Saskatoon-Regina.....	122.7	123.7	124.0	118.9	124.7	123.0	125.7	129.0
Edmonton-Calgary.....	122.6	123.2	123.6	115.1	124.5	120.1	128.0	133.3
Vancouver.....	126.7	127.7	127.5	118.3	138.6	116.9	132.1	136.5

N.B.—Indexes above measure percentage changes in prices over time in each city and should not be used to compare actual levels of prices as between cities.

(1) St. John's index on the base June 1951 = 100.

G—Strikes and Lockouts

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Department of Labour on the basis of reports from the Unemployment Insurance Commission. The first three tables in this section cover strikes and lockouts involving six or more workers and lasting at least one working day, and strikes and lockouts lasting less than one day or involving fewer than six workers but exceeding a total of nine man-days. The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. For further notes on the series see page 763, July issue.

TABLE G-1—STRIKES AND LOCKOUTS, 1955-1960

Month or Year	Strikes and Lockouts Beginning During Month or Year	Strikes and Lockouts in Existence During Month or Year			
		Strikes and Lockouts	Workers Involved	Duration in Man-Days	
				Man-Days	Per Cent of Estimated Working Time
1955.....	149	159	60,090	1,875,400	0.18

TABLE G-4—STRIKES AND LOCKOUTS INVOLVING 100 OR MORE WORKERS, JULY 1960

(Preliminary)

Industry — Employer — Location	Union	Workers In- volved	Duration in Man-Days		Starting Date — Termina- tion Date	Major Issues ~ Result
			July	Accu- mulated		
MANUFACTURING— <i>Rubber Products—</i> Kaufman Rubber, Kitchener, Ont.	Rubber Workers Loc. 88 (AFL-CIO/CLC)	345	7,760	10,350	June 25	Wages, union recognition, modified union shop, check off~
Firestone Tire and Rubber, Hamilton, Ont.	Rubber Workers Loc. 113 (AFL-CIO/CLC)	800	3,200	3,200	July 6 July 12	Piece work rate on new tire building machine~ Return of workers.
<i>Iron and Steel Products—</i> Otao Limited, Orillia, Ont.	Steelworkers Loc. 4657 (AFL-CIO/CLC)	130	1,950	7,010	June 1 July 25	Wages, union security~6¢ an hour increase the first year, 4¢ an hour second year, voluntary irrevoc- able check-off, escape clause, two additional paid statutory holidays.
<i>Non-Metallic Mineral Products—</i> Dominion Glass Co., Redcliff, Alta.	Glass and Ceramic Work- ers Loc. 201 (AFL-CIO/ CLC)	540	540	540	July 19 July 21	Heat conditions in plant~ Return of workers, con- ditions to be investigated.
CONSTRUCTION— Foster Wheeler Co., Sarnia, Ont.	I.B.E.W. Loc. 530 (AFL- CIO/CLC)	338	2,370	2,370	July 14 July 25	Washroom facilities~Re- turn of workers, pending meeting re conditions.
Kenora and Rainy River Dis- trict Contractors' Association, Fort Frances, Kenora, Rainy River, Ont.	Carpenters Loc. 1669 (AFL-CIO/CLC)	300	2,700	2,700	July 19	Wages~
Electrical Contractors' Associa- tion, Ottawa, Ont.	I.B.E.W. Loc. 586 (AFL- CIO/CLC)	325	1,950	1,950	July 22	Wages~
Construction Aggregates, Steep Rock Lake, Ont.	Steelworkers Loc. 3466 (AFL-CIO/CLC)	600	600	600	July 12 July 13	Removal of one tug from dredging operations, senior- ity rights~Return of workers.
TRADE— Three hardware firms, New Westminster and Vancouver, B.C.	Retail, Wholesale Em- ployees Loc. 535 (AFL- CIO/CLC)	515	6,180	28,170	May 6 July 20	Wages, fringe benefits~5% increase for female help the first year, \$7.50 a month the second year, reduction in hours, improved vaca- tion scheme.

Explanatory Note to "Manpower Situation in Local Areas"

The system of classifying the labour market situation in individual areas is an analytical device whose purpose is to give a clear and brief picture of local market conditions based on an appraisal of the situation in each area. In considering each category, it is necessary to keep in mind the marked seasonal fluctuations in labour requirements in Canada. Labour surpluses are consistently highest in each year from December to March and lowest from July to October.

The criteria on which this classification system is based are as follows:—

Group 1: Labour Surplus. Areas in which current or immediately prospective labour supply exceeds demand in almost all of the major occupations. This situation usually exists when the ratio of applications for employment on file with NES to paid workers, including those looking for jobs, is more than 9.9, 11.9 or 13.9 per cent, depending on the size and character of the area.

Group 2: Labour Surplus. Areas in which current or immediately prospective labour supply exceeds demand in about half of the major occupations. The situation usually exists when the ratio of applications for employment on file with NES to paid workers, including those looking for jobs, is more than 5.9 or 6.9 per cent, but less than 10.0, 12.0 or 14.0 per cent, depending on the size and character of the area.

Group 3: Balanced Labour Supply. Areas in which current or immediately prospective labour demand and supply are approximately in balance for most of the major occupations. The situation usually exists when the ratio of applications for employment on file with NES to paid workers, including those looking for jobs, is more than 1.9 or 2.4 per cent, but less than 6.0 or 7.0 per cent, depending on the size and character of the area.

Group 4: Labour Shortage. Areas in which current or immediately prospective labour demand exceeds supply in most of the major occupations. This situation usually exists when the ratio of applications for employment on file with NES to paid workers, including those looking for jobs, is less than 2.0 or 2.5 per cent, depending on the size and character of the area.

The classification of areas does not depend solely on the ratio of job applications to paid workers. All areas, and particularly those in which the ratio is close to the limits of the above-mentioned ranges, are examined closely in the light of other kinds of information to see whether they should or should not be reclassified. Information on labour market conditions at local areas is obtained mainly from monthly reports submitted by each of the local

offices of the National Employment Service. This information is supplemented by reports from field representatives of the Department of Labour who regularly interview businessmen about employment prospects in their companies, statistical reports from the Dominion Bureau of Statistics and relevant reports from other federal government departments, from provincial and municipal governments and from non-governmental sources.

The term "labour market" as used in this section refers to a geographical area in which there is a concentration of industry to which most of the workers living in the area commute daily. The term is not meant to imply that labour is a commodity and subject to the same kind of demand and supply factors operative in other markets.

To facilitate analysis, all labour market areas considered in this review have been grouped into four different categories (metropolitan, major industrial, major agricultural, and minor) on the basis of the size of the labour force in each and the proportion of the labour force engaged in agriculture. This grouping is not meant to indicate the importance of an area to the national economy. The key to this grouping is shown in the classification of labour market areas on page 877.

The geographical boundaries of the labour market areas dealt with in this section do not coincide with those of the municipalities for which they are named. In general the boundaries of these areas coincide with the district serviced by the respective local office or offices of the National Employment Service. In a number of cases, local office areas have been amalgamated and the names used include several other local office areas, as follows: Farnham-Granby includes Cowansville; Montreal includes Ste. Anne de Bellevue; Lac St. Jean includes Chicoutimi, Dolbeau, Jonquière, Port Alfred, Roberval and Alma; Gaspé includes Causapsal, Chandler, Matane and New Richmond; Quebec North Shore includes La Malbaie, Forestville, Sept Îles and Baie Comeau; Sherbrooke includes Magog; Trois Rivières includes Louiseville; Toronto includes Long Branch, Oakville, Weston and Newmarket; Sudbury includes Elliot Lake; Niagara Peninsula includes Welland, Niagara Falls, St. Catharines, Fort Erie and Port Colborne; Vancouver-New Westminster includes Mission City; Central Vancouver Island includes Courtenay, Duncan, Nanaimo and Port Alberni; and Okanagan Valley includes Kelowna, Penticton and Vernon.

The 110 labour market areas covered in this analysis include 90 to 95 per cent of all paid workers in Canada.

Explanatory Notes to "Current Labour Statistics"

(a) These figures are the result of a monthly survey conducted by the Dominion Bureau of Statistics for the purpose of providing estimates of the employment characteristics of the civilian non-institutional population of working age. (About 30,000 households chosen by area sampling methods in approximately 110 different areas in Canada are visited each month). The civilian labour force is that portion of the civilian non-institutional population 14 years of age and over that had jobs or that did not have jobs and was seeking work during the survey week.

(b) Total applications on file at NES offices exclude registrations from persons known to have a job while applying for another one. Means are also taken to exclude, as far as possible, persons who have secured work on their own since registration. Nevertheless, the figures inevitably include a number of persons who have found employment or who have left the labour force by the time the count is made. On the other hand, not all the persons who are looking for work register at employment offices.

OCCUPATIONAL MONOGRAPHS in the “CANADIAN OCCUPATIONS” SERIES

This Series is prepared by the Economics and Research Branch of the Department of Labour to help young people choose a career, and as an aid to those engaged in vocational guidance work. Each booklet covers an occupation or occupational field, outlining the kind of work done, the preparation and training needed, how to enter the occupation, career opportunities and employment outlook.

MONOGRAPHS

TITLE	Catalogue No.
1 Carpenter, 1957.....	L43-0157
*2 Bricklayers and Stone-Masons, 1954.....	L43-0254
3 Plasterer, 1954.....	L43-0354
4 Painter, 1957.....	L43-0457
*5 Plumber, Pipe Fitter and Steam Fitter, 1957.....	L43-0557
6 Sheet-Metal Worker, 1954.....	L43-0654
7 Electrician, 1954.....	L43-0754
8 Machinist and Machine Operators (Metal), 1958.....	L43-0858
*9 Printing Trades, 1957.....	L43-0957
*10 Motor Vehicle Mechanic, 1960.....	L43-1057
11 Optometrist, 1958.....	L43-1158
*12 Social Worker, 1957.....	L43-1257
13 Lawyer, 1958.....	L43-1358
*14 Mining Occupations, 1957.....	L43-1457
15 Foundry Workers, 1957.....	L43-1557
*16 Technical Occupations in Radio and Electronics, (being revised).....	L43-16
17 Forge Shop Occupations, 1959.....	L43-1759
18 Tool and Die Makers, 1959.....	L43-1859
19 Railway Careers, 1954.....	L43-1954
*20-35 Careers in Natural Science and Engineering, 1953 (one booklet).....	L43-2053
36 Hospital Workers (Other than Professional), 1954.....	L43-3654
*37 Draughtsman, 1955.....	L43-3755
38 Welder, 1955.....	L43-3855
*39 Careers in Home Economics, 1956.....	L43-3956
40 Occupations in the Aircraft Manufacturing Industry, 1956.....	L43-4056
*41 Careers in Construction, 1957.....	L43-4157
42 Medical Laboratory Technologist, 1957.....	L43-4257
*43 Careers in Meteorology, 1958.....	L43-4358
44 Teacher, 1959.....	L43-4459
45 Physical and Occupational Therapist, 1959.....	L43-4559
46 Office Occupations, 1960.....	L43-4660

All monographs in the “Canadian Occupations” series are priced at 10 cents per copy, with the exception of *Careers in Natural Science and Engineering*, which is 25 cents. A discount of 25 per cent is allowed on quantities of 100 or more of the same title.

Send remittance by cheque or money order, made payable to the Receiver General of Canada, to The Queen’s Printer, Ottawa, Canada.

School guidance counsellors should inquire from their provincial Department of Education for supplies.

FILMSTRIPS

*The Department of Labour, in collaboration with the National Film Board, has prepared a number of occupational filmstrips based on titles in the “Canadian Occupations” series. Titles covered to date are indicated by an asterisk. Monographs 20-35 have been covered in two filmstrips, entitled *Careers in Natural Science and Careers in the Engineering Profession*.

Filmstrips are priced at \$1.50 each and may be purchased from the National Film Board, Box 6100, Montreal.

THE LABOUR FORCE

ECONOMICS AND RESEARCH BRANCH

Employment and Unemployment, September

The return of students to school and the completion of a large part of the harvest were the main developments affecting the labour force between mid-August and mid-September. The result was a large decrease in the size of the labour force, a somewhat smaller decrease in employment, and a moderate decline in unemployment.

In the week ended September 17, the labour force was estimated at 6,474,000, which is 183,000 higher than a year earlier but 149,000 lower than in mid-August. The estimate of employment was 6,147,000, which is 81,000 higher than in September 1959 but 124,000 lower than in August this year. Unemployment was estimated at 327,000, which is 25,000 lower than a month earlier but 102,000 higher than a year earlier.

During the August-September period, employment of persons under 20 years of age dropped by 170,000, a reflection of the withdrawal of students from summer employment. The main offsetting increase, amounting to 51,000, was among women over 25 years of age; the re-employment of married women in the service industry constituted a large part of this group. Smaller gains, such as those resulting from the resumption of automobile production, were overshadowed by these large seasonal movements. Agricultural employment decreased seasonally to about the same level as a year earlier.

Employment this September was higher than a year earlier by 81,000; this was a somewhat smaller margin over year-earlier figures than that registered in the early months of this year. Increased employment of women, particularly in trade and services of all kinds, was largely responsible for the growth over the year; the number of men employed was down slightly from a year earlier, the decrease occurring mainly in construction and manufacturing.

Employment was estimated at 6,147,000 in September, 6,271,000 in August and 6,066,000 in September 1959. The number of men employed was estimated at 4,512,000 in September, 4,633,000 in August and 4,532,000 in September last year; for women the comparable numbers were 1,635,000, 1,638,000 and 1,534,000.

The statement given here on the current manpower situation presents for the first time a national estimate of unemployment. Briefly, unemployment as now defined combines Labour Force Survey estimates of persons without jobs and seeking work and persons on temporary layoff. This definition, which is comparable to the one recommended by the International Labour Organization, was recommended by an interdepartmental committee on unemployment statistics (L.G., Apr. p. 348) and adopted by the Government earlier this month. Employment and unemployment estimates for previous months have been revised to conform to the new definition.

Between August and September, employment decreases were general west of the Atlantic region. Employment was higher than a year earlier in all regions except British Columbia, where lumbering and construction have been less active than last year; the effects of slackness in these industries outweighed the steady demand for office and sales workers. This demand was apparent in most parts of the country.

The regional breakdown of employment estimates was:

	September 1960	August 1960	September 1959
Atlantic	551,000	542,000	529,000
Quebec	1,699,000	1,745,000	1,688,000
Ontario	2,262,000	2,303,000	2,219,000
Prairies	1,104,000	1,136,000	1,090,000
Pacific	531,000	545,000	540,000

In the trade and service industries, a high rate of growth continued. In the third quarter, these industries employed 56,000 more men and 92,000 more women than last year. Large pulp-cutting programs in eastern Canada increased total employment in primary industries to a level slightly higher than a year ago. In construction and manufacturing, however, gains this summer were less than seasonal, and the third-quarter employment total in these two industries was down 74,000 from a year earlier.

Unemployment

The number unemployed decreased between August and September, in contrast to the increases that occurred in the two previous months. Most of the decrease, which amounted to 25,000, took place in the Ontario region, and was partly the result of the recall of automobile workers for production of new models.

Unemployment as a ratio of the total labour force was 5.1 per cent in September, 5.3 per cent in August and 3.6 per cent in September 1959. The September unemployment rate was higher than the national average in the Atlantic, Quebec and Pacific regions; it was considerably lower than the average in the Ontario and Prairie regions.

Of the 327,000 unemployed in September, 268,000 were men and 59,000 women. The number on temporary layoff, 22,000, was relatively high for this time of year.

There was little change in the duration of unemployment between August and September. About 70 per cent of the total without work and seeking work were unemployed for less than four months, 14 per cent for four to six months and 15 per cent for longer than six months.

LABOUR MARKET CONDITIONS

COLLECTIVE BARGAINING REVIEW

ECONOMICS AND RESEARCH BRANCH

During September, 76 major collective agreements covering approximately 230,000 workers were in various stages of negotiation. A further 10 major agreements were concluded to provide wage increases for more than 13,800 workers.

Collective bargaining was in progress during the month for the renewal of agreements covering loggers and lumber workers at various locations across Canada. In British Columbia the **International Woodworkers of America** were negotiating two agreements, one with **Interior Forest Labour Relations Association**, representing 34 firms in the southern interior of B.C., and the other with the **Northern Interior Lumbermen's Association**. A conciliation board that had been set up to help settle the outstanding issues between the union and the southern interior operators released a majority report, signed by the chairman and the companies' nominee, containing recommended settlement terms. It proposed that the parties sign a two-year agreement providing for a 6-cent-an-hour increase on September 1, 1960 and an additional 4 cents one year later, making the basic wage \$1.79 on September 1, 1961. The recommendations were accepted by the union but rejected by the Association, which maintained that the operators were unable to pay the new rates. They pointed out that lumber prices had dropped to the 1952 level, when the basic wage was \$1.30 an hour and the agreement allowed one paid statutory holiday annually compared with the current nine. However, the door was left open for further talks, and early in October it was reported that a compromise had been worked out.

A conciliation board was also set up in the dispute between the union and the Northern Interior Lumbermen's Association, which represents 38 employers. The majority report recommended a one-year agreement with a 6-cent-an-hour increase on September 1, 1960 and a further 2 cents effective March 1, 1961, at which time the basic rate would become \$1.77 per hour. In addition, the report proposed improved shift premiums and a third week of vacation for employees with five years of continuous service. By the end of September neither party had commented on the proposals.

In Ontario, approximately 16,000 bushworkers represented by the **United Brotherhood of Carpenters and Joiners of America** will be affected by the bargaining for new collective agreements with the woodland divisions of the major pulp and paper firms in the province. A key issue in the negotiations has been the union demand for a reduction in the 48-hour week to 40 hours without loss of pay. Direct bargaining between the union and a number of companies failed to bring about a settlement, and conciliation services were requested. Conciliation officers were brought into the talks with **Abitibi Power and Paper**, Port Arthur; **Great Lakes Paper**, Fort William; **Kimberley-Clark Spruce Falls Paper**, Kapuskasing and Longlac; **KVP Company**, Espanola; **Marathon Corporation**, Port Arthur; and **St. Lawrence Corporation**, Nipigon.

Early in October, a settlement between the **Seafarers' International Union** and the **Lake Carriers' Association** ended a short-lived strike and averted a threatened tie-up of approximately half of Canada's Great Lakes shipping fleet. Strike action, limited to the vessels of N. M. Paterson and Sons Limited, was

taken at the end of September after union members voted to reject a conciliation board's recommendations (L.G., June, p. 547; Aug., p. 769). The other four companies in the bargaining group thereupon announced that their fleets would be put out of service until the issues were settled. Within a few days vessels that reached terminal ports were tied up and the crews paid off. Had the tie-up been completed, some 1,600 crewmen and approximately 100 ships would have been affected, leaving Canada Steamship Lines and 11 smaller companies the only ones operating on the Great Lakes and inland waterways. Before the tie-up could make much headway, a compromise solution was worked out with the aid of a federal mediator, resulting in a two-year agreement that provided a 5-per-cent wage increase retroactive to July 15 of this year and a reduction in the work week from 48 hours to 44 hours effective during the 1961 shipping season, with special compensation for work done on Saturdays and legal holidays.

The **International Ladies' Garment Workers** signed new agreements with **Toronto's Dress and Sportswear Manufacturers' Guilds** similar to the one that gave the union's Montreal members a 37½-hour week effective in 1963. Following closely the pattern set in Montreal, the Toronto three-year agreements gave an immediate increase of \$4 weekly for cutters and \$3 weekly for hourly-paid workers. The 40-hour week will be reduced to 39 hours on January 1, 1962 and to 37½ hours a year later. Time workers will receive the same pay for the reduced hours as they had previously received for 40 hours; piece workers will get a 2½-per-cent increase on January 1, 1962 and 3½ per cent on January 1, 1963 to compensate for the lost working time. Other provisions include an increase in the employers' contribution to the severance pay fund, and an agreement by the manufacturers to place the union label on all dresses and sportswear.

Among the collective agreements due to terminate during the last quarter of 1960 is the first five-year agreement signed in 1955 between **Canadian General Electric** and the **United Electrical, Radio and Machine Workers**, representing 5,000 workers at the company's eight plants in Toronto, Peterborough and Guelph, Ont. Early in October the union reportedly formulated the terms for a new agreement and presented their proposals to the company. The new proposals contained provisions designed to protect the workers from the immediate effects of automation and technological change. To offset the loss of jobs through improved manufacturing methods, the union asked for a reduction in the current 40-hour work week with the same take-home pay. The extent of the reduced work week was not specified but was left open for negotiation. In addition, they proposed that the company provide the necessary training required to qualify employees for newly created jobs arising out of automated processes and improved manufacturing methods.

For the forthcoming negotiations the union served notice that they will not ask for a five-year agreement as previously, but rather will seek a one-year term. The union proposed that the 9-per-cent cost-of-living bonus arising out of the expiring agreement be incorporated into the established rates and that, in addition, wages be increased by 15 cents an hour. Another demand was that the employer pay the entire cost of the hospital plan, eliminating the deductible feature whereby employees paid the first \$50 of medical costs. In addition, the union requested that the vacation plan be altered to provide two weeks with pay after one year of service, three weeks after 10 years and four weeks after 20 years. After receipt of the union's proposals, the company was expected to arrange for meetings in October to discuss terms for a new agreement.

The 39th CCCL convention, held in Montreal at the end of September, approved a resolution that changed the name of the Canadian and Catholic Confederation of Labour to the Confederation of National Trade Unions (*Confédération des Syndicats nationaux*). Accordingly, beginning with this issue, the initials CNTU instead of CCCL will be used in the Collective Bargaining Scene (below) to indicate affiliation.

Part III—Settlements Reached During September

(A summary of the major terms on the basis of information immediately available. Coverage figures are approximate.)

BATA SHOE, BATAWA, ONT.—SHOE WKRS. (AFL-CIO/CLC): 2-yr. agreement covering 550 empl.—2¢-an-hr. increase effective Sept. 28, 1960, plus an additional 3¢-an-hr. effective Sept. 23, 1961 for hourly wkrs.; all piece work rates increased by 2%; 3 wks. vacation after 15 yrs. of service (formerly 2 wks. and 3 days after 15 yrs.).

CBC, COMPANY-WIDE—MOVING PICTURE MACHINE OPERATORS (AFL-CIO/CLC): 2-yr. agreement covering 1,500 empl.—retroactive pay of \$200 per empl. pro-rated on the basis of length of service in the bargaining unit since June 1, 1959; plus a general increase of 5% on basic wages eff. upon ratification of agreement; an additional 4% general increase on basic wages eff. June 1, 1961; in addition to the increases certain categories will receive adjustments ranging from 1% to 5%.

DOM. ENGINEERING WORKS, LACHINE, QUE.—MACHINISTS (AFL-CIO/CLC): 1-yr. agreement covering 900 empl.—a lump sum payment of \$20 in lieu of retroactive pay for all empl. who have been in continuous employment since March 28, 1960; eff. Sept. 10, 1960 all empl. will receive an increase averaging 6¢ an hr.; eff. Sept. 10, 1960 the work wk. was reduced from 41½ hrs. to 40 hrs. without change in take-home pay.

DRESS MFRS. GUILD (DRESSES) TORONTO, ONT.—LADIES' GARMENT WKRS. (AFL-CIO/CLC): 3-yr. agreement covering 1,100 empl.—increases ranging from \$3 to \$4 per wk. for hourly wkrs.; a general increase of 7% for piece wkrs.; two-stage reduction in work wk., the first eff. Jan. 1, 1962 from 40 to 39 hrs., the second eff. Jan. 1, 1963 to 37½ hrs., both reductions without change in take-home pay; 1 extra paid statutory holiday making a total of 6 per yr.

DRESS MFRS. GUILD (SPORTSWEAR), TORONTO, ONT.—LADIES' GARMENT WKRS. (AFL-CIO/CLC): 3-yr. agreement covering 2,000 empl.—increases ranging from \$3 to \$4 per wk. for hourly wkrs.; a general increase of 7% for piece wkrs.; two-stage reduction in work wk., the first eff. Jan. 1, 1962 from 40 to 39 hrs., the second eff. Jan. 1, 1963 to 37½ hrs., both reductions without change in take-home pay; 1 extra paid statutory holiday making a total of 6 per yr.

K.V.P. COMPANY, ESPANOLA, ONT.—PAPER MAKERS (AFL-CIO/CLC), PULP AND PAPER MILL WKRS. (AFL-CIO/CLC), I.B.E.W. (AFL-CIO/CLC): 1-yr. agreement covering 650 empl.—increases ranging from 11¢ to 15¢ an hr. retroactive to May 1, 1960; an additional increase ranging from 4¢ to 5¢ an hr. eff. Nov. 1, 1960; special leave with pay up to 3 days in the event of a death in the immediate family of the empl.

NEW BRUNSWICK TELEPHONE, COMPANY-WIDE—I.B.E.W. (AFL-CIO/CLC) (TRAFFIC DEPT.): 2-yr. agreement covering 700 empl.—an immediate increase of \$2.50 per wk.; an additional increase of \$1.75 per wk. eff. July 31, 1961; time-and-one-half to be paid in addition to straight time for empl. working on statutory holidays.

PHILLIPS ELECTRICAL, BROCKVILLE, ONT.—I.U.E. (AFL-CIO/CLC): 2-yr. agreement covering 900 empl.—settlement terms not yet available.

POWER SUPER MARKETS, TORONTO, ONT.—BUTCHER WORKMEN (AFL-CIO/CLC): 2-yr. agreement covering 500 empl.—increase of \$4 per wk. retroactive to May 1, 1960; an additional increase of \$2 per wk. eff. May 1, 1961 plus an additional \$1 per wk. eff. Jan. 1, 1962; hrs. reduced from 43 to 42 hrs. without change in take-home pay; 4 wks. vacation after 23 yrs. of service (formerly 4 wks. after 25 yrs.).

SASKATCHEWAN GOV'T.—SASKATCHEWAN CIVIL SERVICE (CLC): 1-yr. agreement covering 5,000 empl.—adjustments given to individual classifications averaging approx. 3 per cent.

NOTES OF CURRENT INTEREST

Prime Minister Conferring with Business, Industry, Farm and Labour Leaders on Unemployment Problem

Before the next session of Parliament begins, on October 28, Prime Minister Rt. Hon. John Diefenbaker will confer with representatives of business, industry, farm, labour and other leaders to learn their views on ways to combat unemployment in Canada. The plans were announced during a nation-wide television appearance last month of the Prime Minister.

In his speech, Mr. Diefenbaker noted that the Government currently is attacking the unemployment problem on three main fronts:

1. By providing the maximum of assistance to those who are actually unemployed;
2. By creating new jobs through direct federal projects, separately, as well as in co-operation with the provinces and municipalities;
3. By seeking out the underlying causes "of this phenomenon of unemployment in a period of economic progress and to take whatever action offers a reasonable hope of increasing the jobs provided by the whole economy to meet the requirements of all who wish to work . . ."

He then explained in detail the actions of the federal Government toward relieving unemployment.

"In the matter of direct assistance to the unemployed, we have extended unemployment insurance coverage by including fishermen, married women and others under its benefits, by the extension of seasonal benefits and other measures which have increased both the numbers of persons entitled to benefits and the amounts of the benefits themselves. As a result, more than four million Canadians can now qualify for unemployment insurance."

At this point the Prime Minister commented on the belief of some persons that others were taking advantage of the Unemployment Insurance Fund. "There may be some such cases, because after all, since the inception of unemployment insurance a total of some \$3 billion dollars has been paid out in benefits.

"However, the utmost precaution is being taken to prevent abuse," he said, citing the fact that in the last fiscal year the claims of more than a third of the applicants were

disallowed in the first instance, although many were later able to qualify for seasonal or other benefits.

"We are intensifying our efforts to prevent and punish any who wrongfully take benefits under the Fund at the expense of their fellow citizens who have proper claims on those benefits," the Prime Minister said.

On the Government's second approach to the unemployment problem—projects designed to create new jobs—Mr. Diefenbaker mentioned the Winter Works Incentive Program, recalling that this year the period has been extended to a starting date of October 15.

"Preliminary estimates were that it would create 165,000 jobs, and this figure is almost certain to be exceeded. Two major cities have already announced that projects under this program will be doubled, and if this is reflected in the action of other major cities, it is possible that the result may be an additional two hundred thousand winter jobs.

"It is my view that seasonal unemployment this winter could be reduced to its absolute minimum with the full co-operation of the provinces in the winter works program in addition to the other measures being taken by the federal Government.

"I urge earnest re-consideration of these provincial contributions wherever they fall short of guaranteeing the full potential of the winter works program in any province. The enthusiastic co-operation of many municipalities leaves little doubt that many more jobs can be provided if they are given even greater incentives."

Pointing out that one of the main areas of the drop in jobs in winter is the construction industry, Mr. Diefenbaker recalled the increase, from four to six billion dollars, in the total that can be loaned for housing by approved lenders, and from \$1 billion to \$1½ billion in the total of CMHC direct housing loans. "These measures alone should mean new jobs this winter for at least 60,000 Canadians who might otherwise be unemployed."

All federal building contracts are now being timed so that the maximum amount of work will be done this winter, and gov-

ernment contractors are no longer allowed, as they once were, to stop work entirely in the wintertime without permission from the Government, the Prime Minister said.

"Some 103 public works construction projects totalling \$54 million will be continued through this winter. In addition, 45 new construction projects totalling \$15 million will be begun this winter. Additional expenditures on many smaller projects and purchasing orders are expected to bring the total of all government public works in operation this winter up to approximately \$100 million.

Turning to the third aspect of the unemployment problem, the underlying causes, Mr. Diefenbaker said that every expert, self-appointed or otherwise, has his own view of what these causes are.

"We know that some manufacturing industries are lagging behind the rest of the economy in the creation of new jobs. Much has been said and written about this recently, particularly in respect to the difficulties some secondary industries are facing from foreign competition in our own domestic market." The Government is determined to do whatever can be done to make it possible for these secondary industries "to

resume their important role as leaders in the creation of new jobs for Canadians," the Prime Minister said.

As a further measure to combat unemployment, Mr. Diefenbaker reported that instructions have recently been sent out to senior government employees across the country to recommend any federal project that can be undertaken at once in any area where unemployment is high.

The Prime Minister urged that it be realized that curing unemployment is not a project that can be accomplished by the federal Government alone. It required the united action of all Canadians in all walks of life.

Concluding his remarks, Mr. Diefenbaker said that short-term action such as the Government has been taking is necessary to meet the immediate situation, "but let us never forget that the long-term solution is dependent in large measure on the continued expansion of our trade.

"We cannot achieve this if we price ourselves out of the markets of the world because of unreasonable demands from any quarter calculated to benefit any one part of the population at the expense of the others."

Advance Starting Date of Winter Works Incentive Program

Six and one-half months of work instead of the five months provided last winter will be possible in 1960-61 as a result of an extension of the Municipal Winter Works Incentive Program announced by Hon. Michael Starr, Minister of Labour, on September 7. The Program began on October 15; starting date in previous years was December 1.

It is estimated that the extension will provide at least 10,000 additional on-site jobs and approximately 10,000 indirectly

through the use of additional materials and services, Mr. Starr said. The Government expects the 1960-61 Program to provide 83,000 direct jobs and approximately 165,000 direct and indirect ones.

Mr. Starr said he had urged on the provinces and municipalities participating in the Program the importance of maintaining the highest level of Canadian content in the use of materials on projects carried out under the Program in order to provide a maximum amount of employment.

Seasonal Unemployment Problem Worsening, N.B. Report Says

Over the years the amount of seasonal unemployment in New Brunswick has increased as the numbers employed in the province's seasonal industries have increased, with the result that seasonal unemployment has become a progressively more serious social and economic problem, says the foreword of a new handbook just published by the New Brunswick Department of Labour, entitled *Seasonal Employment in New Brunswick*.

Further on the booklet points out that "The seaside location of the province led to the development of the fishing and transportation industries; extensive forest lands

led to the development of the lumbering and logging industries. These, with the important addition of the construction industry, are subject to climatic variations and conditions."

The first section of the handbook, entitled "Seasonal Employment," has four chapters, appendixes on employment statistics and survey methods, and summaries of the provincial Government's winter works projects in 1958-59 and 1959-60, and of the federal Municipal Winter Works Incentive Program in the same two years.

Section II deals with Winter Construction Experience.

Warns against Granting of Tax Concessions that Have Effect of Replacing Labour, Now Surplus, by Capital, Now In Short Supply

Canada's internal growth is threatened, not by a shortage of capital investment, but by a surplus of labour, and "we should not discourage the use of labour by granting special tax concessions and privileges which could have the effect of replacing labour by capital," said Eric W. Kierans, President of the Montreal Stock Exchange and Canadian Stock Exchange, in an address before the annual conference last month of the Canadian Institute of Chartered Accountants.

He was speaking on "Economic Implications of Depreciation Policies" and had declared that Canadian depreciation policy must be determined solely by an analysis of economic conditions in this country, not by solutions of other nations. As an illustration he described how Britain's capital cost allowance provisions favoured the employment of capital over labour. But in England, "labour is the factor in relatively short supply; in Canada, we have a chronic, structural unemployment problem."

"Where the productivity of capital facilities is greater than that of labour, then we must obviously make the economic choice and employ additional capital, even when this has to be imported. But when the relative productivities are equal, it would only be common sense in Canada to use labour, which is in excess supply, and to save on capital, of which this country is very short."

Foreign Ownership

Our economic policy should be directed to achieving a fuller state of employment. In addition, we have the "serious institutional factor of foreign ownership of more than 62 per cent of our manufacturing, mining and smelting, oil and gas industries," Mr. Kierans continued. Since foreign investment has concentrated in the capital-intensive rather than the labour-employing sector, "it is obvious that the immediate beneficiary of tax concessions on a capital cost allowance basis would be the foreign ownership that now causes us so much concern."

He pointed out that such concessions would accelerate the trend toward foreign control by making it easier for the foreign ownership to finance their growth and expansion from internal sources; the growth is, in effect, "financed by interest-free loans from the Government" and by profits. The possibility that foreign corporations would permit Canadians to invest in their operations in this country thus becomes more and more remote: the firms have no need for further funds from external sources.

Economic survival demands constantly increasing efficiency. The problem is not solely that of replacing presumed obsolescence, as proponents of accelerated depreciation or write-offs based on replacement rather than original cost imply. Economic efficiency does not consist merely in the existence of a large, new and shiny industrial plant with all the latest electronic gadgets, but in the exact balancing of all resources—land, labour and capital—to meet demand, Mr. Kierans said.

"We cannot afford the economic waste nor technological obsolescence of more expansion based on inaccurate projections of demand," he warned.

How do we charge off overinvestment that results from excess capacity? "Normally, in a single-product firm or in a new firm, the enterprise collapses and the investors lose their capital. But in today's complex, multi-product corporation, the losses of ill-conceived projects are written off against the profits of other lines, and so the Treasury subsidizes the failure by reduced tax revenues on diminished profits and the consumer by the increase in or stickiness of prices on profitable items which must absorb these extraneous costs," Mr. Kierans said.

Structural Unemployment

Part of the blame for structural unemployment in Canada may be traced to our obsession with the virtues of fixed capital, he continued. This has led to an unbalanced development of the economy and a disproportionate mixture of labour and capital.

"Burdened with excess capacity in many industries and short of capital, we still seek tax privileges to encourage still more investment? Where can we get such funds but abroad—and thus sell more of our resources?"

"Blessed with an abundant supply of highly skilled labour, we seek to turn this asset into a liability by offering the special concessions of accelerated costing to those who employ fixed capital in place of labour.

"The wage earner is no longer on an equal footing with capital when their employment is determined, not by their respective productivities, but by the manner in which these costs can be used to reduce taxable profits.

"Tomorrow's labour costs are a charge against tomorrow's income; but accelerated depreciation seeks to charge off tomorrow's cost of capital against today's profits—a worthwhile inducement to substitute capital for labour," Mr. Kierans said.

Canadian tax policy should favour the use of labour not only to reduce the social costs of heavy unemployment but also for economic reasons, he continued, pointing out that labour costs are variable but the substitution of capital for labour brings fixed costs, fixed costs bring inflexibility in methods of operation, and the resulting high costs and break-even points make us more highly vulnerable to fluctuations in demand than would a more judicious mix of labour and capital. He suggested that this mix be determined by their relative productivities, "not by tax concessions that favour the use of capital and prejudice the employment of labour."

Other Effects

Among other effects of juggling depreciation costs mentioned by Mr. Kierans were:

—The reduction of profits which impairs the ability of labour to bargain for increased wages. "There is a distortion in the accounts which is open to various interpretations and tends to work against a just distribution of income to labour."

—The price of a product must bear not only the normal costs of production but also the additional costs of accelerated rates of depreciation. "Prices will thus tend to be higher than normal costs would suggest."

CCA Delegations Submit Briefs To Four Atlantic Provinces

During September and October the Canadian Construction Association presented briefs to the Governments of Newfoundland, Nova Scotia, New Brunswick and Prince Edward Island.

In the briefs the CCA requested all four Governments to revise and amend provincial labour legislation.

Among other things, the Government of Newfoundland was asked to:

—Establish joint committees of interested parties and Government interdepartmental committees to co-ordinate the scheduling of both new and maintenance construction work to the greatest possible extent during the winter months.

—Facilitate the completion of the Newfoundland section of the Trans-Canada Highway with all possible speed.

The Government of Nova Scotia was asked to amend the Mechanics' Lien Act; the Government of Prince Edward Island to consider the establishment of an apprenticeship program, and to encourage the scheduling of construction operations so as to provide the maximum of wintertime employment.

Ontario and Quebec Sharing in Cost of Winter Works Projects

The Governments of Ontario and Quebec have signified their intention to participate in the federal Government's Municipal Winter Works Incentive Program, under which it pays 50 per cent of labour costs for approved projects.

Premier Jean Lesage of Quebec said his Government will contribute 40 per cent of labour costs involved for approved projects during the 1960-61 period. The Ontario Government pays 25 per cent of approved winter works projects in the province.

The extension of the period during which the federal Government will contribute (p. 995) will mean an additional 40,000 jobs in Ontario, Premier Leslie Frost has estimated.

Already three Ontario municipalities have announced their plans for winter works projects. Hamilton plans a winter works program that would cost \$4,000,000 and provide 68,000 man-hours of work. The proposed program is twice as costly as the one undertaken in 1959-60. Ottawa plans winter works projects valued at \$2,716,000, almost triple the value of the previous winter's program. Toronto's Board of Control has approved plans for projects that will cost \$4,534,190.

Make House Repairs in Winter, Minister of Labour Advises

Building supply manufacturers, building supply dealers and building contractors were urged on September 9 by Hon. Michael Starr, Minister of Labour, to concentrate on advancing the idea that interior renovations of plants, offices and homes should be done during the winter months, when skilled tradesmen and materials are more readily available.

Mr. Starr said that the practice would be "most beneficial" to wintertime employment in Canada.

At the same time, the Minister urged plant and business owners to restrict as far as possible their interior renovation and redecoration to the winter months.

He was speaking at the presentation of a plaque to the "Canadian Building Supply Dealer of the Year," Alan Burnes, Sales Manager of Lansing Building Supply Ltd., Willowdale, Ont. The company was the winner of a contest sponsored by *Building Supply Dealer*, a national trade publication, for its contribution to last winter's "Do It Now" winter employment campaign.

In 7 Years, Number of Students Matriculating in Alberta Doubles

The number of Alberta high school students achieving senior matriculation standing is rapidly increasing each year, according to a study made by the Alberta Department of Education.

The survey showed that in 1958, the last year for which complete figures are available, 1,874 Grade 12 students were awarded senior matriculation certificates. They represented 11.32 per cent of the 16,557 pupils who enrolled in the first grade 12 school years earlier. Matriculation in 1951 totalled 946, or 5.65 per cent of the 16,749 who were enrolled in Grade 1 for the first time in 1940.

Officials attribute the improvement to a realization on the part of students that senior matriculation is now a minimum requirement for many employment opportunities, and necessary for university entrance.

Department Issues 7th Report On Training of Skilled Manpower

Most federal government departments have several types of organized training programs, according to the seventh report in the series prepared under the Research Program on the Training of Skilled Manpower, which has just been published. It is *Training Programs and Courses for Canadian Government Employees*.

It is based on a survey by A. W. Crawford, former Director of Canadian Vocational Training Branch, Department of Labour, under the guidance of a subcommittee of the Interdepartmental Skilled Manpower Training Research Committee.

The report deals with the methods and procedures of providing organized or supervised training for persons employed in technical, industrial and clerical occupations at the supervisory and operational levels in federal government departments and agencies and in the Armed Forces. Crown corporations were not included in the survey.

Primary objective of the survey was to determine the nature and extent of staff training in government departments, both for the recruitment of new employees and for the development and maintenance of high standards of proficiency.

An indication of the extent to which government departments and agencies draw from and contribute to the country's pool of skilled workers, and an idea of the changes that are taking place in the training of government employees as a result of technological developments, were also sought.

The report is in three parts. The first deals with general practice and training procedures in all departments of government. It gives a brief description of three methods of providing training: educational leave, for individual trainees in degree-granting universities; external training, for individuals and groups through short intensive courses provided by outside agencies; and correspondence courses.

The second part deals with the training responsibilities and activities of the Civil Service Commission and briefly describes some of the courses that are made available to employees.

The third part consists of a series of separate sections dealing with the nature and scope of training programs and courses operated by the selected departments and agencies.

ILO Governing Body to Discuss CLC Complaint Next Month

The complaint filed with the International Labour Organization by the Canadian Labour Congress and the International Confederation of Free Trade Unions against the Government of Canada (L.G., Dec. 1959, p. 1250) concerning legislation enacted in March 1959 by Newfoundland will be discussed at the meeting of the ILO Governing Body in Geneva November 15 to 18.

The report of the ILO's Committee on Freedom of Association on the Canadian complaint came up for discussion at the Governing Body's 145th Session, held May 27 and 28, just prior to the 44th International Labour Conference. The Canadian Government Member of the Governing Body suggested postponement of discussion until the November meeting, by which time the Committee on Freedom of Association would have additional information. The Canadian Worker Member, CLC President Claude Jodoin, said he wanted quick action but was sure the delay in obtaining further information was not the fault of the federal Government.

Mr. Jodoin charged that the federal Government, having failed to exercise its power of disallowance, must share with the Government of Newfoundland responsibility for the legislation about which the CLC was complaining.

Also postponed to the November Governing Body meeting was the question of merging the manpower and employment committee and the technical assistance committee into a committee on operational programs. Suggested membership of the new committee was fourteen government, seven worker and seven employer members.

This decision was taken at the 146th Session of the Governing Body, held immediately after the conclusion of the 44th International Labour Conference. The 146th Session also approved a partial list of experts to be invited to attend a meeting of experts on major mine disasters to be held during the first quarter of 1961.

Fifth Province Passes Act on Fair Accommodation Practices

At its 1960 session the Manitoba Legislature passed the Fair Accommodation Practices Act prohibiting discrimination on account of race, creed or national origin. Similar legislation is on the statute book in Ontario, New Brunswick, Nova Scotia and Saskatchewan.

The Act prohibits any person from denying accommodation, services or facilities customarily available to the public, to any person because of "race, religion, religious creed, colour, ancestry, ethnic or national origin." The displaying of notices and signs and the use of other media of communication such as newspapers, radio and television to express discrimination on any of the above grounds is prohibited.

The Act explicitly states that its provisions are not deemed to interfere with the free expression of opinions upon any subject by speech or in writing or to confer any protection to or benefit upon enemy aliens. Places of worship do not come under the Act.

The administration of the Act will be assigned by the Lieutenant-Governor in Council to a member of the Executive Council.

Complaints of discrimination must be made in writing to the responsible Minister. Such complaints will be investigated by an officer designated by the Minister to enforce the Act. Where the officer is unable to effect a settlement of the matter, the Minister appoints a commission consisting of one or more members.

The commission, after making an inquiry into the case, may, if necessary, recommend to the Minister the course that ought to be taken. Where the commission is composed of more than one person the recommendations of the majority of the members are the recommendations of the commission.

The Minister is required to furnish a copy of the commission's recommendations to the parties and may, if he deems it advisable, publish such recommendations. The Minister is further empowered to issue an order embodying the recommendations of the Commission and requesting compliance of the parties with its terms.

A person found guilty of a violation of the Act or any order made under the Act, is subject to a fine of up to \$50 for a first offence and up to \$200 for a second. In the case of a corporation the corresponding fines are \$100 and \$400.

The Act authorizes the Minister to apply to the Supreme Court of the province for an order enjoining a person who has been convicted of an offence from continuing the violation. Any prosecution under the Act require the consent of the Minister.

National Public Employees Union Holds Sixth Annual Convention

At the sixth annual convention of the National Union of Public Employees (CLC), held in Saint John, N.B., during September, a resolution was approved requesting that a national minimum wage for men and women of \$1.50 per hour be established. Another asked that all canned goods marketed in Canada carry labels clearly showing the country of origin.

The convention urged the federal Government not to allow immigrants into Canada unless jobs were available for them.

Other resolutions called for a maximum work week of 40 hours, improved labour legislation, and improvement in the education of the Indians of Canada to equip them to take their place in modern society as Canadian citizens.

CLC President Claude Jodoin, in an interview preceding the conference, said that the four-day week will be prevalent in Canadian industry and commerce in the near future.

Mr. Jodoin said the shorter week not only will be requested by more unions "but may become a necessity because of automation and unemployment."

Addressing the delegates at the convention, Mr. Jodoin expressed the opinion that unemployment is Canada's main problem. Automation was a contributing factor, he believed, and "all sections of our economy will have to make efforts" to deal with it. But it is natural to look to the federal Government for leadership in the matter, he said, and repeated a CLC demand for a conference of government, management and labour representatives to seek ways of creating more jobs.

Union leaders, Mr. Jodoin noted, recognized that they, too, had a responsibility in combating unemployment and that they could help the situation by "discouraging overtime work and moonlighting."

Canadians Prominent at Meeting Of Accident Prevention Boards

Canadian provinces are leading the way in establishing rehabilitation programs and centres, Antonio DiPinto, Executive Assistant and at the Rhode Island Curative Centre, told delegates to the 46th annual convention of the International Association of Industrial Accident Boards and Commissions.

No state in the United States has established "specialized centres devoted exclusively to the treatment of industrially injured workers in the past 10 years, with the possible exception of Ohio," he said.

"Rehabilitation of workers is a serious business in Canada and the welfare of the individual is important."

At the convention, held at Edmonton, radiation protection at Atomic Energy of Canada, Chalk River, Ont., was given special mention in the report of the committee on atomic energy and radiation work risks. John F. Cauley, Vice-Chairman, Ontario Workmen's Compensation Board, was chairman of the committee.

At Chalk River, it was reported, it has been found necessary, in order to preserve adequate radiation hazard control standards, to keep the organization of the control personnel separate from that of the operation groups.

"In general, the figures presented justify the belief that an efficient radiation protection service well integrated into the over-all project organization can result in a large output of work in high radiation fields with no need for serious overexposure," the committee report said.

Other Canadians who took a prominent place in the program included C. M. Macleod, QC, Chairman of the Alberta Workmen's Compensation Board and retiring President of the Association, who presided at all plenary sessions; Eugene E. Sparrow, Chairman of the Ontario Workmen's Compensation Board, who was moderator of a panel on safety; Joseph Morris, Pacific Regional Vice-President of the Canadian Labour Congress, who was a member of the safety panel; and Dr. John R. Fowler, Medical Director, Alberta Workmen's Compensation Board Rehabilitation Clinic, who was moderator of a panel on the treatment and rehabilitation of workmen with back injuries.

G. G. Greene, Director, Government Employees Compensation Branch, Department of Labour, presented a paper on the Government Employees Compensation Act and the relationship with the provincial Workmen's Compensation Boards.

President of the Association for the coming year is W. M. Douglas, Administrator, Bureau of Workmen's Compensation, Department of Labor and Industrial Relations, Honolulu, Hawaii. The 1961 convention will be held at Honolulu in November next year.

More Pay, Fewer Hours Needed To Increase Jobs, Meeting Told

Higher wages and fewer working hours, as a means of providing more work for more people, was recommended by speakers at the 12th convention of the Tobacco Workers' International Union (AFL-CIO-CLC), held in Montreal in September. It was the first time the Union had met in Canada.

It was emphasized that shorter working hours are essential because automatic machinery is producing 200 times faster than humans produced 50 years ago.

A special three-member committee was set up by the convention to gather data on automation. Its findings will be compared and synchronized with that found by other labour groups.

President John O'Hare, who was re-elected, told delegates that the Union aims to adopt a 35-hour work week to combat the effects of automation. He said he regarded the 35-hour week as "eventually inevitable" and urged that discussions on the subject be included in all future collective bargaining negotiations.

Mr. O'Hare noted that in the past few years automation has brought about changes that have had a "terrifying effect on the whole economy and are foremost in the minds of millions of workers.

"When we speak of automation the average citizen thinks in terms of fear—fear of losing one's job." This fear must be eliminated by discovering ways and means to make automation work for the benefit of all, with more security, better wages and fewer working hours, he said.

Two resolutions on political action were adopted without debate. One urged that the union's members make every effort to assure a maximum vote on behalf of "liberal and enlightened" candidates and to contribute to the AFL-CIO Committee on Political Education.

The other resolution asked that members be kept informed of labour bills, including the names and political affiliations of sponsors.

The importance of calling a national conference to study the importance of unemployment was stressed by Claude Jodoin, CLC President.

Trends in the Agricultural Labour Force

Proportion of persons employed in agriculture in Canada has dropped from 33 per cent of total labour force in 1921 to 11 per cent in 1959, study by Department of Labour reports. Between 1946 and 1958, decline averaged 4 per cent a year

The proportion of persons employed in agriculture in Canada has dropped from 33 per cent of the total labour force in 1921 to 11 per cent in 1959, according to a study just published by the Economics and Research Branch of the Department of Labour. The bulletin, *Trends in the Agricultural Labour Force in Canada from 1921 to 1959*, points out that at the beginning of this century, more than 60 per cent of the population of Canada lived in rural districts, the majority on farms.

The study is the fourth in the series of Farm Labour Bulletins published by the Department.

"Between 1946 and 1958, the number of persons with farm jobs in Canada has been declining at an average compound rate of about 4 per cent per year," the study says. It adds that if this very rapid rate of decline were to continue, the number of persons with jobs in agriculture—in 1958 reckoned at 712,000—would drop to about 300,000 by 1978.

It is unlikely, however, the report says, that the decline will continue at this rate; the latest statistics show that the decline during 1959 was only 2.8 per cent—a much slower rate than in any year since 1954.

It must be remembered that the movement from the farms after 1940 was larger because people had been "damned up" in agriculture during the depression in the 1930's. If one considers the trend of employment in agriculture for the past 28 years, i.e., from 1931 to 1959, the average compound rate of decline has been about 1.75 per cent. Projecting this slower rate of decline into the future would lead to the conclusion that the number employed in agriculture may be slightly less than 500,000 by 1979 or 1980.

Greater than in U.S.

The report points out that the drop in agricultural employment between 1946 and 1958 was even greater, relatively, than that which occurred in the United States. During that period it declined by 40 per cent in Canada, compared with a drop of 30 per cent in the United States.

The result has been that, while in 1946 persons employed in agriculture represented 15 per cent of all persons employed in the United States compared with 25 per cent in Canada, in 1958 the proportions were 9 per cent in the United States and 12 per cent in Canada.

The bulletin points out that "A study of the labour force in agriculture merits attention if for no reason other than the fact that there is a scarcity of information on this aspect of the industry. Agricultural economic studies have concentrated on such aspects as settlement problems and land tenure, choice of farm enterprises, farm production and income, capital and credit problems. Farm labour, however, has too often been accepted as a given factor."

Fourth Largest Employer

During the decade 1948-58, agriculture lost its place as the second largest industry in Canada and became fourth in terms of employment, the report says. By 1958 it had been exceeded in the numbers of persons employed by manufacturing, service, and trade.

The decline in agricultural employment between 1946 and 1958 was greatest, numerically, in the Prairie Provinces, Ontario and Quebec. These three regions accounted for 90 per cent of the total decline in Canada, the study shows.

During the period, the Prairie Provinces experienced the greatest decline in numbers, but the rate of decline was greatest in Ontario and next greatest in Quebec.

Besides the decrease in the farm population, the report states that there has been a marked change in the composition of the agricultural labour force. In 1946 unpaid family workers made up 30.4 per cent of the total number of workers, but in 1958 they constituted only 20.7 per cent.

The proportion of unpaid labour contributed by family members on farms has declined rapidly over a period of little more than a decade. The decline in this type of worker suggests that farmers are encountering increasing difficulty in retaining their sons and daughters on the farms in the face of increasing opportunities for paid employment elsewhere.

An important accompaniment of the decline in the farm labour force has been an increasing preponderance of males over females in the farm population. In 1956, males accounted for 53.6 per cent of the total; and in the age group 14 years and older they represented 54.8 per cent. "In other words," the report explains, "there were 121 males to every 100 females aged 14 and over." This high ratio of males on farms is not a new thing, however—the 1921 census showed males as 53.7 per cent of the total rural population.

Proportion of Older Workers Higher

Another important change in the composition of the farm labour force, resulting from the departure of so many younger workers for jobs in other industries, is that the proportion of older workers on farms is higher than in the past. According to labour force surveys in 1958, while 50 per cent of all men in the non-agricultural labour force were in the 25-44 age group, in agriculture this age group provided only 37.1 per cent of the total working men. In the agricultural labour force more than 42 per cent of all males were 45 years of age or older.

According to census data, in the three Maritime Provinces in 1951 nearly half the farm operators, and in Ontario about 46 per cent of them, were 50 years old or more. In the Prairie Provinces and Quebec, on the other hand, only 37 per cent were as old as this.

There has also been a trend in recent years toward an increase in the percentage of seasonal workers in the farm labour force. This, the report says, may be due to a number of factors, but the chief of these is probably the increased use of machinery, as a result of which "farmers tend to speed up their seeding and harvesting operations, concentrating the employment of seasonal

labour over much shorter periods of time and doing without extra year-round help after the peak period of activity is over."

Longer hours of work and lower wages in agriculture than in other industries make it hard for farmers to compete in the general labour market, the bulletin points out.

In 1958 farm workers put in an average of 54 hours per week, compared with 40 hours for workers in non-agricultural industries. Wages for hired farm workers have been rising since the early 1940's. In August 1941, the average in Canada for male farm wages, with board, was \$35 per month. In August 1958, the comparable average was \$120. Despite this increase over the years, however, farm wages remain lower even than those for unskilled labour in other industries...

Since unemployment insurance has not yet been extended to agricultural workers it is becoming especially difficult for farmers to get the amount of labour they need for seasonal work, the report says.

The 68-page report contains chapters on: The Agricultural Labour Force, Characteristics of the Agricultural Labour Force, Seasonality of Employment in Agriculture, Conditions of Employment in Agriculture, Trends and Characteristics of the Farm Population, Other Trends in the Agricultural Industry, and Conclusions. A number of tables and charts are also included.

McGill University's 12th Annual Industrial Relations Conference

Five speakers, including the president of a government employees' association, a union research director and a management spokesman, present talks on various aspects of the conference theme: "The Role of Government in Labour Relations"

"The Role of Government in Labour Relations," was the theme of McGill University's 12th annual industrial relations conference, September 8 and 9. The conference was attended by nearly 180 delegates representing business firms, labour organizations, employers' organizations, other universities, and federal, provincial and municipal governments.

As on previous occasions, there were five speakers, one address and the discussion period that followed it occupying each half day, and another address being given at the conference dinner. In addition, a short panel discussion wound up the conference.

The first speaker was Prof. Joseph Shister, Professor and Chairman of the Department of Industrial Relations at the University of

Buffalo, who has held appointments on a number of United States government bodies and is a member of several arbitration organizations in the United States. He spoke on "The Role of the State in Collective Bargaining."

J. C. Best, National President of the Civil Service Association of Canada, the second speaker, gave an address on "The Government as Employer."

The dinner speaker was Prof. H. D. Woods of McGill University, who spoke on "Power and Function in Industrial Relations."

Cleve Kidd, Canadian Research Director of the United Steelworkers of America, spoke on "A Union View of Government in Labour Relations." Sharman K. Laerie, Manager and General Counsel of the

Niagara Industrial Relations Institute, gave a management view in an address entitled, "A Business View of the State Function in Labour Relations."

Prof. H. D. Woods, who founded the McGill Industrial Relations Centre some 12 years ago, and who has acted as chairman of previous conferences, recently resigned as Director of the Centre to accept a Ford Foundation Faculty Research Fellowship for the year 1960-61, under which he will carry on a study of Canadian labour relations policy. His place as chairman was taken at this conference by Prof. E. C. Webster of McGill University, the acting director of the Centre.

Members of the panel whose discussion closed the conference were S. J. Frankel, a McGill political scientist; J. C. Weldon, a McGill economist; and Dr. W. Donald Wood, Director-elect of the newly established Industrial Relations Centre of Queen's University, who acted as leader; and the five conference speakers.

Prof. Joseph Shister

Assuming that no great depression or other unforeseen upheaval occurs, the prospect is that the "legal framework" will not during the next 10 years become more favourable to unions than it is now, and it may perhaps become less favourable, said Prof. Joseph Shister, the first speaker at the conference.

Prof. Shister, who is Professor and Chairman of the Department of Industrial Relations at the University of Buffalo, spoke on "The Role of the State in Collective Bargaining."

The speaker gave some of his reasons for this opinion. First, he said, the mass media—the press, radio, etc.—which editorially are in general unfavourable to unions, are not likely to change the direction of their influence. Secondly, the expected increase in the number of white collar workers, who are more hostile to unions than blue collar workers, would exert an influence unfavourable to organized labour.

Another factor was the probable relatively slow rate of growth of unions in the next decade. Prof. Shister thought that the unions would make little headway in organizing white collar workers.

Another consideration that led him to regard the outlook as unfavourable to unions was the probability that the next decade would be characterized by rising prices, for which the public would be inclined to blame the wage demands of organized labour. The continuance of prosperity will favour conservatism, the speaker also pointed out.

Management will more and more tend to take a tougher attitude in its dealings with unions, resisting attempted encroachments on its prerogatives, if not trying to win back some of those that have been lost.

Both management and labour will become less flexible toward each other, Prof. Shister predicted. Members of management groups will co-operate more closely with each other in the common cause, and so will members of union groups. Government will have to play a more important role. There will be more emergency strikes and more arbitration.

At the beginning of his address Prof. Shister pointed out that his views were based on United States experience, and that in spite of many similarities and much common ground in labour relations in Canada and the United States, there were significant differences between the two countries.

Contrary to popular belief, the legal framework is not uniform and precise, but is diversified in many ways, the speaker said. In the federal jurisdiction it differs from that of the states, and there are differences between the various states. The philosophy of the governors and of the judiciary is different in different states.

The legal framework is changing and evolutionary. Governmental intervention has grown tremendously at both the federal and the state level, but that growth has not been gradual nor has its direction been uniform, Prof. Shister said. On the contrary, growth has been sporadic and from time to time its direction has changed, now leaning in favour of unions and now in favour of management. This change in direction has shown itself at the judicial, as well as at the legislative level.

Governments have been primarily concerned with affecting the framework and procedures, not the terms of collective bargaining. Thus protection of the right to self-organization, picketing, secondary boycotts, and union security have been matters of government concern. But with the passage of the Landrum-Griffin Act (the U.S. Labour-Management Reporting and Disclosure Act 1959), government intervention has taken a new turn—regulation of the unions' internal affairs.

The internal affairs of Unions, the speaker pointed out, have a strong influence on collective bargaining. More democracy in the running of unions would make for less responsibility in collective bargaining, not more, he thought, since it would make the leaders more responsive to the will of the rank and file, who were generally more

extreme and less enlightened than the leaders of a union. In this way the regulation of internal union affairs affects bargaining policy.

Turning to the question of what determines the direction and extent of government intervention in industrial relations, Prof. Shister said that some thought this could not be explained rationally. But he believed that reasonable explanations could be given. He described some of the factors that, in his view, helped to determine the legal framework.

The chief influences, he said, were the climate of opinion—or public opinion—and collective bargaining experience.

He disagreed with those who denied that there was such a thing as independent public opinion, believing that public opinion was moulded by the mass media of communication. The climate of opinion was developed by certain forces, and the mass media of the press, the radio, etc., were not the sole or dominant influence, Prof. Shister said. The personal experience of citizens has a strong influence, and the influence of home, school, church and community are all important, he contended. Another important influence is the competition between the two dominant political parties.

As an example of the influence of personal experience, Prof. Shister said that a business or professional man who found his plans hampered or thwarted by union opposition would probably feel resentment against unions. On the other hand, a worker who had first-hand experience of the advantage of having a union to protect his interests would be likely to be a strong supporter of unions.

The climate of opinion builds up gradually, and it would lead to nothing if it were not for the stimulus of dramatic events, such as the great depression of the 1930's, the McLellan investigation into corruption in unions, and the postwar strikes in the mass-production industries. These dramatic events occur sporadically, and therefore government intervention comes in spurts.

Even the judiciary, Prof. Shister said, were sensitive to the climate of opinion. As a striking example of this, he instanced the unanimous decision of the United States Supreme Court on the question of desegregation in the schools—a decision in which the consideration of the effect on international relations had strongly influenced the Court.

The speaker gave three reasons why the public in the United States believed in free collective bargaining. These were: the wish to minimize government intervention because of a dislike of controls; the wish, for

practical reasons, to avoid enlarging the bureaucracy; and the psychological reason that most people would rather do a thing themselves even if someone else could do it better.

Collective bargaining experience affects legislation by influencing the climate of opinion and by influencing leaders in government, the judiciary, management, and labour. The philosophy and outlook of different presidents of the United States had affected the degree of intervention, Prof. Shister said, instancing the contrasting personalities of President Truman and President Eisenhower.

Most think that unions influence legislation more than management does, the speaker said, but in his opinion this view was quite wrong. Experience has shown that "organized labour in the United States cannot deliver the vote," he said. Unions have also shown a good deal of ineptitude in political action. Although management was not perfect in this field it was more adept than the unions. It had more money and press support, but its organization was also more effective for this purpose. The political influence of organized labour, Prof. Shister thought, was relatively small.

Question Period

When asked to enlarge upon what he had said about "union democracy," Prof. Shister said that labour leaders were better informed than the rank-and-file members, and understood better the limits to what management could or would give. The leaders could usually make a bargain that would suit the members better than one the members themselves could make. Except in the case of "sweetheart" contracts, which he thought were few and far between but where greater democracy would make for better contracts, Prof. Shister said that the influence of members on bargaining tended to be irresponsible and extreme.

A trade union delegate disagreed with the view that democratic procedures in unions did not allow officials to act responsibly. His own experience led him to believe that the members would be reasonable if the facts were explained to them.

Prof. Shister said that the ability of union leaders to carry the membership with them varied according to the size and intelligence of the membership and according to the "creative insight" of the leaders. In some cases where the members were intelligent and few in number the leaders might have little trouble.

Another delegate who disagreed that more democratic methods in unions would cause them to degenerate into anarchy expressed

the view that the trend in unions is toward a better educated membership; he thought this, not authoritarianism, was the answer.

Prof. Shister reminded the conference that he did not say that authoritarianism was the answer. But although he agreed that educational efforts had increased in unions, he did not think that they had increased enough, or could do so, to enable the members to see as much as the leaders.

J. C. Best

"In my view the case as to whether or not the Government is a good employer rests solely on the issue of effective negotiating procedures," said J. C. Best, National President of the Civil Service Association of Canada, in his address entitled, "The Government as Employer."

"Most of us are quite realistic enough to accept the fact that bargaining as it is spelled out in the various labour relations acts probably would not be too satisfactory in the government service," he continued. "We also recognize that any system must recognize the fact that funds, under our system of Government, are voted by Parliament, and any agreement reached would have to be subject to Parliamentary approval."

The view that the Government's "good employer policy" is enough to guarantee fair treatment for civil servants fails to take into account two important factors, the speaker said. The first of these is that employees are not concerned solely with economic gains, "and it has often been suggested that the possession of bargaining rights, the ability to stand up to the employer on terms of relative equality, in itself does much to increase the self-respect and working morale of a body of men and women."

The second, and probably more important factor, Mr. Best said, is that the "good employer policy" does not give civil servants any real assurance that their lack of bargaining rights will not result in economic loss.

"I cannot say in conscience that the Government on its record has been a good employer. True, private employers are only as good as their unions make them, but the Government does not even reach this cynical plateau," the speaker said. He added that "The whole system of employer-employee relations in the government service is rigged in the Government's favour . . . Action to equalize pay and conditions" is always too little and too late."

"Until the time comes (and it may be nearer than many of us realize) that the Government decides, in co-operation with its organized employees, to work out a system of bargaining or negotiating that is equitable to all concerned, we cannot consider the Government as being in the front rank of employers," Mr. Best said.

Much of his address was taken up with outlining the composition and history of the Canadian Civil Service and the history of employer-employee relations in the government service.

Mr. Best pointed out that if the armed forces, the Royal Canadian Mounted Police and the whole of the Public Service are included (but not counting the employees of the Crown companies), the Government is the employer of nearly 500,000 Canadian citizens, and is by far the biggest single employer in the country. "Yet in relation to its other identities and functions, the Government treats its role as an employer as a relatively minor one," he contended.

The Government as an employer has no clearly defined personnel policies and procedures, he complained. "The basic characteristic of the Government in employment matters has been a strong tendency toward expediency," he asserted. He considered it strange that "the public can remain so basically indifferent to the whole concept of the Government's role as employer."

Mr. Best then dealt with the functions of the Civil Service Commission, the Treasury Board, the departments, and the National Joint Council. Finally he outlined the character of, and the part played by the various employee organizations in the civil service.

Although conceding the value of the Civil Service Commission in regard to appointment, promotion, classification, training, etc., he said that "in the economic areas of employer-employee relations it is, to the employee, a severe handicap and a roadblock to successful negotiations . . .

"As the most powerful and important committee of Cabinet, the Treasury Board and its staff are deeply involved in personnel administration," he pointed out. "Both before and after money is voted by Parliament, Treasury Board has an influence on all personnel policies proposed by the Civil Service Commission that will result in the expenditure of public funds."

Although expert knowledge in matters of organization and scales of pay lies with the Commission, the ultimate power of decision is with Treasury Board. "In effect, the Commission has responsibility without power and Treasury Board has the power but not the responsibility for civil service matters," Mr. Best said.

The National Joint Council was established in 1944, and "was the Government's answer to the demand for something to replace or supplement direct representation from the employees." It consists of the Official side, on which there are 10 representatives, most of whom are deputy ministers or assistant deputy ministers; and the Staff side, on which there are 13 representatives drawn from the main national civil service associations, Mr. Best explained.

From the employees' point of view, the Council has a number of shortcomings, he commented. Some of these were: it is advisory only; the Government is, in fact, in a position to control the recommendations coming from the Council; the requirement that all recommendations must be unanimous tends to be stultifying; it usually takes a long time to implement its recommendations; all proceedings are confidential and staff side representatives must often make decisions without reference to those they represent; and, lastly, salary and wage questions are held to be outside the Council's terms of reference.

Mr. Best said that in spite of these faults, the Council had a part to play as a consultative body; but, he asserted, "not as the only formal means of employee-employer negotiation."

Speaking of the civil service employee's organizations, he said: "If the plethora of administrative and control agencies on the management side is confusing, the 'jungle' of employee organizations in the federal service also defies comprehension."

After implying that the rewards of public service did not compare favourably with those in industry, Mr. Best asked, "How then are these munificent rewards arrived at?" Answering his own question, he said: "Unilaterally." Government has in these matters "consistently refused to negotiate and often to even consult," he stated.

"Salary research up to and including 1957 was more or less on a hit or miss basis," he said, and no one, even in the Civil Service Commission, was at that time sure what criteria should be used in salary determination.

In 1957, "after much urging from the associations," the Government agreed to the establishment of a pay research bureau as part of the Civil Service Commission to do the statistical research work required to determine accurately the relation between civil service salaries for given jobs and their industrial counterparts.

Mr. Best said that the present situation in which "the whole system of employer-employee relations in the Government serv-

ice is rigged in the Government's favour," is "basically an unhealthy state of affairs."

In concluding, he said, "As the country's biggest single employer there is a definite onus on the Government to accept its responsibility to lead in introducing employee benefits. It is not enough for the Government to legislate morality into others, while at the same time using its sovereign power to deny its own employees a role in the determination of their salaries and working conditions."

Question Period

In reply to a question, Mr. Best said, "The strike is not an issue in the Civil Service generally at this time."

Mr. Best was asked whether his association had prepared any position as to what would constitute a satisfactory arrangement for bargaining with the Government. His reply was that it had prepared such a position, and that what it favoured was an arrangement similar to that which had been established in Great Britain.

Under this arrangement the Government negotiated with its employees on pay and working conditions, and if agreement was not reached the matter was submitted to a modified form of arbitration. The Government agreed not to reject the decision of the arbitrator, but the final decision was made by Parliament.

In reply to another question, Mr. Best said that the Department of Labour had hardly anything to do with the determination of civil service salaries and working conditions generally. Its only concern with staff matters is with reference to its own employees.

Prof. H. D. Woods

The system of industrial relations that exists in Canada today is sufficiently different from that found anywhere else to justify its being called unique, said Prof. H. D. Woods, who was the speaker at the conference dinner. His topic was, "Power and Function in Industrial Relations."

Prof. Woods said that the difference between the Canadian and the American practice in the field of labour relations is surprising, in view of the great similarities in the general economic institutions of the two countries and the presence of so many organizations of business and labour that operate on both sides of the international boundary.

He contended that "the legal framework which we have developed in Canada to deal with collective bargaining has, on the whole,

been less favourable to the emergence of strong unions and effective collective bargaining than in the American case."

The main reason for this, Prof. Woods said, is that the power of the private parties has been restricted much more in Canada than in the United States, while at the same time the function of the state has been much larger.

"In the United States the constitutional allocation of function has placed labour relations largely in federal hands. This is the reverse of the Canadian system, where the provinces are predominant. The effect this difference has had on the growth of strong or weak unions and the character of collective bargaining has not been measured. But logic as well as some spotty evidence indicate that collective bargaining is being confined within provincial boundaries in some cases where it would develop on a broader scale," the speaker said.

He mentioned three other factors that helped to explain the different development in the two countries. One of these factors was the requirements regarding membership support in certification procedure in some provinces. Another was that, owing to the imposition of compulsory delays on the use of economic force in Canada, the interference with negotiations was much more drastic than in the United States, where this restraint did not exist. A third factor was that he Canadian practice of imposing the no-strike ban, coupled with compulsory arbitration of disputes during the life of an agreement, had sharply reduced powers that were still available to the parties in the United States.

Prof. Woods said that the effect of the retention of the right to strike on grievances must be of great importance to American unionists in actual negotiation.

"A comparison of the system of industrial relations in the two countries suggests that in the United States public policy is firmly based on effective collective bargaining which leaves the major role to unions and management, whereas in Canada the private function has been sharply curtailed by the expansion of the functions of public boards and officers carrying out public policy formulated by 11 independent governments.

"The effect of this concentration of power and function in the hands of the various governments and their agencies, and the general constitutional balkanization, is hard to determine. But certainly the experiments in recent years in several provinces suggest that we are moving further along the road to state control and to diversity on a regional or provincial basis.

"The idea of a national pattern of industrial relationships worked out freely by unions and management appears to be becoming less and less possible as time passes," he said.

Prof. Woods was careful to say, however, that he did not suggest that legal framework of industrial relations that had developed in Canada had been "the result of calculated policy decisions against labour unions." Rather, he thought, it had been "the fruit of fortuitous circumstances such as the constitutional allocation of jurisdiction over labour matters which had made it possible to contain growing union power behind provincial boundaries."

He thought that it also reflected the general predisposition in Canada to assign a larger role to government than in the United States.

It might also, he thought, indicate "the low level of theorizing in this country about a philosophy of business and of labour-management relations." He said that we in Canada are pragmatists, and we have not been much concerned with long run impact.

The speaker remarked that in Canada the growth of labour legislation had been more steadily in the same direction than in the United States, where, as Prof. Shister had said, it had been inclined to veer alternately in favour of labour and management. But he said that in Canada, as in the United States, changes in industrial relations came sporadically and were largely induced by crises.

Prof. Woods said that in referring to the Canadian system of industrial relations he meant "the established machinery of state intervention in the relationships which come into being because of industrial and commercial employment." He said that although the provincial and federal departments of labour were organized in various ways, "the fact remains that the scope of governmental function in labour relations has expanded tremendously, and is not likely to decline. If anything, it will increase."

Labour relations, he said, involved a struggle for power, with labour, employers, and governments all trying to shift power in their respective directions. This was not peculiar to the labour relations field, though some of the devices used in that field were unique. These included: on management's side, discipline, dismissal, discrimination, intimidation, the run-away plant threat, and the lockout; on the union side, slow-downs, picketing, boycotts, intimidation, strikes, and so on.

The key to an understanding of the reasons why these unique devices were used lay in the unique nature of the employ-

ment relationship itself. "The fact that the thing bought and sold is labour effort or work . . . that it is delivered over time and only through the physical presence of the labourer, and that it is variable as to quantity and quality, and must be integrated with machines, materials, and the labour of others, distinguishes the labour market from all others," Prof. Woods said.

"Much of the conflict between unions and management concerns the degree of control over the process of changing the rules that is to rest with management, or with collective bargaining involving the union," he pointed out. This conflict becomes particularly difficult whenever management tries to regain lost ground, as was shown in the last U.S. steel strike, where the work rule issue was so important.

Unions start from nothing, grow, and reach a kind of maturity; but there is no permanent stability in labour relations, the speaker said. The reason for this is that "the problems are constantly changing, new issues are emerging, and new solutions have to be found. The social problems of industrialism do not disappear when resolved, they are reborn, or evolve to new forms as industrialism itself changes. The most we can expect in a relatively free society is a kind of moving equilibrium . . ."

The equilibrium between labour and management may be stabilized for a time by a number of devices, of which the certification of unions and the agreements signed by unions and management are examples. The respective roles of the two parties and of the state may also be stabilized by public policy reflected in legislation. The role of labour relations boards and minimum wage laws are examples of ways in which industrial relations are influenced by legislation.

However, the speaker pointed out, "the state leaves the determination of working conditions and wages and hours to the unions and management, where collective bargaining is operating, and to individual negotiation where it is not."

As an interesting mixture of private and public determination of the terms and conditions of work, Prof. Woods mentioned the Quebec Collective Agreement Act, under which a private agreement negotiated by a union or unions with a group of employers may be extended by law to cover the whole industry.

"Much more important in the unique Canadian system is the use of the delay on the strike and compulsory conciliation. I suggest that we have never quite made up our minds why we continue to use these devices," he said. "An equally important

question to ask is whether in fact our elaborate system of compulsory conciliation produces the results claimed."

It is suggested from time to time that the public is concerned with the effect that the terms of settlement may have on prices, employment, and the like; yet the public is quite willing to accept the results of private bargaining that produces a settlement without resort to conciliation. Clearly the ground of public interest in the settlement of a dispute must fail unless it can be shown that disputes that might end in a strike have an effect on prices more important than those that are settled without a strike. No logical case has been made out for general compulsory intervention to prevent strikes on this reasoning, Prof. Woods contended.

There are cases in which there is clearly ground for state intervention, however, he said. "Public intervention in Canadian railway disputes is inevitable simply because of the enormous role played by this form of transport in the economy, and because the employers are largely deprived by public policy of freedom to adjust freight rates upon which their revenues depend." In such cases the Government must intervene because collective bargaining cannot work properly, Prof. Woods said.

Cleve Kidd

In a democracy the role of government in industrial relations should be to give positive encouragement to direct collective bargaining between management and unions on the highest level that the maturity of both sides will permit; but this is the reverse of what is happening in Canada today, said Cleve Kidd in his address to the conference.

Mr. Kidd, Canadian Research Director of the United Steelworkers of America, spoke on "A Union View of the Role of Government in Labour Relations."

"At a time of growing Canadian unity, our balkanized methods of handling industrial relations are encouraging enmity and dissension;" our laws and the way they are administered more and more favour management; the certification procedure, instead of encouraging collective bargaining is restricting its scope; and our conciliation procedure is becoming less and less a proper process for encouraging collective bargaining and more and more a device for aiding management manoeuvres, he contended.

Although it might have been the original intention of government to interfere as little as possible in trade union affairs, he said, this attitude soon changed to the view that it would be in the best interests of unions, management and the public to

establish rules prescribing the activities that both parties directly involved in industrial relations might pursue.

The federal Industrial Disputes Investigation Act of 1907 dominated government attitudes toward industrial relations for close to half a century, Mr. Kidd said. These attitudes, in summary, included the assumption "that government should have nothing to do with problems of union recognition, with the rights of unions or managements, and should not openly encourage or discourage union organization. The sole function of government arose in the latter stages of the collective bargaining processes, when it took all possible action to prevent strikes and lockouts.

"This theory of the role of government in industrial relations has resulted in some legislation that is unique in political democracies," he continued. "I refer to the compulsory conciliation procedures that are common to both federal and provincial jurisdictions. It has also resulted in the common usage of police in strike situations—almost invariably to protect the interests of management. The police and the government came to be viewed by labour as tools of management," and this, Mr. Kidd believed, has seriously impaired and will eventually destroy government's effectiveness in mediating labour-management disputes.

The advent of industrial unionism in Canada in the 1930's drastically changed the labour situation, but it was not until 1944 that the federal Government introduced new regulatory legislation (Order-in-Council P.C. 1003) that set up certification procedures and recognized the right to organize. The wartime procedures were made permanent by the Industrial Relations and Disputes Investigation Act of 1947, Mr. Kidd related.

This Act and the discussions that led to its passing made it clear that the main responsibility for labour relations lay with the provinces, and for some time afterwards "most provincial legislation was closely patterned after the federal Act, and by and large we had uniform procedures across the country," he said. Although this was still essentially true, uniformity is increasingly breaking down, and if this continues it will lead to a "hodge-podge of provincial procedures and requirements."

Although some would say that this is inevitable, Mr. Kidd said, he hoped that this view was wrong, and that the British North America Act could be amended to allow greater uniformity to be established.

Although labour might have gained by being granted compulsory certification, he contended that the restrictions and com-

pulsions contained in legislation passed in 1944 and afterwards have placed labour in danger of being rendered ineffective.

Labour gained mandatory recognition at a cost of inhibitions and prohibitions such as compulsory conciliation; compulsory arbitration of grievances (in which he said he believed Canadian legislation was unique); hemming in, restricting and hedging the right to strike; interference with labour's jurisdictional problems; and other matters, such as the licensing of unions, as prescribed in Newfoundland.

"Some of the above constitute clear violation of fundamental democratic rights," Mr. Kidd contended.

Although he did not deny that the legislation that gave recognition to the right to organize might on the whole have contributed to the growth of unions, he thought that economic influences were probably the most important contributing factor.

Legislation providing for mandatory union recognition had been of doubtful value to unionism, he implied. There appeared to be justification for the belief that certification procedures have really been directed toward making strikes for recognition illegal rather than to encourage collective bargaining.

Mr. Kidd disagreed with Prof. Woods' view that the restrictive effect of Canadian legislation on labour had been unintentional. "Unions recognize that the rights of the community have to be respected and protected. But is this to be the excuse for legislative restrictions on, and erosions of other rights; i.e., the right to organize, to bargain collectively and to improve group standards by united actions?" he asked.

The speaker was highly critical of conciliation as it has developed in Canada and its provinces. He agreed that conciliation had served useful purposes in the past. It had, he said, allowed the parties to submit their cases to public scrutiny and had resulted in some degree of public understanding of the issues involved in major cases; and in the hands of competent chairmen (to say nothing of competent board members), conciliation boards have frequently resulted in fair and reasonable settlements. "They have, for the most part, promoted the cause of industrial peace."

But, although he had in the past been in favour of conciliation, his opinion had now changed, and he had come to think that it had outlived its usefulness and should be ended, Mr. Kidd said. He would favour its retention only when it was requested by either party "and that only in areas of major significance to the whole economy or in

the area of public service." He suggested that voluntary conciliation might be a sensible alternative.

Some of his reasons for this view were:

—The great scarcity of persons who are competent by training, temperament, or character to act as conciliation board chairmen. Mr. Kidd said that it would be hard to find a score of persons in Canada who were competent to fill the role of conciliator or mediator.

—Board chairmen are all too often subject to pressure from governments.

—The growing number and kind of restrictions that are being placed on labour unions; conciliation boards in themselves constitute a technique of delay, and conciliation has now assumed the role of another restriction.

—The degree of maturity reached by industry and unions in collective bargaining obviates the need for conciliation as we know it.

In enlarging upon these points, Mr. Kidd said with reference to the scarcity of persons suitable to act as conciliation board chairmen that he was not including the conciliation officials of the various departments of labour. The services of these men had been valuable, but he thought that they lacked power and that they should be given more scope.

He complained that the pressure that he contended governments often put on conciliation board chairmen strongly tended to be in favour of the employer.

"What do unions expect from governments in the realm of industrial relations?" he asked. First of all, he said, a minimum of interference. Pointing to the freedom from restriction in countries like Scandinavia and the United Kingdom, he said, "Only in countries like Canada and the United States, where the main concern of governments is apparently the protection of the privileges of private enterprise, are unions interfered with in every possible way short of complete state regulation.

"Next, unions expect governments to recognize their unquestioned rights to organize," Mr. Kidd said. "In this regard the concept of certification as now practised in Canada is open to serious question."

He said that the requirements of labour relations boards regarding eligibility for union membership, determination of bargaining units, proof of membership in a union, and the establishment of numerical requirements, interfere with legitimate trade union activities and have quite often defeated union attempts at organization.

"Unions also expect government to eliminate the types of legislation that have been

enacted on both coasts," the speaker continued. "These constitute direct and serious violations of basic human rights. A Bill of Rights that does not provide for the disallowing of such activities does not contain much practical substance."

Unions also want governments to establish industrial councils composed of government, employers and unions, patterned after those found in Sweden and Israel.

Another thing that unions expect from governments, Mr. Kidd said, is legislation forbidding an employer to try to open his plant by hiring strikebreakers when a strike begins. He pointed out that if compulsory certification, compulsory arbitration and conciliation were done away with, there would be no "illegal" strikes.

"We would also expect to see the use of injunctions in industrial disputes radically altered," the speaker said. "Injunctions have almost invariably been used for the purpose of limiting the effectiveness of strikes; in this sense they have facilitated the use of strikebreakers." Labour did not greatly object to the principle of injunctions, but if they were to be used fairly, he argued, the principle should be recognized that "the job of a wage or salary earner must be given equality of protection with the dollars invested by the employer."

Amendment of the B.N.A. Act to allow national collective bargaining with companies operating in more than one province was another of the things that labour expected, Mr. Kidd said.

"Finally," he said, "we would expect the type of government that labour could espouse to adopt a positive program of more even distribution of the wealth produced by our members; a program of full employment; a program of rising living standards; all these things we believe would be of the greatest help in reducing industrial strife; present day labour legislation with all its compulsory features would cease to exist as labour became an equal partner in the society it helped to produce."

Question Period

J. C. Weldon, chairman of the session, asked the speaker whether he considered that conciliation was merely useless, or whether he thought that it was positively harmful to the labour movement.

Mr. Kidd said that his thinking on the subject was not complete, and that it was not in agreement with the view generally held in labour ranks. He thought that the conciliation procedure often contained a good deal of "sound and fury, signifying nothing;" but at the same time it was sometimes valuable if one were thinking

of industrial peace. The time factor was almost always against the union, and helped management owing to the money it saved by delaying wage increases.

More than one of the delegates pressed Mr. Kidd to explain what he meant by his statement that government conciliation officers should be given more power. Mr. Kidd said that the conciliation officers of the labour departments were often very capable and that there were some outstanding people in the government service, and if they had been allowed to develop their function they might have rendered conciliation boards unnecessary. He said that perhaps he ought not to have used the word "powers." Perhaps what he really meant was an extension of influence. These conciliation officers were not used as much as they should be. Most conciliation board chairmen were not conciliators. He did not suggest, he said, that all types of conciliation should be wiped out. He agreed that conciliation officers should not make recommendations, but he thought they should act as mediators.

In answer to another question, Mr. Kidd agreed that it was hard for the labour and management representatives on conciliation boards to be impartial, and he also agreed that these two members should be dispensed with.

Prof. Woods disagreed with this view. He said that his experience with such boards had been that the party members of a board were valuable to a chairman as links with the respective parties, in communicating with and influencing them. "Let's get rid of this nonsense of having three impartial people on a board," he said.

Mr. Kidd said that he did not think the two members were needed for the purpose Prof. Woods had mentioned, because it could be effected in other ways. He thought, however, that the two members were useful in doing a reporting job for their respective parties.

When asked to amplify his statement that legal requirements regarding certification had often defeated union attempts at organization, Mr. Kidd said that he did not see why there should be any legal requirements regarding majorities in a bargaining unit. "I don't think apathetic people have any rights," he said.

Sharman Laerie

Our laws were drawn up for industrial unions, and they do not take into account the peculiar circumstances of the craft unions in the construction industry, who are in complete conflict with these laws in their method of operation, said Sharman K.

Laerie, who gave the last address of the convention. The title of his address was "A Business View of the State Function in Labour Relations".

Mr. Laerie is Manager and General Counsel of the Niagara Industrial Relations Institute.

A satisfactory certification procedure for construction unions is almost impossible to devise, owing to the temporary nature of the employment about which they have to bargain, he said. Something must be done to cure this, the speaker said, suggesting that such unions might be granted immediate, temporary bargaining rights with provision for re-examination later.

The conciliation procedure required by law also militates against construction unions, Mr. Laerie said. He questioned the suitability for such unions of the requirement that the two parties must enter into an agreement for a period of at least a year. He thought that the one-year contract requirement and conciliation procedure might be cut out for construction unions.

If these disabilities of the unions were dealt with, we should prohibit secondary boycotts, organizational strikes, and other like devices that are not a legitimate part of contract bargaining procedure, the speaker contended. The seeds of corruption on both sides lie in the present situation, and such evils as intimidation, "sweetheart contracts," blackmail, etc., are likely consequences. He predicted that the situation would get worse if not dealt with.

In a democracy the government should try so to influence the balance of power between contending parties that the net results were in the best interests of all citizens, Mr. Laerie said. This was the proper role of government in any case of contending interests.

He emphasized the importance of the shortness of the period during which the present relationships between labour and management have grown up. The present standing of unions originated a mere 25 years ago, and in that time there had been a great growth in union membership and in the strength of organized labour's position. This change had arisen out of a climate of public opinion that was favourable to unions and that was justified by the behaviour of employers. He suggested that the unions now enjoyed immunities regarding restraint of trade, trespass and assault.

In the light of the tremendous progress that had been made by unions and the revolution that had taken place in the relations between men and bosses during the past 25 years, the speaker questioned

the seriousness of the union restrictions that had been referred to by some who had spoken at the conference.

Turning to suggestions that had been made for curbing the power of unions, Mr. Laerie said that with regard to legal regulation of the internal affairs of unions, he regarded these as of very little importance in their effect on the balance of power between labour and management. The unions he dealt with were not guilty of the corrupt practices that this regulation was aimed at, but some corruption was to be expected when unions were as powerful as they are now and had so much money at their disposal. He should have thought, however, he said, that such unions as the UAW and the United Steelworkers would have welcomed this regulation.

Referring to the immunity of unions from action regarding restraint of trade, the speaker said that it was basic that almost every move of a union comes in conflict with the definition of "restraint of trade." But he objected when a group of employers were forced to break the law by the unions' power to impose certain conditions of work.

He was opposed to the proposal that unions should be broken up, or "fragmentized." The unions should be free to match the power of the employers. There was also the practical objection that any attempt to force such a breaking up would be impossible to administer: the unions would be able to find legal means to stop it.

Our law enforcement officers should be less willing than they are to excuse union persons for offences of assault and trespass during strikes, the speaker thought. He disagreed with statements that had been made that the police were at the picket lines to promote disturbances. They were there to prevent lawless violence. He referred to cases in which persons convicted of serious crimes committed during strikes had been let off with very light punishment.

The speaker condemned lawless violence during strikes, and he supported the magistrate who, in a recent case, had placed a union organizer on probation for two years, during which he was not allowed to approach within a block of any plant where a strike was going on.

Mr. Laerie said that he would be happy if the reforms he had suggested were made. If this was not done, he predicted that the trend of public opinion would tend to become more unfriendly to unions. But he counselled against the Government's "rushing in" to try to cure all these things.

He thought that our main plea to the public should be for it to influence the Government not to act too quickly.

Panel Discussion

The panel leader, Prof. W. Donald Wood, asked for the members' views on probable changes in labour relations during the 1960's.

Mr. Kidd said he suspected there would be an increase in government intervention in union affairs, but he did not fear this much. He thought it would stimulate the unions.

Mr. Laerie thought there might be "a little flattening out" in government intervention. The excesses on both coasts would tend to tone down such action.

Mr. Best thought that where there was a vacuum in labour relations there would be more government intervention.

Mr. Frankel said he thought something would develop in connection with emergency strikes.

Mr. Frankel was asked by a delegate to comment on the view that there is no such thing as public opinion, since newspaper and radio comment is overwhelmingly against labour. Mr. Frankel said that there is an area of opinion to overcome this bias. Public experience regarding strikes, for example, affected public opinion.

Messrs. Kidd and Laerie were asked what they thought of the suggestion that industrial relations boards should give rulings regarding bargaining in good faith.

Mr. Laerie did not think it would be a good thing. He said that it was hard to define "bargaining in good faith." Mr. Kidd said that in some areas he thought it could be defined; for example, where an employer made a plea of inability to pay without giving any evidence to support it. He thought that the Kaufman strike* was a clear example of bad faith. Mr. Laerie said that not many employers use the Kaufman approach, but he asked why Mr. Kaufman should not have demanded a bond from the union as security against injury to his business.

*Strike by members of Local 88, United Rubber Workers of America, at Kaufman Rubber Co. Kitchener, Ont., for union recognition, a modified union shop, check-off of union dues, and wages and hours comparable to those provided in other URWA agreements in the province. Workers involved, at the maximum, numbered 575. The union had been certified in 1945 and had been trying since then to conclude a collective agreement with the company. The owner demanded that the union post a \$25,000 bond to cover possible damages during this or any future strike. The strike began June 25, 1960 and is considered to have ended on August 17, by which time 82 per cent of the employees were back to work.

One of the delegates who was well informed on industrial relations matters said that there were few requests for rulings regarding bargaining in good faith. They were usually made in cases where there was a clear-cut refusal by an employer to meet the employees' representatives. He added that rulings were not given until they were asked for.

A delegate suggested that there would in the future be an increased pressure on government to take a stronger hand in labour relations in regard to unemployment, the competition of imports, etc. He asked for Prof. Shister's opinion on this.

Prof. Shister said that when he predicted the day before that the next 10 years would

be a period of dominant prosperity he had pointed out that this did not preclude recessions. Among the factors that he thought would make for more government intervention were that the government was expected to promote full employment, and that the economic growth of Russia would add to the pressure for full employment and a more rapid rate of economic growth than the present one. Pressure on wages by unions, and thus on prices, would also cause hostility to unions that would force government activity, he thought.

Prof. Wood said that fiscal, monetary and welfare policies would have a big influence on labour relations.

Annual Conventions of the New Brunswick and Newfoundland Federations of Labour

Question of political action occupies prominent place in discussions at both meetings. Presidents of both groups for coming year different from 1959 chiefs

The question of political action by the labour movement in Canada occupied a prominent place in the discussions at the 4th annual convention of the New Brunswick Federation of Labour at the end of August, and at the 24th annual convention of the Newfoundland Federation of Labour in July.

Both Federations will have a new president at the helm during the coming year,

although the man elected to head the New Brunswick Federation is the same one who had occupied the post for 27 consecutive terms until his defeat last year.

The Newfoundland Federation had to elect a new president because the one who held the office in 1959, being a member of the International Brotherhood of Teamsters, was forced to resign when that union was expelled from the CLC in April this year.

New Brunswick Federation of Labour

Defeated last year after 27 consecutive years in the post, James A. Whitebone of Saint John, N.B., was again elected President of the New Brunswick Federation of Labour at its fourth annual convention, in Campbellton, August 29-31. He succeeds Angus MacLeod, also of Saint John, victor over Mr. Whitebone at the 1959 convention (L.G., Oct. 1959, p. 1018), who did not seek re-election.

In two main resolutions the Federation condemned a candy factory in St. Stephen, N.B., for blocking attempts by the Bakery and Confectionery Workers' International Union of America (CLC) to organize its workers; and urged the Government of Premier Louis J. Robichaud to "abolish the immoral practice" of indiscriminate firing of employees after a change of administration, or face exposure of the "archaic and vicious political patronage system being followed by the Government of this province."

Organized labour "cannot accept the principle of discharging competent, trained employees who have given faithful service to the public, on the basis of the opinion of non-elected citizens who make up the patronage committee of the various electoral districts," the second resolution declared.

Delegates to the convention heard R. P. Rintoul of Ottawa, National Director of the National Union of Public Employees (CLC), say that "research has proved quite satisfactorily" that while weekly salaries in Canada decreased 3.5 per cent last year, business profits jumped by 15 per cent. He thought this was evidence to dismiss the "myth" that higher labour costs are pricing Canada out of the export market. If salaries had increased as much as business profits, he contended, the additional money would have boosted domestic sales and reduced unemployment.

CLC Vice-President William Dodge told the Federation that the Canadian Labour Congress took part in the founding of the new political party to be formed by a merger of the CCF and labour, but it will not be a component part of it.

"Affiliates of the party," said Mr. Dodge, "will be the individual unions, not the CLC." But the CLC will extend full co-operation to the party, he stated.

To gain the presidency of the Federation, Mr. Whitebone defeated—on the first ballot—Phillip Brooker of Fredericton and Aurele Furlotte of Dalhousie.

Serving with Mr. Whitebone will be: Yvon Lanctin, Secretary-Treasurer; and Vice-Presidents M. J. M. Kenny, Ralph J. Boyd and Aurele Furlotte.

In other resolutions, delegates suggested that the Federation:

—Request the provincial Government to make funds available, through interest-free loans, to students wishing to attend college

who can show the need, promise, aptitude and necessary scholastic qualifications;

—Petition the Government to have the Workmen's Compensation Act amended to include deafness as a disability;

—Seek legislation that would provide free school books to all students from Grades 1 to 13;

—Attempt to have the Government institute a general minimum wage order of \$1.25 an hour, an eight-hour day and a 40-hour work week;

—Demand full bargaining rights for the Public Works Employees' Union;

—Seek to have the city of Moncton included in the cost-of-living index so that a more accurate cost of living can be determined for the Maritimes;

—Urge the provincial Government to enact an equal pay for equal work act to maintain parity among workers and to eliminate what the Federation termed "an unfair labour practice."

Newfoundland Federation of Labour

Speculation that the election of officers at the 24th annual convention of the Newfoundland Federation of Labour was a struggle between factions supporting and opposing political action by the Federation—an election that was won by the supposed supporters of political action—was laid to rest in a statement released by the new executive after the close of the convention. The convention was held in St. John's from July 11 to 14.

"The Executive of the Newfoundland Federation of Labour were surprised at . . . the impression that the recent convention faced a political issue and that the election of officers was primarily a decision on the political stand of the Federation," the statement said.

"We hasten to add," said the Executive in its statement, "that we are not concerned by what any person might think about the right of labour to become involved in politics. We are supposed to have political freedom in this country, and if we decide to take part in politics that is our right as free Canadian citizens."

At the convention, Esau E. Thoms was elected President of the Federation over Steve Neary, who had been acting as caretaker-president of the Federation. Mr. Neary, who was defeated at the 1959 convention by Larry Daley, was appointed to replace Mr. Daley on the latter's resignation after the expulsion of his union, the Brotherhood of Teamsters, from the Canadian Labour Congress. Mr. Daley was organizer for the Teamsters in Newfoundland.

The entire executive for 1960-61 is new. Joe Gillies of the Retail Clerks was elected Secretary-Treasurer by acclamation. Elected Vice-Presidents were: Calvin Normore, Western Vice-President; James Mullett, Central Vice-President; and Larry Dobbin and Lester Fairwell, Eastern Vice-Presidents.

The 83 delegates to the convention approved unanimously and without discussion a resolution demanding that the provincial Government "repeal all labour legislation passed since March 1, 1959." The legislation was an outcome of the strike of loggers in the 1958-59 winter.

Presented by the St. John's District Labour Council, the resolution termed the laws in question "the most oppressive in force in any province, state or country in North America" and asked the Government to "introduce legislation restoring the labour statutes which were in effect" prior to the woods dispute of 1959.

Delegates gave the stamp of approval to a new labour weekly newspaper, *The Examiner*, test copies of which were distributed at the convention. The newspaper will be supervised by an NFL-named editorial board.

In another resolution, the Federation requested the Government to establish a university and a vocational training school at Corner Brook to serve the central and western parts of the province.

Other resolutions approved called for the raising of the minimum wage to 75 cents and \$1 an hour, the raising of workmen's compensation benefits to correspond with increases in the cost of living, and for extension of the Act providing compensation for fluorspar miners at St. Lawrence who contract lung disease to all mine workers in the province.

Guest speakers and observers at the convention included William Dodge, Executive Vice-President of the Canadian Labour Congress, and Hon. Charles Ballam, Newfoundland Minister of Labour.

The 1961 convention of the Federation will be held in Grand Falls, where the Federation was founded 24 years ago.

92nd Trades Union Congress

Delegates support two contradictory positions on defence and foreign policy but almost unanimous on other matters; approve General Council recommendation that unions take disciplinary action against stewards who incite unofficial strikes

The 92nd Trades Union Congress, which met in Douglas, Isle of Man, from September 5 to 9, in voting on defence and foreign policies supported two stands that observers believed to be mutually exclusive.

On other matters, however, the Congress was for the most part unanimous in its decisions.

The Congress accepted a recommendation from the TUC General Council that affiliated unions take disciplinary measures against shop stewards who incite unofficial strikes. It adopted two resolutions calling for action to stimulate organization of the unorganized but defeated a proposal to give the General Council authority to merge unions with conflicting jurisdictions.

The TUC reaffirmed its belief in the principle of public ownership of the means of production, distribution and exchange, and reiterated its determination to seek higher wages.

The Congress marked the retirement of Sir Vincent Tewson as General Secretary of the Trades Union Congress after 14 years in the position. He is being succeeded by George Woodcock, Assistant General Secretary since 1947. Mr. Woodcock's election was by acclamation.

At the close of the Congress, the General Council elected Ted Hill of the Boiler-makers as its Chairman. Mr. Hill will thus be President of the TUC for the coming year and will preside at the 1961 Trades Union Congress.

Almost 1,000 delegates attended, representing 184 affiliated unions with a membership of 8,128,446, a drop of about 51,000 during the year. About 4,000 of this loss was the result of the disciplinary disaffiliation of the National Amalgamated Stevedores and Dockers. Most of the remainder was in unions representing coal miners and railwaymen.

Presidential Address

In his presidential address at the opening session of the congress, Claude Bartlett, who as Chairman of the TUC General Council presided over the proceedings, condemned unofficial (wildcat) strikes, called for a quickened pace of trade union education, warned that union services do not come at cut-rate prices, and appealed to the country's unions to attract into their ranks the "black-coated, white-collared and white-coated workers who at present stand a little aloof."

Mr. Bartlett, President of the Confederation of Health Service Employees, is the first General Council Chairman in 30 years who is not employed as a full-time union official.

He warned that workers who engage in unofficial strikes risk doing harm not only to their own union but to the whole trade union movement. (Unofficial strikes have had a bad effect on public opinion recently.) But much worse is the emergence of "an organized conspiracy to defy union rules that have been democratically decided upon and to ignore the agreements that have been properly negotiated for settling grievances and avoiding disputes," he continued.

"Those whose recklessness or disregard for trade union democracy leads workers into a series of dog fights are damaging the reputation of the tens of thousands of workshop representatives who, day in and day out, quietly and without fuss or bluster, are settling scores of problems which, without their skill and sagacity, would lead to chaos in industry."

A union member "does not relish becoming one of hundreds of trade unionists to be flung out of work and to have their earnings cut at a few hours' notice because a dozen men in another workshop have

downed tools before getting down in an orderly way to the settlement of a dispute that has angered them."

The loyal trade unionist is ready to fight to defend a principle or establish a right, the TUC President said. "He sees the strike as an indispensable part of the trade union armoury... But its value depends not on how often it is used but on how wisely it is used as a last resort rather than an opening gambit.

"If there has to be a fight, the good trade unionist wants it to take place on a battleground that he has helped to choose, with the issues clear and with all the resources of the union mobilized and marshalled for success."

If unionists wanted to deal with the "deliberately mischievous minority" they must equip the conscientious majority with all the knowledge they need. There must be an even greater enlargement of the educational and training facilities that trade unions provided, Mr. Bartlett said, and unions would have to add to the number and range of the specialists they use as managements draw increasingly on the services of specialists.

Members ought to be kept up to date on the main features of union policy as it developed. Too many of them at present relied on newspapers for accounts of what was happening in the industrial field.

Where union meetings were well attended, the task of keeping members informed was not a difficult one; but where unions had ceased to attract substantial numbers of members to meetings, the unions must not be slow to experiment with other ways of "spreading the news and collecting the views."

If lack of money was a barrier to the expansion of information, education and publicity services, "members must be told bluntly that powerful machines could not be bought at cut prices."

Some unionists were saying that a massive publicity campaign was needed to restore the movement's reputation, but the President believed that the answers to allegations that any trade unionists are guilty of unworthy actions must come from the organizations of which they are members, not from a campaign run by the movement as a whole.

Claude Jodoin

"Preservation of world peace in freedom and justice is the most important problem of our time," said Claude Jodoin, President of the Canadian Labour Congress, who was a fraternal delegate to the TUC.

"We can remain an effective force for peace only if we can stand together in the face of common dangers," he added. "Unity is the paramount issue in the free international labour movement.

"There may be different roads leading to the achievement of common goals; but if we remain divided and, as a result, paralyzed by futile discussion of the best methods of achieving these goals, then our battle is lost before it is even started," Mr. Jodoin said.

No single country and no single trade union organization by itself can hope to cope with the world's problems. "International action is a must."

Both the CLC and the TUC were part of the International Confederation of Free Trade Unions, he reminded the conference, and the CLC was determined to continue its support of the international organization.

Speaking on disarmament, subject of a long debate on the third day of the conference—Mr. Jodoin spoke on the second day—the CLC President told of his organization's many pleas to the Government to work for an agreement on the halting of nuclear tests and for negotiations to bring about the beginnings of mutual and total disarmament.

"While working for disarmament," he said, "we have realized long ago that if our efforts are to be successful, and the world is to be relieved of the mortal fear of self-destruction and to live in freedom and dignity, unilateral disarmament and neutralism in world affairs, far from being helpful in the struggle, are bound to have the opposite effect. (The day after Mr. Jodoin spoke, the TUC approved a resolution calling for unilateral nuclear disarmament by Great Britain.)

"We have urged a continuation of our traditional and historical alliances, while at the same time working within these alliances for the objectives that are so close to the hearts and minds of the millions of workers throughout the world."

Defence Policy

The Congress voted both for and against atomic weapons for Britain, approving a General Council policy declaration that would have the nation retain nuclear weapons in its arsenal and also a resolution that called for complete rejection of any defence policy based on the threat of the use of nuclear weapons.

The majority in favour of the resolution, however, was greater than that in support of the official policy. The vote on the resolution was 4,356,000 to 3,213,000, a majority in

favour of 1,143,000. The vote on the policy declarations was 4,150,000 to 3,460,000, a majority of 690,000.

(TUC unions vote on the basis of their total membership and each union casts its vote as a block.)

The explanation for this confusing and apparently contradictory stand is that one of the largest affiliates, the Amalgamated Engineering Union, with 908,000 votes, cast its ballot for both the resolution and the policy declaration. The Building Workers (83,000 votes) abstained on the declaration but voted for the resolution.

The resolution, moved by the Transport and General Workers' Union, expresses the belief that the defence and foreign policies of "the future Labour Government" should be based on:

—Complete rejection of any defence policy based on the threat of the use of strategic or tactical nuclear weapons.

—Permanent cessation of the manufacture or testing of nuclear and thermonuclear weapons.

—Pressing for the re-opening of discussions between nations at the earliest possible moment as the means by which world disarmament and peaceful co-existence can be most readily achieved.

The policy declaration, which was drafted by a joint committee of the TUC General Council and the National Executive Committee of the Labour Party, and approved by both the full Council and full Committee, proposes that:

—The British contribution to the Western armory in future be in conventional terms, leaving to the United States the provision of the Western strategic deterrent.

—No further nuclear tests be conducted by Britain but smaller (tactical) nuclear weapons (as well as the strategic deterrent) should continue to be manufactured exclusively by the Americans but deployed only under strict NATO control.

—Disarmament be thought of as an immediate and urgent necessity, not as a long-term goal.

Both the policy statement and the resolution agreed that flights from British bases of aircraft carrying nuclear weapons should be halted, that the establishment of missile bases in Britain should continue to be opposed, and that Communist China should be admitted to the United Nations.

The policy declaration called for a reform of NATO and revision of NATO strategy, but expressed continued loyalty to the Organization. The resolution made no mention of NATO.

Unofficial Strikes

By a clear majority, registered by a show of hands and not a recorded vote, the Congress adopted a report of the General Council recommending that affiliated unions take disciplinary measures, including expulsion if necessary, against shop stewards who persistently flout official union policy and advice, and call men out on strike before normal grievance and arbitration procedures have been given a chance to work.

A motion to refer the report back to Council, moved and seconded by Communists, was defeated.

The report was an interim one. At the 1959 Congress, a resolution on the subject of unofficial strikes had been rejected because it implied an attack on all shop stewards, and the General Council was requested to conduct an inquiry and present a report at this year's convention.

There were two main reasons for the inquiry; first, trade unionism was declining in public esteem; second, the indirect effects of work stoppages, many of them undertaken without executive authority, were increasing.

Immediately after adopting the report, the delegates unanimously approved a composite resolution expressing appreciation of the work of shop stewards, and calling for an extension of publicity services to increase public understanding of the work performed by trade unions.

The report conceded that there had been instances of mishandling of an industrial problem by a union representative. It spoke of muddle, duplication, and conflict through shop stewards' acting as though they were independent. Conferences of stewards of different unions were being convened, not only to bypass the negotiating machinery but to order strike action, even while official negotiations were going on.

But it pointed out that time lost in strikes last year, apart from the stoppage in the printing industry, which accounted for two thirds of the days lost and which was "official," amounted to an average of less than 30 minutes a worker in the year. And it suggested that a break in the normal pattern of collective bargaining is more likely to be due to faults of management—to hasty decisions and to the causing of rumours by withholding information.

Sir Thomas Williamson, leader of the National Union of General and Municipal Workers, who presented the report, denied that the General Council was attempting

The New General Secretary

The new General Secretary of the Trades Union Congress, George Woodcock, was Assistant General Secretary since 1947. He was the only candidate nominated to succeed Sir Vincent Tewson, who retired at the end of the 92nd Congress.

Mr. Woodcock was born in 1904. At the age of 13 he went to work in the Lancashire cotton mills. When he drew his first full week's pay he joined the Weavers' Union. After 11 years in the mills he won scholarships to Ruskin College and then to Oxford University, where he obtained a degree with honours in philosophy, politics and economics.

In 1936, he joined the staff of the TUC after a brief period as a civil servant, and was appointed secretary of the TUC's Research Department. He became Assistant General Secretary of the TUC 11 years later.

to dictate union policy. The report presented only a recommendation, and the Congress had no authority to make any union do anything.

"If the unions don't want to exercise any discipline, the TUC won't force them to do it," he said. "In fact, it can't do it."

But he pointed out how unofficial strikes had damaged the reputation of the trade union movement, raided union funds by their effect on groups of workers indirectly involved, and weakened the authority of union leaders.

Organization and Jurisdiction

Two resolutions calling for action to stimulate organization of the unorganized were adopted, one unanimously. But one asking for constitutional amendments to give the General Council more authority to bring together unions with competing jurisdictions was defeated.

A motion by the National Union of Vehicle Builders expressed serious concern at the need to recruit many thousands of non-unionists into the trade union movement and at the number of young people who were not trade union members. It called for an examination of the steps necessary to secure greater participation by young people in union membership and activity. The motion was carried.

The resolution that gained unanimous approval asked the Congress to note that the rapid growth of the clerical, technical and scientific labour force had not been matched by a corresponding increase in

trade union membership in those fields of employment. It urged the General Council to look into this question and encourage organizations catering to non-manual workers.

The spokesman for the union sponsoring the motion, the National Union of Bank Employees, warned the delegates against thinking that the trade union movement was all right because of 100-per-cent organization on the shop floors and in factories. "Production techniques are such that in a few years time you may find yourself with 100-per-cent support on the production side but with an army of non-unionists in the offices. If this happens, what will happen to your strength on the shop floor?" he asked.

The Constructional Engineering Union moved a resolution instructing the General Council, in view of the differences still arising between unions regarding membership problems, to look at the TUC's authority in relation to jurisdictional problems and prepare for presentation at the 1962 Congress.

The Tobacco Workers' Union moved an amendment calling for constitutional amendments to give the General Council authority to amalgamate competing unions. The General Council opposed both the resolution and the amendment, and both were defeated.

Public Ownership

A composite motion on public ownership, moved by the President of the Union of Shop, Distributive and Allied Workers, was carried unanimously.

It reaffirmed the TUC's belief in the principle of common ownership and democratic control of those sections of industry vital to the well-being of the country, and, recognizing the vital contributions that public ownership had to make to the solution of many problems facing the nation, called for extension of that principle on a progressive and selective basis. It also called for the General Council to prepare a comprehensive report on the subject.

The resolution further asked the Council to conduct a campaign to explain the moral and material benefits that would accrue to all sections of the community as a result of the application of the principle of control of the means of production, distribution and exchange.

Nationalized Industries

A composite resolution reaffirming TUC belief in a nationalized transport system was adopted. Carried also was a resolution expressing opposition to any attack by the

Government on the nationalized industries, particularly to decentralized control in the coal mining industry.

Economic Policy

The problem of the 1960's was to achieve a breakthrough to the abundance that would come as a result of scientific and technological advances, said J. A. Birch, Chairman of the TUC Economic Committee, when presenting his report to the Congress.

"I have come to the conclusion that governments are usually preoccupied with the economic problems of the previous decade. If the main problem of the fifties was how to secure stability, the main problem of the sixties is surely how to secure expansion," he said.

The TUC General Council, he said, would continue to urge on the Government a policy of expansion through means appropriate to the age.

It was as nonsensical to assert that demands for improved wages and working conditions were bringing the country to its knees as it was to say that the answer to all problems was wage increases, he said.

To critics who regarded the General Council's economic work as nonsense, Mr. Birch said the Council was trying to influence the economic conditions in which collective bargaining would be most effective. This was equally as important as collective bargaining.

A resolution expressing alarm at the decision of the Government to reduce the scale of necessary national expenditure without first examining the trend of capital investment in the private sector of industry was adopted.

Congress unanimously adopted a resolution reaffirming its determination to seek higher wages. The resolution condemned a society that maintained an illusion of prosperity on the basis of easy credit facilities, which, when they got out of hand, compelled the Government to adopt restrictive economic policies. The result of this was that workers were first run into debt and then put out of work.

Social Insurance and Industrial Welfare

A composite resolution on social insurance benefits was carried almost unanimously. It expressed grave concern at the present low level of retirement pensions and all national insurance benefits, and called on the Government to raise substantially the present retirement pension rates to a level "more consistent with the requirements of the second half of the Twentieth Century."

The Daily Herald

Faced with the choice of either relinquishing editorial control over the daily newspaper, *Daily Herald*, or seeing it close down, the TUC decided at the 92nd convention to give up editorial control.

The Congress signed a new 25-year agreement with Odhams Press under which the *Herald* is no longer obliged to support the specific policies of the Labour Party and the trade union movement. A written undertaking has been given by Odhams Press, however, that the paper will not abrogate the "general principles of the labour movement."

The *Herald* began in 1911 as a strike sheet. It was revived the next year by Ben Tillet, who in 1919 brought in Ernest Bevin. In 1929 Bevin brought the TUC into partnership with J. S. Elias (later Lord Southwood) of Odhams Press, forming the *Daily Herald* (1929) Ltd. Under the 1929 agreement the TUC controlled the paper's political purpose and Odhams was given commercial control.

In 1957, after the *Daily Herald* had been losing circulation since the late thirties, a new arrangement was made; a publishing licence was granted to Odhams Press by the *Daily Herald* (1929) Ltd. This meant more editorial freedom for the *Herald* and more financial flexibility for Odhams, which was enabled to operate the paper in conjunction with its other publications.

The paper continued to lose money, in recent months at the rate of £300,000 a year, and its circulation had fallen to one of the smallest of the 10 national dailies in the British Isles.

The 1957 agreement gave to both parties the right to give 12 months' notice of termination of the agreement. Under the new agreement, only Odhams has this right.

The TUC will continue to hold 49 per cent of the stock of *Daily Herald* (1929) Ltd., and will continue to appoint four directors to the board of the paper.

It also asked the General Council to attempt to obtain improvements in all social insurance benefits during the current financial year.

During the discussion of the social insurance and industrial welfare section of the General Council's report, a delegate complained of the way in which the Government was altering the basis of financing national insurance—away from the taxpayer and toward the employer-employee contributions.

Annual Report of U.K. Minister of Labour, 1959

The year 1959 began in the United Kingdom with a total of nearly 621,000 registered unemployed—the highest figure since 1947—but by July the number had fallen to 395,000. It then began to rise, and it reached 421,000 in December. But this was less than the usual seasonal increase and 111,000 fewer than in the preceding year.

These figures are taken from the annual report of the Ministry of Labour for 1959, a summary of which was published in the *Ministry of Labour Gazette* for June.

Owing to the high level of unemployment at the beginning of the year, the average total of unemployment was higher than in the previous year—475,000 compared with 457,000. But by the end of 1959 unemployment had become mainly a local problem.

The mild recession that began in 1958 extended into January 1959, but a period of rapidly increasing industrial activity followed, which culminated in November with a record total working population estimated at 24,385,000, of which 23,432,000 were in civil employment.

Overtime rose to a very high level and short-time working, which was heavy at the end of 1958, toward the end of 1959 had dropped to one of the lowest levels ever reached.

In spite of the usual seasonal decline between November and December, both the total working population and the number in civil employment were higher by 166,000 and 310,000 respectively than they had been at the end of 1958, and higher than in any previous year. All but 34,000 of the increase in civil employment occurred in the manufacturing industries, especially the metal-using industries. The main reductions were in coal mining, railways, agriculture and aircraft manufacture.

Almost the whole of the increase in the working population and 184,000 of the increase in civil employment was accounted for by women and girls.

At the end of the year there were 88,000 more unfilled vacancies than in 1958 and 15,000 more than in 1957. Local shortages of labour were beginning to appear, especially of skilled engineering workers, and throughout the year the demand for scientists and professional engineers greatly exceeded the supply.

Jobs were found by the Ministry for nearly 1½ million men and women, including 72,500 disabled who were found ordinary employment and 1,100 who were placed in sheltered employment.

About 5,100 workers were trained in various skilled trades through the Ministry's vocational training schemes, which were directed mainly toward resettling disabled ex-soldiers and unemployed workers who needed special help. Courses of rehabilitation were given to more than 10,200 men and women—more than in any previous year.

Important labour legislation passed during the year included the amendment of the Factories Acts, 1937 and 1948, which introduced new provisions for the health, safety and welfare of workers (L.G., Feb., p. 186; Nov. 1959, p. 1188). The Terms and Conditions of Employment Act, 1959, repealed the Catering Wages Act, 1943, and brought the hotel and catering industry under the more flexible provisions of the Wages Councils Acts, 1945 to 1948.

The Terms and Conditions of Employment Act also set up a procedure for referring "claims" by representative organizations of employers or employees to the Industrial Court, by means of which an employer could be required to observe the recognized terms and conditions of his industry.

Most of the claims for increased wages, reduction of hours, or other conditions were settled by direct negotiation between the parties or through the industry's voluntary negotiating machinery. The Ministry's conciliation officers, however, brought about settlements in 173 disputes. Other disputes referred to the Ministry that were settled by voluntary arbitration numbered 90, and 88 were settled by the Industrial Disputes Tribunal before it came to an end in February. (L.G., 1958, p. 1389).

The total of 5½ million working days lost in industrial disputes was more than 50 per cent greater than in 1958. This was accounted for by the national printing strike, in which 3½ million days were lost.

Increases in wages and reductions in working hours were the most common subjects of negotiation. Nearly 4½ million wage earners had their weekly rates of wages increased; about 357,000, compared with 339,000 in 1958, had their weekly hours reduced by an average of one and a third hours.

On November 20, the Ministry reverted to its original title after a period of more than 20 years. The Minister of Labour Order, 1959, provided for the transfer on October 21 of the functions of Minister of National Service to the Minister of Labour; and the Ministry of National Service was dissolved by the Ministry of National Service (Dissolution) Order, 1959.

Industrial Fatalities in Canada during the Second Quarter of 1960

Deaths from industrial accidents decreased by 29 from the previous quarter and by 115 from the second quarter of 1959. Of the 219 fatalities during second quarter this year, the largest number, 37, occurred in construction and logging

There were 219* industrial fatalities in Canada in the second quarter of 1960, according to the latest reports received by the Department of Labour. This is a decrease of 29 from the previous quarter, in which 248 were recorded, including 22 in a supplementary list. In the second quarter of the previous year, 334 fatalities were recorded.

During the quarter under review, there were two accidents each resulting in the deaths of three or more persons.

The first of these cost the lives of six persons. On April 13, six loggers were drowned when the boat in which they were returning from their logging camp on Sechelt Inlet, B.C., capsized.

The second accident caused the loss of four lives. On June 20, while returning to base camp from the north end of Stuart Lake, B.C., four forest assistants were drowned when their boat capsized.

Grouped by industries (see chart page 1022) the largest number of fatalities was recorded in logging and in construction, each of which had 37. In logging, the 37 fatalities represented a decrease of 1 from the 38 that occurred during the same period in 1959 and of 5 from the 32 that were recorded during the first quarter of 1960. In construction, 37 fatalities were distributed as follows: 22 in buildings and structures, 9 in highways and bridges and 6 in other construction. For the same period last year, fatalities in this industry numbered 70: 44 in buildings and structures, 20 in highways and bridges and 6 in other construction. During 1960's first quarter, 27 fatalities were listed: 13 in buildings and structures, 12 in highways and bridges and 2 in other construction.

There were 35 fatalities in the mining industry during the quarter: 24 in metal mining, 7 in coal mining and 4 in non-metallic mineral mining. During 1959's second quarter, 43 fatalities were reported,

*See Tables H-1 and H-2 at back of book. The number of fatalities that occurred during the second quarter of 1960 is probably greater than the figure now quoted. Information on accidents which occur but are not reported in time for inclusion in the quarterly articles is recorded in supplementary lists and statistics are amended accordingly. The figures shown include 63 fatalities for which no official reports have been received, including 23 in agriculture alone.

of which 32 were in metal mining, 4 in coal mining and 7 in non-metallic mineral mining. Thirty-four workers were killed in this industry in the first quarter of 1960: 21 in metal mining, 5 in coal mining and 8 in non-metallic mineral mining.

During the quarter, accidents in the transportation, storage and communications industry resulted in 29 deaths; 8 of these were in railway transportation, 6 each in water transportation and local and highway transportation, and 5 in air transportation. During the same period last year, 42 deaths were reported, of which 16 were in local and highway transportation, 10 each in railway and water transportation and 3 in air transportation. Accidents during January, February and March of 1960 caused the deaths of 44 workers; 16 of these were in local and highway transportation, 12 in railway transportation, 10 in water transportation and 3 in storage.

Twenty-three fatalities were recorded in agriculture, an increase of 3 from the 20 that occurred during the same period in 1959 and of 13 from the 10 that were listed during the first quarter of 1960.

An analysis of the causes of the 219 fatalities during the first quarter (see chart page 1022) shows that 63 (29%) were

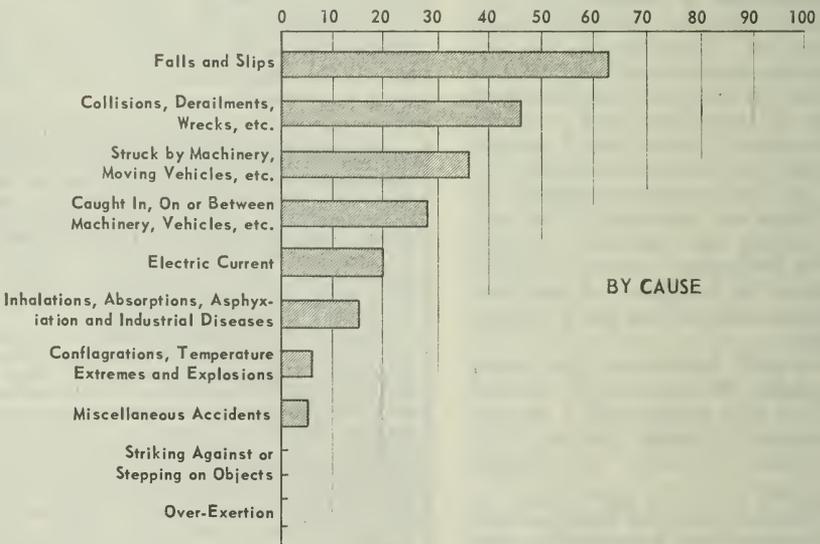

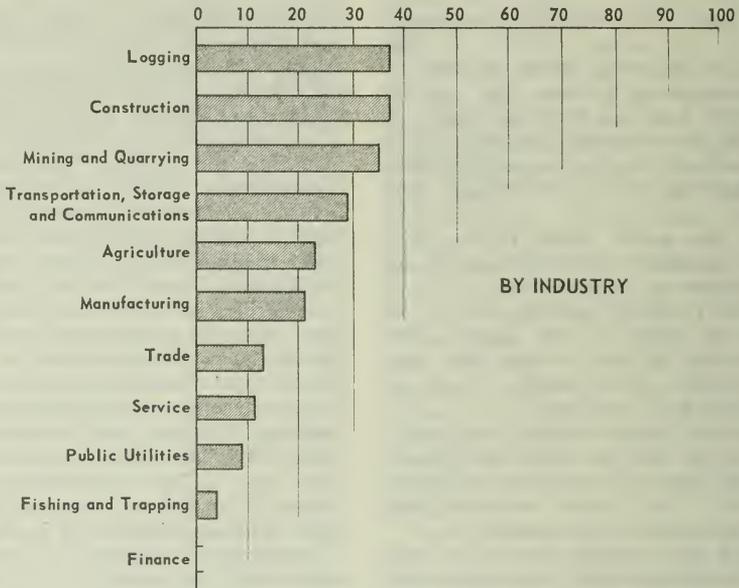

(Continued on page 1068)

The industrial fatalities recorded in these quarterly articles, prepared by the Working Conditions and Social Analysis Section of the Economics and Research Branch, are those fatal accidents that involved persons gainfully employed and that occurred during the course of, or arose out of, their employment. These include deaths that resulted from industrial diseases as reported by the Workmen's Compensation Boards.

Statistics on industrial fatalities are compiled from reports received from the various Workmen's Compensation Boards, the Board of Transport Commissioners and certain other official sources. Newspaper reports are used to supplement these data. For those industries not covered by workmen's compensation legislation, newspaper reports are the Department's only source of information. It is possible, therefore, that coverage in such industries as agriculture, fishing and trapping and certain of the service groups is not as complete as in those industries that are covered by compensation legislation. Similarly, a small number of traffic accidents that are in fact industrial may be omitted from the Department's records because of lack of information in press reports.

INDUSTRIAL FATALITIES IN CANADA

Second Quarter of 1960

Older Worker Survey by Edmonton Club

Few age restrictions on hiring revealed in replies to questionnaire by members of Edmonton service club. Average of 16 per cent of employees of respondents' firms over 65 years of age, and average of 6 per cent more than 75 years old

"About one Canadian in four is over forty, one in five is over fifty, and one in nine is over sixty. Obviously it is of great importance that so many of our population must not be thrown on the scrapheap should they lose their jobs," said the *Edmonton Journal* in an editorial on December 9 last year.

"Many employers who have a rule against hiring anyone over 30 or 40 admit that, on the ground of performance, there is no justification for that policy. However, they claim that pension fund considerations dictate it.

"It does not seem beyond ingenuity to solve this problem, perhaps through larger contributions by the worker, or a special fund for those hired over forty," the editorial said.

At the time it was published, a large service club in Edmonton was preparing a questionnaire on the older worker for circulation among its members. It was circulated early this year and an encouraging number of replies has been received.

To the question, "Has your company a restrictive policy with respect to hiring workers over a certain age, and if so, what age?" only 10 of the 126 replying said they would not hire men over 65; the same 10 noted, however, that they had no prejudice where men over 45 with suitable qualifications were concerned.

One employer of a large staff said his company had retained 100 men over 65, the firm's normal retirement age, and all are "doing good work."

Questioned on the percentage of the firm's employees over 45 years of age, 18 of the respondents reported from 0.5 to 20 per cent of their employees were over 65; the average was 16 per cent. Six per cent were more than 75 years of age.

A group of 52 employers of smaller staffs reported that from 5 to 70 per cent of their employees were more than 45 years of age; the average was 42 per cent.

"In your opinion, is there a job available in your business which could be done by a qualified older worker? was another question. Club members reported employment openings for 29 older workers.

To the question, "If company policy prevents the hiring of older workers (over 45), would consideration be given to a policy change?" almost all of those questioned who controlled labour policy and whose policy did not preclude the hiring of older workers indicated that policy would not stand in the way of hiring older workers if the applicants were otherwise suitable.

Elsewhere on the Prairies

Elsewhere in the Prairie Provinces, the Winnipeg National Employment Office recently effected the successful placement of a 56-year-old widow who found, when looking for a job, that employers were seeking younger persons and that her limited work history was a handicap. After many calls, the special placements division of the NES Winnipeg office persuaded an employer to overlook the woman's age and concentrate on her suitability. She was hired as a general office clerk with a starting salary of nearly \$200 a month.

At Moose Jaw, Sask., CHAB-TV carried a panel discussion on the older worker. An NES officer on the panel reported the recent retirement of an 82-year-old man who had retired once before, when aged 65. As he was eager to continue working, the NES found a job for him at a store; he worked another 17 years before retiring a second time.

The *Winnipeg Free Press* published an editorial commenting on statements of Dr. Wilder Penfield, former Director of the Montreal Neurological Institute, that for the average man physical demands should be lessened by age 60 but that "the brain quite often is ready for its best performance in certain fields at that age." If what Dr. Penfield said is true, the *Free Press* commented, "then a great fund of manpower is being neglected (and indeed destroyed) under our present concepts of 'social security'."

Material for this page was supplied by Morton Wilson, Prairie Regional Public Relations Officer, Unemployment Insurance Commission.

Name Woman Secretary of Royal Commission

Miss Elizabeth Leitch, government economist who was assistant secretary of the Royal Commission on Broadcasting, appointed secretary of the Royal Commission on the automobile industry. Survey women's training and employment in N.Z. city

Miss Elizabeth Leitch, an economist with the Department of Trade and Commerce, last month was appointed secretary of the Royal Commission on the automobile industry (L.G., Sept., p. 892).

A native of Calgary, Miss Leitch was graduated from the University of Toronto with a masters' degree in Economics. Twice she worked in Ottawa for a year, in 1942 and again in 1946, helping to develop the Government price control program. Later, she was assigned to the Food and Agricultural Organization in Washington, where she was chief of the prices section.

In 1950 she joined the Department of Trade and Commerce and since 1953 has been Assistant to the Director of the Economics Branch. She was given leave of absence to serve as Assistant Secretary to the recent Royal Commission on Broadcasting and will now again be freed for full-time work with the new Royal Commission.

Women's Training and Employment in N.Z.

A survey of vocational training and employment of women in the city of Christchurch, New Zealand was recently carried out by the YWCA of that country with assistance from the Department of Labour. It provides an example of co-operation between a government agency and a voluntary organization, and the findings may resemble the conditions found in a medium-sized city in Canada.

The advisory committee for the enquiry was made up of a group of women in strategic positions in business and industry. The committee interviewed representative employers and employees, the registrar of apprentices, the secretary of the furniture making and allied trades, school principals, teachers and career advisers at the secondary school level and, at the university, the heads of the faculty of engineering and extension services.

Employers who participated were selected both from industries employing considerable numbers of women and from those in which few women are employed. They included the managers of a printing, bookbinding and box-making firm, a boot and shoe fac-

tory, a daily newspaper, a clothing and knitwear factory, a department store and a firm of accountants; and the matron of a public hospital.

On the whole the enquiry revealed a conservative attitude toward the education and employment of women. In the secondary schools, girls are found in academic, commercial or domestic arts courses rather than in scientific or technical fields. Because of a shortage of teachers of science and mathematics, girls were not always encouraged to study science. In university most girls worked toward an Arts degree. For the most part students selected their courses without much assistance from guidance officers; at the most they asked for information about the occupation they intended to take up. Material about new, little-known occupations was extremely hard to find.

Except in the newspaper and in bookbinding companies, the committee found employers reluctant to promote women to posts of responsibility. Moreover, many women themselves seemed to care little about promotion. There were, however, a few able women not afraid of accepting responsibility who have been establishing themselves quietly and without opposition in new fields. Among these were a fully-trained watchmaker, a branch manager in a bookbinding establishment, a secretary of an engineering firm and a town-planning officer.

Leaflet on Ontario Labour Laws

Know Your Rights!, a new leaflet by the Ontario Department of Labour, is worth the attention of every woman worker in Ontario. The leaflet summarizes the main labour laws in effect in the province. Subjects covered include labour relations, hours of work, vacations with pay, minimum wages, workmen's compensation, fair employment practices, equal pay, industrial standards, apprenticeship and safety and health in factories, shops and offices. Copies of the leaflet may be obtained free of charge from the Ontario Department of Labour, 8 York Street, Toronto 1.

50 Years Ago This Month

Trades and Labour Congress of Canada holds 26th annual convention. Question of international peace of special concern to delegates, who adopt resolution reaffirming TLC opposition to war. Political action by unions subject of debate

The 26th annual convention of the Trades and Labour Congress of Canada, held in Fort William and Port Arthur from September 12 to 17, 1910, was covered in a lengthy report in the *LABOUR GAZETTE* for October of that year.

The first three days' sessions were held in the auditorium in Fort William, and the rest of the meetings took place in the Finnish Labour Temple in Port Arthur. The report of the credentials committee showed 158 accredited delegates. Of these, 38 represented 23 trades and labour councils, and 120 were sent by 107 international trades unions. One fraternal delegate was sent by the American Federation of Labor.

The convention showed special concern with the questions of international peace and independent political action by trade union bodies.

The Executive Committee in its report recommended that continued efforts be made to promote the work of those who believed in international peace. It also expressed the opinion that the electorate should have been given an opportunity to express its views on the establishment of a Canadian navy.

Later in the convention the delegates unanimously adopted a resolution reaffirming the opposition of the Congress to war, and instructing the executive to take steps to arrange an international peace conference of all federations of labour. The resolution asserted in the preamble that "international warfare is the result of the personal ambition for the self aggregated [*sic*] or commercial gain of an exploiting and influential minority of the people."

One of the miscellaneous resolutions passed by the convention said that, "as capitalists of the world create all wars, this Congress insists upon them doing their own fighting."

The Executive Committee in its report called attention to the continued success of the British Labour Party, as well as the favourable result for the Labour Party in elections in Australia. It said that renewed action should be taken to convince the workers of the desirability and necessity of sending their own representatives to Parliament.

Nevertheless a substitute resolution submitted later by the resolutions committee and adopted by the convention declared that the Congress was not a political party, "but truly the legislative expression of organized labour throughout all Canada." It went on to reaffirm the belief of the Congress in "independent political action on the part of the working class itself," and "the absolute necessity of seizing the federal and provincial law-making powers." It said that "in the matter of enforcement it believes that the best interests of organized labour can be conserved by recommending and permitting provincial autonomy."

The reports of the provincial executive committees for several of the provinces asserted the desirability of political action. The reports that favoured political action included those of the executive committees of British Columbia, Manitoba, and Ontario; the Nova Scotia committee showed its sympathies by saying that the Halifax Labour Party had selected a candidate to contest Halifax county in the forthcoming provincial elections. The Manitoba executive committee said that as a result of a movement originating in the Winnipeg Trades and Labour Council a labour party had been formed.

Nearly 70 resolutions in all were submitted to the convention. In addition to those already mentioned, some of the more important opposed compulsory arbitration, pressed for provincial and Dominion legislation requiring employees to be paid once a week in cash, recommended favourable legislation for co-operative societies, pressed for legislation raising the minimum age at which children might be employed from 14 to 16 years, and urged that "provision should be made by the Dominion and provincial legislatures and school boards to provide the necessary money and create scholarships, so that the child of the toiler whose parents or guardians are unable to provide the necessary funds for such education" could compete for a scholarship and obtain the best education possible.

The Secretary-Treasurer's report showed that total receipts for the previous financial year were \$9,482.34 and the total expenditures \$7,103.56, leaving a balance on hand of \$2,378.78.

TEAMWORK in INDUSTRY

Hon. Michael Starr, Minister of Labour, has challenged "fair-minded people on both sides" to open up new channels of communication and participation between labour and management. Speaking to the recent annual meeting of the Canadian Manufacturers' Association, Mr. Starr deplored the tendency of labour and management to remain on either side of an imaginary fence rather than meet in a atmosphere of co-operation to discuss and resolve their problems.

"They have an equal stake and an equal responsibility in the orderly and prosperous evolution of our economy," he declared.

* * *

Charles Smith, Vice-President of the Brotherhood of Maintenance of Way Employees, has suggested that more use should be made of the forum provided by the Canadian National Railways' Union-Management Co-operation Movement to discuss ways and means of lessening the impact of change on employees. He pointed out that changes in methods of work which are not carefully planned, explained and discussed prior to their inception may lead to fear and misunderstanding. "Without dependable means of communication," he said, it is difficult to maintain a high standard of morale."

* * *

Describing wasteful practices in the steel industry as "a threat to job security," R. Conrad Cooper, Executive Vice-President of Personnel Services for the United States Steel Corporation, has called on companies, the union and employees to tackle the problem through "all-out co-operation". He suggested that what the industry needs most is a constant searching by all personnel for methods to improve efficiency, increase the quality of products, eliminate waste and reduce costs.

The newly elected President of the Canadian Construction Association has recommended the formation of joint labour-management committees in the construction industry in "all centres where contractors and unions are well organized." Jack M. Soules of Port Credit, Ont., stated recently that closer labour-management relations at

all levels are a "must" if costly production and wage losses through industrial disputes are to be avoided.

The CCA believes, continued Mr. Soules, that there are many subjects on which employers and employees have common objectives, and that emphasis should be placed on this positive aspect of their relations rather than on the negative or acrimonious aspect characterized by disputes and work stoppages. The speaker directed attention to the joint labour-management committees operating in the construction industry in Winnipeg, Montreal and other cities. "There is practically no limit to what they can accomplish for the common good if they continue to act in an atmosphere of trust, reason and responsibility," asserted Mr. Soules.

* * *

Solid support for the work of the federal government's Labour-Management Co-operation Service was expressed recently by W. Elliott Wilson, QC, Deputy Minister of Labour for Manitoba. During an address to the Personnel Association of Greater Winnipeg, Mr. Wilson said: "These committees enable people involved in an enterprise to pool their ideas to bring prosperity and a sense of achievement and satisfaction through intelligent, purposeful production planning."

One of the chief complaints about today's mass industry is that the individual employee is made to feel that he is merely a cog, not a person; that he is a number, not a man. "The labour-management committee concept can do more to beat this complaint than anything else presently available," Mr. Wilson declared.

Objective of the 1960 combined "safety-housekeeping" campaign at Continental Can Company's plant 54 in New Toronto is "1,000,000 man-hours without a disabling injury."

Management and the plant's 500 employees are approaching their problems along four avenues: safety meetings, safety tours, safety displays and accident investigations. Strong support is being given to the campaign by Local 4025, United Steelworkers.

Establishment of Labour-Management Committees is encouraged and assisted by the Labour-Management Co-operation Service, Industrial Relations Branch, Department of Labour. In addition to field representatives located in key industrial centres, who are available to help both managements and trade unions, the Service provides various aids in the form of booklets, posters and films.

INDUSTRIAL RELATIONS AND CONCILIATION

Certification and Other Proceedings before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during August. The Board issued five certificates designating bargaining agents, ordered three representation votes, and rejected three applications for certification and one application for revocation of certification. During the month the Board received nine applications for certification, one application for revocation of certification, and allowed the withdrawal of two applications for certification.

Applications for Certification Granted

1. Canadian Transportation Workers' Union No. 158, National Council of Canadian Labour, on behalf of a unit of drivers employed by Hanson Bros. Cartage Limited, Ottawa (L.G., Aug., p. 814).

2. Canadian Air Line Dispatchers Association, on behalf of a unit of dispatchers employed by TransAir Limited at the Winnipeg International Airport (L.G., Sept., p. 914).

3. International Longshoremen's and Warehousemen's Union, Local 509, on behalf of a unit of longshoremen directly employed in the loading and unloading of coastwise vessels at Vancouver by the West Coast Stevedoring Co. Ltd. (L.G., Sept., p. 915).

4. International Longshoremen's and Warehousemen's Union, Local 509, on behalf of a unit of longshoremen employed by the Canadian National Steamship Company Limited in loading and unloading coastwise vessels at Vancouver (L.G., Sept., p. 915).

5. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of marine engineers employed by the Canadian Pacific Railway Company aboard the S.S. *Princess Helene* in the company's Bay of Fundy service (L.G., Sept., p. 915).

Representation Votes Ordered

1. International Longshoremen's and Warehousemen's Union, Local 511, applicant and intervener, British Columbia Bulk Commodities Handlers Union Local No. 1, applicant and intervener, and Pacific Coast Terminals Co. Ltd., New Westminster, B.C., respondent (L.G., Aug., p. 814). The Board directed that only the name of the International Longshoremen's and Warehousemen's Union, Local 511, be placed on the ballot in the vote which affected employees of the company at the bulk loading terminal at Port Moody, B.C. (Returning Officer: D. S. Tysoe) (*see also* item 3, "Applications for Certification Rejected," below).

2. Canadian Brotherhood of Railway, Transport and General Workers, applicant, Bendickson Towing Co. Ltd., Vancouver, respondent, and Seafarers' International Union of North America, Canadian District, intervener (L.G., Aug., p. 814). The Board directed that the names of the applicant and the intervener be placed on the ballot (Returning Officer: D. S. Tysoe).

3. National Association of Broadcast Employees and Technicians, applicant, Radio Victoriaville Limitée, Victoriaville, Que., respondent, and Jean-Paul Berthiaume, *et al*, intervener (L.G., Sept., p. 915). The Board directed that only the name of the National Association of Broadcast Employees and Technicians be placed on the ballot (Returning Officer: C. E. Poirier).

Applications for Certification Rejected

1. Canadian Merchant Service Guild, Inc., Eastern Branch, applicant, Anticosti Shipping Company, Montreal, respondent, and Seafarers' International Union of North America, Canadian District, intervener (L.G., Sept., p. 914). The application was rejected for the reason that it was not supported by a majority of the employees

This section covers proceedings under the Industrial Relations and Disputes Investigation Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board, and the Industrial Relations Branch of the Department.

affected in the representation vote conducted by the Board (*see also* item 2 immediately below).

2. Seafarers' International Union of North America, Canadian District, applicant, Anticosti Shipping Company, Montreal, respondent, and Canadian Merchant Service Guild, Inc., intervener (L.G., Sept., p. 914). The application was rejected for the reason that it was not supported by a majority of the employees affected in a representation vote conducted by the Board (*see also* item 1 immediately above).

3. British Columbia Bulk Commodities Handlers' Union Local No. 1, applicant, Pacific Coast Terminals Co. Ltd., New Westminster, B.C., respondent, and International Longshoremen's and Warehousemen's Union, Local 511, intervener (*see* "Applications for Certification Received," below). The application was rejected for the reason that the applicant did not have members in good standing within the meaning of the provisions of the Board's Rules

of Procedure (*see also* item 1, "Representation Votes Ordered," above).

Application for Revocation Rejected

The Board rejected an application for revocation of certification affecting Canadian National Railways, applicant, and the Canadian Brotherhood of Railway, Transport and General Workers, respondent (L.G., Aug., p. 814).

Applications for Certification Received

1. British Columbia Bulk Commodities Handlers' Union Local No. 1, on behalf of a unit of employees of Pacific Coast Terminals Co. Ltd., New Westminster, B.C., employed at the bulk loading terminal at Port Moody, B.C. (Investigating Officer: D. S. Tysoe) (*see* "Applications for Certification Rejected," above).

2. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed aboard the tug *Melanie Fair* by Foremost

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Industrial Relations Branch. The branch also acts as the administrative arm of the Canada Labour Relations Board, in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certificates given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to

the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of four officers resident in Vancouver comprises British Columbia, Alberta and the Yukon and Northwest Territories; two officers stationed in Winnipeg cover the province of Saskatchewan and Manitoba and Northwestern Ontario; four officers resident in Toronto confine their activities to Ontario; five officers in Montreal are assigned to the province of Quebec, and a total of three officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

Marine Transporters Ltd., Burlington, Ont. (Investigating Officer: A. B. Whitfield).

3. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of marine engineers employed aboard the tug *Melanie Fair* by Foremost Marine Transporters Ltd., Burlington, Ont. (Investigating Officer: A. B. Whitfield).

4. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of truck drivers employed by Eastern Transport Limited, Truro, N.S. (Investigating Officer: D. T. Cochrane).

5. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed aboard towboats operated by the Kingcome Navigation Company Limited, Vancouver (Investigating Officer: D. S. Tysoe).

6. The Montreal Harbour Police Brotherhood (Ind.), on behalf of a unit of security officers employed by the National Harbours Board at the Port of Montreal (Investigating Officer: C. E. Poirier).

7. International Longshoremen's and Warehousemen's Union, Local 512, on behalf of a unit of longshoremen employed by Louis Wolfe and Sons (Vancouver) Limited, Vancouver (Investigating Officer: D. S. Tysoe).

8. Teamsters, Chauffeurs, Warehousemen & Helpers Local Union 880, and General Truck Drivers' Union, Local 938, of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen & Helpers of America, on behalf of a unit of employees of Tank Truck Transport Limited, Point Edward, Ont. (Investigating Officer: T. B. McRae).

9. General Truck Drivers' Union, Local 938 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen & Helpers of America, on behalf of a unit of employees of the Export Packers Company, Limited, Toronto (Investigating Officer: A. B. Whitfield).

Application for Revocation Received

Thompson's Transfer Company Limited, Middleton, N.S., applicant, and Canadian Brotherhood of Railway, Transport and General Workers, respondent. The application was for revocation of certification issued by the Board on July 9, 1959, to the Canadian Brotherhood of Railway, Transport and General Workers in respect of a unit of drivers, helpers, and warehousemen employed by the company and operating in and out of Middleton and Halifax, N.S. (L.G., Sept. 1959, p. 912).

Applications for Certification Withdrawn

1. International Longshoremen's and Warehousemen's Union, Local 512, applicant, and Louis Wolfe and Sons (Vancouver) Limited, Vancouver, respondent (L.G., Sept., p. 915) (new application submitted; see "Applications for Certification Received," above).

2. Newfoundland Union of Journalists & Photographers, Local No. 1593 (CLC), applicant, Newfoundland Broadcasting Co., Ltd., St. John's, Nfld., respondent, and National Association of Broadcast Employees and Technicians, intervener (L.G., Sept., p. 915).

Conciliation and Other Proceedings before the Minister of Labour

Conciliation Officers Appointed

During August, the Minister of Labour appointed conciliation officers to deal with the following disputes:

1. Hull City Transport Ltd., and Hull City Transport Employees Union (Conciliation Officer: Rémi Duquette).

2. Tank Truck Transport Ltd., Point Edward, Ont., and Locals 938 and 880 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Conciliation Officer: F. J. Ainsborough).

3. Canadian Broadcasting Corporation (Building and Maintenance Employees) and

Association of Radio and Television Employees of Canada (Conciliation Officer: F. J. Ainsborough).

4. Northland Navigation Company Limited, Vancouver, and Seafarers' International Union of North America, Canadian District (Conciliation Officer: G. R. Currie).

5. Radio Station CHVC, Niagara Falls, Ont., and National Association of Broadcast Employees and Technicians (Conciliation Officer: F. J. Ainsborough).

6. Vancouver Hotel Company, Limited; and International Union of Operating Engineers, International Association of Machinists, and International Brotherhood of

Electrical Workers (Conciliation Officer: G. R. Currie).

7. National Harbours Board, Prescott, Ont., and Civil Service Association of Canada (casual employees of the National Harbours Board Elevator Group) (Conciliation Officer: T. B. McRae).

Settlement Reported by Conciliation Officer

AMF Atomics (Canada) Limited, Port Hope, Ont., and Local 14193, District 50, United Mine Workers of America (Conciliation Officer: T. B. McRae) (L.G., Sept., p. 923).

Conciliation Board Report Received

The Board of Conciliation and Investigation established in February to deal with a dispute between Canadian National Railways; Canadian Pacific Railway Company; Toronto, Hamilton and Buffalo Railway

Company; Ontario Northland Railway; Algoma Central and Hudson Bay Railway; Midland Railway of Manitoba and Negotiating Committee representing the Associated Non-Operating Unions (L.G., May, p. 468). The text of the report is reproduced below.

Board Reports Received of Settlements

1. Shipping Federation of British Columbia, Vancouver, and International Longshoremen's and Warehousemen's Union (Locals 501, 502, 503, 504 and 508) (L.G., Aug., p. 815). The text of the report is reproduced below.

2. Canadian Broadcasting Corporation and International Alliance of Theatrical Stage Employes and Moving Picture Machine Operators of the United States and Canada (L.G., May, p. 468). The text of the report is reproduced below.

Report of Board in Dispute between

Canadian National Railways; Canadian Pacific Railway Company; Toronto, Hamilton and Buffalo Railway Company; Ontario Northland Railway; Algoma Central and Hudson Bay Railway; and Midland Railway of Manitoba
and

17 International and National Railway Unions

All meetings of the Conciliation Board were held in the City of Montreal, commencing May 9, 1960, and continuing, with a few interruptions, until July 7, 1960.

During August, the Minister of Labour received the Report of the members of the Board of Conciliation and Investigation appointed under the Industrial Relations and Disputes Investigation Act to deal with the dispute between seventeen international and national railway labour organizations, representing approximately 120,000 non-operating employees, and the Canadian National Railways; Canadian Pacific Railway Company; Toronto, Hamilton and Buffalo Railway Company; Ontario Northland Railway; Algoma Central and Hudson Bay Railway; and Midland Railway of Manitoba.

The Conciliation Board was under the chairmanship of Hon. Mr. Justice J. V. H. Milvain, Calgary. The other members of the Board were Philip F. Vineberg, Montreal, the nominee of the companies, and David Lewis, QC, Toronto, the nominee of the Joint Negotiating Committee for the unions.

The Report of the Chairman and Mr. Lewis constitutes the Report of the Board. A minority report was submitted by Mr. Vineberg.

The texts of the majority and minority recommendations are reproduced here.

Following completion of evidence and arguments, the Board met with representatives of the railways and the unions, and then the Chairman, with the representative of the respective parties, met with the parties separately in an effort to bring about conciliation, but without success. Accordingly, it fell to the Board to consider a report or reports to the Minister of Labour.

The matters in dispute requiring determination are well set out from the union point of view in the words of F. H. Hall, appearing at page 38 of the transcript. It is true that the original requests made by the union were more extensive than those actually dealt with by the Board. The situation became finally summarized, and may be expressed in the words of Mr. Hall from the above-noted page of the transcript, as follows:

Thus the result is that there are now two issues of substance before this Board:

- (1) That commencing with the calendar year 1960 all rates of pay be increased by seven per cent plus twelve and one half cents per hour.
- (2) That existing vacations with pay rules be changed by supplementing provisions that after ten years of service employees

shall receive fifteen working days with pay, and after twenty years' service twenty working days.

The railways also advanced a claim on the basis that they were entitled under previous contracts, to a deduction of 10 cents from each individual union dues as deducted prior to remittance to the respective union. The claim of the railways in this regard is amply set forth at page 75 of Railway Exhibit No. R. 1, as follows:

The Request for Payment for the Payroll Deduction of Union Dues

165. On January 12th, 1960, the railways served written notice on the Unions as follows:

In accordance with the advice previously furnished you of the intention of the railways to request revision of the collective agreements relating to the terms and conditions under which union dues deductions will be made, please be advised of the desire of the railways to make effective the following proposal:

For services performed in connection with the payroll deduction of union dues and to pay for administrative services connected therewith, the Company shall retain from dues deducted each month the sum of ten (10) cents per month per deduction.

Before coming to deal with the matters in dispute, I should like to take this opportunity of expressing deep gratification to all of the parties who appeared as witnesses or otherwise, for having done a thorough and painstaking job in presenting their cases. It is extremely gratifying to observe the friendly relationship that continued throughout the lengthy hearings, notwithstanding marked differences of opinion. It is certainly to be hoped that so long as the affairs relating to labour and management remain in competent and co-operative hands such as I have seen throughout the entire hearing, relations will never become too strained and that problems will always be resolved to the common good.

Standard of Measurement

Both the railways and the union placed emphasis on the need for a standard of comparison between the wages of the non-operating railway force of employees and some appropriate outside group. The railways, for example, put it that the wages paid to their employees "should be adequate when tested by a reasonable standard of comparison." The unions insisted that the earnings of durable goods employees are the proper standard and that non-operating railway employees should have exact parity with durable goods earnings.

Thus, a major part of the time this year, as in the two previous conciliation hearings in 1956 and 1958, was taken up with an analysis, support and criticism of the durable

goods standard. The unions point to a fairly extensive history and jurisprudence indicating general acceptance, with qualifications, of the durable goods standard by previous boards. They also point out that in 1956 and 1958 the railways had endeavoured to construct alternative standards of measurement and that this year the Woods Gordon study has been advanced as a third alternative. The first two alternative standards advanced by the railways, called the "paid workers" standard and the "going wages" standard, respectively, were discarded for obvious reasons, which were well expressed by previous boards. It is also clear that the Woods Gordon study of this year, though it involved a great deal of work, cannot be considered as occupying the position of a standard of measurement.

I do not propose to quote the references made by previous boards to the durable goods standard as no real purpose would be served in so doing. What has been said by previous boards can be scrutinized by anyone who desires to do so through the simple medium of turning up the previous decisions. But whatever the particular language used may be, it seems to me that the evidence leads to the conclusion that the wage earners in durable goods as a group have important similarities to the railway non-operating force as a group and that there are also important differences. On the other hand, the attempts to find new standards in 1956 and 1958 and the Woods Gordon study this year amply point up the impossibility of finding complete comparison, much less identity, between job classifications within the non-operating railway work force and outside industry. The Woods Gordon study, in particular, frankly admits this. After very careful and painstaking consideration, the consultants were able to find comparison for only some 20 occupations in the non-operating work force populated by about 19,000 employees out of a total of some 120,000. This is not difficult to understand since the railway industry is unique.

For these reasons it is clear that the durable goods standard should continue to be recognized as an important signpost on the road that must be travelled to reach a rational conclusion on the question of wages for railway non-operating employees. I am also convinced, however, that the durable goods standard cannot be regarded as a fixed and immutable thing to be applied with mathematical precision. It is true that, on the whole, the group of durable goods employees contains relatively the same skills as are found among the railway non-operating employees and that the two groups

also have a similar ratio of male to female employees. These are the two most important elements affecting wages. On the other hand, the two groups are substantially apart in their geographical and territorial distribution and it is well known that wages and earnings differ from region to region in Canada. This difference does not invalidate the durable goods standard as an important signpost but it underlines the impossibility of applying durable goods earnings mechanically and automatically to railway non-operating employees. Other factors

should also be taken into account and the picture as a whole considered.

Some of these factors I shall refer to later when dealing with my recommendations. At this point it is, however, significant to note, when comparing the average hourly earnings of non-operating employees with the average hourly earnings of employees in the durable goods group of industries, that in the last while there has existed a definite relationship between them, as is exemplified by the following table:

Railway Non-Operating Average Hourly Earnings

	Per Cent of Durable Goods Earnings	Cents Below Durable Goods	Average Hourly Earnings in Durable Goods Industries
At December 1957 (before the effective date of the last agreement, January 1, 1958)	91.4	15.3	1.781
At expiry of last agreement, December 1959	92.0	15.3	1.92

It will be noted that, though average wages in both fields increased during the two-year period in which the preceding wage agreement was in effect, railway wages in the non-operating field constituted approximately 92 per cent of durable goods wages at the commencement and at the end of the two-year period. Simple mathematics indicate that during the same two-year period, durable goods average hourly earnings increased by 7.9 per cent. The observations just made will be given further consideration when I come to making recommendations.

Ability to Pay

The railway representatives presented a great deal of evidence of an economic and statistical character, designed to show that the railways are unable, for economic reasons, to absorb any increased cost of operation. They point out that following previous Board awards, applications were made for increased freight rates, which were granted, with a design to recover from such increased rates the increased operating expenses caused by increased labour cost. They point out that though rate increases were authorized, the recovery of revenue from such rates has in fact represented an increasingly smaller proportion of the designed recovery, and that the law of diminishing returns has the situation in its inexorable grip.

It is clear from the evidence that in a large part the embarrassment suffered by the railways in their inability to reap greater returns from their operations, is due to public policy in the shape of statutory rates and government regulations. This

Board must, of course, assume that the impact of public policy is for the public good. However, it is equally clear that the railway employees should not bear alone a subsidization of public policy through limited earnings. The burden must surely be borne by members of the public at large.

However, the railways' inability to pay cannot be entirely ignored in arriving at what amounts to adequate payment to the employees of the railways for the services they perform. Especially is this true today when freight rates have been frozen. This principle has certainly been borne in mind in the past, and its effect can be seen in the existing situation. The fact cannot be escaped that, in the past, railway employees enjoyed what might be termed the cream, in the way of salary and working conditions, and occupied a position at the top of the scale of wages in this country. However, the attrition of time and circumstances has altered that situation, and railway employees no longer occupy that high position.

Railway Claim for Compensation on Check-Off

The railways set out their position on this matter quite fully in Railway Exhibit No. R. 1. They point to paragraph 10, Article 3, of the agreement of February 7, 1953, in the following terms:

The question of what, if any, compensation shall be paid the Railways by the Organizations signatory hereto in recognition of services performed under this Agreement shall be left in abeyance subject to reconsideration at the request of either party on fifteen days' notice in writing.

The railways also quote, at page 77 of R. 1, a letter written on February 7, 1953, from the Chairman and Secretary of the Negotiating Committee to the appropriate railway officers, at a time when a labour dispute was on foot in the United States, which might have some effect on railway employees of Canadian railways in the United States. The letter, as quoted, is as follows:

In connection with Clause 10 of Article 3 of Agreement dated February 7th, 1953, between the Railways and the Seventeen Co-operating Organizations it is understood that, if as a result of negotiations in accordance with Section 10 (b) of Agreement of August 29th, 1952, between certain Eastern Railroads in the United States and their employees represented by the Seventeen Co-operating Railway Labour Organizations, compensation for the Railways for check-off of union dues is agreed to and such agreements include non-operating employees of the Canadian National or Canadian Pacific Railway located in the United States, arrangements consistent therewith and applicable to the conditions of the agreement dated February 7th, 1953, shall be made for compensation of Canadian Railways signatory thereto.

From the agreement and the letter, the railways argue that the unions have accepted, in principle, the idea of a deduction to compensate the railways for handling the funds collected under the check-off. In my view the agreement and the letter do not establish any such acceptance, but under the terms of the agreement it is still open to the parties to negotiate on this subject. In my view no case has been made out to impose upon the unions the request made by the railways at the present time, and it is my recommendation that this request by the railways should not be allowed at this time.

Vacations With Pay

In the evidence presented by the unions it has not been established that the railways are much out of line as to vacations with pay with other industries. It is clear, however, that railway employees on the whole appear to stay in employment for a longer period of time than do employees in other industries. It is also clear that railway employees do a responsible job, and their long-time service is entitled to some recognition. As a consequence, it is my view that the vacations with pay provisions should be altered so as to provide for four weeks vacation with pay after twenty-five years of service, rather than thirty-five years of service under the previous agreement. I have used the words "four weeks vacation" as I

understand that coincides with the period of twenty days referred to in the union request.

Recommendations

It is always difficult to determine the exact dollars and cents that must be decided upon in any labour dispute. It appears to me, however, that, looking at the whole situation and considering the durable goods standard as a guidepost, we may obtain a rational clue to the appropriate recommendation on wages which should be made. It was noted earlier that the significant fact which emerges when the earnings of durable goods employees are compared with those of non-operating railway employees during the past two years is that the two sets of earnings were in the same relative position one to the other at the termination of the previous agreement as they had been at its commencement. There was a gap between the two sets of earnings, but the gap was the same at the end of 1959 as it had been at the end of 1957. At a time when the financial situations of the railways are not improving and freight rates are frozen, it may not be wise to seek to close the gap but it is surely fair and reasonable to prevent its becoming greater. Thus, what must be considered is an effort to start the non-operating employees on a new contract on such a basis that, with future increases over the period of the contract, they will end up in somewhat the same relative position as they occupy at the commencement of the contract with relation to the durable goods employees. On the assumption that the durable goods employees' average hourly earnings would increase by the same rate of 7.9 per cent during the two-year period commencing January 1, 1960, as they did during the previous two-year period, it would involve an increase of approximately 14 cents on top of the non-operating average earnings of \$1.767 to maintain the relative position.

It is my recommendation, therefore, that a new two-year contract be entered into from January 1, 1960, with a 2 cent per hour increase effective as of that date. I further recommend that there be a further 5 cent per hour increase effective September 1, 1960, and an additional increase of 4 per cent of the wages obtaining immediately prior to January 1, 1960, to be effective from May 1, 1961.

As previously indicated, it is my recommendation that the vacations with pay provisions be altered to provide for four weeks or twenty working days after twenty-five years of service.

It is my further recommendation that the railways' request for a charge of ten cents per check-off be refused.

(Sgd.) J. V. H. MILVAIN,
Chairman.

I am very pleased to associate myself with the Chairman's Report and Recommendations, with all of which I agree.

(Sgd.) DAVID LEWIS,
Member.

MINORITY REPORT

All members of the Board, indeed all participants in the hearings, have been confronted with a difficult dilemma. This has not been an ordinary wage debate limited to an apportionment between labour and capital of total revenue inflow. Representatives of the employees are anxious to gear compensation to a durable goods criterion, irrespective of whether revenues are available or not. The railways are concerned with viability. It is no exaggeration to suggest that they fear for their economic lives.

In expressing a dissenting opinion from that of my esteemed colleagues, I find myself less at variance with them on the lengthy factual evidence, so ably presented to us, than on the conclusions to be derived therefrom. The differences which I find it necessary to elaborate stem from my conviction that the more or less mutually agreed upon facts do not justify the results embodied in the Majority Report. Hence, the need to relate, as is done in what follows, the one to the other.

The employees' submissions requested a combination of two wage adjustments—one for the past and another for the current and future period. The former was measured at 15.2 cents per hour. As expressed in the union brief "It follows that at the end of last year, when the master agreement was to expire, there was already a difference of 15.2 cents per hour (=191.9 cents per hour minus 176.7 cents per hour) between earnings in durable goods and the earnings of the non-operating employees. Chances are that the gap has widened a little since then, but it is in any case a *known fact* that the gap had reached 15.2 cents per hour by the beginning of this year." (Union Exhibit 2 p. 38).

This first and overwhelmingly principal component of the claims has been rejected unanimously. Measured against even the durable goods trend of the last two calendar years elapsed, the remuneration of railway non-operating employees has kept full pace. The majority report concludes, and in this respect I do not dissent, that it would not be wise to recommend any change in respect of the 15.2 cents "gap" (or 15.3 cents as expressed in the majority report in carrying the calculations to one less decimal point). Thus, that part of the

demands which is based on what its protagonists have underlined as "known fact" has been dismissed. A far different fate has been met by the residual claim related to the unknown facts—what is referred to in the majority report as an "assumption." All members of the Board have, in effect, treated the evidence on the known facts as leading to the same negative conclusion in terms of requested wage increases. We evidently differ about what should be done on a claim based on the unknown, whether it be measurable by scientific prediction or by crystal ball gazing.

This second component element is a requested adjustment to meet the changes anticipated in the period from January 1, 1960 to December 31, 1961. On this score the unions have asked for 7.2 cents per hour: "We estimate further that as a result of this rising trend, earnings in durables will, on the average, be 7.2 cents per hour higher during the proposed two years of the new contract than they were at December last, less than this during the first year of the contract; correspondingly more during the second. Combining this value of 7.2 cents per hour with the already existing gap of 15.2 cents per hour, we estimate that during 1960-1961, earnings in durables will be, on the average, at least 22.4 cents per hour higher than the present level of earnings for the non-operating employees. Supposing these estimates to be well founded—we justify their use at the end of this section—we find that the *minimum amount needed for parity during the proposed contract is 22.4 cents per hour through the full period of the contract*. This is conditioned only by the estimate we have just made of what is likely to happen to earnings in durables and that estimate, we believe, is responsible and conservative." (Union Exhibit 2, p. 46).

In respect of the 7.2 cents per hour portion of the claim, the majority decision would recommend 14 cents! This has all the characteristics of being *ultra petita*—surely a fatal objection even to a decision of a Board not bound by strict legal principles. In this category it grants more than was asked to those who, in accordance with universal time honoured tradition, ask more than they could conceivably expect to receive. It must, of course, be explained

that the 7.2 cents per hour forecasted rise in durables represents the anticipated *average* increase over the two year period. It was estimated in the union brief that earnings in durables will rise six-tenths of one cent per month during the two years from the month of the then latest known figure, December 1959, to the terminal month of December 1961. The resulting submission was expressed in terms of an over-all single amount to be effective from the opening date of the contract. Hence, the average for the two years was selected in the expectation that the "overcompensation" in the initial period would be offset by "undercompensation" later. Some 2.6 cents per hour was therefore added by the unions to the 22.4 cents per hour aggregate of the two claims above mentioned—15.2 cents plus 7.2 cents—"as a basis for negotiating possible step by step adjustments" (Union Brief Exhibit 2, p. 47). In rejecting the first claim for 15.2 cents and proffering 14 cents on account of the second claim, it follows that the majority report would award 14 cents on an issue in respect of which the maximum demand submitted to the Board, even allocating all of the 2.6 cents to the second portion of the claim, never exceeded 9.8 cents per hour.

The onus of proof always rests on a claimant. The effect of the majority report is to reject that portion of the claim in respect of which definitive factual evidence could be and was adduced, and to award more than was sought for that element which was perforce founded on speculation. Surely the burden of proof imposes greater demands where the framework is conjectural rather than factual. As the report from which I differ enunciates its basic causation: "On the assumption that the durable goods employees' average hourly earnings would increase by the same rate of 7.9 per cent during the two-year period commencing January 1, 1960 as they did during the previous two-year period, it would involve an increase of approximately 14 cents on top of the non-operating average earnings of \$1.767 to maintain the relative position."

A recommendation conditioned by an assumption offers a very unsure foundation on which to support the resultant heavy assault on the financial operability of the railways. Parenthetically, it may be observed that it is particularly inappropriate to justify the retroactive aspects of the proposed increases, relatively small though they may be. Even if one takes it for granted that earnings in durable goods will move upward in 1960 and 1961 at the same rate and to the same degree as they did in 1958

and 1959 and even if one set of such rates, or 92 per cent thereof, are to be meshed against another, this would never justify any increase effective from the commencement of the current year. Earnings in durables on January 1, 1960 did not suddenly rise over those on December 31, 1959. Any New Year's Eve celebrations sprang from other causes.

Moreover, what is the validity of the assumption? There is no rule of economic behaviour, either in theory or by induction, that the trend over the next two years is measurable and matched by movements over the past two years. There is much to justify the very opposite conclusion. Over each of the 10 yearly periods prior to 1958, average monthly changes in wage rates in durable goods industries were consistently different from those of the respective prior or succeeding year; more frequently than otherwise, the rate of change for the annual or biennial period was either more than one-half or more than double that of any contiguous annual or biennial period (U.2 Table 6—p. 43). In the first five months of 1960, earnings in durables have not risen as projected and to date the crucial assumption has proven to be ill-founded.

As time has unfolded, the pattern for the current year does not conform to the underlying assumption. Any increase in average hourly wages in durables during the months of the current year for which the record is available is but a small fraction of the assumed rate. On a basis of 100 in 1949, the durable goods wage index has thus far shown the following evolution in 1960:

January	180.3
February	180.3
March	180.6
April	181.3
May	180.5

The May 1960 figure is not perceptibly higher than the January 1960 level. The now known facts indicate that the condition on which an award is being predicted has thus far not been fulfilled. Applying the decision literally even if one adopts the approach of the Majority Report there is no occasion for any wage adjustment up to the present time.

During the 1958-1959 period, the cost of living was more or less steadily rising. Without trying to unravel cause and effect, no one would deny that this exerted considerable impact on wage levels. During the current year, it has remained almost stationary. Indeed it was strongly urged on behalf of the unions that real wages of non-operating employees in the 1946-1959 period have only risen at the rate of one per cent per annum (Exhibit U-8). If current gov-

ernment policy, expressed and applied, is successful in stemming the previous attrition in the purchasing power of the dollar—as has proved to be the case thus far this year—implementation of the majority suggestion would impose a rate of increment in real earnings four times in excess of the post-war average.

Juxtaposed against the position of the railways, the magnitude of such a proposed change emerges even more strikingly. An increase equivalent to one cent an hour for non-operating employees would cost the CNR and CPR \$2,835,900 per month. The yearly bill for 14 cents an hour would be \$39,702,600. Extension of a substantially equivalent settlement to running trades and all other employes, shown by experience to be a likely concomitant, would entail an annual inroad of \$51,674,400. This is not a once and for all lump sum charge. It is a permanent recurring annual cost—staggered somewhat in the first two years of introduction on a progressive scale.

Moreover, it exceeds the entire net rail income of the two railways before any allowances for fixed charges. Their three year annual average over the years 1957, 1958 and 1959 amounted to \$46,308,833. For the first six months of the current year, CPR's net railway earnings had declined by \$1,641,373 over the comparable returns for the equivalent period of the preceding year. The CNR trend is no better. Such is the situation before taking into account any wage increases. Even assuming that the enormous debt and equity structure were to remain completely unserviced the proposed wage increases would absorb more than 100 per cent of all earnings before fixed charges.

Whether or not serviceable out of earnings, there is no escape from fixed charges. During 1959 the full impact of the step-by-step increases of the last wage settlement was not yet fully operative. Even then, after fixed charges of \$17,435,113 a small part of which was not related to railway operations the CPR was left with a return of only 2.7 per cent on net investment in railway property—a rate far below the cost of obtaining loan capital in the current market. The corresponding return for the two railways combined on net investment in rail property was only 1.15 per cent. The CNR had fixed charges of \$52,558,290 leaving it with a deficit for the year of \$43,558,290 of which 36.4 million dollars was on rail account. As commented upon by one of the CNR representatives appearing before the Board:

Table C-310 shows the 1959 deficit as \$36.4 million. This was in a year of great national

prosperity, with Canadian National handling heavy traffic volume.

In the previous year, 1958, there had been a slight dip in the national economy, and consequently in the railway's traffic volume, but it could only be considered as a very momentary pause in the general business growth and expansion. Yet we have the most unusual spectacle of Canadian National failing to produce a surplus in Net Rail Operating Revenue even *before* taxes and rents have been met. I said "unusual" because never previously has Canadian National failed to show an annual surplus on rail operation, before payment of taxes and rents.

No single factor contributing to this situation has been more influential than wage increases.

With current trends as they are on the railways, assumption of added labour costs at the rate of some fifty-one million dollars a year would wreak consequences that cannot be lightly brushed aside.

The report from which I dissent takes cognizance of this situation by suggesting that the plight of the railways is in large measure due to public policy. In advising substantial wage increases it therefore finds that "the burden must surely be borne by members of the public at large." To apply this conclusion requires the public to bear the extra costs, in addition to any adjustments that may be otherwise necessary to reduce the impact of public policy. Adoption of the recommendations, in their context, can only be met by coupling wage increases with some corresponding measure of public assistance to the railways or relief from pricing restrictions otherwise incumbent upon them. If a conciliation board, under the Industrial Relations and Disputes Investigation Act, is to counsel settlement by imposing the cost of wage increases on third parties, I have much less quarrel with the views of my colleagues. It is a momentarily pleasant avenue of escape to assure both parties that they are right: wages are too low; wage costs are too high; the employees should receive higher wages; the railways cannot pay them, except only as they may be assisted by the "public." Even if our Board possessed such jurisdiction, however, I would hesitate to impose anywhere near the same degree of burden upon the Canadian community. Apart therefrom, it is my view that such a recommendation is beyond the competence and appropriate sphere of jurisdiction of a conciliation board. In any event, it only becomes capable of implementation if and to the extent that the governmental measures, in respect of which it has been conditioned, are forthcoming.

Translating the majority report into added transport charges requires a disproportionate degree of burden in other directions. Corresponding rate additions would not suffice.

A CNR study has indicated that it took 157.3 per cent in cumulative percentage freight rate additions from April 1948 to December 1958 to achieve an estimated theoretical increased rate yield thereby of 86.1 per cent (Ex. R. 5). The CPR made a similar analysis and found an estimated theoretical yield of 88.8 per cent (Ex. R-8). In both instances the actual increased yield was lower, and the CPR estimated it at approximately 71 per cent. This arises by reason of the inapplicability of the increases either in law or through the force of competition to all commodities. In practice general freight rate increases can only be applied to less than one-third of all traffic. Thus, much must be added for little to result. In my opinion, even if such matters were within our jurisdiction, the evidence would not justify any occasion for exacting the dislocation implicit in implementation of the award.

With the union declaration that railway employees ought not to subsidize the effects of public policy, I find no fault. Labour is not the residuary legatee of the products of industry entitled to that which remains only after all other charges are paid. The issue is not the relevancy of public policy, but the relevancy of considering the gross product and its expansibility or otherwise. The parlous condition of the railways is not only a result of public policy. An expression of such policy is to be found in decisions of the Board of Transport Commissioners to the effect that rates were being established at such a point as would provide a stated permissive over-all level of earning power to the CPR. In 1959, the CPR earnings failed to attain this standard by some thirty million dollars. It falls far short of attaining what, by the professed declaration of public policy, is intended.

Wages invariably bear some relationship to productivity. Within the durable goods complex, which has been suggested as a model, there are substantial variations in earnings and more or less corresponding differences in component wage rates. Sharp regional contrasts in wage rates, so much to the fore in evidence, are linked to the relative earning power of different industries in different parts of the country. International disparities are even more extreme.

No evaluation of a fair and reasonable wage can logically be made without reference to the value of the product out of which the wage is to be paid. In 1958, the dollar output per employee for the CNR and CPR combined amounted to \$6,620. The comparable figure in durable goods was \$15,317 and the range was from \$11,231 to \$26,641. The revenue per employee of

the railways was only 43.2 per cent of that achieved in durable goods industries. The increase on the railways in 1945-1958 had been 51 per cent while in durable goods the rise had been as much as 140.3 per cent. Meanwhile, average hourly earnings of railway employees had risen 120 per cent. The two railways in 1958 effected a gross capital expenditure of \$1,926 per employee. In durable goods as a group, the corresponding expenditure was only \$597 per employee. Notwithstanding the enormity of the capital expenditures, rail employees on the two systems received, inclusive of pension, health and welfare charges, 60.9 per cent of rail revenues. The ratio of payroll alone to revenues was 53.8 per cent while in durable goods industries it was 25.9 per cent. Coupling the existing strain with the high labour cost content underlines the accentuated dislocation which would flow from any increase.

Competitive inroads from buses, trucks, automobiles, ships and pipe lines cannot be ignored. They sharply inhibit the revenue recovery potential even if rate increases are to be allowed to match wage changes. To take the most extreme of many possible illustrations: In 1945, Canadian railways handled 13.4 per cent of production and imports of crude petroleum; by 1958, the percentage had declined to 1.6. The effect of those types of changes on the railway share of the transportation market in Canada is vividly illustrated by the following: Between 1949-1958 total freight revenue ton miles for all types of transportation, in terms of constant 1949 dollars in Canada increased 55.8 per cent. The gain for the railways only amounted to 17.8 per cent over the same period. In any industry in a comparable position, abstracting all questions of public policy, the continual increased costs of the past in the face of such a dwindling share of the total market would leave no scope for any further wage increase.

The financial position of the railways derive from a conjunction of two factors. Public policy imposes certain transport obligations below cost. Quite apart from this, however, the steadily worsening competitive position in the transport market further impinges on their earning power. To say that this should have no effect on wage rates is to eliminate a factor of universal applicability where the forces of supply and demand are operative.

Recent Parliamentary enactments in the form of the Freight Rate Reduction Act, imply a freeze on the upper limits of railway rates. It is, therefore, current public policy not to provide any remedial redress

at least in the form of rate charges. If wage modifications are suggested so that the burden is to be borne "by members of the public at large" it follows equally that they must be held in abeyance until the duly elected representatives of the public choose to implement them in some manner so that the burden will fall where those who made the suggestion declare that it should.

Indeed, the cumulative impact of successive wage increases accentuates the disparity between the actual results and what is intended by public policy. As expressed by the Board of Transport Commissioners in its judgment of February 15, 1954 and, as is, *a fortiori* applicable after the intervening seven wage increases since that date:

As a result of these recent rail traffic trends, we are now more strongly than ever of the opinion that the long succession of general freight rate increases, mainly due to added costs of labour which is the largest single factor and to increased costs of materials, has brought about a loss of traffic by the railways to competing modes of transport, not only of traffic which the railways formerly regarded as vulnerable because it was highly competitive, but a loss as well of traffic which was formerly non-competitive but which has now become subject to competition by reason of the aforementioned long succession of rate increases. Thus the law of diminishing returns is now, in the inexorable economic sense, beginning to assert itself. We are convinced therefore that, unless the several underlying conditions adversely affecting the railway industry in general changes markedly for the better, means other than general rate increases imposed on the basis of the past will have to be found in the future if the railways of Canada are to be maintained in a healthy operating position... Canadians at large have a vital stake in our railways. They, we think, reasonably could expect railway management and labour in their own mutual long term self-interest, as well as in the interest of the public, to collaborate in taking a new and economically realistic view of the deterioration which has taken place in the traffic position of Canadian railways since the Board's judgment in March last. This is so, particularly since such deterioration cannot be accounted for by any contraction for the year 1953 in Canadian production generally but is, we believe, attributable mainly to the increasing pervasiveness of competing modes of transport.

In comparing railway non-operating and durable goods employees, there are considerable differences as the majority report indicates due to geographic distribution. Employees in smaller areas and in less industrialized locations generally receive a lower level of compensation than those in large centres or highly developed regions. According to a 1959 count, 79.3 per cent of durable goods employees were in urban centres (under a DBS selection extending, in the main, to those with more than thirty thousand population and/or with more than four thousand manufacturing and min-

ing employees) compared to 62 per cent for the non-operating railway employees. The percentage of rurally situated employees amongst the railway group was almost twice as high. In Ontario and British Columbia, the two provinces with the highest average earnings, there were concentrated 64.5 per cent of total durable goods employees while the equivalent figure for the non-operating railway labour force was only 33.8 per cent. Only 4.4 per cent of durable goods employees were located in the Maritime provinces and Newfoundland—where wages are usually low—compared to 12.5 per cent of total railway non-operating employees.

If average hourly earnings of durable goods employees are weighted to correspond with the urban-rural and provincial distribution of non-operating employees on the railways, the composite result for the first group is reduced by 12.3 cents per hour. This geographically weighted average for the twelve month period January to December 1959, emerges as \$1,748 in durables compared with \$1,758 for non-operating railway employees. When account is taken of the significant geographic distribution factor the alleged gap becomes non-existent.

Moreover to the extent that any comparison is valid, durable goods employees exclude clerical workers but embrace all production help, other than supervisory staff. The non-operating group covers only a segment of the railway force. There must be added the running trades who form a vital element in "production" on the railways. If clerical help is eliminated from the non-operating group and the basic running trades are added, average hourly earnings on the railways for the year 1959 exceeded the weighted average for durables, computed as set forth in the previous paragraph, to the extent of 15.5 cents per hour. Within these two respective groupings, if clerical employees are excluded, the male-female distribution would be higher in the railway group but if account is taken of all railway employees, and a weighting was added for sex distribution as well as regional urban-rural distribution, the resultant higher level on the railways would be some 13½ cents per hour. Thus, if all factors are brought into consideration it no longer becomes possible to assert that railway employees as a whole are compensated at levels lower than those prevailing amongst durable goods employees in corresponding localities and concentrations of population. The very reverse is the case. The so-called gap is substantially in favour of railway employees.

Whether through reliance on durable goods earnings as a yard stick or otherwise, no evidence was introduced by the unions to suggest that actual wages were inadequate or that employees as a group received compensation comparing unfavourably with similar employees in corresponding positions. The Woods-Gordon report, which was not intended as a yard-stick and which would not serve for such purpose, confirms that, by and large, where reasonable comparisons may be made—and admittedly they are quite limited—railway employees are generally as well off as their counterparts in outside industry. The Board received no testimony which would suggest a contrary conclusion.

From 1949 to the end of 1959, the index of hourly average earnings of non-operating railway employees has risen from 100 to 217.1.

Each case presented by the unions evokes an understandably sympathetic reaction, especially on the part of those not obliged at first glance to pay the bill. The ultimate cost to the taxpayer and the adverse effects on the economy of imposing extra charges that weaken Canada's competitive position in markets abroad, escape recognition. Each decision separately would be more supportable were it not for the cumulative effects of earlier awards. Since 1946, this is the eighth consecutive hearing in which substantial additional labour costs are proposed for the railways—although, in one instance, the emphasis was on fringe benefits rather than wage adjustments. In the last four years, on the step-by-step plan, there have been seven different wage increases.

If the age of affluence, in combination with full employment, had arrived and if progressive uninterrupted economic expansion was inevitable and forthcoming, these advances would be welcome. But the rise in wages has not been matched and by wide margin has not been approached by a corresponding expansion of output. To take one more illustrative count, from 1939 to 1958, average hourly earnings of CPR employees (not restricted to those represented before this Board) rose 175 per cent—exclusive of important additions to fringe benefits. During the corresponding period, the index of price materials rose 126 per cent. Total railway expenses per actual gross ton-miles went up 112 per cent. Railway revenues per 1,000 actual gross ton-miles rose only 87 per cent. The preponderant pressures of labour costs become apparent; each successive case only seems to augment them.

The employees have a vital stake in the continued operability of the railways. The scope for increased revenue, to offset the extra charges, has increasingly narrowed by virtue of the pervasive effects of competition already mentioned. The only escape from the vise has been the employment of less labour. In the past, this has been achieved, in the main, through dieselization for which a vast capital expansion has been necessary without corresponding market level returns. This process is now complete and further economies therefrom are no longer available. The compulsion of greater labour costs, particularly without compensating returns in other directions, can only accentuate declining employability on the Canadian railways.

One has only to compare the labour force represented before this Board and that of its immediate predecessor. On both occasions, the non-operating employees constituted 68 per cent of total railway personnel. However, this time they numbered 115,642 compared with 130,114. The main decline has been in the shop crafts—down from 41,702 to 29,683—a 12 per cent drop in their employment within a two-year period. Where formerly they were 32 per cent of all organized non-operating employees they have now been reduced below 26 per cent; of all those concerned incidentally, this group provides the most significant source, albeit still very limited, with some counterparts in certain durable goods industries. A twofold lesson emerges. The composition of the respective labour forces on each side, which are sought to be matched against each other, is highly variable. The element amongst which could be found instances of comparability with particular trades in durable goods industries has declined rapidly.

It is not suggested that reduced employment on the railways is due entirely to additional labour costs. The rationalization of industry usually opens up new markets for the employment of labour. The position in which the railways are placed, when aggravated by the additional proposed distortion of costs as compared to revenues, would further impair employment prospects.

A comparison with the employment pattern in durable goods is instructive. Durable goods industries appear to respond quickly to economic pressures by disemployment—to avoid the ugly word unemployment. Upward moving hourly wage rates are no comfort to the men who are laid off. During 1957 on a base of 1949 equals 100, the index of employment in durables adjusted for seasonal variations averaged 123.3; for 1958 it had fallen to 114.8. The corresponding indices in non-durables were

107.6 and 105.6 respectively. The February 1960 index for durables was 116.9 and for non-durables 106.7. All through the period, the degree of employment change in durables has been much more volatile. The employment force appears to be relatively quickly expanded or contracted. On the railways with its heavy emphasis on service operations, maintenance work and standby activities, a lower volume of business initially means less intensive work for many personnel without immediate unemployment. As the resultant ratio of costs to revenues becomes all the more aggravated, long term reduced employment inevitably results. The comparison with durables, in the face of this different employment pattern, is a source of further distortion in seeking to

measure one industrial segment against another.

A Royal Commission is currently grappling with the interrelationship of the railways and the public. The procedure for seeking rate changes has been immobilized for the time being. Under the circumstances, and in keeping with the grounds formulated in the Majority Report that the burden is one for the public, I would recommend that no wage changes be effected at the present time.

On the two incidental issues before the Board, I would express my concurrence with the conclusions reached by the other members.

(Sgd.) PHILIP F. VINEBERG,
Member.

Report of Board in Dispute between Shipping Federation of British Columbia and International Longshoremen's and Warehousemen's Union

1. *Term of the New Agreement*

The term of the new agreement will be from May 1, 1960 to July 31, 1962.

2. *Mechanization, Bulk Loading, Guaranteed Work Program, etc.*

The problem of mechanization should be resolved as follows:

1. the parties will establish a special joint mechanization committee with equal representation from the Union and the Federation (three men each), which committee will meet regularly at least once per month and which will have the following functions:

- (a) to make recommendations respecting any aspect of mechanization or the use of new or changed methods which the representatives of either party may wish to submit as the

subject for negotiation at the end of the collective agreement;

- (b) to discuss questions of premium rates for commodities in the light of current or changed methods of cargo handling;
- (c) to discuss questions of job-training, re-location, normal retirement, early retirement and the size of the Union work force;
- (d) to discuss the question of work rules, gang structure, gang composition, gang size, despatching practice and other related matters;
- (e) to discuss the appropriate manning for particular types of operations;
- (f) to discuss and make recommendations respecting a guaranteed work program;
- (g) with respect to any of the above matters, to make decisions where they are appropriate, otherwise to make recommendations to the Port Labour Relations Committee where such action is appropriate.

2. It is understood that in dealing with any of the above matters, that issues may arise concerning the size or composition of:

- (a) the gang appropriate for new work or a new type of operation not heretofore performed;
- (b) the gang appropriate for work which continues to be performed as heretofore, without any significant

During August, the Minister of Labour received the unanimous report of the Board of Conciliation and Investigation which had been established to deal with a dispute between the International Longshoremen's and Warehousemen's Union (Locals 501, 502, 503, 504 and 508) and the Shipping Federation of British Columbia, Vancouver.

The Board was under the chairmanship of F. Craig Munroe, QC, New Westminster, and the other two members were J. C. Adams, QC, Toronto, and William Angus Stewart, Vancouver, nominees of the Federation and Union respectively.

The employees affected and the members of the Shipping Federation have ratified the terms of settlement recommended by the Board.

The text of the report is reproduced here.

changes of methods or introduction of mechanical devices;

- (c) the gang appropriate for the performance of work by gangs which heretofore had an established or traditional size and composition, but because of the introduction of new methods, machines or mechanical devices, either party may contend that a manning change is appropriate. (The Parties understand that packaged lumber and bulk operations at Port Moody, Vancouver wharves and Nanaimo, fall within this category.)

With respect to disputes concerning the size or composition of gangs mentioned in 2 (a), the committee will deal with the matter as quickly as possible, each party giving to the other as much advance notice and information as is reasonably possible and if unable to reach a decision by mutual agreement, or by the decision of an arbitrator prior to the commencement of the work, the Federation will proceed to establish the size and composition of the gang, if any, subject to the right of the Union to lodge a grievance. If, after such grievance is resolved by the decision of an arbitrator or otherwise with the result that the Federation is directed to increase the size of a gang or alter its composition, the Federation will pay to the Union the amount of the extra wages which would have been paid had the gang originally been constituted in the manner decided upon as aforesaid.

With respect to any dispute arising out of a claim by either party respecting the type of gang mentioned in 2 (b), although either party may immediately initiate discussions and submit the issue to arbitration, it is understood that any decision of the arbitrator which would have the effect of reducing the size of the gang or altering its composition contrary to the wishes of the Union, will not be implemented until August 1, 1961, unless the parties agree otherwise.

With respect to disputes arising out of the types of gangs mentioned in 2 (c), the decision of the arbitrator, if any, will be implemented on the date directed by the arbitrator, but it will not be given retroactive effect.

The expression "arbitrator" used throughout these proposals means an arbitrator chosen by the parties and failing such agreement means, the board of arbitration selected in accordance with the provisions of the collective agreement.

If by August 1, 1961, the parties have not evolved a guaranteed work program which is mutually satisfactory to them with

respect to the mechanization of operations in the industry, then it is agreed that for the final year of the collective agreement, namely, from August 1, 1961, until July 31, 1962, the following guaranteed work program shall be in effect:

Guaranteed Work Program

Each registered Union member covered by the collective agreement as of August 1, 1960, who as of August 1, 1961, is still so registered and is then under the age of 65 years, will be guaranteed for the 12 month period from August 1, 1961, an opportunity to earn an income equivalent to 1,820 hours at the appropriate straight time base rate.

If a member's total actual income from his employment under the collective agreement, including vacation pay, for the said 12 month period is less than the amount of the guarantee, he shall be paid the difference, if any, after the amount of his actual income has been increased by the following:

- (a) seven times the base hourly rate for each day on which work was available for him which he did not accept, either because he did not report for despatch or because he was not available to be despatched at least once that day, or having been despatched, he refused to work without justifiable reason;
- (b) seven times the base hourly rate for each day during which he was suspended for disciplinary reasons and such suspension is not subsequently held to have been improperly imposed.

No member will be charged with failure to report to work if his absence is due to his scheduled vacation, which depending upon his service may range from a minimum of six days to a maximum of 16 days per year.

The foregoing provisions will be applied on a proportionate basis for those members who for any reason cease to be registered as members available for work before July 31, 1962.

The guarantee of an opportunity to earn an income equivalent to 1,820 hours at the appropriate straight time base rate for the period from August 1, 1961 to July 31, 1962 will not be reduced because of the introduction of mechanization or changes in methods of cargo handling. However, the guarantee shall be reduced proportionately when, due to economic and other conditions beyond the normal control of the Federation, there are reductions or changes in the tonnages of cargo handled by employees covered by the Collective Agreement which

result in the work opportunities for the Union members concerned, being less for the year in question than the work opportunities enjoyed by such Union members for the year immediately prior to August 1, 1960.

3. *Vacations with Pay—Article IX*

Amend Section 902 to provide for payment of 4½ per cent of earnings 6-9 years of service and 5½ per cent after 9 years service, effective August 1, 1960.

4. *Minimum Hourly Guarantee*

Amend Article IX of Schedule "A", Section 901 to read "four (4) hours" instead of "two (2) hours", effective August 1, 1960, provided always that no other minimum guarantee shall be changed.

No change in Section 1002 of Article X or in Section 902 of Article IX.

5. *Night Portion of Split Shift*

Amend Article XIV, Schedule "A", Section 1401 as proposed by the Union, effective August 1, 1960.

6. *Side Runners*

Amend Article IV, Schedule "A", Section 401, as proposed by the Union, effective August 1, 1960.

7. *M.S.A. and Welfare Plan—Article X*

Adopt plan proposed by the Union effective August 1, 1960, the additional cost to make the plan actuarially sound to be borne firstly, by collection of 2 cents additional per man hour from employees so as to equalize the contributions of employer and employee and secondly, the balance required, if any, shall be paid in equal shares by the employer and employee to a maximum of 1 cent per man hour each.

8. *Discipline—Article VI*

The Board recommends that both parties withdraw their proposals for amendment of the discipline clause and continue to operate under the words of the former collective agreement.

9. *Port Labour Relations Committee—Article II*

No change recommended except to the extent that some of its functions have been assigned to the Joint Mechanization Committee.

10. *Grievance Procedure—Article III—Section 301.*

Adopt recommendations of Shipping Federation.

11. *Stoppage of Work—Article VII—Section 701.*

Consideration should be given to revising this section to ensure compliance with Industrial Relations and Disputes Investigation Act.

12. *Welfare and Pensions—Article X*

Amend paragraph 3 of section 1001 as proposed by Shipping Federation.

13. *Holidays—Schedule "A"*

Amend section 801 as proposed by Shipping Federation.

14. *Schedule "B"—Article II*

Amend sections 202, 203, 213, 217 and 224 as proposed by Shipping Federation.

15. *Schedule "B"—Article II*

We endorse the proposals set out in the brief of the Shipping Federation with respect to sections 208 and 215, leaving the parties to work out the special language changes required.

16. *Wages*

- (a) An increase of 8 cents per hour, effective on and after August 1, 1960.
- (b) An additional 8 cents per hour, effective on and after May 1, 1961.
- (c) In addition, a lump sum payment equivalent to 5 cents for each hour worked or paid for during the period May 1, 1960 to July 31, 1960.

17. *Miscellaneous.*

All the requests of the parties relating to proposed amendments of sections 404, Article V, sections 501, 502, 503, 1101 and 1102 and also Schedule "A", sections 502 (b), 503, 602, 701, 1103 and articles 22 and 23 and also Schedule "B" sections 223, 301, 510 and 608 come within the jurisdiction of the proposed Joint Mechanization Committee and should be resolved by that Committee.

Report of Board in Dispute between Canadian Broadcasting Corporation and International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada

The Board of Conciliation appointed in the above matter is happy to report that it effected a settlement of all matters in dispute between the parties consequent upon abortive negotiations for renewal of their collective agreement. The terms of settlement were embodied in a memorandum signed by the authorized representatives of the Corporation and of the union. A copy of the memorandum so signed, and containing also the signatures of the members of the Board, is appended hereto.

Certain aspects of the dispute and the steps taken towards settlement deserve to be noted. The union was certified in 1953, and three successive collective agreements were successfully negotiated between it and the CBC. This is the first time that the parties have gone to a conciliation board; and it is worth noting that although the Board was not fully constituted until the appointment of the Chairman on March 24, 1960, the collective agreement immediately preceding abortive renewal negotiations, and consequent conciliation, expired on May 31, 1959. The number of matters presented to the Board at its first hearing on May 12, 1960, as being unresolved (including claims by the Corporation as well as by the union) was roughly sixty; and it should be said that many of the issues involved multiple rather than single problems. The issues ran the gamut of an entire collective agreement, and their range and complexity (having regard to the technical operations of the CBC in which members of the bargaining unit are engaged) invited considerable concern of the Board as to the quality of the face to face negotiations between the parties when bargaining for their fourth agreement. Regardless of such concern, it was necessary to meet the parties on the grounds on which they respectively chose to take positions which impeded an over-all settlement.

There is no doubt that the work of the Board, strenuous as it turned out to be, would have been more difficult but for the efforts of the conciliation officer, F. J. Ainsborough, who met with the parties in the latter part of 1959 and the early part of

1960. While he failed to achieve a settlement, his work towards a "package" conclusion of the dispute enabled the Board to approach the multitude of issues with some perspective about their relative importance. Although the patience of the parties had been tried over the period of a year that elapsed between the expiry date of their existing agreement and the inception of Board hearings, the Board found it necessary to extend its hearings over several months at the risk of compounding existing difficulties and strains. This was necessary to enable the Board to become familiar with the nature of the relationship between the parties, to assess the possibilities of a settlement and to give the parties an adequate opportunity to consider suggestions of the Board aimed at reducing the area of the differences between them.

It would be idle to minimize the strength of the convictions held by the parties on certain items of their dispute. The Board mentions this because the ultimate settlement testifies to the hard compromises that each had to make; and it is to their credit that they came to see the necessity of making them before, rather than after, a strike. The hearings of the Board were lengthy not only in their number but in the span of hours devoted to the daily sessions. The hearing on June 15 lasted to 8 p.m. and that on July 14 lasted to 5 a.m. of the following morning. At the end of this session, it appeared doubtful whether a

During August, the Minister of Labour received the unanimous report of the Board of Conciliation and Investigation established to deal with a dispute between International Alliance of Theatrical Stage Employees and Moving Picture Machine Operators of the United States and Canada, and Canadian Broadcasting Corporation.

The Board was under the chairmanship of Prof. Bora Laskin, Toronto, and the other two members were J. W. Healy, Toronto, and Guy Merrill Desaulniers, Montreal, nominees of the Corporation and union respectively.

A settlement of the dispute was reached before the Board, and a Memorandum of Understanding is appended to the Board report.

The text of the report is reproduced here.

settlement would be made. But it was felt by the Board that it should persist for at least another day, and the result (achieved at about 10.20 p.m. of July 15) was the settlement to which reference has already been made.

The Board must express its appreciation to the two bargaining groups with whom the settlement was worked out. The union was represented by H. J. Sedgwick, international vice-president (who acted as chairman of the union committee); M. Treanor, business agent, Toronto; Y. Dansereau, business agent, Montreal; G. Kearney, chief steward, Halifax; Miss A. Kugel, steward, Montreal; L. Rampen, chief steward, Toronto; W. Doucette, chief steward, Ottawa; Miss Z. French, chief steward, Winnipeg, and F. Hill, chief steward, Vancouver; R. Chester, secretary, Local 880, Toronto and L. Belanger, vice-president Local 878, Montreal. (Messrs. Hill, Chester and Belanger were not at all the hearings, but Mr. Chester was present at the final series of sessions in

July). The Corporation was represented by J. W. Brooke, counsel; C. B. McKee, director of industrial and talent relations; M. A. Harrison, supervisor, corporate industrial relations; D. Lytle, supervisor, corporate film operations; D. R. Hogan, senior industrial relations assistant (Ottawa); J. Syroishko, industrial relations assistant (Ottawa); J. Lefebvre, director of staging (Montreal); M. Devlin, industrial relations officer for Quebec; G. Sarault, director of design (Montreal); J. Langdon, co-ordinator of TV operations (Toronto); P. Garstang, staging services organizer (Toronto); and D. Tasker, industrial relations officer for Ontario.

Dated this 20th day of July, 1960.

MEMORANDUM OF UNDERSTANDING

The parties agree that they will recommend to their principals the following basis of settlement for renewal of the collective agreement; and upon ratification, that they will execute a new agreement which shall include the following terms:

1. *Retroactivity*—A lump sum of \$200 shall be paid to each employee presently on staff, pro rated on the basis of length of service in the bargaining unit since June 1, 1959.
2. Immediately upon ratification of this Memorandum by both parties an across-the-board increase of 5 per cent on basic wages.
3. Effective June 1, 1961, a 4 per cent across-the-board increase on basic wages.
4. Agreement is to expire December 31, 1961.
5. In addition to the across-the-board increase under (2) above, the following revisions in rates shall be made immediately upon ratification of this Memorandum by both parties:

(1) Paint Shop Helper	5 per cent
(2) Carpenter Helper	5 per cent
(3) Asst. Costume Designer	5 per cent
(4) Warehouse Labourer	3 per cent
(5) Carpenter	2 per cent
(6) Carpenter Crew Leader	2 per cent
(7) Scenic Artist Crew Leader	1 per cent

6. *New Classifications:*

Design Estimator—in process. Corporation to advise within 2 months.
Special Effectsman — Corporation will study and advise within 4 months.

7. *Stagehand—Propsman*—The status quo with regard to reclassifications of stagehand and propsman (set) shall be maintained in all locations. In Montreal, the present incumbents shall remain over scale by the current amount.

8. *Other Items*

- (i) *Article 5*—As in present agreement with changes in dues structure.
- (ii) *Article 7.4*—Letter of intent to be supplied by Corporation.
Article 7.3—As in Corporation proposal.
- (iii) *Article 9*—10-hour mandatory turn-around period—and, where possible, 12 hours; with encroachment to be payable on the turn-around period as scheduled (up to 12 hours) subject to other provisions of the agreement.
- (iv) *Article 12*—As in present agreement.
- (v) *Article 18*—As in present agreement.
- (vi) *Article 19*—As in present agreement omitting 19.1.2 for over one week of temporary assign-

ment, with shift differential of \$1 to apply for assignments of at least one day up to one week.
Article 20—As in present agreement.

(vii) *Article 22*—Lay-off to be according to Corporation seniority, provided employees retained have necessary knowledge, training, skill, and ability.

Article 24—Promotion to be on basis of seniority as between employees with equal knowledge, training, skill, ability and potential.

(ix) *Article 34 et seq*—Maximum time limits under grievance procedure to be discussed including time limits on filing and processing of national grievances as for local grievances.

Balance of grievance procedure
—As in present agreement

(x) *Individual contracts*—Sick leave to be provided on basis of two weeks per year of employment effective date of ratification. Increase in minima to be retroactive to June 1, 1959.

(xi) *Article 16.7*—As in Corporation proposal—amended.

(xii) *Article 26-29*—Agreement to include new Corporation leave regulations.

9. Points from Previous Packages:

Article 2—Inclusion of notice re new related job classifications.

Article 4.4—As in present agreement.

Article 6—As in present agreement.

Article 8—As in present agreement.

Articles 10 and 11—As agreed as in Corporation proposals dated November 19, 1959, and October 1, 1959, (amended), respectively.

Article 13—As in latest amended Corporation proposal.

Article 17—As in present agreement omitting reference to married women in 17.2.2 and including Corporation proposals on 17.2.1 and 17.2.3 re contract classifications.

Article 21—As in present agreement with no letter of understanding.

Article 23—As in present agreement.

Article 25—As agreed in clause comparison chart retroactive to June 1, 1959.

Article 31—Sections 31.1 to 31.3.1 inclusive—As agreed in Corporation proposal.

Article 33—As in present agreement except for editing changes covered

by Corporation proposals except where such changes indicate progression in first three (3) steps on merit.

Sections 33.2 and 33.4—Delete “on merit.”

Sections 33.2.1, 33.4.1 and 33.4.2—Change “on merit basis” to “automatically.”

Section 33.8—After “period ending” insert “with the second last Sunday in the immediately preceding calendar month. Such payment shall be made not later than the 15th of the month unless the latter falls on a statutory holiday or a Saturday or Sunday in which case it shall be made not later than the work day immediately following and where possible the work day immediately preceding.”

Articles 44 to 47—As in present agreement.

Articles 48 and 49—As in Corporation proposal.

Article 50—As in present agreement.

Article 51—As in Corporation proposal.

Articles 52 to 58—As in present agreement.

Articles 60 to 62—As in present agreement.

Articles A, C, J, K—As agreed.

Article L—As in latest Corporation proposal.

Articles M, O, Q, V—As agreed.

In relation to the above terms of agreement reference shall be made to the clause comparison chart as revised May 10, 1960, the agreed clauses listed therein remaining in effect. The new agreement entered into shall contain all articles contained in the previous agreement between the parties save where inconsistent with the new articles above referred to. The parties hereto have acknowledged that they have read this agreement and they agree to it and undertake that they will recommend the inclusion in the new collective agreement of the terms herein set out to their respective principals.

In Witness Whereof the parties hereto have signed this document in the City of Ottawa this day July 15, 1960.

H. J. SEDGWICK,

On behalf of the International Alliance of Theatrical Stage Employees.

M. A. HARRISON,

On Behalf of the Corporation.

Canadian Railway Board of Adjustment No. 1 Releases Decisions in Eight Recent Cases

The Canadian Railway Board of Adjustment No. 1 has released its decisions in eight cases heard in June.

Six of the disputes arose over claims for: extra pay for engineers for picking up diesel units, extra time for engineers while tied up at a point where no shop staff was employed, pay at road rates for a yard engineman when required to go outside established switching limits, payment of overtime for a buffet car steward, payment of compensation for loss of layover by a dining car steward and crew, and payment for two separate days instead of one for engineers operating piggyback trains. The other two cases concerned the seniority standing of three buffet car stewards and the re-assignment of engineers in freight service that involved layover away from home instead of at the home terminal.

The contention of the employees was sustained in two cases, partially sustained in three, and not sustained in three.

Summaries of the eight decisions, Nos. 733 to 740, are given below.

Case No. 733—*Dispute between Canadian Pacific Railway (Pacific Region) and Brotherhood of Locomotive Engineers concerning the claim of engineers for 30 minutes extra pay for picking up diesel units.*

An engineer spent two hours and 10 minutes at a Canadian Pacific junction point, during which time, besides performing switching duties, he picked up a diesel unit. This latter operation entailed making the connections with his other units.

He submitted a claim for 30 minutes for picking up the unit, in addition to the time he spent at the junction. His claim was reduced by 30 minutes and he was paid for two hours and 10 minutes.

The employees contended that engineers were entitled under an article in the agreement to 30 minutes, over and above other allowances for the trip, for picking up diesels en route when this involves making connections.

This article stated that "Road engineers on diesel locomotives who are receiving road rates of pay and paid under rules applicable to road service, who are required to set out or pick up a diesel unit (or units) between terminals of a particular run which involves the making or breaking of connections between the units by the engineer, will be paid 30 minutes at the *pro rata* rate of the trip..."

The company contended that duplicate payment was not provided for under the

rule cited. It declared that the Brotherhood's claim that the 30 minutes allowance was agreed upon over and above other allowances for the trip was not correct.

The contention of the employees was sustained.

Case No. 734—*Dispute between Canadian Pacific Railway (Pacific Region) and Brotherhood of Locomotive Engineers concerning the claim of two engineers in work train service for extra payment while tied up at a point where no shop staff was employed.*

Two engineers employed on work train service were tied up at a point where no shop staff was employed. They claimed payment for 15 minutes in addition to final time of 15 minutes.

The union contended that the engineers were entitled to final time of 15 minutes prescribed under one clause of an article of the agreement, which provided for final time to be allowed in work train service from time of arrival at tie-up point until 15 minutes after engine is placed on shop or tie-up track, and to another 15 minutes under another clause that states that "engineer on work train when laid up at any other than regular roundhouse with regular shopmen, will be allowed 15 minutes after laid up by conductor to cover necessary repairs and get engine ready."

The company contended that the first of these two articles applied only at a place where a roundhouse and shop staff was employed, and the second only at places where no shop staff was employed; and that under no circumstances could both clauses apply to a given situation, since this would involve duplicate payment.

The contention of the employees was not sustained.

Case No. 735—*Dispute between Canadian Pacific Railway (Pacific Region) and Brotherhood of Locomotive Engineers concerning the claim of a yard engineman for 100 miles at road rates when required to go outside established switching limits.*

An engineman assigned to yard service on shift from 3.00 p.m. to 11 p.m. was told, at 10 p.m., to proceed to another point with a light engine to help a transfer whose diesel unit had failed and help it back to the yard. He arrived back at 10.40 p.m. and was off duty at 11.40 o'clock.

The employees contended that the engineer was taken out of yard service and placed in road service and was therefore

entitled to a minimum day at road rates and conditions.

The company contended that the engineer was properly compensated in accordance with an article in the agreement that stated: "Yard engineer whose work takes him outside of switching limits will receive yard rates."

In a general statement, the Board said that the work performed by the engineer in helping a train from another point was not the recognized work of a yard engineer. However, they said, payment for yard work performed should not exceed a minimum day based on service from three to ten o'clock.

The contention of the employees was sustained.

Case No. 736—*Dispute between Canadian Pacific Railway and Brotherhood of Railroad Trainmen concerning the claim of a buffet car steward for payment of hours in excess of 224 in one month at the rate of time and a half the pro rata rate.*

During December 1959 a buffet car steward accumulated 267 hours and 15 minutes, including six days vacation. The company calculated his payment as 208 hours (basic month) at *pro rata* rate, 3 hours 15 minutes in excess of basic month at *pro rata* rate, 48 hours vacation allowance paid at *pro rata* rate, and 8 hours for a statutory holiday paid at *pro rata* rate.

The union, in its contention, cited an article of the agreement that states that hours in excess of 224 shall be paid as overtime at time and a half, and said that the steward should have been paid accordingly.

The company in its contention pointed out that working hours for the purpose of computing penalty overtime do not include statutory holidays or paid vacation time, time spent in deadheading on pass, and certain periods spent away from the home station or while awaiting assignment or in performing non-operating work.

The contention of the employees was sustained to the extent of payment of all hours in excess of 232 hours (224 hours plus 8 hours credited for statutory holiday) at the rate of time and a half the *pro rata* rate.

Case No. 737—*Dispute between Canadian Pacific Railway and Brotherhood of Railroad Trainmen over the claim of a dining car steward and crew for loss of layover compensation.*

Before the change of time on October 25, 1959, dining car crews operated as follows: Montreal to Sudbury, Sudbury to Montreal, Montreal to Winnipeg, Winnipeg to Montreal. On completing this cycle, they were allowed three days layover.

When the time changed on October 25, the company rearranged the crews' schedule to the following: Montreal to Sudbury on one westbound train, Sudbury to Winnipeg on another the next morning, Winnipeg to Sudbury on one eastbound train, Sudbury to Montreal on another the next morning. After completing this cycle, layover time was four days.

Ten crews operated on the first schedule but only nine on the second.

A steward and crew who had bid on the rearranged run left Winnipeg on October 24. When they reached Sudbury on October 25—the day the time changed—they were taken off the train, held overnight, and inserted in another eastbound train the next morning; normally they would have gone straight through to Montreal.

After three days layover (87 hours, 45 minutes), they left Montreal on October 30 for Sudbury.

The union contended that when the company ordered the steward and crew to be taken off the train at Sudbury, held overnight, and put on another train to Montreal the next morning, that is, the new arrangement of the run, it was in effect assigning them to the run. The rearranged run provided for layover in Montreal of 111 hours, but the crew received 87 hours, 45 minutes layover. They submitted a claim for compensation for loss of layover of 25 hours, 15 minutes.

The compensation should be calculated, the union contended, in accordance with an article in the agreement that set out the scale of additional payment to employees required to forego layover in order to perform road service.

The company contended that it was generally recognized that at the change of time employees on the road should complete their cycle, even though it might be changed somewhat en route, and take up their new assignment after completion of their old assignment, which in this case would include its layover time (three days) at home terminal. The steward and crew picked up their new assignment after three days layover in Montreal under their old assignment. The new assignment began when they left Montreal.

It had always been understood, the company contended, that employees were not paid for time lost in the exercise of their seniority at change of time, neither were they paid for any loss of layover in order to pick up their new assignment.

In a general statement, the Board ruled that the company, for operational reasons, had delayed the arrival of the steward and

crew in Montreal and thereby curtailed their layover from 96 hours 45 minutes to 87 hours 45 minutes. It decided that they should be compensated for the nine hours thus lost.

Case No. 738—Dispute between Canadian Pacific Railway and Brotherhood of Railroad Trainmen over the seniority standing of three buffet stewards.

Three buffet car stewards were required by the company to pass clerical tests before being given promotion in their turns. They failed in their first attempts, but later passed the tests. But junior men who were able to pass the tests at the first attempt were promoted, and are now shown on the seniority list above the three who failed at first to pass the tests. The Brotherhood of Railroad Trainmen contended that, when the three stewards did pass, they should have been placed on the seniority list "in their proper place."

The union in its contention quoted two articles of the agreement. One of these stated that employees promoted in any classification shall hold seniority from the date of promotion, providing that the senior man is given his turn to qualify in the higher classification. The other article stipulated that if a junior man is used in an emergency a senior man shall be put in his place as soon as possible, and that the emergency service of the junior shall not count as setting the date of his promotion.

The three stewards were "held back from promotion," the union declared, pending the results of tests "arbitrarily imposed by the company." The Brotherhood added that when a man fails to pass a test other than one established by past practice and custom, it does not constitute "failing to qualify for promotion" within the strict meaning of the rule.

The company contended that the position of steward required certain qualifications, including the ability to read and write properly and a knowledge of arithmetic, and that the appraisal and tests made were necessary. Although it agreed that the senior employee should be given the first opportunity for promotion, he must also qualify as to merit, fitness and ability.

The company quoted an article of the agreement that stated that any man failing to qualify for promotion would thereafter rank junior in the higher classification to the man or men promoted in his place. It also made reference to the first article cited in the employees' contention.

The Board held that the rule governing promotion does not sustain the employees' contention. But it recommended that the

Employees' General Committee of Adjustment and representatives of the company should make a further investigation of the conditions under which these men failed to qualify, and try to reach agreement on the handling of future cases.

Case No. 739—Dispute between Canadian Pacific Railway (Atlantic Region) and Brotherhood of Locomotive Engineers concerning the method of payment of locomotive engineers who operate piggyback trains between Ottawa and Montreal.

The Canadian Pacific Railway inaugurated piggyback service between Ottawa and Montreal in March 1959. Engineers were required to operate from Ottawa to Grovehill and Grovehill-Ottawa.

On April 1, 1959, engine crews were told that they would be called for turn-around service when called to operate piggyback trains between Ottawa and Grovehill. They were also told to submit their pay claims on a single trip ticket, claiming initial time in Ottawa; actual miles run between Ottawa and Grovehill and return; miles, or time off main track, at Grovehill; and final terminal time at Ottawa.

The employees contended that engineers in unassigned freight service who operate trains between Ottawa and Grovehill and vice versa are entitled to payment of a separate trip or day in each direction, in accordance with an article in the agreement that limits the distance of one or more turn-around trips out of the same terminal for engineers in unassigned service to a maximum of 120 miles a day, and stipulates that the distance from the terminal to the turning point shall not exceed 30 miles.

The company in its contention quoted an article in the agreement that states that, on straight-away or turn-around service, 100 miles or eight hours shall constitute a minimum day, that an engineer who makes less than 100 miles will be liable for further service to the extent of eight consecutive hours (12½ miles to count as one hour's service), that miles in excess of 100 shall be paid for at the mileage rates provided, and that on runs of more than 100 miles overtime shall begin when the road time exceeds the road miles run divided by 12½.

The company further stated that Grovehill was a turn-around point, and that as part of the last negotiations with the Brotherhood of Locomotive Engineers the company moved the outer yard switch of Montreal terminals to Grovehill. This was agreed to by the union and included in a memorandum of agreement on January 20, 1959.

LABOUR LAW

Labour Standards Legislation Enacted in 1960

Prince Edward Island enacts Minimum Wage for Men Act, supplementing 1959 legislation applying to female employees. Ontario passes Employment Agencies Act providing for licensing and supervision of fee charging employment agencies

To supplement the legislation passed last year applicable to female employees, the Prince Edward Island Legislature at its 1960 session enacted a minimum wage Act under which minimum wage rates may be set for male employees.

A new Act providing for licensing and supervision of private fee charging employment agencies was passed in Ontario.

In most other provinces, minor changes were made in existing labour standards legislation.

Annual Vacations with Pay

No changes were made in 1960 in any of the vacations with pay Acts to affect the length of the vacation to be given or other main features of the legislation; but the Manitoba Vacations with Pay Act and the Alberta Labour Act were amended in minor details and the Saskatchewan Annual Holidays Act was consolidated, with some revisions.

The Manitoba amendment fixed July 1, 1960 as the date on which the new system of vacation pay cheques adopted in 1959 as an alternative to the cashing of vacation credit stamps for construction workers (L.G. 1959, p. 1068) would go into effect. The amendment also specifically states that an employee's regular rate of wages is the basis of the vacation pay credit required to be paid by the employer. This is not a change in principle, but it clarifies the point that an overtime rate need not be taken into account.

A new provision dealing with collection of vacation pay was added to the Alberta Act. It states the right of an aggrieved employee to bring an action against an employer to recover the vacation pay to which he is entitled. Only amounts accruing to the employee in the two years preceding the action or the two years preceding termination of his employment, whichever

first occurs, can be recovered under this section. If no prosecution has been started by the Department, such an action can be brought by the employee any time not later than 12 months after he has left his employment. Before the amendment, it was not clear that the employee had a right to civil action.

The Saskatchewan Annual Holidays Act was replaced by a new Act consolidating the numerous amendments made in the last several years and introducing minor changes for purposes of clarification.

Two new provisions were added. The Act provides that an employee is entitled to a vacation with pay of two weeks after a year of employment and to three weeks after five years. For the purpose of determining entitlement to a three-week vacation, periods of employment with the same employer may be accumulated so long as any two such periods have not been separated by more than 182 days. The Act as amended provides that a period of employment of two days or less cannot be counted.

Under the Act, annual holidays may be given in one period or in periods of not less than one week each. It is now provided that an employee may, not later than the day on which he becomes entitled to an annual holiday, give his employer a written notice indicating which arrangement he prefers, and the employer must allow him to take the holiday in the manner indicated. However, where an employer, with the approval of the Minister, closes his business in order to give his employees their annual holidays at the same time, an employee is not entitled to have his annual holidays at a different time.

Hours of Work, Public Holidays, Weekly Rest

The "maintenance of earnings" provision in the Saskatchewan Hours of Work Act was extended for another year to April 1,

This section, prepared by the Legislation Branch, reviews labour laws as they are enacted by Parliament and the provincial legislatures, regulations under these laws, and selected court decisions affecting labour.

1961. The effect of this provision is that a reduction in "previously established hours of work" as defined in the Act, in order to meet the requirements of the Act, may not result in a reduction in actual earnings of an employee. It continues to have significance because certain classes have been permitted by orders under the Act to have a longer work week than 44 hours and are progressively being brought up to the 44-hour standard.

Another amendment to the Act restates and clarifies the provision that lays down the rule that an agreement, contract of service or any custom which assures more favourable conditions to employees is not affected by the Act.

In Quebec, the maximum hours of work for certain classes of factories and shops are set by decrees under the Collective Agreement Act, which gives the Lieutenant-Governor in Council authority to make certain terms of collective agreements in an industry or trade binding on all the employers and employees in the province or in a stated region of the province. An amendment to the Act specifies that the provisions respecting hours of work in a collective agreement that may be made mandatory include the fixing of working days, non-working days and the time when a working day begins and ends for each category of employees. However, in any territory where the opening and closing time is fixed for the trade under local by-laws, the working day must fall within the period the trade may keep open under the local by-law.

The Saskatchewan Minimum Wage Act names New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day, Remembrance Day and Christmas Day as paid holidays, and authorizes the Minimum Wage Board to fix the rate of compensation for employees who may be required to work on these holidays; this the Board has done. An amendment to the Act provides that an employer and a trade union representing a majority of the employees in an appropriate bargaining unit may enter into an agreement to substitute another working day for any of the eight holidays listed above.

Another amendment to the Act revised the definition of "restaurant" to which the Act applies to make it clear that it includes "any place in which meals or light lunches, or both, are supplied for a consideration and such service is furnished daily to more than five persons."

The One Day's Rest in Seven Act in Saskatchewan was also amended. It provides that a rest period of at least 24 consecutive hours in every seven days (when possible,

on a Sunday) must be granted to all workers covered by the Act. As the Act stood before this year's amendment, it applied to cities, and its operation could be extended to any rural portion of the province by an Order in Council, and it had actually been extended throughout the province.

As amended the Act applies throughout the province, and there is no provision for exclusion on a territorial basis, but a specified class or group of employers or employees may be excluded from the operation of the Act by an Order in Council "subject to such conditions as may be prescribed therein."

Minimum Wages

An Act entitled "Minimum Wage for Men Act" was passed in Prince Edward Island, with the result that authority is now established to enable the Labour Relations Board to fix minimum wage rates, subject to review by the Minister of Labour, for either men or women or both.

The new Act does not apply to persons employed in a confidential capacity, employees in domestic service or agriculture, or persons employed by the Crown. The Board may make orders with the approval of the Minister establishing minimum rates of wages to be paid by employers, including overtime rates for time worked in excess of a fixed number of hours. Such orders may also fix the rate that an employer is permitted to charge an employee for board and lodging, and the interval at which wages must be paid.

Orders may apply generally throughout the province or to a designated part of the province and cover either all employees coming under the Act or designated groups or classes. Orders of the Board are binding upon employers and employees and may not be altered by individual agreement or, except with the authorization of the Minister, by collective agreement.

The Act imposes on every employer a duty to keep posted in a conspicuous place in his establishment any order of the Board applicable to his employees. An employer must file with the Board, within ten days of a request from the Board, a statement of the names and addresses of his employees, their age, the duties performed, the hours of work performed per day and per week, the rate of wages, any agreement with his employees in relation to wages, hours of work and working conditions and such other information regarding wages, hours of work and working conditions as may be required by the Board. Every employer has a duty to keep records and also to make them available to the Board for inspection.

The Act provides that there shall be one or more minimum wage inspectors under the direction of the Minister of Labour.

An employee or employer who contravenes an order of the Board is liable to a penalty of up to \$100 for each employee affected or, in default of payment, to imprisonment not exceeding one month. A person who seeks to influence an employer or employee to abstain from lodging a complaint or taking part in any proceedings under the Act is guilty of an offence. The judge may order the employer to pay the wages due to the employee. Prosecution for any offence under the Act requires the authorization of the Minister. An employee may also sue the employer for the amount due him under the Act.

Protection of Wages

An amendment to the Wages Recovery Act in Manitoba increased from \$200 to \$500 the maximum wages that may be recovered by an employee in summary proceedings under the Act before a Justice of the Peace. The Justice may allow for solicitor's costs in accordance with a scale set out in the Act. As amended, the scale will be based not on the amount of wages claimed but on the amount of the wages ordered to be paid, and runs from \$5 to \$25.

In Ontario, the Wages Act, which deals, among other matters, with the garnishment of wages, was amended to provide that a judgment debtor may pay off a judgment by instalments and avoid successive garnishment of his wages. The debtor may apply to a division court judge for an order for the release of the garnishment and for the payment of the judgment debt by instalments. So long as he is not in default under the order, no further garnishment of his wages will be made.

The Alberta Industrial Wages Security Act, which secures the payment of wages in mining, was amended in 1959 to authorize the Minister of Labour to exempt any employer from the requirement of giving security for wages if the provincial auditor certified that he was satisfied with the financial position of the employer and his ability to pay the wages of his employees. As a result of an amendment at the last session, the Minister is given power to exempt from the wages security requirements any employer who has not made default in the payment of any wages for a period of three years immediately preceding an application for exemption. Such Ministerial order does not require a certificate of the provincial auditor as to the financial position of the employer.

Payment of Loggers

The Newfoundland Logging Camps Act, 1960, the safety and health provisions of which were reported in the September issue at p. 908, also deals with the scaling of timber for the purpose of computing the earnings of loggers, pay statements, and provision of tools.

An employer of loggers is required to keep his employees informed of the rate of their remuneration and specifications of timber required. At regular intervals not in excess of 18 days or such longer intervals as may be prescribed by the regulations, the wood cut by a logger must be scaled by a commercial scaler. A statement showing the net quantity of wood credited to the logger and the net amount of money due him must be given by the employer to the logger on the completion of the scale. A logger may, in addition, request information showing the identification and measurement of the wood and the quantity of wood rejected.

Where a dispute arises as to the amount of wood credited to the logger, a party to the dispute may ask the Minister of Mines and Resources, who is responsible for administration of the Act, to provide the services of an official scaler. If the parties agree to accept the decision of the official scaler, his decision is final and binding on them. If one of the parties refuses to accept the decision and takes action in a court, the scaler may be heard as a witness.

The Minister is responsible for appointing official scalers and approving the appointment of commercial scalers. Official scalers are authorized to enter any place where logging operations are being carried out and any person connected with a logging operation must assist the official scaler in carrying out his duties.

Regulations will determine the qualifications and duties of commercial and official scalers, and the fees to be paid for examinations and certificates. Rules respecting the keeping of official records and accounts of timber cut by each logger, their earnings and the deductions made, may also be established by regulation.

Every logger is to be supplied by the employer, free of charge, with one axe and one bucksaw, which have to be returned at the end of the season. If he needs additional axes or saws he has to supply them at his own expense. The Minister may issue an order requiring an employer, where necessary, to make available other supplies and equipment on a fair and equitable basis.

Offences under the Act and regulations are punishable by fines not exceeding \$1,000 or, in default of payment of the fine, by

imprisonment up to six months, or by both fine and imprisonment.

The Act came into force by proclamation on August 30.

Private Employment Agencies

The Ontario Legislature enacted a new Employment Agencies Act providing for the licensing of persons carrying on the business of employment agencies, repealing an Act dating back to 1927.

(A 1959 amendment to the federal Unemployment Insurance Act repealed a provision in that Act authorizing regulations for the control and licensing of private employment agencies, indicating that the matter was considered to be a provincial responsibility. Two other provinces, British Columbia and Manitoba, have legislation requiring employment agencies to be licensed, and Alberta, Saskatchewan, Quebec, New Brunswick and Nova Scotia have legislation prohibiting the operation of private fee charging employment agencies.)

A distinctive feature of the new Ontario Act is the bringing of the business of counselling or testing persons for a fee under the definition of an employment agency.

The Minister of Labour is responsible for administration of the Act. Annual licences will be issued by an officer of the Department of Labour to be known as the Ontario Supervisor of Employment Agencies to persons who have complied with the requirements of the Act and regulations. A licensee must display his licence in the premises where he carries on business.

The following requirements are spelled out in the Act. An applicant must apply on the prescribed form, pay the prescribed fee, furnish security, and possess the qualifications prescribed by the regulations. In addition, the applicant must satisfy the Supervisor that he is "worthy of public confidence."

The Supervisor, after a hearing, may refuse to issue or may suspend or revoke a licence if he finds that the applicant or licensee, as the case may be, has contravened any provisions of the Act or regulations or otherwise is not worthy of public confidence. Notice of refusal to issue a licence or its suspension or revocation must be given in writing.

If the party affected is dissatisfied with the decision of the Supervisor, he may, within ten days after receipt of the notice, appeal to the judge of the county or district court where he intended to carry on or carried on his business, for an order reversing the decision of the Supervisor. The judge, after hearing the applicant and the Supervisor, and upon examining any evi-

dence presented by the parties, may either dismiss the application or order the Supervisor to issue or reinstate the licence if he is satisfied that the applicant is worthy of public confidence.

A person contravening any provisions of the Act or the regulations is liable on summary conviction to a fine of not less than \$10 and not more than \$500.

The Act provides only a general framework of rules in the matter of licensing and supervising employment agencies. Wide powers are given to the Lieutenant-Governor in Council to make regulations prescribing the qualifications of applicants for licences, classifying employment agencies, limiting and prescribing the nature of the business to be carried on, regulating and controlling the manner in which the business has to be carried on, prescribing the fees that may be charged, and providing for inspection.

Apprenticeship and Tradesmen's Qualifications

The Manitoba Apprenticeship Act was amended with respect to the rules that may be made by a trade advisory committee. Before the amendment, each committee could make rules in respect to the upper age limits for apprentices in the trade. The amendment withdraws this authority and gives instead authority to set rules in respect to the minimum educational qualifications of apprentices.

Another amendment alters the schedule of trades that may be named as designated trades by adding the following trades: barbers, cooks, electronic technicians, hairdressers and television workers.

The New Brunswick Apprenticeship Act was amended to provide that a holder of a certificate of apprenticeship under the Act or a certificate issued under the Inter-Provincial Standards Seal is entitled to obtain a trade license required by a municipality, without examination, on payment of the municipal licence fee.

In New Brunswick also the Trades Examination Act, which provides for a board of examiners in certain trades to examine and issue certificates of qualification to qualified tradesmen, was amended with respect to the definition of "trade". It now means the electrical trade, the motor vehicle repair trade (mechanical), the powderman's trade, the plumbing trade and the pipefitting trade, or any branch of these trades designated by the Lieutenant-Governor in Council.

The welding trade has been dropped from the list, as examining of welders working on pressure vessels is now carried out by the Boiler Inspection Branch. Motor vehicle repair, for which a board of examiners was appointed in 1958, and the powderman's trade have been added.

Regulation of Trade Schools

In Newfoundland the Regulation of Trade Schools Act was passed. It provides that a trade school giving instruction in the trades enumerated in the Act must be registered with the Minister of Education. Trade schools operated by religious bodies or by companies for their employees are exempt from the operation of the Act.

The Minister may also, by regulations, exempt any trade school from the operation of the Act. Certificates of registration will be issued on an annual basis and may be renewed. The Minister may refuse registration or renewal where in his opinion the registration or renewal should not be granted. He has authority to cancel a certificate where the requirements of the Act and regulations have not been complied with. The Minister is also authorized to inspect trade schools and inquire into the

methods of instruction and safety conditions, and to examine the business books and records.

Regulations may be made regarding the operation of trade schools, providing, among other things, for the carrying out of health, sanitary and safety regulations in trade schools, the maximum fees that may be paid for instruction, and for the making of annual returns and the furnishing of information to the Minister by the keepers and operators of trade schools.

A person who operates a trade school contrary to the Act or regulations is liable to a fine of up to \$100 for a first offence and up to \$500 for a second or subsequent offence. In addition, the Act provides that a person who fails to register is not capable of maintaining proceedings in the courts in respect of any contract in connection with his trade school.

Legal Decisions Affecting Labour

Manitoba Court of Queen's Bench upholds certification order. U.S. Supreme Court rules on the enforceability by the courts of labour arbitration awards

In Manitoba, the Court of Queen's Bench found that Section 4 of the Lord's Day Act, which makes it unlawful to carry on business transactions on Sunday, does not apply to a trade union holding a meeting and passing a resolution authorizing the application for certification.

In the United States, the Supreme Court held that the refusal of courts to review the merits of an award is the proper approach to arbitration under labour collective agreements.

Manitoba Court of Queen's Bench . . .

. . . holds as valid an authorization to apply for certification given at union meeting held Sunday

On May 13, 1960, the Manitoba Court of Queen's Bench in *certiorari* proceedings dismissed a motion to set aside an order of certification. The Court held that the authorization to apply for certification granted at a union meeting held on Sunday was valid and not affected by the restrictions under the Lord's Day Act.

The Manitoba Labour Relations Board on March 31, 1960, certified the Brewery and Soft Drink Workers, Local Union No. 330, as bargaining agent for the employees of James Warner.

The employer applied for *certiorari* to set aside the certification order on the grounds that there was no authorized appli-

cation for certification before the Board. He contended that the authorization was void because it was given at a union meeting held on Sunday, contrary to the Lord's Day Act, Section 4, which reads:

It is not lawful for any person on the Lord's Day, except as provided herein, or in any provincial Act or law now or hereafter in force, to sell or offer for sale or purchase any goods, chattels, or other personal property, or any real estate, or to carry on or transact any business of his ordinary calling, or in connection with such calling, or for gain to do, or employ any other person to do, on that day, any work, business, or labour.

Further, the employer contended that the union was a "person" within the meaning of Section 4 of the Lord's Day Act, and that the act of authorization constituted the carrying on of "business" within the meaning of that section, thus making the authorization void.

The Board and the union argued that Section 4 did not apply to a trade union; therefore, the authorization for applying for certification granted on Sunday was valid and did not affect adversely the certification order.

In dismissing the employer's application, Chief Justice Williams considered first whether a trade union is a "person" within the meaning of Section 4 of the Lord's Day Act.

Section 2 (d) of the Lord's Day Act provides that "person" has the same meaning as it has in the Criminal Code. Section 2 (15) of the Code reads:

"Every one", "person", "owner", and similar expressions include Her Majesty and public bodies, bodies corporate, societies, companies and inhabitants of counties, parishes, municipalities or other districts in relation to the acts and things that they are capable of doing and owning respectively.

The Chief Justice noted that there is no definition of "person" in the Labour Relations Act. On the other hand, the regulations made under the Act contain in Rule 1 (2) (d) the following definition:

"person" includes partnership, corporation, employers' association and trade union, but does not unless the context or any section of the Act obviously intends, mean an individual employee within an establishment, plant, bargaining unit or classification.

In the opinion of the Chief Justice, the Lord's Day Act and the Labour Relations Act not being statutes in *pari materia*, the definition of the word "person" in Rule 1 (2) (d) could not be read into the Lord's Day Act, which has its own definition of the word imported from the Criminal Code. Besides, he doubted if Rule 1 (2) (d) is authorized by the Act.

Further, counsel for the employer argued that a trade union is a "society," and as this word appears in the definition of "person" in the Criminal Code, so it should be read into Section 4 of the Lord's Day Act. Also, counsel argued that "trade unions" are given a "status" by the Labour Relations Act.

No authority was cited to support the contention that a trade union is a "society" and the Chief Justice was not aware of any legal decision in this respect, whether in Canada or in England. Further, he stated that apart from statute a trade union such as Local 330 is a voluntary unincorporated association, an entity unknown to the law.

In this respect, Chief Justice relied on the decision of the Supreme Court of Canada in *Orchard v. Tunney* (L.G., Oct. 1957, p. 1214). He concluded that Local 330 was not a "society" and that it had not been given a "status" by the Labour Relations Act. The Act authorizes the Local to make application to the Board for certification (S. 7 (1)) and to accredit a person to prosecute the certification (Rule 6 (1) (c)). As a voluntary unincorporated association, Local 330 consisted only of its members for the time being. Undoubtedly, it has been provided with a constitution governing the holding of meetings. The only objection raised by the employer as to the validity of the meeting was that it was held on Sunday.

The employer submitted that in holding a meeting and passing a resolution on Sunday the union members were carrying on "business" and that was forbidden by Section 4 of the Lord's Day Act.

In rejecting this argument, the Chief Justice noted that the term "business" has been frequently said by the courts to be a word of large and indefinite import. However, it must be construed as used in Section 4, where it appears in conjunction with the words "of his ordinary calling." In the *Rideau Club v. The Corporation of the City of Ottawa* (1908, 15 O.L.R. 118, the language used by the Master of the Rolls in *Smith v. Anderson* (1879) 15 Ch. D. 247 was adopted describing "business" as "something which is followed and which occupies time and attention and labour for profit."

In the opinion of the Chief Justice it cannot be said that the group of men forming the members of Local 330 who met that Sunday to authorize the application for certification were on the business of their ordinary calling, or were carrying on business at all. Undoubtedly, they were acting for the purpose of obtaining something they thought would be for their benefit, but that fact could not be invoked to suggest that they were carrying on business for a profit. He was not aware of any authority deciding that what the members of Local 330 did on Sunday was prohibited by common law or by statute. He saw no reason why they should not meet on Sunday to pass the resolution they did. In his opinion, Section 4 of the Lord's Day Act had no application to what was done.

The employer's application was dismissed and the certification order upheld. *James Warner and the Manitoba Labour Board et al.*, Canadian Labour Law Reports, August 30, 1960, Para. 15,309.

The Supreme Court of the United States. . .

. . . holds courts can enforce labour arbitrator's award but cannot review the merits of the award

On June 20, 1960, the Supreme Court of the United States in a dispute between United Steelworkers of American and Enterprise Wheel and Car Corporation, in interpreting Section 301 of the Taft-Hartley Act, denied the Courts the power of review of the merits of arbitration awards under collective agreements.

Nevertheless, the Court ruled that the arbitrator is confined to interpretation and application of the collective agreement. Where the arbitrator clearly goes outside the collective agreement he exceeds his jurisdiction and the courts have to refuse

enforcement of the award. However, mere ambiguity in opinion accompanying award which permits the inference that the arbitrator may have exceeded his authority is not reason for refusing to enforce the award.

Mr. Justice Douglas, who delivered the judgment of the Supreme Court, recalled the circumstances of the dispute.

United Steelworkers of America and Enterprise Wheel and Car Corporation had a collective agreement that provided that any difference "as to the meaning and application" of the agreement should be submitted to arbitration and that the arbitrator's decision "shall be final and binding on the parties."

The relevant part of the agreement states:

Should it be determined by the Company or by an arbitrator in accordance with the grievance procedure that the employee has been suspended unjustly or discharged in violation of the provisions of this agreement, the company shall reinstate the employee and pay full compensation at the employee's regular rate of pay for the time lost.

The agreement also provided:

It is understood and agreed that neither party will institute civil suits or legal proceedings against the other for alleged violation of any of the provisions of this labor contract; instead all disputes will be settled in the manner outlined in this Article III—Adjustment of Grievances.

A group of employees left their jobs in protest against the discharge of one employee. A union official advised them to return to work at once. The company, at the employees' request gave them permission but afterwards rescinded it, and the employees were told they did not have a job any more "until this thing was settled one way or the other."

A grievance was filed, and when the company refused to arbitrate, the suit was brought for specific enforcement of the arbitration provisions of the collective agreement. The federal District Court ordered arbitration.

The arbitrator found that the discharge of the employees was not justified, though their conduct was improper. In his opinion, the facts warranted at most a suspension of the men for 10 days each.

After the employees' discharge and before the arbitration award was rendered the collective bargaining agreement had expired. The union, however, continued to represent the workers at the plant.

The arbitrator rejected the company's contention that expiration of the agreement barred reinstatement of the employees. He held that the provision of the agreement above quoted imposed an unconditional obligation on the employer. He awarded

reinstatement with back pay, minus pay for a 10-day suspension and such sums as these employees received from other employment.

The company refused to comply with the award. Then the union applied to the District Court for enforcement of the award. The District Court directed the company to comply.

The Court of Appeals, while agreeing that the District Court had jurisdiction to enforce an arbitration award under a collective bargaining agreement, held that the failure of the award to specify the amounts to be deducted from the back pay rendered the award unenforceable. That defect, it agreed, could be remedied by requiring the parties to complete the arbitration. But the Court held that an award for back pay subsequent to the date of termination of the collective bargaining agreement could not be enforced. It also held that the requirement for reinstatement of the discharged employees was likewise unenforceable because the collective agreement had expired.

In rendering the judgment of the Supreme Court, Mr. Justice Douglas noted that the refusal of courts to review the merits of an arbitration award is the proper approach to arbitration under collective bargaining agreements. The federal policy of settling labor disputes by arbitration would be undermined if courts had the final say on the merits of the awards. Nevertheless, an arbitrator is confined to interpretation and application of the collective bargaining agreement; he does not sit to dispense his own brand of industrial justice; his award is legitimate only so long as it draws its essence from the collective bargaining agreement. When the arbitrator does not comply with this obligation, the courts have to refuse enforcement of the award.

Referring to the case under review, Mr. Justice Douglas held that the opinion of the arbitrator regarding back pay beyond the date of the agreement's expiration and reinstatement was ambiguous. It could be prompted solely by the arbitrator's view of the requirements of enacted legislation, which would mean that he exceeded the scope of the submission. Or, it could be read as embodying a construction of the agreement itself, perhaps with the arbitrator looking to "the law" for help in determining the sense of the agreement. However, a mere ambiguity in the opinion accompanying an award, which permits the inference that the arbitrator might have exceeded his authority, is not a reason for refusing to enforce the award.

Arbitrators have no obligation to the court to give their reasons for an award. To require opinions free of ambiguity could lead arbitrators to play it safe by writing no supporting opinions, and this would be undesirable, for a well-reasoned opinion inspires confidence in the integrity of the process and aids in clarifying the underlying agreement.

Moreover, there is no reason to assume that in the case at bar the arbitrator had not stayed within the areas marked out for his consideration. It is not apparent that he went beyond the submission. The Court of Appeal's opinion refusing to enforce the reinstatement and partial back pay portions of the award was not based upon any finding that the arbitrator did not base his award on his construction of the contract. It merely disagreed with the arbitrator's construction of it.

The review by a court of the merits of the construction of the contract would make meaningless the provisions that the arbitrator's decision is final, for in reality it would almost never be final. The question of interpretation of the collective agreement is a question for the arbitrator. In so far as the arbitrator's decision concerns interpretation of the contract, the courts cannot overrule him because their interpretation of the collective agreement is different from his.

The Supreme Court (with one dissenting opinion) agreed with the Court of Appeals that the judgment of the District Court should be modified so that the amounts due the employees might be definitely determined by arbitration. In all other respects the Court affirmed the judgment of the District Court. *Steelworkers v. Enterprise Wheel and Car Corporation*, Labour Relations Reporter, 46 LRRM 2423.

Recent Regulations under Provincial Legislation

British Columbia raises minimum wages of construction workers. Ontario issues apprenticeship regulations for hairdressing trade, formerly subject to rules for barbering. P.E.I. Labour Relations Board issues first rules of procedure

In British Columbia, a new minimum wage order for the construction industry provides for a minimum wage of \$2 an hour for tradesmen and of \$1.30 for other employees, and requires the payment of overtime after 40 hours in a week.

In Ontario, new apprenticeship regulations for the trade of hairdresser require apprentices to be given at least 1,280 hours of training each year.

The Prince Edward Island Labour Relations Board has issued its first rules of procedure.

British Columbia Male Minimum Wage Act

The British Columbia Board of Industrial Relations recently revised its minimum wage order for the construction industry, increasing the minimum rate of tradesmen from \$1.50 to \$2 an hour and that of other employees from \$1 to \$1.30 an hour, effective August 15.

The coverage of the order is substantially the same, applying to all persons in the construction industry, by which is meant the construction, reconstruction, repair, alteration, remodelling, renovation or demolition of any bridge, building, canal, dock, drain, electrical undertaking, gaswork, harbour, pier, railway, road, sewer, telegraphic or telephonic installation, tramway, tunnel,

viaduct, waterway, waterworks, well (other than oil or gas) or other work of construction, including preparatory work, the laying of foundations and the installation of equipment or any appurtenance connected therewith.

The order does not apply, however, to employees subject to another order, persons acting in a supervisory or managerial capacity, or to employees permanently employed at maintenance work in industrial or manufacturing establishments or in public and private buildings.

The new \$2-an-hour minimum wage is payable to any tradesman in the construction industry, that is, any employee doing the work usually done by a journeyman boilermaker, bricklayer, carpenter, electrician, elevator constructor, glazier, ironworker, lather, mason, millwright, painter, paperhanger, plasterer, pipefitter, plumber, steel fabricator and erector, terrazzo mechanic, tilesetter and welder.

All other persons subject to the order must be paid a minimum of \$1.30 an hour except handicapped or part-time workers and apprentices working under special permit from the Board, who must be paid the minimum specified in the permit.

The overtime provision has been changed to require the payment of time and one-half the regular rate after 40 hours in a week instead of after 44 as formerly. Two other orders, one covering the pipeline construction industry and another covering the shipbuilding industry, require the payment of the premium rate after 40 hours.

In line with the usual practice some variation of the overtime rate is permitted. If, by agreement, hours are averaged over a fixed period, the overtime rate is payable for all hours worked in excess of a weekly average of 40 hours provided hours do not exceed eight in any one day. The Board may also vary the overtime provision whenever an undertaking has been exempted from the Hours of Work Act or a special exemption has been granted by regulation.

The daily guarantee provision is unchanged, providing that an employee must be paid at his regular rate for the entire period spent at the workplace in response to a call from the employer, with a minimum of two hours pay if he reports for work and four hours pay if he starts to work, subject to the usual qualifications.

The order also contains the usual provisions respecting semi-monthly payment of wages, the posting of orders and schedules, the keeping of records and employee registers.

Ontario Apprenticeship Act

The Ontario Industry and Labour Board and the Provincial Apprenticeship Advisory Committee recently issued separate regulations for the trade of hairdresser, which had previously been subject to the same rules as the barbering trade. Amendments to the general apprenticeship regulations and the regulations for barber and hairdresser schools have also been issued. The new provisions were gazetted August 27 as O. Reg. 225/60 to 230/60.

The regulations of the Provincial Advisory Committee provide that the minimum age for apprenticeship in the trade of hairdresser is 16 years. No minimum educational requirement is set but the standards laid down in the general apprenticeship regulations apply. These require apprentices in the designated trades to have a High School Entrance Certificate or Grade VIII standing or its equivalent.

The term of apprenticeship for hairdressers is three years, including the probationary period, the same as in the barbering trade.

In line with its usual practice, the Advisory Committee has limited the number

of apprentices, the ratio of apprentices to journeymen in any establishment being one to five.

The regulations issued by the Industry and Labour Board require all persons engaged in the trade of hairdresser to hold a valid certificate of qualification except registered apprentices or persons employed during a probationary period.

Employers are required to give apprentices the prescribed course of training, which, besides the usual subjects, includes instruction in bacteriology and safety standards in respect of the maintenance and operation of electrical equipment established by regulations under the Power Commission Act. Each year an apprentice must receive at least 1,280 hours of training.

Examinations for apprentices and for a certification of qualification will be based on the prescribed syllabus.

Certificates of qualification are valid for one year only but will be renewed upon payment of the prescribed fee.

Persons holding a certificate of qualification in either the barbering or hairdressing trade may no longer qualify by examination for a certificate in the other trade without serving as an indentured apprentice.

Under the general regulations covering all designated trades, certificates of qualification may be issued without examination to holders of apprenticeship certificates or to persons who have qualified in another province. Applicants who submit evidence of having engaged in the trade at least as long as the period of apprenticeship may qualify by examination.

A new provision states that a person who has completed a course of training provided by a trade school may be issued a certificate of qualification if he passes the prescribed examination and pays the required fee.

In line with this change the regulations governing hairdresser and barber schools have been amended to provide that persons who have completed a course of instruction in such trade schools must have received at least 1,200 hours of training. Previously no minimum training period was set but students who had completed their courses were required to appear before a board of examiners appointed by the Advisory Committee. The board would then certify as to their qualifications and recommend what time credits they were to be allowed toward an apprenticeship.

Prince Edward Island Trade Union Act

The first regulations and rules of procedure to be issued by the Prince Edward Island Labour Relations Board were gazetted August 20.

Established by a 1959 amendment to the Prince Edward Island Trade Union Act, the Board was authorized to perform the functions under that Act formerly fulfilled by the Minister of Labour and such other duties as may be designated by the Lieutenant-Governor in Council.

The regulations deal with certification and decertification, conciliation procedures and the handling of complaints under the Equal Pay Act or a complaint or an application for an order under the Women's Minimum Wage Act.

The rules with regard to certification are similar to those issued in other jurisdictions, providing for notices to interested parties, verification of exhibits and, in cases where objections are raised, hearings upon request of either party and the delegation of authority to deal with a representation vote to any person designated by the Board.

If an application for certification is rejected, the Board will not consider a second application until at least 10 months have elapsed. A similar period must elapse before the Board will deal with an application for decertification.

In conciliation proceedings, an application for conciliation services is to be made to the Labour Relations Board (as in Ontario and Quebec) instead of to the Minister as is the case in the other jurisdictions in Canada. If negotiations break down, either party may notify the Board of the stalemate, in which case the Board must hold a hearing, at the conclusion of which the Board may request the Minister to appoint a con-

conciliation officer to meet with the parties and endeavour to bring about an agreement.

If the conciliation officer is unable to effect a settlement or in any other case where it deems it necessary, the Labour Relations Board may recommend that the Minister appoint a conciliation board.

As is usually the case, the conciliation board is comprised of three members, one selected by each party with a chairman chosen by the nominees. If the parties do not select a chairman within the prescribed 10-day period, the Minister may appoint one.

Within 14 days after the hearing (unless the period is extended) the conciliation Board must report to the Labour Relations Board and it in turn must recommend to the Minister whatever further action it considers necessary.

Complaints of alleged violations of the Equal Pay Act are to be investigated by the Board. Upon receiving a complaint, the Board will forward a copy to the person complained of and fix a date for a hearing. After the hearing the Board will forward its recommendations to the parties and to the Minister.

The Board will also deal with complaints and applications for orders under the Women's Minimum Wage Act. The procedure is similar to that under the Equal Pay Act except that, after hearing representations and such other evidence as it deems proper, the Board may issue an order, subject to final approval by the Minister.

Industrial Fatalities

(Continued from page 1021)

under the heading "falls and slips," all but four of which were caused by falls to different levels. "Collisions, derailments, wrecks, etc." were responsible for 46 deaths: 21 from accidents involving automobiles and trucks, 15 tractors and loadmobiles, 7 aircraft and 3 involving railways. In the classification "struck by," 36 fatalities were recorded. Of these, 28 were in the category "other objects," 6 were caused by moving vehicles and 2 were the result of being "struck by tools, machinery, cranes, etc." Twenty-eight fatalities were the result of being "caught in, on or between"; of these,

16 involved machinery, 6 involved tractors, loadmobiles, mine or quarry cars and 4 belts, pulleys, chains and hoisting or conveying apparatus. Electric current was responsible for 20 deaths, 8 of which occurred in the public utilities industry and 5 in buildings and structures.

By province of occurrence, the largest number of fatalities was in Ontario, where there were 77. In British Columbia there were 61; in Quebec 25 and in Alberta 19.

During the quarter, 51 fatalities were recorded in April, 90 in May and 78 in June.

UNEMPLOYMENT INSURANCE

Monthly Report of Operation of the Unemployment Insurance Act

Number of claimants at end of July almost the same as at end of June but 30 per cent higher than at end of July 1959, statistics* show. Number of initial and renewal claims during month higher than figure for June and for July last year

Claimants† for unemployment insurance benefit on July 29 numbered 294,100, which was almost the same as the 296,400 reported on June 30 but 30 per cent more than the figure of 225,900 on July 31, 1959.

The increase over last year was 36 per cent for males, but only 21 per cent for females. The large proportion of males among the recent claimants is ascribed to reduced employment in construction and in certain sections of manufacturing, e.g., heavy industries. The danger of fire in British Columbia forests was also responsible for reduced employment for loggers.

Initial and renewal claims for benefit received during July numbered 140,400, which was 9 per cent more than the figure of 128,500 in June, and nearly 15 per cent more than the total of 122,300 for July 1959.

The average weekly number of beneficiaries was estimated at 225,900 for July, 18 per cent less than the 275,900 estimated for June but 37 per cent more than the 164,800 for July 1959.

Benefit payments totalled \$19,700,000 in July, \$26,800,000 in June, and \$14,500,000 in July 1959.

The average weekly payment was \$21.81 in July, \$22.11 in June, and \$20.04 in July 1959. The higher rate compared with the previous year is mainly due to the new benefit rates that have been in effect since September 1959.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for July showed that insurance books or contribution cards had been issued to 4,477,847

*See Tables E-1 to E-4 at back of this issue.

†A claimant's unemployment register is placed in the "live file" at the local office as soon as the claim is forwarded for computation. As a result, the count of claimants at any given time inevitably includes some whose claims are in process.

In a comparison of current employment statistics with those for a previous period, consideration should be given to relevant factors other than numbers, such as the opening and closing of seasonal industries, increase in area population, influence of weather conditions, and the general employment situation.

Claimants should not be interpreted either as "total number of beneficiaries" or "total job applicants."

employees who had made contributions to the Unemployment Insurance Fund since April 1, 1960.

At July 31 employers registered numbered 329,411, an increase of 466 since June 30.

Enforcement Statistics

During July, 5,498 investigations were conducted by enforcement officers across Canada. Of these, 3,158 were spot checks of postal and counter claims to verify the fulfilment of statutory conditions and 92 were miscellaneous investigations. The remaining 2,248 were investigations in connection with claimants suspected of making false statements to obtain benefit.

Prosecutions were commenced in 176 cases, 63 against employers and 113 against claimants.* Punitive disqualifications as a result of claimants' making false statements or misrepresentations numbered 1,634.*

Unemployment Insurance Fund

Revenue received in July totalled \$29,-878,737.04 compared with \$23,735,928.09 in June and \$21,791,667.44 in July 1959. Benefits paid in July totalled \$19,702,606.90 compared with \$26,841,962.03 in June and \$14,587,217.11 in July last year. The balance in the Unemployment Insurance Fund on July 31 was \$306,363,607.24; on June 30 it was \$296,187,477.10 and on July 31, 1959, it was \$441,357,140.97.

*These do not necessarily relate to the investigations conducted during this period.

Decisions of the Umpire under the Unemployment Insurance Act

Decision CUB-1759, August 8, 1960

The question to be decided in this appeal is whether or not the claimant has proved that he was unemployed within the meaning of sections 54 (1) and 57 (1) of the Unemployment Insurance Act and 154 (1) of the Regulations as from September 6, 1959. The main facts of the case are as follows:

The claimant filed an initial application for benefit on September 8, 1959 at the local office of the Unemployment Insurance Commission in Windsor, Ont., and was registered for employment as a stock handler. He stated in the application that he had worked as a die setter in Windsor for Motor Products from December 2, 1940 to July 16, 1959, when his employment terminated as the company had "gone out of business." He indicated also that subsequent thereto he had worked as a machine operator in the aforementioned city for Armson's Iron Works from August 20, 1959 to September 4, 1959, when he was laid off because of a shortage of work. In answer to the question in the application "Are you now carrying on any occupation or business?" he stated "No". The claim was allowed.

Following a spot check investigation made by an enforcement officer of the Commission and completed on February 15, 1960, the claimant reported to the local office on February 19, 1960 and made the following written statement:

I am a commissioned salesman for Alumatic, Tecumseh Road. I started this about October 59. I have not been earning any money as business is slow. I am capable and available to accept any full-time employment and have been looking for a regular job. Voluntary statement.

The following questionnaire was addressed to Alumatic of Canada Limited by the local office of the Commission on February 22, 1960, and was completed by the company on February 25, 1960:

- Q. On what date was he first employed by you?
 A. Date of application—August 4, 1959.
- Q. Did his contract start on this same date? If not, on what date?
 A. No contract.
- Q. What hours per day and days per week is he required to work?
 A. Time is his own.
- Q. Is he allowed to set his own hours of work?
 A. Yes.

Q. Does he receive a salary plus commission? If not, does he receive commission only?

A. Commission only.

Q. What were his earnings for October, November, December and January?

A. Oct/ 59	\$188.22
Nov	67.64
Dec	97.34
Jan/60	42.50
	\$395.70

Q. Is he allowed to accept other employment while under contract to you?

A. Yes.

On the evidence before him, the insurance officer notified the claimant, by letter, on March 1, 1960, that he was disqualified from receipt of benefit retroactively to September 6, 1959, on the ground that in view of his occupation as a commission salesman, he was deemed not to be unemployed (sections 54 (1) and 57 (1) of the Act and Regulation 154 (1) (b)). This disqualification created an overpayment in the amount of \$660.00 plus \$30.00 overcredit to the waiting period.

The claimant appealed to a board of referees on the grounds that his earnings as a salesman were not sufficient to live on, that he had spent many days looking for work, that he had been referred to a job by the local office but had heard nothing more about it and that he had always been available for work.

On March 9, 1960, the employer wrote to the local office as follows:

In reply to your letter of March 8, 1960, regarding earnings by (the claimant), we list below commissions credited to his account from October 1, 1959, to March 3, 1960. We feel you would prefer us to give you this listing, as (the claimant's) time is his own and we really don't know when he is working on our behalf.

Oct. 1	30.87
Oct. 1	17.50
Oct. 22	9.00
Oct. 22	29.20
Oct. 22	2.50
Oct. 29	71.00
Oct. 29	19.90
Oct. 29	13.25
Nov. 5	32.00
Nov. 5	5.20
Nov. 5	5.00
Nov. 5	1.08
Nov. 5	21.82
Nov. 5	2.57
Nov. 19	2.53
Nov. 26	10.00
Dec. 3	27.00
Dec. 3	29.00
Dec. 10	9.01
Dec. 21	23.00
Dec. 28	16.90
Dec. 29	7.57

Jan. 7/60	10.00
Jan. 14	30.00
Jan. 14	2.50
Feb. 11	16.00
Feb. 25	2.50
Feb. 25	12.00
March 3	30.00

On March 14, 1960, the claimant was interviewed by the enforcement officer and made the following statement:

I commenced as a commission salesman for Alumatic of Canada around the 1st week of October 59. I was not continuously on full time selling and after I deducted my expenses, my earnings were below the \$13.00 or \$15.00 allowed me and I did not think this was necessary to be shown in my forms. I made enquiries regarding my employment as a commission salesman and was informed that I should tell the U.I.C. of my employment and I did on 19 February 60. I was unaware that I would be considered employed, as I was looking for employment while in the selling job and also did not think it necessary to show earnings as after expenses, they were below my allowable.

On March 22, 1960, the employer addressed the following letter to the local office:

This will certify that (the claimant) was drawn a total of \$672.50 against his commissions from September 25, 1959, to March 11, 1960, and at present owes Alumatic of Canada Limited, \$245.30.

The insurance officer notified the claimant, by letter, on April 7, 1960, that an additional disqualification had been imposed on him in the amount of \$180.00 for having incorrectly declared that he was unemployed for the weeks commencing September 6, 1959, and subsequently, said sum to be deducted from the weekly benefits which would otherwise be payable to him on and after February 14, 1960 (section 65 of the Act). In the same letter, the insurance officer informed the claimant that both disqualifications would be considered by the board of referees when dealing with his appeal.

The claimant was present at the hearing of his case by the board of referees in Windsor, on April 27, 1960. The board, by a unanimous decision, maintained the disqualification which had been imposed under sections 54 (1) and 57 (1) of the Act and Regulations 154 (1) (b) but removed the one which had been imposed under section 65 of the Act. The board's decision reads in part:

... The claimant was present, and heard at length due to the importance of his appeal. He stated that he had been steadily employed at Motor Products Company for 18½ years until July 19, 1959, and therefore, his previous experience with the Unemployment Insurance Commission was extremely limited. He stated that his application for work at Alumatic Company in early August 1959, was for a job as an assistant foreman, consistent with his

training in factory work, and not for the selling position which he later obtained. He did not get hired by Alumatic as per his application, and went to work for Armson Iron Works. Lost this employment due to shortage of work. Returned to Alumatic and explained his need for work, and this brought about the offer of selling for them on a commission basis. After getting started on this work, claimant stated he telephoned the local office to ascertain what amount of earnings he would be entitled to receive without reporting same. He was told, according to his statement, \$13. or \$15. per week. As his average earnings were not more than the figures mentioned, allowing for expenses, he felt he was on sound ground. However, a spot check by the District Investigator developed an investigation resulting in his non-entitlement to benefits, which had been paid him since his application of September 6, 1959. He was then informed that he had been overpaid \$660. in benefits and \$30. for the waiting period was also charged against him, making a total of \$690. Later a punitive disqualification under section 65 of \$180. was imposed. In addition, he has been overpaid \$245.30 by the Alumatic Company. Thus, he finds himself in serious financial difficulties of \$690. and \$180. for which he does not feel responsible. His reasons for this are that he was not restricted by the Alumatic Company to do other work, and he has been steadily seeking permanent employment because his income, both from Unemployment Insurance and his selling job, was not sufficient to maintain his household.

CONCLUSION:

As may be expected, the claimant is very much disturbed in view of the large indebtedness which he has created without realizing that it was taking place. This is the part of the debts which are now assessed against him by the Commission. The claimant's record of long time service with Motor Products, shows that he is a reliable and consistent worker, and his job was only terminated due to the fact that the Company's business wound up. He is a man of excellent character, and the Board recognizes that he would not be one to defraud the Commission. The trouble he has got into is due to his ignorance of the requirements of the Act, and also his failing to investigate his situation with the Commission more thoroughly at an earlier date. While the Board sympathizes with the claimant, in his present unfortunate financial difficulty, there apparently is nothing the Board can do to effect any relief for him. The present regulation, that is 154 (1) (b), is more restrictive than the former 158, which provided an opportunity for relief from disqualification under circumstances similar to those which prevail in this case. From what has been stated, it is evident that the Board must give its approval to the amount of \$690. which has been set up as owing the Commission, but it does not approve of the \$180. punitive disqualification under section 65 of the Act. The Board does not feel that the claimant had any intent to defraud the Commission by accepting unemployment benefits during the period covered by his selling activities. Therefore, the Board recommends that this disqualification be cancelled...

With the permission of the chairman of the board of referees, the claimant appealed to the Umpire and pleaded that his misdemeanour be considered an honest error

due mainly to his ignorance of the Unemployment Insurance Regulations. He pointed out the great hardship he and his family would have to suffer if he were required to repay the large overpayment of benefit even to the extent of "possibly the loss of my home."

Considerations and Conclusions: The claimant's allegation that he was not aware he had to notify the local office of his employment as a salesman and of his earnings carries little weight as a valid excuse for his omission to do so. I find it hard to understand how a person of the claimant's intelligence could have shown so little interest in his obligations under the Act by failing to read the clear and precise instructions contained in the booklet of information for claimants that was issued to him on the date he filed his claim, particularly those explaining how to fill in a claimant's weekly report. The claimant's other allegation that he did communicate with the local office by telephone for information in that connection does not, in my view, count in his favour, as it seems to me that telephoning was a somewhat unusual method to resort to, especially as the claimant had to and, I presume, did report regularly to the local office in person each week or so.

In view of the foregoing and as, on the other hand, the claimant was engaged in employment in which he was in the position of controlling his working hours (subsection (1) (b) of Regulation 154) and as, on the other hand, he has failed to prove that the amount of time that he devoted to selling the products of the Alumatic of Canada Limited was not such as to make that employment so minor in extent that a person would not, under the circumstances, normally have followed it as a principal means of livelihood (subsection (2) of the same Regulation), I consider that the claimant has failed to prove that he was unemployed during the weeks in question in the present appeal (section 54 (1) of the Act). The amount of the claimant's earnings during the period in question is not an essential factor in deciding the issue in the present case, because that in itself does not indicate the amount of time which the claimant devoted to that employment.

In view of the claimant's regrettable but inexcusable omission to report his employment and his earnings, his unsubstantiated statement that he was available for other employment and had actually looked for other work cannot be accepted as sufficient to satisfy the proof required under subsection (2) of Regulation 154.

For the above reasons, I decide to maintain the unanimous decision of the board

of referees and to dismiss the claimant's appeal.

Taking into consideration the claimant's remarks in his appeal to me explaining the hardship that would result by his having to repay the amount of the overpayment, I would recommend that the Commission investigate whether this case is one which would properly come under section 175 (1) (g) (ii)* of the Regulations.

Decision CUB-1760, August 8, 1960

The only question to be decided in the present appeal is whether the claimant has, without good cause, failed to accept the situation that was offered to her on September 10, 1959 (Section 59 of the Act). The main facts in the case are as follows:

The claimant, a married woman, 40 years of age, made an initial application for benefit on April 16, 1959, and registered for employment as a sewing-machine operator. She stated in the application that she had worked as such for Starr-Hollywood Limited, manufacturers of boys' pants, in Toronto, Ont., from 1949 to March 4, 1959, when she left voluntarily for the following reason:

Left vol. Pregnant—Baby born 5 March 59—unemployed from 4 March 59—Available for work. Husband will look after baby when I get work. Waiting to be called back to same firm, not busy now. Also husband works at Post Office—night shift.

Her rate of pay at the time of leaving was given as \$65.00 a week. The claim was allowed.

On May 6, 1959, she declined an offer of suitable employment on the ground that she would work only for her last employer.

The insurance officer disqualified her for an indefinite period, being of the opinion that the claimant, by reason of the said restriction, was not available for work. He also disqualified her for a period of six weeks for refusing to apply for the employment (sections 54 (2) (a) and 59 (1) (a) of the Act). Subsequently, upon receipt of additional information, both disqualifications were terminated.

On June 17, 1959, she failed to accept another offer of suitable employment and was disqualified by the insurance officer to July 25, 1959. She appealed to a board of referees, which upheld the insurance officer's decision.

On September 3, 1959, the claimant became employed as a sewing-machine operator with a manufacturing company in

*Where an authorized officer of the Commission, pursuant to subsection (1), declares that sums paid by way of benefit while a claimant was not entitled thereto and owing by that claimant are no longer due and owing to the Fund, such sums shall be deemed to be written off.

Toronto but was released on the same day as unsuitable.

On September 10, 1959, the local office referred the claimant to continuing employment with Hamilton-Carhart, manufacturer of men's wear, Toronto, as a sewing-machine operator (pants), the wages being based on "piece work (over \$50.000 per week)" which was the reported prevailing rate in the district for that type of work. The hours of work were eight a day and 40 a week (day work). The travelling time by bus from her home to the place of employment was reported to be 35-40 minutes. The claimant did not accept the employment for the following reason: "I want a job. I will not work for \$26.00 a week after 10 years' experience on a job and after I earned \$65.00 a week."

In connection with the claimant's non-acceptance of the employment, the local office commented:

With regard to applicant's statement of 10 years' experience, (the claimant) was referred to several vacancies and the employers stated that applicant did not earn 50c. an hour despite the urging to do better. We do not know where applicant got \$26.00 a week as the basic rate is \$28.00 a week for a maximum of six weeks, but a worker can go on piece work as soon as she produces over the basic rate, which at times happened the next day.

(The claimant) has several times mentioned that she can only work to 4 o'clock because her husband has to leave home.

With regard to the interview, the forelady stated applicant did not come at 8 a.m. to start to work, she came at 11 a.m., showed her a pay envelope but not number of hours worked (time and one half for overtime?) and stated she will think it over, and if she decides she will come in Monday, but of course did not go to work.

The sportswear union advises (the claimant) at no time approached them for work. Hamilton-Carhart is a union shop.

In a letter to the local office dated September 18, 1959, the claimant commented on the various jobs to which she had been referred by the local office and on the unsatisfactory wages offered. She added that while the jobs had to do with the making of garments, the work was of a kind in which she had no experience. She stated also that she expected to be called back to her former employment as soon as the firm became busy again and that in the meantime she was searching for a suitable job.

The insurance officer disqualified the claimant from receipt of benefit for the period from September 6, 1959 to October 17, 1959, inclusive, because in his opinion she had, without good cause, failed to accept a situation in suitable employment (section 59 (1) (a) of the Act).

The claimant appealed to a board of referees, before which she and her solicitor

appeared, and gave evidence at the hearing of the case in Toronto on October 28, 1959. The board, by a majority decision, dismissed the appeal and maintained the disqualification that had been imposed by the insurance officer, on the ground that as the claimant had been unemployed for such a lengthy period of time, she should have given the employment a trial, which was in a union shop and at the basic rate of pay for the particular type of work, viz., 70 cents an hour. The board stated that the plant superintendent, upon being communicated with by telephone, explained that if employees earned below 70 cents an hour their pay was made up to equal this rate.

The dissenting member of the board of referees stated:

\$28.00 per week is not the union rate of wages and it has been known that, where there is a union agreement in the plant, no member of a union can work for less than the union rate. Otherwise they jeopardize their position as a union member.

It is my opinion that this case should have been adjourned until we hear a union representative and get more facts on what the union rate is.

The claimant appealed to the Umpire on November 13, 1959, and stated:

I was misinformed by the forelady at Hamilton-Carhart regarding the rate of pay. If it was explained to me that the 70c. in question was a basic rate as stated in the Board of Referees conclusion and not the prevailing rate, then I would have never hesitated to commence working. I am quite sure that I could have made double that amount, also, taking into consideration that Hamilton Carhart is a Union Shop. In all sincerity, I still feel justified in not accepting 70c. per hour considering that I *am* an experienced operator and at present I am back in the employ of Starr-Hollywood, my original employers and I *am* earning \$1.50 per hour.

In a statement dated November 16, 1959, the claimant indicated that she commenced working again for Starr-Hollywood as a sewing-machine operator on November 9, 1959, and that from this date to November 13, 1959, her earnings were \$43.76 based on piece work. She further stated that on November 13:

I complained about having my machine moved on Friday morning. I was working in the middle till then—but Friday morning I was moved to a draughty spot and when I complained I was told to go. My doctor had advised me not to work in a draught.

The placement officer in a report dated December 3, 1959, stated:

I explained to (the claimant) personally the basic rate of 70c. an hour, the C.L. Bonus, the Union, the distance, the piece work earnings of workers in the plant, the type of plant lunch room, etc. . . .

P.S. Every referral given an applicant is accompanied by verbal information regarding conditions of work, rates, distance, etc.

In further memoranda dated February 24 and March 4, 1960, the placement officer stated that she explained to the claimant at the time of the offer of employment that Hamilton-Carhart was a union shop, that the basic rate of 70 cents an hour was for a maximum of six weeks, that potential earnings were \$50 a week and that "At no time, neither during the interview to which (the claimant) refers, nor on any other occasion did (the claimant) sign a blank sheet of paper, which was filled out after she had left the office".

The claimant's letters dated January 30, March 26 and 28, 1960, which are included in the file, refer to the interviews she had with the placement officer mentioned above and the jobs she had been directed to by that officer. She also requested an oral hearing before the Umpire, which was held in Toronto on July 6, 1960. Those who attended were the claimant and F. G. Power, the latter representing the Unemployment Insurance Commission.

Considerations and Conclusions: During the hearing of her case on July 6, 1960,

the claimant repeated one of the statements contained in her appeal to me, namely that if the forelady at the Hamilton-Carhart Company had explained to her that the 70¢ an hour was the basic rate of pay and not the prevailing rate, she would have accepted the job. Upon asking her whether she had inquired from the forelady about this matter, she replied in the negative.

It seems strange to me that a person of the claimant's experience in the labour field would not have requested information on all the essential conditions of the employment, if she had been serious about accepting the job. Consequently, I cannot consider the claimant's contention that she was not given the proper information by the placement officer at the local office, or by the forelady at the Hamilton-Carhart Company, as a valid excuse for refusing to accept the employment, especially as the record shows that it was suitable within the meaning of section 59 of the Act.

For the above reasons, I decide to maintain the disqualification and to dismiss the claimant's appeal.

Railway Board of Adjustment (Continued from page 1048)

It had always been its prerogative, the company contended, to operate in and out of a terminal in turn-around service, whether with assigned or unassigned crews. It added that there is no provision in the Atlantic and Eastern Regions' Agreement that a trip automatically ends on arrival at a terminal.

The contention of the employees was sustained in that it is not proper to establish runs in turn-around service between terminals where the distance is 100 miles or more in each direction.

Case No. 740—Dispute between Canadian National Railways (Central Region) and Brotherhood of Locomotive Engineers over the method of assigning locomotive engineers to freight service when terminals changed.

Until February 14, 1960, two engineers whose home terminal was Belleville, Ont., were regularly assigned to man freight trains on the run between Belleville and Mimico. Pool engineers whose home terminal was also Belleville manned the same trains between Belleville and Brockville.

Effective February 14, 1960, the runs were re-allocated. Three engineers whose home terminal was Belleville were regularly assigned to run between Mimico and Brockville, straight through Belleville with no change of crew.

The Brotherhood of Locomotive Engineers protested that this change was con-

trary to the intent and understanding of the agreed "Statement of Work Belonging to Engineers Assigned to Belleville." Running of engineers through Belleville meant that Belleville engineers were tied up at either Brockville or Mimico instead of at their home terminal, which had been the change-off point for more than 50 years, the union complained.

The union quoted two articles of the agreement concerning time allowance for both incoming and outgoing engineers on locomotives that were operating through terminals.

The company contended that it had the right to establish regular assignments consistent with the requirements of the service and within the framework of the schedule agreement. It also contended that there was no reference stated or implied in any rule or agreement that debarred the company from abolishing, establishing or changing assignments consistent with the requirements of the service.

The company pointed to an article of the contract that states that if certain changes in assignments are made, including the change of the home terminal between changes of timetable, engineers affected may choose another assignment at their home terminal when the change is made.

The contention of the employees was not sustained.

LABOUR CONDITIONS IN FEDERAL GOVERNMENT CONTRACTS

Wage Schedules Prepared and Contracts Awarded during August Works of Construction, Remodelling, Repair or Demolition

During August the Department of Labour prepared 242 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada, for works of construction, remodelling, repair or demolition. In the same period, a total of 212 contracts in these categories was awarded. Particulars of these contracts appear below.

A copy of the wage schedule issued for each contract is available on request to trade unions concerned or to others who have a *bona fide* interest in the execution of the contract.

(The labour conditions included in each of the contracts listed under this heading provide that:

(a) the wage rate for each classification of labour shown in the wage schedule included in the contract is a minimum rate only and contractors and subcontractors are not exempted from the payment of higher wages in any instance where, during the continuation of the work, wage rates in excess of those shown in the wage schedule have been fixed by provincial legislation, by collective agreements in the district, or by current practice;

(b) hours of work shall not exceed eight in the day and 44 in the week, except in emergency conditions approved by the Minister of Labour;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of eight per day and 44 per week;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Contracts for the Manufacture of Supplies and Equipment

Contracts awarded in August for the manufacture of supplies and equipment were as follows:

Department	No. of Contracts	Aggregate Amount
Agriculture	1	\$112,965.00
Defence Production	97	391,550.00
Post Office	9	225,049.86
RCMP	2	1,342.50

The Fair Wages and Hours of Labour legislation of the federal Government has the purpose of insuring that all Government contracts for works of construction and for the manufacture of supplies and equipment contain provisions to secure the payment of wages generally accepted as fair and reasonable in each trade or classification employed in the district where the work is being performed.

The practice of Government departments and those Crown corporations to which the legislation applies, before entering into contracts for any work of construction, remodelling, repair or demolition, is to obtain wage schedules from the Department of Labour showing the applicable wage rate for each classification of workmen deemed to be required in the execution of the work.

These wage schedules are thereupon included with other relevant labour conditions as terms of such contracts to be observed by the contractors.

Wage schedules are not included in contracts for the manufacture of supplies and equipment because it is not possible to determine in advance the classifications to be employed in the execution of a contract. A statement of the labour conditions which must be observed in every such contract is however, included therein and is of the same nature and effect as those which apply in works of construction.

Copies of the federal Government's Fair Wages and Hours of Labour legislation may be had upon request to the Industrial Relations Branch of the Department of Labour, Ottawa.

(The labour conditions included in contracts for the manufacture of supplies and equipment provide that:

(a) all persons who perform labour on such contracts shall be paid such wages as are currently paid in the district to competent workmen; and if there is no current rate, then a fair and reasonable rate; but in no event shall the wages paid be less than those established by the laws of the province in which the work is being performed;

(b) the working hours shall be those fixed by the custom of the trade in the district, or if there be no such custom, then fair and reasonable hours;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of those fixed by custom of the trade in the district, or in excess of fair and reasonable hours;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Wage Claims Received and Payments Made during August

During August the sum of \$24,663.31 was collected from 15 contractors for wage arrears due their employees arising out of the failure of the contractors, or their sub-contractors, to apply the wage rates and other conditions of employment required by the schedule of labour conditions forming part of their contract. This amount is for distribution to the 724 workers concerned.

Contracts Containing Fair Wage Schedules Awarded during August

(The labour conditions of the contracts marked (*) contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of eight per day and 44 per week, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.)

Atomic Energy of Canada Limited

Chalk River Ont: Dibblee Construction Co Ltd, asphalt paving at plant site.

Central Mortgage and Housing Corporation

Chatham N B: Eastern Landscape Co Ltd, *landscaping repairs. *Gagetown N B:* L P Cogswell, seed treatment in Neighbourhood 4 (Job 67/54). *Montreal Que:* Beaver Asphalt Paving Co Ltd, asphalt paving & sodding, Benny Farm; Beaver Asphalt Paving Co Ltd, *asphalt paving & sodding, Villeray Terrace. *Waterloo Ont:* Imperial Paving Co Ltd, *reconstruction of parking areas in HECL Project. *Windsor Ont:* John Papp, exterior painting of 301 housing units, Project 12/46. *Portage la Prairie Man:* H G Hay Decorating Co, *exterior painting of houses. *Fort Qu'Appelle Sask:* Bliss Bros, *supply of additional material to complete flood control. *Leduc Alta:* Henry Rosenfeld, *exterior painting of houses.

Canada's gross national product, seasonally adjusted, declined by 1.5 per cent from the first to the second quarter of 1960, the Dominion Bureau of Statistics reported last month.

The decline, a mainly physical one as prices were substantially unchanged, is the first interruption in the upward course of the country's economy since the first quarter of 1957.

Main causes for the reversal were found in a decline (about 8 per cent seasonally adjusted) in exports of goods and services; reduced domestic demand created by lower spending on new housing, industrial plant and equipment; and a \$300 million contraction of business inventories.

In a broader perspective, value of gross national product for the first half of 1960 was 3.2 per cent higher than the same period in 1959, but with prices up 1.8 per cent, this reflects a physical volume increase of only 1.4 per cent.

Second quarter comparisons for 1959 and 1960 show value up 0.7 per cent and volume down 1.0 per cent. The first quarter comparisons were 6.0 per cent and 4.1 per cent respectively.

Labour income remained steady, with advances in the services sector offsetting declines in the major goods-producing industries, but personal income showed a fractional over-all reduction of 0.5 per cent.

PRICES AND THE COST OF LIVING

Consumer Price Index, September 1960

Canada's consumer price index (1949=100) rose to 128.4 at the beginning of September, 0.4 per cent above the August index of 127.9. Last year's September index was 127.1.*

The increase was largely seasonal. The food index showed the largest gain, of 1.3 per cent; the other four component indexes registered only fractional changes.

The food index, at 123.3, was 1.3 per cent above the August index of 121.7 and 0.7 per cent above the September 1959 index of 122.4. Egg prices increased by 15 per cent over the month to 65c. a dozen, about average for this month in previous years. Higher prices were also reported for fats, oranges, some beef cuts, bacon and canned salmon. Prices for most fresh fruits and vegetables moved lower; decreases for tomatoes, potatoes and apples were appreciable.

The shelter index rose 0.1 per cent from 144.0 to 144.2; both the rent and home-ownership components contributed to the increase.

The clothing index increased 0.2 per cent, from 110.3 to 110.5, as a result of scattered and minor price increases in men's wear as well as in some items of women's wear and footwear that moved up from sales levels of previous months.

The household operation index edged up 0.2 per cent from 123.1 to 123.3, reflecting price changes for furniture and floor coverings up from earlier sales levels, and price increases for coal and some utensils and household equipment. Most household supplies were somewhat lower but laundry rates were higher.

The other commodities and services index declined 0.1 per cent, from 137.7 to 137.6, as a result of seasonally lower prices on 1960 model cars, which more than counter-balanced price increases for tires, automobile repairs, lubrication and batteries. Lower prices occurred for brake relining and, with local price wars in several cities, gasoline prices also decreased.

Group indexes one year earlier (September 1959) were: food 122.4, shelter 142.0, clothing 109.8, household operation 123.1, and other commodities and services 135.2.

*See Table F-1 at back of book.

City Consumer Price Indexes, August 1960

Consumer price indexes (1949=100) rose in nine of the ten regional cities between July and August.† Increases ranged from 0.1 per cent in Ottawa to 0.6 per cent in Saskatoon-Regina, Edmonton-Calgary and Vancouver. The St. John's index declined 0.3 per cent.

Food indexes followed similar patterns to those shown in the total indexes: higher in all cities except St. John's. Increases ranged from 0.4 per cent in Halifax to 2.7 per cent in Vancouver. The St. John's food index declined 1.0 per cent.

Shelter indexes showed mixed results; three city indexes were higher, two lower and five unchanged. Clothing indexes were up fractionally in three cities, unchanged in four cities and down in the three remaining cities. Household operation indexes also showed mixed results: four city indexes declined, two were unchanged and four were at higher levels. Other commodities and services indexes decreased in three cities, increased in four cities and were unchanged in the remaining three regional cities.

Regional consumer price index point changes between July and August were as follows: Saskatoon-Regina +0.8 to 124.8; Vancouver +0.8 to 128.3; Edmonton-Calgary +0.7 to 124.3; Saint John +0.4 to 129.0; Winnipeg +0.4 to 125.8; Halifax +0.3 to 126.7; Montreal +0.3 to 127.5; Toronto +0.2 to 130.3; Ottawa +0.1 to 128.3; St. John's -0.4 to 116.1*.

Wholesale Price Index, August 1960

Canada's general wholesale price index (1935-39=100) in August stood at 230.2, down 0.9 per cent from 232.2 in July and 0.3 per cent from 231.0 in August last year. Six of the eight major group indexes declined from a month earlier, and the remaining two were unchanged.

Sharply lower prices for potatoes, combined with lesser decreases for grains, raw rubber, dried fruit, and onions were mainly responsible for a 1.8-per-cent drop in the vegetable products group index to 201.0 from 204.7. The wood products group index declined 1.6 per cent to 301.4 from 306.3, the textile products group index fell 0.7 per cent to 228.9 from 230.6, the non-ferrous

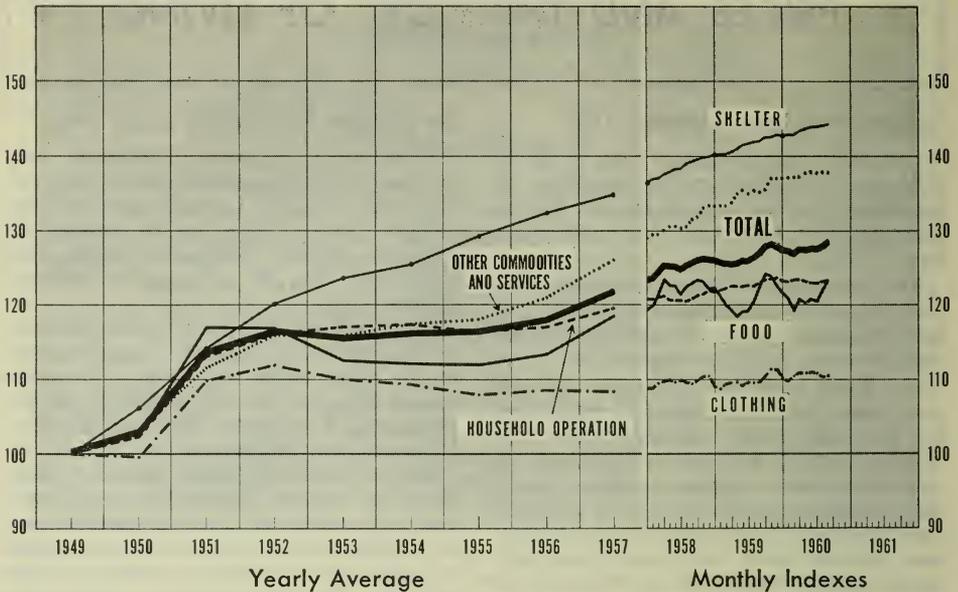

†See Table F-2 at back of book.

*On base June 1951=100.

CONSUMER PRICE INDEX

Index 1949=100

Index 1949=100

metals group index decreased to 178.9 from 179.7, the animal products group index to 250.0 from 250.5, and the non-metallic minerals group index to 184.4 from 184.5.

The iron products group index was unchanged at 255.5 and the chemical products group index at 188.2.

U.S. Consumer Price Index, August 1960

The United States consumer price index (1947-49=100) held steady at 126.6—its record high—between mid-July and mid-August. It was the first month since January that the index did not rise.

In the preceding 12 months, the index has risen in every month except in the mid-November to mid-December and in the

mid-December to mid-January periods. The index now stands 1.4 per cent higher than the 124.8 at mid-August 1959.

In the most recent month, seasonal price reductions in fresh fruits and vegetables and declines in the prices of 1960 automobiles as 1961 model time drew near were counterbalanced by price increases for virtually all other goods and services.

U.K. Index of Retail Prices, July 1960

The United Kingdom index of retail prices (Jan. 17, 1956=100) rose for the second successive month between mid-June and mid-July, advancing 0.2 points from 110.9 to 111.1. The index at mid-July 1959 was 109.0.

Average outlay for fringe benefits in 1959 by 100 companies with a total of 490,967 employees was 22.2 per cent of payroll—\$1,036 per employee, it was found in a survey by Industrial Relations Counselors Service, Inc., Toronto.

The 100 firms surveyed provide a reasonably representative cross-section of Canadian industry, both manufacturing and non-manufacturing.

Four major types of fringe benefit—paid vacations, paid holidays, pension plans and welfare plans—were in effect in nearly all of the 100 companies. Paid rest periods and coffee breaks were reported by 70 companies.

Average outlay for vacation pay was 4.1 per cent of payroll; for pension plan contributions, 3.6 per cent of payroll.

Average fringe benefit outlay by industry ranged from 16.5 per cent of payroll in textile mills to 26.6 per cent in food, beverages and tobacco companies.

Results of the survey were published last month in a 58-page book, *Fringe Benefit Costs in Canada, 1959*, available from Industrial Relations Counselors Service, Inc., 85 Bloor Street East, Toronto 5, Ont., at \$10 a copy.

5. GREAT BRITAIN. MINISTRY OF LABOUR. *Annual Report, 1959*. Pp. 120.

On November 20, 1959 the Ministry reverted to its original title after having been known as the Ministry of Labour and National Service for over twenty years.

6. GREAT BRITAIN. NATIONAL ASSISTANCE BOARD. *Report for the Year ended December 31, 1959*. London, HMSO, 1960. Pp. 60.

7. NEW YORK (STATE). DEPARTMENT OF LABOR. *Annual Report of the Industrial Commissioner, 1959*. Albany, 1960. Pp. 67.

8. ONTARIO. DEPARTMENT OF LABOUR. *Fortieth Report for the Fiscal Year ending March 31, 1959*. Toronto, Queen's Printer, 1960. Pp. 119.

9. U.S. NATIONAL LABOR RELATIONS BOARD. *Twenty-fourth Annual Report for the Fiscal Year ended June 30, 1959*. Washington, GPO, 1960. Pp. 188.

Canada at Work Broadcasts

The following three broadcasts were prepared by the Federal Department of Labour in Ottawa in 1960.

10. *Don't Burn our Forests!* Pp. 4.

A talk prepared from information supplied by the Federal Forestry Branch, Department of Northern Affairs and National Resources in Ottawa for Forest Conservation Week.

11. *No Better and No Worse. A Sketch on Anti-Discrimination*. Pp. 8.

"A play about racial and religious tolerance in a Canadian community."

12. *Progress in Rehabilitation; a Report on the Ninth Meeting of the National Advisory Committee on the Rehabilitation of Disabled Persons*. Pp. 4.

Congresses and Conventions

13. CANADIAN CONSTRUCTION ASSOCIATION. *Proceedings of 42nd Annual General Meeting, January 23-27, 1960, Calgary, Alta.* Ottawa, 1960. Pp. 203.

14. INDUSTRIAL RELATIONS RESEARCH ASSOCIATION. *Proceedings of the Twelfth Annual Meeting, Washington, December 28-29, 1959*. Edited by David B. Johnson. Madison, 1960. Pp. 210.

Contents: Memorial Session to the Late Selig Perlman and Sumner Slichter. The Incidence of Persistent Unemployment. Health Plans in Collective Bargaining: Responsibilities of Management and Labor for Medical Care. Improving the Unemployment Insurance System. The Economics of the Minimum Wage. Changing Patterns of Industrial Conflict. Union Policies and Industrial Management.

15. SASKATCHEWAN CIVIL SERVICE ASSOCIATION. *Proceedings and Minutes of the Forty-seventh Annual Convention held in Regina, Sask., May 18, 19 and 20, 1960*. Regina, 1960. Pp. 113.

Industrial Relations

16. INDUSTRIAL RELATIONS RESEARCH ASSOCIATION. *Employment Relations Research, a Summary and Appraisal*. Editors: Herbert G. Heneman [and others] New York, Harper, c1960. Pp. 226.

Contents: The Labor Force and Labor Markets, by Herbert S. Parnes. Selection and Placement—the Past Ten Years, by George W. England and Donald G. Paterson. Employee and Executive Compensation, by David W. Belcher. Public Policy and Dispute Settlement, by Gordon F. Bloom and Herbert N. Northrup. History and Theory of the Labor Movement, by David Dolnick. Technological Change and Industrial Relations, by George P. Shultz and Arnold Weber.

17. KNOWLES, WILLIAM HENRY. *Trade Union Development and Industrial Relations in the British West Indies*. Berkeley, University of California Press, 1959. Pp. 214.

Examines the social, economic, and political background of the labour movement of the British West Indies.

18. MICHIGAN. STATE UNIVERSITY OF AGRICULTURE AND APPLIED SCIENCE, EAST LANSING. LABOR AND INDUSTRIAL RELATIONS CENTER. *Practical Arbitration. Fifth Annual*

Joint Industrial Relations Conference for Lawyers, Arbitrators and Union and Management Representatives, March 30-31, 1959, Kellogg Center, Michigan State University. Edited by Daniel H. Kruger. East Lansing, 1959. Pp. 168.

Conference sponsored by the Section of Labor Relations Law, State Bar of Michigan, the Labor and Industrial Relations Center, Michigan State University, Institute of Labor and Industrial Relations, University of Michigan—Wayne State University in cooperation with: American Arbitration Association [and others].

Topics discussed: Current Arbitration Trends: a Critique. Current Arbitration Trends: the Arbitrators' Viewpoint. Demonstration Arbitration. How to convince an Arbitrator.

Labour Organization

19. CAMERON, JAMES CARRUTHERS. *The Status of Trade Unions in Canada* [by] J. C. Cameron and F. J. L. Young. Kingston, Dept. of Industrial Relations, Queen's University, 1960. Pp. 169.

Examines labour legislation as it relates to the growth of labour unions in Canada.

20. U.S. BUREAU OF LABOR STATISTICS. *Union Security and Checkoff Provisions in Major Union Contracts, 1958-59.* Washington, GPO, 1960. Pp. 16.

"... Deals with the prevalence of different types of union security and checkoff provisions in major collective bargaining agreements." Information based on 1,631 agreements covering about 7½ million workers.

Labouring Classes

21. CLAY, HILARY M. *The Older Worker and his Job.* London, HMSO, 1960. Pp. 20.

Briefly outlines some of the findings of recent research into the effects of physical and mental changes on older workers.

22. COX, ARCHIBALD. *Law and the National Labor Policy.* Los Angeles, Institute of Industrial Relations, University of California [1960] Pp. 111.

Contains five lectures delivered at the University of California, Los Angeles, in November and December, 1959.

Contents: The Evolution of Labor-Management Relations Law. Public Policy toward Union Organization. The Role of Public Policy in the Negotiation of Collective Bargaining Agreements. The Role of Law in the Administration of Labor Agreements. The Public Interest in Internal Union Affairs.

23. INTERNATIONAL LABOUR OFFICE. *Vocational Training.* Seventh item on the agenda. Geneva, 1960. Pp. 103.

At head of title: Report 7 (1). International Labour Conference. 45th session, 1961.

Gives a brief description of the main features and trends in vocational training in the world today. Includes a draft text and explanatory notes of a Recommendation to be commented on by member governments.

24. INTERNATIONAL TRADE UNION CONFERENCE ON THE EFFECT ON WORKING CONDITIONS OF THE USE OF MICRO-MEASUREMENT AND PREDETERMINED-TIMES METHODS, DORTMUND, GERMANY, 1959. *Final report*, by R. J. Jouffret and F. Hauser. EPA Project 6/05. Paris, OEEC, 1960. Pp. 96.

Conference held October 27-30, 1959. Outlines the development of the use of Methods-Time Measurement and Work-Factor methods in European industries; analyzes the reasons for this development; describes how these methods affect the workers, and discusses some problems which the unions and employers have to solve.

25. NATIONAL INSTITUTE ON REHABILITATION AND LABOR HEALTH SERVICES, ATLANTIC CITY, 1959. *Rehabilitation and Labor Health Services: Guidelines for Action; a Report.* Washington, 1960. Pp. 77.

Sponsored with a grant from the U.S. Office of Vocational Rehabilitation.

26. UDY, STANLEY H. *Organization of Work; a Comparative Analysis of Production among Nonindustrial Peoples.* New Haven, HRAF Press, 1959. Pp. 182.

"... A comparative study of the various ways in which different kinds of work are organized among nonindustrial peoples in the production of material goods."

27. U.S. BUREAU OF LABOR STATISTICS. *Aid to Labor Surplus Areas in Great Britain, Belgium, the Federal Republic of Germany, and Sweden.* Washington, GPO, 1960. Pp. 40.

Deals with programs for aiding unemployed workers in labour surplus areas in four European countries.

Management

28. CANADIAN TAX FOUNDATION. *Corporate Management Conference, Montreal, 1960.* Toronto, 1960. Pp. 52.

Contents: Federal and Provincial Corporation Taxes in Perspective, by Harvey Perry. Valuing Inventories for Tax Purposes, by George P. Keeping. Making the Most of your Losses, by Campbell W. Leach. Deferred Compensation for Executives, by G. T. Tamaki.

29. PRINCETON UNIVERSITY. INDUSTRIAL RELATIONS SECTION. *High-Level Manpower in Overseas Subsidiaries; Experience in Brazil and Mexico*, by John C. Shearer. Princeton, 1960. Pp. 161.

An examination of management personnel in subsidiaries of 23 companies in Mexico and Brazil.

Office Management

30. CANADA. CIVIL SERVICE COMMISSION. ORGANIZATION AND METHODS SERVICE. *Manual on Filing Services.* Rev. ed. Ottawa, Queen's Printer, 1960. Pp. 64.

Deals with the organization of Registry and Filing units; classification of material; initial processing of material; issuing and controlling of files; and, retention and disposal of material.

31. U.S. BUREAU OF LABOR STATISTICS. *Adjustments to the Introduction of Office Automation*. Washington, GPO, 1960. Pp. 86.

"A study of some implications of the installation of electronic data processing in 20 offices in private industry, with special reference to older workers."

Women—Employment

32. INTERNATIONAL LABOUR OFFICE. *Employment and Conditions of Work of Nurses*. Geneva, 1960. Pp. 176.

Based on information received from organizations in 56 countries or territories.

33. U.S. WOMEN'S BUREAU. *Maternity Benefit Provisions for Employed Women*. Washington, GPO, 1960. Pp. 50.

Describes maternity benefits through health and insurance programs provided under voluntary plans or through legislative action.

34. U.S. WOMEN'S BUREAU. *Minimum Wage and the Woman Worker*. Washington, GPO, 1960. Pp. 16.

"This booklet... tells briefly... how and why State minimum-wage laws come about, how they operate, and of their impact on the worker, the employer, and the community."

35. U.S. WOMEN'S BUREAU. *Part-Time Employment for Women*. Washington, GPO, 1960. Pp. 53.

Provides information about the age and marital status of women who work part time; some reasons why they work part time; and, where they find part-time jobs. Concludes with suggestions to women seeking part-time jobs.

Women—Employment—Conferences

36. INTERNATIONAL LABOUR OFFICE. *Conditions and Problems of Women Working in Agriculture*. Working paper on Item no. 2. Geneva, 1959. Pp. 55.

At head of title: PCWW/1959/I/2/D.1. International Labour Organization. Meeting of Consultants on the Problems of Women Workers. Geneva, October 1959.

37. INTERNATIONAL LABOUR OFFICE. *Future Programme as regards Women Workers*. Working paper on Item no. 4. Geneva, 1959. Pp. 20.

At head of title: PCWW/1959/I/4/D.1. International Labour Organization. Meeting of Consultants on the Problems of Women Workers. Geneva, October 1959.

38. INTERNATIONAL LABOUR OFFICE. *Recent Trends in Women Workers' Opportunities and Needs*. Working paper on Item no. 1. Geneva, 1959. Pp. 70.

At head of title: PCWW/1959/I/1/D.1. International Labour Organization. Meeting of Consultants on the Problems of Women Workers. Geneva, October 1959.

39. INTERNATIONAL LABOUR OFFICE. *Women's Wages*. Working paper on Item no. 3. Geneva, 1959. Pp. 16.

At head of title: PCWW/1959/I/3/D.1. International Labour Organization. Meeting of Consultants on the Problems of Women Workers. Geneva, October 1959.

40. MEETING OF CONSULTANTS ON THE PROBLEMS OF WOMEN WORKERS, GENEVA, 1959. *Report*. Geneva, 1959. Pp. 28.

At head of title: PCWW/1959/I/1/D.1. International Labour Organization.

Miscellaneous

41. BELLAN, RUBEN C. *Principles of Economics and the Canadian Economy*. Toronto, McGraw Hill, 1960. Pp. 540.

Intended as a text book with examples drawn from Canadian experience and conditions.

42. CARR-SAUNDERS, (SIR) ALEXANDER MORRIS. *A Survey of Social Conditions in England and Wales as illustrated by Statistics*, by A. M. Carr-Saunders, D. Caradog Jones and C. A. Moser. Oxford, Clarendon Press, 1958. Pp. 302.

Partial Contents: Age, Sex, and Marriage. Births, Deaths, and Migration. Households and Housing. Education. Entry into Employment. Industrial Distribution. Distribution by Occupation, Industrial Status, and Social Class. Protective Associations. Personal Income. Personal Expenditure. Social Security. Health. Use of Leisure Time. Religion. Crime.

43. FRONTIER COLLEGE. *The Frontier College; Report of Special Committee of the Board of Governors, March 1960*. Toronto, 1960. 1 Volume (various pagings).

Reviews the work of Frontier College from 1900 to 1960, outlines its future program and suggests ways for achieving it.

44. GREAT BRITAIN. CENTRAL OFFICE OF INFORMATION. REFERENCE DIVISION. *Social Services in Britain*. London, HMSO, 1960. Pp. 91.

45. NATIONAL INDUSTRIAL CONFERENCE BOARD. *Economic Growth in the 1960's: Prerequisites; Potentials; Problems*. Prepared for the 44th Annual Meeting, May 19, 20, 1960. New York, 1960. Pp. 33.

46. U.S. NATIONAL SCIENCE FOUNDATION. *A Study of Scientific and Technical Manpower; a Program of Collection, Tabulation, and Analysis of Data of the National Science Foundation. A Report prepared pursuant to a Committee Resolution, Committee on Science and Astronautics, U.S. House of Representatives, Eighty-sixth Congress, Second Session*. Washington, GPO, 1960. Pp. 71.

At head of title: Committee print. Describes briefly "... the content and uses of scientific manpower information, the ways in which it is collected, and the principal collection programs." Also describes the present National Science Foundation programs, and a proposed program to be developed over the next few years.

B—Labour Income

NOTE: The estimates of labour income in this table have been revised in accordance with recent revisions to the National Accounts. Note particularly the use of annual totals instead of monthly averages, and the introduction of quarterly instead of monthly totals for some industries. Monthly and quarterly figures may not add to annual totals because of rounding.

¹Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.

²Includes post office wages and salaries.

³Figures in this column are for total labour income, Canada, but are not totals of the figures in the remaining columns of this table, as figures for labour income in Agriculture, Fishing and Trapping are not shown. (See also headnote.)

*Revised.

†Preliminary.

C—Employment, Hours and Earnings

Tables C-1 to C-3 are based on reports from employers having 15 or more employees—at July, 1960 employers in the principal non-agricultural industries reported a total employment of 2,846,752. Tables C-4 (every second month) and C-5 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-3. They relate only to wage earners for whom statistics of hours of work are also available whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage earners in the reporting firms.

¹Includes (1) Forestry (chiefly logging), (2) Mining (including milling), quarrying and oil wells, (3) Manufacturing, (4) Construction, (5) Transportation, storage and communication, (6) Public utility operation, (7) Trade, (8) Finance, insurance and real estate and (9) Service, (mainly hotels, restaurants, laundries, dry cleaning plants, business and recreational service).

TECHNICAL NOTE—A change has been made in the method of dating the statistics published in Tables C-1 to C-6 to conform with the usual practice of the Dominion Bureau of Statistics. In the past, statistics for the last pay period in a month were labelled "pay period preceding" the first day of the following month. From now on, statistics for the last pay period in a month will be labelled for that month. Another change is that average hourly earnings formerly expressed in cents carried to one decimal place, are now published in dollars and cents.

*Revised.

†Preliminary.

D—National Employment Service Statistics

The following tables are based on regular statistical reports from local offices of the National Employment Service. These statistics are compiled from two different reporting forms, UIC 751; statistical report on employment operations by industry, and UIC 757; inventory of registrations and vacancies by occupation. The data on applicants and vacancies in these two reporting forms are not identical.

Toronto.....	128.8	130.1	130.3	121.1	153.1	113.6	123.4	140.2
Winnipeg.....	123.4	125.4	125.8	120.9	134.6	116.2	120.2	125.7
Saskatoon-Regina.....	123.5	124.0	124.8	121.4	124.9	123.0	125.8	139.1
Edmonton-Calgary.....	122.8	123.6	124.3	117.6	124.5	120.2	127.1	133.4
Vancouver.....	127.2	127.5	128.3	121.5	138.4	115.6	132.1	136.5

N.B.—Indexes above measure percentage changes in prices over time in each city and should not be used to compare actual levels of prices as between cities.

(1) St. John's index on the base June 1951 = 100.

G—Strikes and Lockouts

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Department of Labour on the basis of reports from the Unemployment Insurance Commission. The first three tables in this section cover strikes and lockouts involving six or more workers and lasting at least one working day, and strikes and lockouts lasting less than one day or involving fewer than six workers but exceeding a total of nine man-days. The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. For further notes on the series see page 763, July issue.

TABLE G-1—STRIKES AND LOCKOUTS, 1955-1960

Month or Year	Strikes and Lockouts Beginning During Month or Year	Strikes and Lockouts in Existence During Month or Year			
		Strikes and Lockouts	Workers Involved	Duration in Man-Days	
				Man-Days	Per Cent of Estimated Working Time
1955.....	149	159	60,090	1,875,400	0.18
1956.....	221	229	88,680	1,246,000	0.11
1957.....	242	249	91,409	1,634,880	0.14
1958.....	253	262	112,397	2,872,340	0.24
*1959.....	202	217	99,872	2,386,680	0.19
*1959: August.....	28	47	38,656	667,960	0.63

Total.....	6	1	9	4	25	77	7	9	19	61	2	219*

*Of this total 156 fatalities were reported by the various provincial Workmen's Compensation Boards and the Board of Transport Commissioners; details of the remaining 63 were obtained from other, non-official sources.

Here's VALUE

**A 50% Reduction under This Special
GROUP SUBSCRIPTION OFFER**

A 12 MONTHS' SUBSCRIPTION

TO THE

LABOUR GAZETTE

**For
Only**

\$1.00

**Per
Subscription**

FOR GROUPS OF FIVE OR MORE SUBSCRIBERS

Cut the regular price in half by ordering five or more subscriptions at the same time. This offer is designed so that a union local can subscribe for its members, a company for its foremen and personnel officers, a university class for all students in labour relations, labour law, or labour economics.

A list of names and addresses of subscribers must accompany each order

Send remittance by cheque or postal money order, payable to the Receiver General of Canada, to Circulation Manager, LABOUR GAZETTE, Department of Labour, Ottawa.

CORRESPONDENCE—Address letters dealing with editorial matters to the Editor, those dealing with subscriptions to the Circulation Manager. SUBSCRIPTIONS—Canada: \$2 per year, single copies 25 cents each; all other countries: \$4 per year, single copies 50 cents each; Send remittance by cheque or post office money order, payable to the Receiver-General of Canada, to The Queen's Printer, c/o Superintendent of Government Publications, Ottawa. All subscriptions payable in advance. SPECIAL GROUP SUBSCRIPTION OFFER—Five or more annual subscriptions, \$1 per subscription (Canada only). Send remittance, payable to the Receiver-General of Canada, to the Circulation Manager. BOUND VOLUMES—\$5 per copy delivered in Canada, \$7 per copy to other countries. CHANGE OF ADDRESS—Please attach label showing previous address.

Authorized as Second Class Mail, Post Office Department, Ottawa.

EMPLOYMENT REVIEW

ECONOMICS AND RESEARCH BRANCH

The Labour Force, October

Employment decreased by 16,000 between September and October, a less-than-seasonal decline. The labour force continued to expand more rapidly than it has for the past two years; in October it was 3.3 per cent larger than a year earlier—but employment was up only 1.5 per cent.

The number unemployed increased more than seasonally during the month, and was 117,000 higher than a year earlier.

In the week ended October 15, the labour force was estimated at 6,499,000, which is 25,000 higher than the month before and 209,000 higher than a year earlier. Employment was estimated at 6,131,000, which, although 16,000 lower than at mid-September, was 92,000 higher than in October 1959. Unemployment was estimated at 368,000, which is 41,000 higher than a month earlier.

Employment

Between September and October, employment gains in some non-farm industries, notably services, manufacturing and trade, were almost as large as the seasonal decrease in agriculture. As a result, the net decrease in employment during the month was smaller than in recent years. Women accounted for almost all of the increase in non-agricultural employment.

The increase in employment over last year resulted from contrasting trends in the goods-producing and service-producing industries. In the service industry, principally in community, personal and government services, employment was up 10 per cent over the year; there were smaller increases in trade and finance. Employment was considerably lower than last year in construction and manufacturing, and there were lesser declines in other goods-producing industries.

The number of women employed showed a substantial growth over the year, increasing 7 per cent, largely as a result of continued expansion in the service industry. Because of the slackness in goods-producing industries, the number of employed men was down slightly from a year earlier.

Employment was estimated at 6,131,000 in October, 6,147,000 in September, and 6,039,000 in October 1959. The number of men employed was estimated at 4,470,000 in October, 4,512,000 in September and 4,493,000 in October 1959; for women the comparable numbers were 1,661,000; 1,635,000 and 1,546,000.

This summary of the Labour Force Survey now presents a national estimate of unemployment. Briefly, unemployment as now defined combines Labour Force Survey estimates of persons without jobs and seeking work, and persons on temporary layoff. Estimates of employment and unemployment for months prior to October, when the new definition was adopted, have been revised to conform to the new definition.

Non-agricultural employment in October was estimated at 5,436,000; agricultural, 695,000.

Between September and October, farm employment dropped seasonally in all regions except British Columbia. Non-farm employment rose in all regions; the only large increase was in Ontario, where it increased by 25,000, to some extent as a result of rehiring in automobile and parts plants. Over the year, total employment was up in all regions except British Columbia, where there was little change.

The regional breakdown of employment estimates was:

	October 1960	September 1960	October 1959
Atlantic	546,000	551,000	528,000
Quebec	1,694,000	1,699,000	1,670,000
Ontario	2,272,000	2,262,000	2,238,000
Prairies	1,080,000	1,104,000	1,061,000
Pacific	539,000	531,000	542,000

Unemployment

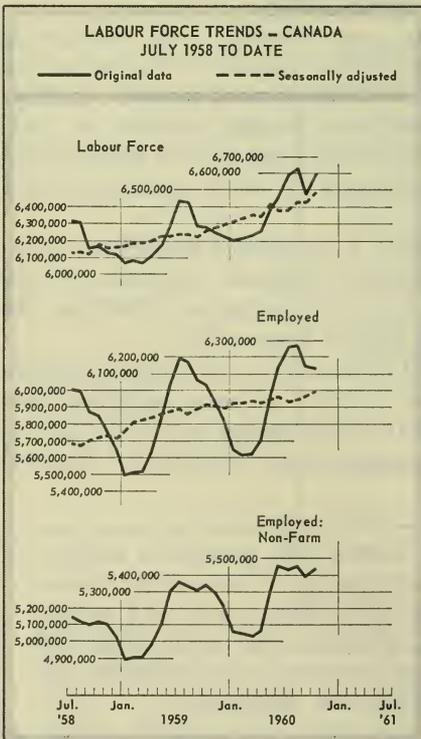

Unemployment increased by 41,000 between September and October, a rise somewhat greater than usual for this time of year. The increase brought the number unemployed in October to 5.7 per cent of the labour force, compared with 4.0 per cent in October 1959 and 5.3 per cent in October 1958. In September the ratio was 5.1 per cent.

Men accounted for 83 per cent of the unemployed, and for most of the increase over the year, a reflection in part of the employment decline in the goods-producing industries. The increase in the number of unemployed women was somewhat smaller, proportionally, partly because of growth of job opportunities in trade and services.

The largest percentage increases in unemployment over the year occurred in Ontario and British Columbia, partly as a result of decreased demands for manufacturing workers. The number unemployed aged 35 to 55 increased, proportionally, more than in other age groups, although the number of unemployed was higher than a year earlier in all age groups.

Regional Summaries

In the **Atlantic** region, employment remained fairly stable between September and October. Contractions in the primary industries were largely offset by gains in trade and transportation. Reductions in farm and fishing employment followed the usual seasonal patterns but layoffs in coal mining were due to market conditions. Marketing of apple and potato crops resulted in increased demands for packers, warehousemen and transporta-

tion workers. Employment in food processing plants declined seasonally but elsewhere in manufacturing, employment either advanced or remained stable.

Employment in October, at 546,000, was 18,000 higher than a year ago. Gains occurred in forestry, manufacturing, and the service producing industries; declines in construction, mining and farming. Employment in the Atlantic region in September was estimated at 551,000.

Unemployment in the region was estimated at 46,000, an increase of 8,000 from September and 9,000 from October 1959. It amounted to 7.8 per cent of the labour force, compared with 6.5 per cent in October 1959.

In the **Quebec** region, employment showed no appreciable change. Agricultural employment declined seasonally but increasing activity in forestry resulted in a noticeable seasonal addition to the work force. Non-residential construction remained steady, but residential construction increased sharply, reversing the trend of the past several months. Manufacturing employment showed little change from the previous month. Employment in the region was estimated at 1,694,000 in October, 1,699,000 in September, and 1,670,000 in October 1959.

The rise of more than 2 per cent in non-farm employment over the year resulted essentially from an improvement in employment in forestry and mining and in the service industries. There was a substantial year-to-year decline in residential construction in spite of an increase in housing starts in October; this was largely responsible for the decrease in construction employment over the year. Losses overshadowed gains in a number of manufacturing industries, bringing total manufacturing employment down from last year's level. The main weaknesses were in the manufacture of transportation equipment—apart from aircraft—electrical apparatus and wood products. Principal gains were in industries producing aircraft and parts, paper products, and food and beverages.

The increase in unemployment during the month, from 116,000 to 126,000, was smaller both relatively and absolutely than in the same period of 1959. Unemployment as a proportion of the labour force rose from 5.2 per cent last October to 6.9 per cent in October this year.

In the **Ontario** region, the seasonal drop in farm employment was more than offset by employment increases elsewhere, notably in automobile and parts plants. In addition, activity in fruit and vegetable canning plants was maintained at peak levels during the first half of the month as a result of a heavy crop; employment in clothing factories remained high, and there was some rehiring in aircraft manufacturing. Production and employment were below last year's level in furniture and household appliance plants, and among heavy electrical apparatus, road machinery and agricultural implement producers. Construction activity declined seasonally. Continuing fine weather permitted extensive fall ploughing and successful completion of the harvest of late crops.

The number of women employed in non-farm industries, mainly service and trade, was much higher than a year earlier. Male employment showed a decline of 1 per cent, mainly because of decreases in construction, manufacturing and mining.

Employment in the region was estimated at 2,272,000 in October, compared with 2,262,000 in September and 2,238,000 in October 1959. Unemployment, at 120,000, increased in October to 5.0 per cent of the labour force from 4.6 per cent in September, when the estimated number of unemployed was 109,000. In October 1959 estimated unemployment was 72,000, which was 3.1 per cent of the labour force.

In the **Prairie** region, employment declined seasonally by 24,000, from an estimated 1,104,000 in September to 1,080,000 in October; it was 1,061,000 in October last year. A seasonal drop in farm employment more than offset a small increase in non-agricultural industries. Favourable weather enabled construction to remain fairly steady, and food processing plants were busier after fall deliveries of cattle, sugar beets and other specialty crops. Employment in the clothing industry increased for the production of winter lines. Agricultural employment was virtually the same as a year earlier but non-farm industries showed a gain of 18,000. The gain occurred chiefly in services and trade, and offset small declines in construction and transportation.

Unemployment, at an estimated 31,000, increased from September to October by about the same amount as in the last three years. It represented 2.8 per cent of the labour force, compared with 2.3 per cent a year earlier, when it was estimated at 25,000.

In the **Pacific** region, seasonal hiring in forestry, mining and trade, and a further expansion in the service industry, brought about a recovery in employment between September and October after a decline the month before. Logging and lumbering were somewhat steadier than usual at this time of year and employment in shipyards and machine shops held steady. Favourable weather helped maintain construction activity, and the number working on farms remained unusually high. Employment was higher than a year earlier on farms, in mining and in the pulp and paper industry. Increases in these industries were offset, however, by year-to-year declines in fishing and most manufacturing industries, particularly shipbuilding and sawmilling. Construction was also down from a year earlier as a result of a drop in housebuilding.

An estimated 539,000 were employed in the region in October, compared with 531,000 in September and 542,000 in October 1959. Unemployment rose seasonally; it was estimated at 41,000 in September, 45,000 in October. In October it represented 7.7 per cent of the labour force, up from 4.6 per cent in the same month of 1959.

COLLECTIVE BARGAINING REVIEW

ECONOMICS AND RESEARCH BRANCH

A highlight of collective bargaining in British Columbia during October was the signing of an agreement covering 4,500 woods workers in the southern interior of the province. In the northern interior, however, little progress was made during the month toward settlement with the logging operators. In Ontario, the major pulp and paper producers were negotiating new agreements with the woods workers, with the aid of conciliation officers. Also in this province, the Ontario Hydro Electric Commission renegotiated the agreement that expired last March, providing wage increases for their 11,000 employees. A key settlement that could possibly clear the way for ending the country-wide strike at Dominion Bridge Company was signed between the Steelworkers and the company's Montreal plants.

During the month the **railways' non-operating unions** were completing their strike vote and in mid-November announced that the membership had voted overwhelmingly in favour of strike action, and that the strike deadline had been set at December 3. Immediately after this, it was announced that the Prime Minister had called the CNR and CPR presidents as well as the chief union negotiator together for consultation.

Significant progress was made during October in the collective bargaining conducted on behalf of the loggers and sawmill workers employed by lumber firms located throughout the interior of British Columbia. More than two thirds of the workers affected were covered by the new agreement signed by the **International Woodworkers of America** and the 34 firms in British Columbia's southern interior represented by the **Interior Forest Labour Relations Association**. The settlement was a compromise based on a conciliation board report that had previously been rejected by the operators and accepted by the union (L.G., Oct., p. 989). The two-year agreement provides for a wage increase of 3 cents an hour retroactive to September 1 of this year, with a further 3 cents on March 1, 1961, and 4 cents an hour on September 1, 1961. In addition to the increases, tradesmen will get an extra 6 cents an hour and powerhouse engineers and firemen 4 cents an hour effective last September 1. Carrier drivers and fork-lift operators will get an extra 3 cents an hour starting September 1, 1961. As part of the settlement, the parties undertook to work out the details for a travel-time clause to be incorporated in the agreement on September 1, 1961. It will be modelled on the existing arrangements in effect among the coastal operators whereby employees are compensated for travel from assembly points to work sites. The situation with respect to the 2,500 loggers in the interior of northern British Columbia remained unsettled. The operators rejected the conciliation board's recommendations which had been accepted by the IWA (L.G., Oct., p. 989), and no further progress was reported during the month.

Negotiations in the pulp and paper industry in eastern Canada were centred largely around the talks between the Lumber and Sawmill Workers' Union locals of the **United Brotherhood of Carpenters and Joiners of America** and the 10 companies comprising the bulk of Ontario's integrated forest industry having both forest and mill operations. The unions' main wage demands were for a 20-cent hourly increase for day workers and a 14-per-cent wage boost

for piece workers. In addition to the increased wages, the unions were seeking a reduction in the present 48-hour work week to 40 hours with maintenance of pay. Other key issues were union jurisdiction over the contractors in the woodlands, including those who provide services only; improved vacations and holidays; and extensive changes in the working and living conditions at camps. The companies have offered an hourly increase of 5 cents and a 2-per-cent raise for piece work as well as increased contributions to medical, hospital and surgical plans and improvements in working and living conditions. The negotiations at the woodland divisions of the pulp and paper firms are all at the conciliation officer stage, except at **Abitibi Power and Paper**, where application was made for the assistance of a conciliation board.

Bargaining affecting 11,000 Hydro Electric Power workers represented by the **National Union of Public Service Employees** ended with the signing of a new one-year agreement with the **Ontario Hydro Electric Power Commission**. In the settlement, a compromise was reached on the Commission's demand that the cost-of-living clause be deleted in its entirety. The union agreed to removal of the clause on condition that it would be reinstated in any future agreements of more than one year's duration.

Increases in the new agreement for linemen, electricians and skilled trades amounted to 7 cents an hour retroactive to April 1 of this year with another 2 cents effective November 3. Group-one labourers and three classifications of drivers will get wage boosts of 10 to 12 cents an hour, and handymen will get 15 cents. The salaried group of employees will get increases ranging from \$9 to \$22 a month as well as a progressive reduction in the work week from the present 37½ hours to 35 hours by next April. Salaried employees on shift work will receive a 9-cents-an-hour premium for the afternoon shift and 13 cents an hour for the night shift. The premium for the salaried group engaged on construction projects was increased to 2 per cent from 1½ per cent. Hydro also agreed to raise their contributions toward the cost of the medical plan from 70 to 75 per cent.

A major break in the strikes that closed down operations at 12 of the 14 **Dominion Bridge Company** plants across Canada came on October 27, when the **United Steelworkers of America** signed a separate two-year agreement with the company's Montreal plants. This was made possible when the union agreed to forego its demand for national bargaining that it had been attempting to establish in these as well as previous negotiations. The new agreement embodied a total wage increase of 8 cents an hour over the life of the agreement, improved life insurance and an increased weekly sickness indemnity. A new provision in the agreement was the establishment of a company-union parity committee charged with the task of reviewing the current pension plan and recommending a new one to cover the Montreal bargaining unit only. A draft plan, when approved by the parity committee, will be submitted to an employee vote, and if adopted, will replace the existing company operated plan that covers both plant and office employees, whether union members or not, working at all the plants across Canada. If a new plan is approved, the company agreed to match the employees' contributions up to a maximum rate of 4 per cent of the participating employees' straight-time earnings.

The Montreal settlement stimulated local bargaining at each of the other plants, paving the way for the termination of the remaining work stoppages and the full resumption of operations. By the middle of November settlements were reported at practically all of the company's plants.

Part III—Settlements Reached During October 1960

(A summary of the major terms on the basis of information immediately available. Coverage figures are approximate.)

ASSOCIATION DES MARCHANDS DÉTAILLANTS (AUTO-VOITURE), QUEBEC, P.Q.—CNTU-CHARTERED LOCAL: 3-yr. agreement covering 650 empl.—eff. Oct. 1, 1960, present 49-hr. wk. to be reduced to 47 hrs. and on June 1, 1961 to 45 hrs. with the same take-home pay; 5¢-an-hr. increase eff. June 1, 1962 and a further 5¢-an-hr. increase eff. Dec. 30, 1962; when agreement expires on Dec. 30, 1962 a further 5¢-an-hr. increase will be granted as a cushion against delays in renegotiating the agreement; 3 wks. vacation after 17 yrs. of service (formerly no provision for 3 wks. vacation); union shop.

CONSOLIDATED PAPER, GRAND'MÈRE, QUE.—PULP AND PAPER MILL WKRS. (AFL-CIO/CLC): 1-yr. agreement covering 600 empl.—basic rate increased by 11¢ an hr. retroactive to May 1, 1960; an additional 4¢-an-hr. increase eff. Nov. 1, 1960; 3 wks. vacation after 10 yrs. of service (formerly 3 wks. after 15 yrs.); 1 additional non-scheduled holiday with pay; provision for bereavement leave.

DE HAVILLAND AIRCRAFT, TORONTO, ONT.—AUTO WKRS. (AFL-CIO/CLC) (OFFICE WKRS.): 2-yr. agreement covering 500 empl.—increases ranging from \$3.45 to \$7.40 per wk. over the 2-yr. period; 4 wks. vacation after 25 yrs. of service (formerly no provision for 4 wks. vacation); \$2.00 per wk. cost of living bonus incorporated in salary; improved insurance provisions.

DOMINION BRIDGE, LACHINE, QUE.—STEELWORKERS (AFL-CIO/CLC): 2-yr. agreement covering 1,300 empl.—an increase of 4¢ an hr. eff. Oct. 27, 1960; an additional 4¢ on Oct. 27, 1961; 4 wks. vacation after 25 yrs. of service (formerly no provision for 4 wks. vacation); parity committee to be set up to study provisions for a new pension plan; life insurance increased from \$2,000 to \$3,000; weekly indemnity for sickness increased from \$30 to \$40.

DOW CHEMICAL, SARNIA, ONT.—OIL WKRS. (AFL-CIO/CLC): 3-yr. agreement covering 550 empl. Settlement terms not immediately available.

FUR MFRS. GUILD, MONTREAL, QUE.—BUTCHER WORKMEN (AFL-CIO/CLC): 2-yr. agreement covering 2,200 empl.—increase of \$6 per wk. retroactive to Sept. 1, 1960; work wk. reduced to 39 hrs. eff. Sept. 1, 1960 and a further reduction to 37½ hrs. eff. Sept. 1, 1961; companies cannot contract out work except in very special cases.

GENERAL STEELWARES, TORONTO, ONT.—STEELWORKERS (AFL-CIO/CLC): 2-yr. agreement covering 1,500 empl.—3¢-an-hr. increase eff. Oct. 1, 1960 plus 5¢-an-hr. increase eff. Oct. 1, 1961; 1 mo. vacation for empl. with 25 yrs. of service (formerly no provision for 1 mo. vacation).

INTERIOR LUMBER MFRS. ASSOC., SOUTHERN B.C.—WOODWORKERS (AFL-CIO/CLC): 2-yr. agreement covering 4,500 empl.—3¢-an-hr. increase retroactive to Sept. 1, 1960; 3¢-an-hr. increase eff. March 1, 1961 with a further 4¢-an-hr. increase eff. Sept. 1, 1961; tradesmen to receive an additional 6¢-an-hr., engineers and firemen 4¢ an hr. all eff. Sept. 1, 1960, and carrier and fork lift operators to receive an additional 3¢ an hr. eff. Sept. 1, 1961.

KELVINATOR OF CAN., LONDON, ONT.—AUTO WKRS. (AFL-CIO/CLC): current agreement covering 600 empl. extended for 1 yr. without change.

LADIES' CLOAK AND SUIT MFRS. ASSOC., WINNIPEG, MAN.—LADIES' GARMENT WKRS. (AFL-CIO/CLC): existing agreement covering 800 empl. extended for 2 yrs. without change.

LAKE CARRIERS ASSOC., EASTERN CANADA—SEAFARERS (AFL-CIO): 2-yr. agreement covering 2,500 empl.—a general increase of 5% in both wages and overtime retroactive to July 15, 1960; at the commencement of fit-out in the spring of 1961, work wk. to be reduced to 44 hrs.; work on Sat. to be paid 1½ times daily rate; statutory holidays to be paid at the Sun. rates (1½ times daily rate), when worked, and normal daily rate when not worked, empl. to receive 14 days paid holiday for 270 days service to come out of a vacation fund accumulated from the Association's contributions; vacation payments to be made through the union office based on documentary evidence of days worked.

JOHN MURDOCH, ST. RAYMOND, QUE.—WOODCUTTERS, FARMERS UNION (IND.): 2-yr. agreement covering 500 empl.—a general increase of 3% retroactive to Sept. 1, 1960 and an additional 3% eff. Sept. 1, 1961.

ONTARIO HYDRO, COMPANY-WIDE—PUBLIC SERVICE EEMPL. (CLC): 1-yr. agreement covering 11,000 empl.—7¢-an-hr. increase retroactive to April 1, 1960 plus an additional 2¢ on Nov. 1, 1960 for hourly rated empl.; 1½% increase retroactive to April 1, 1960 for salaried empl.; work wk. for salaried empl. to be reduced to 35 hrs. eff. April 1, 1961; improvements in health plan and sick leave; severance pay plan introduced.

NOTES OF CURRENT INTEREST

Employment Conference Supports Plan for Productivity Council

At the end of a 1½-day conference on employment last month, Prime Minister Diefenbaker announced in a press conference that the Government was ready to submit to Parliament legislation to promote the establishment of a national productivity council. The conference had been forecast by the Prime Minister in a television broadcast in September (L.G., Oct., p. 994).

The proposal was supported by the representatives of 21 industry, business, farm and labour organizations attending the conference, he said.

Suggestions made at the conference were many and varied, and at times contradictory, Mr. Diefenbaker said, but there was agreement that Canadian production should be expanded to provide more jobs.

In his announcement, the Prime Minister called attention to the British Productivity Council set up in 1952 to stimulate interest in methods of raising productivity in special industries and areas. The British Council is financed by government, employer and employee groups.

Over 960 Winter Works Projects Approved by Program's Opening

By October 17, first day of this year's Municipal Winter Works Incentive Program, more than 960 projects had been approved for federal contribution, the Minister of Labour announced.

At the end of the first day of the 1959-60 program, 605 projects had been approved.

All ten provinces have agreed to take part in this year's program and all except Prince Edward Island had submitted projects prior to the opening of the program.

Estimated cost of the 967 projects accepted up to October 17 was about \$58,000,000, of which about \$44,000,000 will be spent during the six and a half months—October 15 to April 30—that the program is in effect.

The total direct payroll cost for the period is estimated at \$14,000,000, half of which will be contributed by the federal Government.

It is expected that 17,894 men will be hired as a direct result of those projects

already approved and that the total on-site employment will amount to 970,160 man-days.

Seven of the provinces will add further incentives for projects undertaken by their municipalities under the program.

Quebec has agreed to pay 40 per cent of payroll costs; Ontario, Saskatchewan, Alberta, British Columbia and Prince Edward Island have agreed to pay 25 per cent; Manitoba will pay up to 25 per cent in some cases and up to 50 per cent in others.

This year the program was broadened to include two new classes of projects, and the period extended by advancing the starting date from December 1 to October 15.

For the first time, the program includes the construction, major reconstruction, major alteration or renovation of municipal buildings except schools and hospitals, up to a maximum federal incentive payment of \$50,000 on each new structure.

The program has also been extended to cover such projects as street lighting, traffic signals, municipal parking lots, water and sewage treatment plants, pumping stations and water towers.

A \$100,000,000 program of winter work was announced last month by the Minister of Public Works. During the coming winter, the Department plans to construct between 60 and 80 standard post offices and 12 slightly larger post offices, undertake \$3 million worth of interior work in government buildings, and purchase some \$1,200,000 worth of furniture and equipment.

"Do It Now" Campaign Prevented Layoffs by Building Supply Firms

A survey by the Department of Labour of 470 building supply dealers who had participated in the 1959-60 "Do It Now" winter work campaign showed that 64 per cent of them had increased their sales volume from the previous year. The increases averaged 17 per cent, and ranged from 1 to 200 per cent.

More than 95 per cent of the suppliers questioned reported staff increases or maintenance of full staffs during the period when they normally lay workers off.

Announces Further Changes in National Housing Act Regulations

The Minister of Public Works last month announced changes in National Housing Act regulations to provide further government assistance to housing.

The changes were:

—Extension of home improvement loan financing to rental properties, including apartment buildings;

—Lifting until the end of the year of all income limits for direct Central Mortgage and Housing Corporation loans to prospective home owners and builders;

—Extension from 25 to 30 years of the repayment period for all CMHC loans;

—Making available immediately two direct loans to a merchant builder, intended to finance the construction of display homes;

—Increased limited-dividend housing loans for larger projects.

This is the first time home improvement loans have been made available to owners of rental properties, and the Minister predicted an extensive program of repair work this winter.

From September 1, the gross annual income of an applicant for a direct loan was limited to \$7,000, plus \$200 for families of three, four and five or more children, to a maximum of \$7,600.

The extension to 30 years of the repayment period for NHA mortgage loans will result in a reduction of the monthly repayment. The reduction will amount to \$4.30 on a \$10,000 loan.

The two direct loans to a builder "are intended to finance the construction of display homes which will aid sales under the program of direct loans for pre-sold houses," the Minister explained.

He said that on limited-dividend housing projects started before the end of this year the maximum loan permitted would be increased from 85 to 90 per cent, and the limit of 100 units a project would be lifted.

No changes were made in the interest rate of NHA loans, which now stands at 6½ per cent on house construction loans and 6 per cent on home improvement loans.

In the first nine months of this year, starts on the construction of new dwelling units totalled 76,797, compared with 102,806 in the same period in 1959, the Dominion Bureau of Statistics reported last month.

Completions numbered 88,621 compared with 100,333.

Units under construction at the end of September this year totalled 69,538; at the same date last year they numbered 88,965.

National Unemployment Estimate Now Available for First Time

The interdepartmental committee set up in March to consider changes in the monthly statistical report on employment and unemployment (L.G., April, p. 348) last month recommended, and the Government adopted, a national estimate of unemployment. This is the first time such an estimate has been presented.

The new figure combines estimates from the Labour Force Survey of persons without work and seeking work, and of persons on temporary layoff.

The new estimate was taken into use in time for last month's joint release by the Department of Labour and the Dominion Bureau of Statistics dealing with employment and unemployment during the week ended September 17. It was also used in last month's *LABOUR GAZETTE* (page 985).

Groupings Now Used

The groupings now used in the presentation of labour force data are as follows:

Labour Force—The civilian labour force includes that portion of the civilian non-institutional population 14 years of age and over who, during the survey week, were employed or unemployed.

The employed includes all persons who, during the survey week, (a) did any work for pay or profit, (b) did any work which contributed to the running of a farm or business operated by a related member of the household, or (c) had a job but were not at work because of bad weather, illness, or vacation, or because they were taking time off for other reasons.

The unemployed includes all persons who, through the survey week, (a) were without work and seeking work, i.e., did not work during the survey week and were looking for work, or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; or (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

Not in the labour force—Those not in the labour force include all civilians 14 years of age and over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those: going to school, keeping house, too old or otherwise unable to work, and voluntarily idle or retired. Housewives, students and others who worked part time are classified as employed; if they looked for work they are classified as unemployed.

Huge Construction Project Likely To Begin in 1961 on B.C. River

Construction of three huge storage dams in British Columbia is proposed in an agreement reached last month between Canada and the United States on the basis of a treaty to develop the Columbia River, which flows through both countries. Construction is expected to begin next year.

The Canadian Parliament and the United States Congress have not yet ratified the treaty.

Quebec Agrees to Participate in Co-operative Road-Building Plans

The province of Quebec last month joined two federal-provincial road-building programs, the Trans-Canada Highway and the "Roads to Resources" plan. It is the tenth province to participate in the latter program and the last to sign the Trans-Canada Highway agreement.

Under the "Roads to Resources" scheme (L.G., March, p. 244), the federal Government will match a province's expenditures on roads that will help develop a promising resource, up to a maximum of \$7.5 million. Under the Trans-Canada Highway Act, the federal contribution is 50 per cent of the cost of new building of specified standard.

Work is expected to begin in the new year.

Declare Two Ontario Districts Surplus Labour Areas, Union Asks

The National Employment Service will be asked to investigate whether Deloro and Atikokan in Ontario should be classed as surplus labour areas, the Minister of Labour told a delegation from the United Steelworkers that met with him at the end of October.

Deloro is a one-industry community, dependent on the Deloro Smelting and Refining Company Limited, which is scheduled to close down on January 15, 1961. Employment has already declined, from 300 in late 1958 to 70, the delegation asserted.

In Atikokan, according to the union's submission, two development projects have closed down and large scale layoffs are coming in the area's major industry, Steep Rock Iron Mines.

If the two localities are declared surplus labour areas, federal assistance is available to enable the unemployed workers to move to places where the NES believes employment would be available.

Dr. R. M. Adams Now Chief of Labour-Management Division

Dr. Robert McDonald Adams, since 1958 Head of the Wages Research Section of the Department's Economics and Research Branch, has been appointed Chief of the Labour-Management Division of that Branch. He assumed his new duties on October 12.

Born in London, Ont., he was graduated from the University of Western Ontario in Honours Economics and Political Science in 1951. The next year he was granted a master's degree in Economics from Queen's University, Kingston, Ont.

In 1957 he completed the degree of Doctor of Philosophy in Labour Economics at the London School of Economics and Political Science, London, England. His graduate work included also a year of research at the University of Chicago.

IAGLO Elects Elliott Wilson President for Coming Year

A resolution adopted at the annual conference of the International Association of Governmental Labour Officials, held at Detroit, Mich., at the beginning of September, recommended that steps be taken in each state and province to have adopted the danger symbols approved by the International Labour Organization.

Another resolution recommended that all members of the Association promote a "stay-in-school" program, an apprenticeship program and safety training.

Other major resolutions among the 16 adopted:

—Urged members of the Association to endeavor to extend minimum wage protection to agricultural workers.

—Recommended an increase in the (U.S.) federal minimum wage and an extension of coverage, and also urged the states and provinces to do likewise.

—Noting that children need protection from dangerous employment, urged the provision of physical examinations for persons under 18, and that existing child labour laws should be effectively administered.

At the conference, 37 states and six provinces were represented, as well as the United States and Canadian federal Departments of Labour.

J. B. Metzler, Ontario Deputy Minister of Labour, was a co-chairman of the Committee on International Labour. R. E. Anderson, Nova Scotia Deputy Minister of Labour, was chairman of a session on labour relations. A paper by Jacob Finkleman,

QC, Chairman of the Ontario Labour Relations Board, was presented at this session.

W. Elliott Wilson, QC, Manitoba Deputy Minister of Labour, was elected President of the Association for the coming year.

Dept. Publishes 1960 Edition of 'Labour Organizations in Canada'

Affiliates of two central bodies, the Canadian Labour Congress and the Canadian and Catholic Confederation of Labour, continue to account between them for well over 80 per cent of trade union members in Canada, according to the 49th annual issue of *Labour Organizations in Canada*, published at the end of October. The information in the 1960 edition was obtained in the early months of the year from national or international union headquarters, central labour congresses, and independent local organizations active in Canada.

Total membership reported at the beginning of 1960 was approximately 1,459,000. This total no longer includes the members of three organizations of government employees, numbering some 16,000, which have severed affiliation with the CLC.

A total of 6,805 locals were reported in the 1960 survey.

Union membership in 1960 was approximately 32 per cent of the estimated total of non-agricultural paid workers in Canada.

Labour Organizations in Canada, 1960 is available from the Queen's Printer, Ottawa (Catalogue No. L2-260), at 35 cents a copy.

Employment Committee Urges Increase in Training of Jobless

Representations urging expansion of vocational training facilities for unemployed persons are to be made to provincial authorities by national organizations whose delegates attended the 75th meeting of the National Employment Committee, held in Ottawa last month.

The resolution was adopted unanimously by representatives of the Canadian Construction Association, Canadian Retail Federation, Canadian Chamber of Commerce, Canadian Labour Congress, Canadian Manufacturers' Association, Canadian Federation of Agriculture, Canadian Welfare Council, Canadian Legion, National Council of Women, and the Canadian Federation of Business and Professional Women's Clubs.

The Committee, under the chairmanship of Frank McCallum, Oshawa, was advised by the Unemployment Insurance Commission that only some 6,000 unemployed persons are being directed into training

each year both under Schedule "M" involving a division of cost between the federal and the provincial Governments, and other training courses approved by the UIC.

The main obstacle to larger enrolment of unemployed in training courses was lack of facilities, the UIC advised the Committee, whose members expressed the opinion that immediate steps should be taken to urge the provinces to explore the possibilities of providing more accommodation and instructors with a view to expanding the unemployed training program.

The Committee believed that with the rapidly changing nature of employment requirements, new skills and constant refreshing of old skills were essential if many of the unemployed were to be developed to the point where employers could usefully hire them.

In other resolutions the Committee recommended establishment of the Municipal Winter Works Incentive Program on a continuing, perennial plan, rather than one requiring annual advice to municipalities of its adoption; and urged continuation of the campaign to keep young people in school with a view to raising their educational qualifications commensurate with the demands of present-day employment.

Booklet on Working Conditions In Canadian Industry Is Issued

Working Conditions in Canadian Industry, 1959, published at the beginning of the month by the Economics and Research Branch of the Department of Labour, draws together in tabular form information on working conditions in most Canadian industries obtained in the annual survey conducted in the spring of each year.

Preliminary information on working conditions of both plant and office employees in the manufacturing industry was presented in the article, "Working Conditions in Manufacturing," in the March number of the *LABOUR GAZETTE* (page 297).

The 78-page booklet now available provides in greater detail information on conditions in mining, public utilities, transportation and communication, trade, finance and service industries as well as manufacturing. It is available from the Queen's Printer, Ottawa (catalogue No. L33-1560), at 25 cents a copy.

Publication of the English edition of *Canada 1960*, the popular handbook issued yearly by the Dominion Bureau of Statistics, was announced at the end of October. The 1960 edition, 31st in the series, contains an up-to-date portrayal of the Canadian

economy and of Canada's political, social and cultural development. It is available from the Queen's Printer at \$1.00.

Many Labour Organizations Hold Annual Conventions

During the past month conventions were held by the International Woodworkers of America, Districts 1 and 2; the British Columbia Provincial Council, United Brotherhood of Carpenters and Joiners; and the National Union of Public Service Employees. In September, conventions were held by the United Steelworkers, the United Packinghouse Workers, the International Printing Pressmen, and the United Rubber Workers.

Woodworkers—The 23rd annual convention of District 1 of the International Woodworkers of America, held in Vancouver from September 27 to October 1, urged a revised government forest policy, including the establishment of a forest advisory committee.

The 135 delegates from the four western provinces also approved resolutions asking for simplification of conciliation machinery, elimination of provisions in British Columbia legislation for government-supervised strike votes, curtailment of immigration until a new policy had been worked out, public ownership of all electric power installations in B.C., lowering of the age limit for old age pensions, and appointment of a Royal Commission to lay down rules for stricter control of forest resources.

The District 2 convention urged introduction of a comprehensive health insurance program, retraining of displaced workers, waiver of hospital insurance premiums during periods of unemployment, deduction of health insurance premiums for income tax purposes, a \$75 monthly pension at age 65 without a means test, and elimination of the waiting period for unemployment insurance benefits.

Carpenters—The annual convention of the British Columbia Provincial Council of Carpenters and Joiners endorsed formation of the new political party being organized by labour and the CCF, and urged members of the Carpenters to support it. The union itself, however, will not support the new party; its constitution forbids the union's involvement in politics.

(At a special convention in September, the international union rejected overwhelmingly a Canadian sponsored amendment to the constitution to permit locals to contribute funds to political parties and religious organizations.)

The convention agreed to give priority in next year's negotiations to a demand for a seven-hour day.

Public Service Employees—A resolution urging all the delegates to support the new political party being organized by the CCF and the CLC, and asking local unions to send delegates to the new party's founding convention in Ottawa next July, was passed by the 15th annual convention of the National Union of Public Service Employees with only one dissenting vote. The convention, held in Hamilton on September 29 to October 1, was attended by about 180 delegates.

In another resolution passed by the convention, the Ontario Hydro-Electric Power Commission was sharply criticized for forbidding its employees to take an active part in politics. The delegates resolved to ask for amendment of the Bill of Rights to make it clear that all Canadians except highly placed civil servants have the right to engage in political activity.

The federal Government was urged in another resolution passed by the convention to put into effect policies that would give farmers "the promised 'fair share of the national income'."

The convention unanimously supported a resolution asking the locals to support a voluntary plan for contributing 1 cent a month a member to the solidarity fund of the International Confederation of Free Trade Unions.

Another resolution criticized the CLC for trying to confine NUPSE's jurisdiction "in the interests of other Congress affiliates." CLC policy prevents the union from directly organizing federal or provincial government employees, national representative Francis Eady said.

James C. Clark, President of the union, told the delegates that attempts to bring about a merger with the National Union of Public Employees had failed for the time being. In spite of efforts to reach a compromise with that union at a meeting in June, he said, basic differences between the two unions on vital issues are far from being reconciled. The convention agreed to continue merger talks.

In the election of officers, Stanley A. Little, Toronto, was elected President and Chief Executive Officer, and the following elected vice-presidents: K. Cummings, F. O. Rogers, and C. C. Mains.

Steelworkers—A standard work week of 32 hours, made up of four eight-hour days, will be the next bargaining target of the United Steelworkers of America, it was decided at the union's 10th biennial convention in September. The union also will

propose that the United States Congress consider the 32-hour week as subject for legislation.

Another bargaining goal adopted was three weeks vacation every five years after five years of service.

The convention approved a program for setting aside part of the steel industry's pension fund reserves, amounting to \$1,600 million, for the construction of hospitals and group-practice medical centres for steel communities.

One of the guest speakers at the convention was Walter L. Gordon, who was Chairman of the Royal Commission on Canada's Economic Prospects. He told the delegates that an increasing number of Canadians believe that United States investment in Canada had gone too far.

President David McDonald urged the major United States steel producers to join the union in a program intended to keep the industry permanently free from strikes. His plan comprised joint efforts to develop "some broad method for the distribution of the emoluments" of automation and other technological advances.

Packinghouse Workers—Resolutions urging the federal Government to sponsor more public works and set up controls over automation in industry were adopted at a conference of Ontario locals of the United Packinghouse Workers of America in Brantford in late September.

In a four-point resolution it was suggested that the federal Government co-operate with the provinces in a constructive program of public works, including schools, hospitals, highways and other capital projects.

Encouragement of new investment capital for secondary industry, establishment of a national minimum wage and development in co-operation with the provinces of an adult education and training program for workers displaced by automation was requested in another resolution.

A panel discussing the changing economy agreed there is a need for legislation to control adverse conditions that might result from automation.

Printing Pressmen—At the convention in September of the International Printing Pressmen and Assistants' Union of North America, leaders of four unions in the graphic arts industry signified their approval of a fusion of their memberships, through merger, association or federation.

Supporting the merger move were: Elmer Brown, President of the International Typographical Union (AFL-CIO/CLC); William J. Farson, Executive Vice-President of the American Newspaper Guild (AFL-CIO-CLC); Paul L. Phillips, President of

the United Paper Makers and Paper Workers (AFL-CIO-CLC); and Leo Feeney, Vice-President of the International Stereotypers' and Electro-typers' Union of North America (AFL-CIO-CLC).

Rubber Workers—The United Rubber Workers elected an entirely new slate of officers at its convention at the end of September. The new president is George Burdon, former Director of Organization for the union.

He succeeds Leland S. Buckmaster, who had to vacate the position under the compulsory retirement provisions of the union's constitution.

The convention voted to raise monthly dues to \$1.25 and authorized the payment of \$25 a week strike benefits beginning with the third week of a strike; strike benefits will become effective July 1 next year.

Establishment of a skilled trades department in the union was another convention action.

B.C. Civil Servants End Affiliation With Labour as Check-off Lost

A resolution in favour of withdrawing from the British Columbia Federation of Labour was voted down at the annual convention of the British Columbia Government Employees Association on October 7. But 11 days later, the executive of the Association, after a seven-hour emergency session, sent telegrams to Acting Premier Eric Martin and to the Federation announcing at least a temporary suspension of affiliation with the Federation.

Reason for the swift reversal of policy was the action of the British Columbia Government in announcing on October 11 that it was abolishing the check-off of dues of the employees' organization because of its connection with organized labour, which in turn was affiliated with the CCF.

Abandoning a long established principle, the Inter-State Executive of the Australian Council of Trade Unions last month announced its decision to oppose compulsory political levies on individual union members.

The problem of compulsory political levies arose about two years ago when two members refused to pay the levy imposed by their union. They claim they were prevented from working because of their refusal, and the Tasmanian Supreme Court, ruling that the imposition of the levy was illegal, awarded them damages. Later, the High Court reversed the finding of illegality but did not change the award of damages.

Fewer Receive Blind Allowance But More Get Disabled Grant

The number of persons receiving old age assistance in Canada decreased from 99,581 at June 30 to 99,454 at September 30.

The federal government's contributions under the federal-provincial scheme totalled \$7,674,007.12 for the quarter ended September 30, compared with \$7,654,709.21 in the preceding quarter. Since the inception of the Act, the federal Government has contributed \$204,725,577.56.

At September 30, the average monthly assistance in the provinces ranged from \$48.78 to \$52.91, except for one province where the average was \$46.53. In all provinces the maximum assistance paid was \$55 a month.

Blind Persons Allowances—The number of blind persons in Canada receiving allowances under the Blind Persons Act decreased from 8,665 at June 30 to 8,657 at September 30.

The federal government's contributions under the federal-provincial scheme totalled

\$1,041,116.59 for the quarter ended September 30, compared with \$1,039,443.43 in the preceding quarter. Since the inception of the Act, the federal government has contributed \$29,474,555.23.

At September 30, the average monthly allowance in the provinces ranged from \$50.29 to \$53.98. In all provinces the maximum allowance paid was \$55 a month.

Disabled Persons Allowances—The number of persons in Canada receiving allowances under the Disabled Persons Act increased from 50,365 at June 30 to 50,525 at September 30.

The federal Government's contributions under the federal-provincial scheme totalled \$4,090,541.09 for the quarter ended September 30, compared with \$4,099,434.75 in the preceding quarter. Since the inception of the Act, the federal Government has contributed \$63,914,766.54.

At September 30, the average monthly allowance in the provinces ranged from \$52.71 to \$54.50. In all provinces the maximum allowance paid was \$55 a month.

The ILO and the CLC recently sponsored a workshop on "Teaching about the ILO" at Ste. Agathe des Monts, Que. The three-day meeting, which was attended by a group of 30 Canadian and United States labour educators and observers interested in adult education, was presided over by the CLC's Director of Education, Max Swerdlow (middle of above photo). Main speakers were Albert Guigui (right), Chief of the Industrial Workers Division of the ILO, and Paul Chu (left), Chief of the Workers' Education Section, ILO, both from Geneva. Other principal speakers included Ralph Wright, Director of the Washington Branch of the ILO, and Kalmen Kaplansky, Director of the CLC's Department of International Affairs.

Technological Change and Skilled Manpower in Automobile and Parts Manufacturing

Output in both automobile and automotive parts manufacturing industries rose during 1948-58 period by greater percentage than did employment, survey finds. Salaried employment increased; number of employees on direct production fell

During the period 1948-58, the number of units produced in the Canadian automobile manufacturing industry increased 36.4 per cent while employment in the industry increased only about 7 per cent and average hours worked decreased from 39.7 hours a week in 1948 to 38.3 hours in 1958.

The value added by manufacture rose about 75 per cent and volume of output, as measured on a weighted index computed by the Dominion Bureau of Statistics, grew 54.6 per cent, it is pointed out in the latest report in the Research Program on the Training of Skilled Manpower. The report, No. 8 in the series, is titled, *Technological Changes and Skilled Manpower: The Automobile and Parts Manufacturing Industries*. It was produced by the Economics and Research Branch of the Department of Labour.

Although employment in the industry rose 7 per cent during the period, the number of employees engaged in direct production fell approximately 6½ per cent. The proportion of direct labour as a percentage of total employment was 82.8 per cent in 1948 and 72.5 per cent in 1958.

Among salaried workers, on the other hand, there was an increase in employment that more than offset the drop in hourly-rated workers. Salaried employment as a proportion of total employment increased, in three assembly and fabricating establishments surveyed, from 16.6 per cent in 1948 to 20.3 per cent in 1953 and to 27.6 per cent in 1958. In two engine manufacturing establishments it increased from 8.6 per cent in 1948 to 10.4 per cent in 1953 and to 16.1 per cent in 1958.

Skilled tradesmen increased in numbers during the decade but the ratio of skilled workers to total hourly-rated employment remained constant, although there was a slight proportional increase in the two smaller of the three establishments surveyed.

Survey findings in the parts manufacturing industry were similar. Data on output in units were not obtainable but in terms of value added, production in this industry increased 113 per cent, and as measured by the DBS weighted volume index, by 35 per cent. Employment increased by only

about 25 per cent and average hours worked "decreased probably somewhat in excess of 8 per cent."

In the parts industry, direct production workers made up 84.3 per cent of the industry's total labour force in 1948 and 78.3 per cent in 1957.

Salaried employment as a proportion of total employment increased from 11.5 per cent to 21.3 per cent; in the automobile manufacturing industry it increased from 18.7 to 26.2 per cent.

Unlike the automobile manufacturing industry, in parts manufacturing the proportion of skilled tradesmen increased during the decade. In one establishment, skilled tradesmen accounted for 10 per cent of hourly-rated employment in 1948 and 15 per cent in 1958; in another the percentage change was from 18 per cent in 1955 to 20 per cent in 1959.

In the survey, made by visiting four automobile manufacturers and eighteen parts supply firms, and the unions representing the workers in them, interviewers sought detailed information about technological changes recently introduced, their manpower effects, and the problems associated with them.

The report describes the nature of technological change in the automobile and parts industry, its effects on manpower both in aggregate and specific terms, and its effects on occupations, skill levels and training. It deals also with some of the human problems that arise from technological change.

Aim of the report is to serve as a basis for evaluating the problems that have arisen and the means of overcoming them.

The bulletin is divided into six chapters: Chapter 1—Characteristics of Canadian Automobile and Automotive Parts Manufacturing Industries; Chapter 2—Technological Change and its Impact on Output and Employment in the Automobile and Automotive Parts Manufacturing Industries; Chapter 3—The Effects of Technological Change on Occupations and Skills; Chapter 4—An Analysis of Specific Technological Changes in the Automobile and Automotive Parts Manufacturing Industries; Chapter 5—Some Problems of Human Adjustment to

Technological Change; and Chapter 6—Training in the Automobile and Automotive Parts Manufacturing Industries.

Individual Skilled Trades

The survey showed that the rate of growth or decline of individual skilled trades during the period 1948-1958 was uneven. "The trades that showed a relatively small increase from 1948 to 1958 almost all evidenced a decline in the first six years," the report states.

One chapter of the report deals with particular technological changes in the automobile and automotive parts manufacturing industries. In the first of these industries, 40 changes were reported in enough detail to make it possible to gauge their effects on the general level of skill of the workers directly involved. From an examination of these changes the conclusion was reached that, "in the vast majority of cases, no change occurred in the skill level of manpower directly engaged on specific operations. This finding may reflect the fact that most of the changes took place in areas where low skilled employees had previously been employed. The increase in skilled manpower requirements is seldom direct and . . . the indirect manpower effects were excluded from the analysis.

"During discussions of these changes with both management and unions, the impression gained was that while only 12.5 per cent of the changes involved a direct, appreciable increase in skills, in almost all cases there was a slight increase in the general skill composition of the labour force due to more complicated maintenance and the operational requirements of newer, more complex machinery."

In the automotive parts industry, 44 cases of specific changes were reported in sufficient detail to enable them to be used for purposes of analysis. From a study of these cases it was concluded that, "in the overwhelming majority of cases, no changes in skill levels were involved. In just over 10 per cent of the cases a lowering of the skill levels required for the job occurred, due to the change in production techniques. In no case did any specific change result in increased skill levels. This is in contrast to the automobile industry, where there was

an increase in skill level in 12.5 per cent of the cases."

This statement refers only to workers directly involved in the operation. Secondary manpower effects of the 44 specific changes were again excluded from the analysis.

Employment Opportunities

In connection with technological changes that involved a considerable increase in capital equipment, the report points out that logically an increase in capital equipment per worker tends to increase employment opportunities in maintenance relative to production within the plant and industry, and tends to increase employment opportunities in the capital goods industries, assuming that output of the industry where the change occurred does not fall drastically.

"Although increased employment opportunities in maintenance work are evident in Canada to some extent, increased employment in the capital goods industries as a potential offset to possible displacement does not exist to a significant degree, since the bulk of the production machinery is imported."

The information obtained in the survey seems to indicate a sizeable increase in productivity, the report states, but it is not possible to determine the magnitude of the increase with any accuracy.

The chapter dealing with problems of human adjustment to technological change describes the effect of technological change on various groups of workers and some of the measures used to mitigate the hardship involved for those who are displaced from their jobs by such changes. It goes on to give a brief description of technological unemployment in three selected districts.

The chapter on training describes the various types of training given in the two industries and the purposes of such training.

In the parts industry, where the majority of firms have fewer than 1,000 employees, there is very little organized training, most of the training being of the informal, "on-the-job" type. This latter kind of training is used greatly in the automobile manufacturing industry also, but there large establishments predominate, and there are also varied and extensive training programs in force, the report says.

Equal Pay for Equal Work

The ILO Convention concerning equal remuneration for men and women workers for work of equal value has received a total of 34 ratifications.

In June of this year, ratifications of the equal pay Convention were deposited by Costa Rica and Denmark.

Royal Commission on Coal

Commissioner Rand points out difficulty of enunciating "National Coal Policy"; recommends that federal Government continue to assist the coal industry, and suggests subsidies on coal produced not subventions on coal moved to markets

"The difficulty of enunciating a 'National Coal Policy,' as it has been described, lies largely in the geographical distribution of coal in a country in which political and social contentions are at odds with economics," says the report of the Royal Commission on Coal, which was published at the end of September.

Major recommendation of the Commissioner—Hon. Ivan C. Rand, retired justice of the Supreme Court of Canada and now Dean of the Faculty of Law, University of Western Ontario—is that the federal Government continue to assist the coal industry. Dean Rand suggests replacement of the subventions now being paid to cover part of the cost of moving coal to markets by two classes of subsidy on coal produced.

One of the other recommendations was that a trade school and vocational school be established in the Sydney, N.S., district. Dean Rand also made some comments on labour relations in the Cape Breton coal mines and, concerning mine closures, made the suggestion that the union be consulted on any steps that may be taken.

The Commission was appointed to inquire into and make recommendations on: the present and future markets for coal in various parts of Canada; the steps that can reasonably be taken to reduce the cost of production and distribution of coal; the steps that the coal industry can take to secure as large a market as possible for Canadian coal and to keep the industry on an economic basis; and the measures that can reasonably be taken by governments to support the economic production, distribution and sale of Canadian coal.

The Report

The report describes the main difficulties under which the coal industry is labouring. "The Crow's Nest Pass deposits are approximately 2,000 miles and those of the Sydney district 1,350 miles from Toronto; and 2,275 and 1,020 miles respectively from Montreal. The railway rates on coal to Toronto from the West range from \$9.96 to \$10.72; from Glace Bay \$6.31; to Montreal they are from \$11.46 to \$12.20 and \$5.09 respectively.

The report further points out, "In fact heavy as is the transportation charge on both Nova Scotia and United States shipments, greater mining costs in the former

are sufficient in themselves to handicap entry into Ontario and Quebec points. For 1958 the average cost at the pit-head of Nova Scotia coal was \$10.72, against prices at the mines of United States coal shipped into Canada ranging from \$3.60 to \$5.33.

"A similar contrast shows in the average output per man-day. The average in 1948 at the Nova Scotia mines was 2.66 tons; in the United States it was over 11 tons and is steadily rising.

"These are the elements in the Canadian situation which have given rise to the coal 'problem' and have led to such extravagances in assistance," the Commission says.

The report holds out some hope for the future of the Canadian coal industry. "According to the best available opinion, the superior position of oil and gas will be maintained at least during the next 25 or 35 years, not, perhaps, with the margin of advantage at this time exhibited, but, certainly for many purposes, a sufficient standing to strain the best efforts of the coal industry. It seems to be agreed that the total energy which those resources embody is not of the magnitude of coal."

The Commissioner thinks, therefore, that "within a measurable period" coal will recover its position, at least in some degree. "The problem is, then, of a substantial interim period," he says.

Coal will find its greatest future use in industry and in the production of electrical energy, the report states.

Measures Available

If Canada is not to adopt the policy followed in the United States, where "subventions and any other form of direct public aid are unknown" and "the consequences of ruthless competition are accepted as normal business risks by employer and employee," what measures are legitimately available?

The policy so far followed has been that of granting subventions by the government to cover part of the cost of moving the coal to market. These subventions, begun in 1928-29, have cost a total of \$135,000,550.05 on an aggregate of 69,051,962.34 tons of coal, or an average of \$1.96 a ton during the whole period since 1928-29.

The cost of these subventions has shown a "startling increase" during the last seven years, and particularly during the last two.

In 1959-60 about \$15,500,000 was paid on the movement of 3,090,021 tons, or an average of \$5.01 a ton, the report points out.

The subvention payments in 1959-60 constitute a figure "which in my opinion the future should not see exceeded," Dean Rand says.

The report states that Eastern coal is now threatened by foreign oil with the loss of its Atlantic or "natural" market. "In the circumstances... the conclusion to which the Commission is driven is that, to avoid a grave social disruption, assistance must be continued, and its nature and justification become the principal purpose of the inquiry."

The situation is different in the western provinces of Saskatchewan, Alberta and British Columbia. "These provinces are the main sources of Canadian oil and gas in what are estimated to be large volume; and their provincial policies are set to exploit these resources to the utmost. It is these new fuels which are now responsible in greatest measure for the difficulties of their own coal reserves; what has been effected is a substitution of industry in fuels and it is to the substituted agencies that the provincial industrial economy has become geared..."

"In this situation, should the Dominion then undertake to succour, in the interest of possible minor social dislocations, a provincial resource the difficulties of which are the direct and foreseen results of provincial action? I can see no warrant for such action..."

"The provinces did not seriously urge any such assistance... The local governments view coal as they do oil or any other fuel; its position must be left to its inherent strength, and if that is not sufficient to enable it to continue competitively, then it must go the way of all weaklings and yield to its competitors."

The western provinces are rich in resources and are rapidly becoming industrialized, the Commissioner pointed out. Resource based industries, together with the industries they generate, furnish alternatives occupations, so that the troubles of at least labour and community from a single industry "are readily absorbed in the vigour of others."

Recommendations

The main recommendation of the report is that the Dominion Government shall pay two classes of subsidy on coal, called in the

report "basic" and "social subsidies" the subsidy to be paid as follows:

(a) On all bituminous coal produced yearly in Nova Scotia by eligible operators, there shall be payable a basic subsidy of 50 cents a ton; in addition, a social subsidy of \$2 a ton will be payable on all sales for consumption in the Atlantic Provinces and in that section of Quebec south of the St. Lawrence River from Gaspé Peninsula to Levis, called Eastern Quebec; on sales made in Quebec within the area to which, under the present subventions, shipments from Nova Scotia receive a reduction of 35 per cent in the rail freight rate, a social subsidy of \$4 a ton; and to all other points in Quebec and Ontario a social subsidy of \$5 a ton.

(b) On all bituminous coal produced in New Brunswick by eligible operators there shall be payable a basic subsidy of 40 cents a ton on coal mined underground and of 30 cents a ton on coal mined by the stripping method; in addition, a social subsidy of 60 cents a ton for all coal mined underground and of 40 cents a ton for all coal strip mined sold for consumption within the Atlantic Provinces and Eastern Quebec; for sales of both underground and strip mined coal to points in New Brunswick, \$1.35 a ton; and to points in the 55 per cent and 70 per cent areas, \$2.70 a ton.

(c) On all bituminous and sub-bituminous coal and lignite produced by eligible operators in Saskatchewan, Alberta and British Columbia: for all mined underground, a basic subsidy of 40 cents a ton; and for all strip mined, a basic subsidy of 30 cents a ton. For the reasons stated, no social subsidy shall be payable on coal or lignite mined in these provinces.

At present the maximum subvention paid on Nova Scotia coal sold in Ontario and Quebec is \$8.75 a ton, compared with a maximum of \$5.50 a ton under the recommendations of the report. Western mine operators now receive up to \$4 a ton subvention on coal shipped to central Canada, while the most they can receive under the Rand recommendations is 40 cents a ton.

Payment of the recommended subsidy should not be made on coal from mines not in operation throughout the fiscal year 1958-59 and mines that have not continued operations up to the date of the report nor to operations that did not produce more than 50,000 tons during the 1959-60 fiscal year.

The total subsidy that can be earned by the Dominion Coal Company and its associated companies is not to exceed the amount paid in subventions to the company during the fiscal year 1959-60. The total subsidy that can be earned by any other operator in Nova Scotia and New Brunswick shall be the amount which the permissible production for subsidy purposes would earn were all the production sold within the Atlantic Provinces and Eastern Quebec.

No social subsidy shall be paid on coal exported from Canada.

The report recommends the re-organization of the Dominion Coal Board by reducing its membership to five persons, none of whom shall be an officer or employee of, or be associated in any way with any sector of the coal industry.

A further recommendation is that a sum of not less than \$1,500,000 a year be spent over a period of 15 to 20 years in developing tourist attractions by reconstructing the ruins of the fortress of Louisbourg, building a highway between Louisbourg and Point Tupper, and developing the Cape Breton Highlands National Park.

Other recommendations are that, with the co-operation of the provincial governments, a trade school and a vocational school be established in the Sydney district; and that immediately a group of five persons, two representing the Dominion Coal Company, two representing the employees, and an engineer representing the Dominion Government, shall make a study of coal mining in Britain, France, Belgium and West Germany, with a view to improving efficiency in the company's mines.

Object of Social Subsidy

The main objective of the social subsidy, the report says, "is to assist coal production to a better competitive position in its own market." It points out that the subventions paid during the last 15 years "have been available to the eastern operators only to markets in sections of Quebec and Ontario and payments up to a maximum of \$9 a ton have been possible."

Dean Rand could not agree that this method had been successful or that it should be followed in the future.

"What is threatened today, and what in part has already been lost, is the coal market within the Atlantic Provinces and the Eastern St. Lawrence Valley area. That region may be called the natural market for the coal or Nova Scotia and New Brunswick, and may legitimately be said to reach as far west as Montreal. It is that market which, primarily, should belong to eastern coal and, in the course of the next few years with the growth of business activity, be extended in quantity."

Labour Relations

Regarding labour relations in the Cape Breton coal mines, Dean Rand says, "They have a history of over 50 years which is unfortunate in the legacy passed on to the present generation." Past strife, especially the struggle for union recognition and factional warfare within the unions, has left bitterness that, after several generations,

"seems still to be lurking in too many minds."

He points out that "It has not, apparently, been realized that from a purely industrial point of view the parent company, DOSCO, would be better off without the coal operations; and that the senior management, judging them by their actions, at least within the past few years, have not striven to preserve the life of the operations in their present magnitude is, in my opinion, contrary to the facts."

The report says that during each of the years 1958 and 1959 DOSCO has suffered a deficit of more than a million dollars, besides undertaking a large loan, part of which remains to be repaid, for the purpose of increasing mechanization. It adds that no dividends have been paid on the company's common stock for 40 years.

"In the United States, where the highest wages in the mining world are paid and the employees are the beneficiaries of the policies of Mr. Lewis and his successor, mines such as those of Cape Breton would have been abandoned years ago and the majority of the workers would have been left to the course of their fellow unionists in West Virginia," Dean Rand remarks.

The miners have one complaint that he considers justified. It is that the operating costs of individual collieries are never made public. The answer usually given is that such information would be valuable to competitors, but the Commissioner finds this answer unsatisfying, since the information, he says, is already available to competitors from other sources.

With reference to wages, Dean Rand says, "With the company's operations continuing only through government help, it must be realized and acted upon that the employees and their communities are the real beneficiaries of the enabling assistance given to operations which, in an economic-industrial sense, are not at this time essential to Canada. So far as these conclusions go, there will be available to the company for capital or other improvements and operating charges two thirds of whatever net profit may result. The higher this is made the greater the probability that part of it will be available to labour.

"But it should be realized by everyone, workers and public, that the limit of government assistance has been reached, and by demands that cannot be met, the magnitude of present operations might have to be radically reduced. On this I will venture one more remark: drastic action by the union will have the worst possible effect . . ."

Regarding mine closures, which should be carried out with the least possible displacement of workers, Dean Rand says that he

presumes the union will be consulted on any steps that are taken in this matter as well as on other matters covered in the report.

The Woman Worker and the Labour Movement

Women workers may be shamefully exploited, says woman vice-president of CCCL in report to convention. Labour movement could secure more equitable working conditions for the woman worker, "but she is scarcely ever a member of it."

Women are in the labour market to stay; and the woman worker may be shamefully exploited, said Miss Jeanne Duval, a vice-president of the Canadian and Catholic Confederation of Labour, in a report presented to the CCCL's 39th annual convention at the end of September.

Women workers are exploited, she said, because of employers' desire to profit by the cheapest labour in the market, because the labour movement has given only sporadic attention to the problems of the woman worker, and because the woman herself submits to injustices without making her grievances known.

The trade union movement could secure for women workers, as it has for men, more equitable conditions of work; "but she is scarcely ever a member of it." As for those women who join a union, "very few interest themselves in the life of the movement."

In her report, Miss Duval suggested several solutions to the problem of the woman worker. In addition to exhorting women workers to discard their "individualistic attitude" and become active members of the trade union movement, she outlined several steps that unions should take. These included the setting up, by unions with women members of consultative committees to inform the union executive of the woman's point of view, the setting up of a committee to study legislation governing women's work in Quebec province, and the organizing of study periods exclusively for women.

Miss Duval's report dealt almost exclusively with conditions in the province of Quebec, where the CCCL has most of its membership. The industrialization of the province has brought women out of the home and into the labour market, she pointed out at the beginning of her report.

"Grim necessity" obliges women to work. The working man cannot afford to keep his daughter at home; to maintain his home requires the earnings of every member of the family, boy or girl. Daughters leave home to take a job, and married women return to work. "In this industrial century, women, like men, are obliged to earn their living."

In support of her statement that the woman worker may be exploited, Miss Duval quoted average earnings figures compiled by the Dominion Bureau of Statistics. Enquiries made in CCCL unions had produced almost the same figures.

"Can there be any justification for paying women about half the wages paid to men?" she asked.

Adolescent Girls

The most serious situation, however, is the work situation of adolescent girls. "It is a rebuke to the human conscience that girls at this crucial period of growth are expected to work the same hours and produce the same output as adults who are at the height of their powers."

Miss Duval said a CCCL survey indicated that 54 per cent of the girls interviewed had begun to work before they were 16 years old; as a result, 60.6 per cent of them had not had more than eight years schooling.

She urged the CCCL to undertake immediately a systematic campaign of protest to governmental authorities in order to secure amendments to the law governing industrial and commercial establishments and to that governing compulsory school attendance so that it would be impossible for young people to enter the labour market before the age of 16. The first act sets a minimum age of 14 years for employment; the second fixes the school leaving age at 14 years.

While awaiting enactment of the amending legislation, the CCCL should demand rigid enforcement of the existing laws that prohibit the employment of girls of less

than 14 years of age in match, biscuit, rubber, cutlery, shoe, sheet metal stamping, wood dressing and wire making factories; canneries and laundries. It should also demand enforcement of the legislation that prohibits the employment of girls under 18 years of age in certain other industries.

"The obtaining of work permits seems not to be very difficult in our province," she continued. In 1957-58 there were 5,621 work permits issued to girls of 14 and 15 years of age in the province of Quebec. Double this number are probably employed without work permits.

"It is the less important industries situated in small localities that employ the largest number of these girls without work permits," Miss Duval said. "The girl who knows she lacks a work permit does not protest conditions to the extent that she has a right to do, fearing the loss of her job. Unwittingly she becomes a hindrance to the improvement of working conditions. She ruins her health for a pittance: \$21.58 for 54 hours of work."

The CCCL's only woman vice-president said the principal reason for the small number of women trade unionists was that the majority of women workers spend only a few years in gainful work. Almost 50 per cent of the 20 to 24 year age group are employed, only 26.3 per cent of the over-25 age group.

For the same reason—the few years that she is employed—few of the women workers who join the ranks of organized labour interest themselves in the life of the movement. "The enquiry that we made among our women trade union members showed that 45 per cent of the women interviewed had not attended a union meeting in the course of the year."

Another cause of women's indifference to trade unions was that "the trade union movement and its method of organization are the products of men's minds rather than of women's; they are adapted to the outlook and needs of men. Women are very conscious of this, and their way of complaining about this state of affairs is to remain silent and abstain from participation."

Solution Urgently Needed

The need to check the exploitation of women workers is urgent, Miss Duval said, because "to allow the continuance of an average wage differential of \$31.80 a week is to tempt the employer beyond his strength. Moreover, it contributes to unemployment by increasing the surplus of labour: there are companies that prefer to lay off young men and employ girls to do the same work at lower wages."

The need is urgent also because "to continue to allow adolescent girls to ruin their health by doing work that is beyond their physical capacity is to penalize the generation of tomorrow"; and because "if we continue to permit our young people to leave school at the age of 14, how can we hope to have them attain well-paid work?"

For the trade union movement, too, the need is urgent. "In permitting the exploitation of women to continue, the labour movement, which sets as its aim the protection of the economically weak, is falling short of its responsibility toward women workers. In failing to adapt to feminine mentality and so facilitate the active participation of women, the labour movement is cutting itself off from a sphere of influence of great importance to its expansion; it is robbing itself of a considerable number of members..."

Suggested Solutions

Miss Duval began her list of suggestions for solution of the problem of the woman worker by urging women to become active members of their unions. The CCCL should undertake a campaign of education to give all women an understanding of "the vital importance of the trade union movement in this industrialized world that exploits them so thoroughly."

The CCCL ought also to reorganize its trade union groups to allow women to develop to the full extent of their capacity by taking the following steps:

—"Every trade union that includes a nucleus of women among its members ought to set up a consultative committee composed of four or five workers who represent woman's point of view in the executive of the union. This committee ought to be provided for in the constitution of the trade union. This committee would be expressly consulted regarding the terms of the collective agreement. The negotiating committee of a union that includes women members ought always to include at least one woman. A policy of negotiation ought to be established for every type of employment which includes women among its ranks. This policy would have as its primary aims: reduction of the differential between the wages of men and women in the same industry; systematic evaluation of jobs; the application of equality in wages everywhere that studies have revealed an identity of jobs.

—"A committee made up of technical consultants and women workers should be formed to study the legislation governing women's work in the province and report on the changes in the laws that our

movement ought to request of government authorities, in order that women workers may be justly protected . . .

—“The educational services of the CCCL, in collaboration with the various other educational committees, ought to give special

attention to the organizing of periods of study exclusively for women . . .”

The problem of women's work is the problem of the entire working class, Miss Duval concluded. “We ought to make it the object of our continuing concern.”

31st Annual Meeting of the Canadian Chamber of Commerce

Comments on unemployment problem dominated addresses of all speakers at one of meeting's sessions and held prominent place in luncheon address. Warn against deficit financing and continued deficit in balance of international payments

Unemployment, its causes and nature—and suggestions for its cure—dominated the addresses of all three speakers at one of the plenary sessions at the 31st annual meeting of the Canadian Chamber of Commerce, held at Calgary October 3, 4 and 5. The subject also occupied a large part of one of the luncheon addresses.

The session that heard all three speakers discuss unemployment was on “Employment and the National Economy.” Theme of the annual meeting was “Canada's Future in the Changing World.”

Speakers at the session that is reported here were: Mitchell W. Sharp, Vice-President, Brazilian Traction, Light and Power Ltd., Toronto; K. H. Rapsey, Vice-President and General Manager, Allen-Bradley Canada Ltd., Galt, Ont.; and Hon. J. V. Clyne, Chairman of the Board, MacMillan, Bloedel and Powell River Ltd., Vancouver.

The luncheon speaker was James Coyne, Governor of the Bank of Canada, who spoke on “Living Within our Means by Expanding Our Means to Live Better.”

Mr. Sharp, who pointed out that present unemployment was a more complex problem than at any time in the postwar period, said that “let's spend a lot of money” was not the answer. He urged better training programs for the unemployed.

Mr. Rapsey, declaring that the primary industries could not provide more jobs,

said we must look to the manufacturing industry to provide the greater number of jobs that a greater population requires, and that Canadian manufacturers require a major share of the domestic market. He warned that our deficit in foreign trade was damaging the economy.

Mr. Clyne attacked the annual wage increase, which he said was absorbing the savings from increased efficiency and, by lessening the incentive to invest was another cause of unemployment. He said also that it was dangerous to raise tariffs.

Mr. Coyne said Canada must stop buying more abroad than it exported and urged the replacement of imported goods with goods made in Canada. He declared that deficit financing was no cure for unemployment.

The annual dinner speaker was Harvey S. Firestone, Jr., Chairman, The Firestone Tire & Rubber Company, who, in an address on “Foreign Trade and Aid,” described the United States experience in international aid so that Canada, now planning an increase in its foreign aid program, might derive benefit from that experience.

Other sessions at the annual meeting dealt with “Business Responsibility for Good Government” and “Business and the Chamber.” These sessions are not reported here.

Employment and the National Economy

Mitchell W. Sharp

The chief problem in Canada is one of achieving balance; our economy is not in balance now, and existing unemployment is one evidence of this fact, said Mitchell W. Sharp, first speaker at the plenary session on “Employment and the National Economy.”

There is little wrong with total employment, he pointed out. It has been rising almost steadily from year to year and is higher than ever before. But unemployment is higher in absolute numbers and as a proportion of the labour force than at any time since the 1930's, and has tended for some time to grow rather than diminish.

"This means that the present level of unemployment is not the result of people's being thrown out of work in any aggregate sense, since more people were at work in August than in any previous August on record, but is the result simply of employment opportunities increasing less rapidly than the labour force," Mr. Sharp said.

"It could well be that business activity will remain reasonably high, that the GNP and employment will go on rising, and yet that unemployment will continue at levels that are unacceptably high . . .

"Indeed, the unemployment figures could rise to even more embarrassing levels over the next few years. The likelihood is that within the next few years the net addition to the labour force is going to be abnormally high because the large crop of postwar babies will be reaching employable age during the 1960's."

This situation calls for something different from the "let's spend a lot of money and get the economy moving" approach that might be justified if the economy were stagnant, he continued. The economy is not stagnant.

We should be thoroughly sceptical about the proposition that all we have to do is keep capital expenditures going up and the unemployment figures will go down and down, he warned. It is probably impossible to maintain an ever-increasing rate of capital expenditure, "even with massive public works." Our aim should be as high a rate of investment as can be sustained without distorting the economy and without massive imports of capital.

But if from time to time we need and invite foreign capital, "let us not gripe when it is made available"; but let us not get to the point where we cannot get along without it.

"We should try to get rid of the idea that a resumption of the boom is necessary or desirable to mop up the kind of unemployment we have today." Unemployment is a different and more complex problem than at any time in the postwar period, and conventional approaches do not seem to be adequate, he said.

Plea for Fresh Thinking

Here Mr. Sharp made a plea for fresh thinking, by businessmen and others. A move toward either freer trade or increased protection, for example, would either be neutral in its short-run effects on total employment or, by its upsetting effect on domestic producers or on export markets

would be likely to result in some temporary reduction in total job opportunities. "The tariff argument is largely irrelevant to the existing problem of unemployment, although higher or lower tariffs may be of value to the particular industries that they benefit."

What is relevant is the ability of Canadian producers to compete both at home and abroad. Less emphasis on capital investment, he pointed out, would help keep costs down in Canadian industry as a whole.

Before turning to suggestions for action of a more positive character, Mr. Sharp reminded the session that there was nothing Canadians could do to insulate themselves from events abroad. "All we can do . . . is avoid actions that might have an adverse effect on the economies of our customers, such as a significant increase in restrictions on other countries' exports to us, and encourage the development of new markets by playing our full part in international aid and investment programs."

The present approach to the unemployment problem is to try to offset business cycle fluctuations by means of fiscal and monetary policies. But unemployment may be more than a cyclical problem; "there may also be structural unemployment arising from distortions produced by inflation, from technological developments such as automation, from changes in external competition and so forth that requires more radical treatment."

Greater effort should be made to get at the facts and make them publicly available, he advised, and the more important facts to discover are: first, who are the unemployed, and, second, why are they unemployed?

If the facts do confirm that unemployment is more than a cyclical problem arising not from over-all deficiency of effective demand but from something more deep-seated, the sooner the nation begins to work on the problem the better. Only the central government can give the necessary leadership, Mr. Sharp believed, but business should urge government to give that leadership and should offer its full co-operation.

The Answer

Perhaps part of the answer lies in better training programs to fit the unemployed for the jobs that are available despite high unemployment. "As technology reduces the demand for unskilled labour, and increases the demand for skilled labour," he said, "training becomes more and more important, apart altogether from the contribution that training programs would make to the outlook of those who find themselves without jobs."

Perhaps the answer requires a direct attack on depressed areas and regional pockets of unemployment.

The problems of secondary industries require special study.

The present system of unemployment insurance seems to require revision: the aim should be a system that provides an incentive to seek work and adequate protection if work cannot be found.

"The failure of the last upturn in economic activity to reduce unemployment to usual levels makes one less confident that the pattern of the past 15 years will be repeated," he said in conclusion. It would not be prudent to assume that another great wave of expansion is in the making, and the course he advocated was "to begin now to consider what should be done if unemployment persists. This is not a time for panic, but for planning."

K. H. Rapsey

"Ten years from now Canada is going to need two million new jobs," said K. H. Rapsey, second speaker in the session on "Employment and the National Economy." In an address entitled "The Contribution of the Secondary Manufacturing Industry," he declared that Canada must have a growing manufacturing industry to provide those jobs, and he offered some suggestions on ways to foster the growth of that industry.

He explained that over the next five years, although immigration is expected to be lower, the number of Canadians aged between 14 and 24 years will increase rapidly and by 1965 this age group will comprise just about a quarter of the country's working population. "This heavy increase in the number of young, unskilled workers will present an increasingly serious unemployment problem unless positive steps are taken to correct it."

Canada's primary resource industries cannot provide the new jobs. "Let us not deceive ourselves into thinking that they can ever support our present population, much less a growing population," he said. "They will be hard pressed to provide even the number of jobs that they do today.

"To absorb a growing population, we must have a growing manufacturing industry." But our domestic industry is plagued with inflated taxes and wage costs and with sharpened foreign competition; and, he pointed out, these costs go still higher whenever a foreign supplier captures an appreciable percentage of our relatively small

domestic market. "Yet there does not appear to be public or governmental recognition of the damage being done to our whole economy."

Mr. Rapsey had earlier told the delegates that when the manufacturing industry suffers, the reaction on employment and national income is "visible and painful." About 45 per cent of the employment in the productive and service industries results from secondary manufacturing accounts.

"When manufacturing industry falters, there is a drop in the demand for primary products and a falling-off in the need for the service industries."

Causes of Damage

Damage is being done to the Canadian economy, he went on, by the deficit in our foreign trade and an even worse deficit in our balance of international payments, and by the artificial premium on the Canadian dollar, which encourages imports and erects a hurdle that exports must leap.

Canada is living on borrowed money. Our national income is already overspent by some \$1,500 million.

But economic forces will dictate certain changes: international expenditures must be restricted to the level of income; wage rates and population figures will find their levels as determined by demand; the industrial activities within Canada will be decided by competition, new products, and all the basic laws of economics.

Although Canada could in theory make a free choice of trade policies from among the many possible alternatives, "actually, the actions and reactions of other countries restrict the choices available."

Here Mr. Rapsey commented on the desirability of complete free trade. "Canada has been preaching multilateral freer trade for some time, but no one is listening or following. We have gone a long way in the direction of unilateral free trade, which is somewhat akin to wandering unarmed in a dark jungle."

As for the suggestion that Canada engage in bilateral free trade, in which arrangement the natural trading partner would be the United States, he warned that, "Because of the disparate populations of the two countries, such a move could only result in eventual political integration."

To the suggestion that Canada join the European Common Market, he replied that such a decision would necessitate a complete slash of our wage and salary levels if we hoped to preserve any manufacturing employment.

"In the world today we must consciously choose those economic activities that are most likely to contribute to Canadian employment and economic welfare," Mr. Rapsey advised. "Then we must deliberately foster and protect those activities."

The Place to Attack

Pointing out that when any budget is unbalanced the obvious place to attack is the biggest item, he called attention to the fact that in several recent years machinery imports have totalled nearly \$1,000 million. Manufacture of some of this equipment in Canada would help balance our trade, provide employment for Canadians and ease the tax burden on the rest of us.

"If we resolve to balance our international payments by making goods here instead of importing them, we will provide jobs for about 300,000 Canadians."

The machinery is imported, he explained, because of three classes of rates in Canada's tariff laws: "preferred end-use" items, "class or kind not made in Canada" and "British Preference."

"Preferred end-use tariff items are a device for eliminating duties which would otherwise be paid by certain preferred users . . .

"Class-or-kind tariff items are a device for charging little or no duty on equipment that is not immediately available from Canadian sources . . . The 'type-or-size' tariff items provide a positive guarantee *against* Canadian production.

"British Preference tariff rates were originally intended to favour Commonwealth supplies over Canadian suppliers."

Dominion Bureau of Statistics tabulations show scores of imports that appear to collide directly with existing efficient Canadian producers, in addition to the major import groups: automobiles, aircraft, radios, electrical apparatus, and petroleum and products.

Mr. Rapsey said publicly owned utilities seem least able to understand "the mathematics of the situation." As custodians of public funds, he declared, "they should not ask for, nor accept, bids from off-shore suppliers unless our trade is balanced and our employment full.

"The utility may boast of saving a small amount on a purchase, but the taxpayer finds his load is increased to pay unemployment benefits."

In summary, Mr. Rapsey said that Canada needs more industry of all kinds but "it is to manufacturing that we must look to

provide more jobs for a growing population . . . At our present population level, Canadian producers require the major part of the domestic market to ensure reasonable production quantities."

Hon. J. V. Clyne

The unemployment situation is dangerous—and some of the methods being suggested to remedy it are equally dangerous, said Hon. J. V. Clyne, final speaker at the panel session on "Employment and the National Economy."

The present unemployment—the problem of having too few jobs available for a rapidly expanding labour force—has two main causes, he said. These were: the rapid increase in the number of persons seeking employment by reason of the explosion of population, and the progress in industrial technology that is steadily reducing the number of workers required by industry.

Population projections show that every year during most of the sixties there will be about 100,000 more young people reaching job-hunting age; on the other hand improvements are taking place in machinery and methods that result in diminishing use of manpower. As an example, Mr. Clyne related that in Detroit it is estimated that machines have taken over the jobs of one out of every five employees in the automobile industry since 1953, and in the United States packinghouse industry 30,000 jobs have disappeared since 1956.

No one, however, would suggest that any limitations be placed on the use of machines. The Canadian Chamber of Commerce policy statement recognizes that "failure to harness its [automation's] advantages to improve productivity would prove fatal to the competitive positions of many Canadian industries."

Improvement in industrial methods has always been a cause of unemployment and dislocation, he continued, "but in the past this has been temporary because of countervailing advantages." The serious dislocation caused by the Industrial Revolution in the 19th Century solved itself because gains in productivity lead to lower prices, which stimulated demand, which created further employment.

But the same factors that produced prosperity in the past are not now operating in Canada. "The savings gained by increased productive efficiency are not being passed on to the consumer but are being absorbed by continuous wage increases," Mr. Clyne said.

To the argument that industry can well afford to pay increased wages out of profits, Mr. Clyne replied that the shareholder is at the present time receiving a very low return on his capital investment. "If wages continue to increase there will be very little incentive in Canada to invest more capital in new plants, which in itself is another cause of unemployment.

"What is happening is that the company invests money in mechanical improvements in order to effect savings in manpower so as to reduce manufacturing costs; the savings are absorbed by annual increases to the curtailed labour force; there is no benefit to the company's competitive position, and there is increased unemployment."

Annual Wage Increases

It is unrealistic to talk about problems of trade and unemployment without giving recognition to the existence of the annual round of wage increases, Mr. Clyde asserted. It is only a question of time before all profits are eaten up in annual wage increases, and if capital cannot receive a fair return on its investment it is going to cease investing in this country. The costs of annual increases cannot be passed on to the consumer in world markets and cannot be passed on in the domestic market without creating inflation and unemployment.

The theory that high wages cause higher consumption is invalid in Canada because Canada is a great exporting nation, virtually dependent on exports for its prosperity; we cannot possibly consume our own production in Canada, he declared. And if the price of our goods becomes inflated by high wages, our customers abroad won't buy them.

"We have sacrificed our long-term interests in favour of expediency in uneconomic settlement of wage disputes and in apparently accepting the theory of the annual wage increase," Mr. Clyne said. The belief that every problem in industrial relations must be solved by another round of wage increases, a further shortening of hours of work and another set of fringe benefits is an archaic one. He wondered how many in the ranks of organized labour realized that the annual wage increase is a cause of unemployment.

Some labour leaders fail to recognize, or refuse to recognize that it is their own actions in "extorting" wage settlements that

have been unjustified economically that have brought about the present condition of unemployment, he said.

Somehow Canada must manage to trade with the rapidly increasing mass of low wage earning people of the world, who are forming their own new blocs to trade together and who possess skills and machinery that match, in some cases outmatch, ours in North America. He could not say how this could be done but believed one thing: "We must stop worsening our position." The chief responsibility for this lies with our labour leaders.

Governments can do much, by refraining from bringing pressure upon industry to make wage settlements that are economically unsound. Paternalistic legislation is not the answer.

Dangerous to Raise Tariffs

To raise tariffs as a remedy for unemployment was almost as dangerous as the illness it was designed to cure, Mr. Clyne said. "It is difficult to understand how such an argument can be advanced in a country such as Canada, which is so vitally dependent upon export trade and which is so vulnerable to retaliatory measures if tariffs are raised . . .

"I do not believe that more than one fifth of the Canadian work force is engaged in that section of manufacturing that could conceivably derive short-term benefits from protection."

The truth is that the benefits of free access to other markets greatly outnumber the short-term advantages of protecting a domestic market, he declared.

A move toward freedom of trade, he acknowledged, will require continuous re-adjustment of our social, political and economic attitudes. He thought it unnecessary to speculate on the form that adjustment may take, but declared that "the one thing we must not do . . . is to suppress either technological advance or the move toward freedom of trade." Neither form of suppression can or will alleviate unemployment.

"Unemployment can be cured now to a great extent if we call a halt to the senseless upward spiral of wage increases and if we do everything possible to increase our access to foreign markets; but if we do neither of these things, it will become chronic," he concluded.

Luncheon and Dinner Speakers

James Coyne

In an address to a luncheon session of the annual meeting, James Coyne, Governor of the Bank of Canada, said:

1. We cannot go on indefinitely buying goods and services from abroad in amounts in excess of our exports.

2. Overcoming the deficit in our balance of payments could increase employment by 250,000 and reduce unemployment to as low a level as we have known.

3. Work for a growing labour force can be provided and the number of unemployed reduced by substituting Canadian products and services for those that are being imported.

4. Unemployment cannot be cured by deficit financing.

5. Canada will not enjoy the advantages of automation as long as most of the discovery and development, and the related increase in employment in the trades producing automatic machinery, takes place outside of Canada; in this connection, we need to improve our educational facilities.

In his address, which was titled "Living Within Our Means by Expanding Our Means to Live Better," he commented also on the extent of foreign domination of Canadian industry.

The sooner we can provide for ourselves an amount of goods and services made in Canada by Canadians, in replacement of the supply from outside, the stronger and more secure will be our economic future and national integrity, Mr. Coyne said. The alternative to providing goods and services from Canadian sources is a restriction of the supply of goods and services available for consumption and for expansion of capital facilities in Canada.

We cannot continue to buy more from abroad, on credit, than we export, because this requires large further increases in our foreign debt. Present large scale unemployment reinforces the urgency of dealing with the balance of payments problem, he declared.

We can live within our means and live better if we increase our means; this can be done by putting to use presently available but unemployed resources. If the productive facilities now unemployed—physical plant and equipment as well as human labour—could be brought into production, the nation's spending would no longer be seriously in excess of production, as it has been for several years, as shown by the deficit in our international payments.

"The excess of our international payments over our international receipts represents about 4 per cent of our Gross National Product," he said. "Our annual average of unemployment amounts to approximately 6 per cent of our labour force.

"Overcoming the deficit in our balance of payments could increase employment by 250,000 (4 per cent of our labour force) and reduce unemployment to as low a level as we have known in modern times".

Replacement of Imports

But in order for the provision of jobs for those now unemployed to result in an increase of exports or decrease in imports sufficient to balance our international accounts, we must "make that our national goal and bend all our efforts to that end." And for increased employment to have that result, "the main endeavour must be in the direction of replacement of imports by increased production in Canada to meet our own requirements."

Only through increasing employment in the production of goods and services for Canadian use and consumption can progress be made in providing work for the growing labour force and in reducing the number of unemployed, Mr. Coyne said. He pointed out that there was no practical possibility of quickly increasing employment in our export industries, agriculture and the other resource industries.

Deficit Financing

"In times of relatively high unemployment there are apt to be demands from some quarters for rapid monetary expansion, easy credit, more debt and printing press money, and deliberate large scale deficit financing . . .

"In my view, our present unemployment cannot be cured by the blunderbuss methods of over-all large scale monetary expansion and deficit finance. The approach to the problem of unemployment needs measures which are specifically pin-pointed or directed toward creating employment in Canada, and stimulating production in Canada, rather than merely handing out money indiscriminately for possible spending on further imports, or encouraging by unsound credit practices more and more people to go more and more deeply into debt," Mr. Coyne declared.

In addition to the personal tragedy, unemployment is "a very real cost to the entire national economy," and no one

should escape his share of that cost. Those who are employed must share the burden of maintaining the incomes of the unemployed and likewise the costs of stimulating increased employment, he said.

Avenues of Attack

"There are three main avenues of attack on the problem of unemployment," Mr. Coyne continued. "Each can be financed on a straight forward pay-as-you-go basis, or each can be the excuse for inflationary methods of finance, which obscure the real costs and real burdens and at the same time ensure that such costs and burdens shall impose the greatest sacrifice on those least able to bear them."

Mr. Coyne's three suggested avenues of attack were: encouragement of increased production in the private sector of the economy, increased employment on public projects of all kinds, and, while the first two are being followed, sharing of the costs of unemployment by some form of income maintenance payments to those unemployed.

Again he said it was dangerous to look to inflationary finance to deal with unemployment. "Whatever degree of assistance the people of Canada decide to provide to the unemployed—even up to the point of guaranteeing them incomes equal to that which they had when they were employed, if that should be the decision of the community—can be provided without resort to large scale government deficits or monetary inflation."

Most people would prefer to see the rise in employment take place in private industry, "but if and to the extent that it is found necessary or desirable to provide employment directly through government projects, suitable financial methods can be found to meet the cost and share the burden without resort to large scale deficit financing or monetary inflation."

Importation of Capital

At this point Mr. Coyne commented on the large scale importation of capital in recent years. For six or seven years, until this year, we had been trying to carry out a capital investment program larger than our own capacity to provide new capital out of our own savings.

"We should, for our own sake, live within our means and increase our means by our own efforts," he advised. Large scale importation of capital may be useful to a backward or underdeveloped nation, "but a country which has reached Canada's

stage of development can make better progress, and retain more control over its own destiny, by relying on its own savings to provide the necessary capital."

If we cannot or do not choose to increase our own savings, we should not look to the savings of others to do for us what we will not do for ourselves. "Let the surplus savings of the world be used to help the needy countries of Africa, Asia and other parts of the world."

We cannot go on increasing our foreign debt, he declared. Although we must continue to import in reasonable volume, "we cannot continue to import vastly more goods and services than we export." We cannot import in unlimited volume goods and services that appear to be cheaper than the cost of producing them in Canada.

He reminded the meeting that throughout our history we have done things that from a strictly economic point of view would seem to be more expensive than taking the opposite course of action. As an example, he cited the action being taken to deal with the problem of seasonal unemployment. In many industries, employment in winter costs more than employment in summer, "yet most people agree that it is desirable to maintain employment in winter and to shoulder certain costs in that connection."

Automation

A further "compelling" reason why it is essential for Canada to produce the highest possible percentage of goods and services within the country rather than rely on imports is that the pace of technological discovery and development is constantly accelerating, and the utilization of technological progress—automation—is increasing rapidly. But so far most of the discovery and development has been taking place outside our borders.

"Automation reduces costs and helps to raise the standard of living, and the decrease in one field is offset and more than offset in other fields and particularly in the field of producing automatic machinery." But Canada will not enjoy this offsetting advantage unless we take steps to that end.

"The danger is that the progress of industry and advanced technological techniques outside Canada will result in growing unemployment in Canada, while the related increase in employment in the highly skilled, better paid trades producing machinery and capital goods takes place outside Canada . . .

"If our population and our employment are to continue to grow, we must concentrate on producing in this country a great part of all the capital goods, the productive machinery, the higher processed chemicals and other new materials that we are going to use."

We need to increase our educational facilities immensely, we need more universities and technical institutions and training establishments of all kinds, and many times as many students and workers in training as at present, Mr. Coyne said. "We must provide the basic educational background for all our people, and the laboratories and engineering facilities for scientific and technological research and training here in Canada."

In addition we must provide industrial jobs for those who are able to acquire the necessary training and put it to use.

Foreign Domination

Answering his question why we have got into the serious difficulties that now confront us, Mr. Coyne said one reason was that we have thought we could go on developing profitably by doing more of the same things we had done in the past rather than working for new avenues of development.

"I have no doubt our judgment has been clouded and our initiative stunted by the fact that so much of the more advanced sections of Canadian industry is controlled and dominated by foreign enterprises.

"No country in the world with anything like our relative state of development has ever had such a degree of foreign domination, or even half or one quarter the degree of foreign domination."

Ours is in many ways a branch plant economy, with the result that research has been slow to develop in Canada; research facilities have been provided elsewhere.

"Rarely is there genuine Canadian participation in the introduction of new ideas or the development of new products and projects. Important management decisions are for the greater part of our industry taken outside Canada by foreigners, and taken for reasons that have little or nothing to do with the outlook or aspirations of Canadians. In most of such companies, Canadians are not encouraged to have new ideas, cannot put their ideas to the test, and cannot assume responsibility for proving and carrying out their ideas."

As evidence Mr. Coyne cited the Canadian automobile industry, which "has never built a Canadian automobile designed to

—Milne Studios, Toronto.

James Coyne

meet special Canadian conditions or incorporating Canadian ideas, whether good or bad."

Concluding, Mr. Coyne said: "With more educational facilities, with more development engineering and product development in Canada, but above all with a feeling that there was real opportunity for the exercise of these talents without running into roadblocks or frustrating action from abroad, I for one am confident that Canadian industry could hold its own with that in any part of the world."

Harvey S. Firestone, Jr.

Canada is now such a giant in the economic world that she will exercise even greater economic statesmanship in international affairs; it is crystal clear that she must devote more time, attention and money in assisting the newly developing countries of the world, said Harvey S. Firestone, Jr., the annual dinner speaker.

Such increased assistance need not necessarily come from the Canadian government, he asked. Many Canadian companies could find it very advantageous and extremely profitable to invest considerable sums of money overseas.

Speaking on "Foreign Aid and Trade," Mr. Firestone began with a review of the history of United States foreign aid. Because Canada was preparing to increase its

assistance program, he hoped that such an appraisal might allay in Canada public criticism such as that now being heard in the United States.

The people in the United States, he said, were willing to assume the responsibility for providing international aid in the years immediately after the Second World War but now thought that other nations should assume a greater share.

The United States foreign aid program passed through these stages.

—Help to wartime allies in converting from a military basis to a peace-time economy, in restoring their productive economies.

—The Marshall Plan, adopted in 1948, designed to create the kind of economic environments that would be conducive to the maintenance and promotion of political independence among the free countries of Western Europe.

—When the Soviet Union maintained and improved its military machine while Western European countries were straightening out their economies and demobilizing their military forces, military assistance became a vitally important part of the program.

—As European recovery required less aid, emphasis was placed on giving help to the less developed areas of the free world. Unlike in Europe, the situation in the less-developed countries was one of creating the basic factors essential to economic improvement. President Truman's "Point Four" program, adopted in 1949, was based on the idea of helping these people to help themselves.

The United States Government's efforts to overcome the deficiency of public capital in many less developed countries have recently encountered increasing opposition to the "give-away" type of aid, and the Government has been trying to create and put into effect plans that will stimulate the flow of private capital into the less developed countries.

"There is a growing sentiment against the size of our foreign aid program," Mr. Firestone reported. "There is increasing insistence that the tax burden on the people of the United States be reduced. Obviously, such a reduction cannot occur unless government spending is curtailed. And one of the largest and most vulnerable single items of government expense is the foreign aid program."

The people of the United States are aware of Canada's participation, he said. It was recently disclosed that about one half per cent of Canada's Gross National Product was being spent for international co-operation. "Furthermore, in his recent speech before the United Nations General Assembly, Prime Minister Diefenbaker announced that Canada is planning to increase its contributions to less developed countries."

To conclude Mr. Firestone said: "Under the Canadian and American systems of free enterprise, governmental allocations of funds for foreign aid are really stop-gap measures. Ultimately, private investment should find the way to provide the developing nations of the world with ample help and, at the same time, receive benefits that will justify such assistance."

Annual Conventions of Nova Scotia and Manitoba Federations of Labour

Nova Scotia unions call for several amendments to Trade Union Act and greater efficiency in conduct of conciliation. Manitoba group protests recent raising of hospital insurance premiums, judicial inquiry into Brandon Packers strike

Nova Scotia Federation of Labour

Resolutions on a wide variety of subjects were adopted at the Fifth Annual Convention of the Nova Scotia Federation of Labour (CLC), held at New Glasgow at the end of September. More than 150 delegates attended, representing 49 union locals and three labour councils.

Federation President Ed Johnston and Secretary-Treasurer Tom Shiers were re-elected.

A nine-point resolution, sponsored by the New Glasgow and District Labour Council and passed without debate, called for the elective union shop, a fair labour practices authority, public responsibility for the enforcement of the Trade Union Act, minimum seniority rights for all workers whether organized or not, an eight-hour day and a 40-hour work week for male and female workers in all employment, elim-

ination of strike breaking interference in legal strikes, provisions for the taking of a legal strike vote at any time after conciliation services have been requested, broadening of employee definition within the Trade Union Act, and "such other measures as may be necessary to provide Nova Scotia with the most progressive trade union legislation in Canada."

Several resolutions urged amendments to the province's Trade Union Act. The Federation asked that certification of a trade union be mandatory where the union, in a certification election, gained a vote of 50 per cent plus one.

Another resolution called for an amendment that would make work stoppages legal where working conditions were unsafe. Under this suggested provision, the provincial Government would be obligated to conduct an immediate inquiry into the unsafe working conditions, and the findings would be binding on the employer.

The convention requested more efficiency in the conduct of conciliation. Too much time elapsed awaiting the decisions of conciliation boards, the Federation charged, and one result was that it became difficult to obtain retroactivity in wage settlements.

Because of the "acute shortage" of trained conciliators, the Federation suggested that both the federal and provincial Governments give grants to universities for the training of conciliation officers. The convention also urged the Federation to sponsor an educational program to enable trade unionists to serve on conciliation boards.

Another resolution on this subject asked the Federation executive to study methods of reducing the costs of arbitration proceedings.

The Act does not guarantee proper labour representation on the Labour Relations Board, the delegates declared when asking that the two labour representatives on the Board be selected by the Federation.

Among requests addressed to the federal Government were resolutions that called for:

—Increases in unemployment insurance benefits, payment of benefits for all holidays except Sundays, extension of coverage to

all industries, removal of the waiting period, and unlimited duration of benefits.

—Raising of old age pensions to \$75 and lowering of the qualifying age without means test to 60 years.

—Payment of subsidies to the Canadian merchant marine to enable it to compete with foreign shipping, the payment to be contingent on Canadian companies' building, repairing and maintaining their ships in Canadian yards.

—Establishment of a commission to investigate the price of drugs.

The Provincial Government was asked to:
—Enact a minimum wage act for males, with a minimum rate of \$1.35.

—Amend the Workmen's Compensation Act to provide coverage for lung cancer related to diesel fumes, heart disease resulting from the nature of a worker's occupation, and deafness arising from working in extreme noise.

—Increase mothers' allowances to \$100 a month.

—Enact legislation to make it illegal for a person to hold more than one job at a time.

—Compel municipalities to pay persons for time spent on jury duty.

The convention voted against an exchange of delegations with Soviet trade unions.

A resolution that was approved urged the Canadian Labour Congress to give consideration to the establishment of a weekly or monthly newspaper to serve as a medium for the presentation of labour's viewpoint.

Guest speakers at the convention included Premier Stanfield of Nova Scotia; Hazen Argue, leader of the CCF Party; George Home, CLC Director of Political Education; Vincent Normore, a Vice-President of the Newfoundland Federation of Labour; and Mayor Harry Mosher of New Glasgow.

Ed Johnston, Sydney, was re-elected President and Tom Shiers, Windsor, re-elected Secretary-Treasurer.

Vice-Presidents re-elected were: Sinclair Allen, Halifax; C. A. Webber, Liverpool; Charles Parker, Aylesford; and John Lymb, Dominion. New vice-presidents are Kaiser Milligan, Truro, and Don Murphy, New Glasgow.

Manitoba Federation of Labour

Support for the proposed new political party, unemployment, and the recent raising of hospital plan premiums by the provincial Government were leading subjects of debate at the sixth annual convention of the Manitoba Federation of Labour (CLC), held in Winnipeg on October 14 to 16.

The judicial inquiry into the Brandon Packers strike was condemned in a resolution that led to heated discussion.

In a speech at the opening session of the convention, Hon. John Carroll, Manitoba Minister of Labour, said those who try to

divide labour and management into two camps are "false friends."

The New Party

A resolution instructing the Federation's executive to encourage all local unions to support the new political party was passed by an overwhelming majority. But a small group strongly opposed the motion.

The minority group, consisting of only 12 of the 200 delegates, included one of the Federation's vice-presidents, G. Lawrence Taylor of the Pulp, Sulphite and Paper Mill Workers. Mr. Taylor declared that his union would not affiliate with any party.

"Don't spend any of our money on political action, because if you do we'll have to pull out," Irvine Jackson, representing a local of the International Brotherhood of Electrical Workers, warned the Federation.

It was left to the executive to decide whether a per capita tax should be levied on local unions for political action until the new party is financially self-reliant.

A resolution asking that labour prevent domination of the new party by the CCF was defeated.

The move to support the new party was led by three prominent labour officials: Joseph (Jimmy) James, Federation President; Grant McLeod, Winnipeg and District Labour Council President; and Sam Goodman, a federation vice-president.

William Dodge, Executive Vice-President of the CLC, and George Home, CLC Director of Political Education, spoke in favour of support for the new party.

Unemployment

The Federation passed a resolution that reminded Prime Minister Diefenbaker of his re-election promise concerning unemployment, and called on him to carry it out. It also urged the provincial Government to take immediate action on the matter.

Another resolution said that "all signs point to a mass growth of unemployment in the immediate future."

The convention supported a campaign to organize the unemployed into a movement that would be closely allied with the trade unions.

William Dodge said that the Government in Ottawa should spend large sums on public works to create employment. "This is no time for balanced budgets, it's a time for deficit spending," he said. He proposed a special fall session of Parliament to deal with unemployment.

The Federation also passed a resolution asking the provincial Government to take action in a number of directions, including: research into the causes of unemployment; plans for more public works and services, including housing and development of industries and resources; establishment of a training program; and enactment of a legal 40-hour work week. The resolution called on the provincial Government to protest the Federal Government's "inactivity" on the unemployment problem.

The convention voted to ask the federal Government to provide for payment of seasonal unemployment benefits out of consolidated revenue instead of out of the Unemployment Insurance Fund.

Provincial Hospital Plan

The provincial Government was roundly criticized by the convention for "its undemocratic procedure" in raising premiums under the hospital plan by almost 50 per cent. The resolution passed by the delegates asserted that "no sound reason" had been given by any member of the Government "for this unwarranted increase".

The Federation declared that the federal and provincial governments should bear the entire cost of the hospital scheme, and that premiums should be done away with. For the present, it demanded that premiums should be reduced to what was immediately required to meet the needs of the plan.

Another resolution asked the Government to replace the directors administering the Hospital Services Insurance Act by persons who are not interested in "the profit motive." It asserted that the directors "have now proven that they are irresponsible and completely unaware of social responsibilities involved in... administering such a project."

Brandon Packers Strike Inquiry

The delegates supported with wild applause a statement in which the Federation criticized the proceedings of the judicial inquiry into the Brandon Packers strike.

The statement declared that the way the inquiry had been conducted had worsened employer-employee relations, had set worker against worker and citizen against citizen, that "the institution of trade unionism has been held up to ridicule," and that the proceedings "have shaken the faith of Manitoba in responsible government."

Without mentioning him by name, the statement referred to the fact that the Federation's President had been subpoenaed to appear before the inquiry. It said that the Manitoba Federation of Labour is not

a bargaining agency, and that it was a "strange and possibly an unprecedented act for the commission to subpoena before it an officer of this organization." The Federation, it said, had asked for an industrial inquiry under the Labour Relations Act instead of a judicial inquiry.

The statement was approved unanimously.

Manitoba Minister of Labour

At the opening of the convention the 200 delegates were addressed by John Carroll, Manitoba Minister of Labour. Those who try to divide labour and management into two camps are "false friends," Mr. Carroll said. He declared that "the stigma of pro-labour or anti-labour" should be eliminated.

"All will agree that an employer who engages in unfair labour practices should be condemned," he said, "but it is unfair to imply that this is a common practice, because... the facts show that this is rare indeed."

At the same time, the isolated irresponsible actions of trade unionists should not be allowed to brand the whole movement, Mr. Carroll said.

Speaking of unemployment, he said that the best efforts of government, business and labour were needed to combat it. Some unemployment could be attributed to inability to meet competition in both home and foreign markets. Some could be put down to lack of technical and professional skill.

Details of the province's winter works program, one of the largest in its history, would be announced later, the Minister said.

Strike Breaking

Legislation prohibiting employers from forcing their employees to cross picket lines, or handle merchandise from struck plants, was demanded by the convention. It also passed a resolution approving a mass demand for federal "bill of rights" setting out the right of all Canadians to join labour organizations of their choice.

The Federation, in another resolution, voted for a petition to be made to the Manitoba legislature to prohibit employers from soliciting the services of strikebreakers from other provinces.

Other Resolutions

Other resolutions passed by the convention:

—Regretted the failure of the provincial Government to "play its proper part" in slum clearing and housing development.

—Asked the province not to appoint civil servants to boards set up to deal with labour relations.

—Asked for the immediate re-convening of the Minimum Wage Board to hear representations in favour of a minimum wage of \$1.25 an hour.

—Requested repeal of regulations providing for sub-minimum wages for learners and other classes of workers.

—Requested that payment for statutory holidays be made compulsory by law in all kinds of employment.

—Asked the provincial Government to press the federal Government for financial contributions to reduce the cost of education for local taxpayers.

—Asked the CLC to press for more equality in private pension plans.

—Voted for promotion of world disarmament and for an end to production and testing of nuclear weapons.

—Asked that employees receiving compensation while off work on account of injuries be allowed to qualify for unemployment insurance benefits.

—Supported a petition by the Senior Citizens Clubs of Greater Winnipeg for the elimination of/or a reduction in hospital insurance premiums for old age pensioners and old people with fixed incomes.

—Requested a national portable pension plan on a basis similar to unemployment insurance, with contributions from employers and employees.

Election of Officers

Federation President Joseph (Jimmy) James was re-elected and all the other members of the executive council returned unopposed.

They were: First Vice-President, Donovan Swailes, Winnipeg; and five area vice-presidents, Sam Goodman, Winnipeg; Henry Schellenberg, Flin Flon; James Nicholls, Brandon; G. Lawrence Taylor, Pine Falls; and Mike Sedik, Selkirk.

Immigrants to Canada during the first nine months of 1960 totalled 83,431, compared with 85,355 in the same period of 1959, the Immigration Department reports.

Of the 83,431 immigrants so far this year, 11,590 listed "manufacturing" as their intended occupation. Other large occupational groups were: professional, 5,937; clerical, 4,888; service, 6,634; and labourers, 6,291.

Rehabilitation Review

Canadian elected President of International Society for Rehabilitation of the Disabled. Sudbury district trade unions agree to furnish occupational shop in projected 40-room service centre of Canadian National Institute for the Blind

A Canadian has been elected President of the International Society for the Rehabilitation of the Disabled. At the recent 8th World Congress of the Society, which was attended by some 3,000 delegates from 48 countries, Hall H. Popham was elected President in succession to Sir Kenneth F. Coles of Australia.

Mr. Popham, head of an Ottawa office equipment firm, has been active in work for the disabled for many years, and in recent years has served as Vice-President of the International Society. He is a past president of both the Ontario Society for Crippled Children and the Canadian Council for Crippled Children and Adults.

* * *

Some 25 officials representing 18 trade unions at a recent meeting in Sudbury unanimously agreed to furnish a projected service centre of the Canadian National Institute for the Blind with an occupational shop, and to supply it with the equipment needed at the outset. In the 40-room centre, the occupational shop will be used to train blind persons for useful employment, and small subcontract jobs will be undertaken. The centre will serve 140 blind persons in the district, most of whom have been blinded in industrial accidents.

The unions represented at the meeting included those of nickel and steel workers, carpenters, milk salesmen, transport and construction workers, and public service and hospital employees.

* * *

The establishment of a number of new institutions or services for the benefit of disabled and handicapped persons across Canada has been announced recently. They include the following:

—The Thunder Bay Crippled Children's Centre to provide for treatment of cerebral palsy victims and crippled children in north-western Ontario. The centre was established through the work of the Kiwanis Club of Port Arthur and Fort William.

—A brace and appliance service for disabled residents, announced jointly by the Saskatchewan Government and the Saskatchewan Council for Crippled Children and Adults. Two centres, each under medical supervision and staffed by qualified technicians, have been equipped to supply braces

and appliances at approximately the cost of the materials.

—A Psychiatric Research Institute for Children in London, Ont., established by the Mental Health Division of the Ontario Department of Health. The Institute, first of its kind in Ontario, is under the direction of Dr. E. Zarfes, and is intended primarily for research in connection with mental retardation.

—A new workshop in Regina to provide sheltered employment for the severely handicapped. The first main project of the workshop is a bookbinding service. At present, five persons are employed in repairing and binding books on contract from the public library. A woodworking section is also being set up to manufacture transformer crates on contract from an electrical firm. Expansion into other fields is hoped for.

—A geriatric rehabilitation team, established at the Regina Geriatric Centre in May as an experiment. The team is composed of a rehabilitation nurse, a part-time physiotherapist, a part-time occupational therapist, and two nurse attendants.

—A Research Unit in Rheumatic and Other Connective Tissue Diseases at the University of British Columbia, announced by the Canadian Arthritis and Rheumatism Society.

An agreement has been reached between the Governments of Nova Scotia and New Brunswick for the joint construction of an interprovincial school for the deaf at Amherst. The agreement calls for the construction of a school to house a maximum of 225 pupils.

* * *

The National Employment Service office in Edmonton recently announced that it had found employment for a total of 946 handicapped persons during the year ended June 30. The employment service works in conjunction with the provincial rehabilitation authorities for the handicapped.

* * *

F. S. Hatcher, who had been employed in the Civilian Rehabilitation Branch of the Department of Labour in Ottawa for the past two years, has returned to British Columbia to join the Department of Social Welfare, where his work will continue to be connected with rehabilitation.

Attitudes and Older Workers

In speech to Canadian Council of Foremen's Clubs, Minister of Labour appeals for help in developing attitudes among those responsible for hiring that will ensure equal consideration of all qualified job applicants regardless of age

"Industry needs the services of older workers. The qualities so common in older workers—mature judgment, experience, patience, wisdom, stability, and tolerance—are essential to industry and to the community," said Hon. Michael Starr, Minister of Labour, in an address to the Canadian Council of Foremen's Clubs.

He explained that by "older workers" he meant anyone who had difficulty in finding or keeping employment "simply because someone thinks he has passed too many birthdays." This broad definition, he said, applies mainly to persons past 40 years of age.

At the outset, the Minister acknowledged that foremen had a vast influence on the attitudes of both workers and management. "Because of your position of influence," he said, "you can help develop attitudes among those responsible for hiring that will ensure equal consideration of all qualified applicants for employment."

The belief that persons who have turned 40 are past their prime has become so widespread and prevalent in recent years that many in this age group have come to believe it themselves, he said. But there is some evidence that this attitude is changing: "many enlightened employers are beginning to recognize the potential of the older segment of our labour force."

Mr. Starr said he often wondered whether employers who put unrealistic age limits on their jobs had really thought the matter out, if they realized how badly they were restricting their choice of applicants, and that they might miss the ideal person for the job—by just one year.

Everyone wants to make the most effective use of the manpower available, "but are we making the best use of our manpower when we leave mature people with experience, knowledge and skill among the ranks of the unemployed simply because they have passed their fortieth or fiftieth birthdays?"

The facts about older workers, the Minister said, were: absenteeism and accident rates are lower among those past 40 years of age, learning ability does not decrease with age, older workers tend to remain on a job once they are employed, and the older worker is as productive as the younger worker.

A study by the Department of Labour of work performance by age groups, covering more than 1,000 employees in two large department stores (L.G., Oct. 1959, p. 1022), indicated that flexibility and adaptability existed among all age groups, and the older workers scored as high, or higher, than their younger fellow-workers in rate of learning and productivity.

It is fortunate for our economy and our society that the majority of persons in the middle-aged and older age groups are gainfully employed, he continued. "If all those aged 40 and over in industry, the professions, government and public life were simultaneously withdrawn from the labour force, our national economy would come to a standstill."

Some responsibility for obtaining and holding employment lies of course, with the older worker himself, the Minister conceded. "He must realize that technological progress means constant change; change can render skills and knowledge obsolescent. Every worker must bear some responsibility for adapting himself to changing conditions, must try to keep his skills and knowledge up to date so that he has the qualifications needed by employers."

Perhaps industry could help him meet these changes, he suggested, by providing opportunities for training and, sometimes, improvement of education. "Facilities for vocational and technical training must be available to those who can benefit from them. It is to industry's ultimate benefit to provide training on the job to enable workers to upgrade themselves and keep their skills up to date."

Here the Minister mentioned the new arrangements under the Federal-Provincial Vocational Training Agreements whereby the federal Government will now pay 75 per cent of the costs of training for unemployed persons, for which training there are no age limits.

The older worker problem is a serious one that can never be minimized by the efforts of Government alone, he concluded. "An ultimate solution can be brought about only by the co-operation of governments, management, organized labour and the public generally."

Work Experience of Farm Homemakers

More than three quarters of 352 Ontario farm women had held jobs outside the home after leaving school and before marriage, survey finds. CLC has formed ladies auxiliaries organizing committee, CCCL studies women workers' problems

What do Ontario farm women do from the time they leave school to the time they marry? This was one of the questions answered by the Special Study of Ontario Farm Homes and Homemakers recently carried out by the Ontario Department of Agriculture with the co-operation of the Rural Sociology Unit of the federal Department of Agriculture.

More than three quarters of the 352 farm homemakers residing in every county and district of Ontario who were interviewed had held one or more different types of jobs outside the home. The following table shows the occupational distribution.

Type of Work	Number	% of 352 women
Domestic service	90	26
Professional and managerial	61	17
Clerical and sales	61	17
Sales and kindred	45	13
Personal service	40	11
Unskilled	27	8
Managerial and official	14	4
Semi-professional	7	2
Semi-skilled	6	2
Military	5	1

Women and the Labour Movement

The first newsletter of the newly formed Ladies' Auxiliaries Provisional Committee of the Canadian Labour Congress has been issued.

Action has been taken on all five resolutions relating to ladies' auxiliaries approved at the CLC Convention last April, the newsletter reports. These were: establishment of a provisional Ladies' Auxiliaries Organizing Committee (L.G., June, p. 576), the publication of a news bulletin, a survey and report on existing auxiliaries in Canada, support of the union label campaign of the CLC, and the preparation of a program guide for ladies' auxiliaries.

The newsletter also announces that a women's committee of the Ontario Federation of Labour is to be established at a provincial conference to be held in conjunction with the OFL annual convention.

The CCCL and Women Workers

The problems of women workers were given special attention at the recent convention of the Canadian and Catholic Confederation of Labour. A report presented by Jeanne Duval, a vice-president and head of women's activities for the CCCL, resulted in important decisions (see page 1120). Immediately after the convention Miss Duval left for Brussels to attend a meeting organized by the International Federation of Christian Trade Unions to discuss the problems of women workers.

Married Women at Work

The employment of married women was the subject of a recent study conducted by the Australian Department of Labour and National Service in 22 manufacturing companies employing from 11 per cent to 68 per cent married women. The report on the study states:

"Generally speaking, no marriage bar was applied, but 15 of the 22 companies barred married women whose provision for the care of their children appeared inadequate. The companies excluded married women with three or more children, and one, all mothers with infants.

"No special provision regarding hours of employment was made to meet the needs of married women, though during the war concessions had been made to attract more women workers. No firms granted leave specifically for married women. The latter, however, applied more often than single women for leave without pay on domestic grounds; 18 of the 22 companies made provision for such leave.

"No differences in the rates of absenteeism were reported. Seven companies rated married women as more diligent workers; the rest could see no difference between single and married women. Friction between married and single women was noted in only three cases."

The number of married women in employment in Great Britain in May 1959 was (excluding widows) four million, or 52 per cent of all women workers, according to Ministry of Labour estimates. In Canada, in the same month, married women made up 45 per cent of the female labour force.

50 Years Ago This Month

Hired to work on railway construction, Winnipeg men refuse to work on reaching the site; 14 found guilty of breaking contracts, sentenced to 14 days in jail. Ottawa police granted one day's rest in seven. Teachers seek salary increases

For more than the first decade of the LABOUR GAZETTE's life, the magazine employed local correspondents and published in each issue reports submitted by them. The reports in the November 1910 number throw some light on conditions in the Canadian labour world 50 years ago this month.

From Edmonton came the following: "One hundred men who shipped from Winnipeg about October 1 to work for Foley, Welch and Stewart, contractors on the Grand Trunk Pacific grade west of Wolf Creek, refused to go to work after they arrived in Edson, and the majority walked back to this city [about 125 miles].

"Ten of these men were arrested at Entwistle by the Royal Northwest Mounted Police, and brought to this city at the instigation of the contractors, who claimed the men had broken their contract. The men were tried before Inspector Worseley who dismissed the case; the costs to be paid by the prosecutor. Out of 139 men who shipped from Winnipeg October 5, a large number deserted before Edson was reached, 14 were arrested for breaking their contract, they were found guilty by Inspector Sweetapple, and sentenced to 14 days in the Royal Northwest Mounted Police barracks at Fort Saskatchewan."

The same correspondent went on to say, "The Trades and Labour Council is endeavouring to have conditions improved in the railway construction camps west of the city. Among the improvements asked is that restrictions be placed on employment agencies binding them to give more explicit information as to existing conditions to those seeking employment."

The Ottawa correspondent reported: "The Ottawa Police Commissioners decided to grant every man on the police force one day's rest in seven, and the staff of 75 men will be increased by 12 new constables to make this possible. Up to the present time there has been no definite compensation to the men for Sunday work.

"The minimum salary of first class male teachers in the Ottawa public schools was raised from \$950 to \$1,100 in order to secure better teachers for some vacancies that have to be filled," the same correspondent reported. "The lady teachers, whose

maximum salaries run from \$450 to \$850, have applied for increases."

From Hamilton came the following: "Among the new industries locating in Hamilton is the Acme Motor, Carriage and Machinery Company. This is a merger of the Baynes Carriage Company, of this city, the American Road Machinery Company, of Goderich, and a group of automobile makers of Detroit, Mich. Automobiles will be built in this city, and the Goderich works will turn out carriages. About 150 men will be employed here."

The same correspondent said that, "Teachers in the Collegiate Institute have asked the Board of Education for increases in salary, but the Board so far has declined to accede to any change. The maximum salary paid to Collegiate teachers in Toronto is \$400 more than is paid in Hamilton, and in face of this it is almost impossible to hold local teachers when they get an offer to go to that city. The maximum salary in this city is \$1,600, and the minimum \$1,200."

An item from St. Thomas read: "St. Thomas ratepayers will be asked in the near future to vote on a by-law permitting the city to lend \$30,000 to the Monarch Knitting Company for a period of five years... Employment will be given to at least 200 hands at the opening of the factory, and the company demands a guarantee that that number will be procurable when business is commenced, this number to be increased as business develops. The highest wages will be paid. Women workers will be in special demand, and steady employment will be given."

The Winnipeg correspondent wrote: "At the beginning of the month a strike of the employees of the Winnipeg Electric Street Railway Company was threatened, and would have occurred if orders from the international office of the street car men's organization had not arrived forbidding the strike.

"The cause of the trouble was the dismissal of certain men for breaking rules. The men charge discrimination on the part of the management, and impute to the company a desire to remove from their employment certain officials of the men's union.

INTERNATIONAL LABOUR ORGANIZATION

Ad Hoc Meeting on Civil Aviation

Four resolutions relating to conditions of employment in civil aviation were adopted unanimously at the Ad Hoc Civil Aviation Meeting convened by the International Labour Organization in Geneva September 26 to October 7. Four other resolutions were adopted without the support of employer delegates.

Canada was one of the 18 nations represented at the meeting.

Two of the resolutions adopted unanimously concern studies or work to be undertaken by the ILO. One concerns personnel posted abroad; the other, occupational health risks.

The third of the resolutions that won unanimous approval deals with joint consultation at the company level, the national level, or both, according to the practice in each country, upon such subjects as may be agreed between the parties concerned.

The fourth invites the ILO Governing Body to request the Director-General to ask the International Civil Aviation Organization to continue to take into account the working environment of flight personnel in connection with any ICAO study of related technical and operational problems.

The resolutions that were adopted with the support of government and worker delegates but without that of employer delegates dealt with the future work of the ILO in the field of aviation, studies that the ILO should undertake concerning conditions of employment in air navigation services, the effects of technological change, and financial security of civil aviation personnel.

The first part of the final resolution, dealing with civil liability of air crew, was adopted unanimously. The second part, dealing with termination of employment of air hostesses, did not have the support of

the employer delegates. The whole resolution was then adopted without employer support.

The meeting also adopted a series of conclusions on hours of duty and rest periods of crew members. The conclusions contain suggestions on flight and duty time limitations and minimum rest periods, for joint consultation and for definitions of flight time, hours of duty and rest periods.

Head of the Canadian delegation was M. M. Fleming, Controller, Civil Air Operations and Regulations Division, Department of Transport. The other government delegate was D. S. Tysoe, Industrial Relations Officer, Department of Labour, Vancouver.

Worker delegates were: Capt. J. H. Foy, President, Canadian Air Line Pilots Association, and Robert R. Smeal, Secretary of the Canadian Air Line Flight Attendants Association. Adviser to the worker delegates was Capt. W. J. Rodgers of the CALPA.

Employer delegates were: G. E. Bolton, Director of Personnel, Trans-Canada Air Lines, and J. K. Dakin, Director of Industrial Relations, Canadian Pacific Air Lines Vancouver.

Chairman of the meeting was Harold F. Rossetti, Deputy Secretary of the United Kingdom Ministry of Labour, a government member of the ILO Governing Body.

The following countries were represented by tripartite delegations: Australia, Belgium, Brazil, Canada, Colombia, France, Federal Republic of Germany, India, Italy, Japan, Mexico, Netherlands, Switzerland, the United Kingdom, and the United States. Denmark, Norway and Sweden were represented by a joint delegation.

ILO Membership Reaches 89

Between October 14 and November 1, four nations joined the International Labour Organization, bringing membership to 89. The Gabon Republic became the 86th member, Nigeria the 87th, the Central African Republic the 88th, and Malagasy (formerly Madagascar) the 89th.

TEAMWORK in INDUSTRY

More than 10,000 people visited the Cornwall, Ont. division of Howard Smith Paper Mills during the company's two-week, day-and-night Open House this summer. Among the sightseers were employees and their families, hundreds of school-children and their teachers, plus about 45 business, industrial, professional and service club organizations.

For the evening plant tours, about 25 volunteers were assigned to stations along the tour route. Recruited from staff employees and the memberships of Local 212, United Paper Makers and Paper Workers (AFL-CIO/CIO) and Local 338, International Brotherhood of Pulp, Sulphite and Paper Mill Workers (AFL-CIO/CLC), these guides guarded the safety of visitors, answered countless questions and pointed the way.

Management was pleased over the response. Said General Manager W. P. Nesbitt: "It is gratifying to learn that so many of our employees and their families and so many Cornwall and district citizens are interested in the many developments which have occurred at our mill."

Larry Snyder, President of Local 212, described the affair as "a success from four points of view: company, union, employees and community." Asked if he could explain what motivated people to show up in such numbers, he replied: "It was their chance to see how a big mill operates and to learn something about the good relations existing here between employees and management. The wives and children are interested mainly in seeing where Dad works and exactly what he does all day for his paycheck."

Terry Duff, President of Local 338, added his estimate of the individual employee's reaction. He thought that "anyone taking pride in his work would be glad to have his family and friends drop in."

* * *

To compete successfully against larger firms the small company must develop top efficiency, and to achieve top efficiency, labour and management must be willing to work together toward that objective in an organized fashion.

When brick and tile manufacturer Lloyd R. Shaw made this observation in Halifax recently to representatives of the federal Labour-Management Co-operation Service,

he was speaking from extensive practical experience with joint consultation. "Any company or plant interested in improving efficiency and bettering its industrial relations is missing a golden opportunity if it does not have a labour-management committee," he stated. "This is our conviction after 11 years' experience."

L. E. Shaw Ltd. encompasses eight plants located at Halifax, Dartmouth, Lantz, New Glasgow and Sydney in Nova Scotia, and at St. John, Fredericton and Chipman in New Brunswick. The firm will celebrate its 100th year in the brick and tile business in 1961. It employs a total of 350 people, 114 of whom work at the Lantz plant.

Joint consultation will soon be extended to the Fredericton and Sydney plants, according to spokesmen for the company and the National Union of Brickyard Workers. This will bring to five the number of Shaw plants practising joint consultation. The others are at Lantz and New Glasgow, N.S., and at Chipman, N.B.

According to Keith Rawding, plant superintendent at Lantz, committee influence has spurred teamwork and co-operation among top management, union officers and supervisors, and lightened his own responsibilities. Mr. Rawding hasn't missed a single meeting in the 11 years the Lantz committee has been operating. "Our company's labour relations have been excellent during this time," he reported, "and much of the credit is owing to our LMPC."

Clinton H. Isenor, President of Local 2, National Union of Brickyard Workers (CLC), claims that employees and plant at Lantz derive benefits from the labour-management committee in their midst, particularly in the field of safety. Plant safety tours which the committee conducts weekly have contributed to the employees' steadily improving accident record.

According to Harry Livingstone, Manager of Personnel Administration, plants that have too small a staff to justify setting up a separate committee for safety should let their regular labour-management committee handle this subject.

Mr. Livingstone reported that accident frequency has been lowered from 84 to 14 in the last four years, and the company-union objective for 1960 is 10.

Establishment of Labour-Management Committees is encouraged and assisted by the Labour-Management Co-operation Service, Industrial Relations Branch, Department of Labour. In addition to field representatives located in key industrial centres, who are available to help both managements and trade unions, the Service provides various aids in the form of booklets, posters and films.

INDUSTRIAL RELATIONS AND CONCILIATION

Certification and Other Proceedings before the Canada Labour Relations Board

The Canada Labour Relations Board did not meet during September. During the month the Board received seven applications for certification.

Applications for Certification Received

1. National Harbours Board Police Brotherhood, Montreal, on behalf of a unit of harbour and bridge security officers employed by the National Harbours Board at Montreal (Investigating Officer: C. E. Poirier).

2. The National Syndicate of Maritime Workers of Lake St. John, on behalf of a unit of employees of Price Brothers & Company Limited, engaged in the transportation of pulpwood by boat on Lake St. John, Que. (Investigating Officer: C. E. Poirier).

3. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed aboard the *M.V. Arctic Rover* by Arctic Shipping Ltd., Vancouver (Investigating Officer: G. H. Purvis).

4. International Longshoremen's and Warehousemen's Union, Local 503, on behalf of a unit of deepsea longshoremen employed by the Tahsis Company, Ltd., at the Port of Tahsis, B.C. (Investigating Officer: G. H. Purvis).

5. General Truck Drivers' Union, Local 879 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of employees of the Leslie Armstrong Mail Service, Owen Sound, Ont. (Investigating Officer: A. B. Whitfield).

6. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of employees of Tippet-Richardson (Ottawa) Limited, Ottawa (Investigating Officer: G. A. Lane).

7. International Longshoremen's and Warehousemen's Union Local 512, Canadian Area, on behalf of a unit of longshoremen employed by Vancouver Wharves Limited at North Vancouver, B.C. (Investigating Officer: G. H. Purvis).

Conciliation and Other Proceedings before the Minister of Labour

Conciliation Officers Appointed

During September, the Minister of Labour appointed conciliation officers to deal with the following disputes:

1. Dennison Mines Limited, Elliot Lake, Ont., and United Steelworkers of America, Local 5185 (office and technical employees) (Conciliation Officer: F. J. Ainsborough).

2. Canadian Pacific Air Lines, Limited, Vancouver Airport (Flight Kitchen Section at Sea Island), and General Truck Drivers and Helpers Union, Local 31 of the International Brotherhood of Teamsters, Chau-

feurs, Warehousemen and Helpers of America (Conciliation Officer: G. R. Currie).

3. Trans-Canada Air Lines, Montreal, and Canadian Air Line Flight Attendants' Association (Conciliation Officer: Rémi Duquette).

4. Upper Lakes Shipping Limited (Grain Elevator Division), Goderich, Ont., and Local 23736, Canadian Labour Congress (Conciliation Officer: T. B. McRae).

5. McCabe Grain Company Limited, Edmonton, Alta., and Local 514 of the International Brotherhood of Teamsters,

This section covers proceedings under the Industrial Relations and Disputes Investigation Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board, and the Industrial Relations Branch of the Department.

Chauffeurs, Warehousemen and Helpers of America (Conciliation Officer: J. S. Gunn).

6. Three Rivers Radio Inc. (Station CHLN) and Region No. 6, National Association of Broadcast Employees and Technicians (Conciliation Officer: C. E. Poirier).

7. Eastern Canada Stevedoring Co. Ltd., Montreal, and Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, Local 264, Halifax, N.S. (Conciliation Officer: Rémi Duquette).

8. Canadian Arsenals Limited (Gun Ammunition Division), Lindsay, Ont., and International Union of Operating Engineers, Local 796 (Conciliation Officer: T. B. McRae).

Settlements Reported by Conciliation Officers

1. Vancouver Hotel Company, Limited; and International Union of Operating Engineers, International Association of Machinists, and International Brotherhood of

Electrical Workers (Conciliation Officer: G. R. Currie) (L.G., Oct., p. 1029).

2. National Harbours Board, Prescott, Ont., and Civil Service Association of Canada (Casual Employees of the National Harbours Board Elevator Group) (Conciliation Officer: T. B. McRae) (L.G., Oct., p. 1030).

3. The Nova Scotian Hotel, Halifax (Canadian National Hotels, Limited) and Hotel and Restaurant Employees' and Bartenders' International Union, Local 662 (Conciliation Officers: D. T. Cochrane and H. R. Pettigrove) (L.G., Sept., p. 923).

4. Trans-Canada Air Lines, Montreal, and Flight Engineers' International Association (Conciliation Officer: Rémi Duquette) (L.G., June, p. 604).

5. Consolidated Denison Mines Limited, Spragge, Ont., and Local 796, International Union of Operating Engineers (Conciliation Officer: F. J. Ainsborough) (L.G., April, p. 369).

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Industrial Relations Branch. The Branch also acts as the administrative arm of the Canada Labour Relations Board, in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certificates given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and work declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for application for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to

the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of four officers resident in Vancouver comprises British Columbia, Alberta, and the Yukon and Northwest Territories; two officers stationed in Winnipeg cover the province of Saskatchewan and Manitoba and Northwestern Ontario; four officers resident in Toronto confine their activities to Ontario; five officers in Montreal are assigned to the province of Quebec, and a total of three officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

6. Can-Met Explorations Limited, Spragge, Ont., and Local 796, International Union of Operating Engineers (Conciliation Officer: F. J. Ainsborough) (L.G., April, p. 370).

Conciliation Boards Appointed

1. Canadian Pacific Railway Company (S.S. *Princess Helene*) and Seafarers' International Union of North America, Canadian District (L.G., Sept., p. 923).

2. Quebecair Inc., Rimouski, Que., and Canadian Air Line Pilots Association (L.G., Aug., p. 815).

3. Canadian National Railways (Niagara, St. Catharine and Toronto Railway—Motormen, Conductors and Bus Operators), and Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Division No. 846 (L.G., July, p. 709).

4. Radio Station CHVC, Niagara Falls, Ont., and National Association of Broadcast Employees and Technicians (L.G., Oct., p. 1029).

5. Hull City Transport Ltd., and Hull City Transport Employees Union (L.G., Oct., p. 1029).

6. Canadian Broadcasting Corporation and Canadian Wire Service Guild, Local 213, American Newspaper Guild (L.G., Sept., p. 923).

Conciliation Board Fully Constituted

The Board of Conciliation and Investigation established in September to deal with a dispute between the Canadian Broadcasting Corporation and Canadian Wire Service Guild, Local 213, American Newspaper Guild (*see above*) was fully constituted in September with the appointment of W. H. Dickie, Toronto, as Chairman. Mr. Dickie was appointed by the Minister on the joint recommendation of the other two members, J. W. Healy and G. Eamon Park, both of Toronto, who were previously appointed on the nomination of the Corporation and union respectively.

Conciliation Board Reports Received

1. McAllister Towing Ltd. (Sincennes-McNaughton Division) Montreal, and Seafarers' International Union of North America, Canadian District (L.G., Aug., p. 815). The text of the report is reproduced below.

2. National Harbours Board (Fleet Department, Montreal Harbour) and Seafarers' International Union of North America, Canadian District (L.G., Aug., p. 815). The text of the report is reproduced below.

Settlement Reached after Board Procedure

Northern Alberta Railways Company, Edmonton, and Brotherhood of Locomotive Engineers (L.G., Aug., p. 815).

Report of Board in Dispute between McAllister Towing Ltd. (Sincennes-McNaughton Division) and Seafarers' International Union of North America

During September, the Minister of Labour received the Report of the Board of Conciliation and Investigation established to deal with the dispute between the Seafarers' International Union of North America, Canadian District, and McAllister Towing Ltd. (Sincennes—McNaughton Division), Montreal.

The Board was under the chairmanship of Carl Goldenberg, QC, of Montreal. He was appointed by the Minister in the absence of a joint recommendation from the other two members, Jean-Paul Cardinal, QC, and Bernard L. Boulanger, both of Montreal, nominees of the employer and union, respectively.

The majority report, which under the provisions of the Industrial Relations and Disputes Investigation Act constitutes the report of the Board, was submitted by the chairman and Mr. Cardinal. The minority report was submitted by Mr. Boulanger.

The majority and minority reports are reproduced here.

The hearings of the Board took place in Montreal on July 6, 1960, and August 30, 1960. Each party presented its case and was afforded an opportunity for rebuttal.

Having heard and examined the submissions of the parties, and having duly deliberated thereon, the Board finds and recommends as is hereinafter set out.

1. *Introductory*

The Sincennes-McNaughton Line Ltd., operating tugs, was associated with Beaconsfield Steamships Ltd. and Mohawk Navigation Co. Ltd., operating freighters on the St. Lawrence River and the Great Lakes, until June 1959, when McAllister Towing Ltd., purchased the assets of Sincennes-McNaughton Line Ltd. The employees on both operations, that is, tugs and lake

carriers, have since about 1955 been represented by the Union and governed by substantially the same collective agreement. Having regard to this fact, the Board, in the recommendations which follow, has taken cognizance of the recommendations which it recently made as a Board appointed in the matter of a dispute between the Union and the Lake Carriers Association.

2. Wages

(A) The Union demands a wage increase of 10 per cent across the board.

Considering the relationship of the company's operations to other operations on the St. Lawrence River and the Great Lakes, and, more particularly, the recent recommendations in respect of the Union's demands for Great Lakes sailors, the board recommends that the parties enter into an agreement covering the period from the opening of navigation (including fit-out) in 1960 to the close of navigation (including lay-up) in 1962 with the following changes in wages:

- (a) an increase of 4 per cent in basic pay for each classification of employment retroactive to the opening of navigation in 1960.
- (b) an increase of 4 per cent in basic pay for each classification of employment on the opening of navigation in 1961.
- (c) an increase of 4 per cent in basic pay for each classification of employment on the opening of navigation in 1962.

(B) The Union demands that wages be paid in cash every two weeks instead of by monthly cheques.

The Board does not recommend that the existing method of payment be changed.

(C) The Union demands that Clause 19 (e) of the last contract, which provides that when a vessel sails without full complement the wages of the absent members shall be divided among the men who must perform their work, should be changed so that such wages would be paid to members in the particular department affected.

The Board does not recommend any change.

3. Hours of work

(a) The Union demands a reduction of the work week from 48 hours to 40 hours, with time-and-one-half for work performed on Saturday and double time for work performed on Sunday.

While the reasons for the inapplicability of a 40-hour week to the nature of the operation on the Great Lakes does not

apply with the same force to the operations of the company, the Board, having regard to the wage increase herein recommended and to the recent recommendation with respect to the hours of work of Great Lakes sailors, does not recommend the proposed reduction of the work week.

(b) The Union demands that deckhands work an 8-hour day without any spread instead of 8 hours in a spread of 16 hours.

The Board does not recommend any change in the provisions of the last contract governing the hours of work of deckhands.

(c) With respect to Clause 19 (g) of the last agreement, which provides that all ratings perform "only their routine operational duties" between 8:00 a.m. Saturday and 8:00 a.m. Monday, and between 6:00 p.m. and 8:00 a.m. weekdays, the Union demands that "operational duties", be replaced by "navigational duties", and that "sougeeing and polishing" be added to the duties excluded during those hours.

The Board does not recommend any change in the existing provision.

4. Maintenance of membership and employment

The Union demands that Clause 3 (f) of the last agreement, defining the exclusive rights of the master or chief engineer, be modified and that it be also agreed that no crew member shall pay off or be paid off in a port where there is no union hall.

The Board does not recommend any change in Clause 3 (f).

The company points out that Clause 3 (f) gives to the master the exclusive right "to hire, promote, demote, transfer, lay off, suspend or discharge employees." It submits that, according to the Union, "transfer" means the transfer of personnel from one department to another on the same ship but not transfer from one vessel to another.

The company proposes that, in view of the limited crew on each of its tugboats, each boat should be considered as a separate department and the entire fleet considered as a unit so as to enable the company to transfer the crew from a tug which is laid up to an available tug in commission. It submits that under the Union's shipping rules, the men lose employment when their tug is tied up because they have to be replaced by a completely new crew on the replacing tug.

The Board finds that the company's proposal has merit and should receive the serious consideration of the Union.

5. *Grievance procedure*

The Union demands a change in Clause 4 (a) of the last agreement which would delete the requirement that the ship's delegate on each ship shall be a Canadian citizen with one full navigation season's service in the industry and that he shall be elected by the majority of the employees aboard.

The Board recommends that the present wording of the clause be retained, with the deletion of the words "and a Canadian citizen."

6. *Vacation pay*

The Union demands a change in Clause 8 of the last agreement providing for vacation pay, the principal effect of which would be the establishment of a Vacation Pay Fund into which the company would make the vacation payments.

The Board does not recommend the change demanded by the Union. It recommends that Clauses 8 (a) and 8 (b) of the last agreement be retained unchanged, but that Clause 8 (c) be replaced by the following:

Any employee paid off before the end of the navigation season shall receive his vacation pay at the time of pay-off.

7. *General and emergency duties*

The union demands a rewording of Clause 9 (e) of the last agreement dealing with oilers and firemen.

Since agreement has been reached on the rewording of the same clause in the Union's contract with the Lake Carriers Association, the Board recommends that Clause 9 (e) be reworded accordingly.

8. *Statutory holidays*

The Union requests that Clause 10 of the last agreement be amended to provide for payment at double the straight pay for work performed on holidays.

The Board recommends payment at time-and-one-half the basic daily rate for work other than routine operational duties performed on statutory holidays.

9. *Cleanliness of quarters*

The Union demands that Clause 11 of the last agreement be changed to remove the requirement that the employees shall co-operate in keeping their quarters clean.

The Board does not recommend any change.

10. *Other conveniences*

The Union demands that Clause 12 of the last agreement be amended by specifying certain additional items which shall be sup-

plied to the employees. The Board recommends that Clause 12 be changed to read as follows:

The following items shall be supplied employees:

1. A suitable number of clean blankets for each employee.
2. Sheets, pillowcases and counterpanes, which shall be changed once weekly.
3. Roller and bath towels changed weekly.
4. One cake of toilet soap and one cake of laundry soap shall be provided for each rating weekly.
5. An adequate supply of crockery or plastic dishes.
6. It is agreed that inner spring mattresses shall be provided as present mattresses are replaced.
7. In the interests of maintaining clean and tidy quarters the crew quarters shall be painted when reasonably required.
8. Soiled linen shall be returned before a new issue is made.

It is the policy of the Company to maintain the comfort of the crew by providing as good equipment as possible under given circumstances, but it must be understood that this policy is dependent on the full cooperation of the Union and the crew members.

11. *Meals, coffee time and lunches*

The Union requests changes affecting the hours of meal service and coffee breaks.

The Board does not recommend any change in the wording of Clauses 13 (a) and 13 (b) of the last agreement.

12. *Transportation*

The Union demands certain changes in Clause 14 of the last agreement dealing with transportation costs payable by the company. The company rejects the proposal as being inapplicable to tugboat operations.

The Board does not recommend any change in Clause 14 of the last agreement.

13. *Room and meal allowance*

The Union demands that Clause 15 of the last agreement be amended to provide for a meal allowance of \$1.50 per meal, and a room allowance of \$5 per room when the employer does not provide room and board.

The Board recommends an increase in the meal allowance to \$1.25 per meal and in the room allowance to \$4.50 per room.

14. *Safety*

The Union demands that Clause 16 of the last agreement dealing with safety regulations be amended to enforce the greater safety of the crew.

The Board recommends that the clause be reworded to read as follows:

Safety

It is agreed that any safety regulations that the Company may now have in force for the safety of the vessel and crew and any further safety regulations which the Company shall

put into effect and bring to the attention of the crew shall be strictly adhered to by all crew members. Violation of any such regulation shall warrant dismissal.

- (a) Crew members shall not be required to work aloft on masts or king posts or derricks while cargo is being worked.
- (b) There shall be no chipping on tankers contrary to safety regulations unless the tanker is gas free.
- (c) Plastic safety helmets shall be supplied the unlicensed employees on ore carriers. Employees to be responsible for care and return of these.

15. *Tank cleaning*

The Union demands a change in Clause 17 of the last agreement dealing with tank cleaning.

The Board recommends that the clause be amended by changing the word "tanks" to "waterbottoms."

16. *Overtime and overtime payments*

The Union demands a compensatory payment for a fireman on watch who has to go into the bunker to trim coal. The company states that the demand is inapplicable to its operations.

The Board does not recommend any change.

17. *Longshore work by the crew*

The Union demands that Clause 21 of the last agreement be amended to read as follows:

If an employee is required to perform any work usually done by the longshoremen, such as loading or unloading cargo or the handling of cargo and dunnage he shall perform such work and shall be paid in addition to his regular wage the applicable rate at that point payable to longshoremen. In no case shall the rate paid for this work be less than the regular overtime rate set forth in this Agreement.

The company objects to the inclusion of the word "dunnage."

The Board recommends that Clause 21 be amended as requested by the Union.

18. *Stewards' department*

The Union demands that Clause 22 of the last agreement be changed, but the company rejects the demand as inapplicable.

The Board does not recommend any change.

19. *Interruption of work*

The Union demands that Clause 23 of the last agreement be amended by adding the following thereto:

Employees shall not be forced to put themselves in jeopardy of violence or physical danger by being required to work behind or pass through legal picket lines.

In refraining from making a recommendation for a change in Clause 23, the Board is confident that the company would not penalize employees for refusing to cross picket lines when there is a clear and imminent danger of physical injury.

20. *Shipwreck*

The Union demands the addition of the following clause to the agreement:

Shipwreck

Crew members of the unlicensed personnel who suffer loss of personal effects and clothes through Marine Disaster or shipwreck shall be compensated by the payment of \$500.00.

The Company proposes the following clause:

Loss of personal belongings

The Company agrees to assume responsibility for the loss of personal belongings and clothing of unlicensed personnel due to shipwreck or other marine casualty up to the sum of Three Hundred Dollars (\$300.00) payable only in respect to proven loss.

The Board recommends the adoption of a clause to read as follows:

The Company agrees to assume responsibility for the loss of personal belongings and clothing of unlicensed personnel due to shipwreck or other marine casualty up to the sum of Three Hundred Dollars (\$300.00), payable on reasonable proof of loss.

21. *Proposals by the company*

The Company submitted certain new proposals at the final hearing of the Board. Since these had not been submitted to the Union during negotiations, nor to the conciliation officer before the appointment of this Board, the Board finds that it is precluded from giving consideration to the proposals.

22. *Duration of agreement*

The Board recommends that the parties enter into an agreement covering the period from the opening of navigation (including fit-out) in 1960 to the close of navigation (including lay-up) in 1962.

Signed at Montreal, Quebec, this 14th day of September, 1960.

(Sgd.) H. CARL GOLDENBERG,
Chairman.

(Sgd.) J. P. CARDINAL,
Member.

MINORITY REPORT

On all issues with particular emphasis on wages, hours, safety provisions, and vacation plan, the Board has held considerable discussion. On the four issues named, the chairman and company nominee have indicated that they intend to offer some relief on these vexing questions. I regret, however, the necessity for recording, respectfully but firmly, that I dissent on

the basic problems which my colleagues obviously intend either to dispose of by compromise or to leave untouched by a simple rejection. Although there are portions of the majority report to which I might be prepared to subscribe, I find an insufficiency in them to which I must give voice. The problems of the employees cannot be ignored if they are to be cured.

In differing with my colleagues, I would like to express my appreciation for their unflinching patience, courtesy and kindness. I would also like to note the conscientious manner in which they considered the lengthy submissions and evidence submitted to the Board by both parties.

In making my observations and recommendations, I am, for purposes of simplicity, disposing of the proposals of the Union in the same consecutive manner in which they were first presented to the employers.

The following is my award

Section 3—Maintenance of members and employment

The Union has requested an addition to an existing clause limiting the right of an employee to quit the ship to a port only where a union hall is located so that replacements can be secured. The Union has also requested that the master be placed under the same limitations with regard to firings, lay-offs, etc. It is my finding that this practice is already followed by Canadian flag deepsea ships, and in fact, these limitations on both the master and the crew are provided for under the Canada Shipping Act. For this reason I recommend that this request be granted.

Section 4—Grievance procedure

In accordance with the provisions of the Fair Labour Practices Act the Union has deleted the requirement limiting the election of ship's delegates to Canadian citizens only. It has also removed the qualifying time period which a crew man was required to serve in the industry before becoming eligible to place his name forward to be elected as a ship's delegate. On the first point, the Fair Labour Practices Act speaks for itself and any limitation of rights for employment through nationality is illegal and therefore this Board does not have the power to make the existing language in this respect legal. The law itself forces the Union request. On the matter of the time limitation, no adequate reason for this onerous burden on the employees has been advanced by the employer and therefore I recommend acceptance of the Union proposal.

Section 8—Vacation pay

The Union has requested a vacation pay plan. There is no extra cost involved to the company. The company has objected on the grounds that such a plan would not be in accordance with the provisions of the Annual Vacations with Pay Act. In studying the Annual Vacations With Pay Act, I can find no bar to a vacation plan as described in the Union proposal. It appears to me that it would be extremely simple to frame a plan fully in accordance with both the letter and the spirit of the Annual Vacations with Pay Act. Therefore I recommend acceptance of the Union proposal.

Section 9—General and emergency duties

The Union has requested overtime for oilers and firemen taking aboard stores after their eight hours work has been completed. This has been agreed upon by a company counter-proposal, therefore, I recommend the Union proposal be granted.

Section 10—Statutory holidays

The Union has requested payment at double time for the statutory holidays contained in the agreement. In the previous agreement the same provision provided that a statutory holiday would be treated the same as a Sunday. The employees presently receive time and one-half for work performed on a Sunday, but they did not receive any remuneration for work performed on a statutory holiday. This condition presents an inequity. The company opposed this proposal on the grounds that it was a cost factor. It appears to me that the company would deny these employees a right enjoyed by millions of Canadians. The company is extending the cost argument to a far greater degree than is warranted. I have no hesitation in recommending the complete acceptance of this Union proposal.

Section 11—Cleanliness of quarters

The Union has requested that the company assume responsibility for the cleanliness of quarters assigned to employees. On the face of it this appears to be a common sense suggestion. There is some doubt in my mind as to whether or not the company is already charged with this responsibility under certain provisions of the Canada Shipping Act. Nevertheless, I recommend that this Union request be granted.

Section 12—Living conditions

The Union has enumerated a number of requirements for living conditions aboard the vessels. They have also asked for a penalty rate of \$2 per man per day when linen is not changed on time. In advancing

their case before the Board, the Union stated that they felt the penalty payment would save the employees from the abuses of the past when sometimes linen was not changed for up to three weeks. The company's position with regard to the actual articles requested was that these articles had already been provided by the Company on their own motion and no useful purpose could be served in writing contractual language to describe an existing condition. The company term the Union request for the linen penalty payment as unwarranted and a possible cost item. I find it hard to reconcile the company's position. In the first place, they enter a solemn contract to provide certain living conditions to their employees. It is assumed that the contract being made in good faith, the company will take every necessary step to see that their solemn contractual commitments will be met to the letter. On the other hand, the company objects to a penalty payment, which, if they were living up to the contract would never have to be paid. There appears to be an anomaly in the company's position on the whole question. The company's objection to the penalty provision almost gives me the uncomfortable feeling that the company will meet these contractual commitments only if it is convenient to them. I cannot help but feel dismayed and discouraged by the company's attitude. Under the circumstances, I have no alternative but to recommend that this Union proposal be granted in full.

Section 13—Meals, coffee time and lunches

The Union has requested changes to sub-section (a) and sub-section (b) of the existing wording in the previous agreement; with regard to sub-section (a) I am inclined to agree with the company, therefore, I would recommend that the wording in the previous agreement prevail with regard to sub-section (a) of Section 13. With regard to sub-section (b) the Union has requested coffee times during the day. The company's position is that coffee is always available and the men can have it when it is convenient. By this I take it to mean that the men may have coffee when it is convenient to the employer. The type of work these men do is industrial in nature and I believe the present, rather loose method of giving the men coffee is most unsatisfactory. Common practice would indicate that the Union's proposals are all justified and I would recommend that sub-section (b) of Section 13 of the Union's proposals be incorporated in the next agreement in their entirety.

Section 14—Transportation

The Union has made additions to sub-section (a) and sub-section (b) of the existing wording contract. With regard to sub-section (a) they have provided that transportation money be paid in cash and that when they be sent from one point to another to join a vessel they be paid their transportation for this journey and similarly reimbursed where a return trip is indicated at the end of a shipping season. The company's position on this request is rather confused. The company admits that a man may be hired at the company office in the city of Toronto to join a vessel at Goderich, Ont. From the company's arguments it is indicated that situations covered by this example arise quite frequently. However, the company objects to making this payment on the grounds that a man being transported is replacing a man and therefore, since it is a Union member getting off the ship, thereby creating the vacancy the Union is to a degree responsible. The company failed to support their argument with figures on how many of this type of vacancies were brought about by dismissals and lay-offs as opposed to the default of Union members quitting the ships. The Canada Shipping Act seems to make it quite clear that the master has a discretion of allowing a crew member to pay off a ship other than at a terminal port. It seems to me that where there is interest displayed by the Union request this interest is not matched to any degree by the company's argument against the request. I feel that in any event whenever an employer requires an employee to travel during the course of his employment the employer should pay the transportation expenses. Therefore, I recommend that this Union request be granted.

With regard to sub-section (b) the Union requests that employees be paid for their transportation expenses after they have completed 30 days service. Evidence during the hearings indicated that the licensed officers were presently paid under this system and in fact have been for some time. The company's position was that the company's practice of withholding a man's transportation expenses for the entire season tended to keep a man aboard the ship for the complete season's service. This is hard to believe. It would seem to me to be an unwarranted imposition by the company on their employees. The company put themselves in the position where they admit that they owe money to their employees and then attempt to justify an extremely long withholding period far exceeding the requirement set down for payment of debts under the laws of the land. This does not

make sense. Accordingly I recommend the Union proposal contained in sub-section (b) of Section 14 be granted.

Section 15—Room and meal allowance

The Union has requested that the meal allowance be increased to \$1.50 per meal and the room allowance be increased to \$5 per room per night. The company has indicated that they will be prepared to go some way toward granting relief on the meal money. However, they oppose any increase in room allowance. On making a check of the number of hotels for the tariffs charged therein at Quebec, Three Rivers, Montreal, Sorel and Valleyfield, I find that the Union proposal reflects the minimum prevailing rates. On the face of this evidence I can only recommend the Union proposal.

Section 16—Safe working conditions

The Union has requested a number of safe working conditions and in evidence submitted details of fatalities suffered on the job, fatalities which the Union felt could have been avoided had these safety provisions been in effect. While the company was prepared to grant some of these safety conditions it appears to me that the company only granted safety conditions where they had the minimum effect. For example, the company was prepared to accede to the request where it covered tankers. According to the reference books provided, there are not very many tankers on the Great Lakes and it follows that the company would be committed to a very small degree, if at all, by the granting of this request. I have taken the opportunity to visit the docks and observe the safety conditions aboard Canadian lake ships. My opinion in this situation in this regard is that intolerable conditions prevail, and it appears to me that the Union could have gone a lot further in their requests. In my observations I noted that lake ships were not provided with proper rigged gangways, crew members being required to climb aboard ship by means of ladders placed on the dock and against the side of the ship. Female as well as male crew members were required to gain access or take their exit from the ship in this precarious manner. Not even a safety net was provided between the ship and the dock under the ladder. I also noted that crew members were not paired off to go over the side of the ship on stages when the hull was being painted. I was advised by a British sailor that on British ships crew members were never permitted to go on stage over the side of the ship alone and unattended, specifically because of the safety factor. I must admit

that I am appalled at the company's attitude on this question. While it is true that there will always be industrial accidents according to the company's argument it is also true that in some industries and notably the chemical industry industrial accidents have been reduced to a minimum by extremely rigid safety provisions. I recommend most sincerely that the Union proposals of safety provisions be granted and implemented in full.

Section 17—Tank cleaning

The Union has attempted to clarify by the use of specifications the previous contract language on penalty tank work. The company has taken the opportunity of attempting to limit the penalty tank work to the water bottom tanks. It is my recommendation that the Union request be granted.

Section 18—Schedule of monthly wages

The Union has requested a 10 per cent across the board increase. The company has offered 10 per cent over three years on the basis of 3 per cent, 3 per cent and 4 per cent. It is my recommendation that a 10 per cent across the board increase be granted retroactive to the date of the opening of navigation 1960.

Section 19—Hours of work

The Union has requested amongst other things a 40-hour work week with a provision for time and one-half on Saturdays and double time for Sundays. I recommend that this Union request be granted.

On the other conditions under hours of work the Union has requested under sub-section (a) that crew members on watches be classed as day workers and be required to perform their duties between 8:00 a.m. and 8:00 p.m. daily. I recommend this request be granted.

I also recommend that the Union request sub-sections (e) and (g) be granted and with regard to the whole of Section 19.

Section 20—Overtime and overtime payments

The Union has requested that where firemen are called to trim coal on watch they should be paid time and one-half. It appears to me that the Union has lent too much importance to this proposal in view of the fact that conversion from coal to oil fuel on the Lakes is almost complete and coal-passers and coal burning ships are rapidly disappearing from the scene. I therefore recommend that this Union overtime request be rejected.

Section 21—Longshore work by the crew

The Union has made addition to the existing language by including dunnage as longshoremen's work. On checking with the longshoremen's Union I find dunnage is considered to be longshoremen's work and therefore I recommend acceptance of this Union proposal.

Section 22—Stewards' department

The Union has asked that where stewards are required to assist to handle stores from the dock to the ship after their eight hours have been completed they should be paid for this work at the regular overtime rate. The language in this Union proposal seems to be exactly similar to the language contained in Section 9 of the Union's proposals with regard to oilers and firemen handling stores from the dock to the ship. The company accepted Section 9 of the Union's proposals, and in fact in their own proposal made some of the provisions for this eventuality. With regard to the Stewards' department, however, the company was firmly opposed to the Union suggestion and I could not discover the reason for this most determined opposition. I was left with the feeling, after hearing the arguments of both sides, that the stewards were subject to considerable abuse with regard to the handling of stores and that the company wished to continue this abuse. I noted that the Union's challenge to the company to bring the figures of overtime payments to the stewards for this type of work over the life of the last contract was not answered and no figures were produced. To me this situation reveals an ominous and rather unsatisfactory disposition on this point. I believe that consistency in the contract language is essential. The company has already agreed the engine department be given this provision and I find it no less than fair to recommend that the similar provision for the stewards as contained in this proposal be granted in full.

Section 23—Interruption of work

The employees through the Union have requested that they not be forced to place themselves in jeopardy by being required to work behind legal picket lines. This is an important proposal. In evidence the Union submitted details of men being in-

jured and in fact being put in jail when they sought to protect themselves against a 500 man Communist picket line last year on the Northland Navigation docks in Vancouver. Apparently no protection was given the men and neither medical aid nor legal counsel was extended to those who were hurt and those who were put in jail as a result of their efforts to go to work. This is an intolerable situation. In this case men suffered physical injury or criminal incarceration as a result of their efforts to go to work. On the other hand, had they refused they would have placed themselves in financial jeopardy or under jail sentences by actions taken in law against them by their employer. I must hold that where this lack of protection is so obvious, contractual language must be designed to meet the situation. Therefore I recommend that this Union request be granted.

Section 24—Shipwreck

The Union has requested that where employees suffered loss of personal effects through marine disaster they be compensated by the payment of \$500. The company gives cognizance to this problem to a degree. The company suggests \$300 upon proof of loss. I find the company's offer anomalous. It is my opinion that if proof of loss can be had there should be no limit to the amount payable. It is my recommendation that the company's request be rejected and the Union request be accepted.

Term of the agreement

I recommend that the agreement cover a term of one calendar year from the date of the expiration of the previous contract.

Company proposals

The company submitted certain new proposals at the final hearing of the Board. Since these had not been submitted to the Union during negotiations, nor to the conciliation officer before the appointment of this Board, I find that it is precluded from giving consideration to the proposals.

The above I would humbly submit covers all the points in dispute between the parties and I would therefore respectfully submit this as my report with regard to the above cited dispute.

Report of Board in Dispute between

National Harbours Board (Fleet Department, Montreal Harbour)
and

Seafarers' International Union of North America, Canadian District

The hearings of the Board took place in Montreal on June 27, 1960. Each party presented its case and was afforded an opportunity for rebuttal.

Having heard and examined the submissions of the parties, and having duly deliberated thereon, the Board finds and recommends as is hereinafter set out.

1. Wages

The Union requests an increase of 25 per cent in monthly wages and overtime rates. In support of this request, it compares the monthly rates paid by the employer with the monthly rates of pay of Great Lakes sailors and contends that the result shows a wide gap.

Having considered the two sets of monthly rates, the Board finds that they are not comparable in that the rates for the Great Lakes sailors are based on a working month of 240 hours, whereas those for the employees of the National Harbours Board are based on a working month of 174 hours. When these rates are reduced to an hourly basis, which, in the circumstances, is the only comparable basis, the Board finds that, in fact, the employees of the National Harbours Board now enjoy an advantage in most classifications. However, the Board also takes cognizance of the fact that an increase in wages on the Great Lakes was recently recommended by another board of conciliation.

During September, the Minister of Labour received the Report of the Board of Conciliation and Investigation established to deal with the dispute between the Seafarers' International Union of North America, Canadian District, and National Harbours Board (Fleet Department, Montreal Harbour).

The Board was under the Chairmanship of H. Carl Goldenberg, QC, of Montreal. He was appointed by the Minister in the absence of a joint recommendation from the other two members, Capt. K. L. Crump, and Bernard L. Boulanger, both of Montreal, nominees of the employer and union, respectively.

The majority report which, under the provisions of the Industrial Relations and Disputes Investigation Act, constitutes the report of the Board, was submitted by the chairman and Capt. Crump. The minority report was submitted by Mr. Boulanger.

The majority and minority reports are reproduced here.

Accordingly, having considered the submissions of the parties, and having examined the existing wage schedules of the employees and comparable wages, the Board recommends that the parties enter into a two-year contract commencing January 1, 1960, with a general increase in current basic wage rates and in current overtime rates of 7 per cent, of which 4 per cent shall be retroactive to January 1, 1960, and the remaining 3 per cent shall become effective on January 1, 1961.

The Union also requests that payment of wages should be made on the basis of a 30-day month instead of a calendar month and, furthermore, that wages be paid every second Friday. The Board does not recommend that these changes be made and points out that with respect to the request for payment every second Friday, serious accounting difficulties would be encountered.

2. Statutory holidays

The Union requests an additional paid statutory holiday and the employer has agreed to recognize Victoria Day as such. The Board recommends that this agreement be incorporated in the new contract between the parties.

3. Annual Vacation

The Union requests that the annual vacation of its employees be based on effective working time instead of on a calendar month.

The Board finds that under the expired contract, the employees are entitled to an annual vacation of 21 calendar days, that is, 15 working days, for 12 months worked. The Board recommends that, without increasing or decreasing the annual vacation entitlement, the vacation clause should be redrafted so that the annual vacation will be calculated on the basis of working days instead of calendar days in the month.

The Board draws the attention of the parties to the provision of the expired agreement under which an employee forfeits all rights to vacation credit if his service is terminated for any reason whatsoever before completing six months service, or if he is discharged for cause at any time, and recommends that this clause be deleted as being in contravention of the Annual Vacations Act.

4. Hours of service

The Union requests that the provision of the expired contract which requires employees to work eight hours in a spread of sixteen hours be changed to reduce the spread to twelve hours. The Board finds that the employer has, as a general rule, organized the work in such a way that the day workers in fact work for eight consecutive hours, excluding meal periods. Accordingly, the Board does not recommend that the provision of the contract which allows for a spread of sixteen hours be changed.

The Union also requests that when crew members are required to stand by for security purposes after the completion of their eight-hour duty for the day, they shall be paid at the regular overtime rate.

The Board finds that the situation envisaged by the Union in this case is an extremely rare occurrence because the security function is attended to by night watchmen. Only in the rare case of an emergency affecting the safety of the ship are the employees involved. The Board recommends that, for the new contract, the parties should draft a mutually satisfactory clause which would provide for remuneration for employees held on board for security purposes after completion of eight hours of work, except in the case of an emergency affecting the safety of the ship of which the master shall be the sole judge.

5. General duties

The Union requests that the contract should provide that crew members perform the normal duties of their respective classifications and that work other than such normal duties be paid for at the regular overtime rate, except in the case of an emergency affecting the safety of the ship.

The Board finds no grounds on which to recommend such a provision.

Signed at Montreal, this 8th day of September, 1960.

(Sgd.) H. CARL GOLDENBERG,
Chairman.

(Sgd.) K. L. CRUMP,
Member.

MINORITY REPORT

The Conciliation Board constituted to deal with the above cited dispute has discussed all of the items recorded and has held hearings and received evidence and presentations from both the employees and the employers. It is with regret that I must record for your attention my dissent on the problems having been unable to reconcile my appreciation of this situation with the views of the chairman. I had thought

that possibly a joint report could have been written by myself and the chairman. However, and with all respect, I find myself unable to reconcile the facts as I see them, with the chairman's conviction that the Harbours Board employees are comparative in earning to the commercial unionized sailors employed on the Great Lakes.

The main factor in these proceedings was with regard to the earnings of the Harbour Board employees in relation to commercial employees performing the same work in the industrial area. In this determination I would humbly point out that both the writer and the chairman were placed in excellent circumstances to make a comparison on this argument. Both this nominee and the chairman also served on the boards of conciliation affecting the Lake Carriers Association, which employ thousands of commercial seamen, and the McAllister Towing Ltd., representing tugboat employees in the port of Montreal, which is the closest comparable and commercial neighbour to the Harbours Board operation.

Evidence introduced by the companies in the Lake Carriers conciliation board hearings revealed that the average commercial Lakes seaman earns \$4,500 for a complete season's employment. Evidence introduced by Capt. Oppen of the National Harbours Board at the previous proceedings in this case revealed that the average Harbour Board employee earned \$3,500 for a complete season's employment. Evidence introduced by James D. McAllister at the McAllister Towing Ltd. conciliation board hearings revealed that the tugboat employees of McAllister Towing Ltd. earned an average of \$5,000 for a complete season's employment. All of the foregoing evidence was substantiated from payrolls and was uncontroverted.

In addition, McAllister Towing, the nearest commercial neighbour of the Harbour Board operation, complained about the pay rates tolerated by the union membership on the Harbour Board's equipment in Montreal Harbour, which was termed by Mr. McAllister in these words set forth as a quotation in the following paragraph:

In reviewing the S.I.U. contracts of other companies engaged in tugboat operations in this area this company has recently established that a gross inequity exists amongst the terms and conditions of these contracts. Specifically, McAllister Towing Ltd. is presently paying higher wages than these other companies which are not only similarly occupied, but are also competitors of McAllister Towing Ltd. It is the opinion of this company that McAllister Towing Ltd. is being discriminated against because of its high level of wages under the existing contract. We have compiled a table of comparative wages in the form of Exhibit B.

(Exhibit B presented by McAllister reveals that a McAllister deckhand obtains \$313.33 per month and a Marine Industries and Toronto Towing Company deckhand obtains \$296.50 per month, while a National Harbours Board deckhand obtains only \$245 per month.)

Under Exhibit "G" presented by Mr. McAllister it was revealed that the average earnings for a deckhand during 1959 including weekend and other overtime was \$529.33 per month.

The honourable chairman of this Board held that the Harbours Board employee enjoyed roughly the same hourly rate in comparison with the commercial deckhand due to the fact that the Harbours Board employee worked a 40-hour week while the commercial deckhand "worked" a 48-hour week. In my opinion, this point of view is an over-simplification approaching error. While technically the commercial deckhand "works" a 48-hour week, the fact is that the work that he may perform on Saturdays is extremely limited, being confined to work necessary to the movement of the ship only, and absolutely excluding any and all kinds of maintenance work. When the commercial sailor does perform maintenance work on Saturdays he is paid in addition to his daily wage overtime at the rate of \$2.21 and \$1.76 per hour, depending on his classification. In practical operations the commercial sailor has Saturdays off unless it is an arrival day or a sailing day for the vessel in port.

It was suggested to me by my colleagues that the same formula awarded by the chairman in the Lake Carriers conciliation board award would apply equally as well here. With all sincerity I must state, Mr. Minister, my most profound conviction that this formula which I feel, as I have explained above to be based on error, would not serve as a true and realistic basis for an equitable settlement to this dispute.

This is a Crown company owing a duty and certainly a dignity in its relations with its employees to the public of Canada to which it owes its creation. For that reason the seriousness of writing this dissenting

report has impressed itself upon me insofar as there would appear to be a burden on me to isolate the cancer of this dispute so that success may arise from these conciliation hearings at a future date on the basis on which this dispute is finally settled.

While finding myself in disagreement with my colleagues, I would like to express my appreciation to them for their patience, courtesy and kindness throughout these arduous proceedings.

The following is my award:

Article 2—General conditions of work

It is my award that the work spread be reduced to 12 hours as requested by the employees and it is also my award that security and standby watches after the completion of 8 hours be paid for at the regular overtime rate. I would also recommend that crew members be permitted to rotate watches twice monthly.

General duties

I would recommend that crew members perform only the duties traditionally associated with their classifications.

Annual vacation and holidays

I would recommend the employees' request on the computation of vacation for holidays be granted.

Article 4—Salaries

In view of the evidence introduced I find myself with no alternative but to, in all conscience, urge and recommend that the request of the employees for a 25 per cent increase on their wages and overtime rates be granted in full on the basis of a two-year agreement.

The above I humbly submit covers all the points in dispute between the parties and I would therefore respectfully submit this as my report with regard to the above cited dispute.

(Sgd.) BERNARD BOULANGER,
Member.

Signed at Quebec this 3rd day of September, 1960.

CORRECTION

The Canada Labour Relations Board's reasons for judgment in the application for certification affecting the Canadian National Railways and the International Longshoremen's and Warehousemen's Union and the Canadian Brotherhood of Railway, Transport and General Workers, published on pages 916 and 917 (September issue), shows W. S. Mason and Elroy Robson as members of the Board. This is incorrect. Mr. Mason was representing the CNR; Mr. Robson, the CBRT and GW.

LABOUR LAW

Labour Relations Legislation in 1960

Three provinces—Ontario, Alberta, Newfoundland—substantially revise labour relations legislation at 1960 sessions; Quebec made important amendments at 1959 fall session. New Newfoundland legislation requires unions to register

At the 1960 sessions of the provincial legislatures, Ontario, Alberta and Newfoundland substantially revised their labour relations legislation. Newfoundland enacted new legislation for the regulation of trade unions.

Important amendments to the Quebec Labour Relations Act were passed at the 1959 fall session, and an amendment to the Civil Code permits unincorporated unions, under certain conditions, to institute court actions.

An amendment in New Brunswick dealt only with the composition and operation of the Labour Relations Board. A procedure for revoking certification was established in Prince Edward Island. Amendments to the Judicature Acts in Ontario and Alberta dealt with the use of injunctions in labour disputes.

The amendments to the Ontario Labour Relations Act followed upon an extensive inquiry into the Act between 1957 and 1959. A Select Committee on Labour Relations of the Ontario Legislature examined the operation and administration of the Act and heard submissions from numerous organizations and individuals. Its recommendations, tabled in the Ontario Legislature on February 2, 1959, have been previously reported (L.G. 1959, p. 366).

The amendments brought forward by the Government included some principles new in the Ontario legislation as well as a number of changes aimed at more effective implementation. Among those containing new features are a procedure for dealing with jurisdictional disputes between unions regarding work assignments, the use of a mediator selected by the parties to assist in the settlement of contract disputes arising out of contract negotiations, a definition of the duties and powers of an arbitrator dealing with disputes arising out of a collective agreement, a new provision for the

enforcement of arbitration awards, some limitation upon union security agreements, and several provisions placing certain duties upon unions in respect to internal conduct.

Authority was provided to make regulations requiring the filing with the Department of Insurance of audited financial statements of the affairs of pension or welfare funds. The amending Act came into force on October 22.

The Alberta amendments also followed conferences with employer and union groups in the province, and were introduced after a draft had been circulated for comments. Among the changes is a provision for invoking emergency provisions if a strike in certain essential services threatens danger to life or property, prohibiting work stoppages and authorizing the Minister to prescribe appropriate procedures for settlement. Picketing in support of an illegal strike was made illegal, and the Board is directed not to certify a union if membership in the union directly resulted from picketing.

A number of amendments to the Newfoundland Act made changes arising out of experience in administration since the Act was adopted in 1950 and are similar to those adopted in other provinces. One which is new in legislation in Canada is a provision that seeks to make a union security provision requiring union membership as a condition of employment effective only if membership in the union is available to the employee concerned. The Newfoundland Trade Union Act, which requires unions operating in the province to be registered with the Department of Labour and imposes a number of duties upon trade unions with respect to their internal affairs, is unique in Canada.

The more important of the changes effected by these ten enactments are reviewed below under subject matter headings.

This section, prepared by the Legislation Branch, reviews labour laws as they are enacted by Parliament and the provincial legislatures, regulations under these laws, and selected court decisions affecting labour.

Certification of Bargaining Agents

ONTARIO

A change was made in Ontario with respect to craft units. The Ontario Select Committee recommended that the Labour Relations Board should have discretionary power to consider industrial unit history as well as craft history when application for certification is made by members of a craft unit. This recommendation was in line with representations made to the Committee by both the Ontario Division of the Canadian Manufacturers' Association and the Ontario Federation of Labour that the Board should be authorized to refuse to certify a bargaining agent for a craft group where there has been an established practice of plant-wide bargaining.

Before the amendment, the Act stated that any group of employees who were found by the Board to meet certain craft tests "shall be deemed by the Board to be a unit appropriate for collective bargaining." The following words have now been added: "but the Board shall not be required to apply this subsection where the group of employees is included in a bargaining unit represented by another bargaining agent at the time the application is made." The effect is that where the employees in a craft group are a part of a plant unit, the Board is given discretion to determine whether the craft principle is to override other considerations in the determination of the appropriate bargaining unit.

A new section provides for a pre-hearing representation vote. Under existing procedures, a vote is not ordered until the hearings have been held and the appropriate unit has been defined, so that the time taken to process the application is increased by the time taken to conduct the vote. Under the new provision, if the applicant trade union requests a pre-hearing vote, the Board may determine "a voting constituency" and, if it appears to the Board on an examination of the records of the trade union and the employer that not less than 45 per cent of the voting constituency were members of the trade union at the time the application was made, the Board may direct that a representation vote be taken among the employees in the voting constituency. The Board may direct the ballot box to be sealed and the ballots not counted until the parties have been given full opportunity to present their evidence and submissions to the Board.

When the Board has defined the appropriate unit, if it is satisfied that not less than 45 per cent of the employees in the bargaining unit were members of the trade

union at the time the application was made, the pre-hearing vote has the same effect as a representation vote. That is, if more than 50 per cent of the employees in the appropriate unit voted in favour of the union, the union will be certified. The effect of the new procedure may be to reduce the time required to reach a decision on an application for certification.

As before, the Act provides that the Board shall not certify a union if an employer has been instrumental in forming or supporting it. It is now further stated that a union is not to be certified "if it discriminates against any person because of his race, creed, colour, nationality or place of origin"; and a collective agreement which discriminates against any person on these grounds is not to be deemed a collective agreement for the purposes of the Act. As before, an agreement between an employer-dominated union and an employer is not recognized under the Act. The wording of the provisions dealing with discrimination has been brought in line with the wording of the Fair Employment Practices Act.

ALBERTA

The Alberta amendment also made changes in regard to certification procedures. It is the only one of the provincial Acts that attempts to expedite processing of applications for certification by setting time limits within which the Board is required to complete its inquiries. Before the amendment, the time limits were 21 days after receipt of the application, and an additional period of seven days if necessary. The amendment extended this additional period from seven to 21 days, which brings the total period allowed to 42 days exclusive of Saturdays, Sundays and other holidays.

Presumably to deal with a situation where picketing has, in the opinion of the Board, interfered with the employees' free choice of a bargaining agent, there is a new provision stating that a trade union shall not be certified, if, in the opinion of the Board, "application for membership or membership in the trade union directly resulted from picketing of the place of business of the employer at which the employees affected are employed, or elsewhere." Further, where an employer has recognized a trade union as bargaining agent and has entered into an agreement, if recognition resulted from picketing, the collective agreement will not be deemed to be an agreement under the Act.

"Suspension" of certificates, a term introduced into the Alberta Act in 1954, has in effect been removed. The amending Act replaces the expression "suspension" by

"revocation" and makes the open periods for an application for revocation of a certificate the same as the open periods for an application for certification of a bargaining agent.

As before, a certificate is to be revoked if the Board, after determining the merits of the application, is satisfied that the majority of the employees no longer wish to be represented by the bargaining agent. A new provision authorizes the Board to revoke certification if it is satisfied that the bargaining agent "has ceased to be a proper bargaining agent."

A collective agreement in effect at the time of the revocation of a certificate becomes void and of no effect. However, a trade union whose certificate has been revoked may apply for certification at any time for the same unit of employees or a part of it, and if it is again certified, the voided collective agreement again comes into effect if the termination date has not been reached.

With respect to representation votes, the Board may now delete from the list of employees entitled to vote any who have been laid off or whose employment has terminated. Formerly the Board had no discretion in the matter: the Act provided that a person who was an employee immediately before the date of the application "shall be deemed to be an employee." Persons who were employees immediately before a conciliator was appointed or before a legal strike or lockout must still be deemed to be employees until the dispute is settled.

Where the parties to a collective agreement agree to continue its operation for any period less than one year or for an unspecified period while they are bargaining, the continued operation of the agreement does not constitute a bar to an application for certification. Neither does an agreement constitute a bar where notice to commence bargaining has been given and the collective agreement provides for the continuation of the agreement beyond the first termination date.

NEWFOUNDLAND

Provisions inserted in the Newfoundland Act in 1959 setting out the conditions under which a certificate of a bargaining agent may be revoked were revised by the 1960 amendment. As revised, the Act authorizes the Board to revoke the certificate where, after investigation, it has determined that a bargaining agent no longer represents a majority of employees in the unit, or, in the case of a union that holds bargaining rights by virtue of being a party to a collective agreement with the employer (a situa-

tion which was not covered in the 1959 amendment), to issue a declaration terminating such bargaining rights. The Board may act upon its own motion, and make such investigation as it sees fit, but a hearing must be held if requested by any party concerned.

The 1959 provisions requiring the Board to decertify a union on the grounds that any of its officers had been convicted of offences in connection with labour disputes, or where a judgment had been entered against the union for tortious acts, were repealed.

PRINCE EDWARD ISLAND

An amendment to the Prince Edward Island Trade Union Act provided a procedure for revoking a certification order issued under the Act. As amended, the Act gives the Minister of Labour authority to revoke certification of a bargaining agent after it has been in effect for at least ten months where, in his opinion, the trade union no longer represents a majority of employees or has ceased to be a unit appropriate for collective bargaining. In accordance with a 1959 amendment, the Labour Relations Board may be authorized to carry out any function of the Minister under the Act.

By the same amendment the Act was declared not to apply to an employer carrying on business of a seasonal nature which does not require general employment for a period in excess of six months in a year.

Collective Bargaining

Composition of Bargaining Committee

The Newfoundland Act, until the 1960 amendment, did not lay down any requirements in regard to the composition of bargaining committees. It now specifies that during collective bargaining a trade union is to be represented by a bargaining committee consisting of employees of the employer who are in the trade union. The committee may also include one or more officers or other representatives of the trade union.

If the union is bargaining with an employers' organization or group of employers, the bargaining committee must consist of employees of one or more members of that organization or group. If the bargaining unit consists of not more than 15 employees, at least one employee from the unit is to be on the committee, and if it consists of more than 15 employees, two employees. This provision is similar to the section added to the Ontario Act in 1954.

The Newfoundland Act goes on to provide that during bargaining an employer is to be personally present or to be represented by a person authorized by him to bargain collectively with his employees. When an employers' organization which comprises three or more employers is engaged in collective bargaining, the organization is to be represented by at least three of the employers, or their authorized representatives, whose employees are concerned in the bargaining, and those employers or their representatives shall have authority to bargain collectively on behalf of the organization.

Notice to Bargain

A change in Alberta, in respect to notice to bargain for the revision or renewal of an agreement, now specifies that the notice must be given not less than 30 days and not more than 60 days before the date of expiry of the agreement, instead of any time in the last two months, as formerly.

A similar change was made in Newfoundland, but the Newfoundland Act provides that the parties to a collective agreement may include in the terms of the agreement a specified time limit for the giving of notice, which may differ from the period specified in the state.

Altering Conditions of Employment

NEWFOUNDLAND

A new provision in the Newfoundland Act prohibits an employer, in the period during which an application for certification is being dealt with, from altering rates of wages or any other term or condition of employment for the employees in the unit concerned, without consent by or on behalf of the employees. A similar provision already in the Act applies to the period of negotiation of a collective agreement, including the conciliation period. It formerly stipulated that in this period the employer was not permitted, without consent, to decrease the rate of wages. The word "decrease" has now been changed to "alter".

ALBERTA

The comparable provision in the Alberta Act was also amended. Previously, the "freeze" period extended from the date of an application for certification until the date the application was disposed of. Now it extends from the date of the application until the date it is refused or until 30 days after the date of certification, unless a collective agreement is entered into in the meantime.

During this period "the relationship of employer and employee continues uninterrupted by any matter or thing arising out of the application, and none of the parties shall alter any of the conditions of employment except that the employer, with the consent of the bargaining agent, may give effect to a proposed change in wages or hours." The same stipulation applies, where a dispute exists, until 14 days after the date of the vote on the award.

Transfer of Ownership

A new provision was added to the Newfoundland Act to deal with the situation where the ownership of a business has been transferred. A bargaining agent that has been certified in respect of the employees before the transfer continues to be the bargaining agent within the meaning of the Act, and a collective agreement concluded between the bargaining agent and the former owner is binding on the person to whom ownership of the business has been transferred. Somewhat similar provisions are found in the Acts of British Columbia, Alberta, Manitoba and Saskatchewan.

Collective Agreements

Limitation on Union Security Provisions

ONTARIO

The Ontario Act provides that the parties to a collective agreement may include in an agreement provisions "for requiring as a condition of employment membership in the trade union that is a party to or is bound by the agreement or granting a preference of employment to members of such trade union or requiring the payment of dues or contributions to such trade union."

The Select Committee stated in its report that evidence was produced that in some instances union organizers are forcing employers to sign a union shop contract when as a matter of fact none of the employees in the bargaining unit is a member of the union. The Committee recommended "that no collective bargaining agreement shall include a provision for a closed shop or union shop unless the trade union first shall have been certified by the Labour Relations Board as the bargaining agent of the bargaining unit affected, or unless the union otherwise establishes that at the time the agreement was entered into it did in fact have as members in good standing the majority of the employees in the bargaining unit required for automatic certification."

In accordance with this recommendation, the Act was amended by adding the stipulation that an employer and an uncertified trade union may not enter into a first agreement containing a clause requiring union membership as a condition of employment unless the union has established at the time it entered into the agreement that not less than 55 per cent of the employees in the bargaining unit were members of the trade union.

This limitation does not apply to a certified bargaining agent, which has had to establish as a condition of its certification either that 55 per cent or more of the employees in the unit are union members or that at least 45 per cent of the employees in the unit are union members and an additional 6 per cent are in favour of it as a bargaining agent; nor does it apply to an uncertified union once it has had an agreement for a year or more. The limitation does not apply either where an employer joins an employers' organization and agrees to be bound by an existing agreement requiring union membership as a condition of employment, nor does it apply to employers and employees engaged on construction projects "at the site thereof."

Before the amendment, the Act provided that where a collective agreement makes membership in a trade union a condition of employment, an employer was prohibited from discharging an employee who had been expelled or suspended solely because he was a member of another trade union. The amendment widens this provision, to take in also a situation where membership in the trade union has been denied or withheld from an employee because he is a member of another trade union, and it now covers also a situation where an employee has lost membership or has been denied membership because he has engaged in activity against the trade union.

When the Bill was being considered by the Committee on Labour, an amendment was proposed and was subsequently passed stating that this provision protecting the employment of a person to whom union membership is not available "does not apply to an employee who has engaged in unlawful activity against the trade union... or any officer, official or agent thereof or whose activity against such trade union or on behalf of another trade union has been instigated or procured by his employer or any person acting on his employer's behalf or whose employer or any person acting on his employer's behalf has participated in such activity or contributed financial or other support to the employee in respect of such activity."

A change was made also in the Newfoundland Act with respect to the conditions under which a clause in an agreement requiring union membership as a condition of employment may be implemented by an employer. Added to the stipulation that a provision in an agreement is not valid if it requires an employer to discharge an employee because he is a member of or engages in activities on behalf of another trade union, is a new provision to the effect that an employer may employ a person, notwithstanding the terms of the agreement, who is otherwise qualified for employment and who has applied for membership in the union but has been refused membership by the union.

It is then stated that a provision in a union constitution or by-laws which is designed or operates to exclude such a person from membership in the union is invalid. It is further stated that this new provision does not excuse an employee from complying with the constitution, rules and by-laws of a union of which he becomes a member. During passage a further clause was added stating that "nothing contained in this Act shall be deemed to invalidate any provision in respect of seniority of employees contained in a collective agreement."

Check-Off

In Alberta, the check-off provision was amended to require an employer to check off an initiation fee "not to exceed an amount equivalent to one month's union dues" if the employee signs an authorization.

Dispute Settlement

Disputes Arising out of an Agreement

The amendments in Ontario, Alberta and Newfoundland all made changes in the provisions of the Acts requiring collective agreements to contain procedures for the settlement without stoppage of work of disputes arising out of the agreement.

ONTARIO

The Ontario amendment followed recommendations of the Select Committee, to the effect that measures should be taken to expedite arbitration proceedings, to give the arbitrator powers of inquiry, and to ensure implementation of the award.

A provision was added stating that where a party to the arbitration complains to the Minister that the arbitrator has failed to render a decision "in a reasonable time,"

the Minister may, after consulting the parties and the arbitrator, issue an order "to ensure that a decision will be rendered . . . without further undue delay."

Arbitrators were given extended powers, similar to those enjoyed by conciliation boards, except that arbitrators have no power to compel witnesses to produce "documents and things."

To ensure compliance with an award, where there is a failure to comply with any of the terms of an award within 14 days, any "party, employer, trade union or employee" affected by the decision may file in the office of the Registrar of the Supreme Court a copy of the operative part of the decision and thereupon the decision is enforceable as a judgment or order of that court.

Another recommendation of the Committee was that awards should be filed with the Department of Labour and that they should be indexed and made available for inspection. The amendment authorizes regulations to be made requiring the filing with the Department of Labour of arbitration awards.

ALBERTA AND NEWFOUNDLAND

Both the Alberta and Newfoundland Acts, prior to this year's amendments, provided that where the parties to an agreement failed to include in it an arbitration clause as required by the Act, the Board was authorized, on the application of either party, to prescribe a clause which was to be deemed to be a term of the agreement and binding on the parties. The effect of the amendment in each province is that a clause is now spelled out in the Act. When the Board finds that there is no arbitration procedure, or no adequate procedure, this clause is to be deemed to be a part of the agreement.

In Alberta, the requirement as now stated is that every collective agreement shall contain a provision for settlement of disputes arising out of the agreement without stoppage of work or refusal to perform work. The main points in the prescribed clause are that if a difference arises, the parties are to meet and endeavour to resolve it. If they fail to do so, they are to establish a three-member grievance board. If the two members appointed by the parties fail to select a chairman the Minister of Labour is to appoint one.

The jurisdiction of the grievance board is defined so as to make it clear that the board may not change, modify or alter any of the terms of the agreement. All differences submitted must present an arbitrable

issue under the agreement and not involve the determination of a subject matter not covered by or arising during the term of the agreement.

The grievance board is required to render its decision not later than 14 days after the appointment of the chairman, but the time may be extended with the consent of both parties. The parties to the dispute are to share the costs equally.

The prescribed clause in the Newfoundland Act also requires the setting up of a three-man arbitration board. Where one of the parties fails to name an arbitrator, or if the two arbitrators named by the parties fail to agree upon a chairman, then the Minister, on the request of either party, makes the appointments. The arbitration board may deal with any dispute arising out of the interpretation, application, administration or alleged violation of the agreement, including any question as to whether a matter is arbitrable.

Contract Negotiation Disputes

ONTARIO

In its report, the Ontario Select Committee observed that a large percentage of the suggestions received by the Committee concerned the conciliation process and that criticism was directed at the Department, its conciliation services and the personnel of boards for the delay between the filing of the application for conciliation services and receipt of the Board report.

Among the suggestions from the union briefs for remedying the situation were the following: the conciliation board stage should be eliminated; the board stage should be optional, at the request of either party; unions should be free to strike 90 days after the expiration of the contract.

The Committee studied the causes of the delay at each stage of the conciliation process, and came to the conclusion that the delays were frequently due to difficulties beyond the control of the conciliation officer or board chairman. It concluded also that the whole process is designed to assist the parties to reach a voluntary settlement, and if such assistance does take five or six months, such effort is worth while if it proves the means by which strikes are avoided. The record showed, in their opinion, that conciliation officers and boards had achieved a commendable record.

The report did not suggest any fundamental change in the conciliation process, but suggested a number of ways in which the Department of Labour might promote the training and recruitment of skilled conciliators.

The Ontario amendment seeks to deal with the problem of delays by enabling the Minister to intervene to prevent delays in setting up a conciliation board and by revising the provisions of the Act dealing with time limits at the board stage. If in the opinion of the Minister a member of a conciliation board has failed to enter on his duties so as to enable it to report to the Minister within a reasonable time after its appointment, the Minister may appoint a member in his place after consulting the party whose point of view was represented. Similarly, if a chairman is unable to enter on his duties, he has a duty to advise the Minister of his inability and the Minister may appoint another person in his place.

The chairman of a conciliation board is required to communicate to the Minister the date of the first sitting of the board immediately upon its conclusion. The board is required to report its findings and recommendations to the Minister within 30 days of that date. However, the chairman of the board may apply to the Minister for one extension of 30 days, and the initial 30-day period may be extended by agreement of the parties for a period not exceeding 90 days. Any extension beyond 90 days will require the consent of the Minister.

Where a conciliation board fails to reach a majority decision, or where the board is unable to report within the time allowed, the notification of the chairman stating such circumstances constitutes the report of the conciliation board.

Another amendment proposes to give to the parties to a dispute the means of settling their differences through a mediator of their own choosing. Where the parties are entitled to conciliation services under the Act, they may request the Minister to appoint a mediator selected by them. Such a mediator is to "confer with the parties and endeavour to effect a collective agreement." He has the same powers of investigation and inquiry as a conciliation board, and the same period (now 30 days after the first sitting, with possible extensions) to report his findings and recommendations. The report of a mediator has the same effect as the report of a conciliation board. His remuneration and expenses are to be borne equally by the parties.

NEWFOUNDLAND

Another new provision in Newfoundland requires that on receipt of a conciliation board report the parties must notify the Minister of their positions with respect to the report. Within 15 days of receipt of

the report, each party must notify him which, if any, of the recommendations have been accepted or rejected.

Disputes Affecting Essential Services

ALBERTA

A new provision in the Alberta Act deals with disputes in certain essential services. When, in the opinion of the Lieutenant-Governor in Council, a state of emergency exists in the province in such circumstances that life or property would be in serious jeopardy by reason of a breakdown or impending breakdown in the supply of water, heat, electricity or gas to the public, or a stoppage or impending stoppage of hospital services in any area, if the state of emergency arises from a labour dispute, the Lieutenant-Governor in Council may by proclamation declare that on a fixed date normal procedures in the dispute are to be replaced by emergency procedures. After that date any strike or lockout or other action in the labour dispute otherwise authorized or permitted under the Act in a labour dispute becomes illegal and an offence under the Act.

The Minister of Labour is "forthwith" to establish a procedure to assist the parties to the dispute to reach a settlement and is empowered "to do all such things as may be necessary to settle the dispute," and in the meantime the *status quo* is to be maintained, except that the employer, with the consent of the bargaining agent, may give effect to a proposed change in wages and hours.

Jurisdictional Disputes

New provisions dealing with jurisdictional disputes related to work assignment were introduced into both the Alberta and Ontario Acts.

ALBERTA

The Alberta Act, as amended, makes it an unfair labour practice on the part of an employee to refuse to perform work for his employer, and on the part of an officer or representative of a trade union or employees' organization to encourage or consent to such refusal, for the reason that other work is assigned to members or non-members of a trade union or other organization. No special machinery for settling work assignment disputes is provided for in the amendment.

The Ontario amendment states that the Lieutenant-Governor in Council may appoint one or more jurisdictional disputes commissions composed of one or more persons. Regulations may be issued regarding the functioning of these commissions, their practice and procedure.

The Labour Relations Board, after receiving a complaint that an employer is assigning particular work to employees in a particular trade union rather than to employees in another union, or that a trade union is requiring an employer to do so, may refer the complaint to a jurisdictional disputes commission.

The commission, after consulting any person or organization that in its opinion may be affected by the complaint, may issue such interim order with respect to the assignment of the work as it, in its discretion, deems proper in the circumstances. The employer, trade union and their officials or agents have to comply with the interim order.

When requested by any person or organization affected by the interim order, the commission shall reconsider the complaint, provided that the party making the request has complied with the interim order.

Reconsidering the complaint, the commission has to give to any person or organization affected by the interim order full opportunity to present evidence and to make submissions. When the commission finds that, in its opinion, the trade union or its agents or officials are without justification requiring the employer to assign work, or that the employer is unjustifiably assigning work, it will direct the action to be taken by the employer or the union, or by their respective agents or officials as the case may be, with respect to the assignment of work, and the organizations or the persons concerned have to comply with the direction. In conducting its inquiries, the commission has all the powers granted by the Act to a conciliation board, namely, summoning witnesses, administering oaths, accepting evidence at its discretion, entering premises, inspecting work and interrogating people.

Unless appealed to the Labour Relations Board, the direction of the commission is final, but the commission may at any time, if it considers it advisable to do so, reconsider and vary or revoke the direction.

Any party affected by the commission's interim order or direction may, within seven days after release of the decision, apply to the Labour Relations Board for review of the order or direction.

If the finding of the Board is that the interim order or the direction prohibits a lawful strike or lockout, or restrains the parties from observing the provisions of a collective agreement relating to the assignment of work, or prohibits a trade union or an employer from collective bargaining in respect of employees in a bargaining unit on whose behalf a trade union is entitled to bargain, it may quash the interim order or the direction. Or the Board may, if it deems proper, alter the bargaining unit as defined in a certificate or in a collective agreement to enable the interim order or the direction to be carried into effect in conformity with other provisions of the Act. In the latter case, the certificate or collective agreement is deemed to have been altered in accordance with the Board's determination.

In the case of non-compliance with an interim order within two days or of a direction within fourteen days after their release or after the date provided in the interim order or direction, the Labour Relations Board will, at the request of an affected party, file the commission's decision in the office of the Registrar of the Supreme Court and then an interim order or direction becomes enforceable as a judgment or order of that court.

Proceedings to enforce an interim order or a direction may be instituted in the Supreme Court by or against a trade union or an unincorporated employers' organization in their own name, as the case may be.

Orders or directions of a commission are not subject to review in any court. Neither may proceedings before the commission be questioned, reviewed, prohibited or restrained by way of injunction, declaratory judgment, *certiorari*, *mandamus*, prohibition or *quo warranto*.

Where trade unions and employers have made arrangements to resolve disputes arising from the assignment of work, a jurisdictional disputes commission may postpone disposition of a complaint until the parties have dealt with the matter under their arrangements for settlement.

Changes in Enforcement Procedures

QUEBEC

An amendment to the Quebec Labour Relations Act, passed at the fall session and effective January 5, 1960, strengthens the Act's prohibition of discrimination for union activity by providing that an aggrieved employee may bring his case to the Labour Relations Board and that the Board may order the employer to reinstate him with

pay for lost time. A complaint may be made by the employee to the Board within 15 days of his dismissal, suspension or transfer.

If it is shown to the satisfaction of the Board that the employee was exercising a right accorded him under the Act, or engaging in union activity permitted by the Act, the onus is on the employer to establish that the disciplinary action was for another fair and sufficient reason.

In the case of a dismissed employee who is not willing to return, the employer may be required to pay an indemnity equal to wages from the date of dismissal to the eighth day after service of the order requiring reinstatement. An action for recovery of such wages may be brought either by the Board or the employee in the six months following the date of the Board's decision.

The fines for failing to comply with an order of the Board were also increased, so that a firm failing to comply with a reinstatement order would be subject to fines as high as \$1,000 a day.

Another change in enforcement procedure and policy is indicated in a provision which states that "any penal prosecution under this Act may be taken by the Board, or by any interested party with the written authorization of the Board or the consent of the Attorney-General." This seems to contemplate the initiation of prosecutions by the Board in some situations.

ONTARIO

Changes were also made in the Ontario Act with respect to the way complaints of individuals are to be dealt with. As the Act stands, the Minister is authorized to inquire into a complaint that any person has been refused employment, discharged, discriminated against, threatened, coerced, intimidated or otherwise dealt with contrary to the Act, first by appointing a conciliation officer to effect a settlement, and if he cannot do so, by appointing an inquiry commissioner and issuing an order based on his recommendation. The amending Act repeals this authority, and instead empowers the Board to deal with such complaints.

The Board may authorize a field officer to inquire into a complaint and endeavour to effect a settlement. If he is unable to do so, the Board itself undertakes an inquiry and determines the action to be taken by the employer and trade union or either of them. Such determination of the Board may, in the Board's discretion, "notwith-

standing the provisions of a collective agreement, include reinstatement in employment with or without compensation by the employer and the trade union or either of them for loss of earnings and other employment benefits."

A new method of enforcement has also been adopted, in that, if the determination of the Board is not complied with in 14 days, any employer, trade union or employee may notify the Board of such failure, and the Board will file a copy of the determination in the office of the Registrar of the Supreme Court and the determination becomes enforceable as a judgment or order of that court.

ALBERTA

A new section has been added to the Alberta Act providing for the reference of certain differences to the Board of Industrial Relations. Where a difference exists between parties concerning the application or operation of the provisions of Part V of the Act, either of the parties may refer the difference to the Board. The Board may cause an investigation to be made as to the facts and in the course of the investigation call the parties concerned before it. The Board is to make full inquiry and endeavour to bring about agreement between the parties. If such agreement cannot be reached, the Board may make recommendations as to the course to be taken by the parties, and if this fails, the Board has power to take further action to secure compliance, subject to the provision that the consent of the Minister must be obtained for any prosecution under Part V.

Labour Relations Boards

Amendments in Quebec, New Brunswick and Newfoundland made changes in the composition or method of operation of the respective Labour Relations Boards.

QUEBEC

The amendment in Quebec provided for a larger board and specifically stated the principle of equal representation of management and labour groups. The new Board consists of a chairman, a vice-chairman and six other members, three representing employers and three representing employees, to be recommended by the most representative labour and employers' associations and appointed by the Lieutenant-Governor in Council. The Board may sit in two divisions, at Montreal and Quebec or elsewhere.

NEW BRUNSWICK

In New Brunswick the Act was amended to authorize the Lieutenant-Governor in Council to appoint an alternate chairman, who will act as chairman when the chairman is unable to perform his functions or "at such times or in such matters as the chairman may direct". As in Quebec, the amendment will enable the Board to sit in two divisions, each with the powers and duties of the full Board.

NEWFOUNDLAND

The amendments in Newfoundland provide for the appointment of an alternate member representative of employers and an alternate member representative of employees to serve on the board in the absence of the regular member or where that person has an undue interest in the matter under consideration. A member has "undue interest" if he declares that he has such an interest or if a majority of other members of the Board declare that he has. This is similar to a provision in effect in Manitoba with respect to the Manitoba Labour Board.

The Newfoundland amendment also provides that the term of office of the chairman, vice-chairman and members and alternate members is to be two years, the term of office of one employer representative and one employee representative expiring each year. Although the term of office is two years they hold office during pleasure and are eligible for reappointment.

Unions: Registration, Legal Status, etc.

The Trade Union Act, which came into effect in Newfoundland on October 1, is the first example in Canada of legislation requiring unions to register and to conform with certain rules as a condition of existence as trade unions. It also modifies the legal status of unions, imposes certain obligations upon unions in respect to their internal government, and requires them to report certain matters to an official of the Department of Labour.

Newfoundland has had trade union legislation since before Confederation. The Trade Union Act in effect at the time of Confederation provided for voluntary registration of trade unions and made the United Kingdom Trade Disputes Act, 1906 applicable to such unions. In 1950 this Act was replaced by one that again provided for voluntary registration and incorporated some of the provisions of the 1906 United Kingdom Act protecting registered unions from civil actions. The 1950 Act has now been repealed.

A union is defined in the new Act, and also in the Labour Relations Act as amended this year, as "a local or provincial organization or association of employees, or a local or provincial branch of a national or international organization or association of employees within the province that has as one of its purposes the regulation in the province of relations between employers and employees through collective bargaining but does not include an organization or association of employees that is dominated or influenced by an employer."

Registration of Unions

The Act establishes in the Department of Labour an office to be known as the Registry of Trade Unions, presided over by an officer called the Registrar appointed by the Lieutenant-Governor in Council. In the absence of the Registrar, or where none has been appointed, an official of the Department named by the Minister is authorized to carry out the Registrar's duties.

A union is required to apply to the Registrar for registration within six months after the date of the formation of the union or the coming into force of the Act, whichever is the later date. The Registrar may extend this time limit "for good reason".

Before a union can apply for registration, it is required to appoint "trustees," not fewer than three and not more than seven. The trustees have to be members of the union resident in the province. They continue after registration and hold office until their successors are appointed by the union. The real and personal property belonging to a registered union "shall vest in the trustees... for the use and benefit of the union and its members."

Two union officers must submit the application in a form to be prescribed by regulations, along with a statement showing the number of members in good standing; the trustees and officers of the union giving their names, addresses and functions; a copy of the union's rules and a copy of the latest audited financial statement of the union.

The Registrar, within 30 days after receipt of the application, will register the union and issue a certificate of registration, or he may refuse to register a union if the application was not made accordingly to the Act or if the union has not complied with the provisions of the Act.

Further, a union cannot be registered under a name that is identical with that by which another union has already been

registered, or if the name so nearly resembles the name already registered as to be calculated to deceive.

A trade union that fails to apply for registration within the statutory time limits or does not fully comply with the registration procedure within six months (or such longer time as allowed by the Registrar) after the date of application is guilty of an offence and liable on summary conviction to a fine of \$500. Non-compliance at the end of a further period of six months entails a fine of \$2,500. A union that, because of its failure to comply with the Act, has not been registered within six months after the date of such a second conviction shall be dissolved.

Union Constitutions

The Act specifies that "the rules of a union shall contain all the rules for the government, regulation, conduct and management of the union" and that the rules are binding upon union members.

The rules must set out the name and objects of the union; qualifications for membership and conditions for continuation and loss of membership; the circumstances under which a member may be fined, suspended or expelled and the conditions for reinstatement; the amount of initiation fees and membership dues or the fee on reinstatement; the calling of meetings and requirements for a quorum; provisions for trustees, officers, executive members, committees and auditors, the method of their election or appointment, their term of office and methods of removal; the purposes for which union funds may be used; the manner in which they may be invested and the requirement that an audited statement of receipts and disbursements shall be submitted to each annual meeting and posted during the meeting; breaches of the rules in respect of which fines may be levied and the amount of those fines; provisions for appeals by members against fines, forfeitures, suspensions and expulsions; the benefits to which members are entitled and the conditions for authorizing benefits; provision for dissolution of the union and distribution of funds on dissolution; and provisions for amending the rules.

As stated above, a copy of the rules is to be filed with the Registrar, along with an application for registration. Subsequently, the union is required to file each new rule or change in rules with the Registrar, who is to register it if it does not conflict with any provision of the Act or regulations. If he refuses to register a rule, he is

required to give the union written notice of his refusal stating the reasons. A rule is not binding on a union or its members unless it has been registered.

The secretary or other officer of a union is required to supply each member when he joins with a copy of the rules and within two months after it has been registered a copy of each rule that the union subsequently makes. Any additional copy required shall be supplied by the secretary at cost. A union is required to give a written receipt of money paid by a member showing what the payment represents or other evidence of receipt such as stamps or buttons. Copies of the annual financial statement are to be supplied to union members on request at a charge of not more than 25 cents. The secretary of a union is to have custody of and preserve all correspondence received and copies of correspondence sent, and a permanent record of all decisions made by the union or the executive.

A union may change its name by the consent of two-thirds of its members. The change must be reported to the Registrar, who shall issue a certificate showing the new name and the former name of the union. A change of name does not affect any rights or obligations of the union or any legal proceedings by or against it.

With the approval of two-thirds of its members a union may amalgamate with another union, except with an unregistered union. By an advertisement satisfactory to the Registrar, a union must notify its creditors of its intention to amalgamate with another union, the name of such union, and the date on which the amalgamation becomes effective. The union that results from the amalgamation has the rights and liabilities of each of the amalgamating unions. The conditions for registration apply to the body resulting from the amalgamation.

Reporting Requirements

Besides the reports required in connection with an application for registration, the making of a new union rule, change of name or amalgamation, a union must make annual returns to the Registrar, within one month after the date of each annual meeting, showing the trustees, officers and other executive members and their addresses and an audited financial statement, including the auditor's report. Any change of mailing address has to be reported within a week. A union must also report the name of any organization with which it is associated or affiliated as a result of the granting of a

charter or an agreement, or any organization of which it is a member or in which it is represented.

The information filed with the Registrar is to be divulged only to the Minister or his Deputy, unless regulations are issued permitting him to do otherwise. He is, however, at the beginning of each calendar year to publish in the Newfoundland Gazette and at least one newspaper a report listing the unions to whom certificates have been issued, whose certificates have been cancelled or suspended, which he has refused to register, whose names have been changed, which have amalgamated, and those resulting from amalgamation.

If the Registrar believes that a union is not complying with its rules or with the Act he may carry out such investigation as he deems fit, and for the purposes of such investigation he has the powers of a commissioner under the Public Enquiries Act. If a union has violated its rules or the Act, he may suspend or cancel its certificate. The suspension or cancellation is effective three months from the date of notice to the union.

A union may appeal to the Supreme Court of the province the refusal of the Registrar to register it, refusal to register any rule, or his suspension or cancellation of a certificate.

It seems to be a matter of interpretation whether the Act deals in any general way with the legal status of registered unions. It makes it clear that such a union may hold real and personal property, that such property shall vest in the trustees, and that all actions, suits, prosecutions and complaints, taken by or against a union in respect to such property, shall be taken in the name of the trustees, and that they may sue and be sued, plead and implead. The Act states further that "all other actions by and against a union registered under this Act shall be taken in the name of the union."

It is clear that the Act does not deal in any way with the related question of responsibility of a union for the acts of its members, nor does it change the law in respect to legal or illegal activities of unions in carrying out their main objects. Amendments to the Labour Relations Act, described below, have some bearing on these matters.

Liability of Trade Unions in Civil Actions

Until the 1959 amendment, the Newfoundland Labour Relations Act provided that a prosecution for an offence under the Act could be brought against a trade union in its own name, but it did not other-

wise deal with legal status. This section still stands.

A 1959 amendment (52A) provided that an action could be taken against a trade union in its own name for any tortious act alleged to have been committed on behalf of the union, and that for the purposes of the action a trade union was deemed to be a person, and was responsible for any act of an officer, member, agent or representative. This section was repealed in 1960, and another provision (25A) enacted; it reads as follows:

25A. Where an employee is on a strike which is not contrary to this Act no action lies against that employee or against a bargaining agent acting on behalf of that employee in respect of damages in contract for which the employer has become liable to another person as a result of the strike but nothing contained in this section shall be deemed to exempt an employee or bargaining agent from any liability for a tortious act.

The implications seem to be that in case of an illegal strike an employee or a bargaining agent would be liable for damages incurred by the employer towards a third person as the result of the strike; and that, whether or not a strike is legal, an employee and a bargaining agent are liable in damages for a tortious act. There seems to be an assumption that procedural difficulties in bringing an action against a trade union in its own name have been removed.

Actions by Unincorporated Unions in Quebec

In Quebec, an amendment to the Code of Civil Procedure incorporates in the Civil Code a provision that has been in effect in the province since 1938, making it possible to bring a legal action against a voluntary association (including an unincorporated trade union) as such and in its own name. Also, these provisions made such an association financially liable with all its resources, whether movable or immovable. This remedy was similar to the representative action used against collective membership of a voluntary association in the common law provinces. However, where the remedy of representative action could be used in proceedings *by or against* voluntary associations, the remedy provided in Quebec was limited to proceedings against a voluntary association.

Now a new provision has been added stating that a voluntary association of employees which is an association of employees within the meaning of the Labour Relations Act may plead in courts in its own name for the purposes of any recourse provided by the laws of the province, by depositing in the court with the writ of summons or other

proceedings introductive of suit, a certificate issued by the provincial Labour Relations Board establishing that such a group constitutes a *bona fide* association within the meaning of the Labour Relations Act.

Restraint of Certain Acts in Illegal Strike

ONTARIO

A new provision was added to the Ontario Act which states: "No person shall do any act if he knows or ought to know that, as a probable consequence of the act, another person or persons will engage in an unlawful strike or an unlawful lockout." The provision does not apply to any act done in connection with a lawful strike or lawful lockout.

One effect of the new section would seem to be that where a strike is illegal, picketing of any kind would be illegal if its probable consequence would be to cause employees, both those directly involved in the dispute and any others who were not in a position under the Act to engage in a legal strike, to go on strike contrary to the Act out of respect for the picket line.

Under the Act, a person doing any act which fell within the provision could be prosecuted, if consent were given.

ALBERTA

The amendments passed in Alberta also contained a new provision dealing with certain activities in connection with an illegal strike. It states that where a strike is illegal no trade union or member of the trade union or other person shall "dissuade or endeavour to dissuade anyone" from entering an employer's place of business, operations or employment; dealing in or handling the products of any person, or doing business with any person. The activity which is made illegal by this section is described in the same terms as are used in the British Columbia Trade-unions Act of 1959.

However, the direct consequences of the Alberta provision are to make a trade union or individual engaging in activities prohibited by the section liable to prosecution and summary conviction, with the imposition of a fine, for a breach of the Act, whereas the direct consequences of the British Columbia provision are that the union is made liable for damages.

Injunctions in Labour Disputes

In both Ontario and Alberta, amendments to the respective Judicature Acts brought

changes concerning the issuing of injunctions to restrain action in respect to strikes and lockouts.

ONTARIO

Before being amended, the Ontario Act provided that an *ex parte* interim injunction restraining any person from doing any act in connection with a labour dispute was to be granted for a period not longer than four days. Now any interim injunction is to be granted for four days only and normally following two days' notice to the persons affected. Only where the court is satisfied that a breach of peace, injury to a person or damage to property has occurred or is likely to occur may the notice be dispensed with and the injunction granted *ex parte*.

The two days' notice of the application for an injunction, where the employees to be affected are union members, is deemed to have been given if served upon an officer or agent of the trade union concerned; where the employees to be affected are not union members, such notice should be posted up in a conspicuous place on the employer's business premises; if some of the employees are and some are not union members, the notice should be served upon an officer or agent of the union as well as being posted in a conspicuous place on the employer's business premises.

ALBERTA

The amendment to the Alberta Judicature Act which applies where a strike or lockout exists in a labour dispute to which the Alberta Labour Act applies bans *ex parte* injunctions altogether when applied for before trial and aiming at restraining any person from doing any act in connection with the strike or lockout.

The period of notice of hearing is shorter than in Ontario, being described as sufficient time before the hearing to enable the person served to attend and in no case less than three hours. Along with the notice of motion, there must be served a copy of every affidavit intended to be used in support of the application. It is further provided that such affidavits are to be confined to facts which the deponent is able of his own knowledge to prove. When the injunction is to be directed against members of a trade union, the notice of motion may be served upon any officer of the trade union or any union member or any person engaged in the activity to be restrained.

ONTARIO

In Ontario, in accordance with a recommendation of the Select Committee, a provision was included in the Act to the effect that every trade union, upon the request of a member, is required to furnish him, without charge, with a copy of the audited financial statement of its affairs to the end of the last fiscal year, certified by the responsible officer to be a true copy. A member who has failed to obtain a copy may make a complaint to the Board, and the Board may direct the union to file a copy with the Registrar of the Board and furnish a copy for such members as the Board directs.

ALBERTA

A provision was also added to the Alberta Act requiring a bargaining agent to make available to each of its members a copy of its annual financial statement not later than two months after the end of the union's fiscal year. This follows the provision, which has been incorporated in Alberta legislation since 1938, requiring a trade union to file with the Minister, on his request, a copy of its financial statement. The information filed with the Minister is not available except to the Minister and his officers, and any statistical summaries published must be such that the particulars in respect to any trade union cannot be identified.

Another recommendation of the Ontario Select Committee, that trusteeship over local unions should not be continued for lengthy periods and that reports on trusteeships should be filed with the Labour Relations Board, was incorporated in a new section that states that a provincial, national or international union that establishes a trusteeship over a subordinate body in the province is to report its action to the Board, along with a statement setting out the terms under which supervision or control is to be exercised, and such additional information as the Minister from time to time requires. The trusteeship is not to remain in effect for longer than 12 months without the consent of the Board. Trusteeships in effect on the coming into force of the Act are to be reported within 60 days of that date.

Strike Votes

A new provision was added to the Ontario Act with respect to strike votes. It provides that a strike vote taken by a trade union shall be by secret ballot.

The Nova Scotia Trade Union Act has contained such a provision since it was enacted in 1947. In 1954 a similar provision was enacted in the British Columbia Labour Relations Act. The legislation in other jurisdictions does not deal with the manner of voting.

Legal Decision Affecting Labour

Quebec Court of Queen's Bench rules suspension of union member for disregarding boycott that union not empowered to order is illegal, and orders reinstatement

On May 25, 1960, the Court of Queen's Bench (Appeal Side), in a unanimous decision confirming the judgment of the Superior Court, ruled that, where the union constitution does not empower the union either expressly or by implication to order and enforce a boycott against third parties, the suspension of a union member for disregarding such a boycott is illegal. Also, the Court ruled that where the union, in suspending a member and imposing a fine, acted without or outside its jurisdiction, the union member is not bound by the appeal procedure set out in the union constitution and may, by way of *mandamus* proceedings,

bring at once to the courts the matter of his reinstatement into membership of the union.

On July 17, 1957, the Seafarers' International Union of North America, Canadian District, passed a resolution to the effect "that the York Hotel, having refused to rent rooms to SIU members, that the membership go on record to declare this hotel unfair and to place on charge any SIU members dealing with this hotel."

After this resolution was passed, Stern, a union member in good standing, was sitting one evening in the beverage room of the York Hotel with several fellow members

of the union. He was approached by one Baxter (a member in and "despatcher" for the union), who told him that he was violating the order of the union in being in the York Hotel. A few days later Stern was required to surrender his membership certificate and was informed that he was under charge and that his case would be heard by the Trial Committee on August 19, 1957.

The union brought two charges against Stern. The first charge accused him of having entered the York Hotel in contravention of a boycott order affecting that establishment, thus violating Article 2, Section 7, of the Constitution of the Seafarers' International Union. This section reads:

To preserve unity and to promote the common welfare of the membership, all members of this union shall uphold and defend this constitution and all policies, rulings, orders and decisions duly made.

The second charge arose because Stern refused to obey the notice ordering him to surrender his union membership certificate; this action was in contravention of Article 14, Section 7, of the union constitution:

Any officer of the union shall have power to demand the certificate of membership from any member against whom charges are pending, such certificate to be retained by the union until final disposition of the case.

The trial committee in its decision suspended Stern from all privileges as a member of the union for a period of one year and ordered him to pay a fine of \$200.

Following this decision Stern applied for an order of *mandamus* nullifying the penalties imposed on him and requiring his reinstatement.

The trial judge noted that nowhere in the constitution is there any power specially granted to the union to order and enforce a boycott. It might be argued that there is an implied authority to resort to boycott under certain circumstances against an employer or union members, but there is

nothing to empower or justify the union in ordering and enforcing a boycott against third parties, nor can such a cause of action be justified on the ground that such power is implied because it is needed in, or properly incidental to, the exercise of powers directly granted.

If the resolution purporting to create the alleged offence was illegal and beyond the power conferred upon the union, there was in law no such offence as the one with which Stern was charged, and the trial committee of the union who tried and convicted him acted illegally and without jurisdiction. The trial judge ordered reinstatement and awarded damages of \$1,000 against the union. The union appealed.

Mr. Justice Bissonnette in his reasons for judgment agreed with the reasons set out by the trial judge and was of the opinion that the union had no jurisdiction whatever to bring this charge against Stern. Also, in his opinion, the second charge, which arose from Stern's refusal to hand in his membership certificate, was equally unfounded, as Article 14, Section 7 of the union constitution does not provide for any penalty for such an alleged breach of a regulation.

Finally, Mr. Justice Bissonnette dealt with the union's opposition to the petition for *mandamus* on the ground that Stern, before going to the Court, should have first of all had recourse to an appeal as provided by the union constitution. In rejecting this contention, Mr. Justice Bissonnette stated that the legal doctrine is that one who is injured by a ruling made by a corporation acting without jurisdiction or exceeding its jurisdiction may have recourse at once to a court of law.

The Court dismissed the union's appeal and upheld the judgment of the Superior Court reinstating Stern into union's membership and granting him damages against the union. *Seafarers' International Union of North America, Canadian District, v. Stern* (1960), R.J.B.R. No. 7, p. 901.

N.S. Appoints Judge to Enquire into Labour Legislation

Judge A. H. McKinnon of Antigonish, N.S., is making a study of labour legislation in Nova Scotia and elsewhere. Appointment of a "fact-finding body" was recommended by the Nova Scotia Legislature's law amendments Committee after it had rejected at the last session a private bill sponsored by the Nova Scotia Federation of Labour, to amend the Trade Union Act.

Nova Scotia Premier Stanfield said when making the announcement that Judge McKinnon's terms of reference were to "enquire into existing labour legislation in various jurisdictions in Canada and elsewhere; ascertain the opinions of experts in the field of labour legislation as to the degree to which the said legislation protects the interest of the employer, the employee, unions and the public; assess the extent to which the said legislation promotes industrial peace and to report on these matters to the next session of the Legislature."

Recent Regulations under Provincial Legislation

British Columbia raises minimum wage of patrolmen and employees in pipeline construction industry. Newfoundland issues new regulations for logging camps

In British Columbia, a revised order for patrolmen raised the minimum wage from 42 cents to \$1 an hour, introduced an overtime rate and increased the weekly rest from 24 to 32 hours. Another new minimum wage order with a somewhat wider coverage than formerly set a minimum wage of \$1.30 for employees in the pipeline construction, oil-well drilling and service industries.

In Newfoundland, new regulations for logging camps laid down minimum standards with respect to construction, equipment and maintenance of logging camps.

A new code governing gas piping and appliances was adopted in British Columbia, and changes were made in the regulations governing distribution systems. The first regulations have been issued under the new Energy Act in Ontario.

Other recent regulations deal with certification of refrigerator mechanics in Alberta, and a conditional exemption from the Saskatchewan Hours of Work Act.

Alberta Tradesmen's Qualification Act

A new regulation under the Alberta Tradesmen's Qualification Act (Alta. Reg. 224/60) broadened the definition of refrigerator mechanic to include any person engaged in the installation, service, maintenance, repair and alteration of refrigeration systems, including "brine circuits" but not "chilled water circuits".

As a result of this change, all persons engaged in the trade except registered apprentices will now be required to hold a certificate of proficiency.

The new regulation specifically states, however, that the term "refrigerator machanic" does not cover a person holding a certificate under the Boilers and Pressure Vessel Act who makes repairs or minor alterations to the refrigerating system in a plant where he is the engineer in charge.

Previously, the regulations covered only persons engaged in the repair, fitting and construction of refrigerators having a capacity of less than three tons and with wholly automatic controls.

British Columbia Hours of Work Act; British Columbia Male and Female Minimum Wage Acts

The British Columbia Board of Industrial Relations recently issued a new minimum wage order for the pipeline construction,

oil-well drilling and service industries which provides for a minimum wage of \$1.30 an hour. The new order replaces a 1956 order that covered only the pipeline construction industry and provided for a minimum wage of \$1 an hour.

The Board also revised its wartime order for patrolmen, increasing the minimum wage from 42 cents to \$1 an hour.

The new orders were gazetted August 25 to go into force October 3. Another regulation gazetted the same day (B.C. Reg. 176/60) exempted employees in the pipeline construction and oil-well drilling and service industries from the operation of the Hours of Work Act. A previous regulation had exempted only employees in the pipeline construction industry.

Order No. 28 (1960)—Pipeline Construction, Oil-well Drilling and Service Industries

As previously indicated, Order No. 28 (1960) has a broader coverage than the order it replaces, applying to the oil-well drilling and service industries as well as to pipeline construction. This means it covers all operations in or incidental to the construction or maintenance of any pipeline used for transmitting or transporting gas, oil or petroleum, including preparatory and foundation work, as well as the drilling, completion, recompletion, remedial treatment of an oil or gas well and all supplementary operations or services provided therewith.

It does not, however, cover the installation of mains and service-lines in, or from industrial plants or other buildings. The order also exempts persons in these industries whose duties are entirely of a supervisory or managerial character.

The \$1.30-an-hour rate established by the order applies to all employees in these industries except apprentices and part-time or handicapped workers employed under a special authorization from the Board, who must be paid at the rate specified in the permit.

While no limits are placed on hours, time and one-half the regular rate is again payable for all hours worked in excess of eight in the day or 40 in the week where hours do not exceed eight in any one day.

The daily guarantee provision is also unchanged, requiring an employee to be

paid at his regular rate for the entire period spent at his workplace in response to a call from the employer, with a minimum of two hours pay if he reports for work and of four hours if he begins work, subject to the usual qualifications.

Order No. 32 (1960)—Patrolmen

Like the wartime order which it replaces, Order No. 32 (1960) covers any person who, by contract or agreement, undertakes to watch or patrol the premises of more than one person for the purpose of guarding or protecting persons or property against robbery, theft or other hazards.

As well as increasing the minimum wage of patrolmen from 42 cents to \$1 an hour, the new order introduced an overtime provision that requires such employees to be paid time and one-half their regular rate for all hours worked in excess of eight in the day or in excess of eight in the shift in cases where shifts extend past midnight. This premium rate is also payable for time worked beyond 44 in the week where hours worked do not exceed eight in any day or in any shift. In cases where hours are extended in accordance with the exceptions provided for in the Hours of Work Act, however, the overtime rate is not payable until the patrolman has worked the agreed number of hours.

Another new feature is a daily guarantee provision similar to that in Order No. 28 described above.

Under the new order, the weekly rest of patrolmen has been increased from 24 hours to 32 hours, with provision for the Board to approve a different arrangement upon receipt of a joint application from the employer and the employees.

The provision prohibiting employers from making deductions for uniforms or other articles does not appear in the new order. However, a general order regarding cost and upkeep of uniforms, No. 3 (1946), provides that when an employee is required to wear a uniform or special article of wearing apparel it must be furnished and maintained by the employer without cost to the employee.

Following its practice in recent years, the Board has incorporated into the new order a number of general provisions which did not appear in the earlier order for patrolmen. These provide for semi-monthly payment of wages, require orders and work schedules to be posted, and make it mandatory for employers to keep records of wages and daily hours of employees, together with a register of the names, ages, occupations and residential addresses of all employees.

British Columbia Gas Act

British Columbia has issued Reg. 165/60 under the Gas Act, amending the provisions governing the installation of gas piping, appliances and venting. Cited as the Gas Code, it was gazetted August 11, and replaces Reg. 160/58. Regulations governing installation, protection, and maintenance of gas mains, services and meters (Reg. 164/60) were gazetted at the same time.

Gas Code for Piping and Appliances

Part I of the amended gas code corresponds to the seven parts of its predecessor. It contains general safety regulations relating to gas piping and appliances, and provisions in respect of gas piping installation, appliance installation, venting of appliances, and the procedure to be followed to place an appliance in operation. It also has altered provisions in connection with offences. In addition, there are new requirements for the reporting of gas accidents. Every person engaged in gas distribution or installation of house-piping or appliances must, as soon as he hears about it, report to the Gas Inspection Division of the Department of Public Works any fatality caused by gas. He must also report any fire or explosion caused by gas which results in personal injuries requiring medical treatment.

Part II of the regulation is new, supplementing and amending Part I, and sets forth additional requirements for commercial and industrial installations with pressures in the house piping of one-half p.s.i.g. or greater and single applications with over 400,000 B.t.u./hr. input.

Rules Governing Gas Mains, Services and Meters

In so far as the new regulations pertain to design, fabrication, installation, testing, or inspection of distribution mains and service pipes and the installation of gas meters, they apply to installation or replacements made on or after July 1, 1960.

Except where the regulations provide otherwise, standards adopted to govern these activities are as contained in the 1958 edition of the following code of the American Standards Association, and any amendments approved by the Chief Inspector: "The American Standards Code for Pressure Piping, B31, Section 8, Gas Transmission and Distribution Piping System". The Chief Inspector may give written permission for deviations from these regulations.

Every gas company must file with the Chief Inspector its standards of construction governing the installation of distribution mains, service pipes and meters, and any amendments. Also, they are required to inform the Chief Inspector of the size, location and maximum operating pressure of all proposed extensions to distribution mains.

The regulations provide that work on a gas installation must be done proficiently. A welder working on a gas installation must be certified under the Boiler and Pressure Vessel Act and have his certification in his possession for inspection by an inspector.

Other provisions set out safety requirements with respect to meters and regulators, excavations near distribution mains and service pipes, damaged gas installations and avoidance of damage to them. Also, provision is made for the testing of gas installations and for fees.

Newfoundland Logging Camps Act, 1960

The Newfoundland Logging Camps Act, 1960, was proclaimed August 30, 1960, and regulations issued under it were gazetted on the same date. Part 1 of the regulations relates to health and safety requirements and applies to logging camps occupied by 10 or more loggers. Part II deals with the appointment of scalers.

The new regulations require that all logging camps must be under the continuous supervision of the operator, who is responsible for ensuring that specified provisions are carried out to protect the health and safety of their occupants.

Logging camps must be located on dry ground providing adequate natural drainage and may not pollute any water supply. General construction provisions specify that buildings must be wind and weatherproof and set out requirements in connection with windows, doors and bunkhouses and cookhouses, heating of living and sleeping quarters, floor clearance, air space in bunkhouses and sleeping quarters, construction and finish of the interior of buildings, toilets and fire protection.

The regulations require that an operator may not employ kitchen staff suffering from a communicable or contagious disease, and specify the attire that these persons must wear. He must observe certain requirements in respect of storage of food and water supply.

The operator must ensure that accommodation and facilities provided in bunkhouses, cookhouses and kitchens meet specified standards in respect of comfort, cleanliness, sanitation and ventilation. He is also required to provide adequate facilities for washing and laundering, and changing and drying clothes.

Camps must have sufficient artificial light for the comfort, convenience and safety of occupants, and be supplied with first aid kits and stretchers.

The operator must observe certain requirements in connection with the disposal of sewage and garbage, extermination of vermin, location of stables, and abandonment of camps.

Every operator is required to notify the Minister of the location of camps, the road to them, their opening, closure and re-opening, and the name of the foreman or other person in charge. He must also maintain records required by the Minister and have a copy of the Act available for examination by any logger employed by him.

Ontario Energy Act

Regulations issued under the Energy Act (O. Reg. 236/60) dealing with the distribution and consumption of gas and oil fuels replace some of the regulations in effect under the Ontario Fuel Board Act.

As before, the Canadian Gas Association is designated as an organization to test gas appliances to specifications approved by the Minister, and the C.S.A. Installation Code B.149-1959 for gas burning appliances and equipment is again adopted with some modifications. For liquefied petroleum gas piping and appliance installation, the N.F.P.A. standards remain in effect. The C.S.A. Installation Code for Oil Burning Equipment (B.139-1957) has been adopted by the new regulations.

Reports of certain accidents caused by gas or oil have to be made to the inspector by the producer, transmitter, distributor or storage company immediately upon becoming known, and a written report must be sent to the Minister of Energy Resources. The accidents to be reported are those resulting in a fatality, a fire or explosion resulting in property damage estimated at \$250, or resulting in personal injury requiring medical treatment. A previous provision requiring the reporting of accidents to the Ontario Fuel Board did not cover accidents caused by oil.

Saskatchewan Hours of Work Act

Certain employees of swimming pools operated by the City of Moose Jaw were granted a conditional exemption from the 44-hour standard set by the Saskatchewan Hours of Work Act by O.C. 1467/60 gazetted September 16.

The new order, which went into force on August 1, permits swimming pool supervisors, life guards, checkers and cashiers employed in municipal swimming pools in

(Continued on page 1187)

UNEMPLOYMENT INSURANCE

Monthly Report on Operation of the Unemployment Insurance Act

Total of claimants for benefit at end of August slightly lower than at end of July but 33 per cent higher than 1959 figure. Number of claims during month higher than figures for both previous month and August 1959, statistics* show

Claimants† for unemployment insurance benefit on August 31 numbered 280,200, which was 5 per cent less than the 294,000 reported on July 29 but 33 per cent more than the figure of 210,000 on August 31, 1959.

There were 40 per cent more male claimants on August 31 than on the same date last year, and 22 per cent more female claimants.

Initial and renewal claims for benefit received during August numbered 149,600, which was 7 per cent more than the figure of 140,400 in July and 46 per cent more than the August 1959 total of 102,400.

Renewal claims increased 69 per cent from the year-earlier total; initial claims, 31 per cent. The proportion of the claims received during August that were initial claims was 54 per cent; this was considerably less than in August 1959, when 61 per cent of the claims received were initial.

The average weekly estimate of beneficiaries was 210,900 for August, 225,900 for July and 154,700 for August 1959.

Benefit payments totalled \$21,400,000 in August, \$19,700,000 in July, and \$13,100,000 in August 1959.

The average weekly benefit payment was \$22.01 in August, \$21.81 in July and \$20.19 in August 1959. Higher benefit rates went into effect in September 1959.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for August showed that insurance books or contribution cards had been issued to 4,617,680 employees who had made contributions to the Unemployment Insurance Fund since April 1, 1960.

*See Tables E-1 to E-4 at back of this issue.

†A claimant's unemployment register is placed in the "live file" at the local office as soon as the claim is forwarded for computation. As a result, the count of claimants at any given time inevitably includes some whose claims are in process.

In a comparison of current employment statistics with those for a previous period, consideration should be given to relevant statistics with those for a previous period, factors other than numbers such as the opening and closing of seasonal industries, increase in area population, influence of weather conditions, and the general employment situation.

Claimants should not be interpreted either as "total number of beneficiaries" or "total job applicants."

At August 31 employers registered numbered 330,851, an increase of 1,440 since July 31.

Enforcement Statistics

During August 5,223 investigations were conducted by enforcement officers across Canada. Of these, 2,230 were spot checks of postal and counter claims to verify the fulfilment of statutory conditions and 113 were miscellaneous investigations. The remaining 2,880 were investigations in connection with claimants suspected of making false statements to obtain benefit.

Prosecutions were begun in 198 cases, 76 against employers and 122 against claimants.* Punitive disqualifications as a result of claimants' making false statements or misrepresentations numbered 2,452.*

Unemployment Insurance Fund

Revenue received in August totalled \$28,320,628.14 compared with \$29,878,737.04 in July and \$20,426,861.74 in August 1959. Benefits paid in August totalled \$21,356,560.34 compared with \$19,702,606.90 in July and \$13,123,155.75 in August last year.

The balance in the Fund on August 31 was \$313,327,657.04; on July 31 it was \$306,363,607.24 and on August 31, 1959, it was \$448,660,846.96.

*These do not necessarily relate to the investigations conducted during this period.

Decisions of the Umpire under the Unemployment Insurance Act

Decision CUB-1767, August 11, 1960

(Translation)

Summary of the Main Facts: The claimant, a married man, 29 years of age, filed a renewal application for benefit on December 9, 1959, and registered for employment as a truck driver. At that time he stated that he had last worked as a labourer for an agricultural implement manufacturer at T..... from September 6 to December 4, 1959, when he lost his employment for the following reason:

Dismissed for not reporting to work last Friday, because I had personal business to attend to. I had notified the foreman that I could not report for work, and it was the first time that this had happened.

The employer stated that he had dismissed the claimant for "repeated absences without permission."

The insurance officer disqualified the claimant from receipt of benefit from December 6, 1959, to January 16, 1960, under section 60 (1) of the Act, being of the opinion that the claimant had lost his employment by reason of his own misconduct.

On December 28, the local office received a letter from the claimant which reads, in part, as follows:

...I missed one day for personal business and I was unable to return in time for my work, but the foreman was notified by my wife. Some time ago I missed two days because of illness. In that case too, the foreman was notified...

The claimant also submitted the following document:

To whom it may concern:

I, Mr. de la, hereby certify that (the claimant) came to Montreal on December 4 to pay interest and to renew (the) note made out to me.

On January 5, 1960, the employer forwarded the following additional information to the local office:

...You will find below a record of the claimant's absences without permission:

October 19, 1959; October 20, 1959; October 26, 1959; October 30, 1959; November 6, 1959.

On January 12, 1960, the claimant appealed to a board of referees on the following grounds:

...It is true that I was absent on the 19th, 20th and 26th of October, because I was ill, and as I travelled with my foreman he was notified of this when he came to call for me to go to work. As for October 30th and November 6th, the plant was operating on short time, four days a week, and no one was working.

On December 4, having personal matters to attend to in Montreal, as confirmed by Mr. de la, I went to his place and expected to be back in time to go to work at the usual hour, 2 p.m., but owing to circumstances beyond my control I was unable to get back in time. When the foreman came to call for me, my wife notified him that I was not back.

As you will be able to verify, each time I stayed away from work I had a valid reason, and my employer was notified of it through the foreman...

On January 14, 1960, the employer furnished the local office with the following information:

...On October 30 and November 6, 1959, the plant was indeed closed down on those two dates; after checking... *there is no indication in the (claimant's) record of notification of his absences on the 19th, 20th and 26th of October, 1959 and on December 4, 1959.* His foreman... with whom he travelled, says that he was informed by (the claimant's wife) when he stopped to pick him up that her husband was not going to work and he said that he had notified the office to that effect each time...

On February 2, 1960, the board of referees heard the appeal in the presence of the claimant. The decision of the board reads, in part, as follows:

...When he made his first statement the claimant declared that he had been absent on December 4, 1959; afterwards he admitted that he had been absent from his work on October 19, 20 and 26 in addition to December 4. It is true that the claimant travelled regularly with his foreman and that in each absence the claimant's wife informed the foreman that her husband was not going to work. Although each time the foreman notified the office accordingly, it is not proven that the claimant gave the reason for his absences. When a claimant is obliged to stay away from work, he should take every precaution to keep his job. In other words, he should, if possible, notify his employer without delay and give the reason for his absence.

In the circumstances, the claimant did not give the reasons, and basing their opinion on decisions of the Umpire, the board of referees by a majority decided to confirm the decision of the insurance officer, on the ground that the claimant had been absent too often without good reasons. The board, by a majority, dismissed the appeal.

The dissenting member expressed the following opinion:

...Under the terms of the Act, in cases of illness it is impossible for a claimant to notify the employer that he is going to be ill. Moreover, the section of the Act which says "repeated absences" should be considered in the light of the duration of employment. In my opinion, the days of absence declared by the employer and the reasons given by the claimant for his absence do not justify in any way dismissal from employment.

On April 7, 1960, the claimant appealed to the Umpire from the decision of the board of referees. His appeal reads, in part, as follows:

...each time (the 19th, 20th and 26th of October) and the 4th of December, 1959) that I did not go to work, my wife informed my foreman accordingly. It is noted in the remarks of the insurance officer that I should have notified my employer. Does that mean that I should have notified the president of the Company?

...The Company stresses the fact that I did not go to work on the 19th, 20th and 26th of October and the 6th of November. (I must say, however, that on the 30th of October and the 6th of November the plant was not in operation). As for the other days, I must say that my wife always notified the foreman that I could not go to work owing to illness; one single day I did not go to work because of extremely urgent business in Montreal; my wife also informed my foreman that day. (My letter of January 12 explains the situation).

...The Company does not deny the fact that the plant was shut down on October 30 and November 6...However, it is noted... that no indication appears in the (claimant's) record of notification of his absence on the other days. I mentioned it in the fourth paragraph of this letter and I repeat that I gave the necessary notification to my foreman and not to the president of the Company...

On May 26, 1960, the claimant sent to the local office a solemn declaration which reads, in part, as follows:

...If I absented myself from my work... on the 19th and 20th of October, it was entirely due to the fact that I had the 'flu and my absence on the 26th of October was due to a severe backache. As for October 30 and November 6, as already mentioned, the factory was closed.

With regard to my absence of December 4, as I have already mentioned, I had to go to Montreal on personal business...

Considerations and Conclusions: The evidence presented by the employer does not establish that he reprimanded the claimant on the occasion of his absences during October. It must therefore be assumed that the said employer had at that time deemed sufficient the notification given through the foreman and considered valid the reasons then furnished by the claimant for his absences.

As for the evidence of the claimant's absence which brought about his dismissal, that of December 4, 1959, he has not furnished any explanation concerning the nature of the "uncontrollable circumstances" which, according to him, detained him in Montreal longer than he had expected. It is therefore impossible for me to assess the precise value of those circumstances as a reason for his delay, and I am not surprised that his employer decided to dismiss him for not furnishing him with a further explanation.

The claimant's wife did, at the very last moment, inform the foreman of the absence, but this mere information did not constitute sufficient notice under the circumstances, because the employer was entitled to know not only that he had not returned, but why, with all necessary corroborating details, he was absent and had not been able to return in time to resume his work. Now there is nothing in the evidence from which I can conclude that the claimant furnished these details to his employer immediately or as soon as possible after his return from Montreal.

For all these reasons, I consider that the claimant lost his employment by reason of his own misconduct within the meaning of section 60 (1) of the Act, and I accordingly decide to dismiss his appeal.

Decision CUB-1768, August 11, 1960

Summary of the Main Facts: The claimant, single, 32 years of age, filed an initial application for benefit on November 20, 1959, and was registered for employment as a stationary engineer, 4th class. He had worked as a truck driver from September 15, 1958 to February 24, 1959, when he became separated from his employment for the following reason:

I was arrested on an outstanding warrant and as a result was sentenced to one year at the Haney Correctional Institute. My date of release is due on 9 Dec. 1959. I am now serving the pre-release period 72 days and I am available for work at any time. The regulations at the Institute are that if I am offered a job during this pre-release period I would be released within 24 hours for the purpose of taking the job. The only restriction being that I must report to the Institute daily and sleep at the camp.

On November 20, 1959, the Warden of the Haney Correctional Institution, Haney, B.C., wrote to the local office as follows:

We wish to advise you that the above named was convicted and sentenced on March 9, 1959.

He has been a trainee of the Haney Correctional Institution from March 16, 1959, to date. His expected date of release is December 9 1959.

On December 3, 1959, the insurance officer wrote to the Regional Claims Office and stated:

This claimant has been serving a sentence at the Haney Correctional Institute and is due to be released on December 9 1959. At this institution there is a rather new departure in penal restrictions in that they have what is termed a pre-release camp. Sometime prior to the termination of an inmate's sentence he is moved to this pre-release camp which is not behind fences and walls etc. and is used on work gangs around the area. Also from this camp we are told an inmate may be given permission to go out in search of work or having obtained work he may go to work daily and return to the pre-release camp each night

until his sentence has expired. We are satisfied that the claimant is available for employment as required under the Unemployment Insurance Act but since he is still residing in or an inmate of an institution supported by public funds is he entitled to unemployment insurance benefit?

Our feeling is that he is not an inmate within the usually accepted sense of that term, as he is allowed considerably more freedom than "inmates" and is only retained in the pre-release camp to avoid the possibility of injecting him back into society without a job and with not much alternative but to revert to his old ways.

P.S. These men may, in some cases, be in pre-release camp, as long as 70 days depending on volume of releases may average around 45 days.

On the facts before him, the insurance officer was of the opinion that although the claimant had been given the privilege of seeking and accepting employment, he was, until December 9, 1959 at least, in custody in a penal institution and, therefore, must be considered an inmate of a prison supported wholly or mainly out of public funds. Accordingly, he disqualified the claimant from receipt of benefit as of November 15, 1959, and for so long as he was an inmate of the Haney Correctional Institution (section 64 of the Act).

The claimant appealed to a board of referees on December 11, 1959, and stated, *inter alia*: "... Men in this Camp are allowed to go out to work and when working are required to pay unemployment insurance and should be entitled to receive benefit while unemployed ..."

The claimant's appeal was written in the local office following his release from the institution. In view of his release, the insurance officer terminated the disqualification on December 8, 1959. The insurance officer in referring the appeal and the file to the board of referees requested the latter to consider only the period November 15, 1959, to December 8, 1959.

The claimant, who was not present at the hearing of his case by the board of referees in New Westminster on January 5, 1960, was represented by the Warden of the Haney Correctional Institution.

The board's decision reads, in part:

... The essential facts are outlined in the submission and in support of the claimant (the Warden) suggested that while Section 64 of the Act was explicit in its intent there seemed to be room for discussion as to what constituted an inmate within the meaning of that Section ...

The particular section of ... regulation (170) which it is suggested might be made applicable in support of the claimant's case is that portion which says:

"A claimant—shall not be disqualified from receipt of benefit by reason only of being an inmate if the institution requires an inmate to pay all or part of his subsistence."

In this case it is stated that the claimant upon securing employment pays a certain amount for his room and board until the expiration of his sentence. We use the expression "expiration of his sentence" because in our opinion this is the determining factor. This person could not be released to society until that term had expired unless by some special disposition of a parole board which has not happened in this case.

In our judgment, therefore, the claimant must be considered to be an inmate within the meaning of Section 64 of the Act and as such it is our considered opinion that he could not be considered entitled to the protection of the Unemployment Insurance Act while he continues to be an inmate.

We note in connection with this whole matter that there are no Umpire decisions which can be cited either one way or another and because of the principle involved, while we must disallow the appeal, will grant permission for an appeal to the Umpire without further request.

With the permission granted by the board of referees, the claimant appealed to the Umpire. On behalf of the claimant, the Warden of the institution, in a somewhat lengthy submission, outlined, as grounds for appeal, the program that operates within the particular camp, which had none of the traditional security measures one normally finds in prisons. He pointed out that the men are permitted to go into the community for the purposes of job interviews, to place advertisements in newspapers and to write to prospective employers, and that if a man obtained employment, it was possible, with the assistance of one of the two parole boards mentioned, for him to work in the community without supervision and return to the camp each evening. He also stated:

... We do not feel that the authors of Section 64 of the Act had in mind a Correctional Institution when writing that particular section. We suggest that they had in mind a more traditional, maximum security-type prison whose primary objective was confinement and punishment rather than rehabilitation. In other words, it is submitted that this Institution is more closely related to a mental hospital than to a penitentiary ...

The claimant also requested an oral hearing of his case before the Umpire, which was held in Ottawa on July 5, 1960. The claimant was represented by R. W. McKimm, of the firm of Mirsky, Soloway, Assaly and Houston, Barristers, Solicitors, etc., Ottawa, and the Unemployment Insurance Commission by F. G. Power, a solicitor of its Legal Branch.

On August 2, 1960, Mr. McKimm submitted for the Umpire's attention and consideration a letter dated July 25, 1960, which the Warden of the Haney Correctional Institution addressed to the Unemployment Insurance Commission, Ottawa, setting out the position of the said Institu-

tion with regard to the regulations and requirements for payment of subsistence charges by men who are in the Pre-Release Camp. That letter reads in part:

...The standard charge for board at our Pre-release Camp for men who are employed in the community is \$50.00 per month. All the men who have worked in the community, while residing at this Camp have paid this charge...

We have never fully decided what we might charge a man who receives unemployment insurance benefits of, say, \$20.00 or \$30.00 per week because it has always been, up until this time, a very academic question. Certainly we could be prepared to define our policy in this regard in any way which was considered to be mutually satisfactory to both ourselves and the Unemployment Insurance Commission.

My own personal opinion is that the unemployment insurance benefit as a source of board money would have to be evaluated in terms of the needs of the man's family. In that way it could serve to take a man's family off social assistance and reinstate the husband or father as a breadwinner. Moreover, the money received by him would be insurance benefit and not a straight grant or dole, which we would all agree can be demoralizing.

(The claimant), of course, was unable to find employment in the community and therefore could not pay cash by way of board. However, he maintained himself in terms of tobacco and other personal needs and he worked in our boiler house and in that way contributed to the overall welfare of the Institution.

It should be remembered that during the period a man works in the Pre-Release Camp he must make unemployment insurance contributions. Another item of interest is that, in relation to subsistence, each man is required to provide for his own tobacco, toothpaste, and other similar items. This would also have to come out of the unemployment insurance benefit.

Quite apart from the rate of board required and the benefit to the man from unemployment insurance money while he is in camp,

There were 3,000,000 claims made for unemployment benefits in Britain during 1959, it is disclosed in the annual report of the Ministry of Pensions and National Insurance.

During November 1959 there were 241,000 persons receiving unemployment benefit, compared with 334,000 in November 1958. The cost for the year ended March 31, 1959 was more than £49,000,000.

The report reviewed the work of the Ministry in the administration of the War Pensions, Family Allowances, National Insurance, Industrial Injuries Insurance and related schemes.

On the average, under the various plans, the Ministry pays about 12,000,000 benefits and allowances each week. At the end of 1959 the cost was running at £1,200 million a year.

there is yet another consideration. I refer to the possibility that if a trainee receives unemployment insurance while he is in the camp, then it will not be necessary for him to experience a 2-week waiting period following his discharge before he can obtain insurance benefits. This ruling at present applies even though the man may have registered for employment and may have actively sought employment as long as 2 months prior to his discharge date. In fact, the present situation, wherein a man is able to work out of the camp and make contributions to the Unemployment Insurance Fund, causes him an additional handicap if he loses his job prior to discharge; and the man who is unable to find work while he is in the camp must wait a further 2 weeks upon discharge. In either event an additional handicap is placed upon these men at the time of their discharge...

Considerations and Conclusions: The evidence before me shows that if the Haney Correctional Institution is not a prison or a penitentiary, it certainly is "an institution supported wholly or partly out of public funds" within the meaning, intent and purpose of that phrase in section 64 of the Act.

As to the contention that the said institution might be regarded as being one similar to a hospital or to a mental institution within the meaning of Regulation 170, I am unable to agree with it, because it appears to me that the words "other similar institution" as used in that Regulation must be interpreted restrictively and therefore, be considered to include only those institutions which admit people (inmates) for the chief purpose of giving them medical treatment only (physical or mental).

For the above reasons, I decide to confirm the unanimous decision of the board of referees and to dismiss the claimant's appeal.

At the end of 1959, the Ministry was paying war pensions to about 750,000, family allowances to 3,500,000 families with more than 9,000,000 children.

Under the National Insurance Schemes, the Ministry was paying nearly 5,500,000 retirement pensions, more than 450,000 widows' benefits and guardians' allowances and 160,000 industrial disablement pensions.

The report noted that mainly due to the influenza epidemic in February and March of 1959, claims for sickness benefit during the year were 8,750,000, nearly 900,000 higher than in the previous year.

The over-all cost of social services being paid on December 31, 1959 amounted to £100 million for war pensions, nearly £130 million for family allowances, and £650 million for retirement pensions.

LABOUR CONDITIONS IN FEDERAL GOVERNMENT CONTRACTS

Wage Schedules Prepared and Contracts Awarded during September

Works of Construction, Remodelling, Repair or Demolition

During September the Department of Labour prepared 211 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada, for works of construction, remodelling, repair or demolition. In the same period, a total of 221 contracts in these categories was awarded. Particulars of these contracts appear below.

A copy of the wage schedule issued for each contract is available on request to trade unions concerned or to others who have a *bona fide* interest in the execution of the contract.

(The labour conditions included in each of the contracts listed under this heading provide that:

(a) The wage rate for each classification of labour shown in the wage schedule included in the contract is a minimum rate only and contractors and subcontractors are not exempted from the payment of higher wages in any instance where, during the continuation of the work, wage rates in excess of those shown in the wage schedule have been fixed by provincial legislation, by collective agreements in the district, or by current practice;

(b) hours of work shall not exceed eight in the day and 44 in the week, except in emergency conditions approved by the Minister of Labour;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of eight per day and 44 per week;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Contracts for the Manufacture of Supplies and Equipment

Contracts awarded in September for the manufacture of supplies and equipment were as follows:

Department	No. of Contracts	Aggregate Amount
Defence Construction (1951) Ltd.	1	\$1,568,197.00
Defence Production	99	1,191,246.00
Post Office	3	59,498.00
RCMP	4	9,943.10

The Fair Wages and Hours of Labour legislation of the federal Government has the purpose of insuring that all Government contracts for works of construction and for the manufacture of supplies and equipment contain provisions to secure the payment of wages generally accepted as fair and reasonable in each trade or classification employed in the district where the work is being performed.

The practice of Government departments and those Crown corporations to which the legislation applies, before entering into contracts for any work of construction, remodelling, repair or demolition, is to obtain wage schedules from the Department of Labour showing the applicable wage rate for each classification of workmen deemed to be required in the execution of the work.

These wage schedules are thereupon included with other relevant labour conditions as terms of such contracts to be observed by the contractors.

Wage schedules are not included in contracts for the manufacture of supplies and equipment because it is not possible to determine in advance the classifications to be employed in the execution of a contract. A statement of the labour conditions which must be observed in every such contract is however, included therein and is of the same nature and effect as those which apply in works of construction.

Copies of the federal Government's Fair Wages and Hours of Labour legislation may be had upon request to the Industrial Relations Branch of the Department of Labour, Ottawa.

(The labour conditions included in contracts for the manufacture of supplies and equipment provide that:

(a) all persons who perform labour on such contracts shall be paid such wages as are currently paid in the district to competent workmen; and if there is no current rate, then a fair and reasonable rate; but in no event shall the wages paid be less than those established by the laws of the province in which the work is being performed;

(b) the working hours shall be those fixed by the custom of the trade in the district, or if there be no such custom, then fair and reasonable hours;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of those fixed by custom of the trade in the district, or in excess of fair and reasonable hours;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Wage Claims Received and Payments Made during September

During September the sum of \$10,502.06 was collected from 11 contractors for wage arrears due their employees arising out of the failure of the contractors, or their subcontractors, to apply the wage rates and other conditions of employment required by the schedule of labour conditions forming part of their contract. This amount is for distribution to the 283 workers concerned.

Contracts Containing Fair Wage Schedules Awarded during September

(The labour conditions of the contracts marked (*) contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of eight per day and 44 per week, and also empower the Minister of Labour to deal with any questions which may arise with regard thereto.)

Department of Agriculture

Normandin Que: Le Chauffage Moderne Ltee, supply & installation of laboratory furniture with plumbing & electrical service fittings in Laboratory & Growth Bldg, Experimental Farm. *Ste Clothilde Que:* Roger Bedard Inc, construction of implement shed, Horticulture Organic Soil Substation. *Ottawa Ont:* Dibblee Construction Ltd, construction of roads & paving, Research Branch, Central Experimental Farm. *Indian Head Sask:* A B Campbell & Sons Ltd, supply & erection of implement & storage shed. Forest Nursery Station. *Fort Vermilion Alta:* St-Laurent Construction Ltd, construction of loose housing barn (1960), Experimental Farm.

Central Mortgage and Housing Corporation

Gander Nfld: Sidney Burry & Son, exterior painting of 116 housing units (CMHC 4/55). *Montreal Que:* Antoine Ponton, interior painting of stairways, Benny Farm. *Deep River Ont:* Florida Landscaping Co, site improvement & planting for 41 housing units & Newton Crescent, (AECL 27/59). *Meaford Ont:* Hartholt & Son, *exterior painting of houses, Project 1/48. *Peterboro Ont:* Ward Decorating, *exterior painting of houses, Project 11/49. *Toronto Ont:* Leslie L Solty & Sons Ltd, site improvement for 245 housing units & park areas (FP 5/54), Lawrence Heights. *Kamsack Sask:* Olsen Construction, *carpentry maintenance repairs, Project 1/49. *North Battleford Sask:* Schwab Bros Construction, *carpentry maintenance repairs, Project 1/48. *Regina Sask:* Silverline Decorators, *replacing concrete walks, Projects 2/6, 7/48 & 8/49. *Saskatoon Sask:* Wiebes Painting & Eavestroughing, *exterior painting of houses, Projects 3-5. *Saskatoon & Sunderland Sask:* J Warkentin, *carpentry maintenance repairs, Projects 3-5 & 6/49 & Projects 1 & 2. *Weyburn Sask:* G Hastings, *exterior painting of houses, Project 2/48. *New Westminster B C:* Neil Meyer, exterior painting of 133 apartment units. *Penticton B C:* Continental Painters, exterior painting of 46 housing units, Project 2/47. *Vancouver B C:* L Hesketh, *painting of boiler rooms in apts; Alby's Roofing, *renewal of gutters. *Vernon B C:* M & M Insulation, repairs to roofs of 59 housing units.

St. Lawrence Seaway Authority

La Prairie to St Lambert Que: Leo Tremblay Transport Inc, loading & hauling topsoil. *St Lambert Que:* Canadian Vickers Ltd, repairs to fender boom, St Lambert Lock, Eastern District. *Sault Ste Marie Ont:* John McLeod & Sons Ltd, installation of sewage, plumbing & water system, Sault Ste Marie Canal.

Department of Transport

Halifax N S: Community Enterprises Ltd, construction of combined maintenance garage, firehall & airport services bldg & related work; L G Rawding, landscaping of new Air Terminal area, Airport; Trynor Construction Co Ltd, construction of water supply line, access road & associated work, International Airport. *Fredericton N B:* Forbes & Sloat Ltd, strengthening & enlarging of parking apron, construction of new taxiway & strengthening of runway at Airport. *House Harbour, Magdalen Islands Que:* Jean-Marie Cote, erection of security fence for Airport. *Montreal Que:* Arno Electric Reg'd, construction of approach lighting facilities. *Port Harrison Que:* Docherty & Whelpton Construction Co, installation of electrical power supply to bldgs under construction. *Bensfort Ont:* Simcoe Dock & Dredging Ltd, construction of steel sheet piling enclosure around pivot pier, Bensfort Bridge over Trent Canal. *Campbellford Ont:* Central Bridge Co Ltd, strengthening of bridge deck at Highway Bascule Bridge No 14. *Fort William Ont:* Hacquoil Construction Ltd, hard-surfacing of car parking area & rebuilding of roads, Lakehead Airport. *Kingston Ont:* Canadian Shipbuilding & Engineering Ltd, *construction of launch. *Malton Ont:* The Foundation Co of Canada Ltd, construction of Air Terminal bldg—Aeroquay No 1, Toronto International Airport. *North Bay Ont:* B & B Cable Service Ltd, installation of airport lighting facilities. *Ottawa Ont:* H J McFarland Construction Co Ltd, construction airport & car parking area, service roads, sewer, watermains & repairing of runways, Airport. *Scarborough Ont:* Green Lawn Landscape, landscaping, etc, Radiosonde Training Establishment. *Uplands Ont:* Able Construction Co Ltd, supply & installation of refrigeration equipment, air conditioning, electrical & related works, Ottawa Air Terminal Bldg. *Warton Ont:* Cecil A Watson, construction of dwelling. *The Pas Man:* T J Pounder & Co Ltd, surface treatment of runways & taxiways at Airport. *Winnipeg Man:* Drake Construction Co Ltd, construction of power house, Air Terminal Bldg, International Airport. *Saskatoon Sask:* North West Electric Co Ltd, installation of taxiway lighting, Airport. *Calgary Alta:* Standard Gravel & Surfacing of Canada Ltd, strengthening of existing aircraft parking apron, Airport. *Edmonton Alta:* C W Carry Ltd, erection of structural steel & steel decking for Terminal Bldg, International Airport. *Enderby B C:* W & W Construction Ltd, road improvements from NDB to VOR, site clearing & related work. *Prince George B C:* LeeBilt Construction, construction of dwelling & related work. *Quesnel B S:* McKellar Construction Ltd, construction of dwelling & related work, Airport. *Victoria B C:* A C Allan & Co, installation of water supply mains & associated work, International Airport; Dominion Bridge Co Ltd, supply & erection of fencing for remote receiver & transmitter site, Mount Newton, International Airport. *Williams Lake B C:* Abilene Contracting Co Ltd, construction of maintenance garage & related work. *Cambridge Bay N W T:* Yukon Construction Co Ltd, construction of non-directional beacon bldg & related work. *Norman Wells N W T:* McRae & Associates Construction Ltd, construction of four dwellings, two refrigerated storage bldgs & related work.

PRICES AND THE COST OF LIVING

Consumer Price Index, October 1960

Canada's consumer price index (1949=100) rose 0.8 per cent from 128.4 to 129.4 between September and October.*

All five group indexes contributed to the rise, but a further seasonal increase of 2.0 per cent in the food index accounted for most of it. Increases in the other four groups averaged 0.2 per cent.

The October index of 129.4 was 1.1 per cent above the October 1959 reading, 128.0.

The rise in the food index from 123.3 to 125.8 was largely seasonal; it put this October's index 1.3 per cent above the October 1959 food index of 124.2. Price increases were reported for eggs, bananas, citrus fruits, tomatoes and most meats. Price declines were limited generally to apples, lamb, veal and domestically grown vegetables.

The shelter index rose fractionally from 144.2 to 144.3. Both the rent and homeownership components edged up.

The clothing index rose 0.6 per cent, from 110.5 to 111.2, largely reflecting the increase in prices of new season's lines of winter clothing from last season's year-end levels. Women's and girls' winter coats were particularly affected by the change.

The household operation index increased from 123.3 to 123.5, a rise of 0.2 per cent. Furniture prices moved up from previous months' sales levels, and higher prices were reported for coal and some household supplies and services. Appliance prices continued to drift to lower levels; both current and new season's models reflected this movement.

The other commodities and services index increased a fractional 0.1 per cent from 137.6 to 137.8. Doctors' and dentists' fees were higher and premiums for prepaid health care rose in some regions.

Group indexes a year earlier (October 1959) were: food 124.2, shelter 142.4, clothing 110.5, household operation 123.4, and other commodities and services 135.5.

City Consumer Price Indexes, September 1960

Consumer price indexes (1949=100) rose in nine of the ten regional cities between August and September. Increases ranged from 0.2 per cent in both Saint John and

Montreal to 0.7 per cent in Vancouver. The St. John's index declined 1.1 per cent.†

Food indexes followed similar patterns to those shown in the total indexes: all city food indexes were higher except for St. John's. Increases ranged from 0.5 per cent in Montreal to 2.6 per cent in Vancouver. The St. John's food index declined 3.2 per cent.

Shelter indexes showed mixed results: four city indexes were higher, two lower and four unchanged. Clothing indexes moved higher in eight regional cities but declined in the remaining two cities. Household indexes declined in three cities, increased in four cities and were unchanged in the other three regional cities. Other commodities and services indexes were lower in eight of the ten regional cities, unchanged in one and fractionally higher in one.

Regional consumer price index point changes between August and September were as follows: Vancouver +0.9 to 129.2; Saskatoon-Regina +0.8 to 125.6; Edmonton-Calgary +0.8 to 125.1; Ottawa +0.7 to 129.0; Halifax +0.4 to 127.1; Toronto +0.4 to 130.7; Winnipeg +0.4 to 126.2; Saint John +0.2 to 129.2; Montreal +0.2 to 127.7; St. John's -1.3 to 114.8.*

Wholesale Price Index, September 1960

Canada's general wholesale price index (1935-39=100) reached 230.4 in September. This was up slightly—0.1 per cent—from 230.2 in August but down from the 230.9 recorded for September 1959.

During the month, three major group indexes moved higher, four lower, and one, textile products, was unchanged at 228.9.

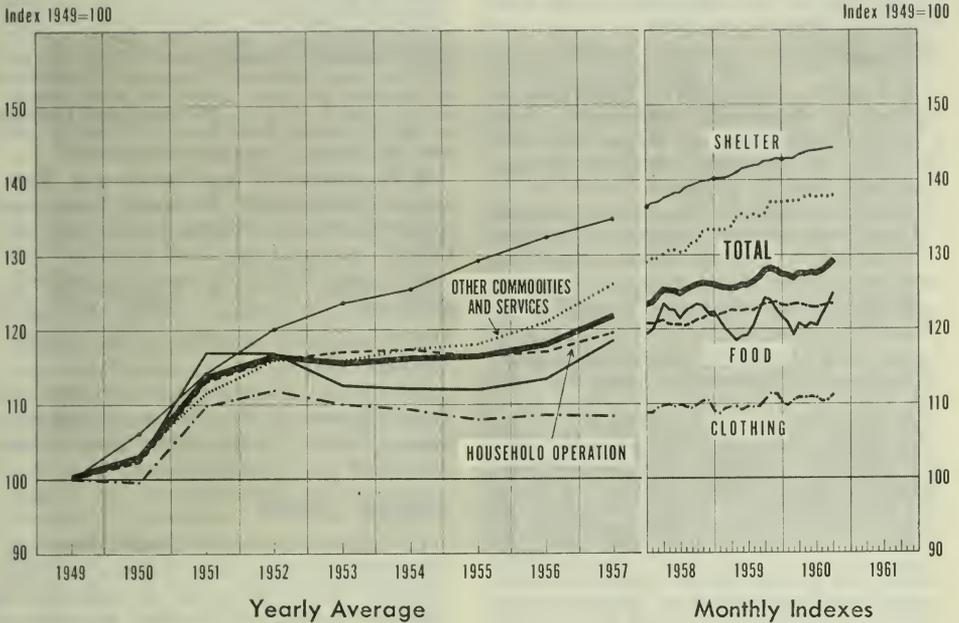

The animal products group index rose to 252.1 from 250.0, and the non-metallic minerals group and the iron products group edged up to 184.5 from 184.4 and to 255.6 from 255.5, respectively.

The non-ferrous metals group index fell to 177.4 from 178.9. Three group indexes were just noticeably lower: the wood products group index moved down to 301.0 from 301.4, the chemical products group to 188.0 from 188.2, and the vegetable products group to 200.9 from 201.0.

† See Table F-2 at back of book.

* On base June 1951=100.

CONSUMER PRICE INDEX

U.S. Consumer Price Index, September 1960

The United States consumer price index (1947-49=100) rose 0.2 per cent between mid-August and mid-September to another record, increasing from 126.6 to 126.8. The mid-September reading was 1.3 per cent higher than a year earlier, when the index stood at 125.2.

U.K. Index of Retail Prices, August 1960

The United Kingdom index of retail prices (Jan. 17, 1956=100) declined between mid-July and mid-August. It dropped from the record high of 111.1 to 110.4, which was only 0.1 point higher than the mid-May level. At mid-August 1959 the index was 109.3.

Publications Recently Received in Department of Labour Library

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Application for loans should give the number (numeral) of the publication desired and the month in which it was listed in the *Labour Gazette*.

List No. 145

Aged

1. U.S. CONGRESS. SENATE. COMMITTEE ON LABOR AND PUBLIC WELFARE. *The Aged and Aging in the United States: a National Problem. A Report by the Subcommittee on*

Problems of the Aged and Aging to the Committee on Labor and Public Welfare, United States Senate, pursuant to S. Res. 65 (86th Cong., 1st sess.), a Resolution authorizing a Study of the Problems of the Aged and Aging, with Minority Views. Washington, GPO, 1960. Pp. 186, 155.

At head of title: 86th Cong., 2d sess. Committee print.

This report contains the following: (1) basic recommendations on the problem of the aging; (2) a factual account of the present status of the aged and aging; and, (3) a brief description of what is being done in handling the problem.

2. WORKSHOP ON AGING, TORONTO. 1960. [*Proceedings*] Toronto, Ontario Society on Aging, 1960. Pp. 74.

The Workshop, held on March 26, 1960, was arranged "to evaluate the progress made in carrying out the resolutions of the First Ontario Conference on Aging."

Automation

3. ILLINOIS. UNIVERSITY. INSTITUTE OF LABOR AND INDUSTRIAL RELATIONS. *Fast-Changing Technology—its Impact on Labor Problems*, by Richard C. Wilcock. Urbana, 1960. Pp. 3-9.

Discusses the social and economic problems resulting from increased automation in plants.

4. JACOBSON, EUGENE HENRY. *Employee Attitudes toward Technological Change in a Medium Sized Insurance Company*, by Eugene Jacobson [and others] East Lansing, Labor and Industrial Relations Center, Michigan State University, 1959. Pp. 349-354.

Employees' responses to questionnaires about technological change and the installation of a new electronic computer in a medium sized insurance company showed, among other things, that about one third of the nonsupervisory employees reported that the introduction of the computer had affected their jobs; most employees liked to work with machines and expected a greater use of machines in the future; most employees were optimistic about being retained despite the use of the machines; and, most employees didn't think that the introduction of the new technologies had had much effect on the amount of pay they got, their chances of promotion, or the amount of supervision they received.

Collective Bargaining

5. PRINTING INDUSTRY PARITY COMMITTEE FOR MONTREAL AND DISTRICT. *Decree relating to the Printing Trades (Island of Montreal and a Radius of 100 Miles from its Limits) 1946-1960*. Rev. ed. with amendments. October 31, 1959. Montreal, 1960. Pp. 64.

English and French, the latter inverted with special title page.

6. ULMAN, LLOYD. *Collective Bargaining and Inflation*. Berkeley, University of California, Institute of Industrial Relations, 1960. Pp. 51-58.

This paper "argues that trade unions have exerted independent upward pressure on wages and prices in the past, but it concludes that their over-all impact might reasonably be expected to decline in future years."

Economic Conditions

7. NATIONAL INDUSTRIAL CONFERENCE BOARD. *Economic Unity in Europe: Programs and Problems. Presentations on the Subject by George W. Ball [and others] before Sessions of the Board's 400th Meeting, held in New York City on January 21-22, 1960; and a Specially Prepared Appendix on the Size and Structure of the European Economic Community and the European Free Trade Association*. New York, 1960. Pp. 127.

Contains talks presented to members of the National Industrial Conference Board on the European Economic Community (the Common Market or "Inner Six") and the European Free Trade Association (the "Outer Seven"). Two major questions explored were: 1. How far has the European Economic Community progressed in reaching its stated goals and what remains to be done? 2. What is the nature and purpose of the European Free Trade Association and how will it affect American businessmen?

8. ORGANIZATION FOR EUROPEAN ECONOMIC COOPERATION. *Economic Conditions in Member and Associated Countries of the OEEC: Ireland*. Paris, 1960. Pp. 37.

9. UNITED NATIONS. DEPARTMENT OF ECONOMIC AND SOCIAL AFFAIRS. *Economic Survey of Latin America, 1958*. Mexico, 1960. Pp. 160.

10. UNITED NATIONS. DEPARTMENT OF ECONOMIC AND SOCIAL AFFAIRS. *World Economic Survey, 1959*. New York, 1960. Pp. 250.

Employees—Training

11. GREAT BRITAIN. DEPARTMENT OF SCIENTIFIC AND INDUSTRIAL RESEARCH. *Training made Easier; a Review of Four Recent Studies*. London, HMSO, 1960. Pp. 30.

Outlines some recent research into problems of training. Contents: What do Trainees have to learn? How can Trainees be helped to learn? Problems of Application.

12. KING, S. D. M. *Vocational Training in View of Technological Change; Report*. EPA Project no. 418. Paris, European Productivity Agency of the OEEC, 1960. Pp. 117.

An examination of training requirements of production and maintenance workers in highly mechanized and automatic factories.

Employer-Employee Communications

13. ILLINOIS. UNIVERSITY. INSTITUTE OF LABOR AND INDUSTRIAL RELATIONS. *Cognitive Similarity and Interpersonal Communication in Industry*, by Harry C. Triandis. Urbana, 1960. Pp. 321-326.

The author's contention seems to be that the effectiveness of mutual communication between a supervisor and a subordinate is related to their mutual liking for one another. There is an analysis of communications, between supervisors and subordinates in a plant employing 300 people, expressed in a series of mathematical formulae.

14. INTERNATIONAL LABOUR OFFICE. *The Practices, Procedures and Techniques of Effective Employer-Employee Communications in the Petroleum Industry*. Third item on the agenda. Geneva, 1960. Pp. 113.

At head of title Report 3. International Labour Organization. Petroleum Committee. Sixth session, Geneva, 1960.

Considers five aspects of the communications process between employers and employees: "the nature of the process and the need for the

effective interchange of information and views between parties; what information should be conveyed; the barriers to communication; the various channels and methods of communication; and the findings of some recent research on the subject."

Industrial Relations

15. ILLINOIS. UNIVERSITY. INSTITUTE OF LABOR AND INDUSTRIAL RELATIONS. *Steel Strike complicates 20 Years of Progress in Labor Relations*, by Milton Derber. Urbana, 1960. Pp. 16-24.

Discusses ten ways in which industrial relations have changed in the last twenty years in the U.S.

16. NATIONAL BUSINESS CONFERENCE ON LABOUR-MANAGEMENT RELATIONS, WINNIPEG, 1960. [*Addresses presented to the Conference, January 25, 1960*. Montreal. Canadian Chamber of Commerce, 1960] 5 papers. Conference co-sponsored by the Winnipeg Chamber of Commerce and the Canadian Chamber of Commerce.

Titles of talks: Key-Note Address, by W. S. Kirkpatrick. Employer-Employee Relations and the Law, by J. W. Healy. Management Initiative in Collective Bargaining, by J. W. Henley. Informing the Employee, by Lloyd Hemsforth. A Program for Action, by Howard T. Mitchell.

Labour Organization

17. INTERNATIONAL FEDERATION OF INDUSTRIAL ORGANISATIONS AND GENERAL WORKERS' UNIONS. *Report on Activities for the Years 1957-1959*. Amsterdam, 1960. Pp. 59.

18. PELLING, HENRY. *American Labor*. Chicago, University of Chicago Press, 1960. Pp. 247.

The author, an authority on labour history and associated with Queen's College, Oxford, has written a narrative history of American labour organization from its beginnings to the present time.

19. SAKURABAYASHI, MAKOTO. *Labour Unions in Postwar Japan*. Tokyo, Sophia University, Industrial Relations Center, 1960. Pp. 20.

Labouring Classes

20. CANADA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH BRANCH. *Working and Living Conditions in Canada*. Ninth edition, April 1960. Prepared... in consultation with the Dept. of Citizenship and Immigration. Ottawa, Queen's Printer, 1960. Pp. 72.

21. CONFERENCE ON LABOR, NEW YORK UNIVERSITY. 12TH, 1959. *Proceedings*. Albany, Matthew Bender & Co., 1959. Pp. 306.

Some of the topics discussed in the proceedings were labour arbitration, collective bargaining, inflation, and, labor legislation in the U.S.

22. GARRATY, JOHN ARTHUR. *The United States Steel Corporation versus Labor: the Early Years*. East Lansing, Labor and Industrial Relations Center, Michigan State University, 1960. Pp. 38.

A brief study of the labour policies of the United States Steel Corporation during its early years.

23. HARRINGTON, MICHAEL, Ed. *Labor in a Free Society*, edited by Michael Harrington and Paul Jacobs, with a foreword by Clark Kerr. Berkeley, University of California Press, 1959. Pp. 186.

Contains papers presented at a conference held in May, 1958, at Arden House, Harriman, N.Y., under the sponsorship of the Fund for the Republic.

Contents: Freedom in the Work Situation, by Erich Fromm. The Position of Trade Unions in the American Economy, by Sumner H. Slichter. The Role of Law in preserving Union Democracy, by Archibald Cox. Union Self-Discipline and the Freedom of Individual Workers. A Trade-Union Point of View, by Arthur J. Goldberg. The Rights of British Trade-Union Members. Experiences of the Australian Labor Movement under Government Control.

24. ILES, D. J. *Problems of Full Employment*, by D. J. Iles and C. A. Tucker. London, Routledge & Kegan Paul, 1960. Pp. 265.

Covers the theory of full employment and outlines how the British government has dealt with the question.

25. INTERNATIONAL LABOUR OFFICE. *General Report [prepared for the Petroleum Committee]* First item on the agenda. Geneva, 1959. [i.e. 1960] Pp. 170.

At head of title: Report 1. International Labour Organization Petroleum Committee. Sixth session, Geneva, 1959.

Some of the topics discussed are wages and hours, working conditions, industrial relations, recent developments in the petroleum industry, holidays with pay, and, housing for petroleum workers.

26. INTERNATIONAL MEETING ON SOCIAL RESEARCH, PARIS, 1959. *Social Research and Industry in Europe, Problems and Perspectives; Report on the International Meeting on Social Research organized by the European Productivity Agency on 8, 9 and 10 July 1959*. Paris, 1960. Pp. 96.

Heads of research institutions and research workers representing nine European countries met in Paris in July 1959 to discuss the social sciences in industry. This book consists of a report of the meetings and national reports of representatives in the following countries: Belgium, France, Germany, Italy, Norway, Switzerland, and Great Britain.

27. MINNESOTA. DIVISION OF VOCATIONAL REHABILITATION. *Vocational Rehabilitation in Minnesota; Annual Report, July 1, 1958 to June 30, 1959*. St. Paul, 1960. Pp. 18.

28. QUEBEC (CITY). UNIVERSITE LAVAL. DEPARTEMENT DES RELATIONS INDUSTRIELLES. *Bénéfices sociaux et initiative privée*

[par] Gerard Dion [et al.] Quebec, Les Presses universitaires Laval, 1959. Pp. 180.

Report of the 14th Congrès des relations industrielles held in Quebec City, April 20-21, 1959. Discusses various aspects of fringe benefits.

29. STESSIN, LAWRENCE. *Employee Discipline*. Washington, Bureau of National Affairs, Inc., 1960. Pp. 315.

Analyzes the principal published American arbitration awards which deal with discipline problems. Some of the topics discussed in the book are insubordination, absenteeism, fights and arguments, theft, dishonesty, and disloyalty, gambling incompetency damage to, or loss of, machines and materials, and, union activity.

30. U.S. BUREAU OF LABOR STATISTICS. *Indexes of Output per Man-Hour for Selected Industries, 1939 and 1947-59. Annual Industry Series*. July 1960. Washington, 1960. Pp. 16.

Older Workers

31. GORDON, MARGARET S. *The Older Worker and Hiring Practices*. Berkeley, University of California, Institute of Industrial Relation, 1960. Pp. 1198-1205.

The author says, "The problem of breaking down the barriers to the employment of older jobseekers is inseparably linked with the problem of effective utilization of the older worker on the job and with the complex issue of retirement policy."

32. ROSS, ARTHUR MAX. *Employment Problems of Older Workers*, by Arthur M. and Jane N. Ross. Berkeley, University of California, Institute of Industrial Relations, 1960. Pp. 97-120.

Outlines some of the problems facing older workers and suggests some solutions.

33. YOUMANS, E. GRANT. *Socio-Economic Problems of Older Persons in Casey County, Kentucky*. Lexington, University of Kentucky, Kentucky Agricultural Experiment Station, 1960. Pp. 48.

Supplies information about the work, retirement, and economic conditions of older persons in a rural county of Kentucky, and assesses some of the socio-economic changes which have occurred with advancing chronological age.

Unemployment

34. BRITISH COLUMBIA. RESEARCH COUNCIL. *Seasonal Unemployment in British Columbia; a Report prepared... on behalf of the Government of Canada and the Government of British Columbia*. Vancouver, 1960. 1 Volume (various pagings).

This study has four objectives: (1) to describe and analyze the seasonal unemployment problem in B.C.; (2) to collect and evaluate statistical and other data relating to the problem; (3) to determine what aspects of the problem might be remedied; and, (4) to evaluate specific proposals for remedy that have been made by various individuals and organizations.

35. U.S. BUREAU OF EMPLOYMENT SECURITY. *Chronic Labor Surplus Areas, Experience and Outlook; an Analysis of Recent Labor Market Developments and Employment Outlook in Chronically-Depressed Areas and Other Areas with Relatively Heavy Unemployment*. Washington, 1959. Pp. 90.

An analysis of the labour market experience of 46 major industrial centers and 143 smaller areas which were designed as 'areas of substantial labor surplus' by the Bureau of Employment Security of the U.S. Department of Labor in July 1959.

36. U.S. CONGRESS. SENATE. SPECIAL COMMITTEE ON UNEMPLOYMENT PROBLEMS. *Readings in Unemployment*. Prepared for the Special Committee on Unemployment Problems, United States Senate, pursuant to S. Res. 196, 86th Congress, 1st session. Washington, GPO, 1960. Pp. 1716.

At head of title: 86th Cong., 2d sess. Committee print.

Consists of a representative selection of research studies and articles dealing with the history of unemployment in the U.S., the special groups and problems associated with it, and some remedies that have been adopted and proposed to meet the problems caused by unemployment.

Wages and Hours

37. CLARK, JOHN MAURICE. *The Wage-Price Problem*. New York, Committee for Economic Growth without Inflation, American Bankers Association, 1960. Pp. 68.

Examines the effects of wages and prices on inflation.

38. ILLINOIS. STATE EMPLOYMENT SERVICE. *Estimates of Employment, Hours, and Earnings in Nonagricultural Establishments. Chicago Standard Metropolitan Statistical Area. no. 1. Jan. 1959 thru April 1960*. Chicago, 1960. 1 Volume (unpaged).

Cover title: Chicago Standard Metropolitan Statistical Area. Employment, Hours, and Earnings.

Issued by Research and Statistics Section, Illinois State Employment Service and Division of Unemployment Compensation. Prepared in co-operation with the U.S. Bureau of Labor Statistics and the U.S. Bureau of Employment Security.

39. U.S. BUREAU OF LABOR STATISTICS. *Union Wages and Hours: Printing Industry, July 1, 1959 and Trend 1907-59*. Washington, GPO, 1960. Pp. 45.

40. U.S. WOMEN'S BUREAU. *Equal-Pay Primer, Some Basic Questions*. Rev. ed. Washington, GPO, 1960. Pp. 13.

A brief explanation of the meaning of "equal pay" with a short outline of State and Federal legislation concerning it.

Miscellaneous

41. CONFERENCE ON SCIENTIFIC MANPOWER. 8TH, CHICAGO, 1959. *Scientific Manpower, 1959; Papers of the Eighth Conference on Scientific Manpower*. Washington, National Science Foundation, 1960. Pp. 38.

Contents: Engineering Programs in the Light of the New Technology, by Harold L. Hazen. Graduate Training and the Space Sciences, by John P. Hagen. Education and Manpower Problems in Oceanography, by Gordon A. Riley. Implication of Nuclear Science Developments for Graduate Training, by Charles W. Shilling. Graduate Training in Metallurgy, by Walter R. Hibbard, Jr. Graduate Training Requirements in Chemical Fuels, by Richard D. Geckler.

42. FORM, WILLIAM HUMBERT. *Integration and Cleavage among Community Influentials in Two Border Cities*, by William H. Form and William V. D'Antonio. East Lansing, Labor and Industrial Relations Center, Michigan State University, 1959. Pp. 804-814.

A study of two communities, El Paso, Texas, and C. Juarez, Chihuahua, on the United States-Mexico border.

43. HANNAM, H. H. *A Revolution in Canadian Agriculture* [Ottawa, Dept. of Labour] 1960. Pp. 3.

Canada at work broadcast no. 829.

Dr. Hannam, President and Managing Director of the Canadian Federation of Agriculture, discussed postwar developments on Canadian farms.

44. INTERNATIONAL LABOUR OFFICE. *Equality of Treatment of Nationals and Non-Nationals in Social Security*. Eighth item on the agenda. Geneva, 1960. Pp. 103.

At head of title: Report 8 (1). International Labour Conference. 45th session, 1961.

"Analyzes the points on which equality of treatment is restricted by national legislation or in national practice, and the favorable effect of international social security law; it then sets out the technical problems affecting the preparation of an international instrument on equality of treatment, and the solutions proposed by the Committee of Social Security Experts of the ILO." Includes a questionnaire on the subject to be completed and returned by member governments.

45. NATIONAL INDUSTRIAL CONFERENCE BOARD. *Executive Aircraft Practices*, by Roger M. Pegram. New York, 1960. Pp. 88. Supplement, 1960. 20 p.

A study of 168 companies that use their own commercial aircraft in running their business. Discusses the types of aircraft; where the planes are obtained; equipment of the planes; costs of running them; where pilots are obtained; qualifications and selection of pilots; duties of aircraft personnel; and, the operations of the planes and their maintenance. Includes four case studies.

46. PEARCE, CHARLES ALBERT. *Quality of Statistics on Work-Injury Rates*. [Address] Interstate Conference on Labor Statistics, July 7-10, 1959, Knoxville, Tennessee. Washington, U.S. Bureau of Labor Statistics, 1960. Pp. 15.

Address not included in published proceedings.

47. SNOW, PHEBE. *How a Book is made*. London, Routledge and Kegan Paul, 1960. Pp. 133.

Discusses how modern processes of book-production have developed over the past centuries, and follows the process of producing a book all the way from the making of the paper to the selling of the completed book.

48. UNITED NATIONS. COMMISSION ON HUMAN RIGHTS. *Freedom from Arbitrary Arrest, Detention and Exile. Yearbook on Human Rights: First Supplementary Volume*. New York, United Nations, 1959 [i.e. 1960] Pp. 249.

Contains statements from 56 countries on these topics.

49. U.S. BUREAU OF THE CENSUS. *Historical Statistics of the United States, Colonial Times to 1957*. Prepared by the Bureau of the Census with the co-operation of the Social Science Research Council. Washington, GPO, 1960. Pp. 789.

Second volume in the Historical Statistics series issued by the Bureau of the Census as a supplement to the annual Statistical Abstract of the United States. The first volume, Historical Statistics of the United States, 1789-1945, was published in 1949.

Contents: Population. Vital Statistics and Health and Medical Care. Migration. Labor. Prices and Price Indexes. National Income and Wealth. Consumer Income and Expenditures. Social Statistics. Land, Water, and Climate. Agriculture. Forestry and Fisheries. Minerals. Construction and Housing. Manufactures. Transportation. Communications. Power. Distribution and Services. Foreign Trade and Other International Transactions. Business Enterprise. Productivity and Technological Development. Banking and Finance. Government, Colonial Statistics.

Recent Regulations

(Continued from page 1170)

Moose Jaw to work up to 88 hours in a two-week period at straight-time rates. If a holiday occurs during this period, the 88 hours are to be reduced by eight hours for

the purpose of determining overtime and no account is to be taken of any time an employee is required to work or be at the disposal of his employer.

Similar exemptions have been granted to employees of municipal swimming pools in Prince Albert, Regina and Saskatoon.

B—Labour Income

NOTE: The estimates of labour income in this table have been revised in accordance with recent revisions to the National Accounts. Note particularly the use of annual totals instead of monthly averages, and the introduction of quarterly instead of monthly totals for some industries. Monthly and quarterly figures may not add to annual totals because of rounding.

¹Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.

²Includes post office wages and salaries.

³Figures in this column are for total labour income, Canada, but are not totals of the figures in the remaining columns of this table, as figures for labour income in Agriculture, Fishing and Trapping are not shown. (See also headnote.)

* Revised.

† Preliminary.

C—Employment, Hours and Earnings

Tables C-1 to C-3 are based on reports from employers having 15 or more employees—at August, 1960 employers in the principal non-agricultural industries reported a total employment of 2,866,502. Tables C-1 (every second month) and C-5 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-2. They relate only to wage earners for whom statistics of hours of work are also available whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage earners in the reporting firms.

¹Includes (1) Forestry (chiefly logging), (2) Mining (including milling), quarrying and oil wells, (3) Manufacturing, (4) Construction, (5) Transportation, storage and communication, (6) Public utility operation, (7) Trade, (8) Finance, insurance and real estate and (9) Service, (mainly hotels, restaurants, laundries, dry cleaning plants, business and recreational service).

TECHNICAL NOTE—A change has been made in the method of dating the statistics published in Tables C-1 to C-6 to conform with the usual practice of the Dominion Bureau of Statistics. In the past, statistics for the last pay period in a month were labelled "pay period preceding" the first day of the following month. From now on, statistics for the last pay period in a month will be labelled for that month. Another change is that average hourly earnings formerly expressed in cents carried to one decimal place, are now published in dollars and cents.

Tables C-4 and C-5 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-3. They relate only to wage-earners for whom statistics of hours of work are also available whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage-earners of the co-operative firms.

TABLE C-4—HOURS AND EARNINGS IN MANUFACTURING BY PROVINCES

NOTE: The index of average weekly wages in 1949 dollars is computed by dividing the index of average weekly wages in current dollars by the Consumer Price Index. For a more complete statement of uses and limitations of the adjusted figures see *Man-Hours and Hourly Earnings*, DBS, page ii.

* December 1959 figures adjusted for the holidays are 40.8 hours and \$71.52.

D—National Employment Service Statistics

Tables D-1 to D-5 are based on regular statistical reports from local offices of the National Employment Service. These statistics are compiled from two different reporting forms, UIC 751: statistical report on employment operations by industry, and UIC 757: inventory of registrations and vacancies by occupation. The data on applicants and vacancies in these two reporting forms are not identical.

G—Strikes and Lockouts

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Department of Labour on the basis of reports from the Unemployment Insurance Commission. The first three tables in this section cover strikes and lockouts involving six or more workers and lasting at least one working day, and strikes and lockouts lasting less than one day or involving fewer than six workers but exceeding a total of nine man-days. The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. For further notes on the series see page 763, July issue.

TABLE G-1—STRIKES AND LOCKOUTS, 1955-1960

OCCUPATIONAL MONOGRAPHS in the "CANADIAN OCCUPATIONS" SERIES

This Series is prepared by the Economics and Research Branch of the Department of Labour to help young people choose a career, and as an aid to those engaged in vocational guidance work. Each booklet covers an occupation or occupational field, outlining the kind of work done, the preparation and training needed, how to enter the occupation, career opportunities and employment outlook.

45 Physical and Occupational Therapist, 1959	L43-4559
46 Office Occupations, 1960	L43-4660

All monographs in the "Canadian Occupations" series are priced at 10 cents per copy, with the exception of *Careers in Natural Science and Engineering*, which is 25 cents. A discount of 25 per cent is allowed on quantities of 100 or more of the same title.

Send remittance by cheque or money order, made payable to the Receiver General of Canada, to The Queen's Printer, Ottawa, Canada.

School guidance counsellors should inquire from their provincial Department of Education for supplies.

FILMSTRIPS

*The Department of Labour, in collaboration with the National Film Board, has prepared a number of occupational filmstrips based on titles in the "Canadian Occupations" series. Titles covered to date are indicated by an asterisk. Monographs 20-25 have been covered in two filmstrips, entitled *Careers in Natural Science and Careers in the Engineering Profession*.

Filmstrips are priced at \$1.50 each and may be purchased from the National Film Board, Box 6100, Montreal.

EMPLOYMENT REVIEW

ECONOMICS AND RESEARCH BRANCH

Employment Situation in the Fourth Quarter

One of the main features of the employment situation in the fourth quarter was the continued expansion of the service industry. Between August and November, employment in the service industry rose 55,000 compared with an average rise of 45,000 during the previous five years. Staffing of new educational and health facilities accounted for a large part of this advance. Employment expansion in retail trade, which had been quite substantial earlier this year, was held down by the retarding influence of mild weather on sales of winter clothing. In other service-producing industries, employment either contracted or remained stable between the third and fourth quarter.

The third to fourth quarter changes in employment in the goods-producing industries were mainly seasonal. Manufacturing employment normally drops fairly sharply between August and November as a result of layoffs in the canning industry; this year it declined by 59,000, which was about average. Forestry employment expanded seasonally and mining remained fairly stable. Construction and agricultural activity did not decline as rapidly as usual owing to the fine weather prevailing in many areas during October and November.

Motor vehicle and motor vehicle parts plants have been busier in recent months following stepped up production on the 1961 models. A strong first half of 1960 was followed by cutbacks in production and employment for retooling and model changeover during the third quarter. With the completion of the transition period in October, production of passenger cars and commercial vehicles showed a better than 50-per-cent rise from September. The January-October production figures were slightly higher than last year for both passenger cars and commercial vehicles. Employment has been rising in recent months, although it is still somewhat lower than a year ago.

The iron and steel industry, which accounted for the heaviest losses in manufacturing employment earlier in the year, showed a further decline during the fourth quarter. Activity in primary steel products continued to slacken during the past few months while other parts of the iron and steel industry held fairly steady at the reduced levels of the third quarter. Employment was somewhat firmer in the aircraft industry as a result of recent orders from the United States Government.

Construction employment moved down in an irregular fashion from mid-1959 to mid-1960 as some losses were interspersed with partly offsetting advances. From August to November, when construction employment normally falls sharply (the average contraction in the past five years was 50,000), the decline this year was only 35,000. The unusually mild fall weather appears to have been the main reason for the smaller drop this season. Housing continued to be a major source of weakness in the fourth quarter; although an upturn in housing starts occurred toward the end of the year, the volume of

work under construction in October was still lower than a year before. Non-residential construction was maintained at a fairly high level after showing some strengthening in the third quarter. Prospects in this sector of construction continued to be fairly bright, particularly in engineering, where the value of contracts awarded has been running well ahead of last year. Contracts awarded in the first ten months of 1960 were more than one-fifth higher than last year in engineering and one-tenth higher in industrial construction.

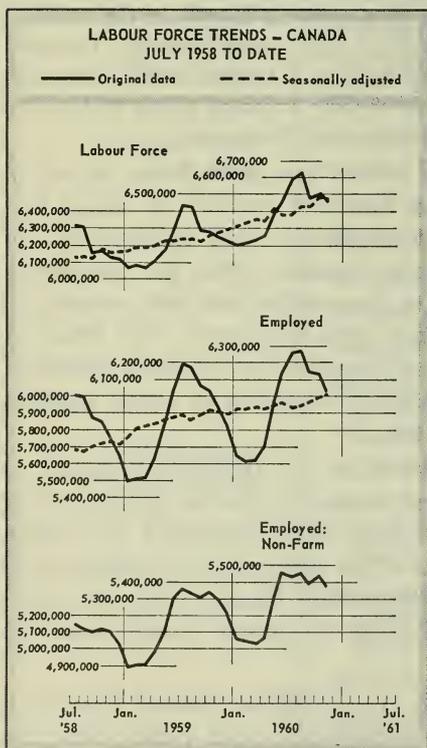

Employment Growth Over the Year

Total employment in November, at 6,029,000, was up 99,000 over the year before. The sustained growth of most sectors of the service industry was responsible for the increase. Activity in trade, finance, insurance and real estate showed little change over the year but some slackening occurred in transportation. For the service-producing industries* as a whole, employment was 119,000 higher than last year. On the other hand, employment in the goods-producing industries during November was down from a year ago by 20,000, with losses in manufacturing and construction; there was a small advance in agriculture.

Some 1,644,000 women were employed in November, 102,000 more than a year before; there were slightly fewer men employed than a year ago. As might be expected, the employment expansion in the service industries was more striking among women than among men. On the other hand, the slowdown in activity in the goods-producing industries affected more men than women.

The labour force growth accelerated during recent months, and by November it was 211,000 higher than a year before. Women accounted for more than half of the increase, much more than their share of the labour force. The rising number of married women in the labour force was particularly marked. Expansion of job opportunities, changing social attitudes and labour saving devices in the home have all played a part in the increased labour force participation of married women.

*For purposes of employment analysis it is sometimes useful to have in one group all the industries that produce goods and in another group all the industries concerned with supplying services. The former includes agriculture and other primary industries, manufacturing and construction; the latter, transportation and other utilities, trade, finance, insurance, real estate and service (which includes recreation, community, government and other services).

NOTE: The uppermost curve, representing the labour force, on this chart in the November issue (p. 1098) was incorrectly plotted. It indicated a labour force of 6,599,000 in October. The figure was actually 6,499,000, as plotted above.

Trends in Manufacturing Industries

Most of the employment losses over the year have been in construction and manufacturing, and in the latter, weaknesses have been centered in the durable goods industries. In September, the employment index for durables was 6.6 per cent lower than a year before while for non-durables it showed no change. The iron and steel products industries experienced the most marked employment decline; in agricultural implements it fell by about 29 per cent. Smaller, though still substantial employment reductions took place in heating and cooking appliances, iron castings and primary iron and steel. The curtailment of activity in agricultural implements can be attributed, in part, to a weakening in the export market. Export sales of agricultural implements in the first eight months of 1960 were down 27 per cent from the comparable period in 1959. The 8-per-cent employment decline in transportation equipment, shown in the table below, embraced shipbuilding, motor vehicles, aircraft and railway rolling stock. Some improvement appears to have taken place in the aircraft and automotive industries during October and November though not enough to bring employment up to last year's level.

Manufacturing Employment

(Index: 1949=100)

	Sept. 1960	Sept. 1959	% Change
Manufacturing	111.5	115.3	-3.3
Non-Durables	111.5	111.8	-0.3
Food and Beverages	129.8	126.6	+2.5
Tobacco and Tobacco Products	78.8	84.4	-6.6
Rubber	102.5	110.5	-7.2
Leather	85.6	88.9	-3.7
Textiles	77.3	80.0	-3.4
Clothing	92.3	95.8	-3.7
Paper	127.3	127.2	*
Printing, Publishing	124.5	123.3	+1.0
Products of Petroleum and Coal	137.4	138.3	-0.7
Chemical	133.4	132.6	+0.6
Miscellaneous	133.1	132.0	+0.8

Non-metallic Mineral	144.2	152.3	-5.3

* Less than 0.5.

Source: Employment and Payrolls, DBS.

The slowdown in construction activity—traceable to a large extent to a drop in housebuilding—has had its counterpart in reduced employment levels in the building material industries. Wood products and non-metallic mineral products show identical year-to-year declines of 5.3 per cent. Reduced demands for concrete and brick accounted for much of the slackening in non-metallic mineral products. The easing in the demand for wood products had its origin in the domestic market. Exports of wood products have been maintained at a slightly higher level than last year.

Employment in the electrical apparatus and supplies industry was down by 5.4 per cent in September compared with a year before. The slower pace of activity in this industry can be attributed largely to fewer electric power developments. Employment in heavy electrical machinery fell sharply over the year while, with minor exceptions, the other parts of the industry held up fairly well. Non-ferrous metals was about the only hard-goods industry to maintain employment at last year's level. Exports have shown more strength than last year, offsetting weaknesses in the domestic market. Conspicuously large gains have been apparent in sales of aluminum, nickel and copper.

Employment trends in the non-durable goods industries have been mixed. Food and beverages, which account for roughly one fourth of total employment in the non-durable goods industries, made a September-to-September advance of 2.5 per cent, offsetting the larger percentage declines in tobacco products, rubber, leather, textiles and clothing. Employment levels were virtually unchanged over the year in paper products, miscellaneous manufacturing products and products of petroleum and coal.

Unemployment

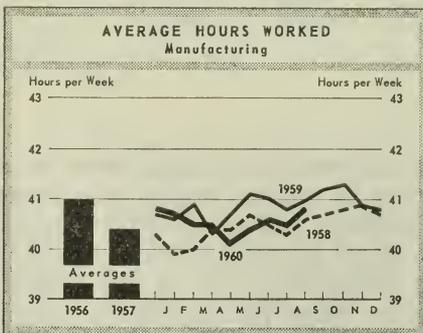

Unemployment increased seasonally between the third and fourth quarter and continued to be substantially higher than last year. In November, an estimated 429,000 persons were unemployed, representing 6.6 per cent of the labour force. A year before, the figure was 317,000, representing 5.1 per cent of the labour force.

Men accounted for about 80 per cent of the increase over the year. The largest year-to-year percentage increase was in the 14-19 year age group; as usual, the rate of unemployment was substantially higher among teenagers than in any other age group. Four fifths of the unemployed in November were over 19 years old, and in these older age groups the increase over the year was more or less uniform.

Long-term unemployment has been more prevalent than in 1959. In November, some 116,000 job seekers had been seeking work for four months or more. A year before, 63,000 of a smaller total had been seeking work for this length of time.

About 42 per cent of the persons unemployed in November were heads of families; 48 per cent were sons, daughters or other relatives living in family units; and 10 per cent were unattached persons. Of 294,000 family units with one or more persons unemployed, 59 per cent also had at least one person in the family working. In the remaining 120,000 families, no one was employed.

Regional unemployment rates in November were highest in the Pacific and lowest in the Prairie Provinces. Unemployment in Ontario was below the national rate; in the Atlantic and Quebec regions it was higher than the national rate.

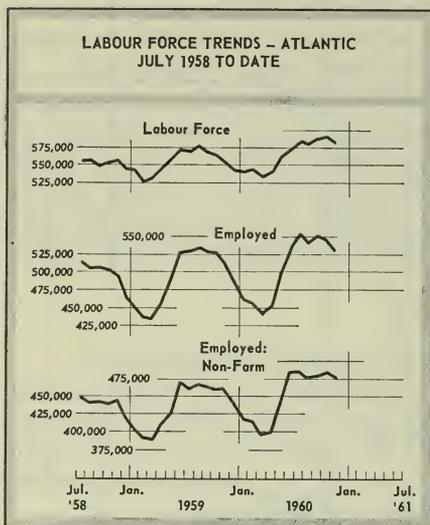

CLASSIFICATION OF LABOUR MARKET AREAS—NOVEMBER 1960

	SUBSTANTIAL LABOUR SURPLUS	MODERATE LABOUR SURPLUS	APPROXIMATE BALANCE	LABOUR SHORTAGE

Manpower Situation in Local Areas

ATLANTIC

The decline in employment in the Atlantic region from the third to the fourth quarter was less than seasonal. Increased activity in pulpwood logging was the main source of employment strengthening, although certain parts of manufacturing improved also. Logging employment reached the highest level in several years, bolstered in part by the rebuilding of pulpwood inventories. The revival in steel production was one of the sources of strength in manufacturing. Except in the wire and nail mill, which has been hampered by market conditions for several years, the Sydney steel mills were operating at better than 90 per cent of capacity during November. The shipbuilding industry, which was a source of

employment expansion during the summer and early fall, released some 500 workers during November. Activity in aircraft manufacturing was well sustained during the fourth quarter but the railway rolling stock industry showed little improvement from the low level of the third quarter.

The construction industry has shown less buoyancy in recent months than earlier in the year, mainly reflecting an easing in highway and street construction. Other types of non-residential construction were maintained at slightly higher levels than last year. Housebuilding activity continued at a reduced rate, although prospects improved toward the end of the year after an upturn in housing starts.

Activity in the coal mining industry showed no appreciable change between the third and fourth quarter. This industry has been experiencing periodic cutbacks in production since the summer of 1958.

Employment in November was 18,000 higher than a year earlier, all of which was accounted for by increased female employment. Much of the over-all employment advance was in the service industry; there were smaller gains in forestry and manufacturing. An increase of 31,000 over the year brought the November labour force estimate to 583,000.

Unemployment increased more than seasonally between the third and fourth quarter, reaching a considerably higher level than last year. In November some 53,000 or 9.1 per cent of the labour force were unemployed; in November 1959, the estimate of 40,000 was 7.2 per cent. The increase in unemployment was fairly well distributed throughout the region. The labour market classification at the end of November was as follows (last year's figures in brackets): in substantial surplus, 3 (1); in moderate surplus, 18 (17); in balance, 0 (3).

Local Area Developments

St. John's (metropolitan): Group 1. Employment was maintained at a somewhat higher level than last year until the middle of the third quarter but more recently it has been running below the 1959 level. The construction industry was mainly responsible for the year-to-year employment decline, although manufacturing employment has been somewhat lower also.

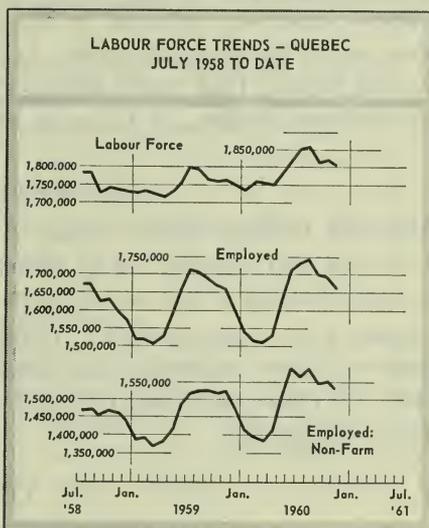

Halifax (metropolitan): Group 2. Employment continued at a slightly higher level than last year. Advances occurred in manufacturing and trade but partly offsetting employment declines have taken place in construction and transportation.

QUEBEC

After a moderate growth in the first half of the year, employment in the Quebec region dropped off sharply about midway in the third quarter, and continued to decline in the following months at a higher rate than it did the year before. In November, total employment in the region, at 1,664,000, was about the same as the year-earlier level. Women constituted 26.1 per cent of total employment, fractionally higher than last year.

The greater-than-usual decline in employment was the result of opposing movements in non-agricultural industries. Total manufacturing employment, seasonally adjusted, began to decline in June, and by September had dropped 3.4 per cent; indications are that this trend continued in the fourth quarter. Within manufacturing industries, capital goods and consumer durable goods were most severely affected, although most non-durables also experienced various degrees of employment decline. One conspicuous exception among the durable goods industries was the aircraft and parts industry, where employment remained at a high level throughout the year. Reduced activity in the capital goods industries was in part a reflection of the decline in investment and in part was the indirect effect of the strike at the Dominion Bridge plant at Lachine, which lasted from the middle of August to the end of October and involved about 1,500 workers.

Employment developments in the non-manufacturing industries (except construction) in the third and fourth quarters, and indeed throughout the year, were, on the whole, favourable. During most of the year, total construction employment lagged behind that of the two previous years. In the first half of the year a drop in residential construction was mainly responsible for this decline. In the third and fourth quarters, however, the curtailment in industrial construction became increasingly evident. In October, a sharp upturn in housing starts resulted in an improvement in construction employment.

In the primary industries, increased demand for iron ore and other mineral products in the export markets was reflected in a rise in employment in mining in the first nine months of the year. Forestry employment, however, showed little change over last year, in spite of considerably increased exports of wood and its products and of paper.

Employment in the region derived its main support from the service-producing industries, particularly from trade and service, where employment was consistently higher than last year. As the service-producing industries together account for more than 35 per cent of total employment in the region, this employment growth offset declines in other industries.

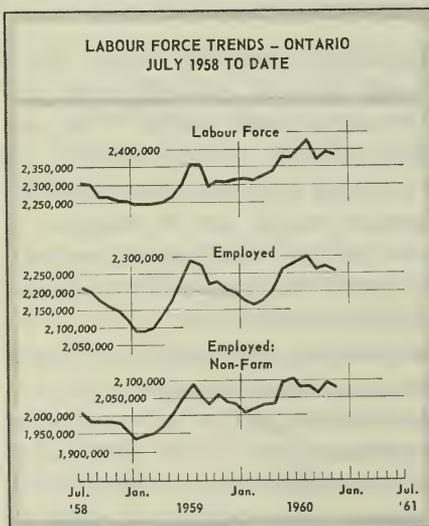

Unemployment was higher than last year throughout most of this year. As a proportion of the labour force, unemployment in November was 7.9 per cent, compared with 5.7 per cent in November 1959. In the first 11 months it averaged 6.4 per cent, compared with 5.5 per cent in 1959. Most labour market areas were affected by the increase in unemployment, although there were only a few reclassifications. At the end of November, the area classification was as follows (last year's figures in brackets): in substantial surplus, 3 (1); in moderate surplus, 21 (21); in balance, 0 (2).

Local Area Developments

Montreal (metropolitan): Group 2. A considerable drop in total employment from last year, mainly due to decreased activity in manufacturing, resulted in a reclassification of this area from balance to a moderate surplus category.

Quebec-Levis (metropolitan): Group 2. The decline in employment over the year was only moderate. Both total manufacturing and construction held up well, but there was a sharp drop in employment in the production of transportation equipment.

ONTARIO

Employment in Ontario decreased seasonally from the third to the fourth quarter. Farm workers accounted for a large part of the 3.5-per-cent decrease in employment as most farming operations were completed during the third quarter. The smaller-than-usual decline of employment in non-agriculture activities was a reflection of mixed developments. One important factor was that fine weather extended well into December, which enabled most construction workers to remain at work relatively late in the season.

After a small dip in the third quarter, employment in manufacturing increased to early summer levels. The automobile and parts plants, after having shut down

in the summer for retooling and model changeover, began the recall of workers in September and continued to do so for most of the remainder of the year.

Employment in the canning and tobacco processing plants reached their seasonal peaks during the fourth quarter.

Over the fourth quarter, as has been the case all year, there was a steady rise in the number employed in the service-producing industries. Normal employment patterns prevailed in forestry, mining and the trade industries.

In November the labour force was 2,384,000 and employment an estimated 2,257,000, up 76,000 and 53,000 respectively from a year earlier. Women accounted for all of the net year-to-year gain; male employment was down slightly.

The increase in the number of both men and women employed in the service industry was substantial. There was, however, no increase in total male employment over the year, mainly because of somewhat lower levels of residential construction; persistent declines in manufacturing of electrical apparatus and supplies, iron and steel products and textiles; and, despite higher output than last year, the employment of fewer workers in the automotive and associated industries.

A seasonal increase in unemployment brought the November estimate to 127,000, higher by 23,000 than a year earlier. This estimate represented 5.3 per cent of the labour force, little changed from the August estimate of 5.1 per cent but up from 4.5 per cent in November, 1959. The November classification of the 34 labour market areas in the region was as follows (last year's figures in brackets): in substantial surplus, 2 (2); in moderate surplus, 28 (20); in balance, 4 (12).

Local Area Developments

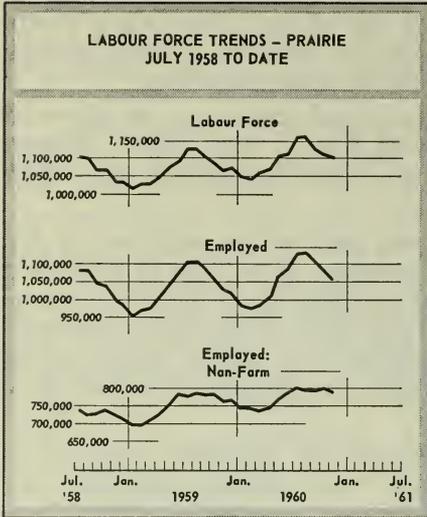

Toronto (metropolitan): Group 2. The number registered for employment at the local NES offices increased over the quarter and remained above last year's total. Over the quarter and over the year weaknesses in rubber, textile, and iron and steel plants have persisted while the service, trade and finance groups continued to grow. Prolonged favourable weather allowed an extension of construction activity well into December.

Hamilton (metropolitan): Group 2. A record year for shipping was reported but industrial employment showed signs of weakening in the fourth quarter. One of the main factors was reduced domestic demand for steel products, which has affected employment in both primary iron and steel plants. Construction, which was doing well in the third quarter, began to fall sharply in October and unemployment in the construction trades neared pre-summer levels.

Windsor (metropolitan): Group 1. Most but not all of the workers laid off in the third quarter during model changeover in the automobile plants have been recalled. Food and beverage processing plants reached high levels at the beginning of the fourth quarter whereas employment in the trade industry declined.

Kitchener (major industrial): Group 2. Employment increased over the quarter but was lower than the last quarter of 1959. Quarterly improvements occurred in food and beverage plants and electrical apparatus plants. Over the year, most serious employment decreases were among construction crews and workers in electrical goods plants. There was a labour surplus in most construction trades and among women in most occupational groups.

PRAIRIE

Employment reached a seasonal high of 1,136,000 in August and moved down to 1,052,000 in November. The November figure was 23,000 higher than a year earlier. All of the year-to-year gain was in non-agricultural industries; male workers accounted for 8,000 of the increase. The number on farms, 261,000, was slightly down from a year earlier. The labour force totalled 1,101,000 in November, 37,000 more than in the same month of 1959.

In the early part of the fourth quarter extremely favourable weather made possible a relatively high level of after-harvest work on farms. Shipment was begun of the wheat crop, which was appreciably better than in 1959 and about equal to the average for the previous 10 years. The construction industry was also aided by the mild weather, in sharp contrast to the storms a year earlier. The good weather this year persisted until the last week of November, when a drop in temperature and heavy snowfalls disrupted outdoor work.

In the construction industry, employment declined seasonally from the third to the fourth quarter. The total number employed also remained lower than a year earlier except in Saskatchewan, which recorded a 5-per-cent year-to-year increase early in the fourth quarter in spite of a decline of about 24 per cent in houses under construction. In the other two provinces, housebuilding was down 47 per cent in Alberta and total construction exhibited a loss of about 10 per cent, and in Manitoba housebuilding was down 31 per cent and total construction about 4 per cent from a year earlier. The chief sustaining influences in the construction industry in the past year were four hydro projects and a heavy schedule of gas and oil gathering and distribution pipeline projects. The year's roadbuilding program was completed early in the fourth quarter, resulting in a number of layoffs.

The number working in manufacturing was reduced, chiefly in enterprises associated with construction such as sash and door makers, cement and concrete plants, and sand and gravel processors. In the needle trades between-season layoffs occurred as some orders for winter clothes were completed and the switchover to spring lines began. In the iron and steel industry, where employment was down from a year earlier, pipe plants were taking on men to begin production for next year's heavy program of pipeline construction.

Loggers were released when softness of logging roads somewhat hindered forestry operations and demand for forestry products weakened. In transportation, railways laid off some maintenance crews and employment in road transportation also declined.

Unemployment increased about as much as usual between the third and fourth quarters, and the November estimate of 49,000 represented 4.5 per cent of the labour force, compared with 2.8 per cent a month earlier and

3.3 per cent in November 1959. The November classification of labour market areas was as follows (last year's figures in brackets): in substantial surplus, 0 (2); in moderate surplus, 13 (9); in balance, 6 (8).

Local Area Developments

Calgary and Edmonton (metropolitan): Group 2. As a result of extremely heavy declines in housebuilding and weakness in a number of manufacturing plants, employment levels were lower than a year earlier.

Fort William-Port Arthur (major industrial): Group 2. Employment went down as iron ore shipments ceased in November and some layoffs occurred in forestry.

PACIFIC

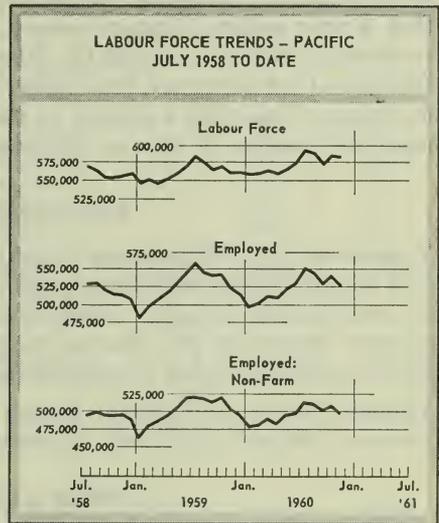

The seasonal decline in employment was about normal in the Pacific region from the third to the fourth quarter, and total employment, which totalled 526,000 in November, showed a gain of 2,000 from the same month last year. In non-agricultural industries, however, employment remained below the year-earlier level as it has been since the first quarter, and male employment was down 2,000 from November 1959. The November labour force totalled 583,000, above the year-earlier figure by 22,000.

Snowfalls in November curtailed logging operations in some districts, especially at higher altitudes. Other cut-backs resulted from market conditions for lumber, shingles and plywood. Some mills were shut down and others reverted from two-shift operation to a single shift. Demand continued steady in pulp and paper, and operations continued at high levels.

The construction industry was aided by mild weather but a 39-per-cent year-to-year drop in the number of houses under construction at the end of October was instrumental in cutting total employment in the industry well below year-earlier levels. Men were laid off in the fourth quarter as roadbuilding programs were completed and as activity on other projects went down seasonally. Preparations for laying pipe on the large gas project in the southeast corner of British Columbia got under way in the fourth quarter.

The number at work in manufacturing was reduced from the third to the fourth quarter as a consequence of layoffs in shipyards, in industries supplying construction projects, and in food processing. Canning of fruit, vegetables and fish were completed in a number of plants.

The mining industry continued steady with little change in employment levels. Gains were registered in natural gas and crude oil production in the northern part of the province, where 15 drill rigs were in operation in the later part of November.

Herring fishing got under way for the first time this year when market conditions improved, allowing a large number of fishermen to return to work. Other fishing continued to lag behind last year's levels, however, and whaling was not resumed; whalers have not operated so far this year. From January to the end of October the value of fish caught was 21 per cent lower than in the same period last year; the weight of fish landed was 51 per cent lower.

Some pickup was noted in retail trade in the fourth quarter after a 2.8-per-cent decline from year-earlier totals in the first three quarters. This decline was accompanied by a 3-per-cent drop in employment in September from the same month in 1959. This drop in retail trade was virtually offset by an increase in wholesale trade employment, however, so that the total year-to-year loss in trade was only fractional.

The increase in unemployment from the third to the fourth quarter was about equal to the change in previous years, but the total remained well above that a year earlier. Unemployment in November amounted to 57,000, which represented 9.8 per cent of the labour force, up from 7.7 per cent the month before and 6.6 per cent a year earlier. The 12 labour market areas were classified as follows (last year's figures in brackets): in substantial surplus, 3 (1); in moderate surplus, 8 (9); in balance, 1 (2).

Local Area Developments

Vancouver-New Westminster (metropolitan): Group 1. Layoffs in wood products manufacturing other than pulp and paper, which held at strong levels, and in construction brought employment levels down seasonally in the fourth quarter. Settlement of a 20-day grain handlers' strike late in November allowed the outward movement of grain to begin again.

Victoria (major industrial): Group 2. Layoffs in shipyards along with other seasonal cutbacks increased unemployment in the third quarter.

COLLECTIVE BARGAINING REVIEW

ECONOMICS AND RESEARCH BRANCH

The direct participation of the Prime Minister and members of the Cabinet in the negotiations between the **railways** and the **non-operating unions** highlighted industrial relations activity in Canada during November. As the month drew to a close and the strike deadline of December 3 approached, the Prime Minister held direct talks with the railway presidents and the unions' chief negotiator in an attempt to bring about agreement between the parties. Meanwhile the companies, in preparation for a possible strike, placed an embargo on shipments of livestock and perishables and laid off a number of shop workers. When it became evident that an agreement would not be achieved, legislation to maintain railway operations was placed before Parliament, and the Railway Operation Continuation Act became law on the eve of the strike deadline. Under the terms of the Act, the 111,000 non-operating employees are to remain at work under the terms of their existing collective agreements until May 15, unless the parties reach an agreement beforehand.

During November, the **National Union of Public Employees** ended ten months of negotiations on behalf of more than 5,000 civic workers by signing new collective agreements with the **Municipality of Metropolitan Toronto**, the **City of Toronto**, **Scarborough Township** and **North York Township**. The settlements averted a possible strike, as it had appeared earlier that post-conciliation bargaining between the parties might not end in agreement. The negotiations were complicated by split decisions in the reports of three of the four separate conciliation boards connected with the dispute. The conciliation board in the dispute between the union and Scarborough Township was the only one that rendered a majority report; in all three of the disputes between the union and the Municipality of Metropolitan Toronto, the City of Toronto and North York Township, each member of the three-man conciliation boards released a separate report. The Scarborough Township Council accepted the majority recommendations of the board of conciliation dealing with its dispute but the union rejected them and the union members voted to join the other locals in strike action. The legality of a work stoppage at this time was questioned on the grounds that a split decision did not constitute a report under the Ontario Labour Relations Amendment Act of 1960. The provincial Minister of Labour called on the board members to reconvene, with instructions that either a solution be developed or a majority report produced. North York led the way out of the impasse by signing a two-year agreement with the union that established a pattern for most of the remaining settlements. Scarborough signed a few days later. This settlement was limited to one year, retroactive to January 1, 1960, leaving the 1961 agreement yet to be negotiated. The final agreement to be signed provided the employees of Metro and the City of Toronto with a total increase of 16 cents an hour over a two-year term.

In addition to the "Collective Bargaining Scene" that normally accompanies this Review, the "Bargaining Calendar" below lists the major agreements (exclusive of those in the construction industry) that are due to expire during 1961, according to the month in which they terminate.

BARGAINING CALENDAR FOR 1961

Collective agreements covering 500 or more workers listed by month in which they terminate.
 Agreements in the construction industry are excluded.

NORTHERN ELECTRIC, TORONTO, ONT.—COMMUNICATIONS WKRS. (AFL-CIO/CLC): 1-yr. agreement covering 1,000 empl.—increases ranging from 5¢ to 9¢ an hr. depending on classification.

THOMPSON PRODUCTS, ST. CATHARINES, ONT.—EMPL. ASSOC. (IND.): 2-yr. agreement covering 700 empl.—6¢-an-hr. increase for all empl. eff. Nov. 1, 1960; an additional 5¢-an-hr. increase for unskilled wkrs. and 7¢ for skilled wkrs. eff. Nov. 1, 1961; 4 wks. vacation after 25 yrs. of service (formerly no provision for 4 wks. vacation).

TORONTO CITY, ONT.—PUBLIC EMPL. (CLC) (OUTSIDE WKRS.): 2-yr. agreement covering 2,800 empl.—9¢-an-hr. increase retroactive to April 1, 1960; an additional 7¢-an-hr. increase eff. April 1, 1961; improved shift differentials; city will pay 50% of the comprehensive medical plan if 75% of the empl. will sign up for the plan.

TORONTO METROPOLITAN AREA, ONT.—PUBLIC EMPL. (CLC): 2-yr. agreement covering 1,800 empl.—9¢-an-hr. increase retroactive to April 1, 1960; an additional 7¢-an-hr. increase eff. April 1, 1961; improved shift differentials; city will pay 50% of comprehensive medical plan (PSI Blue plan) providing 75% of empl. sign up for the plan.

TOWNSHIP OF SCARBOROUGH, ONT.—PUBLIC EMPL. (CLC): 1-yr. agreement terminating Dec. 31, 1960 covering 500 empl.—7½¢-an-hr. increase retroactive to Jan. 1, 1960; an additional ½¢-an-hr. increase retroactive to July 1, 1960; PSI Blue plan with the employers and the employees sharing equally the costs (formerly PSI Brown plan was in force); reclassification of certain empl. to be negotiated.

NOTES OF CURRENT INTEREST

115,600 Workers Over 45 Years Placed by NES in 12 Months

In the 12 months ended September 30, the National Employment Service, Unemployment Insurance Commission, placed 115,611 workers who were 45 years of age or over. This was 12.3 per cent of the total of 938,735 placements in all age groups.

The figures confirm the steady swing toward recognition by Canadian employers of the value of workers in the over-45 age group, the NES says.

Reports from the 200 NES offices across Canada show that the hiring policies of 262 firms employing 51,296 workers—firms that previously had put the accent on youth when hiring new employees—have been revised significantly during the past year to open the door to older workers.

Employment Up in Most Nations, Joblessness Too in Canada, U.S.

A general continuation of the uptrend in employment that was evident throughout the world in 1959 is indicated in a comparison by the International Labour Organization of the most recent data for 32 countries—generally April or May 1960—with figures for the corresponding month of 1959.

Of the 21 countries, including Canada, that submit statistics on non-agricultural employment to the ILO, all but one reported higher totals than in 1959. Total non-agricultural employment remained unchanged in El Salvador.

In all countries except Belgium, the pre-recession 1957 level was exceeded in 1960.

The long-term decline in agricultural employment continues in most of the 21 countries. Total employment, however, has expanded since 1959.

Most of the countries, however, have a much greater labour supply than can be fully employed. The increase in the numbers employed may simply mean more underemployment, the ILO points out, with the available work being spread over greater numbers of workers.

The basic problem is that rates of economic growth in most cases are not keeping pace with the increase in population, the ILO says. It should also be noted

that many countries have recorded substantial increases in production without corresponding increases in manufacturing employment.

A survey of recent data for 41 countries showed that unemployment worsened between 1959 and 1960 in 13 countries: Canada, the United States and 11 economically less developed countries.

Consumer prices have generally increased, but at a modest pace, during the past year. This was an important factor leading to further gains in workers' real earnings, as hourly cash earnings generally increased over the period.

Workers' incomes were further enhanced by increases in average hours worked per week in most of the reporting countries. Man-days lost through industrial disputes were at a high level.

CBC Citizens' Forum Presenting Three Programs on Employment

Three programs concerning employment in Canada will be presented on "Citizens' Forum" over the CBC's television and radio networks in late January and early February.

"Citizens' Forum" is a joint project of the CBC and the Canadian Association for Adult Education. On radio it is heard on the Trans-Canada Network every Thursday night at 8.30 local time (10 p.m. in Newfoundland). On television it is seen on Sunday afternoons at 4.30 in most regions.

The first of these programs, "Employment in the Maritimes," dealing with the question of how far the recommendations of the Gordon Report have been implemented, will be given on television on January 22, and on radio on January 26.

The second program, entitled "Retraining for Employment," which attempts to answer the question of how much retraining is going on and whether a large-scale retraining scheme would relieve unemployment, will be on television on January 29 and on radio on February 2.

The third program, "Employment through Immigration," deals with the effect on employment of the arrival of new immigrants. The dates are February 5 for television and February 9 for radio.

White-Collar Workers Increase Faster than Total Work Force

The number of white-collar workers employed in the United States steel industry has increased by about 185 per cent during the past 25 years; the total work force in the industry, by about 21 per cent, according to the American Iron and Steel Institute.

During the 25-year period, the number of salaried workers in the steel industry has risen from 40,000 in 1935 to 114,000 last year. More than 22 per cent of the entire work force in the industry was salaried workers in 1959, compared with less than 10 per cent 25 years before.

A similar trend was noted in a survey of technological change and skilled manpower in the Canadian automobile and parts industries by the Economics and Research Branch of the Department of Labour (L.G., Nov., p. 1115).

Ontario Throne Speech Discloses Plans to Stimulate Employment

The Ontario Government will seek to provide more jobs this winter by stimulating secondary industry and starting more public works projects. This was forecast in the Speech from the Throne at the opening of the second session of the 26th Legislature on November 22.

A record road-building program that will cost more than \$261,000,000 will be undertaken by the Highways Department. Other projects mentioned included schools for deaf and retarded children, hospitals, administrative offices and departmental works, reform institutions, training schools, flood control and water conservation, waterworks and sewage disposal projects.

The Government plans to enlarge the Economics Department to the end that special studies may be made to try to reduce the imbalance in the province's commodity trade and tourist travel. The methods used by other countries in promoting secondary industry will also be examined.

The Planning and Development Department will be reorganized to foster more collaboration with departments of the federal Government with the object of stimulating business, increasing production, and extending trade. The reorganization will include the setting up of a products research division to complement the Government's present commercial and industrial development activities. The main function of the new division will be to stimulate production and employment in existing manufacturing

industries, and to increase the processing of raw materials in the province.

Formation of a market development branch, whose function will be to seek additional outlets for Ontario farm products, is under way within the Department of Agriculture.

New plans are being made for the provision and financing of public low-rental housing and for urban development.

The Department of Labour's apprenticeship courses are to be expanded.

The Government plans to provide scholarships, bursaries, and funds from which loans can be made to students. The problem of financing the cost of the province's universities, made acute by increasing enrolments, will be studied.

As part of a large-scale scheme of rehabilitation and improvement of existing reform institutions, a new one will be built at Elliot Lake, and new training schools for boys and girls will be undertaken.

U.S. Non-Ops Gain 5-Cent Increase, Better Health, Vacation Benefits

Members of 11 non-operating rail unions in the United States will receive major health, insurance and vacation improvements, and a 5-cent-an-hour pay increase under a nation-wide agreement that settled a dispute that extended over 15 months.

Terms of the agreement followed closely the recommendations made by a Presidential emergency board.

Among benefits gained by the unions in the new agreement was a \$4,000 group life insurance policy for each active employee, the costs to be borne entirely by management.

Other fringe benefit gains were: improved hospital, medical and surgical benefits for dependents; two weeks vacation after three years of service instead of after five years; freezing into basic pay rates of the 17 cents accumulated cost-of-living increase under the escalator clause—now to be eliminated.

B.C. Minister of Education Given Labour Portfolio Too

The portfolio of Labour in the British Columbia Government was recently taken over by Hon. Leslie Peterson, in addition to the post of Minister of Education that he held previously. Mr. Peterson took office as Minister of Labour on November 28.

The new minister succeeds Hon. Lyle Wicks, who was defeated in the last provincial election.

U.S. Agreement Permits Company To Contract Work to Outsiders

A new collective agreement between the Pennsylvania Railroad and the Transport Workers Union and System Federation No. 152, Railway Employees Department (AFL-CIO) recognizes the company's right to contract work to outsiders under certain conditions.

The railroad agreed that "it would not contract out work of rebuilding or upgrading locomotive units or equipment parts where existing facilities were adequate and there was a sufficient number of qualified employees available to do the work, except that the railroad could contract out such work where it could be done by outsiders at lower cost than the railroad could do it itself."

The agreement provides a formula to determine what would be considered "lower cost;" the formula varies depending on the size of the contract. For example, a contract valued at \$1,000,000 could be given to an outside contractor if the cost of doing the work in the railroad's own shops would amount to more than \$29,500 above the contractor's bid.

Code of Organizing Practices Adopted by CLC Executive

A code of organizing practices, designed to regulate the behaviour toward each other of affiliated unions that are trying to organize the same group of workers, was adopted unanimously at the October meeting of the Executive Council of the Canadian Labour Congress. The code forbids the rival unions to make public attacks on each other that are calculated to injure the reputations of the individual unions concerned or of the trade union movement in general.

The code says: "Public attacks by one affiliate upon another result in adverse publicity which causes grave injury to organized labour. More serious is the fact that jurisdictional disputes, boycotts, and the resulting unfavourable publicity give rise to regulatory legislation."

Where two or more affiliates are seeking to organize the same workers, the code provides, each affiliate shall conduct its organizing campaign in such a manner as to increase those workers' respect for the trade union movement.

Affiliates are forbidden to issue statements that:

—Impugn or attack the motives or character of any competing affiliate, its officers or subordinate units.

—Allege or imply that any other affiliate is guilty of undemocratic practices, corruption, or any other improper conduct.

—Attack the international, national, provincial, regional, craft or industrial status of another affiliate. (Such attacks are considered by the Congress to be attacks on its own constitutional policy, which recognizes all these types of unions, the code says.)

—Criticize the benefits received from, or the dues and initiation fees paid to another affiliate.

The code prohibits the organizing and conducting of boycotts against products or services produced under a bona fide collective bargaining relationship of another affiliate.

The code provides that a complaint of any violation of its conditions shall be sent by an aggrieved affiliate to the ranking official of the other affiliate involved, with a request that the spirit and intent of the code be observed. If this complaint is not effective, the matter may be carried to the Congress itself.

If the Congress is unable to settle the dispute it is to be referred to the Executive Council, which is required to report its decision to the parties, and to "take such action as it deems advisable and appropriate to enforce compliance."

The CLC Executive Council at its October meeting also approved a statement on employment that formed the basis of the Congress submission to the Prime Minister's employment conference later that month (L.G., Nov., p. 1108).

It also adopted a policy statement, and appointed a national committee on health and safety, of which the chairman will be Joseph Morris, a Pacific Regional Vice-President of the CLC.

Quebec Steelworker Locals Form Union's Third Canadian District

Canadian locals of the United Steelworkers of America, at present distributed between two districts, will in future be divided among three. Some 60 locals in Quebec, now in District 5 along with Maritime locals, will be grouped in the new district, leaving District 5 with only the Maritime locals.

Of the 82,000 Canadian members of the union, about 60,000 are in District 6 (Ontario to the West Coast), about 8,000 in District 5 (Maritimes), and about 14,000 in the new Quebec district.

A director for the new district will be nominated by the Quebec members in the spring of 1961.

CNTU Suggests Labour Courts, Quebec's Premier Agrees

Quebec Premier Jean Lesage has approved a suggestion made by the Confederation of National Trade Unions requesting the establishment of labour courts in order to lighten the work of the Quebec Labour Relations Board. The CNTU's suggestion was included in a memorandum submitted to the provincial Cabinet in mid-November.

"We are in agreement with this suggestion," the Premier said, "and we shall act with dispatch."

The memorandum stressed the fact that the agenda for the sittings of the Labour Relations Board is usually overburdened with disputes of a legal nature, such as conflicts arising out of dismissals for union activity.

The Minister of Labour, Hon. René Hamel, also promised to see that the work of the QLRB would be speeded up.

The Premier stated that he was in agreement with the CNTU memorandum in reference to the principle of equal wages for equal work, and declared he was opposed to Sunday work, "except when absolutely necessary."

The memorandum was read by the Secretary General of the Confederation, Jean Marchand. The President, Roger Mathieu, introduced the delegation to the Cabinet.

The chief recommendations contained in the memorandum were that:

—The provincial Government make several changes in labour relations legislation in order to insure, among other things, "prompt reconsideration of cases of dismissal for union activity."

—Company unions be declared illegal.

—The CNTU have one additional representative on the QLRB.

—The procedures of the QLRB be simplified and that an administrator be appointed to study the administrative and non-contentious problems.

—The Government reorganize the Minimum Wage Board and the Workmen's Compensation Board so that they represent more fully the views of employers and employees.

John McLeod of Bricklayers, ITU's Bob Ford Die in November

Two veterans of the Canadian labour movement died during November.

John McLeod, for 40 years Vice-President in Canada of the Bricklayers, Masons and Plasterers' International Union, a trade union officer for 52 years, and a trade union member for 56 years, died on November 12 at the age of 78 years.

R. Fred (Bob) Ford, President of the Ottawa and District Labour Council and of the Ottawa Allied Printing Trades Council, died November 24 at the age of 69 years. He failed to recover from a heart attack suffered while en route to the Ontario Federation of Labour convention.

Mr. McLeod, who retired in May this year, was honoured by a testimonial dinner earlier this year (L.G., July, p. 664). He joined the Stonemasons' Union in Scotland his birthplace, in 1903. The next year he came to Canada and became a member of the Bricklayers.

In 1908 he was elected Recording Secretary of Local 26, Toronto, and two years later became business agent of the local. Mr. McLeod was for several years President of the Ontario Provincial Conference of the Bricklayers, until in 1918 he was appointed special deputy of the international president. Two years later he was elected vice-president by acclamation.

Throughout the Second World War he served as a member of the National Joint Conference Board, a tripartite board set up to advise the federal Minister of Labour.

In 1949 he was an adviser to the Government Delegates to the Second Session of the ILO Building, Engineering and Public Works Committee, held in Rome.

Mr. Ford was for 50 years an active member of the International Typographical Union. He became President of the Ottawa Typographical Union in 1946. At the time of his death he was an executive member of the Ottawa local.

Mr. Ford was a member of the Board of Referees in Ottawa of the Unemployment Insurance Commission.

Credit Unions Continue Expansion, Membership Exceeds Two Million

Credit unions in Canada continued to expand throughout 1959, it is reported in *Credit Unions in Canada, 1959*, an annual publication of the Economics Division, Department of Agriculture.

Membership increased 7 per cent during the year to 2,347,317, or 13.3 per cent of the country's population.

The trend was toward the occupational type of credit union, which formed 34 per cent of the total in 1959 compared with 16 per cent in 1949.

Savings, which include shares and deposits, increased 13 per cent to \$1,056 million. Average assets per member totalled \$492.

Assets were up by \$145 million to \$1,009 million.

HOUSE OF COMMONS DEBATES

A Guide to Items of Labour Interest in Hansard

(page numbers refer to Hansard)

November 17—*The Speech from the Throne* (p. 2) proposed that Parliament enact, among others, legislation to:

—Allow continuing maintenance of a well-trained and well-armed Canadian defence force, adequate to meet Canada's defence obligations;

—Approve measures designed to increase immediate employment opportunities and also measures that will constitute a large further instalment in the long-range program of national development;

—Approve another and larger program of assistance to municipalities for winter works projects;

—Approve extension of the federal grants for hospital construction for a further five-year period after the expiration of the present period in March 1963;

—Approve amendments to the National Housing Act that will improve the terms of mortgage lending;

—Authorize the Central Mortgage and Housing Corporation, in partnership with provincial authorities, to undertake the purchase, improvement and rental of existing housing in specified areas of urban redevelopment, just as such partnerships now build and rent new housing units;

—Authorize Central Mortgage and Housing Corporation to make loans to universities for students' residences on terms similar to those of loans made for limited dividend housing projects;

—Allow Central Mortgage and Housing Corporation to make long-term loans to local authorities for approved projects for sewage disposal and treatment, up to two thirds of the costs of such projects, on terms similar to those of loans for limited dividend housing projects. "As a special incentive for prompt action on this urgent problem, Parliament will be asked to authorize the Crown to write off one quarter of the amount of any such loan expended on work done before April 1963."

—Establish a productivity council, its membership to include Canadians from the fields of industry and commerce, organized labour, agriculture and other primary production, as well as qualified individuals chosen from the public at large and from the scientific agencies of government;

—Authorize federal Government guarantees for bank loans to small businesses to finance additions and improvements to their business premises and equipment;

—Allow extension of the assistance given to provincial governments for vocational training, both in the school system and in the training and retraining of those who have already become workers;

—Approve grants of 75 per cent of the amounts expended up to March 31, 1963 in building approved technical schools or training institutions;

—Approve amendments to the Unemployment Insurance Act that will safeguard the basic purpose of the Act, to strengthen the Fund and to correct abuses that have developed in practice;

—Enable the Government to join with provincial authorities and local groups throughout Canada in comprehensive programs of rural rehabilitation and development;

—Approve a number of major projects of national development—the development of water power on the Columbia River, several projects of railway development opening up Canada's frontier, a floodway to protect the city of Winnipeg and nearby communities, works to conserve and control the waters of the upper Thames River in Southwestern Ontario;

—Encourage greater participation by Canadians in the ownership and control of industry and resources in Canada;

—Require the disclosure of information by business and labour organizations in Canada controlled from outside Canada;

—Amend the Pensions Act to include substantial increases in the pensions payable to veterans or their dependents;

—Revise the Civil Service Act and the Immigration Act.

—Amend the Canada Shipping Act.

November 18—*Report on negotiations* between Canada and the United States in connection with the development of the water resources of the Columbia River tabled by Hon. E. D. Fulton, Minister of Justice (p. 7).

Measures to deal with unemployment will be introduced for consideration at the earliest possible opportunity, the Prime Minister says, after discussions between the Government and the Opposition on appropriate arrangements (p. 7).

Industrial Enquiry Commissioner appointed to attempt to settle strike of grain handlers on the West Coast, the Minister of Labour informs a questioner (p. 8).

There were 92,000 more persons at work in Canada in October 1960 than in 1959; in the past three years the Canadian

economy has provided 272,000 new jobs, Donald MacInnis (Cape Breton South) says in moving the address in reply to the Speech from the Throne (p. 15).

Reasons for the increase in unemployment, Mr. MacInnis says, are the large influx of young men and women into the labour market, technological displacement, the removal to the cities of agricultural population, the increase in married women working, relatively young pensioners, farmers and others who take on full or part time jobs (p. 14).

"Earnest wish" of workers in his constituency that the Government will take strong measures to ensure the survival of the textile industry expressed by Rémi Paul (Berthier-Maskinonge-Delanaudiere) when seconding the address in reply to the Speech from the Throne (p. 19).

November 21—Bill C-4, to provide for a Canadian preference in government construction, purchase and service contracts, introduced by E. J. Broome (Vancouver South) and given first reading (p. 26).

Bill C-23, to provide for the development of certain provinces by the distribution of industry and for the reduction of unemployment therein, introduced by R. C. Coates (Cumberland) and given first reading (p. 26).

Bill C-9, to amend Canada Fair Employment Practices Act to extend its provisions to the Civil Service, introduced by Frank Howard (Skeena) and read the first time (p. 27).

Bill C-25, to amend Canada Fair Employment Practices Act to prohibit discrimination because of age, introduced by Mr. Howard and read the first time (p. 27).

Pay for statutory holidays and pay for work performed on statutory holidays proposed in Bill C-12, introduced by Erhart Regier (Burnaby-Coquitlan) and given first reading (p. 27).

Bill C-14, to amend Industrial Relations and Disputes Investigation Act to bring civil servants within the provisions of the Act, introduced by Frank Howard (Skeena) and read the first time (p. 28).

Minimum wages for employees proposed in Bill C-28, introduced by Arnold Peters (Timiskaming) and given first reading (p. 28).

Revision of mediation and conciliation processes through amendment of the Industrial Relations and Disputes Investigation Act, proposed in Bill C-30, introduced by Mr. Howard and given first reading (p. 28).

Motion preceding introduction of measure to provide, by way of a guarantee of loans made by banks to proprietors of small

business enterprises, for the improvement and modernization of premises and equipment is agreed to (p. 29).

Motion preceding introduction of a measure to amend the National Housing Act is agreed to. The measure is designed to further encourage the demand for housing by increasing the loan ratios and extending the period of repayments for loans made to home owners and home builders and for rental housing; to increase from \$25 million to \$40 million the aggregate amount that may be paid out of the consolidated revenue fund for urban redevelopment purposes; to increase from \$200 million to \$500 million the amount of home improvement loans that may be guaranteed under Part IV of the Act by Central Mortgage and Housing Corporation; and other things (p. 29).

Motion preceding introduction of a measure to provide for the establishment and operation of a national productivity council is agreed to (p. 30).

Motion preceding introduction of a measure to authorize the Minister of Labour to enter into agreements with provincial governments for the encouragement of technical and vocational training and to authorize the making of contributions by Canada toward the cost of programs of technical and vocational training undertaken under provincial authority is agreed to (p. 39).

There were 117,000 more persons out of work in October this year than at the same time last year, Hon. L. B. Pearson, Leader of the Opposition, says in the debate on the address in reply to the Speech from the Throne (p. 35).

There was a higher percentage of unemployment in Canada between 1936 and 1940 than exists today, Prime Minister Diefenbaker says in the same debate (p. 40).

Canada's gross national product increased during the first half of 1960 by 3 per cent to \$35.34 billion at seasonally adjusted annual rate, a figure that was "lower than that we had hoped for," the Prime Minister Diefenbaker says (p. 40).

The adverse trade balance for Canada, for nine months, has been reduced from \$415 million in 1959 to \$121 million, the Prime Minister says (p. 42).

Canada's labour force increased from 6,290,000 in October 1959 to 6,499,000 in 1960, about 3½ per cent, the Prime Minister asserts (p. 42).

Prime Minister Diefenbaker expresses the hope that "business will deny itself increasing profits that are unfair and unjust" and that "the labour leaders of this country will give heed to the national situation and do their part to assure that reason will

characterize their relations with business across Canada to the end that jobs may be maintained" (p. 43).

Of those in Canada's labour force, 40 percent did not get an education that extended beyond elementary school, the Prime Minister says (p. 44).

Objective of the Productivity Council that is to be established will be to bring together representatives of business, agriculture and labour, women's representatives, and representatives of all sectors of the community "to the end that in a community of effort, as has been successful in the United Kingdom and elsewhere, we shall secure the counsel, advice and, above all, the concerted action of these groups brought together by the state but controlled by private enterprise and not directed by the state in any way." (p. 45).

There were 368,000 unemployed in Canada on October 15, compared with 251,000 in the same month last year, an increase of more than 40 per cent, says Hazen Argue (Assiniboia) in the debate on the address in reply to the Speech from the Throne (p. 47).

House in committee reports progress on resolution to introduce a measure to provide a guarantee of loans made by banks to proprietors of small business enterprises, for the improvement and modernization of premises and equipment (p. 54).

November 22—*Statement about strike of West Coast grain handlers made by the Minister of Labour (p. 63).*

Bill C-36, to provide for establishment of a hospital sweepstakes board, introduced by J. F. Browne (Vancouver-Kingsway) and read the first time (p. 65).

Government investigating proposed closing of Glace Bay coal mine on January 14, the Minister of Mines and Technical Surveys says (p. 70).

Bill C-40, respecting loans to small businesses for improvement and modernization of equipment and premises, introduced by the Minister of Finance and given first reading (p. 71).

House goes into committee to consider resolution to introduce a measure to amend the National Housing Act, 1954, to further encourage the demand for Housing (p. 88).

November 23—*Report of the Royal Commission on Coal is under careful study by inter-departmental committee, the House is informed by the Minister of Mines and Technical Surveys (p. 111).*

Unemployment Insurance Advisory Committee met on October 27, and its recommendations are being studied, Hon. Michael Starr, Minister of Labour, replies to a question (p. 112).

The Columbia River Project was discussed by representatives of the federal Government and the British Columbia Government on this date, Hon. Howard Green replies to a question (p. 116).

Authority to abandon service on the Newcastle-Fredericton subdivision upon not less than one month's notice was issued to the Canadian National Railways by the Board of Transport Commissioners, the Minister of Transport tells a questioner (p. 116).

Bill C-42, to amend the National Housing Act to extend loan repayment periods, introduced to House and given first reading (p. 118).

Recommendation of the Unemployment Insurance Advisory Committee that assistance to unemployed fishermen should not be financed through the Unemployment Insurance Act is receiving consideration but no decision has been made, the Minister of Labour informs questioner (p. 142).

November 24—*Racial discrimination was in no way involved in the discharge of 17 Negro porters by the company operating the limousine service at Dorval airport, the Minister of Transport replies to a question. The issue is one of employer-employee relationships, he says (p. 145).*

Domestic service is one field in which there are always vacancies, the Minister of Citizenship and Immigration says when replying to a question concerning the reported admission to Canada of 51 Spanish immigrants (p. 146).

Second reading given Bill C-42, to amend the National Housing Act to allow extension of loan repayment periods, following lengthy debate (p. 148). The House then went into committee for step-by-step consideration of the Bill (p. 185).

November 25—*Establishment of export financing facilities announced by the Minister of Trade and Commerce. As a result of the "fully adequate" facilities, "labour throughout will benefit from increasing employment in all the industries and regions that profit from rising industrial exports," he says (p. 189).*

Bill C-42, to amend the National Housing Act to extend the loan repayment period and increase the aggregate amount that may be paid out of the consolidated revenue fund for urban redevelopment and the amount of home improvement loans that may be guaranteed, read the third time and passed (p. 198).

The Minister of Labour introduces motion preceding introduction of a measure to provide federal contributions to provincial technical and vocational training programs. The Minister then gives an explanation of the proposal (p. 231).

NEW YEAR MESSAGES

Hon. Michael Starr
Minister of Labour

In extending New Year's Greetings to the people of Canada, I wish to say that the only way to approach 1961 is with confidence.

It is true that we carry with us into 1961 some large problems; and the development of more employment is among the most pressing. It would be untrue and dangerous to believe, however, that our problems are an indication of any underlying weakness in this economy. There is nothing basically wrong with the Canadian economy.

The fact is that we have unemployment in a period of general prosperity—a time when employment, income, exports, and our standard of living generally are at or near record levels. This is a grim paradox indeed for those Canadians who are presently unemployed.

This is not a problem that has come about overnight. It is rather the result of changes that have been taking place for many years now—the advances in technology which are eliminating many unskilled jobs, the mechanization of our farms, the concentration of industry in our larger centres, and changes and increasing competition in our overseas markets.

It has become clear to the Government that two important steps have to be taken. First, it is essential that we raise the level of education and training of the Canadian population. We know that, right now, jobs are being offered in Canada which unemployed people cannot take, simply because they have not sufficient education or training.

It is not too much to say that our whole future depends on a well-trained work force. We must have it if we are to maintain employment, expand our export markets and in general keep up our standard of living.

Accordingly, we are making a determined effort to encourage more training. We are stepping up our assistance to the provinces for the building and operation of technical training schools. We have increased our contribution toward training for unemployed people, to give them the skills they need to find permanent employment. And we will try in every way possible to convince young people—and their parents—of the wisdom and the necessity of getting all the education and training they can.

It has also become very clear that some kind of assistance is needed for the thousands of small businesses in Canada.

Parliament has therefore just passed an Act designed specifically to help these small businesses. This Act will allow the Government to guarantee loans made to small businesses that wish to modernize, to expand, to acquire new equipment and in general to keep up with the times and to take advantage of new opportunities.

This kind of activity will help in turn all the industries that manufacture supplies and equipment, and this will have an immediate effect on employment. We are optimistic that it will stimulate the economy of every town and village across Canada.

Your Government has introduced other measures to stimulate the economy and to fight unemployment. We are making more money available for house building, and for the improvement of homes and businesses. The Municipal Winter Works Incentive Program has been welcomed by more cities and towns than ever before, and is far in advance of any previous year. Up to now, it is providing on-site jobs for more than 75,000 men. We are pressing our "Do It Now" Winter Work Campaign to encourage as much construction work as possible in winter. We are making a concentrated effort to expand our trade in world markets.

Claude Jodoin

Roger Mathieu

A. A. Hutchinson

I can assure you that the Government is alert to take any step that holds the promise of greater prosperity for Canada. Government action, however, is not enough. It will take the combined efforts of all of us—governments, management, labour, and in-

deed all Canadians, working together—to make certain that we all share in the good things which this country can offer so abundantly.

My very best wishes to you all for the coming year.

Claude Jodoin, President, Canadian Labour Congress

We are facing a year of tremendous challenge. A year ago we entered a new decade with a spirit of optimism. Many of the optimistic hopes expressed by organized labour, in common with these in many other sections of society, have not been fulfilled. We must not, however, let this in any way detract from our determination to move forward toward a better life for all people.

One of the most serious challenges we face at the turn of this year comes from economic conditions. We are all aware that many thousands of Canadian families have just gone through this season's festivities with the grim realization that holidays mean little to people who have no work to go to when the holidays end.

The unemployment we are experiencing today is neither entirely new nor peculiar to Canada; but this is no excuse for the suffering and the waste that is resulting. This situation is particularly inexcusable in a country which is young, vigorous, and the possessor of tremendous natural resources. We in organized labour are optimistic about our ability as Canadians to end this waste and suffering and to build a greater Canada.

This is the time for us to raise our sights and demonstrate our faith in our country and its future. We may take justifiable pride in the growth which we have seen in the lifetime of many of us; but we cannot stand still. We must continue growing. We are lagging behind in providing jobs for our growing population. We know that very large number of young Canadians who are at school today will be joining the labour force in the immediate future and we owe a responsibility to these young people. We must face up to the changes which are resulting at a very rapid pace from technical developments in many of our industries.

This is one of the great challenges we face in 1961 and we must make this the year to put the Canadian economy back on its feet.

Large sections of the Canadian labour movement are looking forward to 1961 as the year in which the New Party will take concrete form. This development will, we expect, inject new thinking and new drive into the political life of Canada. We look on it as a development that will at last provide a real democratic alternative to Canadian electors and offer a new opportunity for various sections of the community to work together in common interest.

Labour will undoubtedly continue to play an important role in the building of the New Party but we have no desire to see this a dominating role. At the same time, trade unions will retain their independence and the right to play their full role, if necessary as critics. We have become increasingly aware in recent months of the unsettled feeling on the part of a great many Canadians and of their very deep desire for the sort of new approach that is so urgently needed now. There will be a place and great opportunity for these people in the party labour is helping to create.

Roger Mathieu,

President, Confederation of National Trade Unions

As we reach the end of one year and the beginning of another, it is customary to exchange greetings and to express the hope that Christmas and New Year will be happy occasions, and that the New Year will bring prosperity and happiness.

While respecting this worthy tradition we cannot, however, forget that our wishes, no matter how sincere they may be, might not be realized for hundreds of thousands of Canadians. I am referring to all those who, with their families, are afflicted by the dire calamity of unemployment.

The year 1960, which is about to end, has been economically distressing. Unemployment has increased, the cost of living has risen to a point where it has greatly exceeded the purchasing power of a multitude of Canadian families. In addition, the few social security benefits in force have continued to depreciate in value.

It is a serious thing that the situation has reached this stage, but the most depressing aspect of it all is the fact that the government of our country apparently has not yet even vaguely outlined a policy for recovery.

—Family allowances are now worth only about half of their original value;

—Old age pensions, in spite of the fact that they were readjusted a few years ago, permit the recipient to buy only about three-quarters as much as he could originally obtain with the money;

—Unemployment insurance benefits are no longer paid to tens of thousands of unemployed persons who, under the Unemployment Insurance Act, have used up their rights to benefits;

—People are not well enough informed about the Unemployment Assistance Act, and those who are no longer entitled to regular benefits do not even have a place

Our concern about domestic matters must not cause us to lose sight of international affairs. We have, in this regard, faced some bitter disappointments in the year just ending. These must not discourage us from continuing to work toward a world in which all may live in peace. The Canadian Labour Congress feels very strongly the need for meaningful discussions at the summit level and for effective steps toward orderly disarmament.

This, then, is not a time for complacency. It is a time that calls for courage and imagination to break new paths to greater heights.

to go in order to avail themselves of this Act, which was originally passed for their sake;

—Close to 150,000 Canadian workers employed by our large railway companies have wasted more than a year, first in negotiating, then in pleading their cause before a conciliation officer, and finally before a conciliation board. The board recommended that they be given a 14-cent-an-hour increase, but now an inconceivable law deprives them of their only available recourse to obtain the payment that is their due;

—Meanwhile, manufacturers and business are not obliged to negotiate with anyone nor to submit to arbitration to obtain permission to raise the price of their products. They abuse this privilege, and the result is a lowering of the purchasing power of the consumer, and overproduction, which in turn leads to unemployment;

—At the same time, the bulk of our natural resources continues to be exported to foreign markets where they are transferred into finished products by foreign workers while the true owners of this natural wealth, the Canadian citizens, are forced into unemployment;

—While all this is going on, those in authority do their best to convince us that all is well and to brand as socialistic all suggestions which are made with a view to improving the situation in which we are floundering.

The outlook is not bright, but there is still hope. The union organizations are working hard. As for the Confederation of National Trade Unions, it will continue to appeal to public opinion and to bring increasing pressure on the authorities to adopt and apply a sound policy of full employment, and to administer public affairs

in the interests of all classes in every section of the country, rather than let a privileged minority enrich itself to the detriment of the common good.

During the year, the Confederation of National Trade Unions has helped thousands of workers to unionize. Thus we have provided these people with the only possible means by which they can improve their lot. And during 1961, we plan to make an even greater effort. The men and women who are not yet unionized must be made to understand that it is in their interest to do their own share towards getting out of the mess they are in.

In addition, in 1960, we strongly requested the federal Government to create a national board of economic guidance. With public opinion on our side, we shall continue to request this measure, which is absolutely necessary if economic recovery is to be achieved. We shall never give up on this point, for our cause is just and we are determined to see it succeed.

The working class may count on our movement, and all those who are working for the common good may be assured of finding sincere collaborators in our ranks.

A. A. Hutchinson,
Chairman, National Legislative Committee,
International Railway Brotherhoods

The year 1960 has in many ways proved to be a year of disappointment. High hopes were held at the start of the year that the nations of the world would reach a better understanding with consequent improvement in prospects for the goal of "Peace on Earth."

Circumstances dashed our hopes and again reminded us of the failings of mankind and the results of selfishness and lack of consideration for the weak and the helpless.

In Canada the hoped-for improvement in the economy of the country has not been realized and as a result we have with us the fact of very serious unemployment problems.

Railroad employees have not felt the impact of unemployment to the extent that workers in some other lines have, as there have been some circumstances that helped to cushion the blow of reduction in staff, but in the year 1960 the situation has worsened, and the problem of unemployment on the railways brought about by automation and technological changes has now become acute in all branches and shows every sign of getting worse.

I would now like to pay public tribute to the thousands of working men and women who take an active part in the Confederation of National Trade Unions and who serve the cause of the entire working class with indefatigable energy. Thanks to our education program, the number of these enthusiastic supporters of the cause is constantly rising, and there is no doubt that the future will be brighter than the present.

At the beginning of this New Year, it is my hope that all those who are unemployed and anguished by insecurity will not despair, and that they will nevertheless gather enough courage to do their part in helping those who are fighting the good fight for them.

I hope that all those who still have jobs will be able to keep these. My wish for them is that their present union, or the one to the creation of which they will contribute in 1961, will obtain adequate pay for them, and the security and respect to which they are entitled.

To all workers' families, I extend my best wishes for a happy Christmas and for a more encouraging New Year than the last one.

The federal Government has recognized the general problem of unemployment in Canada and is trying to remedy the matter by various means.

Railway Labour is ready to do its part to any reasonable extent in improving the economic condition of Canada, realizing that the welfare of railway employees depends upon the welfare of the railways and that the railways, in turn, as a service industry, serving all branches of the Canadian economy, are dependent upon the expansion and health of industry generally: manufacturing, forestry, mining, agriculture, fisheries, etc.

Railway employees know that there is no adequate substitute for mass transportation that can supplant railway transportation efficiently and effectively and we are alarmed at the rate of reduction in facilities and services.

It is our hope that the improvements in economic conditions which were so confidently predicted for the year 1960 and which, unfortunately, were not realized may yet come to us in the coming year of 1961.

It is with this hope that we extend to all a sincere wish for a Happy, Bright and Prosperous 1961.

Labour Legislation of the Past Decade

Series of articles will review developments in labour legislation in Canada in 1951-1960 period. This first article covers most important steps taken in the past decade concerning minimum wages, hours of work, paid vacations, holidays

Part 1—Labour Standards

Ten years have passed since publication in the 50th Anniversary Issue of the *LABOUR GAZETTE* of an article, "Fifty Years of Labour Legislation in Canada", which described the most important labour legislation in each decade from 1900 to 1950.

Now, a series of articles by the Legislation Branch of the Department of Labour, of which this is the first, will review developments in labour legislation in Canada

in the past decade. The articles will cover the most important steps that have been taken in the years 1951 to 1960 in respect to labour standards, labour relations and trade union legislation, safety of persons and property, workmen's compensation, equal opportunities for employment, and other matters.

The subject of this first article is labour standards legislation.

Minimum Wages

All the Canadian provinces now have minimum wage laws. Prince Edward Island, the last province to enact such legislation, passed a Women's Minimum Wage Act in 1959 and an Act covering male workers in 1960. To date no orders setting minimum rates have been issued in Prince Edward Island. In all other provincial jurisdictions, minimum wage orders are in effect covering the entire province.

Under the Canadian system of minimum wage fixing, a minimum wage board has authority to fix* standards of minimum wages and to apply the minimum wage so fixed to all employees in the province or to any group or class of employees in an industry or in all industries. In the early years of minimum wage regulation, and particularly when minimum wages were confined to women workers, the Boards found it practicable and advisable to determine minimum rates and other working conditions for individual industries or occupations, with the result that as many as 40 or 50 orders were in effect at one time. In order to facilitate administration and to achieve more uniform standards, these orders were consolidated and reduced in number, individual orders being eventually replaced by general or blanket orders covering all types of employment.

The British Columbia Board of Industrial Relations has adhered to the practice of setting minimum wages on an industry or occupation basis, issuing a separate order for each industry or occupation. Revision

of orders is a continuing process, and wherever practicable orders have been consolidated. Since 1950 the Board has made at least seven new orders governing trades and occupations not previously covered. Currently, about 40 minimum wage orders are in effect.

In the other provinces, the practice is to issue general orders setting rates applicable to most industries, supplemented in some cases by a small number of special orders setting different rates and working conditions for a particular trade, occupation or class of workers. In these provinces the trend in recent years has been towards a widening of the coverage of general orders and a reduction in the number of special orders.

In their setting of minimum rates under general orders, some Boards have allowed variations in rates on a regional or population basis or on the basis of sex. In Alberta, both a regional and a sex differential are provided for.

In Nova Scotia, Ontario and Quebec, rates are set according to zone. In Nova Scotia, the cities and towns are classified, according to population, in Zones I and II. Zone III comprises the rest of the province. In Ontario, the five largest cities constitute Zone I, centres of 3,000 population and over are included in Zone II, and places with under 3,000 population comprise Zone III. In Quebec, Zone I consists of the Greater Montreal area and Zone II takes in the remainder of the province. In Alberta and Manitoba, a distinction is made for minimum wage purposes between urban and rural areas, centres with over 5,000 population in Alberta being classed as urban.

*In most provinces Board orders require the approval of the Lieutenant-Governor in Council. In Manitoba and Newfoundland, the Board is merely empowered to make recommendations to the Lieutenant-Governor in Council concerning minimum rates.

In Nova Scotia, there is a difference in minimum rates of \$2.40 a week between Zones I and II, and of \$4.80 a week between Zones II and III. In Ontario, the difference between zones is \$2 a week; in Quebec, it is 6 cents an hour. In Alberta, the regional differential is \$4 a week; in Manitoba, there is a difference of 5 cents an hour between urban and rural rates.

In Newfoundland, New Brunswick and Saskatchewan, there is no regional differential in rates, any minimum rate set applying throughout the province. The same is true of British Columbia except in a very few cases where an order has been made for a designated area of the province.

Of the provinces which set minimum rates for both sexes (Nova Scotia, Ontario and, with the exception of one order, New Brunswick set rates for women only), only two allow a difference in minimum rates on the basis of sex. In Alberta, the differential between male and female rates is \$2 a week; in Newfoundland, it is 15 cents an hour. In British Columbia, most orders are applicable to both sexes, setting the one rate for both. Exceptionally, however, in the orders governing factories and the fresh fruit and vegetable processing industry the Board has established minimum rates of 75 cents an hour for men and 60 cents an hour for women. These rates were made subject to the Equal Pay Act, i.e., they apply where men and women do different work.

In a few provinces, the Boards have set rates for young workers lower than the established minimum rate, in effect providing a differential on the basis of age.

In Manitoba, a minimum rate of 48 cents an hour is in effect for young workers under 18. This rate is 18 cents lower than the urban adult rate and 13 cents below the rural adult rate.

In Saskatchewan, lower rates for workers under 18, \$2 less than adult rates, have been set since 1957. The current rate for young workers is \$30 a week. For part-time workers under 18, rates are 5 cents an hour less than adult part-time rates.

In Alberta, the Board of Industrial Relations sets a graduated scale of minimum wages for male workers under 19.

Minimum rates in the Newfoundland orders apply to employees over 17. No rates have been set for workers under 17.

In one British Columbia order, that covering metal mining, the Board has fixed a minimum rate for young workers, requiring boys under 18 employed on a casual basis to be paid not less than 60 cents an hour. The adult minimum rate for metal mining is \$1 an hour.

The most significant changes in minimum wage legislation during the past decade have been changes in coverage and the upward revision of minimum rates. Almost without exception, each revision of an order has resulted in an increase in the minimum rate. Developments in each province are discussed below.

Alberta

In 1952 the Alberta Board in effect divided the province into two zones for minimum wage fixing purposes by setting higher minimum rates for its four largest cities—Edmonton, Calgary, Lethbridge and Medicine Hat—than for the rest of the province. (At the same time a maximum 44-hour work week was put into effect in these four cities, in place of the maximum 48-hour week prevailing elsewhere in the province.) The minimum rates set were \$26 a week for men and \$24 for women as against \$25 and \$20 elsewhere in the province.

In 1956, a different division of the province was provided for, the urban rate being applied to all cities and towns with a population of over 5,000, and lower rates, \$4 less in each case, being set for rural areas. The rates set in 1956 remain in effect.

In Alberta, the minimum rates set are weekly rates, with an hourly part-time rate for workers who normally work less than 40 hours in a week. Current rates for men are \$30 a week in centres with over 5,000 population and \$26 in the rest of the province. Corresponding women's rates are \$28 and \$24 a week. Learners' rates, applicable for a three-month learning period, are set for women workers only. Not more than 25 per cent of the total female staff in an establishment may be paid learners' rates.

Lower rates than the full minimum are set for young male workers under 19, according to age. Before 1956 these rates were set for workers under 21, but in that year the age of male workers eligible for the full minimum rate was lowered from 21 to 19 years. Consequently, rates for young male workers now apply to those under 17 years, those between 17 and 18, and those between 18 and 19 years.

In addition to the four general orders, the Board has made a number of orders for special industries or classes of employees, many of them combined hours of work and minimum wage orders. These orders permit the working of extended hours in the industry or occupation concerned (often 10 hours in a day and 208 hours in a month), and lay down the

overtime rate (usually time and one half the regular rate) that must be paid after the limits prescribed. Under the general orders, time and one half the regular rate must be paid for work done after 9 and 48 hours, or after 9 and 44 hours in the four largest cities.

British Columbia

In their setting of minimum rates during the fifties, the British Columbia Board continued a policy first begun with the setting of a 75-cent rate for carpenters in 1938 and 1939, i.e., the setting of minimum rates based on skills. These rates were considerably higher than the basic minimum rates set previously and were more akin to the minimum rates set in industrial standards schedules in some of the other provinces.

In response to requests from employers and trade unions, and taking into consideration the prevailing rates in the trade concerned, the Board set minimum rates that reflected the basic skills of the particular classification of tradesmen, e.g., \$1.25 an hour for machinists and for journeymen in the refrigeration trade. For the sheet metal trade the rate, first set at \$1 an hour in 1948, was raised to \$1.25 in 1952 and later to \$1.50. In 1955 a \$1.50 minimum rate was set for tradesmen in all branches of the construction industry and a rate of \$1 for other employees. When the construction order was again revised in 1960, a rate of \$2 an hour was established for tradesmen (the highest rate in effect in the province) and \$1.30 for other workers. Comparable rates are \$1.50 an hour for electronic technicians and \$1.75 an hour for journeymen-tradesmen in the shipbuilding industry.

The minimum rates for factories, shops and offices, etc., are more in line with the rates set under general orders in the other provinces; many of the British Columbia orders, however, set a comparatively high minimum rate. For factories, rates of 75 cents and 60 cents an hour for men and women workers, respectively, are in effect. The rate for shops, hotels and restaurants is 65 cents an hour, and the rate for offices and laundries is 75 cents an hour.

On the other hand, a rate of \$1 an hour has been set for geophysical exploration, logging and sawmills, metal mining, cook and bunkhouse occupation in unorganized territory, bus operators, trucking, patrolmen, and the woodworking industry. The minimum rate for first aid attendants is \$1.25 an hour and for pipeline construction and oil well drilling and servicing, \$1.30 an hour.

During the decade the Board for the most part discontinued its former practice of setting weekly minima in favour of setting an hourly rate. In revisions of orders for shops, offices, hotels and catering, elevator operators and public places of amusement, weekly and part-time rates were changed to hourly rates. In only a few orders, those covering barbering, hairdressing, hospitals, personal service occupations and the undertaking business, are weekly and part-time rates now set. In hairdressing a weekly rate of \$35 is set for employees whose work week consists of 39 hours or more, and an hourly rate of 90 cents is applicable to those who work less than 39 hours. In the other occupations, weekly rates apply to those who work 40 hours or more, hourly rates to those working less than 40 hours.

The Board continues to set lower rates for learners in certain industries. Learners' rates were dropped, however, from the hotel and catering and hairdressing orders in 1952 and from the order covering amusement places in 1960. A definite trend in the setting of learners' rates since 1956 has been a reduction in the learning period. For factories, shops, laundries and woodworking, the learning period was reduced from six months to six weeks, and for offices it was reduced from four months to two. The only other orders in which learners' rates are set are those governing hospitals and automotive repair (parts department). In these orders the learning period remains six months. Before employing a worker at learners' rates, an employer must obtain a permit from the Board.

By amendments to the Minimum Wage Acts in 1953, the Board was granted further powers with respect to the setting of overtime rates. Previously, the Board had had authority only to fix an overtime rate payable after 44 hours, i.e., in cases where, under powers conferred by the Hours of Work Act, it allowed the statutory weekly limit of 44 hours to be exceeded. The amendments enabled the Board to set an overtime rate payable after a lesser number of weekly hours than 44.

As a result of these amendments, uniform working conditions could be established on large construction projects, where some workers might be paid overtime rates after 40 hours according to the terms of a collective agreement and others, working for another employer and not covered by a collective agreement, might be paid overtime after 44 hours, as required by a minimum wage order.

Under this authority the Board has required payment of the overtime rate (time and one half the regular rate) after a 40-hour week in orders covering pipeline construction (1956), shipbuilding (1960), and the construction industry (1960). Normally, under most orders, where overtime is allowed under permit, payment of the overtime rate is required after 8 hours in a day or 44 hours in a week.

In two or three instances the Board has set punitive overtime rates as a means of exercising some control over the working of excessive hours. In fresh fruit and vegetable processing in the busy season (June 1—November 30), during which time the industry is exempted from the Hours of Work Act, time and one half the regular rate must be paid for the first two hours worked after 9 in a day, double time after 11 hours and, if overtime is not calculated on a daily basis, time and one half after a 54-hour week. For the rest of the year the usual overtime conditions (time and one half after 8 and 44 hours) apply. This method of regulation has been the one used in the trucking industry since 1948. It was tried briefly in the taxicab industry but was abandoned in 1952 in favour of a requirement that each taxi driver should be paid his regular rate plus an additional 30 cents an hour for all hours worked in excess of 9 and 48 hours.

The Board no longer sets maximum charges or deductions which may be made for board and lodging in its orders governing hotels and catering, resident janitors and elevator operators. Instead, the orders stipulate that an employee may not be required to partake of meals or make use of lodging as a condition of employment, and give the Board supervisory powers over the adequacy of any services provided. If the Board finds that services are inadequate or charges are excessive, it may specify the maximum charges that may be made.

Manitoba

In 1957 the Manitoba Employment Standards Act was enacted, replacing the former Minimum Wage Act, the Hours and Conditions of Work Act and the Factories Act.

As regards minimum wages, a new feature of the Act is its provision for the appointment of one or more Minimum Wage Boards, each to perform its duties within the area for which it may be appointed. Only one Minimum Wage Board is presently functioning.

The Board's powers under the new legislation are confined to making recommendations regarding minimum wages and do not extend to the regulation of other working

conditions. In deciding upon its recommendations, the Board is to be guided by "the cost to an employee of purchasing the necessities of life and health" and, in determining the amount needed, it may conduct inquiries and hear representations from interested persons.

Minimum rates were raised in 1952, 1957 (for women only) and 1960. In 1952 weekly and part-time rates for women were replaced by hourly rates. Since 1957 a single rate has been set for boys and girls under 18.

A significant change in 1960 was the removal of the differential based on sex. The previous rates for women were 54 cents an hour in rural areas and 58 cents in urban centres. The rate for men was 60 cents an hour. The new order set the same rate for both sexes, allowing, however, a 5-cent differential between urban and rural rates, which are now 66 cents and 61 cents, respectively. This differential, according to the Board, is justified because of the difference in transportation costs.

In 1952 higher limits were set on the amount of overtime that might be worked by women. These limits are 3 hours in a day, 12 hours in a week, and 24 hours in a month. No employee under 15 is permitted to work any overtime. There are no restrictions on overtime for men.

Minimum rates in Manitoba apply to an 8-hour day and 44-hour week for women and to a 48-hour week for men. For time worked beyond these limits an overtime rate (time and one half the minimum rate) must be paid. This provision has somewhat limited application since it applies only to employment which is not within the scope of the hours provisions of the Employment Standards Act. Part III of the Employment Standards Act (hours of work legislation), which applies to the major industries in the chief industrial areas of the province, requires time and one half the *regular* rate to be paid for work done after 8 and 48 hours (44 hours for women).

A new provision regarding overtime was added to the order in 1957. This states that, where men and women are doing identical or substantially identical work in an establishment, the employer may apply to the Manitoba Labour Board for an exemption from the obligation of paying employees of one sex on a different basis from that applicable to the other sex. If approval is given, the employer would be permitted to pay women employees the overtime rate after 48 hours instead of after 44.

Somewhat different provisions regarding uniforms were added to the order in 1952. Where the wearing of a uniform is re-

quired, it must be provided by the employer without charge to the employee. Where, however, an employee is paid more than the minimum overtime rate, a charge may be made, subject to the provision that no charge may be made for furnishing, laundering or maintaining uniforms that would bring an employee's earnings below the minimum hourly rate. Further, the Minister has discretion to fix or limit the amount of charges or may prohibit the making of any charge.

A new provision in 1957 had to do with deductions for meals. It stated that an employer who is engaged in the business of supplying meals to customers may not charge an employee more than half what a customer would pay for the same meals. Other employers may not deduct more than 35 cents a meal or \$7 for a week's board, whichever is lesser.

In other amendments the Minister was given general supervision over the payment of wages and authority to require weekly payment if he considered it desirable. Women employees may not be paid less frequently than twice a month. Wages must be paid within three days of the completion of the pay period in which they were earned, unless written permission to do otherwise is obtained from the Minister. An employee discharged by his employer must be paid the wages due him within three working days after his employment is terminated.

More supervision of home work was provided for in 1957. Any employer intending to give out home work must register with the Minister. The orders do not set a minimum wage for this work but the Minister, in his absolute discretion, may impose "conditions and limitations" upon the work in so far as payment is concerned. Formerly, under the Factories Act, the employer was required to keep a register of home work given out but full particulars of the type and amount of work done by each employee and the wages paid must now be recorded.

As a means of informing workers of the minimum rates to which they are entitled, employers were required, under the order as revised in 1957, to furnish a copy of the minimum wage order to each employee. This requirement replaced a provision requiring posting of the order. As amended in 1960, the order now provides for distribution to each employee or posting, or both, of a summary provided by the Minister, at the request of an officer of the Department of Labour. As before, the requirement does not apply to employees covered by collective agreement, presumably on the supposition that union members

will be made aware of the statutory conditions covering their employment by their union.

Newfoundland

In Newfoundland, a new Minimum Wage Act was passed in 1950, repealing the Labour (Minimum Wage) Act, 1947.

The first steps in minimum wage-setting were taken in 1953, when a general order was made for male workers, excluding only farm workers and market gardeners. This order set a minimum rate of 50 cents an hour for hourly-paid male workers over 18 and required payment of time and one half the minimum rate after 10 hours on a weekday or for any work done on Sunday.

In 1955 a general order for women workers was issued and the male order revised to lay down the same conditions for both sexes, apart from a difference in the minimum rate. The minimum rate for men remains 50 cents an hour; the rate for women is 35 cents. Both orders apply to employees over the age of 17. Where a worker is paid at an hourly rate, overtime (time and one half the minimum rate) is payable after eight hours on a weekday and for any Sunday work. Where an employee is paid a fixed weekly or monthly wage, he must be paid the overtime rate after 48 hours in a week.

The Newfoundland Board is required by statute to review its orders every two years.

New Brunswick

The first orders for women workers in New Brunswick set weekly and part-time rates but these were changed to hourly rates in 1950, the first such rate being 35 cents an hour for a 48-hour week or less. The minimum rates in the two orders for women (a general order and an order for hotels and restaurants) have been raised from time to time and are now 55 cents an hour for hotels and restaurants and 60 cents an hour for other workplaces. Overtime at time and one half the minimum rate must be paid after 48 hours or the hours normally worked in the establishment, if less than 48.

Only one order is in effect for male workers. This order sets a minimum rate of 65 cents an hour for the canning industry.

Nova Scotia

In 1951 a new Women's Minimum Wage Act was passed in Nova Scotia, which, while similar in principle to its predecessor, was more in line with the Acts of the other provinces. More specific provision was made for inspection, and the Minimum Wage Board was given wider powers,

including power to regulate the making of deductions, to fix the time and manner of payment of wages, and to exempt any group of employees or employers from the Act or a minimum wage order. Orders now required the approval of the Lieutenant-Governor in Council, and posting of the orders by employers was required.

One of the new features of the Act was its application to the whole province; the previous statute had been restricted to the cities and incorporated towns. Minimum wage orders continued to apply to the cities and towns until 1958, when employment outside the towns was covered for the first time.

As in other provinces, minimum wage orders were consolidated. In 1951 one general order was issued, replacing 10 separate orders covering as many different industries. Since 1951 three special orders have been made, one covering summer employment in hotels within 20 miles of a city or town (now incorporated in the general order) and the others, which remain in effect, covering beauty parlours and the fish-processing industry.

Minimum rates were raised by \$1.80 a week in 1951 and were again increased, along with the change in zoning mentioned above, in 1958. Rates are now \$21.60, \$19.20 and \$14.40 a week for the three zones into which the province is divided.

In 1957 new provisions regarding the payment of overtime were laid down in the general order and the order for beauty parlours. Previously, payment of overtime (at time and one half the minimum rate) was required for work done after 48 hours in a week or after the regular work week in an establishment, if less than 48, but only with respect to employees who were being paid at the minimum rate. The amendments extended the application of the overtime provision to employees whose normal rate of pay was *above* the minimum. That is, all employees covered by the orders were now entitled to overtime pay after working 48 hours or normal hours, if less.

Learners' rates were dropped from the general order and the order for fish processing in 1958 but were restored in amendments made the same year. In place of learners' rates for a six-month learning period (the minimum rising at the end of three months), the general order now sets one rate of \$18 a week payable for a probationary period of 90 days following commencement of work for all workplaces in Zones I and II (the cities and towns). In Zone III (the rest of the province) the minimum for experienced workers and learners alike is \$14.40 a week. In the

fish-processing industry a learners' rate of 37½ cents an hour may be paid during a 90-day probationary period. The full minimum rate for the industry is 45 cents an hour. For beauty parlours the learning period was reduced from 18 months to nine months.

A further change in 1958 was that, instead of a provision limiting the deductions that could be made from the minimum weekly rate where board and lodging are furnished by the employer, the general order set out the maximum charges that an employer may make for these services.

Ontario

Minimum rates in Ontario, which are applicable to women only, were raised in 1955 and again in 1960. These rates, which are set for three zones, apply to a work week of not more than 48 hours or the prevailing work period in an establishment, if less than 48 hours. Hours worked after the weekly limit must be paid for on a *pro rata* basis.

In 1955 current rates, which since 1947 had been \$16.80, \$15.80 and \$13.80 a week respectively for the three zones, were raised to \$22, \$20 and \$18. In 1960, a further increase of \$8 a week was put into effect, making the present minimum rates \$30 in Zone I, \$28 in Zone II and \$26 in Zone III. Increased deductions for board and lodging, when supplied by the employer, were also authorized. Learners' rates, which apply during a period of six months, were increased correspondingly. An employer may not class more than 20 per cent of his female employees as inexperienced workers.

Prince Edward Island

In Prince Edward Island, the Government, acting on a resolution of the Legislature, appointed a committee to study minimum wage legislation in 1956. Both Acts which have since been enacted, one covering female workers and the other covering males, provide for the setting of minimum rates by a board established under other legislation, the Labour Relations Board appointed under the Trade Union Act.

Both Acts contain the standard provisions found in other provincial minimum wage legislation. The Act respecting a minimum wage for men stipulates that orders of the Board setting minimum rates for men are subject to review by the Minister of Labour. No minimum wage orders have yet been issued.

Quebec

During the past decade, the Quebec Minimum Wage Commission continued its policy of simplifying minimum wage orders and reducing their number. Workers formerly covered by separate orders (which were permitted to expire) were made subject to General Order 4, the blanket order covering the majority of unorganized workers in the province. In 1950 a separate order (No. 41) was issued for employees of municipal and school corporations, and in 1957 a new order (No. 40) was made for employees of hotels, restaurants, hospitals and real estate undertakings. These three orders—Nos. 4, 40 and 41—and the forestry order (No. 39), which has been in effect for many years, are all the minimum wage orders now in effect.

The order for municipal and school corporations sets the same minimum rates as Order 4, except for a few occupational groups. Minimum rates for employees in hotels, restaurants, hospitals and real estate undertakings are somewhat lower than those fixed by Order 4. Their current minimum is 64 cents an hour in Zone I and 60 cents in Zone II.

A reduction in the number of zones for which minimum rates are set has had the effect of making workers in the smaller centres eligible for a higher minimum rate, as well as of narrowing the differential between the highest and lowest minimum rate.

In 1953 the number of zones was reduced from four to three, by combining the former Zones III and IV (places with from 2,000 to 10,000 population, and places with under 2,000 population, respectively) to form a new Zone III.

In 1957 a change in the size of towns included in Zone II—those with 6,000 population and over instead of 10,000 and over—made a large number of workers eligible for a higher minimum rate.

In a further revision, effective May 1, 1960, the number of zones was reduced to two, Zone I now comprising the Greater Montreal area, and Zone II the remainder of the province.

In 1953 Order 4 was revised and rearranged in a more concise form on the basis of a classification of workplaces according to the length of the "regular work week" rather than, as before, on the basis of categories of workers. Minimum hourly rates applied to the hours in the "regular work week", which varied with different establishments. For any work done after the hours in the regular work week payment of an overtime rate was required.

Under this arrangement, 48 hours constituted the regular work week for most establishments, with establishments having a 54-hour regular work week, a 60-hour regular work week or no regular work week being listed as exceptions. (Establishments with a 48-hour work week were not listed, all those for which a longer work week was not fixed being deemed to have a work week of 48 hours). Workers having no regular work week were not entitled to payment of overtime.

In 1953 provision for the payment of overtime on a daily basis (after 12 hours) was discontinued, and a significant feature of successive revisions of Order 4 and the other orders has been the progressive reduction of the regular work week.

In 1957 the classification of the 60-hour regular work week was done away with, and in the latest (1960) revision the 54-hour regular work week is no longer prescribed for certain workplaces. The result is that fewer exceptions are now authorized from the general standard of 48 hours. In 1960 the regular work week of employees of municipal and school corporations was reduced from 54 to 48 hours, and that for employees in hotels, restaurants, hospitals and real estate undertakings from 60 to 54 hours.

A further change in 1960 was in regard to the rate of overtime pay set by the orders. Since 1946, when the Minimum Wage Commission was given specific authority to fix overtime rates of pay for hourly-paid workers not governed by a collective agreement, it had set an overtime rate for these workers of time and one half the *regular* rate, and, for other employees, an overtime rate of time and one half the *minimum* rate. The orders now set one rate for overtime work (i.e., for hours worked in excess of the regular work week)—time and one-half the *minimum* rate. As before, employees paid on a weekly, monthly or yearly basis and receiving at least a specified minimum amount are not eligible for overtime pay.

A new departure in 1953 was the setting of minimum rates for inexperienced employees, defined as employees who "in addition to apprentices, are not occupied at skilled labour or at labour requiring training and who, because of their restricted ability, cannot furnish the output of a skilled worker." The number of such employees was limited to 20 per cent of the work force of an establishment. Previously (from 1946-1953), 75 per cent of the workers in a factory or shop were required to receive the minimum rate, and lower rates were

set for the remaining 25 per cent. As enacted in 1942, Order 4 set three different rates for work in industrial or commercial establishments, applying to 60, 25 and 15 per cent, respectively, of the work force.

The inexperienced workers' rates set in 1953 were not, strictly speaking, learners' rates, since they were not set in relation to a definite learning period, i.e., inexperienced workers were not required to get periodic increases. They were rather rates set for workers from whom skilled work was not expected or required.

These inexperienced workers' rates and the 20 per cent quota were removed from the orders in 1960, the only lower rates now prescribed being for piecework employees and for employees on probation in hospitals in their first six months of employment. Such employees must now be paid at least 56 cents an hour in Zone I and 52 cents in Zone II.

Minimum rates under Order 39 governing forest operations have been progressively raised, and the order has been greatly simplified.

In 1950 daily instead of monthly rates were fixed. In 1958, instead of rates set on an occupational basis, new general hourly, daily and weekly rates were set for all workers other than pieceworkers, the determining factor being the extent to which the working hours of an employee could be controlled. For employees whose hours were verifiable, the order set a minimum rate of 75 cents an hour; for those whose hours could not be verified the rate set was \$7 a day; and for employees without a regular work week a minimum of \$42 a week was prescribed. Corresponding rates for inexperienced or handicapped workers were 50 cents an hour and \$5 a day. In addition to these changes, the regular work week for woodworkers was reduced from 60 to 54 hours.

A major change in 1960 was that a new daily minimum of \$9 was set for pieceworkers. Previously, 11 different rates were prescribed, varying with the type of work performed. A later amendment, however, reinstated per cord piecework rates in pulpwood operations. Rates of workers hired on a fixed wage basis were raised to 90 cents an hour, \$8 a day or \$48 a week, depending on the extent to which hours may be controlled.

Rates for inexperienced workers, defined as in Order 4, were dropped but slightly higher rates than those set previously (60 cents an hour for employees whose hours are verifiable and \$6 a day for those whose hours are not verifiable or who have no

regular work week) were set for pieceworkers who have not worked 12 working days.

As in other orders, the rate set by Order 39 for overtime is time and one half the minimum rate. Previously, forestry workers were entitled to their regular rate for overtime.

Saskatchewan

In Saskatchewan, the extension of the coverage of the Minimum Wage Act and orders to places with a population of under 300, effecting province-wide coverage, and the removal of the differential between urban and rural areas were important developments in the past decade.

At first applied only to cities, the scope of the Saskatchewan Act was progressively extended to cover additional towns, villages and hamlets until, by a final step in 1953, it was made applicable to the entire province. The differential between urban and rural rates, although narrowed to \$1 a week in 1957, was maintained until 1960, when the orders were amended to establish one minimum of \$32 a week for all employees of 18 and over in the province, except those covered by special orders.

Since 1950 the Act has been amended several times, adding to the Board's powers to determine minimum wages and other working conditions and providing a new and alternative basis upon which minimum wage standards may be set.

An amendment in 1957 empowered the Board to determine the minimum wage on the basis of an amount which it deemed fair and reasonable, having regard to the wages which it considered to be generally prevailing in the employment affected. The amendment was introduced "with a view to providing a greater measure of protection not only for employees but also for employers who pay fair wages." This method may now be used by the Board, as it deems fit, in preference to the criterion long set out in the Act—that the Board should base the minimum wage on the amount which it deems adequate to furnish the necessary cost of living to the employees concerned.

To the Board's already extensive powers to determine working conditions was added power to fix the maximum number of hours that may be worked without a meal period, to require employers to provide, repair and launder uniforms at their own expense, to order that rest periods must be counted as time worked, and to require employers to furnish pay statements on each regular pay-day and on termination of employment.

The Board has laid down all these requirements in its orders, the requirement concerning pay statements having been set out in a new order in 1957.

In Saskatchewan, the practice of setting weekly minimum rates for full-time employees and hourly rates for part-time workers has been continued, part-time workers being defined as those who work less than 36 hours in a week. Proportionally higher than the rates established for full-time workers (currently 85 cents an hour as against \$32 a week), the part-time rate is designed to discourage the practice of providing only part-time work.

As already noted, rates \$2 less than the full minimum rates are set for workers under 18. The present rate for young workers is \$30 a week.

Provision for overtime is contained in the Hours of Work Act and orders, and the

Minimum Wage Board is not concerned with it.

As a result of a change made in 1960 in the orders covering hotels, restaurants, educational institutions, hospitals and nursing homes, any employer who requires or permits a woman worker to finish work between 12.30 and 7 a.m. must provide free transportation for the worker to her home. There are similar provisions governing night work of women in Alberta and Manitoba (covering the hours between midnight and 6 a.m.). In Ontario, where permission is granted to proprietors of restaurants or other employers to employ women 18 years of age and over during the night, permits are subject to certain conditions regarding the conveyance of the worker to her home.

The following table presents a comparison of the minimum rates in effect in 1950 and 1960 for women workers in factories, shops and offices in the various provinces.

A COMPARISON OF MINIMUM RATES FOR WOMEN IN FACTORIES, SHOPS AND OFFICES IN 1950 AND 1960

	1950	1960
Newfoundland.....	nil	35¢ per hour
Nova Scotia.....	\$15, Zone I (per week) \$14, Zone II \$13, Zone III	\$21.60, Zone I (per week) \$19.20, Zone II \$14.40, Zone III*
New Brunswick.....	35¢ per hour	60¢ per hour
Quebec.....	35¢, Zone I (per hour) 32¢, Zone II 28¢, Zone III 25¢, Zone IV	70¢, Zone I (per hour) 64¢, Zone II*
Ontario.....	\$16.80, Zone I (per week) \$15.80, Zone II \$13.80, Zone III	\$30, Zone I (per week) \$28, Zone II \$26, Zone III
Manitoba.....	\$19.50, urban (per week) \$18.50, rural	66¢, urban (per hour) 61¢, rural
Saskatchewan.....	\$21, cities and 9 larger towns (per week) \$18.50, smaller towns	\$32 (per week)
Alberta.....	\$20 (per week)	\$28, places over 5,000 (per week) \$24, rest of province
British Columbia.....	40¢ per hour, factories \$18 per week, shops and offices	60¢, factories (per hour) 65¢, shops 75¢, offices

*For difference in definition of zones in Nova Scotia and Quebec between 1950 and 1960 see pages 1240, 1241, 1245, 1246.

Hours of Work

In 1950 five provinces, Alberta, British Columbia, Manitoba, Ontario and Saskatchewan, had hours of work legislation of general application which either set absolute limits on hours or required the payment of an overtime rate after a specified number of hours of work. Hours were limited in Alberta and Ontario to 8 in a day and 48 in a week and in British Columbia to 8 and 44. In the other two provinces, the second method of regulating hours was

followed, and an overtime rate was payable after 8 and 48 hours (44 for women) in Manitoba, and after 8 and 44 hours in Saskatchewan (by administrative regulation, 8 and 48 in the smaller centres). All of the Acts, of course, provided for some exceptions or variations.

In the ensuing ten-year period there were few important changes in hours legislation. Hours were reduced to some extent in Alberta and Newfoundland, coverage was

extended in Saskatchewan and Manitoba, and authority to limit daily hours was granted in Saskatchewan.

In Alberta, an administrative order in 1952 reduced the weekly limit on hours from 48 to 44 in the cities of Edmonton, Calgary, Lethbridge and Medicine Hat. In 1953, in Newfoundland, an amendment to the St. John's Shops Act set a 44-hour weekly limit on hours for shop employees in that city and a six-mile radius, with provision for longer hours by agreement upon payment of an overtime rate. A 1959 amendment to the same Act, effective from January 1, 1960, limits hours of shop employees to 40 in a week unless time and one half is paid. The same requirement was laid down in 1960 for shop workers in the Exploits Valley district.

By a 1951 amendment, which went into force on March 1, 1952, the coverage of the Saskatchewan Hours of Work Act was extended to all places covered by the Minimum Wage Act, which in effect meant all workplaces in centres with a population of over 300. As a result, employees in workplaces other than factories, offices and shops in the smaller places and certain categories of workers such as janitors and long-distance truckers, who had been previously excluded, were now covered and entitled to overtime rates for work beyond the prescribed limits. The following year (1953), when the Minimum Wage Act was made applicable to all parts of the province, the Hours of Work Act was correspondingly extended. Later in the same year the Act was declared not to apply to the northern part of the province, the area north of Township 62, except for the village of Creighton and the hamlet of Lac la Ronge. Since that time Uranium City, although in the exempted northern area, has been brought within the scope of the Act.

In Manitoba, in 1953, the Hours and Conditions of Work Act (now Part III of the Employment Standards Act), which applied in the chief industrial areas of the province, was extended to include Snow Lake and Lynn Lake, two northern local Government Districts.

In 1958, the Saskatchewan Act, which previously had not placed any absolute limitation on working hours, was amended to authorize the Lieutenant-Governor in Council to issue regulations applicable to any class of employment limiting working time in any one day to 12 hours. In 1959, a regulation was made prohibiting employers in highway construction and maintenance

work from requiring employees to work more than 12 hours in a day except by special permit.

In other legislation, in addition to the general hours of work Acts, there are provisions limiting hours. In New Brunswick and Quebec, factory Acts place some restrictions on working hours of women and boys under 18. The Nova Scotia Factories Act limits hours of boys and girls under 16 to 8 in a day and 48 in a week. Mining Acts in New Brunswick and Nova Scotia, which set a maximum eight-hour day for underground work in mines, provide the only statutory regulation of hours of work of miners in those provinces; hours of work Acts apply to mining in other provinces. In New Brunswick, hours of workers on construction work done under contract with the provincial Government must be limited to 8 and 44.

There is also some indirect regulation of hours by virtue of provisions in minimum wage orders requiring the payment of an overtime rate after a specified number of hours of work.

Industrial standards legislation in Alberta, New Brunswick, Nova Scotia, Ontario and Saskatchewan, and the Collective Agreement Act in Quebec, all introduced in the thirties, continue to provide an important method of regulating hours of work, as well as of establishing minimum rates, in some trades and industries. In Manitoba, the Fair Wage Schedule issued annually under the Fair Wage Act sets the regular work week and establishes minimum rates for private as well as public construction work.

The use of this method of regulation has not increased significantly in the last ten years, the number of schedules and decrees now in effect being only slightly greater than in 1950. Schedules or decrees regulate working conditions in the construction trades in defined areas in each of the six provinces, a few new trades and areas now being covered; province-wide standards are established for the main branches of the garment industry in both Ontario and Quebec; and decrees or schedules cover the barbering and hairdressing trades in many areas. The trend has been to reduce regular working hours, a 40-hour week now being common for the construction trades in the larger centres. A 37½-hour week has been established for the ladies' cloak and suit industry in province-wide orders in both Ontario and Quebec.

Vacations With Pay

In 1950 legislation requiring employers to grant their employees an annual paid vacation was in force in six provinces. Between 1950 and 1960 there was a further extension of this new field of legislation. Vacations with pay were provided for by law in two other provinces, a federal Annual Vacations Act was enacted, and a number of amendments, including a lengthening of the vacation period in three provinces and various changes to facilitate administration, were made in most of the provinces.

New Brunswick passed its Vacation Pay Act in 1954, bringing it into force on June 30, 1955. Its application was limited to two industries—mining and construction—where the enforcement of a legal standard appeared to be necessary. In introducing the Bill, the Minister of Labour indicated that surveys had shown that, where there was year-round employment, vacations with pay were quite generally granted without legislation. In 1958 the application of the Act was extended to the canning and packing industries.

The Nova Scotia Vacation Pay Act, which went into force on January 1, 1959, was of general application, exempting only employees in lumbering and commercial fishing, farm workers and domestic servants.

The federal Annual Vacations Act went into effect on October 1, 1958, providing for an annual vacation with pay for workers in undertakings within federal jurisdiction. These include operations that are interprovincial or international in nature, such as railway, ship, ferry, bus, trucking, telegraph, telephone, pipeline, tunnel, bridge and canal operations, operations relating to inland and maritime navigation, longshoring and stevedoring. Also included are aerodromes and air transport, radio and television broadcasting stations, banks and banking, certain mining operations, and federal Crown corporations and works (such as grain elevators, and flour, feed and seed cleaning mills) that have been declared to be for the general advantage of Canada.

The New Brunswick and Nova Scotia Acts followed the lead of a number of the other provinces (including Ontario and Quebec) by providing for a minimum vacation period of one week after a year's service. The annual vacation provided for in the federal Act is one week in respect of a completed year of employment for an employee who has worked for less than two years with the same employer, and two weeks for an employee who has worked for the same employer for two years or more.

In both New Brunswick and Nova Scotia, provision was made for a system of vacation stamps to enable workers in the construction industry (and in the other industries covered in New Brunswick) to receive the benefits of a vacation with pay.

As regards the length of the annual vacation, the Manitoba Vacations with Pay Act, which since 1947 had provided for a vacation of one week after a year's service, was amended in 1951 to provide for an additional week after three years with the same employer.

In 1956 the British Columbia Legislature replaced the Annual Holidays Act with a new statute of the same name, effective from July 1, 1957, providing for a two-week vacation with pay instead of one week. British Columbia thus became the second province to provide for a two-week vacation after one year of service, Saskatchewan having set this standard in its first vacations with pay legislation in 1944.

In 1958 the Saskatchewan Annual Holidays Act was amended to provide for an annual vacation of three weeks after five years service, with vacation pay at the rate of 3/52 of the total wages earned during the previous year of employment. This provision applied only where a worker had been in continuous employment with the same employer, and to enable persons whose employment with the same employer had not been continuous to enjoy the same benefits, the Act was further amended in 1959. The amending Act stated that an employee was entitled to a three weeks vacation with pay after five "accumulated" years of employment, provided that no break in his service had exceeded six months or 182 days.

By an amendment in 1959, Manitoba became the third province to provide for a two-week vacation after one year's service with an employer. As already noted, the former provision was for one week after one year and two weeks after three years of service.

In 1950 a change in the definition of "working year" in the British Columbia Act reduced the period of service held to constitute a year of employment. Set at 280 days in the original (1946) Act, the qualifying period was reduced to 250 days the following year. The 1950 amendment defined "working year" to mean one calendar year's continuous service, comprising not less than 225 days of actual work.

In Alberta, the 275 days prescribed in the original (1946) vacation orders were likewise reduced. From 1949 on, annual

vacations were calculated on the basis of one-half day for every 23 days worked after a year of employment, and one day for every 23 days worked after two or more years' service. This provision was replaced in 1958, making 225 days of actual work the requirement for a year's employment.

For purposes of comparison, a year's service in New Brunswick is considered to consist of 225 working days or shifts. In Manitoba, an employee is held to have completed a year's service if he has worked 95 per cent or more of the regular working hours during the year. In Nova Scotia, the employee must have worked 90 per cent or more of the working hours during the year.

Several of the Acts were amended to provide that continuity of service was not to be affected by changes in the management of the undertaking. The Alberta Labour Act was amended in 1950 to provide that, where a business was sold, leased or transferred, the service of the employees concerned was to be deemed to be continuous for the purposes of computing their vacations with pay. British Columbia and Manitoba amended their Acts to the same purpose in 1956; Saskatchewan enacted a similar provision in 1957; and a comparable clause was inserted in the 1958 federal Act.

Although worded differently, a provision added to the Quebec Minimum Wage Act in 1947 has the same intent. It states that vacations with pay granted by a minimum wage order according to the duration of an employee's service are to be calculated according to the period during which he has been employed at the same enterprise "without regard to changes of ownership of such enterprise."

In 1959 an amendment was made to the Manitoba Act to prevent an employee's absence from work because of an accidental injury for which he received workmen's compensation from breaking his continuity of service. To ensure that an employee may not lose any entitlement to a vacation accumulated before such an injury, the Legislature provided that the Manitoba Labour Board may find that he has completed a year's service and is eligible for an annual vacation if he has worked for his employer during 12 months, which were not continuous but were interrupted only by the period during which he was in receipt of compensation.

In 1950 the British Columbia Act was amended to provide that vacation pay should be 2 per cent of total annual earnings rather than regular pay, as before (now, with the longer vacation period, 4

per cent of earnings). In most of the provinces vacation pay is a percentage of annual earnings (2 per cent for a one week's vacation and 4 per cent for a two weeks' vacation), but in Alberta and Manitoba it is the employee's regular pay for a week's work or for two weeks' work, as the case may be. In Quebec, an employee is entitled to his regular weekly pay for his annual vacation if he is engaged and paid by the week or any longer period; if he is paid on any other basis, e.g., by the hour, his vacation pay is 2 per cent of his annual earnings.

Several significant changes were made in connection with the vacation stamp system.

In Manitoba, where June 30 was the normal cut-off date for the redemption of stamps issued in the previous year, provision was made in 1956 for a person who was unemployed during the winter months to cash his vacation stamps at any time after November 30 in any year if he could establish that he had exhausted his unemployment insurance benefits and was available for work.

For the same reasons Alberta in 1958 changed its redemption date from June 1 to January 15, enabling workers to obtain the cash equivalent of their vacation credits at any time within the 12 months beginning on January 15 in each year.

In Nova Scotia, an employee may cash his stamps at any time after the anniversary date of his employment.

In a revision of the Quebec vacation orders in 1957, the use of the stamp system was authorized for manual workers in the building construction industry throughout the province. Previously, its application had been limited to the Montreal and Hull areas.

Because of the administrative problems involved in the operation of a system of stamp books, the Manitoba Legislature provided in 1959 for the payment of vacation pay to construction workers by cheque, effective from July 1, 1960.

Under the new scheme, which like the stamp system will apply only to construction workers in the Greater Winnipeg area, the employer will periodically pay to the Minister of Labour amounts equal to the total vacation pay credits due to each of his employees at the time the payment is made, at the same time furnishing the Minister with the name, address and unemployment insurance number of each employee. The employer is also required to notify the employee of the amount paid. The Minister will deposit the amounts received with the Provincial Treasurer. As

soon as practicable after June 30 in each year, a cheque will be sent to each employee for the amount of vacation pay to his credit in the records of the Department of Labour, less a charge for administration costs.

In 1957 the reference in the Alberta legislation to vacation with pay stamps was changed to "vacation with pay stamps or other credits," thus enabling the Board to provide, if it so decided, that credits might be placed in vacation books by a method other than stamps, e.g., by a meter machine. To date the Alberta Board has not adopted the new system. In Quebec, employers are now permitted to use meter machines for vacation credits instead of stamps. This method, authorized in 1958, is used by a number of larger firms.

The British Columbia Act as replaced in 1956 made provision for a system of vacation credits but a stamp system has not so far been introduced in that province. Saskatchewan is the only other province in which the stamp system is not used.

All the Acts set a fairly lengthy period within which an earned vacation must be given, ranging from four months in New Brunswick to twelve months in Alberta and Quebec. In the remaining Acts the period specified is ten months. The employer, as a general rule, is free to decide at what time within the specified period the vacation is to be taken, and, in those jurisdictions where a two or three weeks vacation is provided for, whether it is to be taken in one or more periods. The Alberta orders state, however, that the vacation (which must be at least one week after one year and two weeks after two or more years of service) is to be in an unbroken period, and the Saskatchewan Act, as amended in 1960, makes it clear that the personal wishes of the employee are to be taken into account.

The new Saskatchewan provision is that, if an employee, not later than the day on which he becomes entitled to an annual vacation (that is, after a completed year of employment), gives his employer written notice indicating how he prefers to take his vacation, the employer must permit him to take it in the manner indicated. (The Act stipulates that the vacation may be taken in periods of not less than one week each.) This provision does not apply, however, where the Minister approves a general plant shutdown for the purpose of giving all employees a vacation at the same time.

The employee must receive advance notice of the date on which his vacation is to begin in Manitoba (no period specified); Alberta (where the date is not mutually

agreed upon, at least one week's notice); New Brunswick (one week); Nova Scotia (one week); Quebec (15 days); and in Saskatchewan and under the federal Act (not less than two weeks). In the Saskatchewan and federal jurisdictions, as in Alberta, notice is required unless the starting time of the vacation has been agreed upon by employer and employee, or, alternatively, in Saskatchewan, by employer and trade union. In Saskatchewan, written notice is required.

Six of the Acts stipulate that any public holiday (as defined) occurring within the vacation period is not to be counted as part of the annual vacation and that the employee is entitled to an additional day for any such holiday. The federal and Saskatchewan laws stipulate further that the employee is to be paid, over and above his vacation pay, the wages to which he is entitled for the holiday.

In 1958 an amendment to the Saskatchewan Act made provision for a system which, if established by regulation, would enable employees to postpone a week of their annual vacation each year for a maximum of four years. Under such an arrangement, which would permit the accumulation of a vacation of up to seven weeks, some form of guarantee would be required for the payment of vacation pay, such as the deposit of vacation pay in a trust account or the furnishing of a bond. The system would in no case be mandatory, since it would not apply with respect to any employee "unless he and his employer have, with the approval of the Minister, agreed that it shall apply." There is no comparable provision in any of the other Acts.

All the Acts except that of Manitoba provide for the payment of vacation pay on termination of employment but a number of them specify that a worker must have completed a minimum period of service in order to qualify. A provision in the Saskatchewan Act requiring a worker to have been employed for at least 30 days in order to become eligible for vacation pay on termination of employment was removed in 1958.

A minimum period of 30 days is laid down in the federal and Alberta legislation; in Nova Scotia and Ontario, the period specified is three months. In Ontario, however, the three months requirement applies only where a worker voluntarily leaves his job, and if the employment is terminated by the employer the employee must be given vacation credit for any time he has been employed. The British Columbia Act

excludes any person who has not completed five days of actual work in a calendar year.

As a safeguard to an employee's entitlement to an annual vacation or vacation pay, the Saskatchewan Act was amended in 1955 to provide that where notice of termination of employment has been given (a week's written notice is required under the Minimum Wage Act in case of discharge or layoff of an employee with three months service or more), the employer may not permit an employee to take any part of his vacation during the period of notice. Further, payment of vacation pay is not to constitute payment for the period of notice.

In line with the changes in the Saskatchewan Act providing for annual vacations on the basis of accumulated as well as continuous service, an employer may, at the request of an employee, withhold payment of any vacation pay owing to him on termination of employment if the employee's services have been terminated because of shortage of work and it seems likely that he will be re-hired within 182 days. If, however, the employee asks for his vacation pay during the 182-day period, the employer must comply with his request within seven days.

In Quebec, provision for a paid vacation allowance for forestry workers was made in 1958. Any worker who works at least 75 days in a four-month period for the same employer is now entitled on termination of employment to a vacation allowance of 2 per cent of his earnings for the period of his employment.

All the Acts (except that of New Brunswick) exclude certain groups (e.g., farm workers, domestic servants,* members of family undertakings, professional workers), and some (federal, Nova Scotia and Saskatchewan) permit further exemptions by Order in Council.

In some instances the vacation provisions of a collective agreement may supersede the provisions of the Act, if approved by the Minister of Labour. In 1951 the British Columbia Act was declared not to apply to an employer and his employees covered by a collective agreement containing vacation provisions approved by the Minister of Labour, provided that the employees' representatives were authorized to bargain in accordance with the labour relations Act.

Similarly, recognizing that the parties to a collective agreement might wish to continue alternative vacation arrangements,

*Domestic servants are within the scope of the Manitoba and Saskatchewan legislation.

Parliament wrote a provision into the federal Act giving the Minister authority to approve vacation provisions in agreements signed after the coming into force of the Act.

The New Brunswick and Nova Scotia Acts state that, where annual vacation provisions established by any other Act, agreement, contract of service or custom are "as favourable to an employee" as the provisions of the Act, the provisions so established are to prevail.

Several Acts stipulate that vacation pay is to be deemed wages. A provision that an annual vacation or its equivalent in vacation pay was to be deemed wages was inserted in the British Columbia Act in 1956. A similar provision is found in the federal and Saskatchewan Acts, the federal legislation providing that "for all purposes" vacation pay is to be deemed wages. Presumably, under such a provision vacation pay could be included with other wages as a preferred claim in case of bankruptcy.

Penalties for violation are set out in all the Acts, and all except the Act of Manitoba empower the magistrate levying a fine to order payment by the employer of the vacation wages due.

The Quebec provision is unique. A Quebec employer who does not grant an employee his vacation within the 12-month period specified is liable to a fine which is double the vacation pay due to the employee. The fine must be paid to the Minimum Wage Commission, which is authorized to pay half to the employee.

Time-limits for prosecutions are laid down in several Acts. The period within which action must be taken under the Alberta and federal Acts is one year. The same time-limit was fixed in the Saskatchewan Act in 1956 but a 1958 amendment extended the period to three years. In Quebec, a civil action arising out of the Minimum Wage Act or an order under it must be instituted within six months from the date of commission of an alleged offence.

Recent amendments to the Manitoba and Alberta Acts give the employee his own remedy, apart from the Act, for the recovery of vacation moneys due him. A 1956 amendment in Manitoba stated that vacation wages payable under the Act were to be held to be a debt due from the employer to the employee and as such were recoverable by court action.

The Alberta amendment in 1960 permits an employee to take legal action to recover vacation pay while he is still employed or within 12 months after termination of employment, if no prosecution has been

initiated under Section 43 of the Act (usually on the information of the Department of Labour). Action by the employee is limited to amounts of vacation pay accruing over a period of two years.

In Alberta, the provisions in industrial standards schedules dealing with vacations with pay supplement the vacation legislation already described.

In 1950 the Alberta Labour Act was amended to include vacations with pay among the subjects that might be negotiated at a conference between employers and employees in any industry and dealt with in an industrial standards schedule. It provided, however, that any vacation-with-pay plan formulated by such a conference should not be less favourable to employees than the vacation provisions set out in orders of the Board of Industrial Relations.

The vacation provisions in a number of schedules, while limited in application to a particular industry and area of the province,

set a higher standard than that set by the Board, providing for a vacation of two weeks after a year's service. As already noted, one week's vacation after a year's service and two weeks after two years is the general requirement laid down by the Board.

In Quebec, workers governed by a decree under the Collective Agreement Act are subject to the vacation with pay provisions set in the decree. The Department of Labour or Minimum Wage Commission has no jurisdiction with respect to the administration and enforcement of a decree, which is under the supervision of the parity committee concerned. More than 100 decrees are presently in force covering more than 250,000 employees. The Minimum Wage Act (under the authority of which vacation orders are made) does not apply to workers whose working conditions are regulated by decree.

Public Holidays

In Canada, payment for public holidays is regulated to a greater extent by collective agreement than by statute. Only two provinces, Manitoba and Saskatchewan, have provisions of general application dealing with public holidays. Under the Saskatchewan provisions, which go back to 1947, employees are entitled to a specified number of paid holidays as a matter of right, and, if required to work, must be paid at a premium rate for work done on the holiday, in addition to their regular pay. The Manitoba provisions, which were enacted in 1951, prohibit work on specified public holidays unless an overtime rate is paid. Provisions prohibiting work on specified public holidays except with a permit from the Advisory Committee, stipulating that certain holidays must be observed as paid holidays, or requiring the payment of an overtime rate (frequently double time) for work done on specified holidays, are now regular features of the decrees under the Quebec Collective Agreement Act and of industrial standards schedules in some provinces. These provisions, while regulating a considerable portion of industry, particularly in Quebec, cover only certain trades and areas in the province concerned.

Provisions in minimum wage orders in Alberta, Manitoba and Nova Scotia deal with the question of pay for public holidays but only to the extent of prohibiting deductions from the minimum wage for time not worked on a holiday. The Factories Act of British Columbia makes it mandatory for factories, with the exception of certain con-

tinuous industries, to close on specified holidays unless granted special permission for employment, but does not deal with the question of pay for the holidays. There is also legislation in British Columbia and Newfoundland requiring shops to be closed on listed holidays.

In Saskatchewan, the Minimum Wage Board, acting under authority conferred on it by the Legislature in 1947 to require payment for public holidays, requires full-time employees who do not work on any of eight listed public holidays to be paid their regular pay. If they are required to work, they are to be paid for the holiday and, in addition, time and one half their regular rate for all work done (in effect, two and one half times the regular rate), except in hotels, restaurants, hospitals, etc. In such workplaces, employees who work on a holiday are required to receive, in addition to their regular daily wage, wages at their regular rate or equivalent time off at regular rates within four weeks. The eight listed holidays are New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day, Remembrance Day and Christmas Day. When Christmas or New Year's Day falls on Sunday, the requirements set out above apply to the following Monday. They also apply when the Monday following Remembrance Day is declared a holiday.

An amendment made to the Saskatchewan Minimum Wage Act in 1960 was designed to make the public holiday provisions more flexible by permitting an employer and trade

union to make an agreement substituting another working day for any of the eight holidays named in the Act. Such an agreement may be concluded only by a trade union which represents a majority of the employees in an appropriate bargaining unit.

The enactment of the Manitoba provisions in 1951 was, apart from the increasing regulation of public holidays under decrees and industrial standards schedules, the major development in this field during the decade. These provisions, first placed in the Hours and Conditions of Work Act, are now part of the Employment Standards Act.

In Manitoba, in all employment except farming, workers are entitled to time and one half their regular rate if required to work on seven public holidays—New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day and Christmas Day. For workers employed in a continuously operating plant, a seasonal industry, a place of amusement, a gasoline service station, a hospital, a hotel, a restaurant, or in domestic service, compensatory

time off may be substituted, in accordance with custom or agreement. Domestic servants may be granted two half-days off in lieu of a holiday.

An additional holiday was provided for in 1951 with the passing of the Remembrance Day Act, under which November 11 is set apart as a day of remembrance, with a general prohibition upon work, except in emergencies. Except in farming and certain essential services, work may not be performed except by permit from the Minister of Labour. Overtime provisions are not applicable on Remembrance Day. Any employee other than a watchman, furnace tender or janitor who is required to work must be granted compensatory time off without loss of pay within 30 days.

The list of essential services exempted is quite lengthy and includes hospitals, restaurants, drug stores, dairies, bakeries, transportation, and the work of janitors, watchmen, policemen, firemen and domestic servants. In 1953, newspapers, which had been only partially exempted previously, were entirely excluded.

Weekly Rest

Prior to 1950, weekly rest legislation had been enacted in seven provinces—Alberta, British Columbia, Manitoba, Nova Scotia, Ontario, Quebec and Saskatchewan. The provisions, however, varied widely in scope. In the period under review, weekly rest legislation was introduced in New Brunswick, the coverage of the Manitoba and Saskatchewan Acts was extended, and the weekly rest provisions in the Alberta Labour Act were clarified.

The New Brunswick Weekly Rest Period Act, passed in 1954, requires employers to give their employees a weekly rest of at least 24 consecutive hours, to be taken, if possible, on Sunday. Where a weekly rest is impracticable, the Minister may permit rest periods to accumulate and to be taken later, either part at a time or all together. The only groups excluded from the Act are farm workers, employees required to cope with an emergency and part-time workers who are not usually employed more than five hours in a day. Other groups may be exempted by the Lieutenant-Governor in Council.

In 1950, the Saskatchewan One Day's Rest in Seven Act, which had applied only in the cities and by administrative order had been extended to 21 listed towns, was re-enacted to make it applicable to the employees of any employer covered by an order of the Minimum Wage Board. Since minimum wage orders at that time covered

all centres with a population of 300 or more, the One Day's Rest in Seven Act was made applicable in these areas. In 1957, the weekly rest requirement was extended to all parts of the province by Order in Council, and in 1960 the Act itself was amended to provide for province-wide coverage. Provision was also made for the Lieutenant-Governor in Council to exclude any specified class of employees, subject to such conditions as may be prescribed.

In 1951, the Manitoba One Day's Rest in Seven Act was repealed and its provisions incorporated in a new statute, the Hours and Conditions of Work Act, with some extension of coverage, both geographically and industrially. Instead of being limited to the cities, the weekly rest provisions now applied to the chief industrial areas in the province. In 1957, the Hours and Conditions of Work Act and its weekly rest provisions were in turn incorporated in the Employment Standards Act with no change in coverage.

The Alberta legislation was re-worded in 1957 to require that an employee be given a day off "immediately following each period of not more than six consecutive days of work" unless the Board of Industrial Relations orders that hours of rest be allowed in two periods or that a longer period than 24 hours be granted. Under the previous wording requiring an employer to grant an employee a day's rest "in each

period of seven consecutive days," it was possible for an employee to work 12 days without a day off.

The Alberta Labour Act permits the Board to make special provision for days of rest in continuous industries and authorizes the granting in such operations of a consecutive rest period every four weeks or in relation to some other work period fixed by the Board. Under this authority the Board has made special provision for accumulated days of rest in the highway construction, geophysical exploration, oil well drilling, oil well service and pipeline

construction industries, and for cooks, night watchmen, etc., in lumber camps.

In British Columbia, weekly rest requirements are laid down in minimum wage orders by the Board of Industrial Relations, acting under its authority to regulate "conditions of labour and employment." A change in the British Columbia orders during the decade is the now almost universal requirement that employees must be given a 32-hour weekly rest, unless a different arrangement is approved by the Board. This provision was either inserted in a number of orders for the first time or substituted for a 24-hour rest requirement.

Changes in General Assistance Legislation from November 1959 to October 1960

Terms of Unemployment Assistance Act 1956 now effective in all provinces and territories. Several provinces amend general assistance legislation, mothers' allowances legislation, and legislation affecting living accommodation for aged

The terms of the Unemployment Assistance Act, 1956, became effective in all provinces and territories with the signing of an agreement with the Yukon Territory on November 1, 1959, to be retroactive to January 1, 1959. Under this Act the federal Government pays to the provinces 50 per cent of the cost of financial assistance to the unemployed, irrespective of their employability. Reimbursement is made to the province within the existing provincial framework of general assistance.

Several provinces made major changes in their general assistance legislation in 1960. A new Act was passed in New Brunswick and major amendments were introduced in Quebec and Nova Scotia, and, although not yet proclaimed, in Alberta. Several changes were made in the Newfoundland legislation and minor amendments in Saskatchewan and Ontario. The greater part of the Social Allowances Act of Manitoba, passed in 1959, was proclaimed effective as of February 1, 1960.

New Brunswick

The Social Assistance Act passed by the New Brunswick Legislature completely reorganized the administration of assistance to needy persons. The statute repealed the Mothers' Allowances Act, The Legal Settlement Act, the Support of the Poor Act and The Municipal Homes Act. Much of the content of these Acts was, however, consolidated and included in the Social Assistance Act.

Part I of the Act, effective April 1, 1960, provides for the payment of provincial allowances to needy mothers (discussed below in "Changes in Mothers' Allowances") Part II, effective July 1, 1960, enables the province for the first time to share with the municipalities in a general assistance program. This Part also sets out the duties and responsibilities of the municipalities and of the province in the provision of aid to needy persons, including those in need of care in municipal homes.

Regulations under the Act set out administrative and food standards to be observed by the municipalities as a condition of provincial aid. Under the formula of aid the province reimburses each municipality to the extent of one dollar per capita of the population plus 70 per cent of expenditures made in excess of that amount, provided the minimum standards of food allowances are met. The province also pays 50 per cent of the cost of administration of aid to persons in need, on condition that municipal standards of administration, including the qualifications of the Director of the department or agency as specified in the Regulations, are observed.

Legal settlement is the device used to establish the financial responsibility of a municipality, and this is reduced from three years to one year under the new Act.

Quebec

In Quebec, the program of general assistance, was revised through an amendment to the Quebec Public Charities Act, effective January 1, 1960, with Regulations.

The amendment gives greater administrative and financial responsibility to the province and, depending on the program, reduces or eliminates municipal responsibility; widens coverage to include additional classes of persons; includes welfare organizations such as social agencies in the definition of public charitable institutions; and eliminates municipal domicile in those categories for which the municipality has no financial responsibility. The amendment also transfers houses of refuge from the jurisdiction of the Minister of Health to that of the Minister of Social Welfare.

The Regulations set out categories of persons eligible for assistance, prescribe means tests, specify rates of assistance and the distribution of costs of maintenance of children in care of social agencies or institutions.

The province does not require a municipal contribution toward the cost of aid to employable and unemployable persons in their own homes. Aid to persons unfit for work for at least 12 months is administered and paid by the Quebec Social Allowances Commission of the Department of Social Welfare. Aid to employable persons continues to be administered by municipal welfare departments or by recognized social agencies, but with full reimbursement by the province. All applications, however, must be forwarded to the Social Assistance Services, Department of Social Welfare, for the purpose of enquiry and approval or for modification of the decision reached by the agency concerned.

Supplementary assistance may be paid by the province to recipients of government allowances and of old age security and also to special cases, that is, to persons who do not meet the conditions of eligibility but are in need, and to whom payments are considered within the spirit of the law. "Urgent assistance" up to \$100 may be given by a welfare organization with full reimbursement by the province to persons not otherwise eligible where aid is required under some special circumstances, such as to prevent eviction.

Municipalities in Quebec are no longer required to contribute to the cost of aid given to persons in homes for special care or in private nursing homes. The costs are now shared on a basis of two thirds by the province and one third by the institution. Substantial increases in the maximum per diem rates payable by the province to the institution were authorized by Order in Council No. 474 of March 30, 1960. In the case of other persons, including children receiving institutional care, where the

cost is shared by the province, the municipality and the institution, the municipal contribution has been reduced from 24 per cent to 12 per cent for cities and towns and from 15 per cent to 8 per cent for municipalities governed by the Municipal Code.

Domicile is a factor in cases where the municipality has some financial responsibility. The amendment gives the right of appeal to municipalities in matters of domicile, eliminates the continuity of domicile, and enables a married woman separated from or abandoned by her husband to establish her own domicile as if she were a widow. Domicile is, as formerly, the place of last residence for 12 consecutive months, but is now lost after 12 consecutive months absence from the municipality.

Provision is made for the confidentiality of municipal documents. No list or identifying information about recipients of aid may be published or disclosed to any person other than those concerned with granting assistance.

Nova Scotia

In Nova Scotia an amendment to the Social Assistance Act, 1958, repealed The Mothers' Allowances Act and incorporated aid to needy mothers in Part I, Provincial Assistance, to become effective April 1, 1960 (see section on Mothers' Allowances below.)

The amendment also provided, on a date to be fixed by the Governor in Council, for the payment of provincial allowances to disabled persons between the ages of 18 and 65 who are not eligible to receive an allowance under The Disabled Person's Allowances Act or the Blind Persons Allowances Act. This section was subsequently proclaimed to be in force from July 1, 1960.

Alberta

Alberta, by an amendment to The Public Welfare Act, R.S.A. 1955, which is yet to be proclaimed, added a new part to the Act: Part III, Social Allowances, which would provide for provincial social allowances to needy mothers with dependent children, now aided under the Mothers Allowances Act, and to persons, who, because of their age or by reason of physical or mental ill health or incapacity that is likely to last more than ninety days, cannot earn a sufficient income to pay for basic necessities. Persons who are receiving old age security, old age assistance, blind or disabled persons allowances may also be eligible for an allowance if need is proven.

The amendment also made an addition to Part I of the Act under which a municipality would be required to pay to the Minister of Public Welfare any moneys recovered from an indigent person or his estate in excess of the amount contributed by the municipality.

Newfoundland

In Newfoundland an amendment to the Social Assistance Act repealed and replaced Section 20 of the Act, which dealt with the collection as a debt to the Crown of any assistance obtained by misrepresentation or fraud. The new section tightened this provision by adding assistance obtained by non-disclosure of facts or any other cause.

Regulations under the Act gazetted March 29, 1960 make it clear that, where a husband and wife or either of them is under the age of 21, social assistance payable by reason of mental or physical incapacity or other exigency is to be at the usual rate for adults.

Under Regulations gazetted September 28, 1960, effective October 1, 1960, changes were made concerning allowable income. For persons requiring assistance for reasons other than unemployment, the allowable annual income was raised from \$360 to \$440 for a family of adults and from \$440 to \$800 for a family of adults and children. The means test for persons whose only claim to social assistance is unemployment was adjusted to include income for the 60 days preceding application as well as the preceding 30 days, as formerly specified. Income for one adult may not exceed \$35 for the preceding 30 days, or \$100 for the preceding 60 days. For each additional person in the family, amounts are increased by \$10 for the 30-day period and by \$20 for the preceding 60 days. There was also an extension of deductions that may be made in calculating income.

These Regulations also provide that from June 1, 1960, the boarding allowance for an ambulatory person be raised from \$60 to \$75 a month, and for a person who is bedridden, from \$75 to \$100 a month.

Additional Regulations gazetted October 25, 1960, make provision for "centralization assistance" to the shareholders of a community, when all the inhabitants wish centralization, that is, to abandon a community voluntarily and move to new communities under the guidance and with the assistance of the Department of Public Welfare. The resolution to move the community must be passed unanimously at a public meeting and a committee of three elected by the householders to conduct negotiations with the Department through

the local welfare officer. The Social Assistance Board may grant each householder who applies for such assistance an amount up to \$600. The applicant may claim assistance to pay for building materials, transportation of persons and property, hired labour, and the purchase of land upon which to erect a dwelling house in his chosen community.

Saskatchewan

Saskatchewan amended The Social Aid Act to clarify the policy and procedures to be followed in the movement of indigent persons from one municipality to another; and to authorize municipalities to pay members of appeal committees up to \$4 a day in addition to any other remuneration that they receive while attending meetings, and 10 cents a mile in travelling to and from meetings.

Regulations gazetted December 18, 1959, amending previous Regulations, permit the Director to approve room and board for needy persons in excess of the maximum if extreme hardship would otherwise result, and to give an additional allowance of up to \$10 a month for comforts. A comforts allowance of up to \$10 for persons in nursing homes was also allowed. The amendment permits a clothing replacement allowance in the case of an employable person only after he has been receiving aid for three months.

Ontario

Ontario amended The General Welfare Assistance Act to replace the term "supplementary allowance" with "supplementary aid" to correspond with the terminology used in the agreement between Ontario and the federal Government under The Unemployment Assistance Act.

That part of the 1959 amendment providing for the extension of terms of the General Welfare Assistance Act to Indian bands was proclaimed effective January 1, 1960. Twenty-two Indian bands have been approved for purposes of the Act. These are listed in O. Reg. 51/60, gazetted March 12, 1960, O. Reg. 100/60, gazetted May 7, 1960, and O. Reg. 222/60 gazetted August 20, 1960.

Regulations gazetted November 28, 1959 (O. Reg. 267/59) revoke former provisions and provide a penalty for late returns by municipal welfare administrators of statements of account covering assistance granted during the month. If the required statement is not submitted to the Minister within three months next following the first day of the month to which it relates, the payment by

the province to the municipality based on the statement is reduced from 80 per cent to 30 per cent.

These Regulations also revoke Regulation 26 of the Regulations of June 1957, dealing with premiums for medical care. The premium for medical care payable on behalf of each person granted assistance during the month, which must be shown on the monthly statement of account, has been raised from \$1.05 to \$1.25. As formerly, the province pays the full amount to the Ontario Medical Association, and, as medical care premiums are shareable on the same basis as other assistance payments, 20 per cent of the amount shown for each monthly statement is recovered by the province from the municipality.*

Manitoba

The Social Allowances Act, 1959, of Manitoba, with the exception of the sections relating to mothers with dependent children, Indians and appeal, was proclaimed effective February 1, 1960. (For changes made by the Act, see L.G., Nov. 1959, p. 1157).

Changes in Mothers' Allowances Legislation

Five provinces have made some change in their legislation affecting mothers with dependent children.

New Brunswick and Nova Scotia both repealed their Mother's Allowances Acts and since April 1, 1960 have provided allowances to needy mothers under Part I of their respective Social Assistance Acts. These allowances are administered and financed provincially as under the former Acts. Eligibility requirements have been broadened and, in New Brunswick, a change in rates made. In Nova Scotia length of residence is no longer a factor; the only requirement now is that the applicant be living in the province. The new Act does not exclude Indians from assistance under the Act.

* NOTE—As this article was going to press, Regulations under The General Welfare Assistance Act, 1958 (O. Reg. 293/60) were received, published in the Ontario Gazette, November 12, 1960. These revoke former Regulations, with the exception of those concerning Indian bands. In brief, the new Regulations define the categories of persons covered, and set maximum rates of allowances which the province will share with the municipality. Rates of assistance are set out in detail together with a schedule giving the amount payable for food, clothing and household sundries for heads of families with dependents. A specified amount to include food, clothing and household sundries, termed the "pre-added budget," replaces the former separate amounts for each of these items, and includes as well the milk allowance, formerly expressed in terms of quantity.

In New Brunswick several changes were made: the definition of "foster-mother" has been expanded to include a sister-in-law of the child; the qualifying time for a mother deserted by her husband has been reduced from two years to one; the maximum monthly allowance payable to a mother or foster mother has been raised from \$80 to \$90; and residence requirements have been simplified in that the former provisions applicable to the child have been eliminated, and it is now required only that the mother be resident for at least one year immediately prior to her application.

Alberta, at the spring session of the Legislature, passed an Act to amend The Public Welfare Act, which would, on proclamation, make allowances to needy mothers payable under Part III of the Act. Administration and payment of allowances will remain a provincial responsibility.

When Manitoba's Social Allowances Act, 1959 is fully proclaimed, several changes will be made in allowances to needy mothers (L.G., Nov. 1959, p. 1158). However, the proclamation of most of the Act, effective February 1, 1960, had the effect of eliminating the citizenship requirement for an allowance payable on behalf of a dependent child otherwise eligible and of raising the age of children who may benefit to 16 years. Mothers' allowances, still payable under The Child Welfare Act in Manitoba, have since February 1, 1960 been administered under Regulations (Manitoba Regulation 7/60) which apply also to provincial social allowances payable to other categories under The Social Allowances Act. The rates for basic necessities remain unchanged.

In Newfoundland, Regulations under The Social Assistance Act, gazetted February 2, 1960, were amended to provide that, in families receiving a cash allowance, unmarried children over 16 years of age who are not attending school may qualify for assistance in kind in their own right. Regulations gazetted March 29, 1960 make it clear that a mother, father or foster mother under 21 years of age who qualifies for an allowance for a dependent child is entitled to a food and clothing allowance at the same rate as persons over 21 years of age.

Increases in food and clothing rates for children under 16 years of age and in the amount of allowable income were made under Regulations gazetted September 28, 1960. Food rates for children, except those receiving aid in kind, have been raised from \$8 to \$10 a month and the clothing rate has been raised to a flat \$5 a month from \$2 for each child under 6 years of age

and \$3 for each child between 6 and 16 years of age. The allowable income for a family of adults and children has been raised from \$440 to \$800 a year.

Living Accommodation for the Aged

In recent years an increasing number of low-rental housing projects for the elderly and some hostel accommodation have been partially financed through long-term low-interest loans made under section 16 of the National Housing Act. Such loans may cover up to 90 per cent of the cost of a project and may be amortized over a period of up to 50 years. The interest rate on loans made under section 16 was reduced from $5\frac{7}{8}$ per cent to $5\frac{1}{4}$ per cent per annum by Order in Council P.C. 1960—13/9, gazetted on October 12, 1960. Other changes are forecast in the Speech from the Throne.

During their 1960 sessions, the legislatures of Newfoundland, Prince Edward Island, New Brunswick, Quebec, Ontario, and British Columbia passed legislation affecting living accommodation for the aged; new or amended regulations came into effect in New Brunswick, Ontario, Manitoba, Saskatchewan, and Alberta.

Newfoundland

The province of Newfoundland is authorized by the Senior Citizens (Housing) Act, 1960 to guarantee the repayment of loans made under section 16 of the National Housing Act, when they are made to limited-dividend companies constructing hostels or housing for the elderly. Such a guarantee is required by Central Mortgage and Housing Corporation when it makes loans for hostel accommodation. Payment of the cost of operating hostels or housing projects may also be guaranteed by the province under the new Act.

Prince Edward Island

In Prince Edward Island, through the Provincial Homes for the Aged Act, 1960, the institution formerly known as the Provincial Infirmary has been designated as the Home for the Elderly, and the Provincial Infirmary Act under which it formerly operated has been repealed. The home is operated by the Department of Welfare and Labour. When the transition to a home for the aged is completed, care will no longer be provided for the mentally ill. The home will, however, continue to offer some nursing care.

New Brunswick

Municipal homes in New Brunswick, which were formerly governed by the Municipal Homes Act, are now operated under the Social Assistance Act, 1960. The earlier Act has been repealed.

The municipal homes care for needy persons of all ages, except those who are responsible for and have children in their care. Under the new statute the province contributes for the first time to the maintenance of needy persons in municipal homes. Each municipality is reimbursed to the extent of \$1 per capita of its population, plus 70 per cent of its expenditures for social assistance in excess of this amount, including payments made for maintenance in municipal homes.

The Act also authorizes the inspection of municipal homes by boards of commissioners appointed by the municipalities responsible for the homes and sets out the duties of the commissioners.

Regulations under the Social Assistance Act require municipal homes to meet standards outlined in Regulations issued in 1958 under the Health Act. The latter provide for the licensing and inspection of private places offering accommodation for more than two aged and infirm persons, and standards in them govern, among other things, accommodation, fire protection, personnel, medical care, nutrition and record keeping. Changes made in these Regulations under the Health Act (Order in Council 60-249, gazetted March 30, 1960) tightened fire prevention measures for licensed homes.

Quebec

Through an amendment to the Quebec Public Charities Act and by new Regulations issued under it, the province has increased its contributions toward the cost of maintaining needy persons in public charitable institutions, including homes for the aged. The Province now pays two thirds of maintenance costs, the remaining one third being paid by the institution providing care.

Prior to the amendment, cities and towns were contributing 24 per cent of the cost of maintaining their residents in homes for the aged, and rural municipalities 15 per cent of such costs. Under Order in Council 474-60, which became effective on April 1, the provincial contribution may not exceed \$2.20 per day for persons able to take care of themselves and \$3 per day for those requiring occasional supervision. Rates for totally disabled persons may be up to \$6 per day.

Ontario

Residents of municipal homes who have incomes or assets exceeding amounts to be set by regulation are required through an amendment to the Ontario Homes for the Aged Act to pay for their maintenance in the homes. The Act did not formerly include such a requirement.

Several changes had been made in regulations under the Homes for the Aged Act and the Charitable Institutions Act. Through O. R. 242-59, gazetted October 24, 1959, maximum limits have been set on the amounts that may be included in maintenance costs for medical services provided to residents of a municipal home. These are \$2 per bed each month if the home has a bed care unit and \$1.75 per bed if it does not have such a unit. Similar maximum limits have been set for charitable institutions by O.R. 241-59, gazetted on the same date. In both cases provincial grants are, of course, based on maintenance costs.

Provincial maintenance grants to charitable institutions equal 75 per cent of the amount paid by the institutions for the maintenance of their needy residents. The grant is based on "the average daily cost of maintenance," which is the average daily cost of maintaining a resident during the preceding calendar year. The maximum cost on which a grant may be based has been increased from \$3.30 to \$3.40 per day by O.R. 241-59, mentioned above.

A provincial grant is no longer paid on behalf of any resident of a charitable institution who is not contributing to his own support, if the provincial supervisor who inspects charitable institutions decides that the resident is able to contribute. Also, if any resident is able to contribute more than he is providing, the additional amount that he could pay is considered as paid in computing a grant. These provisions are contained in O.R. 16-60 gazetted January 23, 1960.

Manitoba

New regulations have been issued under the Manitoba Elderly Persons Housing Act, 1959. It is under this Act that the province makes capital grants and guarantees the repayment of loans to municipalities and voluntary organizations constructing housing projects or homes for the aged.

Under the Regulations (Manitoba Regulation 96-59) gazetted January 9, 1960, applications for capital grants must be accompanied by a capital and operating budget for the proposed project and a scale plan showing rooms for the accommodation of residents, with the number of beds in each room. A proposed capital and operating budget is also required with each application for a provincial guarantee. The value of the land and buildings for which the

loan that is to be guaranteed has been made, the name of the lender, and the interest rate on and method of repayment of the loan are also required. Any organization applying for a guarantee must be incorporated and a loan must be secured by a mortgage on the property for which it is granted. The sponsor of any project for which a guarantee is granted must also submit an operating budget each year until the loan is repaid.

Saskatchewan

The provincial maintenance subsidy paid annually to hostels or homes for the aged in Saskatchewan has been increased from \$40 to \$60 per bed by Order in Council 720-60 gazetted May 6, 1960. To be eligible for this grant, homes must be licensed by the Department of Social Welfare and Rehabilitation. The annual subsidy paid for low-rental housing remains at \$40 for each self-contained unit.

Alberta

Order in Council 602,60, gazetted May 14, 1960, sets the rates to be charged in municipal homes for the aged in Alberta. These rates will apply in the 50 municipally operated homes being built throughout the province at the expense of the provincial Government (L.G., Nov. 1959, p. 1160). Under the Regulations, residents maintained in homes will be charged \$60 per month if they live in double bedrooms and \$65 a month for single rooms.

However, persons whose only income is derived from Old Age Security plus the Alberta Supplementary Allowance will not be charged more than \$60 per month under any circumstances. Those who have not established residence in Alberta for welfare purposes may be charged \$65 and \$70 for residence in double and single rooms respectively.

British Columbia

The British Columbia Municipal Act has been amended to require municipalities to grant tax exemptions to low-rental housing projects and homes for the aged built by non-profit organizations with the aid of provincial capital grants under the Elderly Citizens Housing Aid Act. The exemption covers both land and buildings but does not extend to local improvement charges.

12th Meeting, Apprenticeship Training Advisory Committee

Committee stresses importance of immediately establishing more apprenticeship programs and training facilities in Canada to meet future demands for skilled tradesmen. Not even enough apprentices being trained to meet current wastage

In the eight Canadian provinces where the Federal-Provincial Apprenticeship Agreement is active there were 19,162 apprentices registered on September 30, an increase of 967 from the previous year, the Apprenticeship Training Advisory Committee was advised at its 12th meeting, held in Ottawa in November.

The Committee stressed the importance of immediately establishing more apprenticeship programs and training facilities in Canada to meet future demands for skilled tradesmen. The Committee was told that there is evidence that not enough apprentices are being trained currently to meet normal losses in industry occasioned through retirements, upgrading and other similar factors, let alone provide for future needs.

Committee members believed that some method must be devised to bring forcibly to the attention of employers that their biggest asset is their skilled manpower; and to convince young persons that apprenticeship offers one of the best ways of entering upon a successful career in industry.

Deputy Minister of Labour A. H. Brown told the Committee that there is a growing recognition of the importance and urgency of training as a prerequisite to employment. Training is one of the main components in bringing about the effective utilization of the labour force, he said.

Mr. Brown told the Committee that at two recent conferences he had attended—the Dominion-Provincial Conference and the Prime Minister's Conference on Unemployment—he was pleased to note that the importance of education was greatly stressed and to hear delegates support the type of training that is being provided through the Dominion-Provincial Apprenticeship Training Plans.

It was important for persons concerned with training to improve the quality of their programs wherever possible, he said, and for apprenticeship to be studied continuously to see if it is meeting present-day industrial requirements.

Discussing the interprovincial examinations that have been developed and used in a number of trades, the Vocational Training Branch reported that by the end of June, 1,336 apprentices across Canada had written the motor vehicle repair examination; 1,053 of them had been successful. More than

600 interprovincial seals had been issued and affixed to the certificates of the successful apprentices.

In the electrical construction trade, 266 apprentices wrote the examinations and 147 were successful. There were 39 seals issued.

Revision and reassessment of the interprovincial plumbing examination, which has been in use for almost a year, is taking place in preparation for official use in 1961. Examinations for the carpentry and sheet-metal trades are being prepared in Nova Scotia and Manitoba respectively and should be ready for a trial period soon.

Since the last meeting of the Committee, trade analyses have been completed in the steamfitting, radio and television servicing, cooking and toolmaking trades, bringing the total of trades analysed to 16. Work is progressing on the analysis of the refrigeration and air conditioning trade and it should be completed by the end of the year.

The analyses list the body of information that a qualified journeyman in each trade should know, and may be used as the basis for a course of study, and for on-the-job training. They are designed to bring about standardization of the trades across Canada so that the level of proficiency in a trade will be the same in all parts of the country.

The Committee unanimously approved a resolution recommending that the Vocational Training Advisory Council consider steps to raise the standard of vocational industrial instructors—those who teach apprentices related classroom work. The recommendations:

—That an instructor be required to hold a secondary school graduation diploma; be a qualified journeyman in his trade; must acquire, after qualifying as a journeyman, a minimum of three years practical trade experience in his trade; must have a minimum of one full school year of professional training or equivalent as a trade instructor; and must periodically return to his trade as a journeyman in a recognized firm for a minimum of one summer every three years. It was recommended that the departments of education in Canada be requested to consider this period in industry as a prerequisite for purposes of classification of the instructor.

The Committee agreed that one of the most serious problems still facing the

apprenticeship program was school drop-outs. Canadian youth, it was reported, in many cases lack the necessary background in science, mathematics and languages to take advantage of training opportunities.

It was suggested that there should perhaps be more vocational education at the secondary school level to create a greater interest among those young persons who are thinking of leaving school.

31st Meeting, Vocational Training Advisory Council

Council urges calling of national conference to establish or identify levels of technician training, appoints committee to study technician training problem
Every province planning to undertake or expand training of unemployed workers

The Department of Labour was urged last month at the 31st meeting of the Vocational Training Advisory Council to call a national conference soon of all organizations that could take steps to establish or identify levels of certification of technicians on which training could be based, and perhaps to agree on common terminology to describe technician training.

A committee of Council was appointed to study the technician training problem and bring back recommendations to the next Council meeting in April 1961.

During the meeting it was disclosed that plans are being made in every province to undertake or expand training of unemployed workers. Council expressed the opinion that although increased training was not the complete answer to the unemployment problem, it might go a long way toward alleviating it.

Training for unemployed workers is provided under the terms of Schedule M, under the Federal-Provincial Training Agreements. Recently the federal Government agreed to pay 75 per cent of the costs of training provided the number of training days per annum exceeds 7 per cent of the adult population of the province concerned. (During this fall and winter period ending March 31, this percentage need only be 3½ per cent).

Addressing the meeting, Hon. Michael Starr, Minister of Labour, said that a number of provinces had indicated that they plan to double their training programs. One province, he announced, expected to increase its program by 400 per cent.

Mr. Starr referred to the school drop-out problem, noting that hundreds of boys and girls were leaving school without sufficient education or training to meet the requirements of industry. Coupled with this were such factors as the movement during the past 10 years of some 400,000 persons from farm occupations to employment in industry.

A program to encourage children to stay in school, and a broad program of training would help fit them better for gainful employment, he said.

Registrations were increasing at National Employment Service offices, the Minister said, while at the same time large numbers of unfilled job vacancies existed because persons with required skills were not available to fill them.

A. H. Brown, Deputy Minister of Labour, told the Council that Canada is faced with keen competition from the industries of other countries, both in foreign trade and home markets, and as a result the necessity for a more highly-skilled labour force is paramount if Canada is going to maintain its place and improve its economy.

Figures on United States union dues, initiation fees, transfer fees and work transfer fees are contained in the first annual report under the Labour-Management Reporting and Disclosure Act of 1959, released recently by the U.S. Department of Labor.

The 88-page report contains a nine-month summary by Commissioner John C. Holcombe of the Bureau of Labor-Management Reports, the administrative agency that handles the law.

Two sections of the report summarize litigation involving one or more provisions of the Act. The Bureau itself has not yet undertaken "any penetrating analysis" of the new material. It advises that it will welcome outside participation by research organizations to obtain data that are now available on an important segment of the national social structure.

The report shows that out of 39,650 local unions that filed under the Act, about half—20,161—have dues ranging from \$3 to \$4.99 per month, and 8,252 have dues ranging from \$5 to \$9.99 per month.

39th Annual Convention of the Canadian and Catholic Confederation of Labour

Delegates approve change of name to Confederation of National Trade Unions and modification of statement of principles; all confessional distinctions thus removed. Other subject attracting most attention was problem of unemployment

(Translation)

The 39th annual convention of the Canadian and Catholic Confederation of Labour, held at Montreal from September 25 to October 1, changed the organization's name and modified its statement of principles to give it a non-confessional character.

The new name is "Confederation of National Trade Unions."

The CCCL has thus abandoned the title under which it has been known for 39 years in favour of a designation used by many of its affiliates for a long time.

The delegates resolved, by changing the name of their organization, to put an end to all confessional distinctions. A minority move to replace the word "Catholic" by the description "Christian" did not secure the votes of the majority of the assembly of about 500 delegates.

At the same time the Congress adopted a statement of principles containing no allusion to the social doctrine of the Church, but merely a reference to "Christian principles," which are to guide the Confederation in its activities.

The change of name and the amended declaration of principles merely give official blessing to a state of affairs that has existed for a number of years. The delegates added emphasis to the move by electing an English-speaking vice-president for the first time in the history of the Confederation. He is S. Ted Payne, of Montreal, one of the vice-presidents of the National Federation of Metalworkers.

Besides the question of the change of name, the problem to which the delegates devoted the most attention was that of unemployment. The National President, Roger Mathieu, devoted his general review to a thorough examination of the economic situation in Canada, and many delegates spoke during the Congress in denunciation of the present state of affairs.

Agreement was reached to ask not only for economic planning by an advisory council, but also for economic planning at the national level.

Problems of internal organization also occupied much of the delegates' time; two days of discussion in camera were devoted to the study of financial questions. It was therefore decided to hold a special con-

gress in the fall of 1961—regular congresses meet only biennially—during which closer study would be given to problems of the Confederation's structure.

Discussion of the subject of labour unity was very brief; the delegates voted without any notable enthusiasm for the continuation of negotiations with the Canadian Labour Congress.

The elections produced no important change, Messrs. Roger Mathieu and Jean Marchand being re-elected President and Secretary-General, respectively.

The International Federation of Christian Trade Unions, the world organization to which the Confederation is affiliated, was represented by its Secretary, Auguste Vanistendael.

The official opening of the 39th Congress took place on Sunday afternoon, in the presence of an impressive number of distinguished guests, representing the Government, the clergy, the universities, and fraternal associations.

Hon. René Hamel, Provincial Minister of Labour, represented the Government of Quebec; the federal Department of Labour was represented by the Parliamentary Secretary to the Minister of Labour, Richard D. Thrasher, M.P.

Change of Name

The Canadian and Catholic Confederation of Labour (CCCL) will henceforth be known as the Confederation of National Trade Unions (CNTU). In French the name becomes *Confédération des Syndicats nationaux (CSN)*.

The convention decided to drop the religious label by which the labour organization had been identified since its founding in Hull in 1921.

The necessity of a change of name was not questioned; all or nearly all the delegates were in favour of eliminating the word "Catholic" from the title. The discussion centred around the use of the word "Christian."

The choice facing the delegates was between *Confédération des Syndicats nationaux* (Confederation of National Trade Unions) and *Confédération des Syndicats chrétiens* (Confederation of Christian Trade Unions).

Of the 430 delegates who took part in the secret balloting, 72 per cent voted in favour of the name containing no indication of religious affiliation. Thus ended a debate begun in 1950.

One of the important considerations in that decision was the necessity, which the Confederation recognized, of extending its ramifications not only to the industrial centres of the province, but outside Quebec as well.

Jean Paul Lefebvre, Assistant Director of Education, emphasized that the Confederation must look to the future rather than to its past. "A change of name is a necessity in a changing environment," he said. "The CCCL must adjust itself to those changes."

The Director of Public Relations, Gérard Pelletier, reminded the delegates that as the ranks of the CCCL were open to all Canadian workers, it was essential to change its name. "If we want to indicate outwardly the changes that have taken place inside our movement," he said, "we must change its label."

In his capacity of public relations officer he pleaded with the convention to make a clear-cut decision, "a decision which leaves no room for misunderstanding."

New Statement of Principles

To go with its new name the Confederation has also adopted a new statement of principles (*see* page 1266) that sets forth the basic principles of the Church's social doctrine without specifically explaining their origin.

The existing statement, which was adopted at the 1951 convention, explained among other things that the Confederation "bases its principles and action on the social doctrine of the Church, which it recognizes as being the only doctrine capable of ensuring social order."

The new statement says that the Confederation "in its thinking adheres to Christian principles on which it bases its action."

Commenting on this decision, the National Secretary said that the majority of workers in Canada are opposed, not to the principles on which the Confederation is based, but rather to the label under which those principles are presented.

"With this difficulty removed," he said, "we believe that the CCCL would be acceptable to the majority of the Canadian working class, which would greatly facilitate the acquisition of an economic basis that is better adapted to the pursuit of its aims."

It was decided to maintain the present status of the chaplains. The report of the National Secretary explained:

It does not seem that the presence of the chaplain, especially at the level of the CCCL, is likely to create problems. It is generally accepted that a group should have advisers.

The only difficulties we foresee will be encountered at the level of the local union, where there will be strong minorities that are hostile to Catholicism. Under those circumstances, it will be left to the diocesan bishop to determine the advisability of having a chaplain present at the general meetings.

The report concluded that the presence of chaplains in the unions is not an obstacle to the growth of the movement.

Special Convention in 1961

A special convention will be held in the fall of 1961 at which the delegates will study specifically a new constitution, a revision of the structure and responsibilities of the federations and central councils, and the allocation of the fees among the various levels. An executive committee will also have to be elected.

The Confederation decided at its 1959 convention that after 1960 the conventions would only be held every two years. The next regular convention will therefore be held in 1962. The special convention will provide an opportunity to clear up some urgent reforms concerning internal administration.

It is expected that the present system of federations will be replaced by a grouping of the unions according to the sectors of economic activity. Consideration is also being given to reducing the number of affiliated bodies.

Unemployment

The Congress declared itself in favour of various measures to fight unemployment, demanding, among other things, national economic planning, anti-dumping legislation, and a large-scale "Buy-Canadian campaign."

The delegates adopted a resolution proposed by Michel Chartrand of the Montreal Typographers' Union demanding "management of the Canadian economy to meet human needs."

"We want the Canadian economy to be managed directly by the Government," declared Mr. Chartrand, "for real economic planning implies controlled investment."

He was supported by the former president of the Confederation, Gérard Picard, who called economic planning the answer to unemployment.

The committee which studied the report of President Mathieu on the unemployment problem stressed the importance of "putting

Statement of Principles, Confederation of National Trade Unions

(Translation)

Character and Aims of the CNTU

The Confederation of National Trade Unions is a free and democratic national organization of trade unions. In its thinking, it adheres to Christian principles, on which it bases its action.

Its objective is to promote the occupational, economic, social, and moral interests of Canadian workers. In its own particular sphere and in co-operation with other institutions it seeks to bring about for the workers economic and social conditions that will enable them to live as human beings and Christians. The Confederation wishes to contribute to the establishment of orderly relations between employer and employees according to the principles of truth, justice, and charity.

It believes in the primacy of spiritual forces in the establishment of the social order. This belief is founded on its concept of the human being.

Human Beings

The CNTU believes in the fundamental dignity and equality of all men.

The dignity of the human being rests on the fact that man, being created in the image of God, is endowed with intelligence and free will and has an eternal and supernatural destiny. Man is therefore a personal being responsible for his acts and for his life; the lower creatures are ordained for his happiness.

The fundamental equality of all men springs from their common origin, nature, and purpose.

The CNTU recognizes that the proper organization of society calls for diverse functions organized hierarchically. Access to those offices must be based on objective criteria which reject class privileges and favouritism in all its forms. The CNTU does not tolerate interference with a person's rights on the grounds of his language, nationality, race, sex or religion.

Rights and Liberties

To enable him to fulfil his destiny and to discharge his obligations, man is vested

with inalienable natural rights than can never be denied, abolished or ignored.

To exercise those rights, man must enjoy corresponding freedoms. He must, however, take into account the limits imposed by the nature and finality of human beings and by the co-existence of various people living together as a society.

The CNTU believes it necessary to recall some of the fundamental rights of workers which it intends to defend and to promote:

1. the right to work;
2. the right of association;
3. the right to a fair distribution of wealth;
4. the right to respect of the individual in his physical and moral life;
5. the right to truth, to education, and to culture;
6. the right to legal security;
7. the right of free expression;
8. the right to participate in the economic, social, and political life of the nation.

Society

As his nature requires him to do, man must live in society to develop his faculties and fulfil his destiny. He must be regarded as the active subject of social life and not as a mere object.

It is a duty for each citizen to contribute to the public good according to the requirements of social justice.

That is why the workers, like other men, are entitled to participate in the organization of social life.

The State

The State should promote the common good. The CNTU believes that it should, by its laws and their proper application, safeguard the civil rights and liberties of everyone and foster the development of autonomous intermediate groups whose active contribution is necessary for the maintenance of social peace.

The State should concern itself above all with directing and orienting the economy and the distribution of wealth and with establishing conditions that ensure full employment and social security.

our economic development in order, co-ordinating the expansion of our various industries, in short, of planning. In the long-term planning field, we believe that the present Congress should insist on the federal Government's setting up an economic council. In regard to short-term planning, especially as a remedy for the severe unemployment crisis anticipated next winter, your committee suggests that the present Congress request the calling of a Federal-Provincial Conference."

Such a conference, said the Confederation, would be greatly preferable to individual representations from individual groups,

such as are bound to occur at the meetings called by the federal Government.

Mr. Picard also declared himself in favour of a more effective anti-dumping law, based on the Canadian sale price, and not on that of the exporting country. Jean Paul Robillard, of the Montreal Union of Journalists, spoke in favour of healthy competition in exports.

The Congress also announced its intention of doing everything in its power to encourage the purchase of Canadian products. The Confederation has expressed its determination to join for this purpose with the Canadian Labour Congress, the Cana-

Statement of Principles, Confederation of National Trade Unions

Democracy

The CNTU has faith in political democracy, because it is the system that best guarantees the freedom of citizens and their participation in civil responsibilities. Democracy implies universal suffrage and the division of powers between the legislative, executive, and judicial branches. The CNTU believes that our political system should not be at the mercy of a few privileged people who use power for the protection of their privileges and their selfish interests.

The CNTU believes that a true political democracy is inconceivable without democratization of the economy. It is opposed to any form of totalitarianism.

Work

Work, which is the chief factor in the production of wealth, engages man with all his being: his physical strength, his mind, his will, his responsibilities, his motives, and his aspirations.

The CNTU therefore holds that the material and quantitative aspect of work should not be the only consideration, and it vigorously calls for working and employment conditions that respect the dignity of the workers and enable them to discharge their obligations in a normal way.

The CNTU also demands for the worker a share in the formulation of working conditions and in the life of the business.

Since each man has the duty of self-preservation imposed on him by nature, he has the natural right to work, and society owes him the chance to obtain steady and remunerative employment in keeping with his aspirations and abilities.

Income of the Worker

The workers of all countries are entitled to a fair wage and a comparable income that will permit them and their families to live under acceptable human conditions.

The workers should receive from enterprise their fair share of the wealth which they helped to create. They are also entitled to share in the general prosperity of the nation.

The CNTU believes also that there should be equal pay for male and female labour for work of equal value.

Trade Unionism

Trade unionism is an essential means by which the workers can protect and promote the interests of their trade. If the union really represents the workers concerned, it is the normal body for negotiation, representation, co-operation, and participation at all levels: that of the individual business, industry, and the national economy. Accordingly, the right of association of all workers, without discrimination, should be recognized and the free exercise of that right should be guaranteed.

Among its immediate objectives in this sphere, the CNTU wishes to ensure the full exercise of the right of association, and it advocates collective agreements, social security measures, and sound labour legislation. It attaches great importance to the economic vocational, social, intellectual and moral training of the workers.

Property

The CNTU is mindful of the universal destination of all resources of the earth and the social finality of material goods.

The CNTU recognizes the legitimacy of the right of private ownership and affirms its twofold nature—individual and social. However, it takes great care not to identify private ownership and capitalism. It repudiates liberal capitalism and rejects Marxism in all its forms.

Therefore it demands for the workers, and for the other members of society, the means of owning property privately.

The exercise of the right of ownership should be regulated according to the nature of the object, depending on whether the goods are for individual use or are capital goods. Private or public ownership of capital goods is subject to larger social expenditures that arise from the nature of such goods, from their subordination to the common welfare of society, and from the fact that the lives of the workers are engaged in the enterprise.

The State should control all economic activity to ensure that the general interest is put before the interests of the individual. Some business concerns, because of their great importance for the well-being of the citizens or because of their tendencies to

dian Manufacturers' Association and the Canadian Chamber of Commerce.

Moreover, the Congress asked the federal Government to take measures for taxing subsidiaries of foreign companies established in Canada on a basis which is fair to Canadian industry; for taxing capital profits on the same basis as other profits; and for making foreign companies established in the country offer at least 51 per cent of their shares on the Canadian market.

The demand was also made that the provincial Government levy royalties on the companies developing the province's natural

resources, and establish regional economic advisory councils.

The Congress has also formed a standing committee on unemployment.

Report of National President

The creation of an economic council and government planning were suggested by the CCCL National President as remedies for unemployment.

"As long as Canada does not resolutely adopt a policy of economic planning, Canadians will experience chronic and permanent insecurity in the field of employ-

Statement of Principles, Confederation of National Trade Unions

abuses, need to be watched more closely and kept within just limits by suitable control measures.

If there is a danger for the common good in leaving certain services or means of production under the control of private interests, the community should assume responsibility for them. The management of such enterprises will be entrusted as far as possible to autonomous bodies that are representative of all interests.

Co-operative Movement

The CNTU sees in the co-operative movement an excellent means of economic and social improvement and a necessary complement to union action designed to reduce the cost of living and to humanize and democratize the economy.

Economic Life

The CNTU considers that the economic life should be at the service of man and that society should allow everyone to play a responsible part in it and to share in its organization.

The CNTU believes that economic life should not be guided solely by the mechanism of technology, but that it should be subordinated to moral and spiritual values and directed according to the standards of social justice and charity.

With a view to ensuring harmony in labour relations and providing for the needs of the community, the CNTU believes in the necessity of establishing for the economy a legal status founded on the community of responsibilities between all who play a part in the economic life.

The CNTU notes that there are several forms of enterprise. It recognizes as valid those which, while pursuing their own aims, respect the human personality and best serve the common good.

The CNTU advocates participation by the workers in the management of enterprises by the introduction of elements of the partnership contract into the labour contract. This development will encourage the integration of the workers in the enterprise and will lead to better co-operation between the employer, the employees, and their union organization. Thus, as is proper,

the management of the enterprises will cease to represent exclusively the interests of capital.

Economic life should be organized in such a way as to ensure close co-operation between the public authorities and the employers' and workers' organizations at the industry and national levels.

At the industry level the workers and their employers, through their union organization, should join hands in forming bodies for co-operation which will have the job of studying the general problems of their industry and finding adequate solutions.

At the provincial and national levels, according to the jurisdictions established, the CNTU believes in the necessity for appropriate organizations to which the representatives of the workers and of their employers should be appointed by their respective bodies. The role of such organizations would be to co-ordinate and guide the economic life under the supervision of the State.

Finally, the CNTU believes that Canada, in conjunction with other states, should aim at the international organization of the economy in order to ensure a better distribution of the wealth and to guarantee, not only economic security and stability in the world, but also peace and harmony among nations.

Social Security

The CNTU affirms that the workers are entitled to the security resulting from an adequate income, from stability of employment and from effective protection against the risks of work and certain risks inherent in life.

The CNTU believes that the production of material goods should first be geared to the satisfaction of legitimate human needs and that a policy of full employment should be established. But it is also necessary to adopt social security measures which provide for replacement and complementary income. In the planning and application of such measures, the rights of individuals should be respected and an appeal should be made for the co-operation of the parties concerned and of their representative bodies.

(The Statement of Principles concludes with two clauses, on "The Family" and "Education and Culture.")

ment," declared Mr. Mathieu in his progress report presented at the opening of the Convention.

It has been proved, and for a very long time, that an economy such as ours, left to the uncertainties and vagaries of private interest, continuously engenders unemployment, except during exceptional periods of great prosperity. But it has also been proved that governmental authority, through planning, may lessen the evil and reduce it to the minimum.

During his 45-minute speech, which dealt almost exclusively with the "scourge of unemployment," Mr. Mathieu analyzed the current situation, reviewed the remedies that had been applied, and suggested to the

federal and provincial governments certain remedies that should be applied.

He dwelt chiefly on the creation of an economic council that would be "the economic conscience of the country." He saw such a council as being less preoccupied with politics and the struggle for power than with wise planning and energetic solutions.

The role of this Council would be first to inquire into the causes of our economic ills, into the structures of our economy, into our markets, etc. After objective investigations, the Council should make recommendations to the various governments in order that the necessary measures may be taken concurrently at all

levels—federal, provincial and municipal—to achieve full employment.

The economic council which we have in mind would embody precisely this policy of common sense and foresight. With it, the two hundred-odd members of such a council—not civil servants but experts, specialists, representatives of all the social groups and all the basic institutions of the nation and appointed by those groups or institutions—would place their resources of ability and imagination at the service of the State.

Mr. Mathieu denied that such a council constitutes a dangerous form of socialism. "Between State control and non-interference, between Communism and the libertarianism of private enterprise, there exists a solution for the common good, a reasonable solution which reconciles the necessary government interventions with the fundamental liberties of the citizens," he said.

The President of the CCCL was vehement in his criticism of the federal Government. It had taken only "a few timid initiatives in no way proportionate to the problem," he declared.

From the debates in the Commons, we see clearly that the major effort of the federal authorities has consisted in speeches, the greatest number of which tended, not to solve nor to throw more light on the problem, but on the contrary to deny it, to diminish its importance or to blame it entirely on the preceding government.

Mr. Mathieu launched an appeal to convince the mass of workers that unemployment can and must disappear and that full employment is an essential goal of any policy.

"Unemployment is not only a question of statistics. It is not first of all a question of technique; it is above all a human problem," he said.

The National President repeated a suggestion made to the federal Government by the CCCL in its brief of February 1, 1960 concerning more accurate statistics on unemployment.

We believe that the statistics published by the federal Government should be very much more complete than they are. They should indicate the number of registered unemployed as well as the number of beneficiaries under the Unemployment Insurance Act, as also the number of persons who do not draw unemployment benefits and who are looking for work. Finally, they should mention the number of man-hours lost through unemployment and the sum of money which the workers did not receive on account of unemployment.

Turning to unemployment insurance, Mr. Mathieu protested against the exhaustion of the Unemployment Insurance Fund, and more particularly against the arbitrary addition of new categories of beneficiaries. "It is unjust," he said, "to allow persons who have neither employers (like the fishermen) nor labour agreements, to profit from unemployment insurance. There is no doubt that

these people needed assistance, but the State should have borne the cost itself."

He also suggested as a remedy for unemployment the development of an active industrial and commercial policy. "Canada, in order to achieve full employment, must at all costs find outlets for its products, all its products, outside its boundaries," he said.

Mr. Mathieu also attacked the massive exportation of our natural wealth and stated that Canada should develop its secondary industries.

He called for the development of an active export credit policy, explaining that the Government should assist Canadian firms who supply products which the buying countries cannot pay for within the usual periods of time.

Passing to the question of wages, the CCCL President declared that a certain flexibility of wages requires a minimum of flexibility in prices and in the money supply. He maintained that a policy of full employment requires an annual increase in prices and that perfect stability of prices would entail annual unemployment.

Mr. Mathieu also made several suggestions to the Quebec Government, emphasizing particularly that it should encourage the development of secondary industry.

Noting that the rate of unemployment is higher in those groups of workers who left school too early, he declared that a "progressive policy in matters of education is essential for the elimination of unemployment."

The National President concluded his report by drawing the attention of the delegates to the problem of hunger throughout the world.

He declared that the poverty found in the underdeveloped countries "is out of all proportion to that which we deplore in this country," and he recalled that that poverty "is to a certain extent indivisible and that we shall never succeed in completely eliminating it in our midst if we do not at the same time attack it wherever it exists."

He referred to the proposal of Pierre Mendes-France, the former Premier of France, who said:

Nothing prevents us from proposing at the General Assembly of the United Nations a resolution solemnly proclaiming the principle and duty of solidarity of nations and asking, as a consequence, every member country to devote from one to two per cent of its national revenue to help the underdeveloped countries—this would be a kind of international income tax. Each donating country would then be free to act (at least at the beginning) either through bilateral agreements with beneficiary countries or through international organizations—but it

should be required to give an accounting of its actions once every year. In this way, wholesome competition would spring up and expand.

Mr. Mathieu expressed the hope that Canada would take the initiative in this.

Parliamentary Secretary to Minister of Labour

Richard D. Thrasher, M.P., Parliamentary Secretary to the Minister of Labour, pointed out that since the CCCL was holding its convention so close to the time of the Prime Minister's conference on the unemployment question, it should be in a position to offer some "constructive suggestions."

Mr. Thrasher expressed to the meeting the regrets of Hon. Michael Starr for his inability to be present at the convention and assured the delegates that the subjects of their deliberations would receive careful study not only by the Minister of Labour but by the whole government.

"Your government looks forward each year to your presentation of your brief," he said. "Each year it contains helpful suggestions for the continued improvement of working conditions in Canada industry."

The Parliamentary Secretary also emphasized the effort of labour to raise the standard of living in this country.

"Labour in this country has borne itself in an attitude of responsibility and dedication to the orderly advancement of labour's aims," he said.

He added:

"Through enlightened and responsible leadership, through its research facilities, through its close contacts with the economic life of this country, labour is in a position to play a formidable role in the maintenance of peace and prosperity."

Provincial Minister of Labour

Vigorous steps will be taken to ensure that applications to the Quebec Labour Relations Board will be heard and acted on in the shortest possible time. This was the promise made by Hon. René Hamel, Quebec Minister of Labour, at the opening of the convention.

He declared that there is no reason for long delays where applications for union recognition are concerned.

Mr. Hamel emphasized, however, that he is neither the Minister of the unions, nor of the employees, but a Minister of the Crown, and as such he must work for the common good.

The provincial Minister of Labour also declared that the provincial government intends to take steps to raise the age limit for compulsory school attendance.

"When the young workers come on the labour market without sufficient preparation," he said, "it is as if they came disabled."

Lt.-Col. Laval Fortier

Lt.-Col. Laval Fortier, who was recently appointed Chief Commissioner of the Unemployment Insurance Commission, stated that it is his firm intention to protect the interests of the workers who have contributed to the Unemployment Insurance Fund.

"Too many persons are still obtaining unemployment insurance benefits who are not entitled to them," he said.

At the same time Col. Fortier asked for the support of organized labour to improve the efficiency of the National Employment Service in its campaign to combat seasonal unemployment.

Affiliation to CLC

The Confederation decided to reconstitute the committee on labour unity and to continue talks with the Canadian Labour Congress on unity, but only in so far as its own integrity is preserved.

The secretary of the committee on labour unity, Jean Marchand, reporting on the year's activities, revealed an apparent stumbling block. He said:

The Canadian Labour Congress would have no objection to granting the Canadian and Catholic Confederation of Labour the status of a national union, on condition its affiliated unions have the right to negotiate for mergers with our syndicates and federations. If the CCCL accepts this condition there is no doubt that, strictly speaking, it will no longer have the status of a national union within the meaning of the constitution of the CLC.

Negotiations between the two organizations are always carried on with the understanding that the Confederation would affiliate with the status of a national union. The constitution of the CLC guarantees the integrity of all its affiliated unions, both national and international, and forbids a union to recruit members from another union or to undertake negotiations without the latter's consent.

In Mr. Marchand's opinion, the CLC would be making a significant restriction in asking the Confederation to allow the federations and unions affiliated to the Canadian Labour Congress to negotiate directly with the syndicates of the CCCL.

Michel Chartrand, delegate from the Montreal Typographers, suggested that the status of national union be claimed and that jurisdictional problems be met when difficulties arise.

"The basis of the problem," said Mr. Chartrand, "is that if negotiations go on any longer, we will come to the conclusion that the leaders on both sides do not want affiliation."

Mr. Marchand explained that the structure of the Confederation will give the CLC trouble because of its numerous *de facto* jurisdictions and those which it claims *de jure*.

The convention resolved, however, to continue affiliation talks and once more appointed the committee on labour unity with the following membership: Adrien Plourde, Florent Boisvert, Marcel P  pin, Emile H  bert, Eug  ne Rancourt, Charles Ruel, Ald  ric Gosselin, Adalbert April, Jean Marchand, L. P. Boily, S. Ted Payne, Ren   Gosselin, Michel Chartrand, Henri Vachon and Alexandre Brisebois.

Labour Relations Board

The convention accused the Quebec Labour Relations Board of giving "decisions which are too often partisan."

In a resolution of censure, carried unanimously, the delegates called upon the Board to respect the right of association and the union organizations of the workers.

The CCCL also instructed its Executive Committee to take steps with the least possible delay to have the provincial Government amend the Labour Relations Act and reform the Board. (In his speech at the opening of the Congress, the Quebec Minister of Labour stated that changes would be made.)

The convention also protested against "the interminable delays" concerning requests for union recognition.

Declaring that the rights of workers "have been systematically violated in the past" by the Commission, the resolution stressed that this state of affairs "is such as to inspire among the workers contempt for judicial and governmental institutions and that this state of mind saps democracy at the base."

Public Relations

At the suggestion of the CCCL Public Relations Director, G  rard Pelletier, the convention decided to reduce the Confederation's journal to a monthly publication and to use the money thus saved for a televised news report to be broadcast over five private stations in the province.

The committee, after study of the report of the Public Relations Director, came to the conclusion that "the chronic indifference of the members to their journal appears to us to stem from the widespread craze for pictures in general and for television in particular."

Decline in Membership

The Confederation suffered a decline in membership during the year. According to the report tabled by the Secretary-General, it now has 94,114 members in 442 unions, a decline of 1,098 members and 14 unions.

The decline in membership is explained principally by the defection of some 36 unions, with 1,874 members, in the Federation of Municipal and School Corporation Employees.

The building, lumbering, clothing and pulp and paper federations have all suffered losses of membership.

On the other hand, the Federation of Metalworkers has increased its membership by 10 unions and 3,333 members, and the Services Federation has gained 1,257 members. The defection of the Federation of Municipal and School Corporation Employees outweighed the gain in the Metalworkers union.

The committee added:

It is therefore realistic to think that a televised news report would ensure the physical presence of the movement not only in the homes of the members but also in all homes willing to receive the televised news report.

Despite the exorbitant cost of those telecasts, the convention should not hesitate to invest the sum of money necessary for that venture. It appears to us to be an investment that will not fail to pay dividends from the standpoint of recruiting and advertising and above all of the reputation and the prestige of the CCCL.

Mr. Pelletier explained that he is planning a series of 13 quarter-hour programs for early 1961. The publicity branch will be responsible for the preparation of a 10-minute film for each broadcast, leaving to the central councils the task of devoting the other five minutes to matters of local interest.

Aid to Underdeveloped Countries

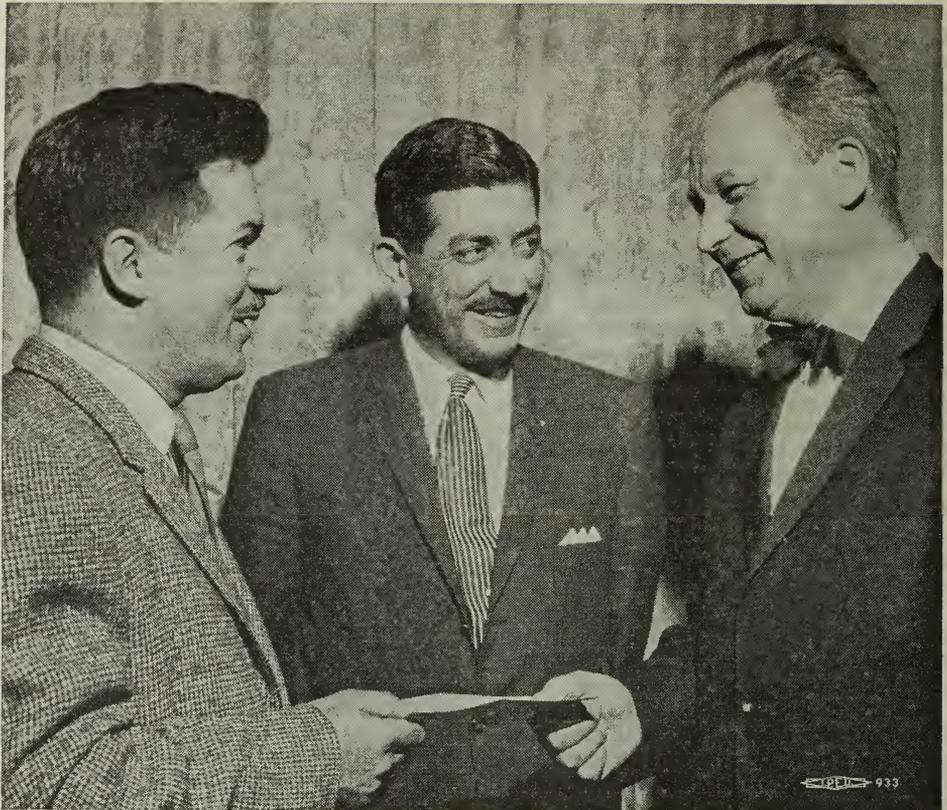

In response to the moving plea of Auguste Vanistendael, IFCTU Secretary, on behalf of the underdeveloped countries the convention carried a resolution asking the federal Government to donate annually at least 1 per cent of gross national revenue for the assistance of these countries.

This would at present amount to more than \$300,000 a year.

This motion of the President of the Montreal Union of Journalists also proposed that assistance to underdeveloped countries should be given through the United Nations.

Merchant Shipping Convention

The convention resolved to ask the federal Government to denounce the British Commonwealth Merchant Shipping Convention of 1931, so far as coastal and inland shipping are concerned.

Aid to Underdeveloped Countries—Auguste Vanistendael (right), Secretary of the International Federation of Christian Trade Unions, receives a cheque for more than \$3,500, a CCCL donation to the International Solidarity Fund, from CCCL Secretary-General Jean Marchand. CCCL President Roger Mathieu is an interested observer.

S. Ted Payne, Vice-President of the National Federation of Metal Workers, claimed that such action is necessary to remedy the state of unemployment in Canadian shipyards.

The Convention expires at the end of 1961 and must be denounced before the end of this year. The Confederation also intends to present a memorandum on this subject to the federal Government.

Education

The Congress requested the appointment at the earliest possible date of a Royal Commission to enquire into education in the province of Quebec.

The proposal that such an inquiry be held came from Fernand Jolicoeur, Director of the CCCL's Education Division, who suggested that it should be included in the memorandum to be presented by the Confederation to provincial Government on all aspects of education.

"We will ask that the enquiry cover not only general instruction, but also vocational training and popular culture," said Mr. Jolicoeur.

Noting the Quebec has a complete system of vocational schools set up by the Government, he stressed that in spite of everything the "real needs of the labour market" are not being met.

Ways must be found, therefore, of obtaining simultaneously a marked increase in the effectiveness of our system of instruction both at the general school level, elementary and secondary, and at the level of vocational training; and likewise of co-ordinating the two stages of education and providing guidance service at all levels.

The delegates also expressed the wish to see established in the province a service particularly concerned with adult education.

Women's Advisory Committee

The Confederation has set up a women's advisory committee entrusted with studying problems peculiar to female workers and advising the executive.

The decision to form such a committee came as the result of a report submitted by Vice-President Jeanne Duval, in which she stated that female workers are "shamefully exploited" (L.G., Nov. p. 1120).

The women's committee will work toward improving the lot of working women through legislation providing more protection for those women who must leave the home to go out and work.

The committee must also endeavour to make women more interested in union activities. According to Miss Duval, one of the main causes of women's inferior position on the labour market is their lack of participation in trade unionism.

In addition to Miss Duval, the committee is composed of Miss Julia Boisclair of Quebec, Miss Raymonde Couillard of Montreal, Miss Raymonde Lorrain of St. Hyacinthe, Miss Cécile Cantin of Victoriaville, and a fifth person who will represent the Saguenay-Lac St. Jean region.

Electoral Expenses

The CCCL has asked that the provincial electoral act be amended to provide for payment of basic electoral expenses by the Government.

The resolution, which was moved by Angelo Forte, a Vice-President of the CCCL, and passed unanimously also demanded that contributions to the election funds of a political party be made public and that every candidate, whether he is elected or not, be required to produce a full report of his electoral expenses.

"The expenses of the political parties are reaching fantastic sums," Mr. Forte said, "and that advertising spree tends to create a mob atmosphere and a climate of psychological assault that is contrary to the exercise of the democratic virtues."

In suggesting that the Government pay the basic electoral expenses, Mr. Forte explained that the size of the constituency and the number of electors would have to be taken into account.

Other Resolutions

During the five days of discussion the delegates passed many resolutions, which, among other things, ask:

—that federal and provincial civil servants should enjoy the right of association and all that it implies, especially the right of collective bargaining;

—that the penalties and fines provided by the Quebec Collective Agreements Act should be increased;

—that the principle of private arbitration should be recognized by law;

Increase in Dues

The delegates decided to increase by 15 cents the monthly dues payable to the Confederation.

At the same time it was decided that a union which is not affiliated to a trade federation shall pay to the Confederation, over and above the regular dues, a supplementary amount to be set by the Confederation's office.

In fixing the supplementary amount the office is to take account of the total dues paid by the federated unions and the value of the services which the Confederation will be called upon to give.

The study of financial questions took much of the delegates' attention. During two days of sessions in camera the Congress examined in detail the Confederation budget and the administration of the labour defence fund.

—that hospital employees should be protected by the Unemployment Insurance Act;

—that a person claiming employment benefit who has drawn a portion of his seasonal benefits should be able to draw the portion he has not received in the period preceding the next seasonal benefit period, if he has not qualified for regular benefit.

The convention did not have time to study all the resolutions submitted, and many of the 162 resolutions on the order-paper were referred to CCCL headquarters for study during the year.

Other Speakers

Chaplain-General's Message

Canon Henri Pichette, Chaplain-General of the CCCL, congratulated the convention delegates on having chosen to adapt their movement to the prevailing union system and to the environment in which it moves, while safeguarding the essential part, namely the fundamental values on which it is based and the dynamic force with which it is imbued.

The Chaplain-General had awaited the outcome of the debate on the religious affiliation of the CCCL before delivering his traditional message.

The changes that have been made are far-reaching, and make the Confederation accessible to all workers who are men of good will. Your statement of principles makes it an ideological central body having no formal or constitutional ties with any religious denomination in particular. The positions set forth in your principles provide a cross-roads where all workers who wish to base their action on Christian principles and to set their union goals within the framework of God's plans may meet and be perfectly at ease.

Moreover, he pointed out, affiliated bodies are quite free "to maintain or create unions having a religious connection by virtue of their constitution when circumstances permit."

At the same time, Canon Pichette pointed out that the Catholic trade-unionist still has the same obligations to base his conduct, even his conduct in the union, on his own particular morality and faith, "and no one can reproach him for it."

Describing the exact extent of the changes, he went on to explain:

The Confederation has become an institution that offers to its members, whether Catholic or not, facilities for expressing themselves according to their convictions. Moreover, by its statement of principles, it positively encourages the expression of personal convictions. The Confederation has not become a neutral union confederation. It affirms its adherence to Christian principles and reminds everyone that as members of this organization they must base their union action on the ideals that spring from those principles.

Canon Pichette urged the delegates to be generous to the peoples of less fortunate countries and to answer the appeal of the IFCTU.

IFCTU Secretary General

Auguste Vanistendael, of Belgium, Secretary General of the *Confédération internationale des Syndicats chrétiens* (International Federation of Christian Trade Unions), urged Canadian trade unionists, as Christians, to work for the training of trade unionists in the underdeveloped countries.

Mr. Vanistendael said that the inhabitants of underdeveloped countries want a world which will take into account not only their material needs but also their spiritual aspirations.

The Communist world, he pointed out, has already begun to train thousands of militant trade unionists and the democratic countries must take up the challenge.

Mr. Vanistendael devoted most of his speech to a description of the poverty in which two thirds of the world's population lives. "There are millions of people who have never had a roof over their heads," he said, "millions of people who scarcely get one meal a day."

Describing the often heroic devotion of the trade unionists who are seeking to combat the grinding poverty in the underdeveloped countries, the IFCTU Secretary urged the workers of America to make sacrifices to promote a humane social order throughout the entire world.

At the conclusion of Mr. Vanistendael's speech, National Secretary Marchand gave him a cheque "for more than \$3,500" for the International Solidarity Fund.

Elections

Roger Mathieu, of the Montreal Journalists Syndicate, was re-elected National President for a third consecutive term. Jean Marchand of Quebec was again the choice of the delegates for National Secretary, a post he has held since 1948.

Mr. Jacques Dion was re-elected Treasurer by acclamation for a second term.

For the first time, the Confederation elected an English-speaking vice-president. He is S. Ted Payne of Montreal, a vice-president of the Metal Workers' Federation. He was elected second vice-president.

The other vice-presidents, in the order elected, are: René Gosselin, of Granby; Eugène Rancourt of Quebec; Adrien Plourde of Arvida; Guy Thibodeau of Shawinigan; Daniel Lessard of Thetford Mines; Miss Jeanne Duval of Montreal; and Henri Vachon of Kenogami.

Fourth Annual Convention of the Ontario Federation of Labour (CLC)

Unanimously adopts resolution of support for formation of new political party, and one proposing four-pronged attack against unemployment. Calls for repeal of "all anti-labour sections" of Labour Relations Act, forms women's committee

At the 4th Annual Convention of the Ontario Federation of Labour, at Toronto from November 7 to 9, particular attention was devoted to: the proposed "New Party," unemployment, the Ontario Labour Relations Act, a more prominent role for women in the labour movement, education of displaced workers, automation, and the treatment given immigrants—particularly in the building trades in Ontario. More than 800 delegates attended.

More than 100 resolutions dealing with hours of work, wages, schooling, human rights, fair practices in labour-management relations and other matters were adopted. At the end of the convention, 59 resolutions were turned over to the incoming executive.

Incumbent David Archer was opposed for the presidency of the Federation by Stan Thornley of the United Rubber Workers. Mr. Archer was returned to office for his third consecutive term, defeating his opponent by 621 votes to 100. For the post

of secretary-treasurer, incumbent Douglas Hamilton was opposed by Gordon Brennan of the United Packinghouse Workers. Mr. Hamilton was re-elected.

Attending the convention were 763 delegates from local unions, 41 delegates from 30 labour councils and 12 officers, for a total of 816.

New Political Party

Delegates unanimously passed a resolution endorsing the policy approved by the Canadian Labour Congress of co-operating with the CCF and "other liberally minded people" in forming a new political party in Canada.

The same resolution instructed the incoming committee to carry out at the provincial level the intent of the Congress resolution and to work in co-operation with the CCF and other liberally minded people in organizing a political arm of the New Party at the provincial level, and to participate and support the work of the Ontario Committee of the New Party and to co-operate with it in organizing a founding convention and call upon affiliated labour councils and locals to back the Federation in supporting the financial drive for the New Party Founding Fund.

The majority of the delegates who spoke in support of the New Party resolution emphasized that it was the opinion of labour that a new party was necessary in Canada because neither the present federal Government nor its predecessor, nor the present Government of Ontario had succeeded in solving the unemployment problem in Canada, and that the New Party could and would solve it.

Canadian Labour Congress Executive Vice-President Stanley Knowles, a guest at the convention, said that the new party being created must aim at replacing the "private profit system with a public-oriented economy."

Mr. Knowles said the New Party "is going to wrest control of people's destinies from the few and hand them to the many." He criticized "affluent society" that permitted too many Canadians "to be hungry, live in substandard homes, be uneducated, be in fear of medical bills and feel insecure."

At the pre-convention meeting of the Federation's Political Action Committee on November 6, Morden Lazarus, OFL Director of Political Action, said that more than 260 locals representing upwards of 140,000 Ontario trade unionists had signed statements of support for the New Party, and it was expected that by the end of the current year half of the Federation membership of more than 400,000 will have signed up.

Unemployment

The resolution on unemployment, a substitute for 11 others, was adopted unanimously. It proposed a four-pronged attack on the problem:

1. The organizing by the OFL of mass protests, petitions and lobbies to bring the severity of the problem to the attention of all levels of government.

2. Adoption by all levels of government of immediate programs to alleviate the problem; low rental housing, public works projects, stimulation of trade, increased investment in public enterprise, development of national resources, and the building of schools, hospitals and highways.

3. Maintenance of unemployment insurance payments for the full period of unemployment.

4. Planning by all levels of government of the country's economic development.

In the preamble, the resolution declared that the increased and extended winter work program, "while a good thing in itself, will not get to the root of the problem because of its short range possibilities and because it gives little or no consideration to the growing numbers of unemployed industrial workers."

Stating that assistance and support to the unemployed was "a major responsibility of the labour movement," another resolution urged all OFL affiliates to "utilize and expand their existing facilities to serve their own unemployed members and unemployed workers generally" and recommended that every local union establish an unemployment committee to provide, in conjunction with labour councils, "leadership and service" to unemployed workers.

A group of delegates opposed this approach. They wanted to organize the unemployed into a separate organization.

Dennis McDermott, chairman of the resolutions committee, said he was puzzled to hear that anyone would not want to see the unemployed identified with labour but would rather see them organized in an unattached group without funds, leadership or benefit of experience.

"Who is better equipped to help the unemployed than the existing local union organization?" he asked.

Another resolution mentioned unemployment and disarmament. "In the minds of many people," the resolution's preamble said, "world disarmament would create serious unemployment in Canada." The resolution urged Canadian governments to initiate programs for full employment such as those proposed by the labour movement, "and make clear to the people of Canada that prosperity need not depend on war."

President's Address

In his presidential address, David Archer noted that thanks to the public relations efforts of labour councils and affiliated unions, "the hostile climate that prevailed a year ago" has changed considerably.

He drew attention to amendments that have been made to the Ontario Labour Relations Act, and suggested that the "new legislation obviously places great restraint on the craft unions, particularly those in the building trades." Building trades unions will have to very carefully scrutinize the new rules to ascertain how they are affected by them, the OFL President warned.

The speaker recalled that at the 1959 Convention he had warned against questionable operations by some fee-charging employment agencies. He noted that since that time the Ontario Legislature had enacted a bill "governing fee-charging hiring agencies, but no rules or regulations have been drafted governing their operation."

In connection with the organization of immigrant workers, Mr. Archer said that despite "the obstacles placed in the way of organizing by the Labour Relations Act and the new restrictive amendments," he wished to pay tribute to the building trades for their "marvellous efforts" in organizing that particular group of workers.

Mr. Archer also paid tribute to the recent immigrants who, in many cases, lacking a knowledge of the customs and the language of Canada "braved discrimination, threats and loss of employment to associate themselves with their organized Canadian brothers."

Referring to the Workmen's Compensation Act, the speaker said there are a number of things in it "crying for amendment." He noted particularly the salary limitations, and asserted that there should be no ceiling on the earnings used for the purpose of computing compensation. If there were no annual salary limit, he said, the over-all rates of assessment would be lower, since statistics show there are fewer persons in the higher wage brackets who suffer injuries in their employment.

Mr. Archer thought also that there could be an improvement in the definition of an accident, giving more scope to the Compensation Board in its determination of just what was an accident. He thought the section could be profitably patterned after that contained in the Manitoba Act.

On the question of unemployment, Mr. Archer said that the Federation has been "outspokenly critical of the lack of federal and provincial programs to ensure jobs for our rapidly growing labour force. . . Repeatedly we pointed out the need for a concerted

federal-provincial plan for full employment, not just a few stop-gap measures to silence the public outcry in periods of obvious distress but a long-range program to prevent distress."

Mr. Archer said that unemployment in Canada reached 10.6 per cent of the working force in March 1958. It was 9.5 per cent in 1959 and 9.1 per cent in 1960" and whether it is the size of these figures, or the abnormally high levels of unemployment through the rest of the year, the fact remains that the Government is no longer able to disregard unemployment as a major problem facing this country. An adjustment which persists for three or four years just can't be counted on to work itself out."

To eliminate unemployment, Mr. Archer said that labour must certainly press for more and better public works programs and welfare programs. These measures would relieve some of the distress resulting from unemployment.

As an immediate step toward eliminating unemployment, Mr. Archer suggested that the provinces of Ontario "could and should" immediately amend the 48-hour week legislation to provide for a 40-hour week, and "establish a fair minimum wage for men as well as women that will not only assist our economy to regain a normal footing, but will help to put an end to the exploitation of workers."

Labour Relations Act

A campaign for the removal of "all anti-labour sections" from the new Ontario Labour Relations Act was approved by the convention.

During the debate on the resolution two leaders of building trades unions suggested defiance of the legislation and predicted drastic action by unions of building workers.

John W. Bruce, Canadian organizer of the Plumbers, declared, "I am going out and preach civil disobedience. There is no law that says a man has to go to work."

William Jenoves, who in addition to being Vice-President of the Canadian Labour Congress and President of the Toronto and District Labour Council is Secretary-Treasurer of the Toronto local of the Bricklayers, said it was impossible for building trades to comply with the law and carry on an effective organizing campaign.

"This obnoxious type of legislation has forced workers to rebel against governments before, and as far as the building trades are concerned, we are prepared to fight," said Mr. Jenoves. He suggested that the OFL's stand be taken up with the Ontario Government "before drastic action will have to be taken by the workers."

Women's Committee

A resolution proposing formation of a women's committee was drafted by more than 160 women associated with the Ontario Federation of Labour at a pre-convention meeting held November 6.

The resolution was later approved by the OFL convention.

The November 6 meeting was addressed by Mrs. Therese Casgrain, National Vice-President of the CCF, and Miss Marion Royce, Director of the Women's Bureau, federal Department of Labour.

The resolution proposed setting up the women's Committee which will:

—Initially operate on the same basis as other committees of the Executive Council;

—Invite representation from every labour council affiliated with the OFL. This representation together with the committee named by the Executive Council should be used as the basis for a women's trade union organization in Ontario;

—Give priority to organizing on a province-wide basis in co-operation with labour councils in each area;

—Report to regular meetings of the Executive Board and Council of the OFL;

—Work in co-operation with the Ladies' Auxiliary Organizing Committee of the Canadian Labour Congress;

—Consider the practicability of a women's session at the OFL-CLC Education School at Niagara Falls, February 18-19, and a summer school at Port Elgin;

—Report progress to a pre-convention conference in 1961 and make specific recommendations for a statement of objectives and a program of activities.

Speaking on the formation of the New Party, Mrs. Casgrain urged her listeners to direct their feminine wiles to politics and to the New Party in particular, because "when women set their minds to do it, they can do marvellous things." She said that more than 100 names for the New Party had been suggested, but up to now no official name has been selected.

Miss Royce said that often there is a tendency to exploit part-time women workers in industry. They are often "not made eligible for fringe benefits, and are usually excluded from the bargaining units represented by trade unions."

There is a growing supply of part-time workers, Miss Royce noted. She declared that there was a great need for education among this group. She also asserted that there is an "alarmingly high" percentage of

teen-agers unemployed and warned the older women that they could be driven out of the labour force by this group.

Referring to low wages paid women workers, the speaker said that better organization of women could be a solution to the problem. "Despite the fact that seven provinces require equal pay for equal work there are still too many discrepancies," she added.

Miss Royce noted that "we let married women work in Canada, but we don't do much to let them have the sort of support they need." Lack of adequate care for the children of working mothers was one of the major problems that women face—"a problem that has received scant attention to date." She pointed out that British Columbia was the only province with a law providing for maternity leave for working mothers.

Emergency Resolutions

The convention adopted three emergency resolutions: (1) concerning employers who refuse to carry on the check-off system of union dues for workers who are members of unions contributing to support of the New Party; (2) concerning the proposed curtailment of passenger service by Canada's railways; and (3) relating to a strike at St. Thomas, Ont.

The first resolution served notice "on the reactionary employers in the Ottawa Valley that the labour movement of this province will resist to the utmost and with every force at our command, any attempt on the part of employers to suppress the Canadian workers' right to seek economic abundance and social progress through the political media of moral and financial support to the new party."

The second requested the Canadian Labour Congress "to instruct its Railway Trades Department to submit a brief to the Royal Commission on Transportation to bring to their attention: (a) The prevention of large-scale unemployment for the present and the future, (b) Examine this industry in the national interest parallel to the Gordon Royal Commission Report, (c) Deplore speed-up, in its widest application, which second to automation, is the largest contributor toward unemployment."

The third resolution called upon all affiliates to assist, "morally and financially, and every other way within their power," the workers on strike against a St. Thomas, Ont., firm.

Foreign Policy

The Federation's foreign policy resolution, a substitute for five others, urged the adoption of a foreign policy that will:

1. Be free from the dictates of any foreign power.
2. Affirm the right of all people throughout the world to be free from such dictation.
3. Critically re-examine Canada's foreign commitments with a view to strengthening those that lead to the establishment of freedom and economic progress and eliminating those that do not.
4. Take the initiative in the United Nations in seeking negotiated and controlled disarmament.
5. Encourage and support the United Nations.

Other Resolutions

Because the Ontario Government "has failed to fulfil its long-standing promise to meet at least 50 per cent of the education costs of municipalities," the convention adopted a resolution in support of steps to establish a program of federal grants. This would make possible a more rapid expansion and improvement of educational facilities in all provinces, the resolution stated.

In another resolution seeking action on the federal level, the OFL called on Parliament to establish a board from which every company must first receive permission before it can establish, re-locate or transfer a factory or operation. The resolution was sponsored by a Windsor local of the United Auto Workers.

An increase in old age pensions to \$75 a month was demanded.

The Ontario Government was urged to:

—Place greater emphasis on vocational training, re-establish the position of Director of Vocational Training, and direct guidance personnel in the Department of Education to take a more realistic approach in getting students into vocational training.

—Amend the Fair Employment Practices Act to make unlawful the printing of job applications that discriminate against workers in the 35 to 60 age group, and the refusal to hire or the termination of employment because of age.

—Establish a minimum wage of \$1.25 an hour.

—Ask the federal Government to increase its contribution for the construction of access roads.

—Implement a fully comprehensive medical and dental insurance scheme, give more aid to municipalities for the building of hospitals, and provide financial assistance to medical and dental students.

—Amend the Ontario Hospital Services Plan to provide out-patient diagnostic service, to class as dependents all persons within the family fully supported by the contributor, and to extend coverage to pensioners without premium payments.

—Establish a bureau to regulate all aspects of production and distribution of pharmaceuticals, including pricing, labelling and advertising.

—Provide the Ontario Anti-Discrimination Commission with a competent, full-time staff, and appoint a citizens' advisory committee to assist the Commission.

—In view of the "widespread exploitation of unorganized workers," ensure enforcement of labour standards legislation.

The Federation condemned the contracting-out of work and urged that workers employed on contract be given the same wages and benefits as given to the contracting company's workers. Contracting-out is used as a means for avoiding the payment of established rates or for exploiting underpaid workers, the resolution declared.

Another resolution demanded an end to all nuclear testing.

The Canadian Labour Congress was urged, in another resolution, to make available to the public the final ILO report on the "abrogation of recognized freedoms and rights" effected by last year's labour legislation in Newfoundland.

Labour and Automation

A special night session at the convention heard two well-known economists speak on "Labour and Automation." The speakers were Dr. Eugene Forsey, CLC Director of Research, and Dr. W. R. Dymond, Director, Economics and Research Branch, Department of Labour, Ottawa.

Dr. Forsey told the delegates that:

—A shorter work week is not the cure for unemployment.

—Unorganized industries, women, and white-collar workers must be organized or the labour movement will find itself more and more a minority group.

—The union member of the future will need more education to hold his job.

Dr. Dymond said that much of Canada's unemployment problem results not so much from a lack of demand for labour as from a lack of balance in the type of labour force growth compared with the type of job opportunities industry is creating.

Among other things, Dr. Forsey said the shorter work week "is a result of an immense increase in production . . . It is putting the cart before the horse to say that cutting hours will increase production and thus increase employment."

The CLC economist pointed out that automation had resulted in a rapid increase of workers in those areas where labour organization was weakest, and that organized labour would have to concentrate its emphasis on white-collar workers if it hoped to cope with automation. In the relatively unorganized industries "the proportion of women, who are notoriously hard to organize, is not only large but is getting larger."

He said that between 1946 and 1959 the highly organized group of industries—logging, mining, manufacturing, construction, transportation, storage and communications—increased by 684,000 workers (38 per cent); the unorganized group—trade, finance, insurance and real estate, services—by 947,000 (78 per cent).

He drew attention to the fact that since the end of the Second World War, industrial production in Canada had been doubled with the employment of only a handful of extra workers. During the same period, he noted, the labour force has increased by almost 1,500,000. Jobs have not become available at the same rate, and, as a result, the nation now finds itself short of about 350,000 positions.

Dr. Forsey suggested that a cure for the situation might be brought about by a "massive expansion" of the economy's public sector which might, in its initial phases, have to be financed by a deficit budget.

Dr. Forsey hastened to point out that even that plan might backfire. Because even if enough jobs were developed, there might still be a lot of unemployment because suitable workers to fill the jobs might not be available.

"They may be skilled jobs for unskilled or semi-skilled workers. They may be jobs with new skills for workers who have only old skills. They may be white-collar jobs for blue-collar workers. That is why we have to lay such emphasis on education and retraining for displaced workers.

"Or the jobs may be in one part of the country and the workers in another. That is why we have to emphasize location-of-industry policy, bringing new jobs to available workers, or aiding workers to move to jobs."

Basically, automation increases production and jobs, Dr. Forsey believed. "The whole process of mechanization ever since the industrial revolution has meant constant displacement of labour.

"Are there fewer people employed now than at the end of the 18th century? No." There are far more at work now, "and at a far higher standard of living."

Summing up, Dr. Forsey said that there "is very little unions can do by themselves—

by collective bargaining for example; most of what they can do they can do only by putting pressure on governments, notably, of course, the national Government. And what can governments do—they can take measures to see that there are enough jobs to go round; they can take measures to match jobs and workers.

"More specifically, the national Government has got to get our rate of economic growth up again, and keep it up; get it up and keep it up high enough to restore and maintain full employment. The only way we can see of doing that is by a big expansion of the public sector of the economy, financed by deficit financing initially."

Dr. Dymond found that there was much of what Dr. Forsey said that he could agree with—the growth of employment in relation to output, the growth of the labour force and the increase in unemployment, that the gap between output and employment is largely the result of technological change." The fact still remains that manufacturing employment, despite technological change, has gone up, and not down, by 23 per cent from 1946 to 1959; mining employment went up 25 per cent; construction employment has doubled, he pointed out.

The rate of over-all economic growth has declined in the last two or three years, Dr. Dymond said, and "this has weakened the total demand for labour as compared with the growth of the labour force."

A good deal of Canada's unemployment in recent years, Dr. Dymond thought, has resulted from a lack of balance in the growth of employment for male workers compared with the growth of employment for female workers.

The demand for male workers in non-farm employment increased by some 247,000 from 1956 to 1960. This was made up of an increase of 222,000 male workers absorbed in service-producing industries and an increase of only 25,000 men in the non-farm goods-producing industries.

During the same period there was a net increase of men entering the non-farm labour force of 436,000, which meant that unemployment among men increased by some 189,000 over these four years. The economy had not generated enough jobs for which male workers were hired...

Dr. Dymond noted that during the same period employment among women increased by 279,000, exceeding the increase for men by some 32,000. This total increase for women was distributed in terms of 258,000 in the service industries and 21,000 in the non-farm goods-producing industries. Three-quarters of the increase consisted of married women.

The convention took under consideration a telegraphed invitation from the Mayor of Windsor that the 1961 convention be held in that city. It was indicated that the invitation would be accepted if suitable arrangements can be made.

Most of the women involved, said Dr. Dymond, came from outside the labour force directly into employment and thus did not reduce unemployment as an equivalent increase in male employment would have done.

Another major imbalance creating unemployment, Dr. Dymond pointed out, is that much of the labour demand recently has been for skilled, technical and professional workers, while large numbers of unskilled and untrained workers with relatively low levels of education are entering the labour force.

"Almost two thirds of the unemployed have only a primary school education or less," he said.

In Canada in recent years, 67 per cent of the students who enter primary school do not complete high school. The growth of job opportunities, on the other hand, is more and more in favour of persons having high school graduation or better.

In the past decade, said Dr. Dymond, the rate of growth for professional workers was 71 per cent; for skilled and technical workers, 38 per cent; for white-collar workers, 34 per cent; for semi-skilled and unskilled workers only 24 per cent; all other kinds of occupations have declined by 27 per cent.

Dr. Dymond concluded by saying that little difficulty is experienced in retraining

production workers for automated production jobs, but that difficulties have been encountered in re-training workers for skilled and technician jobs in industry because of their lack of sufficient education.

He said that above all there is a great need for a better integration between education and industry. A higher degree of integration would better meet the changing needs of Canada's economy for specialized manpower and make a more fundamental contribution to the adjustment problems of workers displaced through technological change.

Elections

David Archer was re-elected President of the Federation, Douglas Hamilton, Secretary-Treasurer.

For the 10 vice-presidencies, 14 candidates were nominated. Nine incumbents were re-elected and Hugh Doherty of the Pulp and Sulphite Workers Union was chosen in place of Wilfred Ostling of the same union, who was not a candidate.

Results of the voting for the vice-presidents were:

George Barlow, Retail, Wholesale and Department Store Union, 644; Edward "Scotty" Liness, Hod Carriers, 624; George Watson, United Textile Workers of America, 605; Purdy Churchill, Printing Pressmen, 597; Sam Hughes, Packinghouse Workers, 591; Michael Fenwick, Steelworkers, 548; William Punnett, United Rubber Workers, 545; William Boothroyd, Machinists, 526; Richard Courtney, United Auto Workers, 485; Hugh Doherty, Pulp and Sulphite Workers, 452.

Deputy Minister A. H. Brown Honorary President of CAALL

A. H. Brown, Deputy Minister of Labour, was named an honorary president of the Canadian Association of Administrators of Labour Legislation at the closing session of its 19th annual conference.

Adam Bell, Victoria, B.C., the first president of the Association, was also named an honorary president.

A report of the conference appears on page 1309 of this issue.

Boilermakers' Former President, Charles MacGowan Dies at 73

A leader in the merger of the American Federation of Labor and the Congress of Industrial Organizations, and a vice-president of the merged groups, Charles J. MacGowan, President Emeritus of the International Brotherhood of Boilermakers, Iron Ship Builders, Blacksmiths, Forgers and Helpers (AFL-CIO-CLC), died October 27 in Kansas City, Kansas, at the age of 73 years.

Annual Conventions of British Columbia, Saskatchewan, Alberta Labour Federations

Suggestions for alleviating unemployment made by all three provincial bodies, and all pledge support for new political party. Alberta and B.C. unions seek repeal or amendment of provincial trade union legislation enacted last year

British Columbia Federation of Labour

A six-point program to end unemployment was adopted at the 5th annual convention of the British Columbia Federation of Labour, held in Vancouver October 24 to 28.

The more than 300 delegates also approved a resolution calling on all union members in the province to press for a seven-hour day in future negotiations.

The third major resolution adopted—by a standing vote in which, after a stormy 3½-hour debate, only 12 delegates registered opposition—was one to support and “co-operate closely with the CCF in the nomination of candidates” and to “co-ordinate campaign activities” in a federal election if one is called before formation of the new party next July.

Delegates from four unions who opposed political affiliation by organized labour were told by a Federation vice-president that no affiliate would be compelled to accept the Federation’s political action policy. The dissenting delegates were from the Meat Cutters and Butcher Workmen, the Marine Workers and Boilermakers’ Industrial Union, a local of the International Association of Machinists, and the Office Employees’ International Union.

The Federation appealed to the public and to businessmen to support the six-point program to deal with unemployment. It said that everybody in the country was affected by unemployment, and that labour must have the support of others in fighting it.

The six points approved by the convention were:

—Joint planning by labour and management to shorten the work week with no reduction in pay, and to provide for a retraining program to meet the effects of automation on employment.

—An emergency program of public investment, with the co-operation of federal, provincial and municipal governments, to improve educational, health, housing and other public activities and services.

—Government help in building up industries, particularly those related to natural resources.

—Reduced taxes on lower incomes and increased taxes on profits and capital gains to raise the purchasing power of wages.

—Special November sessions of Parliament and of the B.C. Legislature.

—A full employment act that would set full employment as a national aim.

The convention contended that the program would immediately increase business for everyone, and that it was the only alternative to a devastating business paralysis.

Joe Morris, First Vice-President of the Federation, said it was better economics to stimulate productive employment than to finance bare subsistence for the unemployed.

Shorter Work Week

The resolution calling on all member unions to press for a seven-hour day in all future contract negotiations was unanimously supported.

Pat O’Neal, Secretary of the Federation, summarized the statements of a dozen speakers who spoke for the resolution when he said:

“It is a major way—really the only way—to combat serious unemployment which exists and to meet the technological advances in many industries in B.C.”

Other Resolutions

The convention also adopted a resolution in favour of a plan to expedite and improve contract negotiations, and it urged resort to strikes to force the repeal of provincial legislation restricting picketing.

The negotiation plan would limit direct negotiations between the parties to a period of 10 days. If no settlement were reached in that time, the Minister of Labour, on request from either side, would appoint a mediator. If the mediator failed, the union would be free to conduct a strike vote. The plan would eliminate conciliation procedures, which unionists contend are unsatisfactory.

With regard to strikes to force changes in legislation, Federation officials said later that the intention was not to call a general strike. When a union engaged in a strike, however, in which it might “have to” defy

the legislation, the officers would have the power to back a request for the Federation's support.

The convention instructed the Federation's officers to "formulate a policy of full economic and political action, including if necessary the calling of work stoppages," to fight for the repeal of the two amendments to the Trades Union Act passed in 1959.

In other resolutions, the convention urged the provincial Government to:

—Introduce a province-wide health insurance plan.

—Make it an offence for employers to hire strike breakers.

—Provide more facilities for the education of retarded children.

—Enact fair employment and fair accommodation legislation.

—Do away with legislation preventing the formation of co-operating drug companies.

The Federation decided to ask the CLC to do two things: undertake a campaign for a national health insurance plan, and to work with the AFL-CIO to get restrictions on political action removed from constitutions affecting Canadian locals of international unions.

In another resolution, the convention urged that the Federation and the CLC should undertake a program of education and publicity against "moonlighting."

Other resolutions adopted asked for an independent appeal board for workmen's compensation cases; a ban on election news in newspapers 48 hours before the election, and a request that United States television stations directing programs to Canada observe the same rule; a merchant marine for Canada; trade with all countries; and that Canada adopt an independent position in world affairs.

Certain delegates again pressed their request that the CLC should hasten its efforts to bring back to its fold unions that have been excluded or expelled. Orville Braaten, Pulp, Sulphite and Paper Mill Workers, warned the delegates that the seeds of a second labour congress were being sown in Canada, because so many unions are outside the CLC.

The Federation decided to send a fact-finding delegation to Cuba. The delegation will comprise three officials of the Federation, and delegates from affiliated unions if they can pay their way. The proposed tour was recommended by a committee because "we have heard reports that differ from reports" in the newspapers.

The convention demanded the restoration by the provincial Government of the check-

off of union dues for civil servants. The resolution was passed unanimously. The convention stated that the Government's action in cancelling the checkoff might be interpreted as a signal of its willingness to co-operate with cancellation of the check-off from other union contracts.

(The British Columbia Government Employees' Association sent no delegates to the convention, having suspended its affiliation with the Federation when the Government cancelled the check-off of its dues (L.G., Nov., p. 1113).

At the close of the convention the delegates approved without change a report by the natural resources committee that made a savage attack on business. Two of the committee members dissociated themselves from the "indecent" wording of the report.

Among other things, the report demanded that the province's forest industries be denied what amounts to a perpetual supply of raw material unless they grant a guaranteed annual wage.

President's Address

Robert Smeal, President of the Federation, in his address to the convention said that big business had succeeded in making labour the scapegoat for the disastrous results of big business policies, and that government apathy had allowed serious unemployment to build up. Government planning and control of investment is needed for economic stability, he said.

Mr. Smeal said that labour had entered politics because the struggle to right the country's wrongs had expanded to the provincial and national spheres from the traditional field of the struggle between labour and management. "We must now be prepared to act on the political scene," he asserted.

Mayor Tom Alsbury

Mayor Tom Alsbury of Vancouver, who addressed the opening session, likened unemployment to a malignant cancer eating up wages, profits and taxes, and eventually the entire economy. With the grim spectre of the '30s looming up, unemployment, he said, would not be solved by the mutual accusations of labour, management and government.

He recommended a thorough study of markets, prices, wages and costs as the first step toward dealing with unemployment. He said that as a result of unemployment the city's financial position is worsening and tax arrears are increasing. Taxpayers who are unemployed cannot pay taxes on time and sometimes cannot pay them at all.

Donald MacDonald

Unemployment is a national disgrace, said Donald MacDonald, Secretary-Treasurer of the Canadian Labour Congress, one of the special speakers at the convention. There is every indication that there will be 750,000 or perhaps a million unemployed in Canada this winter, he warned the delegates.

He ascribed unemployment not only to the economic recession, but also to the fact that although the country is producing more and more goods and services, it is doing so with less labour. "Even if there were no economic recession we would still be confronted by a monumental unemployment problem," he said.

Saskatchewan Federation of Labour

Implementation of plans for special investment and large-scale public works programs and development of natural resources to alleviate unemployment were urged on the federal and provincial governments by the 5th annual convention of the Saskatchewan Federation of Labour, held in Prince Albert from October 20 to 22. More than 150 delegates attended.

Unemployment is now a grave problem that can be solved only through collective and co-ordinated efforts of federal, provincial and municipal governments, said Hon. C. C. Williams, Minister of Labour of Saskatchewan, who was one of the speakers. He said, however, that the heaviest responsibility rests with the federal Government, since it had control over decisive sections of the country's economy.

Another speaker, Donald MacDonald, Secretary-Treasurer of the Canadian Labour Congress, said that the four problems confronting labour in Canada today were: unemployment, lack of legislative progress, a hostile climate of public opinion generated through mass media propaganda, and lack of progress in organization.

Speaking of the new party, he said that it would be a vehicle "truly representative" of the needs, hopes and aspirations of the people of the nation. It was up to labour to marshal all its forces to the support of the new party, and he said that he had no doubt of "the ultimate success of the new party, which will probably become a national government in our time."

Hon. W. G. Davies, provincial Minister of Public Works and former Executive Secretary of the Federation, told the dele-

Elections

With one exception, the head officers of the Federation were re-elected without opposition. Returned to office: President Robert Smeal, Secretary Patrick O'Neal, and Russ St. Eloi, Mel Kemmis and Ray Haynes, Second, Third and Fourth Vice-Presidents respectively.

Joe Morris, Western Regional President of the International Woodworkers, was opposed in the election for First Vice-President by Stu Hodgson, Financial Secretary of the Vancouver local of the IWA. Mr. Morris, however, was re-elected by 185 votes to 146.

gates that the present unemployment situation was "a crying disgrace." He blamed both the present and former Government in Ottawa for failure to do anything about unemployment.

Resolutions at the convention asked for an increase in old age pensions to \$85 a month, with provision for changes to reflect the annual increase in the gross national product; "unalterably opposed" the testing and use of atomic and hydrogen bombs and thermo-nuclear weapons; recommended alternative methods of payment for physicians that would encourage "good quality of medical care and safeguard the medical program from excessive costs;" asked the Saskatchewan Government to lift all restrictions on liquor advertising; asked the same government to "take immediate steps to prevent the irresponsible growth of corporation farming;" condemned municipal councils in the province for "refusing to take effective action in the field of low-rental and low-cost housing;" and asked the provincial Government to establish a provincial crown corporation for the construction of low-rental and low-cost housing projects.

Fred. J. McLelland, Saskatoon, was re-elected President. Two new Vice-Presidents were Harry Apps, Prince Albert, and S. W. Simmons, Moose Jaw. Walter Smishek was re-elected Executive Secretary.

Other officers elected included: Treasurer, Ivan Moore, Regina; Secretary, Louis Steil, North Battleford; Directors, Ray Christie, Moose Jaw; Robert Van Impe, Saskatoon; Alex Primeau, Prince Albert; and Arthur Miles, Regina.

Alberta Federation of Labour

Active support for the new political party was approved by the 5th convention of the Alberta Federation of Labour, held in Calgary on October 26 to 28. The measure was the subject of heated debate, however, and was opposed by a third of the 300 delegates who attended.

The resolution was in two parts: first, that the Federation "wholeheartedly endorse the formation of the party" and, second, that the Federation participate in the promotion of the party by giving leadership and guidance to local unions and affiliates and any other interested groups.

Peter Ugenutz, Edmonton, in support of the motion, declared that political action was the only course left to organized labour, since "we can't protect what we have achieved any other way."

On the other hand, the International Brotherhood of Electrical Workers and the Brotherhood of Carpenters and Joiners decided to keep clear of political action, and the delegates of the two unions abstained from voting on the question.

About 50 out of the 140 resolutions submitted had to do with the Alberta Labour Act. Three of the resolutions adopted sought repeal or amendment of sections of the Act: one asked for repeal of a section of the Act that allows employers to organize company unions or employees' organizations, another asked for amendment of part of a section to allow voting as a bargaining unit instead of by shop, and a third urged repeal of the section of the Act that gives the lieutenant-governor-in-council power to take steps to bring about settlements in strikes affecting public utilities.

In other resolutions the Federation asked the provincial Government to:

—Make it an offence for employers to hire strikebreakers.

—Provide more means of education for retarded children.

—Enact fair employment, and fair accommodation legislation.

—Set a minimum wage of \$1.25 an hour.

Another resolution recommended that a demand be made of the federal and provincial governments for the enactment of a maximum five-day, 30-hour work week for all workers in Canada, with no reduction in take-home pay.

A resolution requiring an increase of 1 cent in the per capita tax paid by locals to the Federation was passed with slight opposition. Affiliates will now be assessed 5 cents per member per month instead of 4 cents. The increase in the levy was expected to help to pay the salary of a full-time executive secretary.

Hon. Raymond Reiersen, Alberta Minister of Labour, in welcoming the delegates defended the sweeping changes made in the Alberta Labour Act during the last session of the Legislature. Referring specifically to a number of the amendments, he said, "There isn't one amendment to the Act that will restrain or restrict your right to organize, to bargain collectively, to strike and all the other rights we fought for, lived for, and that we wish to pass on."

One of the guest speakers at the convention was Hazen Argue, CCF leader in the House of Commons. The new party must be founded on free trade, he declared. "We must resist higher tariffs," he said, arguing that they only led to increased costs, lower standards of living and shrinking trade. He called for Canada to associate herself with the British, with the Outer Seven and the Inner Six trade markets, and to participate in an Atlantic free trade area.

All executive officers of the Federation were re-elected. They are: Joseph (Jimmy) James, President; Peter McSheffrey, Secretary-Treasurer; Donovan Swailes, First Vice-President; and Sam Goodman, Henry Schellenburg, G. Lawrence Taylor, J. R. Nicholls and Mike Sedik, Vice-Presidents.

Wage increases in United States manufacturing in 1959 went to approximately 8,700,000 production workers under union contracts or management policies, it was reported by the Bureau of Labor Statistics in a release that included non-union and small union situations.

The most common increases in 1959 were 9 to 10 cents an hour. These applied to some 1,903,000 production workers employed in factories where general wage changes were made.

The range in the increase amount was from less than 3 cents an hour for 1,043,000 workers to 19 cents and more for 96,000.

Canadian Chamber of Commerce Makes Annual Presentation to Government

Urges prohibition of sympathy strikes, secondary boycotts, and picketing in certain circumstances; recommends separation of unemployment assistance from unemployment insurance, and independent study of Unemployment Insurance Act

Prohibition of sympathy strikes, secondary boycotts and picketing in certain circumstances was urged by The Canadian Chamber of Commerce in its annual presentation to the federal Government on November 22. The brief was based on policy declarations approved at the Chamber's annual meeting in October.

The Chamber recommended also that unemployment assistance be separated from unemployment insurance, and that an independent study be made of the Unemployment Insurance Act with a view to restoring the Unemployment Insurance Fund to a sound financial basis.

Again this year a ban was called for on agreements that deny or terminate employment because of failure to become or remain a union member.

In a reference to automation, the Chamber's submission said:

We have followed with interest the steps that the Government has taken in consultation with industry and labour representatives to place the development of automation in proper focus, and it is our view that automation is part of continuing industrial evolution and we feel that there must be a recognition that failure to harness its advantages to improve productivity would prove fatal to the competitive position of many Canadian industries with corresponding damage to our hopes of improving our standard of living. In this area we have stressed to our own members the need for management to give suitable planning to effect any changes smoothly. We feel that the increasing importance of education designed to meet the needs for different skills and more engineers and technicians should receive constant attention.

Among the types of work stoppages that should be prohibited, the Chamber said, were "strikes and lockouts endangering the health or safety of the public." Unresolved bargaining issues in these areas should be settled by arbitration.

The Chamber recommended that all strikes during the life of an agreement should be prohibited, that provision should be made for the taking of secret strike votes under independent supervision, that strikes should be made illegal unless authorized by the majority of the employees concerned, and that no strike should take place more than 30 days after the taking of a strike vote.

Another recommendation was that the appropriate minister of the crown should, during the course of a strike, have authority to order a strike settlement vote to be taken by secret ballot.

It recommended that picketing should be prohibited: when the object is to secure bargaining rights; in a jurisdictional dispute; when the employer being picketed is not a party to a labour dispute; and at premises other than those to which a legal strike or lockout is in effect. In any case, picketing should be done only by employees of the establishment concerned, the Chamber declared.

It asked that as a condition of certification unions be required to register with the Department of Labour, and "under conditions comparable with those existing in the Companies Act to safeguard the interests of shareholders, be required to operate under prescribed rules and by-laws designed to protect the basic rights of their members."

It recommended that legislation be clarified or enacted to make trade unions answerable to the courts in civil actions.

The Chamber recommended that those employed as watchmen or security guards, or in a confidential capacity, be excluded from any unit certified for collective bargaining.

Judges should continue to be eligible for appointment as chairmen of conciliation and arbitration boards, the Chamber said.

It urges that recourse to the courts should be made available as a means of testing the decisions of labour relations boards. It also asked that the courts should be free to decide whether a prosecution under labour law was in order or not, and that the consent of the minister to a prosecution should be done away with.

"There should be recourse to the courts on specific points of law and jurisdiction arising from the awards of arbitrators," the statement said.

Unemployment Insurance

Referring to the Unemployment Insurance Fund, the statement said that "the original concept of unemployment insurance should not be extended to embrace unemployment

assistance by using contributions from non-seasonal employment to subsidize seasonal unemployment."

It urged the federal Government to make unemployment assistance separate from the Unemployment Insurance Fund, and to provide "that an independent body study the Unemployment Insurance Act with a view to restoring the Unemployment Insurance Fund to a sound financial basis, in particular examining the Act as to sources of drain, coverage and financing . . ."

The Chamber urged its members to plan their work as far as possible so as to "give employment during any seasonal unemployment period," and to co-operate with local agencies in combatting seasonal unemployment.

It also advised members to recognize the advantages of hiring older workers and to employ them as much as possible. It likewise urged them to give favourable consideration to employing handicapped persons in work for which they were suited.

The statement recommended "that aggressive government action be taken to ensure a greater and more continuous flow of desirable immigrants . . ." and "that efforts be made to attract and secure immigrants with special skills in the United Kingdom and on the Continent by offering employment opportunities to be arranged through direct contacts with Canadian employers."

Regarding health services, the statement said, "The Chamber believes that in a free society the individual has the primary responsibility to make provision for and pay the cost of medical care for himself and his family." It went on to say that it was impressed "with the rapid extension and growth of voluntary service and indemnity plans for prepaid medical care. These voluntary plans should be encouraged with aid from employers when appropriate."

It said that it was concerned about the constant and persistent demands for increased health benefits to be provided by the state. "The Chamber firmly believes that future financial assistance by the federal Government should be directed only to the areas in which the expense of illness is clearly beyond the means of the individual."

The Chamber requested the federal Government to encourage and support the provinces in every possible way in developing co-ordinated rehabilitation programs that would provide the facilities and services necessary "to bring comprehensive rehabilitation to those individuals who can benefit." But it said that help by the federal Government should be limited to those who cannot help themselves, to the indigent, the aged,

the chronically ill and those who suffer catastrophic medical expense.

The statement urged the promotion of closer understanding between urban and rural people, greater help by industry and commerce in expanding agricultural research, and the development of an effective national farm safety program. It opposed the "use of Government marketing boards which adversely affects the normal and free enterprise method of processing, manufacturing, transporting, storing, marketing and merchandising the processed products of the farm."

Taxation

The Chamber said that it believed the burden of taxation in Canada was too heavy, and it advised a "re-examination of the entire tax structure." Careful control of federal expenditure, it said, would leave a greater share of the tax dollar for provincial and municipal governments for essential projects. However, it also urged the need for prudence by the latter governments in their expenditures.

"In the field of social welfare, the Chamber believes that a careful distinction must be drawn between what is socially desirable as an ultimate aim and what can be achieved without damaging the system that makes our social welfare advances possible . . . In principle, the Chamber believes that any additional welfare expenditures should be delayed until the full impact of present commitments can be assessed," the statement said.

Regarding international trade relations, the Chamber urged the Canadian Government to encourage the development and use of the country's resources and to accelerate industrialization, to continue to support the General Agreement on Tariffs and Trade and similar agreements, and to continue its economic support of the less industrialized countries, especially those within the Commonwealth.

Referring to the "Buy Canadian" campaign, it said that "without restricting the choice of the consumer, the Chamber urges its members to promote, wherever practicable, the purchase of Canadian-made goods and services."

The Chamber expressed concern at the decline of Canadian-owned shipping and about the future prospects of the country's shipbuilding industry. "It is not in the national interest that Canadian participation should be reduced to the point where these essential services are controlled or exclusively provided by foreign interests," the statement said.

Businesses owned by non-residents would list their stock on Canadian stock exchanges; include Canadians on their boards of directors; employ Canadians whenever possible, especially in managerial and technical positions; purchase equipment, materials and supplies locally; and publish separate finan-

cial statements on their Canadian operations, the Chamber recommended.

All told, some 45 policy declarations were laid before the Government as representing the majority views of some 800 Boards of Trade and Chambers of Commerce with an underlying membership of some 125,000 businessmen across Canada.

Dispute Settlement in Sweden

Sweden, most highly unionized country in the world, has fewest strikes. Method of settling labour-management disputes and operations of Labour Court described by Honorary President of Canadian-Scandinavian Foundation in Montreal address

A description of labour-management dispute settlement and of the workings of the Labour Court in Sweden was given last month by the Honorary President of the Canadian-Scandinavian Foundation in an address to the Montreal members of the Canadian Progress Club.

Although Sweden is the most highly unionized country in the world, it has the fewest strikes, said Robson Black, who is President Emeritus of the Canadian Forestry Association.

With 94 per cent of all gainfully employed persons in Sweden holding union cards, the country's 2,000,000 workers, year after year, have been losing only 4,000 man-days through open conflicts with their employers. In comparison, Canada, with "only about 35 per cent of workers unionized," last year lost 2,400,000 man-days through work stoppages, "in addition to widespread industrial disruption affecting the whole national economy," he pointed out.

Peaceful negotiation of labour-management differences, he said, that now prevails in the Scandinavian countries is predominantly a product of the self-discipline of employers' and workers' organizations, "which have come to regard the strike weapon as an archaic and clumsy instrument, hurtful to both parties and damaging to the public order.

"Government intervention or compulsory legislative action exert no influence whatever in leading the contending parties to an amicable settlement," Mr. Black said.

Historically, he noted that in the early 1900's, with labour unions poorly organized and ineffective, Swedish industry underwent repeated shutdowns. Strikes and lockouts occurred in rapid succession.

Influential public leaders demanded drastic government control of unions and

managements. But labour and management, fearing political domination, met in a national conference in 1926 and drew up a mutual pact binding both parties to a program of peaceful settlements. With the exception of "one serious defection in 1945—involving a strike of metal workers—there have been no major disturbances to the present time," he said.

The key to labour-management peace in Sweden, Norway and Denmark is the centralization of all procedures by unions and employers in two powerful bodies located in the national capital: the Federation of Labour Unions, and the Federation of Employers.

Under the prevailing arrangement, a local or craft union must carry any dispute to its national federation council, composed of the chairmen of all the unions in the country. An aggrieved employer, in turn, must similarly submit his case to his national federation.

The two national organizations then arrange a conference to examine the dispute. Discussion may go on for days "but always with a view to finding a compromise and standing clear of an open break.

"Far removed from local antagonisms and personalities," said Mr. Black, "the joint tribunal works hard to make the best possible bargain and while their negotiations continue, workers continue at their jobs and factories maintain production."

Despite such "painstaking precautions" by both sides to keep the peace, a few short-lived work stoppages occur now and then. "When they do, no company would think of hiring strike-breakers, nor would the unions interfere with the movement of employees engaged in plant maintenance," he said.

Of particular interest to Canadian students of Swedish labour-management rela-

tions is the Labour Court at Stockholm, "a unique institution".

The Labour Court deals only with the interpretation of collective agreements, and can in no way affect wages or working hours. Should a union or an employer claim an infringement of a collective agreement, the Labour Court gives the case a prompt hearing. Seven persons sit on the tribunal: two senior court judges, one non-partisan social expert, and two representatives each from management and labour.

Complaints come almost equally from workers and managements, and each party prosecutes its case with determination. Yet unanimous verdicts are rendered in 85 cases out of every 100.

Thus, "the delegates of employers continually take sides with the labour plaintiffs, or the labour delegates enter judgment against the claims set forth by their union brethren," Mr. Black said.

In a wildcat strike, the Labour Court has the authority to impose fines of \$40 on each "wildcatter" and in several instances has turned back the fines collected to the injured employer.

"Should an employer's illegal action toward his working staff deserve the Court's condemnation," said Mr. Black, "he would be lucky to escape fines of several thousand dollars which, at the Court's discretion, may be paid into union funds."

In conclusion, Mr. Black noted that to many persons it seems paradoxical that "highly-industrialized Sweden, with almost every worker intensely loyal to his union and with a Social Democrat Government in power for 26 years, should maintain 'free enterprise' to a fuller degree than is the case in Canada. Almost 95 per cent of all commercial activity is owned and managed by private corporations and the labour organizations insist that it should remain that way.

"By friendly and skilled negotiation, the Swedes and their Norwegian and Danish neighbours have built up the highest standard of living in all Europe, and a social welfare system more comprehensive and generous in scope than can be matched by anything achieved thus far on the North American Continent.

"As labour and management in Sweden move progressively into a working partnership, the influence of Communist teaching dwindles ever closer to zero." The wage-earner is so surrounded with freedoms and privileges as to induce within himself a new respect for self-discipline, "which in turn is reflected in a distaste for all labour 'agitators' and an insistence upon high standards of character in his local and national leaders."

How To Increase Employee Skills Is Automation's Chief Problem

Provision for adequate education—the increase of employee skills by every possible type of training program—is one of the chief problems for the future, says Roger W. Bolz, publisher and editor of *Automation* magazine.

Some steps that could be taken to produce adequate education were proposed by Mr. Bolz in a paper included in a collection released under the title "New Views on Automation" by the Subcommittee on Automation and Energy Resources of the Joint Economic Committee of the United States Congress.

Among his recommendations were:

—Legislation to provide more capital for small and medium-sized plants wishing to automate;

—Stimulation of in-plant apprenticeship, on-the-job training courses, and special educational plans through direct tax advantages;

—Creation of a national area redevelopment board to provide help to distressed areas and to help stimulate development of new industries in such areas;

—Provision of tax incentives to encourage persons to relocate or readjust to severe displacement resulting from automation or from failure to automate;

—Creation of a national automation planning board of engineers to serve as an information clearing house and consulting panel for both industry and government guidance.

"New Views on Automation" presents the current thinking of U.S. government agencies, spokesmen of labour and management, and interested professional men on the effect of technological change and automation on economic stability and growth.

Subjects discussed include the amount of automation that has taken place since 1957, the amount of new investment that may come in the foreseeable future for automation, the extent and type of employee displacement, problems of retraining and allocating workers, and the role government should play in these new developments.

NES Older Worker Counselling Service

Toronto NES office pioneered counselling service for job applicants over 45 after finding that older job-seekers were having difficulty in obtaining work. Program then extended to other cities, and has been copied by other countries

More than 12 years ago, the Department of Labour's Ontario Advisory Committee became concerned over repeated reports from many areas that applicants for employment over 45 years of age were finding it increasingly difficult to obtain work. The Committee recommended to the Regional Director of the National Employment Service-Unemployment Insurance Commission that steps be taken to evaluate the capabilities of these workers.

The Director supported the recommendation, and a survey of registered job-seekers over 45 years of age was made by the NES in five of the larger offices in Ontario.

It was found that these older men and women were, for the most part, quite capable of work, that there were few job vacancies for them, and that many were registered for jobs they did not like but which were commonly considered "suitable" for older workers.

It was then recommended that certain of these applicants be counselled to determine the jobs they wanted to do, and could do. Thus began, for the first time, a counselling program for older job applicants conducted by a public employment service, the NES in Toronto.

The hope underlying the program was that it might lead to a better understanding of these workers and a more effective classification of their employment possibilities. So successful was the counselling service that it was extended to other cities in Canada and copied by other countries.

The majority of those interviewed have been over 60 years of age and, after counselling, most have obtained jobs they liked. Practically all who found work remained in their new jobs.

This discovery of the exceptional capabilities of the older worker has influenced many employers to change their hiring and, in some cases, their retirement policy.

For example, a large insurance firm whose policy was to hire only young persons now hires, and promotes, older applicants as well. A large metal processing plant has made its retirement policy more flexible so that workers may stay on after 65. A well-known drug concern has reported that there is now absolutely no discrimination, conscious or unconscious, against older

workers; the firm now hires the best qualified applicants regardless of age.

Three placements illustrate the results achieved through counselling.

A widow, charming and capable, had to look for gainful employment at 60 years of age. Counselling revealed her possibilities as a housekeeper in a church summer conference. So efficiently did she perform this work that she won the respect of her employer and her subordinates, and, at the end of the summer, she was referred to a large hotel for a job as an inspectress, to inspect the rooms before occupancy. The hotel, which had suggested a woman "under 40," is happy with the older worker.

A large retail china and glass store placed an order for a "young and dependable" porter, whose duties would be the unpacking and cleaning of expensive china. The NES selection officer had counselled an applicant he thought would be ideal for the job—a man 63 years of age. This man's reliability and appearance were such that he could do the work efficiently, and would be an asset to the employer if seen on the sales floor. When these qualifications were pointed out to the employer, the man was hired, and is satisfactory in every way. The employer is convinced that his own astuteness led to the man's hiring.

A high ranking army officer, 50 years of age, was about to retire from the service. He was, of course, capable, and he had an impressive appearance. He was interviewed by the NES and his application sent to the executive and professional placement officer in the city where he had chosen to live. Immediately on its receipt, three likely employers were telephoned and copies of the application mailed to them. One of the three firms contacted the man directly and arranged a personal interview. As a result, when the officer retired from the army, a position as general sales manager, at a starting salary of approximately \$10,000 a year, was awaiting him.

There is still a long way to go. Employers are still seeking youth—with experience! But appreciation of the advantages of hiring mature workers is spreading more and more.

—Dr. W. G. Scott,
Ontario Regional Special Placements Officer,
Unemployment Insurance Commission

OFL Sets Up Women's Committee

Conference attended by 160 women union members and wives of members, held the day before OFL's annual convention, decides to set up committee as basis for province-wide organization of women associated with labour movement in Ontario

A Women's Committee of the Ontario Federation of Labour is to be set up "as the basis for a women's trade union organization in Ontario," it was decided at a women's conference attended by 160 women union members and wives of members, held the day prior to the OFL annual convention last month.

The Women's Committee will be composed of members of the OFL Executive Council with representation from labour councils affiliated with the Federation. Its primary objective is to form a province-wide organization of women associated with the labour movement either as members or wives of members. To accomplish this it will co-operate with labour councils in each area and will work closely with the Ladies' Auxiliary Organizing Committee of the Canadian Labour Congress.

A second task will be to consider the practicability of holding women's sessions at the OFL-CLC Education School at Niagara Falls in February and at a summer school at Port Elgin. Future programs will be outlined in a progress report to be presented by the Committee to a pre-convention women's conference in 1961.

International Conference

A conference on the problems of women workers was recently held in Brussels under the auspices of the International Federation of Christmas Trade Unions. Miss Jeanne Duval, a vice-president of the Confederation of National Trade Unions (formerly CCCL), was among the 50 delegates.

Insufficient progress was being made throughout the world in the application of the principle of equal pay for equal work, the Conference noted. It asked the national affiliates of the IFCTU to carry out more detailed studies of the question in their own countries, to consider methods of speeding up the acceptance of the principle, and particularly to urge governments that have not already done so to ratify the ILO convention on equal pay.

On the question of vocational training for girls and women the Conference stressed that all educational facilities should be available equally to boys and girls and that girls should be encouraged to make full use of them. Vocational guidance should begin early, in the upper grades of

the primary schools. Refresher courses should be available to working women so that their skills and knowledge may keep abreast of scientific and technical developments. Older women whose family responsibilities have kept them out of the labour force for years but who want to work for pay should also have suitable opportunities for vocational training, perhaps in the form of refresher courses.

The Conference passed a resolution urging the labour movement to adapt itself to the "feminine mentality" in order to attract more women workers to its ranks. Affiliated organizations were asked to undertake campaigns to make women workers more aware of the important contribution they are making to their country's economy. At the same time trade unions were asked to press for social legislation that would assist mothers to stay at home to bring up their children if they wished to do so.

COTC to Enroll Women

For the first time, women students are to be enrolled in the Canadian Officers' Training Corps at Canadian universities.

To meet the growing need for trained dietitians in the Army, it is intended to recruit 20 students of home economics and household science faculties this fall. The women who meet the standards will be enrolled as officer cadets in the COTC. They will receive theoretical instruction during the winter months and take part in practical training during the summer.

Philippines Women's Bureau

A separate Women's and Minors' Bureau has recently been established within the Philippines Department of Labour, replacing the former Women's and Minors' Division of the Bureau of Labour Standards.

The Bureau will enforce labour laws affecting women and children and make recommendations to the Secretary of Labour regarding legislation covering their employment. In this connection, the Bureau will assist in reviewing cases involving maternity leave and equal pay claims.

Staff of the Bureau are authorized to enter places of business where women and children work to inspect records and question employees on matters coming within the scope of the act.

50 Years Ago This Month

Conciliation board in dispute between Canadian Pacific Steamship Company and Sailors' Union thinks request for 10-hour day reasonable. TLC submits annual brief, expresses its opposition to compulsory arbitration of labour disputes

Payment for handling cargo on Sundays and holidays, when the vessel was not in danger; a reduction in working hours to 10 a day; overtime at the rate of 50 cents an hour for work on Sundays and holidays and for time in excess of the regular day; and more sanitary quarters for the men—these were the main demands in November 1910 of the Sailors' Union, representing 86 deckhands employed by the Canadian Pacific Steamship Company at Vancouver and Victoria.

The report of the conciliation board appointed to deal with the dispute, which was published in the *LABOUR GAZETTE* of December 1910, stated that the men had a grievance regarding hours, remuneration, accommodation and food.

The Board considered the demand for overtime pay for work on Sundays and holidays a fair one. It also thought the request for a 10-hour day was reasonable. It said that the evidence showed that "on some 'runs' the men had worked as long as 30 hours at a stretch, and that a 15-hour day was not unusual." It did not recommend the "watch and watch system" that the men had asked for as an alternative to the 10-hour day.

The Board recommended that time worked in excess of 10 hours a day and on Sundays and holidays should be paid for at the rate of 40 cents an hour, the same as the rate then paid to longshoremen for the same kind of work in port.

"The accommodation for the deckhands varied in the different boats from bad to fair. In nearly every case greater attention should be given to cleanliness and comfort," the Board said. Complaints about food were general, according to the report.

According to evidence given before the Board, the sum allowed for food was 76 cents a day per man in July and 80 cents in August. The Board considered this "ample," but it was convinced that "the men do not receive anything like the food this allowance should supply." The remedy, it said, was closer supervision by the Company of its employees "connected with the culinary service."

The report made the general statement that it had been proved that the deckhands on most coasting ships in nearby American

waters had better working conditions than those "being asked for here," and "also that the conditions in the same class of work in other parts of the British Empire are much superior."

In an interview with the Prime Minister, Sir Wilfrid Laurier, and Mr. Mackenzie King, the Minister of Labour, a delegation from the Trades and Labour Congress in November 1910 submitted a number of requests based on resolutions passed at the 1910 annual convention of the Congress. Things asked for included:

—A law requiring proper inspection of locomotive steam boilers.

—Old age pensions, appointment of extra Fair Wage Officers, amendment of the Fair Wage schedule and enforcement regarding immigrants.

—A requirement that railway companies provide proper sheds for carmen, "who have at present to work out of doors in all kinds of weather."

—An eight-hour day, double pay for Sunday work, an improved uniform, and "a Superannuation Act providing for retirement at 55 years of age, or on completion of 25 years' service," for letter carriers.

—Legislation limiting hours of labour on public works to eight a day.

Opposition was expressed to compulsory arbitration as a means of settling labour disputes, and to military displays on Labour Day.

The Minister of Labour in his reply, referring to the request of the carmen, pointed out that between 1,300 and 1,400 workmen were killed each year in Canada through industrial accidents.

(The total number of persons 10 years of age and over for whom occupation was recorded was given in the 1911 census as 2,723,634.)

Mackenzie King discussed the Eight Hour Day Bill introduced during the 1909 session of Parliament, and pointed out that in matters of this kind the Government had to act, first as the trustee of all the people, and secondly with the aim of being a model employer. Somewhere between these two considerations, he said, it should be possible to work out a solution regarding hours of work.

TEAMWORK in INDUSTRY

Five labour-management committees serving the interests of employer and 1,200 employees in the Nova Scotia Light and Power Company, Limited are "not in-expensive" but are "justifying their cost, both in time and money," according to General Manager A. R. Harrington.

"I consider labour-management committees a very useful tool for promoting efficiency and improving relations," he continued, "but they must be properly administered. Proper education in advance is the right approach—not forcing by impatience. Supervisors, the union and everyone who will be involved in the idea must all *want* an LMC."

Mr. Harrington also believes that unions are basically interested in joint consultation because "it gives employees a clearer picture of what goes on within a business organization and makes them feel more like partners in the enterprise."

A labour-management committee was first introduced into the company's Transit Division in 1958. Some thought had been given to organizing an LMC in every division at once, but it was ultimately decided that Transit should take the plunge alone on an experimental basis. Progress of the committee was so satisfactory that within a few months representatives of Local 1165, IBEW, were supporting requests by employees in the Eastern and Western Areas for a further extension of joint consultation. Eastern and Western Areas formed their committees in May 1959, and Thermal Division and Electric Operations five months later.

Freedom to speak one's mind at LMC meetings received strong support during the first annual joint meeting in Wolfville, N.S., of the Eastern and Western Area Committees. Parliamentary immunity and the scope of topics at LMC meetings were raised for discussion by Jack Riggs, co-chairman of the Western Area LMC, and President of Local 1165, IBEW.

R. M. Barteaux, Superintendent of Electric Operations, Halifax, and chairman of the joint meeting, stated that committee members are free to bring any matter to the meetings, and that subjects introduced would be dealt with according to their merits.

When Mr. Riggs was asked recently if he could picture a labour relations situation so hopeless that joint consultation could not help it, he replied: "Definitely not! No matter how rough the situation, a labour-management committee would solve their problems eventually."

He believes that increasing good faith between employees and company is one of the most important gains achieved through labour-management co-operation. "Grievances have been cut 'way down. Things we used to fight for at just the union level we now straighten out in labour-management."

Larry Fevens, a leading steam plant operator with the Thermal Division and union co-chairman of its labour-management committee, believes that joint consultation is one key to promoting better relations in Canadian industry generally. "Understanding between labour and management can be greatly extended by arranging for more personnel to serve on labour-management committees," he said.

Severe morale problems associated with being part of a business that isn't making money call for special efforts if good relations are to be maintained between labour and management, according to L. Currie Young, Superintendent, Transit Division.

"We need labour-management committees more than others do," he stated. "They are an excellent tool for communications, and a very worthwhile method of improving morale. They are needed particularly in times of stress to maintain relations on as friendly a level as possible. The better your labour-management communications, the better your chances of riding the storm."

Jack Kane, President of Division 508, Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America (AFL-CIO/CLC), expressed the opinion that joint consultation, by providing opportunities for company and union to become better acquainted with each other's point of view, enables people to "get a lot of good work done."

Added J. Arthur Mont, Business Agent for Division 508: "I would recommend a labour-management committee to any union local experiencing difficulties in its relations with management—and vice versa."

Establishment of Labour-Management Committees is encouraged and assisted by the Labour-Management Co-operation Service, Industrial Relations Branch, Department of Labour. In addition to field representatives located in key industrial centres, who are available to help both managements and trade unions, the Service provides various aids in the form of booklets, posters and films.

INTERNATIONAL LABOUR ORGANIZATION

Certification and Other Proceedings before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during October. The Board issued six certificates designating bargaining agents, ordered two representation votes, and rejected one application for certification and one application for revocation of certification. During the month the Board received five applications for certification.

Applications for Certification Granted

1. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of cook-deckhands employed aboard tugboats operated on the West Coast by the River Towing Co. Ltd. The Seafarers' International Union of North America, Canadian District, intervened (L.G., Sept., p. 914).

2. International Longshoremen's and Warehousemen's Union, Local 511, on behalf of a unit of employees of the Pacific Coast Terminals Co. Ltd., employed at the bulk loading terminal at Port Moody, B.C. The British Columbia Bulk Commodities Handlers Union, Local No. 1, intervened (L.G., Oct., p. 1027).

3. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of cook-deckhands employed aboard tugboats operated on the West Coast by the Bendickson Towing Co. Ltd. The Seafarers' International Union of North America, Canadian District, intervened (L.G., Oct., p. 1027).

4. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of drivers, warehousemen, and certain office employees of Eastern Transport Ltd., operating in and out of its terminals at Truro, Halifax and New Glasgow, N.S., and Moncton, N.B. (L.G., Oct., p. 1029).

5. International Longshoremen's and Warehousemen's Union, Local 512, on behalf of a unit of employees employed at

the Vancouver gear locker of Louis Wolfe and Sons (Vancouver) Limited (L.G., Oct., p. 1029).

6. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of deckhands, oilers, and cooks employed aboard the M.V. *Arctic Rover* by Arctic Shipping Ltd. (L.G., Nov., p. 1140).

Representation Votes Ordered

1. Canadian Brotherhood of Railway, Transport and General Workers, applicant, Kingcome Navigation Company Limited, Vancouver, respondent, and Seafarers' International Union of North America, Canadian District, intervener (L.G., Oct., p. 1029). The Board directed that the names of the applicant and the intervener be placed on the ballot (Returning Officer: G. H. Purvis).

2. Teamsters, Chauffeurs, Warehousemen and Helpers, Local 880, and General Truck Drivers' Union, Local 938, of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicants, and Tank Truck Transport Limited, Point Edward, Ont., respondent (L.G., Oct., p. 1029) (Returning Officer: T. B. McRae).

Application for Certification Rejected

National Association of Broadcast Employees and Technicians, applicant, Radio Victoriaville Limitée, Victoriaville, Que., respondent, and Jean-Paul Berthiaume, *et al*, interveners (L.G., Oct., p. 1027). The application was rejected because it was not supported by a majority of the employees in a representation vote conducted by the Board.

Application for Revocation Rejected

The Board rejected an application for revocation of certification affecting Thomp-

This section covers proceedings under the Industrial Relations and Disputes Investigation Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board, and the Industrial Relations Branch of the Department.

son's Transfer Company Limited, Middleton, N.S., applicant, and the Canadian Brotherhood of Railway, Transport and General Workers, respondent (L.G., Oct., p. 1029). The application was rejected for the reason that on the evidence the Board was not satisfied that the union no longer represented a majority of the employees in the unit for which it was certified.

Applications for Certification Received

1. Maritime Airline Pilots Association, on behalf of a unit of stewardesses, dispatchers, ticket agents, and general duty employees (cooks) employed by the Maritime Central Airways Limited (Investigating Officer: H. R. Pettigrove).

2. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of truck drivers, fire watchers and watchmen-gatekeepers employed by the Canadian National Railways in its hump

yard at Moncton, N.B. (Investigating Officer: G. A. Lane).

3. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of employees of Sydney Transfer and Storage Ltd., Sydney, N.S. (Investigating Officer: D. T. Cochrane).

4. Ready-Mix, Building Supply, Hydro Construction Drivers, Warehousemen and Helpers, Local Union 230 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of employees of Ottawa Pre-Mixed Concrete Limited, Ottawa, Ont. (Investigating Officer: B. H. Hardie).

5. General Truck Drivers' Union, Local 938 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of employees of Moloughney's Van and Storage Limited, Ottawa, Ont. (Investigating Officer: G. A. Lane).

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Industrial Relations Branch. The branch also acts as the administrative arm of the Canada Labour Relations Board, in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certificates given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to

the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of four officers resident in Vancouver comprises British Columbia, Alberta and the Yukon and Northwest Territories; two officers stationed in Winnipeg cover the province of Saskatchewan and Manitoba and Northwestern Ontario; four officers resident in Toronto confine their activities to Ontario; five officers in Montreal are assigned to the province of Quebec, and a total of three officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

Conciliation and Other Proceedings before the Minister of Labour

Conciliation Officers Appointed

During October, the Minister of Labour appointed conciliation officers to deal with the following disputes:

1. Radio Station CJMS Limited, Montreal, and National Association of Broadcast Employees and Technicians (Conciliation Officer: Rémi Duquette).

2. Vancouver Barge Transportation Limited, Vancouver, and Local 512, International Longshoremen's and Warehousemen's Union (Conciliation Officer: G. R. Currie).

3. Vancouver Barge Transportation Limited, Vancouver, and Seafarers' International Union of North America, Canadian District (Conciliation Officer: G. R. Currie).

4. Barnhill's Transfer Limited, Truro, N.S., and Locals 76 and 927 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Conciliation Officer: D. T. Cochrane).

5. Kitchener-Waterloo Broadcasting Co. Limited (Radio Station CKCR) Kitchener, Ont., and National Association of Broadcast Employees and Technicians (Conciliation Officer: T. B. McRae).

6. The Hamilton Harbour Commissioners, Hamilton, Ont., and the International Longshoremen's Association (Conciliation Officer: F. J. Ainsborough).

7. Thompson's Transfer Company Limited, Middleton, N.S., and Canadian Brotherhood of Railway, Transport and General Workers (Conciliation Officer: D. T. Cochrane).

Settlements Reported by Conciliation Officers

1. Canadian Pacific Air Lines, Limited, Vancouver Airport (Flight Kitchen Section at Sea Island), and General Truck Drivers and Helpers Union, Local 31 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Conciliation Officer: G. R. Currie) (L.G., Nov., p. 1140).

2. Upper Lakes Shipping Limited (Grain Elevator Division), Goderich, Ont., and Local 23736, Canadian Labour Congress (Conciliation Officer: T. B. McRae) (L.G., Nov., p. 1140).

3. Canadian Arsenals Limited (Gun Ammunition Division), Lindsay, Ont., and International Union of Operating Engineers, Local 796 (Conciliation Officer: T. B. McRae) (L.G., Nov., p. 1141).

Conciliation Boards Fully Constituted

1. The Board of Conciliation and Investigation established in September to deal with a dispute between the Canadian Pacific Railway Company, S.S. *Princess Helene*, and the Seafarers' International Union of North America, Canadian District (L.G., Nov., p. 1142) was fully constituted in October with the appointment of His Honour Judge K. L. Crowell, Bridgetown, N.S., as Chairman. Judge Crowell was appointed by the Minister on the joint recommendation of the other two members, E. Neil McKelvey, Q.C., Saint John, N.B., and Gerald N. Keddy, Halifax, N.S., who were previously appointed on the nomination of the company and union respectively.

2. The Board of Conciliation and Investigation established in September to deal with a dispute between Quebecair Inc., Rimouski, Que., and Canadian Air Line Pilots Association (L.G., Nov., p. 1142) was fully constituted in October with the appointment of Harold Lande, Q.C., Montreal, as Chairman. Mr. Lande was appointed by the Minister in the absence of a joint recommendation from the other two members, Arthur Matteau, Montreal, and Cleve Kidd, Toronto, who were previously appointed on the nomination of the company and union respectively.

3. The Board of Conciliation and Investigation established in September to deal with a dispute between Canadian National Railways (Niagara, St. Catharines and Toronto Railway—Motormen, Conductors and Bus Operators), and Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Division No. 846 (L.G., Nov., p. 1142) was fully constituted in October with the appointment of His Honour Judge W.S. Lane, Picton, Ont., as Chairman. Judge Lane was appointed by the Minister on the joint recommendation of the other two members, R. V. Hicks, Q.C., Toronto, and James O. Robertson, Sudbury, who were previously appointed on the nomination of the company and union respectively.

4. The Board of Conciliation and Investigation established in September to deal with a dispute between Hull City Transport Ltd., and Hull City Transport Employees Union (L.G., Nov., p. 1192) was fully constituted in October with the appointment of Jean Girouard, Montreal, as Chairman. Mr. Girouard was appointed by the Minister on the joint recommendation of the other two

members, Jacques Bertrand, Hull, and Jean-Robert Gauthier, Montreal, who were previously appointed on the nomination of the company and union respectively.

Settlement after Strike after Board Procedure

Association of Lake Carriers (Scott Misener Steamships Limited, Upper Lakes Shipping Limited, N. M. Paterson & Sons

Limited, Hall Corporation of Canada and Carryore Limited) and Seafarers' International Union of North America, Canadian District (L.G., Sept., p. 923). Stoppage of work occurred on September 29, when the Union struck only N.M. Paterson and Sons Limited. A memorandum of agreement was signed between the union and all member companies of the Association on October 4 and work was resumed on the same date.

Canadian Railway Board of Adjustment No. 1 Releases Decisions in Seven Recent Cases

The Canadian Railway Board of Adjustment No. 1 has released its decisions in seven cases heard on September 13.

Three of the disputes arose out of claims for: difference in wages for a section foreman during the time he was superseded as extra gang foreman, runaround for a brake-man when he was not called as conductor for a spare yard shift, and time and a half for a conductor for a yard shift.

The other four cases concerned an appeal against discipline assessed against a cable splicer helper in connection with an accident; the protest of the locomotive engineers concerning the discontinuance of Redditt, Ont., as a terminal; the method of payment of a conductor and crew on snow plow service; and the method of paying freight crews operating piggyback trains between two points.

The contention of the employees was sustained in four of the cases, not sustained in two cases and partly sustained in the remaining case.

Summaries of the seven decisions, Nos. 741 to 747, are given below.

Case No. 741—*Dispute between Canadian National Railways (Central Region) and Brotherhood of Maintenance of Way Employees concerning the claim of a section foreman for difference in wages during the time an employee junior to him was allowed to work as extra gang foreman.*

A section foreman with designated headquarters at L'Epiphanie was appointed foreman in charge of an extra gang recruited at Joliette and assigned to repair damage caused by a derailment at L'Epiphanie. He remained in charge of the extra gang until replaced by an available employee from Joliette holding seniority as extra gang foreman.

The section foreman from Joliette claimed for difference in earnings during the period that the foreman from L'Epiphanie was in charge of the repair crew. He contended that the position of extra gang foreman ought to have been bulletined, and that since it was not, he as the senior qualified employee available should have been assigned to the position. The claim was denied.

The union quoted two clauses in the agreement in support of the claim. One of these stated that employees were to be informed "by bulletin on the 1st and 15th days of each month of all vacancies or new positions in their department...including the positions of extra gang foreman and assistant foreman." The other clause said that temporary vacancies of less than 30 calendar days need not be bulletined, but might be filled by "the senior qualified employee immediately available."

The company also cited the second clause, contending that it was not possible to foresee that an extra gang foreman would not be available within the 30-day period during which the company was freed from the necessity to bulletin new positions. "If an employee holding seniority as extra gang foreman is not immediately available but there is a prospect of such an employee's being available within 30 days, the senior qualified employee at or nearest to the point where work will commence is advised that he will be placed in charge of the extra gang until such time as he can be replaced by an extra gang foreman," the company explained. The section foreman whose regular assignment was on the L'Epiphanie section had therefore been put in charge of the gang.

During the period covered by the claim, the gang had reported for work at Joliette

each day, travelled to the working point near L'Épiphanie, and returned to Joliette at the end of the day.

Since it could not foresee that an extra gang foreman would not be available within 30 days, the company contended that the only point at issue was whether the words "immediately available" were meant to apply to the senior qualified employee at or nearest to the working point, or to the senior qualified employee at the point where the employees reported for and were relieved from duty.

The company argued that the wording was ambiguous, but that it had interpreted the rule as it had on this occasion since its adoption, and without objection from the employees until the present dispute.

In a general statement, the Board stated that in the circumstances the section foreman making the claim was the senior qualified employee immediately available, and that he should have been given the position.

The contention of the employees was sustained.

Case No. 742—*Dispute between Canadian National Railways (Communications-Department) and the Order of Railroad Telegraphers concerning a claim that discipline had been erroneously assessed against a cable splicer helper in connection with an accident.*

After an investigation into an accident in which a track motor car was struck by a train, the cable splicer in charge of the car was assessed 30 demerit marks and debarred from operating track motor cars for an indefinite period, and the others in the cable splicing crew riding in the car—another cable splicer and two helpers—were assessed 20 demerit marks each.

One of the helpers already had 40 demerit marks against him, and the assessment of 20 marks resulted in his dismissal. The union, charging that the discipline was erroneously assessed, claimed immediate reinstatement of the helper and payment of the wages applicable to the position he held at the time of the dismissal for each working day until reinstatement.

The employees pointed out that the maintenance of way rule states that *the person in charge of a car* must acquaint himself as fully as possible with the movement of trains. The helper was not in charge of the car, and had been previously debarred from operating track cars for an indefinite period, the union said.

The company stated that the employee in charge of the car was primarily responsible and had been disciplined accordingly. But although the helper was not in charge

of the car, he and the other two members of the crew had been duly qualified to operate track motor cars and were fully aware of the rules regarding their operation. Notwithstanding this they all agreed to proceed to their destination regardless of the impending departure of a train. None had objected to the action of the cable splicer in charge of the car. They were therefore held to be partly responsible for the accident.

The company pointed out that all three members of the crew other than the driver had each been assessed the same 20 demerit marks, but that the union had not objected to the disciplining of the other two. This showed that the organization admitted their share in the responsibility, it said.

The company asserted that the union's real reason for protesting the one case was because the assessment of the 20 demerit marks in this case, added to previous demerit marks, had resulted in the employee's dismissal. The company contended, however, that the helper was not being dismissed because of his responsibility in this case, but as a result of an accumulation of demerit marks, and that the discipline was fair and equitable.

The Board decided that the discipline, in that it resulted in the dismissal of the employee, was excessive. It directed that he should be reinstated, that the parties should arrange between themselves the amount of suspension to be assessed, and that time lost in excess of the time suspension agreed upon should be paid for.

Case No. 743—*Dispute between Canadian National Railways (Western Region) and Brotherhood of Locomotive Engineers concerning the discontinuance of Redditt, Ont., as a terminal.*

On February 5, 1960, the company, in accordance with an article in the Engineers' agreement, notified the employees' representatives by letter that Redditt, Ont., was to be discontinued as a terminal. This change was carried out on April 24.

At the same time the Minaki subdivision between Transcona and Redditt and the Quibell subdivision between Redditt and Sioux Lookout were consolidated into one subdivision called the Redditt subdivision. Transcona and Fort Rouge were designated home terminals for all enginemen working on the Redditt subdivision, except those assigned to wayfreight service between Redditt and Sioux Lookout.

The employees protested the abolition of the Quibell and Minaki subdivisions, and contended that the company was repudiating the home station agreement dated February 6, 1931.

The company pointed out that Redditt was included in the list in the clause of the agreement defining terminals, and that the rule permitted eliminations from or additions to the list by giving the union's general chairman 15 days notice in writing. This the company had done.

On February 5, 1960, it had informed the Brotherhood that centralized traffic control would be in operation on the Minaki and Quibell subdivisions about March 31, at which time Redditt would be discontinued as a terminal. Freight engine crews would then be run from Transcona and Sioux Lookout and vice versa, and passenger train engine crews from Winnipeg Union Station to Sioux Lookout and vice versa.

At subsequent meetings, the company said, the union had conceded management's right under the agreement to eliminate Redditt as a terminal, but at the same time it strongly objected to the action as a violation of what it called the "headquarters terminal agreement." The company asserted that this document was not an agreement, but merely a list covering arrangements regarding home stations for enginemen and firemen, and was subject to change by management at any time.

The company contended that its position with regard to these lists had been fully sustained by Mr. Justice Maybank at the hearing when an application by the Brotherhood for an injunction to restrain the company from eliminating Redditt as a terminal was refused.

The company had offered to make any reasonable arrangement that would minimize inconvenience to the employees, but the union had several times rejected the offer, the company said. It said the Brotherhood's protest was "without merit."

The contention of the employees was not sustained.

Case No. 744—Dispute between the Algonia Central and Hudson Bay Railway Company and the Brotherhood of Railroad Trainmen concerning a claim by a brakeman for runaround when he was not called as conductor for spare yard shift.

On a Sunday, a conductor was required for a spare yard shift, and a qualified trainman on the joint spare board was called. A yard helper, who was the senior qualified available yardman under the agreement and who, although Sunday was a rest day for him, had indicated that he was available for call, then submitted a claim for run-around of four hours.

The union quoted several articles of the agreement in support of the yardman's

claim to the spare yard shift and for a runaround of four hours in lieu.

The company contended that the clause in the agreement permitting regularly assigned yardmen to indicate availability for call on rest days was not a mandatory rule. The company was not compelled, it said, to call men out on rest days at overtime rates, in preference to qualified men on the common spare board who would be paid at pro rata rates.

The Board expressed the opinion that the employee submitting the claim was "the senior available man in the terminal" under the meaning of the agreement, and was, therefore, entitled to be called. The contention of the employees was sustained.

Case No. 745—Dispute between Canadian Pacific Railway Company (Eastern Region) and the Brotherhood of Railroad Trainmen concerning the method of payment of a conductor and crew on snow plow service.

A conductor and crew were ordered in snow plow service from MacTier to Port McNicoll. On arrival at Port McNicoll, they were ordered to return to MacTier via Orillia.

They submitted a wage ticket from MacTier to Port McNicoll on straight-away basis, and a separate wage ticket from Port McNicoll via Orillia to MacTier on a straight-away basis.

The company refused the wage ticket and paid the crew on a turn-around basis at continuous time from MacTier to Port McNicoll to MacTier via Orillia.

The union contended that, according to the agreement, the crew was entitled to payment on a straight-away basis (100 miles) from MacTier to Port McNicoll, and payment on the same basis plus overtime for the subsequent trip from Port McNicoll to MacTier via Orillia.

The company in its contention argued that unassigned snow plow service was considered work train service and was payable as such under the agreement. In the present case, it said, the crew was entitled to initial terminal time at MacTier; road miles or time, whichever was greater, from the outer yard switch at MacTier to Port McNicoll and return to MacTier via Orillia in turn-around service; and final terminal delay at MacTier. Total mileage of the run was 128 miles.

The Board in a general statement said that the evidence submitted did not indicate that a recognized practice of operating crews between MacTier and Port McNicoll in turn-around service had been established. Payment should be made as claimed by the employees, the Board directed.

Case No. 746—*Dispute between the Al-goma Central and Hudson Bay Railway Company and the Brotherhood of Railroad Trainmen concerning a conductor's claim for time and a half for a yard shift.*

A yardman regularly assigned as a yard helper in a relief yard crew worked temporary vacancies as follows: as a yard foreman from 7.30 a.m. to 3.30 p.m. one day; as a yard foreman on a spare shift from 6 p.m. the same day to 2 a.m. the next day; and as a yard foreman instead of yard helper from 12.01 p.m. to 8 p.m., his regular assigned hours, this second day.

He was paid at straight time at foreman's rate for the first shift, at time and a half for the second shift, and at straight time for the third shift. He claimed time and a half for the third shift.

The union contended that since he had worked two consecutive shifts as a yard foreman, and the second shift had started less than 24 hours from the starting time of the first, the yardman was entitled to time and a half for the second shift.

The company in its contention quoted an article of the agreement to the effect that yardmen assigned to regular shifts who are required to begin work on a second tour of duty within 24 hours of the starting time of the preceding shift shall be paid at overtime rate for the second shift. The company pointed out that the employee had been paid overtime for the second shift that began on the first day. This shift did constitute a second shift within 24 hours of the start of the first shift, the company agreed.

It contended, however, that the shift that began on the second day had begun more than 24 hours after the starting time of the preceding shift paid at pro rata rate.

The contention of the employees was not sustained.

Case No. 747—*Dispute between Canadian Pacific Railway Company (Atlantic Region) and the Brotherhood of Railroad Trainmen concerning the method of paying through freight crews operating piggyback trains.*

When the Canadian Pacific Railway Company inaugurated piggyback service between Ottawa and Grovehill, the service, being unassigned, was operated by through freight crews from the Ottawa through freight pool. The crews claimed 106 miles track mileage from Ottawa to Grovehill plus final terminal time at Grovehill, and, on the return trip, initial terminal delay at Grovehill and 106 miles track mileage Grovehill to Ottawa.

The company would not accept claims for payment on a straight-away basis, insisting on the submission of claims on a turnaround basis, Ottawa to Grovehill and return, with no terminal delay at Grovehill.

The employees contended that the company did not have the right under the agreement to operate unassigned crews in and out of a recognized freight terminal on a continuous time basis. The company argued that it had always been the prerogative of the company to operate in and out of a terminal in turnaround service, and that Grovehill was a turnaround point. It stated further that in the Atlantic and Eastern Regions agreement there was no provision that a trip automatically ends on arrival at a terminal, such as applies on the Prairie and Pacific Regions.

In a general statement the Board said that it appeared the company had already taken steps to pay through freight crews operating piggyback trains between Ottawa and Grovehill on a straight-away basis, in conformity with the Board's decision in Case 739 (L.G., Oct., p. 1048).

The claim of the employees was sustained.

Presidential Commission Appointed in U.S. Railway Dispute

On November 1, President Eisenhower created a commission to study a long-standing dispute over work rules and practices between five United States railway brotherhoods, representing an estimated 250,000 railroaders, and the major railroads of the country.

The President's action followed agreement in October by the unions and the managements to submit their differences to the arbitration of a Presidential commission.

The Commission will be composed of 15 members. Five of them will be appointed by management, five by the Brotherhoods and five by the President. The Commission will be empowered to investigate the facts surrounding the work rules and practices issue and report its findings to the President.

Work of the Commission is scheduled to start early in January and it is scheduled to make a report, with recommendations, by December 1, 1961.

The Commission's recommendations, will not be binding, U.S. Secretary of Labor James P. Mitchell said, but, "will carry great weight."

One of the railroads' chief demands is for the elimination of most firemen on diesel locomotives. They also seek elimination of the dual basis of pay system.

LABOUR LAW

Legal Decisions Affecting Labour

Ontario Court of Appeal upholds jurisdiction of and certification order issued by Labour Relations Board. New Brunswick court quashes certification order because ruling that barred non-resident employees from voting was erroneous

The Ontario Appeal Court, upholding a certification order issued by the Ontario Labour Relations Board, ruled that where the "dominant" feature of the company's operations is establishment and servicing of gas-well sites, operations that are local and intra-provincial, then such activities are within provincial jurisdiction in spite of "shipping and navigation" activities, which are strictly incidental and subordinate to the company's main operations.

In New Brunswick, the Supreme Court (Appeal Division) quashed a Labour Relations Board order certifying a union as a bargaining agent, on the ground that an erroneous ruling barred from voting members of the bargaining unit who did not reside in the province.

Ontario Court of Appeal . . .

. . . upholds Labour Relations Board's jurisdiction, dismisses an appeal to quash certification order

On June 28, 1960, the Ontario Court of Appeal dismissed an appeal by the Underwater Gas Developers Limited from the judgment of Mr. Justice Smily of the Ontario Supreme Court dismissing an application of the company for a court order to quash an order of the Ontario Labour Relations Board certifying the International Chemical Workers' Union as bargaining agent for the company's employees (L.G., March, p. 280).

In confirming the trial judge's decision, the Appeal Court held that the company's operations did not fall within "navigation and shipping" in Section 91 (10) of the B.N.A. Act; whatever "navigation and shipping" is involved in the company's operations, such activities are strictly incidental and subordinate to a totally different activity and undertaking, namely the establishment and servicing of gas-well sites,

and the "dominant" features and objects of the company's operations are wholly within provincial jurisdiction.

Mr. Justice Aylesworth, in rendering the judgment of the Court, recalled that the operations of the company consist of the establishment and servicing of sites for the drilling of gas under water. In its operations, the company uses a barge, a tug, a crane unit, a diving boat, a pile driving unit and some boats to carry supplies, equipment and heavy material. The company provides the tower and the platform at the well site and has such facilities on shore as a boat hoist, a warehouse, an office, a stockyard for pipes and a workshop for the welders. The operations of the company may extend from between one and one-half to 14 miles from the shoreline. The barge and the tug boat have living quarters and the men can receive all their meals there. The men can, and sometimes have to, live on board. The company employs a total of 39 men. The boats are subject to the Canada Shipping Act and are licensed by the federal Department of Transport. The skippers of the larger boats obtain certificates from the Department of Transport, which Department inspects the boats and supervises their operation and carriage of high explosives, and also regulates the equipment on boats and the safety requirements.

The company contended that its operations came within Section 91 (10) of the B.N.A. Act, "navigation and shipping," and therefore its employees came within the scope of Section 53, (a) and (h), of the federal Industrial Relations and Disputes Investigation Act. The union submitted that the operations of the company are of such a nature as not to come under the heading of "navigation and shipping" in Section 91 (10) of the B.N.A. Act and, being local and intra-provincial, fall wholly

This section, prepared by the Legislation Branch, reviews labour laws as they are enacted by Parliament and the provincial legislatures, regulations under these laws, and selected court decisions affecting labour.

within Section 92 (10) and (16) of the B.N.A. Act. Consequently, the union contended that the company's operations did not fall within the scope of the I.R.D.I. Act but were subject to the Ontario Labour Relations Act.

The union's submission was accepted by the Ontario Labour Relations Board, which, on August 6, 1959, certified the union as the bargaining agent of the company's employees, and the same position was taken by the trial judge who, on November 26, 1959, in *certiorari* proceedings, dismissed the company's application to quash the certification order.

In dealing with the case in the Appeal Court, Mr. Justice Aylesworth noted that the real question at issue was whether or not the company's operations were within the Dominion jurisdiction as "navigation and shipping"; if they were, then the federal, not the provincial legislation with respect to labour relations applied to the company's employees. In his opinion, Section 91 (10) of the B.N.A. Act, conferring exclusive jurisdiction upon the Parliament of Canada with respect to navigation and shipping, must be read in conjunction with subsection 29 of that section

S. 91 (29)—Such classes of subjects as are expressly excepted in the enumeration of the classes of subjects by this Act assigned exclusively to the Legislature of the Provinces.

The relevant parts of Section 92 with respect to provincial jurisdiction read as follows:

S. 92—In each Province the Legislature may exclusively make laws in relation to matters coming within the classes of subjects next hereinafter enumerated, that is to say,—

10. Local works and undertakings other than such as are of the following classes,—

(a) Lines of steam or other ships, railways, canals, telegraphs, and other works and undertakings connecting the Province with any other or others of the Provinces or extending beyond the limits of the Province;

(b) lines of steam ships between the Province and any British or foreign country;

16. Generally all matters of a merely local or private nature in the Province.

The relevant portions of Section 53 of the I.R.D.I. Act read as follows:

S. 53 Part I applies in respect of employees who are employed upon or in connection with the operation of any work, undertaking or business that is within the legislative authority of the Parliament of Canada including, but not so as to restrict the generality of the foregoing,

(a) works, undertakings or businesses operated or carried on for or in connection with navigation and shipping, whether inland or maritime, including the operation of ships and transportation by ship anywhere in Canada;

(b) any work, undertaking or business outside the exclusive, legislative authority of the legislature of any province.

In the Privy Council decision in *Paquet v. Corporation of Pilots for and Below the Harbour of Quebec* (1920) A.C. 1029, Viscount Haldane made the following observation at p. 1031:

But the language of S. 92 has to be read along with that of S. 91, and the generality of the wording of S. 92 has to be interpreted as restricted by the specific language of S. 91, in accordance with the well-established principle that subjects which in one aspect may come under S. 92 may in another aspect that is made dominant be brought with S. 91.

In *Montreal City v. Montreal Harbour Commissioners* (1926) A.C. 299, Viscount Haldane, again delivering the Privy Council judgment, said: "Now there is no doubt that the power to control navigation and shipping conferred on the Dominion by S. 91 is to be widely construed."

In spite of that statement, the Privy Council expressed the opinion that the right of the Dominion in matters relating to navigation and shipping did not extend so as to authorize the Dominion to vest in a body of harbour commissioners an exclusive right to occupy provincial property such as the foreshore within the limits of a harbour without compensation and to erect there permanent works such as quays, docks and railways.

The constitutionality of the I.R.D.I. Act was tested in the Supreme Court of Canada in *the Matter of a Reference as to the Validity of the Industrial Relations and Disputes Investigation Act, R.S.C. 1952, c. 152, and as to its Applicability in Respect of Certain Employees of the Eastern Canada Stevedoring Company Limited* (1955) S.C.R. 529 (L.G., Aug. 1955, p. 952). In this case the following two questions were referred to the Court for consideration:

- (1) Does the Industrial Relations and Disputes Investigation Act... apply in respect of the employees in Toronto of the Eastern Canada Stevedoring Co. Ltd., employed upon or in connection with the operation of the work, undertaking or business of the company as hereinafter described?
- (2) Is the Industrial Relations and Disputes Investigation Act,... *ultra vires* of the Parliament of Canada either in whole or in part and, if so, in what particular or particulars and to what extent?

Seven members of the Court held that Sections 1 to 53 inclusive (on which argument was heard) are *intra vires* of the Parliament of Canada and that their application will depend upon the circumstances of any particular case.

Mr. Justice Rand held the sections to be *intra vires* if applied to works and undertakings within S. 91 (29) and 92 (10) (a) and (b) of the B.N.A. Act. He held further that crews of vessels engaged in strictly local undertakings or services and locally

organized stevedores are outside the scope of the Act.

Mr. Justice Locke held the sections to be *intra vires* except as to employees engaged upon or in connection with the works, undertakings or businesses operated or carried on for or in connection with shipping, the activities of which are confined within the limits of a province, or upon works, undertakings or businesses of which the main or principal part is so confined.

Regarding the first question addressed to the Court it was held (Mr. Justice Rand dissenting and Mr. Justice Locke dissenting in part) that the Act applied in respect of employees in Toronto of the company employed upon or in connection with the operation of the work, undertaking or business of the company as described in the order of reference.

The order of reference made it clear that the *business* of the company was stevedoring and that this stevedoring was performed in Toronto in connection with the ships of seven shipping companies, all of which ships operated on regular schedules between ports in Canada and ports outside of Canada.

In Mr. Justice Aylesworth's opinion, the real *ratio* of the decision of the majority in the *Stevedores'* case, so far as the operations of the company were concerned, was that the business of the company, namely stevedoring, was an essential part of the business of shipping. The "shipping" which the seven steamship companies engaged in was international in character and obviously it could not be seriously contended that such "shipping" was not within Section 91 (10) of the B.N.A. Act. On the other hand, in the case at bar, whether or not the company's operations may fairly be described as navigation or shipping, those operations are solely intra-provincial and of a purely local nature.

From the pronouncements of various judges in the *Stevedores'* case regarding "inland shipping" or intra-provincial navigation and shipping, Mr. Justice Aylesworth drew the conclusion that the majority of judges of the Supreme Court of Canada were of the opinion that the business of navigation and shipping, or a business the main object of which was navigation and shipping, when only intra-provincial in scope and extent, fell within the exclusive jurisdiction of the province in which such business was carried on and was not embraced in the federal jurisdiction under Section 91 (10). Further, the business of shipping with which the judges in the *Stevedores'* case had to deal was not an intra-provincial business and the stevedoring

was a business which the judges thought to be "an essential" part of shipping.

Returning to the case at bar, Mr. Justice Aylesworth thought that even giving the phrase "navigation and shipping" a very wide application, the company's operations did not fall within that heading as contained in Section 91 (10) of the B.N.A. Act. In his opinion, the operations of the company were not only purely local in nature, but they could not fairly or sensibly be construed as operations of navigation and shipping; there is some "navigation" and some "shipping" in those operations between the shore and the drilling sites but those activities are strictly incidental and subordinate to a totally different activity and undertaking, namely the establishment and servicing of gas-well sites; the "dominant" features and objects of the undertaking are features and objects wholly within provincial jurisdiction.

The Court dismissed the company's appeal. *Underwater Gas Developers Limited v. Ontario Labour Relations Board and International Chemical Workers Union, AFL-CIO-CLC*, CCH Canadian Labour Law Reporter, para. 15,323.

New Brunswick Supreme Court . . .

. . . quashes a certification order on ground that employees not resident in province did not vote

In February 1960, the Supreme Court of New Brunswick (Appeal Division), in *certiorari* proceedings, quashed a certification order on the ground that it was made without authority because some members of the bargaining unit who did not reside in the province were ruled to be ineligible to vote and were deprived of an opportunity to express their wishes.

The Court held that although the Labour Relations Board had no jurisdiction to certify a bargaining agent for a unit composed of employees of a non-resident employer, there was nothing to preclude it from conferring on non-resident employees of a resident employer (whose business is carried on in the province) the right to vote on whether they wanted a certain union to represent them.

Eastern Bakeries Ltd. has its head office in Saint John, N.B., and operates three branches in New Brunswick (among them the Moncton Branch) and one branch in Nova Scotia. Local No. 76 of the Teamsters, Chauffeurs, Warehousemen, Helpers and Miscellaneous Workers applied for certification as a bargaining agent of "all employees of the employer employed as driver-salesmen, spare driver-salesmen, special delivery drivers and highway drivers and helpers

employed at the Moncton plant of the employer."

A list of such employees filed by the company with the Board showed 22 employees as residing in New Brunswick, 3 in Prince Edward Island and 13 in Nova Scotia, a total of 38 employees.

On June 26, 1959, the Board ruled that the appropriate bargaining unit would be composed of "all employees employed as driver-salesmen, spare driver salesmen, highway drivers and driver helpers employed by Eastern Bakeries Limited, Moncton Branch." The Board also directed a vote of all eligible employees be conducted to determine their wishes.

Subsequently, the secretary of the Board, who acted as returning officer on the vote, ruled, with the concurrence of the chairman of the Board, that those employees in the unit who were non-residents of the province were not eligible to cast ballots.

Accordingly, only those employees who resided in New Brunswick (22 in number) were listed as eligible voters. The number of votes actually cast was 18, of which 14 were in support of Local 76. As the result of this voting, the Board, on July 31, 1959, certified Local 76 as the bargaining agent for "all driver-salesmen, spare driver-salesmen, special delivery drivers, highway drivers and driver helpers employed by Eastern Bakeries Limited, Moncton, N.B."

The company, in *certiorari* proceedings, challenged the certification order on the ground that the Labour Relations Board exceeded or abused its jurisdiction in that (a) it did not permit all of the employees of the company's Moncton Branch to vote as directed by the Board order dated June 26, 1959; (b) it granted certification to Local 76 as bargaining agent for all the employees of the company's Moncton Branch without ascertaining if the majority of such employees desired the said local to be a bargaining agent on their behalf.

Further, the company argued that the Moncton Branch has a number of employees coming within the bargaining unit who reside in the provinces of Nova Scotia and Prince Edward Island and who are hired, discharged, paid and supervised by the company's Branch in Moncton. The vote, as directed by the Board, was taken of only those employees who resided in the province of New Brunswick, but other employees coming within the bargaining unit, who happened to reside in Prince Edward Island and Nova Scotia, were not allowed to vote on the question whether or not they wished Local 76 to act as their bargaining agent.

The ground on which the secretary of the Board excluded the non-resident members of the unit from voting was that the Board's jurisdiction is limited to the province and it has no jurisdiction in respect of any person residing outside the province.

Mr. Justice Ritchie, in rendering the judgment for the Court, referred to the New Brunswick Labour Relations Act, Section 8 (1) and (2), which reads as follows:

- S. 8 (1) Where a trade union makes application for certification under this Act as bargaining agent for employees in a unit the Board shall determine whether the unit in respect of which the application is made is appropriate for collective bargaining and the Board may before certification, if it deems it appropriate to do so, include additional employees in, or exclude employees from, the unit, and shall take such steps as it deems appropriate to determine the wishes of the employees in the unit as to the selection of a bargaining agent to act on their behalf.
- (2) When, pursuant to an application for certification under this Act by a trade union, the Board has determined that a unit of employees is appropriate for collective bargaining,
- (a) if the Board is satisfied that the majority of the employees in the unit are members in good standing of the trade union; or
 - (b) if, as a result of a vote of the employees in the unit, the Board is satisfied that a majority of them have selected the trade union to be a bargaining agent on their behalf;
- the Board may certify the trade union as the bargaining agent of the employees in the unit.

In Mr. Justice Ritchie's opinion, the basic issue in the case at bar was whether the Board has jurisdiction to include non-residents of the province in a bargaining unit for which it certifies a bargaining agent and thereby entitle them to vote under Section 8 (2) (b).

The company argued that the Board determined the employees who should comprise the bargaining unit and included no restriction as to residence; despite the terms of the order directing the certification vote, the Chairman and Secretary of the Board restricted the vote to those of the employees who were resident in New Brunswick; the Board made a certification order for a unit of 38 employees, of whom only 14 had expressed a desire to have the union represent them.

The Court ruled that the Board had jurisdiction to include non-residents in the bargaining unit. A province, Mr. Justice Ritchie stated, does not require jurisdiction over a person to confer on him a right *in personam*; but ordinarily such jurisdiction is necessary to divest such a right.

Although the Labour Relations Board has no jurisdiction to certify a bargaining agent for a bargaining unit composed of employees of a non-resident employer, there is nothing to prevent it from including in a bargaining unit of employees of an employer carrying on within the province a business which is within provincial legislative authority, persons who reside outside the province, and thereby to entitle them to vote on the question of whether they wish a particular union to represent them as a bargaining agent. No obligation is imposed on them by such inclusion nor are they divested of any right.

Counsel for the Labour Relations Board, referring to *R. v. The Labour Relations Board, ex parte Gorton-Pew (New Brunswick) Limited* (1952) 2 D.L.R. 621, submitted that although in determining the composition of the bargaining unit the Board is exercising a judicial function, the actual making of the order is an administrative act not open to review on *certiorari*.

In the opinion of Mr. Justice Ritchie, when a statute says a Board shall have

jurisdiction to make an order if certain facts exist, the Board has jurisdiction to enquire into the existence of those facts. The decision that jurisdiction has been established is, however, open to examination on *certiorari*.

Further, Mr. Justice Ritchie stated that the wording used by the Board to define the bargaining unit could be interpreted only as including in it the non-resident employees ruled ineligible to vote. Only 14 employees voted in favour of selecting the union as the bargaining agent for the unit; 16 other members of the unit, by a ruling which was clearly erroneous, were deprived of an opportunity to express their wishes. As the condition precedent to the exercise by the Board of its jurisdiction did not exist, the certification order was made without authority and should be quashed. Accordingly, the Court ruled to quash the certification order.* *Regina v. Labour Relations Board (N.B.)*, ex parte *Eastern Bakeries Ltd.*, (1960), CCH Canadian Labour Law Reporter, para 15,321.

Recent Regulations under Provincial Legislation

Ontario Labour Relations Board revises its rules of procedure, bringing them into conformity with this year's amendments to Ontario Labour Relations Act.
Newfoundland issues first regulations under province's 1960 Trade Union Act

In Ontario, the Labour Relations Board revised its rules of procedure, bringing the provisions into conformity with the 1960 amendments to the Ontario Labour Relations Act.

New regulations issued under the Newfoundland Trade Union Act lay down the procedure to be followed by unions when applying for registration or filing annual returns.

Other regulations deal with certificates of status in the carpentry trade in Saskatchewan, the coverage of the Nova Scotia regulations governing elevators and lifts, and public holidays in British Columbia.

Alberta Workmen's Compensation Act

The Alberta Workmen's Compensation Board has added the operation and rental of pleasure and sight-seeing boats to the list of trades and businesses excluded from the Workmen's Compensation Act. The exemption was approved by Alta. Reg. 226/60 gazetted July 31.

British Columbia Factories Act

December 26 and 27, 1960, and January 2, 1961, were declared public holidays for purposes of Section 56 of the British Columbia Factories Act by a proclamation gazetted October 20. This means that factories in British Columbia which come within the scope of the Act must close on those days unless granted special permission to open.

An earlier proclamation, gazetted October 6, had declared Thanksgiving Day, October 10, a public holiday.

Newfoundland Trade Union Act, 1960

The first regulations to be issued under the new Newfoundland Trade Union Act, 1960, were gazetted October 4. They went into force on October 1, the same day as the Act.

The new Act requires each union to establish a board of trustees who will be responsible for the real and personal property of the union, to have a written

*The decision has been appealed to the Supreme Court of Canada.

constitution dealing with certain specified matters, and to register with the Registrar of Trade Unions. It is also mandatory for unions to file annual returns, including a financial statement (L.G., Nov., p. 1162).

The regulations prescribe the forms to be used for the various applications and reports and lay down rules regarding notices, applications for registration, amalgamation or change of name, the inspection of documents, and notice of replacement of officers.

The Act stipulates that a union must apply for registration within six months after the date of the formation of the union or the coming into force of the Act, whichever is the later date, unless the Registrar extends the time limit. The regulations state that an application must be made in triplicate and on the prescribed form and must be verified by statutory declaration or affidavit of the two officers signing it.

Among other information, the prescribed form requires unions applying for registration to give their mailing address (the Act specifies that this must be a Newfoundland address), the date of formation, if organized after October 1, the number of members in good standing, the names of the trustees, officers and other executive members, together with the names of the offices held and addresses of the officials.

The applicant union must also indicate what provisions in the rules contain the information regarding the objects of the union, qualifications for membership, circumstances under which a member is subject to forfeitures, suspension or expulsion, the conditions for reinstatement, and other matters which, under the terms of the Act, must be contained in the constitution.

If the application meets the requirements laid down in the Act, the Registrar will issue a certificate of registration in a form prescribed by the regulations. A union that does not register in the prescribed time is guilty of an offence and, if the offence continues, may be dissolved.

Whenever a union intends to amalgamate with another union, it must file with the Registrar a statutory declaration to the effect that at least two thirds of the membership have approved the amalgamation, as required under the Act. At least one month before the effective date it must publish the required advertisement notifying its creditors of its intentions. Within six months from the date of amalgamation, the new union must apply for registration.

An affidavit or declaration stating that the required percentage of the membership has approved the action must also be filed whenever a union changes its name, where-

upon the Registrar will issue a new certificate of registration showing the new name and the former name of the union.

As regards inspection of documents filed with the Registrar, the regulations state that only union rules, the names and addresses of trustees, officers and executive members, and the names of organizations with which a union is associated or affiliated will be made available for inspection by the general public. However, if a union member satisfies the Registrar that he meets the requirements for continued membership laid down in the union rules, he may examine any document filed by the union or a copy of any notice sent to the union by the Registrar.

Within one month after any trustee, officer or other executive member vacates his office, a notice must be sent to the Registrar. A notice giving the required particulars must also be sent within one month after the replacement is made.

Nova Scotia Elevators and Lifts Act

General regulations under the Nova Scotia Elevators and Lifts Act (L.G., 1958, p. 1411) which regulate the operation of elevators, dumb-waiters, escalators, manlifts and incline lifts have been amended by an Order in Council dated August 24.

The amendment excludes from the scope of the regulations the following elevating devices; a Class A dumb-waiter having a car floor, or platform frame, area three square feet or less, and maximum capacity of 100 pounds or less; a hand power Class A dumb-waiter having a car floor or platform frame, area six square feet or less, and maximum capacity of 150 pounds or less; agricultural elevating devices, installed in or adjacent to a barn, and used exclusively for agricultural purposes.

Ontario Labour Relations Act

New rules of procedure made by the Ontario Labour Relations Board were gazetted October 14 and went into force October 22, the same day as the 1960 amendments to the Ontario Labour Relations Act. The new regulations (O. Reg. 268/60) replace CRO 236 and amendments.

Regulations made by the Lieutenant-Governor in Council relating to pension and welfare funds and trusteeships (O. Reg. 269/60 and O. Reg. 270/60) were gazetted the same day and also went into effect on October 22.

Among other changes, the 1960 amendments to the Labour Relations Act provided for a pre-hearing representation vote, established a new procedure for dealing

with jurisdictional disputes arising out of work assignment, required unions to provide members with audited financial statements upon request, provided for the filing of audited financial statements of pension and welfare funds, placed restrictions on union trusteeships, and gave the Labour Relations Board new enforcement powers and authority to fix terminal dates (L.G., Nov., p. 1153).

RULES OF PROCEDURE

The changes are reflected in the new rules of procedure, which now include a section on complaints with respect to financial statements, unfair practices and jurisdictional disputes as well as the usual provisions dealing with applications for certification, conciliation, and other matters.

As might be expected, some new forms have been prescribed and some of the existing ones have been revised to conform with the new requirements. Where applicable, they have provided for terminal dates and stipulate that statements or representations must be in writing and will not be considered by the Board if not received on or before the terminal date. In particular, the notice of fixing terminal date draws the recipient's attention to the rule regarding evidence as to representation. This stipulates that evidence of membership in a trade union, or of objection to certification or of signification that employees no longer wish to be represented by a trade union must be in writing, must be accompanied by a return mailing address and the name of the employer, and must be filed not later than the terminal date. It further provides that no oral evidence concerning any of these matters will be accepted by the Board except to identify or substantiate the written evidence.

Another new provision states that, except in the case of an application for a declaration that a strike or lockout is unlawful or for consent to institute a prosecution, any person who intends to allege improper or irregular conduct at a hearing must first file a notice of intention. This notice must contain a concise statement of the material facts upon which he intends to rely but not the evidence by which the material facts are to be proved. It must also give the names of the persons involved and the time and place of the action. If the Board thinks that the notice of intention has not been filed promptly, the person may not adduce evidence at the hearing without the Board's consent.

APPLICATIONS

As has been indicated, in order to speed up procedures, the Board was given authority to fix terminal dates for applications, with additional power to refuse to accept any evidence not presented in the prescribed manner or within the time-limit fixed by the Board. One of the new general rules states that whenever an application is made, the registrar will fix a terminal date, which may not be less than five or more than ten days after the day on which the registrar serves the employer with the notices of application for posting, if served personally, or after the day immediately following the day on which the notices are mailed, if served by mail.

When an application for conciliation is made by one of the parties, the registrar will fix a terminal date, which may not be less than four or more than seven days after date of service of the notice of application. In the case of an application for a declaration that a strike is unlawful or for an application for consent to prosecute, the reply must be made not later than the sixth day after service of notice.

There have been some changes in the rules regarding application for certification, one being that an applicant or intervener desiring certification must now file, on the prescribed forms, a statement on the status of the trade union and a declaration concerning membership documents. On the statement of status of trade union, the applicant or intervener must certify that (1) it is a trade union within the meaning of the Labour Relations Act; (2) that no employer or employers' organization has participated in its formation or administration or contributed financial or other support to it; or (3) that it does not discriminate against any person because of his race, creed, colour, nationality, ancestry or place of origin.

The declaration concerning membership documents requires the applicant or intervener to indicate the nature of the documents. Where the documentary evidence consists in part of receipts or other acknowledgments of payment of dues or initiation fees, the applicant or intervener must certify that he has personal knowledge of or has made inquiries concerning the collectors and for that reason knows that the persons whose names appear on the receipts or acknowledgments actually paid the amounts credited to them. Any exceptions must also be noted.

Except where the Board has granted a request for a pre-hearing vote, an employee or group of employees who oppose the

application may file, not later than the terminal date for the application, a statement of desire to make representations. This must be in writing and signed by the employees or each member of the group as the case may be. If the statement of desire is filed in the required manner, the employee or group of employees may appear and be heard at the hearing. The new rules specify that where evidence is adduced, it must include testimony in the personal knowledge and observation of the witness as to the circumstances concerning the origination of the statement of desire and the manner in which each signature on the statement was obtained. The same practice must be followed whenever employees have filed a statement of desire indicating their opposition to an application for termination of bargaining rights.

Other changes were introduced as a result of the amendment providing for a pre-hearing vote. Under this procedure, the Board may establish a voting constituency; if, after a check of the union's membership position, it appears that the trade union has not less than 45-per-cent membership in the voting constituency, the Board may direct that a vote be taken. If after the pre-hearing representation vote is taken the Board is satisfied that not less than 45 per cent of the employees were members of the trade union at the time of application and if the union obtains a majority, the Board may certify the union. The Board also has discretion to direct that the vote be held but that the ballot box will be sealed and the ballots counted only after the parties have had an opportunity to present evidence and make submissions.

As previously indicated, the rules have been changed to take these new provisions into account. If a pre-hearing representation vote is desired, this must be indicated on the application for certification submitted by the applicant or by an intervener. The new rules also prescribe special forms for notifying the respondent of a request for a pre-hearing representation vote and for giving notice of the returning officer's report giving the results of the vote.

After a pre-hearing representation vote has been taken, any objection or representations must be made in the prescribed manner, following which a hearing will be held after notice to the parties.

In representation cases, where statements are not submitted in the required manner, the Board will dispose of the application upon the evidence before it without further notice to any party or to the employees.

In the case of applications for conciliation services, if any person requests a hearing

he must set out in his application or reply, as the case may be, a concise statement of the material facts upon which he proposes to rely, the relief to which he claims to be entitled, and the submissions he proposes to make in support of his claim. Similar information must be given when a hearing is requested following the filing of an application concerning the status of a successor trade union.

COMPLAINTS

As previously indicated, the 1960 amendments gave the Board additional enforcement powers. Complaints of discrimination in employment, previously handled by the Minister, will now be dealt with by the Board, which has also been empowered to hear complaints in connection with furnishing of financial statements and jurisdictional disputes.

The regulations set out the procedure to be followed with respect to all three types of complaints.

An employee who considers that he has been refused employment, discharged or discriminated against contrary to the Act must now file a written complaint with the Board giving, among other details, a concise statement of the unfair practice and the steps, if any, taken to adjust the matter complained of. The Board may then authorize a field officer to investigate the matter and try to reach an agreement. If he fails to effect a settlement, the Board may hold a hearing after giving both parties the prescribed notice.

If the Board decides not to hear the case itself but to appoint a hearing officer to inquire into the matter and report his findings and recommendations, the registrar must send a notice of inquiry to both parties. If the respondent wishes to reply he must do so on the prescribed form and within the time-limit set on the notice. A copy of the hearing officer's report will be sent to the parties, together with a notice setting out the information to be included in statements of objection or in representations and fixing a time-limit for filing such statements. Where objections or representations filed in the required manner are received or where the Board so orders, a hearing will be held after proper notice to the parties.

The regulations do not specify what further action will be taken but the Act provides that the Board may issue whatever order it considers necessary, including reinstatement with or without compensation. If the Board's order is not implemented within the prescribed time, the aggrieved person may notify the Board, whereupon the Board will file its order in the Supreme Court

and it will become a judgment of that Court and may be enforced as such.

If a trade union has failed to furnish a member with a copy of an audited financial statement upon request, the member may file a complaint with the Board on the prescribed form. Among other facts, the form requires the complainant to state what steps have been taken to secure the desired information. The trade union will be served with a copy of the complaint and a notice of complaint and, if it wishes to reply, must do so in the manner prescribed. If after the expiry date for the reply the complainant informs the Board that he has not received a copy of the financial statement, or if the union claims that the applicant is not entitled to receive the statement requested, a hearing will be held after the notice to the parties.

Another amendment introduced this year provided for the establishment of a jurisdictional disputes commission to settle disputes arising out of work assignment. Under the Act a complaint concerning a work assignment may be filed with the Board. The regulations stipulate that such complaints must be in writing and must include a concise statement of the acts or omissions complained of as well as any steps taken to settle the problem.

As provided in the Act, complaints will be referred to a jurisdictional disputes commission, which is authorized to issue an interim order that must be complied with within two days.

Anyone who has obeyed the interim order and is affected by it may request the commission to give further consideration to the issue. After giving the parties an opportunity to present evidence and make representations, the commission may issue whatever direction it sees fit and its direction must be complied with within 14 days.

The Act further provides that anyone affected by an interim order or by a direction of the commission may apply to the Board for a review. In such cases, however, the Board's power to review is limited to seeing if the order or direction (1) prohibits a lawful strike or lockout; (2) restrains observance of the provisions of a collective agreement relating to work assignment; or (3) interferes with established bargaining rights of a trade union.

The regulations stipulate that a request for review must be on the prescribed form and must include a copy of the interim order or direction. The applicant is to indicate the reason for the review and the material facts upon which the claim is based. Each person named in the request

for review will be served with a special notice of application and hearing and, in turn, must reply in the required manner within the prescribed time-limit if he wishes the Board to consider his evidence or representations.

Under the Act, if the Board finds that any of the above-mentioned results follow from an interim order or direction of a commission, it may either quash the decision or it may, by altering the bargaining unit in a certificate or in a collective agreement, remove the conflict between the interim order or direction and any certificate or collective agreement.

DISMISSAL WITHOUT A HEARING

Whenever the Board considers that an application or complaint does not make out a *prima facie* case, it may dismiss it without a hearing, giving the reasons for the dismissal.

If the applicant or complainant wishes the case reviewed, he must request the Board to do so within 10 days after being served with the decision, submitting at the same time a statement of the facts and reasons upon which the request for review is based. After a request for review is filed, the Board may direct the case to be re-opened, order the registrar to serve the applicant or any other person affected with a notice of hearing to show cause why the application or complaint should be re-opened, or affirm its earlier decision.

Pension or Welfare Funds

When the Act was amended, the Lieutenant-Governor in Council was empowered to make regulations requiring the filing with the Department of Insurance of audited financial statements of pension or welfare funds operated for the benefit of employees.

The regulations issued under this authority (O. Reg. 269/60) are not limited to union pension or welfare funds, but cover all such funds operated in Ontario. They provide that upon the request of the Superintendent of Insurance an audited financial statement of the affairs of a fund for the last completed fiscal year must be filed with the Department of Insurance. The statement must show the following information: how the fund is administered; the basis on which contributions to the fund and pension or welfare payments are made or are to be made; and the assets, liabilities, income and expenditure of the fund.

Statements of Trusteeships

The Act now requires that where a local of a trade union is placed in trusteeship, a statement as to the terms of the trustee-

ship, on the prescribed form, must be filed with the Board within 60 days by the provincial, national or international trade union assuming supervision or control over the local.

Among other information, the statement of trusteeship must give the date on which supervision or control was assumed, the names and addresses of the persons appointed to exercise supervision or control, by whom they were appointed, the expected period of trusteeship, a detailed statement of the terms, and provisions, if any, for the holding of membership meetings of the subordinate union and for representation at conferences and conventions.

Saskatchewan Apprenticeship and Tradesmen's Qualification Act

The general regulations under the Saskatchewan Apprenticeship and Tradesmen's Qualification Act have been amended by new provisions concerning the carpentry trade, which were approved by O.C. 1692/60 gazetted October 7.

The new provisions state that, effective March 1, 1961, every tradesman and every

apprentice in the province engaged in the carpentry trade must hold a certificate of status, which must be renewed annually. At present, certificates of status are mandatory only in the cities and in the town of Melville and a five-mile radius.

There has been no change in the other special rules for the carpentry trade. As before, the minimum number of hours which an applicant must work to qualify for a certificate of journeyman's status is 8,000 hours, including time credit for appropriate trade training.

The ratio of apprentices to journeymen remains one to three, with provision for an employer who employs fewer than three journeymen in any establishment to engage one apprentice.

As before, provision is made for persons in small establishments who are engaged full-time in the carpentry trade to enter into a contract of apprenticeship with the Director of Apprenticeship.

The provincial quota is also unchanged, the regulations again stipulating that the total number of registered apprentices may not exceed one third of the total number of journeymen carpenters in the province.

19th Annual Conference, Canadian Association of Administrators of Labour Legislation

The nineteenth annual conference of the Canadian Association of Administrators of Labour Legislation was held in Victoria, B.C., from September 27-30. The delegates were welcomed on behalf of the Government of British Columbia by the Honourable Wesley Black, Provincial Secretary, and on behalf of the City of Victoria by His Worship, Mayor Percy Scurreh.

The departments of labour of all provinces and the federal government, which form the nucleus of the organization, were represented at the four-day meeting by their deputy ministers, and senior officers responsible for the administration of labour relations and labour standards legislation, the two main topics on the agenda. Also in attendance were the Ministers of Labour of British Columbia, Alberta, Manitoba, Quebec and Nova Scotia, and representatives of the Unemployment Insurance Commission, the Northwest Territories Administration of the federal Government and the International Association of Governmental

Labor Officials of the United States and Canada.

The program included a general session on recent legislative and administrative developments in all jurisdictions and two sectional meetings, carried on simultaneously, on problems arising out of the administration of labour relations and labour standards legislation. The labour relations group discussed major legislative developments of the past two years in the labour relations field, and a number of problems of concern to Labour Relations Boards.

Jurisdictional problems, fair wages on government contracts, wage protection legislation, and minimum wages were among the subjects considered by the labour standards officers at their two-day session.

"Science and Social Welfare" was the subject of an address given at the annual dinner on September 28 by Dr. Gordon Shrum, O.B.E., Director of the British Columbia Research Council.

(Continued on page 1514)

UNEMPLOYMENT INSURANCE

Monthly Report on Operation of the Unemployment Insurance Act

Claimant total at end of September almost unchanged from month before, nearly 40 per cent higher than year-earlier figure, statistics* show. Since end of seasonal benefit period, total has stayed about 40 per cent above 1959 figures

Claimants† for unemployment insurance benefit on September 30 numbered 279,500, almost unchanged from the August 31 total of 280,200, but nearly 40 per cent more than the figure of 201,600 on September 30, 1959.

Over the year, the number of male claimants has risen by almost 50 per cent; of female claimants, by about 20 per cent. The proportion of males was 67 per cent, compared with 62 per cent in 1959.

In the five months since the end of the seasonal benefit period, the month-end claimant total has stayed about 30 to 40 per cent higher than last year's comparable figures.

Initial and renewal claims for benefit during September numbered 140,300, which was 7 per cent fewer than the August total of 149,600 but 22 per cent more than the total of 115,100 reported in September 1959.

Renewal claims increased 36 per cent from the previous year's total, and initial claims 13 per cent. Initial claims comprised only 56 per cent of all claims; at the same time last year they amounted to 61 per cent.

The average weekly number of beneficiaries was estimated at 222,700 for September, 210,900 for August and 155,000 for September 1959.

Benefit payments totalled \$21,200,000 in September, \$21,400,000 in August and \$13,400,000 in September 1959.

Since the end of the seasonal benefit period, benefit payments have risen over last year's amounts at a higher rate than the claimant total. Payments in May 1960 were about 30 per cent greater than in May last year but September payments were

In a comparison of current employment statistics with those for a previous period, consideration should be given to relevant factors other than numbers, such as the opening and closing of seasonal industries, increase in area population, influence of weather conditions, and the general employment situation.

Claimants should not be interpreted either as "total number of beneficiaries" or "total job applicants."

58 per cent greater than a year earlier. The relatively heavier increase in payments results largely from the increase in benefit rates that became effective September 27, 1959; but an additional reason is the increase in the proportion of male beneficiaries.

The average weekly benefit payment was \$22.65 in September, \$22.01 in August and \$20.54 in September 1959.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for September showed that insurance books or contribution cards had been issued to 4,734,817 employees who had made contributions to the Unemployment Insurance Fund since April 1, 1960.

At September 30 employers registered numbered 331,776, an increase of 925 since August 31.

Enforcement Statistics

During September 5,080 investigations were conducted by enforcement officers across Canada. Of these, 1,832 were spot checks of postal and counter claims to verify the fulfilment of statutory conditions and 91 were miscellaneous investigations. The remaining 3,157 were investigations in connection with claimants suspected of making false statements to obtain benefit.

*See tables E-1 to E-4 at back of this issue.

†A claimant's unemployment register is placed in the "live file" at the local office as soon as the claim is forwarded for computation. As a result, the count of claimants at any given time inevitably includes some whose claims are in progress.

Prosecutions were begun in 182 cases, 45 against employers and 137 against claimants.* Punitive disqualifications as a result of claimants' making false statements or misrepresentations numbered 2,608.*

Unemployment Insurance Fund

Revenue received in September totalled \$27,335,026.34 compared with \$28,320,-

628.14 in August and \$19,953,518.86 in September 1959. Benefits paid in September totalled \$21,186,259.61 compared with \$21,-356,560.34 in August and \$13,375,586.41 in September 1959.

The balance in the Fund on September 30 was \$319,476,441.77; on August 31 it was \$313,327,675.04 and on September 30, 1959, it was \$455,238,779.41.

Decisions of the Umpire under the Unemployment Insurance Act

Decision CUB-1772, September 9, 1960

Summary of the Main Facts: The claimant, a 49-year-old married woman, filed an initial application for benefit on January 11, 1960 and was registered for employment as a stock control clerk. She stated that she had been employed as such at the RCAF Station, Fort Osborne Barracks, Portage la Prairie, Man., (pop. 10,000) from May 30, 1955 to December 15, 1959, when she voluntarily left her employment because her husband had been transferred to Emerson, Man. (pop. 893). She stated also that she was available for work in Emerson only. Her salary at the time of her separation was \$220 a month.

On January 15, 1960, the insurance officer notified the claimant that she was disqualified from receipt of benefit from January 10, 1960 and for as long as she failed to prove that she was available for work (section 54 (2) (a) of the Act), since she had left her employment voluntarily in order to establish residence in an area in which suitable employment opportunities for her were virtually non-existent.

On January 25, 1960, the claimant appealed to the board of referees. In her appeal, she stated in part:

... I did not leave my job voluntarily—I had no choice. My husband came first.

My husband lost his job last June when MacDonald Airport closed. In October, he got a chance of a job in Emerson at the Customs. He took it rather than be out of work and it was permanent. We did not realize Emerson was such a small place.

As my husband has only another six years to work before retirement, we had planned on making our home in Portage and I would continue to work out. He had to work shifts and most week ends. So, we changed plans. I would give up my permanent job in Portage and try to get one in Emerson.

I gave a month's notice before leaving and by not working another five months to make up my five years, I lost out on another month's

leave credits. But my husband needed a home...

On February 26, 1960, the board of referees unanimously dismissed her appeal on the following grounds:

... It would appear that the claimant separated voluntarily to accompany her husband to a new location where he found employment.

This Board, in view of the claimant's statement that she is available for work in Emerson only, unanimously holds that the claimant has not proved she is available for work, and therefore, the disqualification for an indefinite period commencing on 10 January, 1960, is sustained.

On March 30, 1960, with leave of the chairman of the board of referees, the claimant appealed to the Umpire on the following grounds:

When MacDonald Airport closed last June, my husband lost his job at South Port. As his name was quite a ways down the list of men laid off, he was advised to take a job outside of Portage la Prairie, as there were too many men ahead of him for the local jobs.

In October, he was told the Customs and Immigration Offices at Emerson were enlarging at both 75 and 81 highways, and that there was an opening for him. As it was affecting his health being out of work and if he did not start work again within the three months, his salary would start at the minimum again. We both thought there would be work for me there also. So he accepted the job. That meant, in order to be with my husband, I had to give up my job as clerk in stock control at South Port, that I had held for four and a half years. I left my job on December 15th. I quite expected that after my leave credits were up, your office would help me find a job here with my husband, and I need a job.

On April 8, 1960, a placement officer of the local office wrote to the supervisor of the insurance branch of that office a memorandum stating: "The information received from the audit department as to the employers in Emerson registered with them, would indicate that the opportunities for employment for (the claimant) as a Stock Control Clerk are practically non-existent."

On April 22, 1960, the placement officer informed the aforementioned supervisor that

- 3 Garages
- 1 Implement Dealer
- 1 Theatre
- 2 Barristers

The placement officer also stated that the following business establishments employed female workers:

Bank of Nova Scotia	1 female
H. H. Wright & Co.	3 "
Canada Customs	3 "
Border Cafe	1 "
Lewthwaites	1 "
Mickey's General Store	3 "
Custom Meat (Solo Store)	2 "
Brown Derby	2 "
Post Office	1 "
Streick & Price Gen. Store	2 "
3 Beauty Shops	3 "

On May 20, 1960, the placement officer wrote to the supervisor of the insurance branch a memorandum which reads:

We have sent a letter to the applicant asking her if she is available for another type of work or in another locality. So far we have not received a reply. As to the occupations that the females are employed in in the establishments in Emerson, they are as follows:

Bank of Nova Scotia	1 female—Steno.
H. H. Wright & Co.	3 females—2 stenos, 1 prop.
Canada Customs	3 females—1 steno, 2 officers
Lewthwaites	1 female—Clerk (wife of prop)
Mickey's General Store	3 females—3 clerks (1 the wife of the prop)
Custom Meat (Solo Store)	2 females—2 clerks (1 daughter, 1 wife of prop)
Post Office	1 female—1 clerk
Streick & Price Gen. Store	2 females—2 clerks (wives of props.)
Hotel	3 females—2 charwomen, 1 clerk
2 Cafes	2 females—2 clerks
Border Cafe	1 female
Brown Derby	2 females
3 Beauty Shops	3 females

The letter sent to the claimant by the placement officer and referred to in the preceding paragraph is dated May 13, 1960. It reads in part:

We regret that we have been unable to obtain a position for you as a Stock Control Clerk. On your application for employment you state that you have also had experience as a Sales Clerk. Would you be willing to accept employment in this occupation or is there any other type of employment that you would be interested in obtaining in your vicinity?...

The claimant's reply to the aforementioned letter is dated May 17 and reads in part:

I realize there are not many jobs in Stock Control, and as I have received a lot of training in the Army during the War, I am willing to take a job as an Office Clerk, a Receptionist, or as a Sales Clerk...

At the request of the Umpire, the Chief of the Claims Division of the Unemployment Insurance Commission obtained the claimant's Master Application for Employment, form UIC 701M, from the local office. It shows that while serving in the Army during the 1939 War, the claimant qualified as a typist and that for 5½ years ending in 1952 she had worked as a sales clerk in a retail store in Winnipeg. It shows also that on May 20, 1960, upon receipt of the claimant's letter dated May 17, a secondary occupation, viz., sales clerk, was added to her registration for employment.

Considerations and Conclusions: The decision of the board of referees appears to rest on the assumption that the claimant, at the time of her application for benefit, was willing to accept work in Emerson as a stock control clerk only.

However, the only evidence to support the board's assumption is that she was registered for employment as a stock control clerk only, notwithstanding (a) the apparent non-existence of an occupation of that kind in Emerson and (b) the claimant's disclosure of previous training and experience in other occupations.

It would have been desirable if the placement officer who interviewed the claimant in the present case had informed her then that a position of that kind was non-existent in Emerson and at the same time inquired from her if she would accept other employment such as a clerk, sales clerk, etc. However, I fully realize that placement officers have many duties to carry out, apart from having to interview a large number of persons in the course of their day's work. For that reason, the placement officer's oversight is understandable.

The claimant herself seems to have realized there was some excuse for this

oversight because, in the letter accompanying her application for leave to appeal to the Empire, she went to the trouble of explaining the situation that prevailed in the local office on the day she filed her application for benefit:

... It was... unfortunate for me to get to the Unemployment Office so late in the afternoon that first day to make out my application forms. I was tired from the long drive into the city and am afraid I rushed through too quickly. I was told I didn't have very much time.

The staff, I imagine, were also tired by then trying to get all those applicants through before closing time. There were so many that day. I hope you will take all this into consideration when deciding about my appeal.

Notwithstanding that the claimant's incomplete registration, i.e., the exclusion of a secondary occupation, was unquestionably due to an understandable oversight of the placement officer, the fact remains that if that officer had, on January 11, 1960, explained the situation to the claimant as was done four months later by letter dated May 13, it is quite possible that she would have indicated her willingness as she did in her letter of May 17 to accept work in more than one occupation and, therefore, this information would have been on record on January 11 and not four months later as was the case.

Although the foregoing conjecture seems reasonable, what would have been the claimant's answer cannot now be assumed and as, furthermore, a considerable amount of evidence was added to the record after the date of the decision of the board of referees, I should refer the case back to the board for reconsideration. However, I am not going to do so as I feel that such a referral would unnecessarily delay the final disposal of the matter at issue.

I consequently decide to remove the disqualification that was imposed by the insurance officer, but only in respect of what I consider to be a reasonable period of time in which the claimant could have had the opportunity to explore the employment possibilities for her in Emerson. Such a period, in view of the restricted labour market and the fact that the claimant had had no recent employment in a small locality like Emerson, should be five weeks as from January 10, 1960, that is approximately one week for each year of her employment as a sales clerk, and I so direct.

But for this modification, I dismiss the claimant's appeal.

Decision CUB-1779, September 29, 1960

Summary of the Main Facts: The claimant, married, 34 years of age, filed an initial application for benefit on November 24, 1959, and registered for employment as a secretary. She had worked in that

occupation from May 1944 to August 31, 1959, when she voluntarily left because of pregnancy. Her rate of pay was \$270 a month.

On April 4, 1960, the local office notified the claimant of an offer of employment of three months' duration as a secretary in "Notre Dame College School" at a wage of \$55 a week. The reported prevailing rate of pay in the district for that type of work was \$45 a week. The hours of work were seven and a half a day and 37-40 a week (day work). The distance from her home to the place of work was one mile and no transportation was available. The claimant's reasons for non-acceptance were:

Couldn't work there as wasn't comfortable and felt couldn't do my work as cannot and do not believe in the Catholic Church. Felt it was better the way I felt not to accept the position as would not be of any use. Am a Public School Supporter and my husband's late father was a Lutheran Minister, he also objected.

The local office commented as follows:

When employer placed the order he stated the applicant would not have to be of Roman Catholic faith, therefore applicant was considered suitable. Protestant and Roman Catholic students attend this school. They are campaigning for funds for an addition to the school.

The insurance officer notified the claimant by letter on April 26, 1960, that she was disqualified from receipt of benefit for the period April 3, 1960 to May 14, 1960, inclusive, because, in his opinion, she had, without good cause, failed to accept a situation in suitable employment (section 59 (1) (a) of the Act).

On April 28, 1960, the claimant appealed to a board of referees on the following grounds:

- a) I do not believe in Separate Schools and, therefore, according to my principles cannot work for, support or contribute to such a cause.
- b) The job in question is not a Private Secretary's job. The gentleman at Notre Dame College School agreed to this. It was a job of typing, using the calculator and using the mimeograph plus other duties. No dictation or shorthand entered the picture or was required.
- c) The salary was not commensurate with that of my previous position.
- d) No transportation was available—which I had previously.
- e) This is the first job I have failed to accept.
- f) In talking with various people from the Unemployment Commission, it has been stated that the length of time that one has received Unemployment Insurance has a bearing on whether one should get suspended. I do not believe that this should be the case, and it is certainly not stated so in the Unemployment Insurance Act. (Payments have been received for four months only).

The claimant was neither present nor represented at the hearing of her case by

a board of referees in St. Catharines, Ont., on May 26, 1960. The board, by a majority decision, dismissed the claimant's appeal and maintained the disqualification that had been imposed by the insurance officer. The decision reads:

... The board was unanimous in their opinion that the job offered was suitable in all respects except for the religious angle. The majority members of the board are of the opinion that although the claimant does not believe in the Catholic faith it is not sufficient reason for failing to accept employment with Notre Dame College School.

The majority members point out that the applicant did not have to be of the Roman Catholic faith but if the employer had so done, it could have been considered as discrimination. Conversely should the applicant fail to accept a position on religious grounds, the applicant therefore could be considered as discriminating against the employer.

The majority therefore feel that after unemployment for approximately seven months and the position was reported at the prevailing rate for that type of work within the district in claimant's registered occupation, we feel that because of the restrictions she has placed on the conditions on personal reasons under which she is willing to accept employment has failed to accept suitable employment...

The dissenting member of the board expressed the following opinion:

... It should be noted that the employer is a religious organization of the Roman Catholic faith and is not a common employer. Basic religious freedom is inherent to our

democratic system, and applied to this situation must surely mean that the claimant has every right to decline employment with a religious faith for which she is not in sympathy. This principle is aggravated in my opinion by the type of work that is offered which involves the campaigning for funds to further this religious organization.

It is an undisputed fact that the commission is willing to grant special considerations to members of the Seventh Day Adventist belief and therefore members of other religious beliefs should be granted equal consideration.

On this basis I feel that the claimant's appeal should have been allowed.

The claimant appealed to the Umpire and as grounds for her appeal she cited the opinion expressed by the dissenting member of the board.

Considerations and Conclusions: The record shows that the functions of the temporary employment which was notified to the claimant on April 4, 1960, would have involved her participation in work connected with the campaigning for funds to further a denominational organization, which she objected to do because of her religious convictions.

In view of the foregoing and also in the absence of evidence that her religious convictions were not honestly held, I consider that she had good cause for refusing the employment offered and decide to allow her appeal.

Canadian Association of Administrators of Labour Legislation

(Continued from page 1309)

At the closing session, A. H. Brown, federal Deputy Minister of Labour, and Adam Bell, Victoria, were elected honorary presidents of the Association.

W. Elliott Wilson, Q.C., Deputy Minister of Labour, Manitoba, expressed the Association's appreciation of Mr. Brown's continuing interest in and assistance to the organization. "Mr. Brown," he said, "has intimately associated himself with the work of this Association. He has assisted the members of the Association in their work within the respective departments of labour and has shown himself more than ready to discuss our problems, to give us the benefit of his wisdom and experience, and to place at our disposal the services of his department."

K. A. Pugh, Deputy Minister of Labour, Alberta, paid tribute to Mr. Bell for the prominent part he had played in the organization of the Association in 1938, and as its first president. (At that time Mr. Bell, now retired, was Deputy Minister of Labour of British Columbia and later became Chairman of the province's Workmen's Compensation Board.)

Mr. Pugh was elected President of the Association for 1960-1961. The other officers who will serve on the Executive Board during the coming year are J. B. Metzler, Deputy Minister of Labour, Ontario, Past President; W. Elliott Wilson, Q.C., 1st Vice-President; R. E. Anderson, Deputy Minister of Labour, Nova Scotia, 2nd Vice-President; and Evelyn Best, federal Department of Labour, Secretary-Treasurer.

LABOUR CONDITIONS IN FEDERAL GOVERNMENT CONTRACTS

Wage Schedules Prepared and Contracts Awarded during October Works of Construction, Remodelling, Repair or Demolition

During October the Department of Labour prepared 219 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada, for works of construction, remodelling, repair or demolition. In the same period, a total of 167 contracts in these categories was awarded. Particulars of these contracts appear below.

A copy of the wage schedule issued for each contract is available on request to trade unions concerned or to others who have a *bona fide interest* in the execution of the contract.

(The labour conditions included in each of the contracts listed under this heading provide that:

(a) The wage rate for each classification of labour shown in the wage schedule included in the contract is a minimum rate only and contractors and subcontractors are not exempted from the payment of higher wages in any instance where, during the continuation of the work, wage rates in excess of those shown in the wage schedule have been fixed by provincial legislation, by collective agreements in the district, or by current practice;

(b) hours of work shall not exceed eight in the day and 44 in the week, except in emergency conditions approved by the Minister of Labour;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of eight per day and 44 per week;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Contracts for the Manufacture of Supplies and Equipment

Contracts awarded in October for the manufacture of supplies and equipment were as follows:

Department	No. of contracts	Aggregate Amount
CMHC	3	\$ 92,407.99
Defence Construction (1951) Ltd.	2	48,400.00
Defence Production	109	506,979.00
Post Office	6	149,561.25
RCMP	7	65,993.00

The Fair Wages and Hours of Labour legislation of the federal Government has the purpose of insuring that all Government contracts for works of construction and for the manufacture of supplies and equipment contain provisions to secure the payment of wages generally accepted as fair and reasonable in each trade or classification employed in the district where the work is being performed.

The practice of Government departments and those Crown corporations to which the legislation applies, before entering into contracts for any work of construction, remodelling, repair or demolition, is to obtain wage schedules from the Department of Labour showing the applicable wage rate for each classification of workmen deemed to be required in the execution of the work.

These wage schedules are thereupon included with other relevant labour conditions as terms of such contracts to be observed by the contractors.

Wage schedules are not included in contracts for the manufacture of supplies and equipment because it is not possible to determine in advance the classifications to be employed in the execution of a contract. A statement of the labour conditions which must be observed in every such contract is however, included therein and is of the same nature and effect as those which apply in works of construction.

Copies of the federal Government's Fair Wages and Hours of Labour legislation may be had upon request to the Industrial Relations Branch of the Department of Labour, Ottawa.

(The labour conditions included in contracts for the manufacture of supplies and equipment provide that:

(a) all persons who perform labour on such contracts shall be paid such wages as are currently paid in the district to competent workmen; and if there is no current rate, then a fair and reasonable rate; but in no event shall the wages paid be less than those established by the laws of the province in which the work is being performed;

(b) the working hours shall be those fixed by the custom of the trade in the district, or if there be no such custom, then fair and reasonable hours;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of those fixed by custom of the trade in the district, or in excess of fair and reasonable hours;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Wage Claims Received and Payments Made during October

During October the sum of \$24,632.53 was collected from 11 contractors for wage arrears due their employees arising out of the failure of the contractors, or their sub-contractors, to apply the wage rates and other conditions of employment required by the schedule of labour conditions forming part of their contract. This amount is for distribution to the 564 workers concerned.

Contracts Containing Fair Wage Schedules Awarded during October

(The labour conditions of the contracts marked (*) contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of eight per day and 44 per week, and also empower the Minister of Labour to deal with any questions which may arise with regard thereto.)

Department of Agriculture

Nappan N S: Modern Construction Ltd, paving of road, Experimental Farm. *Nor-mandin Que:* Alma Construction Ltee, supply & erection of two steel hay barns, Experimental Farm. *Kapuskasing Ont:* Lord & Burnham Co Ltd, supply & erection of greenhouse, Experimental Farm. *Lacombe Alta:* Alta-West Construction Ltd, construction of beef pole barn & addition to bull barn, Experimental Farm.

Atomic Energy of Canada Limited

PRICES AND THE COST OF LIVING

Consumer Price Index, November 1960

Canada's consumer price index (1949=100) edged up 0.2 per cent from 129.4 to 129.6, a new high, between October and November. A year ago the index stood at 128.3.*

Increases in clothing, shelter and other commodities and services indexes offset a decrease in the food index. The household operation index was unchanged.

The food index dropped 0.2 per cent from 125.8 to 125.5. Lower prices were reported for beef, fresh pork, veal, lamb, chicken, grapefruit and bananas. Prices were higher for eggs and a number of fresh vegetables.

The shelter index rose a fractional 0.1 per cent from 144.3 to 144.5. Rents were unchanged, but prices of some home-ownership items were up slightly.

A rise of 1.2 per cent in the clothing index, from 111.2 to 112.5, reflected changes between November prices in effect at the end of the last winter season for winter clothing items, including men's overcoats, women's fur coats, boys' parkas and women's overshoes.

The household operation index was unchanged at 123.5. Scattered and minor sale price decreases were reported for a number of furniture items and floor coverings, as well as lower prices for fuel oil and some household utensils and equipment. These changes just balanced higher prices for coal and a number of textile items.

The other commodities and services index rose 0.4 per cent from 137.8 to 138.3. Initial pricing of 1961 model passenger cars showed prices up 4.9 per cent from the year-end prices (September 1960) of 1960 models, but down 6.1 per cent from the initial pricing (November 1959) of 1960 models. Higher prices were recorded for theatre admissions, film, men's haircuts and women's hairdressing. Price declines were generally limited to several prescription drug items and personal care supplies, including shaving cream, toilet soap, toothpaste and cleansing tissues.

Group indexes in November 1959 were: food 123.8, shelter 142.6, clothing 111.4, household operation 123.5, and other commodities and services 136.9.

*See Table F-1 at back of book.

City Consumer Price Indexes, October 1960

Consumer price indexes (1949=100) rose in all ten regional cities between September and October. Increases ranged from a fractional 0.1 per cent in Saskatoon-Regina to 1.1 per cent in both Montreal and Toronto.†

Changes in the food indexes, largely seasonal in nature, followed patterns similar to those shown in the total indexes: up in all ten regional cities. Increases ranged from 0.3 per cent in Saskatoon-Regina to 3.1 per cent in both Ottawa and Toronto.

Other group indexes showed more varied results. Shelter indexes were unchanged in three cities, lower in three cities and higher in the remaining four. Clothing indexes were up in seven of the ten regional cities, unchanged in two and down in one. Household operation indexes were higher in four cities, lower in three cities and unchanged in the remaining three regional cities. Other commodities and services group indexes were unchanged in seven of the ten regional cities and higher in the other three.

Regional consumer price index point changes between September and October were as follows: Montreal +1.4 to 129.1; Toronto +1.4 to 132.1; Vancouver +1.3 to 130.5; Ottawa +1.2 to 130.2; Halifax +1.0 to 128.1; Winnipeg +0.9 to 127.1; Saint John +0.8 to 130.0; Edmonton-Calgary +0.5 to 125.6; St. John's +0.2 to 115.0*; Saskatoon-Regina +0.1 to 125.7.

Wholesale Price Index, October 1960

Canada's general wholesale price index (1935-39=100) in October was 230.3, little changed from the September index of 230.4 and from last year's October index of 230.0. Four of the eight major group indexes were lower in October than in September and three were higher. The iron products group index was unchanged at 255.6.

The non-ferrous metals group index declined for the fourth consecutive month, dropping 1.1 per cent to 175.5 from 177.4. The animal products group index fell 0.4 per cent to 251.0 from 252.1, the non-metallic minerals group index eased down 0.1 per cent to 184.3 from 184.5, and the chemical products group index also dropped 0.1 per cent to 187.7 from 188.0.

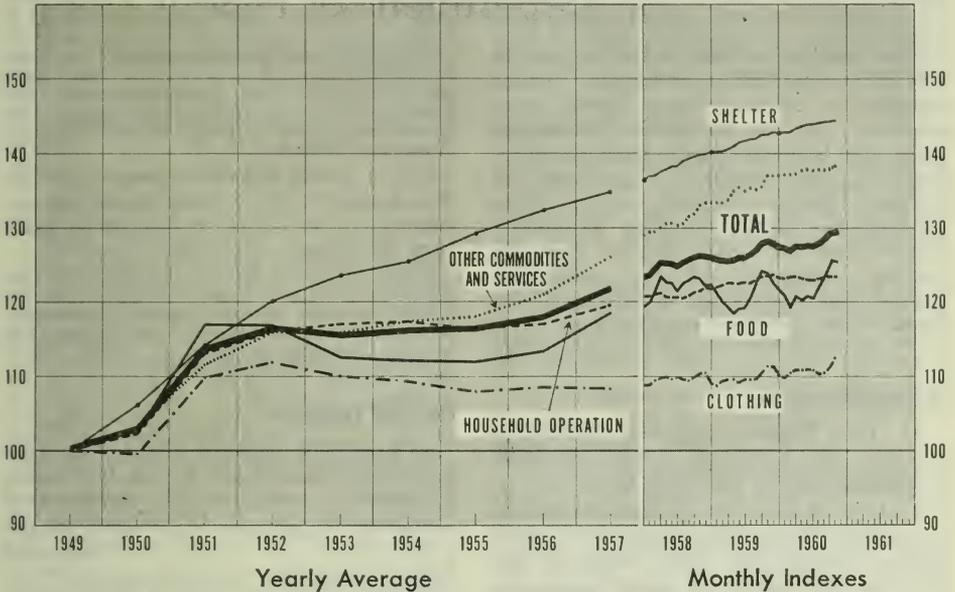

†See Table F-2 at back of book.

*On base June 1951=100.

CONSUMER PRICE INDEX

Index 1949=100

Index 1949=100

The vegetable products group index rose 0.3 per cent to 201.5 from 200.9, the wood products group index increased 0.3 per cent to 301.8 from 301.0, and the textile products group index edged up 0.1 per cent to 229.2 from 228.9.

The index of Canadian farm product prices at terminal markets (1935-39=100) eased down to 1.2 per cent, from 218.0 to 215.3, in the three-week period ended October 21. The animal products index declined 2.1 per cent from 274.5 to 268.6, and the field products index edged up 0.3 per cent from 161.5 to 162.0. Regional indexes declined: the eastern index moved down 1.8 per cent from 239.2 to 235.0, and the western index 0.7 per cent from 196.9 to 195.5.

U.S. Consumer Price Index, October 1960

The United States consumer price index (1947-49=100) rose to 127.3—a record—

between mid-September and mid-October. It was the ninth increase in the past 12 months. In October 1959 the index was 125.5.

Forty per cent of the 1.4-per-cent increase over the year was in food prices. Prices of goods other than food were down by 0.3 per cent from a year earlier.

Food prices increased in the month more than is usual for the season but prices of new automobiles rose less than they usually do.

U.K. Index of Retail Prices, September 1960

The United Kingdom index of retail prices (Jan. 17, 1956=100) rose from 110.4 to 110.5 between mid-August and mid-September. This was still below the record 111.1 reached at mid-July this year but was above the year-earlier figure of 108.7.

Operating revenues of Canadian railways increased in 1959 by 5.2 per cent to a total of \$1,224,568,000. Revenue in 1958 was \$1,163,735,000, the Dominion Bureau of Statistics reported last month.

Operating expenses in 1959 climbed 3 per cent to \$1,166,307,000 from \$1,132,278,000 in 1958.

Net operating revenue in the year increased to \$58,261,000 from \$31,458,000; the ratio of operating expenses to operating revenue fell to 95.24 from 97.30.

The number of passengers carried in 1959 was 2 per cent below the 1958 figure, and freight traffic volume, as measured in ton-miles, rose 2.4 per cent during the year; total revenue tonnage carried climbed 6.9 per cent.

Publications Recently Received in Department of Labour Library

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the *LABOUR GAZETTE*.

List No. 146

Accident Prevention

1. U.S. BUREAU OF LABOR STANDARDS. *Control of Electrical Shock Hazards*. Washington, GPO, 1960. Pp. 15.

2. U.S. BUREAU OF LABOR STANDARDS. *Safety and Health Regulations for Longshoring*. Washington, GPO, 1960. Pp. 96.

...Contains safety and health regulations that have been determined by the Secretary of Labor to be reasonably necessary to the life, health and safety of employees engaged in longshoring, ship repairing, and related employments covered by section 41 of the Longshoremen's and Harbor Workers' Compensation Act, as amended.

3. U.S. BUREAU OF LABOR STANDARDS. *Safety and Health Regulations for Ship Repairing*. Washington, GPO, 1960. Pp. 160.

4. U.S. OFFICE OF EDUCATION. *A Guide for Improving Safety Education Programs in School Shops*, compiled by Howard K. Hogan. [Washington, GPO, 1960] Pp. 48.

Building

5. BUITINK, J. G. *Examples of Building throughout the Winter*. Translated by D. A. Sinclair. Ottawa, Division of Building Research, National Research Council, 1960. Pp. 11.

Brief description of some winter construction in The Netherlands.

6. CROCKER, C. R. *Winter Construction*. Ottawa, National Research Council, Division of Building Research, 1960. Pp. 4.

A brief examination of winter construction in Canada.

Business

7. HULTGREN, THOR. *Changes in Labor Cost during Cycles in Production and Business*, by Thor Hultgren, assisted by Dorothy Dorfman Green. New York, National Bureau of Economic Research, 1960. Pp. 85.

Contents: Potential Influences on Labor Cost; Available Figures, Production and Man-Hours per Unit of Product, Production and Labor Cost per Unit of Product, Changes during Cycles in Business at Large, Cyclical Change: Tests and Inferences.

8. U.S. SMALL BUSINESS ADMINISTRATION. *Management Aids for Small Manufacturers*. Annual No. 6. Edited by Robert A. Lutzberg. Washington, GPO, 1960. Pp. 73.

Partial Contents: Rating your Firm's Organization, Making your Sales Meetings Profitable, Protecting your Business against Dishonesty, How Directors strengthen Small Firms, Improving Foremen Relations in Small Plants, Job Evaluation in Small Industry.

Economic Conditions

9. LAMPMAN, ROBERT JAMES. *The Low Income Population and Economic Growth*, by Robert J. Lampman. *The Adequacy of Resources for Economic Growth in the United States*, by Joseph L. Fisher and Edward Boorstein. Materials prepared in Connection with the Study of Employment, Growth, and Price Levels for Consideration by the Joint Economic Committee, Congress of the United States. Washington, GPO, 1959. Pp. 71.

At head of title: 86th Cong., 1st sess. Joint Committee print.

10. PARKS, ARTHUR CARMICHAEL. *The Economy of the Atlantic Provinces, 1940-1958*. [2d ed.] Halifax, Atlantic Provinces Economic Council, 1960. Pp. 179.

"Historical and comparative analysis of the economic achievement of Nova Scotia, New Brunswick, Prince Edward Island and Newfoundland." Also contains an analysis of achievement in the following industries: minerals and mineral processing, pulp and paper, lumber and wood using, fish and fish processing, agriculture, other manufacturing, construction, and services.

11. QUEBEC (PROVINCE). BUREAU OF STATISTICS. *Quebec, 1959*. Quebec [1960] Pp. 103.

English and French.

A brief review of economic activities in the Province of Quebec during the year 1959.

12. UNITED NATIONS. BUREAU OF ECONOMIC AFFAIRS. *Economic Developments in the Middle East, 1958-1959. Supplement to World Economic Survey, 1959*. New York, 1960. Pp. 125.

Employment Management

13. BRITISH INSTITUTE OF MANAGEMENT. *The Cost of Labour Turnover*. London, 1959. Pp. 79.

Based on a study of labour turnover costs in 16 firms.

14. BUREAU OF NATIONAL AFFAIRS, WASHINGTON, D.C. *Controlling Absenteeism*. Washington, 1960. Pp. 21.

Contents: Introduction. Records & Their Analysis. Costs of Absenteeism. Notification of Absence. Discipline & Penalties. Role of First-Line Supervisor. How to improve Attendance. Sample Forms & Records.

15. INDUSTRIAL RELATIONS COUNCILORS SERVICE. *Fringe Benefit Costs in Canada*, 1959. Toronto, 1960. Pp. 53.

Industrial Relations

16. CANADIAN CONSTRUCTION ASSOCIATION. [Papers delivered to Pre-Convention Labour Relations Forum, January 1960] Ottawa, 1960. 7 parts.

Contents: Pre-convention Labour Relations Forum [Summary]. Arbitration Board's Power to award Damages for Breach of Agreement (Reprinted from Labour Gazette, Jan. 29, 1960). Joint or Multiple Bargaining, by Alan E. Cameron. Effective Operation of a Joint Committee, by J. Lawrie. The Promotion of Labour Legislation, by W. A. Nisbet. Administration of Labour Legislation, by K. A. Pugh. Effective Operation of Joint Committees, by W. E. Williams.

17. DEUTSCH, ANTAL. *Provincial Legislation governing Municipal Labour Relations; a Comparative Study of Provincial Labour Legislation governing Municipal Employer-Employee Relations*. Montreal, Canadian Federation of Mayors and Municipalities, 1960. Pp. 62.

An analysis of provincial labour legislation as it touches on thirty-two different topics.

18. INDUSTRIAL RELATIONS RESEARCH ASSOCIATION. *Papers presented at Detroit, Michigan, May 6-7, 1960; Proceedings of the Spring Meeting*. Edited by David B. Johnson. Madison, Wis., 1960. Pp. 571-679.

Some of the topics discussed are: the Labor-Management Reporting and Disclosure Act of 1959; collective bargaining in the automobile and in the basic steel industries; and, union participation in elections.

Labour Laws and Legislation

19. INTERNATIONAL ASSOCIATION OF GOVERNMENTAL LABOR OFFICIALS. *Labor Laws and their Administration. Proceedings of the Forty-second Convention of the International Association of Governmental Labor Officials, held in Kennebunkport, Maine, September 9-12, 1959*. Washington, U.S. Bureau of Labor Standards, 1960. Pp. 211.

20. U.S. BUREAU OF LABOR-MANAGEMENT REPORTS. *Guide for Employer Reporting. How to complete Employer Report LM-10; Instructions for Employers required to use LM-10 in complying with Section 203 (a) of the Labor-Management Reporting and Disclosure Act*. Washington, GPO, 1960. Pp. 43.

Under the Labor-Management Reporting and Disclosure Act of 1959 employers must disclose to the Secretary of Labor certain financial transactions and arrangements made with labour organizations, union officials, employees, labour relations consultants, or other persons. Contains a facsimile of the form with explanations of the various sections to be completed.

Labour Organization

21. BROOKS, GEORGE W. *The Sources of Vitality in the American Labor Movement*. Ithaca, New York State School of Industrial and Labor Relations, Cornell University, 1960. Pp. 47.

Briefly discusses administration of trade union activities. Despite some disadvantages which have arisen with the increase in the size of unions, the author expresses optimism about the future of the American labour movement.

22. INTERNATIONAL LABOUR OFFICE. *The Protection of Trade Union Funds and Property*. Geneva, 1960. Pp. 200.

Reviews legal provisions and practice relating to trade union funds and property in force in various countries. Discusses the following subjects: "sources of trade union funds and property; purposes for which trade union funds and property may or may not be utilized; internal administration of trade union funds and property; voluntary measures to secure or encourage good trade union administration; supervision of trade union financial administration by public authorities; sanctions in respect of unauthorized use of trade union funds and contraventions of legislative provisions; disposal of trade union assets on winding-up or dissolution."

23. POSTAL, TELEGRAPH AND TELEPHONE INTERNATIONAL. *Secretary's Report, 1957-1959 [to the] 17th Postal, Telegraph and Telephone International Congress, 18-22 July, 1960, Vienna*. Berne [1960?] Pp. 266.

24. SCOTTISH TRADES UNION CONGRESS. *Sixty-third Annual Report held in Perth ... 19, 20, 21 and 22, April 1960*. Glasgow, 1960. Pp. 415.

Labouring Classes

25. CAREY, JAMES BARROW. *Forsake Me Not. Testimony ... before the Senate Subcommittee on Problems of the Aged and Aging, April 6, 1960*. Washington, Industrial Union Dept., AFL-CIO, 1960. Pp. 32.

Mr. Carey, Secretary-Treasurer of the Industrial Union Department, AFL-CIO, and president of the International Union of Electrical, Radio and Machine Workers, was presenting the views of labor on the subject of health care for the older citizen.

26. GARBARINO, JOSEPH WILLIAM. *Health Plans and Collective Bargaining*. Berkeley, University of California Press, 1960. Pp. 301.

Deals with the provision of hospital and medical care through collectively bargained health plans.

27. GREAT BRITAIN. CENTRAL OFFICE OF INFORMATION. REFERENCE DIVISION. *Technological Education in Britain*. [2nd ed.] London, HMSO, 1960. Pp. [44].

"This pamphlet is mainly concerned with the provision made in Britain for training in engineering and in such applied sciences as industrial chemistry, applied physics and mineral survey."

28. INTERNATIONAL LABOUR OFFICE. *Workers' Housing*. Fifth item on the agenda. Geneva, 1960. Pp. 53.

At head of title: Report 5 (1). International Labour Conference. 45th session, 1961.

Contains the text of a proposed Recommendation concerning workers' housing which is being forwarded to member governments for additions or comments. Also contains excerpts from the proceedings of the 44th Session of the International Labour Conference relating to this topic.

29. MONA, JAMAICA. UNIVERSITY COLLEGE OF THE WEST INDIES. DEPARTMENT OF EXTRA-MURAL STUDIES. *Labour Education in the British Caribbean. The Report of a Labour Education Survey conducted June-July, 1959, and of the Conference held at the University College of the West Indies, Mona, Jamaica, August 4-9, 1959*. Ed. Rawle Farley. Mona, Jamaica [1959?] Pp. 119.

This booklet contains (1) addresses presented to a Conference on Labour Education in the British Caribbean; (2) a report of a labour education survey in the territories and islands in the British Caribbean area conducted by Gower Markle, Director of Education and Welfare of the Canadian section of the United Steelworkers of America; and (3) reports of study groups and recommendations of the Conference.

30. NEW ZEALAND. DEPARTMENT OF LABOUR. *Report for the Year ended 31 March 1960*. Wellington, Government Printer, 1960. Pp. 84.

31. U.S. BUREAU OF APPRENTICESHIP AND TRAINING. Washington, GPO, 1960. Pp. 74. Includes sample work schedules for the various automotive trades.

32. U.S. BUREAU OF LABOR STANDARDS. *Time off for Voting under State Laws*. Rev. ed. Washington, GPO, 1960. Pp. 22.

Wages and Hours

33. ALBERTA. BUREAU OF STATISTICS. *Wages and Salary Rate Survey-Alberta. I May 1960. Range of Wages, Weighted Averages and Medians, Alberta and Four Major Cities*. Edmonton, 1960. Pp. 115.

34. CANADA. BUREAU OF STATISTICS. *Review of Man-Hours and Hourly Earnings With Average Weekly Wages, 1945-59*. Ottawa, Queen's Printer, 1960. Pp. 47.

35. INTERNATIONAL LABOUR OFFICE. *Reduction of Hours of Work*. Fourth item on the agenda. Geneva, 1960. Pp. 60.

At head of title: Report 4 (1). International Labour Conference. 45th session, 1961.

Contains excerpts from the proceedings of the 44th Session of the International Labour Conference relating to reduction of hours of work. Includes the text of a proposed Recommendation on the topic which is being submitted to member governments for suggested amendments and comments.

Women

36. CANADA. WOMEN'S BUREAU. *A Meeting of the ILO and Women's Work... Ottawa, August 3, 1960 [including a talk by Mrs. Elizabeth Johnstone, Head of the Office for Co-ordination of Women's and Young Workers' Questions, International Labour Office, on 'Current Emphasis in ILO Programme relating to Women's Work.'* Ottawa, 1960] Pp. 6.

37. FLEXNER, ELEANOR. *Century of Struggle; the Woman's Rights Movement in the United States*. Cambridge, Belknap Press of Harvard University Press, 1959. Pp. 384.

Describes the work of some of the active participants in the women's rights movement. Tells about the efforts of women factory workers to organize trade unions, and about the struggle of Negro women to build their own organizations, among other things.

38. SEMINAR ON PARTICIPATION OF WOMEN IN PUBLIC LIFE, BAGOTA, 1959. *Seminar on Participation of Women in Public Life (1959) Bogota, 18 to 29 May 1959*. New York, United Nations, 1959. Pp. 40.

Workmen's Compensation

39. CANADA. DEPARTMENT OF LABOUR. GOVERNMENT EMPLOYEES COMPENSATION BRANCH. *The Government Employees Compensation Act; Statistical Report 1959-60*. Ottawa, 1960. Pp. 86.

40. INTERNATIONAL ASSOCIATION OF INDUSTRIAL ACCIDENT BOARDS AND COMMISSIONS. *Workmen's Compensation Problems. Proceedings, 45th Annual Convention of the International Association of Industrial Accident Boards and Commissions, Boston, Mass., September 27-October 1, 1959*. Washington, U.S. Bureau of Labor Standards, 1960. Pp. 234.

41. U.S. BUREAU OF LABOR STANDARDS. *Attorneys' Fees in Workmen's Compensation; a Report of the Standards and Procedures in State Legislation*. Washington, GPO, 1960. Pp. 55.

"This bulletin, which is based on a review of State laws, information received from a number of States, and upon secondary sources, discusses the standards and practices of the 50 States, the District of Columbia and Puerto Rico, concerning the regulation and control of claimants' attorneys' fees."

Miscellaneous

42. CANADA. ROYAL COMMISSION ON COAL (1959-60). *Report*. Ottawa, Queen's Printer, 1960. Pp. 127.

The Royal Commissioner, Mr. Rand, makes comments and recommendations on the following: coal subsidies by the federal Government; cost reduction in the production of coal; the present coal market in Canada; expansion of research facilities pertaining to coal, etc.

43. CANADIAN PULP AND PAPER ASSOCIATION. *Proceedings, Forty-Seventh Annual Meeting [Montreal, January 1960]* Montreal, 1960. Pp. 42.

44. EUROPEAN SEMINAR ON SHELTERED EMPLOYMENT, THE HAGUE, 1959. [*Proceedings. The Hague?*] Nederlandse Centrale Vereniging voor Gebrekkigenzorg [1959?] Pp. 171.

Seminar held August 31-September 8, 1959.

45. HODGETTS, JOHN EDWIN, ed. *Canadian Public Administration. [A Book of Readings]*. Edited by] J. E. Hodgetts [and] D. C. Corbett. Toronto, Macmillan, 1960. Pp. 575.

Includes general articles on public administration and articles on government committees, royal commission reports, government corporations, personnel management in the civil service, Parliamentary Committees, government departments and agencies, trade unions in the public service, etc.

46. INTERNATIONAL LABOUR OFFICE. *Co-operative Management and Administration*. Geneva, 1960. Pp. 222.

Partial Contents: Character and Functions of Management. Staffing and Personnel Management. Plant and Premises. Office Organization and Methods. Marketing. Merchandising. Processing and Manufacture. Transport Organization. Co-operative Capital. Co-operative Ac-

counting. Public Control. Legal Responsibilities of Co-operatives. Research and Advisory Services.

47. LIPSET, SEYMOUR MARTIN. *Social Stratification and 'Right-Wing Extremism'*, by Seymour M. Lipset. Berkeley, University of California, Institute of Industrial Relations, 1960. Pp. 38.

An examination of certain extremist right wing political movements and the classes of society from whence their support comes.

48. MASSON, FRANCIS. *Barriers to Trade between Canada and the United States*, by Francis Masson and J. B. Whitely. [Washington?] Canadian-American Committee, 1960. Pp. 97.

Partial Contents: The Area of Free Trade. The System of Tariffs and Quotas. Administrative Protectionism in the United States. Canadian Administrative Protectionism. Effects of U.S. Trade Barriers. Effects of Canadian Trade Barriers.

49. MILLER, BEN. *Gaining Acceptance for Major Methods Changes*. New York, American Management Association, c1960. Pp. 63.

The study examines the reactions of people in six companies to methods changes involving electronic computers or punched-card tabulating equipment. Includes six case studies.

50. NATIONAL INDUSTRIAL CONFERENCE BOARD. *Administration of Executive Expense Accounts*, by Norman E. Pflomm. New York, 1960. Pp. 56.

Based on the experience of over 375 companies, this study reports on the prevailing practices of companies with regard to travel and entertainment expenses and membership dues. Includes nine samples of written policies.

51. U.S. BUREAU OF THE CENSUS. *Alphabetical Index of Occupations and Industries. 1960 Census of Population*. Washington, 1960. Pp. 649.

1959-60 Report, Apprenticeship Commission Montreal Printing Trades

Apprentices under the jurisdiction of the Quebec Apprenticeship Commission of the Printing Trades for Montreal and District on March 31, 1960 totalled 383, according to the recently published report of the Commission for 1959-60. This compares with a total of 343 apprentices under the Commission in the previous year.

All the apprentices were regularly employed in shops in the Island of Montreal and within a radius of 10 miles from its boundaries.

During 1959-60 the number of new boys added to the ranks was 134, but 94 left the jurisdiction of the Commission, making a net increase of 40.

Most of the newcomers were beginners in the various printing trades, although a certain number had had some experience in the industry either as students from the Graphic Arts Institute or as employees who did not previously come under the jurisdiction of the Commission.

Of the 94 "separations" during the year, 60 were apprentices who had completed the six years of their apprenticeship and had been promoted to journeyman status. Of the other 34, some were unemployed, some had moved to another jurisdiction, and some had dropped out of the industry.

B—Labour Income

NOTE: The estimates of labour income in this table have been revised in accordance with recent revisions to the National Accounts. Note particularly the use of annual totals instead of monthly averages, and the introduction of quarterly instead of monthly totals for some industries. Monthly and quarterly figures may not add to annual totals because of rounding.

¹Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.

²Includes post office wages and salaries.

*Figures in this column are for total labour income, Canada, but are not totals of the figures in the remaining columns of this table, as figures for labour income in Agriculture, Fishing and Trapping are not shown. (See also headnote.)

*Revised.

†Preliminary.

C—Employment, Hours and Earnings

Tables C-1 to C-3 are based on reports from employers having 15 or more employees—at August, 1960 employers in the principal non-agricultural industries reported a total employment of 2,874,065. Tables C-4 (every second month) and C-5 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-2. They relate only to wage earners for whom statistics of hours of work are also available whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage earners in the reporting firms.

¹Includes (1) Forestry (chiefly logging), (2) Mining (including milling), quarrying and oil wells, (3) Manufacturing, (4) Construction, (5) Transportation, storage and communication, (6) Public utility operation, (7) Trade, (8) Finance, insurance and real estate and (9) Service, (mainly hotels, restaurants, laundries, dry cleaning plants, business and recreational service).

TECHNICAL NOTE—A change has been made in the method of dating the statistics published in Tables C-1 to C-6 to conform with the usual practice of the Dominion Bureau of Statistics. In the past, statistics for the last pay period in a month were labelled "pay period preceding" the first day of the following month. From now on, statistics for the last pay period in a month will be labelled for that month. Another change is that average hourly earnings formerly expressed in cents carried to one decimal place, are now published in dollars and cents.

*Revised.

D—National Employment Service Statistics

The following tables are based on regular statistical reports from local offices of the National Employment Service. These statistics are compiled from two different reporting forms, UIC 751; statistical report on employment operations by industry, and UIC 757; inventory of registrations and vacancies by occupation. The data on applicants and vacancies in these two reporting forms are not identical.

Montreal.....	127.8	127.7	129.1	129.3	146.0	106.0	118.9	138.5
Ottawa.....	128.6	129.0	130.2	126.8	148.7	115.6	122.1	137.4
Toronto.....	130.3	130.7	132.1	126.6	153.1	114.2	124.1	140.0
Winnipeg.....	125.0	126.2	127.1	123.7	135.0	115.9	120.3	137.2
Saskatoon-Regina.....	124.6	125.6	125.7	124.5	124.9	124.0	125.5	129.1
Edmonton-Calgary.....	124.5	125.1	125.6	121.3	125.5	120.9	126.8	133.0
Vancouver.....	129.6	129.2	130.5	126.7	137.9	116.5	135.2	136.4

N.B.—Indexes above measure percentage changes in prices over time in each city and should not be used to compare actual levels of prices as between cities.

(1) St. John's index on the base June 1951=100.

G—Strikes and Lockouts

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Department of Labour on the basis of reports from the Unemployment Insurance Commission. The first three tables in this section cover strikes and lockouts involving six or more workers and lasting at least one working day, and strikes and lockouts lasting less than one day or involving fewer than six workers but exceeding a total of nine man-days. The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. For further notes on the series see page 542, May issue.

TABLE G-1—STRIKES AND LOCKOUTS, 1955-1960

Month or Year	Strikes and Lockouts Beginning During Month or Year	Strikes and Lockouts in Existence During Month or Year			
		Strikes and Lockouts	Workers Involved	Duration in Man-Days	
				Man-Days	Per Cent of Estimated Working Time
1955.....	149	159	60,090	1,875,400	0.18
1956.....	221	229	88,680	1,246,000	0.11
1957.....	242	249	91,409	1,634,880	0.14
1958.....	253	262	112,397	2,872,340	0.24
*1959.....	202	217	99,872	2,386,680	0.19
