This Board desires to thank the parties for their full co-operation which was so essential to the result and the Board Chairman wishes to acknowledge the debt which he owes to his fellow Board members whose assistance was invaluable.

Dated at Haileybury this 12th day of March, 1960.

ALGOM URANIUM MINES LIMITED

This Conciliation Board met with the parties at Toronto, Ont., on September 25 and October 24, 1959 and January 23, February 7, 8 and 9, 1960, to deal with the following matters:

1. Management rights
2. Established practices
3. Union security
4. Hours of work
5. Overtime
6. Shift premiums
7. Statutory holidays
8. Vacation with pay
9. Incentives and production standards
10. Miners Rehabilitation and Pension Trust Fund
11. Wages
12. Insurance welfare program.

On the two last dates the Board chairman was unable to be present but David B. Archer and David W. Mundell carried on with the negotiations, then in their final stage, at the specific request of the chairman of the Board.

This same Board was seized of the issues in dispute between the same Union and four uranium mining companies of the Rio Tinto Group and a number of meetings were held with the parties over a period of five or six months.

These meetings commenced in September of 1959 and concluded in February 1960 and complications arose due to the decision of the United States Atomic Energy Commission and its United Kingdom counterpart not to exercise options held upon further production of uranium oxide from Canadian mines.

This decision enhanced the desirability of a "stretch-out" of current contracts to prevent the sudden ending of uranium production in 1962/63 and the consequent adjustments in the industry considerably enlarged the responsibility of this Board and prolonged the negotiations.

As the discussions at the various meetings were of necessity interrelated it is difficult and rather artificial to assign any one meeting to any particular company of the group but for distribution purposes this has been done and the six meetings mentioned above have been allocated to this particular Conciliation Board.

It gives great pleasure to this Board to report that all the matters of disagreement between the parties have now been settled and that the parties have signed a renewal of their previous collective agreement.

This renewal is dated the 15th day of February, 1960 and is effective for a period of two years, commencing January 1, 1960 and running up to and including December 31, 1961.

The major items of the settlement may be set out as follows:

- (1) An increase of six (6¢) per hour in the miner's rate effective January 1, 1960 to bring this rate to \$2.20 per hour which was the miner's rate at Milliken Lake Uranium Mine and Northspan Uranium Mine before the present negotiations commenced.
- (2) A general wage increase of four cents (4¢) per hour to all classifications effective January 1, 1960.

- (3) An additional general wage increase of five cents (5¢) per hour to all classifications effective January 1, 1961.
- (4) An improvement in the Welfare Plan (group insurance) at a cost to the Company of approximately one cent (1¢) per hour.
- (5) Premium pay for statutory holidays actually worked increased from double the regular rate to two and one-half times the regular rate at an estimated cost to the Company of .31 cents per hour.
- (6) Vacations with pay in accordance with the Federal Annual Vacations Act. The Company claims that it has agreed to improvements beyond the requirements of the statute which will cost the Company approximately two cents (2¢) per hour.
The Union disagrees with the Company as to interpretation of the statute and states that it may apply to the courts for a construction of the statutory provisions.
- (7) A continuity bonus of six (\$6.00) dollars per month of service, limited to a maximum of \$400 per em-

ployee, payable to all employees permanently displaced because of the closing of the mine brought about by the changes announced in November 1959 by the governments in their uranium purchasing policies.

The current cost of this continuity bonus is estimated by the Company to be three and one-half cents (3½¢) per hour.

Conclusion

This Board expresses its appreciation to the representatives of the parties for their co-operation which was fully and freely rendered to the Board and was essential to the result.

For himself the Chairman of the Board acknowledges his indebtedness to his colleagues whose active and knowledgeable assistance was of prime importance.

Dated at Haileybury this 15th day of March, 1960.

MILLIKEN LAKE URANIUM MINES LIMITED

This Conciliation Board met at Toronto on January 30, 1960 to deal with the following matters:

1. Established practices
2. Management rights
3. Union security
4. Safety and health
5. Hours of work and overtime
6. Shift premiums and overtime premiums
7. Vacation with pay
8. Statutory holidays
9. Incentive and Production standards
10. Miners Rehabilitation and Pension Trust Fund
11. Wages
12. Improvements to insurance program
13. Duration of agreement.

Actually this same Board was dealing with similar issues involving Algom Uranium Mines Limited, Pronto Uranium Mines Limited, Northspan Uranium Mines Limited (production workers) as well as Milliken Lake Uranium Mines Limited.

A number of meetings were held over a period of five months which eventually resulted in settlements and it is difficult to relate any one particular meeting to any specific Company but for purpose of distribution this has been done and the above meeting allocated to this particular Board.

This Board is pleased to report that all matters in issue between the parties were finally resolved and on February 26, 1960 the parties signed a collective agreement dated February 15, 1960 and effective January 1, 1960 for a period of two years, *i.e.*, to and including December 31, 1961.

The major items of the settlement may be summarized as follows:

- (1) A general wage increase of 3 cents per hour to all classifications effective January 1, 1960.
- (2) An additional general wage increase of 4 cents per hour to all classifications effective January 1, 1961.
- (3) An addition of one statutory holiday to increase the paid holidays from six to seven (this was in lieu of a wage increase of 1 cent per hour).
- (4) Premium pay for statutory holidays actually worked increased from double the regular rate to two and one-half times the regular rate—estimated cost to Company is .31 cents per hour.
- (5) Vacations with pay in accordance with the Federal Annual Vacations Act. There is still a difference of opinion between the parties here as the Company claims it has agreed to

improvements, beyond the requirements of the federal statute, which cost the Company about 2 cents per hour whereas the Union disagrees with the Company interpretation of the language of the statute and states that it may apply to the court for construction of the statutory provisions.

- (6) Continuity bonus of \$6 per month of service, maximum of \$400 payable to all employees permanently displaced because of the closing of the mine brought about by the changes announced in November 1959 by the governments on their uranium purchasing policies.

The current cost of this bonus is estimated by the Company to be 3½ cents per hour.

Conclusion

This Board wishes to express its appreciation to the representatives of the parties for their full co-operation which was absolutely essential to the successful conclusion of these negotiations.

The Board Chairman acknowledges his indebtedness to his colleagues upon the Board without whose help and unstinted assistance no settlement could have been reached.

Dated at Haileybury this 9th day of March, 1960.

Report of Board in Dispute between Grand River Railway Company, Lake Erie and Northern Railway Company, and Canadian Pacific Transport Company Limited, Preston, Ontario and Brotherhood of Railroad Trainmen

This Board of Conciliation, consisting of His Honour Judge J. C. Anderson, Chairman; John W. Long, QC, Company nominee, and The Honourable Arthur W. Roebuck, QC, Brotherhood nominee, appointed on or about the second day of December, 1959, met with the parties in Ottawa on February 18 and 19, 1960, and heard the full submissions of both parties with respect to the issues in dispute.

At these meetings the Brotherhood of Railroad Trainmen was represented as follows:

During March, the Minister of Labour received the unanimous report of the Board of Conciliation and Investigation established to deal with a dispute between the Brotherhood of Railroad Trainmen, and The Grand River Railway Company, The Lake Erie and Northern Railway Company and The Canadian Pacific Transport Company Limited, Preston, Ont.

The Board was under the Chairmanship of His Honour Judge J. C. Anderson, Belleville, Ont., who was appointed by the Minister on the joint recommendation of the other two members, J. W. Long, QC, Montreal, and the Honourable A. W. Roebuck, QC, Toronto, nominees of the companies and union respectively.

The text of the report is reproduced here.

F. A. Collin, Vice-President; H. Halberstadt, General Chairman; A. McGlynn, Secretary; W. McKecknie, Committee Member.

The Company was represented by the following:

A. M. Hand, Chairman, Negotiating Committee—Montreal; W. D. Thompson, Manager—Preston; A. T. Hilton, Supervisor of Operations—Preston; J. Ramage, Labour Relations Assistant—Montreal; F. G. Firmin, Supervisor, Labour Relations—Montreal; F. W. McCurry, Supervisor, Labour Relations—Toronto; D. Cardi, Contract Analyst—Montreal.

The Company and the Brotherhood each put forth a number of items which they wished revised in a renewal of the collective agreement which expired on May 31, 1958. The main issue, however, on which the parties submitted briefs and material had to do with the question of retroactivity of increases, and the Brotherhood's request that their rates of pay involving conductors, motormen, brakemen-trolley-men, and trolley-men, be increased to standard yard rates plus increases allowed in the settlement with the CPR and Eastern Region Brotherhood of Railroad Trainmen.

Each party presented briefs in relation to the issues referred to the Board and replies were filed and orally submitted in relation to the matters raised in the briefs. After the formal material was submitted the Board made an effort to conciliate the issues, and as a result, on the evening of February 18, 1960, a memorandum of understanding as to the terms of settlement was arrived at and signed by the respective parties. A copy of the memorandum of understanding is attached hereto and forms a part of this report.

Your Board unanimously recommends that the contract which expired on May 31, 1958 be renewed and extended until May 31, 1961, subject to the changes and

amendments set forth in the said memorandum of understanding.

Your Board further recommends that the changes and amendments to the contract set forth in the said memorandum of understanding be incorporated in the new collective agreement in appropriate contract language.

All of which is respectfully submitted.

Dated at Belleville, this 29th day of February, 1960.

(Sgd.) J. C. ANDERSON,
Chairman.

(Sgd.) J. W. LONG,
Member.

(Sgd.) A. W. ROEBUCK,
Member.

Memorandum of Understanding

Wages

The wage rate increases in the contract, which will run from June 1, 1958 until June 1, 1961, will provide that wage rates be increased over the rates in effect on August 31, 1959 less 1 per cent aside for health and welfare benefits as follows:

8.3 per cent effective September 1, 1959; and effective June 1, 1960 the yard rates in effect on the Eastern Region of the Canadian Pacific Railway will apply, which include a 1.5 per cent increase effective as of that date. These increases will result in the following rates becoming effective June 1, 1960:

	Rate per day \$	Pro Rata	Time and one-half	Vacation Rate per day \$
Conductor and Motorman	18.78	2.175	3.519	18.78
Brakeman and Brakeman-Trolleyman	17.40	2.040	3.262	17.40
Trolleyman	16.32		3.060	16.32
Spare				16.32

Health and Welfare—Amend third paragraph of preamble as follows:

“Effective from March 1, 1960, the Company will pay each conductor, motorman, brakeman, brakeman-trolleyman, trolleyman and bus operator, who performs compensated service during any calendar month, an amount of \$4.25 for such month in lieu of health and welfare benefits. Should the Brotherhood of Railroad Trainmen at some future date enter into a health and welfare plan involving contributions from the Company, the amount of \$4.25 per month herein referred to will no longer be paid by the Company to such conductor, motorman, brakeman, brakeman-trolleyman, trolleyman or bus operator, but shall be paid by the Company as its contribution to such health and welfare plan in respect of such employee.”

It is understood the Company will join with the Brotherhood of Railroad Trainmen in an application to the Employee Benefit Plan Administrative Committee on behalf of the employees coming within the scope

of this agreement to participate in the benefit plan for employees of Canadian Railways.

In the event that the application of the Brotherhood is not accepted, the Company will pay each employee \$4.87 instead of \$4.25 per month in lieu of health and welfare benefits from the first day of the month following the decision of the Employee Benefit Plan Administration Committee giving a negative answer to the application for participation in the plan.

Should the application of the Brotherhood be accepted by the administrative committee, the Company will share, on a 50-50 basis with the employees, the cost of the present benefits under the current health and welfare plan with the non-operating employees which expires December 31, 1960.

Electric Lights and Oil Burners on Cabooses

It was agreed this matter would be finalized as was done in the case of the CPR Eastern Region.

Electric Lanterns

It was agreed the same provisions as settled with CPR Eastern Region would apply.

Statutory Holidays

It was agreed that Victoria Day be added to the existing list.

Two-week Pay Period

Dropped.

Vacations With Pay

The standard yard vacation rule as agreed to on the Eastern Region of the CPR to apply, effective on the date of signing the revised agreement.

Car Step-up Rule

Dropped.

Booking Rest

It was agreed that there was no justification to warrant any change from the present practice.

Cleaning Watches and Inspection

As this not granted on parent company, matter is dropped.

Held Away from Home Terminal Rule

Not applicable.

Reclassification of Yards

This was considered a managerial question and as well as jurisdictional problem was involved. As a result, this matter was dropped.

Article 2—Bus Service

Delete clauses (b), (c) and note.

Article 5—Overtime

(a) Delete "except as provided for in clause (b) of Article 2."

Article 13—Assignments

(a) Insert in second sentence—"except in the case of displacement when a trainman's seniority does not entitle him to an assigned run." Second sentence to read, "Men bidding in assigned runs will not be permitted to revert back to the spare board except in the case of displacement when a trainman's seniority does not entitle him to an assigned run or in exceptional circumstances."

Delete last three sentences.

Add—"A trainman refusing to accept any particular run to which he is entitled will lose his rights to that run until it again becomes vacant, but will otherwise retain his seniority standing." (Transferred from second paragraph Article 14).

(d) Vacancies or new runs created for a period of seven days or longer, vacations excluded, will be bulletined for three days and given to the senior qualified man making an application, appointment to be made the day following the close of the bulletin. In the case of men on vacation, on leave, or on account of illness, in excess of three days, such men will be allowed three days after return to duty to file applications. Positions will be filled meantime by the senior qualified man making application. Until positions are filled following bulletin, such vacancies, and all other vacancies including vacations, will be filled by the senior qualified man on the crew desiring same. In the event that there is no qualified man on the crew or spare board, the position will be filled by the junior qualified man on the seniority list.

Article 14—Promotion

Revise second paragraph as follows:—"Trainmen holding seniority rights subsequent to December 1st, 1953 will be required upon completion of their probationary period to classify as Conductor or Motorman and qualify for same, as provided for in Article 7 (b). Such employees refusing to accept a run for which they are classified and qualified will rank junior thereafter to any employee accepting such run. Trainmen holding seniority rights subsequent to December 1st, 1953 will also be required to fill all other positions left vacant on sign-ups or advertised and not bid on in order of seniority."

However, it shall be provided for that a trainman displaced by a reduction of crews or otherwise, from the service in which he is engaged will have the right to exercise his seniority, and take any trainman's position to which his seniority entitles him.

Article 19—Uniforms

Revise as follows: "Bus Operators shall wear the prescribed uniform while on duty. One tunic and two pairs of trousers will be supplied per year. One third of the cost will be borne by the trainmen, two thirds by the Company. Uniform caps to be supplied free. Company will require one year's service of this clothing and if, prior to that time, the employee leaves the service, he will retain the clothing and pay the Company for that portion of service not received."

Article 21—Lunch Period

Revise as follows: "Trainmen in freight, work and snow plow service will be allowed a reasonable time to eat, not more than 20 minutes, without deduction in pay. The

LABOUR LAW

Legal Decisions Affecting Labour

Alberta court holds conciliation board's award not reviewable by the courts.
British Columbia court refuses injunction to enforce union security provision

In Alberta, the Supreme Court held that a conciliation board constituted under the Alberta Labour Act is an administrative body and its award is not subject to review before the courts of law in *certiorari* proceedings.

In British Columbia, the Supreme Court held that a union had a legal right to demand the discharge from employment of certain expelled union members but an injunction should not necessarily be granted to enforce an unfruitful demand.

Alberta Supreme Court...

...rules that decision of a conciliation board is not subject to review by a superior court

On January 14, 1960, Mr. Justice Riley of the Alberta Supreme Court, in *certiorari* proceedings, dismissed an application for an order quashing a unanimous award of the conciliation board appointed under the provisions of the Alberta Labour Act.

The board consisted of a chairman and two other members. The appointment of one of the members of the board was objected to on the ground that he had been too closely connected with the activities of the painters' union involved in the dispute to act as unbiased arbitrator. The appointment was ruled in order by the chairman of the conciliation board and the board issued a unanimous award on May 21, 1958.

Mr. Justice Riley, rejecting the application for quashing the award, held that the conciliation board's so-called award is in no sense an adjudication; is not a *lis inter partes*; is in no sense an adjudication affecting the extinction or modification of private rights or interest; is not binding unless accepted by all parties; and is not subject to superior court review.

Further, Mr. Justice Riley added that a tribunal is not acting in a judicial capacity unless it has power to adjudicate in the

sense of being able to make a decision that will directly determine and affect rights and liabilities of the parties concerned. A board (or an official) may have a *quasi-judicial* function when acting as a tribunal and deciding on rights and liabilities between conflicting parties and, when making decisions it is allowed to apply its own ideas of policy, procedures and expediency instead of existing rules of law. In short, the function of a board or an official is either judicial or *quasi-judicial* and subject to superior court review when its function amounts to adjudication. The essential elements of either a judicial or *quasi-judicial* function is first, that the body must have jurisdiction to adjudicate, which means it must decide a question regarding rights and liabilities of each party and, secondly, the body must have a duty to act in a judicial manner. If these two elements are not present, the body is acting in an administrative capacity, in which case judicial control by way of prohibition or *certiorari* does not apply.

Under the Alberta Labour Act the conciliation board is a body to inquire, to obtain information, to make recommendations and to formulate a plan in the hope that it will be acceptable to employers and employees. There is no need for a conciliation board if the minister in his discretion refuses to appoint a conciliation board or even a conciliation commissioner.

The function of the conciliation board is persuasive and neither judicial nor *quasi-judicial*. The board is an administrative body and its decisions are not subject to review by the courts of law.

In dismissing the *certiorari* application the court relied on the decision of the Supreme Court of Canada in *Godson v. Toronto (City)* and *MacDougall* (1890) 18 SCR, 36. *F. F. Ayriss & Co. et al. v. Board of Industrial Relations et al.* (1960) 30 WWR, Part 14, p. 634.

This section, prepared by the Legislation Branch, reviews labour laws as they are enacted by Parliament and the provincial legislatures, regulations under these laws, and selected court decisions affecting labour.

British Columbia Supreme Court...

...refuses injunction to compel an employer to discharge employees after expulsion from union

On December 7, 1959, Mr. Justice Brown of the British Columbia Supreme Court dismissed an application for an injunction to force an employer to discharge certain employees expelled from the union, although there was a union security provision in the collective agreement by which the employer agreed to maintain in his employment only union members in good standing.

The Court held that such union security provision in the collective agreement entitles the union to demand the discharge of expelled members but it does not necessarily follow that an injunction will be granted to enforce an unfruitful demand.

On January 15, 1959, a collective agreement was signed between the Seafarers' International Union of North America, Canadian District, and Westward Shipping Ltd., by which the company recognized the union as sole bargaining agent for all unlicensed personnel employed on the company's three ships.

Section 3 of the agreement read as follows:

Section 3. Union Security and check-off. The company agrees to maintain in their employ only members of the union in good standing. "Good standing" is here interpreted to mean that a member is not in arrears as to union dues and/or has not been expelled or suspended by the union. The union agrees that this clause shall not be invoked in such manner as to penalize or cause undue inconvenience to the Company.

Seventeen of the employees notified the union and the company in writing that they revoked the appointment of the union as their bargaining agent. The union notified the company that nine of these men were no longer members in good standing and asked that their employment be immediately terminated. The company was unwilling to comply with the union's request to discharge the men. Then the union applied to the court for a temporary injunction to compel the discharge of non-union employees.

In particular, the union asked for a declaration that the collective agreement of January 15, 1959 was a valid and subsisting contract and the company was under obligation to maintain in its employ only members of the union in good standing, and for an injunction restraining the company from refusing to discharge nine men who were no longer members of the union in good standing.

The union contended that proof of irreparable damage for granting the injunction was not essential where there was an undisputed contract which was violated. The

union relied on the judgment of Mr. Justice Wilson in *Gulf Navigation Ltd. v. Seafarers' International Union* (1959) 18 DLR (2d) 216, who was of the opinion that the rule as to proof of irreparable damage was not an absolute one. If a party has agreed that a particular thing shall not be done, and proceeds to do it, the party, as a rule, will be enjoined. Mr. Justice Wilson also referred to *Doherty v. Allman* (1876) 3 App. Cas. 709 where Lord Cairns pointed out that if there had been a negative covenant a Court of Equity would have had no discretion to exercise. If the parties contracted that a particular thing shall not be done, all that a Court of Equity has to do is to say, by way of injunction, that which the parties have already said by way of covenant, that the thing shall not be done. In such a case of a negative covenant a court injunction simply gives sanction to what already is the contract between the parties, and the court would not consider the question of the balance of convenience or inconvenience or the amount of damage or injury as a condition for granting injunction.

The union in the case under review claimed that the covenant as contained in section 3 of the collective agreement was in effect negative only. In this contention the union relied on *Metropolitan Elec. Supply Co. v. Ginder* (1901) 2 Ch. 799. In that case the court took the position that the consumer agreed to take the whole of the electric energy for his premises from the company. The company was bound to supply the energy if asked. The consumer asked and consequently he had a right to be supplied. The parties were contracting, not affirmatively for the supply of something, but negatively that the consumer would not take a specified product from somebody else. There was no affirmative contract to take anything at all. The consumer did not agree to take any kind of energy from the company, but he agreed to take the whole of the electric energy required. He could use gas and require no electric energy. The only thing the consumer contracted to do was that if he took electric energy he would take it from the company. The essence of that contract was, although not expressed in words but implied, that the consumer would not take electric energy from somebody else. The consumer agreed to take the whole of the electric energy from A, which necessarily implied that he would not take from B. Consequently, as a matter of construction, not by express words but by necessary implication, there was an agreement not to take from others.

In the case under review, the union argued that it was in a similar position. The company had no obligation to employ anyone, but only not to hire any others except members of the contracting union. The court agreed with this analogy and, in Mr. Justice Brown's opinion the union would have to be entitled to injunction against any hiring outside the provisions of the agreement. But the essential difference between this case and the *Metropolitan* one lies in the fact that the company did not hire or attempt to hire anyone else. The company employed the men supplied by the union, as it agreed to do. The status of those men vis-a-vis the union had altered in that they appeared to have defected from the union. The union sued for what was in effect a mandatory injunction by asking that the company be forced to take the active step of discharging them.

The verb "maintain" used in section 3 of the collective agreement has troubled the courts for many years. The court decisions interpret the meaning of that word as expressing what is, primarily at least, an affirmative covenant.

In the opinion of Mr. Justice Brown section 3 contains an affirmative covenant and an implied negative covenant as well. The negative covenant, not to hire outside the union, had not been violated, consequently there was no occasion for an injunction in that respect.

The union also alleged that non-compliance by the company with the provisions of the collective agreement would cause irreparable damage and harm to the union in the proceedings before the Canada

Labour Relations Board. Apparently a hearing before that Board was scheduled for December 8, 1959, in connection with an application for certification as bargaining agent by the Canadian Brotherhood of Railway, Transport and General Workers in respect to the employees of the company. The Court could not agree that irreparable damage would be suffered by the union in the certification procedure if the union failed to obtain an injunction. The status of the employees as between the unions would not be dealt with in any way by such injunction and any interlocutory judgment would not influence the Board in its proceedings or findings.

In conclusion the Court held that the union security clause of the collective agreement has both a positive and a negative aspect and an injunction would go beyond a mere enforcement of the implied negative covenant; that having regard to the power of the Labour Relations Board it could not be said that irreparable damage was done by the company's refusal to discharge the men; and the balance of convenience was clearly against interlocutory injunction.

The Court was aware of the judgment of Mr. Justice Wilson in *Jurak v. Cunningham* (L.G., April, p. 372) and of his statement that the union has a legal right (under similar circumstances) to demand the discharge of the expelled members. Mr. Justice Brown agreed with that statement; however he did not consider that an injunction should be granted to enforce an unfruitful demand.

The application for injunction was dismissed. *McLaughlin et al. v. Westward Shipping Ltd. et al.* (1960) 21 D.L.R. (2d) Part 10, p. 770.

Recent Regulations under Provincial Legislation

Quebec revises its four minimum wage orders; some rates increased and zones reduced from three to two. Manitoba increases minimum wages of taxi drivers

In Quebec the four minimum wage orders have been revised effective May 1, increasing some rates and reducing the number of zones from three to two.

Under the new general order and that for school and municipal corporations the minimum wage is now 70 cents in Greater Montreal and 64 cents elsewhere in the province. The minimum hourly rate in hotels, restaurants, hospitals and real estate offices is 64 cents in Zone I and 60 cents in Zone II. A new daily minimum of \$9 is prescribed for pieceworkers in forestry operations.

In Manitoba, the new minimum for taxicab drivers hired by the week is \$40 plus 75 cents for each hour on duty in excess of 54, or 40 per cent of gross receipts, whichever is greater.

British Columbia Apprenticeship and Tradesmen's Qualification Act

The trade of heavy duty mechanic was added to the list of trades designated under the British Columbia Apprenticeship and Tradesmen's Qualification Act, by B.C. Reg. 54/60 gazetted March 10.

The heavy duty mechanic's trade is defined as the maintenance, manufacture, overhaul, reconditioning and repair of equipment powered by an internal combustion engine, including graders, loaders, shovels, tractors, trucks and wheeled and tracked vehicles of all types used in the construction, logging, transportation and other industries.

The heavy duty mechanic's trade has also been designated in Alberta. (L.G. 1958, pp. 1033, 1411).

British Columbia Hours of Work Act

The British Columbia Board of Industrial Relations has exempted persons employed in the pipeline construction and oil well service industries from the Hours of Work Act. This means that employees in these industries are allowed to work beyond the eight-hour daily and 44-hour weekly limits set by the Act.

However, a minimum wage order for the pipeline construction industry requires employees to be paid time and one-half their regular rate for all hours worked in excess of eight in the day and 44 in the week.

The new order, which was gazetted on March 10 as B.C. Reg. 55/60, covers all operations in or incidental to the construction or maintenance of any pipeline used for transporting gas, oil or petroleum as well as preparatory work and supplementary operations or services provided necessary to the drilling, completion, recompletion or remedial treatment of an oil or gas well. It does not, however, include the installation of mains and service lines in, to or from industrial plants or other buildings.

For the past four years temporary exemptions have been granted to persons in the pipeline construction industry.

Manitoba Taxicab Act

Regulations made by the Manitoba Taxicab Board increasing the minimum wages of taxicab drivers were gazetted on March 19 as Man. Reg. 10/60.

Under the new provisions, a driver hired by the week who regularly works nine hours a day for six days in a week must now be paid a minimum wage of \$40 plus 75 cents for each hour on duty in excess of 54, or 40 per cent of his gross intake for the week, whichever is greater. Previously, the minimum was \$38 a week plus 65 cents for each hour on duty in excess of 54, or 38 per cent of the gross receipts, whichever was greater.

Provision is again made for prorating the wages of a driver who is absent because of illness or by arrangement with his employer.

The regulations state that such an employee must receive a proportional amount of the \$40 weekly minimum or 40 per cent of his gross intake, whichever is greater.

As before, the regulations protect the minimum against deductions by providing that, if a driver is hired by the week, an owner may not make any deductions from his wages that would reduce his weekly wage below \$40, except a deduction authorized under federal or provincial legislation or a deduction made at the employer's written request with the Board's approval.

A driver hired on other than a weekly basis must receive a minimum of \$2.10 for each day on duty, with an additional 70 cents for each hour in excess of three hours. Formerly, the minimum for drivers in this category was \$1.80 a day with an extra 60 cents an hour if they worked more than three hours.

Quebec Minimum Wage Act

The Quebec Minimum Wage Commission recently replaced its four minimum wage orders by new orders which went into force on May 1, to remain in effect until May 1, 1961. The new orders were approved by O.C. 318 of March 9 and were gazetted March 19.

Although a few rates are slightly higher than those established in January when the previous orders were last amended (L.G., Feb., p. 179), the principal changes in the minimum wage rates are due to the rezoning. In the revised orders the number of zones has been reduced from three to two, with a corresponding reduction in the number of rates.

The minimum rate set by the new general order, No. 4, 1960, and by the revised order for municipal and school corporations, No. 41, 1960, is 70 cents in Zone I (Greater Montreal) and 64 cents elsewhere in the province. In hotels, restaurants, hospitals, and real estate offices the minimum wage is now 64 cents in Zone I and 60 cents in Zone II. The revised forestry order, No. 39, 1960, sets only one rate, \$9 a day, for pieceworkers.

The orders were further simplified by changes in the hours provisions. In the new general order a 54-hour week is no longer prescribed for certain work places, and other exceptions have been dropped, with the result that fewer exceptions are authorized from the general standard of 48 hours. The revised orders for hotels, restaurants, hospitals and real estate offices and for municipal and school corporations have also reduced the work week, at the same time eliminating some of the former exceptions.

The overtime rate, which for some hourly paid employees was previously fixed at one and one-half the employee's regular hourly rate, is now fixed at one and one-half times the minimum rate.

Order No. 4 (1960)—General Order

The coverage of the revised general order is substantially the same, the order governing all employees subject to the Minimum Wage Act except those employees specifically exempted. This means that agricultural workers, domestic servants and employees covered by a decree under the Collective Agreement Act are excluded, as well as the following: university and secondary school students; blind persons working in establishments for the blind; emergency firefighters; the employer's consort; members of the clergy or a religious order; employees of church corporations or boards of trustees; persons employed in religious or charitable institutions such as convents, orphanages, etc.; employees in small telephone exchanges outside the Montreal area; persons who habitually work outside the employer's establishment and whose hours are not controlled by him; and employees governed by another order, including persons totally or partially exempted from its provisions. Except that peatcutters and employees of people's savings banks are no longer excluded, these exemptions are the same as formerly.

Zones—As previously indicated, the province is again divided into zones for purposes of the order but the number has been reduced from three to two. Zone I comprises the Metropolitan Montreal Area; it includes Montreal Island, Isle Jesus, Isle Bizard and the County of Chambly. Zone II covers the rest of the province.

Hours—The regular work week, that is, the number of hours in a week beyond which any time worked must be paid for at an increased rate, is again 48 hours but there are considerably fewer exceptions than formerly. A 54-hour work week is no longer set for certain workplaces, with the result that the regular work week for the following industries or establishments is now 48 hours: retail stores; the service industries; garages and service stations; plants manufacturing wooden articles; saw-mills outside the Montreal area; weaving, spinning and knitting mills and carding houses; dyeing establishments; the transportation industry; food processing plants; flour mills, bakeries, pastry shops and biscuit factories; canneries and meat packing plants; dairies; entertainment and sports establishments; theatres and movie houses; funeral parlours.

It also means that chauffeurs and their helpers, maintenance and service men, firemen and stationary engineers, who were previously deemed to have a 54-hour work week regardless of the nature of the establishment, will now have a regular work week of 48 hours.

The only workplaces now without a fixed work week are establishments in the electoral districts of the Magdalen Islands, Saguenay, Matane, Gaspé and Bonaventure where fish and other sea foods are processed. In line with former practice certain classes of employees are also deemed to have no regular work week. They are: temporary employees of canneries; employees preparing fish on shore, in snow-houses or in cold storage plants; caretakers with lodgings furnished; watchmen; and peatcutters.

Minimum Rates and Overtime—The new general minimum rates—70 cents an hour in Zone I and 64 cents in Zone II—represent an increase of 2 cents an hour for employees in Montreal and of 4 cents for employees in centres with a population of less than 6,000.

Lower rates are no longer prescribed for inexperienced workers, with one exception. Pieceworkers, in the first six months of their employment, may be paid a minimum of 56 cents an hour in Zone I and 52 cents in Zone II.

Office boys, messengers, pinboys and boot-blacks are now entitled to a minimum of 56 cents in Zone I and 52 cents in Zone II. The former minimum was 52, 48 or 44 cents, depending on the zone.

Caretakers continuously supervising their employer's establishments who are provided with free lodgings on the premises must be paid at least \$40 a week in Zone I and \$35 in Zone II. This represents no change for caretakers in Montreal or in places with a population of 6,000 or more but means an increase of \$5 in the weekly minimum of caretakers elsewhere in the province.

In line with former practice, the Order provides that every employee called to work less than the regular working day is entitled to be paid for three hours at his minimum wage rate unless he refuses to do the work required of him.

The overtime rate is now one and one-half times the minimum, and is to be paid for hours worked in excess of the regular work week, except that employees paid on a fixed weekly, monthly, or yearly basis and receiving, even when not working a full week, a weekly wage of \$60 in Zone I and \$55 in Zone II are not entitled to overtime. Previously, a distinction was made between

hourly rated employees not governed by a collective labour agreement and other employees, the overtime rate for the former being one and one-half the regular rate and for the latter one and one-half the minimum. Also, persons hired on fixed wage basis who received at least \$55 in Zone I and \$50 in Zones II and III had no right to claim overtime.

Deductions—Deductions from the minimum wage are again prohibited unless imposed by an Act or court order. Tips, as before, are regarded as the exclusive property of the employee and the employer may not retain them or treat them as part of wages even with the employee's consent.

General Provisions—The general provisions dealing with weekly rest, annual holidays with pay, payment of wages, records, reports and notices are substantially the same as before.

Employees must be allowed 24 consecutive hours of rest each week or two periods of 18 consecutive hours each. Employees are also entitled to a week's vacation with pay unless exempted by the vacation order (No. 3, 1957).

As formerly, the order provides that whenever an employee is paid in cash, the money must be placed in a sealed envelope, together with a statement showing the name of the worker, the pay period, total number of hours worked (with overtime shown separately), wages earned and wage rate, deductions and take-home pay.

Employers are again required to keep, for a six-year period, records showing for each employee: name and address, occupation, date of commencement of employment, pay period, hours of beginning and finishing work, total number of hours worked, overtime hours, wage rate and wages earned, deductions, take-home pay, and particulars regarding holidays prescribed by the vacation order.

Reports giving particulars as to wages must be sent to the Commission upon request. The employer is also required to post in a conspicuous place all orders and notices furnished by the Commission.

Order No. 39 (1960)—Forest Operations

The revised forestry order, No. 39, 1960, has the same coverage as the order it replaces, applying to all persons engaged in logging or driving operations, in reforestation projects, and in forest improvement work such as the construction or maintenance of roads, camps or other facilities, and thinning, drainage or irrigation work. Caterers working in connection with any

of the operations referred to above are also bound by the new provisions, as are contractors, subcontractors and jobbers.

Hours—Minimum wage rates for forestry workers are again based on a 54-hour week except in the case of pieceworkers, kitchen help, stablemen, guards, fire rangers, and employees engaged in driving operations or in the loading or unloading of boats. Such employees are deemed to have no regular work week and consequently are not entitled to overtime. As before, time spent travelling between the camp and the work area is considered working time and must be paid for accordingly.

Minimum Rates and Overtime—The rates for forestry workers hired on a fixed wage basis are the same as those set in January when the previous order was last amended. The minimum for employees whose hours of work are verifiable is 90 cents an hour; for those whose hours of work are not verifiable the minimum remains \$8 a day. The same weekly minimum, \$48, is set for employees without a regular work week.

The special rates for learners (60 cents an hour for those whose hours were verifiable, \$5.75 a day for those without a regular work week) have been dropped, however. This means that persons in this category must now be paid a minimum of 90 cents an hour, \$8 a day or \$48 a week, depending on the extent to which their hours are controlled.

The major change, however, concerns pieceworkers: only one rate, \$9 a day, is now provided. Previously, rates varied according to the type of work performed, 11 rates having been set with additional allowances for peeling operations.

The order continues to provide, however, that pieceworker rates apply to the quantity of marketable timber accepted by a culler as defined in the Quebec Cullers' Act, further stating that the culling system used for calculating stumpage dues must be used as the basis for calculating wages of cutting pieceworkers.

A new provision has also been added which deals specifically with pieceworkers who have not worked 12 working days. The minimum for such employees is 60 cents an hour if their hours are verifiable and \$6 a day in the case of employees whose hours are not verifiable or whose work week is irregular.

The minimum now payable for overtime is one and one-half times the minimum rate. Under the previous order, forestry workers were entitled only to their regular rate for overtime hours provided it was

not less than the prescribed minimum. As before, employees hired for a fixed weekly, monthly or yearly salary need not be paid overtime if they earn \$62 or more a week.

Deductions—The provisions with respect to deductions are unchanged. The maximum deduction for board and lodging remains \$1.50 a day. Employers are again prohibited from charging for the use of bedding but may make deductions from an employee's wages if bedding is lost or not returned, provided the rates are mentioned in notices and pay statements. They may also charge for laundering if the price is posted in the employees' living quarters.

All employees except pieceworkers and jobworkers must be provided with the necessary tools and equipment at the employer's expense and may not be charged for worn or broken tools or accessories. Employers may make deductions, however, if tools, equipment or safety garments are lost or not returned.

The following other deductions are permitted: deductions imposed by an Act or court order, cash advances made to the workers, and the price of goods sold provided a price list is posted in a conspicuous place in the camp building.

General Provisions—As before, forestry workers with a regular work week are entitled to a weekly rest of 24 consecutive hours or two periods of 18 hours each.

Employees who work for one employer at least 75 days within a four-month period are entitled, on departure, to a vacation allowance of 2 per cent of earnings. The qualifying period does not apply, however, to employees laid off. The order also stipulates that the vacation allowance for a previous 12-month period must be paid between May 1 and June 1 each year.

Before operations are begun, an employer must send the Commission a written notice of his plans, at the same time requesting copies of this order for posting in his camps.

Whenever an employee is hired, he must sign a written contract showing the conditions of employment. The new order also states that the contract must specify whether the employee is hired on a fixed wage or piecework basis and the wage rate. One copy must be given to the employee immediately and another forwarded to the Commission upon termination of services.

An employer is again held responsible for any transportation expenses incurred by a forestry worker going or returning to the terminal point of the public highway, including board and lodging and baggage.

He may, however, charge for such services any sum specified in the engagement contract.

The operation commonly known as "bunching" is again prohibited.

With a few minor differences, the provisions regarding earnings statements and the keeping of records are the same as under Order 4. Order 39 also contains the usual provisions respecting posting of orders and regulations and requests for information.

Order 40 (1960)—Hotels, Restaurants, Hospitals and Real Estate Undertakings

Order 40, 1960, the revised order for hotels, restaurants, hospitals and real estate undertakings, has the same coverage as the former order. Employees of lodging houses with fewer than five bedrooms to let, professional employees, and student nurses are again exempted.

Zone boundaries have been redrawn to conform with the changes in Order 4 with a corresponding reduction in the number of rates.

Hours—The regular work week has been reduced from 60 hours to 54. As previously, certain classes of employees are considered to have no regular work week and therefore cannot claim payment for overtime. These include employees of boarding, lodging or staff houses, caretakers with lodgings furnished, watchmen and janitors.

The definition of hours of work is unchanged, however, and means not only the time when an employee is effectively working but also time when an employee is at his employer's disposal as well as time spent waiting in response to a call.

Minimum Wage Rates and Overtime—The minimum rate for the majority of employees governed by the order is now 64 cents in Zone I and 60 cents in Zone II. The new rates represent no change in the minimum wage of employees in places with a population of 6,000 or more but mean an increase of 4 cents for employees elsewhere in the province.

Bellboys are now to be paid at least 56 cents an hour in Zone I and 52 cents in Zone II, whereas previously the minimum for such employees was 48, 44, or 40 cents an hour, depending on the location.

Chauffeurs, watchmen and stationary engineers and firemen must be paid a minimum of 70 cents an hour in Zone I and of 64 cents in Zone II. Formerly, the rates were 68 cents in Zone I, 64 cents in Zone II and 60 cents in Zone III.

The minimum wage of office boys, messengers and bootblacks is now 56 cents in Zone I and 52 in Zone II, which means

an increase of 4 cents an hour for those in centres with a population of over 6,000 and of 8 cents in places with a population of less than 6,000.

Special rates are no longer set for employees in boarding houses. Instead of setting a lower rate for inexperienced hospital workers, subject to a 20-per-cent quota, the revised order states that during the first six months of employment employees on probation in hospitals may be paid a minimum wage of 56 cents in Zone I and 52 cents in Zone II.

Caretakers who are provided with free living quarters on the premises are to be paid a minimum of \$40 a week in Zone I and \$35 in Zone II. Previously, the minimum weekly rate was \$40, \$35 or \$30, depending on the zone.

Monthly rates are again set for supervising janitors whose duties include the leasing of apartments or space and the collection of rents, the only difference being that the rates are now the same throughout the province. Janitors who are provided with free heated quarters on the premises are to receive at least \$85 a month; those who live in unheated apartments \$95 a month. Supervising janitors who do not live on the premises must be paid at least \$105 a month. Under the former order, the rates were \$15 a month less for employees in Zone III.

Employees acting as watchmen and janitors who do odd jobs such as looking after furnaces, etc., must be paid the same minimum as the majority of employees covered by the order, that is, 64 cents in Zone I and 60 cents in Zone II, with a minimum of three hours per day.

The provision dealing with the three-hour minimum is the same as in the general order.

The new overtime provisions are the same as those set out in Order 4.

Deductions—Deductions from the minimum wage are again prohibited unless imposed by an Act or court order and, as formerly, there is a provision stating that an employer who furnishes an employee with lodging, board or meals cannot "deduct the cost of these accommodations from the employee's minimum wages nor may he compensate the cost thereof with the wages of his employee." However, in exceptional cases, in order to facilitate bookkeeping, an employer may, as before, deduct the cost of lodgings, board or meals from an employee's minimum wage provided (1) the price of such services has been set out in the contract signed by the employee

(2) the deductions relate to the services provided during the pay period (3) the prices are shown on the earnings statement together with the number of meals, where applicable.

A new section has also been added which states that, notwithstanding the previous sections, an employer is forbidden to charge his employee more than 50 cents per meal, \$3 per week for lodging and \$10 per week for board and lodging.

General Provisions—The provision with respect to tips remains the same as that in the general order.

As before, the order states that if special uniforms are required they must be provided at the employer's expense.

All employees subject to the order except caretakers with lodgings furnished and employees of real estate undertakings are, as formerly, entitled to a weekly rest of 24 consecutive hours or two periods of 18 consecutive hours each.

The provisions respecting payment of wages, pay statements, records, written reports and posting of orders are the same as those described above with respect to Order 4.

Order No. 41, (1960)—Municipal and School Corporations

As in the case of the other orders, there has been no change in coverage, Order 41, 1960, governing all employees of municipal and school corporations to whom the Minimum Wage Act applies except persons subject to another order.

The order has been simplified, however. The number of zones has been reduced from three to two with the same boundaries as under Orders 4 and 40.

Hours have also been reduced, the regular work week in school and municipal corporations now being 48 hours instead of 54. Some of the exceptions have also been eliminated. A 60-hour week is no longer set for chauffeurs and their helpers nor is a 72-hour week prescribed for firemen, policemen or policemen-firemen.

The following employees are again considered to have no regular work week and, as before, are not entitled to be paid at the overtime rate: employees engaged in snow clearing operations, caretakers with lodgings furnished, employees whose hours of work are unverifiable, school teachers, attendance officers, and employees of telephone exchanges in Zone II with fewer than 300 subscribers.

Minimum Rates and Overtime—In keeping with former practice, the rates set by Order 41 are the same as under the general order, except in the case of a few special categories. The minimum wage now payable to the majority of persons employed by municipal or school corporations is 70 cents an hour in Zone I and 64 cents in Zone II. The rates for office boys and messengers and caretakers are also the same as those set by Order 4 and described above.

Lower rates are no longer set for inexperienced workers, the result being that employees in this category are now entitled to the same minimum wage as experienced employees, that is, 70 cents or 64 cents an hour, depending on the location. Under the former order, the minimum for such employees was 56 cents in Zone I, 52 cents in Zone II and 48 cents in Zone III.

Although set out in a slightly different way because of the changes in zones, the rates for secretaries of municipal corporations are the same as before. The minimum for Zone I is \$175 a month and in Zone II rates range from \$40 a month in municipalities with a population of 300 or less to \$140 a month in centres with a population of 6,001 or more. In the counties the minimum remains \$70 a month.

The rates for school secretaries again vary according to the number of property owners in the district, ranging from \$30 a month in districts with 50 ratepayers or

less to \$110 in areas with 1,201 or more ratepayers.

The minimum for attendance officers is \$5 a month if there are less than 100 pupils and \$10 if more.

The minimum wage for school teachers has been raised from \$60 to \$150 a month, effective July 1, 1960. Those who agree to do maintenance work are to receive an additional \$5 a month.

The overtime provisions have been revised in the same manner as those in Order 4. As firemen and policemen are no longer permitted to work up to 144 hours in a consecutive two-week period, the special overtime provision requiring such employees to be paid their regular rate plus an additional \$1 for every hour worked beyond the prescribed limit has been dropped. This means that the minimum overtime rate for these employees is now the same as that of other employees governed by the order, that is, one and one-half times the minimum rate with the usual exemption for those hired for a fixed weekly, monthly or yearly wage who earn \$60 or more a week in Zone I and \$55 in Zone II.

General Provisions—The other provisions of the Order, which are unchanged, are the same as in Order 4 except for a few minor details. One difference is that, in line with former practice, the revised order does not provide for a vacation with pay for employees in municipal and school corporations.

Report of Board

(Continued from page 476)

meal period to be arranged at the discretion of the Conductor to permit most efficient performance of the work, but not later than six hours after starting work. The despatcher will be notified when taking meal period.

Manning of Trains, Etc.

The request for a five-man crew on all runs is dropped.

Pay Cheques for Vacation

It was felt no difficulty should be encountered in disposing of this matter at the local level.

Disputes Referred to Board of Adjustment

Clause to cover agreed to.

Rates of Pay for Bus Operators

With respect to the bus operators, it was agreed that the first, second and third class rates would be deleted and that effective September 1, 1959 an increase of 8.3 per cent would apply to the fourth class rate in effect August 31, 1959 less 1 per cent set aside for health and welfare benefits, and that a further 1.5 per cent increase would apply on the same rates effective June 1, 1960.

Rules changes, unless otherwise specified, to become effective March 15, 1960.

UNEMPLOYMENT INSURANCE

Monthly Report on Operation of the Unemployment Insurance Act

Total of claimants for benefit in February up from both month and year earlier; seasonal benefit claimants included in the total up from January but down from February 1959, statistics* show. Number of initial and renewal claims also up

In a comparison of current employment statistics with those for a previous period, consideration should be given to relevant statistics with those for a previous period, factors other than numbers such as the opening and closing of seasonal industries, increase in area population, influence of weather conditions, and the general employment situation.

Claimants should not be interpreted either as "total number of beneficiaries" or "total job applicants".

Claimants† for unemployment insurance on February 29 numbered 814,200, of whom 217,000 were seasonal benefit claimants. This total was 4 per cent greater than the total of 782,500 (177,100 seasonal benefit) on January 29, and 2.3 per cent above the figure of 796,000 (243,000 seasonal benefit) on February 27, 1959.

Seasonal benefit claimants totalled 40,000, or 23 per cent more than in January, but were 26,000, or 11 per cent below the level of February last year. The number on seasonal benefit is lower this year because, as a result of improved employment conditions in 1959 over 1958, fewer people exhausted regular benefit, and because of the increase in the maximum duration of regular benefit in effect since September 1959.

Fishermen included in the seasonal benefit claimants on February 29 numbered 29,000; on January 29 they totalled 26,000, and on February 27, 1959 they numbered 28,000.

Initial and renewal claims for benefit during February numbered 240,300, compared with 306,600 in January and 220,900 in February 1959. February was the first month since November 1959 in which the monthly total of claims filed was greater than in the corresponding month of last year. This is attributable partly to economic

*See Tables E-1 to E-4 at back of this issue.

†A claimant's unemployment register is placed in the "live file" at the local office as soon as the claim is forwarded for computation. As a result, the count of claimants at any given time inevitably includes some whose claims are in process.

factors and partly to the increase in the duration of benefit in effect since September 1959.

The average weekly number of beneficiaries was estimated at 677,300 for February, compared with 620,000 for January and 673,400 for February 1959.

The average weekly benefit payment was \$22.00 for February, \$21.91 for January and \$21.56 for February 1959.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for February show that insurance books or contribution cards had been issued to 4,946,293 employees who had made contributions to the Unemployment Insurance Fund since April 1, 1959.

At February 29 employers registered numbered 326,447, an increase of 106 since January 31.

Enforcement Statistics

During February, 6,144 investigations were conducted by enforcement officers across Canada. Of these, 3,528 were spot checks of postal and counter claims to verify the fulfilment of statutory conditions and 139 were miscellaneous investigations. The remaining 2,477 were investigations in connection with claimants suspected of making false statements to obtain benefit.

Prosecutions were begun in 137 cases, 32 against employers and 105 against claimants.* Punitive disqualifications as a result of claimants' making false statements or misrepresentations numbered 1,573.*

Unemployment Insurance Fund

Revenue received in February totalled \$24,841,607.92 compared with \$29,135,-

*These do not necessarily relate to the investigations conducted during this period.

805.55 in January and \$18,446,070.36 in February 1959. Benefits paid in February totalled \$62,585,968.43 compared with \$54,344,674.19 in January and \$58,037,486.77

in February 1959. The balance in the fund on February 29 was \$408,141,026.81; on January 31 it was \$445,885,387.32 and on February 28, 1959, \$547,399,504.48.

Decision of the Umpire under the Unemployment Insurance Act

Decision CUB-1657A, March 10, 1960

Summary of the Main Facts: In decision CUB-1657, dated July 21, 1959, the Umpire directed the board of referees, pursuant to the authority vested in him under section 76 of the Act, to rehear the case of the claimant and in doing so not only to examine the new evidence contained in two documents which the interested union had submitted during the oral hearing before him in Toronto on June 26, 1959, but also to make a complete review in its adjudication, as it had apparently overlooked the fact that two separate premises were involved.

Accordingly, the board of referees reheard the case in St. Catharines, Ont., on September 23, 1959. The claimant was not present at the hearing but was represented by officials of the union mentioned above.

The board took into consideration the new evidence produced. In addition to the brief and the leaflet submitted at the oral hearing before the Umpire, it consisted of paragraph 16 of a memorandum sent on June 30, 1959 by the regional claims officer of the Commission at Toronto to the same manager by an official of the International Nickel Company of Canada Limited, and a copy of a press release issued by the Nickel Information Service of that company on January 26, 1959.

The letter dated July 16, 1959 reads in part:

We regret, as we informed you on July 14, that it is not possible to supply this information as requested. It is not our normal practice to compile a day-by-day record of overall production...

It should be pointed out that the start-up period was grossly irregular due to the abnormal circumstances which were the natural result of a three-month shut down of the entire production facilities of the Company. Much of the time immediately following resumption of work was devoted to restoration of production facilities to an operating condition and to building up satisfactory in-process stocks of raw and intermediate materials.

Our study does, however, indicate that 85% of the overall production rate in effect at the time the strike was called had not been attained by January 6 which I note is the day shown in the June 30th memo as that on which approximately 85% of the working force is deemed to have been recalled...

The letter dated August 11, 1959 also reads:

During our conference this afternoon you discussed with me the three prime factors in determining the location of our nickel refinery at Port Colborne as opposed to location in the Copper Cliff area.

The three prime reasons were inferred by your office to be as follows:

- (1) An abundant supply of electricity at reasonable rates
- (2) Adequate supply of water, and
- (3) Accessibility to the prime market area along with adequate rail and water transportation.

This will confirm to you that our decision to locate the nickel refinery at Port Colborne was made mainly as the result of consideration of the above factors.

The submission to the board of referees also contained a daily record "of hourly rate employees returning to work" at the Port Colborne plant following the settlement of the strike. It reads:

Dec. 26, 1958	372
“ 27 “	413
“ 28 “	413
“ 29 “	468
“ 30 “	505
“ 31 “	538
Jan. 1, 1959	546
“ 2 “	578
“ 3 “	590
“ 4 “	602
“ 5 “	751
“ 6 “	806
“ 7 “	832
“ 8 “	873
“ 9 “	876
“ 10 “	906
“ 11 “	906
“ 12 “	1,060
“ 13 “	1,081
“ 14 “	1,132
“ 15 “	1,152
“ 16 “	1,163
“ 17 “	1,165
“ 18 “	1,165
“ 19 “	1,242
“ 20 “	1,240

Jan. 21, 1959	1,257
“ 22 “	1,274
“ 23 “	1,315
“ 24 “	1,317
“ 25 “	1,317
“ 26 “	1,328

The insurance officer commented: “It will be noted from the above figures that on 5 January, 1959, the date on which the resumption of work was considered to be appreciable, approximately 50% of the hourly rated employees of the Port Colborne plant had returned to work and 85% was not attained until 19 January, 1959.”

As the insurance officer who attended the hearing before the board of referees had reported that the transcript of the evidence was inadequate “due to the rapid fire manner” in which the oral evidence had been given, he was asked to prepare a narrative report, which reads as follows:

The writer attended the rehearing of the Board of Referees session at St. Catharines on Wednesday, 23 September 1959. The chairman in his opening remarks suggested there were five prime points at issue and these were reasonably taken in turn although at times the discussion overlapped the various points enumerated. The five questions are set out on page 2 of the transcript of evidence.

(From the submission it would seem that there are 5 points to come to a decision on:—

(1) No. of hourly rated employees who went on strike from each of the two plants, Copper Cliff and Port Colborne.

(2) Are the Port Colborne and Sudbury plants considered as one or two.

(3) If separated, their production, return date of employees and the number, will it be treated separately or both production employees may be considered together in separate premises.

(4) The question of 85% being the basic percentage used in both production and employees as being returned when calculated for the termination of the work stoppage.

(5) The date to be arrived at with from the other 4 items a conclusion may be derived therefrom).

Question 1 dealt primarily with the number of employees at the Sudbury and Port Colborne plants and it was agreed that the figure was 14,513 as set out in the initial submission.

The second point raised was whether or not the Sudbury (which includes the mill and smelter at Copper Cliff and all adjacent mining properties) and Port Colborne plants constitute separate premises. It was agreed, after some discussion among the union and the members of the Board of Referees, they did not constitute separate premises within the meaning of the Act but were an integrated part of a continuous operation, being geographically separated for reasons as set out on page 7 of the submission to the Board of Referees. They established, to their satisfaction, that one would not operate without the other and while they have separate locals, they nevertheless bargained as a unit with the employer.

The third point raised a question only that if they were found to be separate premises then the production quotas necessary to establish

an appreciable resumption of work would have to be considered on an individual basis. This question no longer became pertinent when the point raised in question 2 was decided in favour of one operation.

Question 4 introduced the 85% yard stick established by various Umpires as constituting percentage required in either personnel recalled or production attained or both. The employee member, Mr. W. J. Marshall, a member of the UAW union and international representative, was quite emphatic in expressing the union's viewpoint on this percentage requirement. He was of the same opinion as was the research director and union representative, Mr. H. L. Robinson of the Mine, Mill & Smelter Workers Union, that there should be no “gimmicks” associated with the denial of unemployment insurance benefit from the day following the signing of the bargaining agreement with the employer. In this case they argued to the effect that following the signing of the agreement on 19 December 1958, employees of International Nickel Co. should have been entitled to benefit from 20 December 1958 on. It was pointed out that the agreement signed had to be ratified by the employees and this was not completed until 23 December 1958 and that the employer and the union both felt it not advisable to recall anybody the day before Christmas and therefore the day the first persons were recalled was 26 December 1958. At best they insisted that relief from disqualification should have occurred as of this date. It was pointed out by the chairman that if they wished to have serious consideration given to this particular point, it should be taken up by the various unions for discussion with the Unemployment Insurance Advisory Board.

Following some lengthy discussion, all parties agreed that they had to be guided by the present jurisprudence established by the Umpire and that 85% was, under usual conditions, necessary, having due respect to personnel and production. The union representative chose to dismiss the letter from the employer under date of 16 July 1959 in relation to production attained on a day to day basis following settlement of the dispute. He inferred that the company were unwilling to furnish day to day production figures even though the employer pointed out the complexity of their operations prevented this and more so, due to the necessity of starting up following a three months' strike.

At this time and several times later I drew to the attention of the union representative that the Commission did not lightly regard the employer's statement as of no consequence because they could not furnish day to day production figures. The commission did, however, accept the statement furnished by the employer as authentic when they stated that, as a result of their study, it was indicated that 85% of the overall production rate in effect at the time the strike was called *had not* been attained by 6 January 1959, etc. The union representative stated that all we had was a lot of shadow boxing regarding production figures. Several times I again stated the Commission accepted the factual evidence in the employer's letter of 16 July 1959 and pointed out the following. One of the conditions of return to work was the re-implementation of the 40-hour work week. In turn, I pointed out that even working a 40-hour week in contrast to the 32-hour week they were working on 23 September 1958, they still were unable to turn out 85% of the

production previously attained. This would suggest that due to the shutdown on account of the strike, it was not feasible to reach their potential at this time. The union further argued that the employer had two choices to make early in June 1958 and that was to implement further lay-offs in addition to the 1200 laid off in March 1958 or reduce the work week to 32 hours. He insisted that this decision saved the Unemployment Insurance Fund a very substantial loss and that we should take this into consideration when considering work resumption. The union finally dropped the question of production attained and chose to argue the point on the 20% allowance for a four-day week, or in other words, that the 85% should be based on 80% of the personnel recalled, etc.

It was at this time that the employee representative chose to call it man hours worked and that there should be 85% of 80% of the man hours of production worked in effect on 23 September 1958. I endeavoured to point out the only two requirements the Commission were concerned with under the Act were personnel recalled and production attained and that if they want to introduce man hours worked that was something new and aside from the requirements. It will be noted that these man hours of employment have been introduced in the minority report of the dissenting employee member at this hearing.

The union representative, Mr. H. L. Robinson, stated that the Commission were in error when they referred to the news item published by the Financial Post which was in the form of a brochure and filed as an exhibit. This news item was dated 26 January 1959 and the union representative referred me to an item in the same brochure under date of 2 January 1959. It was his contention that production had exceeded 20% by a stepped-up programme. This stepped-up production percentage was quoted in the release under date of 26 January 1959 but it was not so stated in the press release of 2 January 1959. However, in the press release of 2 January 1959, it reads as follows: "International Nickel Company plans to maintain output at a rate of some ten thousand tons a month each of nickel and copper which is almost 20% higher than before the start of the recent strike."

I pointed out that this was not an accomplished fact on 6 January 1959, it was only the employer's plans at that date and as there is no production shift on the week-ends, it did not have much bearing. It was more reasonable to consider that there had been some culmination of this plan somewhere in the neighbourhood of 26 January 1959 and that this increased production was non-existent on 6 January 1959 when we terminated disqualifications under Section 63 on the basis of employees recalled.

Further arguments were advanced by the union to the effect that there never had been any reduced production because the employer was in a position to make all deliveries from stock piles to his customers during the strike. The employee member of the Board agreed with this thinking, stating that they had immense stock reserves both in Canada and in the United States in bond to the U.S. government. The union representative placed considerable value on the employer's brief as submitted to the Board of Conciliation appointed by the Minister of Labour of the Province of Ontario, which was included as an exhibit and which the union used as one of the reasons for an increased wage demand when presenting their case. We could find no significant information

in this lengthy report that would necessarily apply to the implementation of section 63 of the Unemployment Insurance Act and in particular, the requirements as to an appreciable resumption of production following the work stoppage due to the strike.

The board, by a majority decision, dismissed the appeal. Its decision reads, in part, as follows:

... At the request of the Umpire due consideration was given regarding both Port Colborne and Copper Cliff being separate premises. This was clarified that owing to the method of production it was not possible to separate the plants, but to deal with them as one unit. The 85% based as the calculating figure for the return of both production and employees, was founded on other decision CUB-1158. It was agreed that this would be the basis of calculation.

The Board after hearing the oral evidence of the several members, and taking into consideration the new evidence produced, also the request of the Umpire regarding separate premises, and the evidence in the submission, arrives at the conclusion that there were 84.19% employees returned to work on January 6th, 1959, hence the termination of the work stoppage would be January 5th, 1959...

The dissenting member of the board of referees stated, in part, as follows:

With reference to the 85% which being an interpretation of Section 63 (1) (a) of the Act which has been interpreted by various umpires, this case being of a unique nature, I would respectfully submit that the 85% ruling should not be applicable. In fact it is my considered opinion that this percentage should either be modified or on the resumption of work those employees in a strike bound plant not being recalled immediately, providing they are willing and able to accept other employment, should qualify for benefit under the Regulations of the Unemployment Insurance Act...

Because the Company were either unable, or unwilling to supply production figures, the only fair basis on which I can adjudicate this claim is to work on the assumption that 14,513 employees were employed prior to the strike, on a 32-hour week. This in essence is a 20% reduction in the normal work week and in applying the 85% yardstick, this I submit should be used on the basis of man hours which will decrease the 11,611 employees to 9,869 employees, which in turn based on the percentage figures would in turn have made the disqualification from December 23rd, 1958, to January 4th, 1959...

From the board of referees' decision of September 23, 1959, the interested union appealed to the Umpire on the following grounds:

First, that the principle that at the end of a strike, workers are disqualified from Unemployment Insurance benefit until there has been a substantial resumption of work (usually deemed to be when production or the number of employees back at work, or both, depending upon the circumstances, have reached 85% of what they were immediately before the strike began) is wrong and unfair;

Secondly, that the above principle was incorrectly applied in this case;

Thirdly, the Board made its decision on the basis of the fact, not disputed by the Union, that 84.19% of the number of employees of the International Nickel Company in Sudbury and Port Colborne had returned to work on Tuesday, January 6, 1959. However, the Board made this decision without taking any steps to obtain the additional information which the Union requested and which would have enabled the Board to arrive at a correct interpretation of the above fact.

This is a test case, chosen to represent all hourly rated employees of the International Nickel Company both at Coppercliff and Port Colborne, whose disqualification from benefit was ruled to have terminated January 5, 1959.

The union also requested a further oral hearing before him, which was held in Toronto on February 4, 1960. The union was represented by H. L. Robinson, its Research Director, who was assisted by the President and the Vice-President respectively of Local 637, and the Unemployment Insurance Commission by F. G. Power and G. I. Shearer.

Considerations and Conclusions: For obvious reasons, it seems, the appellant union did not question the fact that the representative claimant had lost his employment on September 24, 1958 by reason of a stoppage of work attributable to a labour dispute at the premises at which he was employed and thereby came within the purview of subsection (1) of section 63 of the Act; nor did the union contend that the claimant fulfilled the requirements of the relieving provisions of subsection (2) of that section. The objections raised by the union are concerned solely with the duration of the disqualification as imposed by the insurance officer and, after taking into consideration the oral representations submitted by the union's representative at the hearings before me, may be summed up as follows:

1. The disqualification should have been made to terminate on the day the labour dispute was settled; or, failing that,

2. The determination by the insurance officer of the date of the resumption of work should have taken into account

- (a) that the work on the premises had, for some time before the strike, been operating on a 32-hour week due to large stocks of unsold nickel in the hands of the company, and

- (b) that, after the strike, the employees were immediately placed on a 40-hour week, as the company intended to increase its output about 20% higher than before the strike to restore its customer inventories as well as replenish its working stocks.

The first one of the union's objections is contrary to the explicit wording of subsection (1) (a) of section 63 of the Act, which provides that a claimant who has lost his employment by reason of a stoppage of work attributable to a labour dispute is disqualified from receiving benefit

"until the termination of the stoppage of work". Consequently, whether that provision is based on a "wrong and unfair" principle cannot be a relevant consideration in deciding the point at issue, as I must take the law as I find it. Moreover, I believe it must be based on a sound and logical principle in view of the admitted fact that a force once set in motion may produce effects which can be assessed only after an interval has elapsed. For example, in the case dealt with in the Umpire's decision CUB-827, the stoppage of work, as a normal consequence, had resulted in the deterioration of the employer's premises and equipment and these could not be reconditioned or repaired for an immediate resumption of work upon settlement of the dispute. The Umpire held in that case that the extended stoppage was due to the labour dispute for the period required to place the premises and equipment in working condition, as the record did not support the contention that the employer had chosen deliberately to keep the plant idle to suit his own convenience.

In the present case, the record shows that if the company did not recall all of its employees to work immediately after the settlement of the labour dispute, it was "due to the abnormal circumstances which were the natural result of a three-month shutdown of the entire production facilities of the Company" and, as a consequence, "much of the time" following the settlement "was devoted to restoration of production facilities to an operating condition and to building up satisfactory in-process stocks of raw and intermediate materials". If the statistical data which I am about to examine should show also that a substantial resumption of work did not take place at the company's premises until some time after the settlement of the dispute, the extended stoppage, in the absence of convincing evidence to the contrary, shall have to be attributed to a direct and normal consequence of the labour dispute.

The information supplied by the company with respect to the resumption of its operations indicates that "85% of the overall production rate in effect at the time the strike was called had not been attained by January 6". That information does not show when such a rate was attained, nor does it differentiate between the respective rates of production reached at each one of the two plants involved in the present case, which is essential because, as I intimated in referring this case to the board of referees, we are here dealing with two separate premises.

The distance between the two plants—both situated in the province of Ontario, but one in Copper Cliff, which is in the north-western part of the province, and the other in Port Colborne, which is in the south-western part thereof—is approximately 350 miles. Under these geographical conditions, and no matter how tightly integrated or interdependent, functionally or otherwise, those plants were, the contention that they were, for the purpose of the company's operations, the same premises has no more foundation in law than it has in fact. Nor can the reasons which allegedly prompted the company to build one of the plants in question at Port Colborne rather than near or at Copper Cliff be considered otherwise than as additional and more convincing reasons why they should be separate units.

It is a general rule of statutory construction that if a statute uses a term which is not explicitly defined in the statute itself, such term is used in its commonly and generally accepted sense or meaning. Accordingly, in the absence of a definition in the Act of the terms "factory," "workshop" and "premises" as used in section 63, such terms must be given their commonly or generally accepted meaning, that is, as referring to the geographical location of any unit of an enterprise. That such was also the intended meaning of those terms is made clear enough in subsection (3) of that section, which provides that each department shall be deemed to be a separate factory or workshop for the purpose of section 63, whenever separate branches of work commonly carried on as separate businesses in separate premises happen to be carried on in separate departments "on the same premises".

From the above it will be readily seen that the legislator's apparent intent was to give a claimant such protection or relief from disqualification as could be derived from the fact that the labour dispute which caused his loss of employment did not occur at the factory, etc., at which he was employed, but at some other factory, etc., and this notwithstanding that both premises were owned and operated by the same person.

Consequently, the question of the date of the termination of the stoppage of work, which I have to decide, must be examined in the light of my finding that there are two separate premises involved and of the fact that the information supplied by the company does not differentiate between the respective rates of production reached at each one of those two plants. As a result, I am, therefore, left with no alternative but to decide that question on the basis of the daily record of the hourly rated employees returning to work after the settlement of the dispute at Port Colborne and Copper Cliff respectively.

In that connection, the record shows that the insurance officer and the board of referees were very generous in considering that a substantial resumption of work had already taken place on January 6, 1959. As a matter of fact, 81 per cent of the employees had by then resumed work at Copper Cliff and only 53 per cent at Port Colborne, and this, particularly in respect of the latter plant, falls short of the percentage usually considered to be sufficient to rule that a stoppage of work has terminated, i.e., 85 per cent. However, I will not disturb their erroneous finding as my decision, in view of section 80 of the Act, can have no practical effect on the benefit already paid as a result of the board's decision. In other words, my decision has but academic interest in that respect.

The point raised by the union regarding the working week having been shorter before the strike than after is one that cannot carry any weight in the absence of definite evidence that the employer's delay in recalling the employees to work after the settlement of the dispute was due to the company's decision to increase its production rather than to factors which had arisen out of and were attributable to the dispute. To say that this latter situation was the one which prevailed is a reasonable assumption, as it seems that the company's decision to increase its output should have had the effect of expediting rather than retarding their return to work.

For the above reasons, the union's appeal is dismissed.

U.S. Employment Up, Employment Down in March

Primarily because the weather was abnormally severe—the worst in any March since 1941—employment fell and unemployment rose in the United States in March, the U.S. Department of Labor reported last month. The usual pattern for March is just the opposite.

Employment totalled 64,257,000, a decline of 253,000 from February. Unemployment amounted to 4,206,000, an increase of 275,000. The seasonally adjusted rate of unemployment rose to 5.4 from 4.8 per cent.

LABOUR CONDITIONS IN FEDERAL GOVERNMENT CONTRACTS

Wage Schedules Prepared and Contracts Awarded during March

Works of Construction, Remodelling, Repair or Demolition

During March the Department of Labour prepared 185 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada, for works of construction, remodelling, repair or demolition. In the same period, a total of 163 contracts in these categories was awarded. Particulars of these contracts appear below.

A copy of the wage schedule issued for each contract is available on request to trade unions concerned or to others who have a *bona fide* interest in the execution of the contract.

(The labour conditions included in each of the contracts listed under this heading provide that:

(a) the wage rate for each classification of labour shown in the wage schedule included in the contract is a minimum rate only and contractors and subcontractors are not exempted from the payment of higher wages in any instance where, during the continuation of the work, wage rates in excess of those shown in the wage schedule have been fixed by provincial legislation, by collective agreements in the district, or by current practice;

(b) hours of work shall not exceed eight in the day and 44 in the week, except in emergency conditions approved by the Minister of Labour;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of eight per day and 44 per week;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Contracts for the Manufacture of Supplies and Equipment

Contracts awarded in March for the manufacture of supplies and equipment were as follows:

Department	No. of Contracts	Aggregate Amount
Post Office	9	\$164,046.11
RCMP	3	6,863.00
Transport	1	98,373.21

(The labour conditions included in contracts for the manufacture of supplies and equipment provide that:

(a) all persons who perform labour on such contracts shall be paid such wages as are currently paid in the district to competent workmen; and if there is no current rate, then a fair and reasonable rate; but in no event shall the wages paid be less than those established by the laws of the province in which the work is being performed;

The Fair Wages and Hours of Labour legislation of the federal Government has the purpose of insuring that all Government contracts for works of construction and for the manufacture of supplies and equipment contain provisions to secure the payment of wages generally accepted as fair and reasonable in each trade or classification employed in the district where the work is being performed.

The practice of Government departments and those Crown corporations to which the legislation applies, before entering into contracts for any work of construction, remodelling, repair or demolition, is to obtain wage schedules from the Department of Labour showing the applicable wage rate for each classification of workmen deemed to be required in the execution of the work.

These wage schedules are thereupon included with other relevant labour conditions as terms of such contracts to be observed by the contractors.

Wage schedules are not included in contracts for the manufacture of supplies and equipment because it is not possible to determine in advance the classifications to be employed in the execution of a contract. A statement of the labour conditions which must be observed in every such contract is however, included therein and is of the same nature and effect as those which apply in works of construction.

Copies of the federal Government's Fair Wages and Hours of Labour legislation may be had upon request to the Industrial Relations Branch of the Department of Labour, Ottawa.

(b) the working hours shall be those fixed by the custom of the trade in the district, or if there be no such custom, then fair and reasonable hours;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of those fixed by custom of the trade in the district, or in excess of fair and reasonable hours;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Wage Claims Received and Payments Made during March

During March the sum of \$20,334.82 was collected from 17 contractors for wage arrears due their employees arising out of the failure of the contractors, or their subcontractors, to apply the wage rates and other conditions of employment required by the schedule of labour conditions forming part of their contract. This amount is for distribution to the 405 workers concerned.

Contracts Containing Fair Wage Schedules Awarded during March

(The labour conditions of the contracts marked (*) contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of eight per day and 44 per week, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.)

Department of Agriculture

Kentville N S: Malcolm L Wallace, supply & erection of storage bldg & workshop, Experimental Farm. *near Eyebrow Sask:* W E Clark & C E Lewis, construction of dykes & canal excavation, Eyebrow Lake Diversion.

Central Mortgage and Housing Corporation

Contracts Containing the General Fair Wages Clause

PRICES AND THE COST OF LIVING

Consumer Price Index, April 1950

Canada's consumer price index (1949=100) rose 0.5 per cent from 126.9 to 127.5 between March and April.* In April 1959 the index stood at 125.4.

Although all five group indexes were higher, an increase of 1.3 per cent in the food index accounted for most of the rise in the total index.

The rise in the month was the first after four successive declines, and it brought the index back to the January level. The all-time high, 128.3, was recorded last November.

The food index rose from 119.4 to 120.9 as price increases occurred for bread, eggs, citrus fruits, apples, potatoes and chicken. Beef and pork prices were generally lower, as were those for most imported fresh vegetables.

The shelter index moved from 142.9 to 143.3, a rise of 0.3 per cent. The rent component was unchanged but the home-ownership component recorded a further increase.

An upward movement of 0.4 per cent in the clothing index, from 110.4 to 110.8, reflected scattered price increases for some items of footwear and men's clothing as well as for items of women's clothing up from sale levels of previous months.

In the household operation index, a fractional increase from 123.4 to 123.5 reflected somewhat higher prices for some appliances resulting from initial pricing of 1960 models, as well as furniture prices up from sale levels. These increases, combined with some price increases for household utensils and equipment, more than balanced lower prices for textiles.

A movement of 0.1 per cent in other commodities and services from 137.0 to 137.1 was due to higher doctors' and dentists' fees. Price declines were limited to gasoline, bicycles and toilet soap.

Group indexes one year earlier (April 1959) were: food 119.3, shelter 140.5, clothing 109.6, household operation 122.6 and other commodities and services 133.7.

Wholesale Price Index, March 1960

Canada's general wholesale price index (1935-39=100) moved fractionally lower between February and March, dropping 0.2

per cent from 230.0 to 229.6. It was the second successive decline of that proportion.

The March 1960 index was slightly below the year-earlier figure of 230.6.

During the month, five of the major group indexes moved lower, two higher, and one remained unchanged.

The downward movement in the animal products group continued; the index dropped a further 0.7 per cent, from 242.6 in February to 240.8. The non-ferrous metals group index moved 0.3 per cent lower, from 178.2 to 177.6. Three other groups—vegetable products, textile products and wood products—were only perceptibly lower.

Indexes for non-metallic minerals and chemical products were slightly higher.

The index for iron products was unchanged at 256.3 for the third consecutive month.

The index of Canadian farm product prices at terminal markets (1935-39=100) edged up 0.4 per cent, from 217.9 to 218.8, between March 25 and April 22. The field products index rose 1.8 per cent, from 174.4 to 180.6, reflecting price gains for potatoes and rye, western flaxseed and eastern corn, barley and hay. The animal products index eased off 0.5 per cent from 258.3 to 256.9 as declines for calves and hogs, chiefly on eastern markets, and eggs and butterfat in the East were almost balanced by gains for steers and lambs, the latter mainly in the East, and poultry.

City Consumer Price Indexes, March 1960

Consumer price indexes (1959=100) decreased in nine of the ten regional cities between February and March.* Only the Edmonton-Calgary index increased, by a fractional 0.1 per cent.

Declines ranged from 0.1 per cent in Winnipeg and Saskatoon-Regina to 0.8 per cent in Montreal.

Lower food indexes were mainly responsible for movements in the total indexes as foods declined in all ten cities. Decreases in the food index ranged from a fractional 0.1 per cent in Edmonton-Calgary to 2.3 per cent in Montreal. In contrast, clothing indexes rose in all ten cities, with increases ranging from 0.2 per cent in Montreal and Vancouver.

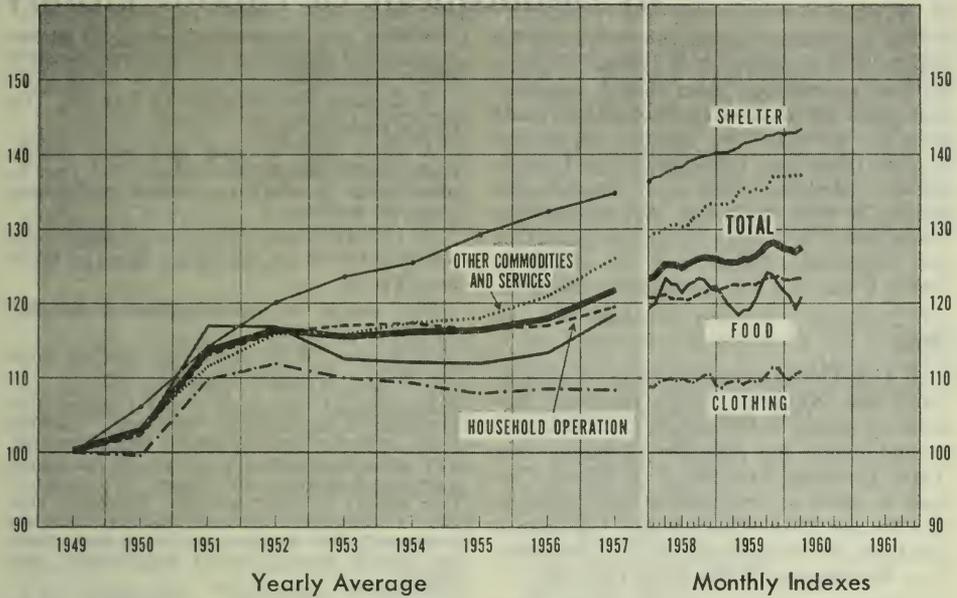

*See Table F-1 at back of book.

*See Table F-2 at back of book.

CONSUMER PRICE INDEX

Index 1949=100

Index 1949=100

Shelter indexes showed mixed results: five city indexes up, three unchanged and two down from February levels. Household operation indexes rose in seven cities, remained unchanged in two cities and declined in St. John's. Other commodities and services group indexes were lower in four of the ten regional cities, unchanged in three cities and up a fractional 0.1 per cent in the other three.

Regional consumer price index point changes between February and March were as follows: Montreal -1.0 to 126.5; Toronto -0.5 to 129.2; Vancouver -0.4 to 128.7; St. John's -0.3 to 114.5†; Halifax -0.3 to 126.7; Saint John -0.2 to 128.9; Ottawa -0.2 to 127.4; Winnipeg -0.1 to 124.0; Saskatoon-Regina -0.1 to 123.4; and Edmonton-Calgary +0.1 to 123.3.

U.S. Consumer Price Index, March 1960

The United States consumer price index (1947-49=100) rose to a record high between mid-February and mid-March, advancing 0.1 per cent from 125.6 to 125.7. The increase was mainly attributable to rising food prices, which after falling for five months climbed, as is usual at this time of year; the rise in the food component was 0.3 per cent. The housing index rose 0.1 per cent.

The U.S. index for March 1959 was 123.7.

U.K. Index of Retail Prices, February 1960

The United Kingdom index of retail prices (Jan. 17, 1956=100) remained unchanged at 109.9 between mid-January and mid-February. This was lower than the index for February 1959, which was 110.3.

"Tight Money" One of Challenges Facing Canadians—OFL

More than 800 persons attended the 2nd Education Conference of the Ontario Federation of Labour, held in Niagara Falls, February 13 and 14, and heard about challenges to Canadians in the form of tight money, import competition, automation, U.S. investment and the growth of the White Collar class.

Doug Hamilton, OFL Secretary, acted as Chairman of the Conference.

Items on the agenda that were discussed at the Conference included: Our Changing Economy, Public Relations, Welfare for Workers, International Affairs, Fair Employment Practices, Political Policy for Labour.

† On base June 1951=100.

Publications Recently Received in Department of Labour Library

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the *LABOUR GAZETTE*.

List No. 139.

Aged

1. U.S. DEPARTMENT OF HEALTH, EDUCATION, AND WELFARE. *Guide for State Surveys on Aging; a Manual to aid States and Communities in Program Planning for Their Growing Population of Older Citizens to assist in Preparations for Participation in the 1961 White House Conference on Aging. With Adaptations for Community Use.* Washington, GPO, 1959. Pp. 110.

2. WALKER, KENNETH MACFARLANE. *Commentary on Age.* London, Cape, 1952. Pp. 192.

Contents: The Problem of Old Age. Body Changes in Old Age. Ageing of the Tissues. Rejuvenation, Man's Span of Life. The Psychological Changes in Old Age. The Treatment of Old Age. The Philosophy of Old Age. The Religious View of Old Age. Old Age and Society. Ways of solving the Old-Age Problem.

Canada at Work Broadcasts

The following broadcasts were sponsored by the Federal Department of Labour and published in Ottawa in 1959.

3. BRUCE, JOHN W. *Labour's Views on the Older Worker Problem.* Pp. 4.

The speaker is General Organizer of the United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitting Industry of the United States and Canada. He emphasizes the importance of retaining older workers.

4. CAMPBELL, IAN. *Experience Available.* Pp. 4.

The author, who is National Co-ordinator of Civilian Rehabilitation and Chairman of the Interdepartmental Committee on Older Workers, tells about the problems of the older worker and of the educational program which the Federal Department of Labour is carrying out to help solve the problem.

5. CANADA. DEPARTMENT OF LABOUR. *On Your Agenda.* Pp. 9.

A short play about a meeting of a joint labour-management committee at which problems affecting the plant are discussed and solutions proposed.

6. CANADA. DEPARTMENT OF LABOUR. *Plans are for People.* Pp. 8.

A short play which tells how a joint labour-management committee can improve industrial relations in a plant.

7. CANADA. DEPARTMENT OF LABOUR. *Top of the Iceberg.* Pp. 7.

A short play showing how joint labour-management consultation helped one firm to improve its product by inviting suggestions from the workers.

8. CRUICKSHANK, WILLIAM HARVEY. *Industry's Views on the Older Worker Problem.* Pp. 4.

The speaker is Vice-President of the Bell Telephone Company.

9. LINDAL, WALTER JACOBSON. *Plan Now for Winter Works Campaigns.* Pp. 4.

The speaker, chairman of the National Employment Committee in Winnipeg, describes four steps to relieve winter unemployment: (1) indoors construction work; (2) household painting, decorating and repairs; (3) construction repairs in non-residential buildings; and, (4) a "Municipal Winter Works Incentive Program." The speaker concludes that everyone should support winter employment campaigns.

10. STARR, MICHAEL. *A Summary of the Older Worker Problem.* Pp. 4.

The Minister of Labour points out that older workers have acquired know-how, experience, judgment and stability. Their record with regard to accident rates, absenteeism and labour turn-over is superior.

11. WHITE, CECIL G. *Hold that Pension.* Pp. 4.

The author, who is Senior Actuary in the Department of Insurance in Ottawa, spoke about the importance for the employee who changes jobs to preserve the pensions he earns with a succession of employers.

Collective Bargaining

12. AMERICAN FEDERATION OF LABOUR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS. INDUSTRIAL UNION DEPARTMENT. [*Collective Bargaining Today*]. *Proceedings, Third Annual Industrial Relations Conference of the Industrial Union Department, AFL-CIO, Philadelphia, Pennsylvania, June 15 and 16, 1959.* Washington, 1959. Pp. 99.

Among the speakers were Walter Reuther, President of the U.A.W., David J. McDonald, President of the United Steelworkers of America, James B. Carey, President of the International Union of Electrical Workers, and Senator Stuart Symington.

13. NEW YORK (STATE). DEPARTMENT OF LABOR. DIVISION OF RESEARCH AND STATISTICS. *Union Agreement in New York State; Duration of Agreements and Provisions for Re-opening, Deferred Increases, and Escalation.* New York, 1959. Pp. 27.

Based on a study of 917 union agreements covering 1,400,000 workers.

14. NEW YORK (STATE). DEPARTMENT OF LABOR. DIVISION OF RESEARCH AND STATISTICS. *Union Agreements in the Construction Industry in New York State*. New York, 1959. Pp. 56.

A study of selected provisions of 375 union agreements covering 228,000 workers.

15. U.S. BUREAU OF LABOR STATISTICS. *Pension Plans under Collective Bargaining. Pt. 1. Vesting Provisions and Requirements for Early Retirement; Pt. 2. Involuntary Retirement Provisions, Late 1958*. Washington, GPO, 1959. Pp. 29.

A study of 300 plans.

Disabled—Rehabilitation

16. U.S. CONGRESS. SENATE. COMMITTEE ON GOVERNMENT OPERATIONS. *Rehabilitation of the Disabled in Thirty-Seven Countries of the World; Domestic Programs and International Activities in Technical Assistance*. Prepared for the Committee on Government Operations, United States Senate, and its Subcommittee on Reorganization and International Organization (Pursuant to S. Res. 347, 85th Congress, and S. Res. 42, 86th Congress). Washington, GPO, 1959. Pp. 153.

17. U.S. OFFICE OF VOCATIONAL REHABILITATION. *Psychological Services in Vocational Rehabilitation*, by Salvatore G. DiMichael. Washington, GPO [1959] Pp. 53.

Economics

18. GALBRAITH, JOHN KENNETH. *The Affluent Society*. Boston, Houghton Mifflin, 1958. Pp. 368.

A book on economics.

19. SAMUELSON, PAUL ANTHONY. *Economics; an Introductory Analysis*. 4th ed. New York, McGraw-Hill, 1958. Pp. 810.

An introduction to economics for college students.

Industrial Relations

20. AMERICAN MANAGEMENT ASSOCIATION. *Industrial Relations Here and Now; Trends, Issues, and Company Practices*. New York, c1959. Pp. 123.

Topics discussed include collective bargaining, discipline, management communications with employees, and management development.

21. EUROPEAN PRODUCTIVITY AGENCY. *Joint Consultation in Practice, a Survey in British Industry*. [Paris, OEEC, n.d., 1959?] Pp. 43.

Contents: Why Joint Consultation? The Forms it takes. How Groups are represented. How Committees work. How Representatives report back. What Consultation can achieve. What People feel about Consultation. Other Kinds of Consultation. Pointers to Practice.

22. PRIVES, M. Z. *Unionism and the Merit System in Municipal Labour Relations in Canada*. Montreal, Canadian Federation of Mayors and Municipalities, 1958. Pp. 58.

The author sought to discover: (1) whether employee organizations in the municipal service tried to influence their field of employment by gaining recognition for a closed shop system and, how this related to the merit principle; (2) whether these organizations were interested in hiring only, or in promotion and related matters as well; and, (3) whether it was possible to notice any pressure being presently applied in municipal labour relations and what the future development might be in municipal labour relations.

Industry—Location

The following surveys, revised to 1959, were prepared and issued by the Industrial Development Branch of the Department of Industry and Development of Alberta in Edmonton in 1959 and 1960.

23. Bentley. Pp. 8.

24. Cardston. Pp. 21.

25. Castor. Pp. 14.

26. Kitscoty. Pp. 9.

27. Lacombe. Pp. 16.

28. Lethbridge. Pp. 40.

29. Olds. Pp. 15.

30. Vermilion. Pp. 15.

International Labour Conference

31. INTERNATIONAL LABOUR OFFICE. *Reduction of Hours of Work*. Seventh item on the agenda. Geneva, 1960. 2 Volumes.

At head of title: Report 7 (1)-(2). International Labour Conference. 44th Session, Geneva, 1960.

Volume 1 has a summary of the general situation regarding hours of work along with a questionnaire on the subject sent to member countries. Volume 2 contains a summary of the replies to the questionnaire and proposed conclusions based on the replies.

32. INTERNATIONAL LABOUR OFFICE. *Workers' Housing*. Eighth item on the agenda. Geneva, 1959-1960. 2 Volumes.

At head of title: Report 8 (1)-(2). International Labour Conference. 44th Session, Geneva, 1960.

Volume 1 contains a report and a questionnaire on the subject of workers' housing. Volume 2 contains replies to the questionnaire and proposed conclusions based on the replies.

International Labour Organization

The following three reports were prepared by the International Labour Office in Geneva in 1959 for the Fifth Session of the Advisory Committee on Salaried Employees and Professional Workers, held in Cologne in 1959.

33. INTERNATIONAL LABOUR OFFICE. *Effects of Mechanisation and Automation in Offices*. Third item on the agenda. Geneva, 1959. Pp. 121.

34. INTERNATIONAL LABOUR OFFICE. *General Report [prepared for the Advisory Committee on Salaried Employees and Professional Workers]* Geneva, 1959. 2 Volumes.

Contents: v.1. *Effect given to the Conclusions of the Previous Sessions.* v.2. *Recent Events and Developments affecting Salaried Employees and Professional Workers.*

35. INTERNATIONAL LABOUR OFFICE. *Problems of Women Non-Manual Workers.* Second item on the agenda. Geneva, 1959. Pp. 83.

Job Analysis and Specification

36. CANADA. DEPARTMENT OF LABOUR. *An Analysis of the Heavy Duty Trade.* Prepared by a National Committee appointed by the Department of Labour. Ottawa, Queen's Printer, 1959. Pp. 114.

Deals with an analysis of repairs to heavy trucks, track vehicles, power graders, scrapers, etc. Contents: Hand Tools and Operations. Use of Fastenings and Fittings. Bench Work and Power Tools. Hazardous Procedures. Cab and Body Care.

37. EUROPEAN PRODUCTIVITY AGENCY. TRADE UNION INFORMATION AND RESEARCH SERVICE. *Job Evaluation; Report on the Scandinavian Conference held at Runo, Sweden from 10th-13th June, 1958.* Paris, OEEC [1959?] Pp. 81.

This is the Final Report on the Stockholm Seminar on Job Evaluation.

Contains reports on job evaluation in various West European countries submitted to the participants, and summarizes the conclusions reached by the three working groups formed by the participants.

38. U.S. OFFICE OF EDUCATION. DIVISION OF VOCATIONAL EDUCATION. *Mechanical Drafting and Design Technology.* Washington [n.d., 1959?] Pp. 26.

At head of title: Job descriptions and suggested techniques for determining courses of study in vocational education programs.

39. YODER, DALE. *Jobs in Employee Relations*, by Dale Yoder and Roberta J. Nelson. New York, American Management Association, c1959. Pp. 52.

Job descriptions of people who devote their full time to employee relations as executives, supervisors, specialists, or in positions associated with personnel like the Medical Services Director or the Safety Director.

Labour Organization

40. CONFERENCE ON AMERICAN LABOR'S ROLE IN LESS DEVELOPED COUNTRIES, CORNELL UNIVERSITY, ITHACA, N.Y., 1958. *American Labor's Role in Less Developed Countries; a Report on a Conference held at Cornell University, October 12-17, 1958.* [Ithaca] New York State School of Industrial and Labor Relations, Cornell University [1959?] Pp. 70.

Sponsored jointly by the AFL-CIO Department of International Affairs and the New York State School of Industrial and Labor Relations at Cornell University.

Partial Contents: The Role of the Free Trade Union in a Less Developed Nation, by John T. Dunlop. The Educational Needs of Free Unions in Less Developed Countries, by Anthony S. Luchek and John K. Meskimen. To what extent can U.S. Trade Unions assist the Development of Free Unions in the Less Developed Countries? By Jay Lovestone. Problems of Management in Less Developed Countries, by Charles A. Myers. Trade Union Organization and Labor Relations in Indonesia: A Case Study, by Harry Goldberg.

41. PETRO, SYLVESTER. *Power Unlimited; the Corruption of Union Leadership; a Report on the McClellan Committee Hearings.* New York, Ronald Press Co., 1959. Pp. 323.

A summary of the hearing of the U.S. Senate Select Committee on Improper Activities in the Labor or Management Field. The book discusses the abuses uncovered by the Committee and suggests remedies.

42. U.S. CONGRESS. SENATE. SELECT COMMITTEE ON IMPROPER ACTIVITIES IN THE LABOR OR MANAGEMENT FIELD. *Second Interim Report of the Select Committee on Improper Activities in the Labor or Management Field, United States Senate, pursuant to S. Res. 44, 86th Congress.* Washington, GPO, 1959. Pp. 375.

Contains factual summaries and findings on James R. Hoffa; Teamsters Local 295 and the Detroit Institute of Laundering in Detroit, Mich.; Allen Dorfman and the Union Insurance Agency of Illinois; the Great Atlantic & Pacific Tea Co. of New York, and New York Locals 342 and 640 of the Amalgamated Meat Cutters and Butcher Workmen of North America. These individuals and organizations were investigated during 1958.

43. WEARMOUTH, ROBERT FEATHERSTONE. *Methodism and the Trade Unions.* London, Epworth Press, 1959. Pp. 78.

Discusses the impact of Methodism on the trade union and working class movements in Great Britain.

Labour Statistics

44. INTERNATIONAL LABOUR OFFICE. *The International Standardisation of Labour Statistics.* [3d ed.] Geneva, 1959. Pp. 124.

Deals with international activity in the field of standardization of labour statistics at the present time and with international standards in labour statistics as they touch on major economic classifications, labour force, employment, unemployment and underdevelopment, wages, hours of work and labour income, consumer price indices, family living studies, international comparisons of real wages, social security, industrial injuries and occupational diseases, industrial disputes, collective agreements, and migration.

45. INTERSTATE CONFERENCE ON LABOR STATISTICS. 15TH, LITTLE ROCK, 1957. *Proceedings of 15th Interstate Conference on*

Labor Statistics, June 18-21, 1957, Little Rock, Arkansas. Washington, U.S. Bureau of Labor Statistics, 1959. Pp. 121.

Conference sponsored by U.S. Bureau of Labor Statistics and Arkansas Department of Labor. The principal topics discussed at the conference were manpower, workmen's compensation, and the operations of State offices.

Labouring Classes

46. ACTON SOCIETY TRUST. *Redundancy.* London, 1958-1959. 2 Volumes.

Contents: v.1. *A Survey of Problems and Practices.* v.2. *Three Studies on Redundant Workers.*

"Redundancy is the involuntary loss of a job through no fault of the worker concerned." Part 1 is concerned with "the causes of redundancy, its relation to the mobility or immobility of labour, its effect on individuals, and the measures which either are being taken, or could be taken, to reduce the costs and hardships, material and psychological, which it imposes." Part 2 describes the results of three enquiries about redundancy. One enquiry was made among redundant employees of four firms; the second is based on information supplied by a local Employment Office concerning the past employment and unemployment history of all the workers re-employed in a particular month; the third study was a sample of fifty redundant workers who were re-employed by the firm which had previously employed them.

47. BECKER, JOSEPH M. *Shared Government in Employment Security; a Study of Advisory Councils.* New York, Columbia University Press, 1959. Pp. 501.

Employment security includes two branches: the employment service which supplies jobs, and unemployment compensation which provides benefits for the jobless. "The function of an advisory council in a government program is to help those responsible for the program to know and to do what the program requires." The author examines the functions of advisory councils in employment security and discusses the experience of fifteen states with advisory councils and outlines the history of the Federal Advisory Council in the U.S.

48. COMMERCE CLEARING HOUSE. *New Labor Law of 1959 with Explanation. "Labor-Management Reporting and Disclosure Act of 1959" signed into Law by the President, September 14, 1959. Public Law 86-257.* [Chicago, c1959] Pp. 96.

Analyzes clauses of the new American Labour Act and includes text of the law.

49. DESAI, NEERA. *Woman in Modern India.* Foreword by Gardner Murphy. 1st ed. Bombay, Vora, 1957. Pp. 314.

Discusses social and economic conditions of women in India.

50. U.S. BUREAU OF LABOR STATISTICS. *Analysis of Work Stoppages, 1958.* Washington [GPO, 1959] Pp. 36.

A detailed statistical review of strike activity in 1958.

51. U.S. CONGRESS. HOUSE. COMMITTEE ON EDUCATION AND LABOR. *Picketing and Boycotts; Selected Readings.* Washington, GPO, 1959. Pp. 376.

Consists of eighteen articles or excerpts from books.

Professional Workers

52. CANADA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH BRANCH. *The Early Post-Graduate Years in the Technical and Scientific Professions in Canada; a Case Study of the 1954 Graduating Class of Engineers and Scientists.* Ottawa, Queen's Printer, 1959. Pp. 30.

Based on data obtained from questionnaires completed by new graduates in 1954 and again three years later in 1957. This report tells something about the type of industry in which the graduates worked, their present duties, their field of specialization, the geographic location of the job, and the extent of post-graduate study.

53. CANADA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH BRANCH. *Employment Outlook for Professional Personnel in Scientific and Technical Fields, 1958-1960.* Ottawa, Queen's Printer, 1959. Pp. 55.

Partial Contents: Major Findings—A Graphic Outline. Employment Trends 1958-1960. Recruitment and Effects of Shortages. Sources of Engineers, Scientists and Architects. Analysis by Profession: Engineering; Sciences; Other.

54. CANADA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH BRANCH. *Engineering and Scientific Manpower Resources in Canada; Their Earnings, Employment and Education, 1957.* Ottawa, Queen's Printer, 1959. Pp. 51.

Covers over ten thousand persons in every branch of engineering, architecture and in several fields of science.

55. U.S. OFFICE OF EDUCATION. *Engineering Enrolments and Degrees, 1958,* by Justin C. Lewis and Henry H. Armsby. Washington, GPO, 1959. Pp. 50.

Profit-Sharing

The following three items were prepared by the Council of Profit Sharing Industries in Chicago in 1958.

56. *Profit Sharing in Manufacturing Business.* Pp. 40.

Describes how profit-sharing works for small and large manufacturers, and with collective bargaining.

57. *Profit Sharing in Service Business.* Pp. 39.

Describes how profit-sharing works in small, service-type organizations, in publishing and advertising companies, and in retailing and merchandising businesses.

58. *Profit Sharing, its Administration, Legal, Accounting, Investing*. Pp. 38.

Deals with the legal considerations and accounting aspects of profit-sharing, investing profit-sharing funds in the company's stock, and the administration of trust funds.

Wages and Hours

59. BACKMAN, JULES. *Wage Determination; an Analysis of Wage Criteria*. Princeton, N.J., Van Nostrand, 1959. Pp. 316.

Describes factors that determine general changes in wages and non-wage benefits such as wage comparisons, cost of living, workers' budgets, productivity, ability to pay, and economic environment.

60. CARTTER, ALLAN MURRAY. *Theory of Wages and Employment*. Homewood, Ill., R. D. Irwin, 1959. Pp. 193.

A survey of the development of traditional wage theory in the light of contemporary developments in labour market structure.

61. KEAT, PAUL G. *Changes in Occupational Wage Structure, 1900-1956*. Chicago, University of Chicago, 1959. Pp. 93.

Bound with Lurie, Melvin. *The Measurement of the Effect of Unionization on Wages in the Transit Industry*.

Contents: Long-Range Changes in Occupational Wage Differentials. Short-Run Changes in Occupational Wage Differentials. Factors Responsible for the Long-Run Changes in Occupational Wage Differentials. A. Introduction. B. Sex and Race Differentials. C. Union Influence. D. Immigration. E. Age. F. Education and Training.

62. LOVEJOY, LAWRENCE CLARK. *Wage and Salary Administration*. New York, Ronald Press Co., 1959. Pp. 502.

Discusses such topics as job analysis, job rating, incentives, wage surveys, fringe benefits, pensions, and supplemental unemployment benefits.

63. LURIE, MELVIN. *The Measurement of the Effect of Unionization on Wages in the Transit Industry*. Chicago, University of Chicago, 1958. Pp. 113.

Bound with Keat, Paul G. *Changes in Occupational Wage Structure, 1900-1956*.

An attempt to estimate how much the Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America has raised wages in the transit industry and to discover whether this amount has varied in relation to economic conditions over a period of time.

64. NATIONAL INDUSTRIAL CONFERENCE BOARD. *Severance Pay Patterns in Manufacturing* [by Harland Fox and N. Beatrice Worthy] New York, 1959. Pp. 47.

Based on a study of about 300 different severance pay plans in seven manufacturing industries: chemicals, petroleum, rubber, textiles, food, primary metals, and electrical machinery.

65. U.S. BUREAU OF LABOR STANDARDS. *Wage Payment and Wage Collecting, State Legislation and Administration*. June 1959. Washington, GPO, 1959. Pp. 43.

"... Summarizes the provisions of State wage payment and wage collection laws, the methods used in their administration, and the procedures for handling complaints."

Workmen's Compensation

66. CANADA. DEPARTMENT OF LABOUR. LEGISLATION BRANCH. *Workmen's Compensation in Canada, a Comparison of Provincial Laws*. October, 1959. Ottawa, Queen's Printer, 1960. Pp. 47.

67. LANE, MORTON. *The Effect of the California Workmen's Compensation Law upon the Employment of the Handicapped*. New York, Institute of Physical Medicine and Rehabilitation, New York University-Bellevue Medical Center, 1958. Pp. 45.

Miscellaneous

68. GREAT BRITAIN. CENTRAL ADVISORY COUNCIL FOR EDUCATION (ENGLAND). *15 to 18; Report*. Volume 1. London, HMSO, 1959. Pp. 519.

Concerns the education of English boys and girls between the ages of 15 and 18.

69. MCNAUGHT, KENNETH WILLIAM. *A Prophet in Politics, a Biography of J. S. Woodsworth*. Toronto, University of Toronto Press, c1959. Pp. 339.

During his lifetime Mr. Woodsworth was a social reformer, a socialist politician and the father of the Co-operative Commonwealth Federation and its leader from its inception in 1932 till 1940.

70. NATIONAL INDUSTRIAL CONFERENCE BOARD. [*The Conference Board Economic Forum presents:*] *Prerequisites for Economic Growth, a Discussion by the Conference Board Economic Forum and Guests held at ... New York City, September 24, 1959*. New York, 1959. Pp. 80.

Eleven economists participated in this discussion. Economic growth was defined as "increase in national product per capita." Some participants felt that the rate of economic growth was slow in the U.S. at the present time but that the rate could be increased by raising productivity.

71. TOEWS, J. A. *Alternative Service in Canada during World War II*. Winnipeg, Publication Committee of the Canadian Conference of the Mennonite Brethren Church, 1959. Pp. 127.

"... Alternate Service was a form of national service which the Canadian Government required of conscientious objectors in lieu of military training or service." Deals with the provision of the Canadian Government for the exemption from military service of four religious groups: the Mennonites, the Quakers, the Hutterites and the Doukhobors.

72. UNITED NATIONS. OFFICE OF PUBLIC INFORMATION. *For Human Welfare; a Study Guide on the Work of the Economic and Social Council*. 2d ed. New York, 1959. Pp. 48.

73. U.S. BUREAU OF LABOR STATISTICS. *Consumer Prices in the United States, 1953-58; Price Trends and Indexes*. Washington, GPO, 1959. Pp. 126.

74. U.S. DEPARTMENT OF LABOR. *Background Statistics bearing on the Steel Dispute...including Supplementary Tables*. Pp. 37.

Contains information about the steel industry in the U.S.

75. WELFARE COUNCIL OF METROPOLITAN CHICAGO. DIVISION ON FAMILY AND CHILD WELFARE. *A Plan for Expansion of Homemaker Services*. Chicago, 1959. Pp. 43.

Homemaker services include "full or partial responsibility for household management, family and child care, and/or full or partial responsibility for giving personnel care to sick and handicapped individuals." A survey of homemaker services in Chicago and recommendations for their expansion.

ILO Publication Begins Series on Office Automation's Effects

The first of a series of three articles on the "Effects of Mechanization and Automation in Offices" appears in the February 1960 issue of the *International Labour Review*, published monthly by the International Labour Office, Geneva.

The articles are based on a report submitted to the Fifth Session of the ILO Advisory Committee on Salaried Employees and Professional Workers, held in Cologne, Germany, in November and December 1959.

The first article discusses such items as Development of Mechanization in Offices, Early Stages in the Development of Office Mechanization, Punch-card Equipment. The Spread of Mechanization in Offices, Introduction and Spread of Automation in Offices, Effects on Employment.

Labour Conditions in Federal Government Contracts

(Continued from page 495)

& Elgin Sts; Ottawa Iron Works, repairs to sky lights, DVA Bldg; B J Normand, plaster repairs, Postal Terminal; Trudel & McAdam Ltd, alterations to National Research Council. *Perth Ont*: Lorne North, interior decoration, federal bldg. *Port Hope Ont*: Russel Construction Ltd, dredging. *Westview B C*: British Columbia Bridge & Dredging Co Ltd, dredging.

St. Lawrence Seaway Authority

Beauharnois Que: J G Fitzpatrick Ltd, construction of entrance wall fenders, Beauharnois Locks. *St Catharines Ont*: H E Heighton & Son Ltd, repairs to gate No 1, Lock No 2, Welland Canal.

Department of Transport

Moncton N B: Canadian Comstock Co Ltd, installation of main from heating plant to Terminal Bldg. *Bagotville Que*: Accurate Electrical Contractors, installation of airport lighting facilities, RCAF Station. *Montreal (Dorval) Que*: The Foundation Co of Canada Ltd, installation of aircraft hydrant refuelling operating plant for new terminal development. *St James Man*: Babcock-Wilcox & Goldie-McCulloch Ltd, installation of steam generating units, auxiliary equipment instruments & controls for new power house bldg, Winnipeg International Airport. *Winnipeg Man*: Peter Leitch Construction Ltd, excavations & installation of water & sewer services, etc, for Air Terminal Bldg, International Airport. *Saskatoon Sask*: Boychuk Construction Co Ltd, renovations to remote receiver & remote transmitter bldg. *Grande Prairie Alta*: Midwest Electric Co Ltd, construction of LI lighting & related work, Airport. *Enderby B C*: Canadian Bridge Works Division of Dominion Steel & Coal Corp, fabrication, supply & erection of antenna tower. *Sandspit B C*: K Moore & Co, construction of remote receiver bldg & related work, Airport. *Watson Lake Y T*: Wirtanen Electric Co Ltd, construction of low intensity approach lighting on approach No 26, Airport.

* Less than 10,000.

B—Labour Income

NOTE: The estimates of labour income in this table have been revised in accordance with recent revisions to the National Accounts. Note particularly the use of annual totals instead of monthly averages, and the introduction of quarterly instead of monthly totals for some industries. Monthly and quarterly figures may not add to annual totals because of rounding.

¹ Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.

² Includes post office wages and salaries.

³ Figures in this column are for total labour income, Canada, but are not totals of the figures in the remaining columns of this table, as figures for labour income in Agriculture, Fishing and Trapping are not shown. (See also headline.)

† Preliminary.

* Revised.

C—Employment, Hours and Earnings

Tables C-1 to C-3 are based on reports from employers having 15 or more employees—at January, 1960 employees in the principal non-agricultural industries reported a total employment of 2,660,099. Tables C-4 (every second month) and C-5 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-3. They relate only to wage earners for whom statistics of hours of work are also available whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage earners in the reporting firms.

¹ Includes (1) Forestry (chiefly logging), (2) Mining (including milling), quarrying and oil wells, (3) Manufacturing, (4) Construction, (5) Transportation, storage and communication, (6) Public utility operation, (7) Trade, (8) Finance, insurance and real estate and (9) Service, (mainly hotels, restaurants, laundries, dry cleaning plants, business and recreational service).

TECHNICAL NOTE—A change has been made in the method of dating the statistics published in Tables C-1 to C-6 to conform with the usual practice of the Dominion Bureau of Statistics. In the past, statistics for the last pay period in a month were labelled "pay period preceding" the first day of the following month. From now on, statistics for the last pay period in a month will be labelled for that month. Another change is that average hourly earnings, formerly expressed in cents carried to one decimal place, are now published in dollars and cents.

Chemical products.....	130.4	130.1	127.7	89.30	88.87	85.43
Medicinal and pharmaceutical preparations.....	119.0	118.7	116.6	79.04	77.33	75.90
Acids, alkalis and salts.....	148.8	150.9	138.6	101.07	102.80	96.72
Miscellaneous manufacturing industries.....	125.9	124.8	120.1	69.54	66.49	66.94
Construction	105.4	113.3	105.0	79.22	69.78	75.62
Building and general engineering.....	106.1	111.3	106.3	86.82	73.34	81.36
Highways, bridges and streets.....	104.2	116.4	102.9	66.62	64.23	66.08
Electric and motor transportation.....	129.1	130.0	123.9	79.32	76.80	76.79
Service	137.1	137.3	131.6	52.22	51.45	49.63
Hotels and restaurants.....	123.6	124.2	120.0	40.79	40.51	39.84
Laundries and dry cleaning plants.....	109.8	110.9	111.3	45.28	43.99	43.12
Industrial composite	115.2	118.1	113.7	75.05	72.41	72.34

Tables C-4 and C-5 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-3. They relate only to wage earners for whom statistics of hours of work are also available whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage-earners of the co-operative firms.

D—National Employment Service Statistics

The following tables are based on regular statistical reports from local offices of the National Employment Service. These statistics are compiled from two different reporting forms, UIC 751; statistical report on employment operations by industry, and UIC 757; inventory of registrations and vacancies by occupation. The data on applicants and vacancies in these two reporting forms are not identical.

Toronto.....	128.2	129.7	129.2	118.2	153.3	114.3	123.7	138.9
Winnipeg.....	122.6	124.1	124.0	116.8	133.9	117.2	119.8	133.6
Saskatoon—Regina.....	122.1	123.5	123.4	117.1	124.5	122.1	125.4	129.2
Edmonton—Calgary.....	122.2	123.2	123.3	114.8	124.8	119.9	127.0	133.0
Vancouver.....	127.0	129.1	128.7	120.3	138.9	117.4	135.0	136.7

N.B. Indexes above measure percentage changes in prices over time in each city and should not be used to compare actual levels of prices as between cities.

(1) St. John's index on the base June 1951 = 100.

G—Strikes and Lockouts

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Department of Labour on the basis of reports from the Unemployment Insurance Commission. The first three tables in this section cover strikes and lockouts involving six or more workers and lasting at least one working day, and strikes and lockouts lasting less than one day or involving fewer than six workers but exceeding a total of nine man-days. The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. For further notes on the series see page 542, May 1959 issue.

TABLE G-1—STRIKES AND LOCKOUTS, 1955-1960

Month or Year	Strikes and Lockouts Beginning During Month or Year	Strikes and Lockouts in Existence During Month or Year			
		Strikes and Lockouts	Workers Involved	Duration in Man-Days	
				Man-Days	Per Cent of Estimated Working Time
1955.....	149	159	60,090	1,875,400	0.18
1956.....	221	229	88,680	1,246,000	0.11
1957.....	242	249	91,409	1,634,880	0.14
1958.....	253	262	112,397	2,872,340	0.24

(1) Prior to 1956 the Department had classified as "industrial" fatalities, deaths which occurred at the place of work of the deceased person even though such deaths were not the result of a condition or event connected with the employment of the person concerned. This practice has been discontinued. Figures for the years 1949 to 1955 have been revised accordingly.

(2) These figures are preliminary. They include 964 reported by the Workmen's Compensation Boards and the Board of Transport Commissioners and 294 compiled from other sources some of which will presently be reported by the Boards. The 294 fatalities were distributed as follows: Agriculture 82; Logging 13; Fishing and Trapping 67; Mining 11; Manufacturing 17; Construction 37; Public Utilities 2; Transportation, Storage and Communications 40; Trade 6; Finance 2; Service 17.

Caught In, On or Between:

Machinery.....	5	1	11	3	1	1	1	23	1	1	5	8	2	2	20

CORRESPONDENCE—Address letters dealing with editorial matters to the Editor, those dealing with subscriptions to the Circulation Manager. SUBSCRIPTIONS—Canada: \$2 per year, single copies 25 cents each; all other countries: \$4 per year, single copies 50 cents each; Send remittance by cheque or post office money order, payable to the Receiver-General of Canada, to The Queen's Printer, % Superintendent of Government Publications, Ottawa. All subscriptions payable in advance. SPECIAL GROUP SUBSCRIPTION OFFER—Five or more annual subscriptions, \$1 per subscription (Canada only). Send remittance, payable to the Receiver-General of Canada, to the Circulation Manager. BOUND VOLUMES—\$5 per copy delivered in Canada, \$7 per copy to other countries. CHANGE OF ADDRESS—Please attach label showing previous address.

Authorized as Second Class Mail, Post Office Department, Ottawa.

EMPLOYMENT REVIEW

ECONOMICS AND RESEARCH BRANCH

Current Manpower Situation

Between April and May, employment increased by an estimated 250,000 to 5,992,000. About three quarters of the over-all gain was among males and more than 90 per cent of it occurred in non-farm industries. The increase in activity resulted in a substantial, though smaller-than-usual decrease in unemployment.

Among the non-agricultural industries, employment gains in forestry, construction and manufacturing were about normal for the season. The increase in employment in services was larger than usual.

Employment in Quebec increased more than is usual for the month while in the Pacific region it was below normal. In Ontario and the Prairie and Atlantic regions, employment gains were about equal to the seasonal average.

Seasonally adjusted, non-agricultural employment was at a record level in May. The total was 189,000, or 3.7 per cent higher than a year earlier. The service industry, which accounted for three fourths of the year-to-year increase in employment, registered large gains during the past few months after remaining fairly stable during most of 1959. Employment in trade followed an irregular upward trend over the year and showed a net advance of 62,000. Construction employment declined moderately over the year, largely reflecting a decline in housebuilding. The trend in manufacturing was fairly stable during the past 12 months, though there were offsetting influences among individual industries.

In manufacturing, employment gains since last spring ranged from less than 1 per cent to better than 5 per cent in the following industries: iron and steel, rubber, paper products, printing and publishing, electrical apparatus, chemicals, shipbuilding and motor vehicles. Offsetting losses occurred in textiles, clothing, leather, non-metallic mineral products, railway rolling stock, aircraft, and tobacco products; the declines ranged from 2 per cent in textiles to 19 per cent in tobacco products.

In the iron and steel products group employment trends have been mixed. Employment in primary iron and steel has been noticeably higher than in the spring of 1959, but activity in fabricated and structural steel has shown a sizeable decline. The machinery industry showed some employment strengthening during the last half of 1959 but has made little additional improvement so far this year. Agricultural implements and heating and cooking appliances registered moderate year-to-year employment declines in May; they showed persistent increases through 1959 and the early part of 1960.

The number of persons without jobs and seeking work declined during the month by 118,000 to 399,000. Virtually all of this decline in job seekers was among males and more than half of it was in Quebec. The number seeking work represented 6.2 per cent of the labour force compared with 5.4 per cent in May 1959 and 6.0 per cent in May 1958. The estimated number on temporary layoff declined by 15,000 in May to about the same total as a year ago.

This year the number of persons without jobs and seeking work reached a peak of 566,000 in March and averaged 508,000 during the first five months. Almost 90 per cent of this total were males and three quarters were males 20 years of age and over. Just about half of the total were married men.

The Atlantic region was the only part of the country in which unemployment was lower than last year. In relation to the regional labour force, however, the number of job seekers in this part of the country was considerably higher than the national average, as it has been for many years. In other regions the unemployment rate varied from 5.1 per cent in the Prairie Provinces to 11.7 per cent in Quebec.

The incidence of unemployment was heaviest, as usual, among persons in the younger age groups. In the male labour force of 324,000 under 20 years of age, for example, one in five was seeking work this spring. Even among girls of this age group the proportion seeking work was above the national average.

Persons Without Jobs and Seeking Work (January-May 1960, in thousands)

	Labour Force	Seeking Work	Per Cent
Total	6,261	508	8.1
Males	4,665	453	9.7
Females	1,597	55	3.5
14-19 years	572	87	15.2
20-24 years	792	88	11.1
25-44 years	2,898	202	7.0
45 and over	1,999	132	6.6
Married	—	270	—
Single	—	222	—
Other	—	16	—
Atlantic	545	77	14.1
Quebec	1,756	205	11.7
Ontario	2,335	127	5.4
Prairie	1,065	54	5.1
Pacific	561	45	8.0

The intensity of seasonal unemployment in Canada is reflected, in part, in the duration of job-seeking during the winter months. In January this year almost 80 per cent of all job seekers had been seeking work for three months or less. By April, however, the proportion seeking work for more than three months had increased from one fifth to one half. On average, 20 per cent of job seekers in the first five months of this year looked for work for less than a month and 60 per cent sought work for three months or less. Those seeking work for more than six months accounted for 11 per cent of the total.

CLASSIFICATION OF LABOUR MARKET AREAS—MAY 1960

	SUBSTANTIAL LABOUR SURPLUS	MODERATE LABOUR SURPLUS	APPROXIMATE BALANCE	LABOUR SHORTAGE

Mining Output and Employment, Prairie Region, 1949-59

The Prairie Provinces experienced a marked expansion in non-agricultural employment in the decade between 1949 and 1959. The increase amounted to 50 per cent, which compares very favourably with an increase of 34 per cent for the whole of Canada in the same period. This rapid employment advance in the non-farm industries of the Prairie region is largely associated with the development of the mining industry and the direct stimulation imparted to other industries as a consequence. The greatest production increases occurred in the petroleum industry, but outputs of uranium, copper, zinc, and non-metallic construction materials also showed significant gains.

As recently as 1949, agriculture dominated the economy of the Prairie Provinces, but its share of the net value of production had declined to 58 per cent from 66 per cent in 1928. Mining's share in this period tripled to 9 per cent, and construction moved from 5 per cent to 9 per cent.

By 1956 agriculture had moved down still further to 37 per cent of the net value of total production; mining represented 15 per cent, at almost \$485 million, and construction accounted for 24 per cent.

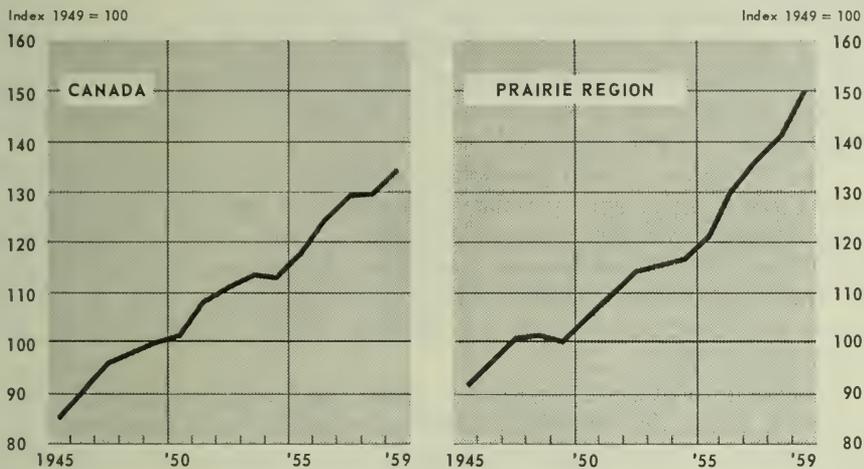

The Leduc oil discovery in February 1947 was one of the more significant events in the progress of the Prairie mining industry. In that year, less than 10 per cent of Canada's requirements of crude were met domestically and production in the Prairies totalled less than \$20,000,000 from about 400 producing wells. By 1958 there were more than 11,000 producing wells and the net value of total production reached \$394,000,000. Exploration and development expenditures went up from \$77,000,000 in 1947 to more than \$600,000,000 in 1956, and have subsequently remained near this annual level. Domestic crude currently provides more than half of Canada's requirements.

A smaller, though still spectacular development of the natural gas industry accompanied the expansion in oil. Producing gas wells increased from 174 in 1948 to 730 in 1958, and production in the same period rose from 162,000,000 to 926,000,000 cubic feet per day. Of the 1958 total, 238,000,000 cubic feet per day was exported. Prairie gas moved by pipeline to the Pacific coast for the first time in 1957, and to the central provinces in the fall of 1958.

In 1958 crude oil pipelines totalled 7,204 miles, compared with 455 miles in 1948. The largest of these are the 1,930-mile Interprovincial Pipeline from Redwater, Alta., to Port Credit, near Toronto, and the 785-mile line joining Edmonton to the Vancouver-Puget Sound area. The latter serves refineries on both sides of the international border. The 2,290-mile Trans-Canada Pipeline from Alberta to Eastern Canada is the longest natural gas line, and a 1,300 mile pipeline delivers Alberta gas into the Western United States. A 600-mile gathering and transporting system is in operation in Alberta.

Although oil and gas development has somewhat overshadowed the advance in other minerals, nevertheless their growth has been substantial and they have contributed greatly to the economic development of both the Prairie region and Canada as a whole. From \$111,000,000 (\$174,000,000 including oil and gas) in 1949, minerals production reached \$201,000,000 in 1959 (\$649,000,000 including oil and gas). In the latter year, Manitoba's minerals production totalled \$58,000,000, of which structural materials (chiefly cement, sand and gravel) accounted for \$19,000,000, nickel \$13,000,000 and crude oil, copper, and zinc for lesser amounts. Saskatchewan's 1959 total of

NON-AGRICULTURAL EMPLOYMENT 1945 - 1959

Source: D B S

\$214,000,000 was chiefly composed of: crude oil, \$100,000,000; uranium, \$54,000,000; and substantial amounts of copper, zinc, and structural materials. Oil (\$309,000,000) and gas (\$26,000,000) made up the major share of Alberta's \$378,000,000 total, with structural materials and coal also prominent. Alberta and Saskatchewan were in third and fourth place, respectively, in the value of minerals produced by Canadian provinces.

The expansion of minerals production in the Prairie region brought about large increases in employment in both mining and related industries. From 1949 to 1959, total mining employment increased most markedly in Alberta. Saskatchewan exhibited the greatest proportional change (194 per cent), owing to the much lower starting level in 1949. Employment in Alberta's oil industry nearly tripled in the 10-year period, and offset an 80-per-cent decline in coal mining employment. (Prairie coal production, affected by competition from gas and oil, declined from \$48,000,000 to \$13,000,000). In Manitoba, mining employment showed a more modest increase, with greater productivity chiefly accounting for increases in production.

Employment in the construction industry has doubled in Alberta since 1949, and Saskatchewan and Manitoba registered gains of 67 per cent and 44 per cent, respectively, because of the need for facilities for the mining industry and for residential, commercial, and municipal buildings that accompanied the increased urbanization of the region. In manufacturing, employment in iron and steel products in Manitoba went up 23 per cent, and in Saskatchewan a 71-per-cent increase in products of petroleum and coal helped raise total employment in manufacturing by 25 per cent. Manufacturing employment showed the sharpest rise in Alberta, almost 60 per cent, with employment in iron and steel products more than doubling, in products of petroleum and coal nearly doubling, and in chemical products showing a 300-per cent increase.

The previously-mentioned sharp rise of 50 per cent in non-farm employment in the Prairie region from 1949 was partly offset by the decline in agriculture that accompanied the mechanization of Prairie farms. The drop amounted to 35 per cent in the 10 years, bringing on-farm employment from 433,000 in 1949 to 284,000 in 1959. The movement from the farming areas supplied labour for, and greatly facilitated the rapid industrial expansion of the region. As a result of the movement, however, while the Canadian population rose 30 per cent in the period, the population of the Prairies went up somewhat less, 23 per cent.

The expansion in total population combined with increasing urbanization to bring about very rapid population increases in most of the cities of the region. This is especially apparent in Alberta, where Calgary expanded from 105,000 in 1948 to 218,000 ten years later; Edmonton, in the same period, went from 127,000 to 252,000. This growth was not confined to the larger centres; Red Deer's population, for example, tripled in the 1949-59 period, from 6,000 to 18,000.

Besides providing employment to offset the recent decline in the agricultural work force, the minerals-producing industries have contributed to the diversification of the Prairie economy. These industries have also provided high-wage employment. The average weekly wage in the oil industry, more than \$100, is among the highest in Canada. Royalties and other taxes have aided government finances; since 1947 revenues from the petroleum industry to the government of Alberta alone have amounted to nearly one billion dollars.

Present trends in Prairie minerals production appear likely to continue. Crude oil production is steady, although the rapid pre-1958 rise appears to have ended until new markets are developed. Natural gas production is continuing to expand rapidly, for both domestic and export markets. Final arrangements have been completed for one of four proposed export pipelines, and the construction of 50 miles of 30-inch line from southeastern Manitoba to the border-crossing point at Emerson is scheduled to begin in the near future.

In other minerals, the world's second largest nickel mine is nearing completion in northern Manitoba. A nickel smelter, a copper mine, and a zinc mine are also soon to go into production. Two mines in Saskatchewan will tap the almost unlimited deposits of potash in that province. Uranium production will continue at a somewhat reduced rate until world demand catches up with supply.

Further opportunities for manufacturing employment are being created in the steel and pipe plants completed or under construction at Regina, Camrose, Calgary, and Edmonton. Caustic soda, chlorine, phenol, and other petrochemical plants are being built in Alberta. These plants, along with the minerals-producing facilities of the region, may be expected to attract other related, subsidiary establishments to provide for a continuing growth and diversification of the Prairie economy.

The "Employment Review" in its present form will henceforth appear quarterly only, in the June, September, December and March issues. In the intervening months, the Department of Labour-Dominion Bureau of Statistics Joint press release will be substituted.

Manpower Situation in Local Areas

ATLANTIC

Employment in the Atlantic region increased seasonally between April and May, the number of persons with jobs increasing by an estimated 43,000 to 502,000. This total was about the same as a year earlier. Renewed activity in seasonal industries such as farming, fishing, construction, sawmilling, and logging accounted for most of the employment expansion. Over-all manufacturing employment strengthened somewhat despite a few small layoffs in the manufacture of steel products.

On the whole, employment conditions in the region showed little year-to-year change. Coal mining, a major source of weakness last year, continued to be hampered by reduced markets due to increased competition from other fuels. The construction industry was less active than in the spring of 1959, but forestry showed some improvement. Manufacturing employment was slightly higher than last year; gains in sawmilling, pulp and paper mills, and iron and steel plants more than offset losses in other sectors such as railway rolling stock.

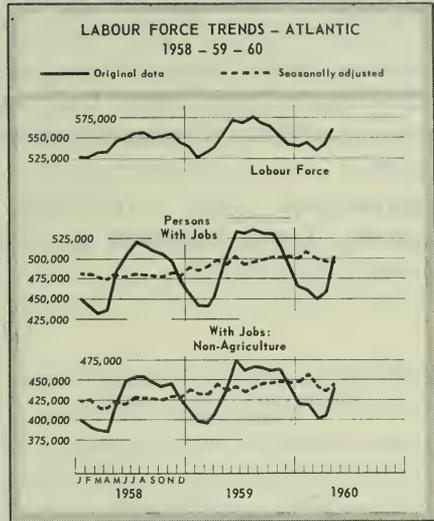

Unemployment declined sufficiently during the month to reduce labour surpluses from substantial to moderate proportions in 11 areas. The classification of the 21 areas in the region at the end of May was as follows (last year's figures in brackets): in substantial surplus, 8 (10); in moderate surplus, 13 (11).

Local Area Developments

Halifax (metropolitan) remained in Group 2. Early summer weather hastened the seasonal rise in construction employment; skilled tradesmen were in heavy demand. About 200 workers were released at the shipyards but elsewhere in manufacturing, employment either remained stable or increased. Electronic and textile plants were reported to have taken on additional staff. Service workers were in strong demand at some of the National Defence establishments, which were preparing for the cadet summer training exercises. Total employment in the area was virtually the same as a year earlier.

St. John's (metropolitan) remained in Group 1. Fishing and construction showed the usual employment expansion during the month, but total employment remained at a considerably lower level than last year. Relatively few workers were hired for the St. John's harbour development but there were increased demands for construction workers at northern sites.

New Glasgow (major industrial) was reclassified from Group 1 to Group 2. Unemployment declined sharply in the area as fishing and farming activities were resumed. The Eastern Car Co. plant at Trenton continued operating at a reduced scale.

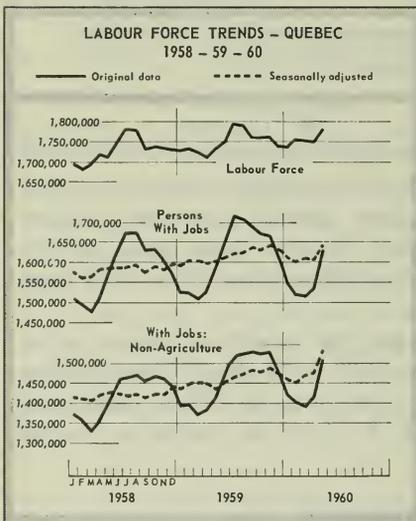

Sydney (major industrial) was reclassified from Group 1 to Group 2. Seasonal industries were almost entirely responsible for the decline in unemployment. The construction industry was more active than last year. At the same time the number of construction workers registered at the NES office at the end of May was about 30 per cent greater than the year before.

Moncton (major industrial) was reclassified from Group 1 to Group 2. The reclassification was mainly the result of seasonal employment expansion in outdoor activities. Unemployment was at virtually the same level as a year earlier.

Charlottetown (major agricultural), **Grand Falls, Summerside, Bridgewater, Kentville, Truro, Yarmouth** and **Fredericton** (minor) were reclassified from Group 1 to Group 2.

QUEBEC

The employment increase in the Quebec region between April and May was greater than usual for the month, the number of persons with jobs rising by an estimated 94,000 to 1,630,000, about 36,000 higher than in May last year. The marked increase during the month followed a relatively slow expansion in early spring. Most of the increase occurred in non-farm outdoor industries, and more than three-quarters of it was among male workers. Activities in forestry, after having reached a seasonal low point in April, turned up sharply during the month, resulting in the rehiring of more than 10,000 loggers for work in the province and in the neighbouring United States logging areas. Mining operations

continued at a higher level than last year, both metal and non-metal mining showing an employment gain.

Total non-agricultural employment was up about 2 per cent in May over the previous year. Increases occurred mainly in service, trade and manufacturing, with off-setting declines concentrated mostly in construction and transportation. Manufacturing employment has shown considerable strength since the beginning of the year. In the first quarter of 1960 manufacturing employment was, on the average, some 2 per cent higher than last year. Although the leather and clothing industries have operated at a lower level than a year before, other sectors of manufacturing, such as transportation equipment, non-ferrous metal products and primary textiles, showed more-than-off-setting gains.

Unemployment declined markedly in all areas during the month, though it was still higher than last year. As a result, eight local labour market areas were reclassified during the month to categories denoting lower unemployment. At the end of May, the area classification was as follows (last year's figures in brackets): in substantial surplus, 15 (12); in moderate surplus, 9 (12).

Local Area Developments

Montreal (metropolitan) was reclassified from Group 1 to Group 2. Registrations at NES offices in May were substantially down from the previous month but remained more than 10 per cent higher than in May 1959. Employment during the first three months of the year was more than 1 per cent higher than in the same period a year ago. Seasonal rehiring took place at some manufacturing plants such as food and beverage, textile, wood products and building material establishments. Industrial and commercial construction was reported to be high for the time of the year; housebuilding activity was at a very low level.

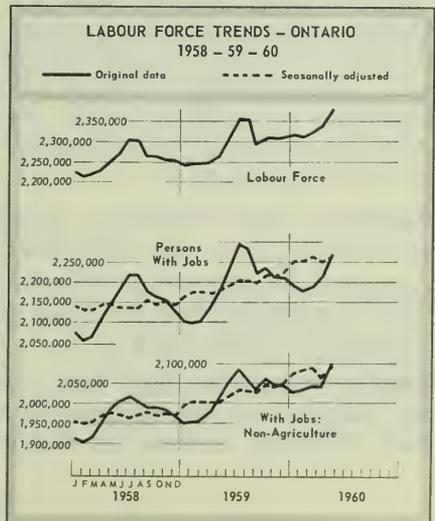

Quebec-Levis (metropolitan) remained in Group 1. Employment rose seasonally in the area during the month, particularly in forestry and waterfront activities. Unemployment remained relatively high, however, mainly because of slackness in construction and trucking.

Other Areas. During the first quarter of the year activities expanded substantially in the *Lac St. Jean* and *Shawinigan* areas: industrial employment was almost 10 per cent higher than in the same period a year ago. In the first area, the difference was mainly due to a marked increase in aluminum production: some 800 workers have been rehired since the beginning of the year. Another factor was a more intensive pulp cut in the area, resulting in higher employment among loggers. Increased production of aluminum was also responsible, in part, for the employment increase in Shawinigan, although chemicals and most other parts of the industrial complex in this area also expanded.

ONTARIO

Employment in the Ontario region increased substantially between April and May after a rather slow advance in the previous month. The employment estimate for May, after allowance for seasonal movement, was moderately higher than the level at the beginning of the year. This advance took place in spite of a slowdown in some parts of manufacturing, notably in the production of steel products, textiles, and household appliances. The main strength has been the automobile industry, where employment has been steadily maintained at a higher level with fewer short-term layoffs than last year.

The employment gain over the year, estimated to be close to 4 per cent, was the highest of any region and accounted for more than two thirds of the year-to-year increase in the country as a whole. Almost all of the increase in the province was in the trade and service industries, and nearly three quarters of the additional workers were women. There was an opposite trend in the goods-producing industry, with employment slightly lower than last year.

The number of persons without jobs and seeking work was estimated to be 111,000, some 29,000 more than a year earlier. Construction workers accounted for a substantial part of the increase, a result of the low level of housebuilding in almost all parts of the region. The labour market classification of the 34 areas of the region was as follows (last year's figures in brackets): in substantial surplus, 4 (2); in moderate surplus, 28 (20); in balance, 2 (12).

Local Area Developments

Hamilton (metropolitan) remained in Group 2. As a result of layoffs in steel, textile, and agricultural implement manufacturing, and a lower level of residential construction, unemployment remained above last year's level. However, the sharp gain in steel production last summer and fall, and the upturn in commercial and industrial construction after the strike settlement in February, has kept employment above last year's level.

Toronto (metropolitan) remained in Group 2, with some improvement over the previous month. The level of employment was about the same as that of the corresponding period in 1959. Manufacturing employment, seasonally adjusted, has been at a stable level this year. In May, there were layoffs in rubber products, and hirings in agricultural implements and iron and steel products. The seasonal increase in construction activity was interrupted by an industrial dispute involving some 1,500 painters.

Windsor (metropolitan) was reclassified from Group 1 to Group 2. Employment remained steady and corresponded closely to the figures for the same month of 1959. Employment in automobile plants remained fairly stable. Hiring in the construction industry was slow, owing to a small number of starts in residential housing. The area still has a shortage of architects, draughtsmen, and mechanical and electrical engineers.

Oshawa (major industrial) remained in Group 2 with some improvement over the previous month. Manufacturing generally remained stable, although there were some short-term layoffs in automobile parts plants. With no large projects underway, construction activity was much slower than in the previous year. Apart from some skilled and professional workers, there was a surplus of labour in most occupations.

Kitchener (major industrial) remained in Group 2. Unemployment was still substantially above last year's level. Construction, clerical and textile workers accounted for more than half of the increase. In most of the manufacturing industries, employment was close to last year's level; except for housing, construction was quite active.

Peterborough (major industrial) remained in Group 1. Activity in manufacturing, construction, and mining was at a low level. In spite of the seasonal improvement, therefore, a substantial surplus of labour continued.

PRAIRIE

A large seasonal employment increase occurred between April and May in the Prairie region. An increase of 49,000 raised the estimated number of job holders to 1,067,000, about 23,000 higher than a year earlier; most of the improvement resulted from a larger-than-seasonal change in agriculture. Cool, wet weather with heavy rains in some areas held back farming operations

somewhat in the first half of the month but by month-end the greater part of the seeding and nearly all of the harvesting of the 1959 crop was complete. A few shortages of skilled farm help were reported. Early crop prospects appeared very favourable, with moisture conditions good to excellent.

Non-farm employment expanded seasonally during May. Logging workers were hired as river drives began in the eastern part of the region and paper mills recalled men for the summer to operate woodyards. Employment in commercial and industrial construction picked up although homebuilding remained weak. Recent figures show total employment in construction to be roughly 5 per cent below last year.

Dry weather in the second half of the month permitted the lifting of road restrictions and the resumption of trucking and oil drilling operations. There was some decline in oil drilling from the May 1959 level: the number of drill rigs in operation dropped more than 20 per cent, partly because of market conditions for crude oil, and partly because of the movement of oil rigs to northern British Columbia, where prospects for discoveries have been considered favourable and where development of recently found oil fields proceeded.

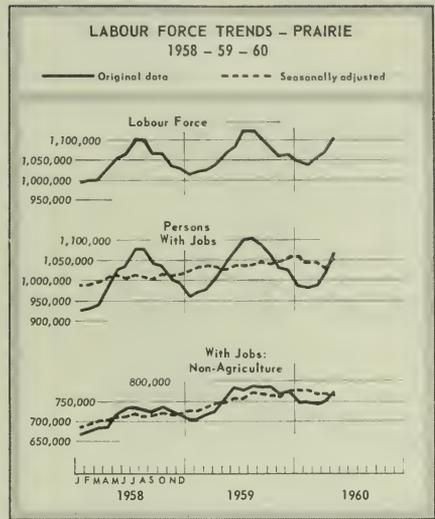

The improvement in over-all employment conditions was most apparent in smaller centres where the agricultural pickup and seasonal hirings by the railways had their greatest effect. Unemployment declined substantially, although it remained higher than a year earlier. Fourteen labour market areas were reclassified to categories denoting decreases in unemployment. At the end of May the classification was as follows (last year's figures in brackets): in substantial surplus, 3 (2); in moderate surplus, 10 (9); in balance, 7 (9).

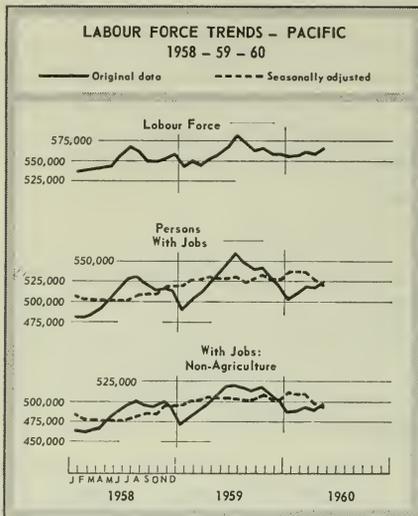

Local Area Developments

Calgary, Edmonton and Winnipeg (metropolitan); **Fort William-Port Arthur** (major industrial); **Prince Albert and Red Deer** (major agricultural); and **Dawson Creek** (minor) were reclassified from Group 1 to Group 2. **Brandon, Moose Jaw, and Regina** (major agricultural); and **Swift Current, Weyburn, Drumheller, and Medicine Hat** (minor) were reclassified from Group 2 to Group 3.

PACIFIC

In the Pacific region employment increased less than seasonally between April and May. The estimated increase of 8,000 brought the total of persons with jobs to 525,000, down 9,000 from a year earlier. This is the only region in which employment was lower than last year. The year-to-year decline was a reflection chiefly of reduced employment in shipyards, residential construction

and related industries. Sash and door makers and sheet metal shops experienced the most marked year-to-year declines.

Little change occurred in agricultural employment; seeding was well advanced at month's end and prospects appeared favourable for fruit, forage, and vegetable crops. In fishing, however, landings by fishermen in the first quarter were down by more than 50 per cent from last year. Whaling and herring fishing were discontinued this spring because of depressed market conditions. The salmon catch is also expected to be well down from last year, and halibut prices show considerable weakness.

The usual seasonal expansion in business and industrial construction was

retarded to some extent by inclement weather. Heavy rains fell in most parts of the region, and some snow in the north. The weather was also blamed for some sluggishness in retail trade and it hampered transportation and logging in areas other than the southern interior and Vancouver Island. In the latter areas, the removal of road restrictions enabled trucking and woods activity to move toward stronger summer levels. A small decline took place in plywood manufacturing, and the demand for lumber was less firm; some reductions in prices were reported. Shipments remained high through May, however, and exports for all of Canada in the first four months of 1960 were up from a year earlier by 4 per cent for lumber and timber, 5.4 per cent for wood pulp, and 10.2 per cent for newsprint paper. Pulpwood production in the first four months of the current year in British Columbia was up 20 per cent from the same period in 1959.

A slight decrease in unemployment occurred during the month, but the total remained considerably above a year earlier. One labour market area was reclassified to a category denoting a decrease in unemployment. At the end of May the classification of the 11 areas in the region was as follows (last year's figures in brackets): in substantial surplus, 3 (2); in moderate surplus, 7 (8); in balance, 1 (1).

Local Area Developments

Vancouver-New Westminster (metropolitan) remained in Group 1. Some layoffs occurred in shipyards during May, and carpenters and other construction workers were in substantially greater surplus than a year earlier. Some reductions also occurred in garment factories on completion of spring and summer lines. The general seasonal increase in economic activity, however, offset these reductions, so that a moderate gain in employment was registered in the metropolitan area; transportation and service industries provided the chief source of employment opportunities during the month.

Cranbrook (minor) was reclassified from Group 1 to Group 2.

Current Labour Statistics

(Latest available statistics at June 15, 1960)

Principal Items	Date	Amount	Percentage Change From

(b) An unusually large number worked less than 35 hours because Easter Monday was in the survey week.

COLLECTIVE BARGAINING REVIEW

ECONOMICS AND RESEARCH BRANCH

Twenty-four collective agreements covering bargaining units of 500 or more workers are due to expire during the three-month period from June to August of this year. Half of these agreements are in the logging and the pulp and paper industries. Under negotiation in May were 118 major agreements; 27 of them were settled, to provide new contracts for a total of 32,200 workers, of whom more than 40 per cent are employed by the 11 pulp and paper companies that signed new agreements in the past month.

During May, there were no work stoppages in the course of negotiations for the major agreements covered by this review. Settlement on the eve of a strike deadline set by the **Retail, Wholesale, and Department Store Union** averted a work stoppage that threatened to affect operations of **Dominion Stores Limited** supermarkets in Toronto, Hamilton, Burlington, St. Catharines, Thorold, Merriton, Niagara Falls, Peterborough, Belleville, and Oshawa.

The 1,700 members affected ratified a new agreement at the end of May that provided a total wage increase of \$7.50 per week over a two-year period, made up of \$4 weekly retroactive to November 1, 1959 and a \$3.50-a-week increase to take effect October 31, 1960. As a result, employees on the company payroll since November 1, 1959 will receive \$160 in retroactive pay, with pro-rated amounts for those hired later. The first pay increase brings the minimum wage for male clerks with one year of service up to \$67.50 weekly, and for female clerks in the same category to \$59.50 weekly. Also included was a three-stage reduction in the work week without loss in pay. The reduction was from 43 to 42 hours on ratification, to 41 hours on November 1, and a final one to 40 hours effective May 1, 1961. The standard Christmas bonus of \$30 was increased to one week's pay for employees with one year of service, while those with only six months service are to receive a half week's pay.

The medical plan agreed upon was equivalent to the PSI Blue Plan. The company will continue to pay the full cost of medical coverage for the employees and, in addition, agreed to pay half the cost of dependent coverage. The vacations clause was altered to provide three weeks paid vacation for all employees with 12 years of continuous service rather than 15 as formerly. Starting in 1961, employees with 20 years service will, for the first time, receive a four-week vacation. There are to be nine paid statutory holidays per year, and double time will be allowed if the employee is required to work on his day off in a week with a statutory holiday.

Towards the end of April, negotiating committees representing **The Federation of Telephone Workers of British Columbia** and **The British Columbia Telephone Company** reached a provisional agreement. By the end of May it was reported that the union's 6,000 members had voted to accept the terms of the proposed two-year agreement, which provided for a 3-per-cent increase effective April 1, 1960, followed by another 3 per cent on December 1, 1960, and a final 2-per-cent increase on August 1, 1961. In addition, the vacation provisions were modified to allow for three weeks vacation after seven years of service instead of after eight years, and four weeks after 25 years instead of after 30 years.

Bargaining, involving plants in six provinces, was in progress between the **Dominion Bridge Company** and the **United Steelworkers of America**. Besides the establishments in Lachine listed below (*see* "Collective Bargaining Scene"), plants affected are located in Amherst, Toronto, Sault Ste. Marie, Ottawa, Winnipeg, Selkirk, Regina, Edmonton, and Calgary. In negotiating the 1959 agreements the union failed to bring about co-ordinated bargaining through a central committee. Negotiations, therefore, were on a plant-by-plant basis, with the final signing deferred until all individual agreements could be completed simultaneously. This year the union again attempted to use a central committee to co-ordinate bargaining in all 11 establishments, but the company maintained that such procedure was contrary to policy and insisted that they deal separately with each local bargaining unit. Collective bargaining at the 11 establishments was at various stages of negotiation by the end of May; some units were at the conciliation stages.

Midway in a two-year agreement between the **Amalgamated Clothing Workers of America** and the **Men's Clothing Manufacturers of Ontario** a wage reopener clause was invoked. The ensuing talks ended in a new agreement that extended the current one for another two years and provided the union members with new wage and fringe benefits. Approximately 3,000 employees of the men's clothing industry in Toronto and Hamilton are to receive a total 12½-cent an hour wage increase during the life of the new agreement, made up of 7½ cents an hour effective July 4, 1960 and an additional 5 cents an hour starting July 3, 1961. The 25 member firms of the association further agreed to add PSI coverage to existing health and welfare benefits.

Approximately 2,000 seamen were affected by conciliation board proceedings in progress during the past few months. The board was set up to deal with a dispute between the **Association of Lake Carriers** representing five Great Lakes shipping companies and the **Seafarers' International Union**. The union asked for a 10-per-cent wage increase, a 40-hour work week, and overtime rates for Saturday and Sunday work. Other demands included the retention of existing welfare benefits, eight statutory paid holidays, payment of transportation costs when joining the ship, safer working conditions, and cash payment of wages.

The SIU maintained that the carriers were able to pay added wages because, with the opening of the St. Lawrence Seaway, they were able to eliminate smaller ships and replace them with larger, more efficient vessels. One ship, therefore, with a reduced crew of 32 seamen could now handle grain from the Lakehead that formerly required six ships and a combined crew of 152 men. It was further contended that additional savings will be possible from the reduced sailing time, from 12 to 9 days, on the Fort William to Montreal route.

The Association of Lake Carriers countered the union demands with an offer of a 10-per-cent wage increase spread over a three-year contract, and two weeks paid vacation after a season of employment. They opposed the shortened work week on the grounds that a 40-hour week on Great Lakes ships was impracticable, and contended that the present agreement already provided ample compensation. This consisted of an additional 2½-days pay over and above the basic pay for seven days work and a guarantee of only operational duties on week-ends. By the end of May, the conciliation board was still deliberating on the submissions made by the parties.

Canada and Dominion Sugar, Montreal, was unable to reach a mutually acceptable agreement with its employees represented by the **Bakery and Confectionery Workers Union**, and a conciliation board was established.

A conciliation officer appointed earlier to assist in the talks suggested that the parties accept a two-year agreement in which an 8-cent-an-hour increase would be given in the first year and 7 cents an hour in the second. In addition, he recommended that another 2 cents an hour be provided as a night shift premium. The company's counter-proposal was a 4-cent-an-hour increase each year in the two-year agreement. Both the company and the union have named their representatives to the conciliation board.

The same union was also negotiating a new contract for the 300 employees of the **St. Lawrence Sugar** refineries. In these talks, too, the parties were unable to reach an early settlement. The union had asked for an hourly increase of 20 cents in a one-year agreement. The company offered a 9-cent-an-hour increase in a two-year agreement; 5 cents an hour during the first year and 4 cents an hour more during the second year. A conciliation board was set up to help the parties reconcile their differences.

SWIFT CANADIAN, SIX PLANTS—PACKINGHOUSE WKRS. (AFL-CIO/CLC): 2-yr. agreement covering 2,800 empl.—general wage increase of 6¢ an hr. eff. April 1, 1960, and a further 6¢-an-hr. increase eff. April 1, 1961; 3 wks. vacation after 12 yrs. service starting in 1961 (previously 3 wks. after 15 yrs.); 1 additional paid holiday.

TORONTO ELECTRIC COMMISSIONERS, TORONTO, ONT.—PUBLIC SERVICE EMPL. (CLC): 2-yr. agreement covering 800 empl.—general wage increase of 4% retroactive to Feb. 1, 1960, plus an additional 4% increase eff. Feb. 1, 1961.

NOTES OF CURRENT INTEREST

Ninth Meeting, National Advisory Committee on Rehabilitation

After rehabilitation, a group of handicapped Canadians last year earned approximately \$8,500,000. Had they not been returned to the labour force their upkeep would have cost the Canadian public an estimated \$3,500,000.

The figures were based on a sample survey covering 4,689 disabled persons with 3,410 dependents, and were disclosed at the ninth meeting of the National Advisory Committee on the Rehabilitation of Disabled Persons, held in Ottawa in May.

The meeting was held under the chairmanship of Brigadier James L. Melville, who was recently appointed Chairman of the Committee. He succeeds Dr. G. Fred McNally, former Chancellor of the University of Alberta, who has retired after serving as Chairman since the Committee's inception in 1952.

Brigadier Melville told the Committee that "rehabilitation and employment must go hand in hand and we must impress on every citizen of Canada that it is the ability of a handicapped person that counts, not his disability."

In his report to the Committee, Ian Campbell, National Co-ordinator of Civilian Rehabilitation, said that the past year provided evidence that the experimental period through which the rehabilitation program has passed has resulted in the establishment, in all parts of the country, of better means of reaching the disabled with the constructive forces of rehabilitation.

Since the program began, Mr. Campbell said, Canada has seen established rehabilitation offices in each of the provinces, growth in facilities for medical rehabilitation in hospitals, and "a significant increase in the number of professional personnel engaged in the medical side of this program."

The Committee heard that at least 15 new rehabilitation centres had come into being, at least 11 new centres for sheltered employment had been established, the number of disabled persons receiving formal or on-the-job training had increased considerably, placement efforts of the National Employment Service have been extended, and efforts to co-ordinate the work being done by both voluntary and governmental agencies strengthened.

In the past 12 months, special placements officers of the National Employment Service had found employment for 17,940 handicapped persons, 3,000 more than in the previous year, it was reported by A. G. Wilson of the NES.

The Committee also heard a preliminary report from Frank S. Hatcher, Department of Labour, on a survey made of sheltered workshops in Canada. These provide employment for handicapped persons who are not ready to enter the regular competitive employment market.

Some members of the Committee expressed concern over the fact that many persons with physical handicaps are not known to rehabilitation authorities and consequently are not getting the services they need.

Referring to the rehabilitation program as a whole, Arthur H. Brown, Deputy Minister of Labour, said, "we have a good vehicle for rehabilitation in this country, but we need to generate more horsepower in this vehicle so that we can move ahead at a faster rate." He urged the Committee to examine seriously the operation and scope of the rehabilitation program.

"Looking back over past progress," Hon. Michael Starr, Minister of Labour, told the Committee, "it is quite obvious that facilities to deal with the problems of the disabled have expanded; greater interest has been developed in rehabilitation; co-operation between governments and voluntary agencies has increased; thousands of disabled persons have been assisted to stand on their own feet and take their rightful place as productive citizens.

"The contribution to their happiness has been great and the savings to the public purse considerable. And not only that. A productivity has been developed in these people that has benefited them and the whole of Canada as well . . ."

Speaking on the provision of medical grants for rehabilitation, Dr. E. A. Watkinson of the Department of National Health and Welfare told the Committee that this year more than \$2,600,000 is available to the provinces through the Medical Rehabilitation Grant for the extension and development of their rehabilitation programs.

30th Meeting, Vocational Training Advisory Council

Full employment in Canada requires, among other things, a work force that is adequately equipped to perform available jobs. Hon. Michael Starr, Minister of Labour, told delegates to the 30th meeting of the Vocational Training Advisory Council, held in Ottawa on May 19 and 20.

Chairman of the meeting was Dr. G. Fred McNally, Edmonton, Alta.

Mr. Starr told the meeting that one of the many problems facing Canadians as they enter the 1960's is the realistic relating of vocational education and training programs to the social, economic and industrial situations that currently prevail.

He noted that unemployment, whether due to seasonal, cyclical or technological reasons, has no easy or ready-made solution, but that adequate education and training is regarded as one of the means to cushion its heavy burden on Canadian society.

"A well-balanced program," said Mr. Starr, "to provide the potential industrial workers, the service and commercial workers and the professional and technical personnel in proportion to the needs of our economy and the needs of our young people, is required . . ."

Mr. Starr stressed the importance of keeping young people in school until they have the required background to undertake further training or employment as their capacity dictates. He added:

"Full employment also places a demand on shorter range programs to retrain, upgrade, refresh, or rehabilitate those who for one reason or another require such training to adjust to changing conditions of employment, age, or physical condition.

"The Vocational Training Advisory Council has been instrumental and helpful in establishing training programs for the unemployed, for the physically handicapped, for apprentices, trade and technical training programs, and programs at the high school level.

"We have set up a research program on the training of skilled manpower for industry which is giving us a picture of what is needed.

"We have undertaken an extensive 'Stay in School' campaign to try to point out the advantages of a high school education for all of our young people.

"And yet many of our young people are dropping out of school or graduating with less than sufficient education and training to get and hold job opportunities that are available.

"Many young people have been unable to find training facilities which they so badly need.

"People are unemployed because they are unable to get the training necessary to take available jobs.

"Our relations with industry on the kind and amount of training needed are not as good as they might be.

"Co-ordination of school and on-the-job training might be improved to make our efforts more effective and efficient.

"It seems that all of these things are related directly or indirectly to the great problem of unemployment which in the past year or two has reached well beyond the limits that any of us would want to see.

"A great responsibility rests on all of us to look at our vocational training program in the light of present conditions, and especially for Council to recommend studies and measures that will realistically meet the needs of our present conditions, as they relate both to the requirements of Canadian industry and to the extension of training facilities and programs to provide training designed to widen the opportunities for employment of unskilled workers and for those workers who have been displaced by reason of technological changes in industry."

Delegates to the meeting, representing government, industry and labour, expressed themselves as fully in accord with the Minister's contention that education of the adequate kind at the adequate time would go far toward eliminating unemployment from the Canadian scene.

The meeting discussed ways of increasing training opportunities for the unemployed, the desirability of setting nation-wide standards for courses in institutes of technology, and techniques to promote and encourage vocational training in agriculture.

During the year ended March 31, more than 4,600 unemployed persons were trained under Schedule "M" of the Special Vocational Training Projects Agreement, but the Council agreed that expansion of this training was necessary.

Some effort should be made to guarantee that a graduate of an institute of technology in any province is acceptable in all others, the Council declared.

A standing committee was appointed to investigate what might be done to meet the vocational training needs in agriculture.

The report of the Department's Vocational Training Branch showed that the number of apprentices under the federal-provincial agreements was 19,962 at March 31, an increase of 1,395 over the previous year.

Minister of Labour in N.B., Hon. A.E. Skaling Dies at 68

Hon. Arthur E. Skaling, prominent in the Canadian trade union movement for more than 30 years, and from October 8, 1952 New Brunswick Minister of Labour, died in Lancaster, N.B., May 24, at the age of 68 years.

Hon. C. B. Sherwood, Minister of Agriculture, was appointed Acting Minister of Labour, effective June 1.

During his career, Mr. Skaling served as President of the Saint John Trades and Labour Council for 22 years; President for a period of the New Brunswick Federation of Labour, of which he was a member for 24 years; President for a time of the Bricklayers, Masons and Plasterers' International Union of America, Local No. 1, which he joined shortly after moving to Saint John in 1930.

In 1955, Mr. Skaling was a member of the Canadian delegation to the 38th International Labour Conference at Geneva.

He was a member of the Saint John Common Council from 1940 to 1944 and a member of the Executive of Mayors and Municipalities of Canada in 1944.

Four International Unions Name New Men to President's Post

New presidents have been named by four international unions.

Kenneth J. Brown, a Canadian, has been confirmed as President of the Amalgamated Lithographers of America. He succeeds F. P. Slater, to whom he had been serving as administrative assistant.

John J. Murphy, Secretary of the Bricklayers, Masons and Plasterers' International Union since 1948, has succeeded Harry C. Bates, President since 1935, who retired last month.

David Sullivan, President of the Union's largest local, has succeeded William L. McFetridge as President of the Building Service Employees' International Union. Mr. McFetridge, a Vice-President of the AFL-CIO, was President of the Union for 20 years.

Roy E. Davidson, First Assistant Grand Chief Engineer of the Brotherhood of Locomotive Engineers for seven years, on July 31 will become Grand Chief Engineer, succeeding Guy L. Brown, who last month announced his intention to retire on that date.

The new President of the Lithographers had served five years as President of the Toronto local and was the Canadian member on the union's international council. He

is a son of Arthur W. Brown, Vice-President in Canada of the Lithographers.

Harry C. Bates

Although he has stepped down as President of the Bricklayers, Harry C. Bates will continue to serve as a Vice-President of the AFL-CIO. He assumes the title of President Emeritus of the Union.

Mr. Bates first joined the Bricklayers in 1900. He was elected president of a local in 1910, and was later a special representative of the international union. In 1920 he was elected ninth Vice-President, and in 1924 he became Treasurer. He was elected First Vice-President in 1928.

At the 1933 convention of the AFL in San Francisco he was elected Vice-President of the Federation.

Mr. Bates has been succeeded by John Murphy, Secretary of the union since 1948, and before that Director of Organization for the AFL. He first joined the Bricklayers in 1926.

William L. McFetridge

William L. McFetridge entered the labour movement in 1923, when he joined the Chicago Flat Janitors Union. He became president of the local 14 years later, and continued to hold that position while serving as International President of the BSEIU.

He will continue to serve as AFL-CIO vice-president and as a member of the Federation's Executive Council.

Guy L. Brown

Guy L. Brown, Grand Chief Engineer of the Brotherhood of Locomotive Engineers since 1953, started work as a locomotive fireman on the Chicago & North Western Railway in 1909. He was promoted to engineer in 1914, but continued to work mainly as a fireman, and was a local officer of the Brotherhood of Firemen and Engineers for many years.

He became a local chairman of the Brotherhood of Locomotive Engineers in 1939, and was elected general chairman for the engineers on the C & NW in 1945. At the 1947 BLE convention he was elected an Alternate Assistant Grand Chief Engineer, and he became an Assistant Grand Chief Engineer by succession in 1949. He assumed the top post in the union just before the 1953 convention on the death of James P. Shields, the Grand Chief Engineer; and was elected in his own right at the convention.

Determination to support a continuing program of publicity to persuade students to remain in school and get enough education to allow them to adequately meet the demands of employers was voiced at the 74th meeting of Canada's National Employment Committee.

Re-Organizing Head Office UIC Creates Two New Posts

The appointments of M. D. Fidler as Director of Technical Services and of T. G. Morry as Director of Personnel and Administrative Services in the Unemployment Insurance Commission were announced at the end of May. Both men qualified for the newly created senior posts in interdepartmental competitions held in connection with re-organization of a number of the Commission's head office branches.

Mr. Fidler was born in Calgary, where he played football for the Stampeders and won national titles in short-distance swimming. After 15 years in public auditing and accounting in Calgary, he became, in 1941, a district treasury officer for the Commission. In 1942, he was promoted to Assistant Chief Treasury Officer of the Commission in Ottawa, and in 1947 became Director of Organization and Personnel in the Office of the Comptroller of the Treasury, Department of Finance. In 1959 he was appointed Director of Administration with the Comptroller of the Treasury.

Mr. Morry left the employ of the Newfoundland Government in 1949 to join the Commission as district auditor for the province. He came to Ottawa in 1953 as a standards and methods officer, and in 1955 was promoted to re-organize the enforcement operations of the Commission, later becoming Director of Enforcement until his appointment as Director of Personnel in May 1958.

He was born at Ferryland on the Avalon Peninsula, Newfoundland, and was educated in Newfoundland and at Pittsburgh, Pa. He worked in the United States for some years before returning to St. John's to enter the government service.

Disabled Persons Allowances, Old Age Assistance on Rise

The number of blind persons in Canada receiving allowances under the Blind Persons Act decreased from 8,688 at December 31, 1959 to 8,671 at March 31, 1960.

The federal Government's contributions under the federal-provincial scheme totalled \$1,044,012.18 for the quarter ended March 31, compared with \$1,052,019.43 in the preceding quarter. Since the inception of the Act, the federal Government has contributed \$27,393,995.21.

Federal expenditure for the fiscal year 1959-60 amounted to \$4,198,167.36, a decrease of \$36,964.12 from the \$4,235,131.48 in 1958-59.

At March 31, the average monthly allowance in the provinces ranged from \$50.27 to \$54.15. In all provinces the maximum allowance paid was \$55 a month.

Old Age Assistance—The number of persons receiving old age assistance in Canada increased from 98,495 at December 31, 1959 to 98,773 at the end of March 1960.

The federal Government's contributions under the federal-provincial scheme totalled \$7,630,321.96 for the quarter ended March 31, compared with \$7,604,015.19 in the preceding quarter. Since the inception of the Act, the federal Government has contributed \$189,396,548.06, an increase of \$140,263.70 over the expenditure of \$30,207,284.36 in 1958-59.

The average monthly assistance in the provinces ranged from \$48.79 to \$53.15 except for one province where the average was \$45.69. In all provinces the maximum assistance paid was \$55 a month.

Disabled Persons Allowances—The number of persons in Canada receiving allowances under the Disabled Persons Act increased from 49,446 at December 31, 1959 to 49,889 at the end of March 1960.

The federal Government's contributions under the federal-provincial scheme totalled \$4,079,489.78 for the quarter ended March 31, compared with \$4,024,492.06 in the preceding quarter. Since the inception of the Act, the federal Government has contributed \$55,724,790.70.

Federal expenditure for the fiscal year 1959-60 amounted to \$16,050,960.22, an increase of \$720,592.06 over the \$15,330,368.16 in 1958-59.

At March 31, the average monthly allowance in the provinces ranged from \$52.67 to \$54.56. In all provinces the maximum allowance paid was \$55 a month.

BLFE Will Conduct Referendum On Setting Up Canadian Division

A referendum on the question of establishing a Canadian division of the Brotherhood of Locomotive Firemen and Engineers (AFL-CIO-CLC) will be held among Canadian firemen, H. E. Gilbert, President of the Brotherhood, announced last month.

As a result, 32 of the 44 Canadian lodges that had been withholding dues from the grand lodge since April 1 have consented to release the money.

In connection with the referendum, Mr. Gilbert pointed out that he has no power to allow establishment of a Canadian division. Such action must be taken by a convention. The next convention of the Brotherhood is scheduled for 1963.

Gérard Picard Now President Of CCCL Printers' Federation

Gérard Picard, former President of the Canadian and Catholic Confederation of Labour, has been elected President by acclamation of the Federation of Printing Trades of Canada Registered (CCCL). He succeeds Roland Thibodeau, who becomes secretary.

At the organization's convention, held last month in St. Johns, Que., it was announced that the Federation will change its name to the Canadian Federation of the Printing Trades and Information.

Following his term as President of the CCCL, Mr. Picard was for one year President of the National Metal Trades Federation (CCCL).

Amendments to Labour Act Made by Alberta Legislature

Prohibition of, or checks on certain kinds of picketing are provided by amendments to the Alberta Labour Act, which received Royal Assent early in April. The amendments also withdraw or limit the right to strike in certain cases.

One of the amendments provides that a trade union shall not be certified by the Board of Industrial Relations, if, in the opinion of the Board, "application for membership or membership in the trade union directly resulted from picketing of the place of business of the employer at which the employees affected are employed, or elsewhere."

It further provides that where an employer has recognized a trade union and has entered into an agreement as a result of picketing, the agreement will not be deemed to be an agreement under the Act.

Picketing in support of an illegal strike is made an offence under another amendment.

The Lieutenant-Governor in Council is given authority under one of the amendments, in cases where "life or property would be in serious jeopardy by reason of" stoppages or impending stoppages of work affecting the supplying of water, heat, electricity or gas to the public or any part of the public, or a stoppage or impending stoppage of hospital services; to declare by proclamation that normal procedures in the dispute are to be replaced by emergency procedures. After the date fixed in the proclamation, any such stoppage becomes an offence under the Act. The Minister is then empowered to provide machinery to help the parties to reach a settlement.

Another new provision of the Act makes it an unfair labour practice for an em-

ployee to refuse to perform work for his employer "for the reason that other work will be or has been performed by any class of persons being or not being members of a trade union or other organization." For a trade union representative to authorize, or to consent to encourage, an employee's refusal to work under these circumstances is also an unfair labour practice.

It was previously an offence under the Act to threaten an employee with dismissal or in any other way, or to cause loss of employment, in order to prevent an employee from exercising trade union activities. One of the new amendments makes it an offence to threaten or injure an employee in such a way in order to prevent him from joining a trade union. Another amendment prohibits an employee or a trade union representative from using threats or coercion in order to encourage or discourage trade union activity. The scope of this provision is extended to cover any person.

A proposal to amend the Judicature Act by eliminating the use of *ex parte* injunctions in labour disputes was removed from the bill in committee of the whole House.

Conversion to Diesels Completed On Canadian National Railways

Diesel locomotives now do all the hauling on the Canadian National Railways. The last steam locomotive to operate on the 25,000-mile system arrived at Winnipeg from The Pas, Man., on April 25, it was announced on May 31.

There now are 2,144 diesel locomotives and 28 self-propelled diesel cars operating across the system.

Building of diesel repair and maintenance shops has kept pace with the CNR's conversion program. Major shops for complete overhaul are located at Moncton, Montreal and Winnipeg. Road switchers are overhauled every four or five years, road freight locomotives every 360,000 miles and road passenger locomotives every 700,000.

Prince Edward Island was the first province to be entirely served by diesels. The entire Atlantic region, with headquarters in Moncton, was converted by 1957. It was the first region in the system to lose steam power.

The Central region became fully converted last year, when the region's last steam locomotive left Montreal on April 17, 1959. The Western region was fully converted to diesel power this year.

The Canadian Pacific Railway expects to complete its conversion to diesel equipment by early next year.

Office Mechanization Hasn't Yet Made Inroads into Employment

Mechanization in offices may be increasing, but so far it has made few inroads into employment, delegates attending the 41st conference of the National Office Management Association in Montreal last month were told.

In the opinion of one speaker, the demand for office workers in the United States

alone will increase by 35 per cent by the end of the present decade.

Another speaker told the delegates that electronic computers can do a certain amount of prognosticating "but their accuracy is no better than the information fed to them" by human beings. He could not forecast when the automatic office will arrive, but urged his listeners: "Don't hold your breath until it gets here."

HOUSE OF COMMONS DEBATES

A Guide to Items of Labour Interest in Hansard

(page numbers refer to Hansard)

April 26—*The Proposed changes in regulations* relating to the payment of old age assistance, disability allowances and blind persons allowances, tentatively agreed to at a meeting last September 28 and 29, have been circulated in draft form to the provinces, who must indicate their official concurrence before further steps can be taken, the Minister of National Health and Welfare replies to a question (p. 3274).

Work on CNR passenger cars will not be done at London shops after the end of July, but work on medium and heavy repairs to freight cars, work equipment and miscellaneous equipment, employing upwards of 300 men, will not be affected. Those employed in the passenger car workshop will have an opportunity to transfer to other assignments, the Minister of Transport replies to a question (p. 3316).

April 27—*A \$15,000,000 Colombo Plan contribution to Pakistan is announced by the Minister of External Affairs. The funds will be used for Canadian commodities and equipment to help in Pakistan's economic development program (p. 3317).*

Apartheid in South Africa is discussed. The House was debating a motion to adjourn for the purpose of discussing a definite matter of urgent public interest (p. 3319).

April 28—*Immigration Service advertisements in Great Britain carry lists of occupations in which there are vacancies in Canada. "There are always a few openings at various places in Canada," the Minister of Citizenship and Immigration says in answer to a question (p. 3347).*

Progress reported on second reading of Bill C-57, to amend the Trans-Canada Highway Act (p. 3349).

May 2—*Federal aid to Atlantic Provinces discussed in debate on motion that the*

House go into committee of supply (p. 3551). Hon. J. W. Pickersgill (Bonavista-Twillingate) moves an amendment urging consideration of four proposed components of a "comprehensive and planned program of federal assistance" (p. 3461). Erhart Regier (Burnaby-Coquitlam) moves an amendment to the amendment to add a fifth proposal (p. 3464).

May 3—*Federal aid to Atlantic Provinces again debated (p. 3498). Amendment to the amendment is defeated, 211 to 8 (p. 3522); the amendment, by 166 to 51 (p. 3523).*

"Drastic fall-off in housing starts" is subject of grievance by J. R. Garland (Nipissing) (p. 3524). The Minister of Public Works predicts a total of 123,000 housing starts this year, slightly lower than his earlier prediction of 125,000 (p. 3533).

May 4—*Loans aggregating \$19 million were made to the Unemployment Insurance Fund by government agencies between April 19 and April 29, the Minister of Finance informs the House (p. 3540).*

Policy of allowing farmers' sons from European countries to accept employment on Canadian farms for the farming season is not a new policy, the Minister of Citizenship and Immigration informs a questioner. This is the third year young farmers have come from Holland, the first from Belgium (p. 3545).

May 6—*Committee has been appointed to consult with representatives of the Ontario Government, mining companies and the community of Elliot Lake, and has been empowered to examine the possibility and feasibility of any projects under federal jurisdiction that might be considered for location in the Elliot Lake area, the Minister of Trade and Commerce announces in reply to a question (p. 3632).*

May 9—*There have been continual instances of fraud in connection with claims for unemployment insurance benefits practically throughout the existence of the Unemployment Insurance Act, the Minister of Labour says in answer to Hon. Lionel Chevrier (Laurier), who asked the Minister to comment on the remarks of his Parliamentary Secretary (p. 3682). (The Parliamentary Secretary's address is summarized on page 582 of this issue.)*

Introduction of a bill that will provide for deferring of income tax on certain profit-sharing plans is approved. The measure proposes to amend the Income Tax Act to make provisions under which amounts allocated under a profit-sharing plan shall not be included in taxable income until actually received (p. 3719).

May 11—*Advertisements have been placed in the British Isles by the Department of Citizenship and Immigration inviting immigrants to Canada and outlining employment opportunities in the construction industry, the Minister of Citizenship and Immigration replies to a question (p. 3773).*

In setting up a committee to explore the possibilities of maintaining and extending a high level of employment, the Senate acted on its own initiative, the Minister of Labour replies to a question (p. 3780).

May 12—*Committee dealing with Elliot Lake will also deal with Bancroft and Uranium City, "because these areas deserve the same consideration as Elliot Lake," the Minister of Trade and Commerce replies to a question (p. 3809).*

Housing loans by approved lenders during the first four months of 1960 totalled 4,023 compared with 5,737 in the same period of 1959, the Minister of Public Works says in reply to a question. But in the week ended May 6, there were 668 loans compared with 576 in the same week last year (p. 3811).

May 13—*Motion to adjourn to discuss "the imminent termination of unemployment insurance seasonal benefits to approximately 200,000 unemployed persons" was not accepted by the Speaker (p. 3853).*

There were 1,979 prosecutions completed by the Unemployment Insurance Commission in connection with unemployment insurance frauds during the fiscal year ended March 31, 1960, and \$2,008,165.65 recovered from claimants not entitled to benefits, the Minister of Labour replies to a question (p. 3895).

May 16—*Report on Commonwealth Prime Ministers' conference given by Rt.*

Hon. John G. Diefenbaker (p. 2898). He said he hoped the South African Government would heed "and heed quickly the appeal that was made to it" concerning its racial policies.

Bill C-57, to amend the Trans-Canada Highway Act to extend the period of federal payments and to increase the maximum expenditures, read the third time and passed (p. 3928).

Bill C-61, to amend the Railway Act to permit grants to be made from the grade crossing fund for a further period of three years beyond January 31, 1961, introduced and read the first time (p. 3942).

May 17—*Bill C-61, to amend the Railway Act, read the second time, considered in committee, reported, read the third time and passed (p. 3955).*

May 18—*Figures on housing starts and completions in the first four months of 1960 given by the Minister of Public Works (p. 4003).*

May 19—*Bill C-63, to amend the Old Age Security Act to permit the payment of pensions to pensioners who leave Canada, given first reading (p. 4055).*

May 20—*Approved lenders are now coming into the housing loan market, the Minister of Public Works says in reply to a question about a change in the \$5,000 limit on incomes of applicants for loans. Applications amounting to \$50 million have already been received (p. 4077).*

Provincial payments to hospitals during 1959 totalled \$300,938,192.97, the Minister of National Health and Welfare replies to a question. Federal advance payments under the Hospital Insurance and Diagnostic Services Act were based on the provincial payments (p. 4122).

May 23—*National advisory board on economic development and automation called for in non-confidence motion. The board should have representatives of government, industry, labour, agriculture and the universities, the motion said (p. 4128). The Minister of Labour says setting up of such a committee would be "setting up a Cabinet outside of the Cabinet" (p. 4163).*

May 24—*Debate continues on the motion to set up a national advisory board on economic development and automation (p. 4178). The motion is defeated, 136 to 43 (p. 4204).*

Provision for earlier vesting in industrial pension plans would be made by the Government through the Income Tax Act, says W. H. McMillan (Welland) in bringing up a grievance that "for the most part there are no vesting rights in industrial pension schemes in vogue in our country" (p. 4205).

Third Constitutional Convention of the Canadian Labour Congress

Almost unanimous approval given to proposed formation of new political party. SIU and Teamsters expelled for raiding other CLC affiliates. Congress calls for higher wages, all-inclusive social security system; raises per capita tax

Almost unanimous approval of the proposed formation of a new political party in Canada was given by the 3rd Constitutional Convention of the Canadian Labour Congress, held in Montreal April 25 to 29, thus carrying one step further the project begun at the 1958 convention in Winnipeg (L.G. 1958, p. 586). Accredited delegates numbered 1,726.

The Congress made clear its determination to enforce its constitutional prohibition against jurisdictional warfare between member unions by expelling two unions that had been found guilty of raiding other CLC affiliates. The Seafarers' International Union was expelled forthwith; the International Brotherhood of Teamsters was given 30 days in which to agree to conform to the constitution.*

(The latest edition of the Department's directory of labour organizations, *Labour Organization in Canada*, lists the Teamsters' Canadian membership as 37,943, and the Seafarers' as 15,700.)

Of the 475 resolutions submitted to the convention, not much more than a third were dealt with, the remainder being left for the incoming executive when the convention adjourned. Because of lack of time, the reports of three of the thirteen convention committees were not brought before the delegates.

In a statement on economic policy adopted by the convention, the CLC called for an increase in Canadians' buying power in order to provide and maintain full employment. The statement enumerated nine steps that could be taken to increase buying power, the first of which was to "press for higher wages."

A new, all-inclusive social security program gained overwhelming support of the delegates. The convention asked for a government inquiry into the price of drugs, and recommended a system of free education for all, including university education.

The delegates showed their disapproval of racial discrimination by passing a strongly worded resolution condemning the South African Government's policy of *apartheid*. They reinforced this by under-

taking to give full support to a boycott of South African goods, arranged to start on May 1.

Constitutional amendments passed at the convention increased the per capita tax of affiliated organizations and directly chartered unions. Other amendments increased the salaries of the four principal officers of the Congress.

But the delegates resisted all attempts to amend the constitution to remove the clause prohibiting affiliation of any union controlled or dominated by Communists or other totalitarians.

An amended resolution that was adopted after delegates had refused to accept a recommendation to reject the original urged all unions to make it a policy not to cross picket lines. But the convention rejected a resolution calling for the setting up of a central strike fund.

All four executive officers—President Claude Jodoin, Secretary-Treasurer Donald MacDonald, and Executive Vice-Presidents Stanley Knowles and William Dodge—were re-elected by acclamation.

Guest speakers included Hon. Michael Starr, Minister of Labour; Hon. Antonio Barrette, Premier and Minister of Labour of Quebec; and four fraternal delegates, two from the Trades Union Congress, one from the AFL-CIO and one from the International Confederation of Free Trade Unions.

Senator Sarto Fournier, Mayor of Montreal, welcomed the delegates to the city.

Claude Jodoin

A strong appeal for support of a new left-wing political reform party was made by President Claude Jodoin in his address at the opening of the convention.

While asserting that the CLC will remain first of all a trade union organization, he affirmed strongly the right of unions "to undertake political activities and to try to elect a government of their liking."

So that there should be no doubt of his own stand in this matter, he added that he was "wholeheartedly in support" of the resolution proposed by the Executive Council to form a new political party and that he hoped "it will have the kind of resounding support that will leave no doubt as to where we as a labour movement stand."

*Expulsion of the Teamsters was made effective June 1 by the CLC Executive Council after the union failed to send a representative to meet with the Council.

In his 5,000-word address, read alternately in English and in French, the President discussed varied matters such as unemployment, inflation, labour legislation, education, world peace, defence spending, international affairs, automation and the South African situation.

Mr. Jodoin first spoke of "the waste and tragedy" of unemployment during the past winter and expressed the fear that it would become "year-round unemployment".

He again suggested the calling by the federal Government of a conference at which all levels of government—federal, provincial and municipal—would meet with the representatives of management and labour so that an intensified attack could be launched against unemployment.

"We have just entered a new decade," he said, "and we are on the threshold of great new economic developments with national boundaries giving way to international market areas. In such a world, with all its implications, there is simply no room for the gross inefficiencies that are reflected in large numbers of workers out of jobs."

Mr. Jodoin recalled that, since the last convention, the labour movement has "been made the target for the most vicious type of attack.

"We reject these accusations and slanders," he said. "If Canadians enjoy higher living standards today than they did a year ago, if there is growing concern about the rights of individuals in a free society, if there is more leisure for all of us, it is because organized labour has been a vital factor in the life of Canada."

Much more needs to be done, said Mr. Jodoin. "We have a very real need for a comprehensive medical plan that will give protection and service to all Canadians in time of illness; we need a national pension plan that will provide a reasonable standard of living for our older citizens."

Mr. Jodoin called upon the membership to "face up to the realities and obligations of life in a political democracy." He denied that "direct participation in political issues through a particular party is something foreign to the labour movement. In one way or another, labour movements over a great many years in this and other countries have taken an active part in politics," he said.

He was warmly applauded when he added:

And so I say to you today that for the unions that make up this Congress to associate themselves freely with the party of their choice is consistent with the role that unions, as a social force working for the betterment of all mankind, have to play. I would go further and say that not only have unions a right to undertake political activities and to try to elect a

government of their liking; but they have a responsibility to help provide the people of their country with an opportunity to exercise a meaningful choice as to their representation in Parliament and the legislatures and municipal councils.

The President reaffirmed that the CLC should not itself become an appendage of any political party. He explained: "As in the case of the British TUC and labour organizations in other countries, so we will, most certainly, remain first of all a trade union organization. We shall retain our rights as trade unionists regardless of what party happens to be in power."

Turning to education, Mr. Jodoin stated that the labour movement is concerned about the educational needs of the children of our country and about education as a continuing experience.

And, he asserted, although the historical rights of the provinces must be preserved, "this does not diminish for a moment the obligation of the federal Government to use its resources toward eliminating the imbalance that exists between the children of one province and another in terms of their educational resources."

The President of the CLC declared that the preservation of world peace and justice is the most important problem of our time. He saw in mutual and simultaneous disarmament the best defence against war.

Mr. Jodoin stated that "we do not need atomic warheads in Canada and we cannot effectively maintain them." He also called for a reduced defence budget, claiming that the money thus saved "could be used at home or for increased aid to the economically under-developed countries abroad."

Mr. Jodoin referred to the position taken by the CLC in regard to South Africa.

The apartheid policy of South Africa is an example of the blind obstinacy of a white minority trying to impose a system of slavery on the overwhelming majority of the native population. We spoke with some emphasis of the South African situation when we met the Government earlier this year, and it was obvious that these remarks caused the Prime Minister some annoyance. We have no apology to make for the stand we have taken on behalf of the people in South Africa who have been the victims of the most inhuman treatment.

He also pledged continued support to the International Confederation of Free Trade Unions, stating that the CLC plans to increase its contributions to the International Solidarity Fund and that it "shall not hesitate to make real sacrifice to the cause of trade union solidarity."

The President reported that the CLC has not yet been able to reach agreement with the Canadian and Catholic Confederation of Labour on a unity formula acceptable to the Congress.

The Minister of Labour

Techniques in dealing with men and women must keep pace with the techniques of industry itself, suggested the Minister of Labour in a 2,000-word address to the convention.

The Honourable Michael Starr called for a whole new approach to the problem of labour-management relations, one that will mean closer working arrangements between labour and management.

"I would advocate an open-minded approach in labour-management relations," he said. "In such matters as portable pensions, mobility of labour within industries and within plants, automation, and other matters of contention, a 'new look' may be required in labour-management relations."

Mr. Starr warned that "the human element in labour can be ignored only with peril."

"In the Government," said the Minister, "there is deep concern that those who are displaced by technological advances in industry should be retrained in order that they may once again take their places in the assembly line of progress.

"This is the age of the skilled worker," declared Mr. Starr. "We must increase the level of training skills in order to keep up employment and to keep high productivity at manageable cost."

Stating that in Canada it should not be necessary to import technicians, he listed among the measures now being studied in this field: stepped-up apprenticeship training, improved technical schools, closer ties between the schools and the plants.

Mr. Starr recalled that in its last submission to the Government, the CLC referred to attacks being made on labour. He believed that labour and management have a tremendous responsibility to seek out and explore those areas of mutual interest that are beneficial to both rather than those that divide.

The rights of both management and labour are preserved in our federal legislation, he said. "As long as I am Minister of Labour, those rights will neither be infringed nor abridged," he pledged.

At the same time, he stated that labour-management problems are best solved through mutual arrangements and on a voluntary basis "rather than through legalistic coercion."

He praised the Canadian labour movement for having "done a good job of keeping its house in order."

The Minister deplored the fact that "in the midst of our economic expansion, with the highest employment on record, there is unemployment."

—Portugal & Ayers, Winnipeg

The Minister of Labour

He drew applause from the delegates when, after having mentioned the different kinds of unemployment as listed by the economists, he said: "I do not think that a person who is out of work is too concerned about what type of unemployment he is suffering from. He just wants a job."

Mr. Starr stated that the type of unemployment that flows from the very complexity of our industrial organization can and must be tackled by labour, by management and by government.

"In the field of technical change, our industrial operation must never be allowed to become so big, so aloof, so indifferent, as to lose sight of the individual and his needs," he warned.

He added that since we are not fully aware of all the effects and side effects of automation, increased productivity through technological changes does not justify an abrupt or all-out implementation of automation.

Mr. Starr registered his concern for the individual over the age of 40 who is unable to obtain a decent job. He referred to his campaign among employers on this subject, saying that the response has been gratifying.

"I have received indications from many employers that they have already modified their attitude or are prepared to modify their policies in this matter," he said.

Mr. Starr added that he is determined to carry on his campaign for the employ-

ment of older workers "until the situation is rectified to quite an extent."

Mr. Starr referred to the fact that the Unemployment Insurance Commission and the Training Branch of the Department of Labour, in co-operation with provisional departments, made it possible, last year, for 6,000 unemployed persons to follow some 800 courses approved by the Commission and at the same time receive benefits.

The Minister also referred to the changes to Unemployment Insurance Regulations 172 and 173 so that severance pay, bonuses and gratuities are no longer considered as earnings, and that holiday pay will be so considered only under certain circumstances. "In other words," he pointed out, "the whole situation reverts back to what it was."

He said that the representations of the CLC in this matter received careful consideration, adding that "as you can see, they were not without effect."

Mr. Starr also spoke of the federal Government's Municipal Winter Works Program, which, this winter, provided some 50,000 jobs directly on site and stimulated needed municipal construction to the value of more than \$100 million.

"It is my personal opinion," the Minister said, "that we can lick many of the problems of seasonal unemployment in Canada—or at least reduce it to a point in keeping with the second highest standard of living in the world. I can assure you that we will take whatever measures are necessary to do so."

In his opening remarks the Minister paid a tribute to the late Aaron Mosher, Honorary President of the CLC, referring to him as "a good Canadian, a good labour man."

New Political Party

The convention, in a boisterous bedlam, solidly sanctioned the creation of a new left-of-centre political party.

After a 3½-hour debate, during which 32 speakers favoured the new party, three opposed it and one was non-committal, the delegates voted overwhelmingly to give the CLC a mandate to continue working toward the creation of a new federal political party.

Fewer than two dozen of the 1,600 delegates present at the Wednesday evening session opposed the resolution (see box) submitted by Eamon Park, chairman of the Political Education Committee.

The afternoon session was marked, however, by the dramatic walk-out of the 43-member International Brotherhood of Electrical Workers delegation in protest against political action.

Spokesman Angus MacDonald, of Vancouver, read a prepared statement to the

effect that the IBEW wished to take a neutral position on the new party and that it opposed "any part of its per capita dues to the CLC being used or channelled to the formation or assistance of any political party."

He added that the IBEW delegates would be back after the convention had disposed of the political action resolution.

The overwhelming show of hands in favour of the new party was the signal for an exuberant demonstration on the floor of the convention: delegates stood and cheered, confetti flew, and there was an impromptu chorus of "Solidarity Forever" followed by six cheers, three for the Congress, three for the new party. The session was then adjourned, almost a full hour before the scheduled time.

The resolution re-affirmed the Congress' two-year-old decision to study the possibility of founding a new party (L.G. 1958, p. 589). The next step is likely to take place at the CCF convention at Regina this summer. Then, a year from now, a founding convention for the new party is contemplated.

Chairman Park, Assistant Canadian Director of the United Steelworkers of America, said that labour does not seek to dominate the new political party. "We want to play our part with the CCF, the farmers, and other progressive groups in building a better Canada," he added.

The parade of rank-and-file speakers at the microphone represented all provinces. None of the CLC officials on the platform spoke in the discussion.

Argument in favour ranged from the need of legislative powers to achieve economic gains to the need to create a sense of realism in political life through a system of right and left.

A. R. Denton, International Association of Machinists, Winnipeg, warned against a class party, that is, one dominated by labour.

The convention, wishing to clear the air as to the portent of the new party resolution, reasserted by a resolution "that affiliation with the New Party shall be on a voluntary basis from CLC-affiliated organizations and chartered local unions and their membership."

The delegates also restated the position of the CLC itself: It shall not itself become an integral part of the new party but it shall co-operate with the new party and with the fullest assistance encourage the affiliation of CLC affiliates with the party.

The CLC thus expressed recognition that some of its affiliates are obligated, by the

Resolution on New Political Party

WHEREAS the events of the past two years have shown the correctness of the Winnipeg resolution of this congress and the continuing need for a broadly based political instrument of the Canadian people; and

WHEREAS the response inside the labour movement and from the public generally has shown the great possibility for effective political action which lies ahead;

THEREFORE BE IT RESOLVED that this convention:

(1) Accepts and approves the report of the Executive Council, including the general principles set out in the study papers referred to therein, and hereby endorses the steps taken by the Council to carry out the instructions and mandate of the last convention.

(2) Instructs the Executive Council to continue its participation in the work of the National Committee for the New Party

and the Executive Council is hereby authorized to assist by all appropriate means in the preparations for and in the calling of a Founding Convention at a time and place and on a basis to be decided by the National Committee.

(3) Urges the Executive Council, affiliates of the Congress, provincial federations and local labour councils to bring this resolution to the attention of all local unions and their members and to encourage their democratic participation in the formation of the political instrument envisaged herein, as well as in its work and activities after it is formed.

(4) Re-affirms its determination that the new political instrument shall be organized on such a basis that it will be fully representative of farmers, members of the CCF and other liberally-minded groups and individuals as well as of labour, so that it may faithfully serve the best interests of all the people of Canada.

character of the employment of their members, to maintain a position of political neutrality.

Commented Mike Punshon, of the Painters Union, Toronto: "This should clarify the situation and show that public service employees can join the CLC."

Expulsion of SIU

The Seafarers' International Union did not appear before the convention when given an opportunity to appeal its threatened expulsion from the Congress. Two days later, approval of the report of the committee on officers' reports, which contained a recommendation that the SIU be expelled "as of the date of the adoption of this report," removed the seamen's union from affiliation with the CLC.

The Union had been suspended on June 18, 1959, by the CLC Executive Council for raiding another CLC affiliate, the National Association of Marine Engineers (L.G., July 1959, p. 681).

When, on the second day of the convention, President Jodoin offered the platform to any SIU representative at the convention, no one came forward. The convention moved on to the next item on its agenda and the question of the SIU expulsion did not come up again until two days later, when the committee on officers' reports submitted its report.

The committee had originally proposed to recommend that the expulsion should take effect after six months, if the union meantime failed to satisfy the Executive Council of its intention to conform to the rules of the Congress.

The chairman of the committee said that unions were not needlessly expelled. He pointed out that the SIU had ignored the opportunity it had been given to come to

the convention and plead its case, and he said that the committee had considered the Executive Council's report on the matter and had decided to recommend adoption of that report. The recommendation was approved.

Expulsion of Teamsters

Immediately after the vote on the expulsion of the SIU had been taken, President Jodoin rose to explain the decision of the Executive Council in the case against the International Brotherhood of Teamsters on charges of raiding the membership of two other affiliates of the Congress—the Brotherhood of Railway and Steamship Clerks, and the United Brick and Clay Workers.

Mr. Jodoin said that the 40,000-member Teamsters Union had been found guilty by the executive on charges of raiding. The constitution must be abided by. Efforts had been made to settle the matter by negotiation. "If we don't settle our own problems, we shall be legislated against," he said. The Teamsters had refused to accept the terms laid down by the Executive Council for settling the dispute, Mr. Jodoin said, and on behalf of the Council he moved that if the Brotherhood did not abide by the constitution, it should stand expelled 30 days from that date.

I. M. (Casey) Dodds, Canadian Director of the Teamsters, in defending his union's stand complained that he had had only three and a half hours in which to prepare his statement. He said that with regard to the employees of Canadian Pacific Merchandising Services, his union was prepared to allow the question of which union was to represent these employees to be submitted to a vote of the employees themselves.

Frank Hall, Vice President of the Brotherhood of Railway and Steamship Clerks,

saying that some of the statements Mr. Dodds had made were red herrings, declared that the real issue was whether the constitution was to be observed and upheld. The basic fact was that the Teamsters had raided the membership of his Brotherhood, which for the past 40 years had had a contract with the CPR covering the employees who were included in the new department, known as Merchandise Services, that the CPR had set up in British Columbia.

Mr. Hall contended that the employees included in this new department were freight handlers and express workers, who belong to a nation-wide group of railway employees who are all covered under one set of contracts negotiated by his union.

In the discussion that followed, some of the delegates supported the Teamsters. More than one said that the dispute should have been settled by bringing the two parties together.

William Mahoney, United Steelworkers, said that every effort had been made to settle the dispute by bringing the parties together. He pointed out that the Teamsters would have 30 days in which to comply with the constitution, and "If the Teamsters are out of the Congress in 30 days, it will be by their decision," he declared.

The motion to expel the Teamsters within 30 days if it did not abide by the constitution was approved by a large majority. Only an estimated 150 delegates voted against it.

Economic Policy

Only by putting more buying power into the hands of the people can Canada develop the new economic frontier presented by the "vast unsatisfied needs of the people, here and abroad," the CLC declared in a statement on economic policy approved by the convention. The statement enumerated nine ways to raise the people's buying power.

"Higher wages" was given the No. 1 place on the list.

These unmet needs can provide full production, full employment and steadily rising standards of living "as far into the future as we can see," the statement declared. And full employment with progressively rising living standards for all "continue to be the main goal of Canadian Labour."

Instead of full employment, Canada now has high unemployment in a booming economy, the CLC asserted. Unemployment in March was worse than for any March since the war with the single exception of March 1958, yet production was at an all-time high. To put an end to this situation, governments, management and labour must

exert all their energies: "but the heaviest responsibility rests upon the National Government, which alone has the necessary powers and resources to make full employment effective," the statement said.

One of the measures slowing down the rate of annual growth and causing steady unemployment is the "tight money" policy. "Neither the current degree of inflation nor its causes justifies a tight money policy," the CLC declared.

A tight money policy makes sense only in the case of "demand" inflation—too many dollars chasing too few goods—which, to a large extent, is caused by excessive consumer demand in an economy with no idle manpower and no idle plant capacity. But today there is unemployment and unused plant capacity. As long as the money pumped into the economy is no more than necessary to employ such idle resources, there is likely to be little danger of inflation, the statement said.

"Creeping" inflation may be the price the nation has to pay to achieve maximum growth and full employment; "we may not be able to eliminate inflation altogether and at the same time have full employment," the statement admitted. If this is so, the logical thing to do would be to try to find ways of keeping inflation "to the absolute minimum consistent with the maintenance of maximum economic growth and full employment."

To provide and maintain full employment, to provide jobs for those now unemployed and to absorb annual increases in the labour force, the Canadian economy must grow at a faster annual rate. And to sustain a faster rate of growth, there is the unmet need in Canada for housing, schools, hospitals; and in the underdeveloped countries for our machinery.

The nine ways in which buying power can be raised, the CLC believes, are:

1. By pressing for higher wages;
2. By reducing working hours and maintaining take-home pay, thus spreading available employment;
3. By increasing old age security benefits and family allowances;
4. By a public investment program in housing, school, hospitals and roads;
5. By increased efforts to promote exports;
6. By a planned immigration policy;
7. By adequate measures to increase farm purchasing power;
8. By a substantial increase in Canada's contributions to the Colombo Plan and United Nations technical assistance;
9. By special measures to help depressed industries and depressed areas.

Social Security

In a series of resolutions the CLC called for an all-inclusive social security program. The major resolution urged establishment by the federal Government of "a unified, integrated system of social security that would provide a minimum health and decency standard of living."

Existing measures would have to be improved to meet such a standard, the resolution said, and additional legislation enacted to meet the following needs: loss of income due to illness, medical care in all its phases, maternity, invalidity, death of the breadwinner, funeral expenses, and retirement. Benefits under such a system should, "to the greatest extent possible," be available "as of right," the resolution added.

Other resolutions demanded improvements in old age pensions to increase payment to \$75 a month payable at age 65 without a means test, greater federal financial support towards the cost of building hospitals and other hospital costs not now covered by hospital insurance, establishment of a national system of old age security over and above the one now in effect, removal of the restriction that prevents old age pensioners from living abroad, and increases in family allowances to restore "their original purchasing power."

In another resolution the CLC asked for immediate introduction of a national health insurance plan that would provide preventive and diagnostic as well as curative and rehabilitation services, drugs and appliances provided by physicians, surgeons, dentists and other specialists and agencies.

A federal government investigation into the drug industry, its profits, and its pricing and business policies was called for in another resolution that protested against the "exorbitant prices being charged for drugs."

The proposed old age security system would be based on contributions from government, employers and employees, though not necessarily in equal proportions, and would be portable, universal and compulsory on employers and employees, would provide pensions proportional to income during the best period of working life, would provide protection against the effects of inflation, and would provide "a minimum pension sufficient for a minimum health and decency standard of living, where the accrued pension, together with any other old age security benefit, falls short of satisfying such a standard."

The need for portability of pension plans was supported, the relaxing of rules governing pension plans by the Department of National Revenue was protested, and the Congress was directed to take suitable

action, in a resolution approved by the convention.

Speaking on the resolution on financing of hospital construction, W. M. Black, National Union of Public Employees, charged that the British Columbia Government was now using for other purposes money paid by the federal Government for hospital construction. He wanted money so paid to be earmarked for the purpose for which it was intended.

J. W. Bruce, Plumbers, Toronto, speaking as the CLC representative on the Council of Health, said that some of the delegates were making mis-statements. Millions of dollars were ready to be supplied by the federal Government, but the provincial governments were not co-operating, he said. He also pointed out that the Government through the combines investigation machinery was acting in the matter of drug prices.

When one delegate asked where the money was to come from to pay for the services the Congress was demanding, another delegate suggested that a 4 per-cent increase in the corporation tax would cover the cost.

Unemployment Insurance Act

A number of resolutions submitted to the convention expressed dissatisfaction with the Unemployment Insurance Act, and demanded its amendment.

The delegates unanimously passed a resolution recommended by the legislative committee, which was under the chairmanship of W. G. Davis, Executive Secretary, Saskatchewan Federation of Labour, instructing the Congress, directly and through its representatives on the Unemployment Insurance Advisory Committee, to continue to press for the repeal of Regulations 172 and 173, under which severance pay and vacation pay were counted as wages for unemployment insurance purposes. (The Minister of Labour, in his address later to the convention announced that the regulations had been changed to bring them back to what they were before September 1959).

The committee recommended against the acceptance of four resolutions that would have committed the convention to the demand that the Act and regulations be amended to allow all insurable unemployed persons to receive benefits as long as they were unemployed, regardless of the number of contributions they had made. The committee, although agreeing with the criticism of the Act implied by the resolutions, opposed them on the ground that they would mean that workers who had made extensive contributions to the Unemployment Insurance Fund would fare no better

than those who had made few contributions, and that this would create injustices and change the Act into a social assistance measure.

The committee's stand, however, was strenuously opposed by a number of the delegates.

W. Rutherford, United Automobile Workers, Oshawa, said that the committee seemed to be more concerned with conserving the Unemployment Insurance Fund than with helping the unemployed. C. B. Keely, Shipyard General Workers' Federation of British Columbia, said that if there was enough money to spend on Bomarcs that don't work, it should be possible to find the money for unemployment benefits.

As a result of this opposition, two of the resolutions were referred back to the committee and the other two were deferred. Later the committee recommended a substitute resolution to cover the four; it directed the CLC to urge the Government to extend the provisions of the Unemployment Insurance Act to allow benefits to be paid to unemployed workers who cannot qualify for them or have exhausted their rights, and further resolved "that benefits paid under such circumstances be financed through consolidated revenue or other sources exclusive of the Unemployment Insurance Fund." Owing to lack of time, however, the committee's resolution was not dealt with by the convention.

A resolution, submitted by the Brotherhood of Painters and Decorators, Vancouver, that instructed the Executive Committee to press for a change in the regulations that would allow provincial workmen's compensation boards to insert stamps in claimants' unemployment insurance books in the same manner as employers was referred to the incoming Executive Committee for review and consideration.

The committee recommended referral to the incoming executive of another resolution, submitted by the Brotherhood of Carpenters and Joiners, Vancouver, and proposing legislation to allow workmen's compensation boards to buy unemployment insurance stamps in the same way as employers, but the delegates strongly objected to the recommendation.

Henry Weisglass, United Steelworkers, speaking in support of the committee's recommendation, pointed out that social insurance should not be confused with social assistance. He told the delegates that reason might prevail over emotion "if you realized how your pockets would be affected." Broadening unemployment insurance would mean higher contributions, he said, with

"the burden falling on us rather than on the federal treasury."

The resolution was referred back to the committee, which almost immediately reversed its stand and recommended concurrence. This recommendation was approved.

Other resolutions that were passed recommended amendment of the Unemployment Insurance Act to prevent the exemption or exclusion of any employee from coverage under the Act on the strength of a "declaration of permanency," because annual earnings exceeded \$5,460, or for any other reason.

Communist-Dominated Unions

A move to delete from the CLC constitution the clause that excludes from affiliation "any organization controlled or dominated by communists, fascists or other totalitarians" was defeated.

Rejection of the resolution urging removal of the clause, which had been submitted by a West Coast local of the Pulp, Sulphite and Paper Mill Workers, was recommended by the constitution and law committee. Although a small but aggressive group of delegates supported the resolution, the convention adopted the committee's recommendation.

Orville Braaten, delegate from the local sponsoring the resolution, said the clause had held up the admission of the Mine, Mill and Smelter Workers to the CLC. "How can we control Communists unless we have them in our Congress?" he asked.

J. K. Bell, Secretary-Treasurer of the Marine Workers' Federation, Halifax, pointed out that the clause in the constitution that withholds charters or certificates of affiliation from organizations "in conflict with the jurisdiction" of CLC affiliates, unless the affiliates give their written consent, could be used by groups already in the Congress to keep rivals out.

Several supporters of the resolution declared there was a need for a unified labour movement in Canada. Charles Stewart, Street Railwaymen, Vancouver, contended there was no need to fear Communist leaders in a few unions.

Murray Cotterill, of the United Steelworkers took issue with the speakers who supported the resolution. The free trade union movement holds that a man cannot serve two masters, he said, and the success of the Congress had been based on its refusal to allow the presence of disrupting elements.

The real issue, he contended, was that certain organizations have proved they cannot organize successfully outside the Congress and they want to get in in order to get help.

—Federal Photos, Montreal

Confetti flew when the convention voted overwhelmingly in favour of a new party.

Crossing Picket Lines

A resolution sought to prevent an employer from requiring an employee to cross a picket line established by "a recognized labour organization while conducting a strike lawfully under the provisions of any legislation, federal or provincial," or from disciplining an employee for refusing to cross such a picket line. The organization committee recommended non-concurrence in the resolution.

Several speakers spoke in opposition to this recommendation, then the convention sent the resolution back to the committee with instructions to bring in a substitute. The substitute resolution urged all unions to "develop a policy of refusing to cross picket lines established by other unions in any legitimate strike situation," and to try to negotiate provisions in agreements giving protection to workers who refuse to cross such picket line.

The resolution further directed the Congress and its provincial federations "to promote a program of legislation to provide protection for workers who honour picket lines in legitimate strikes."

Strike Fund

A resolution submitted by the National Union of Public Employees, Port Arthur, besides condemning the "hold-the-line" wage policy, would have required the CLC to

support "all unions which may be compelled to strike," and to set up a defense fund for giving financial help to striking unions. The organization committee opposed this resolution on the ground that the Congress had no right to assess the members of affiliated unions for contributions to such a fund.

General Vice-President William Mahoney supported the committee, saying that the proposal to set up a strike fund was impracticable. Most unions had set up their own strike funds, and a national strike fund would be depleted by small unions, he argued.

Regional Vice-President Larry Sefton also supported the committee. He said that it was the responsibility of the committee "not to recommend things we cannot do." The Congress was not equipped to set up a national defence fund, and it was irresponsible to want to establish such a fund, he said.

Establishing a strike fund would create the "illusion of a pot of gold," another delegate said. Each union must be prepared to make its own sacrifices, he added.

Orville Braaten, Pulp, Sulphite and Paper Mill Workers, Vancouver, said that the committee should re-shape the resolution. To concur in the committee's recommendation might give the appearance of endorsing a hold-the-line policy.

S. K. Thornley, United Rubber Workers, Toronto, supported the resolution and took issue with the committee. The resolution should be amended, he said, but in such a way as to allow a strike fund to be set up.

The resolution was referred to the committee on economic policy but was not dealt with by that committee before the convention ended.

South Africa

By a unanimous standing vote, the convention passed a strongly worded resolution that:

1. Condemned "in the strongest terms" the *apartheid* laws of the Government of South Africa;

2. Called on the Canadian Government to support in the United Nations and in the Councils of the Commonwealth "all measures in condemnation of the policies of the Government of South Africa";

3. Urged that, should these measures fail, the Government of South Africa be excluded from the Councils of the Commonwealth of Nations;

4. Urged members of all CLC unions to join in a world-wide boycott of South African consumer goods that was to begin on May 1.

Eamon Park, United Steelworkers, proposed that "to give a dramatic touch and impact" the President should ask the provincial governments to require the liquor commissions in their respective provinces to stop buying South African wines and brandies. Regarding foodstuffs, to make the boycott effective some appeal should be made to the leaders of industries to support it, he added.

President Jodoin said that action would be taken through the provincial federations of labour.

J. W. Bruce, Plumbers Organizer, Toronto, said that the volume of trade was not the important factor. Rather it was to attract attention to the inhumanity of the South African Government's policy. We have to arouse humanity and our own Government, and if considerations of Commonwealth unity stand in the way, "Let's get rid of the Commonwealth," he said.

After the standing vote, a minute of silence was observed in respect for those who had died in the South African disturbances.

Public Relations

A number of resolutions submitted to the convention showed concern and annoyance about the offensive allegedly being waged against the labour movement by various

employers' organizations, and about the anti-labour legislation believed by many trade unionists to have been one of the outcomes of the attack.

A substitute resolution to combine some of these resolutions was passed unanimously. It instructed the incoming executive to "intensify public relations activities of the Congress to the fullest possible extent by use of radio, press, television and other methods."

It further called upon provincial federations of labour, labour councils and affiliated unions to co-operate in such a program by the appointment of publicity committees, and directed the CLC Public Relations Department of the Congress to co-ordinate the activities of such committees.

Murray Cotterill, Canadian Public Relations Director for the United Steelworkers, speaking in support of the resolution, said that the organized attack on labour was working to a great extent, even among the less active members of the labour movement itself. The labour movement had been guilty of a sin of omission in not telling the public the story of the movement, and many workers were ignorant of their own movement. Local and international unions must support the publicity campaign actively, and not leave it entirely to the CLC, he said.

Automation

Establishment of a national advisory committee—representing labour, management and social agencies—on the re-training and re-location of workers displaced by automation was urged by the Congress in a resolution adopted in a unanimous standing vote.

Adequate compensation for displaced workers is a necessity, the same resolution said. It was a substitute for seven others that was drafted by the committee on economic policy, of which Neil Reimer, Canadian Director of the Oil, Chemical and Atomic Workers, was chairman.

The resolution recommended government action "to enable displaced workers to fill new jobs" by: training and re-training, with full pay during such training; bringing new industries to surplus labour areas, or where this was not possible by helping the workers to move to new industries by paying the cost of moving and re-settling.

All affiliated unions were advised to press for higher wages, and shorter hours and longer vacations with the same take-home pay; and the incoming executive was instructed to press for "the fullest participation by the unions in all measures taken to cope with the problem of automation and technological change."

The resolution urged the Government's committee on technological change to "broaden and speed up its research into the employment effects of such change."

Education

The principle of equal opportunities of education for all was endorsed in a resolution that requested the federal Government to "institute an early and adequate system of federal aid to education at all levels." The aid should include free university education for all students who are qualified and who maintain suitable standings, it added.

In another resolution the CLC urged the Government to increase the grants to the federal-provincial training schemes so that anyone wishing to take the courses could do so free of charge. This resolution also proposed that "anyone who has depleted his unemployment insurance should be able to obtain financial assistance while taking these courses without undergoing the indignities at present connected with Schedule M*."

The chairman of the education committee, Frank C. Bodie, President of the Alberta Federation of Labour, said his committee found no indignities in connection with Schedule M and recommended deletion of the words in the resolution that referred to them. His recommendation was adopted, and the resolution amended and approved.

The committee recommended rejection of a resolution that would have asked the federal Government to provide loans to worthy students at universities and technical institutes, explaining that it was incompatible with the principle of free education already endorsed by the convention.

A resolution urging the federal and provincial governments to make grants to selected universities for the training of a sufficient number of persons in labour economics, industrial relations, and arbitration and conciliation was referred to the incoming CLC executive and to provincial federations of labour.

Expressing regret that it had not been possible to make progress toward the establishment of a Labour College, a resolution reaffirmed endorsement of the College and instructed the Congress to continue its efforts to have one established.

*Schedule M of the Special Training Projects Agreement makes provision for the training, for occupations that offer a reasonable opportunity of regular employment, of persons registered with the National Employment Service as unemployed, whose fitness for employment would be definitely improved by training.

Per Capita Tax and Officers' Salaries

The convention approved changes in the CLC constitution to increase the per capita tax of affiliated bodies and to raise the salaries of the president and secretary-treasurer by \$2,000 a year and of the two executive vice-presidents by \$1,000 a year.

The president will now receive \$16,000, the secretary-treasurer \$14,000 and the executive vice-presidents \$13,000 a year, "plus expenses."

Secretary-Treasurer MacDonald explained in his report that the increases in per capita tax, which it is estimated will bring in an additional \$400,000 a year, were necessary in order to enable the Congress to meet the anticipated increase in the cost of maintaining its present services, and the cost of the expansion of activity that should be undertaken if the Congress was to play its part effectively.

He mentioned especially the need for "a much broader public relations program—one designed to offset to some degree at least the tremendous propaganda campaign that has been directed at labour for the past two years or so."

Greater emphasis on educational programs was also necessary, he said, "if our unions and members are to be properly equipped to cope with the rapid changes in the economy and the resultant effects on labour organization."

The establishment of several trades departments was being considered, he added, and this would require money.

The amendments were approved by the required two thirds majority, in spite of vigorous opposition from some delegates, especially to the proposed salary increases.

The per capita tax of affiliated international and national unions, regional and provincial organizations and organizing committees was raised from 7 to 10 cents per member per month. The tax of directly chartered unions was raised from not less than 75 cents to not less than \$1.05 a member a month, and the portion of the per capita tax paid by chartered unions required to be set aside in the defense fund was increased from 5 cents to 20 cents a member a month.

In support of the recommended tax increase, Executive Vice-President William Dodge pointed out that the Congress was a service institution for its affiliates, and the affiliates' demands were increasing. He called attention to the loss of revenue that resulted from the CLC's policy of transferring directly chartered locals to affiliated unions.

Opposing the increase, Angus MacDonald, IBEW delegate from Vancouver, said that the unions must take a greater share in public relations work, that the Congress was giving too much help, and that the Congress ought to operate on as near a skeleton budget as possible. Charles Stewart, Street Railwaymen, Vancouver, said that there should be better assurance on the distribution of the revenue from the per capita increases, suggesting that a good proportion of it should be put into a national defence fund.

Speaking in favour of the recommended increases in the head officers' salaries, William Mahoney, who as chairman of the constitution and law committee introduced the amendments, said that salary adjustments for lower officers could not be made if the senior officers' salaries were left unchanged.

J. D. Hunter, CBRT, Belleville, contended that the salaries of CLC executives were now out of line with those of the rank-and-file and that liaison between the workers and their representatives was lost when some of the latter were getting as much as \$16,000 a year.

Election of Officers

All the officers of the Congress except two of the regional vice-presidents were re-elected, and all except the four general vice-presidents were elected without opposition.

Claude Jodoin was returned for his third term as President, Donald MacDonald for his third term as Secretary-Treasurer, and Stanley Knowles and William Dodge for their second terms as Executive Vice-Presidents.

William Stewart of the Shipyard General Workers' Federation of British Columbia was nominated for the presidency but as he was not in the convention hall to accept nomination, and did not send written acceptance, the nomination lapsed.

The only contest took place for the four general vice-presidencies. In the balloting, the six candidates placed as follows: William Jenoves, President, Toronto and District Labour Council, 1,072; William Mahoney, Canadian Director, United Steelworkers, 1,044; George Burt, Canadian Director, United Auto Workers, 988; Frank Hall, Vice-President in Canada, Brotherhood of Railway and Steamship Clerks, 906; Gordon Lambert, United Auto Workers, 332; and J. K. Bell, Secretary-Treasurer, Marine Workers' Federation, 290. Joseph Connolly, Plumbers organizer, was nominated but declined to run.

There was no contest for the 13 regional vice-presidencies. But there are two newcomers to vice-presidential positions, as two former incumbents declined nomination. Angus MacLeod, President of the New Brunswick Federation of Labour, succeeds James A. Whitebone, MBE, as an Atlantic regional vice-president; and J. H. D'Aoust, Canadian Director, Textile Workers Union of America, succeeds Paul Swaity as an Ontario vice-president.

The other 11 regional vice-presidents are: Atlantic—D. J. Gannon, President, Halifax, Dartmouth and District Labour Council; Quebec—Miss Huguette Plamondon, United Packinghouse Workers; Roger Provost, Canadian Director, United Textile Workers; and Louis Laberge, President, Montreal Labour Council; Ontario—Andrew Cooper, Canadian representative, United Brotherhood of Carpenters; Larry Sefton, Director, District 6, United Steelworkers; W. H. Smith, President, CBRT; Prairie—Neil Reimer, Canadian Director, Oil, Chemical and Atomic Workers' International Union, and Donovan Swailes, Vice-President, Manitoba Federation of Labour; Pacific—Joseph Morris, President, District No. 1, International Woodworkers of America, and E. P. O'Connor, Secretary, British Columbia Government Employees' Association.

Fraternal Delegates

Arne Geijer

A great mission lies before the trade union movement in Canada, the AFL-CIO, and the European trade union movements, said Arne Geijer, President of the International Confederation of Free Trade Unions, fraternal delegate to the convention from that organization.

This mission, the speaker said, is to establish trade unions in the so-called economically underdeveloped countries of the world, not only to take care of the workers' economic interests but also to give "the longing for freedom and the fight for independence a democratic basis in free, genuine and progressive trade unions."

The ICFTU has always been on the side of oppressed peoples and has defended their right to decide their own fate and to exploit their own natural resources, Mr. Geijer said.

There was reason to think that the number of employees would increase rapidly, and that as new territories get their independence and began to exploit their natural resources, foreign capital would flow in, the speaker thought. In helping to build trade union organizations, the ICFTU must be careful to support only "real trade union projects."

—Federal Photos, Montreal

CLC President with Two of the Guest Speakers
 with Hon. Antonio Barrette with AFL-CIO's George Harrison

The International Solidarity Fund was established in order to enable those countries that could afford to do so to contribute to the growing activities of the ICFTU, Mr. Geijer said. As a result of the voluntary contributions received, "significant activities are under way." He mentioned educational work in Asia, Africa and Latin America, referring especially to the African college at Kampala in East Africa, for which "we are now constructing our own building." We may also have to do this for other colleges in West Africa and in Latin America, he added.

"Most important for our international... is that we give it ample resources of competent and experienced trade unionists and financial support. And I know that we can rely upon our Canadian friends to fulfil their share of this obligation," Mr. Geijer said.

(When Mr. Geijer had finished speaking, the CLC gave him a \$25,000 contribution to the International Solidarity Fund. It was an instalment of the \$100,000 that the CLC voted at its 1958 convention to contribute in the period ending December 31 this year.)

Sir Thomas Williamson

If we are to win the minds and hearts of the younger generation—and we must do so if we are to survive and progress—our message must be more up-to-date and more

in tune with modern conditions than it has been, Sir Thomas Williamson, C.B.E., J.P., General Secretary, National Union of General and Municipal Workers, fraternal delegate from the Trades Union Congress of Great Britain.

The speaker pointed out that today most of the social evils of the early days of the labour movement in Britain had been eliminated. "We live in a different world from that of the pioneers... We cannot win the youth of 1960 with the slogans and programs of 1860."

Sir Thomas said he believed the primary reason why the Labour Party had been defeated in three successive elections after six years in government was "that we are not winning over the younger generation."

To meet this situation, the British TUC was spending large sums of money on educational schemes directed mainly towards the younger members of the labour movement, the speaker said. He referred to a suggestion made by the TUC delegate to the previous CLC convention that there should be an exchange of trade union students between Canada and the United Kingdom, and he said that although distance was a difficulty he believed it was one that should somehow be surmounted.

"The struggle in the world today, in all countries, is for the minds of men. The problems of all peoples everywhere are the

same . . ." The struggle was to determine the future organization of society, whether it was to be on the basis of the freedom and parliamentary democracy for which we stand, or some form of totalitarianism. "History has proved that basic to this [our] way of life is a strong, virile, responsible, free trade union movement," Sir Thomas asserted.

Robert Willis

A glance at the resolutions before the convention showed that the labour movements in Great Britain and in Canada had much in common, said Robert Willis, one of the two fraternal delegates from the TUC. He suggested that the industrial and political experiences of the old country might be useful to the new.

He believed that some of the industrial problems we were facing were the result of our being in the first phase of a second industrial revolution. Automation brought changes in union relations, and old methods no longer worked, he said. We now have a trade union organization, whereas in the first industrial revolution the workers were unorganized. Must we repeat the mistakes that were made in the first upheaval? he asked.

Are we ready for the changes that are approaching and for the new class of worker that is coming to industry Is the white collar worker going to consider himself as being in a class apart or as a part of the working class movement? he continued.

Employers and governments must be told that new techniques must not become a cause of unemployment. The new marvels of science should lead to more production and shorter hours, not more unemployment. Various welfare services should not be based on a bank balance, but should be a social right, Mr. Willis said.

Regarding the relation between the Trades Union Congress and the Labour Party, the speaker said that the TUC was not subservient to the Labour Party. The Congress demanded and preserved the right of consultation with any government. It held joint consultations with the Labour Party, but was not affiliated with it, the speaker pointed out.

Robert Willis is General Secretary of the London Typographical Society.

George Harrison

The fraternal delegate of the AFL-CIO warned that the North American economy is not expanding at a fast enough pace.

George M. Harrison, President of the Brotherhood of Railway Clerks since 1928, told the Canadian delegates that the number one problem on the economic front is to

find additional employment opportunities for the workers displaced by automation and technological changes.

Mr. Harrison, who is also Vice-President and member of the Executive Council of the AFL-CIO, said that the all-out attack on labour in the U.S. is "an effort to stop the progress of labour unions on the economic front."

"To fight wage increases on the ground that they are inflationary is a misunderstanding of inflation economics," he added.

Turning to international matters, Mr. Harrison called the 20th Century the century of the common man. "We are on the verge of a social upheaval that will put aside poverty, illness and disease throughout the world," he said.

He added that with the skill and the energy at the disposal of the modern economy the world can no longer tolerate such social ills.

The AFL-CIO fraternal delegate agreed that the moral responsibility of the trade union movement extends beyond the day-to-day battle because the survival of the world is at stake. At the same time, he called upon the U.S.S.R. to abandon its goal "of establishing its godless ideology, by subversion, on the rest of the world."

Other Speakers

Cardinal Léger

His Eminence Cardinal Paul Emile Léger, Archbishop of Montreal, called on the working classes to engage in tripartite cooperation with employers and the State, so as to avoid "the abuses of unbridled liberalism on the one hand, without, as a reaction, slipping into the opposite excess of abusive State control."

Speaking at the opening of the convention, His Eminence expressed the hope that conversations would be held between employers' and workers' groups and that opportunities for meeting and for discussing problems would be sought.

"That solidarity which should bind together all the agents of production," said Cardinal Léger, "should find a practical application in the setting up of joint committees on which management and labour leaders would undertake studies in common and concerted action, thus enabling them to submit concrete plans with regard to outstanding questions, such as unemployment for example, and obtain from the State the support and the services considered necessary."

His Eminence denounced as materialistic the two modern economic systems of economic liberalism and Marxist communism.

"An economic system," he said, "must be humane; in other words, it must serve man,

—Federal Photos, Montreal

The 1960-62 Executive Council of the CLC (left to right): Front row—Executive Vice-President Stanley Knowles, President Claude Jodoin, Secretary-Treasurer Donald MacDonald, Executive Vice-President William Dodge. Second row—B.C. Regional Vice-President E. P. O'Connor; General Vice-Presidents Frank Hall, William Mahoney, George Burt and William Jenoves; and Regional Vice-Presidents Harold D'Aoust (Ontario), Miss Huguette Plamondon (Quebec), Andrew Cooper (Ontario). Third row—Regional Vice-Presidents Joe Morris (B.C.), Larry Sefton (Ontario), Neil Reimer and Donovan Swailes (Prairie), Louis Laberge (Quebec), Angus McLeod and D. J. Gannon (Atlantic). it must respect his nature, and it must be guided by his primary needs—hence the need to set up an economic system in terms of the common good, that is favourable to the community as a whole.”

In order to achieve this end, he went on, an economic system must be organic, but it must not absorb the whole of human activity. Spiritual values must retain their priority and economics must be subordinate to moral law.

The Cardinal stated that planning “is a good thing under certain conditions.”

Citing the testimony of Pius XII, he added:

Our obligation to increase production and to adapt it wisely to the needs and the dignity of man brings to the foreground the question of regulating the economy as regards production. Now without substituting their oppressive omnipotence for the legitimate autonomy of private enterprise, the public authorities have an undeniable part to play here when it comes to co-ordination—all the more essential in view of the confusion of present-day conditions, especially social conditions.

Cardinal Léger cautioned, nevertheless, against too rigid planning, which might be dangerous, for human society “is not a

machine, and it should not be made such, even in the field of economics.”

Hon. Antonio Barrette

The Premier of Quebec told the CLC delegates that he did not believe in government by any particular class.

“I do not believe,” said Hon. Antonio Barrette, “in class government. I think that every government should have representatives of all classes of society.”

Mr. Barrette attended the convention both as Premier and as Minister of Labour, and also as a member, since 1917, of the International Association of Machinists, Lodge 847. This was apparently the first time a Premier of Quebec had addressed a labour congress, although Mr. Barrette himself said that he was speaking to the delegates in his capacity as Minister of Labour.

One of his main reasons, Mr. Barrette said, for having decided to accept the office of Premier was that it would give the workers of the province a chance to say that one of their own had reached the highest post in the provincial Government.

Claude Jodoin Receives Histadrut Award

CLC President Claude Jodoin became the first Canadian to receive the newly-founded Canadian Histadrut Humanitarian Award.

The award, in the form of a plaque, was presented at a testimonial luncheon during the Convention by Col. Isaiah Avrech, representative for Histadrut, who praised Mr. Jodoin for his "integrity and leadership".

"We want to acknowledge our appreciation for your outstanding efforts in fostering sympathetic understanding between Canada and Israel," he added.

Accepting the award, Mr. Jodoin said that it really belongs to the Canadian Labour Congress as a whole.

Quebec's new Workmen's Compensation Act, according to Mr. Barrette, is the most progressive and most humane of all such laws in Canada. He reminded the delegates that the Superior Labour Council has been revived, that the fines imposed on employers guilty of dismissals for union activities have been increased, that labour has been given increased representation on the Labour Relations Board and that the code of procedure has been amended to allow *bona fide* trade unions to engage in civil actions.

Dr. Alexander Laidlaw

The labour movement and the co-operative movement were fundamentally brothers, said Dr. Alexander Laidlaw, National Secretary of the Co-operative Union of Canada. He appealed to labour to support the co-operatives by their patronage, and in the fight the co-operatives were making against the move to have their net earnings made subject to income tax.

The idea that the co-operative movement was mainly a rural one was no longer correct, the speaker pointed out. Besides their rural trade, they were now engaged in the insurance business, credit, home building, and distribution of consumer goods and services.

The position of the co-operatives with regard to income tax had, he said, been greatly misrepresented. In many communities they were among the largest tax payers. Their contention, however, was that the savings they gained for their members should not be subject to income tax, since these savings were not income for the co-operatives.

A. P. Gleave

Closer co-operation between organized labour and the organized farmers was urged by A. P. Gleave, President of the Saskatchewan Farmers' Union and Chairman of the Inter-Provincial Farm Union Council. He proposed a national conference of labour, industry and the farmers.

Just as workers sought security through higher wages, so farmers sought security through stability of the prices of their products, Mr. Gleave said, Labour's efforts to get lower interest rates on housing loans parallel the farmers' need for capital at a reasonable rate. Farmers and labour had a common interest in such matters as national health insurance, adequate pensions and unemployment insurance, the speaker pointed out.

The difficulties that automation was creating for labour were, in many respects, similar to the problems faced by farmers in the pressure for increased efficiency without the sacrifice of individual welfare, Mr. Gleave contended.

Col. Isaiah Avrech

The message of Israel is that there is no disagreement between democratic freedom and economic progress, Col. Isaiah Avrech, American representative for Histadrut, told the delegates in a brief address.

He said that Histadrut has reached a state in its development where it can, in turn, give the same assistance it has received to the trade union movement of the underdeveloped countries of Africa and Asia.

After thanking the Canadian labour movement for the support given to Israel, Col. Avrech expressed the hope that Histadrut may, in turn, serve the ideals of world labour.

Other Resolutions

White Collar Workers

A resolution urging an intensification of the campaign to organize white collar workers and calling upon the whole trade union movement to help in the work was carried unanimously.

During the debate, a Vancouver delegate of the Office Employees' International Union said that the Canadian banks were reverting to the anti-union tactics of many years ago in trying to prevent the organization of their employees. He suggested that delegates who had bank accounts should find other ways of placing their money.

National Council of Canadian Labour

A resolution passed unanimously and without discussion charged the National Council of Canadian Labour with encroaching on the jurisdiction of the Plumbers and with raiding various organizations affiliated with the CLC. The resolution, proposed by the Plumbers' Montreal local, asked affiliated unions to boycott the NCCL and to expel from their ranks "members found supporting or organizing members of the said organization."

CLC—CCCL Merger

The committee on organization combined in one resolution a number of separate ones regarding a merger between the CLC and the CCCL. The resolution, which directed "that the incoming Executive Council renew negotiations with the CCCL in an endeavour to find a mutually acceptable formula for merger of the two bodies," was carried without opposition or discussion.

Organization of Immigrants

A resolution that alleged exploitation of newly arrived immigrants by employers, who were accused of using them "to break down union contracts, reduce wage rates and also to remove work and employment beyond the protection and guardianship of organized labour," was referred back to the committee. Later a re-worded resolution was brought back and passed. It resolved "to aid all unions to organize these workers and that the officers of this Congress be instructed to give the closest attention to this undertaking." The CLC was also directed to try to set up special committees across Canada to correlate organizing efforts.

Conflicting Jurisdictions

The convention, on the recommendation of the committee on organization, passed a substitute resolution directing the CLC to "encourage the elimination of conflicting and duplicating organizations and jurisdictions through the process of agreement, merger, or other means, by voluntary agreement in consultation with the appropriate officials of the Congress."

Other Constitutional Changes

The perennial move to have conventions held by the CLC every year instead of every two years was once again defeated. The constitution and law committees pointed out that the amount of staff work involved in connection with a convention made it impracticable to hold one every year.

A resolution to amend the constitution to "provide for votes at conventions to be allotted on a per capita basis" was defeated.

The convention defeated a resolution that would have amended the constitution "to give workers in Canada their democratic right to belong to their chosen union, by majority vote of workers concerned." The committee, in recommending rejection, said that this resolution would negate the non-raiding provisions of the constitution.

Financial Statement

A surplus of \$1,274.92 out of a total revenue of \$1,219,907.05 in the CLC's operations during 1959 was reported by Secretary-Treasurer Donald MacDonald in his financial statement. This compared with a surplus of \$30,398.05 out of total revenue of \$1,191,453.11 in 1958.

The per capita tax paid by affiliated organizations accounted for \$1,112,169.71 of the total revenue in 1959 compared with \$1,092,846.87 in 1958. Other sources of revenue brought in \$127,853.60.

ICFTU

A resolution re-affirming "the need for international solidarity action to assist workers who become victims of repressive measures or of natural or industrial disasters, as well as to strengthen free trade unions, so that they can raise the living standards of their members and the wage-earners of their respective countries," was the last resolution passed by the convention.

The resolution pledged the Congress to make "an annual contribution of at least \$50,000 to the International Solidarity Fund, to be raised from voluntary contributions to the ICFTU Activities Fund of the Canadian Labour Congress." It reiterated decisions adopted by the first and second conventions calling upon all affiliated and chartered organizations to contribute a minimum of 1 cent a member a month to the ICFTU Activities Fund.

Unfinished Business

Among the resolutions not dealt with for lack of time and referred to the incoming executive for consideration, were some that would have:

—Demanded prompt adoption of the Congress's proposals to the Winter Employment Conference of 1958 for direct financial inducements through tax relief, and lower interest and depreciation rates, to provinces, municipalities, firms and individuals, to encourage wintertime construction.

—Urged the Dominion Government to announce the terms of the its winter works policies early in the summer to allow all concerned to plan accordingly.

—Pressed for the establishment of a 5-day, 40-hour week, without reduction in take-home pay, as the legal maximum throughout Canada.

—Urged the establishment of a national minimum wage of \$1.25 an hour, and longer paid vacations.

—Asked the federal Government to protect the rubber footwear industry by establishing quotas or by raising tariff barriers so as to "level out Canadian production to 75 per cent of the Canadian market."

National Women's Auxiliary

Some progress in organizing a national women's auxiliary, in accordance with a resolution passed at the Winnipeg convention, was reported by George Burt, Canadian Director of the UAW. He said that at a conference held that morning a provisional national committee had been elected to organize this body.

The committee consists of: Mrs. Addie Gannon, representing the UAW, Windsor, chairman; and the following 10 members: Mrs. Janet Grant, representing the London and District Labour Council; Mrs. Mabel Tallon, International Typographical Union, Ottawa; Mrs. Lily Morritt, International Association of Machinists, Montreal; Mrs. Clara Parrish, United Rubber Workers, Toronto; Mrs. Josephine Hallock, United Brotherhood of Carpenters, Vancouver; Mrs. Eleanor Liness, Brotherhood of Locomotive Firemen and Enginemen, Toronto; Mrs. Ethel Mcguire, CBRT, Ottawa; Mrs. Rose Reid, CBRT, Winnipeg; Mrs. Ethel Bedusky, United Steelworkers, Winnipeg; and Mrs. Dorothy McKellar, Oil, Chemical and Atomic Workers, Sarnia.

—Urged the federal Government to adopt "policies designed to create a healthy textile industry capable of doing its share to maintain full employment."

—Called upon the federal Government to adopt measures "to bring American-Canadian trade more nearly into balance, and to encourage development of the secondary industries..."

—Demanded a Royal Commission to investigate "the high prices of agricultural implements which are making life more and more difficult for the farmers."

—Asked the federal Government to subsidize the Canadian merchant marine to enable it to compete "on an equal basis with Commonwealth and foreign ships;" and to make the payment of the subsidy conditional upon the building, repair and maintenance of Canadian ships being done in Canadian yards.

—Pressed for amendment of the British North America Act "to provide for a bill of rights guaranteeing to the Canadian people those rights and freedoms which are essential to a free society."

—Called upon the federal Government to prohibit by law discrimination against older workers because of age.

—Asked for amendment of the National Housing Act to prevent racial discrimination in the renting or selling of housing financed under the Act.

—Condemned the federal Government's policy of granting piecemeal and non-retroactive salary increases to civil servants.

—Supported "to the fullest extent possible the efforts of federal and provincial government employees' associations to obtain the right of collective bargaining."

—Urged the Government of Canada to work for cessation of the testing of nuclear weapons and for an agreement on the necessary control and enforcement measures; for "a strong United Nations with an international force under its control to safeguard peace everywhere;" and for a number of other measures intended to promote peace, self-determination and protection against oppression.

Pre-Convention Meetings

National Policy Conference, United Steelworkers

Wage rates in the Canadian steel industry equal to rates in the United States, and higher in some cases because of special circumstances; reduced working hours—by extended leave with pay, shorter work day, or by longer vacations; and company paid pensions that will provide retirement pay of \$125 a month after 25 years service were the future bargaining aims set in resolutions passed at the national policy conference of the United Steelworkers.

Besides the industry pensions, the union wants the Government to increase old age security payments to \$75 a month at age 65, instead of the present \$55 a month at age 70.

The conference, which was attended by some 300 delegates, was held in Montreal on April 21 and 22, immediately before the CLC convention.

William Mahoney, Canadian Director of the union, told the delegates that he plans

to seek a new round of talks with the Big Three in the Canadian steel industry before the present collective agreements expire late in 1961.

"We have until the end of 1961 to decide whether the next set of negotiations in Canada will have to be based on past procedure without any rules, or whether we can devise a new formula in which sharing productivity with the industry's customers will be a mutually accepted part of the rules," Mr. Mahoney said.

The union is convinced that price reductions are possible in raw materials and processed raw materials, he said.

Vice-President Howard Hague of Pittsburgh, Pa., told the conference that to remain strong, the Steelworkers union must enlist office and technical workers. In Canada about 25,000 office and technical employees in the steel industry are unorganized, and the union, which now represents about 2,000

office workers, is campaigning for more members in the newer mining districts where such employees are "less hostile" to unions than elsewhere.

Larry Sefton, Director of the union's District 6, accused some employers of making use of professional spies in order to find out what union activities their employees were engaging in.

The convention asked the provincial governments to require companies to give at least six months notice of intention to close down or move substantial portions of their operations. It also asked the federal Government to use the National Employment Service to provide facilities for re-employment of workers left unemployed by such shutdowns.

International Ladies' Garment Workers Union

The International Ladies' Garment Workers Union, at its co-ordinating conference held in Montreal on April 23, laid plans for an industry-wide campaign for a 37½-hour week, an average general wage increase of 15 per cent, and a provision that the union label shall be sewn into all women's gar-

ments made in union shops.

A statement issued after the conference said that the 37½-hour week is already in force for about 5,000 of the union's members, and that the move for a shorter work week was the first step toward the goal of an industry-wide 35-hour week.

2nd Convention, Union Label Trades Department, CLC

At the second convention of the CLC Union Label Trades Department, a considerable increase in the number of unions affiliated was reported by the President, Stan Clair, in his opening address. The all-day meeting, held on April 24, was attended by about 90 delegates.

President Clair, who was chairman of the convention, said that the number of affiliations had increased during the previous two years from 32 to 38, leaving 20 unions still unaffiliated. He mentioned that some of the large unions were among those not affiliated.

The Secretary-Treasurer, Thomas B. Ward, stated in his report that besides the addition of eight new affiliates, charters had been issued to seven district labour councils.

Mr. Ward said that the union label directory had been produced and distributed. "While, in the main, the directory has proved to be quite successful, our biggest problem has been to get the co-operation of some affiliates to supply us with the information which is required to make the directory as effective as it might be."

In accordance with opinions expressed at the Winnipeg convention, Mr. Ward said, President Clair had been engaged "on an experimental basis" as a part-time union

label representative for the province of Ontario, starting on October 1, 1958. In regard to the expansion of this kind of activity he suggested that it might be better, "in such a far-flung country as ours," to engage part-time regional directors instead of employing a full-time national director, whose travelling expenses would be very heavy.

Later in the convention a resolution was passed directing the incoming executive to consider the appointment of a full-time director "to manage the Union Label Trades Department, for an all-out promotion to give added impetus for union jobs at this time of mass unemployment." The resolution asked the Canadian Labour Congress to allot additional funds to cover the extra expense. It was further resolved that until a full-time director could be appointed the incoming executive should consider the expansion of part-time workers "on an honorarium basis" to cover the whole of Canada.

A resolution that all unions affiliated with the CLC should automatically become affiliated with the Union Label Trades Department and with Union Label Trades Councils or Leagues was rejected, as also was a resolution "that all trading stamp practices be stopped by the Government."

The propaganda committee introduced a resolution that each labour council union label committee must prepare and have a complete buyer's guide of goods and services that could be bought in their territory. This led to warm discussion about the use of the word "must"; finally, "should" was substituted for "must" and the resolution was passed.

The delegates also resolved that each labour council "should" get out a union label buying guide.

In the election of officers, Stan Clair, Amalgamated Clothing Workers, Windsor, was re-elected President without opposition, and Thomas B. Ward, Canadian Labour Congress, Ottawa, was re-elected Secretary-Treasurer, also without opposition. Mrs.

Josephine Hallock, Office Employees' International Union, Vancouver, and Rene Rondou, Tobacco Workers' International Union, Montreal, were re-elected Vice-Presidents by acclamation.

The five regional Vice-Presidents elected were: Atlantic Provinces—John F. Simonds, Bakery and Confectionery Workers' International Union, Saint John, Quebec—Saul Linds, Amalgamated Clothing Workers, Montreal; Ontario—Saul Fagan, United Hatters, Cap and Millinery Workers, Toronto; Prairies—Mrs. Emily Ross, United Garment Workers, Edmonton; and British Columbia—Percy J. Deplissey, United Brotherhood of Carpenters and Joiners, Vancouver. Both Mrs. Ross and Saul Fagan had held the same offices in the previous two-year term.

18th Annual Spring Conference of Personnel Association of Toronto

Among subjects of addresses were: relationship between productivity and wages, and economic outlook for next decade. Panel discusses negotiations, collective agreements and labour-management relations. More than 1,000 delegates attend

The relationship between productivity and wages, the economic outlook during the next decade, and labour-management relations, negotiations and collective agreements, and communicating were among the subjects discussed at the 18th Annual Spring Conference of the Personnel Association of Toronto at the end of April. More than 1,000 representatives of business, industry, education and government attended the two-day meeting.

The relationship between productivity and wages was emphasized by Dr. Jules Backman, Professor of Economics, New York University; Canada's economic possibilities during the next decade were outlined by A. E. Grauer, Chairman of the Board and President, British Columbia Electric Company Limited, Vancouver; labour-management relations, communicating, collective agreements and negotiations were discussed by a four-man panel.

Members of the panel were: John Wettlaufer, University of Western Ontario; T. J. Bell, Fibreglass Canada Limited; Arthur Patillo, QC, Blake, Cassels and Graydon; and D. A. Page, Goodyear Tire and Rubber Company.

The panel spent most of its time discussing and answering questions submitted anonymously by members of the audience.

Dr. Jules Backman

In analyzing the relationship between productivity and wages paid to Canadian workers, Dr. Backman referred extensively to statistics contained in "Productivity and Employment," an address delivered September 30, 1959 by Dr. George V. Haythorne, Assistant Deputy Minister of Labour (L.G., Nov. 1959, p. 1152).

Dr. Backman noted that if Canadian workers had received increases in real wages equal to the gains in output per worker in the period 1955 to 1959, their wages today would be "significantly lower" than they are.

Real weekly earnings (industrial composite) from 1946 to 1949, he said, increased 38.6 per cent, or at an annual rate of 2.5 per cent—exclusive of non-wage benefits. For manufacturing the rise was 43.6 per cent, or an average annual rate of 2.8 per cent. This compared with an increase of 1.1 per cent in output per worker in the same period and a rate of increase of 1.4 per cent since 1926. Between 1955 and 1959 real weekly earnings climbed by 10.8 per cent, or twice as much as the rise of 5.3 per cent in output per worker.

Although increases in average real wages of all workers tend, in the long run, to be

about the same as average gains in productivity in the *entire* economy, these long-term increases in real wages have no close relationship to long-term gains in productivity in a *specific company or industry*, Dr. Backman said. The average relationship for the entire economy is the end result of thousands of disparate relationships. "The national average is like every other average. Some workers experience an increase in economic well-being at a faster rate than national gains in productivity; others at a slower rate."

Year to year changes in productivity are too irregular to be meaningful, he pointed out. Long-term averages must be considered in order to make allowances for periods of recession as well as the boom periods. When long-term comparisons are made, it is important to make sure that the beginning and terminal years were at similar stages of the business cycle, he warned.

Giving an example, Dr. Backman said that comparisons with 1939 were rejected by the 1949 Steel Wage Board in the United States because the depressed level of economic activity in that year tended to result in an exaggerated rate of increase through 1948, a year of high-level activity. The Board suggested comparisons should be with 1941, because "... valid comparisons can be made only for years of similar rates of operation."

When making wage-productivity comparisons, many use wage rates or average hourly earnings to measure the changes in the economic well-being of workers. But such comparisons understate the improvement experienced because they omit non-wage benefits, he said. The proper comparative is total labour costs.

And the proper comparative is total man-hours, not those of production workers alone, which was acceptable when the ratio of production workers to total employment remained fairly steady. In recent years, however, the relative proportion of total employment accounted for by production workers has been declining, in Canada from 83.7 per cent in 1946 to 75.6 per cent in 1958.

Absence of change in unit labour costs can not be used to gauge what is a proper increase in wages and non-wage benefits, Dr. Backman continued. Unchanging unit labour costs merely show that the total labour bill has increased by the same percentage as total volume of sales. The labour cost component of total costs may vary and a smaller proportion of total costs should be paid for direct labour if a gain in output per man-hour is attributable to the introduction of costly labour-saving devices.

Unchanging unit labour costs in this situation would result in an increase in total labour costs.

"The fact that a smaller proportion is paid for labour does not mean that the wages of the workers retained will not rise," he pointed out. "On the contrary, wages could rise substantially if the total labour cost is divided among a smaller number of workers."

In other words, we must distinguish between an average rise in wages and non-wage benefits, which enables a worker to share proportionately in rising output per man-hour, and the total labour cost bill, which is affected also by the number of workers employed, Dr. Backman said.

Increases in wages and non-wage benefits that are greater than increases in output per man-hour create wage inflation, he continued. When unit labour costs rise, a company can raise prices, narrow profit margins, or reduce costs. But a program to reduce costs might result in unemployment, because labour costs are often the most important costs.

The effects depend on the general trends in the economy. During periods of expansion, a rise in unit labour costs will probably lead to a rise in prices and to some shading of profit margins. During a period of stable or declining business activity, it will be more difficult, even impossible, to pass on a rise in unit labour costs in the form of higher prices; the tendency would be to reduce profit margins or cut costs, with the resulting increase in unemployment.

Available information indicates that there has been and still is wage inflation in Canada, he said. Average hourly earnings and weekly earnings have increased much more rapidly than productivity during the war and postwar years, particularly during the past decade.

Productivity formulas do not provide a simple solution to the problem of wage determination, he told the delegates. Even the annual improvement factor introduced in the 1948 agreement between General Motors and the United Auto Workers is inadequate, for eight reasons:

1. It ignores other factors in wage determination such as the economic climate, ability to pay, and wage comparisons.
2. It ignores the fact that annual changes in wages and in output per man-hour do not follow a fixed and uniform pattern.
3. It ignores the important role of non-wage benefits; these, too, must be paid out of rising productivity.
4. It ignores the growing proportion of salaried employees whose higher compensation also must be paid out of productivity increases.
5. It assumes that past rates of gain in output per man-hour will continue in the future.

6. It assumes that wages and non-wage benefits should increase in real terms at the same rate in periods of expansion and recession.

7. It ignores the role of changing wage relationships in allocating our labour resources to their most effective use.

8. It ignores the key fact of dynamic new types of gains to justify their position.

A contract that provides for an annual improvement factor usually includes an unlimited cost-of-living escalator clause, Dr. Backman said. "To the extent that escalator clauses become operative, the increase in money wages will be greater than the rise in output per man-hour, thus creating wage inflation and pressures for new price rises."

In conclusion he said that productivity is only one factor to consider in wage determination and that mathematical formulas do not provide any short-cut or substitute for the give and take of collective bargaining. And collective bargainers must weigh many factors in reaching an agreement that is fair and equitable to all.

A. E. Grauer

Canada's remarkable growth of the last 15 years indicates some fairly clear trends for the future, trends that will be difficult to reverse because of several factors; yet the remedying of the situation in which this country now finds itself is perhaps the biggest economic challenge for the sixties, said A. E. Grauer, who spoke on "The Challenge of the Next Decade".

The trends, he said, were: the shift of Canada's trade away from the United Kingdom and towards the United States, the flow of foreign investment into Canada, and the growth of the deficit—now serious—in Canada's international balance of payments. Over the next decade Mr. Grauer could foresee no changes in these trends.

The factors that will make it difficult to reverse these trends are: war-devastated countries have completed their internal reconstruction and will probably be more serious competitors from now on; continued heavy foreign investment in Canada will mean a steadily increasing outflow of interest and dividend payments; Canadians have become great tourists, and now spend more abroad than foreign tourists spend in Canada; and, because of our high standard of living and proximity to the United States, Canadians cannot resist the greater variety of goods that the U.S. is able to produce because of their very much bigger internal market.

Even in the export of raw materials—"the backbone of Canada's international trade"—this country faces competition: in uranium, oil, iron ore, and forest products. "Canada will need to place a higher priority

than they have in the past on maintaining their competitive position," Mr. Grauer said.

Canada has never been, and has very little prospect of becoming, an important exporting country of the products of secondary manufacturing. "The problem of Canadian manufacturers will be to retain their share of the internal market."

The heart of our external trade situation is the United States: about 60 per cent of Canada's exports now go to the United States, and about 70 per cent of our imports come from there, he pointed out. The United States tariff, which is designed to permit free entry, or entry at very low rates of duty, of industrial materials in their raw form or in an early stage of processing and which imposes progressively higher rates on goods at more advanced stages of manufacture, has largely kept Canada out of the manufacturing stages where she would otherwise have competitive advantages.

Deep concern has recently been expressed in the United States about its current deficit of international payments, about \$4 billion. If this deficit bore the same relationship to gross national product as Canada's deficit does to her gross national product, that \$4 billion would be more than \$22 billion. Yet there was no concern in the United States about the Canadian situation, nor any thought that something should be done about it, such as reducing artificial obstructions to Canadian trade with the U.S.

Mr. Grauer thought that the United States should be more concerned about Canada's deficit than about its own, because Canada was its best customer and the country in which it has such a big stake. He pointed out that U.S. investment in Canada is now approximately \$14 billion, nearly 40 per cent of its investment abroad, and that U.S. investors "presently control various Canadian basic industries to the following approximate percentage figures: motor vehicles and parts industry, 98 per cent; rubber, 88 per cent; oil and gas, 75 per cent; electrical apparatus, 68 per cent; mining, 65 per cent; chemicals, 60 per cent; pulp and paper, 50 per cent."

"There is no single challenge more important for the 1960's than to get Canadian-American trade relations on a more realistic and enduring basis."

There are, however, important factors that "round out Canada's economic shape for the next 10 years." Canada's population will continue to rise, and "population growth is a basic stimulus to economic development." The nation's labour force may rise by about 25 per cent and, despite an expected decrease in the working day, output

per man-hour may increase by at least 2 per cent a year, with the result that Canada's gross national product will probably continue to rise at an average rate of between 4 and 5 per cent a year.

He warned that this forecast makes "the not unreasonable assumption" that governments now have enough economic knowledge and practical experience that, together with such "built-in stabilizers" as unemployment insurance, will keep the economy from plunging into a major depression.

An important and growing area of economic activity during the 1960's, Mr. Grauer believed, will be in the field of "social capital." This includes schools, universities, churches, hospitals, urban renewal, airports, roads and streets, sewer and water systems and a mixed assortment of other buildings, installations, and equipment used by public institutions and departments of government.

He referred to housing as "an allied important area" and noted that much has been done in recent years to catch up with housing requirements in Canada but that there remains in most towns and cities of Canada a deficiency in such things as sewers, water systems, schools, roads and streets, and airports.

Mr. Grauer proposed four steps that his listeners could take:

1. Rid their collective agreements of any clauses that result in the stifling of initiative or the restriction of output.

2. Assist management in accepting temporary road-blocks to employees co-operation as an inherent characteristic of modern, large-scale industrial organization.

3. Assist in developing the skill of management in dealing with the insecurities, frustrations and disruptions to the work force resulting from the technological changes necessary to improve productivity.

4. Promote and develop in the routine of daily work an atmosphere of meaningful participation by all levels of the organization.

Another challenge for the sixties, he said, lies in the better co-ordination of public and private capital expenditures. "Government expenditures on social capital should be contracyclical to business expenditures."

Canada does not devote enough money and attention to research and to education, particularly vocational, technical, university and postgraduate education. "To meet the difficult competitive future that faces us, . . . we spend far too little time and money on our greatest economic asset, our working force broadly defined, and far too much

attention and money on merely trying to extend the area of material or resource development," he said.

Panel Discussion

John Wettlaufer opened the discussion by suggesting that employers should place more emphasis on communicating, since the ability of most of them in this seemed to be poor. He stressed the very great importance of using exactly the right words when passing on information, when negotiating and drafting collective agreements, and particularly before signing them.

T. J. Bell suggested that many employers are not astute enough to communicate properly and emphasized the importance of programs for proper training in this skill.

Panel Moderator E. R. Complin, Employee Relations Manager, DuPont of Canada, suggested that the panel should make clear in their discussion of communications what they intended. Should the employer concentrate on communicating to the employee the information that management wants him to know, or the information that the employee wants to know.

Mr. Wettlaufer then switched to the social aspects of business and industry and suggested that business had made a great mistake in the past in adopting a hands-off attitude towards everything that was of a social nature. He thought that if business had devised the social security measures that now exist it would consider them good and there would have been less controversy over them. D. A. Page agreed there was too much tendency on the part of business to let someone suggest ideas and then reject them.

Arthur Patillo brought up the subject of Canada's economic position in the world today and the prospects for the future, and advised business and industry to take a good look at it. Making comparisons, he noted that a country like Canada must export to live, whereas the United States, with its tremendous markets at home, does not need to do so. Canadians, he noted, were compelled to keep a close watch on what competitors were doing and try to match their prices in the world of trade abroad. This goal was hampered by the influence of the United States on Canadian labour thinking, which made Canadian workers constantly strive for parity in wages and working conditions with those of their neighbours.

Answering a question from the floor, Mr. Page said he believed that "unions are here to stay, but they are not indispensable." He cited a company in Hamilton that has for many years operated a "company union"

and has never experienced any friction of any sort at the plant. Many employee benefits had been granted by the company away from the bargaining table, proving that business "does do some things voluntarily."

Mr. Patillo, replying to a question on labour-management committees, said he believed that it was a "great mistake to have these committees." He thought management should run their businesses, set the rules and be responsible for the results. The three other panelists, each asked the same question, would not comment.

Commenting on labour unions, Mr. Wettlaufer said that labour is now "big business." Mr. Page believed union leaders must seek more members all the time to keep unions strong, but while they were doing this they were less concerned about the membership than they were with protecting their own jobs.

A three-part question from the floor asked the panel if legal advice should be sought only in drawing up a collective agreement; should a lawyer draw it up; should a lawyer

do the bargaining. Mr. Patillo said he would not recommend seeking legal advice alone; he would not want a lawyer to draw up a collective agreement if it was going to be couched exclusively in legal terminology. He would prefer that an experienced person or persons draw it up with emphasis on simplicity of language; he did not favour having a lawyer do the negotiating of a collective agreement.

Mr. Wettlaufer commented on the importance of simplicity of language in collective agreements. Too often, after an agreement is signed, it is discovered that it does not say what the parties agreed to during negotiations.

Whether companies should sign long- or short-term collective agreements was discussed by Mr. Patillo. He said the financial position of the company should be very carefully considered in deciding this point. The company, primarily, should be certain that it can afford to sign a two- or three-year collective agreement before doing so, otherwise it can run into grave difficulties.

Canada's National Employment Service

Parliamentary Secretary to Minister of Labour says faults and flaws exist in the Service, and fraud occurs in collection of unemployment insurance benefits, but "it is only fair to consider some of its better, maybe redeeming, features"

Faults and flaws exist in Canada's National Employment Service, but before condemning it, "it is only fair to consider some of its better and perhaps redeeming features," said Richard D. Thrasher, Parliamentary Secretary to the Minister of Labour, in an address last month to the Employers' Advisory Committee in Montreal.

And although fraud exists in the collection of unemployment insurance benefits, "in comparison with the total volume of cases, fraud is almost negligible," he said.

Canada's National Employment Service, "cornerstone" of our unemployment insurance scheme, is admired by many in the United States, partly because it is on a national basis in spite of the federal character of our constitution. "In the United States there are as many employment services as there are states."

Good Points

Some of the NES's good points mentioned by Mr. Thrasher were:

It has offices in almost every working community big enough to warrant opening such an office; there are more than 200 of them.

It makes efforts to provide adequately trained staff to seek out available employment, and bring it to the attention of persons seeking employment.

It has a system for adequate communication of employment opportunities and available labour, covering the entire country.

It has machinery with which to maintain effective contact with the demands of the labour market.

It provides necessary statistical information to facilitate government policy decisions on employment, based on concrete facts rather than guesses, and free from the pressures of groups with particular interests.

Turning to criticisms of the NES, he quoted from a paper presented by Prof. John S. Morgan, Acting Director of the School of Social Work, University of Toronto, at a provincial educational conference in February 1959:

... we need a new attitude in relation to the development of the Employment Service. On their behalf it should be said that the employment part of the community also tends to disregard the virtues of the National Employment Service and only to turn to them when they are unable to meet their demands in the open market. Thus it is that the Employment Service tends to get referred to them only

those vacancies that employers have found difficult to fill. This in its turn means that an employee searching for work still has to go the rounds of a whole range of employers if he wants to get one of the better jobs, at least in too many cases this is true. And to the extent to which it is true, it is a denial of the purpose and of the usefulness of any national employment service.

Any unemployment insurance scheme has a two-fold function, Mr. Thrasher reminded the meeting, first to get the unemployed worker back on the job and, when it is impossible to do this, to make financial assistance available to him to compensate him in some degree for his loss of income.

Existence of Fraud

It was at this point that he acknowledged the existence of fraud.

"From time to time," he said "charges are made that the Unemployment Insurance Fund is being drastically reduced through fraud. We know that fraud exists. To deny its existence would be utter nonsense. To prevent it entirely would require the expenditure of vast sums of money, and at some stage the point of diminishing returns would be encountered."

He suggested that the answer was to effect a compromise between the ideal and the practical, and at the same time to stimulate public awareness of the results of fraud.

Three serious consequences result from fraud, Mr. Thrasher said. First, there is a danger that public confidence in the whole unemployment insurance scheme could be seriously undermined to the point where it ceases to be regarded as a unemployment insurance scheme, but rather as a pot out of which insured persons are entitled to draw solely on the ground that at some time in the past they had been contributors.

Secondly, in certain cases collusion sometimes exists between employers and employees for the purpose of collecting benefits, and thirdly, "the effectiveness of our employment system is threatened because our list of registered applicants is no longer a register of genuinely unemployed persons who are actively seeking work; some are registered only for the purpose of obtaining benefits."

There is a responsibility on the State to assist those who through no fault of their own are not able to obtain employment but,

if we are to protect our unemployment insurance system as an insurance scheme we must beware of an attitude that would regard the fund as a panacea for any and all sorts of financial needs and that benefit should be paid to all persons who are not working regardless of the duration of their unemployment or the circumstances which gave rise to it.

Full employment requires action by Government, Industry and Labour, he declared. Just as the impact of unemployment is felt immediately at the local level, so "remedial action must be taken at the same level." If Government alone is forced to provide full employment, "I suggest that the result will be bureaucratic muddle which will impair rather than improve conditions."

Two Other Problems

In addition to the "unwarranted" drain on the Fund imposed by the drawing of benefits by unauthorized persons, two other problems are causing great concern to the NES, Mr. Thrasher said. One is the matter of the older worker, the other the lack of skill among many of the unemployed or the possession of skills that have now become obsolete.

The Minister of Labour last year sent out more than 35,000 letters seeking the co-operation of employers in the older worker problem, and, regarding the second problem, the Unemployment Insurance Commission and the Training Branch of the Department of Labour, in co-operation with provincial departments, last year made it possible for 6,000 unemployed persons to follow 800 courses approved by the Commission and at the same time to receive benefits.

To ensure that the Unemployment Insurance Commission renders maximum possible service to the working men and women of Canada, staffs have been enlarged and their pay substantially increased, he pointed out. In the 12 months ending March 31 this year, the NES filled 80 per cent of all vacancies notified. "This, I submit, is a good record of achievement."

This record was possible, Mr. Thrasher concluded, only through the joint efforts of NES officers and the employers with whom they dealt, and can be improved "only by constant co-operation carried on in an atmosphere of mutual understanding and confidence."

Seasonal Unemployment in Canada—2

Second instalment of three-part article examines some of the characteristics of the seasonally unemployed and attempts to answer some questions: from what industries and what occupations do they come, how skilled, how old are they?

Part 2—Characteristics of the Seasonally Unemployed

From what industries do the seasonally unemployed come, to what occupations do they belong, what are their skills, how old are they, and what is their regional distribution? Part 2 examines some of the characteristics of the people who become seasonally unemployed during the winter, and attempts to answer these questions.

For this report, it has been assumed that the net change in the number of "persons without jobs and seeking work" from summer to winter represents the seasonally unemployed. This method excludes some people who are seasonally unemployed and includes others who are unemployed for non-seasonal reasons. However, it yields

results that are adequate for a general discussion of the characteristics of the seasonally unemployed.

Data on the number of "persons without jobs and seeking work" were obtained from the Dominion Bureau of Statistics; reference has already been made to the monthly survey from which the Bureau obtains this information. Since no detailed occupational information is available for the "persons without jobs and seeking work," data from another source were substituted. For all other characteristics, the data on "persons without jobs and seeking work" were used. For the sake of simplicity, "persons without jobs and seeking work" will be referred to as the "unemployed".

WHAT INDUSTRIES CONTRIBUTE TO SEASONAL UNEMPLOYMENT?

Nearly all industries contribute to seasonal unemployment, although there is a very wide difference in the magnitude of the contribution. Moreover, some industries have their peak employment activities in one season while others have theirs at another, so that the seasonal variations of industries tend to offset one another.

Unfortunately, all the large contributors to seasonal unemployment in Canada have their peak employment in the summer months and their trough in the winter months. The industries that have their peaks in the summer months account for nearly 80 per cent of total industrial employment.

Chart 10 shows the percentage distribution of the seasonally unemployed by broad industry groups with comparable figures for the summer and winter unemployed.

The combining of industries into large major groups conceals some very important differences among the subgroups. This grouping was necessary because of the nature of the original data. (A finer division may produce results in which the probable size of the error in one category is larger than the difference between the categories.) The value of the data is somewhat lessened, also, because they are limited to two years.

However, one aspect of seasonal unemployment is brought out very clearly; the prominent role of the construction and primary industries. The construction indus-

try accounts for 41 per cent of the seasonally unemployed, although it comprises only 22 per cent of the unemployed in summer and 33 per cent of the unemployed in winter. The construction, primary and transportation industries account for 70 per cent of the seasonally unemployed.

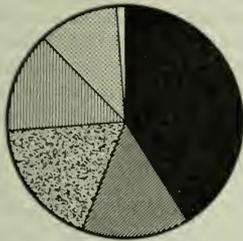

Transportation, public utilities and the primary industries also make up a larger percentage of the seasonal "seekers" than of the summer or winter "seekers". The opposite is true of the other groups.

Before examining the other characteristics of the seasonally unemployed in more detail, it might be useful to compare the industrial distribution of the employed for the same dates as the unemployed. Chart 11 shows the results of this comparison.

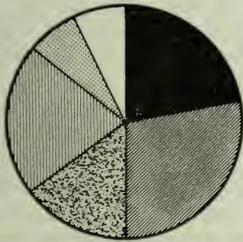

A glance at Charts 10 and 11 will show the difference in the contribution of the industry groups to seasonal unemployment relative to the size of the groups. Only construction, transportation, and public utilities contribute more to seasonal unemployment than to employment during the winter. It is especially true of construction, which contributes only about 8 per cent of total employment in the winter but 41 per cent of the seasonally unemployed. The trade-finance-insurance-service group contributes substantially more to employment than to seasonal unemployment.

OCCUPATIONS OF THE SEASONALLY UNEMPLOYED

The "persons without jobs and seeking work" (called the "unemployed" in this report) are classified only by broad occupational groups, which, for various technical reasons, are not published. It was necessary, therefore, to look elsewhere for information on the occupational characteristics of the seasonally unemployed. One of the other series on unemployment that provides detail by occupation is the series on registrations for employment at National Employment service offices.

In order to test the consistency of these data, the Dominion Bureau of Statistics provided a special tabulation of male persons without jobs and seeking work, by broad occupational groups for summer troughs and winter peaks. These men compared with a similar occupational grouping of the registrations series. The two series were found to yield almost identical distribution patterns, although the actual numbers were considerably different. Hence, all data included in this chapter are presented in terms of percentage distribution only.

In order to minimize the effect of non-seasonal factors, the data were averaged for five years, i.e., the troughs were averaged for 1954 to 1958 and the peaks were averaged for 1955 to 1959.

Nearly all occupational groups are represented among the seasonally unemployed, but some groups are found in greater numbers than their size in the employed sector would indicate. Those occupations that are closely associated with the seasonal industries are generally more widely distributed than those linked with non-seasonal industries. The most noticeable is the construction group of occupations. Within the construction group, however, there are some trades that are subject to wider seasonal fluctuations than others.

Table 1 shows the percentage distribution of the seasonal increases in registration at National Employment offices by large occupational groups.

Among the skilled and semi-skilled occupational groups, three groups predominate. These are the occupations in construction, primary industries and transportation. Construction and the primary industries also dominate the unskilled group. The construction occupations, skilled, semi-skilled, and unskilled, account for 40 per cent of the seasonal increase in registrations.

There is not much seasonal variation among the different "office" groups of occupations. However, within this category the "professional and managerial" occupations register the smallest increase and "sales" occupations the largest.

Each occupational group shown in Table 1 is examined in more detail below.

Service Occupations

Service occupations account for about 6 per cent of total "seasonal" registrations. The seasonal increase in unemployment that originates in the service industry is not as large as the seasonality of employment in the industry would indicate. This is because many persons who work in summer resorts, restaurants, hotels, amusement centres, etc., are "seasonal" workers. They work or look for work during the summer peak and then leave the labour force in early fall. This is particularly true of the large number of students who find employment in the service industries during the summer months.

There is, however, a considerable increase in registrations from summer to winter. For the group as a whole the increase is 122 per cent. Cooks and kitchen workers register the largest increases, 238 per cent for the former and 222 per cent for the latter group. The smallest increase, 92 per cent, is registered by the building service workers.

Protective service workers account for a very large part of the registrations in service occupations throughout the year; during the summer months they represent nearly half of the total. Larger relative increases among the other groups make the protective workers appear less significant during the winter months. Nevertheless, they represent 42 per cent of the winter registrations in the service group and 38 per cent of the seasonal increase. Table 2 shows this in more detail.

Occupations in Primary Industries

Registrations are not a very good indication of the extent of unemployment in agriculture and primary fishing. Workers in agriculture are not included under the Unemployment Insurance Act and because of their location in relation to National Employment Service offices are less likely to register for employment than workers in urban areas. Fishermen are now covered by the Act but have been excluded from these calculations because they are entitled only to seasonal benefits and came under the Act only in 1958. Although figures on agriculture and fishing are included in Table 3, they should be interpreted with caution.

Skilled and semi-skilled loggers and bushmen show the largest increase in registrations from summer to winter, increasing by nearly 700 per cent. This may seem somewhat peculiar considering that logging employment reaches its peak in early winter, usually December. Employment in logging declines very rapidly after January so that by March, when most other industries have reached their troughs, it is at a very low level indeed.

Furthermore, the logging industry is really made up of two quite different segments, the Eastern and the Pacific. Eastern logging has its peak in early winter and trough in

May; Pacific logging employment reaches its peak in October and November and its trough in February.

Although there is no indication that logging employment in Canada is increasing during the summer months, there is some evidence that more of the annual cut is now completed between September and December than was the case formerly. There are many factors involved but probably the most important is the use of heavy mechanical equipment and power saws. Snow was of considerable advantage when horses were used, but with the introduction of trucks it has become an obstacle.

Table 3 shows the percentage distribution of summer and winter registrations as well as the distribution of the seasonal increases for the primary occupations. Loggers and bushmen (skilled and semi-skilled) account for nearly half of the seasonal increase in registrations in primary occupations. Unskilled workers in lumbering and lumber products account for another 34 per cent.

Manufacturing Occupations

Some occupations are common to many industries, others are peculiar to one industry. The group of occupations included in Table 4 belong to the latter category. All these occupations are skilled and semi-skilled, since the registrations in the unskilled group are reported separately.

As a group, these occupations account for less than 5 per cent of total summer registrations and about 3 per cent of the seasonal increase. There is, however, a considerable difference in the seasonality of the registrations among the various sub-groups. The industries associated with the primary group show the largest increase from summer to winter. Registrations in "food and tobacco" increase by 236 per cent and those in "stone and clay products" by 329 per cent. The lowest increase (54 per cent) is registered by workers in primary textile occupations.

No single industry dominates the whole group, but "food and tobacco" accounts for about 28 per cent of the seasonal increase. Table 4 shows the contribution that the various industries make to total male registrations in summer and winter, and to the seasonally unemployed.

Metalworking and Mechanical Occupations

The metalworking and mechanical group of occupations accounts for about 13 per cent of summer registrations, 7 per cent of winter registrations and 5 per cent of the seasonal increase. Although most of these occupations do not show large increases

in registrations from summer to winter, sheet-metal workers and automobile mechanics show increases of more than 200 per cent. Nearly one-third of the sheet-metal workers enumerated in the 1951 Census were attached to the construction industry, and this might account for the large increase in registrations of sheet-metal workers from summer to winter. One would not expect much seasonality in the registrations of sheet-metal workers attached to the iron and steel industry since there is little seasonal variation of employment in this industry.

Table 5 shows the percentage distribution of summer and winter registrations in the metalworking and mechanical occupations.

Construction Occupations, Skilled and Semi-Skilled

Registrations in the skilled and semi-skilled construction occupations account for about 8 per cent of summer registrations, 15 per cent of winter registrations and 18 per cent of the seasonal increase. If the unskilled construction workers are added to the group, the contribution of the construction occupations to the seasonal increase is more than 40 per cent.

Table 5—Percentage Distribution of Male Registrations in Metalworking and Mechanical Occupations, Canada, Average 1954-59

The increases in registrations in construction occupations from summer to winter are so large that it might be useful to show them for each subgroup. Table 6 gives the percentage increases from summer to winter for skilled and semi-skilled construction occupations.

Table 6—Percentage Increases in Male Registrations in Construction Occupations, Canada, Average 1954-59

Occupation	Percentage Increase from Summer to Winter
Construction Machinery Operations ⁽¹⁾	759.1
Bricklayers and Tile Setters.....	1,020.8
Carpenters.....	661.5
Cement and Concrete Finishers.....	745.7
Painters, Construction and Maintenance.....	575.5
Plasterers.....	1,165.6
Plumbers and Steamfitters.....	193.1
Others.....	479.2
TOTAL.....	605.6

SOURCE: Unemployment Insurance Commission, Form 757.

⁽¹⁾ Average for two years only.

As can be seen from Table 6, there is considerable variation among the construction workers in the summer-to-winter increase in registrations. The workers whose type of work is affected most directly by the weather show the largest increases in registrations, and vice versa. Thus, the plasterers and bricklayers show the largest while the plumbers show the smallest increases.

Table 7 shows the percentage distribution of registrations in skilled and semi-skilled construction occupations. Not all the occupations are included, since some occupations common to many industries are difficult to link with one industry. Electricians, sheet-metal workers and foremen are examples. On the basis of the 1951 Census, however,

Table 7—Percentage Distribution of Male Registrations in Construction Occupations, Canada Average 1954-59

Occupation	Summer 1954-58	Winter 1955-59	Seasonally Unemployed
Construction Machine Operators ⁽¹⁾	8.2	9.9	10.1
Bricklayers and Tiles setters.....	4.6	7.3	7.7
Carpenters.....	50.5	53.9	51.4
Cement and Concrete Finishers.....	1.8	2.1	2.1
Painters, Construction and Maintenance.....	10.9	10.3	10.3
Plasterers.....	1.2	2.1	2.3
Plumbers and Steamfitters.....	11.1	4.9	3.9
Other Construction Workers.....	11.7	9.5	9.2
TOTAL CONSTRUCTION OCCUPATIONS.....	100.0	100.0	100.0

SOURCE: Unemployment Insurance Commission, Form 757.

⁽¹⁾ Average for two years only.

the occupations in Table 7 account for about 84 per cent of the employment in construction occupations.

Carpenters dominate the registrations in construction occupations, accounting for 50 per cent of the summer total. This simply reflects the numerical importance of carpenters among the construction occupations. According to the 1951 Census, carpenters accounted for 50 per cent of the skilled and semi-skilled construction workers in the occupational groups included in Table 7.

Transportation Occupations

Registrations in transportation occupations account for nearly 10 per cent of the increase in registrations from summer to winter. Taxi, truck and tractor drivers account for 82 per cent of the increase in the transportation group. Table 8 shows the summer, winter and the seasonal increase in registrations averaged for the period 1954 to 1959.

The increase in registrations in transportation occupations from summer to winter is very large. For the group as a whole it amounts to 355 per cent; it is 379 per cent for the taxi, truck and tractor drivers, and 127 per cent for the routemen.

Although not included in Table 8, seamen are in an occupation that is subject to large seasonal variations. Registrations by seamen increase by more than 700 per cent from summer to winter.

Employment in "water transportation" is subject to rather wide seasonal variations, since the inland sector of this industry is inactive during the winter months. Land transportation facilities are also affected in large measure by the seasonal lull in activity in the winter because of a drop in demand for their services.

Unskilled Occupations

Registrations of men in unskilled occupations account for 32 per cent of summer

Table 8—Percentage Distribution of Male Registrations in Transportation Occupations, Canada, Average 1954-59

Occupation	Summer 1954-58	Winter 1955-59	Seasonally Unemployed
Routemen.....	9.7	4.9	3.5
Taxi, Truck and Tractor Drivers.....	76.8	80.7	81.9
Other.....	13.5	14.4	14.6
TOTAL TRANSPORTATION.....	100.0	100.0	100.0

SOURCE: Unemployment Insurance Commission, Form 757.

and 36 per cent of winter registrations. They represent 37 per cent of the seasonal increase. Registrations in these occupations increase by nearly 300 per cent from summer to winter. Labourers in lumbering and lumber products and construction occupa-

tions represent about 65 per cent of the winter registrations in the unskilled occupations. Registrations by the remainder of the unskilled group increased by about 143 per cent or less than half the increase of construction and forestry.

HOW SKILLED ARE THE SEASONALLY UNEMPLOYED?

Is there any association between the level of skill and seasonality? If registrations are taken as an indication, then skill level does not seem to be an important factor. The most important link seems to be the industry, and within the industry the association appears to be with the weather. This is clearly seen in the construction industry.

If the registrations in construction and lumbering and lumber products occupations are excluded from both the skilled and unskilled group, the increase from summer to winter is somewhat less for the unskilled group (143 per cent) than for the skilled and semi-skilled group (155 per cent).

HOW OLD ARE THE SEASONALLY UNEMPLOYED?

Generally speaking, the seasonally unemployed are somewhat older than the summer unemployed. This difference, however, is nearly all the result of the large influx of students into the labour force for short periods during the summer months, added to those who have finished their studies in June and are entering the labour force on a more permanent basis.

The seasonal factor has a different impact on the different age groups. This is shown in Table 9.

The two age groups that show the largest increases because of the seasonal factor are the 25 to 44 and 45 to 64 age groups; the very young and very old members of the labour force are least affected.

Comparisons of this kind are always suspect unless something is known about the relative positions of groups *before* the time for which the comparisons are being made. Therefore, rates of unemployment for the various age groups for both summer and winter are given in the last two columns of Table 9.

In spite of the relatively small seasonal increase in the young group of "seekers," the winter unemployment ratio is still much higher for this age group than for any of the other groups. It is also interesting to note that the unemployment rate drops with age, the rate of the 25 and over groups being less than half that of the "under 20" group.

Table 9—Summer-to-Winter Increase in Unemployment, and Percentage of Labour Force Unemployed in Summer and in Winter, Canada, Both Sexes, by Age Group

Age Group	Summer-to-Winter Increase 5-Year Average (1954-59)	Unemployed in Summer, 5-Year Average (1954-59)	Unemployed in Winter, 5-Year Average (1954-59)

The seasonal unemployment problem is essentially a "male" problem, but it was thought useful to examine the effect of the inclusion of women in the above ratios. Unfortunately, data on the "seekers" by age group are not broken down for the two sexes. A special tabulation obtained from the Dominion Bureau of Statistics suggests

REGIONAL DISTRIBUTION OF THE SEASONALLY UNEMPLOYED

Since climate is the principal cause of seasonal unemployment, the seasonally unemployed are found in all regions of Canada. Some industries are more affected by the weather than others, so the type of industries that predominate in a particular region will determine the extent of seasonal unemployment. A region with a large part of its labour force engaged in the primary industries, construction and transportation will likely have considerable seasonal unemployment. If, on the other hand, a region has its labour force primarily engaged in a varied manufacturing industry, its seasonal unemployment problem will likely be less severe.

It is not surprising to find that the regions with the largest seasonal problem are the Prairie, Quebec and Atlantic regions. Ontario is least affected by the seasonal factor. The milder climate on the West Coast partly offsets the fact that the region is heavily dependent upon primary industries.

Seasonal unemployment is closely linked with other types of unemployment. It might be useful, therefore, to examine the rates of "general" unemployment for the various

that the exclusion of women from the tables would not change the relationship among the age groups to any significant degree. Because of the high proportion of young women among the female unemployed, their exclusion would slightly reduce the ration of the "under 20" to the other age groups.

regions during the summer and winter. Table 10 shows the ratio of "seekers" to the labour force for the past five years in the various regions.

Table 10—Percentage of Labour Force Unemployed in Summer and Winter, Canada and the Five Regions, Both Sexes, 5-Year Average (1954-1959).

The Maritime and Quebec regions have the highest "rates" of unemployment in summer and winter; the Prairie and Ontario regions have the lowest. The winter rates in the Prairie and Ontario regions are not much higher than the summer rates in the Maritime and Quebec regions.

HOW LONG ARE SEASONALLY UNEMPLOYED SEEKING WORK?

There is no definite answer to this question. Many persons who are laid off for seasonal reasons find work in other industries or other firms in the same industry almost immediately while others may look for work for three or four months. Even during the winter months, the labour market is an active place. Jobs disappear and new ones are created. People leave jobs through retirement, injury, emigration or death. These jobs have to be filled. Surpluses of certain skills may be partly offset by shortages of other skills. During the winter months, however, the time required for people to find a job lengthens considerably.

Table 11 shows the percentage distribution of "persons without jobs and seeking work" by number of months looking for work in July and March.

In July, 31 per cent of the "seekers" had looked for work for more than three months but in March, when unemployment reaches its peak, 40 per cent had looked for this

Table 11—Percentage Distribution of Unemployed in July and March, Canada, Both Sexes, by Number of Months Looking for Work.

Months Looking for Work	Unemployed in July 1954-58 (5-Year Average)	Unemployed in March 1955-59 (5-Year Average)
	%	%
Under 1.....	35.9	18.5
1 to 3.....	32.5	41.3
4 to 6.....	14.2	30.5
7 and over.....	17.3	9.7

Very little increase takes place in the "under 1 month" group and the "7 months and over" group, although it is impossible to say how many, if any, of the seasonally unemployed are in those two "time" groups

in March. The bulk of the seasonally unemployed will by the month of March have been looking for work at least two months and most for probably three to four months.

It is helpful to trace the pattern of the "seekers" as they move through the various "time" groups from summer trough to winter peak. The "under 1 month" group increases slowly until September, then very rapidly to December. There is very little increase from December to January; the group declines quickly after January. This would seem to indicate that the seasonally unemployed are already in the "pool" by January and that seasonal layoffs are coming to an end. From then on the shifts are fewer and the duration of unemployment becomes longer. The "1 to 3 months" group increases from December to February and then declines while the "4 to 6 months" group does not begin to increase until January, showing the largest increase from February to March. This group does not begin to decline until after April.

Although it is difficult to separate the seasonally unemployed in relation to duration of unemployment, there is little doubt that it is the seasonal groups that make these "duration" series behave in this way.

Unemployment in the United States dropped in April by 550,000 to 3.7 million—approximately double the normal seasonal decline for the month.

As a result, the seasonally adjusted rate of unemployment fell to 5.0 per cent from 5.4 per cent the month before.

Most of the improvement in unemployment occurred among adult men, the group that accounted for most of the increase in the previous month.

Total employment increased by 1.9 million over the month to 66.2 million in April, about 850,000 above the year-ago level.

During the month sharp rises in employment occurred in agriculture and construction and there was a substantial pickup in pre-Easter trade.

Several hard-goods manufacturing industries reported employment declines larger than is normal for this time of the year.

The number of workers on nonfarm payrolls increased by 600,000 over the month to 53.0 million in April, mainly as a result of brisk activity in the construction trade.

The employment increases in construction (285,000) and trade (225,000) were both exceptionally large for the month and

reflected the upsurge in building activity and consumer buying.

In contrast to the gains, the number of factory jobs dropped by 100,000 to 16.4 million in April.

Long-term unemployment—15 weeks or more—was unchanged over the month at 1.2 million in April. All of the reduction in unemployment occurred among workers jobless from one to three months, including many normally employed in outdoor industries.

In Great Britain during March, the number of persons in civilian employment was estimated by the Ministry of Labour to have increased by 5,000 to 23,343,000.

The largest increases occurred in construction and in the metals, engineering and vehicles group of industries. There were reductions in coal mining, agriculture, cotton, railways, shipbuilding and ship repairing.

On April 11, there were 391,000 persons registered as being completely unemployed; 10,000 temporarily out of work. Between March 14 and April 11, unemployment fell by 22,000.

Moose Jaw Studies Older People's Needs

Delegates to three-day regional conference discuss flexible retirement, problem of the older worker, maintenance of economic security, health and welfare needs, preparation for retirement, and housing, recreational and educational needs

A three-day regional conference on the needs of senior citizens was held in Moose Jaw, Sask., on May 17, 18 and 19.

Under the general chairmanship of Judge Harold W. Pope, the delegates discussed such questions as flexible retirement, the problem of the older worker, maintenance of economic security, preparation for retirement, health and welfare needs, and housing, recreational and educational needs.

The conference was arranged by a planning committee under the leadership of Dr. Fred C. Heal, a local physician, and Mrs. Kay Larter, social worker, chairman and secretary, in co-operation with the Moose Jaw Ministerial Association. Acting as consultant was Miss Lola Wilson, Director of the Saskatchewan Government's study of the aged and long-term illness.

In the keynote address, Dr. Keith Stuart, Senior Medical Specialist, Ontario Department of Public Welfare, stressed that arbitrarily turning people out to pasture at a specific chronological age was both wrong and harmful to the individual and to society in general. He pointed out that some elderly persons could compete favourably with younger persons in doing heavy physical labour. Others could do many lighter jobs where painstaking and exacting care was needed. He thought such people should have the opportunity to work as long as they were capable and desirous of doing so.

Dr. Stuart said that Canada needed the skills of its older people and that it was a waste of valuable manpower to place persons on the retirement shelf when they still had skills and knowledge to contribute to the productive sector of society.

Wesley G. Bolstad, Budget Bureau, Saskatchewan Government, himself a young man, described as wrong the attitude of our society that idolized youth and relegated older persons to a low status. He stressed that many older people could make a significant contribution to society if given the opportunity.

Dr. Keith A. Yonge, Head of the Department of Psychiatry, University of Alberta, explained the need of the older person to be integrated with his environment.

A recent survey had shown that there were some 3,700 persons aged 65 or over in the city of Moose Jaw, approximately

11.3 per cent of the population compared with a provincial figure of 8.9 per cent and a national figure of 7.7 per cent. The 1956 Census had revealed a population of 8,284 persons aged 45 or over in Moose Jaw.

It was obvious from the large attendance, intense interest, and determination of the delegates that knowledge of these statistics had provided an impetus to positive action on behalf of older persons in the Moose Jaw area.

The social and economic problem of the older worker was introduced by Len Douse, Chief, Division on Older Workers, Civilian Rehabilitation Branch, Federal Department of Labour. He outlined the complexities of the problem and described the Minister of Labour's campaign to create a more favourable employment climate for older workers. He pointed out that efforts by local officials of the National Employment Service to persuade employers to raise or remove unnecessary age barriers in hiring were having favourable results. At the same time, the Department of Labour was carrying out a continuing educational program and developing research and study into many aspects of the problem. As a result of these joint efforts, Mr. Douse explained, considerable interest in finding ways and means of minimizing the problem was becoming evident among employers, organized labour, and the public generally. He stressed the need for community action in this field.

The last day of the conference was held under the auspices of the Ministerial Association of Moose Jaw at their fifth annual Pastoral Clinical Institute under the chairmanship of Rev. H. E. Fennell, Hospital Chaplain, Moose Jaw Presbytery, the United Church. Principal speakers at this session were Rev. Aubrey W. Ingram, Associate Pastor, Zion Church, Moose Jaw, and Rev. H. G. Tuttle, Secretary, Department of Pensions, United Church of Canada, Toronto.

The Moose Jaw Regional Conference provided an outstanding example of the activity that can be stimulated by community co-operation in dealing with a social problem. As a result of the deliberations, a continuing committee is being established to find ways and means of setting in motion the activities suggested at the conference.

U.N. Commission on Status of Women

At 14th session, held in Buenos Aires in April, discusses several aspects of question of improvement of economic opportunities for women: equal pay for equal work, vocational training for women, women in the Civil Service, retirement age

At its 14th session, held in Buenos Aires, Argentina, March 28 to April 14, the United Nations Commission on the Status of Women discussed several aspects of the question of the improvement of economic opportunities for women.

Equal Pay for Equal Work

A representative of the International Labour Organization reported that between January 1, 1958 and February 1, 1960, eight countries had ratified the Convention concerning equal remuneration for men and women for work of equal value, bringing to 32 the total number of ratifications. Peru was the last country to do so, having submitted ratification on February 1, 1960.

Despite widespread official acceptance of the principle of equal pay for equal work, the past decade has seen little narrowing of the differential between the wages of men and women, she said. Further study and action was urged in relation to factors that contribute to the lower level of women's wages. The factors underlined were the limited employment opportunities for women that result from social and economic circumstances, the frequent inadequacy of the vocational education for girls and a romantic and unrealistic attitude towards work on the part of large numbers of women.

Job evaluation is being used increasingly as a means of determining the rate for the job, but the Commission was reminded that job evaluation in itself is not the answer to the problem of equal pay for equal work. Without a diversified approach to the question through education and collective bargaining in situations in which women are employed, job evaluation might lead to such abuses as the classification of certain jobs as women's work and therefore subject to lower rates of pay.

Vocational Training

Several delegates stressed the importance of recruiting and training more women in technical occupations, and a resolution dealing with needed emphases in the vocational guidance and training of girls was adopted. It recommended that governments take all steps within their power to bring about a rapid and substantial improvement in the

vocational preparation, guidance and training of girls and women. The ILO was asked to give continuing priority to the question and to report to an early session of the Commission on the situation in the different countries as well as on its own work in this area.

Women in the Civil Service

In discussing a report on women in public services and functions, the Commission noted the similarity in the distribution of women in public services with that existing elsewhere in the labour force: the great majority engaged in clerical work and comparatively few in the higher levels of administration or the diplomatic service. The report revealed a continuing tendency in the public service to regard the traditional feminine occupations as offering the most suitable employment for women. Delegates agreed that, based upon custom rather than law, even in this present-day industrialized society, such traditional differences persist long past their usefulness. However, modern governments, with an ever-widening range of occupations within the scope of their jurisdiction, have a unique opportunity to pioneer in the utilization of womanpower. Governments were urged to give leadership in breaking down the barriers that prevent women's entry into fields that traditionally have been closed to them and that impede their opportunities for advancement. The Commission recommended that, with the increasing employment of married women in civil service positions, measures be taken to ensure that they be placed on a basis of equality with other employees.

Age of Retirement

A resolution was adopted inviting the ILO to make a study of the age of retirement for women and their rights to pension. The subject had been discussed at length in two previous sessions, but there had remained a difference of opinion on the question of whether the age of retirement for women should be the same as or lower than for men. It was hoped that further enquiry by the ILO might cast new light on the question.

50 Years Ago This Month

Royal Commission appointed to inquire into Canada's needs and equipment for industrial training and technical education. Minister of Labour recommends that Commission pursue its investigations in Canada, United Kingdom, Europe

As a sequel to a resolution regarding technical training introduced in the House of Commons in December 1909 (L.G., Jan., p. 50), an order-in-council was passed in June 1910 appointing a Royal Commission "to inquire into the needs and present equipment of the Dominion as respects industrial training and technical education, and into the systems and methods of technical instruction obtaining in other countries."

The commission consisted of a chairman, James W. Robertson, CMG., LL.D., Montreal, and six members: one from Sydney, N.S., one from Montreal, two from Toronto, one from Berlin, Ont., and one from Winnipeg.

The Minister of Labour recommended that the commissioners "be instructed and empowered to pursue their investigations at such localities as may appear necessary, in the Dominion of Canada, in the United Kingdom of Great Britain and Ireland, the United States of America, France, Germany, and, subject to the approval of the Minister, elsewhere on the continent of Europe."

The LABOUR GAZETTE of June 1910, in which the appointment of the commission was reported, said that that body was expected to "enter upon its labours" early in July, first touring Canada from coast to coast, then visiting the United States, and later the European countries mentioned. It was expected that it would take at least a year to finish its work.

Reporting on the progress of railway construction, the GAZETTE said that it was expected that in 1910 about 1,500 miles of new lines would be laid, which was about the same as in the previous year. It added that it was estimated that during the next five years about 7,000 miles of new lines would be completed and brought into operation.

The Canadian Northern Steamship service between England and Canada was opened on May 13, 1910, when the S.S. *Royal Edward* sailed from Avonmouth for Montreal.

The LABOUR GAZETTE's correspondent at Amherst, N.S., said in his report in the June issue: "The strike at Springhill is the one dark spot on the labour situation. It has now lasted for 10 months. The company is operating the mines with a working

staff of about 200 men, but the men only remain as a general rule for a few months." (L.G., Aug. 1959, p. 815) (This strike was destined not to end officially until May 27, 1911).

The GAZETTE's Toronto correspondent reported that the civic free labour bureau for finding work for the unemployed had ceased to function, "being no longer necessary under present conditions."

The same correspondent said that farm labour was in demand, and that the provincial Department of Colonization had reported the placing of 1,100 men so far that season, with applications for 300 more still on hand. But he added that "in view of the keen competition for their services from the manufacturers, who offered higher wages, it was difficult to induce immigrants to engage with farmers."

During the month of April 1910 a total of 48,267 immigrants arrived in Canada, compared with a total of 24,237 in April 1909. Of the immigrants who arrived in 1910, those who came by ocean ports numbered 27,824, while the remaining 20,443 came from the United States.

According to a report by the Department of the Interior, a total of 7,209 homesteaders took up land in the western provinces in April. Of this total, 4,240 settled in Saskatchewan, and of these, 1,360 came from various parts of Canada, 572 of them being already residents of Saskatchewan. Ontario contributed 429, Quebec 160, and Manitoba 156.

Of those who came from other countries to take up homesteads in Saskatchewan, 1,364 were Americans, 529 were English, 113 Scottish, and 41 were Irish.

The LABOUR GAZETTE reported that one of the acts passed at the previous session of the Legislative Assembly of Saskatchewan had been the Factories Act. This act, the GAZETTE said "forbids the employment of children under the age of 14 in factories, and the employment of youths between the age of 14 and 16 and of young girls between the age of 14 and 18 in dangerous and unwholesome establishments, a list of which is given in a schedule. Hours of labour for women, young girls and youths are limited to eight in any one day, and to 45 in any one week".

INTERNATIONAL LABOUR ORGANIZATION

44th Conference: Agenda and Delegation

Conference, which opened June 1, was to hold second discussions on two subjects with view to approving two international instruments. Canada, with 25-member delegation, among 80 ILO member countries represented at the annual meeting

Second discussions were to be held and draft instruments submitted on two subjects at the 44th International Labour Conference, in Geneva June 1 to 23. Canada was represented by a 25-member delegation.

Protection of workers against ionizing radiations, and consultation and co-operation between public authorities and workers' and employers' organizations at the industrial and national levels were the two subjects for second discussion. They underwent first discussions at the 1959 Conference.

First discussion was scheduled on "reduction of hours of work." The 1958 Conference held a general discussion on this subject.

Assistant Deputy Minister George V. Haythorne is head of the Canadian delegation to the Conference. Paul Goulet, Assistant to the Deputy Minister and Director of the ILO Branch, is the other Government delegate.

Stanley H. Knowles, Executive Vice-President of the Canadian Labour Congress, is the Worker Delegate; T. H. Robinson, Manager, Industrial Relations, Canadian International Paper Company, is the Employer Delegate.

Others making up the delegation are:

Substitute Government Delegates: Max Wershof, Q.C., Ambassador and Permanent Representative of Canada to the European Office of the United Nations; C. Rhodes Smith, Q.C., Chairman, Canada Labour Relations Board.

Advisers to Government Delegates: Dr. M. E. Andal, Chief, Production Section, Economics Division, Department of Agriculture; A. E. Gotlieb, Canadian Permanent Mission to the European Office of the United Nations; John Mainwaring, Canadian Labour Attaché, Canadian Embassy, Brussels, Belgium; R. P. Opie, Adviser on House Construction, Central Mortgage and Housing Corporation; H. T. Pammatt, Executive Assistant, ILO Branch, Department of La-

bour (also Secretary to the delegation); Dr. E. A. Watkinson, Principal Medical Officer, Environmental Health and Special Projects Division, Department of National Health and Welfare.

Advisers to Worker Delegate: Kalmén Kaplansky, Director, International Affairs Department, Canadian Labour Congress; Roger Mathieu, President, Canadian and Catholic Confederation of Labour; Larry Sheffe, President, Canadian Council, United Automobile, Aircraft and Agricultural Implement Workers of America; H. A. Stockdale, Member, National Legislative Committee of the International Railway Brotherhoods, and Grand Lodge Representative of the Brotherhood of Railway Signalmen; H. F. Taft, Secretary, Vancouver, New Westminster and District Building Trades Council, and President of the British Columbia Provincial Council of Carpenters.

Advisers to Employer Delegate: M. Raymond Brunet, Ed. Brunet & Sons Limited, Hull, Que.; Arnold D'Amato, Manager, Quebec Division, Canadian Manufacturers' Association; M. Jean-Pierre Després, Director of Industrial Relations, Iron Ore Company of Canada; James A. Hobbs, Vice-President (Personnel), Bell Telephone Company of Canada; H. Shoobridge, Manager, Personnel Department, Canadian Pacific Railway Company.

Assistant Secretary to the Delegation is Miss L. McColl, Annuities Branch, Department of Labour.

The agenda for the Conference is as follows:

1. Report of the Director-General.
2. Financial and budgetary questions.
3. Information and reports on the application of Conventions and Recommendations.
4. Protection of workers against ionizing radiations (second discussion).

ILO Activities in 1959-60

The International Labour Office sent technical assistance missions to 67 countries during 1959, registered 73 ratifications of Conventions from 28 member countries, and carried forward educational, research and other technical activities along a broad front, ILO Director-General David A. Morse stated in his report to the 44th International Labour Conference.

Important among new activities during 1959-60 was a decision by the ILO Governing Body to establish at Geneva an International Institute for Labour Studies. The Institute will bring together people with experience in labour problems from different countries for study and discussion of social and economic questions. The Institute, Mr. Morse said, will serve as an advanced staff college in the field of social and labour policy,

5. Consultation and co-operation between public authorities and employers' and workers' organizations at the industrial and national levels (second discussion).
6. Contribution of the ILO to the raising of incomes and living conditions in rural communities, with particular reference to countries in process of development (general discussion).
7. Reduction of hours of work.
8. Workers' housing.

Report of the Director-General

"No area of social policy seems to be more in need of and more open to constructive and co-ordinated national and international action" than questions relating to youth, according to the report presented to the Conference by ILO Director-General David A. Morse. The report is entitled "Youth and Work".

The report, based on information gathered from world-wide sources, examines a broad range of questions bearing on youth policy. "Young people," it says, "are coming to working age today in a world in which economic and social environment is being transformed.

"Tomorrow's industries and occupations will be quite different from those now familiar to us," Mr. Morse writes, "and the pattern of occupational opportunity for young people and the qualifications and skills required of youth will be altered beyond recognition."

Much has been done to improve the conditions in which young people live and work, the report says, but the use of child

dealing with matters within the competence and experience of the ILO.

During the period reviewed by Mr. Morse's report, the ILO also continued to amplify activities in a number of fields directly related to economic questions and accompanying social problems, including management development, workers' education, productivity improvement, rural development, labour-management relations, and a wide variety of projects in the manpower field.

In 1959, expenditure on ILO technical assistance projects implemented under the United Nations Expanded Program amounted to \$3,085,447, compared with \$3,160,000 in 1958. A total of 332 ILO experts were sent abroad on technical assistance projects in 1959, and a total of 274 fellowship grants and 206 awards made under the worker-trainee program.

Since its founding in 1919, the ILO has adopted 114 Conventions and almost 2,000 ratifications have been received.

labour is still prevalent in many parts of the world.

"National and family poverty are the root causes of child labour," writes Mr. Morse, "and until more is done to raise national incomes and family levels of living and to make compulsory education a social reality, children will be driven prematurely into the world of work and will be badly in need of protection from exploitation."

Like the population as a whole, the youth population is growing at an accelerated pace. The number of young people between 15 and 19 years of age will increase from 255 millions in 1955 to 332 millions in 1970. Because of their numbers, youth are more than ever at once an asset and a problem in economic planning and development.

The report asserts that, in order to free the potential of youth to its full usefulness and responsibility, much broader opportunities for education and training must be everywhere made available. In addition, adequate placement and guidance procedures must be developed and made available to all youth.

"Confronted with a kaleidoscopic picture of rapidly changing conditions and subject to the conflicting pressures influencing his occupational choice, every young person's greatest need is for guidance—which lies at the heart of the whole process of youth adjustment," Mr. Morse writes.

Consultation and Co-operation

Consultation and co-operation between public authorities and employers' and work-

ers' organizations at the industrial and national levels is the subject of a draft Recommendation that the Conference was to discuss.

The proposed text was drafted in accordance with the conclusions reached by the Conference last year on this question. It also took account of observations that have since been made by governments.

It provides that measures appropriate to national conditions should be taken to promote effective consultation and co-operation between public authorities and employers' and workers' organizations, as well as between these organizations, with a view to increasing the prosperity of the economy as a whole or individual branches thereof, improving conditions of work and raising the standard of living.

Reduction of Hours of Work

In 1958, the Conference had a general discussion on hours of work and expressed the view that the adoption of an international instrument on the reduction of hours of work should be considered.

Delegates to the 1960 Conference had before them a report prepared by the ILO and based on a questionnaire to governments. It says that replies indicate that there is "a large measure of international agreement on two points: on the one hand, the utility of completing the existing international instruments dealing with hours of work by at least one new instrument concerning the reduction of hours of work; and, on the other, the necessity for proceeding progressively with the reduction of hours of work."

A third point on which a considerable number of governments were agreed was that the "principle of the 40-hour week should be maintained in the elaboration of any standards concerning the reduction of hours of work."

With regard to the form the proposed international instrument should take—Convention or Recommendation—the report

says that there was "a very large basis of agreement with regard to the preparation of a Recommendation."

It is suggested that the instrument should have as its object:

(a) on the one hand, to indicate the standard of the 40-hour week as a social standard to be reached, by stages if necessary, and, on the other, to set a maximum limit to normal hours of work;

(b) to indicate practical measures for the progressive reduction of hours of work, taking into account the differing economic and social conditions in the different countries as well as the variety of national practices for the regulation of hours and other conditions of work; and,

(c) to outline in broad terms methods by which the practical measures referred to above might be applied.

On the basis of the replies received from governments, the report suggested that the proposed new instrument should lay down certain general principles. The most important among these is that normal hours of work should be "progressively reduced with a view to attaining the 40-hour week without any corresponding reduction in the real wages of the workers."

Where the normal working week exceeds 48 hours, steps should be taken to bring it down to this level without any corresponding reduction in the real wages of the workers.

In carrying out measures for progressively reducing hours of work, priority should be given to industries and occupations that "involve a particularly heavy physical or mental strain or health risks for the workers concerned."

Another suggested principle is that each member country of the ILO should "declare and pursue a national policy designed to promote by methods appropriate to national conditions and practice and to conditions in each industry the adoption of the principle of the progressive reduction of the normal hours of work."

Sixth Session, ILO Petroleum Committee

Free, vigorous and healthy trade unions can make an important contribution to good labour-management relations, to a policy of sound human relations in the petroleum industry, and to an improvement of social conditions generally in each country, the ILO Petroleum Committee* stated in its

*One of the ILO's industrial committees inaugurated in 1945 to deal with the particular problems of some of the most important international industries.

conclusions concerning trade unions organization reached at its sixth session, in Geneva from April 25 to May 6.

The meeting was attended by 180 delegates and technical advisers representing governments, employers and workers of 20 countries that are members of the Committee, and by 28 observers from a non-member country (the United Arab Republic), intergovernmental organizations, employers' and workers' international organ-

izations, and the International Co-operative Alliance.

Member countries represented were: Argentina, Austria, Brazil, Burma, Canada, France, Federal Republic of Germany, India, Indonesia, Iran, Italy, Japan, Mexico, The Netherlands, Peru, Turkey, United Kingdom, United States, U.S.S.R., and Venezuela.

The Canadian delegation comprised:

Government Delegates—Bernard Wilson, Director, Industrial Relations Branch, Department of Labour (head of delegation); and M. Spalding, Labour-Management Division, Economics and Research Branch, Department of Labour.

Worker Delegates—R. W. Slocombe, Oil, Chemical and Atomic Workers International Union, Sarnia, Ont.; and Gordon P. Wilkinson, Prairie Regional Director of Organization, Canadian Labour Congress, Regina.

Employer Delegates—R. M. Clifford, Manager, Employee Relations Department, Texaco Canada Limited, Montreal; and Ronald S. Ritchie, Manager, Employee Relations Department, Imperial Oil Limited, Toronto.

R. F. Hinton, Manager, Personnel and Industrial Relations, Shell Oil Company of Canada Limited, Toronto, was adviser to the employer delegates.

Trade Union Organization

Recognizing that the determination of the aims and purposes of trade unions was a matter for them to decide within the framework of their own rules, the Committee stressed that the usual objectives of free trade unions were the establishment of satisfactory wages and conditions of employment, and the general well-being of their members, including the provision of union sickness, accident and strike benefits or such other benefits as might be determined.

These objectives conform with the spirit of the provisions of the Freedom of Association and Protection of the Right to Organize Convention of 1947 and the Right to Organize and Collective Bargaining Convention of 1948.

The Committee emphasized the vital importance of trade union members' being able to meet freely and without hindrance outside working hours.

Account should be taken in collective negotiations between employers and trade unions of the desirability of payment for time devoted during working hours to participate on behalf of the unions in joint labour-management meetings, as well as to grant leave of absence to carry out union work, the Committee said.

The Committee also called attention to the importance of workers' education to

enable them to carry out their trade union duties efficiently. This education is primarily a matter for the trade unions.

The ILO should play an important part in this field in the petroleum industry, particularly in the less developed regions, by organizing lecture courses and seminars, by establishing fellowships and by encouraging the distribution of information, teaching materials and documents for educational purposes for the workers.

Effective Employer-Employee Communications

The Committee noted that effective employer-employee communications were of the utmost importance in improving human relations. It pointed out that although the primary responsibility for ensuring effective communication practices was the employer's, and should be recognized as such by him, trade unions and governments could play an important part in encouraging and promoting sound communication methods.

According to the Committee, among the most important aims in the communications program were:

- The fostering of an atmosphere of co-operation between management and workers
- The development of a sense of the community within the undertaking
- The conveyance to employees of a realization of the social purpose of the activities of the undertaking and industry
- The ensuring that employees have a clear understanding of their rights, duties and responsibilities
- The heightening of the feeling of importance and the degree of interest and pride of employees in their jobs
- The bringing of grievances quickly to the attention of management
- The dispelling of rumours that can create a climate of uncertainty and insecurity in the undertaking
- The bringing of the aims and plans of the employer to the attention of workers and the opinions and ideas of workers to the attention of the employer.

The Committee pointed out that good human relations could be established only on a foundation of good basic terms and conditions of service.

Other Decisions

The Committee also adopted resolutions concerning studies to be undertaken by the ILO and containing suggestions for the agenda of its next session.

In a resolution adopted by 54 votes to 42, with 15 abstentions, the Committee invited the ILO Governing Body to draw the attention of the International Labour Conference at its 44th Session to the great interest that the workers in the petroleum industry have in the question of the reduction of the hours of work without loss of wages.

TEAMWORK in INDUSTRY

Among the 34 towns and cities currently practising joint consultation in Canada, the city of London is noteworthy for the extent to which it is utilizing co-operation between unions and management to promote maximum efficiency in the administration and operation of its community services. At present there are three labour-management committees functioning full time: at City Hall, in the Works Department, and in the Fire Department.

Credit for the longest history goes to the City Hall committee, which was founded in 1950. Its membership, totalling 19, includes union and management representatives from eight departments (treasurer's, welfare, assessment, engineer's, health, planning, clerk's and architect's), the heads of purchasing and personnel, and a representative from city council.

According to personnel director William J. Anthony, the committee has proposed and initiated projects for the curtailment of abuses of sick leave and absenteeism, the setting up of more efficient working and operating relationships between departments, and the introduction of standardization to reduce the costs of administration and purchases.

Its main advantage, Mr. Anthony thinks, is that "it has served as a most reliable and practical sounding board for employee thinking concerning the civic administration, its working relationships and conditions."

The city's second committee was established in 1958 for the outside shops and services branch of Works and Engineering. Its 1959 chairman was Stanley G. Ball, who is the works department's personnel supervisor.

Two of the committee's outstanding accomplishments are the adoption of: (1) a job promotion system wherein candidates' qualifications are assessed on a point basis and evaluated jointly by the personnel director and a union representative, and (2) a drivers' merit plan, which has reduced accidents to such an extent that in 1959 insurance claims amounted to only \$652.80, although the works department operates 78 vehicles.

Mr. Ball stated that no subjects are barred from committee meetings. "Despite this freedom," he adds, "neither management

nor the union has ever felt that its power was being usurped through co-operation."

Another member, James Ackworth, President of Local 107, London Civic Employees Union, praised the way in which joint consultation has succeeded in giving cohesion and direction to the big, sprawling, 400-man works department. "I know that without it there would be a huge gaping hole in our organization," he declared.

The London Fire Department's committee convened for the first time in September 1953, and has been meeting regularly ever since.

Valuable time has been saved through the process of ironing out differences at labour-management meetings prior to putting recommendations before city council. There is also a unanimous feeling among members that labour and management representatives have pooled efforts to better living and working conditions within the Department, and to improve fire-fighting techniques and over-all efficiency.

Strong evidence of city council's interest in the committee is demonstrated by the fact that council is represented on the LMC by London's Mayor J. Allan Johnston and Alderman W. C. B. Howard.

Fire Chief Milton C. Mathers said of joint consultation: "This type of negotiation makes for much better relations between union and management... Any fire department which doesn't have a labour-management committee is missing the boat."

Edwin Hothersall, Secretary of Local 142, International Association of Firefighters, expressed the view that the committee provides union and management with the opportunity to look at each other's problems.

Mayor Johnston stated that he has been impressed with the results obtained through the work performed by the three committees.

"In reviewing the period during which I have been closely associated with this important phase of the city's work," he declared, "I know that the best interests of taxpayer and citizen, of officials elected and appointed to manage the corporation's affairs, and of all employees, have been well served by these labour-management committees."

Establishment of Labour-Management Committees is encouraged and assisted by the Labour-Management Co-operation Service, Industrial Relations Branch, Department of Labour. In addition to field representatives located in key industrial centres, who are available to help both managements and trade unions, the Service provides various aids in the form of booklets, posters and films.

INDUSTRIAL RELATIONS AND CONCILIATION

Certification and Other Proceedings before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during April. The Board issued two certificates designating bargaining agents, ordered one representation vote, granted four requests under Section 61 (2) of the Act for review of earlier decisions and rejected one such request. During the month, the Board received 11 applications for certification, four applications for revocation of certification and allowed the withdrawal of three applications for certification.

Applications for Certification Granted

1. International Union of Operating Engineers, Local 882, on behalf of a unit of stationary engineers and firemen employed by the Saskatchewan Wheat Pool in the operation of driers at the company's No. 2 Elevator, Ballantyne Pier, Vancouver (L.G., Apr., p. 369).

2. National Association of Broadcast Employees and Technicians, on behalf of a unit of operators, announcers and traffic director employed by Radio Station CHVC Limited, Niagara Falls, Ont. (L.G., May, p. 465).

Representation Vote Ordered

Truck Drivers, Dairy Workers, Warehousemen and Auto Service Employees Union, Local 998 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicant and intervener, The Newfoundland Labourers' Union, applicant and intervener, and Western Terminals Limited, Corner Brook, Nfld., respondent (L.G., Apr., p. 369 and May, p. 465). The Board directed that the names of both applicants be placed on the ballot (Returning Officer: W. L. Taylor).

Requests for Review under Section 61(2) Granted

1. Local 13946, District 50, United Mine Workers of America (formerly Local 139-G,

United Construction Workers' Division of District 50, United Mine Workers of America), applicant, and the Central Mortgage and Housing Corporation, respondent (Benny Farm Housing Project, Montreal) (L.G., May, p. 467). The Board issued an amending certificate changing the name of the certified bargaining agent.

2. Local 13946, District 50, United Mine Workers of America (formerly Local 139-J, United Construction Workers' Division of District 50, United Mine Workers of America), applicant, and the Central Mortgage and Housing Corporation, respondent (Villey Terrace Project, Montreal) (L.G., May, p. 467). The Board issued an amending certificate changing the name of the certified bargaining agent.

3. National Union of Operating Engineers of Canada, Local 14850, District 50, United Mine Workers of America (formerly National Union of Operating Engineers of Canada, Local 850, United Construction Workers' Division of District 50, United Mine Workers of America), applicant, and the National Harbours Board, respondent (refrigeration plant, Montreal) (L.G., May, p. 467). The Board issued an amending certificate changing the name of the certified bargaining agent.

4. National Union of Operating Engineers of Canada, Local 14850, District 50, United Mine Workers of America (formerly National Union of Operating Engineers of Canada, Local 850, United Construction Workers' Division of District 50, United Mine Workers of America), applicant, and the Central Mortgage and Housing Corporation, respondent (Benny Farm Housing Project, Montreal) (L.G., May, p. 467). The Board issued an amending certificate changing the name of the certified bargaining agent.

This section covers proceedings under the Industrial Relations and Disputes Investigation Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board, and the Industrial Relations Branch of the Department.

Request for Review under Section 61(2) Rejected

Canadian Brotherhood of Railway, Transport and General Workers, applicant, Kingcome Navigation Company Limited, Vancouver, respondent, and the Seafarers' International Union of North America, Canadian District, intervener (unlicensed personnel) (L.G., May, p. 467). The Board decided that it was not prepared to reopen the decision in the matter at this time.

Applications for Certification Received

1. The Commercial Telegraphers' Union, Canadian National System Division No. 43, on behalf of a unit of telegraph operators employed by the Canadian National Telegraph Company at Summerside, P.E.I. (Investigating Officer: A. B. Whitfield).

2. International Longshoremen's and Warehousemen's Union, Local 505, on behalf of a unit of longshoremen employed by the Pacific Stevedoring and Contracting

Co. Ltd. in the loading and unloading of deepsea vessels at Prince Rupert, B.C. (Investigating Officer: D. S. Tysoe).

3. General Truck Drivers and Helpers Union, Local No. 31, and General Teamsters Union, Local No. 885, of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of employees employed by the Canadian Pacific Railway Company in its Merchandise Services Department (Investigating Officer: D. S. Tysoe).

4. Seafarers' International Union of North America, Canadian District, on behalf of a unit of unlicensed personnel employed aboard the M.V. *Tyee Shell* and the M.V. *Western Shell* operated on the West Coast by Shell Canadian Tankers, Limited (Investigating Officer: D. S. Tysoe).

5. The Line Drivers, Warehousemen, Pickup Men and Dockmen's Union Local

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Industrial Relations Branch. The Branch also acts as the administrative arm of the Canada Labour Relations Board, in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certificates given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to

the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of agreements—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of four officers resident in Vancouver comprises British Columbia, Alberta, and the Yukon and Northwest Territories; two officers stationed in Winnipeg cover the province of Saskatchewan and Manitoba and Northwestern Ontario; four officers resident in Toronto confine their activities to Ontario; five officers in Montreal are assigned to the province of Quebec, and a total of three officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

No. 605 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of employees of D. S. Scott Transport Ltd. operating in and out of its Vancouver terminal (Investigating Officer: G. H. Purvis).

6. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed aboard vessels owned or operated by Continental Explosives Ltd., Vancouver (Investigating Officer: G. H. Purvis).

7. International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, Local 514, on behalf of a unit of employees of McCabe Grain Co. Ltd., employed in its feed and seed cleaning mills at Edmonton (Investigating Officer: G. H. Purvis).

8. Pacific Western Air Line Traffic Employees Association, on behalf of a unit of traffic department employees employed by Pacific Western Airlines Ltd., Vancouver Airport, B.C. (Investigating Officer: G. R. Currie).

9. National Association of Broadcast Employees and Technicians, on behalf of a unit of employees of the Kitchener-Waterloo Broadcasting Co. Limited, Kitchener, Ont. (Investigating Officer: A. B. Whitfield).

10. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed by Coast Ferries Limited, Vancouver (Investigating Officer: G. H. Purvis).

11. National Union of Operating Engineers of Canada, Local 14-850, District 50, United Mine Workers of America, on behalf of a unit on stationary engineers and helpers employed by the Canadian Broadcasting Corporation at Montreal (Investigating Officer: G. E. Poirier).

Applications for Revocation of Certification

1. The Packers Steamship Company Limited, applicant, and the International Longshoremen's and Warehousemen's Union, Local 509, respondent. The application was for the revocation of the certification issued by the Board on December 18, 1953 to the International Longshoremen's and Warehousemen's Union, Local 509, in respect of

a unit of coastwise longshoremen employed by the company at Vancouver (L.G. 1954, p. 247).

2. The Packers Steamship Company Limited, applicant, and the International Longshoremen's and Warehousemen's Union, Local 505, respondent. The application was for the revocation of the certification issued by the Board on April 8, 1954 to the International Longshoremen's and Warehousemen's Union, Local 505, in respect of a unit of coastwise longshoremen employed by the company at Prince Rupert, B.C. (L.G. 1954, p. 814).

3. The Packers Steamship Company Limited, applicant, and the Seafarers' International Union of North America, Canadian District, respondent. The application was for the revocation of certification issued by the Board on August 31, 1956 to the Seafarers' International Union of North America, Canadian District, in respect of a unit of unlicensed personnel employed aboard vessels operated by the company on the West Coast (L.G. 1956, p. 1270).

4. The Packers Steamship Company Limited, applicant, and the Canadian Brotherhood of Railway, Transport and General Workers, respondent. The application was for the revocation of certification issued by the Board on February 4, 1960 to the Canadian Brotherhood of Railway, Transport and General Workers, in respect of a unit of marine engineers employed aboard the motor vessels *Teco*, *P.W.* and *Cloverleaf* operated by the company on the West Coast (L.G., April, p. 367).

Applications for Certification Withdrawn

1. International Union of Operating Engineers, Local Union No. 115, applicant, and McNamara-Hislop (Joint Venture), Dawson Creek, B.C., respondent (L.G., March, p. 270).

2. International Association of Machinists, applicant, and Quebecair Inc., Rimouski, Que., respondent (guards) (L.G., May, p. 466).

3. National Association of Broadcast Employees and Technicians, applicant, and Canadian Broadcasting Corporation, respondent (janitors at Winnipeg) (L.G., May, p. 466).

An amendment to the Labour Relations Act of New Brunswick, which received Royal Assent on April 14, authorizes the Lieutenant-Governor in Council to appoint an alternate chairman to the Labour Relations Board. This provision will enable the Board to sit in two divisions, each to consist of either the chairman or alternate chairman and two other members representing employer and employees respectively. Each divisional branch will have the powers and duties of the full Board.

Conciliation and Other Proceedings before the Minister of Labour

Conciliation Officers Appointed

During April, the Minister of Labour appointed conciliation officers to deal with the following disputes:

1. Pacific Elevators Limited, Alberta Wheat Pool, United Grain Growers Ltd., Vancouver, and Local 882, International Union of Operating Engineers (Conciliation Officer: G. R. Currie).

2. The Valley Camp Coal Company of Canada Limited, Toronto, and Seafarers' International Union of North America, Canadian District (Conciliation Officer: F. J. Ainsborough).

3. Robin Hood Flour Mills Limited, Calgary, and Local 326, United Packinghouse Workers of America (Conciliation Officer: J. S. Gunn).

4. Trans-Canada Air Lines, Montreal, and Flight Engineers' International Association (Conciliation Officer: R. Duquette).

Settlements Reported by Conciliation Officers

1. Radio Laurentides, Inc. (Radio Station CKVL) St. Jerome, Que., and National Association of Broadcast Employees and Technicians (Conciliation Officer: Rémi Duquette) (L.G., May, p. 468).

2. British Columbia Telephone Company, Vancouver, and Federation of Telephone Workers of British Columbia (Clerical, Plant and Traffic Divisions) (Conciliation Officer: D. S. Tysoe) (L.G., May, p. 468).

3. Northwest Airlines, Inc. (transportation agents at Winnipeg and Edmonton) and Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (Conciliation Officer: J. S. Gunn) (L.G., May, p. 468).

4. Hill The Mover (Canada) Limited, Chilliwack, B.C., and General Truck Drivers and Helpers Union, Local 31 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Conciliation Officer: G. R. Currie) (L.G., Feb., p. 171).

5. Faraday Uranium Mines Limited, Bancroft, Ont., and International Union of Mine, Mill and Smelter Workers (Conciliation Officer: F. J. Ainsborough) (L.G., Dec. 1959, p. 1301).

Conciliation Boards Fully Constituted

1. The Board of Conciliation and Investigation established in March to deal with a dispute between United Grain Growers Ltd., Pacific Elevators Limited, Alberta Wheat Pool, Saskatchewan Wheat Pool and Burrard Terminals Limited, Vancouver, and Grain Workers Union, Local 333 of the International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America (L.G., May, p. 468) was fully constituted in April with the appointment of W. E. Philpott, Vancouver, as Chairman. Mr. Philpott was appointed by the Minister in the absence of a joint recommendation from the other two members, W. Scott Neal, Winnipeg, and J. R. St. Eloi, Vancouver, who were previously appointed on the nomination of the companies and Union respectively.

2. The Board of Conciliation and Investigation established in March to deal with a dispute between the Association of Lake Carriers (Scott Misener Steamships Limited, Upper Lakes Shipping Limited, N. M. Paterson & Sons Limited, Hall Corporation of Canada and Carryore Limited) and Seafarers' International Union of North America, Canadian District (L.G., May, p. 468) was fully constituted in April with the appointment of H. Carl Goldenberg, Q.C., Montreal, as Chairman. Mr. Goldenberg was appointed by the Minister in the absence of a joint recommendation from the other two members, Jean-Paul Cardinal, Q.C., and Bernard Boulanger, both of Montreal, who were previously appointed on the nomination of the Association and Union respectively.

Union membership declined in British Columbia in 1959, both in number and as a proportion of paid workers in the province, it is shown in the annual report of the B.C. Department of Labour.

Union membership dropped from the record high of 233,972 in 1958 to 219,279, a decline of about 6 per cent.

As a percentage of total paid workers, union membership fell to 48.2 per cent from 53.9 per cent in 1958.

LABOUR LAW

Legal Decisions Affecting Labour

N.B. Court enjoins peaceful picketing in illegal strike. B.C. court denies union's application for order directing Minister of Labour to take strike vote. Manitoba court declares road construction workers are not "building labourers"

New Brunswick Court of Appeal enjoins peaceful picketing; B.C. Supreme Court denies a mandamus order.

In New Brunswick, the Appeal Division of the Supreme Court found that peaceful picketing inducing an illegal strike with the purpose of forcing a company to recognize certain unions without previous certification procedure may be enjoined on the basis of conspiracy or combination to obtain a lawful object (the recognition of unions as bargaining agents) by illegal means (an unlawful strike).

In British Columbia, the Supreme Court held that a two-year collective agreement may be terminated at the end of one year according to Section 23 (2) of the B.C. Labour Relations Act with the consent of the Minister of Labour after the agreement has been in operation for eight months. However, a proviso in the agreement allowing the agreement to be reopened after one year insofar as the wages were concerned could not terminate the agreement when the parties failed to reach agreement and such proviso being repugnant to Section 23 of the Act did not affect the duration of the agreement.

In a declaratory judgment as to the meaning of the words "building labourers" in Part I of the Manitoba Fair Wage Schedule, the Manitoba Court of Queen's Bench held that the term did not include the employees of a construction company who were engaged in road, lane and sidewalk construction.

Supreme Court of New Brunswick . . .

. . . issues an injunction against peaceful picketing when strike illegal under Labour Relations Act

On March 23, 1960, the Supreme Court of New Brunswick, Appeal Division, dismissed an appeal against an injunction restraining all picketing at a Saint John construction site. The Court held that where

the strike was unlawful under the Labour Relations Act, peaceful picketing should be restrained on the ground of conspiracy when several persons combine to obtain a lawful object by unlawful means.

In July 1958, Foundation Maritime Limited, under contract with the Department of Public Works of Canada, was engaged in the construction of a wharf at Saint John, N.B. Although their unions were not certified as bargaining agents, the representatives of the International Brotherhood of Teamsters; the International Hod Carriers', Building and Common Labourers' Union of America; and the International Union of Operating Engineers requested the company to recognize them as representing the units of the company's employees and to bargain collectively with a view of entering into collective agreements. The unions asked for recognition claiming more than 50 per cent of the workers as their members. The company refused to recognize the unions until they had obtained certification under the Labour Relations Act, and insisted that all negotiations would have to be conducted through the Saint John Builders Exchange, an employers' organization, of which the company was a member.

As a result pickets were placed on the sites where the construction was in progress and the placards which the workmen were carrying read "Engineers, Teamsters and Labourers on strike against Foundation Maritime Limited".

The picketing continued from July 23 until July 26, 1958, when the unions were served with an interim injunction order restraining all picketing. On July 30, 1958, the order was directed to continue until the trial (L.G., June 1959, p. 616).

The Court of Appeal, after having reviewed evidence relating to the picketing, did not find any evidence of threats or violence to persons attempting to pass pickets.

This section, prepared by the Legislation Branch, reviews labour laws as they are enacted by Parliament and the provincial legislatures, regulations under these laws, and selected court decisions affecting labour.

Section 1 (p) of the Labour Relations Act provides that "strike" includes the cessation of work or refusal to work or to continue to work by employees in combination or in concert or in accordance with a common understanding.

There was no evidence that any meeting of employees of the company had been held or that any vote had been taken to authorize a strike. Also, no notice of any strike was given to the company. In the opinion of the Court, however, it was clear that there was a strike, within the meaning of the Act, by some of the employees, and that it had been promoted by the individuals named in the action at bar with the object of compelling the company to recognize as bargaining agents the unions represented by these individuals without compliance with the provisions of the Act respecting certification. The result of the strike and picketing was that work completely ceased and the company undoubtedly suffered damages.

Sections 22 (1) and 23 of the New Brunswick Labour Relations Act read:

- (i) Mixing mortar or
 - (ii) Assisting mechanics in the setting of cut stone, terra-cotta, tile and marble or assisting Sheet Metal Journeymen.
- S. 22 (1) No employee in a unit shall strike until a bargaining agent has become entitled on behalf of the unit of employees to require their employer by notice under this Act to commence collective bargaining with a view to the conclusion or renewal or revision of a collective agreement and the provisions of Section 20, or as the case may be, have been complied with.
- S. 23 A trade union that is not entitled to bargain collectively under this Act on behalf of a unit of employees shall not declare or authorize a strike of employees in that unit.

Since at the time of the strike no union had been certified under the Act as bargaining agent for any of the employees, the strike was unlawful. The Act provides penalties for employees striking or union representatives authorizing strikes under such circumstances.

The trial judge, in reaching the conclusion that the company was entitled to damages and to an injunction against picketing, based his judgment on the ground of intimidation by pickets to employees reporting for work; tortious interference with contractual relations between the company and its employees and also between the company and the Department of Public Works; and on the assumption that any picketing in furtherance of an unlawful strike may be restrained.

The Court of Appeal held that there was no evidence of intimidation of employees to abstain from working. Although the strike was unlawful, the picketing was peaceful. The Court of Appeal also held that the unions' interference with contractual relations between the company and the Department of Public Works was not proven. Also, there was no evidence that by stopping work the employees broke contracts of employment.

The issue of the case depended on whether or not all picketing may be restrained solely on the ground that the strike, in furtherance of which it is being done, is unlawful under a statute. This issue has been before courts in Canada on a number of occasions.

In *Oakville Wood Specialties Ltd. v. Mustin* (L.G. 1951, p. 249); *Dabous v. Thibault* (1954) O.W.N. 742; and in *Arsens et al. v. Hotel & Restaurant Employees Union Local 459 et al.* (B.C. Court of Appeal, unreported but referred to in Carrothers' *The Labour Injunction in British Columbia* at p. 57), injunctions against picketing were granted.

On the other hand, in *General Dry Batteries of Canada Limited v. Brigenshaw* (L.G. 1952, p. 188); *Peerless Laundry and Cleaners Ltd. v. Laundry & Dry Cleaning Workers Union* (L.G. 1952, p. 1488) and *Coles v. Cunningham* (L.G. 1954, p. 413), it was held that the plaintiff was not entitled to an injunction where the only ground for the application was that the strike was unlawful under a statute.

The Court noted that in none of the cases in which injunctions were granted restraining all picketing (including peaceful picketing) was the judgment based on conspiracy on the part of defendants, which, in the Court's opinion, is a sounder ground. The company in the case at bar did not specifically plead a conspiracy or combination by the defendant union members to promote an unlawful strike, but in the opinion of the Court, a good cause of action has been established on the allegation contained in paragraph 10 of the statement of claim, which reads: "In the alternative the defendants wrongfully and maliciously conspired and combined amongst themselves to procure, cause and induce the employees of the plaintiff . . . to leave its service and to abstain from continuing therein."

After examining such authorities as *Mogul Steamship Co. v. McGregor* (1892) A.C. 25; *Allen v. Flood* (1898) A.C. 1; *Quinn v. Leatham* (1901) A.C. 495; *Ware and DeFreville Ltd. v. Motor Trade Association* (1912) 3 K.B. 40; *Sorel v. Smith* (1925) A.C. 700; and *Crofter Hand Woven Harris Tweed Co. v. Veitch* (1942) A.C.

435, the Court came to the conclusion that if several persons conspire together or combine in doing acts which injure another in his trade or business, even though the acts would not be unlawful if done by an individual, such other has a good cause of action at common law against such persons acting concertedly when the purpose of their acts is not the lawful advancement of their own interests or if they are using unlawful means to accomplish their object.

In an action based on conspiracy the Court did not think it necessary for the plaintiff company to prove that actual breaches of contracts took place. In the case at bar the company's employees were induced to abstain from work, which, the Court held, was sufficient.

In the opinion of the Court the union members named in the action and those who acted as pickets combined in inducing the company's workers to refrain from working. Their object was to obtain recognition of the unions without certification, which, in itself, was not unlawful, but the means they used, a strike in violation of the Labour Relations Act, was; and they had, therefore, no defence to the action. Any act done in furtherance of the unlawful means should be restrained. The company was therefore entitled to an injunction against picketing in addition to damages.

Respecting damages the Court felt the damages as assessed by the trial judge were too high and reduced them from \$22,712 to \$12,500. *Gagnon et al and Foundation Maritime Limited*, Supreme Court of New Brunswick, Appeal Division, March 23, 1960, unreported.

British Columbia Supreme Court . . .

. . .refuses union application for 'mandamus' order directing Minister of Labour to take strike vote

On January 29, 1960, Mr. Justice Norris of the Supreme Court of British Columbia, in *mandamus* proceedings, dismissed a union's application for an order directing the Minister of Labour to appoint a person to conduct the taking and counting of a strike vote of a company's employees. The Court held that in a collective agreement valid for two years, a proviso allowing the agreement to be reopened within one year with respect to wages was repugnant to Section 23 of the Labour Relations Act and therefore without effect.

On October 1, 1958, the Western District Diamond Drillers Union, Local 1005 of the International Union of Mine, Mill and Smelter Workers (Canada) entered into a collective agreement with Boyles Bros. Drilling Company Limited effective for two

years. However, Article II, dealing with the term of agreement, contained a proviso that the agreement could be reopened after one year of its operation with respect to wages only and accordingly either party could, within a period of two months immediately preceding October 1, 1959, by notice, require the other party to commence collective bargaining with respect to wages only.

In due time, the union gave the company the required notice and the collective bargaining with respect to wages started but the parties could not reach agreement. The union then applied under Section 26 for the appointment of a conciliation officer, a request which was complied with by the Minister of Labour. The conciliation officer's report to the Minister was adverse to the union's request. A copy of the report was forwarded to the union with copies of Sections 40 (notice of the acceptance or rejection of the recommendations of the conciliation officer), 50 (pre-strike vote), 51 (pre-lockout vote) and 52.

Section 52 reads: "At the request of either party to a dispute, the Minister shall appoint a person or persons to conduct the taking and counting of the vote to be taken under Section 50 or 51 if the request is made to the Minister by either party at the time that the decision of that party is given to the Minister under Section 40."

On October 30, 1959, the union wrote the Minister advising him that the members of the local union rejected the conciliation officer's report and asked that a government-supervised strike vote of the employees be taken and that the Minister notify the union of the time and day of the vote.

On November 2, 1959, the Minister wrote the union refusing to grant the vote, on the ground that the fact that "the agreement may be opened 'for the purpose of negotiating wages on October 1, 1959' does not terminate that agreement". He also quoted Section 46 (2) of the Act: "No employee bound by a collective agreement, whether entered into before or after the commencement of this Act, shall strike during the term of the collective agreement, and no person shall declare or authorize a strike of such employees."

Then the union applied to the Court for an order by way of *mandamus* directed to the Minister of Labour to appoint a person or persons to conduct the taking and counting of a strike vote in accordance with the provisions of Sections 52 and 50 of the Labour Relations Act on the ground that the Act requires the Minister of Labour to direct the taking of a strike vote; that the collective agreement of October 1, 1958,

had terminated; that the Minister of Labour had erred in holding that the collective agreement was still in force; that the Minister by acting on the application of the union in appointing a conciliation officer, and by sending to both parties the report of the conciliation officer, and by advising the union that a strike vote could be taken on a certain date, was estopped from asserting that the collective agreement was still in force.

Further, the union argued that the agreement had been terminated or alternatively that the parts dealing with wages had been terminated and that the agreement was severable in that respect and that the provisions of the Act relating to collective bargaining, strike votes and strikes are applicable *pro tanto* to the parts of the agreement relating to wages.

Counsel for the Minister asked the Court to rule on the substance of the application, and in answer to the union's submission, presented the following arguments.

The collective agreement deals specifically with termination of the agreement and these requirements have not been met. The requirements in the proviso in Article II as to notice to commence collective bargaining take the parties outside the operation of Section 17 of the Act (notice to commence collective bargaining at least two months before the expiry of the agreement), and by allowing a proper notice for collective bargaining to be given up to September 30, 1959, such requirements refute the suggestion that the agreement would terminate on October 1, 1959.

Further, counsel for the minister asserted that the interpretation suggested by the union would frustrate the two-year provision of the validity of the agreement; that the parties were not locked into a two-year agreement because they could avail themselves of the provisions of Section 23 (2) of the Act; that notwithstanding the fact that the wage matter was in suspense the agreement was still a collective agreement in force, and Section 46 of the Act, forbidding strikes during the life of the agreement, applied.

Mr. Justice Norris, dealing with the case, noted that Sections 19 (a), 23, 46, 47 and 48 of the Act show that the Legislature endeavoured to bring about a measure of stability in collective agreements, particularly as to their duration and termination.

Section 23 of the Act in subsection (1) provides that agreements for less than one year shall be deemed to be for one year from the effective date thereof and provides that only with consent of the Minister of Labour may they be terminated within the

one-year period. Subsection 2 deals with agreements which are for terms of more than one year and provides that such may be terminated after the agreement has been in operation for eight months and then only with the consent of the Minister, termination to take place on the anniversary date and after two months' notice to the other party of the agreement. Ss. (3) of Section 23 provides: "Parties at the time of making a collective agreement for more than a year may specifically, by agreement therein, exclude the operation of subsection (2), and in that event subsection (2) shall not be applicable to that collective agreement."

Mr. Justice Norris noted that there was nothing in the collective agreement in the case at bar which specifically excluded the operation of subsection 2. However, the application had not been made to the Minister under that subsection.

Section 23, aiming at bringing about stability in the duration of agreement, sets out the conditions under which labour agreements may be terminated. There is nothing in this section or elsewhere in the Act that provides for the termination of agreements in part. The section is intended to restrict freedom of contract with relation to the duration and termination of collective agreements.

Mr. Justice Norris concluded that the proviso in Article II of the collective agreement was repugnant to Section 23 of the Act and must give way to the provisions of that section and was therefore without effect. The union's application for a *mandamus* order was dismissed. *Western District Diamond Drillers Union, Local 1005, of the International Union of Mine, Mill and Smelter Workers (Canada) and Minister of Labour of British Columbia*, C.C.H. Canadian Labour Law Reporter, Para. 15,278.

Manitoba Court of Queen's Bench . . .

. . . holds road construction workers not 'building labourers' within meaning of Fair Wage Schedule

On December 11, 1959, in the Manitoba Court of Queen's Bench, Mr. Justice Freedman issued a declaration that the employees of two construction companies who were engaged in road, lane and sidewalk construction were not "building labourers" within the meaning of Part I of the Fair Wage Schedule under the Manitoba Fair Wage Act.

The declaration resulted from an application of two companies engaged in the construction of roads, lanes and sidewalks and the installation of sewer and water pipes. The companies argued that the employees did not perform work relating to the con-

struction of buildings and should not be classified as "building labourers" as defined in category No. 8 of Part I of the Schedule, as follows:

8. Building labourers—

- (a) Skilled labourers—
 - (i) Mixing mortar or
 - (ii) Assisting mechanics in the setting of cut stone, terra-cotta, tile and marble or assisting Sheet Metal Journeymen.
- (b) General Building Labourers
- (c) Sewer and Underground Construction Work
 - (i) Caisson Workers
 - (ii) Labourers
 - (iii) Pipe Layers
 - (iv) Tunnellers
 - (v) Terrazzo and oxychloride Workers, or any other substitute materials requiring the use of a ((rubbing) Base Machine or Machines
 - (a) Base Machine Rubbers (Wet and/or Dry)—Journeymen
 - (b) Machine Rubbers (Wet).

The Department of Labour submitted that the term "building labourers" should be given a broad interpretation so as to include persons engaged in road construction, contending that in general usage the term was applied to persons employed in building roads as well as to persons engaged in the construction of a building.

Mr. Justice Freedman rejected this argument, pointing out that the subdivisions referred to above did not deal with workers normally employed in road construction such as dragline, shovel, crane and tractor

operators. If the phrase "building labourers" were to be given the broad interpretation contended for by the Department of Labour, then these types of workers would surely have been included in category No. 8. They were not included, he said, for the simple reason that category No. 8 was intended to cover only persons engaged in the erection or construction of buildings in the ordinary sense of the term. While subdivision (c) dealt with sewer and underground construction work, this applied to work carried on in connection with or part of the construction of a building.

The Judge also pointed out that Part II of the Schedule, which all parties agreed did not apply to the applicants, dealt specifically with dragline, shovel and crane operators and other workers normally engaged in road construction. This, he said, strengthened the argument that the term "building labourers" as defined in category No. 8 did not cover workers engaged in road construction.

Accordingly, Mr. Justice Freedman declared that, while engaged in excavating, grading and levelling earth, pouring concrete for roads, lanes and sidewalks, and installing sewer and drain pipes, the applicants were not governed by the provisions of Part I, Category No. 8, of the Fair Wage Schedule. *Re Fair Wage Act: Simkins Construction Co. Ltd. and Harris Construction Co. Ltd. v. Reginam*, (1960) 31 W.W.R., Part 3, p. 123.

Recent Regulations, Federal and Provincial

Safety and health rules for atomic energy workers issued by the Atomic Energy Control Board. Safety requirements for lumbering operations revised in Alberta

The Atomic Energy Control Regulations have been revised to include a section on health and safety. Among other requirements the new regulations set out the maximum permissible dose of ionizing radiation to which an atomic energy worker may be exposed; lay down requirements with respect to protective instruments and equipment, warning labels and signs, and records; and provide for a system of health supervision and inspection.

New safety regulations for lumbering operations issued by the Alberta Workmen's Compensation Board require employers to provide personal safety equipment for their employees.

In British Columbia, the regulations under the Boiler and Pressure Vessel Act were revised, making provision for an Advisory

Board, and the regulations of the Workmen's Compensation Board relating to protection against electric contacts were amended.

Other regulations deal with mine safety in Newfoundland, apprenticeship in the plastering trade in Alberta and the coverage of the Ontario Trade Schools Regulation Act.

FEDERAL

Atomic Energy Control Act

The Atomic Energy Control Regulations, made under the Atomic Energy Control Act, approved by P.C. 1960-348, and gazetted April 13, contain new provisions dealing with health and safety precautions for persons exposed in the course of their work to radioactive substances in excess

of specified quantities. The new regulations replace the regulations approved by P.C. 1954-1643.

Under the Act and regulations the Atomic Energy Control Board has maintained a strict control over the distribution and use of radioactive materials in Canada. It has been the practice of the Board, before permitting any person to obtain such materials, to satisfy itself that he has adequate facilities to handle the material requested and that his proposed operations will not cause a health and safety hazard. The Radiation Protection Division of the Department of National Health and Welfare advises the Board with respect to radiation hazards. This method of control will be continued. The new section on health and safety, which has been adopted following discussion with provincial health authorities through the Dominion Council of Health, establishes a standard as to the maximum dose of radiation that atomic energy workers and the public generally should be permitted to receive, and provides further means for ensuring that the operations of users of radioactive materials do not result in exposures above these limits.

The "prescribed substances" with which the regulations deal are uranium, thorium, plutonium, radioactive isotopes of other elements, deuterium and any substances containing any of these elements or isotopes. Appendix A of the regulations sets out "scheduled quantities" in microcuries of radioactive prescribed substances. A person whose regular business or occupation exposes him to quantities of radioactive prescribed substances in excess of the scheduled quantity is an "atomic energy worker". Appendix B sets out the maximum permissible dose of ionizing radiation expressed in rem (unit of measurement of the dose of ionizing radiation) to which an atomic energy worker may be exposed. These standards are those recommended by the International Commission on Radiological Protection.

Part VI of the regulations, entitled "Health and Safety Precautions," applies to persons who "deal in" prescribed substances. The term "deal in" includes produce, import, export, possess, buy, sell, lease, hire, loan, exchange, acquire, store, supply, operate, ship, manufacture, consume, use and dispose of. The regulations provide that no person shall deal in radioactive prescribed substances in such a way as to expose any atomic energy worker to ionizing radiation in excess of the maximum permissible dose or to expose any other person to ionizing radiation in excess of one tenth of that dose. A qualified medical

practitioner using radioactive prescribed substances for medical diagnosis, medical research or medical treatment is exempted, nor does this prohibition apply in relation to exposure to ionizing radiation "received by a person during emergency procedures undertaken to avert grave danger to life."

It is forbidden to employ any person as an atomic energy worker who is under 18 years of age or who is known to be pregnant or whose health is such that, in the opinion of "the health authority," employment as an atomic energy worker would be undesirable. The function of "health authority" will be carried out by a senior officer of the Medical or Biology and Health Physics Division of Atomic Energy of Canada Limited, a branch or division of a provincial health department concerned with radiation protection, or the Radiation Protection Division of the Department of National Health and Welfare, depending on the location.

No person shall use radioactive prescribed substances obtained under an order of the Board (the only way in which they can be obtained except in quantities specified in Part II of the Regulations and too small to be dangerous) for purposes or at places other than those specified in the order without further authorization from the Board.

A number of rules are set out to be followed by a dealer in radioactive prescribed substances in excess of the scheduled quantity.

In respect to his employees, he must arrange for every atomic energy worker to be given a medical examination of such nature and at such intervals as the Board may require on the advice of the health authority. He must also remove any employee from atomic energy work if the Board so advises.

He must follow procedures and techniques adequate to prevent exposure in excess of the maximum permissible dose. These procedures and techniques are not set out in the regulations, but recommended codes of practice drawn up by experts in Canada and other countries are available. He must comply with all general or specific procedures laid down or approved by the Board, or any special instructions issued by an "inspection officer". An "inspection officer" means a federal or provincial officer authorized by the Board to act as an inspector under these regulations.

Another provision requires dealers to provide such radiation detection and measuring instruments as the Board may require. It is the responsibility of the dealer to see that such instruments are available and are

used by every atomic energy worker under his control. Where any atomic energy worker may or is likely to receive a whole body dose of ionizing radiation at a rate in excess of 1.5 rem per year, monitoring films or other devices approved by the Board for recording cumulative exposure must be provided.

Warning labels and signs are to be placed on any container in which any radioactive substance in excess of the scheduled quantity is stored or used, together with information respecting the nature, quantity and date of measurement of the radioactive material. The above provision does not apply, however, to a laboratory or a factory container in which radioactive materials may be stored or used temporarily under the control of or in the presence of an atomic energy worker. Neither does it apply to a shipping container for radioactive materials labelled in accordance with the regulations of the Board of Transport Commissioners or other transportation authority, provided the shipping container is not the container in which the substance is stored or used.

Each area, room or enclosure in which radioactive materials are used in quantities having activity in excess of one hundred times the scheduled quantity, or where a person might, in a normally accessible place, receive a dose of 0.0025 rem in a hour, must be clearly marked with an approved radiation warning symbol and signs indicating the radiation level.

In addition to the records required under other Parts of the regulations, the dealer must keep adequate records showing (1) the quantities of radioactive prescribed substances produced or obtained by him and the orders under which they were produced or obtained; (2) the disposition of such substances; (3) the amount of exposure, as recorded by monitoring films or other devices, to which every atomic energy worker is subjected. These records are to be available to an inspection officer and to the health authority and may not be disposed of without the Board's authorization.

The reports of the medical examinations of the atomic energy workers must also be sent to or made available to the health authority.

If there is any loss or theft of radioactive materials in excess of ten times the scheduled quantity, a report must be sent to the appropriate inspection officer and health authority within 24 hours, and a complete report sent to the Board as soon as possible. The same procedure must be followed whenever an incident occurs leading to the exposure or suspected exposure of any

person to ionizing radiation in excess of five rem.

The Board may revoke or suspend any order when in the opinion of the Board there has occurred any failure to comply with its conditions or with the regulations. Further, failure to observe the provisions of the Act or regulations is an offence punishable by fine or imprisonment.

PROVINCIAL

Alberta Apprenticeship Act

The regulations under the Alberta Apprenticeship Act respecting the plastering trade were replaced by new provisions gazetted on March 31 as Alta. Reg. 98/60.

Under the new regulations persons with at least four years experience in the plastering trade prior to the date of publication of these regulations (March 31) may be granted a certificate of qualification without examination, upon submission of proof of efficiency. Applications must be submitted within 90 days, however. The regulations further provide that an apprentice who has failed to qualify for a completion of apprenticeship certificate since January 31, 1958 must do so before he may be granted a certificate of qualification.

A person engaged in the plastering trade who applies for a certificate of qualification after the 90-day period will be required to take an examination in order to establish his proficiency. A candidate who fails may be reexamined after six months. If he fails the second examination he may apply for apprenticeship training, in which case he will be given an appropriate standing by the Apprenticeship Board on the recommendation of the local advisory committee.

The qualifications for apprentices are unchanged. Applicants must be between 16 and 24 years and preferably not over 21 years and must have completed at least Grade 9 or its equivalent. As before, the Board may declare any other person eligible for apprenticeship on the recommendation of a local advisory committee.

The term of apprenticeship remains four years, including the three-month probationary period, with the usual exception for persons with previous experience or training in the trade.

The ratio of apprentices to journeymen is still one to three, with an employer who is himself a journeyman or who employs one journeyman again being permitted to hire one apprentice.

The provisions with respect to educational classes, practical training, annual certificates of progress and final certificates of qualification are the same as before except that an apprentice who has been granted a com-

pletion of apprenticeship certificate is now automatically eligible for a certificate of qualification without fee.

The minimum wage rates payable to apprentices in the plastering trade are also unchanged, ranging from 40 per cent of the prevailing journeyman's rate during the first six-month period to 90 per cent during the final year.

Alberta Workmen's Compensation Act

Safety regulations governing lumbering operations have been issued by the Alberta Workmen's Compensation Board effective May 1. The new regulations, Alta. Reg. 100/60, rescind Alta. Reg. 755/57 entitled "Safety Regulations Governing Logging, Sawmill and Woodworking" and apply to woods operations, the manufacture of lumber and the operation of sawing and planing mills, as did those rescinded.

The new regulations specifically state the responsibility of employers, supervisors and workmen.

Every employer is required to ensure, to the best of his ability, that all his workmen know and comply with these regulations and any other accident prevention regulations that apply to the operations under his control.

It is specifically stated as the responsibility of every supervisor and foreman that he shall see that the workmen under his supervision are not working in an unsafe manner or in unsafe circumstances.

Every workman shall use the safeguards, safety appliances or devices furnished for his protection and shall not use any equipment or behave in a manner such as to endanger himself or any other person.

It is a further responsibility of the employer and supervisor to see that all tools and equipment are maintained in safe working condition and that all working platforms are kept in good repair. Where working platforms are more than four feet in height, adequate hand rails are to be provided. Every employer is required to provide and maintain at each place where work is being performed an approved first aid kit.

Personal safety equipment not specifically dealt with in the previous regulations is now prescribed. Every workman is required to wear a safety hat when engaged in any activity where a hazard from falling objects exists. The safety hats are to be provided by the employer, and from November to March, a suitable winter liner for the safety hat is also to be provided. Approved eye protective equipment is to be worn by workmen handling material liable to injure or irritate the eyes, or engaged in any work in which there is an eye hazard from flying objects or injurious light or heat rays. This

equipment is also to be provided by the employer. Where an employer is required to provide protective equipment he may lay down terms of security or deposit against breakage or damage other than ordinary wear and tear.

As before, rules are set out dealing with woods operations such as falling, bucking, chain saw operation and yarding, decking and loading. All haul roads and private roads used for motor truck logging are required to be so constructed as to be safe and are required to be kept in a safe operating condition. When icy conditions exist, sanding of dangerous hills and curves is required.

All tractors working in the woods are required to be equipped with adequate steel guards for the protection of the driver. All trucks and trailers are required to conform to the Motor Vehicle Act regulations. Brakes are to be regularly and frequently inspected by a competent mechanic. Truck engines are not to be allowed to run idle in closed garages or other closed buildings unless provision is made to take care of exhaust fumes. A number of other requirements related to the specific uses of vehicles in woods operations are also set out.

As before, rules are set out governing the transportation of workmen by motor trucks or cars. It is now specifically provided that no explosive or flammable material other than the necessary fuel supply for the vehicle shall be transported in a vehicle transporting workmen.

Detailed safeguards are prescribed in regard to equipment used in sawmills. These include rules for the maintenance and guarding of saws, the safeguarding of conveyors, and approved methods of removing sawdust or shavings from pits or machines. A new section has been added setting out specific rules to make loads safe for piling and handling.

Another new provision has been added dealing with the powers of the inspector. Where an inspector observes the use of unsafe equipment or the existence of unsafe working conditions not specifically covered by these regulations, he may issue an order requiring the employer or operator to make such changes as are necessary to remove the hazards. An inspector is either a member of the Accident Prevention Department of the Workmen's Compensation Board or of the Factories Branch of the Department of Labour.

British Columbia Boiler and Pressure Vessel Act

British Columbia has issued Reg. 1/60 under the Boiler and Pressure Vessel Act, replacing previous regulations (L.G. 1957, p. 987).

Designated as Part I, the new regulation governs the design, construction, installation and inspection of boilers and pressure vessels. It was authorized by O.C. 2984 and gazetted January 14.

At the same time regulations governing low-pressure heating plants were issued (B.C. Reg. 2/60) designated as Part IV, approved by O.C. 2983.

Part I

Part I applies to all steam and hot water boilers, pressure vessels, heat exchangers, air receivers, liquid receivers, oil refineries, refrigerating plants, steam plants, steam processors, and any other pressure vessel, fitting or piping provided for by the Act. It does not cover a low-pressure boiler used to heat a building with less than four self-contained suites, a distribution main or service pipe regulated under the Gas Act, or a pipeline as defined in the Pipe-lines Act.

The codes that are to be followed are those previously specified and many of the additional rules prescribed in the regulations have been repeated, but there are some changes. Among these changes are the following:

Shop inspection is not now required for a low-pressure boiler with 30 square feet (formerly 50 square feet) of heating surface or less, a heat exchanger of the fin-tube type with 100 square feet of heating surface or less, or a hot water tank up to 24 inches in diameter.

The manufacturer or his agent is now specifically required to submit to the Chief Inspector for approval drawings and specifications of any fittings intended for use on a boiler, pressure vessel or pressure piping before it is sold or offered for sale in British Columbia.

Every welding procedure and performance test must comply with Section IX, "Welding Qualifications" of the A.S.M.E. Code or the A.S.A. Code for Pressure Piping.

Authority for approval in connection with certain matters and for the allotting of registration numbers is now vested specifically in the Chief Inspector.

When an inspection is being made, the owner or operator of a boiler or pressure vessel is required to provide the inspector with specified assistance. New provisions are incorporated to safeguard the inspector from hazards of steam, hot water or gas.

A new feature of the regulations is provision for an Advisory Board to be appointed by the Minister. It is to consist of nine members including the Chief Inspector (Chairman); the Assistant Chief Inspector (Vice-Chairman); two professional engineers representing manufacturers of

equipment governed by the Act; two representatives of the Canadian Welding Society, one of whom must have a welder's certificate; two first class engineers engaged in steam plant operation; and a representative of the Canadian Plumbing and Mechanical Contractors Association. The Board members are to be appointed for two years. The Board's functions will be to advise the Chief Inspector in connection with the qualifications and examination of engineers and welders; the review of evidence concerning the issue, cancellation, or suspension of certificates or permits; the review of technical evidence with respect to boiler or pressure vessel accidents; and appeals to the Minister from decisions of the inspectorate.

It is now specifically stated that every person who constructs, repairs, welds, installs, operates, uses, or transports a boiler, pressure vessel, refrigeration plant, or other equipment in contravention of the regulation is guilty of an offence. A further provision prohibits the issue of a certificate of inspection unless all requirements of the regulation have been complied with.

Part IV

The regulations governing low-pressure heating plants apply to all steam boilers operating at pressures not exceeding 15 p.s.i., and to hot water heating and hot water supply boilers operating at pressures not exceeding 160 p.s.i. or temperatures not exceeding 250 degrees Fahrenheit. Boilers of 3 horsepower or less in capacity, as well as several other categories of boilers and pressure vessels, are exempted.

A general requirement provides that no person may operate a boiler unless the owner has a certificate of inspection. Another general provision specifies that a welder may not do any welding, nor may a person employ a welder for work in connection with a boiler, pressure vessel or pressure piping, unless the workman has a valid welder's certificate.

Other sections deal with permits, installation of boilers, fittings, safety-valves and relief-valves, hot water supply boilers, controls, boiler rooms and contravention of the regulation.

British Columbia Workmen's Compensation Act

The British Columbia Workmen's Compensation Board has made Reg. 83/60 under the Workmen's Compensation Act relating to protection against electric contacts. Gazetted April 7, it supersedes Reg. 415/59 (L.G., March, p. 284), and was made effective from January 1, 1960.

As before, material may not be handled or equipment operated within 10 feet of

any energized electrical transmission or distribution system unless specified precautions are taken. The same precautions as were previously specified are required.

A new provision requires that when an assurance has been obtained from the person controlling the electrical system that the electrical conductors will be de-energized, effectively guarded against contact, displaced or rerouted from the work area, the assurance must be made known to all persons allowed in the area, as well as posted for inspection.

If the electrical system is not de-energized the watchman responsible for the movement of equipment must be provided with a positive signal which he must use in signalling the operator to stop his equipment.

Manitoba Workmen's Compensation Act

In Manitoba, the operation of board of school trustees was removed from the compulsory coverage section of the Workmen's Compensation Act by a regulation gazetted on April 16 as Man. Reg. 17/60.

The new provision makes it clear, however, that a school board may apply for voluntary coverage under Section 54 (1) of the Act. In such circumstances, the Workmen's Compensation Board may prescribe such terms and conditions as it deems proper.

Newfoundland Regulation of Mines Act

The Newfoundland Mines (Safety of Workmen) (Amendment) (No. 1) and (No. 2) Regulations, 1960, issued under the Regulation of Mines Act, were gazetted March 29, effective April 1.

No. 1 regulations amend the provisions that came into effect April 1 requiring medical examinations for persons employed in dust-exposure occupations (L.G., Dec. 1959, p. 1322). As amended, they now specify that where a medical examiner was not available, a person may be employed in a dust-exposure occupation without a medical certificate for a maximum period of three months, provided that he has not been previously so employed since the regulations came into force on April 1.

No. 2 regulations amend the rule requiring that no internal combustion engine may be operated underground unless approval

in writing has been obtained from the chief inspector, by revoking the specific conditions of approval. It was formerly a condition of approval that an engine had been certified for underground use by the Department of Mines and Technical Surveys of Canada, the U.S. Bureau of Mines, or the Safety and Mines Research Establishment of the British Ministry of Fuel.

Ontario Operating Engineers Act

An amendment to the regulations under the Ontario Operating Engineers Act dealing with qualifications for a first-class stationary engineer's certificate was gazetted on April 2 as O. Reg. 79/60.

The new provision states that an applicant who has a degree in engineering must obtain a minimum mark of 70 on his statutory examination. Amendments issued in March (L.G., April, p. 377) had reduced the minimum mark from 70 to 60.

The minimum age for an applicant with a degree remains 25 years and, as before, the candidate must be the holder of an Ontario second class engineer's certificate or other certificate considered equivalent by the Board.

Ontario Trade Schools Regulation Act

Trade schools giving courses in practical nursing and the operation of heavy equipment (road type) were brought under the Ontario Trade Schools Regulation Act by O. Reg. 87/60 gazetted on April 16.

The new regulations stipulate that in the case of a school offering a course in practical nursing, the operator must include in the contract a clause stating that such a course does not entitle a student to any credit toward a certificate as a nursing assistant under the Nursing Act, 1951. They also make it clear that the Trade Schools Regulation Act and regulations do not apply to a course in practical nursing within the scope of the Nursing Act, 1951.

Quebec Minimum Wage Act

The Quebec Minimum Wage Commission has renewed until May 1, 1961 its order providing for annual vacations with pay (No. 3, 1957). The renewal order was approved by O.C. 416 of March 30 and gazetted April 9.

UNEMPLOYMENT INSURANCE

Monthly Report on Operation of the Unemployment Insurance Act

Number of claimants for unemployment insurance at end of March slightly higher than at end of February, 7 per cent higher than year earlier, statistics* show, but seasonal claimants aside, regular claimants decline from February to March

The number of claimants† for unemployment insurance benefit on March 31 was 1 per cent higher than the total on February 29 and 7 per cent higher than the total on March 31, 1959. The number of seasonal benefit claimants at the end of March this year was 15 per cent higher than the number at the end of February but 4 per cent lower than at the end of March last year.

The number of regular benefit claimants, therefore, declined from February to March this year but was 13 per cent higher than the number on March 31, 1959.

Claimants on March 31, 1960 numbered 823,000, of whom 248,500 were seasonal benefit claimants; on February 29, 814,200, of whom 217,100 were seasonal; and on March 31, 1959—766,900, of whom 258,300 were seasonal.

The number of fishermen on seasonal benefit was 23,900 on March 31, which was substantially less than the number of 29,200 at the end of February, but almost the same as at the end of March last year. The drop since February reflects the exhaustion of benefit rights.

Initial and renewal claims for benefit during March numbered 283,500, an increase of almost 20 per cent over the number in February and nearly 25 per cent more than in March last year. This was the heaviest volume of initial and renewal claims ever filed in March. Seasonal declines in employment in forestry, together with the delay in construction work caused by cold weather and snow were partly responsible.

The increase in initial claims compared with February is partly due to the exhaus-

In a comparison of current employment statistics with those for a previous period, consideration should be given to relevant statistics with those for a previous period, factors other than numbers such as the opening and closing of seasonal industries, increase in area population, influence of weather conditions, and the general employment situation.

Claimants should not be interpreted either as "total number of beneficiaries" or "total job applicants".

tion of regular benefit, the recipients of which then apply for seasonal benefit. Such cases do not constitute an increase in unemployment.

The average weekly number of beneficiaries was estimated at 733,000 for March, an increase of 8 per cent over the 677,300 estimated for February but 4 per cent less than the estimate of 763,200 for March 1959.

The average weekly benefit payment was \$22.20 in March, \$22.00 in February and \$21.58 in March last year.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for March show that insurance books or contribution cards had been issued to 5,004,826 employees who had made contributions to the Unemployment Insurance Fund since April 1, 1959.

At March 31 employers registered numbered 326,636, an increase of 189 since February 29.

Enforcement Statistics

During March 6,818 investigations were conducted by enforcement officers across Canada. Of these, 4,048 were spot checks of postal and counter claims to verify the fulfilment of statutory conditions and 130 were miscellaneous investigations. The remaining 2,640 were investigations in connection with claimants suspected of making false statements to obtain benefit.

*See Tables E-1 to E-4 at back of this issue.

†A claimant's unemployment register is placed in the "live file" at the local office as soon as the claim is forwarded for computation. As a result, the count of claimants at any given time inevitably includes some whose claims are in process.

Prosecutions were begun in 195 cases, 35 against employers and 160 against claimants.* Punitive disqualifications as a result of claimants' making false statements or misrepresentations numbered 1,813.*

Unemployment Insurance Fund

Revenue received in March totalled \$26,653,405.19† compared with \$24,841,-

607.92 in February and \$18,238,257.70 in March 1959. Benefits paid in March totalled \$74,844,835.89† compared with \$62,585,-968.43 in February and \$65,826,604.67 in March 1959. The balance in the fund on March 31 was \$359,949,596.11‡; on February 29 it was \$408,141,026.31 and on March 31, 1959, \$499,811,157.51.

Decisions of the Umpire under the Unemployment Insurance Act

Decision CUB-1725, March 22, 1960

Summary of the Main Facts: The claimant, married, 27 years of age, filed an initial application (postal) for benefit which became effective on May 10, 1959, and was registered for employment as a stenographer. She had worked as a teller for the Royal Bank of Canada in Redwater, Alta., from August 1, 1950 to April 30, 1959, when she voluntarily left to join her husband who, earlier, had been transferred by his employer to Iosegun Lake, Alta. Her rate of pay is reported in the application as \$2,650 a year.

On May 22, 1959, the insurance officer requested the manager of the Edmonton local office to ascertain if there would be reasonable opportunities of employment for the claimant in Iosegun Lake. The only information he apparently obtained was that it was "very isolated".

On May 25, 1959, the insurance officer disqualified the claimant from receipt of benefit from May 10, 1959, because, in his opinion, she was not available for work in that she was residing in an area where there were no reasonable opportunities of employment for her (section 54 (2) (a) of the Act).

On June 11, 1959, the claimant appealed to a board of referees on the following grounds:

I wish to appeal the disqualification against me. I am ready, willing and able to go to work immediately. There are jobs at Iosegun Lake and I have applied for them. I inquired at Canadian Well Services, where they employ girls in office work. They are not stenographers but I am willing to do office work. They said they would get in touch with me if anything became available. My husband and I live in

a trailer right there in the town and I am easily contacted. (The town is Fox Creek but the Post Office is called Iosegun Lake as there is already a "Fox Creek" P.O.).

There is also a clothing store opening up and I contacted them about a sales clerk job. He said he didn't know whether he and his wife could handle it alone or not as they have children and his wife may not be able to manage both jobs. They would therefore need help and he will let me know.

We have no children and there is not much to do in a small trailer so there is nothing to stop me from working. I also enquired in Valleyview at the Bank of Montreal but they had no openings. This is 52 miles from us but if I could get a job there and we had two pay checks coming in, we would move the trailer there as it would be worth it. We have a car and my husband could travel back and forth.

I am also willing to go to Whitecourt but I have made no actual inquiries there. This is 52 miles the other direction. Valleyview would be more convenient as my husband's office is there (Peace River Pipeline) and he actually did live there two months before I went up.

I feel I am certainly available for work as the U.I. Act requires and wish my case reconsidered. I made these inquiries at Can. Well Services before I even applied for insurance.

The claimant's case came before a board of referees at a session held in Edmonton on June 26, 1959. The board, by a unanimous decision, dismissed the appeal on the following grounds:

Notwithstanding that the claimant was probably willing to take employment and has a good work record, the board was of the opinion that she had failed to prove that she was available for work from 10 May, 1959 within the meaning of the Act. It is noteworthy that she applied at two different places and was unable to find employment, and it is therefore doubtful that she will in fact find employment. By moving to this area she has restricted her availability.

With the permission of the chairman of the board of referees, the claimant appealed to the Umpire, chiefly on the grounds "that the Board did not give proper weight to the undisputed fact that the applicant actively sought work in a broad range of callings and showed willingness to move some fifty miles from her presently located

*These do not necessarily relate to the investigations conducted during this period.

†All figures for March 1960 are subject to revision.

home should there be openings at Valleyview or Whitecourt. Thus the applicant extended rather than restricted her availability for work. Further, the applicant was not given the opportunity to present her case in person before the Board of Referees."

The claimant's solicitor wrote a letter to the Claims Division of the Commission in Edmonton, dated September 28, 1959, requesting that the letter "be presented to the Umpire as an elaboration of the representations previously made." His main contention was that, as Iosegun Lake is on the new highway to the Peace River District, which is in the midst of rapid expansion as a result of oil discoveries in that area, the work opportunities there were far greater than the location from which the claimant had moved.

(The respective population of the places mentioned in this summary is, according to the claimant's solicitor, as follows: Redwater: 1,200; Iosegun Lake: 400; Valleyview: 973; Whitecourt: 687).

In view of the solicitor's letter of September 28, 1959 referred to above, the Registrar of the Umpire requested the Chief of the Claims Division of the Unemployment Insurance Commission to obtain further information. As a consequence, the Manager of the local office at Edmonton wrote to the Regional Claims Officer on February 22, 1960, in part, as follows:

In connection with your request for information regarding the employment of females in the towns of Iosegun Lake, Redwater, Valleyview and Whitecourt, we have the following to report:

Iosegun Lake—Iosegun Lake has 9 employers. There are approximately 7 female employees in that hamlet. These are made up of cooks, waitresses and a store clerk. The businesses are mainly small garages and service stations servicing the oil industry. Cooks and waitresses are employed in one small coffee shop.

Redwater—Redwater has 28 employers and approximately 17 females are employed in the town. There is one bank which has 3 female employees. The majority of the other female workers are employed as store clerks, waitresses and cooks.

Valleyview—Valleyview has 41 employers and approximately 38 female workers are employed in the town. There is one bank which employs 1 female. The majority of female workers are employed as cooks, waitresses, telephone operators and sales clerks.

Whitecourt—Whitecourt has 56 employers and approximately 55 female workers in the town. There is one bank which employs 1 female. The majority of female workers in the town are cooks, waitresses, motel maids, and sales clerks. There is also a very small number of office clerks.

Over the past year we have received 8 orders from the areas concerned constituting 24 vacancies. All orders were for service workers including cooks, waitresses, etc.

Considerations and Conclusions: I cannot attach much weight to the fact that the local office, "over the past year," received notification of only 24 vacancies from an unspecified number of employers in the areas referred to, chiefly because there is no evidence that such vacancies represented all or at least a substantial portion of all the employment openings for female help that had occurred in those areas. Nor can I, as I usually do, and I say this with all due deference to the board of referees, ascribe much significance to the fact that its decision was unanimous, because the only information apparently supplied to the board by the local office regarding the conditions of the labour market in the areas under review was that Iosegun Lake is a "very isolated" place.

Unlike the board of referees, I am in a more fortunate position, as the information which has since been obtained from the local office shows that there were reasonable opportunities of employment of the kind that the claimant proved she was willing and ready to accept, i.e., office and sales clerk work, in three of the towns or villages mentioned, namely Iosegun Lake, Valleyview and Whitecourt.

In accordance with the views which I expressed in a recent similar case, i.e., CUB-1712, I consider that the claimant should have been given a reasonable period of time to thoroughly explore the employment situation in those three towns or villages, and I feel that, in view of her nine years of continuous employment, 18 weeks, based on two weeks for each year of employment, would constitute such a period in the particular circumstances of her case.

I therefore decide to remove the disqualification for the 18 weeks commencing the first day of her period of unemployment, viz., May 1, 1959.

But for that latter-mentioned modification, the claimant's appeal is dismissed.

Decision CUB-1727, March 22, 1960

Summary of the Main Facts: The claimant, a married woman, 50 years of age, filed an initial application for benefit on November 9, 1959 after she became separated from her employment as a general office clerk on November 6. The reason given for such separation is "Left voluntarily when asked to work part-time. Wants and needs full-time work . . ." The employer submitted to the local office his own version of the separation which reads: "Laid off from full-time work as we had not sufficient work for her services full time."

The insurance officer on the strength of these declarations disqualified the claimant from November 8 to December 19, 1959, for having voluntarily left her employment without just cause (Section 60 (1) of the Act).

The claimant appealed to a board of referees on November 17, 1959, and stated:

True, I left . . . on November 6, 1959, as (my employer) was unable to keep me on full time. (His) mistrust of me and accusations he made regarding his business has taken its toll on my health and in the past two months have lost 12 pounds and my nerves are very bad. Although I was trying to carry on and I'm sure (he) was satisfied with my work, when things became slack and he asked me to work part time, I thought it was an opportunity to sever connections and try to find full time employment in more serene surroundings. I worked thirteen months for (him) and I might mention before I started with him in October 1958 he had five girls in one year pass in and out of his office which might raise a question as to his method of dealing with his employees.

The majority of the board of referees, on December 3, 1959, dismissed the appeal on the following grounds:

It is the majority decision of the Board, on the evidence before them, that the Claimant did voluntarily leave her employment without just cause within the meaning of the Act. We feel that the Claimant should have accepted the part-time work which was offered her until she had some assurance of other work to go to. The Board has taken into consideration Umpire's Decision CUB-768, which is considered parallel to this particular case.

Regarding the question of whether or not the claimant voluntarily left her employment without just cause, the dissenting member of the board expressed the following opinion:

. . . She did not, she was laid off from full-time work. It is my feeling that part-time work is not suitable employment within the meaning of the Act and the Claimant could be losing full-time employment by accepting part-time work.

The claimant appealed to the Umpire and stated *inter alia* that she could not accept work offered on a part-time basis at a low wage rate, because the wage was not sufficient for her needs and it would greatly impede her efforts to obtain other suitable employment during the period when jobs

were scarce and must be sought out. The employment was not suitable on these grounds and also because of unsatisfactory working conditions.

Considerations and Conclusions: Generally speaking, an insured person who voluntarily leaves his employment solely because it does not or would not provide him with full-time employment is justified in so doing only when he has assurance of other full-time work. In the present case, the claimant has failed to show that the circumstances were such as would meet this condition.

Admittedly, the claimant's weekly wages, in view of the shorter working hours, would necessarily have been lower than those which she received while working full time. However, there is no evidence on file to show that such wages would not have been at the prevailing rate in the district for the same kind of work.

As to the dissenting member's opinion that the claimant might have lost full-time employment by accepting part-time work, I would refer him to decision CUB-1030, wherein the Umpire said that it is "better for a claimant to keep his employment and to seek a better position in his leisure hours than to throw himself totally out of work."

The claimant's allegation that her employer's "mistrust of me and accusations he made regarding his business had taken its toll on my health" is not only too vague in description but lacks substantiation and, therefore, cannot be accepted as evidence which would have a bearing on the case.

For the above reasons, I must dismiss the claimant's appeal. However, as neither the insurance officer nor the board of referees appear to have taken into account that the claimant left because of having to accept part-time work only, I hereby direct that the period of disqualification be reduced to one equalling the number of days' work which the insurance officer, after investigation, finds that the claimant would have worked during the period of six weeks following the date of her separation from employment.

This Man's Not Too Old to Work

An elderly carpenter in Sydney, N.S., apparently does not believe in retirement at 65.

Early last month, after being without work six months, Joseph White obtained a job in his trade with a local contractor. He reported this to the local Unemployment Commission office and gave notice that he no longer required unemployment insurance benefits.

On turning up Mr. White's file, the NES clerk received a surprise: Mr. White is 91 years old.

LABOUR CONDITIONS IN FEDERAL GOVERNMENT CONTRACTS

Wage Schedules Prepared and Contracts Awarded during April

Works of Construction, Remodelling, Repair or Demolition

During April the Department of Labour prepared 202 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its crown corporations in various areas of Canada, for works of construction, remodelling, repair or demolition. In the same period, a total of 153 contracts in these categories was awarded. Particulars of these contracts appear below.

A copy of the wage schedule issued for each contract is available on request to trade unions concerned or to others who have a *bona fide* interest in the execution of the contract.

(The labour conditions included in each of the contracts listed under this heading provide that:

(a) the wage rate for each classification of labour shown in the wage schedule included in the contract is a minimum rate only and contractors and subcontractors are not exempted from the payment of higher wages in any instance where, during the continuation of the work, wage rates in excess of those shown in the wage schedule have been fixed by provincial legislation, by collective agreements in the district, or by current practice;

(b) hours of work shall not exceed eight in the day and 44 in the week, except in emergency conditions approved by the Minister of Labour;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of eight per day and 44 per week;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Contracts for the Manufacture of Supplies and Equipment

Contracts awarded in April for the manufacture of supplies and equipment were as follows

Department	No. of Contracts	Aggregate Amount
Defence Construction (1951) Ltd.	1	\$ 87,574.36
Defence Production (March Report)	108	921,137.00
Post Office	17	120,938.46
Public Works	1	8,364.00
R.C.M.P.	3	4,510.75

The Fair Wages and Hours of Labour legislation of the federal Government has the purpose of insuring that all Government contracts for works of construction and for the manufacture of supplies and equipment contain provisions to secure the payment of wages generally accepted as fair and reasonable in each trade or classification employed in the district where the work is being performed.

The practice of Government departments and those Crown corporations to which the legislation applies, before entering into contracts for any work of construction, remodelling, repair or demolition, is to obtain wage schedules from the Department of Labour showing the applicable wage rate for each classification of workmen deemed to be required in the execution of the work.

These wage schedules are thereupon included with other relevant labour conditions as terms of such contracts to be observed by the contractors.

Wage schedules are not included in contracts for the manufacture of supplies and equipment because it is not possible to determine in advance the classifications to be employed in the execution of a contract. A statement of the labour conditions which must be observed in every such contract is however, included therein and is of the same nature and effect as those which apply in works of construction.

Copies of the federal Government's Fair Wages and Hours of Labour legislation may be had upon request to the Industrial Relations Branch of the Department of Labour, Ottawa.

(The labour conditions included in contracts for the manufacture of supplies and equipment provide that:

(a) all persons who perform labour on such contracts shall be paid such wages as are currently paid in the district to competent workmen; and if there is no current rate, then a fair and reasonable rate; but in no event shall the wages paid be less than those established by the laws of the province in which the work is being performed;

(b) the working hours shall be those fixed by the custom of the trade in the district, or if there be no such custom, then fair and reasonable hours;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of those fixed by custom of the trade in the district, or in excess of fair and reasonable hours;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Wage Claims Received and Payments Made during April

During April the sum of \$7,169.27 was collected from 7 contractors for wage arrears due their employees arising out of the failure of the contractors, or their subcontractors, to apply the wage rates and other conditions of employment required by the schedule of labour conditions forming part of their contract. This amount is for distribution to the 253 workers concerned.

Contracts Containing Fair Wage Schedules Awarded during April

(The labour conditions of the contracts marked (*) contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of eight per day and 44 per week, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.)

Department of Agriculture

Morden Man: Henry J Martens, construction of controlled temperature storage addition, fruit processing laboratory, Experimental Farm. *near Outlook Sask:* Peter Kiewit Sons Co of Canada Ltd, Al Johnson Construction Co of Canada Ltd, Poole Construction Co Ltd (Joint Venture), construction of downstream tunnels of South Saskatchewan River Dam.

Central Mortgage and Housing Corporation

Greenwood N S: Valley Services Ltd, *supply & installation of fire alarm boxes. *Camp Gagetown N B:* Laurentian Landscape Ltd, planting of trees in married quarters area (Job 64/54). *St Hubert Que:* Rodighiero Construction Co Ltd, construction of stage 11 extension to existing stage 1 school (DND 9/59). *Clinton Ont:* Alf Erickson Construction, construction of 12 housing units (FP 1/58). *Fort Erie Ont:* Hubert Henkel, *installation of metal eavestrough on 25 housing units (Project 5/48). *Regina Sask:* Klassen Construction Ltd, construction of 110 housing units (FP 1/58). *Edmonton Alta:* Robert Simpson Co Ltd, supply & installation of floor tile for 106 apartment units, Highlands Court; DeVac Western Ltd, supply & installation of metal windows, Highlands Court. *New Westminster B C:* J Nachbar, *maintenance of grounds, apartments. *Vancouver B C:* Mainland Installation Ltd, *restoration & repair of 3069-3055 West 4th Ave; Northwestern Painting Co, painting of hallways in apartments, Vancouver Terraces; David Hunter's Garden Shops Ltd, *maintenance of grounds, apartments.

Expand Winter Works Program, Employment Committee Urges

Expansion of the scope of the Municipal Winter Works Incentive Program and earlier announcement of the federal Government's plans were recommended by the National Employment Committee at its 74th meeting, held in Ottawa last month.

In a resolution to the Unemployment Insurance Commission, the Committee urged the Government to include in the winter works program projects not at present authorized by the federal-provincial-municipal agreement.

The Committee also passed a resolution recommending that the Unemployment Insurance Commission broaden the field covered by the program of seminars being conducted by the Commission to familiarize employers with the regulations governing employment and unemployment insurance and to obtain from employers suggestions on ways that the National Employment Service might more adequately meet their manpower requirements.

Seminars are currently being held in co-operation with the Canadian Pulp and Paper Association from Newfoundland to the Lakehead. Plans are under way to extend the program to the construction industry. The Committee urged that the seminars be extended to other industries in Canada as well.

Raymond Brunet of Hull, Que., and Thomas B. Ward were appointed vice-chairmen of the Committee.

The next meeting is scheduled to be held at Winnipeg on October 11, 12 and 13.

Farmers' Cash Income in 1959

Canadian farmers received an estimated \$2,786,000,000 in 1959 from the sale of farm products, participation payments on previous years' grain crops, net cash advances on farm-stored grains, and deficiency payments under the present farm prices support program, the Dominion Bureau of Statistics reported last month.

The estimate is slightly below the 1958 level of \$2,813,000,000 and compares with the record high estimate of \$2,859,000,000 in 1952.

Publications Received in Library

(Continued from page 630)

69. U.S. WOMEN'S BUREAU. *Careers for Women in the Physical Sciences*. Washington, GPO, 1959. Pp. 77.

Discusses careers for women in chemistry, physics, geology, astronomy and meteorology.

70. WOODWARD, JOAN. *The Saleswoman; a Study of Attitudes and Behaviour in Retail Distribution*. London, Pitman, 1960. Pp. 86.

A report of a study carried out in four department stores. The findings are grouped under four headings: 1. Supply and utilization of staff; 2. Salary structure; 3. Conditions of work; and, 4. Personal and organizational relationships.

Miscellaneous

71. INTERNATIONAL LABOUR OFFICE. *International Migration, 1945-1957*. Geneva, 1959. Pp. 414.

Discusses political migration with particular reference to West Germany and Israel, and economic migration.

PRICES AND THE COST OF LIVING

Consumer Price Index, May 1960

Canada's consumer price index (1949=100) declined 0.1 per cent between April and May, from 127.5 to 127.4.* For May 1959 it stood at 125.6.

Decreases in the food and household operation indexes outweighed increases in the shelter and other commodities and services indexes. The clothing index was unchanged.

The food component decreased 0.6 per cent from 120.9 to 120.2 as egg prices dropped 6 cents a dozen and lower prices were reported also for oranges and orange juice, tomatoes and bananas. Potato prices continued to rise, and beef, after declining for several months, rose between April and May. Pork prices were steady.

A drop of 0.3 per cent in the household operation index from 123.5 to 123.1 was due largely to a seasonal decline in coal prices and sale prices on textiles. Some utensils and household supplies were higher. Insurance rates on household effects, priced in May, were also higher.

The shelter index rose slightly from 143.3 to 143.5, an increase of 0.1 per cent. The rent component was unchanged but home-ownership was higher, largely because property insurance, priced in May, was above last year's level.

An increase of 0.4 per cent in other commodities and services from 137.1 to 137.6 reflected higher automobile insurance rates as well as price increases for theatre admissions, men's haircuts, women's hair-dressing and local transportation, the latter price change occurring in Toronto and Hamilton. New passenger cars showed seasonal price declines and gasoline prices were slightly lower. The clothing index was unchanged at 110.8 as only minor price changes occurred on a scatter of clothing items.

Group indexes one year earlier (May 1959) were: food 118.5, shelter 141.0, clothing 109.7, household operation 122.5, and other commodities and services 134.9.

City Consumer Price Indexes, April 1960

Consumer price indexes (1949=100) increased in nine of the ten regional cities between March and April 1960.† The Vancouver index decreased 0.4 per cent, and

increases in the other nine cities ranged from a fractional 0.1 per cent in Edmonton-Calgary to 1.0 per cent in St. John's.

Higher food indexes were mainly responsible for movements in the total indexes, as foods increased in all regional cities except Edmonton-Calgary and Vancouver. In the latter two cities, food indexes declined 0.1 per cent and 0.5 per cent respectively. Increases in the other eight regional cities ranged from 0.6 per cent in Saskatoon-Regina to 1.8 per cent in Montreal.

Other commodities and services group indexes were up in all regional cities except Halifax and Saint John; the increase of 0.4 per cent in St. John's was the largest upward movement. Shelter indexes were unchanged in five of the ten regional cities, down in Toronto and Vancouver, and up in the remaining three. Clothing indexes showed mixed results, with five city indexes higher, three lower and two unchanged from March. Household operation indexes decreased in five cities, increased in four cities and remained unchanged in the remaining regional city.

Regional consumer price index point changes between March and April were as follows: St. John's +1.1 to 115.6;† Montreal +1.1 to 127.6; Winnipeg +0.7 to 124.7; Ottawa +0.6 to 128.0; Toronto +0.5 to 129.7; Halifax +0.3 to 127.0; Saint John +0.2 to 129.1; Saskatoon-Regina +0.2 to 123.6; Edmonton-Calgary +0.1 to 123.4; Vancouver -0.5 to 128.2.

Wholesale Price Index, April 1960

Canada's general wholesale price index (1935-39=100) rose 0.7 per cent between March and April this year to 231.3 from 229.6. Last year's April index stood at 231.2.

Five of the eight main group indexes increased while two decreased and one was unchanged.

The vegetable products group index recorded the largest upward movement, rising 1.7 per cent to 205.6 from 202.2. The animal products group index advanced 1.1 per cent to 243.4 from 240.8, the non-ferrous metals group index rose 0.8 per cent to 179.0 from 177.6, the textile products group index rose 0.6 per cent to 229.6 from 228.2, and the wood products group index also rose 0.6 per cent to 306.2 from 304.4.

†On base June 1951=100.

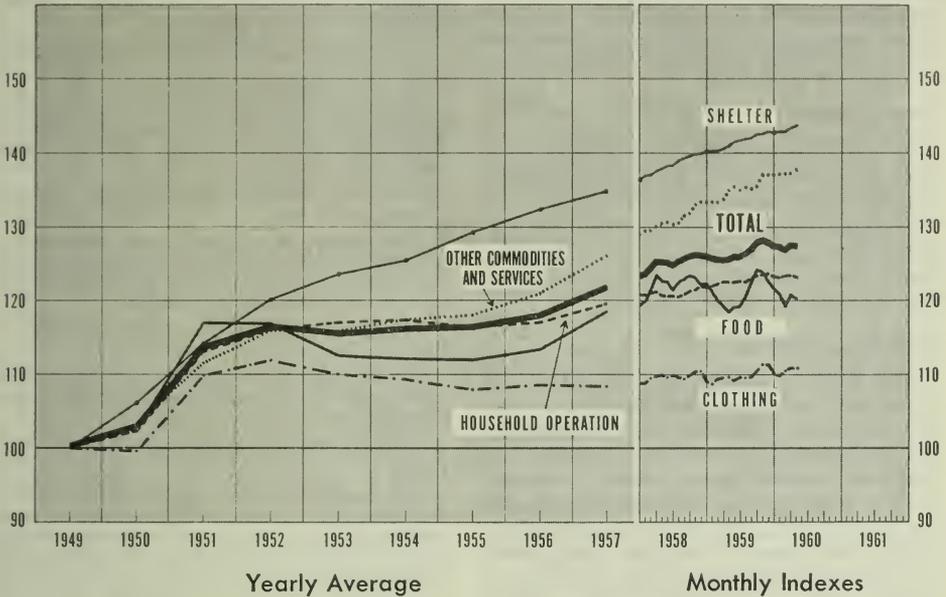

*See Table F-1 at back of book.

†See Table F-2 at back of book.

CONSUMER PRICE INDEX

Index 1949=100

Index 1949=100

The non-metallic minerals group index declined 0.5 per cent to 185.5 from 186.4, and the iron products group index edged down to 256.2 from 256.3.

The chemical products group index was unchanged at 188.4.

The index of Canadian farm product prices at terminal markets advanced 0.9 per cent from 218.0 to 219.9 between April 29 and May 20. The field products index moved up 0.9 per cent from 180.3 to 181.9, and the animal products index rose 0.8 per cent from 255.8 to 257.8. Regional indexes were: East, up 1.1 per cent from 243.7 to

246.3; and West, up 0.5 per cent from 192.4 to 193.4.

U.S. Consumer Price Index, April 1960

Mainly because of a 1.5-per-cent increase in the food component, the United States consumer price index (1947-49=100) rose to another record at mid-April; it advanced 0.4 per cent to 126.2 from 125.7 at mid-March. The food group index climbed 1.5 per cent over the month.

The April 1960 index was 1.9 per cent higher than a year earlier, when the April index was 123.9.

Publications Recently Received in Department of Labour Library

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Applications for loans should give the number (numeral) of the publication desired and the month in which it was listed in the *LABOUR GAZETTE*.

Accident Prevention

List No. 140.

1. INTERNATIONAL LABOUR OFFICE. *The Protection of Workers against Ionising Radiations*. Geneva, 1959-1960. 2 volumes.

At head of title: Report 4 (1)-(2). International Labour Conference. 44th Session, Geneva, 1960.

Part 1 contains a proposed Convention and a proposed Recommendation concerning this topic. Part 2 contains a summary and short analysis of the replies of 53 member governments along with the English and French versions of the proposed texts.

2. U.S. BUREAU OF LABOR STANDARDS. *Hazardous Employment prohibited for Minors under State Child-Labor Laws*. Washington, GPO, 1959. Pp. 105.

"A State-by-State summary of laws and rulings prohibiting the employment of minors in hazardous occupations."

Annual Reports

3. NEW BRUNSWICK. DEPARTMENT OF LABOUR. *Report for the Year ending March 31st, 1959*. Fredericton [1959?] Pp. 47.

4. SASKATCHEWAN. DEPARTMENT OF LABOUR. *Fifteenth Annual Report for the Fiscal Year ended March 31, 1959*. Regina, Queen's Printer, 1960. Pp. 94.

Arbitration, Industrial

5. AMERICAN FEDERATION OF LABOR AND CONGRESS OF INDUSTRIAL ORGANIZATIONS. BUILDING AND CONSTRUCTION TRADES DEPARTMENT. *Plan for settling Jurisdictional Disputes Nationally and Locally*. Approved by the Building and Construction Trades Dept., AFL-CIO. *Agreements and Decisions rendered affecting the Building Industry by the American Federation of Labor [and others] January 1958*. Washington, 1958. Pp. 145. Bound with: National Joint Board for Settlement of Jurisdictional Disputes. *Procedural Rules and Regulations...*

6. NATIONAL JOINT BOARD FOR SETTLEMENT OF JURISDICTIONAL DISPUTES. *Procedural Rules and Regulations of the National Joint Board for Settlement of Jurisdictional Disputes, Building and Construction Industry*. Amended May 8, 1958. Washington, 1958. Pp. 16. Bound with: AFL-CIO. Building and Construction Trades Dept. *Plan for settling Jurisdictional Disputes Nationally and Locally*. 1958 ed.

Automation

7. JACOBSON, HOWARD BOONE, ED. *Automation and Society*. Edited by Howard Boone Jacobson and Joseph S. Roucek. New York, Philosophy Library [1959] Pp. 553.

Contains chapters dealing with the evolution of the concept and method of automation, its application to various important American industries, and the problems it raises in the areas of education, leisure, politics, business and public administration. There is a chapter by two Russian authors on automation in Russia. Also includes thirty-seven short case histories of automation in the U.S. and Canada.

8. WEIK, MARTIN H. *A Second Survey of Domestic Electronic Digital Computing Systems*. Aberdeen Proving Ground, Md., Ballistic Research Laboratories, 1957. Pp. 439.

Describes the engineering and programming characteristics of 103 different electronic digital computing systems.

Canada at Work Broadcasts

The following five broadcasts were published by the Federal Department of Labour in Ottawa in 1959 and 1960.

9. CANADA. DEPARTMENT OF LABOUR. *Frontier College—a Tribute*. Pp. 4.

This is tribute to the late Dr. Edmund Bradwin, the second principal of Frontier College, who spent over fifty years with that institution.

10. COX, ROBERT. *International Labour Organization*. Pp. 4.

The speaker, a Canadian who is Chief of the Special Research and Reports Division of the ILO in Geneva, tells about the work of the ILO in under-developed countries.

11. FRASER, GRAEME. *Movie Making in Canada*. Pp. 4.

The speaker, Vice-President of Crawley Films Limited in Ottawa, tells something about the Canadian motion picture industry.

12. GRIZZLE, STANLEY G. *Discrimination*. Pp. 4.

The speaker is Secretary--Treasurer of the Toronto CPR Division of the Brotherhood of Sleeping Car Porters, and a member of the Toronto and District Labour Committee for Human Rights. He talks about the Federal Fair Employment Practices Act and about fair employment practices laws in six provinces: British Columbia, Manitoba, Saskatchewan, Ontario, New Brunswick and Nova Scotia.

13. JARVIS, EDITH. *Careers in Canada's Foreign Service*. Pp. 4.

The speaker, who was in charge of the assignment of stenographers for the Department of External Affairs, told about the duties of stenographers in her Department, both at home and abroad.

Economic Conditions

14. DUKE UNIVERSITY, DURHAM, N. C. COMMONWEALTH-STUDIES CENTER. *The American Economic Impact on Canada* [by] Hugh G. J. Aitken [and others] Durham, N.C., Duke University Press, 1959. Pp. 176.

"Papers... delivered and discussed at a summer seminar of the Duke University Commonwealth-Studies Center in the summer of 1959." Contents: The Changing Structure of the Canadian Economy, with Particular Reference to the Influence of the United States, by Hugh G. J. Aitken. Recent American Influence in Canada, with Particular Reference to Economic Factors and Canadian Reaction, by John J. Deutsch. Canadian Economic Policy from 1945 to 1957, Origins and Influences, by W. A. Mackintosh. The Impact of United States Farm Policy on Canadian Agriculture, by Clarence L. Barber. The American Economic Impact on Quebec, by Maurice Lamontagne. The Flow of United States Investment Funds into Canada since World War II, by Irving Brecher. The Influence of American Labor Organizations and Policies on Canadian Labor, by Eugene Forsey.

15. EUROPEAN PAYMENTS UNION. *Final Report of the Managing Board; Final Period 1st July-27th December 1958*. Paris, OEEC, 1959. Pp. 85.

16. NATIONAL INDUSTRIAL CONFERENCE BOARD. *The Business Outlook, 1960; a Discussion by the Conference Board Economic Forum and Guests held at... New York City, December 3, 1959.* New York, c1959. Pp. 106.

A review of economic conditions in 1959 and a forecast of things to come in 1960.

17. UNITED NATIONS. DEPARTMENT OF ECONOMIC AND SOCIAL AFFAIRS. *Economic Survey of Africa since 1950.* New York, 1959. Pp. 248.

"Analyzes the economic structure of African countries and deals generally with patterns of economic development in those countries."

Economics

18. *Economics and the Policy Maker*, by Sidney S. Alexander [and others] Washington, Brookings Institution, 1959. Pp. 209.

Contents: Economics and Business Planning, by Sidney S. Alexander. Economic Stabilization Policy, by Gerhard Colm. The Problem of Creeping Inflation, by Neil H. Jacoby. Taxation Policy by Louis Shere—Monetary and Credit Policy, by Robert V. Roosa. Economics and Collective Bargaining, by Sumner H. Slichter. Competition and Monopoly, by Mark S. Massel. Economics and Economic Development, by Everett E. Hagen.

19. UMBREIT, MYRON HENRY. *Economics: an Introduction to Principles and Problems* [by] Myron H. Umbreit, Elgin F. Hunt [and] Charles V. Kinter. 3d ed. New York, McGraw-Hill, 1957. Pp. 637.

Education

20. ALBERTA. ROYAL COMMISSION ON EDUCATION. *Report.* Edmonton, Queen's Printer, 1959. Pp. 451.

Senator Donald Cameron, chairman. The Royal Commission's "recommendations are designed to result in a curriculum of greater depth of content in essential fields of study and to provide for more intensive study under teachers more carefully selected and with more adequate professional qualifications. It has recommended a measure of decentralization of authority through the evolution of a system of accredited schools and community colleges, and it has emphasized the need to provide greater equality of educational opportunity for all the gifted, the handicapped and children in rural areas."

21. CANADA. BUREAU OF STATISTICS. *The Organization and Administration of Public Schools in Canada.* 2d ed. Ottawa, Queen's Printer, 1960. Pp. 232.

Employees—Training

22. SEYMOUR, WILLIAM DOUGLAS. *Operator Training in Industry.* London, Institute of Personnel Management, 1959. Pp. 52.

"An outline of some recent developments in techniques of training, based on wartime experience in the services and munitions factories and, more recently, on investigations into industrial skills and their acquisition in a number of universities and research institutions."

23. U.S. OFFICE OF EDUCATION. DIVISION OF VOCATIONAL EDUCATION. *Meeting Manpower Needs for Technicians; Report of a National Conference on Vocational-Technical Education, Washington, D.C., May 13-17, 1957.* Washington, 1957. Pp. 51.

Employment Management

24. BUREAU OF NATIONAL AFFAIRS, WASHINGTON, D.C. *Controlling Health and Welfare Costs.* Washington, c1959. Pp. 14.

Based on data submitted by 132 executives which revealed that all firms responding provide hospital and surgical benefits; most firms incorporate medical care in their programs; and, some protect their employees against serious accidents and illnesses. The respondents were divided almost equally among those favouring a contributory plan and those who preferred a non-contributory plan. More than half prefer major medical insurance over a comprehensive plan. Most prefer continuing health and welfare coverage for employees after retirement.

25. HARBRECHT, PAUL P. *Pension Funds and Economic Power.* New York, Twentieth Century Fund, 1959. Pp. 328.

Partial Contents: The Advent of the Pension Trusts. What are the Pension Trusts? Objectives, Theory and Practice. Impact of Government Policies. Pension Trusts in 1960. A Policy for Pension Trusts.

26. URWICK, LYNDALL F. *The Correct Place of Personnel Activities in Business Organization.* Toronto, Personnel Association of Toronto, 1958. Pp. 25.

Talk delivered to the 16th Annual Conference of the Personnel Association of Toronto on April 17th, 1958.

Industrial Relations

27. BROWN, ERNEST HENRY PHELPS. *The Growth of British Industrial Relations, a Study from the Standpoint of 1906-14.* London, Macmillan, 1959. Pp. 414.

Discusses the conditions of the working classes, the conditions of work, the development of industrial relations, the growth of trade unions, industrial disputes, etc.

28. INTERNATIONAL LABOUR OFFICE. *Consultation and Co-operation between Public Authorities and Employers' and Workers' Organizations at the Industrial and National Levels.* Fifth item on the agenda. Geneva, 1959-1960. 2 Volumes.

At head of title: Report 5 (1)-(2), International Labour Conference. 44th Session, Geneva, 1960.

Part 1 contains a proposed Recommendation on this topic. Part 2 contains a summary and a brief analysis of the replies and comments of 53 countries.

29. INTERNATIONAL LABOUR ORGANIZATION. *An Account of an Asian Bipartite Study Tour on Labour Management Relations to the United Kingdom and Federal Republic of Germany, 6 September-8 November 1958.* Geneva, International Labour Office, 1959. Pp. 205.

Discusses the social background of industrial relations, labour unions, employers' associations, collective bargaining and the settlement of industrial disputes, joint consultation, and personnel management practices in Great Britain and the Federal German Republic.

30. MICHIGAN. UNIVERSITY. BUREAU OF INDUSTRIAL RELATIONS. *Addresses on Industrial Relations. 1959 Series*. Ann Arbor, 1959. 1 Volume (various pagings).

Some of the topics discussed are: management teamwork, executive development, fringe benefits, management-union relations, and, white-collar unions.

Inflation (Finance)

31. CHAMBER OF COMMERCE OF THE UNITED STATES OF AMERICA. COMMITTEE ON ECONOMIC POLICY. *The Mechanics of Inflation, an Analysis of Cost and Demand Pressures on the Price Level; Report*. Washington, Chamber of Commerce of the United States, 1957. Pp. 69.

This report attempts to explain how inflation is caused, how it works, and what can be done about it.

31. CHAMBER OF COMMERCE OF THE UNITED STATES OF AMERICA. ECONOMIC RESEARCH DEPARTMENT. *Administered Prices and Inflation; Some Public Policy Issues. Statement by Walter D. Fackler [Assistant Director] and Padraic P. Frucht on Price Prenotification (S. 215) for the Chamber of Commerce of the United States before the Subcommittee on Antitrust and Monopoly, Committee on the Judiciary, United States Senate, April 23, 1959. With Supplemental Materials*. Washington, Chamber of Commerce of the United States, 1959. Pp. 81.

The two speakers, representing the Chamber of Commerce of the U.S.A., objected to a U.S. Senate Bill which they claimed had two false imputations: (a) "a few dominant corporations have control over the production, the distribution, and the price of basic commodities upon which all American economy depends," and (b) "inflation will be checked if the pricing policies of these corporations are publicly reviewed before increased prices may be made effective."

33. NATIONAL INDUSTRIAL CONFERENCE BOARD. *Progress against Inflation, a Series of Talks on the Subject by Homer Jones [and others] Wages, Productivity, and Prices, an Address by W. Allen Wallis. Delivered before Sessions of the Board's 398th Meeting, held in Chicago on November 19, 1959*. New York, 1960. Pp. 67.

Titles of talks: Current Strength of Inflationary Forces, by Homer Jones. Wage Policies and Inflation, by Walter A. Morton. The Federal Budget, by Robert P. Mayo. Some Implications of Creeping Inflation, by Tilford C. Gaines. Inflation and the Balance of Payments, by Frank A. Southard.

Labour Organization

34. KENNEDY, ROBERT FRANCIS. *The Enemy Within*. 1st ed. New York, Harper, 1960. Pp. 338.

The author is the former Chief Counsel of the U.S. Senate Select Committee on Improper Activities in the Labor or Management Field. He tells about the work of the Committee during its three years' activities.

35. MCGILL UNIVERSITY, MONTREAL. INDUSTRIAL RELATIONS CENTRE. *Unions and the Future. Eleventh Annual Conference, September 10 and 11, 1959*. [Montreal, 1959?] Pp. 72.

Contents: Unions in the Next Decade, by R. A. Lester. Some Aspects of the Canadian Wage Structure—Implications for Union Policy, by Sylvia Ostry. Reflections from Experience, by Oakley Dalgleish. Legislating the Internal Behaviour of Unions, by Archibald Cox. Federal Jurisdiction over Labour Relations—a New Look, by F. R. Scott. Panel Discussion.

36. ROBERTS, BENJAMIN CHARLES. *Trade Unions and Industrial Relations in the Soviet Union*, by B. C. Roberts and Maria Feingold. London, The Workers' Educational Association, 1958. Pp. 31.

Some of the topics discussed are unions and the state, the structure of Russian trade unions, collective bargaining, incentive systems, the authority of Russian management, industrial relations, and social security.

37. SHIPPEN, KATHERINE BINNEY. *This Union Cause; the Growth of Organized Labor in America*. 1st ed. New York, Harper, 1958. Pp. 180.

A history of American labour unions written for young people.

38. U.S. BUREAU OF LABOR STATISTICS. *Union Constitution Provisions: Trusteeship. Reason for Trusteeship, Hearing Requirements, Powers of Trustee, Duration, Appeals*. Washington, GPO, 1959. Pp. 38.

An analysis of trusteeship provisions in 114 trade union constitutions.

Labour Supply

39. U.S. BUREAU OF LABOR STATISTICS. *Military Manpower Requirements and Supply, 1959-63*. Washington, GPO, 1959. Pp. 10.

40. U.S. DEPARTMENT OF LABOR. *Manpower, Challenge of the 1960's*. Washington, GPO, 1960. Pp. 24.

Shows changes in the U.S. population and labour force which are expected to take place between 1960 and 1970.

Labouring Classes

41. CANADA. UNEMPLOYMENT INSURANCE COMMISSION. *Employer's Handbook on Unemployment Insurance*. 15th ed. Ottawa, Queen's Printer, 1959. Pp. 42.

42. CLARK, FREDERICK LEGROS. *Age and the Working Lives of Men, an Attempt to reduce the Statistical Evidence to its Practical Shape*. London, Nuffield Foundation, 1959. Pp. 67.

Partial Contents: How Many Ageing Men become Incapacitated for Further Work through Chronic Invalidity? The Crucial Question. How Many of the Older Men have to moderate or change their jobs? How far does his job determine the Employment Prospects of an Older Man? At What Rates do Men really retire from Work and for What Causes?

43. HARRISON, WILLIAM TAYLOR. *The Truth about Right-to-Work Laws; the Union Arguments, the People's Case*. Washington, National Right to Work Committee, 1959. Pp. 180.

The author supports right-to-work legislation which would do away with the closed shop.

44. INTERNATIONAL LABOUR OFFICE. *Contribution of the ILO to the Raising of Incomes and Living Conditions in Rural Communities, with Particular Reference to Countries in Process of Development*. Sixth item on the agenda. Geneva, 1959. Pp. 98.

At head of title: Report 6. International Labour Conference. 44th session, 1960.

Deals with the agricultural situation in the world.

45. ONTARIO FEDERATION OF LABOUR (CLC). *Can Farmer and Labour Co-operate? A Report of the Farmer-Labour Conference, Club Whitesands, June 27 and 28, 1959*. Toronto, 1959. Pp. [33].

Sponsored by the Farmer-Labour Co-ordinating Council and the Farmer-Labour Committee of the Ontario Federation of Labour with the co-operation of the Ontario Farmers' Union.

46. SHULTZ, GEORGE PRATT, ED. *Labour Problems: Cases and Readings*, by George P. Shultz and John R. Coleman. 2d ed. New York, McGraw-Hill, 1959. Pp. 546.

This is a text book containing articles and excerpts from books. Some of the topics covered are union philosophy, management philosophy, collective bargaining, union security, wage administration, labour laws, and social insurance.

Power (Mechanics)

47. NATIONAL INDUSTRIAL CONFERENCE BOARD. *Radioisotopes in Industry*, by John J. McMahon and Arnold Berman. New York, 1959. Pp. 136.

"Radioisotopes are... used by industry to measure and control manufacturing processes; to inspect materials, parts, and finished products; to determine the cause of processing difficulties; and to facilitate research." Tells of the use of radioisotopes in the following industries: chemicals, crude petroleum and natural gas, drugs, electric and gas companies, electrical machinery, electronic components and accessories, fabricated metal products, food, paper, plastic materials, rubber, textile products, tobacco, etc.

48. U.S. CONGRESS. JOINT ECONOMIC COMMITTEE. *Energy Resources and Technology. Hearings before the Subcommittee on Automation and Energy Resources of the Joint Economic Committee, Congress of the United States, Eighty-Sixth Congress, First Session, pursuant to Sec. 5(a) of Public law 304, 79th Congress...* Washington, GPO, 1959. Pp. 352.

Hearings held Oct. 12-16, 1959. In these hearings such matters as the estimated requirements and reserves of such fuel and power sources as coal, oil, gas, hydroelectric, the atom, the sun, shale distillation, etc., were considered.

Productivity

49. BIRMINGHAM, ENG. UNIVERSITY. FACULTY OF COMMERCE AND SOCIAL SCIENCE. *Productivity and Economic Incentives*, by J. P. Davison [and others] of the Faculty of Commerce and Social Science, University of Birmingham. London, Allen & Unwin, 1958. Pp. 306.

The four authors conducted an investigation in factories, laundries, and co-operative stores. "The project was to test as exactly as possible the force of economic incentives upon the productivity, the earnings and the satisfaction (or otherwise) of groups of workers and to discover under what precise conditions the force was stronger or weaker."

50. EASTERFIELD, T. E. *Productivity Measurement in Great Britain, a Survey of Recent Work*. London, Great Britain, Dept. of Scientific and Industrial Research, 1959. Pp. 79.

This report is arranged in four main sections: 1. the problem of multiple inputs (such as labour, raw materials, fuel and power, machinery, etc.); 2. the problem of multiple outputs; 3. a study of factors affecting productivity; and, 4. the application of productivity studies to achieve practical results.

51. EUROPEAN PRODUCTIVITY AGENCY. TRADE UNION INFORMATION AND RESEARCH SERVICE. *Problems of the Textile Industry in Europe; Final Report of the Milan Conference*, by Jacques Michollin. Paris, OEEC. [1959?] Pp. 7.

Includes reports of a trade union seminar held in Milan, May 13 to 17, 1957, sponsored by the European Productivity Agency, the International Federation of Textile Associations and the International Christian Federation of Textile and Clothing Workers. The topics discussed at this Conference were: 1. Economic situation and structure of the industry; 2. Technological evolution and productivity; 3. Working and social conditions; 4. Wage policy and practices; 5. Vocational training and trade union education of textile workers.

52. EUROPEAN PRODUCTIVITY AGENCY. TRADE UNION INFORMATION AND RESEARCH SERVICE. *Productivity in Ports; Final Report on the Conference held in Copenhagen from October 1 to 4, 1957*, by K. Kuhne and A. J. Ledeganck. Paris, OEEC, 1959. Pp. 95.

Report of an International Trade Union Conference on Productivity in Ports held in Copenhagen from October 1 to 4, 1957.

53. GOMBERG, WILLIAM. *Labor's Participation in the European Productivity Program: a Study in Frustration*. Berkeley, Institute of Industrial Relations, University of California, 1959. Pp. 240-255.

Deals with American trade union participation in the administration of the Marshall Plan in European countries through the European Co-operation Administration.

54. U.S. BUREAU OF LABOR STATISTICS. *Trends in Output per Man-hour in the Private Economy, 1909-1958*. Washington, GPO, 1960. Pp. 47, 46.

"...Presents indexes and average rates of change in output per manhour for the private economy, agriculture, and non-agriculture for the post-World War II period, 1947-58, and for the long-term period 1909-58. Estimates are also presented for manufacturing and non-manufacturing for the period 1947-57."

Professional Workers

55. ENGINEERING INSTITUTE OF CANADA. *Engineering Careers in Canada, 1959-60* Edition. [Montreal, 1960?] Pp. 87.

56. GREAT BRITAIN. ADVISORY COUNCIL ON SCIENTIFIC MANPOWER. COMMITTEE ON SCIENTIFIC MANPOWER. *Scientific and Engineering Manpower in Great Britain, 1959*. London, HMSO, 1959. Pp. 48.

Sociology, Industrial

57. GROSS, EDWARD. *Work and Society*. New York, Crowell, 1958. Pp. 652.

Concerns the sociology of work. Discusses the world of work, three types of occupations (professional, white collar and blue collar), work organizations such as the farm, the restaurant, the factory, and work as it is related to unions and to ethnic groups.

58. INTERNATIONAL SOCIAL SCIENCE COUNCIL. INTERNATIONAL RESEARCH OFFICE ON THE SOCIAL IMPLICATIONS OF TECHNOLOGICAL CHANGE. *Changements techniques, économiques et sociaux; étude théorique. Social, Economic and Technological Change; a Theoretical Approach*. Avec la collaboration de G. Balandier [et al. Paris, International Social Science Council] 1958. Pp. 355.

Contents: Social Change as influenced by Technological Change, by H. T. Chabot [and others]. Analyse critique de concepts relatifs aux implications sociales du progrès technique, par H. Janne et S. Bernard. Measurement of Social Implications of Technological Change, by S. Kuznets. The Demographic Consequences of Changes in Productive Technology, by K. Davis. Measurement of Organizational and Institutional Implications of Changes in Productive Technology, by W. E. Moore. Social Implications of Technological Change as regards Patterns and Models, by R. First [and others] L'apport synthétique de l'anthropologie et de l'histoire, par G. Balandier et C. Moraze.

Taxation

59. CANADIAN TAX FOUNDATION. *Personal Corporations; a Study of Their Background and Treatment under the Canadian Income Tax*, by Gwyneth McGregor. Toronto, 1960. Pp. 28.

60. CANADIAN TAX FOUNDATION. *The Post-War Taxation of Canadian Co-operatives*, by R. Craig McIvor. Toronto, 1959. Pp. 78.

61. CANADIAN TAX FOUNDATION. *Report of Proceedings of the Thirteenth Annual Tax Conference Convened by the Canadian Tax Foundation at... Quebec City, November 19-20-12, 1959*. Toronto, 1960. Pp. 294.

Wages and Hours

62. AUSTRALIA. DEPARTMENT OF LABOUR AND NATIONAL SERVICE. *Wage Incentives in Australian Industry, Principles and Cases*. Canberra, Commonwealth Government Printer, 1959. Pp. 115.

Describes the kinds of incentive schemes in effect in Australia and includes nine case studies of plans in operation.

63. SIBSON, ROBERT EARL. *Wages and Salaries: a Handbook for Line Managers*. New York, American Management Association, c1960. Pp. 224.

Contents: Management's Stake in Wage and Salary Administration. The First Step: Job Evaluation. The Second Step: Pricing Job Value. The Role of Merit Rating in a Wage Program. The Importance of Wage Incentive Plans. Fringe Benefits as Additional Compensation. Compensation of Exempt Employees. Administration of the Pay Program.

64. U.S. BUREAU OF LABOR STATISTICS. *Wage Structure: Gray Iron Foundries, April-June 1959*. Washington, GPO, 1959. Pp. 32.

Includes information on wages and hours, paid vacations, paid holidays, and health, insurance, and pension plans.

65. U.S. BUREAU OF LABOR STATISTICS. *Wage Structure: Leather Tanning and Finishing, May 1959*. Washington, GPO, 1959. Pp. 46.

Includes information on wages, hours of labour, paid vacations, paid holidays, and health, insurance, retirement severance, and pension plans.

Women—Employment

66. GILDERSLEEVE, GENIEVE NORTHAM. *Women in Banking; a History of the National Association of Bank Women*. Introd. by Ray M. Gidney. Washington, Public Affairs Press, 1959. Pp. 115.

The National Association of Bank Women began in 1921 with a membership of 16 and by 1957 had almost 3,000 members.

67. U.S. CHILDREN'S BUREAU. *Child Care Arrangements of Full-Time Working Mothers*, by Henry C. Lajewski. Washington, GPO, 1959. Pp. 26.

A survey of working mothers employed full time and with children under 12 years of age to find out who looked after the children while their mothers worked, and where this care was provided.

68. U.S. WOMEN'S BUREAU. *Careers for Women in Retailing*. Washington, GPO, 1959. Pp. 52.

Contents: Women and the Retailing Industry. Careers for Women in Department and Specialty Stores. Women as Owners of Small Stores. If You want a Career in Retailing.

* Less than 10,000.

B—Labour Income

NOTE: The estimates of labour income in this table have been revised in accordance with recent revisions to the National Accounts. Note particularly the use of annual totals instead of monthly averages, and the introduction of quarterly instead of monthly totals for some industries. Monthly and quarterly figures may not add to annual totals because of rounding.

¹ Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.

² Includes post office wages and salaries.

³ Figures in this column are for total labour income, Canada, but are not totals of the figures in the remaining columns of this table, as figures for labour income in Agriculture, Fishing and Trapping are not shown. (See also headnote.)

* Revised.

† Preliminary.

C—Employment, Hours and Earnings

Tables C-1 to C-3 are based on reports from employers having 15 or more employees—at February, 1960 employees in the principal non-agricultural industries reported a total employment of 2,649,723. Tables C-4 (every second month) and C-5 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-3. They relate only to wage earners for whom statistics of hours of work are also available whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage earners in the reporting firms.

¹ Includes (1) Forestry (chiefly logging), (2) Mining (including milling), quarrying and oil wells, (3) Manufacturing, (4) Construction, (5) Transportation, storage and communication, (6) Public utility operation, (7) Trade, (8) Finance, insurance and real estate and (9) Service, (mainly hotels, restaurants, laundries, dry cleaning plants, business and recreational service).

TECHNICAL NOTE—A change has been made in the method of dating the statistics published in Tables C-1 to C-6 to conform with the usual practice of the Dominion Bureau of Statistics. In the past, statistics for the last pay period in a month were labelled "pay period preceding" the first day of the following month. From now on, statistics for the last pay period in a month will be labelled for that month. Another change is that average hourly earnings, formerly expressed in cents carried to one decimal place, are now published in dollars and cents.

D—National Employment Service Statistics

The following tables are based on regular statistical reports from local offices of the National Employment Service. These statistics are compiled from two different reporting forms, UIC 751; statistical report on employment operations by industry, and UIC 757; inventory of registrations and vacancies by occupation. The data on applicants and vacancies in these two reporting forms are not identical.

G—Strikes and Lockouts

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Department of Labour on the basis of reports from the Unemployment Insurance Commission. The first three tables in this section cover strikes and lockouts involving six or more workers and lasting at least one working day, and strikes and lockouts lasting less than one day or involving fewer than six workers but exceeding a total of nine man-days. The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. For further notes on the series see page 542, May 1959 issue.

CORRESPONDENCE—Address letters dealing with editorial matters to the Editor, those dealing with subscriptions to the Circulation Manager. SUBSCRIPTIONS—Canada: \$2 per year, single copies 25 cents each; all other countries: \$4 per year, single copies 50 cents each; Send remittance by cheque or post office money order, payable to the Receiver-General of Canada, to The Queen's Printer, % Superintendent of Government Publications, Ottawa. All subscriptions payable in advance. SPECIAL GROUP SUBSCRIPTION OFFER—Five or more annual subscriptions, \$1 per subscription (Canada only). Send remittance, payable to the Receiver-General of Canada, to the Circulation Manager. BOUND VOLUMES—\$5 per copy delivered in Canada, \$7 per copy to other countries. CHANGE OF ADDRESS—Please attach label showing previous address.

Authorized as Second Class Mail, Post Office Department, Ottawa.

EMPLOYMENT REVIEW

ECONOMICS AND RESEARCH BRANCH

Labour Force Survey, June

Between May and June the number of persons with jobs increased by an estimated 162,000 to 6,154,000. The increase during the month in both farm and non-farm employment was about average for this time of year. Almost all of the gain was among men, with little change in the employment of women.

Non-farm activities accounted for virtually all of the employment expansion during June. As is usual at this time of year, large gains occurred in construction and forestry. Employment in Quebec increased more than is usual for the month, while in Ontario the gain was below normal. In other regions the employment changes were mainly seasonal.

Compared with a year earlier, there were 101,000 more persons with jobs, about three-quarters of the increase being among women. Farm implement declined by 49,000 over the year, while the number of job holders in non-farm industries increased by 150,000. Most of the gain took place in the service industries.

The number of persons without jobs and seeking work decreased by 99,000 over the month to 300,000 in June. The number of persons on temporary lay-off was practically unchanged at 15,000. All of the decline in job-seekers was among males and half of it took place in Quebec. Of those currently seeking work, 248,000 were men and 52,000 were women.

The June estimate of persons without jobs and seeking work represented 4.6 per cent of the labour force, compared with 3.7 per cent in June 1959 and 5.2 per cent in June 1958. The Ontario and Pacific regions were mainly responsible for the increase over the year; about four-fifths of the over-all gain occurred in these two regions.

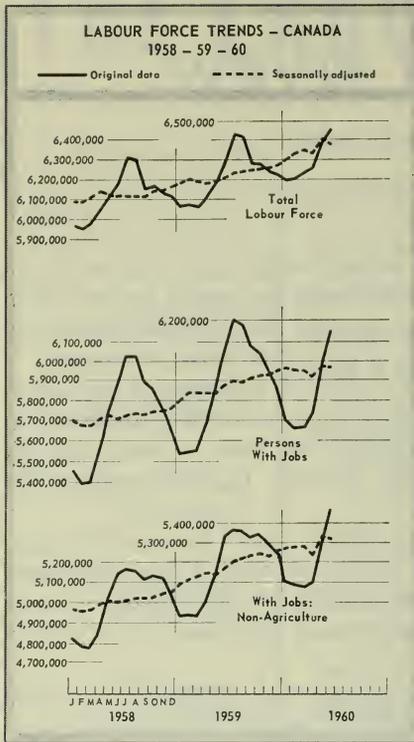

Of the 300,000 seeking work in June, 85,000 had been seeking work for less than one month; 91,000 for one to three months; 124,000 for four months or more.

The classification of the 110 labour market areas was as follows (last year's figures in brackets): in substantial surplus, 3 (1); in moderate surplus, 68 (51); in balance, 39 (58).

The labour force as estimated from the monthly sample survey conducted by the Dominion Bureau of Statistics totalled 6,454,000, and in the week which ended on June 18, 1960. This total compares with 6,391,000 a month earlier.

A breakdown of these labour force data indicates that 5,761,000 or 89.3 per cent of those in the labour force usually worked 35 hours or more at the jobs they held in the survey week; 393,000 or 6.1 per cent usually worked less than 35 hours; 300,000 or 4.6 per cent were without jobs and seeking work. Classed as not in the labour force are such groups as those keeping house, going to school, retired or voluntarily idle, too old or unable to work. These numbered 5,326,000.

The survey provides additional information about those who worked less than full time and were not regular part-time workers. Of the persons in this category 70,000 or 1.1 per cent of the labour force worked less than full time

on account of short time and turnover (39,000 being on short time and 17,000 having found jobs during the week), 15,000 or 0.2 per cent of the labour force were not at work due to temporary lay-off, while 262,000 or 4.1 per cent of the labour force worked less than full time for other reasons. The other reasons included illness (85,000), vacation (85,000), bad weather (33,000), and other (59,000).

During the corresponding week in 1959 there were 6,287,000 in the labour force of whom 5,691,000 usually worked 35 hours or more at the jobs they held during that week; 362,000 usually worked less than 35 hours; and 234,000 were without jobs and seeking work. There were 5,267,000 classed as not in the labour force.

The number of persons with jobs in the *Atlantic* region increased by an estimated 37,000 to 539,000 between May and June, about normal for the season; employment in the *Quebec* region showed a more-than-seasonal

rise between May and June. The number of persons with jobs in June was estimated to be 1,715,000, an increase of 85,000 over the previous month; in *Ontario* the number of persons with jobs increased by an estimated 15,000 to 2,283,000 between May and June, 44,000 more than the previous year; employment increased seasonally in the *Prairie* region from May to June. The estimated increase of 18,000 brought total persons with jobs to 1,085,000, up 12,000 from a year earlier; employment continued to rise in the *Pacific* region, though more slowly than in past years. The number of persons with jobs increased by an estimated 7,000 to 532,000 between May and June. Over the year, employment declined by 16,000, mainly in manufacturing, construction, transportation and communication industries.

COLLECTIVE BARGAINING REVIEW

ECONOMICS AND RESEARCH BRANCH

During June 32 major settlements provided new collective agreements for approximately 40,000 workers in various Canadian industries. In addition, four major asbestos mining companies in the Quebec eastern townships were ironing out final details of a new agreement similar to the ones signed during the month by Canadian Johns-Manville and Lake Asbestos of Quebec. A number of settlements were worked out in the pulp and paper industry and bargaining was expected to start shortly in logging. In the dispute between the railways and the non-operating unions, both parties presented their final arguments before a conciliation board.

Of the settlements that were concluded during the month, two were negotiated while work stoppages were in progress. The largest halted production of Caribou Aircraft at **De Havilland Aircraft Company** when 1,300 workers represented by the **United Auto Workers** were called out on strike. The union had demanded a supplemental unemployment benefit plan, an improved cost of living clause and improvements in the company's medical and life insurance program as well as wage increases. The company's pre-strike offer of a 5-cent-an-hour increase for each year of a three-year agreement was rejected by the employees. After an eight-day work stoppage the union accepted a two-year settlement providing 8 cents an hour increase this year and 7 cents an hour next year, with an additional 4 cents an hour for skilled tradesmen. There was no provision made for the SUB, but sickness and accident benefits were improved and the provisions of the cost of living bonus were made more liberal.

The second major work stoppage, also in the aircraft industry, was at **Canadian Aviation Electronics**, Montreal. The **International Union of Electrical Radio and Machine Workers** called a strike when the company did not accept a conciliation board recommendation for a 12-per-cent wage increase. After a 10-day work stoppage, the employees voted to accept the company's offer of a 7-per-cent wage increase during the life of a three-year agreement.

Municipal employees in the **City of Toronto** will receive a wage increase of 6½ per cent over two years in the new agreement signed between the city's Board of Control and the **Public Employees Union**. The 2,000 inside workers will get a 3½ per cent wage increase retroactive to April 1, 1960 and a further 3 per cent increase effective April 1, 1961. These increases, however, will not be compounded. The city also agreed to pay 50 per cent of a medical plan similar to the PSI Brown Plan. All new employees will be required to become union members within 60 days instead of 110 days. The city failed to reach an agreement with the outside workers represented by the same union and conciliation services were requested.

Collective bargaining was in progress during the month in Toronto and Montreal between the **International Ladies' Garment Workers' Union** and the **Dress Manufacturers Guilds**. The union's demands followed the policy set at a recent Montreal co-ordinating conference of local delegates who met to prepare for the forthcoming negotiations with garment manufacturers in Montreal, Toronto, Winnipeg, Edmonton and Vancouver. The new policy called for a reduction in the work week to 37½ hours without a loss in pay, as well as a general wage increase of 15 per cent. In addition, it was requested that the

employer's contribution to the severance pay fund be increased from one half per cent to one per cent; that two additional paid statutory holidays be granted; and that the union label be sewed into all manufactured garments.

Considerable progress was made in re-negotiating agreements in the pulp and paper industry in Eastern Canada. Settled early in July was an agreement between the pulp and paper unions in **Bowater Newfoundland Pulp and Paper Corp.** on terms similar to other pulp and paper settlements. In B.C. the primary pulp and paper mills reached a settlement which will give approximately 5,000 workers a 4 per cent wage increase during the next year. Details of these settlements will be published in next month's edition of the **Labour Gazette**.

Major Settlements in 1960

Wage settlements contained in major agreements signed during the first six months of 1960 have been tabulated for presentation in this review. During that period a total of 95 major collective agreements covering more than 117,000 workers were negotiated and signed in Canada. As in the 1959 settlements, approximately 65 per cent of the new major agreements were for terms of approximately two to three years, with the majority running for a two-year period. The remaining 35 per cent of the agreements covered in the study were for a one-year period.

Base rate increases up to 10 cents an hour were agreed upon in slightly more than half of the one-year settlements, with most of the increases in the order of 5 to 9.9 cents per hour. All but one of the eight one-year contracts providing for increases within the 15.0 to 19.9 cents per hour range were in pulp and paper mills located in Eastern Canada. A total of four new settlements, two of them in logging, were signed for one year without provision for wage increments. Most of the two-year agreements which constituted more than half of all settlements concluded in the period provided for wage increases between 5 and 14.9 cents per hour over the life of the agreement. Approximately three-quarters of the three-year agreements provided for increases to the base rates totalling 15 to 30 cents per hour.

WAGE SETTLEMENTS DURING THE FIRST HALF OF 1960

Collective agreements covering 500 or more workers concluded between January 1 and June 30, 1960, excluding agreements in the construction industry and agreements with wage terms in piece rates only.

Total Wage Increase in Cents per Hour*	Term of Agreements in Months									
	Under 15		15-20		21-26		27-32		33 and over

NOTES OF CURRENT INTEREST

Many Canadian Skilled Workers Trained Abroad, Survey Finds

Thirty-five per cent of all tradesmen interviewed during a Department of Labour survey that sought some insight into the ways in which workers in five selected skilled trades had acquired their skill had received the greater part of their training outside Canada, it is stated in a bulletin based on the survey. The bulletin is No. 4 in the series produced by the Research Program on the Training of Skilled Manpower.

The proportion of tradesmen trained outside Canada ranged from a high of more than 50 per cent in the case of draughtsmen to 22 per cent in sheet metal working.

The more highly skilled the trade, the greater was the dependence on immigration as a source of skilled workers. "This suggests that, up to the time of the survey, training facilities in Canada were failing to keep pace with manpower requirements, and this was particularly pronounced in the more highly skilled occupations," the report says.

The samples of workers interviewed comprised tool and die makers, sheet metal workers, floor moulders, draughtsmen, and electronic technicians in the Toronto and Montreal labour markets.

Other information sought in the survey, says the foreword to the bulletin, included: the opinions of workers as to what formed the most valuable part of their training, how they regarded their trade in relation to other occupations, how technological changes were affecting training needs, and the sources of workers in skilled trades.

"It was felt that data of this kind would be of value in suggesting ways in which the education and training of workers for the skilled trades could be improved and would, therefore, assist educational authorities, industry, labour, government, and other interested groups in their efforts to meet industry's changing requirements for skilled and technical manpower," the report says.

The bulletin gives a summary of the findings of the survey, followed by tabulated data relating to each of the five trades dealt with. A further, detailed analysis of the tabular material is contained in a

separate report for each trade, which can be obtained from the Economics and Research Branch, Department of Labour.

The report mentions four criteria as having decided the choice of trades to be studied. These were: that the skills required in the trade have been affected by technological changes, that the trade represents an important occupational group, that it is likely to grow in importance as mechanization increases in industry, and that it is one to which entrance is frequently gained by apprenticeship.

"In selecting the industries and establishments to be covered for each trade, an attempt was made to have as broad an industry coverage as possible within the limits imposed by the manpower and time available for the study. The number of workers to be selected from a particular industry and establishment was related to the number employed in that trade in the establishment and in the industry of which the establishment formed part," the report states.

Hospital Insurance Agreement Signed with Yukon Territory

The eleventh agreement under the Hospital Insurance and Diagnostic Services Act has been completed with the signing of an agreement with the Yukon Territory on June 29.

The Yukon Plan, which came into operation on July 1, is similar in scope to that in a number of other areas of the country. It includes all of the in-patient services required under the federal Act and also certain services for out-patients. The latter will be provided within 24 hours after an accident or for a longer period in cases where the required services cannot be obtained within that time.

The Plan will be financed out of the general revenues of the Territory and no premiums or authorized charges will be levied to meet the Yukon share of the joint undertaking. Under the terms of the Hospital Insurance and Diagnostic Services Act, the Dominion Government contributes approximately 50 per cent of costs on a nation-wide basis.

CLC Executive Council Deals with Matters Referred by Convention

Prompt adoption by the federal Government of proposals made by the Canadian Labour Congress at the 1958 National Winter Employment Conference was called for last month by the CLC Executive Council. The Council held a three-day meeting in Ottawa to deal with resolutions referred to it by the Congress convention in April.

At the meeting, the Council also pronounced the formal sentence of expulsion from the CLC of the International Brotherhood of Teamsters, which had failed to take advantage of the 30 days of grace granted it by the convention.

The Council also called for:

—Publication earlier in the year of the Government's plans for dealing with winter unemployment.

—A large program of public works to provide employment, and measures to encourage and help in the building of houses.

The Council proposed revisions in unemployment insurance legislation that would have the effect of:

—Making benefits available to workers who have exhausted their benefits or are unable to qualify, with the cost borne not by the Unemployment Insurance Fund but met out of public funds.

—Modify disqualification regarding unemployment due to work stoppages.

—Provide unemployment assistance to persons released from prison.

—Extend provisions of the Act to all civic employees.

Among a number of suggestions regarding changes in taxation recommended by the Council were those calling for a more progressive income tax, with higher exemptions for married and single persons and on account of dependents, as well as several kinds of new exemptions.

The Council condemned "the racist features and breaches of civil liberties" in Canada's present Immigration Act. It asked the Government to establish a national advisory committee on immigration composed of representatives of farmers, labour, management, welfare agencies and other bodies. It also proposed that "the admission of immigrants be consistent with the absorptive capacity of the country."

Support was given in principle to the programs of organized farmers for fair prices for farm products. The Council also asked for the establishment of a Royal Commission to investigate the prices of agricultural implements, and repudiated any suggestion that wage increases obtained by workers in the farm implement industry

were in any way responsible for the high price of implements.

The Council supported civil servants in their requests for salary increases, and condemned the Government's action in granting piecemeal increases to civil servants without making the increases retroactive. It also reiterated previous demands for collective bargaining rights for civil servants.

The Council again asserted its opposition to the principle of compulsory arbitration and the use of injunctions in labour disputes. Denial to any group of employees of the right to strike was strongly condemned.

Elimination of trading stamps by law was asked for by the Council. Another resolution protested "the outrageous interest rates and other charges of finance companies."

Independent Research Group Says Chignecto Canal Feasible

The Chignecto Canal is "technically feasible" and, from a climatic point of view, usable, according to a report by an independent research organization that was commissioned by the Chignecto Canal Committee.

The cost of the project, estimated at \$90 million, "could be more than counterbalanced by increased revenues from the region," the report said.

The report, by Economic Research Corporation of Montreal, was released by Michael Wardell of Fredericton, honorary secretary of the Canal Committee. The report was prepared under the direction of Dr. D. E. Armstrong, McGill University, and Dr. D. H. Hay, Massachusetts Institute of Technology.

The Canal would connect the Bay of Fundy with the Northumberland Strait.

The Canal is pictured by the report as an extension of the St. Lawrence Seaway linking it with a sheltered route for Atlantic coastal shipping. It adds that Great-Lakes-type boats, cheaper than ocean-going ships to build and operate, could be used in the waterway.

J.H. Oldenbroek Resigns as ICFTU Secretary-General; Becu Succeeds

J. H. Oldenbroek of The Netherlands, Secretary-General of the International Confederation of Free Trade Unions for the past 10 years, resigned from the post last month.

He will be succeeded by Omer Becu of Belgium, Secretary-General of the International Transport Workers' Federation.

The ICFTU represents an estimated 57,000,000 union members in 100 countries.

Pictured at a testimonial dinner to John McLeod, retired Vice-President in Canada of the Bricklayers, Masons and Plasterers' International Union, are (from left): John W. Bruce, Organizer for the Plumbers and Pipefitters; S. J. Finlay, Vice-President, Eastern Canada, International Brotherhood of Boilermakers; CLC President Claude Jodoin; Mr. McLeod; and J. J. Murphy, International President of the Bricklayers.

Testimonial Dinner Honours John McLeod, Bricklayers' Vice-President

John McLeod, for 40 years Vice-President in Canada of the Bricklayers, Masons and Plasterers' International Union, a union officer for 52 years, and a trade unionist for 56 years, was honoured recently at a testimonial dinner in Toronto.

Mr. McLeod, now 78 years of age, was apprenticed as a stonemason in his native Scotland at the age of 15 years. In 1903 he became a member of the Stonemasons' Union in Scotland. Early in 1904 he came to Canada, and worked at his trade in Toronto and Niagara Falls, becoming a member of the Niagara Falls local of the Bricklayers, Masons and Plasterers in the same year.

In 1908 Mr. McLeod was elected Recording Secretary of Local 26, Toronto, and in 1910 he became business agent for the local, at that time a job that occupied only three months of the year. He worked as a stonemason during the remaining nine months.

Mr. McLeod was for several years President of the Ontario Provincial Conference of the Bricklayers Union, until in 1918 he was appointed special deputy of the international union. Two years later he was elected Vice-President by acclamation.

In 1934, he represented the Trades and Labour Congress at the Tolpuddle Martyrs Centennial, and was TLC fraternal delegate to the Trades Union Congress.

Mr. McLeod served throughout World War II as a member of the National Joint Conference Board, a tripartite board set up by the federal Government to advise the Minister of Labour.

In 1949 he was an adviser to the Government Delegate to the Second Session of the ILO Building, Engineering and Public Works Committee, held in Rome.

Mr. McLeod was known for his moderation and talent for conciliation in his dealings as a union official. It is said that during his 40 years as vice-president there wasn't one officially sanctioned strike in his jurisdiction. When an unofficial walkout occurred, he used his authority to get the men back to work.

The dinner was attended by about 150 persons from a score of unions and the Canadian Labour Congress. Chairman was S. J. Finlay, Vice-President in Canada of the Boilermakers.

J. B. Metzler, Ontario Deputy Minister of Labour, and R. J. Tallon, former Commissioner of the Unemployment Insurance Commission, were among those present.

U.S. Senate Told about Canadian Labour-Management Co-operation

A summary history of Canadian labour-management co-operation, the annual report of the Labour-Management Co-operation Service of the Department of Labour for the year ended March 31, 1959, and a lengthy extract from the Department's Monthly bulletin *Teamwork in Industry* for May were incorporated last month in the United States *Congressional Record-Senate* on the motion of Senator Jacob Javits.

Senator Javits asked that these documents be printed in the *Record* when he introduced in the Senate a bill for the establishment of an agency of government to be responsible for the development of labour-management councils to increase American productivity.

He said this was remarkable confirmation of the effectiveness of this technique from our neighbour, Canada."

Two Thirds of U.S. Plant Workers Covered by Collective Agreements

Two thirds of the 11,700,000 production and kindred workers employed in manufacturing in the United States in 1958 were in establishments in which a majority of the plant workers were covered by collective agreements. This was shown by a survey by the U.S. Bureau of Labor Statistics, the results of which were summarized in the *Monthly Labor Review* for April.

Nearly 3,900,000 factory workers were in establishments in which collective agreements were either non-existent or extended to only a minority of the employees.

HOUSE OF COMMONS DEBATES

A Guide to Items of Labour Interest in Hansard

(Page numbers refer to Hansard)

May 26—*Percentage of persons without jobs and seeking work, by number of months looking for work, at the end of corresponding weeks in April in the years 1953 to 1960 inclusive, given in a table presented by the Minister of Labour in answer to a question. The situation "has run pretty well normally for the past eight years," Mr. Starr says (p. 4250).*

There were 228,551 active seasonal benefit claims on April 30, but there have been no complaints from the Canadian Labour Congress or the Canadian and Catholic Confederation of Labour about the cut-off date of May 15 for seasonal unemployment insurance benefits, the Minister of Labour points out in answering a question (p. 4252).

May 27—*"Will automation have any effect on Canada's 700,000 unemployed ... I think we should look twice before completely mechanizing the Post Office Department," says Azellus Dennis (St. Denis) during debate on the Post Office Department estimates (p. 4292).*

May 31—*Report of the Royal Commission on coal is expected in the late summer, the Minister of Mines and Technical Surveys tells a questioner. A rumour that three mines in Nova Scotia are likely to be closed before the production of the report is not true, the Minister says in answer to the same questioner (p. 4361).*

June 1—*The unemployment insurance fund balance on April 30, 1957 was \$854,607,845.71; April 30, 1958, \$693,102,899.31; April 30, 1959, \$454,462,498.91; April 30, 1960, \$324,986,215.82 (interim), the Minister of Labour states in reply to a question (p. 4409).*

The Canadian National (West Indies) Steamships does not contemplate repossessing any of the eight vessels sold to Cuban interests in August 1958; seven of them were in Halifax and one in Baltimore, according to the latest reports, the Minister of Transport says in answering a question (p. 4411).

June 6—*Second reading moved of Bill C-63, to amend the Old Age Security Act to do away with the requirement that an old age security pension must be suspended when a pensioner absents himself from Canada for more than one month (p. 4554).*

The motion was debated at considerable length and the bill passed second reading (p. 4566).

Motion to authorize inquiry into prices of farm machinery by the standing committee on agriculture and colonization is agreed to (p. 4571).

June 7—*A protest from Regina Local 179 of the Plumbers and Steamfitters union regarding the recruitment of United States welders by a company employed by the Saskatchewan Power Corporation, while Canadian welders with suitable experience*

remained unemployed, had been received by her, the Minister of Citizenship and Immigration says in answer to a question. She had asked her department to investigate (p. 4597).

Bill C-63, to amend the Old Age Security Act, read the third time and passed (p. 4599).

June 9—*Question of bringing non-professional hospital employees under unemployment insurance* has been constantly under consideration, the Minister of Labour says in reply to a question (p. 4710).

"*Canada needs immigrants* for many reasons, the most obvious of which is to provide skills and training necessary for the development of the country," the Minister of Citizenship and Immigration says in outlining the views of the Government on immigration, during debate on her department's estimates (p. 4711).

The Department of Citizenship and Immigration is advertising overseas to the effect that there are openings "in the same areas in which we have thousands upon thousands of unemployed," Harold E. Winch (Vancouver East) says during the same debate (p. 4717).

June 10—*Borrowings* from the Minister of Finance on behalf of the unemployment insurance fund have recently been reduced, the Minister of Finance says in reply to a question. Total loans outstanding from the Minister of Finance were \$37,000,000 on May 31, and on June 9 they had been reduced to \$25,000,000 (p. 4768).

June 13—*Medical care program* proposed by the government of Saskatchewan has not been the subject of consultation between himself or his officials and provincial officials, and the Premier of Saskatchewan has not sought federal financial assistance, the Minister of National Health and Welfare says in reply to questions (p. 4818).

June 15—*The number of people admitted to Canada for permanent landing* during the years 1956 to 1959, and the number ordered deported, are given by the Minister of Citizenship and Immigration in answer to a question (p. 4948).

Unemployment insurance fund investment transactions during April and May are reported by the Minister of Finance in answering a question (p. 4949).

June 20—*A study concerning the values placed on automobiles for duty purposes* and discounts on the values of imported cars is going on, the Prime Minister says in answering a question about his recent

conference with heads of the Canadian automobile industry regarding conditions in the industry (p. 5110).

Resolution to introduce amendments to the Public Service Superannuation Act with respect to contributions, pensionable service, benefits, etc., is debated and concurred in, and Bill C-76 is read the first time (p. 5124).

Resolution to introduce a measure to amend, revise and consolidate the Civil Service Act is debated and concurred in, and Bill C-77 read the first time. The measure "touches all aspects of the appointment, classification, tenure, rights and responsibilities of the Civil Service of Canada, and the powers and duties of the independent Civil Service Commission charged with responsibility in relation thereto," the Minister of Finance explains (p. 5128).

Need for careful consideration of the proposed bill by Parliament is recognized by the Government, the Minister said, and to facilitate such detailed consideration he would propose that the bill, after second reading, be referred to a special select committee of the House for study and report (p. 5155).

June 21—*Figures on unemployment* released by the Dominion Bureau of Statistics on June 9 show that unemployment "both in absolute and relative terms is higher than in the corresponding periods of 1959 and 1958," and higher than in any corresponding period since the great depression, Hon. Paul Martin (Essex East) says in asking how the Government intended to deal with the situation. The Minister of Labour pointed out that according to the release there were 250,000 more persons working than last month and 140,000 more working than in the same period of 1959 (p. 5173).

June 22—*Five hundred strawberry pickers* are needed at Chilliwack and there are only 200 people registered at the National Employment Service office, and 4,000 pickers are wanted in the whole Fraser Valley, Harold Hicks (Fraser Valley) says, asking the Minister of Labour where pickers can be obtained. The Minister promises to bring the matter to the attention of the NES (p. 5241).

A survey to determine the feasibility of building the Chignecto Canal will be made and the cost will be shared equally between the federal Government and the Government of New Brunswick, the Minister of Public Works informs a questioner (p. 5242).

THE WOMEN'S BUREAU

"There is urgent need for more study and analysis of the basic facts about the employment of women and opportunities for their employment." Canadian women's organizations repeatedly brought this appeal to the Government's attention, and this was an important factor in the decision almost six years ago to establish a Women's Bureau in the Department of Labour.

The purpose of the Bureau was to promote a wider understanding of women's role in the contribution to the labour force, and to advance their opportunities in employment in order to enable them to make a more effective contribution to the development of Canada.

In the almost six years of its existence, the Women's Bureau has performed the functions assigned to it:

1. To examine existing data and studies concerning conditions of employment of women workers, and to stimulate additional

research by the appropriate branches of the Department or other research bodies.

2. Using the knowledge so gained, with the help of other branches of the Department, to assemble information of interest to women, and, through speeches and published material, to make it available in such a way as to foster an intelligent approach to women's problems.

3. To develop regular channels between the Department and other public and private agencies, including women's groups and employer and labour organizations, in order to ensure a continuing interchange of information concerning women in employment.

4. To advise the Department on any of its programs affecting women workers, and to be available for consultation with provincial government agencies or other bodies concerned with employed women as requested.

In the performance of its third function (see box), the Women's Bureau has had many contacts recently with women's organizations; staff members gave addresses to and participated in the discussions at several conferences and conventions.

At the 42nd annual conference of the Alberta Association of Registered Nurses, at Banff from May 17 to 20, several speakers from outside the nursing profession addressed the delegates this year. Among these was Mrs. Agnes Beckett, Assistant to the Director of the Women's Bureau, who discussed some of the problems confronting the professional woman.

At the spring convention of the Business and Professional Women's Clubs of Alberta, in Medicine Hat from May 21 to 23, Mrs. Beckett described the aims and work of the Women's Bureau and participated in the discussion of the issues before the meeting. Chief among these was a survey of business and industry being carried out by the Clubs in an effort to measure the effectiveness of the provincial equal pay law passed in 1957. Members reported a favourable reception from businesses so far approached.

A brief to be presented by the Clubs at the forthcoming Government inquiry into the operation of the Alberta Labour Act was also discussed. The Clubs are asking the Board of Industrial Relations and its inspectors, who administer the Act, to give leadership in educating the public with respect to the principle of equal pay for equal work. Also being urged is an increase in the minimum wage rates and identical minima for men and women workers.

The Canadian chapter of *Les Femmes Chefs d'Entreprises* was hostess to the 11th

international convention, held at Montreal from May 29 to June 4. The purpose of the association, founded in France in 1945, is primarily economic, and includes acquainting women with the laws affecting their economic interests and status.

Miss Marion Royce, Director of the Women's Bureau, attended two sessions of the convention, at which delegates from Belgium, France, Great Britain, The Netherlands and West Germany were present. All members of the organization fill executive positions in business and the professions, and the majority are married. The theme of the congress was the survival of the family enterprise and the role of women as partners in or directors of such businesses.

At the annual meeting of the National Council of Women of Canada, held at Niagara Falls from May 30 to June 3, Miss Royce spoke on the history and program of the United Nations Commission on the Status of Women, with particular reference to the 14th session recently held at Buenos Aires. She drew attention to issues currently before the Commission that are of special concern to Canadian women: the status of married women in employment, equal pay for equal work, vocational guidance for girls, age of retirement, legal minimum age of marriage, and the effect of inheritance laws on the status of women.

On June 10 Miss Royce spoke to the University Teachers of Home Economics, a section of the Conference of Learned Societies, on the subject of women in the labour force and the contribution that home economics might make to training women in the future. This talk was followed by a discussion of needed developments in university curriculum in the field.

Women as Part-Time and Part-Year Workers

Both part-time and part-year workers more common in female labour force than among male working population. As women's labour force participation grows, number of workers who do not devote full time to the job will likely increase

Neither the number of women with jobs nor the participation rate of women* gives a measure of the share of the nation's work, in man-hours, weeks or months, that is contributed by women. And the labour force participation rate does not reflect the extent to which the working population is made up of part-time and occasional workers; anyone who does even one hour's work during the survey week is counted in the labour force, and given the same weight in the participation rate as a full-time worker.

(The Dominion Bureau of Statistics monthly bulletin on the labour force survey regularly warns that "while variations in the estimates of the total number of persons with jobs provide a valuable indicator of economic conditions, significant changes in the employment pattern may be concealed unless attention is focussed on the extent to which these people worked less than full time, or were not at work.")

In assessing the contribution of women to the nation's work, it becomes important, as the number of employed women grows, to investigate the effect of the difference in the pattern of women's work from that of men's. A change is taking place in the sex composition of the working population; there may also be a change in the individual contribution to work made by the female members. Since a woman's work-pattern is greatly influenced by obligations that fall on her when she marries, it is likely that the total contribution of women workers would be affected by the increase in recent years in the proportion married.

It is important, too, to ascertain whether the proportion of working women who spend virtually their whole lives in the labour force—a minority of all women—is increasing or decreasing. If the number of labour force members who do not have full-time, year-round jobs is increasing at a faster rate than the number of those who do, the implications may be important.

Women with family responsibilities do not generally commit themselves to full-time, year-round employment. Yet they may arrange to work outside the home for

a few hours a day, perhaps while children are at school, or on certain days of the week. Or they may take on full-time jobs now and then in a seasonal rush, permitting their usual home duties to pile up until they are free again.

Although the two patterns of work are not always mutually exclusive, it is generally true that when women take jobs that do not commit them 100 per cent to the labour force they are either (a) part-time workers in that they work less than the regular weekly hours, or (b) part-year workers. The important factor that distinguishes both categories from regular labour force members (male or female) is that their primary attachment is to duties outside the labour force.

From the labour force survey data it is possible to measure with some degree of accuracy the extent of part-time work. But how many labour force members work only part of the year, and the characteristics of these part-year workers are much more difficult to establish. In this article, attention will be directed first to the identifiable group of part-time workers, and then an attempt will be made to estimate the extent of part-year work.

Part-Time Work

Although it is technically possible to use part-time workers in many factories, industry generally "wants a full working day of seven or eight hours... so that machines can be kept running and the hours fit in with the general organization of the establishment, supervision, transportation arrangements and so on".¹ In North America, industry has made relatively little use of part-time workers except in times of labour shortage. Employers naturally want to avoid disruption of the routine of the plant that is likely to result from introducing part-time work beyond what is necessary to meet unforeseen circumstances that are bound to arise from time to time.

When a plant shuts down because of lack of orders or of raw material, or when illness or the weather prevents workers from putting in full time on the job, the result is what is usually called short-time work or

*Percentage of the civilian female population 14 years of age and over in the labour force, i.e., with jobs or without jobs and seeking work.

¹Dame Mary Smieten: "Problems of Women's Employment in Great Britain," *International Labour Review*, Vol. LXIX, No. 1, Jan. 1954, p. 51.

involuntary part-time work, and it mainly affects men.

But in addition to those who work part time now and then by reason of circumstances beyond their control, many are on a regular schedule of part-time work year in and year out. This arrangement may be due to requirements of the employer whose establishment experiences regular rush periods as well as lulls, or it may be a special plan to enable the worker to fulfil other obligations. In some kinds of establishments such as retail stores and restaurants, the needs of the employer fortunately coincide with the hours that many part-time workers can afford to give to paid work. Women whose commitments to home responsibilities preclude them from giving full time to an outside job make up the majority of regular part-time workers. This class of part-time workers, which in the last five years has been growing in Canada at a much faster rate than the regular full-time working force, can be said to dilute the labour force.

Recognizing that part-time work is among the important issues concerning women workers today, the International Labour Organization has called on experts from many countries to consider part-time work among other questions affecting working women. Already it is clear that opinions are divided as to the probable effects of any large-scale growth in this segment of the labour force.

Women's organizations have expressed fears that part-time employment may "lead to the creation of a special body of women workers of a lower type constituting a threat to the application of the principle of equal pay and to the status of the female labour force as a whole".² Others have raised objections on economic grounds. It has been suggested that if part-time work were to become available on a large scale some women would switch from full-time to part-time work, causing a drop in the overall contribution of women to the working force. Whether or not this would happen is a matter of conjecture. It is certain, however, that the part-time job fills a real need for many. It enables women to add to the family income without neglecting essential duties of the home; at the same time it provides employers with extra help at peak periods.

The meeting of Experts on Women's Employment called by the ILO in 1956 agreed to limit the definition of part-time

work for the purposes of their discussions to regular work carried on for substantially less than normal hours of work by mutual agreement between the employer and the worker. Involuntary short-time work in periods of economic recession, and seasonal and casual work were excluded.

The Canadian Labour Force Survey conducted monthly by the Dominion Bureau of Statistics classes all who work less than 35 hours in the survey week as less than full-time workers. Data are provided separately for those who regularly work part time. These regular part-time workers correspond roughly to the group with which the ILO meeting of Experts on Women's Employment is concerned.

In recent years both the number and proportion of Canadian workers on a regular schedule of part-time work have been growing. This trend is particularly noticeable in the case of women (Table 1).

Despite the fact that the number of part-time jobs has been on the increase, there is "great demand for part-time employment on the women's side... in most of the economically more developed countries".³ Because married women still make up a high proportion of the non-working population the situation is likely to continue. These women are, generally speaking, not looking for full-time jobs, but if suitable part-time jobs were offered many would be ready to accept them.

Unless a very tight employment situation develops there is little hope of heavy demand for part-time workers in factories, although in time of national emergency they could become indispensable. But the growing distributive and service industries will probably continue to offer more part-time employment. It would be hard to imagine retail stores today without the women who help the full-time staff at rush hours and replace them on their days off, or offices without the men and women to clean up after regular workers go home. Considerable success has been achieved in placement of part-time workers in retail stores, restaurants, beauty parlors and laundries. With few full-time domestic workers available nowadays, a great many families rely on part-time household help. In professions in which there is a perennial shortage of help, such as nursing, social work and teaching, it is generally possible to solve the administrative problems, and considerable use is made of part-time workers.

Regular part-time work for women appears to be an established pattern in North America in establishments where it is either a solution to the employer's prob-

lem or a means of using help available only part of the time by re-scheduling some of the work. The U.S. Department of Labor reports that: "The recent increases in labor force participation rates of married women have undoubtedly been partially due to expanding part-time job opportunities in suburban stores and service establishments." They add that: "If sufficient additional part-time jobs are not available, there may not be as much continued increase as projected

in the labour force participation rates for this group."⁴

Part-Year Workers

The monthly labour force survey is based on labour force activity during the survey week. It does not, of course, show what proportion of the workers are employed for less than a full year. The only authoritative

source of information concerning that group of workers is the Census.

The last census of the Canadian labour force was conducted in 1951. It shows the number of weeks worked during the year by wage-earners of each sex, but there is nothing to indicate whether the weeks away from work were voluntary or involuntary.

It seems reasonable to assume, however, that few regular workers would choose to work less than 10 weeks in the year. Table 2 shows that although more men than women were employed for less than 10 weeks⁵ in the year (the bulk of them probably occupied most of the year as students or keeping house), this category of workers represents a higher proportion of all female wage-earners than of male wage-earners. This was true both in 1941 and 1951.⁶

No data are available to permit an investigation of the trend in this respect from 1951 to the present time, but comparison with 1941 census information shows that the absolute number of men working less than 10 weeks of the year (and also less than 20 weeks) fell in the decade preceding

⁵ For comparative purposes data are also given for wage-earners employed for less than 20 weeks in census year. The argument is unchanged.

⁶ Of course some who worked only a few weeks in the year would be beginning workers and others retiring, but this should not affect the comparison between 1941 and 1951. A study made by the Economics and Research Branch in 1949 concluded that roughly 13.5 per cent of the female labour force and 9.6 per cent of the male labour force were employed for only part of the year. The big difference was that of these part-year workers 97 per cent of the females but only half of the males were "not available for employment during the remainder of the year". The great majority of these male part-year workers would be students, whereas housewives would make up a high proportion of the females. "Seasonality of Employment in Canada," *Labour Gazette*, 1949, p. 1210.

1951, whereas the number of women working less than 10 weeks and also less than 20 weeks increased. Yet the forties saw such a great expansion in the total number of wage-earners, male and female, that for both sexes the percentage of all wage-earners who worked less than 10 weeks and less than 20 weeks fell.

The Census also throws light on which industries had the highest proportion of men and women who were employed for less than 10 weeks in 1951 and in 1941. Generally speaking, for both sexes it is mainly agriculture and other industries employing outdoor workers (Table 3). Since these industries are at their peak in the summer months, many of those who worked less than 10 weeks in the year would no doubt be winter-time students.

Among women there is a relatively high percentage of part-year workers in the service industry, in manufacturing, and in trade—particularly retail trade. The service and trade industries are large-scale employers of women, especially of married women.

The proportion of women who work less than 10 weeks of the year is high in the manufacture of foods and beverages. This is related to seasonal canning of fish, fruits and vegetables.

Because the data concerning part-year workers do not cover the same period as the information on part-time workers, the trends cannot be compared. It is known, however, that between the 1941 Census and the Census of 1951 the percentage of wage-earners who had worked less than 10 weeks of the year ended June 1 fell, for both men and women. Whether or not part-time work was on the increase during this period is not known. But it has been shown that during the last six or seven

years there has been a decided growth in regular part-time workers as a proportion of all persons with jobs.

Both part-time and occasional workers are more common in the female labour force than among the male working population.

If women workers—particularly married women workers—make up an increasing proportion of the labour force, the number of working people who do not devote full time to the job the year round will probably continue to grow.

Legislation Affecting Women's Work*

Legislation affecting women's work is of two kinds: requirements that apply to women and not to men, and standards that apply to both men and women. Recent trend in first type has been toward repeal or extension to both men and women

"Legislation affecting women's work" is not just that narrow category of legislation that places a specific obligation on an employer with respect to a female employee and not with respect to a male employee. Most of the legislation significantly affecting women's work applies to men as well as women.

What has been the trend, first, with respect to requirements such as restrictions on hours of work of women that do not apply to hours of work of men, restrictions on night work of women, and safeguards or amenities that must be provided only for women?

The trend is towards repeal of some such provisions and extension of others to both men and women, and the record of the last ten years seems to be practically devoid of any new legislative provisions applying only to women.

In 1951, the sections of the British Columbia Factories Acts referring specifically to women and young girls were removed, one such provision being a provision requiring women and young girls to be given at least an hour for lunch unless exempted by an inspector. Another provision requiring the employer on the direction of the inspector to provide a suitable room for meals, which had previously applied only to women and young girls, was amended to apply to all persons employed in factories.

In relation to night work, the provisions of the Ontario Factory, Shop and Office Building Act prohibiting employment of women after 9 p.m. in a factory or after 2 a.m. in a restaurant was amended in 1953 to permit the Minister of Labour to authorize work until a later hour. Taking one year as an example, according to the annual report of the Department, such permits were granted to 147 employers during 1957

(97 in the manufacturing industry, 1 in wholesale trade, and 49 proprietors of restaurants). These permits are subject to specified conditions, and where a trade union acts as bargaining agent for the employees, are issued only if the union agrees to performance of the work during the hours specified.

When the Manitoba Employment Standards Act was passed in 1957, that part of it which replaced the Factories Act was substantially revised. A number of sections relating solely to young girls and women were replaced by general provisions applicable to all employees.

Some absolute limits on hours, i.e., limits that apply even if an overtime rate is being paid, still apply to women and not to men. There are such limitations on working hours of women in factories in New Brunswick, Quebec, Ontario, Manitoba and Saskatchewan. These provisions have not been materially changed in the last few years.

Legislation Applying to Both

Legislation that applies to both men and women employees may have special significance for women. Legislation that establishes minimum standards in respect to rates of pay, time off with pay, regular hours of work, protection of wages and minimum standards in the working environment is of particular importance to considerable numbers of women, because many women are still unskilled and because many, whether skilled or unskilled, owing to family ties, seek work in the immediate area in which they live. In these circumstances, there may be little competition for their services and little pressure upon an employer to improve the conditions in which employment is offered. The conditions of work that are offered may be largely determined by the legal minimum standard.

What has been the trend with respect to these standards in the last few years?

*A paper prepared in the Legislation Branch for delivery at a departmental seminar on the Women's Bureau.

Although some provinces continue to set lower minimum rates for women, the differential has been reduced in most cases since 1950. In Manitoba, in 1950, the minimum wage for women was \$19.50 a week in the cities and \$18.50 in the rural areas. The minimum for men was 50 cents an hour, regardless of location, which amounted to \$22 for a 44-hour week (a differential of \$2.50). The difference was gradually reduced, and in the orders recently issued the same minimum rate has been set for men and women, 66 cents an hour in urban areas and 61 cents an hour in rural areas.

In Alberta, the differential between the male and female minimum wage rates has been considerably reduced. In 1950, the minimum wage for women was \$20 and that for men was \$25. At present, the female minimum wage rates, \$28 in the five large cities and \$24 in the smaller places, are \$2 a week less than those set for men: \$30 and \$26, respectively.

In British Columbia, where minimum rates are set on an industry or occupational basis, only one rate, 40 cents an hour, was set for factory workers in 1950, whereas the order now in effect sets a minimum of 60 cents for women and 75 cents for men. This is an exception, however, the general trend when issuing new orders being to set the same rate for male and female employees. The present minimum rate is 75 cents an hour for both men and women in offices, and 65 cents an hour in shops and hotels.

As to the general trend in the level of minimum wage rates, taking factory employment as an example over the past 20 years, the present rates are not far different than they would have been had the 1938 rates simply been adjusted according to the cost-of-living index. However, there has been a significant extension of coverage to all types of employment and all areas within a province, with the result that a minimum wage rate is set for practically all women employees except those in agriculture or domestic service and for almost all men with the same two exceptions, except that in the provinces of Ontario and Nova Scotia no rates are set for men and New Brunswick sets rates only in one industry. (Prince Edward Island enacted a women's minimum wage Act in 1959 and at the 1960 session passed legislation providing for the setting of minimum rates for male employees. No rates have so far been set).

Another Trend

Another trend is the abolition or reduction of a learning period in which lower rates may be set for inexperienced workers.

Still another is to include a number of associated requirements with the requirement to pay a minimum wage. One of these of considerable importance is the requirement that an employee be given, when he is paid or, in some cases, on request, a pay statement showing the basis of computation and any deductions made. Another is the requirement that if an employee is asked to report for work, he has to be paid for a minimum period even if work is not available.

The trend toward establishing legal minimum requirements in regard to annual paid vacations goes back to 1944. By 1950, there were such requirements in Ontario, Saskatchewan, Alberta, British Columbia, Quebec and Manitoba. In the 1950's, annual paid vacations legislation was passed by Parliament in respect to the federal industries and by New Brunswick and Nova Scotia, with the result that the requirement of an annual paid vacation is now law in eight provinces and in the federal industries. In addition, in the 1950's, the required period of the annual vacation was increased from one week to two weeks in British Columbia and Manitoba, and in Saskatchewan, the requirement of three weeks after five years' service was added.

A perennial issue in regard to all these standards is the level at which they should be set. Although minimum wage rates have been set in Canada since 1918, the search for a set of factors that might sensibly determine the reasonable minimum wage is still going on. Although this question of purpose of standards and the setting of the standard continues to be unsolved, some standards are in fact established and serve a useful purpose.

Another matter, the philosophy and practice of administration of minimum labour standards legislation, continues to be an issue. Most labour standards laws are adopted as social measures to carry out a public policy. In any such Act, there is provision for administrative action of some kind, perhaps the determination of certain questions, and very commonly rights of inspection to see whether the law is complied with. Failure to comply with the law is an offence and there are criminal sanctions if an offence is proved in court. These are not laws passed to clarify the law between individuals, but in the interests of society as a whole. Compliance is a matter of public interest rather than of the interest of any one individual who may be affected.

Because standards more advanced than the minimum are known to exist in many establishments, and the average is good, there has been a drift toward the assump-

tion that the situation is satisfactory everywhere and the administrator would be wasting the public money in going out to see what is going on. But the usefulness of labour standards laws to women workers depends to a large degree upon whether a positive policy of administration is carried out.

Equal Pay Laws

Equal pay laws have been the type of legislation attracting most interest from women's groups in the last 10 years. In that period, equal pay laws have been passed by Parliament for the federal industries and by seven provinces. The letter of the law applies only where women are doing work at which men are also engaged, and has no application in any establishment where men and women do different types of work.

It can be said, however, that these laws have served a useful purpose as a statement of public policy, have strengthened the hands of personnel administrations that believe in the principle of rate for the job as a matter of efficiency, and have strengthened the position of women employees seeking, with good grounds, to improve their status.

There has been no discernible public policy in Canada with respect to employment of those women who have a choice between working and not working. No action has been taken by any government to encourage or discourage participation of married women in paid employment. There has been no move here, as in a number of other countries, to encourage the scheduling of part-time work, or to provide services such as day-care of children, to encourage women with family responsibilities to work outside the home. No legislation has been adopted requiring maternity leave to be given, and the only existing legislation is the Maternity Protection Act passed in British Columbia in 1920, under which no regulations have been issued. There seems to have been no movement in Canada, as in a number of other countries, to provide

that women cannot be dismissed from employment during the time of maternity leave, so that continuity of service is maintained and seniority rights are not lost.

A fact that women sometimes fail to recognize is that developments in labour relations legislation are of a major concern to women's work as well as to men's work. Because women do not work in great numbers in the heavy manufacturing industry or in transportation or in construction or in some of the other fields where trade unions have been most active, it is easy to overlook the fact that there have always been some industries (the clothing industry is an example) in which women have been employed and in which a substantial proportion of the employees belong to unions. Now as organization efforts are becoming more concentrated on the "white collar" group, the rights and obligations of trade unions and of trade union members become of greater concern to women.

Many representations have been made in the last three years urging changes in federal and provincial labour relations legislation and some important changes were made last year in British Columbia and this year in Alberta, Quebec and Ontario. Out of all these, one development in Quebec and Ontario may be of particular interest to women: the provision in each province authorizing the Labour Relations Board to deal with complaints that a person has been refused employment, discharged, or discriminated against for engaging in trade union activities. In each province the Board may order reinstatement in employment with compensation for loss of earnings and other employment benefits. In Ontario, other types of complaints from individuals that they have been dealt with contrary to the Act may also be dealt with by the Board. British Columbia and Saskatchewan have had this type of administrative remedy for a number of years. As organization moves into new fields, protection of the right of association by legislation may continue to be an important safeguard of employees' rights.

Two Canadian Women Awarded Honorary Degrees

Dr. Alice E. Wilson, MBE, and Miss Laura C. Pepper, MBE, have been awarded honorary degrees by Carleton University, Ottawa, and Mount Allison University, Sackville, N.B., respectively.

A former civil servant (L.G., Feb., p. 165), Dr. Wilson is a well-known geologist who during the past 10 years has been a lecturer at Carleton University.

Miss Pepper has been chief of the Consumer Section, Department of Agriculture, since it was organized in 1939.

Graduate Training in Business for Women

Survey of graduates of Harvard-Radcliffe Program in Business Administration seeks answer to question: Is graduate training in business for women worthwhile?

To mark the 20th anniversary of the Harvard-Radcliffe Program in Business Administration, a one-year graduate course begun in 1938 to meet the special needs and opportunities of women in business, Radcliffe College carried out an extensive survey of its 816 graduates in order to provide an answer to the question: Is graduate training in business for women worthwhile?

The following excerpts are from a report* on the employment experience of the 351 graduates working at the time of the survey.

"In the working group are 239 single workers (92 per cent of all single graduates) and 112 married workers (21 per cent of all married graduates). Twenty-five of the married workers are employed part-time.

"Employment in manufacturing firms, financial institutions, and schools and colleges now occupy almost half of all working graduates of the program. Of these three fields, the oldest and steadiest area of administrative opportunities for women has been the educational field. The 51 graduates employed in schools and colleges . . . are working as college officers and administrators, counsellors, teachers, and research and staff assistants.

"By contrast, manufacturing employment has been an area of more recent opportunity for women. . . . The 62 graduates currently employed in manufacturing firms can be found in almost every type of department. The largest number (19) are in personnel departments; but 14 are administrative assistants to managers of other departments or to company executives, and three are themselves department heads in small firms. Ten graduates are in market research departments, and eight of them have been on the job for three years or less, for this is a new and growing job area. Other graduates are employed as advertising and sales assistants, technical representatives, and production assistants.

"The financial field is an area of even more recent opportunity; employment of women in administrative positions by banks, investment firms, and insurance companies has shown a rapid growth since 1950. Most of these young women are working as assistants to security analysts, economic research assistants, and administrative assistants to trust officers and investment

counsellors. But four are security analysts themselves and three are qualified stock-brokers.

"Average salaries of the working graduates tend to cluster around a series of plateaus, based on the number of years they have been in the work force. A small number of graduates, all working ten years or longer, are making salaries greater than \$10,000 a year. But the 'five figure' woman executive is still almost a rarity. With beginning salaries so much higher for the most recent graduates—\$3,900 for the class of 1958, only about \$2,500 a decade ago—she will probably appear in much larger numbers within the next five to ten years.

"Almost without exception, Harvard-Radcliffe Program graduates remain in the work force until marriage or family responsibilities require their presence at home. Only 21 per cent of the married graduates of the program are currently at work, a lower proportion than the national average for all married college graduates in the country. But it should be remembered that half of the married women at work in the United States are over 40 years of age, while less than 15 per cent of program graduates are in this age group, for the program is only 21 years old.

"The Radcliffe Appointment Bureau receives more requests from married graduates for part-time job opportunities than it can satisfy. As the number of part-time workers grows, employers may well find new ways to utilize this resource of trained womanpower.

"Perhaps the most noteworthy characteristic of the record of Harvard-Radcliffe Program graduates is the variety of their activities. It clearly indicates that they have found increasing numbers and kinds of opportunities to pursue, activities which provide them with meaningful job satisfaction. And these opportunities are found not only at the top management level—it is even more important that they are to be found at other administrative levels. It is indeed fortunate that a young woman today has increasingly favourable chances to 'break the management barrier'. But it is perhaps even more fortunate for the larger numbers of young women who expect to be working steadily or at intervals through the years ahead that they will be able to work toward whatever job level challenges their maximum abilities."

* "Administrative Opportunities for Women" by Christine Hobart, Director, Harvard-Radcliffe Program in Business Administration, *Journal of College Placement*, February 1960.

89th Annual General Meeting of the Canadian Manufacturers' Association

Opening meeting's industrial relations conference, Minister of Labour speaks on "The Challenge of Change in Industrial Relations." Other speakers discuss union responsibility and accountability, and questions surrounding productivity

The 89th Annual General Meeting of The Canadian Manufacturers' Association was held June 5, 6 and 7 at Toronto. "The Sixties—New Dimensions For Industry" was the theme this year.

In addition to business sessions, the meeting consisted of seven conferences: management, world trade, transportation, legislation, marketing, insurance, and industrial relations.

The industrial relations conference, fully reported here, had as its theme, "Industrial Relations in the Dynamic Decade Ahead". It was officially opened by Hon. Michael Starr, Minister of Labour.

The first session of the industrial relations conference consisted, in addition to the Minister's opening address, of three addresses, by W. H. Palm, President, Hinde and Dauch Paper Company of Canada, Limited, Toronto; Arthur S. Pattillo, Q.C., Blake, Cassels and Graydon, Toronto; and R. Conrad Cooper, Executive Vice-President, United States Steel Corporation, Pittsburgh, Pa.

The second session consisted of an address by Dr. Jules Backman, Professor of Economics, School of Commerce, Accounts and Finance, New York University, New York, followed by a discussion by seven other speakers.

Subjects discussed by the speakers included: "The Challenge of Change in Industrial Relations", "Changes in Industrial Relations—The Next Ten Years"; "Changes in Management Responsibility—Management's Obligation to Manage"; and "Productivity in Perspective".

Thomas R. McLagan, OBE, Chairman of Davie Shipbuilding Limited, Chairman of Canadian Shipbuilding and Engineering Limited, and President and General Manager of Canada Steamship Lines Limited, was elected President of the Association for 1960-61.

F. D. Mathers, President, Royal City Foods, New Westminster, B.C., was elected First Vice-President; S. J. Randall, President, General Steel Wares Limited, Toronto, Second Vice-President; T. A. Rice, International Harvester Company of Canada Limited, Hamilton, Treasurer.

President's Address

Retiring President W. H. Evans expressed himself as being "astonished at the failure of organized labour to put its weight behind the (CMA) 'Buy Canadian' drive and give it all-out support."

He said that labour has the resources and organization to back the idea, and expressed pleasure over the fact that recent evidence of what is essentially "Buy Canadian" activity by scattered locals and unions. "In the giving of such support, unionists will be making the greatest possible contribution to their own job security," he added.

"At the risk of being repetitious, I must say again that the threat to Canadian jobs posed by mass consumption of competitive imports grows daily more serious. If we are to meet this threat, I believe that management and labour must come together in a united and sustained effort to make Canadians aware of just what is at stake. Nothing less than that will do.

"And so, what I would like to see—and what I urge from this platform—is a decision by the Canadian Labour Congress to use its power and influence in a positive way to promote, wherever possible and reasonable, the purchase of domestically-made goods as the only means of ensuring stable and increased employment for Canadians."

But the "Buy Canadian" program, however vigorously promoted and however successful, is not the complete answer to foreign competition, Mr. Evans said. "The root of the problem in many cases is that the foreign maker, by virtue of his lower costs, has no difficulty putting a lower price tag on his goods than his Canadian counterpart."

This is where the domestic manufacturer's responsibility rests: he must strive for greater efficiency without sacrificing quality, and must maintain a forward-looking attitude toward technical innovation.

Other great industrial nations of the world enjoy certain basic cost advantages, Mr. Evans pointed out, that make the odds against Canadian manufacturers long indeed. "It is at this point that Ottawa's share of responsibility for the well-being of domestic industry becomes very obvious.

"After all, all governments see to it that the price at which competitive foreign products sell within their borders bears some sort of relation to their own price structure and living standards.

"This is stock procedure with every industrial nation, including the greatest and most powerful, and, let me add, not excluding those that continually pay lip service to the principle of freer trade. It could not be otherwise with any country that wished to preserve and encourage the growth of its own secondary industries."

He emphasized that he was not advocating tariff walls "10 feet high." We are all of us concerned to promote the maximum of international trade, "provided—and it is an all-important proviso—that our own industries are not crippled in the process," he said. He was suggesting only the minimum of protection against foreign encroachments, which many industries in Canada are not receiving today.

Mr. Evans asserted that the manufacturing industry in Canada—"which, let none forget, is not only the greatest single source of employment but also the largest contributor to national wealth and the biggest revenue producer for government itself—is no longer keeping pace with the growth of the labour force.

"As long as this holds true, unemployment—and I am not now speaking of the seasonal kind—will continue to give cause for concern."

In the competition against imports, the paramount need is still to "get costs down," Mr. Evans continued. Apart from management's role in the achievement of this, which he had already stressed, and apart from "the ascending spiral of wage rates and fringe benefits," another major contribution to high prices was corporation taxes.

"Far too many Canadians labour under the delusion that the various forms of corporation taxes... are a legitimate imposition that should be borne by any concern in business to make a profit.

"We should spare no effort to get it across to the general public that what happens is that these taxes merely become part of a company's operating expenses and, as such, are inevitably reflected in the prices paid by consumers. So it is that every smidgen of corporation taxes, no less than the taxes on personal income, are paid by individual Canadian wage and salary earners."

Mr. Evans concluded with statements on management's attitude toward wage rates and on immigration.

"Management, no less than unions, has a very real interest in the maintenance of

Thomas R. McLagan

good wages and a high level of employment. The products of industry, after all, cannot be bought by a population that is poorly paid and far from fully employed, but... this is the condition to which we can easily be reduced if wage demands are unrealistic and quite unrelated to productivity gains.

"I would hope that even the most militant of our unions would recognize that to force up prices even further under present competitive conditions is to invite greater unemployment than we have yet seen."

Canada's small population was another factor in high prices; it is the smallest of all the major industrial nations and therefore unit costs of production are proportionately that much higher.

"We, as a nation, should be pursuing a consistent and deliberate policy of supplementing our present population with selected new immigrants... We have had ample evidence in recent years that the right kind of immigrants do not take jobs from native Canadians so much as make jobs for them."

General Manager's Report

Some of the subjects covered by various submissions made to government authorities by the CMA during the year were outlined by J. C. Whitelaw, Q.C., CMA General Manager, in his report, which is a review of the Association's activities during the preceding 12 months.

The Association has made frequent recommendations to federal and provincial governments in favour of legislation regulating picketing and secondary boycotts similar to that passed recently in the United States. It also favoured the making of trade unions subject to civil liability.

The Association is not opposed to the use of qualified laymen as conciliation board chairmen, but wants the withdrawal of judges from such service to be gradual in order to give time to train men to replace them. Every effort should be made to retain judges as arbitration board chairmen, the CMA's Industrial Relations Committee said. It also recommended that conciliation boards should not be required to render reports or recommendations in a dispute unless they were unanimous.

The CMA opposed the amendments to the Unemployment Insurance Act passed last September, which included increased contributions by employers and employees. The report referred to the increasing drain on the fund, but said that there is evidence that the Government now recognizes the need for a thorough re-appraisal of the whole unemployment insurance scheme before any more changes are made in the Act, as the Association recommended.

The Association continued to support the Government's winter work campaign and to study ways and means of increasing winter employment.

The CMA opposes any continuation of a trend toward inflation, creeping or otherwise, and calls for a halt to increases in government expenditure, a determined effort to eliminate waste of public money, a reduction in taxes, and the removal of "the privileged status of labour unions which permits them to exert monopolistic power in pursuit of ever-increasing wage claims."

The Association was concerned that for the second year in succession immigration has been far less than the average for the 1950's.

It objected to the volume of goods being imported from "low-wage countries," and asked for measures by the Government to "control" such imports effectively.

Regarding attempts to find means of measuring productivity, a CMA committee came to the conclusion that, "If it were feasible for the Government to establish a national productivity index, it would have no practical use or application in collective bargaining." A general index might be useful in national economic analysis and planning, the committee said, but "it would be completely unsuitable and undesirable for use in wage negotiations."

The Minister of Labour

The question of labour-management relations will grow rather than diminish in importance through the next decade, and "in my mind, the first need is better communications between labour and management," said Hon. Michael Starr, Minister of Labour, in the opening address of the Industrial Relations Conference at the meeting.

Theme of the Industrial Relations Conference was "Industrial Relations in the Dynamic Decade Ahead" and Mr. Starr was speaking on "The Challenge of Change in Industrial Relations."

"Somewhere along the line, the communications system has unfortunately deteriorated," the Minister stated.

One of the reasons for this, he said, was that today everything is big: big business, big labour, big government. "What we must remember is that behind all this bigness we are still dealing with people."

He said it was an unfortunate situation where labour was on one side of an imaginary fence and management on the other side of the same fence and "never the twain shall meet."

They must meet, the Minister said. "And they must meet in an atmosphere of mutual understanding and co-operation or else the problems we have now will be very minor compared with those which are in store."

He believed there were people in both management and labour who realized how extensively the interests of both are linked in the maintenance of a prosperous economy; it should not be beyond the ingenuity of the fair-minded people on both sides to come together in an atmosphere of co-operation.

"Co-operation, of course, is based on understanding. That is why I feel that new channels of communication must be opened up between management and labour." Management must make every effort to present its case to labour. In the individual plant, management should take steps to increase the feeling of participation by the employees in what is going on in that plant.

If employees understand that their well-being depends to exactly the same extent as does management's on the progress and the prosperity of the firm, it should not be beyond the resources of sound industrial relations to build around that central point.

He was not suggesting a barrage of propaganda, because the best public relations is a sound industrial relations program. "This is based on the fact that management accords a genuine and constructive recognition of the importance of the employees in the general scheme."

The next step was a more active feeling of participation by the employees in the progress and destiny of the particular industry. This is something that must be worked out in detail in each industry, Mr. Starr said.

"The Government has no intention of dictating to labour or management. Therefore, I would suggest that a common approach by labour and management on their mutual problems would be beneficial." He urged labour and management to "take a long, objective look at those mutual interests which bring them together rather than those which divide."

If employees understand that their well-being depends to exactly the same extent as does management's on the progress and the prosperity of the firm, it should not be beyond the resources of sound industrial relations to build around that central point.

He was not suggesting a barrage of propaganda, because the best public relations is a sound industrial relations program. "This is based on the fact that management accords a genuine and constructive recognition of the importance of the employees in the general scheme."

The next step was a more active feeling of participation by the employees in the progress and destiny of the particular industry. This is something that must be worked out in detail in each industry, Mr. Starr said.

He had begun his address by pointing out that when he had spoken to the Canadian Labour Congress a few weeks earlier he had called for a whole new approach to the problem of labour-management relations (L.G., June, p. 561). He was making the same suggestion to the CMA, because "I persist in lumping both labour and management together in these things—because I believe that both have an equal stake and an equal responsibility in the orderly and prosperous evolution of our economy."

W. H. Palm

Two basic questions face management and labour immediately in this new decade, said W. H. Palm, President, Hinde & Dauch Paper Company of Canada, Limited, in an address on "Changes in Industrial Relations—The Next Ten Years" to the Industrial Relations Conference.

The two: "Is management to continue being duped into going along with a wage-cost pattern that is already leading to a withering up of many of our industries?" and "Are professional union leaders embedded in such a rut of 'boom psychology' that they can find no other means of holding their membership together than continually

demanding annual increases in wages and fringe benefits, even at the expense of losing the very jobs their members hold?"

Certainly, he acknowledged, from time to time we may expect one country to gain a competitive advantage over another, "but when we reach a point, as we have, where gross inequality of labour costs and competition is occurring to such a degree that this country's economic mechanism commences to falter, then balancing forces must assert themselves at once or we will be headed for a most serious dislocation."

The first corrective action for management to take is to make a constant effort "to keep our employees informed on the state of the business in every sense of the word. And then at the bargaining table we must take the initiative with a realistic set of proposals and objectives of our own," Mr. Palm advised.

"In the past decade, we have practically bargained ourselves out of the marketplace, in Canada and overseas. In the next decade, I predict, we are going to bargain ourselves back into it again at home and abroad, because our very survival depends on it."

Because "happenings past and present can be very useful criteria upon which to construct a picture of events that may lie ahead," Mr. Palm began by recalling some of the more significant changes in industrial relations over the past ten years and reviewing what is happening now. He defined "industrial relations" as the whole employer-employee relationship in the broadest sense, including not only relations between management and organized labour—"labour relations"—but also relations between employer and employees outside any collective agreement.

One of the most significant changes in industrial relations in the last ten years, he thought, was the emergence of the responsibility for industrial relations in an organization as a top-management function. This change has come about as a result of "a growing awareness that the human resources of an enterprise require the same careful planning and development as do the technical, financial and other major segments of the business."

He discussed changes in industrial relations over the last ten years under two headings: (a) personnel relations, and (b) labour relations. Under personnel relations he first commented on the effect continuing automation may have on employment.

"It has become very fashionable in some circles to complain about the evil effects of automation," he said. But he thought that leaders of labour, government and management should all be talking about and plan-

ning for the positive effects of automation. He believed that technological change can and will create more employment as automation proceeds and the country grows.

When we are planning automation, I think we should take our employees into our confidence and not keep it a deep, dark secret, which will only stimulate their fears. The personnel having the ability and versatility to acquire a number of new aptitudes should be identified in advance through appropriate selection techniques. Training should then be started at once for the acquisition of the new skills that will be required of them as the swing to mechanization proceeds.

Communication is another process of management and industrial relations that we must never cease striving to improve, Mr. Palm continued. "I do not think we have been making a strong enough effort to communicate ideas and information to our own employees, especially those who are members of organized labour... We need to do more listening as well as talking if we are to establish and maintain good communications with our employees.

"I predict that there will be great advances in our communications techniques and that much better communications will be developed in the Sixties."

Another job management has to do, he said, is to make sure that people within the organized groups in any company take a full interest in the activities of their union organization. The problem of poor attendance at union meetings is one that may be viewed as the job of the union to solve, "but I suggest management will benefit greatly in the long run by seeing to it that the viewpoint of their employees collectively is truly represented at union meetings."

Finally, management should ensure that the employees have a thorough knowledge of the impact that government actions have on the country's economic situation. "There should be a more complete understanding by employees of the disposition being made by the Government of their tax dollar," Mr. Palm said.

Under the heading of labour relations he predicted that the 45-per-cent growth in union membership in the last ten years will not continue, that it will be difficult for the growth of union membership in the next ten years to keep pace with the increase in the working population. He warned the meeting, however, to be on the lookout for plenty of union activity among the unorganized clerical and junior salaried personnel.

During the past ten years, an increasing awareness has developed that management representatives in negotiations need to acquire additional skills, he asserted. On

the other hand, the international officers of a union who spearhead bargaining are "all too frequently lacking in knowledge of, and in many cases interest in the particular business enterprise with which they may be dealing." He predicted a decided change in this situation over the next ten years.

One thing that will not happen in the next ten years, said Mr. Palm, is a national "summit conference" of labour and management leaders, suggested by CLC President Claude Jodoin "to explore the areas of conflict."

I don't think this suggestion is practical or that it would provide any useful solutions to labour-management problems. In the first place, I don't think Mr. Jodoin or any leader of an organization such as the CLC, made up as it is of a host of individual labour unions, can make binding decisions for all of them any more than the President of the CMA can make commitments for the entire membership of that body. Certainly the CMA doesn't attempt or even pretend to bind member companies to any uniform national labour relations policy.

He also believed that the so-called "areas of conflict" were best dealt with around the collective bargaining table at the plant level. Some areas of conflict will have to be settled through hard bargaining, others through the regulation of trade unions by effective legislation, Mr. Palm declared.

On labour relations legislation, he described as "interesting developments" the United States Labor-Management Reporting and Disclosure Act of 1959 (L.G., Nov. 1959, p. 1181; Dec. 1959, p. 1305) and the changes in the Newfoundland, British Columbia and Alberta legislation. But he did not include the amendments to the Ontario Labour Relations Act, which he called "very disappointing," because "they did little either to restrain the power of unions... or to restore the proper balance between management and labour."

In a comment on legislation as it relates to union security he said:

I believe that we in management, in seeking legislation that would regulate and restrict union security as a matter of public policy, should at the same time defend these democratic principles at our own bargaining table by refusing to grant union security in our negotiation of a first contract or any further degree of it in collective agreements where it already exists.

Another question that has caused considerable concern to management is seniority. Many thorny problems have crept in and practices frequently do not jibe with the language of collective agreements. Mr. Palm predicted that "this situation will become increasingly more difficult in the period ahead of us, and I see no easy solution or quick panacea to this extremely complex problem."

During the past decade, too, a great many management rights "have been bargained away," he said, but predicted that "by skillful hard bargaining, management will regain some of the rights that it has literally thrown away during these past ten years."

Turning to labour costs and competition, he asked: "What road must management and labour travel together to preserve the continuing competitive ability of Canadian industry in world markets?"

Canadian industry is in the position today where many of its products are being undersold by goods of foreign origin. Why? We all know the reason... because our costs have risen too high. During the past ten years, the rate of climb in our industrial costs has certainly been far out of proportion to that of many competitors in other lands. The industries that have been hardest hit are those whose products have continued to have a high labour cost content—and, alternatively, have been unable thus far to offset this high cost by mechanical or other means. Those industries that have been able to capitalize on technological development and introduce compensating effects have continued to maintain some ability to compete.

Arthur S. Pattillo

Legislation that would change the civil and civic liability of unions in Canada was suggested by Arthur S. Pattillo, Toronto lawyer, as a means of achieving industrial peace. He was speaking to the industrial relations conference on "Changes in Labour Relations Legislation—Union Responsibility and Accountability."

Mr. Pattillo thought union responsibility and accountability includes both an area of responsibility for specific acts of union officers and members in the normal legal sense and also a second and larger area of responsibility to the country and to society in general for the results of union policies and methods. The first has been and is being dealt with by various legislatures in Canada and elsewhere, but the second has "not been touched at all," he said.

"The first area of responsibility involves the unique position which unions have, both as to liability for the damages which flow from the acts of union officers and members and as to the degree of economic pressure which is permitted to them under the present laws.

"This is the area which has been receiving most attention in recent years and, though it involves both the regulation of permissible or prohibited acts and the sanctions which are to be applied for breaches of the regulation, I will refer to this area as the problem of civil liability. The second area of responsibility to which I have referred may be described as civic liability as opposed to civil liability..."

The question of civil liability, Mr. Pattillo noted, involves the entire problem of a union's legal responsibility for the acts of its officers and members.

He recalled that the conflict between the working force and employers in Canada, which reached a peak in the early part of this century, was resolved by a system of industrial relations legislation which requires compulsory negotiation of working conditions between employers and employees—but not compulsory agreement—and compulsory arbitration with binding effect on both parties once agreement has been reached and there is disagreement as to the application or interpretation of that agreement.

In order to make the system work, said Mr. Pattillo, each jurisdiction in Canada has evolved elaborate certification procedures for designating bargaining agents and elaborate definitions of acts that are prohibited to employers and employees and their agents—unfair labour practices.

"The regulations of conduct introduced into labour relations legislation," said Mr. Pattillo, "were, generally speaking, designed to prevent interference by employers with the formation and administration of unions, and to prohibit both parties from taking economic action during the life of an agreement, or, failing agreement, until certain steps had been taken in the process of compulsory negotiation. Very little attention was paid originally to sanctions or penalties for breaches of these regulations.

"In Canada, practically no attention has been paid by legislatures until very recently to the regulation of the forms of economic action permitted to the parties once the parties are free to act. The regulation of acts has been left, by and large, to the general law..."

The general law works slowly, Mr. Pattillo pointed out, and is consequently not adequate to regulate the economic conflict arising through collective bargaining. This has given rise to many problems. Mr. Pattillo dealt with two of them.

The first problem was created by the form of organization adopted by unions, "and this involves the legal status of unions." The second arises because the law was not equipped to deal with large-scale economic action, which is possible with today's large and powerful union organizations.

"This defect in the legal structure," he said, "gives rise to a whole series of problems as to what is and is not acceptable action by unions in exercising their economic power..."

The speaker dealt briefly with one of the forms of the economic action—picketing. He said:

Aside from offences long recognized in law, such as assault, trespass and the like, the remedy for combined action by employees has largely been left to the principle of common law conspiracy. To state this law in its simplest form—it prohibits agreement by two or more persons to do an unlawful act or to do a lawful act by unlawful means...

With the growth of large international and national union organizations, unionism has achieved virtual economic domination of the small employer. Even in the case of the larger employers the economic necessity of staying in operation if competitors are operating and the judicious use by unions of the "whipsaw" techniques in bargaining, to which all of you have been subjected, have placed the unions in a very strong position. As a result, the time has come, in my opinion, for a thorough-going review of the methods employed by unions.

In my view, the most important area for immediate attention is the use of picketing as a means of achieving the legitimate objects of trade unionism.

The law regulating picketing has largely been left to be developed by the courts—without the guidance of legislation, Mr. Pattillo continued. The recent Select Committee of the Ontario Legislature recommended that pickets be limited to employees actually in the bargaining unit of the employer affected, and that picketing be prohibited when a strike has been declared to be unlawful, when the object of the picketing is to establish bargaining rights, when the object of the picketing arises from jurisdictional disputes, and when the employer is not a party to a labour dispute. This recommendation was not "unfortunately, in my opinion," included in the amendments to the Act introduced at the recent session of the Legislature.

When the Minister of Labour introduced the amending bill, Mr. Pattillo recalled, he remarked that mass picketing, intimidation, and the use of threats and force were effectively dealt with by the Criminal Code, that any provincial legislation in this field would probably be a nullity, and that apparently neither management nor labour understands the present law of the land. "It would appear to me," the speaker said, "that the Government of the province of Ontario did not understand the recommendation that was made to it."

Although the law of picketing where there is intimidation and the use of threats and force is clear, the Select Committee's recommendation dealt with much more than this. "The Committee sought to cover the use of picketing as an economic sanction and... its recommendation was ignored."

About all that can be said for certain in most jurisdictions is that picketing that involves violence, threats of violence, trespass

and, in some cases, intimidation by mass of numbers will be enjoined, Mr. Pattillo said.

"It is important to preserve the individual's freedom to communicate his dissatisfaction to others, but, faced with the power of organized labour today, the unrestrained use of picketing is an instrument of coercion to employees and employers alike. In my view, it is no longer sufficient to restrain or attempt to restrain violence. Picketing—like strike action itself—should be precluded before the procedures of certification and compulsory negotiation have been observed."

R. Conrad Cooper

The entire problem of wasteful practices in the United States steel industry "is a job that must be tackled both by the companies and the union, by every employee and every foreman," said R. Conrad Cooper, Executive Vice-President, Personnel Services, United States Steel Corporation, in his address to the industrial relations conference on "Management's Obligation to Manage."

"It is a job that must be done, and done correctly, lest the wheels of competitive misfortune spin us beyond the point of no return. It is a question that must be answered to provide real job security for the steel workers themselves," he asserted.

"Clearly this is not a job that can be done amidst conflict and sterile argument about management's rights. The need is for recognition and discharge of obligations," the speaker continued. "Being obligated to the employees and the stockholders to manage the business efficiently, management cannot pass that obligation on to the union leaders or anyone else. Faulty contract language which stands in the way of management's ability to discharge its obligation is not in the interest of the employees or anyone else. We live in the hope that our union friends will come to recognize this basic truth."

What effect the agreement reached after the recent steel strike would ultimately have on the industry's competitive position only time would tell, Mr. Cooper said. But he gave the warning that "an unearned wage increase that produces an inflationary rise in costs eventually either brings about a price increase or a lessening of profit and perhaps a postponement of extremely important efforts such as research or the installation of new facilities. No amount of bargaining can ever change this. It is a basic fact of economics."

The speaker said that "by force of a combination of circumstances, we finally

made a settlement that has in it the possibility of some further inflation." Whether such inflationary possibilities materialized would depend partly on the degree of co-operation given by the employees and the union "in our constant efforts to improve productive efficiency," he contended.

Mr. Cooper denied that the agreement represented, as some had said, "a complete loss" for the companies. Regarding wage and benefit increases, he said, "we missed our objective by about a third, but we bettered the prior experience [from 1940 onwards] by more than 50 per cent."

He also pointed out that although they had failed in their attempt to eliminate "the unsound cost-of-living escalator clause," they had held it down to a maximum of 6 cents. On the work rules issue, although they had not got what they wanted, they had "gained recognition of the issue and a pledge of union co-operation in the solution."

Mr. Cooper began his address with an outline of the history of the controversial Section 2B of the steel industry's basic labour agreement—the "Local Working Conditions" clause.

The clause, first incorporated in the 1947 agreement, had been "finally written and approved at four o'clock in the morning by six brain-weary men who were racing to beat a strike deadline." It had been a constant source of friction and had hampered efforts to increase efficiency, the speaker contended. "To a degree that was never contemplated by its authors, it has also impaired management's clearly stated rights to manage."

Some of the consequences of the kind of situation often thus brought about were: inefficiency and waste have been frozen into the operation; some good workmen are "thereby made unwilling 'featherbedders'—which most steel workers don't relish;" the results were demoralizing to supervisors directly involved, and to other supervisors who witnessed them; and "the championing grievance man has won a hollow victory and perhaps caused some long-term antagonism between people."

The truth was, Mr. Cooper asserted, that "all that the company negotiators were seeking when the storm blew up in the 1959 negotiations was that the union negotiators should join them in drafting language that would say unmistakably exactly what the original language was intended to say—and would do what the original language was intended to do."

Productivity in Perspective

The second session of the industrial relations conference had as its theme, "Productivity in Perspective." The session consisted of an address, "Productivity: Some Observations and Questions," by Dr. Jules Backman, Professor of Economics, School of Commerce, Accounts and Finance, New York University, and a discussion by "The President's Round Table on Productivity."

Participants in the discussion were: Dr. Backman, W. H. Evans, CMA President; Dr. R. V. Yohe, President, B. F. Goodrich Canada Limited; H. B. Style, President, John Inglis Co. Limited; Harry Taylor, Vice-President (Industrial Relations), Union Carbide Canada Limited; Dr. W. R. Dymond, Director, Economics and Research Branch, Department of Labour; Dr. Ewan S. Clague, Commissioner, U.S. Bureau of Labor Statistics; W. L. Monck, Industrial and Public Relations Manager, Trenton Steel Division, Dominion Steel and Coal Corporation; Dr. David McCord Wright, Professor of Economics, McGill University; and Dr. Oswald Hall, Professor of Sociology, University of Toronto.

Dr. Jules Backman

Productivity is only one factor to consider in wage determination, Dr. Backman said in his address. "Mathematical formulas do not provide any short cut or substitute for the hard give and take of collective bargaining. Collective bargainers must weight many factors in reaching an agreement that will be fair and equitable to all concerned."

Before stating this conclusion, Dr. Backman pointed out that productivity reflects the relationship between all the inputs of factors of production and the resulting output, and that "we have not been able to measure the separate contribution" of capital investment, raw materials, managerial know-how and labour to the resulting output.

"Output per man-hour" and "output per worker" are much narrower in scope than productivity, he explained, and the use of these more limited measures does not mean that labour is solely responsible for the gains in output per man-hour.

Measurement of physical output, necessary to determine productivity gains, is also difficult. If output is determined by taking the dollar value of output and dividing it by some price index, an adequate measure of the dollar value of total output and an adequately representative price index are needed. But because today's output of, for example, electrical appliances is only remotely related to the output of 30 years

ago (refrigerators today have little in common with their forbears), and because of new products not available 30 years ago, it has been difficult if not impossible to obtain estimates of output per man-hour for some industries.

The number of man-hours or workers can be obtained. But even the labour input data are not very satisfactory, because all workers from the janitor to the president are given equal weight. And how do you measure the contributions of other factors of production?

Even payroll data become more and more inadequate as we move back through the years, Dr. Backman said. The inadequacy of data at starting dates is a particularly important weakness of long-term productivity estimates.

Then there is the question of what man-hour totals to use. When the ratio of production workers to total employment remained fairly steady, it made no difference whether output was divided by one man-hour figure or the other. But in recent years the relative proportion of total employment accounted for by production workers has been declining.

"Clearly, productivity estimates are subject to many limitations," he said.

Turning then to the causes of higher productivity, Dr. Backman said that although many persons use the terms "output per man-hour" and "productivity" interchangeably, and imply that gains in output are due solely to labour, the primary factor contributing to greater productivity has been the substitution of machines for labour. "New capital investment undoubtedly is the major factor which contributes to increases in productivity."

When he dealt with sharing the gains of productivity, he pointed out that they may be shared among four groups: workers, consumers, investors, and government, which shares in the gains through tax collections. "If the total gain in productivity is given to one group, problems are created."

Is it better to raise wages or to cut prices, Dr. Backman then asked. Many economists, he said, favour price reduction, because if some prices are reduced, or rise less than the general price level does, a larger number of units may be sold. And unless more units are sold, the increase in productivity will be accompanied by layoffs; this is usually described as technological unemployment. The benefits obtained by workers who continue to work are, in part, at the expense of those who lose their jobs.

"However," he said, "we must remember that historically gains in productivity have

been accompanied by more jobs, not fewer jobs, although there have been unavoidable periods of adjustment."

As to the role of productivity in collective bargaining, productivity is only one of the forces that influence changes in wages. Others include changes in the cost of living, wage changes in the area or in the industry, ability to pay, workers' budgets, and the general economic environment. All factors must be evaluated, Dr. Backman said.

In attempting to use productivity comparisons in collective bargaining, it is substantially true that in the long run, increases in average real wages of all workers tend to be about the same as average gains in productivity in the economy. But this broad generalization tells nothing about the form of these gains—whether in wages or in other benefits.

"Despite the frequent references to this relationship it does not provide a useful guide for specific wage negotiations. Rather, it has become a rationalization for at least a minimum rise in wage rates equal to the gain in productivity... But if all the gain is distributed in the form of higher wage rates, nothing would be left to increase non-wage benefits unless part of the gain is diverted from other groups who properly should share in it," he said.

Short-term changes in output per man-hour do not provide a meaningful test as to the adequacy of annual adjustments in wages and non-wage benefits, he asserted. And when considering relationships to changes in output per man-hour, it is important to use total labour costs.

It is sometimes suggested that stability of unit labour costs provides a satisfactory test as to what is a proper increase in wages and non-wage benefits. Unchanging unit labour costs merely show that the total labour cost bill has increased by the same percentage as total volume of sales. But labour cost is only one component of total costs and may account for a varying proportion of the total at different periods of time. If the gain in output per man-hour is attributable to the introduction of labour-saving devices requiring large capital expenditures and hence greater costs, the composition of costs will change and a smaller proportion of total costs should be paid for direct labour.

The fact that a smaller proportion is paid for labour does not mean, Dr. Backman pointed out, that the wages and non-wage benefits of the workers retained will not rise; wages could rise substantially since the total labour cost is divided among a smaller number of workers.

Productivity formulas do not provide a simple solution to the problem of wage determination, he repeated.

Dr. R. V. Yohe

Any action that lowers cost in relation to selling price results in increased productivity, said Dr. Yohe during the discussion that followed Dr. Backman's address. And any action that produces more units from the same facilities, any action that results in higher quality without cost increase, or any action that enhances the usability or value of a product, even if more costly, may also be considered an increase in productivity.

Therefore, he declared, productivity is a management function, and increased productivity the direct responsibility of top management.

Management astuteness in labour negotiations determines whether or not complete productivity improvement may be obtained from modernization, he continued. "Installation of labour or other cost reduction methods and equipment designed to increase productivity may be wasted effort if the value is lost at the negotiation table."

H. B. Style

"There is no particular merit in producing more with equal or less effort unless we can direct this increased power of productivity in the right direction and distribute the fruits of it so that the life of mankind as a whole becomes happier and more meaningful," said Mr. Style, who was commenting on the best social and economic use of the gains in productivity.

The benefits of increasing productivity are being enjoyed in widely varying degrees in various parts of the world, he continued. On the North American continent, as a result of the "fruits of productivity," only 60 per cent of the average family's income is now required for the basic necessities, leaving 40 per cent available for the pursuit of a better way of life. In contrast, nations such as India are still facing the chronic problem of keeping their people above even the barest subsistence level.

"As long as there is such a wide disparity between the productivity of nations, there is no purchasing power in the nations of low productivity with which to buy the capital assets with which to improve their own productivity." Therefore, generous assistance to the backward nations must be given, even though this must inevitably mean some temporary sacrifice of our own prosperity, he declared.

Some things we in Canada could do immediately, he said. Over the last two years we have spent approximately \$900 million in unemployment insurance benefits "because we cannot find work for all our population. Surely it would be better for our own country and certainly for the world

if, instead of spending these vast sums on keeping people idle, we use some of it in finding jobs for the unemployed in making capital equipment under the Colombo Plan," suggested Mr. Style.

Up to now, Canadians have used the gains of increasing productivity primarily to satisfy material needs. In future, he thought, we must pay more attention to the non-material aspects of life, and suggested better community planning and efforts to raise the level of education and culture.

Harry Taylor

Discussing the "Role of Productivity in Collective Bargaining," Mr. Taylor suggested that whether or not labour should share in the proceeds of increased productivity is not by itself an issue. "Labour has shared in such gains. The important differences of opinion centre around the extent and timing of the sharing," he said.

He suggested that the ability or inability of a company to pay higher wages, both direct and indirect, must be determined on the basis of the company's profits and not on national productivity patterns.

"A national index," he said, "that is based on the ratio of total man-hours to total selling prices must include a number of assumptions," for example, that the ratio of man-hours to selling prices is the same for producing neckties as it is for automobiles.

"In other words, if the determination of wages in an individual company is to be tied to some national index it would involve some very real risks—risks many managements would be unwilling to take."

When a company, or group of companies, or a small segment of the total economy introduces an automatic arrangement affecting wages, such as an improvement factor or escalation, the impact is absorbed in the total economy. If all companies did the same thing it would not be so easily absorbed. "In fact, it could bring about further inflation because of the pressures it would generate," he said.

Mr. Taylor said that the wartime cost-of-living bonus, when dealt with on a uniform national basis and related to a national index, was found to be unworkable in the national interest. He suspected a similar situation would result if all wages were determined on a uniform national index basis, whether the index is the consumer price index, a productivity index, or both.

Mr. Taylor thought that at times management places too much reliance on mathematical formula in attempting to solve human relations problems. "We sometimes overlook other important considerations which motivate people and from which they derive job satisfaction."

In conclusion, Mr. Taylor said he "does not consider that productivity has had a direct and substantial bearing on the collective bargaining process. Nor do I see that it will have in the immediate future. I believe it is unlikely in the immediate future that a statistical device will replace the give and take of the collective bargaining process."

He believed the productivity concept will be used from time to time but could not see it playing an important role in the bargaining process until data are available that are more useful than present data at the level at which bargaining usually takes place.

Dr. W. R. Dymond

Dr. Dymond suggested that a number of "home-made" national productivity statistics have resulted in erroneous interpretations of Canadian employee output. He said that Canada's economic growth has generally favoured low-productivity industries such as service, trade and government sectors of the economy.

Goods-producing industries, he said, which usually feature a high rate of productivity, have grown at slower rates in the past few years, with the result that the economy as a whole has had a low rate of increase in productivity.

Dr. Ewan S. Clague

"Does rising productivity create unemployment? The answer is: Yes and No," said Dr. Clague.

The introduction of some new machine or process may eliminate a score of jobs, and those workers may be laid off. Then it could be said that the mechanization was the cause of their unemployment.

But lower prices for a product may result in more sales and stable or even expanding employment in the industry. An expanding industry often generates new jobs, either within itself or in other industries. Technological advance has in the past resulted in the growth of industries such as automobiles, chemicals and electronics, Dr. Clague pointed out.

"In an expanding economy, increased productivity will not result in general unemployment," he declared. "If output of goods and services lags behind the increases in productivity and the labour force, unemployment can result."

He also pointed out that unemployment in a specific firm often does not result directly from productivity gains in that firm. Bureau of Labor Statistics studies have shown that the introduction of automation in a plant or office causes scarcely any layoffs and no loss of jobs. This is not

surprising, he said, because the concern that successfully introduces new devices usually has an expanding market and the devices make it possible to do additional work.

On the other hand, unemployment that might be said to result from automation will occur in other firms in the industry and, more specifically, among firms that did not automate. If the automation is successful, and costs are lowered, the less progressive concerns operating with old methods (which may mean considerable use of labour) will find themselves unable to compete. They may shut down entirely and throw many hundreds out of work, but the connection with automation is remote and indirect.

A further complication is that it is impossible to distinguish unemployment attributable to productivity gains from unemployment due to other factors, he said.

The question about productivity and unemployment really has to be stated another way, he said—What do we plan to do about unemployment?

In a progressive, changing economy many industries, firms, occupations and jobs will become obsolete while new ones are rising. In a general way, it can be said that the more rapidly the economy changes the faster it grows. Yet each of these changes can produce unemployment. The answer is not to prevent the changes but to deal effectively with their results.

Earlier, Dr. Clague had discussed the problems of measuring productivity, and the limitations of productivity-wage comparisons.

The one basic question that must be asked in connection with the measurement of productivity, he said, is: What are you going to use it for?

As for productivity-wage comparisons, productivity measures for a specific job, the firm as a whole, the industry, and the total economy are all different. Which should be used for wage comparisons? The General Motors-United Automobile Workers 1948 contract attempted to relate the wages of workers in a given industry to the productivity of the whole economy.

Dr. David McCord Wright

Many think of productivity in terms of efficiency or cutting out waste; but the problem of increasing productivity is not just the problem of efficiency but the far more fundamental problem of inventions, said Dr. Wright. "Historically, the great source of productivity increase has been the discovery of new patterns of input combination."

Increased productivity cannot automatically be credited to any one single force, and the problem of sharing productivity gains is more complicated than usually thought, Dr. Wright said.

Although machinery that raises productivity will usually require *differently* skilled labour, it is doubtful that it will always require labour that is *more* skilled. Once it is introduced, the required effort and skill may be less.

"In fact, frequently the only real contribution made by labour to the increased productivity may simply be the contribution of not vetoing the change."

Dr. Wright outlined the historical pattern of sharing as follows. An increased prospect of profit has led to an increased urge to invest, to an increased urge to expand, and to increased competition for labour, both to build the new plant and to operate it once it is completed. "This competition for labour is what raises wages and explains the undeniable fact that the average rate of increase of real wages for the century before unions became strong was much the same as it has been since they did."

What we are seeing today may be a considerable exploitation of capital by labour, he continued. Capital's share is being maintained only by the ingenuity of management in finding more and more ways of using complicated additions to capital. "In other words, the constant pressure of higher money wages upon the price level is being contained to the extent that it is by a speeded-up introduction of labour-saving devices. It is capital's productivity that is really rising."

Dr. Wright concluded with a warning. The "motive power" for investment and industrial activity is the hope of profit. Too rapid a rate of increase in money wages can cause unemployment even when there is an accompanying inflation, because the inflation may not be enough to offset the increased risk. Inflation may clear the shelves but if profit prospects are not adequate, employment to replace or to expand may not occur. "Thus we can find not merely unemployment or inflation, but unemployment and inflation."

World Trade Conference

The world trade conference was opened by Hon. George Hees, Minister of Transport, who suggested that Canada should start invading other countries' foreign markets with the determination to win those markets that others have long considered theirs by right.

"Other countries," he noted, "don't have any reticence about invading our markets. Let's do a little invading of theirs, for a change..."

Mr. Hees said there are two unwarranted and undesirable lines of economic thinking in Canada—"defeatism and smugness"—and

believes that "those who assume an attitude of smugness look to our accomplishments, particularly since the Second World War, and assume that all we have to do is continue in our role of order clerks and business will continue to fall into our lap..."

He told his listeners that they all must be aware that it is no longer that easy—that the world has entered a period of hard sell and it is up to Canadians to realize this and "to utilize to the best of our ability our high qualifications in this regard..."

Challenge from Mass-Production Countries

Canada's prosperity is not dependent upon selling our resources in the export market but upon upgrading these raw materials to the fullest extent before consuming or selling them, said W. N. Hall, President of Dominion Tar and Chemical Company Limited, Montreal, in an address on "The Challenge of Mass-Production Countries."

"Canada has the raw materials, the labour force, most of the technical skills and most of the money we need," he added.

He pointed out that Canada's economy is growing slowly, and "for a young, undeveloped country like Canada, this is a serious situation."

"This country has the serious problems of an unfavourable balance of trade, and unemployment. In the minds of many, the only solution to this is to export our wheat and our raw resources." But, Mr. Hall asserted, in the first nine months of 1959 we exported \$64 million in wheat to Japan and imported \$76 million worth of Japanese manufactured goods, most of which we could make here.

The effect has been that we have no more manufactured goods than we could have had anyway, but we have allowed the Japanese to make \$76 million worth of them and thus have left our unemployment problem unsolved.

"If Canada could manufacture only a small percentage of the goods now imported, we would have no Elliot Lake problem," Mr. Hall declared.

We buy Japanese manufactured goods because they are cheaper, they cost individuals less. But, he said, they cost the country more. "The Japanese are exporting unemployment to us, since we are employing Japanese workers. Our own unemployed, with no purchasing power, mean a reduction in Gross National Product and, as a result, further unemployment.

"By all means," said Mr. Hall, "let us trade our wheat, our pulp, our minerals to the rest of the world. But let us accept in return the things we really need—goods

demanded by our consumers which we cannot economically make.

"Canadian industry should not be seeking protection to make higher profits, but to secure our markets and allow us to grow and become mass producers. With growth there will be increased employment—and lower costs."

Challenge from Low-Wage Countries

If Canada's present standard of living is to be maintained, the country must have a protected economy, J. Herbert Smith, President of the Canadian General Electric Company, told the Canadian Manufacturers' Association.

Mr. Smith said that Canada must encourage home production of those items of which foreign producers are enjoying the advantages of lower wages and lower living standards. He warned that the alternative to this could be heavy unemployment; a slower rate of growth—even regression.

In the 10-year period up to and including 1957, Mr. Smith asserted, the Canadian economy grew with little threat from imports, but in the past three years of essentially uncontrolled imports, the economy declined.

Beginning with statistics on his own company, Mr. Smith indicated how the Canadian economy is declining. In the past three years Canadian General Electric had seen its employees reduced in number by 3,000, almost 20 per cent, to 13,000, he said.

He pointed out how Canada's rate of unemployment compared with that of other countries: in the early spring of 1960, Canada's unemployed numbered 9.1 per cent of the work force; in the United States, 5.8 per cent; and in Great Britain, 1.9 per cent.

In 1947, he said, 67 per cent of all imports were fully manufactured goods; now the percentage is 78. In the past three years Canada's labour force expanded 7.7 per cent, but persons with jobs increased only 4.9 per cent. Gross national product (per capita in constant 1949 dollars) increased in the 1946-56 period by 19.3 per cent, but in the next three years it dipped 4.1 per cent.

Mr. Smith noted that the cost of payments from the Unemployment Insurance Fund to jobless Canadians in the past two years amounted to \$900,000,000, and that Canada's deficit balance of international payments was \$1.5 billion.

If, instead of importing goods that result in a \$1.5 billion deficit, Canada could produce them, said Mr. Smith, it would mean employment for 300,000 persons who are now out of work.

He added that the goods produced by these Canadian men and women would likely sell at prices slightly higher than imported products by essentially the difference in their pay and that of the foreign workers they would displace. But, he emphasized, "When we consider the present 'unemployment salaries' we are presently paying several hundred thousand Canadians to remain idle, we may well find that the domestic products are, in fact, less costly to the Canadian taxpayer."

Challenge from the New Europe

"The time has come," said R. W. Todgham, President, Chrysler Corporation of Canada, Limited, "when the federal Government should review the British preferential tariffs..." Subject of his address was "The Challenge from the New Europe."

Mr. Todgham said that Canadian automobiles enter the United Kingdom under a 20-per-cent tariff, while British automobiles are entering Canada duty-free.

Referring to the high costs of production in Canada, Mr. Todgham said that not all the blame for them can be laid at the feet of the manufacturers. Organized labour, he suggested, must shoulder some of the blame for the situation.

He noted that in Chrysler's Simca plant in France, 30,000 workers produce 2,500 motor vehicles each day. "To match this production at Windsor," he asserted, "Chrysler would need about 60,000 men."

Pressing his contention about tariffs, Mr. Todgham said that in the Windsor, Ont., area today there are some 8,500 persons unemployed "and far too many of them used to work in automobile plants."

Walter L. Gordon

Unemployment may well be our main domestic problem in the years immediately ahead, said Walter L. Gordon, of Clarkson, Gordon & Co., Toronto, and Chairman of the 1955-56 Royal Commission on Canada's Economic Prospects, in an address to the management conference.

"I refuse to believe this problem is insoluble when there are so many things that need so badly doing.

"But it will not be solved, in my opinion, unless we think searchingly about it and unless the Government adopts consistent and at the same time imaginative policies for dealing with it," he declared.

Surely unemployment is a challenge to the manufacturing industries of Canada, he said. He then suggested that it would be a "constructive and useful thing" for the CMA to undertake a thorough study of the unemployment problem, preferably on a joint

basis with the trade unions. "After all, they have as much, or more, at stake as anyone."

Mr. Gordon said it should not be the sole preoccupation of the manufacturers to safeguard the capital invested in their companies and increase their profits every year. It was more important, he believed, to preserve the jobs of their employees and to provide jobs for others who seek work but cannot find it.

The aim of the study, he suggested, should be to provide "a detailed set of proposals for correcting or alleviating our present difficulties and a suggested outline of the broad policies the Government should pursue if this problem is to be kept under control in future."

To command respect, the study would have to be objective and aimed directly at alleviating unemployment. If it appeared to promote the self-interests of the manufacturers alone it would not have much influence.

Mr. Gordon suggested some questions that might be included in the study.

Do a persistent tight money policy for too long a period and an artificially high value for the Canadian dollar work to the disadvantage of both the resource industries and domestic manufacturers?

Is the unemployment insurance scheme open to abuses? Could this "essential form of protection" for people who become unemployed be tied in with a comprehensive scheme of government work projects on

which the people engaged would be given useful things to do and be well paid for doing them?

Is the re-training and re-establishment of people who become displaced through automation or because of the obsolescence of companies or industries a responsibility of the Government alone, or should the companies and the trade union concerned be expected to assist in a solution of the problem?

Another example of things that might be studied, Mr. Gordon continued, was the tariff structure. He would like to see all tariff rates in excess of 20 per cent examined "with a very fishy eye." If all the higher rates of duty were reduced, he said, "there might be room for some modest revisions in the opposite direction in places where they would do the most good.

Among many other subjects for study in a truly comprehensive examination of the unemployment problem was the need to devise policies for the relief and reinvigoration of distressed areas.

Recalling "the rosy picture of what Canada could accomplish during the next 25 years" that was painted by the Royal Commission of which he had been Chairman, Mr. Gordon said he could see no reason why we should not continue to be optimistic about the long-term future "if we evolve a consistent set of policies designed to stimulate the economy, to raise the level of human welfare, and to eradicate the curse and canker of unemployment."

Laval University's 15th Annual Industrial Relations Conference

Conference studies technological changes and the rights of management, and the repercussions management's introduction of such changes will have in bargaining

(Translation)

The 15th annual Industrial Relations Conference of Laval University, held at Quebec on April 25 and 26, studied technological changes with respect to the rights of management.

Some 400 persons participating in the two-day meeting considered the rights of management to introduce technological changes and the repercussions of such action in the field of collective bargaining.

The conference was held under the direction of Rev. Father Gérard Dion, Director of the Department of Industrial Relations at Laval.

Msgr. Alphonse Marie Parent, Rector of the University, and Jean Marie Martin, Dean of the Faculty of Social Science, welcomed the participants.

The guest speaker at the closing banquet was Prof. Lewis Coser of Brandeis University, who spoke on the future of the labour movement and technological change. Prof. Coser pointed out in particular the rising importance of the white collar sector in the area of automation.

Each of the six speakers' addresses was followed by a discussion.

The afternoon of the second day was taken up by a discussion and summing up on bargaining and arbitration concerning

technological changes. Taking part were W. G. Donnelly, Personnel Director of the Aluminum Company of Canada Ltd.; Jean Sirois, Assistant Manager (Standards Department) of the Dominion Textile Company; Marius Bergeron, Research Director, Canadian and Catholic Confederation of Labour; and Marcel Pépin, Technical Adviser to the National Metal Trades Federation (CCCL) and member of the Quebec Superior Labour Council.

Nature and Importance of Technological Change

The responsibility of retraining persons displaced from their jobs through mechanization or automation goes beyond the compass of the company, said Jean Paul Deschênes, Professor of Industrial Relations at Laval University, in a speech that set the tone of the two-day conference.

"The Government, the technical and specialized schools, the community, the trade unions, the companies, all should co-ordinate their efforts to provide adequate and plentiful training facilities to permit displaced persons to turn towards other sectors of industry," was his advice.

Mr. Deschênes defined technological change as follows: A modification of capital-labour equilibrium resulting from a change in the technique of production in an enterprise where the man-machine system operates at its maximal efficiency, whereby the participation of capital in the manufacture of a unit of production increases in proportion to the contribution of labour in the manufacture of this same unit.

The speaker explained that technological changes are divided into two categories: mechanization and automation. In mechanization, the machine tends to replace human effort, but man still plays an important part, for he controls the machine; in automation the machine tends to replace human control.

Stating that mechanization has favoured the establishment of monopolies or at least "oligopolies", and that the price we pay for many products is greatly higher than what we would pay were these enterprises submitted to price competition, Mr. Deschênes expressed the fear that this tendency towards the concentration of control would be accentuated by automation because of the fabulous cost of the installations.

The speaker then wondered whether the enterprise could discipline itself to take only a reasonable part of the profits so that both the worker and the consumer might benefit, or whether there would be need for a superior controlling body.

Dealing with short-term unemployment caused by technological changes, Mr. Deschênes declared that their advantages compensate by far for their disadvantages.

He insisted, however, on the necessity of retraining persons dismissed from their jobs because there was nothing left for them to do, and those dismissed because they were not adapted to the new machines.

He also maintained that the concern must give the remaining employees all possible opportunity to acquire new skills.

"The cost of retraining will probably diminish for a certain time all the benefits resulting from the innovation," he said, "but in that way the concern could compensate for the economic and social disturbances it causes in the community."

Mr. Deschênes also suggested different ways to channel technical progress and curtail its harmful effects.

More planning by companies of the technological changes they wish to introduce would permit a better orientation of the employees liable to be displaced. Although it is true that scientific discovery cannot be foreseen, that a newly-conceived machine can be obsolete before it reaches the market, nonetheless, in the majority of cases, a technological change can be foreseen, discussed and applied at the proper time.

Shorter working hours and longer holidays would permit a greater number of persons to work during the same period of time.

A broader seniority plan, based on the whole concern and not only the division, and more rational dismissal, hiring, transfer and promotion plans could also help reduce the harmful effects of technological change on both the labour force and the community.

Property, Responsibility, Rights of Management

"The more numerous a man's possessions become and the farther we get from the centre of his personal life, the more urgent also becomes the social mission of his property and the stronger must become his respect for the common good in the use of his property," said Father Gérard Dion, Director of the Department of Industrial Relations, in his speech on property and the basis of authority in industry.

Authority is the moral power to co-ordinate the activities of a group towards the common good, Father Dion pointed out. Reminding his listeners that things are administered but that men are governed, he pointed out that one must distinguish between the basis of authority, the holders of authority, the ways of choosing them and the exercise of authority.

"Authority is always founded on the common good," he said. "It is the common good that gives authority its powers, that determines its nature and the scope and limit of its competence."

Father Dion added that it is evident that ownership is not and cannot be the basis of authority. "If property creates a right to things, it cannot by itself give any power over men."

"If there were only things to administer in the concern," he said, "there would be no problem. But the difficulty arises when these things cannot be administered without involving men whose co-operation is essential to the administration."

As to the scope of the power of a person or group, as well as the ways of exercising authority, since what counts is effective authority and not power in the abstract sense, and since one cannot force investors to invest any more than one can make workers work, the concrete arrangement boils down to a question of agreement, of negotiation between the partners in production.

In conclusion, he declared that what are termed the rights of management are not immutable, can change and do change with changing times and circumstances.

"It can all be brought down to a question of efficiency, of fitness for realizing the welfare of the enterprise with due respect for the rights of all participants and the common good of the whole economy," he said.

Efficiency, "Science" and Rights of Management

In the context of rights of management, which are less and less closely connected with the right of ownership, in the perspective of numerous and often divergent definitions of efficiency and in view of the obvious uncertainties and in accuracies of "science" in industry, more especially with regard to technological changes, what recourse do management and the union have?

This was the question which Roger Chartier, Professor of Industrial Relations at Laval University, tried to answer.

He pointed out that the process of collective bargaining is essentially partial participation of the union in the management of the concern. He also drew attention to the fact that, as there are no limits of principle in the field of collective bargaining, it is only normal that discussions should be held between the parties in technical and financial matters just as they have been for a number of years in social and economic matters.

The traditional attitude of management in setting forth its rights as an occupant

and in assuming and keeping for itself all the rights which the union does not manage to get away from it, he added, is very general. This will gradually give way, however, to a new attitude, more positive and less apprehensive, based on the notion of a trustee's role, a clearing-house in the service of all who are interested in the concern.

Mr. Chartier suggested that the management of a concern should see in its employees, at all levels, not rivals and persons trying to encroach upon its efficiency, but persons engaged in a common work whose activities it must co-ordinate and whose interests it must put into equilibrium in terms of the aims of the concern that every one has at heart.

Mr. Chartier pointed out that there can be no such co-ordination without concessions, give-and-take and even compromise; that is the price one must pay for real efficiency in a concern.

If the union wishes and seeks to participate in the management of all who may be affected by the actions and decisions of management, the latter, in all pragmatism, can aim to participate in the process of decision of all who are in a position to affect the eventual results, the concrete carrying out of these decisions.

"The management of concerns," he said, "will base its decisions on the relative bargaining strength of those concerned."

Mr. Chartier concluded that the management of concerns, the meeting-place for all agreements to be arranged, will continue to be effective, but in an eminently broader and more fruitful sense, in respect for the rights of all the agents of production and in the search for that point of equilibrium that will enable the concern to function and to be of service.

Technological Change and Collective Bargaining

Jean Réal Cardin, Director of the Industrial Relations Section of the University of Montreal, suggested the use of teams of specialists by trade unions in their negotiations with management over the technical implications of technological progress.

"In the event of increased development and application of industrial engineering techniques and their more frequent and better understood use by the labour movement," he said, "these techniques will become a means for the labour movement to extend further, and to justify, its claims to more open bargaining, better accepted by management in the field of technological change."

The speaker declared that, as a general rule and for the time being at least, trade

unions do not question the right of management to decide such questions as the products to be manufactured, factory sites, the organization of production, and the methods, means and processes of manufacture.

He pointed out, however, that to protect the workers trade unions demand that the drawing up and establishment of rules and procedures regarding the application of changes be carried out through bargaining.

"The trade union movement in big industry does not, in general, object to management's initiating and applying technological changes it considers necessary for the progress of the concern," he said, "but the trade unions attempt to bargain on the conditions under which these changes will take place in the factory."

The trade unions insist upon bargaining on everything pertaining to the working conditions of their members; on anything that can change them, that can modify or destroy, from a human or economic point of view, that which has been won," Mr. Cardin recalled.

"Bargaining over technical change," he said, "does not mean only to discuss the means by which it will be introduced into the factory, but also, and above all, to ensure that the terms of the agreement on this introduction are laid down or revised accordingly."

Arbitration and Technological Change

The Employer's Point of View

Management has, at all times, the right to change the means, methods and processes of production; the union has a right to represent and protect the workers, which allows it to contest and appeal management's decisions.

In this way J. J. Gagnon, Director of Industrial Relations for the Aluminum Company of Canada, described the respective positions of employers and employees in the realm of technological change.

Mr. Gagnon stated that since both parties had agreed on the principle of arbitration of grievances, the union had by this very fact recognized the rights of management to administer the concern and to exercise its function of initiator.

"Arbitration of grievances during the lifetime of the collective agreement can only revise the actions of management," he said.

The speaker maintained that management has complete freedom in the exercise of its rights and that an arbitration cannot substitute his judgment for that of management as to the latter's right to act in such or such a manner.

He added:

In the case of technical change, the contract should specify that such grievances be submitted to an arbitrator specially qualified for the task. Moreover, the contract should indicate that for each grievance the arbitrator's decision would be limited to the technical change involved, and that once the question was decided it should remain so for a certain length of time unless there be subsequent changes in equipment, machinery or material.

Mr. Gagnon was opposed to the arbitrator's interpreting the whole of the collective agreement or trying to find a common denominator for all working conditions.

"In the case of a work or production standard," he said, "it is imperative that the arbitrator's decision be limited to that standard which is the subject of the grievance."

"The establishment of work standards is a responsibility of management," concluded Mr. Gagnon, "and it is up to the union to contest them if it believes that, as a result of the establishment of those standards, the concern demands more than a reasonable day's work, that the pay is inadequate, or that working conditions are inherently bad."

The Employee's Point of View

"In principle, all disagreements can be arbitrated," said Marius Bergeron, Director of the Research Service of the Canadian and Catholic Confederation of Labour, who spoke on the trade unions' point of view on grievances arising from technological change.

In the case of changes affecting operating conditions, Mr. Bergeron maintained that the collective agreement should let the arbitrator or the arbitration committee decide whether or not the work load or rhythm has been maintained and submit a decision binding both parties.

The criterion of judgment, he said, should be the work rhythm or work load existing when the agreement comes into effect.

In another respect, in the case of change bringing about new working conditions, the collective agreement should acknowledge the right of the arbitrator or the arbitration committee to submit a recommendation only.

He added that suspension of the no-strike clause should also be provided for the following reasons:

1. Each party to the agreement should be subject to the same procedure when it seeks to establish new working conditions;
2. The arbitrator's role is not to establish the law between the parties, but to apply it, to interpret it;
3. Techniques used to establish new working conditions not being scientific, they could not be resorted to to impose new

working conditions which, in fact, modify the collective agreement as accepted.

Mr. Bergeron stated that the current practice used in the application of new working conditions "ignores certain fundamental rights of the workers."

Declaring that present agreements do not sufficiently elaborate on the manner in which differences arising from the application of technological changes shall be negotiated or settled, he added:

It is desirable that the techniques used to determine new working conditions during the lifetime of the agreement be contractually agreed on and jointly applied, with the condition that differences could be submitted to arbitration binding the parties, the arbitrator using as a criterion the techniques agreed upon.

The Labour Movement and Technological Change

According to Prof. Lewis Coser of Brandeis University, the increase in production costs in the last decade was not caused by wage increases but by the proliferation of white collar workers.

Speaking at the closing banquet, Dr. Coser maintained that increases in salaried personnel tend to absorb and cancel out the results of improvements in productivity.

The modification of the labour structure will be accentuated to such a point that in 20 years, in many industries, the ratio of production workers to other workers will stand at one to three, the exact opposite of that existing at present.

Mr. Coser declared that it would be possible to minimize the effects of the increase of white collar workers if management "would consent to share with the workers certain of its traditional functions.

"There is no reason why trade unions, by taking a more direct part in the development and control of production work, could not succeed in reducing the costs of a scattered supervision which presently con-

stitutes one of the most important factors in the increase of administration costs," he said.

The speaker noted that with the coming of the age of automation, management is demanding complete freedom in introducing technological change, whereas the trade unions are asking for the adoption of protective measures to mitigate certain consequences of automation.

He specified:

In the past, labour action has indirectly stimulated capital investments by obligating management to seek compensation for increases in labour costs. In future, pressure from the trade unions may provoke an increase in the responsibilities of the workers to the level of direct control of production work. It is possible that management will agree to pay this price in return for a greater stability in its relations with the workers and their unions.

Mr. Coser pointed out that it is impossible today to give back to the individual worker his mastery over, the elements, formerly complex and numerous, of his job; however, it is not only possible but also desirable to give him this mastery by entrusting the worker group with collective control over a complex of jobs which have been simplified.

He said that trade unions will have to force management to give the workers a general, many-sided training instead of letting such training deteriorate towards fragmentation and specialization. Thanks to this orientation, many workers will become capable of directing and controlling by themselves a good part of the production work.

"If the unions fail in this task," warned Mr. Coser, "their social function will gradually lose its importance; but if, on the contrary, they can adapt themselves to the requirements of modern times, they will render a great service not only to their members but to the whole of society."

European Farmers' Sons Gaining Experience on Canadian Farms

An experiment that is allowing the sons of farmers in The Netherlands, Belgium and France to come to Canada for periods of up to nine months to study Canadian farming techniques is being tried out under direction of the Department of Citizenship and Immigration.

During the current year the sons of 120 Dutch farmers will take advantage of the plan.

Through working on Canadian farms it is hoped the young farmers will familiarize themselves with agriculture conditions and make them aware of the advantages and opportunities to be derived from establishing themselves on farms in this country.

It is expected that after they return to their own countries they will discuss with their friends and farm organizations the farming possibilities in Canada, and that many of them may return to this country themselves to take up farms.

The plan, in addition to helping Canada, will help The Netherlands and, to a lesser extent, Belgium and France.

Seasonal Unemployment in Canada—3

Final instalment of three-part article relates steps already taken to deal with seasonal unemployment, suggests several ways by which it may be reduced, and concludes that long-term solutions being sought to greater and greater extent

Part 3—Steps Taken to Deal with Seasonal Unemployment Problem: Summary and Conclusions

EFFORTS TO STIMULATE WINTER EMPLOYMENT

Education and Promotion

In the late 1940's, a number of National Employment Service offices of the Unemployment Insurance Commission organized a "Find a Job Week" program to ease winter unemployment. As a result of the success achieved by these local campaigns, the Commission in January 1950 instructed all its offices to promote the establishment of local winter employment committees and to extend the local publicity campaigns.

Since 1954 the local campaigns have been incorporated into a national winter employment promotional and educational program conducted jointly by the Department of Labour and the National Employment Service of the Unemployment Insurance Commission. The purpose of the national program is to inform the public about the seasonal problem and to encourage support for the winter employment campaign from organizations and individual citizens.

This program, which illustrates in various ways the advantage of having work done in the "off-season," makes use of newspapers, magazines, billboards, radio and TV advertising. To ensure its success liaison has been established with large companies having a direct interest in stimulating winter sales. Active co-operation is also obtained from newspaper associations, the Canadian Broadcasting Corporation and major magazine publishers. In all, about fifty national associations and publishing firms have given some degree of co-operation.

Expenditures on behalf of the publicity campaign from outside sources are substantially greater than those from the Government of Canada. Many companies in providing support have created new markets for themselves that have increased their sales and so provided additional winter work. The result has been beneficial to both the community and the nation.

Because it is at the community level that the campaign takes effect, the organization of approximately 200 local campaigns across Canada by the National Employment Service of the Unemployment Insurance Commission is a major feature of the

undertaking. These campaigns have their origin in local employment committees, groups of citizens representing a cross section of community interests working in close co-operation with local NES office staffs. Most local campaigns are conducted jointly by such voluntary committees and the local NES office, although in a few localities the local office conducts the campaign without committee assistance.

As in the national campaign, the first objective of the local campaigns is to bring the facts of winter unemployment and the desirability of doing something about it squarely before the community. The second is to stimulate individuals to support the campaign according to their abilities and the opportunities open to them.

Public knowledge of the problem of winter unemployment and the importance of taking action to create more winter employment have been increased tremendously by the local campaigns. How is this increase being achieved? The following paragraphs give some idea.

During the winter of 1958-59 local organizations distributed more than 100,000 posters, 80,000 window streamers, almost 3,000,000 correspondence stickers and more than 1,100,000 pamphlets, all of which were provided by the Department of Labour. Sponsored newspaper advertisements, editorials, pictures and news items obtained locally are conservatively estimated to have totalled 248,836 column inches. Locally sponsored radio and TV spots are similarly estimated to have totalled 27,791 spots.

The film "Winter Construction—It Can Be Done," produced for the National Research Council, was shown to 368 audiences; 428 talks and panel discussions were conducted, and by local arrangement 379 second-run movie theatres ran winter employment film clips as a public service.

The organization and carrying out of local campaigns entailed 927 meetings of local committees. In addition local workers arranged much additional free publicity,

such as pulpit announcements, letters from committee chairmen to employers, parades, exhibitions, etc.

Reports from employment offices and local committees indicate that this increased knowledge was translated into action by municipal governments, local industry and business, local organizations and individuals. As a result of such action, many thousands of workers were employed who would otherwise have remained unemployed and large numbers of workers who might have been laid off were kept on the job.

National Winter Employment Conference

In 1958 the Canadian Government organized a conference to discuss Canada's seasonal unemployment problem. The conference was held in Ottawa on July 14 and 15 with Hon. Michael Starr, Minister of Labour, as Chairman. Representatives of provincial governments, industry, labour, consumers, the universities and other private organizations attended the conference.

During the conference, delegates were divided into four groups: government, promotion and publicity, trade and commerce, and industry. These groups met separately and then reported to a plenary session.

The government group recommended:

1. Greater availability of money for financing housing construction with lowest possible interest rates and low down payments;

2. Assistance in slum clearance to create employment during the winter months;

3. Expansion of the federal assistance program in the construction of roads to underdeveloped areas in winter months, and in the construction of camp sites and picnic grounds;

4. Establishment of municipal and provincial committees to develop measures for creating winter employment;

5. Incentive by way of greater federal assistance to provinces for public works during winter months;

6. Continuing and intensified winter employment campaigns and adequate staff for National Employment Service Offices, to assist them in the conduct of such campaigns;

7. Better timing and planning on the part of all levels of government of public construction projects;

8. Discouragement of overtime in high employment periods, with a view to levelling out employment the year round; discouragement of the practice of holding two jobs—commonly known as “moonlighting”;

9. Sharing by the federal government with provinces and municipalities the cost of renovation of municipal public buildings, streets, etc.;

10. Expansion, wherever possible, of trade training to improve the skills of unemployed persons, thereby enhancing their prospects of obtaining employment;

11. Encouragement to secondary industries, to stimulate more extensive processing of basic materials in Canada.

In addition, the government group endorsed the suggestion that “serious study be given to providing incentives to business generally to retain and/or hire employees in the winter season.”

The promotion and publicity group concluded that the responsibility for leadership in publicity and promotion must fall on the Government. Independent organizations can, of course, be of enormous help. The group recommended three main things:

1. An intensified advertising campaign;

2. An intensified personal selling campaign, with some new twists in it for group selling; and

3. An intensified promotional and publicity campaign.

The trade and commerce group recommended:

1. Financial incentives to encourage capital outlay during the winter months—this might be done through an accelerated depreciation allowance;

2. Encouragement of winter vacations in Canada—this might include incentives to resort operators;

3. Encouragement of an increased volume of expenditures on home improvements during the winter.

The industry group stressed the importance of incentives: “We stress that there must be some incentive, something that would hit the pocket of the industrialist, of the homemaker, of the municipality; that is the prime thing that could result in developing action.”

Government Activity

In 1955, the Government of Canada issued a directive on winter employment to all its departments and agencies. This directive urged all departments and agencies to plan their activities in such a way as to create, where possible, maximum employment during the winter months.

An interdepartmental committee on winter employment was established under the chairmanship of the Deputy Minister of Labour to carry out the intention of the directive. The committee is made up of

representatives from the Department of Labour, the Unemployment Insurance Commission, and the main spending departments in the construction fields: Public Works, Transport, Defence Production, National Defence, Finance, Defence Construction Ltd. and Central Mortgage and Housing Corporation.

These departments and agencies have succeeded in shifting a large proportion of construction work and purchasing to the winter months. As a matter of policy, some government departments do practically all postponable repair and maintenance work in winter.

Provincial governments continue to cooperate in efforts to stimulate winter work. Interdepartmental committees have been established in five provinces. Generally, it is provincial policy to schedule maintenance and repair work for the winter months.

In the winter of 1958-59 Nova Scotia offered to municipalities a winter works incentive program under which the province paid 50 per cent of direct payroll costs of approved projects for the repair, extension and renovation of municipal buildings, screening and improving reservoirs and water supply lakes, improving dumps and erecting or repairing traffic signs and street lamps.

In Alberta a \$2-million cold weather road-building program was carried out with the specific purpose of providing winter work. In many provinces a substantial amount of construction work is carried out in the off season on provincial buildings.

The Municipal Winter Works Incentive Program, announced by the Government of Canada in 1958 and now in its second year of operation, has met with substantial success. Under the program the Government of Canada agreed to pay 50 per cent of direct labour cost on certain municipal projects that "are not normally carried out in winter." The projects for approval fell into the following three categories:

1. The construction and major reconstruction of streets, sidewalks or roads, other than arterial roads;
2. The construction and major reconstruction of water, sewage and storm sewage facilities not including buildings;
3. The construction and development of municipal parks, municipal playgrounds, separate or in municipal parks but not including school playgrounds.

Workers eligible to work on these projects were those who were either unemployed or who would have become unemployed in the absence of these projects. The National Employment Service did the recruiting.

All provinces accepted the plan. Prince Edward Island, Ontario, Saskatchewan and Alberta added supplementary payments amounting to 25 per cent of direct labour cost while Manitoba added about 30 per cent to the federal contribution.

During the first year of operation (October 31, 1958 to May 31, 1959) more than 700 municipalities participated. Some 1,947 projects were approved, involving total expenditures of more than \$89 million for the designated six-month period. These projects provided an average 41 days of employment for 35,545 additional workers on site. How many additional man-hours were required to supply materials and for transportation and services associated with these projects are now known, but they would be a substantial number.

In the summer of 1959, the Government announced that the Program under the same conditions would operate between December 1, 1959 and April 30, 1960. Again all provinces participated; about two million man-days of employment were created by the program.

The Municipal Program has provided tangible support to the government's educational efforts in creating winter work. It has demonstrated that a modest financial incentive can create a large number of additional jobs during the winter months. To the extent that it paid, on the average, more than \$500 in wages to each worker who worked on the projects, it gave a large measure of security to the families of those workers who participated in the program. It has, in addition, made a positive contribution to community development and to the growth and stability of the economy generally.

Apart from the Municipal Winter Works Incentive Program, the federal Government has co-operated with other groups in carrying out special winter works projects. For example, the Department of Northern Affairs and National Resources offered financial assistance to provinces in the development of camping grounds and picnic areas and the construction of forest access roads. The federal Government paid 50 per cent of the labour costs on these projects.

During the winter of 1958-59 winter employment was stimulated greatly as a result of funds made available by the federal Government for housing. Many contractors in all parts of Canada expanded their operations during the autumn months with the result that the carryover of houses (houses under construction) reached a record of almost 90,000 going into the winter. Again in 1959, the Government made available

sums of money for houses built during the 1959-60 autumn and winter months.

A larger amount of money was borrowed during recent winters for home improvement loans under the provision of the

National Housing Act than in former years. Central Mortgage and Housing Corporation has also encouraged the building of low-rental housing in rural areas in the winter months.

EVALUATION OF THE WINTER EMPLOYMENT CAMPAIGN

It is not possible to measure statistically the results of efforts to stimulate winter employment; but there is a great deal of evidence from local sources that many workers have been employed in winter who in the absence of this campaign would have been unemployed.

Also, there is much evidence that active participation in finding a solution to the serious seasonal problem is growing.

The Working Committee on Winter Employment, with members from the Department of Labour and the Unemployment Insurance Commission, has been responsible for research and education on and promotion of increased winter employment. Guided and stimulated by this committee, the co-operating national and local groups have expanded their search for ways and means to reduce the seasonal unemployment problem.

After participation in the National Winter Employment Conference in July 1958, the Canadian Manufacturers' Association established a committee on winter employment to consider how production and sales programs could be planned on a year-round basis in order to minimize layoffs, to study the types of manufactured products that might be sold to a greater extent during the winter months and the possibility of enlisting more national and local advertising with the object of increasing the manufacture of these goods in winter. Divisions and branches of the Association across Canada co-operated with interested individuals and groups at the provincial and municipal levels on winter employment programs. Representatives met with local and provincial winter employment committees.

The Canadian Labour Congress is represented on the Winter Employment Subcommittee of the National Employment Committee, the National Joint Committee on Wintertime Construction and all regional employment committees. Labour Councils are encouraged to co-operate with municipal authorities in developing winter projects. Many of them sponsor advertisements and other forms of publicity to stimulate winter work. Provincial Federations of Labour are encouraged to co-operate with provincial authorities in developing provincial winter employment programs.

The Canadian Construction Association established the National Joint Committee on Wintertime Construction in 1955. This committee is representative of all groups with an interest in winter construction. The committee worked with the National Research Council in the preparation of the film, "Winter Construction—It Can Be Done".

The National Housebuilders' Association is represented on national and local winter employment committees and has distributed publicity material on winter employment to local associations. The experience of builders who operate twelve months each year has been of great value in establishing a realistic view of the benefits and difficulties inherent in winter construction.

Apart from these, the Division of Building Research of the National Research Council has given considerable support to year-round construction.

This broad outline of the extent of activity and interest in the seasonal problem suggests that the people of Canada are generally aware of the seriousness of winter unemployment. Nevertheless, while thousands of additional winter jobs undoubtedly have been created in past winters, the magnitude of seasonal unemployment in total has not altered appreciably. A number of factors have been responsible for this lack of measurable progress despite the considerable efforts devoted to creating more winter employment:

1. The seasonal industries are growing rapidly and thus the absolute number of workers affected by seasonal layoffs is growing;

2. The construction industry in particular has operated at unusually high levels in the past several years and since its seasonal swing from summer to winter has not changed appreciably, the absolute number laid off for seasonal reasons has continued to be high;

3. The logging industry, which used to absorb a large number of workers in the wintertime, has gradually shifted its operation away from winter to summer and autumn, thus inducing a larger swing in total employment between summer and winter;

4. The truck and taxi components of the transportation industry have expanded rapidly in past years and both of these are highly seasonal.

On the other hand, the year-round stability of total employment is supported by an expanding manufacturing industry.

Research

The Economics and Research Branch of the Department of Labour began a study of seasonal variation in employment in early 1952. This study culminated in a statistical report, "Calendars of Seasonal Variations in Employment," published in August 1954. The initial purpose of this study was to enable labour market analysis to assess more accurately month-to-month movements of industrial employment.

In December 1952, the National Advisory Council on Manpower requested the National Employment Committee to undertake a study of seasonal unemployment in Canada. In the summer of 1953 the National Employment Committee, through the regional and local employment committees, questioned more than 600 Canadian employers in 18 seasonal industries on the causes of seasonal variations in their employment and on methods they had developed to reduce such variations, and asked for any suggestions for further action. A report based on the employers' replies was prepared by the Economics and Research Branch of the Department of Labour in April 1954 under the title, *Seasonal Unemployment in Canada*.

SUMMARY

This study has already indicated which industries bring about our seasonal unemployment problem. It has been estimated that in March 1959, when unemployment was at its annual peak, about 250,000 persons were unemployed for seasonal reasons. At least 40 per cent of these came from the construction industry. The balance came largely from the primary industries (agriculture, mining, logging, fishing, etc.) and the transportation and related industries that service, and are dependent upon, these other seasonal industries.

The Problem Related to Certain Industries

Although manufacturing as a whole does not contribute significantly to the pool of the seasonally unemployed, many industries within the manufacturing sector are among the most seasonal industries in the Canadian economy. But because of the different times at which their peak activities occur, and also because many large manufacturing

A third report, "Canada's Seasonal Employment Problem," was prepared by the Economics and Research Branch in the summer of 1958 to provide basic data for the delegates to the National Winter Employment Conference held in Ottawa, July 14 and 15, 1958.

One of the many recommendations coming out of the National Winter Employment Conference was that more ought to be known about those who become unemployed for seasonal reasons each winter. It has been recognized for some time that while we have a fair idea of the magnitude of seasonal unemployment, more ought to be known about who the seasonal unemployed are, what industries they come from, their age, sex, duration of unemployment and, possibly, their income position.

The Economics and Research Branch has undertaken such a study, using available data and special tabulations made by the Dominion Bureau of Statistics and the Unemployment Insurance Commission. The results of part of this study were outlined in the second part of this article. Some questions remain unanswered and further research will try to answer them.

Over the past year the Government of Canada has co-operated with the Government of British Columbia, through the B.C. Research Council, in a study of seasonal unemployment that will add to our knowledge of the problem in that province. A similar study will be undertaken by the Economics and Research Branch in co-operation with the Governments of Nova Scotia and New Brunswick.

industries experience no seasonal swings at all, the over-all contribution to the seasonal problem by manufacturing is minimized. The most seasonal groups within manufacturing are the food-processing and the wood products industries. Hence, a region or a labour market area with a preponderance of this type of manufacturing activity will experience larger seasonal swings.

Agriculture contributes considerably more to seasonal variations in employment than to seasonal unemployment. This is particularly true of the "unpaid family workers," many of whom become active members of the labour force during the summer months but withdraw from the labour force for the rest of the year. The boys and girls return to school while the women resume their household duties. Many other farm workers who leave the farm labour force after the harvest find jobs in other indus-

tries, particularly construction and forestry, for a short period. When they subsequently become unemployed, they are no longer identified with agriculture. This movement tends to reduce the measurable amount of seasonal unemployment that originates in agriculture.

Some types of farming employ labour on a year-round basis, others need no labour at all during the winter, and the remainder fall somewhere in between. It seems likely that manpower resources in the latter type of farming are underutilized during the winter months. This might be offset by over-utilization (i.e., very long hours, maximum effort, six or even seven days a week, etc.) during the summer months.

Forestry is a substantial contributor to the pool of seasonally unemployed although, as in the case of agriculture, many loggers leave the forestry labour force when they leave their logging job, and become attached to other industries. In Eastern Canada, logging and agriculture, or logging and fishing, are usual combinations of year-round employment. The peak demand for loggers occurs in late fall and early winter, when the demand for farm labour in agriculture and fishing is at its seasonal low.

Unfortunately, however, winter logging operations are becoming less important, so that although the seasonal trough in logging does not occur until May, employment is at a very low level during February, March and April, when most other seasonal industries are also operating at very low levels. The result is that while a high level of logging employment from October until January cushions the large seasonal declines in other industries, it no longer provides the support during the other winter months that it formerly did. Furthermore, the concentration of logging operations in regions with a substantial amount of seasonal unemployment makes this shift particularly important.

The Problem Related to the Regions of Canada

The amount of seasonal unemployment in a region depends upon its industrial composition and climate. Since Canada's economic regions have different industry structures and some variation in climate, it is not surprising to find different degrees of seasonality. It is lowest in Ontario and the Prairie region and highest in the Atlantic, Quebec and Pacific regions. Although no precise information is available, it appears that the Atlantic region's contribution to the seasonal problem is more than half that of Ontario's although its labour force is only about one-fifth that of Ontario.

Most of the seasonal unemployment in the Prairie region is associated with agriculture and construction, and in Ontario with construction and transportation, particularly lake shipping. Fishing, fish processing, fruit and vegetable canning, construction and forestry are the industries associated with seasonality in the Atlantic, Pacific and Quebec regions.

The extent of seasonal unemployment not only varies among the different regions but also among the different labour markets within each region, depending upon the extent and variety of manufacturing activities in the area. If a labour market area is heavily dependent upon seasonal primary industries, seasonal unemployment is likely to be high. If it has a varied manufacturing industry, it will tend to have little seasonal winter unemployment, apart from the influx of seasonal workers from outlying points.

Who Are the Seasonally Unemployed?

Keeping in mind the limits imposed by the data used, Part 2 of this article provided at least a partial answer to this question. In the first place, the industries from which most of our seasonally unemployed come are predominantly employers of men. The proportion of women in construction, logging, transportation and fishing is very small, less than 3 per cent, except in transportation. In transportation, however, the women are a stable group throughout the year. This is because the seasonal component of the transportation industry is made up largely of seamen and taxi and truck drivers, all essentially male occupations. This is not meant to imply that women are not affected by the operations of the seasonal industries, but that women who work in seasonal jobs during the summer are more inclined to leave the labour force when the job is finished than to seek another job. Bearing this in mind, therefore, the seasonal unemployment problem can be regarded as essentially a male problem.

Men who are seasonally unemployed in the winter have a wide variety of occupational skills but these are distributed very unevenly and are dominated by construction occupations. This is true for all levels of skill. For the period 1955 to 1959, construction occupations averaged 24 per cent of the peak registrations for employment of the skilled and semi-skilled and 40 per cent of the unskilled group. Furthermore, the proportion of unskilled workers among the winter registrations is considerably larger than among the summer registrations.

The winter unemployed are younger than the employed, on average. In January 1959, when only 6 per cent of the men who had

jobs were under 20 years of age, this age group accounted for 14 per cent of those without jobs. Of the under-20's who were

unemployed, 22 per cent were from the labourers' group and 19 per cent had no work experience at all.

CONCLUSIONS

The analysis suggests that apart from a large group of skilled and semi-skilled construction workers, the seasonally unemployed are relatively unskilled male workers in the younger age groups. While there are many local exceptions to this generalization, a short-term solution to the seasonal problem would require finding or creating jobs for a group of skilled and semi-skilled construction workers and for relatively unskilled men, many of whom also lack any extensive work experience. Furthermore, any attempt at solving this problem through the creation of winter jobs must take account not only of the amount of seasonal unemployment in a particular locality but also of the availability of the necessary skills within the area.

Workers are not likely to move over long distances to obtain employment for only two or three months. Geographical, industrial, and occupational mobility of unemployed workers is inhibited by many factors: economic, social and institutional. Work patterns tend to develop that impede the mobility of the unemployed, particularly if such patterns are supported by high earnings for eight to ten months of the year and unemployment insurance benefits for the remainder.

In general, therefore, jobs for the seasonally unemployed would have to be created in the local areas where seasonal layoffs occur and would also have to be suited to the kinds of skills available locally.

These are factors involved in a short-term consideration of the seasonal problem. What about the longer-term solution? Can the seasonal problem be solved in the long that today everything is big: big business, involved?

There are several ways by which seasonal unemployment can be reduced. Some of these are: (1) a reduction of seasonal fluctuations in the employment of seasonal industries; (2) a decrease in the number of persons attached to the seasonal industries; (3) a shift in seasonal patterns so that there is a better balance between the peak activity of one industry and the trough of another; and (4) a shortening of the inactive season, i.e., a reduction of the seasonal layoff period. What are the prospects for achieving these changes?

Apart from construction, most seasonal industries are dominated by fundamental climatic and seasonal factors about which little can be done. The seasonal swings in

construction have been declining for more than 30 years. Since 1924-28 the seasonal amplitude has decreased from 66 per cent to 38 per cent in the 1953-57 period. The size of the amplitude in the "buildings and structures" part of the industry fell from 47 to 31 per cent, and the swing for "highways, bridges, and streets" was reduced from 146 to 50 per cent. Although the seasonality in the "buildings and structures" has increased slightly over the past 10 years, that of the "highways, bridges and streets" sector has continued to decline. Many factors are involved but technological developments are no doubt the most significant.

The seasonality of all major industry groups has decreased over the past 30 years but more recently some industries have shown an increase in their seasonal amplitude. In nearly all industries studied, the seasonal amplitudes are still well below the levels of the late 1920's. The one exception is the "agricultural implements" manufacturing industry, whose amplitude has increased substantially.

There has been an increase in the number of persons employed in some seasonal industries and a decrease in others. Employment has declined in agriculture, forestry and fishing and increased in construction and transportation. Given the same seasonal amplitude, an industry will contribute an increasing number to the pool of the seasonally unemployed as its total employment increases. As mentioned earlier, the amount of seasonal unemployment originating in agriculture is much less than one would expect considering the large seasonal variations in agricultural employment. To a much lesser extent this is also the case in logging and fishing. Hence, a decline in employment in these kinds of seasonal industries will not have the same effect on the pool of seasonally unemployed as a decrease in the employment of other kinds of seasonal industries.

The third kind of change mentioned above is a shift in the patterns of the seasonal industries. An example of this shift has already been given but it might be worth repeating. Logging in Eastern Canada has always had its peak in December and trough in May and this has not changed. But until a few years ago the months of high employment were November to March. Now they are limited to the October-to-January period, with an increasing proportion of the cutting being done in October and November. This

industry, therefore, which used to absorb some of the seasonally unemployed during the winter, is now contributing its own employees to the pool. Unfortunately, shifts in the other direction have been much less significant so that on balance the changes in the patterns of seasonal industries have tended to add to the numbers of seasonally unemployed in the winter.

The fourth type of shift that might take place is a shortening of the layoff period for the seasonally unemployed. There is some evidence that over the past 30 years this has been happening in the construction industry and consequently in the industries that service it. In 1941 only 26 per cent of the construction workers had 50 weeks or more of employment during the year (July 1940 to June 1941) but by 1951 this had increased to 46 per cent. The development of deep-sea fishing on the east coast has lengthened both the fishing season and the processing season. Conservation measures have shortened the fishing season for some species but in most cases the yield is much higher. In the logging industry in Eastern

Canada quite the opposite has happened and the layoff period has become much longer.

What, then, are the prospects for reducing the number of seasonally unemployed in the winter months? There is no simple answer to this question but, as mentioned, it is necessary to distinguish the "short-term" from the "long-term" solutions of this problem. The "short-term" solution depends to a great extent on the action taken by all levels of government, and the longer-term solution demands a development of new techniques and new machines. Promotion and education, building research, development of new managerial and organizational techniques are but a few of the many approaches to the problem. Recent developments along these lines indicate that the longer-term solutions are being sought to a greater and greater extent.

The over-riding factor in the search for a solution to this problem lies, of course, in the country's ability to keep the economy buoyant; this reduces the number of workers affected by the seasonal factor and also reduces the social problem associated with this kind of unemployment.

Industrial Fatalities in Canada during the First Quarter of 1960

Deaths from industrial accidents decreased by 88 from the previous quarter and by 51 from the first quarter of 1959. Of the 226 fatalities in 1960's first quarter, 46 occurred in manufacturing, 42 in transportation, and 31 in logging

There were 226* industrial fatalities in Canada in the first quarter of 1960, according to the latest reports received by the Department of Labour. This is a decrease of 88 from the previous quarter, in which 314 were recorded, including 39 in a supplementary list. In the first quarter of the previous year, 277 fatalities were recorded.

During the quarter under review, there were five accidents each resulting in the deaths of three or more persons.

Two accidents cost the lives of five persons in each case. On March 2, five Montreal firemen were fighting a fire from the roof of a building when the roof collapsed,

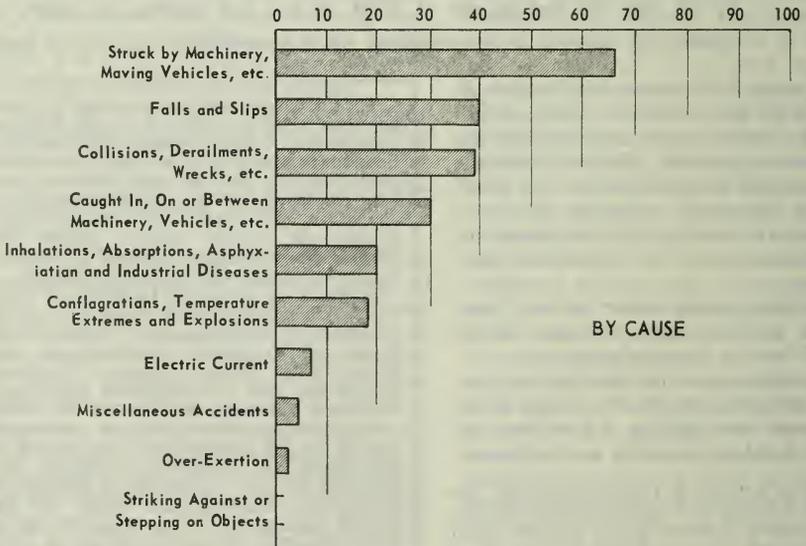

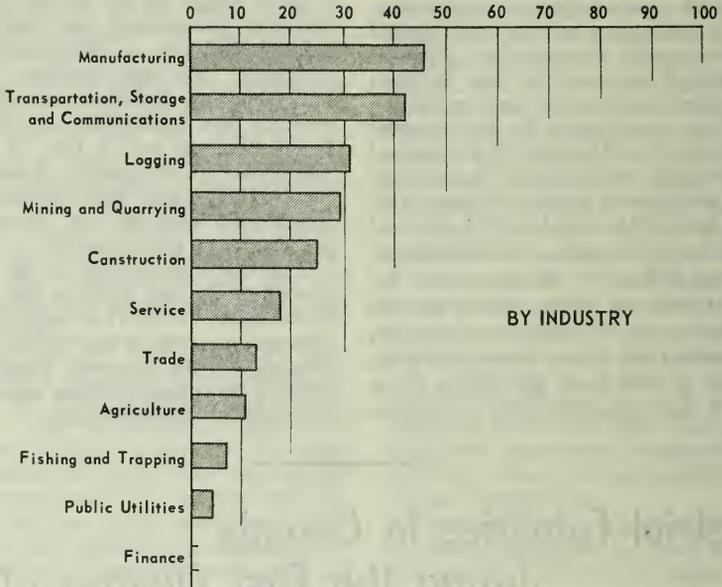

*See Tables H-1 and H-2 at back of book. The number of fatalities that occurred during the first quarter of 1960 is probably greater than the figure now quoted. Information on accidents which occur but are not reported in time for inclusion in the quarterly articles is recorded in supplementary lists and statistics are amended accordingly. The figures shown include 52 fatalities for which no official reports have been received.

The industrial fatalities recorded in these quarterly articles, prepared by the Working Conditions and Social Analysis Section of the Economics and Research Branch, are those fatal accidents that involved persons gainfully employed and that occurred during the course of, or which arose out of, their employment. These include deaths that resulted from industrial diseases as reported by the Workmen's Compensation Boards.

Statistics on industrial fatalities are compiled from reports received from the various Workmen's Compensation Boards, the Board of Transport Commissioners and certain other official sources. Newspaper reports are used to supplement these data. For those industries not covered by Workmen's compensation legislation, newspaper reports are the Department's only source of information. It is possible, therefore, that coverage in such industries as agriculture, fishing and trapping and certain of the service groups is not as complete as in those industries which are covered by compensation legislation. Similarly, a small number of traffic accidents which are in fact industrial may be omitted from the Department's records because of lack of information in press reports.

INDUSTRIAL FATALITIES IN CANADA

First Quarter of 1960

Source: Economics and Research Branch, Department of Labour

and on March 17, five men working in a tunnel in Toronto were trapped and died by drowning and inspiration of silt when the tunnel caught fire.

One accident was responsible for the loss of four lives. The captain and three crew members of the *Margaret Lou*, all of Lunenburg, N.S., were drowned in a coastal storm March 9.

Two accidents cost the lives of three persons in each case. An engineer, fireman and trainman were killed in the collision of two trains at Pomquet, N.S., on February 18. Three loggers returning from their camp were drowned on Pitt Lake, B.C., when the boat overturned.

Grouped by industries (see chart page 702) the largest number of fatalities, 46, was in manufacturing. Of these 10 were in wood products, 9 in iron and steel products and 4 each in paper products, transportation equipment, non-ferrous metal products and non-metallic mineral products. Fatalities recorded in this industry for the same period in 1959 numbered 40; of these, 17 were in iron and steel products, 8 in wood products and 2 each in transportation equipment, non-ferrous metal products and non-metallic mineral products. During 1959's fourth quarter, 44 fatalities were recorded; of these 9 were in wood products, 7 in iron and steel products, 6 in foods and beverages and 3 in non-ferrous metal products.

During the quarter, accidents in the transportation, storage and communications industry resulted in the deaths of 42 persons; 16 of these were in local and highway transportation, 12 in railway transportation, 8 in water transportation and 3 in storage. During the same period last year, 40 deaths were reported; 15 of these were in railway transportation, 10 in local and highway transportation and 5 in storage. Accidents during October, November and December of last year resulted in the deaths of 47 workers; 18 of these were in local and highway transportation, 11 in railway transportation, 9 in air transportation and 7 in water transportation.

There were 31 fatalities in logging, a decrease of 2 from the 33 that occurred

during the same period in 1959 and of 7 from the 38 that were recorded during the fourth quarter of 1959.

Fatalities in the mining industry numbered 29: 16 in metal mining, 6 in coal mining and 7 in non-metallic mineral mining. During 1959's first quarter, 43 deaths were reported, of which 30 were in metal mining, 6 in coal mining, and 5 in non-metallic mineral mining. Forty-six persons were killed in this industry in the fourth quarter of 1959: 34 in metal mining, 4 in coal mining and 8 in non-metallic mineral mining.

There were 25 fatalities in the construction industry during the quarter: 11 in buildings, 12 in highways and bridges and 2 in other construction. For the same period last year, fatalities in this industry numbered 50: 18 in buildings, 24 in highways and bridges and 8 in other construction. During 1959's fourth quarter, 88 fatalities were listed: 54 in buildings, 22 in highways and bridges and 12 in other construction.

An analysis of the causes of the 226 fatalities during the first quarter (see chart page 702) shows that 66 (29 per cent) were under the heading "struck by". Of these, 46 were in the category "other objects", 11 were caused by "moving vehicles" and 9 the result of being "struck by tools, machinery, cranes, etc.". In the classification "falls and slips" 40 fatalities were recorded, all but four of which were caused by falls to different levels.

"Collisions, derailments, wrecks, etc." were responsible for 39 deaths: 18 from accidents involving automobiles or trucks, 7 tractors and loadmobiles, 6 railways, 5 involving water craft and 3 aircraft. Thirty fatalities were the result of being "caught in, on or between"; of these, 10 involved machinery, 6 automobiles and trucks, and 5 hoisting and conveying apparatus.

By province of occurrence, the largest number of fatalities was in Ontario, where there were 76. In British Columbia there were 50; in Quebec 36; and in Alberta 22.

During the quarter, there were 72 fatalities in January, 76 in February and 78 in March.

Work Injuries Disabled 1,970,000 U.S. Workers in 1959

In 1959, job injuries disabled 1,970,000 United States workers, it is reported by the United States Department of Labor's Bureau of Labor Statistics. Approximately 13,800 of the injuries resulted in deaths.

The 1959 injury total, the highest since 1953, was 8 per cent higher than the 1958 figure. The injury rate increased from 29.4 per cent per thousand workers in 1958 to 31.2 in 1959.

Approximately 84,200 of the 1959 injuries resulted in some degree of permanent physical impairment and in some cases left the victims unable to seek further gainful employment.

Manual on Older Worker Problem

Much of recurring heavy costs of labour turnover might be halted by hiring and retention of mature workers, who are more likely to remain permanently, states new reference manual, a compilation of factual material on older worker problem

Many companies, noted for efficiency in their operations, spend considerable money annually on "under 40" and "under 30" advertising turnover in certain job areas, although much of this recurring loss might be halted by the hiring and retention of mature workers, who are more likely to remain permanently.

This is one of the points made in a new mimeographed reference manual prepared by the Department's Information Branch for limited distribution to those interested in helping to create a better employment climate for older workers. The manual is a compilation of factual material pertaining to the social and economic problem of the older worker.

Other points made by the manual are summarized here.

Mental Ability—A study in the United States has indicated that mental ability can be greater at age 50 than at age 20. The Army's alpha intelligence test was given to 127 male freshmen at Iowa State College during 1918-1919 and to the same group 31 years later, during 1949-1950.

After taking into account factors that might have a bearing on the results, psychologists found the group to be intellectually more able in 1950, when ages averaged about 50, than they were in 1919.

But how far beyond age 50 does this growth in mental ability continue? Studies reported to the New York State Joint Legislative Committee on Problems of Aging indicate that the brain may not reach peak capacity until approximately age 60, and that, in subsequent years, mental efficiency declines slowly until the age of 80.

Labour Turnover—Tables in the manual include one on annual turnover rates, based on findings of a 12-month survey in seven cities in the United States, covering establishments employing 3,900,000 workers.

Separations per 100 Employed

	Total*	Dis- Quits	charges	Lay- offs
Both sexes (Average)	54	23	6	17
Under 45	62	30	7	18
45 and over	38	11	4	15
45-64	36	11	4	15
65 and over	57	14	4	16

* Includes miscellaneous separations and type not reported.

Absenteeism per 100 Work-Days, by Age Group

All age groups	3.4
Under 20 years	5.5
20-24 years	4.9
25-29 years	4.3
30-34 years	3.6
35-39 years	3.4
40-44 years	3.5
45-49 years	3.4
50-54 years	3.3
55-59 years	2.8
60-64 years	2.9
65-69 years	3.3
70-74 years	3.2

Non-Disabling Injuries per Million Work-Hours, by Age Group

All age groups	980
Under 20 years	1,230
20-24 years	1,500
25-29 years	1,560
30-34 years	1,420
35-39 years	1,240
40-44 years	1,050
45-49 years	990
50-54 years	740
55-59 years	630
60-64 years	560
65-69 years	430
70-74 years	320

Pension Plans—Under a unit benefit pension plan, an employer must contribute more for an older worker. The employee contributes a fixed percentage of his earnings, regardless of his age, and the employer pays the balance of the cost of providing the worker's pension; this requires a higher payment for those in the upper age groups. The same applies to plans in which the employer contributes the entire cost.

(Under a money purchase pension plan, where both employer and employee contribute an agreed percentage of the employee's earnings, the cost to the employer is the same whether he hires older or younger workers.)

How much higher is the payment? The increase for a limited number of older workers is likely to be insignificant in relation to the firm's total pension costs, or even when considered as an addition to a good worker's total wage.

The manual describes one way to reduce these extra pensions costs make special provisions that allow an older worker to increase his percentage contribution to the unit benefit plan while keeping the employer's contribution at the usual level.

50 Years Ago This Month

Wages and prices have been following each other for some time in an ascending spiral. Previous decade's industrial expansion, leading to heavy investment, chiefly of borrowed capital, said basis of higher prices prevailing—in 1910

The publication of statistics on prices that began in the LABOUR GAZETTE of February 1910 (L.G., Feb., p. 166), as a result of widespread public concern over the rising cost of living, was carried a step further by the publication in June 1910 of a separate special report on wholesale prices in Canada from the beginning of 1890 to the end of 1909.

The 500-page report, which was summarized at length in the GAZETTE of July 1910, was reported to have taken a year to prepare under the direction of R. H. Coats, at that time associate editor of the LABOUR GAZETTE (to become in 1915 the first Dominion Statistician). The *Gazette* described the report as "undoubtedly the most comprehensive statement on the subject of prices ever published in Canada."

The object of the investigation that supplied the material for the report, the GAZETTE said, was "to determine as accurately as possible the nature and extent of the general rise in prices which has occurred during the past few years". The investigation was confined to wholesale prices, the report itself stated, because "their accessibility and reliability render them the medium usually chosen for the purpose of an inquiry into the cost of living."

The period 1890-1909 was chosen for the survey because the then recent rise in prices had begun some time after the beginning of that period. The average level of prices during the decade 1890-99 was chosen as the base for the index used in the report. The prices of 230 commodities were included in the investigation, and these were divided into 16 industry groups.

The report showed that from 1890 to 1897 the average level of prices fell quite sharply from an index of 110 to an index of about 92. During 1897 prices began to rise, and by 1900 they had reached about 108. After a slight setback during 1900, prices continued to rise without interruption until 1907, in which year they reached an index point of 126. During the recession of 1908 the index fell nearly five points to 121. In 1909, however, the upward movement began again. During the whole period the extreme range of prices from the lowest point reached in 1897 to the highest reached in 1907 was 34 points.

According to the report, the biggest increases had occurred in the prices of lumber, grains and fodder, animals and meats, furs, hides and leather, paints, fish and dairy produce. Although none of the other groups had shown a decline in price from the base period, the prices of metals and implements, fuel and lighting, and drugs and chemicals were only slightly above the 1890-99 average.

Although the report declined to pronounce on the causes of the rise in the general level of prices, at the conclusion it did point to "some of the leading agencies which may produce a rise or fall in prices, which have probably been operative either separately or in combination to a greater or lesser degree..."

It mentioned in particular one "feature of the present situation which has been declared to lie at the very basis of the high prices prevailing." This, put briefly, was that the previous decade had been one of very rapid industrial expansion in Canada, leading to heavy investment, chiefly of borrowed capital, and that this expenditure had stimulated demand in general. On the supply side, the increased production, which would have helped to counteract the increased demand, was at that time still largely to come. "Hence the weight thus far has been thrown almost entirely into the demand side of the scale."

Later the report said: "In the general result, wages and prices have been following each other for some time past in what has been described as 'an ascending spiral'. The shortening of hours and the slackening of effort mentioned above are perhaps best considered as a parallel phenomenon with the rise of wages. So likewise is the fact that with greater spending power has come a general rise in the standard of living. Wastefulness and extravagance may have supervened, having their root in the distribution of so much accumulated wealth. A standard of this kind once established is very difficult to dislodge... But the situation is wider than any merely personal issue, and its solution depends to a degree on the transition from potential to actual productiveness of the buildings, railways and towns now under construction, whereby what have hitherto been very potent factors in demand will become factors also in supply."

TEAMWORK in INDUSTRY

Credit for the goodwill existing between the Winnipeg Supply and Fuel Company and members of Local 274, United Cement, Lime and Gypsum Workers' International Union, is attributed to their joint Beef Committee program.

Under the auspices of union and management, informal meetings are held in the Stonewall and Spearhill plant offices once a month, at which time minor grievances are brought to management's attention to prevent their developing into serious disputes requiring Grievance Committee action. Discussions are centred on plant conditions as they effect the men on the job.

"Beefs" are first made verbally by plant personnel to their representatives who, at the next beef meeting, bring them to the attention of the plant superintendent. Suggestions for operational improvements are put forward by the employees, as well as suggestions for improvements in working conditions based on specific complaints. In every case, the plant superintendent makes a personal investigation and initiates the necessary alterations. In the event that proposed changes might affect the entire plant or necessitate capital expenditures, the matter is referred by the superintendent to the manager of the lime division, F. E. P. Pearson. Mr. Pearson reports that although quarry operators have always maintained an enviable safety record, there has been a decided reduction in the number of plant accidents since the adoption of the "beef" program.

The program initially received the keen interest of the employees because of the obvious tangible benefits, and the company realized that the employees' welfare had a proportionate bearing on the welfare and development of the firm. Awareness of these possibilities on the part of both management and labour, coupled with a mutual pride in their joint progress, accounts for the continued enthusiasm behind "beef" meetings.

Local 274's District Representative John Gudmundson stated recently that "beef" meetings "can be credited to a large extent with promoting full co-operation between the company and its employees."

Company President Alex Robertson added that "beef" meetings serve as an

excellent vehicle for active and interested workers—usually a more vocal group—to 'let off steam' in a constructive fashion."

* * *

"Getting everyone into the act" is an important ingredient in any safety program, and a prime explanation behind the successes achieved by the Joint Union-Management Safety Committee of the Dominion Rubber Company, St. Jerome, Que., according to Safety Director Jacques Sigouin.

The latest official tally reveals that the 60 employees of the company's Leather Shoe Division—winners of the President's Trophy—have amassed a total of more than 15 consecutive years without a lost-time accident. All eight departments of the Dominion Rubber Company have their own safety committee, each consisting of the foreman, assistant foreman, and three union members. The latter positions are rotated monthly in order to gain maximum employee participation in the program.

The departmental committees meet separately once a week, and their combined activities are reviewed every Monday by the plant safety committee, whose membership comprises the plant manager, superintendent and safety supervisor, and the eight department foremen.

Roland Lauzon, Gérard Maisonneuve and Benoit LaViolette, who are president, treasurer and secretary respectively of Local 144, Rubber Workers Federal Union (CLC), jointly endorse the work of the union-management safety committees.

Said Mr. Lauzon: "These safety committees have enjoyed the full support of the union since they were established in 1945. There has always been very close co-operation between management and the union in order to safeguard and promote safety among our employees."

* * *

Six winners of an employee suggestion contest at Gunnar Mines, Uranium City, Sask., were awarded an all-expense trip to the 1960 Prospectors' Convention in Edmonton. The contest ran for a month and drew 90 suggestions from the firm's 450 employees.

Establishment of Labour-Management Committees is encouraged and assisted by the Labour-Management Co-operation Service, Industrial Relations Branch, Department of Labour. In addition to field representatives located in key industrial centres who are available to help both managements and trade unions, the Service provides various aids in the form of booklets, posters and films.

INDUSTRIAL RELATIONS AND CONCILIATION

Certification and Other Proceedings before the Canada Labour Relations Board

The Canada Labour Relations Board met for two days during May. The Board issued ten certificates designating bargaining agents, ordered one representation vote, rejected one application for certification, and granted four applications for revocation of certification. During the month the Board received five applications for certification, one application for revocation of certification, and allowed the withdrawal of three applications for certification.

Applications for Certification Granted

1. International Longshoremen's and Warehousemen's Union, Local 505, on behalf of a unit of longshoremen employed by the Canadian Stevedoring Company Limited in loading and discharging cargo of deepsea vessels within the harbours of Prince Rupert and Watson Island, B.C. (L.G., April, p. 369).

2. Canadian National Railways Police Association, on behalf of a unit of railway police employed by the Canadian National Railways in its Investigation Department (L.G., April, p. 369).

3. Retail, Wholesale and Department Store Union, Local 1060, on behalf of a unit of employees of Commercial Caterers Limited employed at Gander Airport, Nfld. (L.G., May, p. 465).

4. The Newfoundland Labourers' Union, on behalf of a unit of stevedores employed by Western Terminals Limited at Corner Brook, Nfld. (L.G., June, p. 601) (*see also* "Application Rejected" below).

5. International Association of Machinists, on behalf of a unit of hostesses and flight agents employed by Quebecair, Inc., Rimouski, Que. (L.G., May, p. 465).

6. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of marine engineers employed by Westward Shipping Limited, Vancouver, aboard the motor vessels *Standard Service* and *B.C. Standard* (L.G., May, p. 466).

7. International Association of Machinists, on behalf of a unit of employees of Northern Wings Limited, Seven Islands, Que., employed in its Maintenance Department and Traffic and Operations Department (L.G., May, p. 466).

8. Line Drivers, Warehousemen, Pickup Men and Dockmen's Union, Local No. 605 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of employees of D. S. Scott Transport Ltd., London, Ont., working in and out of its Vancouver terminal (L.G., June, p. 602).

9. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed by Continental Explosives Limited, Vancouver, aboard the M.V. *Pacific Laurel* (L.G., June, p. 603).

10. International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, Local 514, on behalf of a unit of employees of McCabe Grain Company Limited, employed in the company's grain elevator and feed mill at Edmonton, Alta. (L.G., June, p. 603).

Representation Vote Ordered

Canadian Brotherhood of Railway, Transport and General Workers, applicant, Shell Canadian Tankers, Limited, respondent, and Seafarers' International Union of North America, Canadian District, intervener (unlicensed personnel, M.V. *Tyee Shell*) (L.G., May, p. 465). The Board directed that the names of the applicant and intervener be placed on the ballot (Returning Officer: D. S. Tysoe).

Application for Certification Rejected

Truck Drivers, Dairy Workers, Warehousemen and Auto Service Employees Union, Local 998 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America,

This section covers proceedings under the Industrial Relations and Disputes Investigation Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board, and the Industrial Relations Branch of the Department.

applicant, Western Terminals Limited, Corner Brook, Nfld., respondent, and The Newfoundland Labourers' Union, intervener (L.G., June, p. 601). The application was rejected for the reason that it was not supported by a majority of the employees affected in the representation vote conducted by the Board (*See also* item 4 of "Applications Granted" above).

Applications for Revocation Granted

1. The Packers Steamship Company Limited, applicant, and the International Longshoremen's and Warehousemen's Union, Local 509, respondent (coastwise longshoremen at Prince Rupert) (L.G., June, p. 603).

3. The Packers Steamship Company Limited, applicant, and the Seafarers' International Union of North America, Canadian District, respondent (unlicensed personnel) (L.G., June, p. 603).

4. The Packers Steamship Company Limited, applicant, and the Canadian

Brotherhood of Railway, Transport and General Workers, respondent (marine engineers) (L.G., June, p. 603).

Applications for Certification Received

1. Teamsters, Chauffeurs, Warehousemen and Helpers Union, Local 927 and Local 76 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of employees of Barnhill's Transfer Limited, Truro, N.S. (Investigating Officer: D. T. Cochrane).

2. Canadian Merchant Service Guild, Inc., on behalf of a unit of deck officers employed aboard the S.S. *Menihék Lake* by Carryore Limited, Montreal (Investigating Officer: C. E. Poirier).

3. National Association of Broadcast Employees and Technicians on behalf of a unit of employees of Three Rivers Radio Inc. (Station CHLN), Three Rivers, Que. (Investigating Officer: C. E. Poirier).

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Industrial Relations Branch. The Branch also acts as the administrative arm of the Canada Labour Relations Board, in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certificates given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for applications for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to

the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of four officers resident in Vancouver comprises British Columbia, Alberta, and the Yukon and Northwest Territories; two officers stationed in Winnipeg cover the province of Saskatchewan and Manitoba and Northwestern Ontario; four officers resident in Toronto confine their activities to Ontario; five officers in Montreal are assigned to the province of Quebec, and a total of three officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

4. International Longshoremen's Association, on behalf of a unit of longshoremen employed by Hamilton Harbour Commissioners, Hamilton, Ont. (Investigating Officer: T. B. McRae).

5. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed aboard tugs operated by the Point Grey Towing Co. Ltd., Vancouver (Investigating Officer: G. H. Purvis).

Application for Revocation Received

Radio Station CHVC Limited, Niagara Falls, Ont., applicant, and the National Association of Broadcast Employees and Technicians, respondent. The application was for the revocation of certification issued by the Board on April 8, 1960, to the National Association of Broadcast Employees and Technicians in respect of a unit of employees of Radio Station CHVC Limited (L.G., June, p. 601).

Application for Certification withdrawn

1. General Drivers, Warehousemen and Helpers, Local Union No. 979 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of

America, applicant, and East-West Transport Ltd., Winnipeg, respondent (Winnipeg terminal) (L.G., May, p. 466).

2. Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, applicant, the Canadian Pacific Railway Company, including certain ancillary services and subsidiary companies as follows: B.C. Coast Steamship Service, B.C. Lake and River Service, Great Lakes Steamship Service, Bay of Fundy Steamship Service, Canadian Pacific Steamships Limited, New Brunswick Cold Storage Company, Dominion Atlantic Railway, Esquimalt and Nanaimo Railway, Eastern Public Markets Limited, and Alberta Stockyards Limited, respondents, the General Truck Drivers and Helpers, Local Union No. 31 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, intervener, and The Order of Railroad Telegraphers, intervener (L.G., May, p. 466).

3. The Commercial Telegraphers' Union, Canadian National System Division No. 43, applicant, and the Canadian National Telegraph Company, respondent (operators at Summerside, P.E.I.) (L.G., June, p. 602).

Conciliation and Other Proceedings before the Minister of Labour

Conciliation Officers Appointed

During May, the Minister of Labour appointed conciliation officers to deal with the following disputes:

1. Clarke Steamship Company Limited, Montreal; Albert G. Baker Limited, Quebec; Quebec Terminals Limited, Quebec; Terminus Maritime Inc., Quebec; and Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (Conciliation Officers: Rémi Duquette).

2. Canadian National Railways (Niagara, St. Catharines and Toronto Railway—Motormen, Conductors and Bus Operators) and the Amalgamated Association of Street, Electric Railway and Motor Coach Employees of America, Division No. 846 (Conciliation Officers: F. J. Ainsborough and T. B. McRae).

Settlements Reported by Conciliation Officers

1. Robin Hood Four Mills Limited, Calgary, and Local 326, United Packinghouse Workers of America (Conciliation Officer: J. S. Gunn) (L.G., June, p. 604).

2. Pacific Elevators Limited, Alberta Wheat Pool, United Grain Growers Ltd., Vancouver, and Local 882, International Union of Operating Engineers (Concilia-

tion Officers: G. R. Currie) (L.G., June, p. 604).

Conciliation Boards Appointed

1. McAllister Towing Ltd. (Sincennes-McNaughton Division) and Seafarers' International Union of North America, Canadian District (L.G., May, p. 468).

2. National Harbours Board (Fleet Department, Montreal Harbour) and Seafarers' International Union of North America, Canadian District (L.G., May, p. 467).

Conciliation Board Fully Constituted

The Board of Conciliation and Investigation established in March to deal with a dispute between Consolidated Denison Mines Limited, Spragge, Ont. (production workers) and United Steelworkers of America (L.G., May, p. 468) was fully constituted in May with the appointment of Magistrate J. A. Hanrahan, Windsor, as Chairman. Magistrate Hanrahan was appointed by the Minister in the absence of a joint recommendation from the other two members, George S. P. Ferguson, Q.C., and David B. Archer, both of Toronto, who were previously appointed on the nomination of the company and union respectively.

LABOUR LAW

Changes in Workmen's Compensation Laws

Nine provincial Workmen's Compensation Acts amended at 1960 sessions of the Legislatures. Raising of benefits continued, several new features introduced

Nine of the provincial Workmen's Compensation Acts were amended at the 1960 sessions of the Legislatures, bringing about a continued upward revision of benefits and introducing new features into several of the Acts. The British Columbia amendment was a minor one, merely providing for investment of Workmen's Compensation Board funds.

Compensation in Nonfatal Cases

Maximum Annual Earnings

The maximum annual earnings on which compensation is based were increased in two provinces. In Quebec the increase was from \$4,000 to \$5,000, effective from January 1, 1960, and in Saskatchewan it was from \$5,000 to \$6,000, beginning July 1.

Increases in Disability Pensions

The Nova Scotia Legislature provided for increases in disability pensions in respect of past accidents (those occurring before April 1, 1959), and set a new minimum compensation award for a permanently and totally disabled workman with dependent children, in each case making the additional costs of the higher compensation a charge on the Consolidated Revenue Fund.

From May 1, 1960, all workmen in Nova Scotia in receipt of permanent partial disability pensions based on 66 $\frac{2}{3}$ or 70 per cent of average earnings because of accidents occurring before April 1, 1959 are to be paid compensation at the rate of 75 per cent of earnings. In 1959 a compensation rate of 75 per cent of earnings was adopted but payments at that rate were limited to compensation payable in respect of accidents occurring on or after April 1, 1959. Henceforth, all permanent partial disability pensions will be based on 75 per cent of earnings, regardless of when the accident occurred.

Minimum Compensation Award

The minimum compensation award for a workman with a permanent total disability is now either \$100 per month (the previous minimum) or, if he has more than one child under 16 years, the amount which a widow with the same number of children under 16 would receive. The new minimum is payable only if a workman has two or more children at the time the Board determines his permanent total disability, and it continues to be applicable only while the workman has at least two dependent children under 16. This section, as amended, applies from May 1, 1960 to all permanent total disability cases, regardless of when the accident happened.

In Prince Edward Island, the minimum payment for temporary total or permanent total disability was increased from \$15 to \$20 per week.

Compensation for Disability from Silicosis

A further change in Nova Scotia was that workmen disabled by silicosis or coal miners' pneumoconiosis were made eligible for compensation, from May 1, 1960, at the rate payable since April 1, 1959, that is, at the rate of 75 per cent of earnings, regardless of the date on which they became disabled, whether before or after April 1, 1959.

Benefits in Fatal Cases

Funeral Benefits

The maximum allowance for funeral expenses was increased from \$200 to \$300 in Prince Edward Island and from \$200 to \$400 in Quebec, and in Nova Scotia and Prince Edward Island an allowance not exceeding \$100 for transporting a workman's body for burial was authorized. All the Acts now provide for an allowance for the transportation of the workman's body.

Payments to Widow

Widows' pensions were raised in three provinces, Quebec, New Brunswick and

This section, prepared by the Legislation Branch, reviews labour laws as they are enacted by Parliament and the provincial legislatures, regulations under these laws, and selected court decisions affecting labour.

Saskatchewan, and in each case the increase was made applicable to all widows receiving pensions on the date the amendment went into effect. In New Brunswick, the costs of the retroactive increases are to be paid from the Consolidated Revenue Fund.

The new pension rates are \$75 a month in Quebec, \$60 in New Brunswick and \$100 in Saskatchewan, in place of \$55, \$50 and \$75, respectively. In Saskatchewan, however, the increased pension is payable only until the widow or invalid husband reaches the age of 70 (and becomes eligible for an old age security pension), after which the former pension of \$75 a month will be paid.

The lump sum payment to a widow was increased from \$200 to \$300 in Quebec.

Two provinces made changes in a widow's remarriage allowance. In Prince Edward Island, a widow who remarries will now receive \$50 a month for 12 months (the equivalent of a year's payments) instead of \$20 a month for 12 months. In Saskatchewan, a widow is now entitled on remarriage to a sum equal to two years' monthly payments or a lump sum of \$2,000, whichever is the lesser. Previously, a sum equal to two years' payments (\$1,800) was paid.

Allowance to Dependent Mother

In Manitoba, the Board was authorized to make a monthly payment not exceeding \$75 to a wholly dependent mother of a deceased workman. All persons in this category who were in receipt of benefits on March 26 (when the Act went into force) were made eligible for the new allowance. Previously, a dependent mother was classed with dependants other than consort and children, for whom the Board is empowered to make an award which, in its judgment, is proportionate to the pecuniary loss sustained, subject, however, to a maximum of \$30 a month to any one dependant and \$60 a month to all such dependants.

Children's Allowances

In Quebec, the allowance for a dependent child was raised from \$20 to \$25 a month, and that for an orphan from \$30 to \$35. In Saskatchewan, the pension for an orphan was increased from \$45 to \$50 a month. In both provinces the increases were made applicable to all children receiving compensation, regardless of when the accident occurred.

In Nova Scotia, in accordance with a recommendation of the McKinnon Royal Commission, the limitation on the number of children in a family eligible for benefits was removed. The limit of \$172.50 on the amount of monthly pension payable to a

widow and children was struck out, as was the limit of \$150 on the amount of monthly pension payable to a family of orphans, which restricted the number of children for whom benefits might be paid to five. The same limit of \$172.50 a month on benefits to widows and children of fishermen and dredgers under Part III was also removed.

These amendments, effective from May 1, 1960, and applicable to existing pensioners as well as new ones, will enable the Board to pay benefits in respect of all children in a family under the age of 16, regardless of their number.

Dependants' Compensation, Past Accidents

In Ontario, all widows and dependent children receiving compensation under the Act will now be paid at the same scale of benefits. In 1953 the monthly allowance to a widow was raised from \$50 to \$75, the monthly allowance for a dependent child from \$12 to \$25, and that for an orphan child from \$20 to \$35. The increases were made applicable, however, only to accidents happening after April 2, 1953. The amendment this year made these rates of benefit also applicable in cases where the death of the workman occurred *before* April 2, 1953.

Minimum Payable to Widow and Children

In two provinces increases were provided in the amounts specified in the Acts as the minimum payable to a widow and children in case total monthly benefits exceed the maximum allowed and are subject to reduction.

In Quebec, total monthly benefits may not exceed 75 per cent of the deceased workman's earnings, subject to the following minimum amounts (former amounts in brackets):

- (1) where there is a widow and one child—\$100 (\$75)
- (2) where there is a widow and two children—\$125 (\$95)
- (3) where there is a widow and more than two children—\$150 (\$95).

In Saskatchewan, total monthly benefits to dependants in case of death are subject to reduction if they exceed the workman's average monthly earnings, subject to specified minimum amounts. These minimum amounts were increased in line with the higher pension now provided for a widow until she reaches the age of 70 and also with respect to the amount allowed for each child. The changes made were as follows (former minimum amounts in brackets):

- (1) where a widow is the sole dependant—\$100, if under 70—\$75, if over 70—(\$75)

(2) where dependants are a widow and one child—\$135, if under 70—\$110, if over 70—(\$100)

(3) where dependants are a widow and two children—\$170, if under 70, plus \$20 for each additional child—\$145, if over 70, plus \$20 for each additional child—(\$125, plus \$15 for each additional child).

In all cases benefits to a widow are also available to an invalid husband.

Rehabilitation

In Quebec, a substantial increase—from \$100,000 to \$300,000—was authorized in the amount that the Board may spend on rehabilitation services.

Radiation

In Nova Scotia, radiation was added to the schedule of industrial diseases, and a number of conditions were laid down under which benefits may be paid for death or disability caused by its effects.

If the Board finds that disability or death has been caused by the proximate effects of radiation overdosage, the workman or his dependants will be entitled to benefits as if the overdosage were a personal injury by accident.

If the Board finds that disability or death has been caused by the cumulative effects of radiation over an extended period, the effects of the radiation will be deemed an industrial disease and the workman or his dependants will be entitled to benefits.

The amending Act provides, further, that benefits may be paid where a workman was exposed to radiation more than 12 months previous to the date of his disablement or death. In the case of other industrial diseases listed in the schedule, the workman is required to have been engaged in the employment to which the disease is attributed within the 12 months preceding his disablement.

Where a workman has been exposed to radiation outside as well as within the province, the compensation paid is to be in the proportion that the exposure to radiation in Nova Scotia bears to the total exposure.

Finally, employers who use x-rays, isotopes, or any other form of radiation likely to prove a hazard to an employee exposed to it must make, retain and furnish to the Board a record of such exposure.

The schedule of industrial diseases under the Newfoundland Act was also amended to add carcinoma or malignant disease arising from radiation in any process, employment or occupation where radiation, x-rays or radioactive materials or substances are

involved. This amendment was given retroactive effect to April 1, 1951, when the Act first went into force.

Additions to Schedule

Subject to the approval of the Lieutenant-Governor in Council, the Newfoundland Board was empowered to add any disease and associated work process to the schedule by regulations. In accordance with this amendment, "industrial disease" was redefined to include any of the diseases mentioned in the schedule and any other diseases added to the schedule by regulations.

Committee of Medical Referees

A new section added to the Newfoundland Act authorizes the Board, with the approval of the Lieutenant-Governor in Council, to appoint a committee of medical referees to investigate, in relation to any claim for compensation, the nature of any disease named in the schedule and its relationship to any of the processes listed opposite the disease in the schedule.

The committee, which is to consist of three specialists in the disease concerned, has power to require any workman to undergo medical examination.

Where the workman is examined, the committee must certify to the Board the extent of his temporary or permanent disability by reason of the disease in respect of which he has claimed compensation.

Where a claim is made by the dependants of a deceased workman, the committee is required to certify its opinion as to the reasonableness of the inference that the workman died from the disease, and whether the disease is related to any of the processes opposite the name or description of the disease in the schedule.

In either case the decision of the committee or any two of its members is to be final and binding on the Board as to the medical evidence in the case. Costs of the investigation are to be paid from the Accident Fund.

Extended Coverage

Several changes were made in the Nova Scotia Act with respect to coverage.

From July 1, 1960, hospitals, nursing homes and veterinary hospitals were brought within the scope of the Act. Mr. Justice McKinnon recommended coverage of these employees but on an elective basis. Hospital coverage is now provided in all provinces except Prince Edward Island and Quebec.

Provision was also made for coverage of the members of a volunteer fire brigade or department on the application of the municipality concerned.

For the purposes of such coverage, the municipality making the application is deemed to be the employer, and the members of the brigade are deemed to be persons certified as such by a duly authorized municipal official. The municipal corporation is required to notify the Board each year of the number of members of the brigade and of their average earnings for the purposes of Part I. Such earnings, which may not be less than \$2,000 nor more than \$3,600 per year, are to be deemed the average earnings of all members of the brigade.

A third change in coverage relates to Part III. As recommended by the McKinnon Commission, the sealing industry is now classed as part of the fishing industry and covered by Part III. Part III is a special section of the Act, applying solely to fishing and dredging, which makes the employer liable for the payment of compensation and

requires him to carry insurance to cover his liability.

Notification Required

Another change in the Nova Scotia Act is that a workman who has an option of bringing an action against a third party for damages or of claiming compensation is now required to notify the Board in writing within six months of the date of the accident of the remedy he has elected to pursue.

Increased Payment under Silicosis Act

In New Brunswick, the Act passed in 1955 to provide compensation for workmen who contracted silicosis before June 1, 1948 was amended to increase the compensation payable to a disabled workman or widow from \$50 to \$60 a month, effective from June 1, 1960. This Act is administered by the Workmen's Compensation Board but funds are provided from the Consolidated Revenue Fund.

Legal Decision Affecting Labour

Manitoba Court of Queen's Bench holds that consent to prosecute under Labour Relations Act, unlike that under Lord's Day Act, restricted to aggrieved person

The Court of Queen's Bench in Manitoba dismissed an application for an order of prohibition against a prosecution under the Lord's Day Act on the ground that, while under the Labour Relations Act the consent to prosecute is restricted to the "aggrieved" person, under the Lord's Day Act the informant need not be named and the enforcement of the latter Act is the peculiar responsibility of the police.

On February 13, 1960, Mr. Justice Bastin of the Manitoba Court of Queen's Bench held that since the Lord's Day Act is criminal legislation, any citizen has the right to lay an information; but the enforcement of the Act should not be confined to some "aggrieved" person, and, like the provisions of the Criminal Code, is the peculiar responsibility of the normal law enforcement agencies.

On the other hand, the Manitoba Labour Relations Act is directed to a particular group and is restricted and selective in its scope and therefore it was held previously that under the Act the consent to prosecute was restricted to the "aggrieved" person and a consent to one party did not give authority to another party to prosecute.

Consent was sought to prosecute Stone Productions Limited for violating the Lord's Day Act by unlawfully providing on Sunday, November 22, 1959, in the City of

Winnipeg, a performance at which a fee was charged for admission.

Section 16 of the Act reads: "No action or prosecution for a violation of this Act shall be commenced without the leave of the Attorney-General, or his lawful deputy, for the province in which the offence is alleged to have been committed . . ."

The consent to prosecute was in the form of a letter addressed to R. T. Taft, Chief Constable, and was signed by the Attorney-General for Manitoba.

The information was laid by J. C. Webster, a member of the City of Winnipeg police force.

The company applied to the Court of Queen's Bench for an order of prohibition with regard to the prosecution proceedings before the Winnipeg police court. One of the grounds for the order urged by the company was that the informant did not have the leave of the Attorney-General to commence the prosecution as required by Section 16 of the Act.

The company's argument was based upon *Re Walterson and Laundry & Dry Cleaning Workers Union and New Method Launderers Limited* (L.G., May 1955, p. 565).

The *Walterson* case was an appeal to the Manitoba Court of Appeal from a prohibition order granted with reference to a prosecution under Section 47 (1) of the

Manitoba Labour Relations Act. The Court of Appeal upheld the order on the ground that the consent of the Labour Relations Board to a prosecution had been issued to a labour union which was not a legal entity and, therefore, could not prosecute. The information was laid by the business agent of the union, but the court held that as he did not have the certificate of consent, the prosecution was without lawful authority.

The wording of Section 47 (1) of the Manitoba Labour Relations Act was as follows: "No prosecution for an offence under this Act shall be instituted except with the consent in writing of the board."

The Court of Appeal held that "a consent to one party does not give authority to another party to prosecute."

In the case at bar, the company argued that the person to whom the consent was issued was the Chief Constable and a prosecution by any other person was without lawful authority.

In answering this contention, Mr. Justice Bastin considered the purpose, scope and wording of the two Acts. Dealing first with the Manitoba Labour Relations Act he quoted from the *Walterson* decision where, with reference to the full title of the Act, it was stated that its purpose was to promote conciliation and peace, not conflict and prosecutions, hence the requirement of special consent to prosecute; that to hold by implication that the Act gave trade unions the legal status to carry on prosecutions would be directly contrary to the basic purpose of the Act; that considering public policy and the purpose of the Act, third parties who have no direct interest in the subject matter of the litigation should not be permitted to promote litigation; therefore the consent required by Section 47 (1) of the Act should be to the aggrieved person and not to some third person.*

The Manitoba Labour Relations Act, Mr. Justice Bastin added, is directed to a particular group within the local community and is concerned with that group alone. It is very restricted and selective in its scope and for that reason, and in accordance with public policy, the court had previously held that Section 47 (1) was to be given an interpretation narrower than the words used would normally justify.

The Lord's Day Act, on the other hand, is a public act in the broadest sense, affecting the whole community, and was enacted

with the intention of serving the welfare of the entire community. The purpose and scope of this act do not suggest that the responsibility of enforcing it should be confined to some "aggrieved" person rather than to the normal law enforcement agencies. Consequently, the reasoning that led the court in the *Walterson* case to hold that third parties who have no direct interest in the subject matter should not be permitted to promote litigation, could not apply to the Lord's Day Act.

The Lord's Day Act, Mr. Justice Bastin continued, has been held to be criminal legislation, and while any citizen has the right to lay an information, the enforcement of the Act, like the provisions of the Criminal Code, is the particular responsibility of the police.

The consent to prosecute required by Section 16 of the Lord's Day Act has been considered in a number of cases but in none of these cases has it been held that the consent must name the informant. This consent to prosecute need not be in writing but must be with respect to a particular violation, since the consent to be given relates to a specific prosecution. In *Rex ex rel Skinner v. Icelandia Ltd.* (1947) O.R. 761, where the matter of leave to prosecute under the Lord's Day Act was dealt with, it was stated that the complainant had to show in some manner that he procured the necessary consent to commence proceedings. It was also stated that the granting or withholding of the leave by the Attorney-General is a *quasi-judicial* function and Section 16 of the Act was inserted as an important protection for persons who might be charged indiscriminately under the Act.

In the case under review, Mr. Justice Bastin pointed out that Taft was the executive head of a large police force. The consent of the Attorney-General, whether embodied in a letter or some other form, should properly be delivered to the person responsible for law enforcement in the City of Winnipeg and he in turn naturally and properly acted through his subordinates. All the magistrate needed to determine to establish his jurisdiction was that the Attorney-General had consented to the prosecution of a particular violation of the Act charged and in the case at bar he was justified in so deciding on the strength of the letter signed by the Attorney-General.

The application for an order of prohibition was dismissed. *Stone Productions Limited v. Garton* (1960) 31 W.W.R., Part 8, p. 380.

*The Manitoba Labour Relations Act has since been amended. See An Act to Amend The Labour Relations Act, 1959 2nd Sess. c. 32, s. 4.

Recent Regulations, Federal and Provincial

Manitoba sets new general minimum wage rates, issues new fair wage schedule for construction workers. New Brunswick, Ontario raise female minimum wage rates

In Manitoba a new regulation was issued that sets a minimum wage of 66 cents an hour in urban areas and 61 cents in rural areas for men and women 18 years and over. The new fair wage schedule for construction workers increased rates by an average of 10 cents an hour.

In New Brunswick the two female minimum wage orders were revised, establishing a minimum wage of 55 cents an hour for women in hotels and restaurants and of 60 cents for female employees in other workplaces. The overtime rates, which were one and one-half times the minimum rates, were increased correspondingly.

Amendments to the Ontario minimum wage order for women raised the minimum wage of experienced employees by \$8 a week to \$30 a week in Zone 1, \$28 in Zone 2 and \$26 in Zone 3. Learners rates were increased by \$7 and \$8 a week.

CSA codes dealing with installation of gas and oil burning equipment and the NFPA building exits code and flammable liquids code were adopted under the Newfoundland Fire Prevention Act.

Other regulations deal with annual holidays in Saskatchewan, minimum wages of certain forestry workers in Quebec, additions to schedules under the Workmen's Compensation Acts of Alberta and Quebec, and oil and gas wells in the Territories and other federal public lands.

FEDERAL

Territorial Lands Act, Public Lands Grants Act

Canada Oil and Gas Regulations have been issued under the Territorial Lands Act and the Public Lands Grants Act in connection with oil and gas wells in the Northwest Territories, Yukon Territory and other public lands under the jurisdiction of the Government of Canada.

These regulations were approved by P.C. 1960-474 and gazetted May 11. They replace the Territorial Oil and Gas Regulations (L.G. 1957, p. 720) authorized under the Territorial Lands Act by P.C. 1957-521.

The provisions requiring derricks and other machinery in and around oil or gas wells to be so constructed and operated as to afford reasonable safety from accidents to employees and the specific safety rules prescribed are incorporated in the new regulations without change.

PROVINCIAL

Alberta Workmen's Compensation Act

The Alberta Workmen's Compensation Board has added the industry of the manufacture of drilling mud aggregate from minerals to the Schedule of industries covered by the collective liability section of the Workmen's Compensation Act. The notice of the extension of coverage was gazetted May 14.

Manitoba Employment Standards Act

A new regulation respecting minimum wages and conditions of employment made after study and public hearings by the Manitoba Minimum Wage Board was approved by Man. Reg. 30/60 and gazetted May 21. It establishes a minimum wage of 66 cents an hour in urban areas and of 61 cents in rural areas for both men and women.

The previous order (Man. Reg. 3/57) set a lower rate for women, the minimum being 58 cents in the larger centres and 54 cents in the rural areas. The previous rate for men was 60 cents an hour, regardless of location.

Coverage

The coverage of the order is the same as formerly, applying to all employees except independent contractors; persons employed in agriculture, fishing, fur farming, dairy farming or in the growing of horticultural or market garden products for sale; domestic servants in private homes; volunteer workers in a religious, philanthropic, political or patriotic institution; beneficiaries under a charitable, rehabilitation or therapeutic plan employed by a religious, philanthropic, or municipal body; students in training for or qualified members of the professions of accountancy, architecture, dentistry, engineering, law, medicine, nursing or pharmacy. Persons acting in a managerial capacity are also exempt provided they are paid not less than the prescribed minimum wage for standard and overtime hours.

Wage Rates

The new 66-cent rate applies to all employees 18 years and over in Greater Winnipeg, the cities of Brandon and Portage la Prairie, the towns of Flin Flon and Selkirk, and in summer resorts from May to September. The minimum adult rate

elsewhere in the province is 61 cents an hour. For employees under 18 the minimum remains 48 cents an hour.

As previously, an employee who provides a bicycle for use in his employer's business must receive an additional 10 cents a day or 50 cents a week, whichever is the lesser amount.

The minimum overtime rate continues to be one and one-half the minimum hourly rate and, as before, where an employee's regular rate is higher than the applicable minimum rate an employer may not apply the excess amount against hours for which the minimum overtime rate must be paid.

Learners and Handicapped Persons

In line with previous practice, the regulations permit the employment of learners and handicapped persons at subminimum rates under special permit from the Minister of Labour, subject to certain conditions.

As before, the regulations provide that if the Minister is satisfied that it is reasonable for an employer to employ inexperienced workers for a training period at less than the prescribed minimum he may issue a learner's permit, setting out the length of the training period and the minimum hourly wages payable during that period. In no case may the learner's rate be less than three-quarters of the applicable minimum rate nor may the learning period exceed six months. The Minister, however, may approve an extended learning period upon the joint application of an employer whose workers are paid on a piecework basis and the bargaining agent of the employees. The regulations again stipulate that, in the case of an employee with experience in substantially similar work, the learning period must be reduced accordingly.

Also, the Minister is again given authority to limit the number of women employed as learners in any establishment to 25 per cent of the total number of female employees, excluding supervisors, or to prohibit the employment of any women as learners.

With or without a medical certificate, the Minister may, if he considers it fair and reasonable to employ a handicapped person at a lower rate, issue a handicapped employee's permit setting out the name and description of the handicapped employee and the hourly rate at which he must be paid. The Minister may also limit the period during which a handicapped employee may be paid less than the minimum wage.

Employers, as before, are required to maintain a separate payroll for learners and handicapped persons recording, where applicable, any relevant previous experience of learners.

Deductions from Wages

As formerly, deductions for board and lodging are prohibited except by agreement between the employer and the employee. Employers whose business is furnishing meals to customers may not deduct from an employee's wages more than half of the charge that would be made to a customer for the same meals. Other employers may charge up to 35 cents for each meal or \$7 for a week's board, whichever is the lesser amount. The maximum charge for lodging remains \$3 a week.

Also, the regulations continue to provide that if the Minister finds that the meals are inadequate, the lodgings unsuitable or the employer is charging too much, he may fix or limit the charges that may be made for board or lodging or he may prohibit deductions from wages.

The regulations again provide that where workers are required by the employer or the Minister to wear or use any special type of clothing, uniform or equipment, it must be furnished and maintained by the employer without cost to the employees. Deductions are permitted, however, in the case of employees whose wage rate, if calculated on an hourly basis, would be higher than the applicable minimum overtime rate, that is, would be more than 99 cents an hour for adults in urban areas and 91½ cents in the rural areas. However, no charge may be made for furnishing, laundering or maintaining uniforms, clothing or equipment which would reduce the employee's wages below the minimum hourly rate. Also, if the Minister considers that an employee is being charged too much for any of these services, he may fix or limit the deduction or even prohibit the employer from making any charge or collection.

Hours and Overtime

Standard hours of work are, as before, 48 a week for men and eight hours a day and 44 hours a week for women. Subject to the exceptions described below, employers are required to pay overtime rates for time worked beyond these limits.

If, in any establishment, men and women are engaged in the same or substantially the same work, the Manitoba Labour Board may, upon application, grant the employer permission to pay women overtime on the same basis as men.

Also in shops where it is customary for employees to work up to 11 hours on one or more days in the week, women need not be paid overtime except for time worked in excess of the agreed daily limit or in excess of the 44-hour weekly limit.

The same limitation is placed on overtime work as formerly. Children under 15 are forbidden to work overtime and the overtime hours of women may not exceed three in a day, 12 in a week or 24 in a month. There is no restriction on overtime for men.

The provision for the three-hour call-in requirement now specifically states that employees reporting for work on the call of the employer must receive at least three hours at the minimum rate. In addition to exempting children under 15 and employees in theatres, hotels and restaurants in rural areas, the new provision excludes students 15 to 17 years.

Meal periods may not be less than one hour unless the employer and a majority of the employees agree on a shorter period, in which case the period must be at least 30 minutes.

General Holidays

Employees are again protected against a reduction in minimum weekly pay for time not worked on a general holiday which falls on a regular work day, provided they work regular hours on the working days immediately before and after the holiday and on all other days in the week. However, an employee who is absent because of illness or with the employer's consent on either the day before or the day after the holiday will not lose this benefit provided the other requirements are met.

This provision supplements the provision in the Employment Standards Act that requires employees who work on a general holiday to be paid one and one-half the regular rate or, in certain types of employment, to be given compensatory time off with pay, unless more favourable conditions are established by collective agreement, in which case the provisions of the agreement will apply. The seven holidays are: New Year's Day, Good Friday, Victoria Day, Dominion Day, Labour Day, Thanksgiving Day and Christmas Day.

Homework

The provisions with respect to homework are unchanged. An employer wishing to hire an employee to do take-home work must first send a written notice of his intentions to the Minister.

A record showing the names and addresses of every homemaker, together with particulars as to the type and amount

of work done by each employee, the amount paid, the wage rate and deductions from wages, must be kept and made available to the Minister upon request.

In addition, the Minister is given discretionary power to impose such conditions and limitations as he deems necessary to protect the minimum wage standards laid down in these regulations.

Special Employment Conditions for Women

In line with former practice the regulations again set out some special provisions for women, supplementing the special hours provisions referred to above. Every female employee must be allowed a rest period of at least 10 minutes during each work period of three hours or more without loss of pay. Under the new regulations, however, a female employee may be required to work five hours instead of four hours without a meal period.

As regards night work the regulations again stipulate that if the work period of a female employee ends between midnight and 6 a.m., adequate transportation to her residence must be provided at her employer's expense.

Another provision states that women, as well as children and young persons 15 to 17 years, may not be required to lift a weight that would impose excessive physical strain nor may they carry burdens weighing more than 25 pounds farther than 10 feet.

Minimum Age for Employment

The employment of children under 15 years is again prohibited except with the written permission of the Minister.

Pay Periods, Earnings Statements and Records

The rules regarding payment of wages are the same as before except for a new provision requiring an employer to pay any wages due an employee whose services have been terminated within three working days of the date of termination.

The provisions dealing with earnings statements and records are unchanged.

It is no longer mandatory for employers to furnish a copy of these regulations to all employees, except those covered by a collective agreement filed with the Manitoba Labour Board. Instead the new regulations provide that, upon request of an officer of the department, a summary provided by the Minister must be distributed to each employee or posted in the establishment or both.

Health and Sanitation

Following previous practice the regulations again lay down rules regarding health and sanitation in factories and office buildings. Included are provisions setting standards with respect to air and floor space, ventilation, sanitary and washing facilities, control of dust and harmful vapours, and rest rooms for female employees.

The provision requiring employers to provide a room or other space for dining and rest purposes whenever employees remain on the premises to eat any meal now states that such a room must also be provided whenever the Minister thinks it advisable because of the location of the establishment. It also stipulates that the room must be of adequate size and separate from any actual working area.

Manitoba Fair Wage Act

The annual fair wage schedule for Manitoba construction workers was gazetted on April 30, increasing wage rates by an average of 10 cents an hour. The new schedule went into force on May 1 to remain in effect until April 30, 1961.

As previously, the schedule is in two parts. Part I applies to private construction work costing more than \$100 in Greater Winnipeg or in any city or town with a population of 2,000 or more or in any other part of the province designated by the Lieutenant-Governor in Council, and to public construction projects authorized by the Minister of Public Works. Part II, as before, applies to public highway, road, bridge or drainage construction projects outside the city of Winnipeg.

Part I contains two sets of minimum wage rates covering 27 categories of workers, including licensed tradesmen, skilled building labourers, machine operators, truck drivers and watchmen. The higher or Zone "A" rates apply to public or private construction work in Winnipeg and a 30-mile radius. The Zone "B" rates which, except in a few cases, are lower than Zone "A" rates, apply to public work elsewhere in the province and to private work in places with a population of 2,000 or more (Brandon, Dauphin, Flin Flon, Minnedosa, Neepawa, Portage la Prairie, Steinbach, Swan River and The Pas).

A new provision respecting coverage states that, on the recommendation of the Fair Wage Board, the Minister of Labour has approved the omission from the schedule of rates and hours of work of persons employed on main pipe line and distribution pipe line construction where a collective agreement is currently in effect. Such persons were excluded because an order

exempting pipe line and distribution pipe line construction from the operation of the Fair Wage Act is now under consideration.

Another new provision regarding coverage emphasizes that the inclusion of a specific new type of work under an item does not exclude other allied types of work now being performed by employees in the classification.

A third provision makes it clear that the Fair Wage Board and the Minister are not dealing with matters of jurisdiction, stating that the appearance of a job description or title in a particular classification does not recognize or have the effect of allocating jurisdiction to any particular trade union.

Some changes were also made in the classification of workers. The category "asbestos workers" now includes helpers as well as journeymen and first, second and third class improvers; rates range from \$1.65 to \$2.40 an hour in Zone "A" and from \$1.45 to \$2.05 an hour in Zone "B".

Stonemasons are now included in the same category as bricklayers and their minimum wage has been increased by 10 cents to \$2.70 an hour in Zone "A" and \$2.35 in Zone "B".

The new rate for bridge, structural and ornamental ironworkers is \$2.60 an hour in both zones and is now payable to persons who do welding on these types of work.

The definition of carpenters and millwrights was broadened to include acoustic tile applicators and the wage rate was increased by 10 cents to \$2.50 an hour in Zone "A" and \$2.15 in Zone "B". A special rate is no longer set for carpenters in Brandon. Similarly, the category "plasterers" was widened to cover persons who do stucco work, and a minimum rate of \$2.70 established for employees in Zone "A" and of \$2.35 in Zone "B".

A new category, dry wall applicators (plaster board only), was added, the rates for this class of workers being \$2 in Zone "A" and \$1.90 in Zone "B".

The definition of building labourers was clarified and two new subdivisions were added: (1) labourers with more than two years' experience assisting sheet metal journeymen, and (2) operators of pneumatic tools. The minimum for such workmen is \$1.85 an hour in Zone "A" and \$1.70 in Zone "B". The rates for general building labourers were increased by 10 cents to \$1.65 an hour in Zone "A" and \$1.45 in one "B".

Another new category, operating engineers and machine operators, was added. It has three subdivisions: (1) mechanics, gasoline

or diesel operators of cranes, shovels, drag-lines, backhoes and rubber-tired earth movers, 201 h.p. and over, (2) operators of crawler-type tractor 51 h.p. and up, rubber-tired earth movers up to 200 h.p. and trenching machines, (3) operators of compressors, material hoists, concrete mixers, crawler-type tractors up to 50 h.p., batching plants, backhoes up to $\frac{3}{4}$ cubic yards capacity, crushers and screening plants. Minimum hourly rates for such workmen are \$1.95, \$1.90 and \$1.85 in Zone "A" and \$1.80, \$1.70 and \$1.65 in Zone "B".

Rates for Zone "A" now range from \$1.05 an hour for watchmen and flagmen to \$2.80 for journeymen plumbers. A few rates are the same as last year. The minimum for lathers remains \$2.35 an hour and that of stonecutters \$2 an hour. The rate for millwrights in Zone "A" is unchanged (\$2.70 an hour) but the minimum in Zone "B" was raised to \$2.35 an hour.

As before, the majority of Zone "A" rates are based on a 40-hour week with a longer work week for a few categories. A 48-hour work week is prescribed for operating engineers, machine operators, roofers and timber and cribmen. Truck drivers may be required to work up to 45 hours at the straight-time rate, and cement finishers, oxychloride workers, building labourers and benders and placers up to 42½ hours.

As previously indicated, lower rates are again set for Zone "B" except in a few cases, ranging from \$1.05 an hour for watchmen and flagmen to \$2.60 an hour for ironworkers.

Also in line with former practice, the schedule prescribes a longer work week for Zone "B", all rates being based on a 48-hour week except in the case of ironworkers, whose regular work week is 40 hours.

The rates for workers employed in road and bridge construction (Part II) were increased by 10 cents an hour, except in the case of watchmen and timber men, whose wages were increased by 5 and 15 cents an hour to \$1 and \$1.55 an hour, respectively.

Employees covered by Part II are again permitted to work up to 120 hours in a two-week period at straight time rates, the only exception being carpenters, whose minimum wage rate of \$2.15 an hour is based on a 48-hour week.

New Brunswick Minimum Wage Act

The New Brunswick Minimum Wage Board recently revised its two female minimum wage orders, establishing a minimum wage of 55 cents an hour for women in hotels and restaurants and of 60 cents for

female employees in factories, shops, offices and other workplaces. Both rates are based on a work week of 48 hours or less. The new orders were gazetted May 11 to take effect July 1 and replace orders that came into force September 1, 1957.

Hotels and Restaurants

The new minimum for hotels and restaurants is 10 cents higher than formerly and applies to all places of public accommodation where meals or lodging may be obtained, including tourist cabins, tourist homes and inns.

In addition to the 55-cent minimum previously referred to, the new order for hotels and restaurants sets a minimum overtime rate of 83 cents an hour, payable for all hours worked in excess of 48 in a week. Previously, the minimum overtime rate was 68 cents an hour.

There was no change in the maximum rates that an employer may charge a female employee for board or lodging. The maximum weekly charge remains \$8 for board and lodging, \$6 for board only and \$2 for lodging only. The maximum charge for a single meal is 30 cents.

General Order for Women

The new general order applies to all women workers except the following: persons employed in hospitals, nursing homes, religious, charitable or educational institutions; officers, officials or persons employed in a confidential capacity; domestic servants, agricultural workers, women employed by or under the Crown, apprentices registered under the Apprenticeship Act and persons governed by the hotel and restaurant order described above.

As well as increasing the general minimum from 50 to 60 cents an hour, the new order has raised the overtime rate from 75 cents to 90 cents an hour. As before, the overtime rate is payable for time worked in excess of 48 in the week.

Newfoundland Fire Prevention Act, 1954

Newfoundland has adopted as regulations under the Fire Prevention Act, 1954, the following codes, gazetted May 17: "The Installation Code for Gas Burning Appliances and Equipment, CSA Code B1949-1958"; "The Installation Code for Oil Burning Equipment, CSA Specification B139-1957"; and "The Building Exits Code, NFPA No. 101-1959".

The Inflammable Liquids Regulations, 1960 were also gazetted May 17, adopting the "The Flammable Liquids Code, NFPA No. 30", except that a substitute provision has been set out relating to flammable

liquids other than crude petroleum. It provides that, where necessary, individual tanks or groups of tanks must be diked or the yard provided with a curb with a capacity not less than that of the largest tank in order to prevent the spread of the liquid.

Ontario Minimum Wage Act

The Ontario Industry and Labour Board recently amended its minimum wage order for women, increasing minimum rates for experienced employees by \$8 a week to \$30 a week in Zone 1, \$28 in Zone 2 and \$26 in Zone 3, effective July 1. Learners rates were increased by \$7 and \$8 a week.

The new rates apply to all women workers in the province except domestic servants, farm workers, apprentices under the Apprenticeship Act, employees in telephone exchanges with fewer than 300 subscribers, employees qualified in specified professions and students and articulated apprentices in these professions.

There has been no change in zone boundaries. Zone 1, as before, comprises the cities of Toronto, Hamilton, Windsor and Ottawa and their environs and the city of London. Zone 2 comprises every local municipality and every school section under the Public Schools Act within unorganized townships or unsurveyed territory having a population of 3,000 or more and not included in Zone 1. Municipalities and school sections with a population of less than 3,000 form Zone 3.

Wage Rates

As previously indicated, the weekly minimum for experienced employees in Zone 1 was raised from \$22 to \$30; in Zone 2 from \$20 to \$28; and in Zone 3 from \$18 to \$26.

Lower rates are again set for inexperienced workers, that is, employees who have worked for less than six months in the class of employment for which they were hired, subject to the same limitations as formerly. During the first three months of employment, the weekly minimum payable to inexperienced employees is now \$26 in Zone 1, \$24 in Zone 2 and \$22 in Zone 3, an increase of \$7 over the previous minimum. The minimum for the second three months has been raised by \$8 to \$28 in Zone 1, \$26 in Zone 2, and \$24 in Zone 3.

However, an office worker who holds a secondary school graduation diploma of the commercial course or who has completed a course of instruction in business and office practice provided by a registered trade school must be paid the minimum weekly wages for an experienced employee from the commencement of employment. The

same is true of a hairdresser who holds a certificate of apprenticeship and of employees engaged as cleaners, elevator operators, or workers in theatres, amusement places, hotels, clubs, restaurants or in any place where meals are served to the public.

Except in the case of certain pieceworkers referred to below, an employer may not class more than 20 per cent of the total number of his female employees as inexperienced. Where fewer than five women are employed, only one may be classed as inexperienced.

The special provisions for pieceworkers continue to apply. During the first three months of her employment, an inexperienced pieceworker must not be paid less than she would receive if she were working on a time work basis. Notwithstanding this provision, however, an employer in a seasonal industry for the processing of fruits and vegetables who pays piecework rates may be deemed to have complied with the minimum wage requirements if at least 60 per cent of the female employees earn at least the minimum weekly wages for an experienced employee in the zone. In other industries where piecework rates are paid, at least 80 per cent of the female employees must be earning at least the equivalent of the rate for experienced workers.

An employee whose employment is for periods less than the normal daily or weekly period established by custom of her employer will continue to be classified as part-time and, as before, may not be considered as inexperienced for minimum wage purposes. A part-time worker who works less than four hours a day must be paid a minimum of four hours pay to be determined either by the proportion of the minimum weekly wages in relation to the normal weekly work period or by not less than one-twelfth of the minimum weekly wages, whichever is the greater amount.

Hours and Overtime

Minimum wage rates, as before, are based on a work week of 48 hours, or on the normal number of hours worked per week, if less than 48. Full-time employees who work less than the normal working day or week or who work longer than normal hours must be paid on a proportionate basis, determined by the minimum weekly wages for the zone in relation to the normal weekly work period. If an employee is required to remain on the premises, she must be paid for time so spent, even if she is not actually given work to do.

Deductions

There was also an increase in the amounts that may be deducted for board or lodging where an employee is hired on the basis of receiving meals or room, or both, as part of her weekly wages. The maximum amounts at which these may be valued in Zones 1 and 2 are now \$4 a week for room rent; \$8 a week for meals; 40 cents for single meals, and \$12 for room rent and meals. In Zone 3, the amounts are now \$3 a week for room rent; \$7 a week for meals; 35 cents for single meals and \$10 a week for board and lodging. As before, an employer may not charge for more than one meal in each three hours worked nor may he make any deductions for meals or lodging unless the employee has actually received the meals and occupied the room.

No deduction from the minimum weekly wages may be made for the purchase, use, laundering or cleaning of uniforms, aprons, caps or similar articles of apparel.

Quebec Minimum Wage Act

The Quebec Minimum Wage Commission has amended its forestry order (No. 39, 1960) to set special minimum rates for pieceworkers in pulpwood operations who are engaged in cutting wood, constructing small hauling roads or in piling wood. For wood measured by the cord, such pieceworkers may be paid a minimum wage of \$4.10 a cord for aspen and poplar and of \$5.30 for all other wood. The minimum for other pieceworkers remains \$9 a day.

The amendment was approved by O.C. 637 of April 26 and gazetted May 7 to take effect May 1.

Quebec Workmen's Compensation Act

The Quebec Workmen's Compensation Commission recently added brucellosis to the list of compensable industrial diseases. The new regulation was approved by O.C. 583 of April 21 and gazetted May 7.

Saskatchewan Annual Holidays Act, 1960

The first regulations under the Saskatchewan Annual Holidays Act, 1960, were approved by O.C. 795/60 and were gazetted May 20. Except for minor changes, the new regulations are the same as those under the previous Act, which were repealed by O.C. 743/60 gazetted May 6.

The new regulations state that in order to bring the annual holiday entitlement day of a new employee in line with those of other employees in the establishment, an employer may, by agreement with an employee who has less than one year's service, grant that employee a holiday of one working day for each month employed. The holiday must be given in one continuous period and the employee must be paid his average wage (one twenty-sixth of his total wage) for that period of employment.

Another provision permits an employer, upon the employee's written request, to withhold payment of the holiday pay payable upon termination of employment if services are terminated because of work shortage and it seems likely that the employee will be rehired within 182 days. This is because Section 4 of the Act permits persons with broken services to accumulate years of employment for holiday purposes provided no break in service is longer than 182 days. If the employee is not rehired within the prescribed period the employer is required to pay the holiday pay immediately. The employee may also request the payment of his holiday pay at any time during the 182-day period, in which case the employer must pay the amount owing within seven days of receipt of such request.

Under the previous regulations an employer could withhold payment of holiday pay if he expected to re-engage the employee within 90 days.

Ontario Government Committee Will Study Portable Pensions

After the introduction by a CCF member in the Ontario Legislature of a private bill to provide for portable pensions, which did not get beyond first reading, Premier Frost announced that a committee on portable pensions had been set up by the Government with the task of making a comprehensive study of such pensions plans.

Shortly before, in the Alberta House, a private member introduced a motion asking the Government to study the feasibility of enacting legislation that would provide, for workers under provincial jurisdiction, for vesting and transferability of pensions. The debate on the motion was, however, adjourned without a vote.

New York State Minimum Wage Law

New law establishes, effective October 1, statutory minimum wage of \$1 an hour and provides for setting of higher minimum rates through wage board procedure

The state of New York has enacted a new Minimum Wage Law establishing a statutory minimum wage of \$1 an hour effective October 1 and providing for the establishment of higher minimum rates through wage board procedure. Existing wage orders will remain in effect but any rates lower than the statutory minimum will be raised to \$1.

In his memorandum approving the new law, Governor Rockefeller said the bill combined the simplicity of a statutory minimum wage with the desirable flexibility of the industry-by-industry wage board procedure. He further stated:

This measure represents a most significant achievement for the State of New York. It establishes for the first time a State-wide wage floor of one dollar an hour. It also permits adjustments of minimum wages in sensitive response to general wage levels and living costs while, at the same time, preserving the flexibility required by the problems of each industry and occupation.

The previous minimum wage law, which was enacted in 1937, did not set a general minimum but provided for a tripartite wage board, appointed on industry-to-industry basis, to establish minimum wages for each industry or occupation.

Under this procedure, 10 minimum wage orders were issued covering approximately 1,300,000 workers in the following intrastate industries: retail trade, hotels, restaurants, amusement and recreation establishments, cleaning and dyeing, laundries, beauty parlours, confectionary, counsellors in children's camps and building service. Some of the rates set in these orders are less than \$1 an hour.

However, a great many workers, although not excluded by statute, are not at present covered by the state minimum wage orders nor are they subject to the federal Fair Labor Standards Act, which provides for a minimum wage of \$1 an hour for industries in interstate commerce. Among those not presently covered are employees in such industries as hospitals, nursing homes and related institutions, nonprofit and educational services, and a miscellaneous group of personal service trades (funeral service, shoeshine parlors, barber shops). A number of these workers are low-wage employees.

The new law was designed to give protection to such employees and to raise any existing rates which fall short of the require-

ments considered necessary for a minimum subsistence. The preamble of the Act states:

There are persons employed in the state of New York at wages insufficient to provide adequate maintenance for themselves and their families. Such employment impairs the health, efficiency and well-being of the persons so employed, constitutes unfair competition against other employers and their employees, threatens the stability of industry, reduces the purchasing power of employees, and requires, in many instances, that their wages be supplemented by the payment of public money for relief or other public and private assistance. Employment of persons at these insufficient rates of pay threatens the health and well-being of the people of this state and injures the overall economy.

Accordingly it is the declared policy of the state of New York that such conditions be eliminated as rapidly as practicable without substantially curtailing opportunities for employment or earning power.

Main Provisions

The state labour department estimates that the new law extends minimum wage coverage to 700,000 workers not presently covered by either a state minimum wage order or by the federal minimum wage law. Some employees working for intrastate organizations still remain outside the scope of the law, however, including taxicab drivers, outside salesmen, students, volunteers, apprentices and learners working in nonprofit institutions, as well as domestic servants, farm workers and other employees usually exempted from minimum wage legislation.

As previously indicated, the 10 existing minimum wage orders will remain in effect except that any rate in the orders of less than \$1 an hour will be raised to \$1 effective October 1. Non-hourly rates (unit rates, piece rates, weekly rates) will be modified by the Industrial Commissioner as he deems necessary to carry out the purpose of the law.

For occupations not covered by existing orders the Industrial Commissioner will issue an order providing for a \$1 minimum, effective October 1. Allowances from the minimum may be permitted by the Commissioner for gratuities, meals, lodging, apparel and other items supplied by the employer.

Provision is also made for the establishment of lower rates for learners, apprentices, handicapped workers and students employed in resort hotels that are not open for more than six months in any year

where necessary to prevent curtailment of opportunities for employment of these workers. Regulations may be issued providing for employment of such employees at subminimum rates under special certificates from the Commissioner. Those dealing with learners and apprentices may impose limitations as to time, number, proportion and length of service.

Regulations and allowances are to be determined after public hearings by the Commissioner or wage board.

A nonprofit religious, charitable or educational institution will be exempted from the statutory minimum and from any applicable minimum wage order if it certifies under oath to the Commissioner that it pays and will continue to pay to all of its employees at least \$1 an hour, exclusive of allowances for meals, lodging, or apparel furnished by the employer.

Procedure

At the discretion of the Commissioner, or upon the petition of 50 or more interested residents of the state, an investigation will be made to determine whether the wages being paid in a particular occupation are sufficient to provide adequate maintenance and to protect the health of the employees concerned. If, on the basis of information in his possession, the Commissioner is of the opinion that a substantial number of persons in any occupation are receiving wages insufficient to provide adequate maintenance and health, he must appoint a wage board to inquire into and make recommendations regarding minimum wages and regulations for employees in that occupation.

Wage boards, as before, are to be drawn up on a tripartite basis: not more than three employer representatives and an equal number of employee representatives and public members, with one of the public members as chairman. The chairman may delegate to a tripartite panel of members any or all of the powers of the board except those relating to the report, which must be approved by a majority of the whole board before being submitted to the Commissioner.

A more expeditious wage board procedure has been established. The wage board will have to submit its recommendations to the Commissioner within a maximum period of 90 days, instead of 180 days as at present, and the Commissioner will have to act on the recommendations within 45 days. An order will become effective within 30 days of issuance, instead of the present 60 days.

Procedures have also been speeded up by providing that it is no longer mandatory for the Commissioner to hold public hearings before issuing an order.

As before, an appeal may be taken to the Board of Standards and Appeals, which must decide, after oral argument, whether an order or regulation is contrary to law. Employers who appeal from a wage order will be required to post security—either by bond or bank deposit—if they wish to stay proceedings against them pending determination of the appeal. This is to protect workers against negation of wage orders through default or dissolution of employers. The security requirement, however, may be waived by the Board of Standards and Appeals if the employer is of strong financial responsibility.

Decisions of the Board of Standards and Appeals must be rendered within 60 days and are final unless an appeal is taken to the appropriate court within 60 days.

On his own initiative or on the petition of 50 or more residents affected by the order, the Commissioner may reconvene the wage board after six months or appoint a new board to recommend whether the minimum wage or regulations should be modified. In such cases, the same procedure must be followed as when an order is first promulgated.

Standards

Certain standards are laid down to guide wage boards in making their recommendations. In no case may the recommended wage be in excess of an amount sufficient to provide adequate maintenance and to protect the health of employees. Neither may the rate be less than \$1 an hour except in the exceptional cases expressly provided for (apprentices, learners, handicapped workers, students). A non-hourly rate may be set, however, where an hourly rate is impracticable, provided the statutory minimum is safeguarded. The board is also given authority to fix wages in accordance with the nature of the work performed and to set regional differentials where necessary.

In addition to its suggestions for minimum wages, a wage board may recommend such regulations as it deems necessary to carry out the purposes of the law and to safeguard the minimum wage. These may include provisions defining the exclusions from the Act, regulations governing piece rates, incentives and commissions in relation to time rates; overtime or part-time rates; waiting time and call-in pay rates; split shifts, excessive spread of hours and weekly guarantees; allowances for gratuities and for meals, lodging, apparel or other services and facilities.

UNEMPLOYMENT INSURANCE

Monthly Report on Operation of the Unemployment Insurance Act

Total of claimants for benefit at end of April down 13 per cent from number at previous month-end, up 17 per cent from year-earlier total. Seasonal benefit and fishing claimants down from month earlier but up from same month of 1959*

Claimants† for unemployment insurance benefit on April 29 numbered 714,900, of whom 228,600 were claimants for seasonal benefit. This total was 13 per cent lower than the total of 823,000 (248,500 seasonal benefit) on March 31, but 17 per cent higher than the total of 610,800 (228,400 seasonal benefit) on April 30, 1959.

Seasonal benefit claimants on April 29 comprised 32 per cent of the total, compared with 30 per cent on March 31 and 37 per cent at the end of April last year. Fishing seasonal benefit claimants numbered 13,100 on April 29, compared with 23,900 on March 31 and 11,400 on April 30, 1959. The marked decline in the number of these claimants during April reflects the combined effect of the resumption of fishing and the exhaustion of benefit rights.

A claimant's unemployment register is placed in the "live file" at the local office as soon as the claim is forwarded for computation. Consequently the count of claimants at any given time inevitably includes some whose claims are in process.

Initial and renewal claims for benefit during April numbered 214,600, which was 24 per cent fewer than the 283,500 claims submitted in March but 3.7 per cent more than the total of 206,900 in April 1959. The decline during April this year is considerably greater than it was in the same month last year, when it was only 10 per cent.

The average weekly number of beneficiaries was estimated at 732,900 for April, 733,000 for March, and 640,200 for April 1959.

The average weekly benefit payment was \$22.18 in April, \$22.20 in March and \$21.29 in April 1959.

*See Tables E-1 to E-5 at back of this issue.

†A claimant's unemployment register is placed in the "live file" at the local office as soon as the claim is forwarded for computation. Consequently the count of claimants at any given time inevitably includes some whose claims are in process.

In a comparison of current employment statistics with those for a previous period, consideration should be given to relevant statistics with those for a previous period, factors other than numbers such as the opening and closing of seasonal industries, increase in area population, influence of weather conditions, and the general employment situation.

Claimants should not be interpreted either as "total number of beneficiaries" or "total job applicants".

Insurance Registrations

The annual renewal of insurance books takes place during May. Consequently, the usual statistics on the number of insurance books and contribution cards issued to employees are not available for the month of April. They will, however, be ready for the month of May. As the figures are cumulative, those issued as at May 31 will include all new entrants to the insured population from April 1.

Employers registered at April 30 numbered 327,590, an increase of 954 during the month.

Enforcement Statistics

During April, 6,514 investigations were conducted by enforcement officers across Canada. Of these, 3,904 were spot checks of postal and counter claims to verify the fulfilment of statutory conditions and 131 were miscellaneous investigations. The remaining 2,479 were investigations in connection with claimants suspected of making false statements to obtain benefit.

Prosecutions were begun in 153 cases, 24 against employers and 129 against claimants.‡ Punitive disqualifications as a result of claimants' making false statements or misrepresentations numbered 1,851.‡

Unemployment Insurance Fund

Revenue received in April totalled \$22,194,917.24† compared with \$32,588,270.44

‡These do not necessarily relate to the investigations conducted during this period.

in March and \$14,581,844.02 in April 1959. Benefits paid in April totalled \$61,767,-880.26† compared with \$74,837,064.30 in March and \$59,930,502.62 in April 1959.

The balance in the fund on April 30 was \$324,986,215.82†; on March 31 it was \$365,892,232.95 and on April 30 last year, \$454,462,498.91.

Decisions of the Umpire under the Unemployment Insurance Act

Decision CUB-1729, April 11, 1960

Summary of the Main Facts: The claimant, single, 29 years of age, filed an initial application for benefit on December 1, 1959. He had been employed as a route driver from January 1, 1959 to November 28, 1959, when he was dismissed because "I lost my driver's licence and there were no other openings other than drivers at the present time". The employer confirmed the claimant's statement.

The offence for which the claimant's driving licence was suspended was one of impaired driving and took place outside his working hours and while he was driving his own car.

The insurance officer disqualified the claimant from receipt of benefit from November 29 to January 9, 1960, inclusive, on the ground that he had lost his employment by reason of his own misconduct (section 60 (1) of the Act). The insurance officer based his decision on Umpire's decision CUB-1065.

The claimant appealed to a board of referees, before which he appeared at the hearing of his case in Toronto on January 26.

The majority of the board in a brief decision dismissed the appeal and maintained the disqualification. The dissenting member of the board expressed the following views:

... His conviction was unrelated to his job and his employer stated that he would have retained him if another job had been available. There was no industrial misconduct and the claimant's appeal should be upheld. I would advise the claimant to appeal the majority decision to the Umpire.

The claimant appealed to the Umpire.

Considerations and Conclusions: The claimant's employment as a route driver was dependent on his possession of his motor vehicle operator's licence. Consequently, the retention of such a licence had a direct relationship to his particular kind of occupation and it was his solemn duty, as an employee, to take the utmost precaution at all times, even when he was driving his own automobile during non-working hours, to safeguard that licence as a most

treasured possession. This, the record shows, he failed to do; and such failure, in my opinion, is "misconduct" within the meaning of that expression in section 60 (1) of the Act, and I so decide.

In view of the foregoing, the claimant is subject to disqualification. However, as it appears to have been his first offence of that kind and as the employer's reason for dismissing him was solely because of the suspension of his licence, I consider that the period of disqualification should be reduced to one week, and I so direct.

But for this modification the claimant's appeal is dismissed.

Decision CUB-1738, May 6, 1960

Summary of the Main Facts: The claimant, a young married woman, filed a renewal application for benefit on November 28, 1958, and was registered for employment as a secretary. She had worked as such for a law firm in Vancouver at a salary of \$225.00 a month from July 28, 1958 to November 14, 1958, when she voluntarily left because of pregnancy. Her confinement was expected to be in March 1959.

The insurance officer disqualified the claimant from receipt of benefit, effective November 23, 1958, on the ground that there is a presumption that a claimant who voluntarily separates from her employment because of pregnancy is not available for work, and that such presumption had not been rebutted by the claimant (section 54 (2) (a) of the Act).

The claimant appealed to a board of referees on December 30, 1958, on the following grounds:

1. The appellant is entitled to unemployment insurance benefits pursuant to sections 54 and 60 of the Unemployment Insurance Act, R.S.C. 1952, as amended, and states that she is capable of and available for work as required by section 54 (2) (a) of the said Act, and that she has so represented herself and registered with the National Employment Service.

2. The said Act and Regulations made thereunder do not state or presume that a pregnant woman is to be presumed to be incapable of performing reasonable employment, and no such presumption should be made by this Board.

†All figures for April are subject to revision.

3. The Canada Evidence Act, R.S.C. 1952, as amended, contains no presumption that a pregnant woman is not available for work and thus disqualified from receiving benefits under the Unemployment Insurance Act.

4. The Insurance Officer acted in an unreasonable and arbitrary manner and against the evidence and the weight of the evidence in refusing the appellant's claim for benefit in a letter to the appellant dated December 4, 1958, since the appellant states in good faith that she has been and is willing to accept work of a reasonable nature up to and including a date approximately six weeks before her confinement. The appellant intends to resume employment at a date no later than six weeks following her confinement.

5. The reasons given by the Insurance Officer for the disqualification of the appellant's claim for unemployment insurance which appear on a typewritten sheet of paper annexed to the aforesaid letter dated December 4, 1958, are irrelevant and contradictory in that although the section cited on the face of the letter as covering the situation is section 54 (2) (a) of the Unemployment Insurance Act, yet the Insurance Officer in his reasons aforesaid has attempted to justify his decision on grounds covered by section 60 (1) of the said Act, which contradiction constitutes an error on the face of the decision of the Insurance Officer.

6. The appellant therefore contends that she is entitled to her claim for benefit and that she has been so entitled since November 23, 1958.

The claimant filed an affidavit dated December 31, 1958, which reads in part:

... That part of the duties connected with my position entailed coming into contact with clients who came into the office, and it was therefore of the utmost importance that my appearance be businesslike and in keeping with the formal nature of a law office.

That I subsequently learned that I was to become a mother and could anticipate a substantial alteration in my appearance.

That my duties also required me to perform work of an exacting nature, such as taking rapid dictation with clients present in the room, which resulted in considerable nervous strain due to my condition.

That because of my enceinte position, it was in my best interests to terminate the employment I was engaged in and to obtain a position which was less exacting and which would enable me to work beyond the public eye.

That on the 14th day of November, 1958, I resigned my position. On or about the 20th day of November, 1958, I received my Insurance Book in the mail from my employers and on or about the 21st day of November, 1958, I registered at the National Employment Service Office as being capable of, and available for work of a more suitable type than that which I had previously done.

That I have reported every Thursday at 8.45 a.m. since then, or upon such other date as so instructed by the National Employment Service Office officials, as being capable of and available for work of a reasonable nature, and that I intend to keep reporting as being capable of and available for work until six weeks before my anticipated confinement on or about the 15th day of March, 1959.

That I am in good health now and have been ever since I left my previous employment.

That I am anxious to accept employment of a reasonable nature.

Appearing in the records is the following medical certificate dated January 12, 1959:

This is to advise that (the claimant) has been my patient since August 20th, 1958, and that I am fully conversant with her condition.

In my opinion, it was reasonable for her to terminate her employment as a legal secretary because of the exacting nature of this type of work and the nervous strain consequently involved. However, it is also my opinion that she is quite capable of performing other duties of a less exacting nature.

In passing the appeal documents, etc., to the board of referees, the insurance officer referred the board to the Umpire's decisions CUBs 930 and 1111.

The claimant and her lawyer attended the hearing of her case by a board of referees in Vancouver, B.C., on January 28, 1959. The board unanimously dismissed the appeal and maintained the disqualification imposed by the insurance officer. The decision reads:

... The claimant's counsel developed his argument entirely on the basis of the written submission which had already been made and is part of the record. Substantially his contention is one with which this Board is quite familiar in that the claimant considers herself available for what she describes as "suitable employment" and in support of that attitude has continued to register at the employment office periodically. The claimant was under the impression that this matter of reporting fulfilled her obligations under the Unemployment Insurance Act, but in saying also that she has been watching the newspapers she does not state that she has made any application for employment as the result of such study of newspaper advertisements.

The Board has here an entirely familiar situation, the issue turning entirely upon the meaning of the term "available". The Board suggested to the claimant that what the claimant means by the use of this term is merely that she is willing to take a position if offered to her, but this does not fulfil the meaning of the term "available" so far as the Act and the Umpire's interpretations of the Act are concerned. The counsel for the claimant contended that the Umpire's decisions quoted were not applicable since the situations differed in detail. However, it is an underlying principle, which is reiterated repeatedly by the Umpire in numerous decisions dealing with such situations as this, which must govern the insurance officer in his interpretation of his responsibilities and by which this Board also must be governed. That principle is particularly applicable to a situation where a claimant resigns on account of pregnancy and as in this case, states that the nervous strain involved in the normal performance of her duties was such that she felt she could no longer carry on. In view of such a statement and while not questioning the claimant's willingness to take a position, it seems reasonable to this Board that for the claimant to accept a position within the framework of her established experience would expose her to more or less the same conditions as those from which she has resigned. For the reasons she has stated the opinion of the Board therefore is that the claimant by her own actions has clearly established her non-availability and in the light of the Umpire's decisions which have

been quoted and the principle involved in those decisions, the Board is of the opinion that the insurance officer has correctly applied the provisions of section 54 (2) (a) of the Act under which he has ruled that the claimant is not available for work and has therefore imposed an indefinite disqualification effective 23 November 1958.

The Board sustains the insurance officer's ruling and is unable to allow the appeal.

With the permission of the chairman of the board of referees, the claimant appealed to the Umpire on the following grounds:

The Board sustains the insurance officer's ruling and is unable to allow the appeal.

The Appellant cannot accept the Board's definition of availability for employment as it is applied to the Appellant in this case. The Unemployment Insurance Act, being a remedial Statute, should be given a beneficial construction and not a strict construction. It is unfair, and indeed ridiculous, to say that the Appellant is not available for employment within the meaning of section 54 of the Unemployment Insurance Act, when she has in fact registered with the National Employment Agency, a body created by the Government of Canada and purporting to be a National Clearing House for available employment possibilities, every week since being forced to resign her previous position. The Appellant has shown the utmost good faith and candour in stating that she is available for work of any reasonable nature—a term wide enough surely to put her within the terms and conditions of the Act, and is surely entitled to the benefits created by Statute in such cases. The Appellant has discharged the onus lying on her to show that she was "available for employment" by such weekly registrations, and it is unfair that she should be subjected to cross-examination as to every other step she has taken, reasonable or otherwise, to secure employment of a reasonable nature. The Appellant contends that she is entitled to a re-hearing by the Umpire of this important question, which involves, more than a mere principle, an immediate and wide spread matter of personal and Statutory right. The Appellant further contends that the line of authority which has been built up on this question and which was followed by the Board of Referees in this particular case, is wrong both in fact and in Law.

In addition, the claimant submitted a lengthy and elaborate statement of observations to the Umpire, wherein she took strong exception to the view expressed by the Umpire in his many decisions, viz., that there is a presumption that a claimant who voluntarily leaves her employment because of pregnancy is not available for work. She contended, in effect, that neither in section 54 (2) (a) nor in any other section of the Act was that stand supported.

The claimant also requested an oral hearing before the Umpire, which was held in Vancouver on March 30, 1960. The Unemployment Insurance Commission was represented by F. G. Power, an officer of its Legal Branch.

The claimant stated at the hearing that she was resting her case on her written

submissions and also on the applicable sections of the Act. She stated also, among other things, that when she registered for work she had explained to the placement officer that she rated herself "as being quite capable of doing suitable work within my knowledge, which would include typing, mailing, sorting, filing, dictaphone work, etc." She considered the comment made by the board of referees in its decision, to the effect that any type of work within the scope of her ability would cause nervous strain, as being "completely erroneous". When asked by the Umpire if she had looked for a position, she stated: "Not strenuously, as I understood that the employment office would look for me... I read the ads and registered every week. I sincerely wanted a job as I needed the money."

Mr. Power stated that, in his opinion, the claimant had failed to discharge the onus placed on her by section 54 (2) (a) of the Act to prove that she was available for work, in that she had voluntarily left her employment because of pregnancy and without asking her employer for a change of duties. To this, the claimant answered that there were no opportunities for other work in the office.

Considerations and Conclusions: The only question before me is whether or not the claimant has proved that she was available for work as from November 23, 1958.

In decision CUB-1720 I stated:

Section 54 (2) (a) of the Act places on each individual claimant the burden of proving that he was capable of and available for work on every day for which he is claiming benefit, and as there are no statutory provisions specifically dealing with pregnant claimants, the question of their availability must be determined under the aforementioned section, in the light of the particular circumstances of each such case.

As a general rule, to be available for work means being able, willing and ready to accept at once any suitable employment of which there is normally a supply in the labour market.

When no restrictions appear to be connected with a claimant's declared willingness to accept at once suitable employment or connected with his employability within the normal labour market, the brief statement which he is called upon to make in each weekly report to the local office, viz. "I was... available for work on each day..." is accepted on its face value and regarded as sufficient proof of that which is required to be proved under section 54 (2) (a) of the Act. Such a brief state-

ment, however, cannot be so accepted and so regarded when restrictions on his availability for work appear or are found to exist.

One such restriction is when, as in the present case, a claimant has reported that she is pregnant, in which event the presence or absence of proof of availability must, as a general rule, be judged by the words, acts or omissions of the claimant and by the possibility of her obtaining work in view of the restrictive conditions which ordinarily exist in cases of that kind, particularly when a claimant has decided to leave her employment solely or chiefly because of pregnancy.

A lenient view can usually be taken in those cases where pregnancy is found to have had nothing to do with a claimant's unemployment or where it is the employer who has taken the initiative in causing the unemployment. For obvious reasons, however, such a view cannot be adopted in cases where it is the claimant who takes the initiative to leave her employment because of pregnancy, and where it is found that employment under the new conditions under which she is allegedly willing to work is more difficult to obtain than the employment which she previously vacated. When those new conditions make it almost impossible to find the desired employment of the claimant either through her efforts or those of the local office of the Commission, then availability for work no longer exists for the purposes of the Act.

In the instant case, the restrictions which the record shows existed in respect of the claimant's availability were those which resulted from her desire for work of a less exacting nature than that which she had performed in her previous position as a secretary in the particular law firm which she had just left and also because she could likely accept or find work of such

a lighter nature only for a short duration in view of her approaching confinement.

As I pointed out in previous decisions, it is impossible for me, in the absence of a refusal of suitable employment or without other reliable indications that a claimant's declared willingness to work is not genuine, to assess the probability of a claimant's accepting or obtaining work of the desired kind if, as in the instant case, the record contains no information about the existence of that particular kind of work in the area where she wishes to work. The adjudicating authorities cannot, in law, arbitrarily presume that a claimant will automatically refuse suitable employment nor assume that the conditions of the labour market are unfavourable to a claimant. Furthermore, in the absence of a definite provision in the law, non-availability cannot be inferred solely from a claimant's omission to make a personal search for work or from the reluctance of certain employers to hire pregnant women.

The advanced stage of pregnancy of the claimant could only restrict her availability, but in the absence of proof to the contrary it would appear safe to say that the labour market in a city the size of Vancouver could provide work on a temporary basis, of the kind the claimant desired, i.e., typing, mailing, sorting, filing, dictaphone work, etc., particularly in view of her outstanding qualifications.

As we are dealing here with a borderline case, for the above reasons and because the record shows that the claimant's good faith is unquestionable, I decide to resolve any doubts I have in her favour and to allow the claimant's appeal in respect of the period mentioned in her affidavit of December 31, 1958 as being that for which she would be available for work, viz., from November 23, 1958, until six weeks before the date of her confinement.

Union Asks Unemployment Insurance Coverage for Hospital Workers

A request that 90,000 non-professional hospital employees who are now excluded should be brought under the Unemployment Insurance Act was made in a brief presented last month to a federal Cabinet committee by the National Union of Public Employees (CLC).

The brief argued that whatever excuse there might have been in the past for granting immunity to hospitals "from the moral and legal obligations which must be met by other employers," this excuse had been removed "by the introduction of hospital insurance which now covers the overwhelming majority of Canadians and which guarantees the income of the hospitals."

Hon. Michael Starr, Minister of Labour, said that the question of bringing these employees under unemployment insurance was receiving constant consideration.

The brief was presented by NUPE President William Buss of Toronto, and R. P. Rintoul, Ottawa, National Director. The Union represents close to 45,000 workers.

LABOUR CONDITIONS IN FEDERAL GOVERNMENT CONTRACTS

Wage Schedules Prepared and Contracts Awarded during May

Works of Construction, Remodelling, Repair or Demolition

During May the Department of Labour prepared 238 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada, for works of construction, remodelling, repair or demolition. In the same period, a total of 192 contracts in these categories was awarded. Particulars of these contracts appear below.

A copy of the wage schedule issued for each contract is available on request to trade unions concerned or to others who have a *bona fide* interest in the execution of the contract.

(The labour conditions included in each of the contracts listed under this heading provide that:

(a) the wage rate for each classification of labour shown in the wage schedule included in the contract is a minimum rate only and contractors and subcontractors are not exempted from the payment of higher wages in any instance where, during the continuation of the work, wage rates in excess of those shown in the wage schedule have been fixed by provincial legislation, by collective agreements in the district, or by current practice;

(b) hours of work shall not exceed eight in the day and 44 in the week, except in emergency conditions approved by the Minister of Labour;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of eight per day and 44 per week;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Contracts for the Manufacture of Supplies and Equipment

Contracts awarded in May for the manufacture of supplies and equipment were as follows:

Department	No. of Contracts	Aggregate Amount
Defence Construction (1951) Ltd.	1	\$ 3,070.00
Defence Production (April Report)	83	599,848.00
Defence Production (May Report)	88	294,227.00
Post Office	15	226,377.87
RCMP	13	70,748.36

The Fair Wages and Hours of Labour legislation of the federal Government has the purpose of insuring that all Government contracts for works of construction and for the manufacture of supplies and equipment contain provisions to secure the payment of wages generally accepted as fair and reasonable in each trade or classification employed in the district where the work is being performed.

The practice of Government departments and those Crown corporations to which the legislation applies, before entering into contracts for any work of construction, remodelling, repair or demolition, is to obtain wage schedules from the Department of Labour showing the applicable wage rate for each classification of workmen deemed to be required in the execution of the work.

These wage schedules are thereupon included with other relevant labour conditions as terms of such contracts to be observed by the contractors.

Wage schedules are not included in contracts for the manufacture of supplies and equipment because it is not possible to determine in advance the classifications to be employed in the execution of a contract. A statement of the labour conditions which must be observed in every such contract is however, included therein and is of the same nature and effect as those which apply in works of construction.

Copies of the federal Government's Fair Wages and Hours of Labour legislation may be had upon request to the Industrial Relations Branch of the Department of Labour, Ottawa.

(The labour conditions included in contracts for the manufacture of supplies and equipment provide that:

(a) all persons who perform labour on such contracts shall be paid such wages as are currently paid in the district to competent workmen; and if there is no current rate, then a fair and reasonable rate; but in no event shall the wages paid be less than those established by the laws of the province in which the work is being performed;

(b) the working hours shall be those fixed by the custom of the trade in the district, or if there be no such custom, then fair and reasonable hours;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of those fixed by custom of the trade in the district, or in excess of fair and reasonable hours;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Wage Claims Received and Payments Made during May

During May the sum of \$6,023.70 was collected from 9 contractors for wage arrears due their employees arising out of the failure of the contractors, or their subcontractors, to apply the wage rates and other conditions of employment required by the schedule of labour conditions forming part of their contract. This amount is for distribution to the 144 workers concerned.

Contracts Containing Fair Wage Schedules Awarded during May

(The labour conditions of the contracts marked (*) contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of eight per day and 44 per week, and also empower the Minister of Labour to deal with any question which may arise with regard thereto.)

Department of Agriculture

PRICES AND THE COST OF LIVING

Consumer Price Index, June 1960

Canada's consumer price index (1949=100) rose 0.2 per cent from 127.4 to 127.6 between May and June this year. The index stood at 125.9 at the beginning of June last year*.

In the current period, an increase of 0.5 per cent in the food index combined with fractional gains in the shelter, clothing and other commodities and services groups accounted for all of the upward movement in the total index. The household operation index declined fractionally.

The food index moved from 120.2 to 120.8 as higher prices were recorded for most fresh fruits and vegetables, particularly apples, cabbage, tomatoes and potatoes, and for most meats. Price declines were generally limited to eggs and butter.

The shelter index increased 0.2 per cent from 143.5 to 143.8 as both the rent and home-ownership components were higher.

A rise of 0.1 per cent in the clothing index, from 110.8 to 110.9, reflected some price increases from sales levels of previous months and higher prices for other items, including men's work trousers and oxfords.

Lower prices for coal and fuel oil combined with sale prices for furniture to offset higher prices for textiles and household utensils, and the household operation index declined 0.1 per cent from 123.1 to 123.0.

A rise of 0.1 per cent in the "other" commodities and services index, from 137.6 to 137.7, resulted from higher prices for gasoline, train fares, pharmaceuticals and some personal care items.

Group indexes one year earlier (June 1959) were: food 119.1, shelter 141.5, clothing 109.2, household operation 122.5 and other commodities and services 135.4.

City Consumer Price Indexes, May 1960

Consumer price indexes (1949=100) decreased in seven of the ten regional cities between April and May.* Declines ranged from 0.1 per cent in both Edmonton-Calgary and Vancouver to 0.4 per cent in Saint John. In Toronto and Winnipeg, indexes rose a fractional 0.1 per cent and the St. John's index increased 0.3 per cent.

Food indexes were lower in eight cities, higher in two. Shelter indexes were up in

five cities, down in four cities and unchanged in the remaining regional city. Clothing indexes showed mixed results: five increased, two decreased and three were unchanged. Household operation indexes increased in six of the ten regional cities, decreased in two and were unchanged in the other two cities. Other commodities and service group indexes rose in five cities, declined in four cities and remained unchanged in the remaining regional city.

Regional consumer price index point changes between April and May were as follows: Saint John -0.5 to 128.6; Montreal -0.4 to 127.2; Ottawa -0.3 to 127.7; Halifax -0.2 to 126.8; Saskatoon-Regina -0.2 to 123.4; Edmonton-Calgary -0.1 to 123.3; Vancouver -0.1 to 128.1; St. John's +0.3 to 115.9†; Toronto +0.1 to 129.8; Winnipeg +0.1 to 124.8.

Wholesale Price Index, May 1960

Canada's general wholesale price index (1935-39=100) for May stood at 231.3, unchanged from the preceding month and slightly above last year's May figure of 231.2.

Increases over April in four of the eight major groups were offset by decreases in two others; the remaining two groups showed no change.

The textile products group index recorded the largest upward movement, rising 0.8 per cent to 231.4 from 229.6 in April. The increase was mainly attributable to higher prices for miscellaneous fibre products, raw cotton, and cotton fabrics.

Higher tin and silver prices were mainly responsible for an 0.4-per-cent increase in the non-ferrous metals group index to 179.7 from 179.0. The wood products group also advanced 0.4 per cent to 307.6 from 306.2. The iron products group edged upward by 0.2 per cent to 256.6 from 256.2.

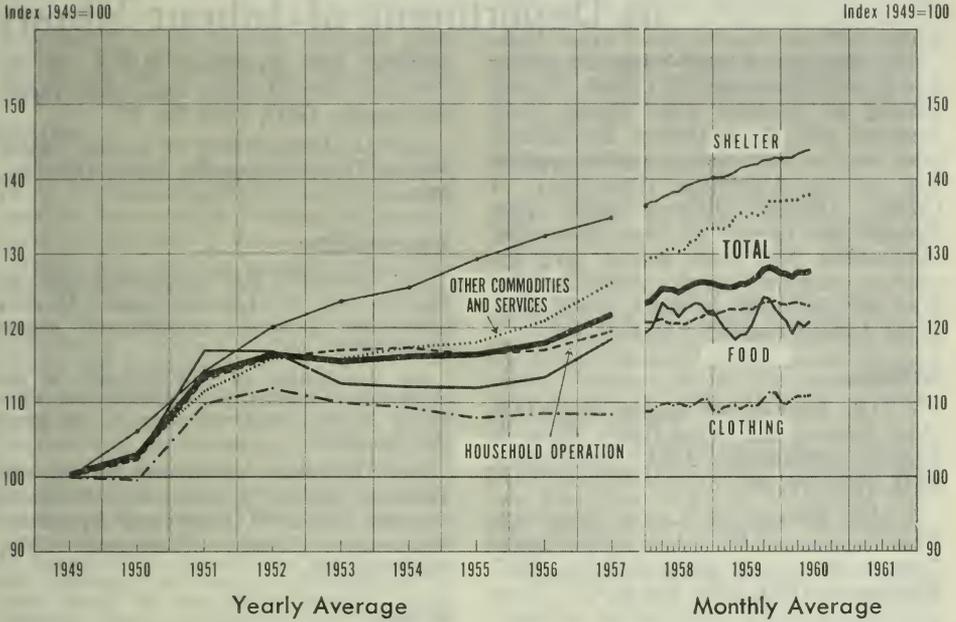

The animal products group declined 0.9 per cent to 241.1 from 243.4 and the vegetable products group index eased 0.2 per cent to 205.1 from 205.6.

The non-metallic minerals and chemical products group indexes were unchanged at 185.5 and 188.4, respectively.

*See Tables F-1 and F-2 at back of book.

† On base June 1951=100.

CONSUMER PRICE INDEX

U.S. Consumer Price Index, May 1960

The United States consumer price index (1947-49=100) rose again between mid-April and mid-May to another peak. It increased from 126.2 to 126.3, largely as a result of rising food prices and the continued steady increase in prices for services. In May 1959 it was 124.0.

The U.S. index has risen in 11 of the last 14 months.

U.K. Index of Retail Prices, April 1960

The United Kingdom index of retail prices (Jan. 17, 1956=100) was 110.3 at mid-April, 0.6 points higher than at mid-March and 0.8 points higher than at mid-April 1959.

The U.K. index was 0.1 points lower than in January 1959. In the 15 months since that date, it has risen in only six, including the latest rise.

Sales dollar profits in Canada's manufacturing industry in 1959 averaged 5.1 cents, compared with 4.6 cents in 1958 when profits were at the lowest point reached during the 12-year period in which the Canadian Manufacturers' Association has been making surveys on the matter.

Wages and salaries (all wages and salaries including management salaries, directors' fees, payments to employees for holidays and in connection with profit sharing or production incentive plans, unless such payments are distributed only upon retirement of employee or some similar basis) accounted for 21.9 per cent of the sales dollar profits, or \$2,091,598,000.

Employee benefits (payments to pension plans, group life, sickness or hospitalization insurance, workmen's compensation, unemployment insurance, medical services, cafeterias, welfare funds, 25-year clubs, etc.) accounted for 1.7 per cent of the sales dollar profits.

Federal and provincial taxes in 1959 amounted to 4.2 cents in each dollar of sales.

The survey covered 1,043 companies distributed throughout Canada's 10 provinces. Their net sales during 1959 amounted to \$9,420,802,000 and they employed 462,935 persons during the 12 months covered by the study.

Education

19. EUROPEAN PRODUCTIVITY AGENCY. TRADE UNION INFORMATION AND RESEARCH SERVICE. *Trade-Union Training in Europe*. Paris, OEEC, 1959. 2 Volumes.

These two volumes examine educational and training activities carried out by unions in Austria, Belgium, Denmark, France, Germany, Great Britain, Greece, Ireland, Italy, Luxembourg, Norway, The Netherlands, Sweden and Switzerland.

20. INVITATIONAL CONFERENCE ON EDUCATIONAL RESEARCH, SASKATOON, 1959. [Proceedings] *Invitational Conference on Educational Research, Saskatoon, September 15 and 16, 1959*. [Toronto] Canadian Education Association [1960?] Pp. 196.

Proceedings published with the co-operation of Imperial Oil Limited. The participants in this conference are engaged professionally in some aspect of educational research. They discussed recent developments and needs in this type of activity. This book consists of a summary of the proceedings; papers on various aspects of educational research in Canada; and regional reports for the Atlantic Provinces and for each of the other provinces.

21. U.S. OFFICE OF EDUCATION. *Teaching as a Career*, by John B. Whitelaw, Shirley Radcliffe [and] Florence Friedlander. Washington, GPO, 1959. Pp. 34.

22. U.S. OFFICE OF EDUCATION. *Teaching opportunities, 1959 ed.* Washington, GPO, 1959. Pp. 39.

23. U.S. OFFICE OF EDUCATION. DIVISION OF VOCATIONAL EDUCATION. *Supervision to improve Instruction in Distributive Education*. Washington, GPO, 1959. Pp. 19.

"... Concerned with supervision of an educational program designed to meet the vocational needs of a person engaged in distribution and marketing."

Electronic Data Processing

24. McCracken, DANIEL D. *Programming Business Computers*, by Daniel D. McCracken, Harold Weiss and Tsai-hwa Lee. New York, Wiley, 1959. Pp. 510.

Deals with the application of electronic computers to business data processing problems.

25. RUTGERS UNIVERSITY, NEW BRUNSWICK, N.J. INSTITUTE OF MANAGEMENT AND LABOR RELATIONS. *Office Automation and White Collar Employment*, by Georgina H. Smith. New Brunswick, N.J., 1959. Pp. 26.

The author points out some changes in staffing and in office routines brought about

by the introduction of electronic data processing systems. With the introduction of these systems there will be less demand for unskilled office workers but more demand for trained technicians to run the machines. If office clerks were trained in the simpler aspects of programming and computer operation this would prevent replacement of staff by the machines and would provide a supply of technicians.

Employment Management

26. AMERICAN MANAGEMENT ASSOCIATION. *Labor Turnover: Calculation and Cost*, by Frederick J. Gaudet. New York, c1960. Pp. 111.

An analysis of what has been written on the calculation of labour turnover and its cost. Chapter titles are: Methods of measuring Labor Turnover. Calculating the Cost of Labor Turnover. Beyond the Statistics: Related Factors in Labor Turnover. Attacking the Labor Turnover Problem.

27. BEER, STAFFORD. *Operational Research and Personnel Management. Part I by Stafford Beer; Part II by R. W. Revans*. London, Institute of Personnel Management, c1959. Pp. 25.

"Operational research involves the application of the methods of science to operations—whether military . . . industrial, economic, or of any other kind. It has to consider systems of men and machines, materials and money; it is concerned with the regulation of these systems, with their decision processes, with their operation for maximum profit or minimum wastage or optimum use of resources." The first part discusses how an operational research department works in one firm. The second paper deals with the application of operational research to the problem that some hospitals in Manchester had in retaining nurses. Investigation showed, in this case, "that the hospital that can keep its staff longer can also deal with its patients more quickly."

28. BROOKSHIRE, MARJORIE SHEPHERD. *Absenteeism*. Los Angeles, Institute of Industrial Relations, University of California, c1960. Pp. 75.

Describes the problem of absenteeism and discusses the methods used to deal with it.

29. CROOME, HONOR MINTURN (SCOTT). *Human Problems of Innovation. Based on a Study of Some Scottish Firms by Tom Burns and G. M. Stalker*. London, HMSO, 1960. Pp. 35.

A short account of problems in the management of some Scottish firms developing new electronics products.

Fringe Benefits

30. BUREAU OF NATIONAL AFFAIRS, WASHINGTON, D.C. *Fringe Benefits*. Washington, c1960. Pp. 13.

Based on data submitted by 115 executives. Discusses the cost of providing fringe benefits, fringe benefits versus pay increases, and new and prospective fringe benefits, etc.

31. CANADA. DEPARTMENT OF LABOUR. ECONOMICS AND RESEARCH BRANCH. *Provisions for Income Security in Canadian Manufacturing Industries*. Ottawa, Queen's Printer, 1959. Pp. 27.

The four types of income security plans discussed in this pamphlet are: 1. Reporting pay—"a guarantee of a minimum amount of pay to a worker who reports to work at the usual hour and is informed that there is no work available for him on that day"; 2. Layoff benefits—those paid to a laid-off worker, such as a supplemental unemployment benefit plan; 3. Accident and sickness disability indemnity insurance; and, 4. Guaranteed employment or wages.

Labour Laws and Legislation

32. CANADA. DEPARTMENT OF LABOUR. LEGISLATION BRANCH. *Provincial Labour Standards concerning Child Labour, Holidays, Hours of Work, Minimum Wages, Equal Pay for Equal Work, Workmen's Compensation, Fair Employment Practices and Weekly Rest-Day*. December, 1959. Ottawa, Queen's Printer, 1960. Pp. 26.

33. PORTUS, JOHN HEREFORD. *The Development of Australian Trade Union Law*. Carlton, Melbourne University Press, 1959. Pp. 267.

Traces the development of the English background of Australian law, and the development of Australian law and its interpretation. Discusses, among other things, the development of compulsory arbitration, voluntary and compulsory unionism, the registration of trade unions, government control over trade union affairs and penal strike legislation.

34. U.S. BUREAU OF LABOR STANDARDS. *State Workmen's Compensation Laws, a Comparison of Major Provisions with Recommended Standards*. Washington, GPO, 1960. Pp. [34].

35. U.S. DEPARTMENT OF LABOR. WAGE AND HOUR AND PUBLIC CONTRACTS DIVISIONS. *Report submitted to the Congress in Accordance with the Requirements of Section 4 (d) of the Fair Labor Standards Act, 1959*. Washington, GPO, 1960. Pp. 76.

Consists of three parts. Part 1 is a summary of the Divisions' activities in administering the Act during the fiscal year 1959. Part 2 summarizes 1959 data on employment, wage structures and occupational differentials. Part 3 contains two studies of the effects of minimum wage rates established through industry committee proceedings for industries in Puerto Rico.

Labour Organization

36. B.C. FEDERATION OF LABOUR (CLC). *Proceedings, Fourth Convention, October 5, 6, 7, 8, and 9, 1959, Vancouver, B.C.* Vancouver, 1959. 1 Volume (various pagings).

37. BARBASH, JACK, Ed. *Unions and Unions and Union Leadership: their Human Meaning*. 1st ed. New York, Harper, 1959. Pp. 348.

Discusses such topics as collective bargaining, labour racketeering, industrial disputes, the Negro worker in unions, and government intervention in the labour movement.

38. PUBLIC SERVICES INTERNATIONAL. *The P.S.I. in Italy*. London [1959?] Pp. 23.

Contents: The Trade Union Position in Italy, by Claudio Cruciani. The Problem of Unity of the Italian Trade Union Movement, by Enzo dalla Chiesa. Trade Unionism in the Public Services, by Alberto Ghezzi. Appeal of the PSI to Salaried Employees and Workers in the Public Services of Italy, by Paul Tofahrn, General Secretary of the P.S.I.

39. SEAFARERS' INTERNATIONAL UNION OF NORTH AMERICA. CANADIAN DISTRICT. VANCOUVER. INVESTIGATION COMMITTEE. *Report*. Vancouver, 1960. Pp. 8.

The Vancouver Branch of the Canadian District of the Seafarers' International Union of North America set up an Investigation Committee to look into and report to the membership on "acts of violence which, it is charged, are being perpetrated on the Vancouver waterfront."

40. U.S. BUREAU OF LABOR-MANAGEMENT REPORTS. *Guide for reporting your Union Finances. How to complete Labor Organization Financial Report LM-2; Instructions for Unions required to use LY-2 in complying with Sect. 201 (b) of the Labor-Management Reporting and Disclosure Act*. Washington, GPO, 1960. Pp. 27.

"The Labor-Management Reporting and Disclosure Act of 1959 requires every [American] labor organization to file annually with the Secretary of Labor a financial report containing information in such detail as may be necessary accurately to disclose each labour organization's financial condition and operations for its preceding fiscal year." This booklet contains a sample form filled out and an explanation of the meaning of each question asked in the Report.

41. U.S. BUREAU OF LABOR STATISTICS. *Collective Bargaining Clauses: Company Pay for the Time spent on Union Business*. Washington, GPO, 1959. Pp. 46.

"...Deals with provisions in collective bargaining agreements designed to protect... union representatives, when so engaged [as shop stewards or committeemen, etc.], from loss of wage income, or to limit the amount of compensable time available for these activities."

42. U.S. CONGRESS. SENATE. SELECT COMMITTEE ON IMPROPER ACTIVITIES IN THE LABOR MANAGEMENT FIELD. *Final Report . . . pursuant to S. Res. 44 and 249, 86th Congress*. Washington, GPO, 1960. 4 Volumes.

Covers the activities of the Committee during 1958 and 1959. Some of the topics discussed are secondary boycotts; political campaign contributions by labour and management; James R. Hoffa and the International Brotherhood of Teamsters; the criminal syndicate in the U.S.; the Kohler Strike at Kohler, Wis., involving the Kohler Company and the UAW; and certain aspects of the coin-operated amusement and vending machine industry.

Labour Supply

43. BERDIE, RALPH FREIMUTH. *Manpower and the Schools*. Melbourne, Australian Council for Educational Research, 1956. Pp. 102.

A survey based on replies to a questionnaire on educational and occupational plans which was submitted to Australian school children.

44. U.S. CONGRESS. SENATE. SPECIAL COMMITTEE ON UNEMPLOYMENT PROBLEMS. *Studies in Unemployment*. Prepared for the Special Committee on Unemployment Problems. United States Senate pursuant to S. Res. 196, 86th Congress. Washington, GPO, 1960. Pp. 432.

A study of unemployment conditions and of unemployment as it relates to young people, older workers, women workers, Negroes, automation, labour mobility, etc.

Labouring Classes

45. AFRICAN REGIONAL TRADE UNION CONFERENCE. 1ST, ACCRA, GHANA, 1957. *Report of the First African Regional Trade Union Conference held at Accra, Ghana, 14-19, January, 1957*. Brussels, International Confederation of Free Trade Unions, 1958. Pp. 188.

Conference sponsored by the ICFTU. Delegates and observers from 17 African countries and from other international trade unions and agencies attended this conference. They discussed trade union development in Africa, the economic and social tasks of the trade union movement, and methods for continued co-operation and co-ordination among free African trade unions.

46. CHAMBERLAIN, NEIL W., ed. *A Decade of Industrial Relations Research, 1946-1956*. Editors: Neil W. Chamberlain, Frank C. Pierson [and] Theresa Wolfson. [1st ed.] New York, Harper [1958] Pp. 205.

Contents: Union Government and Union Leadership, by Joel Seidman and Daisy L. Tagliacozzo. Collective Bargaining, by Joseph Shister. Wage Determination in Theory and Practice, by Melvin Reder. The Economic Effects of Unionism, by George H. Hildebrand. Employee Benefit Plans, by Robert Tilove. The Labor Movement Abroad, by Adolf Sturmthal.

47. ILLINOIS. UNIVERSITY. INSTITUTE OF LABOR AND INDUSTRIAL RELATIONS. *Labor Policy in a Democracy*, by Murray Edelman. Urbana, 1959. Pp. 96-100.

The author says, "In the states we recognize as democratic, labor is permitted to try to organize changes in economic practice and in public policy."

48. INTERNATIONAL WORKINGMEN'S ASSOCIATION. 5th CONGRESS, THE HAGUE, 1872. *The First International: Minutes of the Hague Congress of 1872, with Related Documents*. Edited and translated by Hans Gerth. Madison, University of Wisconsin Press, 1958. Pp. 315.

The International Workingmen's Association was founded in 1864 in London and disbanded in 1876. Among its prominent members were Karl Marx and Frederick Engels. At this Hague Congress Karl Marx succeeded in his attempt to move the headquarters of the General Council of the Association.

49. YOUNG CHRISTIAN WORKERS. CANADA. JEUNESSE OUVRIERE CHRETIENNE. *La jeunesse travailleuse du Canada français; manifeste de la JOC canadienne*. Montreal, 1959. Pp. 68.

Occupations

50. INTER AMERICAN STATISTICAL INSTITUTE. *Occupational Classification for the 1960 Census of America (COTA-1960)* Washington, 1959. Pp. 61.

51. PANT, PITAMBAR. *Occupational Pattern in Manufacturing Industries, India 1956*, by Pitambar Pant and M. Vasudevan. Delhi, Planning Commission, Government of India, 1959. Pp. 448.

Old Age Pensions

52. TILOVE, ROBERT. *Pension Funds and Economic Freedom. [A Report to the Fund for the Republic*. New York, Fund for the Republic, 1959] Pp. 91.

Considers the effect of private pension plans on labour mobility and the possibility of a "concentration of economic power as a result of the acquisition of common stock by self-insured pensions funds."

53. U.S. CIVIL SERVICE COMMISSION. *Your Retirement System; Questions and Answers concerning the Federal Civil Service Retirement Law*. April 1959. Washington, GPO, 1959. Pp. 38.

Older Workers

54. CLARK, SAMUEL DELBERT. *The Employability of the Older Worker, a Review of Research Findings*. Ottawa, Economics and Research Branch, Department of Labour, 1959. Pp. [30].

A summary of research findings in Canada, Great Britain, and the U.S. with comments on these findings.

55. U.S. BUREAU OF LABOR STATISTICS. *Comparative Job Performance by Age: Office Workers*. Washington, GPO, 1960. Pp. 36.

This study comprised six age groups. The survey of about 6,000 workers showed that large proportions of workers in the older age groups exceeded the average performance of the younger age groups; the older workers had a steadier work output, with less variation from week to week, than the younger age groups. The findings of the survey did demonstrate, however, the need for individual evaluation of workers.

Political Parties

56. IRVING, JOHN ALLAN. *The Social Credit Movement in Alberta*. Toronto, University of Toronto Press, 1959. Pp. 369.

"...An analysis of the rise of the Social Credit movement in Alberta during the formative years between 1932 and 1935."

57. LABOUR PARTY (GT. BRIT.). *Report of the 58th Annual Conference held in Blackpool, November 28 and November 29, 1959*. London, 1959. Pp. 215.

58. LYMAN, RICHARD WALL. *The First Labour Government, 1924*. London, Chapman & Hall, 1957. Pp. 302.

The first Labour government took office on January 22, 1924 and resigned on November 4, 1924 after its defeat in the election of October, 1924. The author examines the achievements of the first Labour government and the reasons for its defeat.

Productivity

59. AMERICAN MANAGEMENT ASSOCIATION. *Meeting the Productivity Challenge; the Nature of the Challenge and Some Practical Approaches*. New York, c1960. Pp. 102.

"In this report, informed observers of and participants in the contemporary industrial relations scene discuss the meaning of productivity, how it should be measured, the causes and consequences of featherbedding and other 'anti-productivity' factors, and the effects on our national productivity of current labor relations practices and union policies. Other contributors describe some practical approaches for meeting the productivity challenge through effective political action, organization planning, employee motivation, and college/industry co-operation."

60. BEAUMONT, RICHARD AUSTIN. *Productivity and Policy Decisions*. New York, Industrial Relations Counselors, 1959. Pp. 59.

Studies the relationship between productivity and wages.

61. INTERNATIONAL LABOUR OFFICE. *Raising Productivity, Conclusions of Three International Meetings of Experts*. Geneva, 1959. Pp. 55.

The three meetings whose conclusions are reported were one held in 1951 dealing with systems of payments by result; a second, in 1952, dealing with the raising of productivity in manufacturing industries; and the third, in 1959, which discussed the experience gained from the organization and conduct of national productivity programs in underdeveloped countries.

Social Security

62. CONFERENCE ON ECONOMIC PROGRESS, WASHINGTON, D.C. *The Federal Budget and "the General Welfare". We can afford to serve our Human Needs*. Washington, 1959. Pp. 76.

This pamphlet proposes greater Federal grants for education, health purposes, old age pensions, unemployment benefits, and public assistance in the U.S.

63. HOUGHAM, GEORGE M. *Economic Security for the Aged in the United States and Canada; a Summary of the Report by Dr. Robert M. Clark prepared for the Government of Canada and tabled in the House of Commons, March 5, 1959*. Ottawa, Canadian Welfare Council, 1959. Pp. 82.

64. UNITED NATIONS. SECRETARY-GENERAL, 1953- (HAMMARSKJOLD). *The Development of National Social Service Programmes; Report by the Group of Experts appointed by the Secretary-General of the United Nations*. New York, United Nations, Dept. of Economic and Social Affairs, 1959 [i.e. 1960] Pp. 70.

Contains the Report by the Group of Experts on Social Services; the observations of the Secretary-General on the report; and a Resolution on this topic of the U.N. Economic and Social Council.

65. U.S. BUREAU OF PUBLIC ASSISTANCE. *Characteristics of State Public Assistance Plans under the Social Security Act: Old-Age Assistance, Aid to the Blind, Aid to Dependent Children, Aid to Permanently and Totally Disabled*. Washington, GPO, 1959 [i.e. 1960] 1 Volume (unpaged).

Wages and Hours

66. BULLOCK, PAUL. *Standards of Wage Determination*. Los Angeles, Institute of Industrial Relations, University of California [c1960] Pp. 99.

Describes and analyzes the standards applied by employers, unions, and arbitrators in fixing wages. Contents: Comparisons. Cost of Living. Ability to pay. Productivity. Family Budgets. Purchasing Power. Technical and Miscellaneous Factors.

67. BUREAU OF NATIONAL AFFAIRS, WASHINGTON, D.C. *Wage Policies in an Inflationary Period*. Washington, 1960. Pp. 13.

Contents: Use of Wage "Patterns". Maintaining Supervisors' Pay Advantage. White-Collar Pay. Offsetting General Increases by raising Performance Standards. Wage Escalation. Deferred Increases. General Increases: Pros & Cons. Unit v. Average Labor Cost. Breaking the Wage-Cost Spiral. The Wage-Boost Price-Increase Relationship.

68. CANADA. BUREAU OF STATISTICS. *Labour Income, 1926-58*. Ottawa, Queen's Printer, 1960. Pp. 45.

"...Presents... a complete record of annual estimates of labour income from 1926, along with monthly figures from 1947." The definition of labour income given here is "the total of wage, salary, and supplementary labour payments made to, or on behalf of, residents of Canada, excluding military pay and allowances."

69. CANADA. DEPARTMENT OF LABOUR, ECONOMICS AND RESEARCH BRANCH. *Salary Rates, Days and Hours of Work, and Pension Plans in Selected Hospitals, August 1958*. Ottawa, 1959. Pp. 62.

70. GOTTLIEB, E. M. *Overtime Compensation for Exempt Employees*. New York, American Management Association, c1960. Pp. 39.

Based on an AMA survey conducted to determine in what circumstances, and to what extent, industry voluntarily grants overtime compensation to exempt employees, such as supervisors, managers, or salaried professional employees.

71. U.S. BUREAU OF LABOR STATISTICS. *Union Wages and Hours: Local-Transit Operating Employees, July 1, 1959 and Trend 1929-59*. Washington, GPO, 1960. Pp. 10.

Information is based on union scales in effect on July 1, 1959, and covers about 65,000 local-transit operating employees in 52 cities with populations of 100,000 or over.

Miscellaneous

72. INSTITUTE ON THE ROLES OF PSYCHOLOGY AND PSYCHOLOGISTS IN REHABILITATION, PRINCETON, N.J., 1958. *Psychology and Rehabilitation; the Proceedings*. Edited by Beatrice A. Wright. Washington, American Psychological Association, 1959. Pp. 146.

73. NATIONAL INDUSTRIAL CONFERENCE BOARD. *Use of Service Charges in Local Government; a Monograph on the Prevalence and Value of Nontax Revenue*, by Gerald J. Boyle. New York, 1960. Pp. 56.

"A service charge is a payment made by an individual to the government in return for a specific service." Service charges could include such things as the use of municipal hospitals, garbage collection, street cleaning and snow removal, use of public buildings by private groups, etc. This pamphlet describes the types of service charges, how they are used, their relationship to revenue, debt, and expenditure, and their effect in bringing in revenue.

74. SHACKLE, GEORGE LENNOX SHARMAN, Ed. *A New Prospect of Economics; an Introductory Textbook by Members of the Staff of the Dept. of Economics in the University of Liverpool*. Chairman of the Group: Francis E. Hyde. Liverpool, Liverpool University Press, 1958. Pp. 498.

Designed as a textbook for first and second year university students. Contents: Scope, Method and Tools. Theory of Value and Dis-

tribution. Theory of Economic Growth. Theory and Organization of Money. Theory of Employment. Map of the Economic Flows. Market Practices. International Trade. The Government as Economic Agent. Sources of Facts. Summing-up and Further Perspective.

75. TORONTO. UNIVERSITY. COMMERCE CLUB. *The Commerce Journal, 1960*. Toronto, 1960. Pp. 78.

Partial Contents: The Uranium Industry, by Miss R. R. McIlroy. Canadian Labour and Political Action, by D. M. Fisher. The Problems and Prospects of the Canadian Sales Finance Industry, by Douglas G. Hartle. Accuracy and Approximation in Accounting, by S. G. Hennessey. An Introduction to Input-Output Analysis, by H. A. John Green. Some Fundamentals of Data Processing, by J. E. Sands.

76. UNITED NATIONS. ECONOMIC COMMISSION FOR EUROPE. *Government Policies and the Cost of Building*. Geneva, 1959. 1 Volume (various pagings).

"...A comparative analysis of measures taken by governments to reduce or limit increases in the cost of house-building..."

77. U.S. BUREAU OF EMPLOYMENT SECURITY. *Newspapers and Commercial Printing*. Washington, 1959. Pp. 15.

A survey of employment in large newspaper and commercial printing plants between July 1958 and July 1959.

78. U.S. BUREAU OF LABOR STANDARDS. *Safety in Industry; Control of the Physical Environment*. Washington, GPO, 1960. Pp. 13.

Provides useful information to insure a safe and healthy place to work.

79. U.S. DEPARTMENT OF LABOR. *The United States Department of Labor, 1960*. Washington, GPO, 1959. Pp. 40.

Briefly outlines the functions of the various bureaus and divisions of the U.S. Department of Labor.

80. VICKERS, (SIR) GEOFFREY. *The Undirected Society; Essays on the Human Implications of Industrialization in Canada*. Toronto, University of Toronto Press, c1959. Pp. 162.

Consists of addresses or pre-circulated papers to the Round Table on Man and Industry, sponsored by the School of Social Work of the University of Toronto, and held at the University between 1956 and 1958.

Labour Conditions in Government Contracts

(Continued from page 733)

Terminal Bldg, International Airport; R V Coombs Construction Ltd, construction of UHF/VHF transmitter receiver bldg, International Airport *Lethbridge Alta*: McCormick Electric Ltd, installation of airport lighting facilities. *Peace River Alta*: Poole Engineering (1958) Ltd, additional development of airport. *Digby Island B C*: Saltspring Contracting Ltd, construction of overhead power line & power distribution, Prince Rupert Airport. *Sidney B C*: Hume & Rumble Ltd, installation of medium intensity lighting on runways 02-20 & 13-31, Victoria International Airport. *Williams Lake B C*: F B Stewart & Co Ltd, construction of airport lighting facilities; C J Oliver Ltd, construction of air terminal bldg & related work. *Dawson Y T*: Proctor Construction Co Ltd, additional development at airport. *Yellowknife N W T*: McCormick Electric Ltd, construction of low intensity approach lighting system on approach No 26, Airport.

B—Labour Income

NOTE: The estimates of labour income in this table have been revised in accordance with recent revisions to the National Accounts. Note particularly the use of annual totals instead of monthly averages, and the introduction of quarterly instead of monthly totals for some industries. Monthly and quarterly figures may not add to annual totals because of rounding.

†Preliminary.

C—Employment, Hours and Earnings

Tables C-1 to C-3 are based on reports from employers having 15 or more employees—at April, 1960 employers in the principal non-agricultural industries reported a total employment of 2,664,997. Tables C-4 (every second month) and C-5 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-3. They relate only to wage earners for whom statistics of hours of work are also available whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage earners in the reporting firms.

¹Includes (1) Forestry (chiefly logging), (2) Mining (including milling), quarrying and oil wells, (3) Manufacturing, (4) Construction, (5) Transportation, storage and communication, (6) Public utility operation, (7) Trade, (8) Finance, insurance and real estate and (9) Service, (mainly hotels, restaurants, laundries, dry cleaning plants, business and recreational service).

TECHNICAL NOTE—A change has been made in the method of dating the statistics published in Tables C-1 to C-6 to conform with the usual practice of the Dominion Bureau of Statistics. In the past, statistics for the last pay period in a month were labelled "pay period preceding" the first day of the following month. From now on, statistics for the last pay period in a month will be labelled for that month. Another change is that average hourly earnings, formerly expressed in cents carried to one decimal place, are now published in dollars and cents.

Tables C-4 and C-5 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-3. They relate only to wage-earners for whom statistics of hours of work are also available whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage-earners of the co-operative firms.

February.....	40.4	1.77	71.49	171.3	127.2	134.7
March ⁽¹⁾	40.5	1.78	71.95	172.4	126.9	135.9

NOTE: Average Real Weekly Earnings were computed by dividing the Consumer Price Index into the average weekly earnings index. (Average 1949 = 100) by the Economics and Research Branch, Department of Labour.

* Figures adjusted for holidays. The actual figures for December 1959 are 38.4 and \$68.48.

(1) Latest figures subject to revision.

D—National Employment Service Statistics

The following tables are based on regular statistical reports from local offices of the National Employment Service. These statistics are compiled from two different reporting forms, UIC 751; statistical report on employment operations by industry, and UIC 757; inventory of registrations and vacancies by occupation. The data on applicants and vacancies in these two reporting forms are not identical.

Edmonton—Calgary.....	122.0	123.4	123.3	114.3	124.4	120.2	127.5	133.1
Vancouver.....	126.8	128.2	128.1	120.0	138.9	116.9	132.0	136.8

N.B.—Indexes above measure percentage changes in prices over time in each city and should not be used to compare actual levels of prices as between cities.

(1) St. John's index on the base June 1951 = 100.

G—Strikes and Lockouts

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Department of Labour on the basis of reports from the Unemployment Insurance Commission. The first three tables in this section cover strikes and lockouts involving six or more workers and lasting at least one working day, and strikes and lockouts lasting less than one day or involving fewer than six workers but exceeding a total of nine man-days. The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. For further notes on the series see page 763.

TABLE G-1—STRIKES AND LOCKOUTS, 1955-1960

Month or Year	Strikes and Lockouts Beginning During Month or Year	Strikes and Lockouts in Existence During Month or Year			
		Strikes and Lockouts	Workers Involved	Duration in Man-Days	
				Man-Days	Per Cent of Estimated Working Time

**TABLE G-4—STRIKES AND LOCKOUTS INVOLVING 100 OR MORE WORKERS,
MAY 1960**

(Preliminary)

Industry Employer Location	Union	Workers Involved	Duration in Man-Days		Starting Date	Major Issues ~ Result
			May	Accu- mulated	Termina- tion Date	
MINING— <i>Metal Mining—</i> Falconbridge Nickel Mines, Falconbridge, Ont.	Mine, Mill and Smelter Workers Loc. 598 (Ind.)	2,000	10,000	10,000	May 16 May 20	Wearing of safety glasses during entire shift~Ret- urn of workers.
MANUFACTURING— <i>Iron and Steel Products—</i> La Fonderie Ste. Croix, Ste. Croix, Cte. Lotbiniere, Que.	Metal Trades Federation (CCCL)	113	450	7,460	Feb. 3 May 6	Reduction in wage rates~ Amended wage schedule agreed upon.
<i>Chemical Products—</i> Shawinigan Chemicals, Shawinigan, Que.	CCCL—chartered local	1,496	9,620	9,620	May 6 May 14	Seniority rights~Return of workers, seniority rights to be discussed.
CONSTRUCTION— Foundation Company of Canada, Gatineau, Que.	Building trades unions (Hull Council, AFL-CIO)	200	2,000	3,000	Apr. 25 May 16	Union recognition~Ret- urn of most workers.
Toronto Federation of Painting Contractors, Toronto, Ont.	Painters (AFL-CIO/CLC)	1,500	30,000	30,000	May 4	Wages~
TRADE— Three Hardware Firms, New Westminster and Vancouver, B.C.	Retail, Wholesale Em- ployees Loc. 535 (AFL- CIO/CLC)	590	9,740	9,740	May 6	Wages, seniority, fringe benefits~
FINANCE— Société Mutuelle d'Assurances Générales de l'U.C.C. Montreal, Que.	CCCL-chartered local	153	3,210	5,660	Apr. 7 May 24	Union recognition~Union recognized.
SERVICE— <i>Business Service—</i> Brink's Express Co. of Canada, Montreal, Que.	Teamsters Loc. 106 (Ind.)	160	160	160	May 13 May 14	Wages~15¢ an hour in crease of which 7¢ an hour is retroactive.
<i>Personal Service</i> Prince Edward Hotel, Windsor, Ont.	Hotel Employees Loc. 743 (AFL-CIO/CLC)	110	90	90	May 14 May 15	Wages~\$25.00 in lieu of retroactive pay from May 1, 1960; 4¢ an hour increase effective May 1, 1960, a further 3¢ increase effective May 1, 1961.

EXPLANATORY NOTES

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Department of Labour. The first three tables in this section contain data covering strikes and lockouts involving six or more workers and lasting at least one working day, and strikes and lockouts lasting less than one day or involving fewer than six workers but exceeding a total of nine man-days.

The developments leading to work stoppages are often too complex to make it practicable to distinguish statistically between strikes on the one hand and lockouts on the other. However, a work stoppage that is clearly a lockout is not often encountered.

The data on workers involved include all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Where the number of workers involved varied in the course of the stoppage, the maximum number is used for monthly totals, but adjustments are made for changes reported in the number of workers involved in work stoppages extending over two or more months. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included in the data on workers involved. Their number, however, if any, is shown in parentheses for the major work stoppages listed in Table G-4. The data in parentheses are those reported at an early stage of the work stoppage, and they refer only to the plant or premises at which the stoppage occurred.

Duration of strikes and lockouts in man-days is calculated by multiplying the number of workers involved in each work stoppage by the number of working days the work stoppage was in progress. Where the number of workers involved varied significantly in the course of the stoppage, an appropriate adjustment is made in the calculation as far as this is practicable. The duration in man-days of all stoppages in a month or year is also shown as a percentage of estimated working time, based on the corresponding monthly figure or annual average figure for non-agricultural paid workers in Canada. The data on duration of work stoppages in man-days are provided to facilitate comparison of work stoppages in

terms of a common denominator; they are not intended as a measure of the loss of productive time to the economy. For convenience of expression, however, duration in man-days is on occasion referred to as "time loss" in reviews based on this series.

The data on the distribution of work stoppages by industry in Table G-2 follow the Standard Industrial Classification, D.B.S.

In Table G-3 work stoppages are classified according to jurisdiction, whether federal or provincial. This is done on the basis of the governmental agency that intervened in the dispute. Where there was no such intervention the classification is, wherever possible, on the basis of the agency that previously dealt with labour matters in the establishment involved.

Work stoppages involving 100 or more workers are listed in Table G-4, which shows in each instance the employer(s) and the location of the premises at which the work stoppage occurred, the union(s) directly involved in the dispute, number of workers involved, duration in man-days, starting date (the first day on which normal operations were affected) and termination date. For work stoppages that are terminated by mutual agreement, the termination date is usually the day on which work was resumed. Work stoppages that have not been resolved in this way are as a rule considered terminated, for statistical purposes, at the date by which it was established that two-thirds or more of the workers involved had either returned to work, or had found work with other employers, or had been replaced by new employees; or the date by which it was reported that the operations affected by the work stoppage would not be resumed. Also shown in Table G-4 are the major issues, as far as known, that led to work stoppage, and the result, i.e., the terms of settlement of major issues where a settlement was reached when the work stoppage terminated, or the circumstances in which the work stoppage came to an end.

While the methods used to obtain data on work stoppages are not likely to lead to major omissions, it is not always possible, particularly on the preliminary basis, to obtain precise information in detail. Consequently the information in this section may not be accurate in all respects.

CORRESPONDENCE—Address letters dealing with editorial matters to the Editor, those dealing with subscriptions to the Circulation Manager. SUBSCRIPTIONS—Canada: \$2 per year, single copies 25 cents each; all other countries: \$4 per year, single copies 50 cents each; Send remittance by cheque or post office money order, payable to the Receiver-General of Canada, to The Queen's Printer, % Superintendent of Government Publications, Ottawa. All subscriptions payable in advance. SPECIAL GROUP SUBSCRIPTION OFFER—Five or more annual subscriptions, \$1 per subscription (Canada only). Send remittance, payable to the Receiver-General of Canada, to the Circulation Manager. BOUND VOLUMES—\$5 per copy delivered in Canada, \$7 per copy to other countries. CHANGE OF ADDRESS—Please attach label showing previous address.

Authorized as Second Class Mail, Post Office Department, Ottawa.

EMPLOYMENT REVIEW

ECONOMICS AND RESEARCH BRANCH

The Employment Situation, July

Employment increased somewhat more slowly between June and July than in the same period of most previous years. Unemployment increased slightly during the month instead of declining slightly, as it usually does at this time of year.

Agriculture was responsible for the rise in employment during the month, the number of persons with farm jobs increasing by an estimated 138,000 to 820,000. Employment in non-farm activities, which usually increases moderately, showed little change. Layoffs and temporary shutdowns were prevalent in manufacturing centres, and a considerable number of construction workers were released in Quebec. Construction employment in other regions, however, increased about as much as usual, and there were small advances in trade and transportation industries.

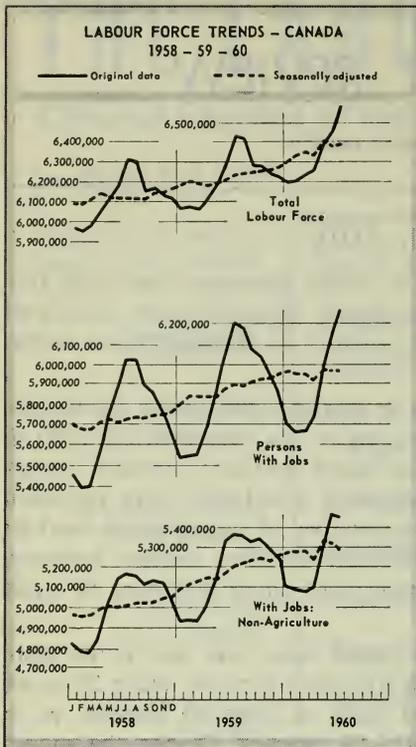

The annual influx of students into the labour force was one of the main developments of the month. There were 174,000 more persons under 20 years of age employed in July than in June—not quite as large an increase as in 1959 but almost 20,000 more than the 1955-59 average. During the month there was a drop of almost 50,000 job holders over 25 years of age. Many of these were school teachers who dropped out of the labour force for the summer months.

The estimated number of persons without jobs and seeking work increased by 11,000 to 311,000 between June and July. This total was 83,000 higher than in July 1959. The increase during the month occurred in Quebec and Ontario, partly because of layoffs in manufacturing and construction. The number on temporary layoff was estimated to be 18,000, compared with 15,000 in June and 12,000 in July 1959. The seeking work figure was 4.7 per cent of the labour force compared with 3.5 per cent in July 1959.

The number of men seeking work was estimated to be 260,000, up slightly from the previous month and 74,000 more than a year earlier. An estimated 51,000 women were without jobs and seeking work, unchanged from a month earlier but 9,000 more than last year.

Although the number of job seekers showed little net change during the month, there was considerable movement within the total. Of those seeking work in June, about 100,000 had found jobs or had withdrawn from the labour force by July. A slightly greater number became job seekers during the month. In July, about 57,000 had been seeking work for more than six months, virtually the same number as the month before and about 13,000 more than a year earlier.

The classification of the 110 labour market areas at the end of July was as follows (last year's figures in brackets): in substantial surplus, 3 (1); in moderate surplus, 54 (31); in balance, 53 (78).

The Labour Force

The labour force, as estimated from the monthly sample survey conducted by the Dominion Bureau of Statistics, totalled 6,592,000 in the week ended July 23. This total compares with 6,454,000 one month earlier.

The breakdown of these labour force data indicates that 5,927,000 or 89.9 per cent of those in the labour force usually worked 35 hours or more at the jobs they held in the survey week, 354,000 or 5.4 per cent usually worked less than 35 hours, and 311,000 or 4.7 per cent were without jobs and seeking work. Classed as not in the labour force are such groups as those keeping house, going to school, retired or voluntarily idle, too old or unable to work; these numbered 5,214,000.

The survey provides additional information about those who worked less than full time and were not regular part-time workers. Of the persons in this category, 60,000 or 0.9 per cent of the

labour force worked less than full time on account of short time and turnover (32,000 on short time, 12,000 laid off for part of the week, 10,000 having found jobs during the week); 18,000 or 0.3 per cent of the labour force were not at work because of temporary layoff, and 784,000 or 11.9 per cent of the labour force worked less than full time for other reasons. The other reasons included vacation (635,000), illness (74,000), bad weather (13,000), and other (62,000).

During the corresponding week in 1959, there were 6,434,000 in the labour force, of whom 5,879,000 usually worked 35 hours or more at the jobs they held during that week, 327,000 usually worked less than 35 hours, and 228,000 were without jobs and seeking work. There were 5,138,000 classed as not in the labour force.

COLLECTIVE BARGAINING REVIEW

ECONOMICS AND RESEARCH BRANCH

The number of major collective agreements at various stages of negotiation at the end of July—63—was lower than in any previous month this year. The most important of the outstanding negotiations, in terms of the number of workers involved, was the dispute between the railways and the 15 non-operating unions. During the month the conciliation board was in the process of reviewing the voluminous evidence presented by both parties and writing its report, which was expected to be presented to the Minister of Labour by the end of August.

During July, talks continued between the Steelworkers union and Dominion Bridge for renewal agreements affecting 4,000 workers at 11 plants across Canada. By mid-August, strikes were called at some of the plants and there were indications that these work stoppages might spread to the remaining ones.

Negotiations for the renewal of an agreement covering 6,000 **Canadair Limited** employees were initiated in mid-July by the **International Association of Machinists**. The union asked for a general wage increase of 7 per cent, which amount was in line with what had been decided upon at a recent conference of the union's North American aircraft locals. Other demands included a change in the vacation allowance to provide for three weeks paid vacation after 10 years of continuous service, instead of after 12 years, and a fourth week after 20 years of service. The union asked that the term of the new agreement be for one year. They also wanted the existing pension plan written into the agreement.

Conciliation services were applied for in the collective bargaining between the **Hydro Electric Commission of Ontario** and its 9,500 employees represented by the Ontario Hydro Employees Union, Local 1000 of the **National Union of Public Service Employees**. The 160-item bargaining agenda was reduced to some 30 items by direct negotiations before the assistance of a third party was requested. One of the points at issue was the union demand that the cost-of-living escalator clause be retained. This clause, which was last invoked in November 1959, allows for a 3-per-cent wage increase for each 3-per-cent boost in the cost-of-living index. In addition, the union requested that its 4,000 tradesmen and 900 operators receive a general wage increase of 4 per cent. For the 4,200 weekly salary employees, whose salaries range upwards from \$52 per week, the union asked for a 3-per-cent increase as well as a reduction in the work week from 37½ to 35 hours. The Commission reportedly was prepared to give some wage increases to the various categories of employees but wanted to delete the cost-of-living clause. By the end of the month a conciliation officer had been appointed but a meeting had not yet been arranged.

In July, a conciliation board released its recommendations for the settlement of the dispute between the **Seafarers' International Union** and the **Association of Lake Carriers**, representing five inland shipping companies. The majority report recommended a 12-per-cent wage boost to be paid in three equal instalments during the life of a two-year agreement; this was a compromise between the union request for an immediate 10-per-cent increase and

the company offer of 10 per cent spread over three years. In the Board's recommendation, the first 4-per-cent wage boost would be retroactive to the start of this year's navigation season, the next 4 per cent would be paid at the start of the 1961 season and the final 4 per cent at the start of the 1962 season. The Board report indicated that it took cognizance of the changing economic conditions in the inland shipping industry resulting from the increased competition and the new operating conditions arising out of the completion of the St. Lawrence Seaway. The union request for a reduced work week from 48 to 40 hours was rejected on the grounds that the nature of the Great Lakes operation precluded the granting of a shorter work week.

The SIU nominee filed a minority report in which he recommended that the union bid for a one-year agreement with a 10-per-cent increase retroactive to the start of navigation this year be granted. He also supported the union request for a 40-hour week.

Included in the 19 major settlements covering approximately 33,000 workers that were reached in July were new agreements in the pulp and paper industry both in eastern and western Canada. In British Columbia five pulp and paper companies jointly signed a one-year agreement that provided higher wages for a total of 4,700 workers, and in Newfoundland, Bowater's signed a one-year agreement with paper unions representing 3,400 employees.

Six months of negotiations ended during July with the signing of a new agreement for 1,600 drivers of 13 metropolitan **Toronto dairies**. A conciliation board had been established to deal with the dispute between the companies and the **Teamsters union**, representing the drivers. The first break in the negotiations came when Acme Farmers' Dairy, one of the major companies in the group, reached a separate settlement with the Teamsters while the board was still in progress. The dairy's 500 drivers received weekly pay increases ranging from \$3.85 to \$5.50 retroactive to March 1. Shortly thereafter the remaining companies reached a settlement that gave approximately 1,000 drivers wage increases ranging from \$3.85 weekly on the base rate to \$4.85 weekly on the maximum rates. The vacation clause was altered to provide three weeks annual

paid holidays to all employees with 12 years of service and four weeks for those with 25 years. The companies agreed to pay two-thirds of the cost of uniforms and \$20 annually as a tool allowance for mechanics.

Duration of Negotiations

As reported in last month's *LABOUR GAZETTE* (p. 657), a total of 95 major collective agreements covering more than 117,000 workers were signed during the first six months of 1960. Approximately half of these major agreements, affecting 53,000 workers, were in manufacturing, most of them in food and beverages, pulp and paper, non-metallic mineral products, rubber products and textiles. In mining, six out of twelve major settlements brought wage increases to uranium miners working in and around Elliot Lake, Ont. The two industrial sectors in which a substantial number of new agreements came into force during the period were transportation and communication, with 10 major agreements covering 20,000 workers, and the service industry, where 19,000 provincial and municipal employees and nearly 3,000 hospital employees received wage increases in 15 new major agreements.

Negotiations that preceded more than two-thirds of the settlements reached during the first half of 1960 were conducted for periods ranging from one to six months; well over one-half of these settlements were concluded after bargaining for three months or less. Of the negotiations that extended beyond six months, most of the major settlements came after seven to nine months of bargaining; in only four major agreements, covering 8,300 workers, talks extended beyond 13 months.

A relatively insignificant number of labour-management negotiations conducted during the first half of 1960 resulted in work stoppages. In Toronto 1,150 aircraft workers went on strike for eight days to bring about the settlement of their dispute with De Havilland Aircraft. Another work stoppage lasting 10 days preceded the signing of a new agreement with Canadian Aviation Electronics, Montreal. In addition to these, there was a work stoppage at the Dominion Textile mill in Magog, where a strike of 1,800 employees held up production at the mill for 4½ months. Although four of the company's plants were engaged in joint negotiations with the union, the Magog local was the only one involved in this work stoppage. The settlements reached while strikes were in progress accounted for only 3 per cent of the total major settlements reached during the first half of 1960.

Close to 60 per cent of the 95 major settlements were concluded by direct company-union negotiations. Of the 38 agreements signed after conciliation proceedings, fewer than one third required further direct discussions between the parties before agreements were signed.

(A summary of the major terms on the basis of information immediately available. Coverage figures are approximate.)

ASBESTOS CORP., THETFORD MINES, QUE.—MINING EMPL. FEDERATION (CCCL): 2-yr. agreement covering 1,650 empl.—increases ranging from 6¢ to 20¢ an hr. over the 2-yr. period retroactive to Jan. 1, 1960; 3 wks. vacation after 15 yrs. service (formerly 3 wks. after 10 yrs.); vacation eligibility date based on employees' anniversary date instead of June 1; improved shift premiums; improved sickness and hospital insurance benefits.

ASSOCIATION PATRONALE DU COMMERCE, QUEBEC, P.Q.—COMMERCE EMPL. FEDERATION (CCCL): 2-yr. agreement covering 1,900 empl.—increase in wages of \$2.50 per wk. for the first year and \$2.75 per wk. for the second year.

ASSOCIATION PATRONALE DES SERVICES HOSPITALIERS, QUE, P.Q.—SERVICES FEDERATION (CCCL) (FEMALE): 1-yr. agreement covering 900 empl.—increases ranging from \$4 to \$9 per wk. eff. June 15, 1960; retroactivity to be calculated at the rate of \$3 per wk. worked from June 15, 1959 to June 15, 1960; work week reduced from 48 to 44 hrs. with same take home pay eff. Jan. 1, 1961; 2 wks. vacation after 3 yrs. (formerly 2 wks. after 5 yrs.); sick leave credits may be accumulated; improved seniority clause; uniforms to be supplied by the hospitals.

ASSOCIATION PATRONALE DES SERVICES HOSPITALIERS, QUEBEC, P.Q.—SERVICES FEDERATION (CCCL) (MALE): 1-yr. agreement covering 550 empl.—wage increases ranging from \$4 to \$6 per wk. eff. June 15, 1960; retroactive pay to be calculated at the rate of \$3 per wk. worked, from June 15, 1959 to June 15, 1960; hrs. reduced from 48 to 44 per wk. eff. Jan. 1, 1961 with same take home pay; 2 wks. vacation after 3 yrs. (formerly 2 wks. after 5 yrs.); sick leave credits may be accumulated; improved seniority clause; uniforms now supplied by hospitals.

BOWATER'S NFLD. PAPER, CORNER BROOK, NFLD.—PAPER MAKERS (AFL-CIO/CLC), PULP AND PAPER MILL WKRS. (AFL-CIO/CLC) AND OTHERS: 1-yr. agreement covering 3,400 empl.—wage increase of 11¢ an hr. eff. June 1, 1960; additional increase of 4¢ an hr. eff. Dec. 1, 1960; 3 wks. vacation after 10 yrs. service (previously 3 wks. after 15 yrs.).

CITY OF WINNIPEG, MAN.—PUBLIC SERVICE EMPL. (CLC): 1-yr. agreement covering 3,700 empl.—wages increased by 5% to a maximum of \$20 per mo. eff. April 1, 1960.

CONSOLIDATED PAPER, PORT ALFRED, QUE.—PULP AND PAPER WKRS. FEDERATION (CCCL): settlement terms not yet available.

DAIRIES (VARIOUS), TORONTO, ONT.—TEAMSTERS (IND.): 1-yr. agreement covering 1,800 empl.—increase of \$3.85 a wk. on base rate; 3 wks. vacation after 12 yrs. service (formerly 3 wks. after 15 yrs.); 4 wks. vacation after 25 yrs. (formerly no provision for 4 wks. vacation).

DAVID & FRERE, MONTREAL, QUE.—EMPL. ASSOC. (IND.): 2-yr. agreement covering 625 empl.—6¢-an-hr. increase retroactive to May 23, 1960 and an additional 3¢-an-hr. eff. May 23, 1961; incorporation of existing cost of living into the wage structure; union shop.

FOOD—STORES (VARIOUS), VANCOUVER, B.C.—RETAIL CLERKS (AFL-CIO/CLC): 2-yr. agreement covering 2,400 empl.—wage increase of 10¢ an hr. retroactive to April 18, 1960 and a further 10¢ an hr. eff. April 18, 1961, with the exception of some female progression rates which are increased by 15¢ an hr. over the 2-yr. period; 3 wks. vacation after 5 yrs. (formerly 3 wks. after 7½ yrs.).

JOHNSON'S ASBESTOS, THETFORD MINES, QUE.—MINING EMPL. FEDERATION (CCCL): 2-yr. agreement covering 900 empl.—increases ranging from 6¢ to 20¢ an hr. over the 2-yr. period retroactive to Jan. 1, 1960; 3 wks. vacation after 15 yrs. service (formerly 3 wks. after 10 yrs.); vacation eligibility date based on employees' anniversary date instead of June 1; improved shift premiums; improved sickness and hospital insurance benefits.

POLYMER CORP., SARNIA, ONT.—OIL WKRS. (AFL-CIO/CLC): 1-yr. agreement covering 1,800 empl.—wage increase ranging from 6¢ to 10¢ an hr.; new base rate will be \$1.88 an hr.

PAPER MILLS (VARIOUS), B.C.—PULP AND PAPER MILL WKRS. (AFL-CIO/CLC): 1-yr. agreement covering 4,700 empl.—general increase of 4%; additional adjustment of 2¢ an hr. for mechanics; new base rate will be \$2.03 an hr.; improvement in vacations.

QUEBEC IRON AND TITANIUM, SOREL, QUE.—METAL TRADES FEDERATION (CCCL): 2-yr. agreement covering 800 empl.—7¢-an-hr. increase retroactive to Dec. 5, 1959; further 11.8¢ an hr. eff. July 25, 1960, and a further 9.8¢ an hr. eff. July 25, 1961; 1 additional statutory holiday making a total of 8; bereavement leave of 3 days for close relatives and 1 day for distant relatives; improved shift premium; overtime after 4 hrs. paid at the rate of double time.

QUEBEC NORTH SHORE PAPER, BAIE COMEAU, QUE.—PAPER MAKERS (AFL-CIO/CLC), PULP AND PAPER MILL WKRS. (AFL-CIO/CLC): 1-yr. agreement covering 1,000 empl.—increase in wages from 11¢ to 20¢ an hr. retroactive to May 1, 1960 and a further increase ranging from 4¢ to 8¢ an hr. eff. Nov. 1, 1960; eff. Jan. 1, 1961, 3 wks. vacation after 10 yrs. of service (formerly 3 wks. after 15 yrs.); 1 additional floating holiday making a total of 3 floating holidays; improved provision for bereavement leave.

R.C.A. VICTOR, MONTREAL, QUE.—SALARIED EMPL. ASSOC. (IND.): 1-yr. agreement covering 600 empl.—wages increased by 2¼% retroactive to May 16, 1960; 3 wks. vacation after 10 yrs. (formerly 3 wks. after 15 yrs.); improvement in hospital insurance clause.

SASK. POWER CORP., REGINA, SASK.—OIL WKRS. (AFL-CIO/CLC): 1-yr. agreement covering 2,200 empl.—regrouping of positions costing approximately 2% of wages; plus 2% increase to office empl. and 3% to field empl. retroactive to June 1, 1960; 4 wks. vacation after 25 yrs. of service (formerly no provision for 4 wks. vacation); increased shift differentials.

STEINBERG'S, MONTREAL, QUE.—EMPL. PROTECTIVE ASSOC. (IND.): 2-yr. agreement covering 3,000 empl.—increases ranging from \$1.50 to \$5.00 per wk. retroactive to June 4, 1960; hrs. reduced from 45 to 40 per wk. eff. June 4, 1960.

WINNIPEG TRANSIT COMMISSION, WINNIPEG, MAN.—STREET RAILWAY EMPL. (AFL-CIO/CLC): 18-mo. agreement covering 950 empl.—increases for bus drivers of 10½¢ an hr. retroactive to Mar. 20, 1960, a further 4¢ an hr. eff. Sept. 25, 1960 and an additional 4¢ an hr. eff. Mar. 26, 1961; 3 wks. vacation after 8 yrs. of service (formerly 3 wks. after 10 yrs.); 4 wks. vacation after 25 yrs. of service (formerly no provision for 4 wks. vacation); improved sick pay benefits and extended period of eligibility for payments.

NOTES OF CURRENT INTEREST

Winter Works Incentive Program Renewed, Expanded

The Municipal Winter Works Incentive Program will be continued this coming winter, the Prime Minister announced in the House of Commons on July 23.

In addition, the announcement said, several features of the Program, which began two years ago, will be extended.

"Due to the results achieved in the experience of these past two years," Mr. Diefenbaker said, "and in response to requests from the provinces, municipalities and other bodies, the Government has decided to continue the program during the coming winter and to extend it in a number of important respects."

During the past two years, he explained, the classes of projects coming within the scope of the Program have been broadly: (a) the construction and major improvement of municipal roads, streets, sidewalks and bridges; (b) the construction and major improvement of municipal water and sewage facilities; and (c) the construction and development of municipal parks and playgrounds.

"It is now proposed to considerably extend the range of this program, and in addition to the classes of projects already included, the incentive payment of 50 per cent of the labour costs will be made applicable during the coming winter to the construction, major reconstruction, major alteration or revocation of municipal buildings, not, however, including schools or hospitals, provided the federal incentive payment on new structure does not exceed \$50,000 on each structure," the Prime Minister said.

The Program will also be broadened by the inclusion of certain projects not hitherto applicable, including street lighting, traffic signals, municipal parking lots, water and sewage treatment plants, pumping stations and water towers.

The 1960-61 program applies to projects carried out during the period December 1, 1960 to April 30, 1961.

"This extension, I hope, will encourage all municipalities with a backlog of needed projects to expand their winter works program substantially.

"The broadening of the Program to include a wide range of municipal buildings

should materially increase winter work, particularly for building tradesmen, who regularly constitute a large proportion of the seasonally unemployed workers each winter, as well as for many workers engaged in the production of building supplies," Mr. Diefenbaker said.

When announcing the decision to continue and expand the Program, the Prime Minister reported the results of last winter's program: 860 municipalities participated, more than 51,000 men received on-site employment on some 2,600 individual projects involving close to two million man-days of work. "It is not unreasonable to assume that at least an equal number of man-days were provided indirectly in manufacturing and servicing material that went into these projects," he said.

All the figures he gave were higher than those of the previous winter.

The estimated federal government share of the costs of the 1959-60 program amounted to \$12,565,000. At the present session of Parliament, the House of Commons voted \$15,000,000 for the program.

During the past two winters, a number of provinces offered additional incentives for winter works projects undertaken by their municipalities. Already this year, Premier Jean Lesage of Quebec has said in an interview that his Government was considering the possibility of making a provincial contribution to municipal winter works projects.

Under the terms of the Program the federal government offers to pay one half of the direct payroll costs of a municipality or its contractors or subcontractors on accepted winter works projects, such projects to include work that would not normally be undertaken during the winter months and to be designed to create additional employment.

Preference is to be given to those projects providing the greatest amount of employment, and priority is to be given to projects in areas where winter unemployment is particularly high.

The bulk of those employed under the plan must be unemployed when they are hired, or persons who would be unemployed in the absence of special winter works projects under the Program.

Provincial Governments are relied on to ensure that going wage rates apply on winter work projects, and that reasonable hours of work prevail.

Earlier in the month, on July 18, the Minister of Public Works announced a major change in the Government's policy for direct mortgage loans, designed to stimulate house building during the winter and increase winter employment in construction.

From September 1 to November 30, applications for direct loans will be accepted from builders unable to obtain commitments from approved lenders, provided the builder can show that the house on which the loan is to be made has been sold to a *bona fide* purchaser whose gross annual income does not exceed \$7,000 for families of two children or less, with upward adjustments of \$200 for families of three, four and five or more children, to a maximum of \$7,600.

Applications will be accepted, too, from individual home-owner applicants who are unable to obtain commitments from approved lenders, provided the gross annual income does not exceed the limitations mentioned above.

Raymond Brunet, Past President of the Canadian Construction Association and Chairman of the National Joint Committee on Wintertime Construction, in an address at the end of July urged municipal governments to start the necessary planning immediately to make full use of the expanded program of federal subsidies for winter works projects.

"Last year there were complaints that some local councils could not complete the necessary preparatory work in order to participate," Mr. Brunet said. "We are accordingly very pleased that this year's announcement was made on July 23 compared with September 3 in 1959. It is now up to the municipalities to use the next four months to complete their necessary planning and financing arrangements."

Increase Federal Contribution To Training of Unemployed

The Government has decided to increase its contribution towards the training of unemployed workers from 50 to 75 per cent, the Minister of Labour announced in the House of Commons on July 23.

"In order to encourage the provinces that have operated substantial training programs over the past years," he added, "as well as to stimulate such training in other provinces, it is proposed that the increased

federal contribution will take effect when the volume of training given to unemployed workers by a province is above a minimum."

The minimum is to be based on the average annual number of days of training provided over the past four years as a percentage of the total adult population in those provinces that have had active training programs for unemployed workers.

"When this minimum amount of training is given by a province," the Minister said, "the higher rate of federal contribution will come into effect and will apply retroactively for all costs incurred in the training of unemployed workers during the fiscal year."

Before making the announcement, Mr. Starr pointed out that "changes taking place in many of our industries demand more highly skilled workers, and it is essential that many of those unemployed today receive additional training in order to fit into job opportunities on a continuing basis."

In reaching its decision to increase the federal contribution, the Government was strongly influenced by a recommendation of the Vocational Training Advisory Council, the Minister said.

Department Issues Monograph On Occupations in Offices

A new monograph entitled *Office Occupations* has been issued by the Department of Labour. This monograph, No. 46 in the "Canadian Occupations" series, covers more than 25 occupations found in offices.

In a general section this monograph deals with the office as a field of employment, including its history and importance, trends, education and training, personal qualifications, entry, and working conditions.

Office workers are classified into the secretarial group, the public contact group, records and processing clerks, the accounting group and office machine operators. For each of these occupations, the monograph outlines the duties, the outlook for advancement, and the salaries.

This 64-page booklet is the first in the series with the modernized cover design, and is well illustrated with charts and photographs. It sells for 20 cents.

The "Canadian Occupations" series is prepared by the Department's Economics and Research Branch.

All publications in the series are available from the Queen's Printer, Ottawa. A price list may be obtained on request.

A. F. MacArthur, UIC, Speaks At IAPES Annual Convention

"Progress Through Better Communications" was the theme of the 47th Annual Convention of the International Association of Personnel in Employment Security, held at Colorado Springs, Colo., June 28 to July 1.

Among the convention speakers was A. F. MacArthur, Commissioner, Unemployment Insurance Commission, who spoke on "Canada in an Age of Progress and Communications."

The meeting was attended by more than 1,300 delegates, from the United States, Canada, Ghana, India, Indonesia, Japan, Nigeria and Turkey.

U.S. Under Secretary of Labor James T. O'Connell, in his keynote address, called attention to two problems: the plight of the older worker, and the entire field of farm and migratory labour. Additional challenges were presented, he said, by continued modernization of the unemployment insurance system and long-term structural unemployment.

Robert C. Goodwin, Director, U.S. Bureau of Employment Security, said effective development and utilization of manpower resources may become the nation's most important economic problem. He urged all persons engaged in employment security work to provide dedicated service for all workers and employers "and all groups who are concerned with the employment process."

William P. Cahill, Executive Secretary of President Eisenhower's Employ the Physically Handicapped Committee, said the old stereotype of the physically handicapped worker has been replaced by a new image—an image that recognizes the individual's qualities. This will be remembered as "the age of the one-legged halfback, the blind collegiate wrestling champ, of wheelchair basketball and amputee baseball," he said.

During a convention workshop on "Removing Barriers to Effective Communications," Harry J. Thompson, Prairie Regional Employment Officer, Unemployment Insurance Commission, reported that every UIC employee is entitled to 10 hours of formal instruction each month and that the first half hour is devoted to effective communications.

Benjamin Cohen of Baltimore was elected President for 1960-61. Marcel Guay, Montreal, Quebec Regional Superintendent for UIC, was elected Second Vice-President.

Other Canadians elected to office were: Leslie T. Fraser, Winnipeg; Frank G. Beau-doin, St. Catharines; Hamilton Baird, Monc-

ton. All were elected members of the IAPES Executive Board.

Mr. Guay was named Chairman of the Association's finance committee. Mr. Beau-doin was named to the essay contest committee, and Mr. Fraser to the administrative organization committee.

The 1961 convention will be held in Washington.

Automation's Introduction Slows Growth of Office Employment

The immediate general effect of the introduction of electronic data processing in offices seems likely to be some slowing down in the growth of employment, especially with regard to routine part-time jobs for which women are hired, according to the findings of a survey, covering 20 large firms, by the United States Bureau of Labor Statistics.

During the four years covered by the survey, from December 1953 to December 1957, employment in the 17 offices for which data were available increased on the average by 7 per cent. This compared with a rise of 15 per cent reported for clerical and kindred workers in the United States as a whole.

The installing of a computer was found to involve a sequence of administrative, technical and staff changes that, on the average, extended over three years; and this period of preparation made it possible to avoid extensive dislocation of employees' positions. The reduction in the work force was effected mainly by curtailing hiring of new employees who would normally have been engaged to cover wastage of the work force.

A year after the introduction of the computer, about a third of the 2,800 employees in the units affected had been placed in other positions, either in the same unit or elsewhere in the office. The majority remained in the same position. Nearly a sixth had quit, retired, died, or had taken leave of absence. Nine persons had been laid off. Employment in the affected group was about 9 per cent less at the end of the year.

"A little under 2 per cent, a total of 52 persons, were transferred from the affected group to electronic data-processing jobs. Most of these had been doing administrative, accounting, or tabulating-machine work; only a few, chiefly for equipment operation, came from the routine clerical work," the report on the survey says.

"Close to one third of the employees in the affected group had been promoted to a

higher grade. A negligible number had been downgraded."

Owing to general policies assuring job security, the seniority provisions of union agreements, and similar protective provisions, older employees were less affected by change in job status than the younger workers. On the other hand, the older employees were not promoted to the newly created electronic positions to the same extent as the younger workers, nor were they taken on as trainees.

"Where employers have formed opinions about the inflexibility or lack of adaptability of older workers, the introduction of electronic data processing may intensify any pre-existing reluctance to hire or promote them," the report says. "The examples of the successful performance of older employees in these new positions in the offices studied reinforce the findings of research workers on the variability in learning capacity at all ages and underscore the importance of individual appraisal of employees in this field as in others."

Says Strike Still Essential Part Of Bargaining Only in Canada, U.S.

"Only in the United States and Canada is the strike still an essential element in a private collective bargaining system, sufficiently frequent to constitute a significant method of determining conditions of employment, and sufficiently long to test the staying power of workers and employers."

This statement is taken from a paper by Arthur M. Ross, Professor of Industrial Relations and Director of the Institute of Industrial Relations of the University of California.

The study on which Prof. Ross based his report covered 15 countries throughout the world: two in North America, nine in Europe, two in Asia, one in Africa, and one in Australia. The period covered was from 1900 to 1956.

"There has been a pronounced decline in strike activity throughout countries with free labour movements," the paper says. "Man-days of idleness in the late 1950's are fewer than in the late 1940's or the late 1930's, despite increases in population and union membership.

"The ratio between the number of strikers and the number of union members—one of the significant measures of industrial conflict—has been falling off in most of the countries... The ratio between man-days of idleness and the number of strikers, a measure of duration, has fallen greatly in every country studied."

The falling off in the frequency of strikes has been particularly marked in Northern Europe, "where strikes occur so infrequently that they no longer play a significant role in the conduct of industrial relations. The right to strike survives and is accorded its customary veneration but is seldom utilized in practice," Prof. Ross says.

In some other countries, notably Australia—where more than 60 per cent of recent strikes have lasted no more than one day and 90 per cent less than a week—and in the Mediterranean and Asiatic countries, strikes are frequent, but of short duration.

The paper distinguishes several "patterns of industrial conflict." The "Northern European Pattern—First Variant" is characterized by "a nominal propensity to strike and a low or moderate duration." The countries it covers are Denmark, The Netherlands, and Germany, with the United Kingdom on the borderline.

The second variant of the Northern European Pattern "is defined by nominal participation and high duration. In other words, there are few stoppages, but those which do occur are long." Norway and Sweden are in this category.

The Mediterranean-Asian Pattern, which covers France, Italy, and Japan, is one of very frequent but very short strikes. In India strikes are longer, but the situation is much the same.

"The North American Pattern of strike activity (United States and Canada) denotes high or medium participation rates as well as unusually long duration of strikes."

The three remaining countries, South Africa, Australia, and Finland, are hard to classify, because, although they "fit" well enough into one or another pattern, the explanations do not.

A number of reasons are given for the growing infrequency of strikes. These include: a degree of reconciliation between managements and unions; the greater prominence of the state "as an employer of labour, economic planner, provider of benefits, and supervisor of industrial relations," and in many countries (but not in the United States) the forsaking of the strike by the labour movement in favour of "broad political endeavours."

Regarding government intervention in industrial disputes, Prof. Ross remarks: "Government techniques of disputes settlement have contributed to the elimination of strikes where they support the collective bargaining system or provide a workable substitute. Where they obstruct and impede collective bargaining, as in Finland and Canada, they probably increase the amount of conflict."

Referring to conditions in the labour movement itself that may increase or diminish resort to strikes, the article says that "rival unionism is a potent cause of strikes where rivalry is pursued on the basis of comparative gains in collective bargaining."

Number of Blind Pensioners Drops; of Disabled, Increases

The number of persons receiving old age assistance in Canada increased from 98,773 at March 31, 1960 to 99,581 at June 30, 1960.

The federal Government's contributions under the federal-provincial scheme totalled \$7,654,709.21 for the quarter ended June 30, 1960, compared with \$7,630,321.96 in the preceding quarter. Since the inception of the Act, the federal Government has contributed \$197,051,570.44.

At June 30, 1960, the average monthly assistance in the provinces ranged from \$48.65 to \$52.96, except for one province where the average was \$46.11. In all provinces the maximum assistance paid was \$55 a month.

Blind Persons Allowances

The number of blind persons in Canada receiving allowances under the Blind Persons Act decreased from 8,671 at March 31, 1960 to 8,665 at June 30, 1960.

The federal Government's contributions under the federal-provincial scheme totalled \$1,039,443.43 for the quarter ended June 30, 1960, compared with \$1,044,012.18 in the preceding quarter. Since the inception of the Act, the federal Government has contributed \$28,433,438.64.

At June 30, 1960, the average monthly allowance in the provinces ranged from \$50.23 to \$54.08. In all provinces the maximum allowance paid was \$55 a month.

Disabled Persons Allowances

The number of persons in Canada receiving allowances under the Disabled Persons Act increased from 49,889 at March 31, 1960 to 50,365 at June 30, 1960.

The federal Government's contributions under the federal-provincial scheme totalled \$4,099,434.75 for the quarter ended June 30, 1960, compared with \$4,079,489.78 in the preceding quarter. Since the inception of the Act, the federal Government has contributed \$59,824,225.45.

At June 30, 1960, the average monthly allowance in the provinces ranged from \$52.67 to \$54.58. In all provinces the maximum allowance paid was \$55 a month.

Issue Two More Trade Analyses: Cooking, Radio and TV Repairing

Two more analyses in the series designed to help in the development of uniform trade standards in Canada have now been issued. They are: *Analysis of the Cooking Trade, Commercial and Analysis of the Radio and Television Service Trade.*

The first analysis incorporates all basic operations that a tradesman should have mastered before he can be considered proficient. The second analysis is a tabulation of essential operations and procedures that a competent repairman could be able to perform with skill and competence.

Both analyses were prepared by national committees appointed by the Department of Labour. They are available from the Queen's Printer, Ottawa, at a cost of 50 cents a copy.

Queen's University Reconstitutes Industrial Relations Department

With the retirement at the end of September of Prof. J. C. Cameron, who served 23 years as head of industrial relations at Queen's University, the Department of Industrial Relations will be reconstituted as the Industrial Relations Centre within the Department of Political and Economic Science. The new Department will be under the direction of Dr. W. Donald Wood.

Dr. W. Donald Wood

Booklet Tells Story of National Employment Service

The Unemployment Insurance Commission has just published a new pamphlet describing the work of Canada's National Employment Service under the title, *NES, Geared to Canada's Employment Needs*.

"This story of the National Employment Service tells something of how it goes about its job of helping to ensure the best and fullest use of the nation's human assets," the pamphlet says. "The NES in developing this service has established more than 200 local offices to serve every major centre from Newfoundland to British Columbia. Each office is staffed with trained personnel, experienced in dealing with the diversified labour requirements of employers from all

fields of endeavour. At each office, qualified employment officers advise and assist men and women of any age or occupation in their quest of suitable employment."

The pamphlet describes the various branches of the work of the NES: its facilities for serving, first the general public, and secondly the special needs of employers and employees in regard to executive and professional workers, the handicapped and the older worker, and part-time workers; also job guidance for young people, upgrading of personal skills and abilities, and studies of education in relation to the demands of industry and commerce.

HOUSE OF COMMONS DEBATES

A Guide to Items of Labour Interest in Hansard

(page numbers refer to pages in Hansard)

June 24—*Bill to amend the Civil Service Act* will remain on the order paper, to be introduced again at the next session, and a committee will be set up at that time to go thoroughly into the matter, the House agrees (p. 5357).

June 27—*Bill C-79*, for the recognition and protection of human rights and fundamental freedoms, introduced by Hon. Howard Green (for the Prime Minister) and read the first time (p. 5415).

Bill C-80, to amend the *Canada Shipping Act* regarding pilots and pilotage, introduced and read the first time (p. 5415). Motion for second reading (p. 5443) agreed to and, after a statement by the Minister of Transport and discussion by Members, the Bill is read the second time and referred to the standing committee on railways, canals and telegraph lines (p. 5451).

Request for full investigation into the causes and cure of unemployment, from the Ontario Association of Mayors and Reeves, had not been received by him, the Minister of Labour says in reply to a question. The Department of Labour is continually looking at the unemployment situation, and reports are being made from time to time, the Minister said in reply to another question as to whether the Government had undertaken a scientific study of the unemployment problem (p. 5418).

Second reading of Bill C-76, to amend the *Public Service Superannuation Act*, moved by the Minister of Finance (p. 5437). After discussion, the motion was agreed to and the Bill read the second time, and referred to a special committee (p. 5443).

By encouraging shipbuilding in every possible way, the federal Government could bolster dwindling employment in Canadian shipyards, says Hubert Badanai (Fort William) during consideration of Department of Transport estimates (p. 5451).

Policy of the railways in "curtailing important services at an exceedingly rapid rate and discharging in large numbers men who have had many years' service, thus causing untold hardship to employees of long standing," deplored by Hazen Argue (Assiniboia) during consideration of Department of Transport estimates (p. 5452).

June 28—*Dismissals on the railways* should be halted, for a period there should be a freeze in the staff of the railways, and there is need for a Royal Commission to inquire into the operations of the railways as they affect the livelihood and welfare of their employees, Hazen Argue suggests during consideration of Department of Transport estimates (p. 5507).

June 29—"We are not aware of German immigrants leaving Canada. My department does not keep records of those immigrants who leave," the Minister of Citizenship and Immigration replies to a question, prompted by press reports, concerning the reasons why these immigrants were leaving (p. 5537).

June 30—*Employable persons who received financial assistance* from immigration officials during the month of May numbered 1,145, the Minister of Citizenship and Immigration says in reply to a question. Of this group, only 287 had been on subsistence for a period of more than two weeks. Most of those who received help did so in periods between employment or just after their arrival (p. 5580).

July 1—*Second reading of Bill C-79*, concerning human rights, moved by the Prime Minister (p. 5642). Enactment of a bill of rights by constitutional amendment "is impossible of attainment at this time," the Prime Minister says during his statement on the Bill, "because the consent of the provinces to any interference with property and civil rights cannot be secured." (p. 5648) The House adjourned without question put (p. 5652).

July 4—*Debate on motion for second reading of Bill C-79*, for recognition and protection of human rights and fundamental freedoms, continues (p. 5657). Amendment calling for consultation with the provinces regarding the possibility of a constitutional amendment moved by Harold E. Winch (Vancouver East) (p. 5692). The House adjourned without question put.

July 5—*Refusal of accommodation* to three negro tourists from the United States by a hotel in Buckhorn, Ont., falls within the jurisdiction of the provincial legislature, the Prime Minister says in reply to a question (p. 5722).

Appointment of a Royal Commission to inquire into conditions in the automobile industry, or the making of a survey by the Tariff Board similar to that made in 1934, which had been proposed by a deputation of the United Automobile Workers, will receive immediate consideration, the Prime Minister says in reply to a question (p. 5723).

Debate continues on motion for second reading of Bill C-79, for recognition and protection of human rights and fundamental freedoms (p. 5726). The amendment moved by Mr. Winch is defeated, 191 to 7 p. 5784). The House adjourned without question put.

July 6—*The Unemployment Insurance Fund* incurred a loss of \$8,415,446 in the sale of bonds of \$139,653,000 (par values) and acquired a profit of \$190,415 from sales of treasury bills of \$96,490,000 (par values) in the period November 1959 to March 1960, the Minister of Finance replies to a question (p. 5793).

A severe shortage of labour exists at the present moment at Elliot Lake, according to officials of the Denison mines, the Minister of Labour says in replying to a question (p. 5796).

July 7—*Debate on motion for second reading of Bill C-79* (human rights) resumed (p. 5884 and 5931) and the motion passed unanimously after long discussion. The Bill was read the second time and referred to a special committee (p. 5951).

July 8—*Where there is a labour dispute*, referral slips given to persons referred to

jobs by the NES must contain a note to the effect that the place of business is involved in a dispute, and this rule is strictly adhered to by all NES offices, the Minister of Labour says in reply to a question about a complaint by the Secretary of the British Columbia Federation of Labour that the Vancouver office was referring men to two hardware firms that had locked out their regular employees (p. 5954).

Unemployment insurance regulations could not be amended so that benefits might be paid to some 450 Glace Bay coal miners out of work owing to cutbacks in the industry, as the United Mine Workers requested, the Minister of Labour says in reply to a question (p. 5955).

An anti-discrimination clause will be inserted in their mortgages by Central Mortgage and Housing Corporation, the Minister of Public Works says in answer to a question, adding that this applies to their direct lending (p. 5958).

July 11—*Motion to go into committee to consider Bill C-76*, to amend the Public Service Superannuation Act, is agreed to and the House went into committee (p. 6021). After consideration in committee, the Bill is read the third time and passed (p. 6034).

In provinces operating hospital insurance programs on a premium basis, no consultation with the federal Government precedes an increase in premium rates, the Minister of National Health and Welfare says in reply to a question. Since January 1, 1959, Manitoba is the only province that has made an upward revision of premium rates (p. 6087).

July 13—*No evidence of exodus from Canada* of any substantial number of German immigrants has been found by her Department after investigation of a report to that effect, the Minister of Citizenship and Immigration says in answering a question (p. 6180).

Government will give consideration to the amendment of the powers of the Royal Commission on Transportation to enable it to inquire into the reduction of rail services and the layoff of personnel, the Prime Minister says while replying to a question on the proposed transfer of CNR passenger car repair work from the London shops (p. 6180).

July 14—*Royal Assent* given to an act to amend the Public Service Superannuation Act, Mr. Speaker informs the House (p. 6313).

July 15—*Bill C-84*, to amend the *Income Tax Act* in respect of profit-sharing plans, introduced and read the first time. The Bill will not be proceeded with at the

present session, in order that interested organizations and individuals may have ample time prior to the next session to study it and bring forward suggestions, the Minister of Finance explains (p. 6342).

Actual loss to the Unemployment Insurance Fund during the fiscal year 1959-60 was \$133,918,924.56, the Minister of Finance states in reply to a question, and the present market value of the Fund, less advances, is \$251,805,741.13 (p. 6342).

Letter to the British Columbia Federation of Labour in answer to its complaint about the referral by the National Employment Service of workers to two Vancouver hardware firms whose employees were on strike is read by the Minister of Labour. The letter explains the Unemployment Insurance Commission's policy concerning labour disputes (p. 6344).

July 18—*Statement on Government housing policy* read by the Minister of Public Works. He announced that the income limitation on applicants seeking direct loans from Central Mortgage and Housing Corporation will be increased effective September 1 from the present range of \$5,000 to \$5,600 to a range of \$7,000 to \$7,600, and, effective from the same date, the Corporation will accept applications for direct loans from merchant builders, provided the house on which the loan is to be made has been presold (p. 6403).

The Act to amend the Public Service Superannuation Act came into effect on receiving Royal Assent (July 14), the Minister of Finance explains in a clarifying statement (p. 6410).

Bill C-80, to amend the Canada Shipping Act respecting pilots and pilotage, considered in committee (p. 6413).

July 19—*Persons who apply for entry to Canada* are given permission to come forward on the basis of their adaptability and the particular trade or skill in which they are employed, as well as the availability of employment in that particular trade or skill, the Minister of Citizenship and Immigration says in reply to a question. "I know of no large scale influx of unplaced persons." (p. 6486).

Germans who were brought to Canada to act as technical advisers to Associated Mining Construction Ltd. of Esterhazy, Sask., are being used only in essential maintenance work to protect the shaft during a strike, the Minister of Citizenship and Immigration says in reply to a question concerning complaints that they were being used as strike-breakers (p. 6486).

Bill C-80, to amend the Canada Shipping Act respecting pilots and pilotage, read the third time and passed (p. 6491).

Amendment calling for an increase in old age pensions to \$75 a month moved by M. W. Martin (Timmins) when motion made to go into committee of supply (p. 6491). Amendment to the amendment, calling for, among other things, the vesting of benefits in industrial pension schemes, moved by the Leader of the Opposition (p. 6509). The House adjourned without question put.

July 21—*Bill C-86, to regulate extra-provincial trucking* by control by a joint board of licensing and tariffs and to repeal the Motor Vehicle Transport Act, introduced and read the first time (p. 6679).

Trans-Canada Highway estimates and those of Central Mortgage and Housing Corporation among those passed (p. 6714 and p. 6716).

July 23—*Municipal Winter Works Incentive Program* will be continued during the coming winter, the Prime Minister announces, and will be extended "in a number of important respects." In addition to the classes of projects eligible for federal incentive payments in the past two winters, the payment—50 per cent of labour costs—will be made applicable "to the construction, major alteration or renovation of municipal buildings, not, however, including schools or hospitals, provided the federal incentive payment on new structure does not exceed \$50,000 on each structure." (p. 6816).

Federal contribution to the training of unemployed workers will be increased from 50 to 75 per cent of the total cost, the increase to take effect when the volume of training given to unemployed workers by a province is above a minimum, the Minister of Labour announces (p. 6819).

Average labour content of all the municipal winter works projects is 34.5 per cent, the Minister of Labour says in reply to a question (p. 6823).

July 25—*Proposed Organization for Economic Co-operation and Development* will in no way limit or change the nature of existing aid programs such as the Colombo Plan, the Parliamentary Secretary to the Minister of Finance says when presenting a report on meetings in Paris to consider the establishment of the proposed organization (p. 6879).

July 26—*Painters from the United States* were given permits to work on the smoke stack of the Vancouver General Hospital because no local workmen were qualified to do high stack repair and maintenance work, the Minister of Labour explains in answer to a question (p. 6947).

Industrial and Geographic Distribution of Union Membership in Canada, 1959

Survey of individual union locals provides breakdown of union membership in Canada—close to 1½ million in 1959—by industry, province, labour market area

At the beginning of 1959 union membership in Canada was close to 1,459,000, according to survey returns received by the Economics and Research Branch of the Department of Labour directly from national and international union headquarters, central labour congresses and independent local organizations. The data obtained from the survey were published in the 1959 edition of *Labour Organizations in Canada*, a handbook which contains statistical tables on union membership and a comprehensive directory of labour organizations with names of their principal officers and publications, and the distribution of their locals. The statistical data contained in the handbook are Canada-wide totals broken down by congress affiliation and type and size of union.

The tables presented below supplement that information by showing the distribution of union membership in Canada by industry, province and labour market area. The tables are based on a separate survey directed at the beginning of the year to individual union locals across the country. In this survey, each union local was requested to report the total number of its members and the industry and location in which all or most of them were employed. Some locals, accounting for close to 6 per cent of the membership total, indicated that their members were dispersed throughout many locations in different areas or provinces, and these locals are classified separately in the accompanying tables.

The first of the four tables shows the distribution of union membership by industry on the basis of the DBS Standard Industrial Classification. The data in this table are shown for the most part on the "major group" level. In instances where more detail could usefully be provided, care was taken to adhere to combinations of recognized industrial sub-groups. For the railway industry, which is not further subdivided in the standard classification system, subtotals are provided to show the division of membership between the operating and non-operating sectors.

Included as a supplement to the first table, Table 2 shows in alphabetical order the names of international, national and

regional unions or independent local organizations that account for more than one-tenth of the union membership within the industry groups. The table thus does not necessarily show all organizations active within any particular industry group, but only those having more than 10 per cent of the organized workers in the group.

In Table 3 union membership in Canada is broken down by province, and Table 4 shows its distribution by labour market area. The boundaries of the labour market areas dealt with in Table 4 are broader than those of the centres for which the areas are named. In general, a labour market area corresponds to the area served by a local office of the National Employment Service. In some cases labour market areas consist of two or more NES local office areas. These composite areas are identified by an asterisk and the local office areas they comprise are listed in the Appendix to Table 4.

At the beginning of 1959 close to 7,000 union locals were active in Canada, and although the survey met with a generally excellent response, not all of the locals supplied the required data. The number of locals from which no information was on hand appears in Tables 1 and 3. The corresponding entry for these locals in the membership column in Tables 1 and 3 represents the difference between the Canada-wide membership total based on the survey of union headquarters mentioned earlier and the membership reported by the responding locals.

The uneven quality of the basic source data and the practical difficulties inherent in the processing of the returns necessarily reduce the accuracy of the results. The statistics presented here, therefore, indicate only in a broad and approximate way the industrial and geographic distribution of organized labour in Canada.

The information for this article was obtained by the Collective Bargaining Section of the Economics and Research Branch from local union secretaries, whose co-operation is gratefully acknowledged.

TABLE 1—UNION MEMBERSHIP BY INDUSTRY, 1959

Industry	Locals	Membership
Logging*	19	39,300
Fishing	16	5,700
Mining	160	53,300
Metal.....	72	32,300
Fuels.....	47	12,500

LABOUR MARKET AREAS COMPRISING TWO OR MORE LOCAL OFFICE AREAS

Labour market areas appear in bold type, followed by names of the component N.E.S. local office areas in light type.

Québec

Farnham-Granby: Cowansville, Farnham, Granby. **Gaspé:** Causapsal, Chandler, Gaspé, Matane, New Richmond. **Lac St. Jean:** Chicoutimi, Dolbeau, Jonquière, Port Alfred, Roberval, Ville d'Alma. **Lachute-Ste Thérèse:** Lachute, Ste Thérèse. **Montreal:** Montréal, Ste Anne de Bellevue. **Québec-Lévis:** Lévis, Québec. **Quebec North Shore:** Baie Comeau, Forestville, La Malbaie, Sept Iles. **Rouyn-Val d'Or:** Rouyn, Val d'Or. **Ste Agathe-St Jérôme:** Ste Agathe, St Jérôme. **Sherbrooke:** Magog, Sherbrooke, **Thetford-Mégantic-St Georges:** Mégantic, Thetford Mines, Ville St Georges, **Trois Rivières:** Louiseville, Trois Rivières.

Ontario

Belleville-Trenton: Belleville, Trenton. **Fort William-Port Arthur:** Fort William, Port Arthur. **Niagara Peninsula:** Fort Erie, Niagara Falls, Port Colborne, St. Catharines, Welland. **Ottawa-Hull:** Hull, Que., Ottawa, Ont. **Sudbury:** Elliot Lake, Sudbury. **Timmins-Kirkland Lake:** Kirkland Lake, Timmins. **Toronto:** Long Branch, Newmarket, Oakville, Toronto, Weston. **Woodstock-Tillsonburg:** Tillsonburg, Woodstock.

British Columbia

Central Vancouver Island: Courtenay, Duncan, Nanaimo, Port Alberni. **Okanagan Valley:** Kelowna, Penticton, Vernon. **Trail-Nelson:** Nelson, Trail. **Vancouver-New Westminster:** Mission City, New Westminster, Vancouver.

Two Broadcasts on Older Worker Problem

George G. Blackburn and Ian Campbell of the Department of Labour deliver talks on Department's weekly radio program, "Canada at Work," heard over 79 stations

Two broadcasts dealing with the problem of the employment of older workers were presented over the Department's weekly radio program, "Canada at Work," during July and August. The program is carried by 79 independent stations from coast to coast.

The speakers were George G. Blackburn, Director of Information of the federal Department of Labour, and Ian Campbell, National Co-ordinator of Civilian Rehabilitation and Chairman of the Interdepartmental Committee on the Problem of the Older Worker. Complete texts of their talks follow.

George G. Blackburn

How often have you said to yourself—'Gad! I'm getting stupid; I must be getting old! We say it when we forget an appointment, misplace a file, are unable to solve a complex problem, forget the birthday of a relative, and so on. We have said it so often, and we have heard it said so often, that we firmly believe that with each passing year we have less mental ability.

However, we should start being honest with ourselves. If we look back over our childhood, we can recall a whole series of missed appointments, misplaced articles,

school examination problems we couldn't solve, and our ability to remember dates of any kind was hardly perfect. In other words, let's admit we were always a bit thick between the ears and we're darn lucky to have reached the exalted position we now occupy. We have what we have, not because of early genius, but because of hard work and experience to say nothing of the breaks. Let's stop kidding ourselves that we had greater mental ability at 21 than we now have in our 40s, 50s and 60s.

This myth of decreasing mental ability wouldn't be worth examining if it were just an individual problem, but the myth has a serious effect on society for it colours the hiring policy of the nation and is one of the chief causes of prejudice against hiring the man over the age of 40, especially for jobs requiring training.

Let's see what the experts say about age and mental ability. Even when they take into consideration the fact that we have learned a lot during the passing years and have a lot of stored information useful in passing judgment on any subject, which we didn't have when we were kids, they find

that as opposed to the popular theory that we lose ground mentally as we grow older after 40, we actually get smarter.

Dr. Irving Lorge, executive officer of the Institute of Psychological Research, Teachers College, Columbia University, says "Intellectual power in and of itself does not change from 20 to beyond 60 and in some of the intellectual abilities there is a modicum of gain."

Senator Thomas Desmond, Chairman, New York State Joint Legislative Committee on Problems of the Aging, put the case even stronger when he said, "Psychologists have found that the mind is still young at 50 and that the brain does not reach its zenith until 10 years later. From 60 on, mental efficiency declines very slowly to the age of 80. Even at 80, many people are just as productive mentally as they were at 30, and they have an additional vast store of knowledge accumulated over half a century from which they can draw."

Psychologists now believe that many of the earlier investigations of age in relation to mental abilities were misleading. These studies were often cross-sectional, comparing, for example, the mental abilities of 20-year-olds with those of 50-year-olds. Because the younger people were generally better educated than the older ones, and more accustomed to taking tests, results were often distorted. More recent investigations have been based on follow-up studies.

One such study showed that bright people get even brighter as they age. Two California psychologists recently gave "concept mastery" tests to 1,103 highly intelligent adults, some of whom have taken part since childhood in a continuing study of what happens to gifted children when they grow up. The results indicated that the mental capacities of these gifted adults had been steadily increasing between ages 20 and 50. No limits to improvement are yet in sight.

But it isn't just gifted persons who improve mentally with age. A former director of the Moosehaven Research Laboratory for Gerontology in Orange Park, Fla., conducted a series of tests with elderly people whose intelligence in the past had been only average. Some of these men and women kept on scoring higher right through their 70s and 80s.

Scientific studies summarized at the annual Conference on Aging held at the University of Michigan in June, 1959, offer further evidence that specific mental abilities such as memory and the ability to learn do not decline any more than does general intelligence.

A University of Michigan test indicated that there is no difference in the ability of young, middle-aged or old to recall specific incidents. And in a nonsense-paragraph experiment the older people, though taking longer in preparation, were more accurate in remembering the words.

But probably the most conclusive evidence on the subject of mental ability and its relation to age comes from a scientific study in the United States by two psychologists of Iowa State College, for the Office of Naval Research. It shows that mental ability is greater at 50 than at 20. In this test, 127 men who had been given the army alpha intelligence test in 1919 were re-tested 31 years later. The results showed that they were intellectually more able in their maturity than they were as young men. The study eliminates the effects of social background and experience on the ability of the individuals to achieve better scores in the tests at the age of 50 than they did 30 years previously.

The psychologists reported: "Nowhere was there any sign that brains had grown rusty. On the contrary, the increase in most mental capacities was tremendous." Scores were higher in general-information quizzes, as might be expected after four years of college and three decades of practical experience. Higher also were scores in tests requiring practical judgment. "But most impressive of all was an increase in scores in certain categories where logic and clear thinking are required. The inescapable conclusion is that most people are smarter at 50 than at the brink of maturity, when we usually think of brains as being agile and most receptive."

The experts say that the primary obstacle which prevents older people from learning new techniques is the tendency of employers to classify all older workers as inflexible, thus creating the illusion that older persons are incapable of learning.

Our culture, too, has given rise to incorrect assumptions about learning ability. Learning is associated with high schools, universities and youth. Our efficient society tends to place people in categories, not allowing for individual differences, and attributes to these groups qualities which they do not possess. Therefore, the older person in his 60s attending high school or university classes is singled out as an unusual individual—out of his category in the social structure. Society does not recognize that, in the words of Dr. Edward I. Stieglitz, noted U.S. geriatrician, "It is quite possible to teach an old dog new tricks, if the teacher knows more than the dog, and the dog wants to learn."

There is the man who took a law course in his late 70s and is now practising his new profession at the age of 85. It might be argued that these and many other isolated examples are the exception, but the element of chance in learning was eliminated by a series of group tests conducted by the Institute of Psychological Research, Columbia University, on 300 individuals ranging in age from 20 to 70.

It was decided to teach these people the Russian language, which none of them knew. The individuals were matched for intellectual ability and were formed into three groups, one aged 20 to 25, another 27 to 37, and the third group 40 years and older. All individuals were instructed at the same time, 100 in a room to a teacher. In the course of two months, on the average, these people learned as much Russian as the institution can give to the average college graduate in about one year. There was no significant difference between the young and the old in the amount of Russian learned. In fact, one of the older persons used his Russian to translate a technical monograph and had it published.

It was decided to corroborate this particular experiment by teaching Pitman shorthand. The group was divided in the same way as in the former experiment and lessons were given for about two months. These people learned enough shorthand to be useful to them, and it was found again that there was not significant difference between young and old.

In terms of industrial application, the Institute tried to teach the same group of people skills that would be useful in industry. Some of the skills were mechanical and some were clerical. It was found that there was nothing in terms of the kind of skills taught that older people could not learn.

In addition to being able to learn well, older people bring to a job many more assets than younger employees. Persons past 40 possess know-how and skills which cannot be duplicated, and have a tremendous capacity for the utilization of experience and for the application of stored knowledge to meet new problems and to master new devices.

Do we grow stupid as we grow older? The few executives past 40, who believe that the ability to learn is monopolized by youth, will say "yes". Believing themselves exceptions, they will continue to decide the fate of people's employment and security through restrictive hiring policies.

Those people who have access to scientific evidence, which shows conclusively that mental capacity increases with age,

will answer "no", and will continue to predict that the day will come when all business leaders will learn the importance of enlightened employment and personnel policies based, not on prejudices, but on fact alone. After all, it is possible to learn at any age.

Ian Campbell

How often do you hear people say, "I'm not half the man I used to be"? I am sure all of us have heard this statement at one time or another or perhaps we have even made the remark ourselves.

Many people talk about getting old and about slowing down. In fact, it has come to the point where people are beginning to believe what probably started out to be no more than a casual remark, perhaps even a joke.

There is no doubt that we tend to excuse our actions and many of our deeds with some statement about growing old. This state of mind is part of our way of life and it is likely we will find men and women in most occupations who are willing to admit that they are on the downhill grade.

For example, in the selling business, which requires initiative, drive, imagination, and in some cases, physical endurance, there are those individuals who believe they are not the men they used to be. Many of these people are in their 40s and early 50s and are in good health. Yet they are slowly persuading themselves and others that they are growing old and that their performance is declining.

To what extent is this true? Does a salesman's performance decrease after 40? Does this magic number really mean the difference between a good salesman and one who is slowly tapering off?

In answer to a recent letter which the Minister of Labour sent to Canadian employers asking for their opinion on the older worker problem, a large number of sales organizations indicated that the backbone of their sales force was the over-40 age group.

Many retail stores praised older sales clerks for their general performance. Some stores, especially women's dress shops, said that the older women built up clientele who returned again and again to be served by the same woman and refused to accept any other clerk.

Not only did some of these stores hire people of 40 and 50 years of age, but a few had hired retired persons for both part-time and full-time positions and had found these people to be very satisfactory.

In the service industries, generally, the older worker was rated very high in his performance. Business after business spoke of the excellent records of persons over 40 and of their steady influence on younger workers.

Of course, there were a few companies, both in the trade and service industries which did not have this same confidence in the ability of older workers. In most of these cases, particularly where selling was concerned, the companies thought that older workers were unable to stand the long hours and the physical activity sometimes involved in this type of employment.

It was this latter thinking which, a few years ago, led the federal Government's Interdepartmental Committee on Older Workers to suggest that a study be undertaken to check the frequent claim that, as chronological age advances, job performance declines. The study, which was recently released, was carried out by the Economics and Research Branch of the Department of Labour in collaboration with two large Canadian department stores.

The results did *not* show that a slowdown comes with age 40, that older persons are only half their former selves. On the contrary, it indicated, in a comparison with other age groups, that older salesmen are often better salesmen, that new employees over 40 become better performers in a shorter period of time than other new employees, and that, in effect, salesmanship often begins at 40.

Here are some of the specific findings outlined in the booklet "Age and Performance in the Retail Trade":

Sales performance increases until somewhere between 51 and 55 years of age and declines slowly in the years that follow. In all cases, the average score for employees over the age of 60 compares favourably with those of employees below the age of 51.

The record of performance of people past 40 is as good as that of other employees, if not better.

The sales person hired after the age of 40 becomes a better performer within a shorter period of time than do those new employees under 40.

The majority of the departmental supervisors, managers and assistant managers stated they had a definite preference for employees over the age of 40 and 45.

Their reasons for this preference were that older people are more consistent performers; they have a highly developed sense of responsibility; they have a more settled

attitude toward their jobs; and most important of all, they inspire confidence in the customer.

Much the same findings were uncovered in a study of office workers in the United States. These experts concluded that the differences in the output per man-hour among age groups of office workers were for the most part insignificant.

They also found that there was considerable variation in performance among workers within age groups, so that large proportions of older workers exceeded the average performance of younger groups.

But probably most important of all was the fact that office workers in the older age groups had a steadier rate of output with considerably less variation from week to week. Similar factual analyses of production and performance in other industries have shown much the same picture.

What these studies mean is that when a man over 40 says he isn't half the man he used to be he really *is* joking. He is probably an above-average performer in his occupation. Studies in other fields have supported this fact. In costly matters such as turnover, absenteeism and accidents, the average worker over 40 rates higher than other age groups. Each year, because of rapid turnover, industry generally loses thousands of dollars invested in trained or partially-trained personnel. This tendency to leave a job is not as prevalent among people over 40, who are usually more settled in their work habits.

A study of turnover rates at 3.9 million workers in the United States showed definitely that separation rates were lower for persons over the age of 45.

In the case of studies of absenteeism, it was found that in every age group above 50, workers lose fewer days on the job than in age groups below 50. People under 20 have the highest absenteeism rates, one study concludes, and the average rate of 3.4 days absent per 100 days of work is not reached or bettered until workers pass the age of 35.

Accidents are also fewer among over-40 employees, according to a number of studies made in Canada and the United States. There is a substantial drop in the number of non-disabling accidents after the age of 40 and the best accident record is held, strange as it may seem, by those workers in the age group 70 to 74. It is true that in some cases older workers are in less risky jobs, but even when this factor is considered, there is little change in the results.

If the older worker problem could be condensed into a few words, it might boil

down to two main things—Many people *think* they are growing old and too many people are ready to believe them.

There is little doubt that people do convince themselves and others that they are beginning to lose some of their faculties. For instance, most people readily believe that a certain age brings an end to a person's participation in certain activities. There is a tendency to start dividing work, sports and other human endeavour into packages and labelling them by age groups.

This attitude is one of the many reasons why some employers place age restrictions on jobs which could be done effectively by a qualified person from any age group. The actions and deeds we think belong to certain age groups are often more important to an employer in determining whether or not a person gets a job than is that person's ability to do the job.

Many employers will praise a worker over 40 who has been employed by them for a number of years. They'll call such a worker responsible, productive, steady and so on. They know his record, his performance and the other good features about him. They keep him on because he is a very valuable man to the company. Yet the man over 40 "outside" the plant, perhaps out of work through no fault of his own, is the proverbial "horse of a different colour." He is not, in the eyes of the employer, capable of doing the job being done by the man his own age who is on the "inside." Many employers, by specifying age limits for jobs are not even giving this "outside" man the chance to show his qualifications at an interview, let alone the chance to prove his value. He has been put in a package and labelled incapable of doing a good day's work.

A merger of two AFL-CIO affiliates in the paper-making and printing industries has been brought a step closer to realization with the recent signing of a "unity declaration" by the United Paper Makers and Paper Workers and the International Printing Pressmen and Assistant's Union of North America. The two unions are closely associated in their operations.

"Aside from the fact that thousands of UPP and Pressmen Union members are right now under contract to the same employers, there has been a tremendous growth in integration of paper and graphic arts production," said UPP Executive Vice-President Harry Sayre.

Older workers, themselves, may have helped foster this attitude. Often they fail to sell themselves and their experience. They feel they are growing old and they start to believe in the myth that they *are* slowing down. Many times they fall short in a job interview because of a self-imposed inferiority complex.

It is quite probable that a number of over-40 job applicants have failed to win a position because of this habit of under-selling achievements and ability. By being over-modest, a job applicant can give the impression of muddled thinking and lack of initiative, and can create an atmosphere which marks him as a slow producer. This approach also gives the employer more reason to believe that he is right in thinking that people over 40 are less productive.

There is a lot of wisdom in the well-worn statement that "You're just as old as you feel." As far as the job applicant is concerned, one might alter that old saying to read "You're as old as you feel . . . And you look it." For it makes sense that if you are convinced you are growing old and slowing down, then it will be easy to convince your potential employer.

Perhaps all of us can help to ease the problem of the older worker in this respect. We—and I mean everyone—could start by stopping our tendency to place people in packages, trying to make them fit some ill-conceived pattern. We might spend more time thinking of people as individuals who can make valuable contributions to the progress of our nation whether they are 20 or 70.

But most of all, there is little doubt that what we need are fewer people thinking about growing old and even fewer people ready to believe them.

A merger of the two unions would bring together more than 250,000 workers employed in the pulp and paper, and the printing industries in Canada and the United States. It would also pave the way toward a further uniting of unions in the industries. The unity declaration says that the "ultimate objective is complete organic unity and full merger of all unions in the printing, paper and paper converting field into one organization."

The Paper Makers have close to 10,000 members in Canada; the Printing Pressmen, about 8,000.

1960 LABOUR DAY MESSAGES

Hon. Michael Starr,
Minister of Labour

Great progress has been made in the improvement of working and living conditions in Canada. Everyone is conscious of the forward strides made in the improvement of rates of pay, reduced working hours, shortened work week, annual holidays with pay, retirement pension plans and a variety of social welfare programs. Everyone is aware of the improvement in recent times in the physical arrangement and design of modern plant and equipment, resulting in healthier and less hazardous working conditions.

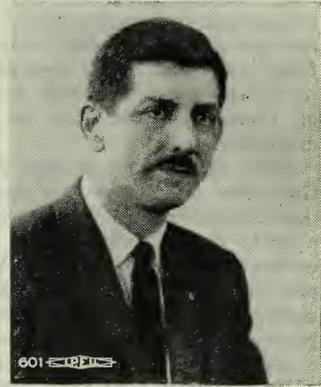

However, with every advance, new problems are created, and the present era has created its share—not the least of which arise from the diminishing proportion of unskilled and semi-skilled jobs in the economy.

The progress we have made in recent times would not have been possible without increased efficiency deriving from the imaginative use of better machines and the improved skill and knowledge of the men producing and operating these machines. We know as well that the introduction of new and better machines must continue if our products are to remain competitive and our standard of living is to continue to improve.

But the introduction of machines inevitably increases the proportion of professional, technical and skilled occupations at the expense of unskilled and semi-skilled occupations, and this trend has been greatly accelerated in recent times. When this fact is considered in the light of the high rate of drop-outs of our young people

Claude Jodoin

Roger Mathieu

A. A. Hutchinson

from schools before graduation, we see a problem of serious proportions facing us unless all of us do what we can to reverse this trend.

It is an appalling fact that 70 per cent of our young people are dropping out of school before reaching junior matriculation, thereby restricting themselves to a large extent to competing for the unskilled and semi-skilled jobs, which now represent only 30 per cent of all the jobs in the economy.

It is obvious that this trend cannot continue without a great many people suffering real hardship, particularly as they advance in years.

Claude Jodoin, President, Canadian Labour Congress

Labour Day in many respects marks the start of a new year. The holiday season ends and many organizations and activities return to a more active period. As we enter this period the Canadian labour movement faces many challenges. One of the greatest of these—and one which we share with all Canadian citizens—is the challenge of unemployment.

With the arrival of fall all too many Canadians know that they face months of uncertainty; months in which they will wonder, almost from day to day, whether or not they will have a job. Winter unemployment has become an established but unwarranted part of the Canadian economic picture. But more recently we have been experiencing conditions in which the toll of unemployment spreads into the warmer months, and for a great many people is a year-round threat.

The challenge we now face with regard to unemployment is indeed a serious one, and one which is in many respects different to that of other periods. Most of us can recall the days in which the country's whole economy slowed down and thousands of men and women waited in line for jobs. Today the economy of our country continues to operate at a high level, production is well up; and yet, at the same time, we have hundreds of thousands of men and women deprived of the right to work.

It has been estimated that the waste from unemployment has reached the neighbourhood of \$3,000,000,000. We are a rich country but we cannot afford waste of this magnitude. And beyond the dollars and cents loss is the far greater toll which unemployment takes in human suffering.

This holiday is observed to honour the men and women who labour for a living.

Both as parents and community leaders, we must take a realistic look at the impact of advanced technology and automation on Canadian business and industry in recent years. What was adequate yesterday in the way of education is becoming less and less adequate today, as more and more basic education is required to understand the theories and laws involved in the production and maintenance of the complex machines and products we now enjoy.

Just as our country has advanced, so our need for more education has increased, and every adult has a responsibility to acquaint himself with the facts and bring them to the attention of the youth of Canada.

I would suggest that Labour Day 1960 is a day on which we should dedicate ourselves to giving every Canadian the opportunity to labour for a living.

We are justifiably proud of the standard of living which we, as Canadians, enjoy; yet across our country there are vast unmet needs. How many communities have adequate schools and hospitals? Where is the community with a completed program of parks and roads and other services? Where are people assured of reasonable housing at prices they can afford to pay? We still have much to do.

And at the same time we are rapidly developing means of increasing our production and turning out more goods and services with less labour. These technical developments can surely provide a brighter future for all Canadians if they are introduced and used with the common good in mind.

These, then, are times of both challenge and opportunity which call for thought and effort on the part of all sections of the community. As a labour movement we stand ready to do our part and to co-operate with other groups. A year ago we made reference to the intensive attacks being made from some quarters on the organized labour movement. It may be that these attacks have now reached their peak but there is new evidence of a desire on the part of some employers to adopt a "let's push-Labour-around" attitude. If they do follow such a course it will indeed be unfortunate. Such a negative policy will make no contribution to a better Canada; but will rather interfere with the type of co-operation which is essential to the future. This may be an appropriate time to make the position of the Canadian Labour Congress clear. We are prepared and will be

happy to co-operate with all other groups in meeting the challenges which we, as Canadians, face in common. If, on the other hand, there are to be efforts to undercut the standards established democratically in collective agreements, then the responsibility for the conflict which will inevitably follow will rest on those who initiated it.

These are times in which our concern must inevitably go beyond our own national borders. When the Canadian Labour Congress held its biennial convention in Montreal a few months ago, we were hopeful of the approach of a better international climate. Those hopes were quickly shattered by the total failure of the Paris Summit Conference, later supplemented by the Soviet's withdrawal from the 10-member disarmament conference in Geneva.

We are still hopeful that fruitful negotiations may be resumed. The world, in today's circumstances, cannot tolerate a situation in which there is no serious attempt to begin solving these admittedly

difficult problems of disarmament leading to a lasting world peace. We, as an organization representing such a large section of the Canadian people, are keenly aware of the vital importance of these matters and are anxious to make whatever contribution we can toward a betterment of international conditions. In particular we seek positive and constructive action toward universal controlled disarmament.

It is regrettable that, on an occasion such as this, one should find it necessary to devote so much attention to matters of this nature; but they are problems that will not disappear simply by being ignored.

As a Canadian organization we retain strong optimism in the future of our country. We have faced and overcome problems before and we can do the same in the future. The Canadian labour movement has made a great contribution to the building of our nation and we look forward to making further contributions in the year and years ahead.

Roger Mathieu,

General President, Canadian and Catholic Confederation of Labour

(Translation)

This year, Labour Day falls in the midst of an atmosphere of general and legitimate concern.

On the international scene, the hope and optimism that buoyed the world last fall have faded in the face of the tactics of the cold war.

In our country, even before care has been taken to remedy the ever-acute and distressing unemployment situation, the threat of a worsening of the present recession darkens an already dim economic picture.

Faced with these two perils, it is important for the working population to assert both great calmness and all the vigilance of which it is capable. Panic would aggravate our troubles but negligence would be still worse. It is important that the active members of the labour movement as well as all citizens keep well posted on the situation and then get determinedly into action.

If it is normal for Christians to accept resignedly the inevitable trials, it is also their imperative duty to contribute to the improvement of all critical conditions that can be remedied.

Unemployment will continue to inflict misery on an increasing number of Cana-

dian homes until the entire working class, particularly the unions, decide to declare open war on this calamity and on those in authority who persistently refuse to interfere or to take effective measures to combat this scourge.

Either the authorities are in good faith and are competent to assume the responsibilities they have sought—and they must prove it without any more delay—or the people have no right to delay any longer and must immediately undertake to show that they mean business and are determined to solve this problem once and for all by taking the necessary steps. For its part, the CCCL does not intend to back away from what it considers to be its duty.

Finally, it is important that all Canadians cease burying their heads in the sand. To solve the serious problems of the moment, the world and Canada need each and every one of us. Let us all answer the call and do our part while there is still time.

On the eve of this new labour year, I bring to the entire working population the best wishes of the CCCL for fruitful action, for the year of more stable peace and prosperity, and for human relations more enlightened through justice and charity.

A. A. Hutchinson,
Chairman, National Legislative Committee,
International Railway Brotherhoods

On this day which is peculiarly Labour's own day our thoughts go back to those pioneers who established labour unions by their tremendous struggles, often at great personal sacrifice. We, who are enjoying the benefits of their heroic work, should not neglect to pay honour to them, who made this day possible.

I believe it can be said, without fear of contradiction, that no institution in the free world has done more to improve the lot of the people in general than has union labour. It has not only benefited those who are members of labour unions but has raised the living standards of all those who work, whether they belong to unions or not.

Railway labour is passing through a very trying period, in which technological improvements and automation are contriving to reduce the number of employees required to perform the work on our railways.

As far as transportation of passengers is concerned, changes in methods of transportation have contributed even more to reduced services and consequent reduction in employment. The principal factor is the private automobile, which, it is estimated, now accounts for about 85 per cent of passenger miles travelled, and sometimes even more than that large percentage.

The reduction in travel by rail has reduced revenues to a point where the railways claim that passenger travel is being subsidized by freight service, and efforts are being made, all too frequently successful, to reduce passenger services, sometimes to the detriment of communities and the travelling public and always to the detriment of employees who man the services.

The result is unemployment for many railway men. In other cases, where actual unemployment does not result, they are being forced to move their households to new locations in order to maintain their right to work. Resultant expense of moving

and loss, through having to sell homes at less than real value, are causing hardship, and up to this time no compensation for such expense and loss has been forthcoming.

Unemployment remains one of the great Canadian problems. We speak of the great resources of Canada and we are making increasing use of our natural resources; but we are neglecting to make full use of the greatest resources we have, the people who are ready and willing to perform productive work. Our labour force is being augmented each year from various sources but particularly from the fine young people of Canada who are reaching the age at which they enter the labour field. The problem is one that calls for concerted action by government, employers and labour and must be met if we are to have prosperity. There are a great many improvements required throughout Canada, some of which should be undertaken by governments and others by private industry.

I know that we have the necessary manpower to make these improvements and I feel sure that if government, management and labour collaborate ways can be found to utilize the manpower that is not now being used, thus benefiting the country as a whole and providing the dignity of labour to those who are ready willing and able to work. Canada is a comparatively wealthy country and surely we can afford to provide work for all those who wish to have it.

On this Labour Day we look forward to the time when the problem of unemployment will have been banished through the combined efforts of all those interested in the problem. On behalf of the National Legislative Committee, International Railway Brotherhoods, I wish to extend greetings and sincere best wishes for the solution of all labour's problems to all friends of labour everywhere.

“... The increasing trend to automation is throwing thousands of skilled workers out of work. One of our very real problems results from the displacement of workers in their late forties and fifties who, despite a variety of skills, find age a very real handicap to re-employment.

“These problems can be met only by three-way action by government, management and labour. It is our responsibility to see that such action is initiated.”

—Labour Day Message,
Larry Sefton, Director,
United Steelworkers of America

Women in Retail Stores

British report stresses the need of improved staff training programs to raise the occupational status of retail selling. Knowledge of staff relationships cited as key to sound personnel policy. An insight into some social factors

Concern for the high rate of staff turnover and the difficulties experienced by retail stores in recruiting qualified staff recently led the Retail Distributors Association of Great Britain to sponsor a study of women in the retail trade. The report of the study¹, based on an analysis of interviews with 341 saleswomen in four department stores, gives an insight into the social and psychological factors that affect personal relations in retail selling.

Staff training and development—The study brought to light an urgent need to raise the status of the occupation and helped to clarify the relationship between status and adequate training. Existing training courses tended to put too much emphasis on systems and routines and failed to equip staff to meet the stresses and strains associated with the job of selling. "If training schemes aimed at developing the less tangible skills required . . ., the effect might well be to raise the status of selling; selling assistants might be made more aware that the service they had to offer was a really worthwhile one"².

Although recruitment of buyers and qualified supervisors of sales staff was one of the most difficult problems facing management, little had been done to encourage the development of supervisory ability among the staff already employed. Most of the saleswomen themselves were not particularly interested in advancement. The report recommends: "A sound management developing program . . . might help not only to overcome the difficulties experienced in the selection and recruitment of suitable supervisory staff but also to formulate a more clearly defined career pattern for those employed"³.

Working environment—The contrast between the glamorous façade of the store and the drabness of some of the facilities provided for the staff aroused their resentment. In general, department stores appeared to pay less attention than factories to physical conditions such as ventilation, heating, lighting and sanitation. "There seems to be insufficient appreciation of the fact that good working conditions have a direct long-term effect on physical health and affect mental attitudes. They also promote good staff relationships, for they are regarded

as symbolizing the attitude of management to staff⁴.

Personal relationships—The attitudes of customers were found to complicate relationships in stores and stresses arose from the fact that staff were working within a framework in which the 'customer is always right'.

It was noted that in choosing selling jobs women often were seeking status and companionship. When neither materialized, frustration resulted. Also, it was found that women with no special training regarded selling as the best employment available to them—"higher class", for example, than factory work. The saleswomen were therefore resentful of the low esteem in which their jobs seemed to be held.

Relationships with colleagues were affected by the fact that work in some departments had a higher prestige than work in others. These status problems also made it difficult for saleswomen to form friendships in the course of their work. Their loneliness was reflected in their fatigue, high in comparison with that found in other occupations.

Wages—The report lists two factors as being essential to a satisfactory pay policy in any organization. The general level of pay must be in line with that for comparable work in other establishments and the differences among earnings inside the organization must be based on a just evaluation of work done.

Most saleswomen interviewed were resentful because their level of pay, being lower than that of factory workers, did not adequately confirm their sense of social superiority. The commission system of payment and merit rating schemes, while admittedly providing an incentive to work harder, were generally disliked because they increased tension between individuals and between departments.

A personnel policy, sound as it may be in itself, the report concludes, "is dependent for its successful implementation on personal behaviour. Thus it is important that any policy devised should be based on an understanding of how people think and feel in their relationship with each other; the staff administration requires a detailed knowledge of the social organization of the store"⁵.

50 Years Ago This Month

About 4,250 conductors, brakemen, baggagemen and yardmen strike Grand Trunk Railway after company rejects demand for same rates of pay and working rules as those prevailing on main railway systems in Eastern U.S. and Eastern Canada

A demand for the same rates of pay and rules of employment as those prevailing on the main railway systems of the Eastern United States and Eastern Canada led to a strike on the Grand Trunk Railway, which began on July 18 and ended on August 2, 1910. An account of the strike was given in the August 1910 issue of the *LABOUR GAZETTE*.

The employees involved were conductors, brakemen, baggagemen, and yardmen; about 4,250 were affected in Eastern Canada and the Eastern United States. The strike was described by the chief spokesman for the unions as "the largest strike in train and yard service that these organizations have ever been called upon to participate in."

C. M. Hays, President of the GTR, in a letter addressed to the employees' representatives shortly before the strike began, contended that the company could not at that time pay the same rates as the more prosperous railways of the Eastern United States. But he offered an increase that he said was equivalent to that recommended by the majority report of the conciliation board established to deal with the dispute. The majority report, which had been signed by the chairman and the employees' representative, had been rejected by the employees.

He said further that the company would pay the same wages as the CPR as soon as the GTR had finished construction of the line that was to connect it with the Grand Trunk Pacific in "the North-West." This connection, which he said should be completed within two years, would enable the company to participate in the higher traffic rates in effect in the North-West.

Some time before the strike began both parties had expressed willingness to submit the dispute to arbitration. Both, however, could not agree on the kind of board they were willing to submit the dispute to.

James Murdock, representing the unions' Committee Grand Trunk and Central Vermont, said in a letter to the Minister of Labour that the employees were willing to accept arbitration provided that a "mutually satisfactory" board could be secured. He expressly stated, however, that "mutually satisfactory", from our point of view, would mean the arbitration offered by us previously." The arbitration offered previously

was arbitration by the identical two-man board that had disposed of, in the words of the spokesmen for the employees, "identically the same questions" in connection with some 14 railways in the United States.

President Hays of the Grand Trunk, on the other hand, proposed submission to a board "composed of experienced railway men," whose decision both parties must agree to abide by.

On July 20, Hon. W. L. Mackenzie King, Minister of Labour, wrote to both parties trying to get them to agree to accept arbitration. The telegrams he received in reply were unsatisfactory. Further correspondence brought no result, and on July 24 the dispute seemed to be completely deadlocked. Yet on the evening of August 2 it was announced that, in the words of the *LABOUR GAZETTE*, "through Government intervention terms of settlement had been agreed upon."

The settlement was evidently brought about by the diplomacy of the Minister of Labour, who, at the request of the employees' representatives, went to Montreal on July 28; and of Sir Frederick Borden, Minister of Militia and Defence, who joined him there.

The two Ministers continued to keep the negotiations going until a settlement was reached, though the means by which they succeeded in their purpose were not divulged in the *LABOUR GAZETTE*'s report.

The main points in the agreement reached, which was dated July 31, were that the company undertook to "put into effect from May 1, 1910, the rates named in schedule of rates dated July 18, 1910..." and that it also promised that on January 1, 1912, it would put into force in train and yard service the rates of pay and rules at that time in effect on the CPR's lines east of Fort William.

Referring to the terms of settlement, the *LABOUR GAZETTE* said that they appeared to constitute "a virtual acceptance by both parties... of the award of the board of conciliation and investigation," except that the standardization of rules and the extension of the mileage basis of pay instead of pay by the money was deferred until January 1, 1912, instead of becoming effective immediately.

INTERNATIONAL LABOUR ORGANIZATION

44th International Labour Conference

Convention and Recommendation on protection of workers against radiation, and Recommendation of consultation and co-operation between public authorities and employers' and workers' organizations are adopted. Three new members admitted

The 44th International Labour Conference, in session at Geneva from June 1 to 23, accomplished the following:

—Adopted a Convention, a Recommendation and a Resolution on the protection of workers against ionizing radiations.

—Adopted a Recommendation on consultation and co-operation between public authorities and employers' and workers' organizations at the industrial and national levels.

—Took preliminary action toward the adoption of international instruments on reduction of hours of work and workers' housing.

—Admitted three new member states, Cameroun, Federation of Mali and Republic of Togo, increasing membership of the International Labour Organization to 83 nations.

—Held a general discussion and adopted a Resolution on the contribution of the ILO to the raising of incomes and living conditions in rural communities, with particular reference to countries in process of development.

—Adopted Resolutions on the role of the ILO in the expansion of economic aid to developing countries, on measures to protect the living and working conditions of young workers, and concerning discrimination.

—Adopted an International Labour Organization budget of \$9,857,110 (United States dollars) for 1961. Canada's share will be 3.5 per cent, or \$344,999 gross.

—Held a general debate on the Director-General's Annual Report, on "Youth and Work."

Some 900 delegates, advisers and observers from 78 member countries and 17 territories attended the Conference, including 33 Ministers from countries in every region of the world. Observer delegations were present from the United Nations, specialized agencies and other official organizations.

Dr. Luis Alvarado, Peru's Minister of Labour and Indigenous Affairs, was elected Conference President; Stoyan Tonchev, Government Delegate of Bulgaria, Massoud Ghayour, Iran's Employer Delegate, and Syndulpho de Azevedo Pequeno, Brazil's Worker Delegate, were elected Vice-Presidents.

Canada's Worker, Employer and Government Delegates spoke in the debate on the Report of the Director-General.

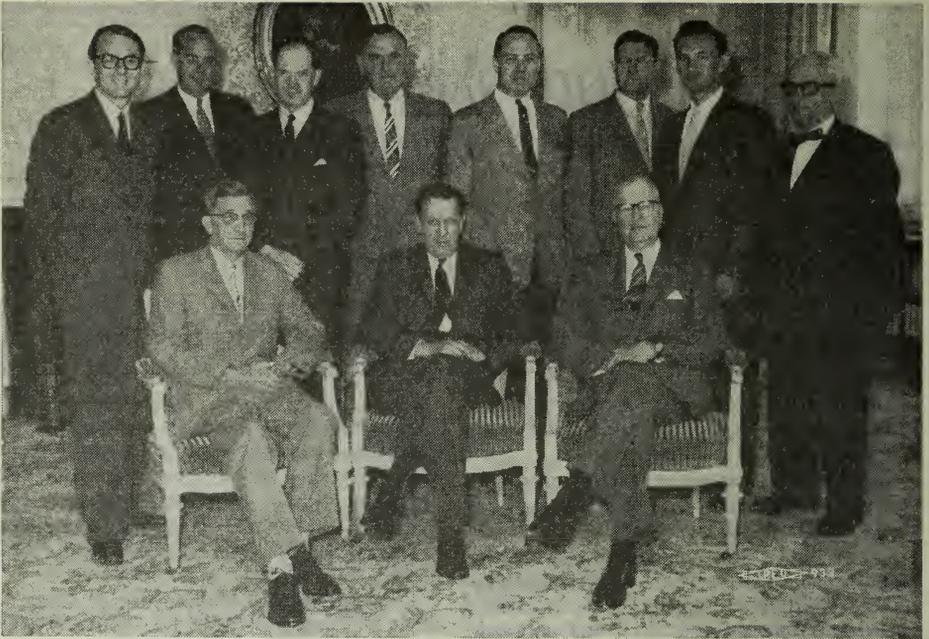

Protection against Ionizing Radiations

By a vote of 253 to 1, with two abstentions, the Conference adopted a Convention concerning the protection of workers against the effects of ionizing radiations (full text on page 806). The Canadian delegation voted in favour of the Convention.

The Convention provides for measures for the effective protection of the health and safety of workers against ionizing radiations, with the condition that every effort be made to restrict the exposure of workers to ionizing radiations, and to avoid unnecessary exposures.

The Convention provides for the establishment of maximum permissible doses, and of maximum permissible amounts of radioactive substances that can be taken into the body; these are to be kept under constant review in the light of current knowledge. Appropriate radiation levels are to be fixed for workers over 18 years of age, and for those under the age of 18, but the Convention provides that no worker under the age of 16 shall be engaged in work involving ionizing radiations. Levels are also to be fixed for workers who are not directly engaged in radiation work, but who remain or pass where they may be exposed to ionizing radiations or radioactive substances.

The Convention also provides for the use of appropriate warnings to indicate the presence of radiation hazards, and for the instruction of workers in precautionary

measures against such radiations. Monitoring of workers and places of work to measure the exposure of workers are provided for, together with a system of medical examinations to protect the health of workers.

By a vote of 257 to 0, with no abstentions, a Recommendation supplementing the Convention on radiations was adopted (full text on page 808). It covers in greater detail the matters dealt with in the Convention.

The Canadian delegation voted in favour.

The Resolution concerning the protection of female workers against ionizing radiations, considering that the employment of women of child-bearing age in radiation work presents special problems of a medical nature, and considering that scientific knowledge in this field has not yet permitted the competent international organizations to arrive at sufficiently precise practical conclusions to be embodied in the text of a Convention, requests the Governing Body to keep these problems under review in the light of advancing scientific knowledge, to ensure their continued study in collaboration with other international organizations, and to take appropriate action, including the consideration of this question as an agenda item at a future session of the Conference.

Consultation and Co-operation

A Recommendation concerning consultation and co-operation between public authorities and employers' and workers' organizations at the industrial and national levels was adopted by a vote of 217 to 0, with 34 abstentions. (full text on page 810). The Canadian delegation voted in favour of the Recommendation.

In part, the Recommendation states that "measures appropriate to national conditions should be taken to promote effective consultation and co-operation at the industrial and national levels between public authorities and employers' and workers' organizations, as well as between these organizations, on matters of mutual concern."

Such measures should be applied without discrimination of any kind against these organizations or among them on grounds such as the race, sex, religion, political opinion or national extraction of their members.

Such consultation and co-operation should not derogate from freedom of association or from the rights of employers' and workers' organizations, including their right of collective bargaining.

Consultation and co-operation should have the general objectives of promoting mutual understanding and good relations

between public authorities and employers' and workers' organizations, as well as between these organizations, with a view to developing the economy as a whole, or in its individual branches, improving conditions of work and raising standards of living.

Consultation and co-operation should aim, in particular, at joint consideration by employers' and workers' organizations of matters of mutual concern with a view to arriving, to the fullest possible extent, at agreed solutions. It should also ensure that public authorities seek the views, advice and assistance of employers' and workers' organizations on such matters as the preparation and implementation of laws and regulations affecting their interests; the establishment and functioning of national bodies such as those responsible for organization of employment, vocational training and retraining, labour protection, industrial health and safety, productivity, social security and welfare; and the elaboration and implementation of plans of economic and social development.

Since its inception and first session in 1919, the Conference has adopted 115 Conventions and 114 Recommendations.

Reduction of Hours of Work

The Conference approved by 123 votes to 43, with 28 abstentions, the conclusions of the technical committee charged with studying the question of the reduction of the hours of work.

These conclusions stated that "the existing international instrument concerning hours of work should be completed by a new instrument concerning the reduction of hours of work."

The Committee believed that the instrument should be in the form of a Recommendation, which should have as its object, on the one hand, to indicate the standard of the 40-hour week as a social standard, to be reached by stages if necessary, and, on the other hand, to set a maximum limit to normal hours of work.

It should further aim to indicate practical measures for the progressive reduction of hours of work, taking into account the differing economic and social conditions in the different countries as well as the variety of national practices for the regulation of hours and other conditions of work. It should also outline in broad terms methods by which the practical measures previously referred to might be applied.

The Conference adopted a resolution to place the question of reduction of hours of work on the agenda of the next session for second discussion, with a view to adoption

of a Recommendation. The resolution was adopted by 124 votes to 41, with 28 abstentions.

Workers' Housing

The committee on workers' housing adopted a set of conclusions with a view to the adoption, at the next session of the Conference in 1961, of a Recommendation.

The committee's report deals with the form of the instrument to be placed before the Conference for adoption. The instrument would apply to the housing of manual and non-manual workers, including those who are self-employed, and of aged, retired or physically handicapped persons.

The report outlines, as objectives of national housing policy, the promotion of construction of housing and related facilities with the aim that such housing should not cost the worker more than a reasonable proportion of his income, whether in the form of rent or in periodical payments toward purchase. Since large-scale production of permanent housing may compete directly with over-all programs for economic growth and development, housing should be co-ordinated with general and social economic policy, so that workers' housing may be given a degree of priority that takes into account the need for it and the requirements of balanced economic development, the report stated.

Competent national authorities should set up a central body with which should be associated all public authorities having some responsibility relating to housing. Such a body should be responsible for studying and assessing the needs for housing and related facilities, and for formulating housing programs, including slum clearance. Representatives of employers' and workers' organizations would be associated in the work of this central body. The report also points out the responsibility of public authorities to co-ordinate resources committed to housing, and to include in economic development programs measures to provide in the long run the skilled manpower, materials, equipment and finance required for housebuilding.

The report also touches upon the necessity for adequate scope for private, public and co-operative enterprise in housebuilding, and for public authorities to assume, to the required extent, responsibility for providing directly, or stimulating, the provision of workers' housing, especially rental housing. The report notes that it is to be recognized that it is not generally desirable for employers to provide housing for their workers directly, and that employers be encouraged to recognize the importance to

Dispute over Seating of Communist Delegates

The Appeals Board of the Conference decided to seat employer delegates from the U.S.S.R., Rumania, Czechoslovakia, Poland, Hungary, Byelorussia, Bulgaria, Yugoslavia and Ukraine as voting members of conference technical committees.

A similar decision was taken at the 43rd Session of the Conference in 1959, when the Appeals Board acted for the first time (L. G., Aug. 1959, p. 819).

The Appeals Board noted in its report to the Conference that it is not called upon to define the meaning of the term "employer" nor to pronounce upon the validity of credentials. By direction of the Conference its function is limited to considering appeals relating to participation in committees and to dealing with individual cases referred to it without prejudice to any other issue.

The principle which the Board is called upon to apply by the decision taken by the Conference is that of equality of treatment for all members of the Conference in respect of full participation in the work of the committees of the Conference.

The Chairman of the Appeals Board is Emil F. Sandstrom, former justice of the Supreme Court of Sweden. Members are Sir Hector Hetherington, Vice-Chancellor and Principal of the University of Glasgow, and K. Vellodi, Indian Ambassador to Switzerland.

Later, the Conference took no decision regarding the credentials of the Government and Employer Delegates of Hungary.

Objections to the credentials of the Government Delegates had been filed with the Conference's credentials committee in a letter signed by 31 employer delegates. The objection to the credentials of the Hungarian Employer Delegate was signed by 42 employer delegates.

The Conference, at the same time, adopted, by a vote of 159 to 80, with 15

abstentions, an amendment to the credentials committee's report "deploring the refusal of the Hungarian Government to comply with the request of the Governing Body to allow certain allegations of the infringement of trade union rights in Hungary to be referred to the Fact-Finding and Conciliation Commission."

The amendment, submitted by the Government of the Philippines, also expressed "the earnest hope that the Hungarian Government will yet comply with the request addressed to it by the Governing Body . . . and that fundamental human rights, including freedom of association, will be secured to the Hungarian people."

The majority report of the credentials committee noted that the General Assembly of the United Nations had decided to take no decision regarding the credentials submitted on behalf of the representatives of Hungary. The majority of the committee recommended that the Conference should take no decision regarding the credentials of the Hungarian Government and Employer Delegates in order not to prejudice the conclusion to which the General Assembly of the United Nations may come as a result of its examination of the problem.

Three days later, an estimated 50 delegates and observers from 55 Commonwealth, African and Asian countries walked out of the Conference when the South African Government Delegate, J. F. Hannah, Minister of Labour, arose to deliver his address. Similar action was taken at a previous sitting by a group of Afro-Asians when the South African Worker Delegate, Louis Petersen, began his address to the Conference.

Canada's worker delegation was among the group that left when Mr. Hannah arose to speak.

them of the provision of housing for their workers on an equitable basis by private or public agencies not connected with the employers. Safeguards for the independence and rights of workers in cases where housing is provided by employers are also dealt with.

On the question of financing, the report deals with the importance of equitable loan facilities for workers wishing to purchase homes, and outlines measures—such as mortgage insurance plans—that public authorities may take to improve and safeguard the position of the worker who is a home buyer.

Resolutions

The Conference adopted four Resolutions.

The Resolution concerning the role of the International Labour Organization in connection with measures for an expansion of economic aid to developing countries requests the Governing Body to consider

action to draw attention to measures of social and labour policy required in connection with economic developments, and to keep under constant review, and to prepare, plans for extending the ILO's technical assistance and related programs.

The Governing Body was requested in the second Resolution to request the Director-General to continue to ensure that close attention is paid to the need for including in ILO publications fullest possible information of a factual and objective character concerning the main social and economic problems and experience gained in dealing with these in different member States.

The third Resolution, concerning discrimination, invites the Governing Body to give early and special attention to the Discrimination (Employment and Occupation) Convention, 1958 (L.G. 1958, p. 874), and to consider particularly the advisability of setting up special machinery for dealing with this matter.

The fourth Resolution, concerning measures to protect the living and working conditions of young workers, requests the Governing Body to give early and special consideration to the problems of young workers, including those in rural areas, and calls on the Governing Body to consider placing on the agenda of an early Conference the question of revision of existing instruments dealing with the living and working conditions of young workers.

Dr. George V. Haythorne

Referring to the statements in the Director-General's report concerning the problems of youth, Dr. George V. Haythorne, Government Delegate and head of the delegation, noted that steady progress is being made in most ILO member countries towards giving youth a better life, owing in part to the ILO influence in introducing methods that protect youth from over-exertion at work before they are physically mature.

"Notwithstanding these beneficial measures, it must be recognized that the overriding factors affecting youth during their formative years are the economic conditions of the families into which they are born... With the attacks being waged on poverty and want both within and among our own countries, the prospects for youth in urban centres are improving, though much still remains to be done..."

The development is needed of practical measures to assist families "under the poverty line" to raise their standard of living to the point at which they might be expected to become more actively interested in improving conditions where they are or in moving elsewhere, he said.

"Until ways and means are found of getting people to do something about improving their lot, there are severe limits on what can be achieved for them or their children through the provision of services in the labour, education, health or any other field," Dr. Haythorne declared.

Some broader measures in the social security field might provide assistance. As an example he mentioned the Canadian system of family allowances.

But more than a satisfactory family income is needed, he said. "A good basic education and training are essential as a preparation for employment in most occupations today."

Today's children "must be encouraged to remain in school beyond the minimum age requirement rather than dropping out before they have taken full advantage of the educational opportunities open to them.

"It is partly to see that youths get the right kind of training that the Canadian Department of Labour, in co-operation with other agencies, has undertaken a broad Research Program on the Training of Skilled Manpower. The objective is to learn more about industries' changing requirements and of the types of training necessary to meet these needs," Dr. Haythorne explained.

"The research carried out to date has brought out more clearly the radical ways in which occupations are being affected by technological changes: the tendency for less dependence on single skilled trades, the accompanying need for a higher basic level of education, and the importance of helping youths through guidance, through employment service facilities and in other ways to bridge the experiences they have in school and those they will have in industry.

"To the extent that similar studies are being made elsewhere of changing manpower requirements and their effect on youth training and youth employment, we would be pleased to share the results of the inquiries we are making in Canada. The ILO might usefully encourage such studies and the pooling of information secured through them," he said.

Stanley Knowles

The use of atomic power and automation, "through democratic planning of national economies, through democratic planning on a world scale, can bring an end to squalor, hunger, ill health, misery and widespread frustration," Stanley Knowles, Canadian Worker Delegate, told the Conference.

It is the wish of Canadian trade unionists, he added, that the goal of improved living and working conditions be pursued and achieved throughout the world, "in the establishment of policies designed to distribute among those who work the benefits of an age whose resources are such that we can end poverty everywhere.

"We seek not only the best possible wages, hours and working conditions—we seek also the constant widening of educational and cultural opportunities. We want to see mankind working and living together in ways that will develop our best instincts."

Speaking on the "desire of all humanity for the achieving of peace," Mr. Knowles said that organized labour in Canada had urged the Government "to do everything within its power to work for universal disarmament and to bring about agreement on the stopping of nuclear tests..."

Mr. Knowles said that Canada had a long tradition of concern for human rights, but

International Institute for Labour Studies

Ernst Michanek, Chairman of the ILO Governing Body, in a speech to the Conference, described the ILO's new International Institute for Labour Studies as "an Institute where men and women concerned with social and labour policy could come, and, in an atmosphere of objective and calm study, seek to widen their understanding of the social forces at play in the world today." The Institute was created last March by unanimous vote of the ILO Governing Body (L. G., May, p. 463).

Mr. Michanek explained that the Institute "would cater to all persons concerned with labour policy, whether they belonged to trade unions, management, government departments, the professions, universities or research bodies." He recalled that members of the Governing Body had "emphasized their belief that such an Institute would prove of particular value to developing countries which were launching programs of industrialization and were therefore going through a phase of rapid economic and social change."

Those studying at the Institute would be chosen because of the responsibilities they exercise in matters of labour and social policy in their own countries or because of

their special knowledge in these fields. At Geneva, they would participate in seminars, round-table discussions and other activities designed for an exchange of knowledge between themselves and other experts and leaders from other regions of the world.

"The idea of the Institute," Mr. Michanek said, "grew out of a need increasingly felt and expressed to complement the activities of the ILO" in the field of education. Existing educational activities of the ILO, especially in the field of workers' education, helped to show the need for providing opportunities for the dispassionate study of labour questions.

Those who come to the Institute, Mr. Michanek said, "would not come to defend a case, to argue a thesis or uphold a point of view. They would be free from pressures . . . The education provided would not be geared to any particular doctrine or theory."

The Institute will be financed from an endowment fund. The first contribution to this fund came from the Government of the Federal Republic of Germany, which during the Conference made a grant of 3.15 million DM (\$750,000). The Government of Switzerland has stated that it has decided in principle to make a contribution.

that he did not want to convey the impression that Canada had solved all the problems that arise under that heading. "But we are vigilant in our defence of equal rights for all regardless of sex, creed or colour. We know that if any person or any minority is discriminated against in any way no one is secure. We believe that democracy is a little more real in Canada than it might otherwise be because of labour's vigilance in this field."

Canadian trade unionists believe also, he added, "that in our world discrimination cannot continue, especially when, like *apartheid* in South Africa, it is an official policy fostered by a government."

Most of the delegates to the Conference, he was sure, were shocked to hear about the prevalence of child labour in many parts of the world, which was described in the Report of the Director-General.

T. H. Robinson

One of the needs of youth is an opportunity to work, and failure to get it can lead to frustration, which underlies much of the unrest among young people today, T. H. Robinson, Canadian Employer Delegate, told the Conference.

"We, all of us—governments, employers, and workers—will do well to examine our employment policies and practices as they relate to young persons. By way of illustration, Canadian employers and Canadian workers could study their labour agreements

to see if they have included therein provisions which may have been appropriate when adopted but are no longer suitable in today's conditions," he said.

He warned that young persons should not get the idea that it is socially desirable to avoid work. "Yet it appears that the discussions relating to the reduction of hours of work are carried on in terms that would suggest that work is an activity to be avoided."

A reduction in the hours of work should be a means towards an end: leisure time to devote to personally satisfying pursuits. This objective can be accomplished only if the reduction in hours is accompanied by the maintenance or improvement of living standards, he declared.

The reduction of hours of work depends on the improvement of productivity, he asserted. Vigorous national leadership helped by technical assistance is doing much to improve productivity, but there is a risk that "a socially desirable goal defined in terms of the reduction of hours of work to a specified maximum per week may be impracticable to apply, now or in the near future in a number of countries. Indeed, such definitions can even be harmful by inducing their adoption before the necessary improvement in productivity has taken place."

Comparatively little study has been made of the effects on productivity, in different regions and different industries, of reducing

the hours of work. "Until we have more acceptable information on this subject, I suggest that the establishment of uniform standards for hours of work in all areas, in all industries, and for all people is a rather hazardous undertaking." This is one field for research by the ILO, he said.

Another field of research that has not been developed as it could is the sociology of labour, the human relations aspects of labour problems. Mr. Robinson suggested more study of this subject "in order that we may provide more acceptable and effective leadership and become more aware of, and therefore more capable of dealing fairly with, problems that arise when people work together on joint economic tasks."

Director-General's Reply

The Director-General, in his reply to the discussion on his Report, said the youth of the world must be imbued with a sense of service to society and humanity in order to fulfil their best promise.

The central fact and challenge of modern times is, he said, "the struggle of the peoples of Africa, Asia, the Middle East and Latin America to create new societies in which they may live in personal freedom, in dignity and peace.

"The problems of youth," Mr. Morse said, "... are the problems of society as a whole, seen under their most critical aspect." The International Labour Organization, he believes, will be able to play its full part, along with other international agencies, in a comprehensive international effort on behalf of youth.

The Director-General pointed out that the needs of youth differed according to the wealth of the society in which they lived.

In the more advanced countries, the need was for broad education supplemented by technical training to keep the individual's skill abreast of technological developments. But in the less-developed regions, the first and imperative need was to create more jobs.

Mr. Morse reminded the Conference that the International Labour Organization has set up a panel of consultants on the problems of young workers, and that next year's Conference will consider policy and action on employment questions.

A major preoccupation of the ILO's technical assistance work was the training and preparation of youth through vocational training, apprenticeship, training of technicians and supervisory staff, and management development, he said.

Canadian Participation

Canadians served on conference committees as follows: T. H. Robinson, Jean-Pierre Després, Arnold D'Amato, and Kalmen Kaplansky, on the resolutions committee; T. H. Robinson, Arnold D'Amato, James A. Hobbs, and H. A. Stockdale, on the committee on radiation; T. H. Robinson, Jean-Pierre Després, H. Shoobridge, and Stanley Knowles, on the committee on consultation and co-operation; T. H. Robinson, H. Shoobridge, Jean-Pierre Després, and Larry Sheffe, on the committee on rural problems; T. H. Robinson, James A. Hobbs, H. Shoobridge, and Roger Mathieu, on the committee on hours of work; T. H. Robinson, Raymond Brunet, James A. Hobbs, and H. F. Taft, on the committee on workers' housing; and John Mainwaring (Secretary), T. H. Robinson, and Kalmen Kaplansky, on the selection committee.

Text of Convention Concerning Protection of Workers Against Ionizing Radiations

The General Conference of the International Labour Organization,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Forty-fourth Session on 1 June 1960, and

Having decided upon the adoption of certain proposals with regard to the protection of workers against ionizing radiations, which is the fourth item on the agenda of the session, and

Having determined that these proposals shall take the form of an international Convention, adopts this 22nd day of June of the year one thousand nine hundred and sixty the following Convention, which may be cited as the Radiation Protection Convention, 1960:

PART I. GENERAL PROVISIONS

Article 1

Each Member of the International Labour Organization which ratifies this Convention

undertakes to give effect thereto by means of laws or regulations, codes of practice or other appropriate means. In applying the provisions of the Convention the competent authority shall consult with representatives of employers and workers.

Article 2

1. This Convention applies to all activities involving exposure of workers to ionizing radiations in the course of their work.

2. This Convention does not apply to radioactive substances, whether sealed or unsealed, nor to apparatus generating ionizing radiations which substances or apparatus, owing to the limited doses of ionizing radiations which can be received from them, are exempted from its provisions by one of the methods of giving effect to the Convention mentioned in Article 1.

Article 3

1. In the light of knowledge available at the time, all appropriate steps shall be taken to

ensure effective protection of workers, as regards their health and safety, against ionizing radiations.

2. Rules and measures necessary for this purpose shall be adopted, and data essential for effective protection shall be made available.

3. With a view to ensuring such effective protection—

- (a) measures for the protection of workers against ionizing radiations adopted after ratification of the Convention by the Member concerned shall comply with the provisions thereof;
- (b) the Member concerned shall notify, as soon as practicable, measures adopted by it prior to the ratification of the Convention, so as to comply with the provisions thereof, and shall promote such modification of other measures existing at the time of ratification;
- (c) the Member concerned shall communicate to the Director-General of the International Labour Office, when ratifying the Convention, a statement indicating the manner in which and the categories of workers to which the provisions of the Convention are applied, and shall indicate in its reports on the application of the Convention any further progress made in the matter;
- (d) at the expiration of three years from the date on which this Convention first enters into force the Governing Body of the International Labour Office shall submit to the Conference a special report concerning the application of subparagraph (b) of this paragraph and containing such proposals as it may think appropriate for further action in regard to the matter.

PART II. PROTECTIVE MEASURES

Article 4

The activities referred to in Article 2 shall be so arranged and conducted as to afford the protection envisaged in this Part of the Convention.

Article 5

Every effort shall be made to restrict the exposure of workers to ionizing radiations to the lowest practicable level, and any unnecessary exposure shall be avoided by all parties concerned.

Article 6

1. Maximum permissible doses of ionizing radiations which may be received from sources external to or internal to the body and maximum permissible amounts of radioactive substances which can be taken into the body shall be fixed in accordance with Part I of this Convention for various categories of workers.

2. Such maximum permissible doses and amounts shall be kept under constant review in the light of current knowledge.

Article 7

1. Appropriate levels shall be fixed in accordance with Article 6 for workers who are directly engaged in radiation work and are—

- (a) aged 18 and over;
- (b) under the age of 18.

2. No worker under the age of 16 shall be engaged in work involving ionizing radiations.

Article 8

Appropriate levels shall be fixed in accordance with Article 6 for workers who are not directly engaged in radiation work, but who remain or pass where they may be exposed to ionizing radiations or radioactive substances.

Article 9

1. Appropriate warnings shall be used to indicate the presence of hazards from ionizing radiations. Any information necessary in this connection shall be supplied to the workers.

2. All workers directly engaged in radiation work shall be adequately instructed, before and during such employment, in the precautions to be taken for their protection, as regards their health and safety, and the reasons therefor.

Article 10

Laws or regulations shall require the notification in a manner prescribed thereby of work involving exposure of workers to ionizing radiations in the course of their work.

Article 11

Appropriate monitoring of workers and places of work shall be carried out in order to measure the exposure of workers to ionizing radiations and radioactive substances, with a view to ascertaining that the applicable levels are respected.

Article 12

All workers directly engaged in radiation work shall undergo an appropriate medical examination prior to or shortly after taking up such work and subsequently undergo further medical examinations at appropriate intervals.

Article 13

Circumstances shall be specified, by one of the methods of giving effect to the Convention mentioned in Article 1, in which, because of the nature or degree of the exposure or a combination of both, the following action shall be taken promptly:

- (a) the worker shall undergo an appropriate medical examination;
- (b) the employer shall notify the competent authority in accordance with its requirements;
- (c) persons competent in radiation protection shall examine the conditions in which the worker's duties are performed;
- (d) the employer shall take any necessary remedial action on the basis of the technical findings and the medical advice.

Article 14

No worker shall be employed or shall continue to be employed in work by reason of which the worker could be subject to exposure to ionizing radiations contrary to qualified medical advice.

Article 15

Each Member which ratifies this Convention undertakes to provide appropriate inspection services for the purpose of supervising the application of its provisions, or to satisfy itself that appropriate inspection is carried out.

PART III. FINAL PROVISIONS

Article 16

The formal ratifications of this Convention shall be communicated to the Director-General of the International Labour Office for registration.

Article 17

1. This Convention shall be binding only upon those Members of the International Labour Organization whose ratifications have been registered with the Director-General.

2. It shall come into force twelve months after the date on which the ratifications of two Members have been registered with the Director-General.

3. Thereafter, this Convention shall come into force for any Member twelve months after the date on which its ratification has been registered.

Article 18

1. A Member which has ratified this Convention may denounce it after the expiration of five years from the date on which the Convention first comes into force, by an act communicated to the Director-General of the International Labour Office for registration. Such denunciation shall not take effect until one year after the date on which it is registered.

2. Each Member which has ratified this Convention and which does not, within the year following the expiration of the period of five years mentioned in the preceding paragraph, exercise the right of denunciation provided for in this Article, will be bound for another period of five years and, thereafter, may denounce this Convention at the expiration of each period of five years under the terms provided for in this Article.

Article 19

1. The Director-General of the International Labour Office shall notify all Members of the International Labour Organization of the registration of all ratifications and denunciations communicated to him by the Members of the Organization.

2. When notifying the Members of the Organization of the registration of the second ratification communicated to him, the Director-General shall draw the attention of the Members of the Organization to the date upon which the Convention will come into force.

Article 20

The Director-General of the International Labour Office shall communicate to the Secretary-General of the United Nations for registration in accordance with Article 102 of the Charter of the United Nations full particulars of all ratifications and acts of denunciation registered by him in accordance with the provisions of the preceding Articles.

Article 21

At such times as it may consider necessary the Governing Body of the International Labour Office shall present to the General Conference a report on the working of this Convention and shall examine the desirability of placing on the agenda of the Conference the question of its revision in whole or in part.

Article 22

1. Should the Conference adopt a new Convention revising this Convention in whole or in part, then, unless the new Convention otherwise provides—

(a) the ratification by a Member of the new revising Convention shall *ipso jure* involve the immediate denunciation of this Convention, notwithstanding the provisions of Article 18 above, if and when the new revising Convention shall have come into force;

(b) as from the date when the new revising Convention comes into force this Convention shall cease to be open to ratification by the Members.

2. This Convention shall in any case remain in force in its actual form and content for those Members which have ratified it but have not ratified the revising Convention.

Article 23

The English and French versions of the text of this Convention are equally authoritative.

Text of Recommendation Concerning Protection of Workers Against Ionizing Radiations

The General Conference of the International Labour Organization,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Forty-fourth Session on 1 June 1960, and

Having decided upon the adoption of certain proposals with regard to the protection of workers against ionizing radiations, which is the fourth item on the agenda of the session, and

Having determined that these proposals shall take the form of a Recommendation supplementing the Radiation Protection Convention, 1960,

adopts this 22nd day of June of the year one thousand nine hundred and sixty the following Recommendation, which may be cited as the Radiation Protection Recommendation, 1960:

I. GENERAL PROVISIONS

1. This Recommendation should be given effect to by means of laws or regulations, codes of practice or other appropriate means. In applying the provisions of the Recommendation the competent authority should consult with representatives of employers and workers.

2. (1) This Recommendation applies to all activities involving exposure of workers to ionizing radiations in the course of their work.

(2) This Recommendation does not apply to radioactive substances, whether sealed or unsealed, nor to apparatus generating ionizing radiations which substances or apparatus, owing to the limited doses of ionizing radiations which can be received from them, are exempted from its provisions by one of the methods of giving effect to the Recommendation mentioned in Paragraph 1.

3. For the purpose of giving effect to paragraph 2 of Article 3 of the Radiation Protection Convention, 1960, every Member should have due regard to the recommendations made from time to time by the International Commission on Radiological Protection and standards adopted by other competent organizations.

II. MAXIMUM PERMISSIBLE LEVELS

4. The levels referred to in Articles 6, 7 and 8 of the Radiation Protection Convention, 1960, should be fixed with due regard to the relevant values recommended from time to time by the International Commission on Radiological Protection. In addition, maximum permissible concentrations of radioactive substances in such air and water as can be taken into the body should be fixed on the basis of these levels.

5. Appropriate measures of collective and individual protection should be taken to ensure that the maximum permissible levels referred to in Articles 6, 7 and 8 of the Radiation Protection Convention, 1960, are not exceeded and that the maximum permissible concentrations referred to in Paragraph 4 are not exceeded for such air and water as may be taken into the body.

III. COMPETENT PERSON

6. The employer should appoint a competent person to deal on behalf of the undertaking with questions of protection against ionizing radiations.

IV. METHODS OF PROTECTION

7. (1) In cases where they ensure effective protection preference should be given to methods of collective protection, both physical and operational.

(2) Wherever methods of collective protection are inadequate, personal protective equipment and, as necessary, appropriate protective procedures should be used.

8. (1) All protective devices, appliances and apparatus should be so designed or modified as to fulfil their intended purpose.

(2) All appropriate measures should be taken to provide for regular examination of these devices, appliances and apparatus, in order to determine whether they are in good condition, are operating satisfactorily, are properly sited and provide the required protection; in particular they should be examined before being put into use and whenever changes are made in procedures, equipment or shielding.

(3) Any defects found in these devices, appliances and apparatus should be remedied at once; if necessary, the equipment to which they are fitted should be taken immediately out of service and kept out of service until the defects have been remedied.

(4) The competent authority should require the inspection in an appropriate manner and at regular intervals of major items of protective equipment and in particular of monitoring equipment.

9. (1) Unsealed sources should be manipulated with due regard to their toxicity.

(2) The methods of manipulation should be chosen with a view to minimizing the risk of entry of radioactive substances into the body and the spread of radioactive contamination.

10. Plans should be made in advance for measures—

(a) to detect as promptly as possible any leakage from, or breakage of, a sealed source of radioactive substances which may involve a risk of radioactive contamination; and

(b) to take prompt remedial action to prevent the further spread of radioactive contamination and to apply other appropriate safety precautions, including decontamination procedures, with, as necessary, the immediate collaboration of all authorities concerned.

11. Sources which may involve exposure of workers to ionizing radiations, and the areas in which such an exposure may occur or where workers may be exposed to radioactive contamination, should be identified, in appropriate cases, by means of easily recognizable warnings.

12. All sources of radioactive substances, whether sealed or unsealed, in use or stored by an undertaking, should be appropriately recorded.

13. (1) The competent authority should require any employer or undertaking using or having possession of radioactive substances to make reports as prescribed by it on the use of these substances.

(2) The competent authority should prescribe the conditions under which such substances should be stored when not in use.

14. No radioactive substance should be transferred to another employer or undertaking without such notification as may be required by the competent authority.

15. (1) Any person who has reason to believe that a radioactive source has been lost, mislaid, stolen or damaged should immediately notify the competent person referred to in Paragraph 6 above or, if this is not possible, another responsible person who should pass the information to the competent person as soon as possible.

(2) If the loss, theft or damage is confirmed, the competent authority should be notified without delay.

16. In view of the special medical problems involved in the employment of women of child-bearing age in radiation work every care should be taken to ensure that they are not exposed to high radiation risks.

V. MONITORING

17. (1) Appropriate monitoring of workers and places of work should be carried out in order to measure the exposure of workers to ionizing radiations and radioactive substances, with a view to ascertaining that the applicable levels are respected.

(2) In the case of external radiation this monitoring should be effected by films, dosimeters or other suitable means.

(3) In the case of internal radiation, when there is reason to believe that the maximum permissible levels may be approached or have been exceeded, this monitoring should include tests—

(a) for radioactive contamination;

(b) if practicable, for body burden.

(4) In addition to measurement of the exposure of the whole body, the monitoring should make it possible to determine the partial exposure of that part of the body where the greatest harm could be done.

18. The competent authority should, where appropriate, require tests to be made for the purpose of detecting contamination of the hands, the body and the clothes of persons leaving a workplace.

19. Persons who carry out monitoring in pursuance of the provisions of the Radiation Protection Convention, 1960, and of this Recommendation, should be afforded adequate equipment and facilities for carrying out this work.

VI. MEDICAL EXAMINATIONS

20. All medical examinations referred to in the Radiation Protection Convention, 1960, should be carried out by a suitably qualified physician.

21. In the cases referred to in Article 13 of the Radiation Protection Convention 1960, all necessary special medical examinations should be carried out.

22. The medical examinations referred to in the preceding Paragraphs should not involve the workers in any expense.

23. Physicians who carry out such medical examinations should be afforded adequate facilities for ascertaining the conditions of work of the workers concerned.

24. For all workers who undergo such medical examinations health records should be established and kept in accordance with the requirements of the competent authority.

25. These health records should be in a form standardized at the national level.

26. So far as practicable a complete record of all doses received in the course of work by every worker specified in Paragraph 24 of this Recommendation should be kept so that the cumulative dose may be taken into account for employment purposes.

27. If, as the result of such medical advice as is envisaged in Article 14 of the Radiation Protection Convention, 1960, it is inadvisable to subject a worker to further exposure to ionizing radiations in that worker's normal employment, every reasonable effort should be made to provide such a worker with suitable alternative employment.

VII. INSPECTION AND NOTIFICATION

28. The inspection services referred to in Article 15 of the Radiation Protection Convention, 1960, should include, or have readily available, a sufficient number of persons fully conversant with radiation hazards and qualified to advise on protection against ionizing radiations.

29. (1) Representatives of these inspection services should be empowered to take steps with a view to the remedying of defeats observed in installations, apparatus or working methods which they may have reasonable cause to believe constitute a threat to the health or safety of the workers by reason of ionizing radiations.

(2) In order to enable representatives of the inspection services to take such steps they should be empowered, subject to any rights of appeal to a judicial or administrative authority which may be provided by laws or regulations, to make or to have made orders requiring—

(a) such alterations to the installation or plant, to be carried out within a specified time limit, as may be necessary to secure compliance with the provisions relating to the health or safety of the workers;

(b) measures with immediate executory force if the danger to the health or safety of the workers make this necessary.

30. (1) Every Member should provide for measures to control the distribution and use of sources of ionizing radiations.

(2) These measures should include—

(a) the notification to the competent authority, as prescribed by it, of the delivery of such sources;

(b) before work involving exposure of workers to ionizing radiations is undertaken for the first time and before substantial extensions or alterations to apparatus or installations emitting ionizing radiations or affording protection against them are carried out; the notification to the competent authority, as prescribed by it, of information concerning the nature of the apparatus or installation and of the measures provided for protection against ionizing radiations.

31. The employer should notify the competent authority, as prescribed by it, of a final cessation of work involving exposure of workers to ionizing radiations.

VIII. CO-OPERATION OF EMPLOYERS AND WORKERS

32. Every effort should be made by both the employers and the workers to secure the closest co-operation in carrying out the measures for protection against ionizing radiations.

Text of Recommendation Concerning Consultation and Co-operation between Public Authorities and Employers' and Workers' Organizations at the Industrial and National Level

The General Conference of the International Labour Organization,

Having been convened at Geneva by the Governing Body of the International Labour Office, and having met in its Forty-fourth Session on 1 June 1960, and

Having decided upon the adoption of certain proposals with regard to consultation and co-operation between public authorities and employers' and workers' organizations at the industrial and national levels, which is the fifth item on the agenda of the session, and

Having determined that these proposals shall take the form of a Recommendation,

adopts this 20th day of June of the year one thousand nine hundred and sixty the following Recommendation, which may be cited as the Consultation (Industrial and National Levels) Recommendation, 1960:

1. (1) Measures appropriate to national conditions should be taken to promote effective consultation and co-operation at the industrial and national levels between public authorities and employers' and workers' organizations, as well as between these organizations, for the purposes indicated in Paragraphs 4 and 5 below, and on such other matters of mutual concern as the parties may determine.

(2) Such measures should be applied without discrimination of any kind against these organizations or amongst them on grounds such as the race, sex, religion, political opinion, or national extraction of their members.

2. Such consultation and co-operation should not derogate from freedom of association or from the rights of employers' and workers' organizations, including their right of collective bargaining.

3. In accordance with national custom or practice, such consultation and co-operation should be provided for or facilitated—

- (a) by voluntary action on the part of the employers' and workers' organizations; or
- (b) by promotional action on the part of the public authorities; or
- (c) by laws or regulations; or
- (d) by a combination of any of these methods.

4. Such consultation and co-operation should have the general objective of promoting mutual understanding and good relations between public authorities and employers' and workers' organizations as well as between these organizations, with a view to developing the economy as a whole or individual branches thereof,

improving conditions of work and raising standards of living.

5. Such consultation and co-operation should aim, in particular—

- (a) at joint consideration by employers' and workers' organizations of matters of mutual concern with a view to arriving, to the fullest possible extent, at agreed solutions; and
- (b) at ensuring that the competent public authorities seek the views, advice and assistance of employers' and workers' organizations in an appropriate manner, in respect of such matters as—
 - (i) the preparation and implementation of laws and regulations affecting their interests;
 - (ii) the establishment and functioning of national bodies, such as those responsible for organization of employment, vocational training and retraining, labour protection, industrial health safety, productivity, social security and welfare; and
 - (iii) the elaboration and implementation of plans of economic and social development.

146th Session of ILO Governing Body

George C. Lodge, United States Assistant Secretary of Labour, was elected Chairman of the ILO Governing Body at the Body's 146th Session.

Mr. Lodge, who will serve for a period of one year, succeeds Ernst Michanek, Under Secretary of State to the Ministry for Social Affairs, Labour and Housing of Sweden.

Pierre Waline, employers' representative of France, was elected employers' vice-chairman; Jean Mori of Switzerland, workers' vice-chairman.

Canada holds a permanent seat on the Governing Body. Dr. George V. Haythorne, Assistant Deputy Minister of Labour, is

Canadian Government member on the Governing Body. Kalmen Kaplansky and T. H. Robinson were elected Workers' Deputy Member and Employers' Deputy Member respectively.

In other business the Governing Body:

—Approved, with the abstention of the representatives of the Governments of the U.S.S.R. and Rumania, a report of the Committee on Freedom of Association containing conclusions on the subject of allegations of violations of freedom of association concerning several countries.

—Appointed members of Governing Body committees and Governing Body representatives on various bodies.

The total of ratifications of Labour Conventions reached 2,000 in June when Australia deposited with the Director-General of ILO, David Morse, ratifications of the Convention on the Abolition of Forced Labour, 1957 and the Convention on Workmen's Compensation (Agriculture) 1921. Australia has now ratified a total of 25 Conventions.

Since it was founded in 1919, the ILO has adopted 114 Conventions bearing upon a wide range of social and labour problems, and its Conventions on the protection of human rights, such as the freedom of association, abolition of forced labour, discrimination and equal pay for work of equal value, are among the most important international initiatives in this field. Other conventions deal with conditions of work, protection of women and young workers,

social security, conditions of work of seamen and of agricultural workers.

Among Conventions that have received the largest number of ratifications are the following:

- Weekly Rest (Industry) 1921—46 ratifications;
- Minimum Wage-Fixing Machinery 1928—41 ratifications;
- Underground Work (Women) 1935—51 ratifications;
- Labour Inspection 1947—40 ratifications;
- Freedom of Association and Protection of the Right to Organize 1948—40 ratifications;
- Freedom of Association in Agriculture 1921—48 ratifications;
- Equal Remuneration for Men and Women for Work of Equal Value—33 ratifications.

INDUSTRIAL RELATIONS AND CONCILIATION

Certification and Other Proceedings before the Canada Labour Relations Board

The Canada Labour Relations Board met for one day during June. The Board issued eight certificates designating bargaining agents, and rejected two applications for certification and one application for revocation of certification. During the month the Board received 13 applications for certification, one application for revocation of certification, and allowed the withdrawal of one application for certification.

Applications for Certification Granted

1. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed employees employed aboard the M.V. *Tyee Shell*, operated on the West Coast by Shell Canadian Tankers, Limited. The Seafarers' International Union of North America, Canadian District, intervened (L.G., July, p. 707) (*see also* item 1 of "Applications for Certification Rejected" below).

2. International Longshoremen's and Warehousemen's Union, Local 505, on behalf of a unit of longshoremen employed by the Pacific Stevedoring and Contracting Company Limited in loading and discharging cargo of deepsea vessels within the Harbours of Prince Rupert and Watson Island, B.C. (L.G., June, p. 602).

3. Pacific Western Airlines Traffic Employees' Association, on behalf of a unit of employees in the Traffic Department of Pacific Western Airlines Ltd., Vancouver Airport, B.C. (L.G., June, p. 603).

4. National Association of Broadcast Employees and Technicians, on behalf of a unit of employees employed by the Kitchener-Waterloo Broadcasting Co. Limited at Radio Station CKCR in Kitchener, Ont. (L.G., June, p. 603).

5. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed employees employed by Coast Ferries Limited, Vancouver, B.C.,

aboard the M.V. *Brentwood* while engaged in the company's freighting service (L.G., June, p. 603).

6. Teamsters, Chauffeurs, Warehousemen and Helpers Union, Local 927, and Teamsters, Chauffeurs, Warehousemen and Helpers Union, Local 76, of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of drivers, garage employees, warehousemen and freight handlers employed by Barnhill's Transfer Limited, Truro, N.S. (L.G., July, p. 708).

7. Canadian Merchant Service Guild, Inc., on behalf of a unit of first, second and third mates employed by Carryore, Limited, Westmount, Que., aboard the vessel *Menihék Lake* (L.G., July, p. 708).

8. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of cook-deckhands employed aboard tugboats operated on the West Coast by the Point Grey Towing Co. Ltd., Vancouver (L.G., July, p. 709).

Applications for Certification Rejected

1. Seafarers' International Union of North America, Canadian District, applicant, Shell Canadian Tankers, Limited, respondent, and Canadian Brotherhood of Railway, Transport and General Workers, intervener (M.V. *Tyee Shell* and M.V. *Western Shell*) (L.G., June, p. 602). The application was rejected for these reasons: the employees of each of the vessels affected, in the opinion of the Board, separately constituted appropriate bargaining units; the SIU is the existing bargaining agent for the unit comprising the unlicensed personnel employed aboard the *Western Shell*; and in the vote affecting the *Tyee Shell* a majority of the unlicensed crew members of that vessel voted against representation by the SIU. (*See also* item 1 of "Applications Granted" above).

This section covers proceedings under the Industrial Relations and Disputes Investigation Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board, and the Industrial Relations Branch of the Department.

2. National Union of Operating Engineers of Canada, Local 14-850, District 50, United Mine Workers of America, applicant, Canadian Broadcasting Corporation, respondent, and Association of Radio and Television Employees of Canada, intervener (stationary engineers and air-conditioning operators at Montreal) (L.G., June, p. 603). The application was rejected for the reason that the unit applied for was not, in the opinion of the Board, appropriate for collective bargaining.

Application for Revocation Rejected

The Board rejected an application for revocation of certification affecting Radio Station CHVC Limited, Niagara Falls, Ont., applicant, and the National Association of Broadcast Employees and Technicians, respondent (L.G., July, p. 709). The application was rejected for the reason that the evidence submitted in support of revocation was not satisfactory to the Board.

Applications for Certification Received

1. Canadian Merchant Service Guild, Inc., Eastern Branch, on behalf of a unit of deck officers employed aboard the motor vessels *Anticosti*, *Castor Consol*, *Loutré Consol*, and *Lievre Consol*, by the Anticosti Shipping Company, Montreal (Investigating Officer: C. E. Poirier) (*See also* item 8, below).

2. General Truck Drivers and Helpers' Union, Local No. 31 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of employees employed in the Cafeteria and Flight Kitchen Department of Canadian Pacific Air Lines Limited, Vancouver Airport, B.C. (Investigating Officer: G. H. Purvis).

3. International Longshoremen's and Warehousemen's Union, on behalf of a unit of checkers employed by Canadian National

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Industrial Relations Branch. The Branch also acts as the administrative arm of the Canada Labour Relations Board, in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certificates given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and work declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for application for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to

the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of four officers resident in Vancouver comprises British Columbia, Alberta, and the Yukon and Northwest Territories; two officers stationed in Winnipeg cover the province of Saskatchewan and Manitoba and Northwestern Ontario; four officers resident in Toronto confine their activities to Ontario; five officers in Montreal are assigned to the province of Quebec, and a total of three officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

Steamships at Vancouver and New Westminster, B.C. (Investigating Officer: G. H. Purvis).

4. Local 23736, Canadian Labour Congress, on behalf of a unit of employees of Upper Lakes Shipping Ltd. in its Grain Elevator Division at Goderich, Ont. (Investigating Officer: T. B. McRae).

5. International Longshoremen's and Warehousemen's Union, on behalf of a unit of longshoremen employed by the Canadian Stevedoring Company Limited at the Terminal Docks in Vancouver (Investigating Officer: D. S. Tysoe).

6. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed aboard towboats operated on the West Coast by the River Towing Co. Ltd., Vancouver (Investigating Officer: G. H. Purvis).

7. Building Material, Construction and Fuel Truck Drivers' Union, Local No. 213 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of truck drivers employed by McNamara-Hislop on a micro-wave tower line project in the Yukon Territory (Investigating Officer: G. R. Currie).

8. Seafarers' International Union of North America, Canadian District, on behalf of a unit of deck officers employed aboard the motor vessels *Anticosti*, *Castor Consol*, *Loure Consol*, and *Lievre Consol*, by the Anticosti Shipping Company, Montreal (Investigating Officer: C. E. Poirier) (*See* also item 1, above).

9. International Longshoremen's Association, on behalf of a unit of longshoremen employed by The Hamilton Harbour Commissioners, Hamilton, Ont. (Investigating Officer: T. B. McRae).

10. International Longshoremen's and Warehousemen's Union, Local 511, on

behalf of a unit of longshoremen employed by the Pacific Coast Terminals Co. Ltd. in its bulk loading operations at Port Moody, B.C. (Investigating Officer: D. S. Tysoe).

11. General Truck Drivers' Union, Local No. 938, of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of employees of Scott Haulage Limited, Timmins, Ont. (Investigating Officer: T. B. McRae).

12. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of unlicensed personnel employed aboard towboats operated on the West Coast by the Bendickson Towing Co. Ltd., Vancouver (Investigating Officer: G. H. Purvis).

13. Canadian Transportation Workers' Union No. 158, National Council of Canadian Labour, on behalf of a unit of truck drivers employed by Hanson Bros. Cartage Limited, Ottawa (Investigating Officer: G. A. Lane).

Application for Revocation Received

Canadian National Railways, applicant, and Canadian Brotherhood of Railway, Transport and General Workers, respondent. The application was for the revocation of certification issued by the Board on August 13, 1959 to the Canadian Brotherhood of Railway, Transport and General Workers in respect of a unit of stevedores and freight handlers employed by the company at Mulgrave, N.S. (L.G., Oct. 1959, p. 1049).

Application for Certification Withdrawn

International Longshoremen's Association, applicant, and The Hamilton Harbour Commissioners, Hamilton, Ont., respondent (L.G., July, p. 708) (For new application submitted subsequently, *see* item 9 of "Applications for Certification Received" above).

Conciliation and Other Proceedings before the Minister of Labour

Conciliation Officers Appointed

During June, the Minister of Labour appointed conciliation officers to deal with the following disputes:

1. Canadian Pacific Air Lines, Vancouver, and Local 28, Hotel and Restaurant Employees' and Bartenders' International Union (Conciliation Officer: G. R. Currie).

2. Atomic Energy of Canada Limited, Chalk River, Ont., and Chalk River Atomic

Energy Draftsmen, Local 1569 of the Canadian Labour Congress (Conciliation Officers: F. J. Ainsborough and T. B. McRae).

3. Soo-Security Motorways Ltd. (North Burnaby B.C. Terminal) and Line Drivers, Warehousemen, Pickup Men and Dockmen's Union, Local No. 605 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Conciliation Officer: G. R. Currie).

4. Shipping Federation of British Columbia, Vancouver, and International Longshoremen's and Warehousemen's Union (Locals 506, 507 and 510) (Conciliation Officer: G. R. Currie).

5. Quebecair Inc., Rimouski, Que., and Canadian Air Line Pilots Association (Conciliation Officer: Rémi Duquette).

6. Vancouver Barge Transportation Limited, Vancouver and Marine Engineers Local 425 of the Canadian Brotherhood of Railway, Transport and General Workers and Canadian Merchant Service Guild, Inc. (Conciliation Officer: G. R. Currie).

Settlement Reported by Conciliation Officers

Atomic Energy of Canada Limited, Chalk River, Ont., and Chalk River Atomic Energy Draftsmen, Local 1569 of the Canadian Labour Congress (Conciliation Officers: F. J. Ainsborough and T. B. McRae) (*see above*).

Conciliation Board Appointed

Shipping Federation of British Columbia, Vancouver, and International Longshoremen's and Warehousemen's Union (Locals 501, 502, 503, 504 and 508) (L.G., May, p. 468).

Conciliation Boards Fully Constituted

1. The Board of Conciliation and Investigation established in June to deal with a dispute between Shipping Federation of British Columbia, Vancouver, and International Longshoremen's and Warehousemen's Union (Locals 501, 502, 503, 504 and 508) (*see above*) was fully constituted in June with the appointment of F. Craig Munroe, Q.C., New Westminster, B.C., as Chairman. Mr. Munroe was appointed by the Minister in the absence of a joint recommendation from the other two members, J. C. Adams, Q.C., Toronto, and William Angus Stewart, Vancouver, who were previously appointed on the nomination of the Federation and union respectively.

2. The Board of Conciliation and Investigation established in May to deal with a dispute between McAllister Towing Ltd. (Sincennes-McNaughton Division) Montreal, and Seafarers' International Union of North America, Canadian District (L.G., July, p. 709) was fully constituted in June with the appointment of H. Carl Goldenberg, Q.C., Montreal, as Chairman. Mr. Goldenberg was appointed by the Minister

in the absence of a joint recommendation from the other two members, Jean-Paul Cardinal, Q.C., and Bernard Boulanger, both of Montreal who were previously appointed on the nomination of the company and union respectively.

3. The Board of Conciliation and Investigation established in March to deal with a dispute between National Harbours Board (Fleet Department, Montreal Harbour) and Seafarers' International Union of North America, Canadian District (L.G., July, p. 709) was fully constituted in June with the appointment of H. Carl Goldenberg, Q.C., Montreal, as Chairman. Mr. Goldenberg was appointed by the Minister in the absence of a joint recommendation from the other two members, Capt. K. L. Crump and Bernard Boulanger, both of Montreal, who were previously appointed on the nomination of the company and union respectively.

Conciliation Board Reports Received

1. United Grain Growers Ltd., Pacific Elevators Limited, Alberta Wheat Pool, Saskatchewan Wheat Pool and Burrard Terminals Limited, Vancouver, and Grain Workers Union, Local 333 of the International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America (L.G., June, p. 604). The text of the report is reproduced below.

2. Canadian National Railway M. V. *Bluenose* and Canadian Brotherhood of Railway, Transport and General Workers (unlicensed personnel) (L.G., May, p. 469). The text of the report is reproduced below.

3. Northern Alberta Railways Company, Edmonton, and Brotherhood of Locomotive Engineers (L.G., January, p. 56). A digest of the report is reproduced below.

Board Reports Received of Settlements

1. Stanleigh Uranium Mining Corporation, Limited, Elliot Lake, Ont. and District No. 6, United Steelworkers of America (production employees) (L.G., May, p. 469). The text of the report is reproduced below.

2. Consolidated Denison Mines Limited, Spragge, Ont. (production workers) and United Steelworkers of America (L.G., July, p. 709). A digest of the settlement is reproduced below.

Report of Board in Dispute between

United Grain Growers Ltd., Pacific Elevators Limited,
Alberta Wheat Pool, Burrard Terminals Limited,
and Saskatchewan Wheat Pool
and

International Union of United Brewery, Flour, Cereal,
Soft Drink and Distillery Workers of America

This was a Board of Conciliation and Investigation which was appointed under the provisions of the "Industrial Relations and Disputes Investigation Act" to endeavour to bring about agreement between the parties to the said dispute, and to find terms for a collective agreement which the parties will accept and to report to the Hon. the Minister of Labour, pursuant to the provisions of Section 17 of "The Industrial Relations and Disputes Investigation Act".

Messrs. D. Ireton, W. P. Pollock, E. G. Hedge, F. D. Peterson, H. Mackay, A. Metcalfe and P. C. Watt appeared for the Employers.

Messrs. E. C. Sims, H. Kancs, G. Dewar, D. F. Berry, J. Brandon, J. Scully, E. Miller and R. Ferguson appeared for the Bargaining Agent.

The parties agreed that the Board had been properly constituted and had jurisdiction to make recommendations in relation to the matters in dispute.

The Board met with the parties, separately and together May 24 to May 30, 1960,—(seven day sittings and five night sittings).

During June, the Minister of Labour received the report of the Board of Conciliation and Investigation established to deal with the dispute between Grain Workers Union Local 333 of the International Union of United Brewery, Flour, Cereal, Soft Drink and Distillery Workers of America, and United Grain Growers Ltd., Pacific Elevators Limited, Alberta Wheat Pool, Saskatchewan Wheat Pool and Burrard Terminals Limited, Vancouver.

The Board was under the Chairmanship of W. E. Philpott, Vancouver, who was appointed by the Minister in the absence of a joint recommendation from the other two members, W. Scott Neal, Winnipeg, and J. R. St. Eloi, Vancouver, nominees of the companies and union respectively.

The Majority Report, which under the provisions of the Industrial Relations and Disputes Investigation Act, constitutes the report of the Board, was submitted by the Chairman and Mr. Neal. The Minority Report was submitted by Mr. St. Eloi.

The Majority and Minority Reports are reproduced here.

The Board regrets to advise that it was unable to bring about agreement between the parties in dispute despite presentation of proposals and counter-proposals to both sides.

It is the considered opinion of the Board that if a wage settlement could have been made, there would have been, in all probability, a settlement made in relation to the many other items in dispute.

Therefore after careful consideration of all the evidence, oral and written, submitted to this Board, the following recommendations are herewith respectfully submitted:

That the present collective agreement be renewed for a period of two years, from December 1, 1959, to November 30, 1961, and amended to reflect the following:

SECTION

1.01 The status of a probationary employee.

3.01 Substitute "Company" for "elevator operations".

4.01 Substitute "recalled" for "rehired".

4.03 (b) Reasonable advance notice from the employer of necessary overtime work. No unreasonable refusal by the employee to work overtime. No discrimination by the employer, (in recognition of necessity for performance of overtime work and employees' obligation to volunteer to perform it.)

4.04 That no employee required to do work during his lunch period shall be sent home early to avoid payment of overtime rates.

4.07 (a) Payment of holiday allowance to any employee whose name is on the payroll during the payroll period in which a holiday falls.

4.08 (a) Amend to reflect union proposal for "three" hours instead of present "two" hours.

4.08 (b) Supper hour for day shift to be from 5:00 p.m. to 6:00 p.m. Work performed during this period to be paid for at the rate of time and one-half. This arrangement to be confined to employees on regular 8:00 a.m. to 5:00 p.m. day shift.

4.11 Substitute "practicable" for "possible".

5.01 Substitute "probationary employees" for "new inexperienced hourly rated employees".

5.02 That an employee shall continue to enjoy the rate for his classification when relieving another employee who is absent due to sickness, accident or regular vacation. However, his rate will be reduced to that of the new classification, if due to the application of the seniority provisions, or due to a demotion, he is transferred to a lower rated job.

6.01 Delete all reference to legislation re vacation. Three (3) weeks vacation after six (6) years of employment. All vacation pay to be on a percentum basis.

7.01 Proposal of the employers—except that the onus will be on the employers to prove that the employee received notice of recall.

8.04 Continuance of the present MSA arrangement for the calendar month next following the month in which the employee is laid off.

8.05 Sickness Indemnity Plan benefits of \$40 per week on the basis of equal sharing of the cost for such Plan.

WAGES

The First aid attendant to receive \$15 per month extra for such duties.

Either of two plans for wages are recommended as follows:

DELETE ESCALATOR PROVISIO

Plan No. 1

Effective 1 December 1959—Amalgamation of 8 cents C. of L. Bonus—\$2.095 Base Rate.

On or about June 15, 1960, I found from the Chairman of the Board that the document he sent me, received about June 6, 1960 and dated June 2, 1960, and to which he referred as "proceedings of the meetings" and to which he asked for whatever amendments I might have, had now already been filed with the Minister as a Majority Report by himself and Mr. Scott Neil, companies' nominee.

I felt this whole procedure of the Board since May 30, highly irregular, in that the "Majority Report" as it now stood was nothing more than the contents of a "Sheet 2" proposal developed by Chairman Philpott and Mr. Neal, and placed before the companies and agreed to by them apparently on Sunday, May 29.

Effective 1 December 1959—General Wage Increase of 5 per cent—\$2.20 Base Rate.

Effective 1 December 1960—General Wage Increase of 2.5 per cent—\$2.25 Base Rate.

OR

RETAIN ESCALATOR PROVISIO

Plan No. 2

Effective 1 December 1959—General Wage Increase of 2.5 per cent.

Effective 1 December 1960—General Wage Increase of 2.5 per cent.

The above recommendations were referred to both parties in detail on more than one occasion. They appeared to understand clearly what each term meant. The Board therefore has cited the agreement term reference only and has refrained from writing in full how such clauses would appear in the contract. The Board feels that in this instance the parties themselves should choose their own language to express these particular terms.

The Board, therefore, under the circumstances, feels that after full consideration of the large volume of evidence and argument adduced at the many hearings, that the recommendations herein contained are fair and reasonable to both parties for incorporation into a new agreement.

Dated at Vancouver, B.C., this 2nd day of June 1960.

(Sgd.) W. E. PHILPOTT,
Chairman.

(Sgd.) W. S. NEAL,
Member.

MINORITY REPORT

It was placed before the union committee on Monday, May 30, and much of "it" rejected in favour of a major portion of a "Sheet 1" proposal composed and placed before the union by the same two gentlemen during my accepted and unavoidable absence May 27 and 28.

The hearings ended May 30 and Mr. Scott Neal returned home to Winnipeg.

I understood there would be further discussion between the Board members by correspondence or, if necessary, by further meeting. This obviously was not contemplated by the Chairman or Mr. Scott Neal, and I feel I was somewhat misled.

It is my opinion that the said "Majority Report" of the Board, signed by Mr. Philpott and Mr. Scott Neal, does nothing

toward alleviating tensions or developing industrial harmony on the Vancouver waterfront grain terminals. The report is nebulous and evasive in many respects and I therefore cannot understand nor agree with my colleagues on the Board.

In order to establish a development toward industrial harmony, I would suggest the following, which varies the old agreement only to the extent of some of the changes proposed to the union committee by my Board colleagues on their "Sheet 1" of May 27-28, except for my comment herein on Sections 5.02 and 7.01.

I propose: No change to the old agreement except:

Section

3.01 Substitute the word "Company" for "Elevator Operations".

4.01 Substitute word "recalled" for "rehired".

4.03 Add a new Section (b) to read:

"An employee will not unreasonably refuse to work overtime when requested to do so. The employer will give reasonable advance notice of necessary overtime work".

4.04 Add a paragraph to read:

"Employees who are required to work during their lunch hour shall not be sent home early to avoid payment of overtime rates."

4.07 (a) Add to the present agreement after the word "rates":

“, provided such employee/s has worked within thirty (30) days prior to and/or within thirty (30) days immediately following the said holiday.”

4.08 Amend last sentence to reflect three (3) hours instead of present two (2) hours.

Also, add an additional paragraph to 4.08 to read:

"Supper hour for day shift to be from 5 p.m. to 6 p.m. Work performed during this period to be paid for at the rate of time and one-half. This arrangement to be confined to employees on regular 8 a.m. to 5 p.m. day shift."

5.02 Leave as in present contract, with the additional following recommendation:

"There be no change to the present language of 5.02".

"It is suggested that the parties, during the life of the agreement, get together and work out regulations within the framework of the present language and satisfactory to both sides, to take care of the practices of temporary postings and reasonable full time postings, etc.

After listening to both sides, I feel a working arrangement can be brought

about through this practical approach."

6.01 Amend to provide:

"All employees shall, after completing one (1) year of employment with the Company, receive two (2) weeks' vacation with full pay each year."

"All employees shall, after completing six (6) years of employment with the Company, receive three (3) weeks' vacation with full pay each year. All employees shall, after completing fifteen (15) years of employment with the Company, receive four (4) weeks' vacation with full pay each year."

"A pro rata payment based on the foregoing to be paid employees who terminate before taking their vacation benefits earned since their last employment anniversary date."

7.01 Leave as in old agreement as there was no evidence before the Board to show a problem existed anywhere. On the contrary, the status of all employees on the seniority lists has not been in dispute.

8.04 Add a provision: "The present MSA arrangement shall continue for the calendar month next following the month in which the employee is laid off."

8.05 Amend to reflect \$50 instead of \$35.

WAGES

First Aid Attendant:

Amend to provide:

"To receive \$15 per month extra for such duties."

General Increase:

I believe the union is strongly against deleting the Escalator Proviso. I also believe the percentage increase suggested is too small.

However, as a bare minimum, I recommend the following:

Plan No. 1

Effective:

Dec. 1/59 Amalgamation of 8 cents C.O.L.B.=Example \$2.095 Base Rate.

Dec. 1/59 General Wage Increase of 5 per cent=Example \$2.20 Base Rate.

Dec. 1/60 General Wage Increase of 5 per cent=Example \$2.31 Base Rate.

or

Retain Escalator Proviso

Plan No. 2

Effective December 1 1959 General Wage Increase of 5 per cent.

Effective December 1, 1960 General Wage Increase of 5 per cent.

Dated at Vancouver, B.C., this 20th day of June, 1960.

Respectfully Submitted,

(Sgd.) J. R. ST. ELOI,
Member.

Report of Board in Dispute between

Canadian National Railways (M.V. "Bluenose")

and

Canadian Brotherhood of Railway, Transport and General Workers

The Board of Conciliation and Investigation appointed under the provisions of the Industrial Relations and Disputes Investigation Act herewith presents its report.

Proceedings before the Board opened in Montreal on April 19, 1960, and were continued on the following day. Each party presented its case and was afforded an opportunity for rebuttal.

The matters in issue submitted to the Board are items (1) and (2) of the proposals made by the union, which read as follows:

(1) Effective with commencement of the calendar year 1960, all rates of pay shall be increased by 7 per cent, plus 12½ cents per hour.

(2) Existing vacations with pay rules shall be changed by supplementing provisions that after 10 years' service, employees shall receive 15 working days pay, and after 20 years' service, 20 working days.

The Board, having heard and examined the submissions of the parties, and having deliberated thereon, finds and recommends as is hereinafter set out.

1. Wages

The union's wage proposal is the same as that which has been submitted to the railway companies by the non-operating railway employees. The employer denies that any wage increase is warranted and submits that the wages, working conditions and fringe benefits of the employees on the *Bluenose* are superior to those prevailing for similar seafaring jobs in the Maritime Provinces and, furthermore, that the *Bluenose* operation is a deficit operation of which the cost is borne by the taxpayers.

After examining wages, fringe benefits and working conditions in some other seafaring jobs, the Board finds that the wages of the *Bluenose* employees compare favourably and also that the employees enjoy certain advantages, such as steady year-round employment, a superior health and welfare plan, and a pension plan which provides for retirement at the age of 65. Having regard to these considerations affecting earnings and the welfare of the workers, the Board finds that the Union's wage proposal, averaging nearly 16 per cent, is excessive and cannot be justified.

Considering the increase of approximately 3½ per cent in the Consumer Price Index between January, 1958, and January, 1960, as well as trends in recent wage negotiations, the Board recommends an increase of 5 cents per hour in basic wage rates retroactive to January 1, 1960, on the basis of a one-year contract.

2. Annual Vacation.

The existing agreement provides for two weeks vacation after one year's service and three weeks vacation after 15 years service. The union proposes three weeks after 10 years service and four weeks after 20 years service. The Employer submits that the existing provisions are liberal and that a change is not warranted.

While the Board cannot recommend the granting of the union's proposal, it approves in principle four weeks vacation after 25 years service and recommends that this be extended to the *Bluenose* employees if, as and when it is granted in comparable marine services in the Maritime area. (See memorandum below).

Respectfully submitted this 15th day of June, 1960.

(Sgd.) H. Carl Goldenberg,
Chairman.

(Sgd.) Jim MacDonald,
Member.

During June, the Minister of Labour received the report of the Board of Conciliation and Investigation established to deal with the dispute between Canadian National Railways (M.V. *Bluenose*) and Canadian Brotherhood of Railway, Transport and General Workers.

The Board was under the Chairmanship of H. Carl Goldenberg, QC, of Montreal, who was appointed by the Minister in the absence of a joint recommendation from the other two members, Prof. A. J. Meagher, QC, of Halifax, and James MacDonald of Ottawa, nominees of the company and union respectively.

The Majority Report, which under the provisions of the Industrial Relations and Disputes Investigation Act, constitutes the report of the Board, was submitted by the Chairman and Mr. MacDonald. The Minority Report was submitted by Prof. Meagher.

The Majority and Minority Reports are reproduced here.

MEMORANDUM

I cannot agree with the qualifications attached by the Chairman to his approval in principle of four weeks vacation for employees with 25 years service. This slight improvement in the vacation entitlement, even if made effective as of January, 1960, would represent a more than reasonable compromise on the union's vacation proposal.

The geographic and occupational qualifications placed on this recommendation are quite unfair, as to have its effectiveness dependent upon others securing it first is to say that the employees concerned are second class citizens in this respect. This I am sure is not his intention, but it does have that effect.

I recommend therefore that employees with 25 years service receive 20 working

days vacation with pay (4 weeks), as of January 1, 1960.

Mindful however of the contract procedure for vacation schedules; and having regard to the time of the year in which this recommendation is made, I further recommend that when the parties meet to finalize the details of the collective agreement, they decide upon its application to the employees concerned, i.e., whether the vacation schedules already agreed upon will enable the employees concerned to actually receive a fourth week off with pay this year, or to receive the fourth week's pay in lieu of the time off.

Respectfully submitted this 20th day of June, 1960.

(Sgd.) Jim MacDonald,
Member.

MINORITY REPORT

Mr. H. Carl Goldenberg, OBE, QC, chairman of the Board appointed to conciliate the above dispute, has informed me by long distance telephone of his recommendations regarding the items in dispute. I understand that these recommendations will be concurred in by Mr. James McDonald, nominee of the union.

By agreement between the applicant, the Canadian Brotherhood of Railway, Transport and General Workers (unlicensed personnel) hereinafter referred to as the "union" and the respondent, Canadian National Railway Company, as manager and operator of the ferry M/V *Bluenose*, hereinafter referred to as the "railway", the demands of the union were referred to the Board for recommendation, namely,

"Effective with commencement of the calendar year 1960, all rates of pay shall be increased by 7 per cent plus 12½ cents per hour.

Existing vacations with pay rules shall be changed by supplementing provisions that after 10 years service employees shall receive 15 working days with pay and after 20 years 20 working days."

I. The Wage Demand

The Wage Demand raises a very fundamental issue, namely, whether, in the absence of any justification, the wage rates in a collective agreement should automatically be increased every time a new agreement is negotiated between the parties.

In this dispute the union has submitted few, if any, grounds in support of its application to increase wages, while the railway has presented many reasons establishing that an increase in wages is not justified at this time.

The union's application for an increase in wages is based upon three grounds, namely,

(i) "that in an expanding economy, with rising prices and increasing productivity, an increase in rates of pay is warranted".

No evidence was presented by the union in support of this contention. In fact, as pointed out by the railway, at the present time the economy of the country, instead of expanding, is unfortunately declining. The cost of living indices are on the downward trend. The productivity argument cannot apply to an operation such as that carried on by the *Bluenose*.

(ii) The second ground submitted by the union is that "the prevailing rates of pay in Maritime water transportation as applied by the Department of Transport to certain small government vessels, and the wage rates in water transportation on the Atlantic coast and lower St. Lawrence as established by the surveys of the Department of Labour," are higher than those paid to the personnel of the M/V *Bluenose*.

Unfortunately, the figures given in the union brief are of a very general nature and were not accompanied by the number of hours worked per week, working conditions or fringe benefits. It is therefore impossible to compare the figures given with those paid to the personnel of the *Bluenose*. The railway pointed out that the men on the various government boats have a 48 to 56 hour work week as compared with the 40 hour week of the men on the *Bluenose*. This would have a material effect on the wage rates set out in the union submission.

(iii) the third union contention is that the demands of the railway non-ops. should be the basis of the settlement. The non-ops'

demands are based upon the durable goods industry. In the union submission it was admitted that the differential between railway workers and durable goods workers "seems to be an irrelevant consideration". Likewise the railway submitted that the operation of the M/V *Bluenose* is not a railway operation. It is not a part of the railway system, for there is no railway connection at Bar Harbour, the southern terminus. It is merely operated by the railway as an agency for the Department of Transport.

The railway contended that the Board should not grant an increase in wages because:

(a) that the wages paid to the unlicensed personnel of the *Bluenose* are not only far ahead of the average wages paid on any comparable ship in the Maritimes, but that the men enjoy working conditions and fringe benefits which are second to none;

(b) that the Yarmouth-Bar Harbour ferry service operates at a deficit and is subsidized by the Canadian taxpayer and any increase will inevitably add to the cost of the operation;

(c) that the practice of continually increasing wages where no increase is justified must come to an end if the anti-inflationary policy of the Canadian Government of holding the line is to succeed.

In support of its contention that the existing wage rates paid to the *Bluenose* personnel are higher than the average, the railway presented a table showing that in comparison with the other six major shipping services in the Maritimes, the *Bluenose* employees are receiving a weighted average hourly rate of \$1.40 per hour as compared with a \$1.30 for the 836 employees on the ships of the other services. This amounts to a 10 cents per hour or 7 $\frac{1}{2}$ per cent differential in favour of the *Bluenose* employees. A further comparison with the 2,268 employees on the 126 vessels of the Great Lakes Carriers Association only raised the weighted average from \$1.30 per hour to \$1.327 per hour, which still leaves the differential of 7 $\frac{3}{4}$ cents per hour in favour of the *Bluenose* employees. A copy of this table is attached (*see* page 822).

Of all the Maritime ships, only the personnel of the S.S. *Princess Helene*, a ferry operating from Saint John, N.B. to Digby, N.S., enjoy in some instances higher rates of pay. A differential of 1.9 cents exists in favour of the unlicensed employees of the *Princess Helene* which the railway contends is exactly balanced out by the tax advantage which it has recently awarded to its employees.

It is quite evident that the cost of living in the city of St. John, the home port of the *Princess Helene*, is much higher than Yarmouth, the home port of the *Bluenose*, so that it is reasonable to expect that a differential should exist between the two ships.

The table as submitted by the railway also shows that the wage rates paid on the *Bluenose* are higher than those paid in the Newfoundland services where the cost of living again is higher than that of Yarmouth.

According to the railway brief, not only are the wages of the *Bluenose* employees far above the average, but working conditions and fringe benefits are second to none. They all enjoy steady employment, a 40-hour week, a pension scheme, a health and welfare plan, and seven paid statutory holidays, as well as regular holidays. In addition, the men are home every second night during most of the year and have eight days off duty after every 20 days on.

The railway's brief also pointed out that the *Bluenose* has had a combined operating deficit of \$397,500 for the years 1958 and 1959. This amount would be increased to \$1,600,000 for the same two years if amortisation of construction cost and other contingencies were added. It was also pointed out that the nature of the operation prevents any additional wage cost from being compensated for by increasing the revenues.

During the period of the contract, namely, January 1, 1958 to December 31, 1959 the Consumer Price Index increased from 123.4 to 127.9 a difference of 4.5 points. Between March, 1958, when the contract was signed, and March 1960, during negotiations, the Consumer Price Index had increased from 124.3 to 126.9, a difference of 2.6 points or approximately 2 per cent. It is my opinion that any increase in the price index during the term of the contract was adequately compensated and allowed for when the original contract was entered into in March, 1958. At that time an increase of 10 per cent was granted. In fact, now the index has been on the decline for some months.

I am of the opinion that a conciliation board should not automatically recommend an increase in wages if the applicant fails to establish any justification for an increase. Here, not only has the union failed to support its application for an increase, but the railway has adduced very strong grounds in rebuttal, so I must recommend against any increase.

Holiday Demands

The union has requested that after 10 years service the employee should receive 15 working days with pay or three weeks holidays, and after 20 years service twenty working days or four weeks holiday.

The only argument presented by the union in support of this demand is that there is a clear trend towards longer paid vacations to which employees are entitled. The union also pointed out in their memorandum that "an examination of the seniority of the employees before the Board did not appear to establish an urgency respecting this demand".

Here again the union has not presented any material in support of its demand and I am of the opinion that the demand should be refused on that ground alone.

The railway in its submissions pointed out that the existing vacation rules enjoyed by the personnel of the *Bluenose* are far in excess of those proclaimed in the Federal Vacation with Pay Act. In addition, excluding vessels operated by the Company and by the Canadian Pacific Railway Company,

no marine employees who enjoy similar advantages are entitled to more than two weeks vacation in any year regardless of the length of service; whereas, many of the *Bluenose* employees enjoy up to three weeks vacation per year.

It is clear that the union's request in regard to additional holidays is not supported by any evidence of a cogent nature, nor do the circumstances presently existing in the industry justify increasing the already liberal holiday provisions enjoyed by the *Bluenose* personnel in relation to the personnel on other ships in the Maritimes.

I wish to join with the other members of the Board in expressing our thanks to the representatives of both parties for their co-operation and assistance. I also wish to extend personal thanks to the other members of the Board for their co-operation.

Dated this 15th day of June, 1960, at Halifax, N.S.

Respectfully submitted,

(Sgd.) A. J. Meagher,
Member.

Report of Board in Dispute between Northern Alberta Railways Company and Brotherhood of Locomotive Engineers

Pursuant to the provisions of the Industrial Relations and Disputes Investigation Act, the Board of Conciliation and Investigation established to deal with the dispute between the above named parties and appointed on November 26, 1959 convened to hear representations from the parties to the dispute.

The members of the Conciliation Board were Irwin A. Blackstone, chairman; G. J. D. Taylor, representing the union; and S. H. McCuaig, QC, representing the employer. Appearing before the Board were: for the union—W. S. Fee and O. J. Travers; for the Company—T. A. Johnstone, A. M. Hand, E. C. Arkell, J. Shepp, J. Ramage, A. L. Cordingley, J. F. Cooper, L. S. Wilson, M. A. Coguit.

After considering the evidence and the briefs submitted in a series of meetings commencing November 30, 1959 until this date, a majority of the Conciliation Board makes the following recommendations:

1. *Wages*

Wage increases to be granted in accordance with the Memorandum between the parties, a copy of which is hereto annexed

and hereinafter referred to as "the Memorandum."

2. *The Memorandum*

All the terms of the Memorandum to be carried out in full with such minor changes

During June, the Minister of Labour received the report of the Board of Conciliation and Investigation established to deal with the dispute between the Northern Alberta Railways Company, Edmonton, Alta., and the Brotherhood of Locomotive Engineers.

The Board was under the chairmanship of Irwin A. Blackstone, Calgary, who was appointed by the Minister in the absence of a joint recommendation from the other two members, S. H. McCuaig, Q.C., Edmonton, and G. J. D. Taylor, Saskatchewan, nominees of the company and union respectively.

The Majority Report, which under the provisions of the Industrial Relations and Disputes Investigation Act constitutes the report of the Board, was submitted by the Chairman and Mr. McCuaig. The Minority Report was submitted by Mr. Taylor.

The Majority and Minority Reports are reproduced here. Also reproduced is a summary of the recommendations of the Board as contained in the Memorandum that was incorporated in the Majority Report of the Board.

that may have already been agreed upon between the parties.

3. *Retroactivity*

Wages to be fully retroactive as set out in the Memorandum. Effective date of other memorandum items including statutory holidays, vacations with pay, health and welfare to be July 1, 1960.

4. *Arbitrary Allowances*

Arbitrary allowances for preparatory and final inspections to be reduced to fifteen minutes in road and ten minutes in yard service commencing July 1, 1960. All arbitrary allowances from July 1, 1958 until June 30, 1960 to be fully paid on scale in existence during that time.

The Conciliation Board had before it extensive information and arguments from both parties with regard to the matter of arbitrary allowances. The subscribers to this Report were impressed with the Company's arguments that the prior schedule of arbitrary allowances was unrealistic having regard to current conditions and that the suggested wages in the Memorandum and reduced arbitrary allowances as recom-

mended herein were having regard to necessary pertinent adjustments identical with that of the current Canadian Pacific Railway contract in force.

5. *Duration of Agreement*

The parties to enter into a three-year agreement from July 1, 1958 until June 30, 1961.

6. *Previous Contract*

Save as herein provided and save where other amendments have already been agreed to the previous contract shall continue in force.

Dated at the City of Calgary, in the Province of Alberta, this 18th day of May, A.D. 1960.

(Sgd.) IRWIN A. BLACKSTONE,
Chairman.

(Sgd.) S. H. MCCUAIG,
Member.

(Because of its length and technical detail, the Memorandum mentioned in the Report has been detached. A summary of the recommendations follows.—Ed.)

SUMMARY OF RECOMMENDATIONS

Wage Increase

July 1958	April 1959	Nov. 1959	July 1960
2%	3%	3%	1.5%

Vacations with Pay

Effective July 1/60

One week after 1 year's service at 2% of gross earnings

Two weeks after 2 years service at 4% of gross earnings

Three weeks after 15 years service at 6% of gross earnings

Four weeks after 35 years service at 8% of gross earnings.

Improvements in vacations are:

(1) Four weeks after 35 years service—previously vacation provisions only went as far as three weeks after 15 years service.

(2) Two weeks after 2 years service—previously qualifying period was three years for 2 weeks vacation.

Health and Welfare

Effective July 1/60

\$4.87 per month to be paid to each employee in lieu of a Health and Welfare Plan.

Previously \$4.25 was paid in lieu of Health and Welfare Plan.

Statutory Holidays

Effective July 1/60

One additional day, bringing the total to 7.

Arbitrary Allowances

Effective July 1/60

Road Service

15 min. preparatory time and 15 min. final inspection time.

This is reduced from previous allowances of 30 min. preparatory time and 45 min. final inspection time.

Yard Service

10 min. preparatory time and 10 min. final inspection time.

This is reduced from previous allowances of 30 min. preparatory time and 15 min. final inspection time for steam locomotives and 15 min. preparatory time and 10 min. final inspection time for diesel locomotives.

Duration of Agreement

Three years from July 1/58 to June 30/61.

The Minority Report concurred with the recommendations of the Majority Report but recommended that the arbitrary allowances remain unchanged.

MINORITY REPORT

I regret that I must express my disagreement with my colleagues on the Board of Conciliation. However, the main issue involved in this dispute is of sufficient importance to merit more extended discussion than is contained in the Majority Report.

The parties to this dispute are the Brotherhood of Locomotive Engineers, and Northern Alberta Railway Company, as employer of locomotive engineers represented by the Brotherhood. The employer is owned jointly by Canadian National Railways and Canadian Pacific Railway Company.

The parties to this dispute are parties to a succession of collective agreements, the last of which was effective commencing July 1, 1956 until June 30, 1958. On May 4, 1958, the union served notice to effect changes in the agreement. On August 13, 1958, the employer wrote the union suggesting that negotiations be deferred pending settlement with the parent lines (that is, Canadian National Railways and Canadian Pacific Railway Company), and this was agreed to by the union. The employer enclosed with this letter proposals for revision of the agreement, including a proposal to abolish arbitrary allowances for preparation and inspection of locomotives.

By May 1959, settlements had been reached between the union and the parent lines, and on May 25 and 26, 1959, representatives of the employer and the union met in Edmonton. The result of these meetings is best expressed by quoting the text of a letter written over the signature of the General Manager of Northern Alberta Railways:

EDMONTON, Alberta,
May 28th, 1959.
FILE: 1562 (1958-9)

Mr. John Marshall,
Ass't. Grand Chief Engineer,
Brotherhood of Locomotive Engineers,
703-356 Main Street,
WINNIPEG 1, Manitoba.

Mr. W. S. Fee,
General Chairman,
Brotherhood of Locomotive Engineers,
10712-141st Street,
EDMONTON, Alberta.

Gentlemen:

With reference to negotiations conducted in connection with existing agreement between the Brotherhood of Locomotive Engineers and the Northern Alberta Railways.

In accordance with your requests I am enclosing to Mr. Marshall three (3) copies of draft memorandum of agreement resulting from such negotiations. Two (2) copies thereof are also forwarded to Mr. Fee.

Yours truly,

J. F. COOPER,
GENERAL MANAGER.

Encl.

It should here be observed that the "draft memorandum of agreement" referred to in Mr. Cooper's letter is "the Memorandum" referred to in the Report of the majority of this Board.

It seems quite clear from the language of this letter that the parties had negotiated, and had reached agreement respecting revision of the collective agreement. It seems equally clear that this agreement, which involved wage increases as well as other benefits to employees represented by the union, contemplated no change in arbitrary allowances for preparatory and final inspections of locomotives, nor any other changes in the agreement than those set out in the memorandum.

However, on June 16, 1959, Mr. Cooper wrote a further letter to the union suggesting that it was necessary to meet again to discuss further revisions of the collective agreement, and in particular that arbitrary allowances be reduced "...to actual time required." Further meetings between the parties followed, and continued disagreement resulted in the establishment of this Board.

When the Board commenced its hearings, the representatives of the employer stated the dispute in this way: "...the only major point at issue which stood in the way of a settlement was the Company's proposal No. 1 respecting the elimination of arbitrary allowances and substitution thereof of a provision for payment on the minute basis for the actual time required to be on duty."

It was to this question, accordingly, that the attention of the Board was directed.

The contention of the employer was that the arbitrary allowances were unrealistic in the light of modern operating conditions, and that the actual duties required of a locomotive engineer in respect of preparation and inspection could be performed in much less time than specified in the collective agreement. The union, for its part, contended that the allowances were inadequate for the proper inspection and preparation of locomotives, bearing in mind the heavy responsibility devolving upon an engineer, and that no reduction, much less elimination, of such allowances should occur.

It should at this point be observed that the employer did not state the issue as accurately as might have been. At first glance it appears that the employer proposed paying engineers for the time actually spent in preparing and inspecting a locomotive. However, in response to direct questioning on this point, a representative of

Canadian Pacific Railway Company stated bluntly that in fact the time to be paid for would be fixed "by supervision," that is, by management. In other words, the employer, rather than seeking the elimination of "arbitrariness" in fact sought their substitution—instead of allowances being fixed by negotiation and set out in the collective agreement, they were to be fixed by unilateral decision of the employer. An engineer, under this proposal, would be paid, not for time actually required in preparation and inspection, but for whatever time management chose to fix as being required.

The evidence advanced on behalf of the employer to justify its contention was, in my opinion, unsatisfactory. At one point, again in response to a direct question, a CPR representative stated that the preparatory duties of a locomotive engineer could be performed in two minutes and inspection in ten seconds. This absurd statement was made in the face of a bulletin as to the duties of engineers which was made part of the employer's case, reading as follows (the emphasis is mine—GJDT):

NORTHERN ALBERTA RAILWAYS
COMPANY

EDMONTON, Alberta,
January 8th, 1960.

Bulletin 78/3575

Enginemen's Bulletin Books: ALL POINTS.

With the advent of operation of GMD 1 type diesel locomotives on these Railways, instructions contained in Revised Diesel Bulletin No. 2, dated January 13th, 1958, and Diesel Bulletin No. 6, dated February 25th, 1958, are superseded.

The following preparatory, road inspection and final inspection duties will hereafter apply to steam or diesel locomotives, as required.

Preparatory Duties:

1. Sign register, read and sign bulletins.
2. See that the locomotive and its equipment is in a safe and satisfactory condition and ready for movement.

Road Inspection Duties:

1. At train inspection points, examine running gear.
2. Drain moisture from air reservoirs.
3. Check for air, water, fuel and lube oil leakage.
4. Check gauges periodically.

Final Inspection Duties:

1. Leave engine and hand brake fully applied, and where provided, see that safety chain is properly placed.
2. (a) Secure closed throttle, reverse lever on center, open cylinder cocks and relief valves and properly adjust fire. Leave at least three-quarters of a glass of water in boiler.

(b) Remove reverse handle with throttle in idle and selector lever in off position. Open generator field switch and turn isolation switch to start position. Open air box drains at all terminals except Dunvegan Yards.

3. Provide for proper protection during inclement weather.
4. Defects to be noted on work report for each unit.

A. Wotherspoon,
MASTER MECHANIC.

A good deal was said about the advent of diesel power and a consequent reduction in time required for preparation and inspection. However, the union pointed out that the responsibilities of an engineer were, in fact, increased, since it is now commonplace for one engineer to be made responsible for multiple power units, each of which requires separate attention in preparation and inspection.

In my opinion, the responsibility which devolves upon a locomotive engineer, coupled as it must be with necessary regard for the safety of the lives and property of railway employees and those who use railway facilities, whether as passengers or shippers, requires the most careful preparation and inspection of locomotive power units, whether diesel or steam. There was, as I have already stated, no evidence to justify the elimination of arbitrariness. There was certainly none to justify the completely arbitrary adoption by the majority of the Board of the allowances set out in another collective agreement involving a different line.

Furthermore, in the light of the negotiations between the parties in May, 1959, which culminated in the Memorandum of Agreement referred to in Mr. Cooper's letter and in the report of the majority of the Board, it seems quite clear that any reduction of arbitrary allowances at this time involves a direct wage reduction which is not, in my opinion, justified by any evidence submitted to the Board.

Accordingly, while I am in agreement with recommendations numbered (1), (2), (3), (5) and (6) of the majority, I must disagree with recommendation numbered (4), and respectfully recommend in its place that arbitrary allowances to engineers as set out in the collective agreement which terminated June 30, 1958, remain unchanged.

Dated at the City of Saskatoon, in the Province of Saskatchewan, this 8th day of June, A.D. 1960.

Member.

Report of Board in Dispute between

Stanleigh Uranium Mining Corporation Limited and District No. 6, United Steelworkers of America

This Conciliation Board met with the parties at Toronto, Ontario on May 14, 1960 to deal with the following matters:

Preamble, Contracting out of work, No discrimination, Union Security, No strike—No lock-out, Hours of work, Overtime, Premium Pay, Statutory holidays, Vacation with pay, Incentive and Production Standards, Rehabilitation and Pension Trust fund, Wages, Insurance Welfare Program, Store Purchases, Duration of Agreement, Established Practices, Preferential Seniority.

This Board is pleased to report that it was able to bring the parties together in a mutually acceptable settlement of all outstanding issues.

A Memorandum of Settlement was entered into and signed by the parties in the presence of the Conciliation Board and for purpose of record attached to the ribbon copy of this report as Appendix "A" will be found the original signed Memorandum of Settlement of which copies are attached as Appendix "A" to the carbon copies of this report.

Conclusion

This Board desires to record its appreciation of the fullest co-operation extended to it by the parties and their representatives which alone made possible the result.

Dated at Haileybury this 17th day of May, 1960.

(Sgd.) JOHN B. ROBINSON,
Chairman.

(Sgd.) D. B. ARCHER,
Member.

(Sgd.) DAVID MUNDELL,
Member.

APPENDIX "A"

Memorandum of Agreement signed before the Conciliation Board this 14th day of May, 1960, between Stanleigh Uranium Mining Corporation Limited and Local 5687 United Steelworkers of America.

The following items are agreed upon and shall, with the exception of item 8, be incorporated in a collective bargaining agreement, subject to agreement by the parties on all non-monetary clauses:

1. The collective bargaining agreement shall be for a term of three (3) years from May 16, 1960.

2. Wage rates in effect on the date hereof shall be increased by four (4) cents per

hour effective May 16, 1960; by an additional five (5) cents per hour effective May 16, 1961; and by an additional five (5) cents per hour effective May 16, 1962.

3. The work week shall consist of forty-two (42) hours.

4. Payment for work performed on the statutory holidays named in the old agreement shall be at one and one half (1½) times the applicable hourly rate, in addition to payment for the day.

5. Union security shall be the voluntary non-revocable check-off.

6. The increases in wage rates shall not be used to reduce incentive bonus.

7. The group insurance and welfare plan shall be improved in accordance with agreement reached, the cost, including the present Ontario Hospital Plan rates, to be borne equally by the employees and the Company.

8. A continuity bonus on the basis of six (6) dollars for each month of employment since date of last hiring, shall be provided by the Company and shall be payable to employees who remain with the Company as long as required by the Company, in the event of the closing of the mine, subject to the employee having a minimum of six (6) months' continuous service at the time of separation. If this bonus is paid by a company taking over this Company, the continuity bonus shall not be payable by Stanleigh Uranium Mining Corporation, Limited.

During June, the Minister of Labour received the unanimous report of the Board of Conciliation and Investigation established to deal with a dispute between District No. 6, United Steelworkers of America (production employees) and Stanleigh Uranium Mining Corporation Limited, Elliot Lake, Ont.

The Board was under the Chairmanship of His Honour Judge John B. Robinson, Haileybury, Ont., who was appointed by the Minister on the joint recommendation of the other two members, David W. Mundell, Q.C., and David B. Archer, both of Toronto, nominees of the company and union respectively.

A settlement of the dispute was reached before the Board and the terms of settlement are contained in a Memorandum of Agreement which is incorporated in the Board report.

The text of the report is reproduced here.

Report of Board in Dispute between Consolidated Denison Mines Limited and United Steelworkers of America

During June the Minister of Labour announced that a settlement had been arranged by the Board of Conciliation and Investigation established to deal with the dispute between Consolidated Denison Mines Limited, Spragge, Ont., and its production workers represented by the United Steelworkers of America.

The Chairman of the Board was His Worship, Magistrate J. A. Hanrahan, of Windsor, and the other two members were George S. P. Ferguson, Q.C., and David B. Archer, both of Toronto, nominees of the company and union, respectively.

The report, which was signed by the Chairman and concurred in by the other

two members of the Board, advises that a settlement of the dispute has been reached before the Board in the form of a Memorandum of Agreement.

The terms of settlement contained in the Memorandum include: a 14-cent-an-hour increase spread over a three-year agreement, an improvement in the welfare plan, a continuity plan, improved vacations with pay, and adjustments in certain classifications and in overtime pay. The new collective agreement to be entered into is effective for three years from June 24, 1960.

The Status of Trade Unions in Canada

The explanation of the existence of trade unions in our society, how trade unions have been moulded by state intervention, controls on trade union activity and how these controls are applied, and the position of trade unions touching the rights of others are some of the questions dealt with in a new book entitled *The Status of Trade Unions in Canada*. The authors are James C. Cameron* and Frederick J. L. Young, respectively Professor and Assistant Professor of Industrial Relations at Queen's University.

The book is divided into chapters on Freedom of Association in Theory and Practice, The Status of Trade Unions in Britain, Legislative Powers in the Labour Field in Canada, Trade Union Status Under the Criminal Law, Early Developments in Collective Bargaining, The Growth of Trade Unions, The Use of the Administrative Board, The Problem of Uniformity, Other Aspects of Labour Relations Law, The Enforcement of Privileges and Obligations, and Trade Unions and the Rights of Others.

In the first chapter the authors have this to say about freedom of association:

"Competent observers seem to agree that the difference between the legal right of freedom to associate and the actual power to use that freedom effectively

stems from the fact that employers and employees are unequal in bargaining power. In the early stages of industrialization, legal freedom of association may be worthless to a group of employees seeking to improve working conditions, because the employer can easily replace them with unemployed individuals or agricultural workers eager to obtain factory employment. On the other hand, in a highly industrialized country, completely untrammelled freedom of association may cause the pendulum to swing to the other extreme. Powerful unions may be able to force policies upon employers, resulting in either bankruptcy of the employers or exploitation of the consuming public.

"It would seem, then, that the scope of effective exercise of freedom of association, like so many other democratic rights, defies accurate description. One may, however, make a general statement to the effect that legal and actual freedom of association must be ensured for employers and employees alike. One may also recognize that employees often require special legal privileges to counter the superior bargaining power of most employers"

*Prof. Cameron is retiring at the end of September (see page 778).

LABOUR LAW

Legal Decisions Affecting Labour

Supreme Court of Canada denies right to sue to unincorporated association in Quebec, in another decision deems employees of municipality in P.E.I. to have right to collective bargaining. N.S. Court upholds certification order

The Supreme Court of Canada ruled that under Article 81 of the Quebec Code of Civil Procedure (as it was before the 1960 amendments), neither the Montreal Joint Board of two local unions, which was an unincorporated body, nor the unincorporated local unions involved in the dispute could sue in their own names. The Court ruled also that the members of the Montreal Joint Board, being merely agents or mandatories of the local unions, could not bring a legal action acting as managers or trustees.

In another decision involving the municipality of Summerside, P.E.I., and a local of the International Brotherhood of Electrical Workers representing municipal employees of the electric light and power department, the Supreme Court of Canada ruled that there was no repugnancy between the P.E.I. Trade Union Act and the Summerside Incorporation Act and consequently the municipal employees involved in the dispute had the right to bargain collectively under the Trade Union Act.

In Nova Scotia, the Supreme Court (*in banco*) ruled that the decision of the Labour Relations Board whether or not an association is a trade union is not a decision on an issue collateral or preliminary to the granting of a certification order but an integral part of the main issue and is thus within the Board's jurisdiction and not open to review by the Court in *certiorari* proceedings.

Supreme Court of Canada . . .

. . . rules that under Quebec law unincorporated body has no legal capacity to sue in own name

On November 2, 1959, the Supreme Court of Canada, affirming the judgments of the courts below, ruled that the Montreal Joint Board, a group of 22 persons entrusted with the business of Local 205 and Local 262 of the International Ladies' Garment Workers' Union, and the Locals themselves,

have no legal status as a group or association to appear in a Court of Justice.

The action was brought by the Montreal Joint Board, an unincorporated board of two local unions, to recover union funds belonging to the parent international union and administered by the Board, which money was stolen by a bookkeeper employed by the Board. Locals 205 and 262 of the International Ladies' Garment Workers' Union, also unincorporated associations, joined as plaintiffs to obtain a judgment compelling the bookkeeper to pay the sum of \$14,193.34. The members of the Board, in bringing the suit, were acting not personally but as managers and trustees of the funds of these two locals.

The Superior Court dismissed the action. An appeal to the Quebec Court of Queen's Bench was dismissed on the ground that the Montreal Joint Board, being only a voluntary association, had no legal capacity to sue in its own name. Also, the Court held that the suit could not be brought in the name of the persons who comprised the Board because the funds stolen had not been entrusted personally to the members of the Board by the local unions. Moreover, since the members of the Board could not show that they were bound to indemnify the locals, no contract of deposit could be set up (L.G., March 1959, p. 289).

The judgment of the Supreme Court of Canada was rendered by Mr. Justice Fauteux. He noted that the dismissal of the action was based, in particular, on the provisions of Article 81 of the Quebec Code of Civil Procedure, which reads:

81. A person cannot use the name of another to plead, except the Crown through its recognized officers.

Tutors, curators and others representing persons who have not the free exercise of their rights, plead in their own name in their respective qualities. Corporations plead in their corporate name.

This section, prepared by the Legislation Branch, reviews labour laws as they are enacted by Parliament and the provincial legislatures, regulations under these laws, and selected court decisions affecting labour.

These provisions were interpreted by the Judicial Committee of the Privy Council in *Porteous v. Reynar* (1887), 13 App. Cas. 120, as being applicable to mere agents or mandataries who are authorized to act for another or others, and who have no estate or interest in the subject of the trusts. But these provisions are not applicable to trustees in whom the subject of the trust has been vested in property and in possession for the benefit of third parties, and who have duties to perform in the protection or realization of the trust estate.

The evidence established that the funds fraudulently appropriated belonged to neither the Board nor to Locals 205 and 262 but to the International Ladies' Garment Workers' Union, the head office of which is in New York State. The evidence showed that the members of the Board had some management of the business of Locals 205 and 262, but were no more than agents or mandataries of the persons constituting Locals 205 and 262.

It was alleged that the Montreal Joint Board was a trustee and held the funds of the Locals as a trustee for the International Ladies' Garment Workers' Union. The word "trustee" admits of several interpretations, each of which may imply, in law, different obligations and rights for the person designated by this name. Under Quebec Civil Law, the words "trust" and "trustee" are peculiar to those acts of giving calling for conveyance of property to trustees for the benefit of persons profiting by the gift. But there must be legal evidence of a covenant, enabling the courts to decide whether, in law, there is a trust, and to determine the rights and obligations resulting from it for the parties. In the case at bar such evidence was not produced; therefore the members of the Board could not claim to have established that they were trustees.

Further, to prove that they were entitled to commence the action, the members of the Board claimed that they had an obligation to give an account of their administration and to put back the property claimed, which they received as managers of the affairs of Local 205 and Local 262. In Mr. Justice Fauteux's opinion this obligation to give an account, and to put back, is also that of the mere mandatory who, according to the provisions of Article 1713 C.C., is required to give an account of his administration and to restore and pay to the employer all that he has received under the authority of his mandate. This obligation, however, does not entitle the mandatory to plead in the name of the employer.

The members of the Board claimed also that they were responsible for the loss result-

ing from the offence of their employee, and thus liable to be sued by the third parties or the union itself; they thought that this gave them the right to sue the bookkeeper, in anticipation of the suit of which they may be the subject.

Assuming that this claim was founded in law and in fact, then, in Mr. Justice Fauteux's opinion, they could sue personally, and not acting as administrators and trustees of the Local unions 205 and 262.

In concluding, Mr. Justice Fauteux was of the opinion that the case was rightly judged and the members of the Board had not justified their right to commence the action against the bookkeeper. The Supreme Court of Canada dismissed the appeal and confirmed the judgments of the courts below. *Perreault et al. v. Poirier and Local 205 and Local 262, I.L.G.W.U.*, (1960), 23 D.L.R. (2d), Part 1, p. 61.

Supreme Court of Canada...

...rules P.E.I. municipality and its employees are subject to the province's Trade Union Act

On May 16, 1960, the Supreme Court of Canada, allowing an appeal from the decision of the Supreme Court of Prince Edward Island (in appeal), ruled that the Trade Union Act of the province constitutes valid legislative authority for trade unions to organize and bargain collectively. The Court ruled also that the employees of the electric light and power department of the Town of Summerside, represented by a local of the International Brotherhood of Electrical Workers as certified bargaining agent, have the right to bargain collectively with the municipality under the Trade Union Act.

The Town Council of Summerside refused to bargain collectively with Local 1432 of the IBEW certified as bargaining agent for its employees in the electric light and power department. The municipality argued that the Trade Union Act did not apply to the town employees because of specific powers given to the Town Council by the Act of Incorporation respecting hiring, dismissal and remuneration of employees. It was also argued that the Trade Union Act did not effectively legalize union activities in the province. The union applied for an order of *mandamus* to force the municipality to bargain.

The trial court dismissed the action, holding that a general statute like the Trade Union Act could not apply to a relationship governed by the terms of a special Act. The trial judge, however, did not accept as valid a contention that trade unions are illegal in the province (L.G., March 1956, p. 296).

On appeal it was held that although under the special act of incorporation the Town Council had exclusive unilateral power to deal with wages, salaries, appointments or hirings and dismissals of its employees, and in these respects it was not obliged to bargain collectively, the collective bargaining provisions of the Trade Union Act would apply to other relevant matters, such as hours of work, holidays, safety precautions, conditions of work and marginal benefits.

Also the Court ruled that the P.E.I. Trade Union Act must be construed as having removed any taint of civil disability or illegality from trade unions under the common law of restraint of trade (L.G., February 1959, p. 157).

The union appealed to the Supreme Court of Canada the part of the decision that excluded from the subjects of collective bargaining the topics of appointments or hirings, remunerations and dismissals. The municipality entered a cross-appeal from that part of the decision that held that the Trade Union Act of Prince Edward Island was effective to legalize trade union activities in the province and also from that part that held that certain topics of labour-management relations regarding municipal employees are subject to collective bargaining under the Act.

The judgment of the Supreme Court of Canada was rendered by Mr. Justice Ritchie, with whom the other judges concurred.

The Supreme Court was in agreement with the Court of Appeal that the Trade Union Act was effective to legalize trade union activities in the province.

Mr. Justice Ritchie rejected the contention that the taint of illegality that attached to trade unions in England in the 18th century was imported to Prince Edward Island with the original colonists and has never been removed by sufficient explicit legislative language and remains a part of the common law of Prince Edward Island.

Referring to the provisions of Sections 2 and 3 (1) of the Trade Union Act, which deal with the right of employees to form trade unions and the right to collective bargaining, he held that these provisions effectively constitute valid legislative authority for trade unions to organize and bargain collectively in the province.

Dealing with that part of the decision of the Court of Appeal that excluded from the subjects of collective bargaining the topics of appointments or hirings, remuneration and dismissals, Mr. Justice Ritchie recalled the argument in support of this decision, namely, that the Trade Union Act was inconsistent with the Town of Summerside Incorporation Act in that the above subjects

were specifically dealt with by By-law 326, which was validly passed under the latter statute. This by-law reads:

The salaries of Town officials, Firemen and all other Employees of the Town shall be such as the Town Council may from time to time determine and fix by resolution, and they shall remain in office during the pleasure of the Council, and should any vacancies occur, the Council may appoint others to take their place at any meeting of the Council.

The Court of Appeal took the position that by the provisions of this by-law "the topics of appointments or hirings, remunerations and dismissals" of employees were reserved to the Town Council and that the collective bargaining provisions of the Trade Union Act were trespassing on this reservation; they were, therefore, to this extent inapplicable to the Town because they formed part of a general statute, which must give way to the special provisions of the Summerside Incorporation Act.

The argument in the Court centred on the extent to which a general Act should give way to a special Act dealing with the same matter.

It appeared to Mr. Justice Ritchie that the position had been most clearly and correctly stated by Mr. Justice Duff (as he then was) in *Toronto Railway Company v. Paget*, 42 S.C.R. 488 at 491, where he said:

One possible view is that in such cases the provision in the general Act is to be wholly discarded from consideration. The other is that both provisions are to be read as applicable to the undertaking governed by the special Act so far as they can stand together, and only where there is repugnancy between the two provisions and then only to the extent of such repugnancy the general Act is to be inoperative. I think the latter is the correct view . . .

This view was reaffirmed by Mr. Justice Rinfret speaking for the majority of the Supreme Court in *City of Ottawa v. Town of Eastview* (1941) S.C.R. 448.

The right question to be asked, in the present case, was how far the two statutes could stand together in relation to their effect on the desire of the employees to bargain collectively with the Town of Summerside through their union representatives. Mr. Justice Ritchie was of the opinion that there was no repugnancy between these two statutes.

Section 62 of the Town of Summerside Incorporation Act provided that "officers" may be appointed by the Town Council and "shall hold office during pleasure" and that their removal, replacement and remuneration shall be at the pleasure of the Council. However, the Trade Union Act does not apply to "officers, officials or other employees employed in any confidential capa-

city" and the Town of Summerside Incorporation Act contains no such restriction with respect to employees generally. In fact, the only reference in that Act to the employment of employees deals specifically with those employed in the town electric plant and system, and is in the following broad language:

163. (2) The Town is empowered to employ such engineers, experts, agents and workmen as may be deemed necessary in surveying, evaluating, constructing, improving, extending and maintaining any such plant or system, and operating the same, and to lease, purchase or otherwise acquire such lands, rights, easements or privileges as may be deemed necessary for the purposes hereof.

It is true, Mr. Justice Ritchie added, that By-law 326 is capable of being construed as regulating conditions of employment of employees of the Town and as dealing with "topics of appointments or hirings, remunerations and dismissals," and it is also true that all such by-laws "shall be as legal and binding as if incorporated in and forming part of the Act" (s. 70) so long as they remain in force.

However, by Section 70 of the Act the Council has full authority "to make, ordain, enact, revise, alter and amend such by-laws as they may deem proper..." and this power includes the power to make such by-laws as may be deemed proper to comply with the terms of an agreement regulating the conditions of employment of its employees, provided that such provisions do not run contrary to the terms of the enabling statute.

If the Town Council sought to pass a by-law changing the terms of the employment of "officers," who are by statute declared to hold office "during pleasure," such regulations might conflict with Section 62 of the Incorporation Act. But in regulating the employment of the employees of the electric light and power department there is no statutory restriction on the powers of Council, who may make such by-laws to that end "as they deem proper."

In Mr. Justice Ritchie's opinion, there was no reason at law why the powers vested in the Town Council could not be employed in such manner as to enable the Town to conclude a binding collective agreement with the union acting on behalf of its employees in the electric light and power department. There is nothing, he added, in the Town of Summerside Incorporation Act to exclude the municipality from being required to bargain collectively and without restrictions with the union in accordance with the Trade Union Act, and if it could be shown that all the requirements of the Trade Union Act had been complied with

by the union, a *mandamus* should be issued to compel the Town Council to bargain collectively.

The Court allowed the union's appeal, and dismissed the Town Council's cross-appeal. *International Brotherhood of Electrical Workers, Local No. 1432 v. The Town of Summerside and A.G. of Prince Edward Island*. CCH Canadian Labour Law Reporter, para. 15,298.

Nova Scotia Supreme Court...

...dismisses application to quash certification order issued by N.S. Labour Relations Board

On March 26, 1960, the Nova Scotia Supreme Court (*in banco*), in *certiorari* proceedings, dismissed an application to quash a certification order issued to District No. 26 of the United Mine Workers.

The Court ruled that the Nova Scotia Labour Relations Board has jurisdiction to determine whether or not the union applying for certification is a "trade union" within the terms of the Trade Union Act. Further, the Court held, the finding of the Board that the union applying for certification was a trade union was not a collateral or preliminary matter essential to the Board's jurisdiction to adjudicate on a certification petition, but was an integral part of the Board's function, granted to it by the Act, when dealing with a certification application. Such finding of the Board was within its jurisdiction and thus unreviewable even if wrong.

An application was made to the Labour Relations Board by District No. 26, United Mine Workers of America, for certification under the Nova Scotia Trade Union Act as bargaining agent to represent a unit consisting of all the employees of Dominion Coal Co. Ltd., Glace Bay, N.S., eligible under the Act.

The application was made according to the Regulations under the Act, with the copies of the constitution of District No. 26 and that of the international union, United Mine Workers of America, attached. The application was opposed by the Central Auxiliary Workers Union, Glace Bay, and Local 2025, International Brotherhood of Electrical Workers, Glace Bay.

Hearings were held in March 1959, and the Board, being satisfied that a majority of the employees in the bargaining unit were members in good standing of District No. 26, and that the unit was appropriate for collective bargaining, issued on May 19, 1959 an order certifying District 26 as the bargaining agent for a bargaining unit consisting of all employees of the Dominion Coal Co. Ltd. in Nova Scotia, but excluding

all salaried employees and the company's employees under the jurisdiction of the Government of Canada.

The rival unions challenged the Board's decision in *certiorari* proceedings, asking the court to quash the certification order on the ground that the application for certification "should in law have been dismissed by the said Board on the ground that the applicant for certification was not a trade union within the meaning of the Trade Union Act, and that the said Board accordingly had no jurisdiction to grant certification . . ."

The motion was heard before Mr. Justice Patterson in September 1959, and in January 1960 he referred the matter to the court *in banco* (sitting as a full court).

The sole issue presented to the court was whether District No. 26 was a "trade union" within the Act, capable of being certified as a bargaining agent.

In support of the motion to quash the order, the following arguments were submitted. The Board committed an error of law manifest on the face of the order; the order was made without jurisdiction because it was based on an erroneous finding of a collateral or preliminary fact essential to its jurisdiction; Section 58 of the Act (the so-called privative section stating the finality of the Board's decisions regarding certain questions and among them whether an organization is a trade union) could not apply to errors of law *ex facie*, or exclude review of findings as to collateral or preliminary facts essential to jurisdiction as opposed to findings made in the exercise of jurisdiction.

Section 1 (s) of the Act defines "trade union" or "union" as "any organization of employees formed for the purpose of regulating relations between employers and employees which has a written constitution, rules or by-laws setting forth its objects and purposes and defining the conditions under which persons may be admitted as members thereof and continued in such membership."

Mr. Justice MacDonald in his reasons for judgment dealt first with the contention that there was an error of law on the face of the record. To substantiate this claim the constitutions of District No. 26 and of the international union were filed. It was not disputed that District No. 26 has been chartered by the international union or that its constitution was to be found, in part, in the constitution of the international union.

Both documents were scrutinized to determine whether District No. 26 is a body within the definition of a trade union.

In Mr. Justice MacDonald's opinion, the perusal of both constitutions showed that District 26 was an organization of employees "formed for the purpose of regulating relations between employers and employees"; that the constitution of the District "sets forth its objects and purposes" and "defines the conditions under which persons may be admitted as members thereof and continued in such membership." Members in a local are also members of the international and of the District that includes that local; both the locals and the District are chartered by the international. Regarding the members in the locals and in District 26, the power of collective bargaining has been vested in the officers of the District and in the District Convention, subject to the approval of all members concerned.

In the certification proceedings the primary function of the Board is to determine whether an organization is a trade union. Also the Board must investigate the union constitution to find out whether the alleged union members in the bargaining unit are "members in good standing" in the applicant union and whether the union is free from employer domination. The Board determines its own procedure and makes regulations as to what shall constitute proof of membership in good standing. In these matters the Board in making necessary determinations should have latitude and the courts should refrain from imposing technical requirements not contemplated by the legislation.

The contention in this case involved a technical question whether there was on the record a manifest error of law.

The applicable rule is that "where upon the face of the proceedings themselves it appears that the determination of the inferior tribunal is wrong in law, *certiorari* to quash will be granted. The tribunal is not obliged to set out . . . the reasons which led to its decision, but if it does state them the superior court will consider the question whether they are right in law, and if they are wrong in law, will quash the decision" (11 Hals. 3rd ed., p. 61).

Mr. Justice MacDonald noted that there is considerable scope for discussion as to what constitutes the record or face of the proceedings, which enables a court to sit in appeal from errors of law in the exercise of jurisdiction. In the case at bar the order by necessary implication did say that the Board did hold that District No. 26 was a trade union under the Act. This involved the determination of a question of law within the rule and that determination was not wrong in law. Consequently the first contention that there was an error of law on the face of the record had to be rejected.

Dealing with the contention that the Board's order was made without jurisdiction because it was based upon an erroneous finding (the finding being that District 26 was a trade union) as to a collateral or preliminary fact essential to the Board's jurisdiction, Mr. Justice MacDonald reviewed the body of case law involving the jurisdiction of labour relations boards. The following is the rule applicable to this situation: "The jurisdiction of an inferior tribunal may depend upon the fulfilment of some condition precedent (such as notice) or upon the existence of some particular fact." Such a fact is collateral to the actual matter and an inferior tribunal cannot, by a wrong decision with regard to such a collateral fact, give itself a jurisdiction which it would not otherwise possess.

On the other hand, "if the fact in question is not collateral, but a part of the very issue which the inferior tribunal has to inquire into, an order will not be granted, although the inferior tribunal may have arrived at an erroneous conclusion with regard to it . . . The distinction is between the case where jurisdiction is conferred on an inferior tribunal only upon condition that some particular state of facts exists and the case where the question of the existence of the fact is one of the issues of fact which the inferior tribunal is given jurisdiction to determine" (11 Hals., 3rd ed., paras. 116-17, pp. 59-60).

"The inferior tribunal must, indeed, decide as to the collateral fact, in the first instance; but the superior court may upon *certiorari* inquire into the correctness of the decision, and may quash the proceedings in the lower court if such decision is erroneous" (11 Hals., para. 270, p. 143).

However, "there may be tribunals which, by virtue of legislation constituting them, have the power to determine finally the preliminary facts on which the further exercise of their jurisdiction depends" (Hals, *ibid* at p. 59).

Mr. Justice MacDonald noted that Section 68 (1) of the Ontario Labour Relations Act, which is similar to Section 58 of the Nova Scotia Trade Union Act, has been held as rendering the decisions of the Board as to the questions listed therein final and that "there cannot be collateral decisions as to whether a person is a member of a trade union or . . . whether a trade union represents the employees" (the *Genaire* case, L.G. 1958, p. 1291). Also, in another decision, it was held that the Ontario Board had jurisdiction to entertain an application and to determine finally whether the applicant was a trade union (the *McCord* case, L.G. 1956, p. 1415).

In *The Queen v. Labour Relations Board* ((1955) 2 D.L.R. 681) the Nova Scotia Supreme Court stated that "the Board has been appointed for the very purpose of determining whether or not a unit is appropriate for collective bargaining. The Board had jurisdiction over the question, over the persons involved and the power and duty to determine the appropriateness of the unit. It is a question of fact."

The Supreme Court of Canada in *Labour Relations Board for B.C. v. Canada Safeway Ltd.* (L.G., 1953, p. 1170) ruled that the question whether workmen were employed in a confidential capacity was not one relating to a collateral matter but was for the Board to decide finally as part of the main issue and its decision thereon was not reviewable.

In *Labour Relations Board v. Traders' Service Ltd.* (L.G., January 1959, p. 58) the Supreme Court of Canada was faced with a certification order attacked as involving a wrong determination of an alleged collateral issue, namely, whether a group of workmen were employees of a particular employer. The majority of the Court, holding that the order could not be quashed, noted that the Board is required to determine whether a person is an employer or employee and that its decision is final and conclusive. Also the Court held that the Board's decision had not been as to a "collateral issue" but one within the main issue.

Mr. Justice Judson in this respect said:

There is no difference in principle between a determination of the capacity in which a person is employed and a determination of the question of the relation of employer and employee. Neither question is a collateral issue. There are no two issues here before the Board, the first whether a man is an employer and the second, whether he is the employer of a particular employee. The issue is a single one and entirely within the Board's jurisdiction. It was for the Board and the Board alone to make the finding on the one issue and this finding is not open to review by the Court.

Mr. Justice MacDonald noted that the Canadian cases referred to held that the several issues involved were not collateral but came within one or more of the clauses of sections making orders "final and conclusive." These sections are identical with or highly similar to section 58 of the Nova Scotia Trade Union Act. This conclusion applies also to the determination of the question whether an organization is a trade union. Further support for the conclusion that this type of question is not one collateral or preliminary to jurisdiction but an integral part of the Board's main function

to grant or reject certification may be found in various provisions of the Trade Union Act.

Various decisions and determinations which have to be made by the Board in the course of dealing with the application for certification must be regarded as having been made in the exercise of its jurisdiction and in discharge of the Board's duty to certify or refuse certification. In this sense it is unnecessary to rely upon Section 58 (which requires the Board to decide certain questions and its decision thereon is "final

and conclusive") as excluding *certiorari* for the reason that *certiorari* does not lie to review decisions of this nature.

The Court held that the decision of the Board whether District No. 26 was a trade union within the Act was on a matter within the Board's jurisdiction to determine, and unreviewable even if wrong. The application for *certiorari* was dismissed. *Re United Mine Workers of America, District No. 26*, (1960) 23 D.L.R. (2d), Part 5, p. 328.

Recent Regulations, Federal and Provincial

Alberta revises safety rules for grain elevators. British Columbia issues new regulations respecting wireless signalling devices used in logging operations

In Alberta regulations dealing with grain elevators, issued under the Factories Act and the Workmen's Compensation Act, lay down new requirements with respect to manlifts and personal protective equipment.

In British Columbia regulations under the Workmen's Compensation Act concerning wireless signalling devices used in logging operations provide that such equipment must be operated by competent workmen.

Other regulations deal with overtime rates in federal government construction contract work, and safety in oil and gas well drilling rigs in Alberta.

Previously, no overtime rate had been set by regulation under the Act. The Act limits hours to eight in the day and 44 in the week except in cases of emergency as may be approved by the Minister. The regulations respecting the fair wages policy (P.C. 2029) provide that, under special circumstances, the Minister may decide what are the current or fair and reasonable rates for overtime. The policy has been to instruct the contractor, where an overtime permit has been granted, to pay overtime rates at not less than one and one-half times the rates of wages required to be paid under the contract but there have been a few exceptions to this.

FEDERAL

Fair Wages and Hours of Labour Act

The Fair Wages and Hours of Labour Regulations (P.C. 1954-2030) have been amended by new provisions dealing with rates of wages for overtime in federal government construction contract work.

The new provisions, which were approved by P.C. 1960-715 and gazetted June 8, were made under authority of Section 6 of the Fair Wages and Hours of Labour Act, which permits the Governor in Council, on the recommendation of the Minister of Labour, to make regulations setting overtime rates for work covered by the Act.

One new provision states that, unless the Minister of Labour orders otherwise, employees working on federal government construction contracts must be paid time and one-half for hours worked beyond 44 in the week. Another provides that, if the Minister so orders, such employees must be paid the premium rate for all hours worked in excess of eight in the day.

The new provisions apply to contracts entered into after August 1, 1960.

PROVINCIAL

Alberta Factories Act

Oil and Gas Well Drilling Rigs

Alberta has issued under the Factories Act regulations governing the erection, operation and dismantling of oil or gas well drilling and servicing rigs and derricks.

The new regulation (Alberta Reg. 172/60), gazetted June 15, rescinds Alberta Reg. 328/57. Its provisions are more extensive than those rescinded, but are almost entirely the same as in Alberta Reg. 371/59 (L.G., Jan., p. 77), issued under the Workmen's Compensation Act.

The new regulation requires that where the factor of safety of a drilling line has been reduced to less than three, immediate and subsequent inspections must be made by the toolpusher and driller to ensure that the line is suitable for continued operations.

Another new requirement provides that all power driven mud pumps must be

equipped with a safety relief valve that will release in the event of excessive pressure.

The foregoing provisions are not contained in the regulation issued under the Workmen's Compensation Act.

Grain Elevators

Alberta Regulation 173/60, issued under the Factories Act respecting the construction, operation and maintenance of machinery and equipment in grain elevators, annexes and mills, was gazetted June 15, rescinding Alberta Reg. 327/57 (L.G. 1957, p. 190; *see also* 1953, p. 586).

The former provisions remain unchanged with the exception of certain requirements relating to manlifts.

A new provision states that for the suspension of manlift cars and counterweights only wire ropes of best plow steel or the equivalent may be used.

Where manlift cars and counterweights are suspended by more than one cable, each wire rope must be at least one-quarter inch in diameter. If three or more wire ropes are used, a safety device to stop and hold the car is not required.

The diameter of a sheave for a manlift cable must now be not less than 40 times the diameter of the wire rope used; the previous minimum diameter was 18 inches.

If the counterweight of a manlift is not entirely enclosed it must be so guided that it cannot become accidentally disengaged from the guides. Also, protection must be provided to a height of six feet on open sides at the work floor and other levels where a person might be struck by the counterweight.

Where manlift cars do not have a safety device to stop and hold the car, counterweights must be guided in open runways and a removable panel installed in the side of the car adjacent to the runway to facilitate inspection of the wire ropes.

Guide rails must now be of metal or straight grained fir or hardwood free from knots and checks. They must be attached to supporting members with bolts, lag screws or wood screws. Manilla ropes may not be used for manlift guides.

Platforms of manlifts with enclosed cars must be constructed of perforated material to enable the operator to have a clear view below the car.

Manlifts must be installed satisfactorily to obtain approval of the factory inspector and plans and specifications of employees' belt lifts must be submitted to the Chief Factory Inspector for approval before installation is begun.

Alberta Workmen's Compensation Act

Safety regulations governing the erection, maintenance and renovation of grain elevators, grain annexes, seed mills and seed cleaning plants, issued under the Alberta Workmen's Compensation Act as Regulation 144/60, were gazetted May 31. They apply to all employers and workmen concerned with these activities, and are effective July 1, 1960.

The new regulations make the employer responsible for ensuring that his workmen know and comply with these and other relevant safety regulations. They also require supervisors and foremen to see that employees work safely and under safe conditions. Workmen must use the safety equipment that the employer is obligated to supply and are forbidden to conduct themselves in a manner that endangers themselves or others.

The employer is required to provide a first aid kit according to the requirements of the Workmen's Compensation Board. The employer also has to provide safety hats for his workmen, and a suitable winter liner from November to March. Workmen must wear safety hats where there is danger of falling objects.

The employer must supply approved eye protective equipment, which his workmen must wear when handling material that is liable to injure or irritate the eyes, or when engaged on work where there is an eye hazard from flying objects or injurious light or heat rays.

Detailed requirements are set out for scaffolding for grain elevators, swing stage scaffolds, scaffolding of a balloon annex, and gin poles.

A special provision relates to the authority of inspectors where the regulations do not contain specific safety requirements in connection with the use of unsafe equipment, materials or tools, or the unsafe or improper use of tools or equipment, or unsafe working conditions. In these cases, an inspector is empowered to order an employer or operator to make whatever changes, improvements or repairs may be necessary to remove hazards to workmen or to reduce the possibility of accidents.

Except where this regulation provides otherwise, all other safety regulations of the Board and all other directions concerning the safety of workmen, persons or property set out in the legislation of Canada or the Province of Alberta apply to employers or workmen engaged in activities with which the new regulation deals.

UNEMPLOYMENT INSURANCE

Monthly Report on Operation of the Unemployment Insurance Act

Number of claimants at month-end and of initial and renewal claims during the month, average weekly number of beneficiaries, and amount of benefit payments all lower during May than in April, higher than in May 1959, statistics* show

Claimants† for unemployment insurance benefit on May 31 numbered 364,300, compared with 486,300 regular claimants on April 29, and 279,400 on May 29, 1959. The total of regular claimants was thus 25 per cent lower than at the end of April, but 30 per cent greater than at the end of May last year.

The decline in the number of claimants between April and May this year was slightly less than the 27-per-cent decrease last year.

On April 29 there were, in addition to the 486,300 claimants for regular benefit, 228,600 claimants for seasonal benefit. Seasonal benefit ended on May 21 this year, on May 16 last year. Data for May therefore cover only claimants for regular benefit, whereas the April figures covered both regular and seasonal claimants.

Initial and renewal claims for benefit during May numbered 165,600, which was 23 per cent less than the April total of 214,600, but 23 per cent greater than the figure of 134,000 in May last year.

Of the 110,200 initial claims for May, it is estimated that some 45 per cent were from claimants who had exhausted regular benefit and wanted to be considered again for regular benefit or for an extension of benefit under seasonal provisions.

The average weekly number of beneficiaries was estimated at 560,800 for May, 732,900 for April and 485,800 for May 1959.

Benefit payments totalled \$52.2 million in May, down 15 per cent from the \$61.8 million in April. During May 1959 benefit payments amounted to \$40.4 million.

*See Tables E-1 to E-4 at back of this issue.

†A claimant's unemployment register is placed in the "live file" at the local office as soon as the claim is forwarded for computation. As a result, the count of claimants at any given time inevitably includes some whose claims are in process.

In a comparison of current employment statistics with those for a previous period, consideration should be given to relevant statistics with those for a previous period, factors other than numbers such as the opening and closing of seasonal industries, increase in area population, influence of weather conditions, and the general employment situation.

Claimants should not be interpreted either as "total number of beneficiaries" or "total job applicants".

The average weekly benefit payment was \$22.17 for May, \$22.18 for April and \$20.81 for May 1959.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for May showed that insurance books or contribution cards had been issued to 3,512,840 employees who had made contributions to the Unemployment Insurance Fund since April 1, 1960.

At May 31 employers registered numbered 328,328, an increase of 778 since April 30.

Enforcement Statistics

During May 6,440 investigations were conducted by enforcement officers across Canada. Of these, 3,865 were spot checks of postal and counter claims to verify the fulfilment of statutory conditions and 126 were miscellaneous investigations. The remaining 2,449 were investigations in connection with claimants suspected of making false statements to obtain benefit.

Prosecutions were begun in 146 cases, 10 against employers and 136 against claimants.* Punitive disqualifications as a result of claimants' making false statements or misrepresentations numbered 1,950.*

*These do not necessarily relate to the investigations conducted during this period.

Unemployment Insurance Fund

Revenue received in May totalled \$25,-187,592.93† compared with \$22,194,917.24† in April and \$18,831,693.78 in May 1959. Benefits paid in May totalled \$52,213,-

351.82† compared with \$61,767,880.26† in April and \$40,446,281.55 in May 1959. The balance in the Unemployment Insurance Fund on May 31 was \$299,293,511.04†; on April 30 it was \$324,986,215.82† and on May 31 last year \$432,847,911.14.

Decisions of the Umpire under the Unemployment Insurance Act

Decision CUB-1739, May 19, 1960

Summary of the Main Facts: The claimant, married, 45 years of age, filed a renewal application for benefit on May 25, 1959 and was registered for employment as a paper cutter. He stated therein that he had worked as such for a printing firm in Toronto, Ontario, from February 1, 1959, to May 21, 1959, when he was dismissed because he could not "get along with the boss." His rate of pay at the time of separation was \$2.25 an hour. The employer submitted his own version of the employee's separation on Form UIC 479 and stated:

This man left; was not laid off or fired. Told Foreman he has been trying for three weeks to get fired so that he could collect unemployment insurance. Was told several times to fill out time sheet and his answer to me was I'll quit first, so in my opinion, he quit. If I were to fire him I would have done so at once, not letting him finish the day.

The insurance officer notified the claimant on June 4, 1959 that he was disqualified from receipt of benefit for the period May 24, 1959 to June 27, 1959 inclusive, because, in his opinion, he had voluntarily left his employment without just cause (section 60 (1) of the Act).

In response to a request from the local office for further information, the claimant on June 5, 1959 stated as follows:

It was impossible to fill out a time sheet because I never got dockets with half the jobs I did. My boss was unreasonable in every way—I could never satisfy him.

Also I did not quit voluntarily. I was given my wages and my insurance book at closing time the last day. I took it to mean I was fired. (Exhibit 4).

The claimant based his appeal to a board of referees on a letter which a controller of the city of Toronto wrote to the local office on July 21, 1959 and which reads, in part, as follows:

(The claimant) states that no one can work for this man, that he is impossible to get along with, that as many as five men start there in one day and "all leave the same day." He says

"even his foreman... had to quit at the end of six months." (Apparently he now works at... Company as a proof reader.)

(The claimant) says that (the employer) stands behind the men all day swearing and cursing at them. He says that (the employer's) statement that he quit voluntarily is not true. He said he put up with this for four months and was then dismissed. He complains that you disqualified him for unemployment insurance and that you are sending other men to this impossible situation with which he was obliged to contend...

I would be pleased if you would investigate (the claimant's) complaint and ascertain if your Department has done him an injustice in cutting off his unemployment insurance in this case. (Exhibit 5).

The board of referees which heard the case on January 14, 1960 by a majority decision dismissed the appeal and confirmed the disqualification which had been imposed by the insurance officer. The board stated in its decision that the claimant and the employer attended the hearing but added little to the evidence already contained in the submissions. The majority of the board was also of the opinion that the evidence "contained herein and given by (the employer) that the claimant stated that he would quit first before filling out proper time sheets was acceptable" and that, therefore, in its opinion, he did, in fact, leave his employment without just cause within the meaning of the Act.

The dissenting member of the board contended that, inasmuch as the evidence given by the employer and the claimant was contradictory, any doubt that might exist in the case should be resolved in favour of the claimant.

The claimant appealed to the Umpire on February 12, 1960 on the same grounds as those contained in Exhibit 4 herein quoted.

In view of the contradictory statements made by the parties, the claimant was requested to obtain individual statements from two or three of the former or present

†All figures for April and May of this year are subject to change.

employees of the printing firm as to the unsatisfactory working conditions which allegedly existed there. The claimant answered in the following manner: "I am unable to get such statements as you request. Note attached advertisement which appears nightly in the newspapers" (the advertisement has to do with an offer of employment for pressmen at his former employer's premises).

In a letter dated March 28, 1960 the claimant denied that he had told the foreman he had tried to get dismissed in order to collect unemployment insurance. He pointed out that he could not have made such a statement to the foreman since there was no foreman at the time of his dismissal. In regard to the filling out of time sheets and his separation from the employ of the company he stated:

The last day I worked for this man, he came and said here is a time sheet, you will have to make it out, and . . . well like it or not. And I said to him, you told me before I would not have to make any time sheets out, because I never received half the dockets for the jobs I done, therefore I could not make out a time sheet, but he just walked away. That was 2:30 in the afternoon. He could have come to me and tried to explain how I could fill a time sheet but he never even came back.

At quitting time the head pressman came to me when I was going home, and handed me my pay and Insurance Book, therefore I took it for granted I was fired.

The Chief of the Claims Division of the Commission submitted a report of an investigation that had been carried out at the plant of the claimant's former employer. This report reads in part:

I visited the plant of the . . . and had interviews with . . . the General Manager and two of his employees . . .

(One of those employees) has been employed for over ten years and (the other one) for four years. Both stated that all jobs had dockets for costing same and employees made out time sheets from dockets.

(The manager) admits swearing at (the claimant) but explained the circumstances, which were—Although (the claimant) had been warned against the practice, he insisted on operating the electric paper guillotine by jamming one of the push buttons so that the machine could be operated by activating the remaining switch with one hand and feeding the paper stock with the other hand. This machine is equipped with this safety device to protect the workers' fingers and hands and (the manager) himself has lost three fingers from his hand in an accident with a paper cutting machine, so he naturally feels quite strongly on the subject of safety.

(One of the employees) stated (the claimant) used to plug safety switch on one side of cutting machine so he could operate with one hand, and he had heard (the manager) swearing at him for doing so.

I saw pay roll sheets for Mr. . . . who was hired as Superintendent at \$125 per week. He earned an average of \$150 per week for the ten weeks he was employed but left on his own accord because he did not feel capable to run plant.

Considerations and Conclusions: It is not clear from the evidence whether the claimant voluntarily left his employment or lost it by reason of his own misconduct.

If he voluntarily separated, it was without just cause, in that the difficulties and unpleasantness he had with the employer stemmed from his lack of co-operation and could have been easily remedied by a change of attitude on his part. If, on the other hand, he was dismissed, it was by reason of his own misconduct, inasmuch as he was not operating his machine in accordance with the employer's instructions, particularly with regard to his own safety. Moreover, he was not filling out his time sheets as directed, which he had no reasonable excuse for not doing as two of his fellow workers of several years' service stated that dockets were supplied for all jobs.

In either event, he was subject to disqualification under section 60 (1) of the Act and I, therefore, maintain the majority decision of the board of referees.

Decision CUC-44, June 16, 1960

Summary of the Main Facts: The applicant in the present case, viz., the Shaw Steamship Company Limited of Halifax, Nova Scotia, operates several boats which are usually engaged in the shipping of freight. However, one or more may go on a sealing expedition during the sealing season in the very early part of the spring. This operation, which generally lasts for approximately eight weeks, is, however, broken off when a full cargo is obtained or when the sealing captain decides it is no longer profitable to continue the hunt due to the daily number of seals having been caught. The sealing crew is paid one-third of the gross landed value of the total catch and the remaining two-thirds goes to the company, which supplies the equipment, food and lodging, as well as the ship.

In March and part of April 1958, the said company operated the vessel *Arctic-Sealer* for the purpose of hunting seals on the ice floes in the Gulf of St. Lawrence and the North Atlantic Ocean. The crew totalled about 69 members, of which approximately 58 were engaged in the actual sealing operation. Not all the sealers were fishermen. Some were farmers, some were lumbermen and some were from various occupations. Most of them, however, resided in Newfoundland.

The records indicate that the company had insured the regular crew members under the Unemployment Insurance Act but not the sealers, the company taking the stand that the latter were not employed under a contract of service.

It seems that inquiries were made at the Commission's local office in St. John's, Newfoundland, by members of the sealing crews of the *Arctic-Sealer* as to their eligibility for unemployment insurance in that, according to the district auditor of the Commission, "other sealing vessels operating under similar conditions from Newfoundland had insured their crews".

On September 24, 1958 the district auditor informed the company, by letter, that the crews of the sealing vessels, including all the sealers, were considered to be employed under a contract of service and thereby engaged in insurable employment, and that, under such conditions, the company was required to make unemployment insurance fishing contributions in respect of them.

On October 18, 1958 the president of the company replied to the district auditor. He stated in his letter that the company had decided not to make a sealing voyage in March 1959. He also said:

This will leave 75 Newfoundlanders unemployed, and they will miss the opportunity of making 20,000.00/25,000.00 as we just are not interested in sending a vessel to the icefields, if we have to collect unemployment from the sealers who are on shares, and to also contribute towards this ourselves. We find it hard to understand why we have to provide a ship, take a \$35,000 gamble on outfitting for sealing, and then to become involved in collecting unemployment contributions, paying an equal amount ourselves, when the sealers are in with us on the venture as far as seals secured, but are free of all obligations should the venture suffer a loss. We at any rate won't be involved in your new ruling as our M/V *Arctic-Sealer* will make no Sealing Voyage in 1959.

On January 29, 1959 the company advised the district auditor that, for reasons of its own, it had decided to again send the *Arctic-Sealer* on a sealing voyage and wished to be informed of the company's position in the matter of contributions in respect of the sealers. The company contended in its letter that it should not be required to make contributions to the Unemployment Insurance Fund in respect of them since the "sealers share in the venture" and "are partners with us" therein.

On February 6, 1959 the Chief Coverage Officer of the Commission replied to the company's letter of January 29, 1959 and said "... in our opinion, the men employed in your sealing operations are employed under a contract of service and therefore

entitled to unemployment insurance stamps in respect of this work. However, you have the right to request a formal decision on this matter by the Unemployment Insurance Commission...".

The President of the said company completed Form UIC 593, "Application for Determination of Question under the Unemployment Insurance Act" and stated therein that the sealing master and not the company, had the right to exercise control as to the method of performance of duties by the sealers and "that sealing crews operating on a share basis are working for their own interest and therefore it is our contention that they are not entitled to unemployment stamps". The Commission, however, did not render a decision on the question but instead, pursuant to section 33 of the Act, referred it to the Umpire for decision and informed the interested parties accordingly.

The agreement (Exhibit 32) which covered the crew of the *Arctic-Sealer* for the 1958 sealing season reads as follows:

This Agreement entered into at . . . between . . . owners of the Good Ship or Vessel called the . . . and . . . Master of the said Ship and the several persons whose names are signed hereto as crew of the said Ship.

Witnesseth that the several persons undersigned agree to proceed on a sealing voyage in the said ship and to serve in the several capacities set opposite their respective names. The crew shall come into service on the . . . day of March, 19 . . . without notice and proceed to sea whenever the Master may deem fit. Each man shall assist in trimming coal or handling ballast and do any work in connection with the voyage required of him. Each man shall in all respects exert himself to the best of his ability for the good of the voyage and be at all times obedient to the lawful commands of the Master and officers, whether on board, at sea, on shore, or on the ice in all respects as if shipped on wages, and should any man neglect or be found incompetent for the proper performance of his duties in any respect (except by reason of sickness) he shall be entitled to only such share of proceeds of the voyage as the Master may allow him. Should any man be drunk or disorderly, or refuse to obey the lawful commands of the Master or Officer in charge before leaving port on the voyage, he may be dismissed by the Master, and shall not be entitled to any share of the proceeds of the voyage or other compensation; nor shall any man be entitled who shall absent himself after coming into service, at any time until the final termination of the voyage without leave of the Master. Any man failing to proceed on the voyage after signing articles shall not be entitled to any share of the proceeds of the voyage. Any embezzlement or wilful or negligent loss or destruction of any part of the ship's cargo, stores or equipment shall be made good to the Owners out of the earnings of the party so offending, or conniving at such offence, without prejudice to any other remedy which the Owners may have for same. In case of any gun or rifle being wilfully or carelessly lost or damaged during the voyage, the loss or damage shall be made good to the Owners by

deduction from the crew's share of the proceeds of the voyage. Engineers and firemen shall not be required to go upon the ice, except by order of the Master. In the event of the Master named in this agreement being prevented by sickness or other cause from proceeding upon or prosecuting the voyage, this agreement shall be in all respects in force and binding as between the undersigned and the Master who may be appointed in his stead.

1. The Master, Officers and Crew further agree to use special care to keep the seals of all classes free from coal-dust or other uncleanness of any kind and free from running fat, keeping the said seals iced down if necessary to prevent running.

2. In consideration of this Agreement being in all respects well and faithfully performed, the said crew are to receive as remuneration for their services at the final termination of the voyage or each trip if there be more than one (which shall include the discharging and weighing off of seals) every man an equal share or portion, according to the number of the crew; Master, Officers, engineers and firemen included, of one-third of the value of the seals brought in and delivered from the vessel, one full man's share having been first deducted from the said Value (for distribution amongst the Officers as the Master may deem fit). A man's share in lieu of a man's share to Master, shall be given to the firemen to be equally divided between them. From the share due each man shall be deducted and retained the amount of his account with the Owners. The Owners do not bind themselves to give any outfit or crop to the crew, but in the event of such being issued, the price charged shall be one-third over the retail cash price of such articles issued, which one-third shall be deemed to be full compensation for the risk run, and any balance remaining unpaid by the said crew at the termination of the voyage shall be cancelled. It is agreed that the whole of the seals shall be landed at such places as Owners of ship may direct, immediately upon arrival of the ship.

3. It is agreed between the Owners and the crew that the crew's one-third share of the value of the seals shall be calculated on the basis of per hundredweight for young harps, per hundredweight for young hoods, per hundredweight for bedlamers, and per hundredweight for old harps and old hoods, subject to the usual deductions for tare and damaged skins. The weighing off and assorting shall be done under superintendence of the Second Hand or a Master Watch or other person or persons representing the crew and a wharfinger or other person or persons appointed to represent the Owners.

4. It is expressly understood and agreed that no member of the sealing crew may collect on his own account or make private arrangement for the procuring of "flippers" from the seals taken on the sealing voyage to which this Agreement applies. Any "flippers" taken on the said voyage may be taken only under instructions from and at the discretion of, the Master.

5. If any man absents himself without the leave of the Master in charge or neglects his duty until all the seals are landed, he shall incur a fine of Two Dollars (\$2.00) per day for every day he is absent from or neglects such duty, and the same shall be deducted from his share of the proceeds of the voyage.

6. If any man shall sign a false name or a name not his own and shall proceed in the said vessel personating or representing himself to be another, it shall be in the option of the Master or Owners to withhold from him any share of the proceeds of the voyage.

7. The voyage shall consist of either one or two trips and shall continue until the first day of May if the Master or Owners so desire. If the ship puts into port and makes a second trip, the Master may discharge any man or men he pleases before sailing on the second trip, but all men hereby agree to sail on a second trip if the Master so desires and requests them, and no man's services shall be considered terminated until the ship has remained at the fishery until May 1, before bearing up for port, unless the Master releases him sooner . . .

On January 15, 1960 at the Umpire's request, the Chief of the Coverage Division of the Commission sent to various employers engaged in sealing operations, a letter asking them to express their views and any representation they might wish to make in connection with the matter in question. A similar letter was also sent to the Canadian Labour Congress.

On January 22, Christensen Canadian Enterprises Limited, Montreal, Que., wrote that it had paid unemployment insurance contributions for the members of the sealing crews of its sealing vessels. On January 27, Karl Karsen and Co. Limited, Halifax, N.S., replied that it had done likewise. On February 8, A. Andras, Director of Legislation, Canadian Labour Congress, submitted an elaborate and interesting statement of observations to the Umpire to the effect that, in the opinion of the Congress, the sealing crews of the Shaw Steamship Company Limited were employed under a contract of service and, therefore, were engaged in insurable employment.

On June 8, 1960 the Umpire heard the case in Halifax, N.S. Among those who were present at the hearing were A. M. Shaw, representing Shaw Steamship Company Limited; J. Denker, secretary-treasurer of the *Arctic-Sealer* ventures; K. Henriksen, representing Karl Karlsen and Co. Ltd. and Christensen Canadian Enterprises Ltd.; James A. Power, Senior Counsel, Dept. of the Attorney General, Province of Newfoundland; and F. G. Power, an officer of the Legal Branch of the Unemployment Insurance Commission.

Considerations and Conclusions: I wish to express my appreciation of the able manner in which those who appeared before me, regardless of the interest which they represented, stated their views in respect of the present issue, viz., whether the members of the sealing crews of the Shaw Steamship Company Limited whose conditions of employment are regulated by the agreement

produced as exhibit 32 are employed under a contract of service and are, therefore, in insurable employment.

I also wish to reiterate the following statement which I made during the course of the hearing, that the applicable provisions of Regulation 191, which governs the present case, make it a condition that the members of a crew engaged in catching seals are insurable as fishermen only if they are members of "a crew engaged under a contract of service for that purpose" and that, in my opinion, in determining whether the members of the applicant's sealing crews in question are employed under a contract of service, I am bound by section 25 (a) of the Act to disregard the manner in which the members of those crews are paid.

Now, the stipulations of the aforementioned agreement other than those related to the manner in which the members of the sealing crews are paid definitely establish

a relationship of master and servant between the Shaw Steamship Company Limited and those members in that, during the whole of the sealing expeditions concerned, the members of the crews are "in all respects as if shipped on wages" under the supervision of the company's representative, *viz.*, the ship's master, whether "on board, at sea, on shore, or on the ice". For example, they agree "to serve in the several capacities set opposite their respective names" in the agreement and to be "at all times obedient to the lawful commands of the Master and officers", failing which they "may be dismissed by the Master".

In view of the foregoing, I consider that the members of the applicant's sealing crews whose conditions of employment are regulated by the aforementioned agreement are "engaged under a contract of service" within the meaning of that expression in paragraph (c) of Regulation 191 (1), and, therefore, I decide that they are employed in insurable employment.

Recent Regulations

(Continued from page 836)

British Columbia Hours of Work Act

The British Columbia Board of Industrial Relations has granted the fresh fruit and vegetable industry its usual seasonal exemption from the operation of the Hours of Work Act, thereby permitting employees in this industry to work longer hours during the period June 1 to November 30, inclusive.

The regulation was gazetted June 16 as B.C. Reg. 120/60.

British Columbia Workmen's Compensation Act

British Columbia has issued Safety Regulation 115/60 concerning wireless signalling devices used in logging operations. It was gazetted June 2.

"Wireless signalling device" is defined as any device, equipment or thing utilizing radio frequency transmission to control or direct the movement of any equipment.

The employer is required to assign a competent workman to operate a wireless signalling device. An untrained person may operate it only in an emergency.

The workman operating a wireless signalling device must be trained in the correct method of operation and he is forbidden to operate it in any other manner.

When the operator is transmitting signals he is required to locate himself out of danger of lines, logs, or other hazards. He must not give a signal until all persons are in a safe position.

No wireless signalling device may be installed until the probability of accidental activation has been eliminated.

Repairs, alterations or adjustments to a wireless signalling device, except changing the battery, must be done by a competent technician.

If a wireless signalling device is not functioning properly it must be removed from services and fixed.

Wireless signalling devices using an audio-frequency tone or tones as part of the signal must have the audio-frequency of the tone or tones clearly marked on the exterior of the case of the transmitter and receiver.

The employer must ensure prior to use that a wireless signalling device will not affect or be affected by any other wireless signalling device within a 10-mile radius.

The regulation forbids voice radio transmission to signal any rigging into motion.

LABOUR CONDITIONS IN FEDERAL GOVERNMENT CONTRACTS

Wage Schedules Prepared and Contracts Awarded during June Works of Construction, Remodelling, Repair or Demolition

During June the Department of Labour prepared 244 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada, for works of construction, remodelling, repair or demolition. In the same period, a total of 230 contracts in these categories was awarded. Particulars of these contracts appear below.

A copy of the wage schedule issued for each contract is available on request to trade unions concerned or to others who have a *bona fide* interest in the execution of the contract.

(The labour conditions included in each of the contracts listed under this heading provide that:

(a) The wage rate for each classification of labour shown in the wage schedule included in the contract is a minimum rate only and contractors and subcontractors are not exempted from the payment of higher wages in any instance where, during the continuation of the work, wage rates in excess of those shown in the wage schedule have been fixed by provincial legislation, by collective agreements in the district, or by current practice;

(b) hours of work shall not exceed eight in the day and 44 in the week, except in emergency conditions approved by the Minister of Labour;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of eight per day and 44 per week;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Contracts for the Manufacture of Supplies and Equipment

Contracts awarded in June for the manufacture of supplies and equipment were as follows:

Department	No. of Contracts	Aggregate Amount
Defence Construction (1951) Ltd.	2	\$ 9,272.00
Defence Production	79	107,508.00
Public Works	2	8,499.00
RCMP	9	120,859.50
Transport	2	461,389.43

The Fair Wages and Hours of Labour legislation of the federal Government has the purpose of insuring that all Government contracts for works of construction and for the manufacture of supplies and equipment contain provisions to secure the payment of wages generally accepted as fair and reasonable in each trade or classification employed in the district where the work is being performed.

The practice of Government departments and those Crown corporations to which the legislation applies, before entering into contracts for any work of construction, remodelling, repair or demolition, is to obtain wage schedules from the Department of Labour showing the applicable wage rate for each classification of workmen deemed to be required in the execution of the work.

These wage schedules are thereupon included with other relevant labour conditions as terms of such contracts to be observed by the contractors.

Wage schedules are not included in contracts for the manufacture of supplies and equipment because it is not possible to determine in advance the classifications to be employed in the execution of a contract. A statement of the labour conditions which must be observed in every such contract is however, included therein and is of the same nature and effect as those which apply in works of construction.

Copies of the federal Government's Fair Wages and Hours of Labour legislation may be had upon request to the Industrial Relations Branch of the Department of Labour, Ottawa.

(The labour conditions included in contracts for the manufacture of supplies and equipment provide that:

(a) all persons who perform labour on such contracts shall be paid such wages as are currently paid in the district to competent workmen; and if there is no current rate, then a fair and reasonable rate; but in no event shall the wages paid be less than those established by the laws of the province in which the work is being performed;

(b) the working hours shall be those fixed by the custom of the trade in the district, or if there be no such custom, then fair and reasonable hours;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of those fixed by custom of the trade in the district, or in excess of fair and reasonable hours;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Wage Claims Received and Payments Made during June

During June the sum of \$22,197.74 was collected from 10 contractors for wage arrears due their employees arising out of the failure of the contractors, or their sub-contractors, to apply the wage rates and other conditions of employment required by the schedule of labour conditions forming part of their contract. This amount is for distribution to the 337 workers concerned.

Contracts Containing Fair Wage Schedules Awarded during June

(The labour conditions of the contracts marked (*) contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of eight per day and 44 per week, and also empower the Minister of Labour to deal with any questions which may arise with regard thereto.)

The St. Lawrence Seaway Authority

St Catharines Ont: Port Weller Dry Docks Ltd, repairs to fender boom No 20, Welland Canal.

PRICES AND THE COST OF LIVING

Consumer Price Index, July 1960

Canada's consumer price index (1949=100) declined 0.1 per cent from 127.6 to 127.5 between the beginning of June and July this year. A year earlier the index stood at 125.9.*

The decline was due to lower indexes for food, clothing and other commodities and services. The household operation index was unchanged, and the shelter index was up fractionally.

The July indexes reflect the effect of changes in provincial sales taxes in Newfoundland and Prince Edward Island.

The food index moved from 120.8 to 120.5, a decrease of 0.2 per cent in the month, to stand slightly above the July 1959 level of 119.2. Lower prices were reported for potatoes, tomatoes, bananas and cabbage. Meats were generally higher, and egg prices rose from 47 cents to 52 cents a dozen.

The shelter index increased 0.1 per cent from 143.8 to 143.9; rents were unchanged but the home-ownership component moved higher.

The clothing index edged downward 0.1 per cent from 110.9 to 110.8 in response to sale prices for women's spring coats, cotton piece goods and some price decreases for items of men's clothing.

The household operation index was unchanged at 123.0 as higher prices for coal, electricity, some new models of appliances, household supplies and utensils and equipment were balanced by sale prices for furniture and lower prices for fuel oil and some appliances.

Lower prices for new passenger cars, gasoline and radios offset higher prices for newspapers and phonograph records and the other commodities and services index declined 0.1 per cent from 137.7 to 137.6.

Group indexes one year earlier (July 1959) were: food 119.2, shelter 141.7, clothing 109.7, household operation 122.7, and other commodities and services 134.9.

City Consumer Price Indexes, June 1960

Consumer price indexes (1949=100) increased in seven of the ten regional cities between May and June.† Increases ranged from 0.2 per cent in Halifax, Winnipeg and

Saskatoon-Regina to 0.7 per cent in Ottawa, the Saint John index was unchanged, and declines of 0.1 per cent and 0.3 per cent were recorded in Edmonton-Calgary and Vancouver, respectively.

Food indexes were higher in seven cities but down in Saint John, Edmonton-Calgary and Vancouver. Shelter indexes showed mixed results: five increased, two decreased and three were unchanged. Clothing indexes were up in six cities, down in two and unchanged in two regional cities. Household operation indexes were higher in eight of the ten regional cities, unchanged in one and slightly lower in the remaining city. Other commodities and services indexes were also higher in eight regional cities, unchanged in one and down in the other regional city.

Regional consumer price index point changes between May and June were as follows: Ottawa +0.9 to 128.6; Montreal +0.6 to 127.8; Toronto +0.4 to 130.2; St. John's +0.3 to 116.2*, Saskatoon-Regina +0.3 to 123.7; Halifax +0.2 to 127.0; Winnipeg +0.2 to 125.0; Vancouver -0.4 to 127.7; Edmonton-Calgary -0.1 to 123.2. Saint John remained unchanged at 128.6.

Wholesale Price Index, June 1960

Canada's general wholesale price index (1935-39=100) for June stood at 231.9, slightly above the preceding month's 231.3 and last year's figure of 230.6. During the month increases in three major commodity groups offset decreases in the other five.

The animal products group index advanced 2.0 per cent from 241.1 to 246.0, and was the principal cause of the rise in the general wholesale index in June. The non-ferrous group index climbed 0.3 per cent from 179.7 to 180.3; the vegetable products group index was slightly higher in June.

Lower crude oil and coal prices led to a decrease of 0.5 per cent in the non-metallic minerals group index from 185.5 in May to 184.6 in June. During the same period the iron products group index declined by 0.3 per cent from 256.6 to 255.8 as scrap iron and steel prices dropped 5.5 per cent below the June 1959 level. The textile products group index declined 0.2

*On base June 1951-100

CONSUMER PRICE INDEX

Index 1949=100

Index 1949=100

per cent from 231.4 to 230.9. Chemical products and wood products each recorded decreases of 0.1 per cent or less.

U.S. Consumer Price Index, June 1960

The United States consumer price index (1947-49=100) rose to a record 126.5 in June, 0.2 per cent higher than the May index, 126.3. The June index was 1.6 per cent higher than a year earlier.

Higher food prices were again mainly responsible for the increase, even though they rose less than normally for the month. The food index rose 0.5 per cent during the month. All other groups were unchanged or only slightly higher.

U.K. Index of Retail Prices, May 1960

The United Kingdom index of retail prices (Jan. 17, 1956=100) remained unchanged at 110.3 between mid-April and mid-May.

The 50th anniversary of the opening of the first national employment exchanges in Great Britain under the Labour Exchanges Act, 1909, occurred on February 1.

Beginning with 62 offices on February 1, 1910, by the end of that year there were 146 offices receiving a total of about 50,000 vacancies a month, and filling about 40,000. Placements reached a record figure of more than 2,700,000 in 1938.

At present there are a little more than 900 employment exchanges and more than 100 sub-offices and branch offices.

With the introduction in 1911 of unemployment insurance for some 2,000,000 workers, the labour exchanges became responsible for issuing unemployment insurance cards and for paying unemployment insurance benefit when claims were made.

In the early years of the exchange service, the number of employment exchanges

steadily increased until the whole country was covered by a network of local offices. In recent years the employment exchange machinery has been continuously adjusted to meet current needs.

The full employment that has continued since the last war has meant that unemployment has been mainly confined to certain areas, although within some of those areas it has been fairly severe. In such districts, the exchanges help those willing to move to other parts of the country to find work, by paying fares, lodging allowances, and the cost of moving.

Today the employment exchanges, together with the Professional and Executive Register, the Technical and Scientific Register, and the Nursing Appointments Offices, provide an employment service for the whole range of employees from professional and scientific workers to unskilled labourers.

Publications Recently Received in Department of Labour Library

The publications listed below are not for sale by the Department of Labour. Persons wishing to purchase them should communicate with the publishers. Publications listed may be borrowed by making application to the Librarian, Department of Labour, Ottawa. Students must apply through the library of their institution. Applications for loans should give the number (Numeral) of the publication desired and the month in which it was listed in the *LABOUR GAZETTE*. List No. 1942.

Women

32. CANADA. DEPARTMENT OF LABOUR. *Occupational Histories of Married Women working for Pay in Eight Canadian Cities*. Ottawa, Queen's Printer, 1959 [i.e. 1960] Pp. 74.

Prepared for the Women's Bureau by the Economics and Research Branch.

An analysis of the work history of a sample of married women from their first job to the present. Includes several selected individual work histories.

33. COUNCIL OF SCIENTIFIC MANAGEMENT IN THE HOME. *Housework with Satisfaction*. Edited by Mildred Wheatcroft. London, National Council of Social Service, 1960. Pp. 77.

34. GLENN, HORTENSE (McCLELLAN). *Attitudes of Women regarding Gainful Employment of Married Women*. Ann Arbor, University Microfilms, 1958. Microfilm copy (positive) of typescript. Collation of the original: viii, 81 1. Thesis—Florida State University.

Based on a survey carried out in a small southern U.S. community among 247 women. The consensus of opinion was that it was all right for a married woman to work if she had no children; if she disliked housework; if her housework didn't keep her busy; if she preferred associations with people outside the home; and, if she had no dependents. Most of the women interviewed disapproved of employment for mothers of pre-school children.

35. INTERNATIONAL WOMEN WORKERS' CONFERENCE, GENEVA, 1959. *Minutes of the International Women Workers' Conference . . . held in Geneva, . . . 19-22 October, 1959*. Geneva, International Union of Food, Drink and Tobacco Workers' Associations, 1959. Pp. 112.

Representatives from fifteen countries attended this conference which was sponsored by the International Union of Food, Drink, and Tobacco Workers' Associations. Some of the items on the agenda were: international trade union work for women; problems of trade union

work for women; equal pay for equal work; and, the ILO and women workers' problems.

36. RUSHER, ELFRED, MAXINE. *A Study of Women in Office Management Positions, with Implications for Business Education*. Ann Arbor, University Microfilms, 1958. Microfilm copy (positive) of typescript. Collation of the original: x, 173 1. Thesis—Ohio State University.

The author examines the characteristics, duties, basic problems, traits necessary for advancement, opportunities for promotion, and educational background of women employed in office management positions.

37. U. S. WOMEN'S BUREAU. *Programs and Services of the Women's Bureau; How to use them*. Washington, GPO, 1960. Pp. [16].

Miscellaneous

38. EMPLOYERS' ASSOCIATION OF GREATER CHICAGO. *Industrial Relations Survey, February 1960*. Chicago, 1960. Pp. 24.

39. GREAT BRITAIN. CENTRAL YOUTH EMPLOYMENT EXECUTIVE. *The Scientist*. London, HMSO, 1960. Pp. 48.

Output per man-hour in the private sector of the United States economy increased during the years 1947-58 at an average annual rate of 3.1 per cent according to one estimate, and 3.5 per cent according to another. These estimates, which are based on data obtained from different sources, are given in a report issued by the U.S. Bureau of Labour Statistics, entitled "Trends in Output per Man-Hour in the Private Economy 1909-58."

One of the sets of data used in the study was gathered by the Bureau and supplemented by data obtained from other sources, and the other was taken from the census statistics. The higher of the two estimates given above was based on data obtained from the latter source. Both estimates are calculated according to the constant dollar value of the gross national product for the private sector of the economy.

The most remarkable feature of the post-war period was the striking performance of agriculture, in which productivity increased by more than 6 per cent a year. In non-agricultural industries the average gain was 2.4 per cent based on BLS data and 2.9 per cent based on census data.

In the nonagricultural sector productivity increased by 2.9 per cent in manufacturing and by 2.3 per cent in non-manufacturing

40. INTERSTATE CONFERENCE ON LABOR STATISTICS. 17th, KNOXVILLE, TENN., 1959. *Proceedings of 17th Interstate Conference on Labor Statistics, July 7-10, 1959, Knoxville, Tennessee*. Washington, U.S. Bureau of Statistics, 1960. Pp. 200.

Some of the topics discussed at this conference were price statistics, their construction, and the analysis of their movements; manpower and occupational statistics; and, quality control of statistical measurement.

41. NATIONAL COUNCIL OF SOCIAL SERVICE. *Help for the Handicapped, an Enquiry into the Opportunities of the Voluntary Services*. London, 1958. Pp. 114.

42. NATIONAL INDUSTRIAL CONFERENCE BOARD. *Small Orders: Problems and Solutions*, by Earl L. Bailey. New York, 1960. Pp. 36.

Describes the different types of small orders, the problems involved in handling them and five methods adopted to solve the problem.

during the period, calculated on the basis of the BLS data.

The annual average changes varied considerably from year to year, ranging from almost nothing to nearly 8 per cent. During periods of economic expansion, the report points out, gains were above average; they were below average during periods of stationary or declining activity.

The report also deals with output per man-hour during the last 50 years. During the period from 1909 to 1958 output nearly tripled being equal to an average increase of a little less than 2½ per cent per year. The acceleration shown during the more recent period is stated to have been due principally to the performance of agriculture.

Among the factors in the long-term growth of output per man-hour given by the report are: advances in technology, in plant and equipment per worker, and in electric energy used per man-hour, research and development, and the growth of clerical, professional, administrative and other non-production workers in manufacturing.

During the period 1947 to 1956, while the number of persons engaged in private industry increased from an index number of 124 to one of 135, the index of total plant and equipment employed increased from 126 to 182. The index of equipment alone increased from 143 in 1947 to 264 in 1956.

* Less than 10,000.

B—Labour Income

NOTE: The estimates of labour income in this table have been revised in accordance with recent revisions to the National Accounts. Note particularly the use of annual totals instead of monthly averages, and the introduction of quarterly instead of monthly totals for some industries. Monthly and quarterly figures may not add to annual totals because of rounding.

C—Employment, Hours and Earnings

Tables C-1 to C-3 are based on reports from employers having 15 or more employees—at May, 1960 employers in the principal non-agricultural industries reported a total employment of 2,767,123. Tables C-4 (every second month) and C-5 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-3. They relate only to wage earners for whom statistics of hours of work are also available whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage earners in the reporting firms.

¹Includes (1) Forestry (chiefly logging), (2) Mining (including milling), quarrying and oil wells, (3) Manufacturing, (4) Construction, (5) Transportation, storage and communication, (6) Public utility operation, (7) Trade, (8) Finance, insurance and real estate and (9) Service, (mainly hotels, restaurants, laundries, dry cleaning plants, business and recreational service).

TECHNICAL NOTE—A change has been made in the method of dating the statistics published in Tables C-1 to C-6 to conform with the usual practice of the Dominion Bureau of Statistics. In the past, statistics for the last pay period in a month were labelled "pay period preceding" the first day of the following month. From now on, statistics for the last pay period in a month will be labelled for that month. Another change is that average hourly earnings, formerly expressed in cents carried to one decimal place, are now published in dollars and cents.

D—National Employment Service Statistics

The following tables are based on regular statistical reports from local offices of the National Employment Service. These statistics are compiled from two different reporting forms, UIC 751; statistical report on employment operations by industry, and UIC 757; inventory of registrations and vacancies by occupation. The data on applicants and vacancies in these two reporting forms are not identical.

G—Strikes and Lockouts

Statistical information on work stoppages in Canada is compiled by the Economics and Research Branch of the Department of Labour on the basis of reports from the Unemployment Insurance Commission. The first three tables in this section cover strikes and lockouts involving six or more workers and lasting at least one working day, and strikes and lockouts lasting less than one day or involving fewer than six workers but exceeding a total of nine man-days. The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. For further notes on this series see page 542, May 1959 issue.

CORRESPONDENCE—Address letters dealing with editorial matters to the Editor, those dealing with subscriptions to the Circulation Manager. SUBSCRIPTIONS—Canada: \$2 per year, single copies 25 cents each; all other countries: \$4 per year, single copies 50 cents each; Send remittance by cheque or post office money order, payable to the Receiver-General of Canada, to The Queen's Printer, c/o Superintendent of Government Publications, Ottawa. All subscriptions payable in advance. SPECIAL GROUP SUBSCRIPTION OFFER—Five or more annual subscriptions, \$1 per subscription (Canada only). Send remittance, payable to the Receiver-General of Canada, to the Circulation Manager. BOUND VOLUMES—\$5 per copy delivered in Canada, \$7 per copy to other countries. CHANGE OF ADDRESS—Please attach label showing previous address.

Authorized as Second Class Mail, Post Office Department, Ottawa.

EMPLOYMENT REVIEW

ECONOMICS AND RESEARCH BRANCH

Current Manpower Situation

The estimated number of persons with jobs in August was 6,301,000, which represents a slight rise from the previous month after allowing for seasonal movements. With this moderate improvement, employment was back to the level of last spring—the highest point reached in the irregular advance that has been in progress for more than two years.

Most of the increase during the month was in manufacturing and trade. Food-processing industries in particular hired large numbers of women workers as fruit and vegetable crops in Ontario and Quebec reached maturity. At the same time, however, most of the automobile and parts industry was closed down for model changeover. These temporary plant shutdowns were reflected in an increase in the number of workers on temporary layoff and in the number of jobseekers in Ontario.

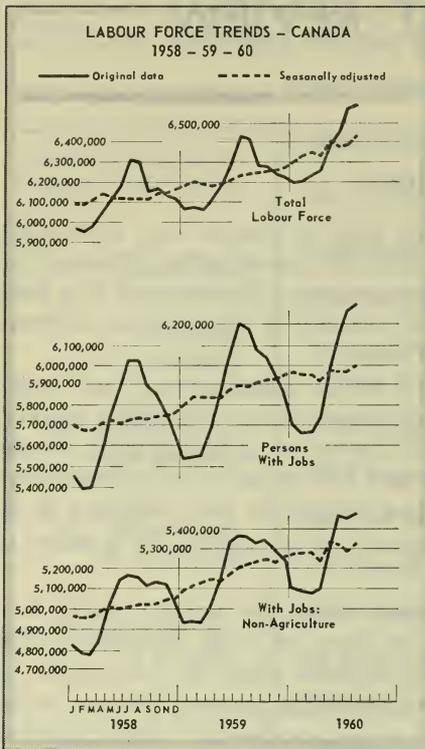

The most noticeable employment decline during the month was in construction, which does not normally start to drop off until September. The reduced level of housebuilding has had a substantial effect on the number of workers employed this year and may have altered the seasonal pattern in the industry. Most reports indicate that activity in non-residential construction has held up well so far this year.

These industrial changes resulted in an unequal distribution of demand for men and women workers. The employment increase during the month was among women; the number of men employed actually decreased slightly. As is often the case, most of the women who were hired came from outside the labour force and not from the unemployed. Many of the men who were laid off, on the other hand, stayed in the labour force, to increase the number of unemployed.

The estimated number seeking work in August was 322,000, an increase of 11,000 from the previous month. Such an increase is not unusual at this time of year. As a rule, the level of unemployment changes by less than 5 per cent over the July-September period before rising seasonally. It is likely, therefore, that the ratio of workseekers to the labour force will not fall much below the 4.9 per cent of August, a rate considerably higher than last year.

Review of Labour Market Developments, 1959-60

The labour force has been growing at an increasing rate this year, after making relatively modest gains during 1958 and 1959. In August, the total was about 198,000 higher than a year ago, a gain of 3 per cent. This was close to the annual increase in 1957, a year of unusually heavy immigration. The labour force growth this year was achieved without any significant increase in immigration.

Employment has moved ahead in a somewhat uneven fashion this year: a large increase this spring, and very little change since. In August, the number of persons with jobs was about 115,000 higher than a year earlier. All of the employment expansion was in non-farm industries, and women accounted for more than four-fifths of the over-all gain. Farm employment continued its long-term decline this year, although the rate appears to have slowed down during the third quarter. The number of persons with farm jobs in the Prairie region was actually higher this summer than in 1959. This is in marked contrast to the substantial declines of most postwar years.

Unemployment was higher than last year through the spring and summer months, the margin increasing steadily as job opportunities failed to keep pace with the growth of the labour force. Over the year, the largest increases have been in British Columbia, Ontario, Quebec and the Prairies, in that order. Unemployment in the Atlantic region changed very little during the past year.

The accelerated growth of the labour force stemmed mainly from an unusually large number of female entrants; they accounted for 57 per cent of the total gain over the year. The year-to-year increase of 113,000 in the female labour force was a more-than-proportionate gain and was much larger than in any previous 12-month period. During the past seven years the average annual increase in the number of women in the labour force was only about half this amount. Much of the growth in the labour force can be attributed to the demand for women workers in services and trade. There has been little appreciable change in the growth rate of the adult female population.

Except for persons 65 and over, all age groups shared in the expansion of the female labour force. Almost half of the increase was among women in the 45-64 age group, a considerably higher proportion than in most years, even when age shifts in the population are taken into account. Women in this age group form probably the largest labour reserve; only about one quarter of this age group participate actively in the labour market. It is not surprising, therefore, that the increasing demand for female workers has attracted a considerable number of persons into the labour market who would have remained outside the labour force under more stringent employment conditions.

The 25-44 year age group accounted for a little less than one-quarter of the increase in the female labour force. Only about 28 per cent of the females in this age group are in the labour force, but more than in other groups are fully

occupied at home, so that the potential reserve is smaller than in the 45-64 group. Women under 25 also accounted for a relatively small part of the increase, partly because of a drop in participation of teen-age girls.

(Estimates in Thousands)

25-44 years	650	624	+ 26
45 years and over	424	372	+ 52
Persons Without Jobs and Seeking Work			
<i>Total</i>	322	239	+ 83
14-19 years	77	59	+ 18
20-24 years	51	42	+ 9
25-44 years	118	85	+ 33
45 years and over	76	53	+ 23

The total male labour force showed an increase of 1.8 per cent during the past 12 months, compared with a gain of 1.3 per cent in the preceding 12-month period. This advance stemmed in part from the fact that a larger proportion of adult men participated in the labour force. The rates were substantially higher than a year ago among persons 25 and over and slightly lower than a year ago in the younger age groups. Participation rates for men in the 25-44 age group increased most noticeably, from 95.6 to 98.1.

Employment gains this year have been almost entirely confined to the service-oriented industries. In the goods-producing industries total employment in August was lower than a year ago as losses in construction and manufac-

turing more than offset an increase in forestry. Employment in mining showed virtually no change over the year despite the considerable drop in uranium and coal mining.

The service industry has grown at a remarkable rate during the past year. Employment in August was about 124,000 higher than a year ago, which represents a gain of 9.4 per cent. About two thirds of the increase was among women. Employment expansion in trade, finance, insurance and real estate resulted in a net gain of 39,000 during the past year, about the same increase as in the preceding 12-month period.

Employment in the construction industry was some 47,000 lower in August than a year ago. The decline over the year was fairly general across the country, reflecting the generally lower level of housebuilding activity. Housing starts in the first eight months showed a decline of 35 per cent from the corresponding period in 1959. Non-residential construction appears to have held up fairly well and the outlook for this sector of the industry was generally strong. The value of contracts awarded during the first seven months was substantially higher than last year for all major types of non-residential construction. Contracts for engineering construction registered a most marked improvement.

Weaknesses have developed in certain parts of manufacturing during the past year, resulting in fairly widespread reductions in employment. Total manufacturing employment in August was estimated to be about 14,000 lower than a year ago. Durable goods industries accounted for most of this decline. The largest staff reductions occurred in iron and steel products, transportation equipment, wood, leather and rubber products. Employment in almost all of the iron and steel products industries showed a year-to-year decline, but was nonetheless almost uniformly higher than two years ago. Aircraft and aircraft parts and railway rolling stock were mainly responsible for the employment decline in the transportation equipment industry. The employment situation in the automotive industry has been obscured by temporary shutdowns for model changeover. The slowdown in automobile production occurred somewhat earlier this summer than usual, after a fairly brisk first and second quarter.

Employment in non-ferrous metals, chemicals and paper products strengthened somewhat during the past year. In non-ferrous metals the employment gains in aluminum products and smelting and refining were more than enough to offset substantial losses in brass and copper products.

The number of persons without jobs and seeking work was 322,000 in August, an increase of 83,000 over the year. The year-to-year increase in unemployment was mainly among men. Male job-seekers in August numbered 269,000, which was 71,000 higher than a year ago. Men in all age groups shared in the increase but the greatest relative gain was among persons 45 and over. Men between 20 and 24 showed the smallest percentage rise. This group normally accounts for the smallest number of jobseekers.

The number of women seeking work in August, accounting for 13 per cent of the total, showed an increase of 12,000 over a year ago. Teen-age girls figured most prominently in the increase. Unemployment is normally highest in this age group.

Of the total jobseekers in August, 93,000 had been seeking work for less than a month, 128,000 for one to three months, 48,000 for four to six months and 53,000 for more than six months.

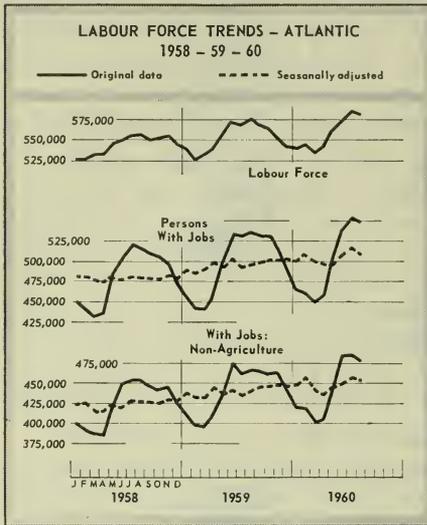

CLASSIFICATION OF LABOUR MARKET AREAS—AUGUST 1960

Manpower Situation in Local Areas

ATLANTIC

The Atlantic region witnessed a modest revival in economic activity this summer after almost a year of very little change. From May to August the number of persons with jobs rose by some 48,000, compared with an average increase of 31,000 during the corresponding period of the past ten years. Forestry and construction were mainly responsible for the employment strengthening this summer. The trade and service industries also expanded somewhat more than seasonally, though the rate of growth was considerably lower than for the country as a whole. Manufacturing employment showed little over-all change, with a mixture of gains and losses among individual industries.

Forestry employment in July and August averaged more than one third higher than in the same period last year and more than one fourth higher than two years ago. The increase in job opportunities appears to have been entirely confined to pulpwood logging. Lumbering activity showed a declining trend, reflecting a slowdown in residential construction. Forest fires, which began interrupting logging operations toward the end of August, caused considerable damage to tree stands in all four provinces in the region. However, except in Newfoundland and the Shelburne area in Nova Scotia, the fires were under control by mid-September.

Increased activity in non-residential construction this summer has more than made up for a decline in housebuilding. Highway and street construction reached a notably higher level than last year, particularly during the early part of the summer. Housebuilding activity during July and August was well below the previous year.

Shipbuilding and pulp and paper mills have shown some employment strengthening during recent months. However, the employment situation in railway rolling stock and iron and steel industries weakened between the second and third quarter. In other parts of manufacturing employment changes followed the usual seasonal pattern.

Coal mines in Nova Scotia continued to experience periodic shutdowns this summer as increasing competition from other fuels reduced the demand for coal. The first of a series of shutdowns began in the summer of 1958 and indications are that periodic shutdowns will continue during the next few months.

Total unemployment in the region showed little year-to-year change, though in certain areas it was higher than in 1959. At the end of August the classification of the 21 areas in the region was as follows (last year's figures in brackets): in moderate surplus, 10 (4); in balance, 11 (17).

Local Area Developments

St. John's (metropolitan): Group 3. The harbour development project has boosted construction employment in this area. Most construction contracts in Goose Bay were nearly completed at the end of August but job prospects remained fairly bright as a large housing project was scheduled to get underway early in September. Total employment in the area was slightly higher this summer than last year.

Halifax (metropolitan): Group 3. Housebuilding activity has held up better in this area than in other parts of the region; during the first six months of 1960, starts were 9 per cent higher than in the previous year. Manufacturing employment was maintained at a fairly high level this summer. The only sizeable layoff in manufacturing occurred at the Dartmouth shipyards, where 150 workers were released in July after the completion of several refit jobs. Total employment in August was slightly higher than last year, with small gains in trade and service.

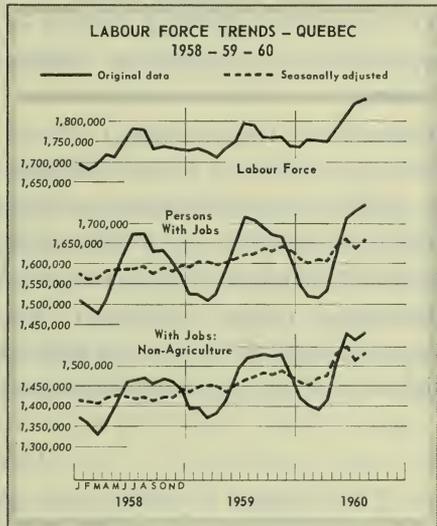

QUEBEC

This year the employment increase in Quebec has been greater than seasonal. Most of this expansion occurred during the second quarter of the year; some levelling off was apparent in the third quarter. The increase in job opportunities occurred in industries employing relatively large numbers of female workers. Between March and August the number of women employed rose by almost 10 per cent, more than double the long-term average.

Employment on farms showed the usual rise but in August was down 23,000 from a year earlier. In non-farm activities employment was some 63,000 higher in August than a year earlier. Much of the over-all increase was in the trade, finance and service industries, which have a fairly heavy concentration of female workers.

Labour requirements in pulpwood logging strengthened appreciably during the summer and by August employment was one-third higher than last year. In mining, employment has shown little non-seasonal change so far this year after a fairly rapid recovery in 1959.

Manufacturing employment showed a smaller expansion between the second and third quarter this year than in 1959, mainly because of a drop in certain non-durable goods industries. Employment in the clothing and leather goods industries in the March-August period was markedly lower than in 1959. There were offsetting gains, mainly in the food and beverage, transportation equipment and non-ferrous metal products industries. The aircraft and shipbuilding industries were particularly busy. Production of aluminum reached close to capacity levels during the second quarter of the year and employment was substantially higher than in 1959.

Total construction employment in the March-August period moved close to the level of the previous year. Although residential construction activity showed little improvement from the low level of the second quarter, strong non-residential construction activity maintained employment at a high level.

Unemployment remained higher than last year, with the increase concentrated mainly among male workers. The increase in unemployment was widely distributed, affecting most of the labour market areas of the region. At the end of August the labour market area classification was as follows (last year's figures in brackets): in moderate surplus, 19 (11); in balance, 5 (13).

Local Area Developments

Montreal (metropolitan): Group 2. Total industrial employment showed very little change during the summer. In manufacturing a lower level of employment in clothing, leather and tobacco industries was offset by gains in food and beverage, printing, chemical and transportation equipment plants. In the latter, both aircraft and shipbuilding industries showed employment gains over the year, more than offsetting declines in the railway rolling stock sector. Increased non-residential construction activity nearly counterbalanced the decline in housing.

Quebec-Levis (metropolitan): Group 2. Industrial employment showed a strong advance in this area and at mid-year was 2 per cent higher than a year earlier. A decline in manufacturing employment, caused mainly by a lower level of activity in clothing and leather plants, was more than offset by a gain in the transportation, trade and service industries.

Shawinigan (major industrial): Group 2. Employment during the summer remained close to 10 per cent higher than a year earlier owing to the continuing high level of activity in almost all parts of this area's industrial complex.

ONTARIO

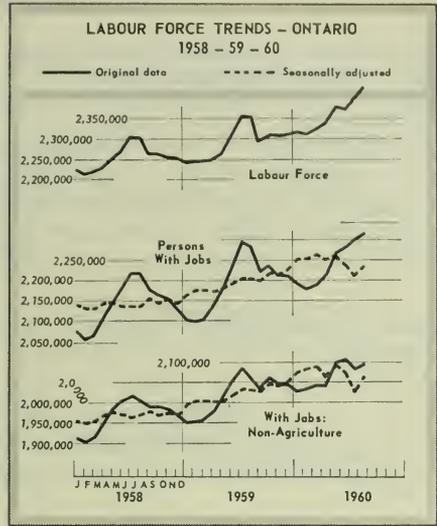

The increase in employment in Ontario between the second and third quarter was much less than in the previous five years, for both males and females. This development stems partly from a relatively early changeover period in the automobile industry; plants in Oshawa, Windsor, Oakville and St. Catharines all began slowing down about a month earlier than usual. Declines in textiles and electrical apparatus and supplies were also responsible for some staff reductions in manufacturing. In addition, residential construction remained at a low level, adversely affecting employment among the suppliers and producers associated with housing. Slight employment declines occurred also in the transportation, storage and communication industry; the logging and lumbering industry continued at a normal pace and most mines operated at a stable level.

The number of persons with jobs in August was 31,000 higher than a year earlier, a somewhat smaller margin than in most previous months of this year. The make-up of this increase differed markedly from the usual pattern.

All of the gain is attributable to the increasing number of women entering the labour force, mainly into the trade and service industries. Men's employment, on the other hand, is down slightly from a year ago, owing to declines in most goods-producing industries.

Employment in agriculture has followed the usual seasonal pattern. In August the estimated number with farm jobs was 220,000, about the same as a year earlier.

There was some improvement from the second quarter in the level of unemployment but the estimate remained higher than that of last year. In August, the area classification of the 34 labour market areas in the region was as follows (last year's figures in brackets): in substantial surplus, 2 (2); in moderate surplus, 16 (7); in balance, 16 (25).

Local Area Developments

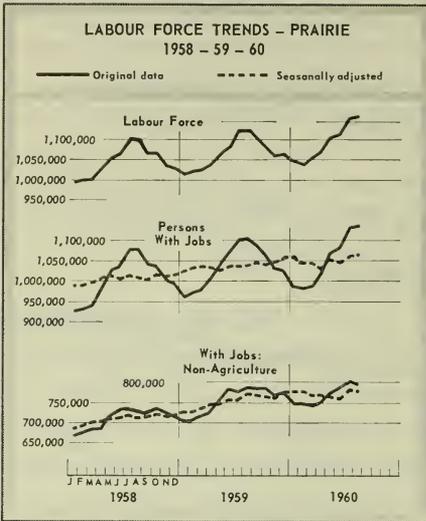

Toronto (metropolitan): Group 2. Although unemployment declined from the second quarter, it remained somewhat higher than last year. The continued low level of residential construction was mainly responsible for the year-to-year increase in unemployment. Weaknesses have persisted also in certain parts of manufacturing, notably transportation equipment and metal working plants. The trade and service industries showed more than seasonal gains in employment. Total employment in the area is currently a little lower than last year.

Windsor (metropolitan): Group 1. Employment in automobile plants was greatly reduced in the third quarter to allow for model changeover. There was also a decrease in employment in food and beverage processing plants, but the number of those employed in the trade and service industries showed improvement. Total employment was down about 6 per cent from a year earlier.

Hamilton (metropolitan): Group 2. After a summer improvement, registrations for employment at the National Employment Service office in Hamilton rose in August. This development reflects further employment reductions in agricultural implement and electrical apparatus plants, and also a slowdown of operations at Studebaker-Packard for retooling. Other industries, notably iron and steel and construction, operated at stable levels. Total employment in the area was at about the same level as a year earlier.

Brantford (major industrial): Group 2. There was a continuing reduction of staff by the agricultural implement plants and slackness existed in other parts of the iron and steel industry. On the other hand, construction continues ahead of 1959.

PRAIRIE

After a strong seasonal upswing from the second to the third quarter, the number of persons with jobs in the Prairie region was estimated at 1,137,000 in August. This was 30,000 higher than in August 1959, and in year-to-year terms it compares favourably with last April, when the gain from the preceding April amounted to only 6,000. Most of this year-to-year improvement occurred in agriculture, in which employment was 15,000 lower than a year earlier in April but 20,000 higher in August. On the other hand, the estimate of 797,000 in non-agricultural industries marked a gain of only 10,000 from the corresponding month of 1959; the year-to-year gain was down from a figure of more than 40,000 early in 1960.

Hot, dry weather in mid-summer caused some downward revisions of earlier crop forecasts. At harvest time a crop about equal to the average of the past 10 years was anticipated.

The number of housing units under construction at the beginning of August was 34 per cent less than a year earlier, and this reduction in residential construction was instrumental in holding construction employment 5 to 10 per cent below year-earlier levels. Some large projects, however, imparted offsetting strength to construction and associated activities. Under construction were gas and oil gathering pipelines, distributing systems, and pumping stations, and also four hydro projects—on the Brazeau River in Alberta, at Outlook and Squaw Rapids in Saskatchewan, and at the Grand Rapids in Manitoba.

At the beginning of the third quarter manufacturing employment was down about 4 per cent from a year earlier. The losses were widely distributed, with the heaviest reduction in iron and steel products, transportation equipment, and products of petroleum and coal. Transportation also engaged fewer workers than in 1959, partly owing to the consolidation of railway maintenance shops that accompanied the change from steam to diesel locomotion. Oil drilling and mining held generally steady except for the closure of a uranium mine in northern Saskatchewan.

Offsetting employment gains were registered in the non-goods-producing industries. Services, trade, and finance all gained substantially to bring about an increase of 1.3 per cent in non-agricultural employment from the year-earlier August level.

Unemployment dropped seasonally during the second quarter, then remained relatively stable well above the year-earlier levels. In all 20 labour market areas the demand and supply of labour were in balance at the end of August, the same as a year earlier.

Local Area Developments

Edmonton (metropolitan): Group 3. A substantial decline in housebuilding resulted in a surplus of construction workers. Food and beverages manufacturing and iron and steel products also showed some declines from a year earlier.

Calgary (metropolitan) and **Saskatoon** (major agricultural): Group 3. Improved business and institutional construction combined with a relatively small decline in housebuilding brought construction employment in the current year above year-earlier levels. This improvement, along with steady gains in trade and services, offset some loss in manufacturing to raise total employment in these two centers well above the 1959 levels.

Fort William-Port Arthur (major industrial): Group 3. Employment in shipbuilding and the bus and aircraft plant was lower than in mid-1959, but waterfront transportation activity was at about the same level. Employment in logging and in pulp and paper mills in the area immediately north and west of Lake Superior was ahead of year-earlier levels through the seasonal low early in the second quarter and after the seasonal upswing late in the second quarter.

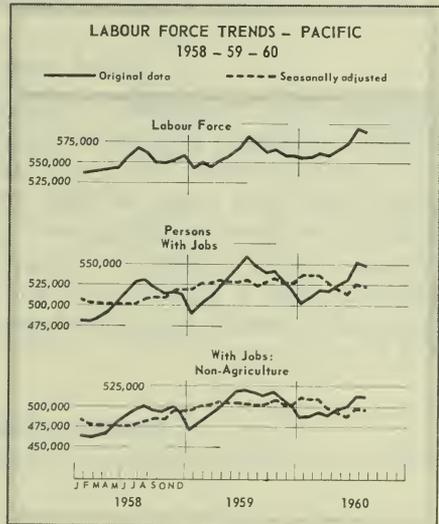

PACIFIC

In August the estimate of persons with jobs in the Pacific region, at 548,000, was about even with the estimate of a year earlier. This marked some improvement over the end of the second quarter, when the estimate was 16,000 lower than a year earlier, but compared unfavourably with the first quarter, when the estimate was substantially higher than at the same time in 1959. In year-to-year terms a substantially higher number were employed in agriculture in August; in non-agricultural industries there were fewer workers employed.

A sharp increase occurred in the farm work force in July as men were hired to harvest moderately heavy fruit and vegetable crops; in August the work force dropped back toward normal levels as summer work was completed. In the fishing industry catches were generally good but herring fishing and whaling were discontinued because of unfavourable market conditions.

Bridge and highway building contributed the main support to construction. There was, however, some weakness in commercial and business building and a sharp drop in housing, where the number of units under construction at the end of July was 38 per cent lower than a year earlier. The over-all year-to-year drop in construction employment in mid-1960 amounted to almost 10 per cent.

Buoyant employment levels were maintained in pulp and paper production through the first three quarters of the current year. Logging and sawmilling were also extremely active in the early part of the year, but near the end of the second quarter the demand for lumber dropped off, mainly owing to reduced housebuilding in the United States and Canada. Shingle mills and plywood

plants were also affected, and several shutdowns occurred. Dry weather in mid-summer resulted in a large number of forest fires, and forest closures halted activity in the woods in many parts of the region. Firefighting provided temporary employment at this time. In mid-August rains allowed the resumption of work, but owing to market conditions, the expansion in employment fell somewhat short of earlier levels.

In manufacturing, shipyards continued to release workers and fish canneries operated at levels lower than last year. The heavy bridge and roadbuilding programs provided generally favourable employment opportunities in steel fabrication plants and machine shops but enterprises supplying the housebuilding and logging industries were affected by weaknesses in those industries.

Mining employment was sustained at favourable levels through the early and middle part of 1960 except in coal mines, which showed a 20-per-cent loss at mid-year from the same time in 1959. The service industries also expanded somewhat, although employment in trade showed little change.

After a slight seasonal decline early in the year unemployment remained stable through the second quarter and into the third quarter, at a much higher level than the corresponding months of 1959. At the end of August the 11 labour market areas were classified as follows (last year's figures in brackets): in moderate surplus, 6 (3); in balance, 5 (8).

Local Area Developments

Vancouver-New Westminster (metropolitan): Group 2. A heavy drop in housebuilding was largely responsible for a 15-per-cent drop in construction employment from year-earlier levels, and manufacturing was also down from last year. Employment held steady at high levels in waterfront transportation through the first three quarters of this year.

Victoria (major industrial): Group 2. Layoffs in plywood production and shipyards offset a brisk demand for personnel in the tourist industry so that employment conditions remained generally less favourable in the third quarter than a year earlier.

COLLECTIVE BARGAINING REVIEW

ECONOMICS AND RESEARCH BRANCH

The highlight of the industrial relations picture in Canada during August was the release of the Milvain conciliation board report containing recommendations for settlement of the dispute between the railways and the non-operating unions. Another important development was the strike called by the United Steelworkers that closed down 10 of Dominion Bridge Company's 14 plants across the country.

Collective bargaining during the month ended in the signing of a number of new agreements. Of special interest were a settlement on the West Coast that made provision for the effects of automation on the jobs of longshoremen and a settlement in Montreal that provided for a substantially reduced work week combined with increased pay for workers in the ladies garment industry. Also in Montreal, civic employees were preparing to open negotiations with City Council for the renewal of their one-year collective agreement.

The situation in Canada's largest single labour dispute, between the **railways** and their **non-operating employees**, remained unresolved with the release of the conciliation board reports (full texts of the reports will be published in the October issue). The majority report, signed by the chairman and the union nominee, recommended a wage increase of approximately 14 cents an hour for the 118,000 employees, in a two-year agreement to terminate December 31, 1961. The hourly increase would be made up of 2 cents an hour retroactive to January 1, 1960, 5 cents an hour on September 1, and a 4-per-cent increase, calculated on the wage rates in effect immediately prior to January 1, 1960, to take effect on May 1, 1961. It was further recommended that the provisions for vacations with pay be modified to provide four weeks annual vacation after 25 years of service rather than after 35 years as now provided. The report rejected the railways' request for a 10-cent charge for the handling of the check off of union dues.

A key issue in the negotiations was the selection of an acceptable standard of measurement to relate the wages of non-operating employees to those of some other comparable group. The union argued that, as in past negotiations, their wages should be tied to the rates paid to workers in the durable goods industry, which includes auto workers, iron and steel workers, furniture makers, appliance makers, and others. Using this yardstick, they maintained it would take approximately 25 cents an hour to bring their wages to the level prevailing in the durable goods industries. To counter this argument, the railways produced a wage study prepared by a firm of management consultants suggesting that the non-operating trades were, in fact, adequately paid compared with outside workers. It was their contention, therefore, that wage increases were unwarranted. The majority report rejected the railways' submission as a measurement of comparable wage rates and relied on the durable goods standard in formulating their recommendations. It was emphasized, however, that this standard should not be applied with mathematical precision because of its inherent limitations, but was to be used as an "important signpost" in determining wage rates.

The majority report recognized that an increased wage bill would create financial difficulties for the railways. It pointed out that "it is clear from the evidence that in a large part the embarrassment suffered by the railways in their inability to reap greater returns from their operations is due to public policy in the shape of statutory rates and government regulations." The railway employees, the report said, should not be asked to subsidize public policy by accepting lower earnings; the burden should be born by the public at large.

The minority report, produced by the railways' nominee, opposed any wage increase for the present time. It maintained that at a time when the railways were facing increased competition, frozen freight rates and rising costs, it was impossible for them to absorb a larger wage bill. The report concurred with the majority decision regarding union check-off and vacations.

Shortly after the release of the conciliation board report the unions announced their acceptance of the proposals for a 14-cent-an-hour increase. The railways, on the other hand, rejected the recommendations because of their previously stated views on wages, and their inability to absorb any additional labour costs. They took issue with the board's conclusions that wages in the durable goods industry will continue to increase at the same rate during the next two years, and contended that present trends did not suggest a continuation of the past rate of increase in durable goods earnings. The unions countered the rejection with an announcement that they would conduct a strike vote among their members; this was expected to take about six weeks to two months to complete.

Operations of Canada's largest steel fabricating firm came to a virtual standstill at the end of August when employees at 10 of the 14 plants of **Dominion Bridge Company** and its subsidiaries went out on strike. The work stoppage was called when the **United Steelworkers of America**, representing the 4,000 employees, was unable to reach mutually acceptable terms for settlement in negotiations that had been in progress since last February. A single exception was at the Amherst, N.S., plant, where the parties were awaiting the release of the conciliation board report. In addition to a uniform wage settlement, the union was reportedly seeking pension and welfare plans that would operate on a national level, rather than on a local basis. Under the present welfare plan, single workers pay \$3.40 a month for welfare and \$1 a month for life insurance. Married workers with no children pay \$6.40 and \$1, and married men with children pay \$7.60 and \$1. In return, workers get \$2,000 in case of death, \$35 weekly for 13 weeks while off the job due to illness, plus medical expenses. The union asked for a national plan that would set the maximum employee contribution at \$6.50 and would provide \$5,000 in case of death, \$50 weekly for 35 weeks in case of illness, plus payment of all medical expenses.

A conciliation board reporting on the negotiations at the Edmonton, Alta., plant recommended that matters of a national character such as pensions and welfare plans should be made subject to a national agreement. It was this recommendation that the union was seeking to implement. Dominion Bridge has consistently opposed any national agreement, both during the current negotiations and during previous ones. The company insisted that each plant was an autonomous unit and must be free to conclude its own agreements in the light of prevailing local conditions.

A program to deal with the problems of automation and technological change was written into the new agreement signed by the **International Longshoremen's and Warehousemen's Union** and the **British Columbia Shipping Federation**, which employs a total of 1,500 longshoremen at Vancouver, Victoria, New Westminster, Chemainus and Port Alberni, B.C. With an increasing trend toward the introduction of new improved machinery for cargo handling, the parties agreed to set up a "joint mechanization committee" composed of three members each from union and management. The committee, meeting at least once monthly, will be charged with the task of recommending items for negotiation in new agreements relating to the general problems of mechanization and the introduction of new and improved methods. In addition, they will develop pay scales and premium rates applicable to changed methods and will deal with problems of job training, relocation, normal retirement, early retirement and size of the union work force.

The most significant provision designed to protect the worker from the immediate effects of automation and change was a guaranteed work week of 35 hours. Each union member will be guaranteed the opportunity of earning an annual income equivalent to 1,820 hours (35 hours per week) at the appropriate straight time base rate, providing he was available for work and remained a member in good standing. A proportionate amount would be provided to those who ceased to be members during the life of the agreement, or were not always available for work. However, if the volume of cargo handled should be abnormally low due to economic or other conditions beyond the control of the Federation, the minimum guarantee would be reduced proportionately.

In addition to the guaranteed income, the new agreement provided for a general wage increase totalling 16 cents per hour spread over two years. The old rate of \$2.78 an hour will be increased by 8 cents an hour on August 1, 5 cents of which will be retroactive to May 1, 1960, and by a further 8 cents effective May 1, 1961. The provision for vacation pay was changed to provide a payment of 4½ per cent of earnings after six years of service and 5½ per cent after nine years of service. Other improvements included a change in the minimum call-out time from two hours to four hours and changes in welfare provisions.

A new agreement with the **Montreal Dress and Sportswear Mfrs. Guild** providing for a 37½-hour work week starting January 1, 1963 brought the **International Ladies' Garment Workers** closer to their target of reducing the Canadian week to the 35-hour level reached in their United States agreements. The present 40-hour week will be reduced in two stages: the first one, taking effect January 1, 1962, will reduce the week to 39 hours, and the second one, a year later, will bring the 37½-hour week into force. Time workers will receive the same pay for the reduced hours as they had previously received for 40 hours. Piece workers will get an increase of 2½ per cent on January 1, 1962 and 3½ per cent January 1, 1963 to compensate for the loss in working time. The 12,000 workers covered by the three-year agreement received other benefits as well. Effective September 15, 1960, wage rates for cutters will go up \$4 weekly while other hourly paid workers will get a weekly increase of \$3. Piece workers will receive a general wage boost ranging from 4 per cent to 7 per cent. The employers' contribution to the severance pay fund was increased to 1 per cent of the payroll starting January 1, 1961. It was further agreed

that the union label would be sewn on all garments manufactured by Guild members, with responsibility for the supervision of this policy vested in the ILGWU. Finally, statutory paid holidays were increased from five to six annually.

During August, **Fire Fighters** in Montreal were reported to be preparing their submission to the **City of Montreal** for a new agreement to replace the current one, which is due to expire shortly. The forthcoming demands were said to be designed to bring working conditions and salaries in Montreal on a par with those prevailing in Toronto's Fire Department. They will request a \$500 increase for the 1,800 employees as well as a reduced work week from 56 hours to 42 hours without loss in take-home pay. In addition, the firemen will seek service pay of \$52 per year with a maximum of \$260 after 17 years of service; a levelling of salaries for officers who perform the same work and have similar responsibilities; and 13 statutory holidays per year.

Talks were continuing during August in the eastern provinces between representatives of **Dominion Coal and Steel Corporation** and District 26 of the **United Mine Workers of America** for the renewal of their collective agreement that had been extended on a month-to-month basis since its termination last December. The latest extension was until September 30. Negotiations were hampered by the generally depressed economic conditions facing the Maritime coal industry as a whole and in particular by the \$1,800,000 loss sustained by Dosco in last year's coal operations. Early in September the union reportedly recommended that its membership accept a new agreement that provided for unchanged wage rates, although changes in some other terms of the agreement were successfully negotiated. A referendum to seek ratification from the rank and file was scheduled to take place September 20.

Part III—Settlements Reached During August 1960

(A summary of the major terms on the basis of information immediately available. Coverage figures are approximate.)

ALUMINUM CO. OF CAN., KITIMAT, B.C.—STEELWORKERS (AFL-CIO/CLC): 3-yr. agreement covering 2,000 empl.—7¢-an-hr. increase during the first yr., 5½¢-an-hr. increase during the second yr. and 6¢ an hr. in the third yr.; new base rate will be \$2.14 an hr.; 3 wks. vacation after 5 yrs. of service (formerly 3 wks. after 15 yrs); company and employees to share equally cost of health insurance plan.

B.C. ELECTRIC, PROVINCE-WIDE—I.B.E.W. (AFL-CIO/CLC): 2-yr. agreement covering 550 empl.—a 3% increase retroactive to May 1, 1960, an additional 3% eff. Jan. 1, 1961 and a further 2% increase eff. Sept. 1, 1961.

B.C. SHIPPING FED., VANCOUVER, NEW WESTMINSTER, PORT ALBERNI, VICTORIA, CHEMAINUS, B.C.—LONGSHOREMEN and WAREHOUSEMEN (CLC): 2-yr. agreement covering 2,150 empl.—an increase of 8¢ an hr. eff. Aug. 1, 1960, and an additional 8¢ an hr. eff. May 1, 1961; in addition lump sum payment of 5¢ an hr. for time worked from May 1 to July 31, 1960; established joint committee to study problems of mechanization; eff. Aug. 1, 1961, guaranteed income equivalent to 1,820 hrs. at the appropriate straight time base rate for the previous 12 mo.

CAN. & DOM. SUGAR, MONTREAL, QUE.—BAKERY WKRS. (CLC): 2-yr. agreement covering 550 empl.—increase of 8¢ an hr. retroactive to Mar. 1, 1960, another 5¢ an hr. eff. Aug. 15, 1960 plus 5¢ an hr. eff. Sept. 1, 1961; 3 wks. vacation after 13 yrs. of service (previously 3 wks. after 15 yrs.); 4 wks. vacation after 25 yrs. of service (no previous 4-wk. vacation clause).

CONSUMERS GLASS, MONTREAL, QUE.—GLASS BOTTLE BLOWERS (AFL-CIO/CLC): 2-yr. agreement covering 800 empl.—8¢-an-hr. increase for the first yr., and an additional 8¢-an-hr. increase in the second yr.; in the second yr. empl. will receive 4 wks. vacation after 25 yrs. of service (no previous provision for 4 wks. vacation); improved shift premiums.

DOMINION STORES, MONTREAL, QUE.—RETAIL CLERKS (AFL-CIO/CLC): 1-yr. agreement covering 900 empl.—a general wage increase of \$2.50 per wk.; work week reduced from 44 to 43 hrs. without change in take-home pay.

DRESS MFRS. GUILD, MONTREAL, QUE.—LADIES' GARMENT WKRS. (AFL-CIO/CLC): 3-yr. agreement covering 12,000 empl.—cutters to receive an increase of \$4 per wk. and all other empl. will receive an increase of \$3 per wk.; 2-stage reduction in work week, the first eff. Jan. 1, 1960 to 39 hrs. and the second eff. Jan. 1, 1963 to 37½ hrs., both without change in take-home pay; 1 extra paid statutory holiday making a total of 6 per yr.

FRASER COS., CABANO, QUE.—WOODCUTTERS, FARMERS UNION (IND.): 1-yr. agreement covering 500 empl.—5% increase for all hourly paid wkrs.; some improvements in vacation allowance.

PRICE BROS., KENOGAMI, QUE.—WOODCUTTERS, FARMERS UNION (IND.): 2-yr. agreement covering 3,000 empl.—salaried empl. to receive 7% increase during the first yr. plus 3% during the second yr.; piece work rate increased by 35¢ per cord in the first yr. and 10¢ per cord in the second yr.

ST. RAYMOND PAPER, ST. RAYMOND & DESBIENS, QUE.—WOODCUTTERS, FARMERS UNION (IND.): 2-yr. agreement covering 500 empl.—3% increase in the first yr. plus an additional 3% increase in the second yr.; vacation allowance increased from 2% to 3% of gross earnings.

T.C.A., COMPANY-WIDE—MACHINISTS (AFL-CIO/CLC): 2-yr. agreement covering 4,000 empl.—a general increase of 5% for the first yr. plus an additional 5% increase during the final yr.; improved shift premiums.

NOTES OF CURRENT INTEREST

Appoint Royal Commission into Automotive Industry

Appointment of a one-member Royal Commission to inquire into the situation in and prospects for the Canadian automobile and parts industries was announced by Prime Minister Diefenbaker in the House of Commons on August 2.

The one commissioner is Prof. Vincent W. Bladen, Dean of the Faculty of Arts, University of Toronto.

Interviewed after his appointment, Prof. Bladen said he was aiming to submit his report early in the new year.

The Royal Commission will be asked, the Prime Minister said, to report on:

1. The present and prospective competitive position of the Canadian automotive industry, in Canadian and export markets, as compared with automotive industries of other countries.

2. The relations between the companies producing motor vehicles and parts in Canada and parent, subsidiary or affiliated companies in other countries, and the effect of such relations upon production in Canada.

3. The special problems and competitive position of the industries in Canada producing parts for motor vehicles, and the effects thereof on the production of vehicles in Canada.

4. The ability of the Canadian industry to produce and distribute economically the various types of motor vehicles demanded or likely to be demanded by Canadian consumers.

5. Measures that could be taken by those in control of the industries producing motor vehicles and parts in Canada, by the labour unions concerned, and by Parliament and the Government to improve the ability of

such industries to provide increased employment in the economic production of vehicles for the Canadian market and export markets.

A few days before the announcement—on July 28—the Prime Minister had reported the Government's decision to appoint a Royal Commission. Speaking in the House of Commons, he told of suggestions by a United Auto Workers delegation and by manufacturers of automobile parts that a Royal Commission be set up or a study made by the Tariff Board.

Having found that the Tariff Board had a "tremendous backlog" of work, "the Government has decided that the importance of the automobile industry to the Canadian economy is such that there should be a comprehensive investigation of the various aspects of that industry."

Several government departments, including the Department of Labour, have already undertaken investigations and have gathered preparatory material that provides background information for the Commission, the Prime Minister said.

Miss J. E. Leitch, Assistant to the Director, Economics Branch, Department of Trade and Commerce, has been named Secretary of the Commission.

Prof. Bladen, an economics professor, was Chairman of the University's Institute of Industrial Relations and head of the Department of Economics before his appointment as Dean of Arts last year. He was Director of the Institute of Business Administration from 1947 to 1953 and head of the Department of Political Economy from 1953 to 1959.

Publish Report on Seasonal Unemployment in British Columbia

A study of seasonal unemployment in British Columbia, begun in July 1958, has just been completed by the British Columbia Research Council.

The study, first of its kind to be undertaken on a regional basis in Canada, was made by the B.C. Research Council with assistance from the Department of Labour of Canada and the Department of Labour of British Columbia.

A consultative committee, first chaired by Prof. John Deutsch, formerly of the University of British Columbia, and later by Prof. Robert Clark, assisted the Research Council with the study. Representatives of management, labour unions and the federal and provincial governments also served on the committee.

The nature and extent of seasonal swings in employment and unemployment in

British Columbia in logging, construction, fishing, agriculture, food processing and trade are set forth and proposals are made for developing greater year-round employment stability.

There is no one answer to the problems of seasonal unemployment, the report demonstrates; but action on many fronts—by the industries involved, by individual firms, by unions and by others—is required.

Numerous recommendations and suggestions are made throughout the report as well as in a separate chapter entitled "Combating Seasonal Unemployment". Some of these recommendations have already been acted upon by the federal Government, including broadening the scope of the Municipal Winter Works Incentive Program, steps to encourage an expansion of training for unemployed workers during the winter, and continuation of publicity and educational efforts in support of the Winter Employment Campaign.

The report contains a number of illustrative charts and an appendix on seasonal fluctuations in the State of Washington, where similar conditions exist. It is published by the British Columbia Research Council, University of British Columbia, Vancouver 8, B.C.

A report on a study by the federal Department of Labour of the seasonal unemployment problem in Canada was published in three instalments in the *LABOUR GAZETTE*—May, June and July numbers. A reprint of this report will be available soon.

Conciliation Board in Rail Dispute Proposes 14-cent Wage Increase

The majority report of the conciliation board in the dispute between six Canadian railways and 17 unions representing 115,000 non-operating employees recommended an increase in wages averaging slightly more than 14 cents an hour over a two-year period. The minority report recommended no wage change "at the present time."

Complete texts of both majority and minority reports will appear in the October *LABOUR GAZETTE*.

On August 31, representatives of the 17 unions agreed unanimously to accept the recommendation of the conciliation board. The railroad companies were still studying the report.

The report recommended that the wage increase consist of 2 cents an hour retroactive to January 1, 1960; 5 cents an hour effective September 1, 1960; and a further 4-per-cent increase, based on the rates prior to January 1, 1960, to be effective May 1, 1961.

The report also recommended that the qualifying period for four weeks vacation with pay be reduced from 35 years to 25 years.

The majority report was signed by Mr. Justice J. V. H. Milvain of Calgary, chairman, and David Lewis, nominee of the unions. The minority report was presented by Philip F. Vineberg, nominee of the companies.

In the United States, the recommendations of a Presidential fact-finding board were accepted last month by more than 100 railroads and 11 unions representing 550,000 non-operating employees. The agreement provides for a 5-cent-an-hour wage increase plus fringe benefits that are estimated to increase the total gain to more than 10 cents an hour.

Prominent among the fringe benefits was the provision for employer-financed life insurance of \$4,000 to every active employee covered by the agreement. The insurance is effective March 1, 1961; the wage increase, July 1 this year.

Railway Employment Decreases In Both Canada, United States

Canada's railways employed 187,981 persons, on average, in 1959, a decrease of 2.5 per cent from 192,809 in 1958, the Dominion Bureau of Statistics reported last month.

Time on duty declined to 379,831,799 hours from 391,168,385 in 1958, an average of 2,021 hours per employee from 2,029.

Total compensation increased to \$780,031,534 from \$757,907,896, an hourly average per employee of \$2.05 compared with \$1.94 in 1958. The yearly average rose to \$4,150 from \$3,931 in 1958.

These statistics are contained in the DBS publication, *Railway Transport, Part IV (Employment Statistics), 1959*, which is obtainable from the Queen's Printer, Ottawa, for 25 cents a copy.

In the United States, the number of persons employed on railways in 1959 was 815,474, compared with 840,575 in 1958. The figures in both cases represent the average of 12 mid-month employee counts in each year. In 1948, the number of employees was 1,326,906, according to statistics of Class I railways published by the Bureau of Railway Economics, Association of American Railroads.

The average number of hours worked by each employee in 1959 was 2,360, compared with 2,356.2 in 1958.

Manufacturing Employment Lags Behind Growth of Labour Force

Employment in manufacturing in Canada is not keeping pace with the growth of the labour force, and this "is a major factor in the present uncomfortably high total of those apparently seeking work and unable to find it," T. R. McLagan, President of the Canadian Manufacturers' Association, said in an address at a Canadian National Exhibition directors' luncheon at the beginning of September.

During the past 10 years the percentage of the labour force employed in manufacturing has declined from 26.6 to 24.8, he pointed out.

This he attributed to increased competition from imported goods, not only from the United States, but also from low-wage countries like Britain, West Germany and Japan.

Mr. McLagan said that in 1959 imports from the United States into Canada were valued at \$3,836,000,000, whereas those from Britain, West Germany and Japan had a combined value of not more than \$826,100,000. He disputed the idea, however, that this showed that imports from the United States—with the highest wage

rates in the world—were four times as harmful as those from low-wage countries. "Harmful they are, but not four times as harmful," he said.

He went on to point out that the bulk of the imports from the low-wage countries were consumer goods that competed directly with Canadian manufacturers, while a high proportion of those that come from the United States are "made up of industrial equipment, materials and components which often complement—and indeed are essential to—our own production.

"The importation of such items... supports and sustains manufacturing employment in this country," the speaker argued.

He also said that, while imports from Japan had risen by 435 per cent between 1954 and 1959, those from West Germany by 182.4 per cent, those from Italy by 153 per cent and those from Britain by 51.9 per cent, imports from the United States had gone up by only 29.5 per cent.

Canadian manufacturers labour under the triple burden of a limited market, high wage rates and punitive taxation, Mr. McLagan said.

Lack of Chances for Training Said Major Problem Facing Women

One of the major problems women face in many countries in trying to get into, or to reach high positions in business and industry is a lack of opportunities to receive adequate vocational preparation, Mrs. Elizabeth Johnstone of the International Labour Office told a meeting in Ottawa last month. Mrs. Johnstone is head of the ILO Office for the Co-ordination of Women's and Young Workers' Questions.

With a few rare exceptions, she said, the vocational preparation of girls to enter business and industry is inferior to that of boys, "both in quantity and quality, and more often than not is often unrealistic in terms of their later work lives."

Mrs. Johnstone said that many reasons have been uncovered for the state of affairs

that exists, some of them well known in Canada, such as reluctance to give the education of girls the same priority as that of boys; indifference on the part of girls to their own vocational futures; separation of education facilities for boys and girls that often results in unequal facilities for the girls; traditional prejudice about what constitutes men's work and women's work; and inadequate vocational guidance for women.

"It is obvious," said Mrs. Johnstone, "that so long as this situation persists, women will always find it difficult to develop their potentialities and skills and hence to have equal chances for promotion and to move into more responsible, more highly skilled and better paid work."

CLC Booklet Instructs Affiliates in Handling of Public Relations

A booklet designed to help local unions, labour councils and provincial federations of labour in the handling of publicity has been produced by the Public Relations Department of the Canadian Labour Congress.

Public relations was a subject of great concern at both the 1960 CLC convention and at recent conventions of some of the provincial federations.

At the CLC convention, a resolution was adopted instructing the executive to "inten-

sify public relations activities of the Congress to the fullest possible extent" and directing the CLC Public Relations Department to co-ordinate the activities of publicity committees of locals, councils and federations.

A public relations forum was held at the 3rd annual convention of the Ontario Federation of Labour, in November 1959, and many suggestions discussed at that forum have been included in the booklet.

HOUSE OF COMMONS DEBATES

A Guide to Items of Labour Interest in Hansard

(page numbers refer to Hansard)

July 27—*Unemployment Insurance Fund* balances on June 30, 1957, 1958, 1959 and 1960, respectively, were: \$852,729,261.78; \$644,520,634.54; \$434,152,690.64; \$296,-187,477.10, Hon. Michael Starr, Minister of Labour, replies to question (p. 7019).

Development of new industries, to prevent the occurrence of ghost towns when natural resources are depleted, should be given serious consideration, says Arnold Peters (Temiskaming) during debate on the estimates of the Northern Administration Branch, Department of Northern Affairs and National Resources. A branch of the Department should handle secondary industry, he suggests (p. 7056).

July 28—*Canada's automobile and parts industry* will be the subject of a Royal Commission inquiry, Prime Minister Diefenbaker informs the House (p. 7108).

Department of Labour estimates for the fiscal year April 1, 1960 to March 31, 1961 brought before the House by Hon. Michael Starr, Minister of Labour (p. 7143).

Canada's Labour force in 1950 numbered slightly over 5,000,000; it currently numbers about 6,454,000, an increase of 20 per cent, the Minister says in his statement on his department's functions (p. 7143).

The Department of Labour is asking for a total of \$14,985,700, a decrease from the \$15,991,942 in the 1959-60 estimates, he announces. The Unemployment Insurance Commission requests \$88,411,000, an increase of \$13,500,000 over the 1959-60 figures, largely accounted for by an increase in the Government's contribution to the Unemployment Insurance Fund. The estimates do not take into account the supplementary estimate, previously passed, dealing with the Municipal Works Incentive Program, whose continuation and enlargement was announced July 23 by the Prime Minister (L.G., Aug., p. 774) (p. 7144).

All chartered banks have undertaken to co-operate in a program of expanded home improvement and home extension construction during the coming winter, the Minister reports (p. 7148).

Employment effects of automation have been under study by the Department of Labour for several years, the Minister says, outlining the research work undertaken and the findings to date (p. 7148).

Debate on Labour Department estimates begins (p. 7149) but the House adjourns without passing any items (p. 7184).

July 29—*Debate on Labour Department estimates* continues (p. 7208). Item covering departmental administration agreed to (p. 7256) but the House adjourns before passing any other items (p. 7260).

July 30—*Debate continues on estimates* of the Department of Labour (p. 7267).

The estimated number of man-days of work provided last winter by the Municipal Winter Works Incentive Program was 1,938,-839, the Minister of Labour replies to question (p. 7287).

Department of Labour estimates completed (p. 7320).

August 1—*Bill C-79 (human rights)* considered in committee (p. 7371 to p. 7383).

August 2—*Appointment of Royal Commission* to inquire into the automobile and parts industry in Canada announced by the Prime Minister. The Commission will consist of one commissioner (p. 7385).

Bill C-79 (human rights) further considered in committee (p. 7390 to p. 7452).

August 3—*Study of Bill C-79* completed in committee (p. 7460 to p. 7520).

August 4—*Bill C-79* providing for the Recognition and Protection of Human Rights given third reading and unanimous passage by the House following debate (p. 7536 to p. 7553).

August 6—*Committee on revised system* for estimating unemployment has submitted its report to the Government, which has it under study, Hon. Michael Starr, Minister of Labour, replies to question (p. 7679).

August 8—*Repurchase of eight CNS ships* sold to the Government of Cuba in 1958 has not been considered by the Government to rebuild the Canadian merchant marine, Hon. George Hees, Minister of Transport, informs questioner (p. 7748).

August 10—*Canada has signed* the articles of agreement of the International Development Association (designed to provide economic aid to underdeveloped countries) (p. 7875).

Stretch-out of uranium contracts, which assures some miners another three years of employment, has been the major effort of the Government to help uranium mining communities, the Minister of Trade and Commerce says during debate on his department's estimates. The Government has had no success in finding other ways to help (p. 7905).

Third Session of 24th Parliament prorogued.

60TH ANNIVERSARY

Volume 1, Number 1, dated September 1900, was unveiled at 16th annual convention of the Trades and Labour Congress of Canada

THIS is the 60th anniversary issue of the LABOUR GAZETTE.

The LABOUR GAZETTE was established as the official journal of Department of Labour under authority of the Conciliation Act, 1900. A statement in its first number, dated September 1900, laid down its purpose as "the dissemination of accurate statistical and other information relating to labour conditions and kindred subjects."

The editorial in this first issue clearly stated that the LABOUR GAZETTE would aim at the impartial relation of facts. It would not be its business to express opinions.

"It is an official publication, and as such will seek to record only such statements of fact, and such collections of statistics, as are believed to be trustworthy. In the selection and publication of these, care will be taken to have the information as complete and impartial as possible . . . The work thus undertaken will, it is hoped, establish a basis for the formation of sound opinions, and for the drawing of correct deductions, but these, in themselves, are tasks which lie beyond the scope and purpose of the *Gazette*, and are ends it will seek to serve, not to meet."

The Debate in the House

On June 7, 1900, the then Postmaster General, Hon. William Mulock (later Sir William Mulock), in the language of Hansard, "moved for leave to introduce Bill (No. 187) to aid in the prevention and settlement of trade disputes and the publication of statistical industrial information."

The two objects of this bill, which eventually passed into law as the Conciliation Act, 1900, were stated by the Minister as follows:

By the aid of boards of conciliation, to promote the settlement of trade disputes and of differences that arise from time to time between employers and employees, and between different kinds of employees.

To establish a Department of Labour, which would have the duty of gathering statistical information and other information affecting labour, and providing for its publication.

Regarding the conciliation portion of the bill, Mulock said, "I may say that it is not anything new, but is an echo, largely, of the Conciliation Act which has been in force in Great Britain for some four years." He went on to outline the history of conciliation machinery in the United Kingdom.

Concerning the proposed publication, he pointed out that "Great Britain established a gazette some years prior to the Conciliation Act." Later on, during the second reading of the bill, he said, "The Department of Labour will issue a monthly labour gazette, and in addition will submit an annual report to Parliament. The labour gazette will be edited and conducted on the lines of the *Labour Gazette* in England."

When asked by an honourable member how that journal was conducted, Mulock said, "They have an editor and a number of correspondents in different

places in Great Britain. It is the duty of these correspondents to constantly gather facts that are of value and instructive to those engaged in industrial life and to communicate them to the central office, there to be analysed, digested and published for the information of the industrial classes."

In answer to another question, the Minister said that these correspondents were paid "some slight remuneration" for their services.

At the time the bill was introduced, George E. Foster, speaking on the Opposition side of the House, had wanted to know whether the labour gazette was to be "a party publication," and whether it was to be "edited in the interest of the party which for the time being has control of the administration." If the latter were to be the case, he predicted that the publication was "doomed to failure from the outset."

During the second reading of the bill, Mulock referred to Foster's previous inquiries, and said he was surprised that Foster should have asked whether the labour gazette was to be a partisan organ, or a medium for influencing public opinion. He repeated that "the labour gazette was to be a publication of fact which all might read and comprehend, and from which they might draw their own conclusions."

Notwithstanding the Minister's assurances, the suspicions of the Opposition, as it appeared later, were not without justification.

Another point brought out in the course of the debate was that the new publication was intended to be impartial as between employers and labour. A member of the opposition asked, "Are the employers of labour to be consulted as to the condition of the labour market by these correspondents for the labour gazette." In reply, Mulock said in part: "It will be an error to suppose that any one class is to be considered in gathering information, because all this information will be applicable to the whole field of labour as a proper subject to be given to the public generally."

Section 10 of the Conciliation Act 1900 that finally emerged read as follows:

With a view to the dissemination of accurate statistical and other information relating to the conditions of labour, the Minister shall establish and have charge of a Department of Labour, which shall collect, digest, and publish in suitable form statistical and other information relating to the conditions of labour, shall institute and conduct inquiries into important industrial questions upon which adequate information may not at present be available, and issue at least once in every month a publication to be known as the *Labour Gazette*, which shall contain information regarding conditions of the labour market and kindred subjects, and shall be distributed or procurable in accordance with terms and conditions in that behalf prescribed by the Minister.

(The whole of this section that related to the LABOUR GAZETTE was incorporated without change in Section 4 of the Labour Department Act, 1909, by which the Department of Labour was established as a separate department under a full-time minister.)

The First Editor

When asked toward the end of the debate on the bill whether he had anyone in view to edit the LABOUR GAZETTE, Mulock replied, "I have some one in view, and if we are fortunate enough to get him I think he will be entirely *persona grata* to all classes—the labouring class as well as the employers of labour."

That "someone" was William Lyon Mackenzie King, who had already, on June 26—this debate took place on July 6—been offered the editorship of the

Labour Gazette Editors

William Lyon Mackenzie King	September 1900 to June 1908
F. A. Acland	July 1908 to June 1912
Robert H. Coats	July 1912 to June 1915
F. A. Acland	Deputy Minister and Editor, LABOUR GAZETTE, July 1915 to July 1917

LABOUR GAZETTE. MacKenzie King, who was in Rome when he received the offer from Mulock by cablegram, after considerable hesitation decided to accept it.

When he first took over his duties, King was, as he said in his diary, "Editor of Gazette, staff & all, and have to begin at the base with the finding of suitable quarters." By the time the first issue of the GAZETTE went to press, however, a small staff had been appointed. These, according to an announcement in the GAZETTE, consisted, besides the editor, of a staff clerk, a "Fair Wages" officer, an officer for the enforcement of the Alien Labour Act, and five local labour correspondents, situated in Toronto, Winnipeg, Stratford, and two in Quebec City. A number of correspondents were appointed in other centres during the ensuing months.

In October, King succeeded in getting his friend Albert Harper appointed to the staff, and later in getting him made Assistant Editor. When Harper was drowned in December 1901 in a heroic attempt to save the life of a woman skater who went through the ice of the Ottawa River, King obtained R. H. Coats as Assistant Editor.

(In 1912 Dr. Coats was named to an interdepartmental committee set up to study and solve the duplication of statistical services in federal government departments. Outcome of the committee's efforts was the formation of the Census Branch; Dr. Coats was placed in charge of the Branch with the title of Dominion Statistician. In 1918, enactment of the Bureau of Statistics Act established the Dominion Bureau of Statistics; Dr. Coats was its first chief.)

Frank Giddens, an ex-newspaperman, also joined the staff at about this time. It appears, however, that he was employed mainly as a stenographer, and he later became King's private secretary.

Before long F. A. Acland joined the staff of the GAZETTE. When King became Minister of Labour in 1909, Acland succeeded him as Deputy Minister and Editor of the LABOUR GAZETTE. Except for an uncertain period starting in 1912, when R. H. Coats was editor, these two posts continued to be combined under Acland as they had been under King until July or August 1917, when they were finally separated, Acland continuing as Deputy Minister and Bryce M. Stewart becoming Editor.

Mackenzie King lost no time in building up the Department and the LABOUR GAZETTE. Besides the appointment of additional correspondents, a clipping system was begun which worked mainly on Canadian newspapers. He set up an extensive reference library, and began to stock it with labour publications from various countries; and instituted a system of exchanging publications on labour matters.

Labour Gazette Assistant Editors

Henry A. Harper	October 1900 to December 1901
Robert H. Coats }	{ February 1902 to 1912
William W. Edgar }	{ July 1905 to 1908
Bryce M. Stewart	June 1916 to July 1917
J. H. Magee }	{ 1920 to 1924
William W. Edgar }	{ December 1923
Charles W. Rump	June 1936 to October 1942
Joseph W. Willard	October 1942 to February 1943
John Mainwaring	March 1943 to July 1951
William S. Drinkwater	August 1951 to March 1958
William R. Channon	June 1958 to present

King soon discovered that his chief had his own ideas about how the LABOUR GAZETTE should be edited. On August 5 King wrote in his diary: "Today I had a pretty good revelation as to the attitude of politicians towards govt. work. Mr. Mulock went thro' my articles & everything wh. in any way cld. count for a Conservative he scored out... He wants to have the first issue [of the LABOUR GAZETTE] really a campaign document filled with references to past doings of govt."

Mackenzie King, however, resisted attempts to make the LABOUR GAZETTE serve the ends of party politics, and he evidently succeeded in doing so without giving serious offence to his chief. He was unable, however, to prevent patronage from governing the appointment of GAZETTE correspondents, although he strongly disapproved of it.

The Unveiling

From the establishment of the first Canadian labour congress in 1873 every labour convention had urged the setting up of a Department of Labour and the publication of a monthly journal or gazette to provide information about labour for the working man, the employer and the general public.

It was therefore a happy coincidence that the LABOUR GAZETTE "made its first public appearance on the opening day" of the 16th annual session of the Trades and Labour Congress of Canada, which was held in Ottawa from September 18 to 22, 1900. The phrase quoted above is taken from the second issue of the LABOUR GAZETTE, which devoted 14 pages to a report of the TLC convention.

The Minister of Labour attended the convention and presented the first number of the LABOUR GAZETTE to the President of the Congress, Ralph Smith, MPP. In his presidential address, Smith referred to the passing of the Conciliation Act as "a step at least in the direction of labour reform." He referred also to the setting up of conciliation and arbitration machinery and the establishment of the LABOUR GAZETTE, which, he said, "will contain matters of supreme importance to the labour movement..."

Growth of the Gazette

The contents and arrangement of the LABOUR GAZETTE have naturally changed during the years since the first numbers were published. The reports from local correspondents, which from the first had been planned to be a prominent feature of the journal, continued to occupy a dominant place until November 1911; but from then on they declined in importance and finally ceased to appear altogether. In that month's issue, for the last time the reports were headed by the name of the correspondent and the territory he covered. Thereafter the reports showed only the name of the district, and they were reduced in length.

In February 1912 a complete list of correspondents was published at the beginning of the reports, but from then on names were not mentioned, and by July 1916 the reports had been boiled down to a single report for each province based on "Reports of Correspondents and Other Sources."

By this time the reports had become Section III of a review of industrial conditions for the month. The other two sections comprised a general review and a review by industries and trades. Even in this diminished form, the local reports had disappeared by May 1918, having been merged with the review of industries and trades.

Reports of industrial disputes, or strikes and lockouts, were published in the GAZETTE almost from the first, and they continue to be a monthly feature, though the form of the report has changed from time to time. Reports on fair wage schedules in Government contracts, and notes and articles on labour legislation and court decisions affecting labour, have been published almost every month during the 60 years of the GAZETTE's life. Industrial accidents have been continuously reported, though since January 1918 only fatal accidents have been dealt with.

From the enactment of the Industrial Disputes Investigation Act, 1907, in March of that year, reports of the more important boards of investigation and conciliation, and summaries of such reports, have frequently been published. For a number of years the GAZETTE devoted a considerable amount of space to these reports, but it now confines itself mainly to publishing monthly itemized lists of conciliation proceedings before the Minister of Labour.

In 1910 the Department of Labour began to collect and compile statistics on wholesale and retail prices and the cost of living, and these statistics were published each month in the GAZETTE. In 1915 monthly publication of prices of a number of articles of food and other items entering into the budget of a working man's household was begun by the GAZETTE.

In course of time, after the Dominion Bureau of Statistics came into operation, statistics on the cost of living published in the GAZETTE began to be based partly on Department of Labour, and partly on DBS sources of information. In November 1940, the new official cost-of-living index constructed by the Dominion Bureau of Statistics was published in the LABOUR GAZETTE for the first time. Not until 1943, however, did the Department of Labour entirely cease to collect statistics on the cost of living.

Beginning in July 1902, the first pages of each monthly issue were devoted to a summary of industrial and labour conditions during the preceding month. This summary continued to occupy the first place until September 1915, when it was relegated to second place and Notes on Matters of Industrial Interest, which had begun in a small way and in a secondary position

in the August 1913 issue, were expanded and took the leading position. Now headed simply Notes of Current Interest, this section is still placed early in each monthly issue, following immediately after the Employment Review and Collective Bargaining Review, both comparatively recent inclusions in the journal's contents.

In January 1951 the familiar "Government Grey" cover, which had been used on the monthly numbers of the GAZETTE from the beginning, was replaced by a coloured cover, the colour of which was changed each month, that carried a photograph illustrating some feature article in the issue. At the same time photographs began to appear on inside pages.

The LABOUR GAZETTE was published in French and English from the beginning, but not until October 1949 was a separate editor appointed for the French edition, la GAZETTE DU TRAVAIL.

In 1900 the price of the LABOUR GAZETTE was 20 cents a year, and 3 cents for single copies. This price remained unchanged for almost half a century, until February 1948, when it was raised to \$1 a year or 10 cents for single copies. Since then the price has been raised twice. In March 1953 it was increased to \$1.50 a year; the price of single copies was raised to 15 cents, but in May of the same year it was raised again to 25 cents, the present price. Finally, in April 1955 the annual subscription rate became \$2.

In the 60 years that have passed since this journal first appeared, tremendous changes have taken place, both in Canada and in the world at large. The LABOUR GAZETTE has changed with the times. It has adapted itself to the changing circumstances, wants, and even tastes of the public it serves. Subjects that were not dreamed of by the readers of 1900 have found their way into the pages of the GAZETTE.

But, amid the changes, one thing that has not changed has been the purpose and principle set out in the first page of its first issue: "... to record only such statements of fact, and such collections of statistics, as are believed to be trustworthy... to have the information as complete and impartial as possible..." and to "establish a basis for the formation of sound opinions and for drawing correct deductions, but these, in themselves, are tasks which lie beyond the scope and purpose of the *Gazette*, and are ends it will seek to serve, not meet."

In 1900, when the *Labour Gazette* was born, Ralph Smith, MPP, was President of the Trades and Labour Congress of Canada. It was he who received the *Gazette's* first number from the Minister of Labour at the 16th convention of the TLC. At that convention, Ralph Smith was re-elected President, John A. Flett re-elected Vice-President, and P. M. "Paddy" Draper elected Secretary-Treasurer. (Draper held that office until 1935, when he became President of the TLC.) David A. Carey was for the third time fraternal delegate to the American Federation of Labour; fraternal delegates were not exchanged with the British Trades Union Congress until 1913.

At the 1900 convention, 65 delegates, representing nine labour councils, one district assembly and 35 local unions, were seated. TLC membership that year was 8,381. The Secretary-Treasurer's financial report showed receipts of \$912.21 in the preceding year and expenditures of \$618.79, leaving a balance on hand of \$293.42. The Secretary-Treasurer also reported the granting of 13 charters to federal unions and one to a labour council.

1960 Annual Report, Unemployment Insurance Advisory Committee

Loss of \$133,919,000 since March 1959 has reduced Unemployment Insurance Fund "below a safe level," Committee states. Replenishment by government grant of cost of extensions during past three years of seasonal benefit period is urged

With the loss of \$133,919,000 since March 31, 1959, the Unemployment Insurance Fund "is now below a safe level" and there is a danger that it may become insufficient to meet its liabilities, the Unemployment Insurance Advisory Committee said in its annual report for the year ended March 31, 1960, which was tabled in the House of Commons on August 10.

The Committee expressed its concern at the rapid decrease in the balance in the Fund, which dropped to \$365,892,000 on March 31, 1960 from \$859,471,000 at the end of March 1956.

"This concern is increased by the fact that May 1960 figures show the Fund has dropped to \$299,293,511.04, and by the end of June 1960, according to preliminary figures, it will show a further decrease of \$3 million—the June 1960 loss being due to loss on sale of bonds," the report stated.

The balance in the Fund at the end of the 1959-60 fiscal year, the committee pointed out, "does not represent the market value of the securities held. Under existing bond market conditions, the value of the balance is 8 to 9 per cent less than that shown."

The Committee drew attention to two main causes of the depletion of the Fund. A major drain on the Fund is created, it said, by the extension of the seasonal benefit period by two months in each of the last two winters, and by three and a half months in the winter of 1957-58. Another is created by the extension of coverage to the fishing industry.

The extensions of the seasonal benefit period cost \$110,208,000 and made necessary the sale of securities at a loss of 8 per cent, making the total cost \$119,024,000. Extension of coverage to fishermen cost, during the past three years, approximately

\$23,000,000, but part of this loss is included in the cost of extending the seasonal benefit period; "the balance would approximate \$12,000,000."

The total loss to the Fund attributed to these two drains was \$131,024,000, and the Committee recommended that this sum should "in all fairness" be replaced by a government grant. In extending the seasonal benefit period, Parliament had instructed that benefits should be paid out of the Fund, but had not provided a source of revenue to meet the expenditure, the report said. A grant to the Fund would be "logical and proper" and would receive general approval, the Committee believed.

"The Committee respectfully recommends that assistance to unemployed fishermen should not be financed through the Unemployment Insurance Act and that other means be found to finance assistance to fishermen."

The Committee quoted several conclusions from the report of the actuary for the Unemployment Insurance Commission, including the following: "There is a distinct possibility that, if unemployment conditions continue at the level that prevailed in 1957-60, the Unemployment Insurance Fund may be exhausted in two or three years, unless action is taken to increase revenue or decrease benefit payments."

It would not be reasonable to increase contribution rates, the Committee asserted. It recommended, in addition to replenishment of the Fund to cover the cost of extensions of the seasonal benefit period, that "the Fund be relieved of the cost of the coverage of the fishing industry, and that the loss through payment to fishermen of benefits far in excess of contributions... be refunded."

The report is reprinted in full below.

REPORT OF THE UNEMPLOYMENT INSURANCE ADVISORY COMMITTEE FOR THE YEAR ENDED MARCH 31, 1960

To His Excellency

The Governor General in Council:

1. Section 89(1) of the Unemployment Insurance Act requires the Unemployment Insurance Advisory Committee to report not later than July 31 each year on the financial condi-

tion of the Unemployment Insurance Fund as at the preceding March 31.

2. The Committee reports that the balance in the Unemployment Insurance Fund as at March 31, 1960, was \$365,892,000. The comparison with other years is shown below:

	1960	1959	1958	1957	1956
Balance at Credit of Unemployment Insurance Fund	365,892	499,811	744,200	878,441	859,471

The decrease from 1959 was \$133,919,000.

The balance shown does not represent the market value of the Securities held. Under the existing Bond Market conditions, the value of the balance is 8 per cent to 9 per cent less than that shown.

The Committee reports its concern regarding the rapid decrease in the balance, namely, a drop from \$859,471,000 in 1956 to \$365,892,000 in 1960. We consider it is now below a safe level and there is a danger of it becoming insufficient to discharge its liabilities.

This concern is increased by the fact that May 1960 figures show the Fund has dropped to \$299,293,511.04 and by the end of June 1960, according to preliminary figures, it will show a further decrease of \$3 million—the June 1960 loss being due to loss on sale of Bonds.

3. The Committee calls special attention to two of the several items which create major drains on the Fund, the first referred to being:

(a) *Extension of the Seasonal Benefit period* by two months in each of the last two winters and extension of three and one-half months in the winter of 1957-58. These extensions cost \$110,208,000, and the expenditure made it necessary to sell securities at a loss of 8 per cent, making the total cost \$119,024,000.

No revenue was provided by Parliament when the concessions were granted. We recommend that the total cost, namely \$119,024,000 paid out of the Fund, be replaced by a Government Grant.

We submit, in all fairness to the Unemployment Insurance Plan, that this replenishment should be provided. We respectfully submit that Parliament met the emergent condition of seasonal unemployment prevailing during

extended periods by instructing that benefits were to be paid out of the Unemployment Insurance Fund but did not provide for a source of balancing revenue to meet the expenditure. We submit that the action proposed would be logical and proper and that a grant to the Fund, as proposed, of \$119,024,000 would receive general approval.

(b) *The second major item of drain on the Fund is caused by the extension of coverage to the fishing industry.* The loss to the Fund during the past three years has been approximately \$23,000,000.

It has been the experience of the Commission that it is impossible, due to the nature of the industry, to devise Regulations to equitably treat unemployment in this industry under the Unemployment Insurance Plan because, in the large majority of cases, there is no contract of service and, consequently, the control provisions of the Act are of little value.

The Committee respectfully recommends that assistance to unemployed fishermen should not be financed through the Unemployment Insurance Act and that other means be found to finance assistance to fishermen.

Part of the \$23,000,000 loss to the Fund caused by the coverage of the fishing industry has been included in the cost of extending the period for Seasonal Benefits. The balance of the loss would approximate \$12,000,000. This amount, it is submitted, should also be refunded. The total that is requested to be refunded is, then, \$119,024,000 plus this \$12,000,000 balance, making a total of \$131,024,000.

4. The Committee received from the Unemployment Insurance Commission financial and statistical statements for the year ended March

31, 1960. These reports were supplemented by further information and explanations, by a report from the Assistant Superintendent of Insurance, Department of Insurance, and by statistical data from the Dominion Bureau of Statistics.

5. From the time Unemployment Insurance was made operative, in July 1941, until the end of March 1960, a total of \$2,737,230,454.79 has been paid out in the form of benefit to unemployed persons.

6. This large sum has been distributed in relatively small amounts. It has been the means of relieving economic distress, through unemployment, of millions of individuals and their families.

The following are key figures selected from those given in the financial statements, prepared for the information of the Committee, by the Unemployment Insurance Commission (over-leaf):

7. Please find copy of Report prepared by the Assistant Superintendent of Insurance, who is the Actuary for the Unemployment Insurance Commission.

8. Attached also are the financial and statistical statements presented to the Committee by the Unemployment Insurance Commission. (The attachments are not reprinted here.)

9. Report of the Actuary

The Report is a comprehensive analysis of the present and prospective state of the Fund. Very important conclusions are:

In paragraph 1: "It would appear that the unemployment experience of 1960-61 will be about the level of 1959-60 and that a further drop in the Fund for the current fiscal year must be expected. This drop should be less than that of the previous fiscal year, largely because of the higher contribution scale that was adopted in 1959." (September 27, 1959.)

In paragraph 9 reference is made to the amendments to the Act which became effective September 27, 1959. The conclusion is "There has been very little time for experience to develop that might be considered with confidence as indicating the effect of these various changes."

Paragraphs 13 to 17 give detailed analysis of Seasonal Benefits and the conclusion is "It seems that Seasonal Benefit has now reached such proportions that a more-or-less incidental type of financing is no longer possible or appropriate."

In paragraphs 27 and 28 he estimates:

That if the unemployment experience of 1957-60 is considered typical there will be an annual deficiency of \$134,000,000 in the Fund and to bring it in balance under the present plan of financing an increase of 41% in contribution rates would be necessary.

If 1955-60 is typical the deficiency appears to be about \$64,000,000 and an increase of 19% would be necessary.

If 1953-60 can be considered the level which may be expected, the annual deficit would approximate \$41,000,000 and an increase in rates of 12% would be necessary.

Table IV on page 11 of his report shows the "Balance" in the fund per person in the "Insured Population"—now at less than \$85 as compared with \$257 in January of 1955.

In paragraph 37 the cost of extending the Seasonal Benefit Periods is detailed and totalled at \$110,208,000 and the comment is "Were this additional amount of \$110,000,000 (\$110,208,000) now in the Unemployment Insurance Fund, concern about its condition might not be so great."

Paragraph 38 comments on the reduction of net revenue from investments due to sale of securities at a discount.

The concluding paragraph 41 of the Actuarial Report is quoted in full:

"41. In conclusion, it seems almost certain that the Unemployment Insurance Fund will again decrease by a considerable amount in 1960-61. There is a distinct possibility that, if unemployment conditions continue at the level that prevailed in 1957-60, the Unemployment Insurance Fund may be exhausted in two or three years, unless action is taken to increase revenue or decrease benefit payments. Should it be deemed to be impractical to institute measures to reduce the benefit load significantly, additional revenue should be provided, through a further general increase in contribution rates, or otherwise. If the experience of 1955-60 is considered to be fairly typical of conditions that may be expected in the immediate future, additional revenue needed appears to be about equal to 20% of current contribution income. If 1957-60 were considered to be a more appropriate base period, an increase of at least 40% should be provided. As an alternative to a contribution rate increase at this time, some procedure might be devised for handling seasonal benefit, class A, outside of the fund, as was suggested earlier in this report."

10. It will be noted the Actuarial Report supports the Committee in its opinion that there is a danger of the Unemployment Insurance Fund's becoming so depleted that it may be insufficient to discharge its liabilities.

11. Paragraph number 37 of the Actuarial Report gives details of the cost of almost doubling the period during which seasonal benefits are paid, and the comment is made, "Were this additional \$110,000,000 (\$110,208,000) now in the Unemployment Insurance Fund concern about its condition might not be so great."

12. The foregoing recommendation is consistent with the Report of the Committee of July 8, 1958, excerpts from which are quoted below:

"Special mention is made of the very heavy expenditures which have been required to meet the Seasonal Benefit Payments.

There was, unquestionably, a need for the special provisions to meet the emergent situation last winter. The Committee is gratified to find that the benefit payments could be made so satisfactorily through the Commission offices.

It is a fact, however, that the burden of this expense, in the opinion of the Committee, should not be imposed on the Unemployment Insurance Fund, unless the loss to the Fund is made good.

We trust that the Government will take action to replace the drain on the Fund, by reason of extension of the Seasonal Benefit Period, by a grant."

13. We submit that it would not be reasonable to increase the rates of contribution, especially in view of the increase of 30 per cent made effective September 27, 1959.

14. Your Committee respectfully repeats the recommendation made earlier in this Report that it would be logical and proper that the Fund be replenished by a grant representing the cost of extension of the Seasonal Benefit periods, in the last three winters. We also recommend that the Fund be relieved of the cost of the coverage of the fishing industry and that the loss through payment to fishermen of benefits far in excess of contributions (less the amount already included in the figure for

Seasonal Benefits) be refunded. The amounts being: on account of extension of Seasonal Benefit Periods (and cost of financing) \$119,024,000, and the balance of the loss on account of fishing industry coverage, \$12,000,000, making a total of \$131,024,000.

15. The Committee plans to meet again soon after October 1, 1960, at which time the increased contribution rates will have been in effect for a full year. After such meeting a further report will be submitted in which the results for one full year respecting revenue and expenditures under the increased contribution scale effective September 27, 1959, will be given.

Respectfully submitted,
A. MACNAMARA,
Chairman.

Ottawa, July 27, 1960.

Industrial Health and Safety Legislation, 1960

At 1960 sessions, six provincial Legislatures enact legislation dealing with some aspect of industrial health or safety. New Brunswick passes new Act to set up uniform standards throughout province for elevators and lifting devices.

At the 1960 sessions, six provincial Legislatures passed legislation dealing with some aspect of industrial health or safety.

New Brunswick passed an Act, to be brought into force on proclamation, providing for uniform standards throughout the province for passenger and freight elevators and other lifting devices, and for a provincial system of inspection under the Minister of Labour. At the present time elevators in establishments under the Factories Act are subject to certain safety requirements of that Act, and municipal councils have authority to pass by-laws regulating elevators within their municipalities. The new Act will not affect any municipal by-law relating to elevating devices in so far as the by-law imposes additional or more stringent requirements than those in the new legislation.

Substantial amendments were made to the Metalliferous Mines Regulation Act in British Columbia, and the Gas Act was also amended to clarify the role of provincial and municipal inspection services.

Public Health Acts were amended in Quebec and Nova Scotia to permit regulation of ionizing radiation hazards and in Nova Scotia the Metalliferous Mines and Quarries Regulation Act was amended with respect to explosives.

The Newfoundland Logging Camp Act, 1960, repeals earlier legislation dealing with sanitary conditions in logging camps and authorizes the Lieutenant-Governor in Council to issue comprehensive regulations establishing health and welfare standards in logging camps.

In Ontario, minor changes were made in several Acts dealing with industrial safety and in Quebec amendments to the Motor Vehicles Act placed limits on the driving time of certain bus drivers and drivers of delivery vehicles.

Elevators

The New Brunswick Elevators and Lifts Act will come into force on proclamation, as will an amendment to the Factories Act repealing the provisions in the Act relating to elevators.

The new Act will regulate all elevators and other elevating devices, except those under the Mining Act and other specified elevating devices. The Minister of Labour will be responsible for its administration, and a Chief Inspector and an inspection staff will be required to carry out its provisions.

An owner is prohibited from operating an elevating device unless it is maintained, operated and inspected in compliance with the Act. Every elevating device must be inspected by an inspector at least once annually.

An inspector is empowered to enter any premises where an elevating device is being installed or operated and require the owner to assist him in inspecting it. An inspector may examine a person under oath in connection with his investigation, and he may order the owner to take whatever safety measures are required to comply with the Act; the elevating device may not be operated until the recommendations are carried out.

The Chief Inspector is responsible for the issue, suspension and transfer of certificates of inspection, which are valid for one year. The approval of the Chief Inspector is also required before a new installation or a major alteration of an elevating device may be made.

The owner is required to report to the Chief Inspector within 24 hours any instance in which an elevating device falls freely, the emergency supporting devices engage, or an accident injures any person. When a fatal accident involving an elevating device occurs, the owner must notify the Chief Inspector immediately by telephone or telegraph. The Chief Inspector is required to have such investigation made as he deems necessary to determine the cause of the occurrence or accident.

The actual standards with which elevating devices must comply are to be set by regulation. The Lieutenant-Governor in Council is authorized to make regulations governing the location, design, construction, operation, maintenance and inspection of elevating devices, and other matters, and prescribing inspection fees.

Penalties may be imposed for violation of the provisions of the Act. Each day on which a person violates the Act or fails to comply with an order issued under it constitutes a separate offence.

In Ontario, where similar legislation, the Elevators and Lifts Act, 1953, has been in effect since 1954, that Act was amended by repealing the provision that enabled the City of Toronto to pass by-laws in respect to matters dealt with in the Act. The amendment, effective on proclamation, will bring elevating devices in the City of Toronto under the Act in the same way as in other municipalities. At present passenger elevators in Toronto and freight elevators in municipal buildings in Toronto are governed by municipal regulations.

Metalliferous Mines

The amendment to the British Columbia Metalliferous Mines Regulation Act introduced a number of changes in connection with the supervision of mine safety and in safety rules. Also, special safety rules may now be required by the Chief Inspector for mines with fewer than 50 employees, as well as those with 50 or more.

A new section in the Act provides that every person employed underground must be under the supervision of a shiftboss or other official who holds a shiftboss certificate.

Applicants for a shiftboss certificate must undergo an examination by a Board of Examiners, composed of the Chief Inspector of Mines or Deputy Chief Inspector as chair-

man, and two other inspectors appointed by the Minister. To obtain a certificate, an applicant must satisfy the Board that he is conversant with the English language, that he has had at least three years practical mining experience, or a mining engineering degree from a university approved by the Board and one year's mining experience, and that he holds a mine-rescue certificate and a first aid certificate approved by the Board. He is also required to have a thorough knowledge of the rules and regulations of the Metalliferous Mines Regulation Act and of safe working practices.

The Board may grant provisional shiftboss certificates under such conditions as it considers necessary. A certificate may be suspended or cancelled by the Board after investigation if an inspector reports that a shiftboss is unfit to discharge his duties by reason of drunkenness or negligence or has been convicted of an offence against the Act. The requirements concerning shiftbosses are effective August 1, 1960.

The owner, manager or other authorized person must now examine at least once during each shift (formerly daily) all working parts of a mine to ensure safe conditions. If a person working underground is not in frequent communication with others, the manager must arrange to have him visited at least once every four hours. When unusually hazardous work is being done in a mine, it must be personally supervised by the manager or other authorized person. No person may operate machinery unless authorized and qualified.

As before, the mine owner or manager has to notify the inspector immediately of fatal accidents and those involving serious personal injury, and mail a report within 24 hours setting out, among other matters, the time, place, nature and extent of the accident. In addition, a detailed report of all accidents for which compensation payments are made must now be mailed at the end of the month to the Chief Inspector and the Inspector. The former provision requiring a report of any accident involving seven days loss of work has been repealed.

Changes were also made in the requirement placed on mine operators to notify the inspectorate of the commencement or cessation of operations. These requirements now apply to quarries as well as mines. A report must be made to the inspector immediately after work is commenced, and within one week after work ceases. Formerly, on cessation, a report was required only within 30 days after abandonment.

The first aid requirements were also amended. It is now specified that the owner of a mine must provide and maintain such

first aid supplies and services as are required by the Workmen's Compensation Board and the first aid rules formerly set out in the Act have been repealed. The requirements specified in the Workmen's Compensation Board order may be increased or reduced by the Chief Inspector after consultation with the Board.

Where more than 36 persons are employed, adequate communication facilities must exist to obtain a physician without delay unless the inspector grants exemption from the requirement. Life-saving equipment must be provided by the owner or manager and used by the workmen if there is danger from drowning.

Annual medical examinations of workmen in the metal mining industry and the operations of milling and concentrating ores, at the expense of the employer, are required under the Act. No workman may be employed in any mine, or in any ore or rock crushing operation (other than an operation where the ore or rock is crushed in water or in a chemical solution) unless he holds a certificate of fitness to the effect that he is free from disease of the respiratory organs or has permission from the Workmen's Compensation Board. The section dealing with the required certificate has been amended to specify that the certificate may be either an annual or temporary one and, if employment is authorized by the Board, the authorization must be in writing.

A number of changes were made in the safety rules dealing with structure and equipment underground. When locomotives are in use on a haulageway, chutes constructed after May 1960 must be so constructed that no part will project into the haulage way in such a manner as to endanger the motorman. Every trolley-locomotive must be operated with the trolley-pole in the trailing position, unless there is no room to reverse the pole, in which case walking speed must not be exceeded. In mechanical haulage underground a car must not be pushed by a locomotive if material extends over the length of the car.

A new requirement specifies that when a ladder-way and a skipway occupy the same compartment there must be sufficient guard-rails to prevent any person using the ladder-way from falling into the skipway.

The rule relating to hoist construction has been changed in several details. A return-bell signal system is required to be installed unless the inspector grants an exemption. The Chief Inspector may exempt hoist installations of friction type from the hoist construction rules of the Act upon such conditions as he may prescribe.

A number of changes were made in the rules governing use of explosives in mines. New provisions empower the inspector to arrange for disposal of a defective explosive or fuse. New requirements are also set out for supplying of fuse to workmen and for the room in which the detonator is attached to the fuse. Blasting operations, as before, may be conducted only by a person holding a blasting certificate under the Act.

It is now provided that the inspector may by an endorsement place any limitation or qualification he thinks fit upon the scope of the certificate. The word "incidental" placed on the certificate will indicate that the holder is limited to blasting what are generally known as pop-holes and bulldozes. It is now obligatory for a mine manager to suspend immediately from his blasting duties the holder of a blasting certificate if the holder is guilty of a breach of blasting rules.

In Nova Scotia, also, the amendment to the Metalliferous Mines and Quarries Regulation Act dealt with explosives. The Act now requires that explosives in cartridges while in boxes or cartons be stored in regular layers not exceeding a total height of five feet. The former requirement specified a maximum of five boxes or cartons in height.

Gas Distribution

An amendment to the British Columbia Gas Act defines more precisely the division of responsibility between provincial and municipal authorities to inspect gas distribution systems. It requires municipal councils to provide and maintain gas inspection services where the gas pressure in house piping is less than half a pound per square inch, except where the Minister of Public Works has arranged with the municipality to have the Chief Inspector responsible for the gas inspection service. House piping has been defined as gas piping in any premises beyond the outlet of the meter, or ahead of the meter if the gas company is responsible for the installation of the piping.

The Chief Inspector must now maintain a gas inspection service for mains, services, and for premises where the gas pressure in the house piping is half a pound or more per square inch. Previously the municipal councils were responsible for all gas inspection services, except where the Minister had arranged with the municipality to have the Chief Inspector responsible for this function.

Radiation Hazards

The Quebec Public Health Act was amended to authorize the Lieutenant-Governor in Council to regulate the sani-

tray conditions of establishments where substances or apparatus emitting ionizing radiations are used. The Lieutenant-Governor in Council is also given specific authority to regulate ionizing radiations in industrial establishments as defined in the Industrial and Commercial Establishments Act.

In Nova Scotia, an amendment to the Public Health Act authorizes the Governor in Council to make regulations for the control of radiation hazards other than hazards from radioisotopes. The regulations may require the registration of all ionizing devices other than those utilizing radioisotopes, and the registration of persons operating, controlling or responsible for the operation of ionizing devices. The operation of any shoe-fitting device that uses fluoroscopic, X-ray or radiation principles is forbidden.

Logging Camps

In Newfoundland, the Logging Camps Act, 1960 was passed, replacing the Logging Act and the Logging Camps (Sanitation and Medical Attendance) Act.

The new Act, which will come into force on proclamation, deals with the establishment and operation of logging camps, supplies, health, employment conditions, and inspection. It also deals with the scaling of timber, but provisions relating to this matter are not reviewed in this article.

The Minister of Mines and Resources may require a person who intends to make arrangements for cutting of timber to submit information on the estimated number of loggers to be engaged, provision for their accommodation and meals and other matters.

Every logging camp must be so located, constructed, maintained and used as to prevent danger to safety and health and to provide for the well-being and reasonable comfort of loggers. Loggers using camps are required to conduct themselves properly. Responsibility for ensuring that the provisions of the Act are observed rests upon the forest operator, every employer of loggers, and the owner, operator, occupier and user of a logging camp. In every camp there is required to be a person designated by the employer or operator as a camp boss to be responsible for seeing that the provisions of the Act are carried out.

The Act sets out medical and health requirements. If a logger is ill or injured the foreman or other person in charge of the logging operation is responsible for ensuring that he gets prompt medical attention. He is also required to report promptly

to an inspector or the Minister of Health any outbreak of disease. An inspector must also report such outbreaks to the Minister of Health.

Inspectors for the enforcement of the Act may be appointed by the Lieutenant-Governor in Council. An inspector is empowered to inspect logging camps and to question any person concerned with its operation or use in regard to matters covered by the Act.

The Lieutenant-Governor in Council has authority to make regulations concerning the construction and operation of logging camps in order to ensure that the health and welfare of loggers is safeguarded. The Act specifies that the regulations may vary according to the type and location of camps and the time of their application.

The regulations may empower the Minister to make orders for carrying out the provisions in the regulations and to deal with related matters.

Offences under the Act are punishable by fines not exceeding \$1,000 or, in default, imprisonment for a period not exceeding six months, or both the fine and imprisonment.

The provisions of the new Act with respect to camps do not differ greatly from the requirements of the legislation that is repealed, but the power to make regulations is very extensive, and the responsibility on the employers, owners and operators is more specifically defined.

Other Changes

Two Acts were amended in Ontario to permit fees to be established for inspection services. An amendment to the Department of Labour Act authorized the Lieutenant-Governor in Council to prescribe fees to be paid for inspection services in connection with work done under compressed air, in construction of tunnels and open caisson work, and in the construction of coffer dams and crib work in water or other places where pressure of sand, water or soil is likely to endanger human life. The Boilers and Pressure Vessels Act was amended to permit fees to be prescribed by regulation for approval of welding procedures for boilers and pressure vessels.

The Ontario Factory, Shop and Office Building Act was also amended to permit a bakeshop to be located below ground level provided that drawings and specifications of the building are approved by the Department of Labour and the work is performed in accordance with the approved drawings and specifications. Another amendment states that where a boiler or pressure vessel in a factory or other premises under

Participation of Women in Trade Unions

Women workers, generally speaking, not well organized, survey by ICFTU among its member organizations found. Replies revealed a number of common obstacles to recruitment of women, and few women in responsible trade union positions

A survey carried out by the International Confederation of Free Trade Unions among its member organizations throughout the world found that, generally speaking, women workers are not well organized. It was impossible to obtain precise figures because many labour unions do not separate men and women in their membership lists.

The results of the survey were the subject of discussion at the international women workers' conference convened by the International Union of Food, Drink and Tobacco Workers Associations.

Despite the lack of precise figures, it was reported that United States unions have more than three million women members. In four countries, Germany, Great Britain, Italy and Japan, women union members number more than a million.

Occupations Poorly Organized—An inquiry to determine which occupations employing large numbers of women were difficult to organize produced confusing results. In some countries, nursing and teaching are very poorly organized; in others, these professions provide a great many union members.

In general, women in the textile trades are strongly organized but even here there are exceptions. Difficulties were reported from most countries in organizing women office workers and saleswomen, but on the other hand, in some countries they are well organized. There are certain occupations that nearly everywhere present serious obstacles to trade union action—domestic servants, home-workers, saleswomen in small establishments and agricultural workers.

Difficulties in Organizing Women—A number of common obstacles to the recruitment of women were reported. Trade unions do not particularly attract women and there is an absence of trade union tradition among them. Married women in particular have little time to devote to union activities because, in addition to their work outside the home, they have to perform their family duties and look after their children. Furthermore, since many young women consider their working life as merely a transition between school and marriage and later as a temporary obligation, they do not attach great importance to obtaining good working conditions through trade union action.

Women in Responsible Trade Union Posts—The higher the trade union responsibilities, the fewer the women holding office, the report notes. Although there is a more representative distribution as between men and women members in executive posts in unions at the local or regional level, even organizations that have more than one woman trade union member for every four men usually do not have a woman on their executive board. A few trade unions that have a female membership of more than 90 per cent have executive boards composed entirely of women but these are exceptional.

Women's Committees—Unions in several countries have organized women's committees to help arouse the interest of women workers in trade union activities and to persuade them to play a positive role. These committees organize special meetings for women at which trade union problems are discussed and household advice, talks on social questions and some entertainment are usually included in the program.

Women's committees are concerned also with such matters as the safety and health protection of women workers, maternal protection, methods of combining work with home responsibilities, forms of discrimination against women workers, their inadequate vocational training and the lack of training opportunities for them.

Educational Programs—In training their members many national organizations prefer to have both men and women attend the same courses. In some countries training courses are held for women only but in others good results have been obtained by reserving a specified number of places for women.

Steps to relieve the shortage and wastage of nurses and midwives in Great Britain were recently urged by the Trades Union Congress in representations to the Minister of Health.

The TUC maintained that entry tests to the profession did not adequately assess individual intelligence and aptitudes along with academic standards; that nurses' salaries were lagging behind wages and salaries in industry and other professions and that the dearth of nurses in the mental health branches was in part due to the restricted opportunities for promotion in that field.

Study of 117 Pension Plans Tends to Refute Argument against Hiring Older Workers

Low maximum age limit for entry to pension plan—often given as reason for not hiring older worker—occurs in relatively few of the 117 industrial pension plans studied. Only 13 plans limited entry to persons under age of 50 years

Industrial pension plans have frequently been cited as one of the major factors mitigating against the employment of older workers. A recent study of 117 industrial pension plans by the National Trust Company tends to refute this argument.

The study indicates that low maximum age limits for entrance eligibility to a plan—so often mentioned as a reason for the establishment of arbitrary age limits in hiring—occur in relatively few pension plans.

Of the 117 plans examined, 69 (58.9%) either had no maximum age limits for entrance or had a maximum of 65 or under-65 for men. Ten of these plans had a maximum entrance age of 60 for women and one a maximum of 55. Of the remaining 48 plans, only 13 had maximum age entrance requirements under 50 years of age and in seven of these the age maximum applied to women only, the maximum for men being age 50 or higher. The remaining 35 plans had maximum entrance age limits varying from age 50 to age 64.

Only six of the 117 pension plans had maximum entrance age requirements under 50 for both men and women. The ages on these six plans were as follows:

Maximum Entrance Age

	Male	Female
Plan A.....	Under 50	Under 50
Plan B.....	45	45
Plan C.....	46	41
Plan D.....	45	42
Plan E.....	45	40
Plan F.....	Under 40	Under 40

Of the 69 pension plans which either had no maximum entrance age limits or a maximum of 65 or under—65 for men, 48 were contributory and 21 were non-contributory, indicating that this factor apparently had little or no bearing on the establishment of low maximum entrance ages to the plans.

The funding of these 69 plans, although predominantly of the trust fund type, included the following types: government annuity and trust fund, government annuity and individual insurance policy pension

trust, government annuity and insured group annuity, insured group annuity, and insured deposit administration (*see box on facing page for definitions*).

Normal Retirement Ages

A normal retirement age of 65 is the provision in 106 of the 117 pension plans examined. In 89 plans, however, there is reference to postponed retirement, which as a rule requires the mutual consent of employer and employee. There is a final cut-off date at age 70 in 21 plans, and 9 plans handle postponed retirement on a year-to-year basis. Under some union-type pension plans there is an "automatic" retirement age of 68.

Early retirement is allowed in most plans with the consent, or at the request of the company.

Normal retirement provisions are summarized in the following table:

Normal Retirement Age

	Number of Plans
Males—Age 70.....	3
Age 68.....	3
Age 65.....	106
Others or not specified.....	5
	117
Females—Age 70.....	1
Age 68.....	3
Age 65.....	54
Age 60.....	47
Age 55.....	6
Others or not specified.....	6
	117

Type of Pension Formula

The majority of the pension plans studied were established on a definite benefit basis, in contrast to the plans in which the benefit at retirement is whatever the specified contribution will purchase. The career average earnings method appears the most popular and is used in more than half of the plans examined. Money purchase plans appear to be losing ground to other types, and only 13 of the 117 plans were using this formula.

Types of Pension Funding

Government Annuities—Contributions are paid to the annuities Branch of the Department of Labour under a master group contract or, rarely, under individual contracts. The payment of annuities and death refunds is guaranteed by the Government of Canada. The premium rates depend upon the date of registration of the individual. The maximum pension is \$1,200 a year and the pension (unless under \$120 a year) cannot be commuted for cash.

Trust Fund (or Self-Administered Fund)—Contributions are accumulated in a trust fund, which is held and invested under the management supervision of a corporate trustee, personal trustee, or an incorporated body called a "Pension Fund Society." Pensions may be paid directly from the trust fund or purchased from an insurer with money from the trust fund. The fund is supervised by a qualified actuary to ensure that the fund is sufficient to meet present and future liabilities as provided under the terms and provisions of the plan established by the employer.

Individual Insurance Policy Pension Trusts—Individual insurance policies are issued by an insurer on the lives of participating employees, the policies being held by trustees under a trust agreement. These policies, in many cases, include a life insurance benefit as well as a pension benefit. The original contracts are based on the employee's current earnings and new policies are usually issued when earnings

increase. An employee leaving the plan may maintain his policy in full force by paying future premiums.

Insured Group Annuity—The terms and provisions of the pension plan are contained in a single master policy issued by the insurer to the employer. Premiums purchase amounts of deferred annuity for each employee at rates guaranteed, usually for three- or five-year periods. Bulk underwriting, accounting, and other group procedures are employed, although individual records are kept.

Insured Deposit Administrations—Contributions, usually reduced by a small expense charge, are made to a deposit fund held by an insurance company, which guarantees a minimum rate of interest on these moneys. The individual record keeping and administration of the plan are handled by the employer. On retirement of a member the cost of his annuity at conversion rates guaranteed by the insurer is withdrawn from the deposit fund and thereafter his annuity is paid by the insurer. An actuary advises on the contributions required. Provision is almost invariably made for an experience rating which passes on to the employer a part of the excess interest earnings and capital gains above the guaranteed minimum. In some cases (immediate participation guarantee) the employer also participates in a specified share of any gains from pensions' mortality or reduced expenses.

The following table summarizes the varied types of pension formula utilized by the 117 plans:

Type of Pension Formula

	Number of Plans
Final Earnings or Final Average Earnings...	27
Average Earnings or Career Average Earnings	61
Uniform Benefit or Flat Benefit.....	14
Money Purchase.....	13
Profit Sharing.....	2
Total Number of Plans.....	117

NOTE: 8 plans included above have a minimum pension based on a final average earning base.

* Includes one plan that provides variable annuities.

Vesting Provisions

An employee who separates from his employment before retirement age is obviously handicapped in building up pension credits if he loses his right to the contributions the employer has made on his behalf. His own contributions are available to him, unless the plan is non-contributory, in which case he has none, but obviously he cannot do as well with them alone as he would if he had the benefit from the employers contributions also.

The National Trust Company study indicates that many pension plans have adopted a vesting clause allowing for 100-per-cent vesting when the employee has completed 20 years of service and has reached 50 years of age. Some 33 of the plans surveyed provided for partial vesting of company contributions prior to the time when vesting becomes complete.

The vesting provisions of the 117 plans are shown in the following table:

Conditions for Vesting of Employer-Paid Pension upon Termination of Employment

	Number of Plans
Final Vesting:	
On employment or enrolment.....	7
After 5 years service.....	1
After 10 year service.....	4
After 15 years service.....	13
After 19 years service.....	4
After 20 years service.....	28
After 20 years service and age 50.....	11
After 25 years service.....	2
Age and Service:	
10 years and age 40.....	5
15 years and age 40.....	2
15 years and age 45.....	2
Age 50 (male), 45 (female) and 20 years service.....	3

50 Years Ago This Month

Settlement by conciliation board of dispute between Toronto Street Railway Co. and its 1,300 employees provides one-cent increase for first and second-year men, 1½ cents for third-year men. Company agrees to provide seats for motormen

A dispute between the Toronto Street Railway Co. and its employees, numbering about 1,300, was settled in August 1910 by the mediation of a conciliation board appointed under the Industrial Disputes Investigation Act. The settlement averted an impending strike.

The two-year agreement reached between the company and the Toronto Railway Employees' Union No. 113, which was published in full in the September 1910 issue of the LABOUR GAZETTE, gave the men a wage increase, retroactive to June 16, that raised the hourly rate for first- and second-year men by 1 cent to 21 and 23 cents respectively, and the rate for third-year men by 1½ cents to 25 cents an hour.

Besides the wage increase, the contract provided that the company should pay half the cost of uniforms for motormen and conductors after one year's service, and the whole cost after two years service. It also settled a number of points regarding discipline and working conditions.

One of the undertakings was that the company would not discriminate against employees for being members of any organization.

The company agreed to provide seats for motormen in closed cars, and in open cars "if a fixed seat of a pattern which will not interfere with the public can be obtained." If a satisfactory fixed seat could not be found, the motormen were to be free to provide and use uniform portable stools of a design approved by the manager, "provided such stools can be used without interfering with the use of the front seat of open cars by the public." The men were to be allowed to use the seats on certain portions of the line only.

Another provision allowed the men in the motor shop five minutes to wash before leaving work. Any employee who, "in the opinion of the management," abused the privilege was to be subject to dismissal.

Regarding discipline, one of the provisions was that any employee against whom charges had been made should have the right to appeal in person to the General Superintendent, and that he might, except in charges of dishonesty, "bring with him in his interest a deputation or any committee of his fellow employees."

A meeting of the Dominion Legislative Board of the International Brotherhood of Locomotive Engineers, held in Ottawa in March, adopted a number of resolutions aimed at the improvement of working conditions for engineers. A letter embodying those resolutions was addressed to the Board of Railway Commissioners early in April, and during August the Board announced that it would consider the questions raised in the letter at a meeting on November 1.

One of the resolutions asked that, "owing to the liability of accident and the exposure to the severe cold during our winter season," it should be forbidden by law for a locomotive to be run tender first for a distance of more than 10 miles, except in emergency.

Another resolution said that "many of the modern engines now being built and used in Canada are totally devoid of comfort or convenience for the men who are obliged to spend the greater part of their time on them." It said that everything seemed to be "sacrificed in order to make them as huge and powerful as possible."

It complained that "to get into position to handle these monsters, the engineer is obliged to climb over obstructions in the shape of different parts of the equipment, and wedge himself in the narrow space between the side of the cab and the boiler." In this position, it was pointed out, if the locomotive ran off the track and turned over, the engineer would have no chance to escape, and would probably be crushed and scalded to death.

The resolution asked that there should be some regulation about the size of the cab, in order that "ample room and breathing space" should be allowed. It also complained that the various gauges and operating controls were often very awkwardly placed.

Another recommendation was that an engineer should be held responsible only for "such defects as may be reasonably detected from the outside," and that looking out for other defects should be the responsibility of competent inspectors, who should be placed at all railway terminals. This would save the engineer from having to crawl between the wheels and under the engine, thereby exposing himself to risk and dirt.

TEAMWORK in INDUSTRY

Labour-Management committees in Canada should be substantially increased in number, says Gordon G. Cushing, Assistant Deputy Minister of Labour.

Speaking recently to a union and business representatives' meeting sponsored by the Windsor Labour-Management Assistance Committee, Mr. Cushing declared: "The 1,500 labour-management co-operation committees now in existence are far too few. This number should be operating in Ontario alone, with proportionate numbers in the other provinces."

The speaker indicated that by bringing union and company representatives together regularly to discuss their mutual problems, these committees are in a strategic position to improve labour-management relations in Canadian industry.

* * *

Excellent communications between management and employees are contributing greatly to the high level of plant morale at the Dominion Road Machinery Company in Goderich, Ont., manufacturers of snow blowers and the all-Canadian "Champion" road graders.

According to General Manager John Sully, the individual employee's opinion is both sought and respected, with the result that there is a steady flow of information back and forth between labour and management.

Top communications and relations booster is the annual series of luncheon meetings—"designed to give all of us a look at the efficiency of our operations from sweeper to vice-president," explained Personnel Manager L. B. Graham. Limiting the size of each group to 12 persons provides "more time to talk," added Mr. Sully. "We're getting a maximum of communication with a minimum of confusion."

While his audience feeds on the company-furnished fried chicken, vegetables, ice-cream and pie, the General Manager introduces a variety of topics: What is our competition doing? How are orders shaping up? What's new in plant safety? How is our house-keeping program? What changes and trends might affect, and therefore interest, employees? Where do we stand on productivity and quality? Are our waste costs too high? Mr. Sully's discourse is invariably followed by an animated exchange of questions and answers.

Elgin Fisher, President of Blue Water Lodge, Local 1863, International Association of Machinists, describes the meetings as a "tremendous success" in promoting labour-management co-operation. Although the luncheons were inaugurated on an experimental basis, they yielded such gratifying results that employees and management expressed a mutual desire to see them retained as an annual event.

Asked about their over-all effectiveness, General Manager Sully declared: "The whole tempo of the plant changed. Morale went up. And everyone became a lot more interested in their work."

Graphs displayed during the meetings enable personnel in the various departments to assess their progress in efficiency, productivity and quality. The idea behind the visual presentation is not to show up either an employee or his work but "to make each man his own inspector." Management and union both are solidly behind this innovation because they reason that a qualified tradesman wants, and expects, to be informed on these matters.

DRMCO management also believes that the company's financial position, including details of operating costs, profits and business prospects generally, is information to which personnel are entitled as partners in a joint enterprise. As Mr. Sully phrased it: "Our employees have an intelligent, sane approach to the welfare of the company and themselves. We believe that if they are presented with the facts management is aware of, they will most likely understand our point of view."

The employees' point of view was perhaps best expressed at the 15th anniversary banquet of Blue Water Lodge, held in Goderich last October. Among the union's guests were top management representatives of DRMCO and their wives, and principal speaker A. J. Hayes of Washington, D.C., President of the million-member IAM. During his address Mr. Hayes referred to the level of labour-management co-operation existing at the Dominion Road Machinery Company as "the kind of relationship which the organized labour movement feels should be established everywhere."

Establishment of Labour-Management Committees is encouraged and assisted by the Labour-Management Co-operation Service, Industrial Relations Branch, Department of Labour. In addition to field representatives located in key industrial centres, who are available to help both managements and trade unions, the Service provides various aids in the form of booklets, posters and films.

INDUSTRIAL RELATIONS AND CONCILIATION

Certification and Other Proceedings before the Canada Labour Relations Board

The Canada Labour Relations Board met for three days during July. The Board issued six certificates designating bargaining agents, ordered two representation votes, and rejected one application for certification. During the month the Board received eight applications for certification and allowed the withdrawal of three applications for certification.

Applications for Certification Granted

1. National Association of Broadcast Employees and Technicians, on behalf of a unit of employees of Radio Trois Rivières Inc., employed at Station CHLN in Three Rivers, Que. (L.G., July, p. 708).

2. General Truck Drivers and Helpers Union, Local No. 31 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, on behalf of a unit of commissary attendants and a commissary supply clerk employed by the Canadian Pacific Air Lines, Limited, in its Flight Kitchen Section at the Vancouver International Airport, Sea Island, B.C. (L.G., Aug., p. 813).

3. International Longshoremen's and Warehousemen's Union on behalf of a unit of checkers employed by the Canadian National Railways at Vancouver and New Westminster, B.C., engaged in checking goods arriving by deepsea vessel and being transferred into railway cars (L.G., Aug., p. 813) (see reasons for judgment below).

4. Local 23736, Canadian Labour Congress, on behalf of a unit of grain trimmers casually employed by Upper Lakes Shipping Ltd. in its Grain Elevator Division at Goderich, Ont. (L.G., Aug. p. 814).

5. International Longshoremen's Association, on behalf of two units of employees of The Hamilton Harbour Commissioners, Hamilton, Ont. (L.G., Aug., p. 814). Two certificates were issued, one covering a unit of regular employees and the other covering a unit of casual employees.

Representation Votes Ordered

1. Canadian Merchant Service Guild, Inc., Eastern Branch, applicant and intervener, Seafarers' International Union of North America, Canadian District, applicant and intervener, and the Anticosti Shipping Company, Montreal, respondent (L.G., Aug., p. 813). The Board directed that the names of both applicants be placed on the ballot (Returning Officer: C. E. Poirier).

2. Canadian Brotherhood of Railway, Transport and General Workers, applicant, the River Towing Company Limited, Vancouver, respondent, and Seafarers' International Union of North America, Canadian District, intervener (L.G., Aug., p. 814). The Board directed that the names of the applicant and the intervener be placed on the ballot (Returning Officer: G. H. Purvis).

Application for Certification Rejected

General Truck Drivers and Helpers' Union, Local No. 31, and General Teamsters Union, Local No. 885, of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicant, the Canadian Pacific Railway Company, respondent, the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, intervener, the Canadian Brotherhood of Railway, Transport and General Workers, intervener, and The Order of Railroad Telegraphers, intervener (Merchandise Services Department) (L.G., June, p. 602) (See reasons for judgment below).

Applications for Certification Received

1. Canadian Air Line Dispatchers Association, on behalf of a unit of dispatchers employed by TransAir Limited, Winnipeg, Man. (Investigating Officer: J. S. Gunn).

2. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of employees of Greyhound Lines

This section covers proceedings under the Industrial Relations and Disputes Investigation Act, involving the administrative services of the Minister of Labour, the Canada Labour Relations Board, and the Industrial Relations Branch of the Department.

of Canada Ltd. in its Sudbury Division (Investigating Officer: A. B. Whitfield) (later withdrawn, *see* below).

3. International Longshoremen's and Warehousemen's Union, Local 512, on behalf of a unit of longshoremen employed by Louis Wolfe and Sons (Vancouver) Limited, Vancouver (Investigating Officer: D. S. Tysoe).

4. Newfoundland Union of Journalists and Photographers, Local No. 1593 (CLC), on behalf of a unit of newsroom staff employed by the Newfoundland Broadcasting Company, Limited, St. John's, Nfld. (Investigating Officer: W. L. Taylor).

5. International Longshoremen's and Warehousemen's Union, Local 509, on behalf of a unit of coastwise longshoremen employed by the West Coast Stevedoring Co. Ltd., Vancouver (Investigating Officer: D. S. Tysoe).

6. International Longshoremen's and Warehousemen's Union Local 509, on behalf

of a unit of coastwise longshoremen employed by the Canadian National Steamships, Vancouver (Investigating Officer: D. S. Tysoe).

7. National Association of Broadcast Employees and Technicians, on behalf of a unit of employees of Radio Victoriaville Ltee., Victoriaville, Que. (Investigating Officer: C. E. Poirier).

8. Canadian Brotherhood of Railway, Transport and General Workers, on behalf of a unit of marine engineers employed by the Canadian Pacific Railway Company aboard vessels in its Bay of Fundy Steamship Service (Investigating Officer: H. R. Pettigrove).

Applications for Certification Withdrawn

1. International Longshoremen's and Warehousemen's Union, applicant, and Canadian Stevedoring Company Limited, Vancouver, respondent (Terminal Docks) (L.G., Aug., p. 814).

Scope and Administration of Industrial Relations and Disputes Investigation Act

Conciliation services under the Industrial Relations and Disputes Investigation Act are provided by the Minister of Labour through the Industrial Relations Branch. The branch also acts as the administrative arm of the Canada Labour Relations Board, in matters under the Act involving the board.

The Industrial Relations and Disputes Investigation Act came into force on September 1, 1948. It revoked the Wartime Labour Relations Regulations, P.C. 1003, which became effective in March, 1944, and repealed the Industrial Disputes Investigation Act, which had been in force from 1907 until superseded by the Wartime Regulations in 1944. Decisions, orders and certificates given under the Wartime Regulations by the Minister of Labour and the Wartime Labour Relations Board are continued in force and effect by the Act.

The Act applies to industries within federal jurisdiction, i.e., navigation, shipping, interprovincial railways, canals, telegraphs, interprovincial and international steamship lines and ferries, aerodromes and air transportation, radio broadcasting stations and works declared by Parliament to be for the general advantage of Canada or two or more of its provinces. Additionally, the Act provides that provincial authorities, if they so desire, may enact similar legislation for application to industries within provincial jurisdiction and make mutually satisfactory arrangements with the federal Government for the administration of such legislation.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the appointment of conciliation officers, conciliation boards, and Industrial Inquiry Commissions concerning complaints that the Act has been violated or that a party has failed to bargain collectively, and for application for consent to prosecute.

The Canada Labour Relations Board is established under the Act as successor to

the Wartime Labour Relations Board to administer provisions concerning the certification of bargaining agents, the writing of provisions—for incorporation into collective agreements—fixing a procedure for the final settlement of disputes concerning the meaning or violation of such agreements and the investigation of complaints referred to it by the minister that a party has failed to bargain collectively and to make every reasonable effort to conclude a collective agreement.

Copies of the Industrial Relations and Disputes Investigation Act, the Regulations made under the Act, and the Rules of Procedure of the Canada Labour Relations Board are available upon request to the Department of Labour, Ottawa.

Proceedings under the Industrial Relations and Disputes Investigation Act are reported below under two headings: (1) Certification and other Proceedings before the Canada Labour Relations Board, and (2) Conciliation and other Proceedings before the Minister of Labour.

Industrial Relations Officers of the Department of Labour are stationed at Vancouver, Winnipeg, Toronto, Ottawa, Montreal, Fredericton, Halifax and St. John's, Newfoundland. The territory of four officers resident in Vancouver comprises British Columbia, Alberta and the Yukon and Northwest Territories; two officers stationed in Winnipeg cover the province of Saskatchewan and Manitoba and Northwestern Ontario; four officers resident in Toronto confine their activities to Ontario; five officers in Montreal are assigned to the province of Quebec, and a total of three officers resident in Fredericton, Halifax and St. John's represent the Department in the Maritime Provinces and Newfoundland. The headquarters of the Industrial Relations Branch and the Director of Industrial Relations and staff are situated in Ottawa.

2. General Truck Drivers Union, Local 938 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, applicant, and Scott Haulage Limited, Timmins, Ont., respondent (L.G., Aug., p. 814).

3. Canadian Brotherhood of Railway, Transport and General Workers, applicant, and Greyhound Lines of Canada Ltd., respondent (Sudbury Division) (see item 2, "Applications for Certification Received," above).

Reasons for Judgment in Application for Certification Affecting Canadian National Railways and International Longshoremen's and Warehousemen's Union and Canadian Brotherhood of Railway, Transport and General Workers

This is an application for certification of the applicant as bargaining agent for a unit of employees of the respondent described as: persons employed as marine checkers in and around the cities of New Westminster and Vancouver, B.C., as required by the respondent, save and except supervisory personnel.

At the hearing no one appeared for the applicant. The application had originally given the respondent's name as Canadian National Steamships, but with the consent of the respondent and the intervener the name was amended to read: Canadian National Railways.

Following representations made at the hearing the Board decided that the correct description of the proposed bargaining unit is:

A unit of employees of Canadian National Railways comprising employees classified as checker, employed at Vancouver, B.C., and New Westminster, B.C., who are engaged in checking goods arriving by deepsea vessel either directly from ship's sling or from a place of rest on the dock into railway cars, excluding the assistant marine foreman and persons above that rank.

From the evidence it appears that the men affected are engaged solely in checking freight which has already been checked out of the ship, into railway cars. It is a railway function for the Canadian National Railways, not a marine function. Only six men are involved, and they are employed on a casual basis as and when ships are unloaded with cargo that requires reloading on Canadian National Railways cars.

The Board consisted of C. Rhodes Smith, QC, Chairman, and A. H. Balch, E. R. Complin, J. A. D'Aoust, A. J. Hills, Donald MacDonald and A. C. Ross, members. The judgment of the Board was delivered by the Chairman.

Though the work is casual it appears that the men do receive a considerable amount of work.

The great body of checkers for the respondent are members of the intervener and are covered by a collective agreement between the respondent and the intervener. This applies to checkers doing similar work for the respondent in most other Canadian ports.

It was argued by the intervener and also by the respondent that if the men affected by this application are to be represented by a union for collective bargaining purposes the proper union is the intervener, and that these men should then be included in the over-all system agreement of the intervener with the respondent.

The intervener cited as a precedent the decision of the Wartime Labour Relations Board in May, 1944 in the Toronto ticket sellers case, in which that Board rejected an application by the intervener for a unit of Canadian Pacific Railway ticket sellers limited to Toronto. The ticket sellers did not constitute a craft group. The vast majority of clerical employees and ticket sellers on the railway system were already represented by another organization. The decision meant that the Toronto ticket sellers should not be carved out of an existing system unit of clerical employees.

The Board is in full accord with the decision in the Toronto ticket sellers case, but believes that in the instant case there are special circumstances which warrant departure from the rule there laid down. In this case none of the men affected are members of the intervener, while five of the six are members of the applicant. The intervener has tried for many years, without success, to have these men included in

the over-all collective agreement. The over-all collective agreement between the respondent and the intervener expressly excludes men employed on docks. The intervener has never applied for certification for a unit which would include these men and did not indicate any intention of doing so. It appears that these men desire separate representation by reason of seniority problems that would arise between them and checkers in the railway sheds if they were included in a common bargaining unit.

Under these circumstances there is, in the Board's opinion, no likelihood that within a reasonable period of time the men affected will become members of the inter-

venor or be covered by the intervener's over-all agreement with the respondent. Unless an exception to the rule in the Toronto ticket sellers case is made, and the application granted, this group of employees will be denied representation for an indefinite period.

In consideration of the foregoing facts the application is granted.

Dated at Ottawa, August 23, 1960.

ELROY ROBSON,
Member.

Reasons for Judgment

in Application for Certification Affecting

Canadian Pacific Railway Company
and
International Brotherhood of Teamsters, Chauffeurs,
Warehousemen and Helpers of America
and
The Order of Railroad Telegraphers; Brotherhood of Railway
and Steamship Clerks, Freight Handlers, Express and Station
Employees; Canadian Brotherhood of Railway, Transport and
General Workers

This is an application by the Teamsters for certification by the Canada Labour Relations Board as bargaining agent for:

All employees employed by the Canadian Pacific Railway Company in its Merchandise Services at Vancouver, B.C., Victoria, B.C., Duncan, B.C., Nanaimo, B.C., Port Alberni, B.C., Courtenay, B.C., and Campbell River, B.C., or elsewhere in Canada except persons employed as welders, machinists, mechanics, lubricating men and their respective trade helpers, except office employees (including those employed in the general office), and excepting persons employed in the regional accounting office, Merchandise Services, and excepting persons excluded by the Act and excepting foremen and dispatchers, but including truck drivers, swampers, warehousemen and helpers employed in connection with or in the said Merchandise Services Department.

At the hearing, on July 13, 1960, counsel for the applicants asked that the application be amended to cover: "All employees em-

ployed by the Canadian Pacific Railway Company in its merchandise services in Canada," with the same excepted classifications.

After hearing argument, the Board has come to the conclusion that it is not necessary to make a formal decision concerning the change requested in the description of the proposed unit, as the meaning of the original description and that of the proposed amendment are essentially the same. In the Board's opinion, the phrase, "or elsewhere in Canada," as found in the application is not intended to describe an alternative area to the location specifically mentioned therein, but rather a cumulative area, so that the true meaning of the phrase is the same as if it had read "and elsewhere in Canada."

At the outset of the hearing counsel for the applicants objected to Donald MacDonald sitting as a member of the Board and hearing the application, on the ground that Mr. MacDonald was a member of the Executive Council of the Canadian Labour

The Board consisted of C. Rhodes Smith, QC, Chairman, and A. H. Balch, E. R. Complin, A. J. Hills, Donald MacDonald and A. C. Ross, members. The Judgment was delivered by the Chairman.

Congress which had already judged certain matters which involved directly this particular application, and that in these circumstances it was difficult to imagine how Mr. MacDonald could be or at least could appear to be in an unbiased position toward the applicants. He thought Mr. MacDonald ought to disqualify himself from sitting on the Board for this application.

Following consideration by the Board of this submission of counsel, the Chairman stated the Board's opinion that there was no reason why Mr. MacDonald should withdraw from the hearing of this application. All members of the Board have taken an oath to carry out their duties in full accordance with the law, in an impartial manner. The composition of the Board was established for the express purpose of ensuring that the principal labour organizations and the major employer organizations in Canada would be represented, and that the Board would have the advantage of the views of all their representatives. There was nothing in the Act, Regulations or Rules of Procedure to indicate that a member who happened to be connected with either an employers' or a workers' organization that was concerned in an application should disqualify himself or be disqualified from sitting as a Board member to hear the application. From a practical point of view the application of such a rule would make it almost impossible for the Board to carry on its work.

Counsel for the applicants also objected to the Canadian Brotherhood of Railway, Transport and General Workers being accorded any status as an intervener. He argued that the Brotherhood had no position in regard to the employees of Merchandise Services, having withdrawn, at the hearing in an earlier application, any claim to represent employees in the proposed bargaining unit. The Board rejected their objection on two grounds: (1) that the description of the bargaining unit in the present application was wider in its terms than the earlier application and might include other members of the CBRT and GW and, (2) that at the date of the filing of this application, according to the report of the Board's investigating officer, the CBRT and GW had 124 members in the proposed unit.

The circumstances in which this application is made, as described in the evidence given to the Board, may be stated as follows:

On or about August 1, 1959, the respondent Company began a reorganization and integration of all its less than carload services, including services afforded by

subsidiary companies wholly owned and operated by the respondent. These services included:

- (a) Package freight services by Canadian Pacific Express Company,
- (b) Less than carload freight services by the respondent,
- (c) Less than carload trucking services by the respondent or by its wholly-owned and operated subsidiary truck transportation companies.

The purpose of the integration of these services was stated to be to regain some or all of the freight business which had been lost by the respondent to independent trucking companies.

The method of integration was the creation by the respondent of a new department known as the Merchandise Services Department, to which all the express and freight carrying services described above were to be transferred. The effect of the transfer is to place under one operation warehousing, local pickup and delivery, and over-the-road trucking.

On August 1, 1959, the new Merchandise Services Department took over the affected operations on Vancouver Island, those at Vancouver on October 1, 1959, and to date in 1960 has taken over those located in several other centres in British Columbia. The operation in British Columbia is a pilot operation. The respondent intends to extend the integration eastward across Canada as its officials gather experience in British Columbia in this new method of handling the business. At the date of the hearing, no dates had been set for stages in this proposed development eastward, though plans for integration in Alberta were stated to be virtually completed.

Integration in British Columbia has involved the following:

- (a) The respondent company in respect of its less than carload freight services.
- (b) Canadian Pacific Express Company, a company wholly owned by the respondent and stated to be operated as a department of the respondent.
- (c) Island Freight Services Limited, a trucking company wholly owned and operated by the respondent,
- (d) OK Valley Freight Lines Limited, a trucking company wholly owned and operated by the respondent.

Prior to the integration, the employees of the respondent and of Canadian Pacific Express Company who are directly affected by this application, were represented for collective bargaining purposes by the intervener, Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and

Station Employees, hereinafter referred to as the Clerks union. Prior to integration the employees of Island Freight Service Limited and of OK Valley Freight Lines Limited who are directly affected by this application were represented by the intervener, Canadian Brotherhood of Railway, Transport and General Workers, hereinafter referred to as CBRT and GW.

At the hearing it appeared that three employees directly affected by this application are members of the intervener, the Order of Railroad Telegraphers.

Prior to the integration the applicants did not represent any of the personnel who became employees of the Merchandise Services Department, hereinafter sometimes referred to as Merchandise Services. The applicants' claim to have as members a majority of the employees of Merchandise Services as constituted at the date of the application.

One of the applicants, viz., Local 31, filed an application on December 31, 1959, for certification as bargaining agent for all employees employed by the Canadian Pacific Railway in its Merchandise Services at 44 West Pender Street, Vancouver, B.C., with certain exceptions. That application was heard by the Board on February 3, 1960. On February 4, 1960 the Board rejected that application "for the reason that the unit of employees for which the application for certification was made was not separately appropriate for collective bargaining, being only part of a much larger unit of employees who are engaged in similar operations of the company and who are for the most part already represented by the intervener, the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, in collective bargaining with the employer."

The number of employees affected by that application was not finally determined by the Board but was in excess of 300.

The number of employees in the classifications specified, who were employed by Merchandise Services at the date of the present application was 429, including all of those for whom certification was sought in the earlier application. The additional personnel for whom certification is sought directly in the present application are employed outside Vancouver, on Vancouver Island. On the other hand the present application is by its terms intended to extend to employees of Merchandise Services throughout Canada. On this basis, all employees in the specified classifications, who may be transferred to Merchandise Services as the integration is extended across Canada, would become included in the proposed bargaining unit.

The evidence is that while there were only a few hundred employees in Merchandise Services, in the specified classifications, at the date of this application, the total number of such employees expected to be in Merchandise Services when the countrywide integration has been completed, is in the neighbourhood of 9,000. The very great majority of these 9,000 employees are members of the Clerks' union, and are now employed either by the respondent or by Canadian Pacific Express Company. They are represented by the Clerks' union for collective bargaining purposes.

Under date August 13, 1959, an agreement in writing was made between Canadian Pacific Railway Company Merchandise Services and the Clerks' union, effective from August 1, 1959, dealing with the transfers to be made of employees to Merchandise Services, and containing, *inter alia*, provisions concerning seniority and rates of pay. On April 1, 1960, an agreement in writing was made between the respondent and the Clerks' union, superseding the agreement of August 13, 1959. This agreement contained provisions concerning the transfer of employees to Merchandise Services, seniority, rates of pay, hours of work, overtime and working conditions.

At the hearing two technical questions were argued:

(1) Is this application premature, in view of the provisions of Rule 8 of the Board's Rules of Procedure?

(2) Is the agreement of April 1, 1960, between the respondent and the Clerks' union, a bar to this application under Section 7 (4) of the Industrial Relations and Disputes Investigation Act?

Considering these questions in the order stated: (1) Rule 8 of the Board's Rules of Procedure reads as follows:

8. Where an application for certification has been refused by the Board, the Board shall not entertain any further application by the applicant for certification in respect of the same or substantially the same unit of employees until a period of six months has elapsed following the date of the decision, except by special leave of the Board where the Board is of opinion that the prior application was rejected on account of a technical error or omission in connection therewith.

The present application is dated March 24, 1960, and was first received in the Board's office on March 28, 1960. It is thus within the six month period mentioned in the foregoing rule. The question to be determined is whether the unit of employees now applied for is the same or substantially the same as the unit applied for in the earlier application.

It is clear from the evidence that a considerable majority of the persons employed

by Merchandise Services at the date of this application were within the unit applied for in the earlier application which was rejected by the Board on February 4, 1960. A number of additional employees, mainly at points on Vancouver Island, were however included in this application, who were not included in the earlier application. The earlier application was expressly confined to employees of Merchandise Services at 44 West Pender Street, Vancouver, while the present application specifies employees at other points in British Columbia and then adds the words "or elsewhere in Canada." This phraseology indicates an intention to set up a unit which would embrace all of Canada. The Board, however, in considering the effect of Rule 8, is of the opinion that it must look at the actual membership of the proposed unit as compared with the membership of the unit in the earlier application, and not at the membership which may develop at some date in the future.

The Board is of the opinion that there is considerable reason to support the view that the two units are substantially the same, and if so, the provisions of Rule 8 constitute a bar to the consideration of the present application. However, the position is not completely clear. The Board therefore has decided to consider the application, notwithstanding Rule 8. (2) Section 7 (4) of the Industrial Relations and Disputes Investigation Act reads as follows:

(4) Where a collective agreement is in force, the application may be made at any time after the expiry of ten months of the term of the collective agreement, but not before, except with the consent of the Board.

The respondent and the Clerks' union took the position that the agreement of April 1, 1960, is a bar to the present application. It was argued that the Board should look not only at this agreement, but at what had transpired previously, and particularly at the agreement of August 13, 1959, for the purpose of deciding whether the application is barred under Section 7 (4) of the Act.

Counsel for the applicants argued that the agreement of April 1, 1960, and also that of August 13, 1959, did not constitute collective bargaining agreements, largely on the ground that it was not at all clear that the Clerks' union is the bargaining agent for the employees of Merchandise Services affected by this application. He further argued that the agreement of April 1, 1960, was made while the organizing campaign of the applicants was in progress, and that an agreement made under such circumstances by an uncertified union should not

bar the union that was actively organizing the employees from making an application for certification.

The present application was received by the Board on March 28, 1960. On the same date the applicants filed an alternative application in identical terms except that it included one or two additional classifications of employees in the description of the proposed bargaining unit. On being informed that they must choose which application they would rely on, they chose to proceed with the application that is now before the Board. The letter notifying the Board of this choice was received on April 7, 1960. On these facts the agreement of April 1, 1960 was not in force at the date of the application.

If the agreement of August 13, 1959 is a collective agreement, as the Board considers it to be, the effect of Section 20 of the Industrial Relations and Disputes Investigation Act must be considered. This section reads as follows:

20. (1) Notwithstanding anything therein contained, every collective agreement, whether entered into before or after the 1st day of September, 1948, shall, if for a term of less than a year, be deemed to be for a term of one year from the date upon which it came or comes into operation, or if for an indeterminate term shall be deemed to be for a term of at least one year from that date and shall not, except as provided by section 10 or with the consent of the Board, be terminated by the parties thereto within a period of one year from that date.

(2) Nothing in this section prevents the revision of any provision of a collective agreement, other than a provision relating to the term of the collective agreement, that under the agreement is subject to revision during the term thereof.

The agreement of August 13, 1959, the effective date of which was August 1, 1959, clearly had not been in force for a period of one year when it was superseded by the agreement of April 1, 1960. In our opinion the word "supersede" cannot be interpreted as meaning that the earlier agreement was simply revised by the agreement of April 1, 1960, but means that the earlier agreement was terminated and replaced by the latter agreement. Further, the agreement of April 1, 1960 was for a completely new term, the relevant clause of that agreement reading as follows:

10.1 This agreement will be effective April 1st, 1960 and will remain in effect for a period of one year and thereafter. On or after February 1st, 1961, sixty days' advance notice in writing may be served by either party on the other to revise, amend or terminate it.

As the agreement of August 13, 1959, was by its terms effective for a period of one year from August 1, 1959, the later agreement would be in conflict with Section

20 (2) even if it were interpreted as being a revision of the earlier agreement.

No request was made to the Board for its consent to the termination of the agreement of August 13, 1959.

Under these circumstances, and after considering the arguments advanced by counsel, the Board has concluded that the agreement of April 1, 1960 does not constitute a bar to the present application.

The argument on the merits of the application was concerned solely with the question whether the bargaining unit applied for constitutes an appropriate bargaining unit.

Counsel for the applicants argued strenuously that a unit of employees of Merchandise Services comprising the classifications applied for was and must be considered an appropriate unit. He contended that the unit now applied for was a unit of Merchandise Services as a whole, which means that the Board's reason for rejecting the earlier application, confined to employees in Vancouver, does not apply. The application includes all employees of Merchandise Services in the specified classifications at the date of the application. Merchandise Services is a new department. The employees of the new department were transferred from several companies and were formerly represented by several unions. When the new department was set up there was no bargaining agent for its employees as such. New bargaining relationships for these employees must be established.

The Board is inclined to agree that a system-wide unit of employees of Merchandise Services might be an appropriate unit, but that is not the situation here. At present Merchandise Services has been organized only in British Columbia, and not even in the whole of that province. It has only a few hundred employees, but when the organization has been completed across Canada the evidence indicates it will have some 9,000 employees in the classifications affected. The evidence also indicates that the great majority of the 9,000 employees who will ultimately be transferred to Merchandise Services are now employed by the respondent or by the Canadian Pacific Express Company and are members of the Clerks' union.

To approve of the bargaining unit as applied for at this time would be to create a unit consisting in fact of employees of Merchandise Services in most of British Columbia. To this unit would apparently be added all employees transferred to Merchandise Services from time to time. If the applicants should succeed in showing

majority support among the present employees of Merchandise Services and become certified as bargaining agent for such employees, under such certification they would automatically become the bargaining agent for other groups of employees if, as and when they are transferred to Merchandise Services, as that department is organized in other parts of Canada, notwithstanding the fact that the great majority of the employees who will be so transferred are members of the Clerks' union. The Board considers that a development of this kind would not tend to promote industrial peace.

Counsel argued that if the applicants did obtain certification for present employees of Merchandise Services, then if, as the integration process continued, the Clerks' union or any other union were able at any time to show majority membership, they could apply for certification. The situation was compared with that which occurred in the Canadian Broadcasting Corporation, where certification for certain classifications of employees was granted by the Board in respect of the Corporation as a whole. At the date of certification the classifications affected were employed at only one or two cities. As business developed a large number of employees in similar classifications came to be employed at a number of other cities and were included in the bargaining unit. There was also a great increase in the number of those employed in the original locations. In the Board's view the situation in the Canadian Broadcasting Corporation case is quite different from that found in the present case. In the CBC case the new employees, whether in the cities originally affected by the certification, or in other cities, were not obtained by reorganization of the staff of the CBC and transfer of whole groups from one department to another. It was simply a case of a great expansion of CBC's operation and the recruiting of large numbers of new employees from any source available and chiefly from outside the corporation. In the present case the great expansion anticipated in the number of employees of Merchandise Services will come by transfer of whole groups of persons now employed by the respondent, by Canadian Pacific Express Company, or by trucking companies wholly owned and operated by the respondent. As previously stated, the great majority of such employees are now members of the Clerks' union. They have been represented by the Clerks' union for many years.

In the light of these circumstances it is the opinion of the Board that to create a bargaining unit of employees of Merchandise Services on the basis of those now

employed would not be analogous to what was done in the CBC case and would not be a fair or proper procedure.

Counsel for the applicants requested the Board, if it did not consider that Merchandise Services was an appropriate unit, to determine that a unit limited to the locations where Merchandise Services is now organized, is appropriate. The Board rejects this request for the reason stated on February 4, 1960, in the earlier application referred to above.

In determining what is an appropriate unit for Merchandise Services, regard must be had to the fact that this is a department of one of our national transcontinental railways, and that when fully organized the employees in the affected classifications will be performing similar functions under very similar conditions in all parts of Canada. Regard must also be had to collective bargaining practices that have prevailed on the railways for many years, under which system-wide or national agreements have been made between each of the companies and many classifications of its employees.

As far back as May 22, 1944, the Wartime Labour Relations Board, the predecessor of this Board, made a decision involving what was an appropriate unit for one classification of railway employees. An application had been made by the Canadian Brotherhood of Railway Employees, now the CBRT and GW, for certification for the ticket clerks of the Canadian Pacific Railway at Toronto. It was held that these clerks did not constitute a craft distinguishable from clerical employees as a whole. The minutes of the Wartime Board's meeting of May 22, 1944, further state:

It has not been shown that, as required by Section 5 (2), [Wartime Labour Relations Regulations, P.C. 1003], the majority of the employees affected are members of one trade union, as employees other than at Toronto would be affected, and if the positions which the applicants wish to segregate in one small agreement were included in the larger or system agreement, many more employees than are referred to in the application would be affected.

The Wartime Labour Relations Board did not issue formal reasons for its decision. The decision was accepted as approving a national or system-wide unit for the classifications affected. It has been accepted by both railways and by the unions affected as applying to a number of other classifications of railway employees. Experience over the last 16 years has convinced this Board that, bearing in mind the history and circumstances of railway operation and collective bargaining in the railways in Canada, it was a wise decision. In our view it has contributed materially to industrial peace in the railways. A rule so long

established, so generally accepted, and so useful in operation should not be departed from without strong and cogent reasons. The Board considers that the circumstances existing in this case do not justify the setting up of a unit of the respondent's employees limited to part or all of British Columbia.

To sum up: The Board considers a bargaining unit limited to the locations where Merchandise Services is now organized would not be an appropriate unit. The Board further considers that in the circumstances of this case as outlined above, it would be premature to certify a bargaining agent for Merchandise Services as a whole, as such certification could only be based on the relatively small number of employees presently employed by Merchandise Services. In our view certification proceedings should be delayed till Merchandise Services has been established over a much wider area than is now the case, so that the wishes of the majority of employees affected may be ascertained.

If the respondent should abandon the further expansion of Merchandise Services, or if the integration should not be developed with reasonable despatch the Board would be willing to reconsider the situation.

The application is accordingly rejected.

Conciliation and Other Proceedings before the Minister of Labour

Conciliation Officers Appointed

During July, the Minister of Labour appointed conciliation officers to deal with the following disputes:

1. The Nova Scotian Hotel, Halifax (Canadian National Hotels, Limited) and Hotel and Restaurant Employees' and Bartenders' International Union, Local 662 (Conciliation Officers: D. T. Cochrane and H. R. Pettigrove).

2. D. S. Scott Transport, London, Ont. (Vancouver Terminal) and Line Drivers, Warehousemen, Pickup Men and Dockmen's Union, Local No. 605 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Conciliation Officer: G. R. Currie).

3. Northern Wings Limited, Sept Iles, Que., and International Association of Machinists (Conciliation Officer: Rémi Duquette).

4. Canadian Pacific Railway Company S.S. *Princess Helene* and Seafarers' International Union of North America, Canadian District (Conciliation Officer: H. R. Pettigrove).

5. Island Fertilizers Inc., Charlottetown, P.E.I., and Labourers Protective Union No. 9568 (Conciliation Officer: H. R. Pettigrove).

6. Canadian Broadcasting Corporation, and Canadian Wire Service Guild, Local 213, American Newspaper Guild (Conciliation Officer: F. J. Ainsborough).

7. Gulf Islands Navigation Limited, Vancouver, and Seafarers' International Union of North America, Canadian District (Conciliation Officer: G. R. Currie).

8. AMF Atomics (Canada) Limited, Port Hope, Ont., and Local 14193, District 50, United Mine Workers of America (Conciliation Officer: T. B. McRae).

Settlements Reported by Conciliation Officers

1. Canadian Pacific Air Lines, Vancouver, and Local 28, Hotel and Restaurant Employees' and Bartenders' International Union (Conciliation Officer: G. R. Currie) (L.G., Aug., p. 814).

2. Soo-Security Motorways Ltd. (North Burnaby B.C. Terminal) and Line Drivers, Warehousemen, Pickup Men and Dockmen's Union, Local No. 605 of the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Conciliation Officer: G. R. Currie) (L.G., Aug., p. 814).

3. Clarke Steamship Company Limited, Montreal; Albert G. Baker Limited, Quebec; Quebec Terminals Limited, Quebec; Terminus Maritime Inc., Quebec; and Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees (Conciliation Officer: Rémi Duquette) (L.G., July, p. 709).

Conciliation Board Report Received

Association of Lake Carriers (Scott Misener Steamships Limited, Upper Lakes Shipping Limited, N. M. Paterson & Sons Limited, Hall Corporation of Canada and Carryore Limited) and Seafarers' International Union of North America, Canadian District (L.G., June, p. 604). The text of the report is reproduced below.

Settlement Reached after Board Procedure

Canadian National Railways *M.V. Bluenose* and Canadian Brotherhood of Railway, Transport and General Workers (unlicensed personnel) (L.G., Aug., p. 819).

The International Association of Machinists has devised an eight-point program aimed at alleviating hardships resulting from automation. The plan calls for:

Advance notice and consultation when employers plan major changes; the right to transfer to other jobs within a plant and in other plants, with adequate moving allowances provided; training for new jobs (or old jobs that have not been eliminated) at full pay and no expense to the worker; preservation of previous rates of pay of

workers who have been downgraded and of a substantial part of the income of those who have been laid off; provision for early retirement with adequate pensions; continuation of insurance and other fringe benefits during layoffs; negotiation of new job classifications and rates of pay where automation has increased skill requirements or responsibility; equitable distribution of gains resulting from greater productivity by general wage increases, more leisure time, or other "socially desirable" methods.

Report of Board in Dispute between

Association of Lake Carriers and Seafarers' International Union

The Board of Conciliation and Investigation appointed under the provisions of the Industrial Relations and Disputes Investigation Act in this matter herewith presents its report.

The Board was composed of: H. Carl Goldenberg, QC, Chairman; Jean-Paul Cardinal, QC, nominee of the Employer; Bernard L. Boulanger, nominee of the Bargaining Agent.

The Board commenced its hearings in Montreal on April 21, 1960, and these were continued on May 18 and May 19, 1960. Each party presented its case at length and was afforded an opportunity for rebuttal.

Having heard and examined the submissions of the parties, and having duly deliberated thereon, the Board finds and recommends as is hereinafter set out.

1. *Wages and Hours of Work*

The principal demands of the Union are for a wage increase of 10 per cent across the board and a reduction of the work week from 48 hours to 40 hours, with time-and-one-half for work performed on Saturday, and double time for work performed on Sunday.

The Board has considered these two demands together because it finds that, a regular 40-hour week being inapplicable to the nature of the operation on the Great Lakes, the demand for a reduction of the work week is, in effect, a demand for an

additional increase in wages. The Board is in agreement with the findings in this matter of the last Board of Conciliation which reported on June 12, 1958.

The Board further finds that the current monthly schedule of wages includes compensation for the lack of an actual 40-hour week.

The Companies, as part of a "package deal" which includes acceptance of their demands as dealt with below, have offered the following increases in wages:

(a) from the opening of navigation 1960 to close of navigation 1960 including fit-out and lay-up—3 percent.

(b) from the opening of navigation 1961 to close of navigation 1961 including fit-out and lay-up—3 percent.

(c) from the opening of navigation 1962 to close of navigation 1962 including fit-out and lay-up—4 percent.

(d) for self unloaders, wages for each rating shall be eleven dollars (\$11) per month over the rates shown above.

Having considered the economics of the industry, the competition offered by lower-cost operations, and new factors affecting operations since the completion of the St. Lawrence Seaway, the Board recommends that the parties enter into an agreement covering the period from the opening of navigation (including fit-out) in 1960 to the close of navigation (including lay-up) in 1962 with the following changes in wages:

(a) an increase of 4 per cent in basic pay for each classification of employment retroactive to the opening of navigation in 1960, to be paid to employees presently in the employ of the Companies.

(b) an increase of 4 percent in basic pay for each classification of employment on the opening of navigation in 1961.

(c) an increase of 4 percent in basic pay for each classification of employment on the opening of navigation in 1962.

2. *Other Demands Affecting Wages and Hours of Work*

(a) The Union demands that wages be paid in cash every two weeks instead of by monthly cheques.

The Board does not recommend any change.

(b) Deckhands at present work 8 hours in a spread of 16 hours. The Union demands that the deckhands work an 8-hour day without any spread, that is from 8 a.m.

During July, the Minister of Labour received the Report of the Board of Conciliation and Investigation established to deal with the dispute between the Association of Lake Carriers, Montreal, (Scott Misener Steamships Limited, Upper Lakes Shipping Limited, N. M. Paterson & Sons Limited, Hall Corporation of Canada and Carryore Limited), and Seafarers' International Union of North America, Canadian District.

The Board was under the Chairmanship of H. Carl Goldenberg, Q.C., of Montreal. He was appointed by the Minister in the absence of a joint recommendation from the other two members, Jean-Paul Cardinal, Q.C., and Bernard L. Boulanger, both of Montreal, nominees of the Association and Union, respectively.

The Majority Report, which under the provisions of the Industrial Relations and Disputes Investigation Act, constitutes the Report of the Board, was submitted by the Chairman and Mr. Cardinal. The Minority Report was submitted by Mr. Boulanger.

The Majority and Minority Reports are reproduced here.

to 5 p.m., while the Companies propose that the deckhands should be available for duty throughout the period of 24 hours.

On this point, the Board can only reiterate the findings of the Board of Conciliation which reported on June 12, 1958, as follows:

The Board appreciates the difficulties which have been encountered in giving effect to the clause of the last agreement and is of the opinion that if a more workable arrangement could be mutually agreed upon, it would be of benefit to both parties. It must be obvious that by restricting the hours of work in which the deckhands may be employed these ratings, in comparison with other members of the crew, will receive excessive overtime payments with resultant ill-feeling among the crew members who regard themselves as the more highly skilled workers. However, having had regard to this situation and having thus given it point, The Board feels unable at this stage, in the absence of mutual agreement between the parties, to revert to a stage antecedent to the last contract.

(c) Clause 19 (e) of the last agreement reads as follows:

When a vessel sails without full complement, wages of the absent members shall be divided among the men who must perform the work of the absent member at the regular basic rate of wages only.

The Union proposes that the clause be reworded as follows:

In the event of a ship sailing shorthanded, wages that would otherwise be paid to the crew member or members who are absent shall be paid to members in the particular department affected, until such time as the vessel's crew is complete.

The Board does not recommend any change.

(d) The first paragraph of clause 19 (g) of the last agreement reads as follows:

For the purpose of this agreement, between the hours of 8.00 a.m. Saturday and 8.00 a.m. Monday and between 6.00 p.m. and 8.00 a.m. weekdays, all ratings shall perform only their routine operational duties. During these periods operational duties shall not include chipping, scraping, scaling and painting.

The Union proposes that "operational duties" should be replaced by "navigational duties", and that, in addition to the duties already excluded, "sougeeing and polishing" shall not be included in "navigational duties".

The Companies propose that the first paragraph of clause 19 (g) be replaced by the following:

For the purpose of this agreement, between the hours of 6.00 p.m. Saturday and 8.00 a.m. Monday, all ratings shall perform only their operational duties.

The Board does not recommend any change.

3. Maintenance of Membership and Employment

Clause 3 (f) of the last agreement reads as follows:

The Union agrees that the Master or Chief Engineer of a vessel has the exclusive right to direct the crew, and to hire, promote, demote, transfer, lay off, suspend or discharge employees. Employees shall comply with all lawful orders of their superior officers, and refusal of any employee to work as directed on any day shall be grounds for discharge.

The Union proposes that the clause be reworded to read as follows:

The Union agrees that the Master or Chief Engineer of a vessel has the exclusive right to direct the crew, and to hire, lay off or discharge employees. Employees shall comply with all lawful orders of their superior officers, and refusal of any employee to work as directed on any day shall be grounds for discharge. No crew member shall pay off or be paid off in a port where there is no Union Hall.

The Board finds that clause 3 (f), as worded in the last agreement, is satisfactory and does not recommend any change therein.

Clause 3 (h) of the last agreement reads as follows:

The Union agrees that, during the navigation season, their hiring facilities at the Ports of Montreal and Thorold shall be available to the Company twenty-four (24) hours every day. The Union agrees to furnish the Company with the night telephone number of the Union's employee in charge of their hiring facilities in the Port of Fort William.

The Companies request that the clause be amended to provide that the Union's hiring facilities at Toronto and Fort William shall also be available twenty-four hours per day and that they be furnished with the night telephone number of the Union's employee in charge of hiring facilities.

The Board recommends that the clause be amended to provide that the night telephone number of the Union employee in charge of Union hiring facilities at all ports shall be furnished to the Companies.

4. Grievance Procedure

Clause 4 (a) of the last agreement reads as follows:

One (1) member on each ship, a bona fide member of the Union and a Canadian citizen, shall act as Union delegate, providing he has had one (1) full navigation season's service in this industry. He shall be elected by the majority of the employees aboard and on the ship's Articles.

The Union proposes that the clause be replaced by the following:

On each vessel there shall be a ship's delegate representing the unlicensed personnel. The ship's delegate shall put to the Master any dispute which cannot be settled by the departmental head.

The Board recommends the retention of the present wording of the clause, save for the deletion of the words "... and a Canadian citizen."

5. *Vacation Pay*

Clause 8 of the last agreement reads as follows:

(a) An employee shall be entitled to receive fourteen (14) days pay (in lieu of vacation), provided he serves continuously aboard ship from the time of spring fit-out to the completion of lay-up in the fall, or has been absent for reasons satisfactory to the Master.

(b) For shorter periods of service all employees shall receive a pro rata payment for each day of service on the basis of fourteen (14) days pay for 270 days service, or 14/270ths of the basic daily rate for each day of service as set out in the Vacation Pay column in paragraph 18 of this agreement.

(c) Notwithstanding the foregoing, any employee who is discharged for cause during the navigation season shall not be entitled to receive any vacation pay whatsoever. Any employee otherwise paid off before the end of the navigation season shall receive his vacation pay at the time of pay-off.

The Union proposes that this clause be replaced by a clause which reads as follows:

An employee shall be entitled to receive fourteen (14) days vacation pay. A vacation pay fund shall be established. The Company shall pay into the vacation fund a pro-rata payment for each day each employee works on the basis of fourteen (14) days pay for two hundred and seventy (270) days' service, or 14.270 of the basic daily rate for each day of service. Vacation payments shall be made to the employees through the offices of the Union, upon documentary evidence of days worked.

The Companies propose that the clause be replaced by the following:

(a) All employees under this contract, shall receive vacation on a daily basis, in the full amount of 2 percent of the daily rate, for whatever period of service and regardless of reason for separation.

(b) All employees, under this contract, who serve continuously aboard ship from the time of spring fit-out to the completion of lay-up in the fall, or have been absent for reasons satisfactory to the Master, shall additionally receive vacation pay to an overall total.

NOTE: Actual scale appended.

EXPLANATION

2 percent is required "FLOOR" amount to be paid according to the Federal Annual Vacation Act 1958.

Under no circumstances, however, will the total vacation pay exceed fourteen (14) days pay at the Daily Basic Rate.

The Board recommends that clause 8 (a) and 8 (b) of the last agreement be retained without change and that clause 8 (c) be replaced by the following:

Any employee paid off before the end of the navigation season shall receive his vacation pay at the time of pay-off.

6. *General and Emergency Duties*

The Board is advised that the parties have agreed to a rewording of clause 9 (e) of the last agreement.

7. *Statutory Holidays*

The Union requests that clause 10 of the last agreement be amended to provide for payment at double the straight pay for work performed on holidays.

The Board recommends payment at time-and-one-half the basic daily rate for work other than routine operational duties performed on statutory holidays.

8. *Cleanliness of Quarters*

Clause 11 of the last agreement reads as follows:

The Company shall see that all quarters assigned for the use of the employees are kept clean in so far as possible and the employees shall co-operate in this respect. The Company agrees to fumigate all quarters whenever such fumigation is necessary to free them of vermin.

The Union demands that the clause be reworded as follows:

The Company shall see that all quarters assigned for the use of the employees are kept clean. The Company agrees to fumigate all quarters whenever such fumigation is necessary to free them of vermin.

The Board does not recommend any change.

9. *Other Conveniences*

Clause 12 of the last agreement specifies certain items which shall be supplied to employees. The Union proposes certain amendments.

The Companies propose that the clause be changed to read as follows:

The following items shall be supplied employees:

1. A suitable number of clean blankets for each employee.
2. Sheets, pillowcases and counterpanes which shall be changed once weekly.
3. Roller and bath towels changed weekly.
4. One cake of toilet soap and one cake of laundry soap shall be provided for each rating weekly.
5. An adequate supply of crockery or plastic dishes.
6. It is agreed that inner spring mattresses shall be provided as present mattresses are replaced.
7. In the interests of maintaining clean and tidy quarters the crew quarters shall be painted when reasonably required.
8. Soiled linen must be returned before a new issue is made.

It is the policy of the Company to maintain the comfort of the crew by providing as good equipment as possible under given circumstances, but it must be understood that this policy is dependent on the full co-operation of the Union and the crew members.

The Board recommends that the clause be revised as proposed by the Companies.

10. *Meals, Coffee Time and Lunches*

The Union requests changes affecting the hours of meal service and coffee breaks.

The Board does not recommend any change in the wording of clauses 13 (a) and 13 (b) of the last agreement.

11. Transportation

The Union demands that clause 14 of the last agreement dealing with transportation costs payable by the Companies be amended to provide that such transportation shall be paid in cash. It also demands that the clause be amended by adding the following thereto:

(a) . . . When crew members have to travel to join a vessel, they shall receive transportation from the shipping port to the port at which they are to join the vessel. At the termination of employment when men are laid off after the vessel has tied up, the same shall apply, except that transportation shall be from port of discharge to the shipping port.

(b) When men rejoin a vessel at the beginning of a sailing season their home address as shown on the Company's records at the end of the previous season shall be considered as the shipping point and they shall be reimbursed for transportation on the first payroll after the completion of thirty (30) days service. At the lay up transportation fare to be paid on day of lay off.

The Board does not recommend any change.

12. Room and Meal Allowance

The Union demands that clause 15 of the last agreement be amended to provide for a meal allowance of \$1.50 per meal, and a room allowance of \$5 per room when the employer does not provide room and board.

The Companies propose a meal allowance of \$1 and a room allowance of \$4.

The Board recommends an increase in the meal allowance to \$1.25 per meal and in the room allowance to \$4.50 per room.

13. Safety

Clause 16 of the last agreement reads as follows:

Safety

It is agreed that any safety regulations that the Company may now have in force for the safety of the vessel and crew, and any further safety regulations which the Company shall put into effect and bring to the attention of the crew, shall be strictly adhered to by all crew members. Violation of any such regulations shall warrant dismissal.

The Union demands that the following be substituted:

Safe Working Conditions

- (a) The Company will take every reasonable care to provide safe working conditions.
- (b) Crew members shall not be required to work aloft on masts, or king posts or derricks while cargo is being worked.
- (c) Working in holds in which bulk cargo of flax is being loaded or discharged and when the leg is in operation shall be considered unsafe working conditions.
- (d) There shall be no chipping on tankers contrary to safety regulations unless the tanker is gas free.
- (e) Plastic safety helmets shall be supplied the unlicensed employees on ore carriers.

- (f) During mooring and unmooring operations there shall be adequate number of hands on deck to handle the lines and there shall be two on the quay to let go the fore and after lines.
- (g) Firemen on tankers shall not be required to leave the Boiler Room while the ship is on the run to clean around the main engine top, clean fan engine flat, work on deck steam lines or in the pump room forward without payment of overtime.

The Companies propose that the clause be reworded to read as follows:

Safety

It is agreed that any safety regulations that the Company may now have in force for the safety of the vessel and crew and any further safety regulations which the Company shall put into effect and bring to the attention of the crew shall be strictly adhered to by all crew members. Violation of any such regulation shall warrant dismissal.

- (a) Crew members shall not be required to work aloft on masts or king posts or derricks while cargo is being worked.
- (b) There shall be no chipping on tankers contrary to safety regulations unless the tanker is gas free.
- (c) Plastic safety helmets shall be supplied the unlicensed employees on ore carriers. Employees to be responsible for care and return of these.

Considering that the Canada Shipping Act imposes upon the companies a legal obligation to provide safe working conditions, the Board recommends that clause 16 be amended as proposed by the Companies.

14. Tank Cleaning

Clause 17 of the last agreement reads as follows:

When employees are required to clean tanks, those on duty shall be paid overtime at the regular overtime rate, and those off duty shall receive time and one-half thereof for the same work.

The Union demands that this clause be reworded to read as follows:

When employees are required to enter or to clean tanks, tank tops, boilers, backhead and bilges they shall be paid at the overtime rate in addition to their regular basic rate. They shall also be provided with boiler suits, rubber boots and gloves, and in lieu of the foregoing not being provided there shall be a penalty payment of seven dollars (\$7).

The Companies demand that the clause be amended by substituting the word "waterbottoms" for the word "tanks" in the present clause.

Following the unanimous recommendation of the Board of Conciliation which reported in this matter in 1958, the Board recommends that the clause be amended by changing the word "tanks" to "waterbottoms."

15. *Overtime and Overtime Payments*

The Union demands that the following be added to clause 20 of the last agreement:

When a vessel carries no coalpasser and the fireman on watch has to go into the bunker to trim coal there shall be a compensatory payment in accordance with Schedule "A".

The Board does not recommend any change.

16. *Longshore Work by the Crew*

Clause 21 of the last agreement reads as follows:

If an employee is required to perform any work usually done by longshoremen, such as operating cargo winches for the purpose of loading or unloading cargo, or the handling of cargo, he shall perform such work and shall be paid in addition to his regular wage the applicable rate at that point payable to longshoremen.

The Union demands that this clause be amended to read as follows:

If an employee is required to perform any work usually done by the longshoremen, such as operating cargo winches for the purpose of loading or unloading cargo or the handling of cargo and dunnage he shall perform such work and shall be paid in addition to his regular wage the applicable rate at that point payable to longshoremen. In no case shall the rate paid for this work be less than the regular overtime rate set forth in this Agreement.

The Companies object to the inclusion of the word "dunnage."

The Board recommends that clause 21 be amended as requested by the Union.

17. *Stewards' Department*

The Union demands that this clause be revised by adding the following thereto:

When members of the Stewards' Department are required to assist with the taking and placing on board stewards' stores and linen outside of the normal work day of eight (8) hours they shall be paid at the straight overtime rate.

The Board does not recommend any change.

18. *Interruption of Work*

The Union demands that clause 23 of the last agreement be amended by adding the following thereto:

Employees shall not be forced to put themselves in jeopardy of violence or physical danger by being required to work behind or pass through legal picket lines.

In refraining from making a recommendation for a change in clause 23, the Board is confident that the Companies would not penalize employees for refusing to cross picket lines when there is a clear and imminent danger of physical injury.

19. *Shipwreck*

The Union demands the addition of the following clause to the agreement:

Shipwreck

Crew members of the unlicensed personnel who suffer loss of personal effects and clothes through Marine Disaster or shipwreck shall be compensated by the payment of \$500.

The Companies propose the following clause:

Loss of Personal Belongings

The Company agrees to assume responsibility for the loss of personal belongings and clothing of unlicensed personnel due to shipwreck or other marine casualty up to the sum of Three Hundred Dollars (\$300) payable only in respect to proven loss.

The Board recommends the adoption of a clause to read as follows:

The Company agrees to assume responsibility for the loss of personal belongings and clothing of unlicensed personnel due to shipwreck or other marine casualty up to the sum of Three Hundred Dollars (\$300), payable on reasonable proof of loss.

20. *Welfare Plan*

The Companies propose the addition of the following clause to the agreement:

The Union agrees that contributions to the welfare plan fund shall cease until the fund shows a balance of a half million dollars. The Companies will then again contribute to the plan at the rate of twenty cents (20) per man per day.

The Board does not recommend any change in respect of contributions to the Welfare Fund.

21. *Guarantees*

The Companies propose the addition of the following clause to the agreement:

(a) the Union will not establish rules or enforce regulations which will in any way be contrary to or interfere with the effective implementation of all clauses in this agreement.

(b) the Union also agrees *not* to enter into an agreement of any kind with another Lake Steamship operator or operators that is economically more advantageous to their operation.

With respect to (a) above, the Board must assume that when the parties enter into an agreement they do so in good faith and, accordingly, that neither the Union nor the Association representing the Companies nor any individual employer will establish rules or regulations which will in any way be contrary to or interfere with the effective implementation of all clauses of the agreement. In the event of a conflict between the agreement and any such rules, the provisions of the agreement must prevail.

Accordingly, the Board recommends that the following clause be added to the agreement:

Neither the Union nor the Company nor any Association of which the Company is a mem-

ber, will establish rules or regulations which violate the terms of this agreement or which may interfere with its effective implementation.

With respect to (b) above, the Board finds that enforcement of such a clause would be difficult because of differences in the definition of such terms as "Lake Steamship operator" or "operators" and "economically more advantageous to their operation." Accordingly, it does not make any recommendation in this regard.

22. Duration of Agreement

The Board recommends that the parties enter into an agreement covering the period from the opening of navigation (including fit-out) in 1960 to the close of navigation (including lay-up) in 1962.

Signed at Montreal, this 25th day of July, 1960.

(Sgd.) H. CARL GOLDENBERG,
Chairman.

(Sgd.) J. CARDINAL,
Member.

MEMORANDUM

While I have signed the report with the chairman of the Board, I desire to set out my views on two points.

First, with reference to hours of work: 1) for deckhands and 2) for watchkeepers. It is my opinion that it would be in the best interests of the industry and of its employees that: 1) deckhands should be available for duty throughout the period of 24 hours; 2) watchkeepers should be allowed to work for the full 8 hours that they are being paid for. This would be my personal recommendation.

The second matter to which I want to refer is the draft contract submitted to the Board by the Companies. I have read this carefully and would recommend to the parties that it be adopted as to form and order as the basis of the new contract to be negotiated.

Signed at Montreal, this 25th day of July, 1960.

(Sgd.) J. CARDINAL,
Member.

MINORITY REPORT

On all issues with particular emphasis on wages, hours, safety provisions, and vacation plan, the Board has held considerable discussion. On the four issues named, the chairman and Company nominee have indicated that they intend to offer some relief on these vexing questions. I regret, however, the necessity for recording, respectfully but firmly, that I dissent on the basic problems which my colleagues obviously intend either to dispose of by compromise or to leave untouched by a simple rejection. Although there are portions of the majority report to which I might be prepared to subscribe, I find an insufficiency in them to which I must give voice. The problems of the employees cannot be ignored if they are to be cured.

In differing with my colleagues, I would like to express my appreciation for their unflinching patience, courtesy and kindness. I would also like to note the conscientious manner in which they considered the lengthy submissions and evidence submitted to the Board by both parties.

In making my observations and recommendations, I am, for purposes of simplicity, disposing of the proposals of the Union in the same consecutive manner in which they were first presented to the employers. Where necessary, I will deal with the employers' demands where they have not already been disposed of by my disposition of the Union proposals. Those matters where my report parallels the

recommendations of the chairman and the Company nominee and within the confines of those only, this Conciliation Board can be deemed to have handed down the unanimous disposition.

The following is my award:

Section 3—*Maintenance of Members and Employment*

The Union has requested an addition to an existing clause limiting the right of an employee to quit the ship to a port only where a Union Hall is located so that replacements can be secured. The Union has also requested that the master be placed under the same limitations with regard to firings, lay-offs, etc. It is my finding that this practice is already followed by Canadian flag deepsea ships, and in fact, these limitations on both the master and the crewman are provided for under the Canada Shipping Act. For this reason I recommend that this request be granted.

Section 4—*Grievance Procedure*

In accordance with the provisions of the Fair Labour Practices Act the Union has deleted the requirement limiting the election of ship's delegates to Canadian citizens only. It has also removed the qualifying time period which a crewman was required to serve in the industry before becoming eligible to place his name forward to be elected as a ship's delegate. On the first point, the Fair Labour Practices Act speaks for itself and any limitation of

rights for employment through nationality is illegal and therefore this Board does not have the power to make the existing language in this respect legal. The law itself forces the Union request. On the matter of the time limitation, no adequate reason for this onerous burden on the employees has been advanced by the employers and therefore I recommend acceptance of the Union proposal and rejection of the Companies' counter-proposal.

Section 8—Vacation Pay

The Union has requested a vacation pay plan. There is no extra cost involved to the Companies. The Companies have objected on the grounds that such a plan would not be in accordance with the provisions of the Annual Vacations With Pay Act. In studying the Annual Vacations With Pay Act, I can find no bar to a vacation plan as described in the Union proposal. It appears to me that it would be extremely simple to frame a plan fully in accordance with both the letter and the spirit of the Annual Vacations With Pay Act. Therefore I recommend acceptance of the Union proposal and rejection of the Companies' counter-proposal.

Section 9—General and Emergency Duties

The Union has requested overtime for oilers and firemen taking aboard stores after their eight hours work has been completed. This has been agreed upon by a Company counter-proposal, therefore, I recommend the Union proposal be granted.

Section 10—Statutory Holidays

The Union has requested payment at double time for the statutory holidays contained in the agreement. In the previous agreement the same provision provided that a statutory holiday would be treated the same as a Sunday. The employees presently receive time and one-half for work performed on a Sunday, but they did not receive any remuneration for work performed on a statutory holiday. This condition presents an inequity. The Companies opposed this proposal on the grounds that it was a cost factor. It appears to me that the Companies would deny these employees a right enjoyed by millions of Canadians. The Companies are extending the cost argument to a far greater degree than is warranted. I have no hesitation in recommending the complete acceptance of this Union proposal.

Section 11—Cleanliness of Quarters

The Union has requested that the Companies assume responsibility for the cleanliness of quarters assigned to employees. On the face of it this appears to be a common sense suggestion. There is some doubt in

my mind as to whether or not the Companies are already charged with this responsibility under certain provisions of the Canada Shipping Act. Nevertheless, I recommend that this Union request be granted.

Section 12—Living Conditions

The Union has enumerated a number of requirements for living conditions aboard the vessels. They have also asked for a penalty rate of \$2 per man per day when linen is not changed on time. In advancing their case before the Board, the Union stated that they felt the penalty payment would save the employees from the abuses of the past when sometimes linen was not changed for up to three weeks. The Companies' position with regard to the actual articles requested was that these articles had already been provided by the Companies on their own motion and no useful purpose could be served in writing contractual language to describe an existing condition. The Companies term the Union request for the linen penalty payment as unwarranted and a possible cost item. I find it hard to reconcile the Companies' position. In the first place, they enter a solemn contract to provide certain living conditions to their employees. It is assumed that the contract being made in good faith, the Companies will take every necessary step to see that their solemn contractual commitments will be met to the letter. On the other hand, the Companies object to a penalty payment, which, if they were living up to the contract would never have to be paid. There appears to be an anomaly in the Companies' position on the whole question. The Companies' objection to the penalty provision almost gives me the uncomfortable feeling that the Companies will meet these contractual commitments only if it is convenient to them. I cannot help but feel dismayed and discouraged by the Companies' attitude. Under the circumstances, I have no alternative but to recommend that this Union proposal be granted in full.

Section 13—Meals, Coffee Time and Lunches

The Union has requested changes to sub-section (a) and sub-section (b) of the existing wording in the previous agreement; with regard to sub-section (a) I am inclined to agree with the Companies, therefore, I would recommend that the wording in the previous agreement prevail with regard to sub-section (a) of Section 13. With regard to sub-section (b) the Union has requested coffee times during the day. The Companies' position is that coffee is always available and the men can have it when it is convenient. By this I take it to mean

that the men may have coffee when it is convenient to the employer. The type of work these men do is industrial in nature and I believe the present, rather loose method of giving the men coffee is most unsatisfactory. Common practice would indicate that the Union's proposals are all justified and I would recommend that sub-section (b) of Section 13 of the Union's proposals be incorporated in the next agreement in their entirety. I would also recommend that with regard to this sub-section (b) the Companies' proposals be rejected.

Section 14—Transportation

The Union has made additions to sub-section (a) and sub-section (b) of the existing wording contract. With regard to sub-section (a) they have provided that transportation money be paid in cash and that when they be sent from one point to another to join a vessel they be paid their transportation for this journey and similarly reimbursed where a return trip is indicated at the end of a shipping season. The Companies' position on this request is rather confused. The Companies admit that a man may be hired at the Company office in the city of Toronto to join a vessel at Goderich, Ont. From the Companies' arguments it is indicated that situations covered by this example arise quite frequently. However, the Companies object to making this payment on the grounds that a man being transported is replacing a man and therefore, since it is a Union member getting off the ship, thereby creating the vacancy the Union is to a degree responsible. The Companies failed to support their argument with figures on how many of this type of vacancies were brought about by dismissals and lay-offs as opposed to the default of Union members quitting the ships. The Canada Shipping Act seems to make it quite clear that the master has a discretion of allowing a crew member to pay off a ship other than at a terminal port. It seems to me that where there is interest displayed by the Union request this interest is not matched to any degree by the Companies' argument against the request. I feel that in any event whenever an employer requires an employee to travel during the course of his employment the employer should pay the transportation expenses. Therefore, I recommend that this Union request be granted.

With regard to sub-section (b) the Union requests that employees be paid for their transportation expenses after they have completed thirty days service. Evidence during the hearings indicated that the licensed officers were presently paid under this system and in fact have been for some time. The

Companies' position was that the Companies' practice of withholding a man's transportation expenses for the entire season tended to keep a man aboard the ship for the complete season's service. This is hard to believe. It would seem to me to be an unwarranted imposition by the Companies on their employees. The Companies put themselves in the position where they admit that they owe money to their employees and then attempt to justify an extremely long withholding period far exceeding the requirement set down for payment of debts under the laws of the land. This does not make sense. Accordingly I recommend the Union proposal contained in sub-section (b) of Section 14 be granted.

Section 15—Room and Meal Allowance

The Union has requested that the meal allowance be increased to \$1.50 per meal and the room allowance be increased to \$5 per room per night. The companies have indicated that they will be prepared to go some way toward granting relief on the meal money. However, they oppose any increase in room allowance. On making a check of the number of hotels for the tariffs charged therein at Quebec, Three Rivers, Montreal, Sorel and Valleyfield, I find that the Union proposal reflects the minimum prevailing rates. On the face of this evidence I can only recommend the Union proposal.

Section 16—Safe Working Conditions

The Union has requested a number of safe working conditions and in evidence submitted details of fatalities suffered on the job, fatalities which the Union felt could have been avoided had these safety provisions been in effect. While the Companies were prepared to grant some of these safety conditions it appears to me that the Companies only granted safety conditions where they had the minimum effect. For example, the Companies were prepared to accede to the request where it covered tankers. According to the reference books provided, there are not very many tankers on the Great Lakes and it follows that the Companies would be committed to a very small degree, if at all, by the granting of this request. I have taken the opportunity to visit the docks and observe the safety conditions aboard Canadian lake ships. My opinion in this situation in this regard is that intolerable conditions prevail, and it appears to me that the Union could have gone a lot further in their requests. In my observations I noted that lake ships were not provided with proper rigged gangways, crew members being required to climb aboard ship by means of ladders placed on the dock and against the side of the ship.

Female as well as male crew members were required to gain access or take their exit from the ship in this precarious manner. Not even a safety net was provided between the ship and the dock under the ladder. I also noted that crew members were not paired off to go over the side of the ship on stages when the hull was being painted. I was advised by a British sailor that on British ships crew members were never permitted to go on stage over the side of the ship alone and unattended, specifically because of the safety factor. I must admit that I am appalled at the Companies' collective attitude on this question. While it is true that there will always be industrial accidents according to the Companies' argument it is also true that in some industries and notably the chemical industry industrial accidents have been reduced to a minimum by extremely rigid safety provisions. I recommend most sincerely that the Union proposals of safety provisions be granted and implemented in full.

Section 17—Tank Cleaning

The Union has attempted to clarify by the use of specifications the previous contract language on penalty tank work. The Companies have taken the opportunity of attempting to limit the penalty tank work to the water bottom tanks. It is my recommendation that the Union request be granted and the Company request be rejected.

Section 18—Schedule of Monthly Wages

The Union has requested a 10 per cent across the board increase. The Companies have offered 10 per cent over three years on the basis of 3 per cent, 3 per cent and 4 per cent. It is my recommendation that a 10 per cent across the board increase be granted retroactive to the date of the opening of navigation 1960.

Section 19—Hours of Work

The Union has requested amongst other things a 40-hour work week with a provision for time and one-half on Saturdays and double time for Sundays. I recommend that this Union request be granted.

On the other conditions under hours of work the Union has requested under sub-section (a) that crew members on watches be classed as day workers and be required to perform their duties between 8:00 a.m. and 8:00 p.m. daily. I recommend this request be granted.

I also recommend that the Union request sub-sections (e) and (g) be granted and with regard to the whole of Section 19 I recommend that all of the Companies' requests be rejected.

Section 20—Overtime and Overtime Payments

The Union has requested that where firemen are called to trim coal on watch they should be paid time and one-half. It appears to me that the Union has lent too much importance to this proposal in view of the fact that conversion from coal to oil fuel on the Lakes is almost complete and coal passers and coal burning ships are rapidly disappearing from the scene. I therefore recommend that this Union overtime request be rejected and that the Companies' overtime request also be rejected.

Section 21—Longshore Work by the Crew

The Union has made addition to the existing language by including dunnage as Longshoremen's work. On checking with the Longshoremen's Union I find dunnage is considered to be Longshoremen's work and therefore I recommend acceptance of this Union proposal.

Section 22—Steward's Department

The Union has asked that where stewards are required to assist to handle stores from the dock to the ship after their eight hours have been completed they should be paid for this work at the regular overtime rate. The language in this Union proposal seems to be exactly similar to the language contained in Section 9 of the Union's proposals with regard to oilers and firemen handling stores from the dock to the ship. The Companies accepted Section 9 of the Union's proposals, and in fact in their own proposal made some of the provisions for this eventuality. With regard to the Stewards' Department, however, the Companies were firmly opposed to the Union suggestion and I could not discover the reason for this most determined opposition. I was left with the feeling, after hearing the arguments of both sides, that the stewards were subject to considerable abuse with regard to the handling of stores and that the Companies wished to continue this abuse. I noted that the Union's challenge to the Companies to bring the figures of overtime payments to the stewards for this type of work over the life of the last contract was not answered and no figures were produced. To me this situation reveals an ominous and rather unsatisfactory disposition on this point. I believe that consistency in the contract language is essential. The Companies have already agreed the Engine Department be given this provision and I find it no less than fair to recommend that the similar provision for the stewards as contained in this proposal be granted in full.

Section 23—Interruption of Work

The employees through the Union have requested that they not be forced to place themselves in jeopardy by being required to work behind legal picket lines. This is an important proposal. In evidence the Union submitted details of men being injured and in fact being put in jail when they sought to protect themselves against a 500 man Communist picket line last year on the Northland Navigation docks in Vancouver. Apparently no protection was given the men and neither medical aid nor legal counsel was extended to those who were hurt and those who were put in jail as a result of their efforts to go to work. This is an intolerable situation. In this case men suffered physical injury or criminal incarceration as a result of their efforts to go to work. On the other hand, had they refused they would have placed themselves in financial jeopardy or under jail sentences by actions taken in law against them by their employer. I must hold that where this lack of protection is so obvious, contractual language must be designed to meet the situation. Therefore I recommend that this Union request be granted.

Section 24—Shipwreck

The Union has requested that where employees suffered loss of personal effects through marine disaster they be compensated by the payment of \$500. The Companies give cognizance to this problem to a degree. The Companies suggest \$300 upon proof of loss. I find the Companies' offer anomalous. It is my opinion that if proof of loss can be had there should be no limit to the amount payable. It is my recommendation that the Companies' request be rejected and the Union request be accepted.

Term of the Agreement

I recommend that the agreement cover a term of one calendar year from the date of the expiration of the previous contract.

Company Proposals

The majority of the Company proposals have been disposed of in the foregoing. However, there are some Company proposals which require separate disposition in view of the fact that they are additions above and beyond the phraseology of the previous contract. My disposition of these is as follows:

Company proposal Article 17; Vacation Pay: The Company would try to reduce broken time vacation pay to 2 per cent of earnings. In the previous contract it was in the neighbourhood of 4 per cent of earnings. There seems to be no reason for this reduction. The Companies did not plead

inability to pay the Union's proposals and having not pleaded inability to pay their proposal for reduction in this case appears to be purely bargaining ammunition, and I have noted the lack of justification in the Company request. I must reject their proposal.

Article 25—Welfare Plan

The Companies propose that the seamen's welfare plan be limited to one-half million dollars. The Companies do not deny the fine services performed by this welfare plan. They attempt to justify their unusual proposal by the growth of hospitalization plans. On the other hand, the Companies are well aware of the vast growth of benefits of the welfare plan effective as of the beginning of this year. They are also aware that the conversion of small to large ships on lakes trade will have an effect on the yield to the welfare plan. Perhaps it will be going too far to say that the Companies are attempting to smash their employees' welfare machinery, but their proposal clearly reveals this trend, if not their intention. I recommend rejection of the Company proposal contained in their Article 25 under the heading of Welfare Plan.

Article 27—Guarantees

Sub-section (a) of the Companies' proposal in this section provides that the Union will not establish rules or enforce regulations which will in any way interfere with this agreement and in judging this Company proposal I am impressed with the words "this agreement." I am reliably informed that the agreement signed with the Association of Lake Carriers is not the only agreement maintained between employers and this same Union. In fact, I understand that there are over 50 agreements which have no relationship to the Lake Carriers agreement. This situation raises great doubts in my mind as to the wisdom of this Board dealing with this proposal at all. This Board is concerned and is indeed confined to matters in dispute between the SIU and the Lake Carriers Association. Its jurisdiction goes no further than this. In my opinion they cannot legally render a decision exceeding the limits of this jurisdiction as set down in its terms of reference. The Company proposal would exceed this jurisdiction. Therefore I have no alternative but to recommend rejection.

Article 27—Guarantees

The Company proposes to enjoin the Union not to sign an agreement economically more advantageous than that signed with the Lake Carriers Association. For the

same reason as that contained in sub-section (a) I recommend that this Company proposal be rejected.

The above I would humbly submit covers all the points in dispute between the par-

ties and I would therefore respectfully submit this as my report with regard to the above cited dispute.

(Sgd.) BERNARD BOULANGER,
Member.

Canadian Railway Board of Adjustment No. 1 Releases Decisions in Twelve Recent Cases

The Canadian Railway Board of Adjustment No. 1 has released its decisions in 12 cases heard in May.

The cases concerned the reckoning of "final terminal time" for engineers; the substitution of a caretaker-express commission agent for a station agent; the suspension of a fireman for refusing to take a call as locomotive engineer; the claim of a brakeman for time lost while relieving a conductor; the claim of a conductor and crew for minimum day yard service when required to make up their own train; the claim of a conductor and crew for work train service; the claim of a conductor and crew for wayfreight rates for an entire day when they were required to help a snow plow extra; the assessment of demerit marks against a brakeman for refusing a call as jump man; the claim of a conductor, who was available but not called, for 100 miles runaround; the operation of self-propelled construction equipment without a conductor in charge; the assessment of demerit marks against a conductor for refusing to take a train of more than 70 cars out of North Vancouver; and the time within which notification of the assessment of discipline has to be given.

The contention of the employees was sustained in five cases. It was not sustained in four cases. In two cases the discipline assessed was reduced and in the remaining case lost time was allowed but for a different day from that for which it was claimed.

Summaries of the 12 decisions, Nos. 721 to 732, are given below.

Case No. 721—*Dispute between Canadian National Railways (Central Region) and the Brotherhood of Locomotive Engineers over calculation of final terminal time at Hamilton.*

At Hamilton, Ont., for operating purposes peculiar to that location, the designated switching limits are located two miles within the yard limits for trains operating over the Grimsby subdivision, destination Hamilton. Between the two are four private sidings and Stoney Creek station. This anomaly has existed since January 1950.

Until March 26, 1958, the company computed final terminal time from the time a locomotive reached the main track switch connecting with the yard track until it was delivered on the shop track. There were exceptions to cover delays at semaphores, yard limit board, or behind another train similarly delayed.

On March 26, however, engineers who were required to set off or pick up cars at Stoney Creek or at any of the four private sidings began to claim final terminal time from the time they stopped to do this, this is, from a time before they reached the outer yard switch. The company reduced the claims, calculating final terminal time from the time the locomotive reached the outer yard switch.

In its contention, the Brotherhood said the company was "declining to recognize" the requirements set out in an article of the agreement dealing with final terminal time. That article, the employees said, "provides that final terminal time for engineers operating in freight service will commence if and when his train is delayed at a point inside the Hamilton yard limits for the purpose of picking up or setting off cars."

The company in its contention explained that the yard limit board was moved two miles beyond the designated switching limits to overcome certain operating hazards that were created by the extension, because of industrial development, of the switching limits in 1948. The company obtained the concurrence of the unions representing the running trades in the move of the switching limits. In moving the yard limits, the company "exercised its prerogative."

"Yard limits may or may not define switching limits," the company argued, and "the fact that a yard limit board is located beyond switching limits for purposes peculiar to the Hamilton situation should not interfere with the point where final terminal time commences."

The Board sustained the employees' contention.

Case No. 722—*Dispute between Canadian National Railways (Western Region) and the Order of Railroad Telegraphers regarding the removal of a station agent and the appointment of a caretaker-express commission agent.*

With the approval of the Board of Transport Commissioners, on September 21, 1959 the Canadian National Railways closed its agency at Briercrest, Sask., and appointed a caretaker to look after express and LCL freight shipments and to keep the station in order for the use of passengers.

The Order of the Railroad Telegraphers then submitted a "statement of claim" in which it declared that the company repudiated the terms and intent of the current collective agreement when it abolished the position of Agent at the station and arbitrarily transferred the handling of express traffic to an employee outside the scope of the agreement. The union demanded re-establishment of the position, reinstatement of the past incumbent and his reimbursement in the amount of money lost to him by way of salary decrease plus all expenses incurred as a result of his displacement.

The union also sought payment of the senior unemployed spare telegrapher for each and every work day the position was not occupied by a telegrapher.

The company denied the claim.

The union contended that the handling of express traffic at stations shown in the list of positions in the current collective agreement with the Telegraphers was work that could be assigned only to railway employees covered by the agreement.

Even supposing the company were entitled to repudiate its agreement in this way, the union contended, it would then be violating an article of the agreement that stipulates that "established positions shall not be discontinued and new ones created under different title covering relatively the same duties and responsibilities for the purpose of reducing the rate of pay."

The employees' contention pointed out that the directive issued by the Board of Transport Commissioners, authorizing the company to remove the agent at Briercrest and substitute a caretaker, contained the proviso that the caretaker must "provide the same service in the handling of express as is being provided by the present agent." The type of caretaker usually hired does not have enough training or education to be capable of handling express traffic and financial paper, the union contended.

The company, in its contention, asserted that the claim of the union involved two essential questions: (1) Had the company

the unilateral right to abolish an agent's position? and (2) Was the work of handling express traffic and its accounting restricted to telegraphers covered by the agreement?

The company's right unilaterally to abolish an agent's position whenever it considered the position no longer necessary, if it had the authority of the Board of Transport Commissioners to do so, had been established by long-standing practice, the company stated.

It further contended that there was nothing in the agreement to support the claim that the handling of express traffic on a commission basis belonged exclusively to telegraphers. "This work has never been exclusively assigned to telegraphers," it said. There were many stations where this traffic was handled by employees of the Express Department, and there were sub-branch offices where it was done by persons not directly connected with either the railway or the Express Department, the company contended.

"Where agents do handle this work it is at the request and through an arrangement with the Express Department and this arrangement can be terminated at any time," the company's contention continued, going on to quote a number of instances in which, in the past, the handling of express by agents had been withdrawn by the Express Department and other arrangements made.

The Board did not sustain the contention of the employees.

Case No. 723—*Dispute between Canadian National Railways (Central Region) and the Brotherhood of Locomotive Firemen and Enginemen concerning the suspension of a fireman for refusing to accept a call as locomotive engineer.*

On September 26, 1959, a fireman refused to accept a call as locomotive engineer and was removed from service pending an investigation. After the investigation he was suspended for 30 days for "refusing duty when called as engineer."

The Brotherhood of Locomotive Firemen and Enginemen requested removal of the suspension and payment of the fireman for the period of his suspension.

The employees, in their contention, quoted an article of the current agreement that stated that firemen assigned to regular runs would not be considered on duty after being relieved at the roundhouse until they were wanted again for their regular runs. They argued that the fireman, being assigned to a regular run, was not required to accept duty when called as an engineer.

The company, in its contention, stated that when the fireman was called as an engineer, none of the engineers on the spare board was available for duty. A demoted engineer who was at the head of the engineers' seniority list was called, but could not be found. The fireman, who was the next demoted engineer on the list, was then called by telephone, but flatly refused to take the call.

At the subsequent investigation, at which he was charged with refusing duty, the fireman stated that he had come off duty after a run as fireman at 6.50 a.m., and that when he was called to take duty as engineer at about 2.10 p.m., he had not been to bed, as he had not expected to be called for duty again, and did not feel in condition to go out. He admitted that he had given no plausible reason for not accepting the call, and that he had been warned at the time that he might be removed from service for refusing to go.

The fireman further admitted at the inquiry that he understood he was liable to dismissal for his offence, and he promised that if he were allowed to remain in the service he would co-operate to the fullest extent in the future.

In a general statement accompanying its decision, the Board cited an earlier decision of the CNR General Grievance Committee, in which the company agreed that senior firemen assigned to regular runs who are liable to be used as engineers should book rest or unfit if necessary, "provided that the locomotive fireman notifies them on arrival that they are liable to be called as engineers." Since the fireman had not been notified that he might be called as a spare engineer, he was not required to be available.

The Board added, however, that in refusing the call as an engineer he should have said that he was not in condition to go out, and that in this respect his conduct was subject to censure.

The Board's decision was that discipline assessed in excess of 15 days should be removed, with payment for time lost beyond the 15 days.

Case No. 724—Dispute between Algoma Central and Hudson Bay Railway Company and the Brotherhood of Railroad Trainmen regarding the claim of a brakeman for time lost while relieving a conductor.

Two crews were assigned to road switcher service. A brakeman of one of the crews was informed that he would be required to relieve the conductor of the other crew for three or four days. He did not work the next day, but worked the next three days as conductor in charge of the second

crew. On the fourth day, the regular conductor returned and as a result the relief conductor was not used. He claimed mileage for that day as brakeman on his own crew, but the claim was refused by the company.

The employees contended that since the conductor had been available for duty all day on the fourth day and was not employed either as conductor on the job he was held off for, or as a brakeman on his own job, he was entitled to what he would have earned if he had been allowed to work on his own job. In support of its claim, the union quoted an article of the agreement that says that a trainman held off service to be ready to act as a conductor shall be allowed mileage lost on his own assignment if he is not used as conductor.

The company, in its contention, quoted the articles regarding the establishment of conductors' spare boards and regarding manning temporary vacancies in train service. It also quoted an article that reads: "A promoted conductor will not be permitted to hold an assignment as brakeman out of his home terminal while a junior conductor is employed as conductor out of such terminal."

The company contended that the trainman while acting as conductor was simply exercising seniority according to the agreement, and therefore was bound by the conditions of his new assignment. According to the agreement, the senior man was obliged to accept promotion.

In evidence presented when the parties appeared before the Board, it came out that the brakeman had been held off duty for more than 24 hours in readiness to act as conductor on the first day after he had been told that he would be needed as relief conductor on the second crew—the second crew did not work that day—and not on the day for which he claimed mileage.

The Board decided that the brakeman was entitled to pay for mileage lost on his regular assignment on the day after his notification but not on the day originally claimed.

Case No. 725—Dispute between Algoma Central and Hudson Bay Railway Company and the Brotherhood of Railroad Trainmen concerning the claim of a conductor and crew for minimum day yard service when required to make up their own train.

A conductor and crew assigned to pool freight service were required to make up their own train and also to do local switching not incidental to their own train because there was no yard crew on duty. For the 20 minutes spent on local switching the crew claimed for a minimum day at yard

rates. The company refused the claim, and the crew were compensated for initial terminal time.

The union contended that in yards where yard crews are employed, freight crews used to do switching other than "special service or switching incidental to their trip or regular assignment" are entitled to a minimum day at yard rates for the extra service performed, in accordance with an article in the agreement that provides for payment in such circumstances at "not less than a minimum day at the schedule rate."

The company contended that the article on which the claim was based did not apply in this instance because the crew were not "called for extra service" within the meaning of the article. It also argued that the crew were properly compensated in accordance with another article dealing with the payment of crews in train service who are required to perform switching at initial or final terminal.

The Board sustained the employees' contention.

Case No. 726—*Dispute between Algoma Central and Hudson Bay Railway Company and the Brotherhood of Railroad Trainmen regarding the claim of a conductor and crew for work train service for loading and unloading contractors' equipment at various points.*

A conductor and crew claimed one hour work train service en route for loading and unloading contractors' equipment at various points on one day, and for one hour and 35 minutes on another day. Both claims were refused by the company.

The employees contended that the loading of such equipment in car load lots and of excessive weights and sizes by the owners, contractors, etc., has always been classed as work train service and is still work train service, rather than wayfreight service.

They quoted an article that states that freight crews will be paid detention for work train service en route when time so spent exceeds one hour.

The company contended that the handling of the shipments in question was certainly wayfreight service, and that the shipments were covered by regular revenue billing. The fact some portion of the shipments in question required the help of the contractor who owned them did not convert the service into "work train service en route," it argued. It quoted a rule of the Canadian Freight Classification No. 20 that requires owners to help in loading freight that was too heavy or bulky to be handled by the regular station employees.

The contention of the employees was not sustained by the Board.

Case No. 727—*Dispute between Algoma Central and Hudson Bay Railway Company and the Brotherhood of Railroad Trainmen regarding the claim of a conductor and crew for wayfreight rates for an entire day when they were required to help a snow plow extra stuck in the snow.*

The crew of a passenger train were ordered to cut off their engine at a junction and proceed about half a mile to help a snow plow extra that was stuck in the snow. The time taken was one hour and 15 minutes, and the crew claimed for the hour and 15 minutes and for the entire trip mileage at wayfreight rate.

The union contended that when the company instructed the passenger crew to leave their train and go up the spur, their class of service was changed from passenger to freight service.

The employees based their claim on an article in the schedule that provides for the payment at the highest rate applicable to any class of service performed, when trainmen perform more than one class of road service in a day or trip. They also cited an article that allows the greater of actual mileage or actual time to trainmen taken from trains on the road to assist other trains.

The company denied the claim and paid the crew in accordance with the article that provides for the addition to road mileage of mileage run when trainmen are taken from trains on the road to assist other trains.

The company contended that the first article cited by the employees did not apply to crews other than those in combination service, and also that the time or mileage allowance provided by the second article cited does not change the class of service.

The Board sustained the contention of the employees.

Case No. 728—*Dispute between Algoma Central and Hudson Bay Railway Company and the Brotherhood of Railroad Trainmen, ex parte, regarding the assessment of demerit marks against a brakeman for refusing a call for "jump man."*

A brakeman working as passenger brakeman on a vacancy was bumped by a senior trainman. The trainmaster asked him whether he wanted to work again that day; the brakeman declined, as he had already worked one day (150 miles).

The next morning he was called for the jump job (third brakeman) on a way freight. He would not accept the call, "as it was a spare board trainman's job."

He was assessed 20 demerit marks; the Brotherhood filed a protest.

The union contended that as the brakeman had not booked for duty after being bumped off the passenger train, and as the company could not and did not call him for his own job at 7 a.m., he should not have been called for spare work at 9 a.m.

The company explained that at the time the brakeman had been displaced the trainmaster had tried to get him to book for freight service, which he was formerly in, but the brakeman had declined. The next day there was a vacancy for a spare brakeman, and as there was no spare board at that place, and the brakeman was the only man known to be idle in the terminal, he had been called.

The company contended that as he was not assigned to any service at the time, he should not have refused duty, and that the discipline was justified.

The contention of the employees was sustained.

Case No. 729—*Dispute between Pacific Great Eastern Railway (Vancouver) and the Brotherhood of Railroad Trainmen concerning the claim for 100 miles by a conductor who was available but not called as conductor-pilot on self-propelled machine.*

A self-propelled tie-tamping machine was operated without a conductor-pilot. A conductor who was available for call that day claimed for 100 miles runaround, contending that he should have been called as conductor-pilot in accordance with an article in the current collective agreement.

A subsection of the article cited provides that: "With the exception of off-track equipment, all self-propelled equipment operating on the main track outside yard limits... shall have a conductor in charge."

The company contended that the electro-gang tamper was off-track equipment, and that the agreement did not require the company to have a conductor in charge.

The contention of the employees was not sustained.

Case No. 730—*Dispute between Pacific Great Eastern Railway (Vancouver) and the Brotherhood of Railroad Trainmen concerning the operation of self-propelled construction equipment without a conductor in charge.*

A Burro Crane was operated without a conductor in charge on a portion of the line under construction. The employees contended that the company had violated the collective agreement in operating the crane without a conductor-pilot.

Four articles of the agreement provide that all construction trains will be manned by Pacific Great Eastern Railway crews; that trainmen required to work on construction lines will be governed by the Brother-

hood of Railroad Trainmen contract and receive not less than schedule rates of pay; that all self-propelled equipment operated on the main track outside yard limits shall have a conductor in charge; and that all contractors' trains, whether the work is being done by the company or by contractor, will be manned by Pacific Great Eastern crews.

The employees contended that the collective agreement covers the operation of self-propelled equipment in the construction territory area. The company contended that there was no rule in the agreement that required it to place a conductor in charge of a Burro Crane operating on tracks under the jurisdiction of the construction department.

The contention of the employees was sustained.

Case No. 731—*Dispute between Pacific Great Eastern Railway (Vancouver) and the Brotherhood of Railroad Trainmen concerning the assessment of demerit marks against a conductor for refusing to take out a train of more than 70 cars.*

A train of 83 freight cars was lined up by the yard office to be run out of North Vancouver northward on the Squamish subdivision. The conductor who was called advised the yardmaster that he was setting off 13 of the cars to reduce the train to 70 cars in accordance with the collective agreement.

When asked by the yardmaster to explain his action in writing, the conductor cited an article of the agreement that provides that on the Squamish subdivision, "mixed and way freight trains shall not exceed 35 cars in length" and "in other territory trains shall not exceed 70 cars."

The conductor was assessed 20 demerits. The Brotherhood protested that the discipline assessed was unjust and improper and should be removed; it contended that the 70-car limit rule applies to all trains over the entire system.

In its contention the company pointed out that the agreement provided a procedure for dealing with any questions over the proper interpretation of clauses in the agreement. The article cited "does not contemplate an employee taking the law into his own hands and applying his own personal interpretation," the company said.

"To allow an employee to place his own interpretation on rules in open defiance of supervisory authority, as was done in this case, would defeat the purpose of the collective agreement and would be an invasion of the rights of management," the company added.

LABOUR LAW

Legal Decisions Affecting Labour

British Columbia courts rule on power of courts to review awards of Workmen's Compensation Board. Court of Appeal declares arbitration award void because jurisdictional disputes not subject to arbitration between one union, employer

In British Columbia, the Court of Appeal dismissed an appeal by the Workmen's Compensation Board against quashing of the Board's decision by the Supreme Court on the ground that the Board, by refusing to accept the specialist's certificate as conclusive, and by refusing a compensation for silicosis, exceeded its jurisdiction.

In another case, the Supreme Court of the province quashed the Workmen's Compensation Board's decision and ruled that the Board's decision in refusing compensation was based upon a misapprehension in law as to the meaning of the word "accident" and, therefore, had to be quashed and compensation assessed and paid.

The Court of Appeal of the province, in another case, allowed an appeal from the judgment of the Supreme Court and held an arbitration award to be void on the grounds that jurisdictional disputes are subject to arbitration between the disputing unions and not between a union and the employer, and that an award affecting the interests of a union that was not a party to such arbitration is in excess of jurisdiction and void.

British Columbia Court of Appeal . . .

... Confirms right of courts to review and quash decisions of the Workmen's Compensation Board

On May 25, 1960, the British Columbia Court of Appeal confirmed the power of the Superior Courts to determine and declare public law and to define the statutory jurisdiction and authority of inferior tribunals and boards. Further, the Court held that the exclusive authority conferred upon the Workmen's Compensation Board by Section 76 (1) of the B.C. Workmen's Compensation Act to decide questions of law does not rule out the power of the courts to interpret the sections of the Act defining the Board's jurisdiction and authority and to review the Board's proceedings

in order to see if the Board has kept within its statutory jurisdiction.

A worker's claim for compensation for silicosis was denied by the Board and he sought to have it reviewed under Section 54A of the Act. The section reads:

54A (1) When a workman applies to the Board for compensation under this Act and claims:

...
(c) that the medical opinion upon which the disputed finding was made is erroneous or incomplete; and makes a request in writing to the Board accompanied by a certificate from a physician certifying that in the opinion of such physician there is a *bona fide* medical dispute to be resolved, with sufficient particulars thereof to define the question in issue, the workman shall be examined by a specialist appointed in the manner provided in this section.

...
(5) Within eighteen days after his appointment, the specialist shall examine the workman at a time and place specified by the Board, and shall certify to the Board as to:

- (a) the condition of the workman;
- (b) his fitness for employment;
- (c) if unfit, the cause of such unfitness;
- (d) the extent of his temporary or permanent disability by reason of the injury in respect of which he has claimed compensation; and
- (e) such other matters as may, in his opinion, or in the opinion of the Board, be pertinent to the claim;

and such certificate, which shall be in the form provided by regulation, shall be conclusive as to the matters certified.

...
(9) Within eighteen days of the receipt of the certificate from the specialist, the Board shall review the claim and notify the workman in writing of its decision regarding the matters contained in such certificate

A specialist appointed under Section 54A examined the workman and in his certificate to the Board stated:

Mr. Battaglia therefore has a fibrotic condition of his lungs caused by silica which has been inhaled during mining and its X-ray appearance is as specific as X-ray can be for

This section, prepared by the Legislation Branch, reviews labour laws as they are enacted by Parliament and the provincial legislatures, regulations under these laws, and selected court decisions affecting labour.

this condition. His capacity for effort is markedly reduced. He is therefore entitled to a pension for silicosis.

The Board refused to accept as conclusive the finding of the specialist that Battaglia had silicosis and proceeded to review the finding in the light of other medical opinions that it secured. On January 23, 1958, the Board informed the worker that "the findings on file do not show that you are disabled by silicosis as defined by the Workmen's Compensation Act" and that his claim was refused.

Following the Board's refusal to change its earlier decision, Battaglia applied to the Supreme Court for a writ of *mandamus* with *certiorari* in aid to compel the Board to grant him compensation for silicosis or to hear and determine his claim according to law. On January 7, 1960, Chief Justice Lett of the Supreme Court of British Columbia quashed the Board's decision of January 23, 1958, and ordered the Board to hear and determine according to law Battaglia's claim for compensation for silicosis. The judgment of the Court was appealed by the Board.

Mr. Justice Davey of the Court of Appeal referred to Section 76 (1) of the Act, which provides that "the Board shall have exclusive jurisdiction to inquire into, hear, and determine all matters and questions of fact and law arising under this Part, and the action or decision of the Board thereon shall be final and conclusive and shall not be open to question or review in any court, and no proceedings by or before the Board shall be restrained by injunction, prohibition, or other process or proceeding in any court or be removable by *certiorari* or otherwise into any court; . . ."

The Board argued that the interpretation of Section 54 A, particularly Subsections (5) and (9), its relation to Section 76 (1), and the extent to which the specialist's certificate is conclusive, are questions of law arising under Part I of the Act over which the Board has exclusive jurisdiction under Section 76 (1) and the courts have no jurisdiction to interfere.

Mr. Justice Davey rejected this argument. In his opinion, Section 54A, is a later and special section which provides a method of reviewing medical findings of the Board; therefore, Section 76 (1) must be taken to be subject to it. In reviewing a claim under Subsection (9) of Section 54A, the Board must accept as conclusive the findings certified by the specialist within the ambit of his statutory authority.

Referring to the Supreme Court of Canada decision in *Toronto Newspaper Guild v. Globe Printing Co.* (L.G. 1953, p. 1174), Mr. Justice Davey stated that it is clearly

established by judicial decision of the highest authority and accepted by Parliament that it is for the superior courts to determine and declare public law and in the course thereof to define the statutory jurisdiction and authority of inferior tribunals and boards; that it requires the clearest language to transfer that jurisdiction from the superior courts to the bodies concerned; under the B.N.A. Act, 1867, perhaps not even then. In his opinion, the exclusive authority conferred upon the Board by Section 76 (1) to decide questions of law does not extend to the interpretation of those sections of the Act defining the Board's jurisdiction and authority, and does not deprive the Supreme Court of British Columbia of its power to scrutinize the proceedings of the Board to see if it acted within the jurisdiction and authority conferred upon it by the Act.

Another point submitted by the Board was that the Board is a purely administrative body not subject to a writ of *certiorari*. In rejecting this submission, Mr. Justice Davey stated that an administrative body is subject to *certiorari* proceedings in respect of matters affecting the rights of others in which it must act judicially. It is true that the compensation Board is an administrative body, but in deciding claims it must act judicially, and not on grounds of policy or expediency. Compensation is a matter of right, not of grace, and the Board is given exclusive authority to determine the questions of fact and law upon which that right depends. The process is clearly one of adjudication, although not necessarily accompanied by the procedure followed in conventional courts.

Mr. Justice Sheppard, in his reasons for judgment, also dealt, *inter alia*, with the Board's contention that being an administrative body the Board is not subject to *certiorari*. He pointed out that the same body may have administrative and judicial functions. The Board, acting under certain sections, may be exercising an administrative function; while acting under other sections, it may be exercising judicial functions. In the case at bar, when reviewing the case under Section 54A of the Act, the Board was exercising a judicial function. Also, the specialist acting under Section 54A was exercising a judicial function. Whether the certificate of the specialist be conclusive or not as to the facts certified pursuant to Section 54A (5), the Board, in exercising the review, is acting on the principle declared by the statute and made binding on the workman and Board. That indicates a judicial function. Further, Mr. Justice Sheppard continued, there is a defined issue to be decided, that is, the validity of the

claim according to the statute, and to be decided between designated parties, the workman on the one hand and the Board on the other. These are *indicia* of judicial function.

It may be that some sections of the statute do confer upon the Board a discretion, thus indicating that under those sections the Board exercises administrative functions; for example, Section 5, in permitting the Board to admit industries or workmen, and Part I, Div. 4, in permitting the Board to determine the amount of the assessment to be made. Those are administrative functions. However, those sections do not apply in the case under review and they do not prevent the Board having judicial functions under the sections here in question.

Referring to the contention that *certiorari* is excluded by Section 76 (1) of the Act, Mr. Justice Sheppard stated that the section does not exclude *certiorari* where the Board is acting outside its jurisdiction (*Acme Home Improvement Ltd. v. Workmen's Compensation Board* (1957) 23 W.W.R. 545). Further, *certiorari* is not excluded where the powers are exercised by the Board in breach of the implied restrictions. In the case at bar, the Board had proceeded to review the certificate of the specialist. That was beyond its jurisdiction.

Further, Mr. Justice Sheppard pointed out that under Subsections (5) and (9) of Section 54A, the jurisdiction in reviewing a case is divided. The specialist has exclusive jurisdiction to determine the matters coming within subsection (5), and in respect of such matters his finding "shall be conclusive as to the matters certified." The jurisdiction of the Board in review lies outside that particular jurisdiction which is specifically assigned to the specialist. Consequently, the Board has the general jurisdiction of review exclusive of that assigned to the specialist, and therefore the Board, in review, must proceed on the basis of the certificate of the specialist being conclusive as to the matters certified by the specialist acting within the limits of subsection (5). When the specialist's certificate is taken to be conclusive, as required by Subsection (5), it still remains for the Board to determine whether the workman has a valid claim under the Workmen's Compensation Act.

In the case under review, the certificate of the specialist stated that the workman had silicosis and a disability therefrom. The Board obtained the opinions of other medical practitioners, reviewed the certificate of the specialist and had, on the weight of evidence, come to a contrary conclusion. In so doing, the Board was

acting outside its jurisdiction. It is for the specialist to say if the workman had silicosis and the extent of any disability caused thereby. The Board, in its review, must accept those findings coming within Subsection (5) and on that basis proceed to determine whether or not the workman has a valid claim for compensation. The Board, in the case at bar, had acted outside its jurisdiction in that it had not accepted the finding of the specialist as conclusive but had proceeded to review that finding in the light of other evidence. In so doing, the Board had exercised a jurisdiction not assigned to it but assigned exclusively to the specialist and had therefore acted *ultra vires*. In so acting *ultra vires* the Board was not determining a question of law and fact "arising under Part I" and was therefore not within the immunity of Section 76.

While the Board has no jurisdiction to review the finding of the specialist, the specialist's certificate, on the other hand, does not conclude the review. The general jurisdiction to review is in the Board, and upon assuming the certificate of the specialist to be conclusive as to the matters within Subsection (5), it is not open to the specialist to extend that jurisdiction so as to entrench upon the general review which is vested in the Board.

The Court dismissed the Board's appeal and confirmed the judgment of the Supreme Court by which the findings of the Board were quashed as being *ultra vires* and null and the Board was ordered to review the matter as required by law. *Battaglia v. Workmen's Compensation Board*, (1960) 32 W.W.R., Part I, p. 1.

British Columbia Supreme Court . . .

. . . holds Workmen's Compensation Board decision that is wrongful on points of law is reviewable

On May 30, 1960, Mr. Justice Manson of the B.C. Supreme Court ruled that the provision of the B.C. Workmen's Compensation Act granting the Workmen's Compensation Board exclusive jurisdiction to determine questions of fact and law and making the Board's decisions final and conclusive is ineffective insofar as it would deprive a claimant of the right to have a wrongful decision on the point of law reviewed and quashed by the courts.

Also, Mr. Justice Manson held to be *ultra vires* the provision of the Act which authorizes the Lieutenant-Governor in Council to appoint the members of the Workmen's Compensation Board. In his opinion, the Board is a judicial tribunal, therefore, its members should be appointed by the Governor General in Council.

The claimant, in *mandamus* proceedings with *certiorari* in aid, was asking the court to quash a decision of the Workmen's Compensation Board and to order the Board to assess and pay a compensation. He contended that the Board put a wrong construction in law upon the word "accident" as defined in Section 2 (1) of the Act. The definition reads:

"Accident" shall include a wilful and intentional act, not being the act of the workman and shall include a fortuitous event occasioned by physical or natural causes.

In the opinion of Mr. Justice Manson, that definition does not exclude the ordinary and common law meaning of the word "accident" and does include the acceleration of death induced by exertion in the course of employment. He found that the medical evidence showed that the claimant's death was accelerated by exertion in the course of employment. The Board, in his opinion, proceeded upon a misapprehension in law as to the meaning of the word "accident", and he ruled that the finding of the Board be quashed and the Board should assess the compensation and pay it to the claimant.

Before reaching his conclusions, Mr. Justice Manson dealt with two points raised in the course of argument: first, the validity of Section 76 of the Workmen's Compensation Act; and second, the competence of the Legislature to authorize the Lieutenant-Governor in Council to appoint the members of the compensation Board pursuant to Section 65 of the Act.

Section 76 (1) of the Act reads, in part, as follows:

76 (1) The Board shall have exclusive jurisdiction to inquire into, hear, and determine all matters and questions of fact and law arising under this Part, and the action or decision of the Board thereon shall be final and conclusive and shall not be open to question or review in any Court, and no proceedings by or before the Board shall be restrained by injunction, prohibition, or other process or proceeding in any Court or be removable by *certiorari* or otherwise into any Court; and without restricting the generality of the foregoing the Board shall have exclusive jurisdiction to inquire into, hear and determine: . . .

It was agreed that the statute confers upon the Board power to determine both facts and law. The question before the Judge was whether the legislature could do what it purported to do by Section 76 and, if so, had it done so effectively?

Section 76 aims to deprive a subject, in terms the Judge considered unlikely to be found in any other provincial statute, of the right to have the decisions of an inferior tribunal reviewed upon points of law. Also, he was of the opinion that there is no similar legislation in other provinces

with the exception of some workmen's compensation acts that would show the same purpose as that of Section 76.

In Mr. Justice Manson's opinion, Section 76, insofar as it purports to deprive a claimant of a right to resort to the courts on points of law, violates a principle which has been in the British system of law from time immemorial. It has been part of the spirit of *Magna Carta* that subjects of the Sovereign shall have the opportunity of having their rights, both criminal and civil, determined by the courts. The courts have always been the protectors of the rights of private citizens and one of those rights is to have adjudications sound in law.

Section 76 of the Act, by denying access to the courts, gives to decisions of the Board the status of decisions of the Supreme Court of Canada. The Acts of Parliament and of legislatures, in Mr. Justice Manson's opinion, are not sacrosanct and the right of the subject to have his rights determined by a court of law is more sacred than an act of a legislature. The saying that Parliament is supreme is too wide a statement as both Parliament and legislatures can only legislate within the limits prescribed by the constitution. In *Switzman v. Elbling and Attorney General of Quebec* (L.G. 1957, p. 983), Mr. Justice Abbott expressed an opinion that Parliament itself could not abrogate the right of discussion and debate. By analogy of reasoning to that enunciated by Mr. Justice Abbott, Mr. Justice Manson was unable to differentiate the limitations on the powers of a legislature in the matter of the free expression of ideas by citizens from the ancient right of the subject to have his rights determined by a court of law. In *Battaglia v. Workmen's Compensation Board* (1960), 32 W.W.R., Part 1, p. 1 (reported above), Mr. Justice Davey, referring to the judgment of the Supreme Court of Canada in *Toronto Newspaper Guild v. Globe Printing Co.* (L.G. 1953, p. 1174), stressed the power of the superior courts to define the statutory jurisdiction and authority of inferior tribunals and boards. Further, he expressed an opinion that Section 76 (1) does not deprive the Supreme Court of British Columbia of its power to scrutinize the proceedings of the Board to see if it acted within the jurisdiction and authority conferred upon it by the Act.

In England, the Court of Appeal in *Re Gilmore's Application* (1957) All ER 796, held that a statute purporting to make a tribunal's decision final merely meant that the decision should be final on the facts, and should not be the subject of an appeal, but such a provision did not exclude jurisdiction by *certiorari*.

Reverting to the case under review, Mr. Justice Manson noted that the words of Section 76 (1)—“and shall not be open to question or review in any court” refer, following the *Gilmore* case, only to findings of fact, and it would appear that the finding on a point of law would be open to review on *certiorari*. Also, he noted that the section does not prohibit *mandamus* proceedings and the application under consideration was for *mandamus* with *certiorari* in aid.

In *Acme Home Improvement Ltd. v. Workmen's Compensation Board*, (1957) 23 W.W.R. 545, Mr. Justice Davey, in reference to Section 76 (1), observed:

The privative provisions of this section... will not oust the jurisdiction of the court to quash the assessment on *certiorari*, if the board has assumed a jurisdiction not vested in it by a wrong decision on a collateral question of law or fact upon which that jurisdiction depends.

In the *Battaglia* case, Mr. Justice Shepard, quoting this observation, added: “Further, *certiorari* is not excluded where the powers are exercised by the board in breach of the implied restrictions.”

In Mr. Justice Manson's opinion, once a board has declined jurisdiction, or has accepted jurisdiction, or has exceeded jurisdiction, if its action in doing so is founded on an incorrect statement of the law, then any order it makes in such circumstances must be quashed.

Also, Mr. Justice Manson agreed with the contention that the Legislature cannot deprive a subject of the Sovereign of the right to have decisions of an inferior tribunal reviewed in the courts on points of law, and if the Legislature has such a power, it must exercise it in clear and explicit English. Section 76, if such a power exists, falls far short of making that clear.

Turning to another issue, whether the Legislature has the competence to authorize the Lieutenant-Governor in Council to appoint the members of the board as provided in Section 65 of the Act, Mr. Justice Manson noted that the Workmen's Compensation Board is not merely an administrative tribunal because part of its function is to do administrative work. In his opinion, the Act intends to create the board a judicial tribunal and give to it the power to determine most important points of law. In fact, nearly every decision of the board involves a point of law. It is immaterial whether the board is described as an administrative body or a judicial body. The real point is, does the Act purport to confer on the board a judicial function normally performed by the courts of the land? Mr. Justice Manson had no doubt that the Act does so.

In the *Battaglia* case, Mr. Justice Shepard said that although the board, acting under certain sections, may be exercising an administrative function, that does not preclude the board's acting under other sections from exercising a judicial function. The same body may have administrative and judicial functions. The Board is exercising a judicial function in making the review under Section 54A. When there is a defined issue to be decided, namely, the validity of the claim according to the statute, between designated parties such as workmen on the one hand and the board on the other, these are *indicia* of a judicial function.

In conclusion, Mr. Justice Manson held that the board has been constituted a judicial tribunal analogous to a Superior Court and with the powers of the Supreme Court of Canada to give a final judgment. It follows that its personnel must be chosen by the Governor General pursuant to the B.N.A. Act, Section 96. But that is not to say that the province could not appoint the members of an administrative board. He accordingly directed “that the finding of the Board be quashed and that the Board assess the compensation to be paid the applicants and pay the same.” *Farrell et al. v. Workmen's Compensation Board*, (1960), 31 W.W.R., Part 13, p. 577.

British Columbia Court of Appeal . . .

... declares void arbitration award affecting the interests of union not party to the arbitration

On March 4, 1960, the British Columbia Court of Appeal, allowing a union's appeal, ruled that a union that was not a party to an arbitration, but whose interests were substantially affected by the award (which was void), may bring a court action to declare the award void. Further, the Court declared that an award that expressly professed to dispose of the rights of nonparties to such arbitration was in excess of jurisdiction and thus void; and that jurisdictional disputes are not “grievances” and if they are to be arbitrated, then the arbitration must be between the disputing unions and not between any union and the employer.

Mr. Justice Smith, rendering the judgment of the Court of Appeal, recalled the circumstances of the dispute.

Victoria Machinery Depot Company Limited employed members of Local No. 3 of the Machinists, Fitters and Helpers' Industrial Union and of Local No. 324 of the United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitters Industry of the United States and Canada. Both unions had collective bargaining contracts with the company. In

recent years, rivalry arose between the two unions, both complaining to the employer of the way in which it apportioned work between them. Both unions threatened to force arbitrations on the employer under grievance proceedings of the collective agreements.

First the Machinists union took this course, and an arbitration took place on its insistence. The company protested and contended that the point raised was not a grievance and not arbitrable under the grievance procedure. The arbitration board took the same view and held that the dispute was a jurisdictional dispute between the two unions and not with the company and could only be decided in an arbitration to which both unions were the parties. The board then made an award that the two unions should arbitrate the division of labour.

The two unions did negotiate to that end, but they could not agree on terms of submission, and nothing came of it.

The Pipefitters then forced the company into an arbitration on division of work under the grievance procedure of their contract. The company again protested that the matter was not arbitrable. However, the arbitration between the Pipefitters and the company took place with the Machinists refusing to take part. The Board made an award which, among other things, held that the Pipefitters were entitled to do many types of work that admittedly its members had not previously done at the company's plant. The company, under pressure from the Pipefitters' union, put the award into effect and issued directions as to apportionment of the work, with the result that a number of the members of the Machinists' union were laid off.

The Machinists then brought a court action, claiming declarations that they were entitled to do nine specified types of work and that the Pipefitters' award against the company was void.

The trial judge, relying on the clause on jurisdiction in the Machinists' collective agreement, which was similar to the corresponding clause in the Pipefitters' contract, held that the dispute was jurisdictional and that the effect of the jurisdictional clauses in the collective agreements was that when a jurisdictional dispute arose, the work should be apportioned as the employer directed "pending a settlement by an independent arbitrator or pending a satisfactory settlement to all concerned." He did not enlarge on how such settlement was to be reached when the parties could not agree on a basis for arbitration, or how such an impasse was to be resolved, but he held that the Machinists had not ex-

hausted their remedies under the jurisdictional clause of their collective agreement, and that until they did so, they could not sue; so he dismissed the action. (L.G., Jan., 1960, p. 69).

Mr. Justice Smith noted that the Machinists had claimed that the Pipefitters' award was void on two main grounds:

- (1) that it was an attempt to deal with a jurisdictional dispute between the two unions under the guise of deciding a "grievance," which meant a dispute between the union and employer;
- (2) that the award attempted to decide the rights of the machinists who were no party to it, and though it did not bind the Machinists, it actually operated to their detriment, and so was void.

Both collective bargaining agreements had "grievance" clauses that were similar and followed immediately after the jurisdiction clauses, which indicates that those who drafted the agreements clearly distinguished between grievances and jurisdictional disputes.

The trial judge held that it was unnecessary to decide whether the Pipefitters' award was void or even "bad," that both unions must let the employer divide the work when jurisdictional dispute arises, and that the unions are bound by that decision until another solution that satisfies all parties is reached. But the trial judge failed to decide how much or how little force that award should have. He implied that the award should never have been made, but he did not decide whether it could be ignored; actually, he said that he did not need to decide whether the award was void or voidable. The result was that though he said that it was the company's duty to apportion the work, he did not say how it could do this with the Pipefitters' union's award still being there.

Mr. Justice Smith was of the opinion that in those circumstances the decision whether or not the award was void could not be avoided.

The company and the Machinists' union asked that the award be declared void. The Pipefitters denied that either the Machinists or the company was in a position to attack the award. They contended that the Machinists could not attack it even by action for declaration because they were no party to it.

Mr. Justice Smith rejected this contention. He was of the opinion that the scope of actions for declarations was being widened and the Machinists could claim the award to be void if they could show that their

interests were substantially affected by the award. There is no doubt that the Machinists' interests were affected. The decisions in some American cases point out that a void, as opposed to a voidable judgment, can be attacked by a stranger; in many English cases, the courts have allowed a stranger to impugn a void judgment. Mr. Justice Smith did not see any distinction in principle between attacking a void judgment and a void arbitration award. Therefore, the Machinists had the status to seek a declaration that the Pipefitters' award was void.

Regarding the grounds for the contention that the award was void, Mr. Justice Smith thought that Articles XI and XII of both collective agreements mean that jurisdictional disputes are not grievances and if they are to be arbitrated, then the arbitration must be between the disputing unions and not between any union and the employer.

Consequently, when a union enforces on the employer arbitration of a jurisdictional dispute, there is no submission for the arbitrators to act, and without submission (unless the statute gives necessary authority), the arbitrators have no jurisdiction.

Another reason for holding the award void was, in Mr. Justice Smith's opinion, that it expressly professed to dispose of the rights of nonparties, which was in excess of jurisdiction. The award was full of rulings that decided the rights of the Machinists and even outside trades and that alone was sufficient to make the award void.

The trial judge held that the Machinists could not sue because they had not exhausted their remedies under Article XI of the collective agreement. That remedy was to arbitrate with the Pipefitters. Mr. Justice Smith did not agree with that reasoning. He noted that the negotiations with the Pipefitters on the terms of arbitration were abortive and there was no prospect of agreement, and the Machinists had reached the point where they were entitled to sue.

As to the Pipefitters, they had the same remedy as the Machinists; instead of forcing an arbitration on the employer, they had the right to sue the Machinists for a declaration of their rights, joining the employer also as a defendant so as to bind him.

The award being void, the Machinists might have been entitled to a decision apportioning the various items of work. But counsel for the Machinists did not ask for a decision in this respect and stated that the Machinists' union was willing to abide by the ruling of the trial judge that the company should apportion the work.

The Court of Appeal allowed the Machinists' union appeal to the extent of declaring the Pipefitters' award void. *Machinists, Fitters and Helpers, Local No. 3 v. Victoria Machinery Depot Company Limited and United Association of Journeymen and Apprentices of the Plumbing and Pipe Fitters Industry of the United States and Canada, Local No. 324*, (1960), 31 W.W.R., Part 12, p. 564.

Recent Regulations under Provincial Legislation

British Columbia establishes new minimum wage for employees in amusement places

In British Columbia a new minimum wage order which went into force on August 1 set a minimum wage of 75 cents an hour for driving school instructors and for employees in amusement places and provided for a 32-hour weekly rest.

British Columbia Male and Female Minimum Wage Acts

A new order of the British Columbia Board of Industrial Relations establishing a minimum wage of 75 cents an hour for driving school instructors and employees in amusement places was gazetted on July 14 as B.C. Reg. 138/60 to go into force on August 1. The new order replaced a 1948 order that set a minimum wage of \$18 a week for employees who worked 40 or more hours a week and of 45 cents an hour for

part-time workers with lower rates for learners.

The new order has a somewhat wider coverage than formerly, applying to driving school instructors as well as to a number of other workers not specifically covered by the previous order, including employees in dance studios, zoos, physical culture or health clinics and studios, charm and modelling schools and driving schools. The Order continues to cover employees in the following other places where a charge for admission or service is made to the public: indoor and outdoor theatres, dance-halls, dance pavilions, music halls, concert rooms and lecture halls (excluding players and artists); shooting galleries, bowling alleys, billiard parlours, pool rooms, ice rinks, roller rinks, amusement parks, golf courses,

sports grounds and arenas; swimming pools, bathing pavilions and dressing rooms, bathing beaches, steam baths; parking lots, auto camps, shoe-shine establishments and boat liveries.

Golf caddies, watchmen, motion picture projectionists and persons subject to another order are again excluded. Supervisory, managerial or confidential employees, previously excluded only from the overtime provision are now fully exempt. The Board, however, may determine whether or not an employee belongs in this category.

In line with the usual practice, some variation of the 75-cent minimum is provided. Pin-setters may be paid a minimum wage of 55 cents an hour and lower rates may also be paid to apprentices and handicapped or part-time workers under special permit from the Board, the Order providing that such employees must be paid the rate specified in the permit.

The daily guarantee provision has been brought into line with that in other orders. Every employee must be paid at his regular rate of pay for the entire period spent at work in response to a call from the employer, with a minimum of two hours pay if he reports for work, unless his condition is such that he is not competent to perform his duties or has failed to comply with the Accident Prevention Regulations of the Workmen's Compensation Board. An employee who commences work must receive at least four hours pay except where his work is suspended because of inclement weather or other reasons completely beyond the control of the employer. School students reporting for work on a school day are to receive a minimum of two hours' pay. Under the previous order all employees were entitled to at least two hours' pay for

reporting for work and part-time workers were guaranteed a minimum of three hours' pay if they commenced work except in the case of *force majeure* or unless the Board gave special permission to vary the arrangement.

As before, hours may not exceed eight in the day or 44 in the week unless the Board has approved a different arrangement in accordance with the exceptions provided in the Hours of Work Act and regulations. The Board may also permit longer hours during emergency conditions, in which case time and one-half the regular rate must be paid for all time worked beyond the prescribed daily and hourly limits.

For the first time employees in amusement places and other workplaces covered by the Order are entitled to a weekly rest of 32 consecutive hours. In exceptional cases, however, the Board may approve a different arrangement regarding a rest period upon receipt of a joint application from the employer and employees concerned.

The new order also contains the usual provisions respecting semi-monthly payment of wages, the posting of orders and work schedules and the keeping of records and employee registers.

Quebec Minimum Wage Act

In Quebec, an amendment to the general minimum wage order (No. 4, 1960) added fishing establishments in the electoral district of Duplessis where fish and other seafoods are processed to the list of workplaces without a regular workweek. This means that employees in such places are not entitled to overtime.

The amendment was approved by O.C. 1016 of June 28 and gazetted July 9 to take effect May 1.

Industrial Health and Safety Legislation, 1960

(Continued from page 908)

the Act is operated contrary to the Boiler and Pressure Vessels Act it shall "be deemed to endanger the safety of the persons employed therein."

In Quebec, an amendment to the Motor Vehicles Act prohibits, except in towns, cities or urban territory, a bus driver from driving for more than 10 hours per 24 hours, and the driver of a delivery truck from driving for more than 12 hours per 24 hours, unless he has rested for eight consecutive hours within the 24-hour period.

Also, a bus driver may not drive for more than 60 hours, and the driver of a delivery vehicle for more than 72 hours, in one week.

In towns, cities and urban territory, bus drivers and drivers of delivery vehicles must not drive more than 250 miles in 24 hours.

Before the amendment, the Act provided that bus drivers in the province were not to drive more than 250 miles in 24 hours but placed no limitation on the hours or mileage of drivers of delivery vehicles.

UNEMPLOYMENT INSURANCE

Monthly Report on Operation of the Unemployment Insurance Act

Total of claimants for benefit at end of June down 19 per cent from number at previous month-end, up 35 per cent from year-earlier total. Total of initial and renewal claims and benefit payments both greater than during June 1959*

Claimants† for unemployment insurance benefit on June 30 numbered 296,400, a figure 19 per cent less than the total of 364,300 on May 31 but 35 per cent greater than the figure of 220,500 on June 30, 1959.

Although the decline since the previous month affected largely males, they still made up more than 75 per cent of the increase over last year.

Initial and renewal claims for benefit during June numbered 128,500, which figure was about 22 per cent less than the 165,600 in May but 20 per cent more than the 107,100 in June 1959.

Of the 76,900 initial claims filed in June, an estimated 12,000 (or one in six) were filed by persons who had exhausted benefit and wanted to re-establish credits. This was a sharp decline from May, when this group was estimated at about 50,000 (or almost one in two).

(A claimant's ability to re-establish entitlement to benefit immediately after exhaustion is considerably less outside the seasonal benefit period than during it. Twenty-four contributions within the preceding 12 months must be proved, and a total of 30 contributions in the previous two years; whereas during the seasonal benefit period such a claimant qualifies for an extension under seasonal benefit Class B by reason of his having exhausted his regular benefit. Consequently he is less likely to file a new claim when he exhausts his benefit during the mid-May to December period than when he does so during the seasonal benefit period.)

The average weekly number of beneficiaries was estimated at 275,900 for June, 560,800 for May, and 197,000 for June 1959.

*See Tables E-1 to E-4 at back of this issue.

†A claimant's unemployment register is placed in the "live file" at the local office as soon as the claim is forwarded for computation. Consequently the count of claimants at any given time inevitably includes some whose claims are in process.

In a comparison of current employment statistics with those for a previous period, consideration should be given to relevant statistics with those for a previous period, factors other than numbers such as the opening and closing of seasonal industries, increase in area population, influence of weather conditions, and the general employment situation.

Claimants should not be interpreted either as "total number of beneficiaries" or "total job applicants".

Benefit payments totalled \$26,800,000 in June, \$52,200,000 in May, and \$18,200,000 in June 1959.

The average weekly payment was \$22.11 for June, \$22.17 for May, and \$20.95 for June 1959. The higher average rate this year is partly explained by the combined impact of the greater proportion of males this June than last—their average rate being substantially higher than that for females—and by the new benefit rates established by the amendments to the Act made in September 1959.

Insurance Registrations

Reports received from local offices of the Unemployment Insurance Commission for June showed that insurance books or contribution cards had been issued to 4,230,270 who had made contributions to the Unemployment Insurance Fund since April 1, 1960.

At June 30 employers registered numbered 328,945, an increase of 617 since May 31.

Enforcement Statistics

During June 7,099 investigations were conducted by enforcement officers across Canada. Of these, 4,352 were spot checks of postal and counter claims to verify the fulfilment of statutory conditions and 177 were miscellaneous investigations. The remaining 2,570 were investigations in connection with claimants suspected of making false statements to obtain benefit.

Prosecutions were begun in 190 cases, 50 against employers and 140 against claimants.* Punitive disqualifications as a result of claimants' making false statements or misrepresentations numbered 1,686.*

Unemployment Insurance Fund

Revenue received in June totalled \$23,-735,928.09 compared with \$25,187,592.93

in May and \$19,406,132.90 in June 1959. Benefits paid in June totalled \$26,841,962.03 compared with \$52,213,351.82 in May and \$18,101,353.40 in June last year. The balance in the Unemployment Insurance Fund on June 30 was \$296,187,477.10; on May 31 it was \$299,293,511.04 and on June 30, 1959 it was \$434,152,690.64.

Decisions of the Umpire under the Unemployment Insurance Act

Decision CUB-1754 July 13, 1960

Summary of the Main Facts: The claimant, a married woman, became employed as a stenographer and typist in a law office in C....., Que., on February 2, 1959. She continued in this employment until May 23, 1959, when she went to M....., Que., to be with her sister, whose husband was drowned on that day.

She returned to C..... at the end of June, after which she resumed her duties in the law office and worked until July 4, when her employer informed her that he was leaving the next day on a business trip, which was expected to last about five days. While out of town, he became ill and, as a consequence, was unable to return to C..... until some time in September or October 1959.

On September 1, 1959, the claimant applied for benefit, by letter, to the local office of the Unemployment Insurance Commission in R....., Que., and stated that for the previous two months she had been unemployed because of her employer's absence, that she was unable to forward her insurance book as it was in the employer's office, to which she had no access, and that she had tried without success to obtain other suitable employment in C.....

On September 7, she again wrote to the local office and asked if it would be possible to have her claim made effective to a date earlier than September 1, because, had she known her employer would have been absent from C..... for such a lengthy period, she would have applied for benefit on July 4. She added that each week she expected he would return and for that reason did not apply earlier.

On December 28, 1959, the claimant completed a formal application to have her claim antedated to July 9 and in support thereof, referred to the reasons given in her letter of September 7 for not having

applied for benefit much earlier and, in addition, submitted seven telegrams she had received from the employer during his absence, all indicating that he expected to return to C..... soon.

The insurance officer informed the claimant on January 13, 1960 that she was not entitled to have her claim antedated because she had not shown good cause for delay in making her claim (sections 46 (3) of the Act and 150 of the Regulations).

On February 8, 1960, the claimant appealed to a board of referees on the following grounds:

...I feel I have established good cause for the delay in filing my claim as explained in a letter to your office on September 7th, 1959, in an interview with your Mr. G..... on December 28th, 1959, and also confirmed by several telegrams sent to your office. The delay was caused by the fact that I was expecting (my employer) to return from one week to another, and by the telegrams you have on hand you will agree that I was justified in my belief. As there is a waiting period of one week before any benefit is paid, I did not consider it worthwhile to make my claim, thinking my employer would return before the waiting period was over.

As already explained to your office, the last day I worked for (my employer) was July 4th, 1959, when he advised me he was leaving the next day on a business trip and would return on July 10th. My salary was to be paid for this period. On July 16th I received a first wire from (my employer) stating he would return in a week. I received further telephone calls from M..... and T..... to the same effect, as well as the telegrams you already have in my file...

The board of referees unanimously dismissed the appeal at a hearing held on March 16, 1960, at which the claimant was present. The board felt that the claimant had a valid reason for the delay in making her claim and that such reason had existed for the period July 9 to September 1, 1959. The board, held, however, that she was not entitled to have her claim antedated during the period in question as she was not available for work in that she expected to be employed again by the same employer within a very short period of time.

*These do not necessarily relate to the investigations conducted during this period.

On April 14, 1960, with the permission of the chairman of the board of referees, the claimant appealed to the Umpire for the following reasons:

My request to have my claim antedated to July 9th, 1959, was refused mainly because it was decided, due to the fact that I was expecting my former employer to return to C....., that I was not available for work. As I have had ten years experience in a legal office I prefer that type of work, but would have accepted other employment in the meantime. However, no other work, temporary or permanent, was available here. In my letter to the U.I.C. dated September 1st, 1959, I stated that I had tried unsuccessfully to find other employment here, but this point was not brought out at the hearing held in A..... on March 16th last. I feel that consideration should be given on this point.

Considerations and Conclusions: On the facts before me, I agree with the unanimous finding of the board of referees, which is in accordance with the provisions of sections 46 (3) of the Act and 150 of the Unemployment Insurance Regulations.

It seems clear that the members of the board of referees were convinced that, notwithstanding the reasons given by the claimant for her delay in making a claim and her statement that she had sought, without success, suitable employment in C....., she had up to September 1 unduly restricted her availability inasmuch as had her employer returned in the meantime, she would not have accepted or continued in other employment. Moreover, the claimant has failed to prove that the employment which she had sought was of a permanent nature.

For these reasons, I dismiss the claimant's appeal.

Decision CUB-1756, July 13, 1960

Summary of the Main Facts: The claimant, married, 36 years of age, filed an initial application for benefit on January 13, 1960, and stated that he had worked as a truck driver for Canadian Breweries Transport Limited, Toronto, Ont., from November 1956 to January 8, 1960, when he was laid off because of lack of work.

In the confirmation of separation (Form UIC 479), the employer stated that the claimant became separated from his employment because of an "Infraction of Company Rules & Regulations".

Because of the conflicting statements of the claimant and the employer regarding the cause of the separation, both parties were asked by the local office of the Unemployment Insurance Commission to submit written comments. The claimant did not reply. However, the employer provided the following additional information:

REASON FOR DISCHARGE: Customer (The Carling Breweries Ltd.) refuses to have this driver deliver for them.

- Reason 1) Failure to complete work assignment on time, thereby booking more hours than necessary. Several warnings.
- 2) Consistently visited home during work hours contrary to instructions and failed to deduct such time from booked hours.
- 3) Consistently short on cash.

The insurance officer disqualified the claimant from receipt of benefit for the period January 10, 1960, the effective date of his claim, to February 13, 1960, because, in his opinion, the claimant had lost his employment by reason of his own misconduct within the meaning of section 60 (1) of the Act.

The claimant appealed to a board of referees. Upon receipt of the appeal, the insurance officer communicated with the Manager of the Canadian Breweries Transport Limited and learned that "in accordance with the provisions of the Union Contract (the claimant's) case was submitted to arbitration on 15 February 1960. A decision is expected shortly and will be available for consideration."

The claimant and his representative, an official of the Brewery, Malt and Soft Drink Workers International Union Local 304, attended the hearing of the board of referees in Toronto on March 2, 1960. The board, by a majority decision, dismissed the appeal and maintained the disqualification that had been imposed by the insurance officer. The decision reads, in part:

... The gentlemen who appeared handed to the Board a decision of Bora Laskin, Q.C., who was the arbiter in the grievance between the employer and the employee. The report stated that in the opinion of the arbiter there was industrial misconduct in fact, but the warnings to the employee were such that they might be considered weak or vague, and, for this reason and other reasons, it was suggested that the employee be re-instated but, however, should suffer a period of suspension.

It is the opinion of the majority of the Board that the claimant did, in fact, lose his employment with Canadian Breweries Transport Ltd. on 8 January 1960, by reason of his own misconduct. The instances of misconduct were admitted by the claimant before the Board...

The dissenting member of the board was of the opinion that in view of Mr. Laskin's decision, referred to above, whereby the claimant should be re-instated to the employ of the company, he did not lose his employment by reason of his own misconduct.

On March 30, 1960, the insurance officer obtained the following information from the employer:

The claimant's last day worked was 8 January, 1960, suspension commenced effective 9 January, 1960. He was re-instated effective 15 March, 1960, following his period of suspension. (The claimant) worked on 15 and 16 March, 1960 and then resigned voluntarily.

The claimant appealed to the Umpire and also requested an oral hearing which was held in Toronto on July 6, 1960. The Unemployment Insurance Commission was represented at the hearing by F. G. Power, a solicitor of its legal branch. The claimant was present.

Considerations and Conclusions: In the course of his testimony at the hearing, the claimant gave reasons why, in his opinion, the employer's action in bringing about the loss of his employment on January 8, 1960 was not justified.

While not wishing to minimize the claimant's side of the story, I feel, as did the

majority members of the board of referees, that he did lose his employment on the latter-mentioned date by reason of his own misconduct. However, as it was considered that the claimant's breach of the company's rules did not warrant his dismissal but a suspension only, I am of the opinion that the nature of the irregularities which brought about his loss of employment was such as to show the existence of extenuating circumstances. For that reason, I hereby direct that the period of disqualification be reduced from five weeks to three weeks.

Except for the foregoing modification, I dismiss the claimant's appeal.

New federal standards for state unemployment insurance to raise benefits and to extend the duration of benefit to 39 weeks in all states were recommended recently by the majority of the United States Senate Special Committee on Unemployment Problems. The minority, on the other hand, proposed that federal grants should be made to states for supplementary benefits during periods of high national unemployment.

Measures for dealing with unemployment unanimously recommended by the committee were: increased federal aid to distressed areas and to employees and businesses hurt by foreign competition; raising the base on which unemployment insurance taxes are levied; increased public assistance aid to states; and federal financial aid to strengthen public employment services.

Other measures proposed by the majority were: a nationwide vocational training program financed by federal grants in aid; establishment of a youth conservation corps and special loans for retraining of certain adult workers; and legislation to provide for stand-by public works and emergency loan programs to enable prompt action to be taken at the outset of a recession.

Canadian Railway Board of Adjustment

(Continued from page 938)

The company said it believed the conductor's interpretation of the car limit rule was wrong, "but whether it was right or wrong is not the point at issue. He had no right to take the arbitrary action he did."

The company held that the discipline assessed was warranted because the conductor's action resulted in disruption of the North Vancouver yard work and in delay and expense to the company. Only the fact that this was the conductor's first offence of this kind saved him from dismissal, the company added.

In a general statement the Board said that "inasmuch as the Squamish subdivision now extends from North Vancouver to Lillooet, the operation of a through freight train out of North Vancouver with more than 70 cars was not permitted under the rule cited by the Brotherhood.

In its decision it recommended, in view of the misunderstanding in the application of the car limit rule, that the discipline assessed be changed from 20 demerit marks to a caution.

Case No. 732—Dispute between Pacific Great Eastern Railway (Vancouver) and the Brotherhood of Railroad Trainmen regarding the time within which notification of

the assessment of discipline has to be given to employees disciplined.

On March 6, a conductor and a brakeman were notified that they had been assessed demerit marks, effective January 30, in connection with a derailment allegedly brought about by excessive speed. The union contended that, in accordance with the current collective agreement, discipline must be assessed within 15 days of the date of the investigation.

The company, in its contention, stated that according to "the accepted practice" the notification to the employees had been placed in the company's mail 14 days after the investigation; but the union protested the discipline on the ground that the employees did not actually receive the notification within 15 days.

The company added that after the protest had been made by the union, meetings were held between representatives of the union and the company, and the company had agreed to the union's request that in future notification of discipline would be sent by Royal Mail, the postmark on the letter to constitute the date of notification.

The contention of the employees was not sustained.

LABOUR CONDITIONS IN FEDERAL GOVERNMENT CONTRACTS

Wage Schedules Prepared and Contracts Awarded during July Works of Construction, Remodelling, Repair or Demolition

During July the Department of Labour prepared 182 wage schedules for inclusion in contracts proposed to be undertaken by departments of the federal Government and its Crown corporations in various areas of Canada, for works of construction, remodelling repair or demolition. In the same period, a total of 168 contracts in these categories was awarded. Particulars of these contracts appear below.

A copy of the wage schedule issued for each contract is available on request to trade unions concerned or to others who have a *bona fide* interest in the execution of the contract.

(The labour conditions included in each of the contracts listed under this heading provide that:

(a) The wage rate for each classification of labour shown in the wage schedule included in the contract is a minimum rate only and contractors and subcontractors are not exempted from the payment of higher wages in any instance where, during the continuation of the work, wage rates in excess of those shown in the wage schedule have been fixed by provincial legislation, by collective agreements in the district, or by current practice;

(b) hours of work shall not exceed eight in the day and 44 in the week, except in emergency conditions approved by the Minister of Labour;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of eight per day and 44 per week;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Contracts for the Manufacture of Supplies and Equipment

Contracts awarded in July for the manufacture of supplies and equipment were as follows:

Department	No. of Contracts	Aggregate Amount
Agriculture	2	\$ 26,259.50
Defence Production	95	414,389.00
Post Office (June Report)	13	260,292.05
Post Office (July Report)	4	118,440.95
RCMP	7	73,156.90

The Fair Wages and Hours of Labour legislation of the federal Government has the purpose of insuring that all Government contracts for works of construction and for the manufacture of supplies and equipment contain provisions to secure the payment of wages generally accepted as fair and reasonable in each trade or classification employed in the district where the work is being performed.

The practice of Government departments and those Crown corporations to which the legislation applies, before entering into contracts for any work of construction, remodelling, repair or demolition, is to obtain wage schedules from the Department of Labour showing the applicable wage rate for each classification of workmen deemed to be required in the execution of the work.

These wage schedules are thereupon included with other relevant labour conditions as terms of such contracts to be observed by the contractors.

Wage schedules are not included in contracts for the manufacture of supplies and equipment because it is not possible to determine in advance the classifications to be employed in the execution of a contract. A statement of the labour conditions which must be observed in every such contract is however, included therein and is of the same nature and effect as those which apply in works of construction.

Copies of the federal Government's Fair Wages and Hours of Labour legislation may be had upon request to the Industrial Relations Branch of the Department of Labour, Ottawa.

(The labour conditions included in contracts for the manufacture of supplies and equipment provide that:

(a) all persons who perform labour on such contracts shall be paid such wages as are currently paid in the district to competent workmen; and if there is no current rate, then a fair and reasonable rate; but in no event shall the wages paid be less than those established by the laws of the province in which the work is being performed;

(b) the working hours shall be those fixed by the custom of the trade in the district, or if there be no such custom, then fair and reasonable hours;

(c) overtime rates of pay may be established by the Minister of Labour for all hours worked in excess of those fixed by custom of the trade in the district, or in excess of fair and reasonable hours;

(d) no person shall be discriminated against in regard to employment because of his race, national origin, colour or religion, nor because he has made a complaint with respect to alleged discrimination.)

Wage Claims Received and Payments Made during July

During July the sum of \$18,755.10 was collected from 13 contractors for wage arrears due their employees arising out of the failure of the contractors, or their subcontractors, to apply the wage rates and other conditions of employment required by the schedule of labour conditions forming part of their contract. This amount is for distribution to the 546 workers concerned.

Contracts Containing Fair Wage Schedules Awarded during July

(The labour conditions of the contracts marked (*) contain the General Fair Wages Clause providing for the observance of current or fair and reasonable rates of wages and hours of labour not in excess of eight per day and 44 per week, and also empower the Minister of Labour to deal with any questions which may arise with regard thereto.)

Goose Bay Labrador: Dougal Painting Contractors Co Ltd, cleaning & refinishing the main floor areas at RCAF Station. *Gander Nfld:* Herwood Lumber Co Ltd, supply & installation of fly screens & storm windows on Administration bldg No 86, RCAF Station. *Greenwood N S:* Lester Croft, exterior trim painting of station bldgs, RCAF Station; Valley Plumbing & Heating Ltd, replacing water service line to bldgs Nos 2, 5, 9, 11, 13, 35, 41 & hangars 1, 2 & 3, RCAF Station. *Halifax N S:* T Hogan & Co Ltd, repairs to refractory in boilers 1 & 2 in bldg No 9, Willow Park. *Bathurst N B:* Maritime Waterproofing & Contracting Co Ltd, exterior renovation & waterproofing of Armoury, Old Post Office Bldg. *St. Hubert Que:* Canadian Erectors Ltd, repairs to two Lee heaters at RCAF Station. *Seven Islands Que:* Tri-Bec Inc, installation of fire alarm protection system in Operation Bldg, walkways & towers, RCAF Station, Moisie. *Ottawa Ont:* Alf Grodde Ltd, cleaning & painting interior of Central Heating Plant at Uplands. *Picton Ont:* H J McFarland Construction Co Ltd, repair of roads in PMQ Area, Picton Heights. *Rockcliffe Ont:* National Roofing & Waterproofing Ltd, re-roofing skating rink & west leanto curling rinks, RCAF Station. *Trenton Ont:* Walker Painting & Decorating Co Ltd, layout & painting of markings on three runways, RCAF Station. *Uplands Ont:* Hurdman Paving Ltd, paving of CE-CEPE parking lot & PMQ entrance road, RCAF Station. *Fort Churchill Man:* Canadian Comstock Co Ltd, extension of electrical power line & installation of transformers. *Portage la Prairie Man:* G H Hay Decorating Co, interior painting of forty PMQs, RCAF Station. *Moose Jaw Sask:* A F Ware, exterior painting of sixty PMQs, RCAF Station. *Saskatoon Sask:* Miller's Sheet Metal & Roofing Contractors, application of roof, Drill Hall, Bldg 20, RCAF Station. *Calgary Alta:* Gallelli & Sons Co Ltd, construction of concrete curb & catch basins, RCAF Station, Lincoln Park. *Edmonton*

Alta: B & E Painting & Decorating Ltd, painting exterior of bldgs, Hamilton Gault Barracks; B & E Painting & Decorating Ltd, exterior painting of bldgs, Griesbach Barracks. *Lancaster Park Alta*: Mecon Installations Ltd, supply & installation of steam line, manhole, etc, RCAF Station, Namao. *Penhold Alta*: Coxson Decorating, interior painting of 30 PMQs, RCAF Station. *Vancouver B C*: Insul-Mastic & Building Products Ltd, exterior cleaning of bldgs & repainting, North Jericho.

Department of Northern Affairs and National Resources

Arctic Red River, Fort Good Hope, Fort Wrigley, Reindeer Station, Lake Claire Sweet Grass Creek, N W T: Maloney-Crawford Tank & Service Co Ltd, supply & installation of POL storage tanks. *Hay River N W T*: Infilco (Canada) Ltd, supply & erection of equipment for water treatment plant.

Department of Public Works

Gull Island Nfld: Hedley Drover, construction of wharf. *St Mary's Nfld*: L G & M H Smith Ltd, wharf repairs. *Launching Pond P E I*: Eastern (P E I) Contractors, retaining wall extension. *Bayfield N S*: Campbell & Grant Construction Co Ltd, breakwater repairs. *Charlos Cove N S*: Colin R MacDonald Ltd, construction of wharf. *Eskasoni N S*: Stephens Construction Ltd, construction of two-classroom school at Eskasoni Indian Agency. *Northport N S*: Colin R MacDonald Ltd, wharf reconstruction & extension. *Whycocomagh N S*: Stephens Construction Ltd, construction of one-classroom addition with toilet accommodation & three-bedroom staff unit, Indian day school. *Dulhousie N B*: Stephen Construction Co Ltd, paving of approach road to public wharf; J W & J Anderson Ltd, roadway repairs. *Richardson N B*: J W McMulkin & Son Ltd, wharf extension. *St. Andrews N B*: MacPherson Builders Ltd, construction of Biological Station workshop. *Stuartown N B*: J W McMulkin & Son Ltd, wharf extension. *White Head N B*: Clare Construction Co Ltd, construction of wharf. *Deschailons Que*: Plessis Construction Ltd, construction of protection works. *Fort George Que*: Ron Construction Co Ltd, construction of pump house & installation of water distribution system, James Bay Agency, & construction of frame bldgs at Paint Hills. *L'Anse au Beaufils Que*: Bisson Construction Inc, harbour improvements. *Les Eboulements (St Joseph de la Rive) Que*: Esdras Boivin, construction of protection wall. *Les Ecureuils Que*: Allmo Paving Ltd, extension to protection wall (1960). *Montreal Que*: Richard & B A Ryan Ltd, installation of elevator, 1613 Delorimier St. *Rouyn Que*: Les Entreprises Rouyn Ltd, addition & alterations, federal bldg. *Ste Anne de Beaupre Que*: Aime Fortin, repairs to wharf. *Goderich Ont*: George L Dillion Construction Ltd, installation of wales & guardrail. *Ottawa Ont*: Gendron Plumbing & Heating Co Ltd, supply & installation of two water pressure systems for X-Ray equipment, 555 Booth St; Otis Elevator Co Ltd, supply & installation of elevator, Rideau Hall; Roy Soderling & Co Ltd, renovations & air conditioning, photographic rooms, Public Archives Bldg, Sussex Drive; Federal Air-Conditioning & Refrigeration Ltd, supply & installation of air conditioning system, "B" Bldg, Cartier Square. *Port Arthur Indian Agency Ont*: O & H Construction Ltd construction of staff unit, Pic Indian day school, Heron. *Six Nations Indian Agency Ont*: Kovacs Construction Co Ltd, construction of two-classroom school, Six Nations No 7. *Toronto Ont*: Kovacs Construction Co Ltd, alterations to Dominion public bldg, 1 Front Street West. *Wallaceburg Ont*: Ontario Marine & Dredging Ltd, harbour improvements (wharf, transit shed & turning basin). *Whitby Ont*: Tracey Construction Inc, harbour improvements. *Selkirk Man*: J S Quinn Construction Co Ltd, wharf extension (Selkirk Shipyard). *The Pas Man*: Matheson Bros Ltd, alterations & additions to federal bldg. *Carway Alta*: Southern Alberta Construction Ltd, alterations to canopies, Canadian Customs & Immigration Bldg. *Goodfish Lake Alta*: Robert Holzer, construction of four-bedroom staff unit & school alterations, Saddle Lake Indian Agency. *Edmonton Alta*: *Erickson & Rimmer & Sons Construction Ltd, construction & delivery of steel ferry for Fort Providence, MacKenzie River; Alberta Mechanical Contractors Ltd, ventilation alterations to existing RCMP Rifle Range. *Lakalsap B C*: Stange Construction Co Ltd, addition of classroom & toilets, Indian day school. *Renata B C*: Pacific Piledriving Co Ltd, wharf reconstruction. *Shoal Harbour B C*: Wakeman & Trimble Contractors Ltd, construction of breakwater. *Skookumchuck B C*: Slade Contractors Co Ltd, construction of one-classroom school & three-bedroom staff unit. *Stuart Island B C*: Pacific Piledriving Co Ltd, construction of wharf & float. *Yoho National Park B C*: W & G Grant Construction (Pacific) Ltd, diversion of CPR mainline in vicinity of Wapta Lake, CPR mileage 125.4 to 126.0. *Hay River N W T*: Rain Bros Construction Ltd, & Park

Bros Ltd, grading, culverts & screened gravel surfacing, Hay River to Enterprise Development Road. *Fort McPherson N W T*: Alta Bend Ltd, construction of water supply & sewage disposal system with mains & services. *Inuvik N W T*: Poole Construction Co Ltd, construction of floating wharf. *MacKenzie River Ferry Crossing N W T*: McNamara Construction Western Ltd, construction of approach roads & causeway. *Carcross Y T*: St Laurent Construction Ltd, construction of warehouse, garage & roothouse, IRS.

Contracts Containing The General Fair Wages Clause

Halifax N S: Fred Rhodenizer, installation of stokers, federal bldg. *Cape Tormentine N B*: Harbour Development Ltd, dredging. *Saint John (Courtenay Bay) N B*: Harbour Development Ltd, dredging. *Quebec Que*: A Gingras, alterations to 910 St Honore St. *Rouyn Que*: Les Entreprises de Rouyn Ltd, supply & installation of partitions, McQuaig St. *Arnprior Ont*: Dibblee Construction Co Ltd, ground improvements, Civil Defence College. *Huntsville Ont*: Sydney Earl, alterations to federal bldg. *Ottawa Ont*: Allied Insulation, insulation of pipes, Central Heating Plant, Cliff St; R A Bingham & Son, installation of partitions, "A" Bldg, Cartier Square; A Lanctot Construction Co Ltd, repairs to entrances, "B" & "C" Bldgs, Cartier Square; Ottawa Boiler & Steel Works, retubing boiler, Jackson Bldg; Roger E Boivin, redecorating washrooms, No 2 Temporary Bldg; McFarlane & Leblanc, electrical repairs, No 2 Temporary Bldg; Bun Wiseman, general repairs, 45 Spencer St; Presley Painting & Decorating Co Ltd, redecoration, Supreme Court Bldg; Roy Soderlind Co, general repairs, Geological Survey Bldg; Rene Cleroux, plumbing repairs, 555 Booth St; F J Shouldice Construction Co Ltd, general repairs, 552 Booth St; A Lanctot Construction Co Ltd, general alterations, Post Office, Sparks & Elgin Sts; J M McQueen, exterior repairs, Rideau Hall; Campbell Steel & Iron Works, boiler room repairs, Cartier Square; The B Phillips Co, general repairs, 30 Lydia St; Thos P Crawford, installation of air conditioning unit, Laboratory, 30 Caldwell Ave; Welldun Plumbing & Heating, plumbing repairs, Centre Block, Parliament Bldgs. *Brandon Man*: Merchandising Industries Co, installation of mail conveyor, federal bldg. *Souris Man*: Dodd Plumbing & Heating Ltd, supply & installation of boiler, Post Office Bldg. *Winnipeg Man*: Building Mechanics Ltd, general alterations, federal bldg. *Regina Sask*: Yarnton Decorating Co Ltd, exterior painting, Motherwell Bldg. *Lethbridge Alta*: General Construction Co, paving, federal bldg. *Browning Passage B C*: MacKenzie Dredging & Derrick Co Ltd, dredging, Pender Island Canal.

St. Lawrence Seaway Authority

St Catharines Ont: MacPherson Construction, road repairs, Lock 1 to Lock 3, Welland Canal.

Department of Transport

Moncton N B: Horton Steel Works Ltd, erection of elevated water storage tank, including concrete foundation, etc. *Cartierville Que*: South Shore Construction Inc, repairs to runway 15-33, Airport. *Orillia Ont*: Allan G Cook, *construction of two steel scows. *Sault Ste Marie Ont*: Curran & Briggs Ltd, additional development, Airport. *Uplands Ont*: Universal Electric, Division of Univex Electrical Construction & Engineering Ltd, installation of underground power distribution, Ottawa Airport. *Regina Sask*: Beattie Ramsay Construction Co Ltd, construction of ramps, sidewalks & access roads to serve new Air Terminal Bldg. *Edmonton Alta*: Arthur A Voice Construction Co Ltd, installation of water supply mains & sewage disposal lines, International Airport; Combustion Engineering-Superheater Ltd, supply & installation of high temperature water generators, International Airport. *Lucy Island B C*: Stange Construction Co Ltd, construction of single dwelling (Prince Rupert Agency). *Vancouver B C*: Allied Builders Ltd, *construction of shallow draft buoy vessel for service on MacKenzie River. *Frobisher Bay N W T*: Bedard-Girard Ltd, installation of approach lighting. *Resolute Bay N W T*: The Tower Company Ltd, prefabrication, transportation & erection of storage bldg at bldg site & installation of ground antenna system at transmitter site.

PRICES AND THE COST OF LIVING

Consumer Price Index, August 1960

Canada's consumer price index (1949=100) advanced 0.3 per cent, from 127.5 to 127.9, between July and August. A year ago the index stood at 126.4.*

The increase resulted largely from a 1.0-per-cent increase in the food index from 120.5 to 121.7, which approximated the usual July-August seasonal increase. The shelter, household operation, and other commodities and services indexes all edged up a fractional 0.1 per cent. The clothing index was down 0.5 per cent.

In foods, higher prices were reported for eggs, beef, pork, bananas and oranges, with most domestic fruits and vegetables showing substantial seasonal declines.

The shelter index moved from 143.9 to 144.0, with rents unchanged but the home-ownership component, reflecting 1960 property tax changes, moving to higher levels.

The household operation index edged up to 123.1 from 123.0 on the strength of price increases for coal, linoleum, textiles and household supplies. Fuel oil prices were lower and August furniture sales were in evidence on a number of furniture items.

The other commodities and services index increased from 137.6 to 137.7 as higher prices were reported for gasoline, taxi fares, some rail fares, newspapers and personal care items. The drug index was lower as substantial price decreases occurred on penicillin prescriptions.

The clothing index declined from 110.8 to 110.3, as mid-summer sale prices for women's and children's wear and some footwear offset scattered price increases for cotton dress prints, boys' trousers and men's pyjamas.

Group indexes one year earlier (August 1959) were: food 120.5, shelter 141.9, clothing 109.7, household operation 122.6, and other commodities and services 135.3.

City Consumer Price Indexes, July 1960

Consumer price indexes (1949=100) showed mixed results between June and July: five of the ten regional city indexes were lower, four were higher and one unchanged.† Decreases ranged from -0.5 per cent in both Halifax and Montreal to -0.1 per cent in Toronto; increases ranged

narrowly from +0.2 per cent in Saskatoon-Regina to +0.3 per cent in St. John's, Winnipeg and Edmonton-Calgary. The Saint John index was unchanged.

Food indexes were lower in six cities and higher in the other four regional cities. Shelter indexes rose in six cities, declined in three cities and remained unchanged in the remaining regional city. Clothing indexes were quite steady; they remained unchanged at June levels in five cities, declined in three cities and increased in the other two cities. Household operation indexes showed mixed results, with indexes down in three cities, up in four cities and unchanged in the other three. Other commodities and services indexes increased in three regional cities, decreased in six cities and remained unchanged in the other regional city.

Regional consumer price index point changes between June and July were as follows: Halifax -0.6 to 126.4; Montreal -0.6 to 127.2; Ottawa -0.4 to 128.2; Vancouver -0.2 to 127.5; Toronto -0.1 to 130.1; Winnipeg +0.4 to 125.4; Edmonton-Calgary +0.4 to 123.6; St. John's +0.3 to 116.5*; Saskatoon-Regina +0.3 to 124.0. Saint John remained unchanged at 128.6.

Wholesale Price Index, July 1960

Canada's general wholesale price index (1935-39=100) edged up 0.1 per cent between June and July this year, from 231.9 to 232.2, and was 0.5 per cent above last year's July index of 231.1.

The increase was not evenly distributed among the component groups; all but two of the eight major group indexes declined.

Higher prices for eggs, oils and fats, fresh and cured meats, furs, and livestock pushed the animal products group index up 1.8 per cent from 246.0 to 250.5, which was sufficient to account for the slight rise in the total index. The index for the chemical products group was unchanged at 188.2.

The index for the vegetable products group was down 0.2 per cent from 205.2 to 204.7. There was a drop of 0.4 per cent in the wood products group index from 307.5 to 306.3. Decreases of 0.1 per cent occurred in the textile products, iron products, and non-metallic minerals group indexes.

*See Table F-1 at back of book.

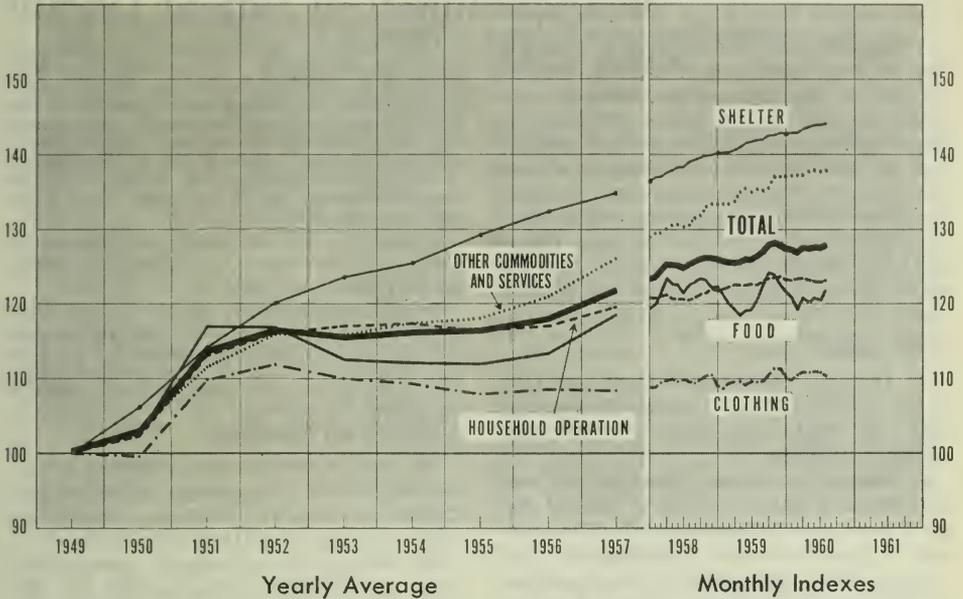

†See Table F-2 at back of book.

*On base June 1951=100.

CONSUMER PRICE INDEX

Index 1949=100

Index 1949=100

U.S. Consumer Price Index, July 1960

Recording the smallest July increase in six years, the United States consumer price index (1947-49=100) rose 0.1 per cent between mid-June and mid-July to a new record high, 126.6. It was 126.5 at mid-June and 124.9 in July 1959.

This was the fifth consecutive month in which a new high was reached, and the increase during the month was the 13th in 16 months.

Principal causes of the latest increase were higher prices for food (although the increase here was smaller than usual at this time of year), gasoline and services.

U.K. Index of Retail Prices, June 1960

The United Kingdom index of retail prices (Jan. 17, 1956=100), after holding steady for two months, rose from 110.3 to 110.9 between mid-May and mid-June. This index is now 1.6 points higher than in June last year.

Canadian Co-operatives Report 8-Per-Cent Increase in Business

The volume of business done by Canadian marketing, purchasing, fishermen's and service co-operatives in the year ended July 31, 1959 was 8 per cent greater than in the previous year, it is reported in the 28th annual edition of *Co-operation in Canada*, a publication of the Economics Division, Department of Agriculture.

The 1959 total was \$1,363,752,000, compared with \$1,245,423,000 in 1958.

The number of co-operative associations in Canada increased to 2,905 during 1959 from 2,883 the year before, but the number of shareholders or members dropped from 1,580,089 to 1,564,514.

The marketing and purchasing co-operatives accounted for by far the largest volume of business—a total of \$1,296,273,000 in 1959, compared with \$22,744,000 in service, and \$25,161,000 in fishermen's co-operatives.

Although fewer marketing and purchasing co-operatives reported in 1959, there was an increase of \$55 million in assets over 1958. Assets in 1958 totalled \$505,023,000; in 1959 the total was \$560,148,000.

Liabilities to the public increased from \$283,176,000 in 1958 to \$314,686,000 in 1959. Liabilities to members also increased from \$77,175,000 in 1958 to \$79,528,000 in 1959.

Net worth of the reporting marketing and purchasing co-operatives increased from \$144,672,000 to \$165,933,000, and members' equity from \$221,847,000 to \$245,461,000.

35. INTERNATIONAL LABOUR OFFICE. *Report of the Director-General.* First item on the agenda. Geneva, 1960. 2 Volumes.

At head of title: Report 1. (Part 1-2). International Labour Conference. Forty-fourth session, Geneva, 1960. Contents: Pt. 1. Youth and Work. Pt. 2. Fourteenth Report of the International Labour Organization to the United Nations.

36. U.S. BUREAU OF LABOR STATISTICS. *Health and Insurance Plans under Collective Bargaining; Hospital Benefits, Early 1959.* Washington, GPO, 1960. Pp. 37.

A study of the hospital benefit features of health and insurance plans under collective bargaining based on a analysis of 300 selected plans.

Wages and Hours

37. STIEBER, JACK W. *The Steel Industry Wage Structure; a Study of the Joint Union-Management Job Evaluation Program in the Basic Steel Industry.* Cambridge, Harvard University Press, 1959. Pp. 380.

The wage structure system in the basic steel industry in the U.S. is based on job descriptions and classifications negotiated jointly by the steel companies and the United Steelworkers of America. This book discusses these negotiations and the development and administration of the job evaluation program.

38. U.S. DEPARTMENT OF LABOR. *Problems involved in applying a Federal Minimum Wage to Agricultural Workers,* by Harry S. Kantor with the assistance of Cora S. Cronemeyer and Francis L. Hauser. Washington, 1960. 2 Volumes.

"Much of the present study represents an effort to identify the practical difficulties in the application of a minimum wage to agriculture and to develop solutions, or approaches to solutions."

Miscellaneous

39. CANADA. ROYAL COMMISSION ON ENERGY. *Report.* 1st-2nd. Oct. 1958-July 1959. Ottawa, Queen's Printer, 1959-1960. 2 Volumes.

Henry Borden, chairman. Contents of 1st Report: Export of Natural Gas and Crude Oil. Regulation of Pipe Line Companies. National Energy Board. Trans-Canada Pipe Lines Limited. Contents of 2nd Report: Crude Oil Reserves. Production and Marketing of Canadian Oil. Export of Canadian Oil. Future

Markets for Canadian Oil. The Montreal Market. Conclusions and Recommendations.

40. GREAT BRITAIN. CENTRAL YOUTH EMPLOYMENT EXECUTIVE. *Choosing your Career.* London, HMSO, 1960. Pp. 32.

Booklet prepared for young people leaving school. Suggests different types of jobs and the training necessary for them. The material in this booklet has particular reference to British students.

41. GREAT BRITAIN. FACTORY DEPARTMENT. *Report on Safety and Health in the Building and Civil Engineering Industries, 1954-1958.* London, HMSO, 1960. Pp. 30.

42. GROUP OF FOUR ON ECONOMIC ORGANIZATION. *A Remodelled Economic Organization. [A Report by the Group of Four established by the Resolution of 14th January 1960 of the Twenty Governments and the Commission of the European Economic Community]* Paris, Organization for European Economic Co-operation, 1960. Pp. 78.

The Group of Four consisted of W. Randolph Burgess, Bernard Clappier, Sir Paul Gore-Booth and Xenophon Zolotas. The Group of Four on Economic Organization met to consider the reorganization of the Organization for European Economic Co-operation to allow for inclusion of the present eighteen members plus the Associate Members, Canada and the U.S.A. This report briefly reviews the work of the OEEC and suggests what the Group of Four thinks are the principal aims and tasks for a future Organization "in the light of experience and changes in the economic scene." The Group of Four includes proposals for membership, name and structure and the necessary juridical and transitional arrangements, and a suggested draft Convention. The proposed name for the new Organization is the Organization for Economic Cooperation and Development.

43. INCE, (SIR) GODFREY HERBERT. *The Ministry of Labour and National Service.* London, Allen & Unwin, 1960. Pp. 215.

The author was Permanent Secretary to the Ministry of Labour and National Service from 1944 to 1956. He describes the function of the Ministry and some of the problems with which it has had to deal with and outlines its principal duties.

44. MONTREAL. UNIVERSITY. DEPARTMENT OF INDUSTRIAL RELATIONS. *Les relations industrielles: signification et recherche,* par Jean-Real Cardin. Montreal, 1960. Pp. 22.

A general discussion of industrial relations research.

45. PUBLIC PERSONNEL ASSOCIATION. OTTAWA CHAPTER. *Conference for Personnel Officers, March, 1960. Text of Major Speeches.* Ottawa, 1960. Pp. 44.

Contents: The Role of the Civil Service Commission, by G. A. Blackburn. The Role of the Department of Finance in Personnel Administration, by H. R. Balls, D. E. Anderson, J. E. E. MacLaren [and] J. B. Moore. The Role of the Treasury Board in Personnel Administration, by C. J. MacKenzie. The Role of the Departmental Officer in the Future, by L. J. Rodger. What Top Management expects of the Personnel Officer, by Dr. G. F. Davidson.

* Less than 10,000.

(1) The change between September and October 1958 in the level of estimates of "Persons without jobs and seeking work" in Newfoundland appeared to be mainly a manifestation of sampling error. This factor should be recognized in any comparison of estimates for September 1958 or earlier with estimates for October 1958 or later.

* Less than 10,000.

B—Labour Income

NOTE: The estimates of labour income in this table have been revised in accordance with recent revisions to the National Accounts. Note particularly the use of annual totals instead of monthly averages, and the introduction of quarterly instead of monthly totals for some industries. Monthly and quarterly figures may not add to annual totals because of rounding.

¹Quarterly figures are entered opposite the middle month of the quarter but represent quarterly totals.

²Includes post office wages and salaries.

³Figures in this column are for total labour income, Canada, but are not totals of the figures in the remaining columns of this table, as figures for labour income in Agriculture, Fishing and Trapping are not shown. (See also headnote.)

* Revised.

† Preliminary.

C—Employment, Hours and Earnings

Tables C-1 to C-3 are based on reports from employers having 15 or more employees—at June, 1960 employers in the principal non-agricultural industries reported a total employment of 2,366,502. Tables C-1 (every second month) and C-3 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-3. They relate only to wage earners for whom statistics of hours of work are also available whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage earners in the reporting firms.

¹Includes (1) Forestry (chiefly logging), (2) Mining (including milling), quarrying and oil wells, (3) Manufacturing, (4) Construction, (5) Transportation, storage and communication, (6) Public utility operation, (7) Trade, (8) Finance, insurance and real estate and (9) Service, (mainly hotels, restaurants, laundries, dry cleaning plants, business and recreational service).

TECHNICAL NOTE—A change has been made in the method of dating the statistics published in Tables C-1 to C-6 to conform with the usual practice of the Dominion Bureau of Statistics. In the past, statistics for the last pay period in a month were labelled "pay period preceding" the first day of the following month. From now on, statistics for the last pay period in a month will be labelled for that month. Another change is that average hourly earnings formerly expressed in cents carried to one decimal place, are now published in dollars and cents.

*Revised.

Tables C-4 and C-5 are based on reports from a somewhat smaller number of firms than Tables C-1 to C-3. They relate only to wage-earners for whom statistics of hours of work are also available whereas Tables C-1 to C-3 relate to salaried employees as well as to all wage-earners of the co-operative firms.

TABLE C-4—HOURS AND EARNINGS IN MANUFACTURING BY PROVINCES

(Hourly-Rated Wage-Earners) SOURCE: Man-hours and Hourly Earnings (Dominion Bureau of Statistics)

(The latest figures are subject to revision)

	Average Hours Worked			Average Hourly Earnings (in cents)		
	May 1960	April 1960	May 1959	May 1960	April 1960	May 1959
Newfoundland.....	41.6	42.5	39.7	1.58	1.61	1.58

D—National Employment Service Statistics

The following tables are based on regular statistical reports from local offices of the National Employment Service. These statistics are compiled from two different reporting forms, UIC 751; statistical report on employment operations by industry, and UIC 757; inventory of registrations and vacancies by occupation. The data on applicants and vacancies in these two reporting forms are not identical.
