

**CÔTE D'IVOIRE**

- Data is based on official information reported by the Ministries of Health. Numbers are subject to change due to ongoing reclassification, retrospective investigation and availability of laboratory results.
- All numbers include confirmed, probable and suspected cases.

## SITUATION

- As of 23 February, WHO reported a total (confirmed, probable, and suspected) of 23 539 cases of Ebola Virus Disease (EVD) in the three most affected countries (Liberia, Sierra Leone, Guinea) along with 9 541 reported deaths.
- Transmission in Sierra Leone has declined but remains widespread, and in Guinea there was an increase during the last weeks. Case incidence in Liberia remains low.
- All affected countries still face considerable challenges in order to 'get to zero'. Desire and decisions to normalise life and enter into recovery / post EVD phase are meanwhile increasingly noted, such as Liberia's reopening of its borders and lifting of the national curfew on 22 February.
- The EU is organizing a High Level Conference on Ebola on 3 March in Brussels. The focus of the conference is on 'getting to zero', bringing in recovery actions and also includes a medical health part.
