that denomination being among his most valued friends. Strong good sense, sound judgment, great clearness of perception and statement were his most striking characteristics. Eminently just and honorable in all his dealings and despising everything false or tricky, he was nevertheless a man of strong prejudices, but he did not allow them to betray him into injustice. Mr. Pickman was not only an accomplished merchant, familiar with everything relating to accounts, the laws and usages of insurance, banking and exchanges, but extensive reading, aided by an excellent memory, had given him a vast fund of general information, particularly on historical and geographical subjects and the politics of Europe and this country, as well as a good knowledge of the best English and French literature. He was a large man physically, fully six feet two inches in height, of striking presence, with a fine head and expansive forehead, indicating decided brain-power. His manners had all the dignity and courtesy of the old school. The brick house on the corner of Chestnut and Pickering Streets, built in 1819, was occupied by him until his death, which occurred in 1846. He was married, in 1810, to Catherine, daughter of Thomas Sanders, of Salem. Three children survived him: Catherine Sanders, married to Richard S. Fay, of Boston; Elizabeth Leavitt, to Richard S. Rogers, of Salem; and William Dudley, to Caroline, daughter of Zachariah F. Silsbee, of Salem.

A son of the last, born in Salem in 1850, and a grandson, born at Geneva, Switzerland, in 1885, both bear the name of Dudley Leavitt Pickman.

RICHARD S. ROGERS.

Richard Saltonstall Rogers was born in Salem January 13, 1790, and was a lineal descendant, not from John Rogers, the martyr, as has been supposed by some, but from another John Rogers, a contemporary of the martyr, living in another part of England. This John Rogers had two sons,—the Rev. Richard Rogers, of Weathersfield, and John, who lived in Chelmsford. The latter son, John, was the father of Rev. John Rogers, of Dedham, England, who was the father of Rev. Nathaniel Rogers, who was born in Haverhill, England, in 1598, came to New England in 1636, and was settled at Ipswich in 1637. The Rev. Nathaniel Rogers married Margaret Craue, and was the father of Rev. John Rogers, of Ipswich, born in Coggeshall, England, in 1630, who graduated at Harvard College in 1649, and was its president from April 10, 1682, until his death, July 2, 1684. The Rev. John Rogers, the president, married Elizabeth Dennison, and was the father of another Rev. John Rogers, of Ipswich, who was born in Ipswich in 1666, and graduated at Harvard in 1684. The last John married Martha Whittingham, and was the father of Rev. Nathaniel Rogers, of Ipswich, born September 22, 1701, and a graduate at Harvard in 1721.

The Rev. Nathaniel Rogers married, first, December 25, 1728, Mary, daughter of John Leverett, president of Harvard College, and widow of Colonel John Denison, of Ipswich, and second, Mary, daughter of Thomas Burnam, and the widow of Daniel Staniford. By his second wife he had Nathaniel, born March 11, 1762, and a graduate at Harvard in 1782. The last Nathaniel married Abigail, daughter of Colonel Abraham Dodge, and had Nathaniel Leverett, August 6, 1785, who married, October 24, 1813, Harriet, daughter of Aaron Wait, of Salem; John Whittingham, who married Austin, daughter of Colonel Benjamin Pickman, of Salem; Richard S., the subject of this sketch, January 13, 1790; William Augustus, who graduated at Harvard in 1811; and Daniel Dennison, who died in infancy.

About the year 1790, after the birth of his two oldest children, Nathaniel Rogers removed from Ipswich to Salem. Richard Saltonstall, with his brothers, was educated at the common schools, and in early manhood entered with energy and enthusiasm upon a business career. At that time Jerathmael Peirce, the father of Benjamin Peirce, librarian of Harvard College from 1826 to 1831, and grandfather of the late Benjamin Peirce, professor of astronomy and mathematics at Harvard, was, with Aaron Wait, under the firm name of Wait & Peirce, largely engaged in Salem in the foreign trade. Nathaniel Leverett Rogers, the oldest brother of Richard, married, in 1813, Harriet, the daughter of Mr. Wait, and through his influence Richard obtained large consignments of merchandise to Russia, and spent several years in that country engaged in the management of the affairs of that enterprising house. In 1816 he sailed as supercargo in the ship "Friendship," belonging to the same house, on a voyage to Lisbon and Calcutta, and after successive voyages in that capacity, and one voyage on the ship "Tartar," as master, he, with his next oldest brother, John Whittingham Rogers, was taken into partnership by his oldest brother, Nathaniel Leverett Rogers, who had already established himself at Salem in foreign trade, under the name of Rogers Brothers. The three brothers, all of whom were quick-sighted, quick-witted and quick to act where shrewd calculation and clear judgment led the way, started at once on a career which, during twenty years, overcame every obstacle in the way of its success.

The older readers of this sketch will remember the vessels in their employ and the captains who commanded them,—the "Grotius," "Augustus," "Tybee," "Clay," "Nereus," "Quill" and "Charles Daggett," will be recognized as names of vessels of which not a timber-head remains, while the names of their masters—Woodbury, Ward, Skerry, Neal, Farley, Vanderford, Kinsman, Lamson, King, Mugford, Bowditch, Brookhouse and Drevin—only recall the past and its busy days of active commercial life. With these ships and masters the Rogers Brothers

Richd. G. Key

John Peckham

were the pioneers in the Zanzibar and New Holland trades, and besides numerous voyages to South America and various European ports, there were performed by them more than one hundred and twenty voyages around either Cape Horn or the Cape of Good Hope.

Those who are familiar with the facilities which ocean cables afford to the merchant who sends his ship to-day into distant seas find it difficult to appreciate the judgment and skill and heroic courage without which no man could successfully engage in foreign commerce fifty years ago. Now the owner communicates with his master in every port, and orders are postponed to meet the exigencies as they arise. Then a one or two or three years' voyage was planned at the start, and its successful termination was a triumph of business skill. Of this skill the Rogers Brothers were largely the possessors and until unexpected and undeserved reverses met them, in 1842, their career was smooth and prosperous.

But the reverses were not sufficient to discourage or depress Mr. Rogers. He met them with the same undaunted courage which he had always exhibited when perils threatened and disaster was nigh. He again adopted the occupation of his early life and sailed as supercargo to Australia in the ship "Ianthé," Captain Woodbury, opening with hope a new chapter in his life. He afterwards became engaged in commerce to some extent with his brother-in-law, W. D. Pickman, of Salem and Boston, and never permitted himself, as long as health and strength remained to fall away from active and absorbing pursuits.

Mr. Rogers married, May 14, 1822, Sarah G., daughter of Hon. Jacob Crowninshield, and had William Crowninshield; Richard Denison, who married Martha Endicott, daughter of Colonel Francis Peabody; Jacob Crowninshield, who married Elizabeth, daughter of Colonel Francis Peabody; Sarah and George, who died early; and Arthur Saltonstall. He married, second, March 17, 1847, Elizabeth L., daughter of Hon. Dudley L. Pickman, of Salem, and had Dudley Pickering; George Willoughby, who married Josephine Lord, of Peabody; and Elizabeth P., who married Mr. Pound, and resides in England.

Mr. Rogers was a man who never sought popularity nor office. His individuality was strong, his opinions were his own and not easily changed, his will was indomitable, and for many years his influence in political and civil life was marked. He was at various times a member of the Common Council of Salem and of the Legislature, but the methods of modern politicians were distasteful to him and he had no ambition to keep them company. He died June 11, 1873, at Salem, at the ripe age of eighty-three years.

CAPTAIN JOHN BERTRAM.

Among the names which Salem holds in loving and lasting remembrance, there are few, if any, which are

more highly esteemed than that of John Bertram. He was a notable representative of a class of men who, as civilization advances, grow more and more important in their influence upon society. In a business age like our own, a great merchant is pre-eminently a factor of force. He and his work touch the community at an infinite number of points. His honest successes are an inspiration to the multitude of workers, the patience and industry by which he wins his wealth and standing are a rebuke to the idlers who take life easily and hope to find short cuts to fortune, his methods are suggestive and healthful, and his history is a school book for beginners to study. In the record of human activities there is nothing finer than the story of the career of a truly great and honorable merchant.

And both as a great and honorable merchant John Bertram was exceptionally eminent. He owed nothing to fortune. Born in humble circumstances with no friends to push him, and no capital with which to begin the world, he shouldered himself to the first rank of successful business men by sheer force of will and patient endurance. He first saw the light in the Isle of Jersey, February 11, 1796. His family were residents of the Parish of St. Saviour, to which parish his ancestry as far back as he was able to trace it had always belonged. The Bertram family belonged to the middle class, in the somewhat peculiar society of the unique island which is both French and English. The ancient parish church is still standing, and in later life Mr. Bertram had the pleasure of revisiting the very locality where, as a boy, he had played, and of entering again the old church in whose very shadow he had perhaps in his earlier years nursed ambitions and hopes that were to be realized in his later life. Beyond question, that old church and its surroundings had something to do with imparting a permanent tinge to his thoughts and feelings, for through a long life he showed a profound reverence for and interest in religious matters, and a sketch of the old church procured in his later years was one of the most highly esteemed of his household treasures.

The family came to America in 1807, and settled in Salem. Like all adventurous Salem boys of that day, John conceived a grand passion for the sea. The shop where he worked was within hearing of the lapping of the waves, and through the windows he could catch sight of the lines of masts and the white gleam of the canvass and the songs of the sailors outward or homeward bound, seemed to invite him to become a wanderer on the ocean. At last a decision was reached, and in December, 1812, Captain Bertram, then sixteen years old, shipped for his first voyage on board a vessel bound for Alexandria and Lisbon, rated on the ship's lists as a "boy" with a pay of five dollars a month. Then came the exciting times of the War of 1812, and after his return from his first voyage he followed the adventurous life of a privateer

until he found himself a prisoner on board the prison ship "Alicant," at Bermuda, and in 1815 one of the unhappy captives confined in the prison ship at Plymouth, England.

The close of the war released Captain Bertram from his captivity, and he found himself at home again, with very little to show for his years of hard service. But the boy's romance had become the purpose of the man, and he was soon afloat again, serving in vessel after vessel, voyaging to all parts of the world, rising from grade to grade, until he found himself in command, retiring from the hard life of the sea in 1832, after twenty years of tasking and faithful service. From thence on he continued in the ordinary routine of commercial business until 1848, when the discovery of gold in California set the world on fire. Captain Bertram was quick to discern the value of this new opening for business, and sent out the first vessel from the States after the discovery of gold, and the third vessel which arrived from any port. He, with others, subsequently built a number of ships for the trade, most of them clippers, some of them very large. From 1852 to 1858 he gradually narrowed the range of his commercial business, until at last he confined it to trade in the Indian seas. In 1856 he became interested in Western railroads, and carried into the new business the same energy and caution and foresight which had characterized him in other departments of activity. There, as elsewhere, his ability commanded success, and his faculty for organization enabled him to spend his last years with his business so well in hand, that he was free from anxiety and relieved from overburdensome labor. At the same time he did not intermit his vigilance. Useful occupation was his delight, and he devoutly believed that if a man wished to be well served, he must serve himself. His quiet office was an observatory, whose windows looked north, south, east and west, and he kept watch of what was going on that concerned him, both on the far shores of Zanzibar and beyond the roll of the Mississippi. Wherever the business was the man was, to plan and oversee and superintend.

Perhaps the most notable thing about Captain Bertram—certainly the thing by which he will be longest and most lovingly remembered—was his open-handedness. He was no importunate creditor in the transaction of business. The number of obligations due him, which were cancelled without payment, will never appear upon the open record. Impatient as he might be at any attempt to defraud him, intolerant as he was of all shiftlessness and extravagance, yet when misfortune overtook his debtors, they had nothing to fear from him. Instead of being their persecutor, demanding the pound of flesh nominated in the bond, he was sure to become their helper. He took especial interest in young men in their early business struggles, and was ready to assist them, both with advice, which, however valuable, is cheap, and

also with financial aid, which most men do not furnish so readily. He had been young himself, and knew all the perplexities of beginnings, and, out of his own experience, caught the impulse to save others from what he had suffered himself.

And this open-handedness was not a matter of self-fish calculation. It came out of large-heartedness. This business consideration was supplemented by most munificent liberality. During the dark days of the War of the Rebellion he was a most intense patriot, in purse as well as profession. The wants of the soldiers never plead with him in vain, and he often anticipated the cry for help before it was uttered. The records of the Grand Army show that this generous interest was not a momentary enthusiasm. To the close of his life he kept in mind the needs and the deserts of the defenders of the Union, and his unrecorded liberalities in their behalf were quite as numerous as his formal donations. The forlorn condition of the race whom the war liberated was constantly and pressingly present with him, and any plan for their elevation was sure to receive generous consideration at his hand; so that he made himself powerfully felt in the schools and educational movements undertaken in behalf of the freedmen. Soldiers and freedmen alike never lost a better friend than Mr. Bertram.

The needs of his own community made constant and large demands upon his sympathy. He was always ready to listen to a story of want, and no deserving applicant failed of a helping as well as a hearing. His generous instincts often foresaw the formal appeal for assistance. He kept a list, to which he was constantly adding new names, of needy families, to whom he annually sent supplies of fuel, and he left in trust to the city a large amount, the income of which was to be used year by year in providing wood and coal for the poor, and no nobler or more judicious legacy was ever made. Morning by morning his hand kindles the fires on scores of the hearthstones of the destitute, and his memory is kept alive by the gracious light and warmth in multitudes of the homes of poverty. A benefaction of that sort is a well-considered charity.

Captain Bertram's liberalities of this nature were numerous. His gifts to the Salem Hospital, his establishment of the Bertram Home for Aged Men, his legacy to the Children's Friends' Society were all on a munificent scale, and will go on doing a work of blessing for generations to come.

No other single citizen of Salem has done more for the good name and real welfare of the municipality than Captain John Bertram. His life was a striking illustration of the fact that wise and generous giving does not impoverish a man. The serene content of his old age was the result of a useful and unselfish life,—a forcible and instructive lesson to those whose highest ideal of living is a constant struggle for merely personal advantage. The tears of the hun-

Jacob Pitman

dreds whom he had helped, that watered his grave when he was borne to his rest at the ripe term of eighty-six years, were the most satisfying tribute which any man can receive. The regret at his loss, with which his name is always spoken, is conclusive evidence that a useful and generous life is the fairest which any man can live. This is the true earthly immortality which is best worth the having.

So long as Salem is well spoken of by those who are acquainted with the ancient city, there will be coupled with its other claims to regard and renown the name of JOHN BERTRAM.

JACOB PUTNAM.

The late Jacob Putnam was one of the founders of the leather business in this vicinity. He was a man of a kindly nature, of indomitable energy and unflinching integrity, and possessed a large share of that intuitive knowledge of human nature which lies at the foundation of success in every vocation.

He was of English descent and traced his lineage back among the earliest settlers of this Commonwealth, to John Putnam, of Aylesbury, Buckingham County, England, who, with his wife and three sons, sailed from London, in 1631, for New England. He disembarked that same year in Boston, and, after a short stay in Charlestown, proceeded with his family to the then infant village of Salem, and here fixed his new place of abode. That he had been a man of note and had attained prominence in his native country is shown by the fact that a tract of land in Salem was now granted to him by the Crown for distinguished services rendered to the English government. Upon this tract he soon erected a house for himself and one also for each of his three sons, and devoted himself to the subjugation of the wilderness and the development and improvement of his new estate. His family increased and multiplied with the lapse of years, and by the achievements of many of its members the family name of Putnam has attained a deservedly high reputation both in the arts of peace and of war. The immediate descendants of this first emigrant were active, discreet and courageous men, fully alive to all the interests of the early settlers of New England and active and stirring in all the exciting struggles which marked our colonial history. They took part in all the combats with the Indians, at Bloody Brook, Brookfield, Lancaster and other now famous fights. The family soon attained prominence in Salem and, indeed, in the whole of Essex County, the sound judgment and vigorous integrity of its members making them fit leaders in all new enterprises, from the institution of a church to the prosecution of a business venture, and safe guides to wise decisions on the many knotty points that tasked the ingenuity of our ancestors as they laid broad and deep the foundations of our present commonwealth.

General Israel Putnam was from one of the branches

of this family; and his impetuous zeal and daring, which might have degenerated into audacity had it not been so shrewdly tempered with New England discretion, have been displayed in many other members of the family.

One of the sons of this John Putnam, the founder of the family, was Nathaniel, and through him, his son Benjamin, his grandson Stephen, and his great-grandson Stephen, the younger, a share of the ancestral estate originally granted by the Crown to John Putnam came to Jacob Putnam, the subject of this sketch, and fifth in the line of descent from the original settler. Jacob Putnam was born at Danvers November 17, 1780, near the close of the Revolutionary War, and grew up to manhood in Salem and in Danvers. He did not enjoy great opportunities of education, having to depend upon the common schools of his neighborhood for the slender education which he obtained from others. But his best education, as is not infrequently the case, was that which he owed to himself alone. He had inherited the traits of his ancestors in no small measure, and his good judgment and common sense enabled him always to be equal to the demands of any situation in which he found himself, and fully capable of carrying on an active business career. The same adventurous spirit which had found vent in the daring achievements of General Putnam led Jacob Putnam in his early manhood to seek fortune in maritime commerce; but his sound judgment soon persuaded him to settle down into the steady pursuits of a business life. In the year 1805 he made a trip to Calcutta in the good ship "Boston Packet," and was absent from his home for two years.

Upon his return to Salem from this voyage, in the year 1807, he established himself in the hide and leather business. This business he prosecuted in all its branches, dealing in hides, tanning, currying and marketing the finished product, extending his operations as opportunities offered, and always availing himself of whatever improvements were within his reach. He also engaged in the South American trade importing both hides and India rubber from that country. He was interested in the Sumatra trade and became a ship-owner and importer. He continued the active prosecution of his business until his death, which occurred January 18, 1866, when it passed to his youngest son, George F. Putnam, of Boston, the present proprietor.

Mr. Putnam's wife was the daughter of Captain James Silver, of Salem, an East India merchant.

Though Mr. Putnam held himself aloof from any political office, he was a highly public-spirited man, and always took a sagacious and intelligent interest in all matters relating to the improvement of his native city. His generous and kindly nature was also active in many directions, especially in private charities, for he had none of that vanity which seeks to make a public display of its benefactions; and his humane and kindly disposition was known by its

fruits to many a poor family, which had good reason to mourn his death.

Mr. Putnam was also a man of deep feeling of patriotism and eager to promote the welfare of his country. He served as a soldier in the War of 1812, doing duty on the sea-coast defenses at Salem, and serving the public and his country in other directions. He took a deep interest in the prosperity and success of the religious enterprises of his day, both in his native city and in the country at large, and contributed generously towards their support. He was interested in fostering everything that would promote the progress and prosperity of his community and of his country. A man of the highest probity and honor, his character was unstained, and he died respected and honored by all who knew him.

STEPHEN C. PHILLIPS.

Stephen Clarendon Phillips was descended from Rev. George Phillips, who was the son of Christopher Phillips, of Rainham, in the county of Norfolk, England. Rev. George Phillips was born in 1593, and was educated at Tittleshall. He entered Gouville & Cain's College, Cambridge, April 20, 1610, receiving the degree of A. B. 1613 and A. M. in 1617. He came to New England in the "Arbella" in 1630, and settled in Watertown, where he died. By a first wife, who was a Hayward, he had a son, Samuel, born in 1625, who graduated at Harvard in 1650, and succeeded Rev. Ezekiel Rogers as minister of Rowley. Samuel married, in 1651, Sarah, daughter of Samuel Appleton, a native of England, who was one of the first settlers of Ipswich. By a second wife (Elizabeth Welden) Rev. George Phillips had Zerobabel, February 5, 1632; Jonathau, October 19, 1633; Theophilus, April 28, 1636; Annible, October, 1637; Ephraim, 1640; Obadiah, 1641; and Abiel. Jonathan, one of these children, married, January 26, 1680, Sarah, daughter of Jeremiah Holland (Harvard College, 1645), was a schoolmaster and magistrate, and died at Watertown, his native place, in 1704. His children were Sarah, born September 14, 1682; Abigail, April 22, 1683; Jonathan, 1685; George, Nathaniel, Elizabeth, Ruth, Sarah and Hannah. Jonathan, one of these children, was born in Watertown, and married, February 27, 1717, Hepzibah, daughter of Stephen Parker, of that place. He removed, in 1719, to Marblehead, and, about 1740, to Newport, R. I., where he died. His children were Stephen, born July 18, 1718, Ruth and others. Stephen, one of these children, was born in Watertown, and married Elizabeth, daughter of Thomas Elkins, of Marblehead. He was a prominent man, deacon of the Congregational Church, and, in Revolutionary times, an ardent patriot and a member of the Committee of Safety and Correspondence. He died in Marblehead March 1, 1801. His children were Mary, born August 22, 1755; Elizabeth, November 28, 1757; Sarah, February 23, 1760; Stephen, November 13, 1764; Lydia, January

17, 1767; William, November 15, 1769. Stephen, one of these children, was born in Marblehead, and for some years was a ship-master in the employ of E. Hasket Derby, of Salem. About the year 1800 he removed to Salem, after which time he was engaged in commerce, except during the last few years of his life, when he spent his summers on his estate in North Danvers. Salem continued, however, to be his residence, and there he died October 19, 1838. He married Dorcas, daughter of Dudley and Dorcas (March) Woodbridge, of Salem, who died at Salem June 15, 1802.

Stephen Clarendon Phillips, the subject of this sketch, was the son of the last-named Stephen, and was born in Salem November 4, 1801. But the distinguished character of his ancestry is not confined to the family whose name he bore. Through his mother (Dorcas Woodbridge) he was descended from Rev. John Woodbridge, a follower of Wickliffe, in the latter part of the fifteenth century, whose son John braved the dangers of the same faith, as did a line of four direct descendants, all clergymen, and all named John. The last John, minister at Stanton Wits, in England, married Sarah, the daughter of Robert Parker, and sister of Thomas Parker, who came to New England and settled in Newbury in 1695. His son, Rev. John Woodbridge, came to New England in 1635, and died in Newbury, March 17, 1695. He married, in 1639, Mary, daughter of Governor Thomas Dudley, and thus the Dudley as well as the Woodbridge blood runs in the veins of the Phillips family. Nor is this all; Benjamin Woodbridge, son of the last Rev. John, and great-grandfather of Dorcas (Woodbridge) Phillips, married Mary, grand-daughter of Rev. Nathaniel Ward, of Ipswich, the author of the "Body of Liberties," adopted as a code of laws by the General Court of Massachusetts in 1641.

Mr. Phillips graduated at Harvard in 1819, and at once entered into active business as a merchant, and in 1822, at the age of twenty-one, was the head of a family, an extensive business man and Representative in the General Court. On the 6th of November in that year he married Jane Appleton, daughter of Willard Peele, of Salem, who died December 19, 1837. On the 3d of September, 1838, he married Margaret Mason Peele, sister of his first wife, who died at Salem July 15, 1883. The children of his first wife were Stephen Henry, born August 16, 1823, whose sketch may be found in the history of the Bench and Bar, in the second chapter of this work; Willard Peele, September 7, 1825, well known in recent years as one of the efficient and successful trustees and managers of the Eastern Railroad; George William, November 27, 1827 (Harvard, 1847); Henry Ware, August 19, 1829; Jane Peele, February 24, 1833; Margaret Peele and Catharine Peele (twins), June 30, 1835; and Abbott Lawrence, December 7, 1837. The children of his second wife were Walter Mason, May 26, 1839; Charles Appleton, January 30, 1841 (Har-

S. C. Phillips, Jr.

(Mr Hunt

E. D. Kimball

vard, 1860); Edward Woodbridge, August 3, 1842; and Catharine, July 7, 1844.

Mr. Phillips was an ardent lover of his native city, a man of overflowing public spirit, and with a heart which beat with warm sympathy in response to the appeals of his neighbors and fellow-townsmen in behalf of all deserving enterprises and charities. The educational interests of Salem won his early and constant aid and support, and for many years he presided over the board which had them in charge. In 1830 he was chosen State Senator, and in 1834 was chosen in the place of Rufus Choate, who had resigned his seat, to represent the Essex South District in Congress. His duties in Washington were ably performed, and by his generous spirit, his thorough integrity, his business methods and his kindly deportment, he won the confidence and friendship of both political friends and foes. The regard in which he was held by his brother Representatives was well illustrated by Mr. Hardin, of Kentucky, whom Mr. Cushing described as "the gray-haired Nestor of the House, and its perpetually snarling Thersites," who, in a reply to a speech of Mr. Phillips, said that "if all the members of the House were like this gentleman from Massachusetts, God would never have repented that he made man."

After one re-election, in 1836, Mr. Phillips retired from Congress, and in 1839 was chosen to succeed Leverett Saltonstall as mayor of Salem. He held office three years, and on his retirement gave the amount of his entire salary to the city for the improvement of the building occupied by the Bowditch and Fisk Schools. In 1848 and 1849 he was the candidate of the Free-Soil party for Governor, and during those and succeeding years was an active participant in those movements which resulted in the organization of the Republican party.

During the last years of his life he was confronted by adversities in business, and though beyond middle age, with a hopeful spirit and an undaunted courage, of which younger men might well be proud, he set himself about to repair and rebuild his fortune. He engaged in extensive timber and lumber enterprises on the St. Maurice and Three Rivers, in Canada, where his third son, George William, was established for their care and supervision. After a visit to the field of his operations, in 1857, he took passage at Quebec in the steamer "Montreal," for Montreal, on Friday, the 26th of June, with the intention of returning home. On the same afternoon the steamer took fire, twelve or fifteen miles above Quebec, opposite Cape Rouge, and only about one hundred and fifty of the four hundred passengers on board were rescued. Among those who lost their lives was Mr. Phillips. His son sent news of the disaster to Salem by telegraph the next day, stating that his father's body had been recovered, and would reach Salem on the following Tuesday. At sunset on Saturday, after the receipt of the sad news, all the bells of the city were

tolled, and on Sunday appropriate allusions to the death of Mr. Phillips were made in all the churches, and the flags of the shipping and armories and engine-houses were displayed at half-mast. On Tuesday, June 30, the funeral took place at Barton Square Church, and the remains of him, whom the city regarded almost as its father and every man as his benefactor and friend, were consigned to the grave. The *Newburyport Herald* said: "With a fortune or without it, we do not know the man that Essex County could not as well have spared. He was one of nature's noblemen, and as an able, honest, sincere Christian man, added worth to the human race by belonging to it." And every reader of the *Herald* said Amen.

WILLIAM HUNT.

William Hunt was born in Salem April 25, 1804. He was in the fifth generation from Captain Lewis Hunt, who came from England and settled in Salem about 1660. His father's name was William. When a mere lad he was employed by Mr. Jonas Warren, in his store at Danversport. After remaining there a short time he entered as clerk in the store of Mr. Nathan Blood, on Derby Street, Salem, where he remained until 1823, when he was employed by Mr. Robert Brookhouse, who had recently commenced in the African trade. After a few years he was given an interest in the business, which was continued until the death of Mr. Brookhouse, in 1866. They transacted a very large business, which was extended to the interior of Africa, from whence they imported large quantities of palm oil, gold dust, ivory and hides. At one time they owned more than twenty ships and barques. After the death of Mr. Brookhouse Mr. Hunt continued the business with Robert Brookhouse, Jr., Joseph H. Hanson and Captain Nathan Frye, until March 27, 1869, when the last voyage was completed, and he retired from business with ample means.

Mr. Hunt was married to Austis Slocom, daughter of Ebenezer and Sarah (Becket) Slocom, March 24, 1831. Two sons—William Dean and Lewis—and two daughters—Mary Dean Hersey and Sarah Becket Putnam—survive him. He died August 3, 1883.

Mr. Hunt enjoyed a high reputation as an intelligent and honorable merchant. He was also a man of much intellectual culture. His reading was very extensive, he being familiar with all the best authors.

He took a deep interest in all affairs of his native city, filling many positions of trust. In his charities he was very unostentatious, knowing but the need to give the required aid.

EDWARD D. KIMBALL.

The subject of this sketch belonged to a New England family, which moved from Ipswich, Mass., to Bradford and Haverhill, and later to Plaistow, N. H..

being among the early settlers of the latter place. Here Mr. Kimball was born, December, 1811, and was a son of Nathaniel and Sarah Knight Kimball. He received his education at Pembroke and at Atkinson Academy, N. H., an institution of which his grandmother was one of the early promoters, and which he attended until he engaged in business at home. By the death of his father he was left, at an early age, as the eldest son in a family of three boys and three girls, with the responsibility of assisting his mother and attending to the duties of the farm. For several years he was engaged in business in a small way, and in the fall of 1833 he made a voyage to South America. The following year, at the age of twenty-one, he left the old homestead and moved to Salem, and shortly after married his cousin, the daughter of Hon. John S. Kimball, of Belfast. He entered into the eastern produce business with Stephen Hoyt, who was afterwards made mayor of New Orleans under General Banks. This connection was dissolved in the winter of 1837 by Mr. Hoyt withdrawing from the business; and Mr. Kimball continued it until 1843, when he bought out the African business of his brother-in-law, David Pingree. This necessitated his going to the West Coast of Africa, which he did soon after, taking with him his wife, and remaining about a year and a half, to look after his property and qualify himself for the successful prosecution of the business. This, in connection with the East India business, he continued until stricken with paralysis, from which he died at Paris, France, in September, 1867, at the age of fifty-six, after an illness of three or four years. He had three sons, one of whom survives him. During his business career he was at times associated with David Pingree, Esq., his brother-in-law, and with his nephew, Thomas Pingree, but principally with his brother-in-law, Charles H. Miller, with whom he was associated many years, and who continued the business after his death. His brothers, Elbridge and Nathaniel, were interested in the business, and also Mr. Reader, on the coast of Africa, and in the East Indies Frank Reed, Esq., who died in Batavia.

Mr. Kimball was among the last of the merchants who sent vessels from the port of Salem, and in the latter part of his life he moved his business to Boston.

He, during his life, filled several other positions of trust and honor, among them the presidency of both the Naumkeag Cotton-Mills of Salem, Mass., and the Naumkeag Bank of Salem. He was successful in all his business pursuits from a rare combination of industry and judgment; managing all his affairs with great skill and success; an indomitable worker; he possessed all the requirements for a large and successful merchant, being at once a good buyer, seller and accountant, generous, polished in all his manners, decided in his opinions and prompt to act upon them, which at once gained for him the confidence and re-

spect of all who knew him. And he at all times exhibited a rectitude of character which never wavered from the proper direction.

HENRY K. OLIVER.

Henry Kemble Oliver was born November 24, 1800, at Beverly, Mass., in the Upper Parish of which town his father was minister from 1787 to 1797. He was the third son and the eighth child of the Rev. Daniel and Elizabeth¹ (Kemble) Oliver, both of Boston, and of the seventh generation of the descendants of Thomas Oliver, "chirurgion," who immigrated from Lewes, Sussex, England, to Boston, with his wife, Ann, and their six or eight children, in 1632, in the ship "William and Francis," from London.

Henry Kemble was christened Thomas Henry, which name was changed by act of Legislature in 1821 to that of his mother's only brother, who died in 1802.

Thomas Oliver, the immigrant, a ruling elder of the First Church in Boston, died June 1, 1658, aged ninety years. The direct line of descent to the subject of this notice is as follows:

- Thomas Oliver and Ann (maiden-name unknown).
- Peter Oliver and Sarah (Newdegate).
- Nathanael Oliver and Elizabeth (Brattle).
- Nathanael Oliver and Martha (Hobbs).
- Nathanael Oliver and Mercy (Wendell).
- Daniel Oliver and Elizabeth (Kemble).
- Henry Kemble Oliver.

In the year 1801 Rev. Daniel Oliver, with his family, removed to Exeter, N. H., and in 1802-03, to Boston. Here Henry attended, at five years of age, the school of a Mr. and Mrs. Hayslop, and acquired his earliest rudimentary knowledge. In 1809 he was transferred to the school of Madame Tileston. "The two schools," he has written, "were on the same method, a good deal of sitting still—if one could—and a very little teaching for each pupil. Not liking either, and with nothing to interest or amuse, during the dreary six hours of the day, I not unfrequently fell under the discipline of good Madame Tileston. I cannot remember that we had books or slates, and sitting still and being good was not within the bounds of my spontaneity; for I was a nervous, uneasy and playful child."

After leaving Madame Tileston's school, Henry attended the Mayhew School, on Chardon Street, under Messrs. Milliken and Holt, "both good floggers," and later, about the year 1810, the school kept by Ebenezer Pemberton, formerly principal of Phillips Andover-Academy. "With Master Pemberton—but still keeping up my elementary studies in English—I be-

¹ Elizabeth Kemble was the second daughter and third child of Thomas and Hannah (Thomas) Kemble.

W. H. Brewer

gan my Latin grammar, under the old dreary method of committing everything to memory. The book used was 'Adams' Latin Grammar,' followed by the 'Colloquies of Cordevitus.' I had small relish for Latin, but was quite fond of my English studies and very apt in declamation.

"Some time in 1811 my father removed me to Phillips Academy in Andover, then under care of John Adams. . . . Here, continuing my Latin, I commenced Greek grammar, and memorized, with distaste at the difficult work, all of the book before entering upon translating. When that came about it was upon 'Dalzell's Græca Minora,' a work then in nearly universal use for lads fitting for college. . . . My stay at Andover was for about twelve months, my first three days having been indelibly fixed in memory by the most distressing homesickness."

Returning to Boston, Henry entered the Latin School,—then on School Street, under William Bigelow,—near the close of 1811. His brother, Nathaniel Kemble Greenwood Oliver (Harvard College, 1809), was for a time, with Mr. Bigelow, an usher of the Latin School, and, about the close of 1813, he opened a private school. Henry attended it, and was by his brother offered at Harvard in 1814. "I was then but thirteen years and eight months old, a mere lad, with a short jacket, having, as was the fashion of the day, a wide collar to my shirt, fringed with a ruffle and turned down over my shoulders. . . . On being taken out to Cambridge at the beginning of the term my father gave me most valuable and excellent counsel. A part of this counsel—and it was very earnestly prohibitory—was that I should not attempt to play any musical instrument whatever.¹ I had been a member of the Park Street choir in Boston, and he gave permission for my singing in the chapel choir, which performed the sacred music on Sunday, under charge of William H. Eliot (H. C., 1815). I strove to obey, but I was over-mastered by my love of music, and I borrowed a flute with one key, the upper joint of which was cracked nearly its whole length. . . . I afterwards, at college, learned to play the violoncello."

Henry remained at Harvard College during the Freshman year and until May or June (1816) of the Sophomore year, when the increase at the college of Unitarian views, and the greater expense, induced his removal to Dartmouth College, much against his inclination. He entered the Junior Class of the latter institution in the fall of 1816. "I had no inclination for a literary life, and my whole preparation for college was to me a burden. . . . When I entered college I had but little knowledge of geography or arithmetic, none of history, almost none of the great facts of astronomy. My intellectual powers had not been properly or philosophically cultivated. . . . In Latin and Greek, and in French, I held at college a pretty good

rank, but I failed in mathematics and in intellectual and moral philosophy. I took an interest in what was then called natural philosophy, a good deal in rhetoric and elocution, but felt sorely my unripeness when called upon to express my ideas in composition."

Immediately on graduating at Dartmouth College Mr. Oliver returned to Boston. The commencement at Harvard College occurred one week later, and at that time he received an *ad eundem* with his old classmates, and subsequently, in 1862, the complimentary degree of A.M.

In May, 1819, he was among the applicants for the place of usher in the newly-established Latin Grammar School in Salem, and at the canvass was numbered third in the order of success. But it happened that the first candidate died soon after election, the second obtained a better place at Lynn, and so Mr. Oliver was appointed. He went to Salem on Thursday, June 10, 1819, making his home with "that most excellent man," Rev. Brown Emerson, minister of the South Church. "I entered upon my work as teacher on the following Monday, June 14th, with very great fear and trembling, and entire distrust in my own abilities, knowledge and ultimate success. Finding my imperfections, I commenced a course of self-education, first in the studies in which I was guiding others, then in French, then in Spanish and Italian; adding afterwards a wide course of mathematics and philosophy, astronomy, general literature and history. I was merciless to myself, studying as many hours out of school as I taught within. What I thus acquired I have never forgotten."

On Sunday, June 20, 1819, Mr. Oliver joined the choir of Mr. Emerson's church, his voice, which had been a high and pure soprano, having matured into a deep and very firm and clear bass, with a range from low C to high E. "I also continued my practice on the flute and violoncello, adding to them the double-bass. In 1821, on suggestion of Hon. Leverett Saltonstall,—always my friend, a noble and excellent man in every respect, and then a leading member of the North Church and society,—I commenced practicing the piano-forte and the organ, and, in 1822, I was appointed organist of St. Peter's Church in Salem, removing to Barton Square Church in 1827, in each place with full charge of the choir."

In 1821 Mr. Oliver's father, mother and two sisters came to Salem for a time, and the family resided on Carpenter Street. "Among the families calling upon us was that of Capt. Samuel Cook,² residing on Federal Street. I had met his elder daughter, Sarah, at meetings of the choir of the South Church, of which she and many ladies of the most cultivated families of Salem were members. An intimacy springing up between Miss Cook and my sister Margaret, I saw

¹ His father was entirely destitute of the musical sense, and he had the early dislike of the religious people of his denomination (he was a Calvinist of the Hopkinsian variety) to all musical instruments.

² Captain Samuel Cook was a retired ship-master, the contemporary of the many enterprising and famous master-mariners of Salem, and of its numerous and successful merchants. He married Sarah, daughter of James and Sarah Chever.

her very frequently, and was gradually drawn toward her by the loveliness of her disposition, the unvarying kindness of her temper, the quiet dignity of her demeanor, the gentleness of all her ways and all her words—till I found my whole self possessed with love for her On Tuesday, the 30th of August, 1825, we were married, at her father's house, by the Rev. Mr. Ducachet."

On the 4th of July, 1824, Mr. Oliver delivered the oration at the celebration carried out by the young men of Salem, a production which, according to a published account of the proceedings, "was received with the most flattering testimonials of approbation by a crowded and respectable assembly." While connected with St. Peter's Church, Mr. Oliver entered upon a course of theological study, with a view of entering the pulpit of the Episcopal Church. His views, however, became Unitarian, and he relinquished the study.

In 1827 he was appointed head master of the newly-established English High School, but in 1830 he resigned the position and opened a private school, building on Federal Street a house planned carefully for the special purpose. "I doubled my income within a year, and during the fourteen years I afterwards continued to teach. I had no reason to complain of either patronage or want of success. During these fourteen years I taught boys six years—fitting for college and for counting-room—and girls eight years I opened the school in the spring of 1831 with about forty scholars."

Having in 1821 enlisted into the Salem Light Infantry, at that date and long afterwards one of the best companies of the State, Mr. Oliver obtained a great deal of military knowledge. In 1833 he was elected lieutenant-colonel of the then just organized Sixth Regiment of Light Infantry, and in 1836 he was chosen its colonel, a position he resigned in 1839.

In 1844 Colonel Oliver was made adjutant-general by Governor George N. Briggs, and gave up teaching, but he retained his residence in Salem. The military force of the State at that date consisted of about seven thousand men, all volunteers. The military property was stored in an arsenal near the foot of the Boston Common, in part, and in part in another arsenal in Cambridge. During his occupancy of this office the war with Mexico broke out, and the general government called, in May, 1846, for troops from each of the New England States. This call was subsequently revoked by the Secretary of War (General Marcy). In November of the same year, however, it was renewed, but on Massachusetts alone, one regiment only being called for, infantry. Ten companies were organized. During his term of office General Oliver was elected captain of the Ancient and Honorable Artillery Company of Boston, of which organization he had been a lieutenant in 1838; and in 1847 he was appointed by President Polk a member of the Board of Visitors at the Military Academy at West Point.

He was elected secretary of this board, and prepared the report to the government.

He continued in the office of adjutant-general till 1848, when he was appointed resident agent of the Atlantic Cotton-Mills, a new corporation for the manufacture of coarse cotton shirtings and sheetings, at Lawrence, Mass., to which town he removed in the early summer of the year mentioned.

In 1853 he was sent from Lawrence, with Messrs. Storow and Parsons, to the Constitutional Convention of the State, where he was chairman of the Committee on the Militia.

He left the Atlantic Mills in May, 1858, and in November following was elected mayor of Lawrence. In 1859 he was elected Representative to the General Court.

In 1860, having been nominated thereto by the Republican Convention at Worcester, General Oliver was chosen State treasurer on the ticket with John Albion Andrew, as Governor; and he was re-elected for each of the four years which made up the five to which the office is limited by law.

In 1867 he accepted a call from Governor Bullock, of Massachusetts, to look into the condition of the factory children in the various establishments of the State. This he did for about two years, finding the several laws relating to their employment under ten years of age, and their schooling when between ten and fifteen years of age, violated everywhere. He prepared two reports on the subject, which excited not a little attention and comment, and caused more stringent legislation.

In 1869 he attained an honorary admittance to the Phi Beta Kappa Society, and in 1870 he gave the oration at Dartmouth College.

The act for the establishment in Massachusetts of a Bureau of Statistics of Labor, with a chief and deputy, was passed in 1869, and General Oliver was selected by Governor Claflin as the chief of the bureau. To the duties of this office he gave his undivided attention, having to grope his way unguided by precedent, example or experience; everything connected with the investigations being new, and nearly all those investigations rendered difficult and embarrassing by the very strong and powerful influence of the employing class of the State. He left the bureau in May, 1873.

In April, 1876, he received an appointment as one of the judges at the International Centennial Exhibition at Philadelphia, and was assigned to Group XXV., in charge of all "Instruments of Precision." Under this expression were included astronomical instruments of all sorts, trigonometrical and surveying instruments, microscopes, magnetic and electric, telegraphic and telephonic instruments. There were also added musical instruments of every variety, from organs down, these being assigned to a sub-group, of which General Oliver was chairman.

Subsequently, after the work of the judges was

supposed to have been finished, and they had left Philadelphia, a "Group of Judges on Appeals" was summoned, of which General Oliver was one, and he again repaired to Philadelphia.

A few days prior to his leaving Philadelphia for his home he received a letter from Salem, desiring him to accept a nomination for the mayoralty of that city, to which he consented, and, at the election later, he was chosen mayor. He was re-elected in the following year, and also in the years 1878 and 1879.

At the approach of the year 1881, Mayor Oliver publicly announced his decision not to be a candidate for re-election, against many requests that he would again stand. "Being eighty years of age on the 24th of November, 1880, it is quite time that I should rest," he said, "and it would not be, in my view, right to impose the natural incapacities of old age even upon a willing people."

On his eightieth birthday, with earnest expressions of gratitude for many favors shown him, during a half century of residence, by his fellow-citizens of Salem, he addressed a letter to the City Council, offering as a nucleus of a Public Library for the city, a donation of books from his own library. The city not feeling then in a position to undertake the establishment of a library, a portion of the books—about 800 volumes—was afterwards given by General Oliver to the "Salem Fraternity."

During the summer of 1882, General Oliver began to be sensible of a cardiac trouble, which, without his being aware of the fact, had been discovered several years before by his physician. The difficulty gradually increased, and his condition became very serious in the succeeding winter, but in the following spring the trouble was so far under control that he passed a very comfortable existence. But he, perforce, led a very quiet life, declining all invitations of a public nature, and passing his time in the companionship of his friends, his books and his music. His communications to the newspapers and the periodicals of the day on current subjects, and on the events of "long-ago," became now very numerous.

During the summer of 1885, up to Sunday, the 26th of July, General Oliver's health continued as good as in the two years before. On the Sunday mentioned he complained of his head, and after an unquiet night he awoke with evident cerebral trouble, aphasia being the chief, and, in fact, the only marked symptom. The inability to express his thoughts in words continued, physical weakness supervened, and he was not able to leave his bed on the morning of the 29th. He died in the early evening of August 12th, retaining almost to the last some consciousness of his surroundings.

General Oliver's death called forth extended manifestations of regret and sympathy, public and private, and his funeral, which took place from the North Church, on Monday, August 17th, was attended by a large concourse of citizens and of officials, both of

Salem and of other places. His body rests in the family tomb in the cemetery on Broad Street, Salem, within sight of the school-house which was the scene of his earliest labors as teacher, and in which hangs his portrait. Upon the tomb there has been placed a natural boulder, from the neighboring fields, covered with moss and gray lichens, and upon this stone is engraved his name, date of birth and of death, and a sculptured suggestion of the pipes of an organ, emblematic of sacred music, which was the grand passion of his life.

Of the character of the subject of this notice it is difficult to speak in a brief space, his talents were so various, his acquirements so extensive, and his personality so strikingly composite. His powers as student, teacher, writer, musician and executive officer were such as are rarely combined in the same person. But the strongest note in his character—the dominant chord—was the musical one. "I had," he says, "early manifested a passion for music, acquired from my mother, who had a voice of rare excellence and great skill in singing, and I learned any music I heard my brother and my sisters perform with the greatest ease and rapidity." And again, "My amusements in college were entirely innocent, and I found great comfort and pleasure in the study and practice of music, my voice and knowledge of the flute being passport to many families wherein music, especially sacred music, was practiced. An evening so passed was to me the greatest pleasure I desired." At ten years of age he was a member of the choir at Park Street Church, Boston. He was also, early, a member of the Handel and Hayden Society, of that city, and an active member of its chorals, whenever possible, even beyond the age of seventy years, at which period of his life his voice still retained great sweetness and power. He was, from his earliest residence in Salem, largely identified with music, and he was the most active member of the Mozart Association, founded in 1825, and of the Salem Glee Club, 1832. Gradually, sacred music, as has been stated, came to be his greatest love, the oratorios of Handel, of Hayden, and of Mendelssohn, his passion, and the organ his idol instrument. He was organist of churches in Salem and Lawrence for a period of forty years. As a composer of church music he held high rank, and many of his compositions have an abiding popularity. In 1849 he published with Dr. S. P. Tuckerman "The National Lyre," and in 1875, "Oliver's Collection of Sacred Music." In 1883, Dartmouth College conferred upon him the Degree of Doctor of Music, and requested his portrait to be hung upon its walls.

As an educator of youth General Oliver really loved his profession, and he combined, in a rare degree,¹ firmness and thoroughness with youthful sym-

¹ Rev. Joseph H. Felt, in his "History of Salem," pronounces Mr. Oliver's private school to have been the most complete and successful ever carried on in that town.

pathies and feelings. His interest in education never flagged to the end of his days. He was himself always a diligent student: the classics were his delight, and he never forgot the beautiful passages from the Greek and Roman writers which he had early learned. But he was also a mathematician of unusual excellence.

His services as a member of the school committee were eagerly sought for in both Salem and Lawrence, and in parts of the years 1858, '59 and '60, he was chosen by the State Board of Education to visit the public schools in various parts of Massachusetts, and to attend teachers' institutes and conventions. He was also at various times in the Examining Board of Visitors of Harvard College, both in the classics and in mathematics.

When the high school in Lawrence was opened, he presented to it the extensive and valuable apparatus which he had collected for his private school in Salem, and he added to the gift a set of busts and statuettes, engravings and many books of reference, Latin, Greek and mathematical, for the use of teachers and pupils. As a token of gratitude the school was given his name, and his portrait was requested, which was hung upon its walls. One of the public schools in Salem also bears his name.

As a military man General Oliver showed marked ability. As colonel of the Sixth Regiment he brought it to a high degree of efficiency, and while adjutant-general, through his personal visits to the parades of the various regiments, and his encouragement of drilling, the service was greatly improved.

The rôle of manufacturer was ably filled by him, but it was more through his devotion to what he had in hand than through any special love for manufacturing. Nevertheless, the products of the mills over which he presided held always the highest rank in the market. The employes did their best, urged not only by the knowledge that much was expected of them, but by the personal magnetism and sympathy of their superintendent, which always so touched and quickened those under him, in every position he ever held, that they instinctively desired to do what he wished done. He thus secured from his subordinates, whether he were present or absent, their best service.

In 1851 he founded a library for the operatives of the Atlantic Mills by a present of books. He also established for them free hot and cold baths in a building near the mills.

As treasurer of the State, General Oliver directed the vast business of the office without loss to the Commonwealth, while on one occasion he saved its credit in a great and sudden emergency by pledging his private means. During his term of office the Civil War broke out, and the business of the department increased to an unprecedented degree. The treasurer acted also as paymaster to the troops raised by Massachusetts, and during the continuance of the war he handled and accounted for \$77,000,000—really

the sum was \$154,000,000, for being received and paid out it was twice handled.

As chief of the Labor Bureau General Oliver made a profound impression. His official announcement of the existence of great abuses called forth extended comment and great antagonism. Some of his work struck at the root of great evils, or of erroneous opinions in society, and so awakened deep hostilities; but he lived to hear all his statements of these evils wholly verified, and his efforts to ameliorate them justified. During the five years of holding the office he prepared five annual reports to the Legislature upon the earnings, cost of living, and savings or indebtedness of the laboring classes of the State—their homes, education, habits of living, morals, manners, hours of labor, amusements, societies of various sorts—upon factory life, factory operatives, factory children, the schooling of the latter, half-time schools, etc., in fact, upon everything relating to the great question of labor and the laboring classes, skilled and unskilled, and of every grade and variety of them.

"I left the bureau in May, 1873, retiring with an entire consciousness that I had omitted no effort in endeavoring to do my whole duty, and that I had, regardless of personal considerations, faithfully set forth the real status of the working people, the real wealth-producers of the State."

After leaving the Bureau, and to the end of his life, he retained the deepest interest in the welfare of the working classes, and more especially in that of factory children, as the many articles written by him for the newspapers of the day testify. In April, 1885, his portrait was hung on the walls of the office of the bureau, in Boston, as its first chief.

As mayor—in two cities—his great executive ability and knowledge of men made him a valuable officer, and his retirement elicited hearty expressions of regret and good wishes from the several departments of the city government and from the citizens generally.

General Oliver's wide range of study and reading caused frequent demands for his services as lecturer before lyceums and other literary associations, and before educational, musical and agricultural societies, while his ready command of language, and his wit and humor, made him greatly sought for as presiding officer at festive occasions. Many of these occasions saw him such an officer when he was beyond eighty years of age. Of these latter characteristics, which constituted a very marked feature of his character, it has been written "His wit and humor were keen, exuberant and irrepressible, and his many tales, and his treasury of knowledge made him extremely companionable, and a delightful conversationalist on any topic." A curious feature in his character was the presence of exuberant spirits and gayety, and the passion for sacred music. But with all his gayety his feelings were deeply reverent. He loved nature ardently, and flowers were the source of the greatest delight to

A. S. Low

him; his highly cultivated garden was the home of many a prize-bloom.

Much as the subject of this notice employed his pen, he published but one little work besides his musical works mentioned. This was in 1830, "A Work on the Construction and Use of Mathematical Instruments in Portable Cases." About the same time he wrote a work on Algebra, but finding that the late Mr. Ebenezer Bailey was engaged upon a book of similar character General Oliver generously withdrew his own manuscript. But he wrote, especially in the later years of his life, a vast number of articles for the newspapers and current literature of the day on all the topics with which he was familiar, and these communications were most entertaining and instructive.

General Oliver's wife died on the 24th of January, 1866, and this was a blow which he never really recovered from. In recording the event he wrote.—"As said Carlyle of Mrs. Sterling, in his life of Edward Sterling, she was of a pious, delicate and affectionate character, exemplary as wife, mother, friend,—of timid, yet gracefully cordial ways,—with natural intelligence, instinctive sense and worth: with a soft voice, a tremulously sensitive nature, strong chiefly on the side of the affections, and the graceful insights and activities that depend on these; truly a beautiful, much enduring, much loving house-mother."

Henry Kemble and Sarah (Cook) Oliver had issue,—Samuel Cook, Sarah Elizabeth, Henry Kemble, Maria Kemble, Emily Kemble, Mary Evans and Ellen Wendell.

ABIEL ABBOT LOW.

Salem has been most generous in enriching, with her worthy sons and daughters, other cities and towns of the country. Few places are more indebted to her for such noble gifts than Brooklyn, N. Y., the story of whose better history and higher prosperity could not be told without the mention of such men as Seth Low and his sons, Isaac H. and John W. Frothingham, Ripley and Reuben W. Ropes, George B. Areher, and others of most excellent repute. Hon. Ripley Ropes, after faithful and valuable service to his native city, removed many years ago to Brooklyn, where his exalted character as a man and his long and distinguished usefulness in public life have made their enduring impress upon the city of his adoption.

Abiel Abbot Low, one of the merchant princes of New York, and an eminent philanthropist and financier, was born in Salem, Essex County, Mass., February 7, 1811. He was the eldest son among twelve children of Seth Low, a native of Gloucester, West Parish, of the same State. His mother, Mary Porter, was descended from John Porter, one of the original settlers of Salem village, (now Danvers), and was a daughter of Thomas Porter, of Topsfield, the town adjacent to Danvers on the north. The Porters have

been a numerous and influential race in this part of Massachusetts and elsewhere for more than two hundred years. Mary was born in Topsfield in 1786, and was a lady of superior character, illustrating all the virtues and nobleness of the Roman matron, refined and adorned with the influences and graces of the Christian faith. She lived to be eighty-six years of age and continued to be an object of much veneration among all who knew her, to the end of her useful and honored life. Her husband, Seth Low, was a man of high intelligence and of solid worth, of strong, clear and sedate mind, and of courteous and dignified deportment. He was held in great respect and love by his fellow-citizens at Salem, where he spent the earlier portion of his married life, as also at Brooklyn, N. Y., whither he removed in 1829, and where he died in 1853. A devout, upright, and public-spirited man, he was one of the foremost citizens of Brooklyn, and rendered most important service, in many ways, to that city in its earlier municipal history. Blessed with such a parentage, and inheriting the excellent qualities of both his father and mother, the son could hardly fail of an honorable and distinguished career. He grew up without any of the vices or bad habits which so often blight the hopes and promises of youth. He received his early education mainly at the public schools of his native city, and wisely and diligently improved the opportunities and advantages which were there afforded him. He was, for some time before he reached the age of maturity, a clerk in the mercantile house of Joseph Howard & Co., a Salem firm largely engaged in the South American trade. Here he manifested remarkable aptitude for business, and won, not only the heartiest commendations, but the entire confidence of his employers. In 1829 he removed to New York, and remained with his father, whose occupation was that of a drug merchant, for three years. In 1833 he sailed for Canton, China, and on arriving there became a clerk in the house of Russell & Co., which was then the largest American firm in China, and of which an uncle, the late William Henry Low, was a partner. In 1837 he was admitted into the firm, and, after three years, returned home, in 1840, to prosecute the same business here—already possessed of considerable wealth, though not yet thirty years of age. He was early distinguished for his sagacity, his far-seeing wisdom and his bold and judicious action. Soon after his arrival home, he established himself in Fletcher Street, New York, and there laid the foundation of that which was destined to become the leading house of America in the China trade. The business of the house was of rapid growth and at length assumed such large proportions that a fleet of swift vessels became indispensable.

With characteristic energy he set about building his own ships, and the construction of the "Houqua," "Samuel Russell," "N. B. Palmer," "David Brown," "Oriental," "Penguin," "Jacob Bell," "Contest," "Surprise," "Benefactor" and "Benefactress" kept

pace with the demands of his business for a while; but he was compelled to purchase several, among them "The Golden State," "The Great Republic" and the "Yokohama." For years the house carried on its immense traffic of teas and silks without the loss of any of its ships. From Fletcher Street the office was first removed to South Street, between Beekman Street and Peck Slip, and again, in 1850, to No. 31 Burling Slip, the present site of the establishment. About the year 1845, Mr. Josiah O. Low, a brother, became a partner; in 1852, Mr. Edward H. K. Lyman, a brother-in-law, was admitted into the firm; and at various subsequent dates several sons and nephews,—the firm-name becoming and remaining to this day "A. A. Low & Brothers." The firm have always maintained their justly-deserved reputation for the strictest integrity, and for the largest and most enlightened methods of mercantile pursuit and dealing. Their name has been the synonym for rectitude and honor in all business transactions, and they have been a tower of strength amidst all the changes, fluctuations and reverses in the commercial world during the past forty-six years. Their influence was most powerfully exercised and felt in the cause of maintaining the national credit; and in the gloomy years of the Civil War they bore their full share in the work of defending and saving the Republic. Refusing to allow their ships to sail under any other flag than the Stars and Stripes, they suffered the loss of the "Contest" and the "Jacob Bell," both of which were captured and burned by Confederate privateers, the latter being freighted at the time with a cargo of great value. During Mr. Low's whole business career he has received constant tokens of the high respect and consideration of the mercantile profession to which he belongs, and of the community in which he lives. His influence in the New York Chamber of Commerce has been wholesome and conspicuous, and it has also been justly appreciated and honored. He became a member of it in 1846. In 1863 his sound judgment, his ready grasp of details, his marked sagacity and his unbending rectitude led to his election as president of this world-renowned body; and on the expiration of the stated term of three years, he was re-elected. At the close of 1866 he resigned this position, in order to make a voyage around the world. On January 1, 1867, he embarked with his wife and one son from San Francisco in the Pacific Mail steamer "Colorado," the first American merchant steamer which crossed the Pacific.

On his return he was honored with a banquet, tendered by the representative men of his profession, in the city which had so long been the scene of his labors and his triumphs. He frequently has been called upon to address the Chamber of Commerce and his fellow-citizens upon subjects connected with the financial or political problems of the day. His vigorous mind has been highly cultured by reading, study, travel, observation and action. His style, both as a writer and

a public speaker, is singularly felicitous and effective, and remarkable for clearness, compactness, good taste and elegance of expression. He has the faculty and the habit, not only of stating his case strongly, but of reasoning on it so wisely and fairly, as well as forcibly, that his reader or listener (as the case may be) is carried with him, and willingly, as well as from conviction, adopts his conclusions. It is because of these qualities that Mr. Low has always had such great influence in the associations with which he has been connected, and such weight in the community in matters of general interest. Had his career been in public life, he would have been as eminent in the counsels of state as he has been in the wide domain of commerce. In great crises, commercial, financial or political, in periods of depression, panic or actual disaster, he has the courage of his convictions, and his opinions are eagerly sought and freely given. During the Civil War, on all important questions of national policy or duty, his voice and his action were alike ready and sagacious, clear, loyal and determined. Holding no political office, though several times invited to do so, he often has been called or sent to the national capital in a representative capacity, for consultation with the government in relation to matters of grave commercial interest.

It is not easy to measure the value and influence of such a man in the community and the country to which he belongs. Able, wise, patriotic and of incorruptible purity and honesty, he is constantly a pillar of strength and support to all the best interests of society and is a rock of safety and defense amidst the changes and perils to which government and people are exposed, or are liable. It is not alone Presidents and Cabinets, Congressional leaders and foreign ministers, the army and navy, upon whom we must chiefly depend in the most stormy times, or in the most critical emergencies. All will be lost unless the nation is held mightily to its financial obligations, its plighted word, its sacred honor. After the war, and for many years, the land was rife with dangerous theories and pestilent heresies in regard to these matters, and *Redemption* itself was a more or less popular cry. It was all-important, and absolutely necessary, that the mercantile and banking classes should lift their voices for the right, that the great commercial metropolis should be heard, that the Chamber of Commerce should speak, and speak with no uncertain sound. Of such occasions, one was in connection with the Centennial Celebration of the Chamber, held at Irving Hall, New York City, April 6, 1868. Mr. Low delivered an address on "The Finances of the United States," and the closing portion of it is here given, in illustration of his sound views, his exalted patriotism and the power and grace of his words:

"Finally," he says, "it seems to me that existing laws for the conversion and redemption of the public debt are good enough till the country returns to specie payment. I look to such return as our only hope of rescue from impending evil. The crisis is full of peril, as all who read and reflect will be forced to admit; the contemplation of this peril leads

me to sorrowful reflection. Three years have passed away since the War of the Rebellion was closed. The eventful month of April, 1865, witnessed the surrender, throughout the South, of all the rebel forces; the disbanding of the loyal armies of the North, and the re-establishment of the national authority everywhere; and although the country was prostrate in sorrow at the death of its great hero and martyr, there was solace and joy in the thought that the blood and treasure of the loyal States had not been poured out in vain. Not only had the life of the nation been providentially preserved, but its honor was untarnished; at home and abroad confidence in the ability of our people faithfully to redeem every obligation that was given during the war daily gained strength, and the speedy restoration of the wayward States to their legitimate place in the Union was the animating hope of every patriotic heart. How this hope has thus far been disappointed it is not my province to consider.

"We may now boast, indeed, that America is 'the land of the free and the home of the brave;' slavery has ceased to exist; the curse and the reproach it brought on our flag and our fame have been buried in a common grave. Have we wiped out this long endured blot on our country's escutcheon, amid all the fire and bloodshed of civil war, in order to deepen and darken the stain repudiation would leave in its stead? Has it come to this, that the Congress of the nation can deliberately entertain propositions, in less than three years after the war, that strike at the spirit and letter of laws now on the statute-book, in the presence of the very men who made them—laws that are vital to the security of those who lent their money for the prosecution of the war? Have we reason to fear that Senators and Representatives who make such demands on our confidence, in their extraordinary measures to enforce reconstruction, will subject our faith to a still severer test? Can they hope to maintain the character of friends of the Union for the sake of the Union if they expose to dishonor the life whose salvation has cost such a price in blood and treasure? Shall we go forth as hitherto, in virtue of our American birthright, proud in the consciousness that our nation's *right* makes our nation's *might*, or remain at home rather than be withered by the rebuking eye of every honest man in every other land governed by honest men? It were better, far, to dash from the American ensign every star and leave only the stripes, as a symbol of everlasting disgrace—of everlasting punishment—if we must cease to claim the respect we have hitherto enjoyed under its all-inspiring folds. No! Let me recall these despairing words! I will not believe in such a destiny. The loyal and the true will rally in behalf of the right and the good. The people and the Congress will uphold the national faith. Our eagles and half-eagles will once more circulate throughout the land, our eyes shall be gladdened with the old device, 'In God we trust,' and throughout the world the stars and stripes shall float together the glorious emblem of nationality to millions upon millions yet unborn."

At the conclusion of the meeting Mr. Low submitted resolutions, which were unanimously adopted, favoring the resumption of specie payments and the honest discharge of the national debt. No man, more than he, was fitted by talent, character, experience, rectitude and service to stand at the centre in such a time, and represent before the people and the world the commercial mind and interests of the United States. Mr. Low has been solicited many times to become the president of banking, insurance and other institutions of a similar character, but he has declined every proffered station of service save that of a director, in which capacity he is identified with a number of prominent organizations. In Brooklyn, the city of his adoption and residence, he has been one of the most public-spirited and useful citizens. He has been an ever-ready and exceptionally liberal patron of schools and colleges, churches and charities, not alone in Brooklyn and New York, but in other parts of the land; and his contributions of money to every good enterprise or institution that has appealed for aid have rarely, if ever, been surpassed in number and magnitude by

those of any of our wealthy and philanthropic citizens. Thoroughly imbued with the spirit of a firm and enlightened Christian faith, the church has found in him a true, devoted, exemplary friend, and many of its branches of different names have been encouraged and prospered by his timely and generous gifts. Fully appreciating the value and importance of substantial education to every community, he has long made the public and private schools of the city objects of the highest concern. Of the Packer Collegiate Institute, in Brooklyn, Mr. Low has been for many years president of the board of trustees, giving to its affairs large and intelligent oversight, and contributing liberally to its library and scientific equipment. The Brooklyn Library and the Long Island Historical Society have found in him, from their inception, one of their most appreciative, active and munificent patrons. The City Hospital, the Society for Improving the Condition of the Poor, the Union for Christian Work and many other benevolent institutions, attest his readiness to aid in the support of well-designed and practically-managed organized charities. Perhaps no more touching illustration of this influence has been furnished than in the munificent gift, by Mr. Low, in the name of his wife, of the new and beautiful *St. Phoebe's Mission House*, which he caused to be erected as a fitting memorial of a departed daughter of wonderful beauty of Christian character and life. The building was opened May 5, 1886, and a tablet more recently erected bears the inscription:

"IN LOVING MEMORY

HARRIETTE LOW.

This house is given for the work she loved by her hereaved parents."

In our great Civil War, Mr. Low's loyalty and patriotism were most pronounced and constant. He was a member of the Union Defense Committee of New York, and quite early in the conflict succeeded Mr. Dehon as treasurer of the committee, which place he continued to fill until the war was over. He was among the most energetic, liberal and useful members of the "War Fund Committee" of Brooklyn, which was organized in 1862, and which efficiently aided the United States Sanitary Commission. He was president of the General Committee of Citizens in Brooklyn, which, in co-operation with the committee of the Woman's Relief Association, in February, 1864, managed and carried out to its grand result of more than \$400,000, the Brooklyn and Sanitary Fair.

This sketch would be quite imperfect did it omit allusion to Mr. Low's constant and most generous relief to those who are in need. It is his nature to "do good by stealth and blush to find it fame," and the world little knows, though very many privately and gratefully know, the largeness, spontaneity and mercy of his bounty in their hour of suffering. His sympathy and gifts have not been limited to those to whom he stood in the relation of friend or

mere acquaintance. The casual mention, in his presence, of distress that had befallen even a stranger whom he had never seen and of whom before he had never heard, has many and many a time (within the knowledge of the writer) elicited not only his warm and Christian sympathy, but his prompt and large pecuniary relief. It has often been remarked by those who have known him well, how continuously and tenderly, amidst all his manifold and arduous daily cares, he has borne such unfortunates in mind, recalling their names and circumstances and, with more benevolent intent, making fresh inquiries about them long after it might naturally have been supposed that such cases must have been forgotten. One of his honored father's last injunctions to his children was, "Remember the poor." And that they have done, not more in obedience to the paternal mandate, than from the philanthropic spirit which they inherited from their excellent parents, and which they have also imparted, it may be added, to the succeeding generation. As the acknowledged head of this very large and influential family circle that surrounds him in Brooklyn, and in every domestic relation of life, Mr. Low, it is not necessary to say, finds his own faithful devotion and affectionate care abundantly recompensed to him in the veneration and love of all. And what is thus true of him in the home and amongst his kindred is true of him also in other connections, in which to still larger numbers he has been the prudent counselor, the thoughtful sympathizer, and the helpful and steadfast friend.

Mr. Low was first married, in March, 1841, to Ellen Almira, daughter of the late Josiah Dow, of Brooklyn, N. Y., and a lady of rare worth and loveliness, by whom he had four children,—two sons and two daughters, all of whom survived their mother, who died in January, 1850. In February, 1851, he was married to Anne D. B., widow of his deceased brother, William Henry Low, and daughter of the late M. Bedell, of Brooklyn, N. Y. Mrs. Low has been very prominent in the religious, benevolent and social life of the city; and it was specially under her fond and faithful guardianship, intelligent and judicious training and earnest and conscientious Christian influence that the motherless children to whose charge she succeeded, and her son, William G., who had been born under her first marriage, received together their home preparation for their varied and prominent spheres of usefulness in subsequent years.

Of these five children, Harriette died August 2, 1884; and Ellen, who married Henry E. Pierrepont, Jr., of Brooklyn, died December 30, 1884. The surviving three, are A. Augustus Low, merchant, who married a daughter of the late George Cabot Ward, Esq., of New York; William G. Low, lawyer and Hon. Seth Low, ex-mayor of Brooklyn, and also a merchant, both of whom married daughters of the late Hon. Benjamin R. Curtis, of the Supreme Court of the United States.

LEONARD BOND HARRINGTON.

The names of men who distinguished themselves for the possession of those qualities of character which so largely contribute to the success of private life and to the public stability, of men who have been exemplary in their personal and social relations, thus winning the affection, respect and confidence of those around them, ought not to perish.

Their example is more valuable to the majority of local readers than that of illustrious heroes, statesmen or writers, and all are benefited by the delineation of those traits of character which find scope and exercise in the common walks of life.

Among the individuals of this class few are better entitled to be held in respectful remembrance than is the subject of this sketch.

The direct ancestor of Leonard B. was *Robert*, who came from England prior to 1642, and settled in Watertown, Mass.

For several succeeding generations the Harringtons were tillers of the soil, and became, through their energy and thrift, extensive landed proprietors in the various parts of New England, where they settled and were men of influence and position.

Charles, the father of Leonard B., however, was a tanner and currier by trade, and he carried on this business during the early part of his business career with a good degree of success. He also did a large business as a packer of beef, and opened up a large export trade in it. In this branch of business he was a pioneer, and was very successful until, during the French War, he suffered great losses in vessels and cargoes by French spoliations. He married Mary Bond, by whom he had five children,—Charles, born January 29, 1782; Artemus, born October 14, 1784; Ruth, born August 25, 1789; Jonas B., born August 22, 1792; LEONARD BOND, born January 29, 1803.

Leonard spent his boyhood in Salem, Mass., to which town his father moved from Watertown shortly after the Revolutionary War. He attended school in Salem, where he acquired a practical knowledge of the branches there taught, but, at the age of thirteen years, developing a taste for sea-life, he went a voyage to South America, during which he suffered from yellow fever, and recovering from it, was finally shipwrecked. These experiences led him to give up the sea, and he then chose the business of leather manufacture. He learned this trade in Roxbury, Mass., and after serving his time he worked as a journeyman for several years, and by prudence and frugality was enabled to begin business for himself in 1829, and from that time to the present has successfully maintained his position among business men.

He was married, January 8, 1831, to Margaret G. Hersey, of Roxbury, who was a superior woman, and did much to encourage and assist him in his plans, and was much beloved by all who knew her. From

L. B. Hammon

Caleb Foot

this union were four children, three of whom are now living.

Having no taste for political life, Mr. Harrington has never been prominent in politics, but has always been identified with the Whig and, later, the Republican parties. In religious belief he is a Universalist, and contributes liberally for the support of public worship.

He is a man of benevolence, easily approached, of kindly instincts, and has always in later years been ready to assist those less fortunate than himself in their business difficulties by his wise counsel and good judgment.

Mr. Harrington has for many years been prominently connected with the financial institutions of Salem. He is president of the Asiatic National Bank and vice-president of Old Salem Savings Bank.

For twenty years he was engineer of the Fire Department, and by his energy and zeal did much to improve the old system; but all this was prior to the advent of the modern steamer, and when the hand machine was made to do duty by "the boys breaking her down."

At the great age of eighty-four years Mr. Harrington is still able to attend to his large business, going to Boston nearly every day, and while having assigned much of the detail to other hands, still in the directing power exercising his business tact and method to the advantage of those associated with him. Mr. Harrington's grandfather was a noted teacher of his day, and as "Master Harrington" was widely known.

Leonard Bond, a maternal uncle, was a soldier in the Revolutionary War.

CALEB FOOTE.¹

Hon. Caleb Foote was born in Salem February 28, 1803, of a sea-faring stock. The first of his ancestors who came to this country, Pasco Foot, who settled in Salem before 1637, had a grant of land in that year, in connection with his fisheries, at Winter Harbor. The degree to which the dangers of the sea assisted in depopulating the maritime towns of our sea-coast in the earlier days is forcibly illustrated in the family history of Mr. Foote. His great-grandfather, Captain William Dedman, died of yellow-fever in a voyage to Havana. His maternal grandfather, Samuel West, a member of the Salem Marine Society, died in a trading voyage to Virginia. His paternal grandfather, Caleb Foote, after serving in the Revolutionary army at Cambridge, engaged in the privateering service, was captured by a British ship, and immured in Forton prison, near Portsmouth, England, from which he escaped to France, and, returning home, died early of disease brought on by the hardships and privations which he had endured in the cause of his country. His father, Caleb Foote, sailed in command

of a vessel from New London in 1810, and his vessel was never heard from afterward, while his wife, Martha, daughter of Samuel Massey West, had died four years before. Thus their son was left at the tender age of seven fatherless, motherless and portionless, wholly dependent on relatives, and began to earn his own living at ten years old, when he left the North Salem Public School to attend in the shop of an uncle in Salem, and later in Boston, returning to Salem again for employment in Mr. Samuel West's bookstore. He was on the point of following the sea, and had shipped as cabin-boy for a sealing voyage in Arctic regions, when the captain who had engaged his services broke the agreement in order to take a larger and stronger boy, and diverted the current of his life. He found employment in the office of *The Salem Gazette* in 1817. Here Mr. Foote has ever since remained as apprentice, proprietor and editor, never long absent from its duties and only rarely engaged in services which called him elsewhere.

The Salem Gazette was one of the few newspapers whose commencement long antedates the present century. On the 1st of August, 1768, began the existence of the *Essex Gazette*. There were for a time transfers to other places, suspensions and changes of name, but the apprenticeship of two proprietors connects without a break the first issue with that of one hundred and nineteen years later (in 1887). The founder of the line, when Massachusetts was a British province, was the sturdy Whig rebel, Samuel Hall. The accomplished and amiable Thomas C. Cushing served his apprenticeship with Mr. Hall, and took his materials and revived the paper, after a broken period, in 1786. Mr. Cushing continued the publication of the *Gazette* until January 1, 1823, when, feeling the infirmities of age and disease pressing on him, he transferred the establishment to one of his sons, Caleb Cushing, and a nephew, Ferdinand Andrews, retiring from business to die September 28, 1824. Mr. Cushing was a man of rare excellencies of character, combining faculties of the mind and qualities of the heart which secured in no common degree the respect and esteem of his fellow-citizens, and was a good master in those days of thorough business training.

The life of an apprentice was one of hard drudgery, but the printing-office is a school which gives encouragement to a boy endowed with the love of reading, for the self-education which has to take the place of the opportunities of school and college; moreover, as Mr. Foote grew up, he found kind and influential friends, who, when the opportunity arose, assisted him with a loan in establishing himself in the business by purchasing half the property in the paper. In 1825 he thus became associated with his former fellow-workman, Ferdinand Andrews, as publishers and joint owners of the *Gazette*. In 1826 Mr. William Brown succeeded Mr. Andrews, selling his interest in the paper also to Mr. Foote January 1, 1833, who

¹ By Rev. Henry W. Foote.

thus became sole editor and proprietor until January 1, 1854, when Nathaniel A. Horton, who had followed what were the traditions of this time-honored newspaper for more than a century, in growing up as an apprentice under the training of his senior, was associated with him in publishing and editing the paper. This partnership has continued till the present time (1887). On June 8, 1831, Mr. Foote had also established a small weekly paper, to which he gave the name of *The Salem Mercury*, the original title of the *Gazette*. This was afterwards enlarged and its title changed to that of *The Essex County Mercury*, and it became an important addition to the influence of the office through the wide constituency which it gained throughout the county.

Meantime such public duties as the engrossing labors of an editor would permit came to Mr. Foote. He served on the school committee in 1830-31, and was a member of the Massachusetts House of Representatives in 1832 and 1833, declining a re-election. In January, 1835, having been for some years chairman of the Whig County Committee, he was elected by the Legislature, on which the duty of choosing the Executive Council at that time devolved, a member of the Council under Governor Edward Everett, and was again elected in 1839, declining a subsequent re-election.

On the accession of the Whig party to the control of the government, a change being necessary, not for party reasons only, in the Salem post-office, Mr. Foote was appointed postmaster in May, 1841, soon after the death of President Harrison, and retained the position three years, administering the office on strict business principles, entirely aloof from political methods, making no change in the subordinate officers, and keeping the business of his newspaper apart from his official duties. A pressure, however, being brought to bear by the administration to induce him to become a partisan of John Tyler and to employ the newspaper in furthering his schemes for election to the Presidency, on refusing to do so, Mr. Foote was dismissed from the post-office in April, 1844. The subsequent years and until the present time (1887), with the exception of seven months' absence in Europe in 1867, were devoted exclusively to the business of the newspaper, in which active labors it was allotted to Mr. Foote to spend a longer period than the full term of life as named by the Psalmist.

A friend, Rev. E. B. Willson, adds the following:

"Mr. Foote's life affords a noteworthy instance—not a solitary one, to be sure—of the admirable substitute which the printing-office and editorial chair may be for the training-school and the college classroom to an apt student. His style as a writer has the better qualities of one college bred—simplicity, perspicuity and purity of diction, and the art of putting things with directness and effect. His knowledge of language and his literary taste and skill are those of the scholar well grounded in English literature and versed in other languages, ancient and modern. Naturally, history, political economy and the affairs of trade and social progress come to be the studies of the conductor of an influential press, an important portion of whose readers are educated men and women. In these departments of journalism Mr. Foote's

accomplishments, at a period when such work was comparatively rare and when he was sole editor, secured for his editorial writing attention and habitual perusal and respect, which has continued during the more recent years, when the editorial responsibility has been shared with his associate. In his long career in the midst of a community characterized by a high average of intelligence and a corresponding moral standard, to have had so strong and enduring hold upon successive generations and through so many and so great changes in manners and opinions, in politics and theology, in private and in social life, bespeaks a man of weight, candor and well-balanced judgment, and of an integrity and steadiness of purpose not often paralleled. His native modesty would never permit him to obtrude his conclusions at any time where their expression was not called for; but those who have drawn from him his opinions upon topics of current interest, including such as were matters of controversy, have been pretty sure to find that he had matured opinions of his own, and that he had not only the courage of his convictions, but that he had been a courageous thinker in arriving at his convictions.

"To those who know Mr. Foote only in the common intercourse of life, and who have only come near enough to observe his unflinching courtesy of bearing, the moral courage, poise and self-reliance hidden behind these genial manners and never-ruffled tooes would be likely to be a revelation wholly unsuspected. Not many a man would be able to carry himself calmly and with unshaken nerves through an interview with desperate fellows, who had, without doubt, plotted to rob him of things of value supposed to be on his person, in a retired apartment of their own selection, to which they had conducted him for this very purpose, and when he had come away unharmed from their lair would relate the affair as quietly as if it had been but a common incident. It would bring a genuine surprise to those accustomed to see one characterized by an unvarying serenity of features and urbanity of address in all situations for a lifetime, to find him capable on occasion of shielding a junior co-worker from abusive criticism by rising from the chair editorial and stepping to the front to assure a rich and influential citizen and friend in a firm and peremptory voice that, though not himself the writer, he assumed joint responsibility with the writer for what had been written, and that the course of remark which he had interrupted must cease then and there, or the visitor must leave the place. To be sure, we recognize it as the natural and right combination when courage and kindness go together; but, unhappily, it is not a conjunction so common as not to cause the surprise of delight when we witness it."

The publication and editing of a public journal in a community like that which inhabits Essex County is a self-denying and exigent task, requiring a man to become wholly merged in his work, especially where the newspaper has had an historic part for more than a hundred years in guiding opinion and helping to mould public development. The *Gazette* was founded by a patriot who had zealously espoused the American cause, and it continued the earnest supporter of the principles of Washington and Hamilton and of Federal measures and men as long as the Federalist party continued to exist. To these principles it held faithfully through the later changes of the party-names to Whig and Republican, but without being an organ of any party or individual, and, on occasion, standing alone against an unworthy candidate for high office, and securing his defeat. If a journal of this character has fulfilled its opportunities of public teaching and public influence, in the constant interest of good morals, honest policies and the religion of good-will and charity, it is a fit memorial of the life which has been devoted to it.

Mr. Foote was married, October 21, 1835, to Mary Wilder, daughter of Hon. Daniel Appleton White judge of probate for Essex County. She died December 24, 1857. Of their six children, three are surviving.

Henry Wheatland

Nathaniel B. Wardwell

NATHANIEL B. MANSFIELD.

Nathaniel B. Mansfield was born in Salem, October 20, 1796, three months after the death of his father. His mother was left with four children,—two daughters and two sons. Of the daughters, one married Captain Brookhouse, of Salem, and the other Joseph Eveleth, of Boston, for many years high sheriff. Of the sons, one died single, and the subject of this sketch married the daughter of William Fabens, of Salem, who was one of the successful merchants of his time.

At an early age the subject of this sketch chose the profession of the sea. Having no one to put him forward, he commenced as a sailor in the fore-castle, and by his energy and perseverance soon became officer and then master of a ship. He was part owner of the "Statesman" and "Newburyport," and transacted business between Havana and Russia for many years. He left the sea as a profession at the age of forty-five, and from that time until his death was interested in shipping. He was connected in business at diverse times with Benjamin Howard, Glidden Williams, Samuel Stevens & Co., of Boston, and Captain John Bertram, of Salem. During the last years of his life he was interested in the ice business at Panama, and established, in connection with Samuel Stevens & Co., a line of packets to Australia. Mr. Mansfield was also a member of the Marine Society of Salem.

He took great interest in politics, was an Old-Line Whig, and a member of the city government for many years as well as of the State Legislature. His great speech at that time was in connection with the land damages to be assessed on the Essex Railroad. He refused at various times the office of collector of the port. He was unceasing in his endeavors to accomplish a party victory.

He had the courage of a strong man with the tenderness of a child, and was loved and respected by all who knew him. He died September 24, 1863.

He was a man of unflinching integrity, and died, as he had lived, one of Salem's most honored and esteemed citizens.

BENJAMIN WILLIAMS CROWNINSHIELD.

Benjamin Williams Crowninshield, son of George and Mary (Derby) Crowninshield, was born at Salem, December 27, 1772; descended from Dr. John Casper Richter von Cronenshilt, a German physician, who came from Leipsic to Boston about 1688, and died there in 1711; married Elizabeth, daughter of Jacob and Elizabeth (Clifford) Allen, of Salem; owned lands near Lynn Mineral Spring Pond. Two of his sons, John and Clifford, came to Salem and were successful and enterprising merchants; John married Anstiss, daughter of John and Sarah (Manning) Williams, the father of George, above-named.

Mr. Crowninshield, like his ancestors, was largely engaged in commercial enterprises in connection

with his father and brothers, under the name of George Crowninshield & Sons. His brother, George Crowninshield, the owner of the famous pleasure yacht, the "Cleopatra's Barge," made an excursion to the ports in the Mediterranean, returning in October, 1817. He built the large brick house on Derby Street, between Curtis and Orange Streets, now occupied as the Old Women's Home. He was a member of the Massachusetts State Senate for several years, United States Secretary of Navy from December, 1814, to November, 1818, Representative in United States Congress 1823 to 1831, one of the first directors of the Merchants' Bank, Salem (incorporated June 26, 1811); married Mary Boardman, daughter of Francis and Mary (Hodges) Boardman, January 1, 1804. He removed to Boston in 1832, and died there February 8, 1851.

HENRY WHEATLAND.

Henry Wheatland, son of Richard and Martha (Goodhue) Wheatland, was born in Salem, January 11, 1812. He was graduated from Harvard College in 1832, and its Medical School in 1837. He never, however, actively engaged in the practice of medicine. At an early age he became interested in the study of natural history, and both in the neighborhood of his home and during voyages for his health to South America and Europe, he made extensive collections, which have enriched the cabinets of the scientific institutions in Salem. He was chosen superintendent of the museum of the East India Marine Society in 1837, and held that office until 1848, when, chiefly through his efforts, the Essex County Natural History Society and the Essex Historical Society—he being an active member of both societies—became united as the Essex Institute, to the building up of which he has since untiringly given the greater portion of his life, and of which society he is now the president. Leaving the field of scientific research to younger men and those who were becoming specialists in its different branches, he later devoted himself to local history and genealogy, and is now admitted to be one of the leading antiquarians in the county, from whose fund of knowledge constant draughts are being made by workers in this field.

Dr. Wheatland is one of the original trustees of the Peabody Academy of Science and its vice-president, a trustee of the Peabody Museum of American Archaeology and Ethnology of Cambridge, and a member of the principal scientific and historical societies of the country.

NATHANIEL SILSBEE.

Nathaniel Silsbee, son of Nathaniel and Sarah (Becket) Silsbee, was born at Salem January 14, 1773; descended from Henry Silsbee, of Salem, 1639, Ipswich, 1647, Lynn, 1658, died 1700, through Nathaniel², Nathaniel³, William⁴, Nathaniel⁵. He pursued his studies with Rev. Dr. Cutler, of Hamilton;

died July 14, 1850; married, December 12, 1802, Mary, daughter of George and Mary (Derby) Crowninshield, born September 24, 1778; died September 20, 1835. In early life he was a ship-master and supercargo, afterwards a successful and eminent merchant, a Representative and Senator in Massachusetts Legislature, for three years president of the latter body, Representative United States Congress 1817-21, Senator United States Congress 1826-35.

BENJAMIN PICKMAN.

Benjamin Pickman, son of Benjamin and Mary (Toppan) Pickman, was born at Salem September 30, 1763; descended from Nathaniel Pickman, who came from Bristol, England, with his family in 1661, and settled in Salem, through Benjamin² (born in Bristol, 1645, married Elizabeth Hardy, died December, 1708), Captain Benjamin³, Colonel Benjamin⁴ and Colonel Benjamin⁵; pursued his preparatory studies at Dummer Academy, then under the charge of the celebrated "Master Moody;" graduated at Harvard College 1784; married, October 20, 1789, Anstiss, youngest daughter of Elias Hasket and Elizabeth (Crowninshield) Derby (born October 6, 1769, died June 1, 1836); studied law with Theophilus Parsons (Harvard College, 1769), then residing in Newburyport, and afterwards chief-justice of Massachusetts Supreme Court; admitted to the bar; soon relinquished the practice of the profession and engaged in commercial pursuits, in which he continued during the greater part of his life; a Representative and Senator of Massachusetts Legislature; member of Massachusetts Constitutional Convention, 1820; member of the Executive Council of Massachusetts; Representative United States Congress, 1809-11. He was president of the directors of the Theological School at Cambridge, and also president of the principal literary and historical and other institutions of Salem and vicinity; died at Salem August 16, 1843.

WILLIAM REED.

William Reed, son of Benjamin Tyler and Mary Appleton (Dodge) Reed, was baptized June 9, 1776; married, November 13, 1800, Hannah, daughter of Robert and Mary (Ingalls) Hooper, of Marblehead (born August, 1778; died May 16, 1855). The first ancestor was William, son of Richard Reed, of Whitlesey, in the county of Kent, who came to America about 1630, settled first at Weymouth, then removed to Boston; Samuel², Samuel³, of Marblehead, Samuel⁴, Samuel⁵, Benjamin Tyler⁶, above-named; an eminent merchant in Marblehead, and highly esteemed for his benevolent and religious character; Representative United States Congress, 1811-15; president of Sabbath-school Union of Massachusetts, of American Tract Society; an officer and member of many other educational and religious organizations. He was so deeply interested in the cause of temperance that

he was styled the "Apostle of Temperance." He died suddenly February 18, 1837. His widow, who survived several years, was always engaged in works of charity, and was regarded as a most accomplished lady and eminent Christian.

BENJAMIN GOODHUE.

Benjamin Goodhue, son of Benjamin and Martha (Hardy) Goodhue, was born at Salem, September 20, 1748; graduated at Harvard College 1766; married, January 6, 1778, Frances Richie, of Philadelphia (born June 27, 1751, died at Salem January 21, 1801); married, secondly, November 5, 1804, Ann Willard, a daughter of Abijah and Anna (Prentice) Willard, of Lancaster, Mass. (born August 20, 1763, died August 2, 1858); descended from William Goodhue, born in England in 1612, took the oath of freeman December, 1636, and probably came over in that year; settled in Ipswich and sustained the chief trusts of the town; was deacon of the First Church for many years, selectman, representative in General Court, etc.; died about 1699; through Joseph², William³, Benjamin⁴.

He early embarked in commerce with credit and success; a Whig in the Revolution; represented the county of Essex in the Senate of Massachusetts from 1784 to 1789, when he was elected a Representative to the first United States Congress under the new Constitution; in 1796 elected to the United States Senate, and in 1800 he resigned his seat and retired to private life. He died at Salem, July 28, 1814, leaving an irreproachable name to his then only surviving son, Jonathan Goodhue, of New York, a merchant who, in character and credit, stood second to none in that commercial emporium.

JOSEPH GILBERT WATERS.

Joseph Gilbert Waters was the son of Captain Joseph and Mary (Dean) Waters, of Salem, where he was born July 5, 1796, and a descendant in the sixth generation from Lawrence Waters, one of the first settlers of Wauertown. He graduated at Harvard College in 1816, and studied law with John Pickering, of Salem. In the autumn of 1818 he went to Mississippi, and resided there some two or three years in the practice of his profession. Owing to ill health, he returned to Salem, and opened an office, where he resided during the remainder of his life. He was editor of the *Salem Observer* for several years from its commencement in 1823. He was appointed special justice of the Salem Police Court September 1, 1831, and standing justice February 23, 1842, and continued to discharge the duties of this latter office until the establishment of the First District Court in 1874. In 1835 he was a member of the Massachusetts Senate. He also held other offices of honor and trust. He married, December 8, 1825, Eliza Greenleaf Townsend, daughter of Captain Penn Townsend. He died July 12, 1878.

CHAPTER XIII.

LYNN.

BY JAMES R. NEWHALL.

THEN AND NOW.

*Descriptive Passages—The Indians—The Settlers—None of the Place—
Natural Features—Productions—Embarrassments and Successes—Civil
History—Statistics.*

“ I hear the tread of pioneers
Of nations yet to be,
The first low wash of waves where soon
Shall roll a human sea.”

—WHITTIER.

IF, upon the afternoon of some fair day, one should, from the summit of Bunker Hill Monument, through a clear glass, direct his eye northeasterly, he will see stretching in an irregular line of something more than three miles, and at a distance of eight or ten miles, a settlement presenting such features and having such surroundings as will be likely to secure his attention for many minutes. Between him and the settlement, far beyond the circle of busy life that lies at his feet, is a stretch of marsh land of rusty gold tinge, diversified by one or two stately groves, by inlets and by salt streams, and traversed by railroads over which locomotives are constantly puffing, and highways over which horse-drawn carriages of all descriptions are constantly moving.

Extending along the rear of the settlement is a line of dark woodland hills, with here and there cropping out a gigantic porphyry cliff, overlooking many miles of sea and land. In front lies the ocean, ever rising and falling like a thing of life, expanding quietly upon the glistening beaches or dashing sullenly against the huge buttresses of storm-scarred rock, every marine craft known to these waters skimming hither and thither upon its surface.

Directing his eye to the settlement itself, the beholder would observe white suburban dwellings scattered about in picturesque niches with gardens and groves. Then come the central portions, with ponderous business structures, the tall smoke-ejecting chimnies proclaiming the reign of industry and thrift, and in every neighborhood some lofty steeple or graceful tower, testifying to a realization of the higher duties of life.

This is Lynn. And probably no place upon the New England coast can present more attractive features and such varied scenery. It is one of the oldest settlements of Massachusetts, as distinguished from Plymouth, and has always maintained a steady, though not rapid, growth, till, at the present time, it has reached a population of very near 50,000. It is on the northern shore of the great bay which is entered from the Atlantic through the gateway formed by Cape Ann, so named by Prince Charles in filial re-

spect for his mother, and Cape Cod, so named by the notable English navigator, Bartholomew Gosnold, from the circumstance of finding multitudes of cod-fish sporting about there. It was the central one of the three important settlements commenced at nearly the same time,—namely, Salem, Lynn and Boston; is five miles southwest of the former, and ten miles northeast of the latter. It is not now very extensive, territorially, but as regards population is the largest city in the United States, east of Boston.

THE INDIANS.

“ Where now the poor Indian scatters the sod
With offerings burnt to an unknown god,
By gospel light shall the path be trod
To the courts of the Prince of Peace.

“ And here will commerce appoint her mart;
The marble will yield to the hand of art;
From the sun of science the rays will dart;
And the darkness of Nature cease!”

—H. F. GOULD.

Before proceeding to other topics, a few words regarding the Indian race found here may not be inappropriate. But of that race we are almost entirely destitute of substantial or illustrative details. Enough, however, is known to show that they were not a superior people, but rather a poor specimen of the human family, though the poet and sentimentalist have clothed them in glowing drapery, and awarded them singular nobleness of character. It is natural to feel a deep interest in those who before us occupied the soil we inherit, whether they were of our own kindred or of other tribes, and it is hard not to assign to them ideal virtues. But yet it is unaccountable that so many writers, notwithstanding the authentic accounts of the horrid barbarities of the red men, as a people, of their ignorance and depravity, should persist in giving them such an elevated sense of honor and such refinement of sensibility. From comparisons made by some enthusiasts it would seem as if these “children of nature” were thought to be superior to all other people of all time. But in estimating the character of these, our predecessors upon the soil, would it not be well to call to mind some of the incidents that roughly touched our own Essex County—the barbarities experienced by the Dustin and Rolfe families, in the terrible attacks on Haverhill, and the fate of the “Flower of Essex” at Bloody Brook, for instance?

There is abundant evidence that there were individuals of the Indian tribes of lofty character. Gratitude is a noble trait, and of its possession they furnish touching examples. With unwavering constancy they would cleave to their friends; but with delight and remorseless vigor they would cleave down their enemies. Of physical courage, endurance of pain, and contempt of death they present conspicuous examples. But these would not be offered as evidence of true exaltation. That here and there an individual of exceptional magnanimity appeared is not denied; but the great body were degraded in the

extreme. It would be unjust to assume that they, as a people, were destitute of the innate sense of right that distinguishes human nature wherever found, or that there were not many endowed with those finer feelings which, under favoring circumstances, can modify and redeem.

To the honor of the people of the Bay settlements it may be said that their conduct towards the natives was generally marked by justice, if not generosity, and, hence, but little hostility was experienced till they had become strong enough to dismiss their fears. It was not till the great struggle of 1675, known as King Philip's War, that much occurred hereabout to cause real alarm.

The unmeasured censure that some have bestowed upon the settlers for what is termed their unjust seizure of lands, in given instances, may have been well merited, for it is sad to believe that some came with very different motives from those popularly ascribed to them, and which they professed. These were unscrupulous in their dealings with the Indians, and overreached and wronged them in every possible way; but there were comparatively few of such unworthy ones.

In treating of Indian land titles, and their absorption by the settlers, an important fact is usually left out of view,—namely, the fact that the Indians were themselves but land robbers. They boastfully asserted that the country did not originally belong to them, but that their brave fathers wrested it by bloody war from the former possessors; defiantly endeavoring to strike terror into the settlers by thus claiming to be a race of conquerors, who might, in good time, rally and drive the pale-faced usurpers into the sea over which they had intrusively ventured. Yes, they and their fathers were brave; but their bravery was far too generally that of violence and lust for blood.

And another thing: the Indians did not cultivate the soil, at least to any extent, for they were by no means an agricultural people. The great command to "till the soil" they did not obey, but remained unfaithful stewards; and there is, perhaps, room for the casnist to assume that as they would not perform their duty, there was no wrong in replacing them by those more faithful.

To follow some writers, one might imagine that the dusky dames and damsels had remarkably refined ideas and graceful accomplishments; that in music especially they were really proficient; and, though destitute of guitars and pianos, had a felicitous way of modulating their voices by the songs of birds or purling of mountain rills. And they would lead us in imagination to listen to melodious strains ringing through the forest aisles as thrilling as the song of the old Spanish troubadour and as inspiring as a cathedral symphony. That many of them had musical voices and a perception of true rhythm may not be questioned; nor need it be doubted that they had

ability to express the natural feelings in song and significant action. Says the poet,—

"The Indian maid danced on the smooth curving shore,
And mingled her song with the wild ocean roar."

But that she danced "scientifically" or had what we understand to be trained musical powers, is hardly to be believed. Most certainly the musical instruments of our red brethren did not produce peculiarly harmonious sounds. And if the war-songs were modulated by the notes of birds, they must have been birds of rasping cry, like the crow or hawk.

To conclude: the Indian population hereabout was quite small at the time the whites came. The exact number cannot of course be known; but there could not have been above a few hundreds. They were a degraded people, but brethren of our own race, possessing in some degree every quality that goes to make up the human being. They were unrefined and governed chiefly by the lower instincts of our nature, with undisciplined minds and unawakened moral sensibilities.

THE SETTLERS.

"Deep-minded and austere they were,
With hearts of grayer throbs,
And their few errors but appear
As spots on vestal robes."

It was in the autumn of 1626 that the sturdy Roger Conant broke up the unsuccessful fishing and planting station at Cape Ann, and led his little company, among whom was the clerical mischief-maker Lyford, some fifteen miles inland and located at Naumkeag, where, though subject to many privations, their "utter denial to go away" resulted in permanent occupation. Two years afterwards, in 1628, Endicott arrived with his large company. Presently the old Indian name Naumkeag was dropped, and that of Salem, or Peace, adopted; and the settlement soon began to be noted for its business activity, its political and ethical influence.

Some of the new-comers had hardly remained long enough to recover from the excitement attendant on the emigration, and the fatigues of the passage, when they became restless and desirous of trying their fortunes in other and, as they conceived, more promising localities. Permission seems to have been readily obtained for little companies to sit down almost anywhere within the Patent. Indeed, the authoritative Endicott allowed them the broad privilege to "go where they would."

Now let us, by the light of tradition, behold, on a bright day in the early part of the summer of that eventful year 1629, a little company of white men, prospectors from Naumkeag, coming over the rocky hills into the fair Saugus territory. They pause now upon a sunny hill-top, then upon a pleasant plain; they traverse the woodland precinct, view the ponds and water-courses; but above all, delight to gaze upon the ocean, beyond which lies their native isle. But all is done with an eye to the practicability of perma-

nently pitching their tents. A few skulking Indians, perhaps, followed them unseen, filled with wonder and apprehension, because it had been foretold by the dusky prophets that men of fair complexion would one day come and occupy the land. But no hostile demonstrations were made, and the prospectors returned safe, and so well satisfied that it was determined to immediately commence a settlement.

“Over the eastern hills they came,
A sturdy, grave and godly band.
A band then all unknown to fame,
But destined to redeem the land.”

And thus it was, that in June, 1629, the settlement of Lynn was commenced—three years after that of Salem, and one year before that of Boston.

The Indian population, as just intimated, was then so small as to be really insignificant; and not being a pastoral or an agricultural people, the land itself was to them of little value, excepting that the woods yielded a fair amount of game, and a few vegetable products afforded some little addition to their limited variety of food. But the sea was a never-failing source of supply; and it is not to be wondered at that the thought of being driven away to some unknown land, where its bright expanse could no more be seen, nor its winsome voice heard, and especially where its store of dainty food could no more be drawn upon, must have been depressing in the extreme. Nor is it to be supposed that, nomadic as to some extent they were, they had not local attachments; that, homely as were their rustic abodes, they were not loved with all the ardor felt by the more cultured of our race, such attachments not being governed by intellectual or moral sentiments. Yet they do not appear to have received the strangers in anything like a hostile attitude.

The names of all who composed the first little company of settlers do not seem to have been anywhere preserved. But EDMUND INGALLS and FRANCIS, his brother, were certainly prominent among them. Edmund Ingalls was a maltster, and established the first malt-house hereabout, though he undoubtedly turned his hand to other employments as exigency required. The industrial portion of the settlers necessarily pursued various occupations in different seasons. The death of Mr. Ingalls, which took place nearly twenty years after, was tragical. He was proceeding on horseback homeward from a short journey westward, when, on reaching the frail little bridge that crossed the Saugus River, he was precipitated into the stream and drowned. The General Court expressed their regrets at the untoward accident, and their willingness to do something indicative of their appreciation of the good services of the deceased by voting the sum of a hundred pounds to his children.

FRANCIS INGALLS, brother of the foregoing, was a tanner, and established a tannery just within the present limits of Swampscott. Mr. Lewis says this was the first tannery in New England; and Mr. Thompson says the same. But it is a mistake. There were tan-

ners in Plymouth several years before. Mr. Ingalls tannery was no doubt the first in Massachusetts, as distinguished from Plymouth. He died at the age of seventy-one years, leaving a will dated August 12, 1672. The inventory of his estate was filed soon after his decease, and the following enumeration of assets will give something of an idea of the estate and household equipment of a fairly well-to-do denizen of that primitive period:

“5 acres of meadow, at Lyn, at 5 pounds, £25. A piece of land in y^e wilderness at Lyn, 2 coats, 2 pairs of breeches, 1 pair draws, and a leather dublet, and a wes-coat, 1 hat and a pair of stockens, 1 pr. shoes, 3 prs. pillows, 3 napkins, 8 pieces of old pewter, 1 Iron Kittoll, a frying pan, 1 Bible and another book, a warming pan, and dripping pan, 3 chairs, 4 cushions, a spinning wheele, 2 silver spoons. Dues to his estate from Nicholas Rich, 17.£ 17s. Dues to his estate from Thomas Taylor, 11.£.”

With the Ingalls brothers appear to have come three others, namely, WILLIAM DIXEY, JOHN WOOD and WILLIAM WOOD, the two latter supposed to be father and son. The father, John, seems to have been a good, common-sense, plodding settler, industrious, but with little ambition. William, the son, was evidently an active, aspiring young man, something of a rover, a keen observer and one desirous of making a mark. And he did make a mark, which remains conspicuous at this day. He may well be called the first historian of Lynn, or indeed of New England. He was the author of “New England’s Prospect,” which was printed in London in 1634. It was a work evidently inspired by a love for his new home, and gives graphic accounts of the different settlements, their condition, advantages and prospects, with shrewd suggestions and honest deductions, but withal tinged by crude conceptions, more or less attributable to the peculiar views and circumstances of the settlers, and the conceits of the time. His quaint descriptions will continue to be quoted so long as our early history continues to interest. He also, in 1635, published a map of New England, engraved on wood.

The William Dixey who came in company with the Ingalls brothers and the Woods appears to have been a common laborer rather than a handicraftsman. He had been for a short time a servant to Isaac Johnson, of Salem,—very likely a farm laborer, as such employees were in those days called servants. In a deposition made by him some twenty-eight years afterward he speaks of others having come with him, but does not give their names, and says they kept their “cattell in Nahant the sumer following.” He subsequently removed to Salem, where he kept the ferry over North River.

Thus we find that during this year—1629—at least five settlers appeared, some of them heads of families, with wives and children no doubt. We have seen, too, by their occupations, that they must have belonged to the classes accustomed to labor, and conse-

quently best fitted to endure the hardships attendant on such an enterprise.

Details regarding memorable events are always interesting, and the introduction of the actors in them renders them doubly so. And surely it is but a meet act of gratitude to endeavor to preserve the names of such as are fully entitled to live forever in the memory of those who continue to enjoy the blessings of institutions founded by them in toil and privation, even though those names may not yet have been heard beyond the circumscribed limits of their ancient home. A conviction like this may often govern in the present sketch.

During the year 1630 some fifty additional male settlers appeared. These, however, were not all heads of families. Among them are found several names still prevalent among us,—a fact indicative of their primary design to make this a permanent home. They settled in all parts of the town, which was then territorially much more extensive than it is now, some locating as many as ten miles from others. They brought with them considerable farm stock, such as neat cattle, sheep and goats, for they were chiefly husbandmen or such as at some portions of the year could turn their attention to farming. Their names are here inserted in alphabetical order, for it is well thus to preserve their memory, as many now living can trace their lineage directly to them. Occasion, however, may be taken elsewhere in this sketch to say something further concerning several of them who, for various reasons, are entitled to more than a passing notice.

Armitage, Godfrey.	Howe, Daniel.
Armitage, Joseph.	Howe, Edward.
Axe, James.	Hubbard, Thomas.
Baker, Edward.	Hudson, Thomas.
Ballard, William.	Hussey, Christopher.
Bancroft, John.	Keyser, George.
Bennet, Samuel.	Lindsey, Christopher.
Breed, Allen.	Negus, Jonathan.
Brown, Nicholas.	Newhall, Thomas.
Burrill, George.	Potter, Robert.
Burton, Boniface.	Ramsdell, John.
Chadwell, Thomas.	Rednap, Joseph.
Coldam, Clement.	Richards, Edward.

Hawkes, Adam.	Willis, Thomas.
Hawkes, John.	Witter, William.
Holyoke, Edward.	Wright, Richard.

After 1630 the population steadily increased. Among the new-comers were some of established reputation in public life and some of high social standing; so the place began to be of note and influence. It will probably be in our way as we proceed to intro-

duce many who, at different periods and in various ways, added to the prosperity and fame of this their adopted home.

NAME, NATURAL FEATURES, PRODUCTIONS, EMBARRASMENTS AND SUCCESSES.

"In sooth, your honor, it was a goodly place; but rich domains attract evil eyes."

The original or Indian name of the territory composing the present city of Lynn and the adjacent towns which once formed a part of her domain was Saugus, an Indian word said to signify *great* or *extended*; and by that name it was known till 1637, when the General Court passed this concise order: "SAUGUST IS CALLED LIN." The name Lynn was adopted from Lynn Regis, or King's Lynn, Norfolk, England, which is a venerable borough upon the river Ouse, near where it falls into the German Ocean. It has been a seaport of some importance for centuries, and has a peculiarly interesting history, having, apparently, maintained its loyalty to the sovereign through all the political agitations and civil wars from the time of King John, which monarch presented to the corporation a sword, a mace and one or two other regal gifts, which are still treasured there with chivalrous fidelity. In Domesday Book, A. D. 1086, Lynn Regis is called Lenne, which means, in the ancient language of Britain, "spreading waters." The name here was adopted through courtesy to Rev. Mr. Whiting, the second minister, who had been a resident of King's Lynn. He was much beloved, being eminent for learning, piety and serenity of temper. He ministered here for the long period of forty-three years.

The extensive Saugus territory, having thus received the name of Lynn, remained intact but few years before it began to be shorn of outlying portions. But down to 1814 no very extensive tract had been severed. In that year Lynnsfield, which had been called Lynn End, and having been incorporated as a district in 1782, was set off as a separate town under its present name. Another portion was, by legislative action, taken from the mother town in 1815, and incorporated under the name Saugus, thus reviving the old name in that detached portion of the territory. In 1852 still another portion was set off, and the new town of Swampscott came into being. The next year, 1853, the pleasant little peninsula of Nahant was unbound and made a separate municipality. By these facts it will be seen that it is very difficult to treat those municipal children of Lynn as having any separate early history.

Along the inland border of Lynn rise extensive ranges of rocky, wooded hills, never attaining a height of more than two hundred and twenty-five feet, though appearing, from the water or from the shoreward levels, to be much higher, which overlook the city and its village environs, with meadows, lakelets and low, level marshes, the latter sometimes

entirely submerged by the storm-impelled sea which relentlessly floats off the laboriously raised stacks of salt hay, and afford the strange sight of railroad trains apparently gliding upon the ocean's surface. This marsh hay, it may be remarked, though by no means so highly esteemed for fodder as English or upland hay, is yet well worth the labor of storing. For stock, though not very palatable, it is healthful, and for some purposes quite valuable.

Away beyond, lies the great expanse of Massachusetts Bay, with numerous green isles and headlands, the shores at night illuminated by innumerable lights, confusing, one might suppose, to the mariner, though picturesque to the beholder. Almost the whole of Massachusetts Bay is within the range of vision from the hills of Lynn. And glistening in the sunshine may likewise be seen the gilded dome of the State House, in Boston, some of the architectural piles of the city and the blue hills of Norfolk, Middlesex and Worcester. And the writer dares predict that these hills, so picturesque and pleasant in themselves, so airy and affording such charming views, and withal furnishing such abundance of substantial and handsome building material, will, ere many years have passed, be occupied by structures rivaling in grandeur and romantic conceit many that crown the famed steepes of the Old World. True, in some parts the ascents and descents are such that, for the infirm and sluggish, sidewalk stairs, such as are seen in the beautiful Mediterranean isle of Malta, might be required,—incentives to maledictions like those attributed to the impetuous Byron :

"Adieu, ye cursed streets of stairs,
How surely he who mounts you swears."

But to such as are enraptured with nature in her more untamed aspect, the hope will long remain that such desolating improvements may never come. But it is enough for the good people of this generation that they may yet, upon the sunny heights, enjoy the budding beauties of spring, in the sequestered glens find retreats for summer's fervid hours, and everywhere, as the year draws towards its close, witness the indescribable glow of autumn foliage. Yes, and winter, too, has its charms. What more enchanting than the frosted trees? Suddenly, as if by some celestial alchemy, every limb and twig seems swaying with the weight of brilliant gems. No wonder that poets have so often celebrated the charms of such fairy scenes. Our own Lewis has commemorated, in lines perhaps the most inspiring that he ever wrote, the striking display on the brilliant morning of January 29, 1829. But ours is not the only land in which may be witnessed these radiant exhibitions of Nature's scenic power. In Philip's "Epistle to the Earl of Dorset," written at Copenhagen in 1709, is this graphic passage, which may well be quoted as descriptive of the scene sometimes presented here :

"And yet but lately have I seen, even here,
The winter in a lovely dress appear ;

Ere yet the clouds let fall the treasured snow,
Or winds begun through hazy skies to blow.
At evening a keen eastern breeze arose,
And the descending rain unskill'd froze.
Soon as the silent shades of night withdrew,
The ruddy morn disclosed at once to view
The face of Nature in a rich disguise,
And brighten'd every object to my eyes ;
For every shrub and every blade of grass,
And every pointed thorn seem'd wrought in glass ;
In pearls and rubies rich the hawthorns show,
While though the ice the crimson berries glow.
The thick-sprung reeds which watery marshes yield,
Seem polish'd lances in a hostile field.
The stag, in limpid currents with surprise,
Sees crystal branches on his forehead rise ;
The spreading oak, the beech and towering pine,
Glaz'd over, in the freezing ether shine.
The frightened birds the rattling branches shun,
Which wave and glitter in the distant sun.
When, if a sudden gust of wind arise,
The brittle forest into atoms flies,
The crackling wood beneath the tempest bends,
And in a spangled shower the prospect ends."

The "Lakes of Lynn," as Mr. Lewis felicitously calls the chain of beautiful ponds that lie upon our inland border, are a charming feature of the landscape. And during these latter years the eligibility of their romantic borders for retired and tasteful residences has become most fully recognized. From them is annually reaped an abundant winter harvest of ice for summer use—collectively some sixty thousand tons. And in various ways they are made to supply the wants and add to the comforts of the people, especially Birch and Breed's Ponds, through which comes our public water supply. The principal of these picturesque lakelets, with their areas, are as follows :

	ACRES.		ACRES.
Birch Pond.....	84	Gold Fish Pond.....	1½
Breed's Pond.....	64	Holder's Pond.....	7
Cedar Pond.....	43	Lily Pond.....	4
Flax Pond.....	75	Sluice Pond.....	50
Floating Bridge Pond.....	17		

BIRCH POND is an artificial reservoir, or storage basin, formed in 1873, for the purpose of an additional supply of water for public use. It was made by carrying a substantial dam across Birch Brook Valley, on the east of Walnut Street, near the Saugus line. A considerable part of this pond is in Saugus.

BREED'S POND is also artificial, and takes its name from Theophilus N. Breed, who, in 1843, built a dam across the valley a few rods from Oak Street, on the north. He thus procured sufficient power for the iron works he established on Oak Street. On the 15th of April, 1851, during the memorable storm by which the light-house on Minot's Ledge was carried away, some forty feet of the dam were demolished, and out rushed the water in a current ten feet in depth, with such impetuosity that large rocks were carried across Oak Street into the meadow below. The dam was repaired and Mr. Breed continued his business, which was iron-casting and machine work, five or six years longer, and then the works were closed.

In 1860 the dam was broken, and the water suffered

to escape, leaving a bed which remained a noxious bog, where rank vegetation flourished and noisy reptiles congregated. In 1863, however, the dam was again repaired, the pond restored and other business commenced. Finally, after an interval of idleness, in 1870, the city purchased the property as the first step towards securing a suitable public supply of pure water. Repairs were made about the pond, the Pine Hill Reservoir was built, pipes were laid in the streets, the pumping engine was set up on Walnut Street and then, on the 27th of February, 1873, the water was sent coursing through the distributing pipes. The reservoir has a capacity of twenty million gallons and is one hundred and seventy-seven feet above sea level.

CEDAR POND is in the northeast section of the city, near the Peabody line, and by a small stream connects with Sluice Pond.

FLAX POND was first looked to for a public water supply. It was in 1869 that it became apparent that something must speedily be done in that direction. It was found that this pond, with its adjuncts, could furnish a daily average of three million gallons, but objections were made as to its use for domestic purposes on account of impurities. A temporary arrangement, however, was made for its use in cases of fire. Pipes were laid, and on the 8th of December, of the year named, the water was sent coursing to the hydrants in various parts of the city. And that was the first time the city received a supply from any source, by aqueduct, for any purpose. This arrangement continued till a supply for all needs was secured from other sources. Flax Pond, from the earliest times, has yielded its waters for many useful purposes. The principal stream that it sends forth is Strawberry Brook, which, in its course to the ocean, has carried mills, supplied tanneries and done many other useful things, besides answering as a highway for the alewives to reach their spawning-grounds. This pond, likewise, is to a considerable extent artificial; and its name was derived from the circumstance that much of the flax which in former times was raised hereabout was taken there to be duly rotted.

FLOATING BRIDGE POND.—This lies in the direct line of the old Salem and Boston turnpike, and the bridge by which it is crossed floats upon the surface, a circumstance that gave rise to the name. This pond is of great depth, so much so that in former times it was spoken of as "without a bottom." The bridge lies flat upon the surface, and, as carriages pass, the water is forced up between the planks, so that some portions are always wet. Stacey's Brook, which discharges at King's Beach, has its rise in Floating Bridge Pond.

GOLD FISH POND.—This is a small gathering of water and occupies what was formerly a brambly bog. It is on Fayette Street, near Lewis, and close by the spot on which Edmund Ingalls, one of the very first settlers, established himself in 1629; hence it was

sometimes called "Ingalls's Pond." It was likewise called "The Swamp," in view of its swampy condition and uncomely aspect. But in 1870, at an expense of about three thousand seven hundred dollars, such improvements were made as rendered it one of the chief ornaments of that part of the city. Especially has it a most attractive appearance at evening, in the lustre of the electric light. About 1840 it began to be called Gold Fish Pond, the name originating in the fact that in it had then appeared large numbers of goldfish, supposed to have been the offspring of five of the species which some boys procured and let loose there in 1837. These fish became so abundant that in a few years the youth of the neighborhood gained many a dime by peddling them about town from buckets of water.

HOLDER'S POND is a pretty little woodland lakelet among the rocky hills, with wild, tangled paths upon its borders, as sequestered as any misanthrope would desire, for his musing hours. And in winter it affords, like all the other ponds, a fine surface for the skater's sports.

LILY POND is upon the north of Boston Street, and near the Peabody line, a portion lying within the limits of St. Joseph's Cemetery. It no doubt acquired its name from the splendid growth of white lilies that year after year, before the multitudes of juvenile depredators began to make their descents, adorned its surface, and perfumed the air around.

SLUICE POND.—At the time the matter of establishing public water-works in Lynn was under discussion, the waters of various sources were analyzed, and it was found that those of Sluice Pond were the purest. This little lake lies near the northeast border, in what used to be called Dye Factory Village, but now Wyoma. It is of irregular shape, and with it, by a gentle little stream, Cedar Pond is connected. The waters of this pond have for many years been utilized for mechanical purposes, the sluice-way through which they passed giving the pond its name; it was, however, formerly called Tomlins's Pond. A small stream connects its waters with Flax Pond, so that Cedar, Sluice and Flax form links to the chain that reaches the ocean by way of Strawberry Brook.

SPRING POND, the main body of which lies in Salem, though the famous mineral spring, from which its name is derived, is just within the Lynn border, has an interesting history which would more properly be given elsewhere. Then there is the little pond, if it can properly be so called, near the centre of the Common. This was formed in 1835, by intercepting the waters of a little brook that pursued its weedy way across that pleasant public ground. Improvements were made and the fountain placed in 1871.

Nothing need be added, perhaps, regarding the mill-ponds that have from time to time been formed by individual enterprise and for individual emolument, though they have added to the prosperity of the place and done their part in the way of beautifying. That

on Federal Street was formed as early as 1655, was dug by hand, and is still supplied by water from Flax Pond, coursing along the canal, tapping Strawberry Brook at Park Street, and running on through a part of Marion. Then there is the twenty-acre mill-pond near the foot of Pleasant Street, formed by Mr. John Alley, in 1831, by running a dam from his wharf to the marsh.

The territory of Lynn presents an interesting field for the geologist. Here are literally hills of porphyry of various colors, red and a beautiful purple predominating, which would, were the stone not so difficult to work, afford an inexhaustible store of handsome and cheap building material. It is now, however, beginning to be used to some extent, in the rubble form. The beautiful walls of Saint Stephen's Church are chiefly composed of it; also those of the First Universalist Church, in Nahant Street. There are likewise large deposits of green stone and syenite. In blasting for the pipes of the City Water-Works up the hill opposite the pumping station on Walnut Street, beautiful dendrites of manganese were found in abundance. Enormous boulders of granite are found in the woods and upon the shores; but these are now fast disappearing, for building purposes. There are also veins of quartz; and there is a tradition that some of the early settlers found gold, in small quantities. The eminent geologist, Agassiz, long had a summer residence at Nahant, and many interesting facts have been brought to light by his researches. The rugged battlements of rock that frown along the shores of the peninsula, upon which he so loved to gaze, and whose mysterious construction he so loved to investigate, we are assured, stood there in solemn majesty ages before Europe emerged from the chaotic mass.

In an examination of the geology of Lynn, Saugus, Swampscott and Nahant would naturally be included. But in this place nothing more than a mere suggestion or two can be made as to the various interesting formations. It is profitless to speculate as to what the condition of the formations and deposits was ages ago, or to endeavor by present appearances to trace the operations of nature in pre-historic times. It may, however, be noted as an interesting fact, touching the history of Essex County, that geological researches long ago led to the belief that at a remote period the Merrimac River, after entering Massachusetts from New Hampshire, instead of pursuing its present course, and discharging its waters at Newburyport, followed a more direct line, and cast its contribution into the Atlantic at Lynn. Supposing that to have been the case, and that it had continued to the present time, where now would have been that line of thrifty Essex County border cities and towns, Lawrence, Haverhill, Bradford, West Newbury and the others that so adorn the whole extent of the beautiful valley; yea, and Newburyport herself?

Lynn cannot now boast of a lordly stream like the Merrimac, but she can boast of her bright little Saugus that traverses her western border—a modest little river, to be sure, but one which has largely contributed to her prosperity during her whole history, by furnishing eligible mill-sites and other manufacturing privileges, and by yielding abundance of various kinds of excellent shore fish. Tons of eels have sometimes been speared from beneath the ice during a single winter, and the clam-banks near the mouth have yielded of their abundance many a nutritive meal for the humble board of the poor as well as savory addition to the luxurious table of the rich. Indeed, the extremity of poverty, at least in the matter of food, was never so keenly felt by the settlers hereabout as by those farther inland, the sea, like a faithful parent, being always a good provider. In addition to all these benefits may be mentioned the facilities for salt water bathing, and boating sports. And now, with its tributaries of pure water, this gentle river of Saugus is about to swell the volume of Lynn's public supply.

It was upon the border of Saugus River that the ancient iron-works, said to have been the first in America, were established. And in a romantic glen, a stone's throw from the bloomery, it is alleged, a band of pirates concealed themselves, after quitting their bloody traffic upon the seas, remaining undisturbed till a King's cruiser appeared upon the coast, when capture and swift retribution overtook most of them.

Lynn, as before stated, is about ten miles northeast of Boston, the metropolis of New England. Including Swampscott and Nahant, which, though they have now become separate municipalities, still seem to be mere territorial outposts, the seashore line measures about six miles; and inland from the sea the line measures about five miles. The main body of the city, or rather of the business portion, occupies a plain, with the sea in front. But there are some diversities of surface, Sagamore Hill and the Highlands being airy elevations, crowned by many fine residences.

It can hardly be said that the soil of Lynn is naturally fertile. It is stony, and in many places the descent towards the sea is so considerable that the droughts of summer often have a serious effect. Nevertheless, such an abundance of rich manuring material is day by day thrown up by the sea, and the means of irrigation are so near at hand, that the labors of even the indigent husbandman need not be in vain. Farming was, of course, the chief occupation of most of the early settlers, and it is stated by Graham that in 1637 there were thirty-seven plows in the whole colony, most of them being in Lynn.

In the early times of the settlement the woods, the beaches and marshes furnished irresistible attractions for the sportsman. Feathered game of various kinds was found in the woods, upon the beaches and

marshes; cod, haddock, bass and halibut sported in the offing; and the woods furnished a good share of wild meat.

Of feathered game very little is now found. The fish, or rather the fishing interest, was chiefly taken away by our undutiful children, Nahant and Swampscott, when they departed; and, of course, in the sketches of those places, some account of it will appear. As to furred game, there is now almost literally none in the woods. Occasionally a shame-faced sportsman may be seen shying from the forest at evening, possibly with a poor little rabbit, but most likely empty-handed.

William Wood, the author of "New England's Prospect," who has already been spoken of as a resident of Lynn, was inclined occasionally to give his descriptive passages in numbers. He did not, probably, aspire to the character of poet, though, with as good grace as some others, he might have done so; and perhaps, having called him the first historian of Lynn, we may as well also call him the first poet. Of the flora of this region he discourses briefly in numbers, mentioning among the trees, the oak, cypress, pine, chestnut, cedar, walnut, spruce, ash, elm, maple, birch and some others of smaller growth; naming also the "diar's shumach," the "snake-murthuring hazell" and "sweet saxaphrage, whose spurnes in beere allays hot fever's rage." Most of these kinds are still common in Lynn woods, though the chestnut and one or two others are not often seen. The hemlock, one of the most graceful native trees of New England, he does not allude to, excepting, perhaps, under some other name.

Mr. Wood mentions some of the fruits of this "Indian orchard," but does not go much into particulars. Blueberries, blackberries, cranberries, raspberries and whortleberries are still common in the woods and meadows. One of the best known shrubs at present found is the barberry, the root of which was formerly much used in dyeing, as it imparts a beautiful yellow. It bears an acid berry, of bright scarlet, from which an excellent preserve is made. It is, however, no doubt an exotic, and akin to that which in England is called the pepperidge bush. The early settlers introduced some plants for which after-generations had little cause to be thankful; among them the white-weed, now known by the more dainty name of field-daisy, and the wood-wax, that beautiful pest of pasture land. But the barberry seems to hold a doubtful rank. Its prevalence, more than a hundred years ago, became so injurious in the pastures that the law interposed to check its increase. It, however, requires such a peculiarity of soil, that to this day it has not spread over a great extent of territory. Even in most parts of Massachusetts a barberry bush was never seen. The General Court, in 1753, ordered that all persons having barberry bushes growing on their lands should extirpate them before the 10th of June, 1760. And the surveyors of highways were required

to destroy all growing by the roadside within the specified time, or the towns should pay two shillings for every one left standing. The reasons for this order were that those bushes had so much increased that the pasture lands were greatly encumbered; and it was imagined that "a steam flew off" from them that blasted the English grain. So it appears that left-handed thanks were due to the people of other lands, in the early days, for questionable gifts, as well as from us of this generation for the gift of the sarcastically-tittering English sparrow. But then it should be remembered that the many nobler gifts from abroad far outnumber the few of doubtful value.

In the woods and fields, the tangled dells and damp vales, along the weedy rills and upon the rocky heights, may still be gathered wild flowers in great variety, from the brilliant cardinal to the shrinking violet. To sum up in a terse sentence of Mr. Lewis, "The forests, fields and meadows are rich in the abundance and variety of medicinal plants, and the town presents a fine field for the botanist."

Very few parts of the New England coast present so many interesting and at times sublime features as those within and about Lynn. Here bold and jagged cliffs of greenstone, feldspar and other adamantine formations rear themselves as impregnable barriers against the inroads of the ever-assaulting ocean; there, broad beaches of fine, gray sand, so compact and hard that carriage wheels scarcely make an impression, with ridges of the wonderful up-castings of the sea—shells of curious shape and glistening stones of every color and form. In pleasant weather and during the warm season there are many attractions for the pleasure-seeker in promenading, boating and fishing; and for the health-seeker in refreshing breezes, quiet retirement and the restoring sea-bath.

The principal beach is that which joins Nahant to Lynn, and has, from early times, been known as Long Beach. It is nearly two miles in length, and forms a gentle curve. The early geographers spoke of it as a very curious formation. To the first settlers it seems to have been the scene of weird mystery, awe-inspiring and not unmixed with undefinable apprehension. Its hollow moanings warned, its gentle murmurings relieved. Mr. Wood thus alludes to it,— "Vpon y^e south side of y^e Sandy Beach y^e sea beateth, which is a sure prognostication to presage stormes and foule weather and y^e breaking vp of Frosts. For when a storme hath bene or is likely to be itt will roare like Thunder, being hearde six myles." The roaring is not, however, always indicative of an approaching storm, as it arises from the violent driving in of heavy seas by out-winds. The wind may change and the threatening cease. Long Beach was a favorite sporting-ground with the Indians, and gambling groups sometimes assembled here, for the Indians were great gamblers, often risking all their possessions, even to papoose or squaw, upon the turning up of a shell or fall of a stone. The

Indian sagamore dwelt upon the neighboring height that overlooks the beach, and from there was accustomed to view the athletic sports of his people, which took place on the sandy plateau, sometimes being unable to restrain himself from joining in the contests—the same picturesque height that still bears the name Sagamore Hill, and is now crowned by commodious dwellings, stores and other marks of refined and busy life.

Upon these beaches and along the rocky indentations of this rugged coast the sea has, from time to time, cast up from her mysterious store-house wonderful specimens of the deposits there. And they have also been the scene of some most appalling shipwrecks and other marine disasters. Government has done something to lessen the dangers, and still much needs to be done. Egg Rock towers up in the offing, eighty-six feet above sea level, and has an area of some three acres, on one-third of which is a shallow layer of soil. It is a precipitous cliff of feldspar, incapable of being landed upon, excepting at one point and during a calm sea. Upon this lonely rock, which is a couple of miles from Long Beach, a mile from Nahant and three miles from Swampscott, a lighthouse has been erected, which for the first time shed forth its hospitable beams on the night of September 15, 1856.

From time to time the territorial integrity of old Lynn has been raided upon. As already remarked, Lynnfield was set off in 1814, Saugus in 1815, Swampscott in 1852 and Nahant in 1853. But as to the latter, some two centuries ago, it was in danger of being severed from the parent, for it was in 1688 that Edward Randolph, who has been called the evil genius of New England, petitioned Governor Andros for the gift of Nahant, indulging, no doubt, in the pleasant dream of erecting a sort of baronial establishment for himself there. His choice of a seat certainly indicated good taste, if not a love for fair dealing. The town was notified of the petition, and great excitement ensued, it being well known that the petitioner had much influence as counselor, secretary and personal friend of the Governor. He had been sent out to report on the condition of the colonies, and was justly reputed to be unfriendly to their interests. There was no doubt of his high prerogative proclivities, nor of his being one of the chief instruments in annulling the beloved old charter. He himself says that he was regarded at Boston "more like a spy than one of his majesty's servants," and speaks of being welcomed, on his return from a brief absence, by "a paper of scandalous verses." The nature of these "scandalous verses" may be gathered from the following extract:

"Welcome, Sir, welcome from ye easterne shore,
With a commission stronger than before
To play the horse-leach; rob us of our illeeces,
To rend our land and teare it all to pieces:
Welcome now back againe; as is the whip,
To a fooles back; as water in a ship.

Boston make roome; Randolph's returned, that Hector,
Confirmed at home to be ye sharp Collector."

It can well be supposed that Randolph was by no means a favorite with the people of Boston, for among his other imprudent—or take the word as more exactly expressive without the "r,"—attempts at acquisition, he petitioned to have a house-lot on Boston Common set off to him.

Such was the man who, in 1688, petitioned Andros, who had just about as much love for the colonies and for abstract justice as he, to grant him the beautiful peninsula of Nahant. The Governor undoubtedly was inclined to comply with his favorite's petition; but decency required that the matter should not be consummated with unseemly haste.

On notice of Randolph's petition, a town-meeting was held, and a vigorous protest, setting forth the right of the town to the peninsula and the damage that would ensue from the granting of the petition, was addressed to the Governor and Council. But Randolph was persistent and renewed his petition, denying the right of the town to the land, and even going so far as to declare that Lynn never was an incorporated town, "and so not endowed with a power of receiving or disposing of such land." To this a spirited rejoinder, signed by seventy-four of the principal inhabitants, was forwarded. But it is not easy to say what the result would have been, had not the successful uprising of the people presently consigned both Andros and Randolph to the Fort Hill Prison, in which uprising the people of Lynn naturally took an active part, Rev. Mr. Shepard, the minister, heading the phalanx which marched to Boston, arriving there, as Randolph graphically said, at about eleven o'clock, "like so many wild bears." This Randolph affair formed a lively episode in Lynn's history.

Had Nahant been granted to Randolph, it is easy to see that it would have become a sharp thorn in the side of Lynn; that a continual petty warfare would have ensued. It would no longer have been, as for many years it was, a pasture for her cattle, nor would it have become, as in after-years it did, a delightful resort for parties of pleasure. And even at this day, instead of being the paradise of a certain class of reputed "dodgers," it would have been—we know not what!

From what has already been said, something may be gathered of the condition, habits, culture and general fitness of the settlers as laborers on the foundations of a new social fabric, and likewise something of the natural features of their new home. It will be observed that they came largely from the industrial classes. But they were a thoughtful people, and realized the responsibilities that rested on them. Next to ensuring the means for procuring the prime necessities of life,—food, clothing and shelter,—they felt the importance of supplying facilities for common education, for moral and intellectual training.

Lynn, unlike some other New England settlements,

has all along, in a remarkable degree, depended on herself, procuring whatever she possessed by her own industry and skill; in other words, has had only what she earned. Some of the early settlements were the outcome of foreign business enterprise, and flourished by the aid of foreign capital. Especially in later times have manufacturing communities been nurtured, if not sustained, by capital drawn from outside of their limits. Not so with Lynn. Her advancement has been made through her own enterprise, her accumulations by her own industry. Throughout all the periods of business adversity and temporal distress that have cast their shadows over the community, in colonial, provincial and later times, Lynn has ever been able not only to maintain her own sons and daughters, but to afford, not perhaps of her abundance, but of her thrift and generosity, relief to communities more severely afflicted. "When there were yet few of them, and they strangers in the land," with humble trust, patient endurance and unremitting toil, they applied themselves to their new duties, and seldom failed of meet reward. But the writer is not unmindful that there is a higher duty to perform than the boastful tracing of progress in a mere worldly way, that higher duty being to mark the development of the great principles that constitute the true foundation of human right and duty; of tracing, even in the most limited sphere, the progress of those principles on which true liberty rests—principles which contribute so largely to the sum of human happiness, and have made our nation what she is.

In the history of Lynn, perhaps as conspicuously as in that of any other New England community, may be seen the progress to which we refer—the progress of principles which were the birthright of the settlers, as Englishmen, shadowed forth in the charter of 1215, and finally appearing in more pronounced form in the Declaration of American Independence, in the established Constitutions and supplementary Bills of Rights.

The Andros administration has been referred to. That, perhaps, was the most pregnant, as it certainly was the most stirring, episode during many years of New England history. Something of its bearing upon the people here has been seen. The result, no doubt, was of great benefit politically, for it quickened the apprehension of natural rights and solidified the determination to permit upon this soil no encroachment upon them. The "tyrant of New England," as the obnoxious Governor was called, soon found that opposition attended every step, and manifested itself in every way—in grave denunciation, cutting satire and comic hyperbole. Imagine the effect of the following stanzas from the Sternhold and Hopkins version of the Fifty-second Psalm, as they are said to have been lined off with great unction by an elderly deacon, and with equal unction sung by voices old and young, smooth and rough, in tune and out, at a meeting which the Governor, in one of his tours, deigned to attend:

"Why dost thou, tyrant, boast abroad
Thy wicked works to praise?
Dost thou not know there is a God,
Whose mercies last always?"

Why dost thy mind yet still devise
Such wicked wiles to warp?
Thy tongue untrue, in forging lies,
Is like a razor sharp.

Thou dost delight in fraud and guile,
In mischief, blood and wrong:
Thy lips have learned the flattering stile,
O false, deceitful tongue."

CIVIL HISTORY.—The civil history of Lynn, in its organic features, does not much differ from that of other early Bay settlements. The town was never formally incorporated, but by the earliest General Court was recognized as an existing municipality. That was enough, though, as we have just seen, the obsequious Edward Randolph, a counselor of Governor Andros when, in 1688, he petitioned for the gift of Nahant, denied this, saying, in answer to the vigorous protestations of the Lynn people, "It does not appear . . . that the said town of Lynn was incorporated in the year 1635, nor at any time since, and so not now endowed with a power of receiving or disposing of such lands, . . . and their town of Lynn is equal to a village in England, and no otherwise." But he and his unscrupulous superior soon found that there was a power somewhere that was able to defeat their arbitrary schemes and land them both in a prison.

The settlers were thoroughly imbued with the sentiment that political power belonged to the people. If Roger Williams was the first here to formulate this as well as certain principles of religious freedom, he was not the first to realize it. When they left the Old World they left the dogma of a divinely-appointed class, and adopted the manly idea of equal rights. Such being the case, what more natural than the establishment of the town-meeting,—the assembly in which all could meet and freely discuss the affairs by which the well-being and prosperity of all were to be affected, and in which each individual, by voice and vote, could exercise his influence? There was the charter, to be sure, and its authority was acknowledged; but its provisions would not have been allowed to override the higher demands of conscience, right and justice, had there been any apprehended attempt to do so, for the trained and ingenious mind can discover ways of interpretation that will circumvent the most crafty scheming.

Very soon the interests of the settlers broadened, and it became necessary to establish "Ye Great and Genrall Courte." And the same right of free discussion and free action was maintained there. At first every freeman was deemed a member of the court, and liable to be fined if he did not attend its sessions, for it was rightly claimed that the community was entitled to the best judgment and skill of each of its members, it being realized as well then as now that in the mind of the humblest hewer of wood and

drawer of water conceptions of unspeakable value might arise. But the time soon arrived when it was impracticable for the whole body of freemen to attend the court sessions; no room could be found large enough to contain them, and then the end had to be sought through deputies or representatives. Soon parties began to appear, and divisions, not on the primary principle of individual freedom, but on the question as to whom it would be most safe and expedient to invest with the delegated power.

Of course it would not be practicable or even desirable to go largely into detail regarding the old town-meetings. They were conducted here much as elsewhere. Every local matter was freely discussed and often the debates broadened into irrelevant dissertations on great public questions and theoretical propositions, very much as they are apt to in these days of political enlightenment. Neighborhood disagreements and jealousies would occasionally arise, and crude conceptions and selfish inclinations manifest themselves. Village orators would harangue at wearying length and village seers forecast calamities; but there were also wise, bonest and patriotic men, shrewd counselors and wary watchers for the public good, and through all and in all each felt his own individual rights and acknowledged his responsibilities.

It is not wonderful that the people of the old Bay State clung so tenaciously and so long to the town-meeting. It had carried them safely through perilous times and threatening shocks; and in a broad sense it may even be claimed that it had been the very nursery of American freedom. There was no city organization in all Massachusetts till 1822, when Boston assumed the new investiture, having then a population of forty-five thousand. It was quite a number of years, however, before any other town followed her example. Salem and Lowell were the first, they becoming cities in 1836. But the adoption of the city form was so far receding from elementary freedom, and while it was desirable, if not necessary, in many respects, it also afforded greater facilities for ambitious politicians and wire-pullers to ply their arts.

Lynn adopted the city form of government in 1850. Many worthy and prominent people strongly opposed the change, and the adoption of the charter came near being defeated; indeed, a similar one previously granted by the Legislature had been defeated by popular vote. Mr. George Hood, a man of much ability and strong persuasive powers, led the opposition, and it is a little singular that he who had persistently and vehemently opposed the charter was elected the first mayor under it. In his inaugural address he thus bade adieu to the old régime: "Before proceeding to the business immediately before us, it seems to be appropriate to the occasion to revert briefly to our venerable system of town government, of which we have taken leave forever, and to pay a passing tribute to the memory of the conscientious men who, in the

midst of toil, privation and peril, founded, cherished and transmitted it to us as a rich inheritance. According to Lewis' History, the first white men known to have been inhabitants of Lynn were Edmund Ingalls and his brother, Francis Ingalls, who came here in 1629. The next year came Allen Breed, Thomas Newhall, George Burrill, Edward Baker, John Ramsdell and Richard Johnson; in 1635, Henry Collins; in 1640, Andrew Mansfield, Richard Hood, Edward Hreson and Henry Rhoades.—all of whom have representatives in this City Council, and perhaps others of whose history I have not been informed. . . . Our town government has accomplished its mission; its successful operation for more than two centuries has proved the capacity of man for self-government; it has proved that the safest repository for power is in the hands of the people. During this long period we hear of no abuse of power by them, nor of those to whom they intrusted the care of the town government. They taxed themselves liberally for all necessary objects of public improvement. The church and the school-house grew up together, both significant monuments of advancing civilization." Is it probable that at the end of two centuries more it can be said of the people under the present form of municipal government, that no abuse of power by them or those to whom they entrusted the administration of affairs, had been heard of?

Mr. Hood well said that under the old government the town prospered. Its growth was steady, but not rapid. At the time of the adoption of the charter, in 1850, the population was 14,200; twenty years before, in 1830, it was 6200; in 1765 the first recorded census gave 2198; and the increase of business was in something like the same ratio. But after the introduction of machinery in the manufacture of shoes, which was subsequent to the adoption of the charter, the increase of business and population was seemingly much more rapid, though perhaps the percentage was not much greater.

For nearly two centuries the town-meetings were held in the meeting-house, as the settlers preferred to call their house of worship, the first being an unseemly little structure, standing in a hollow, near the territorial centre, and the only public building. It was not held by the same tenure that "churches" now are, but was the property of the town. There the village orators exercised their eloquence, the village statesmen their patriotism, the incipient wire-pullers their cunning, till the house itself disappeared. "The Old Tunnel," as the parish meeting-house built in 1682 was in after-years called, then became the place for the transaction of town business. It stood near the centre of the Common, and continued for several generations to serve the double purpose of a place for public worship and a place for the transaction of public business. But it was relieved of the latter use in 1806. In the mean time the Methodists had come in and built a house of worship. And some objec-

tions having been made to the further use of the old house, the town-meetings then (1806) began to be held in the Methodist house, which stood near the east end of the Common, at the head of Market Street. There they were held till the erection of the Town-House, in 1814. That building had an interesting history, of which little can be given here. It stood on the centre of the Common, nearly opposite the head of Hanover Street, and for many years the interior remained unfinished. Of course, elections were held in it; military companies drilled there; and it was used for assemblages and exhibitions of various kinds. In 1832 it was removed to South Common Street, at the point where Blossom Street now opens, and the interior finished. On the formation of the city government, in 1850, it was thoroughly repaired and fitted for the reception of the officials under the new and more august order. Thus it remained until its destruction by fire on the morning of October 6, 1864.

It was on the 10th of April, 1850, that the Legislature granted the City Charter; on the 19th of the same month the inhabitants, in town-meeting assembled, voted to accept it; and on the 14th of May the first organization under it took place. The ceremonies were held in Old Lyceum Hall, which stood on Market Street, corner of Summer. The day was pleasant, and a large number, some of whom were ladies, were present. In the evening the new government, together with a considerable company of prominent citizens, partook of a collation in the Town Hall. There was no jubilant display at the initiation of the new government; no procession, no pyrotechnic exhibition, either oratorical or material. All parties seemed to join in a quiet but cordial acceptance of the change, and in a hopeful, if not enthusiastic spirit, determined to repress all former misgivings.

Soon after the destruction of the old Town House the necessity of a substantial City Hall was so manifest that the work of erection was set about energetically; and, on the 30th of November, 1867, the present stately edifice was dedicated. The city offices were soon removed thither, and from that time onward have the commodious chambers echoed with the eloquence of the assembled counselors.

Whether Lynn has prospered more since the adoption of the city form of government than she would have prospered had the old town form been longer continued can only be conjectured. But certain it is, that during the thirty-five years that the existing form has been in operation her progress has been highly satisfactory. The population has more than trebled; and in business, in educational facilities, in benevolent enterprises, and, may we not venture to add, in religion and morality, her advancement has been alike marked.

It has been stated that Lynn has always been fortunate in having among her people men of sagacity,

energy and prudence,—men who, in the administration of her municipal affairs and in her broader interests, vigorously defended her rights and labored for her good. These are deserving of special notice, and in an elaborate history should have a place; but in a limited sketch like the present but comparatively few can be even named. In the troublous days of the Andros administration, among her heroic defenders were Oliver Purchis, Rev. Mr. Shepard, Thomas Loughton, Ralph King and John Burrill. In the stormy times of the Revolution she had the vigilant watchfulness of Rev. Mr. Treadwell, Rev. Mr. Roby, Deacon John Mansfield, Dr. Flagg and Frederick Breed, besides her brave sons who took the field. And all along, down to these later times, she has never been destitute of loyal sons to protect her good name and promote her prosperity. Especially may it be said that during the threatening times of the great Civil War scarcely a man in her whole population could be found who was not ready, if need be, to take the field in defense of the national cause.

The following is a list of the mayors of Lynn, with the dates of inauguration:

GEORGE HOOD, the first mayor, served two terms; was inaugurated May 14, 1850, and April 7, 1851. He was a native of Lynn, and died June 29, 1859, aged fifty-two.

BENJAMIN FRANKLIN MUDGE, the second mayor, was inaugurated June 16, 1852. He was a native of Orrington, Me.; born August 11, 1817, and died in Manhattan, Kansas, November 21, 1879.

DANIEL COLLINS BAKER, the third mayor, was inaugurated April 4, 1853. He was a native of Lynn; born October 14, 1816, and died in New Orleans, La., July 19, 1863.

THOMAS PAGE RICHARDSON, the fourth mayor, was inaugurated April 3, 1854. He was a native of Lynn; born July 27, 1816, and died November 24, 1881.

ANDREWS BREED, the fifth mayor, was inaugurated January 1, 1855. He was a native of Lynn; born on the 20th of September, 1794, and died in Lancaster, Mass., April 21, 1881.

EZRA WARREN MUDGE, the sixth mayor, was inaugurated January 7, 1856, and January 5, 1857, serving two terms. He was a native of Lynn; was born on the 5th of December, 1811, and died September 20, 1878.

WILLIAM FREDERIC JOHNSON, the seventh mayor, was inaugurated January 4, 1858. He was a native of Lynn; born [in Nahant] July 30, 1819.

EDWARD SWAIN DAVIS, the eighth mayor, served two terms; was inaugurated January 3, 1859, and January 2, 1860. He was born in Lynn June 22, 1808, and died August 7, 1887.

HIRAM NICHOLS BREED, the ninth mayor, was inaugurated January 7, 1861. He was born in Lynn September 2, 1809.

PETER MORRELL NEAL, the tenth mayor, held the office four terms. He was inaugurated January 6,

1862, January 5, 1863, January 4, 1864, and January 2, 1865. He is a native of North Berwick, Me., and was born September 21, 1811.

ROLAND GREENE USHER, the eleventh mayor, served three terms. He was inaugurated January 1, 1866, January 7, 1867, and January 6, 1868. He was born in Medford, Mass., January 6, 1823.

JAMES NEEDHAM BUFFUM, the twelfth mayor, was inaugurated January 4, 1869. He was afterward elected for a second term, and inaugurated January 1, 1872. He was born in North Berwick, Me., May 16, 1807, and died June 12, 1887.

EDWIN WALDEN, the thirteenth mayor, served two terms; was inaugurated January 3, 1870, and January 2, 1871. He was born in Lynn, November 25, 1818.

JACOB MEEK LEWIS, the fourteenth mayor, served four terms, being inaugurated January 6, 1873, January 5, 1874, January 4, 1875, and January 3, 1876. He was born in Lynn, October 13, 1823.

SAMUEL MANSFIELD BEHER, the fifteenth mayor, served two terms, having been inaugurated January 1, 1877, and January 7, 1878. He is a native of Lynn, and was born June 23, 1816.

GEORGE PLAISTED SANDERSON, the sixteenth mayor, was inaugurated January 6, 1879, and January 5, 1880, serving two terms. He was born in Gardiner, Me., November 22, 1836.

HENRY BACON LOVERING, the seventeenth mayor, served two terms. He was inaugurated January 3, 1881, and January 2, 1882. He is a native of Portsmouth, N. H., and was born April 8, 1841.

WILLIAM LEWIS BAIRD, the eighteenth mayor, was inaugurated January 1, 1883, and January 7, 1884, serving two terms. He is a native of Lynn; born July 29, 1843.

JOHN RICHARD BALDWIN, the nineteenth mayor, was inaugurated January 5, 1885. He is a native of Lynn, and was born May 10, 1854.

GEORGE DALLAS HART, the twentieth mayor, was inaugurated January 4, 1886. He was born in Malden, Mass., December 7, 1846, and is an offspring of the old Lynn Hart family. Mayor Hart, elected for a second term, was inaugurated January 3, 1887.

A short series of statistical statements, touching the present state of municipal and kindred affairs, will now be given. Other statistics relating to special topics will appear in their proper places.

POPULATION.—The population of Lynn, as given by the State census of 1885, is 45,867,—males, 21,752; females, 24,115. Native born, 36,099; foreign born, 9768. Of the age of eighty years, 16 males and 31 females; of the age of ninety years, 3 males and 7 females; of the age of ninety-five years, 4, all females. Colored persons, 624.

The population at different periods is shown by the following:

Years.....	1800	1850	1885
Population.....	2,837	14,257	45,867

DWELLINGS. 1885. — Whole number, 7383.—of

which 7161 are of wood, 76 of brick, 2 of stone, and the others of mixed material. It will be noted that this does not include the business buildings, many of which are of brick and very large. Number of persons to each occupied dwelling, 6.33. Number of buildings erected during the year, 392. Lynn has long been famous for the moving of her buildings from place to place, and, in pursuance of the custom, 55 changed their places during the year.

VALUATION, TAXATION AND POLLS.—The following table shows the progress of Lynn in these matters, at several periods since she became a city:

YEAR.	REAL ESTATE.	PERSONAL ESTATE.	TOTAL.	NO. POLLS.	TAX PER \$1,000.
1850	\$3,160,515	\$1,674,328	\$4,834,843	3,251	\$9.00
1860	6,291,460	3,357,605	9,649,065	3,933	8.80
1870	14,277,212	6,649,903	20,927,115	6,773	17.20
1880	17,913,543	5,470,192	23,383,735	10,702	17.60
1886	23,305,806	6,000,003	29,305,809	13,842	19.00

It will be perceived from the foregoing that we have made marked progress, as well in taxation as valuation and polls.

APPROPRIATIONS AND RECEIPTS, EXPENDITURES AND CITY DEBT.—The "progress" in these matters is indicated by the following:

YEAR.	APPROPRIATIONS AND RECEIPTS.	EXPENDITURES.	CITY DEBT.
1850	\$15,000.00	\$36,704.19	Mar. 1, 1850, \$71,398.15
1860	110,667.28	101,569.51	Dec. 31, 1860, 123,100.00
1870	524,776.72	499,583.25	Dec. 31, 1870, 910,000.00
1880	705,999.57	653,327.90	Dec. 31, 1880, 2,169,000.00
1886	1,080,274.65	1,014,617.80	Dec. 20, 1886, 2,522,400.00

It should be remarked, in relation to the city debt, that the exact condition is not always apparent. For instance, the debt in 1886 is given as \$2,522,400.00, but there were such drawbacks as reduced the net amount to \$1,778,128.82.

ALMSHOUSE.—Average number of subjects, 67; average cost of each per week, \$2.62. Aid was also given to 519 families, or some 1600 outside persons; 5457 tramps were during the year provided with food and lodging at an expense of \$320.55.

FIRE DEPARTMENT, FIRE ALARMS, ETC.—Steam fire-engines, 5; hook-and-ladder trucks, 2; horse hose carriages, 5; hose wagon, 1; large double-tank chemical engine, 1; supply wagons, 5; fire alarm telegraph wagon, 1; jumper hose carriages, 2; hose pumps, 5; buggy, 1; small extinguishers, 6. The manual force consists of 1 chief and 4 assistant engineers, 1 superintendent and 1 assistant superintendent of fire alarm telegraph, 6 engineers of steam fire-engines, 5 firemen of steam fire-engines, 12 drivers, 10 foremen, 8 assistant foremen, 49 hosemen, 20 ladder-men, 12 substitutes, making a total of 129. There are also in the service of the department 22 horses and 14,750 feet of hose. The number of hydrants scattered about the city is 557, and the number of street reservoirs, 19. The telegraphic fire alarm was established here in 1871, and has proved extremely useful and economical. The number of fire alarms during 1885 was 188, 84 being bell and 104 still alarms. Loss by fire during the

year, \$169,975.85. Expenditures of the department for the year, \$41,840.06.

Notices of the most disastrous fires that have ever occurred in Lynn may be found elsewhere in these pages.

POLICE DEPARTMENT.—The expenses for the year 1885 were \$43,451.44; number of arrests, 1472; 511 being of persons of foreign birth, and 166 females; 828 were for drunkenness, 186 for assault and battery and 128 for larceny; 5453 persons were provided with lodgings.

WATER WORKS.—Net cost of the public works, to January 1, 1887, \$1,342,144.11. Average consumption of water per day during the year 1885, 1,920,519 gallons; average to each inhabitant, a trifle over 41 gallons per day. Total extension of pipe in Lynn, 75½ miles. The report of the president of the board says (1886), "The department has paid all expenses of maintenance, the interest on the water debt, and shows a surplus of \$26,919.18 to be carried to the water-loan sinking fund."

BIRTHS AND MARRIAGES, 1886.—Number of births, 1296; number of marriages, 616.

Under the sub-titles "Libraries" and "Schools" may be found statistics relating to those institutions, and under "BURIAL-PLACES" will appear certain vital statistics.

And here, perhaps, is the proper place to enumerate some of the institutions, associations and societies for benevolent, moral, social and recreative purposes, of which Lynn has a large number. They are, generally, worthy of honorable recognition, and some are deserving of great praise. It would hardly be practicable even to name them all here, nor is it necessary, as several are spoken of elsewhere. Yet a little space may be allowed, the name of the organization generally indicating its character. Among them are.—Associated Charities (the object being to discreetly distribute the means contributed for charitable purposes.), Board of Fire Insurance Underwriters, 7 clubs for religious, social, political, mutual improvement and recreative purposes. There are also 3 bicycle and 4 boat clubs, and 1 shooting club. Female Benevolent Society, Firemen's Relief Association, Free Public Forest Association, Grand Army of the Republic, Home for Aged Women, Houghton Horticultural Society, Inebriates' Home, Knights of Honor, Knights of Labor, Knights of Pythias, Lasters' Protective Union, Lynn Hospital, McKay Stitchers' Union, 4 Masonic lodges (spoken of elsewhere), Mechanics' Exchange, Medical Society, 9 mutual benefit associations—among them the Workingmen's Aid Association and the Accident Association, 12 Odd Fellows'

lodges, Press Association, Sanitary Association, Shoe and Leather Association, Teamsters' Union, 10 temperance organizations, Young Men's Christian Association.

LYNN BANKS.—There are now (1887) in Lynn five banks of discount, with an aggregate capital of \$1,100,000, to wit: First National, capital, \$500,000; Central National, \$200,000; National City, \$200,000; National Security, \$100,000; Lynn National, \$100,000. There are also two savings banks, namely, Lynn Institution for Savings and Lynn Five-Cents Savings Bank, with aggregate deposits, January 1, 1887, to the amount of \$4,710,000.

LYNN POST-OFFICE.—The business of a post-office may, perhaps, ordinarily be taken as a fair indicator of the business of the place in which it is located. The Lynn post-office was established in 1793, before which time the mail matter of the people here was distributed through the Boston office. Fifty years ago, that is in 1835, the gross amount of postage accruing at the Lynn office, all told, for the year ending October 1st, was \$2,459.28; and the increase of business to the present time is indicated by the following items for the year ending December 30, 1886:

Receipts from sale of stamps, stamped envelopes and postal cards.....	\$50,452.97
Expenditures for salaries, rent, gas, etc.....	23,671.88
Excess of receipt over expenditures.....	\$26,781.09
Number of pieces delivered by carriers.....	3,214,985
Number of pieces collected by carriers.....	1,276,030

There are six daily mails, Sunday excepted, to Boston and the South, and four to the East. Fifty years ago the government did not provide carriers to deliver and collect mail matter, a fact that, no doubt, has had something to do with the increase of correspondence. The rates of postage were much higher than at present. The postage on a single letter from Lynn to New York, for instance, was 18¾ cents, a fact which induced many to send by private hand when opportunity offered. But the postage was not required to be paid in advance, a circumstance, one might think, encouraging to correspondence. A penny post began to run about town in 1812; but he was not employed by government, individuals paying him at the rate of two cents a letter. The first postmaster was Colonel James Robinson, and he kept the office on Boston Street near the corner of North Federal. He was a soldier of the Revolution; was succeeded in 1802 by Major Ezra Hitchings, reared a large family of sons and daughters and died, in 1832, in reduced circumstances, being the recipient, during his latter years, of a small pension.

CHAPTER XIV.

LYNN—(*Continued*).

ECCLESIASTICAL.

*Religious Societies, their Formation and Growth—Sketches of Early Ministers
—Houses of Worship and their Equipment—Statistical Details.*

“The sermon, learned long and cold;
The psalm in graveyard metre told;
But piety, right deep and true,
Each exercise ran through and through.”

—JORDAN.

CONSIDERING the chief cause of the occupation of bleak New England, it would naturally be supposed that the very first public institution in a settlement would be a church. But Lynn was some three years without a minister. Very likely, however, some sort of public religious services were held, especially on the Lord's day.

FIRST CHURCH.—The first church of Lynn, the fifth in the Bay colony, was gathered in 1632; and it remains at this day one of the three or four of the early churches that have preserved their fidelity to the ancient Puritanical faith. Almost every one of the old churches has become Unitarian or Universalist.

The church here appears to have commenced in a way not in accordance with Puritanical or Orthodox order. But whatever irregularity existed was cured by the decision of a council held in March, 1635, “that, although the church had not been properly formed, yet, after-consent and practice of a church estate had supplied that defect, so all were reconciled.” The church was instituted by Rev. Stephen Bachiler, who arrived with his family in June, 1632, the chief inducement for his coming probably being that he had a daughter residing here, the wife of Christopher Hussey. There came with him six persons who had belonged to his church in England, and to these, with such settlers as chose to join them, he commenced ministrations, without installation. He was then of the ripe age of seventy-one years, and appears to have retained great vitality, both mental and physical. He was a man of at least singular characteristics; was high-tempered and extremely tenacious. There was soon serious disturbance among his little flock, and gross scandals began to circulate, insomuch that in four months after his arrival the court was appealed to, and that august body thus decreed:

“Mr. Batchelr is required to forbear exercising gifts as a pastor or teacher publicly, in or pntent, unless it be to those hee brought with him, for his contempr of authority, & till some scandles be removed.”

This sentence, however, was soon after annulled. But the difficulty was not healed; other questions and scandals arose, and the court was again appealed to.

Finally, on his promise to leave town within three months, the proceedings were discontinued. He was here about four years. Afterwards he was at Newbury and Hampton, of which latter place he was one of the first settlers. He subsequently pitched his tent in one or two other places. But in 1651 he returned to England, where, at the age of ninety, he married his fourth wife, his third still living here, and apparently of a reputation by no means unblemished. She petitioned the court for a divorce, but no record of the fate of the petition is found. Mr. Bachiler died near London in 1660, in the one hundredth year of his age. His descendants, and there are many hereabout, take some pride in the fact that Daniel Webster, the eminent statesman, and Mr. Whittier, the poet, trace their genealogical lines to him.

Rev. Sammel Whiting, the successor of Mr. Bachiler, was installed on the 8th of November, 1636. He was descended from a long line of honorable ancestors, and was a son of Sir John Whiting, mayor of old Boston, England, in 1600 and 1608. His brother John was also mayor four years and his brother James one year. Samuel, the minister, was born in 1597, and at the age of sixteen was entered at Emanuel College. He was an apt student, received the degree of A.B. in 1616, and that of A.M. in 1620. Afterwards he received the degree of D.D. His father died while he was in college, leaving a very considerable estate. Emanuel College, as is well known to readers of Puritan history, was called “the hot-bed of Puritanism,” and it was while there, no doubt, that he imbibed those principles which grew with his growth, and strengthened with his strength—those principles which so strongly marked his whole life. It is well to bear in mind that what were known as the Puritan principles of that day had reference not only to church, but also to state. It was not only the grand purpose to purify the church of obnoxious rites and ceremonies, but also to free the people from governmental oppression and wrong—to circumscribe the royal prerogatives, defend against the encroachments and reduce the privileges of the aristocracy; in short, to break down every barrier to the reasonable exercise of individual right, freedom and responsibility.

Mr. Whiting took orders in the Church of England soon after graduating, and became chaplain in a refined and wealthy family in Norfolk. After remaining there about three years, apparently in great prosperity and happiness, he accepted a rectorship in Lynn Regis as colleague of Rev. Dr. Price. In that situation he remained three years, administering his office acceptably, excepting his refusal to conform to certain required usages in the established church service; in brief, he was a Non-conformist, subjected himself to the censure of the Bishop of Norwich, and was induced to resign and remove to the parish of Shirbeck, near Boston, where he again filled the

office of rector, and again came under censure for non-conforming practices.

In 1636 his situation became so uncomfortable that he resigned, and prepared to emigrate to America. The same year, 1636, in which he resigned his charge at Skirbeck, he emigrated to America, arriving in May. He does not appear to have greatly enjoyed the voyage hither, as he remarks that he would "much rather have undergone six weeks' imprisonment for a good cause than six weeks of such terrible seasickness." A few months after his arrival, November 8, 1636, at the age of thirty-nine, he was installed minister of the little church here at Lynn.

Mr. Whiting was twice married. His second partner, she who accompanied him hither, and whose remains peacefully slumber in our old burial-place, near the west end of the Common, could claim family descent more illustrious than his, for she could trace her lineage, without a break, to William the Conqueror. She was a sister of Oliver St. John, the chief justice of England during the commonwealth, and own cousin of Oliver Cromwell. But all the incidents of birth and family on his and her part, incidents which to so many, even here and among us of this day, possess a peculiar charm, seem to have weighed nothing in comparison with their strong sense of duty.

The young couple, as they then were, apparently without one longing look behind, left the bright scenes, the comforts and luxuries of their early homes, crossed the stormy ocean, and bravely entered this western wilderness, with stout hearts, to fight the battle of civilization. Nobly did they address themselves to their chosen work, and great was their success. The beneficial results of their coming did not by any means end with their lives. Children were born to them, and children's children have appeared in every path of usefulness, and adorned our whole history. The entire nation has received benefits hardly capable of being over-estimated. Some of their descendants have been conspicuous in theological, scientific and literary callings; others have filled useful and honorable positions in the national civil service; others, again, have risen to eminence in the military profession. One needs only to glance over a dictionary of American biography to learn how meritorious the family has proved.

Mr. Whiting, as might readily be supposed, took great interest in the education of the youth of the town, and, together with his accomplished wife, did everything possible to refine the manners and elevate the condition of every class. He took unwearied pains to advance every material interest—to improve the husbandry, the fisheries, the mechanic arts—indeed, all branches required for the supply of current and prospective wants. And all the time he never lost sight of opportunities to promote the broader interests of the little community, vigilantly guarding against the imposition of wrongful burdens by the General

Court, through misinformation or selfish appliances, and laboring in every honest way to elevate and dignify her name. The town grew apace during the forty years he continued so devoted to her concerns; and it was a healthy growth.

It is not to be forgotten that many of the clergy of that day had very great influence in the direction of public affairs. Indeed, it was common for the executive, legislative, and even the judicial authorities, to apply to them for the solution of intricate questions and the determining of principles. Many, if not most of them, had, like Mr. Whiting, been ministers in the Church of England, and were men of learning and deep thought. The very experiences that induced their emigration often arose from their advanced views of human rights and political liberty. It is to be remembered, too, that at that period the settlement of a minister was, under ordinary circumstances, expected to be for life; not a mere temporary sojourn, as is so often the case in our day. And it will readily be perceived how much greater the opportunity of the faithful pastor then was to inaugurate and sustain pursuits calculated to be permanently beneficial, the long continuance of his fostering care ensuring results that under frequent change could never be attained, at the same time receiving his own reward in contemplating the regenerating effects of his godly teaching.

No sooner had Mr. Whiting commenced his ministrations to the little flock here than the discordant elements that had disturbed it, and the whole community as well, under his predecessor, were harmonized, and old and young gathered around him in delightful sympathy and trust—exemplifying the truth that mental strength, coupled with genial manners, is potent to secure confidence and love.

The remains of that good old man were laid away for their everlasting repose in the then quiet village burial-place, overshadowed by ancient forest-trees, where but a small company had then been gathered, but where now lie an innumerable host, all heedless of the stately edifices that one by one have arisen around, and undisturbed by the tramp of the busy multitude. The spot where he rests is marked by a simple granite shaft, reared, a few years since, by the Hon. William Whiting, of Boston, a direct descendant, who himself rendered such eminent service to our government during the most trying period of the War of the Rebellion, and who has been since called to join his honored ancestor in the land whence none return. In the names of Whiting School and Whiting Street is the memory of this beloved minister perpetuated.

At this point it may be well to give the pastoral succession in this, the First Church of Lynn, with the dates at which the pastorates began, and append a few notes on some whose names appear therein.

1632. Stephen Bachiler.
1636. Samuel Whiting.

1637. Thomas Cobbet (colleague).
1680. Jeremiah Shepard.

1680. Joseph Whiting (colleague).	1832. David Peabody.
1720. Nathaniel Henchman.	1836. Parsons Cooke.
1763. John Treadwell.	1865. James M. Whiton.
1784. Obadiah Parsons.	1872. Stephen R. Dennen.
1794. Thomas C. Thatcher.	1876. Walter Barton.
1813. Isaac Hurd.	1885. Frank J. Mundy.
1818. Otis Rockwood.	

REV. THOMAS COBBET, who was settled in 1637 as colleague with Mr. Whiting, was a marked character among the early New England divines—marked for his learning, piety and unswerving principles. He was born in Newbury, England, in 1608, studied at Oxford and suffered for non-conformity. He remained here in Lynn till 1656, then left and settled at Ipswich, where he died in 1685. Mr. Cobbet preached the election sermon in 1649, and the court voted that "Mr. Speaker, in the name of the Howse of deputies, render Mr. Cobbett the thanks of the Howse for his worthy paines in his sermon wch, at the desire of this howse, he preached on the day of election, and declare to him it is their desire he would print it heere or elsewhere." He was a voluminous writer, and among his works was "A Practical Discourse on Prayer," of which Cotton Mather remarks, "Of all the works written by Mr. Cobbet, none deserves more to be read by the world or to live till the general burning of the world, than that of Prayer." The elegant Cobbet school-house, on Franklin Street, erected in 1872, is a memorial of this esteemed minister.

REV. JEREMIAH SHEPARD, who in 1680 succeeded Mr. Whiting in the pastorate, was a man of decided traits, and to a degree destitute of the milder qualities of his predecessor. Yet he was successful in his ministry, and his death was deeply mourned. His pastorate extended over forty years. Mr. Lewis says "he was distinguished for his unvaried piety," and "was indefatigable in his exertions for the spiritual welfare of his people." He reasoned deep

"Of Providence, fore-knowledge, will and fate."

His ministrations were characterized by great seriousness, and his views of human nature gloomy, almost to distortion. Rev. Mr. Brown, minister of the Reading Church, in his journal, under date of June 25, 1712, says: "I was ordained past of this church and received the dreadful charge from the mouth of Mr. Shepard, of Lynn."

Mr. Shepard took an active part in some of the political agitations of the day; and in the insurrection that deposed and imprisoned Governor Andros, on the 19th of April, 1689, he exhibited quite as much patriotic zeal as could be expected in a minister of the Gospel, as appears by the relation of one who was present, and who, in speaking of the array that marched in from the country to the assistance of the insurgent Bostonians, says: "April 19th, about 11 o'clock, the country came in, headed by one Shepard, teacher of Lynn, who were like so many wild bears; and the leader, mad with passion, more savage than any of his

followers." The courage and discretion of Mr. Shepard no doubt did much for the welfare of Lynn during that trying period. He was inclined also to watch with jealous eye any approach of trespassers upon the Puritanical domain, and as Quakerism was beginning to make serious inroads, he appointed the 19th of July, 1694, as a day of fasting and prayer for the stay of that "spiritual plague." He died on the 3d of June, 1720, aged seventy-two years. His tomb still remains conspicuous in the old burying ground, marked by a plain oblong brick stand surmounted by a heavy stone slab, with an inscription now so eaten by time and the elements as to be almost illegible. But his name is enduringly preserved in Shepard Street and Shepard School. Mr. Shepard was a son of Rev. Thomas Shepard, who was born in Towcester, England, in 1605, received an excellent education, came over while yet a young man, and was ordained as first pastor of the First Parish Church of Cambridge, in 1636. He was conspicuous for his fervid piety. In Johnson's "Wonder-Working Providence," published in 1651, he is spoken of as "That gracious, sweete, heavenly-minded and soule-ravishing minister, Mr. Thomas Shepheard, in whose soule the Lord shed abroad his love so abundantly, that thousands of souls have cause to bless God for him, even at this day, who are the seale of his ministry." He appears to have received the name Thomas in rather a singular way, saying: "The Powder Treason day [November 5, 1605], and that very houre of the day wherein the Parliament should have bin blown up by Popish priests, I was then borne, which occasioned my father to give me this name *Thomas*, because he sayd I would hardly *believe* that ever any such wickedness should be attempted by men agaynst so religious and good Parliament."

A worthy descendant, Mr. George L. Shepard, of Boston, a son of the late eminent merchant, Michael Shepard, of Salem, has recently published a genealogical account of some of the descendants of the family head.

Mr. Shepard was the first minister of the "Old Tunnel," so called. That famous meeting-house was erected in 1682, two years after his settlement. It will be borne in mind that in those days, and indeed long after, a church here was so far a public institution that its temporal arrangements at least were governed by the votes of the town. To illustrate, let us quote some votes passed at town-meeting in 1692:

"January 8. It was voted that Lieutenant Blighe should have liberty to set up a pew in the northeast corner of the meeting-house, by Mr. King's pew, and he to maintain the windows against it.

"The town did vote that Lieutenant Fuller, Lieutenant Lewis, Mr. John Hawkes, senior, Francis Burrill, Lieutenant Burrill, John Burrill, junior, Mr. Henry Rhodes, Quarter-Master Bassett, Mr. Habersfield, Cornet Johnson, Mr. Bayley and Lieutenant Blighe should sit at the table.

"It was voted that Matthew Farrington, senior, Henry Siblee and Joseph Mansfield, senior, should sit in the deacon's seat.

"It was voted that Thomas Farrar, senior, Crispus Brewer, Allen Breed, senior, Clement Coddam, Robert Rand, senior, Jonathan Hodson, Richard Hood, senior, and Sergeant Haven should sit in the pulpit.

"The town voted that them that are surviving that was chosen by the town a committee to erect the meeting-house, and Clerk Potter to join along with them, should seat the inhabitants of the town in the meeting house, both men and women, and appoint what seats they shall sit in, but it is to be understood that they are not to seat neither the table nor the deacons' seat, nor the pulpit, but them to sit there as are voted by the town."

The pulpit of the Old Tunnel was capacious enough to contain ten persons. A small bell swung in the little tower, and in the northeast corner of the gallery was a "negro pew," quite elevated and boarded well towards the top. The colored brethren and sisters were required to sit there, where they might hear, but neither see nor be seen.

Mr. J. Warren Newhall, in his poem delivered at the celebration of the two hundred and fiftieth anniversary of the organization of the church, June 8, 1882, thus speaks of the architecture of this famous old house of worship:

"A modest cupola the roof surmounts
Of quaint design—so history recounts.
'Twas said the belfry bore a semblance fair
To an inverted tunnel poised mid air;
Hence was the structure the 'Old Tunnel' named,
And for this title evermore was framed.
Downward with quite a questionable grace,
The bell-rope fell into a central place
Within the unique auditorium, where
The sexton rang the call to praise and prayer.
We see no gorgeous fresco on the walls,
Through no stained glass the light of heaven falls;
But glinting 'mid the naked oaken beams,
Through the small diamond panes the sunlight gleams.
No richly cushioned slips the people knew,
But plain deal seats, with here and there a pew,
Built by some person, who must first procure
Permission from the town this to secure.
As time advanced these pews more numerous grew,
But were not wholly uniform to view,—
Some large, some small, of patterns manifold,
By which the owner's taste or means were told.

* * * * *

In place of dainty desk therein appeared
A pulpit, with its lofty form upreared,
While like a canopy o'er the preacher's head
The sounding-board its huge proportions spread.

* * * * *

In the bleak days of wintry wind and snow,
No furnace fire dispensed its genial glow;
To those who fain the service would attend,
The humble foot-stove was the warmest friend."

To the fidelity of this sketch the writer can well attest from childhood recollection and experience. Of the oft protracted exercises our poet also gives the following graphic description:

"No warning clock prescribed the preacher's powers;
The simple sand-glass told the passing hours,
Which, when the tell-tale sand its course had run,
Was deftly turned, and sixtently began!
For they preached sermons countless in deductions;
None of our modern half-hour productions,
In continuity they excelled, 'tis true;
Always an hour in length, and sometimes two."

REV. NATHANIEL HENCHMAN succeeded Mr. Shepard in 1720. He was born in Boston on the 22d of November, 1700, as is stated on the Lynn records in the handwriting of his son, and, if the date is cor-

rect, must have settled here at the early age of twenty. But there is doubt as to the correctness of the date. He graduated at Harvard in 1717. His grandfather was Daniel Henehman, the same who planted the historical "big elm" on Boston Common, which was destroyed by a gale in February, 1876. And this Daniel Henehman was also ancestor of Frederiek Tudor, the wealthy ice merchant, who did so much to beautify Nahant. Mr. Henehman ministered here forty years, and died on the 23d of December, 1761. Rev. Mr. Barton, in his address on the two hundred and fiftieth anniversary of the church, remarks that Mr. Henehman proved to be a man of very different views from his predecessors, Whiting, Cobbet and Shepard, and adds that his "settlement gave a new and disastrous turn to affairs. Finding here a very flourishing church and society, he left, after forty years' ministry, only eighteen members, and that in the days of the great awakening under Whitefield and Edwards." In 1745 Mr. Whitefield came to Lynn, and Mr. Henehman refused permission for him to preach in the meeting-house, a step that occasioned a long and bitter controversy. The great revivalist, however, found audience-room elsewhere, one of his out-door discourses being delivered while standing on the platform of the whipping-post, near the meeting-house. But yet Mr. Henehman is reputed to have been remarkably genial in manners and to have treated Mr. Whitefield personally with much respect and politeness. It is easy to see that his ministry here was not successful, and that there were serious breaks in the harmony of the parish. He had peculiar notions of ministerial duties and ministerial rights, and was tenacious in his adherence to them. He was twice married and the father of five children. His tomb is in the Old Burying-ground, and is, like Mr. Shepard's, marked by a plain, oblong brick structure.

REV. JOHN TREADWELL was the successor of Mr. Henehman. "And during his pastorate," remarks Mr. Barton, "two events occurred which brought in a state of things disastrous to the church in common with others, viz.: the Half Way-Covenant and the Revolutionary War." He was ordained on the 2d of March, 1763, and remained nineteen years; hence it will be perceived that he was here during the most stirring period in American history. The Provincial Congress, in June, 1775, recommended the carrying of arms to meeting on Sundays and other days when worship was held, by the men who lived within twenty miles of the sea-coast; and so we find Mr. Treadwell appearing in the pulpit with a loaded musket, cartridge-box and sermon. He was born in Ipswich September 20, 1738, and graduated at Harvard in 1758. His pastorate here ended in 1782. He then returned to Ipswich, his native place, and afterward removed to Salem; was a Representative and Senator in the General Court, and a judge of the Common Pleas Court. His patriotism was conspicu-

ous, his manners genial, and he loved to indulge in pleasantry, sometimes even out of season. His witty sayings often gained currency, and many of them are not yet forgotten.

REV. OBADIAH PARSONS, the successor of Mr. Treadwell, was installed February 4, 1784, "in peace, harmony and concord," as Mr. Sparhawk, of Lynnfield, says in an almanac memorandum. He remained eight years and then returned to Gloucester, his native place, where he died in December, 1801. He had two wives and nine children. His settlement here does not seem to have promoted the prosperity of the church, and there were some scandals that hastened his removal, though he seems to have maintained a good social standing.

It was during the pastorate of Mr. Parsons that the parsonage at the corner of South Common and Commercial Streets was erected. And, as an appropriate illustration of some of the habits and customs of the time, it may be pertinent to relate an incident connected with the enterprise. The story is that a number of the parishioners of small means were surprisingly liberal in the amounts they subscribed in furtherance of the good object, though it was understood that their donations would be received in the form of labor upon the premises, at a fixed price per day. The contributors were highly applauded for their generosity and the building committee praised for their liberality in arranging with a neighboring retailer for a supply of "refreshments," as they might be called for, while the work proceeded. Cheerily and rapidly the work went on. And then—when the building was completed and the accounts brought together—the contracting parties were astonished to find that the retailer's score, for *liquid* refreshments alone, exceeded in amount all that class of subscriptions.

REV. THOMAS CUSHING THATCHER was installed next after Mr. Parsons. He was a son of Rev. Peter Thateber, of Brattle Street Church, Boston; was born in 1771; graduated at Harvard in 1790, and settled here in 1794; remaining till 1813. He attained a good old age and died in Cambridge September 24, 1849. He was affable in his social relations, but inclined to asperity in his controversial writings. He preached the funeral discourse over the bodies of the drowned men from the Scottish brig "Peggy," which was wrecked near the southern end of Long Beach December 9, 1795. The service was held in the meeting-house, the eight recovered bodies being present. There were twelve on board the brig, only one of whom escaped, and he, during the mournful service, stood in the centre aisle. Mr. Thatcher's text was, "And I only am escaped alone to tell thee," Job, ch. i., v. 19. On the 13th of January, 1800, he pronounced the eulogy on Washington. He also delivered the funeral sermon over the bodies of Miles Shorey and his wife, who were instantly killed by lightning on Sunday, the 10th of July, 1803, in the

house which still stands on Boston Street, opposite Cottage. He was a descendant from that Mr. Thatcher who, with his wife, were the only survivors of the terrible shipwreck, in August, 1635, of the bark of Mr. Allerton, which was cast away off Cape Ann and twenty-one persons drowned, including Rev. Mr. Avery, his wife and six children. The island on which Mr. Thatcher and his wife were safely cast is still called Thatcher's Island.

REV. ISAAC HURD, the tenth minister, was ordained September 15, 1813, and remained about three years. He graduated at Harvard in 1806. From Lynn he removed to Exeter, N. H., where he was installed over the Second Church of that place in September, 1817. There he remained till his death. At the closing period of Mr. Hurd's ministry the condition of the church was very low; so much so, indeed, that the question of disbanding began to be agitated. But better things were in store. This was the time when the "liberal" element was beginning to actively work in the old churches, and Mr. Hurd was inclining towards the new views. It is almost wonderful that the church did not at that time recede from the old paths, as so many of the other New England churches did. And it probably would have gone over had Mr. Hurd possessed the firmness and attractive power possessed by some others of the seceding clergy.

REV. OTIS ROCKWOOD, who succeeded Mr. Hurd, was firm in the faith, firm in his denominational attachments, and firm in his determination to prevent, if possible, any straying from the old paths. He was sound rather than brilliant, and to his earnestness is much of his success to be attributed.

The successors of Mr. Rockwood, down to the present time, have been strong in the faith and zealous in their labors, men of ability and learning, and some of them distinguished above the common rank. So well are their characteristics known to this generation that an attempt at portrayal in detail would be needless here, did the limits allow. Their names and the dates of their settlement have already been given. It may not appear invidious, however, to remark that Rev. Parsons Cooke, who was settled in 1836 and died on 1864, was perhaps the most notable since the time of Mr. Shepard. He was especially strong as a controversialist, and seemed to take a grim delight in opportunities to attack the Unitarian, Universalist and Methodist denominations. Persons of his characteristics always make a mark, and have tenacious adherents and determined opponents. It is difficult, therefore, to form an entirely satisfactory opinion from contemporaneous estimates, and future results must indicate the amount of good achieved. Mr. Cooke published two or three works which received some attention at the time they appeared, the most interesting of which, at least to Lynn people, being that entitled "A Century of Puritanism and a Century of its Opposites." It related

to the history of ecclesiastical affairs here, and took quite an unfavorable view of some of his predecessors in the pastorate and those of their communion. Its sometimes poorly authenticated statements, as to the unworthiness of those under notice, opened the way for the future liberal-minded historian to rank him as one disposed to magnify the failings, rather than the goodness, of others.

Besides the foregoing list of regular pastors the church has, of late years, had the services of two or three acting pastors, whose names follow,—REV. GEORGE E. ALLEN, who supplied in 1863-64; REV. JOSEPH COOK, 1870-71; Rev. J. R. DANFORTH, 1872. Mr. Cook afterwards became quite famous as a lecturer, delivering several series in Boston and other large American cities. He likewise visited Europe and other parts of the world, attracting much attention. He still (1887) continues to exercise his gifts in his chosen field. While here, he delivered a series of Sunday evening lectures in Music Hall, which created considerable sensation on account of the pungency of his style, and, as many thought, indiscreet and unnecessary assertions and denunciations.

Thursday, the 8th of June, 1882, the two hundred and fiftieth anniversary of the founding of the First Church of Lynn was observed by fitting ceremonies at the house of worship, on South Common Street. The day was pleasant and the attendance good. The forenoon exercises consisted of addresses, prayers, Scripture reading and appropriate music. The historical address was given by the pastor, Rev. Walter Barton; and a poem, from which quotations have already been given, was read by the author, J. Warren Newhall. At noon an abundant repast for visitors was spread in the lecture-room. The afternoon services were all of an impressive character. It was an occasion of much interest,—something more than a mere society or denominational observance, being well calculated to enlist the sympathies and stir the feelings of all, especially natives of the town.

The history of the First Church of Lynn has here been dwelt upon more at large, perhaps, than our limits justify; but, in an important sense, it embodies a history of the place. In its communion were the fathers of the town, and, all along, many of the chief men have held it to be their spiritual home. Its influence in early days was potent for good, and in its list of pastors appear some names of more than ordinary lustre.

Having spoken thus at large of the First Church and its ministry, brevity will be necessary in speaking of the other religious societies, of which there are now thirty. Before enumerating them, however, a word should be said of the first churches of Lynnfield and Saugus, which were the Second and Third of Lynn.

The Second Parish Church of Lynn was formed in 1720, the year in which Rev. Mr. Shepard died, and became the First Church of Lynnfield. The eccen-

tric but learned Nathaniel Sparhawk was the first minister. In the sketch of Lynnfield this parish will be further spoken of. In the mutations of New England theology it became a Universalist Society.

The Third Parish Church of Lynn was gathered in 1732, and became the First Church of Saugus. It was over this parish that the Rev. Joseph Roby was settled for the long period of fifty-one years. He was learned and pious, and withal ardently patriotic, being chosen one of the Committee of Safety at the opening of the Revolution. This society, like that of Lynnfield, finally adopted the Universalist faith.

TRINITARIAN CONGREGATIONAL.—Of the Trinitarian Congregational—or, as they are popularly called, the Orthodox—Societies, there are now four, namely,—the *First Church*, that already spoken of, and whose present place of worship is a fine brick edifice on South Common Street, built in 1872; the *Central Congregational*, founded in 1850, and whose present house of worship is also a fine brick edifice, on Silsbee Street, built in 1868; the *Chestnut Street Congregational*, commenced in 1857 as a Congregational Methodist, and becoming distinctly Calvinistic in 1860, their house of worship being a frame structure on Chestnut Street, built in 1857; the *North Congregational*, founded in 1869, and worshipping in their neat wooden church on Loughton Street, built in 1870.

UNITARIAN CONGREGATIONAL.—The *Second Congregational Society of Lynn* is Unitarian in sentiment. It was founded in 1823 and has a peculiar history, exemplifying some of the changes to which so many religious bodies were subjected at about the time of its institution. As has been seen, Mr. Rockwood, of the First Church, was a strong Calvinist. He was settled in 1818. At that time the leaven of "liberal Christianity," as it was called, and which subsequently developed into broad Unitarianism, had begun actively to work. And it was chiefly from those who dropped off from the old society, having imbibed the more "liberal views," that this was formed. Among the early members were several of the most influential people of the town, and it has always comprised some of the wealthiest. Their house of worship, which is the first and still the only one of the order in Lynn, was dedicated on the 30th of April, 1823, and is on South Common Street. It is a wooden structure, and does not compare favorably with most of the present Lynn houses of worship. It may be mentioned, as an interesting fact, that it was in a sermon preached in Boston, at the installation of Rev. Mr. Shackford, who was the sixth pastor of this society, that the distinguished Theodore Parker first publicly and clearly enunciated his peculiar doctrinal views. Another interesting fact, mentioned by Mr. Johnson in his "Sketches of Lynn," is, that the venerable Dr. Pierce, of Brookline, who was here at the ordination of Rev. Mr. Pierpont, the fifth minister, on that occasion remarked that that "was the ninety-fourth ordi-

nation that he had attended, and that it was the first one where intoxicating drinks were not used, and the first ordination dinner at which ladies were present."

FRIENDS, OR QUAKERS.—A *Society of Friends* commenced worship here as early as 1677. The rigid laws against the Quakers, which for many years deformed the statute-books of Massachusetts, and the story of their rigorous enforcement, are too well known to need recounting. But it should be borne in mind that the so-called Quakers of those days were very different from the quiet, orderly and honest people of after-years who have borne the name. They were a turbulent set, defying the government and outraging, certainly in some instances, the decencies of social life. The society here has ever embraced some of the best people, and, with the exception of one or two rather unaccountable outbreaks, has pursued the even tenor of its way. They worship in a plain wooden structure, on Silsbee Street, built in 1816.

METHODIST.—To that early pioneer of Methodism, Jesse Lee, is to be attributed the formation of the first society of the denomination in Lynn. Rev. Mr. Daniels, in his "History of Methodism," speaking of the travels and untoward experiences of Lee in New England, says,—“In Lynn a more hospitable reception was accorded to him, and there he formed his first society in Massachusetts, February 20, 1791, consisting of eight members. On the 27th of the same month it had increased to twenty-nine members, and in May following more than seventy persons took certificates of their attendance on his ministry—a measure rendered necessary by the laws of the State, in order to secure them from taxation for the support of the clergy of the ‘standing order.’” August 3, 1792, was held at Lynn the first Methodist Conference in New England. “There were eight persons present besides Bishop Asbury,” says Daniels, “among whom was Jesse Lee, who was now exulting in having gained a permanent foothold in this unpromising region.”

The *First Methodist Society* of Lynn, thus formed, has maintained a prominent standing not only in Lynn, but in the denomination at large, and has sent forth several thrifty ecclesiastical offspring. Their present house of worship is a conspicuous brick edifice on the northeasterly side of City Hall Square, built in 1879. *St. Paul's Methodist Society* was formed in 1811. Their present house of worship is a wooden structure on Union Street, built in 1861. The preceding house was totally destroyed by fire on Sunday evening, November 20, 1859. Some five hundred persons, many of whom were children, as a Sunday-school concert was in progress, were in the building, but all safely escaped. The *South Street Methodist Society* was formed in 1830. Their house of worship is a neat wooden structure on South Street, built in 1830. The *Maple Street Methodist Society*, Glenmere Village, was founded in 1850. Their house of wor-

ship is an attractive structure of wood on Maple Street, built in 1872. The *Boston Street Methodist Society* was founded in 1853. Their house of worship is a wooden structure on Boston Street, built in 1853. The *African Methodist Society* was organized in 1856, and their modest house of worship, on Mailley Street, erected the next year. *Trinity Methodist Society*, near Tower Hill, was founded in 1873, and their present tasty edifice of wood built soon after. Recently a society has been organized in Wyoma Village.

BAPTIST.—The *First Baptist Society* was founded in 1816. A great deal has been said of the persecutions to which the early Baptists were subjected, and much of the rigorous conduct towards them was inexcusable. Yet it may be said of them, as was said of the early Quakers—they were not characterized by peacefulness, humility and the high sense of Christian duty which characterizes those of the name at this day. Their interference with State affairs no doubt created more opposition than their purely religious doctrines. It is probable that most students of New England history would concede that the banishment of Roger Williams even was brought about more from political than religious considerations. This, however, is not the place for discussing such questions. When the church here in Lynn was formed, the persecutions had long ceased. The house of worship of the *First Baptist Society* is a fine edifice of wood on North Common Street, erected in 1867. The *Washington Street Baptist Society* was founded in 1854. Their house of worship, at the corner of Essex and Washington Streets, is one of the finest in town, is of brick and stone, and was built in 1874. The *High Street Free-Will Baptist Society* was organized in 1871. Their house of worship is of wood, and stands in a commanding position on High Street. The *East Baptist Society* was organized in 1874, and have their house of worship on Union Street. The *Union Baptist Society*, founded in 1880, have their place of worship on Oxford Street, and is a society of colored people. The *North Baptist Society* have their place of worship in Wyoma Village.

CHRISTIAN.—The *Christian Society* was organized in 1835. Their house of worship is a wooden structure on Silsbee Street, built in 1840. This church has always maintained a most respectable denominational standing.

UNIVERSALIST.—The first meeting held in Lynn for the preaching of the doctrines of this denomination was in the Academy Hall in 1811. The *First Universalist Society*, however, was not formed till 1833; it was then organized in the Town Hall, and has had a steady and substantial growth till, at the present time, it is one of the largest religious bodies in Lynn, embracing many of the prominent people. The present house of worship, on Nahant Street, is built of stone and brick, and is one of the finest in the city. The *Second Universalist Society* was organized in 1837. Their house of worship is a wooden

structure on South Common Street, corner of Commercial, the same that was originally occupied by the First Church, and afterwards by a small society of another denomination. Some of the material of the edifice was first used in the famous Old Tunnel.

SECOND ADVENT.—The *Second Advent Society* have a house of worship on Liberty Street, opposite Cambridge. The society, though not large, is composed of earnest believers.

PROTESTANT EPISCOPAL.—The Episcopal Church was of slow growth in Lynn, though it is no doubt true that there were individual churchmen here at an early period. Richard Sadler, who came in 1635, and located at the present junction of Walnut and Holyoke Streets, it is reasonable to suppose, was a devoted churchman, as he took priest's orders after his return to England. His name is perpetuated in the lofty porphyry cliff that rises near the point just named, and which was granted to him by the town in 1638; and that he was a man of integrity, intelligence and prudence is apparent from the importance of the public offices he was constantly called to fill; and there were no doubt here and there other churchmen who may have veiled their sentiments, so great were the prejudices against them. From all that appears, the first service held here was on the evening of Sunday, October 18, 1818. At that time Rev. Thomas Carlisle, of St. Peter's Church, Salem, preached in the First Parish Meeting House, known as the Old Tunnel, the same in which the celebrated Whitefield had been denied the privilege of holding a service. But things had changed. The rigid fetters of the old faith were loosening, and it was actually by invitation of some of the influential members of the parish that Mr. Carlisle came. Yet, as events proved, these good men had but poorly informed themselves as to the church offices and requirements, for they were chiefly the very men who soon after formed the Unitarian Society. However, a sort of church was instituted, which existed, but did not flourish, for a year or two, and then became extinct. It was not till 1834 that another attempt was made to establish a church here. An organization was effected, and for a time they were so prosperous as to erect a modest house of worship, which was consecrated in 1837, but failure ensued; and it was not till 1844 that permanent church worship became established. It was then, in 1844, that St. Stephen's was formed. For some years it was weak and without much influence, but finally became prosperous, and is now one of the most substantial in the diocese. The house of worship, on South Common Street, is a beautiful structure of brick and stone, more costly than any other church building in the county, and is endeared to the parish, especially, as the gift of the late Hon. Enoch Redington Mudge. It was consecrated on Wednesday, November 2, 1881, and cost two hundred and fifty thousand dollars. The interior is impres-

sive for its richness and freedom from all garish display, some of the decorations being very costly. A chime of ten bells has recently been placed in the tower, and first rang out their sonorous notes on the morning of Easter day, 1886. Among the tunes played on that occasion were "Jesus, Lover of my Soul," "The Morning Light is Breaking." This is the first chime ever in Lynn; is pronounced by experts to be superior in tone and unison, and was procured by members of the parish in grateful memory of Mr. Mudge, the donor of the edifice. The weight of the largest bell is three thousand and thirty pounds, and the cost of the whole was five thousand two hundred and fifty dollars. The chime was welcomed with much satisfaction by the people generally, and two of our local poets, in pleasant strains, celebrated the acquisition. Three of the eight impressive stanzas by J. Warren Newhall are here given:

"In the Sabbath morn's hush with melodious accord,
They shall join in an anthem of praise to our Lord;
And their soul-soothing vesper, at eve's hour of rest,
Shall be wafted like notes from the Isles of the Blest.

"They shall ring at the bridal, where love's vows are breathed
By the blushing young maiden with orange-blossoms wreathed;
Or chime the low dirge as the grief-bidden tear
Of affection bedeweth the cherished one's bier.

"At fair jocund morning, or peace-hallowed night,
We shall list to their music with grateful delight,
As they blend in a chorus exultant and strong,
Or soothing and sweet as a lullaby song."

And in the poem of twelve stanzas, by our fellow-townsmen, Joseph W. Nye, are these felicitous lines:

"'Tis meet they first our joy should ring
Upon the glorious Easter Day,
While we responsive gladly sing
The risen Christ and own His sway.

"O bells! ye fitly grace the tower
That one of liberal soul did raise,
Who gave this fane—a sacred dower—
To which all hearts yield ready praise.

"O city loved! with grateful heart
Receive this gift so kindly free;
To thy fair name it will impart
A charm that we have longed to see."

The Church of the Incarnation was formed in 1886, chiefly by members who withdrew from St. Stephen's. They at present worship in their beautiful stone chapel near the corner of Broad and Estes Streets. There is every reason to hope and believe that this parish will soon be exercising an extensive and benign influence.

ROMAN CATHOLIC.—*St. Mary's Parish.*—The first Roman Catholic service held in Lynn seems to have been in 1835, a private house accommodating all the attendants. In 1848 the numbers had so increased that they purchased a frame building on South Common Street, near Elm. This building had rather a singular history. It was first a *Methodist* house of worship, and stood on land purchased of the *Congregational Society*. In 1815 it was bought by the newly-formed *First Baptist Society*, and occupied

by them for a number of years. Next it became a district school-house; then, in 1848, it was purchased by the Catholics and fitted up for their services; and finally, on the night of the 28th of May, 1859, was destroyed by an incendiary fire. The first minister was Father Charles Smith, who died in January, 1851, and was succeeded by Rev. Patrick Strain, who yet, 1887, remains in charge, having served for the longest term of any of the present Lynn ministers.

After the destruction of the first house of worship the Catholics obtained the use of Lyceum Hall, which stood on Market Street, at the corner of Summer, and there mass was said, instructions given and confessions heard. In 1860 the site for the present St. Mary's Church, at the south side of City Hall Square, was procured, and the fine Gothic structure erected. It remained for some years the most imposing church edifice in Lynn. It is built chiefly of brick, its dimensions being one hundred and fifty by seventy-three feet, and having a steeple one hundred and sixty-five feet in height. The interior is imposing, has a number of costly paintings and a fine organ. The seating capacity is one thousand three hundred.

Connected with St. Mary's Church is an excellent parochial school for children of both sexes, at which the daily attendance is over six hundred. The management is in the hands of Rev. Father Strain, and the expenses are met by the members of the parish.

St. Mary's Cemetery, on Lynnfield Street, consecrated Nov. 4, 1858, is connected with this parish.

The Catholic population of Lynn has steadily increased, and at the present time outnumbers any other Christian denomination—so far, at least, as is indicated by attendance on public ministrations. There are now five Catholic priests resident here, and they are as a body worthy of commendation for their zealous endeavors to elevate the character and condition of those under their charge. The long and successful ministry of Father Strain will ever be remembered to his credit.

St. Joseph's Parish, in Union Street, embraces chiefly the Catholic population in the eastern part of the city. It was formed in 1874, and their stately house of worship erected in 1875. Like St. Mary's, it is built chiefly of brick, and is a conspicuous edifice, with a seating capacity of about one thousand two hundred. Rev. J. C. Harrington is the minister, having an assistant. St. Joseph's Cemetery, on Boston Street near Cedar Pond, is connected with this parish.

A *French Catholic Church* was formed here in 1886, and a church is already in process of erection.

The Catholics of Lynn, it is thought, form about thirty per cent. of the whole population.

SWEDENBORGIAN.—A Swedenborgian or New Jerusalem Society was formed here in 1886. Some years ago an attempt was made to establish a society of this order, but the worshippers were so few that services were not long continued.

In addition to the foregoing, there are here, as in most places as large, other religious organizations sustained by some of the churches or by pious and benevolent individuals, such as the *Bethel* and the *West Lynn Mission*, which are doing much good.

It will be seen by the following table that there are now in Lynn thirty-one organized Christian bodies, to wit:

Methodist (1 African)	8	Congregational (Unitarian)	1
Baptist (1 African)	6	Friends	1
Congregational (Trinitarian)	4	Christian	1
Roman Catholic (1 French)	3	Second Advent	1
Universalist	2	Swedenborgian	1
Protestant Episcopal	2	Salvation Army of America	1

The following gives the city assessor's valuation in 1886 of the church property belonging to some of the principal religious societies, including the church edifices and the lots on which they stand:

St. Stephen's (Episcopal)	\$233,000
First Universalist	122,000
First Methodist	102,000
Washington Street Baptist	81,000
Central Congregational (Trinitarian)	73,000
First Congregational (Trinitarian)	63,200
St. Mary's (Roman Catholic)	62,000
St. Joseph's (Roman Catholic)	62,000
First Baptist (Roman Catholic)	41,000
Friends	17,000
Second Congregational (Unitarian)	16,600

Some of the edifices, it will be observed are quite costly; and if the time should ever arrive when they are as heavily taxed as individual property, impecunious worshippers may regret the rich appointments. We should not have been likely to have erected so many churches nor so grand ones had taxation interposed its hungry hand. The above enumeration, as will be observed, does not include all the houses of worship. Taking in the whole, it is found that for the year 1886 the amount of church property exempt from taxation was \$1,079,000.

It is easy to see from the foregoing that Lynn is by no means in a state of spiritual starvation, or, at least, need not be. Her places of worship are numerous and eligible. And as to the learning and ability of her clergy, she would probably acknowledge inferiority to very few. Perhaps there is a little overstraining that verges on the sensational in some societies, and occasional displays that have the unpleasant air of denominational rivalry; but then even spiritual emulation may result in good.

In the "leading" churches a good deal of attention is paid to music. And in some instances it really appears as if that were considered of more importance than the preaching; naturally enough, too, where the music is good and the preaching is poor. But that does not seem to be exactly the right idea. The sacred strains that resounded in the rude sanctuaries of our fathers, though not, perhaps, in full accord with the rules of harmony, were fervid and stirring to the pious heart. But is not the tendency of much of the church music of this day rather to lead from devotion

to admiration—admiration of artistic composition and artistic rendering? And does not the sedate worshipper sometimes feel as if listening to

“Light quirks of music, broken and uneven,”

such as would only

“Make a soul dance upon a jig to heaven.”

The singing in some of our churches is, at the present time, congregational, with the leading of a chorus choir; in others a quartette fills the programme. St. Stephen's follows the ancient church custom of having a surpliced male choir, chiefly boys, whose young, fresh voices and natural renderings add greatly to the interest of the service. In one church an “orchestra band” has lately appeared as an attraction.

A few remarks as to religious observances in former days might be of some interest here; but it is necessary to pass on to other topics. It may, however, be remarked, by the way, that there were, at different periods, quite different views prevailing. In early times the Levitical law, in all its rigidity, was adopted; then came from time to time modifications in one way and another; and, finally, about the close of the eighteenth century, the leaven of French infidelity began perceptibly to work in some classes. But in this part of New England the stronghold of Puritanism was long maintained. Albert Gallatin, the eminent financier and Secretary of the Treasury under Jefferson, was a native of Geneva, and of rigid Puritanical stock. He was in Boston in 1783, and thus speaks of life then and there: “Life in Boston is very wearisome. There are no public amusements, and so much superstition prevails that singing, violin-playing, card-playing and bowls are forbidden on Sunday.” Calvin himself would probably have sanctioned these views, though they were far from New England Calvinism. But these few mere hints on this subject must suffice.

CHAPTER XV.

LYNN—(Continued).

SCHOOLS—LIBRARIES—NEWSPAPERS.

Schools, their Number and Character, with Sketches of Some of the Old Teachers—Present Condition, Cost of Maintenance, with Various Statistical Items—Notice of Early Collections of Books—Free Public Library, its Formation, Growth and Present Condition—Newspapers, Sketch of the First Paper here, and its Editor—Papers of the Present Day.

Men of learning, men of training,
O, be yours a potent sway;
Writing, teaching, vice restraining,
Guiding in the better way.

—ALLAN.

SCHOOLS.—The next thing thought of after the establishment of the church was the school. And the

purpose was not so exclusively then, as it now is, that the youth might be prepared for the common business transactions of life, which at that period were few and of limited range. It embraced also the higher motive of fixing in the youthful mind the principles of moral rectitude and religion. Thus, we find an enactment of the General Court in 1647, commencing: “It being one chief project of y^t ould deludor Satan, to keep men from the knowledge of y^e Scriptures, as in former times by keeping them in an unknown tongue, so in these latter times, by persuading from y^e use of tongues, y^t so at least y^e true sense and meaning of y^e originall might be clouded by false glosses of saint-seeming deceivers, y^t learning may not be buried in y^e grave of our fathers in y^e church and commonwealth, y^e Lord assisting our endeavors: It is therefore ordered y^t every township in this jurisdiction after y^e Lord hath increased them to y^e number of 50 householders, shall then forthwith appoint one within their towne to teach all such children as shall resort to him, to write and reade,” &c. . . “And it is further ordered, y^t where any towne shall increase to y^e number of 100 families, or householders, they shall set up a grammar schoole, y^e master thereof being able to instruct youth so farr as they may be fitted for y^e university, provided y^t if any towne neglect y^e performance hereof above one year, then every such towne shall pay £5 to y^e next schoole till they shall performe this order.” In 1654 the court prohibited the teaching of schools by persons of “unsound doctrine.” Were such a statute now in force, the first difficulty would be to determine what is “unsound doctrine.”

Many of the first teachers were of the clergy, and it need not be remarked that they, with perhaps a few exceptions, were graduates of the English universities, and many had been ministers in the Church of England. Naturally enough, they had a veneration for classical learning, and believed in the superlative virtues of Greek and Latin. But there was little time wasted in attempts to give a smattering of every kind of knowledge, useless as well as useful, as has been the case in later days. There were few books, but the deficiency was supplied by the instructors in various quaint ways, by brief explanatory talks, by homely and ingenious illustrations.

The first action of Lynn in her corporate capacity in relation to schools, so far as the records show, was in January, 1696, when it is recorded, “The Selectmen agreed with Mr. (Abraham) Normanton to be schoolmaster for the town for said year ensuing, and the Town is to give him five pounds for his labors, and the Town is to pay twenty-five shillings towards the hire of Nathan Newhall's house for a year to keep the school in, and that said Mr. Normanton hire said house.” It seems as if, with a salary of five pounds, the town might have provided a school-room for Mr. Normanton. This, however, could not have been the first opportunity the youth of a town had to gain in-

struction; far from it. And it will be observed that the court, as just quoted, does not require that in places of only fifty householders there shall be established a school, but that a resident shall be appointed to "teach such children as shall resort to him," etc. It was when a place had increased to a hundred families, that they were to "set up a grammar schoole."

The early records of Lynn having disappeared, there seem no means for determining when the youth were first gathered for instruction. There is no doubt that Mr. Whiting and Mr. Cobbet, the early ministers, took pains to instruct the youth of their day. And Mr. Lewis remarks, under date 1687, "Mr. Shepard kept the school several months this winter." So there must then have been an established school. Many of the churches had a "teacher," so-called, connected with the ministry. The word, as thus applied, did not then have the same significance that it now has, but evidently had some connection with secular as well as religious teaching. Mr. Cobbet, who was colleague with Mr. Whiting, was called "teacher." On the 6th of October, 1680, when Mr. Shepard was ordained pastor, Mr. Whiting's son Joseph was ordained teacher. In 1718 Mr. Shepard being out of health, the selectmen were directed to employ a schoolmaster, and in their selection "to have relation to some help for Mr. Shepard in preaching." On the town records, under date December 21, 1691, it is stated that at a meeting of the selectmen "Mr. Shepard, with his consent, was chosen schoolmaster for the year ensuing." These sufficiently show the intimate relation then existing between the clerical office and teaching.

In 1702 a vote was passed allowing ten pounds for the maintenance of a grammar-master, "such master to have over and above the said ten pounds 2 pence per week for such as are sent to read, 3 pence per week for them that are sent to write and cipher, and six pence per week for them that are sent to learn Latin, to be paid by parents and masters that send their children or servants to learn as aforesaid." A grammar-school was one in which Latin was taught, English grammar not being in use. Arithmetic was taught by the instructor's writing sums on a slate; and reading and writing were taught much as they now are. These were the common and chief studies. Spelling was allowed to range loosely about the alphabet, there being no fixed standard. So long as the letters used gave the right sound to the word it was sufficient; and some of their words look queer enough to the school-boy of this day.

It appears, that for the convenience of the different neighborhoods, the school was at some periods a sort of ambulatory institution, being at one time located in one part of the town and then in another—a fact that has given rise to the supposition that there were more schools than really existed. For instance, in 1720, the school was kept in Lynnfield, in Saugus, on the Common and at Woodend. John Lewis was

teacher that year; but he was very soon superseded, or an additional school was established, for another master soon appears; and it is not probable that there were two teachers to the same movable school. The name of the new teacher was Samuel Dexter, and he was probably a descendant from Thomas Dexter, one of the most enterprising of our earlier settlers, as he was certainly the progenitor of several eminent persons. He was but twenty years of age when he took the school; was a son of Rev. John Dexter, of Malden, and a graduate of Harvard. He subsequently became minister of the First Church of Dedham. He says in his diary: "Then being desirous, if it might be, to live higher my friends, by y^e motion of some, I was invited to keep y^e school at Lyn; w^{fore}, quitting my school at Taunton, I accepted of the proffers made at Lyn, and Feb. 17, 1720-21, I began my school at Lyn, in w^{ch} I continued a year; and upon y^e day y^t my engagement was up there a committee from Maldon came to treat with me in reference to Maldon school, w^{ch} proposalls I complied with and kept y^t school for abt six weeks, and then was mostly to the present time, [4 Dec. 1722] improv'd in preaching."

The Friends, or Quakers, established a school in Lynn in 1776; and in 1784, after considerable opposition, the town voted to grant their request to have a portion of the school-money especially appropriated to its support. The annual allowance was continued some years. Micajah Collins was master of this school more than a quarter of a century, ever retaining the respect of the parents and affection of the pupils; and of those who received his instructions there are a few yet remaining who can now hardly speak of him without emotion. He was born in 1764, of Quaker parents, received a fair education, and was an approved minister of the Society for almost forty years. In his ministerial capacity he traveled much and became known and respected in many parts of the United States. He was married, but left no issue. The last moments of his life are represented to have displayed in a marked degree the true characteristics of the dying Christian. Many friends and neighbors assembled around his bed, and in kind words he dealt to them admonitions and encouragements, and expressed his own assurance of a blessed immortality. Then he took each individual by the hand and bade all an affectionate farewell. Like the setting of a summer's sun, he gently passed away, without a murmur or a sigh. He died on the 30th of January, 1827. From a poetic tribute to his memory, penned by Rev. Enoch Mudge, a clerical father in the Methodist Church, and published in the *Newport, R. I., Mercury*, the following lines are extracted:

"In temper open, amiable and mild,
In manners simple, trusting as a child;
He to the youth a pleasing pattern gave.
Of access easy, pious, cheerful, grave;
All classes felt an interest in the man,
For innocence through all his actions ran.
Long as an able minister he stood,

And spent his lengthened life in doing good ;
At home, abroad, the humble Christian shone,
While all the praise he gave to God alone."

To the Lynn *Transcript* of December 24, 1886, James A. Breed contributed an article in which he named twenty-two persons living who were pupils of Master Collins, fourteen of them residents of Lynn. None were less than seventy-two years of age, and the ages of five ranged from eighty-five to ninety-three.

Down to the beginning of the present century hardly any girls attended the public schools. There were several reasons for this. One was that their services were needed at home; another, that the studies were not thought necessary for their sphere; and a third, that it was not proper to have boys and girls so closely associated—all which ideas seem to be reversed in this our day. Female pupils are first spoken of, in a Lynn school report, in 1817.

It would be tiresome to multiply details concerning the early schools. Those of Lynn maintained a creditable standing. The people were poor, and during the depressed times immediately preceding the Revolution, the stormy days of the war, and the turbulent period immediately succeeding, the cause of education was permitted to languish. But the vital fires were not extinguished, only smouldering; and when more settled times were reached, they revived with renewed activity. Teaching was not formerly reckoned as a regular profession, but was usually undertaken as a temporary calling by students preparing for other vocations. And this, no doubt, sometimes operated unfavorably for the schools. Such, to a great extent was the case in Lynn, till within fifty or sixty years. Indeed, the wages of all the teachers here, till within twenty-five years, were very low, and they were compelled to resort to various expedients to make both ends meet, if they were blessed with families. There was good old Master Blanchard, who, in 1811, came here to take charge of a district school, bringing with him in the lumbering old carriage his ten children, and finding two others added to the number in due time; he probably never had a salary above three hundred and fifty dollars a year, and to eke out was compelled to keep little private evening schools, and do odd jobs as accountant and scrivener. He was for some ten years teacher in the little square one-story wooden building, with hipped roof, that stood on the latitudinal centre of the Common, nearly opposite where Commercial Street now opens, its diminutive belfry, unoccupied save by the store of lost bat-balls which had from time to time lodged there, giving it a sort of classical aspect. There he taught reading, spelling, defining, writing, ciphering, a little grammar, and those now too often neglected, but highly desirable accomplishments,—good manners, correct deportment and respect for age.

Master Blanchard's religious principles were of the

old Puritanical order, and somewhat rigid at that. And the church probably owed much to his determined stand and urgency that it did not, as did so many other churches of the order, about that time, swerve to the so-called "liberal" faith. He ever made it a part of his duty to endeavor to train the moral as well as the intellectual faculties of those under his charge, as many of the generation now nearly passed away would gratefully attest. He usually devoted an hour or two every week to lecturing the pupils on morals, manners, or some didactic subject, closing with a fervent prayer.

He was a musician of much taste and skill, led the singing in the old church from 1811 to 1824, and composed one or two psalm tunes which long continued popular, and may sometimes now be heard. He was a fifer in the Revolutionary army, and drew a small pension which did its part to help along. His musical talents, however, were never exercised in the school-room, for artistic music was not then thought a necessary accomplishment for those who were chiefly destined for the shoemaker's seat or the farm. The village singing-school afforded opportunity for those whose musical aspirations could not find adequate expression in the natural form of whistling.

Yet Master Blanchard was not a pronounced character, as the world goes, and it seemed singular to many that he should have had the influence he did. Some called him "non-committal" or "time-serving." His influence probably lay in his stern morals, his intelligence and genial manners. He was interesting in conversation, but usually grave and little given to humorous turns. He died on the 25th of May, 1842, aged seventy-eight years.

The Lynn Academy, a private institution, was opened in 1805, and had some days of prosperity, but more that were otherwise. Its beneficial influence, however, was marked, several of its preceptors being men of excellent acquirements and high character. It continued till superseded by the High School in 1849.

Having said thus much of the old schools and school-teachers, a word about the school-houses may be appropriate. Till within fifty years the Lynn school-houses were quite unseemly in external appearance and void of internal conveniences; yes, they were shabby. And such was the case in most places, excepting a few of the richer and more pretentious. Mr. Everett's picturesque conception of the tasty red-top school-house nestling so cosily and significantly at the cross-roads was ideal, for paint was grudgingly applied without, and within would usually be found dirty floors, hacked benches and wad-decorated walls. In Lynn we could boast of hardly anything shapely, to say nothing of the grand or beautiful, till 1848, in which year the commodious wooden structures on Franklin and Centre Streets were erected and supplied with such modern appliances as placed them among the best in the vicinity.

And since then the erection of such stately structures as the Cobbet, on Franklin Street, and the Ingalls, on Essex, in 1872, evince the zeal of our people in the cause of common education. There are one or two of the old school-houses yet in existence, and a comparison of them with those just named is well calculated to astonish not only for the evidence of immeasurable architectural advance, but also, perhaps, for the progress in extravagance. But the comparison must end there, for no such inequality exists between the teachers of old and their modern successors. And let us ever bear in mind that the grandest school-houses do not always insure the best teachers or turn out the best scholars.

Our present *High School* was commenced in May, 1849, in the wooden structure then standing on the west side of Franklin Street, where the Cobbet school-house now stands. Jacob Batchelder, who had for fourteen years been preceptor of the old Academy, was the first teacher. The present High School house, near Highland Square, was completed in 1851, and the school was immediately quartered there. It has enjoyed almost uninterrupted prosperity, and its teachers have been uniformly learned and skillful.

Alonzo Lewis, the poet and historian, was a teacher here in Lynn, his native place, for many years; and it is not easy to determine whether, in the vigor of life, he prided himself most as a poet, historian or schoolmaster. One of his longest poems is entitled "The Schoolmaster." It comprises nearly seven hundred lines, and flows on from beginning to end in his usual melodious style. On the opening page appear these lines:

I sing the Teacher's care, his daily pains,
The hope that lifts him and the task that chains;
His anxious toil to raise the gentle mind,
His skill to clear the path for youth designed,
His faithful watch o'er life's expanding ray,
To guide young genius up Improvement's way.

And further on are these:

The Teacher's lot is filled with pain and care
Which but devoted hearts are fit to bear.
His rank and worth in freedom's cause are great,
Surpassed by few that bless the public state.
His is the task to fit the youthful mind
For all the stations by its God designed.

There are many beautiful passages in this poem, though some critics have thought that as a whole it falls short of one or two others in his volumes. It would be pleasing to quote a number of passages did the scope of this sketch permit; but we may venture to give a short selection or two as specimens of the emanations from that gifted mind, which so uniformly indicate reverence for learning and love of virtue:

"Some shade of woe o'er every lot is thrown;
Some secret pain each human heart must own
Yet, sons of learning! it is yours to rise
Above earth's ills, to seek your native skies.
There, with congenial stars your worth shall shine,
And form a galaxy of rays divine!
And though awhile out-shone by some bright sun,

Yet still ye glow when his clear course is run.
As yonder splendid cone of torrid light
Gleams with rich lustre on the dome of night,
And marks the path where day's bright orb has past,
So hallowed genius! shall thy memory cast
Its pure effulgence o'er the shade of mind,
To light the path for future worth designed.
Here the glad muse her tribute pays to thee,
Taylor, thou Shakspeare of divinity!
From humblest scenes thy genius bade thee soar,
The brightest realms of virtue to explore.
Raised from the teacher's to the bishop's chair
Life's purest honors waited on thee there;
And youth and age, by thy instructions blest,
Enshrined with tears thy everlasting rest."

And again:

"Ye, who the pages of romance have scanned,
And think to find such at the poet's hand;
Know that refinement springs from lofty thought,
That life's best pleasures are by virtue brought;
That warmth of heart and excellence of mind
Are in devotion's sacred charm combined;
This is the joy that bows to heaven's control,
This the exalted pure romance of soul."

Mr. Lewis gained much commendation by his "History of Lynn." But it was not voluminous, embracing but about two hundred and fifty octavo pages; yet it was so condensed as to contain much more than its proportions would seem to allow; and, unlike most works of any kind, appeared, in the mind of the reader as he proceeded, to expand and shed more and more light. It has been said that historical works are always interesting. But there is an immeasurable difference in the degrees of interest. Minute details often weary, and yet they often possess a wonderful charm. Their success depends upon the judgment with which they are interwoven. Mr. Lewis's details are never wearying. And he had a happy faculty of introducing reflections and illustrations that opened extensive fields of useful thought—a faculty of inestimable value in any writer.

Mr. Lewis took great interest in the prosperity of his native place,—judging by results, much greater than he took in his own individual advancement,—and did many good things that otherwise might have long remained undone. The construction of the road to Nahant, along the harbor side of the beach, was an enterprise carried through in a great measure by his exertions. For the light-house on Egg Rock we are, perhaps, indebted to him more than to any other individual. The names of old streets were suggested by him, and so were the names of most of the ponds and the romantic and picturesque places and objects about the woods and along the shores. The city seal was drawn by him; and, in short, we owe a debt of gratitude to him for an almost countless number of useful labors and useful suggestions. In the mere profession of teaching, no doubt, there have been a number here who would rank as the superiors of Mr. Lewis, but it may be questioned if there has been one who, on the whole, has added more to the prosperity or done more to promote the refinement and elevation of our people. He was born in the neat little cottage

still standing on the north side of Boston Street, nearly opposite Bridge, on the 28th of August, 1794. He obtained, chiefly by his own exertions, a very good education, though he was not a college graduate. His poetic talents were early developed, the first volume of his poems appearing in 1823. Another and enlarged addition appeared in 1831. But the largest collection was issued after his decease, in 1882, in a handsome volume edited by his son Ion, and formed a graceful tribute to his memory. The first edition of the "History of Lynn," by Mr. Lewis, was published in 1829, in four numbers; the next edition was issued in 1844, in the form of an octavo of two hundred and seventy-eight pages. In 1865, four years after his decease, a new edition appeared, enlarged by newly-discovered matter, and with the annals brought down to the time of publication, by the writer of this sketch. He died in his picturesque little cottage at the seaside, on Beach Street, on the 21st of January, 1861.

At the present time the female teachers of our public schools far outnumber those of the other sex; and it is well that it is so, for their influence on the young minds committed to their charge, in the lower schools especially, has unquestionably a most beneficial effect. But a glamour surrounds the mistress of old, of which she of our day is divested, distance of time lending its enchantment. Says Shenstone:

"Her cap, far whiter than the driven snow,
Emblem right meet of decency does yield;
Her apron dy'd in grain, as blue, I trowe,
As is the harebell that adorns the field:
And in her hand, for sceptre, she does wield
Tway birchen sprays." . . .
* * * * *

"Albeit ne flattery did corrupt her truth,
Ne pompus title did debauch her ear;
Goody, good-woman, gossip n'aunt forsooth,
Or dame, the sole additions she did hear;
Yet these she challeng'd, these she held right dear."

And the poet's graphic delineation has other winning touches:

"Ours ancient hen she took delight to feed,
The plodding pattern of the busy dame;
Which ever and anon, impell'd by need,
Into her school, begirt with chickens came;
Such favor did her past deportment claim;
And if neglect had lavish'd on the ground
Fragment of bread, she would collect the same;
For well she knew, and quaintly could expound,
What sin it were to waste the smallest crumb she found."

There was worthy "Madame Breed," who long taught her little school on Water Hill, her frilled cap without a stain, and her manners as stately as if she were a queen. Some of our "best people" of the present day can trace their pedigree to her. She was mother of Andrews Breed, so long landlord of Lynn Hotel, in the days of its greatest glory, and grandmother of our fifth mayor.

As to the condition and comparative usefulness of our present schools, there have been more or less derogatory whisperings; not so much touching their

management as the course of study; but as that is to a considerable extent prescribed by law, it is so far beyond the regulation of those in whose hands the educational interests are more immediately placed. The boast that these primary seats of learning are now far superior to any heretofore known is often heard. But the important question is: Are they superior in adaptation to existing wants? The law requires instruction in "orthography, reading, writing, English grammar, geography, arithmetic, drawing, the history of the United States and good behaviour." It is highly probable that if each town could have its own way, or, in modern phrase, were "local option" permissible, this simple curriculum would in many places be changed, as the common pursuits in different localities greatly vary, rendering some studies much more desirable than others. Of course, each town must know its own wants. As a general requirement, however, perhaps the present could not be much improved. And the same may be said of high school studies, as there, in addition to those named, it is required that "general history, book-keeping, surveying, geometry, natural philosophy, chemistry, botany, the civil polity of the Commonwealth and of the United States, and the Latin language" be taught.

But the law does not end with the above requirements. It opens a wide, permissive door through which numerous other studies, some of questionable utility, may and do intrude where the authorities allow or direct. It is here that danger lies, for some that were better kept out will occasionally, by mysterious influences, find their way in; some, to say the least, as useless as necromancy. Great responsibility rests on school committees, and it is agreeable to be able to testify that Lynn has usually been fortunate in securing those who had a due sense of their responsibility and intelligence and energy sufficient to execute their great trust in a way most conducive to the best interests of the people.

In former years such studies were pursued as best prepared the pupil to meet the requirements of the position he was in homely honesty expected to occupy in after-life; not such a position as imaginative parental affection might picture. There is so much knowledge the possession of which is sure to add to our well-being that it seems unwise to occupy ourselves in efforts to gain that which is of doubtful utility. It has been said that all knowledge is useful, but most certainly all knowledge is not equally so. No one can learn everything, life not being long enough for that, and hence is it not the part of wisdom to learn as thoroughly as may be that which is indispensable or sure to be most useful? There is an old maxim that speaks of the jack-at-all-trades being good at none, and why not apply the suggestion to the departments of learning?

Are we not more prone to theorize than our practical fathers were? more charmed with the ideal? But it may be asked, Is not the mind more fully de-

veloped and strengthened, better disciplined and polished, through these modern requirements; are not more extensive, beautiful and ennobling avenues of thought opened through such means? This is a point for the wisest to discuss, and when they have determined it they will do well to let the world know the result.

The annual reports of our school committees are full and perspicuous, and it seems as if no citizen need be in ignorance of the condition of every school, nor of the ever-growing wants of our whole educational system.

The following summaries will perhaps give as much statistical information concerning our present schools as may be thought necessary. They are for 1886.

Number of Schools.—1 High School, 7 grammar schools, 66 primary schools, 2 evening schools, 1 evening drawing school.

Teachers.—Whole number of teachers in day schools, including music teacher, drawing teacher and teacher of elocution, 141; number of teachers in evening schools, 45; number of teachers in evening drawing school, 4; in High School, 5 male and 6 female teachers; in grammar schools, 4 male, 53 female; principals' assistants, 5; teachers in primary schools, 66.

Pupils.—Average whole number of pupils belonging to all the day schools, 6415; average daily attendance of pupils in all the day schools, 5614; average number of pupils to a regular teacher in High School, 29; average number of pupils to a teacher in grammar schools, 42; average number of pupils to a teacher in primary schools, 53; average attendance of pupils in evening schools, 321; average attendance of pupils in evening drawing school, 116; High School graduates, June, 1886, 28.

Cost of Support of Schools.—For such as are accustomed to estimate the value of things moral and intellectual, as well as material, on a pecuniary basis, it may be stated, in brief, that the actual expenditure from the city treasury for the support of the public schools in 1886 was \$126,905.85, which included, for teachers' salaries, \$82,096.37, and for each pupil between five and fifteen years, \$16.86. The relative cost of the schools may be seen from the fact that the total expenditures of the city for the year were \$1,014,617.80.

LIBRARIES.—As auxiliaries in the cause of education, our libraries should be named. The first incorporated institution of the kind in Lynn appears to have been the "Social Library," which was established in 1819, though before that there were one or two collections of books to which the public generally had access; one especially, of considerable value, though limited in the number of volumes, near the close of the last century, in charge of Rev. Mr. Thatcher, of the First Church. The "Social Library" was a useful institution and continued some

thirty years under its original organization, and then was united to the small collection of the Natural History Society. Its number of volumes seems never to have exceeded 1500. In 1855 the "Lynn Library Association" was incorporated and became custodian of the united collection, then numbering about 2000 volumes.

In 1862 the "Lynn Free Public Library" was established, receiving the books of the Library Association, with such additions from other sources as raised the number of volumes to 4100. Thus began the notable Lynn Public Library, the usefulness of which is too well understood to need much remark here. The city year by year makes liberal appropriations for its support and increase, and has been fortunate in the selection of those who take special charge of its interests.

There has been a steady increase in the number of volumes of the Public Library, and at the close of 1885 there were 34,411 bound volumes and 4486 pamphlets. The number of deliveries during the year 1885 was 85,355, and the largest number taken out in one day during the year was on Saturday, January 31st, when 951 were delivered. Receipts for the year, \$6994.25; expenditures, \$6974.27. Whole number of books purchased during the year, 888, including of religious works, 28; scientific, 61; biographical, 79; historical, 134; prose fiction, 219.

Of course there were, all along, as the town grew, small circulating libraries in the different neighborhoods, and limited collections belonging to societies and clubs. These, together with those of the religious societies, furnished probably more good reading than was availed of in those industrious times. Charles F. Lummas, the first printer, for instance, had a collection of two or three hundred volumes in connection with his office, which he called the Redwood Library.

There have not been many large donations to our Public Library as yet, though from time to time books and other appropriate contributions have been made. In this respect Lynn has been less fortunate than many other places. But there was one opportune legacy which will not be forgotten—that of \$10,000 from Sidney B. Pratt. Mr. Pratt was born on the 14th of May, 1814, and died on the 29th of January, 1869, never having been married. He was unassuming in manners, liberal in ideas, diligent in business. Soon after the opening of the Eastern Railroad, in 1839, he commenced the express business, in a small way, which, by his promptness, activity and faithfulness, grew apace into large proportions, and finally, under the name of "Pratt and Babb's Express," became one of the leading lines in the vicinity. The public estimation of him was indicated by the attendance at his funeral, which took place from the Friends' meeting-house, of the mayor and other members of the city government, and a large concourse of business citizens. The donation to the library was by

will. A good likeness of him is to be seen in the Public Library.

Another liberal bequest to the Public Library was made by Lyman F. Chase, who died January 3, 1885. This gift was \$5000. Mr. Chase was a native of Lynn, and much respected as a young business man, his age at the time of his decease being forty-three.

NEWSPAPERS.—There was no newspaper published in Lynn till 1825. It was on the 3d of September of that year that the *Weekly Mirror*, under the proprietorship of Charles Frederic Lummus, made its first appearance. And, as this was an event of marked importance in our history, something more than ordinary notice may surely be proper, both of the paper and its proprietor.

The appearance of the *Mirror* certainly was not brilliant, either mechanically or editorially. There were but nineteen lines of editorial matter in the whole paper. And there was no greeting to the public, nor allusion, in any shape, to the prospects, plans, or expectations of the publisher. An original tale occupied five of the little columns, and an original poem filled another. Mr. Lewis probably wrote both of these. Three or four advertisements appeared on the third page; and the rest of the paper was made up of news items and short extracts. The four pages of the sheet—that is the printed part—were each a fraction less than nine inches by eleven in size; the type was much worn, the ink poor, the paper coarse and dingy. The size of the type was long primer, excepting about one column of brevier and two of pica. And, on the whole, the expectant public can hardly be charged with undue fastidiousness for failing to bestow very high encomiums on this new-born child of the press. Mr. Lummus told the writer, among other things, while recounting the experiences of that eventful period, that he sent a copy to the *New England Galaxy*, then under the charge of Mr. Buckingham, requesting an exchange, but received his own back, with the second E in the word WEEKLY changed to an A. The fifth number appeared in a somewhat enlarged form. The same width of column was preserved, but some five inches were added to the length, making a paper of much better shape. But this was done without boasting or any flourish of trumpets. There was not a line of editorial on the subject; nor was there, indeed, a line on any subject, in that number. Two of the columns were in pica; and the use of that large type was continued, to some extent, for a long time, he, the publisher, taking all suitable opportunities to gravely assure his readers that it was for the benefit of the aged people, whose eyes were dim; and many thanks did he receive for his kindness. The *Mirror* was first printed in a small wooden building, on the west side of Market Street, just where Tremont Street now opens. But in four or five years the office was removed to another small building, at the west end of the Common, the most active business of the town at that time being centred there.

For a considerable time the *Mirror* could boast of but little in quantity, in an editorial way, though what there was, was very good in quality; and it soon became a very readable paper, for, as the proprietor gathered confidence and became more experienced, he displayed most excellent taste and judgment in his selections. He had an open eye for the substantial and useful as well as the exciting and entertaining, and was diligent in looking up matters of local interest. And his brief remarks were often strikingly comprehensive. He seldom attempted an article more than a square or two in length, and was never guilty of spreading over half a column what might just as well be expressed in twenty lines.

Mr. Lummus was very social in his disposition; was acquainted with everybody; was an accomplished musician, and something of a military man. He likewise interested himself in political affairs, but was too honest to gain a reputation for stability as a partisan. In all intellectual and recreative enterprises, from the dignified lyceum to the jovial chowder party, he was ready and active, and hence frequently found himself in a situation where he was able to pick up matter for useful or amusing “squizzles,” as he termed his short articles. And he was able in a short time to gather around him quite a number of very acceptable correspondents.

Mr. Lummus earned for himself the popular nickname of “Philosopher” in a rather amusing manner. Lawyer Gates being in the office one day, abruptly inquired, “Charles, what does the F. in your name stand for?” “Philosopher,” was the instantaneous response. The ready wit so struck the old gentleman that he at once gave currency to the self-bestowed sobriquet.

He had a strange propensity to frequently change the appearance of his paper. Every little while his sheet would appear, perhaps with a new head, a different width of column, or some fanciful display of ornamental type. His means were limited, and his office but poorly supplied with materials. An ancient Ramage press, which looked as if Franklin might have worked at it, a small font of second-hand long primer, a little brevier, and a very few little fonts of small ornamental letter, with a case of pica and a few pounds of great primer, were almost everything he had. His three stands were so aged as to totter on their legs, and his galleys were warped or cracked. The only large type in the office for years were two or three alphabets of four-line pica antique capitals, which served for the heading of hand-bills, and at one time for the heading of his paper. With such a fitting out, he could not, of course, be expected to turn out any very elegant specimens of the art. But at that time such displays in job printing as are now made were not thought of. In March, 1832, the writer purchased his whole establishment for two hundred dollars, paying quite as much as it was worth. He had, however, in the mean

time procured a small font of new long primer, and sent off the old press, hiring a small iron one.

As to the success of the *Mirror*, it may in brief be stated that small returns rewarded hard labor. The number of subscribers was about four hundred—sometimes running a little below, but seldom above. The amount of work in the office—jobs, newspaper and all—could be done by the publisher and one hand. But at first, in a corner of his office, and afterward in a separate room, Mr. Lummus kept a shop with a small stock of stationery and fancy articles, such as are usually sold in a country book-store. A few musical instruments likewise formed a part of his stock, and he would frequently, in times of the greatest hurry, abruptly drop his composing stick to perform a solo on one of them, much to the discomfiture of his journeyman. Indeed he did not possess quite so strong an attachment for manual labor as for some other pursuits. He was fond of considering the matter in a philosophical way, and would sometimes remark, "Well, I guess I won't work too hard to-day, lest I should have nothing to do to-morrow," which remark was the sure precursor of a ride, a walk or an interval of repose over a book. There was a vein of humor, without the sting of sarcasm, running through his conversation, and he much loved a harmless practical joke.

He had an original way of ridding himself of idlers and such disagreeable company as quartered in his office: it was, to immediately set them at some disagreeable work. No matter who the individual might be, old or young, high or low, he would be called to go for a pail of water, sweep the floor, or perform some other equally dignified service, a plausible excuse always accompanying the request; and when one thing was done another was ready to be commenced on, until the victim was wearied out. A gentleman of the first respectability was once seen rolling at the press with a hand-roller, his clothes, hands and sweaty brow all bedaubed with ink, while Mr. Lummus was pulling on with all possible speed, to prevent any opportunity for rest, his countenance wearing the gravity of a sphinx. His financial ability was not of a high order, and he was, moreover, of quite a liberal turn. So it is hardly probable that had his income been ever so great he would have become rich. He would occasionally hire a horse and wagon, and occupy perhaps half a day in going to Salem to procure two reams of paper. The writer was informed by a neighbor of his that he called at his place one forenoon, urging him, in great haste, to ride with him to Boston, whither he was bound, in a chaise, alone. It being a pleasant day, the invitation was accepted. On reaching the city he drove directly to a famous restaurant, and called for some favorite viand, which was speedily before them. As soon as the meal was disposed of, Mr. Lummus arose, and, with an air of great satisfaction patting the natural receptacle of all good dinners, informed his friend that he was ready to start for home.

In the matter of dress Mr. Lummus was far from being a successful imitator of Brummel, though he was always decently clad. The exterior habiliments, however, were not usually in exact keeping with the interior; for sometimes within his muddy and ungainly cow-hide boots he wore delicate silk stockings. And beneath his shaggy coat, of dingy-white and ancient fashion, was perhaps underwear of the finest linen.

He occasionally conceived strange antipathies and prejudices which would sometimes exhibit themselves in a manner rather amusing than offensive. Seeing him once seize the list of the carrier for the eastern part of the town, and begin eagerly to cross off names, the writer asked him if so many wished to stop their papers. "I don't care whether they do or not," he replied, "but if they want it any longer they've got to move out of Woodland to get it." As some of his best friends—among them Mr. Lewis and Mr. Curtin—lived in that section, it seemed odd that he should have conceived such a prejudice.

Like most editors, he was fond of having his paper talked about, and loved much now and then to create a sensation. To that end he would occasionally concentrate in one of his little paragraphs enough material to serve most editors for a column—charging a perfect little bomb-shell—perhaps offensive from its personal application, or roughly divulging some private matter.

Like most editors, too, he was pleased to see his articles going the rounds of the press; and he knew well how to accomplish the end by inserting that which, from its bare oddity, would be snapped up. For instance, he, upon one calm summer morning startled the community with the bold announcement,—“Huckleberries is ripe.” And the press all over the country echoed his announcement. It was customary in former days, as well as now, for people to complain of the dilatoriness of the Legislature. And Mr. Lummus once issued his paper with the usual conspicuous heading, “Legislative Proceedings,” in one of its columns, followed by a long blank space. It was thought to be a good joke; but he said the best of the joke was that it saved the setting of so many types.

The *Mirror* was discontinued in March, 1832, the proprietor having become involved, and the income not meeting the expenses. In the summer of the same year he published the first Directory of Lynn. It was a small 12mo, of seventy pages, with paper covers, and contained such information as is usually found in publications of the kind.

Mr. Lummus now passed some four years without any regular, settled employment. He worked a little at printing, kept a circulating library for a short time, had one or two classes in French and several in music. His plan in teaching French was to learn a lesson one day and teach it the next, thus keeping one step ahead of his pupils, and so near them as to see all the difficulties of the way—so he said—and his success was so satisfactory that one large class made him a valuable present.

There is no doubt that Mr. Lummus did much to awaken and foster a love for literature and other refining influences in the little community, and that we of the present generation owe a debt of gratitude for that. In the columns of his little paper the writings of Miss Fuller, Enoch Curtin, Solomon Moulton and quite a number of others first appeared. And Mr. Lewis was a contributor to its columns as long as it existed. He was in some sort a literary "head-centre," and his quaint and unpretentious criticisms doubtless had much influence in rectifying the style of inexperienced writers. Many times has the writer heard him remark, in his serio-comic undertone, while looking over a manuscript and ruthlessly drawing his expunging pen through passages, no doubt, thought by the writer to be the most brilliant: "There is a flower without any smell;" or, "There is no tub to that."

Early in 1838 the health of Mr. Lummus began seriously to fail; and it was not long before he was compelled to take to his room and then to his bed. The writer often visited him then, for, being in sickness and adversity, he was neglected by most of those who, in his brighter days, had been cheered by his friendship. He was usually cheerful, for his Christian faith was strong, and he seemed to feel no regret at the near approach of death. But to the last his natural eccentricities would occasionally exhibit themselves. One afternoon, just before his death, the bell happened to toll for a funeral. He heard it and remarked, "There, there is that old bell again; well, it will toll for me in a few days, I suppose," without any apparent conception that it would strike one as an unseemly remark. At another time he was found sitting up eating a piece of toast, and, in reply to the inquiry as to how he felt, said: "Oh, your grandsir will be well enough in a few days, I guess." But after he had retired, and one was at his bed-side to bid him good-night, he explained by saying that his remark might have savored of levity; that it had reference to his death, which would probably take place in a few days; and he certainly trusted that all would be well with him.

It was on the 20th of April, 1838, at the age of thirty-seven, that Mr. Lummus closed his life. He had marked singularities of character, but always proved so fast a friend and agreeable companion that he was universally beloved. And he had such an honesty of purpose, and strong desire to "do a little good in the world," as he expressed it, that his memory is more worthy of being cherished than many of higher pretensions and greater renown. Says Mr. Lewis: "He was an excellent musician, and a choice spirit. Few young men in Lynn were ever more extensively beloved or more deserved to be. But thou art dead! 'Alas! poor Yorick!' Thine is a loss to be thought about, and thou shalt long live in our love."

Such was the beginning of printing in Lynn; such the first printer and his outfit; such the first news-

paper, its character and success. Since that time many papers have arisen, flourished for a time and passed away; but there has hardly ever been a period without one or two respectable journals. At the present time (1887) we have the following:

The Lynn Reporter (weekly), established in 1854.

The Lynn City Item (weekly), established in 1876.

Daily Evening Item, established in 1877.

The Lynn Bee (daily), established in 1880.

They are all on the high road of prosperity, in a pecuniary way, each being far in advance of all the others, according to their individual claims. But then, money-making is, of course, a mere secondary matter with the worthy publishers. And as to editorial management, it may be remarked that every sheet bears evidence that not one of the editors would reasonably be expected, in the accustomed modesty of the craft, to deny that he is the ablest of the entire brotherhood. Commendation, however, is needless here, and criticism would be unbecoming.

There are a number of book and job offices, besides the offices at which newspapers are printed. And the work turned out is quite equal in accuracy and elegance to that done elsewhere in the commonwealth.

CHAPTER XVI.

LYNN—(Continued).

INDUSTRIAL PURSUITS.

Iron Works, First in America—Planting and Fishing—Cloth Manufacture—The Great Shoe and Leather Trade; its History and Present Condition—Other Manufactures—Statistics Pertaining to the Different Trades, Interspersed.

"Earth is the work-shop of mankind,
And we're all workers here,
With busy hand or busy mind,
Each in his destined sphere.
Work's higher wage—content and health—
Its lesser—luxury and wealth."

In a very short time after the settlement of Lynn was commenced, mechanics of the few kinds necessary to supply the limited wants of the people appeared. Even before the Colonial Patent was removed to New England, which was in August, 1629, the company at home were careful to see that a sufficient number of skilled artificers were sent over.

IRON WORKS.—The first undertaking of general importance was the establishment of the iron works on the border of Saugus River. These works were commenced as early as 1643, and formed an enterprise worthy of more extended notice than can be attempted here. The undertaking was one of unquestionable importance, not only to the narrow circle of settlers in this immediate vicinity, but to the whole country. It may, indeed, like many other great projects, have been induced and fostered by hopes of pecuniary gain

to those directly concerned; but certain it is that it resulted in great general good, though it ended in financial disaster and vexation in individual instances. Yet, after all, it is by no means certain that individual selfishness was the mainspring of the scheme. The Massachusetts Company evidently realized the importance of such works to the settlers, for before the removal of the patent the subject was earnestly discussed, and at a meeting in London, March 2, 1628-29, an agreement seems to have been made with a Mr. Malbon, "he having skyll in iron works," to come hither on a prospecting tour.

These works at Lynn have been spoken of as the first in America; but the claim that those at Braintree were the first is not forgotten. After patient research, however, the writer is convinced that the claim cannot be substantiated. Mr. Malbon is known to have been here as early as October, 1629, and seems first to have settled at Salem. Now Braintree is some twenty-five miles away, and that distance, in the almost entire absence of roads, was a serious matter. Why, then, should he have gone so far away, and into another jurisdiction, when ore could be found so near at hand as Saugus?

It is evident that some of the workmen at Braintree were previously employed in Lynn, among them Henry Leonard, who came over in 1642, to engage in the Lynn works. But after all, a priority of two or three years in the establishment of such a business is of little importance, though it is well to be exact, considering that sometimes other and material facts may be dependent.

It is apparent that though the Lynn Iron Works were not sustained by local capital—for there was little here—some of our leading men were active in promoting their establishment. Robert Bridges, for instance, in 1642, took specimens of the ore to England, and was, in truth, instrumental in forming the company. And Thomas Dexter, who owned some of the land in which the ore was found also took a lively interest in the enterprise. It is, therefore, unjust to call it a mere English speculation. The people of Lynn did what they could to help along the business.

Smelting, forging and casting were carried on at these works, as well as blacksmithing and various other branches of metal work. And it is singular that there was not better success. One or two inventions of a very useful kind were perfected by some of those employed here; notably by Joseph Jenks, who delighted the farmers with a greatly-improved scythe, or "engine to cut grass," as the court called it. Here were also made, as Mr. Lewis states, by the same ingenious Mr. Jenks, the dies for the famous pine tree coins of 1652. In 1654 the authorities of Boston agreed with Mr. Jenks "for an Inguine to carry water in case of fire," which is said to be the first fire-engine in America. There must at one time have been a good deal of business, for that period, carried on at

the works, as Winthrop, in a letter dated September 30, 1648, says, "The furnace runs eight tons per week, and their bar iron is as good as Spanish." The ore was obtained in the vicinity, and was of the kind called bog ore.

The site of the works was in a sheltered vale on the border of the river, in what is now the centre village of Saugus; and a picturesque little hamlet called Hammersmith grew up apace. Henry Leonard and his brother James worked here, and their descendants have to this day been identified with the iron manufacture, not only of New England, but the whole country. From the humble beginning of these Lynn works has developed the enormous iron trade of the present day. Skilled workmen went from here from time to time, and established themselves in different parts; and their children and children's children, adepts in the same calling, borne on the waves of population as they spread over the land, are still easily identified as of the old Lynn stock.

As before intimated, these iron works were not a financial success. There was very little ready money in the colony; and though the manufactured articles were sold at a very reasonable rate for coin, yet, as the General Court curtly told the company, an axe at twelve pence was not cheap to one who had no twelve pence to buy. And again, they had not been long in operation when they became involved in vexatious and expensive lawsuits. Hubbard says, "Instead of drawing out bars of iron for the country's use, there were hammered out nothing but contentions and lawsuits." They seem to have gained the ill-will of many of their neighbors, had difficulties about flowage, about contracts for wood, and so on. And a most remarkable prejudice appears to have arisen from the apprehension that they would consume so much wood that fuel would become scarce. They, however, continued in a sort of lingering consumption for many years, when the fires of the forges went out never to be relighted, the begrimed workmen departed never to return, and the chief tangible marks of their existence now remaining are two or three grass-grown hillocks of scoria, called by the people of the neighborhood the "cinder banks." Curious visitors sometimes dig through the thin soil that covers the slag and frequently find bits of charcoal as fresh as when ejected from the sooty portals, and occasionally a piece of iron casting.

In the description of New England by Samuel Maverick, recently discovered by Mr. Waters in the British archives, and probably written in 1660, appears the following: "Five miles westward (from Marblehead, 'the greatest town for fishing in New England') lyeth the Towne of Lynne along by the sea side, and two miles above it, within the bounds of it, are the greatest Iron works erected for the most part at the charge of some Merchants and Gentlemen here residing, and cost them about 14000£, who were, as it is conceived, about six years since Injuriously outted

of them to the great prejudice of the Country and Owners." So it seems Mr. Maverick recognized their value; and he must have been familiar with their whole history, for he came over as early as 1624, at the age of twenty-two, and settled on Noddle's Island, now East Boston, which the General Court granted to him in 1633—a fact which indicates an appreciation of his character and services, notwithstanding the deep prejudice that prevailed on account of his being a zealous Episcopalian.

It may be thought that the most proper place for a notice of these works would be in the sketch of Saugus, as they were actually within the present limits of that town; and no doubt the worthy gentleman who furnishes the sketch of that place will give them suitable attention. But there was no settlement of the name Saugus during their existence, nor for a hundred years after. They are always spoken of on the records as of Lynn. While it is of little moment on which side of the present line they were situated, it may be thought that their importance entitles them to some notice in both places. They were the first considerable mechanical industry established here. Craftsmen there were in sufficient numbers and variety to supply all local needs, and that was about all.

After the now historical iron works on Saugus River were abandoned there seems to have been no attempt at iron-working here for almost two centuries, unless blacksmithing be called such. It was in 1843 that Theophilus N. Breed built a factory on Oak Street for the manufacture of shoemaker's tools and for various kinds of castings, erecting a dam and forming what has ever since been known as Breed's Pond, a description of which has already been given. After a few years, however, Mr. Breed relinquished the business, and the pond finally became the property of the city, and yet forms one of the chief sources of our public water supply, as well as a pleasing feature of the landscape, surrounded as it is by romantic hills and woods.

PLANTING AND FISHING.—Planting and fishing were indeed the chief dependence for many years. And they insured a comfortable livelihood, so that the people hereabout were, in a sort, independent from the beginning. The land, however, was not very favorable for husbandry, though the sea yielded an abundance of valuable manuring matter; and in later years, as the cost of labor increased, farming ceased to be profitable, till it has now been well-nigh abandoned.

The fishing was at first confined to what is now known as dory-fishing, and was chiefly carried on from Swampscott. The little boats of the settlers, like the skills of the Indians, merely ventured into the offing. But there was no need of going farther, as the fish were abundant near the shore. It was not till 1795 that the first jigger, so called, a sail craft of some twenty tons, was procured. But from that time

the business increased, affording ample maintenance to many and fortunes to some. The fishermen here have promptly availed themselves of every new discovery and improvement in the prosecution of their calling and been alert in taking advantage of propitious tides.

Shell-fish have always been taken in great quantities along the shore, and many an indigent family have found that the clam banks never refused a liberal discount.

The lobster trade, too, has been one of very considerable profit, though it has of late years been so vigorously pursued that fears have arisen lest the dainty crustacea may be exterminated. As before remarked, the fishing was chiefly carried on at Swampscott, which was a part of Lynn till 1852. And, as the writer, when preparing the proposed sketch of that town, will necessarily have something to say about the fisheries, but little need be added here.

An idea of the extent of the lobster yield on our coast may be gathered from the fact that during the year ending May 1, 1865, there were taken at Nahant 150,000, and at Swampscott 37,000. The average value, as taken from the traps, was six cents each. Since that time the annual catch has gradually diminished. And under the apprehension that the species may become extinct, as just stated, the Legislature has been invoked for their protection. But one would think there could not be much danger in that direction, as piscatory naturalists assure us that a single female lobster will lay 42,000 eggs in a year. It must be, then, that there are "denizens of the deep" as fond as we of the savory food.

The district of Lynn, Nahant and Swampscott returned, as the product of their fisheries for the quarter ending December 3, 1880, as follows: Codfish, cured, 300,000 pounds; mackerel, 400,000 pounds; herring, salted, 100,000 pounds; lobsters, 7000 pounds; fresh fish, daily catch, 315,000 pounds; fish oil, 3200 gallons. Total value, \$44,141.50.

A brief quotation from William Wood's quaint description of what he saw in 1631 may close what is needful just here about the fisheries: "Northward up this river [the Saugus] goes great store of alewives, of which they make good red herrings; insomuch that they have been at charges to make them a wayre and a herring-house to dry these herrings in. The last year were dried some 4 or 5 last [150 barrels] for an experiment, which proved very good. This is like to prove a great enrichment to the land, being a staple commodity in other countries, for there be such innumerable companies in every river that I have seen ten thousand taken in two hours, by two men, without any weire at all saving a few stones to stop their passage up the river. There likewise come store of basse, which the English and Indians catch with hooke and line, some fifty or three score at a tide. . . . Here is a great deal of rock, cod and macrill, insomuch that shoales of basse have driven up shoales of

macrill, from one end of the sandy beach to the other, which the inhabitants have gathered up in wheelbarrows." Alewives still go up the fresh-water streams for a few weeks in the spring to spawn in the ponds; especially do they swarm in Strawberry Brook on their way to Flax Pond; but they are not now esteemed so highly for food as formerly. There are but few bass, some rock cod and occasionally great quantities of mackerel. The habits of the latter, however, are so peculiar that different seasons show very different accounts.

CLOTH MANUFACTURE.—In 1726 the Salem Court awarded to Nathaniel Potter, of Lynn, £13 15s. for the manufacture of three pieces of linen. It is not clear what kind of cloth this was, but is very likely to have been what was afterwards known as "tow cloth." Certain it is that flax was raised here in considerable quantities. The fine pond near our northeastern border, known as Flax Pond, received its name, as mentioned in the description already given, from the circumstance that much of the flax was rotted there. The tow cloth, as it came from the family hand-loom, was not regarded as a very genteel fabric, but its durability could not be questioned, and after being whitened it was fair, though not so smooth and soft as one of this day would desire for an innermost garment. The raising of flax and manufacture of tow cloth has long since been discontinued.

In the early times of the settlement sheep were raised to some extent, and of course the fleeces were by the thrifty dames wrought into comfortable clothing. But the whirl of the spinning-wheel and click of the hand-loom have long since ceased to be heard.

SHOES AND LEATHER.—*Shoes.*—The history of shoes and shoe-making seems always to have had a peculiar interest. Workers at the craft appeared at an early period of the world, for it was necessary to protect the feet from the arid sands of the torrid zone and the frosty plains of the frigid. The earliest covering of the feet in the one case was no doubt the sandal, manufactured from some vegetable production, and in the other, the moccasin, made of uncurried skin. Sandals are still worn in the eastern countries, though light shoes seem generally preferred. The manufacture of shoes in those countries is conducted in the same primitive style that was in practice here in our early days, though the sewing-machine and other revolutionizing contrivances are being introduced. The writer, while threading his way through one of the narrow old streets of Algiers, two or three years since, came across a shop in which were half a dozen shoemakers busily at work on the same kind of low seat used in the Lynn shops of sixty years ago, knee-stirrup, lapstone and broad-face hammer, fulfilling their duties as of yore. So natural did the whole look that a pause was involuntarily made; but though the jolly workers seemed not averse to have a chat, the difficulties of language rendered the communication very limited. In the same city a French-

man was seen busily at work on an American sewing-machine.

Of all the industries of Lynn, the manufacture of shoes has taken the lead for many years; but it was not till the middle of the last century that she began to be known, to any marked extent, in that line of business. Nor is it certain that there was any special inducement for the establishment of the business here, though the manufacture of leather, which was engaged in to some extent in the earliest times, may have had something to do with it. Edward Johnson, of Woburn, writing in 1651, speaks of a Shoemakers' Corporation in Lynn, and Mr. Lewis remarks that the papers relating to it were unfortunately lost, "having probably been destroyed by the mob in 1765." But it must have been an insignificant association. And what reason there was for supposing that the papers, if any really existed, were destroyed in the Stamp Act riot, is not known. It seems more probable that they would have been destroyed in the disorderly times of Andros; but more probable still that they never had any papers.

Edmund Bridges and Philip Kirtland are usually spoken of as the first shoemakers here. They came in 1635. But John Adam Dagr, a Welshman, who came in 1750, seems to have raised the humble occupation almost to the rank of a fine art. He took great pains to excel; and, it is said, imported the most elegant shoes from Europe, and dissected them for the purpose of discovering the hidden mystery of their elegance. This, however, appears to have been done before, but without the desired effect. Shoemakers from all parts of the town, says Mr. Lewis, went to him for information; and he is called in the *Boston Gazette* of 1764 "the celebrated shoemaker of Essex." From this time Lynn took rank as the foremost place for the manufacture of ladies' shoes in all New England—indeed, in all the provinces. But Mr. Dagr, in a pecuniary way at least, never profited much by his skill and labor. The writer has been told by one who knew him well that he lived in a homely way, was not very neat in his dress and did not keep his little shop, which was on Boston Street, near where Carnes now opens, in the neatest order; in short, that he fell into such habits as were not conducive to a thrifty life. He finally became so destitute as to make his home in the almshouse, and there he died in 1808. Kirtland Street, in the westerly part of the city, and Kirtland Block, in Union Street, perpetuate the name of the earlier craftsman, Philip Kirtland, and so, in its way, does the Kirtland Hotel, in Summer Street. But as yet no such honor has been bestowed on the name of Dagr, unless a wild spot in the domain of the Free Public Forest Association, lately consecrated to his memory, be taken as such.

At the time of Dagr's arrival, 1750, there were but three men in Lynn who carried on the business to such extent as to employ journeymen; and these

were William Gray (grandfather of the rich merchant, so extensively known by the inelegant sobriquet of "Billy Gray"), John Mansfield and Benjamin Newhall; the latter, the writer is pleased in being able to say, was his great-grandfather.

Down to the Revolution the business moved onward, but its progress was slow. And during the war, like most other matters of trade, it was sadly depressed. Soon after the return of peace it began to show renewed strength, and was presently recognized as the leading employment of the place. Some of the shrewd business men seeming to have a prophetic vision of the position it was destined to occupy in future years, vigorously set about placing its interests on as firm a footing as possible. Several energetic workers to that end are more worthy of being remembered than some others who are extolled as public benefactors. There was Ebenezer Breed, a native of the town. He made himself acquainted with all that was to be learned in Lynn, and while yet a young man went to Philadelphia, where he engaged in a profitable business connected with the trade here. In 1792 he visited Europe, and not only sent over quantities of the better and most fashionable kinds of shoe stock, but also some skilled workmen to instruct the operatives at home in the more elegant mysteries of the art. He seemed determined to prove that as fine and substantial shoes could be made in Lynn as in Europe, and he succeeded. But the business in a measure languished, for shoes could be imported from England and France and sold cheaper than the manufacturers here could turn them out. Finding such to be the condition of things, Mr. Breed, in conjunction with some others in the trade at Philadelphia, set about endeavoring to induce Congress, which then held its sessions in that city, to impose a duty on imported shoes sufficient to protect the home manufacture. They resorted to a little shrewd management to effect their purpose. Among other schemes a dinner party was given, for they well knew that an appeal to the stomach is in many cases more irresistible than an appeal to the head. Sundry members of Congress were invited to the banquet, as well as divers charming ladies, among the latter the fascinating Quaker widow, Dolly Todd, once Dolly Payne, and afterward Mrs. President Madison. Mr. Madison himself, who was an influential member of Congress, was also there. One or two of the ladies appear to have been aware of the ulterior purpose of the party, and not averse to assisting in making it a success. It need only be added that a very satisfactory act was passed, and Lynn rose on the event. Perhaps facts like these may partially account for the pertinacity with which our people have all along adhered to the protective tariff system. Poor human nature is such that self-interest has much to do with shaping principles.

Without attempting to follow the progress of the trade into minute details, it may be well to state a

few facts that will enable one to judge of its growth. In 1810 there were manufactured here just about 1,000,000 pairs, and they amounted in value to \$800,000. The earnings of the female binders reached \$50,000. Twenty years later, that is in 1830, the number of pairs made was, in round numbers, 1,670,000, Lynnfield having been set off in 1814 and Saugus in 1815. Twenty-five years later, that is, in 1855, the number of pairs is found to have been 9,275,593, Swampscott having been set off in 1852 and Nahant in 1853. From 1865 to 1875 there were made, on an average, not less than 10,000,000 pairs a year, of the average value of \$1.20 a pair.

But a statement of the condition of the shoe trade at the present time would no doubt be most interesting as well as useful, and it is proposed to attempt it with some fullness.

Colonel Wright, in his synopsis of the last United States Census, gives

The number of shoe factories in Lynn as	174
The average number of employees as	10,708
Capital invested	\$4,263,250
Wages paid in one year	4,931,530
Stock used	12,918,221
Value of product	20,916,867
Gross profit	3,097,206
Estimated interest and expenses	2,350,482
Net profit or loss	746,814
Average yearly product per employee	1,956
Average yearly net profit per employee	70
Average yearly earnings for each employee	461
Percentage men employed	71.7
Percentage women employed	28.
Percentage children employed3

These latest published figures show that \$668,280 more were paid in wages, in a single year, than the total capital invested. Equally remarkable is the high yearly average of earnings for each employee, which, it should be remembered, is the average for men, women and children. It is also satisfactory to learn that less than one-third of one per cent. of all Lynn shoe employees are children. The careful attention given, in recent years, to collecting statistics of employees and wages makes the reports of statistical bureaus unusually interesting and instructive. Industrial information is eagerly sought, and an especial interest has centred in examining the progress of the shoe industry, because of its wonderful development and because that development is the result of American ingenuity.

Although the shoe business has such a powerful hold on the every-day life of the people of Lynn, lofty shoe factories do not, by any means, constitute the whole of Lynn's wealth and enterprise. Wherever factories of any kind are located, there naturally spring up a score of subsidiary industries engaged in producing articles which may be used as component parts of a staple product. Lynn, rich in its hundreds of large and small supply factories, which furnish almost everything from tacks, boxes and blacking, to the beautifully finished kid skins of the great morocco factories, is not an exception. From sumac-filled

vats, sunk deep in the ground, up five and six stories, the city is devoted to every department of its chosen industry. Above ground and below ground the business centre of the city is thoroughly dedicated to productivity.

To speak of leather-scented Lynn is almost to speak the literal truth. From tall chimneys, which stand above ponderous boilers and powerful engines, pours forth the smoke of leather shavings and leather refuse, swept from the busy workrooms. Thus everything serves its purpose. Hundreds of leather-shaping machines furnish ton upon ton of fuel for the great boilers. As moisture from vegetation is taken up by the sun, and formed into clouds which pour forth rain to increase the same vegetation, so old leather assists in the manufacture of new leather. Every piece of discarded leather has a value. Thin shavings are pasted and pressed into some new form, fibrous pieces are ground into leather board, and even a ton of factory sweepings has a marketable value. Thus from the time the tanner sells the hair shaved from the skin, to the time the skin is cut and split into a thousand pieces, every particle has a use and value.

The activity and bustle of Lynn people is, in no small measure, due to association with swiftly-moving machinery. Indeed, it is almost impossible to work with people who are always in a hurry to keep up with machinery without catching the same habit. There is nothing lazy about Lynn. It is distinctively a city of workers when there is work to do. There are, unfortunately, seasons of the year when trade is at a low ebb, and there is therefore a necessity for making the most of it when the factories are in motion. There are two busy seasons, one during January, February and March, when summer goods are manufactured, the other during July, August and September, when winter goods are manufactured. The Western market generally requires goods earliest, the Baltimore and Southern market next, the Philadelphia, New York and New England markets latest. Western wholesale buyers order sample pairs of the next summer's styles as early as the preceding October, and for winter wear as early as the preceding March. Summer is as much a preparation for winter, and winter for summer, in shoe manufacturing, as in any other great industry. Although six months in the year probably comprise the busy seasons, yet there are often factories which run exceptionally steady through the greater part of the year. In fact, there is some trade in every factory every week in the year, as samples, sample orders and duplicate orders fill up a great amount of time between the seasons. The uncertainty of constant employment calls for good wages, so that during the busy season operatives earn a handsome sum, which, if it could only be continued throughout the year, would make the trade of shoe-making very desirable. The dull times, however, put the annual income at no more than a supporting average.

The conduct and ownership of Lynn factories is decidedly different from that of most manufacturing cities. In the large mill cities especially the factories are owned by corporations, and often only a small percentage of the stock is owned by residents. The profits of the corporation are paid to non-residents, who may have little interest in the city's prosperity. Not so in Lynn. Lynn is almost wholly owned by Lynn residents. Wages and profits alike contribute to the city's advancement. There are no stock corporations, but every firm manages its own business. By the industry and perseverance of its own citizens, Lynn has increased its wealth, and taken a proud position among the foremost manufacturing cities of the world. Prosperity is not borrowed, but is a home product.

Wages in Lynn are paid weekly. It has been so ever since factories were first established, being an outgrowth of the old custom of paying the shoemaker for his work as soon as finished. Saturday is the great pay-day. Lynn shoe manufacturers have always been well rated in the financial world, and no doubt much of their sound financial standing is due to frequent payments. They have an immense cash paid-up capital in labor alone, all of the time, and as labor is estimated as about one-fourth the value of the manufactured product, Lynn manufacturers would pay one-fourth immediate cash for all their bills, even if they did not pay any more. Labor bills are preferred bills in Lynn, and its good effect is seen on every hand. A "nimble sixpence" has always been a Lynn business principle, and any other system would seem unnatural.

Lynn operatives have never been called to work by factory bells. Nominally there are fifty-nine working hours in the week, but practically there is so much work done by the piece that operatives work a much smaller number of hours. Factory whistles give alarms at seven o'clock in the morning, at twelve o'clock noon, and at one and six o'clock in the afternoon. Those employed by the week observe these hours, excepting on Saturday, when work is over at five o'clock. Almost every kind of work is piece-work, as even in work done by the week there is some stated amount to perform, which is practically the same. There is unusual freedom in entering and leaving factories, and a time-keeper from some strictly-conducted industry would no doubt consider Lynn perfectly demoralized. It would be hard to name a place where employees can be more independent and more fully allowed to regulate their own time than in the factories of Lynn.

Lynn employees live well, dress well and are very thrifty. They live for the most part in detached houses arranged for one or two families. There are very few tenement blocks, and on the average there is one house to every seven persons of the whole population. Manufacturers, as a rule, are not large real estate owners, and do not attempt to house their

own employees, as is often the case with corporations. The employees themselves are large real estate owners, hundreds of houses being owned by thrifty workmen and workingwomen, who have built for themselves neat little homes. Until recent years people still preserved land for kitchen gardening, even in streets contiguous to the business centre. These gardens are gradually filling up, but the same custom still exists in the outlying streets. Lynn owes much to its working people. Had they been less intelligent and industrious, the city could never have grown so evenly and so neatly as it has. Had the working people been less willing to build houses with their surplus earnings, the increasing population could never have been so comfortably accommodated. Manufacturers needed money for increasing business, and could never have afforded to build the houses as fast as they were needed. Lynn has been the mutual success of employers and employed, and a history of its progress which failed to give proper credit to its small property-owners would do injustice to the people—the bone and sinew of the community.

As is the case in every other great industrial community, Lynn capitalists and workmen have oftentimes disagreed on the equivalent to be paid for labor. A general disagreement has almost always resulted in a strike. It is a strange fact that strikes almost invariably occur with most frequency in years of great business depression, when manufacturers can least afford to pay increased wages, and when workmen can least afford to remain idle. The success of a strike depends greatly on the efficiency of labor organization and the confidence of the members in the leaders. There are periods when organizations spring up in great numbers, and other times when the members lose interest and the organizations are less powerful. Disagreements between capital and labor are no modern invention. The good old doctrine of "bearance and forbearance" will do more to engender good feeling than anything else. Water is bound to seek its own level. If the market will warrant it, prices go up, and if there is no demand, prices must go down. Prices get where they belong, despite remonstrance, strikes and differences of opinion. No combination of capital or organization of labor can arbitrarily permanently establish them. For a short time it may be possible to govern them, but that progress which changes trades and trade methods is no respecter of combinations or organizations, and grades and levels prices in accordance with the prosperity or adversity of the existing generation. It is for us to adjust ourselves to changing circumstances with as little friction and as peacefully as possible.

The process of shoe manufacturing does not necessitate so large a plant nor so expensive an outlay as textile manufacturing. Shoes are composite, and the shoe industry is composite. The shoemakers take a

number of manufactured articles, and sew and nail them together in a stylish, shapely manner, thus producing a shoe. There are few chemicals to evaporate if manufacturing ceases for a day, a month or a year. Nearly everything in shoemaking represents work. When work stops, the factory process stops. There is no boiling, mixing or dyeing process going on while the shoemaker sleeps, but his guiding eye and hand are necessary to progress. Water, blacking, glue, paste, cement and applied finishes are all the liquids that enter into the process of shoemaking. In tempering stock, water exclusively is used, every other liquid being for external application. On account of this simplicity, shoes can be made economically in a very small compass, with little outlay, or can be made in great factories with a perfect wealth of machinery. It is a versatile business, and depends on the energy and perseverance of the manufacturer. It is more a business of the people than any great textile industry possibly can be. It is possible for a mechanic to rise from the lowest to the highest position. There are even workmen's co-operative factories. The workmen invest a sum of money in the enterprise, are paid the same wages as are paid in other factories, and are to share in the profits. Shoe manufacturing needs industry, economy and a natural talent for making business success, like any other pursuit. Small beginnings are just as possible to-day in any business as they ever were, and are just as inconvenient. The convenience only of a large capital seemingly makes it a necessity. Oftentimes a comparatively newly established firm will outstrip veteran manufacturers in the race for trade. This has a tendency to keep trade progressive, and no doubt will contribute to its permanence. With the constant invention of improved machinery and tools, the style of conducting business changes about as often as the styles of shoes.

To small capitalists venturing into the shoe business, contractors are a great assistance. With their help a man can manufacture shoes at a very small outlay. There are contractors to do almost everything. Large manufacturers even have a large part of their upper-stitching done by contractors. But to the small manufacturer, the shoemaking contractor, with a line of machinery, is incalculably valuable. He not only contracts for making the shoe, but will even provide lasts and everything necessary to be used. It is possible for a man to have one small room for headquarters, and yet, by contract, arrange for the transaction of an extensive and profitable business. The product does not have that distinctive individuality, however, which belongs to individual factories, because several manufacturers are often supplied by one contractor. But it serves to show how thoroughly Lynn is equipped for the business in all its phases.

Not only in our country, but beyond the seas, the fame of Lynn factories has attracted notice. During the year 1885 a young man, the son of a wealthy

German, made his home in Lynn and worked on different machines in a Lynn shoe factory, studying the ways of Yankee shoemaking. American machines and Lynn machines have made their way all over the world, attracting great attention and interest. Lynn is only one large customer for her own great supply dealers who make the city their headquarters. Lynn supplies go to a dozen foreign countries as well as all over the United States.

If a person were to ask what grade of goods were manufactured in Lynn, he would be told everything in the shape of a shoe. The staple grade is a medium and low-priced article for ladies, misses and children, but there are also several prosperous firms manufacturing for men, boys and youth. In ladies' wear, everything is made from elegant hand-sewed French kid button boots and delicate beaded velvet toilet slippers to shoes of cheaper material, which are made for the million. Everything that can be thought of or desired for American wear is made in Lynn. There are some goods made for export, but the goods for foreign wear form a very small part of the year's business.

Lynn represents a city built without any natural advantages, excepting a healthy situation and beautiful natural attractions. There is no reason why it should have become a prosperous city more than many another, and it would not have become so but for the untiring industry, energy and perseverance of its inhabitants. The city is blessed with a very poor harbor, has no extensive water-power privilege, is not a great railroad centre, and, until a few years since, had only one steam railroad privilege. Its close proximity to Boston has, until recent years, been a disadvantage to local store-keepers, and there has not been that reliable country trade from neighboring towns which has contributed to the wealth of more distant cities.

Lynn is not a county-seat, and has no National, State or County buildings or institutions. The city forcibly illustrates how a whole people can, by devoting themselves assiduously to some definite calling, make themselves proficient and prosperous. The world is never surprised at rapid growth in the West, but the growth of an ancient town on the rock-bound New England coast is remarkable and noticeable. Lynn, a quiet, home-like town, grew from itself, by itself, to a position of importance, and is now the largest city in Essex County. Its inhabitants knew how to make shoes, and they made them. Increase of business called out increase of inventive power to supply the demand. Machines to make shoes called for factories, and factories called people in from towns all over the Northern New England States, where shoes had formerly been sent to be made. This remarkable city is an interesting study because of its peculiar success, as without natural or fortunate advantages it has grown and made a famous name.

And this seems a proper place to go a little into historical detail regarding the leather manufacture here, as distinguished from the shoe manufacture. But, before passing to that matter, the writer would acknowledge his indebtedness to Mr. Howard Mudge Newhall for what is most interesting in the foregoing account of the shoe trade.

Leather.—There is an old proverb which tells us that there is "nothing like leather," so necessary and useful is it in all the arts and for many domestic purposes. So well aware of this were the early settlers of New England that we find the General Court voting, in September, 1638, to "remember to provide bark in the following April for the tanning of divers hides to come." This importation of hides would seem to indicate that they had few cattle, or that they purposed to kill as few as possible, that their numbers might increase. It is probable that the hides of those killed were not well taken off or properly cured, and thus were lost through neglect or destroyed. For this reason we find an order passed in October, 1640, providing for the proper slaughtering and care of hides and skins, and for sending them to be tanned and dressed, with a fine to be imposed upon all who neglected such duty. In June, 1642, the Court passed an elaborate bill, providing that no butcher, currier or shoemaker should exercise the feat or mystery of a tanner, on pain of forfeiting six shillings eight pence for every hide or skin tanned; butchers to forfeit twelve cents for every gash or cut made in slaying; no persons except tanners to be allowed to purchase any hides; persons selling hides insufficiently tanned to forfeit them; tanners not allowed to let their liquors heat or spoil on pain of £20 for every offense; no currier to dress any leather insufficiently tanned, or burn or injure any leather in dressing, on pain of forfeiting the full value of every such hide; sealers of leather appointed, and leather not sealed to be forfeited; sealers to take oath to perform their lawful duty. This order was afterwards extended so as to include all leather made into boots and shoes. In 1646 a stringent law was made to prevent the exportation of any hides or skins, and persons so exporting, and masters of vessels receiving them, were to forfeit their full value.

A committee was appointed May 31, 1672, to look after defects in the tanning of leather and report means to prevent the same.

Although goat and sheep-skins were not classed with hides, yet the same stringent measures were taken to prevent their exportation. A number of glovers, whose names were George Hepbourne, Thos. Buttolph, James Johnson, Nathaniel Williams, Geo. Clifford and Thomas Goulby petitioned against their exportation by one Ralph Woory in 1645, and he was restrained from sending away more than eight dozens, and he and all others forbidden thereafter to export any unless made into gloves or other garments—an early instance of the protection of labor and home industry

In 1672 every seaport town was obliged to choose an officer to see that no hides or skins were improperly transported.

That the manufacture of leather from hides was carried on at Lynn at a very early day is evident. We are informed that Francis Ingalls, one of the first five persons who settled within our bounds, was a tanner and carried on the business on what is now Burrill Street, in Swampscott, and it is claimed that his was the first tannery in the colony. Mr. Lewis states that he saw some of the vats removed from their ancient position about the year 1825. George Keysar came to Lynn about 1639. In 1649 he bought from Samuel Bennett the land lying between Boston Street and Waterhill, and extending from the Newhall property to the present city pumping station. This had previously belonged to Joseph Armitage. Keysar carried on the tanning business here till his removal to Salem, in 1680. His wife was a daughter of Edward Holyoke, and he died in Salem in 1690, aged seventy-three. His son Elizur pursued the same calling at Salem, and his son John at Haverhill—this fact showing that the sons were educated to their father's trade here in Lynn. In 1665 a child by the name of Elizabeth Newhall was drowned in one of Keysar's tan-vats near Boston Street. This property was not disposed of by Keysar's heirs till after 1702, when it probably passed into the possession of the Potters, who owned the property on the opposite or northerly side of Boston Street. In 1705 Robert Potter, who was son of the first settler, Nicholas, disposed of this tan-yard with the tan-house to his son Benjamin, who was a tanner, having very likely, also, learned his trade from the Keysars; Benjamin afterwards acquired the title of captain, and pursued his calling here till 1745, leaving his estate to his children, only one of whom was a son, named Benjamin, and he became *non compos* and had a guardian for many years.

Upon substantially the same premises once occupied by Keysar and Potter a tan-yard and tan-house have been in operation within the memory of persons still living, and the last occupant, Samuel Mulliken, finished off the tan-house into tenements for dwellings. This old building has been demolished within a few years. The yard is still vacant, and the ancient vats can be found by digging.

Upon the premises covered by the factory of John T. Moulton, a tan-yard was in operation at a very early day by Lieut. John Burrill. He was a son of the first settler, George, and was probably born in England in 1631. He lived on Boston Street, in what was more latterly called the Carnes house. This stood upon the spot where Carnes Street joins Boston Street, and was exactly opposite the tan-yard. Col. John left the tan-yard and buildings to his son, Theophilus Burrill, Esq., who also carried on the same business here till 1721, when he sold out to Deacon John Lewis. He in turn, by his will, gave

the tan-yard and tan-house to his grand-son, Samuel Lewis, who sold it, in 1782, to Daniel Newhall and Nathaniel Sargent, who continued it. In 1793 Newhall sold out to Sargent, and he continued alone till his death in 1798. In 1805 Joseph Watson was the owner and pursued the currying trade. These premises were purchased about 1844 by Joseph Moulton, and have been occupied by him and his successors till the present time (1887), for the manufacture of morocco leather. Many of the old vats were removed by him, and some still remain. This spot, therefore, has been used for tanning purposes for nearly all the time since the settlement of the town. A fine spring of cold water, with the natural stream now called Strawberry Brook running through the yard, and in later years a head of water from the canal above, gave the place unusual advantages for a business of this kind. To Mr. John T. Moulton, son and successor of Joseph Moulton, the writer is much indebted for facts here given touching the leather business.

During the latter part of the last century and the beginning of the present the tanning business was carried on by Benjamin Phillips at the yard of the mill at Waterhill. Here he had a chance for a fulling-mill for softening his hides, running it by water-power, which was quite an advance over the old method of horse-power. To him were apprenticed the brothers Winthrop and Sylvanus Newhall, who afterwards had their tan-yards on Market and Broad Streets, then called Blackmarsh. Winthrop Newhall was succeeded, in 1818, by his son Francis S. Newhall, who, in 1822, formed a partnership with his brother Henry for carrying on the morocco leather business.

Probably Winthrop Newhall was the last of the heavy leather tanners here, the morocco trade having supplanted the heavier business which seems to have taken deep root in Salem and Danvers at about the same time.

The morocco manufacture was probably commenced by William Rose upon the same spot where the Burrills began and carried on the tanning of hides. This is inferred from the fact that when Joseph Watson made a mortgage of these premises, Rose was called upon to sign his name as witness to the conveyance. He may have been working for Watson or carrying on business in a small way for himself in Watson's shop. He shortly after had a shop for himself on a spot near that now occupied by St. Stephen's Church, on South Common Street, but left town in 1809, going to Charlestown. On Boston Street and in the vicinity of these old tanneries lived John Adam Dagr, who has been so many times advertised as the celebrated shoemaker of Essex in 1764, and his opinion and advice in regard to the kinds of material requisite for ladies' shoes may have had something to do with the introduction of the morocco business here. At any rate, it came about in his day. His wife's father, Moses Newhall, was probably a shoemaker, the father

of Moses certainly was, as the records show. It is a very unpleasant circumstance that both Dagyr and his wife, in their last days, came to want.

Daniel Collins, many years ago, carried on a tannery on Boston Street, nearly opposite the present Kirtland Street. Levi Robinson took the business more than fifty years ago, and it has finally developed into the large morocco establishment of John E. Donallan.

From Rose and his small beginning has the business gradually increased to its present extensive proportions. This matter has been faithfully treated by David N. Johnson, in his "Sketches of Lynn." He brought it down to 1880, since which time the amount of business has somewhat increased, and two or three new firms have taken up that other branch of the trade, the manufacture of tawed and alum-tanned calf and sheep-skins.

The manufacture of leather, of one kind and another, but chiefly morocco, in Lynn, at present reaches a pretty high figure, as appears by the following from the last United States Census returns:

Number of establishments,	23
Employees,	768
Wages paid during the year,	\$108,618
Capital invested,	\$910,100
Stock used,	\$1,657,763
Value of product,	\$2,309,272

MISCELLANEOUS MANUFACTURES.—The other manufactures of Lynn appear almost insignificant in comparison with the shoe and leather. But something should be said regarding them. The aggregate (including the shoe and leather) as given by the last United States Census, is as follows:

Number of establishments,	329
Employees, total average number	12,446
(Males above 16, 8924. Females above 15, 3487. Youth and children, 35.)	
Wages paid during the year,	\$5,823,572
Capital invested,	\$5,882,350
Stock used,	\$15,551,938
Value of product,	\$25,216,778

A very large proportion of the above, of course, belongs to the shoe business. Indeed, the same census gives as the value of the boot and shoe product \$20,946,867, of the above grand aggregate of \$25,216,778. A few of the other industries may be named:

Bricks.—It was early found that there were large deposits of excellent clay in and about Lynn. And it has always been used to some extent. But heretofore wood has proved so much cheaper as a building material that brick-making had no great encouragement. During later years, however, things have changed, and bricks are coming into more extensive use. The value of bricks annually made is about twenty-eight thousand dollars and the number of persons employed, forty.

Boxes.—The value of boxes—paper and wood—manufactured in Lynn during a year is about one hundred and sixty thousand dollars, and the total

wages paid fifty-five thousand dollars. It will readily be supposed that these are chiefly used in the shoe trade.

Fisheries.—Lynn, with Swampscott and Nahant, belongs to the fishing district of Marblehead. But since Swampscott and Nahant turned their backs upon their aged mother she has had little to show in the matter of fisheries, and little in the way of shipping, if her ambitious yacht-fleet is excepted; but that, by hardy delvers of the deep, would probably be regarded as belonging to the ornamental rather than the industrial. Recent returns, touching the fisheries, have already been given.

It appears, by the last published returns, that the industrial employees of Lynn receive higher wages than those of any other place in the county—the average yearly earnings of each employee being four hundred and sixty-seven dollars. And this average applies to men, women and children. In Haverhill the bulk of the business is similar to that of Lynn; and there the average yearly earnings of each employee is but three hundred and forty-eight dollars, while at the same time the average number of men workers there is some four per cent. greater than at Lynn. In Salem the average earnings of each employee is three hundred and forty-three dollars. In Newburyport but two hundred and sixty-eight dollars. Peabody comes nearest Lynn, showing four hundred and fifty-four dollars per year for each employee.

In closing this division of our work, it is not amiss to remark that the manufacture of boots and shoes takes the lead of all the industries of Massachusetts. The total value of products in the State, in 1880, was \$631,135,284; and of this \$105,118,299 was of boots and shoes. Other manufactures, as stated by the careful hand of Colonel Wright, stood as follows: cotton goods, \$68,566,182; food preparations, \$68,035,755; woolen goods, \$47,473,668; metals and metallic goods, \$40,190,569; leather, \$30,188,859; clothing, \$27,253,582; mixed textiles, \$21,601,038; machines and machinery, \$20,894,545; paper, \$18,358,361; furniture, \$11,196,827; printing and publishing, \$10,474,684. "These twelve industries produce \$469,352,369 worth of goods out of the total product [\$631,135,284] of the State."

The actual average yearly earnings of boot and shoe employees throughout the State, including both sexes and all ages, is \$381.58.

A few other industries of Lynn may be alluded to in passing, which never grew to large proportions, but yet were of some importance in their day:

Ship-Building, or rather boat-building, as it would be called at this day, was engaged in here to some extent, at an early period. A sloop of fifteen tons was built in 1677, and another of about the same burden in 1685. And within some twenty-five years of the latter date, about half a score of vessels, ranging from ten to thirty-five tons burden—and one of sixty—were built here. About 1726 a ship-yard was estab-

lished on Broad Street, a little east of the foot of Market, at which were built, as is stated, sixteen schooners and two brigs. But the business there was abandoned after a few years. There seems to have been quite a number of expert workmen at ship-building in Lynn for many years, and one or two remarkably skillful naval architects. The celebrated frigate "Constitution" was built in Boston, at the ship-yard of Edmund Hart, a Lynn man. In 1832 a yard was established in West Lynn, a little east of Fox Hill Bridge, at which were built a few small vessels. The Lynn "Whaling Company" was formed about that time, and hopes of a profitable maritime business were entertained, but the enterprise proved a failure.

Chocolate began to be manufactured at the mill on Saugus River, at the Boston Street crossing, as early as 1797. In or about 1805 Amariah Childs purchased the establishment and commenced manufacturing an article that soon acquired a world-wide reputation, continuing the business till 1840.

Snuff had been made at the mill as early as 1794 by Samuel Fales, but the use of snuff becoming, by degrees, unfashionable, the business died out.

Salt.—Salt-works were established in Lynn in 1805, but the business never grew to large proportions. The works were on what is now Beach Street, near Broad.

Silk and Silk Printing.—Some fifty years ago a number of our people became much interested in the silk manufacture. They procured collections of worms and planted great numbers of white mulberry trees for their food. They were successful in a limited way, but the business never resulted in anything profitable, and in a year or two the efforts were discontinued. The results in some instances were quite satisfactory. The writer remembers being shown, by a neighbor, some handkerchiefs which were woven from silk raised by him and printed at one of the silk printing establishments, which for a number of years did an active business in Wyoma village, in the vicinity of Strawberry Brook, and on Waterhill.

Wall Paper and Rubber Goods were also manufactured here fifty years ago, and the waters of Strawberry Brook were utilized in some other small manufacturing enterprises.

NEW INDUSTRIES.—Quite recently there have been added to the industries of Lynn one or two of much promise, which are well worthy of enumeration.

Electric Lighting.—Very soon after it had become demonstrated that electricity could be successfully utilized for the illumination of cities, a local electric light company was formed in Lynn and permission given by the city to supply customers, the city itself becoming a large customer also. This company introduced into the streets the very successful arc light of the Thompson-Houston patent, and this mode of lighting soon became so popular that in 1883 a brick building was erected on Stewart Street to enlarge the capacity to meet the local demand.

The capitalists who became interested in this enterprise, recognizing that the development of electric lighting was in its infancy, were convinced that they could profitably invest capital for the manufacture and introduction of electrical apparatus. To that end they invested money in the Thompson-Houston company, of New Britain, Conn., organized under the laws of Connecticut. The machinery and plant of the company was soon removed to Lynn to occupy the substantial brick factory building on Western Avenue, erected for them by the late Minot Terrill, a gentleman who spent nearly the whole of a large fortune, which he had inherited, in building improvements of lasting benefit to the city. The company brought many new families to Lynn, the business increased, and the factory accommodations have had to be enlarged by the addition of another large building. At the beginning of 1887 fully six hundred people were employed, and the annual product amounted to one million dollars. This product is sent all over the world, the demand increases, and oftentimes the works are kept in operation until late in the evening to keep abreast of the orders.

Prof. Elibu Thompson, an experienced electrician, from whom the company derives its name, is very versatile in discovering new methods of applying electricity, which constantly adds new departments of work in the factory. The company, although chartered in another State, is practically a Lynn enterprise, and destined to be of great importance to the city. The main business office is in Boston; the Western office in Chicago.

Hat-Finishing.—In the early part of 1887 a hat-finishing establishment was commenced on Summer Street by Mr. Timothy Merritt. The new undertaking will no doubt become a growing success, as the projector has a good knowledge of the business and energy and enterprise. Every new industry contributes to Lynn's permanent growth, and there is no reason why coverings for the head cannot be as successfully manufactured by her people as coverings for the feet.

The Ice Business may not be strictly called a manufacture unless frost is considered a working partner. But it is now an important industry, and one to be considered, more directly than almost any other, a home industry, the material being of home production and the perfected article being consumed at home. During the last three or four years there have been harvested an average aggregate of some sixty thousand tons each year. In the storing season somewhere about three hundred men are employed in the various departments. At other times, of course, the number varies, and is considerably less.

Occasion has been taken to speak of the industrious habits of the people of Lynn, and of their economy. Upon these traits have mainly rested that general thrift which has been marred by few examples of large accumulation, or of extreme penury—a condi-

tion certainly the most desirable for any community ; for it is the condition that insures the greatest degree of contentment and freedom of mind. Contentment, however, is not, in a worldly sense, an incentive to enterprise, for those who feel contented in low degree seldom put forth the energies necessary to rise above it. Till within a short period Lynn has had no really rich men ; and perhaps it would have been better had she remained as she was. But strife for riches in an eminent degree characterizes this period ; yet how different is the course men pursue for their attainment. Some, without genius, culture or special opportunity, succeed by boldness and courage, others by frugality and carefulness, others by persistent labor. And then individuals are animated by very different motives in their desire for wealth ; some desire it for the ease it brings, some for its luxuries, some for the social position it ensures ; and some, it is to be hoped, for the good it enables them to do for others. And if, in the whole round of cravings, this latter incentive does not in some measure enter, one might as well remain idle.

"Labor brings the joys of health ;
Labor brings the meed of wealth ;
In thy brother's labors share,
And thine own the lighter are."

How much we nowadays hear about shortening the hours of labor ! Our friends, the "Knights of Labor," are not the only ones exercised about the matter. If one would gain time from manual labor for purposes of health or intellectual improvement, or for any of the higher purposes of life, he is certainly to be commended ; but if only for the lower and enervating indulgences which too often fill up "loafing hours," as they are aptly called, he had better be at work.

To the true New Englander

"Absence of occupation is not rest ;
A mind quite vacant is a mind distressed,"

CHAPTER XVII.

LYNN—(Continued).

MILITARY AFFAIRS.

Early History, with Sketches of Some of the Commanders—Ancient and Honorable Artillery, with List of Lynn Members and Notices of Some Achievements—Lynn in the Indian Wars, in the Revolution and Subsequent Wars, and in the Great Civil War—Her Present Military Organizations.

"Thermopylae and Marathon,
Though classic earth, can boast no more
Of deeds heroic than yon sun
Once saw upon this distant shore."

THOUGH the Indians in this immediate vicinity manifested but little hostility towards the settlers, there were constantly disturbing apprehensions.

Perhaps the promptness in military preparation did much to prevent any serious attacks, though the small number here, and their inefficient weapons, could not give them much encouragement in aggressive attempts. But it was not so in some other quarters, and Lynn soon put herself in a condition to succor any neighbor that might stand in need. The Indians quickly learned the use of firearms, and there were enough among the settlers whose base cupidity led them, without scruple, to furnish muskets and ammunition to the dusky warriors in exchange for furs and wampum currency. Even as early as 1630 the Court found it necessary to order that "noe person whatsoever shall, either directly or indirectly, imploy or cause to be imployed, or to their power permit any Indian to vse any peece vpon any occasion or pretence whatsoever, under pain of Xs. ffine for the first offence, and for the 2 offence to be ffyned and imprisoned at the discretion of the Court." This was the next year after the settlement began.

Military skill and personal bravery were naturally in high repute. Plymouth had her Miles Standish, and Massachusetts, though perhaps destitute of a leader as conspicuous as he, could boast of several commanders of experience and tried valor. Lynn was remarkably fortunate in this respect, as she had within her borders two or three well skilled in the tactics of the field. The first major-general of the colony was John Humfrey, who settled here in 1634. His dwelling was on the east side of Nahant Street, and overlooked the sea, Nahant and the Beach, and was but a short distance from the spot on which the habitation of Montowampate, or Sagamore James, the Indian ruler, stood. The writer is well aware that Mr. Humfrey's residence is thought by some to have been at Swampscott, but careful research has shown that to be an error. He indeed owned an extensive tract of land thereabout, but assuredly did not live in that then lonely place. Some even suppose that the "Farm House" on the estate, so highly improved and embellished by the late Hon. Enoch Redington Mudge, was the identical residence of Mr. Humfrey. But it is thought that even a slight examination would be sufficient to convince any one that such a house could not have been built at that period. It is in the style of a later day. He possibly had cultivated acres in the vicinity, and may have erected some rude structure for the temporary shelter of laborers. He also had a land grant in what is now Lynnfield, including the beautiful little lakelet still known as Humfrey's Pond. This latter grant was made in 1635, the year after his arrival, and in these words,— "There is 500 acres of land and a freshe pond, with a little ileland conteyneing aboute two acres, granted to John Humfrey, Esq., lying betwixte nore & west from Saugus [Lynn], provided hee take noe part of the 500 acres within 5 myles of any towne nowe planted. Also, it is agreed, that the inhabitants of Saugus [Lynn] & Salem shall have

liberty to build stoor howses upon the said ileland, and to lay in such provisions as they judge necessary for their vse in tyme of neede."

Mr. Humfrey was one of the most eminent men in the colony, was an original Massachusetts patentee, and, before the removal of the patent to New England, was chosen Deputy-Governor. It being, however, thought best for the interests of the company that he should for a time remain in England, Thomas Dudley was chosen to serve in his stead, and came over with Winthrop's company in 1630.

When Mr. Humfrey came over he brought with him, says Winthrop, "more ordnance, muskets and powder." He was accompanied by his wife and six children, and it is pretty certain would not have returned so soon had it not been for the disconsolate yearnings of his home-sick wife, who was a daughter of the Earl of Lincoln. But he had restless ambition, and perhaps felt that New England was too limited and uncertain a field for his aspirations. From his feverish dreams of advancement, however, he finally awoke. But it was the chilling pressure of disappointment that awoke him. And when meditating on the defeat of his most cherished schemes, a gush of tenderness and even deep religious feeling overwhelmed him. Not much can be said of his exploits in the field, but as a counselor and home director, in planning, ordering and providing, his services were of inestimable value. He returned to England in the fall of 1641, and there died in 1661.

A military company was organized in Lynn as early as 1630. Richard Wright was appointed captain; Daniel Howe, lieutenant; and Richard Walker, ensign. They were provided with two iron cannon. In 1631 there was a report that some Indians intended an attack on Lynn, and Walker, with a suitable number, was detailed for the night guard. He at one time, while on duty, had an arrow, shot from among some bushes, pass through his coat and "buff waistcoat," and afterwards another arrow was shot through his clothes. It being quite dark, after a random discharge or two of their muskets, the guard retired. The next morning the cannon was brought up and discharged in the woods, and nothing more came of the attack. After that the people of Lynn suffered little or no molestation.

At the breaking out of the Pequot war, in 1636, Captain Nathaniel Turner, of Lynn, commanded one of the companies detailed to serve in the first campaign. The expedition did efficient service at Block Island, New London and thereabout. The next year, 1637, a second expedition was undertaken, and the town furnished twenty-one men. In one respect Lynn was a loser by this war, for Captain Turner became so enamored of the country through which he marched that he permanently pitched his tent there, becoming, as Trumbull says, one of the principal settlers of New Haven. But his fate was mysterious and melancholy. He was one of the five men of "chief

note and worth" who sailed for England in 1647, in the little vessel commanded by Captain Lamberton, which was never heard of after; unless the "phantom ship" which appeared in the Sound after a great thunder storm the next year, and which beholders declared was an exact image, is taken as her representative.

Captain Turner received his commission as "Captain of the military company at Saugus," in March, 1633, from the General Court. He became a near neighbor of his superior officer, John Humfrey, and the two no doubt often conferred together on military affairs. Humfrey's action, as already intimated, was in the Council, while Turner's was more in the field, and one of the first orders the latter received was the rather ignoble one to march to Nahant on a wolf-hunt. What luck he had in destroying his four-footed foes does not appear; but when he was called to meet more worthy enemies, he was brave and triumphant. His moving from Lynn at that formation period in her history was a great loss to the place, probably quite as great as that of the departure of his neighbor Humfrey.

Among the Lynn soldiers in the Pequot war was Christopher Lindsey. He was a laboring man, and kept the cattle of Mr. Dexter, at Nahant. The elevation on the peninsula, called Lindsey's Hill, received its name from him. He was wounded in the war, and in 1655 petitioned the court for an allowance, saying that he was "disabled from service for twenty weekes, for which he never had any satisfaction." He was allowed three pounds. His only daughter, Naomi, married Thomas Maule, of Salem, the famous Quaker, whose doctrinal book, together with its supplementary "Persecutors Mauled," created quite a sensation. In it he remarks they five times imprisoned him, thrice took away his goods and thrice cruelly whipped him.

It was in 1638 that the Ancient and Honorable Artillery was organized. Six Lynn men were among the first members, namely, William Ballard, Joseph Hewes, Daniel Howe, Edward Tomlins, Nathaniel Turner, Richard Walker. Daniel Howe was chosen lieutenant. A word in relation to one or two of these early members of that ancient organization may not be inappropriate. In relation to Mr. TOMLINS, it appears pretty certain that he was one in whom great trust was reposed in civil matters, as well as military. Yet it is evident that he had decided opinions, which were not always expressed in ways the most wise or gentle. On the 3d of September, 1634, the court ordered that he, "or any other put in his place by the Commissioners of War, with the help of an assistant, shall have power to presse men and carts, for ordinary wages, to helpe towards making of such carriages and wheelies as are wanting for the ordinances." His brother, Timothy Tomlins, was the same year appointed overseer of the "powder and shott and all other amunicon" of the plantation. In 1643, being then a member of the House of Representatives, he

was "ordred and appoynted, by both Houses of the Courte, to go upon a message to ye Narragansett sachems," and dismissed from the "howse for ye present to prepare himself for ye journey." He went in company with the celebrated Indian negotiator, General Humphrey Atherton. And it is represented that one of their first acts was to catechise the benighted Narragansetts on the Ten Commandments. It is probable that he had not much of an ear for music other than martial, for, in 1641, he was arraigned for expressing opinions against music in the churches. He, however, retracted, and was discharged.

NATHANIEL TURNER, who also joined the Ancient and Honorables at the time of their organization, has already been spoken of. The sword which he wielded against the Indians is still preserved by the Historical Society of Hartford, Conn. A picture of it may be seen in *Harper's Magazine*, volume xvii. page 3. The same weapon also did service, in other hands, in the old French War and in the Revolution.

RICHARD WALKER has also been mentioned as ensign of the first military company of Lynn, formed in 1630. And the duties of the soldiers of those days, in time of peace even, must have been burdensome, for it was ordered, in 1631, "that every Captaine shall train his companie on saturday in every weeke." In May, 1679, a new troop was formed in Lynn, consisting of forty-eight men. They petitioned the General Court that Captain Richard Walker might be appointed commander. Ralph King, who was a son-in-law of the veteran, was made lieutenant. If this is the same Richard Walker, he must then have been eighty-six years old, for he was born in 1593. He appears, however, to have been blest with a most vigorous constitution, for he lived to the great age of ninety-five years. And he is probably the same hero to whom Johnson, of Woburn, refers in the following lines, touching an encounter with some Indians :

"He fought the Eastern Indians there,
Whose poisoned arrows filled the air,
And two of which these savage foes
Lodg'd safe in Captain Walker's clothes."

But the captain of the new troop may have been his son Richard, who was born in 1611, though he even had attained the age of sixty-eight.

The venerable organization now known as "The Ancient and Honorable Artillery," but which in its charter is called "The Military Company of the Massachusetts," at its formation, in 1638, was designed for discipline in military tactics. For many years it, no doubt, served an excellent purpose, but of late years it has come to be regarded as rather a holiday institution. Lynn has furnished a fair share of members, and a list is deserving of space here :

1638. William Ballard.	1639. Samuel Bennett.
1638. Joseph Hewes.	1640. John Humfrey.
1638. Daniel Howe (Lieut).	1640. Thomas Marshall.
1638. Edward Tomlins.	1641. Robert Bridges.
1638. Nathaniel Turner.	1641. John Humfrey, Jr.
1638. Richard Walker.	1641. Adam Otley.

1642. John Wood.	1821. Robert Robinson.
1643. Benjamin Smith.	1822. Daniel N. Breed.
1645. Clement Coldam.	1822. George Johnson.
1648. John Cole.	1822. Ebenezer Neal.
1652. Samuel Hutchinson.	1851. Roland G. Usher.
1691. Thomas Baker.	1860. Richard S. Fay, Jr.
1717. Benjamin Gray.	

Of the first six, those who joined at the time of the organization, enough has perhaps been said. But some of those who subsequently joined are worthy of brief notice.

SAMUEL BENNETT, who became a member in 1639, was one of the first settlers, and located in what is now the westerly part of Saugus. He owned considerable woodland. "Bennett's Swamp," so called to this day, in old Dungeon Pasture, was owned by him. His residence was not far from the ironworks, and in that vicinity he also had lands. He had a good deal of independence of character, not to say wilfulness. At the Quarterly Court, in 1645, he was presented "for saying, in a scornful manner, he neither cared for the Town nor any order the Town could make." In 1671 he sued John Gifford, former agent of the ironworks, and attached property to the amount of four hundred pounds, for labor performed for the company. On the 27th of June, the following testimony was given: "John Paule, aged about forty-five years, sworne, saith, that living with Mr. Samuel Bennett, upon or about the time that the ironworks were seased by Capt. Savage, in the year 53 as I take it, for I lived ther several years, and my constant imployment was to reparaire carts, coale carts, mine carts, and other working materials for his teemes, for he kept 4 or 5 teemes, and sometimes 6 teemes, and he had the most teemes the last yeare of the Iron Works, when they were seased, and my master Bennett did yearly yearne a vast sum from the said Iron Works, for he commonly yearned forty or fifty shillings a daye for the former time, and the year 53, as aforesaid, for he had five or six teemes goeing generally every faire day." In 1644 he was presented by the grand jury as "a common sleeper in time of exercise," and fined two shillings and sixpence. There was a law forbidding the sale of commodities at too great a profit. And for a breach of this law he appears to have once or twice suffered prosecution. On the colony records, under date of May 15, 1657, may be found this entry: "In answer to the petition of Samuel Bennett, humbly craving the remittment or abatement of a fine imposed on him by the County Court, for selling goods at excessive prizes, the court having perused, and by their committee examined, the papers in the case presented, together with the allegations and pleas of the petitioner and others, by him produced, understanding by what appeared, the petitioner received of George Wallis about forty pounds or upwards meerey for the release of the bargain made betwixt them, . . . see it not meete to graunt the petition in whole or in part." Mr. Wallis had also been fined "fivety pounds" for

"selling goods at excessive prizes," and petitioned for a remittal, and the same court judged it "meete to remit the fine all to tenn pounds," which remittal was made in consideration of his being necessitated "to be at the losse of about forty pounds or more to attayne a release of the bargain betwixt him and Samuell Bennett." It seems to have been a mere game of sharps between Bennett and Wallis, but shows the care taken by the court to prevent a circumvention of the wholesome law forbidding one to sell at an excessive profit. The maxim so prevalent in the bargainings of our day—*caveat emptor*—seems then to have been unheeded. Not much is to be found respecting Mr. Bennett in his military capacity.

JOHN HUMFREY has already been spoken of to some extent.

THOMAS MARSHALL, who was a soldier under Cromwell, and without whose assistance, John Duntton says, "if we may believe him, Oliver did hardly anything that was considerable," has been spoken of somewhat largely in another connection.

ROBERT BRIDGES, or Captain Bridges, as he was generally called, was a man of substance and marked traits of character. He was admitted a freeman in 1641, and joined the Ancient and Honorables the same year, being then captain of a militia company. He was a good deal in civil authority, was Speaker of the House of Representatives, an assistant, an acting magistrate and a member of the Quarterly Court. In 1645, accompanied by Richard Walker and Thomas Marshall, both already spoken of as Lynn members of the company, he went as commissioner to negotiate between Lord de la Tour and Monsieur d'Aulney, the governors of the French provinces on the north of New England. The embassy did good service and the court appropriately recompensed them.

That Captain Bridges possessed rigidly Puritanical characteristics is abundantly evident. He was one of the five who, in May, 1645, were appointed by the court to draft bills for "positive lawes" against lying, Sabbath-breaking, profanity, drunkenness and kindred vices. And in 1649 was one of the assistants who, with the Governor, on the 10th of May, signed a protestation against the wearing of long hair, "after the manner of ruffians and barbarious Indians."

It was Captain Bridges who, in July, 1651, granted the magistrate's warrants against Clarke, Crandall and Holmes, the Baptist missionaries from Rhode Island, concerning which affair it is proposed to say something in the sketch of Swampscott.

In the Essex Court files may be found the following record of Captain Bridges's official action in the case of Thomas Wheeler, who appears to have been a man of character and some estate: "4th mo., 1654. Thomas Wheeler bound over to the Court by the worshipful Captain Bridges, for sinful and offensive speeches made by him in comparing the Rev. Mr. Cobbet to Corah. It being proved by three witnesses, sentence of Court is, that he shall make public ac-

knowledgment upon the Lord's day, sometime within a month after the date hereof, according to this form following, and pay the three witnesses £12 2s. 6d. and fees of Court: [I, Thomas Wheeler, having spoken at a town meeting in February last, evil, sinful and offensive speeches against the Reverend Teacher, Mr. Cobbet, in comparing him unto Corah, for which I am very sorry, do acknowledge this my evil, to the glory and praise of God and to my own shame, and hope, for time to come, shall be more careful.] The constable of Lynn is to see it performed." Mr. Wheeler removed to Stonington, Ct., in 1664, and became the largest landholder in the place, was an honored member of the church, and died there in 1686, at the age of eighty-four.

It is not found that Captain Bridges made much of a mark in a military way, but as a business man he certainly, by his enterprise and prudence, added much to the reputation and prosperity of Lynn. He may almost be called the father of the iron works. It was in 1642 that he took specimens of the bog ore found here to London, and succeeded in forming a company which soon after commenced operations by setting up the bloomery and forge. And although the works proved pecuniarily disastrous, the country at large reaped great ulterior benefit through some of the skilled workmen, the best that England could afford, who removed to other places and engaged in works, which, under better management, grew to great importance.

Taking all points of character into view and making due allowance for the characteristics of the time, it must be conceded that Captain Bridges furnishes a fair specimen of the noble class of men who so faithfully labored in laying the foundations of the social fabric which has become our inheritance—men honest, religious, persevering, hopeful and brave. Yet it must be admitted that he was not of a specially genial disposition; nor could he have been very popular in some of his relations. He had hard points of character; was arbitrary, exacting, unyielding in the smaller concerns of daily intercourse, and perhaps not sufficiently regardful of the minor rights of those about him; for we all love to have our rights respected, even when they are of little value. In those days of difficulty and doubt, minds were trained to meet the trials of life with a fortitude that amounted to heroism. Indeed, it was a favorite idea that the afflictions men were called to endure were disciplinary; that souls were purified by such means. This, however, was probably quite as much theoretical as otherwise, for the best of us would prefer to secure by observation, rather than experience, the good that might be derived from pain and suffering.

JOHN WOOD, who joined the company in 1642, was one of the earliest comers. He settled in that part of Lynn since known as Woodend, the local name being derived from him. He is supposed to have been father of William Wood, the author of "New

England's Prospect," published in London in 1634, a book giving such lively and graphic descriptions of the Bay settlements that it has ever been held in high repute. Little or nothing seems to be known of Mr. Wood's military accomplishments. Perhaps he joined the artillery as a sort of apprentice at martial tactics.

CLEMENT COLDAM, made a member in 1645, appeared here as early as 1630. And his recollection of matters pertaining to our very early days seems to have been much relied on in after-years, his testimony having great weight in several important lawsuits. Not much is known of his military achievements. A record says that on April 14, 1691. "Clement Coldam and Joseph Hart were chosen cannoners, to order and look after the great guns." If that means him, he must have been a very old man—about ninety—but he had a son Clement, who was supposed to have removed to Gloucester many years before.

THOMAS BAKER had experience in the field during the great King Philip War, 1675, being one of the Lynn company. He was in the great swamp fight at South Kingston, R. I., in which Ephraim Newhall was killed.

This member of the artillery, who is usually called Captain Thomas Baker, appears to have been a grandson of Edward Baker, who came to Lynn as early as 1630, and from whom "Baker's Hill," in Saugus, received its name, he having settled near it. From him a line of respectable descendants has reached down to the present time. Daniel C. Baker, our third mayor, was of the lineage. And in several other places descendants have become conspicuous.

The life of this Captain Thomas Baker was so illustrative of the vicissitudes to which the people of that period were exposed, and withal so tinged with romance, that space may be allowed for a glimpse or two. He was taken captive by the Indians at Deerfield on the terrible night of February 29, 1704, and carried to Canada. He, however, the next year, succeeded in effecting his escape. In or about the year 1715 he married Madam Le Beau, whose name figures somewhat in the history of that period. She was a daughter of Richard Otis, of Dover, N. H., who, with one son and one daughter, was killed by the Indians on the night of June 27, 1689, at the time they destroyed the place. She was then an infant of three months, and was, with her mother, carried captive to Canada and sold to the French. The priests took her, baptized her, and gave her the name of Christine. They educated her in the Romish faith, and she passed some time in a nunnery, not, however, taking the veil. At the age of sixteen she was married to a Frenchman, thus becoming Madam Le Beau, and became the mother of two or three children. Her husband died about 1713. And it was very soon after that her future husband, Captain Baker, appears to have fallen in with her. He was attached to the commission detailed by Governor Dudley, under John Stoddard and John Williams, for the purpose of

negotiating with the Marquis de Vaudreuil for the release of prisoners and to settle certain other matters, and went to Canada. From Stoddard's journal it appears that there was much trouble in procuring her release, and when it was obtained, her children were not allowed to go with her. Her mother was also opposed to her leaving Canada.

After her return, Christine married Captain Baker, and they went to reside at Brookfield, where they remained till 1733. They had several children, and among their descendants is Hon. John Wentworth, late member of Congress from Illinois. She became a Protestant after marrying Captain Baker, and substituted the name Margaret for Christine, though later in life she seems to have again adopted the latter. In 1727, her former confessor, Father Signenot, wrote her a gracious letter, expressing a high opinion of her and warning her against swerving from the faith in which she had been educated. He mentions the happy death of a daughter of hers who had married and lived in Quebec, and also speaks of her mother, then living, and the wife of a Frenchman. This letter was shown to Governor Burnet, and he wrote to her a forcible reply to the arguments it contained in favor of Romanism. And there are, or recently were, three copies of the letter and reply in the Boston Athenæum. The mother of Christine had children by her French husband, and Philip, Christine's half-brother, visited her at Brookfield.

All the children of Captain Baker and Christine, seven or eight in number, excepting the first, who was a daughter, bearing her mother's name, were born in Brookfield. There is no reason to doubt that the connection was a happy one. They held a very respectable position, and he was the first representative from Brookfield. He was indeed once tried before the Superior Court, in 1727, for blasphemy, but the jury acquitted him. The offense consisted in his remarking, while discoursing on God's providence in allowing Joseph Jennings, of Brookfield, to be made a justice of the peace, "If I had been with the Almighty I would have taught him better."

In 1733 Captain Baker sold his farm in Brookfield. But this proved an unfortunate step, for the purchaser failed before making payment, and their circumstances became greatly reduced. They were a short time at Mendon, and also at Newport, R. I., but finally removed to Dover, N. H. Poor Christine, in 1735, petitioned the authorities of New Hampshire for leave to "keep a house of public entertainment" on the "County Rhoad from Dover meeting-house to Coheco Boome." To this petition she signs her name "Christine baker," and mentions that she made a journey to Canada in hope of getting her children, "but all in vaine." A license was granted, and it seems probable that she kept the house a number of years. She died, at a great age, February 23, 1773, and an obituary notice appeared in the Boston *Evening Post*.

There seems, at first sight, to be a little confusion of dates in the foregoing, or possibly some mistake in personal identity, if the dates in the following deposition are correct. The deposition is in favor of a fellow-soldier, and bears the date June 8, 1730 :

"The deposition of Thomas Baker, of Lyn, in the county of Essex, aged about 77 years, Testifieth and saith. That I, being well acquainted with one Andrew Townsend of Lyn aforesaid for more than 55 years since, and do certainly know and very well Remember that the s^d Andrew Townsend was a soldier in the Expedition to the Narragansett under y^e Command of Capt. Gardner, and that he was in y^e s^d Narragansett fite and in s^d fite Rec^d a wound, in or about the year 1675."

The deponent styles himself of Lynn, but it rather appears that he was then of Brookfield. Perhaps, however, he was proud to still call himself of Lynn, or merely meant that he was of Lynn at the time of the "fite." It is evident that he was somewhat of a rover.

The King Philip War, that last great struggle of the red men, commenced in 1675. It was a period when all the energy and all the patriotism were put to the test—a period, as it appeared to many, of life or death. And our people, though not apparently exposed to immediate danger, responded with a promptness worthy of all praise. The then captain of the military company of Lynn was Thomas Marshall, who had been a resident here for some forty years, though in the mean time he had been back to England, where he gained, by his bravery in the parliamentary army, a commission as captain on Oliver Cromwell. He was a man of some eccentricities, but yet must have had the confidence of the people. He kept the tavern near Saugus River for many years, and appears to have been in some respects a model landlord. He is spoken of in other connections.

It would not be easy to ascertain the exact number of men furnished nor the amounts raised in response to the public calls in this great struggle; but Lynn did her full share.

Our limits will not allow of much detail regarding the different wars that have, from time to time, spread their alarms through the land—the French and Indian Wars, the Revolution and the subsequent contests down to the great Rebellion. Nor is the little that could be given necessary, as the public records and local histories abundantly supply all needs in that direction; to say nothing of the numerous war-like events incidentally spoken of in other parts of this sketch, as the participants came under notice. A few facts, however, should be stated.

During the French and Indian War, 1754-63, some two thousand French Catholic neutrals were sent to Massachusetts to be quartered in different places. Lynn's share was fourteen. Their provisions were supplied by Thomas Lewis, and among his items of charge were four hundred and thirty-two quarts of milk at six pence a gallon. A company marched from Lynn for Canada, May 23, 1758, and two were killed.

Then we come down to the Revolution. Several Lynn men were at the battle of Lexington, April 19, 1775, the opening battle of the war, and four were killed,—namely, Abednego Ramsdell, William Flint, Thomas Hadley and Daniel Townsend. On the 23d of April Lynn chose a Committee of Safety, consisting of Rev. John Treadwell, minister of the First Parish, Rev. Joseph Roby, minister of the Third Parish and Deacon Daniel Mansfield; others were afterwards added, among them Dr. John Flagg. An alarm company was formed, and three night watches established. The memorable battle of Bunker Hill was fought June 17, 1775. The Lynn regiment was under command of Colonel John Mansfield. It mustered, but did not reach the ground in time to take part in the conflict. For his "remissness and backwardness in the execution of duty," the colonel was ordered before a court-martial, consisting of twelve field-officers, presided over by Gen. Greene, found guilty and ordered to be cashiered. The patriotic people of Lynn were greatly mortified at this untoward occurrence, which, however, had rather the effect to stimulate their zeal and determination. Lynn furnished for the war two colonels, three captains, five lieutenants, five sergeants, six corporals and about a hundred and sixty privates, which, considering the then small population, was doing remarkably well. She was poor, and her business prostrated during the war; nevertheless, in 1776, she voted fifteen pounds each to the company of soldiers furnished for the expedition to Canada, and ten pounds for every enlisting volunteer. She also, in 1780, granted as much money as would purchase two thousand seven hundred silver dollars to pay the soldiers. This was liberal, considering the losses by the depressed condition of the currency. Within two years she had granted for war purposes seventy thousand pounds, old tenor. Mr. Lewis remarks, "A soldier of the Revolution says that, in 1781, he sold one thousand seven hundred and eighty dollars of paper money for thirty dollars in silver." By this, something may be seen of the town's liberality. In the procession at the celebration of the Fourth of July, at Lynn, in 1828, were over forty who had served in various capacities and for various terms in the armies of the Revolution; among them four pensioners. The government at that day was not so able to grant pensions as it at present is, and hence comparatively few were on the lists. That was the last procession in which most of them ever appeared—excepting the great procession which knows no counter-march, in which we are all moving on, and from which every one of them soon dropped out.

Concerning several of the more prominent Lynn soldiers who served in the Revolution, it would be agreeable to say something; but the allotted space is so limited that it is necessary to be chary of its use. So deserving a commander as Colonel Ezra Newhall, however, should not be passed over in entire silence.

He was a great-great-grandson of Thomas Newhall, the first white person born in Lynn, and was captain of the Lynn Minute Men at the opening of the war; but, in consequence of the delay of the troops from Salem, was not present at the battle of Lexington. Nor was he present at the battle of Bunker Hill, as he was attached to Colonel Mansfield's regiment, as senior captain, and by the "remissness" of that officer was kept from joining the gathering squadrons. In earlier life Colonel Ezra was an officer in the French War under Colonel Ruggles. Subsequently to the battle of Bunker Hill he was major, then lieutenant-colonel in Colonel Putnam's Fifth Massachusetts Regiment, and so continued to the end of the war. He served in the campaign that sealed the fate of Burgoyne, was at Valley Forge and at the battles of Trenton and Princeton. After the war he was appointed by President Washington collector of internal revenue, and retained the office till his death, on the 5th of April, 1798, at the age of sixty-six years. There is abundant evidence that while in the army he was very popular with his companions-in-arms. While the regiment was encamped at Winter Hill some dissatisfaction was manifested concerning the rank of the captains and other officers, as they stood on the brigade major's books. The captains, therefore, on the 27th of August, 1775, held a meeting and voted to "settle the rank of officers by lot, and abide thereby," at the same time voting that Captain Ezra Newhall should rank as first captain. Indeed, he seems always to have been spoken of as a brave and prudent officer, and a man much beloved. He lived in the house still standing on Boston Street, at the southwest corner of the recently opened Wyman Street. After the Revolution he removed to Salem, purchased an estate on Essex Street, and there died at the time above stated. The *Salem Gazette*, in an obituary notice, said: "He served his country in the late war with fidelity and honor; and in civil and domestic life the character of an honest man, faithful friend, tender husband and kind parent was conspicuous in him. Society suffers a real loss by his death."

The warlike events of later years are, or should be, so familiar to every reader that any attempt at details which space would allow would be far from satisfactory, and we must content ourselves with little more than bare allusions.

The War of 1812 was essentially a naval conflict, but there was much suffering and business depression, and above all, sharp political dissension. At times there were sudden alarms in the seaboard settlements arising from threatened descents and bombardments from the enemy's ships in the bay. The gallant contest between the English frigate "Shannon" and the American frigate "Chesapeake," on the 1st of June, 1813, was witnessed by crowds of the people of Lynn, who not only climbed the hills, but clung to the housetops. And when the American flag was seen to strike,

many a sorrowful eye was turned away. Watch stations were established upon several heights, and two or three alarms occurred which hastily called out the soldiery and excited the people, but no serious conflict took place.

Soon after the close of the first quarter of the present century the military interest began to fall into popular disrepute. It had, indeed, from the frequency of exercise required and other exactions, become quite burdensome. The opposition developed especially in the shape of ridicule. And had it not been for the saving efforts of the uniformed or, as they were called, the volunteer companies, it is hard to tell where the matter would have ended. There were at this time three handsomely uniformed and well-drilled companies,—namely, the Lynn Artillery, organized in 1808; the Light Infantry, organized in 1812; and the Rifle Company, organized in 1818.

Sometimes totally unfit persons were designedly elected as officers, and the district "companies of the line" at times amounted to little more than tattered and jeering assemblages. One man who was elected an officer in a West Lynn company is well remembered. He was a fellow of good information and bright wit, but extremely low habits. For a supply of liquor he could be induced to play in any rôle. On a certain parade day he appeared mounted on a gaunt roadster wrapped in a long cloak decorated profusely with conspicuous and ridiculous badges. And so he capered around as long as he could retain his seat. Yet the fires of patriotism had by no means been extinguished, for every one saw the necessity of a properly organized militia. The dissatisfaction was only towards the existing requirements. And the result of the popular manifestations was a radical change in the laws. And from that time to this the laws have been modified as circumstances required.

The Seminole war, as it was often called, the Florida War, commenced in 1835 and continued nearly eight years. It cost the United States some ten million dollars and several thousand lives. There were romantic as well as bloody features pertaining to this war. Its precipitating cause seems to have been some indignities offered the wife of Osceola, a chief of the Seminoles. He was the son of an English trader who married the daughter of a chief, and was of a most determined and persistent character. So prolonged was the war that the people became very impatient, and with their complaints and censures mingled ridicule, notwithstanding some of the best and bravest army officers were detailed for the service. A sharpshooting poet in 1839 thus delivered himself:

"Ever since the creation,
By the best calculation,
The Florida War has been raging;
And 'tis our expectation
That the last conflagration
Will find us the same contest waging!"

Perhaps the incident in the Seminole War that

most nearly touched the people of Lynn was the loss of Robert R. Mudge, a young officer, promising and much beloved. He was a son of Benjamin Mudge, a native of Lynn and for many years one of her most prominent citizens. Lieutenant Mudge graduated at the West Point Military Academy in 1833, and in 1835 was ordered to Florida to take part in the Seminole War as lieutenant under Major Dade. He was killed at Withlacoochie, together with the whole company of one hundred and seventeen, with the exception of three.

The Mexican War commenced in 1846. Lynn furnished twenty volunteers, no special call being made.

In 1832 the threats of revolt in South Carolina and her apparent determination to break the integrity of the Union, the zeal and oratorical vigor of her statesmen, the drilling of her troops, all tended to create serious apprehension in every quarter. And had it not been for the unflinching determination of President Jackson, his warnings and declarations, especially as embodied in his famous proclamation, there is little doubt that a rebellion would then have been precipitated. But that extremity was reserved for the next generation. And it came.

The history of the great Rebellion, the first overt act of which was the bombardment of Fort Sumter on the 12th of April, 1861, is so familiar that we need only refer to a few facts specially pertaining to Lynn. In five hours after President Lincoln's first requisition for troops arrived Lynn had two full companies armed and ready for duty. And early the next day, April 16th, they departed to meet the foe. The two companies formed a part of the Eighth Massachusetts Regiment, and were Company D, the Lynn Light Infantry, commanded by Captain George T. Newhall, and Company F, commanded by Captain James Hudson, Jr. The regimental officers belonging to Lynn were Timothy Munroe, colonel; Edward W. Hinks, lieutenant-colonel; Ephraim A. Ingalls, quartermaster; Roland G. Usher, paymaster; Bowman B. Breed, surgeon; Warren Tapley, assistant surgeon; Horace E. Munroe, quartermaster sergeant. Many volunteers stood ready and would have gone had there been time for equipment. Company D marched off with sixty privates, and Company F with seventy-six. The zeal thus early kindled did not abate during the whole war. Every call for troops was quickly and fully responded to, and everything done that could add to the comfort of the brave ones upon the field. Lynn furnished three thousand two hundred and seventy-four soldiers, which was two hundred and thirty more than her full quota. Enthusiastic war meetings were from time to time held. And the principal victories were celebrated by the ringing of bells, by bonfires and other joyful demonstrations. Many of her

gallant sons fell on the field; others lost their lives by diseases contracted during the campaigns, and still others have passed away in the common course of nature since the alarms of war have ceased. Many peacefully lie in the Soldiers' Lot in the beautiful Pine Grove Cemetery, while others rest in more secluded sepulchres, or with their fathers in the older burial-places, their graves being strewn on every returning "Memorial Day" with fresh flowers by surviving comrades and loving kindred. By far the greater number, however, still sleep upon the battlefield. A stately Soldiers' Monument was erected in City Hall Square in 1873. It is an allegorical and classic work of art in bronze, cast at Munich, in Bavaria, and cost \$30,000.

The Grand Army of the Republic in Lynn.—General Lander Encampment, Post 5, is said to be the largest in the country. But its ranks are thinning out as member after member is drafted into that army which marches on with ceaseless step, and knows no countermarch.

As population increases, the laws governing our State military affairs are constantly undergoing changes, and it would be useless to attempt here anything like a historical account of the alterations even during the last forty years. The organizations have come to be essentially voluntary rather than compulsory. And the people have never been backward in sanctioning the most liberal provision for the discipline and comfort of her soldiery.

Our present military organizations are the Light Infantry (Company D) and the Woodredge Cadets (Company I), both in high repute. There is also the Lynn City Guards Veteran Association.

It is quite within the recollection of the writer that the newspaper reader often saw at the close of an obituary notice the phrase "He was a soldier of the Revolution." But it is never seen at this day. It is said that the last person to whom a pension was paid on account of the Revolutionary War died at Woodstock, N. H., early in 1887, at the age of ninety-seven. She was a widow by the name of Abigail S. Tilton. Is it not a solemn thought that all of the brave ones who fought for our liberties at that trying period have lain down to that prolonged rest from which they will be aroused only by the sound of the trumpet that summons them and all of us for final review and inspection? And is it not, too, a solemn thought that the remnant of the Grand Army of our day, who took the field for the maintenance of those liberties, are fast joining the throng of their martial fathers? A few years more, and the last soldier will have marched away, and the "Grand Army of the Republic" survive in memory only as a vestige of the heroism of the past.

CHAPTER XVIII.

LYNN—(Continued).

BURIAL-PLACES.

The Old Burying-Ground, with Epitaphs and Notices of Some Who Lie There—Other Burial-Places and Cemeteries—Memorial Day—Ancient Funeral Customs.

“The cold dark grave—there is no care,
No pain nor gloom,
Within the tomb;
The wicked cease from troubling there.”

“It is wise for us to recur to the history of our ancestors. Those who do not look upon themselves as a link connecting the past with the future, in the transmission of life from their ancestors to their posterity—do not perform their duty to the world. To be faithful to ourselves, we must keep our ancestors and posterity within reach and grasp of our thoughts and affections—living in the memory and retrospection of the past, and hoping with affection and care for those who are to come after us. We are true to ourselves only when we act with becoming pride for the blood we inherit, and which we are to transmit to those who shall soon fill our places.” So wrote Daniel Webster, and who will not subscribe to its truthfulness and wisdom? No apology is needed for the introduction of an extended notice of the burial-places of Lynn, for such consecrated grounds always possess a touching interest—to the old, because there lie the departed kindred and friends of earlier years; to the young, because there they see, fast gathering around, the loved ones from the broken household and the charmed circle of glad companionship. In these often-shunned retreats lie those who have made the history of the place; and who could be more worthy than they of grateful remembrance?

One of the first objects in commencing a settlement was to select a suitable place for the burial of the dead, as all realize that such a place will surely be needed, whatever other seeming necessities may be dispensed with. True, the dead would rest just as quietly by the stony wayside or in the weedy bog, as in a flowery bed or beneath a marble monument; but to the sorrowing kindred there is something repugnant in thinking of them as resting in a dreary, uncared-for spot. The Indians, even, had great regard for the remains of their departed ancestors; and woe betide the daring enemy who would desecrate the rude necropolis upon the sunny hillside.

But yet with what different feelings do the living think of the last resting-place they are destined to occupy. Some would lie in a sequestered spot, where the soothing dirge of sighing trees is ever heard; some would lie on the ocean shore, where the spent waves murmur a ceaseless lament; some would lie in the art-adorned cemetery, whither the steps of pensive wanderers may tend at thoughtful hours; some would

lie in the centre of the busy life they loved so well, but which no longer can disturb or charm; and some would have their mortal remains dissolved in the crucible of cremation. Says John Anster:

“If I might choose where my tired limbs shall lie
When my task here is done, the oak's green crest
Shall rise above my grave—a little mound
Raised in some cheerful village cemetery.
And I could wish that with unceasing sound
A lonely mountain rill was murmuring by
In music through the long soft twilight hour,
And let the hand of her whom I love best
Plant round the bright, green grave those fragrant flowers
In whose deep bells the wild bee loves to rest.
And should the robin from some neighboring tree
Pour his enchanted song—Oh! softly tread,
For sure if aught of earth can soothe the dead,
He still must love that pensive melody.”

And then our own Lewis pleadingly enjoins:

“O, bury me not in the dark old woods,
Where the sunbeams never shine;
Where mingles the mist of the mountain floods
With the dew of the dismal pine!
But bury me deep by the bright blue sea,
I have loved in life so well;
Where the winds may come to my spirit free,
And the sound of the ocean shell.”

“O, bury me not in the churchyard old,
In the slime of the doleful tomb!
Where my bones may be thrust, ere their life is cold,
To the damp of a drearier gloom!
But bury me deep by the bright blue sea,
Where the friends whom I love have been;
Where the sun may shine on the grass turf free,
And the rains keep it ever green!”

And thus sings Beattie:

“Let vanity adorn the marble tomb
With trophies, rhymes, and scutcheons of renown;
Mine be the breezy hill that skirts the down;
Where a green grassy turf is all I crave
With here and there a violet bestrown,
Fast by a brook or fountain's murmuring wave;
And many an evening sun shine sweetly on my grave.”

The early settlers, with most unaccountable irreverence, had little regard for the resting-places of their dead, often allowing rank weeds and brambles to flourish, and wandering animals to roam at will over the reserved acres. Whittier alludes to this in these touching lines:

“Our vales are sweet with fern and rose,
Our hills are maple-crowned;
But not from them our fathers chose
The village burying-ground.”

“The dreariest spot in all the land
To death they set apart;
With scanty grace from Nature's hand,
And none from that of art.”

But these later generations of their children have in a measure atoned for their strange remissness by consecrating beautiful cemeteries, in which sometimes appear monuments so costly and decorative that the mind is liable to be led from meditation on the virtues of those they commemorate to admiration of them as works of art or disapprobation of them as monuments of ostentation and extravagance.

THE OLD BURYING-GROUND of LYNN is in the westerly part of the city. It is not known with certainty when the first interments were made there. The stones are no certain index, for the oldest one bears the date 1698, and multitudes must have been buried there before that time. There rest the early fathers and mothers of the place, and many whose talents and virtuous deeds made them conspicuous in their own day and generation.

The first burial in this ancient place, so far as is certainly known, was in 1637, when the remains of John Bancroft, ancestor of the distinguished historian and statesman, George Bancroft, were laid there. And it was on the 1st of April, 1687, that the remains of Thomas Newhall, the first white person born in Lynn, was buried there. He had died at the age of fifty-seven years. The oldest stone bears this inscription: "Here lyeth ye body of Iohn Clifford. Died Inne ye 17, 1698, in ye 68 year of his age." The figure nine, by some sacrilegious intruder, was, eighty years ago, altered in a rough way, so as to resemble a two, and that has led some to the erroneous belief that there was a burial here as early as 1628.

For some two centuries no complete record of interments here seems to have been kept, but since the law so required, the town and city clerks have been faithful in reording.

Mr. John T. Moulton, a worthy native, a few years since had all the inscriptions copied and published in the Peabody Institute Collections,—a labor of love for which he is deserving of the highest commendation.

A few of the epitaphs in this ancient gathering-place of the dead will be given; but it will be borne in mind that it very often happens that the name of one of the most worthy and useful is not so perpetuated, while that of another, whose memory elicits no sentiment of reverence, is blazoned on a pompous monument. It should be borne in mind, too, that many, inspired by ardent love for their native place, were overtaken by the fell destroyer when far away, never again to meet those of their generation till the sea gives up her dead.

Churchyard lore is not usually very refined in diction, however tender in sentiment, and the simple, unlettered record is sometimes more touching than the studied and stately. But a countless multitude, of whose names even there is no record, are there at rest, among them, perhaps, "some mute, inglorious Milton," or some heroic Washington. Certainly a host of the godly men and women of the early days are sleeping there, to be aroused only at the last trumpet's sound; and theirs must be the brightest dreams, should dreams come in that night of centuries.

"Sure the last end
Of the good man is peace. How calm his exit!
Night dews fall not more gently on the ground
Nor weary, worn-out winds expire so soft."

The few epitaphs for which space can be afforded in this connection will, for convenience, be arranged alphabetically.

"In memory of Rev. Thomas F. Alexander, pastor of the Second Christian Church in Lynn, who died April 2, 1838, aged 23 years.

"Precious in the sight of the Lord is the death of his saints.—Ps. 116, 15.

"O Church! to whom this youth was dear,
The angel of thy mercy here,
Behold the path he trod.
A milky-way through midnight skies;
Behold the grave in which he lies;
Even from this day thy Pastor cries
Prepare to meet thy God."

Few ever had the capacity to so win the esteem of the young people of his generation as did this youthful clergyman. He possessed uncommon talents and an uncommonly felicitous way of expressing his views and convictions. He mingled freely with those of all denominations, was neither bigoted nor heterodox, and his early death was deeply felt as a serious loss to the community.

"In memory of Mr. Zachariah Atwill, who died November 6, 1836, Æt 81.

"Mark the perfect man and behold the upright, for the end of that man is peace."

Mr. Atwill was a Revolutionary soldier. At one time he lived in the ancient house that stood on the centre of the Common, a little west of the pond, but now stands on the easterly side of Whiting Street and which is the oldest building in Lynn of which the date of erection is positively known. It was built in 1682 for the residence of the parish sexton. Mr. Atwill kept the almshouse for many years before its removal, in 1819, from the corner of Essex and Chestnut Streets to Tower Hill. A son of his, Zachariah, Jr., was a sea captain, and, it is said, crossed the Atlantic some fifty times without the loss of a seaman.

"Here lyes ye body of Mr. Thomas Baker, who died October ye 3d 1734, aged 81 years."

Mr. Baker was drafted November 13, 1675, to serve in King Philip's War, and was in the Narragansett fight. In 1694 he was a member of the Ancient and Honorable Artillery, and is spoken of more at large in other pages of this sketch.

"In memory of Amos Ballard (son of Mr. John Ballard, of Boston), who was deprived of his life by the accidental discharge of a musket in a canoe in Lynn River, on the 25th of August, 1798. Ætat 77.

"The grave hath eloquence, its lectures teach
In silence louder than divines can preach;
Hear what it says, ye sons of folly, hear;
It speaks to you; lend an attentive ear."

"In memory of Mr. Josiah Breed, who died December 12, 1799, in the 59th year of his age.

"Death is a debt to nature due;
Which I have paid, and so must you."

"Here lyes buried ye body of Doct Henry Burchsted, a Silesian, who died Sept^r xx, Anno Christi, MDCCXXI. Ætatis Suxæ LXIII.

"Silesia t' New England sent this man,
To do their all that any healer can,

But he who conquered all diseases must
Find one who throws him down into the dust
A chymist near to an adeptist come,
Leaves here, thrown by his caput mortuum
Reader, physicians die as others do ;
Prepare, for thou to this art hastening too."

"My widow'd mother,
My only earthly friend,
Erected this monument
To tell each traveller,
Who looks this way,
That underneath this stone
Rests the ashes of her only son,
Josiah Burrage, who died Dec. 13th, 1797,
Aged 21 years.

Oft do we see the tender bud of hope,
Opening its beauties to the morning light,
When lo! a frost cuts down the tender plant,
And levels all our prospects with the dust."

"Here lyes buried the body of the Honorable John Burrill, Esq.,
who died Decem^{br} 10th Anno Christi, MDCCXXI. .Ætatis LXIV.

"Alas! our patron's dead! the country—court—
The church—in tears, all echo the report ;
Grieved that no piety, no mastering sense,
No counsel, gravity, no eloquence,
No generous temper, gravitating to
Those hours, which they did upon him throw,
Could stay his fate, or their dear Burrill save
From a contagious sickness and the grave,
The adjacent towns this loss reluctant bear,
But widowed Lynn sustains the greatest share :
Yet joys in being guardian of his dust
Until the resurrection of the just."

The residence of Mr. Burrill was on the western slope of Tower Hill, and there he died, leaving no children. The "contagious sickness" which proved fatal was small-pox. He was well known throughout the province, was much in public life, and sustained a high reputation as a legislator. He was ten years speaker of the House, and greatly respected for his ability and urbanity in conducting public business.

"In memory of Mr. Thomas Cheever, a soldier of the Revolution,
who died Jan. 28, 1823, .Æt. 90.

"Receive, O earth, his faded form,
In thy cold bosom let it lie,
Safe let it rest from every storm,
Soon must it rise, no more to die."

"The Rev. Joshua W. Downing, A. M. Died July 15, 1830, aged 26."

Mr. Downing was one of Lynn's most promising young men. He was a son of Elijah Downing, a cabinet-maker, who lived on North Common Street, corner of Park. He graduated at Brown University, and at first intended to pursue the profession of law, but becoming converted, he joined the Methodist Conference, and soon became one of the most acceptable preachers in the denomination, insomuch that at the time of his decease he was in charge of one of the oldest and most of vident churches of the order in New England,—the Bromfield Street Church, in Boston.

"This monument is inscribed to the memory of John Flagg, Esq., in whom remarkable temperance, uniform prudence, unaffected modesty, affectionate humanity and diffusive benevolence shone conspicuous among the virtues which graced his character, endeared him to his family and friends, and secured him the respect and love of all who had the happiness to know him.

"As a physician, his skill was eminent, and his practice extensive and successful.

"To Death, whose triumph he had so often delayed and repelled, but could not entirely prevent, he at last himself submitted on the 27th of May, 1793, in the 50th year of his age.

"Heav'n now repays his virtues and his deeds,
And endless life the stroke of death succeeds."

Dr. Flagg graduated at Cambridge in 1761, and eight years after settled as a physician in Lynn, where he soon, by his integrity, affability and skill, won the esteem and confidence of all. He was active and patriotic during the trying Revolutionary period, was a member of the Committee of Safety in 1775, and commissioned as a colonel. Dr. James Gardner, for many years a public-spirited and highly-respected practitioner here, married his only daughter. Dr. Flagg lived at the eastern end of Marion Street, in the same house in which the famous merchant, William Gray, was born some twenty years before.

"George Gray, the Lynn Hermit, a native of Scotland, died at Lynn, Feb. 28, 1848, aged 78 years."

This eccentric individual lived alone for many years in what was, at the time of his appearance, a retired and forlorn retreat, little better than a brambly bog, though near a public road. Further notice of him appears elsewhere.

"This monument is erected to the memory of Mr. Samuel Hart, son of Mr. Joseph & Eunice Hart. Oct. July 18, 1802, .Æt. 24.

"Farewell to friends, to science & to time,
God bids me leave you all, though in my prime,
Parents, mourn not, though I'm the fourth young son
That God hath called, he still doth leave you one,
Grieve not for me, but for the living grieve,
'Tis they who die, it is the dead who live."

The writer of this sketch well remembers hearing in early childhood, a sister of the deceased often speak in the most affectionate terms of his lovely character, especially of his amiability. He seems to have been ambitious of leaving the toilsome occupation of farmer, and preparing for usefulness in some learned profession, and was a student—in Harvard College, it is believed—at the time of his death. The family greatly mourned his loss, and the whole neighborhood partook in the sorrow. The epitaph refers to three brothers who had gone before him, leaving him the last but one of all the sons of the stricken parents. The epitaphs of these three follow, and they are all uncommonly impressive in sentiment and tenderly expressed :

"Sacred to the memory of Joseph & Burrill Hart, Oct. Nov. 15th & Dec. 8th, 1786, .Æt. 18 & 11 years, Sons of Joseph and Eunice Hart.

"These lovely youths resigned their breath,
Prepared to live & ripe for death ;
You blooming youths who view this stone,
Learn early death may be your own.
The Lord, who hath all sov'reign power,
Cut short the lovely opening flower.
The sister's joy, the parent's hope,
Submit to death's relentless stroke."

* * * * *
"Sacred to the memory of Joseph Burrill Hart, son of Mr. Joseph & Mrs. Eunice Hart, who died Nov. 19, 1765, Aged 7 years.

"His opening mind a thousand charms reveal'd,
 Proof of those thousands which were still conceal'd,
 The loveliest flow'r in nature's garden plac'd,
 Permitted just to bloom and pluck'd in haste,
 Angels beheld him ripe for joys to come,
 And call'd by God's command their brother home."

Joseph Hart, the afflicted father of these promising youths, was a farmer, and lived in the ancient house that stood on Boston Street at the corner of North Federal. He owned all the land on the west side of the street up to Walnut, and raised corn, potatoes and the usual products for family consumption, together with large quantities of flax, which was wrought into a durable though not elegant kind of cloth. Mrs. Eunice Hart, mother of the deceased youths, was a granddaughter of Hon. Ebenezer Burrill, who occupied the extensive farm at Swampscott, a portion of which was lately owned by the Hon. E. R. Mudge, deceased. The ancient farm-house in which Mr. Burrill lived is still standing near the elegant stone villa of Mr. Mudge.

"To the memory of Deacon Ezra Hitchings, who was born April 15, 1765, and died Nov. 26, 1829. This stone is erected by the members of the Second Congregational Church in Lynn, of which, from its formation, he was an able and efficient officer, as a testimonial of the profound respect and love for his integrity and benevolence, his piety as a Christian and his worth as a man.

"The memory of the just is blessed."

The Second Congregational Church of Lynn was the first Unitarian, and to the present day remains the only society of that denomination here. Major Hitchings, to use the military title by which he was popularly known, was a native of that part of Lynn which is now Saugus. His wife, who was a woman of much force of character, was a sister of Colonel James Robinson, a soldier of the Revolution, and first postmaster of Lynn. They had no children of their own, but adopted one or two, whom they reared with the watchful care of true parents. Mr. Hitchings kept a West India goods store on Boston Street, corner of North Federal, and did a fair village business, though it yielded nothing beyond a comfortable maintenance.

"Sacred to the memory of Benjamin Massey, who was born Nov. 19, 1786, and died Dec. 10, 1831.

"Reader, a moment pause before this stone;
 It tells a husband, father, Christian gone;
 These sacred names he bore; but oh, how well
 Must faithful memory, not the marble, tell;
 Enough, if in this hard white stone you see
 His strong, firm will—his spotless purity."

The loss of Mr. Massey to the community was seriously felt. He was an active, useful citizen, his services being in constant demand wherever strict personal integrity and prudence were required. He took an important part in the management of public affairs, and filled several of the higher offices of public trust. At the organization, in 1828, of the Lynn Mutual Fire Insurance Company, that still remarkably successful institution, he was chosen secretary, and held the office till his death. He was an industrious

blacksmith, his shop and dwelling being on Western Avenue, a few rods west of Federal Street.

"Alonzo Lewis, died January 21, 1861, aged sixty-six years and five months.

"Frances, his wife, died May 27, 1839.

"All angels now, and little less while here."

This is the resting-place of Mr. Lewis, the poet and historian. In the neat little burial inclosure are two or three chaste marble stones, unpretentious but strikingly appropriate. As Mr. Lewis is spoken of somewhat at large in another place, nothing further need be said here. The other inscriptions in the inclosure, however, should be given,—

"Frances Maria Aurelius. Lynnworth. Ina.	William Lewis, Born 1596. Died 1671. Amey, his wife.
Alonzo Lewis, Jr. Died March 7, 1852.	Isaac Lewis, Jr., Born 1683. Died 1763.
Irene Lewis, Died March 26, 1853.	Hannah, His wife.
Mary Lewis, Died Jan. 28, 1878.	Nathan Lewis, Born 1721. Died 1804. Mary, his wife.
	Zachariah Lewis, Born 1765. Died 1810. Mary, his wife."

(Five Generations.)

"Here lies buried y^e body of Ensign Joseph Newhall, aged 47 years. Departed this life January y^e 29, 1705."

This Mr. Newhall was a man of some note and much respected. In 1696 the town granted him liberty to "Sett up a pewe in y^e east end of y^e meeting-house Between y^e east dowre & the staires." He was, at the time of his death, a member of the General Court, and perished in a great snow-storm while on his way from Boston. It was a violent storm, continuing two days—the 29th and 30th of January. He was a son of Thomas Newhall, the first white person born in Lynn, and the father of eleven children, all of whom survived him. Many descendants of his are yet remaining in Lynn.

"Here lies buried the body of Mr Zacheus Norwood, who departed this life Feb. the 8th, 1756, aged 40 years."

"Here lies buried the body of Doct Jonathan Norwood, who departed this life March 16th, 1782, in y^e 31st year of his age."

These two stones are in memory of father and son. Zacheus, the father, was keeper of the old Anchor Tavern, which, as "Norwood's Tavern," augmented in fame to the close of provincial days. He is spoken of elsewhere in these pages. Dr. Jonathan, the son, was a well-educated physician, and lived on the north side of the Common, between Mall and Park Streets. He graduated at Harvard in 1771. His death, March 16, 1782, was occasioned by injuries received by a fall from his horse.

"In memory of Mr. Isaac Orgin, who died May 29th, 1831, Æt. 70.

"Afflictions sore long time I bore,
 Physicians strove in vain,
 Till God did please to give me ease,
 And take away my pain."

Mr. Orgin was one of the youthful patriots who took the field in the Revolution, and is said to have been some time a drummer.

"Here lies buried the body of Mr. William Perkins, a gentleman of liberal education. He was bred at Harvard College, and commenced Master of Arts in y^e year 1761. He was justly admired for his uncommon abilities, natural and acquired; his literature, exemplary piety, modesty, meekness, and many other humane and Christian virtues which rendered him lovely in every relation of life. He died of a fever Oct^r y^e 9, 1765, and in the 28th year of his age."

"Mary Pitcher.
1738-1813."

This simple inscription on a neat headstone perpetuates the name of one who attained a world-wide reputation as "Moll Pitcher, the fortune-teller of Lynn." A somewhat extended notice of her may be found elsewhere in these pages.

"The First Church of Christ in Lynn erected this monument to the memory of their faithful and much esteemed brother, Deacon Nathaniel Sargent. He died September 23, 1798, aged 38 years.

"I am the resurrection and the life saith the Redeemer."

"The Tomb of Rev. Jeremiah Shepard. The memory of the just is blessed. Mrs. Mary Shepard died March 28, 1710, Aet. 53. A prudent wife is from the Lord. Prov. xxxi. 10 & 28: the Mother of 9 children: 5 died, Jeremiah, 1700, Aet. 23: Mehetabel, 1688: Margaret, 1683: Thomas, 1709, Aet. 29: Francis, 1692.

"Rev. Jeremiah Shepard died June 2, 1720, Aet. 72.

"Elijah's mantle drops, the prophet dies,
His earthly mansion quits, and mounts the skies,
----- So Shepard's gone.
His precious dust, death's prey, indeed is here,
But 's nobler breath 'mong seraphs does appear;
He joins the adoring crowds about the throne,
He 's conquered all, and now he wears the crown."

A notice of this venerable minister appears in another connection.

"How uncertain are human enjoyments!

"From gratitude, respect and endearing recollection, this stone is erected in remembrance of Mrs. Jane & Sally Tufts, consort & daughter of Mr. David Tufts, who died Nov. 15th & 16th, 1795, aged 28 years, the infant 1 day.

"Sacred to the memory of Mrs. Elizabeth Tufts, & dau^r, wife and dau^r of Mr. David Tufts, who obt. Aug. 20th & 22^d, 1801. She aged 32 years, the child Aet 5 hours.

"Why do we mourn departed friends
Or shake at death's alarms?
'Tis but the voice that Jesus sends
To call them to his arms."

"In memory of Mr. David Tufts, a soldier of the Revolution, who died July 6, 1821, Aet. 60.

"When coldness wraps this suffering clay,
Ah, whither strays the immortal mind?
It cannot die, it cannot stay,
But leaves its darkened dust behind."

This Mr. David Tufts, whose singularly severe and affecting visitations are here commemorated, lived in a comfortable two-story frame dwelling which stood on what is now Western Avenue, at the northeast corner of Federal Street, the site being now occupied by huge brick business buildings, and his land extended nearly to Centre Street. His barn was opposite the west wing of Lynn Hotel. As stated upon the stone, he was a soldier of the Revolution, and must have been in service while a mere boy. He drew a pension during the latter part of his life, for though

in the way of gaining a comfortable livelihood by farming and expressing, in a small way, he was yet obliged to exercise industry and economy. He kept his sword hanging above the head of his bed as a memento of his early heroism. His last wife was Eunice, a daughter of Joseph Hart, of Boston Street, and she survived him more than forty years. He left three sons, one of whom was Deacon Richard Tufts, so long conspicuous for his rigid principles as a temperance reformer, and so highly respected for his unswerving moral integrity. He was a deacon of the First Congregational Church for many years, and died an octogenarian. Col. Gardiner Tufts, whose efficient services in the interest of the Massachusetts soldiers, during the Civil War and subsequently, were highly appreciated, and who is yet doing efficient service under State appointment, was a son of the deacon.

"John E. Weston, Minister of the Gospel, died July 24, 1831, Aet. 35.

"He was ordained Oct. 1827, Pastor of the 2^d Baptist Church in Cambridge, and at the time of his death was pastor elect of the Baptist Church, Nashua, N. H. It was while on a journey to Nashua to preach on the ensuing Sabbath that he was drowned in Sandy Pond in Wilmington. This sudden and afflictive event occurred in consequence of a deep bank near the edge of the pond, from which, unperceived by him, he was precipitated with his carriage and sank in death.

"Thus died a most excellent husband and
Father, a devoted and humble Christian, an
able and energetic minister, beloved by all,
and bearing the noble features of that Saviour
whom he delighted to honor."

In this venerable resting-place of the dead repose the remains of three early ministers of the First Church—Whiting, Shepard and Henschman—as well as the countless host of other worthies—fathers and mothers of past generations—some of whom have elsewhere come under notice.

"Life's labor done, securely laid
In this their last retreat,
Unheeded o'er their silent dust
The storms of life shall beat.

"The storm which wrecks the wintry sky
No more disturbs their deep repose
Than summer evening's gentlest sigh,
Which shuts the rose."

The other burial-places of Lynn are as follows, arranged according to the dates of consecration:

THE FRIENDS' BURIAL-PLACE.—This seems to have been set apart for its sacred purposes early in the last century, probably in or about the year 1723, as is found that Richard Estes conveyed to the Friends Society an eligible lot of land at the corner of the present Broad and Silsbee Streets, "in consideration of the love and good will" he bore "to y^e people of God called Quakers, in Lyn," by a deed dated the "seventeenth day of the tenth month, called December, in y^e ninth year of the reign of King George, in the year of our Lord, according to the English account, one thousand seven hundred and twenty-two." The land was given "unto y^e people aforementioned to bury their dead in, and to erect a meeting-house

for to worship God in: I say those in true fellowship of the gospel unity with the monthly meeting, and those are to see to y^e Christian burying as we have been in y^e practice of." In 1826 the remains of a hundred and nine persons were removed from the old Friends' Burying-ground in Boston, and deposited in this at Lynn, the reason being that the society at Boston had become virtually extinct and their ground disused. Considerable feeling, however, was manifested by some, and Joseph Hussey refused to permit the removal of the remains of his two sisters to Lynn, preferring to have them deposited in King's Chapel ground. This burial-place is conveniently and pleasantly situated, near the house of worship, and has a number of neat memorial stones, without costly or gairish display. And in it rest a goodly number of Lynn's most prudent and worthy sons and daughters. Adjoining this ground is another, opened in 1825, as a free burial-place; the reason for the proceeding being that the society refused to permit the interment of a child in their ground without a compliance with their regulations.

THE EASTERN BURIAL-PLACE, on Union Street, was opened in 1812, is neatly kept, and contains the dust of many worthy ones.

PINE GROVE CEMETERY was consecrated on the afternoon of Wednesday, July 24, 1850. The weather was warm, but the sky was clear, and a great concourse attended. The exercises, conducted amid such picturesque and inspiring surroundings, were extremely impressive. The address was delivered by Rev. Charles C. Shackford, minister of the Unitarian Society. Several other clergymen took part in the exercises. An original ode, by G. W. Putnam, and original hymns, by Mr. Joseph W. Nye, Miss Anna H. Phillips and Miss Annie Johnson, were sung. This beautiful burial-place is surpassed by very few in the country for its picturesque natural features, its stately trees, fine shrubbery and flower-studded inclosures, as well as for its graceful and noble monuments. The first burial took place on Sunday, October 13, 1850; and the total number of interments up to January 1, 1886, was nine thousand six hundred, four hundred and sixty-five having taking place during 1885. As to the pecuniary receipts and disbursements, it may in brief be stated that for the year 1885 the City Council appropriated \$9000; to that was added, from sale of lots, \$5176.50; from interments, \$1480.50; from care of lots, \$2673.59; and from various other sources sufficient to make a total of \$19,509.86. The expenditures for labor, grading and the numerous other needful purposes were \$19,310.99.

ST. MARY'S (ROMAN CATHOLIC) CEMETERY, which comprises eight acres, is situated on Lynnfield Street, near the suburban village of Wyoma. It was consecrated on Thursday, November 4, 1858, by Bishop Fitzpatrick, assisted by six other clergymen. A violent storm prevailed on the day of consecration, and the

services, so far as they properly could be, were held in the church, where the rite of confirmation was administered to some two hundred persons.

ST. JOSEPH'S (ROMAN CATHOLIC) CEMETERY, on Boston Street, in the northeastern outskirts, was consecrated by Archbishop Williams, in the afternoon of Thursday, October 16, 1879. A number of clergymen from neighboring places were present. Eighteen burials had taken place there before the day of consecration. In the forenoon of the day of the ceremony the rite of confirmation was administered in the parish church, by the archbishop, to about a hundred and twenty-five children.

ALMSHOUSE GROUND.—A small lot was set apart on the Almshouse grounds for the burial of deceased inmates. But no burials are now made there.

At the present time the burials are chiefly made in the three cemeteries, the whole number in 1886 having been as follows: In Pine Grove Cemetery, 375; in St. Mary's, 207; in St. Joseph's, 46; in the Eastern ground, 58; in the Old, or Western ground, 3; in the Friends', 5—making a total of 694. But the number of deaths during the year was 836, the remains of 142 being taken out of town for interment. In 1885 the number of deaths was 828, of which 148 were by consumption, 21 by diphtheria, 14 by typhoid fever, 70 by pneumonia, 34 by cholera infantum, 9 by scarlet fever. Of children under five years, 278.

It may be added that the old burying-ground at Lynnfield was opened about the year 1720, and that at Saugus about 1732, both of those towns being then a part of Lynn.

The interesting ceremony of strewing with flowers the graves of soldiers who fell in the Civil War has been devoutly observed in Lynn. Once a year—on the 30th of May, which has been established as a legal holiday and called Memorial Day—under the auspices of the local post of the Grand Army of the Republic, the surviving comrades proceed in procession, with appropriate music, to the various burial-places, and there, upon the graves of the departed companions-in-arms, reverentially deposit their floral offerings. The custom began here in 1868, in accordance with the manifesto of General Logan, commander-in-chief of the association, issued at Washington. The occasion calls out crowds of people, old and young. A patriotic address by a comrade, delivered in some convenient place, follows the ceremony.

Did our limits allow, it would not be impertinent to say a few words touching what may be called modern extravagances at funerals. The expenditures for casket, floral decorations and carriages have become really burdensome to persons of limited means. Many seem to think it mean not to follow the fashion in these matters, and mean also to question any charge of those who furnish essentials or decorations. Can ostentatious display relieve a truly grieving heart? Can gairish pomp and glitter at the grave give joy to the departed? It would, indeed, be beath-

enish to avoid a proper manifestation of respect and affection for deceased friends; but is it not sometimes the case that respect and affection are marked by over-wrought display? In early New England times the dead were committed to their last resting-places with very little ceremony beyond the procession of mourning friends; the coffin was rude; and seldom was a prayer offered, an omission which it seems hard to account for, excepting on the ground of anxiety to avoid anything that approached the Romish custom of praying for the dead. Lechford, writing in 1641, says, "At burials nothing is read, nor any funeral sermon made, but all the neighborhood, or a good company of them, come together by tolling of the bell, and carry the dead solemnly to his grave and there stand by him while he is buried. The ministers are most commonly present." As to prayers at funerals, Drake, in his "History of Boston," in speaking of the funeral of the wife of Judge Byfield, who was a daughter of Governor Leverett, and died December 21, 1730, remarks: "At her funeral a prayer was made, which was the first introduction of the practice in the town." And a Boston paper, speaking of the same funeral, says: "Before carrying out the corpse, a funeral prayer was made by one of the pastors of the old church, which, though a custom in country towns, is a singular instance in this place." So much for the religious exercises at burials. And now a word touching some peculiar extravagances at times indulged in.

Before the beginning of the last century some strange customs began to appear, and expenditures were made for purposes much more reprehensible than any extravagance of the present day. Indeed, funerals were sometimes made seasons of absolute jollification. Spirituous liquors were provided in abundance, and scarfs, gloves and rings presented. The General Court, in 1724, prohibited the giving of scarfs on such occasions, "because a burdensome custom." At the funeral of Rev. Mr. Cobbet, who preached in Lynn nineteen years (1637-56), were expended one barrel of wine, £6 8s.; two barrels of cider, 11s.; 82 pounds of sugar, £2 1s.; half a cord of wood, 4s.; four dozen pairs of gloves, "for men and women," £5 4s.; with "some spice and ginger for the cider." It was not Lynn, however, that had the honor of providing thus liberally for the obsequies of Mr. Cobbet, for he had left here a number of years before, and settled in Ipswich. But in 1711 Lynn paid for half a barrel of cider for the Widow Di-paw's funeral. It was generous of the town to see that even a poor widow's remains should not be laid away without some inducement for neighbors to attend the last rites, if no feeling of bereavement existed. And there is a temptation to add the account of expenditures at the funeral of Rev. Mr. Brown, of Reading, in 1733, partly for the purpose of showing the cost of some things required in those days on such mournful occasions:

	£	s.	d.
"To Thomas Eaton, for provisions	2	1	0
Nathaniel Eaton for fetching up the wine	0	15	0
Lt. Nathaniel Parker for 5 qts. Rhom, [rum]	0	8	0
Samuel Pool for digging Mr. Brown's grave	0	8	0
Landlord Wesson, for Rhom, [rum]	0	10	6
Wm. Cowdry, for making the coffin	0	15	0
Andrew Tyler, of Boston, 6 gold rings for funeral	10	18	0
Benj. Fitch, of Boston, Gloves, etc	17	0	0
Mrs. Martha Brown, for wine furnished	5	0	0
Eben Storer, of Boston, sundries	8	0	0
Total	45	15	6

The old burying-grounds embody a history of the early settlements. The "cemeteries" of modern time exhibit the taste and wealth of later days. But it would be unkind to assume that either is not the bourn of true human sympathy and affection. The remains of high or low, rich or poor, wherever and whenever committed to the keeping of mother earth, occasion pangs of sorrow in some surviving breast; there are none so poor or miserable as to be void of this. To the indigent mourner there is substantial consolation in the thought that at the grave all earthly distinctions end; but far greater consolation in the conviction that for a virtuous life passed here a great reward awaits upon the other side of the dark vale. To the true duty-doer, as he draws near the bourn that cannot be repassed, the words of the great poet of our own Essex come as a refreshing breath from that other land,—

"O stream of life, whose swifter flow
Is of the end forewarning,
Methinks thy sundown afterglow
Seems less of night than morning."

There is surely no place better fitted for sombre reflection than that where lie the gathered dead of generations. But why sombre?

"All that tread
The globe are but a handful to the tribes
That slumber in its bosom."

And among them, in peaceful rest, are the good and great, the beautiful and buoyant. What is there doleful in such company? Meditations of the most cheerful kind may well be entertained. And soothing would it be to many a tired spirit could it occasionally respond to the poet's sentiment and say:

"At musing hour of twilight gray,
When silence reigns around,
I love to walk the churchyard way—
To me 'tis holy ground.
To me congenial is the place,
Where yew and cypress grow—
I love the moss-grown stone to trace,
That tells who lies below."

Yes, indeed, to a mind so touched, many a rough passage of life would be made smooth, for step by step more fully would be perceived the utter hollowness of all mere earthly promises, and the emptiness of earth's bubbles, wealth, honor and fame. The pursuit of wealth especially, which is with us so marked a feature, would soon appear like senseless phantom-

chasing. Pausing at the merely rich man's grave,
the racy lines of Swift might well obtrude:

"The sexton shall green sods on thee bestow;
Alas, the sexton is thy banker now!
A dismal banker must that banker be,
Who gives no bills but of mortality."

And again:

"He that could once have half a kingdom bought,
In half a minute is not worth a groat.
His coffers from the coffin could not save,
Nor all his interest keep him from the grave."

CHAPTER XIX.

LYNN—(*Continued*).

OLD FAMILIES—PERSONAL NOTICES—POETS AND PROSE WRITERS.

*Lists of Settlers—Notices of Remarkable Individuals, Eccentric and Otherwise
—Lynn Writers in Poetical, Historical and other Departments.*

"These flowery fields they loved to tread,
These rocky heights to scale,
The dells and tangled breaks to thread,
And snuff the fragrant gale."

REALIZING that the study of kinship, the tracing out of lines of relationship, is peculiarly fascinating and quite as profitable, perhaps, as many of the studies to which attention is usually directed, there have been introduced here and there in the different divisions of this sketch notices, more or less extended, of representative individuals who have appeared in the different periods of our history; enough to render all the assistance that could in that way be afforded to those who would trace out their genealogical lines. Such studies frequently prove of unexpected value, by unearthing facts greatly beneficial to one or another. Very few of the old New England families can be brought to mind of which may not now be found representatives whose virtues or achievements adorn the parent name. "The records of families," remarks a writer quoted by President Wilder, "constitute the frame-work of history, and are auxiliaries to science, religion and especially to civilization. The ties of kindred are the golden links in the chain which ties families, states and nations together in one great bond of humanity. Everything, therefore, which pertains to the history of our families should be carefully recorded and preserved for the benefit of those who are to follow us. He who collects and preserves his own family history is not only a benefactor in his way, but will deserve and receive the grateful thanks of all future generations. He confers a priceless boon upon those whose names and achievements are thus rescued from oblivion, and preserves the experience and wisdom of ages for the emulation and admiration of posterity." Yet there are multitudes of unreflecting people who never think of these things, and other

multitudes who are so engrossed with money-making plans that they can see no good in them. Why, a while ago the writer had occasion to ask a man something about his grandfather, and got the abrupt reply, "But I don't even know who my grandfather was, and don't care; there's no money in it!"

And now as to Lynn: Though not able to boast of any very eminent persons at present within her borders, excepting in the mere business relations of life, in which she stands remarkably well, and excepting those who are "great in their own eyes," she yet can point to many living descendants of her earlier families who have made a mark in their generation. Let us give an example or two: GEORGE BANCROFT, the eminent historian, is a direct descendant from John Bancroft, one of Lynn's early settlers. GEORGE WILLIAM CURTIS, of New York, so prominent in the literary world, is a direct descendant from Ebenezer Burrill, who, July 29, 1725, married Mary Mansfield, and lived in the house that stood on Boston Street near the northeast corner of North Federal. Mr. Curtis's mother was a daughter of Hon. James Burrill, chief justice of the Supreme Court of Rhode Island and United States Senator, who died on Christmas Day, 1820, and whose father, also named James, was a son of Ebenezer, and born in the old Boston Street mansion. HORACE GRAY, a judge of the Supreme Court of the United States, and late chief justice of the Supreme Court of Massachusetts, is a grandson of William Gray, who was born in the two-story gambrel-roof house, the most easterly on the south side of Marion Street, formerly known as the Dr. Flagg house. The bold and chivalrous JOHN J. INGALLS, now a member of the United States Senate from Kansas, and one of the "best dressed" members of that body, is a lineal descendant from Edmund Ingalls, one of the first five settlers of Lynn. The catalogue need not be further extended, though many other honorable names press upon the memory. And then, if deceased ones should be brought to notice, the list could not easily be limited. There was TIMOTHY PICKERING, the friend of Washington, the sagacious and prudent counselor and co-worker on the foundation of the republic; his grandmother was a Burrill, of the same lineage from which Mr. Curtis sprang. THEODORE PARKER, the learned theologian and accomplished scholar, was a direct descendant from the sober old Lynn settler, Thomas Parker. The two BISHOPS HAVEN were lineal descendants from Richard Haven, whose house was on Boston Street, corner of North Federal, near that of the Burrills, the ancestral home of Curtis and Pickering just named. Then there was Rev. SAMUEL KERTLAND, who, by request of the Provincial Congress, induced the Oneidas and some other Indians of the Six Nations to espouse the American cause in the dark, opening days of the Revolution; he was a direct descendant from Philip Kertland, the first Lynn shoemaker. Then there was NATHANIEL P. WILLIS,

or, as he preferred to write it, when that style was fashionable, N. Parker Willis, the poet, a descendant of Thomas Willis, who was among the first Lynn settlers, locating at what we now call Tower Hill. He was a co-representative with Captain Nathaniel Turner and Edward Tomlins in the first General Court, 1634. And, being a man of consequence, he had allotted him, in the land division of 1638, "upland and meadow, 500 acres, as it is estimated," while many of his neighbors received not above sixty. He does not appear to have spent the remainder of his days here, and it is not probable that descendants of his remain. It is at least hoped that the line was not tainted by "Old Willis," who, many years ago, kept the famous dance-house at North Bend, though he had the distinction of being a soldier of the Revolution. But this trail cannot be further pursued.

The narration of prominent events as they occurred in one's own neighborhood is seldom without absorbing interest. But when the actors in those events are introduced, the interest is greatly enhanced. It is the fashion with local historians and quasi historians to give chapters of biography; and those chapters are always interesting, at least to residents. But in view of the fact that, as before remarked, many sketches are scattered about elsewhere in these pages, a different plan must be pursued here. A few of those who have not been spoken of in other connections, but are thought entitled to special remembrance, will here receive attention. It will, of course, be borne in mind that it is not the purpose even to name all who have contributed to the prosperity of Lynn, for that would include a large portion of her population. Genealogies of a number of the old families have been published in one shape and another, and the "History of Lynn" contains many pages of such matter.

The following are the names of some of the settlers who appeared here before the year 1700, and who planted families which are still well represented among us, though they were not of the first comers:

Allen, 1636.	Estes, 1683 (?).	Oliver, 1692 (?).
Alley, 1640.	Farrington, 1635.	Parker, 1635.
Attwill, 1650.	Fuller, 1614.	Phillips, 1650.
Bachelor, 1632.	Graves, 1630.	Pool, 1639.
Baker, 1630.	Hart, 1640.	Ramsdell, 1630.
Bassett, 1640.	Hawkes, 1630.	Rhodes, 1640.
Bennett, 1630.	Hood, 1640.	Richards, 1630.
Berry, 1650 (?).	Hudson, 1630.	Richardson, 1679 (?).
Breed, 1630.	Ingalls, 1629.	Silsbee, 1651.
Brown, 1630.	Ireson, 1635.	Smith, 1630.
Burrill, 1630.	Johnson, 1637.	Stacey, 1641.
Chadwell, 1630.	King, 1647.	Tarbox, 1640.
Clark, 1640.	Lewis, 1639.	Townsend, 1636.
Collins, 1635.	Mansfield, 1640.	Waitt, 1650.
Davis, 1635.	Newhall, 1630.	

ALLEY.—John B. Alley, the first member of Congress from Lynn (1858), descended from the 1640 settler of the name.

BAKER.—Daniel C. Baker, the third mayor, was a descendant of the 1630 settler.

BASSETT.—William Bassett, the first city clerk, came from the family planted here in 1640. His pedigree may be found further on.

BREED.—Andrews Breed, our fifth mayor, and Hiram N. Breed, our ninth, descended from the 1630 settler.

BURRILL.—The Burrill who came in 1630 became the head of what was once called "the royal family of Lynn."

DAVIS.—The Davis named in the list was the ancestor of Edward S. Davis, our eighth mayor.

FULLER.—Joseph Fuller, the first president of the first Lynn bank; and Maria Augusta Fuller, the poetess, were descendants of the 1644 settler.

GRAVES.—From Mr. Graves, the 1630 settler, the section known as Gravesend (now called Glenmere) took its name.

HART.—George D. Hart, our twentieth mayor, descended from the early settler of the name.

HAWKES.—An account of the Hawkes family, planted here in 1630, will appear on a subsequent page.

HOOD.—George Hood, the first mayor of Lynn, was a representative of the old Hood family.

JOHNSON.—William F. Johnson, our seventh mayor, is of the old 1637 line.

LEWIS.—Jacob M. Lewis, Lynn's fourteenth mayor, and likewise Alonzo Lewis, the poet and historian, are descendants from the settler of 1639.

MANSFIELD.—Andrew Mansfield, who came in 1640, was, in 1660, made the first town clerk. To him we are also indebted for the preservation of a record of the land allotments of 1638, which, as he certifies, he copied "out of the Town Book of Records of Lynn," March 10, 1660. Several of his descendants became prominent, two or three in the military line.

NEWHALL.—The Newhall family, planted here in 1630, and of which the first white child born within our borders was a member, has, during our whole history, till within a year or two, maintained its rank as first in numbers, if for nothing else. The name is not now the most numerous, as, according to recent directories, it is slightly led by that of Smith. They are both old Lynn names, but it is evident that but comparatively few of the present Smiths are of old Lynn stock.

RICHARDS.—Richard Richards, who died December 19, 1851, was a descendant of the 1630 settler. He has been ranked as the most inventive genius, in a mechanical way, ever born here, some of his inventions proving of great value in the local business.

A brief notice of the **TARBOX** family will appear a little farther on.

In the sketch of Lynnfield a somewhat extended notice of the **TOWNSEND** family will be given.

A brief list of some of the subsequent families, that is, those which appeared after the year 1700, and made favorable marks which have from generation to generation been continued, follows: Bubier, Buff-

um, Chase, Curtin, Kimball, Moulton, Mudge, Munroe, Parrott, Pratt, Spinney, Stone, Tufts, Usher, Walden, Woodbury.

This short list contains the names of five mayors, to wit.: Bubier, Buffum, Mudge, Usher and Walden. And all the families have presented substantial and useful citizens.

It may be observed that several names, conspicuous in former years, do not appear in these lists. In some instances they are of those spoken of in other connections, in other instances of those who left few or no descendants, and in still other instances of those who did little or nothing to promote the prosperity or enhance the fame of this their chosen home, preferring rather to direct their life's labor to mere selfish ends,—a career that too many of us of the present day are prone to imitate.

HAWKES FAMILY.—This family has ever maintained a respectable rank among the old Lynn families. Adam Hawkes, the founder, was one of the seventeen hundred Puritans who sailed with Endicott from Southampton and landed at Salem in June, 1630. He received large grants in the division of the common lands, and during his busy life acquired other tracts. He was an excellent specimen of the hardy, industrious and thrifty pioneer.

The doings of many of the early comers and their successors are not matters of tradition, but of history and record so clear that one can read their lives as if they were contemporaries. Of this first Adam Hawkes, for instance, we know the little knoll where he built his house, we know of the burning of that house, of the flight through the snow with his wife and infant children; we know when his second house was erected—a house which sheltered some of his descendants for more than two hundred years. In 1872 the old house was taken down, and on one of the bricks of the chimney was found the date, 1601, evidently written in the soft clay with the finger, when the brick was made in England. These bricks, which were in the first house, were relaid in the chimney of the fourth, on the same farm, by Richard Hawkes, of the sixth generation from the original owner. It is a matter of history that some of the ships of Winthrop's fleet were ballasted with bricks, and it has always been known in this family that the bricks in the first chimney came from England. The farm borders upon Saugus River, and the bricks must have been carried up that stream in boats, as there was no road. Another relic of the original chimney, which has ornamented its successors, but which is now regarded as an heirloom, is an iron fireback, some two feet square, and weighing about one hundred pounds, on which is moulded what has been supposed to be the British arms, but which has since been thought to be a coat of arms—perhaps that of the Hawkes family. The "supporters," though not distinct, seem to be similar to those in the British arms, but instead of the crown, this is surmounted by what appears to

be the visors and bars of a helmet and lion. This casting was evidently made to lay in masonry, as the edge is depressed and rough. The fashion of ornamenting the chimney-back above the fire with the family arms or something national was common in early colonial times, probably borrowed from home.

John Hawkes, a son of Adam, the first comer, was a man of considerable local note in his time. His descendants can trace their ancestry to one of the group who signed the immortal compact in the cabin of the "Mayflower." His wife was Rebecca, daughter of Moses Maverick, the founder and for many years the only magistrate of Marblehead. The wife of Mr. Maverick was a daughter of Isaac Allerton, who was one of the "Mayflower" passengers, was Lieutenant-Governor of Plymouth Colony, and for a long time colonial agent. Isaac Allerton and Moses Maverick were conspicuous in the early days, and their blood mingled with that of the successors of Thomas Hawkes, who was burned at the stake in the reign of "Bloody Queen Mary," for his faithfulness to his religious principles.

On the 28th and 29th days of July, 1880, there took place a notable reunion on the grounds of Louis P. Hawkes, who occupies the very place where the father of the family established his abode in 1630. Some three hundred were present, from all parts of the country—representatives from all classes of society, the learned, the diplomatic, the mercantile, the laboring. The Hon. Nathan M. Hawkes, of Lynn, acted as master of ceremonies, and all the proceedings began, continued and ended in the most satisfactory manner. The literary exercises were of a high order, eminently appropriate and interesting. There were devotional exercises, poems, addresses, genealogical sketchings, music, and, for the younger portion, lighter diversions of various kinds. The principal address was by Senator Hawkes, the master of ceremonies, and its terse periods were enriched by historic allusions and family incidents, such as proved of absorbing interest to all present. The sentiments expressed in the closing passages must have found a response in the minds of the elder ones present; in the minds of all not cankered by worldly ambition, nor closed to the beautiful in nature and the conception of life's higher duties:

"This day is a mile-stone that marks our march of a quarter of a thousand years of American life. Individuals and generations lay down the burdens, the failures and the triumphs of life; others stand ready to go on with the duties that citizenship and family command. Let us signalize this occasion as a family by new reverence for the memory of our ancestors, and by new resolves to make our name a still better name in the future than in the past. Let us sanctify the present by making it worthy of the past, ever hopeful of the unseen, wonderful future.

"Within five miles of the ebb and flow of the Atlantic, whence civilization took its westward course, this sylvan retreat has hitherto escaped the rush and crush of busy mercantile pursuits; the snort of the locomotive is unheard; the primitive solitude is undisturbed, save by the peaceful pursuits of agriculture.

"The oratories of the Jews were beneath the shadow of olive trees; the ancient Druids of Gaul, Britain and Germany were accustomed to perform their mystic rites and sacrifices in the recesses of the forest; and our Pilgrim Fathers worshipped God under a like canopy.

"We meet to-day under the shade of the walnut. May this spot be spared from the sordid pursuits of business; may this grove be unvexed by the demands of utility for another period of two hundred and fifty years, that our successors may gather here in 'Nature's noblest sanctuary;' and may our kin in all coming time resort to this Mecca of the Hawkes family in America."

The family name, like all the surnames of colonial days, was spelled in a way to suit the user; but there were not so many variations as in most of the familiar names. In England we find it spelled Hawkes, and that has generally been followed here. Some branches of the family in America, however, spell it Hawks. This saves a letter, but does not make the word handsomer. No full genealogy of the family has yet been arranged. The materials, however, are ample, and space may be allowed for the tracing of one line as a sample. For this purpose we will take our well-known fellow-citizen, Hon. Nathan M. Hawkes, who was master of ceremonies, as before mentioned, on the occasion of the great family gathering.

1. Adam Hawkes arrived in 1630, died 1671.
2. John Hawkes, son of Adam, married Rebecca Maverick.
3. Moses¹, son of John, born 1659, married Margaret Cogswell.
4. Moses², son of Moses¹, born 1699, married Susannah Townsend.
5. Nathan¹, son of Moses², born 1745, married Sarah Hitchings.
6. Nathan², son of Nathan¹, born 1775, married Elizabeth Tarbell.
7. Nathan D., son of Nathan², born 1811, married Tacy P. Hawkes.
8. Nathan M., son of Nathan D., born 1843, married Mary Bullum.

JOHNSON FAMILY.—The Johnson family has been among the most prominent and respectable of the Lynn families almost ever since the settlement commenced, and it would be agreeable to give the genealogy somewhat at large, were it practicable. As the next best thing, however, it may be well to trace the line of a single individual, as a family representative, from the first settler. Others, by their relationship to him, may trace their own lines.

For this purpose, then, let us take the line down to the late Otis Johnson, who died at his well-known residence on Federal Street, February 17, 1870, at the age of sixty-eight years.

*Richard Johnson*¹, the first of the family in Lynn, was born in England in 1612. He came to America with Sir Richard Saltonstall, in 1630, and after residing for seven years in Watertown and for a short period in Salem, settled in Lynn in 1637, being made a freeman the same year. He was a thrifty farmer, and owned a considerable tract of land at the eastern end of the Common, including the site of the present City Hall. His children were Samuel, Elizabeth, Abigail and Daniel.

*Samuel*¹ was known by the title of Lieutenant, and was a cornet in the King Philip War, 1676. For his

services he received, in 1685, a grant of land from the General Court. He died in 1723, at the age of eighty-two, and was buried in the old ground, where his grave-stone may still be seen. He married Mary Collins January 22, 1664, and had nine children.

*Richard*², the sixth child of Samuel¹, was born November 8, 1674; on July 3, 1705, he married Elizabeth Newhall, and died September 26, 1754. He was town clerk for several years onward from 1722, was for three years a representative in the General Court and a deacon in the old church at the time of his decease. His sons were Samuel, known as Captain, Joseph and Benjamin.

*Samuel*², Captain, the eldest son of Richard², was born March 17, 1708, and married Ruth Holten, of Lynn, in or about 1731. His will was probated January 7, 1772.

*Richard*³, the eldest son of Captain Samuel, was born September 25, 1731, married Lydia Batchelor March 21, 1756, and died September 27, 1765, from a fever resulting from haymaking on the marsh. He had sons,—Samuel, Enoch, Rufus, Timothy.

Enoch, son of Richard³, was born January 16, 1761, married Elizabeth Newhall June 8, 1790, and died March 17, 1815. He was a deputy sheriff. Samuel, his son, was born April 30, 1793, married at Nassau, N. P., and long resided there, dying July 11, 1841. George, his son, was born June 7, 1796, and died October 17, 1849. He was a shoe manufacturer, and married Eliza, a daughter of Dr. Aaron Lummus.

Otis, the youngest son of Enoch, was born January 26, 1802, and died at his residence on Federal Street, Lynn, on the 17th of February, 1870, at the age of sixty-eight years, as before stated. He was married in Savannah, Ga., March 18, 1824, to Miss Virginia Taylor. They had nine children, only three of whom are now (1887) living—namely, Enoch Stafford, Maria Lillibridge and Elliott Clarke. The eldest son of Mr. Johnson was William Otis, who died August 17, 1873, aged forty-eight. He was a graduate of Harvard College, and in due time became established as a physician of more than ordinary reputation, having studied under the venerable Dr. Jacob Bigelow. His literary talents were also of a high order, his articles in the *North American Review* attracting marked attention.

BASSETT FAMILY.—William Bassett, the first of the name here, was a farmer and settled on Nahant Street on land still owned by his descendants. He married Sarah, daughter of Hugh Burt, who died in 1661. He was an ensign in the company of Captain Gardner, of Salem, in the Indian War, and was at the "swamp fight." For his services the General Court made him a grant of land. Captain William Bassett, supposed to be the same individual was one of a council of war, with Major Benjamin Church, at Scarborough, Me., November 11, 1689. His name often appears in the oldest town records of

Lynn, where, in 1691, he is called Quartermaster Bassett. He died March 31, 1703. His daughter Elizabeth was the wife of John Proctor, of Danvers, who was executed for witchcraft. She, too, was condemned, but pardoned. The wife of his son William was likewise imprisoned seven months for witchcraft. She had a child, when taken to prison, less than two years old; and the next child she had, after her release, she named Deliverance. The following gives the line of descent down to the children of the late William Bassett, our first city clerk, who was cashier of the First National Bank, and had been for many years at the time of his sudden decease, June 21, 1871:

(2) William Bassett, son of William, the first Bassett here, married Sarah Hood, October 25, 1675, and had children,—Sarah, born 1676, who married Joseph Griffin, for her first husband, and a Newbold for her second; William, born 1678, who married Rebecca Berry in 1703 (his father's lands were divided between him and his brother John); Mary, born 1680, who married a Hill; John, born 1682, who married Abigail Berry, of Boston; Hannah, born 1685, who married John Estes, of Salem; Ruth, born 1689, who married Abraham Allen, of Marblehead; Joseph, born 1692, lost at sea; Deliverance, born 1695, who, in 1719, married Samuel Breed; Abigail, who, in 1728, married Samuel Alley.

(3) William Bassett, son of (2) William, had children,—Rebecca, born 1709; Miriam, born 1712, who in 1732, married David Northey, of Salem; Joseph, born 1715, who inherited his father's lands and married Eunice Hacker; Elizabeth, who, in 1729, married Benjamin Flood.

(4) Joseph Bassett, son of (3) William, had children,—William, born 1738, who died young; Isaac, born 1741, who, in 1769, married Mary, daughter of Joshua Collins, was a farmer and shoemaker, and inherited one-half of the lands of his father, and died in 1829; Nehemiah, born in 1749, who married Abigail Fern; Rebecca, born 1754, who married James Breed; Sarah, born 1757, who married Abraham Breed; Eunice, born 1759; Hannah, born 1763, who married William Breed, of Nahant.

(5) Isaac Bassett, son of (4) Joseph, had children,—Elizabeth; William, who died young; Eunice; William again, who also died young; Isaac, who married Ruth Breed; Eunice again, who married Ezra Collins; Hannah, who married Samuel Neal.

(6) Isaac Bassett, son of (5) Isaac, resided on Nahant Street, on the site occupied by his forefathers, and was long held in repute as a citizen of energy, enterprise and wealth. He died May 24, 1867; had children,—William, born March 4, 1803, died June 21, 1871; Jeremiah, who died young; Elizabeth, who died young; Elizabeth again, who married Samuel Boyce; Mary; Jeremiah again, who also died young; Eunice, who married W. S. Boyce; Lydia, who married James B. Kite, of Philadelphia; Han-

nah; Joseph, who died young; Anna Green, who died April 17, 1863.

(7) William Bassett, son of (6) Isaac, died June 21, 1871, aged sixty-eight. He was the first city clerk of Lynn, and a man much respected; was prominent in the early anti-slavery movements, and a co-worker with those leading spirits, William Lloyd Garrison and Wendell Phillips, both of whom were present at his funeral. His children were Susanna Smith, who married Cyrus M. Stimson; Eliza; Mary Ann, who married Thomas Herbert; William Herschell, who died young; Joseph, who also died young; Sarah, who married William W. Kellogg; William, who died young; William, again, born September 30, 1839; Edmund Quincy, who died young.

(8) William Basset, son of (7) William, now head of the banking firm, Basset, Whitney & Co., of Boston, had children,—William; Ruth; Edith, who died young.

Note.—The ancient spelling of the name was with one "t;" but in later years the final letter was doubled; recently, however, a desire has been manifested to return to the old orthography.

TARBOX FAMILY.—John Tarbox, the first settler of the name here, came as early as 1640. He was a farmer, and among his landed possessions had seven acres of upland on Water Hill, where he appears to have lived, having an orchard near his house. And upon the premises, before the coming of the whites, there was probably an Indian settlement or encampment, as about there were found numerous arrow-heads and other relics. He was evidently a respected settler, active and thrifty. Though farming was his principal occupation, he turned his attention to other pursuits, and was a small proprietor in the iron works. He died May 26, 1674. His will is dated November 25, 1673, and to his son John says,—“I bequeath my house and housing, with orchard and all my land and meadow, with a greene ragg and a great iron kettell, and a round joynd table.” He also says,—“I bequeath unto every one of my sonn, John Tarbox, his children, and my son Samuel's children, one ewe sheep apeece.” The wife of his son John was a daughter of Richard Haven, who lived on Boston Street, corner of North Federal, the site on which George O. Tarbox recently erected a dwelling-house and store. Mr. Haven was ancestor of the two Methodist Bishops, Gilbert and Erastus Otis, and George O. Tarbox, just named, was a lineal descendant from the early settler, John.

With a daughter of Mr. Tarbox the course of true love does not seem to have run with uninterrupted smoothness, for it is found that on the 11th of September, 1649, Matthew Stanley was tried for winning her affections without the consent of her parents, convicted and fined £5, with 2s. 6d. fees, together with an allowance of 6s. to the parents of the young lady for their three days' attendance.

The son, Samuel, married Rebecca, a daughter of Joseph Armitage, landlord of the famous Anchor

Tavern. He had eighteen children, and died September 12, 1715, aged ninety-three years. He was one of the fifteen Lynn men impressed by order of court, November 13, 1674, for service in the King Philip War. A detachment had previously been sent on the same service. In 1685 he joined in "the humble petition of several inhabitants of Lynn, who were sold, impressed and sent forth for the service of the country, that was with the Indians in the long march in the Nipmugg country, and the fight at the fort Narragansett," which petition was signed by twenty-five inhabitants of the town.

It can hardly be said that the Tarbox family became very conspicuous beyond our own borders, though of late years some shining lights of the name, and presumably of the lineage, have here and there appeared. Nor has the family with us been conspicuous for numbers, notwithstanding the good example set by Samuel, who, as just stated, was the happy father of eighteen children. Still, there always have been and yet are a fair number with us. The name of Mr. George O. Tarbox, before mentioned, has been favorably greeted throughout the land for his late effective manifesto touching the "boycott" ordered upon him by the Knights of Labor.

But this class of personal notices cannot be extended here. And the reader may, if he please, consider the foregoing merely as examples that might be greatly multiplied.

And now, with notices of a few eccentric, or rather, perhaps, we should say, abnormal, characters, of which class Lynn has always had an abundant assortment, this division of our sketch will close. Some of those referred to have made an enduring mark and done much to spread abroad the name of the place, but to what advantage or disadvantage there will be different estimates. There is, however, a sort of worldly benefit in being talked about, even if what is said is not quite so favorable. The term "eccentric" is not intended to be applied in an offensive sense, and it is feared that some reader may not see the strict applicability of its use in every instance. In the first notice, especially, it may be deemed hardly appropriate, as matrimonial misunderstandings are in these days so common as to seem "natural" rather than "eccentric." The notices are not given merely to amuse, but for use by way of example or warning, as the case may be.

MONTOWAMPATE, alias SAGAMORE JAMES.—It is fitting to begin with a sketch of the Indian Sagamore James, who ruled over a considerable part of the sea-board line of Essex County at the time of the arrival of the whites, though he was then quite a young man, having been born in 1609. His Indian name was Montowampate, but the settlers called him Sagamore James. He was a son of Nanapashemet, whose jurisdiction extended over a large part of the territory between the Charles and Piscataqua Rivers. On the death of Nanapashemet his "kingdom" was divided,

the portion including Lynn falling to Montowampate, his second son.

The young Sagamore fixed his residence on the delightful elevation still known as Sagamore Hill, lying between Beach and Nahant Streets, and overlooking the beach, Nahant and a considerable portion of the bay. It is now (1887) a thickly-settled part of the city, though still retaining some of its picturesque features. Its proximity to the sea was, perhaps, the chief reason why this place was chosen for the "royal residence," though the lovely natural surroundings may have added their attractions. Not much is known of Montowampate, nor indeed individually of any of the Indians found hereabout, though from the narratives of the old writers glimpses of character sometimes occur. Dudley says Montowampate was "of a far worse disposition" than his brother Wonohaquam, or Sagamore John, as the English called him, who, he says, was "a handsome young man" . . . "affecting English apparel and houses and speaking well of our God."

The Lynn Sagamore seems to have had a high appreciation of his own dignity, and not a very lively sense of the courtesies due to the gentler sex. This is shown by a matrimonial imbroglio, which Thomas Morton thus recounts in his book entitled "The New English Canaan," published in 1632:

"The Sachem or Sagamore of Sagus, made choice, when he came to man's estate, of a lady of noble descent, daughter of Papasiquineo, the Sachem or Sagamore of the territories near Merrimack river; a man of the best note in all those parts, and, as my countryman, Mr. Wood, declares, in his 'Prospect,' a great nigromancer. This lady the young sachem, with the consent and good liking of her father, marries, and takes for his wife. Great entertainment hee and his received in those parts at her father's hands, where they were feasted in the best manner that might be expected, according to the custome of their nation, with reveling, and such other solemnities as is usual amongst them. The solemnity being ended, Papasiquineo caused a selected number of his men to waite on his daughter home into those parts that did properly belong to her lord and husband, where the attendants had entertainment by the sachem of Sagus and his countrymen. The solemnity being ended, the attendants were gratified.

"Not long after, the new married lady had a great desire to see her father and her native country, from whence she came. Her lord was willing to pleasure her, and not deny her request, amongst them thought to be reasonable, commanded a select number of his own men to conduct his lady to her father, where with great respect they brought her; and having feasted there a while, returned to their own country againe, leaving the lady to continue there at her owne pleasure amongst her friends and old acquaintances, where she passed away the time for a while, and in the end desired to returne to her lord againe. Her father, the old Papasiquineo, having notice of her intent, sent some of his men on ambassage to the young sachem, his soune-in-law, to let him understand that his daughter was not willing to absent herself from his company any longer; and therefore, as the messengers had in charge, desired the young lord to send a convoy for her; but he, standing upon tearmes of honor, and the maintaining of his reputation, returned to his father-in-law this answer: 'That when she departed from him, hee caused his men to waite upon her to her father's territories as it did become him; but now she had an intent to returne, it did become her father to send her back with a convoy of his own people; and that it stood not with his reputation to make himself or his men so servile as to fetch her againe.'

"The old sachem Papasiquineo, having this message returned, was enraged to think that his young son-in-law did not esteem him at a higher rate than to capitulate with him about the matter, and returned him this sharp reply: 'That his daughter's blood and birth deserved

more respect than to be slighted, and therefore, if he would have her company, he were best to send or come for her."

"The young sachem, not willing to undervalue himself, and being a man of a stout spirit, did not stick to say, 'That he should either send her by his own convoy or keep her; for he was determined not to stoop so lowe.'

"So much these two sachems stood upon tearmes of reputation with each other, the one would not send for her, lest it should be any diminishing of honor on his part that should seeme to comply, that the lady, when I came out of the country, remained still with her father; which is a thing worth the noting, that salvage people should seek to maintain their reputation so much as they doe."

She was, however, finally restored to his arms, but how the reconciliation was effected does not appear. She soon after became a widow, as the death of Montowampate took place in 1633. Her marital life certainly had its troubles, for besides what has been spoken of, she was taken captive by the Tarratines and held a prisoner for two months. After the death of her husband she returned to her father.

The resolute Montowampate is said to have visited England in 1631, with a letter of introduction from Governor Winthrop to Emanuel Downing, the eminent London lawyer, and while there to have received the honors of an Indian king. His errand was to procure redress for a fraud committed by an Englishman named Watts in a beaver-skin transaction.

On the 4th of September, 1632, the court ordered that "Richard Hopkins shalbe severely whipt & branded with a hott iron on one of his cheekes for selling peeces & powder & shott to the Indians. Hereupon it was propounded if this offence should not be punished hereafter by death." One of the purchasers of the proscribed articles, it appears by Mr. Lewis, was the mettlesome Montowampate.

But this youthful Sagamore of Lynn soon ended his career. Winthrop, in his journal under date December 5, 1633, says,—“John Sagamore [elder brother of Montowampate] died of the small pox, and almost all of his people.” . . . “James Sagamore [Montowampate], of Sagus, died also and most of his folks.”

MARY PITCHER.—The stranger on arriving in Lynn, and leaving the railroad train at the Central Square Station, may observe towering up, a furlong or so off, in a northeasterly direction, a huge porphyry cliff, which he may be told is “High Rock.” It is not now, however, so readily discerned from the Square as it was a few years since, for large business buildings, recently erected, intervene. Seventy-five years ago there was but little population in the vicinity, and the whole of “Rocks Pasture,” near the southern border of which rises High Rock, was lonely and wild enough, with its rocky outcroppings and stunted growth of red cedar. The highway, indeed, wound along the southerly bound, but it was rough and little traveled. In pleasant weather, however, charming views could be obtained of diversified landscape and the ever-changing sea.

Upon the southern declivity, and fronting towards the sea, was a plain little cottage, seated a short dis-

tance in from the road, with a small, unkempt garden in front, and broken rocks, thistles and nettles in the rear. And that lonely cottage was the home of “Moll Pitcher,” the celebrated fortune-teller of Lynn, for many years. It was here that she entertained the numerous visitors of all classes and from all places, who anxiously sought her aid to unveil the mysteries of the life before them, never doubting that—

“She could tell by tea-ground mark,
Furtue bright or fortune dark;
And could give, O wondrous dame,
Loving swain's or maiden's name,
Showing by her mystic art
Whether true or false of heart;
And, by turning cards, could show
Life's whole span, its weal or wo.”

This remarkable woman was born in 1738, of reputable parents, in Marblehead. Her father was a master mariner, and connected with some of the best families in Essex County. And her own reputation seems to have remained unsullied, unless her occult pretensions are to be taken as a stain. Her maiden-name was Mary Diamond, and Mr. Lewis says of her,—

“She was of the medium height and size for a woman, with a good form and agreeable manners. Her head, phrenologically considered, was somewhat capacious, her forehead broad and full, her hair dark brown, her nose inclining to long, and her face pale and thin. There was nothing gross or sensual in her appearance; her countenance was rather intellectual; and she had that contour of face and expression which, without being positively beautiful, is, nevertheless, decidedly interesting; a thoughtful, pensive and sometimes downcast look, almost approaching to melancholy; an eye, when it looked at you, of calm and keen penetration; and an expression of intelligent discernment, half mingled with a glance of shrewdness. She took a poor man for a husband, and then adopted, what she doubtless thought, the harmless employment of fortune-telling, in order to support her children. In this she was probably more successful than she herself had anticipated; and she became celebrated, not only throughout America, but throughout the world, for her skill. There was no port on either continent, where floated the flag of an American ship, that had not heard the fame of Moll Pitcher. . . . Many persons came from places far remote to consult her on affairs of love or loss of property, or to obtain her surmises respecting the vicissitudes of their future fortune. Every youth who was not assured of the reciprocal affection of his fair one, and every maid who was desirous of anticipating the hour of her highest felicity, repaired at evening to her humble dwelling. . . . That she made no pretension to anything supernatural is evident from her own admission, when some one offered her a large sum if she would tell him what ticket in the lottery would draw the highest prize. ‘Do you think,’ said she, ‘if I knew, I would not buy it myself?’ Several of the best authenticated anecdotes which are related of her seem to imply that she possessed, in some degree, the faculty which is now termed clairvoyance. Indeed, there seems to be no other conclusion, unless we suppose that persons of general veracity have told us absolute falsehoods. The possession of this faculty, with her keen perception and shrewd judgment, in connection with the ordinary art which she admitted to have used, to detect the character and business of her visitors, will perhaps account for all that is extraordinary in her intelligence. In so many thousand instances also, of the exercise of her faculty, there is certainly no need of calling in supernatural aid to account for her sometimes judging right; and these favorable instances were certain to be related to her advantage, and insured her abundance of credibility.”

It is stated that the celebrated “Lord Timothy Dexter,” of Newburyport, was accustomed to visit her, and place implicit confidence in her utterances. But whether his strange commercial speculations, which appear to have been uniformly successful, were

attributable to her promptings, cannot be known. She was married on the 2d of October, 1760, to Robert Pitcher, a shoemaker, and became the mother of one son and three daughters. And there, in the lonely home, already described, she died on the 9th of April, 1813, aged seventy-five years. Her remains were interred in the old burying-ground, near the western end of the common. The memory of such a person is not likely to be much honored by those of her own generation, and her resting-place has remained unheeded and almost unknown till the present time (1887)—nearly three-quarters of a century—when two worthy citizens—Isaac O. Guild and John T. Moulton—have erected a neat head-stone to mark the spot, which was some years since pointed out by an aged man who was present at the burial. And to that spot, in future years, many a sentimental maiden and swain will doubtless repair—a class who always had her warmest sympathies.

Mrs. Pitcher was connected with the Silsbee family of Lynn in this way: Lydia, a great-granddaughter of Henry Silsbee, the first of the name in Lynn, in 1735, married Aholiab Diamond, a son of Captain John Diamond, of Marblehead, and had two sons, Samuel and Richard, and one daughter, Mary. This daughter Mary was married, October 2, 1760, to Robert Pitcher, of Lynn, as before stated, thus becoming "Moll Pitcher." Descendants of hers still remain among us. Henry Silsbee, the old settler just named, probably located on Fayette Street not far from the corner of Essex, in which vicinity he owned considerable land. He was designated as a "shoemaker," though probably quite as much of a farmer. The family has always been respectable, but not numerous, and several eminent individuals have appeared in the line, Hon. Nathaniel Silsbee, United States Senator, among them. Silsbee Street perpetuates the name.

GEORGE GRAY.—Near the close of the last century there suddenly appeared in Lynn a man seemingly of an age somewhere between thirty and forty years. He was physically well-conditioned, but in disposition unaccountably reserved. It was soon known that he had come to make this his permanent home, for he made himself possessor of a limited tract of wild land in a lonely and dismal neighborhood, and there erected a rude habitation which, for forty years, continued to be his hermitage, for there he lived "solitary and alone" during that long period.

This man was George Gray, the Lynn hermit. And the hermitage was on Boston Street, nearly opposite the entrance to Pine Grove Cemetery. He was by birth a Scotchman, and died on the 28th of February, 1848, at the age of seventy-eight years. Till population began to increase around him, which it did, much to his annoyance, his home was secluded enough for the most determined misanthrope. A high, woody hill rose in the rear; a tangled swamp on either hand, with a weedy brook winding through; while in front, beyond a little area of brambles and rank vege-

tation, wound the street just named. He persistently, and often with a good deal of asperity, refused to communicate to the many curious inquirers any knowledge of his personal history or the causes which induced the adoption of his comfortless and unnatural mode of life. And that very secrecy gave rise to numberless romantic surmises. Some believed that an unfortunate affair of the heart estranged him from social intercourse; others hinted that some great crime rendered his flight and concealment necessary. But he had the shrewdness to avoid entangling himself by contradicting or admitting the truth of any report.

One of the latest circumstantial surmises related to his connection with the fate of the French Dauphin, Charles Louis, son of Louis XVI. and Marie Antoinette. It gained currency by an article in *Putnam's Magazine*, a monthly periodical of high standing; the theory being that the Dauphin was taken from the custody of Simon, the inhuman ruffian in whose keeping he had been placed, brought to the wilds of America and given in charge of a woman of the St. Regis tribe, who reared him with affection, though never claiming that he was her own child, and probably never dreaming that he was not some poor, friendless waif. It was further suggested that Rev. Eleazer Williams, a missionary of the Episcopal Church, laboring with the St. Regis Indians, was the identical Dauphin. Then gained currency the belief that Mr. Gray was one of those who brought the Dauphin to America, it being declared that he was certainly in France, a red republican, at that period. It is not certain, exactly, what threads were supposed to be found connecting Gray with the transaction, unless it was that Mr. Williams—who no doubt really believed himself to be the Dauphin—came to Lynn, and, finding that Gray was dead, became very anxious to procure a specimen of his hand-writing, for which purpose he called on the writer. But these surmises and rumors need not longer occupy our attention.

At times the hermit was by no means averse to discussing affairs with his neighbors, though very seldom could one receive a welcome to his premises, and never would an invitation to enter his dwelling be extended. His calls were generally made at night. The writer was occasionally favored with one, and usually found him so forgetful of the passing time that it was necessary to remind him of the lateness of the hour by a hint like that of extinguishing the lights, nothing short of some such rudeness being effectual. He was a reflecting man, and of considerable literary and scientific attainment; but the current story of his carrying a Hebrew Bible about in his pocket was, no doubt, a fiction. He took great pleasure in attending lectures, and in studying works on the abstruse sciences. But his fondness for the mechanic arts was, perhaps, his most marked trait; and he became very skillful in some branches connected with machinery.

Strangers would sometimes vex him with untimely visits, and by unpalatable remarks induce sudden exhibitions of temper; but if one assumed to be an adept in any branch of mechanics, he was pretty sure of a courteous hearing. He claimed several useful inventions, and spent considerable money in establishing his claims against those who infringed his patents.

In religion he was probably a materialist most of life. Perhaps a dozen years before his death he remarked that it was "ridiculous for any one to contend that intelligence was not the result of physical organization." But it was understood that he subsequently abandoned his old views, and died in the Calvinistic faith. He was eccentric in his habits, and had little regard for personal appearance, oftentimes—especially during the last few years of his life—appearing in a grim and filthy condition. He was remarkable, even in old age, for power of physical endurance. Many a time has he walked to Boston, on a winter evening, attended a lecture, and walked home after it had closed, making a distance, in all, of full twenty miles, most likely with no thicker covering to his head than a dilapidated straw hat, and upon his feet coarse shoes and no stockings. He suffered much from disease during his last few years. And there, in his forlorn habitation, without the sympathy of friends or the common endearments of home, in solitude and distress, his last days were passed.

Mr. Gray, at the time of his decease, possessed property to the amount of about four thousand dollars. He died intestate, and his debts were not large; a considerable portion, therefore, went into the treasury of the commonwealth. His savings do not appear, however, to have accumulated from a miserly disposition, but rather from habits of industry and a naturally frugal turn, for the administrator remarked that from the appearance of things he could hardly have taken sufficient interest in his pecuniary affairs to have known what he did possess. In some instances the evidences of his money deposits were found thrown among waste paper.

The death of the hermit was noticed in the newspapers throughout the country, and several persons appeared, claiming to be heirs; but they failed to substantiate their claims.

HIRAM MARBLE.—This somewhat singular individual appeared in Lynn in 1852, being then of the age of forty-seven. He brought with him his wife, a son of the age of twenty, and a young daughter. He immediately petitioned the city to sell him the famous Dungeon Rock, a greenstone cliff a mile or two back in the woods, and very difficult of access, on account of steep and tangled ascents, swamps and quagmires. He succeeded in purchasing, at a low price, the rock and about five acres of the surrounding woodland. In that lonely place he erected a rude habitation, and soon set to work building a road down towards the town. This was a severe piece of labor,

for gnarled old trees, huge boulders and ledge-croppings were to be removed. But he persevered heroically till a passable way was obtained. How a man, evidently not very strong or in vigorous health, could undertake such a piece of work was astonishing. But the crowbar, pick and shovel were courageously wielded, and resounding blasts awoke the echoes during the hot days of summer, he feigning to regard it as light labor, saying that he had been seized by a weakening complaint, and found himself unable to pursue the hard work he had commenced on the rock, and so had changed to the light work of road-building.

The hard work commenced on the rock was to excavate, in search of treasure, gold and jewels, imagined to have been deposited somewhere down in its unknown depths. He had come, as he alleged, by spiritual direction, and had full faith in the assurance of the spirits, that they would watch his progress, give directions and lead him to final success. By no means deficient in intelligence, he yet was a credulous enthusiast. In person he was of medium height, had a bright, quick eye, and wore a flowing beard of sandy hue, which did not always bear evidence of having recently had the discipline of a comb. He was communicative, and in his conversation ran a pleasant vein of jocularly; was usually ready to converse on his plans, fears and hopes; and with great good nature, sometimes with an apparently keen relish, alluded to the jeers and taunts of those who were disposed to rank him as a lunatic. The writer had occasional conversations with him, and was sometimes struck by the freedom with which he discussed the pros and cons of spiritualism; nevertheless, his faith and perseverance were refreshing. He asserted that he had been a confirmed infidel, a believer in nothing beyond the visible and temporal, till he received communications that could have come from none but intelligent, invisible beings, unrestrained by any physical obstacle.

For about fifteen years Mr. Marble continued his herculean labors at Dungeon Rock, in bodily weakness much of the time, but buoyed up by the strong hope and, as he believed, supernatural assurance that his labor would not be in vain. But it was in vain, and he died there, worn out and diseased, on the 10th of November, 1868, aged sixty-five years. He remained a spiritualist to the last, and the mediums of the vicinity were invited to be present at the funeral services, which were held at the Rock on the forenoon of Wednesday, November 11th. He was a native of Charlton, in Worcester County, and thither his remains were taken for burial.

Edwin Marble, who at the time of his father's death had attained the age of thirty-six years, and had continued to participate in the arduous toil of excavation, now succeeded to the direction of the work, subject, of course, as he declared, to the engineering of the spirits. His health, however, had

already become undermined, and he was soon obliged to suspend active operations. He died on the 16th of January, 1880, aged forty-eight, and was buried near the foot of the rock, on the southwestern slope, it having been his expressed desire to be interred near the scene of his hopeful, though fruitless, labors. A considerable number of friends, perhaps fifty, most of them of the spiritualistic faith, were present at the burial service, which was simple and affecting; and held there, in the deep forest, amid the winter scenery, was peculiarly touching. The hymn "In the Sweet By and By" was sung at the close. He was a man of good character and good disposition, and a firm believer in spiritual manifestations.

Thus died these two worthy men—father and son—their deaths no doubt hastened, if not occasioned, by their operations in the dark, damp cavern their own hands had formed in the bowels of the mysterious Dungeon Rock, that unwholesome work-place, through the ragged seams of which the water dripped, and where the stifled air reverberated with sounds that might well be taken for supernatural indications. Their labors were in vain. No treasure was reached; but it need not be concluded that they suffered pangs of disappointment, for, cheered on day by day, as they believed, by guiding and unerring spirits, they were hopeful to the last.

After this brief notice of the Messrs. Marble, it would seem almost necessary to add something regarding the supposed deposit of treasure which had induced them, as well as others before them, to waste labor, strength and means at Dungeon Rock. The floating and incoherent traditions on the subject were gathered up by Mr. Lewis and published in the first edition of his history. And, perhaps, it would be most satisfactory to give his account in its original shape:

"This year (1658) there was a great earthquake in New England, connected with which is the following story: Some time previous, on a pleasant evening, a little after sunset, a small vessel was seen to anchor near the mouth of Saugus River. A boat was presently lowered from her side, into which four men descended, and moved up the river a considerable distance, when they landed, and proceeded directly into the woods. They had been noticed by only a few individuals; but in those early times, when the people were surrounded by dangers, and susceptible of alarm, such an incident was well calculated to awaken suspicion, and in the course of the evening the intelligence was conveyed to many houses. In the morning, the people naturally directed their eyes towards the shore, in search of the strange vessel; but she was gone, and no trace could be found either of her or her singular crew. It was afterward ascertained that, on that morning, one of the men at the Iron Works, on going into the foundry, discovered a paper, on which was written, that if a quantity of shackles, handcuffs, hatchets and other articles of

iron manufacture were made and deposited, with secrecy, in a certain place in the woods, which was particularly designated, an amount of silver, to their full value, would be found in their place. The articles were made in a few days, and placed in conformity with the directions. On the next morning they were gone, and the money was found according to the promise; but though a watch had been kept, no vessel was seen. Some months afterwards the four men returned, and selected one of the most secluded and romantic spots in the woods of Saugus for their abode. The place of their retreat was a deep, narrow valley, shut in on two sides by high hills and craggy, precipitous rocks, and shrouded on the others by thick pines, hemlocks and cedars, between which there was only one small spot to which the rays of the sun, at noon, could penetrate. On climbing up the rude and almost perpendicular steps of the rock on the eastern side, the eye could command a full view of the bay on the south, and a prospect of a considerable portion of the surrounding country. The place of their retreat has ever since been called the Pirates' Glen, and they could not have selected a spot on the coast, for many miles, more favorable for the purposes both of concealment and observation. Even at this day, when the neighborhood has become thickly peopled, it is still a lonely and desolate place, and probably not one in a hundred of the inhabitants has ever descended into its silent and gloomy recess. There the pirates built a small hut, made a garden, and dug a well, the appearance of which is still visible. It has been supposed that they buried money; but though people have dug there, and in several other places, none has ever been found. After residing there some time, their retreat became known, and one of the king's cruisers appeared on the coast. They were traced to the glen, and three of them were taken and carried to England, where it is probable they were executed. The other, whose name was Thomas Veal, escaped to a rock in the woods, about two miles to the north, in which was a spacious cavern, where the pirates had previously deposited some of their plunder. There the fugitive fixed his residence, and practiced the trade of a shoemaker, occasionally coming down to the village to obtain articles of sustenance. He continued his residence till the great earthquake this year, when the top of the rock was loosened, and crushed down into the mouth of the cavern, inclosing the unfortunate inmate in its unyielding prison. It has ever since been called the Pirate's Dungeon."

Now, it was this Thomas Veal, who is alleged to have escaped from the Glen and concealed himself in the Dungeon Rock, or Pirate's Dungeon, as Mr. Lewis chooses to call it, who, together with a piratical companion, spiritually appeared to the Marbles, time after time, usually in jolly mood, and assured them of the rich spoils of gold and jewels still in their keeping, and seemed very willing to surrender them

whenever they could be reached by drills and gun-powder. And Veal, moreover, added some touching revelations concerning a Spanish princess and another bright maiden who had been held captive there, and were, with their grim warder, shut in forever by the awful earthquake. Is it, then, to be wondered at that the Marbles, firmly believing all this, and much more, should have pursued their exhausting labors with high hopes? It is not necessary to go into a disquisition as to the authenticity of the traditions here recounted, or an examination of the supposed spiritual revelations. The intelligent reader will perceive the utter absurdity of some and the improbability of others. But yet it can hardly be said that there is no foundation in truth; and none of us would willingly have one of our long-cherished legends entirely fade away.

There is scarcely a place on the whole New England coast that has not traditions about buried treasures of gold and silver, and where unsuccessful attempts have not from time to time been made for their recovery.

It is undoubtedly true that the old buccaneers, who were desperadoes from every nation and kindred, did for years, about the close of the seventeenth century, pursue their nefarious trade of indiscriminate piracy. And, much to their discredit, the colonists were sometimes charged with connivance at the traffic. Those sanguinary sea-rovers were accustomed to rendezvons in the West Indies, and thence fall upon the richly-laden Spanish galleons as they pursued their way homeward with the wealth of the mines of Mexico and Pern. But their depredations were not confined to these; every other craft of value that they met fell a prey, excepting in the few cases of successful resistance. Then there were the noted pirates, Kidd and Bellamy, who were known to be more or less on the coast. And if all the accounts of the treasures they buried are true, they must have secreted enough to load half the British navy.

Whether there was any connection between the earlier sea-robbers and those who made famous the Glen and Pirate's Dungeon at Lynn, may not now be known, but damaging fancies will arise in suspicious minds.

The following lines from a weird old chant, reciting the ceremony at the burial of money by pirates, are very striking:

I saw them bury their golden store at the root of the pirate tree ;
 Bold Blackbeard cried, "Who 'll guard this wealth?" and O, 'twas
 merry to see
 How even the wretch who fears not hell, turns pale at the thought of
 death !
 But one bold knave stood boldly out, and offered himself for scath—
 "I'll watch it," quoth he, "for these forty years I've wandered o'er land
 and sea,
 And I'm tired of doing the devil's work—so bury me under the tree ;
 And better I'll rest as I guard this wealth, than you, in the realms
 below,
 Where the soul cannot burst amid endless groans—where the pirate's
 soul must go,"

So they shot him dead with a charmed ball, and they laid a broad flat
 stone

Deep in the earth above the gold, and they stood the corpse thereon.

Now wo betide the daring fool who seeketh that gold to win.

Let mortals beware of the noble wretch who standeth that grave within.

There is enough of this old piratical literature to form the basis of a countless number of dime novels, and Lynn would naturally be expected to have her share.

LYNN WRITERS.—It was a favorite idea of the author of this sketch to prepare extended notices of different Lynn writers, living and dead, who have from time to time, by their works, contributed to the edification or entertainment of their fellow-mortals, giving specimens of the productions. Among the multitude of writers who have lived and still live here, a score at least are deserving of most honorable mention; some having reveled in the delightful fields of poetry, some in the more sombre walks of history, some in the elevating regions of science and some in the dreamy walks of romance. Such a task would be a delicate one, and in several respects difficult; for, to say nothing of incompetency on the part of the writer, it would be hard to determine what names should be selected from the long catalogue. It might appear invidious to choose only those who were natives; and then, as to those who were not natives, puzzling doubts might arise as to where the line should be drawn. Lynn has been the temporary abiding-place of quite a number of the greater lights of literature and science,—of Longfellow, the poet; of Prescott, the historian; of Agassiz, the scientist, for example. But would it not be rather assuming to claim them as Lynn authors? Their reputation, however, being world-wide, may, perhaps, be said to belong as much to Lynn as any other place. Then there are others who, though natives, turned their backs upon their good mother in early life and afterwards became eminent as writers, but never manifested any love for their deserted parent. Are they deserving of specially honorable mention? Brief notices of a number of our writers, however, are given elsewhere, and need not be repeated here. Poets and philosophers may not be the most useful citizens in the worldling's estimation, but the lights they shed illumine many a dark passage and cheer many a dismal hour in the tramp of life. Our reverence for departed worth, it is hoped, will not be measured by the length of notice; for sometimes the better one is known, the less need there is for extended details. And in no case is it our desire to pose as critic.

WILLIAM WOOD, one of the earliest who settled within our borders, should be first named, for as early as 1634, in his "New England's Prospect," he outlined her physical features and drew terse word-pictures of some of her pleasant and impressive localities. But as he is several times brought into view in other parts of this sketch, nothing further is demanded here.

Most of the old parish ministers, from Rev. Mr. Whiting, who commenced his labors here in 1636, down to Rev. Parsons Cooke, the last, whose ministry here ended by his death, were learned men and skilled in the use of the pen. Their published writings were chiefly on theological topics, and often tinctured by the acrimony of the times. Their discourses on special occasions were sometimes published, and the few copies preserved in the antiquarian collections are even now sought for with avidity, as developing the peculiar religious views and tendencies of the times, as much as for the genius and learning they display. Since Mr. Cooke's day the controversial hatchet has not been fiercely wielded by any of the settled pastors. Indeed, the differing sentiments of most Christian bodies seem to have become more and more assimilated. But it is hoped that the apparent drawing together is to be attributed to the awakening of true Christian love, rather than to indifference as to any religion. But in the company of the clerical worthies we may not long linger. Their fame is not local.

REV. ENOCH MUDGE, 1776-1850.—This good man was a minister of the Methodist connection for a great number of years, having been licensed at the early age of seventeen. His poetical effusions were many, and appeared in various periodical publications. His longest production was "Lynn, a Poem." It was written in 1820, comprised some six hundred and fifty lines and was published in pamphlet form in 1826. In the opening lines the muse takes a view from High Rock, his eye ranging over the wonderful panorama of the sublime and beautiful in nature, occasionally pausing in view of some interesting fabric, and all the way scattering didactic reflections and useful hints. It was about this time that the famous sea serpent was first seen in these waters. And in view of the fact that he has this year, 1887, again made this coast his sporting-place, and seemingly retains his early love for our bay, the following quotation will not be deemed inappropriate:

"Hard by the shore is seen, day after day,
Surprising sight! the Serpens Marinus;
A sight so wondrous strange upon our coasts,
That multitudes collect to feast their eyes;
He with serpentine movements swiftly glides,
Though huge in bulk, and leaves his lengthened wake
Far in the smooth green sea, then darts his head
Aloft in air, and seems with careless ease
To gaze around; anon impetuous starts,
Plunging his head, and ploughs the liquid way;
Sudden he stops and rests when on the waves,
As if to give the observer leave to count
The large protuberances upon his back,
And mark with leisure eye his wondrous frame.
Each eye beholds the varying scene diverse;
Some see, or think they see, the serpent's eyes,
His mane and slender neck, and whiten'd breast;
Some see his back all clad in rusty scales,
His flippers, or his smooth and velvet skin;
His girth and length as various they describe,
From fifty to thrice fifty feet in length,
From fifteen inches through to triple that.
He is a monstrous something, all agree,
But know not what—Sea-Serpent is the name

By which this nondescript is known by us.
The literati term him Halsydous,
By Ramus and Pontoppidam described,
And seen by many in the Greenland seas."

These lines are not given for the brilliancy of their poetic conception or felicity of expression, but they are fairly descriptive. Some of his shorter poems, however, were pronounced by intelligent critics worthy of a place among the selected specimens of our acknowledged poets.

Mr. Mudge was father of Hon. Enoch Redington Mudge, the generous donor of the beautiful St. Stephen's Memorial Church, erected in Lynn in 1881.

ISAAC NEWHALL, 1782-1858.—Mr. Newhall was known in the literary world only by his letters on Junius, a series addressed to Hon. John Pickering, in which he endeavored to show that Earl Temple was the author of those celebrated papers. The letters were published in a duodecimo volume in 1831, and showed the author to be well versed in British politics, with good knowledge of her history and literature. The chief business of his life was that of a retail trader, at one time in Macon, Ga., and afterwards in Salem, Mass. But he spent the evening of his days in quiet and comfort at the old homestead on the eastern side of Mall Street, Lynn—the same house in which he was born on the 24th of August, 1782, and in which he died on the 6th of July, 1858.

ENOCH CURTIN, 1794-1842.—Mr. Curtin, for some years, was a poetic and prose writer of much local repute and of real ability. But his education was limited, and his ambition to shine as a literary light so small that his name has never become known to the extent it deserved to be, and might have been. His poetic efforts were chiefly confined to the production of odes and verses for special occasions, public celebrations and so forth. And his prose articles were largely on local and every-day topics—political, sanitary, gossiping. No collection of his writings ever appeared in book-form. His residence was in the easterly part of the town—Woodend, so called.

ALONZO LEWIS, 1794-1861.—It must be conceded that Mr. Lewis stands at the head of the writers Lynn has thus far produced. He published volumes of poetry and local history, besides contributing, during many years, articles on almost every current topic, for the newspapers and other periodicals. A more extended notice of him appears elsewhere in these pages.

MARIA AUGUSTA FULLER, 1806-31.—Miss Fuller was chiefly known by her poems, though her prose writings were by no means without merit. No collection of her effusions were ever presented to the public in book-form, or, we feel quite sure, her fame would have become far from local. Her father, Joseph Fuller, was the first president of the first bank in Lynn, and was our first State Senator. The house in

which he resided is still standing, at the junction of Union and Broad Streets. Miss Fuller died at the early age of twenty-four years.

SOLOMON MOULTON, 1808-27. — Of this young man—for he died at the early age of nineteen years—a word should be said, for while we realize the utter futility of any attempt to rear upon the uncertain foundation of what “might have been” any ideal fame, it is yet natural to augur whither steps already taken may fairly lead. Young Moulton certainly made some poetic contributions to the newspapers that gave great promise for the future, besides containing in themselves passages of striking thought, touching pathos and felicitous expression. It will be remembered that it was from the columns of newspapers that our cherished poets—as Bryant, Willis, Longfellow and Whittier—first beamed. Mr. Lewis knew Moulton well, and often spoke highly of his poetic ability. He was born in the house on Boston Street, southeast corner of Moulton, but was adopted by an uncle and lived most of his days in Market Street. No collection of his writings was ever published; indeed, he never wrote enough to make a book of much size.

The writers of whom we have thus far spoken—Wood, Mudge, Newhall, Curtin, Lewis, Fuller, Moulton—have long since departed; yet, though their tongues are mute and their pens have dropped, with them we may still commune through their works.

“They are silent; silent forever! Cold, cold are their breasts of clay! Oh! from the rock on the hill, from the top of the windy steep, speak, ye ghosts of the dead!”

Among her living writers Lynn can boast of several who are worthy of far more extended notice than can be allowed in this connection. Brief recognition, however, is better than entire silence. Fugitive pieces without number have appeared in the publications of the day, many of them worthy of being preserved in durable form. And it is hoped that at some future time a discriminating gatherer may arise to rescue them from oblivion. He may not receive the deserved pecuniary reward, but his labor of love would be highly appreciated. In the present enumeration it seems highly proper that mention be first made of such as have, in one way and another, contributed to the elucidation of our history. Of these should be named:

RICHARD I. ATTWILL, who has contributed for the newspapers transcripts of interesting documents which he has here and there discovered, accompanied by apt explanations and annotations from his own pen.

GEORGE E. EMERY has furnished articles which, by his well-trained descriptive powers and lively sense of fitness, have done their share to quicken the taste for historic reading.

CLARENCE W. HOBBS, by his “Lynn and Surroundings,” published at the close of 1886, has added a work of much interest. Its mechanical execution is attractive, and the matter worthy of its neat in-

vestment. It is well illustrated, and the name indicates its general character.

DAVID N. JOHNSON has done work worthy of praise in his “Sketches of Lynn, or the Changes of Fifty Years,” published in 1880. He has also written articles for the publications of the day, and hymns and odes for special occasions.

JOHN T. MOULTON has done a great deal of pen work, for which he will receive the thanks of future generations. Among other things, he has had all the inscriptions in the old burying-ground copied and printed in durable form, with an introduction. He is one of the most intelligent and accurate genealogists among us. The Moulton family has not been destitute of poetic representatives; and he, true to the family tendency, has produced some metrical pieces of animating sentiment and easy flow.

HOWARD MUDGE NEWHALL is yet a young man, but has already written numerous articles of real value on the business of Lynn, its history and present condition. His illustrated article in *Harper's Magazine*, January, 1885, entitled “A Pair of Shoes,” attracted marked attention. He has an eminently practical turn of mind, skill in the arrangement of topics, and clearness of expression.

It may not be overstepping the bounds of modesty for the writer of the sketch now in hand to mention that he has prepared for publication many pages pertaining to the history of Lynn, its sombre and authentic side, as well as its romantic and legendary.

EDWIN THOMPSON has, from time to time, contributed to the newspapers articles on local historical matters that have always been received with favor.

CYRUS M. TRACY has for many years been an acceptable writer as a journalist, essayist and historiographer. Nor has he neglected science and the muse. His historical sketches of several places in Essex County were published in the ponderous volume of C. F. Jewett & Co., in 1878. His “Studies of the Essex Flora” were published in 1858, in pamphlet form. He delivered the poem at the dedication of the City Hall, November 30, 1867, and the oration at the celebration of the two hundred and fiftieth anniversary of the settlement of the town.

GARDINER TUFTS, in 1883, contributed a series of articles to the *Lynn Transcript* entitled “The Old Choirs of Lynn,” which, in fact, embodied the musical history of the place for a long and interesting period. They were worthy of the high commendation they received. In the course of the series appeared biographical notices, anecdotes and terse descriptive passages.

For a long series of years, too, our tuneful fellow-citizens, J. WARREN NEWHALL and JOSEPH W. NYE, have, as occasion prompted, celebrated in verse marked passages in our history, past and present. It is hard to say what Lynn, for almost a generation, would have done without their felicitous contributions for celebrations, dedications and similar occasions.

As we proceed, still other names press upon the recollection. And some of those who do not come within the categories named certainly deserve honorable mention; among them JAMES BERRY BENSEL, who very recently forever laid aside his pen. He was regarded by competent critics as a poetical writer of more than ordinary promise. And there seems reason to believe that had he lived he would have taken high rank as a poet.

EDWARD P. USHER has acquired note as a legal writer, and as a versifier his skill has long been recognized. He delivered the poem at the dedication of the Soldiers' Monument September 17, 1873.

FRANK R. WHITEN, who is still a young man, has shown marked ability in the line of literary criticism, as well as in other departments. Favorable mention, too, should be made of EUGENE BARRY, JOSIAH F. KIMBALL and THOMAS F. PORTER.

There are likewise other worthy pen-charmers, whose names would be introduced here were they not presented in other connections in these pages; and some, too, there undoubtedly are whose names have eluded busy memory's pursuit.

It must be admitted that few places can boast of a larger relative number of writers than good old Lynn. And it seems as if, among us all, something considerable might be accomplished. The old pen-wielders are passing off, but much is reasonably to be expected from some of those now taking their places. The writer, indeed, dares predict that certain of our younger brethren and sisters of the pen will yet attain most enviable renown. But he does not dare record the names of those on whom the prediction rests, as his opinion may not be verified; and were it or were it not verified, his temerity would probably be met by the retributive scorn of those not named as within the horoscopic view.

Macpherson, in his preface to the poems of Ossian, says: "The making of poetry, like any other handicraft, may be learned by industry." But the writer can hardly subscribe, unconditionally, to that, having in view quite a number who have striven for many a day, with unflinching industry, to gain a seat on Parnassus, and have never been able to reach that alluring height—at least in the opinion of their envious critics. However, they undoubtedly received pleasure in picnicking by the way, and were constantly stimulated by hope and expectation. The pleasures of literature, derived from its own dear self, one would think might be sufficient for all the care bestowed on its cultivation. Says Voltaire, "Literature nourishes the soul, rectifies it, consoles it." Such, indeed, is its legitimate effect; but in stalk the hankerings after fame and the jealousies which writers, the more eminent as well as the more conceited, too often allow to diffuse their subtle poison. Dean Swift, in his pungent way, puts it thus:

"What poet would not grieve to see
His brother write as well as he?"

But, rather than they should excel,
Would wish his rivals all in —?"

It cannot be denied that much of the versification of the present day, notwithstanding its "mellifluous flow," falls far below the standard of the French writer just quoted, who, in his axiomatic way, remarks: "Verses that do not teach men new and affecting truths little deserve to be read." One may easily perceive that in much of the poetry of our days many hollow and many turbid places are bridged over and concealed by mellifluous versification. But, in the authoritative words of Percival:

"'Tis not the chime and flow of words that move
In measured file and metrical array;
'Tis not the union of returning sounds,
Nor all the pleasing artifice of rhyme,
And quantity, and accent that can give
This all pervading spirit to the ear,
Or blend it with the movings of the soul.
'Tis not the noisy babbler who displays,
In studied phrase and ornate epithet
And rounded period, poor and vapid thoughts,
Which peep from out the cumbrous ornaments
That overload their littleness."

An attempt to play the critic is very far from the design of the writer, as, of course, a critic should always be better informed than he on whom he sheds his perfume. Is there any limit short of the extent of the human mind, to the knowledge and ability of even the magazine or newspaper reviewer of this enlightened day? Where, then, is the poor writer in one special department? There is an anecdote told of Rev. Mr. Parker, the first minister of Newbury, to this effect: President Chauncey and some scholastic brethren undertook to deal with him for something he had written, which they considered too liberal toward the Episcopacy. They addressed him in English, and he replied in Latin; into that language they followed him; he then charged in Greek and in Greek they rejoined; to Hebrew he then resorted, and there again they met him. Finally, he made a stand in Arabic, when, not being able to follow him, they gave up the contest. He then intimated that, as they were not his peers in knowledge, it was presumption in them to undertake to criticise him. This was an old-fashioned contest. But your modern critic, being at the head of the class in all human knowledge, heeds no obstacle. And the reflex brilliancy of the friendly commentator often has, as we all know, something to do with shaping his periods. Indeed, he sometimes sees

"In Homer more than Homer knew."

But, unhappily for the yet unrecognized aspirant, little of the reflected light shines on him.

Our busy community has no catalogue of exclusively literary persons to exhibit. Her writers have been those who exercised the pen at intervals unoccupied by the daily round in some vocation more sure of securing a livelihood. As a general thing, the physically infirm are more inclined to intellec-

tual pursuits than the strong and healthy, for the invalid is at a disadvantage where strength of arm and bodily endurance are required; and hence it is that some of our best writings come from the retired room of the invalid. Bodily infirmity has often done much in making the scholar, by disabling from physical activity. But the bodily health of the good people of Lynn is not intended to be urged as a reason for any deficiency in mental attainment. Sick or well, let us remember that though finely-turned periods always possess a certain charm, they are of little worth to the thoughtful if deficient in backing.

As has been seen, there is hardly a period in Lynn's history when she has not had a bright company of sons and daughters curvetting, pen in hand, over the fields of poetry, sentiment and philosophy, and gathering in a goodly store for the relief of the jaded minds of those fellow-mortals destined to the more ignoble pursuits of life. By their refreshing and stimulating contributions, they have performed a good part in keeping alive the vivacious tone that has always characterized our industrious home. And may the prospects of a now promising future never be darkened!

CHAPTER XX.

LYNN—(Continued).

TAVERNS—MODES OF TRAVEL.

Character of the Old Houses of Entertainment, and Scenes Enacted in Them—Biographical Sketches of some Famous Landlords—Incidents of Travel—Salem and Boston Turnpike—The Old Stage Lines—Opening of the Eastern Railroad—Hotels of Later Times.

"Around the glowing evening fire,
The farmer, woodsman, village squire,
With pointed finger, loosened tongue,
Shows right for every human wrong.
In kindling mood they sit and sip
The nectar called New England flip,
That late invented beverage,
Rare product of a guzzling age,
America's first evil gift
To help the world in topping thrift,
More rapid than old England's beer,
More potent in its vulgar cheer."

—NORTON.

NEXT to the church and the school, the attention of our fathers was directed to the establishment and regulation of the ordinary, the inn, the tavern, or the house of entertainment, as such places seem to have been indiscriminately called. The accommodation of travelers was, of course, the ostensible purpose; but other considerations had weight. In the old country the settlers had been accustomed to visit such resorts,

" . . . where nut-brown draughts inspired,
Where gray-beard mirth and smiling toil retired;
Where village statesmen talked with looks profound,"

and where neighborhood scandal and tainted gossip no doubt went round. What wonder, then, that the settlers here, the socially high and low, the good and bad, should, in the absence of other convenient meeting-places, have felt the need of something of the kind. There were no newspapers to float off from the press on the morning and evening wind, no news-rooms, no mail, no telegraphs, no telephones. Hither, then, all classes naturally resorted

"To take a smack of politics and ale."

There was, in the more legitimate way, to wit, the accommodation of travelers, a real necessity for houses of entertainment. But it was soon perceptible that such establishments required careful watching, lest their charges should become oppressive and their influence deleterious in a moral way. The General Court, therefore, found it necessary frequently to interpose for their management.

It is true, however, that before population had so far increased as to warrant the establishment of separate ordinaries, every house was, to some extent, a house of entertainment, and every householder a host. This was the natural prompting of the hospitable settler.

At first, ordinaries were established without license; but the court soon took them in hand and regulated their management. As early as 1634 it was "ordered that noe person that keeps an ordinary shall take above six pence a meale for a person and not above one penny for an ale quarte of beare, out of meale tyme, under the penalty of ten shillings for every offence, either of dyot or beare." It was likewise ordered that "victualers or keepers of an ordinary, shall not sniffer any tobacco to be taken in their howses, under the penalty of v shillings for every offence, to be paid by the vituler, and xii pence by the party who takes it." And the court, in their horror of tobacco, went much further, forbidding its use anywhere in public, and even invaded the domestic sanctuary, ordering that "noe person shall take tobacco publicly, under the penalty of 2s. and 6d.; nor privately, in his owne howse, or in the howse of another, before strangers, and that two or more shall not take it together anywhere, vnder the aforesaid penalty for every offence." What would those worthy old legislators think could they enter one of our offensive modern railroad attachments, the smoking-car? As late as 1639 it was lawful for any person to entertain strangers with "lodging and dyot, at reasonable rates," on special occasions, such as an inflow of strangers.

And at the same court it was enacted that "every towne shall have liberty, from time to time, to choose a fitt man to sell wine, the same to bee allowed by license . . . and that it shalbee lawfull for such persons allowed to retaile wine, to let wine bee drunke in his house; provided, that if any person shalbee made drunke in any such house, or any imoderate

drinking suffered there, the master of the family shall pay for every such offence five pounds." At the same time it was "further declared and ordered, that such as are allowed to keepe comon ordinaries and inns shall provide stables and hay for horses, and inclosures for pasturing, where neede is; and it is further declared, that if any shall take excessive prices for their wines or dyeting, they shalbee deeply fined for the same." So began the licensing system and the temperance legislation of Massachusetts; and how do we stand, after the lapse of two hundred and fifty years?

The first tavern in Lynn was opened by JOSEPH ARMITAGE, though at what precise date does not satisfactorily appear. But in 1643 he seems to have been in the business long enough to run himself ashore; for in that year his wife, Jane, presented a dolorous petition, reciting that her husband's labors and endeavors had "beene blasted and his ames and ends frustrated," that they were poor and had a family to maintain; that some of his creditors had, of their "clemencie and gentle goodness," lent a helping hand, with more of such pathetic pleading, and praying that she might be allowed to "continue in the custodie of the said ordinary." The petition was signed by about all of the best and most prominent men of the town, among them the two ministers, Samuel Whiting and Thomas Cobbet, and Robert Bridges, the acting magistrate. It was successful, the concise entry on the court records being "Goody Armitage is allowed to keepe the ordinary, but not to draw wine."

There is ground for suspicion that some of the causes of Mr. Armitage's misfortunes lay in the disregard of his license obligations; for, in addition to the refusal of the court to allow his wife to sell spirits, it is found that he was once fined for not informing the constable of a person being found drunk in his company. He petitioned to have the fine remitted, but the court replied that they saw "no cawse to abate the petitioner any part of that fine."

Mr. Armitage, however, seems to have partially, at least, recovered from his depressed condition, for in 1646 the court say: "In answer to y^e petition of Joseph Armitage, it is ordred, that whoever y^e towne of Linn shall choose at a legall towne meeting to draw wine, he shall have liberty to draw wine there till y^e next siting of this Cort, and y^e same to be presented hereunto." And subsequently comes this entry: "Joseph Armitage is agreed with for this yeare for liberty to sell wine for twenty nobles." The price of his license, then, was about \$32.20 of our present money.

The ordinary of Mr. Armitage soon became known as the Anchor Tavern, and under that name commenced a famous career. It was picturesquely situated on a slight elevation west of Saugus River, almost within a stone's throw of that eccentrically winding stream, and commanded a romantic view of forest and

marsh land, with the ocean upon the south. It was on the road leading from Sa'lem to Boston and about midway between those settlements. For more than a century and a half it enjoyed a reputation attained by few establishments of the kind in the colony. Its name, however, was changed from time to time, as political revolution or caprice of landlord suggested.

Being on one of the chief highways, it was of course a stopping-place for the refreshment of travelers of high and low degree, of official dignitaries and rustic tramps, and one can readily conceive that strangely-assorted groups must have sometimes assembled there.

Mr. Armitage was among the very early settlers of Lynn, having appeared here in 1630, and been admitted as a freeman in 1637. He was a tailor by trade, but in those primitive times it was necessary for most men to turn their attention to different pursuits as the seasons varied. He was undoubtedly energetic and industrious, but those good traits do not appear to have saved him from disasters attributable to other traits less valuable, for it is evident that he was of a speculative turn, and unduly credulous when promising schemes were presented. And then, again, he appears to have been fond of lawsuits. Now these two pernicious characteristics—fondness for speculation and fondness for law-suits—are enough to ruin any man, and in all but a few exceptional cases they do. It may also be fairly assumed that he had sufficient of a retaliatory spirit to defiantly meet the aggressive approaches of his neighbors. At one time he procured a warrant against a number of persons, to whose interference he probably attributed difficulties regarding his license; but they, in returning the compliment, had him presented "for procuring a warrant for seaventy persons to appear forthwith before the Governor," a proceeding which, the court say, "we conceive to be of dangerous consequence." Notwithstanding these propensities, however, it may be said that he was, on the whole, a useful as well as enterprising settler.

Mr. Armitage ceased to be landlord of the Anchor in or about 1652. And his harassed and laborious life was ended in reduced circumstances, though perhaps not in absolute penury. In 1669 he petitioned for the payment of some small scores that Governors Endicott and Bradstreet and other officials had run up at his tavern during their journeyings. His petition was presented to the court at Salem, the charges having stood some twenty years, and reads as follows:

"To the Honored Court now sitting at Sa'lem. The humble petition of Joseph Armitage Humbly sheweth that in the time that I kept Ordinary ther was sum expences at my Hows by some of the Honored magistrates & Depetys of this County as appears by ther bills charged oupon Auditor Generall, which I never Received. Therfor your Humbell petitioner doth Humbly request this Court that they would give me an Order to the County Treasurer for my pay & so your poor petitioner shall ever pray for your prosperity.

"JOSEPH ARMITAGE."

One or two of the charges, with the vouchers, may be given as samples:

"the gouerners Expences from the Court of election, 1651, till the end of October, 1651; to beare & cacks [beer and cakes] 6d.; beare and cacks to himself and som other gentlemen, 1s. 2d.; beare and cacks with Mr. Downing, 1s. 6d.; beare & a cack, 6d.—3s. 8d.

"to the Sargents from the end of the Court of election, 1651, till the end of October, 1651, beare & cacks, 1s. 2d.; for vitalls, beare & logen, 5s.; to Benjamin Scarlet, the gouerners man, 8d.; beare & vitells, 2s.; to the Sargents, 1s. 9d.; beare and cacks, 1s.; to a man that Caried a letter to warne a Court about the duchman, 1s. 6d.; to the Sargents, 1s. 2d.—14s. 3d.

"Mr. Auditor, I pray you give a note to Mr. Treasurer, for payment of 17s. 11d. according to these two bills of Joseph Armitage.

"Dated the 7th of the 11th mo. 1651. JO. ENDECOTT."

"due to Goodman Armitage, for beare & wyne att severall times as I came by in the space of about 3 yeares, 4s. 3d. May 15th, '49. More for my man & horse, as hee returned home the last yeare when I was a Commissioner, hee being deteyned a sabboath day, 6s. 8d.

"SIMON BRADSTREETE."

What does our present good Secretary of War think of the expenses and fare of his worthy ancestor as he took his official journeys? Even President Cleveland, with all his democratic proclivities, would hardly hold to such economy.

After leaving the Anchor, Mr. Armitage lived in comparative retirement till his death, in 1680, at the age of eighty years. In the administration account filed in July, occur these items: "For coffin, vaile and digging the grave, 14s. In wine and sider, for his buriall, £2."

The immediate successor of Mr. Armitage as landlord of the Anchor Tavern was JOHN HATHORNE, who certainly does not appear to have been a very meritorious character. At all events he became involved in one or two questionable transactions. It must have been about the time that he took the tavern that he was proceeded against on a charge of slander, forgery and perjury, and was convicted. He became somewhat humbled by his sentence, and petitioned for the remission or mitigation of the penalty, and the court in its clemency ordered that in lieu of the prescribed punishment he should "pay double damages, which is twenty pounds, to the party wronged and ten pounds to the commonwealth, to be forthwith levied; and to be disfranchised. If he doth not submit to the sentence, then the law that provides against florgery is to take place in every particular."

Mr. Hathorne kept the Anchor but a short time, and nothing appears to indicate that the house did not continue as prosperous as in the days of his predecessor. But little concerning him appears on the records, though the matters alluded to gave rise to grave questions of jurisdiction between the civil and ecclesiastical authorities,—questions that agitated the community for a long time, occasioning some rasping passages between church and state dignitaries.

This brings us to one of the most remarkable periods in the history of the famous Anchor: to wit., the period during which the renowned Captain Thomas Marshall managed its affairs. He was one of the most jolly and hospitable of landlords, and during his administration no wayside inn throughout the colonies enjoyed a more enviable reputation.

Captain Marshall first appeared in Lynn in 1635, and was soon after admitted a freeman. But when the great political agitations that led to the termination of the reign and the life of Charles the First had reached the culminating point, his spirit was aroused and he returned to England, where he joined the Parliamentary forces, and from Cromwell received a captain's commission. He served faithfully and was honorably discharged, and returned hither full of martial lustre and full of pride in the feats he had accomplished, some of which his envious neighbors affected to believe were achievements of the imagination alone. Nevertheless, it is apparent that he had a very good knowledge of military tactics and skill in the disposition of affairs of the field. The simple fact of his having continued to serve as a captain under the great Parliamentary Leader so long and so satisfactorily is sufficient evidence of his skill, fidelity and efficiency. He indeed seems to have had an early inclination for the military profession, and was elected a member of the Ancient and Honorable Artillery Company—or, as it was then called, the "Military Company of the Massachusetts"—in 1640, two years after the formation of that august organization, being then about twenty-four years of age.

After Captain Marshall's return from the war, his fellow-townsmen six times elected him as their representative in the General Court, first in 1659 and last in 1668, and likewise called him to various posts of municipal honor and responsibility.

On the 18th of October, 1659, Captain Marshall was empowered by the General Court to join in marriage such persons in Lynn as had complied with the preliminary legal requirements. In 1670, however, he was discharged from "officyating in that employment," probably much to his chagrin. The cause of the revocation of his authority seems to have been that, through his "overmuch credulity," parties had imposed upon him and induced him to marry them when their intention had not been properly published or other legal requirements complied with. One or two cases were presented against him, that of Allin and Deacon being perhaps the most conspicuous. It occurred in May, 1670. Says the record: "Hope Allin (father of the bride) and John Pease (a witness) appeared in Court, and y^e said John Pease acknowledged that notwithstanding the counsell of the major general (an acting magistrate of another jurisdiction), who had declined y^e marrying of M^r. Deacon (the bridegroom) to Hope Allin's daughter, he did accompany them to Lynn to Capt. Marshall, and Hope Allin declared he did give his consent that the said M^r. Deacon should have his daughter, and told Capt. Marshall that he hoped they might be legally published before that time. The Court judged it meet to censure the said Hope Allin to pay ten pounds as a fine to the country for his irregular procedure, and John Pease forty shillings." Perhaps Mr. Allin was justly punished for his over-anxiety to get his daugh-

ter off his hands, and Mr. Pease for standing by and not disclosing the fact that another magistrate had refused to tie the knot illegally. And as to Captain Marshall, it was probably this case that induced the court to promptly annul his commission, for that appears to have been done almost immediately after the irregular transaction. At this time ministers were not authorized to perform the marriage ceremony, yet the conjugal relation was not regarded on the one hand as a mere civil contract, nor on the other, in the high-church sense, a sacrament. The idea seemed to be that it should occupy a sort of middle ground. The captain, however, did not probably pause to consider as to the right or wrong of the cases that came before him, or to theorize in any way, so long as it was in his power to consummate the happiness of loving hearts.

Captain Marshall commanded the military company of Lynn at the time the great King Philip War commenced, 1675. There was no period in our whole history when there seemed so much cause for alarm within our own precincts, which had always been singularly free from savage aggression, as now, and the bravest and most experienced of the soldiery were anxiously looked to for protection. The court received a letter from the major-general dated Lynn, and in their answer say: "Sr: Wee received your letter dated at Lynn 23th instant, and have perused the particulars inclosed, which still present us with sad tidings (the Lord have mercy on us) touching the performance of yo^r promise to Major Pike in your designe to raise what force you can to resist the enemy's headquarters at Ausebee. Wee approve of it, only wee presume your intelligence that the enemy is there is upon good grounds. Wee cannot give yow particular orders, but leave the management of this affayre to yo^r prudenc and assistance of Almighty God, not doubting yo^r care in leaving sufficient strength to secure the frontier townes of Norfolk and Essex, least the enemy should visit them when the floores are aboard. Without doubt, if their squawes and papposes, &c., be at Assabee, and God be pleased to deliver them into our hands, it would be much for our interest. As for your personall marching, it will be acceptable, if God inable to prosecute it." The action recommended in regard to the squaws and papposes does not sound very pleasantly in the ears of the sympathetic people of this day, but the peculiar dangers and threatenings of those dark times should be taken into account in estimating the character of the recommendation. Captain Marshall was at this time about sixty years of age, but it cannot be doubted that his martial spirit was at once aglow, and that he became active in the military council, if not in the field. A most creditable number of soldiers were immediately on the march from Lynn.

A sad event occurred near the tavern on a dreary night in February, 1681. Samuel Worcester, a representative to the General Court from Bradford, had walked from that town to attend an adjourned ses-

sion. When he reached Captain Marshall's ever hospitable door he was chilled and extremely weary, and sought shelter and entertainment. But from some cause he could not be accommodated. Thinking that he might find lodging with a friend farther on, he departed. In the morning he was found in a kneeling posture, in the middle of the road, dead. He was a son of Rev. William Worcester, and distinguished for his public spirit and his piety. No doubt the event caused the Captain hours of keen regret.

The worthy Captain dispensed the hospitalities of the famous Anchor for forty years. He was a model landlord, attentive to guests, well versed in the political and religious movements of the time, both here and in old England, and able to intelligently discuss all the stirring questions that then agitated the assembly in the village tap-room as well as that in the hall of legislation. And he seems to have had a good share of that sort of suave underflow, so agreeable to the temporary sojourner at the wayside inn. That he had foibles is likewise apparent; but they appear to have been rather attractive than displeasing. John Dunton, the London bookseller, who passed through Lynn in 1686, and who was an uncle to the celebrated John Wesley, thus remarks in his journal: "About two of the clock I reached Capt. Marshall's house, which is half way between Boston and Salem; here I staid to refresh nature with a pint of sack and a good fowl. Capt. Marshall is a hearty old gentleman, formerly one of Oliver's soldiers, upon which he very much values himself. He had all the history of the civil wars at his fingers' ends, and if we may believe him, Oliver did hardly anything that was considerable without his assistance; and if I'd have staid as long as he'd have talked, he'd have spoiled my ramble to Salem." This genial old landlord died on the 23d of December, 1689, at the age of seventy-three years.

It is not difficult to picture in the mind scenes such as must have again and again taken place in and about the Anchor during the administration of the worthy captain. Being deeply interested in military affairs he could highly enjoy the parades of the colonial soldiery; and when he was himself in command, it cannot be doubted that, on many occasions, the troops were summoned to perform their evolutions upon the green that sloped from his house down towards the river bank. We can almost see him there, with drawn sword and commanding voice, ordering movements such as enabled him, with Oliver's assistance, to win such victories in the civil wars. And there we see him stationing here and there behind some rock or in a forest confine mock Indian squads, to show the modes of savage warfare and teach his troops to meet the dusky warrior's strategy.

Again, on occasions when the Colonial Governor undertook his eastern tour, as was customary once a year, important was the day of his arrival at the

Anchor. Early in the morning His Excellency would appear, on horseback, with gilded trappings glistening in the sun, accompanied by his secretary—one who in this day might be called a reporter—and perhaps two or three other dignitaries, the procession flanked by half a score of halberdiers, preceded by a mounted trumpeter, and perhaps followed by a throng of amazed red men.

Arrived at the Anchor, after partaking of refreshments, always the best that the cellar or the larder afforded, the Governor, seated in the most capacious chair, announced his readiness to receive all such townsmen as desired to meet him for a free interchange of views on the condition of public affairs, especially as bearing on their own local well-being. These discussions were dignified, and, no doubt, resulted in much good to individual communities, and possibly matters of private interest were sometimes cunningly interwoven to personal advantage.

Another picture might discover an excited assembly at the Anchor, perhaps in the stirring time of the Andros administration, the discordant voices of the blustering group in the common room rising above the surly creaking of the signboard that sways in the blast without. Some are urging to immediate and determined acts of violence, clamorously declaring their readiness to join in any uprising that shall hurl every would-be oppressor from power, while the more peacefully inclined and the village sages counsel patience and moderation.

The scene may shift to a winter night, dreary without but cheerful within. Before the blazing oaken logs and upon the rude benches that line the wall are seated the worn farmer, the fisherman, the woodsman and the laborer of every degree. Unambitious and void of care, they sit drowsily gossiping, and occasionally drawing forth from its concealment the corn-cob pipe for a languid whiff, till the fire burns low and the parting mug goes round.

But a prettier picture is that presented when the bright moonbeams glisten on the crusted snow, and the capacious ox-sled, with its boxed-in freight of happy youth, drives up. Its approach had been heralded by the wave of maiden laughter that rippled over the white fields, and the captain has donned his best doublet and prepared his best cheer. The sanded parlor is radiant with tallow dips, and savory fumes float from the culinary precinct. It is a time of rare enjoyment with the gallant captain. He is young again, and cannot avoid frequently joining in the merry sports. And then, as he retires to the duties of the snug little banquet-room, behold him beckon a young man aside and slyly and half by signs intimate that up over those winding back-stairs, in the attic hall, there is a bright fire and clean floor, where a little private dance may be enjoyed.

It does not appear certain who the immediate successor of Captain Marshall, as landlord of the Anchor, was.

ZACHEUS NORWOOD, who died February 8, 1756,—if the stone in the old burying-ground bearing the name is erected to his memory,—kept it for many years, and it ceased to be called the Anchor. His wife, Susanna, died January 2, 1747, but he married again, and his widow succeeded him in the management and afterwards became the wife of Josiah Martin. The house was long famous as "Norwood's Tavern."

The matrimonial adventures of Mr. Norwood seem to have been of a varied character. In the record of intentions of marriage, as copied by Mr. John T. Moulton, is to be found these entries, Mr. Moulton remarking that a pen has been drawn across them: "June 2, 1734. This may certify that whereas the intention of marriage betwixt Zacheus Norwood and Mary Richards, both of Lynn, was posted by me the above day; that on the 3d day of June, 1734, the above said Mary Richards forbid the banns." . . . "December 3, 1734. The above-named Mary Richards came to me and told me she had re-considered her forbidding the banns of matrimony betwixt Zacheus Norwood and herself, and desired me to give him a certificate." Whatever the difficulty was, it appears to have been amicably settled, for on the 13th of the next February they were married. She died on the 6th of April, 1736. On the 27th of October, 1745, was published his intention of marriage with Susannah Dunnell, of Topsfield. They were soon after married, and she died January 2, 1747. His third wife was Lydia Burrage, whom he married April 19, 1750. It was she who survived him, kept the tavern herself for some time, and then married the wayward Josiah Martin.

In 1759 that laborious, worthy and much-suffering frontier Church of England missionary, Rev. Jacob Bailey, on the 13th of December, reached here on his way to Boston, having walked all the way from Gloucester. He found a rough company, who much disturbed his needed rest. "We had among us," he said, "a soldier belonging to Captain Hazen's company of rangers, who declared that several Frenchmen were barbarously murdered by them, after quarters were given; and the villain added, I suppose to show his importance, that he split the head of one asunder, after he had fell on his knees to implore mercy." Captain Hazen never taught his men any such savage ways, for he was one of the most humane as well as brave commanders. He was a native of Haverhill, and had a command in the Crown Point and Louisburg expeditions in 1758 and '59. It was in one of these, no doubt, that the villainous act of the boastful soldier occurred. Captain Hazen also distinguished himself under Wolfe, at Quebec, and as a commander in the Revolution. He was finally commissioned as a brigadier-general in the Continental forces. Dr. Jonathan Norwood, a graduate of Harvard, was a son of Zacheus, the keeper of the tavern.

It was somewhere about the year 1760 that there

drifted into Lynn a soldier of fortune by the name of JOSIAH MARTIN. He was supposed to be an Englishman, but little, if anything, was known of his previous life. He, however, found favor in the eyes of Widow Norwood, and she married him. He was very eccentric, and by his waywardness of temper and instability of character is believed to have led her a very uncomfortable life. He evidently knew how to behave much better than he did, for at times he would act well the rôle of a polished gentleman. At other times he would pretend to be a most humble and devout Christian. Mrs. Martin seems to have continued in the chief management of the tavern, though he was ostensibly the keeper. Many anecdotes are told of his witty sallies, and he was by no means destitute of humor. He was much given to practical jokes, as well as witticisms. Rev. Mr. Treadwell was minister of the old church at that time, and himself fond of indulging in witty sallies. Mr. Lewis says that on a certain Sunday, observing that many of his audience had their heads in a reclining posture, he paused in his sermon and exclaimed, "I should guess that as many as two-thirds of you are asleep!" Mr. Martin, raising his head, looked round and replied, "If I were to guess, I should guess there are not more than one-half!" The next day Mr. Martin was brought up for disturbing divine service, but he contended "it was not the time of divine service; the minister had ceased to preach, and it was guessing time." He was accordingly discharged. It is said that he once rode two miles to attend meeting on a warm June Sunday, in a double sleigh, with a span of horses, the dust flying and the runners grating horribly and striking fire at every step. And his wife was a forced passenger by his side, wrapped in a heavy bear-skin robe. However, she was not long subjected to his harassing impositions, for on the breaking out of the Revolution he enlisted in the Continental army, marched off, and was never heard from afterward.

John Adams, subsequently President of the United States, but then a young lawyer traveling his circuit, accompanied by his wife, mentions, under date of November 3, 1766, having "oated" at Martin's, on his way to attend the court at Salem. And returning a few days after, he again "oated" at Martin's, "where we saw," he adds, "five boxes of dollars, containing, as we were told, about eighteen thousand of them, going in a horse-cart from Salem Custom-House to Boston, in order to be shipped to England. A guard of armed men, with swords, hangers, pistols and muskets attended."

This brings us to another important period in the history of this famous tavern, to wit, the commencement of the Revolution. It was now that JACOB NEWHALL became landlord, and for many years onward it was known as Newhall's Tavern, as is shown by the newspapers and other dingy publications of the day. Mr. Newhall was a native of the town, and

a descendant from one of the first settlers, was then about thirty-five years of age, and had previously pursued the occupation of husbandman. Being an ardent son of liberty, one of his first acts was to remove the sign on which was pictured the British emblem of the lion and unicorn, that had swayed for some years from the post in front, and substitute the hopeful emblem of a rising sun. He was a most liberal provider, and unwearied in his endeavors to make his house a real "traveler's home." During the war his engines were often taxed to their utmost to make suitable provision for the unexpected descent of a squad or even an entire company of hungry soldiers. So vigilant was he that it is said he did not for some years retire to bed, but obtained fitful rest in an arm-chair. To be ready for emergencies, he kept on hand fatted cattle that might be promptly slaughtered, and their flesh hastily cooked in the great boilers he had set. His kitchen garden comprised six acres, and under his skillful management yielded an inexhaustible store for summer use, as well as a surplus to be added to his field crops for use at other seasons. He was extremely benevolent toward his needy neighbors, and especially to the families of soldiers who had marched to the war. Even the vagrant tramp was not sent empty away. Among other notable guests during the administration of Mr. Newhall was President Washington, who paused here in October, 1788, as he was proceeding eastward. And four years before, 1784, Gen. Lafayette made a halt there.

Mr. Newhall continued landlord till 1807, a period of more than thirty years; and then, the infirmities of age having somewhat impaired his physical powers, he retired. But he still continued to labor to some extent as a farmer till near the end of his life, which took place on the 18th of June, 1816, at the age of seventy-six. One of his generous disposition could hardly be expected to accumulate much, and he appears to have died in rather reduced circumstances, though not in penny.

It is evident from contemporary accounts that this tavern was, during the Revolution, one of the most notable in these parts. Being on the great road along which flowed the travel from all places east of Boston, and having established an unimpeachable name for hospitality, it was never disregarded by the marching soldier or the traveling civilian.

Under various names and different landlords for some time after the retirement of Landlord Newhall the house continued to dispense its hospitalities. But a cloud came over its prospects. The turnpike from Salem to Boston—the portion in Lynn being what is now known as Western Avenue—was opened in 1803, and rapidly diverted the travel from the old road.

As the "Anchor" was situated just within what is now the town of Saugus, then a part of Lynn, its history will not be overlooked in the sketch of that town, and doubtless many racy and captivating details will be added to what is here given.

From quite early times there had been other houses of entertainment in different parts of the town; but none of them came to be of much account. There was "Ward's Tavern" (which possibly may have been the old "Anchor," bearing another name for a short time before Mr. Norwood assumed the keepership). It was in 1750 that a New York merchant stopped here while traveling eastward. He remarks that he put up at Mr. Ward's, in "Lyn, which is a small country town of about two hundred houses, very pleasantly situated, and affords a beautiful rural prospect." He arrived at about one o'clock and "dyn'd on fryd codd." After dinner, being refreshed by a glass of wine, he pursued his journey to Salem, "through a barren, rocky country," and the next day, after visiting Marblehead, returned to Boston, stopping again at Mr. Ward's, where he "dyned upon a fine mongrel goose."

Timothy Tomlins was licensed in 1636 to "keepe a house of intertainment." He was a farmer and a man of probity, but his house did not attain much celebrity as a stopping-place for travelers, it being somewhat remote from the great traveled road. He was among those who commenced the settlement of Southampton, L. I., in 1640, but did not remain there. He was also one of the Cambridge land proprietors. The extensive range of low forest land and tangled bog lying a short distance northwest of Dungeon Rock, in our Lynn woods, and still known as Tomlins's Swamp, was a part of his estate. He was thirteen times a representative in the General Court, and in other positions faithfully served the town. In 1634 he was appointed overseer of the "powder and shott and all other amunicon" of the plantation.

In 1664 Theophilus Bayley was licensed to keep a public-house.

In the early part of the Revolution there was a tavern kept in the old house at the corner of Federal and Marion Streets. The landlord was Increase Newhall, and it was used as an alarm station—that is, a place at which, when an alarm occurred, the enrolled men in the district instantly reported for duty. At one time, in 1776, there was a midnight alarm that the English had landed at King's Beach. There was presently great commotion throughout the town, for the meeting-house bell and the drums had spread the alarm to all quarters. At the tavern station here spoken of the men promptly rallied, but the commander was not visible. They, however, quickly marched under other orders. It proved to be a false alarm, and they all returned safe. And then, to their amusement, the pusillanimous commander emerged from an oven in which, panic-stricken, he had been concealed. It was during this alarm that Frederick Breed, who lived in the vicinity, displayed so much courage and tact in rallying the men and marching them to the supposed point of danger that he received a commission in the army, and finally rose to the rank of colonel.

We now come down to the time when the old LYNN HOTEL was erected. This establishment became quite as famous as had been the Anchor in its palmiest days.

It was in 1803 that the Turnpike leading from Salem to Boston was opened, making the shortest and most direct route for the eastern travel to reach the metropolis. Then old Boston Street, which had so long been the chief highway through Lynn, was doomed to lose its prestige, its honors and much of its thrift. When the building of the Turnpike was projected there was much croaking and head-shaking, as there always is when great improvements are proposed. One good man, for instance, testified that at some point where the route lay over the salt marshes, he had run a pole down twenty-five feet! It was an expensive road, but was soon made a very good one. By the charter it was to revert to the commonwealth when the proprietors had received the whole cost, with twelve per cent. interest. Accordingly, in 1869, legislative action being had, it became a public highway. That part lying in Lynn is now called Western Avenue, and affords a fine, level driveway of several miles, say from the hills of old Chelsea to the Floating Bridge in Lynn, with the exception of Farrington's Hill. In the old days of horse-racing, the portion lying over the marshes southwest of the hotel was the scene of some famous races. It was there that Major Standpole's "Old Blue" won his vaunted victory, trotting three miles in eight minutes and forty-two seconds. This was on the 6th of September, 1816, and is said to have been the first horse-trot in the country. Of late years equine contests of a different sort are held in the portion of the avenue lying immediately northeastward from the hotel. On every pleasant day in winter, when there is good sleighing, numerous gay turn-outs, drawn by the fleetest steeds of which the town can boast, and many from other towns, may be seen there in friendly trials of speed. And a merry time have the excited spirits, young and old.

Immediately after the opening of the Turnpike the post-office, which had been kept on Boston Street, near the corner of North Federal, was removed to the southern end of Federal Street, where it joined the turnpike, as the mails would come that way, and business began to gather in the same quarter.

LYNN HOTEL was built during the year in which the Turnpike was opened—1803. The most extensively known landlord was Andrew S. Breed, the elder. He took the house in 1813, and under his supervision it attained an enviable reputation, especially for the excellence of its table and the promptness with which the largest demands of guests would be met. He was a very stirring man and recognized by every one in the streets, as he sallied forth on his brawny roadster, in his yellow top-boots and coat of sporting cut. In addition to his large business at the hotel he did a good deal of farming, and many of us can well re-

member the jolly husking-parties which in harvest-time assembled at his bidding to divest the yellow ears of their rustling robes, and at evening received our reward in the banquet of baked beans and Indian pudding, with relays of apples and cider. He was not a man who could pass noiselessly through the world, or who could yield much to what he deemed the unreasonable demands of those about him; in short, he was of what is called an arbitrary disposition, rather boisterous in language, and strict in his requirements of those in service under him. No lazy man's excuses ever weighed with him. Mr. Breed was father of the fifth mayor of Lynn.

It was to this hotel that True Moody, the colored out-door servant, so long and so well known to travelers by his alert attentions, and so much esteemed for his obliging disposition, was attached for some forty years. In person he was stout, and possessed in a well-developed form all the physical peculiarities of the African race. His mouth was capacious and answered the novel purpose of a temporary savings-bank, for in it he was accustomed to deposit the pecuniary gratuities that were sometimes lavishly bestowed by guests, till he could find time to remove them to a more suitable place, or till he required his mouth for a more legitimate purpose. And there is an account of a wager by some young men as to the amount of silver change in his mouth at a given time. To determine the bet, he consented, with his usual good nature, to discharge the deposits into a bowl, when they were found to amount to a little more than five dollars, the whole being in small pieces. By his gains in this humble way he was enabled to secure a comfortable home and respectably support a family. By the failure of the Nahant Bank, in 1836, he lost some hundreds of dollars. And by the Eastern Railroad, which was built soon after, diverting the travel from the hotel quarter, his income was greatly reduced. It is said that at this depressing period he was accustomed to retire to a corner of the deserted stable and weep. He died on the 17th of June, 1855, at a rather advanced age, though probably far below that of ninety-seven years, as some of the newspapers asserted. It is not likely that he or any one else knew his exact age.

The history of old Lynn Hotel, which remained so long in such high repute, is, perhaps, more full of stirring incident than that of almost any other establishment of the kind in this quarter of the country. The leading men of the nation—Presidents and Governors—traveling statesmen, scholars and men of leisure from other lands, were here entertained, as well as the roving multitude of tradesmen and others of every calling and profession. Many a great statesman, military hero and orator has addressed the assembled multitudes from the little balcony over the southern door, and the writer of this sketch, by memory's aid, plainly sees the commanding form of President Jackson firmly poised, as he addresses the

enthusiastic throng, his sententious oratory more than half drowned by the prolonged cheering. From that modest balcony, too, has many and many a time irradiated the choice eloquence of the ambitious local politician.

An idea of the extent of the travel by stage at about this time may be gathered from the fact that in 1836 twenty-three stages left Lynn Hotel for Boston daily, and there were also usually several extras. They belonged to the Salem and Eastern lines. These were the brightest days of the old stage-coach, and the gaudy ones of the Salem Line and the more lumbering ones from the east drew up at those hospitable portals at all hours, that the passengers might alight for the relief of their cramped limbs, and, perhaps, for a little convivial entertainment at the bar, the jolly drivers shouting their brief orders with diplomatic uncton. Private carriages, baggage-wagons and teams of all descriptions, too, were constantly passing and pausing. And for baiting and protection from inclement weather, an unbroken line of horse-sheds extended along the whole eastern side of Centre Street, from North Common to the Turnpike, and sometimes every one of them was occupied, with an overplus hitched to posts on either side of the house.

For about thirty-five years from the time the Turnpike was opened and the hotel built, incidents which had drawn the tide of travel from old Boston Street, there was a business activity and enterprise centering thereabout such as one who has known Lynn for only the last twenty years can hardly realize. The post-office was there, and so were the principal stores, the lawyers and many of the largest manufacturers. The shoe manufacturers of those days, by the way, did not congregate about a common centre, as they now do, but were planted in every neighborhood. The manner in which the business was then conducted made it just as well and more economical. The old-time shoemaker has disappeared, and shoemaking machinery taken his place, so that now, as a necessity, large numbers of workmen must assemble together in huge factories. Combinations, such as Lasters' Unions and Knights of Labor assemblies, could hardly have been formed in the days when only half a dozen worked together in the little shops that, standing widely asunder, dotted our whole territory. Those were days of individual independence, individual responsibility and unfettered effort for individual advancement.

Foot-journeying was much more common in those days than in these railroad times, when it is more economical to ride. The cost of riding was then a material item, especially as there was no considerable saving of time, for a smart pedestrian would often reach Boston about as soon as a "slow coach" or sluggish horse. The turnpike on some great occasions, like, for instance, a famous military parade or an execution, swarmed with pedestrians, and there

were often good-natured trials of speed between strangers as well as friends.

It need not be said that in the early days of the Anchor, travel by horseback and sometimes even by bullback was, in a great measure, necessary, for the roads were stumpy, stony and gullied, so that wheeled vehicles, if any had them, could be but little used. When a journey could be accomplished by water, however, that mode was usually adopted, the light Indian skiff proving remarkably serviceable where the course lay near the shore. Jonathan Dickenson, of Philadelphia, in a letter to William Smith, February, 1697, says "In 14 days we have an answer from Boston, once a week from New York, once in three weeks from Maryland, and once a month from Virginia." Then came various kinds of lumbering conveyances; but it was many years before regular lines of any sort of conveyance were established. Mr. Lewis says that the "stage" which John Stavers put on to run from Portsmouth to Boston, in 1761, was the first in New England. It was a curricie, drawn by two horses, and had seats for three persons. It left Portsmouth on Monday morning, stopped the first night at Ipswich, and reached Boston the next afternoon. Returning, it left Boston on Thursday and reached Portsmouth on Friday. The fare was thirteen shillings and sixpence—somewhere between three and four dollars of our present money—besides the expenses by the way. President Quincy, who, in the early part of the present century, was wooing the fair lady of New York who afterward became his wife, thus feelingly speaks of the difficulties that beset his way: "The carriages were old and shackling, and much of the harness made of ropes. One pair of horses carried us eighteen miles. We generally reached our resting-place for the night, if no accident intervened, at ten o'clock, and, after a frugal supper, went to bed with a notice that we should be called at three next morning—which generally proved to be half-past two. Then, whether it snowed or rained, the traveler must rise and make ready by the help of a horn lantern and a farthing candle, and proceed on his way, over bad roads, sometimes with a driver showing no doubtful symptoms of drunkenness, which good-hearted passengers never failed to improve at every stopping-place, by urging upon him the comfort of another glass of toddy. Thus we traveled eighteen miles a stage, sometimes obliged to get out and help the coachman lift the coach out of a quagmire or rut, and arriving in New York after a week's hard travelling [from Boston], wondering at the ease as well as the expedition with which our journey was effected." It was to difficulties like these, too, that the Lynn shoe "bosses" were subjected in their trips southward, for at that period the customers did not often come to Lynn to make their purchases, but were sought for at their own homes. And their reflections during the perilous journeys, tinged, as they were, by business perplexities, must

have been very different from those that stimulated the ardent Quincy.

The palmy days of the stage-coach were also the palmy days of the Lynn Hotel. Both, too, were thrown into the shade at the same time and by the same means—to wit, the construction of the Eastern Railroad. A good deal of romance clusters around the old stages, and there is little wonder that even now sometimes companies of aged men, remembering the jolly rides of their youth, should wish to live over some especially happy episode. So we occasionally hear of a "tally-ho" expedition, with its old-time turn-out, its yet merry driver, trembling under the weight of years, and its resounding horn again wakening the echoes of the hills. On the 12th of June, 1878, a party of twelve gentlemen, mostly quite aged, and all lovers of old-time customs, set out from Newburyport to enjoy a ride to Boston in the old-fashioned four-horse stage-coach of their boyhood. The driver was a veteran of the road, and eighty-one years of age. The start was propitious and the ride enjoyable, till they reached Lynn, when, near the junction of Western Avenue and Washington Street, an axle broke and the stage was overturned. Two or three of the passengers were seriously injured, and the aged driver received a severe shock to his system, beside painful bruises.

It was in 1838 that Lynn was invaded by the Eastern Railroad, which soon wrought very great alterations; business centres were changed, giving rise to sectional jealousies, which festered for a number of years. The field of operation for the young aspirant for wealth seemed expanding, and there began to be high hope and expectation of renewed and augmented prosperity, though it was during one of the most protracted periods of business depression through which the country had ever passed.

As early as 1828 a proposition to construct a railroad from Boston to Salem began to be seriously considered, and a circular was sent out from the House of Representatives to various towns in the vicinity, seeking information from which a judgment could be formed as to the expediency of undertaking so formidable an enterprise, either by individuals or the State. The circular sent to Lynn was addressed to the editor of the *Mirror*, and was responded to after evidently careful investigation; and some of the statements may properly be introduced, as showing the then condition of things here, in several particulars.

"The principal manufacture of Lynn is shoes. Of these it appears that 1,388,189 pairs are annually made, which, at four shillings a pair, will amount to \$692,126. These, as they are usually packed, will fill 11,535 boxes, the transportation of which, at one shilling a box, will cost \$1192.50. It is considered that about three-fourths of the above amount returns to Lynn in sole leather and other articles for the manufacture of shoes, in English and West India goods and other merchandise, the transportation of which may be fairly estimated at \$5768. The article of flour alone, 2509 barrels, at \$6.00 a barrel, would amount to \$15,000, the transportation of which would cost \$750. The transportation of the same amount in shoes would cost only \$41.67. And many

other heavy articles will bear an equal proportion. The transportation of a barrel of flour from Boston to Lynn is 30 cents, about the same as the conveyance from Baltimore to Boston.

[Swampscott and Nahant were at that time parts of Lynn.] "There have been about 1000 tons of fresh fish and 50 tons of cured fish conveyed on the turnpike as far as Charlestown during the past year, the transportation of which, at twenty shillings a ton, amounts to \$500. Fifty barrels of oil have also been extracted, the transportation of which, at two shillings a barrel, cost \$16.66.

"The other articles transported on the Boston route are 60 tons of hay, 70 tons of chocolate, 26 tons of grain, 50 tons of cocoa, 20 tons of rice, 30 tons of ginger, 16 tons of neat hides, 12 tons of leather, 27 tons of goat and kid skins, 85 tons of sumac, 9 tons of iron, 36 tons of coal, 30 tons of hurberry root and 200 tons of marble,—making in all 671 tons, the transportation of which, at twenty shillings a ton, amounts to \$236.67. Besides these, a large amount of goods is annually conveyed to the dye-house and [silk] printing establishment.

"The average number of passengers is about 11 each day, for 300 days of the year, the amount of whose conveyance, at \$1.25 each, is \$4125. The amount paid by Lynn people for tolls is probably about \$2100.

"By this statement it appears that the annual expense to the town of Lynn, on the Boston route is \$19,668.33.

"The amount of property invested in baggage wagons is about \$1000."

By the foregoing it will be seen how small an amount Lynn could then promise for the support of a railroad. And several interesting facts are disclosed by individual items. What most surprises one, perhaps, is the small number of passengers—an average of *eleven* daily, and that with a thrifty population of 6000. There was comparatively little inducement for any excepting business men to visit the city. The few retail "shopping" necessities could be met at home, and the expense of the visit, both in time and money, was to be looked at. Many went to Boston but once or twice a year, and some not more than twice in a lifetime.

The few leading business men went up once a week in their own "teams," two sometimes joining, one furnishing the conveyance and the other paying the tolls and for house-baiting. Such were the terms on which two prominent townsmen—Samuel Mulliken and Jeremiah Bulfinch—on a chilly November day, set out. Mr. Bulfinch furnished the conveyance, and Mulliken was to pay the expenses. When they arrived at Charlestown in the forenoon they found that an additional toll or something of the sort, to the amount of six cents, had been recently levied. It was what neither had calculated on, and so Mr. M. contended that each should pay half; but Mr. Bulfinch declared that he would pay no part of the six cents. They were equally matched for stubbornness, and sat there arguing and disputing till the declining sun warned them that it was time to turn the horse's head homeward. And home they rode, each probably exulting in his triumph. This incident was related to the writer by one of the parties. "And," he added, his countenance radiating with the rekindled fire within, though he was then more than eighty years old, "I would have set there till this time, before I would have paid it!"

Some of the small manufacturers were accustomed to go to Boston on foot, do their buying and selling and return in the same manner.

Another thing mentioned in the answer to the circular is the amount of coal brought hither at that time—only thirty-six tons—and probably a considerable portion of even that was bituminous, or such as blacksmiths use. Anthracite was then just coming into use in New England, wood being still almost exclusively used for fuel, excepting that in a few country places peat afforded a partial supply. But enough of this.

Old Lynn Hotel has not yet closed its portals, though its business has greatly decreased. During the long period of more than eighty years, since it was erected, its hospitable doors have remained invitingly open for the traveler's entertainment. Other houses in the vicinity have in the meantime been opened and closed. Even the stately Boscobel has, within a few months, retired from the field. But there the old hotel remains, ever and anon renewing its appointments and changing its administration as years move on, becoming less and less an object of interest as those who were familiar with the forms of the elder Breed, of Deacon Field and of the vigilant "True" pass away.

A few words regarding one or two others of the earlier hotels, and matters connected with them, may be given before we pass on to other topics.

It was in 1810 that the once famous Mineral Spring Hotel was built. The situation was retired and romantic in the extreme. Almost surrounded by green hills and woods, and having at its very feet a beautiful lakelet, it was for years deemed a most charming resort. It received its name from the mineral spring which was early discovered near the border of the pond, and stood on rising land about midway between the turnpike and the old Danvers road, just upon the western border of Salem. The waters of the spring are impregnated with iron and sulphur, and were formerly much esteemed for their good effects in scorbutic and pulmonary diseases. Dr. John Caspar Richter van Crowninscheldt, who was reputed to have been educated at the University at Liepsic, and to have fled from Germany on account of a duel, and who, by the way, was an ancestor of the prominent and respectable Crowninshield family of the present day, purchased the adjacent lands and settled there about the year 1690. The celebrated Cotton Mather visited him in his picturesque retreat, partook of the waters of the spring and in one of his works extols their virtues. Earlier than this, however, the spring was known, for in 1669 a description of the boundary line between Lynn and Salem speaks of it as a "roated spring."

But the hotel here has now for many years been numbered with the things that were. In 1847 Mr. Richard S. Fay purchased the estate, together with many adjacent acres, and formed there a most attractive and salubrious summer retreat, repairing and remodeling the house and embellishing the grounds in a manner to render it a fit residence for one of wealth and refined taste.

The Mineral Spring Hotel had one or two landlords of high reputation, whose character assured the most unobjectionable and liberal management. Among them was Major Jabez W. Barton, afterwards, for many years, host at the Albion, in Boston. But there were one or two attempts to sully its fair fame; notably, in 1833, Dr. Hazeltine, a well-known and reputable physician, wrote a communication which was published in the *Boston Medical and Surgical Journal*, speaking very slightly of the waters of the spring, and in highly derogatory terms of the management of the hotel. This elicited several sharp replies, and it seemed finally satisfactorily settled that the house, with the exception of occasional disreputable episodes—such as all public-houses are liable to—had maintained a fair character. A forcible writer in one of the papers of the day said: "We know not which [Dr. Hazeltine] attempts to stigmatize one of the most respectable, quiet and unobjectionable resorts of families and parties in the summer season from Salem and Boston, or the downright ignorance which he manifests concerning the qualities of the spring water. We have said before, and we repeat it, that we know of no place, far or near, possessing so many natural attractions and offering so many real comforts and conveniences to genteel, intelligent and moral people as this summer retreat, nor one with a more upright and every way worthy gentleman at its head, than are to be found at the Lynn Mineral Spring Hotel." This was written at the time Major Barton was landlord.

Perhaps it is incumbent to say something of the great hotel and other public-houses of Nahant, especially those established while the peninsula remained a part of Lynn; but as the writer of the sketch of that town will no doubt say all that is necessary, it might prove unneeded labor.

Nor is it necessary to speak individually of the present hotels of Lynn. We have a considerable number, and they are of various grades, from those reckoned as high-class even down to those which, in by-gone days, went by the name of "salt-hay" hostelries. Our business has been more especially with the taverns of former times—the wayside monuments of the past—around which cluster so much of the true history and the romance of our early days. The generations that knew them have nearly passed away; but their fame will survive in story long after their crumbling walls have disappeared. They have ever furnished for the historian, the poet and the dreamy novelist many of their most jovial, touching and tragic incidents, and long will they continue so to do.

And as to the modes of travel, what more need be said?

"We have spanned the world with iron rails,
And the steam-king rules us now."

A wealthy prize may spy,
Which in the reaper's duller light
Was passed unheeded by.

—Old Ballad.

INDIAN DEED OF LYNN.—The Indian deed of Lynn, which may be found recorded in the registry at Salem, bears the date September 4, 1686. It is really a mere release of all the remaining interest, if any existed, of the grantors, as heirs of Sagamore Wenepawwekin or George No-Nose, so called, and no doubt a precautionary measure, designed to show that the Indian title had been fairly extinguished. It was executed in the troublous times of the Andros administration, a period when real estate titles were greatly confused. Yet, though Andros had declared that an Indian signature was of no more value than the scratch of a bear's claw, he, in 1689, asked Rev. Mr. Higginson whether New England was the King's territory, and received the reply that it belonged to the colonists, because they held it by just occupation and purchase from the Indians.

The grantors affirm in the deed that their ancestor, the Chief Wenepawwekin, was the true and sole owner of the territory of Lynn, notwithstanding the possession of the English. And they also affirm that there had been no legal dispossession. There were many real and many colorable purchases and sales before this deed; for, to say nothing of the cupidity of the settlers, their red brethren, as a general thing, would sell anything for which they could find a purchaser, whether they had a title to it or not; and they would sell the same thing over and over again as long as a purchaser appeared. Gross fraud was, no doubt, in individual instances practiced, but the summary exercise of authority by the General Court probably rectified many wrongs. On the 6th of September, 1638, the General Court "agreed that the Court of Assistants should take order for the Indians, that they may have satisfaction for their right at Lynn." The "right" is not specified, but seems to relate to land.

The Indians were not an agricultural nor a pastoral people, and had no conception of the value of land for the uses of civilized life. Poquanum, called Duke William by Mr. Wood, in his "New England's Prospect," and Black Will in certain depositions among the Salem court files, was Sachem of Nahant. And he could hardly have placed a speculative value on his beautiful dukedom, to have sold it to Mr. Dexter for a suit of clothes, though

possibly he indulged in a vagrant chuckle over his bargain, as it was finally determined that he had no title to the peninsula, which fact he probably knew all along.

This Poquanum, or Black Will, by the way, was quite a character in his time, and somewhat of a rover. It is supposed that he was the same Indian who appeared in a full suit of English clothes, to welcome Gosnold, in 1602. But where he obtained his outfit does not seem to be known. His sale of Nahant and the persistent claims of his grantee occasioned the town much vexation and expense. The end of this wily Indian was tragical. Some vessels had sailed eastward in search of pirates who had been committing depredations and atrocities in various places along the coast. At Scarborough, Me., they fell in with Poquanum, and straightway hanged him, because some Indians had, more than a year before, murdered one Bagnall, a pestilent fellow, whom Winthrop says "had much wronged the Indians." This was retaliating in a summary rather than a just way, it being altogether improbable that Poquanum had any hand in the murder. Indeed, Winthrop says the killing was by "Squidraysett and his Indians."

The tragic death of Poquanum occurred in January, 1633. He seems to have been intelligent, generous in disposition and friendly to the settlers. He left a son who was also named Poquanum, who lived to old age, and was well known in the colony. Gookin, in 1686, says: "He is an Indian of good repute and professeth the Christian religion." He, too, was friendly to the whites, and rendered efficient service during the great King Philip War.

Nothing further need be said regarding the Indian deed of Lynn. But the general remark may be added that there was a great deal of looseness about Indian titles in this vicinity. It can almost be said that heirship was sometimes asserted on no better ground than that the claimant had slain a former owner. Mr. Higginson, the first minister of Salem, in a letter dated in 1629, says: "The Indians are not able to make use of the one-fourth part of the land; neither have they any settled places as towns, to dwell in, nor any grounds as they challenge for their own possession, but change their habitation from place to place." But they soon began to learn from the settlers something of the utility of reforming their nomadic life; and then followed a conception of the value of land.

LYNN'S COLONIES.—Affairs in Lynn had hardly become established in good running order when some of the restless—or it might be more pleasing to say enterprising—spirits began to look for new fields of adventure. In less than a score of years from the commencement of the settlement many families departed and planted new towns, among which were Sandwich and Yarmouth, in Massachusetts; Southampton and Flushing, on Long Island; and Stam-

ford, in Connecticut. New Haven, too, was indebted to Lynn for one of her first and most efficient founders,—Captain Nathaniel Turner, who is spoken of in another connection in this sketch. He it was who purchased from the Indians the territory forming the now beautiful town of Stamford, on the New York and New Haven Railroad, which purchase was brought about in a rather curious way.

The captain's Lynn residence was on Nahant Street, near that of his friend and superior officer, John Humfrey. On the breaking out of the Pequot War, 1636, he took the field with the first expedition and became so pleased with the territory invaded as to determine at the close of hostilities to make a peaceful invasion and form a settlement. He obtained the tract including Stamford by fair purchase from the Indian Sagamores, the recorded agreement being in these words: "I, the said Nathaniel Turner, am to give and bring or send to the above said Sagamores, within the space of one month, twelve coats, twelve howes (hoes), twelve hatchets, twelve glasses, twelve knives, four kettles, four fathoms of white wampum."

The most important of the colonies sent out from Lynn at this period was that of Long Island. Thither went some forty families, and with them, as minister, the Rev. Abraham Pierson, a man of learning and ability. He took with him his little son, Abraham, who was born here. And that son, in 1701, became the first president of Yale College. They sailed in a vessel commanded by Captain Daniel Howe, of Lynn, who appears to have had considerable interest in the expedition. They proceeded as far west as Scout's Bay, landed and made lodgments at Flushing, Jamaica, Hempstead, Oyster Bay and thereabouts. But the Dutch soon asserted their right to the territory and assumed a decidedly hostile attitude. Kieft was then the Dutch Governor, and Captain Howe being a man of determination, things presently began to wear a threatening aspect. The settlers took down the arms of the Prince of Orange which the Dutch had erected, and in their place an Indian drew an "unhandsome face," as Winthrop graphically says, which act the Dutch took "in high displeasure." They then began to rear habitations. Naturally enough, this provoked the Dutch Governor, and to such a degree did his ire attain that he had several arrested and imprisoned. But he does not appear to have been a really ill-natured or unreasonable man, though Washington Irving does characterize him as "William the Testy."

On their promise to remove, the prisoners were readily released. They did remove some eighty miles eastward and commenced the permanent settlement of Southampton, which name was given in commemoration of the port in England from which some of them originally came.

Southampton, thus begun, still numbers among her people many who descended from that good old Lynn stock. In this colonization quite a number of the

leading residents of Lynn were concerned, though some whose names were on the roll did not emigrate. The colony grew apace, and from time to time sent off other colonies that made lodgments in various parts of the island, so that the Long Island of this day owes much to the Lynn of that day.

These colonists evidently carried with them the ideas of freedom and equality under which they had prospered here, and in their new home continued to be governed in a thoroughly democratic way, though at one time, 1644, they placed themselves professedly under the Hartford jurisdiction. "The government of the town," says an intelligent native writer, "was vested in the people. They assembled at their town-meetings, had all power and all authority. They elected town officers, constituted courts, allotted lands, made laws, tried difficult and important cases, and from their decision there was no appeal. The Town-Meeting, or General Court, as it was sometimes called, met once a month. Every freeholder was required to be present at its meetings and take a part in the burdens of government. All delinquents were fined for non-attendance at each meeting."

The Long Island enterprise thus inaugurated by the people of Lynn was really of a good deal of importance. It was with James Forrett, as agent of Lord Sterling, that the negotiations for the right to occupy the land were made. Winthrop says, "Divers of the inhabitants of Linne, finding themselves straitened, looked out for a new plantation, and going to Long Island, they agreed with the Lord Sterling's agent there, one Mr. Forrett, for a parcel of the isle near the west end, and agreed with the Indians for their right." The emigrants, however, to begin with, had a difficulty with Agent Forrett, the cause of which does not exactly appear, and he entered a strong protest against them at Boston as "intruders." Then the troubles with the Dutch came, but by persistence and fair dealing the settlers soon obtained favor and a permanent foothold.

It is not necessary to occupy space in speaking further of the colonies that early went out from Lynn. What has been said of the Long Island enterprise in a great degree characterized the others, their spirit and purposes being much the same.

SLAVERY AND ITS ABOLITION.—The beginning of slavery in Massachusetts was in 1638, when some of the captive Pequot Indians were sent to the West Indies and sold for return cargoes of cotton, tobacco and *negroes*, but in 1641 the court, in a loose and uncertain way, set its face against such servitude, enacting that "There shall never be any bond slavery, villianage or captivitie amongst us, unless it be lawfull captives taken in just warres, and such strangers as willingly selle themselves or are sold to us. This exempts none from servitude who shall be judged thereto by authority." What is there in this to prevent negro or Indian slavery? Under the clause "such strangers as willingly sell themselves or are

sold to us," a door seems to be widely opened. Thomas Keyser, an early settler of Lynn, was a mariner, and appears unscrupulously to have engaged in the Guinea slave trade, conjointly with James Smith, of Boston, a church member. Slaves were most numerous in the province in 1745. In 1754 there were four hundred and thirty-nine slaves in Essex County, and in all Massachusetts forty-four hundred and eighty-nine. In 1774 the General Court passed a bill prohibiting the importation of slaves, but Governor Gage refused his assent.

At the commencement of the Revolution there were twenty-six slaves in Lynn, among them one belonging to Thomas Mansfield, named Pompey, a native prince born on the Gambia, and who continued to be duly honored by all the negroes hereabout, holding a holiday court once a year in a fragrant glade, surrounded by his gayly-clad subjects, who had been allowed their freedom for the day.

The State Constitution was established in 1780. The first article of the Declaration of Rights asserts that all men are born free and equal, and this was generally supposed to have reference to slavery, but it was a point on which there was by no means unanimity of opinion. In 1781, however, at a court in Worcester, an indictment was found against a white man for assaulting, beating and imprisoning a black. The case finally, in 1783, went to the Supreme Court, and there the defense was that the black was a slave, and the beating the necessary and lawful correction by the master; but the defense was declared invalid, and this decision was the death-blow to slavery in Massachusetts.

As to the later movements touching the abolition of slavery in the United States, it may be remarked that Lynn raised a strong and by no means uncertain voice in behalf of the slaves,—a cause so much derided and opposed in its incipient stages, but so much applauded when it had become popular.

The "Lynn Colored People's Friend Society" was formed in 1832, but it is thought that the members really did more for the cause by individual than combined action. Nevertheless, the organization was useful in arousing and centralizing attention. Speakers from abroad were occasionally here. The accomplished and piquant Grimkie ladies from the South gave one or two stirring addresses. In the early part of the summer of 1835 George Thompson, the prominent English abolitionist, visited Lynn, and lectured in several of the meeting-houses to large audiences. In the latter part of the summer he again came to Lynn to attend a meeting of the Essex County Anti-Slavery Society, held in the First Methodist meeting-house. Some hostility was now manifested by the opponents of the movement. In the evening, while Mr. Thompson was lecturing, a great crowd collected about the house, and a stone was thrown through one of the windows, causing great disturbance within. A large number pressed into the entry and attempted

to burst in the inner doors, which had been closed. During the tumult Mr. Thompson ended his discourse, and passed out, unobserved by the crowd. He was presently surrounded by a guard of ladies, and conducted to a neighboring house, whence he departed privately to his temporary residence at Swampscott. Mr. Thompson was here again in 1850, and then met with a cordial welcome. He had a public reception by his Lynn friends at Lyceum Hall, which stood on Market Street, at the corner of Summer. Though the weather was stormy, the hall was well filled, and Mr. Thompson delivered a felicitous address.

It was in 1850 that Congress passed the famous, or as many regarded it, the infamous "Fugitive Slave Law." The law intended to facilitate the rendition of slaves escaping into the free States. Much hostility to the act was manifested in Lynn, and several largely-attended meetings were held, at which it was denounced in strong terms. On Saturday evening, October 5th, a full and enthusiastic meeting took place in Lyceum Hall, at which Mayor Hood presided, and at which resolutions were adopted reaching to the very verge of loyalty. And, though one or two of them savor strongly of the nullification doctrine, they may well be introduced here as indicative of the aroused spirit of our people:

"RESOLVED, That the Fugitive Slave Bill, recently enacted by Congress, violates the plain intent and the strict letter of the United States Constitution, which secures to every citizen, except in cases of martial law, the right of trial by jury on all important questions; further, said bill outrages justice, since it does not secure to the fugitive, or to the free man mistaken for a fugitive, due notice beforehand of the charge made against him, and opportunity for cross-examining the witnesses against him on their oath, gives him no time to get counsel or gather testimony in his own behalf—rights which our fathers secured by the struggle of two hundred years, and which are too dear to be sacrificed to the convenience of slave-hunters, afraid or ashamed to linger amid a community whose institutions and moral sense they are outraging.

"Again, said bill tramples on the most sacred principles of the common law, and even if men could be property, no property, however sacred, can claim the right to be protected in such a way as endangers the rights and safety of free men; therefore—

"RESOLVED, That we protest against it as grossly unconstitutional, as fraught with danger to the safety of a large portion of our fellow-citizens, and capable of being easily perverted to the ruin of any one, white or black; we denounce it as infamous, and we proclaim our determination that it shall not be executed.

"RESOLVED, That we rejoice to believe that there are not prisons enough at the North to hold the men and women who stand ready to succor and protect the panting fugitive slave, and battle and resist the slave-hunter who shall dare to pollute our soil.

"RESOLVED, That every man who voted for this atrocious bill, every one who avows his readiness to execute it, and every one who justifies it on any ground, is a traitor to the rights of the free States, and a criminal of the deepest die, at the head of whom stands Millard Fillmore, who from party or even baser motives, has set his name to a law, the provisions of which, so far from being fitted for a Christian Republic, remind one only of the court of Jeffries or the camp of Haynan.

"RESOLVED, That Samuel A. Elliot, of Boston, in giving his vote for this blood-hound bill, dishonored and betrayed Massachusetts; and how as is often the moral sense of a great city, cankered by wealth, we rejoice to know that he misrepresented his immediate constituents; and we demand of them, in the name of our old commonwealth, to save us from the infamy of his presence in another Congress.

"RESOLVED, That since God has commanded us to 'sweary not him that wandereth,' and since, our fathers being witnesses, every man's

right to liberty is self-evident, we see no way of avoiding the conclusion of Senator Seward, that 'it is a violation of the divine law to surrender the fugitive slave who takes refuge at our firesides from his relentless pursuers;' and in view of this, as well as of the notorious fact that the slave power has constantly trampled under foot the Constitution of the United States to secure its own extension or safety, and especially of the open, undisguised and acknowledged contempt of that instrument with which the slave States kidnap our colored citizens traveling South, and imprison our colored seamen, we, in obedience to God's law, and in self-defense, declare that, constitution or no constitution, law or no law, with jury trial or without, the slave who has once breathed the air and touched the soil of Massachusetts, shall never be dragged back to bondage.

"RESOLVED, That Lewis Cass and Daniel Webster, Senator Foote and Senator Clay, and each and every one of the 'compromise committee of thirteen,' who reported and urged the passage of this bill, as well as every one who voted for its passage, are unworthy the votes of a free people for any office for which they may be hereafter named."

The execution of John Brown, at Charlestown, Va., adjudged guilty of treason for attempting by armed force to free slaves, was signalized by the tolling of church bells in Lynn at sunrise, noon and sunset on Friday, December 2, 1859, the day of execution.

It would be pleasing to give the names of those who long and valiantly fought in the abolition ranks, those who, under reproach and sometimes personal danger, never flinched in their loyalty to the great principles of human liberty. But the list would be too long, and it might appear invidious to select a few. James N. Buffum, however, should not be forgotten; nor Frederic Douglass, who was for some time a resident here, after his successful flight from the South. Some of the more zealous of the early ones lost much of their influence by denouncing the church organizations for the alleged reason that their position was not sufficiently aggressive on that and some other reformatory questions. They were called Come-outers, and in many instances their turbulent course tended to retard rather than advance the cause they really had at heart.

To one who knew the prominent actors in the reformatory movements of this community, say forty-five years ago, particularly the movements touching slavery and intemperance, it is interesting, if not wonderful, to observe the change of public opinion regarding them. No better examples can be had of the zeal and perseverance necessary to be exercised, of the contumely and misconception to be endured, in such a warfare.

But the end of slavery came in a manner not anticipated in those earlier days, and many of the pioneers in the great cause lived to rejoice over the removal of the national disgrace. Little could that great apostle of freedom, William Lloyd Garrison, have dreamed of the career that awaited him, and of the lasting honors that would surround his name so long as American principles should endure, when, in his youthful days, he quietly pursued his humble labors upon the shoemaker's bench, in the little seven by nine shop on Market Street.

HISTORY OF FREE MASONRY IN LYNN.—A brief history of the ancient institution of Free Masonry cannot be inappropriate in this sketch. It dates back

to the commencement of the present century. Tradition informs us that a number of Masonic brethren frequently met for consultation, and concluded, in the early summer of 1805, to form a lodge. These brethren resided in the western part of the town and located the lodge in the upper room of a small wooden building on Boston Street, near the corner of North Federal. The founders of the lodge were among the foremost citizens, men of character and influence, whose names to this day are revered by the fraternity. The original records show that Amariah Childs, Ezra Collins, Thomas C. Thatcher, William Frothingham, Frederick Breed, William Ballard, Francis Moore, Jr., Aaron Breed, Aaron Learned, Samuel Brimblecom, Thomas Witt, Joseph Johnson, Jonas W. Gleason, Joshua Blanchard, David Crane and Richard Johnson, being all master masons, assembled some time about the 1st of June, 1805, and agreed to form themselves into a brotherhood by the name of *Mount Carmel Lodge*; and after choosing Amariah Childs, Master; William Ballard, Senior Warden; and Francis Moore, Jr., Junior Warden, they signed a petition to the Grand Lodge for a charter, which was granted at the quarterly communication in June of the same year.

The hall of Lynn Academy, then recently erected, on South Common Street, was obtained, fitted up, all necessary regalia procured and regular meetings commenced. The first candidate proposed for initiation was Ezra Mudge, father of Ezra Warren Mudge, the sixth mayor of Lynn. The first code of by-laws was adopted November 13th, and the membership limited to fifty. The lodge so prospered that in 1807 an invitation was extended to the Grand Lodge to publicly install the officers. The use of the old parish meeting-house was procured for the purpose, and there the ceremonies took place, the Rev. Asa Eaton, D.D., rector of Christ Church, Boston, delivering the sermon. The membership was, in 1818, limited to seventy-five, by the new code of by-laws then adopted.

In 1821 the lodge erected for its use the two-story frame building which long stood in Market Square, at the corner of Elm Street, and was known as Masonic Hall. The cost was \$1,325.98. The corner-stone was laid June 25th, with Masonic ceremonies, Rev. Cheever Felch delivering the address, and the hall was dedicated November 12th.

The lodge attended, by invitation, the laying of the corner-stone of Bunker Hill Monument, June 17, 1825. On St. John's day, June 24, 1826, Brother Caleb Cushing, of Newburyport, delivered a learned and eloquent address before the fraternity, in the First Methodist meeting-house.

The last meeting of record, previous to surrendering the charter of Mount Carmel Lodge, appears to have been on the 16th of December, 1834. And from that time until June 11, 1845, there is no record to show that the lodge was called together.

During the decade from 1835 to 1845 there is an

unwritten history of meetings on Long Beach and High Rock held by faithful members during the stormy and troublous anti-Masonic period.

The charter of the lodge was restored on the 11th of June, 1845. A meeting was called July 19th, and officers elected, who were installed July 23d, and from that date commenced a season of prosperity which has continued without interruption to the present time. The first person to receive the degrees after the revival of the charter was Bradford Williams, the ceremony taking place September 15, 1845.

On the 17th of February, 1851, a fire destroyed much of the property of the lodge, which was at Liberty Hall, at the corner of Essex and Market Streets, where the meetings were held. After this the regular meetings of the fraternity were held at the house of their Worthy Master, W. M. Phillips, until Dec. 16th, when they met in a hall in which one or two other organizations occasionally assembled. In the winter of 1854 the hall in the Sagamore Building was fitted up and used for the regular convocations of the lodge, and if those old walls could speak, a recital of the history of the meetings of Mount Carmel Lodge would greatly interest the present members of the fraternity in our city.

On the 29th of December, 1855, the first book of records was formally closed, having served the lodge for half a century. And on September 7, 1857, a new code of by-laws was adopted, to which is appended the names of sixty-one members.

On the 8th of September, 1863, *Sutton Chapter of Royal Arch Masons* was organized.

On the 14th of October, 1864, upon invitation of the Grand Body, Mount Carmel Lodge assisted in laying the corner-stone of the new Masonic Temple, corner of Boylston and Tremont Streets, Boston.

On February 21, 1865, *Golden Fleece Lodge* was duly organized, and had for its first three officers Timothy G. Senter, W. M.; Alonzo C. Blethen, S. W.; John G. Dudley, J. W.

April 10, 1865, the ladies of Lynn presented a beautiful banner to Mount Carmel Lodge.

July 4, 1865, the Masonic fraternity joined in the celebration of the day.

November 13, 1865, an invitation was received from Mayor Peter M. Neal to take part in the ceremonies of laying the corner-stone of the City Hall; but on December 11th a communication was received from the R. W. Grand Master refusing to grant a dispensation for the lodges to appear in public to take part in the ceremonies.

October 8, 1866.—A petition was received and consent given for the formation of a lodge at Saugus.

June 24, 1867.—The Masonic fraternity of Lynn participated in the dedicatory services of the new Masonic Temple in Boston.

June 28, 1872.—Died, in Lynn, Jonathan Richardson, a native of the town, aged eighty-seven years. He was one of the early members of Mount Carmel

Lodge, and tiler for more than forty years. He remained a faithful adherent to the institution when so many of the brethren withdrew, in the troublous times of anti-Masonry. His burial took place from the First Methodist meeting-house, and was attended by a large number of the fraternity.

February, 1873.—*Olivet Commandery of Knights Templars* was organized. October 22d there was a grand parade, attracting much attention.

September 8, 1873.—Invitation received from the city government of Lynn to take part in the dedication of the Soldiers' Monument. As an organization, however, the fraternity did not join in the ceremonies.

May 12, 1879.—Invitation received from Mayor George P. Sanderson to participate in the celebration of the Two Hundred and Fiftieth Anniversary of the settlement of Lynn. But the invitation was not accepted.

December 8, 1880.—A board of trustees elected to take charge of the hall and of the property belonging to the Masonic fraternity.

May 9, 1881.—By-laws adopted granting life membership in Mount Carmel Lodge.

October 8, 1881.—Grand Master S. E. Lawrence present for the purpose of addressing the lodges on the commutation of the Grand Lodge capitation tax.

February 22, 1882.—Members from lodges in the Fifth District hold a meeting at Masonic Hall in Lynn, for exemplification of work and the lectures connected therewith. Charles M. Avery, Grand Lecturer, present as instructor.

Mount Carmel Lodge, soon after the renewal of its charter, in 1845, began steadily to increase in numbers and strength, and, from time to time, found it necessary to seek more capacious accommodations. Some years ago the hall in Tolman's Building, Market Street, corner of Liberty, was leased and fitted up in becoming style, the dedicatory ceremonies taking place in July, 1872. But now, for a number of years, the several Masonic organizations have occupied the eligible quarters in the building of the Young Men's Christian Association, on Market Street.

For fifty-eight years Mount Carmel was the only lodge in Lynn. But there are now, 1887, the following Masonic bodies :

Organization.	Membership.
	1886.
Mount Carmel Lodge	1805
Sutton Royal Arch Chapter	1863
Golden Fleece Lodge	1865
Olivet Commandery Knights Templar	1873

The trustees of the Masonic fraternity in Lynn, at the present time, are : William D. Pool, president ; George H. Allen, treasurer ; William B. Phillips, secretary ; Charles E. Parsons, Charles C. Fry.

DRINKING CUSTOMS AND TEMPERANCE MOVEMENTS.—Whether our predecessors, as occupants of this soil, the Indians, were ever excessive drinkers is

not positively known. They did not have distilled liquors, but may possibly have had some sort of herbaceous concoction that operated as a more or less inebriating stimulant. But they had nothing that in its effects would compare with the "fire water" brought by their pale-faced supplanters. Their boisterous orgies, which led our fathers to call them "devil worshippers," were of a character very different from "drunken spreec." But when they got a taste of the white man's fire water, having no restraining moral sentiment, their lust for it was unquenchable. The deplorable result need not be recounted. It has been said that the first instance of Indian intoxication in this part of North America took place in September, 1609, when the ship of the celebrated navigator, Henry Hudson, was cruising about the river that still bears his name. For the curious purpose of ascertaining the natural disposition of the natives whom they encountered, it is said the navigators resolved to make some of the principal ones intoxicated. To that end, ardent spirits, "as much as they would," were administered. Only one, however, became really drunk, though all reached the merry stage. The pranks of the drunken one greatly astonished and alarmed the others, who imagined that an evil spirit had entered into him. The next day, however, everything having calmed down, some became clamorous for a renewal of the experiment. This, as remarked, is claimed to have been the first instance of intoxication ever known among the Indians. Unhappily, it was by no means the last. Many a tract of valuable land has been bought of an Indian for a quart of rum, notwithstanding the efforts of the colonial authorities to prevent such nefarious traffic. During the colonial days there was much legislation in regard to strong liquors, both on the score of their proper use by individuals and their relation to the public by way of revenue. But we must treat of our own neighborhood.

It cannot be said that Lynn in her earlier days was remarkable for abstinence from the use of intoxicating liquors. There were causes for the prevalence of the evil habit here that in some places did not exist. It was the custom of the times for all classes to use intoxicants in season and out of season. Excepting in rare instances, the ministers indulged ; and the doctors. The physical injury attending the use was not so well understood ; nor the moral effect. At ordinations, at weddings, at funerals, drink freely flowed ; and at trainings and huskings ; indeed, at all quasi social and public gatherings ; to say nothing of sly indulgence at home. An illustrative anecdote is told of the eccentric Lois Hart, who lived on the north side of Boston Street, near Federal. During her last sickness the good Doctor Gardner one day remarked to her that, being so aged, she could not expect to long survive, and, in view of her approaching end, asked if he should not invite the minister to call. "Well, yes," she replied, in her rude way, "I

should like well enough to see him; and when you go up town, call into some of the grog-shops, and when you see him ask him to call." The end of the story is that he actually was found in one of the drinking groceries, and blandly received the message.

But especially as regards the youth of Lynn: The crews, usually consisting of five or six, in the shoemaker's little shops thought it necessary to have their forenoon and afternoon drams—in winter to brace up against the cold, in summer to brace up against the heat. It was customary to put boys into the shops at the age of twelve, they having obtained their education by that time, excepting, perhaps, the little they might acquire by occasionally attending an evening school. They were of just the age when character for life was forming, and it was placing them in a most perilous situation. The youngest boy in the shop was usually the one sent out for liquor, and he was entitled, on his return, to the first drink, for the service, if his breath did not betray a sly imbibition by the way.

But it is not true that people were universally blind to the evils of strong drink. From the earliest times there were some wide awake on the subject. The Lynn emigrants to Long Island, soon after getting well established at Southampton, 1655, ordained that no one should sell strong liquors within the town bounds, excepting "our neighbor, John Cooper;" and he was not to sell to any Indian, nor to any but those who would use them properly. There was Dr. James Gardner, just mentioned, who, before the present century, pointed out the evils of so prevalent indulgence, and often fearlessly warned his patients against habits which were destroying their health, as well as ruining their souls. A memorandum of his, under date May 31, 1796, is in these words: "One person died of chronic illness, said to have been occasioned by gross intemperance, or a brutal indulgence of the destroyer, rum. . . . He was able to walk to a considerable distance to procure the poison only six days before death closed the scene at one draught." Mr. Enoch Mudge, from whom many of the name now among us descended, was a rigid abstainer, never allowing spirits in his house or shop. He was grandfather of Hon. E. R. Mudge, the munificent donor of St. Stephen's Church.

When the general awakening on the subject of intemperance took place, more than half a century ago, the voice of Lynn was loudly raised against the evil. Sixty years ago, in 1826, a society was formed here for the promotion of "Industry and Temperance." It soon numbered more than four hundred members, and embraced, with few exceptions, the most conspicuous men of the town. The membership in 1836, fifty years since, was five hundred and fifty. Its president then was Thomas Bowler, for sixteen years town clerk. The society was at that time composed largely of middle-aged and elderly persons, as

in the meantime two other societies, embracing more of the younger men, had been formed, namely, the *Lynn Young Men's Temperance Society*, organized in 1833, and the *Lynn Union Temperance Society*, formed in 1835. This latter was the first organization here that proscribed wine, cider or strong beer, which theretofore had not been popularly reckoned as intoxicants. Of this society Josiah Newhall was the first president, and George W. Keene the first secretary.

Lynn soon took rank among the most zealous temperance communities. Rev. Edwin Thompson, so well known for the last forty years as a lecturer on temperance and anti-slavery, was living here, and, though young, by his winning ways and strong arguments, did much to advance the cause. Liquors soon began to be banished from the workshops and the labeled casks from the stores. It was even facetiously said of one or two zealots that they cut down their apple trees, lest the fruit should be made into cider—contrariwise from the unsophisticated old Indian who is said to have told Mrs. Whiting, on smacking his lips after swallowing the mug of cider she had given him, that he thought Adam was rightly damned for eating the apples in Eden, as he should have made them into cider.

When the shoemakers' little shops were displaced by the large factories, more stringent rules were necessarily established, and, as a matter of course, the machinery was run without the oil of the still. One of the former traps for the young was thus removed. At the present time few, if any, places in sober New England can boast of a more temperate population than Lynn. It would be useless to attempt to give details respecting the many temperance organizations, male and female, adult and juvenile. Yet the cause here, as elsewhere, requires vigilant and unremitting watchfulness.

There are now some fifteen regular temperance organizations in Lynn, besides a number of other associations that make temperance a part of their object.

FREE PUBLIC FOREST.—A voluntary association was formed in 1881, the object being, in brief, the preservation of as large a portion as may be of the extensive range of forest land yet remaining upon our northern border, to be forever devoted to the free use of the public as a woodland park. Thus far about one hundred and ten acres have been secured, chiefly by the gift of those who owned the lands. Twice a year individuals most deeply interested, with invited guests, assemble in some romantic spot, on hill-top or in glen, which, with ceremonies reminding of the old mythological days, they proceed to consecrate. Sometimes it is in memory of a revered departed one, and sometimes of a marked event. An "altar," in the shape, perhaps, of a mossy boulder, is made to bear the ceremonial fire, replenished by woodland gatherings and the oil of incense. The participants, unwreathed in sylvan spoils, gather around with songs, readings and inspiring pageantry. The occa-

sion usually calls out some poem or address well worthy of preservation. For instance, there were written for the meeting on the 30th of May, 1886, four little poems, which, though untoward circumstances prevented their being sung, were published in connection with the account of the proceedings. One of the interesting features on this particular day was the release of a "Messenger Dove." Let us quote a stanza or two from each of the little poems, as, besides their appropriateness to the occasion, they afford a taste of the qualities of some of our local versifiers:

By RUTHIE TURNER:

"Once more we meet at spring's return,
And lay aside each weight and care,
While o'er us bend the leafy trees,
And round us breathes the balmy air."

By BESSIE BLAND:

"To God's first temple we repair,
In forest aisle to rest;
Lo! from the sacred altar there,
The flame uplifts its crest!
A symbol of the life so fair,
That glows on nature's breast."

By SAMUEL W. FOSS:

"Fly to the fields, thou white-winged dove,
Tell all their leafy bowers
That summer comes on wings of love
To storm the land with flowers.

"Tell to the hearts bowed down with grief
That joy returns again;
That summer comes with flower and leaf,
And hope renews her reign."

By DARIUS BARRY:

"The trees and rocks my brothers are,
There's freedom in the air,
The violet and the mossy stone
Send up a silent prayer."

Whatever may be thought of the ceremonies of the "camp days" the object of the associates is assuredly praiseworthy. And though the work undertaken is of great and yet undefined proportions, and such as in no probability can be fully accomplished during the lifetime of the present participants, future generations will doubtless honor the effort. But setting aside all other considerations, these spring and autumn woodland gatherings are highly enjoyable, resolving themselves at suitable hours into picnic entertainments, inspiring social intercourse of a refining and educating character.

CHAPTER XXII.

LYNN - (Continued).

SHORT NOTES, CHRONOLOGICALLY ARRANGED.

"Minute historical facts are to history as the nerves and sinews, the veins and arteries, are to the animated bodies; they may not separately exhibit much of use, elegant or just proportion, but taken collectively, they furnish strength, spirit and existence itself. An historian who hath neglected to study them knows but the hulk of his profession, and like one who is ignorant of anatomy, sinks into a mere manual operator."—Lodge.

In an historical sketch of circumscribed limits there are, of course, many topics on which it is impossible to dwell at large, but which should not be passed over in entire silence, and in some instances brief recapitulations seem necessary. In the hope, therefore, of supplying deficiencies the following summary is introduced:

1004. Various accounts, derived chiefly from ancient Scandinavian manuscripts, have led to the belief that certain adventurous navigators visited this coast and made lodgments much earlier than any permanent occupation was effected. For instance, Thorwald, the Northman, a son of Eric the Red, is claimed to have been upon the New England coast in the year 1004, and to have landed at one or two places. At one landing-place he was so charmed by the prospect that he exclaimed,—“Here it is beautiful! and here I should like to fix my dwelling!” And there, indeed, was the bluff old hero's everlasting dwelling fixed, for in a hostile encounter with a swarm of savages, that presently ensued, he received an arrow wound that speedily proved fatal. As life was fast closing he said to his people,—“I now advise you to prepare for your departure as soon as possible; but me ye shall bring to the promontory where I thought it good to dwell. It may be that it was a prophetic word which fell from my mouth, about my abiding there for a season. There ye shall bury me, and plant a cross at my head and also at my feet, and call the place Krossanes (the Cape of the Cross) in all time coming.” He died, the record adds, and they did as he had ordered. This was quite sentimental for a rough sea rover, but indicates warmth of heart and imagination. But what makes the incident interesting to the people of Lynn is the supposition long since put forth that “Krossanes” was Nahant, so long a part of our own territory. Possibly the supposition is correct, but those loose Scandinavian records are hardly to be taken as conclusive evidence, especially as they fail to fix geographical lines with any certainty.

1602. The celebrated navigator, Bartholomew Gosnold, is said to have anchored in the waters of Lynn this year. He seems, indeed, to have been the first European certainly known to have visited Essex County. He sailed from Falmouth, England, in

March, 1602, and reached Massachusetts Bay on the 14th of May. While coasting around it is highly probable that he cast anchor here, and, perhaps, landed for a prospecting tour. But he did not long remain. While Gosnold was in the vicinity he was greatly surprised by an Indian, dressed in English clothes, coming on board and saluting him in fair English. And that Indian is believed to have been Black Will, of Lynn, the Sagamore before alluded to. He was smart, and not over-scrupulous, as his selling Nahant, to which he had no title, to Mr. Dexter, for a suit of clothes, very well proves.

1614. There is little doubt that Captain John Smith, whose life was saved by the interposition of the dusky heroine, Pocahontas—if the tale is not mere romance—was here in 1614, and was struck by the grandeur of the Nahant cliffs, which he compared to the "Pieramides of Egypt." And for the benefit of the curious in such matters it may be remarked that the redoubtable captain lived at one time in Lynn Regis, from which our own Lynn took its name. He served in a counting-house there, but finally left, with ten shillings in his pocket, which he says were contributed by friends who desired to get rid of him. He went to France and served in a military capacity there and in other countries. In 1608 he was in Virginia, and became a master-spirit in its colonization. But his propensity for roving was unconquerable, and we find him, a few years later, drifting about the New England coast. It appears to have been Captain Smith who bestowed the name New England upon our territory, it having previously been known as North Virginia. Yet he was not, apparently, very favorably impressed by the character of the country or the climate, as he remarked that he was not so simple as to think that any other motive than wealth would "ever erect a commonwealth or draw company from their ease and humors at home" to occupy here.

The foregoing visits, however, were of little importance so far as any direct benefit accrued, no surviving settlement being made hereabout if, indeed, any was contemplated; so let us come to the day of permanent settlement.

1629. Five families, chief among them Edmuud Ingalls and his brother Francis, arrive and commence the settlement.

1630. Thomas Newhall born, being the first person of European parentage born here. He died in March, 1687, aged fifty-seven. Wolves killed several swine belonging to the settlers, September 30th. Fifty settlers, chiefly farmers, and many of them with families, arrive and locate in different neighborhoods.

1631. Governor Winthrop passed through the settlement October 28th, and noted that the crops were plentiful.

1632. First church—fifth in the colony—formed. Stephen Bachiler, minister. The court order that "No person shall take any tobacco publicely, under

pain of punishment, also that every one shall pay one penny for every time he is convicted of taking tobacco in any place."

1633. A corn-mill, the first in the settlement, built on Strawberry Brook. Says Winthrop, under this date,—“James Sagamore, of Sagus, died, and most of his folks” (of small-pox).

1634. John Humfrey arrives and settles on Nahant Street. The settlement sends her first Representatives to the General Court. William Wood, one of the first comers, publishes "New England's Prospect."

1635. Philip Kertland, the first shoemaker, arrives.

1637. Name of the settlement changed from Saugus to Lynn. At this time there were thirty-seven plows in the colony, most of them in Lynn. Settlement of Sandwich commenced by emigrants from Lynn. The General Court forbade the making of cakes or buns, "except for burials, marriages and such like special occasions." And also ordered that corn should be received as legal tender, at five shillings a bushel.

1638. First division of lands among the inhabitants.

1639. Ferry across Saugus River established. First bridge over Saugus River at Boston Street crossing built.

1643. Iron-works near Saugus River commenced, the first in America.

1644. Hugh Bert and Samuel Bennett, of Lynn, presented to the grand jury as "common sleepers in time of exercise." Both convicted and fined.

1646. Lynn made a market town—Tuesday, the lecture day, being market day.

1656. Robert Bridges, one of the most active and enterprising of the early settlers, Speaker of the House of Representatives, and assistant, died this year. He was a large proprietor in the iron-works.

1658. Dungeon Rock alleged to have been rent by an earthquake, entombing alive Thomas Veal, the pirate, with treasure.

1666. A year of disasters. Several die of small-pox. "Divers are slain by lightning." Grasshoppers and caterpillars do much mischief.

1669. Boniface Burton died, aged one hundred and thirteen years.

1679. Rev. Samuel Whiting, for forty-three years minister of the First Parish, died December 11th, aged eighty-two years.

1680. Dr. Philip Reed, the first physician, complained to the court of Mrs. Margaret Gifford as a witch. Joseph Armitage, first keeper of the famous Anchor Tavern, which continued as a public-house for more than a hundred and fifty years, died June 27th, aged eighty. The great Newtonian comet appeared in November, occasioning much alarm.

1682. Old Tunnel meeting-house built.

1688. Excitement about Edward Randolph's petition for a grant of Nahant.

1689. Sir Edmund Andros passed through Lynn on

his way to Boston from the east, making a short stay, not deigning, however, to confer with the people as to their wrongs.

1692. Great witchcraft excitement. Six Lynn persons were arrested and imprisoned; some of them were tried, and one condemned to death, but not executed.

1694. A church-fast appointed by Rev. Mr. Shepard, July 19th, for the arrest of the "spiritual plague" of Quakerism.

1697. Great alarm on account of the small-pox. This was many years before vaccination was practiced.

1706. Second division of land among the inhabitants.

1703. A public fast held on account of the ravages of caterpillars and canker worms.

1719. Northern lights observed for the first time, December 17th. Much alarm occasioned.

1720. Rev. Jeremiah Shepard, minister of the First Parish for forty years, died June 3d, aged seventy-two.

1721. John Burrill, a member of the House of Representatives for twenty years, ten of which he was Speaker, died of small-pox, December 10th, aged sixty-three.

1723. A terrific storm with raging sea, February 24th. First mill on Saugus River, at Boston Street crossing, built.

1726. £13 15s. awarded to Nathaniel Potter for linen manufactured in Lynn.

1745. Rev. Mr. Whitefield preaches on Lynn common, creating much excitement.

1750. John Adam Dagyr, an accomplished shoemaker, arrives.

1755. Greatest earthquake ever known in New England, November 18th. It commenced a little after four in the morning, and continued about four minutes, being apparently the same convulsion that destroyed Lisbon, sixty thousand persons perishing there in six minutes, the sea rising fifty feet above its usual level.

1759. A bear weighing four hundred pounds killed in Lynn woods.

1761. Rev. Nathaniel Henchman, minister of the First Parish for forty years, died December 23d, aged sixty-one.

1770. Potato rot prevails and canker worms commit great ravages.

1775. Battle of Lexington, April 19th; five Lynn men killed.

1776. Declaration of Independence promulgated. At this time twenty-six negro slaves were owned in Lynn.

1780. Memorable dark day, May 19th. Houses lighted as at night.

1784. Gen. Lafayette passed through town, October 28th, receiving enthusiastic plaudits.

1788. Gen. Washington passed through town, in

October, and was affectionately greeted by old and young.

1793. Lynn post-office established, and first kept on Boston Street, near Federal. Dr. John Flagg, an esteemed physician and Revolutionary patriot, member of the Committee of Safety and commissioned as colonel, died May 27th, aged fifty.

1795. Brig "Peggy" wrecked on Long Beach, December 9th, and eleven lives lost.

1796. First fire-engine for public use purchased.

1800. Memory of Washington honored; procession and eulogy, January 13th. Morocco manufacture introduced.

1803. Boston and Salem turnpike opened, and Lynn Hotel built. Miles Shorey and wife both killed by lightning, July 10th; she had an infant in her arms who was unharmed, and lived to old age.

1804. First celebration of independence in Lynn.

1808. First law-office in Lynn opened by Benjamin Merrill; it was in a chamber of the dwelling corner of North Common and Park Streets. Great bull fight at Half-Way House; bulls and bull-dogs engaged. Lynn Artillery chartered November 18th, and allowed two brass field-pieces. John Adam Dagyr, the early shoemaker before named, who became widely known for his uncommon taste and skill, died in the almshouse.

1812. Lynn Light Infantry chartered June 30th.

1813. Moll Pitcher, the celebrated fortune-teller, died, April 9th, aged seventy-five. Sketch of her on previous page.

1814. Lynnfield set off from Lynn and incorporated as a separate town. First Town House of Lynn built. First Bank established—known as Lynn Mechanics' Bank till its reorganization as the First National Bank, in 1864. Battle between the "Chesapeake" and "Shannon" fought, June 1st. Intense solicitude was manifested by the people of Lynn, many of whom witnessed the contest from heights and roofs. The battle was anticipated, and multitudes came from neighboring places. The greatest amount of travel over the turnpike that ever took place in a single day then occurred. One hundred and twenty crowded stages passed, it is said, and an almost countless number of all sorts of vehicles, together with equestrians and pedestrians innumerable.

1815. Saugus set off from Lynn and incorporated as a separate town. Terrific southeasterly gale, September 23d; ocean spray driven several miles inland. Joseph Fuller, first president of first Lynn Bank, and first State Senator from Lynn, died, aged forty-two.

1816. Great horse trot on the turnpike, in Lynn, September 1st; said to have been the first in the country; Major Stackpole's "Old Blue" trotted three miles in eight minutes and forty-two seconds.

1817. President Monroe visited Lynn; school children arrayed on the Common.

1819. The wonderful sea-serpent appears off Long Beach; in the sketch of Swampscott a somewhat

detailed account of this supposed marine monster will appear. Nahant Hotel built. Almshouse at Tower Hill built.

1824. General Lafayette visits Lynn August 31st, and is enthusiastically welcomed.

1825. First Lynn newspaper—the *Weekly Mirror*—issued September 3d by Charles F. Lummus. It was published six years.

1826. First savings bank—Lynn Institution for Savings—incorporated.

1827. Micajah Collins, teacher of the Friends' school and minister of the Friends' Society, died January 30th, aged sixty-two. Solomon Moulton, a youthful writer of much promise, died May 26th, aged nineteen. Broad and brilliant night arch, August 28th.

1828. Flora, a negro woman, died October 1st, aged one hundred and thirteen. Lynn Mutual Fire Insurance Company organized.

1829. Splendid display of frosted trees, January 10th.

1830. Donald McDonald, a Scotchman, died in Lynn almshouse October 4th, aged one hundred and eight; he was at Braddock's defeat and at the battle of Quebec, when Wolfe fell.

1831. Maria Augusta Fuller, poetess and prose writer, died January 19th, aged twenty-four. Dr. James Gardner, a physician of high standing, died December 26th, aged sixty-nine.

1832. First Lynn directory published by Charles F. Lummus. Nahant Bank incorporated; failed in 1836.

1833. Extraordinary shower of meteors, November 13th.

1836. Dr. Richard Hazeltine, a learned and successful physician of the old school, died July 10th, aged sixty-two.

1837. Surplus United States revenue distributed, Lynn receiving fourteen thousand eight hundred and seventy-nine dollars, and applying it to the payment of the town debt.

1838. Charles F. Lummus, first Lynn printer, died April 20th, aged thirty-seven. Eastern Railroad opened for travel from Boston to Salem, August 28th.

1839. Ebenezer Breed—Uncle Eben, as he was called—one of the "nursing fathers" of the shoe business of Lynn—died in the almshouse, December 23d, aged seventy-four.

1841. The first picture by the new art known as daguerreotype, or photography, ever taken in Lynn was a landscape, taken this year by James R. Newhall, by apparatus imported from France.

1842. Amos Blanchard, a musician of the Revolutionary army, and for many years a teacher of a district school, died May 25th, aged seventy-eight. Enoch Curtin, a poet and prose writer, died May 28th, aged forty-seven.

1843. Dr. Charles O. Barker, a reputable physician, died January 8th, aged forty-one; his wife was a daughter of Rembrandt Peale, the celebrated painter.

The schooner "Thomas" was wrecked on Long Beach March 17th, five men perishing.

1845. Dr. Edward L. Coffin, physician, scientist and writer, died March 31st, aged fifty.

1846. Amariah Childs, manufacturer of a famous kind of chocolate, died January 21st, aged eighty. Mexican War commenced; Lynn furnished twenty volunteers. Destructive fire on Water Hill Street, August 9th, destroying a large brick silk-printing establishment, spice and coffee-mill, and two or three smaller buildings; total loss, about seventy-five thousand dollars.

1847. President Polk made a short visit to Lynn, July 5th.

1848. George Gray, the Lynn hermit, died February 28th, aged seventy-eight. Carriage-road over harbor side of Long Beach built. Lynn Common fenced.

1849. Lynn Police Court established. Large emigration to California. Lighton Bank incorporated; reorganized as the Central National in 1865.

1850. City form of government adopted. Samuel Brimblecom, an early and enterprising shoe manufacturer, and colonel of militia during the War of 1812, died April 24th, aged eighty-one. Pine Grove Cemetery consecrated July 24th. Thirteen persons of a picnic party from Lynn drowned in Lynnfield Pond, August 15th. Ten-hour system—that is, ten hours to constitute a day's work—generally adopted. Church bells ordered to be rung at six P.M. Previously there was no limit to work hours.

1851. On March 18th and April 15th the tide, during violent storms, swept entirely over Long Beach, the storm of the 15th of April being that during which Minot's Ledge light-house was carried away. It was so severe as to force the salt water from the sea to the Common, the wind, no doubt, driving the water up the little brook that ran across the Common in such quantities as to overflow and form a sheet that was quite salt. Hiram Marble commenced the excavation of Dungeon Rock, in search of treasure, in the summer of this year.

1852. Swampscott set off from Lynn, and incorporated as a separate town. Louis Kossuth, the Hungarian exile, was warmly received, May 6th; greeted by some ten thousand persons assembled on the Common, and escorted through the streets by a long procession to Lyceum Hall, where an enthusiastic reception took place.

1853. Nahant set off from Lynn, and incorporated as a separate town. Illuminating gas first lighted here, January 13th. Cars commenced running over Saugus Branch Railroad, February 1st.

1854. City Bank incorporated; reorganized as National City Bank, 1865.

1855. City charter so amended as to have the municipal year commence on the first Monday of January, instead of the first Monday of April. Five Cents Savings Bank incorporated.

1856. Two bald eagles appear on the ice in Lynn harbor, January 17th. Ezra R. Tebbets, of Lynn, killed by a snow-slide from a building in Bromfield Street, Boston, February 12th. Egg Rock light first shown, September 15th.

1857. Great snow-storm, with intense cold, January 18th, during which the bark "Tedesco" was wrecked on Long Rock, Swampscott, all on board, twelve in number, perishing. Gould Brown, a famous grammarian and author, died at his residence, South Common Street, March 31st, aged sixty-five. He was a native of Providence, R. I., and long taught a seminary in New York, but spent his later years in Lynn.

1858. Telegraph communication between Lynn and other places established. Impromptu Atlantic cable celebration in Lynn, August 17th, on the arrival of Queen Victoria's message—the first ever sent over an Atlantic cable—to President Buchanan. St. Mary's Catholic Cemetery consecrated, November 4th.

1859. British bark "Vernon," from Messina, driven ashore on Long Beach, February 2d; crew saved by life-boat. Isaiah Breed, active as a shoe manufacturer for nearly fifty years, and a State Senator, died May 23d, aged seventy-two. Roman Catholic Church (St. Mary's), Ash Street, burned, May 28th. George Hood, the first mayor of Lynn, died June 29th, aged fifty-two. Brilliant display of northern lights, the whole heavens being covered, August 28th. Union Street Methodist meeting-house destroyed by fire, November 20th. Church bells tolled at sunrise, noon and sunset, December 2d, in observance of the execution of John Brown at Charlestown, Va.

1860. Harbor so frozen in January that persons walked across to Bass Point. Shoemakers' great strike commenced in February. Prince of Wales passed through Lynn, October 20th, hardly stopping to receive official greetings. First horse railroad cars in Lynn commenced running, November 29th. The luck of a dory fisherman is well illustrated by the experience of Zachariah Phillips, of Lynn, during four days in the latter part of November; his first day's catch sold for twenty-five cents; that of one other day for twenty-one dollars; and, taking the four days together, he realized \$46.50, the fish being chiefly cod, and selling for three cents a pound. Market Street first lighted by gas, December 7th.

1861. Alonzo Lewis, historian and poet, died January 21st, aged sixty-six. Lynn Light Infantry and Lynn City Guards, two full companies, start for the seat of the Southern Rebellion, April 16th, in five hours after the arrival of President Lincoln's call for troops. A splendid comet suddenly became visible, July 2d, the tail having enveloped the earth three days before, producing no disturbance and only a slight apparently auroral light.

1862. Lynn Free Public Library opened. Soldiers' burial lot in Pine Grove Cemetery laid out. Nathan Breed, Jr., murdered in his store, Summer Street, December 23d.

1863. Daniel C. Baker, third mayor of Lynn, died July 19th, aged forty-six.

1864. Rev. Parsons Cooke, for twenty-eight years minister of the First Church, died February 12th, aged sixty-three. The thermometer rose to one hundred and four degrees in shady places, June 25th, indicating the warmest day here of which there had been any record. Free delivery of post-office matter begins. Great drought and extensive fires in the woods during the summer. First steam fire-engine owned by the city arrives, August 11th. Town-House burned, October 6th. Schooner "Lion," from Rockland, Me., wrecked on Long Beach, December 10th, and all on board, six in number, perish; their cries were heard above the roaring of the wind and sea, but succor could not reach them.

1865. News of the fall of Richmond received, April 3d; great rejoicing, church-bells rung, buildings illuminated, bonfires kindled. The surrender of General Lee was celebrated, April 10th. News of the assassination of President Lincoln received, April 15th; mourning insignia displayed in public buildings and churches. Corner-stone of City Hall laid, November 28th.

1866. Dr. Abraham Gould, a skillful physician of extensive practice, died, February 27th, aged fifty-eight. General Sherman passed through Lynn, July 16th, and was cordially greeted by a crowd in Central Square. A meteoric stone fell in Ocean Street, in September.

1867. Thomas Bowler, for sixteen years town clerk, died, July 22d, aged eighty-one. The present City Hall dedicated with much ceremony, November 30th.

1868. Memorial Day—called also Decoration Day—observed, May 30th, being the day for decorating the soldiers' graves with flowers; in 1881 the day was made a legal holiday. Hiram Marble, excavator of Dungeon Rock, died, November 10th, aged sixty-five, having pursued his arduous and fruitless labors about seventeen years. His son, Edwin, succeeded him in the work, and died at the Rock January 16, 1880, aged forty-eight, without having reached the supposed deposits of gold and jewels. Destructive fire in Market Street, December 25th, Lyceum Building, Frazier's and Bubier's brick blocks being destroyed, the whole loss reaching about three hundred thousand dollars.

1869. Mary J. Hood, a colored woman, died, January 8th, aged one hundred and four years and seven months. Another destructive fire, on the night of January 25th, commencing in the brick shoe manufactory of Edwin H. Johnson, in Monroe Street, destroyed property to the amount of some one hundred and seventy thousand dollars. Sidney B. Pratt, who left, by will, ten thousand dollars for the benefit of the Free Public Library, died, January 29th, aged fifty-four. On the evening of April 15th there was a magnificent display of beautifully-tinted aurora-

borealis. Benjamin H. Jacobs, undertaker at the old burying-ground for thirty years, died, June 16th, aged seventy-six. Jeremiah C. Stickney, for forty years in successful practice here as a lawyer, and the first city solicitor, died, August 3d, aged sixty-four. Severe gale, on Wednesday afternoon, September 8th, destroying several small buildings and uprooting more than four hundred shade-trees about the city. The old Turnpike from Boston to Salem became a public highway this year, the portion lying in Lynn being now known as Western Avenue.

1870. Young Men's Christian Association incorporated, March 31st. Land near Central Square sold at five dollars per square foot, the highest rate known in Lynn up to this time. Operations for public water supply begun.

1871. Rev. Joseph Cook, at the time minister of the First Church, gave a series of Sunday evening lectures in Music Hall, early this year, creating considerable excitement by his rather sensational denunciations. William Bassett, the first city clerk, died, June 21st, aged sixty-eight. Terrible railroad disaster at Revere, August 26th, eleven Lynn persons being killed; whole number of lives lost, thirty-three; number of wounded, sixty. Electric fire-alarm established. William Vennar, *alias* Brown, murders Mrs. Jones, is pursued, and in his further desperate attempts is shot dead, December 16th.

1872. City Hall bell raised to its position in the tower, March 2d. Meeting of the City Council commemorative of the recent death of Professor Morse, inventor of the electric telegraph, April 16th. Dr. James M. Nye, a reputable physician and scientist, died, April 21st, aged fifty-three. S. O. Breed's box-factory, at the south end of Commercial Street, struck by lightning and consumed, August 13th, this summer being remarkable for the frequency and severity of its thunder-storms. Brick house of worship of First Church, South Common Street, corner of Vine, dedicated, August 29th. Ingalls and Cobbet school-houses dedicated. Odd-Fellows' Hall, Market Street, dedicated, October 7th. Brick and iron station of Eastern Railroad, Central Square, built. Singular disease, called epizootic, prevailed among horses during the latter part of autumn. Wheel carriages almost ceased to run, excepting as drawn by oxen, dogs or goats, and sometimes by men and boys. The disease, though disabling and evidently painful, was not often fatal. Much speculation in real estate during the year; prices high and business active. Pine Hill Public Water Reservoir built.

1873. Pumping-engine at Public Water-Works, Walnut Street, first put in operation, January 14th. English sparrows make their appearance in Lynn, no doubt the progeny of those imported into Boston; but they were soon declared a nuisance. William S. Boyce, president of the First National Bank, died, August 27th, aged sixty-three. Soldiers' Monument,

City Hall Square, dedicated, September 17th. Birch Pond formed.

1874. Lynn "Home for Aged Women" incorporated, Feb. 6th. Grand celebration in Lynn of St. Patrick's Day, March 17th, by the Irish organizations of Essex County. Benjamin Mudge, captain of the old Lynn Artillery, postmaster, and a political writer of spirit, died, March 21st, aged eighty-seven.

1875. Boston, Revere Beach and Lynn Railroad opened for travel, July 22d. Great depression in business affairs this year succeeded the late unhealthy kind of prosperity. Some tradesmen failed, and real estate fell greatly in price. On the 2d of November a blackfish ten feet in length and weighing three hundred and fifty pounds was stranded on Long Beach, probably having pursued his retreating supper the night before farther than was safe. An unusual number of tramps—that is, homeless wanderers from place to place—appeared in Lynn and received temporary relief.

1876. A fire occurred on Market Street, July 26th, destroying property to the amount of some ten thousand dollars, the principal losers being R. A. Spalding & Co., Mrs. Lancy and W. J. Bowers. The destructive Colorado beetle, or potato bug, first appeared in Lynn this year. The Centennial year of the Republic was appropriately observed in Lynn, July 4th, and the *Centennial Memorial*, giving an account of the proceedings, was published by order of the City Council. Benjamin F. Doak, who by will bequeathed ten thousand dollars for the benefit of the poor of the city, and which bequest has since been known as the Doak fund, died, Nov. 8th, aged fifty. Jacob Batchelder, first teacher of the High School and first librarian of the Public Library, died, Dec. 17th, aged seventy.

1877. Charles Merritt, for some forty years deputy sheriff, died, March 13th, aged seventy-two. Sweetser's four-story brick building, Central Avenue, with an adjacent building, burned, April 7th. Loss, about one hundred and fifteen thousand dollars. In September there was an extraordinary phosphorescent glow along the shores.

1878. Successful balloon ascension from City Hall Square, July 4th—Alderman Aza A. Breed, City Marshal Charles C. Fry and Charles F. Smith journalist, accompanying the aeronaut. Dennis Kearney, radical agitator and California "sand lot orator," addresses a large crowd on the Common on the evening of Aug. 12th. Ezra Warren Mudge, the sixth mayor of Lynn, died, Sept. 20th, aged sixty-six. The temperature in Lynn and vicinity at midnight, Dec. 2d, was higher than in any other part of the United States,—six degrees higher than in New Orleans, La.; seven higher than in Savannah, Ga.; nine higher than in Charleston, S. C.; and ten higher than in Jacksonville, Fla. Gold was held at par Dec. 17th, for the first time in sixteen years; that is, one hundred dollars in gold were worth just one hundred in greenback government notes. The extreme of

variation was on July 11, 1864, at which time one hundred dollars in gold were worth two hundred and eighty-five dollars in the notes.

1879. The brick house of worship of the First Methodist Society, City Hall Square, was dedicated Feb. 27th. The newly-invented telephone now comes into use in Lynn. The two hundred and fiftieth anniversary of the settlement of Lynn celebrated, June 17th. John A. Jackson, designer of the Soldiers' Monument, died, in Florence, Italy, in August, aged fifty-four. St. Joseph's Cemetery (Catholic) consecrated, Oct. 16th. Extraordinary occurrence of a perfectly clear sky all over the United States, from the Atlantic to the Pacific, Nov. 4th, as reported by the United States Signal Corps. Benjamin Franklin Mudge, the second mayor of Lynn, died, in Manhattan, Kansas, Nov. 21st, aged sixty-two.

1880. Tubular wells, Boston Street, sunk by order of the city government to gain an additional water supply; first pumping from them, Sept. 4th. The notorious "Morey Letter" appeared in the autumn, creating much sensation throughout the country. This letter made its appearance in a prominent newspaper of New York City, and purported to have been written by General Garfield, the Republican candidate for President of the United States, and addressed to "Henry L. Morey," of the "Employers' Union," of Lynn. It was in the interest of cheap labor and in favor of Chinese immigration. It created a great sensation among the politicians, especially upon the Pacific coast, in which quarter extreme indignation was manifested. But the letter was soon proved to be a base forgery, concocted to damage the prospects of General Garfield, and it would, no doubt, have had a serious effect had not timely evidence of the fraud been discovered. It was satisfactorily shown that no such person as Henry L. Morey and no such association as the Employers' Union existed in Lynn. A beautiful mirage appeared in the bay Nov. 22d.

1881. Young Men's Christian Association Building, Market Street, dedicated January 17th. Dr. Daniel Perley, a much-esteemed physician, died January 31st, aged seventy-seven years. Government weather signals on High Rock first shown February 23d. National Security Bank of Lynn organized. Lynn Hospital incorporated. Andrews Breed, the fifth mayor of Lynn, died April 21st, aged eighty-six. The "yellow day," so-called, occurred September 6th, the landscape assuming a yellow tinge for some hours in the afternoon, and the weird darkness being such that lights were required in houses. President Garfield's death announced by the tolling of church-bells at midnight, September 19th. He was shot by C. J. Guiteau, July 2d. Memorial services were held September 26th. Hon. Enoch Redington Mudge, donor of St. Stephen's Memorial Church, died October 1st. St. Stephen's Memorial Church consecrated November 2d. Thomas Page Richardson, fourth mayor of Lynn, died November 24th, aged sixty-five.

1882. On the night of February 15th a building on Monroe Street, owned by Charles G. Clark, together with one or two others, partially burned; loss, about twenty thousand dollars. The Grand Army Coliseum, on Summer Street, dedicated March 15th. On the morning of March 15th, just before the time for workmen to assemble, a terrific steam-boiler explosion took place in the rear of the Goodwin last-factory, in Spring Street. The engineer was killed and several others badly wounded. One or two adjacent buildings were much damaged, and a piece of the boiler, weighing about fifteen hundred pounds, was thrown two hundred feet up into the air, and fell in Newhall Street, seven hundred feet distant. A fire occurred on the morning of April 22d at Houghton, Godfrey & Dean's paper warehouse, Central Avenue, destroying property to the amount of three thousand dollars. Electric lights made their appearance here in the spring. Barnum's "greatest show on earth" visited Lynn July 22d. Some half a score of elephants appeared in the street parade. The giant elephant Jumbo and the nursing baby elephant were both members of the caravan. Some twenty-five thousand persons attended the exhibition, and the amount of money received for admission reached nearly eleven thousand dollars. The show consisted of a large collection of animals, equestrian, acrobatic and other circus and semi-dramatic performances. It was, no doubt, the grandest and most costly show ever in Lynn. An explosion of a part of the underground equipment of the Citizens' Steam-Heating Company, at the corner of Washington and Monroe Streets, took place July 27th, injuring the street somewhat and throwing up stones and gravel to the danger and fright of persons in the vicinity. And subsequently other explosions took place, inducing an appeal to the city authorities for protection. An extraordinary drought prevailed during the latter part of the summer. Most of the crops about Lynn were absolutely ruined, the unripe fruit dropped from the trees, and much of the shrubbery and many of the trees had the appearance of having been exposed to fire-blasts. Yet the springs and wells did not indicate any very marked deficiency of moisture somewhat below the surface. We had an uncommonly long succession of very warm days, with westerly winds and clear skies. And the peculiar effect on vegetation was, no doubt, attributable rather to the burning sun than the lack of moisture. The spring was backward by full two weeks, and the weather was, on the whole, anomalous, most of the year. Railroad competition ran so high that in October the fare between Lynn and Boston was, for a time, but five cents. The morning sky for several weeks in October and November, was adorned with a splendid comet, which rose in the southeast two or three hours before the sun.

1883. Sweetser's building, corner of Central Avenue and Oxford St., burned January 26th; loss, eighty-one thousand dollars. There were a large number of de-

structive fires in the woods during the dry months, all along from Floating Bridge to Breed's Pond. Electric Light Works established in Lynn.

1884. A high tide swept over the beach road to Nahant, January 9th. Steamer "City of Columbus" lost near Gay Head, January 18th, three Lynn persons perishing. John B. Tolman, April 22d, gave to the Young Men's Christian Association an estate on Market Street, valued at thirty thousand dollars, in trust, the income to be devoted to the suppression of the sale of intoxicating liquors. The new organization of religious enthusiasts, known as the Salvation Army, appeared in our streets, June 4th, marching about with their tambourines and other musical instruments. Lightning struck in Chatham Street, June 5th, killing a lad twelve years of age and somewhat injuring his two boy companions. Horse railroad extension to Marblehead opened for travel June 25th. Inebriates' Home, New Ocean Street, established October 27th. A building of Quincy A. Towns, on Beech Street, used for extracting grease and oil from leather, by naphtha, destroyed by fire November 26th; loss twenty-five hundred dollars.

1885. Lyman F. Chase died January 3d, aged forty-three years, leaving, among other liberal bequests, to Lynn Hospital, \$5000, and to Lynn Public Library \$5000. Lynn National Bank organized. A fire occurred in Henry A. Pevear's building, Washington Street, January 11th, destroying property to the amount of thirty-three hundred dollars. Lucian Newhall's building, Central Avenue, burned; loss, fifty-six thousand six hundred dollars. Lynn Associated Charities organized March 19th. Trinity Church (Methodist), near Tower Hill, dedicated June 4th. Church of the Incarnation (Episcopal) formally organized June 9th. St. Joseph's Church (Roman Catholic) consecrated June 21st. Church-bells tolled July 23d, in observance of the death of ex-President Grant. The City Council held a special meeting and passed resolutions of respect, and on the 8th of August commemorative services were held in the Coliseum, business being generally suspended. The large brick building owned by Lucius Beebe, and occupied as a glove-kid and morocco manufactory, corner of Western Avenue and Federal Street, destroyed by fire September 3d, the loss being seventy-five thousand five hundred dollars. A heavy thunder-shower, October 3d, flooded several business places on Monroe Street and vicinity and delayed railroad trains.

1886. On Easter day, April 25th, Saint Stephen's chimes rang for the first time. Terrific earthquake at Charleston, S. C., August 31st; much suffering was occasioned, and contributions for relief were sent from all quarters; Lynn contributed \$2060, and Saint Stephen's Church sent a separate sum of \$77 towards repairing the shattered tower of the venerable Saint Michael's. President Arthur died November 18th, and on the day of his burial, November 22d, marks of respect were shown by closing the pub-

lic offices, tolling bells, raising flags at half-mast and the performance of a dirge by Saint Stephen's chimes. Society of the New Jerusalem (Swedenborgian) formed. French Catholic Church organized.

1887. February 25th, President Cleveland sent to the United States Senate a message vetoing the bill, passed by Congress, appropriating \$100,000 for the erection of a post-office building in Lynn. Some indignation was expressed, but business men generally were disposed to view the President's reasoning with candor, and the unlucky slip with resignation.

Henry A. Breed, a well-known citizen, died April 15th, aged eighty-six years and eleven months. He was a native of Lynn, and commenced an active business life about 1819, did a great deal in the building line and was zealous in forwarding improvements of almost every kind, endeavoring, in some notable instances, to introduce new industries here. Being of a sanguine and somewhat credulous turn, and withal attracted by projects of a speculative character, he had serious ups and downs during his whole business career, always, however, maintaining a most respectable position, by his genial manners, his readiness to aid the unfortunate and other excellent qualities. His business prostrations were undoubtedly sometimes attributable to over-confidence in his own ability to "read" the characters of those with whom he dealt; but more often to the shrewder reading, on the other side, of those not half so honest as he. He was one of the founders of the Unitarian Society, and his connection was not severed till the hand of death interposed. For many years he was a member of Mount Carmel Lodge of Free Masons, and was likewise an accredited member of the fraternity of Odd Fellows.

On Wednesday, June 1st, was opened, under the auspices of the Grand Army, Post 5, at the Coliseum in Summer Street, a novel and interesting exhibition of the powers of electricity, especially as applied to industrial mechanism. The Governor of the State was present at the opening and many other prominent persons. The exhibition continued a month, and gave much satisfaction to the large numbers who attended. James N. Buffum, twelfth Mayor of Lynn, aged eighty, died June 12th. On Saturday, June 18th, Robert E. Lee Camp 1, Confederate Veterans, of Richmond, Va., visited Lynn by invitation of General Lauder Encampment, Post 5, of the Grand Army of the Republic. The visiting party had been spending a day or two in Boston, and numbered nearly two hundred, thirty of whom were ladies. About seventy-five of the Veterans, with some ten of the ladies, arrived in Lynn early in the day, and were cordially received by the Lynn Post, which had some five hundred men in line. The weather was pleasant and the day a notable one, business being universally suspended, and the streets thronged with all classes of people. There was a grand procession, with military companies and bands of music. The city authorities took part in the

proceedings, and there was a banquet on the Common. Early in July a delegation of Post 5, numbering one hundred and sixty, made a return visit to the Confederate soldiers, and in Richmond and other places received enthusiastic greetings, with many tokens of restored brotherhood. Edward S. Davis, eighth Mayor of Lynn, died August 7, aged seventy-nine. On the 11th of September a fire occurred in the stable of J. B. & W. A. Lamper, foot of Pleasant Street, in which nineteen horses perished. Dr. John A. McArthur, much esteemed as a man and physician, died September 28, aged fifty-seven.

LYNN REGIS.—It is within the knowledge of the writer that some good people of the ancient borough of King's Lynn now take a lively interest in what pertains to our own Lynn, which, during its comparatively short life, has so far outstripped its prototype, in population at least. They appear to regard us as a sort of vigorous child, a little presumptuous, perhaps, but one in whose prosperity they may delight, as if in some mysterious way it contributed to their honor. It is but a few years since they learned anything of us. Less than fifteen years ago a lawyer there assured the writer that to him our Lynn was only known through Longfellow's "Bells of Lynn."

The celebration of our Two Hundred and Fiftieth Anniversary, to which some of the authorities there were invited, had much to do with rendering our name familiar. And then the Christian sympathy engendered by the giving and receiving of the stone from the ancient wall of stately old Saint Margaret's, to be wrought into the rising wall of Saint Stephen's, was a significant occurrence.

It is true that not a large number of our early settlers came from that place; but there were one or two of more than ordinary family connection. It is not necessary to here speak of the eminent Whiting, through whose instrumentality the names of the places were made identical; nor of some others elsewhere named. But it may be interesting to note in passing, that Richard Hood, ancestor of George Hood, our first mayor, who settled on Nahant Street, was from Lynn Regis. Several old names common in both places could be mentioned—a fact which, though not conclusive evidence of near family connection, are yet strongly indicative of kinship. For instance: There was a Thomas Lighton, mayor of Lynn Regis in 1476; and one of our most active and enterprising settlers was Thomas Lighton, who located near Saugus River in 1635. Edward Baker was mayor of the borough in 1550; and from Edward Baker, who came hither in 1630, Daniel C. Baker, our third mayor, descended. Benjamin Keene (a later name with us) was mayor of old Lynn in 1683. In 1737 "Charles, Lord Viscount Townsend, was Lord High Steward of Lynn Regis." He undoubtedly belonged to the same Townsend family with Thomas Townsend, who came from Norfolk and settled as a farmer at an earlier date, and of whom many

descendants remain here and elsewhere in New England. And by the way, at that date, 1737, the chief officials under Townsend were a recorder, thirteen aldermen, eighteen Common Councilmen, a town clerk, treasurer, chamberlain, sword-bearer, four sergeants at mace and five musicians, with blue cloaks trimmed with gold and badges, a jailer, two beadles and a bellman. Our city government is not organized exactly after that dignified model, which is here presented merely for comparison by the curious. Such genealogical and municipal connections are really of little importance, but the latent interest that all possess in such tracings give them a sort of charm. In the case in hand, it is thought they are sufficient to justify the occupation of space enough to recount a few prominent facts in the history of our ancient prototype.

Lynn Regis, King's Lynn, or, as it is commonly called by its own people, simply Lynn, is an interesting old place on the river Ouse, in Norfolk, a maritime county that has ever maintained its reputation for loyalty and aristocratic pride. Many illustrious Englishmen have been born there, and a long list of distinguished men have represented her in Parliament—several of them statesmen of world-wide reputations. Sir Robert Walpole was elected for Lynn, in 1702. He soon became Secretary of War, then Secretary of the Navy, and finally, after a brief period of eclipse, attained positions of still greater dignity; and, as has been remarked, for a series of years "his life may be said to be the history of England." Canning, too, sometimes called the most eloquent and sagacious statesman of his day, was elected to represent Lynn. Lord George Bentinck was returned for Lynn, in 1826, and continued her representative till his death. The Catholic Emancipation and Reform Bills had his support. He subsequently became the acknowledged head of the Conservative party, and was what we now call a protectionist. But he was never an over-strict partisan. On the death of Lord Bentinck, Stanley, Earl of Derby, was elected for Lynn. To his great ability in the management of public affairs is largely attributed the surrender of the East India Company to the crown. During his colonial secretaryship the great Sepoy revolt was brought to a close. On the decease of his father, in 1869, he entered the House of Lords. The able and accomplished Governor of Madras at the present time, 1886, was for many years Lynn's representative in Parliament. Other eminent representatives of old Lynn might be named, but the list need not be extended. What has been said may not be of great interest, but it affords ground for the question, When will our own Lynn be represented by such men in the councils of the nation? By the presentation of worthy examples a spirit of noble emulation may be stimulated.

From this ancient borough and its vicinity came some of the most valuable New England immigrants. And descendants from old Norfolk families are now

found in every direction, though, as just remarked, not a large number came to our own home. In Winthrop's company, which arrived at Salem in 1630, were a number of substantial Norfolk farmers. Says the careful Mrs. Jones: "It is not alone the relations of Coke and Roger Williams which have given to some spots in New England and elsewhere a flavor of this island's eastern shore. If it were sought to trace such international links, Norfolk would be found to have thrown out many threads across the water, which have attached it invisibly but absolutely to American ground."

Sandringham, the seat of the Prince of Wales, to which he retires for needed rest, is in Norfolk, almost within the territorial limits of Lynn. It consists of something more than eight thousand acres, and is in a high state of cultivation and adornment. It was in this princely abode that the royal heir so long lay between life and death when stricken by typhoid, in the dreary weeks of November, 1872. It was there, too, that the joyous event of the arrival of his son, Albert Victor, at the age of twenty-one, was recently so enthusiastically celebrated. There, likewise, was the last Christmas, 1886, celebrated in right royal style. The Prince and Princess were both present. To the laborers and cottagers on the estate were prime joints of beef distributed to the amount of nine hundred and eighty pounds. How much English beer and other usual Christmas adjuncts were added must be left for the imagination, as nothing appears in the account at hand of the entertainment.

A brief chronological statement of events during an interesting portion of the history of our venerable archetype must close the present record.

A. D. 1100. St. Margaret's Church founded by Herbert, the first Bishop of Norwich, in expiation of his simony. It was from the wall of this ancient temple that the stone which, with its friendly inscription, now rests in the vestibule of our own St. Stephen's was taken. It was presented by the authorities of St. Margaret's when St. Stephen's was in process of erection, 1880, and brought over by Col. R. G. Usher. The inscription reads, "St. Margaret's Church, Lynn, England, to St. Stephen's Church, Lynn, Mass., U. S. A., 28th June, 1880."

1204. Lynn made a borough town with burgesses, in this, the sixth year of the reign of King John. And in 1268 it was made a mayor-town.

1469. King Edward IV. came to Lynn with a great retinue, took shipping and went to Flanders. One of the most interesting relics now remaining in Lynn is the ruin known as the Chapel of "Our Lady," picturesquely situated on an elevation in the beautiful "Public Walks." The visible parts, those above ground, which were built under a license granted in 1482, form a superstructure to the lower, underground parts, which were built at an unknown and much earlier period. The structure is small, but bears evidence of having originally been an elaborate and

richly-adorned shrine; and was probably established for the entertainment of wandering pilgrims, and as a sacred asylum from all secular intrusion—a sanctuary. It was in this retreat that King Edward is said to have lodged when he reached Lynn on his way to Holland, in 1469, his retinue finding quarters elsewhere. It will be remembered that these were the times of the bloody strife between the houses of York and Lancaster, and that he was son of the Duke of York. While here, in the asylum of "Our Lady," he was safe.

1458. Mention is this year made of a boy choir in St. Margaret's Church.

1498. King Henry VII., his Queen and Arthur, Prince of Wales, visited Lynn, and were entertained by the Augustine Friars. He came in state, with a numerous retinue. The Augustine Friars were a mendicant order, much of the character of the Jesuits of the present day; were a learned body, and mingled more in society than most other orders. They settled in Lynn about 1275, and continued till 1539.

1519. Cardinal Wolsey visited Lynn, attended by many lords and gentlemen. It was now that the celebrated prelate was in the zenith of his glory, held the Sees of Bath and Wells, of Worcester and Hereford, together with the rich Abbey of St. Alban's. But disappointment in his ambitious yearnings soon overtook him; his downfall came; and in about ten years after his visit to Lynn death closed his eventful career.

1531. A maid, for poisoning her mistress, is boiled to death.

1535. A Dutchman is burnt in Lynn market-place for heresy.

1536. The Carmelites, the Dominicans, the Augustines and the Franciscans, four orders of friars, totally suppressed in Lynn.

1546. All the streets of the town paved. The guilds and chantries all suppressed, and the lands belonging to them forfeited to the King, Henry VIII.

1549. Several rebels executed at Lynn.

1553. Lady Jane Gray proclaimed Queen of England, at Lynn, by Lord Audley.

1561. Popish relics and mass-books burnt in the market-place at Lynn.

1566. The first chime of bells placed in the tower of St. Margaret's Church. This seems to have been a set of five bells, the largest of which could be heard ten miles off. Some years after the number was increased to eight, and in 1887 to ten, the Mayor, on the occasion of the Queen's jubilee presenting one, naming it "Victoria," and the mayoress one, naming it "Albert." They were first rung on the jubilee day, June 21.

1567. A Dutch ship, then lying in the harbor of Lynn, shot down the spire of St. Margaret's Church and several crosses.

1568. Popish vestments, relics, crucifixes and beads burnt in the Lynn market-place.

1574. The plague prevailed in Lynn.

1575. A severe earthquake felt in Lynn.

1576. Queen Elizabeth visited Norfolk in August.

The corporation of Lynn presented to her a beautiful purse, wrought with pearl and gold, and containing a hundred old angels, the whole value being two hundred pounds. On the 16th of the month, in her progress through the country, she dined at Bracon-Ash Hall, being entertained there by Thomas Townsend, Esq., who, no doubt, was grandfather of Thomas Townsend, who came over to our Lynn, in 1636, and settled as a farmer, near the iron-works. He was a cousin of Governor Winthrop. The wife of Thomas, the entertainer of the Queen, received from Her Majesty the gift of a beautiful gilt bowl in acknowledgment of the hospitality she had received. Daniel Townsend, one of the four Lynn men killed at the battle of Lexington, was a lineal descendant. Something more relating to the Townsends may be found in the sketch of Lynnfield.

1588. The "Feast of Reconciliation," so called, established in Lynn. This was a meeting of the mayor, aldermen, Common Council and ministers, "in order to settle peace and quietness between man and man, and to decide all manner of controversies." It seems as if some such institution might in our day settle more satisfactorily such controversies as fester in our inferior courts. And perhaps labor troubles might come in for adjustment.

1590. A woman named Margaret Read burnt at Lynn for witchcraft. In 1598, Elizabeth Housage; in 1616, Mary Smith; and in 1645, Dorothy Lee and Grace Wright were hanged for the same offense.

1605. A great fire occurred in High Street, Lynn, a man, his wife and three children perishing in the flames.

1621. A man, while ringing the great bell of St. Margaret's, was drawn up by the rope and killed.

1626. Lynn received from London several large cannon for the defense of the town, and St. Ann's fort was built.

1629. A stool for weighing children was this year erected at the charge of the corporation.

1636. Fourteen vessels belonging to Lynn were this year lost by the violence of storms. The plague also prevailed, insomuch that no market was held. Temporary erections were prepared for the afflicted ones of the poorer classes under the town walls.

1642. Lynn received seven pieces of brass cannon from London, for the more effectual armament of the fortifications. In August the town was besieged by the Parliamentary forces and suffered occasional bombardment till September 16th, when it was surrendered by agreement, only four having lost their lives and a few being wounded. The town was required to pay to the Earl of Manchester's army three thousand two hundred pounds. It soon became a Parliamentary garrison town, and so continued till 1652.

1643. Puritanism having gained the ascendancy,

the "curious painted glass" in St. Margaret's Church was ordered to be taken out and plain glass substituted.

1654. Cromwell renewed and enlarged the charter of Lynn. And in the churches the arms of the Commonwealth were substituted for the royal arms.

1655. Lynn again made a garrison town.

1660. The restoration celebrated. Three hundred young maidens, tastily arrayed in white, parade the streets. There was great rejoicing in Lynn at the restoration, for the place had always remained essentially loyal. The oaths of allegiance and supremacy were readily taken by the leading citizens, and the train-bands indulged in musters and military shows. Many of the former customs and observances were revived; among them the early divine service at St. Margaret's—five A. M. in summer and six in winter—which had been suspended for ten years.

1682. Two new May-poles set up in Lynn.

1686. Great rejoicing in Lynn at the erection of a statue of King James II.

1745. February 8th, Eugene Aram, that remarkable individual whose learning and fate have made him historical, commits the murder for which he was finally executed and his body hung in chains. He lived in Lynn, was teacher in the academy there at the time of his arrest, in 1759, and so much beloved by his pupils that many tears were shed when the constables,

"Two stern-faced men set out from Lynn,
Through the cold and heavy mist,
And Eugene Aram walked between,
With gyves upon his wrist."

The school is still flourishing. Upon the leads of Gray Friars' Tower, which yet remains one of the most conspicuous objects in Lynn, and which is near the school, may yet be seen the name of Aram, scratched, it is said, by his own hand. Butwer's novel, entitled "Eugene Aram," was probably suggested by the familiarity of the author with the legends and surroundings of Lynn, he having an aunt residing there.

The foregoing will be sufficient for a glimpse at the history of our ancient prototype, with some of the vicissitudes to which she has been exposed and some of her doings characteristic of the times. But to occupy space with events of later date would hardly be justifiable.

CLOSING REMARKS.—In bringing this imperfect sketch of Lynn to a close, it may be remarked that the several topics introduced have been as fully treated as the allotted space would allow. And in the choice of topics it has been the endeavor to select such as on the whole would prove most interesting and best fitted to illustrate the principal object in view.

Glimpses of its situation, its beautiful surroundings and natural resources, have been given; the labors, sacrifices and sufferings of the people in its earliest days, their leading characteristics, hopes, enjoyments and expectations, have been touched upon; and the

progress onward to the present day of comfort, thrift and attainment in wealth, education and the higher arts of life, has been traced—all according to the prescribed limits and the ability of the writer.

Something of the character of the people in the different periods is to be found in the numerous personal notices scattered through the pages. And the employments on which the prosperity of the place has grown have not been overlooked. Considering the condition in which we now find ourselves, a little self-gratulation may be pardonable. The aspect of things as they now exist may be called reasonably auspicious, and the prayer is that they may ever continue so, while generation succeeds generation as wave succeeds wave upon our shore, ceasing only when those waves cease to roll.

Could one of the old settlers arise—for instance the intelligent Sadler, whose modest habitation nestled at the foot of the hill by which the writer is penning these closing lines—what would be his astonishment! The natural features of the surroundings, the rocky ravines, the green hills, the meadows, the placid river, the sunny isles have undergone but little change. But the plain which he then overlooked, stretching from his feet to the sea, with the smoke of its few rude structures curling upward among the trees, now bears a wide-spread city. And the great waters beyond, which then presented an unbroken field of blue, are now traversed by floating craft of all descriptions, from the huge steam-puffing leviathan that bridges the watery way to his old home on a far-off continent, to the tiny pleasure-boat. Over the then silent hills and through the lonely valleys now echo at early morning the awakening whistles summoning to labor in the numerous factories, at evening repeating their shrill notes as the hours of labor close.

It can well be imagined that he often seated himself upon the mossy crest of the cliff that still bears his name, and which towered above his lonely habitation, at evening twilight,

“When every sound of day is mute
And all its voices still,
And silence walks with velvet foot
O'er valley, town and hill,”

and when

“The music of the murmuring deep
Sooths e'en the weary earth to sleep,”

there to meditate till the darker hours of night drew on, the primeval stillness disturbed only by the rustling of the breeze in the leafy woods, or haply at intervals by the bark of the fox, the howl of the wolf, the hoot of the owl or the melancholy note of the whip-poor-will. Could he then in dreamy forecast have imagined a time like the present—a time when

“Over the marshes mournfully
Drifts the sound of the restless sea,”

forming an eternal foundation harmony to the hum of a busy city, the ceaseless rumbling of railroad trains speeding along with fiery wake and echoing shriek,

and the many other then unknown sounds that now succeed the feverish palpitations of bustling day? As his eye scanned the dark horizon, then unrelieved even by the glimmer of a coast light, could he have imagined that a brightly-lighted city, with its central electric illuminations and its outposts of lambent gas, would ever appear within those murky borders?

But after all our boasted privileges, inventions, progress and attainment—after all the revelations in philosophy, science and mechanics—after all our steam-driven machinery, telegraphs, telephones, gas and electric lights—are there better, wiser, nobler men and women—better rulers, statesmen, philanthropists—better fathers, mothers, children—than there were in days of yore? Probably not. Mankind preserves about the same old average, and very likely will, to the end of time. While we look with compassion upon what we call the unprogressive state of the races below us, are we sure that those above us do not look with pitying eye upon our own condition? Yet to come down to our own limited case, there appears reason for congratulation in that the great rank and file of the community are at this day in a physically better condition than at any former period; better fed, clothed and sheltered; better provided with the necessities, conveniences and comforts of life. Some pseudo-philosophers are wont to boast that this generation has reached a higher plane in all respects than any before known. Let them take comfort in the belief; but the true moralist may well maintain that the plane of perfection is yet a great way off. So let us heed the words of the old dramatist:

“*Fuscal.* How, now, Sir Francis!
Knowest thou not there is a niche,
A blessed niche, provided for each one?
The virtuous and diligent will gain it;
The vicious and the slothful, never!”

BIOGRAPHICAL.

ALONZO LEWIS.¹

The Lynn Bard was born at Lynn, Mass., on the 28th day of August, 1794, and the house in which he was born is yet standing in Boston Street, on the corner of Robinson. He was descended on his father's side from an old Welsh family, a family that traces its lineage, through generation and generation, back to the native princes of Wales, princes that reigned years anterior to the conquests of the Angles and Saxons, and even before the Romans made their appearance in Britain. As the Angles and Saxons absorbed the ancient Briton, so did they, in their turn, become absorbed by the later Normans, and the old Welsh Llewellyn got, in the course of time, to be translated into the more modern Lewis. The first of

¹ By Ion Lewis.

Horzo Lewis

the family to appear in this country was William Lewis, who came here from Glamorganshire, South Wales, in 1636. There is more or less French—probably Norman French—influence in the modern family, that undoubtedly crept in at the Norman invasion, and is manifest in the family motto, “*courage sans peur*.” And the evidence of a participation in the crusades under Richard is seen in their crest, a Saracen’s head. The Lewis coat of arms is a lion rampant on a field azure. The descendants of this William Lewis are not very numerous, most of the name in this country being of English descent. Governor Morgan Lewis, of New York, son of Francis Lewis, a signer of the Declaration of Independence, was of the same family, although the latter came to this country a century later than William Lewis. In the matter of genealogies, however, anything ante-dating the Norman conquest, or even the fourteenth century, is liable to dispute.

Mr. Lewis received a sound and thorough education, but not content with the mere instruction of the schools, he pursued his studies, and with vigor, through the whole extent of his life. As a linguist he acquired considerable proficiency in the commoner modern and ancient languages. He had an evident delight for study, and loved to teach, being at one time head-master of Lynn Academy, and at others, of one or two grammar schools in Lynn. In 1831 he established a young ladies’ school in Boston, but does not seem to have continued it long. In 1835 he abandoned the profession of teacher.

From his early youth he evidenced a strong poetic temperament, and several of his poems were written at an early age, some bearing the date of 1811, Mr. Lewis being then but seventeen years of age. In 1823 he collected and printed his first volume of poems, a book of two hundred pages, but, as he says in the preface, more for private than for public circulation. This volume contained many of his best poems, including “Farewell to my Harp.” In 1829 was published the first edition of the History of Lynn, a work of immense labor. The work was the first in the field of local histories, and is called to this day by good authorities one of the best local histories ever written. Two years later, in 1831, appeared another volume of poems, containing many of the 1823 edition and others written in the interval. Another edition of the history was published, and in 1834 appeared the last volume of poems, which immediately became very popular and went through fourteen editions, being most favorably received by the critics both in this country and in England.

In addition to the above Mr. Lewis published a small English grammar, and another small work on geometry, beside a descriptive sketch called, “A Picture of Nahant.” During his whole life he wrote much for the newspapers and magazines of the time, both in prose and poetry. He edited an anti-slavery paper in Lynn before the appearance of the *Libera-*

tor, and was once, during the absence of Mr. Garrison, in editorial charge of that paper, as he was also of the *Boston Traveler*, then the *American Traveler*. He was a member of the Massachusetts Historical Society, and a corresponding member of many other historical bodies.

In 1851 he was requested by Ticknor & Co. to write a history of Boston, but does not seem to have complied with the request, as the only thing of the kind of his that I have discovered is a sort of chronological arrangement of the principal events in the history of Boston, called “Annals of Boston.” He evidently contemplated another historical work, as a letter of Mr. Whittier’s to him in 1833, says: “I hope thee will decide to go on with thy ‘Witchcraft.’ I certainly think it would be very popular.”

That he was more happy in his prose than in his poetry no one can gainsay, and had he written more of the former, and that of a less local nature, his fame would certainly have been less circumscribed. Many of the descriptive parts of the “History of Lynn” are very beautiful, and I know of people that every now and again take up the history and read and reread for the mere pleasure of reading. In the matter of improvement of his native town he took great interest, and many works of a local nature were conceived and carried through, almost entirely by his unaided efforts. The construction of the break-water and road along Lynn Beach are due to his efforts, as was also the erection of the light-house on Egg Rock.

In the anti-slavery movement Mr. Lewis took a most active part, being second vice president of the first Anti-Slavery Society, of which William Lloyd Garrison was secretary, and furthering the cause by his writings for the periodicals of the time.

He was naturally of a religious nature and lived a consistent Christian life, often denying himself that he might minister to the necessities of others; and exercising that grandest gift of charity that was lacking in the treatment of him by others. He was for many years the only churchman in Lynn, and walked to St. Peter’s, Salem, every Sunday for service. At one time he applied to Bishop Griswold to be admitted as a candidate for Holy Orders, but does not seem to have carried out his first intention. He continued a churchman for the greater part of his life, being prominent in the establishment of St. Stephen’s Parish, Lynn, and was one of the first five incorporators. Before the establishment of St. Stephen’s he held services at Glenmere, himself acting as lay reader.

Mr. Lewis was twice married, his first wife being Frances Maria Swan, of Methuen, by whom he had six children, of whom two, Llewellyn and Arthur, are now living. For his second wife he married Annie Hsley Hanson, of Portland, Maine, by whom he had two children, Ina and Ion, the former dying some months before her father. For the latter part

of his life Mr. Lewis lived in the picturesque cottage in Beach Street, close to the water's edge, a place where he loved to sit and study, and where, on the 21st day of January, 1861, he passed away, at the very beginning of that great struggle which resulted in the accomplishment of an object for which he had striven the greater part of his life.

I have here attempted no extended biography, and would say to those who desire more minute particulars and personal reminiscences to consult "The History of Lynn," as continued by Mr. Newhall and published in 1864; and also, Mr. Johnson's charming "Sketches of Lynn," published a year or two ago.

JAMES ROBINSON NEWHALL.

The brief personal sketch of the individual whose name is placed above, which appeared in the "Centennial Memorial" of Lynn, published by order of the City Council, in 1876, is introduced in these words: "It is a delicate task for one to write of himself, unless he has that in his history the worthiness of which is patent and not to be questioned, it requiring no poet to assure us that we seldom 'see ourselves as others see us.'" That "delicate task," however, fell to his lot, and to a similar behest, in the present case, he submits.

The name appeared in the "Centennial" at the dictation of the Committee of the Council having the matter in charge, who expressed a desire that sketches of the "two historians," as they were pleased to call them, should be inserted. The fitness of thus honoring the memory of Mr. Lewis could not be questioned, whatever might be said of the one whose name had been so long associated with his in delineating the progress of Lynn, the native and ancestral home of both. The sketch referred to will form the basis of the one now in hand. The supercilious antibiographer may magnify his virtues and the over-modest his errors; but the charm lies in the mean, from which, in the present case, there is little inducement to stray.

The subject of this notice was born in Lynn on Christmas day, 1809, in the old Hart house, that stood on Boston Street, at the southwest corner of Federal, the same which, on the Centennial Fourth of July, 1876, disappeared in a patriotic blaze, amid the shouts and cheers of Young America. All his genealogical lines run back to early Lynn settlers. His father was Benjamin Newhall, who was born in 1774 and died in 1857; Benjamin's father was James, born in 1731, died in 1801; James' father was Benjamin, born in 1698, died in 1763; Benjamin's father was Joseph, born in 1658, died in 1706; Joseph's father was Thomas, born in 1630, died in 1687—the first white child born in Lynn. His mother was Sarah, a daughter of Joseph Hart, who descended from Samuel, one of the first engaged at the ancient iron works established near Saugus River in 1643, said to

be the first in America. Both his grandmothers were granddaughters of Hon. Ebenezer Burrill, so conspicuous in colonial times as a Representative and Crown Counselor, and who was a brother of John Burrill, the eminent speaker whom Governor Hutchinson compares with Sir Arthur Ouslow, who was considered the most able presiding officer the British House of Commons ever had.

At the age of eleven the writer left the paternal roof, with his worldly possessions in a bundle-handkerchief, to make his way in the wide world, his mother having died a year or two before and his father having a large family to provide for.

But little worthy of mention occurred until the summer of 1824, when, having worked daily and attended various public schools, he entered the Salem *Gazette* office to learn the art and mystery of printing. And it is pleasing to remark that at the present time, 1887, may daily be seen in that venerable establishment the Hon. Caleb Foote, who at that time, 1824, was busy at the compositor's case. Mr. Foote, however, soon after dropped the composing stick for the editorial pen, an implement which he has wielded to this day with rare ability and acceptance. Would that all editors could realize, as he has, the dignity and responsibility of their public relations. His considerate suggestions and helpful directions to the typographical neophyte have, during these three-score years and three, been gratefully remembered.

After serving in the *Gazette* office for a few years, he felt desirous of gaining a better knowledge of book-printing than could be done in Salem at that time, and in furtherance of the desire procured a situation in Boston. Things so prospered that before attaining his majority he was installed foreman of one of the principal book offices there, his duties in a general way being to direct the work and read proofs. Of this period many pleasant recollections are retained. In the office were printed a large number of classical and scientific works, and some of the most eminent men of the time frequently dropped in. Anecdotes almost without number of such men as Dr. Channing, Dr. Bowditch, Francis J. Grund, the Cambridge professors, N. P. Willis, Samuel G. Goodrich, and shoals of the less conspicuous, but not less ambitious literary aspirants, could be related.

While still under age, in the roving spirit of young printers, he drifted to New York, and soon after his arrival found employment in the *Conference* office, the largest then in the city; and with perhaps a little excusable, if not commendable pride, may refer to his reputation there as being the fastest type-setter in the establishment. This was in 1829. And he has to the present day so indulged his early love for the printer's case as for many years to keep a font or two of type, wherewith to amuse or occupy a vacant hour. Nearly two thousand stereotype pages can be to-day shown as the fruit of these semi-recreative odds and ends of time, much of the matter having

James R. Venable

been set up without having been previously written. As to the quality of the literary products, he cannot, of course, speak. It may, however, be admitted in regard to some, at least, that if worth is to be measured by pecuniary return, it was not very great. Yet, on the whole, there has been much reason to be satisfied, looking at a "fair average." Exposure to the undeserved adulation of sympathetic friends and the equally undeserved severity of vindictive critics is supposed to be the fate of all writers, great and small. It is well remembered that once, on the eve of the publication of a notable work, the writer overheard a debate between two of the learned editors, of this tenor: "Why, you have given nothing from ——," said one, naming a writer by no means obscure. "Well, I know that," was the reply, "but he never wrote anything worth a place in our book." "That is true," was the rejoinder; "but the omission would greatly offend him and his friends, and might lead to damaging reviews. We must have something." And something was had, prefaced by a laudatory note. It will, of course, be granted that the most ignorant critic knows more than the most learned author.

At the age of twenty-two the writer returned to his native place, and soon became engaged in the office of the *Mirror*, the first printing establishment in Lynn, commenced about five years before by Charles F. Lummus, and at that time still owned and conducted by him. It was very poorly supplied with material. There was but little work and that not well done, and it was not long before the proprietor had succeeded in sinking the little means with which he began. The writer purchased the office and commenced the publication of another paper, but was soon satisfied that much labor would yield but a scanty return, and was induced to let the new paper speedily follow the fate of the old.

After busying himself for a few years in various ways, chiefly in connection with printing and the book business, and once or twice a year taking a lecturing tour, he again found himself in New York, engaged in the editorial department of a daily journal and in writing for one or two weeklies. Of this interval many agreeable recollections are retained, among them pleasant ones of the genial young gentleman, Walter Whitman, now the world-renowned Walt Whitman, the poet, who was engaged on the same daily; and the friendly suggestions of the venerable Major M. M. Noah, so long and so fitly called the Nestor of the American press, will not be forgotten.

In 1854, meeting a friend who had for some time been in practice as a member of the Essex bar, he was kindly invited to take a student's seat in his office. The invitation was accepted, and the study of law commenced.

Completing a regular legal course, in May, 1847, he was admitted to the bar in Boston, and forthwith commenced a practice in Lynn, which soon became

quite satisfactory. He was presently commissioned as justice of the peace and notary public, which offices he still holds. On the 24th of August, 1866, he was commissioned as Judge of the Lynn Police Court, with which he had been connected as special justice from the time of its establishment, in 1849. He was likewise appointed a trial justice of juvenile offenders when that jurisdiction was established. The judgeship he resigned August 24, 1879.

At the time he commenced practice there were but three acting lawyers here,—namely, Jeremiah C. Stickney, Thomas B. Newhall and Benjamin F. Mudge. Mr. Stickney was one of the leading lawyers in the county for many years. He died August 3, 1869, aged sixty-four years. Mr. T. B. Newhall commenced practice here in 1837, and now, 1887, after fifty years, may still be found in his well-worn office chair. Of him a personal sketch appears elsewhere in this work. Mr. Mudge opened his office in 1842, removed to Manhattan, Kansas, and died there November 21, 1879, aged sixty-two years. He was our second Mayor, inaugurated in 1852. The number of Lynn lawyers has increased during these forty years (1847-87) from three to about forty, while the population has hardly quadrupled. Is this to be taken as evidence that business has increased in a corresponding degree or as evidence that there has been a remarkably increasing love for litigation?

To return from this divergence. The subject of this sketch has not been much in public office, excepting as connected with the judicial department, though he has served as chairman of the School Board and president of the Common Council.

In the autumn of 1883, at the age of seventy-three years, he took a tour of several months abroad, visiting a number of famous cities and renowned places in Europe, and extending his trip to interesting Levantine points, to Algiers and Malta, on the Mediterranean; to Alexandria, Cairo and the Pyramids in Egypt. Though the tour was undertaken alone—for if alone one can, without let or hindrance, go how, when and where he pleases—he everywhere received such gratifying civilities as could only lead to regrets that he had not earlier in life thus experimentally learned that, after all, men everywhere will, on the whole, rather contribute to make others happy than miserable. Such experience increases faith in human nature, and ought to diminish self-conceit.

Being interested in historical researches, he published, in 1836, the "Essex Memorial;" in 1862, "Lin, or Jewels of the Third Plantation;" in 1865, "The History of Lynn," comprising the admirable work of Alonzo Lewis, with a continuation embracing some twenty-one years; in 1883, an additional volume of the "History of Lynn," with notices of events down to the year of publication and other matter on various topics; in 1876, by desire of the City Council, he prepared the "Centennial Memorial of Lynn," embracing an historical sketch and notices

of the mayors, with their portraits; and in 1879, also by desire of the City Council, he prepared the work entitled "Proceedings in Lynn, June 17, 1879, being the Two Hundred and Fiftieth Anniversary of the Settlement." To these may not improperly be added the sketches of Lynn, Lynnfield and Swampscott, which appear in this "History of Essex County."

If there is any achievement in a literary way with which the writer fancies that he has reason to be satisfied, it comes through his endeavor to contribute something calculated to allure to habits of industry, frugality, temperance and those concomitant virtues, the sure foundation of prosperity, and the sure way towards honorable position. A great many brief biographies and personal sketches of individuals in the various walks of life have appeared scattered about his pages—whether poorly or skillfully drawn is not the question here—sketches of individuals who have acted well their part in promoting the prosperity and extending the good fame of their home, as well as advancing their individual interests. And these personal sketches have a two-fold purpose: first, to perpetuate the names of deserving ones, and, second, to furnish, by their example, encouragement for others to follow on in a like good way. Yet we should all realize that the attainment of mere worldly fame, position or wealth is not the chief purpose of life, and that at the end we shall find there was no great gain in worshipping false gods all our lives.

One other thing has been attempted by the writer, and that is, to illustrate to some extent the romantic and legendary side of Lynn's history. There is a rich store in that direction, and oftentimes it is difficult to distinguish between truth and fiction or know exactly where to draw the line. But the aim has always been to clearly indicate the character of the matter in hand and lead no one astray.

In October, 1837, the writer was united in marriage with Miss Dorcas B. Brown, only daughter of Captain William Brown, of Salem, and by her had one son, who died at the age of ten, his mother having died soon after his birth. In 1853 he was again married, the second wife being Mrs. Elizabeth Campbell, daughter of Hon. Josiah Newhall, of Lynn, and that relation still, 1887, remains unsevered.

The writer trusts that nothing in the foregoing will tend to place him in the category indicated by our former townsman, Henry Clapp, when he said of Horace Greeley: "He is a self-made man and worships his maker," for in his life, as has been seen, few stirring incidents have occurred, no extraordinary adventures, no remarkable achievements. Whether anything of value has been accomplished is a question for others to decide. Nevertheless, it may be remarked in a general way that very few who are so long in the world lead such barren lives that nothing of usefulness or interest is found. And not unfrequently is it the case that the lessons to be drawn from the lives of those in the less prominent walks

are the most widely useful, for the great multitude are companions in those walks, and can the more readily appreciate the obstacles and perceive the snares that beset the way. Every one feels that he has a hand in shaping his own destiny, though it does seem as if

"Some were born to wealth or fame,
While others are mere Fortune's game."

But it is dutiful in all of us to follow the injunction of our rhyming old townsman, of eccentric memory:

"While traveling to the unknown land,
Let each lend each a helping hand,"

ever bearing in mind that

"What *might have been* can not be known;
What *was* we answer for alone."

[NOTE.—It was editorially suggested that this sketch and the accompanying portrait would more appropriately appear among the lawyers of the County. The privilege of being placed in that august company is fully appreciated, though the superior lustre there might be obscuring. But inasmuch as the writer has had a considerable share in illustrating Lynn's history and always earnestly desired her Godspeed, it seemed to him that the more suitable place was in the company of those whose enterprise, industry and dignity of character have so advanced the prosperity of their home and his.]

HON. GEORGE HOOD,

The first mayor of the city of Lynn, was a native of the town of Lynn, and was born on the 10th of November, 1806.

The Hood family is among the earliest mentioned in the annals of Lynn, being descended from Richard Hood, who emigrated from Essex County, in England, about 1640, and settled at Lynn. Dying in 1695, he left three sons.—Richard, John and Nathaniel. Richard, the eldest of these, falling heir to the "Nahant road" property—some thirty acres—now bounded in part by Nahant Street, afterwards exchanged it with Jabez Breed for certain land on the peninsula of Nahant, and went thither to live, and there his descendants have ever since resided. This Richard had a son Abner, who had a son Abner, who married Mary Richardson, and they were the parents of the subject of this sketch. While he was an infant the family removed to Nahant, and there, in the little village school, he received all his youthful intellectual training. He learned the trade of shoemaking, and at the age of twenty-two, in company with John C. Abbott, he went to the then far West to seek his fortune. They directed their course to St. Louis, Mo., at that time, in 1829, a small place. In a few days they were established in business, and within a month Mr. Hood, with a part of their stock, went down to Natchez, Miss., and commenced a branch establishment, which he continued to manage until 1835, the principal business, remaining, meanwhile, at St. Louis. In the last-named year he returned to Lynn and established a commission shoe and leather business in Boston, retaining, however, an interest in the western business till 1841. In his Boston business he continued till the time of his decease.

George Moore.

the hills with innumerable trees, many of which he planted with his own hands. He imported larches, maples, firs and pines in large quantities, planted acorns constantly in his walks about the estate, and succeeded in converting a rough and somewhat unattractive landscape into a variegated forest, through which winds an avenue of great beauty, bordered by deciduous and evergreen trees distributed with great taste, and constituting a charming combination of variety and luxuriance of foliage. The forest which Mr. Fay planted has now become a profitable woodland. The bare hills which he covered with Scotch larches, the rude stone walls and the waste pasture where, originally, there was only a growth of red cedars and huckleberry bushes, through which the approach to the house led, have given way to shade-trees of great variety, which now after forty years are in magnificent beauty. Huge rocks were drawn out of the barren soil, now verdant in lawn, grass-fields and rich crops. The place is one of the most picturesque in New England in natural beauty, and in its present condition is a memorial of the taste and genius of the man who developed and added to its attractions.

In addition to this extensive forest and ornamental tree-culture, Mr. Fay encouraged by precept and practice many of the most important branches of agriculture which belong especially to the practical farmer. While in England he had observed the importance attached to sheep-husbandry, for the production of coarse and middle wools, and for the supply of mutton as a healthful and economical article of food, at that time not in general use in this country. He selected from all the heavy and rapid-growing breeds in England the Oxford Downs, as larger than the South Down, and finer than the Cotswold; and from his large flocks he made for a long time a wide distribution throughout the country. In this branch of agriculture he was considered as authority; and in connection with it he encouraged the growing of root-crops, the most improved Swedes and Mangolds, which English flock-masters and cattle-breeders consider indispensable to their calling.

To the establishment of market-days in Essex County Mr. Fay gave early and earnest attention, and contributed much instruction on this system of trade, so common in England, through the agricultural press of the country. His attendance at the meeting of farmers was frequent. As a trustee of the Massachusetts Society for Promoting Agriculture, in which body, Robert C. Winthrop, George W. Lyman, Chief Justice Bigelow, George Peabody, of Salem, Charles G. Loring, Stephen Salisbury, George B. Loring, Leverett Saltonstall and others were his associates, he did good service, and edited the first issue of the records of the society. As president of the Essex Agricultural Society, he called around that association the most eminent patrons of farming known in the country, and did much to place it in the posi-

tion it now occupies. He had a sincere love of rural life, and although connected from time to time with business enterprises, he never forgot that agriculture is the foundation of all our prosperity, and that a knowledge of its economies and a taste for its pursuits add much to one's usefulness and happiness.

Mr. Fay was a man of great determination, strong impulse and wide observation. His natural powers were great. Highly favored by fortune, he never lost sight of the efforts required for the development of human enterprises, and was somewhat impatient of those theories which disturbed society and endangered its perpetuity and success. He lived in a time of great transitions, in which, although occupying no official position, he gave strong expression to his views and equal impress to his exertions. Early in the breaking out of the Civil War he organized at his own expense a company known as the Fay Guards, which did brave and honorable service in the great conflict. This company was attached to the Thirty-eighth Massachusetts, and was in the following engagements: Port Hudson, May 17 to July 9, 1863; Cane River, La., April, 1864; Mansion Plains, La., May, 1864; Winchester, Va., September 19, 1864; Fisher's Hill, Va., September 21, 1864; Cedar Creek, Va., October 19, 1864. Mr. Fay lived to see the glorious and happy termination of his country's trial.

Mr. Fay died in Liverpool July 6, 1865, leaving a widow and four children.

HENRY NEWHALL.

Henry Newhall was descended from one of the oldest and largest families in Lynn, his earliest paternal ancestor, Thomas N. (the son of Thomas, who came from England and settled in 1630), having been the first child born in the town. He was born March 10, 1797, and was the son of Winthrop and Elizabeth (Farrington). Winthrop Newhall was a tanner. Henry, having associated himself with his older brother, Francis S., in the morocco trade and manufacture, became a prominent merchant, the business of the firm being one of the largest in the town, having its headquarters in Lynn and Boston, with a branch house for a short period in New York. In 1850 ill health compelled him to retire from the firm, and it was several years, partly occupied in travel at home and abroad, before he was sufficiently restored to resume the responsibilities of business. Upon the death of his brother Francis, president of the Lighton (now Central National) Bank, in 1858, he was elected to the office and continued to hold it until his retirement in 1876, at the advanced age of nearly eighty years.

Henry Newhall belonged to a family marked for intelligence and capacity, and inherited those sterling qualities of mind and character that always command the respect and confidence of a community. His integrity, his quiet but penetrating insight into human

Henry Wendtull

Isaac Brad

D. C. Baker

nature, his firmness of character, his careful and intelligent judgment, together with his kind and friendly spirit, made him a most useful citizen, especially in business circles. He had, also, a broad and vigorous mind, and if there were any deficiencies of early education they were more than made up through his large and thoughtful reading, his keen appreciation of the best things in thought and life and his unabated interest in human affairs. Few business men were so well-read in the literature of history, politics, biography and fiction. He was never without a book at hand, and little of the current literature that was worth reading escaped his attention. Then he was known for independent and positive opinion, for which he had no lack of courageous and positive expression; at the same time he was most tolerant and considerate of others. He was a man of great sincerity and plain-spokenness, and his convictions had weight and influence with those with whom he was associated. In business relations he was remarkable for tact and discretion, and it was a matter of common remark that he never obtruded himself upon the interests of others.

One of his especial characteristics was a strong patriotism. And from the first he believed in anti-slavery, and, though prudent and conservative by nature, was an ardent supporter of the cause of humanity at a time when it was most unpopular. Indeed, he was a patient listener to every reform, an admirer of fair play in the advocacy of opinions and principles, and a believer in the honesty of human nature and the progressive tendencies of society.

In religious matters his convictions were not so much traditional as founded upon the dictates of conscience and reason. Of Quaker extraction, he was one of the leaders of the liberal movement in Lynn which culminated in the formation of the Unitarian Society, of which he was a constant and liberal supporter. The mottoes of his life may be said to have been sincerity, honor and fidelity, good-will and justice towards men, and there was nothing toward which he expressed a severer repugnance than their opposites.

He was a genial and companionable friend, and possessed unusually interesting powers of conversation.

He held few public offices, but was identified with most of the important business institutions of the city,—the Lynn Institution for Savings, the Lynn Gas-Light Company, the old Mechanics' Insurance Company, was president of the Exchange and Lyceum Hall Associations, held a number of offices under the old town government, and was one of the first commissioners of the Lynn City Hall and City Debt Sinking Funds, a benefactor of the Lynn Public Library in fact, a friend and adviser in all the business interests of the city.

In his old age his mind was remarkable for its vigor and clearness, while his warmth and kindness, his patience with sickness, his serenity and cheerful

temper drew around him a host of admiring friends. To the young he was as companionable as to the old. He died July 15, 1878, in his own home, situated upon Nahant Street, upon land that had been occupied by many generations of his ancestors, and was buried in Pine Grove Cemetery.

He married Ann Atwell, who died in February, 1863. His surviving children are Charles Henry and Sarah Catharine, wife of Benjamin J. Berry.

ISAIAH BREED.

Isaiah Breed was born in Lynn October 21, 1786, and was the son of James Breed, of that place. Like his father, he entered into the shoe business and pursued it successfully for nearly fifty years, becoming one of the most extensive and wealthy manufacturers in that busy and thriving town. Mr. Breed was one of the first directors of the Eastern Railroad, and president for more than thirty years of the Lynn Mechanics' Bank. He was also, at one time, a Representative in the State Legislature, and in 1839 a State Senator. He took an active interest in the welfare of his native town, and was one of the organizers of the Central Congregational Society, of which he was for some years a deacon. He was a liberal, public-spirited man, of great strength of character, and always distinguished in all the relations of life, as not merely an honest man, but one of deep convictions of duty and a high sense of honor. He was one of those sterling men who gave life and spirit to Lynn as a town, and so added to the wealth and population as to finally establish it as a city of enterprise and continuous growth.

D. C. BAKER.

The immediate ancestors of Daniel Collins Baker lived in Dighton, Mass., and were engaged in farming. Elisha Baker left his father's farm at an early age and went to Lynn, where he married Ruth, daughter of Samuel Collins. Both Mr. and Mrs. Baker were members of the Society of Friends. He had five children, of whom Daniel Collins, the oldest son and the subject of this sketch, was born in Lynn October 12, 1816. His early education was such as the town school of his native town, under the care of Master Hobbs, afforded, and afterwards, for a year and a half, he attended as pupil the Friends' Boarding School at Providence, R. I. At the age of thirteen he was apprenticed to the shoemaking trade, to which he applied himself with such an earnest desire to master its details that while yet a young man he established himself in the manufacture of shoes on his own account, and by his industry and skill soon built up a successful business.

From the manufacture of shoes he became interested in the leather and shoe finding trade, and became a partner in the firm of F. S. Newhall & Co., of Boston, in that business. In later years he resumed

the manufacture of shoes, and at the time of his death was doing business in the South, having a shoe house established in New Orleans. He died in New Orleans July 19, 1863, whither he had gone to gather up something of the fortune which the war had scattered and swept away. He married, December 19, 1838, Augusta, daughter of John B. Chase, of Lynn, and had three children,—William E., who married Lydia M. Marshall, and is an esteemed and successful merchant in Lynn; Helen A., who married A. Mitchell Collins, of Georgia; and Sarah E., who is unmarried.

Mr. Baker, aside from his legitimate business, always felt a deep interest in public affairs, and possessed qualities specially fitting him for their administration. In earlier times he was an active member of the Whig party, and his services were acknowledged by his nomination and election to various prominent positions. As a member of the Whig State Central Committee, which was always composed of the most useful men in the different sections of the State, he performed his full share in promoting the interests of the political organization which it represented. In 1849 and 1850 he was a member of the Massachusetts Senate, and in 1852 was a Presidential elector, and cast his vote for Winfield Scott. He took a leading part in the controversy, which resulted in the adoption of the act incorporating the city of Lynn, passed April 10, 1850, and as a friend of the charter was chosen a member of the first Common Council, and made its president. In 1853 he was chosen mayor over John B. Alley, his opposing candidate. In both of these positions he exhibited the highest qualities of an executive and presiding officer, and won the confidence and respect of both political friends and opponents.

As president of the Council his services were especially valuable in putting the wheels of municipal machinery, in the first year of the life of the city, successfully in motion. As a speaker he was logical and effective, and always ready without apparent preparation. As an administrator of public affairs, he was as prudent and economical as he was liberal and free in his private life. The public schools of the city reaped the advantages of the warm interest he felt in their welfare; perhaps all the warmer because his own opportunities for education in early life were not such as he felt every youth should possess.

He was also a member of the Bunker Hill Association, and his fondness for decorative gardening and for the choicest fruits and flowers, led him to become a member of the Massachusetts Horticultural Society, and enabled him to do a good work in developing and cultivating higher tastes among those about him.

As a wise and careful financial manager Mr. Baker was recognized by those in charge of money institutions, and his services were sought as director of the

Exchange Bank of Boston on its establishment in 1847, and as president of the Howard Banking Company of that city, when it went into operation in 1853.

Though many years have elapsed since his death, he is remembered for his genial disposition, his generous impulses and his large benevolence, which endeared him to his neighbors and friends, and for the faithful and competent service in the performance of every public trust.

EZRA WARREN MUDGE.

Ezra Warren Mudge was born in Lynn December 5, 1811, and was the son of Ezra and Ruth (Chadwell) Mudge, of that town. Ezra Mudge, the father, was born in Lynn April 10, 1780. He was first a shoe manufacturer, then a dealer in dry-goods in Lynn, afterwards a wholesale and retail dealer in shoes in New York City, and later a weigher and gager in the Custom-House in Boston, where he died May 25, 1855. He served the town of Lynn for sixteen years as Representative from 1807, was a member of the Constitutional Convention of 1820, a member of the Council, and was, in the War of 1812, the captain of the Lynn Artillery Company, in the formation of which he was specially active. He married, first, June 28, 1801, Betsey, daughter of Captain John and Mary Brewer, of Salem; second, December 20, 1804, Ruth, daughter of Harris and Ruth Chadwell; and third, November 1, 1819, Hannah Bartlett, daughter of Lemuel and Sarah (Bartlett) Drew, of Plymouth. By his second wife he had Ezra Alden, November 17, 1805; Eliza Brewer, November 5, 1806; Ruth Chadwell, May 9, 1809; Ezra Warren, December 5, 1811; Nathan and Hannah, twins, September 12, 1814; and Sarah Wiggin, March 2, 1819. By his third wife he had Lemuel Drew, August 6, 1820; William B., May 3, 1822; Hervey Mackay, October 3, 1823; Sarah Elizabeth, May 25, 1825; Sarah Caroline, January 1, 1827; Jane and Evelina, twins, March 14, 1829; Mary Evelina, November 21, 1830; Maria Augusta, March 2, 1833; and Robert Rich, June 14, 1835.

The father of Ezra Mudge was Nathan Mudge, who was born in Lynnfield September 21, 1756. He was a Revolutionary soldier, and died in Lynn February 8, 1831.

He married, first, September 2, 1776, Hannah, daughter of John and Sarah Ingalls, and had Nathan, January 26, 1778; Ezra, April 10, 1780; John Park, November 27, 1782; Mary, March 19, 1785; Samuel, May 15, 1787; Joseph, November 15, 1788; and Hannah, December 20, 1790. He married, second, July 24, 1794, Elizabeth, widow of Shubael Burrell, and had Joseph, June 17, 1795; Enoch, October 18, 1796; Hepsey, March 13, 1798; Simon, December 5, 1799; Hepsey B., August 19, 1801; Lydia B., June 14, 1803; Shubael, July 14, 1805; Ann Alden, June

James Harrison Hodge

Edward F. Davis.

22, 1806; and Caroline, April 2, 1808. He died in Lynn February 8, 1831.

The father of Nathan was John Mudge, who was born in Malden December 30, 1713. He was a farmer, and settled in Malden, but afterwards removed to Lynnfield. He married, May 4, 1738, Mary, daughter of Samuel and Anna Waite, of Malden, and had Samuel, March 22, 1739; Mary, April 20, 1740; Lydia, February 28, 1742; John, December 3, 1743; Simon, April 8, 1748; Ezra, April 7, 1752; Enoch, August 1, 1754; Nathan, September 21, 1756; Samuel, February 1, 1759. He died in Lynnfield November 26, 1762.

The father of John was John Mudge, who was born in Malden November 21, 1686. He was a farmer, and always lived in Malden. By a wife, Lydia, he had John, December 30, 1713; Joseph, May 28, 1716; Lydia, January 7, 1718-19. He died in Malden November 26, 1762.

The father of the last John was John Mudge, who was born in Malden in 1654. He was a farmer and tanner, and always lived in Malden. He married, in 1684, Ruth, daughter of Robert and Hannah Burditt, of Malden, and had John, October 15, 1685; John again, November 21, 1686; and Martha, December 25, 1691. He died in Malden October 29, 1733.

The father of the last John was Thomas Mudge, who was born in England about the year 1624, and was born in Malden as early as 1654. By wife, Mary, he had James; Mary, 1651; Thomas, 1653; John, 1654; George, 1656; Samuel, 1658; Jonathan and Martha, 1662.

Ezra Warren Mudge, the subject of this sketch, was educated in the public schools and the Lynn Academy. He first partially learned the book-binder's trade in Fall River, and in 1828 entered the dry-goods store of Chase & Huse as clerk, where he remained until 1838, when he took the business and conducted it alone until 1842, at which time he became partner in the house of William Chase & Co. In 1849, when the Lighton Bank was incorporated, he was selected as its cashier, and he continued to hold that office until 1868, three years after the bank became the Central National, when, on account of failing health, he resigned.

Mr. Mudge was a selectman of Lynn in 1843 and 1844, a member of the school committee in 1843, '46, '56 and '57, town treasurer, treasurer of the city for six years after its incorporation, and in 1856 and '57 was mayor of the city. He was a member of the Board of Aldermen in 1862, '63 and '64, a member of the board of trustees at its organization in 1862, and its president in 1865. His religious views were those of the Universalists, and he was one of the founders of the First and Second Universalist Societies of Lynn.

Notwithstanding the early training of Mr. Mudge was purely a business one, he was by nature a man of refinement, to whom habits of elevated thought

naturally came, and he early in life formed habits of study, which moulded him into a man of literary taste and more than ordinary culture. His honorable and thorough business methods, controlling the routine of his active life, were supplemented by the graces and pleasures which attach to a life of study. He was a thoroughly rounded man, and when he died, September 20, 1878, if it can ever be said of any one, it can be said of him that death closed a finished life.

Mr. Mudge married, January 23, 1836, Eliza R., daughter of John and Margaret Bray, of Salem, and had Ezra Warren, April 18, 1837; William Ropes, July 18, 1839; Mary Chadwell, August 13, 1841; Hervey Mackay, October 6, 1843; Howard Murray, December 9, 1845; Florence Howard, November 28, 1850; Arthur Bartlett, December 14, 1853; Benjamin Cushing, February 10, 1856; and Kate Gertrude, June 30, 1857.

Mrs. Eliza R. Mudge, the widow of Mr. Mudge, has since died, and the living children are Dr. Arthur Bartlett Mudge and Benjamin Cushing Mudge, both living in Lynn, and Florence Howard and Kate Gertrude, the latter of whom is a practicing physician in Salem.

Benjamin Cushing Mudge was educated in the common schools and graduated at the Lynn High School. He afterwards entered the Institution of Technology, Boston, and graduated in 1867, taking the degree of S.B.

Mr. Cushing was four years assistant agent of the Washington Mills, Lawrence, Mass., which are the largest in the world. He started the selling agency of the Dean Steam-Pump Company, Boston, and built up a very large business, was then called to the Boston office of the hydraulic works of Henry R. Worthington, becoming their New England sales-agent, increasing their business five-fold, in addition, organizing and constructing from four to five large water companies each year, and is now officiating as their treasurer. He has recently been elected the president and director of Pascoag and Webster Railway Company of Rhode Island.

EDWARD S. DAVIS,¹

Mr. Davis was born in Lynn, on the 22d of June, 1808. His parents were Hugh and Elizabeth (Bachelor) Davis, the latter being a descendant from Rev. Stephen Bachelor, first minister of the Lynn Church, settled in 1632.

The subject of this sketch received his education partly in the public schools of Lynn and partly in the academy; which latter he left in 1826. He was soon after appointed clerk of Lynn Mechanics' Bank, and in that position remained till he became of age. His health being now such that a change of residence seemed desirable, he removed to Philadelphia, and

¹ By James R. Newhall.

commenced business as a commission merchant. There he remained till 1833, when Nahant Bank was established; and being offered a position in that institution, accepted, and returned to his native place. In the bank and in the Union Insurance Company he continued till 1837, and then resigned.

Soon after leaving the bank he began business as a shoe manufacturer, but relinquished that and returned to the institution on being appointed cashier, and remained till its affairs were finally closed up. He then spent several years of enforced idleness on account of ill health, though occupying a part of the time as book-keeper. Subsequently he was appointed to a place in the United States Bonded Warehouse, in Boston. In 1861 he entered as a clerk in the State Auditor's office, and from that time to the present he has remained in the same department, filling the offices of first and second clerk.

Mr. Davis was, in early manhood, something of a military man; was in 1835 elected major of the Regiment of Light Infantry attached to the First Brigade of Essex County, and remained in commission as major and lieutenant-colonel, most of the time in command, till 1843.

He was one of the early adherents to the anti-slavery cause, and never deserted it. The "Lynn Colored People's Friend Society" was organized in 1832, having "for its object the abolition of slavery in the United States, the improvement of the character and condition of the free blacks and the acquisition to the Indians and blacks of the enjoyment of their natural rights in an equal participation of civil privileges with white men." In 1835 this society numbered one hundred and eighty-five members, and we find Mr. Davis named as corresponding secretary.

In 1838, being an active member of the old Whig party, Mr. Davis was elected Representative to the General Court, and soon after the formation of our city government was elected to the Council. In 1852, '53, '56 and '57 he was president of the Common Council. It was in 1859 and 1860 that he was called to fill the mayor's chair, and down to the last date had been six years ex-officio member of the school committee. In 1834 he was commissioned as a notary public, and in 1837 as a justice of the peace, which last office he now fills.

In his religious views Mr. Davis has, from his youth, been a consistent Episcopalian; and that church is indebted to him, probably, more than to any other, for its establishment in this place. From the organization in 1834, until the present time, he has continued to manifest his devotion to her by labor and by pecuniary contribution, and in the parish of St. Stephen's still continues in an important official position.

During his administration as mayor several projects of public interest were accomplished. The city debt was funded; the first street railroad located; the more systematic grading of the public schools commenced; and the substitution of brick school-

houses for those of wood decided on—two of the former material being erected while he was in office. But perhaps the most notable, at least the most stirring event, was the great shoemakers' strike, which commenced in February, 1860. No occurrence of the kind in this part of the country, probably, ever before created such a sensation. The whole country seemed to have their eyes momentarily turned on Lynn, and through the daily journals and illustrated weeklies her travail was magnified to an extent far beyond what was dreamed of in her own borders. Nevertheless, it was a serious affair, and required the exercise of prudence and coolness in its management. The city was in a ferment for some seven weeks; processions were frequently moving along the streets; large meetings were held; and the drum could be heard at almost any hour. After all, however, there was little actual violence committed. The object of the strikers was the same that is common in all such movements, namely, the obtaining of more adequate remuneration for labor; and perhaps, on the whole, the occurrence was not injurious to the general interests of the place. During this disturbance Mayor Davis, by his prudence, foresight and forbearance, often exercised against the strong urgency of those in favor of more forcible measures, probably saved the city from the odium of violence, and himself and friends from lasting regrets.

The habits of Mr. Davis were somewhat retiring, and he may be said to lead the life of a thinker quite as much as that of an actor. Having a taste for literature, he has collected, doubtless, the largest and most valuable private library in the city; and among his books he spends many pleasant and studious hours. He has also collected a variety of interesting objects of fine art. Agreeable manners, intelligence and freedom from low prejudices mark his daily walk; and few can spend many hours in his society and not feel improved.

In 1836 he married Elvira, daughter of Captain Nathaniel and Martha (Chadwell) Newhall, both belonging to old Lynn families, but has no children.

Mr. Davis took great pride in the Lynn Public Library, and rendered to it valuable service. He was first elected trustee in 1878, and in 1880 became chairman of the board, which position he held until his death. He was a member of the Historic Genealogical Society, and of the Massachusetts Horticultural Society, in both of which institutions he manifested a lively interest. His acquaintance with public men, authors, artists, clergymen and politicians, was quite extended, and his correspondence very large. It is said he preserved a copy of every letter he has written for half a century. His death, though not unexpected, will be most sincerely regretted, not only in his native city but by many in distant places. It may be said of him that all his acquaintances were his friends, and the death of such a man is felt as a loss by the whole community.

Stephen A. Buel

Isaac Newhall

Mr. Davis died at his residence on Summer Street, August 7, 1887, after a long and painful illness.

STEPHEN N. BREED.

The subject of this memoir was one of Lynn's most honest citizens. He was a man of sterling integrity of character, independent in his habits of thought, and fearless, though not ostentatious, in the utterance of his opinions, whether those opinions had received the stamp of public approval, or whether their advocacy subjected him to the adverse criticism of the majority.

He naturally, therefore, took kindly to the reforms of the day, carefully discriminating between the narrow and visionary schemes of so-called reformers, and those measures of social improvement that base their demands upon the principles of justice that appeal to man's uncorrupted moral sense. His wide reading had taught him that majorities were often wrong, and that of necessity reform must begin with the minority. Whatever such a view cost him, he was willing to bear.

Accordingly he was found in the ranks of the abolitionists when to be such made men sneer and raise the cry of fanatic. While he well knew that the world would not hear too much reform at once, he realized that such an essential villainy as human slavery struck at the fundamental rights of man. Therefore he was a Garrisonian abolitionist, though never standing on the extreme non-voting ground; being a decided Whig in his early years, and later an earnest supporter of the Republican party. No compromise must be made with slavery, no toleration must be given to it, nothing but its destruction would meet the demands of justice.

Mr. Breed was a member of the old Silsbee Street Debating Society, so famous in our local annals, and occasionally took part in the debates; but he usually preferred to listen. He had a fine sense of humor, and though undemonstrative in its manifestation, the few who knew him well saw how clearly he perceived the incongruities which lie at the root of man's humorous instincts, and how keenly he appreciated any demonstrations that presented the witty side of human nature. He was a genial, instructive companion. His tenacious memory furnished him with a storehouse of facts and reminiscences running back to the early years of the century.

Mr. Breed was born and bred in the Quaker communion, but in early life became a regular attendant at the Unitarian Church just then organized, until the establishment of the Free Church, when he attended the ministry of Samuel Johnson. In the later years of his life he again attended the Unitarian Church. He never dogmatized in matters of religion, feeling assured that there were many things concerning it which he did not know, and many more about which there was more or less uncertainty.

His prudent habits and sound judgment gave him marked success in business. He took charge of the lumber trade established by his father—an industry then in its infancy—and laid the foundations of what became in after years, with the aid of his sons, one of the most extensive retail lumber establishments in New England, yielding its owner an ample fortune. He was a man of strict business integrity, and he will be long remembered by the multitude of his patrons, for the unpretending kindness of his manners, and for his leniency when misfortune made them his debtors.

Mr. Breed was a son of James and Phebe (Nichols) Breed, and was born in 1806. He married Elizabeth, daughter of Frederick and Betsey Breed, and had six children, viz.: Mary Elizabeth, James F., Albert H., Harriet M., Stephen F. and Ella F. Of these four are living, viz.: James F., Albert H., Stephen F. and Harriet M., now Mrs. Walcott. Mr. Breed died April 8, 1886.

ISAAC NEWHALL,

One of Lynn's prominent and widely-known citizens, was born January 4, 1814, and died February 22, 1879. He was a native of Lynn and of Quaker parentage, his mother being one of the eminent preachers of that denomination.

Mr. Newhall was greatly instrumental in advancing the welfare and prosperity of the city, and was at all times interested in the municipal affairs of the city, being a member of the Board of Aldermen in 1851 and 1875; and the present success of many institutions and enterprises in Lynn is due to his indefatigable efforts, particularly the building of the Lynn City Street Railway, of which he was a director.

He was a man of indomitable will and perseverance. He was singularly constituted as a business man, and pursued an independent course, apparently regardless of public opinion. He had decided opinions and was not inclined to court the good opinion or the favor of only his intimate friends, apparently courting opposition, and he seemed to take great pleasure in combating public sentiment. In public and local affairs he interested himself earnestly, having filled various public positions, rarely going with the current, at times advocating sentiments adverse to those expected from a man of his comprehension and intelligence.

He was unostentatious, while frugality and abstemiousness characterized him through life, and his faith in the future welcomed the end. He early engaged in the shoe business and became one of Lynn's largest and successful manufacturers. Later still, after machinery became necessary, he kept up with the progress of the age, until, becoming largely interested in real estate operations, he gradually left the shoe business, occasioned, no doubt, by failing health, suffering intensely from neuralgia,

which no medical or surgical skill could alleviate. The last few weeks of his life were weeks of intense suffering, which he bore with remarkable patience and Christian resignation. No complaint would fall from his lips.

Mr. Newhall was twice married. He left a widow and five children.

JAMES M. NYE, M.D.

The old town of Salisbury, one of the most historic sections of the Commonwealth, has been prolific in the number of her sons who have attained honorable and leading positions among their fellow-men. Such an one is the subject of this sketch—Dr. James M. Nye.

Dr. Nye came to Lynn in 1841 and established himself in the practice of his profession, which he continued with marked success until his death. He was ever alive to the interests of his adopted city, and all measures tending to advance its welfare found in him an earnest advocate. His genial disposition, large sympathies and acknowledged skill in his profession, soon gained him an extensive practice, and his benevolence was plainly manifest in the large numbers of poor people whom he attended professionally, receiving no compensation except that arising from the inner consciousness of having performed a charity pleasing to himself and in accordance with the divine teachings of which he was, through life, a consistent follower.

Dr. Nye manifested a deep interest in educational matters and served for several years, with ability and honor, upon the school-board of Lynn, resigning his position only when compelled to by the pressure of his professional duties. His interest in matters of education was not alone confined to Lynn, but extended to the freedmen of the South, for whom he supported several teachers during the last years of his life.

Dr. Nye was a consistent Christian, and during his residence of thirty-one years in Lynn he was one of the most prominent members of the First Baptist Church, and an earnest worker in its behalf. He was superintendent of the Sunday-school and clerk of the society for a long period. Modest and unassuming in his disposition, strictly moral in his character, upright in his dealings with others, he left the example of a true Christian gentleman, and died one of Lynn's most esteemed and honored citizens.

Dr. Nye was born September 26, 1818, and died April 21, 1872. He married Hannah C. Peaslee, of Newton, N. H., June 29, 1842, who still survives him.

JOHN B. ALLEY.

John B. Alley belongs to one of the oldest Essex County families, and is descended from Hugh Alley, who, with his brother John, settled in Lynn in 1634.

Hugh Alley was a farmer, and exhibited the same energy, activity and shrewdness which have characterized his descendants. He is believed to have been the first to take up land, and settle on it, in that part of Lynn which is now Nahant. The grandfather and great-grandfather of Mr. Alley inherited from their ancestor a desire for the possession of land, and were the largest owners of that kind of property in Lynn. John Alley, the father of Mr. Alley, and son of Hugh Alley, lived in Lynn, as did all his ancestors, and was a thriving business man. He married Mercey, daughter of Jonathan Buffum, of Salem, and sister of the late Jonathan Buffum, of Lynn, who for many years was one of its honored and distinguished citizens. Mr. Alley was born in Lynn January 7, 1817, and attended the public schools of that town. At the age of fourteen he was apprenticed to a shoe manufacturer, and at nineteen received the gift of his time. At this early age he displayed those habits of industry and fidelity which have marked every step of his successful career. Possessing by nature a clear head, a cool temperament, a sound intellect and a good judgment, he knew that to succeed in life, industry and fidelity were the only remaining requisites for success.

Immediately, or soon, after the close of his apprenticeship he went to Cincinnati, and there purchased a flat-boat, which he loaded with merchandise and carried to New Orleans. In so young a man the enterprise and skill essential to profitable results in such an undertaking are unusual. But they were possessed by Mr. Alley, and it may be truly said that the fruits of this expedition, with the lesson of self-reliance which it taught him, laid the foundation of the fortune, which he has since acquired.

At the age of twenty-one he returned to Lynn and began the manufacture of shoes. In five years, at the age of twenty-six, he was the owner of one of the largest enterprises in a city full of active, bold, shrewd men, with whom he had entered on a race for wealth. In 1847 he established a house in Boston for the sale of hides and leather, and was the acknowledged peer of the most successful men in the trade. At various times he has been the senior partner in the firm of Alley, Choate & Cummings, the firm of John B. Alley & Co., in which Griffin Place, an able and successful man, was the partner, and more recently in the firm of Alley Bros. & Place, in which the two sons of Mr. Alley and Mr. Place were the partners. In 1886 this last firm was dissolved, and after a business career of forty-eight years Mr. Alley retired, leaving with his former partners a special capital for the continuance of the business. He is now absent on a European tour, enjoying his first vacation in a life of seventy years, free from the burdens and responsibilities of a business which required his constant and conscientious attention and care.

But Mr. Alley may be said to have led two lives.

James M. Nye.

John F. Alley

Edward Penhall

Aside from his legitimate career as a merchant, he has always felt a deep interest in public affairs, and in large operations involving heavy responsibilities, requiring heroic courage, and promotive of the welfare and growth of the country. In his earlier years, before the birth of what was called the Free-Soil party, in 1848, he was attached to the Liberty party, imbibing as he did from the Society of Friends, with which his father was associated, anti-slavery sentiments, which never abated until, by the proclamation of President Lincoln, the slave was made free. At the Presidential election in 1848, when Martin Van Buren and Charles Francis Adams were the Free-Soil candidates for President and Vice-President, he was one of the candidates for electors on the Free-Soil ticket. In 1851, during the administration of Governor Boutwell, he was one of the Executive Council. In 1852 he was in the State Senate, serving as chairman of the Committee on Railroads. In 1853 he was a member of the Constitutional Convention, and for several years was an active and influential member of the Republican State Central Committee. In 1858 he was chosen Representative to Congress, serving four terms, during two of which he performed with industry and ability the duties of chairman of the Committee on Post-Offices and Post-Roads. His service in Congress covered the whole period of the war, and no man of the Massachusetts delegation was more devoted and faithful to public duties. His speeches, though not frequent, were well-timed and always clear, well-expressed, strong and persuasive. Those more worthy than others of mention were a speech delivered on the 30th of April, 1860, vindicating the Republican party, one delivered on the 26th of January, 1861, on public affairs, one delivered January 23, 1862, on the State of the Union, and one on the 6th of February of the same year, on the Treasury Note Bill.

Mr. Alley was one of the first to appreciate the remarkable qualities of John A. Andrew. Mr. Andrew had been a member of the House of Representative of Massachusetts in the winter of 1860, and was little known by the people at large until, in the latter part of the session, Caleb Cushing, who was a member, took occasion, in a speech as remarkable for beauty of diction and powerful logic as for its peculiar spirit and sentiment, to arraign the Republican party for a want of loyalty to the Union. As when Hayne delivered his eloquent speech in the Senate of the United States, and Massachusetts men wondered how and by whom he would be answered, so the Republican members of the Legislature listened with amazement to this Democratic champion, and though they knew he must be answered, they knew not from whose lips the answer would come. But they were not doomed to be disappointed. After the recess at the noonday hour John A. Andrew rose, as Webster rose in the Senate, with the assured air of defiance on his brow, but with his clansmen full of doubt. But the power

and eloquence were in him, and the time had for the first time come for their full display. It is sufficient to say that with a triumphant oratory rarely heard Mr. Cushing was answered, and the party of which from that time John A. Andrew was the champion was nobly vindicated. In the autumn of that year he was chosen Governor of the commonwealth, and in defending from attacks made on the floor of Congress, Mr. Alley said, in his speech of January, 1861: "Massachusetts has had twenty-one Governors since the adoption of her State Constitution, in 1780, all of them able and distinguished, some of them illustrious, but in everything which constitutes true greatness of character and mind, not one among them all, in my judgment, was the superior of John A. Andrew."

This encomium, as extravagant as it seemed at the time, showed Mr. Alley to possess an insight into character then shared by few, so far as Andrew was concerned, and his words have been more than vindicated in the universal judgment of men.

Since the retirement of Mr. Alley from Congress he has been engaged with others in large railroad enterprises in the West and South. His connection with the Union Pacific is well known, and since the completion of that gigantic undertaking he has been more especially interested in railroad extensions in Iowa and Texas. Mr. Alley is one of that body of courageous men to whose capital the country is indebted for the development of a vast section, which, without facilities of travel and transportation, would be still looking to the future for its prosperity and wealth. Nor has the investment of his capital been confined to railroads. He has become also largely connected with land property in New Mexico, and is to-day the largest owner in three ranches which together contain more than forty thousand head of cattle. It is needless to say that he is a very wealthy man, and that his wealth is exceeded by that of few in the State.

EDWARD NEWHALL.

Edward Newhall, son of John and Delia (Breed) Newhall, was born in Lynn, July 22, 1822. His family belonged to the society of Friends, and his early education was received at the Friends' Institute, in Providence. In 1845 he began the study of medicine under Dr. C. H. Nichols, since distinguished as the superintendent of the Bloomingdale Lunatic Asylum, in the city of New York. He afterwards entered the Harvard Medical School, from which he graduated in 1848. The next two years he spent in Europe attending lectures and walking the hospitals in Paris and as a student in the famous Lying-in Hospital of Dublin. In 1850 he returned home and settled in Lynn, where his thorough medical education and devotion to his profession soon secured to him a wide reputation and practice. He is held in no less esteem by his professional brethren than by the community in which he lives, and has been presi-

dent of both the Essex South Medical Society and the Lynn Medical Association.

He married, October 23, 1853, Eliza F. Beaumont, of Canton, Mass., who died in June, 1870, having been the mother of three sons and one daughter. In 1873 he married Mrs. M. A. (Field) Saunderson, of Quincy, Mass., by whom he had two sons and a daughter. Dr. Newhall, now sixty-five years of age, is still possessed of a physical and mental vigor which years have not impaired, and he neither seeks nor needs any relaxation from his continuous and arduous professional work.

His second son, Herbert William, A.M., M.D. (Harv.), is associated with him in practice.

EDWARD WINSLOW HINCKES.

Edward Winslow Hinckes was born in Bucksport, Me., May 30, 1830. He was the son of Captain Elisha Hinckes, who was born in Provincetown, Mass., September 28, 1800, and who was lost at sea January 14, 1831. In 1802 the father of Elisha removed with his family to Buckstown (now Bucksport), and there Elisha was brought up, and married, October 9, 1824, Elizabeth Hopkins, daughter of Ephraim and Hannah (Rich) Wentworth, of Orrington, Me., and had the following children: Temperance Ann, April 23, 1826; Elisha Albert, May 1, 1828; Edward Winslow, May 30, 1830.

The father of Elisha was Elisha Hinckes, who was born in Truro, Mass., July 14, 1774, and died in North Bucksport, Me., March 15, 1851. In early life he followed the sea, but in April, 1802, he, with his family and brothers, Winslow and Jesse, removed from Provincetown, where they then lived, to Buckstown (now Bucksport), Me. There he bought wild land, which he cleared and improved, and on which he died. He married first, in March, 1796, Temperance, daughter of Sylvanus and Hannah (Cole) Smith, of Eastham, Mass., and had Anna, born in Provincetown January 11, 1797. He married second, December 22, 1799, Mary, daughter of Nathaniel and Anna (Rich) Treat, of Truro, and had Elisha, September 28, 1800; Temperance Smith, born in Bucksport June 24, 1803; Mary, July 30, 1805; Sarah, January 30, 1807; William Treat, March 30, 1809; Sylvanus Treat, November 21, 1810; Hannah, August 5, 1812; Naomi, May 16, 1816; Ezekiel Franklin, August 10, 1820.

The father of the last Elisha was Samuel Hinckes, who was born in Portsmouth, N. H., about 1728, and shortly removed with his father to Boston, and there lived until 1753. He afterwards taught school in Truro, where he married, about 1756, Susanna, daughter of Jonathan Dyer, of Truro, and where he continued to live until 1795, when he removed to Bucksport, and there died in 1806.

The father of Samuel was Captain Samuel Hinckes, who was born in Portsmouth, N. H., at an unknown

date, and graduated at Harvard in 1701. In 1716, while a resident in Portsmouth, he was sent as a Representative of the province of New Hampshire to the Indians at the eastward, was a captain in the Indian wars and commanded Fort Mary, at Winter Harbor, from 1722 to 1727, when he removed to Boston. He died in Portsmouth shortly after 1753. He married Elizabeth (Winslow) Scott, a widow, previous to 1715. Elizabeth Winslow was a daughter of Edward and Elizabeth (Hutchinson) Winslow, and granddaughter of John Winslow, who married Mary Chilton, one of the passengers in the "Mayflower".

The father of the last Samuel was John Hinckes, who came from England about 1670, who was Councilor for the province of New Hampshire and assistant in the Court of Chancery from 1683 to May 25, 1686, when he became a Councilor in the government of President Joseph Dudley, having been named for the office by James the Second, in his commission to Dudley, dated October 8, 1685. He was also chief justice of the Court of Pleas and General Sessions in New Hampshire from 1686 to 1689. In 1692 he was named as Councilor of New Hampshire and made president of the Council. In 1699 he was appointed chief justice of the Superior Court, and remained in office as Councilor and chief justice until 1708. He was living in New Castle, N. H., in 1722, and had deceased April 25, 1734. He married, at an unknown date, Elizabeth, daughter of Nathaniel and Christian Fryer, and had Samuel, a daughter who married a Gross, Christian, Barbara, Sarah and probably Elizabeth.

Edward Winslow Hinckes, the subject of this sketch, having received the rudiments of his education in the public schools of his native town, in 1845, at fifteen years of age, removed from Bucksport to Bangor, Me., where he served as an apprentice in the office of the Bangor *Daily Whig and Courier* until 1849, when he removed to Boston, where he was engaged in the printing and publishing business until 1856. He was a Representative from the city of Boston in the Legislature of 1855, and in the same year was a member of the City Council from the Third Ward. Early in 1856 he was appointed a clerk in the office of the secretary of the commonwealth of Massachusetts, and prepared for publication the State census of 1855. He remained in the secretary's office until the firing upon Fort Sumter, employing his leisure hours in the study of law, with the intention of making that his profession, being encouraged and assisted in his purpose by Hon. Anson Burlingame, of whom he was an ardent friend and supporter. Having removed to Lynn in 1856, he was chosen librarian of the Lynn Library Association, and until the outbreak of the war actively promoted the interests of that organization, whose collection of books subsequently became the nucleus of the present Public Library in that city. He was also prominently connected with the Sabbath-school of the First Baptist Church in

Edw W. Hinckes

Lynn. On the 18th of August, 1859, he was appointed adjutant of the Eighth Regiment of Massachusetts Militia,—the Essex County regiment.

This appointment, trivial as it no doubt seemed at the time, proved the turning-point in his life, and was the opening door to a military career in which he won lasting fame.

At the outbreak of the war he was placed by this appointment in a position whose duties he had performed with enthusiasm, and from which he could reasonably hope to receive advancement. On the 18th of December, 1860, he wrote to General Anderson, then stationed at Fort Moultrie, the following letter, which shows him to have been the first volunteer of the war :

“BOSTON, December 18, 1860.

“MAJOR ANDERSON, U. S. A.,

“Commanding Fort Moultrie :

“MAJOR: In case of attack upon your command by the State (or would-be nation) of South Carolina, will you be at liberty to accept volunteers to aid in the defence of Fort Moultrie ?

“I am confident that a large body of volunteers, from this vicinity, can be put afloat at short notice to aid in the defence of the post entrusted to your command, if necessity shall demand and the authorities permit it.

“Indeed, the men who have repeatedly responded to the call of the authorities to protect the officers of the law in their work of securing to the owners, from whom it had escaped, the chattel property of the South, will never hesitate to respond to a call to aid a meritorious officer of our Federal Republic, who is engaged not only in protecting our national property, but in defending the honor of our country and the lives of our countrymen.

“I have the honor to be, sir, your obedient servant to command.

“EDWARD W. HINKS,

“1st Lieut. and Adj. 8th Regt. Mass. Vol. Mil.”

“FORT MOULTRIE, S. C., December 24, 1860.

“LIEUTENANT ED. W. HINKS.

“Adj. 8th Regt. Mass. Vol. Militia :

“SIR: I thank you, not only for myself, but for the brave little band that are under me, for your very welcome letter of the 18th inst., asking whether, in case I am attacked, I would be at liberty to accept volunteer aid in the defence of Fort Moultrie.

“When I inform you that my garrison consists of only sixty effective men: that we are in a very indifferent work, the walls of which are only about fourteen feet high, and that we have within one hundred and sixty yards of our walls sand hills which command our work, and afford admirable sites for batteries and the finest covers for sharpshooters; and that, besides this, there are numerous houses, some of them within pistol-shot, you will at once see that if attacked by a force headed by any one but a simpleton, there is scarce a possibility of our being able to hold out long enough to enable our friends to come to our succor.

“Come what may, I shall ever bear in grateful remembrance your gallant, your humane offer.

“I am, very sincerely, yours,

“ROBERT ANDERSON,

“Major 1st Artillery, U. S. A.”

“24 ST. MARK'S PLACE, July 5, 1866.

“GENERAL E. W. HINKS :

“DEAR SIR: * * * * *

“Your letter, which I received two days before I moved over to Fort Sumter, was the first proffer of aid which was made me whilst in Charleston Harbor.

“Respectfully, your obedient servant,

“ROBERT ANDERSON,

“Major General U. S. A.”

On the 15th of April, 1861, when the news was received of the attack on Fort Sumter, he hastened to Boston, and tendered his services to Governor Andrew, and at the same time urged the acceptance of

the Eighth Regiment as a part of the contingent of fifteen hundred men called for by the President. His offer of service was accepted, and his request at once complied with. Under orders promptly issued, he, that evening, rode to Lynn, Salem, Beverly and Marblehead, and despatched messenger to Newburyport and Gloucester, notifying the various companies of his regiment to rendezvous in Boston for instant duty. The next morning, April 16th, he marched into Faneuil Hall with three companies from Marblehead, the first troops in the country *en route* for the seat of war.

On the 17th of April he was commissioned lieutenant-colonel of the Eighth Regiment, which marched on the 18th for Washington. At Annapolis, Md., on the 21st of April, a detachment from the regiment, under command of Colonel Hincks, boarded the frigate “Constitution,” then lying aground, and first lighting her of her guns, floated her and worked her to sea. Leaving the ship at midnight, he learned the next morning from General Butler that Colonel Leferts, of the New York Seventh Regiment, had, after consultation with his officers, declined to advance his command and take possession of the Baltimore and Washington Railroad, through apprehension of an overpowering rebel force. He at once said to General Butler: “Give me the selection of two companies for the purpose and I will perform the duty.” He was at once placed in command of a detachment consisting of Captain Knott V. Martin’s Marblehead company, Captain Geo. T. Newhall’s Lynn company and several picked men, engineers and mechanics from other companies under command of Lieutenant Hodges, of Newburyport, and marched to the station, of which he took possession, with the rolling stock, materials, books, papers, etc., there found. Without delay he began the work of repair on the engines and track, the former having been disabled and the latter seriously broken up. During the first day an advance of five miles was made, and after a night’s bivouac the work was resumed and continued until the road was in running order. For this service the regiment received the thanks of Congress in the following resolve:

“THIRTY-SEVENTH CONGRESS, FIRST SESSION.

“CONGRESS OF THE UNITED STATES IN THE HOUSE OF REPRESENTATIVES.

“July 31, 1861.

“On motion of Mr. Lovejoy :

“Resolved, That the thanks of this House are hereby presented to the Eighth Regiment of Massachusetts Volunteers, for their alacrity in responding to the call of the President, and for the energy and patriotism displayed by them in surmounting obstacles upon sea and land, which traitors had interposed to impede their progress to the defence of the National Capital.

“GALUSHA A. GROW,

“Speaker of the House of Representatives.

“Attest :

“EM. ETHERIDGE,

“Clerk.”

Reaching Washington on the 26th of April, Colonel Hincks was that day appointed a second lieutenant of cavalry in the regular army, the only rank in which, at that time, an officer could enter the regular

service. From the date of his entrance into the regular army his military history is borne on the records of the office of the adjutant-general, as follows:

"Appointed second lieutenant Second Cavalry April 26, 1861; colonel Eighth Massachusetts Volunteers May 16, 1861; colonel Nineteenth Massachusetts Volunteers August 3, 1861; brigadier-general United States Volunteers November 29, 1862; brevet major-general United States Volunteers March 13, 1865, for gallant and meritorious services during the war; resigned volunteer commission June 30, 1865; appointed lieutenant-colonel Fortieth United States Infantry July 28, 1866; transferred to the Twenty-fifth United States Infantry March 15, 1869; breveted colonel United States Army March 2, 1867, for gallant and meritorious services at the battle of Antietam, Md.; and brigadier-general United States Army for gallant and meritorious services in the assault of Petersburg, Va.; retired from active service for disability resulting from wounds received in the line of duty December 15, 1870, upon the full rank of colonel United States Army.

"*Service.*—With Regiment Eighth Massachusetts in the State of Maryland until August 1, 1861; with Regiment Nineteenth Massachusetts in the Army of the Potomac from August, 1861, to June 30, 1862, when wounded in action at White Oak Swamp, Va.; absent wounded to August 5, 1862; commanding Third Brigade, Sedgwick's division, Army of the Potomac, to September 17, 1862, when twice severely wounded in the battle of Antietam, Md.; on leave of absence wounded to March 19, 1863; on court-martial duty as brigadier-general at Washington, D. C., April 2 to June 9, 1863; and under orders of War Department to July 4, 1863; commanding draft rendezvous at Concord, N. H.; acting assistant provost marshal, general and superintendent of the Volunteer Recruiting Service for the State of New Hampshire to March 29, 1864; commanding district of Saint Mary's ad camp of prisoners of war at Point Lookout, Md., April 3 to 20, 1864; commanding Third Division, Eighteenth Army Corps, to July, 1864, when wounded; on court-martial duty to September 22, 1864; commanding draft depot and camp of prisoners of war at Hart's Island, New York Harbor, to February, 1865; on duty at New York City as acting assistant provost marshal general, superintendent Volunteer Recruiting Service, and chief mustering and disbursing officer for the Southern Division of New York to March, 1865; and on the same duty at Harrisburg, Pa., for the Western Division of Pennsylvania to June 30, 1865; governor of the Military Asylum to March 6, 1867; *en route* to, and in command of, Fort Macon, N. C., until April 13, 1867; on special duty at headquarters Second Military District at Charleston, S. C., to April 27, 1867; provost marshal general Second Military District North and South Carolina to January 16, 1868; commanding Fortieth regiment and the sub-district and port of Gold-boro', N. C., to July 13, 1868; on sick leave of absence to December 4, 1868; commanding regiment in North Carolina and Louisiana until April 20, 1869, when he assumed command of the Twenty-fifth Infantry, and remained in command of that regiment and the post of New Orleans, La., until August 14, 1869; on sick leave of absence to December 4, 1869; and in command of regiment in New Orleans and *en route* to and at Fort Clark, Texas, from that date to December 15, 1870."

Such is the record borne on the pages of the army books, and no narrative could set forth the military life of General Hincks so clearly and eloquently as these authoritative words. Aside from the leading well-known generals of the war, few officers can boast of a more varied and gallant and useful career.

In concluding the narrative of the war experience of General Hincks, while the repeated testimony of his superior officers in their general orders to his gallantry will be omitted, the list of battles in which he was engaged must not fail to be mentioned.

Battle of Ball's Bluff, Va., October 21, 1861; siege of Yorktown, Va., April, 1862; affair at West Point, May 7, 1862; Fair Oaks, June 1, 1862; Oak Grove, June 25, 1862; Poach Orchard, June 29, 1862; Savage's Station, June 29, 1862; White Oak Swamp, June 30, 1862; Glendale, June 30, 1862; Chantilly, September 1, 1862; South Mountain, September 14, 1862; Antietam, September 16 and 17, 1862; Baylor's Farm, June 15, 1864; assault on Petersburg, June 15, 1864."

The services of General Hincks after the war were only less important than those during its continuance. Under General Sickles and General Canby the aid he rendered in perfecting and carrying out the reconstruction measures of the government in North and South Carolina, forming what was called the Second Military District, was recognized by his superior officers as efficient and valuable.

On the 15th of December, 1870, the general was retired from active service upon the full rank of colonel in the United States Army on account of wounds received in battle, and on the 7th of March, 1872, he was appointed, by the board of managers of the National Homes, deputy-governor of the Southern Branch of National Homes, at Hampton, Va. On the 1st of January following he was transferred to the Northwestern Branch, near Milwaukee, Wis., and resigned October 1, 1880.

After the resignation of his position as deputy-governor of the National Home at Milwaukee, General Hincks remained in that city until June, 1883, and was largely influential in the organization of the Milwaukee Industrial Exposition, a corporation then formed and still in existence, having for its object the promotion of the industrial interests of Milwaukee and the State of Wisconsin. Since 1883 he has lived in Cambridge, Mass., enjoying a period of well-deserved peace and comfort. He occupies a stately old mansion, said to be more than two hundred years old; and the books and pictures and quaint old family china and furniture with which it is replete reveal the culture and taste of its occupants.

In the autumn of 1862, after having been severely wounded in the battle of Antietam, General Hincks was urgently requested by many independent Republicans to run for Congress in the Sixth District, then represented by Mr. John B. Alley, but he positively declined to be a candidate for any office that would prevent his return to the field as soon as he should sufficiently recover from his wounds. He was sergeant-at-arms of the National Republican Convention at Philadelphia in 1872, when General Grant was nominated for a second term; and again at Cincinnati, in 1876, when General Hayes was nominated for President. In the Cincinnati Convention he was nominated by the chairman of the Michigan delegation "for his many wounds received in battle," and was unanimously elected.

General Hincks is a Knight Templar in the Masonic order, a companion in the National Commandery of the Loyal Legion and a member of the New England Historical Genealogical Society.

General Hincks has been twice married,—first, January 25, 1855, to Annie Rebecca, daughter of Moody and Clarissa (Leach) Dow, of Lynn, who died in Lynn August 21, 1862. Her only child was Anson Burlingame, who was born in Lynn October 14, 1856, and died in Rockville, Md., January 27, 1862.

He married second, September 3, 1863, Elizabeth

James W. Reed

John B. Tolman.

Peirce, daughter of George and Susan (Treadwell) Nichols, of Cambridge, whose only child, Bessie Hincks, born in Cambridge April 11, 1865, died in Cambridge July 5, 1885.

The death of this daughter was peculiarly sad. She had graduated in 1883 from the Milwaukee College, and had entered the Harvard Annex full of hope and promise. While walking in the street her dress took fire from a burning cracker, and she was burned to death. Her sweet and loving character, blended with high literary attainments, lent a joy and grace to her parents' home, since shadowed in perpetual gloom. It is only necessary, before closing this sketch, to add a word of explanation concerning the family name of General Hincks.

The common ancestor of the Hincks family in this country, Councilor and Chief Justice John, uniformly wrote his name Hinckes, but when copied by clerks it was usually written Hinks, and so frequently appears in the Council Records of Massachusetts and the Archives of New Hampshire. Captain Samuel, who graduated at Harvard in 1701, and his son Samuel, Jr., the schoolmaster on the Cape, uniformly wrote their names Hincks; but Elisha and his son, Captain Elisha, Jr., the father of the general, appear to have dropped the *c*, and to have written their names Hinks; and in early life the general also wrote his name without the *c* (Hinks), and it so appears in the Army Register and the official records of the war, although other branches of the family wrote their names with a *c*; but in 1871, under authority of law, the general restored the letter *c* to his name, and has since written it Hincks, and all the branches of the family descended from Chief Justice John now conform to this style. It will be noted that all of this family in this country bearing the name of Hincks are descended through the Winslows from Mary Chilton, who came in the "Mayflower," and Anne Hutchinson, the Quakeress.

FRANCIS W. BREED.

Francis W. Breed, of Lynn, is one of the most prominent shoe manufacturers, not only in that city, but in New England. His extensive factories at home and abroad give employment to large bodies of workmen, and have a capacity, when in full running order, of six or seven thousand pairs of shoes per day. Mr. Breed's rise in business, while it has been rapid, has been steady, conservative and safe. Possessing, in a marked degree, the quality of thoroughness in whatever he undertakes, he has achieved success where competition is close and where slackness or inattention might have caused disaster. His markets, both for purchase and sale, are extensive, and both are watched with a careful eye. Mr. Breed has traveled extensively, and with an elasticity of spirit and a buoyancy of heart, he has always sustained a weight of care and responsibility with calmness and

composure, and kept himself young under burdens, which often crush and break down even less active business men. His residence on Ocean Street in Lynn has a beautiful outlook over the bay, and is one of the most attractive and comfortable homes on the shore.

JOHN BROAD TOLMAN.

Mr. Tolman was a lineal descendant from Thomas Tolman, who was born in England in 1608 or 1609, and came over in the "Mary and John" in 1630, becoming a settler of Dorchester, Mass. A grandson of the early settler just named, whose name also was Thomas, was a native of Lynn, and died here in 1716. And this last Thomas was the great-great-grandfather of John B., the subject of this sketch, who thus becomes connected with our Lynn families.

John B. Tolman was born in Barre, Worcester County, Mass., on the 30th of December, 1806, and in that town the first two years of his life were passed. His parents then removed to Needham, in Norfolk County, Mass., it being the native place of his paternal grandfather, who was severely wounded at the battle of Lexington, but on his recovery enlisted and served through the Revolutionary War, rising from the ranks to a field officer.

In this latter town most of Mr. Tolman's early life was passed and his education chiefly obtained at the public schools there. And he had manual duties to perform about the farm even at the tender age of eight years, such as a boy of this period would be thought entirely unequal to.

At the usual age for apprenticeship he was placed in the office of H. & W. H. Mann, of Dedham, Mass., to learn the printing business. It was a large and well-appointed establishment for the time, and afforded facilities for acquiring a good knowledge of the art. He faithfully served his full time and not long after went to Boston, there to follow his trade. Says the *Commonwealth* newspaper of April 9, 1881: "In 1828 Mr. Tolman came to Boston as a journeyman in the book-office of Isaac R. Butts, doing a full day's work each day and filling the berth of an extra hand two nights in the week on the *Columbian Centinel*, 'hanging out from twelve to three o'clock.'"

It was in February, 1830, that he became a resident of Lynn, where he was at once engaged as printer of the *Lynn Record*, a few numbers of which had then been issued. After several years of service as manager, not only mechanically but editorially, he purchased the office and soon did a larger business than had been done in any other Lynn office up to that time. He introduced the first machine press here, printed several papers at different times and had a good run of job work.

By middle life he found himself in circumstances where his accustomed unremitting application to mechanical labor was unnecessary. He then sold out his printing materials and business, and turned his

attention to other and less wearing pursuits. Yet the semi-intellectual employment of type-setting was always congenial to him, and he was sometimes, for years after, seen as a volunteer compositor, for hours together, in some printing-office, the sharp click of the type and the bass rumbling of the press having the old-time charm for his ear. He now engaged in real estate and kindred operations, and here, too, success generally attended him, so that his means were soon augmented.

The Rev. Edwin Thompson, himself a man of remarkable vitality, industry and perseverance, in a communication to the *Dedham Transcript* of March 15, 1884, in allusion to the physical strain to which Mr. Tolman was accustomed to subject himself in early manhood, says: "Before the days of railroads Mr. Tolman frequently walked from Lynn to Boston on business and back the same day. Whenever he wished to visit Dedham it required all day to go there by stage, starting by Lynn stage at 8 A.M. for Boston, and leaving Boston for Dedham by 'Mason's stage' at 4 P.M. In order to save time, Mr. Tolman frequently walked the whole distance, twenty miles, leaving Dedham in the morning and arriving at Lynn in season to devote half a day to business."

Perhaps no trait is more conspicuous in Mr. Tolman than his promptness in fulfilling engagements. So rigid was he in this respect, while in the printing business, that he appended to some of his advertisements a notice that if a job of work was not ready for delivery at the time agreed on, no pay would be required.

The career of Mr. Tolman furnishes a notable illustration of the certainty with which industry, promptness, indomitable perseverance and frugality insure competence.

Mr. Tolman is a strict disciplinarian and a man of marked individuality and rigidly just in all his dealings. Like a good many other thrifty men—more in number than is generally supposed—he was never addicted to the use of intoxicating liquors. Nor did he acquire the habit of using tobacco in any form. Mr. Thompson remarks: "Mr. Tolman thinks he has saved, reckoning at compound interest, about eight thousand dollars in not using tobacco, and by not using rum much more." His abstinence from "rum and tobacco," of course did much to increase his pecuniary means. And then with his other good traits of prudence in expenditure and carefulness in every way, aided by superior business sagacity, he has been enabled, during his latter years, to spare generous sums for benevolent purposes. In 1881, on the occasion of the celebration of his golden wedding, he made a donation to the Lynn Hospital of two thousand five hundred dollars, to be held for the purposes thus expressed in his letter to the president of the corporation:

"As I am interested in the project for a Hospital in this city, and as the present effort to obtain a fund to establish one happens to be coinci-

dent with the fiftieth anniversary of my wedding, I, together with my wife, desire, on this day and occasion, to make it an offering expressive of our interest in it and the city in which we have so long resided.

"We also desire to devote the gift, in part, to the benefit of members of the Printing Fraternity in Lynn, as they may be in need of hospital treatment. We both have a strong regard for the occupation to which I was brought up, and in which my wife's father and four of her brothers were long engaged.

"As we desire the hospital to be established on a lasting basis, even if it shall commence in a small and prudent way, we wish the income of the fund only to be used, and offer, through you, to give to the Hospital the symbolical sum of Fifty-times-Fifty Dollars, to be received and held on the following terms:

"That the said Hospital shall hold and invest the said sum forever, and devote the income arising therefrom to maintain a bed, or beds, in said Hospital, for the benefit of all persons, under the rules and regulations of the hospital; that it shall devote said bed, or beds, to the extent of a sum equal to the whole income received from said fund, to the use of Practical Letter-Press Printers residing in Lynn (and especially to any person ever apprenticed to me), if the same shall be so required."

This donation was cordially received and duly acknowledged. In 1884 he conveyed to the Young Men's Christian Association, of Lynn, an estate on Market Street valued at thirty thousand dollars, in trust "For the suppression in said Lynn of intemperance in the use of intoxicating liquors by the cultivation of public opinion and the enforcement of laws prohibiting and restraining the manufacture and sale of the same, and by assisting in the reform of persons of intemperate habits. Also, for the education and instruction of the public, and especially the young, in all practical ways by which they may be reached in regard to the moral and physical injuries arising from the habitual use of such liquors, and also of tobacco and other stimulants." And as subordinate to this work it was further stipulated that a part of said income, as opportunity afforded, should be expended for the suppression of immoral literature, especially such as circulates among the young, the donor summarily adding that "his general intention is that of reform, rather than that of the alleviation of the effects consequent upon intemperance," and leaving the details of work for those appointed to act under the trust. This donation was also cordially accepted and duly acknowledged, and will no doubt be faithfully applied. A local paper, in speaking of this gift, says: "Mr. Tolman was an ardent temperance advocate in early life; he was also a radical and outspoken abolitionist, and advocated all the moral reform movements at a time when it required sound moral courage to do so," and adds, in reference to the gift: "He feels that in this act he has contributed to the relief of the poor and needy as expressly, and more effectually, than if he had ministered directly to their present necessities, as he believes in the adage, 'An ounce of prevention is worth a pound of cure.'"

The latest and one of the most useful of Mr. Tolman's public donations was the munificent one of one thousand dollars to the Home for Aged Women.

Mr. Tolman has not appeared much in public life, having no political aspirations, and constantly avoiding official position. It is here, perhaps, that he has fallen short of his duty to the public, which, in return

Hiram W. Breed

for the protection and benefits conferred, had a right to place him, occasionally at least, in positions where his fearless independence, caution and watchfulness would be available and effectual. He, however, has "held important and responsible positions in connection with private and corporate interests."

Mr. Tolman has been something of a traveler, having made extensive tours in the Western and Southern States and in California. He has likewise visited Europe, and, of course, with his inquiring mind, gathered much unique and useful information.

In March, 1831, Mr. Tolman was united in marriage with Miss Lydia S. Mann, of Dedham, a daughter of Herman Mann, of whom he had learned his trade, and sister of Herman Mann, Jr., and their children were two sons and a daughter, of whom the latter only is now living, being the wife of Mr. Charles J. Pickford, of Lynn.

HIRAM NICHOLS BREED.

In the "Centennial Memorial of Lynn," published in 1876, by order of the City Council, appeared a biographical sketch of Mr. Breed, which was prepared with care, and to which little need be added here excepting that now, 1887, after the lapse of another decade of years, he still retains, in a remarkable degree, that healthful vigor, both of body and mind, that has characterized him through life; and that the community still have the benefit of his mature judgment and efficient services.

Mr. Breed, says the sketch referred to, was born in Lynn, September 2, 1809, and was a son of Asa Breed, born February 21, 1783, a direct descendant from Allen Breed, who settled in Lynn in 1630. The Breed family during our whole history has maintained the highest rank, numerically, with the exception of the Newhall, which considerably outnumbers any other.

After receiving a district school education, Mr. Breed was put to the common employment of the youth of that period in this place, namely, the trade of shoemaking. And that occupation he has pursued for the greater portion of his life. The old-fashioned shoemaker's shop was an unrivalled school in its way—a school in which the free discussions on every topic of public or private interest had a tendency to make men intelligent in every way except, perhaps, in mere book-learning. The discussions often led to reflection and investigation, and whoever possessed ability was pretty sure to have it recognized.

Mr. Breed was, at a comparatively early age, called to take a part in the management of public affairs; and for many years has held responsible offices. He was in various positions in the old town government, and the office of selectman when it expired. On the adoption of the city form he was one of the first Board of Aldermen, being likewise returned for the same position the next year. He was a member of the Legislature in 1848 and 1850, and a member of the Constitutional Convention in 1853. By Governor Bontwell

he was appointed Coroner, and held the office twenty-five years, until the duties were referred to the courts; and he held the office of Justice of the Peace thirty-four years. He was ten years a director in the old Mutual Fire Insurance Company, likewise City Assessor in 1858 and 1859, and Surveyor of Highways ten years. In the latter capacity he rendered eminent service, doing much to protect and beautify the picturesque drives in the outskirts, as well as to render safe, compact and cleanly the business streets. For thirteen years he was Commissioner of Pine Grove Cemetery, and for six years contractor to grade and prepare the lots. Nor should it be forgotten, while speaking of his many excellent labors, that he was active and efficient in the establishment of the Home for Aged Women.

In 1861 Mr. Breed was elected to the office of Mayor. That was a year especially filled with unusual demands, anxieties and perplexities, for it was the opening year of the great Civil War. New duties and responsibilities were then pressing, and untried measures were to be adopted. It required firmness to withstand unreasonable demands, and judgment to meet all legitimate claims. The success of his administration, under the circumstances, entitles him to much credit. It was a difficult task to shape and put in operation the measures that resulted so favorably to the soldiers and their families, while at the same time other public interests were vigilantly guarded. Something of the modest spirit with which he entered upon his duties as Mayor may be gathered from the opening passage of his inaugural address: "Called from a laborious but honorable occupation to fill the position of Mayor of this city, and well acquainted with my many deficiencies for this important trust, I feel confident that, seeking to know my duty, I shall be able by assiduity and industry to discharge the duties with a measure of satisfaction to myself and my constituents." Perhaps his habit of careful investigation, before proceeding to action, in matters of real importance, is one of his most prominent characteristics—never too hasty, and never liable to be driven on by the unadvised urgency of those who always stand ready to press others while no responsibility rests on themselves.

Mr. Breed belongs to one of the old families of the eastern section of the town, though the first Breed located in the western section, and has lived to see great improvements in the vicinity of his birth-place. Ocean Street, which is now reckoned one of the finest avenues in the county, he has seen opened through lands, not indeed barren, but occupied only for purposes of husbandry. He also had much to do with the laying out of Breed, Foster and Nichols Streets, now filled with a thrifty population. And to his energy and enterprise that whole section is indebted for many of those improvements which have changed it from its former quaint and rather ancient aspect to one pleasant and attractive.

On the 4th of July, 1830, Mr. Breed was united in marriage with Nancy, a daughter of Caleb Stone, a well known and much respected citizen, and by her had ten children—four sons and six daughters. On the 4th of July, 1880, the fiftieth anniversary of their marriage, a large company of kindred and friends assembled in a tasty pavilion, erected for the purpose, and there offered their congratulations and good wishes to the esteemed couple. It was an occasion of much enjoyment, mingled with the touching reflection that the day for final separation could not, in the common course of nature, be far distant. And since then the endeared companion with whom Mr. Breed had so long journeyed, has been called to the better land. A beloved and promising son, too, then in early manhood, has likewise passed the bourne whence none return.

ISAAC FRANCIS GALLOUPE.

One of the most noted of the early settlers of New England was John Gallop, of Strode, County Dorset, England, who, at the age of forty, set sail for America in the "Mary and John," and arrived on the 30th of May, 1630, at Watertown (now Boston). He was a descendant, in the eighth generation, of John Gallop, who, in 1465, came out of the North and settled in Dorset, his heraldic shield bearing the mottoes, "Be bold, be wyse."

Isaac Francis Galloupe, a descendant in the seventh generation from John Gallop, the pioneer, was born in Beverly, Ma-s., June 27, 1823. His parents were Isaac and Annis (Allen) Galloupe, both of sturdy New England stock. After receiving a suitable academical education he entered, as a student, the office of Dr. A. S. Pierson, of Salem, with whom he remained two years, at the end of which time he entered the Tremont Street Medical School, in Boston, and pursued his studies another year. He also attended three full courses of lectures at the Medical School of Harvard University, where he graduated in 1849.

Thus thoroughly prepared, in the spring of 1849 he settled in Lynn, where there were several physicians of more than ordinary reputation, who, in view of the favorable auspices under which he came, welcomed him with the utmost kindness. He was not long in gaining practice, and has from that time to the present enjoyed a reputation ever increasing, till it may now with confidence be said that very few physicians or surgeons in the county can be regarded as his peers. He is an honored member of the Massachusetts Medical Society and of the several local associations, in all of which much deference is paid to his ability and skill, and his suggestions are received as authoritative. His writings on various professional topics, which have from time to time appeared in the medical journals, have uniformly commanded attention and received warm commendation.

As a citizen, Dr. Galloupe has always received the highest respect, although the exactions of his profession have prevented his appearing much in public office. He, however, has served several times as city physician, and, as a member of the School Committee, has shown his interest in the cause of education. But it was in the Union army, during the great Rebellion, that his excellent professional attainments became most conspicuous. He was commissioned as surgeon of the Seventeenth Massachusetts Regiment July 10, 1861. The next year he served as acting brigade surgeon in North Carolina, and then division surgeon on the staff of Major-General J. G. Foster. Besides the foregoing he filled several other important and difficult positions, among them that of surgeon-in-charge of the United States Army General Hospital, medical director, surgeon-in-charge of the medical department in a number of perilous expeditions, post-surgeon at Newbern, N. C., surgeon-in-charge of rebel prisons and jails. In all of them he proved himself so diligent and faithful as to elicit the heartiest commendation of the commanding officers.

In the report of Colonel Amory, issued from the headquarters at Newbern December 21, 1862, concerning the actions of the 14th, 16th and 17th of that month, appears the following: "When all did their duty well, it seems unnecessary to mention names, but I feel compelled in this place to testify to the fidelity with which Dr. Galloupe, the senior surgeon of my brigade, discharged his duties. His efficiency at all times and his care of the wounded merit the highest praise."

In 1868 Dr. Galloupe was commissioned by the President, "for faithful and meritorious services during the war," a lieutenant-colonel of volunteers by brevet. This appointment was made in accordance with the many and strong recommendations of those best able to judge of his distinguished merits as a surgeon and soldier. Among those urgently advocating his appointment were Major-General J. G. Foster and Surgeon-General Dale. General Foster wrote, "I know Dr. Galloupe to be a most worthy and excellent officer, who, under all circumstances during the war, performed his duty with marked ability;" and Surgeon-General Dale wrote of him, "His record during the war was honorable to himself and creditable to the commonwealth." Many passages, equally laudatory, from others, might be added, showing the high estimation in which his services were held by those most competent to judge. It may not be amiss, however, to add the following letters of those well-known commanders, General Burnside and General Butler, to the Secretary of War:

"STATE OF RHODE ISLAND, EXECUTIVE DEPARTMENT,

PROVIDENCE, August 8, 1868.

"General J. M. SCHOFIELD, Secretary of War:

"General,—It gives me great pleasure to bear testimony to the skill, industry and gallantry of Surgeon Isaac F. Galloupe, of the Seventeenth Massachusetts Volunteers, who served with me in North Carolina.

Grace F. Galloupe

Joseph C. Bennett

On all occasions during the war when his services were needed he proved himself a most efficient surgeon and brave officer. In February, 1864, he was captured by the enemy whilst operating upon the field. I believe his good services and record entitle him to a brevet, and I hope it may be found for the interest of the public service to give him the promotion.

"Yours truly,
"A. E. BURNSIDE."

"BAYVIEW, NEAR GLOUCESTER, MASS., August 10, 1868.

"To the Honorable Secretary of War,—

"Surgeon Galloupe served under my command at Newbern, N. C., and was captured during an attack while engaged in the strict line of his duty in removing a musket-ball from a wounded officer. He was detained in Libby a month and then exchanged. His services were more than those of surgeons of the line, and were specially mentioned. His testimonials from other commanders under whom he served are of the highest order. I urgently bespeak for him a brevet appointment as fit recognition of his efficient and assiduous and meritorious services.

"I have the honor to be

"Your very obedient servant,
"BENJAMIN F. BUTLER."

The reference to Dr. Galloupe's being taken prisoner while attending a wounded officer on the field may merit an explanatory word or two. The wounded officer was Henry A. Cheever, adjutant of the Seventeenth Massachusetts Volunteers, who says, in a letter to the Secretary of War, dated August 8, 1868: "On February 1, 1864, when the rebel General Pickett made his demonstration against Newbern, N. C., it was my misfortune to receive a dangerous wound in the left side, and my very excessive good fortune to be associated with Surgeon Galloupe, who remained with me on the field performing a surgical operation, when to remain and do his duty to me (our small force having been routed by overwhelming numbers) was to fall into the hands of the enemy. I, as well as some others belonging to the Department of North Carolina, owe our lives to the faithful manner in which Surgeon Galloupe discharged his every duty. His humanity saved many lives and cheered the dying hours of many others. As a companion he was always of high moral character. I know of nothing stronger that could be said in his behalf than that he always, whether in camp or on the march, met and faithfully discharged his every obligation, and, in my opinion, is richly deserving of all the honors that can be granted to one who served his country well."

Dr. Galloupe's army experience has enabled him to make valuable contributions to the surgical literature of war, and he has taken occasion, from time to time, in his concise and lucid manner, to describe cases that have come under his operating hand, much to the benefit of his professional brethren, so that the period of his public usefulness by no means ended with the close of the war. As an example of his intelligent way of viewing professional duties and responsibilities the following extract from a publication of 1863 is introduced, for it contains suggestions likely to prove of benefit wherever the note of war is heard:

"AMPUTATION ON THE BATTLE-FIELD.—Surgeon Isaac F. Galloupe, of the Seventeenth Regiment, has written an interesting letter to Surgeon-General Dale, in which he speaks of amputations on the field of battle

from his experience in the service. He says that it is thought by many that amputations on the battle-field are sometimes needlessly performed, but this is an error in his opinion. The golden opportunity for the operation is immediately on the reception of the injury, presuming, of course, that amputation is necessary. The severe shock and depression of spirits which immediately follow a severe injury in civil life do not appear often in those wounded in battle, but the men are in a high state of excitement and exhilaration, a condition highly favorable for immediate operation, which, if performed at such time, produces no shock to the system. This condition, however, soon passes off, and if not improved, the opportunity is lost.

"He says that during the three engagements upon the recent Goldsboro' expedition, about one hundred and fifty wounded were brought to him, and as he could not attend to all the cases personally, he selected the eight worst ones and performed amputation, leaving the rest to 'conservative surgery,' and in every case among these of gunshot fracture of the long bones, not including those of hands and feet, the patient finally lost his limb, and in some cases his life also, while those who had undergone primary amputation made rapid recovery.

"In the eight cases in which Surgeon Galloupe operated on the occasion referred to, all but one lived and rapidly convalesced, the case terminating fatally being that of Private Rand, who lost his arm and leg, and who died from surgical fever after his arm had entirely healed and his leg was progressing very favorably."

Dr. Galloupe was a liberal contributor of material for the "Medical and Surgical History of the War of the Rebellion," published by the War Department.

Dr. Galloupe returned from the war with a commanding professional reputation, and quietly resumed his practice in Lynn, where he still resides.

In 1854 Dr. Galloupe was united in marriage with Lydia D. Ellis, a daughter of the late David Ellis, of Lynn, and is the father of two sons,—Francis Ellis, a graduate of the Massachusetts Institute of Technology in 1876, now practicing mechanical engineering in Boston, and Charles William, a graduate of Harvard College in 1879, and the Harvard Medical School in 1883, who is now a successful practitioner in Lynn.

JOSIAH CHASE BENNETT.

Bennett is an old Lynn name, and as some of the family left here at an early period and settled in New Hampshire, it is perhaps fair to presume that the subject of this sketch, who was born in Sandwich, N. H., on the sixth of May, 1835, was a descendant from Samuel Bennett, who came to Lynn during the first decade of our history—no doubt as early as 1636. He was a man in good circumstances, public-spirited, and withal possessed of much independence of character—was a little wilful perhaps, but on the whole, such a one as no descendant need be ashamed of.

He was a member of the Ancient and Honorable Artillery as early as 1639. Mr. Bennett's father was Simon Bennett a farmer, also born in Sandwich, who stood very high in the community for his integrity and sterling Christian character. He was the son of Stephen Bennett, and a grandson of Stephen Bennett who served as a drum-major during the entire period of the War of the Revolution, and who, at a very old age, froze to death as the result of a fall on the ice of Lake Winnepesaukee.

Chase, the middle name of Mr. Bennett, was de-

rived from his maternal ancestors, his mother (Mary Fogg Chase) having been of the New Hampshire Chase family, which has always numbered many eminent personages; among them two Bishops of the Episcopal Church, namely, Philander Chase, Bishop of Ohio, who acquired the title of "Father of Ohio," he having gone there in its infancy, and being largely instrumental in shaping its early history; the other was Carlton Chase, Bishop of New Hampshire, he who afterwards, on the fall of Bishop Onderdonk of New York, discharged the episcopal duties of that Diocese. In this family line, too, appeared the distinguished statesman and financial expert, Salmon Portland Chase, who was Governor of Ohio, United States Senator, Secretary of the Treasury under President Lincoln, and afterwards Chief Justice of the Supreme Court of the United States.

In Mr. Bennett's business career we have a notable example of the progress of a true New Englander, one who from the more humble ranks, by industry, perseverance, and enterprise has attained a commanding position in the community; a position, however, which could not have been reached and maintained without the additional virtues of probity, fair dealing and true manhood.

It may be well briefly to sketch his career, there being abundant material furnished by the public prints which have delighted, from time to time, to speak approvingly of his characteristics and doings. Says one writer: "He was the son of poor parents, and from an early age was thrown upon his own resources for support. When he was sixteen years of age he left his native town and went to work on the shoemaker's bench in Danvers. In those days a shoemaker made the whole shoe, and there were no large factories as at present." In another article we are informed that "From Danvers he went to Boston and engaged in the business of manufacturing silk hats." This business and that of photography engaged his attention until 1865, when he became connected with the American Shoe Tip Company of Boston, remaining with them about five years. During this time he traveled extensively, becoming acquainted with the shoe trade all over the country.

The company rose from a very embarrassed condition to become a great financial success, a result almost wholly contributed to by his personal efforts. At this time he resided in Lynn during the summer, and in Boston during the winter. In 1870 he took up his residence permanently in Lynn, and commenced manufacturing shoes, in a small way, with George E. Barnard, in Exchange Street, under the firm name of J. C. Bennett & Co. Two years afterward the business was removed to their new building in Central Square.

In Central Square the business still continues, under the firm name of J. C. Bennett & Barnard. They do a very large business, and have attained a position where no want of capital is felt, and rank among our

first-class manufacturers. They manufacture none but the first grade of shoes, and put them on the market in corresponding style. The products of their factory are widely and favorably known throughout the country, and have contributed largely to place Lynn in the foremost rank in the production of fine goods.

Mr. Bennett has always been a true friend of the laboring classes and willing to consider their wants and their rights, and hence, through all the agitations that have of late years beset the trade here, he has been remarkably free from difficulties that have been encountered by such brother manufacturers as were disposed to be more tenacious of their own opinions and less considerate of those of others. If, however, troubles have at any time arisen, he has always settled them by arbitration, to the mutual satisfaction of employer and employees.

Mr. Bennett served in the State Senate in 1884-85, and in that position, by his prudence, good judgment and moderation won the universal approval of his constituents; and he likewise gained much applause from the benevolent and sympathetic of all parties, by giving to the Lynn Hospital, the entire amount of his salary as Senator.

In 1865 Mr. Bennett was united in marriage with Miss Nancy Louisa Richardson, of Rochester, N. H., and they have pursued an affectionate and Christian walk together, these many years, both being members of St. Stephen's Church, he having already served as Parish Vestryman, for several years.

JOHN AMBROSE MCARTHUR.¹

Very few of the adopted citizens of Lynn, and she can number many worthy ones who have appeared at different periods, have stood higher in general esteem than Dr. McArthur—esteem for skill in his profession, and for the high qualities that characterize the true gentleman.

He was born near Halifax, Nova Scotia, in 1831, and of excellent ancestry, his grandfather having belonged to the gentry of Lanarkshire, Scotland, and his father, being a man of finished education, having graduated from Dublin University. The latter became an officer in the Queen's Regiment, and was at the burial of Sir John Moore, and at the battle of Waterloo. His mother was a daughter of one of the Royalists who emigrated to Halifax at the close of the American Revolution.

After coming to the States Dr. McArthur resided for a time in Newburyport, where he married and buried his first wife. He was subsequently in business in Montreal, but returned to Newburyport, where he was for a time in business.

Dr. McArthur pursued his medical studies in the Harvard Medical School, where he took a full course, and graduated in 1872, his previous good education

¹ By Jas. R. Newhall.

J. A. McArthur M.D.

J. W. Corwell

A B Martin

furnishing a firm ground-work for professional acquirement.

After spending a short time in Charlestown, he came to Lynn, and in a remarkably short time found himself in an extensive and lucrative practice. Soon after coming to Lynn he was united in marriage with Miss Annie E. Friend, of Gloucester. They had one child, a daughter, and the mother and daughter survive him.

Dr. McArthur's genial manners, varied acquirements, liberal views, and tender sympathies made him esteemed by all classes. And his rapidly accumulating means enabled him to indulge his naturally benevolent inclinations. He diligently followed his profession till declining health required a slackening of professional labors, and for the last two or three years of his life he was compelled to withdraw as much as possible from active practice.

He was not much in public life, as premonitions of declining health warned him to beware of exposure and excitement. In the quiet duties of church work and in the lodge-room he took delight; was an exemplary member of St. Stephen's Church, in which he served as vestryman some ten years, his earnestness and good judgment having much influence with his official associates. He was a charter member of the fraternity of Odd Fellows, and first treasurer of the Richard Drown Lodge; likewise a member of Olivet Commandery of Knight Templars, and passed through all the chairs at Newburyport.

Dr. McArthur died at his residence on South Common Street on the 28th of September, 1887, and the funeral services were held in St. Stephen's Church on the morning of Saturday, October 1, 1887. The remains were taken to Newburyport for burial in the family lot, several of his official brethren, kindred and friends, accompanying them to their final resting-place.

JONATHAN WOODWARD GOODELL.

Jonathan Woodward Goodell was born in Orange, Mass., August 2, 1830. His father was Zina Goodell, and his mother was Polly, daughter of Amos Woodward, of that town. He was educated in the common schools of Orange, at the Melrose Seminary, in West Brattleboro', Vt., and at Saxton's 'River Academy, in Rockingham, in the same State. He afterwards studied medicine in the Berkshire Medical College, and graduated from that institution at the age of twenty-six. During the first ten years of his professional life he practised in Greenwich, Mass., and then removed to Lynn, where he has ever since resided. Since his arrival in Lynn, in February, 1866, he has devoted himself with energy and skill to the practice of medicine and surgery, in which he has secured a large and eminently successful business. He is a member of the American Medical Association, and of the Massachusetts Medical Society, of which latter organization he has been several times

chosen one of the counsellors. He has been, also, President of the Essex South Medical Association, and in these various honorable positions has always had the confidence and respect of his professional brethren. He has neither occupied nor sought public office, but has given his time and energy to his chosen profession, indulging in the single avocation of the study of horticulture as a relief from his legitimate occupation. To the promotion of this branch of science he has lent freely his intelligent service, and is now president of the Houghton Horticultural Association of his adopted city. He is now, at the age of fifty-seven, releasing himself somewhat from the burdens of his profession, and seeking relaxation and pleasure among the fruits and flowers, to whose culture his refined tastes more and more incline. He married, November 1, 1868, Martha Jane, daughter of Jason Abbott, of Enfield, Mass., and has one daughter, now sixteen years of age. He is still in the prime of vigorous manhood, and promises many years of usefulness, both in the pursuit of his profession and in the promotion of a higher culture and taste in the community, of which he is an honored member.

AUGUSTUS B. MARTIN.

Augustus B. Martin is the son of Newhall Martin, of Charlestown, Mass., and he (Newhall Martin) was born in Boston, 1802, commenced the shoe business in what was then Charlestown, but is now part of Boston, in 1822, and remained there till his death, which occurred December 18, 1880, doing the same business in one place fifty-eight years.

In 1823 he married Hannah Phillips, who was also born in Boston, and had the following children: Newhall, born 1825; James Pope, 1827; Edward F., 1829; Augustus B., 1831; Francis A., 1833; Alphonso, 1835; Harriet, 1837. His wife dying May 19, 1839, he married a second wife, Widow Mercy (Hatch) Leach.

Augustus B. Martin was educated in the public schools in Charlestown, and at the age of fifteen entered his father's establishment, where he remained three years. He then learned the trade of moroccodressing with James M. Waite, of Charlestown, and after working at his trade three years, in Newton, with Charles Packer, removed to Lynn at the age of twenty-four. There he started in business with Moses Norris, under the firm-name of Norris & Martin, in the manufacture of morocco. After remaining three years and a half with Mr. Norris, with his small means considerably increased, he established himself alone in the same business, remaining alone until 1867, when he admitted his brother, Edward F., as partner.

In May, 1876, he opened a store in Boston for the sale of his goods, and from the time of his arrival in Lynn, in 1855, to the present time his career has been one of uninterrupted success. Manufacturing at first

on a small scale, and selling to his neighbors in Lynn, he now has customers wherever shoes are made in the United States and Canada.

In 1881 his establishment in Lynn was burned, but was at once replaced by one which is the largest and best-appointed morocco factory in New England. Their store, near the Revere Beach Railroad station, is the most elegant and commodious store, in that line of business, in the United States, and forms part of a brick block owned by himself and built in 1884.

The goat-skins manufactured by the firm are imported by them chiefly from South America, and it is safe to say that no better product than theirs enters the market. Mr. Martin is a Republican in politics, and a Universalist in religion, and has taken an active interest in the advancement of views represented by the party and sect designated by those terms. He is a man of public spirit, interested in the welfare of his city, and the institutions which give it character. He has been a member of the City Council and Board of Aldermen, a director in the Mechanics', now the First National Bank, and is now vice-president of the Lynn National Bank.

He married, December 25, 1856, Elizabeth R., daughter of William S. Fretch, and has had the following children: Lizzie, May, Alice G., and Augustus B. Augustus B., Jr., was admitted a member of the firm January 1, 1887.

JOHN TODD MOULTON.¹

Mr. Moulton was born in Lynn on the 7th of August, 1838. His father was Joseph Moulton, long known among us as a successful tanner and morocco manufacturer; and his mother was Relief Todd, a Vermont lady.

The ancestor of the family was Robert Moulton, who was sent over by the London Company, in 1629, to Governor Endicott, as master shipwright, with six journeymen, to begin the shipbuilding business at Salem. The large island off Beverly shore, called the Misery, "receiving that name," says Felt, "on account of a disastrous shipwreck there," but gives no particulars. Robert Moulton was quite prominent in the early town and church affairs of Salem, and was granted two hundred acres of land in Salem village, now West Peabody, and was one of eight men disarmed at Salem for sympathizing with the wheelwright in his desire for liberty of conscience and free speech.

Mr. Moulton, the subject of this sketch, graduated from Lynn High School in 1855, having prepared for college under Jacob Batchelder. But he relinquished the idea of college-life on account of failing health, caused by too close application to study. He spent several years in his father's nursery in attending to the cultivation and propagation of fruit-trees, shrubs,

and plants, having a strong natural love for such employment.

The father of Mr. Moulton had served an apprenticeship of seven years at the leather manufacture, in all its branches and under him the son became an adept, so that in 1864 he was well qualified to succeed to the then firmly-established business. In that business, the manufacture of morocco leather, he still continues, employing at the present time some sixty or seventy workmen. His factory stands on the spot where one of the earliest tanneries was established, by the Lewises. In the chapter on the industrial pursuits of Lynn more may be found in relation to the business and the successive owners of the premises. The factory is quite extensive, and is located on Marion Street, opposite the foot of Centre.

Mr. Moulton was born in the old Mansfield house, on the north side of Boston Street, nearly opposite the termination of Marion. It was built in 1666 by Robt. Mansfield, and still remains the property of descendants of the builder, now of the eighth generation. The grandmother of Mr. Moulton was a Mansfield, and lineal descendant from Robert, just named.

The integrity, prudence and promptness of Mr. Moulton have made his services much in requisition for positions of peculiar trust. He has already served twelve years as trustee of the public library, and has recently been elected for a new three-years' term, being likewise treasurer of the board of directors. He is treasurer of the fraternities of Associated Charities, treasurer of the Boston Street Methodist Society and treasurer of the trustees of the Lynn Free Public Forest. As mentioned elsewhere, he is a writer of merit in both prose and poetry, and has been the poet at several High School reunions.

But the most distinguishing trait of Mr. Moulton, in a literary way, is his love for historical research. He is a member of the New England Historical and Genealogical Society, and likewise of the Methodist Historical Society.

The people of Lynn are greatly indebted to him for the collection and preservation of much that is useful as well as interesting in her history. He has prepared copies of the earliest existing town records, and had them published in the Historical Collections of the Essex Institute. He has also collected and published the inscriptions from the oldest grave-yards of Lynn, Lynnfield and Saugus, and has prepared genealogies of the Moulton and Mansfield families. A few months since, as mentioned in another connection, he, with Mr. Isaac O. Guild, was at the expense of erecting a suitable stone to mark the resting-place of "Moll Pitcher," the renowned fortune-teller of Lynn, perhaps the most remarkable personage known in our history, and of whom a somewhat extended account may be found in the historical sketch of Lynn in the present work.

Mr. Moulton, it is agreeable to add, is always ready to contribute from his abundant store any informa-

¹ By James R. Newhall.

James T. Moulton

John P. Woodbury

tion he may possess regarding our early families, and the characteristics and doings of our fathers. And all well-wishers of the community will join in rejoicing in the prosperity of one so worthy.

Mr. Moulton was united in marriage with Miss S. Fannie Sweetser in December, 1867, and their children are one son and two daughters.

JOHN P. WOODBURY.

John P. Woodbury was born in Atkinson, N. H., on May 24, 1827. He traces his ancestry through seven generations to one of the earliest settlers in Salem (1624), John Woodbry, who held the first official appointment mentioned in the old Colonial records. Later he was sent to England with full powers to settle some difficulties which had arisen between the colony and the mother country, and returned to the colony in 1628, having executed his commission satisfactorily. John Woodbury, the grandfather of John P., came to Lynn in 1820. He was a skillful master shipwright and carpenter, and the first in this part of the country to introduce the "square rule" in framing buildings. Four of his sons—Jepthah P., Seth D., Joseph P., and James A—became prominent as business men in Lynn, the last two especially as inventors. His eldest son, Rev. John Woodbury, the father of John P., was born at Beverly, and was first settled as a Baptist clergyman at Northfield, Mass., and later, as was the custom at that time, was changed from time to time to other New England parishes. He was a man of liberal views and earnest and devoted in his labors, but in 1850 his health compelled him to retire from the ministry. He was married to Myra Page of Atkinson, and John P. Woodbury, the subject of this sketch, was their only son. His early years were spent in various New England towns where his father was settled. In addition to a common school education he had the advantage of three years' study at the Hancock (N. H.) Literary and Scientific Institution, of which his father was a trustee. At the age of fifteen he was employed for six months on one of the most sterile farms in New England, at the foot of old Monadnock. Any one acquainted with farm-life of thirty years ago will understand how he welcomed a change of employment. He entered the office of the Keene (N. H.) *Sentinel*, and soon became a good compositor. The following year, having a taste for mechanical employment, he went to Bangor, Me., and spent three years of hard work in acquiring a thorough knowledge of various wood-working trades. He then came to Lynn, and was employed for a year as journeyman cabinet-maker in the factory of Seth D. Woodbury, which stood on the present site of the Boston Revere Beach & Lynn Railroad station. The following year he became the confidential clerk of Joseph P. Woodbury, and in 1849-50 visited Buffalo and the principal cities of the West, in connection with patent business. He was in

Washington in the spring of 1850, while the famous compromise measures were before Congress, and heard the questions which led to our civil war discussed by Clay, Webster, Calhoun and many other distinguished members of Congress. On his return he became a partner of Jephthah P. Woodbury in the lumber and building business, which was carried on at Commercial wharf, at the foot of Commercial Street, in Lynn. In this same year (1850), he married Sarah E. Silsbee, a daughter of Nathan Silsbee, and a descendant of one of the earliest settlers of Lynn. In 1854 he sold his interest in the lumber business, and again visited the West, with the intention of settling there, but in four months he returned to Lynn and established himself in the real estate and insurance business. He was the pioneer in this line of business in Lynn. By steady and close occupation he obtained the confidence of his fellow-citizens, and succeeded in establishing the largest business of the kind in Essex County; indeed for many years only two insurance offices in the State made larger returns to the insurance commissioners.

Mr. Woodbury was a firm believer in the future growth and improvement of Lynn. He was for a time a member of the Common Council of the city, but he was too busy a man to continue long in public office. His name is intimately connected with the progress of his adopted city. He was treasurer of the Exchange Hall, the Sagamore Hotel, the Lynn Market-House, and the Lynn City Improvement Companies. It is to his organization of this latter company that Lynn owes the laying out of Central Avenue, the finest and most substantial street in the city. Having secured control of nearly all the land lying between the Central station and the City Hall, he associated with him many of Lynn's leading capitalists and laid out this wide avenue, which has proved to be one of the greatest improvements ever made in Lynn. At the time the project was started it met with violent opposition from the owners of land on Market Street, who feared the depreciation of their property; but time has shown that the improvement has rather enhanced the value of their land. Mr. Woodbury's firm belief in the future of Lynn led him to invest all his savings in real estate, frequently at what were considered high prices, but time has confirmed his judgment. In 1867, after twenty-five years of labor, he sold his business, and, with his family, enjoyed a well-earned holiday in Europe. Seven months were spent in Paris at the time when Napoleon III, then in the height of his glory, was entertaining the crowned heads of the world, and making Paris the most brilliant capital of Europe. The remainder of a year was spent in visiting the principal cities of the continent and in Southern Italy. On his return Mr. Woodbury accepted the presidency of the Exchange Insurance Company, an organization composed largely of Lynn capitalists, but in eighteen months resigned from the position, and has not since been in active business. His leisure is

largely occupied in the collection of books and engravings, and he is especially interested in extra illustrated books, of which he has a considerable collection. He still retains a summer residence in Lynn, but spends the winter months in Boston or in traveling. He is a member of the Bostonian Society, the Boston Art Club, the Grolier Club of New York and other kindred organizations.

Mr. Woodbury is a Unitarian, and was for many years a trustee of the Second Congregational Church of Lynn. In politics he was one of the original Free-Soilers, voting for Martin Van Buren in 1848, and was afterwards a steady Republican until 1883, when, dissatisfied with the nomination of James G. Blaine for President, he became an Independent voter. He has two children, Marcia E., wife of Edward P. Parsons, and John, a lawyer, practising in Boston.

Mr. Woodbury's career illustrates the fact that in this country every avenue to business success is open through steady, unremitting effort, to an earnest and reliable working man; and, better still, that through all his toil a man may carry tastes which will furnish him with delightful occupation and keen enjoyment in time of leisure.

WILLIAM F. MORGAN.

Mr. Morgan was born in Bellingham, Mass., January 2, 1839, and was a son of William F. Morgan, who was a lineal descendant from Miles Morgan, one of the early settlers of Springfield, Mass.

Miles Morgan with two brothers, James and John, sailed from Bristol, England, in March, 1636, and arrived at Boston in the following April. The family removed to Bristol from Llandaff, in Wales, a few years before the sons emigrated to New England. Miles, the youngest of the three was born in 1615, and on his arrival in Boston, or shortly after, he joined a party of emigrants, mostly from Roxbury, of whom Col. William Pynchon was the head, and settled in Springfield. The land first occupied by the settlers in that place is now traversed by the Main Street, and was divided into shares and distributed among them by lot. The tract allotted to Mr. Morgan extended from Main Street to the river, on the south side of what was once called Ferry Lane.

About the year 1643 he married Prudence Gilbert of Beverly, having made the acquaintance of the family during the voyage from England, and the tradition of the family invests the matrimonial alliance with the romance of a courtship at sea, a separation for years, an offer by letter carried by a messenger through the wilderness, an acceptance of the offer, a journey to Beverly by the bridegroom and his companions armed with muskets, and a return with the bride one hundred and twenty miles to Springfield their future home.

The records bear the names of the following children: Mary, born February 14, 1644; Jonathan, November 16, 1646; David, September 23, 1648; Pe-

teah, July 17, 1650; Isaac, May 12, 1652; Lydia, April 8, 1654; Hannah, April 11, 1656; Mercy, July 18, 1658.

The mother of these children died January 14, 1660, and Miles married February 15, 1669, Elizabeth Bliss, and had one other child, Nathaniel, born June 14, 1671. His death is recorded as having occurred May 28, 1699.

Nathaniel Morgan, son of Miles, married January 19, 1691, Hannah Bird, and settled on the west side of the Connecticut River in West Springfield, where he died August 30, 1752. His children were, Nathaniel, born February 16, 1692; Samuel, 1694; Ebenezer, 1696; Hannah, 1698; Miles, 1700; Joseph, December 3, 1702; James, 1705; Isaac, 1708; and Elizabeth, 1710.

Joseph Morgan, son of Nathaniel, married in May, 1735, Mary, daughter of Benjamin Stebbins, and lived and died in West Springfield. His death occurred November 7, 1773. His children were, Joseph, born February 19, 1736; Titus, who died in infancy; Titus again, July 19, 1740; Lucas, February 26, 1743; Elizabeth, December 23, 1745; Judah, March 22, 1749; Jesse, twin of Judah, and Hannah, November 29, 1751.

Judah Morgan, son of Joseph, married April 12, 1775, Elizabeth Shivoy. His children were, Festus, born January 12, 1776; Elijah, June 2, 1777; Richard, March 4, 1779; Amos, November 7, 1780; Elizabeth, June 23, 1787, all of whom were born in Northampton. He died November 13, 1827.

Festus Morgan, son of Judah, married 1799, Submit French of Northampton, and had one child, a son, William F. Morgan, who was born in Northampton, October 6, 1800. He was the father of the subject of this sketch. He learned the business of woolen manufacturing and established himself in that business in Oxford, and a few years later in Bellingham. He married, April 17, 1832, Eliza, daughter of Rufus Russell of New Braintree. His children were, Julius, born and died 1834; William H., born 1836, died 1839; William F., 1839, all of whom were born in Bellingham. He died in Bellingham, August 10, 1839.

William F. Morgan, the subject of this sketch, was a son of the above William F., and was born in Bellingham, January 2, 1839. After the death of his father his mother removed with her family to South Milford, where he attended the public schools until he was ten years of age. He then went to live with a relative on a farm in New Braintree, and while there attended the schools of the town and was later a pupil in Day's Academy in Wrentham.

In 1856, at the age of seventeen, he commenced what was in reality his business career, it being then that he entered a shoe store in Providence, R. I. Here he soon developed such aptitude and business capacity that at the age of twenty-one he was offered the position of partner, which offer was accepted.

Wm. Morgan

Charles C. Beede

Lynn was at that time, as it still is, the centre of the great New England shoe manufacture, and perhaps the most promising field for the development of enterprise, the exercise of industry and the investment of capital, known to the trade. He was, therefore, induced to leave Providence and accept the offer of a situation as salesman and book-keeper in one of the largest establishments here. Hither he came in 1861.

After remaining in the situation named till 1864, he commenced manufacturing on his own account, and soon found himself in a prosperous business, which continued so to flourish and increase, that in 1871 he found it expedient to take a partner. The present firm of Morgan & Dore was formed in 1871 and soon became one of the largest, most reputable and successful in the city. In addition to the factory in Lynn, they have established factories in Pittsfield, N. H., and Richmond, Me., where their liberality and fair dealing have won for them an honorable name, and where the constant employment given to a large number of residents has proved a substantial and highly appreciated benefit to the people.

On the second of June, 1863, Mr. Morgan was united in marriage with Miss Emeline B. Nichols, of Providence, and has two children, William F. (now a student in Trinity College, Hartford, Class of 1888), and Alice L.

Mr. Morgan has not been much in public office, though he has served in the Council. His peculiar fitness for other public service, however, could not remain unrecognized. In charitable enterprises he has always been an active and efficient laborer. He is president of the Board of Associated Charities and a member of the Board of Hospital Managers. He is likewise a trustee of the Five Cents Savings Bank.

In financial matters his skill and forecast have been conspicuous. He was one of the founders of the National Security Bank of Lynn, and has held the position of director ever since its organization.

In 1879 he erected the beautiful residence in Nahant Street, corner of West Baltimore, where he still resides.

Few men ever in Lynn have furnished an example more worthy of imitation than Mr. Morgan. His industrious habits, upright dealing, respect for religion, liberal aid in the promotion of worthy objects, and courtesy of manners, have made him one of exceptionally high esteem. And no well-wisher of the community can envy the prosperity of one who has thus risen to rank as one of the foremost citizens.

CHARLES O. BEEDE.

Charles O. Beede,¹ the subject of this sketch, was born in Lynn in 1840. He received his early education in the public schools of that city and of Sandwich, N. H., and added to his store of knowledge by

close study for a season at the New Hampton Institute.

Being thus equipped theoretically for a business career, he returned to Lynn and entered one of the large shoe manufactories of that city, that he might gain by practical experience the knowledge necessary for business success.

In 1865 he began business for himself, and by untiring industry and honesty of purpose he soon began to climb the rounds of fortune's ladder. His progress was rapid, but he was soon admonished that close application and earnest attention to the cares and responsibilities of an ever-increasing trade demanded in his case a penalty, and in 1872 he was obliged to retire from active business and seek rest and recreation amid the rugged hills and sunny dales of his old New Hampshire home, and for a year rested from his labors.

At the end of that period, being recuperated and thirsting again for the bustle and stir of a busy life, he returned to Lynn, and at once entered the lists, setting the mark for his prize in the establishment of a business that should be favorably known throughout the country.

With a persistency that could not be abated and a zeal that knew no tire, he pushed on until the firm of C. O. Beede was known as the leading firm in New England for the manufacture of boot and shoe supplies, and his name recognized as the name of one who carved his fortune out of the rough stone of opportunity.

Mr. Beede is one of those happy men who study and understand the needs of their employees and cultivates the most friendly relations with them.

He gives his entire force an outing once a year, and joins with them in their annual games and dinner, and when the great feast day of the year comes, the day of Thanksgiving, the table of every man in his employ bespeaks the liberality and thoughtfulness of the man they labor for.

Outside of his regular business he pays attention to real estate matters, and shows the same good judgment there, ranking as among the most prominent and successful dealers in the city.

Mr. Beede, like all progressive men, takes a healthful interest in politics, and believes that that system or party is the most right that does the most toward advancing the material, the social and the moral interests of the people.

Being of a social nature it is not to be wondered at that he should make friends, and in answer to their call he has repeatedly looked after the city's interest by serving on the aldermanic board, and he always carried into his public duties the same qualifications that has made of him in his private life a man of mark.

Honest, always earnest in every cause which he knows to be right, a clear thinker and a progressive man, with a mind broad and comprehensive enough

¹ By Benjamin Pitman.

to take in the possibilities of great enterprises, and yet conservative enough to prevent any undue enthusiasm to control his judgment.

Mr. Beede stands in the community in which he lives thoroughly equipped for every public and private duty.

PATRICK LENNOX.¹

Lynn has been fortunate in numbering, from time to time, among her adopted citizens, those who by their enterprise and other valuable traits, have added to her prosperity and the extension of her good name. And some of these have come from other and distant lands. Such individuals she has always welcomed, and in their fidelity to her interests has secured ample reward. Of this class, few now with us are more worthy of honorable mention than the individual to whom this sketch refers.

Mr. Lennox was born in Kildare, one of the eastern counties of Ireland, a short distance from the city of Dublin, on the first day of August, 1828, and was educated in the national schools. Not much need be said of his boyhood, as it was passed very much like that of other youth about him, with its pranks, its aspirations and its incipient loves. But his ambition to "rise in the world," as he entered early manhood, asserted itself, and led to such "prospecting" in regard to the future, as induced him to turn his eye to America, as the most promising field. He then left his native land without a pang, excepting such as naturally arose from the severance of youthful attachments and home associations.

At the age of twenty he found himself in New York, full of youthful ardor and buoyant hope. He landed there in 1848, and without unnecessary delay came to Lynn. Here he immediately entered the employ of Darius Barry, one of our energetic and reputable morocco manufacturers, on Monroe Street. After serving for three years in a modified sort of apprenticeship, he was competent to accept employment as a journeyman in the establishment of Smith & Clark. Such was his skill, industry and enterprise, and his ambition, too, it may be added, that within two years he was able to commence business on his own account.

The shoe business was at that time rapidly growing in Lynn, as machinery was beginning to be introduced in almost every department. This was a fortunate circumstance, and Mr. Lennox had the shrewdness to perceive the tendency of trade, and had established such a reputation for good management, and had, withal, accumulated such an amount of capital that he was able to take advantage of the tide of prosperity. He soon became numbered among our principal morocco manufacturers, and was not deficient in ample means. His business rapidly extended, and he has now about a hundred and twenty-five

workmen busily employed. He has a salesroom in Boston, which was established in 1877; and at his factory, in Market Street, Lynn, large sales are constantly being made.

It was in 1871 that he built his fine business building in Market Street, opposite the station of the Narrow Gauge Railroad. It was one of the best buildings in the city at the time of its erection, and is still an ornament to the street which has now so many handsome structures. And in noticing this building a correspondent of one of the journals of the day remarks as follows:

"Every traveler on the Boston and Maine Railroad, while passing through Market Street, Lynn, has doubtless observed the substantial and handsome store and factory belonging to Patrick Lennox, who commenced business as a morocco dresser in early life, and has steadily built up a business and trade, now ranking among the first in the State with substantial tokens of his stability. His quiet, gentlemanly demeanor and carefully chosen words will not at first view impress one that he is possessed of the vital force and energy of character that has placed him among the first of the business men of the city. His candor, probity and intelligence makes him a marked man in the community, and his countrymen take especial pride in noting his prosperity in which they are joined by all the citizens. As his name indicates he is a native of Ireland, but so Americanized that none would suspect it from his speech and appearance. He is an honor to both his native and adopted country, loyal and true to both, a self-made, successful business man, deserving of his good fortune."

Mr. Lennox has usually avoided appearing much in public life, having no aspirations for official position. It would, no doubt, have been beneficial to the interests of the city had he been less chary in this respect, for his good judgment and pacific course would many times have saved from indiscreet expenditures, unprofitable discussions and mischievous disagreements. He has, however, held office as director in the National City Bank of Lynn, from January, 1882.

Six years after he arrived in Lynn, that is, in 1854, he was united in marriage with Miss Bridget Clark, and they became the parents of eight children—two sons and six daughters.

It will be seen that Mr. Lennox is not by any means an old man, certainly not in business activity and neighborly sympathies. But he has reached the age when it has become experimentally certain that a course like his, of industry, temperance and upright dealing are, under all ordinary circumstances, sufficient to ensure wealth and honorable social standing. And herein he furnishes an example worthy of imitation by all youths who have the good of the community and themselves truly at heart.

GEORGE HARRISON ALLEN.

Mr. Allen belongs to one of the oldest families in New England. His ancestor, William Allen, though not one of the Plymouth colony, came to New England not long after the arrival of the Pilgrims, and, after a short residence at Nantasket, now Hull, removed to Salem immediately after the arrival of John Endicott at that place, in 1629. At Salem he mar-

¹By James R. Newhall.

P. Henry

George Allen

RESIDENCE OF JOSEPH DAVIS,
LYNN, MASS.

ried, in 1629, Elizabeth Bradley, and had a son Samuel, who married Sarah Luck. Samuel had a son Jonathan, who married Mary Pierce, and Jonathan a son Jacob, who married Sarah Lee. Jacob had a son Isaac, who married Rebekah Tewksbury, and Isaac a son Jacob, who married Lucy Gallop, and was the father of Jacob Alva Allen, the father of the subject of this sketch. Jacob Alva Allen was born in Beverly, March 5, 1810, and married Prudence, daughter of Shubel Hire, who came from Ireland and settled in Middlebury, Vermont, where his daughter Prudence was born, November 5, 1807. He afterwards removed from Beverly to Manchester, Massachusetts, and there George Harrison Allen was born, June 21, 1840. In 1847 he removed from Manchester to Methuen, and in 1849 to Lawrence, and in the common schools of the last two towns his son received his education.

At the age of seventeen George Harrison Allen left school to learn the trade of boxmaking, planing and mill-work on lumber, sawing logs and fitting lumber for building. He began at the first rung in the ladder, and learned the trade thoroughly from shoveling shavings into the fire-room to the clerk's chair in the counting-room. In 1865 he removed from Lawrence to Lynn, and entered into partnership with Joseph A. Boyden, for the manufacture of paper and wood packing-boxes. At the end of two years, Joseph having died, he formed a new partnership with William C. Boyden, of Beverly, under the firm-name of Allen & Boyden, and has since carried on the same business, manufacturing both at Lynn and Beverly a product valued at about one hundred and fifty thousand dollars per annum. Mr. Allen has always devoted himself with energy and industry to his chosen work, and, though he has shared with others business losses and disasters by fire, he has by the display of a determined spirit overcome obstacles in his way and won his full measure of success.

Mr. Allen, though often importuned and at times strongly tempted, has always refused to accept or seek public office. He has believed that the demands of his business were entitled to all his time, and that an entrance into the political arena and a participation in its contests would necessarily distract his mind and divert his attention from the management of his legitimate pursuits.

Mr. Allen has been placed in offices of responsibility and trust in various Masonic bodies, having been at the head of the Golden Fleece Lodge, Sutton Chapter, and Olivet Commandery. In the Grand Commandery of Knights Templars, and appendant order of Massachusetts and Rhode Island, he has passed the chairs of Grand Captain General, Grand General and Deputy Grand Commander, which office he now holds. He has also passed the chairs of the Palestine Encampment of Independent Order of Odd Fellows, having been its Chief Patriarch.

He married, December 26, 1864, Sarah Luella, daughter of Eben and Temperance McIntire, of Lan-

caster, N. H., and resides in Lynn, where his business headquarters are located at 188 Broad Street. He is in the prime of life, and with health and strength his continued prosperity and success are assured.

CHAPTER XXIII.

LYNNFIELD.

BY JAMES R. NEWHALL.

Early Grant—First Settlers—Natural Attractions—Ponds and Streams—Flora—Fauna.

LYNNFIELD was for more than a century and a half a territorial outpost of Lynn. It was on the 13th of March, 1633-39, that "Linn was granted 6 miles into the country," and a committee appointed to make a territorial survey for the purpose of ascertaining the character of the land beyond, and determining whether it "bee fit for another plantation or no." The court, while making the grant, seem to have had some doubt as to the extent of colonial rights and the security of titles, as they soon after enacted that the Governor and assistants shall "take care that the Indians have satisfaction for their right at Lynn."

The granted territory was long called Lynn End, and occupied chiefly by farmers. It was set off as a parish November 17, 1712, and the inhabitants were to be relieved from taxes in the old parish as soon as they built a meeting-house and settled a minister; this they accomplished in about eight years, the house being built in 1715 and the minister settled in 1720. In 1782 the parish became a separate district, and in 1814 the district was incorporated as a separate town. The precise time when the first settlers arrived or just where they located is not certainly known. It is presumed, however, that they came from Lynn, some of them, perhaps, before the grant was made. It is manifest by the names found on the church records—Aborn, Bancroft, Gowing, Mansfield, Newhall, Wellman—that at least the principal ones were from Lynn.

The Mansfields and Newhalls settled in the southeastern part, the Bancrofts and Wellmans in the northwestern and the Gowings somewhere between the two.

The early history of Lynnfield is, of course, interwoven with that of Lynn, and their natural features are in a large degree similar. Its woody hills form a part of the extensive range that sweeps up from old Plymouth County, varying in height, but never reaching an altitude that entitles them to the name of mountains. They present irregularities of shape, diversities of soil and modifications of geological construction, and follow the line of the coast at dis-

tances varying from half a mile to eight miles from the shore, in many places bearing strong evidence of having once been the boundary of the tide. Anciently, for the whole extent they were well wooded; but as population increased, the axe in many places laid them bare, and orchards and arable fields began to appear. At intervals the chain now seems much broken, as most portions likely for the present to repay the expense have been reclaimed. Some sections, however, still retain much of their primeval aspect,—a fact eminently true of several of the remoter parts of Lynnfield.

But Lynnfield possesses many attractions for the lover of nature, in her lonely glens and pleasant heights, in her lakelets and busy streams. She has good highways and romantic byways, green meadows and sunny plains. But she has not the ocean views that so charm, and the ocean breezes that so invigorate. Many, however, come hither for temporary homes during the vacation season, and in the quiet enjoyment of rural sights and rural sounds, in the breathing of uncontaminated airs, in the use of fresh and simple food, and in freedom from the restraints of fashionable life, find a medicine that revivifies their jaded energies, and enables them to return to their homes again to enter with zest the accustomed routine.

There can be nothing more pleasing to the wooer of nature, especially one who contemplates her charges with the eye of a true lover rather than that of a scientist, than to view the glowing pageantry of the woods hereabout in mid-autumn. The splendid coloring of the foliage takes place at different periods, the swamp maple and white birch often beginning to change in the latter part of August. Some seasons present much greater brilliancy than others, early frosts being quite certain to destroy the effect. Yet there is a strange belief with many that frost actually produces the appearance. Even the poet Whittier sings:

“Autumn’s earliest frost had given
To the woods below
Hues of beauty such as Heaven
Lendeth to its bow;
And the soft breezes from the west
Scarcely broke their dreamy rest.”

Frost comes as a destroyer, not as a beautifier. And it is a little remarkable that one so observant, who had spent his life in the theatre of such changing scenes, should have adopted the old error. But, perhaps, the singer yielded to the poetical idea.

While the foliage is so inviting to the woodland stroller, or sometimes after it has been loosened by the frost and fallen, the Indian summer comes—those few days of delicious languor, when all nature seems to be wrapped in a mantle of haze and lying down to dreamy repose. The natural cause of Indian summer, which, by the way, occasionally fails to appear, does not yet seem to be satisfactorily ascertained. And perhaps, in the absence of anything more

reasonable, the red man’s explanation may be adopted—namely, that it is a period when a breath from the hunting-grounds of heaven is permitted to sweep down to earth.

The geology of Lynnfield is not very dissimilar to that of Lynn, excepting that granite to a considerable extent takes the place of porphyry and greenstone. Quarries of the former have been long profitably worked. Some years ago a quarry of serpentine was opened. In various sections, in former years, peat meadows yielded an abundance of fuel, it being in some cases found fifteen feet in depth; but of late it has not been so much used, partly, no doubt, on account of the increased expense of labor in the preparation, and partly on account of the greater convenience of other kinds of fuel better adapted to the modern modes of heating.

PONDS AND STREAMS.—There are several picturesque lakelets or ponds in Lynnfield, and two or three streams that not only add charms to the landscape, but are useful in various ways, though not largely employed as manufacturing agents. *Lynnfield Pond*, as it is usually called, though sometimes known as “Suntaug Lake” or “Humphrey’s Pond,” being the same “freshe pond with a little ileland” named in the old grant of 1635 to John Humphrey, is the chief of the still waters. It occupies about two hundred and ten acres, and lies partly in Peabody, is a beautiful sheet, with lovely surroundings. A melancholy accident occurred here on the 15th of August, 1850. A company, connected for the most part with the First Christian Society of Lynn, were holding a picnic on the border. In the course of the afternoon a party of twenty-five, chiefly ladies, rowed out in a large, flat-bottomed boat about a hundred yards from the shore. As some of them shifted from side to side, the boat was made to careen, and several of them, becoming alarmed, threw their weight in a manner to completely capsize it. Before aid could reach them thirteen were drowned. *Pilling’s Pond* is largely artificial and of no great depth. *Nell’s Pond* is remarkable for its elevation, being something like a hundred feet above sea-level.

Along the northern border of Lynnfield flows the main branch of *Ipswich River*, and the western is partially traversed by the *Saugus*. *Hawkes’ Brook* meanders leisurely along, and is now charged with the useful duty of adding to Lynn’s public water supply.

The *spring water* of this vicinity is uncommonly pure, for the stone through which it percolates is not soluble; and it forms a good sample of that which William Wood, Lynn’s first historian, as early as 1633, thus enthusiastically celebrates: “It is farr different from the waters of England, being not so sharp, but of a fatter substance and of a more jettie color; it is thought there can be no better water in the world, yet dare I not prefer it before good beere, as some have done; but any man will choose it before bad beere, whey or butter milk.”

FLORA.—The flora of Lynnfield, as it was observed by the first settlers, is no doubt well, though not fully, described in the following lines from Wood's "New England's Prospect." And well might such a promising region be coveted,—

"Trees both in hills and plains in plenty be,
The long liv'd oake, the mournful cypress tree,
Skie-towering pines, and chestnuts coated rough,
The lasting cedar, with the walnut tough ;
The rosin-dropping firr for masts in use ;
The boatmen seeke for oars, light, neat grown sprowse,
The brittle ash, the ever-trembling aspens,
The broad-spread elme, whose concave harbours waspes ;
The water-spongie alder, good for naught,
Small elderne by th' Indian fletchers sought,
The knottie maple, pallid birch, hawthornes,
The horubound tree that to be cloven scores,
Which from the tender vine oft takes its spouse,
Who twines embracing armes about his boughes,
Within this Indian Orchard fruits be some,
The ruddie cherrie and the jetty plumbe,
Snake murthering hasell with sweet saxaprage,
Whose spurres in beer allays hot fever's rage,
The diar's shumach, with more trees there bee
That are both good to use and rare to see."

Descending to the more lowly products, it may be said that in the woods and ravines, in the swamps and upon the rocky heights, are to be found shrubs and flowers of great beauty, some varieties of which, under the hand of cultivation, have become garden favorites. And many plants of rare medicinal value are to be found. But the long and persistent warfare of our learned doctors against the use of "herbs" has resulted in greatly reducing the esteem in which they were once held. The old traffic of the semi-medicant wanderers, with their pyrola, sassafras, gold-thread, rosemary, catnip, sweet flagroot and countless other varieties of similar curative merchandise, has become nearly extinct. And so has gone all that class of irresponsible doctors, friends of the poor, as they called themselves, and sometimes were, who, for the fee of a meal, were ever ready to advise and prescribe. It did not cost so much to be sick in those primitive days as it now does.

FAUNA.—As considerable is said in the sketch of Lynn, of which Lynnfield so long remained a member, regarding the fauna of the region, no elaboration will be required here. Bears were not uncommon in the woods ; moose, beaver and deer were seen ; foxes and wolves abounded ; and so did raccoons, weasels and woodchucks. Most of these, excepting the last two, have become nearly extinct—the first three entirely so. But no better idea of the animal life here-about can be given than by quoting the concise, though somewhat grotesque, metrical description given by a quaint old writer. His was a style much in vogue in early times, and some of the important facts in our history have been preserved in that now seemingly irregular way. Those rhyming historians had no thought of debauching history through poetic license, but aimed at a straightforward delineation of facts, perhaps using that form to aid the memory. But to the quotation, which is from a more extended

description that appears in Lynn's Centennial Memorial,—

"Some of the nobler game erst found, within these forests wide,
The moose, the beaver and the deer no longer here abide ;
Nor growling bear, nor catamount, nor wolf do now abound,
But raccoons, woodchucks, weasels, skunks, and foxes yet lurke round,
And in the broocks and ponds still rove the turtle and musk ratt,
The croaking paddock and leap-frog ; and in the air the batt.
Serpents there be, but poys'nous, few, save horrid rattlesnakes,
And adders of bright rainbow bne, that coyl among the brakes.
And then of birds we have great store ; the eagle-soaring high,
The owl, the hawk, the woodpecker, the crow of rasping cry,
The partridge, quail and wood-pigeon, the plover and wild-goose,
And divers other smaller game are here for man, his use.
And many more of plumage fair in coo and song are heard ;
The whippoorwill, of mournful note, the merry humming-bird.
In bog and pond the peeper pipes at close of springtide day,
And fire-flies dauce like little stars along the lover's way."

Upon the rocky hillsides, about the ledges, and in the sequestered forest defiles, the hideous rattlesnake is still occasionally met with, during the hottest weather. Seldom, however, is there any injury and almost never any fatal result from encounters with these old-time terrifiers. Formerly they were numerous, and occasioned much fear, but the numbers and fears have greatly decreased. It is stated, however, that during the summer of 1868 a Lynnfield farmer killed the extraordinary number of thirteen, of various sizes.

ECCLESIASTICAL HISTORY.

FIRST PARISH.—The First Church of Lynnfield was formed August 17, 1720, though a meeting-house appears to have been built some five years before. It had always been a hardship for worshippers of that remote region to attend service at the First Parish house, some living more than seven miles distant. And as early as the time when the "Old Tunnel" was built, 1682, on Lynn Common, much discussion was had as to the expediency of building farther inland, in some place that would be most convenient for the four sections, now Lynn, Lynnfield, Saugus and Swampscott, separate parishes not then being contemplated. But the desire of the people near the site of the old house prevailed, and the new one was placed on the Common, where it remained, a marked object, till 1827. There does not appear to have been any ill-feeling engendered, and thither the people of Lynnfield went for worship till they became strong enough to form a separate parish.

The Rev. NATHANIEL SPARHAWK was installed minister of the Lynnfield parish at the time the church was formed, 1720, and his salary for the year fixed at seventy pounds. He was born in Cambridge in 1694 ; graduated at Harvard in 1715 ; was dismissed in July, 1731, and about one year thereafter, May 7, 1732, died, at the early age of thirty-eight years. The reason for his dismissal does not exactly appear. Mr. Lewis says, "A part of his people had become dissatisfied with him, and some, whom he considered his friends, advised him to ask a dismissal, in order to produce tranquillity. He asked a dismissal, and

it was unexpectedly granted. A committee was then chosen to wait on him, and receive the church records; but he refused to deliver them. Soon after he took to his bed, and is supposed to have died in consequence of his disappointment." His wife was Elizabeth Perkins, and he had four children, one of whom was Edward Perkins Sparhawk, a man who became somewhat noted. He was born July 10, 1728, and graduated at Harvard College in 1753. His wife was Mehitabel Putnam, whom he married in 1759. Mr. Lewis says he was never ordained, though he preached many times in the parishes of Essex. He appears not to have approved of the settlement of Mr. Adams, the third minister of the parish, having himself been a candidate, and calls him "old Adams, the reputed teacher of Lynnfield." The historian adds, "He is the first person whom I found in our records having three names. The custom of giving an intermediate name seems not to have been common till more than one hundred years after the settlement of New England." One son of Rev. Nathaniel, the first minister, born October 24, 1730, named John, was apprenticed to a shoemaker, and afterward became a physician of Philadelphia. One of our Essex County historians has strangely enough given the Rev. Nathaniel as the one to whom we are indebted for the series of interleaved almanacs which have been so much quoted from. But he had been dead fifty years before the almanacs were made. The Sparhawk who made the almanac memoranda was most likely Edward, son of the first minister, though some have thought he was a brother or nephew.

The immediate successor of Rev. Nathaniel Sparhawk in the pastorate was the Rev. STEPHEN CHASE, who was settled in 1731. He was born in Newbury in 1708, graduated at Harvard in 1728, resigned in 1755, and died in 1778. His salary, as fixed at the time of his ordination, was one hundred pounds. Mr. Chase was here during the exciting period of the visit of Rev. George Whitefield, the celebrated English revivalist. Rev. Mr. Henschman was then minister of the First Parish of Lynn, and while he personally treated the eminent stranger with great courtesy, and even cordiality, strongly opposed his course of ministration, and refused the use of his meeting-house for one of his meetings. Mr. Henschman addressed a letter, printed in pamphlet form, to Mr. Chase, giving reasons for his opposition to Mr. Whitefield.

Some of these reasons, as clearly enumerated by Mr. Lewis, were, that Mr. Whitefield had disregarded and violated the most solemn vow, which he took when he received orders in the Church of England, and pledged himself to advocate and maintain her discipline and doctrine—that he had intruded into places where regular churches were established—that he used vain boasting and theatrical gestures to gain applause—that he countenanced screaming, trances and epileptic fallings—that he had defamed the char-

acter of Bishop Tillotson, and slandered the colleges of New England.

It does not appear that Mr. Chase publicly answered the letter of Mr. Henschman, nor, indeed, what his precise views regarding Mr. Whitefield were. The letter was, however, answered by Rev. Mr. Hobby, of Reading, who became a warm defender of Mr. Whitefield. And to Mr. Hobby's answer Mr. Henschman made a rejoinder. The controversy was protracted and warm, and perhaps some good resulted.

The wife of Mr. Chase was Jane Winget, of Hampton, and they had five children. After leaving Lynn he settled in Newcastle, N. H., remaining there till his death.

The third minister of the Lynnfield Parish was Rev. BENJAMIN ADAMS. He was born in Newbury May 8, 1719; graduated at Harvard in 1738; settled here November 5, 1755; died May 4, 1777. His wife was Rebecca Nichols, and they had seven children.

The fourth minister was Rev. JOSEPH MOTTEY. He was born in Salem, May 14, 1756; graduated at Dartmouth, 1778; settled here September 24, 1783; died July 9, 1821. His long pastorate would indicate that he was beloved by his people, though it was a period when ministerial changes were not by any means so frequent as now. He was of a retiring and sensitive disposition, had marked eccentricities, and withal a humorous vein. As a preacher he was mild and persuasive; not given to "ecstasy and holy frenzy." At times he was subject to strange fancies and singular apprehensions. The following instance is related in Sprague's "Annals of the American Pulpit," where a notice of him appears: "One extremely cold night, after going to bed, he came to the conclusion that he should certainly die before morning. While reflecting upon being found dead in his bed, he bethought him that his appearance, as he then was, would not be just what he should like; so, getting up in the cold, he put on clean linen and jumped into bed again. Very soon he fell asleep, slept soundly till morning, and on waking was quite astonished to find that he was not dead." This certainly indicates that he had little fear of death. But he was a man of high character, and, notwithstanding his eccentricities, or "oddities," as they were called, continued to enjoy the respect of his people, who seem never to have doubted his piety and conscientiousness. His reply to one who called him "odd" was witty as well as characteristic: "Yes," said he, "I set out to be a very good man, and soon found that I could not be without being very odd."

Mr. Mottey was not accustomed to exchange with his brother clergy so often as did most of the ministers of that period; neither did he take anything like so active a part in the temporal affairs of his parish as some of them, especially Mr. Treadwell and Mr. Roby, of the other Lynn parishes. This trait was sometimes commented on in a manner unfavorable to

him. But the fact was, no doubt, rather attributable to his naturally shrinking disposition than to lack of interest in public affairs. That he was industrious with his pen cannot be doubted, for it is asserted that he wrote more than two thousand, if not fully three thousand, sermons, which, if they were of the usual length of the sermons of that period, must have covered many more sheets of paper than most of the preachers of our day find it in their way to cover.

"In regard to doctrines," quotes Mr. Parsons, in a paper read before the Essex Unitarian Conference, September 8, 1881, "Mr. Mottey, in the first years of his ministry, was much inclined to what is now termed orthodoxy. Afterwards, and until the end of his life, there was a general coincidence in his opinions with what is now termed liberal Christianity." But "liberal Christianity" is a term so indefinite as to cover a wide field. And it cannot be admitted that Mr. Mottey ever became what is now known as a Unitarian or Universalist; nor was his successor, Mr. Searl, of either of these denominations. There are many shades of belief among the individuals of all denominations. And no doubt some of the theologians of Andover and Princeton are quite as well entitled to be called liberal Christians as was Mr. Mottey.

The fifth minister of Lynnfield Parish was Rev. JOSEPH SEARL. He was born in Rowley December 2, 1789; graduated at Dartmouth in 1815; settled here January 21, 1824; resigned September 27, 1827. He removed to Stoneham. Mr. Searl was the last preacher of the old orthodox faith in this, the First Lynnfield Parish. Rev. LUTHER WALCOTT, his successor, was of the Universalist persuasion. The ministerial succession was as follows:

1720. Nathaniel Sparhawk.	1783. Joseph Mottey.
1731. Stephen Chase.	1824. Joseph Searl.
1755. Benjamin Adams.	1854. Luther Walcott.

After Mr. Walcott left the society was supplied by different ministers for a few years, and then services were discontinued.

It would be needless to repeat that this, the First Church of Lynnfield, was originally of rigid Puritanical stamp. And in its history appears another instance of the tendency to swerve from that faith, and by the force of a mere vote adopt one of a different character. Where no superior ecclesiastical authority is acknowledged there seems nothing to prevent this. This Lynnfield society changed its faith as an organization by voting to settle Mr. Walcott. The First Church of Lynn is one of the three or four of the early churches in Massachusetts that have preserved their integrity, through good report and evil, to the present day, they never having yet voted themselves out of the old faith. The right of individual interpretation may be very precious, but its tendency is to instability.

The following are the other religious societies of Lynnfield:

ORTHODOX EVANGELICAL SOCIETY (Centre Village). [Trinitarian Congregational, formed September 27, 1832.]

1833. Josiah Hill.	1863. M. Bradford Boardman.
1837. Henry S. Greene.	1871. Oliver P. Emerson.
1850. Uzal W. Condit.	1874. Darius H. Scott.
1856. Edwin R. Hodgman.	1883. Henry L. Brickett.
1859. William C. Whitcomb.	

SOUTH VILLAGE CONGREGATIONAL. [Trinitarian, formed in 1849.]

1849. Ariel P. Chute.	1865. Jacob Hood.
1858. Allen Garnett.	

METHODIST.—A society of this order was formed here in 1816, and a house of worship erected, in the Centre Village, in 1823. But regular meetings have not been held for several years.

OLD FAMILIES AND BIOGRAPHICAL SKETCHES.

NEWHALL FAMILY.—*Joseph Newhall* was an early settler of Lynnfield. He was a grandson of Thomas Newhall, the first of the name in Lynn, and a son of Thomas, the first white child born here. He was born on the 22d of September, 1658, and married Susanna, daughter of Thomas Farrar. He was a man of considerable importance in his day, and was often in places of public trust. He settled, as a farmer, in Lynnfield, his homestead farm, as it was called, consisting of some thirty-four acres. He also had another estate, known as the Pond farm, consisting of a hundred and seventy acres, lying on the west of Humphrey's Pond, and being a part of the grant made to Mr. Humphrey in 1635. It is thus seen that Mr. Newhall possessed many "broad acres," comprehending woodland, tillage and meadow. But his most valuable possession was a family of eleven children—eight sons and three daughters. Just when he took up his abode in Lynnfield does not distinctly appear; but it was probably soon after he came of age, his marriage taking place at about the same time. He seems to have been a good man and a regular attendant on public worship, for by the record, November 4, 1696, it appears that the town did grant liberty for Joseph Newhall to "sett up a pewe in y^e east end of y^e meeting house [the Old Tunnell] Between y^e east dowre & the staires; provided itt does nott prejudice the going up y^e staires into y^e gallery, & maintains so much of the glas window as is against s^d pewe." He was a member of the General Court, and died while in office. And in this connection it may be remarked that the pay of representatives, and indeed of all public officers, was at a rate that did not encourage that degree of hankering for official position so lamentably prevalent in our time. Upon the records is found this item: "Dec. 1706, to his serving a Representative at the general court in the year 1705, until his death, 76 days at 3s per day—11 £ 8s 0d." Mr. Newhall perished while on his way from Boston to Lynn, in a great snow-storm, in January, 1705-06. His grave-stone is in the old burying-

ground, near the westerly end of the Common, Lynn, and gives his age as forty-seven, and his title, ensign. All his eleven children survived him.

ELISHA NEWHALL, the third son of Joseph, born November 20, 1686, was a farmer in Lynnfield, and owned a tract on the northwest of Humphrey's Pond. He also owned a tract on the southeast of the pond, and on the latter his house stood. He was something of a military man and attained the rank of captain. His death took place on the 19th of March, 1773, at the age of eighty-seven. He married, February 27, 1710-11, Jane, daughter of Joseph Breed. She was of his own age and survived him but three days. They had eight children—three sons and five daughters. The church record says, "They lived very happily together as man and wife, almost sixty-five if not almost sixty-six years, then died, but three days difference between y^r deaths. Thus were they lovely and pleasant in their lives and in their death they were not divided."

DANIEL NEWHALL, a younger brother of Elisha, just spoken of, was born February 5, 1690-91. His wife was Mary, daughter of Allen Breed. His widow, says Mr. Waters, died suddenly January 1, 1775, in her eighty-fourth year. In a notice of her death published in the *Essex Gazette*, she is said to have left eleven children, sixty-six grandchildren, thirty-two great-grandchildren—in all, one hundred and nine.

BENJAMIN NEWHALL, another son of Joseph, and brother of Elisha and Daniel, was born April 5, 1698. He did not pursue farming, but engaged in shoemaking, and located on Lynn Common. In 1729 he sold his remaining interest in the Humphrey farm, evidently intending not to return to Lynnfield. He seems to have been successful in his vocation and was one of the three mentioned as doing sufficient business in 1750 to require the employment of journeymen. He, like his brother Elisha, had military aspirations, and in the French and Indian War was a captain. He was a Representative, first in 1748, and several times thereafter. He married Elizabeth Fowle January 1, 1721, had fourteen children, and died June 5, 1763. His son Benjamin, born September 6, 1726, was probably the same who was town clerk at the opening of the Revolution, and who died in 1777.

SAMUEL NEWHALL, the youngest son of Joseph, and brother of Elisha, Daniel and Benjamin, was born March 9, 1700-1. He was adopted by his uncle, Thomas Farrar, who was a farmer, lived on Nahant Street, Lynn, and was a son of Thomas Farrar, known as "Old Pharaoh," who was one of those accused of witchcraft in 1692.

ASA TARBEL NEWHALL was born in Lynnfield June 28, 1779; his father, Asa, was born August 5, 1732; his grandfather, Thomas, was born January 6, 1681; his great-grandfather, Joseph, was born September 22, 1658, and was the first of the Lynnfield Newhalls; and his great-great-grandfather was Thomas, the first white person born in Lynn.

Mr. Newhall was bred a farmer, and followed the honorable occupation all his life. He was a close observer of the operations of nature, and brought to the notice of others divers facts of great benefit to the husbandman. He delivered one or two addresses at agricultural exhibitions, and published several papers which secured marked attention and elicited discussion. His mind was penetrating and possessed a happy mingling of the practical and theoretical; and he had sufficient energy and industry to insure results. Such a person will always make himself useful in the world, though he may be destitute of that kind of ambition which would place him in conspicuous positions.

He was liberal in his views, courteous in his manners; and by his sound judgment and unswerving integrity secured universal respect. In his earlier manhood he was somewhat active as a politician, and was judicious and trustworthy. He was a member of the Constitutional Convention of 1820, and a Senator in 1826. He was also a Representative in 1828.

His wife was Judith Little, of Newbury; and he had nine children—Joshua L., Asa T., Thomas B., Sallie M., Eunice A., Judith B., Caroline E., Hiram L. and Elizabeth B.

Mr. Newhall died at his residence, in the southeastern part of Lynnfield, on the 18th of December, 1850, aged seventy-one, and was buried with Masonic honors.

GENERAL JOSIAH NEWHALL was born in Lynnfield on the 6th of June, 1794, and was a lineal descendant from Thomas, the early Lynn settler, his nearer ancestor probably being Joseph, the first of the family who pitched his tent in Lynnfield.

The long and active life of General Newhall closed on the 26th of December, 1879. During several years of his earlier manhood he followed the profession of teaching, but, as time advanced, grew weary of that exacting employment, and retired to the more congenial one of agriculture. He however retained his love for study, and became quite proficient in some branches, his attainments bearing his fame even to the other side of the Atlantic, where, in 1876, he received the honor of being elected a fellow of the Royal Historical Society of Great Britain. He served in the War of 1812, and was afterwards much interested in military affairs, attaining the rank of brigadier-general in the Massachusetts militia. When General Lafayette reviewed the troops on Boston Common, during his visit to America in 1824, he was present in command of a regiment.

Lynnfield was incorporated as a separate town in 1814, and General Newhall was her first representative in the General Court. He served also in 1826-27 and again in 1848. During the administration of President Jackson he held an office in the Boston Custom-House. He also, at different times, filled important local offices. But his most congenial and satisfying resort was the honorable occupation of farmer

and horticulturist. There, the results of his experiments and suggestions were often of much value. He was kind-hearted, genial in manners and ever ready to lend a helping hand to the deserving who needed assistance. The last time the writer had the pleasure of meeting him was on the occasion of the celebration of the Two Hundred and Fiftieth Anniversary of the Settlement of Lynn, June 17, 1879. He seemed greatly to enjoy the proceedings, and as the open carriage in which he sat moved along in the procession, on that pleasant forenoon, was in fine spirits and highly interested in observing the many evidences of thrift and improvement.

His wife was Rachel C., a daughter of Timothy Bancroft. They were married October 28, 1824, and became the parents of nine children, only two of whom survived him. As has appeared, even from the little that has been said here, the early fathers and mothers of the Newhall family of Lynn did their full share to increase the native population. Perhaps no family is deserving of higher praise than this in that direction. And it is found that the name soon began to prevail far and near as emigration kept pace with the rolling tide of population, till at this day representatives are to be found in every part of our broad land, some in commanding positions; but the great multitude, as in all other families, plodding "along the cool, sequestered vale of life." Henry F. Waters, Esq., of Salem, has performed praiseworthy labor in gathering so much genealogical information in his little work entitled "The Newhall Family of Lynn, Massachusetts," collating it so carefully and presenting it in such intelligible form.

DOCTOR JOHN PERKINS.—Among the residents of Lynnfield who have from time to time adorned her history may be named Dr. John Perkins, who died in 1780, at the age of eighty-five. He was well educated, having studied two years in London, and practiced forty years in Boston. He was quite a scientist, and proposed some theories that attracted considerable attention among the savants of the day. The greatest earthquake ever known in New England occurred on the 18th of November, 1755, near the time when Lisbon was destroyed. The same year Dr. Perkins published a tract on earthquakes, probably induced by the terrible commotions of that time. Other writings of his received much commendation, especially an essay on the small-pox, published in the *London Magazine*. Vaccination, it will be borne in mind, was not then practiced. It is said he left a manuscript of three hundred and sixty-eight pages, containing an account of his life and experience. It would, however, probably have long since been published had it contained much of real value, as it was in the custody of the American Antiquarian Society. Among other things, it is alleged to have contained a long and particular relation of a singular encounter of wit between Jonathan Gowen, of Lynn, and Joseph Emerson, of Reading. They met by appoint-

ment at the tavern, in Saugus, and so great was the number of people that they removed to an adjacent field. The Reading champion was foiled, and went home in great chagrin. Dr. Perkins says that the exercise of Gowen's wit "was beyond all human imagination." But he afterward fell into such stupidity that the expression "You are as dull as Jonathan Gowen" became proverbial. This intellectual encounter seems to have been enjoyed by the neighbors of the champions almost as keenly as are the elevating yacht or even base-ball contests of our day.

The doctor appears to have been an interested observer of passing events, active and cheerful as well as prompt and efficient in the practice of his profession.

This Dr. Perkins has been mentioned in connection with the invention of the "Metallic Tracters," which were so much ridiculed by the profession at the time they were produced. But the inventor of them was quite another man, a Dr. Elisha Perkins, of Connecticut. He was a learned man, and one of much ability and boldness in experimenting; and proved his sincerity by going to New York in 1799, when the yellow fever was prevalent there, to test the virtue of a medicine he had prepared for its cure, and falling himself a victim to the disease.

DANIEL TOWNSEND, of Lynnfield, who was killed in the battle of Lexington, was a lineal descendant of Thomas Townsend, or Townshend, as he and others of the family sometimes spelled the name, who came to Lynn as early as 1635, and in the records is called a husbandman. He owned a lot of some seven acres, on the southerly side of Boston Street, a short distance west from Franklin; and upon this lot his dwelling is thought to have stood, though Mr. Lewis says he lived near the iron works, in the present bounds of Saugus. Perhaps he lived in both neighborhoods, for he is known to have owned lands near the southwesterly border of Lynnfield, and in other places. He died December 22, 1677, at about the age of seventy-seven years. His son John was a wheelwright, and belonged to the church in Reading, though he seems always to have been called of Lynn. Perhaps the Reading church was more convenient to his home than that of Lynn. He died December 14, 1726, leaving a son, Daniel, born April 1, 1700. And this Daniel was father of the Daniel who is the subject of this notice, and was one of the first to lay down his life in the great struggle for American independence.

The Townshends were an ancient and celebrated family, whose seat had, from time immemorial, been in Norfolk, England, near the town of King's Lynn, from which our own Lynn received its name, through Rev. Mr. Whiting, who at one time was chaplain to Sir Roger Townshend. And for many generations they maintained their lordly position.

On the 24th of May, 1723, Charles Townshend was by writ, says Mackerell, "called up to the House of

Peers by the style and title of the most Noble and Right Honorable Charles Townshend, Lord Lynn, of Lynn Regis, in the County of Norfolk."

It would hardly be in place here to attempt an enumeration of the many statesmen and military heroes who have made the name of Townshend illustrious, or at least conspicuous, in the Old World. One or two, however, whose names became connected with American affairs, may be named. There was Marquis George Townshend, eldest son of the third viscount, who commanded a division under Wolfe in the Canada expedition, and after the death of Wolfe took command, and received the capitulation. He subsequently rose to the highest rank in the British army, was an active member of Parliament, and a Privy Councillor. His younger brother, Charles, though a statesman of acknowledged ability, was evidently extremely fond of popularity; insomuch that he seems at times to have been on either side of the American cause during the agitating times immediately preceding our Revolution. It was he who introduced the resolutions that did much to precipitate the war, the resolutions imposing a duty on glass, tea, paper and certain other articles. Macaulay says of him: "He was a man of splendid talents, of lax principles and of boundless vanity and presumption."

But enough of the foreign pedigree. Although it may be well to mention that in the ancient church of St. Margaret, in King's Lynn, the stately edifice in which devout worshippers have been accustomed to assemble for almost eight hundred years, and from which was taken the time-worn stone now in the vestibule of St. Stephen's in our own Lynn, there is a black marble in the north alley, bearing this inscription: "Here lieth the Body of Mr. James Townshend, who was Organist of this Church 36 Years, and died the 8th of Jan. 1724. Aged 54 Years. Also Elizabeth, his Mother, who died the 21st of April, 1733. Aged 84 Years."

The American branch of the Townshend family can boast of a full share of such as became conspicuous in various departments—of poets, scientists, legislators, and especially those who shone in the military calling. And in the circumscribed sphere of village life were many whose virtues might have adorned any position. Of this latter class seems to have been Daniel Townshend, whose memory has occasioned this notice, and who met a patriot's death at Lexington on that pregnant April day in 1775. His life was not an ambitious or adventurous one, and not much can be gathered of his history. He was born December 26, 1738, and consequently, at the time of his death, was in the prime of life. He left a wife and five young children; was sober and industrious, pious and a consistent member of the Lynnfield church. He was prompt at the call of duty on that memorable morning, and with the company of minute-men reached the scene of action soon after daylight. Mr.

Lewis says Townsend was with Timothy Munroe, another Lynn man, standing behind a house "firing at the British troops, as they were coming down the road, in their retreat toward Boston. Townsend had just fired, and exclaimed, 'There is another redcoat down,' when Munroe, looking round, saw, to his astonishment, that they were completely hemmed in by the flank-guard of the British army, who were coming down through the fields behind them. They immediately ran into the house, and sought for the cellar; but no cellar was there. They looked for a closet, but there was none. All this time, which was indeed but a moment, the balls were pouring through the back windows, making havoc of the glass. Townsend leaped through the end window, carrying the sash and all with him, and instantly fell dead. Munroe followed, and ran for his life. He passed for a long distance between both parties, many of whom discharged their guns at him. As he passed the last soldier, who stopped to fire, he heard the redcoat exclaim, 'Damn the Yankee! he is bullet-proof—let him go!' Mr. Munroe had one ball through his leg, and thirty-two bullet-holes through his clothes and hat. Even the metal buttons of his waistcoat were shot off." Townsend was found to have had seven bullets through his body. His remains were taken to Lynnfield, and "lay the next night," says Captain C. H. Townsend, "in the Bancroft house, where the blood-stains remain on the old oaken floor to this day" [1875]. The *Essex Gazette*, of May 2d, in a brief obituary, speaks of him as having been a constant and ready friend to the poor and afflicted; a good adviser in cases of difficulty; a mild, sincere and able reprovcr. In short, it adds, "he was a friend to his country, a blessing to society, and an ornament to the church of which he was a member." And then are added, as original, the lines given below. The notice and lines were written by some sympathizing friend, the latter being transferred to the stone when erected, some time after, at his grave:

"Lie, valiant Townshend, in the peaceful shades; we trust,
Immortal honors mingle with thy dust.
What though thy body struggled in its gore?
So did thy Saviour's body, long before;
And as he raised his own, by power divine,
So the same power shall also quicken thine,
And in eternal glory mayst thou shine."

To show with what alacrity the rural population responded to their country's call, it may be remarked that thirty-one towns were represented on that dawning day of the Revolution. The loss upon the side of the British was much greater than on the side of the Americans,—a fact that may be accounted for in various ways, without supposing cowardice or remissness on either side. On the part of the British, seventy-three were killed, one hundred and seventy-two wounded and twenty-six missing. On the part of the Americans, forty-nine were killed, thirty-six wounded and five missing.

John P. Townsend, of New York, and Captain

Charles H. Townsend, of New Haven, have published much valuable matter pertaining to the family history, collected both here and in England, for which labor of love they deserve many thanks. Whether the family here have kept up a correspondence with their English cousins is not known. Perhaps in some future generation, one of those agitating dreams of an immense fortune waiting in England for American heirs may be entertained by some ambitious one of the line; if so, it is to be hoped that it may not, like so many similar dreams, prove but alluring romance.

THOMAS WOODWARD.—Mr. Woodward was well known by the shoemaking fraternity of fifty years ago throughout this region by his famous awls. He was born in Lynnfield in 1773, and died in 1860, at the great age of eighty-seven years. His manufactory was in that part of Reading now known as Wakefield. He was a remarkably ingenious mechanic and has been credited with a number of useful inventions. The Emerson razor-strop, which was so popular fifty years ago, when men generally kept their faces closely shaved, is said to have been a device of his. But his ingenuity does not seem to have been directed to any achievement of much magnitude, as was that of his neighbor, Dixon. His awls, however, though not strictly an invention, gave him a name and a substantial income, and probably, in a negative way, had a saving effect on the morals of many an operative who, irritated by the brittleness or rough movement of other awls, might be led to call in the aid of lubricating profanity. Mr. Eaton, in his "History of Reading," says of Mr. Woodward: "He was an honest, industrious and kind-hearted man, but possessed some peculiarities of character. He had an inquiring and rather credulous mind; any new idea, either in physic, physics or ethics, he was ever ready to adopt, and if he thought it valuable, he was disposed to pursue it with great sincerity and pertinacity of purpose; hence we find him ever trying some new experiment in manufacturing, using some newly-invented pills or cordial, making a 'tincture' that becomes, and still continues, a popular medicine; becoming an anti-Mason and abolitionist of the most approved patterns, and an honest and sincere believer in Millerism. He was, however, a very useful citizen. He lived to be aged, and his body outlived his mind."

MISCELLANEOUS MATTERS.

NEWBURYPORT TURNPIKE.—The turnpike from Newburyport to Boston was finished in 1806 at a cost of four hundred and twenty thousand dollars. But it did not prove a successful enterprise pecuniarily. A few stages ran over it, but not much of the travel was diverted from the large seaboard settlements. It ran through the southerly section of Lynnfield, and was expected to bring great prosperity to the place. Disappointment followed. The capacious and well-appointed hotel was built, and for many years, in-

deed excepting a few intervals of private occupancy, till the present time, has furnished a pleasant resort for summer visitors as well as winter parties. The surroundings are picturesque, one of the most charming features being the beautiful pond near the border of which it stands. The drives in all directions are attractive, and the quiet all that the most retiring can desire. Lynnfield Hotel (South Village) is four miles and two hundred and eighty rods from Central Square, Lynn.

FIRES IN THE WOODS.—During her whole history Lynnfield has periodically been subjected to extensive fires in her woods. Down to the present day such fires occur, frequently in the most mysterious way. And it has been suggested, perhaps with some reason, that under peculiar circumstances the pitch exuding from a pine may accumulate in such a manner as to act as a lens, and in an excessively hot sun so concentrate the rays as to produce fire. From the earliest times the attention of the authorities has been directed to this matter. But though legislation has done something, it has never succeeded in suppressing the dreaded evil, and never will while friction matches continue to be used, and careless boys, heedless smokers and thoughtless gunners range the woods. In November, 1646, the General Court passed this order concerning "kindling fires in wuds": "Whosoever shall kindle any fires in y^e woods, before y^e 10th day of y^e first mo." [March] "or after y^e last day of y^e 2th mo., or on y^e last day of the weeke, or Lords day, shall pay all damages y^e any pson shall loose thereby, & halfe so much to y^e comon treasury." And the same year the court generously allowed the use of "tobacko," under certain restrictions, saying, "It shalbe lawfull for any man y^e is on his journey (remote from any house five miles) to take tobaccho, so that thereby hee sets not y^e woods on fire to y^e damage of any man."

During the severe drought which prevailed in 1864 very destructive forest fires raged. And also during the severer drought of the next year, 1865, which continued from July 5th to October 15th. And almost every season many acres are burned over, destroying not only standing wood, but that cut and corded. The Massachusetts Legislature, in 1885-86, passed "An Act for the better protection of Forests from Fires," and it is hoped that the provisions will be energetically enforced; if they are, some good may result.

OLD CURRENCY.—About the close of the Revolution, the currency, what there was of it, was in a sad state of confusion. The Continental money, so called, the paper issued by Congress, had depreciated to such a degree that a thousand dollars of it were sold for less than twenty dollars in silver. Mr. Lewis gives the following description of different denominations of these fiscal pledges, many of which are still preserved among antiquarian collections. Doubtless many specimens are to be found among the old Lynn-

field families. The pieces of paper were about two inches square: "The one-dollar bills had an altar with the words *depressa resurgit*, the oppressed rises. The two-dollar bills bore a hand, making a circle with compasses, with the motto, *tribulatio dicitur*, trouble enriches. The device of the three-dollar bills was an eagle pouncing upon a crane, who was biting the eagle's neck, with the motto, *eritus in dubio*, the event is doubtful. On the five-dollar bills was a hand grasping a thorn bush, with the inscription *sustine vel abstine*, hold fast or touch not. The six-dollar bills represented a beaver felling a tree, with the word *perseverando*, by perseverance we prosper. Another emission bore an anchor, with the words, *In te Domine speramus*, In thee, Lord, have I trusted. The eight-dollar bills displayed a harp, with the motto *majora minoribus consonant*, the great harmonize with the little. The thirty-dollar bills exhibited a wreath on an altar, with the legend, *si recte, facies*, if you do right you will succeed." In a few years, however, the government succeeded in so regulating matters that confidence began to be felt. And soon after Albert Gallatin, who was perhaps the most able financier of the age, was called to the Treasury Department, things began to wear an encouraging aspect. But still there remained for many years a great diversity in the mode of reckoning, if not in real values, in different sections of the country; and the coins in circulation were variously denominated. But little was as yet coined here, and the chief silver in circulation, down to a time quite within the recollection of multitudes now living, was Spanish. Who does not remember the four-pence-halfpennies (6½ cents), the nine-pences (12½ cents), the pistareens (at first 20 cents, and then suddenly reduced to 17 cents)?

GOLD AND PAPER CURRENCY.—In this connection, perhaps as appropriately as in any other, a word may be said regarding the value changes in the currency consequent on our late Civil War. On the 17th of December, 1878, for the first time in sixteen years, gold stood at par,—that is, \$100 in gold were worth just \$100 in greenback government notes. The extreme of variation was on July 11, 1864, when \$100 in gold were worth \$285 in bank bills. From this last date the difference in values began slowly to fade away. In the gold room of the New York Stock Exchange there was much enthusiasm manifested on the day when par was reached, and great cheering.

SIAMESE TWINS.—During the warm season of 1831 the famous Siamese twins, Chang and Eng, so mysteriously united in person, were for a short time rusticated in Lynnfield. It was about the time that they were first exhibited in this vicinity. They were one day out on a gunning excursion, and becoming so irritated by being followed and stared at by men and boys, they committed a breach of the peace, were taken before a magistrate and put under bonds. It came near becoming a serious question how one could be punished by imprisonment, should it come to that,

if the other were innocent. The difficulty vanished, however, when it appeared that both were guilty. They died in North Carolina in the winter of 1873, within two hours of each other, aged sixty-three years.

PRIZE-FIGHTERS.—Edward O'Baldwin, known as the Irish Giant, and Joseph Warmuld, an Englishman, noted prize-fighters, were arrested by the police just as they had commenced a battle in Lynnfield, on the morning of October 29, 1868. A crowd of those who delight in such demoralizing contests had assembled from Boston and neighboring places, but they very suddenly dispersed in dismay when the police appeared. O'Baldwin and Warmuld were arraigned before the Lynn Police Court and bound over for the action of the grand jury. The former was finally sentenced to the House of Correction for two years, but the latter escaped, forfeiting his bail.

GOLDEN SPIKE.—May 10, 1869, was the day on which the last spike was driven in completion of the first continuous railroad line connecting the Atlantic and Pacific. It was an eventful occasion, far away there in the Rocky Mountain shadows, and drew together many prominent persons from different parts of the country. The spike was of solid gold, and what renders the occurrence of special interest to the people of Lynnfield is the fact that it was driven by David Hewes, a native of the town, and a contractor on the road. It was, however, soon withdrawn and deposited in a museum in San Francisco, under the well-grounded apprehension that if allowed to remain, some straying traveler, curious or covetous, would appropriate it.

EPIZOOTIC.—A strange disease called epizootic prevailed among horses during the latter part of the autumn of 1872; so many were disabled that such wheel-vehicles as were drawn by horses almost ceased to run. In Boston the United States mail was carried to and from the post-office in ox-teams. Various expedients were resorted to. Goats and dogs, in many instances, were harnessed for labor; and sometimes men and boys undertook the duties of the disabled animals. The disease was not usually fatal, but such as survived were left in a weakened condition.

SURPLUS REVENUE.—In 1837 the surplus United States revenue was distributed. The amount received by Lynnfield was \$1328.29, and it was appropriated to the payment of the town debt. Other towns, by vote, devoted their shares to different purposes, some even distributing it per capita. Saugus received \$3500, and appropriated it to the building of a town-hall. Lynn received \$14,879.00, and applied it to the payment of the town debt. Judging from present appearances, it will be a long time before the municipalities will receive another such dividend.

FOREST HILL CEMETERY.—This endeared resting-place for the dead was consecrated on the 14th of October, 1856. Addresses were delivered by Rev. Edwin R. Hodgman, of the Trinitarian Congregational

Church, Centre Village, and Rev. Ariel P. Chute, of the South Village Church.

FARM PRODUCTS—MANUFACTURES—STATISTICS.
—Lynnfield is essentially a farming town, and certainly an industrious one, as the following items from the latest returns show.

FARM PRODUCTS.

Number of farms.....	55
Tons of hay raised.....	970
Gallons of milk.....	141,329
Pounds of butter.....	5,228
Dozens of eggs.....	18,486
Bushels of potatoes (on 35 acres).....	3,622
Bushels of Indian corn (on 48 acres).....	1,899
Total value of products.....	\$54,415

MANUFACTURES.

Average number of employees (males, 11; females, 33).....	74
Wages paid during the year.....	\$25,900
Capital invested.....	12,300
Stock used.....	70,350
Value of products.....	120,500

Boots and Shoes.—Included in the above is that of boots and shoes, the productive value of which is much larger than that of all the other manufactures combined, and foots up as follows :

Average number of employees (males, 35; females 33).....	68
Total wages paid during the year.....	\$23,800
Capital invested.....	6,300
Value of stock.....	67,000
Value of products.....	112,500

POPULATION.—The population at different periods is shown by the following short table :

Years	1820.	1850.	1870.	1885.
Population	596	1723	818	766

In 1885 the number of families was 185; number of ratable polls, 245; number of voters, 180; number of dwelling-houses, 167.

SCHOOLS.—There are three public schools, known as Centre School, South Grammar School and South Primary. Expenditures for schools during the year ending March 1, 1887, \$1235.20. Whole number of scholars, May 1, 1886, between the ages of five and fifteen, 115.

TOWN EXPENSES.—The town expenses for year ending March 1, 1887, amounted to \$7949.42, divided as follows: Highways, \$1423.70; schools, \$1603.82; town officers, \$432.90; miscellaneous, \$245.05; State and county tax, \$1036.15; printing, \$70.10; State aid, \$216; abatements, \$42.32; interest and debt, \$1710; poor, \$1044.56; discount on taxes, \$123.82.

VALUATION AND TAXATION.—The total valuation for 1886 was \$545,964; real estate, \$474,097; personal, \$718,67; rate of taxation, \$9 on \$1000.

BIRTHS, MARRIAGES AND DEATHS, 1886.—Births, 11—4 males, 7 females. Marriages, 17. Deaths, 15—5 males, 10 females; four were over 80 years old; Rev. Jacob Hood was 94 and Sophia N. Hood 90, lacking a month.

Representatives.

1826-27. Josiah Newhall.	1844. Enoch Russell.
1828. Asa T. Newhall.	1848. Josiah Newhall.
1829-32. John Upton, Jr.	1850-51. William Skinner, Jr.
1832. Bowman Viles.	1852-53. John Danforth, Jr.
1833. John Upton, Jr.	1856-57. David A Titcomb.
1834-35. Joshua Hewes.	1860. John Danforth.
1836. John Perkins, Jr.	1865. George L. Hawkes.
1837. William Perkins.	1869. James Hewes.
1838-41. David N. Swasey.	1874. Wm. K. Roundy.
1841. James Jackson.	1881. Andrew Mansfield.
1843. Joshua Hewes.	

Town Clerks.

1814. John Upton, Jr.	1841. Andrew Mansfield, Jr.
1818. Andrew Mansfield.	1842. Joshua Hewes.
1823. Bowman Viles.	1843. Andrew Mansfield, Jr.
1832. John Upton, Jr.	1844. John Perkins, Jr.
1833. Bowman Viles.	1857. John Danforth, Jr.
1834. Andrew Mansfield, Jr.	1878. Francis P. Russell.
1837. Joshua Hewes.	

Postmasters.

[South Village.]

Office established May 25, 1836.

1836. Theron Palmer.	1855. Henry W. Swasey.
1839. Charles Spinney	1869. James Jackson.
1852. James W. Church.	

[Centre Village.]

Office established August 1, 1848.

1848. George F. Whittredge.	1868. Levi H. Russell.
1851. Samuel N. Newcomb.	1874. Francis P. Russell.
1856. Jonathan Bryant.	

RECAPITULATION AND HISTORICAL SUMMARY.

1635. May 6th, the General Court grants to John Humfrey five hundred acres of land, including what is now called Lynnfield Pond, or Humfrey's Pond, or Sintang Lake.

1639. March 13th, "Linn was granted six miles into the country," by the court. This was the territory now forming Lynnfield and parts of adjacent towns, and was long called Lynn End.

1658. September 22d, Joseph Newhall, the first settler in Lynnfield of the name of Newhall, is born in Lynn. He was the father of eleven children, all of whom survived him; was known as Ensign Newhall; was a Representative in the General Court; and in January, 1706, perished in a great snow-storm, on his way from Boston.

1696. The winter of this year was the coldest for more than fifty years, and occasioned much suffering.

1706. Division of public lands among the settlers.

1712. November 17th, Lynnfield set off from Lynn as a separate parish.

1715. First meeting-house in Lynnfield built.

1719. December 17th, Northern lights observed for the first time. People greatly alarmed, some declaring that they could hear a rustling.

1720. August 17th, First Church of Lynnfield (the second of Lynn) formed, and Rev. Nathaniel Sparhawk installed.

1730. August 31st, Andrew Mansfield killed in a well, by a stone falling on his head.

1731. November 24th, Rev. Stephen Chase, second minister of Lynnfield Parish, settled.

1732. May 7th, Rev. Nathaniel Sparhawk, first minister, died, aged thirty-eight.

1733. The following entry appears on the Lynnfield Church records: "December 20, 1733, at a chh meeting, Voted that every communicant of this church shall pay three pence every sacrament day, in order to make provision for the Lord's table."

1749. Hot summer. Great drought. Multitudes of grasshoppers.

1755. November 5th, Rev. Benjamin Adams, third minister of Lynnfield Parish, settled. The most severe earthquake ever felt in New England occurred November 18th.

1759. Died in Lynnfield, June 4th, Margaret, wife of John Briant, of "something supposed to breed in her brain," as the church record says.

1764. On the public records of Lynn appears the following. It no doubt refers to a marriage that took place in Lynnfield Parish, as the Rev. Mr. Adams was minister there at the time, and Gowing was an early Lynnfield name: "Married, Daniel Gowing to Mary Bowers, Dec. 25, 1764, by Rev. Mr. Adams." And it is added that the bride was clothed only in a sheet and undergarment, and those "she borrowed." Probably the bride appeared in that remarkable outfit under the apprehension that if she brought nothing to her husband he could not be held for any debt of hers. But why might she not have borrowed a gown as well as the other articles? Or could it have been a Christmas frolic? Perhaps she was a widow and that her former husband died in debt, for it appears that by an old "legal custom" the new husband could in such case be held responsible for the liabilities of his marital predecessor. At all events, such was the reason given regarding a marriage that took place in Salem, April 21, 1818, where the record says the bride was even less clothed "while the ceremony was performed."

1766. June 22d. Ensign Ebenezer Newhall, aged seventy-three, died "of something supposed to breed within him."

1772. Extraordinary amount of snow in March. Storms on the 5th, 9th, 11th, 13th, 16th and 20th. In sixteen days there fell about five feet on a level. On the second Friday in April so violent a storm occurred that drifts twelve feet deep accumulated.

1775. April 19th. Battle of Lexington; Daniel Townsend, of Lynnfield, killed.

1780. May 19th. The memorable dark day, which extended all over New England, creating great alarm. The darkness was so great that at noon houses were lighted as at night. And the succeeding night was of indescribable darkness, many declaring that it could be felt. The occurrence has never been satisfactorily accounted for. The great astronomer, Herschel, said of it: "The dark day in Northern America was one of those wonderful phenomena of nature which will always be read of with interest, but which philosophy is at a loss to explain." Dr. John Perkins, of Lynnfield, a learned physician and author died, aged eighty-five.

1782. Lynnfield Parish made a district, September 24th. Rev. Joseph Mottey, fourth minister of Lynnfield, settled.

1786. Certain memoranda by Mr. Sparhawk, of Lynnfield, in an interleaved almanac of this year, are of interest in various ways. The mode of reckoning the currency is illustrated in this: "January y^e 30th. Bought two piggs by y^e hand of Mr. Reed, the barrow weighing 62 pounds, at five pence per pound . . . the other weighing 54 pounds at five pence per pound;" the whole amounting to "two pound, eight shillings and two pence—which is eight dollars and two pence." The following relates to the installation of Rev. Obadiah Parsons over the First Parish of Lynn: "Feb. y^e 4th: Then was Installed at y^e Old Parish, in Lynn, Mr. Obadiah Parsons. Y^e Revnd mr Cleaveland of Ipswich began with prayer, y^e Revnd mr. Forbes of Capan preached the sermon, y^e Revnd mr. Roby, of Lynn 3d parish, gave the charge, y^e Revnd mr. Payson, of Chelsea, made the concluding prayer, and the Revnd mr. Smith, of Middleton, gave the right hand of fellowship. The gentleman above mentioned was settled in peace, harmony, and concord." Still another memorandum says: "From y^e 14th of June until the 13th of July, a very dry time. And upon y^e 14th of July, early in the morning, Jove thundered to the left and all Olympus trembled at his nod. The sun about an hour high; a beautiful refreshing shower. Again, July y^e 15th, the latter part of y^e night, Jove thundered to the left, three times, and Olympus trembled. A shower followed." It will be observed that these memoranda were not made by Rev. Nathaniel Sparhawk, the first minister of Lynnfield, as one or two historical writers have stated, as he died more than fifty years before.

1788. John Burnham chosen a delegate to the convention for ratifying the Constitution of the United States.

1794. Early part of the winter unusually mild. Thermometer on Christmas day reached eighty degrees in the open air. Water in the ponds sufficiently warm for boys to bathe.

1800. June 11th, Samuel Dyer, a gentleman from Boston, drowned in Humfrey's Pond.

1803. May. Snow-storm; fruit trees being in blossom.

1804. July. Snow fell this month.

1806. Newburyport and Boston Turnpike completed at a cost of four hundred and twenty thousand dollars.

1814. Lynnfield incorporated as a separate town.

1815. September 23d, terrific southeasterly gale; ocean spray driven as far inland as Lynnfield.

1820. Asa T. Newhall elected a member of the Convention for revising the State Constitution.

1824. January 21st, Rev. Joseph Searl, fifth minister of Lynnfield, settled. He was the last preacher of the old Puritanical faith settled over the first society, his successor, Rev. Luther Walcot, being a Universalist.

1833. November 13th, extraordinary shower of meteors. It occurred early in the morning, and continued several hours. As computed by Arago, not less than two hundred and forty thousand, some of great brilliancy, were at one time visible above the horizon of Boston. They radiated from a point near the zenith, and shot forth with great velocity, bending their course towards the horizon; were of various sizes, with well-defined trains. Their bodies were not very dense, and though some explosions were heard, most of them rushed noiselessly onward. The "shower," if so it should be called, extended all over the United States; indeed, over the whole of North America, if not over the whole world, invisible in some places on account of sunlight or clouds. No entirely satisfactory explanation has yet been given. It has, however, been ascertained that similar occurrences take place periodically, though there is no record of any that approached this in brilliancy.

1837. Surplus United States revenue distributed. Lynnfield received \$1328.29, and applied it to payment of town debt.

1840. January 4th, the house of Widow Betsey Newhall, in the South Village, burned.

1842. September 23d, the house of Warren Newhall, in the Centre Village, burned.

1843. Splendid comet; first seen about noonday, February 1st.

1850. A son of Joseph Ramsdell, aged ten, killed a rattlesnake in July, measuring five feet in length and having eleven rattles. A tornado passed through the westerly part of the town, about three in the afternoon, August 1st, sweeping all in its path. Its track was but a few rods in width, and fortunately no buildings stood therein. August 15th, thirteen persons of a picnic party drowned in Lynnfield Pond. August 31st, railroad through South Village opened. December 18th, Asa T. Newhall died, aged seventy-one, and was buried with Masonic honors.

1852. November 26th, first church-bell in Lynnfield raised, on the South Village Church.

1853. James Hewes elected a member of the convention for revising the State Constitution.

1854. Railroad through Lynnfield Centre opened October 23d. Boundary line between Lynnfield and Reading established. There was a long and unusually beautiful period of Indian summer, ending October 28th.

1856. October 4, Forest Hill Cemetery consecrated.

1857. Boundary line between Lynnfield and North Reading changed.

1858. Magnificent comet (Donati's) visible in the northwest, at evening, for several weeks, in the autumn. The tail was determined to be, on the 10th of October, fifty-one millions of miles in length.

1859. August 28th, brilliant display of northern lights; whole heavens covered. November 18th, large barn of John Mansfield, South Village, burned, two yoke of oxen and two horses perishing.

1860. Thomas Woodward, a native of Lynnfield, manufacturer of the celebrated Woodward awls, died, aged eighty-seven years. June 29th, the meeting-house in South Village was struck by lightning during a severe thunder-storm of three hours' duration. July 18th, muster of Essex County fire companies in Lynnfield.

1861. The great Civil War commenced early in April. Lynnfield furnished sixty soldiers. John P. Mead was mortally wounded at the battle of Bull Run, July 21st. A military encampment was formed in the South Village and a number of regiments there drilled preparatory to leaving for the seat of war. July 2d, a splendid comet suddenly appeared. It was a little west of north, extended from the horizon to the zenith and moved with extraordinary rapidity; insomuch that it was visible but few nights.

1862. May 4th, Captain Henry Bancroft's barn burned, together with carriage-house and other out-buildings. A horse and several cows perished.

1865. January 17th, Dr. Thomas Keenan, a skillful physician and much esteemed citizen, died, aged sixty-one years. He was an Irishman by birth and served as a surgeon in the British army before coming here. The town, at their next annual meeting, passed resolutions of respect for his memory. April 3d, news of the fall of Richmond received. April 15th, news of the assassination of President Lincoln received. During September destructive fires raged in the woods, the weather being very dry and warm.

1866. June 22d, bell on church in Centre Village raised; weight, eight hundred and thirty pounds.

1867. January 17th, a terrible snow-storm.

1868. During the summer a Lynnfield farmer killed thirteen rattlesnakes.

1869. April 15th, in the evening there was a magnificent display of beautifully tinted aurora borealis. During the month of September Captain Henry Bancroft graded the common land belonging to the First Congregational Society, and known as the "Common," at the cost of about thirteen hundred dollars, bearing all the expense himself. September 8th, severe gale in the afternoon, next in violence to that of September 23, 1815. A multitude of trees uprooted.

1870. October 20th, a very perceptible earthquake shock felt at about half-past eleven in the forenoon.

1871. December 18th, old mill on Saugus River, near residence of George L. Hawkes, burned. Tradition says the privilege was an ancient grant by the King of England, to ensure the grinding of grain.

1872. The summer of this year was remarkable for the frequency and severity of its thunder-storms.

1873. English sparrows began to make their presence known hereabout this year—probably the progeny of those imported into Boston. It was believed that they would benefit agriculturists by destroying ravaging insects, but they did not fulfill expectations, and were soon declared worthless.

1874. March, a Lynnfield lady gives birth to three

children at one time, making up a family of four infants, under the age of thirteen months, and eight children, all under twelve years. The parents, not being in very prosperous pecuniary circumstances, were deservedly the recipients of many useful gifts.

1876. The destructive potato bug or Colorado beetle first appears in this vicinity.

1879. December 26th, General Josiah Newhall died, aged eighty-five years. He was Lynnfield's first representative in the General Court.

1881. September 6th, the yellow day, so called. Early in the afternoon the air assumed a dim, brassy hue. The obscuration was so great that common newspaper print could not be easily read without artificial light; the faces of people were of a light saffron hue, and the grass and foliage had a marked golden tinge. The day was close and warm and the smell of smoke very perceptible. September 20th, news of the death of President Garfield received. He was shot by C. J. Guiteau, July 2d.

1882. During the latter part of the summer an extraordinary drought prevailed; crops were almost ruined, and in some places the landscape had a scorched appearance. A splendid comet was visible in the southeast for several weeks in October. It rose two or three hours before the sun; its speed was almost inconceivable and the nucleus had the appearance of partial disruption, as if it had met with some violent collision.

1885. July 23d, President Grant dies. News of his death received the same day.

1886. January 17th, Rev. Jacob Hood died, aged ninety-four years.

BIOGRAPHICAL.

GENERAL JOSIAH NEWHALL.

General Josiah Newhall was born in Lynnfield June 6, 1794, and was a lineal descendant of Thomas Newhall, the first white person born in Lynn, who was himself the son of Thomas Newhall, who came from England in 1630, and was the progenitor of the Newhalls of Lynn.

General Newhall's occupation was a farmer and horticulturist, his interest in these pursuits leading him to become one of the founders of the Massachusetts Horticultural Society. During the war of 1812 he served in the American army. It was owing, perhaps, to his early experience in bearing arms that he became active in the State militia. In 1824 he commanded a regiment of nine companies which was among the forces reviewed on Boston Common by General Lafayette, at the time of his visit to Boston in 1824. Subsequently, he rose to the rank of Brigadier-general, and was six years in command of the First Brigade. He was also active in civil affairs.

Under the administration of General Jackson he was several years connected with the Boston custom-house. He was the first Representative elected to the General Court from Lynnfield after the incorporation of that town, and served in the Legislatures of 1826, 1827 and 1848. He was prominent in town affairs and served as chairman of school committee twenty-two years.

In November, 1876, General Newhall was elected a member of the Royal Historical Society of London and Great Britain.

General Newhall died December 26, 1879.

JOHN PERKINS.

Captain Perkins was born in the northwesterly part of Lynnfield, on the 18th of July, 1806. His father and grandfather were respectable and thrifty farmers; and farming has been his own life-occupation.

The Perkins family probably settled here somewhere about the year 1650. It is found that Luke Perkins was a soldier in the King Philip War, and marched against the Indians in 1675. He was a pious man, and before departure requested Mr. Cobbet, then of Ipswich, but previously of Lynn, a minister famed for his fervency in prayer, to pray for the safety of the detachment. And it is added, "they all returned in safety."

John Perkins, a later ancestor, married, August 29, 1695, Anna Hutchinson, and had five children,—Anna, John, Elizabeth, Mary and William. Elizabeth became the wife of Rev. Nathaniel Sparhawk, who graduated at Harvard in 1715, studied divinity and was settled over the Lynnfield Parish, as its first minister, August 17, 1720. He had four children,—Elizabeth, Nathaniel, Edward Perkins and John. Of these, Edward seems to have become somewhat noted, and was the first person appearing on the Lynn records with three names, the fashion of giving two baptismal names then just beginning. The son John became a physician in Philadelphia.

Another of the family was Dr. John Perkins, who was born in 1695, and lived to the age of eighty-five, having spent much of his life in other homes. He was a skillful practitioner, but perhaps most widely known by his literary and scientific writings. He was well educated, having studied two years in London. And many years practice in Boston gave him an experience and reputation excelled by few physicians of the period. Some further notice of him, appears in the historical sketch of Lynnfield.

It is sufficient, in this connection, to add that the Perkins family of Lynnfield has all along maintained a most respectable position. With few exceptions they have been prosperous and highly regarded.

The present Captain John Perkins, whose portrait accompanies this brief sketch, and who gained his title many years since by being commander of a

J. Newhall

Eng. A.

John Perkins

military company, has led a quiet, unostentatious, but useful life. He has been a selectman, assessor and overseer of the poor more than twenty years, and for several years town clerk. He has likewise held a commission as justice of the peace twenty-one years, and represented the town in the General Court. His good judgment and neighborly kindness has always been much in requisition for the guidance and assistance of his less qualified neighbors. And in the settlement of estates of deceased persons, and as guardian of minors, his services and sympathies have been highly appreciated.

Captain Perkins was joined in marriage April 22, 1830, with Catharine S. Sweetser, of South Reading (now Wakefield), and they became the parents of five children,—Catherine E., born May 16, 1832; John H., born December 8, 1833; Mary F., born November 14, 1837; Addia J., born September 13, 1845; and Clara A., born July 17, 1849. All the children are now, 1887, living, excepting Mary Frances, the second daughter.

CHAPTER XXIV.

SAUGUS.

BY WILBUR F. NEWHALL, ESQ.

Situation—Boundaries—Area—River—Settlement—Set off from Lynn—Population—Saugus Centre—Lifbondale—East Saugus—North Saugus—Oaklandvale—Geology—Town Meetings—Town House—Alms-house—Cemetery—New Town Hall—East Saugus set off—Water-Pipes—Town Clerks—Representatives—Valuation, Taxation—Polls—Post Offices.

SITUATION.—Saugus is situated in the very southern corner of Essex County.

Should you open before you a map of the county, you will notice that its general shape is a square of about twenty-three miles on each side, with its opposite corners or diagonals pointing north and south and east and west. At the very southern corner you will find the township of Saugus. It is five and six-tenths miles long north and south, with a trend somewhat west of north, and two and four-tenths miles average width.

BOUNDARIES.—It is bounded northerly by Lynnfield and Wakefield, easterly by the city of Lynn, southerly by Revere and westerly by Revere, Melrose and Wakefield.

AREA.—Its area is about thirteen and one-half square miles, of which about two and a quarter square miles are salt marsh, occupying the very southern end of the township, and only separated from Massachusetts Bay by the narrow strip of land known as Revere Beach. Situated only nine miles from Boston, you will see at once that the traffic and travel to and with Boston of the whole county must largely

pass over some portion of its territory. Before A.D. 1800 Boston Street, or the old Boston road, so called, was the only thoroughfare. Soon after this the Salem turnpike and the Newburyport turnpike were built, and in 1838 the Eastern Railroad was opened for travel; and these now remain the only avenues of communication, through our town, with Boston for the county of Essex.

Saugus is an Indian name, and, as near as can be now ascertained, signifies "extended," suggested, no doubt, by its broad salt marshes.

The Indians applied this name to the whole territory lying between Boston on the south and Salem on the north.

The Indian name of our beautiful river was "Abousett," and it is to be regretted that this name was ever dropped; but the white settlers fell into the custom of calling it the river at Saugus, and finally, very naturally, Saugus River; thus it was we lost the beautiful Indian name of our river.

Our river takes its rise in Quannapowitt Lake, in Wakefield, passes through the broad meadows of Lynnfield and enters midway our northern boundary, when, continuing its southerly course through North Saugus to Saugus Centre, where just below Scott's factory, it meets the tide-water and thence flows in its crooked course through the narrow salt marshes southerly one mile to East Saugus, where it reaches, and thence becomes, the easterly boundary of the town for the remainder of its course to the sea.

SETTLEMENT.—The first political status of Saugus is found, October 19, 1630, when John Taylor was admitted freeman to the General Court.

In 1634 Nathaniel Turner, Edward Tomblins and Thomas Willis were Representatives from Saugus to the first Legislature.

In 1636 towns were given authority to choose not more than seven "prudential men" to manage town business.

At that time Saugus not only comprised its present territory, but also that which now forms the city of Lynn and towns of Swampscott, Lynnfield, Reading, Wakefield and Nahant.

But the early settlers, evidently dissatisfied with the Indian name of Saugus, very soon sought to find some more familiar name, and very naturally recalling the old English town of Lynn, from which, no doubt, some of them emigrated, it was decided to change the name; and the Legislature granted their petition, for, November 15, 1637, we find on its records an enactment, said to be the shortest ever passed, as follows: "Saugust is called Lin."

Thus it was that our name was set aside, so to continue until February 17, 1815, when, by a legislative act, our present territory was set off from Lynn and received again its original name of Saugus. For many years previously it had had a separate ecclesiastical standing, and was known as the "West Parish."

POPULATION.—The population of the town in 1815

was very near 700 persons. April 3, 1815, there were 150 votes cast for Governor. We find by the census of 1820 the population was 748. In 1885 it was 2855. The intermediate years show a pretty constant and regular increase. And although up to 1815 our town had been largely agricultural in its interests and pursuits, yet it was the approximate period of the increase in our manufacturing industries,—shoes and woolen goods in the centre of the town, tobacco in Cliftondale and shoes in East Saugus.

SAUGUS CENTRE.—This brings us to the division of the town into its several villages. Nature provided for these by its isolated sections of territory, suitable for farms and dwelling-houses, while separating these sections were, and still are, rocky and wooded hills, rising to no very considerable height and yet sufficient to divert our connecting roads into fixed and almost necessary locations.

Beginning with Saugus Centre, by far the largest section of intervals in the town, we find it located almost exactly in the geographical centre of the town, being bounded on the north by Pranker's mill-pond and on the east by the river. Few villages are so beautifully situated as this, commanding as it does from the top of Round Hill, looking easterly towards the ocean, one of the loveliest views of the river valley.

CLIFTONDALE.—Almost directly south of the Centre, and about one mile distant, is Cliftondale, formerly known as Sweetser's Corner, reached directly by Central Street alone. Recently this village has taken a wonderful start in the erection of dwelling-houses, there having been built within the past year about forty, mostly by business men and mechanics employed in Boston and Lynn, while some are built by speculators who hope to sell. This section already promises to be a populous portion of the town.

EAST SAUGUS.—Coming back to the Centre again, we shall find southeasterly therefrom, about one mile distant, the village of East Saugus, situated in the river valley, and only reached by one road, now called Winter Street, on the southerly side of the valley. On account of the small area of eligible territory for building purposes, this village is compactly built, and consists principally of two streets—Chestnut Street and Lincoln Avenue—leading up from the bridge to the hill at the south of the village, where stands the village church.

The crooked reach of the river, between the Centre and the East Village, through the narrow strip of salt marsh, is usually kept filled with water by the mill-dam at the East Saugus Bridge, and so serves as a mill-pond, replenished by successive flood-tides and receiving in addition thereto the fresh water from the river flowage.

Almost directly west of East Saugus is Cliftondale, one mile away, and only reached by Lincoln Avenue, formerly called the old Boston road.

Thus we see that these three principal villages of

Saugus are respectively about one mile from each other, occupying the points of an equilateral triangle, across the interior of which no road passes.

It would almost seem that this triangular district, although made up mostly of rocky hills and heretofore neglected, will, some future day, be intersected by winding avenues and dotted with beautiful hillside residences. It remains to mention two smaller villages of our town.

NORTH SAUGUS.—Some more than two miles from the Centre, and in the extreme northerly end of our township, is the village of North Saugus, a section of very excellent farming land. It is reached by Central Street, passing Pranker's factory, and also by the Newburyport turnpike. Saugus River flows beside this village, and its two tributaries, Penny Brook and Hawkes Brook, flow directly through the village. These two brooks have recently been taken for a water supply by the city of Lynn; their waters have been diverted by an artificial canal and carried into Birch Pond, so called, on the eastern boundary of our town.

OAKLANDVALE.—The last village to be mentioned is Oaklandvale. This is situated a mile and a half from the Centre, northwesterly, and is only reached by the road leading to Wakefield and Melrose. This is also an agricultural district, through which flows a stream sometimes called Strawberry Brook, which empties into Saugus River below North Saugus.

GEOLOGY.—The geology of Saugus is a continuation of that of Lynn. The rock formations in both places belong to the east and west system of Hitchcock, as given in his report of the geology of Massachusetts.

Approaching the town from the ocean side, we come to a broad belt of alluvium, beneath which is a thin stratum of sand or gravel, and underlying all is a bed of tough blue clay of unknown depth.

Succeeding this is a broad belt of felsite, generally known as porphyry. It is composed of the finely-comminuted remains of older rocks hardened by heat and pressure to a flint-like substance. It is known to scientists as the Lower Laurentian series, or the rocks that contain the remains of the earliest forms of life.

On the northern side of the felsite the formation has not been sufficiently studied. Much of it, however, is syenite, and the curved lamination in some portions of the rock indicate gneiss. Trappean dykes frequently occur in this rock and in the felsite. The dividing line between the two formations is very obscure, being generally covered by drift. On the hill one-half mile east of Pranker's mills, and at the railroad cut near the centre of the town, the junction of the two formations may be noticed. Also near the Lynn line, on Vinegar Hill, syenite is found protruding through the felsite, which is here composed of rounded felsite pebbles, cemented by a hardened matrix of the same material.

The jasper bed, near Round Hill, in the Centre,

is undoubtedly a fine variety of felsite, the banded variety of which furnishes very fine specimens.

Round Hill is a conspicuous object, and is of undoubted volcanic origin. Hitchcock calls the composition of the rock which forms the hill "Varioloid Wacke." The base of the rock is of a pleasant green color, and is filled in places with rounded nodules of quartz, varying in size from that of an ordinary shot to that of a pea. On the north side of the hill the base of the rock is of a chocolate color; this, together with the white nodules of quartz, forms very pretty specimens.

But few minerals or metals have been found in Saugus. The jasper locality is well known and many specimens have been taken from the bed.

Epidote is common, but the crystals are too small and imperfect to be valued. Good specimens of asbestos, associated with epidote, are found near East Saugus, and calcite (nail-head spar) has been found in the deep railroad cut near the Centre.

Hematite (specular) is found in the hill near the railroad cut, also in bowlders in the northwest part of the town. Pyrite has been found near the head of Birch Pond, but the specimens are poor.

Bog iron-ore was discovered soon after the first settlement, in different parts of the town, but mostly in North Saugus, where very good specimens can now be found. This was the ore used by the old Iron-Works from 1643 to 1680.

As heretofore stated, Saugus was set off from Lynn by act of Legislature passed February 17, 1815.

TOWN-MEETINGS.—The first town-meeting was held in the parish church March 13, 1815, and subsequent ones continued to be held there until 1818, after which time the school-house in the Centre generally served as the gathering-place for the town, although, occasionally, they were gathered at the Rock School-house, so-called, in the South District.

TOWN-HOUSE.—In 1837 a town-hall was built, arranged for hall above and two school-rooms below. This building is still standing, and since 1875, when our new town-hall was built, it has been used for school purposes.

It may be interesting to notice some of the circumstances of the building of this first hall.

Some two thousand dollars had been given to the town as their portion of the United States revenue surplus, distributed by General Jackson.

The question was, how this should be disposed of. Five town-meetings were held from May 12 to July 8, 1837, and as may well be imagined, very strong feelings swept the town. It was first voted to divide it among the inhabitants; then this was reconsidered, and it was voted to pay it over to the treasurer.

Then this was reconsidered, at a third meeting, and finally voted again to pay to the town treasurer.

At a subsequent meeting it was voted *not* to build a town-house; and, at a still later meeting, it was voted to build,—yeas, 90; nays, 74. Two thousand dollars

was appropriated, and a committee of seven chosen by ballot, to obtain a location and contract for and superintend the building of said town-house.

March 12, 1838, the town appropriated six hundred dollars more to finish the town-house.

ALMSHOUSE.—In 1823 the present almshouse, with farm formerly owned by Mr. Tudor, was purchased.

CEMETERY.—In 1844 the town bought one acre of Salmon Snow, for a new cemetery. This proving too small was enlarged in 1858, by the purchase of adjoining property of Roswell Hitchings.

Again, in 1874, the two estates east were purchased of Henry Newhall and others, so as to further enlarge the cemetery substantially as it is at present. During these years the town has taken excellent care of the grounds, which have grown in attractiveness and beauty, year by year, through the interest of our townsmen and very much to their credit. Few things speak louder of the tenderness, sympathy and love of a people than its care for the resting-place of the departed.

In the most eligible part of the cemetery is the "Soldier's Lot," surrounded by hammered granite border fence and entrance-steps, ornamented with appropriate war emblems, all carved in solid granite. This was built by the town.

Our cemetery is beautifully situated on the sloping ground between Winter Street and Shute's Brook.

NEW TOWN-HALL.—In 1875 the town built their new town-hall, on the eastern side of Central Street, purchasing of Mr. Samuel A. Parker a low, wet piece of land, and at great expense filling up and grading the same. There was a great difference of opinion in the town in regard to the expediency of erecting such a building.

A number of town-meetings were held, in which adverse action was taken, but the building party finally prevailed, and the town was loaded with a debt of fifty thousand dollars in consequence. The first story is occupied for rooms for town officers, High School and public library, the second for assembly room.

EAST SAUGUS SET OFF.—While the new hall was building the inhabitants of East Saugus made a vigorous effort before the Legislature to be set off from Saugus and annexed to the city of Lynn, but they did not succeed in getting a bill through both branches of the Legislature. Soon after this, in deference to the feelings and wishes of East Saugus, the town voted an appropriation of five thousand dollars for the laying of water-pipes through the village of East Saugus, connecting with the Lynn Water-Works for a supply. This work was done, and August 10, 1878, the water was let into the pipes and a public celebration made of it by the citizens of East Saugus.

WATER-PIPES.—The town has just voted, July 8, 1887, to extend this system of water-pipes through

Cliftondale and the centre of the town, and for that purpose made an appropriation of thirty-five thousand dollars to lay seven miles of pipe, and chose Wilbur F. Newhall, Edward Pranker and Charles H. Bond, water commissioners, to carry out the action of the town, and said commissioners have just given the contract to Messrs. Goodhue & Birnie, of Springfield, for the laying of the cement pipes, the work to be commenced forthwith and completed this season.

TOWN CLERKS.—The following is a list of the town clerks, with their terms of office :

1815-18. Richard Mansfield.	1834-40. Wm. W. Boardman.
1819-27. Thomas Mansfield, Jr.	1841-47. Benj. F. Newhall.
1828-30. Zachens Stocker.	1848-51. Harmon Hall.
1831-33. Isaac Childs.	1852-57. Wm. H. Newhall.

REPRESENTATIVES.—The following is a list of the Saugus Representatives to the General Court. Until about 1857 it required a majority of all the votes cast to elect a Representative, and this explains why oftentimes no one was sent. In 1835 the town-meeting adjourned twice and balloted six times without making any choice :

1816, '17, '20. Joseph Cheever.	1841. Stephen E. Hawkes.
1821. Dr. Abijah Cheever.	1842-43. Benj. F. Newhall.
1823. Jonathan Makepeace.	1844. Pickmore Jackson.
1826. John Shaw.	1846-47. Sewall Boardman.
1827-28. Wm. Jackson.	1850. Charles Sweetser.
1829, '30, '31. Dr. Abijah Cheever.	1851. George H. Sweetser.
1832-33. Zachens N. Stocker.	1852. John B. Hitchings.
1834. Joseph Cheever.	1853. Samuel Hawkes.
1836-37. Wm. W. Boardman.	1854. Richard Mansfield.
1838. Charles Sweetser.	1855. Wm. H. Newhall.
1839. Francis Dizer.	1856. Jacob B. Calley.
1840. Benj. Hitchings, Jr.	

In 1857 the district system went into operation, and Saugus was united with Lynnfield, Middleton and Topsfield. We give below the names of the Representatives from Saugus alone :

1857. Jonathan Newhall.	1872. Jacob B. Calley.
1860. Harmon Hall.	1875. Otis M. Hitchings.
1862. John Howlett.	1877. Joseph Whitehead.
1863. Charles W. Newhall.	1879. J. Allston Newhall.
1866. S. S. Dunn.	1882. Albert H. Sweetser.
1869. John Armitage.	1885-86. Chas. S. Hitchings.

VALUATION AND TAXATION.—The valuation of the town this year (1887) is :

Real Estate	\$1,906,061
Personal Property	202,835
Total valuation	\$2,108,896
Rate of taxation per thousand	\$13.50
Number of polls	852

POST-OFFICES.—The first post-office was established in the village of East Saugus in 1832. This remained the only post-office in town until 1858, when two others were established—one in Saugus Centre and one in Cliftondale. The following are the names of the postmasters of each office :

East Saugus.—1832, Henry Slade ; 1832, George Newhall ; 1836, Herbert B. Newhall ; 1863, Charlotte M. Hawkes ; 1873, Charles Mills ; 1885, Henry J. Mills.

Saugus Centre.—1858, Julian D. Lawrence ; 1870, John E. Stocker.

Cliftondale.—1858, Wm. Williams ; 1860, George H. Sweetser, A. H. Sweetser ; 1877, M. A. Putnam ; 1883, M. S. Fisk.

CHAPTER XXV.

SAUGUS—(Continued).

Early Settlers—Indians—Fish—Marshes—William Ballard's Farm—Landing Road—Edward Baker—Nicholas Brown—Samuel Bennet—Thomas Dexter—Thomas Hudson—Captain Walker—Adam Hawkes—Richard Leader and Others—Appleton's Pulpit.

EARLY SETTLERS.—The year 1630 brought a great many hundred people to our shores, and of this number some found their way to our town either through the primeval forests or, more likely, by boats ; and it is not surprising that they should enter our river and select along its banks favorable spots for their rude houses, around which they were to commence their clearings.

INDIANS.—Long years before this the Indians had been attracted to this river, and upon its sunny banks and in its sheltered vales had built their wigwams, reared their families and cultivated their small fields of corn and pumpkins.

On the south side of the hills, in East Saugus, on both banks of the river, are found the relics of their settlements, consisting of shell-heaps, pestles, hatchets, arrow-heads and bones.

FISH.—Our river at that time abounded with fish of many varieties, some of which, on account of our mills and their obstructions, are now no longer found in our waters ; but not the least attraction was the abundance of clams found in the sandy shores of our river, and, at low tide, accessible at all seasons of the year.

MARSHES.—Whatever may be the changes in the aspects of the country since those early days, in consequence of the removal of forests and the incoming of civilization, yet we have one feature of our landscape presenting substantially the same appearance as then, namely, our salt marshes.

Our early settlers looked very kindly on these marshes as furnishing a sure supply of food for their horses and cattle, while they were toiling to bring into arable condition the uplands then covered with timber. These marshes certainly afforded them abundance of fodder. And even to-day they still continue to yield their crops to our farmers, as shown by the numerous stacks of hay annually gathered in the summer, to be removed in the winter when the marshes are covered with ice and snow.

WILLIAM BALLARD was one of our early settlers. He was a farmer, and received sixty acres in the allotment of lands in 1638. He was also admitted a freeman in 1638. His farm comprised what is now the village of East Saugus. His first house stood in the rear of the dwelling now owned by George Oliver. His two sons, John and Nathaniel, divided the farm in 1697.

It was sold to Dr. Oliver in 1710, and in 1720 to Colonel Jacob Wendell, and about 1760 to Zaccheus Norwood, who died about 1768, leaving a widow and

three children. On this farm stood the Anchor Tavern, then kept by Mr. Norwood, and at his decease by his widow, until 1773, when Landlord Jacob Newhall took charge.

About 1725 a town way was laid out by the selectmen through the farm from the old Boston road to the Lower Landing, so called.

After almost a hundred years of alienation from the Ballard family, one-half of this farm was bought back by William Ballard; the other half continued in possession of the heirs of Norwood until about 1800, when this was bought by John Ballard, Esq., of Boston, who then became the owner of the entire farm. In 1802 he built a new hotel a few rods south of the old tavern, and from 1815 to 1822 he made this house his residence.

During subsequent years the farm was partly cut up into house-lots and sold, making the present village of East Saugus,—and it was not till a few years ago that the remaining portion of the farm, on either side of Ballard Street, was sold by the Ballard family to Mrs. John Pike and Henry W. Johnson.

EDWARD BAKER was another early settler. In the allotment of 1638 he was given forty acres. His farm was on the south side of Baker's Hill, so called. He was admitted a freeman in 1638 and died in 1687.

NICHOLAS BROWN received in the allotment two hundred acres. His farm was on the road to North Saugus. He early removed to Reading.

SAMUEL BENNET, a carpenter and a member of the Ancient Artillery Company in 1639; he received in the allotment twenty acres. His farm was in the westerly part of the town.

THOMAS DEXTER, a farmer, was admitted a freeman in 1631, and in the allotment was given three hundred and fifty acres. He lived in the centre of the town, near the iron-works, and was generally known as "Farmer Dexter." He was an active, stirring man in the plantation, although frequently getting into trouble with his neighbors, and even quarreling with the Governor of the colony. He must have possessed an irritable disposition as well as fighting qualities.

He built a mill on the river, for the grinding of corn, and also a fish-weir in 1632, wherein were captured large quantities of alewives and bass; one hundred and fifty barrels were cured the first year.

THOMAS HUDSON lived on the westerly side of the river, near the iron-works. He received sixty acres in the allotment.

CAPTAIN RICHARD WALKER, a farmer, was located on the west side of the river, and in the allotment received two hundred acres. Born in 1593, admitted a freeman in 1634 and died at the age of ninety-five years.

ADAM HAWKES, a farmer, settled in North Saugus about 1634. He landed in Salem with Endicott's company in 1630, and probably soon after went to

Charlestown, as his wife Sarah's name is there found on the church records. Undoubtedly he reached this remote section of land by following up the river in his boat, and his location was well selected.

In the allotment of 1638 he was given one hundred acres, but before his death, which occurred in 1671, he acquired a great deal more land, for in the division of his property, March 27, 1672, we find him possessed of five hundred and fifty acres, one-half of which was given to his son John, and one-half to his grandson, Moses. A true inventory of his estate was made by Thomas Newhall and Jeremiah Swayen, March 18, 1672, which contains many curious and interesting items, which we would like to give here, but for its length. The total value of his property, real and personal, was £817 11s.

Adam Hawkes had only two children, John and Susannah. John married Rebecca Maverick, daughter of Moses Maverick, and what is very unusual, the homestead farm has continued in the Hawkes family, in an unbroken succession, down to the present time, and is now owned and occupied by Samuel and Louis P. Hawkes, and the family of Richard Hawkes.

Adam Hawkes built his first house on the hill, a few hundred feet north of the present house of Louis P. Hawkes; this house was burned down soon after it was built. Much of the iron-ore which was obtained by the old iron works, in the centre of the town, for forty years or more, was, without doubt, dug in the meadows of Mr. Hawkes. And it seems he was troubled with the flowage of his lands by the iron works, the dam being raised much higher than the present one. He obtained damages for this flowage at several different times.

The above-mentioned early settlers were all farmers, and it is to be regretted that there is not more definite knowledge of their locations and history. Could sufficient time be given, undoubtedly much more might be gleaned concerning them and others who have escaped notice.

But there were also many men connected with the iron works industry, in the Centre, some of whose names we have preserved to us. Among these were Richard Leader (general agent till 1651, after which John Gifford was agent), Joseph Jenks, and Joseph Jenks, Jr., Henry Leonard, Henry Styche (who lived to the great age of one hundred and three), Arzbell Anderson, MacCallum More Downing, John Turner, John Vinton and Samuel Appleton, Jr., who owned the works after 1677.

APPLETON'S PULPIT.—An interesting incident in our early history is recorded on a bronze tablet fastened to the perpendicular face of a rocky cliff on Appleton Street, in the centre of the town, a few years ago, by some of the descendants of the Appleton family. The tablet is about two and a half feet square, and firmly bolted to the rock just beneath the place where the stirring harangue is supposed to have

been made. This cliff forms the abrupt side of a prominent hill, known as Calemount or Catamount Hill.

Tradition says that in those troublous times a watch was stationed on the hill to give alarm of any approach of the Crown officers to arrest their man. The watch was to signal their approach by crying, "Caleb, mount!" and from this cry came the name of the hill.

The following is the inscription on the tablet:

"APPLETON'S PULPIT.

"In September, 1687, from this rock, tradition asserts that, resisting the tyranny of Sir Edmund Andros, Major Samuel Appleton, of Ipswich, spoke to the people in behalf of those principles which later were embodied in the Declaration of Independence."

CHAPTER XXVI.

SAUGUS—(Continued).

FARMS, &C., A HUNDRED YEARS AGO.

East Saugus—Old Mill—Moore Farm—Tavern—Major Parker's—Thomas Florence—Amos Stocker—Lewis Place—Thomas Stocker Place—John Stocker Farm—Bojaton Farm—Jacob Eustis Farm—Breeders Place—Allen Place—Colonel Abner Cheever—Dr. Cheever Place—Ezra Brown Farm—Tudor Farm—Josiah Rhodes Farm—Asa Rhodes Farm—Master Hitchings Place—Samuel Boardman—Aaron Boardman—Leory Boardman Farm—John Dampney—Deacon Pratt Farm—Elkanah Hawkes Farm—Hitchings Place.

It may be interesting to the reader to take a look at some parts of the town, but more especially at the farms as they appeared a hundred years ago or thereabouts.

EAST SAUGUS.—Let us begin at the bridge in East Saugus, now compactly built and covering the entire slope from the hill to the river; but, one hundred years ago very few houses were standing here. In 1775 the old one-story shed-like mill building, then used as a grist-mill, was standing on the west side of the bridge, leaving a very narrow roadway over the bridge. Adjoining the mill on the south was a two-story dwelling-house, of good size, built by Joseph Gould, who having died the year previous, the house was then occupied by his widow.

Let us proceed southerly up the hill by the only road, and a few rods will bring us to a two-story dwelling, occupied by Colonel Ebenezer Stocker, of subsequent Revolutionary fame. This house was torn down in 1851 to give place to the present house, built and owned by H. W. Brackett.

A few rods farther south we find an old-fashioned two-story house, where now stands the house of Fales Newhall. Jacob Newhall, the grandfather of Fales Newhall, then lived there and he was a farmer and shoemaker.

This house was torn down about 1825.

Continuing up the hill, and near the top, we come to a two-story dwelling, which is still standing and owned by the heirs of the late Frederick Stocker. In

1775 it was owned by a Mr. Moore. His large barn then stood on the present site of the Methodist Church.

The road soon comes to the rocky hill, where it turns to the left, and a few rods bring us to the famous tavern kept by Landlord Jacob Newhall. It stood on the left or northerly side of the road, facing the south; it was a two-story gambrel-roof house, with a long sloping roof in the rear covering the kitchen.

From the bridge we have found only five houses, including the tavern.

Should we continue along under the hill on the Boston road southerly a few rods, we should pass on the right, Major Parker's blacksmith-shop in full blast, and just beyond this his dwelling-house. This house has recently been torn down and a large two-story double dwelling built on the site.

Major David Parker came from Malden to Saugus when quite a young man—about 1760. Having married a Miss Hunnewell, of Charlestown, he settled himself in a house which stood a few rods south of the old tavern. A short distance north of the house he built his long blacksmith-shop and carried on a brisk business. He was industrious, capable and enterprising. He held an honorable rank among the people and was early honored with the office of captain of the West Parish Militia, one of the largest companies in Lynn. This was previous to the Revolutionary War, for we find that Captain David Parker mustered his company at an early hour on the day of the Concord fight and marched them with all speed to the scene of the conflict, where his company did gallant service. The courage and bravery shown by Captain Parker led immediately to his promotion as major. He was a man of great benevolence of feeling, kind and affable to strangers. He continued to work at his blacksmith-shop up to the period of his death, which occurred in the early part of this century.

The next house south of Major Parker's was Samuel Oliver's, a blacksmith who worked for Major Parker. In 1805 Solomon Brown purchased this house of Mr. Oliver and lived in it until his death. It was afterwards removed to the Centre.

Some rods still south we come to Thomas Florence's small one-story house standing on the side of a ledge to the right, just where it is to-day, in 1887.

Thomas Florence was a hero of the Revolutionary War. He was a gardener by trade, working most of the time for Landlord Newhall.

His great-grandson, Charles Florence, now lives in the house.

A few rods south of the Florence house we reach a large dwelling occupied by Amos Stocker, another Revolutionary soldier, and by trade a cooper. This house is still standing.

Still going south a short distance, just where the road turns to the west, on our right is a large two-story dwelling, built as early as 1740; it was considered in that day one of the best houses. It was the

birth-place of John Ballard, Esq., he who built the new hotel on the Ballard farm. This house is still (1887) standing, and is owned and occupied by William A. Trefethen, farmer.

Just opposite the last house there was a lane, sometimes called "Lewis Lane," leading south; some rods down this lane there was an old dwelling-house, in front of which were noble elms. This was the "Lewis Place," one of the earliest settled farms in this section.

In 1800 it passed to the ownership of Landlord Newhall.

The house was torn down a few years ago.

Coming back to the old Boston road and continuing westerly from the Trefethen house, we soon come to a dwelling known in the Revolutionary times as the "Thomas Stocker Place," then occupied by himself. This house is still standing, in 1887, and is owned by Charlotte M. Mills. Some forty rods farther on we find a large dwelling on the right hand side. It stood where now, in 1887, the "Sunnyside House" is found, and a part of the old house was undoubtedly used in the erection of the new one.

In coming thus far from the tavern we have found nine dwellings, while from the bridge to the tavern we found only five.

The large tract of land lying west of Lincoln Avenue, in Cliftondale, extending down to the Revere line, and intersected by the Saugus Branch Railroad, and now very recently bought and laid out into town lots by C. H. Bond, Henry Wait and E. S. Kent, was formerly a noted farm.

Previous to the War of 1812 John Stocker owned this farm, and built himself a house. Subsequently it passed into the possession of Captain Daniel Bickford. In about 1826 Isaac Carleton became the owner. His native place was Andover. He cultivated the farm until his death, in 1841.

Anthony Hatch became the owner in 1847, and continued such up to his death, in 1879.

Mr. Hatch, formerly a ship carpenter in Medford, did an extensive market gardening on his farm. A man of great industry; his broad well-tilled acres always presented a pleasant sight to the passer-by.

About one-half mile south of Cliftondale, on the old traveled road which bore to the east of Lincoln Avenue as now traveled, was a famous farm of olden time, being situated partly in Saugus (then Lynn) and partly in Chelsea. The road passed between the barn and farm-house, which stood at the foot of the hill then known as Boynton's Hill. This was the hardest hill between Salem and Boston, and was much dreaded by the drivers of heavy teams. Mr. Boynton was often called upon for an extra lift, and Landlord Newhall often sent extra horses or oxen to help teams which were to stop at his tavern.

Mr. Boynton lived to an advanced age, and the farm passed to his son, Ellis Boynton. The farm was soon sold to Eben F. Draper and John Edmunds,

who owned it for a few years and sold to Dr. Smith, of Boston. A large part of this farm was utilized by the Franklin Trotting Park some years ago, and is still used somewhat for horse-racing.

Leaving Lincoln Avenue at Cliftondale, and taking Essex Street, a short distance brings us to a fine residence on the right, facing the depot, now owned (in 1887) by Pliny Nickerson. This dwelling-house has not always presented the beautiful appearance of to-day, for it has met with many changes since its first construction, in 1807, by Jacob Eustis, of Boston, a brother of Governor Eustis. The land in front of the house constituted his farm. Mr. Eustis was a man of untiring industry, especially scrutinizing all town expenses, and every irregularity received his scathing rebuke.

About 1830 he sold to James Dennison. It then passed to W. Turpin, and soon to Seth Heaton, who occupied it until 1853. Mr. Heaton sold to Daniel P. Wise and others, who then applied the name of Cliftondale to this section of the town, and began a scheme of improvement. Subsequently John T. Paine, Esq., of Melrose, bought a portion of the land, with the Eustis house. The location of the old road, which ran nearer the house and inside of the noble trees now standing, he caused to be re-located outside of the trees, where we find it to-day. Substantial stone walls were built around the place, and the house itself remodeled.

Continuing our way beyond Mr. Nickerson's, the road winding to the north, we pass soon on our right a tract of land (now being rapidly built over with houses) that was known seventy-five years ago as the "Breedon Place" among the old farm settlements of the town. Crossing the railroad, are fine tillage fields on the left. A large part of this farm was reclaimed from an extensive swamp by Timothy H. Brown, who settled here about 1830 and died in 1851. This was known years ago by the name of the "Allen Place," from its owner, Lemuel Allen, who married the daughter of Parson Roby. Mr. George N. Miller is the present owner, and may be reckoned one of our prosperous farmers.

Still going westerly a short distance to the corner of Felton Street, we come to an old house now owned and occupied by Mr. Walter V. Hawkes. This was the home and farm of Colonel Abner Cheever, of Revolutionary memory. The farm was one of the best of that early day. On the death of the colonel, about 1820, it passed into the hands of his son, Major Henry Cheever, who occupied it till his death in 1858.

About sixty rods to the north we come to the once famous "Dr. Cheever Place," for many years considered the most elegant residence in Saugus. A broad high two-story verandah supporting the roof on massive columns gave it at once an elegant and southern air. It was built about 1808. Noble shade-trees surrounded the house, the grounds were kept neat and

trim, ponds were formed in the rear of the house for fish, boats and bathing. He built a fine avenue, bordered with shade-trees, leading direct from his residence to the turnpike, protected by gates at either end. Dr. Cheever was a surgeon in the Continental army. In politics a Federalist, in religion a Unitarian, and for many years attended public worship with that society at Lynn.

He died about 1842, leaving two children,—Dr. Charles Cheever, of Portsmouth, N. H., and Eliza S. Cheever, both now deceased. The doctor owned about two hundred acres of land, forty acres being tillage.

About forty rods west of the Dr. Cheever place is an old house, now somewhat modernized, and owned by Mr. William H. Penny. It was formerly the house of Ezra Brown, and in the Revolution days was the abode of his father. More recently the farm was owned by Stephen Hall, who lived there many years. His daughter is the wife of Mr. William H. Penny.

About one hundred rods north of Mr. Penny's house, on the Newburyport turnpike, is the farm now owned by the town of Saugus, and occupied for its almshouse. This was one of the farms of the olden time. It was formerly known as the "Tudor Place." The old road from Sweetzer's Corner (now Cliftondale) to South Reading passed through this farm for about sixty rods south of the present house, substantially where the turnpike was afterwards built and is now traveled. Before the present house was built there was a venerable old farm-house upon the same spot. That old farm-house was owned by William Tudor, Esq., known as Judge Tudor. He inherited this place from his father, John Tudor. The late Frederick Tudor, Esq., of Nahant, was the son of William Tudor, Esq. The improvements made by William Tudor, Esq., upon this place began about the year 1800. The old house was not torn down entirely, but was made the nucleus of the new house by doubling the size of the old house and modernizing the whole structure. Judge Tudor no doubt intended to make it his permanent family residence. Its fine situation, its rich fields around the dwelling, its picturesque wooded hills, all afforded him the opportunity to display his taste. An artificial pond was formed south-westerly of the house, and into it was conducted the water from Long Pond by an artificial canal which he excavated, partly through solid ledge, at great expense. This canal can now be seen, and through it is now running a portion of the waters of Long Pond. The magnitude of this work and its speedy completion testify to the energy of Mr. Tudor.

In 1807 the house was vacated by the Tudor family, and for years was occupied by different families. In 1818 it was leased to Robert Eames, who lived there until 1822, when it was purchased of Henry I. Tudor by the town of Saugus for a poor farm.

On Central Street, near the junction of Denver Street, on what was then the traveled road to Reading, were two very old farms, one on the south side of the

old road, owned by Josiah Rhodes, who died about 1794. This dwelling, which was a small one-story house, stood upon the elevated ground east of the house now standing and recently occupied by the late Salmon Snow. Mr. Rhodes' barn was upon the opposite side of the old road. The widow of Josiah Rhodes soon after her husband's death married Richard Shute, who came from Malden. He combined farming, mercantile business and school-teaching. He bought the old school-house, attached it to the farm-house as an ell and made of it a store. These buildings were all burnt one pleasant autumn afternoon, about 1820, with all their contents. Mr. Shute was an active man, and being lame, rode a great deal on horseback, even sowing his grain from the back of his bay mare. He was also tax collector for Lynn for some three years. After his death the farm passed into the possession of Benjamin Swain, and by him was sold to Salmon Snow, about 1833.

The second farm above referred to was on the northerly side of the Reading road and the westerly side of the road leading to the meeting-house. This farm was owned about eighty years ago by Deacon Asa Rhodes.

More recently it was owned by the late Deacon James Roots. The Deacon Asa Rhodes house was a venerable relic of the olden time, two stories high, with a chimney in the centre occupying a large part of the house. A little east of the house stood his small shoemaker's shop, where the deacon could always be found at his craft. The deacon was born in the old house, March 1749, and lived there all his days, dying at the age of ninety-three years. Though a farmer, yet his principal business was shoemaking. He worked his own stock and made shoes for the Marblehead market. He would repair to Marblehead with his saddle-bags, distribute their contents among his customers, take other orders and return home. His way of traveling was sometimes on horseback, sometimes on foot with saddle-bags on his shoulder, and sometimes, with leather-apron on, he would wheel a barrow. The old house was torn down soon after his death, in 1842. Deacon James Roots, who married a daughter of Deacon Rhodes, owned and lived on the place until his death.

About eighty rods eastward of the Deacon Rhodes place was what was known as the Master Hitchings place. This place is now our cemetery. Thomas Hitchings moved from Lynn to the West Parish, about 1802, so as to lead the singing in the parish church, and also to teach the singing-school; hence he was called "Master Hitchings." He lived in the old homestead and reared a large family. This old house is still standing, although removed many rods towards East Saugus, on land known as the Bowler Field.

In the westerly part of the town, now called Oaklandvale, a little over a mile from the Town Hall, on the road to Wakefield, were a number of old farms

deserving some mention. Just before the road descends to the meadow and crosses the brook the location of the old Reading way can be seen leading off to the left or south, and making a wide sweep over the meadow; the present new location across the brook was laid out in 1818. Just after crossing the meadow an old house is still seen to the north, and some rods back from the road. This was in Revolutionary days occupied by Samuel Boardman.

Just here a road branches off to the left, leading to Melrose. A few rods on this road brings us to a venerable dwelling-house on the right, a good specimen of the old time house; it is fully two hundred years old. During the American Revolution it was occupied by Aaron Boardman, and afterwards it became his son's, Abijah Boardman's, who lived and died there. When the county of Suffolk extended up as far as this farm, the line dividing the counties passed through this house, and the court had to decide where Mr. Boardman should pay his poll-tax. Chelsea finally collected it, as his sleeping-room was in that town.

Coming back to the Reading or Wakefield road, and continuing westerly, we come to some excellent intervals, where were several very old farms. In the Revolutionary days there were four farm-houses here, one of which only is now standing. This is the house on the south side of the road, the homestead of the late Joseph Cheever, and more recently occupied by his son, Cyrus Cheever. It was formerly Ivory Boardman's house. Another of the old houses also stood on the south side of the road, before reaching the Joseph Cheever homestead. This was built about 1775 by John Dampney, formerly of Salem, grandfather of the late Joseph Dampney, Esq., of Lynn.

Another of the old houses stood on the north side of the road and west of the Joseph Cheever house. It was occupied by Daniel Floyd.

But another of these houses, and the most remarkable, was the Deacon Pratt house. It stood about one hundred rods east of the old road, upon a level plot of ground. The remains of the old fruit-trees can yet be seen.

Deacon Pratt was noted for his orderly habits, his place being always in the best of shape. He was a deacon in the West Parish Church, and a highly exemplary man.

Let us now retrace our steps as far as the Oaklandvale School-house. Directly opposite this school-house is a road leading northerly. We take this road, and about forty rods brings us to a modern two-story dwelling, built by Joseph Measury, Esq., in 1847. Subsequently he sold it to G. W. Phillips, Esq., who recently died there, when it was sold to the present owner, Mr. Ziegler.

A few rods beyond this house brings us to a gate on the left; through this gate, about twenty rods, stands a venerable farm-house, now owned by Mr. Bostwick. This was one of the ancient farm-sites of the West

Parish of Lynn. This farm then included all the land extending to the Wakefield road.

In 1775 it was owned by Elkanah Hawkes, who occupied it many years. He combined by occupation the blacksmith and farmer. His shop stood near the gate before-mentioned, wherein was executed what smith-work the neighborhood needed. When out gunning in the woods his hand was mutilated by an accidental discharge of his gun, rendering amputation necessary. With the aid of his son, he continued his business several years. He had a daughter, Love Hawkes, who for several years taught school in the neighborhood.

During the beginning of the present century the farm came into the possession of Nathan Hawkes, son of Nathan of the West Parish, who owned it till its sale to Mr. Saunders and Measury, in 1846. After the sale he moved to the old house farther east, near where the old road crosses the brook. He died here in 1862, at the advanced age of eighty-seven years. This old farm-house, where he died, was owned by Daniel Hitchings early in this century, and afterwards was owned by Ira Draper, Esq., until about 1840. It still stands and is occupied by Hannah Hawkes.

About one hundred rods eastward of this last farm, in a large field, stands an old farm-house, until very recently owned and occupied by the late Lott Edmunds. This farm, in the period of the Revolution, was called the "Hitchings Place." Its site is rather low, and all these fields and intervals, in the period of the old "Iron-Works," must have been covered with water to the depth of three feet and more.

To the northwest of these last farms, and contiguous thereto, is that tract of rough, wild woodland, long and still known as the "Six Hundred Acres." This was the lot of public land distributed among the settlers about 1706.

ST. JOHN'S EPISCOPAL MISSION. CONGREGATIONAL SOCIETY IN CLIFTONDALE.

OLD PARISH CHURCH.—The first parish church in Saugus, known as the Third Church of Lynn, or the Church of the West Parish, dates its organization in the year 1738. Previous to that time the people in

the west part of Lynn attended meeting at the parish church on Lynn Common.

The first step was the union of all the principal men to build a meeting-house. The union was named the "Proprietors of the Meeting-House." In 1736 the work was commenced, and the best of oak timber was cut for the frame. The work made considerable progress during the year, although it was not probably finished till 1737. The finishing only extended so far as to build a pulpit and cover the floor with plain seats, one side called the "men's seats," and the other the "women's seats." At this state of affairs the parish records commence. The first book of records was a present to the parish from Thos. Cheever. It is a remarkable vellum-covered book, and served the parish ninety years. On the first page of the book is written: "This book is a gift to the Society of Proprietors of the new meeting-house, in the western end of the town of Lynn, by Thomas Cheever."

On the 5th of March, 1738, a warrant was issued by Ebenezer Burrill, Esq., of Lynn, addressed to Joshua Haven, and requiring him to call the first meeting of the Third Parish of Lynn for organization and the choice of officers.

(The Second Parish had previously been organized in that part of Lynn now called Lynnfield).

The meeting was held by adjournment at the meeting-house, the 28th day of March, 1738, and William Taylor was chosen parish clerk, and William Taylor, Jonathan Wait and Josiah Rhodes parish committee. After this organization the parish at once proceeded to provide their first preacher. Edward Cheever, a resident in the parish, an educated man and about entering the ministry, was invited to preach for three months.

It appears that the people were pleased with the preaching of Edward Cheever, and at a meeting held June 18, 1738, they voted to settle him as their minister. For some reason which does not appear, Mr. Cheever was not at once settled. In the following October the parish voted to send letters for ordination, although it does not appear that he was ordained till October, 1739. What salary he was to have does not appear from the records, although a certain gift of the General Court was appropriated to assist the settlement, and that forty members of the parish were each to carry to the house of Edward Cheever a half-cord of wood each year, and not fail. At the same time with this settlement several things came up for the decision of the parish. One was to accept the legacy from Theophilus Burrill of one hundred pounds (three hundred dollars, silver) "to be expended in furniture and vessels for the Lord's Table." It was voted to accept and appropriate. Another was to assign a lot of land for "horse-stables," each one to build his own stable. So about ten stables were built, probably in front of the burying-ground.

We cannot sufficiently admire the zeal of our ancestors—then few in number and widely scattered—to

undertake a work of such magnitude as the building of a church. It was forty-four feet long by thirty-six wide, with about twenty-feet posts. It had upper and lower windows all round, of common-sized glass. On its front, or south side, was the front door, with a large porch or vestibule, which was entered by three doors. It had, besides, a door on each end opening into the church. No doubt the model of this was found in the "Old Tunnel," so-called, on Lynn Common. Let us go into the church. The pulpit is upon the north side of the house, in the centre, raised high, with a seat in front for the deacons. A gallery runs around the front and two ends, the front gallery seats being appropriated to the singers. The floor of the church is seated with plain plank seats, divided into two sections.

What a pattern of plain Puritan simplicity must this church have presented, with its "men's seats" on one side and its "women's seats" on the other; and then the worshippers with their antique dresses!

The situation of this church was very pleasant. It was in the centre of the town, on a small elevation of land upon the west side of the road leading north to the "Old Iron Works," on a part of the "Taylor Farm," so-called, on the triangular green where now (1887) stands the flag staff. The road running westerly, now called Main Street, was not then made. For some years the people living on the old road to South Reading probably passed through the fields, opening bars, but afterwards a highway was built. This church edifice continued to stand on the same spot, although undergoing some alterations, until the year 1858, when it was moved about three rods north of its old site, and is now occupied for a grocery-store by Mr. Whitehead, with dwelling above. The elevated knoll has been graded down and is now an open square.

Let us now return to the old church in 1740. Another question was then brought up which proved in the sequel an encroachment on the "free-seat" plan. They voted to build a pew for the minister at the east end of the pulpit. Poor, blind mortals! They should have known enough of human nature to have taught them that it never would be endured to have the minister's family sit above the people. So, very soon after, it was resolved that the new church should have pews, in part at least. A committee was chosen to make a plan for the pews. At a meeting held on the 8th of December, 1740, the committee on pews made the following report in substance: "We are of opinion, there being room enough to erect twenty-nine pews in said meeting-house, nineteen wall pews and ten pews on the floor. All persons that make choice of a wall pew, they maintaining the glass against their own pews. The proprietors of the house to have the choice of pews. That each person having a pew shall pay for erection of his own pew. That the pews shall be taxed forty shillings per week as apportioned."

The foregoing report was accepted and a larger committee of seven of the best men was chosen to superintend the whole matter, and after the pews were built, to tax them.

This committee, finding that more pews were needed, made a plan to increase the number to thirty-four, by making five more. Their report read thus: "By taking two seats of the men's, and two hindermost seats of the women's, with five feet of the women's fore seat and second seat, will make room for five pews more, making thirty-four in all."

The report was accepted.

From what can be gathered, it appears that the Third Parish (now Saugus) was set off from the First Parish (Old Tunnel) on condition that the parish tax should be assessed and collected by the First Parish till the General Court should incorporate the West Parish. That during said time, the West or Third Parish might have separate preaching, and draw from the treasurer of the First Parish their ratable proportion of the money raised. Their proportion was thirty-five parts of every one hundred and eighty. It is thus seen that Saugus was no small part of Lynn, as to taxation at that day. The sum refunded, with forty shillings per week tax on pews, was deemed sufficient to meet the cash expenses of the new parish. But the young parish found very soon the same difficulties that religious societies have always found—the trouble of raising money. The people were remiss in paying the weekly assessments upon the pews, and also were negligent in supplying the yearly half-cord of wood each. Various votes were passed threatening to delinquents.

On March 6, 1745, the parish chose a committee to build the five additional pews on the lower floor, and twenty pews in the gallery, ten in the front gallery and five in each end gallery. They were also empowered to let, tax and sell, as they might judge best.

It was voted that every pew occupier should supply a half-cord of wood yearly, and more or less as the tax might be.

The course adopted by the West Parish about the construction of pews was an improvement on the "Old Tunnel" method. In that house every one made his pew to his own taste, but here the society built the pews uniformly and the pew-owner paid the cost.

In February, 1747, the parish again petitioned the General Court for an act of incorporation.

The First Parish Church at Lynn stoutly opposed all these petitions for separation; but it was finally obtained.

In February, 1749, Ebenezer Burrill issued a warrant for organization under the charter. The meeting was held the 10th inst., and Jonathan Hawkes was chosen as first parish clerk under the charter. (Rev. Edw. Cheever was dismissed December, 1748.)

At this meeting it was voted that the parish concur with the church in inviting Mr. Joseph Roby to

become their minister. In this vote of concurrence the parish voted all the particulars as to the payment of Mr. Roby. We here give the vote verbatim:

"Voted for the annual support of Mr. Roby so long as he shall carry on the work of the ministry in said parish, the improvement of a suitable house and barn. Pasturing and sufficient winter meat for two cows and one horse, and to put the hay, or winter meat into the barn—the improvement of two acres of land suitable to plant, and to be kept well fenced, and sixty pounds in lawful silver money at six shillings and eight pence per ounce, and also the loose contribution."

On March 1, 1749, a committee was chosen "to inform Mr. Joseph Roby that he was chosen to settle in the ministry by the church and parish." Soon after this vote the subject of giving the meeting-house to the parish was discussed by the proprietors, and a meeting was held for that purpose, wherein it was voted that said "meeting-house, with all privileges and appurtenances, be given to the Third Parish, excepting pew No. 23, and the place where it stands; provided said parish wrong no person of their expense in building the pews in said house."

For reasons which do not appear, Mr. Roby was not settled on the foregoing vote, and at a meeting held April 21, 1750, a committee was chosen to supply the pulpit with "transient preaching." Also to see how the parish could purchase a house and land suitable for a parsonage.

From a subsequent vote it may be inferred that the support voted to Mr. Roby was not entirely satisfactory to him; we give verbatim the second vote, July 2, 1750:

"Voted, That if Mr. Joseph Roby accepts our Invitation and settles in the work of the ministry in this parish, his whole Salary as suport annually to inuabie him to Carry on the work of the ministry in said Parish shall be as followeth: The improvement of a suitable House and Barn standing in a suitable place, Pasturing and sufficient Winter Meat for two cows and one Horse, the Winter Meat put in his Barn, the improvement of two Acres of land suitable to plant, and to be kept well fenced, Thirty Pounds in lawful Silver money at six shillings and eight pence per ounce. Twenty cords at his Dore and the lose contribution. And also the Following Articles or so much money as will purchase them, viz., Sixty Bushels of Indian Corn, Forty-one Bushels of Rye, Six Hundred Pounds wait of Pork and Eight Hundred and Eighty-eight Pounds wait of Beefe, and that the Salary or annual Suport as above expressed shall begin at the time of Mr. Roby's giving his answer of Ex-ception, and continues so long as he continueth in the Work of the ministry amongst us, Said Parish Reserving the Term of one year and six months from the time of his giving his answer of Ex-ception to erect complete and finish the House and Barn above mentioned."

Mr. Joseph Roby finally concluded to east his lot with the resolute and benevolent little band which constituted the West Parish of Lynn. Although a Boston man by birth, he nevertheless met his humble and rustic friends with becoming dignity of character. We give his letter of acceptance:

Boston, July 25th, 1750.

"Hon'd and Belov'd Brethren:—I am oblig'd to you for the respect you have shown me in the call you have given me to settle with you in the work of the ministry among you, and am extremely sorry that any difficulties have in time past prevented the accomplishing an affair so agreeable to you as well as myself. It is with freedom and much satisfaction that I now declare my acceptance of your call, hoping that an event so important to you and me will be overruled in great favor to each. I presume you will always consider my circumstances, and kindly supply my wants as there may be occasion. I hope we shall have an interest in

each other's affection, and that your love to me and mine to you may abound—that we shall live together in peace, and that the God of love and peace may dwell among us and bless us continually. I ask your prayers to God for me, and God forbid that I should cease praying for you, that the blessings of heaven may be your portion and that of your children after you, and that a preached gospel may be to you the power of salvation. I am, honored and dear brethren,

"Yours affectionately,

"JOSEPH ROBY.

"To the Third Church and Parish in Lynn."

Already in March, 1750, a house and barn, with thirty-three acres of land, had been purchased of John Hutchinson for three hundred pounds currency (about nine hundred dollars), for a parsonage and parsonage lands. In 1780 we find the first mention of dollars and cents—as then written, "dolars and sents." Pounds were fast becoming obsolete, their value having so depreciated that in the latter part of their use the parish voted eight hundred pounds, instead of the less sum, which appears in the settlement stipulation.

Between the minister's salary, house and barn, tillage land and pasture, wood and hay, corn and rye, beef and pork, which all had to have particular care every year, to which may be added the care of the church, the collections of rates, the building and taking up of pews, the establishing of horse-sheds, the fencing of burying ground, the building and keeping of pound, the establishing and providing for a school, with almost everything else that appertains to civilized life, it well may be judged that parish meetings were no dull or stale affairs. An old and somewhat amusing practice prevailed of recording the names of dissenters to a vote. For instance, Josiah Rhodes might dissent about the providing pork for the minister, and would at once request his name recorded as dissenting.

"Parson Roby," as he was familiarly called, had now been settled over a half-century. Peace and love had marked all his intercourse with his people. In July, 1802, the loved pastor, who had always enjoyed the best health, was suddenly attacked with disease while in his pulpit. He was taken therefrom to his home, never more to resume the duties so long and so faithfully discharged. In August a meeting was held on the matter, and Joseph Emerson was employed as a substitute for a few weeks. Thus matters went on, several ministers supplying till January 31, 1803, when the aged pastor died. The record reads thus: "January 31st, 1803, the Rev. Joseph Roby departed this life, in the 80th year of his life and the 53d of his ministry, and was buried the 4th day of February, at the expense of the parish." The following is the inscription on his gravestone, still standing in the old burying-ground:

"Sacred to the memory of the Rev^d Joseph Roby, who departed this life Jany. 31st, 1803, in the 80th year of his age and 53d of his ministry in this Parish.

"Through life a lover of learning and virtue, a sincere friend, a kind and affectionate husband and parent, and a devoted Christian.

"By a constant practice of the Christian and social virtues, he rendered himself greatly beloved and respected in the various walks of domestic life. Reader, would'st thou be honored in life and lamented at death, go and do likewise.

"No pain, no grief, no anxious fear
Invade these bounds; no mortal woes
Can reach the peaceful sleeper here
Whilst angels watch his soft repose.
So Jesus sleeps, God's dying Son,
Past thro' the grave and blest the bed.
Then rest, dear Saint, till from his throne
The morning break and pierce the shade."

In April, 1804, the church and parish gave a call to Rev. William Frothingham—his letter of acceptance was dated June 2, 1804, from which we give an extract:

"The office to which you have called me is greatly important and solemn. It is to be an ambassador of Christ to men—to be entrusted with the word of reconciliation—to be a guide and instructor in matters of eternal moment to you—to watch for your souls as one that must give an account—to be your spiritual steward, appointed to give every one his meat in due season—to be a worker together with Christ. How sacred an office! What peculiar talents, what spiritual graces are necessary to the right discharge of it!"

He was installed September 26, 1804. Mr. Frothingham continued as minister for thirteen years, until dismissed at his own request, May 7, 1817. The parish had become weaker through the withdrawal of several prominent members and other causes, and so were unable to support Mr. Frothingham—he left his charge with grief and the society parted with him with deep regret.

The parish voted the pulpit free to ministers of any denomination, no expenses being made to the parish. This state of things existed for three or four years, and very little was done to promote harmony of action.

From 1821 to 1826 Rev. Joseph Emerson and Rev. Hervey Wilbur, being principals of the Saugus Female Seminary, also generally supplied the parish pulpit.

This year, 1826, began that conflict of opinions which finally resulted in dividing the society. The Trinitarian and Unitarian elements could no longer coalesce.

Through the great influence of Dr. Abijah Cheever, the Rev. Ephraim Randall, a strict Unitarian, was installed minister October 3, 1826. His pastorate was short-lived, lasting until the following autumn in 1827, when it was dissolved and the parish left again destitute.

The controversy became bitter. From 1827 to 1832 very little was done,—occasional preaching in the old church, rarely orthodox, but more frequently Universalist and Unitarian.

In 1832 the Calvinistic members of the parish, seeing no prospect of ever gaining the ascendancy in the parish again, formally withdrew and organized a new society. This left the old parish in a crippled condition, which lasted up to 1836.

In the winter of 1835-36 the members of the old parish waked up and began a general repairing and remodeling the inside of the old church, which had now been built one hundred years.

The old high-backed latticed pews were removed, also the venerable pulpit with the sounding board,

also the deacons' seat, and the galleries on the south and east sides, leaving a small gallery on the west end for the singers.

The broad south porch did not escape, but was torn down and its doors closed, the only entrance now being on the west side. Such was the change that the old church could scarcely be recognized.

The first minister after the renovation was Rev. John Nichols. After Mr. Nichols the pulpit was supplied from 1838 to 1848 by Benjamin F. Newhall, Esq., James M. Usher and others.

In 1850 Rev. Josiah Marvin was settled and continued till 1852.

From 1852 to 1857, preaching by Rev. Henry Eaton, Sylvanus Cobb, D.D., Rev. J. W. Talbot and Hon. James M. Usher.

From 1857 to 1859, supplied by Rev. J. H. Campbell

It was at this time that most of the parish property was sold. In 1858 some movement was made for a new church. Soon the old parish church was sold for about two hundred and forty-two dollars to Miss Eliza Townsend, who removed the church to the northerly side of Main Street, near by, and made it into a store with dwelling above. The site of the old church was sold for five hundred and seventy dollars.

In 1860 a new church was built and dedicated in the autumn of the same year. It was located a few hundred feet west of the old site, at the corner of Main and Summer Streets, where it is now standing with its modest spire. An outside clock on its tower gives the time of day to observers.

Since 1860 the pulpit has been supplied as follows: From 1860 to 1861 by Rev. Benjamin W. Atwill; 1862 to 1865 by Rev. J. H. Campbell; 1866 to 1873 by Rev. Thomas J. Greenwood; 1875 to 1876 by Rev. Albert W. Whitney; 1876 to 1878 by Rev. Thomas W. Iliman; 1878 to 1884 by Rev. Charles A. Skinner; 1885 to April, 1887, Rev. J. H. McInerney. In June, 1887, Rev. Irving W. Tomlinson is engaged to supply for one year.

Having brought the old parish history down to the present time, let us return to that portion of the old parishioners who, although claiming to be the true successors in doctrine of the old parish church, were yet by the laws of the State made the seceders, being in the minority.

In 1832 the Calvinistic members of the parish formed a society and first held separate services in the seminary building, which stood on the parish property.

Law was resorted to by the old parish, and they were finally driven out from this building and went to the public school-house.

This rupture or secession from the old society was led by Joseph Emes, David Newhall and George Pearson. Their first pastor was Rev. Sidney Holman, who was installed January 16, 1833, and dismissed December 31, 1834. From this time till May, 1836, there was not a settled minister.

Worship was regularly maintained however, the lay brethren reading sermons and otherwise assisting in the services.

On May 1, 1836, Rev. Moses Sawyer commenced to supply the pulpit, and continued his ministry for six years.

On April 19, 1843, Rev. Theophilus Sawin was ordained pastor, and was dismissed April 30, 1848.

Rev. Cyrus Stone, a returned missionary from India, now supplied for a few years, and Rev. Levi Brigham was installed May 7, 1851, and continued until September, 1868.

On March 10, 1869, Rev. F. V. Tenney was installed, and by his request was dismissed May 24, 1877.

On April 17, 1878, Rev. Samuel T. Kidder was ordained, and continued until October, 1879.

On July 21, 1880, Rev. Edw. L. Chute was installed and continued until October, 1882.

Rev. C. H. Washburn supplied in 1885 until 1886, when he was followed in June by Rev. M. S. Hemenway, who supplied the pulpit for one year, and at the present time (1887) the society is without a settled pastor.

This society built their first church in 1835, Joseph Emes, Esq., being the chief planner and manager. This was a stone church of very plain appearance, and is still standing (1887), although occupied as a grocery-store and post-office.

The society worshipped in this stone church until 1854, when they built a larger and more commodious church edifice, which still stands, and is a commanding structure in this portion of the town. Originally, as designed by Arthur Gilman, architect, it had no vestry under the audience-room, but in 1871 the society raised the whole building, with its tower, and built under the same a vestry story.

While this gave the society better accommodations, it most certainly injured its excellent proportions and took much away from its former beauty.

THE FIRST METHODIST CHURCH.—Methodism first gained a settlement in that part of the town now known as East Saugus, but then as the South Ward.

Jesse Lee, the pioneer Methodist preacher from the New York Conference, came to Lynn in December, 1790, and a church was built in Lynn in June, 1791.

Some of our inhabitants were attracted to these Methodist services, which brought to their hearts an earnestness and a consecration which they had not found in the more formal and cold services of the parish church.

Whole families were in the habit of walking down to the Methodist services on Sabbath mornings, carrying their luncheon with them, and returning at night.

We find that as early as 1810 members came up from the Lynn Church and held prayer-meetings in the old Rock School-house, so-called. This school-house, which proved to be the cradle of Methodism

in Saugus, deserves rather more than a passing notice.

The spot where this famous school-house stood is plainly to be seen to-day, although the house has long since disappeared.

It stood on the eastern brow of the rocky hill on the old Boston road, now called Lincoln Avenue, opposite to what was formerly the old Anchor Tavern. The spot was many feet above the level of the street, and being rocky and comparatively worthless, it was thought just the place for a school-house, and so here it was built in 1806.

Every one who entered must needs climb up a steep ascent and then ascend the long flight of steps into its side porch.

The building was about twenty-four feet square, one story high, with hipped roof. On the southerly side was a porch about six feet square, from which an aisle six feet wide ran through the middle of the house north and south. At the north end of the aisle stood the teacher's desk upon a raised platform: in the middle of the aisle stood a large, capacious cast-iron box-stove.

From this central aisle three narrow passages on each side sloped up to the sides of the house; between these passage ways ran long desks or forms for the accommodation of the scholars, each tier being higher than the one in front.

In 1838, a new school-house having been built, the old Rock School-house was sold, and during the attempt to remove it from its elevated plateau some accident occurred by which it was precipitated into the street below; this necessitated its demolition.

It was in this building that the Methodist services were held for many years, beginning about 1810 and continuing until their new church was built, in 1827. Among the early converts were Solomon Brown, John Shaw, Amos Stocker and Joseph S. Newhall—men who proved themselves worthy to uphold the banner of the cross amid the increasing opposition.

It was not long, in 1815, before Edward T. Taylor, then an illiterate young man, traveling as an itinerant peddler, found a place in this school-house to begin his preaching, which afterwards became so famous. About 1818 this occasional preaching-place was joined to the Malden Circuit, and among the preachers were Orlando Hinds, Isaac Jennison, Aaron D. Sargent, Frederick Upham, Jotham Horton, Leonard Frost, Eleazer Steel, Aaron Wait, Jr., and Warren Emerson. As the converts increased they were formed into a class and were first connected with the Methodist Episcopal Church at Lynn Common. The winter of 1819 and 1820 was a period of great religious interest; hardly a family in this village but shared in some measure in the work.

The first written church records begin in June, 1825, when Rev. Henry Mayo was the Conference preacher in charge.

He was appointed by the Conference June 6,

1824. For this year there was a subscription for his support of one hundred dollars, made up by forty-eight subscriptions ranging from five dollars down to forty-two cents.

Of this amount twenty-five dollars was contributed by friends in Lynnfield; also twelve dollars and twenty-two cents by the "Honorable Mite Society." This was a woman's society which met once a month at different houses for conversation and prayer and payment of dues. This money was expended in the following manner:

Presiding elder's bill	\$8.92
Preacher's traveling expenses	2.50
The table expenses	18.75
Quarterage	69.83
	\$100.00

The record of the names of the members of the church, as made by Henry Mayo June 4, 1825, is headed by Solomon Brown, and contains sixteen males and thirty-seven females, with twenty-five on probation. The First Quarterly Conference met in the South School-house (also called the Rock School-house), June 4, 1825.

The following official members were present: Edward Hyde, presiding elder; Henry Mayo, preacher in charge; John Shaw and Joshua Howard, stewards; and Solomon Brown and Joseph S. Newhall, class-leaders. At this meeting Jonathan Newhall and Joseph G. Goldthwait were added to the stewards.

FORMATION OF A PARISH.

"SAUGUS, June 30, 1825.

"At a meeting of the inhabitants of Lynn and Saugus convened in said Saugus, it was voted first that we form ourselves into a society, to be called the 'First Methodist Episcopal Society in Saugus.' Second, that we petition William Jackson, Esq., a Justice of the Peace in and for the County of Essex, to grant a warrant calling a Legal meeting of the members of said Society, for the purpose of choosing officers and transacting such other business as may be found proper."

PETITION AT LARGE.

"SAUGUS, June 30, 1825.

"To William Jackson, Esq., one of the Justices of the Peace in and for the County of Essex:

"We, the undersigned Petitioners, at a meeting held in Saugus, Voted to organize ourselves into a Society called the First Methodist Society in Saugus, and we would therefore beg leave to request you to issue a warrant calling a legal meeting of the members of said Society, for the purpose of choosing officers and transacting such other business as shall come before the meeting.

"John Shaw.

Benj. F. Newhall.

Jona. Newhall.

Jos. G. Goldthwait.

Solomon Brown.

Edmund Brown.

James Hall.

Benj. P. Oliver.

Benj. B. Hitchings.

Levi D. Waldron.

G. W. Raddin.

James Howard.

Stephen Smith.

Josina Howard."

The warrant, as requested, was issued by William Jackson, Esq., July 15, 1825, and the legal meeting of the First Methodist Episcopal Society in Saugus was held at the Rock School-house on July 25, 1825, when John Shaw was chosen moderator, Benjamin F. Newhall secretary and parish clerk, Joshua Howard treasurer, and John Shaw, James Howard, Stephen Smith, Jonathan Newhall and Joshua Howard a com-

mittee. The yearly meeting was to be held on the first Wednesday in March, annually, at 7 o'clock, P.M.

This gave to the society a legal status.

Rev. Henry Mayo saw the church organized in all its departments and well started in its long career of service. That the church should have started at this time with so much matured strength clearly indicates that there had been for years previous a great deal of labor put forth in the interest of Methodism. This was the case, as has already been mentioned.

Many of our people had formed a congenial religious home with the Lynn Common Methodist Church, had become members therein and had attached themselves to a "class," which met in East Saugus.

The following are the successive pastorates :

1824. Rev. Henry Mayo.	1850-51. Rev. Daniel K. Bannis-
1825. Rev. Leroy Sunderland.	ter.
1826-27. Rev. Aaron Joselyn.	1852. Rev. J. A. Adams.
1828. Rev. Nathan Paine.	1853-54. Rev. Ralph W. Allen.
1829. Rev. Ephraim K. Avery.	1855-56. Rev. Wm. H. Hatch.
1830. Rev. John J. Bliss.	1857-58. Rev. Daniel Richards.
1831. Rev. Hiram H. White.	1859-60. Rev. Jonas M. Clark.
1832. Rev. Ebenezer Blake.	1861-62. Rev. Cyrus L. Eastman.
1833. Rev. Joel Steele.	1863-64. Rev. Daniel Richards.
1834. Rev. John Lord.	1865. Rev. Thomas Marcy.
1835. Rev. Lewis Bates.	1866-68. Rev. Pliny Wood.
1836. Rev. Newell S. Spalding.	1869-71. Rev. Jesse Wagner.
1837-38. Rev. Sanford S. Benton.	1872-73. Rev. M. B. Chapman.
1839-40. Rev. Daniel K. Bannis-	1874-76. Rev. Saml. Jackson.
ter.	1877-78. Rev. P. M. Vinton.
1841-42. Rev. Jona. D. Bridge.	1879-81. Rev. Henry J. Fox, D.D.
1843-44. Rev. William Rice.	1882-83. Rev. W. N. Richardson.
1845-46. Rev. Isaac A. Savage.	1884-86. Rev. David S. Coles.
1847-48. Rev. Edward Cook.	1887. Rev. Geo. W. Mansfield.
1849. Rev. Wm. M. Mann.	

At a meeting of the society held in the Rock School-house April 17, 1827, it was unanimously voted "to proceed immediately to erect a House of Worship for this society." Rev. Aaron Joselyn, George Makepeace and John T. Burrill was a committee to obtain subscriptions for the new church.

Accordingly, the work on their first church at once commenced, and was carried forward to completion with commendable dispatch, so that its dedication took place November 22, 1827.

This church was of very modest appearance, forty-six by forty feet, without spire or tower, bell or vestry. It contained forty pews and cost two thousand dollars. Its pulpit was high above the pews and was reached by two flights of stairs, at the head of which were doors through which to enter the box pulpit.

The church stood on the same spot where now stands the second church.

This edifice served the society until 1842, when it was lengthened by adding about twenty feet on the back end and building a basement vestry under the same. Twenty-two new pews were thus obtained, and fifteen hundred dollars spent. Rev. Jonathan D. Bridge was then pastor and much religious interest prevailed.

In 1854 the society sold their first church, and it was removed to the corner of Lincoln Avenue and Wendell Street, where it still stands under the name of Waverly Hall.

Active measures were taken in building their second church on the old spot, and in the meantime services were held in the school-house and in the old church.

The vestry of the new church was dedicated December 3, 1854, and public dedication services of the entire church were held February 22, 1855. Sermon by Rev. Bishop E. S. Janes.

In 1875 the exterior of the church edifice was thoroughly repaired, and the main roof and spire were slated.

In 1880 the interior was improved by stained-glass windows, new pulpit with enlarged platform and altar, frescoing, carpets and upholstering.

In 1835 the society built a parsonage just north of the church. It was a modest one-and-a-half-story dwelling, which made a home for the successive pastors until 1871, when the parsonage was sold and removed, and a new one was erected on the old site. This cost about four thousand five hundred dollars, and is still standing. It was built during the pastorate of Rev. Jesse Wagner, who raised sufficient money among this people to pay for its erection.

A flourishing Sunday-school has always been connected with this church, and even as early as 1819 we find a Sunday-school formed. George Makepeace was the first superintendent, succeeded by Harriet Newhall, Miss Bridgton, James Burrill, Fales Newhall, Martin W. Brown, George H. Sweetser, Joseph C. Hill, James S. Oliver, Alvah Philbrook, Rufus A. Johnson, Horace Lovering and Wilbur F. Newhall, who is the present superintendent, having held the same office since 1865, with the exception of two intervening years.

This church continues to be the only one in East Saugus.

CLIFTONDALE METHODIST EPISCOPAL CHURCH.—The Methodist Episcopal Society of Cliftondale was organized March 20, 1856. There had been preaching, however, a part of each Sabbath by Rev. R. W. Allen during 1854 and every Sabbath by James Blodgett during 1855.

The new society at first held its services in the unfinished room in the school-house, now the grammar school room. In 1857 a chapel—a plain, but substantial, structure—was built, and in December of the same year was dedicated to the purposes of Christian worship.

The first pastor was Rev. James Blodgett, a local preacher, who died a few years since. He was followed, in turn, by Revs. George F. Poole, who remained as pastor from 1856 to 1859; Solomon Chapin, 1859-61; John S. Day, 1861-63; Daniel Waite, 1863-

66; Frank G. Morris, 1866-68; J. F. Bassett, 1868-69; George E. Reed, 1869-70; J. E. Richards, 1870-71; Joshua Gill, 1871-72; Ralph W. Allen, 1872-75; C. W. Wilder, 1875-77; A. O. Hamilton, 1877-78; C. M. Melden, 1878-80; W. P. Odell, 1880-83; George A. Phinney, 1883-86, the latter being succeeded by Charles A. Littlefield, the present pastor of the church.

This church is the daughter of the East Saugus Methodist Episcopal Church, granddaughter of the First Methodist Episcopal Church of Lynn, and mother of the Methodist Episcopal Church of Saugus Centre, which latter church, in 1877, formed a society of their own, and a year later built and dedicated their present place of worship.

The Sunday-school connected with the society was formed in 1852 and organized in 1858. The superintendents of the school have been S. S. Dunn, Hon. George H. Sweetser, Horatio G. Herrick, Matthew Rawson and Albert H. Sweetser, who holds the position at the present time. The school is in a prosperous condition, its present membership being one hundred and eighty-six.

About the beginning of the year 1881 the pastor, Rev. W. P. Odell, conceived the idea of building a new church, in which plan he readily interested the members of the society, displaying commendable zeal and enterprise in the matter. The plan of building a new church was finally given up, and it was decided to remodel the chapel. The effort to solicit subscriptions met with such success that the building committee, consisting of A. H. Sweetser, J. A. Roddin, C. H. Bond, S. P. Coates and E. S. Kent, feeling assured of success, placed the matter in the hands of Henry W. Rogers, of Lynn, who submitted to the committee the plan of the present edifice, which was accepted, and work was commenced on remodeling the chapel in July, and was finished the day before its dedication.

The church is a very handsome one, giving entire satisfaction to the people and being an ornament to the community. Its seating capacity is about two hundred and twenty-five. There are two entrances in front by large double doors, surmounted with neat pitched roof hoods. The front gable is ornamented with tracery of a pretty pattern. The exterior is painted in shades of olive green, the spire, roofs and belts of cut shingles around the tower are painted red. The vestibule, audience-room and tower-room are lighted by beautiful stained-glass windows of a new and attractive design. The audience-room on the main floor is entered by two large doors, opening into aisles three and a half feet wide, with rows of ash pews, richly upholstered, on either side. The walls and ceilings are tastily decorated with rich frescoes of the Pompeiian style. Below the audience-room is a vestry, with a seating capacity of one hundred and twenty-five, also store-rooms, library and class-room.

The church is in a very prosperous condition. Both church and Sunday-school are growing rapidly. The present church membership (August, 1887) is one hundred and thirty-eight.

THE METHODIST EPISCOPAL CHURCH IN SAUGUS CENTRE.—In 1875 a few Christian men invited Rev. O. J. Pettegrew to assist in starting a Methodist mission in the Centre. A Sunday-school was formed; also a Ladies' Sewing Circle, and preaching Sunday afternoons.

The services were held in Flye's Hall at first, but this proving too small to accommodate the people, a removal was made in September to "Hitchings' Hall," near the depot. Mr. Pettegrew continued his labors with them until April, 1876, when Rev. J. Thompson came for a short time.

In November, 1876, the society united themselves with the Methodist Episcopal Church at Cliftondale, and in May, 1877, Rev. E. H. McKenney began his services with them, which continued three years.

July 23, 1877, Rev. Daniel Dorchester, presiding elder of the New England Conference, met with thirty-eight members of the society and organized them into a church. Rev. E. H. McKenney was made pastor and all the usual church officers elected, including a board of trustees. Steps were at once taken towards the building of a chapel.

A lot of land on Main Street, nearly opposite Vine Street, was given by William H. Penny, and during the winter a church, thirty-two by fifty feet, was erected, so that April 24, 1878, it was dedicated by appropriate services, Rev. V. A. Cooper, of Lynn, preaching the sermon.

The church was placed in the westerly portion of the village, so as better to accommodate the people living in the neighborhood, including Oaklandvale. The following are the Conference ministers who have had charge: April, 1880, Rev. Charles M. Melden; April, 1882, Rev. Samuel Plantz; April, 1883, Rev. Arthur W. Tirrill; April, 1884, Rev. Webster Miller; April, 1886, Rev. Daniel Richards; April, 1887, Rev. C. J. Mills.

ST. JOHN'S MISSION (Saugus Centre).—In the spring of 1883 the diocesan Episcopal missionary, Rev. John S. Beers, held a service in a private house in Saugus Centre. A goodly number of churchmen were present. Soon after this a modest beginning was made by the establishment of a Sunday-school, which, in a few months, numbered forty scholars, and later on increased to seventy. Mr. Thomas Ashworth was the first superintendent—an earnest Christian man—but in less than two years he died, after a short and painful illness. He was succeeded by Lyman F. Merrill, a member of St. Paul's Church, Malden, who continued to hold this office until a short time previous to his ordination as deacon in the Episcopal

Church. At present Mr. Frank Knight, of St. Stephen's Church of Lynn, is acting as superintendent.

During the first year occasional services were held in a hired hall, Rev. Mr. Beers and others officiating.

In the summer of 1884 Rev. Thomas L. Fisher, minister at St. Luke's Church, Linden, added to his heavy labor in his own parish a regular Sunday afternoon service for this mission, together with such pastoral care as his time would allow.

The hall on Central Street, near Mr. Flye's, was tastefully fitted up under his direction; several gifts of church furniture, books and other necessary things were made, and the work continued to prosper under the name of St. John's Mission.

Money is now being raised for the erection of a church edifice, assistance having been received from St. Stephen's Church, Lynn, so that the society hope, in less than a year's time, to have a place of worship of their own.

FIRST CONGREGATIONAL SOCIETY OF CLIFTONDALE.—This religious society was organized November, 1886. About a year previous to its formation services were held in Clifton Hall, preachers being obtained as they could be from different denominations.

A Sunday-school was gathered in connection with the society in April, 1886.

About the time of the organization of the society Rev. Theodore Haven was called as pastor, but he remained only about two months.

Very soon after Rev. Henry B. Miter was engaged as pastor, and has remained with the society up to the present time, September 1887.

The society continues to hold its services in Clifton Hall, owned by Mr. Charles H. Bond, who has been much interested in the formation of this society.

CHAPTER XXVIII.

SAUGUS—(Continued).

MANUFACTURING INTERESTS, PAST AND PRESENT.

Iron Works—Mill Site at East Saugus—Pranke's Mills—Scott's Mills—North Saugus—Tobacco Business at Cliftondale—Crockery—Shoe Business—Grain Mill on Ballard Street—Brick Making—Hair Business.

IRON WORKS.—Although iron ore was first discovered in other sections of the country, the first successful iron works were established in New England and in that portion of Massachusetts now embraced in the township of Saugus. In 1632 mention is made by Morton of the existence of "iron stone" in New England, and in November, 1637, the General Court of Massachusetts granted to Abraham Shaw one-half of the benefit of any "coles or yron stone w^{ch} shal be found in any comon ground wch is in the countrys disposing."

Iron ore had been found in small ponds on the western bank of the Saugus River soon after its settlement in 1629, and in 1642 specimens of it were taken to London by Robert Bridges, in the hope that a company might be formed for the manufacture of iron.

This hope was realized in the formation of "The Company of Undertakers for the Iron Works," consisting of eleven English gentlemen, who advanced £1000 to establish the works. John Winthrop, Jr., had previously gone to England, and he appears to have assisted Mr. Bridges to secure the organization of the company. He became a member of the company, as did others among the colonists. Thomas Dexter and Robert Bridges, both of Lynn, were among the original promoters of the enterprise.

Workmen were brought from England in 1643, and the foundry was erected on the western bank of Saugus River, just at the head of tide water, in what is now called the Centre of Saugus, and still marked by the old banks of scoria, which have bravely withstood all changes. The village at the foundry was called "Hammersmith," from a place of that name in England, whence came many of the workmen.

In 1644 and subsequently the General Court granted many special privileges to the company. On March 7, 1644, it was granted three miles square of land in each of six places it might occupy in the prosecution of its business.

On November 13, 1644, it was allowed three years "for ye perfecting of their worke and furnishing of ye country with all sorts of barr iron." The citizens were granted liberty to take stock in the enterprise, "if they would complete the finery and forge, as well as the furnace, which is already set up."

On the 14th of May, 1645, the general court passed an order declaring that "ye iron works is very successful (both in ye richness of ye ore and ye goodness of ye iron)," and that between £1200 and £1500 had already been disbursed, "with which ye furnace is built, with that which belongeth to it; and some tuns of sowe iron cast in readiness for ye forge. There will be neede of some £1500 to fini-h ye forge."

On the 14th of October, of the same year, the company was granted still further privileges by the General Court, on the condition "that the inhabitants of this jurisdiction be furnished with barr iron of all sorts for their use, not exceeding twentye pounds per tun," and that the grants of land already made should be used "for the building and seting up of six forges or furnaces, and not bloomaries onely." The grant was confirmed to the company of the free use of all materials "for making or moulding any manner of gunnes, potts and other cast-iron ware."

On the 6th of May, 1646, Mr. Richard Leader, the general agent of the company, who is described as a man of superior ability, purchased "some of the country's gunnes to melt over at the foundery." On August 4, 1648, Governor Winthrop wrote from Bos-

ton to his son, who had removed to Pequod, Conn., that "the iron work goeth on with more hope. It yields now about seven tons per week." On September 30th he writes again: "The furnace runs eight tons per week, and their bar iron is as good as Spanish."

Among the many workmen who came over from England were Richard Leader, already mentioned, Henry and James Leonard, Henry Styche, Archibald Anderson and Joseph Jenks, who had come from Hammersmith in England. He was a machinist and a man of much skill and inventive genius. He prepared the moulds for the first castings. A small iron pot, holding about one quart, was the first article cast, according to Lewis' History, and is still in the possession of a lineal descendant of Thomas Hudson, who was the original owner of the lands on which the iron works were built, and who obtained possession of the pot immediately after it was cast.

Joseph Jenks, who became the founder of an eminent New England family, purchased from Richard Leader on the 20th of January, 1647, the privilege of building a forge at the iron works for the manufacture of scythes and other edge tools.

This enterprise was successful.

In 1652 he made at the iron works, for the mint which was that year established at Boston, the dies for the first silver pieces coined in New England. On one side of these coins was the impression of a pine tree. In 1654 he made for the city of Boston the first fire engine made in America. In 1655 the General Court granted him a patent for an improved scythe. This scythe we understand to be substantially the one in present use, a great improvement over the short wide-bladed scythe of English make. He died in 1683.

Henry and James Leonard were also skilled workmen at the iron works. They and their descendants were afterwards connected with other colonial iron enterprises.

They had a brother Philip, who does not appear to have lived at Saugus.

Rev. Dr. Fobes, in referring to the Leonard family in his book written in 1703, says that "the circumstance of a family attachment to the iron manufacture is so well known as to render it a common observation in this part of the country (town of Raynham), "where you can find iron works there you will find a Leonard!"

Henry and James Leonard are said to have learned their trade at Pontypool, in Monmouthshire. One or both of them superintended the erection of iron-works at Braintree, in 1648, and also at Taunton, in 1652, and at Rowley, in 1668.

Indeed, we read of many other iron enterprises by these Leonards in many parts of our State. For a hundred years after its settlement Massachusetts was the chief seat of the iron manufacture on this continent. Most of its iron enterprises, during this hun-

dred years, were bloomeries; but there were blast-furnaces also, although the latter, as a rule, produced only hollow ware and other castings, and not pig-iron. During the period mentioned the iron industry of Massachusetts was confined to the eastern counties of the colony, where bog or pond ores formed almost the only kinds of ores obtainable.

But let us return to our own iron-works in Saugus. The General Court granted many privileges to this iron enterprise.

In 1644 all engaged therein were exempted from taxes for ten years. The workmen also were not liable to military service. They gave any of the inhabitants liberty to share in the work, by "bringing in within one year no less than £100 a person, with allowance to the adventurers, &c., for £1000 already disbursed," if they would complete the finery and forge, as well as the furnace, which "is already set up." Liberty was given "to make use of all yron ston, or yron ore," to cut wood and to make ponds and highways.

In 1646 arrangements were made with Thomas Dexter for opening a new water-course and enlarging the pond. Land was purchased of Dexter and a new dam was erected higher up the river, and probably very near the present dam. The old canal, which conveyed the water to the mills, can be distinctly seen in places, even at the present time.

This new dam raised the flowings of the water and caused damage to land of Adam Hawkes, in the northerly part of the town.

In 1652 John Gifford was the new agent at the iron-works. He seems to have increased the height of the dam again, and also to have flowed more of Mr. Hawkes' land.

In 1653 Thomas Savage and Henry Webb, of Boston, obtained judgment against the Iron Company for £2245.

In 1660 Oliver Purchis succeeded Gifford as agent of Iron-Works.

From this time onward an increased amount of trouble and annoyance attended the Iron Company. They had made great inroads into the forests in consequence of the large quantities of charcoal needed,—so much so, that fears were everywhere prevalent that the wood would be exhausted and the country impoverished.

Debts and law-suits increased.

In 1671, during the night the dam was cut away and the great pond emptied of its water. This caused much damage.

In 1678 Samuel Appleton, Jr., took possession of the Iron Works, by a grant in the will of William Payne, of Boston. It was estimated there were three thousand acres of iron mill land. Mr. Appleton then owned three-fourths of the Iron Works, valued at £1500, but, in 1683, the heirs of Major Thomas Savage sold the remaining fourth to Mr. Appleton, who thus owned the whole property.

In 1688 Mr. Appleton sold the entire works to James Taylor, of Boston, and it was about this time that they probably ceased operations entirely. Vexatious law-suits had much to do with hastening its cessation, but it would rather seem probable that the supply of iron-ore had nearly become exhausted.

From the foregoing details it is plainly established that the enterprise at Saugus embraced a blast-furnace or "foundry," and a refining forge. The term "foundry" was long a synonyme for "furnace," castings being made directly from the furnace.

This practice continued in this country down to almost the middle of the present century, and is still followed in many European countries. That the furnace was in operation in May, 1645, is certain, and that the forge was in operation in September, 1648, is equally certain.

These dates may be accepted as definitely determining the first successful attempts in this country to make "sowe iron" and other castings in a blast-furnace, and to make "barr iron" in a refining forge from "sowe iron."

MILL-SITE IN EAST SAUGUS.—In October, 1721, certain citizens of Lynn, viz., Benjamin Potter, Jacob Newhall and William Curtis, were granted a right to build a tide-mill at East Saugus Bridge, but these men failing to build, the right was given, in 1722, to Thomas Cheever and Ebenezer Merriam, and they at once built a mill with two run of stones for grinding corn. This mill was a small one-story building built upon the west side of the river, and likely upon the very spot now occupied by the south end of the present mill.

Merriam sold to Cheever in 1729, and August 10, 1738 Cheever sold the property to Joseph Gould for six hundred and twenty pounds.

Gould was a Quaker, but not a native of Lynn. He was a prudent, energetic business man. Within a few years after the purchase he built for himself, adjoining the mill, a two-story dwelling-house, one room of which he occupied for a small grocery-store. This dwelling-house was taken down in 1844. Joseph Gould owned and occupied the mill till his death, in 1774. His widow continued in possession up to about 1785, when, through neglect to make necessary repairs, it became unserviceable. The flood-gates no longer kept the water in the mill-pond, but it was allowed to ebb and flow with the tide.

This state of things continued for seven years, until 1792, when the Widow Gould died.

It was then, in 1792, that George Makepeace, Esq., of Boston, bought the mill of the heirs for nine hundred dollars. This was an important time for this mill privilege. Mr. Makepeace had been a leading importing merchant at Boston. He at once tore down the old one-story mill, and in its place built a good two-story building. This was built in 1794, and comprises about two-thirds of the present building.

being the central part. In this mill he put two runs of stones for grinding corn and in the northerly end two mortars for grinding snuff. These snuff-mortars were rimmed out of large buttonwood-logs in their rude state with the bark on.

This was the beginning of the snuff business which has made Saugus renowned.

It was through the advice of Samuel Fales that Mr. Makepeace undertook the snuff business, which, in 1798, he transferred to his nephew, Jonathan Makepeace, who continued it for about fifty years, up to 1844, making his snuff, known as "Makepeace's snuff," which obtained a reputation in all parts of the country. He gave his constant personal attention to the making of this snuff from the very best of leaf-tobacco, cured in the most careful way; it was then ground and scented and put up in small wooden kegs, with his own autograph on each. He was a very methodical man, upright in all his dealings, and generous to all worthy objects, for many years a consistent member of the Methodist Church, and respected by the entire community. He was more familiarly known as Major Makepeace.

CHOCOLATE BUSINESS.—About 1796 the chocolate business had its beginning in this mill. Mr. Makepeace at this time put on an addition to the northerly end of the mill for a chocolate-factory. Another water-wheel was also put in.

The machinery for roasting, cracking and fanning the cocoa was run by chains from horizontal shafts. The noise and din of such machinery was indescribable. Benjamin Sweetser, Amos Rhodes and Deacon John Wait were the first chocolate manufacturers, and the business was continued for many years by Mr. Amariah Childs.

The following extract is from the pen of my father, Benjamin F. Newhall, Esq., as printed in the *Lynn Reporter* in his sketches of Saugus:

He says in regard to the chocolate business here,—

"In 1812 the last war with England commenced, which gave a new impetus to the chocolate business.

"The mill was overwhelmed with work, so that it was carried on in summer, and the cooling was done in cellars. Mr. Childs, with others, entered quite largely into the manufacture, which yielded, in the beginning of the war, a large profit.

"Very soon, with the large demand, cocoa began to advance in price, and continued to do so till it rose from eight cents per pound to thirty-three cents, a rise of over three hundred per cent.

"After this extreme, it soon receded, and finally settled into a healthy trade.

"One of the most amusing things connected with this old chocolate manufacture was the pretended art and skill indispensable to a successful issue. This art and skill was believed to be a secret possessed by only here and there an individual.

"Even the persons who carried on the manufacture did not pretend to any knowledge of the art.

"It seemed to be a general concession by the public that the science of the manufacture was unknown, except to a very few, who had obtained it, by great labor and expense, from Spain or South America.

"This acknowledgement gave the pretenders a superiority, and placed them in a position not only to be honored, but to be well paid.

"The man who had brass enough to carry the pretence through successfully, managed everything about to his own mind.

"In my early boyhood I used to work in this chocolate-mill, as consid-

erable of the work could be done by boys better than by men. The grand magician of that early day was Josiah Rhodes, nicknamed 'Slim Caesar.'

"He exercised the most unlimited control over the whole establishment. So arbitrary was he in the exercise of his pretended skill that scarcely anyone dared to look at the chocolate in process of manufacture. The *roaster* and *stirring-kettle* were objects forbidden by him to be examined by the ignorant world. I well remember with what veneration I used to look upon this aged, cadaverous veteran. The smoke of the roaster could be seen curling up over the fire, but none had the courage, in his presence, to smell of the forbidden odor.

"Occasionally a small, mysterious white powder, from a piece of clean white paper, would be cast into the roaster, or the kettle, in a mysterious and magical manner, completely blinding the eyes of the uninitiated. Such was the dignity and haughtiness attendant upon the exercise of his skill that he rarely ever smiled or spoke when engaged.

"Even his employers hardly ever dared to ask a question. Men who labored years under him never dared to raise a pretence of knowing anything. Such were the pretended mysteries of the trade in olden times."

About 1800 George Makepeace built himself a dwelling-house on the north side of the river, near the mill. He also built a small building for a nail factory, with machinery to cut nails by hand. This business was carried on for five or six years very vigorously.

A machine was also put in for picking oakum, but this proved a failure.

Another unprofitable expenditure of Mr. Makepeace was the erection of a saw-mill on the north side of the river. To do this he had to dig a channel across the highway. Long after the saw-mill had ceased to be used this channel was filled up by the town of Lynn in 1820.

About 1806 Mr. Makepeace leased the mill premises to Amariah Childs, and in 1812 he sold the mill property to said Childs.

In 1813 Mr. Makepeace removed to Charlestown, where he died in 1820, about eighty years of age.

Mr. Childs continued the business at the mill from 1806 to 1840, and very early in this period he added the business of grinding spices.

This spice-grinding was done for Boston merchants, the spice being teamed out from Boston, and after being ground and put into barrels, was teamed back again.

It was not then put into small packages with showy labels as we now see it on the grocers' shelves.

In 1844 Mr. Childs sold the whole mill property to Charles Sweetser, Esq., for eight thousand dollars.

During all these years, with uninterrupted fidelity, Mr. Jonathan Makepeace had continued the snuff business in the mill; but now he gave up the business to Mr. Sweetser, who took out the old snuff machinery and put in nine new snuff mortars and also new water-wheels. He also removed the chocolate machinery and instead put in machinery for roasting and grinding coffee.

Indeed, the whole mill was put into excellent order. Mr. Sweetser, who lived in Cliftondale, where was his business office, carried on the grinding of snuff in the mill, while he leased the rest of the mill to different parties. First to Childs & Raddin, then to Josiah

Starr for a short time, and finally, January 1, 1858, to Herbert B. Newhall, who has continued the spice and coffee business up to the present time.

Mr. Sweetser died in 1865, but some years before this he relinquished the snuff business to his two sons, Charles A. and George H. Sweetser, who did a very large business.

The mill now, in 1887, is owned by Charles A. Sweetser. About four years ago the snuff machinery was removed and the whole mill has since been occupied by Mr. H. B. Newhall, he adding to his business the grinding and preparation of herbs.

Almost while I am writing, a fire has occurred in the above mill, which has caused its nearly total destruction. Very early Friday morning, July 8, 1887, a fire was discovered in the southerly end of the mill and such was its rapid spread that the whole mill was instantly enveloped in flames.

The fire department from Lynn responded at once, and were successful in preventing the farther spread of the fire.

But the mill was left a wreck; only its charred outer walls are standing. It was insured for six thousand dollars.

Nothing was saved of the stock of H. B. Newhall.

So closes the eventful history of this noted old mill.

PRANKER'S MILLS.—The present dam is about five rods above the locality of the old iron-works dam.

About 1770 Ebenezer Hawkes made a rude dam upon the site of the present one, and excavated, in part, the present canal. He built a grist-mill and saw-mill.

In 1794 Benjamin Sweetser bought the mills and property. He was a chocolate manufacturer, and had carried the business on to some extent with horse power, in a building near his residence, which stood in what is now known as Cliftondale, on the Old Boston Road, where now stands the public house known as "Sunny Side House." This factory building was removed, in 1797, into the Village of East Saugus, and was afterwards owned and occupied for many years by Jonathan Makepeace. It has subsequently been removed again into Lynn, and now stands on Hawkes Hill, located one-quarter of a mile east of the river. But to return again to the mill site. About two years after buying, Major Sweetser built a new building for a chocolate-mill about seventy feet northwest of the grist-mill. From this period, 1796, he enlarged and extended his business, and very soon became one of the most renowned chocolate makers in the country. The name of Benjamin Sweetser stamped on every cake of the glossy chocolate gave it a reputation that none other had. About 1800 Major Sweetser erected a dwelling-house north of the factory, which is now standing; here he lived until his death, in 1819. From 1816 to 1820 the chocolate

manufacture was in a very prosperous condition, and the mill was rented to William Smith, who manufactured chocolate for Messrs. Chase & Page, of Salem. During this time the chocolate was made in exact imitation of the Spanish, and found a ready sale in the New Orleans market and for export.

From 1815 to 1822 the grist and saw-mills were leased to Robert Eames, who ground dye-woods, principally cam-wood. A very large business was done. About 1822, William Gray, of Boston, otherwise familiarly known as "Billy Gray," removed his manufacture of duck-cloth from Stoneham to Saugus. He took the Stoneham factory building to pieces and removed it to this locality, placing it between the chocolate-mill and the grist-mill, and forming but one building about one hundred and fifty feet in length. The duck was made of flax and hemp. But this business lasted only about one and a half years.

In 1824 the premises were leased to Brown & Baldwin for the purpose of bleaching and printing calico. John Haskins, of Boston, was soon associated with them under the firm-name of Brown, Baldwin & Haskins. A large amount of money was expended in new building and further improvements, followed by business embarrassment and final suspension at the end of 1825.

In 1826 the property passed to True & Brodhead, who continued the business. They repaired and raised the dam, which led to tedious lawsuits for flowage damages. During the ownership of Messrs. True & Brodhead, in 1829, the flannel manufacture was begun by Messrs. Brierly & Whitehead, who leased a portion of the old mill. This was the beginning of a business which has since given to Saugus a reputation as well as permanent prosperity.

In 1830 Mr. Brodhead withdrew, and Mr. Street entered the firm as True & Street; they continued until 1832, when their failure suspended business. It was during this time that they built a large brick factory, eighty-five by forty feet, and three stories high, which is now standing, but in consequence of a fire, in 1866, the upper story and roof were removed; it is now two stories high, with flat roof. In 1834 Whitwell, Bond & Co. were the owners; they introduced the business of cleaning and assorting wool. In 1835 another change in ownership took place, and Messrs. Livermore & Kendall, of Boston, became possessors and managers—professedly by the New England Wool Company,—the establishment was known as Rockville. In 1836 they removed to Framingham, and all business at the mills ceased for about two years.

In 1838 Edward Pranker, Esq., bought the property and removed from Salem, N. H. The mill underwent a thorough renovation and new machinery was put in. Although a period of great financial depression, yet Mr. Pranker showed energy and zeal in his business, which prospered from the first.

In 1846, finding the old brick building too small for his increasing business, he built another brick

factory adjoining the old one on the west, seventy by fifty feet, three stories high. Both factories were complete, with six sets of cards, thirteen jacks and forty looms. Each jack carried one hundred and eighty spindles.

In 1857 Mr. Pranker associated with himself in the business his son, George Pranker and John Armitage, the new firm being Edward Pranker & Co. Frame buildings were built on the south side of the road for wool-pulling and tanning sheepskin pelts.

In 1860 Mr. Pranker built a new brick building, one hundred and twenty-five by sixty feet, and two stories high, putting in four sets of woolen machinery. This building was placed on the east side of the road, nearly opposite the old brick mill, and extending northerly almost to the river.

Mr. Edward Pranker died in 1865. He was born in Wilton, England, in 1792; by occupation he was a weaver of woolen goods; he came to America in 1820.

After Mr. Pranker's death his son George and Mr. John Parsons continued the business up to 1877, but the death of Mr. George Pranker brought a suspension of the business for about two years.

In April, 1879, six grandchildren of Edward Pranker associated themselves together under the name of the "Pranker Manufacturing Company," and have continued the woolen-cloth business up to the present time.

They have increased the business each year, and have constantly been adding new and improved machinery. They now employ about one hundred operatives. They manufactured the past year goods valued at three hundred thousand dollars, requiring about four hundred and fifty thousand pounds of clean wool.

The principal goods are all-wool shirtings and ladies' dress-goods and sackings of all colors and shades. Also plain and twilled flannels.

The fire, in February 1866, damaged the two brick mills adjoining each other on the westerly side of the road, and caused a change in their restoration; the older mill being lowered to two stories, while the newer mill, built in 1846, was raised to a four-story building; flat roofs were placed on both. These two buildings, together with the brick building on the east side of the road, containing six sets of machinery, now make up the principal buildings in use by this company,—in all ten sets of machinery. On the east side of [the road, opposite the oldest mill, they have a large brick steam boiler building, furnishing steam for power and heat for all the mills, of about two hundred horse-power. In 1884 they built a round brick chimney, one hundred feet high and ten feet diameter at the base, adjoining the boiler building.

SCOTT'S MILLS.—About 1810 Joseph Emes, Esq.,

then a young man of twenty-three years of age, bought this property, and in 1811 finished the dam and erected a two-and-a-half-story brick building for a morocco manufactory and other business. In 1813 Mr. Emes put in a grist-mill with one run of stones. At this time Robert Emes, Esq., his brother, united with him in business. They did a prosperous business.

In 1812 a fulling-mill for softening skins and hides was added to the establishment.

In 1817 the grist-mill was changed into one for the grinding of dye-stuffs, principally camwood. This business continued for about four years.

After 1821 Joseph Emes continued the business himself, manufacturing kid and morocco, with the grist and fulling-mills running as business could be obtained.

In 1834 James Brierly leased a part of the brick factory for the manufacture of hair and woolen rags.

In 1844 Mr. Emes erected a saw-mill upon the eastern bank of the river, which was operated for about two years.

In the spring of 1847 the brick factory was burned, with all the stock and machinery therein. This led to the selling of the property by Mr. Emes to Francis Scott, Esq., a merchant of Salem, in 1848. He at once repaired the dam, and erected on the northwest side of the river a large brick factory building, eighty-five by fifty feet and four stories high, put in all necessary machinery, and commenced the manufacture of flannel. In 1857 his son, A. A. Scott, was taken into the business as a partner, under the firm-name of Francis Scott & Son. In 1862 Mr. Francis Scott was thrown from a cart, severely injured and died soon after his injury, since which time the business has been carried on by his son, under the same style of firm.

Mr. A. A. Scott now employs about fifty workmen and workwomen. He manufactures all-wool flannels and dress goods. He makes eight hundred thousand yards annually, both fine and coarse grades. Improved machinery has been put in; also a steam-engine of eighty horse-power, with which the factory can be run whenever the water power is insufficient.

NORTH SAUGUS.—In 1814 the manufacture of linen duck was started in North Saugus. A dam was built across the river at a short distance west of the Newburyport Turnpike, and about a hundred rods above the bridge through which the river flows under the Turnpike.

A company was formed under the name of the Lynn Linen-Spinning Factory Company. The active men in the enterprise were Joseph R. Newhall and Amos Binney, of Boston. A large three-story frame building, situated on the east side of the river, was built, but the peace of 1815, together with sundry lawnsuits for flowage damage, soon caused a suspension of business.

In 1816 Joel Fox undertook to revive the droop-

ing energies of the concern by introducing machinery for making fine linen cloth, and also shoe-thread. After a trial of three years he sold out and removed. The building was divided and set off to different persons to satisfy their judgments for damages. Thus in five years arose, flourished and died the "Linen-Factory," so-called.

Let us leave this spot and go perhaps a half a mile to the north, into the present village of North Saugus. Directly opposite to the school-house, on the easterly side of the highway, where now are found the artificial works of the city of Lynn for diverting the water of Hawkes Brook for their own use; it was here, on the south slope of a bluff of land that in 1816 Nathaniel Perry built a large frame building and put in machinery for spinning and weaving linen, at the same time building a dam across the brook close by. In the same year (1816) John Clark and James Howlett purchased land about ten rods northwest of Perry's mill, on Hawkes Brook, and built a dam and a frame building, and began the manufacture of Rappee snuff.

The effort of Mr. Perry to establish a linen-factory, after about a year's labor, proved a failure. Mr. Perry sold out to John Clark and James Howlett, who at once introduced the snuff business into this building. A canal was dug across the bluff of land, about fifteen rods long, so that the water of both streams could be connected into one pond when necessary.

The snuff business continued some two years, when this ceased also.

In 1828 John Clark, Esq., put into the large building the necessary machinery for a grist and chocolate-mill. This business continued for about three years, when the whole was discontinued and the dams removed. Hardly a vestige now remains to mark either site.

There is left but one other point in North Saugus for us to notice where business was early started.

About a half a mile westerly from the school-house, on the Wakefield road, is situated an old mill-site, on Saugus River. It is now owned by Byron S. Hone, who has a saw-mill in operation.

In 1811 Dr. John Hart, David Pratt, E. Weston and others were incorporated under the name of the "Lynn Wire and Screw Manufacturing Company" at this point; land was purchased, the dam was built and a suitable building erected in 1812. Although the business was commenced with vigor, yet misfortune soon attended this company, and failure and suspension followed. From 1816 to 1819 very little use was made of the property, and in the latter year it passed into the possession of John Clark, Esq., of Boston, who at once changed its use into a snuff-mill. This purchase influenced, in part, the removal from the two other snuff-mills, before alluded to. Eight large mortars were at once introduced into this new mill, and arrangements made for a large business.

James Howlett had charge and superintendence, but

afterwards bought the mill, and at his death his son, John Howlett, bought out the other heirs, and continued the snuff-business, and the cutting of tobacco into what was called "fine-cut." A few years before selling the mill to Mr. Hone, Mr. Howlett removed the snuff-mortars and tobacco-cutter and put in instead a saw and shingle-mill, which have continued in operation to the present time.

In 1871 Mr. John Howlett sold the mill property to Philip P. Hone. At his death it passed to his only son, Byron S. Hone, who is the present owner.

CLIFTONDALE TOBACCO BUSINESS.—That portion of the town now called Cliftondale was formerly for many years known as Sweetser's Corner. The growth and prosperity of this village is to be traced to its manufacture of tobacco in its various forms, viz., snuff, chewing and smoking tobacco, and cigars, which had its beginning at the very close of the last century.

The pioneer in this business was William Sweetser, known as William Sweetser, Jr. He manufactured snuff in a hand-mill previous to this century and sold his product principally in Salem and Marblehead.

Following close upon Mr. Sweetser was Samuel Copp. He was a native of Boston, and his mother was a sister of the wife of Landlord Newhall. Having the misfortune to lose his father at an early age, he was apprenticed to a tobacconist. During this time his mother removed to Saugus and resided in the family of Landlord Newhall, where she died before he reached his majority.

On completing his apprenticeship he at once repaired to Saugus and commenced a very small business, first in East Saugus, then in Lynn on Boston Street near Federal Street, but after a very few years he removed to Cliftondale built him a house and shop and married for his second wife another daughter of William Sweetser who lived close by. This was about 1807. Mr. Copp's house, with the shop a few feet west, stood on the spot now occupied by the palatial residence of Mr. Charles H. Bond.

His factory was a two-story frame building and the business then consisted mainly in the manufacture of "Fig and Pig-tail," as they were then called. The upper story was wholly devoted to hand labor and spinning "pig-tail;" in the lower story were stout wooden screws in strong oaken frames, where the manufactured tobacco was pressed into boxes or kegs.

Previous to the establishment of Samuel Copp only one house existed at the "Corner;" this was the house of William Sweetser, and it is now standing, having been owned and occupied for many years past by the late Charles M. Bond.

Mr. Copp continued the business till 1820, when he sold out to Charles Sweetser, son of William Sweetser, who added the manufacture of cigars known as "short sixes" and "long nines," and also began the manufacture of snuff, first grinding the snuff at Salem

until 1841, when, purchasing the mill-site at East Saugus, he removed his snuff-grinding thereto. It will be seen that Mr. Charles Sweetser greatly enlarged the business, and a market was found all over the United States and British provinces and to some extent in foreign countries.

In 1860 Mr. Charles Sweetser gave up the business to his two sons, Charles A. and George H. Sweetser, who carried it on under the firm-name of Sweetser Brothers.

During these years many others took up the same business, viz., Charles Raddin, who was an extensive manufacturer, also S. S. Dunn, Charles M. Bond, Silas S. Trull, Thomas F. Downing, Hiram A. Raddin and John M. Raddin.

At the beginning of the Rebellion, in 1861, the cigar manufacture practically ceased, on account of the Southern market being lost and the heavy internal revenue tax placed on these low-priced goods. Pipe-smoking was resorted to.

The manufacture of snuff continued throughout and since the war with little variation until the past five years, when it began to decrease.

Now, in 1887, Joseph A. Raddin, under the firm-name of F. L. & J. A. Raddin, conducts the business of his father Charles, having also bought out the Sweetser Brothers' business in November, 1885. Mr. Raddin's business is largely in cut smoking tobacco, some brands of which have become very popular.

The other manufacturers of to-day are S. S. Trull, Edward O. Copp, grandson of Samuel Copp, M. S. Fiske and Copp & Gibbons, all of whom, excepting Copp & Gibbons, confine their business to cigars.

CROCKERY-WARE.—The road which now leads from Cliftondale to Saugus Centre, called Central Street, soon after leaving the village of Cliftondale, descends a hill and crosses a swamp or peat meadow. This was known as "Jackson's Meadow." It contains an inexhaustible quantity of peat, which many years ago was utilized by the inhabitants to a small extent.

Underlying this peat deposit is a deposit of very fine blue clay.

In 1808, or thereabouts, William Jackson, an Englishman by birth and education, came to Saugus (then Lynn), and bought a small farm at what is now Cliftondale, together with a part of the meadow before mentioned.

He became aware of this deposit of fine clay and its adaptability for crockery-ware.

The embargo and War of 1810 and 1812 coming on rendered the importation of crockery very difficult. Mr. Jackson at once built a large building and two smaller ones. He procured the best machinery and most skillful workmen possible at that time, but he soon found out that the clay was not adapted for the finest kind of ware, and so his manufacture was confined to a superior kind of brown and red earthen-ware.

This factory was continued for about four years, when, becoming unprofitable, it was totally abandoned.

SHOE BUSINESS.—We will now rapidly sketch the rise and progress of the shoe business in Saugus. Let us go back to 1802, when our territory was included in the town of Lynn. It was in this year that Ebenezer Oakman, Esq., a young man of active business talents, began the manufacture of shoes on the northern side of our river, about ten rods from the bridge, in East Saugus. He built a small factory, which he enlarged in 1807, and also built a new factory in the same year, and again in 1810 he built a much larger factory, connecting it with a large barn fifty feet northerly by a lower building. At that time this was undoubtedly the largest shoe factory in Lynn. Mr. Oakman's market was found largely in Philadelphia, whither his shoes were shipped by sailing-vessels from Boston. His example and zeal were contagious in the community.

During the War of 1812, it being too dangerous to send his shoes to Philadelphia by packet, he established a line of large baggage-wagons, drawn by six horses, with two skillful drivers, making the transit to Philadelphia and back in about six weeks' time. This was continued during the war, although at great expense. Among his teamsters were Captain Jacob Newhall, Jesse Rice and Captain Jacob Baird.

During this time Mr. Oakman was indefatigable in his business, both at Lynn and Philadelphia, spending a part of his time at each place. He commenced, to some extent, also the manufacture of gentlemen's calf boots. After the peace of 1815 the business was not prosecuted with so much vigor, although Mr. Oakman continued it till about 1818. After that period he closed his business here and removed to Philadelphia for a permanent residence.

This was a great detriment to Saugus, for soon the factory buildings were cut up and removed to different parts of the town and made into dwellings. In those days shoes were manufactured very differently from what they are at this time. The leather and kid were brought to the factory and cut up in the rudest manner. The uppers, binding, soles, thread, and everything necessary was counted out to the workman, who took them away in a bag or basket to his house or a small shop near the same, and while the women folks bound the uppers, he put on the soles and finished them entirely ready for market, after which he carried them to the boss, and returned home with a new week's work.

After Mr. Oakman's removal, the shoe business was carried on in a very small way for a number of years, until about 1825. It was at this period that a number of resolute and active young men, natives of our town, took up the business and carried it on with uniform success. These were Thomas Raddin, Jr., George W. Raddin, Sewall Raddin, Jacob Newhall, Jr., Abel

Newhall and Benjamin F. Newhall. It was from this time until 1838 that these manufacturers did a large and prosperous business.

John W. Newhall began business in 1841; James C. Lockwood, Levi D. Waldron and Pickmore Jackson in 1842; Charles W. Newhall in 1847; Harmon Hall and Charles E. Raddin in 1850. Mr. Hall was associated with John W. Newhall from 1852 to 1855, but after this he continued the business himself for many years. But from this time onward the shoe business of Saugus began to decline.

This was caused by the entire revolution of the manner of manufacturing shoes. Machinery was taking the place of hand labor. The workmen were congregated together in large factories instead of being scattered about the town and country in their little shops.

There was an advantage, as well as convenience, to the manufacturers themselves to be in a narrow locality. So our manufacturers, one by one, began to leave us, removing their business into the centre of the city of Lynn, or elsewhere, so that at this time (1887) there is only one shoe manufacturer, L. Waldo Collins, doing business in East Saugus. Our people, men and women, find their employment in Lynn, going down in the morning and returning in the evening, either by horse-cars or steam railroad.

But we must not forget to speak of the shoe business in the centre of the town.

Among the early shoe manufacturers in the centre of the town we will mention Moses Mansfield, who died in 1806; he lived in the Capen house. Also his brother, Thomas Mansfield, who lived in the Adam Ames house, now owned by Mr. Scott. Also Richard Mansfield, who died in 1824; he lived on Main Street, where Mr. Follett now lives. His shop was opposite.

In 1818 Benjamin Hitchings moved into town and commenced the shoe business, and continued in business until about 1850. Latterly he took his two sons, John B. and Otis M., into partnership.

Mr. Hitchings at first lived in the Davis house, on the Cinder Banks, and manufactured there until he removed to his house, and shop connected therewith, on Main Street, near the turnpike, where he died.

Of the early shoe manufacturers Mr. Hitchings was by far the largest, often employing from forty to fifty hands.

David Newhall and W. W. Boardman manufactured from 1830 to 1850.

Otis M. Hitchings manufactured from 1846 to 1872, employing some years one hundred hands.

In 1852 Walton & Wilson commenced the shoe business, and continued until 1879, when they sold out to Charles S. Hitchings, who removed his business, commenced in 1807, into the three-story factory on Central Street, corner of Pearson, said factory having been built by Walton & Wilson in 1872, and occupied

by them up to 1879. Messrs. Walton & Wilson did a large business, often employing as many as a hundred hands, and manufacturing shoes to the amount of one hundred and fifty thousand dollars yearly.

William T. Ash commenced in 1877. His business increasing, he soon removed to O. M. Hitchings' factory, near the depot, where he continued until 1883, when he removed his whole business to Lynn. Mr. Ash at this time was doing a good business, employing some eighty hands.

Charles S. Hitchings, William F. Hitchings and Otis M. Burrill are now the only shoe manufacturers remaining in the Centre. Mr. Charles S. Hitchings, the largest of the three, employs from forty to fifty hands.

GRAIN-MILL.—In 1850 Benjamin F. Newhall purchased the lands on both sides of Fox Hill Creek, so-called, extending to the Salem turnpike, for the purpose of constructing a grain-mill, and wharf adjoining it on the northerly side. The wharf was built in 1851, and the earth for filling was taken from the southwest side of Ballard Street, making now a part of the mill-pond. Ballard Street was built from the old Boston road in East Saugus to the Salem turnpike in 1850. The grain-mill was built in 1852. From the time of its erection to the present a very large grain business has been done here. And until very recently the grain has been landed in vessels directly to the mill, being raised from the vessel by a large elevator. From fifty to one hundred thousand bushels of corn have been ground annually. Since 1864 Herbert B. Newhall, son of Benjamin F. Newhall, has owned and run this mill. During a few years last past Mr. Newhall has landed his grain by railroad at Lynn Common Depot and carted it to the mill, for the reason that it could be done more cheaply than by vessel.

BRICK-MAKING.—It is now forty-six years since Mr. Frederick Stocker began brick-making in East Saugus, with his yard between Winter Street and the river. Mr. Stocker usually manufactured from one-half million to a million bricks annually. About nineteen years ago he gave up the business to his son Frederick, who continues up to the present time. He makes about one million bricks annually, and consumes thereby about four hundred cords of wood, and gives employment to a dozen men.

As long ago as 1812 Mr. Thomas Raddin made bricks in a yard on the northerly side of the river, where Mr. T. H. Rhodes' house now stands.

Mr. Hatch also made bricks in the same place in 1859 for about two years.

From 1850 to 1860 William M. Newhall also carried on the brick business on the northerly side of the river, not far above the bridge. He manufactured about a million bricks annually, until the clay was practically exhausted. From 1858 to 1860 Mr. H. Hurd had a yard adjoining Mr. Newhall's.

CURLED HAIR.—In 1848 Enoch T. Kent commenced the business of preparing hair for plastering. He then lived on the place now occupied by William A. Trefethen, in East Saugus.

In 1853 he removed to Cliftondale, and took as a business partner S. R. Marvin, when they enlarged their business, amounting to fifty thousand dollars yearly. They dissolved partnership in 1866, and in 1873 Mr. Kent built a large factory in the Centre, on what is known as Shute's Brook near the railroad depot. This factory was three stories, with basement, and was furnished with steam-power, the brook affording water for washing and scouring purposes. Here he has continued the business up to the present time, not only furnishing hair for plastering, but for spinning and saddlers' and upholsterers' use. He employs about twenty men, and does about fifty thousand dollars business annually. He ships his hair to all parts of the country.

CHAPTER XXIX.

SAUGUS—(Continued).

Anchor Tavern—Roads and Bridges—Boston Road—Great Bridge—Salem Turnpike—Newburyport Turnpike—Railroads—Horse Railroads.

ANCHOR TAVERN.—Very early in the settlement of the town, probably as early as 1643, a tavern was established in that part of the town now called East Saugus, on the road from Boston to Salem, and about half-way between these two places. It was built on the Ballard farm, under the brow of the hill, just where the highway turned sharply to the south.

For about one hundred and seventy years it afforded shelter for man and beast, and became, during its history, a famous hostelry, known far and wide.

Joseph Armitage was its first landlord, and from him it received the name of "The Anchor Tavern."

Governors Endicott and Bradstreet early found entertainment here, as the court records, in 1669, show Mr. Armitage's petitions for payment of their expenses for "bear and cacks" (beer and cakes), "vitalls, bear and logen, beare and wyne att severall times."

Mr. Armitage died in 1680. But probably many years before this he was succeeded by Captain Thomas Marshall, who was the second landlord and continued to keep the tavern until December 23, 1689, the time of his death. Captain Marshall was a soldier under Cromwell.

We are not informed of the landlords succeeding Captain Marshall until we come to Zaccheus Norwood, who bought the tavern-stand with the Ballard farm in 1760. The house now was very famous and its patronage very large.

Mr. Norwood died in 1768, leaving a widow, who continued to keep the public-house. She afterwards

married an eccentric Englishman, named Josiah Martin, who, by his hypocrisy, gained her affections and afterwards led her a terrible life as landlord.

On May 3d, 1773, Landlord Jacob Newhall became landlord at this tavern. The time of the Revolution was now approaching, and it was not long before Landlord Newhall took down the Anchor Tavern sign, with the lion and unicorn, and substituted in its place the "Rising Sun Tavern," with a painted representation of the morning sun just appearing above the horizon. Landlord Newhall was an ardent patriot, and his means were freely spent for the country. No one was allowed to go hungry past his house. He continued its landlord until about 1800, and when he left it, carried away scarcely anything but a good name to show for his many years' labor.

It was in 1800 that the tavern and the entire farm came back into the possession of the Ballard family, and in 1802 Mr. John Ballard built a new public-house, about nine rods south of the old tavern. This was the time that the Salem turnpike was building. Mr. Ballard had prevented the turnpike from being built over his farm.

Disappointment was in store for him in regard to his new public-house, for as soon as the turnpike was opened the travel was diverted and the stand was ruined.

Joseph Palmer was the landlord of the new hotel; but he continued only until the opening of the turnpike, when he went to Lynn to take charge of the Lynn Hotel.

From 1815 to 1822 Mr. Ballard made the hotel building his own homestead.

After this it continued a checkered career as a public-house until 1871, when it was purchased by Wilbur F. Newhall, and removed a few hundred feet east, so as to make room for a new dwelling.

The old Anchor Tavern building continued to stand during these years of the new hotel, serving as a farm-house, until 1836, when it was torn down to make room for a new street—now Lincoln Avenue—leading down to the bridge.

ROADS AND BRIDGES.—The old Boston road, formerly so called, running through East Saugus and Cliftondale, was one of our earliest roads. It crossed the river at East Saugus, where the upland on either bank approached so near to the river's edge as to leave but little salt marsh. Here was a natural fording-place at low tide; and it was here that the General Court, June 6, 1639, ordered, "That those of Lynn shall have £50 from the country towards the building of a cart-bridge over the river there; when the bridge is finished, to be allowed them."

On petition of the town, October 27, 1648, the court further ordered, "That there shall from henceforth be allowed thirty shillings per annum out of the treasury of the county towards the maintenance of the said bridge, for which the inhabitants of Lynn are forever to repair it."

This action was probably caused by a sad accident which occurred at the bridge, March, 1648, to Edmund Ingalls, one of the first settlers, then an old man.

It would seem that the bridge must have been decayed and out of repair, for Mr. Ingalls, while crossing on horseback, fell through and was drowned. His heirs recovered from the State one hundred pounds. The court appropriated at once twenty pounds more for immediate repairs.

May 23, 1655, the court again ordered that a committee should rebuild the bridge, and the County Court should apportion the expense among the towns of the county. It so remained a county charge until a joint committee of Lynn and Saugus, in 1815, agreed that the two towns "shall support said bridge equally, in conjunction with the county."

This bridge, sometimes called the "Great Bridge," with Boston Street, was an important avenue of communication for the whole county, and indeed we might say the only one until the building of the Salem turnpike, in 1803. Before the bridge was built it was necessary to make a long circuit to the Centre, where was found the only safe fording-place at the head of tide water. This circuit made at least two and one-half miles extra travel up one side of the river and down the other.

There has been some difference of opinion in regard to the location of an ancient ferry. In 1639 the General Court granted to Garrett Spencer "the ferry at Lynn for 2 years." The law also regulated the tolls. It is generally thought that this ferry was from Needham's Landing in Lynn, to what is now called the Lower Landing, on Ballard Street, in East Saugus. In those days it undoubtedly was a great accommodation to travelers on foot or horseback, and especially before the building of the bridge at E. Saugus.

Another very early road was from Boston Street, leaving the same near where the Methodist Church now stands in East Saugus, and going up on the southerly side of the river, substantially where Winter Street is now located; but when reaching where now is the New Cemetery it bore to the left, where the old track is now seen and can be traveled, going on westerly near where Denver Street now is to Vine and Main Streets, and then on to the west part of the town and to Reading.

Another road branched off this, going northerly, near where Central Street now is, to the iron works, and to the fording-place across the river.

The road from Lynn, now called Walnut Street, passing Birch Brook, and on to North Saugus and Lynnfield, is also a very old road.

It was near this road, on Choose Hill, so-called, that it was proposed to build the Old Tunnel parish church, so as to accommodate the parishioners from

Lynn, Saugus and Lynnfield, this being near the geographical centre. But this project was soon abandoned, and three parishes was the result.

The road from Lincoln Avenue, in Cliftondale, to Saugus Centre, now called Central Street, was built by the town in 1837.

The road running from Lincoln Avenue, in East Saugus, to the Salem turnpike, now called Ballard St., was built in 1850. The expense of its construction was borne by the town of Saugus, Essex County, the turnpike corporation and the owners of the land. A bridge was built across Fox Hill Creek. It gave a very convenient and easy access to the public town landing.

SALEM AND BOSTON TURNPIKE.—The charter for the construction of the Salem turnpike was obtained in 1801. Very great opposition was made to this road by the towns of Danvers and Malden, and by the Malden Bridge corporation, who had, only nine years before, built their bridge over the Mystic River, a mile to the west of the proposed Chelsea Bridge.

This turnpike was doomed to divert the great current of travel from the old Boston road, in Saugus, to a passage over its lonely salt marshes.

But public utility triumphed over local interests, and the turnpike was built and opened for travel from Salem to Lynn, July 5, 1803, and on September 22, 1803, over the entire length to Chelsea.

On September 22, 1807, the turnpike and bridges were declared to be fully finished.

The traffic over the turnpike constantly increased up to 1838, when, in consequence of the opening of the Eastern Railroad, the stage travel ceased, other travel decreased, the tolls were reduced and the stock of the corporation fell to almost or quite forty dollars a share. This turnpike was made a public highway in 1868.

THE NEWBURYPORT TURNPIKE.—The charter for the construction of this turnpike was obtained in 1802. It was finished about 1805, and the cost was nearly \$480,000.

About four miles of this turnpike is in Saugus, passing through the town from north to south. At the time this road was built Salem and Newburyport were rival commercial towns. Salem was about building an air-line turnpike to Boston, and so Newburyport could do nothing less.

It was made straight, regardless alike of settlements on either side, or of hills and swamps on the direct line. And although the shrewdest men of Newburyport were its projectors, yet it proved from its completion not only to be a ruinous investment, but a stupendous folly. Grass soon overgrew its road-bed.

From 1840 to 1846 the tolls were discontinued, and the turnpike became a public highway in the several

towns through which it passed, making a heavy burden to many towns, especially Saugus.

RAILROADS.—The Eastern Railroad was chartered in 1836 and was opened to travel in 1838. Although its route passed through a portion of Saugus territory, over the salt marshes between Saugus and Chelsea Rivers, in the very southern extremity of the township, yet the town was not recognized in its location and charter.

But this railroad as located afforded small accommodations to our citizens, who were still obliged for many years to travel a distance of two and three miles to Breed's Wharf Depot, in West Lynn. A very small westerly portion of the town found the Boston and Maine Railroad at Melrose nearer.

Our present railroad accommodations with Boston and Lynn, in all thirty-one daily trains both ways, have not been obtained without long struggles and many changes extending through years.

The earliest efforts for a railroad through Saugus were made just previous to 1844.

Benjamin Goodrich and others petitioned for a charter from Salem to Boston, passing through South Danvers (now Peabody), West Lynn, East Saugus, East Malden (now Linden and Maplewood), Malden Centre and thence into Boston. This route was surveyed over the Ballard farm and south of Baker's hill.

After two or three years' fruitless trial for a charter before the Legislature this project was abandoned. The Eastern Railroad was the main opponent.

We wish to mention here the name of Joshua Webster, Esq., as the man, among many others, to whose untiring energy and zeal we finally obtained railroad accommodations. Formerly of Lynn, he at this early time bought a large farm in Maplewood, known as the "Wait Farm," and removed thither. He was determined to have a railroad through his farm. In 1846 he projected a railroad from East Saugus to Malden, connecting with the Boston and Maine Railroad. The route was through the centre of Saugus, thence down the valley of the Newburyport turnpike through Maplewood to Malden, a distance of over five miles. In 1847 a petition was presented to the Legislature for a charter. To oppose this project, the Eastern Railroad brought forward a scheme to build a branch railroad from Breed's Wharf Depot in Lynn through East Saugus to Saugus Centre. A survey was at once made and petitions presented to the General Court.

The war for these rival routes first began in Saugus, and then in all its warmth was carried to the Legislature. The Legislature gave a charter to the Malden route. Among the leading men who favored this route were Joshua Webster, Daniel P. Wise, G. G. Hubbard, G. W. Raddin, George Pearson and Edward Pranker. The company was soon organized, and Joshua Webster chosen president. This was in the spring of 1848. In 1849 the charter was amended,

so as to change the location from the turnpike valley and run through Cliftondale and Linden to Malden. Still another step remained. In 1850 a further amendment to the charter was obtained to extend the branch from East Saugus to Lynn Common; thus, by yearly advances, the Malden branch party obtained all they wished; Lynn could be reached in the interest of the Boston and Maine Railroad. This amendment was obtained in spite of the greatest opposition of the Eastern Railroad.

The difficult problem now was to get the stock taken and to build the road.

It was publicly stated that if the residents along the route would take half the stock, some one stood ready to take the remainder. Who could this be? Perhaps the Boston and Maine Railroad. It was now July, 1851. Something must be done at once or the charter would be forfeited. A meeting of the shareholders was called at the Saugus Town Hall. Mr. Edward Crane rose and said he would take the remainder of the stock. But another month brought new fears and complications. In August it became known that Mr. Crane had sold all his stock to the Eastern Railroad. Was this to be a defeat to the whole project? Not so; thanks to a few energetic men, led by Mr. Joshua Webster of Maplewood. Contracts for its construction were given out in November, 1851, and the ground was broken on Pearson's Neck, so-called, in Saugus, February 1852.

In October 1852, the following directors were chosen: G. G. Hubbard, Joshua Webster, Benjamin F. Newhall, Albert Thorndike, Isaiah Breed, B. T. Reed and Samuel Hooper. G. G. Hubbard was chosen president, and George Hood treasurer.

In February 1854, the branch was so far completed that an engine and two cars were provided for it, and by the latter part of the month four trains each way were run from Lynn Common Depot to Edgeworth, in Malden, there connecting with the Boston and Maine Railroad.

Then one small car more than accommodated all its patrons. The experiment of combining car and locomotive was tried. It caused a great deal of merriment and was nick-named the "tea-kettle;" this was soon set aside.

The railroad barely paid its running expenses. The Eastern Railroad now became its sole owner, and they at once built the two connecting links necessary to make the Branch a part of their railroad system, viz., a link from Lynn Common Depot to Breed's Wharf Depot, and the other link from Malden Centre to South Malden (now Everett). Thus was established, in 1854, our railroad facilities substantially as they exist to-day, only instead of four trains we now have sixteen trains each way daily.

Since the building of our railroad Malden has become a city; its territory is rapidly filling up with residences, so that the overflow is now reaching our town and everything bids fair for a rapid growth of Saugus.

Horse Railroads.—Our horse railroads began by the granting of two charters to two rival companies in the spring of 1859, requiring cars to be run on each by November 20, 1860, on penalty of loss of charter.

One was the Lynn and Boston Railroad, which built its track over the Salem turnpike, thus running across the extreme southerly part of the town over the salt marshes. So far as the accommodation to the people of Saugus, this road was of very little moment; still, after great difficulty, it was built so that regular trips were commenced over the turnpike June 1, 1861, and have continued up to the present time.

The other was the Cliftondale Horse Railroad. James S. Stone, Esq., of Charlestown, was the principal manager. Ground was broken in October, 1860, and the work was put forward with great rapidity, so that by November 20th the cars commenced running.

It was the intention to have this horse railroad run through to Lynn, but Lynn refused the location, so that its starting-point was at the bridge in East Saugus, and running to the Cliftondale Depot, thence through the woods to the Newburyport turnpike, and so on to Boston *via* Malden Bridge and Charlestown. Had this road been permitted to extend its track down to the city of Lynn, it might have had a longer life.

The principal motive for its construction was the development and sale of house-lots in Cliftondale, called the "Homes."

This land speculation not proving a success, and the passenger traffic being very light, it was only a question of time when it would be obliged to stop its running.

As it proved, it was only about three years when it was abandoned and the rails taken up. It is now very difficult to find any trace of its location.

But the time finally came when our town obtained excellent horse railroad accommodations, which it now enjoys, very much to its benefit as well as to the advantage of the road.

The Lynn and Boston Railroad extended its tracks from Lynn to East Saugus, Cliftondale and Saugus Centre, and are now running half-hourly trips throughout the day and evening.

The cars from Lynn to East Saugus commenced running June 24, 1882; they then stopped at Ballard Street, but the road was soon extended to Cliftondale, and the cars commenced running June 17, 1885.

The next year a branch was built up Chestnut Street and Winter Street to Saugus Centre, and the cars commenced running July 31, 1886.

We are thus provided with a horse railroad system which will without doubt long continue.

Such is the union of the industrial pursuits and business of Lynn and Saugus, that it is a necessity, and will add greatly to the development of the town.

The Lynn and Boston Railroad is now building another link from Cliftondale *via* Lincoln Avenue to Linden to connect with the horse railroad from Malden to Revere Beach. This will give us another

connection with Boston, and also with Malden, Medford, Melrose, Stoneham and Woburn.

This route is now, September 15, 1887, just opened for travel.

CHAPTER XXX.

SAUGUS—(Continued).

Schools—West Parish School—Ladies' Seminary—Public Schools—High School—Principals—Cliftondale Library—Free Public Library—William Sutton Lodge—Abousett Division, S. of T.—Sunshine Lodge of Good Templars—Saugus Mutual Insurance Co.—Farms and Farmers.

SCHOOLS.—*West Parish School.*—The West Parish very early felt their need of school privileges for their children, and the people were not slow in providing them.

At first a school was opened in some private dwelling, as accommodations could be obtained, but not always in the same dwelling, and it was frequently changed to different parts of the parish. This arrangement obtained until 1775, when a small one-story building was built in the Centre, on the south-east end of the burying-ground. This building served for school uses until July 29, 1801, when it was sold for sixty-three dollars to Richard Shute, who removed it and added it to his house for a grocery-store, till its destruction by fire, in 1820.

In the year 1800 a great school-house fever prevailed in the West Parish. No less than five school-houses were petitioned for in 1801,—two of these to be at the "Centre," one at the "North End," one at "Boardman's End" and the other in the "South part," now East Saugus.

The parish voted but one, and that to be in the "Centre," southwest of the meeting-house.

It was soon built, and stood near to William W. Boardman's house, on what is now Main Street.

This school-house was standing until very recently, in the yard of William W. Boardman, and was used by him for many years as a shoe manufactory. Within a few years it has been torn down.

In 1787 the parish voted that thirteen families at the "North End" might withdraw and make a new school district.

This was the first separation in school matters.

In 1806 a school-house (old Rock School-house) was built in the "South part," now called East Saugus.

It may be of interest to speak of a private academy which was started in our town.

Ladies' Seminary.—In January, 1821, the Rev. Joseph Emerson, of Beverly, projected the establishment of a Female Seminary in Saugus.

The parish encouraged the project, and voted the use of the parsonage, with land near by, for a school building, which was built in the spring of 1822.

For two years its popularity was very great.

Such numbers of young ladies flocked to the institution that board accommodations could scarcely be found.

While the seminary was in a successful tide of prosperity, the old parish affairs, now rapidly on the wane, considerably revived.

Rev. Joseph Emerson was a very popular divine, and supplied the pulpit for the greater part of the time.

It unfortunately happened that the autumn of the second year was a very sickly season.

The typhoid fever prevailed in many towns, and among these was Saugus.

Several young ladies of the seminary died, causing many of the pupils to be withdrawn and deterring others from coming, so that the school never recovered from the effects of this unfortunate sickness.

Mr. Emerson's poor health obliged him to leave, and in the autumn of 1824 he was succeeded by Rev. Hervey Wilbur, who also supplied the parish pulpit.

But in spite of Mr. Wilbur's efforts to revive the seminary he was obliged to give it up in the autumn of 1826.

Public Schools.—Our town has always maintained good public schools. If they have not been fully up to the high standard of our neighboring cities, we have spent for them a much larger proportion of our valuation. I notice in the last State report that of the thirty-five towns and cities in Essex County, Saugus is the eighth in the percentage of valuation expended for schools.

The whole number of children in our town between five and fifteen years of age is five hundred and twenty-four, divided as follows:

Ward 1, North Saugus	26
" 2, Centre Saugus	175
" 3, Cliftondale	167
" 4, East Saugus	128
" 5, Oaklandvale	28
Total	524

There are thirteen schools; the two at North Saugus and Oaklandvale are mixed schools, but those in the other wards are arranged into three and four grades.

In these schools there are five hundred and twenty pupils.

Our High School had its beginning in April, 1872. Since 1875 it has gathered in rooms fitted up for its use in the new Town Hall. It has a three years' course of study, including Latin and French.

Diplomas are given to graduates.

There are (now about forty-five pupils in this school.

It has had six principals since its commencement. Mrs. Frances H. Newhall served from 1872 to 1875; Mr. James B. Atwood a few months in 1875; Mr. F. W. Eveleth from October, 1875 to 1879. He was followed by Mr. Charles E. Lord for one year, then by Mr. C. H. Smart for two years, up to 1881.

The present principal, Mr. Wilbur F. Gillette, took charge in April, 1881.

CLIFTONDALE LIBRARY.—About two years ago a library association was formed in Cliftondale, and is now in a prosperous condition. It has about seven hundred volumes.

FREE PUBLIC LIBRARY.—This last spring (1887) a free public library was started by private subscriptions from all parts of the town.

The town has furnished and fitted up a room in the Town Hall for its use.

About thirteen hundred volumes have already been purchased and carefully catalogued.

It will be opened this autumn, and it is hoped that it will form a worthy nucleus of a large and permanent public library.

THE WILLIAM SUTTON LODGE OF FREE AND ACCEPTED MASONS was instituted in 1866. Its lodge-room is now in East Saugus, in Mr. Sisson's building, on Franklin Square. It now has seventy-five members.

THE ABOUSETT DIVISION, No. 10, SONS OF TEMPERANCE, was organized in 1850. It now has forty members, and holds its meetings at the Town Hall every fortnight.

THE SUNSHINE LODGE, No. 111, OF GOOD TEMPLARS was organized in 1879. It has about sixty members, and meets at the Town Hall every week.

THE SAUGUS MUTUAL FIRE INSURANCE COMPANY was incorporated February, 1852, and commenced business the following April.

Benjamin F. Newhall, Esq., was the originator of this company, and it was through his energy and regard for the public welfare that the company has had so prosperous a career. The community at that time was poorly provided with insurance, its cost being so great from the heavy assessments of companies located in other States particularly.

In forming this company Mr. Newhall determined to provide purely mutual insurance, receiving no cash premium in advance, but only notes to be assessed sufficiently to pay the losses and expenses as they occur.

He was chosen its secretary and treasurer, and Edward Pranker its president.

Its office was, and continues to be, in East Saugus.

On the resignation of Edward Pranker, in 1858, Hon. Harmon Hall was elected its second president and has continued to fill that office up to the present time.

Mr. Newhall being severely afflicted with rheumatism, was obliged to resign in the summer of 1861,

when his son, Wilbur F. Newhall, Esq., was chosen secretary and treasurer, which offices he now fills.

On April 1, 1853, the company had \$812,500 of property insured. In 1863 it had \$2,208,665. On April 1, 1887, it had \$2,889,300.

It has paid out for losses during these thirty-five years \$36,328.

By its prudent and conservative management it has not only provided insurance at a very small cost to its members, but at the same time has given them a strong and reliable company, which has earned for itself the confidence of the public.

AGRICULTURAL.—As our farming interests are considerable, I will give a list of our farms, with a few additional items.

North Saugus.—Louis P. Hawkes, 33 acres of tillage, 47 acres pasture, 21 cows and 4 horses. He also has a large silo.

Samuel Hawkes, 13 acres of tillage and 10 acres of cranberry meadow.

Heirs of Richard Hawkes, 26 acres tillage and 9 cows.

These three farms form a portion of the original farm of Adam Hawkes, settled in 1634, and have continued down in an unbroken line from their ancestors.

Byron S. Hone, 50 acres tillage, 114 acres pasture, 42 cows and 4 horses.

Henry E. Hone, 4 acres tillage, 32 acres pasture, 7 cows and two horses.

Joshua H. Coburn, 20 acres tillage, 15 cows and 2 horses.

Heirs of George W. Butterfield, 10 acres tillage, 20 cows and 4 horses.

Elijah G. Wilson, 6 acres tillage and 23 pasture.

Francis M. Avery, 15 acres tillage and 9 cows.

These farms furnish chiefly milk and hay.

Oaklandvale.—Artemas Edmonds, 9 acres tillage and 5 cows.

Samuel Simmons, 60 acres and 13 horses; this is the Lott Edmonds farm, and is now used as a veterinary farm.

Heirs of Nathan Hawkes, 4 acres tillage and 3 cows.

E. W. Bostwick, 28 acres tillage.

J. M. Hall, farm owned by J. J. Zeigler, 16 acres; this is a veterinary farm.

E. W. Saunders, 38 acres tillage, 17 acres pasture. Mr. Saunders came here in 1850, cleared his land, built him an elegant residence and has laid out his grounds into lawns, tillage, shrubbery and forest, so as to resemble an English park, presenting to us an elegance of landscape rarely found.

The long avenue, shut in on either side by tall evergreen trees, is of wonderful beauty. Mr. Saunders has expended more than fifty thousand dollars on this place.

A ride through these grounds will well repay one.

RESIDENCE OF A. A. SCOTT,
SAUGUS, MASS.

Lowell Howard, 5 acres tillage and 2 cows.
Elbridge S. Upham, 8 acres tillage, 8 cows and 2 horses.

Isaiah Longfellow, 10 acres tillage and 4 cows.

These last three farmers give attention to strawberry culture, and furnish great quantities for the market.

John Gillon, 13 acres tillage.

Arthur Watson, 10 acres tillage, 20 acres pasture and 9 cows.

J. Henry Howard, 8 acres tillage and 8 cows.

Saugus Centre.—The Town Farm, 40 acres tillage and 18 cows.

William H. Penny, 20 acres tillage, 39 acres pasture, 30 cows and 2 horses.

John M. Berritt, 10 acres tillage, 15 acres pasture and 4 cows.

Lewis J. Austin, 7 acres tillage, 14 cows and 2 horses.

Charles M. Ames, 11 acres tillage and 5 cows.

Heirs of Sammel A. Parker, 12 acres tillage.

Harrison Wilson, 10 acres tillage, 7 cows and 2 horses.

William Fairchild, 9 acres tillage and 2 cows.

Cliftondale.—Walter V. Hawkes, 10 acres tillage and 2 green-houses.

George N. Miller, 24 acres tillage, 10 cows and 5 horses. He bought this farm in 1870.

A. & J. R. Hatch, 20 acres tillage, 10 cows and 5 horses.

George W. Winslow, 19 acres tillage, 7 cows and 2 horses.

These last four farms are largely for market-gardening for Boston and Lynn.

East Saugus.—William A. Trefethen, 9 acres tillage, 16 acres pasture, 2 cows and 2 horses.

John W. Blodgett, 31 acres tillage, 15 acres pasture, 22 cows and 6 horses.

Mr. Blodgett runs his farm for market-gardening almost entirely. He has owned it since 1854.

Charles H. Libbey, 7 acres tillage, 3 cows and 2 horses.

Frederick Stocker, 30 acres tillage, 3 cows and 12 horses.

Henry W. & A. Dudley Johnson, 48 acres tillage, 34 acres pasture, 15 cows and 3 horses.

CHAPTER XXXI.

SAUGUS—(Continued).

MILITARY RECORD.

IN the late War of the Rebellion our town nobly showed its patriotism by an early and prompt response to the country's call for volunteers. One hundred

and sixty-three men enlisted, and of these, eight served in the navy.

The larger number of these were in the Seventeenth and Fortieth Massachusetts Regiments.

The following are the names of the soldiers:

Bimsley P. Guilford.	Noah G. Harriman.
Abel Wilson.	Charles A. Kidder.
Jesse Hitchings.	Charles W. Sweetser.
Willard Edmunds.	Wilham T. Asb.
David H. Cheever.	Bimsley P. Guilford, Jr.
John H. H. Wilson.	James Roots, Jr.
George H. Penney.	George McAllister.
Joseph W. Flye.	Daniel Flye.
William Chambers.	William L. Stocker.
William Noble.	Reuben R. Coates.
Edwin A. Reed.	John H. Copp.
John F. Carlton.	Samuel T. Langley.
Nathan J. Thoms.	Watson J. Thoms.
Charles A. Newhall.	John W. Seward.
Thomas McDowell.	John H. Twisden.
Edward Hitchings.	M. Porter Newhall.
William M. Stocker.	John H. Hone.
George H. McClary.	John Powers.
Warren P. Copp.	Edward Charlton.
Hiram H. Newhall.	George Childs.
Charles F. Pearson.	James Herk.
Joseph Newhall.	Charles H. Williams.
Europe R. Newhall.	John A. Whittemore.
Joseph Wiggin.	Kenely McElroy.
Henry Baker.	Augustus W. Bruce.
Thomas Twisden.	Benjamin E. Morgau.
Isaac Perkins.	John E. Stocker.
Daniel Kidder.	A. James Parker.
John W. Howlett.	Otis A. Foster.
James Charlton.	Edwin Mansfield.
Oliver F. Childs.	James A. Parker.
Thomas Gibbons.	Stephen Stackpole.
Philip F. Floyd.	Charles Walwick.
William H. Fuller.	Charles A. Hobbs.
William S. Copp.	George H. Newhall.
Marcus M. Sullivan.	Elbridge S. Upham.
George A. Mansfield.	Thomas Twisden, Jr.
Abijah S. Boardman.	James Eaton.
Elisha Bragg.	Henry Kidder.
Charles Osgood.	John Timony.
Lorenzo Mansfield.	William Cheney.
William H. Rich.	Benjamin F. Coates.
E. Herbert Downing.	William H. Amerige.
Francis H. Dizer.	George S. Williams.
Edward A. Jethers.	Frederick A. Trefethen.
Isaac R. Schofield.	Tristram Goodale.
Robert Harrison.	H. Clay Cross.
John L. Andrews.	James K. Goodwin.
Henry P. Nichois.	James Hughes.
Thomas Florence.	William J. Love.
Theodore Houghton.	Porter Newhall.
Elliott W. Oliver.	Walter E. Rhodes.
Benlen B. Prince.	Mfred B. Roots.
Jacob E. Newhall.	William Frisk.
Benj. N. Trefethen.	Frederick Lewis.
Wesley Stocker.	Marcus M. Sullivan.
David Brierley.	Moses Spottford.
William Murray.	Willard W. Burbank.
George W. Fairbanks.	William Blanchard.
William S. Copp.	Charles S. Hicks.
William E. Gabriel.	Moses E. McAlpine.
Charles H. Mansfield.	James L. Pike.
Frederick Dearborn.	George Campbell.
Benjamin Roman.	Harrison E. Stocker.
Willard Edmunds.	William C. Richards.
George V. Carlton.	William W. Brown.
William Halliday.	Luther Harriman.
Stiles F. Sherman.	Charles Maloney.
Samuel A. Guilford.	John A. Whittemore.

James H. Kent.
William E. Oliver.
Samuel S. Wormstead.
George H. Oliver.
Willard L. Fiske.

Henry A. Oliver.
George Kidder.
Frank Peterson.
Albert Eaton.
George H. Brown.

Those whose names do not appear on the above list were credited to some other town or State.

Among these soldiers, serving as they did in a great many different regiments and in almost every arm of the service, strange as it may seem, yet we cannot certainly name any who were killed in battle, although many were seriously wounded, some to die from these wounds, and some from exposure and disease in the service.

Some few were unaccounted for.

Their brave deeds and patriotic service are recorded on a more enduring tablet than any earthly scroll, and our town feels proud of the men who bore her escutcheon through the War of the Southern Rebellion.

The veterans of Saugus, in June, 1869, organized as the *General E. W. Hinks Post 95, Grand Army of the Republic*, with Charles A. Newhall as their first Commander.

The post held their meetings at first in the old Town Hall, afterwards in Flye's Hall, and later in the new Town Hall, until they moved into their own new hall in 1886.

Their new building is situated near the railroad depot, and was purchased of William T. Ash in the early part of 1886. The building was remodeled and an assembly room for the Post provided in the second story of ample dimensions, and elegantly furnished throughout.

The Post is now in a very prosperous condition, having a membership of some sixty, owning their building and having nearly a thousand dollars in their relief fund.

BIOGRAPHICAL.

BENJAMIN FRANKLIN NEWHALL.¹

Benjamin Franklin Newhall was born April 29, 1802. His father was Jacob, son of Landlord Jacob Newhall. His mother was Abigail, daughter of William and Ruth Makepeace, of Norton, Mass.

She was a woman of noble presence, of exemplary Christian character, pious without ostentation, and devoted to her family, which consisted of three sons and five daughters, for whom she labored day and night and lived to see her prayers answered in their behalf.

Benjamin Franklin was her first-born child, and so very naturally upon him fell early the burdens of the family. Passionately devoted to his mother, he gave

his whole energies to her assistance in the support of the family, the father being of little help the greater part of the time.

Brought up in a tavern in his earliest years, he was exposed to great temptation. In his autobiography he thus speaks of these days and experiences: "What saved me God only knows. But I was saved. I remember I always resisted, and often heard the exclamation, 'What ails the child that he will not drink!' Some spiritual guardian was about me to watch my infantile footsteps and keep me in the path of rectitude." After writing of the many beauties of his birth-place, he speaks of his mother thus: "And better still, the glowing vision of that angel form, who every day supplied my infant wants, and whose voice was sweeter to me than the sweetest music."

He writes again, "How well do I remember, in the late hours of the night, when her husband was away and her dear ones were sleeping, that she would come to my bedside and, kneeling with overflowing heart, pour out her soul in prayer that God would preserve her darling boy from the snares so thick around him. She thought I was asleep, but I was awake and still, and the silent tear moistened my young cheek, and I vowed before God that a mother's prayers should not be in vain. How often she kneeled at my bedside when I was asleep I know not, no doubt often." Again he writes, "My mother, in her extreme anxiety for my welfare, never tired in giving me good advice. She felt that there was great danger of my giving way to the use of the dreadful cup, and so there was."

Again he writes, "When about four years of age my mother had bought me some picture books, and she commenced learning me to read. About the same time the school-house, afterwards called the "Rock," was in process of building. My mother took me into it one pleasant summer's eve, and, pointing out to me the smallest and lowest seat, saying at the same time, 'there, my son, is your seat.' This in a few days I found to be literally true, for on my first entrance into the school I was appointed to the little seat."

It was here that he attended school during its uncertain sessions, until about fourteen years of age.

It was at this early age, in the autumn before he was fourteen, that he commenced work for Mr. Childs in the chocolate mill, often working day and night.

He writes again in his autobiography, "I could scarcely endure it. I sometimes declared, 'this shall be my last night;' but when the beautiful sun shone in the morning I felt better and was encouraged to go on. I hated shoemaking and was yet determined to earn something for my mother. If I could earn eighty-three cents a day for work night and day it was to me a great sum. But with all the hard work and suffering I got through my first winter in the mill. How I bore the fatigue God only knows. Some unseen hand supported me, and when I was just on the

¹ Written by his son, Wilbur F. Newhall, Esq.

Wm. J. Newhall

point of giving up several times some impulse of mine forbade it. God helped me."

Such were his early labors that it might almost be said he had no boyhood, so early was the yoke fitted to his youthful shoulders. But he bore it with courage. He writes, "When I had nothing to do I could read, and used always to keep a book in the mill always ready." He soon also engaged in teaming for Mr. Childs. He writes of himself when eighteen years old, "I had so much per day for driving the team and twenty-five cents to buy me a dinner. I always managed to carry my dinner, and thus save and lay up twenty-five cents. This I continued for two years or more. I generally took my book with me and studied while I was driving; so I turned my labor into amusement." Of this same period he writes, "This season I found religious impressions growing more and more in my mind. I felt more and more the need of Divine strength to enable me to resist successfully the evil temptations of the world. I read the Bible, prayed often and frequently went to meeting. I began to hear with new ears, because I felt an interest in the subject preached. Night and day religious matters were in my thoughts, and I was looking forward to a period of church membership as a kind of bulwark of defense."

He identified himself at once with the Methodists and labored zealously with them. When twenty years of age he was baptized by immersion in the pond at Melrose.

He was now making his plans for more schooling, just as soon as he was twenty-one years of age, and for this object he laid some money aside until he had one hundred and seventy dollars. He reached his freedom year, and away he went to New Market Academy, in New Hampshire. We wish we had space to give his account of his start in the stage. He says of his studies: "I pored into the grammar with all my energy, but it was all darkness to me; I knew nothing about it. My boyhood's studies of grammar were but a parrot performance, as I now found by experience. What would I not have given for some one to explain to me the first principles, and know the meaning of the Parts of Speech. But I had no one and so I delved alone. I read and then thought, meditated and then studied. One night, while I was trying to penetrate its mysteries, I instantly saw it all clearly. As the sun suddenly bursts through the obscuring clouds and shines upon the earth, so a knowledge of English grammar burst suddenly on my mind. I saw it all in a glance, simple as my A, B, C. I could pass the most difficult passages instantly." He writes again: "I soon procured some French books, and commenced that language. I learned five thousand words in about a week, and in two weeks could translate the New Testament pretty well."

He remained at the Academy about six months. He then returned home and immediately procured a school in Stoneham and began teaching. As an in-

stance of his remarkable memory, he states that while teaching this school he committed to memory the whole New Testament in thirty-seven days. This was in 1824. He taught this school six months. April 25, 1825, he married Dorothy Jewett, daughter of David and Sarah Jewett, of Standstead, Lower Canada. This explains why, soon after this, he, in company with his brother-in-law, opened a store in Canada. But this business proved disastrous and left him in heavy debt. He then returned to Saugus for good, wiser from experience, if poorer in purse.

We have thus dwelt upon his early life experiences to show the difficulties, the privations, and the hardships he met and subdued. He was stronger than all of these, even making them his servants for discipline and preparations for his remaining life's work. On his return from Canada, already in debt, he borrowed money and commenced the shoe business in earnest. His untiring zeal, his strict business rules, his steadfast integrity, his keen foresight, and his rigid economy, brought him rapid success. He never swerved from these paths, so early chosen. They brought him competence, if not wealth; respect and honor from those who knew him best.

The very poor privileges of the village school in his early youth, ending at thirteen years of age, adding a six months' term at New Market Academy when twenty-one years of age, constitute his scholastic equipment; but these were a small part of his endowments. His mind was always inquiring, extremely receptive, and, what was far more important, it grasped with a tenacity never to be loosed and never to be forgotten, everything that could be of value, benefit, use, or help to him. He might be called a self-educated man, in the best sense of that term. His heart and nature were sympathetic. Having had so many difficulties in his youth, he knew how to sympathize with young men, and many there are of these, to-day, who will testify to his personal assistance in their time of need. What he espoused was with his whole heart. Interested from his youth in the temperance cause, having witnessed the direful effects of intemperance, he never relinquished his warfare against the demon, but, with sledge-hammer blows, on the platform, in the pulpit, as well as in business and social walks of life, he lifted up his voice for total abstinence, and labored in every way to save the youth from this destroying vice, and to make of the inebriate a sober and useful man.

He showed the same characteristics in politics. Always an anti-slavery man, his home and heart were ever open to the fugitive slave, who found a shelter at his fireside, and a God-speed in his journey or mission. He saw in the old Liberty and Free-Soil party the cloud no bigger than a man's hand; he entered its ranks, fought beside its standard, and lived long enough to see the hydra-headed monster slain and buried.

He very early united with the Methodist church in

East Saugus, to which his ardent, sincere nature rendered no half-hearted service.

He had no place for hypocrisy in his heart, and he could brook nothing of the kind in others. He became an exhorter, and then a local preacher, in the Methodist Church. We may well imagine that no grass was allowed to grow under his feet. As well bid the torrent cease its flow as to curb his powers of mind and heart from progress and growth. His warmth in moral reforms often led to some friction with the stereotyped ideas of the Methodist clergy, some of whom could not allow interference with their denominational tenets and labors. The church did not, at that time, stand where it does to-day in relation to these movements. If it had, he probably would never have severed his union with the people of his early choice.

He entered the Universalist Church because he found there a more congenial atmosphere, where he could exercise more freedom of thought and action. He became a very regular preacher for this denomination, and even amid his multiplied business labors he found leisure nearly every Sabbath, for many years, to supply gratuitously some pulpit either near or far away.

He also served his native town of Saugus in nearly every official capacity. As town clerk, selectman, overseer of the poor, school committee and representative to the General Court. In the Legislature he strongly opposed capital punishment. He was chosen one of the commissioners of the county of Essex for two terms, from 1844 to 1850, when the labors of that office were as abundant and onerous as to-day, and, perhaps, far more so.

He organized the Saugus Mutual Fire Insurance Company in 1852, and was its secretary and treasurer until incapacitated by disease, in 1861.

These were but a few of his labors. From his awaking in the morning until his sleeping at night, his fertile brain was always active. He gave himself little rest or recreation. Like a locomotive, steam was always on. His style was simple, chaste and clear. He wrote much for the newspapers, among which contributions were his interesting "Historical Sketches of Saugus," which have furnished me much material for my "History of Saugus" in this work. He also wrote a great deal of poetry, indeed his writings in both prose and verse would, if printed, fill volumes.

The last ten years or more of his life were full of pain and suffering. He was afflicted with chronic rheumatism, which never loosed its grip upon him; his limbs became swollen, his joints distorted and dislocated. When walking was difficult, he rode; then was wheeled about in his invalid chair; then was confined to his house, then to his room, then to his bed for two years, until his naturally iron constitution gave way. During all these years he was busy reading and writing, and his fortitude and cheerful-

ness never failed him. He died October 13, 1863, aged sixty-one years.

His widow survived him twenty-three years, dying October 7, 1886. They had seven children, two of whom died in infancy; Benjamin, their eldest, a graduate of Harvard and a lawyer, died in Milwaukee, Wis., at the aged of twenty-nine years; two sons and two daughters still survive, and are residents of East Saugus.

The following verses were written by him just before his death, September 17, 1863:

For many years my prayer hath been,
That I might end this mortal race
Without severe and torturing pain,
And, calm and easy, die in peace.

And now the Lord hath heard my prayer,
Assuaged my pains, so oft severe,
And given my frail body rest
The little time that I am here.

I'll give Him praise while life and strength
Shall let me speak my gratitude,
And with my last expiring breath
I'll calmly breathe, The Lord is good.

CHAPTER XXXII.

DANVERS.

BY ALDEN P. WHITE.

OLD SETTLERS OF SALEM VILLAGE—INCORPORATION OF DANVERS.

IN that part of the town which, a few years ago, belonged to Beverly, the most conspicuous feature of the landscape is a long, high hill, known as Folly Hill. On its summit once stood the lordly mansion of a colonial grandee. The cellar is still distinctly marked, and portions of the building are still in use as residences a mile or two removed from the original exalted situation. This building experiment, never since repeated, was known as "Browne's Folly;" hence the name of the hill. From its top the view includes very much of the original limits of Old Salem. Far beyond the islands of the harbor the ocean fills a wide space of the eastern horizon, while close in the western foreground lie the farms and villages of Danvers.

Many years ago three boys were together on Folly Hill. One of them is living still; his name must be often mentioned in any history of his native town, and his portrait is presented by the engraver at the close of this sketch. The second was one who reached such an eminence in the science of botany that his name will be found conspicuous in that chapter of this book which treats of the natural history of the county. The third, not a Danvers but a Salem boy, became known wherever English is read,

for he wrote the "Scarlet Letter;" he it was, indeed, who, writing of this hill long after, described its outline as a whale's back rising from the calm sea, and in one of those stories into which his wonderful pen wove much of the history of our Puritan forefathers, he told how John Endicott cut out the red cross from the banner of England.

Not long afterwards there was a military muster at Salem. Every able-bodied man in the town and neighborhood was there. All were well armed with steel caps upon their heads, plates of iron upon their breasts and at their backs, and gorgets of steel around their necks.

Endicott was the captain of the company. While the soldiers were expecting his orders to begin their exercise, they saw him take the banner in one hand, holding his drawn sword in the other.

"And now, fellow soldiers, you see this old banner of England. Some of you, I doubt not, may think it treason for a man to lay violent hands upon it. But whether or no it be treason to man, I have good assurance in my conscience, that it is no treason to God. Wherefore, I have resolved that we will rather be God's soldiers than soldiers of the Pope of Rome, and in that mind I now cut the Papal cross out of this banner."

And so he did. And thus in a province belonging to the crown of England, a captain was found bold enough to deface the king's banner with his sword.

Governor John Endicott was the pioneer of Danvers. As he sailed from Cape Ann by the rocky hills of the north shore and brought the "Abigail" to anchor off the few cabins of the "old planters," near Collin's Cove, doubtless his eyes followed the course of the river far inland, where, in the midst of the primeval forest, he was in a few years to hew out a home and found a town.

Endicott landed at Salem in September, 1628. Nearly four years later the company, who by their charter, claimed absolute disposal of all lands therein conveyed, made him a grant in these words:

"1632, July 3. There is a necke of land lying about 3 myles from Salem, cont. about 300 ac. of land granted to Capt. Jo: Endicott to enjoy to him and his heires forever called in the Indean tongue Wahquamashcock, in English Birchwood, bounded on the south side with a ryver call in the Indean tongue Soewampnessett, comonly called the Cowe howse ryver, bounded on the North side with a ryver called in the Indean tongue Conamalsquonocant, comonly called the Ducke ryver, bounded on the East with a ryver leading opp to the 2 former ryvers, which is called in the Indean tongue Orkbasunt, otherwise known by the name of Woolston ryver, bounded on the West with the maine land."

Very soon the Governor entered with characteristic energy upon the work of clearing his grant. He came up in his shallop bringing men well equipped with tools, of which the ax was all important. Within a year seven thousand palisades were cut, and ground was broken for Indian corn. Very early the grant took the name of the "Orchard Farm," and the extent to which the Governor carried the raising of fruit trees may be judged from the fact that some fifteen years after he began his attack on the wilderness he gave five hundred of them to Captain Trask for two hundred and fifty acres of land. For some years the only neighbors were wolves and Indians, and until his men opened roads there was no thoroughfare to town except by water. Just where the Governor is supposed to have made his original landing a high railroad bridge spans the river, and on the slope be-

tween the river and the site of the homestead there may be seen from the car windows the famous Endicott pear tree. Just exactly how it came there, whether from the seed or by transplanting, is not known, but tradition clings with the firmest grip to the assertion that the Governor's own hands in some way had to do with this very living tree, which now for two hundred and fifty years has each spring put on the verdure of fresh youth. The Orchard Farm was a sort of training school to which presently the sons of well to do settlers were glad to come to learn the Governor's methods of agriculture which they later applied to their own farms. The little army of defence within the "palisades" received a supply of equipments on the 27th of the fourth month, 1636.

"This day was brought into town and carried up to Mr. Endicott's these corslets following, viz: eighteen back peices, eighteen belly peices, eighteen peices of tassys, eighteen head peices of three sorts and but seventeen Gorgets. Itim sixteen Pikes & nineteen swords."

On the 27th of the eleventh month, 1636, John Woodbury, Captain Trask and John Balch were directed to "lay out 200 acres for Mr. Endicott next adjoining the land which was formerly granted him." This was a town grant—the simple but all important act of March 3, 1635, giving jurisdiction to towns over their own lands having then been passed—and was called "The Governor's Plain." It is that which lies at the foot of Hog Hill,—its more deserving and euphonious name, Mount Pleasant,—and includes Felton's Corner, the Collins House property and the adjacent lands.

The river which makes up from the ocean to Danversport there divides into three branches, much as one may spread the first three fingers of the hand. These rivers, beginning with the lowest, are known as Water's, Crane and Porter's. The Orchard Farm comprised the peninsula or neck between Water's and Crane; that between Crane and Porter's, upon which the principal village of Danversport is, was granted contemporaneously with the Orchard Farm, to the Rev. Samuel Skelton, a minister of Salem, in these words:

"There is another necke of land lying about 3 myles from Salem cont. about 200 ac. granted to Mr. Sam^l Skelton to enjoy to him and his heires for ever, called by the Indians Wahquack, bounded on the South upon a little ryver, called by the Indians Conamalsquonocant, upon the North abutting on another ryver called by the Indians Pome-mueucant, and on the East on the same ryver."

For a long time the land included in this grant was known as Skelton's Neck, but it will be seen that until the middle of the last century it remained utterly unsettled.

The land next adjoining the Orchard Farm and northerly of the Governor's Plain, was thus disposed of on the 11th of the eleventh month, 1635.

"Granted by the freemen of Salem the day and year above written unto Mr. Townsend Byshop of the same his heirs and assigns forever one farm conteyning three hundred acres butting upon Mr. Endicott's Farms on the East and four hundred poles in length and six score poles in breadth, that is to say six score and four at the west end and one hundred and sixteen at the East end, bounded by the water between the

farme of the Executors of Mr. Skelton, an (?) him at the North east corner of his farme, and hath there allowed from Mr. Endicott's Farme Eight acres for an highway, is bounded again at the southwest corner by the Brook, provided always that in case of sale, the Town of Salem to have the first proffer of it before any other.

John Endicott,
Thomas Gardiner.

Roger Conant,
Jeffrey Massey,
Edm. Batter."

This was the grant in the midst of which was the famous Rebecca Nourse house, which is still standing. The house was Bishop's mansion, built when he first occupied the land. He was one of the judges of the local court and was otherwise honored, but he fell from grace on the question of infant baptism, and after a few years he concluded to sell out, perhaps to seek a place where he could think as he pleased. He sold to Henry Chickering, who held it from 1641 to 1648, and then sold it to Governor Endicott who, with this purchase, owned about a thousand acres, running from the iron foundry to beyond the Collins Street station. The price was one hundred and sixty pounds. The Governor settled the Bishop farm upon his oldest son, John, when he was married, 1653, and gave him the deed in 1662. After the death of the Governor, in 1665, there was a controversy over the settlement of his estate regarding this property, but the deed held, and instead of passing to Zerubbabel, the surviving brother, when John died without issue in 1668, it was adjudged to have been John's in fee, and he, by will, left it to his widow. She mourned from February to August, then married a Boston minister, Rev. James Allen, and died in five years, leaving the farm to him. Five years later Mr. Allen sold out to Francis Nourse for four hundred pounds. This was April 29, 1678; the real estate had more than doubled since the Governor bought it. Very likely the price was governed somewhat by the terms of the sale, which gave the grantee twenty-one years in which to pay the whole purchase money. During this time a series of long and bitter disputes and law-suits arose as to the boundaries of the farm which, though resulting favorably to the Nourses and adversely to the owner of the Orchard Farm, doubtless had its influence in the disaster which befel the family when the aged mother was taken away to die on the gallows, a condemned witch. In a little grove just west of the historic house, where are other family graves, a substantial monument marks her resting-place. It was erected a few years ago as the result of a movement began in 1875, by which her descendants organized the "Nourse Monument Association." The inscription contains these lines written by Whittier:

"O Christian Martyr,
Who for Truth could die,
When all about thee
Owned the hideous lie!
The world redeemed
From Superstition's sway
Is breathing freer
For thy sake to-day."

Just outside the northwestern corner of the Bishop-

Nourse farm, near the angle of Prince Street, at "Muddy Boo," were to be seen, until quite recently, certain depressions which were the remains of ancient wolf-pits.

Having mentioned the two sons of Governor Endicott, let here a word be said of his descendants. John left no children. Zerubbabel, who lived on the orchard farm, was a physician. His second wife was a daughter of Governor Winthrop, and he had five sons, of whom John went to England and there followed his father's profession; Zerubbabel and Benjamin lived in Topsfield; Joseph went to New Jersey, and Samuel remained at home and married Hannah, a daughter of Nathaniel Felton, of Felton's Hill. The widow, Hannah Endicott, married Thorndike Proctor, who in 1764 bought the little old building which was the first meeting-house of Salem, moved it to his land near Boston Street, where it was used first as a tavern and later as part of a tannery until 1865, when it was restored and moved to the rear of Plummer Hall by the Essex Institute, and has since been visited by thousands. Samuel Endicott had four children, but he died when thirty-five years old, leaving his only son, Samuel, a boy of seven, the only representative of the name in the vicinity of the home of his fathers. But this boy lived to re-establish the family, and died an old man and "captain" in 1766, and was buried in that Endicott family burying-ground, which is plainly in sight across the river from the Danversport railroad station. One of his sisters married Benjamin Porter, the other Martin Herrick. Captain Samuel had a dozen children; of his sons John, the oldest, kept the orchard farm; and of his wife, Elizabeth Jacobs, it is related that she was at the South Meeting-house when Colonel Timothy Pickering halted his men on the way to Bunker Hill, and cried out in patriotic zeal: "Why on earth don't you march; don't you hear the guns at Charlestown?" The farm passed next to another John, oldest son of John and Elizabeth, one of whose brothers, Robert, married a daughter of Minister Holt, of South Parish, and established an Endicott family in Beverly. The oldest son of this last John was Samuel, who married Elizabeth, daughter of William Putnam, of Sterling, Mass., in 1794, and was the father of the wives of Francis and George Peabody, of Salem, and of William Putnam Endicott, who was born in 1803, graduated at Harvard in 1822, and is still living in Salem, and the father of William C. Endicott, Secretary of War. The orchard farm is retained in this branch of the family, its present owner being William Endicott, of London, England, and is this summer (1887) undergoing extensive improvements at his hands.

Elias Endicott, son of Captain Samuel, was christened in 1729; married Eunice Andrews; died in 1779, was buried in the Plains burying-ground, and left six children: Anna, married Israel Putnam, and became the mother of Hon. Elias Putnam; Elias Endicott, Jr., who was one of the early shoe manufac-

turers, and lived where his grandson, Elias Endicott Porter now lives; Israel, who was a mason, lived in the brick house at the Port, which descended to his son, William; Mary was the wife of Zerubbabel Porter, whose son Alfred was the father of Elias Endicott Porter; and Margaret ("Aunt Peggy") died unmarried.

The first and most distinguished name in our early annals has become, in the male line, utterly extinct. In the Danvers directory the name of Endicott appears but once,—“Lydia W., widow of William.” The late William Endicott was one of the early anti-slavery men, was one of the last of the Danversport sea-captains, often served as moderator of town-meetings, and was otherwise prominent in local affairs; his daughter, Mrs. H. G. Hyde, resides in Danvers, and two sons in Haverhill.

Ante-dating the Bishops' grant by a month was one of three hundred acres to Robert Cole. This covers the region back of Hog Hill, including Proctor's corner and extending a mile or more towards West Peabody. After a short time Cole sold to Enannell Downing, a brother-in-law of Governor Winthrop, a lawyer, a man of such high repute and so desirable an acquisition to the colonists that before he arrived a grant of five hundred acres was given him by the town. This he sold to John Porter; it included the Bradstreet farm near the Topsfield line.

Downing's son George, who was one of the first graduates of Harvard, became Sir George Downing, a prominent figure in the history of the Old Country in Cromwell's time. The old Ipswich road, the first highway connecting Lynn and Boston with the northern settlements, was laid out through this land, and in 1648 one of his tenants was allowed to keep an "ordinary" to accommodate travelers. For a time the Downings let the farm, and in 1666 it was occupied by John Proctor, who subsequently bought a part of it. Proctor, who came from Ipswich, was a strong man in every sense, and he was one of the conspicuous victims of the witchcraft delusion. Many of his descendants have been prominent citizens of South Danvers, where the family is still well represented.

The land next east of Downing's, in the midst of which is the beautiful Rogers estate, was granted, three hundred acres, to Thomas Read, who, with others, went back to England to bear a hand in the coming revolution. In 1701 it was sold to Daniel Epps, the famous school-master, concerning whom it was in 1671 "Voated that the selectmen shall take care to provide a house for Mr. Epps to keep skooles in." The honor of his name was preserved through several generations by men distinguished in our local annals.

The long, high hill south of the Governor's plain was from the first the home of the Feltons. The old homestead at the end of the road which runs from the Ipswich road along the top of the hill was built more than two hundred years ago, and the Na-

thaniel Felton who now owns and occupies it comes near to being the seventh Nathaniel in direct line. A Jonathan in the third generation is the only break. Besides the inclosed burying-ground, where the Ipswich road makes its steep climb, in which old stones and new contain the names of Proctor and Felton, there are here and there on the hillside traces of more ancient and unmarked graves.

The tract adjoining the Bishop-Nourse farm on the north, covering the village of Tapleyville and extending from Ash Street to a little beyond the meeting-house, at the Centre, was granted to Elias Stileman. The latter sold in 1648 to Richard Hutchinson, who came over in 1634, with his infant son, Joseph. Hutchinson was also one of the grantees of the large tract which included Whipple's Hill, named for the husband of his granddaughter, and in 1637 he was granted twenty acres on the meadow back of the meeting-house, on condition that he should "set up plowing." He died in 1681 at the full age of four score, "a vigorous and intelligent agriculturist and a man of character." It will be seen presently how the lower portion of his estate descended through his son-in-law in an unbroken line of Putnams—the Judge Putnam farm. The upper portion fell to Joseph Hutchinson, who was, like his father, a prominent and influential man, of sound sense and plain words. He it was who out of his homestead lands gave one acre for the first meeting-house and later contributed several more towards a home for the first preacher. The family name is still well represented in the neighborhood. The most distinguished name in the family history is that of Colonel Israel Hutchinson, of Revolutionary fame, of whom a notice appears elsewhere. He was the son of Elisha, who died before 1730. Elisha was the son of Joseph, who outlived the son some twenty years; Joseph was the son of that Joseph who was brought over from England in his infancy. A brother to Colonel Israel's father was Ebenezer; Ebenezer's son was Jeremy, who married a daughter of Asa Putnam, and lived from 1738 to 1805; one of Jeremy's sons was Joseph, who was born in 1770, married Phebe Upton, of North Reading, and died in 1832, leaving two sons to become heads of families—Deacon Elijah Hutchinson and Benjamin Hutchinson, both now deceased. The home of Deacon Elijah was the house just west of Nathaniel Ingersoll's training-field, formerly "the home of the widow Eunice Upton, inholder." Three fine residences just beyond are those of Deacon Elijah's sons, Warren, Alfred and Edward.

Next west of the Stileman-Hutchinson land was the grant of Francis Weston, which covered the land extending westerly from the church towards the turnpike. Weston was such a man as to be chosen one of the three Representatives of Salem in the first House of Deputies, but like Bishop he was too tolerant for the age, and was invited to leave, in 1638, and his wife was treated to an experience in the stocks.

Six years later it was sold by one John Pease to Richard Ingersoll and his son-in-law, Wm. Haynes. Ingersoll had come over in 1629, and was granted eighty acres at Rial Side. January 12, 1636-37, "Richard Inkersoll is to have *Id.* for every person he may carry over the North Ferry, during the town's pleasure." He was for a time lessee of the Bishop-Nourse farm, and shortly after this purchase of the Weston grant he died. He was another of the right sort of men, and his son, Nathaniel, was one of the brightest characters of our early history.

Nathaniel was but eleven years old when his father died. His mother married again, and soon the lad found a home with Governor Endicott, not that he was driven to this step, but probably only as other boys and young men were glad to be educated in the practical agricultural college at the Orchard Farm. "I went to live with Governor Endicott as his servant four years." He was nineteen when he went back to the land which his father had left him, and near by the present parsonage of the First Church, he built a house of more generous proportions than were common. Here, to the end of his three-score and ten, he was mine host of an open house, the resting-place of weary travelers, the meeting-place on all sorts of occasions of the villagers. Its ample public-room was at once town-house, church and military headquarters, and the whole-souled landlord was looked upon as the natural arbiter of neighborhood quarrels. He was a just man, whose guide of life was the golden rule, and the love and respect universally accorded him were but the natural tribute to his worth. There is nothing out of harmony with such a character in the following permit granted in 1673, though at present men of his stamp are not found keeping bar: "Nathaniel Ingersoll is allowed to sell bear and syder by the quart for the tyme whyle the farmers are a building of their meeting-house and on Lord's days afterwards." When his only child, a little girl, died, he and his wife took and brought up Benjamin, one of the sons of his neighbor Joseph Hutchinson, who was "an obedient son until he came of one and twenty years of age." Ingersoll was not rich, but he gave the young man a liberal marriage gift out of his comparatively small farm. This was but one of a series of gifts of land. When the church was organized, as will hereafter appear, Nathaniel Ingersoll and Edward Putnam were colleagues as first deacons. It will be seen that Deacon Putnam's farm was on the Middleton line two or three miles from the church, and in 1714 he had reached a time when a man sees old age approaching. Ingersoll desired his dear friend to pass his declining years in the comfortable proximity to the church which he had himself ever enjoyed. Therefore, "for the good affection" which he bore to him, he freely gave Deacon Putnam "a piece of land bounded northerly upon the land of Joseph Green (the minister) next to his orchard gate, westerly on the highway, and southerly

and easterly on my land," and thither, it is thought, Deacon Putnam came to dwell. When pipes were laid for the water-works, an old well was dug into, thought to have been his. Long before this he had given four acres and a half to Rev. Samuel Parris. By his will he gave the church fifty shillings "for the more adorning the Lord's Table, to be laid out in some silver cup." He gave a life estate in the lands of which he died possessed to his wife, with remainder to his adopted son, except one piece, "a small parcel of land of about two acres, that lyeth between Mrs. Walcots and George Wyotts by the highway, which I give to the inhabitants of Salem Village, for a training place forever." Forever! What better monument can a man leave to his memory than a reservation of land for the use of the public, forever. The pleasant common at Danvers Centre, bounded on one side by a street which bears the giver's name, is the old training-field of Nathaniel Ingersoll. These words are Mr. Upham's: "Within its enclosure the elements of the military art have been imparted to a greater number of persons distinguished in their day, and who have left an imperishable glory behind them as the defenders of their country, a brave yeomanry in arms, than on any other spot. From the slaughter of Bloody Brook, the storming of the Narragansett Fort and all the early Indian wars; from the Heights of Abraham, Lake George, Lexington, Bunker Hill, Brandywine, Pea Ridge, and a hundred other battle-fields, a lustre is reflected back upon this village parade-ground. It is associated with all the military traditions of the country, down to the late Rebellion."

About a mile northwest of the training-field is the high hill, upon which is situated the Danvers Lunatic Hospital, ten great buildings in one, whose roofs and pinnacles and central tower are seen for miles around, and form a landmark for fishermen far out in the harbor. This hill was in the midst of a grant to Captain William Hathorne, soldier, lawyer, judge, legislator, whose "many employments for towne and countrie" were publicly recognized. A well-preserved old house in which Francis Dodge lived, when he sold the farm to the State, stood just south of the main building. Two hundred years ago it was the home of Joshua Rea. The hill retains the name of Hathorne.

Thus the line of original grants swept inward from the Orchard Farm. Still to the westward three hundred acres near the crossing of the two turnpikes were owned as early as 1650, by Job Swinerton, whose brother was a physician in Salem town. Job Swinerton had formerly lived on the place now owned by Andrew Nichols, Jr.; he sold this to John Martin, and Martin to Dale. From the latter, who was the ancestor of Surgeon General Dale and of those of the name in Danvers, came the name "Dale's Hill." Swinerton died in 1689, nearly ninety years old. One of the old Swinerton homesteads stood where Daniel

P. Pope lives, and some parts of the original estate are still owned and occupied by Swinertons. The tract between the Swinerton grant and the Ipswich River, on both sides of the Andover turnpike, was granted in 1648 to Captain George Corwin, a rich merchant of Salem. William Cattlebury purchased three-quarters of this land. "Buxton's Lane" perpetuates the name of John Buxton, a son-in-law of Cattlebury, and a man whose name appears with Nathaniel Ingersoll's and a few others, on a bond which saved the Rev. George Burroughs from unjust imprisonment. Some five hundred acres south of Corwin's grant, and covering much of West Peabody, came, by numerous conveyances, to be owned by Robert Goodell, some of which is still owned by descendants of the same name.

The present residence of Rev. Willard Spaulding, in West Peabody, stands on the site of the first Pope homestead. The land about it was first granted in 1640, to another man of the cloth, the Rev. Edward Norris, pastor of the First Church of Salem. It was bought by Joseph Pope in 1664, and his homestead, which remained in the family until 1793, when it was sold to Nathaniel Ropes, of Salem, was standing thirty years ago.

Joseph Pope came over in the "Mary and John," in 1634. He and his wife Gertrude were both in sympathy with the Quakers, and were excommunicated. He died about 1667, leaving nine children. Three sons founded families,—Joseph, Benjamin and Samuel. Samuel married Exercise Smith, whose parents were persecuted Quakers in Governor Endicott's time. It is through Joseph that most of the Popes in this vicinity trace their ancestry. Joseph's wife, Abiah Folger, of Nantucket, was an aunt of Benjamin Franklin. They had four sons to grow up. Three of them,—Enos, "clothier;" Eleazer, "cord-wainer;" and Nathaniel, "blacksmith," went to Salem. In 1813 the third Enos, who followed the business which the first began, died at the age of ninety-two, the oldest man in Salem. Joseph, oldest of the four sons of the second Joseph, was born in 1687, married Mehitable Putnam, and died in 1755. While he was in occupation of the homestead young Israel Putnam, afterwards major general, came and married his daughter Hannah. Israel Putnam went to Pomfret, Conn., and so did his wife's oldest brother, Joseph. The sons of another brother, Ebenezer, were of Salem, while Eleazer's descendants are found principally in Vermont. Another brother, Nathaniel, kept alive the family name at the village. He lived from about 1724 to 1800, married first, a daughter of Jasper Swinerton; second, a daughter of Peter Clark, the minister. Among his children were Mehitable, wife of Caleb Oakes, and mother of the distinguished botanist, William Oakes; Amos Pope, the father of Zephaniah; and Elijah. Elijah died in 1846, eighty years old; the last of his sons, Jasper, died while yet these notes are unfinished, June, 1887,

having reached an age some five years greater than his father's. Jasper leaves no children living. The Popes now living here are the children and grandchildren of the late Nathaniel and of the late Elijah.

Going back to Skelton's Neck, the territory just north thereof, aptly called the Plain, or, more commonly, the Plains, was originally granted to Samuel Sharp, "the godly Mr. Sharp who was ruling elder of the church of Salem." It will later appear what became of this and other lands reaching toward the Topsfield line. East of the Topsfield road, one hundred and sixty acres, of which Augustus Fowler's farm is a part, was granted to Daniel Rea, who first came to Plymouth and then to Salem. He died in 1662, and his only son, Joshua, founded an influential and widely connected family, though the name has passed out of the voting lists. Daniel Rea, son of Joshua, was living in Mr. Fowler's house two hundred years ago. To the eastward of the Reas, the Birch Plain region, the Rev. Hugh Peters had a grant of two hundred acres, which, after his execution, was sold by Captain John Corwin's widow to "Henry Brown, Jr., of Salisbury, yeoman." Browns are still living on a part of the estate. Far to the east, in what is now North Beverly, the land including Cherry Hill was one of the first grants. It was given to William Alford in 1636, and the hill was long called after his name. He sold to Henry Herrick, a younger son of Sir William Herrick, of Beau Manor Park, and the good blood of the ancestors showed itself in the sterling character of many of the descendants. The land between Cherry Hill and the Burley Farm, originally granted to John Holgrave, was later occupied by two Reas, two Bishops, a Watts and Captain Thomas Raymond. The latter was of a family of military renown; Colonel J. W. Raymond, now one of the County Commissioners, is a descendant. Three Raymonds were in the Narragansett fight, and one, John, was the first to enter the narrow pass to King Phillip's redoubt, which proved fatal to so many who went out from this vicinity, among others to Captain Joseph Gardner, son-in-law of Emanuel Downing, and to Charles Knight, Thomas Flint and Joseph Houlton, Jr., members of his company.

Covering the Burley Farm, east of Frostfish Brook, were some two hundred and fifty acres originally belonging to Charles Gott, Jeffrey Massey and others, a neighborhood for some time called "Gott's Corner." To the southward of the Ipswich road were the farms of the Barneys and Leaches, through which runs the road to Beverly town. Folly Hill was then Leach's Hill, and its length was bisected by the division line between the farms of the two families. Both names have passed away from the locality; in the little burying-ground by the highway in which doubtless are nameless graves, one is marked with the name of Martha, wife of Richard Leach, who died in 1756.

From the head of canoe navigation at Frostfish Brook, by the way, there began a well-defined Indian trail, leading, Mr. Nichols says, as far north as Canada. A glance at the county map shows that the location was well-chosen as a terminus of such a trail.

All of this region from Beverly to Reading was known in very early times as "Salem Farms," and the early settlers and their descendants were commonly called "the Farmers." The settlement which grew up along the brooks, which come together near Peabody Square, was at first called Brooksby, later as the Middle Precinct, and became the South Parish of Danvers. Since 1855 it has been a separate town, and an account of its early settlers and growth belongs to the history of Peabody, and will there be found.

Hints of the character of some of the Farmers have been given. As a whole they were a sturdy, intelligent set of men, with the energy and vigor requisite to convert the wilderness into pleasant homes, jealous of their rights, too prone to lawsuits, fair types of New England yeomanry.

Presently, children who had been born upon the lands, intermarried, established themselves on farms, carved out of the ancestral acres, and took the places of the aged fathers. A feeling grew that they were separated, alike by distance and by manner of life, from the dwellers in the town. It was far to go to church over rough roads and in all weathers, and the church was the centre of all things. They wanted to be a parish by themselves and provide their own minister. In 1670 this desire was expressed in a petition to the town, and some two years later the town's consent was ratified by an act of the General Court. October 8, 1672, the parish known as Salem Village was established; October 8, 1872, the first church of Danvers observed the two hundredth anniversary of that event.

"All farmers," so ran the vote of the town, "that now are or hereafter shall be willing to join together for providing a minister among themselves whose habitations are above Ipswich Highway, from the horse bridge to the wooden bridge at the hither end of Mr. Endicott's Plain, and from thence on a west line shall have liberty to have a minister by themselves and when they shall provide and pay him in a maintenance, that then they shall be discharged from their part of Salem minister's maintenance." The bounds of Salem Village, though a source of grievous dispute, especially between the farmers and "the Topsfield men," substantially included all of the present town except the two necks of Danversport, a part of North Beverly, considerable of West Peabody and much of the town of Middleton.

This Middleton land was an original grant of seven hundred acres to Governor Richard Bellingham, made by the General Court in 1639. It was bought for two hundred and fifty pounds by two poor men, Bray

Wilkins and John Gingle, who paid down a ton of iron and one pound in money, in all twenty-five pounds, and gave a mortgage back for the balance. They paid off the debt, Wilkins and his sons bought up the Gingle interest, and, in 1702, Wilkins died at great age, a patriarchal land-owner, in the midst of the farms and homes of his descendants. Though beyond the six mile limit, these lands were by special act of the General Court, in 1661, made a part of Salem.

There were within the village, twenty years after its establishment, some hundred and fifty houses. Among the farmers not already mentioned were Daniel Andrew, himself sometimes a school-master, and founder of a family in which a number have followed that calling; the Flints, some of whom remain on the lands of their ancestors in West Peabody; Joseph Houlton, the honored head of a fine family, most conspicuous among whom is Samuel Holten, whose name will often appear in these annals; the Kettels, a name now extinct here; the Needhams, whose farms were divided by the village line, are still represented in West Peabody by descendants of the family name; Robert Prince, of whom the late Moses Prince was a descendant in the fifth generation, the latter a man who was eminently distinguished for the extent and accuracy of his knowledge of local history. The Prince farm contained about one hundred and fifty acres and the house which Robert occupied and probably built, is still standing on the estate of J. E. Spring. The widow of Robert married Alexander Osborne, and under that name she was one of the first three arrested for witchcraft, and was taken from this very house to Boston jail, where she died May 10, 1692.

Lying partly within the Village limits and partly in Topsfield, was the land of William Nichols, a large farm which he had bought about 1650, of Henry Bartholemew. "Nichols Brook" which flows through these lands perpetuates his name. He lived to be very old and from his only son, John, came an extensive family. One of the most prominent figures in our local history during the first half of this century was Dr. Andrew Nichols, a son of Andrew of the sixth generation, and were it not for the fact that a notice of his life from the pen of his son Andrew will be found accompanying the engraving at the close of this sketch, it would be fitting at this point to pay a tribute to his worth. Andrew Nichols, civil engineer, son of the doctor, whose home is not far south of the old Nichols farm and whose land includes a part of the Prince land, of which latter family he is a descendant through the marriage of John Nichols and Elizabeth Prince, has written a genealogy of the Nichols family and has collected a rich store of material for local history. Abel Nichols, a brother of the doctor, was the father of the late Abel Nichols, artist, father of Mrs. William E. Putnam and Lewis A. Nichols, and brother of the late Mrs. E. G. Berry.

In the extreme southeastern corner of the town, pleasantly situated on the southern bank of the river below the confluence of its three branches, is a very old and interesting house. It has always remained in the Jacobs family, whose ancestor, George Jacobs, was another of the victims of the witchcraft delusion, and, according to tradition, was hung on an oak tree on his own land and there also buried. It was his great-granddaughter, Elizabeth Jacobs, who married John Endicott and spoke out loud to Colonel Pickering as before related. She lived to be over ninety and died in 1809. Her ancestor had received from Salem a grant of a few acres and six "cow leases," on Rial Side, and it is recorded that the old lady used to tell how, before her marriage, she used to paddle a canoe across the river to milk the cows on this very land, and when the tide was out she would go across the flats on stepping-stones and wade the channel. It must be explained that the channel was much less deep then than now, and, although years ago it was written that "the stones are to be seen to this day," they are out of sight now beneath the mud.

One of the sons-in-law of Francis Nourse was Thomas Preston, the ancestor of a family which has always had representatives prominent in local affairs. Much more space deserves to be here given them than can be afforded. The present Massey estate was long in the Preston family. There, a hundred years ago, lived Levi Preston, who married Mehitable Nichols, and was the father of eleven children. One of these, Levi, built the present meeting-house of the First Church; Mehitable married Ebenezer Berry, inn-keeper; Polly married Nathaniel Felton; Sukey and Eliza, the brothers Asa and Nathan Tapley; Daniel was the father of Major D. J. Preston, deputy sheriff and tax collector, recently deceased; Abel, Hiram, William, John and Samuel—not in the order of their birth—all of these went out from the house on the hill. John went not far. He married Clarissa, the only daughter of Joseph Putnam, the next neighbor, and building an addition to her father's place, they lived there. John Preston died May 28, 1876, in his eighty-sixth year. He was the oldest Free-Mason in town; was many years a selectman; representative to the General Court; for many years chorister at the First Church in the days of 'cello and double-bass; was one of the early shoe manufacturers, and, after he gave up that business, a good farmer. His widow still survives, and her great age is mentioned in connection with the Putnams. His son, Charles P. Preston, resides on the site of the old house in which his father and grandfather, it might be carried farther, lived. According to the Directory of 1887, but three men in Danvers to-day bear this family name, two of whom are C. P. Preston, just mentioned, and his son.

Deacon Samuel Preston, brother of John, was one of the most distinctive figures, especially in the history of the First Church, of the past half-century. In his later

years, as he came regularly to the ancient place of worship, there was coupled with a venerable form and appearance a youthful, elastic step. "There was no good service which he was not prompt, eager and faithful to render. He was of robust mind, of pure tastes, and he had a firm grasp of spiritual and eternal things." He read much and the best books, and it is not strange that in his family there is to be found a highly developed taste for literature. Miss Harriet W. Preston, the well-known authoress and magazine contributor, is his daughter. Something more of him in connection with the shoe business.

Present space permits only this brief and incomplete mention of the first settlers. Until 1752, when the district of Danvers was incorporated, the history of the parish of Salem Village is practically the history of that part of the town which still retains the name of Danvers, and its outline will be found in the chapter of church history. In the mean time some families thus far purposely omitted in the mention of the early settlers will here be somewhat more fully noticed.

THE PUTNAMS.—One of the most beautiful estates in Danvers is that known as Oak Knoll, which owes much of its attractiveness to the taste of its former owner, William A. Lander, Esq., of Salem. It is in the midst of pleasant surroundings, a mile's drive from the Plains, and passers-by peer through the trees to the unostentatious but comfortable mansion which will ever be memorable as the home of one who now for a number of years has been a member of the family of its present owners—the poet Whittier. But this very estate is, in itself, of deeper historical interest. It is the home of the first Putnam, the ancestor of that family which not only is to-day the largest and most distinctive of Danvers, but has its representatives far and wide, and has illuminated our national history with the names of many of its illustrious individuals.

John Putnam, this progenitor, came from Buckinghamshire, England, when well along in years. The land upon which he settled lay just north of Elder Sharpe's grant. This latter, resting on Skelton's Neck, and covering the whole of the present central village of the Plains, ran northwesterly to a point at the little pond at Beaver Dam. Putnam's land, including his own grant of a hundred acres, made in 1641, and previous grants to Ralph Fogg, Thomas Lathrop and Ann Scarlett spread out easterly from this point, so as to cover nearly the whole territory west of the Topfield road from Lindall Hill to beyond the Putnamville school-house.

John Putnam had three sons, all born in the old country. Thomas, the oldest, was a young man of twenty-six at the time of his father's grant in Salem farms; he seems to have first struck out for himself in Lynn, where his character and good education qualified him to act as magistrate, and where he married Ann Holyoke, sister to the grandfather of President Holyoke of Harvard College. Nathaniel who was

just then arriving at his majority, and John, a lad of fifteen, probably came with their father to the new home at Beaver Dam. The father was one of the most energetic and successful of the pioneers, and became a very large land-owner. A few months before he died he bought, in company with John Hathorne, Richard Hutchinson and Daniel Rea, two very large tracts, the one including Hathorne's Hill and the surrounding territory; the other Davenport's, afterwards Putnam's Hill, and the surrounding territory. It would seem as though the lion's share of these lands fell to the Putnams.

John, the youngest son of the pioneer, married Rebecca Prince, and remained on the father's homestead.

Thomas, who had moved from Lynn to Salem town and married, some four years after his father's death, for his second wife, the rich widow of Nathaniel Veren, receiving as his double inheritance a portion of the original grant to Captain William Hathorne, built at the foot of the easterly slope of the hill which perpetuates the grantees' name, a house which, with subsequent additions, still remains, not only in perfect preservation, but in the hands and occupation of Putnams, who are lineal descendants of the builder, and who cherish, with fond interest, the history and traditions of their family. This house is about a mile due west from Oak Knoll, and, according to the location of modern roads, is at the intersection of the highway to Middleton and the Newburyport turnpike, and is directly opposite a fine avenue, which at this point begins its winding climb of Hathorne's Hill to the new lunatic hospital.

Nathaniel, the other son of the pioneer, married Elizabeth, daughter of Richard Hutchinson, the man who bought the original grant covering the whole region of Tapleyville, from Walnut Grove Cemetery to the site of the first village church. It was on a part of this tract which came to him by this marriage that Nathaniel built his home. Though not itself standing, another house of respectable age stands on or near its site. Mr. Nichols thinks the original house stood near the town gravel-pit, on Hobart Street. Notwithstanding the laying out of streets and house-lots in the most thickly settled portion of the town, including the grounds of the town-house, the Peabody Institute and the cemetery, some of the original farm remains about the house which, long the home of Judge Samuel Putnam, a lineal descendant of Nathaniel, has of late years been owned by other Putnams collateral to the Judge, but running back to the same ancestor. This Putnam estate, also very familiar, is on the main thoroughfare from the Plains to Tapleyville, something over a mile in a straight line, nearly south of Oak Knoll. It is on the banks of the stream which drains the meadows of Beaver Dam, and a short distance below the house the stream is met by another which drains the meadows far to the west and south. This confluence takes place in a

natural basin easily and effectively dammed for water-power, and from very ancient times these Putnams have utilized this power for milling, just where Otis F. Putnam is to-day sawing, grinding and storing ice at the old stand.

From these three homes, then,—of Thomas, near Hathorne's hill; of Nathaniel, near the mill-pond; of John, at Oak Knoll,—came the three great families of Putnams.

a. The family of Thomas.—Thomas had three sons who became heads of families,—Sergeant Thomas, Deacon Edward and Joseph. The two former pushed up a mile toward Middleton, and established themselves close together on what is now Dayton Street, near the railroad station at Howe's crossing. Joseph remained on the home place.

No male descendants of Sergeant Thomas are left here. A short time ago William Putnam, an old man, died in his ninetieth year, in the old farm-house on the lower hill, directly in front of the hospital. He was the son of Deacon Eben Putnam, and grandson with three "greats" of Deacon Edward; and of the two living sons of this old man, one, James Warren, keeps the place, and, rare in these days, has a fine family of eight children, six of whom are boys, to keep the good deacon's name alive at home. The brother of William, Deacon Ebenezer, was the father of Rev. Hiram B. Putnam, now at Derby, N. H., and of Harriet Putnam. One of Deacon Edward's sons, Elisha, moved away to Sutton, Mass., and thus Danvers claims some of the honor which belongs to the name of General Rufus Putnam, son of Elisha, and a native of that town.

No history of this town will be complete without a full account of the part which Danvers took in the settlement of the Northwest Territory. The earliest wagon-train, under command of Captain Hafield White, a Danvers man, started on its long journey from here. Invitations have just been received by descendants of these pioneers to join in the great centennial celebration, to take place at Marietta in 1888.

General Rufus Putnam, Washington's friend, a famous engineer of the Revolution, presided at the convention in Boston, March 1, 1786, at which the Ohio Company was formed, and April 7, 1788, he laid out at Marietta the first permanent settlement in Ohio. Major Ezra Putnam, his cousin, also a grandson of Deacon Edward, was another of the Ohio pioneers. Nearer home, another descendant of Deacon Edward, Oliver Putnam, honored the family-name by establishing at Newburyport the Putnam Free School. Another descendant was the late lamented Professor John N. Putnam, of Dartmouth College.

Both the second and third generations, and, indeed, at least one of the fourth generation of Putnams, played prominent parts, and some of them very unfortunate ones, in the terrible witchcraft tragedy which

spread over this neighborhood. Nearly all of them were deluded. How otherwise, when one of the worst afflicted of the "afflicted children" was the daughter of Sergeant Thomas Putnam, recorder of the parish, and oldest son of the richest man in the village? It struck the proud and powerful family to the centre, and they were not so superior to the unreason of the age as to see that spanking was much more needed than hanging. The sad, dark days of 1692! None who have grasped from the wonderful monograph of Mr. Upham anything of their reality will speak in jest of Salem witches. They were taken, most of them, from Danvers homes, homes still standing in our midst, and, condemned by blind terror in the name of Law, after mockeries of trial their necks were broken on the gibbet. The Putnams had a hand in this business, save one. Against the black background there stands one grand stirring picture. It is of a young man twenty-two years of age standing at his farm-house door, with loaded firelock and saddled horse, ready to resist arrest or flee from overpowering force. It is Joseph Putnam, youngest of the sons of the first Thomas, who, in the face of brothers and uncles, from the first denounced the proceedings through and through. Such a course was almost sure death, and for six months gun and horse had been ready day and night. He had been married but a year to a young bride of less than seventeen, a granddaughter both of old John Porter and Major William Hathorne, and she was a worthy wife of a noble husband. It was this son who remained on his father's place, the one opposite the entrance to the hospital.

They had three sons, this young couple, Joseph and Elizabeth, whose names were William, David and Israel. There is a little chamber in the oldest part of the old house, which, through the kindness of the occupants, is often visited with great interest. Perhaps here all three of these boys were born, but, alas for the heroes of peace, it is the heroes of war whom men most idolize, and as one enters beneath the oaken beams of the low ceiling, and sees in the quiet room the ancient furniture, the fire-place and other relics of long gone years, the mind strives only to grasp the strange reality that in this very spot that favorite hero of the Revolution, to whom tales of bravery and courage seem as commonly attributed as to the demi-gods of old, "Old Put," Major General Israel Putnam, Washington's "uncut diamond," actually kicked and cried just like any other baby. The wolf's den, the rapid ride from the plow to the Lexington alarm, the tender of the first commission at Boston from the hands of Washington, the dashing plunge at Horseneck, the long service of one of the most trusted commanders, these and all other events of his distinguished life, had a sort of potential existence in this same little room.

He was a little more than twenty-one years old when the event happened to which this item found in an old memorandum book refers: "July ye 19

1739 Israel Putnam and Hannah Pope were married together." Immediately the young couple struck out, took a farm at Pomfret, Conn., and returned thither no more. The descendants of the general are numerous in the State of his adoption, in New York, and especially so, through his son, Colonel Israel, an officer with his father in the Revolution, about Marietta, O.; and some also in Kentucky and other Southern States.

William, the oldest brother of the general, had no sons. David, the next son, remained on the home place. It was a mistake to insinuate that Israel monopolized the military spirit of the family. David, so Mr. Upham says, was a celebrated cavalry officer, but, being much older than Israel, flourished in the period anterior to the Revolution. Colonel Timothy Pickering used to mention as one of the recollections of his boyhood, that David Putnam "rode the best horse in the province."

To follow briefly down the old house which may now understandingly be identified by the name it commonly bears, the "Old Put" house, David had these sons,—William, Joseph, Israel and Jesse. Joseph was "Deacon Joseph" of the Village Church, for whom David built that other Putnam house a short distance from his own, known as the "Colonel Jesse house." Of Colonel Jesse and his children, a few words farther on.

William, eldest son of David, moved to Sterling, Mass. A daughter of his became the wife of Captain Samuel Endicott, of Salem, and their son, William P. Endicott, who married Miss Crowningshield, is the father of Hon. William Crowningshield Endicott, President Cleveland's Secretary of War. Another descendant of William Putnam, of Sterling, was the Rev. George Putnam, D.D., long and well known as pastor of the First Church of Roxbury.

Jesse, the youngest son of David, was a graduate of Harvard, and a well known merchant of Boston, whose earlier residence was on Summer Street, near Trinity Church. His daughter Catherine was that lady of fine culture and patriotic spirit who, in her eighty-fifth year, presented a silk banner to the Putnam Guards of Danvers as they went out to war.

Israel, the third son of David, the fourth in line of ownership, remained on the old place, and from him it descended to the only one of his three sons who married,—Daniel. Daniel married the daughter of another Putnam, Stephen, whom we shall meet in the family branch of Nathaniel, and of his twelve children, two, Miss Susan and her brother Ansel W., are the present occupants of the historic house. The youngest daughter Julia, widow of Hon. John D. Philbrick, of whom something is written in connection with our schools, resides nearly opposite. Allen, the oldest, and Benjamin Wadsworth, the youngest son, reside in Boston. Daniel and Ahira manufactured shoes in a shop still standing within the yard of the old house; the widow and a granddaughter of

Daniel, who reside here, are his only living representatives; Ahira's son, Granville B., is a well known teacher in Boston, and the name of his other son, Major Wallace A. Putnam, stands first on the monument erected to the Danvers men, who lost their lives in the late war. Deacon William R. Putnam tilled his ancestral acres some thirty years, removed, to reside with his children at Redwing, Minn., in 1874, and there died in 1886. The male lineage of the old General Putnam house runs back then thus,—Ansel, Daniel, Israel, David, Joseph, Thomas. There are now living but five grandsons of Daniel in the male line, and none of them live in Danvers.

A few words concerning the family of Jesse, "Col. Jesse" before alluded to. He was himself one of the prominent and widely known citizens of his day, one of the foremost advocates of the early temperance reform and one of the strongest opponents of slavery. In his manner he was somewhat brusque, and, like his grandfather, he was fond of a good horse.

He died in 1860, but his widow, Elizabeth, daughter of Dr. Silas Merriam, of Middleton, whom he married in her twentieth year, still living, celebrated November 14, 1884, her *one hundredth birthday*. Rare event; fitly celebrated. The "tribe of Jesse" were six sons and six daughters, a family in all respects to be proud of. Four of the surviving five were present with their mother on the occasion just mentioned. These twelve children were, in order, Catherine, Andrew, Elizabeth, Francis P., Henry F., Calvin, Mary J., Martha A., Sarah W., Charles, Emily A. and John M. The latter lives on his father's place, and in his family is another Jesse. The other survivors are Calvin; Sarah, widow of George W. Fuller; and Emily, widow of Rev. Richard T. Searle. Francis died at his home near by his father's a few years ago, much respected. Henry and Charles died in the West, the latter having been superintendent of schools in St. Louis. (Mrs. Putnam died September 20, 1887, at the age of 102 years, 10 months, 6 days.)

b. The family of Nathaniel.—Nathaniel, "Lieutenant,"—military titles were common in the family—had two sons, Benjamin and John. The latter went beyond the westerly slope of Hathorne's hill and established himself near the Log Bridge over the Ipswich River, on the farm now owned by George H. Peabody. He was known as "Carolina John," and this name occurs on a rough diagram of a division of land drawn in ink on the parchment binding of one of the old volumes of records in the registry of deeds at Salem. The site of his home is marked by a very old but well preserved house, situated beneath ancient elms, where the high land begins to slope to the river meadows. It was in the immediate neighborhood of the other river farms upon which the brothers Deacon Edward and Sergeant Thomas Putnam, cousins of this John, were settled. John had these sons,—Josiah, John, Amos, Samuel and Daniel. A grandson, Daniel, was a deacon of the village church

and lived close by his grandfather's place on one of the Peabody farms, and died in 1801, aged sixty-three years. Neither of the brothers, except John, leave descendants of the male line in Danvers. A descendant of Josiah, Hon. Harvey Putnam, born at Brattleboro, Vt., in 1793, was a prominent lawyer in Schenectady, N. Y., a member of Congress, and his son, Hon. James O. Putnam, of Buffalo, has long been one of the most distinguished men of western New York. John, brother of Josiah, had three sons,—John Amos, Edmund. An eccentric old man well-known some years ago, published a rambling autobiographical sketch called "The Life and times of Peter Putnam." Peter's grandfather was the brother of Amos and Edmund, just mentioned, and their estate was on the turnpike, south of Hathorne's hill.

Amos Putnam was a physician, and one of the active patriotic spirits of Revolutionary times. His name often occurs in honorable connection on the records of the town. His residence was the brick house near Felton's corner, where afterwards the late Daniel Tapley lived. A son of Dr. Amos, James, also a physician, is to be remembered with his estimable wife who long survived him, as the parents of those two teachers "Hannah and Betsey," names always spoken together because they always taught together, and fondly cherished by many of our older people. Recently a number of the survivors of their old scholars met with Mrs. Harriet P. Fowler to consider the erection of a memorial over their hitherto unmarked graves. Something further of them will be found in the chapter on schools.

Edmund Putnam, brother or rather half-brother of Dr. Amos, was "Deacon Edmund," whose name is revered by Universalists as the pioneer of the departure of that denomination from the old faith. He served as deacon in the village church from 1762 to 1785, and died in 1810, aged eighty-six years. He lived in the old house standing between the Topsfield road and the railroad, a well preserved relic of witchcraft times, now owned by Augustus Fowler. Deacon Edmund's sons were Andrew, Israel and Edmund. Israel was the father of Elias Putnam, "Squire Lias," a name at which the pen halts to find words of fitting tribute and then passes altogether, on the announcement that a distinguished son, Rev. Dr. Alfred P. Putnam, is to contribute a sketch of his father's life, to appear in subsequent pages of this book. In the number and character of descendants the line of Edmund, Israel and Elias is well represented at home and abroad.

Poplar and Locust Streets cross each other a third of a mile above the Square at the Plains. Both are ancient roads; the former, the old "Dyson Road" from Beverly to Andover; the other, the "Topsfield Road." At this corner was the old homestead of Judge Timothy Lindall. Speaking roughly, the roads cross at right angles, the Topsfield road running north, the Andover road running west. Another road,

now called Summer Street, starts from the Andover road about a half mile west from the Lindall corner, and runs north parallel to the Topsfield road, till it meets a fourth road, now called North Street, which, starting from the Topsfield road a mile and a half above the Lindall corner, runs west, the "back road" to Topsfield. About the sides of the parallelogram which, still roughly speaking, is formed by these four roads, are a number of old Putnam homes. Oak Knoll, the family starting-point, is itself on the easterly side of Summer Street, about midway of its length. The first Putnam to push much northward was Benjamin, elder of the two sons of Nathaniel. He was "Deacon Benjamin," who settled on the place now owned and occupied by Miss Goodhue, the very old house standing on or near the ancient site, being on North Street, midway between Summer Street and the Topsfield road. Deacon Benjamin died in 1714, fifty years old. By will he gave his son Daniel "one hundred and fifty pounds for his learning." Daniel went to Harvard, and among his college mates during the last year of his course was Joseph Green, son of the village minister. Daniel graduated in 1717, the first of a long list of subsequent graduates of the same name. He became a minister in North Reading, and died there, leaving descendants.

Nathaniel, oldest son of Deacon Benjamin, moved back south to his grandfather's, Nathaniel's, place by the mill-pond. He, likewise, was a deacon, serving twenty-three years, dying in 1754, and he was the father of still another deacon, Archelaus, who at one time lived where the late Gilbert Tapley died, and of whom the story is elsewhere told how he was the pioneer of Danversport.

Tarrant Putnam, next son of Deacon Benjamin, and the first of a number of other Putnams to bear that peculiar name, was the father of Gideon, still another deacon, who died in 1811, eighty-four years old. Gideon was a store-keeper, who lived and carried on his business at the well-known corner where subsequently Jonas Warren, Daniel Richards, and the sons of the latter, succeeded him. It was Deacon Gideon who, by selling cheese in Revolutionary times at nine shillings per pound, was declared an enemy of his country, though he so far regained popular favor as to be sent soon after to the General Court. He will be remembered as the father of that distinguished citizen whose name has been already mentioned—Judge Samuel Putnam, who died about thirty years ago on the homestead estate of the original Nathaniel. He is remembered as an old gentleman courtly and refined, of the manners of the old school, esteemed and respected by all who knew him.

After a highly honorable and extensive practice at the bar, in which his severe application showed itself in the fruits of exact and comprehensive legal learning, he was appointed in 1814, on the death of Chief

Justice Sewall, to a seat on the bench of the Supreme Court. This he held until January 26, 1842. The late Alfred A. Abbott thus spoke of him at the celebration of the centennial of the town, 1852: "For more than a quarter of a century did he fulfill, ably and faithfully, the duties of his high station, doing his full part to sustain and elevate that reputation of our Supreme bench which has made its decisions standard and indisputable authority throughout the land. Our reports contain a great number of his opinions, elaborate and rich, than which few are cited with more frequency, or held in greater respect. At length, when the weight of increasing years began to oppress him, Judge Putnam voluntarily put off the judicial ermine, with a rare delicacy and commendable good sense resigning his lofty trust while yet his mental vigor was unabated, and retiring from his well-earned and still fresh laurels to the joys and comforts of private life. No one has illustrated the family name with a purer life, higher virtues or juster fame." He was the grantor of the lands of the Walnut Grove Cemetery, Peabody Institute and surrounding estates. He carried on the milling business before alluded to, and numerous documents are on file in the Town-House showing with what courteous firmness he asserted and maintained his rights whenever the mill privilege was in danger of being infringed, as when Sylvan Street was laid out in 1842 over his dam. As early as 1820, so wrote an aged citizen a few years ago, Judge Putnam was the only man in Essex County who laid in ice for market. Then the ice was cut from the pond with an axe, loaded upon sleds without tools, stored in a cellar built for that purpose and was delivered to consumers with the naked hands. A load was driven twice a week to Salem. This cellar held but a hundred tons; the present harvest is more than five thousand tons. The descendants of Judge Putnam reside chiefly in Boston. A son, Samuel R., married a sister of James Russell Lowell, and their son, Lieutenant William Lowell, fell bravely fighting at Ball's Bluff in 1861. His mother was the writer of a remarkable series of sketches on Hungary at the time of the struggle of Kossuth and his compatriots for liberty. Dr. Charles G. Putnam, second son of the judge, was an eminent practitioner in Boston, president of the Massachusetts Medical Society, and through his generosity the town possesses a substantial memorial of the family in the reservation known as Pickering Park, at the meeting of several streets laid out through the old farm. This was presented to the town by Dr. Putnam in 1875.

Deacon Tarrant Putnam, uncle to Judge Samuel, was the father of Dr. Israel, of Bath, Me., and Tarrant, a New York merchant of great wealth. A son of Dr. Israel is Hon. William L. Putnam, ex-mayor of Portland and a leading lawyer there, at present prominent as representing the United States in the fishery controversy with the Dominion.

Just opposite the junction of Summer and North Streets, situated on a high hill at the northwest corner of the parallelogram and looking directly south-erly to Oak Knoll is a pleasant old farm-house known as the Wallis farm. This was the home of Benjamin, one of the seven sons of Deacon Benjamin and the ancestor of Benjamin C. Putnam, now of Danvers, the sixth Benjamin in line. The fourth son of Deacon Benjamin, and the last to be here mentioned, was Stephen. He pushed around to the easterly side of a long high hill which monopolizes much of the north-erly portion of the land included by the roads spoken of and which fittingly bears the name of Putnam's Hill, and established himself on the site of the present residence of Henry A. White. The descendants of Stephen have been more conspicuous and are at present more numerous than any others of this branch of the family. The old house is still remembered by some, standing under a great willow, beneath which was a large horse-block. Here, as well as on some other estates, slaves were kept; one, "old Rose," was bought in Jamaica by the pound.

The sons who grew up on this hill-side farm included Timothy, a Tory, who went to Nova Scotia; Moses, a Harvard graduate of 1759, who went to Wilton, N. H.; Phinehas, Aaron and Stephen, Jr. Phinehas went westward and established his home a half a mile north of the "Old Put" house; of his five sons, Joseph remained at home, and Charles P. Preston, a son of his only child Clarissa, widow of John Preston, now in her ninety-fifth year, is the present owner and occupant of the premises. Matthew, another son of Phinehas, went south to the Rebecca Nourse homestead of witchcraft history, which place has come down through another Matthew and Orrin to the heirs of the latter. Timothy, another son of Phinehas, came to the Plains and lived long on the site of the present residence of his grand-son, Otis F. Putnam; he was the father of Elbridge, Willard, Adrian and Gustavus, of whom the latter only survives, and through these sons, except Willard, numerous descendants of "Uncle Timmy" are living in the town.

Pushing south from his father's home, Stephen's son Aaron went to the southern slope of Putnam's hill and probably built the pleasant old house which one can see through the leafy lane lead- ing in from the Topsfield road near the residence of Israel H. Putnam. Aaron had two sons to estab- lish families, Simeon and Rufus. Simeon's sons were Simeon, Aaron, Augustus, Edward B. and Israel H., the latter retaining the ownership of the old place; the well known face and figure of the former, "Uncle Sim," for many years tax-collector, will be long re- membered; he died April 14, 1880, in his seventy-fifth year. Rufus, soon after his marriage, struck out into a new quarter for the Putnams, and bought one of the old Leach homesteads, under the easterly slope of Folly Hill; William, the survivor of his two sons, is

still living near the site of the old house in his eighty- fourth year; the other son, Rufus Putnam, after a long and honorable service as teacher in the higher schools of Salem, built about thirty years ago on his portion of his father's farm, the house in which he died in November, 1875. He brought back to his native town the ripe wisdom of mature years and the benefit of his counsel was often sought, especially in the settlement of estates. He was long president of the Savings Bank, and long on the school committee; he was quiet in his life, of unspotted character, and greatly respected.

To go back a step now to the farm of Stephen: Stephen, Jr., the youngest brother of Phinehas, Aaron and the others, just mentioned, remained at home. Stephen, Jr., was a carpenter who built or helped to build the village meeting-house of 1786, and he was the father of these children,—Stephen, Moses, Jacob, Susanna, Ruth, Samuel, Eben, Hannah and Sally. The first and the last two died unmarried. Moses and Samuel established themselves close by their grandfather's home, and each built up a large and successful shoe business in the neighborhood, which as an involuntary tribute to the energy and worth of these brothers has for some forty years borne the name of Putnamville. The old name of this locality to the Topsfield line was Blind-hole, after a swamp. Jacob learned the tanner's trade at Elias Endicott's, bought the old Frye's Tavern, between Peabody and Salem, and built up a successful business there. George F. Putnam, of Salem and Boston, is his son. Eben, the last survivor of the children, came early down to Danvers Plains, in the days when there was no village to speak of, where now is the business centre of the town. Of the daughters, Susanna married Daniel Putnam, lived in the "Old Put" house, and was the mother of the present occupants. Ruth was the wife of Andrew Batchelder, and lived in the old Lindall house. A number of old clocks bear his im- print as "clock-maker;" by a second wife his de- scendants are likewise numerous and respectable.

The three sons who remained at home all lived to a good old age, to be popularly known as "uncles"— Uncle Moses, Uncle Sam and Uncle Eben—and were fathers of very large families. Uncle Moses was ac- cording to the tax-list of 1847 the richest man in town. Those next approaching him were Daniel P., Jonathan and Samuel King, Gilbert Tapley, Benja- min Porter, Samuel Putnam and Elias Putnam. He died September 10, 1860, in his eighty-fifth year. Four of his children are living,—Harriet, the wife of Deacon S. P. Fowler; Susan, widow of Daniel F. Put- nam; Moses; and Emeline, wife of Charles A. Put- nam, of Boston. Of Samuel's children, these,—Mary, widow of Elbridge Trask; Thomas, Albert, Charles A. and Henry. Of Eben's children, these,—Edwin F.; Elizabeth, wife of William Cheever, of Staten Island; Margaret, widow of Joseph W. Ropes; and Mrs. Hannah Bomer, in the west.

C. The family of John. It was "Lieutenant," afterwards "Captain" John, youngest of the three sons of the pioneer, who remained on the original Putnam homestead at Oak Knoll. He was impetuous, rough, ever ready to stand by his rights if need be with force and arms, but when the farmers realized that education was lax among them, it was this same man whom they selected "to take care that the law relating to the catechising of children and youth be duly attended," and to see "that all families do carefully and constantly attend the due education of their children and youth according to law." In his family the minister, George Burroughs, and his wife lived nine months in the year 1680, and on these beautiful premises where the poet is passing his declining years, the minister gave evidence of that great strength which twelve years later was credited to the devil and cost him his life.

John Putnam had four sons,—Jonathan, James, Eleazer and John. Stretching eastward from Oak Knoll a broad fertile plain lies between Lindall Hill and Putnam's Hill. Skirting the northern limits of this plain was an ancient road, traces of which are yet visible, which coming from Wenham passed by Oak Knoll and so on through a part of the pleasant avenue which leads by the old Prince house, a relic of witchcraft times, which is now the farm-house of J. E. Spring's place, around Beaver Dam to the village church, a road over which, without doubt, many sad and anxious hearts passed to trial and condemnation in the terrible days of 1692. Just opposite the residence of the late Nathaniel Boardman, and included within his estate, is an old well-preserved house, the oldest in Putnamville. It marks the point at which a traveler coming across the meadow from Oak Knoll would strike the Topsfield road, and thither Jonathan Putnam pushed out and built, it is thought at least a part of this very house. Jonathan's son Jonathan is the ancestor of Nathan T. Putnam and the descendants of his son David in town are the Boardman family.

James, second son of John, seems to have taken the homestead, Oak Knoll. To follow down this interesting estate, it probably passed next to James' son Jethro, at any rate Jethro's son Enoch lived there. Colonel Enoch Putnam was one of the distinguished men of his time. He was forty-three years old when the Revolution broke out, and as a lieutenant in Colonel Hutchinson's Minute-men went to Lexington; by good service in the war he won his higher title of colonel. It was the two daughters of Colonel Enoch whom two sons of Phinehas Putnam, Joseph and Timothy, married, and as Mrs. Preston, the aged lady before referred to is the daughter of Joseph, she is likewise the granddaughter of Colonel Enoch, and to a young lady, her own granddaughter, has passed a plain gold ring, worn quite smooth, but with this inscription legible,—“Remember the giver.—E. P.” The giver was the colonel and the wearer

was the great-great-grandmother of the present owner. The only son of Colonel Enoch, Jethro, married a daughter of the distinguished Dr. Holten, and of his family the representatives of his son Philemon still live here. As Jethro went to live on the Holten place it is probable that about that time the old homestead went out of the Putnam family. Some fifty years it was owned by Nathaniel Smith and wife, and was sold with sixty-five acres of land to William A. Lander, April 9, 1841. By subsequent purchases Mr. Lander became owner of nearly as much more adjoining land. The old house was allowed to stand two or three years after the present residence was built. It stood on the level field where now is the pear orchard and not far from the old well and the large elm which was dug and planted by slave labor. Mr. Lander lived on the place which his own taste has made so beautiful until 1875, when he removed to Salem, and the place then passed to its present owners, the family of the late Colonel Edmund Johnson, of Boston, who died in 1877. Mr. Whittier is a relative of the family, and has spent most of his time at Oak Knoll, a name which he himself gave the estate.

But another and later Putnam homestead, just this side of Oak Knoll, remained in the family much longer than the original homestead. It was probably built by James Putnam, an uncle of Colonel Enoch, and passed down through Archelaus to his son, Doctor Archelaus, then to his son, James A., whose heirs sold it to Mr. Lander.

John A. Putnam, of Danvers, is one of the children of James A. Hon. James Putnam, of whom Chief Justice Parsons said, "he was the best lawyer in North America," an uncle of Dr. Archelaus, was undoubtedly born in this old house. He practised in Worcester, and among his students was John Adams, the second President; he succeeded Edmund Trowbridge as Attorney-General of the province, was raised to the bench and held other high positions. But he threw the weight of his powerful influence and character in favor of the Royalists and was proscribed as a Tory.

Two (Jonathan and James) of the sons of Lieutenant John have been thus mentioned. The next (Eleazer) went over to the site afterwards occupied by Phinehas Putnam, of the branch of Nathaniel, and now owned by Charles P. Preston, Eleazer being of the third generation and Phinehas of the fifth. One of the sons of Eleazer, Henry went to Medford, and it will be read elsewhere how he followed his sons to Lexington and was killed. Samuel, another son, established his home where the late Sylvanus B. Swan died, which was long the home of Samuel's son, Eleazer, "Squire Ely," pronouncing it with the "E" long and the "ly" short, widely known and trusted as magistrate, surveyor and conveyancer. Of the 'Squire's three sons, Rev. Israel Warburton Putnam, D.D., born in 1786, was a very distinguished clergy-

man, who was settled twenty years at Portsmouth, N. H., and thirty years at Middleboro', Mass.; Archelaus, a physician, practised in Windham, N. H.; and Samuel was for many years a distinguished teacher of Brooklyn, N. Y.

Reference has been made to the fact that Henry, son of Eleazer, son of Lieutenant John, was killed at Lexington. One of his sons, also Henry, was wounded in the same engagement. Allen Putnam, a young son of this Henry, is said to have been the first to leap ashore of the colonists who went out to found Ohio. The Danvers home of Allen's grandfather seems to have been the old Amos Wilde house, on Locust Street, opposite Chestnut Street.

It was John, another son of Lieutenant John Putnam, who, in connection with his father, is supposed to have built the "old Clark house," still standing, not far north of Oak Knoll. Among his descendants the name of Caleb often occurs; none are known in Danvers.

At a gathering of the descendants of Deacon Benjamin Putnam, held a few years ago, one of our oldest citizens, as orator, recalled how, in his childhood he sat in the old brick meeting house when the familiar faces of the Putnams were in every part of the church, their titles, positions and scriptural names all objects of veneration. There were, he said,—

"Benjamin and Joseph, Timothy and Eleazer, Philemon and Ithram, James and Ebenezer, Amos and Stephen, Seth and Simeon, Israel and David, Peter and Gideon, Phinehas and Matthew, Ezra and Nathaniel, Moses and Samuel, Jesse and Daniel."

No genealogy of the family has been published, though Dr. A. P. Putnam has collected a rich store of material, of which, doubtless, he will some day give the public the benefit. For what is here given the writer is indebted to certain members of the family and others in Danvers, and to Dr. Putnam for a number of interesting notes which have been mainly incorporated in the manuscript.

THE PORTERS.—Among the records of old deeds at Salem is an agreement made the 10th day of the Third Month, 1643, between Samuel Sharpe, of Salem, and John Porter, of Hingham:

"The sd Samuel doth hereby sell unto ye said Jno. his fearme lying North of Mr. Skelton's farme Deceased with ye meadow ground thereto annexed & all appurtenances thereto belonging for ye summe of one hundred & ten pounds to be paid in money Cattle & corne at such rates as 2 or more indifferent men shall apprise them to be paid at 3 several payments that is to say fifty pounds the 20th of this present month being 3rd month 1643 and thirty pounds of ye 3d mo 1644 & other thirty pounds on the first day of ye 3rd mo in 1645 In witness whereof the parties above sd have hereunto set their hands the day and year above written

"SAMUEL SHARPE
"JOHN PORTER"

The deed, acknowledged before Governor Endicott, conveyed all the land now covered by the central village of Danvers, "the Plains." The purchaser, John Porter, came from England and settled at Hingham, where he was in 1635. He was sent from

Hingham as a deputy to the General Court in 1644, and that same year moved his family and his goods, probably by water, to make a new home at Salem Farms. According to the family tradition, he lived in the old house which was standing in the field near the present location of the Unitarian Church within the memory of living persons. He was a tanner by trade, and some remains of his tan-yard were discovered many years ago near the old house. An ancient well is still to be seen close by. John Porter was a man of energy and influence; he was well known throughout the colony, held many official positions,—selectman, deputy to General Court, etc.,—and he became probably the largest individual land-owner in what is now the town of Danvers. He and John Putnam stand together as prominent figures in our earliest history. Both were the ancestors of a very numerous and honorable line of descendants. If the Porters at first owned the most acres, certainly the Putnams came next, and the two families together held fully two-thirds of the present town and extended beyond its limits. Their farms were adjacent, inter-marriages, of course, occurred, and many now living here and elsewhere trace back their ancestry, often in more ways than one, through Porter-Putnam unions to the two Johns.

John Porter's oldest son, John, was a distinguished exception to the "honorable line" above referred to; he was a reprobate. He abused his parents till they appealed to the law. He was punished condignly, and were it not for his mother's forbearance would probably have been hung. Later his case became very conspicuous, because upon his appeal for redress made to the four commissioners of Charles II., sent over in 1664 to curb the liberties of the colonists, occurred a memorable struggle, in which the General Court had every advantage of position, and used it, to the final rout of the royal emissaries. The elder John refers in his will to his "sonne John Porter, who, by his Rebellious & wicked practices, hath been a great grief to his parents, & greatly wasted my estate." The man left no descendants to be ashamed of such an ancestor. Three other sons, like the three sons of John Putnam, became the heads of great families,—Samuel, Joseph and Israel.

Samuel, "mariner," settled in Wenham, on the easterly shore of the lake, and a part of his original farm is still occupied by his descendants. His only son, John, did much to wipe out the dishonor with which his uncle had stained his grandfather's name. This John was of high respectability, representative to the General Court and moderator of town meetings during the first quarter of the last century, and he married into another eminent family, the Herricks, of Alford's—now Cherry Hill. From the single thread of an only son the line now branched out in the families of five sons, they being of a family of eleven children, whose ages at death aggregated nine hundred and fifty-five years. Of these five sons,

Samuel, the oldest, lived on the lake-side homestead, and he, too, married well, his wife being a granddaughter of Governor Simon Bradstreet. Samuel's grandson Isaac was the father of Colonel Paul Porter, commander of the Ipswich regiment of militia in the war of 1812, and a very prominent citizen of Wenham, through whose children to the third and fourth generation the name is preserved in that town. One of the younger of the five sons just mentioned was Jonathan, an inn-holder of Wenham, who was also sent to the General Court. His oldest son was Benjamin, and with him the name returns to Danvers, and adds to our list of military heroes one of the most distinguished. On the pleasant southern slope of the first hill which one meets in driving from Danvers Plains to Topsfield is a well-preserved gable-roofed house, once one of the Rea homes. In a portion of this old house Zerubbabel Rea lived, a hundred and twenty-five years ago, more or less. Through his marriage with Sarah, widow of Bartholomew Brown, and daughter of Zerubbabel Rea, the place thenceforth became the home of Benjamin Porter, who had four sons. Of these, Moses was the oldest,—General Moses Porter, of whom a sketch appears in what is written concerning the Revolution. He was never married. The homestead passed to the third son, Zerubbabel. He, too, was a tanner, and certain stone door-steps in the vicinity are relics of his bark-mill, which stood in the rear of Augustus Fowler's residence, itself a well-preserved relic of two centuries ago. Zerubbabel Porter was also the very first shoe manufacturer of Danvers, the pioneer of that industry for which the town soon became noted. Until within a few years ago the little square shop was sitting in the angle between the highway and the drive to the Rea-Porter house, hugging close to the hill, which was the cradle of our shoe business. Of the men who were there employed, and of the growth of the business from the beginning, a few words will be found elsewhere. Zerubbabel Porter was one of the early Universalists, "was of rare intelligence, a ready speaker at town-meetings, wrote much and well for the newspapers, especially upon political subjects." The writer happened to come across this letter in the files of old papers at the Town-House:

"GENTLEMEN ASSESSORS OF DANVERS:

"I lately received my tax bill for 1839, find addition to my former taxes for many years past about fifty per cent. I think, gentlemen, you must have wrong conceptions of my property and circumstances. I am bordering on eighty years of age and feeble health, . . . as to property, not five dollars has been added to my estate the year past. . . . Perhaps you think I have stock in the Village bank, by the advice of friends I gave my note on Interest for five shares and have paid the interest ever since, you of course will judge the value of such property. . . . It has always been my fortune to labor hard, at the age of twenty-one it was my fortune to loose one of my hands, of course it made work extremely hard, now I am done, think of these things and doo what is right—if you can consistently with your feelings I think will abate some of my tax—I am gentlemen myself some acquainted with assessing taxes. I very well know it is a difficult office to perform, but

certainly we ought feel for the sick and feeble, for they are not in a capacity to gain property.

"I am Gentlemen, your friend and Servant,
"Z. PORTER."

Zerubbabel Porter died November 11, 1845, in his eighty-seventh year. He left two sons, Warren and Alfred. The former was lieutenant in the War of 1812, and afterwards was commissioned lieutenant-colonel. Three males only of the next generation are living in town, Elias Endicott Porter, son of Alfred; and Dr. Warren Porter and John W. Porter, attorney, sons of Colonel Warren, and upon one little boy, the son of the latter, at present depends the preservation in Danvers of this branch of the family name.

Of the male descendants of pioneer John Porter's next son, Joseph, there are none at all left here. They early scattered. One—Samuel, son of Eleazer, son of Samuel, son of Joseph—graduated at Harvard in 1763, became an eminent lawyer in Salem, was proscribed as a Tory, went to London and died there, after revisiting this country in 1798,—“a gentleman of culture and refinement, who contributed greatly to the enjoyment of the band of refugees at the weekly meetings of the New England Club in London during the war.”

One of the purchases which the first John Porter made, was that of the Emanuel Downing grant of five hundred acres near the Topsfield line. This farm he gave to Joseph upon his marriage with Anna, daughter of Major William Hathorne, and for many years it remained in the family, probably longer than any other in Danvers. It went down to the fourth consecutive Joseph, who died in 1895, and then passed to Captain Dudley Bradstreet, who married this last Joseph's daughter Polly, from whom it descended to his son, Major John Bradstreet. This is why this old Porter farm is commonly called the “old Bradstreet farm.”

To Israel, who established the third and last branch of the Porter family, his father by will bequeathed “my new mansion-house, with all ye housings there-upon, orchards and lands adjoining, so much as was by me purchased of Mr. Sharpe, also I do give him sixty acres of Skelton's necke, *i. e.* that pt wh I purchased of Mr. Skelton's daughters,” also “my interest in the Saw-mill near Skelton's neck.” By purchase from his brother Benjamin, who was unmarried, and otherwise, Israel retained all the southern portion and, as now settled, by far the richest, of his father's great landed property. One of these deeds from Benjamin to Israel, dated January 23, 1700, conveys “a certain parcel of land given unto me by will of my dearest father, and by him purchased part of it of Mr. Gott, part of Jacob Barney, Jeffery Massey, William Watson, John Pickard and Pasco Foot, all which parcels are commonly called Gott's Corner.” This “Gott's Corner” included a part of the beautiful estate which is known as the Burley Farm, now owned by George A. Peabody, Esq., and also the Proctor farm, and

other lands eastward. It was on or near the site of Mr. Peabody's residence that Israel Porter himself was living in witchcraft times. Israel died in 1706, leaving by will to his oldest sons, John and Israel, all of Sharpe's farm above the Ipswich Road. A deed of partition was made between John and Israel in 1809. John was a "mariner," and probably died in Boston. By virtue of a power in his will his widow Elizabeth, in consideration of twelve hundred and ten pounds, "good bills of credit on the Province," sold to Timothy Lyndall, of Boston, gentleman, four tracts embracing about two hundred and fifteen acres, July, 1715. The old Lindall house, which stood at the corner of Locust and Poplar Streets, has been referred to in what has been said of the Putnams.

Israel Porter's second son, Israel, one of the clerks of the Village parish, was the father of Ginger, a name now somehow gone out of fashion, who married Elisha Hutchinson and became the mother of another Danvers military hero, spoken of later, Colonel Israel Hutchinson.

William, the third son to leave descendants, seems to have lived east of Frost Fish Brook, then Beverly, now East Danvers; but, April 19, 1750, he sold his farm of two hundred and forty-six acres to "King" Robert Hooper, and thus another great slice of the Porter lands passed out of the family.

Benjamin, the fourth and last son of Israel to leave descendants, was the father of John, an inn-holder, and Benjamin, potter. One of the latter's sons was Israel, who lived during the last half of the last century, and was the father of Abijah and Benjamin. Abijah lived and died in the old house, on High Street, nearly opposite Aaron Warren's. This his son Isaac inherited, and, in a little cottage close by, the widow of Isaac, Eliza Jocelyn Porter, is living, in her ninetieth year. Abijah's brother, Benjamin, was well known as "Cap'n Ben," who made a fortune in the fishing business at Marblehead, came back to Danvers about 1835, and bought the Nathan Read mansion, near the Iron-Works. His son, Benjamin F. Porter, with his children, now live on the same estate; and it depends solely upon the young grandsons of Capt. Ben and the lawyer's little boy, before alluded to, whether the family-name shall be longer preserved where once it was so numerous and powerfully represented. A few other Porters in town are not of this stock.

The Mudges.—Though this family cannot be reckoned among the early settlers, they have been prominent in town for more than a century. Their ancestor was Thomas Mudge, who was born in England, about 1724, and came to Malden, where he was in 1657. His oldest son was killed at Bloody Brook in 1675, and two others were in Captain Moseley's company. His son John was one of the grantees to whom land was given for services in King Philip's War. John's son was Deacon John, and the deacon was the father of another John, who was a Malden farmer

and died in 1762. This last John had a number of sons, the eldest of whom was killed in his nineteenth year in the French War, under General Amherst; the youngest died from the effects of service in the Revolution; Simon, the fifth of a family of nine, is of especial interest here.

Simon Mudge was born in Malden, April 8, 1748. He was a carpenter, and he came to Danvers to live two years before the Revolution. The farm which he bought is the one now owned by Amos Pratt, on Centre Street. Subsequently, his widow went to live with her brother, William Whittredge, on the farm at the corner of Dayton and Newbury Streets, where her son Amos continued to live and bring up his family. Simon Mudge also served in the Revolution, and, in July, 1776, marched away with a Danvers company for Ticonderoga. A diary which he kept of his march is preserved in the family and extracts have been printed. Very likely its custodian, who is one of the most zealous of temperance men, fails of being touched by this pitiful complaint:

"August the 6, 1776. Last night Ly in tentes the town being so full that we could neither get vituals nor Logeing till this morning there and Rum sells for nine Shillings and fore Pence a gallon and the most miserable stuff j ever Drank. Drawd for 62 men but no sauce recd. Orders to march to Ticonteroga to-morrow."

He was at Lexington in Captain Flint's company. His wife was Elizabeth Whittredge, of Danvers, who died in 1836, ninety years old; he died in 1799, in his fifty-second year, leaving six children. Of these, two were sons,—Simon and Amos, and but one daughter married,—Nancy, wife of Elijah Hutchinson, of Middleton. Simon was like his father, a farmer and carpenter, and lived and died, 1775–1853, on his father's homestead. His wife was a daughter of Silas Merriam, of Middleton, and the family of Amos Pratt are their only descendants in town; a son, William Whittredge, married a daughter of Jonathan Perry, and moved to Bedford, Mass., in 1856.

Simon's son Amos, born in 1782, was also a carpenter and farmer, and died April 7, 1853. His wife was Sarah Wilson, and they had six children, four sons and two daughters. Josiah, the oldest son, to whom the double occupation descended, is represented by the families of his son Albert H. Mudge and by those of George H. Peabody and Walter T. Martin. Otis, the next son of Amos, received a good academy education, for several years was a successful school teacher, and then began the manufacture of shoes, a business in which he was successfully engaged until the close of his life. He died in 1862 in his forty-ninth year, on the old homestead, leaving no children. He was in the Legislature of 1851, and helped to elect Sumner; was on the school committee and a selectman.

Edwin and Augustus Mudge sons of Amos, are among the most respected and influential citizens of the town. Both have represented their fellow-citizens at the State House, the former in the House, the latter in the Senate. Edwin Mudge's contribution of

his legislative salary towards the erection of the Soldier's Monument is mentioned in the chapter on the Civil War. Augustus is president of the savings-bank. In 1849 the partnership of E. and A. Mudge, shoe manufacturers, was formed, which, with the addition of Edward Hutchinson, in 1858, has remained since unchanged. Of this business something further appears in the sketch of the shoe industry of the town.

The two daughters of Amos Mudge,—Nancy and Caroline, married, respectively, Zephaniah Pope and James Marsh.

INCORPORATION.—The municipal individuality of Danvers begins January 25, 1752. For a considerable time previously there had been a growing desire for separation from Salem both at the Village and the Middle Parish. During the preceding summer a special committee, consisting on the part of the Village, of Samuel Flint, Cornelius Tarball and James Prince, and on the part of the parish, of Daniel Epes, Jr., Malachi Felton and John Proctor, considered the matter, and in anticipation of securing their end proposed that plan which, for more than a hundred years, was substantially lived up to, namely,—“Ye major part of ye selectmen and assessors shall be Chosen one year in one parish, and ye next year in ye other parish successively.” The committee were instructed at once “to labour,” both at old Salem and in the General Court,—a mild sort of lobby, perhaps, which was successful in obtaining desired legislation. The full text of the act of incorporation is as follows :

“Anno Regni Regis Georgii Secundi &c., Vicesimo Quinto.

“An act for erecting the Village parish and middle Parish so called, in the Town of Salem into a Distinct and separate District by the Name of Danvers.

“Whereas, the Town of Salem is Very Large and the Inhabitants of the Village and Middle parishes so called within ye same (many of them at Least,) live at a great Distance from that part of Salem where the Publick affairs of the Town are Transacted and also from the Grammar School which is kept in ye sd first Parish.

“And Whereas, most of the Inhabitants of the sd first Parish are Either Merchants, Traders or Mechanics & those of ye sd Village and Middle parishes are chiefly Husbandmen, by means whereof many Disputes & Difficultys have Arrissen and May hereafter arise in the managing their public Affairs Together, & Especially touching ye Apportioning the Public Taxes, For preventing of which Inconveniences for the future.

“Be it Enacted by the Lieut. Governour, Council, and House of Representatives, That that part of ye sd Town of Salem which now constitutes the village and middle parishes in sd Town according to their boundaries and the Inhabitants therein, be Erected into a separate and Distinct District by the Name of Danvers, and that said Inhabitants shall do the dutys that are Required and Enjoyed on other Towns, and Enjoy all the Powers, Privileges and Immunities that Towns in this province by Law Enjoy, except that of seperately chusing and sending one or more Representatives to Represent them att ye Genl Assembly, &c.

“Jany ye 25, 1752.”

A “district” differed from a “town” only in the matter of sending representatives to the General Court. A district could not do that; it sent a “delegat.” And so jealous was the King of that body

that the Governor was charged to consent to no division of territory which would add to its members. The act was considerably more than half a loaf, and the rest soon came. As to the origin of the name “Danvers,” there is yet some doubt. “D’Anvers” is an old English family name, evidently of French origin. In one of the numbers of the *London Art Journal* an article on ancient street tablets gives a cut of one in Chelsea with this inscription :

The conclusion accepted by S. P. Fowler, who has made the subject a study, is that “in some way not yet discovered the name came from Sir Danvers Osborne, Bart., the unfortunate Governor of New York, in 1753.” Mr. Rice has added: “I think it must have been through Lieutenant-Governor Phipps.”

It is believed that there is but one other town of the same name in the country, and that one, in McLean County, Illinois, is a namesake of the first. The western town was laid out about fifty years ago “and it was agreed to call it Danvers, out of regard to Israel W. Hall, who came from Danvers, Mass.” A speaking acquaintance is maintained between the two towns through the medium of local papers.

It may be interesting to see the record of the first meeting of the district, verbatim :

“At a Legall Meeting of ye Inhabitants of the District of Danvers, March^{ye} 4th, 1752, in ye first Parish in sd District—

“Voted Daniel Epes, Esq^r, Moderator for s^d Meeting, Voted Daniel Epes, Jun^r, Esq^r, Clerk, & Mr. James Prince Treasurer.

“Voted to Chuse Seven Selectmen for this present year, viz. : four in ye first Parish & three in ye Second Parish, & to chuse by written Votes, & chose Mr. Archelaus Dale, Mr. John Andrew & Mr. Henry Putnam, to tell ye Votes Chosen Selectmen, Daniel Epes, Jun^r, Esq^r, Captain Samuel Flint, Deu Cornelius Tarball, Mr. Stephen Putnam, Mr. Samuel King, Mr. Daniel Gardner, & Mr. Joseph Putnam ; & the above Named Persons were chosen Assessors and Overseers of ye Poor.

“Voted to Chuse four Constables, viz. ; Two in ye first and Two in ye Second Parish ; & Chose Mr. David Goodale for ye West Ward in ye first Parish, & Mr. Samuel White for ye East Ward in sd first Parish, and Chose Mr. Roger Derby Constable in ye East Ward, and Mr. Jonathan Twiss Constable in ye West Ward in ye Second Parish.

“Voted to Chuse five Tithingmen, & Chose Mr. Samuel Putnam, Jun^r, and Mr. Archelaus Putnam, Jun^r, for ye first Parish, & Chose Mr. Samuel Osbon, Jun^r, Mr. James Upton & Mr. Timothy Upton, for ye Second Parish.

“Voted Mr. John Andrew, Mr. John Preston, Mr. Francis Nurse, Lieut. David Putnam, Mr. Jacob Goodale, Mr. George Goad, Surveyors of High ways for the first Parish.

“Voted En^d John Procter, Mr. Andrew Mansfield, Mr. Jasper Needham, Mr. Jonathan Russell, Mr. James Goad, Mr. James Buxton & Mr. John Southwick, Jun^r, Surveyors of High ways for ye Second Parish.

“Voted Mr. Jonathan Putnam and Mr. John Osbon Hayward.

“Voted Israel Cheever and Mr. James Upton, Sealers of Leather

“Voted Mr. Samuel Holton, Mr. Benjamin Putnam, Mr. John Osbon and Mr. Ebenezer Marsh, fence Viewers

"Voted Jonathan Putnam & Mr. David Goldthawyt, Clerks of y^e Murkett.

"Voted Mr. Daniel Rea to take Care that y^e Laws Relating to y^e Preservation of Deer be observed.

"Voted Mr. Henry Putnam & Mr. David Goldthawyt Sur^r of Lun-her.

"Voted Mr. James Chapman, Mr. Ebenezer King, Mr. John Brown & Mr. Gideon Foster, to Take care that y^e Laws relating to y^e preservation of alewives be observed.

"Voted Mr. Walter Smith, Mr. John Vinne, Mr. George Wiat, Jun^r. Mr. Israel Hutchinson, Mr. John Oaks, Mr. Ebenezer Goldthawyt, Mr. Daniel Marble, Jun^r., Mr. Jonathan Osbon & Mr. Jonathan Trask, Jun^r. Hog Reaves.

"Voted Mr. Hugh Kelly, Mr. David Foster & Mr. Ebenezer Boyce, Pound Keepers.

"Voted that y^e Selectmen be Hereby fully Impowered to agree with the Town of Salem concerning our proportion of the poor in the Alms House, & Settle y^e Number, and take care of them as they shall think best, and make Report of their doings att the Adjournment of this meeting.

"Voted To mend the High ways in s^d District by Days' works, and that Surveyors be chosen in Different parts of y^e Distr., & that y^e selectmen shall appoint y^e surveyors their Respective Wards, and the selectmen to Tax y^e Polls & Estates, and such persons as chuse to pay their s^d Tax in Labour, shall have free Liberty so to do; and such persons as will not pay their Tax in work on y^e s^d High ways, shall be obliged to pay the same in money, according as they are Taxed, and the Surveyors are Hereby fully Authorized and Impower'd to Collect and Gather the s^d Taxes in there Respective Wards, & to be accountable for y^e same, to the Selectmen, & the Allowance shall be, Two Shillings and Eight pence p. Day for a man, & that boys & Teams be Left to y^e Surveyors to sett y^e Value, & y^e Surveyors shall give Timely Notice to the Persons Taxed in their Lists, not Less than three days and the High way work shall be done, some time between the first day of April & y^e first Day of November, and att no other Times, Except in Cases where it may Happen that there may be Necessity.

"Voted That this meeting be Adjourned to y^e 18th Instant, att one of the Clock in y^e afternoon, to this Place.

"DANIEL EPES, Jun^r., Dist. Clerk."

"The Inhabitants met according to Adjournment.

"Voted to Excuse David Goodale from being Constable this year.

"Voted John Swinerton Constable in y^e room of David Goodale.

"Voted Jonathan Twiss Surveyor of high ways in y^e room of James Goodl.

"Voted Samuel Osbon, Jun^r, Surveyor of high ways in y^e Room of James Duxton.

"It being put to Vote whither y^e Inhabitants will raise Two Hundred Pounds Lawfull mony, to Defray y^e Charges of y^e District, & the County Tax, Exclusive of high ways for this present year It passed in y^e Affirmative.

"It being put to Vote whither y^e Inhabitants will raise one Hundred & Fifty pounds Lawfull mony, to Defray the High way charges. It past in the Affirmative.

"Voted That y^e Swine may go att Large, provided that they are yoked & wringed, &c., according to Law.

"Voted That Meetings of the District shall be warned for y^e future, by posting attested copyys of y^e Warrants for Calling s^d Meetings, on the Meeting-House in y^e first parish, & on y^e Meeting-House in y^e second parish.

"Voted That y^e Selectmen take y^e Care of our Interest in y^e Alms-house in Salem.

"Voted That y^e Selectmen be Hereby fully Impower,d to Settle with y^e Town of Salem, Relateing to y^e School mony, & all other accounts, and to Receive y^e Mony that may be Due from s^d Salem to us.

"Voted that y^e Selectmen be Impowered & Desired to Agree with some meet Person to keep a Gramer school in y^e District as soon as may be.

"Voted Ebenezer Jacobs Constable in y^e Room of Roger Derby.

"DANIEL EPES, Jun^r., Dist. Clerk."

Within two years boundaries were run between the district and all the adjoining towns, and many other measres taken, but the more the inhabitants acted after the manner of towns, the more impatient they grew to become a town. So on the 3d of February,

1755, they passed a vote "that it be the minds of the Inhabitants that the said District be erected into a seperate Town Ship, & that the said Daniel Epes, Jun^r., Esq., be and hereby is desired and impowered to prefer a Petition to the Great and General Court, and to use his Endeavours to get the same affected."

The act which conferred the full powers of a town upon Danvers, was not, however, passed until June 9th, 1757, and then only after persistent demands and against the protest of Thomas Hutchinson, Governor.

The population of the town at its incorporation was not far from 2000. The first State census, 1765, gives it then 2133. Subsequent figures may, for convenience, be given here:

1776.....	2,284	1840.....	5,020
1790.....	2,425	1850.....	8,106
1800.....	2,643	1860 ¹	5,110
1810.....	3,127	1865.....	5,114
1820.....	3,646	1870.....	5,600
1830.....	4,228	1880.....	6,598

In 1759 this memorandum was entered on the town records:

"Rec^d of Daniel Epes, Jun^r., a Province Note of twenty pound For supporting the French Neutrals the year past, Being the Charge the Town was at for the Same."

It recalls the melancholy event of Longfellow's "Evangeline." The English expelled some thousand of these inoffensive people from Acadia in 1755, and in the scattering a few came to Danvers. The only other mention of the unfortunate people is eight years later, when, on the question of supply, "they being goeing off," these votes were passed:

"Voted: to give the French Neutrals something.

"Voted: that the Overseers of the Poor shall allow the French people what they shall think just, and to be drawn out of the Treasury, and then the moderator dissolved the meeting."

It is common to find in the town records of a hundred years ago assessors' returns of the "Number of Coaches, Chaises, etc., in the Town of Danvers." There is an air of aristocracy in these lists, containing the names of those rich enough to "ride in chaises." But twenty-three persons in the whole town owned these vehicles in 1784. Those owning "fall back" chaises were Hon. Samuel Holten, Israel Hutchinson, Esq., Nathaniel Pope, Arch. Rea, Colonel Jere. Page, Joseph Flint, Widow Mercy Porter, Daniel Jacobs, Jr., Samuel Gardner, Captain Timothy Orne, Widow Elizabeth Poole. Nathaniel Putnam owned two "standing-top" chaises, and the following, one each: Benj. Putnam, Zorub. Porter, Colonel Enoch Putnam, Captain Wm. Shillaber, Jos. Southwick, Jr., John Dodge, Ebenezer Dale, Arch. Putnam, Phinehas Putnam, Amos Putnam, Gideon Putnam.

Regarding maps of the town, as early as 1794, the selectmen were directed to take a plan of the town in accordance with a Legislative act. No further action was taken until 1830, when the same instructions were repeated, and the next year the selectmen were

¹ Town divided in 1855.

authorized to publish a map if they should think proper. After some sixteen years, three lawyers, Northend, Abbott and Proctor, were directed to make a complete survey of the town for the correction of the plate. The maps of the old town of Danvers, now somewhat rare, embellished with cuts of "The Naumkeag House, North Danvers, E. G. Berry," "Moses Black, Jr., Wood and Coal-Yard, Danversport," "Third Congregational Church," and a few scenes in South Danvers, are printed from this plate.

For about half a century, commencing with 1816, it was the custom of Danvers people to be reminded of the dinner-hour and of bed-time by the ringing of church-bells. In the year mentioned it was first voted "that the Bells be rung at 12 o'clock at noon and at 9 o'clock A. M. (P. M.), provided it does not cost more than \$25 at each Meeting-House."

In 1832 Moses Black and others succeeded in adding the music of "the Bell at the Neck." The practice has been discontinued since 1863, except for a single year (1874), when the sextons rang its final knell. The dinner-hour seems likely to take care of itself, but if the later alarm could shorten the average "evening out" it might be well to bring it back again.

There were at least two flourishing local military companies a half a century ago. These were the Artillery Company and the Danvers Light Infantry. Doubtless much of interest might be written concerning both. This requisition was found among the old papers in the town-house.

"DANVERS Oct. 4th, 1816.

"GENTLEMEN:

"Having been ordered to parade the company which I command for the purpose of inspection and review of arms on the 19th day of the present month, it is my duty to request you, Gentlemen, and I do hereby request you, to provide a quantity of good powder sufficient for 100 men (that being the number born on the company roll) agreeable to the 23d section of Massachusetts Militia Law.

"Yours with respect,

"DANIEL PRESTON.

"Gentlemen Selectmen for Danvers."

Captain Felton presented a similar requisition for blank cartridges for his company of forty-five; and Captain Asa Tapley, Jr., for seventy men.

By-laws respecting fires, "better to promote the more populous part of the town" against danger, were formulated as early as 1819.

At the annual meeting of 1840, the need of a more complete system of by-laws was met by the election of Dr. Andrew Nichols, J. W. Proctor, John Page, Eben S. Upton and Elias Putnam as a committee of revision and construction, which committee reported to the meeting which elected them that "on examining the existing by-laws, they find them so imperfect and incomplete as to demand an entire revision and new arrangement. . . . They would recommend that a committee of one from each school district, together with the selectmen and clerk prepare such a system of by-laws as in their judgment the interests of the town require, etc." and that the same be printed, distributed and acted upon the next year.

This committee were: No. 1, John W. Proctor; No. 2, Moses Black, Jr.; No. 3, Elias Putnam; No. 4, John Preston; No. 5, Jeremy Hutchinson; No. 6, Nathaniel Felton; No. 7, Daniel P. King; No. 8, Samuel Brown, Jr.; No. 9, John Mansfield; No. 10, Elias Needham; No. 11, Andrew Nichols; No. 12, Henry Poor; No. 13, Samuel Preston.

Eight years afterwards the subject was revived, and John W. Proctor, Dr. Nichols, Moses Black, Jr., A. A. Abbott and Nathaniel Pope were appointed to draft a new code. At the first annual meeting after the division of the town, that is, in 1856, it became necessary to take a fresh start, and Moses Black, Jr., Edwin Mudge and Francis Dodge were appointed to perform the duty. In 1874 important revisions were made at the suggestion of a committee chosen for the purpose, namely, Rev. C. B. Rice, Israel W. Andrews and Henry A. Perkins. The last revision, 1883, was made by a committee consisting of Rev. C. B. Rice, D. N. Crowley, I. W. Andrews and George Tapley.

The part which Danvers took in the Revolution which came soon after the incorporation of town has been spoken of separately. During and some time after the Revolution the people of the town were concerned about small-pox, which in October, 1773, seemed "to spread in several of our neighboring Towns," and Ebenezer Goodale and Dr. Joseph Osgood were chosen to take preventive measures against its appearing here. Though in some respects an unpleasant topic to write of or to read of, nevertheless much may be learned from the records of these years, before Jenner's great discovery, of the way in which inoculation, which preceded vaccination, was regarded. In the spring of 1777, Benjamin Porter and others petitioned "to see if the town will grant Leave to inoculate for the Small-pox in that part of the Town called the Neck from the house of Benjⁿ. porter to the Bridge By Abel Watterses, the Town inhabitants only unless their should not so many of the inhabitants appear to Be Inoculated as could be convend in that case to take in persons From other towns; also to choose a committee to regulate the affair," and another committee to apply to the General Court for their approbation. The record of the meeting which considered this petition is short and to the point:

"At a Leagal meeting of the inhabitants of Danvers, may 19th, 1777, Voted, Dr. Amos putnam moderator; Voted not to Act on the Request of Benjⁿ. porter and others; Voted to Desolve s^d meeting, the moderator Declared s^d meeting Desolved."

The next year, measrnes were taken for suitable quarters "for the reception of those persons belonging to this Town who shall be taken with the Small Pox the natural way." Another move was also made for "Liberty to Inoculate such persons as shall chuse to take the Small Pox that way belonging to this town;" it had a momentary success:

"Voted to Inoculate in the Town for the Small Pox.

"Voted to reconsider the vote respecting Inoculation.

"Voted to dismiss the clause in the warrant respecting Inoculation; Voted that this meeting be Disolved."

In May, 1778, the advocates of inoculation gained more substantial yet temporary success. It was then voted "that Captain Derby's house be set apart for the Inoculation in this Town," and three men, whose names signify the interest taken in the matter, Captain Daniel Jacobs, Major Caleb Low and Major Samuel Epes, were appointed "to regulate said affair." In less than a fortnight Ezekiel Marsh and others brought to the selectmen their petition to put a stop to inoculation at the Derby farm, though when the selectmen issued their warrant it contained also another petition, of Benjamin Balch and others, for inoculation "in that part of the town called the Neck." The former petition was granted; the latter, refused.

Feeling ran high on the subject. This last meeting, held on the 8th of June, set the seal of its condemnation unequivocally upon the new and absurd idea. But it was not enough; it should be killed and buried beyond resurrection. Therefore, four days later another warrant was posted at the meeting-houses giving notice of a meeting on the 15th of June to take into consideration the desire of Mr. Arch's Dale and others for a final stop of the business, and it seems worth while to quote at length from the record of this meeting. Mr. Dale was himself moderator.

"Voted to put a final Stop to the Small Pox by Inoculation in Capt Derby's House, that was allowed of by the Town during their Pleasure; voted that the Stop take place this Day; voted no person be allowed to enter into Said Derby's House after the 15th of June, 1778, for Inoculation; voted if any Doct^r or any other person after the Said 15th Day of June, 1778, Shall Inoculate any Person whatever with the Small Pox in s^d House or Territories thereto belonging, Shall be liable to pay the Same fine that they would have been liable to have paid had they Inoculated without leave from the Town, and incur the Town's Displeasure; voted if any Person whatever Shall, after the Said 15 of June, 1778, Enter the Said House or territories thereunto belonging and be Inoculated contrary to the True Meaning of the Town, Shall pay the Same Fines & Suffer the Same Penalties, which by Law they are liable to as those Persons that Inoculate in their own Houses.

"Voted that all the votes and orders of the Town respecting the Stopping of the Inoculation that have or Shall pass be fairly Copied of by the Clerk and immediately Sent to the Doctors and others Concerned; voted to Choose a Committee; voted the Committee to Consist of three; voted Cap^t William Shillaber, Stephen Needham and Aaron Osborn be Said Committee, whose business Shall be to duly Inspect into and See that every vote and order of the Town respecting the Stopping of Said Inoculation be faithfully Complied with, and to prosecute any and every Person (if need be) that doth not Comply with the Same. Voted to Dissolve this Meeting, and the Moderator declared the Meeting Dissolved accordingly.

"Attest: STEPHEN NEEDHAM, Town Clerk."

Thus the matter remained for twelve years. Not till 1792 was any proposition bearing upon the subject brought before the town, and then public opinion had so far changed as to allow "persons to inoculate in proper places," under the superintendence of another committee of solid men.

At the annual meeting of 1793 the town was asked to consider if any allowance should be made "to some of the Persons that have had the Small pox that are poor;" and three pounds were voted to Nathan Upton, who was an unfortunate victim of the "natural way."

More than twenty years later "vaccination" was for the first time the subject of public action. General Gideon Foster's name was at the head of a petition for a town-meeting, held in July, 1815, for the especial purpose of considering the expediency of accepting certain proposals offered by one Dr. Fansher. They were as follows:

"Dr. Fansher begs leave respectfully to propose to the Town of Danvers that he will (in case it meets the approbation of the Town) Vaccinate at such places in the different Neighborhoods throughout the Town as shall be designed by a Committee for the Children to assemble for that purpose, and attend and examine his patients at the proper time to see that each individual are secure from the danger of the small Pox at 25 cents per head, and he believes that no person can possible do this nice business and do it justice for a smaller fee and be the gainer."

These proposals were accepted with the provisions reserved—there must be some Yankee to the trade—that all above six hundred were to be treated gratis. And if any one doubts that this Dr. Fansher was an important man just at this time, let him read the names of the committee chosen to inspect him, "two from each district and three in the districts where the clergymen reside:" No. 1, Rev. Sannel Walker, Squires Shove, Fitch Pool; 2, Rev. Jere. Chaplin, Nath'l Putnam; 3, Zernb'l Porter, Eben Putnam, Jr.; 4, Eleazer Putnam, Daniel Putnam; 5, Rev. Benj. Wadsworth, Joseph Hutchinson; 6, Nathan Felton, Jonathan Proctor; 7, Jesse Upton, Asa Gardner; 8, John Marsh, Amos King, 3d; 9, John Mansfield, John Douty; 10, Jona. Walcut, John Jacobs; 11, Gideon Foster, Elijah C. Webster; 12, Rich'd Osborn, Nathan Poor.

The following resolutions passed also at this time are well in advance of the times:

"RESOLVED, That this Town entertain a high opinion of Vaccination, and consider it (when conducted by skilful and experienced hands) a sure and certain substitute for the small Pox.

"RESOLVED, That this Meeting deems it the indispensable duty of a community to make use of the means that Divine Providence has given us to guard against every impending evil to which we are exposed, especially those which involve the health or the Lives of the Inhabitants."

CHAPTER XXXIII.

DANVERS (Continued).

REVOLUTIONARY HISTORY.

NOT long after the incorporation of Danvers, began the muttering of discontent all through the colonies because of the hardness of heart of the Pharaoh beyond the seas, and his oppression of his people. Long, long years was the storm brewing, and only the few saw with prophetic eye in the play of lightning on the distant cloud the outlines of that fearful word, Revolution. These years sifted out the hearts of men with crucial test, and when from the nearing cloud rolled out the thunder of war, patriotism had heroes for leaders.

The "writs of assistance" were issued in 1761; the

odious stamp act passed in 1765, when Franklin wrote, "The sun of liberty is set," and American merchants agreed to non-importation until its repeal. In that year the Colonial Congress met in New York at the invitation of Massachusetts, which formulated the rights of colonists, beginning "No taxation without representation." New taxes and the act for the enforced quartering of troops by citizens in 1767; the refusal of Boston to furnish quarters; the order for the arrest and transmission to England of leaders of the opposition; three years of constant irritation and a massacre in the streets of Boston, March, 1770; the tea-party, December, 1773; the Boston Port Bill; the first Continental Congress; John Hancock's Provincial Congress at Cambridge and its measures for committees of safety and minute men, 1774; then Lexington, war, independence, the United States of America.

Danvers kept pace with these events. How well its citizens grasped the situation of the times and how forcibly and well they expressed themselves, it has been left on the records for any to read who will. They came together after the passage of the stamp act; Thomas Porter was their representative in the General Court, and these are the words in which they instructed him:

"We the Freeholders and Other Inhabitants of said Town of Danvers, in Town Meeting assembled the Twenty-first of October, A. D. 1765, Professing the Greatest Loyalty to our Most Gracious Sovereign and our Sincere Regard and Reverence for the British Parliament as the Most Powerfull and Respectable Body of Men on Earth, yet being Deeply Sensible of the Difficultys and Distresses to which that August Assembly's Late Exertions of their Power in and by the Stamp Act, must Necessarily Expose us, Thinks it Proper, in the Present Critical Conjunction of affairs, to give you the following Instructions, Viz: That you Promote and Readily Joyn in Such Dutifull Remonstrances and Humble Petitions to the King and Parliament and Other Decent Measures as may have a Tendency to Obtain a Repeal of the Stamp Act or alleviation of the Heavy Burdens thereby Imposed on the British Colonies.

And in as Much as great Tumults Tending to the Subversion of Government have Lately Happened & Several Outrages Committed by some Evil Minded People in the Capital Town of this Province, you are therefore Directed to Bear Testimony against and do all in your Power to Suppress & prevent all Riottous Assemblies and unlawfull Acts of Violence upon the Persons or Substances of any of his Majesty's Subjects; And that you Do not give your Assent to any Act of Assembly that shall Imply the Willingness of your Constituants to Submit to any Internal Tax that are or shall be Imposed on us Otherwise than by the Great and General Court of this Province, according to the Constitution of this Government, and that you be carefull not to give your Assent to any Extravagant Grants out of the Publick Treasury.

"Other Matters we leave to your Prudence, Trusting you will Act with Honour & Justice to your Constituants and Due Regard to the Publick Wellfair.

"Attest: ARCS. DALE, T. Cler.

On the 20th of September, 1768, a meeting was held at the North Meeting-house to "see if the town shall send one or more persons to joyn committies of Boston and other towns in a convention to be holden at Fanneil Hall on the 22nd instant," and by unanimous vote Mr. Samuel Holten, Jr., was desired to represent the town in the convention. In December following he was voted two pounds and fifteen shillings for his service. Dr. Holten was charged "to look well to the rights of the people," and so con-

spicuous was his service among the "Sons of Liberty" that, as will be seen, they were in constant requisition wherever there was work for a mind ready for wise counsel and a heart full of untiring devotion. Let a few words be here written of him, just as his name first appears, though it be partly in anticipation of events which should follow later.

Samuel Holten was born June 9, 1738; he died January 2, 1816, in the seventy-eighth year of his age, and is recalled as an old man by a few very old citizens. He was of the third generation from Joseph Houlton, an original settler of Salem Village, and one of the honored heads, the line being Joseph, Henry, Samuel, Samuel. Samuel, Jr., studied medicine with Dr. Jonathan Prince, whose home was on the southern slope of the Asylum hill. He began practice when quite young in Gloucester, but soon returned here. In his thirtieth year he was chosen representative to the General Court. His services in the convention of 1768 have been alluded to. He was in the Provincial Congress of 1775, an active member of the general Committee of Safety, a member of the Executive Council under the provisional government, and soon his profession and all other interests, save those of his country, were abandoned. He was a delegate in 1778 to the Congress which framed the Articles of Confederation, being forty years old when his sphere of usefulness so broadened, and at some time he presided over the body, thus occupying temporarily "the first seat of honor in his country." He was five years in Congress under the confederation, and two under the constitution. Ill-health prevented his longer acceptance of the willing suffrages of his constituents. At home, he was five years in the Senate and twelve years in the Council. Though he seems to have made no special study of law, his reputation for probity and good sense was such that he was appointed as early as 1776 a judge of Common Pleas for Essex County, a position which he held about thirty-two years. From 1796 to 1815 he was judge of probate for Essex County. Duties to the State and the country did not, however, alienate him from the small affairs of his own town. His name will appear most conspicuously in the lists of town officers,—selectman, town-clerk, moderator, treasurer for twenty-four years, even hog-reeve. In the church and parish he was equally useful, being often instrumental as an arbiter in matters of difference and delicacy to bring them to a happy issue. His home was the somewhat ancient and stately house where the street which bears his name makes, after passing through Tapleyville, a sharp bend to the Village church,—now owned by Thomas Palmer. A reminiscence of his early practice as a physician has been preserved,—

four shillings and 13d. gave in.

The Holten High-School and the Holten Cemetery, wherein he is buried, also bear his name. He was one of the incorporators of the Massachusetts Medical Society in 1781, and of the Massachusetts Society for Promoting Agriculture in 1792. He is described as majestic in form, yet graceful, of pleasing countenance and engaging manners. "He was not a brilliant man, and perhaps not a great man in ability for any one line of action; but he was great in capacity for general accomplishment, in balance of mind and in the easy and regular and effective working of all his faculties upon whatever service they might be employed. He was faithful, too, in every trust. All things considered, he was the most remarkable man the town has ever produced." He left two daughters, one of whom married Dr. George Osgood, the other, Jethro, son of Colonel Enoch Putnam, and the descendants of Jethro's son, Philemon, are still living near the old homestead. Having in mind the traditional dignity and courtly appearance of the doctor, it occasioned a smile to come upon Gideon Putnam's record of a certain very lively meeting over the Water's River Bridge, when, "there being a Considerable Noise, the moderator got up on his seat and Called for order and made a Speech to the people." This was the doctor.

The men of Danvers were warned to meet May 28, 1770, "to see what methods said inhabitants will come into, in regard to the Publick Grievances the Province Labours under at this Day, in Particular, In regard to a Duty on Tea, etc., for the sole purpose of Raising a Revenue out of America, and to Act upon said affair what may be thought most proper." Dr. Holten, Arch. Dale, Captain William Shillaber, Dr. Amos Putnam and Gideon Putnam were instructed to consider and report, and what they reported was thus adopted:

"Voted that this Town Highly Approve of the Spirited Conduct of the Merchants of our Metropolis, and the other Maritime Town in this Province in an Agreement of Non importation well calculated to Restore our Invaluable Rights and Liberties. Voted that we will not ourselves (to our knowledge) or by any person for or under us, Directly or Indirectly Purchase of such Person or Persons any Goods whatsoever, and, as far as we can effect it, will withdraw our connection from every Person who shall Import Goods from Great Britain Contrary to the agreement of the Merchants aforesaid.

"Voted that we will not Drink any foreign Tea ourselves, and use our best Endeavours to prevent our Families, and those Connected with them, from the use thereof; from this Date until the Act imposing a Duty on that Article be repealed, or a general Importation shall take place, Cases of sickness Excepted.

"Voted, that the Town Choose a Committee of Twelve men to carry a Copy of these votes to every Householder for him to sign, and in case any Person refuse to sign; as above said, he shall be Looked upon as an Enemy to the Liberties of the people, and shall have their Name Register'd in the Town Book.

"Voted, that a copy of these votes be printed in the Essex Gazette, that

the Publick may know the sentiments of this town. The foregoing report being several times read, voted to accept the report by a unanimous vote.

"Voted, John Nichols, Arch^d. Dale, Benj^r. Putnam, Dr. Amos Putnam, Capt. Flint, Benj^r. Russell, Jun^r., Samuel Gardner, Jona. Tarbel, Jesper Needham, Wm. Shillaber, Joseph Seccomb & Deacon Benj^r. Sawyer; Be a Committee for the purposes mentioned in the foregoing report. Then the Moderator Dissolved the Meeting.

"Attest: SAM'L HOLTEN, JUNR., T. Cler."

In this connection a story is told of the wife of a distinguished patriot who, not quite able to forego the luxury of enjoying with a few callers a sip of the forbidden beverage, kept within the agreement not to drink a drop within the house, by entertaining them on top of the house. The incident has been charmingly told in the verse of Lucy Larcom. The old house is a conspicuous figure on the Plains, and one can easily imagine, within the low railing which still surrounds the easy slope of the upper portion of the gambrel roof, that little party enjoying their innocent rebellion. A story is told, too, of the suspicion of certain husbands of the south parish that a large coffee-pot "several sizes smaller than a common light-house," was surreptitiously used by their wives at quiltings and such gatherings, for tea-drinking, and the practice was effectively broken up by the discovery, one night when the grounds were being concealed as usual behind the back-log, of what remained of one of those little creatures which inhabit gardens, hop well and look ugly.

A number of years after, licenses to sell tea were issued, in this form:

"Mrs. Mercy Porter is permitted to sell Bohea and other India Tees by Retail for one year to commence from the Day of the Date hereof. Danvers, Feb'y 20, 1782.

SYLVESTER PROCTOR. } Selectmen
DANIEL PUTNAM. } of
STEPHEN NEEDHAM. } Danvers."

Similar permits were at the same time granted to Major Samuel Epes, John Dodge, Eben'r Sprague, Captain Gideon Foster, Zach. King, David Foster, Nathan Proctor and Captain Samuel Page.

In the middle of January, 1773, the worshippers at the North Meeting-House and at the South Meeting-House, found posted conspicuously a warrant under the hand of Gideon Putnam, town clerk, calling upon the freeholders and other inhabitants to assemble in town-meeting at two o'clock on the afternoon of the following day at the South Meeting-House "to see what method said inhabitants will take in order that our civil Privileges may be Restored and transmitted Inviolable to the latest Posterity." At the meeting so called Joseph Southwick was moderator. A motion was carried to choose a committee to take into consideration our civil privileges and to "Draw up something proper for the town to act." It was voted that Francis Symonds, Benjamin Proctor, Gideon Putnam, Captain William Shillaber, Doc'r Amos Putnam, Tarrant Putnam, Jun., and Wm. Pool be this committee. In two weeks the committee presented this report:

"The Freeholders & other Inhabitants of the Town of Danvers Legally assembled, by adjournment ye 1st Day of February, 1773, Taking into Consideration the Unhappy Situation of our Civil Privileges,—Proceeded to Pass the Following Resolves—(viz. :)

"I, that we will use our utmost Endeavours that all Constitutional Laws are Strictly adhered to, and Faithfully Executed, believing that Next to our duty to God, Loyalty to our King (in a Constitutional way) is Required in Order to the wellbeing of the Community.

"II, that when Government becomes Tyrannical & Oppressive we hold ourselves bound in Duty to Ourselves, & Posterity, to use every Lawful Method to Check the Same, least it Deprive the Subject of Every Privilege that is Valuable.

"III, that it is the Opinion of this Town, that the Rights of the Colonists in General, & this Province in Particular, have of late been greatly Infringed upon by the Mother Country by unconstitutional Measures which have been Adopted by the Ministry, tending wholly to Overthrow our Civil Privileges, Particularly in Assuming the Power of Legislation for the Colonists, in Raising a Revenue in the Colonies without their Consent, in Creating a Number of officers Unknown in the Charter, and investing such Officers with Powers wholly unconstitutional, and Destructive to the Liberties we have a right to Enjoy as Englishmen; in Rendering the Governor Independent of the General Assembly for his support, and by Instructions from the Court of Great Britain the first Branch of our Legislature has so far forgot his Duty to the Province, as that he hath Refused his Consent to an Act imposing a Tax for the Necessary support of Government, unless Certain Persons Pointed out by the Ministry were Exempted from Paying their just Proportion of said Taxes, and hath Given up the Chief Fortress of the Province (Castle William) into the Hands of Troops, over whom he Declared he had no Controul; in Extending the Power of the Courts of Vice Admiralty to such a Degree as Deprives the People of the Colonies (in Great Measure) of their inestimable Rights of Tryals by juries, & in that we have Reason to fear (from Information) the judges of the Superior Court & &c., are Rendered independent of the People for their Liberties.

"IV, that an act of Parliament intitled an Act for the better Perservation of his Majesties dockyards & c. (in consequence of which, Commissioners have been Appointed to inquire after the Persons, Concerned in burning his Majesties Schooner, the Gaspee, at Providence) has Greatly Alarmed us tho we are very far from Pretending to justify the Act, yet we Apprehend such Methods very Extraordinary, as the Constitution has Made Provision for the Punishment of Such Offenders—by all which it appears to us, that in Consquence of Some Unguarded Conduct of Particular Persons, the Colonies in General, and this Province in Particular are, for our Loyalty, Constantly receiving the Punishment due to Rebellion Only.

"V, that we will use all Lawful Endeavours for Recovering, maintaining & Preserving the invaluable rights & Privileges of this People and Stand Ready (if need be) to Risque our Lives & fortunes in Defence of those Liberties which our forefathers Purchased at so Dear a Rate.

"VI, that the Inhabitants of this Town do hereby Instruct their Representatives, that he use his Influence, in the Great & General Court, or Assembly of this Province, & in a Constitutional way Earnestly Contend for the just Rights & Privileges of the People that they may be handed down inviolate to the Late & Posterity, and as this depends in a Great Measure on the Steady, firm and United Endeavours of all the Provinces on the Continent, we further Instruct him to use his influence that a Strict Union & Correspondence be Cultivated & Preserved between the Same, and that they Unitedly Petition his Majesty & Parliament for the Redress of all our Publick grievances; we further Instruct him, by no Means to Consent to give up any of our Privileges, whether Derived from Nature or Charter which we has as just a Right to Enjoy as any of the Inhabitants of Great Britain; also that he use his Endeavours that ample and Honorable Salaries be Granted to his Excellency, the Governor, and to the Honorable judges of the Superior Court & &c., adequate to their Respective Dignities.

"The foregoing was Put to vote Paragraph by Paragraph and they all past in the affirmative.

"Voted, that a Committee of three men be appointed to Correspond with the Committee of Correspondence of the Town of Boston and Other Towns in this Province as Ocation shall or may Require.

"Voted, Doctor Samuel Holten be one of Said Committee.

"Voted, Tarrant Putnam, Jur., be one of Said Committee.

"Voted, Capt. William Shillaber be one of Said Committee.

"Voted, that the above Committee be Desired to Send an attested Copy

of the Resolves of this Town to the Committee of Correspondence of the Town of Boston."

"Voted, that this meeting be Dissolved & the moderator Dissolved it accordingly.

"Attest, GIDEON PUTNAM, T. Clerk."

Early in June, 1774, the Royal Governor, General Thomas Gage, finding Boston too hot to be comfortable, came out into the country and made his residence in Danvers. The place thus distinguished, not far from the present division line of Danvers and Peabody, called the "Collins House," the residence of Francis Peabody, has been kept in repair and preserved with fine taste in colonial style, and with its approach bordered by lines of ancient over-hanging trees, is one of the finest old mansions to be seen anywhere. It was built by Robert Hooper, a magnate of literal "codfish aristocracy." He was the son of a poor man but rose to great wealth, and for a time nearly monopolized the fishing business of Marblehead. Partly from the grandeur of his mode of life and equipages, but more especially because of his personal honor and integrity he was commonly called "King Hooper." It is a tradition among the fishermen that he, rare exception to men similarly engaged, never cheated them or took advantage of their ignorance. He built this house in Danvers about 1770. While Governor Gage resided here he was attended by a strong detachment of the Sixty-Fourth Royal Infantry, who were encamped on the opposite plain. The presence of these soldiers was to the growing hostility of the people, what the color of their uniforms is to the animal typically representing English character. They were under good discipline and generally behaved themselves well. The grandmother of Deacon Fowler, a daughter of Archelaus Putnam, remembers that one day two officers surprised her in Colonel Hutchinson's, her stepfather's, orchard at New Mills. To one who commenced to climb the fence, the other said, "Wait till the girl goes away; do not frighten her." Mrs. Fowler used to relate of Governor Gage that he often conversed with Colonel Hutchinson, was affable and courteous, and once, while sitting on a log before the door, he said, "We shall soon quell these feelings and govern all this," sweeping out his arm with an expressive gesture. The camp was watchful against surprise, realizing how unwelcome was its presence, and of what a lively spirit of rebellion they were in the midst. "Part of the Sixty-Fourth Regiment encamped near the Governor's, we hear, were under arms all last Friday," reads a contemporaneous newspaper item. Some pranks were played on the troops; at the drum-call to arms, a man so well disguised as to make his identity uncertain, but said to have been Aaron Cheever, dashed in on horseback shouting "Hurry to Boston! the Devil is to pay!" Early in September the regiment departed. There was a large oak on the plain which had been used for a whipping-post in the camp. The timber of this tree was afterwards used in

building the frigate *Essex* at Salem. The iron-staple to which the British soldiers were strung up for the lash was found imbedded in the wood, which, by a singular turn, became the stern-post of the frigate.

As one passes the old Collins house it is common to hear of a bullet-hole which has been preserved in the door, and there are various stories as to where the bullet came from. Hon. Daniel P. King stood sponsor to one of which this is the substance: On the gate-posts were large balls, ornamented with lead. A party of patriots going to join the army helped themselves to this precious material. The owner came to the door and remonstrated with such abusive epithets that a man hinted that his presence could be dispensed with by firing pretty near where he stood. "King Hooper" was supposed to be tainted with toryism. At a town-meeting in May, 1775, "a letter was read from Mr. Hooper, voted not satisfactory to the inhabitants." Later he made, in Marblehead, a more public recantation, and was received again in public favor, but he died, in 1790, insolvent. The house passed to the hands of Judge Benajah Collins, whose name it commonly bears. At one time it was in the Tapley family, and again owned and occupied by Rev. P. S. Ten-Broeck, who kept a girls' boarding-school there. It is said there were but two native born Danvers tories,—Rev. William Clark, son of Rev. Peter Clark, who, in 1768, was an Episcopal minister in Quincy, and was afterwards confined in a prison-ship in Boston harbor; the other, James Putnam, went to Halifax, became one of the council and a judge of the Supreme Court, and died at St. Johns in 1789.

In the winter of 1774-75 the clouds grew very black, the mutterings more unmistakable. On the 21st of November the town turned its back to England by voting to adhere strictly to all the resolves and recommendations of the Provincial Congress. Early in January each man was supplied with "an effective fire-arm, bayonet, pouch, knapsack, thirty rounds of cartridges and ball," and discipline was required three times a week, and oftener as opportunity may offer. Before long something happened.

One of the characters of New Mills was Richard Skidmore, a drummer at the siege of Louisburg, a soldier and privateersman in the Revolution, and, as will be noticed, a member of the alarm list of 1814. At the head of the latter company, an old man, he vigorously beat the same drum which he had used at Louisburg. A barrel of rum once fell to his share of a prize; as long as it lasted, he said, he heard "How do you do, Mr. Skidmore?" but as soon as the rum was gone, it was "How are you, old Skid?" again. Skidmore was a wheelwright, and had made several vehicles of a pattern not commonly seen in village shops, gun-carriages. The guns themselves were concealed somewhere, it is supposed, at the North Fields. Information of their existence reached Boston, and Colonel Leslie's regiment was sent to effect

their capture. Of the bloodless repulse at North Bridge, the persistent yet prudent conduct of Colonel Leslie, the valiant resistance of the men who blocked the march, the story belongs to Salem, and will there be found. Danvers men flew to the spot as the alarm spread swiftly over the country. Had one shot been fired, right there would have begun the war. This was the 26th of February, 1775.

Some seven weeks later a similar search party stealthily moved out from Charlestown to seize stores reported concealed at Concord. Paul Revere was out that night. Then followed Lexington, and Liberty entered upon her baptism of blood.

It was between five and six o'clock on the morning of April 19, that the engagement took place on Lexington common. The British moved on and arrived at Concord, some six or seven miles beyond, about nine o'clock. By that time the rapid alarm had reached Danvers, sixteen miles away. It met with instant response. Two companies of minute men and three companies of militia, from one hundred and fifty to two hundred men, hurried to the scene of action. Learning of the retreat from Concord, the objective point was to reach Cambridge soon enough to cut off the British from effecting a return. To do this they went on a run, and in a few hours they were in the midst of action. Few well men could be found in Danvers that day; at New Mills not one.

The women who were left alone at New Mills gathered at the house of Col. Hutchinson to watch and wait together. To their anxious vigil news of the fight came on the evening of the nineteenth. Were the men safe? Most of them. Were any hurt? Some. Were any —? Yes, young bride of a few weeks, your husband, Jotham Webb, was one of the first martyrs to Liberty. Six others, only one more than twenty-five years old, lost their lives, of the men who went out from Danvers,—Henry Jacobs, Samuel Cook, Ebenezer Goldthwaite, George Southwick, Benjamin Daland, Jr. and Perley Putnam. Nathan Putnam and Dennison Wallace were wounded; Jos. Bell, missing.

On the evening of the twentieth, several men on horseback drove up to the house where the women waited, escorting a horse-cart which bore a precious burden. On the kitchen floor of that house which is still standing, the dead were unrolled from the bloody sheets, and the next morning were taken away for burial. Danvers suffered more than any other town after Lexington. The corner-stone of the monument at the corner of Main and Washington Streets, Peabody, was erected in commemoration of the dead, April 20, 1835, the sixtieth anniversary of the fight. Gen. Gideon Foster, who led the way to Lexington, took part in the exercises, and a number of survivors of the fight were present.

Of the five Danvers companies which took part in the flight, two, commanded by Captains Samuel Epps and Gideon Foster, were composed mostly of south

parish men, and their muster rolls will be found under the history of Peabody. The three other companies were composed of the following men, most of them then living within the present limits of Danvers:

HUTCHINSON'S COMPANY.—*Captain*, Israel Hutchinson; *Lieutenants*, Enoch Putnam, Aaron Cheever; *Ensign*, Job Whipple; *Privates*, Samuel Goodrich, Eliphalet Perley, Nathaniel Cheever, Eben Andrew, James Burley, Samuel Chase, Nathaniel Durton, Henry Dwinells, John Francis, William Freetoe, Nathan Putnam, James Porter, Tarrant Putnam, Thomas White, Samuel Baker, Samuel Fairfield, Benjamin Porter (3d), Jonathan Sawyer, William Towne, W. Warner, Perley Putnam, Benjamin Shaw, William Batchelder, Jotham Webb. Also twenty-four men from Beverly.

PAGE'S COMPANY.—*Captain*, Jeremiah Page; *Lieutenants*, Joseph Porter, Henry Putnam; *Ensign*, Richard Skidmore; *Privates*, Samuel Strickney, James Putnam, Benjamin Putnam, Sr., Daniel Bootman, David Bootman, John Nichols, Jr., John Brown, Jethro Putnam, Jeremiah Putnam, William Fanno, John Ward, Michael Webb, Benjamin Kimball, Benjamin Kent, Stephen Putnam, Joseph Smith, Elisha Hutchinson, Benjamin Stickey, Mathew Whipple, Enoch Thurston, Phillij Nurse, Robert Endicott, David Felton, Daniel Verry, David Verry, Archelus Rea, Jr., James Goody, Nathan Porter, Samuel Whittmore, Nathan Putnam, Peter Putnam, Samuel Fowler, Samuel Dutch, Eben Jacobs, Jr., Samuel Page.

FLINT'S COMPANY.—*Captain*, Samuel Flint; *Lieutenants*, Daniel Putnam, Joseph Putnam; *Ensign*, Israel Putnam; *Privates*, Asa Upton, Abel Nichols, Thomas Andrew, Amos Tapley, William Putnam, Joseph Daniels, Joshua Dodge, Jonathan Sheldon, William Goodale, Benjamin Russell, Mathew Putnam, John Hutchinson, Jr., Aaron Tapley, Levi Preston, Peter Putnam, John Preston, Daniel Lakeman, Israel Cheever, Eleazer Pope, Jr., Aaron Gilherl, Nathaniel Smith, Jonathan Russell, Daniel Russell, Jethro Russell, John Hutchinson, Stephen Russell, Geo. Small, Jr., Nathaniel Pope, Jr., Joseph Tapley, Simon Mudge, William Whittredge, Josiah Whittredge, Eben McIntyre, John Kettel, Benjamin Nurse, Eleazer Goodale, Amos Buxton, Jr., Reuben Barthirk, James Burch, Michael Cross, Israel Smith.

There was another Danvers man killed at Lexington, the only one credited to Medford,—Henry Putnam. He was the youngest son of Deacon Eleazer Putnam, and sold his father's homestead about 1745 to Phineas Putnam, great-grandfather of Charles P. Preston, the present occupant of the estate. Of this Henry, it is related that, while on a journey from Medford to Connecticut, he stopped over night at Bolton, fell in love with his host's daughter, proposed in the morning, was immediately married, and, with his bride, drove back her dowry, consisting of two cows and twelve sheep. He was captain of a company at Louisburg, and was exempt by age from duty, when he followed his five sons to Lexington.

The record of the next town-meeting after the battle, held on 1st day of May, is expressive of the watchfulness of Danvers:

"*Voted* that there be two watches kept in the town of Danvers. *Voted* that one watch be kept on the road near the new mills and the other watch at the crook of the roads near Mr. Francis Symonds. *Voted* that each watch consist of 13 men every night. *Voted*, to choose a Committee of Seven to regulate the watches. *Voted*, John Nichols, Benjamin Proctor, Benj. Porter, Capt. Shillaber, Nathaniel Brown, Stephen Needham and Deacon Asa Putnam be said Committee. *Voted* that if any person refuse to watch if warned by the Committee (or any one of them) his name shall be returned to the Committee of Inspection for this town, and if his reasons are not judged sufficient he shall be posted in the newspapers. *Voted*, to choose a Committee of three persons to procure teams to cart stones to Watertown. Mr. Arch. Dale, Capt. John Putnam & Mr. Jonathan Table was chosen. *Voted*, to be concerned with the neighbouring towns in establishing a post between the towns of Newbury Port and Cambridge. Doctor Putnam, Mr. Stephen Needham & Capt. Epes be a Committee to settle the affair with the neighbouring towns. *Voted*,

as the sense of this Body of people that we Disapprove of Firing any Guns except in cases of alarm or actual engagement."

A minute may here be made, that in 1850 Danvers received a courteous invitation to be present at the 75th anniversary of the "Concord Fight," and the delegation sent were John W. Proctor, John Page, Robert S. Daniels, Samuel Preston, Henry Cook, Moses Black, Dr. George Osborne, Daniel Putnam, Jonathan King, Samuel P. Fowler, Eben Sutton, Elias Savage and Fitch Poole. At the centennial anniversary our selectmen added to the occasion the dignity of their presence.

After Lexington the yeomanry suddenly found themselves a besieging army about Boston. The second Centennial Congress met May 10, 1775, recognized the actual existence of war, appointed Washington commander-in-chief and commissioned four major-generals; but the only commission delivered, and that by the hands of Washington, was to Israel Putnam, a son of Danvers, whose biography is a matter of national history.

The watch, which had been maintained since Lexington, was discontinued July 17, 1775, Congress having provided a guard for sea-port towns. In September following, Colonel Benedict Arnold camped at Danvers on his march to Quebec.

And now that which at first was the dream of only the most daring of the leaders, became moulded into a great popular idea—Independence. On the 7th of June, 1776, Lee, of Virginia, offered in Congress the resolutions of freedom, which were not adopted until the 2d of July. But two days after its introduction, and irrespective of it, for news did not travel by lightning, the citizens of Danvers were warned to meet at the South meeting-house, June 18, to consider a resolve of "the late House of Representatives passed on the 10th Day of May, 1776," to the effect that each town should come together to instruct their representatives in the next General Court whether, in case of a declaration of independence by Congress, "they, the said inhabitants will Solemnly Engage with their Lives and Fortunes to Support them in the Measure."

Captain William Shillaber was moderator of the meeting at which these votes were passed:

Voted that if the Hon^{ble} Congress for the Safety of the United Colonies Declare them Independent of the Kingdom of great Britain, we the Inhabitants of this Town do Solemnly Engage with our live and Fortuens to Support them in the Measure.

Voted that the Town Clerk be, and hereby is directed Immediately to Deliver an attested Copy of the Proceedings of this Town Respecting Independency, to Majr. Samuel Epes Representative of said Town, for his Instructions how to Proceed in Case the Important question of Independency should come before the Hon^{ble} House of Representatives of this Colony.

The Town taking into Consideration the Paragraph in the Warrant Respecting giving a bounty to their minute men voted to give a Bounty to one quarter part of the militia that shall be Drafted out and stand at a minutes warning Provided they March voted that the Bounty or present Given shall be one pound pr month to Each minute man so long as they Continue in the Province Service, voted to dissolve this meeting and the moderator declared this meeting Dissolved accordingly.

"AT STEPHEN NEEDHAM, T. Clark.

When, on the nation's birth-day the Declaration was finally adopted by Congress, it was eagerly welcomed in Danvers, adopted without a dissenting vote, and spread for all to read upon the clerk's records. The Articles of Confederation were likewise unanimously approved, February 9, 1778, but the Constitution proposed for Massachusetts that year met an unanimous vote the other way. From the summer of 1777 consideration was from time to time given to enforcing the "acts respecting the prices of goods and all other articles in the Town." A meeting was called July 5, 1779, "to have the proceedings of Boston of the 17th of June last communicated, and to know the minds of the Inhabitants of the Town respecting a convention of Delegates from the several committees of correspondence, etc., in the State proposed to be held at Concord on Wednesday, the 14th instant."

On this it was resolved "that the town will do all in their power to reduce all the Exorbitant prices of the necessaries of Life, and Desire one of the Committee of Correspondence, etc., to attend at the said convention at Concord if they shall think proper."

Dr. Amos Putnam was moderator of the meeting, which, August 2, 1779, heard and considered the action of the convention. Deacon Edmund Putnam, Colonel Hutchinson, Archelaus Dale, John Epes, and Dr. Putnam withdrew, and, after a short adjournment, reported "that the resolves and addresses of the convention are well planned for the Public Good," and on their recommendation this vote was passed:

"(Viz.): Resolved, That we will Exert ourselves and do all in our power to carry the Same with all the wholesome Laws heretofore made for the Like Purpose into Execution, and in Testimony of our Sincerity therein we recommend that the Inhabitants of this Town here unto Set their hands by Subscribing their Names from Twenty one years old and upwards and that the Committee of Safty be Directed to offer y^e same to the Inhabitants, aforesaid and deal with all that refuse to Sign the Same (if any should be) as Directed in the Resolves aforesaid, and that the Town Clerk be Directed to Give out Copies to the Several members of the Committee aforesaid for the Like Purpose."

Dr. Putnam, Aaron Cheever, Captain Shillaber and Archelaus Rea were added to the Committee of Safety. At a later time it was voted that "the prices Set by the Selectmen and Committe of Saftie to the Several Articles now read with Several resolves accompanying the Same be accepttable to the Town Voted Saml. Epes be a Committe to git a Sefient Number of the above Prices and resolves Printed."

There was one conspicuous instance of violation of these regulations. In the record of a meeting, 13, 1779, appears this:

"Voted Mr. Gideon Putnam has violated the resolves of the Convention at Concord by selling cheese at nine shillings per lb., as by evidence fully appeared.

"Voted Mr. Gideon Putnam be posted in one of the Public Newspapers of this State for Breaking one of the resolves of the Convention at Concord, as an enemy to his cuntry.

"Voted not to excense those persons who have not subscribed their names to carry the resolves of Concord into Execution. Voted to Post

the Several Persons in the public prints for not complying with the vote of the Town, as by a List from the Committee of Safety will appear."

Cheese at \$1.50 per pound seems rather high, but scarcity and inflated currency account for it. Rum was quoted at from \$20 to \$25 per gallon; molasses, £3 19s.; Bohea tea, £5 6s. per lb.; iron, £30 per cwt., and other things in proportion. An idea of the purchasing power of continental money may be had in the appropriations made by the town in October, 1880, for "beef for the army." It was voted that the sum of thirty thousand pounds be raised and assessed upon the inhabitants for the purpose of procuring beef, and Enoch Putnam, Jona. Sawyer and Timothy Patch were appointed a committee to carry out the vote. The vote to procure beef was then reconsidered, and, instead, it was voted to send the money direct to the county committee, of which Samuel Osgood, Esq., of Andover, was one. The following January, 1781, it was voted to raise eighteen hundred pounds in silver or an equivalent in paper money "for the use of the town to procure Continental soldiers." The recruiting committee were Ezra Upton, John Dodge and Capt. Samuel Page, who were instructed not to exceed one hundred and eighty silver dollars for each man for three years or the war, "exchange of paper money for silver money at seventy-five for one." At the same meeting these votes were passed:

"Voted that this Town be formed into as Many Classes as there are Soldiers to procure for the Town for three years or During the War. Voted that the Friends be Excused from being Classed with the rest of the Town. Voted to reconsider the vote respecting not Classing the Friends, and that the Friends be subject to be Classed with the other Inhabitants of the Town."

Thus all through the war those who remained at home helped to uphold the government and supply the army. There were brave patriots, then as ever, who never fired a musket, but were none the less devoted and useful.

During the eight terrible years Danvers was represented at the front as well among the leaders as in the ranks. On the roll of honor the names of some of her sons are written very high. Ranking highest were three Generals, Israel Putnam, Moses Porter, Gideon Foster; next, three Colonels, Jeremiah Page, Israel Hutchinson, Enoch Putnam; two Majors, Caleb Lowe, Sylvester Osborn; six Captains, Samuel Eppes, Samuel Flint, Jeremiah Putnam, Samuel Page, Denison Wallis, Levi Preston, Johnson Proctor.

Some of these men will be mentioned in the history of Peabody, and others are noticed in other connections in this sketch. Of two of them, Porter and Hutchinson, something will here be said:

Moses Porter was an apprentice, eighteen years old when the war broke out. He helped to work one of the guns at Bunker Hill, and stuck to his piece when most of the men had fled. His country never allowed him to quit it afterwards, says Mr. Upham, whose words also are these: "From that day he bore a commission in the army of the United

States. He was retained on every peace establishment always in the artillery, and at the head of that arm for a great length, and until the day of his death. No man who fought at Bunker Hill remained so long a soldier of the United States. After the Revolution, in which he was wounded, he served with Wayne in the Indian campaign, and was at the head of the artillery when the War of 1812 took place. He was in active service on the Niagara frontier, and on the 10th of September, 1813, was breveted for distinguished services. He defended Norfolk, Va., in 1814, with great ability and vigilance, and saved that most vital point of coast defense. At successive periods after the war he was at the head of each of the geographical military divisions of the country." He died at Cambridge in 1822, and was buried on his father's farm, from which his remains have been removed to Walnut Grove Cemetery. A letter preserved from Captain Simeon Brown to General (then Lieutenant) Porter, 1781, says, "I went yesterday to Salem to get a Dictionary, but there are none to be had, therefore I cannot send one this time, but will try at Boston the first opportunity, and if one can be obtained I will send it on." Though a reflection on Salem as a literary centre, the letter speaks well for the young artillery officer who wanted a dictionary. Moses Porter never married.

The house which Colonel Israel Hutchinson built, the one in which the women gathered during that nineteenth of April and saw laid out on the floor the dead heroes brought back from the fight, is still standing at Danversport, close by the "new mills" which Archelaus Putnam built. Indeed, Hutchinson's second wife was the widow of Archelaus Putnam. For many years this house remained in the family as the residence of Briggs T. Reed, who married the colonel's granddaughter, Betsey; it is now owned by the Eastern, or Boston and Maine Railroad Company, and before long may give place to a much needed new station. Colonel Hutchinson was a descendant of the fifth generation from Richard Hutchinson, the emigrant, who came from Arnold, England, in 1634, and with his wife Alice and four children, settled near Hathorne's hill. He was born in 1727 and was living on the Plains in 1762, moving soon after to New Mills. His long and honorable military record began when he enlisted as a scout in Captain Herrick's company, in 1757. The next year, in the Lake George and Ticonderoga campaign he was a lieutenant in Captain Andrew Fuller's company; the next year a captain, he led a company, under General Wolfe, up the Heights of Abraham. A man with this experience was naturally enough chosen as a leader of the minute-men of '75. Soon after Lexington he was commissioned a lieutenant-colonel in Colonel Mansfield's regiment, and soon was promoted to full rank of colonel. He was at the siege of Boston, and his regiment was one of those detailed to fortify Dorchester Heights. He went to New York, commanded Forts Washington and Lee,

and was with Washington throughout the memorable retreat through New Jersey. On his return from the war he was conspicuously honored by his fellow-citizens, who sent him repeatedly to the General Court and elected him to other offices, until politics entered more into consideration, and Federalists carried the day against the colonel and his fellow-Democrats. In his old age he kept busily engaged at his business, which had been interrupted by the war. He worked in his saw-mill until he met there the accident which, in his eighty-fifth year, caused his death, March 16, 1811. He is buried in the Plains Cemetery. His son, Israel Hutchinson, Jr., was a deacon of the Baptist Church and long clerk of the society. The colonel's orderly-book, from August 13, 1775, to July 8, 1776, is in possession of the Massachusetts Historical Society. It contains a "descriptive list of non-commissioned officers and privates enlisted in the county of Essex to serve in the army of the United States," comprising five hundred and twenty-two names, including thirty from Danvers.

Colonel Hutchinson is recalled by Deacon Fowler, who was a boy of eleven when he died, as a smart old man, small in stature, clad in a white frock, working in his saw-mill. He was accustomed to call the boys in from the street to help him roll logs. He had not himself a lazy bone, and he abhorred laziness in others and despised loafers. His son, the deacon, entertained visiting ministers, and when one of these guests strolled in to look over the mill, the old man, taking him for a loafer, threatened to throw him into the pond.

How gladly the townspeople welcomed the close of the war, and withal, how vigilant they were for the preservation of the rights so dearly bought, may be judged from instructions given Colonel Hutchinson, June 9, 1783. After alluding to his conspicuous services during the war and at the General Court, the instructions proceed,—“The contest is over and a complete Revolution is happily accomplished. This town, sir, congratulates you on so glorious a period. . . . As the Independence depends solely (under Divine Providence) in the Union of these United States, you are to consider the confederacy of the States as Sacred and in no point to be violated. . . . You are to use your endeavor that no Absentee or Conspirator against the United States, whether they have taken up arms against these States or not, be admitted to return, and those persons that have returned, you are not to suffer such persons to remain in this Commonwealth. . . . In any matters that turn up, which you think militate against your Constituents, you are to apply for further Instructions.”

Danvers was represented in the march of Colonel Wade's Essex County Regiment, to suppress Shay's Rebellion. An orderly-book, now in possession of Dr. A. P. Putnam, gives the names of sixty-eight men of the company of Captain (afterwards Colonel) John Francis, fourteen of whom were from this town,

including four officers,—Daniel Needham, lieutenant; Daniel Bell, drummer; Josiah White, sergeant; Moses Thomas, corporal.

CHAPTER XXXIV.

DANVERS—(Continued).

ECCLESIASTICAL.

THE FIRST CHURCH.—By the terms of the act already referred to, which constituted Salem Village, all the farmers within the Village limits were to contribute “to all charges referring to the maintenance of a minister and erecting a meeting-house,” and five persons were to be appointed “among themselves or town of Salem,” to collect rates and levies, the constable of Salem to have power to make distress on the goods of any neglecting to pay. At the first meeting of the Farmers, about a month after the establishment of the Village, namely, November 11, 1672 (old style), five persons were chosen “to carry along the affairs according to the court order,”—Lieutenant Thomas Putnam, Thomas Fuller, Joseph Porter, Thomas Flint and Joshua Rea.

The first preacher at the Village was then also formally engaged,—Rev. James Bayley. He was a young man, but little over twenty-one years of age, a native of Newbury, and a graduate of Harvard in 1669.

For some seventeen years there was no separate and independent church. The condition of things was anomalous. While a considerable number of the members of the church of Salem Town worshipped, for convenience, at a place nearer home than formerly, but yet were not allowed to sever their connection with the parent church, there was, on the other hand, a complete parochial organization, corresponding somewhat to the modern “society,” in which, contrary to the usual Puritan polity, the franchise was not confined to church members. From this half-and-half state of things came, from the very first, trouble. The householders far outnumbered the church members. It can easily be imagined that certain non-church members, from the natural inclination to exercise newly acquired power, took too prompt and vigorous a part to suit those who had hitherto not been obliged to consult them. However that may have been, the young minister soon found his congregation divided into very marked factions for and against himself. A majority favored him, but the other side was a good instance of a “strong-working minority.” Mr. Bayley was employed from year to year, and each renewal of his engagement added to the determination of the opposition. That he had the courage to stay some seven years, as he did, speaks better of his grit than of his wisdom. But, after appeals to the parent church from both

sides, and a thorough investigation by the General Court, out of which Bayley came triumphant, “orthodox and competently able, and of a blameless and self-denying conversation,” he at last, about the beginning of 1680, gave up. He continued to remain in the village for some time after his resignation on land given him by certain parishioners, among whom was his most conspicuous opponent, Nathaniel Putnam. The land consisted of about forty acres, situated in part on the meadow and hill east of the meeting-house. The deed, though dated after his resignation, seems to be in confirmation of a gift promised or actually given soon after his engagement to preach. The recitation that “the providence of God having so ordered it, that the said Mr. Bayley doth not continue amongst us in the work of the ministry, yet, considering the premises, and as a testimony of our good affection to the said Mr. Bayley,” goes far to show that, after all, the spirit of fair play prevailed. Mr. Bayley eventually studied medicine, practiced in Roxbury, and died January 17, 1707.

In the latter part of 1672 it was determined to build a meeting-house “of 34 foot in length, 28 foot broad and 16 foot between joists.” The first meeting-house stood on the acre which Joseph Hutchinson donated for that purpose; its site is the northern side of Hobart Street, a little east of the old Hook house. Part of the meagre furnishings of this building consisted of the “old pulpit and deacons’ seats” taken from that very meeting-house preserved in Salem by the Essex Institute, the parent church having about this time built a new meeting-house, and bestowed these things on the Farmers.

Mr. Bayley’s successor was George Burroughs. He was engaged in November, 1680, having then been out of college ten years. He came from a rough experience in the wild district about Casco, where life was in peril from Indian assaults, but after three years stay he went back among the woods and savages, and, doubtless, preferred the certain dangers of the frontier to the treatment he received at Salem Village. The farmers voted sixty pounds for his first year’s support, one-third in money, the balance in provisions at stated rates, but they neglected to fulfil their agreement, and compelled him to run in debt to pay his wife’s funeral expenses. The unjust suit brought against him by John Putnam, in whose family he had boarded has been mentioned.

The third minister was one Deodat Lawson. Gift of God, his name implied, but Mr. Rice pithily says he could not have been divinely given to this people, save in the way of bare allowance. He remained from early in 1684, and left in the summer of 1688. Daniel Epps, the famous school-master who lived on the present Rogers estate, supplied the pulpit as a layman before Lawson was finally settled.

On the 19th of November, old style, 1689, a church was at length organized, and on that day began the pastorate of a man whose name will ever stand out

most conspicuous in the blackest chapter of New England history, the Reverend Samuel Parris. For in his family broke out and by him was fostered to its direful end, the Salem Witchcraft Delusion. In Mr. Upham's book the events of the preceding years which had a bearing in the accusations and trials, especially the divisions and animosities which, commencing with the Bayley troubles, grew from bad to worse through Burroughs' and Lawson's stay, are all collected and told with the skill of a novelist unfolding his plot to the climax of the catastrophe. Elsewhere in this book appears a summary of the sad story. Only here let it be said that to Danvers, this very town, and not to the present limits of the city of Salem, belongs the melancholy distinction of being the place in which the delusion had its origin. A little back from the present parsonage there is a distinct depression which marks the cellar of Parson Parris' house; here and there "witch houses" are still standing and lived in; and about the present meeting-house of the First Church, in some manner as of lineal descent, centre those associations of the scenes of 1692 with which the whole region is filled.

The covenant "agreed upon and consented unto by the Church of Christ at Salem Village, at their first embodying on y^e 19 Nov., 1869," was subscribed by these twenty-seven persons:

Samuel Parris, pastor.	Eliz. (wife to Sam.) Parris.
Nathaniel Putnam.	Rebek (wife to John) Putnam.
John Putnam.	Anna (wife to Briay) Wilkins.
Bray Wilkins.	Sarah (wife to Joshua) Rea.
Joshua Rea.	Hannah (wife to John, Jr.) Putnam.
Nathaniel Ingersoll.	Sarah (wife to Benjamin) Putnam.
Peter Cloyes.	Sarah Putnam.
Thomas Putnam.	Deliverance Waleott.
John Putnam, Jr.	Persis (wife to William) Way.
Edward Putnam.	Mary (wife to Sam.) Abbie.
Jonathan Putnam.	
Benjamin Putnam.	
Ezekiel Cheever.	
Henry Wilkins.	
Benjamin Wilkins.	
William Way.	
Peter Prescott.	

Parris rid the church of his ill-fated presence on the last day of June, 1696, having doggedly hung on to a position where he served but to perpetuate and keep alive the troubles for which he was so largely responsible. It is human nature to feel one's blood boil at the thought of the part this man, a minister of God, took in the murder of innocent people, but greater than he were not great enough to rise above the accepted ideas of their time. Through these poor instruments One that is greater than all was working in a way they knew not of. Only such a sacrifice could arouse mankind to the horror of their own unreason. The rocky summit of Gallows Hill bears witness that never again under civilization shall human life be imperiled by such superstition.

With the departure of Parris, a leaf was turned on the record of the dark days of the earliest history of the parish and church, and brighter days appeared,

when after much effort to fill the vacancy, an invitation to Rev. Joseph Green was accepted. He was a Harvard man, and was not quite twenty-three years old when he was ordained, November 10, 1698. Before this he had preached many months, the people had ample opportunity to know him and to become settled in their own minds. It was with unanimity that he was called, and the response which he made he entered in the church book: "I gave an answer to the church and congregation to the effect that if their love to me continued, and was duly manifested, and if they did all study to be quiet, I was then willing to continue with you in the work of the ministry." As an evidence of the new peace brought about by his ministry, certain members who had had nothing to do with the church since the witchcraft days, came to communion February 5, 1699, a red-letter day in the history of the church.

Two years later, and a day of thanksgiving was observed for continued peace and prosperity. The change, says Mr. Rice, was permanent. "Nothing, scarcely, before the settlement of Mr. Green, had been done by a united people. Nothing of importance, scarcely, since, in the space of a century and three-quarters, has been done in any other manner. No minister has been settled except with a practical unanimity; and in each case but one, I think, there has been no dissenting vote in church or parish. Nor has there been, in all that long period, a single serious and obstinate contention among the members of this church and society."

With the beginning of a new century the people determined to have a new meeting-house. Very likely more room was needed, but there were plenty of reasons why the old building should be abandoned. It might well have been dragged where the gibbets had stood and there burned to ashes, but with less poetic justice it was taken down and set up again as a barn on the opposite side of the road, where it stood, Mr. Upham says, "until, in the memory of old persons now living, it mouldered, crumbled into powder-post and sunk to the ground." The new building was erected on "Watch-house Hill," the site of three succeeding meeting-houses, including that now in use. The hill had been leveled considerably and otherwise cleared; it can easily be seen that the spot was wisely chosen by the earliest settlers for the location of a block-house defense against the Indians. The meeting-house of 1701 fronted north, facing Deacon Ingersoll's house. It was first occupied July 26, 1702. From the thirty-four by twenty-eight of the first building the dimensions were increased to forty-eight by forty-two. The building committee were Captain Thomas Flint, Joseph Pope, Lieutenant Jonathan Putnam, Joseph Herrick and Benjamin Putnam. The cost was about three hundred and seventy pounds, part of which was raised by subscription among persons outside of the village limits. Mr. Green contributed liberally and the town people helped somewhat.

A diary kept by Mr. Green has been preserved and printed by the Essex Institute, with notes by Deacon Fowler. It reveals the lovable character of the writer and gives many a glimpse of life in Salem Village during his pastorate. On the 26th of November, 1715, having just reached the age of forty years, and having completed eighteen years of ministry among his people, Joseph Green died, and was buried in the old cemetery which bears the name of one of his successors. Good and just man, the greatness of his work far exceeded the length of his life. Deacon Edward Putnam made this minute in the church-book.

"Then was the choyses flower and grenest olif tree in the garden of our Lord bear cut down in its prime and flourishing estate at the age of forty years and 2 days, who had ben a faithful ambasindor from God to us 18 years, then did that brite star seet and never more to apear her among us; theu did our sun go down, and now what darkness is com upon us. Put away and pardon our Iniquities, o Lord, which have ben the cause of the Sore displeasure and return to us again in marcy, and provide yet again for this, thy flock, a pastor after thy one hearte as thou hast promised to thy people in thy word, one which promise we have hope, for we are called by thy name; o leve us not."

June 5, 1717, a year and a half after Mr. Green's death, the Rev. Peter Clark was ordained. He was also a Harvard man, five years out, and about twenty-five years old. Hobart Street is named for Peter Hobart, the father of Mr. Clark's wife, who came here to live about 1730. Mr. Clark's pastorate lasted fifty-one years. Mr. Rice says of him: "Mr. Clark was a man very unlike his predecessor, and yet well fitted to serve the people among whom he came. He had a sharp and vigorous mind, with a taste for theological discussions." A modern congregation would find it hard to sit through a single sermon such as the Rev. Peter's people had to endure every week. A delegation once went to him to suggest that he administer his teaching in less heroic doses; but he said "No; any could leave when they had heard enough, but the sermons must go on to their appointed ends." Two volumes of his works, as well as a number of scattering sermons have been published. One of these, which Mr. Rice seems successfully to have analyzed back to its original plan, presents a scheme of heads and sub-heads, fearfully and wonderfully made—in all, eighty-four separate divisions. No wonder he was widely known as a stalwart preacher, and was called upon to deliver choice specimens of his literary and oratorical skill on special occasions in Boston and elsewhere. Once he had neglected for some reason to join in the prayers of neighboring ministers for the cessation of existing drought, but having been formally requested so to do, he also the next Sabbath prayed for rain, and it soon rained. His negro man, who knew well his master's character, said "he knew that wheu Massa Clark took hold, something would have to come."

During Mr. Clark's pastorate the first church bell was hung, in 1725; the town of Middleton was incorporated, 1728, and a church there organized in 1729 oc-

casioned the withdrawal of twenty-four members of the Village Church; and in 1752 the Village was separated from Salem and became a part of Danvers.

This entry in the church book, made by Deacon Asa Putnam more than half a century after Deacon Edward Putnam entered his touching obituary of Mr. Green, tells its own story:

"Now, it has pleased God in his holy Providence to Take away from us our Dear and Rev'd pastor by Death, Mr. Peter Clark, who departed this Life June ye 10, 1768—in ye Seventy-Sixth Year of his age, and on ye 15th day was his funeral. itt was attended by Great Solemnity; his Corps was Carried in to ye Meeting-house; a prayer was made by ye Rev'd Mr. Diman, of Salem; a Seaman Delivered by the Rev'd Mr. Barnard, of Salem, from Galatians, 3 Chap., 14 verse. Then Removed to his Grave with ye Church walking before the Corps, assisted by 12 Bears, with a great Concours of People following. . . . Now he is gone, Never to see his face no more in this world, no more to hear the Presious Instructions and Examples out of his mouth, in Publick or in Private, any more; that ye God of all grace would be pleased to sanctifie this great and Sore bereavement to this Church and Congregation for good, and in his own Due Time Give us another Pastor after his own heart to feed this People with Truth, Knowledge and Understanding, that this Church may not be Left as Sheep without a Shepherd, &c."

It was not until after more than four years that the vacancy occasioned by Mr. Clark's death was filled. The church repeated its action of a half century before. It took to itself another young man fresh from his studies, and relinquished the services of his life-work only when death called him to the fullness of his years. More than fifty-three years was Dr. Wadsworth pastor of this people. Over more than a hundred years the two pastorates of himself and his predecessor extended. It was but twenty-five years after the witchcraft times—they seem far back in our annals—that Mr. Clark was settled. The Missouri Compromise had been effected some years before Dr. Wadsworth's death. What chapters of history were enacted while these two men preached at Salem Village and the First Parish of Danvers.

Benjamin Wadsworth was born in Milton, July 18, 1750, graduated at Harvard in 1769, and was licensed to preach a few months before his ordination in Danvers. This event occurred December 23, 1772, and it was an especially great time for the parish. Certain festivities incident thereto have been the subject of local tradition which gives some hint of the nature of the liquid refreshment dispensed by some of the villagers to numerous guests from out of town. Judge Holteu made this minute:

"The utmost decency was preserved through the whole of the Solemnity and the Entertainment consequent, was generous and elegant, reflecting great Honour upon the Parish."

Among the items of the bill of costs for the "Entertainment," are:

"For Bisket, £2 5s. 0d.; Pork, Beef, Salt (?) and Rye and Injun Meal, £20 17s. 0d.; about one Ton of Good Hay, £25; for Turkeys, £8 14s. 0d.; for Malt, £0 7s. 6d.; for Rum, £0 8s. 0d.; Syder about half a Barrel £0 15s. 0d.; New England Rum, £0 16s. 0d."

Mr. Wadsworth's salary was at first fixed at ninety pounds. Not long after his coming, came the stirring times of the Revolution. The young minister was among the Danvers men who flew to the North Bridge

at Salem to repel Colonel Leslie's march. About 1784, by way of compromise for a new parsonage, the parish gave Mr. Wadsworth an acre of land on the road west of the old parsonage lot, upon which he erected the rather stately mansion which still bears his name. At this time, too, the square hip-roofed meeting-house which had stood the use of some eighty-four years, was considered too old and small, and in 1786-87 a new meeting-house, the third in the history of the parish, was erected. It was sixty feet long by forty-six wide, twenty-seven feet post, with an ordinary pitch roof. A square tower ran up in front, surmounted by a belfry which in turn was surmounted by a tall and slender conical steeple. The old bell of 1725 was hung in the belfry, but in 1802 a new bell was procured weighing six hundred and seventy four pounds and costing \$299.56.

This meeting-house was burned on the morning of September 24, 1805. "It was supposed to be set on fire by some incendiary," wrote the parish clerk. The accused person was so evidently insane that he "was therefore sentenced to receive no punishment but that of confinement as a lunatick." The greater part of the plate was stolen and suspicions were strong and well grounded that the real criminals were certain persons who used the poor imbecile for a cats-paw, but through lack of evidence they escaped conviction. The ruins had not ceased smoking when the standing committee,—Amos Tapley, Asa Tapley and Jonathan Porter, Jr.—issued their warrant for a meeting to be held the next week at the Upton Tavern, to consider rebuilding. It was voted to rebuild, that the new building should be of brick, that it should have a dome. The dimensions of the "Brick Church" were sixty-six feet by fifty-six feet, twenty-eight feet to the eaves, and the tower was "sixteen feet four inches square, having two wings, covered with a cupola, and terminated with a vane ninety-six feet from the foundation,"—Dr. Wadsworth's words. The corner-stone was laid May 16, 1806, and the finished building was dedicated November 20th of the same year. Dr. Wadsworth's sermon, then delivered, was published. Its rhetoric, especially in descriptions of the fire, is sufficiently lurid to meet the demands of the occasion. By an act of the Legislature, March 8, 1806, a number of Danversport people were transferred with their estates, from the South Parish to this parish; they had for some time maintained a practical connection here, though the territory of Danversport was never within the original limits of Salem Village and its inhabitants, belonged to the Middle Precinct or South Parish. "Ten respectable characters with their families," Dr. Wadsworth calls them. They were Samuel Page, John and Moses Endicott, Nathaniel Putnam, Samuel Fowler, Caleb Oakes, William Pindar, Jasper Needham, John Gardner, Jr., and Amos Flint, the last three being from what is now West Peabody.

A vote was passed in 1819 that the minister might read a portion of the Scriptures at the opening of the

meeting on the Sabbath and on "all other Publick Days, as in his opinion shall be to the advantage and benefit of his hearers."

In March, 1825, Dr. Wadsworth felt the approach of the end. Previous to that time he had scarcely known sickness. On the 18th of January, 1826, he died, in the seventy-seventh year of his life and the fifty-fourth year of his pastorate. In his last sickness he bought the old burial-ground which bears his name and gave it to the parish, and there is his own grave. An outline of his character, as presented by Mr. Rice, is here condensed:

"Dr. Wadsworth was a man of fine personal appearance, and with the bearing of a thorough gentleman of those days. He is described by the late Judge Samuel Putnam as 'of great bodily vigor, with limbs finely proportioned; about five feet ten inches in height, with a hard some and florid countenance.' But there are those of yourselves, with whom the figure of this former pastor is still familiar. 'I can see him now,' says Dea. Samuel Preston, 'precisely at the minute appointed, with a dignified step passing up the broad aisle, dressed in surplice and band, cocked hat in hand, the curls of his auburn wig gracefully waving over his shoulders; slightly recognizing the powdered dignitaries, such as Judge Holten, Judge Collins and others, as he passed; ascending with an agile step, the stairs of his high pulpit, and taking his seat under the huge canopy or sounding-board which hung suspended over his head.'

"The doctor was formal and ceremonious, but courteous without exception to all, and warm and kindly, withal, at heart. He kept his position, as the manner of those times was with ministers, a little apart from his people. The children looked upon him with a kind of awe; and the feeling extended to his family and the house in which he lived. The lad who drove his cows to their pasture was not expected to enter the yard by the front way. He could keep persons at a distance from him whenever he chose to do so, with wonderful civility and ease. He was reckoned by many to be reserved; and he was so with many, but not with his intimate friends. In his intercourse with his brother ministers he was often facetious and witty, which may be thought a singular circumstance. But even with his brother ministers he was understood to be a person of dignity. By one of them, Mr. Huntington, of Topsfield, it used to be said that 'when any of the brethren called upon Dr. Wadsworth, they were civil enough,' but when they came to his house 'they threw in their saddles at the front door.' The former part of this only should be believed.

"He was conservative in all his tastes and habits, and did not enter readily into new methods. He introduced the observance of the monthly concert near the end of his ministry, held in the afternoon of Monday; but there were at that time no other prayer-meetings.

"The weekly meeting on Friday evening dates from the settlement of his successor. The service of public or social prayer by the brethren of the church had fallen, indeed, considerably into disuse at this period, so that at the establishment of the Sabbath-school there was some difficulty in finding persons who were willing to offer the opening prayer.

"But, if Dr. Wadsworth had the weakness of a conservative temper, he had also its strength. He was steady and judicious in his work. He did little that ever needed to be undone, either by himself or by any one else. He was a lover of peace, and had wisdom to maintain it. He was able in his own life to illustrate, in a good degree, the principles of the religion he taught. He exhibited remarkable patience and calmness in the midst of difficulties, and resignation in time of trial. He had a steadiness of devotion and of trust, the power of which was not lost upon his people. And thus, if in its later years his ministry failed somewhat in general and marked popular effect, it did not lack in thoroughness and beauty of impression upon those that cherished its influences. It was long afterwards to be noticed that among those whose lives had been moulded by his ministry, there was to be found a rare and admirable type of Christian character."

In a little less than three months after Doctor Wadsworth's decease there was another ordination in the village. Once again the church took unto itself a young man who, in his turn was to grow old in its service. The young man, Milton Palmer Bra-

man, had preached somewhat during Doctor Wadsworth's sickness, and was speedily and unanimously called to become his successor. The date of the ordination was April 12, 1826. He resigned March 31, 1851, after a pastorate of nearly thirty-five years. Nearly one hundred and sixty three years before, the revered young Joseph Green came to Salem Village, and only four lives bridge the span between his coming and Doctor Braman's resignation. A single pastorate of half a century is here and there met with in the history of other churches, but a series of life pastorates like this, aggregating so many years, will not be easily paralleled.

The present parsonage property was purchased May 26, 1832, and was first occupied by Mr. Braman January 8, 1833. In 1835 a vestry or chapel was built on Hobart Street, east of the parsonage, where it stood until 1871, when it was bought and removed by G. B. Martiu. In 1838 an act of the Legislature incorporated Samuel Preston, Samuel P. Fowler, Jesse Putnam and their associates under the name of the First Religious Society in Danvers, and a month later, April 18, 1838, this act was repealed, and a new act passed, beginning, "The North Parish in Danvers, of which the Rev. Milton P. Braman is pastor, is hereby made a corporation," etc., and slightly altering the provisions of the former act so that the society "may assess the pews in any meeting-house hereafter erected by them or conveyed to them."

The new meeting-house to be "hereafter erected" was not long in coming. Fears were entertained of the safety of the brick meeting-house. "A certain cracking and settling of the walls which had for years been noticed, became too serious, it was thought, to be longer neglected." There was a unanimous vote to pull it down and build once more a new house. The present meeting-house, the fifth in line of succession, was finished and dedicated November 21, 1839. Its cost was about twelve thousand dollars. Jesse Putnam, Samuel Preston, William Preston, Nathaniel Pope, Peter Cross, Daniel F. Putnam (on his decease, Nathan Tapley), and John Preston were the building committee; Levi Preston, master carpenter. Dimensions of the building, eighty-four by sixty feet.

Early in Mr. Braman's ministry, 1832, a Benevolent Circle was formed among the ladies of the parish. Mrs. Braman was its first president. Some interesting reminiscences, written by Harriet P. Fowler, are here condensed:

"Let your readers come with me in imagination to some old-fashioned farm-house in the North Parish, now Danvers Centre. It is fifty years ago. From one to two in the afternoon the members are arriving, some in chaises, some in wagons, while others walk over the hills and pastures, not much impeded by stone walls or fences, as trains and pull-backs are not in vogue. At two o'clock quite a large company has assembled, the President reads a chapter from the Bible, and business commences. Some of the ladies have brought large bags and boxes. In one corner a smart, energetic woman is dealing out shoes to bind; a trying

ordeal for novices to sit by an old shoe-binder and try to turn off as many as she does. In another part of the room a lady is giving out material for stocks, those elaborate structures of hair-cloth, bombazine and Satin, in which men of that generation arrayed their necks. Wonder they were not stiff-necked for life! Press-boards, holders and flat-irons show that the ladies mean business.

"A group of elderly women are deftly plying their knitting-needles—wise women, who know that cold hands and feet make cold hearts—so they are providing warm mittens and stockings for fathers, husbands, sons. There is a table where shirts and collars are being made for the luckless wights who have neither mother nor wife to provide for them. A bevy of young misses are tastefully arranging patch-work for quilts, to be given to invalids, or sold to increase the funds of the society. At twilight work is suspended, and after a cup of tea and simple refreshments, it is again resumed till nine o'clock. In the evening the men drop in, making themselves useful by holding yarn for the young ladies or perchance threading the needles for the older ones, and generously responding when the collection was taken at the close of the evening.

"With the money earned we relieved the wants of the poor, clothed Sabbath school children, and bought them books; we carpeted the church and helped to build the chapel; we gladdened the heart of the home missionary, and accumulated quite a little fund found useful in subsequent emergencies. In such a meeting in one of these old-fashioned rooms could be seen the graceful and energetic Mrs. Braman, the quiet but efficient Mrs. Kettle, and many others whom we of the present might be proud to claim as mothers or grandmothers."

At the fiftieth anniversary of this society, celebrated November 8, 1882, ten of the fourteen original members then living were present.

In the year 1844 the church suffered the loss of those of its members, who formed what is now the Maple Street Church, at the Plains. This division occurred chiefly through consideration of convenience. The earlier losses, when Middleton was incorporated, and when the South parish was established, were of the same nature. But from time to time in the history of the church, members have separated from it to accept the doctrines of other denominations. All of the churches hereafter to be mentioned, except the Catholics, have drawn for their organization in a greater or less degree on the strength of the parent church. Yet the numerical strength of the First Church, in 1867, when there were two hundred and two members, was greater than ever before. The congregations were largest just before the withdrawal of the Plains people, a fair attendance on a pleasant Sabbath being about four hundred.

March 31, 1861, has been mentioned as the date of Dr. Braman's resignation. He had a number of times previously expressed a desire to be dismissed, but his people would not let him go. This time he had decided. "I have reached that time of life when I wish to retire from the labors which the ministry imposes on me, and when it is usually better to give place to younger men."

Dr. Braman was the son of a minister, Rev. Isaac Braman, of Georgetown, and his mother was the daughter of a minister. The father, in response to an invitation to attend the George Peabody reception in 1856, wrote: "If Barzillai, the Gileadite, when only four score years old, could think himself excusable for not going up to Jerusalem with his King, whom he highly esteemed and loved, much more may one who is in his eighty-seventh year be excused from

William P. Braman

going to South Danvers." The son, Milton Palmer Braman, second in a family of five children, went from Phillips Academy to Harvard, graduated from there in 1819, and after a year's teaching entered the Andover Seminary. He preached his first sermon at Danvers, in December, 1825. He married Mary Parker, of Georgetown, in November, 1826, seven months after his settlement here. He moved to Brookline shortly after his resignation, then to Auburndale, where he died April 10, 1882, in his eighty-third year. He was buried in the town of his birth after a brief service at the home of his aged mother.

Dr. Braman was a strong man. Some have placed him at the head of eminent divines reared in Essex County. He was greatly assisted by his wife, one of the wisest and best of women, who relieved him of family cares, so that he could devote his time to parish duties, and in these she was ever a thoughtful assistant. The son, grandson and great-grandson of ministers, all of whom were exemplars in their generation in the discharge of the pastoral office, he likewise, by his earnest and faithful preaching, made a deep impression upon his hearers, many being led to a saving knowledge of the truth and a devoted Christian life, of whom shining examples yet remain.

The present pastor of the church, Dr. Braman's successor, Rev. Charles B. Rice, was installed September 2, 1863, and is approaching the twenty-fifth anniversary of his settlement. Mr. Rice is a native of Conway, Mass. His father, Colonel Austin Rice, who died July 15, 1880, at eighty-six years of age, was for fifty years one of the leading men of western Massachusetts in religious and educational movements, but a few years before his death was sent to the Legislature, was one of the founders of Mt. Holyoke Seminary and a trustee of that institution at the time of his death. Rev. Mr. Rice has always taken an active interest in town affairs, has served on the school committee almost continuously since 1865, has represented his fellow-citizens in both houses of the Legislature, and has served on the State Board of Education. A permanent monument to the memory of Mr. Rice is the published "History of the First Parish in Danvers," which is an amplification of the address delivered by him at the celebration of the two hundredth anniversary of the parish. This book has been chiefly followed in the preparation of this short sketch of one of the oldest, most historic, and in all respects most interesting churches to be found in this country. Many interesting details have been altogether omitted for the reason that they are there easily accessible. Doctor Braman was living at the time of the anniversary. Something more must here be said of him, and from a sermon delivered by Mr. Rice, April 28, 1882, these extracts are taken:

"His strength was in the pulpit. Preaching stood foremost with him, and it was preaching fit to stand in that place of forwardness. His mind was logical, and thus he went clear of all mist and vagueness,

and his thoughts ran steadily toward some point he meant to reach. But he was not dull and dry in reasoning. Along with his logical movement there went a certain enlivening measure of imaginative and almost poetical fancy. Then he had a clear, shrewd sense concerning common life and common things, so that his style was terse and direct and struck sharply on actual practice. And then, hiding behind this shrewd practical sense, or in it, was a line of humor, ready to come into play where it might, and not coming into sight where it ought not. And then he had a gift of sarcasm at hand for use when it might be called for. By all these means he held attention to what he said, and his hearers were interested and entertained, and sometimes in a manner fascinated, even while they might be severely smitten upon.

"He was forcible, direct, clear and pungent. He laid hold on the intellect and sensibilities of his hearers both together. To an unusual degree his sermons ran close to life. I think this was their most distinguished characteristic. They were apt to concern, in some manner, those that heard them; and thus they entered into their thoughts and clung upon their memory. They were not uniform in strength, a thing not to be expected; but they were apt, all of them, to be in some part thoughtful, and of a quality to move one to some thoughtfulness for himself.

"He preached upon all Christian doctrines, and with frequency upon some. The doctrine of justification by faith was dear to him. He was skilled in depicting the lives of men, and he called often into use the great Scriptural biographies. The deal of those former ages rose up here, with bones and flesh and breath, and lived again under his hand. He dealt in this way with the good and the bad, with Moses and David and Pilate and Judas, and he may seem sometimes to have had a certain grimness of satisfaction in the work he might thus make with the bad.

"Dr. Braman drew great attention upon what are termed 'occasional sermons,' discourses preached upon the occurrence of the Fourth of July on a Sabbath day, or in connection with the death of prominent men, as General Harrison or Daniel Webster, or upon the annual days of Fasting or Thanksgiving. On these days this house was filled. People came sometimes in barges from the neighboring towns, and strangers were here often from a greater distance.

"His sermons were always written. He never spoke in the pulpit without notes. Up on one occasion, as he went to preach at South Danvers, now Peabody, his manuscript was forgotten, and he was greatly disturbed when he made the discovery, and unwilling to attempt to preach; but when the time, in the midst of the service, was come, and while yet he scarcely knew upon what he should speak, he went down to the platform before the pulpit, that he might not seem to preach, and there he did preach and in a manner which seemed to those that heard him to surpass his usual powers. He preached also, though he did not call it preaching, in the prayer-meetings he held in the chapel. It is remembered thus that at the chapel prayer-meeting, held on the evening of the day of Daniel Webster's burial, he spoke for a full hour, dwelling upon the burial scenes of great men, and making emphatic as he drew to a close, the insignificance of all earthly honors to one who had just entered into the presence of the holy angels and the Saviour and Judge of men.

"He spoke usually with little of gesture and nothing of oratorical art. His ordinary manner could not be called graceful. He had a well-known habit of rolling a strip of paper upon the fingers of his right hand, and after a certain established order of procedure, and he might be troubled if this resource failed. But when he was once under way in the pulpit upon a theme that stirred him, and was kindled with his topic, his ungraceful manner was either forgotten or it was changed, he gesticulated often with force and freedom, and the spirit of an orator was upon him.

"Dr. Braman was faithful and utterly fearless in rebuking wherever it seemed to him rebukes were needful. He was a conservative man. He was not changeable. He was not like the Apostle Peter. He was apt to stand for the cool side of things. But he stood for the cool side of things sometimes, it must be admitted, in a hot way, that would not have been unbefitting even to Peter.

"He was a strong opponent of slavery. They have misjudged him who from anything that occurred in his later years have thought of him differently. But in this matter his natural conservatism, and his legal habit of mind, had much force in shaping the course he took. As events moved rapidly forward, he himself advanced less rapidly, and in his dislike of all that seemed revolutionary in its origin or nature, he was led, we may think, too far in distrust or opposition toward those great popular movements which were designed under the shining

providence of God, to bring the gigantic evil he himself deplored—though by ways that did not please him—fearfully and gloriously to an utter end.

“Dr. Braman was a member of the School Committee of the town for twenty-five years, and Chairman of the Board for a considerable portion of that period.

“He was also a member from this town of the Convention held in 1853 for revising the Constitution of the State, and he bore an active and influential part in its proceedings.

“He went little into general society, and had not a liking for social assemblies.”

Mr. Rice reached the twentieth anniversary of his settlement, September 2, 1883. Even then his pastorate was longer than any other in the Essex South Conference. In the twenty years, one hundred and ninety-one had been added to the membership; the number of members was then two hundred and seven; largest number in the history of the church, two hundred and twenty-three, in 1877. In 1882 the ratio of church membership to the population of the parish, was larger than ever before. Nearly one-quarter part of all who had ever been members were then still living. Mr. Rice had married one hundred and twenty-six couples, one hundred being of the parish, had attended three hundred and fifty funerals, preached five hundred and thirty-four written sermons and three hundred and ninety-eight unwritten, of which he says with characteristic humor “all ought to have been better, and some ought not to have been at all.” Mr. Rice observed the anniversary by a discourse from the pulpit from which the foregoing statistics have been taken, and the following evening the event was made the occasion of a gathering of his own parishioners, friends from other parts of the town, ministers from neighboring churches, and others, for congratulations and social enjoyment. Augustus Mudge presided, and after remarks reviewing the period, he presented Mr. Rice an envelope containing a very substantial token of the esteem of his people. Among the letters read during the evening was this:

“OAK KNOLL, Danvers, 9th mo., 3d, 1883.

“HON. AUGUSTUS MUDGE:

“Dear Friend:—I very much regret that I am not able to be with you at the gathering this evening. I am, it is true, better acquainted with the gentleman whom you so deservedly honor on this occasion, as a kind friend and neighbor, as a public-spirited citizen, than as a minister; but the fact that he has held his pulpit for twenty years is proof that he has done good service in it. During this long period I have never heard that his parish have been troubled by the bodily presence of that evil and disreputable personage with whom his predecessor, Parson Parris, fought such a losing battle. As a consequence of this he has had no occasion to spend his time in searching for witches among the elderly ladies of his congregation; and the sound theology of his people under his ministrations has made heresy-hunting so unnecessary that the solitary Quaker who has sojourned within the parish limits still remains unchanged!

“Pleasantry apart, I beg leave to add my congratulations to yours, and to express my best wishes for my friend Rice and his family.

“Thine truly,

“JOHN G. WHITTIER.”

The Sabbath-school was organized in 1818, in Dr. Wadsworth's pastorate. The names of an even hundred of the first scholars are given by Mr. Rice, fifty-six females, forty-four males. The largest number at

any time connected with the school was in 1867, four hundred and four, with an average attendance of nearly three hundred. The school had its origin at a meeting held at Dr. Wadsworth's house, July 30th of the year mentioned. Those present were the first teachers,—Samuel Preston, Edwin Joselyn, Edith Swinerton, Betsey Pope, Eliza Preston, and Betsey, Hannah, Harriet, Nancy, Eliza and Clarissa Putnam. The latter, Mrs. Preston, now living, has been mentioned in another connection. The idea of having a Sabbath-school seems first to have been entertained by Miss Betsey F. Putnam, who had seen the working of such a school in Beverly, started some years previously. The fiftieth anniversary of the Sabbath-school was observed August 9, 1868. Mrs. Emma Putnam Kettle, who died the year before, had been a teacher from the first year. The first superintendent was Samuel Preston. His successors have been Porter Kettle, Nathan Tapley, Samuel B. Willis, John Peabody, Ebenezer Putnam, George W. Endicott, Ahira Putnam, Wm. R. Putnam, Moses W. Putnam, Augustus Mudge, Edward Hutchinson, George W. French, Samuel A. Tucker, William Siner.

A number of the above served several different times. The longest consecutive term was that of Mr. Mudge, from 1848 to 1868. There were in 1886, connected with the school three hundred and four members, with an average attendance of one hundred and sixty-seven.

A LIST OF DEACONS.

1690-1719. Nathaniel Ingersoll.	1802-18. Joseph Putnam.
1690-1730. Edward Putnam.	1807-19. James Putnam.
1700-18. Benjamin Putnam.	1818-31. Jonathan Walcott.
1718-33. Eleazer Putnam.	1820-31. Eben. Putnam.
1731-54. Nathaniel Putnam, son of Benjamin.	1832-61. John Thomas.
1733-40. Joseph Whipple.	1832-44. Frederick Bows.
1741-62. Cornelius Tarbell.	1845-48. Ebenezer Putnam, son of Eben.
1756-57. Archelaus Putnam, son of Nathaniel.	1848-61. Samuel Preston.
1757-62. Samuel Putnam, Jr.	1861-85. Elijah Hutchinson.
1762-95. Asa Putnam.	1861-74. William R. Putnam.
1762-85. Edmond Putnam.	1886. Alfred Hutchinson, son of Elijah.
1785-1804. Gideon Putnam.	1886. Edward A. H. Grover.
1795-1802. Daniel Putnam.

1836. Wm. R. Putnam.
1837. Franklin P. Putnam.
1838-65. Rufus Tapley.
1866-87. Augustus Mudge.

A meeting was called just before the following Christmas at the house of the Rev. Benjamin Boltch, to consider the method of settling the outstanding accounts for work on the new meeting-house; the matter was entrusted to Colonel Hutchinson, Nathaniel Webb and John Felt. Jonathan Sawyer was here appointed the first treasurer of the society; he was already "clerk," Dr. Gott having early resigned.

The record of the sale of pews is in this form:

"Mr. Aaron Cheever, Vandue master, Vandue open Jonathan Sawyer Clerk.

"Jona. Sawyer, bid of No. 8 at 82 dollars.

"And sold to Colonel Israel Hutchinson.

"James Richardson, Bid of No. 35 at 81 dollars.

"Joseph Smith, Bid of No. 32 at 77 dollars"

And so on. Other bidders were James Richardson, Henry Putnam, Captain Samuel Page, Nathaniel Webb, Samuel Fairfield, Captain Jeremiah Putnam, Captain Gideon Foster, Nathan Upton, Ebenezer Dale, Samuel Fowler, Charles Hall, Aaron Cheever, Simon Pinder, Richard Skidmore, Nathaniel Putnam, John Felt, John Gaummell, Nathaniel Smith, John Chapman, Benjamin Kent.

BAPTIST.—On the authority of a letter written in 1817 by Israel Hutchinson, clerk, the Baptist Society was formed November 12, 1781. The first reeorded meeting was November 26, 1781. Captain Gideon Foster was chosen Moderator; Dr. Nathaniel Gott, clerk; and Jere. Hutchinson, Israel Porter and Nathaniel Pope, a committee to supply preaching. On the 10th of December, Nathaniel Pope, Samuel Fairfield and Captain Foster were chosen to procure a spot of land to set a meeting-house upon; later they were directed to "go on the spot or spots and see which is most comodose for the society and what it can be purchased for." Ebenezer Moulton and Benjamin Jacobs were added to the committee and the dimensions of the building fixed, "sixty feet in length and forty-five in wedth." January 9, 1782, it was voted "to Build the Meeting-House on Hooper's Plane, so called." In April this vote was reconsidered, and at a meeting held in Mr. Aaron Cheever's house it was voted to "chuse a committe to purchis the Land for the Meting-House." Captain Foster was retained on the new committee, and Aaron Cheever and Ebenezer Dale were the others. They were directed "to purchis a Land to Sett the meting-House on, and agree for a fraim and Git the underpinning." Charles Hall, Brickmaker, conveyed to this committee the land on which the building was erected, twenty-nine poles, by deed dated September 20, 1783, the consideration being twenty-six pounds.

Early in November, 1783, "Voted to Except of Mr. Henry putnams plan for the pews. Voted, that the pews be Sold at Vandue. Voted to choose a Committee to attend the Vandue and make sale of the pews, and to Notify to attend the Sale in ways and manner the Committee shall think proper. Voted that this committee consist of Seven persons." Colonel Israel Hutchinson, Nathaniel Webb, Jona. Sawyer, Nath. Pope, Ebenezer Moulton, Joseph Osborne and Samuel Fairfield were this committee.

The first pastor really settled over the new society was Rev. Benjamin Foster, and the society was remarkably fortunate at having such a man at hand. He knew his people and they knew him, for he had grown up among them. His father was Gideon Foster, a native of Boxford; his mother, Lydia Goldthwait, of Danvers. He was born in the house which formerly stood on Lowell and Foster Streets, South Danvers, June 12, 1750. His brother Gideon, about a year and a half older, the hero of Lexington, was one of the founders of the church. Benjamin attended the town schools, and when about twenty years old entered Yale College, from which he graduated in 1774. In college he became a decided convert to the belief that immersion is the only valid mode of administering the ordinance of baptism. After graduating he joined the First Baptist Church in Boston, under Rev. Dr. Stillman, who directed his theological studies. He was ordained pastor of a Baptist Church in Leicester, Mass., October 23, 1776. He evidently had preached somewhat at New Mills as a supply during the latter part of 1783.

January 27, 1784, the society met "at the house where they commonly met on the Sabbath days" to see if they would agree with the Rev. Benjamin Foster to preach any longer. They voted to request him to fill the pulpit for the next Sabbath, adjourned over, and then sent Joseph Osborne, Nathaniel Upton and Thomas Stevens "to waight upon him" with a result thus reported,—"the Rev'd. Mr. Foster will stay with the Society six months unless something extraordinary prevents." When the six months were out, December 8, 1784, it voted to agree with Rev. Mr. Foster to preach till May next, and he, cautious as before, agreed "if sickness don't prevent."

Mr. Foster remained here two years and then ac-

cepted a call to Newport. Another two years and he was pastor of the First Baptist Church of New York. In 1792 the College of Rhode Island (Brown University) conferred upon him the degree of "D.D.," probably because of the talent and learning displayed in his work, "A Dissertation on the Seventy Weeks of Daniel, the particular and exact fulfillment of which Prophecy is considered and proved."

Dr. Foster was a fighter with arguments, and he stood manfully by the guns of Pede-baptism. He had a controversy with Rev. John Cleveland, of Ipswich, on the baptism question, and his pamphlet, "Primitive Baptism Defended," published September 3, 1784, was widely noticed and a second edition called for and published in 1788. The introduction to this pamphlet, which is really a letter to Mr. Cleveland, contains a passage revealing the character of the man, which it would be well for every minister in the land to adopt:

"May God grant that my pen be directed by truth, and governed by candor and moderation, while I attempt to correct the mistakes of one whom I trust I shall ever have reason to respect! And the more we imbibe of the happy temper of our divine Master, the greater caution we shall use to suppress language which is bitter and censorious towards Christians who differ from us in those points of religion which are of lesser importance."

In the year 1798, in his forty-ninth year, he died in New York, the death of a hero. Not in that glory of military renown, clothed with which his brother Gideon lived to a very old age, but in a scourge of yellow fever. When panic was everywhere and people fled from the city, he remained at his post and fearlessly visiting the sick and dying, he took his life in his hands and lost it. True heroism! When the general roll is called how these instances of unselfish devotion, untrumpeted from the house-tops, will far outshine and outnumber the brave deeds of war.

Dr. Foster was buried in the Baptist Cemetery, N. Y., and on the marble over his grave are these words written by an eminent Presbyterian clergyman of that city:

"He excelled as a preacher; as a Christian he shone conspicuously; in his piety he was fervent; the church was comforted by his life, and now laments his death."

At a meeting, early in 1786, Nathaniel Putnam, Benjamin Kent and Simon Pindar were chosen to provide preaching for that year. A similar committee the next year were Jonathan Sawyer, Aaron Cheever, Nathaniel Webb; 1788, Nathaniel Upton, Nathaniel Webb, Israel Hutchinson; 1789, Messrs. Upton, Hutchinson and Ebenezer Dale; 1790, Israel Porter, Eleazer Wallis, Colonel Hutchinson; 1791, the same; 1792, the latter two and Newall Wilson. But little other business was transacted in these years. A vote, of 1789, that the committee provide preaching once a month and as much oftener as they can, is significant. In 1792 the clerk, Israel Hutchinson, Jr., was directed to draft three subscription papers for the committee to see "how much money they can

gitt sined for the support of the gauspill the present year."

In the fall of 1792, we have a hint of a law-suit in which the Society was involved with the Second Parish in Beverly. Richard Waitt had been representing the society and Joseph Batchelder, Israel Porter and the clerk were chosen to help him fight. March 26, 1793, the society met to see what measures they would take "respecting the Rev. Thomas Green preaching for the present year." Ebenezer Wallis, Israel Porter, Josiah Swett, I. Hutchinson, Jr., and Nathaniel Upton considered the matter, and their report was accepted "Respecting giving the Revd. Thos. Green all the monies that may be Subscribed on the subscription papers, and that he shall Have all the Light Contributions and all other advantages witch may arise by sd society."

A proprietors' meeting was held in April, 1793, to further consider the settlement of accounts and disposal of unsold pews. The committee were directed to hang the pew doors and make the end doors to the house; James Richardson was given a certain time in which "to cap his lot of pews." The next year a subscription paper was again passed around, "to see how much they can get sined for Rev. Thomas Green;" and he was also given the light contribution. It may have been from excessive lightness

that Mr. Green resigned, November 26, 1796. The next March it was voted "to procure sum person who possesseth a good Carrier to preach for the Society this year, and the committee is to promise the minister all the contribusion that arises by the Society or otherwise all the money that the committee shall see proper." Nothing like having these little financial matters between pastor and people plainly understood. It is not shown in the society records who first succeeded Mr. Green. There was no settled minister for six years. Elder Joshua Young was supplying in the fall of 1800. In December, 1802, the standing committee made a report on Lord's Day evening, after the service that they have agreed with Mr. Jeremiah Chaplin "to preach to the Society one year Exclusive of Two Days the committee agreed to give him; we are to pay 312 dollars, equal to 6 dollars pr. day, wich the Society appeared to be very well satisfied with, and also voted to pay the same."

A minute has been preserved of certain donations to Mr. Chaplin for the society :

"The above money was given by Rev Samuel Stilmon's Church, Mr Baldin's Church and the church at Charleston, that is to say,

From Doc. Stilmon's	\$51.25
From Mr. Baldin's	61.8
From Charlston.	20.10
	\$132.43

- " By a box of Glass 100 f 8 by 10 Inches
- " Given by Deacon Waitt, of D. Stilmon's
- " Church cost \$13.75 cents.
- " 1804, Sept. 13, 1 Reed Eight Dollars of
- " Deacon wild, it being a Remnont Not
- " paid to Collector when Mr. Chaplin recd
- " The above money." 8.

\$140.43

Dr. Stillman was the pastor of the First Baptist Church of Boston, with whom Benjamin Foster studied. The society sent grateful acknowledgment of the prompt and liberal assistance thus afforded in repairing the meeting-house.

In 1805 Mr. Chaplin's salary was raised to four hundred dollars, but the ordinary formula of the annual meetings was a vote for a subscription paper, "to see how much could be raised for the continuance of the gospel, as the Revd. Jeremiah Chaplin's time is nearly expired." Contributions were taken, one year every Sabbath; again, by passing the box around twice in every three months to collect the money of the subscribers. To be impartial in this business, in 1816 Samuel Whipple, collector, was directed "to carry Round the book in the gallery at the time they pass Round below to collect the Subscription."

On the 17th and 18th days of September, 1817, the Salem Baptist Association met with the New Mills people.

There were at this time fourteen churches within the association, namely, the First Haverhill, the pioneer of Baptist Churches in this vicinity, founded in 1765; Chelmsford, 1771; Rowley, 1786; Danvers,

1793; Beverly, 1801; First Salem, 1804; South Reading, 1804; Nottingham West, 1805; Newbury, 1805; Gloucester, 1807; Marblehead, 1810; Methuen, 1815; Lynn, 1816; Reading, 1817.

That the meeting was quite an event may be judged from the preparations. A month before, there was a special meeting of church and society, at which there were appointed to act with the standing committee, a special committee of ten,—Dea. Isaac Porter, Benjamin Kent, Captain Thomas Putnam, William Trask, Captain Thomas Cheever, Captain Edward Richardson, Major Joseph Stearns, James Carr, William Johnson, Israel Hutchinon. They met at Mr. Hutchinson's house, to perfect arrangements. Major Black was made chairman. Messrs. Kent, Porter and Hutchinson were detailed to see that provision was made for the care of horses; Captain Putnam, Major Black and D. Hardy—the latter not of the ten—were directed "to visit the Nabours to see what entertainments they will make both as to provisions and Lodging for the ministers and messengers who may attend the association;" "to Seete the Ladies"—there the ten passed around sly jokes, of course, at the expense of each other, but they settled down with commendable fitness on the three men with handles to their names most suggestive of chivalry,—Captain Putnam, Captain Cheever, Captain Richardson; "to keep the Dores of the meeting-house," Dea. Porter, Messrs. Kent and Hutchinon; "to attend in the galleries and place the people at the best advantage to prevent Disorder," Major Stearns, Mr. Allen Gould; "to examine the meeting-house and report what it will be necessary to do," Captain Putnam, Messrs. Trask and Kent. The general committee met again and "maid a report what they had Dun for the association, as it Respects viting & Lodging, & Likewise to the Keeping of horses. Rev. Mr. Chaplin, Messrs. Kent and Hutchinon, were appointed to make a division of the guests among the people; it was voted "that Mr. John Dock have the Sole Care of the Singing, & that he may invite what assistance he may think necessary, to assist him." One more meeting the committee had; William Trask and Major Black were appointed "to keep good order round the meetinghouse in Divine Sarvis." The only record which Mr. Hutchinson made of the occasion, which presumably was carried out with pleasure and profit, was in regard to the singing; he himself was called upon to manage this part of the service, owing to John Dock's previous engagement. He employed, he writes, Mr. Kinne, of Salem, Mr. Carey, of Salem, Mr. Timothy Berry, of Beverly and many others attended with them. "Kinne's bill, \$14—Berry's bill, 4\$50—Mr. Carey came with others gratis."

The Salem Association met with the New Mills Church again in 1836 and again in 1854; in the latter year it was comprised of twenty-four churches.

In April, 1818, Mr. Chaplin's salary was made five

hundred dollars, to be raised by tax assessed on the polls and estates of those persons who are or who may be petitioners for an incorporation act, and as if to give comfort and encouragement to the minister, a copy of the record of this action was sent to him. But a month later he accepted a call to another position. For sixteen years he had lived and labored among this people, how devotedly and with what mutual affection can be judged from the extracts of letters which follow. The meagreness of his salary forced his domestic economy into narrow straits; it is said that he often was seen fishing from Spite Bridge, and whether or not he had a weakness for angling, doubtless the catch was welcome to the frying-pan. It is a pleasant thing to record that his reputation for sterling manhood, conscientious work and scholarly attainments brought to him an invitation to accept the presidency of the institution since known as Bates' College.

May 18, 1818, his release was reluctantly granted, and the unfeigned thanks of the society were tendered him for his long and faithful services. Further, three persons were chosen "to form an address to be presented to him." Their names appear below:

"DANVERS, May 30, 1818.

"REV. JEREMIAH CHAPLIN:

Rev. & Dear Sir,—We are authorized by the unanimous vote of the Baptist Society in Danvers, in behalf of the same, to present you our unfeigned thanks for your long and faithful labors with us as a minister of the Gospel and preacher of morality; and to express our sincere wishes that wherever you may in providence be called the smiles of Heaven may accompany you. You would deem it superfluous were we to enlarge upon the high estimation which we have ever placed on your ministerial performances or the love which we have ever borne toward you as a citizen. The reluctance with which we have lately assented to your dismissal sufficiently bespeaks these sentiments. Nothing but a sense of duty in consideration of your present feelings has drawn this assertion from us. Although your removal is to us not joyous, but grievous, yet the occasion of this removal and the circumstances under which you leave us, afford us a very pleasing reflection. We have the satisfaction to believe that no want of attachment to us, love of honor, pecuniary views nor sinister motives, of whatever nature, had any part in inducing you to request a dismission. And much as we regret the loss which we must sustain by this separation, we are not disposed to complain of any injustice on your part. No, Sir! We are rather disposed to feel grateful for the privileges which we have already enjoyed, and to hope that the usefulness of your labours will be more extensive than it could be with us. We should be criminally contracted and selfish in our views were we to wish the general good to be sacrificed to our particular interest. That your removal will be for the general good we have not undertaken to decide from our own knowledge, but have acted with deference to your superior judgment, and so far as self denial would admit have acted with cheerfulness.

"We request and trust we shall ever have an interest in your supplications at the throne of Him who gave and who taketh away. Be assured dear sir, we possess the most affectionate feelings for yourself and family. Wishing you may receive a hundred-fold in this time, and in the world to come eternal life.

"FREDERICK EMERSON,	} Addressing Committee.
"JOSEPH STEARNS,	
"THOMAS PUTNAM,	

"June 1, 1818. Read in parish meeting and approved.

ISRAEL HUTCHINSON, Clerk.

Many years after Mr. Chaplin's departure, one of his successors wrote: "The parting scenes as they still linger in the memories of the aged, and as rehearsed by them with tearful eye, show how deep a hold he had upon his people."

It was at the beginning of Mr. Chaplin's ministry that the Beverly people withdrew to form a church of their own, and by reason of their dismissal and from other causes, the parent church was left in a low condition, with but thirty-eight members. At the close of Mr. Chaplin's ministry the membership was seventy-four.

On the 21st of June, 1818, the next Sabbath after Mr. Chaplin left, Rev. James A. Boswell preached. Three or four weeks later a meeting was held to see if the society were so "satisfied with the gifts and talents" of this preacher as to wish to have him supply longer. The meeting left it to the committee and the committee engaged him for three-quarters of a year. A well-known lady who was then a young Miss attending Miss Martin's "Dame's School" at New Mills, remembers being present at his installation, and that the new minister looked very young and small when the old divines were talking to him. Very likely any man would have felt somewhat diminutive on such an occasion.

On the 12th of February, 1819, the act was passed which has been hinted at, incorporating the First Baptist Society in Danvers. The original incorporators were, Andrew Batchelder, Martin Bates, Michael Barry, Moses Black, James Carr, Benjamin Chaplin, Thomas Cheever, Caleb Clarke, Parker Cross, John Doak, George Ellis, Solomon Emerson, Israel Endicot, George Ervin, Levi Fish, Benjamin Foster, William Francis, Elijah Fuller, Timothy Fuller, Daniel Goodhue, Allen Gould, Andrew Gould, Daniel Hardy, Stephen Haynes, Israel Hutchinson, Aaron Jacobs, Ebenezer Jacobs, Henry Johnson, Wm. Johnson, Hercules H. Josselyn, John Kenny, Benj. Kent, Benj. Kent, Jr., Jos. Kent, John Kent, Robert Lefavor, Nathaniel Mayhew, Samuel McIntire, Jonathan McIntire, John Mitchell, William Morris, Amos Osborn, Jeremiah Page, John Page, Benjamin Perry, Allen Peabody, Samuel Pinder, John Porter, Jonathan Proctor, Amos Putnam, Allen Putnam, Andrew Putnam, Jeremiah Putnam, John Putnam, Thomas Putnam, Parker Richardson, Briggs D. Reed, William Shillaber, Samuel Slater, Ephraim Smith, Joseph Stearns, Seth Stetson, Timothy Stevens, Asa Stickney, Thomas Symonds, William Trask, Daniel Upham, Benjamin Webb, Nathaniel Webb, Nathaniel Webb, Jr., Samuel Whipple, Stephen Whipple, Amaziah Whitney, Noah Whittier and Moses W. Wilson.

The first meeting under the new act was held at School-house, No. 2, on Monday, March 29, 1819, at six o'clock, P.M., to choose officers and levy a tax for support of the Gospel and other expenses for the ensuing year. Sixteen votes were cast for moderator, all for Thomas Putnam; twenty for clerk, all for Israel Hutchinson. Thomas Putnam, Moses Black and Benjamin Kent were elected assessors; Joseph Stearns, treasurer; Hercules H. Joslyn, collector. The first votes of money under the new order were in this wise: "Voted to Raise \$400 for the Benefit of

the Gospel; Voted to Reconsider the Vote for \$400; Voted to raise \$350 Dollars for the Benefit of the Gospel; Voted to Reconsider the Vote for \$350; Voted unanimously to Raise \$300 for the support of the gospel in Said Society the present year." Evidently a case of a strong working minority. The sum finally voted was not, however, let it be hoped, the limit of the minister's salary. The old subscription was not abandoned, but the committee were directed to present it to those persons who did not "come under the incorporation act," or any others disposed to help.

In April it was voted without dissent - his "gifts and tallants" had stood the test—to give Mr. Boswell a call to settle. On his acceptance, it was voted unanimously to give him an ordination on the second Wednesday of June, and that the Rev. Benjamin Wadsworth and the Rev. Samuel Walker be invited to attend. Ten dollars was subsequently voted to Benjamin Chaplin to defray expenses of singing on the occasion.

At the beginning of the next church year, March, 1820, there was not a unanimity in the invitation to Mr. Boswell to continue, and after careful consideration he asked to be dismissed. Dismissal was granted, but the fact that both a letter of recommendation and—what was of much greater import, judging from the monetary votes of the society—a present of one hundred dollars, were given him, goes far to remove the idea that any ill-feeling existed between pastor and people.

Rev. Arthur Drinkwater preached more or less during the following spring and summer, and in August the society met to consider his gifts and talents, and requested him "to make them a visit and supply the pulpit for a certain term of time as the Society may think proper." In September advice was received from Dr. Chaplin, their old pastor, "respecting Mr. Drinkwater's character as being a good gospel minister," and he was invited to settle over the church. December 7, 1821, was appointed for installation.

In November, 1822, there were certain votes passed which must have had a meaning to somebody,— "Voted that there be a committee chosen to wait on the man who stole the wood from the Society. Voted that the man that stole the wood be allowed 24 hours to produce the man he bought the wood of, and if he does not he must take the course of the law."

In 1824 Abednego Rust and Nathaniel Tuttle were chosen "thything men to keep the boys still;" about the time of Mr. Drinkwater's installation William Johnson had been empowered to present to the grand jury any persons making any disturbance in or about the meeting-house on the Sabbath; in 1825 Daniel Hardy was deputed to take care of the boys in the galleries, and the thything men chosen by the town were requested "to take cognizance of the boys that throng the porch before divine Service, to the inconvenience of the females that are going into the

meeting-house." Does any grandfather wink slyly to himself?

In January, 1826, Gideon Foster, Benjamin Kent and Briggs R. Read were commissioned to draft a bill and secure its passage by the Legislature, authorizing the taxation of pews; such a bill became a law in the following March. By its provisions a person must own, in order to vote thenceforth in the society meetings, at least one-half a floor pew or the whole of a gallery pew.

The year 1828 is conspicuous in the annals of the Baptist Society as the year of a new house of worship. Though the first house was but forty-five years old, suspicions were entertained as to its strength. An association of subscribers, afterwards proprietors, was formed to build a new house.

The proprietors of the new meeting-house, though composed, of course, of the leading Baptists, were separate and distinct from the society. They held their own meetings and kept their own records, Samuel P. Fowler acting as clerk. At their first meeting, in March, 1828, it was voted, "That if the proprietors of the old meeting-house are willing to dispose of their house and the land on which it stands, for a reasonable consideration we purchase it for the purpose of removing the house and erecting a new one in its place, to be governed by the present incorporation. The property in the house to belong to the subscribers to the new meeting-house. It is understood, in case we purchase the old meeting-house, a new one will be erected on its site within eighteen months." Eben Hunt, Arthur Drinkwater and Moses W. Wilson were appointed to see if the proprietors of the old meeting-house were willing to dispose of their house under such conditions.

The society held a series of meetings about the same time, at which the standing committee were empowered to sell the building "for four hundred dollars and nothing less, and more if they can get it," the purchasers to remove the same before the following June; and the "subscribers" were permitted to erect a new meeting-house on the old lot for the use of the church and society, to be governed by the act of incorporation already in force.

That old church is still in existence. It was bought by John A. Learoyd and removed to the Plains, not far from Lindall Hill, where its timbers grew, and has ever since been used as a carrier-shop. It was thought, as has been said, old and unsafe when sold, but as Mr. Rice, with characteristic humor, remarks, "it has upon it at the present time a certain air of breadth and settlement in configuration of such a sort that the eye of the beholder may not readily discern to what end it should ever fall down."

The new building committee were Samuel Fowler, Arthur Drinkwater, Daniel Hardy, Briggs R. Reed, and Ebenezer Hunt. The chairman was directed, among other things, to ascertain whether any compensation could be obtained for the land belonging to

the meeting-house lot, but used as a highway since the widening of the road in 1802, and he found that the society had slept too long on their rights. The proprietors held meetings through the summer and fall, and from time to time instalments of subscriptions were paid in. In December, 1828, they wished to know whether their subscription paper was an instrument sufficiently binding to sue upon for non-payment, and Messrs. Fowler, Hunt and Reed were sent to obtain advice from Rufus Choate, then at South Parish, and Squire Benj. Merrill. The advice was that the paper would hold.

On the 17th of March, 1829, the house was finished, and the committee were directed to "inform the Baptist Society at their annual meeting (when it is understood that the house will have been accepted) that the house is ready for their use, and that they be desired to make arrangements for the opening of the house with appropriate religious services."

May 1st, John Porter, Benj. Kent and Benj. Porter were chosen to arrange for dedication. May 25th Mr. Kent and Daniel Hardy were authorized to sell the pews in the new church at public auction by bidding for choice over and above the appraisal, the appraisal to cover the cost of the house; and they were also directed "to obtain a legal title to the land under a part and adjoining said meeting-house of the family of the late Captain Thomas Putnam, deceased." A summary statement of the cost of the church is this:

E. Felt,	\$135.00
Nathaniel Galucia,	110.80
E. Perry,	20.63
Jona. Perry,	20.00
Israel Endicott,	58.24
Ebenezer Hunt,	2.60
Edmund Needham,	18.90
M. Pulsifer,	160.60
Sam'l Fowler,	44.27
S. P. Fowler,	3.00
Henry L. Gould,	21.70
M. Wilson,	} Carpenters, \$4290.60
W. Francis,	
J. Ross,	
Total,	\$4825.14

At this time when the people moved out of the old house into the new, the relations of pastor and people and of the people to one another should have been particularly harmonious. Mr. Drinkwater closed his pastorate June 26, 1829. During the last year of his service some very unpleasant differences of opinion arose in the society which resulted in the organization of the Universalist Society, weakening not inconsiderably the society in which the division occurred. Universalism had its beginnings in Danvers much earlier than this, as will hereafter appear. A hint at the feeling which existed in 1829 may be found in a vote that the committee be instructed "to inquire into the story that has gone abroad that the Unitarians want to get the new meeting-house."

Mr. Drinkwater is remembered by certain old peo-

ple as one of the sort of men that Cæsar liked to have about him, not a bit "lean and hungry." He was of a light, florid complexion, of talents not rising high above the average; he made many friends outside of his own church.

In the spring of 1830 the Rev. James Barnabee was by unanimous vote invited to fill the vacant pulpit. He is remembered by old people as a man with a very loud voice. Mr. Barnabee's year commenced on the first of May, and six hundred dollars was voted for his support and incidental charges. His pastorate was short, ending in May, 1832, but very eventful; soon after he came the great revival all through the churches was felt here with so great effect that the membership was increased from ninety-three to one hundred and thirty-nine. At the old church, Dr. Braman's, there were added in the same period one hundred and twelve members, increasing the membership from about one hundred, in 1828, to one hundred and ninety-five in 1833.

July 23, 1832, the society united with the church in giving a call to the Rev. John Holroyd, at a salary of five hundred dollars for the first year. Five years later, November 8, 1837, Mr. Holroyd died while at Providence, R. I.,—the only instance of a vacancy in the pastorate caused by death. During his labors the membership of the church reached its highest limit— one hundred and fifty-five. He was about sixty years old at his death; a quiet, venerable appearing man, greatly beloved and lamented by all who knew him. He left a widow, but no children; she was the daughter of Dr. Benedict, of Providence, a somewhat noted Baptist preacher and writer.

May 26, 1838, Rev. E. W. Dickinson accepted a call of the church and society, at a salary of six hundred dollars. His stay was short. He resigned in October of the next year; in his letter of resignation he wrote: "The causes which lead to this step, it is presumed are already known, and their capitulation at this time is not needed. The subject has long been before our minds, and although the separation, to me at least, is painful, still the feelings natural to such an event are less poignant than if it had been sudden."

For more than a year after Mr. Dickinson's resignation there was no settled pastor.

Rev. J. Humphrey Avery supplied the pulpit some of the time, and in January, 1841, he was invited to become settled. In response he wrote that he would come on the following conditions:

"That I receive the ninety dollars now due for supplying your pulpit, before the close of the present week; that my salary commence the first day of February; that I have seven hundred dollars per annum, to be paid quarterly; that I have two Sabbaths during the year to dispose of as I may think fit; that the church and society have the right to dismiss me at any time by giving me three months notice; that duplicates of this contract be signed by the committee of the church and society and myself, in presence of competent witnesses; that one of the duplicates be left with the clerk of the church or the clerk of the society and the other with me. Should any apology be deemed proper, brethren, for the formality of this statement, I have only to say that in mere business transactions I have but one method."

The business men at New Mills were evidently not displeased with a business-like pastor; the conditions were accepted. After seven or eight months he addressed another letter to the committee in equally plain terms, giving them the choice of accepting his resignation February 1, 1842, or of making his salary six hundred dollars after that date and, in addition, furnishing him "with a good room near the meeting-house, to which he might remove his library," and of giving him a regular installation as soon as might be convenient. And the terms of the latter alternative were promptly accepted. Mr. Avery had been a Congregationalist.

On the 5th of July, 1843, the society voted unanimously to concur with the church in giving the Rev. Joseph W. Eaton a call, at a salary of five hundred dollars for the first year. His letter of acceptance is dated July 17, 1843. The next spring he wrote:

"The satisfaction, which you have been pleased to express with my poor services for the past year has been particularly grateful to my feelings. . . . The union which I am informed pervades your body gives me reason to hope that my labors among you may yet be useful, and so long as this state of things continues I shall be encouraged to exert myself for your spiritual benefit."

But times were hard for the church and society during Mr. Eaton's pastorate. Among the founders of the church, it will be remembered, none were more prominent than Gideon Foster and certain other South Parish men, and for a number of years the New Mills Church was supported by all people of that denomination, far and wide in this vicinity. But we have seen how, in 1801, the Beverly people withdrew to form a church of their own; then, in 1804, the First Baptist Church of Salem was established, and, doubtless, a number of South Parish people who found themselves more conveniently situated to Salem than to New Mills, at once associated themselves with the Salem Church. But in the meantime there had been a growing desire among those parishioners of the New Mills Church who lived in the southern part of the town to have a church of their own. They began to hold meetings in Armory Hall in 1843, settled a minister and built a chapel that same year. This was about the beginning of Mr. Eaton's pastorate at New Mills, during which thirteen of his church-members were dismissed to join the new church. These dismissals, though not great in number, came at a time when the parent church could ill afford any loss of strength. But a much more serious element of disturbance was the storm of the anti-slavery movement which centered on the old church and struck hard. An account of the "Come-outers" appears elsewhere. About the only mention of anti-slavery which appears on the society's records are these votes:

April 4, 1839. "Voted that the Lectors on Poes, Temperance and antislavery be free of expense, after having the Consent of the Standing Committee.

April 21, 1840. "Voted it be left with the Standing Committee whether there shall be lectures in the meeting house on the subject of slavery the ensuing year."

It was well understood that Mr. Eaton was to have

six hundred dollars after the first year, but it was not easy to raise the money. They asked him to take five hundred dollars. "On listening," he replied, "to the description you gave me of the financial concerns of the society, I stated that I was at a loss to know exactly what my circumstances were, but promised that if I could do anything to help to extricate the society from its embarrassments, I would cheerfully do it. On looking over my accounts, however, I find myself much more largely indebted to others than I supposed myself to be, and that my salary has been barely sufficient to enable me to meet my expenses. I do not see how they can be reduced. The idea of being in debt without having the means to pay it, is to me distressing, both from the sinfulness of the thing and from its influence on the cause of religion. I have nothing to depend upon for a support but the compensation I receive for my services, and must look therefore to the people whom I serve for the means of a comfortable maintenance. Still, I cannot endure the thought of being a burden to the society; hence, hoping we may have health and strength, considering the dull state of business, and desirous of affording the society what relief I can, I will try, though I know not how I shall succeed, to do this year with five hundred and fifty dollars."

To add to the difficulty of the situation, on the morning of September 6, 1847, the church and vestry were destroyed by fire, and there was no insurance. An adjoining dwelling, owned by Aaron Eveleth, was burned at the same time.

The standing committee pluckily issued a warrant before the close of the day, calling upon the society to take action as to building a new house. In one week from the date of the warrant, the shortest time allowable, the society met and voted "that we feel it our duty to make an effort to erect a new house in place of the one destroyed by fire," and appointed twelve men to circulate a subscription paper for the purpose,—Daniel Goodhue, Jr., Tristram Woodbury, Hiram Preston, David H. Caldwell, William Putnam, Henry Johnson, Benj. Porter, Moses Black, Rev. J. W. Eaton, Abijah Porter, Peter Waitt and Jacob F. Perry. Both the Universalist Society and the new society at the Plains promptly tendered the use of their churches to the Baptists. Arrangements were made with the former.

On the 20th of September, Benjamin Porter, Moses Black and David H. Caldwell were instructed "to select such a model of a house as they think will best suit the society."

On the 18th of October a building committee were chosen to carry out the vote of its society to rebuild,—Benjamin Porter, David H. Caldwell, Moses Black, Henry Johnson and Josiah Ross. The third meeting-house of the society was erected within the next year and is the one now in use. The present church bell was then purchased by certain "proprietors," and was hung in the tower on the following conditions:

"That the bell be rung by the sexton of the Baptist Society on Sundays, the Universalist Society paying one-half the expense; that the bell be rung at any other time by either Society, not interfering with our religious services, by each paying their own sexton; the door to be locked—one Key to be kept by the sexton, one to the care of the Fire Department. The remains of the bell, if ever burned, to go to the proprietors of the bell. The bell to be hung on a good substantial bell frame secured to the deck."

The following clipping from an old newspaper is interesting in this connection:

NOTICE.

The Ladies of the First Baptist Society in Danvers will give a Tea Party on Wednesday, Oct. 4th, in Citizens' Hall, New Mills, to aid in furnishing the new house of worship, now erected on the site of the one destroyed by fire last year. Good music will be secured for the occasion, etc., etc.

On the 23d of April, 1849, Mr. Eaton addressed to the society a letter of resignation. Like his other communications it is full of Christian manliness and forbearance; and it gives an insight into the state of things which, by reason of circumstances beyond his control, made his pastorate not a bed of roses. "Just before your former meeting-house burnt, I was led to canvass the question whether I ought not to resign my office, but after the occurrence of that event I concluded it was my duty at any rate to remain with you and aid you in every way in my power until another edifice should be erected." It was after the completion of the new church that he resigned. In explanation he wrote: "I do this not because as great an amount of success has not been realized as could have been anticipated, considering the distracted state of things when I came among you, the adverse influences with which I have had to contend, the disaster you experienced in the burning of your meeting-house, the many removals of whole families from town, the deaths that have occurred among you, some of whom have been your prominent men, the formation of two new societies at the Plains, the excitements of different kinds that have existed in the place, and the low state of religion. If I mistake not, this society is in a far better condition than any one, acquainted with the facts in the case, could reasonably expect it to be in. I take this step not because, could a change be effected which might easily be done, I could not labor on with zeal and hope; but because of the want of that spirit, energy and co-operation, which characterizes new enterprises; which allows nothing to be undone which should be done, and which is essential to success."

In March, 1850, a call was extended to Rev. Aaron W. Chaffin. This was his first pastorate, and he remained here fifteen years, an average preacher and an excellent pastor, greatly beloved not only by his own people but by his fellow-citizens generally, for he took great interest in all that pertained to the good of the town, and especially in the schools. Genial, kind, witty, "everybody liked him." He accepted a call to Manchester, N. H., died at Lynn in 1874, and was buried here in Walnut Grove Cemetery.

Rev. Foster Henry succeeded Mr. Chaffin, and oc-

cupied the pulpit from December 5, 1862, to May 1, 1865. Then followed Rev. Charles H. Holbrook, from November 14, 1865, to September 2, 1870; Rev. J. A. Goodhue, from November 22, 1870, to May 1, 1872; Rev. G. W. McCullough, from June 20, 1873, to April 1, 1876; Rev. Lucien Drury, from August 3, 1877, to April 29, 1883; Rev. Gideon Cole, from July 1, 1884, to the present time.

These notes have treated chiefly of the Society. The Baptist Church was organized July, 1793, with thirty-six members. The first deacons were Eleazer Wallis and Israel Porter. Benjamin Kent was appointed 1823; Hercules Josselyn, 1832; John Hood, 1835; Parker Brown, 1838; Ichabod Sawyer, 1839; Abijah Porter, 1845; Henry Johnson, 1855; James Felton, 1855; Charles H. Whipple, 1855; Monroe B. Brigham, 1859; Francis Bowen, 1874; Wm. A. Jacobs, 1880. Deacons Whipple and Jacobs are the present incumbents.

The committees appointed "to supply preaching" in the earlier years of the society have already been given. They were the precursors of the regular standing committees. A complete list of the latter cannot be given for lack of space, but the names which appear at the beginning of each decade of this century will give some idea of the prominent supporters of the society from time to time:

1800. Deacon I. Porter.	1840. Daniel Hardy.
Nathaniel Prince.	Hiram Preston.
Nicholas Dodge.	1850. Benj. Porter.
Wm. Trask.	James Holt.
Amos Sawyer.	Henry Johnson.
1810. Benj. Porter, Jr.	1860. John Burns
Benj. Kent.	M. B. Brigham.
Richard Elliot.	Elnathan Dodge.
L. Leonard.	1870. Wm. Putnam.
Wm. Trask.	M. B. Brigham.
1820. Benj. Kent.	Wm. A. Jacobs.
Wm. Trask.	1880. C. H. Whipple.
Stephen Whipple.	W. A. Jacobs.
1830. Daniel Hardy.	Geo. H. Perkins.
Jacob F. Perry.	1887. C. H. Whipple.
John Porter.	W. A. Jacobs.
1840. Benj. Porter.	Solomon Fuller.

The first clerk of the society, chosen November 26, 1781, was Dr. Nathaniel Gott, but he did not serve through the successive adjournments of the first meeting, and Jonathan Sawyer, chosen in his place, held the office about five years, until 1786, when Nathaniel Fowler's name appears. Ebenezer Dale was clerk in 1789, Israel Porter in 1790. On April 5, 1792, Israel Hutchinson, Jr., was chosen, and after thirty years of continuous service, his neatly kept records end with the oath administered by him to his successor, Stephen Whipple, April 17, 1821.

Stephen Whipple served but one year.

Hercules H. Josselyn was chosen at the annual meeting of 1822, and he served till April, 1841, nineteen years, when it was voted "that the Thanks of this Society be presented to Hercules Josselyn for his long and faithful services as Clerk of the Society."

Parker B. Francis held the office to April 1843:

Hiram Preston, 1843-45; Charles E. Smith, 1845-53; Maurice C. Oby, 1853-58; Isaac N. Roberts, 1858-62; M. H. Dorman, 1862-64; Josiah Ross, 1864-75; William H. Stetson, 1875-80; Charles A. Gentry, 1880, to the present, 1887.

Last April, 1887, the Sunday-school observed its sixty-ninth anniversary. The original records, if there were any, are not to be found. John Hood, Peter Waitt and Captain Benjamin Porter were superintendents before 1854, since which time, thirty-three years, Deacon Charles H. Whipple, has been in continuous service. There are now one hundred and sixty connected with the school.

January 26, 1879, the standing committee were instructed "to inquire into the cost of buying the land adjoining that of the society on High Street, and of building thereon such a building as the Society needs." This vote was the beginning of the new chapel which was dedicated this spring, 1887.

"Among the favorable causes under the blessing of God," these were Mr. Chaffin's words thirty years ago, "which have conspired to keep this somewhat ancient church in existence, we should not fail to notice the general unanimity of its members and their steadfastness in sound doctrine and wholesome discipline. Besides, there never has been a time when there have not been some noble, self-denying brethren and sisters whose faith in the darkest hour faltered not. In the early, as well as the later history of this church, especially will the names of Porter, Kent, Richardson, Whitney and Hardy, with others of kindred spirit, now at rest in Heaven, be held in long and sacred remembrance. While living they were known in the churches, and, though dead, their deeds live."

UNIVERSALIST.—The pioneer of Universalism in Danvers was Edmund Putnam. He was born here in 1724, moved to Topsfield in early life, returned when about thirty-five, and occupied the well-preserved old house off Locust Street, afterwards the home of his distinguished grandson, Elias Putnam, and at present owned by Augustus Fowler. Edmund Putnam was for twenty-three years, from 1762, a deacon of the old Church. Probably his changed views of theology led to his resignation in 1785. Dr. Nichols' centennial poem contains this:

"Still people would think, read their Bibles,
Embrace
Other doctrines than those we have named;
Deacon Edmund, with new-fangled views of
God's grace,
Universal salvation proclaimed."

An item in the records of the old church is significant in this connection,—“In 1788 rates were abated of Samuel Cheever, Jer. Hutchinson, James Smith, John Swinerton, Henry Putnam, Nath'l Webb, Wm. Gifford, and Mrs. Eunice Hutchinson, because they entertained religious sentiments differing from those

professed by the church.” Though, as has been seen, this was about the time the Baptists organized their church, some who were thus “differing” are known to have been early Universalists.

It was in the little community at Putnamville—Deacon Putnam's neighborhood—that the new ideas were most thought about and talked about, and where they first assumed organic form.

Rev. Henry P. Forbes delivered a historical address of the society on the occasion of its fiftieth anniversary, October 19, 1879, which is here liberally used in connection with the series of historical letters written by Rev. Dr. Alfred P. Putnam, a great-grandson of Deacon Edmund. Mr. Forbes has thus well and concisely spoken of those families in Putnamville in which Universalism was especially fostered:

“In true Danvers fashion, they were nearly all related to each other. Israel Putnam, 2d (Dea. Edmund's son), married Anna, sister of Elias Endicott, Jr. Zorobabel Porter married Mary, another sister. Elias himself, when a young man, worked at the currier's trade in Gloucester, where John Murray was settled over the First Universalist Society organized in America. He returned to Danvers, and, having married, came to live in the house where dwelt his sister Anna. This family of families—Endicotts, Porters, Putnams—seems to have been of one mind in religious matters. They were all persons of character and influence, and chiefly from them came the impetus toward the formation of an Universalist Society. But they were not alone. The Browns, the Richardsons, the Bakers, and Woodburys of Wenham, with various others, had come to be more or less earnest believers. In the year 1815 the fluid sentiment began to crystalize into an organization. On the 22d of April a company of them assembled, organized themselves into a society, and drew up a *Declaration of Principles*.”

At this first meeting, Israel Putnam, 2d, was chosen moderator and treasurer; Colonel Warren Porter, clerk; John Baker, Joseph and Zorobabel Porter, committee. The committee were instructed “to inquire after a minister as soon as funds can be obtained to pay him, and invite any suitable person that may be willing to preach.” The committee found a very suitable person in Rev. Hosea Ballou, who came up to preach occasionally in the little school-house and gave the new movement the impetus of his powerful help. For a number of years there was slow and quiet progress, the number of members recorded in 1823 being thirty-six; in 1825, forty-four. Besides Mr. Ballou many other ministers came to preach in the school-house, among others Rev. Charles Hudson, who, at the semi-centennial was living, in his eighty-fourth year, at Lexington, Mass.

The last recorded meeting of the society at Putnamville was May 28, 1827. “With this, the ecclesi-

astical stream sinks from the ledges of Blind-hole into the sands of the Plain, and working its way southward bubbles up at the New Mills." This latter place, the thriving commercial centre of quite an extensive territory, by all odds the liveliest portion of the town, having but one church, and that of rigid tenets, seems to have been good ground for the larger growth of Universalism. It has been shown from the records of the Baptist Society how about this time defections were occurring, and how in 1829 a considerable number of Baptists formally withdrew. This withdrawal marked the occasion of the formation of the Danvers Universal Society, which was brought about by a simple agreement of association in the handwriting of Dr. Ebenezer Hunt, dated October 15, 1829, and signed by William Francis, Hathorne Porter, Josiah Gray, John Ross, Moses W. Wilson, Nathaniel Boardman, Joshua Silvester, B. C. Brickett, William E. Kimball, Daniel Woodman, Ebenezer Hunt, Benjamin Potter, Isaac Caldwell, William Rogers. A petition was immediately issued to Dr. George Osgood, justice of the peace, and by him a warrant was issued for a first meeting for the legal establishment of a new religious society. Upon this petition are the additional names of John Hines, Joseph Porter, Sylvanus Dodge and Simeon Pendar. These eighteen men are regarded as the charter members of the present society; five were living at the semi-centennial, 1879, and four were present, but today but one of all the number is surviving, Joshua Silvester. (Since writing, he, too, has passed away).

For some months efforts were made to form a union with certain early Unitarians at New Mills, of whom Capt. Jeremiah Page, Jonas Warren and Maj. Moses Black were leaders. A coalition committee were appointed to agree on a name, but no report was ever made, and March 8, 1830, these efforts seem to have been acknowledged fruitless, and it was voted "that this society be called the First Universalist Society of Danvers."

The first standing committee, William Francis, Elisha Pratt and Joseph Porter, were at once instructed to consider the expediency of hiring the old Baptist meeting-house, which had been removed in 1828, as has been noticed in the sketch of the Baptist Society, to make room for a new house on the original site. The committee hired the old house at forty-five dollars for a year. No clergyman was yet settled, and preaching was irregular; but the society grew, there being one hundred and seventeen males at the beginning of the next year. Though a vote was in the meantime taken "that the contemplated meeting-house be located at or near the Plains so called," the old house was hired again, but the contract was made not without bitterness. Major Black and John Page now owned 11-16ths of the building, and were willing enough to let their part at forty-five dollars, but Deacons Kent and Hardy, of the Baptist Church, owners of the other

5-16ths, charged one hundred dollars for their share. Evidently the latter did not wish the building used by the society at all, and one of them made some remark about wishing to feed pigs in his part, with, it is alleged, a tinge of comparison not altogether complimentary to the Universalists. The society simply took the 11-16ths, and fenced off the remainder. It is not difficult to imagine the feeling of which this little episode is but a hint. It could not be otherwise. Not even Baptist human nature could look with equanimity on what, from their standpoint, was an upstart and heretical body, which, having sapped the strength of the old church by withdrawing a considerable number of its members, had the audacity to set up in their old building and, within ear-shot of their sterner doctrine, to utter the alluring promise of universal salvation.

The first regular pastor of the new society was Rev. F. Hodson, who remained from the spring of 1831 to June of the following year. During this time the old school-house in Putnamville was occasionally used for services, as were also the school-houses at the Centre and at the toll-gate.

The settled intent of the Universalists to have a church of their own came to a head in September, 1832. Forty-eight shares at fifty dollars were taken in a new house "to be erected between Berry's tavern and the Baptist meeting-house," and the shareholders became and remained a separate, corporate body until 1847, when they merged by mutual vote with the society. A building committee, Nath'l Boardman, J. Silvester, Hathorne Porter and Joseph Porter, "fixed on the piece owned by Mr. Israel Endicott as the most eligible," and this lot was purchased. Moses W. Wilson contracted October 29, 1832, to build a house fifty-six by forty-two, twenty-two feet posts, for twenty-five hundred dollars. With alterations and additions the total cost reached thirty-one hundred dollars. The building was dedicated Friday, June 28, 1833. Rev. Hosea Ballou, of Boston, made the dedicatory prayer; Rev. Hosea Ballou, 2d, of Roxbury, delivered the sermon; Revs. L. Willis, of Salem, and S. Streeter, of Boston, also old helpers in the society's infancy, took other parts. An original hymn by Dr. Hunt was sung, beginning

"Eternal Source of Light and Love,
Of all we are or hope to be,
Dwelling in majesty above
We dedicate this house to Thee."

Rev. D. D. Smith was at this time settled over the society, though living in Boston. There were one hundred and thirty-one male members, a number which has since remained as high-water mark. Soon after the dedication of the church, Dr. Braman, from the citadel of his pulpit, preached a strong sermon against Universalism and the danger of its incursions, out of which grew the memorable debate between Dr. Braman and Dr. Whittemore, November 6, 1833, mentioned elsewhere, in which, of course, Dauvers

Universalists lent their champion decided aid and comfort.

Rev. H. Knapp was installed as pastor of the society, December 20, 1833, and remained until August 16, 1836; he died in Cambridge in 1878, aged sixty-seven. Rev. S. Brimblecom, of Westbrook, Me., succeeded him here and remained until 1840; he was an earnest anti-slavery man, was orator of the day, July 4, 1837, at a meeting of the Danvers Anti-slavery Society, and president of the Young Men's Anti-slavery Society. He died in Haverhill, 1879, in his eighty-first year. Soon after his resignation, on motion of Dr. Hunt, it was resolved that the committee procure, if practicable, the services of laymen in conducting Sabbath worship; accordingly Moses Black, Jr., Joseph Merrill, John Hines, Dr. Hunt, and perhaps others officiated as occasion required. In July, 1840, Rev. A. A. Davis, then recently from Ohio, accepted a call and was settled at a salary of six hundred dollars. He gave an impetus to all departments of the society's work, and in his pastorate the church was organized. The church was first publicly recognized October 21, 1840; it numbered about sixty members. John Hines was chosen clerk; M. Bodge and Eben Putnam, deacons. Mr. Davis' pastorate was brief, closing in October, 1841, when he went to Jamaica for his health, but it was especially important, happening in the height of the anti-slavery storm which burst upon the community and the churches at this period. Something is said of anti-slavery troubles elsewhere. Rev. D. P. Livermore supplied during the following winter; and in the spring of 1843, Rev. S. Bulkley, of New Market, N. H., was chosen pastor. Rev. J. W. Hanson succeeded him in 1846. Mr. Hanson was a young man of active mind, a ready debater, inquiring and critical. Though here but two years, he has left a memorial behind him in Hanson's "History of Danvers," a book accustomed to be spoken of as containing many inaccuracies, but as the work of a stranger, on short preparation and with scarcely any previously printed material to rely on, it is remarkable that the book is as valuable as it is. Mr. Hanson resigned in 1848, went to Norridgewock, then to Gardiner, Me., was editor of *Augusta Gospel Banner* six years, then settled at Haverhill, and was chaplain of the Sixth Massachusetts Regiment; removed to Dubuque, Iowa, and in 1870 to Chicago, where, in 1879, he was living, and had then been D.D. for three years, editor of the *New Covenant* for nine years, and author or editor of some thirteen volumes.

The next pastor here was Rev. J. W. Putnam, who came in 1849, a pupil of Rev. Dr. Sawyer, at Clinton, N. Y., and remained in this his only pastorate till his lamented death, November 4, 1864. He left a widow and two children, a daughter and a son, all living. Throughout his pastorate "he grew in mental stature and in favor among the people" to the end. His townsmen honored him, his people loved him. He

would not leave his society; his parish would not let him go. In the noon of his manhood they gave him to the messenger from whose call there is no appeal. As a scholar, thinker, writer, speaker, pastor, he ranked high in his profession.

It was during Mr. Putnam's pastorate that, in 1858, it was decided that the "new church" was no longer new,—in fact so old that another building was demanded. There was not, at first at least, a unanimous concurrence in this opinion, but after several meetings it was decided to build nearer the Plains, which had by this time usurped the former distinction of New Mills as being the principal village of the town. A building committee was chosen, consisting of Joshua Silvester, J. W. Ropes, W. J. C. Kenney, George Porter and Moses Black, Jr. A lot of land was purchased of Eben G. Berry, and the present house was erected under a contract with Josiah Ross for four thousand three hundred and thirty-seven dollars. The church was completed in July, 1859, and was dedicated August 18th. From many of the surrounding heights and from many of the approaches to the town, the twin Gothic towers of the Universalist Church present one of the most prominent and picturesque views of a landscape beautiful in many respects. It is one of the many monuments of Joshua Silvester. The society formally tendered him their thanks "for the energy and assiduity with which he has labored in this work,—to him more than any one else, perhaps more than all else combined, do we owe the valuable suggestions and services resulting in this beautiful edifice."

The basement of the church was soon fitted up as Gothic Hall, and until the day of the Peabody Institute was the best hall in town and much used for lectures, entertainments, and for the graduating exercises of the High School.

The society bid farewell to the old meeting-house, July 31, 1859, which was then sold at auction for twenty-five hundred dollars, and soon was converted to the use of the new Catholic Church, in whose hands, much enlarged and remodeled, it still remains.

The vacancy in the pastorate caused by the death of Mr. Putnam was filled by Rev. H. C. Delong, of Binghamton, N. Y., who served from 1865 three years, and was succeeded by Rev. G. J. Sanger, who, as faithful pastor and eloquent preacher for six years and business man for several more, was one of our best known and worthiest citizens, upon whom his fellow-citizens bestowed political honors with a generous hand. A few years ago he decided to return to the ministry, and accepted a call to Essex. Rev. Henry P. Forbes was installed November 22, 1875,—a man of scholarly tastes and fine literary ability, a pastor much loved and respected, and a citizen especially useful on the school committee. He resigned after five years to accept a professorship in the St. Lawrence University, Canton, N. Y. Rev. F. A. Dillingham, his successor, was installed in the spring

of 1881, and remained until February, 1885, when he in turn was succeeded by Rev. Winfield S. Williams, whose pastorate extended from June, 1885, to October, 1886. The church is at present (June, 1887) without a settled pastor. (July 5th, a call was extended to Rev. C. B. Lynn, of Boston, accepted.)

In the old days of the Putnamville school-house, it is said that Abijah Richardson sustained the burden of worship in song, singing four parts at once. A permanent choir was organized after the society built a church of their own, of which William Black was chorister. For twenty years he did not miss the preaching service, and to his own and his brother Moses' family the society were continually indebted for important musical services. Among the earlier singers were Henry and Augustus Fowler, Philip Smith, W. J. C. Kenney, Moses Black, Jr., Mrs. Benjamin Osgood, Mrs. Sawyer and Louisa Hines. Later, Mrs. S. E. Howe led the soprano for twenty years. The organ was purchased some time in the forties, over which Miss Hattie Black first presided. Before that, was the customary church orchestra, in which Mr. H. Dwinell played the violin; Aaron Putnam, viol; J. Sawyer, clarionet; assisted sometimes by W. J. Kenney and M. Black, Jr., on the clarionet and viol.

The Sunday-school was organized in 1830. Among the earlier superintendents were I. W. Andrews, Aaron Eveleth, Henry Fowler, Edwin F. Putnam and Moses Black, Jr. In 1840 there were eighty-eight members, including nineteen teachers. Among the later superintendents were John Hines, William E. Putnam, William Rankin, Andrew W. Trask, Edward Tyler, John H. Elliott, Ezra D. Hines, Rev. George J. Sanger, and, at present, Howard R. Burrington. The school now numbers about one hundred and fifty. In December, 1880, a successful effort was made to raise a debt of two thousand five hundred dollars against the society, and the event was celebrated by a supper early in January.

Maple Street Church.—On the 15th day of March, 1844, Nathaniel Silvester, Moses J. Currier, Henry T. Ropes, Benjamin Henderson, Aaron Bateman, Gustavus Putnam, represented to George Osgood, a justice of the peace, that they were about to form themselves into a religious society for the worship of Almighty God, and requested him to issue a warrant for the calling of a meeting to be holden at the school-house on Danvers Plains on Monday evening, March 25th, to organize such a society under the name of the Third Orthodox Congregational Society of Danvers. Dr. Osgood issued his warrant accordingly to Nathaniel Silvester to warn a meeting according to the terms of the petition. At this meeting Henry T. Ropes was chosen the first clerk of the society; Winthrop Andrews was chosen moderator; Moses J. Currier collector; Benjamin Turner, Samuel Brown, Nathaniel Silvester were the first parish committee; George Osgood, Henry T. Ropes, and Benja-

min Turner were appointed committee on by-laws; Nathaniel Silvester, Samuel Brown, and Henry T. Ropes, to take into consideration a more suitable place of worship; M. J. Currier, W. Andrews and John A. Learoyd, to solicit subscriptions for preaching.

At the adjournment of this first meeting, by-laws were presented and accepted; the house committee reported in favor of a subscription in shares of one hundred dollars each, the cost not to exceed four thousand dollars; the same committee were instructed to see what land could be obtained in several parts of the plains; Rev. Mr. Thayer was employed to preach for six months at seven dollars per day; Watts' Select Hymn Book was adopted; John A. Learoyd was "authorized to procure a Bass Vial." At a further adjournment a building committee of eight were chosen, as follows: Samuel Putnam, John A. Learoyd, Henry T. Ropes, Benjamin Turner, Joseph Adams, Samuel Brown, Daniel Richards, Samuel P. Fowler.

April 29th it was decided to purchase the lot of land offered by Ezra Batchelder, "8 Rood front by 11½ Roods deep, for \$800." The committee was instructed to build a basement story of rough granite of suitable dimensions for a hall. The material subsequently suggested the name, Granite Hall. Rev. Loren Thayer was employed "to supply the desk until the meeting-house is completed." Benjamin Turner, Gustavus Putnam and Moses J. Currier took into consideration the expediency of organizing a choir of singers. Daniel Richards and Mr. Currier were instructed to purchase a bell not to exceed twelve hundred pounds. The new house was dedicated Wednesday, January 22, 1845, Mr. Thayer preaching the dedication sermon. This year fifty dollars was paid Parker B. Francis for singing, and seventeen dollars was "paid Mr. Stanley for a flute;" later the society purchased "the Bass Vial of J. A. Learoyd" for \$30.75. Moses Putnam was thanked for the handsome sofa and chairs he had furnished the society, as were also the ladies for carpeting the house. The first person called to settle as minister was Rev. F. A. Barton, of Chicopee Falls, who declined on account of ill health. Rev. Richard Tolman, of Dorchester, accepted a call, and was ordained September 17, 1845, the first pastor of the new church and society,—salary, six hundred dollars for the first year, afterwards seven hundred dollars. The ordination sermon was preached by Rev. E. N. Kirk. Mr. Tolman remained until November, 1848. On April 3, 1849, this letter was sent to Rev. James Fletcher, of Acton, then at Andover Theological Seminary:

"DEAR SIR: We, the undersigned, as a committee in behalf of the Third Cong. Church and Society in Danvers hereby extend to you an invitation to become our pastor and teacher. The salary which the society offer you is six hundred dollars.

SAML. P. FOWLER,	} Com. of
BENJ. TURNER,	
FRED'K HOW,	} Com. of
M. W. PUTNAM,	

Mr. Fletcher accepted and was ordained June 20, 1849, to a pastorate which lasted nearly fifteen years.

The expense of the new church was about eight thousand dollars, for more than half of which sum indebtedness had been incurred. Strenuous efforts were made to liquidate this debt, and, February 1, 1847, eighteen men entered into a written obligation to contribute, by way of loan or advancement, in four annual payments a total of four thousand two hundred and eighty dollars; of this sum Moses Putnam subscribed eighteen hundred dollars, his brother Samuel five hundred and twenty dollars, Nathan Tapley and Jesse Putnam each three hundred dollars. The other names which appear in autograph in the records are Elbridge Trask, Joseph S. Black, Moses W. Putnam, Samuel P. Fowler, Frederick How, F. Howes, Eben G. Berry, Richard Tolman, Daniel Richards, Stephen Granville, Rebeckah Perry, James M. Perry, John A. Learoyd, Nathaniel Silvester. In May, 1850, but seven hundred dollars of the debt remained, and "whereas Moses Putnam, Esquire, has generously offered to pay the sum of \$250," measures were taken to meet the balance. Upon the very next leaf to that which records this happy state of things appears this memorandum of Deacon Fowler's:

" BURNING OF THE MEETING-HOUSE

"On the night of July 10th, 1850, the meeting-house of the Third Cong. Society was destroyed by fire. It broke out in the entry of the Hall about 11 o'clock, and was the work of an incendiary. It was insured at two mutual offices in Salem for the sum of \$5,000.

"The house was completely destroyed, but the walls of the basement story were left standing, and by many persons supposed to be not much injured. The sheds and fences around the house are but little injured, in consequence of there being but little wind at the time of the fire. The House, with its furniture, Church plats, and Sabbath-school library, was consumed.

"The Selectmen of the Town have offered a reward of 500 dollars for the detection of the sacrilegious villain who burnt our beautiful House and laid waste our pleasant things. The Sabbath evening after the fire, Wm. Duffee, a young man living on the Plains, was, on the complaint of Geo. Perkins, arrested and lodged in Salem jail, being accused of setting fire to the Meeting-House. He was carried before Justice Rantoul, of Beverly, and, pleading guilty of the charge, he was sent to the Salem jail to await his trial, Perkins being also sent with him as a witness. Both effected their escape in November following. Duffee was retaken, convicted and sentenced to the *State Prison for life*. Perkins who was suspected as an accomplice with Duffee in the burning of the house, some weeks after returned to Danvers, gave himself up, was carried back to jail, and, no one appearing against him, at the term of court following he was discharged.

"On Sunday, July 14th, public worship was held by the Society at the Free Chapel, on the Plains, where an appropriate and interesting discourse was delivered by our pastor. The text was from the 14th chapter of Exodus, 15th verse, "And the Lord said unto Moses, Wherefore criest thou unto me? Speak unto the children of Israel, *that they go forward.*"

"In this discourse our Pastor, in a forceable manner, enjoined upon us the importance of immediately going forward in the work of rebuilding our Meeting-House."

The very next day the standing committee issued their warrant for a meeting to consider rebuilding. It was voted "that we proceed immediately to rebuild our meeting-house—the vote passed unanimously." The offer of the use of the Free Chapel was accepted.

The new building committee were S. P. Fowler, Nathan Tapley, Daniel Richards, Alfred Fellows, J. S. Black, Elbridge Trask, J. C. Butler, Nathaniel Silvester and Stephen Granville. They went to work with six thousand dollars insurance and trusted to raise the balance. The contract was originally given to Boston parties for six thousand eight hundred and seventy-five dollars, but they failed to meet their engagements—"the winter came upon us with its snow and rains with the building completely exposed." The contractors were paid two thousand eight hundred and fifty dollars to leave the job, and Abel Preston's proposal to finish the building for four thousand dollars was accepted. On Sunday, March 9, 1851, services were first held in the new Granite Hall, and the church itself was ready for dedication September 17, 1851. The total cost of the new or present church was \$8485.66; the new bell cost two hundred and thirteen dollars. The present organ was purchased by subscription, as was also the clock in the tower, and at a meeting of the subscribers to both, August 15, 1854, both were "unconditionally presented" to the society. About the same time certain pews were set apart to be sold for the benefit of the eighteen subscribers who assumed the debt of the old church, they suffering a loss of twenty-five per cent. of their subscriptions—the proportional loss of pew-holders over insurance. The new bell was not up to the standard of orthodoxy, and cracked; the present bell dates from 1856.

Moses Putnam, foremost of the friends and supporters of the church and society, a few months before he died, which was September 10, 1860, in his eighty-fifth year, gave up several notes amounting to fourteen hundred dollars, which he held against the society. A communication was sent to him expressive of the heart-felt gratitude of the society for this and former generous donations.

Rev. Mr. Fletcher tendered, May 21, 1864, a letter of resignation.

A call was extended, February 1, 1866, to Rev. Wilham Caruthers, of North Cambridge, who accepted, and was installed April 18th. This call was not nearly unanimous, and after a little more than two years Mr. Caruthers tendered his resignation, to take effect July 31, 1868. On the 22d of February, 1869, by a large and unanimous vote, Rev. James Brand, then a student at Andover, was invited to become pastor, and he was ordained October 6, 1869. Shortly after, December 5th, the church celebrated its twenty-fifth anniversary. In the spring of 1872 the subject of making extensive and radical changes in the house was first brought up, and continued to be talked about and voted upon for two years, when it was finally decided to take the work in hand. Andrew M. Putnam, Winthrop Andrews, Charles H. Gould, John S. Learoyd and Daniel Richards were the supervising committee. An addition was built on the rear of the church, the interior was entirely remodeled, the old

galleries were abolished, the organ and choir-loft moved behind the pulpit, modern black-walnut pews were substituted for the old ones, which are now occasionally seen adorning gardens and back piazzas. With the change in the building came also a change in the organization of the society. It was proposed to abandon the system of individual pew-ownership for a system of annual rental. By act of the Legislature the existing corporation was dissolved March 24, 1874, and a new society was immediately organized under the general statutes, the first meeting of which was held the next day. Under the by-laws of the new society all property was vested in a board of five trustees, three at least to be members of the church. Membership was open to any person renting a sitting and receiving a majority vote at any regular meeting. There have been but three elections of trustees,—

1874

Chester H. Gould.
Edward A. Lord.
Moses J. Currier.
John S. Learoyd.
John A. Putnam.

1879.

George W. Fiske.
John A. Putnam.

Moses J. Currier.
Charles H. Gould.
John S. Learoyd.

1885.

C. H. Gould.
Samuel L. Sawyer.
G. W. Fiske.
John A. Putnam.
J. S. Learoyd.

Before these changes, however, Mr. Brand resigned his pastorate, to take effect November 1, 1873. He went to Oberlin, Ohio, "to accept a place where my usefulness in the ministry, if I have any, can be more than doubled." He went "with the kindest words to say and the pleasantest memories to carry," and left with his parishioners an abiding love and respect towards himself. He has not failed by reason of "the greatness of the field and the urgency of the call." After nearly two years Rev. Walter E. C. Wright accepted the invitation to fill the vacancy, and was installed October 12, 1875, his brother, Rev. G. F. Wright, of Andover, and Rev. James Fletcher, a former pastor, taking part in the exercises. During his pastorate of seven years he not only endeared himself to his own people, but won and merited the greatest respect of his fellow-citizens by the many manifestations of his active public spirit. Upon him fell most of the responsibility of the re-arrangement and new catalogue of the Peabody Library, a work which will remain a substantial monument to his memory. He was also largely instrumental in lifting from the church a heavy load of debt. He was an able debater, and the occasion in Gothic Hall when he stood alone against an array of advocates of woman-suffrage will long be remembered. His letter of resignation dated August 12, 1882, contains this: "The experience of the past few months has indicated the importance, for the health of my wife and perhaps my own, of a change of residence to a milder climate." An urgent call to take up a congenial and important religious and educational work at Berea College, Kentucky, was there-

fore accepted, and his resignation was tendered, to take effect the last of September, 1882. Rev. Edward P. Ewing, formerly of Enfield, Mass, his successor and the present pastor, was installed November 1, 1883.

The first deacons of the church were Frederick Howe and Samuel P. Fowler; subsequently elected: John S. Learoyd, Samuel P. Trask, Eben Peabody. Messrs. Fowler, Learoyd and Peabody survive in office. The membership of the church at its organization was 42; at present, 1887, 305; total membership since organization, 537.

The moderator of the first meeting of the society, 1844, was Winthrop Andrews. Moderators of subsequent annual meetings have been as follows:—Samuel P. Fowler, 1845, '47, '48, '49; Nathan Tapley, '46, '51, '53, '54, '59, '60; Joseph S. Black, '50, '58; Dr. D. A. Grosvenor, '52; William L. Weston, '55, '56, '57, '61, '68, '74; Rufus Putnam, '62, '63, '64, '65, '67; John A. Putnam, '66, '75, '76, '77; John S. Learoyd, '69; John R. Langley, '70, '72, '73; Moses J. Currier, '71; Samuel L. Sawyer, '78, '81; George W. Fiske, '79, '80, '83, '84, '85, '86, '87.

Until 1882, the offices of treasurer and collector were considered as one, and the persons holding the office were as follows:—Moses J. Currier, 1844; Moses W. Putnam, '45-'47, '51; Elbridge Trask, '48; John C. Butler, '49, '50; James M. Perry, '52-'70, eighteen consecutive years; John A. Putnam, '71-'81. In 1882 the offices were divided. Webster F. Putnam was elected treasurer, and served two years; George W. Fiske, '84, '85; Charles H. Gould, '86, '87. Winthrop Andrews has held the office of collector from 1882 to the present, 1887.

Henry T. Ropes was the first clerk of the society and served for three years. Joseph S. Black succeeded him and served three years. Deacon Samuel P. Fowler began to keep the records in 1850 and has entered on the thirty-seventh year of his service. During the whole period since the organization of the society, the records have been kept admirably.

The list of standing committees is as follows:

STANDING COMMITTEES.

1844.	Joseph S. Black.
Benj. Turner.	Daniel Richards.
Saml. Brown.	
Nathl. Silvester.	1848.

The Sunday-school in connection with the Maple Street Church was organized December 4, 1844. It then consisted of one hundred and fourteen members and twelve teachers. The first superintendent was Francis P. Putnam. Succeeding superintendents have been Moses W. Putnam, Joseph S. Black, Nathaniel Hills and John S. Learoyd.

By far the longest term of office is that of the present superintendent, Mr. Learoyd, who is now in his twenty-second year of consecutive service. There are at present connected with the school, four hundred and thirty-six members, forty-two teachers, two hundred and seventy-eight scholars in main school, ninety-one primary, and twenty-five in the pastor's Bible-class. The average attendance is three hundred and six. Yearly collection for 1886, three hundred and forty dollars. Number of library books, eight hundred and sixty-five.

CATHOLIC.—Before 1850 there were very few natives of Ireland residing in Danvers. Between 1850 and 1855, or even later, they came here in considerable numbers and made homes for themselves. The first man of Irish birth to settle here, about 1840, was the late Daniel Crowley, whose children are an honor to his name. Another early settler was Edward McKeigue. It was in the latter's house, November 1, 1854, that the first Catholic service was held in Danvers. Rev. Thomas H. Shahan, then of the Church of Immaculate Conception in Salem, officiated. Afterwards regular services began to be held in Franklin Hall, and then a chapel was erected south of the High Street Cemetery. When the Universalists gave

up their church in 1859, the Catholics bought it. This building, since altered and enlarged beyond recognition as to its original condition, is the present church of this denomination. A fine new pastor's house has been very recently erected on a pleasant site in the rear of the church, overlooking the river. It is a fact significant of the increase of the Catholic population since the time above referred to, that in this church worships a congregation by far the largest in town; and it is also significant that while many of the old names, common a hundred or two years ago, have become entirely extinct, and others are in danger of becoming so, the names of Sullivan, Collins, Gallivan, McCarthy and others appear in increasing numbers in each new directory and voting list, and indeed those names mentioned seem already to be more numerous than any other save one. The largest collective settlement of the people of this church radiates from the crossing of Hobart Street and the Eastern Railroad. It used to be called after the capital of the old country. Much of the land was bought by Captain Andrew M. Putnam, and by him was first opened up for building purposes. At his death, May 6, 1881, the family received a touching letter from a committee of Irish citizens, requesting permission to march behind the funeral procession to the grave. Twenty-eight of them did this, and some of their number filled the grave with earth. "No pen can write," such was the tribute, "nor mind describe the love, the veneration, we have for him, who was 'a friend in need and a friend indeed.' The name of Captain A. M. Putnam shall be forever near and dear to us. Many a heart has he made glad, by putting them in a way of having a little home for themselves when every one else seemed against them."

The first resident pastor of the church was Rev. Charles Raioni, who also had charge of the church in Marblehead. Thither he removed on the separation of the parishes in 1872. He was a gentleman advanced in years, and greatly beloved. His successor, Rev. Fr. O'Reilly, remained but one year. Rev. Patrick Joseph Halley was appointed to Danvers in April, 1873, and his pastorate extended to September, 1882; Rev. D. B. Kennedy's, from the last date to April, 1885, when the present pastor, Thomas E. Power, was appointed.

EPISCOPAL.—Calvary Parish was organized on the 14th of April, 1858. Joseph Adams and John S. Pratt were the first wardens. Rev. Robt. F. Chase entered upon his duties as rector, May 9th, 1858, services being held at first in Bank Hall.

The corner-stone of the present church at the corner of Holten and Cherry Streets, was laid by Bishop Eastburn, May 11, 1859, and the church was consecrated by him, May 25, 1860. Mr. Chase resigned in 1862, but was again rector from 1863 to 1865. His successors were as follows:—Rev. George Horvill, rector from 1865-66; Rev. William W. Silvester, deacon in charge of the parish, 1868; Rev. S. J. Evans,

rector, 1869-71; Rev. William I. Magill, 1872-77. Rev. George Walker, the present rector, took charge of the parish October, 1877.

UNITARIAN.—As was hinted in the sketch of the Universalist Society, there were, many years ago, a number of influential families who had accepted the Unitarian faith. It was not, however, until 1865, that the present society was organized and worship begun, the first service being held in the Town Hall, and conducted by Rev. A. P. Putnam, then of Roxbury.

Mr. and Mrs. P. H. Wentworth, with their family of children, had recently removed to Danvers from Roxbury, where they had been parishioners of Mr. Putnam, and it only needed their presence and earnest zeal in the town, to insure success to the new movement. One or more meetings of the friends were held to consider the matter, previous to the first public service, and arrangements were soon made for regular Sunday worship in the Town Hall until more suitable accommodations could be had. The desk was supplied by different preachers until April 1st, 1867, when Rev. Leonard J. Livermore became the pastor of the infant church, and remained the minister until his death, in the summer of 1886, having his residence throughout at Cambridge, and being the guest of Mr. and Mrs. Wentworth, on his weekly visits to Danvers. The little church prospered, and in a few years erected its present neat and commodious chapel, which is located very near the site of the first house at Danvers Plains, that of pioneer John Porter. The cost of land and edifice was about \$13,000. The building took the name of Unity Chapel, and was formally dedicated as a house of worship on the evening of the 16th of March, 1871. The opening prayer was by Rev. S. C. Beane, of Salem; the reading of the Scriptures by Rev. J. B. Moore, of Lawrence; the sermon by Rev. A. P. Putnam; the act of dedication by the pastor and people; the prayer of dedication by Rev. J. T. Hewes, of Salem; chants and hymns were sung by a quartette and by the congregation. The church suffered a great loss in the death of Mr. Wentworth, about the time of the decease of its first minister. For a fuller notice of these two excellent men and faithful friends, see Dr. Putnam's sketch of Mr. Wentworth on a subsequent page. Mr. Livermore's successor is Rev. J. C. Mitchell, who entered upon his work here during the last winter (1886-87), having previously been the minister of the Orthodox Congregational Church in Wenham.

METHODIST.—This is the only church located in the village of Tapleyville, and draws its strength and support largely from that neighborhood.

The first preaching service, preliminary to organizing a church, was held in Lincoln Hall, October 22, 1871. As a result of this and successive meetings it was determined to build a meeting-house. G. A. Tapley gave the lot of land, and he and his father otherwise contributed liberally. The present building was dedicated early in 1873. It cost about fif-

teen thousand dollars. The church was organized March 17, 1872. The first pastor was Rev. Elias Hodge, to whose enthusiastic work much of the first success of the new church was due. He served until 1874, the conference year beginning with April. His successors have been Rev. R. H. Howard, 1875-76; Rev. Garrett Beekman, 1877-79; Rev. W. J. Hambleton, 1880-82; Rev. W. M. Ayres, 1883-85; Rev. C. A. Merrill, the present pastor, came in 1886.

The Sunday-school was organized November 5, 1871; its first superintendent, Oliver D. Ham-

SEVENTH DAY ADVENT.—In the summer of 1877 a very large tent was pitched in the open lot on Hobart Street, opposite the station, and large congregations went nightly to hear Elder Canright's expositions of the doctrines of the above sect. He succeeded in making numerous converts, some from other churches, more from those not previously in the habit of attending church. Notwithstanding the practical inconvenience of keeping Saturday as the Sabbath, a considerable number hold firmly to that way. A chapel was dedicated January 6, 1878. It stands very near the site of the tent. The church was organized December 11, 1877. There has been for some time no settled pastor. Very recently there have been quite a number of baptisms. Charles Hartman is superintendent of the Sunday-school.

CHAPTER XXV.

DANVERS.—(Continued).

EDUCATIONAL.

ONE of the reasons why the Village and Middle Parishes petitioned to be set off from Salem was because they were so far from the grammar-school. But there were schools, probably of lower grade than grammar, in both the Village and Middle Parishes many years before the district of Danvers was incorporated. The first action taken towards a separate school within the present limits of Danvers and Peabody was in 1701, under a vote entered in the village parish records that "Mr. Joseph Herrick and Mr. Joseph Putnam and John Putnam jun. are chosen and empowered to agree with some suitable person to be a school-master among us, in some convenient time; and make return therefor to the people." The man instrumental in building the first school-house was the minister of the Village church, Rev. Joseph Green. Certain passages of his diary, March, 1708, bear upon the subject:

"March 11. . . . I spoke to several about building a schoolhouse and determined to do it, &c.

"18. I rode to ye neighbors about a schoolhouse and found them generally willing to help.

"22. Meeting of the Inhabitants. I spoke with several about building a schoolhouse. I went into ye Town Meeting (village meeting) and

said to this effect: Neighbors I am about building a schoolhouse for the good education of our children . . . Some replied that it was a new thing to them and they desired to know where it should stand, and what the design of it was. To them I answered that Deacon Ingersoll would give land for it to stand on, at the upper end of the Training field, and that I designed to have a good school-master to teach their children to read and write and cypher and everything that is good. Many commended the design and none objected to it.

"25. Began to get timber for schoolhouse."

The teacher first mentioned by name is Katherine Daland; she taught before Mr. Green's house was finished. In 1714 Samuel Andrew taught and is the first mentioned master.

To pass now at once to the separate existence of the town and the manner in which it managed school affairs. At first the schools were left to the selectmen. The first school-committee, as a distinctive board, were chosen in 1756, under the following votes:

"Voted, to chuse a com'tee to regulate ye Grammar School & to be five men. Voted, Dan'l Gardner Dan'l Purington Dan'l Epes Jun'r Nath'l Felton Sr. David Putnam voted, that the School Com'tee Draw up Something and lay it before ye District on ye adjournment"

In the annual warrant for 1766 there occurred for the first time a proposition for the division of school money between the parishes according to the proportion of their taxes, but no action was then taken. The next year the question of establishing other than grammar-schools came up again. It was four years since the same matter had been referred to the discretion of a committee, and now the growing need of such schools seemed so imperative that it was directly voted "that there be a number of schools provided by the selectmen besides the Grammar School in the winter Season in this Town as the Selectmen Shall think proper, To be at Town Cost." The next year, 1768, "the claws in the warrant" relating to division of the school money between the parishes was dismissed as before, and again the monopoly of public education was restored to the grammar-school; but before winter set in the selectmen were instructed "to set up what schools they shall think proper."

So matters went, at times only a grammar school, at times "other schools set up," until, in the midst of the Revolution, December 1, 1777, on a petition headed by Col. Jeremiah Page, a decidedly progressive step was taken. At a meeting held in the North Meeting-House, Archelaus Dale, Moderator, it was voted that there be Ten Schools set up in the Town for three months each, and that the selectmen regulate the schools and provide proper persons for School-masters.

In 1780 the expression "district schools" is first used; it was then voted "that there be District Schools set up for three months to begin as soon as may be."

In 1783 nine schools were "set up" for two months, but whether or not nine schools were insufficient to meet the law, or the setting-up thereof was too largely on paper merely, the inhabitants found themselves this year presented before the Court of General Sessions for not keeping schools according to law.

and Samuel Cheever was sent to Ipswich to answer for the town on the first Tuesday of April, and he was instructed "to use his influence, that the Town be not fined for their neglect in not keeping schools." The potency of Samuel's endeavors may be inferred from the fact that there is no further mention of the subject.

The 10th of November, 1794, is the beginning of a new epoch, it marks the first step towards the establishment of a systematic district system. It was then voted that the selectmen "divide the town into as many districts as will best accommodate the town;" and the next month the first distinct and separate appropriation of money for school purposes was made,—£90, exclusive of the grammar school. Gideon Foster's record of the laying out of the school districts must here be omitted. There were nine in all; number one including the present central village of Peabody; two, the Port; three, Putnamville; four, Beaver Brook; five, the Centre; six, Felton's Corner; seven and eight, West Danvers; nine, towards Humphrey's Pond. The establishment of division lines caused some uneasiness among those who lived on the outskirts of the respective districts. For instance, Col. Jethro and Dr. Archelaus Putnam, and the dwellers on the Derby Farm, found themselves, by the new dispensation in No. 3, wished to be in No. 4, and evidently succeeded in getting there; for the next year, Aaron Putnam and others of No. 3 petitioned that the lost sheep be brought back again. Daniel Taylor and others soon wanted a division of No. 7 by a North and South line. In 1800 Amos King wished to be set off from No. 8 to No. 6, but the inhabitants said no.

Early in 1802 a special meeting was called, to see if the town would make some general alterations in district lines; the only changes made were in numbers two, three and four, all within the present limits of Danvers.

In 1806 John Jacobs and others presented a petition for the division of No. 7 and, succeeding in obtaining it, the new district, number ten, was the result. In the same year the subject of rules for the government of schools was first considered, and the following code drawn up by Parsons Wadsworth and Walker, and Hon. Nathan Read, David Daniels and Capt. Samuel Page, will prove interesting reading:

DR. WADSWORTH'S CODE.

"1. It is recommended that each Instructor open his School in the morning and close it in the evening with a short prayer.

"2. On every School day except Saturday, each instructor shall employ at least six hours in the instruction of his pupils, and not less than three on that day.

"3. The instructor of each School shall class his pupils in such manner as he shall judge most conducive to their improvement, not making less than two Classes.

"4. To facilitate the acquirement of an accurate & uniform mode of Spelling & pronunciation, Perry's Spelling-book and Dictionary shall be taught in all the Schools; and the following shall be the Catalogue of Books from which the Scholars shall be supplied at the discretion of the Instructor, viz. 'Murray's English Grammar Abridged,' 'Morse's Geography, abridged Constitution of the State of Massachusetts,' &c.,

'Wakefield mental improvement,' 'Pikes Arithmetic' & the 'holy Bible,' together with such Latin & Greek Classics as are usually taught in Grammar Schools.

"5. To abridge the time commonly consumed by Children in learning to write, the plan described in Jenken's 'Art of Writing' shall be adopted in all the schools; & Copper-plate copies furnished by the Instructors shall be used by those Scholars who are able to write joining hand.

"6. The Scholars shall be taught punctuation notes or marks, interrogation, admiration, accent, emphasis & cadence.

"7. Every Instructor shall establish & maintain order & good Government in his school, not by inflicting cruel & unusual punishment, but by addressing the understanding & ingenious feelings of the youth committed to his care, & by endeavoring to excite a spirit of industry & emulation stimulating them to their duty by the hope of reward rather than by the fear of Punishment.

"To carry these rules & orders (should the Town adopt them) into effect the Committee sensible that the improvement of Scholars depends greatly on the attention & fidelity of instructors beg leave to recommend a particular regard to the moral & literary qualifications of those who shall be employed in that capacity the annual choice of a School committee, faithfully to discharge the important trust reposed in them by law, & likewise to direct the Town Clerk to furnish the Grammar School Master at least with a written copy of the laws of this State respecting the power & duty of the School committee & instructors of Schools prefixed to a copy of these regulations.

"GENIA. WADSWORTH, PR. ORDER."

In 1808 another sub-division of districts occurred; the people living in the western part of No. 1 were set off as No. 11; and within a few months Clark Wilson and others secured a division of No. 11, and a portion thereof was established as No. 12. At the March meeting of 1816 another very important advance towards system was made. Three persons—Nathan Felton, Daniel Putnam and Dr. Andrew Nichols were chosen "to define the powers and duties of School Committee."

Ten years in advance of the law of the State making it the duty of towns to choose a school committee, Danvers accepted the report of these men, which contained, among other recommendations, this,—

"That it be proper and expedient to choose a School Committee, whose powers and duties shall be the same as is given to the ministers of the gospel and the selectmen of the town by the laws of the Commonwealth, excepting such as have or may be given to the school districts by a special vote of the town."

And twenty-two years in advance of the State law requiring school committees to make annual reports, Danvers adopted this recommendation,—

"It shall be the duty of the School Committee to make a report of so much of their doings and such other particulars respecting the several schools as they may deem worthy the consideration of the town at their annual March meeting."

At the same meeting at which this action was taken it was voted "that District No. 2 be divided, agreeably to a Petition of John Page and others, dated April 19th, 1816, and is on Town files." A search among the old papers in the town-house vault was rewarded by the finding of this interesting autograph petition, the origin of the present Plains District, now No. 1,—

"TO THE SELECTMEN OF DANVERS:—

"GENTLEMEN: We, the subscribers, inhabitants of School District number two, request you to insert a clause in your warrant at the May

meeting for the choice of Representatives to this effect: to see if the town will pass a vote to separate that part of District number two. Beginning at Frost fish brook bridge, so called, and from thence following the mill-pond down until you come to the point of land owned by John Page, thence up a branch of said pond, until you come to the bridge near brick yards; thence running down by the Salem road until you come to the east corner of Seth Stetson's pasture; thence running as the fence stands to the south corner of said pasture; thence southerly as the fence runs to Crane river, so called; thence following said river to the Bridge with all the land, polls and estates, to the northward and westward said line now belonging to District number two, with all the powers and privileges belonging to other school Districts in the town of Danvers.

" Danvers, April 19th, 1816.

- " JOHN PAGE.
- " GEORGE OSGOOD.
- " EZRA BATCHELDER.
- " EBEN BERRY.
- " TIMOTHY PUTNAM.
- " EBEN PUTNAM, JR.
- " ANDREW BATCHELDER.
- " ALLEN PEABODY."

Very soon Benjamin Wellington and Jonathan Perry, with their polls and estates, were set off from No. 3 to the new district, No. 13, and the next year "the land of Wm. Burley, of Beverly, which lies in Danvers" was subjected to the same transfer.

In 1820 the town directed the school committee to return the number of children between five and eighteen, with the following result :

No. 1.....162	No. 4..... 51	No. 7.....69	No. 10..... 46
" 2.....184	" 5.....104	" 8.....85	" 11..... 116
" 3..... 53	" 6..... 98	" 9.....16	" 12.....120
No. 13.....66.			

About this time it is apparent that the old "grammar school" was being neglected. In the summer of 1821 Dr. Nichols and others petitioned for such a school, and as cumulative evidence of its non-existence this vote appears on the record of the next annual meeting,—

" Voted, To choose a committee to answer a communication received by the selectmen from the county attorney, relating to Grammar Schools. Voted, that John W. Proctor, John Page and William Sutton be said committee."

The spirit of Samuel Cheever seems to have descended on these men, for, as in the case of his mission to Ipswich forty years before, nothing was thereafter heard of this threatened indietment.

Since the code of 1816 there had been annually elected three committee-men at large, and each year these three were the ministers of the three churches. After seven years it seems that it was thought well to give laymen a representation, and at a meeting called for that purpose and no other, and on the petition of the school committee themselves, it was voted then and thereafter to add three to the committee at large; and those first added were Dr. Nichols, Nathan Felton and John W. Proctor.

In 1827 the term "at large" was dropped. The body which had been thus distinguished now became, with the addition of one more, simply the School committee; while the committee, chosen as formerly, one from each district, received the new title of Prudential Committee. To further distinguish the "upper house" from the latter, for several years

the phrase "Committee of Superintendence" was applied to it.

In 1831, by vote of the town the Prudential Committee were thenceforth to be elected by the several districts at district meetings.

In 1835 just forty years had passed since the original establishment of districts. In the mean time many alterations, only some of which have here been noted, had taken place in the way of changing individuals and their estates from one district to another, until there might well have been more or less uncertainty about the true dividing lines. They were therefore carefully examined and re-located by a committee of delegates from each existing district, and their report was recorded by Dr. Shed in a volume of school records.

In 1836 occurs the first mention of compensation to the school committee. They were authorized to appoint three of their number to visit all the schools in town, and these three were to receive for their services the same rate per day as other town officers.

The next year, 1837, the Massachusetts School Fund is first mentioned. The manner of disposal of the town's share was referred to the school committee.

The Legislature of 1838 passed an act, changing the authority to employ teachers from the prudential to the general committee unless towns should otherwise order, and Danvers did so otherwise order. But lest the district government should smack too highly of one-man power, it was, the next year, recommended to each district to choose two other persons to act and advise with the prudential man in superintending the concerns of the district.

The year 1839 marks the beginning of our printed school reports. The first school report proper ever made to the town was in 1817, and was committed to the "files." Resurrected from its long repose, this old document, somewhat blotted, scratched and inter-lined, signed "B. Wadsworth, Chairman, pr. order," makes very interesting reading to-day, and shows that school-report literature has departed not far from the standard thus early set,—the very small iron hand in the glove of well wadded velvet. There seems to be a certain familiar sound about expressions such as these :

"The Committee are enabled to report that the schools generally appeared advantageously in comparison with their condition in past years. . . . Notwithstanding the respectable character of the schools generally, there is still room for improvement. In some districts the committee did not find the scholars had made so great proficiency in their studies as might have been reasonably expected. . . . In some districts many of the children have been sent very inconstantly to school, and the efforts of the Instructors have not been met with that zealous support from Parents which is essentially necessary to give the desired effect. In some instances the committee did not find that degree of silence and regular order which is necessary to enable scholars (Ah, Doctor!) to pursue their studies most advantageously. . . . But the committee with pleasure add that in no instance was there discovered any marks of negligence, or want of constant and faithful attention to their laborious employment on the part of the Instructors. . . . The committee would close their remarks respecting the several schools

by stating, that they derived the highest gratification in witnessing the regular order and highly respectable attainments of the scholars in the school kept by Mr. Samuel Preston, District N. 4, in the North Parish, and in the school kept by Mr. Amory Felton, District N. 11, in the South Parish.

The Committee conclude by earnestly exhorting all concerned to exert all their influence and abilities to improve their respective schools by employing the best Instructors, by sending the children and youth to school as constantly and as many years as possible, and by affording them all the aid and encouragement in their power to attain at least a thorough acquaintance with the several branches, or, rather, rudiments of science which are taught in English schools."

Following the custom thus set in 1817, reports were for eighteen years annually read at town-meeting and filed away. From 1835 to and including 1838 the reports are recorded at length, together with many interesting returns, in Dr. Shed's book of "School Records."

At the annual meeting of 1839, after Rev. Allen Putnam had read the report of the year then ended, it was recommitted with authority to the committee to cause as many copies of it to be printed as they should think proper for the benefit of the inhabitants. Israel H. Putnam appears in this earliest printed report as a teacher in No. 7; subsequently he was given the much larger school in No. 5. One of his successors in No. 7 was John G. Walcott, and following Walcott, in the winter of '42-43, was a young man from the Village, Augustus Mudge. Of the latter the committee said, "the teacher seemed to feel an active interest, and the appearance of the school justifies us in saying that in his first attempt, he has succeeded in imparting that interest to his scholars." In the sequence of events, Mr. Putnam and Mr. Mudge are now associated the one as treasurer and the other as president of the Danvers Saving Bank.

Oliver A. Woodbury, who became a physician in Nashua, N. H., deceased, taught in No. 10. Among the lady teachers were Elizabeth P. Pope, Fidelia Kettelle, Margaret Putnam, Harriott A. Pope, Emily Gould and Hannah J. Putnam. The mention of the then young men, Putnam, Walcott and Woodbury, calls to mind the fact that just about this time they were themselves attending school at Pembroke Academy, N. H. And this was a thing not uncommon among the ambitious young fellows of Danvers, who desired something more than the meagre education of a few weeks each winter at the home schools. They left their work and their wages not for the fun of a term or two at boarding-school, but to get the most out of it; sometimes spurred on by a friendly word of advice, but as often impelled merely by personal determination. Quite a number went to Bradford, a few to Atkinson, N. H., and perhaps elsewhere, but Pembroke seems to have been the favorite. In the few catalogues which have been preserved the following names appear of North Danvers young men and women who were at Pembroke about 1840: Israel H. Putnam, Oliver A. Woodbury, Israel P. Boardman, Francis Noyes, Charles A. Putnam, Albert Putnam, Elias E. Putnam, Israel E. Putnam, Moses W. Put-

nam, Thomas M. Putnam, William Putnam, John G. Walcott, Joseph S. Black, Charles P. Preston, Aaron W. Warren, Charles H. Gould, Harrison O. Warren, John H. Porter, John Reed, Caroline E. Page, Sarah P. Page, Emiline Putnam, Nancy Putnam, Mary O. Black, Sarah A. Kent.

At Topsfield Academy there were, about 1830, these: Ezra Batchelder, James D. Black, Thomas J. Bradstreet, Moses K. Cross, John C. Page, Charles Page, Ebenezer Putnam, Francis Putnam, William R. Putnam, Henry F. Putnam, Charles H. Rhoades, Asa T. Richards, Richard West, Lydia Bradstreet, Harriet N. Page, Harriet Putnam, Clarissa Putnam, Elizabeth A. Putnam.

A fellow-student with some of these Danvers young people at Pembroke was a young man from Deerfield, N. H., who went to Dartmouth College, and helped to pay his way by teaching, winters. About Thanksgiving time, during his first year, he drove from his home looking for a school, and spent a night in Danvers with Oliver Woodbury, calling the next morning on "Uncle Moses," father of Israel E. Putnam, a young man of great promise who had died at Pembroke, and by Uncle Moses he was taken over to the old General Putnam homestead to the shoe-factory of Daniel and Ahira Putnam, to see in particular the latter who was prudential committee-man, and to Ahira the young man made application to teach the district school, No. 4, the ensuing term and was engaged. Julia Putnam, a daughter of the homestead, helping about the household work which by well-established New England custom falls to Monday morning, noticed the arrival of the young stranger, and was interested in his errand for she was the teacher of the summer school. The young man's name was John D. Philbrick. It is a proud thing for Danvers that a name since so widely and honorably known should find itself connected with her annals. Mr. Philbrick taught the No. 4 school three winters. He became engaged to Miss Putnam, and was married to her after his graduation, and after his great life-work was accomplished came back to these scenes of his early labors and of his early love to die. It is interesting to read in the light of his subsequent career what was said of the young student-teacher by the committee of 1839: "At the commencement of his term we feared that Mr. Philbrick might fail to meet the reasonable demands of the district; but are happy in being able to state that both he and his school made progress that was *highly* gratifying to the committee and creditable to themselves. We have seldom found in school so general and thorough acquaintance with the various marks of punctuation as was possessed here; and as a necessary consequence we found some of the best readers here that we have listened to in town. The various recitations approached to uniformity in character and were very fair."

John Dudley Philbrick was born in Deerfield, N. H., May 27, 1818. He graduated from Dartmouth

in 1842, having some weeks previous to graduation entered upon the duties of a position in the Roxbury Latin School. While at Roxbury he married, August 24, 1843, Julia A. Putnam, of Danvers. He next went to the Boston English High School, was master of the Mahew School in 1845-46, and achieved great reputation for his admirable work as master of the Quiney School, 1847-52. For a few years his labors were then transferred to Connecticut, first as principal of the State Normal School, and again as State superintendent of common schools. In December, 1856, he was recalled to Boston by his election as superintendent of public schools, a position which, except for an interim of a year and a half, he held continuously until March, 1878. His published official reports during this term are a part of the standard literature of education. He was sent by the United States to represent our educational department at the Vienna Exposition in 1873, and again to Paris in 1878. From France he received the decoration of Chevalier of the Legion of Honor, and the Gold Palm of the University of France. St. Andrew's University of Scotland conferred upon him, in 1879, the degree of D. C. L. He was one of the original incorporators of the Massachusetts Institute of Technology, and remained on the board as long as he lived; was ten years a member of the Massachusetts State Board of Education, and ten years a trustee of Bates' College. In his later years he was especially instrumental in the establishment of free evening schools and the State Normal Art School, and in the enactment of the truancy law and teachers' tenure of office act. He died at Danvers, February 2, 1886. In a private letter to John G. Whittier, I. E. Clark, of Washington, says: "I cannot express to you what a personal grief to me was the news of the death of Mr. Philbrick. . . . He was a great educator, I think worthy to stand beside Horace Mann in the memory of his countrymen." The immediate successor of Mr. Philbrick in this district school, of Danvers, was the man who is now librarian of the Boston Public Library, Hon. Mellen Chamberlain, who also married a Putnam of the neighborhood, a daughter of Jesse.

Mrs. Philbrick has furnished these names of other old teachers in No. 4: Asa Cummings, long editor of the *Portland Mirror*; Samuel, William and Eliza Preston (the latter Mrs. Nathan Tapley), Catherine, Elizabeth, Susan, William R., Francis P. and Julia A. Putnam, Dr. Joseph E. Fiske, Otis Mudge.

Dean Peabody, now clerk of Essex County Courts, taught in Putnamville, beginning in 1843-44.

In the winter of 1846-47 a young man, now widely known as Rev. Dr. Alfred P. Putnam, taught the "senior department" of the Plains School. "This was Mr. Putnam's first experiment in school-keeping. He entered upon the work in his own district, and under peculiar disadvantages. Yet the committee present at the closing examination testified to the general good appearance of the school and its decided improve-

ment during the year." Charles A. Putnam, who became superintendent of schools in St. Louis and there died, taught at No. 4, in 1847-48. Freeman N. Blake, who some years ago became a permanent resident of Danvers, was teaching thirty-seven years ago in No. 12. Harrison Gray taught at No. 7. Rufus Sawyer at No. 10, in 1850. Arthur A. Putnam, brother of Alfred, son of Elias, lawyer, of Uxbridge, began his first experiment, 1852, where he grew up, in No. 3. John W. Sawyer, who recently died at the head of the Butler Insane Asylum, Rhode Island, was teaching in 1852 at the "little border school," in No. 10.

Other well-known names than those already given which appear in the list of teachers from 1840 to 1845 are,—Hannah Pedrick, Sarah A. Osgood, Hannah P. Bradstreet, Sophronia Fuller, Asenath P. Pope, Sarah B. Pedrick, Almira A. Putnam, Eliza W. Preston, Melicent P. Peabody, Matilda Peabody.

From 1845 to 1855,—Elizabeth Hopkinson, Clarissa A. Preston, Mary P. Tapley, Eliza W. Preston, Nancy Perry, Mary J. Sawyer, Adeline F. Bomer, Sophronia E. Tapley, Mary E. Porter, Nancy E. Boardman, Sarah E. Symonds, Susan Putnam, Julia A. Page, Lydia A. P. Tapley, Harriet Felton, Amanda B. Hood, Hannah P. Pope, Harriet A. Putnam, Lydia A. Felton, Mary A. Richards, Sarah J. Putnam, Harriet M. Putnam, S. A. Hyde, M. A. Wilkins, Pamela Needham, Sarah F. Emery, Ann J. Emery, Ellen F. Towns, Cornelia Putnam, Sophia J. Richards.

In the year of the first printed report, 1839, the subject of high schools was first brought up. William D. Joplin, John W. Proctor, Allen Putnam, Samuel Preston, J. M. Austin, Daniel P. King and Benjamin Porter were appointed to consider the propriety of establishing one or more such schools agreeably to the statutes. They reported that a majority at least felt that the credit and interest of the town demanded better and higher schools than those existing. In view of the scattered location of the inhabitants, they said, it would not be practicable to agree upon a site for the establishment of one school to accommodate all, and, perhaps, it would be equally difficult to agree upon two. Although there were wise men on this committee, the concluding paragraph of their report is a bit of that rare wisdom which confesses its own limitations,—

"They are satisfied that something ought to be done, and they hope something will be done; but it requires wiser heads than theirs to determine how it shall be done in a manner that will prove satisfactory."

In the face of such an avowal it is not surprising that high schools remained in the realms of the ideal for many years to come. After three years some determined souls had the courage to bring up the subject again, it was referred to the school committee and that was the end of it. Then after one of the periods of Jacob's courtship, in 1849, it was brought up a third time, and again referred to the school committee. The next year, for the third time in its

history, an indictment hung over the town. High-schools were no longer a matter of choice, but of necessity, and the citizens stirred themselves to get at once out of the unpleasant situation. J. W. Proctor, Samuel Preston, Moses Black, Jr., Andrew Nichols and Fitch Poole were appointed to act in concert with the school committee.

On Monday, the 8th of April, 1850, Rev. Thomas P. Field of the South Church read the report of this committee in town meeting. It was voted that he read it over again. And after various attempts at amendment, it was adopted.

The report begins,—

"It is obvious that the Town is under an absolute necessity of establishing a High School. The Law on this subject is imperative, and we cannot neglect its requisitions, without incurring a heavy penalty. But so extensive is our Territory, and so scattered our population, that One High School will by no means satisfy the desires or meet the wants of our community. If we have One High School, we must have two, in order that all the Inhabitants of the Town, may participate in the benefits of Education, in the higher branches of knowledge. The Committee have considered the subject of uniting the High Schools, in some way with one or more of the District Schools, in order, if possible, to obviate the necessity of establishing Independent Schools. They have come to the conclusion, however, that no satisfactory arrangement of this kind can be made. It is uncertain whether any of the Districts would consent to it, and if they would, it is thought by the Committee that the plan could not be made to work, in a manner advantageous to the interests of either District or High School education."

The committee proposed certain votes, which by the acceptance of the report, became the action of the town:

"First, That it is expedient to establish two High Schools, independent of the District Schools,—One in the North and one in the South part of the Town, the said Schools to be free to all the Inhabitants, under such uniform regulations for the admission of Pupils as the school committee shall establish. . . . That the School Committee be instructed to provide two suitable school rooms, with Furniture and apparatus, and establish High Schools, according to Law, as early as the first of May next, or as soon after as practicable."

On the third day of June, 1850, the two high schools were opened for the admission of such scholars as should pass the examination. Thirty-eight entered the south, thirty-one the north school. John P. Marshall, now of the faculty of Tuft's College, was the first principal of the north school. The building in which the north school was inaugurated was situated on Conant Street, in a corner of the lot now occupied by the dwelling of Roswell D. Bates. It is described by one of the original pupils as "a long, narrow and low structure, a little back from the road, with two large trees before it. The room was very low studded, at one end the desk and at the other the recitation platform; between were only three rows of double seats. The pupils were of good age and ability." The first examination was awaited with great interest. "In consequence of the desire of so many to be present at this time, it was deemed proper to hold the examination in the new spacious school-house at New Mills. The performances were of a high order, and most gratifying to the committee and the numerous visitors."

After a few months better quarters were found for

the school. On the present town-house lot was the chapel of the Wesleyan Society and, being then little or not at all in use, the real estate was sold to the town, and the meeting-house became a school-house. This chapel had been called the "Quail Trap," and the name elung to it so long as it was used as a school-house. When the town-house was built, the 'quail trap' was moved to Essex Street, where, ever since, it has been a residence in good and regular standing. At the close of the second term of the second year Mr. Marshall resigned to take a better position; A. P. S. Stuart succeeded him, and remained till the close of the fall term, 1853. Mr. Nathaniel Hills, late principal of the high school at Great Falls, N. H., was selected as Mr. Stuart's successor. Rev. James Fletcher succeeded Mr. Hills. The present principal is H. R. Burrington; Miss S. F. Richmond, Miss Annette Sawyer, assistants.

By a letter dated London, 30th November, 1853, addressed to the committee of the Holten and Peabody High Schools, George Peabody, in acknowledgment of the compliment paid him in the name of the south school, stated that he would transmit in the autumn of 1854, and thenceforth annually during his life, the sum of two hundred dollars for prizes as rewards of merit to pupils of both high schools at their yearly examinations, the entire amount to be common to both, and distributed as among the pupils of one school. The school committee determined "that a suitable medal shall be awarded and presented to every pupil who shall pass three years—constituting the entire course—in either of these schools, and whose attendance, deportment and advancement shall have been uniformly satisfactory to the teachers and committee." Later, 1867, Mr. Peabody established a fund of two thousand dollars, the income of which has been annually devoted to the purchase of medals and books for graduates.

The first graduates of the Holten High School to receive the Peabody Medal were the

CLASS OF 1855.

Emily G. Berry.	Addison P. Learoyd.

Mary F. Putnam.	John H. Parker.
Nancy W. Proctor.	Adrian L. Putnam.
Asenath A. Sawyer.	Daniel W. Proctor.
Elizabeth P. Swan.	

In the spring of 1849 a lively episode occurred in No. 6. There the Rev. Daniel Foster, the preacher at the Wesleyan Chapel, was teaching, and things did not run smoothly between himself and the committee. Rev. Mr. Eaton, one of the committee, went in to examine the school. He undertook to hear a class in geography, but Foster remarked that the time was up, and cut short the committee-man's questions by sending the class to their seats. Mr. Eaton called a meeting of the board and reported what had occurred, and the board voted "that the whole committee pro-

ceed this afternoon to examine the school in District No. 6;" and they all filed into the school-house at half-past one. Foster gave them seats, and went on with his business. In a few minutes the chairman, Mr. Braman, said: "We have come here to examine this school." "It was examined yesterday," said Foster, with the inference that it wasn't to be examined again. Then followed a scene. The committee ordered scholars to stand up and recite, and the teacher told them to sit down. They were more in awe of their teacher than of the committee and they sat still and some cried. The committee finally withdrew as gracefully as they could, leaving behind a note in Foster's hands, informing him that he was forthwith dismissed.

At the adjournment of the annual meeting the matter was piping hot. The committee read a long report, covering nearly four newspaper columns, giving the facts of the case and justifying their action. On a motion to print twelve hundred copies, Foster himself moved to strike out all concerning No. 6; followed his motion by a violent attack on the committee and carried his point. And further, at the subsequent election, he was a successful candidate for membership of the board which turned him out, and the Rev. Mr. Eaton failed of re-election.

By an act of 1850 the Legislature gave towns the option of abolishing the district system. There was an immediate effort in Danvers to take advantage of this act. The larger expenses made necessary by the establishment of the two high schools just at this time gave a special incentive to the movement. In response to instructions to consider the subject of a radical change in the school district system with a view to greater economy and more efficient management, the school committee, through A. A. Abbott, Esq., presented in 1851 a very strong and clear report setting forth the desirability of abolishing the system. But Danvers never voted to abolish the system, though a number of attempts were made to secure this action. On March 24, 1869, the Legislature took the matter into its own hands and broadly enacted that "the school district system in the commonwealth is hereby abolished."

At the annual meeting of 1853 William L. Weston made a motion that a superintendent of schools be employed. Subsequently it was voted that the committee be instructed to hire Charles Northend. Mr. Northend, a native of the northern part of the county, had been long and favorably known as a teacher; his name appears in the first printed report, 1839, as principal in No. 1. His salary as superintendent was at first eight hundred and fifty dollars. The great extent of territory to be covered, from the "Rocks" to "Beaver Brook," from the "Devil's Dishful" to "Blind-hole" must have made the occupation somewhat akin to that of a circuit-rider. Mr. Northend served faithfully a number of years, and was the first and only school superintendent of Danvers.

In April, 1841, a move was first made for the establishment of what is now the Tapleyville district. Gilbert Tapley presented a petition with his own signature and thirty others for a new district to be carved out of Nos. 5 and 6; but inasmuch as his brother, Asa, was on hand with a list of remonstrants twice as long, the petitioners were respectfully given leave to withdraw. They withdrew just five years, and at the end of that time a division of No. 6 was effected on the petition of its own district committee, and the northern part thereof set off as a new district,—the last—No. 14. No record of a dividing line was made further than to adopt the one described in the petition, which has not been found.

With the division of the town it became expedient to readjust the districts. Six districts, namely, Nos. 2 (Port), 3 (Putnamville), 4 (Beaver Brook), 5 (Centre), 13 (Plains) and 14 (Tapleyville), together with a part of No. 6 (Collins House), were left to Danvers. One from each—S. P. Fowler, I. H. Putnam, Francis Dodge, Augustus Mudge, Calvin Putnam, Orrin Putnam and Hix Richards—were appointed to renumber and relocate the districts. No alterations were made in the lines of Nos. 2, 4 and 13. A portion of No. 14 was annexed to No. 5, and another portion to No. 6. No. 5 previously had 141 scholars and lost 7; No. 14 had 193 and lost 49; No. 6, having but 31 left in Danvers after the division of the town, gained 66. The districts numbered 13 and 14 in the old town became 1 and 7, other numbers remaining unchanged.

A short time after the dissolution of the annual meeting at which this report was accepted, dissatisfaction was manifest in the calling of a special meeting to alter the new lines of Nos. 5, 6 and 7. It was then voted to annex all of No. 6 that remained in Danvers to No. 7, and to call the consolidated district No. 6, with the proviso that if a majority of voters residing south of a certain line should within thirty days express to the selectmen their wish to form a district by themselves, they should then be allowed to organize as District No. 7.

The people south of the given line did wish to remain a district by themselves, and did not wish to be deprived of the old number, which had been a familiar designation of their locality for more than sixty years, and in June the numbers were changed back,—No. 6 to the old "Turkey Plain" District, and No. 7 to Tapleyville.

In the mean time the people of the old Village district, No. 5, were having a hot little war. The people in the immediate neighborhood of the church, and so on to Tapleyville, wanted to be a separate district and have a school-house of their own. They were outnumbered in the district, but succeeded in obtaining a vote of the town for the division of No. 5 by a line crossing Centre Street four rods east of the house of John Roberts; and all that portion lying east of the line was established as District No. 8. A

nice large school-house was erected just opposite the church; but the triumph of the seceders was short. Although they had fortified themselves with the opinion of eminent counsel, the division was tested by a suit at law and pronounced illegal. For a time the disappointed divisionists held out, and many of them actually let their places be sold under the hammer for the taxes levied for No. 5, and one man remained in Salem jail six months rather than pay them. But better counsels soon prevailed, the sold property was redeemed, and now only broad smiles wreath the faces of certain town fathers when the nearly-forgotten subject is mentioned.

The school-house stood for a number of years in melancholy emptiness, and was finally moved to the Plains, where it was used first as a shoe manufactory, and was then changed to a fine-looking dwelling, as innocent of anything like neighborhood quarrels as is its respected owner and occupant, Deacon Eben Peabody, of the Maple Street Church.

It was during the ephemeral existence of this No. 8, that the annexation of territory, east of Porter's River and Frost Fish Brook, from Beverly to Danvers took place. This new territory was, February 1, 1858, established as School-district No. 9. But at the March meeting of 1859, there being no longer a District No. 8, it was voted to change the new territory from No. 9 to No. 8, and thus without further change the districts have since remained: No. 1, Plains; 2, Port; 3, Putnamville; 4, Centre; 5, Beaver Brook; 6, Collin's House; 7, Tapleyville; 8, East Danvers.

In 1795 the total appropriation made by the town for schools was four hundred dollars; the proportion received by each district is interesting as showing their relative numerical importance: No. 1, \$111.11; 2, \$50.90; 5, \$46.92; 3, \$43.95; 7, \$43.90; 6, \$43.85; 4, \$33.33; 8, \$15.50; 9, \$10.64.

In 1810 the appropriation had increased to \$1250; 1820, \$1800; 1830, \$2500; 1835, \$3000; 1840, \$3500; 1845, \$3 for each scholar between four and sixteen years; 1855, \$5.50 for each scholar, four to sixteen, \$1 of which amount for each scholar was devoted to high schools,—estimated, 2,400 scholars.

After South Danvers was set off, the first appropriation of Danvers, 1856, for schools was \$3800 for common schools, \$1200 for the Holten High School. In 1865, \$5000 for common, \$1300 for high; in 1875, \$10,000 for common, \$2100 for high; in 1880, \$10,000 for common, \$1750 for high; in 1887, \$15,600 in all. The income on the Massachusetts School Fund and the dog tax have been added, and are not included in these figures.

At the annual election of 1880, next after the passage of the law enabling women to vote for school committee, twenty-seven Danvers women availed themselves of the right. Mrs. Andrew Nichols was the first woman to vote.

At the last annual meeting, 1887, the town voted

an appropriation for evening schools. The first and only previous instance of similar action was in 1850, when some provision was made for evening schools for the poor from the State school fund.

The first school-house at the Plains was brought from Middleton the first part of this century by private enterprise, for the use of primary scholars. Older scholars went to New Mills until the Plains district was established, in 1816. The first district school-house was a small building erected under contract by Stephen Whipple, carpenter, near the spot occupied by the bakery.

The present grammar-school building at the Port was finished in 1849, and was dedicated July 25th, with considerable ceremony. There were addresses by the presiding officer, S. P. Fowler, by Charles Northend, then a teacher in Salem, by J. W. Proctor, Rev. Messrs. Appleton, Fletcher and Braman, Mr. Rust, commissioner of schools for New Hampshire, and "Mr. R. Putnam, an experienced teacher of Salem." The immediate predecessor of this building was the "old brick school," situated on a part of the same lot but much nearer the street. Hon. James D. Black has furnished the writer with some reminiscences of the brick house: "With my brothers and sisters my school days were spent in the district school-house at the Port till we attained the age of fifteen or sixteen years. Andrew Wallace taught most of the time of my earlier school days. I recall among my school-mates Henry and Augustus Fowler; Jeremiah and Timothy Page; John, William and Parker B. Francis; Samuel and Josiah Pender; Warren M. and John Jacobs; William B. and Augustus Read; William and Joseph Lamson; Benjamin, Charles and William B. Chaplin; William Cheever, Edward Stimpson, William Endicott, George Kent, Philip Smith and Seth Stetson. Our schools were not graded; all ages attended the same school, from children in A B C to those in studies now confined to the high school. Quills were used in writing, steel pens came later. Most of Mr. Wallace's pupils made good penmen. He was succeeded by Richard Phillips, of Topsfield."

There was another smaller building called the "green door school-house," near the present railroad station, which was in use some eighty years ago, and was long ago moved by Peter Wait's father to Ash Street, where it has since been used as a dwelling; and of still earlier date was a school-house, close by the First Baptist Meeting-house.

The very first schoolmaster at the New Mills was Caleb Clark, who kept his school in the house of farmer Porter. His writing desks were boards laid upon barrels. Of his discipline, Deacon Fowler has written:

"He was in the habit of whittling a shingle in school and for small offences compelling the disobedient to pile the whittlings in the middle of the room; when this was accomplished he would kick them over, to be picked up again. He would sometimes require them to watch a wire, suspended in the room, and inform him when a fly lighted on it. For

greater offences he would sometimes attempt to frighten them into obedience by putting his shoulder under the mantel piece and threaten to throw the house down upon them. It is said of the worthy pedagogue, when deeply engaged in a mathematical problem that he became so absorbed in the work as to be wholly unconscious of anything transpiring around him, and the boys taking advantage of this habit would creep out of school and skate and slide by the hour together."

At a meeting held in District No. 3, Putnamville, July 6, 1812, a vote was passed to build a new school-house after the plan of the brick house at the New Mills and also "voted to purchase a piece of land of Rufus and Simeon Putnam in this district, being on the northwest corner of the school-house pasture, so called, adjoining the road and Zadoc Wilkins land, and the same land on which the old school-house stood before the present school-house was built."

The "present school-house" was built in 1787, under this vote passed at a meeting of "School ward No. 3," at the house of Zerubable Porter, namely: "voted that there be a school-house erected for the education of children on or near the spot where the old one formerly stood if the ground could be obtained."

Both the original building, the building of 1787, and the brick building of 1812 stood farther up the Topsfield road than the present Putnamville school-house, namely, at the head of North Street.

The second one of these buildings is still in useful existence, having been bought and moved, some half a century ago, by Perley Tapley, to become part and parcel of the little village which bears his name. It forms a portion of the house next west of the late residence of Gilbert Tapley. Among those who taught in this building were Master Andrews, a famous teacher college educated, Jonathan and Benjamin Porter, Thomas Savage, Charles Wheeler, Charles Kimball, probably Clarissa Endicott, and surely Esther Forsaith, to secure whom Jonathan Porter went up to Chester, N. H. It was in this building, too, that Universalist meetings were first held. Elias Putnam taught the first winter school in the brick house in 1812-13, and his youngest son, Arthur, taught the last in 1851-52. Between them were, among others, Philemon Putnam, Oliver Woodbury, Edwin Josselyn; ladies, Clarissa Endicott (Porter), Nancy Putnam (Boardman), Sarah Rea (Bradstreet), Sally Shillaber.

The old school-house which preceded the present one in No. 5, the Village, both being in the line of succession to that first school-house of Parson Green, has been thus described by a former pupil: "The old brown house stood on a small barren, unfenced, unattractive triangle at the corner of Centre and Dayton Streets. There were three rows of benches on each side of the house, one side for the girls, the other for the boys. At one end there was a large open fire-place, and opposite it stood the master's lofty desk, to which he ascended by two or three steps. The windows were so high that scholars could not look out from the seats, and outsiders could not look in without climbing. No paint or ornament of

any kind was indulged in. My earliest recollection goes back about sixty years, when Miss Edith Swinerton (Mrs. Aaron Tapley) was the teacher.

"The only other lady teachers to whom I went were Hannah and Betsey Putnam. They were sisters, 'solemn sisters.' They always taught together. Though very unlike in temper, they were devotedly attached to each other, and would consent to no other arrangement, no matter if they together received no more than enough for one, as was generally the case. Each had a chair and table, and sat facing each other. Both were very pious. Betsey read the Bible; Hannah opened with prayer. Betsey heard the lesson. She was of a very sweet and gentle spirit, and much beloved by her scholars. Hannah was more fiery and quick, and a terror to evil-doers. They always spoke with punctilious accuracy and dignity. A little girl was sent one day into the clothes-room to get the teacher's hose. Not knowing what was meant, and yet not daring to ask, the messenger brought in, perhaps, a shawl. 'I sent you for my hose, not my shawl.' Again the timid messenger retired and brought in a bonnet, when the exasperated teacher, in a sort of desperation, spoke, in unmistakable terms, 'Well, if I must so speak, bring in my stockings.'

"Betsey's way of showing her regard for a favorite pupil was by calling him out occasionally to read for her entertainment 'The Bears and the Bees,' 'The Beggar's Petition,' 'Procrastination' or some other choice selection from the 'English Reader.' Hannah's attentions were commonly bestowed in a somewhat different way when correction was needed. A reverend gentleman recalls an occasion of this sort, when his young form bent, at an ungraceful angle, over Hannah's knee, and the room reverberated more or less with the emphatic correction applied to that portion of a boy's body by nature designed to receive it. Their prized 'rewards of merit' consisted of little oblong bits of paper with yellow borders, and mottoes written thereon in their own hands. On Saturdays hymns and Bible verses were repeated as a sort of special exercise."

This present summer of 1887 a number of the survivors of the pupils of these estimable sisters have taken steps to erect a memorial over their hitherto unmarked graves in Wadsworth Cemetery.

CHAPTER XXXVI.

DANVERS—(Continued).

VILLAGES OF THE TOWN.

DANVERS is notably a town of many villages. There are in all eight railroad stations, not counting the junction, within its limits and five post-offices.

The first post-offices in Danvers, it may here be mentioned, were established as the result of a town-meeting held in 1828, when Dr. Nichols, Jonathan Shove, Nathaniel Putnam and Samuel and John Preston were chosen "to devise or digest any scheme relative to the Establishment of Post-offices in this Town." The action of the meeting is thus recorded:

"Voted, That there be but one post-office in this Town.

"Voted, That there be one more post-office added in this Town.

"Voted, To reconsider the last, 65 votes for and 65 votes against, the moderator decided the vote."

The committee's report was, however, adopted, in which it was recommended that the town have two post-offices, one between the old South Meeting-house and Pool's Bridge, to be called the South Danvers Post-office, and one at the New Mills, to be called the North Danvers Post-office, and this action was communicated to the Postmaster-General. For many years this office at New Mills or Danversport remained the only one within the present limits of the town. Mail addressed "Danvers" now comes to the Plains. The other offices are Danvers Centre, Tapleyville and Asylum. The latter, established chiefly for the convenience of the hospital, accommodates that locality in the midst of which is the General Putnam homestead, the home of the Prestons, Nichols, Verrys and other well-known names, commonly spoken of as "Number Four." While there is no central village there, the community has always maintained a distinctive identity, and has borne an enviable reputation for the character of its inhabitants. The name Danvers Centre is misleading; its only appropriateness is in the way of reminiscence and lies in the fact that the locality to which it is applied is the seat of the church which was the religious and political center, not only of Salem Village, but, for many years after the incorporation of the town, of all the northern portion thereof.

It is often called "the Village," a name altogether better, inasmuch as it is suggestive of the historic associations with which the locality abounds. Though by the destruction of the Mudge shoe-factory the Village no longer has any manufacturing business of its own, its people are full of life and public spirit. They keep up their end in public affairs, turn out to caucuses and town-meetings, and exercise a strong influence usually on the safe and conservative side of things. The history of this community, most interesting of all the villages of the town, has been given somewhat in the sketch of the early settlers and in that of its church.

Forty or fifty years ago, perhaps more, Putnamville, the name given to school district number three, extending from Porter's Hill to the Topsfield and Wenham lines, was the centre of much wealth and culture; of its people, Rev. Dr. A. P. Putnam has written in a series of very interesting letters. Concerning the Plains, the Port and Tapleyville, something remains to be said here.

THE PLAINS.—About the time Elder Sharpe sold his grant, which included nearly all of this present principal village of the town, to John Porter, the General Court formally laid out, as a great highway connecting the lower and upper settlements of the Colony, "the Ipswich Road." It crossed Farmer Porter's lands at their greatest width,—entering them at some point on Ash Street, and continuing through Elm and Conant Streets to Frost-fish Brook,—and it often served as a fixed boundary in the many subsequent divisions of the Porter estate. Almost exactly midway between the limits of "Porter's Plains," so these level lands were soon called, as measured on the Ipswich Road, another road or path was at a very early date opened northward, which, in due course, became the highway to Topsfield along the line of the present Maple and Locust Streets. The point at which the Topsfield road left the Ipswich road is the present "Square."

This meeting of roads had no immediate effect in the formation of anything like a village. As late as 1692 there was but one house in all the region, and that was the original Porter homestead, near the Unitarian Church. More than a full century had passed, when, in 1755, another road, High Street, was pushed down to the embryo settlement at New Mills and across the river to Salem, and even then the Square was scarcely more than a country cross-roads.

At the head of High Street there is standing a well preserved gambrel-roofed house, which was built about the time the street was laid out. It is the homestead of a family which, though not numerous, has been honorably prominent in the town's history. About the middle of the last century, an Andrews, then living on the Shillaber farm at Putnamville, wanted some bricks, and had to go to Medford for them. Andrews told the brickmaker that there was excellent clay in Danvers, and asked him to send some one to commence working it. "Here's my son," the brickmaker said, "just turned twenty-one, he can go if he wants to." The son came, boarded with Andrews, married his daughter, started the brick business here and built the house just referred to. His name was Jeremiah Page. He died June 8, 1806, in his eighty-fifth year, and is always spoken of as Colonel Jeremiah. At the breaking out of the Revolution he took a very active part, and commanded a company of militia at the fight on the retreat from Lexington, and throughout his useful life he was one of the leaders in town affairs. He had twelve children, three of whom were by a second marriage. His oldest son, Samuel, went with his father to respond to the Lexington alarm, and was where bullets were thickest. Subsequently he joined Washington's army about Boston, with a captain's commission. He was at the crossing of the Delaware, at White Plains and Monmouth, and shared the sufferings of Valley Forge. He was with Wayne at the storming of Stony Point, and to insure success to the bayonet

charge his company were ordered to remove the flints from their muskets. After the war he became a successful merchant at New Mills, Danversport. In the following sketch of that village, which, for a half century after the Revolution, was the commercial centre of the town, Captain Page must be again mentioned, and as a matter of convenience, some further reference to the family will there be made. Capt. Page died September 2, 1814, aged sixty-one, and with his father is buried in the High Street Cemetery. He held many public offices, and represented the town many years in the General Court.

At the beginning of this century there were but twelve dwellings in all the Plains, including two taverns, one store, one blacksmith's shop, one butchery and two brick yards. Until 1816 there was no public school here, and children had to go to New Mills. That year, on the basis of sixteen houses and one hundred and thirty inhabitants, a new school district was formed, as told elsewhere.

Several years before this, however, an effort had been made to educate the smaller children near home, and Deacon Gideon Putnam, Ezra Batchelder and Timothy Putnam bought a small school-house in Middleton and moved it here. Ezra Batchelder's house stood where the Maple Street School-house stands; "Uncle Timmy's" stood where his grandson, Otis F. Putnam, now lives. Deacon Gideon kept tavern and store at Richards' Corner. Deacon Gideon was the father of the courtly Judge Putnam, as has been said, and it is related that when the son was home on a vacation from college, and was obliged to play host to a stranger, he was chagrined at the meagre fare—it was probably washing-day—and paid the price of the meal to the guest "for picking the bones." In 1820 there were but twenty-one houses from the square along the whole line of the Centre horse-car route. The only house on the easterly side of Maple Street between the store at the corner of Conant Street and the Perry farm was the Captain Eben Putnam's house, which was once a part of the mansion on Folly Hill.

The butchery stood on Conant Street beyond Alfred Trask's residence, and was carried on by James Sleeper, who lived in a three-story brick building, which stood on the corner of Maple and Elm Streets, but projected far into the present widened location of Maple Street. This brick building was where the bank was first located. An "ell" fronting on Elm Street was long since moved some distance west, and is now owned by H. M. Merrill. In this "ell" Porter Kettelle did a small store-keeping business. The principal storekeepers then were Jonas Warren, who had bought out the Putnam's, but did not keep tavern, and "Johnny Perley," at Perley's Corner. Great was the rivalry of these two, and great was the business they did. For fair and liberal dealing Uncle Johnny's reputation suffered somewhat in comparison with Mr. Warren's. The former was a

bachelor, of modest and soft speech, but sharp to keep the half cents on his side of the bargain. Amusing stories are told of the way war was waged between the two corners. The amount of goods sold and bartered was enormous. Heavy teams from far back in the country came in loaded with produce, as many as forty in a single day, and generally they went no farther than Danvers Plains, but exchanged their produce here for a long supply of fish, salt, molasses and other staples, including, of course, New England rum. Clerks were sometimes busy till midnight loading for the return trips.

The old hotel on the site of the present one was owned by Ebenezer Berry, who bought it of Jethro and Timothy Putnam in 1804. Mr. Berry came from Andover, and married a daughter of Captain Levi Preston. His two children,—Eben G. Berry and Mrs. Sperry are living, a sketch and portrait of the former appearing in subsequent pages. The building was sold at auction in three sections, 1838, and these were removed to make room for the erection of the present hotel. One of these sections has long been the home of Benjamin Henderson on Elm Street; a second sojourned for a while on Cherry Street, and was finally settled near the soap factory, while the hall was removed to a lot on Maple Street, owned by Amos Brown, was there occupied by Amos Proctor Perley as a dry-goods store, and burned in the fire of 1845. This hall had been originally a part of the mansion on Folly Hill, referred to in the opening lines of this sketch. Its floor was painted to represent mosaic work and its finish was thorough and costly. It was so annexed to the hotel that its length ran parallel to High Street, and the uses to which it was put were many and various. Here the Danvers militia congregated, with their burnished flint-locks and the paraphernalia of destruction, awaiting officers' inspection. Here the North Danvers Lyceum met, as chronicled where other literary societies are spoken of. Here the selectmen and assessors met. Here was the lodge-room of Jordan Lodge of Masons, and here, by no means last to be mentioned, were held those dancing parties at the mention of which old eyes kindle, and limbs, no longer sprightly, beat time to the echoes of the darkey Harry's fiddle, which linger still in their ears.

At both Warren's and Perley's corners grocery business is still carried on. Both are decidedly "old stands." Samuel Preston succeeded "Uncle Johnny" and kept store awhile in connection with the shoe business, then Amos Proctor Perley took it, and subsequently formed a partnership with his brother-in-law, Moses J. Currier, under the name of Perley and Currier. Mr. Currier survives; Mr. Perley, known and respected far and wide as "Uncle Proc," a man of sterling integrity, died a few years ago; his son, Charles N. Perley, present post-master, carries on the store.

Mr. Warren sold out his property at the Plains in

1841, and thenceforth carried on a wholesale business at the Port. Frederick Perley was the purchaser, perhaps a nominal one, for he very soon re-conveyed the whole to Elias Putnam. There were nine acres in all, on which Mr. Putnam built his shoe factory and the house in which he died, and through which he laid out Park Street. One acre on the corner, including the old store buildings, he sold for three thousand dollars to Daniel Richards. Mr. Richards was a native of Atkinson, N. H., who came here as a clerk to Mr. Warren in 1828, two months before he was twenty-one. "It was hard work to be a grocery clerk then,"—these are his own words—"but I weighed one hundred and seventy-five pounds and was pretty strong."

In 1833 the temperance-reform movement was working. The old store-keepers were unwilling to be "driven" to give up the time-honored custom of selling spirits and, as a consequence, Mr. Richards started a new "temperance store" in a building which stood where Beal and Abbott's store now is, and was well supported.

After Mr. Richards' purchase of the old corner, he sold the buildings and built the present store. A part of the old store-tavern is the Dougherty house on School Street, and another part is the Abbott house, corner of Elm and Park Streets. Mr. Richards died last November, 1886, in his eightieth year. He was for thirty years president of the National Bank, was a life trustee of Peabody Institute, and, in addition to the grocery business which is still carried on by his sons, he bought the Fowler mill property at Liberty Bridge, and built the grist-mill, now used for grinding rubber, using as many as one hundred thousand bushels of grain a year.

The open level land at the Plains made it a favorite place for military musters. In 1809 the brigade of General Eben Goodale formed a line nearly a mile long, from Perley's corner to the old house owned by Augustus Fowler. Twenty-five hundred troops, infantry, cavalry, bands, Governor Christopher Gore, a big dinner and a sham fight,—it was something of a day.

In 1813, during the war, another brigade of three thousand men mustered on the same ground, and Lindall Hill was covered with spectators, who nevertheless took themselves out of the way when a fort, which had been constructed on the hill, was stormed and burned. The Plains, too, was the place of celebration on "Lecture Day," the last Wednesday in May, when the Legislature used to first meet. "Who does not remember," wrote Dr. Osgood in his little pamphlet, "how thousands upon thousands congregated on Danvers Plains to see the horses run, the mountebanks tumble, the fandango whirl around and the drinking of egg-pop, punch, and something a little stronger? And then what lots of 'lection cake, buns, and molasses ginger-bread, rolling marbles and nine-pins, running and wrestling!" A colored man,

Milan Murphy, a veteran of the Revolution, and called "Colonel," a chronic victim of all sorts of prauks, was a prominent figure in these festivities. He marched wearing his old three-cornered hat, a blue coat with brass buttons, and accompanied his voice to an old fiddle on which he played his one tune, "sometimes on one string, sometimes on no string at all." Colonel Milan was great at butting, making nothing of going through the head of a molasses hogshead. He found his match one day in an old ram, presently to be made, after the manner of his kind, into "spring lamb," at the butchery already mentioned. There was but one round, and the details have not been so well preserved as the conclusive fact, that "the ram knocked Milan more'n a rod."

It was about 1830 that the Plains began to be something. Then Samuel Preston was manufacturing shoes on the site of the present bank building; Eben Putnam, in a shop near his house; and others before long came in. Joshua Silvester moved his business from the little shop at the foot of Porter's Hill, and built a large factory and fine residence on the westerly side of Maple Street, in 1837. No man deserves more special mention in a history of Danvers than he, and a word might as well be written here as elsewhere. He was eighty-four years old, July 9, 1887, and is able to be about, though his sight is failing. He was born in Wiscasset, Me.; his family moved to Andover, Mass., when he was a child; he came here when he was eighteen to work at shoe-making; went with Frederick Perley one term at Atkinson Academy; clerked a year or two at Jonas Warren's store; began shoe-manufacturing in the shop at Porter's Hill, with a partner named Brickett, and remained after the dissolution of the partnership until the date of his removal to the Plains, as above. The fire which destroyed the new buildings at the Plains will be noticed. His numerous trips to England in connection with subsequent business enterprises, and his acquaintance there with Mr. Peabody, are spoken of in connection with the history of the Peabody Institute. He has served the town as selectman, in the legislature, and in other capacities, but what he is to be chiefly remembered for, is the far-sighted public spirit which he has always shown in the matter of public improvement, and especially in encouraging the setting out of shade trees. He has lived long enough to see the sticks which he set in the ground by hundreds, years ago, transformed into bowers of beauty, and children, who have grown to manhood as the trees have grown, and who realize the richness of their legacy, rise up to bless this benefactor. Last winter a public testimonial was made to him. (His death occurred, since writing, July 29, 1887).

Mr. Silvester married a sister of Francis Noyes, who had a large factory and dwelling just above Mr. Silvester's. Mr. Silvester's sister Mary married Thomas Bowen, the first post-master at the Plains, and his sister Sarah married John A. Learoyd. Mr. Learoyd

learned the currying trade in Byfield, came here in 1829 and worked as a journeyman for Brickett & Silvester, at Porter's Hill, and boarded with Mr. Silvester. He soon came down to the Plains, bought and moved the Baptist meeting-house of 1783, and began in it the currying business, which he carried on through life, and which one of his sons continues. He was from the first a leader in the Maple Street Church. His own house was planned for the convenience of neighborhood prayer-meetings, when all went to Dr. Braman's church, and when the separation took place the new church was formally organized in his parlors. He died February 1, 1880, and his wife survived him but three weeks. They left a family of children trained after their own hearts, and strong in church work. Among them one son an Episcopal minister; a daughter, the wife of a minister; another son for nearly twenty-five years superintendent of a model Sunday-school.

Amos Brown's wheelwright shop and house were between Noyes' factory and the place where Cherry St. was soon laid out. He and his brother Samuel, mason, came from North Beverly. If the life of wheels depends on sound stock and honest work, every pair which ever came out of Amos Brown's shop is running yet. Right across the street from Brown's shop was Deacon Frederick Howe's house and blacksmith shop. The Deacon was born in Methuen, in 1793, learned his trade of the Wilkineses, at the Centre, and at length established himself here. He died July 2, 1880, eighty-seven years old. He was a deacon of the First Church when he was made one of the first deacons of the Maple Street Church. He entered from the first into temperance reform, and early attached himself to the anti-slavery movement, without for a moment losing his interest, as many did, in the church. His blacksmith shop was naturally a centre for discussion on such questions, and was one of the rallying-points of the Liberty party. "It is remarkable that a man so occupied and of so laborious a life found time and strength to do so much in so many good causes. Between his anvil-strokes rung out true words that formed opinions of other men, and the tired hand was never too weary to use the pen for the same purpose." None of Deacon Howe's family remain here. One of his sons, Joseph W., is a prominent member of the New York bar, and had a hand in the conviction of Tweed.

Frederick Perley, a brother of "Uncle Proc," lived and manufactured shoes opposite Ezra Batchelder's. Joseph W. Ropes came here from Salem in 1838, and engaged in the tinware and stove business, which his son carries on. In subsequent pages will be found a sketch of Alfred Trask, who came to the Plains about 1835, and built up a large and prosperous business as a drover.

The establishment of the Village Bank here in 1836 was brought about by the efforts of leading shoe manufacturers, Elias Putnam foremost, and tended very

much to the making of the Plains the business centre of the town. The new church was organized in 1844, there were better and larger schools, lands which had long been used only for farming were laid open for building, and the prosperity of the place may be judged from this clipping from the *Courier*, May 18, 1845, a paper published for a few years at South Danvers:

"But the greatest improvements seen to have been made in North Danvers. New streets have been opened, old ones built up, old houses transformed to new, and the whole village presents a thrifty and go-ahead appearance to the occasional visitor—not appreciated by the constant resident. The beautiful church, the noble public house, the large shoe factories and long ranges of handsome dwellings seem to have arisen by magic. High Street is so filled up that we can hardly tell where the New Mills village leaves off and where the 'Plains' begins. They are fast joining hands, and when they come together they will have quite a city-like appearance."

But a few months later a different story appears in the files of the same paper.

"DISASTROUS FIRE IN DANVERS!"

"A very alarming fire took place in the North Parish, in Danvers, at the Plains, last Tuesday afternoon (June 19, 1845), commencing at 2 o'clock.

"It broke out in an outbuilding belonging to the dwelling house of Mr. Joshua Silvester, and was said to have been occasioned by some children playing with friction matches. The fire spread with great rapidity, and seemed at one time beyond human control. The number of buildings of all sorts destroyed is said to be eighteen.

"These consisted of the dwelling, extensive store and barn of Joshua Silvester; the building occupied by John Hayman, painter, and F. E. Smith, tailor; the large building occupied by Francis Noyes as a shoe manufactory, together with his dwelling and stable; the building occupied by Amos Brown, wheelwright; and Codin & Co., painters; two dwelling houses, shoe manufactory, barn and store house of Samuel Preston, who saved nothing but a couple boxes of shoes; Francis (Frederick) Howe's blacksmith shop; barn and store house belonging to A. Proctor Perley; a new building occupied by the post-office, and Clough's restorator. The Village Bank Building was a good deal injured by fire and water, and most of the furniture of W. L. Weston, the cashier, was greatly injured; but all Bank property was saved. The goods of Henry T. Ropes, who occupied part of the building as a tailor's shop, were saved. Mr. John Page's house was completely emptied, but unjured by fire. The streets were filled with property taken from the stores and houses. A. P. Perley & Co.'s store was saved by unparalleled exertions, though for a long time in imminent peril. The stock was removed.

"There was a great scarcity of water, it being necessary to connect eight engines to obtain a single stream of water upon the fire. The nearest body of water was Frost Fish Brook, over a half a mile distant, at the Beverly line.

"The alarm reached Salem about a quarter past two o'clock, and several engines and fire companies immediately started, guided by the direction of the smoke, although it was not then known where the fire was, nor how imminent was the danger. Express messengers arrived some time afterwards for assistance, when the alarm was again sounded, and several more engines were despatched, making seven in all from Salem, preceded, accompanied and followed by great numbers of our citizens. The progress over the length of dusty road was exceedingly toilsome, with the almost vertical sun heating down upon their unsheltered heads, at a temperature of 120 to 130 degrees. Some were very overcome by the exposure and fatigue. One man fell at the brakes of No. 6, and when the engine, having exhausted the water at the cistern where it was posted was withdrawn, he was lying upon the grass insensible, under the care of the physicians belonging to the company.

"The amount of loss is variously estimated, some going as high as \$80,000. There was insurance in various offices—mostly of mutual companies—to the amount of over \$90,000."

The work of rebuilding went speedily on, but, with the exception of the new bank building, there was a

lamentable want of anything like architectural design, and it must be confessed that from this want of foresight our main street presents a shambling and irregular appearance, not worthy of the general appearance of the town. There is not space to speak of the later development and prosperity of the Plains. Suffice it to say that Farmer Porter's fields are so well built up that few desirable house-lots remain unutilized, and, generally speaking, Danvers Plains is a beautiful village, and its residents have many rare advantages.

DANVERSPORT comprises two peninsulas, formed by three divergent forks of tide water, into each of which flow inland streams, known, commencing with the most southerly, as Water's, Crane and Porter's Rivers. As the highway across them runs, the main road to Salem, these rivers are about a third of a mile apart; at each bridge, tide-gates and mills. It is the lower peninsula between Water's and Crane Rivers that formed Governor Endicott's orchard farm, the first settled land in Danvers. The upper peninsula—Skelton's Neck, wherein came to be much commercial activity, and for many years the principal village of the town—was for a long time wild and unsettled. It was quite a hundred and twenty years after the Governor had broken ground on his grant that Archelaus Putnam went down through the woods and selected as a site for a tide-mill the place where the out-curving banks of the Crane River make the stream quite narrow. From his father, Nathaniel's, farm (the Judge Putnam place) he floated down the stream, or moved down its frozen surface, a cooper-shop, landed it about where the railroad station now is, moved it across the point made by the sharp bend of the river, and near the present location of Aaron Warren's brick store he made it into a dwelling, wherein, with his wife Mehitable, he lived, the pioneer of Danversport. Soon after the settlement of Archelaus, his brother John moved down, and together they built a grist-mill. Tradition is that the whole district was covered by a dense thicket, in which foxes abounded. This was a path through the neck to the upper settlements, marked by blazed trees, by which wood was taken to the water-side and boated to Salem. A more respectable way, two rods wide, was soon laid out from Porter's Plains to the mills, the origin of High and Water Streets. In 1760 this road was pushed on over Endicott's Neck, across Water's River, and so on to Salem. It was welcomed by land-owners on the lower side of that river, who conveyed to Samuel Clark, Jeremiah Page, Benjamin Porter and others for the benefit of the public "two rods wide through our land in a straight line as may be from the Bridge when built to North Field Proprietors' way, so called, at the Gate going into said Small's land." But there was almost no end of trouble within the town. The road was strongly opposed. For one thing the New Mills, as the little

community soon came to be called, belonged territorially to the south parish, and the people there were unwilling to see the diversion of business and interest which the short cut to Salem would render inevitable. This is what Colonel Israel Hutchinson meant when he wrote in his private papers, "After they found they could not get it discontinued, they proposed to make it a toll-bridge. We found that would not by any ways do, as those people (of Salem and Marblehead) who had assisted us in repairing the way and building the bridges would be great sufferers, and it would promote traveling that way, which was what the leaders, who were sellers of rum, tobacco, etc., wished to prevent." Application was made to the North Parish "if they were willing to take us with all ways and bridges, but they (the South Parish) would not let us go. We then, after contending in the law more than seven long years, and although we had gained our cause in every case, being almost ruined, were under the necessity of proposing to the General Court that we would take all ways and bridges on ourselves." And the General Court looked on the proposition with favor, and in 1772 passed "An Act for the subjecting the Inhabitants of a Part of the Town of Danvers, called the Neck of Land hereafter described, to the charge of maintaining and supporting certain Bridges and Highways." After reciting the unhappy divisions and controversies, and the final and amicable compromise in ratification of which the act was passed, it was provided that the inhabitants of the Neck should constitute an independent highway district to maintain existing highways and bridges therein, and also any others constructed at the special instance and request of the inhabitants. The district, containing about three hundred acres, was bounded by a line commencing at Crane River Bridge on the Ipswich Road (Ash Street); thence following the river channel to Lieutenant Thomas Stevens' land (about at the southerly end of the railroad bridge); then straight across Fox Hill to the high-water mark on the south side of Water's River, a little west of the bridge; thence across the further end of the bridge to Porter's River, up the whole length of Porter's River, to the Ipswich Road again at Frost-fish Brook Bridge; and so on by the Ipswich Road (Conant, Elm and Ash Streets) to the place of beginning. These limits embraced a large tract now included in the Plains. The act remained in force nearly seventy years, until its repeal March 7, 1840. Evidently matters, however, had not been conducted in strict conformity to requirements, for in 1836 the Legislature confirmed the recorded proceedings, giving them the same effect as if the officers had been proprietors and all meetings called by competent authority.

From the beginning made by Archelaus Putnam, other mills were in a few years established on Crane River—wheat-mills in 1764, and a saw-mill in 1768. Associated with him in ownership were John Buxton,

Samuel Clark, John Pickman and Israel Hutchinson.

In the mean time other dwellings were erected along the new highway, the woods were cleared away, and a little village speedily grew up at "New Mills." On the banks of Porter's River sharp-eyed men from the ship-building towns saw excellent facilities for that business. The pioneer of ship-building here was Timothy Stephens, of Newbury, an enterprising and skillful builder. Presently a number of young men came down from the North, worked with Stephens and learned his trade, and permanently established themselves here. Some of these will be mentioned again.

For nearly half a century after the first mill on the Crane River the tide-power on the other two rivers remained unutilized. About 1798 Nathan Reed enters into the history of Danvers. He was a graduate of Harvard, 1781, a tutor there of Harrison Gray Otis and John Quincy Adams, and afterwards studied medicine and kept an apothecary store in Salem. There he married, October 20, 1790, Elizabeth Jaffrey, and built the house in which the historian Prescott was born, on the present site of Plumer Hall. Among the achievements of his inventive mind was the first machine for cutting nails. He purchased the water-power on the Water's River, and with associates erected the Salem and Danvers Iron Works. At the same time he purchased part of Governor Endicott's old Orchard Farm, and on a slightly eminence overlooking the river built a mansion, which, after the successive ownership of Captain Crowningshield, Captain Benjamin Porter and the heirs of the latter, still retains much of its original stateliness. When the company were incorporated, March 4, 1800, Nathan Reed is described "of Danvers;" seventeen others, of Salem. The corporation was authorized to hold thirty thousand dollars of real and three hundred thousand dollars of personal property, and reference is made in the act to the date of the original partnership, May 5, 1796.

In the mill-pond, in front of his residence, Reed experimented by applying steam to the paddles of a small boat long before the Hudson was the scene of Fulton's larger results. He was the first man to apply to the government for a patent, and himself framed the first patent law. He represented the district in Congress, 1800-03. A political *jeu d'esprit* was current at the time of his candidacy for re-election to Congress, when his party, the Federalists, were called "Jacobins" by their opponents, the Republicans, and the candidate of the latter party was the Hon. Jacob Crowningshield:

TO THE FEDS.

With disappointment how *you'd* pout,
With joy how *we* should grin,
Should we keep *Federal* NATHAN out,
And get a *JACOB* in.

Soon after his service in Congress he removed to

Maine, where he had purchased a large tract of land. He was there appointed a judge of Common Pleas. He died in Belfast, January 24, 1849, in his ninetieth year, leaving a numerous family. Nathan Reed's petition:

"To the freeholders & other inhabitants of the Town of Danvers the Petition of Nathan Reed respectfully sheweth that he has it in contemplation to build certain Mills near Water's bridge, so called, on Water's river, so called, & requests the Town to grant, convey & quit claim to him, his heirs and assigns forever its consent, license, right & permission to erect a dam or dams on & across said River; to build mills, piers and wharves & to construct a lock & flood gates any where high or adjoining said bridge, & to do every thing necessary for completing & using said mills without any let, hindrance or molestation whatsoever of said Town.

"Salem, March 9th, 1795.

"NATHAN REED.

"At a legal meeting of the inhabitants of the Town of Danvers, March 9th, 1795—voted that the prayer of above Petition of Nathan Reed be granted.

"Att.: GIDEON FOSTER, T. Clerk."

The business at the foundry brought up from the towns of the south shore, nurseries of iron-workers, several men who established families here. John Joselyn was one of the earliest of these, among whose children was Edwin Joselyn, who for thirty years was a noted teacher in Salem, and among whose descendants are the wife and children of Hon. Augustus Mudge. John Bates who followed an older brother here from Dedham a few months after he was twenty-one, is still living within sound of the machinery, and on the 20th of this present month May, 1887, will be ninety years old. Besides the foundry on the north bank of the river there was a nail-shop, and also an anchor-shop on the south bank. In the latter were forged the anchors of the frigate "Essex," an occasion celebrated by much punch. Work was steady at the anchor-shop, the plan being to manufacture a supply for some time ahead, mostly of a size for fishermen and coasters, and when the stock was too much reduced, a gang of expert anchor-men were called up from the south-shore who kept the one trip-hammer and the two pairs of bellows busy until anchors were sufficiently plenty again. One of these anchor-men, John Silvester, after a progressively successful career in the iron business, about 1858 bought the works at Danvers, and it is his son Benjamin Silvester who is at present carrying on the business of rolling iron at the old stand. The nail and anchor shops have long since been removed, the former fulfilling a mission of usefulness at Calvin Putnam's lumber yard, the latter now a barn in the neighborhood. Before Mr. Silvester's purchase the works were carried on by Matthew Hooper who built the large brick residence on the Salem side of the river. Within a few years a spur track has been laid from the railroad to accommodate the works.

The old-time ferry between Salem and Beverly, some two miles down the river, gave place to the Essex Bridge, now "Beverly Bridge," the proprietors of which were incorporated November 17, 1787. The people at New Mills were much opposed to the new

bridge for more reasons than one. It interfered somewhat with free navigation, in compensation for which the proprietors were required to pay £10 annually to the town treasurer; then travel from Ryall Side and the back country would naturally be more diverted from New Mills, and for this, while there was no compensation, the energetic inhabitants attempted a remedy. They built a bridge of their own across Porter's River in 1788. The land on the other side of the river then was a part of Beverly. Later, some three years after the incorporation of the iron works at Water's River, Samuel Page, Thomas Putnam, Caleb Oakes, Samuel Endicott, John Page and Hezekiah Flint were, June 23, 1803, incorporated as the Danvers and Beverly Iron Works Company. They were authorized to build a bridge of stone, thirty-two feet wide, for which Captain Burley furnished the material from his land on the Beverly side, to erect and use forever an iron manufactory and any other mills for useful manufacture, and to hold property to the value of three hundred thousand dollars, in two hundred shares. Option was given to Beverly to build the bridge, but the committee of that town preferred to relinquish the right of improving the river for a mill-pond and to pay twenty dollars annually towards the support of the bridge. Both the original structure and the stone bridge were for a long time called "Spite Bridge." Those who built it gave the name of "Liberty Bridge." By an act, February 8, 1811, the company having "lately discontinued their operations," the Salem establishment was sold to the company at Water's River. Nathaniel Putnam was many years agent and manager of the works. Subsequently the works were changed into a grist-mill, were long known as "Fowler's Mills, then "Richards' Mills," and within a few years have entered a new stage of usefulness, that of grinding up old rubber.

A man without a handle to his name must have been at a discount in New Mills. The busy little port was thick with "Cap'ns," with here a "Colonel," there a "Major." It was the home of a considerable number of men who were masters of ships out of Salem, of others who were prosperous ship-owners, merchants and millers. Such families were not numerous, and they naturally became connected and inter-twisted by marriages in a way perplexing to unravel.

Among the young men who were attracted by the ship-building at the new settlement was Samuel Fowler, of Ipswich, born there January 9, 1748-49. He was but seventeen when he came. At that time a young girl was just entering her teens who had the distinction of being the first white child born at New Mills. She was Sarah Putnam, daughter of Archelaus, the pioneer, and step-daughter of Colonel Israel Hutchinson. Two years before the battle of Lexington Samuel Fowler and Sarah Putnam were married. She is said to have been a very handsome woman, "with a snowy complexion and black eyes and hair,"

She lived to be over ninety-two years of age, and died November 19, 1847, having survived her husband nearly thirty-five years. Samuel Fowler, shipwright, became a ship-owner, engaged in trade with the West Indies, and is called on the records "merchant."

Captain Samuel Page, the oldest son of Colonel Jeremiah, married Rebecca, daughter of that William Putnam who went to Sterling, Mass, and he came down from Porter's Plains to become one of the first and leading citizens of New Mills.

Simon Pinder (sometimes Pindar, Pendar) was of the same age as Samuel Fowler, and came also from Ipswich. He married here Mehitable Dutch, and probably built the old house on Fox Hill, in which he lived and died, on the site of which is the new house of Mr. Dennett's. He was engaged in the fishing business and also kept a store near his house. He died July 4, 1813. An older house than his, by the way, on Fox Hill is the "Fairfield House," so called for Samuel Fairfield, who married Anna, a daughter of Colonel Hutchinson, and died November 26, 1810, aged sixty-two.

Aaron Cheever, some seven years older than Fowler and Pindar, was a blacksmith. He came early to New Mills from Newburyport.

Nathaniel Putnam was a son of Archelaus and a brother of Samuel Fowler's wife.

Moses Black, a full generation younger than those just mentioned, was born in Haverhill in 1779, and came here at the close of the last century. He was a "wool-puller," and established a prosperous business, was known as "Major Moses," and was the founder of the Black family, than which few in town have been more prominent and influential.

Nathaniel Putnam had a large family, among whom were Nathaniel, known as "Cap'n Nat," Mehitable and Phebe. Aaron Cheever had two sons, both sea-captains,—Thomas and William. Simon Pinder had seven or eight children, among whom were Samuel, Hitty, Hannah and Sally. Jere. Putnam, not previously mentioned, was the father of two other sea-captains, "Captain Jerry" and "Captain Tom."

Captain Nathaniel Putnam married Hannah Pindar; Samuel Pindar married Mehitable Putnam; Moses Black married Phebe Putnam. Captain Thomas Cheever married Sally Pindar; William Cheever married Betsey Waters, and at his death she became the third wife of Captain Nathaniel. Hitty Pindar became the wife of "Captain Jerry" Putnam.

One of Hannah Pindar Putnam's children, Nathaniel, married a daughter of "Captain Tom" Putnam, and subsequently moved to New York; and one of Betsey Waters (Cheever) Putnam's children, Abby, was married to a son of Captain Tom's, Captain Albert. Samuel Pindar lived in the "Mead House" on Endicott Street—a part of his father's estate—and worked at times for Major Black; he

died in 1838, was the only son who had a family here, and the removal of his own sons leaves no one now to represent the family name. A link between the Pindars and Pages was the marriage of a daughter of John Pindar, of Beverly, son of Simon, to Captain Samuel Page's oldest son, Jeremiah.

"Captain Tom" Cheever and his wife, Sally Pindar, lived with his brother, William, in that large house on Water Street which has fallen to such decay that the roof is tumbling in. Captain Thomas sailed forty years for Captain Joseph Peabody, of Salem. Captain William died at Calcutta when but thirty-two years old, and left no children to grow up; his widow re-married as noted. Of Captain Thomas's children, two daughters became wives of Dr. Ebenezer Hunt; William and his wife, Elizabeth, daughter of Captain Eben Putnam, live at Staten Island, N. Y.; and George, Miss Hannah P. and Mary P., widow of William, son of Major Moses Black, live here.

Captain Jerry Putnam, who married Hitty Pindar, lived in the house which he built, now owned by Charles Warren; he was of the fraternity of sea-captains, lived to be about seventy, and his oldest daughter, Mehitable, married into another family, not yet mentioned, well savored with salt—the Johnsons. The Johnson home was a small house which stood near Dr. Frost's residence. The father, William, and three sons, William, Henry and Thomas, were all sea-captains. The son William lived in Salem; Thomas lived in the house next north of Charles Warren's, and of his children, Thomas W., of Salem, is the secretary of the Holyoke Insurance Company, and George was lost at sea, leaving two boys now in our schools. It was Captain Henry Johnson who married Captain Jerry's daughter; he first went to sea when twelve years old as cabin-boy for Captain Tom Cheever, and after he gave up the sea, settled down on his father-in-law's place. His son, the late James A. Johnson, was the last to follow the traditional occupation of the family.

The family trees of the Pages and Fowlers intertwine in various ways. Samuel Fowler, the young man who came from Ipswich, had four children to grow up. Colonel Jeremiah Page was twice married, and his eldest son, Captain Samuel, was much older than the children of the second wife. It is not, strange, therefore, that while Samuel Fowler's son, Samuel, married Captain Samuel Page's daughter, Clarissa, that the younger son, John Fowler, should have married Captain Samuel's half sister, Martha, and that Martha's brother, John, should have married Mary, a sister to Samuel and John Fowler. Samuel Fowler, Jr., born in 1776 and died in 1859, lived in the square brick house on the corner of Liberty and High Streets, and carried on an extensive milling and tanning business about Liberty Bridge. His tan yard, which remained in the family until a few years ago, is one of the longest established in

the country. Of his children three sons survive,—Deacon S. P. Fowler, whose life runs parallel with the century, and of whom a sketch follows this article, Henry and Augustus. A daughter, Rebecca, married Aaron Eveleth; another, Sally Page, James D. Black, a son of Major Moses. The latter and Miss Maria L. are the surviving daughters. John Fowler built the Bates house near the iron foundry, from whom it passed to two sea captains, Captain Edward Richardson and Captain Stephen Brown, and from them to John Bates, its present venerable owner. John Fowler's oldest son, "master mariner," died in the Gulf of Mexico in 1840; another, Jeremiah, was one of the pioneers of California, established the first diary in San Francisco, is still living, a successful old man, in Placer County, that State, and within a few years his family has re-allied itself to Danvers, through the marriage of one of his sons to a daughter of the late Captain Andrew M. Putnam.

John Page and his wife, Mary Fowler, lived in his father's homestead at the Plains. He saw the growth of the Plains village from almost nothing to the business centre of the town, and contributed to this progress. The manner in which he carried on his father's business of brick-making will be noticed when that industry is spoken of. He was an honored and representative citizen of the town. His widow long survived him, and died, lacking a month of ninety years. Like her mother, Sarah Putnam, she was distinguished in her youth for the fine personal appearance, which she retained in a remarkable degree in her old age; she was of more than ordinary intelligence, and read extensively to the latest period of her life. The connection between Major Black's family and the Fowlers has been noticed. A direct Black-Page alliance was made by the marriage of the Major's son, Moses, Jr., to Harriet N., daughter of John and Mary Page. Mrs. Black and four sisters, Mrs. Hunt, Mrs. Edgerton, Mrs. Weston and Miss A. L. Page are the surviving children of John Page. It is unpleasant to know that in the male line this name, which has been so conspicuous in our history, is here extinct.

Beside the children of Major Moses Black already mentioned were Mrs. Sarah L. Holroyd, Mrs. Mary O. Smith, Archelus P. and Joseph S. The latter was a son-in-law of Moses Putnam, and his partner; he died in 1861. William, Moses, James D. and Joseph S. Black were, each in his peculiar way, prominent and leading citizens. James D., the only surviving son, who lives at Harvard, Mass., has furnished the writer with some interesting reminiscences which have been used in the sketch of the schools.

These families here mentioned by no means included all of the "first families" of New Mills. There were Captain Crowningshield, and later Captain Ben Porter, at the Read mansion, Captain Israel Endicott and other Endicotts, Caleb Oakes, Major Joseph Stearns, Deacon Benjamin Kent, ship builder, Josiah

Gray, Captain Jacob Perry, the Webbs and so on. Much might be written of them were there plenty of space and time. Some will be mentioned again in connection with brick-making and other industries, and other representative names than those already mentioned will appear in the sketch of the local church, the Baptist, in the account of the anti-slavery excitement, and especially in the list of the company formed during the war of 1812, an account of which here immediately follows.

In the summer of 1814 nearly sixty men, mostly of New Mills—the solid men of the place in more senses than one, who were exempt from service—voluntarily associated themselves into an independent company of defence. They met in the school-house July 16th, organized by the choice of Captain Samuel Page as moderator, and Captain Thomas Putnam, clerk, and passed, among others, these votes:

"Voted, That the Alarm post be the front yard of Capt. Saml. Page's house. Voted, That the company meet at their Alarm Post on Saturday next at 4 o'clock P. M., well equipped, including Knapsack, etc.

"Voted, That as we have pledged ourselves on the points of Honor to be *Always Ready* and willing to obey the commanding officer of said company, therefore any member who does not at all times (when ordered) attend at the Alarm Post in good season and well armed and equipped shall be liable to be reprimanded for each neglect by the commanding officer."

The muster-roll of the New Mills minute-men:

Samuel Page.....	Captain.
Thomas Putnam.....	Lieutenant.
Caleb Oakes.....	Sargent.
John Endicott.....	Sargent.
John Page.....	Clerk.
Richard Seidmore.....	Drummer.
Stephen Whipple.....	Fifer.
Ephraim Smith.....	Fugle-man.

Privates.

Thomas Cheever.	Daniel Hardy.
Edward Richardson	Jona. Sheldon.
Hooper Stimpson.	Seth Stetson.
Stephen Brown.	Michael Saunders.
Samuel Pindar.	Ezra Batchelder.
John Fowler.	Thos. Symonds.
Benjamin Kent.	Ephraim Smith.
Moses Black.	Hercules Jocelyn.
Daniel Putnam.	Jeremiah Page.
Samuel Trickey.	Benjamin Wellington.
William Francis.	William Trask.
Samuel Fowler.	Moses Putnam.
Joseph Stearns.	Israel Andrew.
Jonas Warren.	Nathl. Mahew.
Eben Dale.	John Wheeler.
George Waitt.	David Tarr.
Nathaniel Putnam.	John Russell.
John W. Osgood.	John Kenney.
Allen Gould.	Jacob Allen.
Ebenezer Jacobs.	Daniel Usher.
George Osgood.	Israel Endicott.
Henry Brown.	James A. Putnam.
Ebenezer Berry.	Israel Hutchinson.
William Cutler.	

Of the *personnel* and appearance of this company fortunately an interesting sketch has been written by Deacon Fowler. Here were men whose age had added breadth to shoulders and rotundity to forms, men who held commissions in the Revolution, shipmasters who had visited foreign climes, skippers and hook-and-

line men; shipwrights, wealthy shoe manufacturers, men who first pressed bricks by machinery and found a mint in the clay-pit; tanners, merchants, farmers, artisans, officers of the town, county, church, State, physicians, and—enough! Truly a company extraordinary in its make-up. They marched, a little stiff in the knee-joints, from their Captain's down to the woods in the lane (River Street) for practice in firing, till "The Girl I Left Behind Me" quickened their energies and warmed them up. Amid generous plaudits it is to be presumed the veterans moved on with taciturn dignity. The young men smiled, but only some sour Federalist growled, "There goes the old ring-bone company." The weapons were of every sort—the King's arm, good for a charge of ten fingers, two balls and five buck-shot; the long heavy ducking gun, requiring liberal allowance of ammunition; the large-calibre "refugee." The firing by platoons was somewhat theoretical—there was too much individuality about it. Blank cartridges being used there was little danger in front. Not so in the ranks, for from the vents of the old firelocks a generous discharge of powder was at each shot directed towards the exposed ear of the man on the right, until the word was passed down, "Turn up your guns when you fire." At one of the numerous false alarms that the British were landing at Salem, the company marched at midnight as far as Gardner's farm. It was noticed that they were divided somewhat peculiarly. The well-fed, heavy, short-legged and short-winded men held the rear, under the lieutenant, while the front rank, composed of the leaner and longer-legged, advanced faster under the captain. The people of Salem were in constant fear of naval attack, and people inland were so alert that it is said a shot from a battery, alarmed by some harmless fishermen, caused quick commotion to the extreme limits of New Hampshire. The escape of the "Constitution" from English ships into Marblehead harbor was witnessed by Danvers men from Folly Hill. Earthworks, mounting two iron four-pounders, were thrown up at Water's River, and several prize vessels laid off the ship-yards during the war. The last survivor of the New Mills minute-men was Jonas Warren.

A school-boy of sixty years ago recalls that then Capt. Samuel Page was the leading merchant, and that his mercantile business was not confined to coasting, but foreign goods were largely imported. His fine mansion, still standing, was regarded as the most aristocratic residence of the village. He had years before erected several large warehouses to accommodate his business.

Capt. Nat Putnam and Capt. Tom Cheever were partners in store-keeping in the brick building until recently occupied by Aaron Warren. Capt. Nat built as his residence the large brick building opposite, known as the Bass River House, and a very fine residence it must have been in those days. After Capt. Page's death, Putnam and Cheever occasion-

ally used the storehouses, and so also Major Black, to store sheeps' pelts. Into one of them a cargo of smuggled rum was surreptitiously unloaded in the dead of night. Though a blacksmith, who had to be aroused to mend the broken cann-hooks, was let into the secret, the vessel got away before daylight, and nothing was for a long time known of the close proximity of so much exhilarating fluid. But the stuff could not be sold, and remained an elephant in somebody's hands until long after its advent somebody else "peached," and a long line of government trucks entered the village and confiscated the whole stock.

The following list of the earliest Danversport vessels was made by Mr. Crowley, of the Salem Custom-House, at the writer's request. The date is that of register. The owner's name follows the name of the vessel.

1789. Schooner "Nancy".....	Samuel Page.
1792. Schooner "Sully".....	Samuel Page.
1792. Schooner "Alice".....	Halfield White.
1792. Brig "Lucy".....	Caleb Low.
1793. Schooner "Hawk".....	Samuel Page.
1794. Schooner "Clarissa".....	Samuel Page.
1795. Schooner "Industry".....	Samuel Fowler.
1796. Schooner "Sally".....	Fowler & Pindar.
1798. Schooner "Esther".....	Samuel Fowler.
1799. Schooner "Eliza".....	Samuel Page.
1799. Schooner "Two Brothers".....	Samuel Page.
1800. Schooner "Five Sisters".....	Samuel Page.
1801. Brig "William".....	Samuel Page.
1802. Ship "Putnam" 266 tons.....	Samuel Page and others.
1804. Schooner "Jeremiah".....	Samuel Page.
1804. Schooner "Rebecca".....	Samuel Page and Sol. Giddings.
1804. Schooner "William".....	{ Wm. Pindar, Thos. Putnam, Simon Pindar, Caleb & Oakes.
1806. Bark "Wm. Gray".....	Wm. Pindar & Thos. Putnam.
1806. Schooner "Polly".....	John Fowler & John Page.
1807. Schooner "Augusta".....	Caleb Oakes.
1810. Brig "Rebecca".....	{ Samuel Page, J. H. Andrews, Samuel Endicott.

One of Samuel Page's partners in the ship "Putnam" was the merchant, Abel Lawrence, and her master was Nathaniel Bowditch.

The sturdy ship-wrights at New Mills helped out their country in the times that tried men's souls. Beside the smaller craft, three fine ships,—the "Grand Turk," the "Jupiter," the "Harlequin,"—were built here during the Revolution. Before the war, Pindar, Kent and Fowler took a contract to build a three hundred and fifty ton ship for a London house. Capt. John Lee was sent from England to superintend her building. Impending hostilities prevented the owners from rigging and fitting her, and as long as she remained on the stocks the builders could not, according to contract, demand their pay. Capt. Lee refused to allow her to be launched, but all the carpenters mustered one night and slid

her into the water. The builders might better have thrown up the bargain and make the most of the ship, but they chose to bring a fruitless suit against the American agent of the Englishmen, and in the meantime the good ship, utterly uncared for, floating with the tides, rotted in the river.

Old newspapers which contain "arrivals" at the "Port of Danvers" give an insight into the amount and character of the business here transacted. A few sample entries during the summer of 1848 are here given,—

- "June 2d.—Arr. sch. 'Albert,' with frame of Baptist Meeting House.
- "3d.—Arr. sch. 'Henry Chase,' corn and flour, to J. Warren.
- "4th.—Arr. sch. 'New Packet,' lumber, to J. W. Roberts.
- "5th.—Arr. sch. 'Franklin,' lumber, to Asa Sawyer, Jr.
- "7th.—Sld. sch. 'Franklin.'
- "8th.—Sld. sch. 'Aurora.'
- "9th.—Sld. sch. 'New Packet.'
- "11th.—Arr. sch. 'Pilgrim,' corn, to D. Richards.
- "20th.—Sld. sch. 'Minor,' bricks, from Nathan Tapley.
- "22d.—Arr. Sloop 'Lady Temperance,' stone, to M. Black.
- "27th.—Arr. Brig 'Ellen,' corn, to D. Richards. Schs. 'Franklin' with lumber, to A. Sawyer, Jr.; 'Regulator,' wood and sleepers, to E. B. R.
- "30th.—Arr. schs. 'Otter,' lime, to A. W. Warren & Co.; 'Henry,' lumber, to Calvin Putnam."

From April 1 to November 30, 1848, there were 172 arrivals including 58 cargoes of lumber, 31 wood and bark, 43 flour and grain, 17 lime, 3 molasses, 2 salt, 4 coal, 12 in ballast, 2 unknown. Seventeen vessels loaded for shipment to other ports, two cargoes being sent to the coast of Africa. It is said that the first cargo of coal ever landed here was owned by Parker Brown, but nearly as early a venture in this new combustible was that of J. W. Ropes. His advertisement thus appeared in August, 1849.—

"Coal.

"Now landed at Black's wharf, and for sale by the subscriber, a cargo of very superior anthracite coal which will be sold at the wharf or delivered as cheap as can be purchased in Salem.

"JOSHUA W. ROPES."

The following is the summary of the arrivals in 1860:

Jonas Warren, lime, flour, grain, etc.,	44
Joshua Silvester, iron,	12
Daniel Richards, grain,	16
H. O. Warren & Co., coal and wood,	32
Joshua Gray & Son, wood,	5
Moses Black, Jr., coal and wood,	34
Samuel Low, wood,	1
—— Beckford, grain,	5
Augustus Tapley, coal,	1
Calvin Putnam, lumber,	25
J. Bragdon & Co., lumber,	10
Aaron Eveleth, lumber,	12
D. Cam, lumber,	1

Whole number of arrivals, 198

The Legislature authorized the town to put down channel poles in the rivers in 1844. Recently the draw-bridges at Beverly were widened to accommodate larger coal vessels than could otherwise come to Danversport. Calvin Putnam established the present extensive lumber business, on the site of Deacon Kent's ship-yard, about thirty-five years ago.

THE TAPLEYS AND TAPLEYVILLE.—About the first of this century an old man was driving a heavy load of oak ship-timber, along one of the roads in the western part of the town. There had recently been a very heavy fall of snow, and the roads were so full that turning out was a matter of great difficulty. Suddenly out of the drifts there appeared an approaching sleigh, and behind the driver sat the magnate of whom something has been said, "King" Hooper. "Turn out," cried Hooper. "Can't do it, load's too heavy," said the old man, "let your man take one of these shovels and we'll soon make room." "No, half the road's mine, and I'll wait here till I get it." "All right" was the complacent reply, and slipping out the pin he went back home with his oxen, leaving the load of logs effectually blocking the narrow path. This was Gilbert or, as it more often appears "Gilbord" Tapley, the ancestor of the numerous family of that name in Danvers, many of whom have borne prominent and honorable parts in the quiet annals of the town. He was the brother of John Tapley, from whom Tapley's Brook, in Peabody, derived its name. Another brother located in Maine. Gilbord came up to Salem Village and bought, in August, 1747, of Joseph Sibley, a farm of sixty-seven acres, bounded by Amos Buxton, Joshua Swinerton and others, the river-meadows, and a "way" now called Buxton's Lane. His dwelling on this farm was standing until within thirty to forty years on the Andover turnpike, a few rods south of the Wm. Goodale place. He was married three times; first, to Phebe, daughter of John, and sister to Dr. Amos Putnam; second, to Mary, widow of Nathaniel Smith; third, to Mrs. Sarah Farrington. Phebe was the mother of Amos, Daniel, Phebe, Joseph, Aaron, Asa, Elijah; Mary was the mother of Sally, eight children in all. Through only two of these was the name preserved here, Amos and Asa. Of the daughters, Phebe married Wm. Goodale, of Hog Hill; Sally, Porter Putnam. Of the other sons, Daniel married Mary Tarbell; Joseph went to Lynnfield and left very numerous descendants; and Elijah established a family at Wilton, N. H. Amos Tapley's home was in near neighborhood to his father's, the present Joel Kimball place. His wife was Hannah, daughter of John Preston, who lived where George H. Peabody does now, not far away. They were the parents of twelve children, seven sons. Of the sons,—David, Amos, Moses, Aaron, Daniel, Philip and Rufus,—Moses and Daniel were among the pioneers of Indiana; Amos went to Lynn and was the father of Amos P. Tapley, one of the most respected citizens of that city; Philip died at sea, young; and upon David, Aaron and Rufus depended their father's branch of the family name at home. David's son Alvin was the father of Joseph A. Tapley, of Danversport. Aaron lived close by his father, on the James Goodale place, and left no son. Rufus took his father's home, and later moved next south of the First Church; three of his children went to Saco,

Me., of whom Rufus P. was for seven years a judge of Maine Supreme Court; none of the children are left here. Thus the only lineal male representatives of Gilbord's son Amos, now in town, are Joseph A. Tapley and his sons.

Now of Gilbord's son Asa. It was said that Gilbord's second wife was the Widow Smith; she brought three daughters into the family, two of whom quite conveniently became wives of two of the sons, while a third, Ruth, married Matthew Putnam, and thenceforth presided over the old Nourse witchcraft homestead, and became next neighbor to her sister Elizabeth. For it was Elizabeth Smith whom Asa Tapley married, and their home was the old house which was sold to the late Elisha Hyde, and until within a few years stood on the street which bears that man's name. Asa came to own a great deal of land in that neighborhood. His children were Daniel, Asa, Betsey, John, Gilbert, Sally, Nathan, Perley, Jesse, Mary. Daniel lived first in the brick house which was the old home of Dr. Amos Putnam, near Felton's Corner; Nathan and Asa were brick-makers, the former living first in the house which he built, now occupied by his son-in-law, William H. Walcott; Asa in the house next south; while the house of Hix Richards, who married their sister Betsey, completed the trio of adjoining Tapley houses. The son John settled in Dover, N. H. Gilbert and Jesse established themselves near their father's home; the former in the old Tarbell house, which stood on the corner of Hyde and Pine Streets, where he made shoes and money, the latter at the other end of Hyde, on Collins Street. Perley lived and died in the house into which Gilbert afterwards moved and died, on the corner of Pine and Holten Streets. Looking back at the character and standing which these sons who remained in Danvers maintained, it is using a very moderate expression to speak of them as a remarkable family. Some of them died wealthy, all respected. None now survive. Gilbert reached the greatest age, eighty-five, and was the last survivor, his death occurring October 10, 1878.

Perley Tapley was a famous mover of buildings, and many are the feats which he and his long team of oxen accomplished in this direction. About 1843 he moved a building in which Matthew Hooper had manufactured boxes, near Felton's Corner, to the brook at "Hadlock's Bridge," and in it Perley and Gilbert Tapley began the manufacture of carpets. This building was burned in June, 1845, and another was immediately built. Gilbert Tapley carried on the business alone from 1847 to 1864, when the Danvers Carpet Company was formed. For many years the industry thus established gave employment to many people. In 1876 there were about one hundred employees, who turned out one hundred and fifty thousand yards of ingrain carpets.

About the time the carpet business was started Perley Tapley began moving buildings from far and

near, and converting them into dwellings. Many of these remain, the original settlers of the village, which, thus created, very properly took the name of Tapleyville. A humorous squib which appeared in the *Danvers Eagle* October 30, 1844, was concocted on one of those trips which leading South Parish men used to make to hear Dr. Braman preach Fast-day and Thanksgiving sermons. It was headed "Tapleyville in 1844." "There is one peculiarity," it says, "which we believe is not common to any other place. By the city regulations it is provided that no house or other building shall be erected within the territory, and the city is entirely composed of buildings which have been moved into it, and by this means it is constantly increasing. Nothing is more common than to see houses of all sizes and shapes and of every quaint style of architecture traveling into the place and seating themselves down in some comfortable situation to rest just so long as the mayor will allow them to remain. . . . We had the curiosity to look into the City Hall when the Council was not in session, and found it ornamented with various agricultural implements. Like the rest of the city, it looked like a traveling concern, and was built of rough slabs. We understand it once took a tour of observation through the streets of Salem, and afterwards returned to its native place." The "mayor" was, of course, Perley Tapley. The building last alluded to was a log cabin, which had been conspicuous in the Harrison campaign processions. It was the great feature of a great procession at Salem, when people gazed in admiration at Perley Tapley's skill in managing the forty or fifty yoke of oxen attached to the cabin, especially in turning corners. A glee club sang from the balcony, and a halt was made on Salem Common, where there was a great dinner, and an able and eloquent speech by Daniel Webster.

Mr. Tapley is said to have been the first to move a brick building. Having a church-steeple on his hands at one time, he cut it up sectionally into shoemakers' shops; one is to be seen near the Tapleyville Station. He was moving a building on floats from Boston to East Boston once, and being somewhat out of his element on any other than a solid foundation, was in danger of being blown out to sea; in the crisis he is said to have called vehemently to the pilot to "gee." Wishing a new school-house for his village, he did what he could to make the old Number 6 building "too small" by loading every child of school age in his neighborhood into his ox-cart and filling the room to overflowing. Many characteristic stories of his energetic way of doing things might be collected. He was not forty-eight years old when he died. He leaves no sons, but two daughters in town. In addition to the single family mentioned as the representatives of old Gilbert's son Amos, there are now in town but five other adult male Tapleys,—George and his two sons, of the line of Daniel, son

of Asa, and Gilbert Augustus and his only son, of the line of Gilbert, son of Asa.

Tapleyville is supplied with a post-office and a railroad station. As a school district it ranks among the three largest; as a business and manufacturing centre it is one of the busiest in town. Within a few years a large tract of land bounded by Holten, Pine and Hobart Streets has been opened and is well taken up by new dwellings. The new streets are named for the pastors of the First Church,—Clarke, Wadsworth, Braman, &c. Within the present year, 1887, a fine three-story building has been erected by the Agawam Tribe of Red Men for society and business purposes.

CHAPTER XXXVII.

DANVERS—(Continued).

MISCELLANEOUS.

TEMPERANCE.—It is a fact too well known for comment that a typical New Englander of a century ago loved rum. It was potent at "raisings," it added to hospitality, it lent wisdom to council, eloquence to speech, strength to effort. It was as necessary to settle a minister as to swap a horse. It was the article most often charged on the grocer's day-book; it was absolutely common. And it made men drunk. After the revolution home production greatly increased, and during the first part of this century intemperance became a crying evil.

In the year 1812 a temperance society was formed. It was the first in this State, perhaps the first in the world,—The Massachusetts Society for the Suppression of Intemperance. Three Danvers men were of its members,—Hon. Samuel Holten, Rev. Dr. Wadsworth and Joseph Torrey, at least two of them leaders anywhere. And this accounts for the fact that so early, two years after the parent society, a temperance society was started here. It was called the Danvers Moral Society, and had for its officers a fine set of men who neither shrank from the work nor feared the opprobrium of an unpopular reform,—Dr. Holten, president; Rev. Messrs. Wadsworth and Walker, vice-presidents; Drs. Torrey and Nichols, secretaries; Fitch Pool, treasurer; Eleazer Putnam, Samuel Page, John Endicott, Sylvester Osborne, James Osborne, James Brown, William Sutton and Nathan Felton, counsellors. Deacon Samuel Preston gave in his old age some reminiscences of his early connection with the society, himself one of the early secretaries. The board of managers, he said, met once a month. "As cases one after another came up, to particular members of the board was assigned the duty of visiting and trying to persuade the fallen one to break off his habits and to lead a sober and useful life. This was followed until re-form was effected or the case became hopeless, when his or her name was added to a list of

names which were to be handed to the selectmen of the town to be 'posted' as common drunkards, and the dealers in intoxicating drinks were forbidden to sell or give to any person whose name was so 'posted.' Several lists of some eight or ten names were so made out and posted in public places. The process created so much bitter feeling that it was abandoned after some years of trial. The binding principle of the societies was not, in the beginning, total abstinence; other methods had to be tried before." The Moral Society at first went no farther than to declare against the daily use of ardent spirits. It took nineteen years of progress to strike out, in 1833, the word "daily."

The first indication of the new reform upon the records of the town is a vote passed at the annual meeting of 1818, thanking the selectmen (Nathan Felton, Jonathan Walcott, Sylvester Proctor, Daniel Putnam, Nathaniel Putnam), for the measures by them adopted "to prevent those given to intemperance in drinking, from wasting their health, time, and estates by the excessive use of ardent spirits; and that the present board be instructed to pursue the system commenced by their predecessors."

Nine years later, May 27, 1827, Caleb Oakes carried a motion for a committee of nine to enforce the laws and "to give notice to the selectmen of every licensed person known to violate the laws that their approbation of such person may hereafter be refused." This committee consisted of Caleb Oakes, Fitch Pool, Samuel Fowler, John Peabody, Samuel Preston, John W. Proctor, Elijah Upton, Nathan Poor and Samuel Taylor. It was in this year, 1827, that the first public address advocating total abstinence was delivered in Danvers. The speaker was a young physician, Ebenezer Hunt, who thus early took the advanced stand upon this question, which throughout the course of his well-rounded life he fearlessly took on other great questions which later agitated the country.

In 1830 the town were asked to take certain measures "agreeable to a request of the Danvers Moral Society." The next year the overseers of the poor were instructed not to furnish liquors at the almshouse, except as recommended by the attending physician.

Two years later, and at a meeting held at the Brick Meeting-House in the north parish March 4, 1833, public sentiment had been so far affected that the first no-license vote was passed. John W. Proctor, a lineal descendant of the original settlers of that name, a young lawyer whose name must appear often and honorably in any chronicles of his native town, then wrote in lead-pencil certain resolutions which were offered to the meeting by a young man whose birth was contemporaneous with that of the century, and who to-day is still with us, despite his advanced age maintaining the active superintendence of the one of the most important departments of town affairs, of whom more may be learned in the biographical sketch which follows, Samuel P. Fowler. The resolutions were these:

"*Resolved* that the following order be adopted:

"*Whereas* in consequence of the Change that has taken place in public Opinion in regard to the use of Spirituous liquors, it is very generally believed that the Public convenience does not require licenses to be granted for the vending of Ardent Spirits.

"*And whereas* it is desirable to discourage the use of Ardent Spirits in all reasonable and practicable ways, Therefore voted as the sense of the town that it is not expedient to license the Sale of Ardent Spirits within the town, and that the Selectmen be hereby instructed and requested to withhold their Approbation of such licenses."

Col. Jesse Putnam headed a petition for no-license next year, and Daniel P. King, Alfred Putnam, Abner Sanger, Robert S. Daniels and Joshua H. Ward were appointed to correspond with other towns on the question. Women were in no ways backward in the temperance movement. At the annual town-meeting of 1836, this petition signed by about eight hundred of them was presented:

"To the Citizens of Danvers in Town Meeting assembled:—

"We, the undersigned, your Mothers, wives, sisters and daughters, ask your attention for one moment to the temperance cause, as it now exists in this community. We are aware that you are not unmindful of this cause, and that you have heretofore done much in support of it, and the present year have instructed your Selectmen not to approbate the sale of Ardent Spirits within the town. We are also aware that you were among the first publicly in town meeting to denounce the traffic in ardent Spirits and to proclaim its evils. All this is well, but still much remains to be done. Notwithstanding all your efforts, there are many still intemperate, and the means of gratifying their insatiable appetites are still at hand.

"Yes, and they who furnish these means go unpunished and disregarded. Of what are laws or resolutions in word only? Better by far to have no laws, than permit them to be violated with impunity. Have you not again and again resolved that the sale and the use of ardent spirits are destructive of the Peace and well-being of Society? Do you not all feel and see that this is true? Then why permit it? We beseech you delay no longer. Banish the evil from among you. Beseech those who transgress, in kindness to desist. But if they will not, in kindness, compel them to do it. Never hesitate or falter in doing that you know to be right. We your friends, your own consciences, and the God of heaven, will sustain you in the path of duty. As you love us, as you regard your own welfare, both here and hereafter, suffer not the evil of drunkenness to be any longer within your borders; and unite with us in prayer that our neighboring Citizens may share the same blessing."

At a special meeting held April 3, 1837, a committee, in the nature of a temperance vigilance committee, and the first of the sort, was appointed; it consisted of John Peabody, Rufus Wyman, Jesse Putnam, John B. Peirce and Samuel P. Fowler. At this meeting a resolve was passed which reveals a state of things unremedied to this day and which might with greater pertinence than efficacy be at any time re-enacted:

"*WHEREAS*, this town for several years past, while endeavoring to prevent the sale and use of intoxicating liquors within it, has found its efforts thwarted, and its citizens allured and enticed away to their injury, by the Licensed shops and houses on its borders in the City of Salem. *Therefore* ———

"*Resolved*, that the Selectmen in behalf of the town be requested respectfully to beseech the Authorities of the City (if such dram shops shall still be thought necessary in the City) not to locate them immediately upon our borders; but to remove them as far off as possible."

There followed a period of inactivity for some seven years. Then, in 1844, more resolutions were passed, and another vigilance committee was appointed, on which with others previously mentioned were Joseph Osgood, Elias Putnam, William and Joseph S. Black,

Samuel Tucker and Samuel Preston. Four years later and another committee, another in 1849, several in the fifties, and one, the last, as late as 1871, upon the earlier of which appear as leading temperance men of the day these additional names: Allen Knight, Israel Adams, Deacon Frederick Howe, William Walcott, Gilbert Tapley, Nathan Tapley, Wm. J. C. Kenney, Eben Putnam, Israel W. Andrews, Edward T. Waldron and Moses Black, Jr. In 1849 these rather unique votes were passed:

"That each minister, each lawyer and each Doctor be requested to deliver to the citizens of the Town, one Lecture at least, each, during the year, on the subject of Temperance and Gambling

"That the Town Clerk send a certified copy of the above vote to each of the gentlemen referred to and to publish it in the *Danvers Courier*.

"That the Gentlemen referred to have the liberty to make use of such language as they please on the evils of using tobacco."

About 1849, too, the subject of lotteries received the attention of condemnation, and committees were especially instructed to prosecute violations of the law.

Agreeable to the law of 1855, the selectmen appointed as the first liquor agent of the town, Needham C. Millett. He was required to keep pure and unadulterated liquors, for medicinal, chemical and mechanical purposes only, at his place of business on Maple Street; to sell for cash only at twenty-five per cent. net profit; to make quarterly returns to the town treasurer; and his compensation was one hundred dollars. His successors as liquor agents were: 1856-57, Olive Emery, High Street; 1858-61, Hiram Preston, Maple Street; 1862-65, Levi Merrill, Maple Street; 1866, Daniel Richards, corner High and Elm Streets; 1867, A. Sumner Howard, Cherry Street; 1869-72, Abram Patch, Jr., Maple Street.

From the stand taken so early, when the resolutions of 1833 were adopted, neither the old nor the present town of Danvers has ever receded. Once only, in 1883, the vote went in favor of license, four hundred and twenty-one to two hundred and eighty-three; but by a singular coincidence, the proceedings of this meeting were technically illegal, through the omission to use check lists in balloting for moderator, and on a subsequent trial the result was reversed by a close vote, four hundred in favor of license, four hundred and thirty-eight against. The first vote under the local option law of 1868 was a negative answer, one hundred and forty-nine to five, to the question "Shall licenses be granted for the sale, to be drunk on the premises, of either distilled or fermented liquors?" Late votes on the license question have been: 1884, 476 no, 275 yes; 1885, 391 no, 233 yes; 1886, 384 no, 183 yes.

Not always, however, has the real state of the temperance question been in harmony with this showing. A dozen years ago the saloon element, for a time, successfully defied the law, and endeavored, by terrorizing prosecutors, to avoid prosecution. At least one extensive fire has been traced to such a source. But the people at length aroused to meet the emergency,

and, under a police who deserve great credit for so well performing their duty, have brought back the town to a place essentially of law and order, where liquor-selling timidly skulks and drunkenness is not common.

Within recent years a number of temperance societies have been organized. Apparently the oldest is the Catholic Total Abstinence Society, whose good work cannot easily be over-estimated. It was organized November 19, 1871, and bought and fitted up its present building some four years later. Its hall was dedicated February 17, 1879. The Danvers Reform Club was organized, January 21, 1876; the Woman's Christian Temperance Union of Danversport, January 17, 1876; a similar Union at the Plains, February 6, 1876.

FIRE DEPARTMENT.—The first action of the town regarding fire-engines was in the first year of this century. On the 25th of August, 1800, Robert Shillaber, Israel Putnam and Edward Southwick were chosen "to purchase two fire engines for the use of the town, whenever a sum of money shall be raised by subscription equal to one-half the cost of said engines, and deposited in the hands of the committee aforesaid for that purpose."

"*Vote.* Said engines shall be kept in repair at the expense of the town and one of them shall be placed near the house formerly called the Bell Tavern and the other on the neck of land near the new mills so called provided the inhabitants who may be likely to receive the most benefit therefrom will at their own expense erect suitable buildings to receive them."

By a law of the Commonwealth, the selectmen of towns owning fire-engines were empowered to nominate "engine-men." At the beginning of 1801, the selectmen made these appointments:

" FOR ENGINE NO. 1.

- Edward Southwick.
- Nathl. Storrs.
- Henry Cook.
- Joseph Buxton, Jr.
- Dani. Reed, Jr.
- Isaac Frye.
- Caleb Osborn.
- Jona. Osborn.
- John Osborn.
- Amos Osborn.
- George Stone.
- John Pierce.
- Wm. Woods.
- Wm. Reed.
- David Osborn.
- Saml. Osborn, Jr."

" FOR ENGINE NO. 2.

- Thomas Putnam.
- Caleb Oakes.
- Benj. Kent.
- James Carr, Jr.
- Joseph Kent.
- Willebe Wells.
- Nathl. Putnam.
- Wm. Trask.
- James Gray.
- Currier True.
- Saml. Pinder.
- Wm. Pinder.
- Saml. McIntire.
- Saml. Fairfield.
- Joshua Goodale.
- James Carr."

The names of Edward Southwick, William and Daniel Reed, Jr., Caleb Osborne, George Stone, John Pierce and Samuel McIntire were subsequently, for some reason, erased.

Officers known as "fire-wards" were first chosen at the annual meeting of 1801. The persons then chosen were Ebenezer Sprague, Samuel Page, Edward Southwick, Ebenezer Shillaber, Simon Pindar and Israel Hutchinson, Jr. Ten years later Page and Southwick were both on the board, and with them

Samuel Fowler, Jr., Gideon Foster, Joseph and Sylvester Osborne and Benj. Crowninshield.

Some records of the meetings of No. 2, about this time, have been preserved. At Nathaniel Putnam's store certain preparations were made one day in February, 1808, which show that charity went hand in hand with festivity.

Voted, That the company have a supper to-morrow night, as per vote the last meeting.

Voted, The committee be authorized to invite the minister and school-master to sup with us in free cost, and that they invite the fire ward in said district to sup with us in club.

Voted, That the remaining part of the fines that may be had after paying for said supper, &c., be given to the most needy persons in said district.

Voted, That there be a committee to distribute the same and inform them what fund it came from.

Voted, That this committee consist of Mr. Caleb Oakes, Mr. Israel Endicott and Mr. Wm. Trask.

Voted, That the clerk pay over to the committee last chosen the balance that may be in his hands after settling for the supper.

Voted, That the committee make a return of their doings at the adjournment.

At the adjournment the report was accepted and the committee duly thanked. They received from the clerk thirty dollars for distribution, and fourteen persons received from one to four dollars each.

In 1810 the "Columbian Fire Club" is first mentioned in the town records. The club petitioned for an additional number of buckets to be placed under its care. Three good men and true considered the subject,—Jona. Ingersoll, Jas. Foster and Samuel Page; but whether the club secured the buckets or not is a question of distressing uncertainty. A survivor of this club relates that each member was required to keep a fire-bucket, a bed-key and a canvas bag, hanging ready for use in the front entry.

In 1815 there were ten fire-wards,—Sylvester Osborne, Benj. Crowninshield, Caleb Oakes, Thomas Putnam, Joseph G. Sprague, James Brown, Moses Black, John Upton, Jr., Samuel Fowler and Ward Pool. In that year the New Mills engine was thus manned:

Thomas Cheever.	Jacob Jones.
Wm. Francis.	Samuel Pindar.
Hercules H. Joselyn (gone to sea).	Ebenzr. Jacobs.
Allen Gould.	Daniel Brady.
John W. Osgood.	Benj. Chaplin.
Saml. W. Treaky.	Thos. Symonds.
Andrew Gould.	Nathaniel Putnam.
	Jona. McIntire.

Appropriations, by direct vote, for the fire department were few and far between in the early years of its existence. In 1837 the selectmen were authorized "to furnish the new mill engine company with fire Buckets, as they think proper, provided they do not find those they lost at the late fire" and the only other recorded appropriation for the first twenty years was on a vote in 1819, authorizing the repair of the hook-and-ladders belonging to the town, and the purchase of as many new hooks, ladders, pikes, not to exceed fifteen, as the fire-wards should think proper.

In 1821 Oliver Saunders and others petitioned for

a new engine. The first thing was to inquire into the status and condition of the old engines. It was evidently an important matter. Notice the number and character of the committee of inspection: Ebenezer Shillaber, Andrew Nichols, Nathl. Putnam, John Upton, Jr., John Page, Sylvester Osborne, Caleb Oakes, John W. Proctor, Danl Putnam, Warren Porter and Samuel Fowler. But the committee was considered still lacking somewhat in weight and five more were added,—Briggs R. Reed, Oliver Saunders, Eben Putnam, Jr., Joseph Spaulding and Allen Gould. All these were appointed by the moderator, yet "the inhabitants" were not quite satisfied. They voted "to add two more to the above Committee, the Town to have the liberty of nominating them, and Edward Southwick and Nathaniel Watson were added." Verily, if the old engines were not thoroughly overhauled, it was not the fault of the town-meeting. Subsequently it was voted to procure two new engines and repair the old ones, provided half the cost of the new ones be raised by subscription. Squires Shove, Caleb Oakes, Nathaniel Putnam, Ebenezer Shillaber and Wm. Sutton, were delegated to pass around the bat.

In 1826 two sets of sail cloths were provided at an expense of one hundred and fifty dollars, one set to be located near the south meeting-house, the other at New Mills. The men who ran with the machine this latter year at New Mills were

John Ross.	James Smith.
Josiah Gray.	John Bates.
James Smith.	John Kent.
John Burns.	Andrew Porter.
Hiram Perley.	Moses Wood.
Frederick A. Tufts.	Daniel Woodman.
John T. May.	Franklin Batchelder.
James Haynes.	Daniel Caldwell.
Richard Elliot, Jr.	David S. Barnard.
James Perry.	Jesse P. Harriman.
John Herrick.	Daniel Hartwell.
Benjamin Kent, Jr.	

In 1830 another engine was purchased for the south parish; the same year an act of the Legislature was passed "to establish a Fire Department in Danvers." The act provided for the choice of twelve fire-wards; changed the power of appointment of engine-men from the selectmen to the fire-wards; limited the number of engine-men to forty "for each hydrau-lion or suction-engine, twenty-five to each common engine, four to each hose-carriage, twenty to each sail-carriage and twenty for a hook-and-ladder company;" authorized the engine-men to organize themselves into distinct companies under the direction of the fire-wards; and made the fire-wards custodians of all fire-apparatus. The first board chosen under this act consisted of R. H. French, Lewis Allen, Caleb Low, Richard Osborne, S. P. Fowler, Moses Black, Caleb L. Frost, Benjamin Wheeler, Henry Cook, Edward Upton, Enoch Poor and Jacob F. Perry.

In 1835 the New Mills people petitioned for a new

engine-house, and secured it. The same year "Johnny" Perley, the storekeeper at the little village which was springing up at Porter's Plains, petitioned for a fire-engine, to be located near Berry's tavern, and the next year Philip Osborn and others wanted a new engine-house at the "Pine Tree Corner" (Wilson's Corner), and secured an appropriation of three hundred dollars for that purpose.

Mr. Perley's petition not having met with success, another store-keeper, Daniel Richards, headed a petition in April, 1836, "for a good and sufficient fire-engine to be located at the Plains, and to provide a convenient building for the same." The fire-wards at this meeting presented a report which, doubtless, influenced favorable action.—"The engine Niagara, No. 1, is not suitable or fit to work with the Salem engines, they being suction . . . ; the Forrest, No. 3, is in good order and well manned . . . ; the Erie, No. 2, is in a bad condition and not man'd, wants repairing and altering . . . ; the . . . , No. 4, a good, new engine, is wanted at the Plains, with hose and a house for the same." A vote was passed to raise two thousand three hundred dollars for the purpose of purchasing two new engines, one to replace the old "Niagara," the other for the Plains, and for hose, etc., and the repairing of the "Erie." Richard Hood's bill "for finishing the engine-house at the neck" in 1836 was \$102.85.

But the new engine for the Plains was not immediately forthcoming. At the March meeting of 1837 one of the articles was "To inquire of the Fire Department what they have done towards obtaining a Fire-Engine to be located at the Plains, agreeable to the request of Eben Putnam." At an adjournment a committee which had been appointed to consider the report of the fire-wards reported "that it is expedient to procure a middling-sized engine of good construction to be located at the Plains, provided an efficient company of thirty men can be found in that vicinity ready to take charge of the same; that, in case an engine is procured, a suitable house should be built for the accommodation of the same." These recommendations were adopted, and eight hundred dollars appropriated. But the committee added in their report,—"It is worse than useless to expend a thousand dollars for an engine and to have it, when the alarm of fire is given on a cold night, frozen up and unfit to be used." Two hundred dollars was soon after added to the appropriation of eight hundred dollars.

The election for fire-wards in 1840 resulted as follows, the number of votes each received being given :

Miles Osborne	297	Henry Fowler	299
Francis Baker	300	George Porter	296
Amos Osborne, Jr.	300	Simeon Putnam	190
Jere L. Kimball	297	John Hart	190
Benjamin Wheeler	298	William H. Little	189
Edwin F. Putnam	299	Eben Sutton	186

E. F. Putnam and Simeon Putnam declined, and

Daniel Richards and Ezra Batchelder were chosen to fill the vacancy.

In 1842 Otis Mudge and one hundred and twenty-eight others petitioned for an engine and house, "to be located near the North Parish Meeting-House (Rev. Mr. Braman's);" the matter was referred to Mr. Mudge, Miles Osborne and W. J. C. Kenney, but when a vote was taken—this was a meeting held in the South Parish—only 51 voted for the measure, and 59 voted against it. It was "tried again." Mr. Mudge and John W. Proctor were appointed tellers. They reported 65 in the affirmative and 65 in the negative. Then the house was polled, and the tellers having reported "68 for locating an engine, and 78 against it," it was then voted that the subject be dismissed. In 1843 the engine at New Mills was replaced by a new machine, called the "Ocean," at a cost not exceeding a thousand dollars; and what became of the old Niagara appears in this item of the fire-wards' report for 1844:

"No. 2.—This engine, with its apparatus, is in good order, it having been removed from the Neck to the Tapley Village, and is now under the charge of Perley Tapley, who has engaged to furnish a house for it at his own expense."

In this report the story is told at length of the great fire which swept through what is now Peabody Square, burning the South Meeting-House, the old Essex Coffee-House and many other principal buildings in the vicinity. "The sun, this morning, rose upon a scene of desolation never before witnessed in our town, disclosing more fully to view crumbling walls and smouldering ruins in the place of those buildings which the devouring element had swept from our view. The destruction of property was very large." Further details will doubtless appear under the sketch of the history of Peabody.

Perley Tapley soon requested the town to purchase his engine-house, and the fire-wards were directed to buy it unless they could do better otherwise. In 1849 Tapleyville was given a new engine, and the "Niagara" was finally disposed of.

The number and value of the several fire-engines, houses and apparatus belonging to the town at the time South Danvers was set off as a separate town, will be found in the inventory of town property in this sketch, where the history of the division of the town is given. A few days after the act was passed which incorporated South Danvers, the Legislature amended the act of 1829, which established the Danvers Fire Department, so that the town of Danvers was required thenceforth to choose five fire-wards annually instead of twelve.

The men elected as the first fire-wards of Danvers, after the division of the town, were Winthrop Andrews, R. B. Hood, A. G. Allen, W. B. Richardson and Josiah Ross.

The rising generation knows little of the glory which once surrounded the country fire department.

Only certain grandfathers remember the halcyon days. Now and then an item in old newspaper files recall them, days of reception or visitation, the carefully polished machine, the well-drilled company of choicest young manhood, rivalry not a little, admiration unbounded. There was such a day in the fall of 1849, when a great event happened in Wenham,—its first new engine came. On the shore of the big pond where Hugh Peters preached in the wilderness of Enon, there was a grand exhibition of prowess, and Danvers was there by her board of fire-wards, and the "General Putnam, No. 4;" the company dressed in uniform of white frocks, dark pants and glazed caps.

"They marched under the direction of that pattern of directors, William J. C. Kenney, to the music of Osgood's excellent band, and the way they performed the military evolutions would have done honor to a company of veteran soldiers."

The idea of having a "steamer" first came up in town-meeting in 1866, on the petition of Henry F. Putnam and others. It was then referred and indefinitely postponed. Two years later George W. Bell headed a similar petition, and on the last day of March, 1868, a series of votes were taken on the motion, "that the town purchase a steam fire engine." The first hand vote was declared lost; it was then voted to poll the house; the motion was again put and declared carried, eighty to forty; the minority, not satisfied, doubted the count; the voters passed in front of the moderator, and were counted as they passed, and the motion was finally declared carried, seventy-six to twenty-five. No money was immediately appropriated, but at the annual meeting of 1869 it was voted, after another close fight, sixty-seven to sixty-five, to appropriate five thousand dollars, and the fire-wards, namely, Timothy Hawkes, George W. Bell, Charles T. Stickney, Wyatt B. Woodman and John C. Putnam, together with Winthrop Andrews, William L. Weston, R. B. Hood, H. A. Perkins and Nathan Tapley were entrusted with the weighty business of buying the only "steamer" which the town ever indulged in. Three thousand dollars more was appropriated for apparatus for the new engine and fifteen hundred dollars for accommodations. And, at a final adjournment, each of these votes were reconsidered, and the whole matter indefinitely postponed. Thus it is ever with town-meetings. But the next year and the next the steamer agitation was renewed, three self-acting extinguishers, "soda fountains," having been purchased in the meantime, and so on until in 1873, the first and only steam fire engine came to stay—but a short time. The fire-wards, who were entrusted with its purchase, were G. W. Bell, George Kimball, J. C. Putnam, Thomas Curtis and William J. Murphy. The basement of the building known as Bell's hall, on Maple Street, was fitted up as a steamer-house.

But now for some time the advance guard of public

sentiment had been laboring to bring up the rank and file to the belief that Danvers was ready to indulge in the metropolitan luxury, nay, necessity, of a water-supply system. It is now some eleven years since the pure water of Middleton Pond first appeared in our streets and kitchens. Who would part with it? Yet it came only after much agitation and much honest opposition. The matter of water supply was first brought up in town-meeting in 1870, and was referred to S. P. Fowler, Daniel Richards, Oliver Roberts, C. T. Stickney and W. L. Weston. They reported next year, recommending acceptance of certain terms offered by the city of Salem for supply for five years, keeping an eye to Middleton and Swan's Ponds for an ultimate supply. Nothing further until November 17, 1873, when another committee of consideration was appointed. They reported at the annual meeting of 1874 in favor of building a reservoir on Will's Hill, in Middleton, at an estimated cost, with pipes, etc., of two hundred and fifty thousand dollars. The following April, 24th, the Legislature passed the Danvers Water Act, authorizing the town to take water from Middleton and Swan's Ponds, to issue bonds to three hundred thousand dollars, payable in not exceeding thirty years, to choose three water commissioners, and to provide for a sinking fund. The validity of the act depended upon its acceptance by the town within two years. In the meantime another factor entered into the water question. The State needed a new insane asylum; sites were examined here and there; finally the summit of Hathorne Hill, in Danvers, was fixed upon as the most eligible. The asylum commissioners wanted water and were willing to co-operate with the town. Their bill lay almost in a direct line from the square to Middleton Pond and about midway. They offered the town a part of the bill for a reservoir, thirty thousand dollars towards the cost of works and one thousand dollars annually for their supply. The proposition gave new energy to the water men. A motion to raise two hundred thousand dollars June 15, 1875, received 364 yeas to 314 nays, but, two days before, a law went into effect requiring a two-thirds vote for such extraordinary appropriations, and the proposition thus failed of being carried. They tried again very soon, July 2nd. Then the Water Act was accepted, 506 to 290, but a motion to proceed with construction still failed of two-thirds,—512 to 336.

George H. Norman, the great contractor, in September, 1875, made this offer; to put in the works, including a five million gallon reservoir, twenty miles of pipes and one hundred and fifty hydrants, and keep them as a private speculation or sell them to the town for two hundred thousand dollars. The offer was accepted September 13th. The first water commissioners were elected September 21st; they were John R. Langley, Otis F. Putnam, Harrison O. Warren. Then the question arose as to the authority of the town to transfer its rights under the act to

Mr. Norman, and the matter was dropped. The next month the town of Beverly made a proposition to supply Danvers, and a vote was passed to take water from this source provided a fair bargain could be made, but no bargain was made. In the meantime the asylum people would wait but little longer for further action on their offer. The question was put to vote April 28, 1876, on proceeding to introduce water, in connection with the State, at an expense to the town, not exceeding one hundred and fifty thousand dollars. Yeas, 409, nays, 230,—not two-thirds. The water men kept at work. May 13, 1876, they were successful. Then, on the same question, the whole number of votes—the largest number ever cast up to that time—were 933. Of these 637 were yeas; 296 nays. Samuel Waitt, an old man of eighty-four, threw the last vote, a yea.

Early in July following, the water commissioners closed a contract with G. H. Norman for complete works and twenty-one miles of street pipes for one hundred and sixty-two thousand five hundred dollars. The State built the reservoir, paid twelve thousand five hundred dollars, and agreed to pay one thousand dollars annually for twenty years. Thus the net first cost of the water-works to the town was one hundred and fifty thousand dollars, which was met by the issue of five per cent. bonds. The principal main was completed to the square August 17, 1876, and water first appeared, direct from the pond, the reservoir not being completed, Wednesday, November 8th. Early in December the reservoir was ready for use, and on Thursday, December 23d, the entire system was in working order and opened by a formal trial. The head was found to be strong enough to throw a 1½-inch stream, not only over the highest buildings, but well over the flag-staff to a height of over one hundred and twenty-five feet. Fire-engines were immediately at a discount. At the annual meeting of 1877 it was recommended that the steamer be sold, and notices of its sale at auction were sent broadcast to towns and cities. Hose companies have taken the place of the engine companies. Nine of these companies and one hook-and-ladder company comprise the present fire department. Fires have happily been comparatively infrequent, but on more than one occasion the ready presence of Middleton water has prevented what otherwise threatened to the square a repetition of the ruin of '45. Two lamentable and disastrous conflagrations have within a few years occurred in spite of the water.

Benjamin E. Newhall was appointed superintendent of the water-works in September, 1876, while they were in process of construction, and held the office efficiently to his resignation, July 1, 1883. The duties of the office were then divided. Henry Newhall was appointed registrar; David J. Harrigan, superintendent of pipes, and no change has since been made.

In December, 1880, the commissioners were obliged

to defend a suit brought by the Ipswich mills for damages alleged to have been sustained by the diversion of water from Ipswich River by lowering Middleton and Swan's Ponds, they being tributary to the river. The commissioners who heard the evidence, Judge Choate of the Probate Court and Messrs. Frances and Darrascott, engineers, reported in favor of the mills, and awarded five thousand four hundred and ninety-five dollars for the diversion of water from Middleton Pond, and two thousand and five dollars for Swan's Pond, "if in the latter case the petitioners are entitled to an assessment under this award." The Superior Court at the October term, 1881, ruled against the Swan Pond assessment. Another law-suit was the result of a ballot for water commissioner at the annual meeting of 1881. Josiah Ross was declared elected by one vote, five citizens having been appointed to count the votes, and having so reported to the moderator. A motion thereupon made that the votes be recounted by a new committee was carried. The new committee reported that the opposing candidate, Otis F. Putnam, was elected by one vote, and the moderator so declared the vote, stating it so appeared on recount. These are all the facts of record. But it seems that the moderator and town clerk subsequently counted the ballots which had been preserved, and their results coincided with the original count. Under the circumstances the two members of the board recognized Mr. Ross as having been elected. Presently Mr. Putnam brought a petition to the Supreme Court for a writ of mandamus, compelling the two commissioners to recognize him and to refrain from recognizing Mr. Ross. The question was practically the legality of the recount, important and hitherto undecided. Judge Endicott, before whom was the original hearing, dismissed the petition, but by request reported the case to the full court. The case was argued at the bar in November, 1881, and the judges present not agreeing, the court afterwards directed it to be submitted on briefs to all the judges. The final decision reported in One Hundred and Thirty-third Massachusetts Reports was "by a majority of the court" in favor of the petitioner, Mr. Putnam.

At the expiration of John R. Langley's term in 1882, resolutions were passed in recognition of his efficient and valuable services as chairman of the board from its establishment. He was one of the earliest and most zealous advocates of water. The full list of water commissioners is,—

1875-82, John R. Langley.	1882-85, George H. Peabody
1875-90, Otis F. Putnam.	1883-86, G. A. Tapley.
1875-81, Harrison O. Warren	1885-88, C. H. Giles.
1880-83, Daniel Richards.	1886-89, C. S. Richards

LAW-SUITS.—The early records of the town give evidence that the inhabitants in their corporate capacity not infrequently indulged in law-suits, and as usual this species of entertainment seems to have

been rather expensive, especially as the town was commonly at the unsuccessful end of the verdict.

In March, 1767, this action was taken,—

"Voted, Thomas Porter and Gideon Putnam be agents in behalf of the Town and they or either of them be fully Impowered to defend and settle the actions or Pleas of the Case which Benj. Sawyer & Gilbord Tapley has brought against the Town as Surveyors of Highways for the year 1766."

In the following May, this,—

"To see if the inhabitants will prosecute their appeal against Benjamin Sawyer at the next Superior Court to be holden at Ipswich.

" Voted that the appeal shall be prosecuted."

The town was beaten, but in that prime fighting condition when it hated to let go. An article was inserted in the warrant of 1768, "to see if it be the minds of the Inhabitants to Petition the General Court for a Rehearing at the Superior Court on the case of Deacon Benja. Sawyer, and in another County if it can be obtained." But moderation prevailed: it was voted "to dismiss the claws," and—perhaps with no reflection on their efficiency—"also the agents."

In March, 1769, Samuel Holten, Jr., and William Shillaber were appointed agents "to answer at the next Court of General Sessions of the Peace for the County of Essex to a presentment carried into said Court against sd Town of Danvers."

Two years later the two men just named and Gideon Putnam, Jona. Buxton, Benj. Porter, William Putnam and Robert Shillaber were chosen "to take legal advice respecting Mess. Aaron and Enoch Putnam with regard to their taking timber which the town provided to repair the bridge over Water's River and to prosecute them in their discretion." They did prosecute, with what disastrous result the following document shows:

"DANVERS, December 23, 1771.

"Then received of Mr. Gideon Putnam and Samuel Holten, Jun^r. (two of the Select-men of Danvers), the sum of Two Hundred and Fifty-eight pounds fourteen shillings and two pence Lawfull money in full of a judgment of the Superior Court & costs in favour of Mr. Aaron Putnam and Enoch Putnam (two of the Surveyors of Highways in the Town of Danvers for the present year), against the Inhabitants of the said Town of Danvers.

"Witness:

"JEREMIAH PAGE,
"ISAAC DEMPSEY."

JR. SR, GIDEON PUTNAM,
"ENOCH PUTNAM,

For some time after this law-suits were at a discount. When next the town was sued, by Archelaus Dale, in 1781, he seems to have been satisfied by a conference committee, and when, in 1783, the inhabitants were asked what they would do respecting an action commenced against them by Major Caleb Low, they voted to pay the cost of the action upon his withdrawing it.

Commencing in 1784 and extending over a period of two years there was a long and obstinate series of encounters at law and otherwise between the town and Daniel Prince, on account of taxes collected by him. Concerning the merits of the case it is difficult

now to understand. Prince was committed to Salem gaol, where the town clerk was sent to desire him to send proposals as to his release, but "no proposals were sent by Mr. Daniel Prince in writing." His real estate was taken on execution and agents were appointed to bid off the same for the use of the town. In 1814 the town was indicted for not being sufficiently provided with powder. Several indictments for not conforming to the school laws have been mentioned in connection with the schools.

"The inhabitants of the town of Danvers" have been parties to a number of cases which have gone to the Supreme Court upon points of law. The first, reported, 10 Mass., 514, was on a question of taxing the Iron Foundry Company. In 6 Pickering, 20, there was a question between the town and the county commissioners on a highway matter; in the same volume the case of Joseph Osborne against the town to recover money paid for taxes is reported. A question of a pauper's settlement which arose between Danvers and Boston was decided in 10 Pickering, 513. Another case in which the town and the county commissioners were parties arose on the laying out of a new highway from Haverhill to Salem, through Boxford, Topsfield and Danvers, 2 Metcalf, 185. A case in which John Page was plaintiff, 7 Metcalf, 326, on a question of damages from the laying out of a road over his land, involved the validity of the action of a Topsfield town meeting in selecting a jury-list. In 1860 Gilbert Tapley was sued by School District, No. 6, for "taking and carrying away a school-house," a case in which the real defendant was the new district, No. 7—1 Allen, 49. The injunction to restrain the payment of fifty thousand dollars, voted for bounty, reported 8 Allen, 80, is spoken of in the war history; as the case of Gustin vs. School District No. 5, is spoken of in the School History. Putnam vs. Langley et. al., involving a disputed election, has been referred to in connection with the water department.

BURYING GROUNDS.—When Salem filed the North River basin in the summer of 1885, gravel was taken from West Danvers (West Peabody) and on the farm which was owned in witchcraft times by the widow of Joseph Pope, neighbor of old Giles Corey and of the Flints, the steam shovel unearthed some ancient graves, and before the work went on, the remains were carefully removed to a new resting-place. It was one of the many family or neighborhood burying-grounds which are to be seen here and there all over the town, the time-worn head-stones relieved now and then by a fresh marble, signifying that one of the later generation had gone to sleep with the fathers. Over on the old "Boston path" is a lot in which the Popes buried their dead from the earliest times. Here lies Caleb Oakes, his wife, Mehitable Pope, and their son, William, the distinguished botanist; Sarah, "relict of Nathaniel Pope & daughter of the Rev. Peter Clarke, who was more than 50 years the worthy minister of this Parish," 1802, and many others,—the

familiar "Jasper," of which the Popes have been fond, several times appearing.

On the summit of Hog Hill, well worthy of the modern name of Mount Pleasant, the Proctors and Needhams, families from the first occupying the heights, have a private ground. A short distance back of Governor Endicott's old residence, plainly to be seen from the passing train, in a quiet, secluded spot, rest the remains of many of the great pioneer's early and late descendants.

Of the larger, more public burial-grounds, that on Summer Street, known as the Wadsworth Cemetery, is the oldest. It was an ancient burial-place, originally set apart by the Putnam family and purchased by Rev. Dr. Wadsworth of Jonathan Perry, and by him conveyed to the First Parish, to whom it still belongs. The most interesting stone here is that of Elizabeth, wife of Rev. Samuel Parris, the "witch minister," who died July 14, 1696. Judge Holten is buried in the old ground on Holten Street, near his home, as are many others who were honored in their day and generation. The High Street Burying-ground, at the Plains, contains stones a hundred years old or more, many of which are of prominent citizens of New Mills in the earlier part of the century, the Pages, Captain Benjamin Porter, Deacon Benjamin Kent and many others.

These old grounds are now seldom used. By the foresight of certain men whose names, hereafter appearing, are worthy of all honor, a large tract of land, originally twelve acres, and subsequently much increased, was purchased of Judge Samuel Putnam, and laid out as Walnut Grove Cemetery. This tract, extending from Sylvan to Ash Streets, embracing the valley of the two brooks which by their union make Crane River, and the sloping hills on either side, well wooded with walnut, beech and other trees, is of rare natural beauty, and is prized inestimably by the town. The movement for a new cemetery was initiated at a meeting held May 5, 1843, at the Plains school-house. Captain Eben Putnam was chosen chairman; Henry Fowler, secretary. Another meeting was held October 17th, Elias Putnam, chairman. A committee reported a form of organization with by-laws, and recommended the names of fifteen men as trustees: Elias Putnam, Gilbert Tapley, Moses Black, Joshua Silvester, Henry Fowler, Nathaniel Boardman, Thomas Cheever, Eben G. Berry, William J. C. Kenney, Daniel Richards, Nathan Tapley, Samuel P. Fowler, A. A. Edgerton, John Bates and Samuel Preston. The first regular officers were chosen at a meeting held the next day at Joshua Silvester's shoe factory, and Elias Putnam was elected president; Henry Fowler, clerk; Joshua Silvester, treasurer. Samuel P. Fowler was chairman of this meeting. He is now both president and treasurer, and his brother, Henry, has been the clerk from the beginning.

Incorporation was granted at this time. The

grounds were consecrated Sunday afternoon, June 23, 1844. The exercises, beginning at five o'clock, were,—

I. Hymn, written for the occasion by Andrew Nichols, M.D. II. Introductory Prayer by Rev. S. C. Bulkley. III. Hymn, written for the occasion by Rev. James Flint, D.D. IV. Address by Rev. John Brazer, D.D. V. Hymn, written for the occasion by G. Forrester Barstow, M.D. VI. Concluding Prayer by Rev. J. W. Eaton. VII. Parting Hymn. VIII. Benediction by Rev. T. F. Field.

The services were held in the grove, and were attended by not less than two thousand persons. The address of Dr. Frazer was said to have been a very appropriate and beautiful discourse, and that it made a deep impression on the many hearers. It remained unpublished for nearly forty years, when, through the efforts of Dr. A. P. Putnam, the original manuscript was traced to the possession of Mrs. Annie W. Ellis, of Dorchester, who kindly furnished him a copy, which was published in full in the *Danvers Mirror*, December 31, 1881.

April 13, 1885, the corporation was empowered by the Legislature to hold property in trust for the improvement of lots, etc.

Up to quite recent times the town so far cared for the burial of its deceased citizens as to own and provide hearses. They are first mentioned in 1818, when this action was taken :

"Voted: to choose a committee of five persons to consider on the clause respecting procuring hearses to make an estimate of the cost of one or more and to make report at the adjournment.

"Voted: that Sylvester Osborne, Doctor George Osgood, Jesse Putnam, Caleb Oakes and Sylvester Proctor be of said committee.

"Voted: that there be two hearses and two borses for the same provided within in this Town."

In 1842 Moses Black and thirty-five others petitioned "for a Hearse and Hearse-house near the Burying Ground on the Plains, near the house of Joseph Danforth." The petition was referred to the selectmen, with instructions to cause the things prayed for "to be placed in such a location as will best accommodate those who have occasion to use them."

In 1854 similar accommodations were asked for, to be located near Mr. Braman's church. A house was there erected, and remained until 1871, when the selectmen were instructed to sell it. In the appraisal, at the division of the town, these items were charged to North Danvers: house at cemetery, 10 by 15, \$45; house at Braman's 12 by 18, \$120; two hearses, new, \$440; one old, \$20.

THE ANTI-SLAVERY MOVEMENT.—A few slaves were owned in Danvers before slavery was abolished in the State. At the time of separation from Salem there were twenty-five such chattels, sixteen of whom were women. A number of documents such as the following have been preserved:

"DANVERS, April 19th, 1766.

"Rec'd of Mr. Jeremiah Page Fifty Eight pound thirteen shillings and four pence lawful money and a negro woman called Binali which is in full for a Negro girl called Combo and a Negro girl called Cate and a Negro child called Deliverance or Bill which I now Sell and Deliver to ye said Jeremiah Page.

"Witness, { JONA. HANCOCK.
{ EZEK. MABSE."

"JOHN TAPLEY.

A story has been told that Cudjo, owned by a neighbor of General Israel Putnam, was of fierce and revengeful temper, and having suffered some real or fancied injury at the hands of his mistress, threatened her life. To get rid of him his master sent him on a play-day trip to deliver a load of potatoes on some vessel at Salem. He took his fiddle and played to the sailors, went below to "rosin his bow," and when he reached deck again was far out at sea, consigned to the same southern market as his potatoes.

During the struggle on the admission of Missouri, Danvers addressed to Nathaniel Sillsbee, representative of the district in Congress, a very forcible letter on the subject of slavery, signed by Edward Southwick, William Sutton, Thomas Putnam, Andrew Nichols and John W. Proctor, committee.

The history of Abolitionism is, to a great extent, the biography of William Lloyd Garrison, a native of this county of Essex. For some ten years after the conflict over the admission of Missouri, a sort of lethargy prevailed over the country in regard to slavery. On the 4th of July, 1829, Garrison, then not quite twenty-five, delivered an address which excited much attention from its bold and vigorous assault on the peculiar institution of the South. That fall, as joint editor of the *Genius of Universal Emancipation* with Quaker Benjamin Lundy, of Baltimore, he issued over his initials his distinct avowal of the doctrine of immediate emancipation. He at the same time attacked the colonization societies, and was soon thrown into jail, convicted of libel for characterizing as "domestic piracy" the transportation of a cargo of slaves from Baltimore to Louisiana in a ship owned in Newburyport. Coming North, he lectured in the principal cities, finding all halls in Boston closed against him save that offered by a society of infidels. But to his mind Boston was the best centre from which to arouse the public sentiment of the North to a revolution in favor of emancipation. He issued the first number of the *Liberator* on the first day of the year 1831. "I am in earnest; I will not equivocate; I will not excuse; I will not retreat a single inch, and I will be heard." He was heard. In December the Georgia Legislature offered five thousand dollars for his arrest and conviction under the laws of that State. January 1, 1832, he and eleven others organized the New England (afterward Massachusetts) Anti-Slavery Society, the first based on the principle of immediate emancipation. He continued to be heard to such effect that in October, 1835, to save his life from a mob who were dragging him through the streets of Boston, the mayor jailed him as a disturber of the peace. On the other hand, his burning words kindled here and there sympathetic hearts, and probably there were few earlier and certainly no more ardent and enthusiastic supporters of Garrison and his doctrines than a number of young men of Danvers, chiefly residents of New Mills, and the leading spirits of these young men—

James D. Black, Joseph Merrill, Jesse P. Harriman, William Endicott, Richard Hood, John Hood and John Cutler—came to be called "the Seven Stars."

Of these, Black and Harriman are the only survivors at the time of this writing. Mr. Black, now of Harvard, Mass., was a member of that family of Moses Black, already spoken of as having filled prominent and honorable parts in our town life. When not more than twenty years old he took an advanced position in favor of immediate and unconditional emancipation as the only adequate remedy for the evil of slavery. The occasion was at a meeting of a Lyceum, the first established at New Mills, in 1833, and he made such an impression that he was invited to deliver a fuller address on the same subject on the 4th of July of that year, in the Baptist Church. With the exception of a lecture by the distinguished Oliver Johnson in Mr. Braman's church some time in 1832, the words of this young man, uttered in the face of such circumstances as only the courage of strong convictions would have led him to oppose, seem to have been the first public utterance of such radical and unpopular views in Danvers. To the position thus early taken he remained constant, foremost with his tongue and pen in the hot times which were to follow. Others, who were quick to ally themselves with the Abolitionists, were Hathorne Porter, Alfred R. Porter, William Francis, Dr. Eben Hunt, Rev. S. Brimblecom, Job Tyler, Hercules Jocelyn and a number of ladies. The cause grew by continual agitation. Local societies were formed, the *Liberator* and *Herald of Freedom* went into the shops and the homes. Eloquent and dauntless speakers spoke wherever they could get a hearing, and the seed thoughts grew by earnest talks over the anvil and cobble-stone or by the formal debate of the Lyceum. Among the earlier orators at New Mills was the Rev. C. P. Grosvenor of Salem, in whose parlor was organized the Essex County Anti-Slavery Society. George Thompson, of England, spoke in the Baptist Church in 1835, after a fruitless attempt had been made to procure a church or hall in Salem. The earliest organized society in Danvers was among the women, chiefly of the South Parish, in 1837. Very soon the men at the North Parish, chiefly of New Mills, formed the Danvers Anti-Slavery Society, and this society celebrated the 4th of July, 1838. Alfred Porter wrote a hymn for the occasion; Rev. S. Brimblecom was the orator. A "Young Men's" Society was organized in August following, at the Universalist Church. Joseph Merrill, Thomas Bowen and John R. Langley drafted the constitution. Rev. Samuel Brimblecom was the first president.

The meetings were commonly held in the brick school-house, or in the engine-house at New Mills. Dr. Putnam, who has devoted much attention to gathering up the details of this chapter of local history, has well said, of the records of these early meetings, that they "all attest how these younger citizens

of the town were in the habit of debating and forming opinions in relation to matters of great public interest. Their organization opened to them a school of no little importance, where they learned many valuable lessons, and became fully imbued with the sentiments and principles of Liberty. So it was that the New Mills became in due time a well-known centre of Abolitionism. Thence the influence spread through the town and beyond its limits." Early in 1839 a change was made in the name: "This society shall be called the North Danvers Anti-Slavery Society and shall be auxilliary to the Massachusetts State Society." These are the names of the members at this time: William Endicott, Thomas Bowen, Joseph Merrill, William Alley, J. R. Langley, Samuel Brimblecom, Jonathan Richardson, J. F. McIntire, M. Black, Jr., Elias Savage, J. D. Andrews, J. M. Usher, C. P. Page, Hercules Jocelyn, J. D. Black, John Hines, Hawthorne Porter, Richard Hood, Jesse P. Harriman, Wm. Francis, Oliver O. Waitt, James Kelley, Archibald P. Black, John Hood, John Cutler, Winthrop Andrews, George Kate, Eben Hunt, Joseph W. Legro, Benjamin Potter, I. K. McIntire, Job Tyler, Daniel Woodbury, Henry A. Potter, Josiah Ross, A. R. Porter (withdrew), Edward Stimpson, Jonathan Eveleth, Charles Benjamin, S. P. Fowler, O. O. Brown, A. A. Leavitt, William Needham, E. G. Little, J. R. Patten, Ira H. Clough, Abner Mead and Joseph Porter.

Of these men and others, if any, like them, N. P. Rogers at a later time wrote in his *Herald of Freedom*, "The people of New Mills are mostly working people, and therefore favorable material for the abolition movement. They embrace it readily and it has done everything for them in the way of mental improvement and moral strength. Young men bred to labor and unbred to learning have risen up by intimacy with the Anti-Slavery enterprise to an astonishing degree of mental power and eloquence." From time to time delegates were sent to the State Society, often traveling in the only way they could afford, on foot. On Thanksgiving Day, 1839, the name was again changed to the Danvers New Mills Society. It was the custom of the members to express their feelings in resolutions, a long series of which, more or less spirited, have been preserved. A sample, selected for its brevity, is this:

"Resolved, that it is inconsistent and unbecoming in us as Abolitionists to celebrate the Fourth of July as the Birthday of a free country while nearly three millions of our countrymen are held in most abject slavery."

In a hasty review it is necessary to take long strides. It was not for some ten years after Garrison began his crusade that the excitement of the times reached its extreme in Danvers, in the collision with the churches. In the meantime, the young men here more than kept pace with the forward movement of the Abolitionists. They talked, wrote, agitated. The files of abolition papers abound in letters from Endicott, J. D. Black,

the two Hoods, Harriman and others, sharp and caustic, abounding in flings at the churches, enlivened now and then by a controversy with some minister. Garrison himself came, February 16, 1841. Of the meeting he wrote in the *Liberator*:

"It was our privilege to lecture in Danvers, New Mills, on Sabbath evening last, to a densely crowded audience in the Universalist Meeting House—a house to the praise of its proprietors be it told—that has never been shut against the advocacy of the anti-slavery cause, not even in the troublous times of mobocracy in the Commonwealth."

Other speakers, especially Foster and Pillsbury, showed no such courtesy to the churches, and, indeed, about this time the trouble, which had long been brewing, culminated. The old First Church, Dr. Braman's, did not escape condemnation, but was outside the storm-line. On the Universalist and Baptist churches the storm broke. At first both of these churches opened their houses freely to the anti-slavery meetings, but the speakers so often immediately turned to the open and violent denunciation of the churches themselves, that considerations of self-respect and self protection forced themselves upon the churches. After sundry experiences of this kind the committee having charge of the Universalist Church called a meeting of the Society for instructions, and a committee was appointed to consider and report upon whether the further use of the church should be allowed. Through the chairman, Elias Putnam, this committee reviewed the state of things and concluded: "We think this Society should pursue a liberal policy in granting the use of their house for moral and religious purposes, but to say that we should give up the house to every one who would please to occupy it, would be in effect to surrender our claim to the house and would leave the Society without the use of the house for any specific purpose," and a resolve was recommended and adopted, allowing the use of the church "on all suitable occasions for the promotion of religion and morality, and that the committee should refuse the house when they have reason to believe that it will not be used for the promotion of these objects." This majority report was accepted, and in a few instances the standing committee refused applications for the church. The sentiments of the more radical reformers were expressed in a minority report by Dr. Hunt. Upon premises of the great liberality of Universalism, and the doctrine it has always taught that truth has nothing to fear in conflict with error, he said that "any action of the Society in closing their meeting-house against the discussion of any question deemed by any one of sufficient importance to gain the attention of the public, and not incompatible with sound morality, would be a gross departure from those principles by which we as a denomination professed to be governed, anti-Republican and anti-Christian."

About the middle of June, 1841, the anti-slavery society passed a resolve "that it is the duty of the Baptist and Universalist Societies to open their meet-

ing-houses for the sacred purpose of pleading the cause of our brethren and sisters in bonds on all proper occasions free of expense to the Anti-Slavery Society as such," and talk began to be common about the duty of anti-slavery Christians to withdraw from or come out of the churches to which they belonged. Richard Hood had asked for and received letters of dismissal and recommendation from the Baptist Church to a church of the same denomination in Wenham, but a private letter prevented his admission to the Wenham Church. Mr. Hood turned upon the home church in vigorous rebuke for its unfaithfulness to the slave, and quoting the text, "Come out from among them and be ye separate, saith the Lord, and touch not the unclean thing and I will receive you," asked that his name be erased from the church record. Mr. Hood was only one of many who, by similar action, received and were doubtless proud of the name of "Come-outers." At a special meeting of the Anti-Slavery Society August 19, 1841, it was "Resolved that nothing should be allowed to hinder the progress of Abolitionists in their work of deliverance to the slave. If they find themselves attached to a pro-slavery political party or a pro-slavery religious church they should come out from them immediately or we cannot consider them in any other light than loving party and sect more than they love the slave." A week later, Parker Pillsbury in the chair, the church was characterized as "the stronghold of slavery." No wonder that feeling between man and man at New Mills was wrought to a very high pitch. No wonder that conservatives retaliated by calling the disturbers fanatics, "Gab-olitionists," "Long-heels," "the school-house gang" and other epithets even less expressive of endearment. So matters went through the following winter and spring, and if interest had in any respect flagged, a two days' convention of the Essex County Anti-Slavery Society, held at New Mills in the latter part of June, 1842, rekindled the fires to fiercer flames. Wendell Phillips was there, and Rogers, Foster, Pillsbury, Thomas P. Beach and others from abroad. There was no lack of material for rousing meetings. The third Sunday after the convention Rev. Mr. Mansfield, a Baptist "supply," had closed the long prayer, and was proceeding with the service when a man, who was recognized as Beach, one of the convention speakers, rose from his place in the congregation and began an anti-slavery appeal. He was temporarily choked off by a hymn, but when the music ceased he was at it again. Major Black and Captain Caldwell with righteous indignation descended upon the intruder and dragged him out of the house. Beach was accustomed to this sort of thing, was non-resistant, limp as a wet rag, and while the guardians of the churches were struggling to carry his dead weight, he quoted to them texts, "Love your enemies," "If a man smite thee, etc." Worship was broken off. The congregation, or most of them, were thoroughly mad.

The minister called for a sheriff, and certain ones jumped out of a window to run to the Universalist Church for an officer. Something was said about ducking Beach in the horse-trough near by, but the plug was pulled out and no such attempt was made. Service was resumed, but in came Beach at a side door and again interrupted: "Come down from the pulpit, and not stand there like a whited sepulchre." In his own subsequent account, "the committee-man took a vote of the meeting and they decided I should not stay in the house. Whereupon they rushed upon me like tigers and landed me in the street." After church an officer went to arrest Beach at the house of Jesse P. Harriman. Beach assumed his putty state. The officer was unable to handle his weight alone, and commanded his host to keep him. Harriman, an ardent come-outer, refused in the name of God. Dr. Hunt was commanded to assist, and in terse English gruffly declined to obey. Somehow, with the help of prominent Universalists, Beach was put into Salem jail, but back he was at a meeting in the Universalist Church at five o'clock, speaking to a large audience, at which, he wrote, "the Spirit of God was present, and several were convinced of the truth and openly confessed Christ by identifying themselves with the despised and hated Abolitionists." Dr. Hunt was fined a hundred dollars for refusing to assist the officer, and Harriman went to jail for the same offence. Later William Black renewed the complaint, which had been withdrawn, against Beach and united with the Quakers of Lynn in keeping him for some time in the jail at Newburyport, to the freely expressed indignation of his friends.

In September, 1842, Richard Hood was another guest from Danvers in Salem jail. His offence was attempting to speak on anti-slavery at a Friday evening prayer-meeting in Amesbury, against the orders of the minister to desist.

It was through such times as these that the people finally emerged to a calmer consideration of the great principles which soon organized the advocates of universal freedom into a great political party. The New Mills Society disbanded about 1844. Much bitterness and personal feeling could not fail of being engendered by the events of which only the merest outline has been given, but these men were but the skirmishers preceding the awful, inevitable conflict, in which differences were merged in loyalty, and Liberty, unthroned, was re-crowned with the blood of heroes.

Out of this agitation came the beginnings of a great political party, the principle of which was opposition to slavery. These beginnings were very small and the men who first stepped out of the old parties braved not a little unpopularity and opprobrium. The names of some forty Danvers men who voted with the "Liberty Party" in 1840, the first year of its existence, have been recalled. They are Frederick Howe, Jesse Putnam, J. A. Learoyd, Jonathan Perry,

Peter Cross, Elias Savage, Peter Wait, Samuel Wait, Samuel Harris, Jr., Warren Sheldon, Elijah Hutchinson, Otis Mudge, Kimball Hutchinson, Nathan Tapley, Allen Knight, Henry Dwinell, Joseph Danforth, Eben Hunt, Winthrop Andrews, Joseph Verry, Jr., Benjamin Hutchinson, Charles Page, Samuel Brown, Edward Waldron, Amos Brown, Abel Nichols. Of these, Dr. Hunt was perhaps the most active. From interesting reminiscences furnished the writer by James D. Black these extracts are made: "The Free Soil party was not organized until some years subsequent to the earlier struggles of the Abolitionists. We used to vote at the State elections scattering votes for Garrison for Governor, &c. At that time a majority of votes were required to elect, and our scattering votes counted against the regular tickets and made politicians mad, and many times as I approached the ballot-box the epithet, "Long heel" would be hurled at me. After the Free-Soil party got a foothold the dominant party, the Whigs, were put to their wits ends to retain control of elections."

It was the campaign of 1848, which consolidated the anti-slavery elements. Throughout the summer and fall of that year politics waxed hot. On the 4th of July a social gathering of the Friends of Liberty in Essex County was held in a beautiful grove in the northern part of the town. The convention was attended by from fifteen to twenty thousand persons during the day. Addresses were made by Rev. W. B. Dodge, of Illinois, by clergymen from Salem, Lynn and Boston, Dr. Hunt and Dr. Nichols representing home talent. The Kimball family, of Woburn, sang a number of liberty songs, and a glee club and choir of singers from North Danvers, "by their sweet music added greatly to the enjoyment of the people." Letters were read from Hon. S. C. Phillips and the Hon. D. P. King, breathing the spirit of liberty, and Dr. Nichols' muse was inspired by the occasion.

The voters in District No. 13 who were dissatisfied with the nominations of both the Whig and the Democratic Parties, and were in sympathy with the Convention of Freemen held at Buffalo in August, 1848, at which the Free-Soil Party had its birth, immediately held weekly meetings for free and candid discussion of the candidates and principles of that convention. Early in September they formed a Free-Soil Club, and upwards of eighty out of the hundred and fifty voters of the district signed a

CONSTITUTION OF THE NORTH DANVERS FREE-SOIL CLUB,

with this Preamble: "We, the undersigned, beholding with feelings of deep regret, the disposition of the slave power of this Union, to subvert the spirit of our Government by extending American Slavery over territory now free, and the determination to control the policy and interests of our country, and seeing, as we have seen, that spirit of truckling to the slave power, on the part of the two great parties of our country—the Whigs and the Democratic—as shown by their past acts, but more recently and more clearly in their chosen leaders, we feel called upon as Patriots, as lovers of Freedom, if we would be true to our own interests and the interest of our nation to renounce both these parties; and

"WHEREAS, We behold in the Buffalo Platform, principles to which every friend of free institutions should subscribe, and candidates worthy our support, we do therefore endorse these principles, and that we may act with greater efficiency in the election of the candidates do form ourselves into an organization to be called the Free-Soil Club, and to be governed by the following constitution."

Under the articles which follow, these officers of the club were chosen: President, Elias Putnam; Vice-Presidents, Nathan Tapley, John Hood, Augustus Mudge, I. W. Andrews; Corresponding Secretary, Daniel Foster; Recording Secretary, Jeremiah Chapman; Executive Committee, William Dodge, John R. Langley, Allen Knight, Otis Mudge and William J. C. Kenney.

Who managed the caucuses forty years ago? was a question put to Mr. Black. "I can't tell," he writes, "who ran the Whig and Democratic caucuses. The Free-Soil caucuses had such young men as John A. Putnam, J. R. Langley, Alfred Fellows, Winthrop and I. W. Andrews, Ira Clough, E. F. Putnam, Richard and John Hood, E. T. Waldron and the writer." A clipping from a newspaper of the day gives some hint of the prominent Whigs:

NOTICE.

"The Whigs of Danvers are requested to meet in Union Hall on Monday Evening, August 28th, at 7½ o'clock, for the purpose of forming a Taylor Club, and to adopt such other measures as may be necessary for the thorough organization of the party for the coming election; and to choose six delegates to the Whig Convention at Worcester, Sept. 13.

"A full attendance of Whigs from all sections of the town is earnestly requested.

"WM. D. NORTBEND,	HENRY FOWLER,
"SAMUEL PRESTON,	JOSHUA SILVESTER,
"EBEN S. POOR,	A. A. EDGERTON,
"GEORGE R. CARLETON,	ELIJAH W. UPTON

"Danvers, August 26, 1848."

At this meeting A. A. Edgerton was chosen secretary; George W. French and Joel Putnam, delegates from the north parish; town committee from No. 2, H. Fowler, William Endicott; No. 3, I. P. Boardman, Joseph S. Black; No. 4, Albert Bradstreet, Charles P. Preston; No. 5, Nathaniel Pope, Edwin Mudge; No. 6, Aaron C. Proctor, Jesse Tapley; No. 13, N. Silvester, Dr. Osgood; No. 14, G. W. French, Augustus Tapley. The vote of Danvers at the election of 1848 resulted, 560 for Taylor, 503 for Van Buren, 146 for Cass.

With the formation of the Republican party Danvers promptly wheeled into line. Out of a total vote of 1382 cast in 1856, 1076 were for electors representing the candidates of that party. In 1860 John G. Whittier, elector for this district, received 564 out of 769 votes; in 1864 Mr. Whittier received 592 votes to 125 for S. Endicott Peabody, of Salem. Subsequent presidential elections have resulted as follows:

	Republican.	Democratic
1868	720 (Grant.)	201
1872	645 (Grant.)	195
1876	701 (Hayes)	335 (Tilden.)
1880	637 (Garfield.)	295 Hancock
1884	565 (Blaine.)	276 (Cleveland)

In 1880 there were also 227 "Greenback votes;" in 1884, 254 Greenback and 34 Prohibition. The

Greenback party held its first caucus in Danvers in the fall of 1878, when a local committee and delegates to conventions were elected. The party grew with surprising rapidity, enlisting great numbers of active and earnest young men, who developed great skill in political organization, and succeeded in controlling the Legislative elections in 1879, '82 and '83. See lists of Representatives. This party lost much of its cohesive strength after the disappearance of General Butler from politics, and a number of the leaders openly returned to the Republican fold this past spring, 1887.

RAILROADS.—One day in the summer of 1847 two men might have been seen on the summit of the hill which is now crowned by the asylum, eagerly scanning the winding valleys to the south and to the north. Presently they went on, and climbing one of the high hills of Andover followed again the course of the lowland to the great mills in the new manufacturing town on the Merrimac. These two men, Elias Putnam and Joshua Silvester, always progressive, were full of the new idea of steam and iron, which had already begun to revolutionize travel. Following closely the old stage route from Boston, east, were laid the rails of the Eastern Railroad. These men on the hill-tops saw in the valleys the course of an iron highway, which uniting Lawrence to the main line at Salem, would "bring the railroad to Danvers."

And soon it came, but not while Mr. Putnam lived. Cutting through the high ridge south of Water's River, it crossed the stream almost at the little cove, where Governor Endicott is said to have landed from his shallop; passed within a gun-shot of the ancient pear-tree which the Governor planted; bridged the river down which was brought, in a little shop, the genesis of Danversport; entered Parson Skelton's grant close by the old home of the Revolutionary Colonel Hutchinson; pushed on across the old Ipswich road through Porter's Plains; beyond Beaver Dam, almost under the windows of that little room where "Old Put" was born, and so on northward. But the railroad did not come all at once. It seems to have halted on the way. This letter which appeared June 9, 1848, signed "North Danvers," is a sample of other communications:

"Why cannot the inhabitants of North Danvers be accommodated with two or three trains on the Essex Railroad per day? The rails are laid and seem to be in good condition to run upon. The engine and cars now have to remain at South Danvers doing nothing—waiting for time. Cars have been running to accommodate South Danvers for a year and a half while we have waited patiently until now. The people of this part of Danvers labored and toiled, and did what they could to have this road built. The time has been designated repeatedly by one or more of the directors when we should have this accommodation, but thus far we have not seen it."

On the 1st day of July, 1848, the road was formally declared open to North Danvers. There were on the first time-table three trains a day, each way, to and from Salem. On the Fourth of July three thousand

persons passed over the road. Before the end of the summer trains were running to Andover. On the 4th of September the whole line was opened and a train of eight cars filled with stockholders and guests took a trial-trip to Lawrence. It has been recorded that during the passage up a canvass was taken for presidential preferences. While General Taylor was the choice of 401, Van Buren 62, and Cass 41, the inference is somewhat amusing from the fact that on the return-trip, after a first-rate dinner, the number of Taylor's adherents was reduced by 51, while those of his rivals were increased.

The first station-agent at the Plains was Samuel W. Spaulding. He came here, a young man, from Merrimac, N. H., and worked for John Grout, coaching between Danvers and Salem. Spaulding bought out Grout, and was running the line himself when appointed on the railroad. Not being willing to relinquish the coaching business, he soon gave up the other. About twenty years ago Parker Webber took a half interest in the coach-line, and a few years later Spaulding sold out his interest to Webber, who carried on the business until the latest competitor for public travel—the horse-car—made this business unprofitable. In November, 1878, Benjamin Henderson resigned the position of station-agent, which he had then held twenty-eight years and more. He is still living, approaching his ninetieth year; he was chorister of the First Church, and a famous singer in days gone by.

Danvers has long been provided with double railroad facilities to Boston. Both lines are, by the recent consolidation of the Eastern with the Boston and Maine, under the control of the latter company, and the "know-nothing" has become an important junction. Instead of the "Eastern" and the "Maine," it is now "the eastern division" and "the western division." The latter was originally built and incorporated in several pieces: Haverhill to Georgetown, Newburyport to Georgetown, Georgetown to Danvers, Danvers to Wakefield, and the main line of the present western division of the Boston and Maine. Travel was opened through Danvers in 1854, and by successive changes and consolidations the entire branch became the property of the Boston and Maine.

In 1841 the subject of town clocks was brought before the town. Petitions for clocks, one at South Parish, and one on the Baptist Church at New Mills, met with indefinite postponement.

About ten years later a subscription paper, which had its origin in the grocery-store of Gould and Emerson, dated December 24, 1852, was circulated to raise money "for the purpose of defraying the expense of placing a clock upon the meeting-house (Rev. Mr. Fletcher's), at the plains." These items of expense are summarized on the original paper:

Paid Perkins & Cressey.....	\$ 83.73
Paid Putnam & Kenney's bill, freight.....	3.37

November 19th, paid Howard & Davis, cash.....	1.50
Eben Putnam's bill.....	2.00
Paid balance to Howard & Davis.....	150.00

\$414.10

The town-clock thus established was soon transferred to the Maple Street Society, and has ever since been maintained by the society. Once only, 1861, a petition was introduced for the town to keep the clock in repair, but the subject was indefinitely postponed.

The "gold-fever" of '48-49 struck Essex County and did not leave Danvers untouched. The local papers devoted much space to the subject, and many heads were filled with dreams of sudden wealth. "At present," so run a sample letter, credited to the Alcalde of Monterey and copied into the *Danvers Courier*, "the people are running over the country and picking gold out of the earth here and there, just as a thousand hogs, let loose in the forest, root up ground-nuts." An item of January 13, 1849, speaks of several young men of this town who will leave for San Francisco in a day or two. About the same time twenty-one members of the Naumkeag Mining and Trading Company embarked in the ship "Capitol," for San Francisco, among them two Danvers men, George K. Radcliffe and Franklin Ward. Early in March following, some thirty men from Salem and vicinity, comprising the "Essex Mining and Trading Company," left Boston for Corpus Christi on the schooner "John W. Herbert." Of this number was Mr. Henry Fowler, whose reminiscences are of experiences far at variance from those depicted by that alluring old Alcalde.

Those who paid the largest taxes forty years ago in North Danvers may be found in the following list, 1848:

TAX OF OVER \$100:		TAX OF OVER \$50:	
Wm. A. Lauder.....	\$ 322.38	Nathaniel Boardman.....	\$ 59.74
Nancy Oaks.....	100.80	Ebenezer G. Berry.....	69.82
Moses Putnam.....	382.30	Peter Cross.....	53.20
Samuel Putnam.....	122.48	Daniel Goodhue.....	59.78
Est. Elias Putnam.....	113.98	Charles Lawrence.....	71.50
John Page.....	112.38	James A. Putnam.....	75.98
Benj. Porter.....	176.22	Asa Tapley.....	54.14
Gilbert Tapley.....	194.14	Jonas Warren.....	58.30
Gilbert Tapley, in trust.....	84.00	Stephen Wilkins.....	57.50
Matthew Hooper.....	119.66	John Bates.....	58.62

THE CENTENNIAL.—With the year 1852 a round century had passed since the farmers of Salem Village and the settlers of the Middle Precinct separated from Salem and began their corporate existence as the district of Danvers. Early in the previous fall those spirits who never allow such anniversaries to pass unforgotten were on the alert. At a town-meeting held in Granite Hall, September 22, 1851, a committee of nineteen,—five at large and one from each school district,—were chosen with full authority, to make such arrangements and adopt such measures as in their judgment should seem most appropriate to

the occasion. This centennial committee consisted of the following persons:

Fitch Poole.	John W. Proctor.
Andrew Nichols.	Rev. Milton P. Braum
Ebenezer Hunt.	

FROM THE SCHOOL DISTRICTS.

- | | |
|--------------------------|----------------------|
| 1. Robert S. Daniels. | 8. Samuel Brown, Jr. |
| 2. Samuel P. Fowler. | 9. Joseph Brown. |
| 3. Aaron Putnam. | 10. Leonard Cross |
| 4. Albert G. Bradstreet. | 11. Francis Baker. |
| 5. Nathaniel Pops. | 12. Miles Osborne. |
| 6. Moses Preston. | 13. John Page. |
| 7. Francis Phelps. | 14. Gilbert Tapley. |

The day chosen for the celebration was Wednesday, June 16th. The scene of the festivities was the Middle Precinct, South Parish, through whose streets a procession a mile and a half long moved amid a very large and enthusiastic throng and beneath a very warm sun. The committee had half a thousand dollars at their disposal, and this, together with private enterprise in the way of decorations, gave the town a gala-like appearance. There are plenty of men still in their prime who were in that procession; but it was thirty-five years ago; a new generation has sprung up since then and the fathers will pardon a smile as their children read of the pride and pomp of that day. It was the day of days for the engine companies. The choicest young manhood of Danvers tugged at the ropes of their polished machines. Coming at the very head of the line, after the escorting military was General Scott, No. 2, of Tapleyville—ah, Fame, where is the old tub now?—drawn by Captain Calvin Upton's forty-eight men, dressed in fire hats, plaided sacks and black pants. Next the Torrent, and next General Putnam No. 4, of Danvers Plains, Captain Albert G. Allen, with forty men, likewise in plaided frocks and black pants, and carrying a banner on which was emblazoned "General Putnam—I never surrender." This engine also appeared well, says the record. Of course it did; it appeared well on that little occasion already referred to, when Captain Kenney took it over to pump out Wenham pond, and that occasion to this was but a candle to a comet.

After the "Eagle" came the "Ocean," No. 6, of Danversport, Captain Welch, whose thirty-five men, clad in white shirts, black pants and Kossuth hats, were assisted by a pair of roan horses. Seven companies in all there were, nearly four hundred strong.

Then came the civic division headed by Chief Marshall, Dr. S. A. Lord and his assistants. In a long line of open barouches the people saw a live Governor and many distinguished guests. Then came old School Master Epps and other representatives of his time. A "Blind Hole Shoe Shop of 1789," and an ancient up-in-the-lane pottery were both in active operation.

Next followed the schools. Sylvanus Dodge was chief of this division, aided by Jeremiah Chapman,

Edward W. Jacobs, Augustus Varney, Alden Dempsey, James P. Hutchinson, Dr. J. W. Snow, George Tapley, Albert J. Silvester, Loring Dempsey, Abner Mead and Gilbert A. Tapley. Fifteen hundred pupils presented a most beautiful feature of the occasion, but no adequate description—the record again—can be given of the ingenious and admirable designs they displayed. The Peabody High School came first, then the Holten High School, followed by the schools from the different districts.

The last division of the procession was a cavalcade of three hundred horsemen. After great exertions on the part of the chief-marshal and his assistants the streets were so far cleared of the multitude of people and vehicles that the procession was put in motion. Moving down Main Street it countermarched at the Salem line, near the Great Tree," but, alas, the streets then spanned with arches and gay with banners and bunting are not now Danvers streets. At noon the line reached the Square again. The schools moved up Lowell Street to a large tent provided for them, and the rest of the procession entered the Old South, in which the following exercises had been appointed.

1. VOLUNTARY.....By the organ.
2. INVOCATION.....By Rev. James W. Putnam.
3. ANTHEM.
4. READING THE SCRIPTURES.....By Rev. James Fletcher
5. PRAYER.....By Rev. Israel P. Putnam, of Middleborough.
6. ORIGINAL HYMN.....By Fitch Poole.
7. ADDRESS.....By John W. Proctor.
8. MUSIC.....By the band.
9. POEM.....By Andrew Nichols.
10. PSALM, selected from a collection in use one hundred years ago, "Faithfully translated into **English Metre**; for the Use, Edification and Comfort of the Saints in Publick and Private, especially in *New England*."
 PSALM LXXVII.
To the Musician, Neginoth. A Psalm of Song.
11. PRAYER.....By the Rev. F. A. Willard.
12. OLD HUNDRED.....Sung by the whole congregation.
13. BENEDICTION.

On account of the heat Mr. Proctor's address was abridged, and Dr. Nichols' poem was entirely omitted. At a full town-meeting held shortly after, however, the Doctor was cordially invited to read his poem on an occasion to be specially appointed, and such an arrangement was carried out.

Dinner was served after the exercises at the church in a large canvas pavilion erected near Buxton's hill on the Crowninshield estate. After the feast the Chief Marshal introduced as President of the Day, Rev. Milton P. Braman, and after the Doctor's own remarks there was enough talking, both from men prominent in local affairs and from others of wider renown, to last perhaps another hundred years. The Commonwealth was represented by its Governor, George S. Boutwell, and its Secretary, Amasa Walker. Salem, the mother-town, sent her mayor, Charles W. Upham, afterwards author of "Salem Witchcraft;" Daniel A. White, Judge of Probate for Essex County;

William D. Northend, Esq., who begun his practice in South Danvers; and another young lawyer who to-day sits in the Cabinet as Secretary of War, William C. Endicott. The historian of New England, John G. Palfrey; the annalist of Salem, Rev. J. B. Felt, at this time of Boston; Rev. Messrs. Thayer, of Beverly; Stone, of Providence; Sewall, of Medfield; and Putnam, of Middleboro'; Allen Putnam, of Roxbury; Lilley Eaton, of South Reading; John Webster, of Newmarket, N. H.; and George G. Smith, of Boston, were nearly all present and delivered the contributions which are credited to them. Alfred A. Abbott, Esq., P. R. Southwick, R. S. Daniels, S. P. Fowler, J. W. Proctor, Rev. F. P. Appleton and Dr. Hunt were called upon as representative citizens of the town. Letters were received from the Hon. Robert C. Winthrop, Rufus Choate, Robert Rantoul, Jr., Daniel Webster, Edward Everett, Jared Sparks and others.

In the meantime the school children were enjoying themselves at a feast of their own, prepared by a committee on which William L. Weston and Henry Fowler represented the northern districts. William R. Putnam, of the school committee, presided, and to his own remarks and those of the toastmaster, Augustus Mudge, were added addresses from Charles Northend, then recently elected superintendent of schools, and John D. Philbrick, then of the Quincy School of Boston.

The printed volume of something over two hundred pages, containing a full record of the Centennial Celebration, forms an important contribution to the material for local history.

These books are seen here and there in family book-cases, but they are not popular reading. There remain, however, as constant and conspicuous reminders of the day thus celebrated, certain memorials of another sort.

The biography of George Peabody properly belongs to that part of old Danvers which now for nearly twenty years has borne his honored name, and there it will undoubtedly be found. Let a few meagre facts and dates appear here.

He was born February 18, 1795, in a house still standing near the junction of Washington and Foster Streets, on the old Lynn Road, in Peabody. His earliest business experience was as a store-boy for the man whose friendship he cherished to the last, Capt. Sylvester Proctor. At sixteen he became a clerk for his oldest brother, David, in a dry-goods store at Newburyport. Before he attained his majority he was taken into partnership by Elisha Riggs, a wealthy New York dry-goods merchant. In 1815 Riggs and Peabody moved their business to Baltimore and subsequently established branch houses in Philadelphia and New York. In 1827 he made his first voyage to Europe in furtherance of his business. During the next ten years he often repeated the trip, and at

times the United States Government, taking advantage of his business sagacity, entrusted him with important financial negotiations. He went to England for a permanent residence in February, 1837, at the age of forty-five. In 1843 he retired from the American house of Peabody, Riggs & Co., and thenceforth was George Peabody, Banker and Merchant, of London.

It was for fifteen years then, when Danvers celebrated her Centennial, that her illustrious son had been a stranger to his native land, and nearly twice that time since the sixteen-year-old boy went away from the place of his birth to seek and find his fortune.

An invitation had been sent to him. When John W. Proctor arose to respond to the toast in his honor, it was somehow generally expected that something of especial interest was about to be made known. Mr. Proctor held up to the view of all a sealed envelope, and, in explanation thereof, read a letter from Mr. Peabody, regretting his inability to be present, concluding in these words,—

"I enclose a sentiment, which I ask may remain sealed till this letter is read on the day of celebration, when it is to be opened according to the direction on the envelope."

This direction was as follows,—

"[The Seal of this envelope is not to be broken till the toasts are being proposed by the Chairman at the dinner, 16th June, at Danvers, in commemoration of the one hundredth year since its severance from Salem. It contains a sentiment for the occasion from George Peabody, of London.]"

The seal was broken and the sentiment disclosed, which has long since become as household words,— "Education, a debt due from present to future generations." It was followed by the announcement of a gift of twenty thousand dollars for the purpose of erecting and maintaining a public library and lyceum.

Among the conditions annexed to the gift was one that the town should accept the gift and choose a committee of not less than twelve to carry out its purposes. Both of these things were done at a town-meeting, June 28, 1852, the action of the town being embodied in a series of resolutions submitted by Dr. Andrew Nichols. The committee of twelve were chosen on such tenure that two vacancies were to be filled by election each year. The committee thus first chosen and their terms of office decided by lot were as follows,—Eben King, Joseph S. Black, one year, to 1853; William L. Weston, Aaron F. Clark, two years, to 1854; Francis Baker, Joseph Poor, three years, to 1855; Elijah W. Upton, Miles Osborne, four years, to 1856; Joseph Osgood, Eben Sutton, five years, to 1857; Robert S. Daniels, Samuel P. Fowler, six years, to 1858. Subsequent elections for terms of six years were as follows,—In 1853, Henry Poor, Joel Putnam; 1854, Philemon Putnam, John B. Peabody; 1855, Francis Dane, Israel W. Andrews; 1856, Franklin Osborne, Isaac Hardy, Jr.

Dr. Nichols' resolves provided also that the committee or trustees should themselves annually appoint a lyceum and library committee from the town at large. The trustees made this latter committee equal to their own number. The first appointees were Dr. Andrew Nichols, who died during his first year of service, Fitch Poole, George A. Osborne, Benjamin C. Perkins, Ebenezer Hunt, John B. Peabody, W. N. Lord, Eben S. Poor, Wm. L. Weston, A. A. Abbott, Philemon Putnam, Eugene B. Hinkley, Wm. F. Poole. The latter is now widely known as the author of "Poole's Index of Periodical Literature."

The corner-stone of the new building was laid August 20, 1853, and after its completion was dedicated September 29, 1854—a substantial brick edifice, eighty-two feet by fifty, bearing on its front the words PEABODY INSTITUTE, situate on the main street from the South Meeting-house to Salem, on the opposite side and a little northwest of the Lexington monument.

Division of the Town.—It is the intention to speak particularly of the Peabody Institute, not of Peabody but of Danvers. It is necessary, therefore, here, as the sequence of events will show, to speak of no less an important matter than the dismemberment of the old town, which had celebrated its hundredth anniversary, and the separation of the southern half of its territory into a new town, leaving to the upper half alone the name of the old town. The separation was no sudden movement. From the very first, the communities north and south of Waters River and the long chain of hills, separated, as they were, by natural barriers, found themselves possessed of different interests and associations. There was no common centre. Town-meetings were held, as has been seen, one year at a meeting-house in the North Parish, the next at the South Parish, and each parish made hay for itself when the time came. A recent letter from a former resident contains something of this sort: "No, Danvers was rich in oratorical talents, while So. Danvers was exceedingly deficient in that material. They had money and votes, but no orators, and when the town-meetings were held at So. Danvers, there all the appropriations in that part of the town could easily pass the ordeal; and when the town-meeting was held at No. Danvers, that was the golden opportunity for appropriations for that part of the town." Before division was finally accomplished the anomaly was presented of two town-houses in one town. The history of the agitation which brought this about goes back to 1772, when Ebenezer Goodale and others prayed that the inhabitants might assemble and make known their minds as to whether meetings for the future should be held alternately in the Village and Middle parishes according to the agreement made between the parishes before incorporation, and "also to see if it be their minds to Erect a House near the Centre of the Town, to hold their Town-Meetings and other Publick Meetings in, &c." "The question was put to

see whether the inhabitants would act anything respecting the holding the Town-Meetings for the future, and, a Poll being demanded, it was determined that way, Ninety-four for acting and Ninety-three against. Voted, not to act upon the paragraph in the warrant respecting the erecting of a House near the Centre of the Town."

At the annual meeting of 1828 a committee was chosen to consider the building of "one or more Town Houses," but whatever their report may have been, it was gently but effectively disposed of by a motion that "the subject subside for the Present."

The matter next came up in 1834. Another large and representative committee was appointed, who were instructed to make estimates for "one or more, designating the place of location of the same." But their report met no better fate than the one of 1828. It was "deferred,—" just twenty years.

In the warrant for the annual town-meeting of 1854 were two articles,—one for the erection of a town-house "near the centre of the population and business of Danvers South Parish," another for the erection of "two school-houses for the accommodation of the Peabody and Holten High Schools."

After much discussion and several special meetings, these two propositions were combined. The High School buildings were a necessity. It was voted "to construct them so as to make each building suitable to convene the town-meetings," and twenty-two thousand dollars was appropriated in all. The report of the building committee was accepted in 1856, and ordered "placed on the file." From this oblivion a part is here brought back to the light of day. It is interesting to know what hands helped to build our temple of democracy and how much it cost:

Net cost of land.....	\$1350 00
Benjamin Moor's bill, contract and extras	7800 00
Architect's bill.....	85 00
John Rollin's bill for well.....	26 25
Perkins & Cressy, building fence, etc.....	115 63
Clark & Bletcher, stone gate-posts.....	18 50
Hezekiah Dwinell, gate.....	28 00
Smith & Wallis, chestnut rails for fence.....	42 00
William H. Walcott, teaming.....	2 50

William O. Haskell, settees.....	125 47
Total.....	<u>\$11,148 05</u>
Total cost, South Danvers.....	\$11,803 48

The building committee were Fitch Poole, Joseph Poor, Nathan Tapley, Calvin Putnam, E. T. Waldron, Josiah Mudge. In the summer of 1883 the Danvers town-house was enlarged to its present proportions.

Thus much of the town-house. To take up the broken thread of the division of the town: in Feb-

ruary 16, 1855, a warrant was issued under the hands of Lewis Allen, Leonard Poole and Nathan H. Poor—the names of Benjamin F. Hutchinson and Joel Putnam, North Parish members of the board of selectmen, did not appear—warning the voters to meet at Union Hall, in the South Parish, "to see what action the Town will take on the order of Notice from the Legislature on the petition of Benjamin Goodridge and others, relative to a division of the Town."

Lewis Allen was chosen moderator. Alfred A. Abbott presented the following resolution:

"Resolved, That the time has arrived when the true interests of all portions of the Town of Danvers, and the convenience and well-being of its citizens imperatively demand a division of its extended territory and numerous population into two separate and independent municipalities—that an equitable and convenient division would be made by a dividing-line drawn from the mouth of Water's River on the East, thence westerly through the centre of said River, to Pine Street, and thence straight, in a northwesterly course, to the head in Ipswich River, the point of intersection of the stream running from Phelps's Mill; all remaining on one side of said line to constitute a town by itself; and all remaining on the other side of said line to constitute another and separate town; and that our Representatives in the Legislature be hereby requested, and a committee of Ten to be appointed by this meeting be and they are hereby instructed to use all fair and honourable means in aid of the prayer of the petition of Benjamin Goodridge and others, and to secure by an Act of the Legislature, the division of the Town substantially in accordance with the plan above indicated."

An adverse amendment offered by Samuel Preston was voted upon four different times, and each time the amendment was declared lost.

Messrs. Hardy and Andrews polled the house, but could not agree in their count.

The South people had the advantage of position. As the day wore away the northern farmers had to think of the cows and the chores. To take off the keen edge of the contest, a motion was interpolated that a committee of ten—five from each section—be chosen "to take into consideration the subject as to see what names shall be applied should a division take place, and report at the next annual meeting." It would take a long time to choose ten men; it was getting really dark; the cows would be suffering, and then the committee just elected were to report at the next annual meeting. So some went—enough to decide the contest against the non-divisionists, for the South people had no idea of deferring the matter. They had come to stay. The main question was put, and this time the work of the tellers was not difficult. At five minutes past seven o'clock the moderator declared the result: one hundred and forty-one opposed to the resolution and two hundred and thirty-five in favor.

By vote of the meeting the chairman nominated as the committee called for by the resolution: Dr. George Osborne, R. S. Daniels, Winthrop Andrews, Henry Poor, Moses Black, Jr., Eben Sutton, Philemon Putnam, Joseph S. Needham, Amos Merrill and Francis Dane.

Within a very short time, March 8, 1855, a special meeting was held in the new town-hall in North Parish, to vote by ballot on the question: "Is it ex-

pedient to have the Town divided agreeably to the petition of Benjamin Goodridge and others?"

Though the polls were kept open from nine o'clock to five, the advocates of division, relying on the vote already secured, wisely let the day go by default, and the count showed but four yeas to four hundred and thirty-six nays. The clerk was instructed to send to the Legislature on the next day a copy of the record of this meeting, and Kendall Osborne, Samuel Preston, Andrew Torr, Daniel Richards, Joseph Poor and Henry Fowler were appointed to remonstrate against division. James D. Black was in the Senate, and Israel W. Andrews was in the house. The latter was the champion of the opposition to division, and by a great effort he succeeded in obtaining an adverse vote in one of the earlier stages of the bill; but on May 18, 1855, the Legislature finally passed "An Act to Incorporate the Town of South Danvers." This act established a division line, but provided that if a majority of the voters of Danvers should by vote express within thirty days their desire to have the line changed, that the Governor should appoint three commissioners to consider, and finally determine the same. The present line was in this manner established by commissioners.

An examination of this line as shown on any good map shows that instead of following the channel of Water's River to the Salem line, it leaves the river and turns southerly, so as to include about fifty acres south of the bridge. Upon this territory is a part of Hanson's Grain-Mill, the large brick-house built by Matthew Hooper, a three-story brick tenement house now owned by John Bates, the old witchcraft house of the Jacobs' family, and several other dwellings. Matthew Hooper and some, if not all, of his neighbors petitioned the Legislature to be set off from Danvers to South Danvers, but Danvers was unwilling to let them go, and nothing came of their petition.

A special meeting of that part of the inhabitants of the territory which still retained the name of Danvers, was called on 28th of May, to take such steps as the new phase of their municipal career demanded. Certain vacancies in offices formerly held by citizens of the new town were filled. In the place of Francis Baker, William L. Weston was chosen treasurer, a position to which he was annually re-elected for eighteen years. Samuel Preston and Zephaniah Pope were elected overseers of the poor in the places of Wingate Merrill and Andrew Torr. Daniel P. Pope was added to the health committee; Aaron Putnam was chosen auditor. There were already three Danvers men on the old board of selectmen, and seven out of twelve on the school committee, and in each case it was voted "to dispense with choosing any more." It was here voted that the chairmen of the several boards and the clerk procure all the books and records remaining in South Danvers, and that the Danvers members of the town-hall building committee provide a suitable place for them.

Another very important subject was considered at this first meeting of Danvers after division. It is sufficiently explained in the vote passed, namely, "that a committee of — persons be chosen to confer with a committee of the town of South Danvers for the purpose of adjusting the division of town paupers, town property, town debts, State and county taxes, the government of the Peabody Institute, the expenses of the bridges now existing in the town of Danvers, and any other matters arising from the division of the town, and if the said committee shall disagree they are directed to apply to the Court of Common Pleas for the County of Essex for the appointment of three disinterested persons to hear the parties and award thereon." At an adjournment a week later the blank in the vote was filled by the appointment of one from each of the old school districts remaining in Danvers, as follows: No. 13, William Dodge, Jr.; No. 2, Henry Fowler; No. 3, Aaron Putnam; No. 4, Francis Dodge; No. 5, Nathaniel Pope; No. 6, Nathan Tapley; No. 14, George Tapley.

South Danvers was represented by George Osborne, Henry Poor, Robert S. Daniels, Francis Baker, Eben King and Abel Preston.

The two committees, acting in conference, first met on June 25, 1855, and proceeded then, and at successive adjournments, to a very systematic appraisal and adjustment of accounts between the two towns. The report, which was accepted in all particulars save that part which referred to the government of the Peabody Institute, on March 2, 1857, and which was finally accepted as a whole on February 1, 1858, covers nearly twenty large-sized pages of record, and, though very interesting reading, is too long to insert here. A few general items may be culled from the report, however. The footing of the appraisal of the property of the old town, on May 18, 1855, the day of division, exclusive of the two town houses, the Surplus Revenue and the Massachusetts School Fund, was \$39,184.50.

The assessors' valuation, 1854, of property north of the division line was \$1,444,900; south of the line, \$2,732,600. Danvers was, therefore, entitled to 34⁵/₁₀₀ per cent. of the corporate property, or the value of \$13,553.14, and South Danvers to 65⁵/₁₀₀ per cent., \$25,691.36.

To the town of Danvers was assigned property scheduled as follows:

Engine General Scott, fixtures and hose	\$814 00
Engine General Putnam, fixtures and hose	586 50
Engine Ocean, fixtures and hose	657 00
Sail car at Danversport	15 00
Engine House No. 2	2,5 00
Engine House No. 1	300 00
Engine House No. 6	350 00
Hearse House at Cemetery	45 00
Hearse House at Braman's	150 00
Two new hearses, \$110, one old hearse, \$20	400 00
Liquors and fixtures at J. W. Snows	10 50
Iron safe, 1100 lbs. at 80	112 00
Case for weights and measures	5 00
Bookcase, 7, found at Whipple's Brook, 300	40 00
Five ballot boxes, 3, stereotype maps of Danvers, 1	4 00

Reservoir near E. Putnam's	89 25
Reservoir near C. Putnam's	164 00
Reservoir near Village Bank.....	89 25
Reservoir near Baptist Church (interest in).....	1 00
Hooks-and-ladders near Baptist Church.....	25 00
Hooks-and-ladders near Fox Hill.....	5 00
Hook-and-ladders near Berry's Stable.....	15 00
Hook-and-ladders near P. Tapley's house.....	25 00
<hr/>	
Total.....	\$4297 50

The residue of town property, including the town farm and almshouse (appraised at \$22,050, and personal property thereon, \$5,519), the whole valued at \$34,887, was assigned to South Danvers.

The Surplus Revenue Fund (\$10,000), by the terms of the act was to be apportioned according to the number of children between five and fifteen years of age, on May 1, 1855, on either side of the line. The number of children was ascertained to be as follows:

District	Danvers.	S. Danvers.	District	Danvers	S. Danvers.
1	359	10	47
2	239	11	359
3	53	12	170
4	71	13	228
5	126	14	181
6	32	44			
7	51	Totals.....	930	1170
8	125			
9	22	Grand Total.....	2107	

To Danvers was, therefore, assigned \$4,413.85; to South Danvers, \$5,586.15. The amount of the Massachusetts School Fund, \$862.72, was, on the same basis, apportioned, \$383.45 to Danvers, and \$485.27 to South Danvers.

The cost of the two new town houses was found, as has been already noticed, to be \$22,951.53. The north building cost \$11,148.05. On the basis of valuation, Danvers was entitled only to the $34\frac{587}{10000}$ per cent. of the value of both buildings, namely, \$7,938.24; therefore, Danvers was indebted to South Danvers in this matter, \$3,209.81.

The total tax for 1855 was found to be \$44,698, of which \$15,460.15 was due Danvers, and \$29,237.85 South Danvers; and the balance of accounts showed that Danvers owed South Danvers, \$9,016.98.

The total indebtedness of the old town, on May 18, 1855, was \$65,167.38, of which \$20,000 was held by the Salem Savings Bank, about \$19,000 by the Warren Bank, \$10,000 by the Trustees of the Surplus Revenue Fund, and \$3,500 by the Danvers Savings Bank; and the total assets, \$4,829.18—leaving the balance of indebtedness, \$60,338.20. Of this balance, Danvers was holden to pay, according to the fixed ratio, \$20,869.78; South Danvers, \$39,468.42. And it was decided that South Danvers pay to Danvers this latter amount in full discharge of its proportion of indebtedness, with interest from May 15, 1855, and that Danvers, retaining all the assets, continue liable for the whole amount of indebtedness.

One point the joint committee could not agree upon. The Danvers men claimed that South Danvers was liable to pay its proportion of two roads, Town's

road and Endicott Street; the South Danvers men refused to allow the claim, and the matter was passed unsettled.

After a careful examination of all the bridges in the old town, the committee awarded eight hundred and seventy-five dollars to be paid by South Danvers to Danvers as an indemnity to the latter for the greater burden thenceforth to be borne by reason of their maintenance.

The final balance of all accounts passed upon showed that South Danvers was indebted to Danvers in the sum of \$33,931.86.

It was found that of the thirty-seven paupers at the almshouse, seven had gained or derived a settlement within the limits of Danvers, and the remainder within the new town and mutual releases were recommended from each town to the other from liability for support of those paupers not found to belong to the respective towns.

The relative interests of the two towns in the government of the Peabody Institute were adjusted so that South Danvers should have nine of the twelve trustees, a lion's share, and inasmuch as four of the board were already residents of Danvers, it was provided that the first vacancy occurring among these four should be filled from South Danvers.

Finally, as a matter of courtesy, it was agreed that Danvers should pay its proportional expense of the cost (two hundred dollars), of copying the records for South Danvers, and that the latter town should pay its proportion of J. C. Stickney's bill of one hundred and fifty dollars, for services in behalf of the North people before the Legislature.

And so, now for more than thirty years, there have been two towns where there was but one. Those who went out are richer and more populous than those who are left; but to the latter, within narrowed limits, belong the name and fame of the old town. The question of division gave rise to much bitter feeling, but the fact of division was sooner or later one of necessity. It is only strange that it did not come earlier. Traces of this feeling, it must be acknowledged, might still reward patient research, but the younger generation know it not. While there is little mutually attractive between the towns, but each looks to Salem as a centre, there is nothing repellent between them, and with increased traveling facilities the people are learning to know each other better to the end of a more perfect cordiality and unity.

And, now, to return to the broken thread of the story of George Peabody's benefactions. In the latter part of the summer of 1856 it was known that the man whose name had become so widely honored intended presently to leave London for a visit to this country. On the petition of the trustees of the institute the selectmen of South Danvers called a town-meeting, August 21, 1856, at which resolutions of

welcome were passed, and a committee of twenty, together with the selectmen, were appointed to meet Mr. Peabody on his arrival at New York "to invite him to the home of his youth, and the seat of his noble benefactions; and, if he shall accept their invitation, to adopt such measures for his reception and entertainment as, in their judgment, will best express the love and honor which we bear him." An attested copy of the action of South Danvers was sent to Danvers, with an invitation to unite in the proposed reception.

On September 10th a Danvers town-meeting passed a series of resolutions, thanking "our sister town of South Danvers for the invitation to co-operate with them in the reception and entertainment of Mr. Peabody," heartily concurring in the sentiments of the resolutions adopted by them, and a committee of twenty-one were chosen to act with the South Danvers committee. The gentlemen chosen were,—

Joshua Silvester, chairman.

Samuel Preston.	Philemon Putnam.
Ebenezer Hunt.	Levi Merrill.
Samuel P. Fowler.	Charles Page.
William L. Weston.	Reuben Wilkins.
Matthew Hooper.	William Endicott.
Israel H. Putnam.	William Green.
Augustus Mudge.	Charles P. Preston.
James D. Black.	Benjamin F. Hutchinson.
John A. Learoyd.	George A. Tapley.
Nathan Tapley.	Arthur A. Putnam, secretary.

The committees of the two towns henceforth acted as a joint committee, and the general expenses of the celebration were borne by the inhabitants of both towns in due proportion, as if no division had taken place. Delegations from the joint committee were sent to New York to welcome Mr. Peabody on his arrival, and, despite numerous invitations to accept of metropolitan honors, he declined to accept any public demonstration except from the hands of his own townsmen. And so on the 9th of October, 1856, the old town gave her son a royal welcome. Because of Mr. Peabody's modest refusal to be honored elsewhere, those who wished to show him their respect were obliged to come to him. "From being simply a village festival, it became almost national in its character."

The day of the reception opened auspiciously—one of the fine Indian summer days. Mr. Peabody had come from Georgetown, driving over the road in a private carriage with his two sisters and a nephew. A salute of a hundred guns announced his arrival at the Maple Street Church, Danvers Plains. Here he was met by the committee, and was seated in an elegant barouche, drawn by six horses, accompanied by Robert S. Daniels, Joshua Silvester and Rev. Milton P. Braman.

"The scene here was very beautiful. The spire of the church and private buildings were gayly dressed with flags and streamers, and in full view was an elegant three-fold arch spanning the wide street, the centre arch rising high above the others, and being

adorned with evergreens, wreaths, medallions, flowers and flags." This arch deserves more than passing notice. One cannot easily imagine its imposing and graceful proportions. It was designed and executed by Mr. Silvester, and coming first in the long series of decorations with which the streets of both towns were adorned, Mr. Peabody personally expressed his surprise and grateful admiration to its designer at his side.

Two cavalcades were drawn up just below the arch; one wholly of ladies, added greatly to the attractiveness of the escort. Each lady threw into Mr. Peabody's carriage, as he passed, a bouquet of flowers. The procession moved on through High Street to Danversport, and so on to South Danvers, "through streets lined with decorated houses and under waving flags and triumphal arches, attended by the booming of cannon and strains of martial music. The shouts and salutations of the people were gracefully acknowledged by Mr. Peabody as he bowed to the throng on either side." The cavalcades and carriages forming an escort about half a mile long, proceeded thus through and out of Danvers and into South Danvers.

At Wilson's Corner Mr. Peabody and his escort found drawn up to receive them the main body of a large and notable procession.

It is unnecessary to enter into the details of the day. The pageant of joy was equalled only by the pageant of sorrow, when through the same streets the great benefactor was years later borne to his grave. On the day following the reception Mr. Peabody went back in company with his sisters to Georgetown. A large crowd was gathered in Danvers Square, intent on having a last hand-shaking. Tired, as he must have been, it was evidently his intention to proceed with only a passing greeting, but he found his way blocked by a barrier he could not resist. A chain of little children stretched, hand in hand, clear across the wide street. He stopped, and the informal reception held from the open carriage, and his expression of pleasure at the enthusiastic welcome accorded him, made a pleasing close of the great reception.

BRANCH LIBRARY AND PEABODY INSTITUTE.—Reference has been made to the fact that Joshua Silvester had partaken of Mr. Peabody's hospitalities in London. Mr. Silvester went to England in the latter part of 1846, the year after the disastrous fire which swept away his business on Danvers Plains. He took with him his brother-in-law, J. M. C. Noyes, and Jacob Cross, Samuel Knights, Chas. Wait, and one Story, of Essex, and introduced the business of making pegged shoes in Manchester. Mr. Silvester came back within a year, the others soon following, except Noyes, who remained and carried on the business until his death, about ten years ago. Between 1850 and 1855 Mr. Silvester made four other trips to England. On one of these, in '53, he took letters to

Mr. Peabody, was invited to attend his annual Fourth of July dinner, and being the only Danvers man in London, was asked much by him concerning the progress of the Institute he had then recently given. This acquaintance thus formed, ripened with later visits.

It was to Mr. Silvester that, soon after the reception here in 1856, Mr. Peabody wrote from Georgetown, requesting a meeting on the arrival of a certain train at the Danvers station. While walking together on the station platform, Mr. Peabody first made known his intention to give ten thousand dollars to establish a Branch Library for Danvers, so that the citizens of this part of the old town would not be obliged to depend on the Institute at South Danvers. He asked Mr. Silvester to bring to him at the Revere House, Boston, a list of suitable persons to receive the gift. Mr. Silvester found him enjoying buckwheat cakes at a late breakfast; and over an informal cup of coffee the list was accepted, with Mr. Silvester's name, which Mr. Peabody insisted upon adding. This letter, soon written, is self explanatory.

"REVERE HOUSE, BOSTON, Dec. 22, 1856.

"GENTLEMEN:—During my recent visit to the old town of Danvers, I had opportunities of examining into and understanding the operations of the Institute, and of ascertaining to some extent the comparative advantages derived from it by different portions of the town.

"In compliance with my original directions the Institute was located within one-third of a mile of the site of the meeting house formerly under the pastoral care of Rev. Mr. Walker; and while thus the population of South Danvers is within a reasonable distance of the Institute, the population of Danvers is mostly too remote therefrom, and cannot very conveniently share fully in its privileges. It has occurred to me that a Branch Library might be established in Danvers, in some central position, probably the Plains, which would remedy the existing difficulty and would secure to the inhabitants a more equal participation in the benefits which it was my design to confer upon all.

"I therefore propose to make a donation of Ten Thousand Dollars for the purpose of establishing a Branch Library, to be located as before mentioned provided the suggestions and conditions hereinafter stated are satisfactory to all the parties interested.

"First, the Library shall be called and known as the BRANCH LIBRARY of the PEABODY INSTITUTE, and shall be under the direction and control of the Trustees of the Institute, in the same manner and to the same extent as are the funds of the Institute and its library at South Danvers.

Second, Three Thousand Dollars of the amount to be expended at once for the purchase of books, and the fitting up a room or rooms for their reception; the remainder, Seven Thousand Dollars, to be safely invested by said Trustees, and the income thereof to be used by the Lyceum and Library Committee of the Institute for the increase of the Library, the payment of rent, and for defraying such other expenses as may be incurred in the proper care and management of the same; the whole income to be used for the exclusive benefit of the Branch Library.

"Third, the inhabitants of Danvers are to be still entitled to the full enjoyment of all the privileges and advantages of the Parent Library and of the Lyceum, and the inhabitants of South Danvers are to have the right of participating equally in the privileges of the Branch Library. If, however, it should be found hereafter that this arrangement ought to be modified for the better accommodation and the greater advantage of all concerned, then this last provision, as also either of the others, may be altered by general consent; such alteration being subject to my approbation.

"It is my desire, gentlemen, that you will, as soon after the receipt of this as convenient, confer with some of our friends in Danvers, in which conference it is my wish that the Lyceum and Library Committee of the Institute should take part, as in all proceedings relating to this matter.

"Very respectfully and truly yours,

"GEORGE PEABODY."

Mr. Peabody designated Rev. Milton P. Braman, Samuel Preston, Joshua Silvester, James D. Black, Matthew Hooper and William L. Weston, to act in the conference, suggested by the above letter, with the trustees of the Institute and the Lyceum and Library Committee. Appropriate resolutions were passed at a town-meeting held January 12, 1857; and at the same time it was voted to offer to the trustees for the use of the branch library certain rooms in the Town-House over the selectmen's and town-clerk's offices. And here the library was situated for about a dozen years. The first delivery of books from the branch library was September 5, 1857. It then contained two thousand three hundred and seventy volumes.

But as early as the March meeting of 1857, the town took action towards securing a suitable lot on which some time to erect a library building. The matter was referred with full powers to a committee consisting of the selectmen and Matthew Hooper and Wm. L. Weston at large; and, by districts, Joshua Silvester, Moses Black, Jr., Aaron Putnam, Francis P. Putnam, James Goodale, Israel W. Andrews, George Tapley and Frederick A. Wilkins. This committee purchased, for four thousand dollars, about four and a half acres, fronting on Sylvan Street, of land formerly a part of Judge Samuel Putnam's estate. Mr. Silvester, Mr. Hooper and Augustus Mudge were appointed to lay out the ground in a suitable manner. This latter committee expended \$347.13 in grading, laying out walks, etc., and they set out two hundred and sixty-one rock-maple trees. In their report they say:

"When Mr. George Peabody was riding through these grounds last August, he seemed to inquire with much interest, what grounds they were; he was answered that it was Peabody Park, a lot purchased by the Town for the Branch Library Building site, and as there is no name sanctioned by the Town, the Committee would advise the adoption of Peabody Park as the future name of this lot. . . . The committee would also express their appreciation of the valuable services of one of their number who has been removed by death, Mr. Matthew Hooper, and add their testimony to his worth as a member of the committee and the high estimation in which he was justly held by citizens of the town."

Ten years passed, long, trying years; and after the war was over, in the spring of 1866, it was known that Mr. Peabody intended to visit this country again. At a special town-meeting, April 23, 1866, Rev. Milton P. Braman and Daniel Richards were sent to meet Mr. Peabody at New York, and in concert with a delegation from South Danvers to tender him a cordial welcome in behalf of both towns.

This visit was especially auspicious to Danvers. Not contented with the generous gift of the branch library, Mr. Peabody had come prepared to make a far more notable donation. The endowment of the PEABODY INSTITUTE of DANVERS is contained in the following letter:

"TO REV. MILTON P. BRAMAN, JOSHUA SILVESTER, FRANCIS PEABODY, JR., SAMUEL P. FOWLER, DANIEL RICHARDS, ISRAEL W. ANDREWS, JACOB

F. PERRY, CHARLES P. PRESTON and ISRAEL H. PUTNAM, Esqrs., all of Danvers.

"GENTLEMEN:—In a letter to the Trustees of the Peabody Institute at South Danvers, bearing date of the 22d of last month, I expressed to them my purpose of giving, in addition to the Ten Thousand Dollars formerly given by me to them for the foundation of the Branch Library in your town the sum of Forty Thousand Dollars, making in all Fifty Thousand Dollars for the foundation of a separate and distinct Institution in your town; and with the understanding that by the necessary municipal action on the part of South Danvers and Danvers, each town should formally relinquish all rights and privileges in the Library, Lectures or other benefits of the other; and I then also stated that it would be necessary that the fund heretofore placed in the hands of the Trustees of the Institute at South Danvers for the especial use of the Branch Library should be transferred to those who should hereafter have it in charge.

"The Town of South Danvers having taken the municipal action indicated in the letter to which I have referred, I now, with the understanding that the Town of Danvers has taken or shall take like action, designate you, gentlemen, as the persons to whom the funds heretofore held by the said Trustees for the benefit of the Branch Library, shall now be transferred, and give you in addition the sum of Forty Thousand Dollars; which with the amount thus transferred to you, shall be by you held in trust, or expended under the provision of such Trust, for the establishment of an Institute, for the promotion of knowledge and Morality, in the Town of Danvers, similar in its general character to that which now exists at South Danvers.

"Of the amount, I direct that the sum of thirty thousand dollars be and always remain permanently invested as a Fund, of which the annual income shall be expended, under the direction of yourselves and your successors for the maintenance, increase, and care of the Library, and the delivery of such Lectures or courses of Lectures, as shall be conducive to the purpose proposed in the establishment of the institution.

"The remainder of the amount I have placed in your hands as above, shall be used for the erection of a suitable building for the Library and other purposes of the said Institute, which shall be completed within two years from the date hereof. In the event of any and all the vacancies occurring in the number of you, my Trustees above named, by resignation, by death, or in what manner soever such vacancy shall occur, I direct that such vacancy shall be filled by the choice of the Inhabitants of the Town of Danvers legally qualified to vote at Town-meetings, who shall, at a Town-meeting to be called for the purpose as soon as conveniently may be after such vacancy occurs, make such choice; and I further direct that my said Trustees shall annually make and print a Report, which shall be made public and published setting forth the condition of the Library and of the funds invested.

"And wishing as I do to promote both now, and for all coming time a spirit of Peace, unity and brotherly love, I enjoin upon you and your successors forever the same principles and directions for your guidance in relation to party politics or sectarian theology, or any allusion to them whatever in any of the lectures, meetings or transactions of the Institute, which I have already enjoined upon the Trustees of the Peabody Institute at South Danvers, in my letter September 22, 1866, and I beg to refer you specially to that letter, for the rules to be observed in relation to your future course.

"I have further to ask, that you will communicate the contents of this letter of trust to a town-meeting of the citizens of Danvers at as early a day as convenient.

"I am with high respect your humble servant,

"GEORGE PEABODY.

"Oakland, Md., October 30, 1866."

RULES REFERRED TO IN MR. PEABODY'S LETTER.

"My earnest wish to promote at all times a spirit of harmony and good will in society, my aversion to intolerance and party rancor and my enduring respect and love for the happy institutions of our prosperous republic, impel me to express the wish that the Institute I have purposed to you shall always be strictly guarded against the possibility of being made a theater for the dissemination or discussion of sectarian theology or party politics; that it shall never minister in any manner whatever to infidelity, to visionary theories of a pretended philosophy which may be aimed at the subversion of the approved morals of society; that it shall never lend its aid or influence to the propagation of opinions tending to create or encourage sectional jealousies in our happy country, or which may lead to the alienation of the people of one section of the Union from another.

"But that it shall be so conducted, throughout its whole career, as to

teach political and religious charity, toleration and beneficence, and prove itself to be, in all conditions and contingencies, the true friend of our inextinguishable Union, of the salutary institutions of our free government, and of liberty regulated by law."

Some question arose as to the best location for the New Institute. At the annual meeting of the town, 1867, the matter was referred to a committee, of which Wm. L. Weston was chairman, who reported, "There are many considerations which would make it desirable that a building such as is proposed should be more centrally located; but, after conferring with the Trustees, they are nearly unanimous in the conclusion that the interests of the town will be best promoted by its location on the spot originally selected. They therefore recommend the passage of the following vote: That the Selectmen of the town be and they are hereby authorized to transfer to the Trustees of the Peabody Institute the lot known as Peabody Park, for the purpose of erecting thereon, at such time as the Trustees may deem expedient, a Lyceum and Library building."

These recommendations were accepted. Time adds each year to the beauty of the grounds and emphasizes the wisdom of the choice.

Plans for a building were laid before Mr. Peabody and approved by him. On the 10th of February, 1868, a contract was made with Charles H. Smith, of Newburyport, for its construction, for the sum of \$18,500. The institute was completed in January, 1870, at a total cost of \$29,241. It is a wooden building, inclined to the Gothic style of architecture, eighty-six by fifty-two feet, and contains on the lower floor the Peabody Public Library, and on the second floor a large lecture-hall.

Mr. Peabody was again expected from England during the summer of 1870. The formal opening of the institute was deferred to the 14th of July, when he, him-self, was present. A permanent record of the events of that memorable day was made by the graphic pen of Dr. Braman.

A few months later, and the world received in sadness the news that George Peabody was dead. He died on the 4th of November, 1870, in London. Once more he was borne across the Atlantic, and the cannon of a noble ship of the Queen of England announced to his native land the arrival of his body.

According to his dying request he was buried from the place where he was born, and the funeral pomp was such as when a king dies.

The citizens of South Danvers had already honored and perpetuated his name by the acceptance of an act passed by the Legislature April 13, 1868, that "the town of South Danvers, in the County of Essex, shall take the name of Peabody."

The people of Danvers hold Mr. Peabody's name very dear. His gift to them was especially generous, for, were his only motive to remember his birth-place, that might well have been satisfied by his original gift to the old town. The Peabody Institute of Dan-

vers is a potent influence for education, which, in the words of the donor, "is a debt due from the present to future generations."

Of the original life Trustees Francis Peabody, Jr., Samuel P. Fowler, Israel W. Andrews and Israel H. Putnam are still on the board.

The first vacancies occurred in 1871, when Mr. Braman and Mr. Preston resigned. It was then voted that the term of office of trustees elected by the town should be four years; and Mr. Preston and Melvin B. Putnam were elected. In 1875 Mr. Preston and Ezra D. Hines were elected. In 1877 Mr. Perry resigned, and Dr. W. W. Eaton was elected in his place. In 1879 Mr. Preston and Mr. Hines were re-elected. At the expiration of Dr. Eaton's term, in 1881, J. Peter Gardner was elected. In 1883 Lucius A. Mudge and William T. Damon were elected. In 1885 Mr. Gardner was re-elected. In 1887 Mr. Mudge and Mr. Damon were re-elected, and Joseph W. Woodman was also elected to fill the vacancy caused by the death of Daniel Richards.

A course of free lectures, concerts, etc., have been annually provided since the winter of 1867-68, at an average expense of about \$500.

By an act of the Legislature, March 16, 1882, the trustees were incorporated to hold property to the extent of \$300,000.

The list of librarians since the opening of the Branch Library,—April 1, 1857, Nathaniel Hills; June 24, 1865, S. P. Fowler, pro tem.; October 9, 1865, Wm. Rankin, Jr.; January, 1867, A. Sumner Howard; April, 1882, Lizzie M. Howard; January 3, 1885, Emilie K. Davis. A few summers ago the library was closed and the books classified and catalogued according to modern scientific methods. The special committee were Dr. W. W. Eaton and Rev. W. E. C. Wright, of the Maple Street Church. A contemporaneous report says that "upon the latter rested the heaviest burden of gratuitous work which he has shouldered, although it was a labor of love, and carried through almost without stopping to rest for six months. With what assistance the doctor could find time to give, Mr. Wright has directed and superintended every detail of its preparation, and performed himself a large part of the most responsible and difficult work."

The whole number of volumes now in the library, 12,024; number of borrowers' cards issued, 2300; average number of books delivered each day, 185.

CHAPTER XXVIII.

DANVERS—(Continued).

INDUSTRIAL PURSUITS—SOCIETIES—PHYSICIANS, ETC.

AGRICULTURE.—Farming has of necessity been most developed within recent years in the line of

market-gardening. Probably nowhere in the county can finer cultivated fields be seen than in this town. Sun and rain, bugs and worms, remain as ever uncertain elements, but there has been a wonderful advance in the application of scientific principles. Very much of that broad plain, up which swept the tide of original settlement, is devoted to this sort of farming. The land here is rich and level, and every acre is worked for all it is worth. The Danvers onion is famous everywhere. Hundreds of barrels are raised within half a mile of the Collins House. Much of this land is comparatively new, "Turkey Plain," as it used to be called, having been covered with bushes within the memory of some living, and a hundred years ago thought to be the poorest land in town. The older farms are generally under thorough and enterprising management. Many of them make a specialty of producing milk.

An article by the editor of the *Massachusetts Ploughman*, in that paper November, 1880, is authority for the statement that the reputation of Danvers exceeds that of Weathersfield, Conn., for the cultivation of the onion, and, further, that "no town in the State is so distinguished for its superior orcharding." This statement will not here be challenged. If it be true, it is well, and fits well to the fact that here on the "Orchard Farm" of Governor Endicott the first fruit trees of any account in New England—perhaps the whole country—were raised. A hundred years ago pear-trees were to be seen near every farm-house. Some had a few plum and peach-trees. These bore abundantly. Most of the apple-trees were then of natural fruit, and the apples were largely consumed in the shape of cider. An old cider-mill which stood on the General Putnam place was thus constructed. A trench was dug, fifteen inches wide and fifty feet in circumference, and flat stones were placed on the bottom; the sides were of brick, eighteen inches deep. Apples were thrown in this circular trench, and a heavy stone wheel, drawn by horse-power and revolving about a central upright, did the squeezing. The apparatus was taken down about 1819. Deacon Joseph Putnam, who owned and carried on this mill, and Abram Dodge, of Wenham, were the first in the county to plant apple orchards of improved varieties for growing winter apples for market. This was soon after the Revolution. At that time farms were valued not so much for their location as for the amount of stock they would keep. The Clark farm was then considered the best farm in Danvers, so Wm. R. Putnam has written. Before the discovery of the uses of coal relieved the fear of a scarcity of wood, every well-appointed farm included one or more peat lots. Here and there peat sheds are still seen in the meadows, but it is not common, as formerly, to see about the farm-buildings carefully piled blocks of this sort of fuel. Its most general use was from about 1780 to about 1830.

The Essex Agricultural Society has from the first

been warmly supported by the farmers of Danvers. Among the incorporators of the society, June 12, 1818, were Frederick Howes and Jesse Putnam. The Danvers men have always taken a good share of premiums at the annual exhibitions, and they now stand at the head of membership. Charles P. Preston was for twenty-five years secretary of the society, resigning in 1885. Some minutes of the exhibition of 1848 show that Elijah Pope received the first premium for ploughing with double team, and Francis Dodge the second. For working oxen, Orrin Putnam, fourth; Francis Dodge, fifth. Working steers, Elijah Pope, second. Fat oxen, Perley Goodale, first. Bulls, Orrin Putnam, second. Milch heifers, Eben Putnam, third. Yearlings, Francis Dodge, first. Sheep, Elijah Pope, gratuity, no premiums given. June butter, Charles P. Preston, first; same, second for September butter.

Jouathan Perry came to Danvers in 1803, when he was twenty-one years old. In 1815 he bought the Towne farm of some fifty acres, which has remained in the family since that time. Mr. Perry was the first farmer in Essex County to raise strawberries and dandelions for the market, and for over thirty years he drove a vegetable wagon to Salem. His sons, Horatio and James, followed the same business, and will long be remembered and missed. Shortly before the death of the former, a few months ago, he furnished the writer with some information in regard to his father, who was a most excellent citizen. In the cause of temperance and liberty he was first and foremost; he was one of the five who first signed the total abstinence pledge and stood alone for more than a year; he labored earnestly to start the first temperance store in town; he was one of the twelve Liberty Party voters in 1840; was captain of the militia company for a number of years.

SHOE BUSINESS.—All over this part of the country, outside of the thickly settled villages, a peculiar type of building may be noticed. It has grown dingy from lack of paint, and cob-webs and old hats have not uncommonly usurped the glazier's work. Here a hospital for decrepit plows and rusty guns, there converted into sleeping apartments for poultry, now freshened up into quarters for a "hired help," again abandoned altogether, sitting cozily by the roadside and near by the home, equipped with a chimney and well supplied with windows, the observing stranger—and it must be considerable of a stranger not to know all about it—struck by the number of its duplicates, could not fail to conclude that it was originally designed for some use to which it is not now put.

The little building is a monument to the departed days of the industry here spoken of. It is a shoemaker's shop. Here, for many years, the "stock" was brought from some one of the manufacturers, and in the intervals between farm chores was made up. It was a family work shop, the boys learning early to use hammer and awl, and the girls "closing"

and "binding." It was, too, a sort of educational and political exchange. While the pegs flew in at the swift strokes or the black-ball stick coursed round the freshly trimmed edge, ears were open to some one who read aloud what Horace Greeley said in the last *Tribune* about Kansas. Town topics and national legislation were here freely discussed, and the forever unsettled questions, which no man will solve until the mystery itself comes, were likewise earnestly and thoughtfully debated. Pair by pair the finished shoes went back into the stock box, and when the sixtieth completed the "set," the hinged lid was fastened down and the old horse took a trip to town for pay and fresh work. Business was steady, pretty much the year round, and there was always the little land to fall back upon,—no fear of slack times between trades, and no labor troubles.

Machinery has closed the little shops. First a simple roller replaced the old lap-stone. That made no difference. Even when the pegging-machine was successfully introduced "gaugs" were formed, and for a time the shops struggled against steam. But team conquered, and here, as elsewhere, shoes have been made by the bands of many men and women, from cutter to packer, all working under one roof, and, so far as possible, by the aid of power machinery.

Danvers was a representative shoe-town in the days of the old regime, and much business is here done in the modern way. The first shoe manufacturer in town was Zerubbabel Porter, and a little shop at the foot of Porter's Hill, standing until within a few years, was the cradle of the business. Mr. Porter was a tanner by trade, and he commenced making shoes in order to work up leather unsaleable for custom trade. This was about the time of the Revolution. That little shop, which was raised from its first condition so that tanning was carried on in the basement and shoemaking above, became a sort of normal school in the latter art, from which many graduated to success. About the time young Elias Endicott married Nancy Creasy, of Beverly, in 1791, he, likewise a tanner and currier by trade, built a little shop for that business. That shop now forms the parlor of the present residence of Elias Endicott Porter, above Putnamville. The young man presently added a second story, moved into it, and kept at his business beneath.

More additions were made, and about the commencement of this century, in a small shop still used as a woodshed, he too, following the example of his brother-in-law, began to manufacture shoes. Both found markets in Baltimore and other southern ports, packing their goods in barrels and shipping them from Salem on board of coasters.

Jonathan Porter worked for his cousin Zerubbabel as early as 1786, and among his apprentices was Caleb Oakes, who commenced to manufacture in the little shop, and later built up a large and prosperous busi-

ness at Danversport. His widowed mother, who was a Putnam, came here from Portsmouth when he was but two years old. He was brought up by Colonel Enoch Putnam, married Mehitable, daughter of Nathaniel Pope, and is buried with her in the old Pope burying-ground. He was the father of William Oakes, the distinguished botanist.

About 1789 a young boy of fourteen went to Jonathan Porter, to learn his trade, and when he became of age he took out work a year for Caleb Oakes. One day, when he returned a set of shoes and found no stock ready for him, Mr. Oakes sold him a little leather and told him he might cut it up himself. The next set of shoes he made he put into saddlebags and took them to Boston on horseback. From this beginning Moses Putnam continued with patient industry and sagacity until he became, in the neighborhood which bears his name, the chief shoe manufacturer of the town. He followed the business steadily for fifty-seven years, surviving two sons and a son-in-law, all of whom had been associated with him.

Among other early manufacturers were Samuel Putnam, Nathaniel Boardman, Eben Putnam, Major Joseph Stearns, Daniel Putnam, Gilbert Tapley, the Prestons, Elias Putnam and Joshua Silvester. Fifty years ago the business was confined mostly to Putnamville, the Plains and the Port. About that time James Goodale and Otis Mudge began to manufacture at the Centre. In 1854 there were thirty-five firms, making more than a million and a half pairs annually, and giving employment to about twenty-five hundred men and women.

Samuel Preston and Joshua Silvester were carrying on business on opposite sides of the square at the time of the great fire of 1845. About 1830 Mr. Preston was also running a store at Perley's corner. David Wilkins did his teaming, going into Boston four times a week with a pair of horses. He would load up with cases of brogans and start at one or two o'clock in the morning, and deliver the shoes at the various wharves along old Commercial Street. Then, with a load of groceries previously ordered,—molasses, great boxes of sugar bound with raw hide, and with a hundred sides of leather on top of all,—he drove back. One Hartwell at the Port was, at the same time teaming for the Putnamville people, and did a good business. Later Mr. Wilkins, still a familiar figure with his lumber-wagon in our streets, formed a partnership with the late D. J. Preston, and took all the Boston teaming. It was the growing importance of the shoe business and the need of banking accommodation that led to the establishment of the Village Bank in 1836. During the financial crisis of the next year Danvers men lost heavily with others. For twenty years there was prosperity, and then the crisis of 1857 and the demoralization of business occasioned by the breaking out of the war, forced many to the wall. Those who pulled through

or rallied afresh, had prosperous times during the war.

Among those who have contributed to the fame of Danvers as a shoe town within the past twenty or thirty years, and who have either retired, deceased or engaged otherwise in business, are John Sears, Daniel F. Putnam, J. C. Butler, C. H. Gould, Ira P. Pope, Alfred Fellows, J. R. Langley, Amos A. and Henry A. White, Joel Putnam, Aaron Putnam, I. H. Putnam, William E. Putnam, I. H. Boardman, Henry F. Putnam, Phineas Corning, J. M. Sawyer, G. B. Martin, G. H. Peabody.

The oldest established firm still in business is that of E. and A. Mudge & Co. Edwin Mudge, senior partner, commenced manufacturing in 1837, when nineteen years old. From 1840 to 1847 he was associated with his brother Otis. In 1849 he formed the partnership with his brother Augustus, which, with the admission of Edward Hutchinson in 1858, has since remained without further change. After a number of expedients to accommodate their extensive business, the firm erected a large three-story factory, well fitted with all modern conveniences. It was situated close by the residences of its owners, and was the life of the Center, but at present the tall chimney is the melancholy monument of its former existence. It was burned about the first of June, 1885. Its loss has not proved so disastrous to the Center as was feared, for it so happened that the firm were able to move at once into the factory they now occupy at the corner of Pine and Holten Streets, Tapleyville, taking their old help with them, and the horse cars make the two villages practically one. Upon the corner mentioned, George B. Martin manufactured shoes, and built up a prosperous business in a factory which, by successive additions, had grown to great size, and was occupied by Martin, Clapp and French (W. T. Martin, son of G. B.), when, on the night of February 23, 1883, the whole establishment and five adjoining dwellings were burned. The firm at once rebuilt, but they had not long occupied their fine factory before they experienced serious labor troubles and were induced to move their business to Dover, N. H. Thus the Mudges were enabled to move into it at once after their fire. G. W. Clapp withdrew from the Martin firm at the time of its removal, and with W. A. Tapley commenced the business carried on near the old carpet factory. Other large shoe manufacturers are C. C. Farwell & Co., J. E. Farrar & Co., Glover & Co. and Eaton & Sears; numerous other firms do a smaller business.

BRICK-MAKING.—Danvers bricks rival Danvers onions in their reputation for sterling qualities. Farmer Andrews' trip to Medford and young Jeremiah Page's return with him, the origin of the business here, has been mentioned in the sketch of the Plains. Mr. Page continued the business, of which he was the pioneer, to the close of his life, 1806, and at his decease his son, John Page, and son-in-law, John Fow-

ler, carried it on a few years in partnership. Mr. Page then continued the business alone, and with such energy and success that Page's bricks were widely known and in great demand. He is said to have made the first "clapped bricks," which were really pressed bricks, made before the invention of machinery facilitated this most important feature of brick-making. For many years Mr. Page was a large contractor for government work, and many of his bricks were used in fortifications and light-houses. A very large number were sent to Forts Taylor and Jefferson on the Florida coast. In fact Danvers bricks were the government standard, specifications calling for them or others as good. Mr. Page had yards on both sides of High Street, that on the westerly side extending beyond the location of the railroad and others on South Liberty Street near the Peabody line.

Deacon Joseph Putnam and Israel, his brother, nephews of General Israel, many years ago made bricks near the driving-park on Conant Street. The Webbs, too, were early brick-makers, Nathaniel Webb, grandfather of Putnam Webb, now living at the Port, having a yard near the horse-car stables on High Street. Jotham Webb was just beginning business below the box-mill at the Port, when at the Lexington alarm, he hurriedly donned his wedding suit, and was brought back to his young bride slain by a British bullet.

Josiah Gray was born in Beverly, but his parents moved to Bridgeton, Me., when he was a small boy. He came thither when a young man and learned to make bricks under John Page. He then worked some fifteen years making nails and anchors at the iron works, but on the occasion of a sharp cut in wages he began to make bricks in East Danvers, then Beverly. He virtually made Liberty Street what it is to-day, erecting a number of dwellings and setting out the first shade trees. He died in 1873 at an advanced age, having been a most excellent citizen. The business which he began has continued prosperously in his family for more than fifty years. In 1881 the old yard off Liberty Street, then carried on by S. F. and J. A. Gray was bought by the New England Pressed Brick Company. Expensive works proved, however, a poor substitute for simpler processes and the company failed. J. A. Gray went to Maine, and S. F. Gray, is carrying on the yard off High Street, formerly worked by W. H. Porter.

Asa and Nathan Tapley and Matthew Hooper were early brickmakers in District No. 6. William H. Walcott succeeded Nathan Tapley, and William T. Trask succeeding Mr. Walcott, at present carries on that yard. Isaac Evans, Samuel Low and Moody Elliott were also among the early makers. G. H. Day commenced business in 1861; his sons, G. H. and E. F. Day, later. Samuel Trask, who succeeded Mr. Evans, W. H. Porter, Edward Carr and H. E. Elliott, began about the same time. At some time, John C. Page made bricks on Lefavour's Plain,

South of Water's River, near Kernwood; and Charles Page in the large pasture near Crane River bridge; this latter yard was reopened by the Grays, and some of the bricks for the Danvers Lunatic Hospital, for which they had the contract, were made here.

John Grout had a yard in the rear of his residence on High Street. It is estimated that about five million bricks are now annually made here, divided as follows:

G. H. Day	1,500,000
S. F. Gray	1,000,000
Edward Carr	1,000,000
P. A. Gallivan	800,000
Samuel Trask	600,000
Wm. T. Trask	400,000

Of these, at least, a fifth are of first quality front brick, rated in the market as good as any made in New England.

PHYSICIANS.—With the exception of an uncertain report of a Dr. Gregg, said to have lived at Salem Village in 1692, there is no evidence that the town had any settled physician until about 1725, but depended for medical and surgical services upon the Salem doctors.

Jonathan Prince was probably born in Danvers, and was certainly the first resident physician of whom there is any clear account. He studied medicine with Dr. Toothaker, of Billerica, and was the preceptor of Drs. Amos Putnam and Samuel Holten. He lived on the southern slope of Hathorne Hill, at a spot marked by a cluster of pines. The house was long since removed to the corner of Hobart and Forrest Streets, where it is known as the "Hook house."

AMOS PUTNAM was born in Danvers 1722. He pursued his medical studies with Dr. Prince, and practiced in the town till the opening of the French War, when he entered the service as a surgeon. At the close of the war he returned to Danvers, and followed his profession until he was more than eighty years of age. He was a justice of the peace for many years, and one of the most influential citizens of the town. His grave is in a small inclosure near the Collins House, marked by a plain head-stone, on which is the following inscription: "Sacred to the memory of Doct. Amos Putnam and Hannah Phillips, the wife of A. P." He died July 26, 1807, aged eighty-five. She died Oct. 2, 1758, aged thirty-three.

SAMUEL HOLTEN was more distinguished in our history in other respects than as a physician. An outline of his biography has been already given.

ARCHELAUS PUTNAM was born in Danvers in 1741. His birth-place and residence through life was the old Putnam homestead, near Wadsworth Cemetery. He graduated from Harvard College in 1763, and soon after commenced to practice his profession in town. He was a skillful physician and surgeon, and a man of great influence among his fellow-citizens. His death occurred in 1800, and his remains are buried in Wadsworth Cemetery.

JAMES PUTNAM, son of Dr. Amos Putnam, was born in Danvers about 1760, studied medicine and was associated in practice with his father.

ANDREW NICHOLS was born November 2, 1785, died 1853. See sketch of his life and portrait.

Dr. Shed was a druggist rather than a practicing physician. He was long town clerk, and something is said of him in connection with that office. He lived in the South Parish.

During the first years of this century quite a number of physicians began business in town, but after a brief period removed to other localities. Among these may be mentioned, Drs. Clapp, Cilley, Gould, Porter, Patten and Carleton.

Dr. Carleton located at the Port, and was famous as a "singing-master." Dr. Patten lived in what is now the Bass River House.

GEORGE OSGOOD was born in North Andover, March, 1784. After receiving his medical degree he came to Danvers and commenced practice in 1808. He also joined the Massachusetts Medical Society the same year. His home was for a time near the village bank building, and afterwards near the Essex depot, in the Abbott House. He was in active practice more than half a century, and during this long time he was one of the most familiar figures in the town. He was a son-in-law of Dr. Holten, and is buried near the grave of the latter in the Holten Cemetery. The headstone bears this inscription:

GEORGE OSGOOD, M.D.
He practiced medicine in this town fifty-five years.
Beloved and respected by all who knew him.
He passed to his rest, May 26, 1863,
Aged 79 years, 2 months.

EBENEZER HUNT, whose name has often appeared in these pages, for more than half a century practiced in this town of his adoption. He was born in Nashua, N.H., April 13, 1799; died at Danversport, October 27, 1874. He graduated at Dartmouth Medical College in 1822, and the next year settled here. He was among the earliest and foremost in the temperance and anti-slavery movements, and so ardent was his patriotism that when war came he enlisted as assistant surgeon in the Eighth Regiment. Radical in his views, gruff in manner, he was warm of heart and skillful in his profession, and will long be remembered as a useful citizen.

DAVID A. GROSVENOR, JR., a son of Dr. Grosvenor, of North Reading, was born in Manchester, Mass., 1812. He pursued his medical studies with his father, and also with Dr. Mussey, of Hanover, N. H. He received his diploma as Doctor of Medicine from Dartmouth Medical School in 1835. He commenced practice in Rutland, Mass., in 1836, but three years later came to Danvers and settled. His residence is on Elm Street, near the Essex depot. He became a member of the Massachusetts Medical Society in 1840.

J. W. SNOW, born in Eastham, Mass., October 10,

1820. Studied medicine at Harvard Medical School and Hospital. Graduated at Pittsfield College; commenced practice at Liverpool, Nova Scotia, in 1847; settled in Danvers, January 1, 1850; removed to Saco, Me., in 1867, and shortly after to Boston, where he now resides.

DR. P. M. CHASE was born in Bradford, Mass., May 11, 1828; entered Phillips Academy, Andover, in 1847; attended a medical course at Woodstock, Vt., in 1853; was a pupil of Dr. H. B. Fowler, of Bristol, N. H.; entered the Medical Department at Dartmouth College in 1854, and in 1855 entered Harvard Medical School, and graduated from Harvard Medical College in 1857; located at Danvers as practicing physician in 1857; was commissioned examining surgeon for recruits in the Rebellion in 1861; in 1874 was commissioned United States Examining Surgeon for Pensions; in 1875 was commissioned surgeon in the Eighth Regiment, M. V. M.; was a Democratic candidate for State Senator in 1874-75. He died at his residence, corner of Locust and Oak Streets, January 4, 1887.

LEWIS WHITING, homeopathist, was born in Hanover, Mass., January 24, 1832; he graduated from the Bridgewater Normal School, and taught school till his health failed; began the study of medicine at Bellevue Hospital, N. Y., in 1861; was afterwards two years in the navy as surgeon's steward; continued his studies in 1864 at the College of Physicians and Surgeons, in New York, and graduated in 1865 at the New York Homeopathic Medical College; settled in Danvers August, 1865. Residence on Putnam Street.

WILLIAM WINSLOW EATON, born in Webster, Me., May 20, 1836; graduated from Bowdoin College in 1861; began the study of medicine, in 1860, with Dr. Isaac Lincoln, of Brunswick; took his first and second course of lectures in 1861 and '62, at the Maine Medical School; was a pupil of Dr. Valentine Mott in the winter of '63 and graduated at N. Y. University in 1864; entered the military service as assistant surgeon of the Sixteenth Regiment, Maine Infantry, in 1862; was promoted to surgeon and served three years; began practice in South Reading, Mass., in 1865; removed to Danvers in April, 1867; was elected a member of the Maine Medical Association, and of the Massachusetts Medical Society in 1865. Residence on Holten Street, near the Peabody Institute. Dr. Eaton has served on the school committee, as trustee of Peabody Institute, and in other public capacities, and has been recently elected president of the Walnut Grove Cemetery corporation.

D. HOMER BATCHELDER, born in Londonderry, N. H., 1811, graduated at Berkshire Medical College in 1840, practiced thirteen years in Londonderry, then removed to Cranston, R. I., from which town he came to Danvers in December, 1876. His residence was at the Port, and after a few years he moved elsewhere and was succeeded by Dr. Frost.

EDGAR O. FOWLER was born in Bristol, N. H., May 7, 1853; graduated at New Hampton Institute; studied medicine with his father, Dr. H. B. Fowler, of Bristol, N. H.; was a student at Bellevue Medical College and Long Island Hospital, N. Y., in 1872 and 1873; graduated at Dartmouth Medical School with the degree of M.D. in 1873; commenced practice in Danvers in 1874; joined the Massachusetts Medical Society in 1875; died suddenly of heart disease, May 1, 1884.

WOODBURY G. FROST was born in Brunswick, Me.; graduated at Bowdoin College in 1860; taught school before and after graduation; received degree of A.M. in 1863, and the degree of M.D. in 1866; was acting assistant surgeon under Farragut in the W. G. B. Squadron; practiced medicine twenty years in Freeport and Portland, Me., and in Danvers, Mass.; served on school committees in Maine, and at present is on the Danvers board.

DRS. F. A. GARDNER and COWLES recently practiced here a short time.

DR. H. F. BATCHELDER, homeopathist, has lately settled.

LAWYERS.—At least three natives of North Danvers have risen to high judicial positions,—Samuel Holten, as probate judge of Essex County; Samuel Putnam, as justice of the Supreme Court of Massachusetts; and Rufus Tapley, as justice of the Supreme Court of Maine. Hon. Nathan Read came also to be a Maine judge. Arthur A. Putnam has been, if he is not still, judge of a local court in Worcester County. Judge Cummings of the Massachusetts Supreme Court; Frederick Howes of the Burley Farm; Abner C. Goodell, long Register of Probate at Salem; and Mellen Chamberlain, ex-chief justice of the Municipal Court of Boston, and now superintendent of the Boston Public Library, have lived in North Danvers. Wm. Oakes was a lawyer, and practiced somewhat in Ipswich, but devoted himself chiefly to botany. Among those who have practiced here and gone elsewhere are William G. Choate, A. A. Putnam and Horace L. Hadley. A few devoted martyrs still remain to pour on oil when life's waters are troubled. Their names,—J. W. Porter, E. L. Hill, D. N. Crowley and A. P. White. Stephen H. Phillips, at one time attorney-general of Massachusetts, has within a few years taken up his residence on a part of the estate which was formerly owned by his father. A number of distinguished lawyers, including Rufus Choate, practiced in that part of Danvers which is now Peabody, and their names, here purposely omitted, will be found in the sketch of that town elsewhere in this book.

THE DANVERS LUNATIC HOSPITAL.—That is the official name, and though it doesn't slide so easily from the tongue as insane asylum it doubtless is professionally more correct. The act of 1873 authorized the Governor to appoint commissioners to select and buy a site for a new hospital for the insane, to

be located in the northeastern part of the State. S. C. Cobb, of Boston, C. C. Esty, of Framingham, and Edwin Walden, of Lynn, were so appointed, and they selected Hathorne Hill, in Danvers, then owned by Francis Dodge, as the best location. From an æsthetic and hygienic point of view, the situation of the great institution is superb, and the beautifully kept grounds on the summit of the slightly hill add much to the attractiveness of Danvers, yet on practical grounds, the wisdom of placing the building so high has been questioned.

Work was commenced on the hill May 1, 1874. The hospital was ready for use in May, 1878. The cost of buildings, land, etc., at the latter date was \$1,599,287.49. The first superintendent was Calvin S. May, M.D., who served from May 13, 1878, to August 9, 1880. William B. Goldsmith, M.D., was appointed superintendent March 1, 1881, and resigned February 1, 1886, to accept a similar position at the Butler Hospital, Providence, R. I. During the year's absence of Dr. Goldsmith in Europe, July 15, 1883, to July 15, 1884, Henry R. Stedman, M.D., was acting superintendent. William A. Gorton, the present superintendent, was appointed on the date of Dr. Goldsmith's resignation.

The first board of trustees were Charles P. Preston, of Danvers, Daniel S. Richardson, of Lowell, Gardner A. Churchill, of Boston, Samuel W. Hopkinson, of Bradford, James Sturgis, of Boston. The present board, 1887, include Messrs. Preston, Richardson and Hopkinson, and also Harriet R. Lee, of Salem, Solon Bancroft, of Reading, Dr. Orville F. Rogers, of Boston, Florence Lyman, of Boston.

Dr. May was treasurer as well as superintendent. After his resignation the offices were separated, and Stephen C. Rose, of Marblehead, was appointed treasurer. He served from August 9, 1880, to September 1, 1882, when his successor, Charles H. Gould, of Danvers, who at present holds the office, was appointed. There are now, July, 1887, in the institution seven hundred and fifty patients. The receipts for the past year were \$151,598.95; payments, \$149,887; balance in favor of the institution, \$1711.95. The coal bill was about \$2500.

The officers at the hospital, 1887, are as follows: superintendent, William A. Gorton; lady physician, Julia K. Carey; first assistant physician, Edward P. Elliot; second assistant, Milo A. Jewett; third assistant, Arthur H. Harrington; treasurer, Charles H. Gould; steward, Nathaniel W. Starbird, Jr.; clerk, C. A. Reed; engineer, G. A. Lufkin; farmer, S. S. Pratt.

LITERARY SOCIETIES.—Probably the first was the "New Mills Lyceum," organized December 24, 1832. Its original members were Wm. Francis, Alfred Porter, J. P. Harriman, Edward Stimpson, Hathorne Porter, Samuel McIntire, Jr., Benj. Porter, Ang. Fowler, Jere. Page, Jr., Wm. Black, Wm. Endicott, Wm. Cheever, Edward Perry, Wm. Chaplin, David

Taylor, John Perkins, Samuel D. Pindar, H. G. Bixby, Moses W. Wilson, Edward D. Verry, Joseph Merrill.

The meetings were held in the school-house or Baptist vestry. Many of the young men who became conspicuous in the anti-slavery movement "learned to talk" in this debating club.

Nearly fifty years ago the North Danvers Lyceum used to hold its meetings in the hall of the old tavern, which hall was part of the mansion once standing on Folly Hill. On one side sat the ladies, on the other the gentlemen. The dignitaries, chief among whom were the ministers, Dr. Braman and others, sat at the head of the hall. Just how long the Lyceum continued its existence cannot be stated, but that for a time its meetings were the scenes of many vigorous and beneficial discussions on all sorts of topics, and by men who were no mean gladiators in such combats there is ample testimony. Mrs. Philbrick has preserved this interesting notice :

"The question for debate on Wednesday evening, December 25th, provided there be no lecture is—

"Will the present pressure in business on the whole be a benefit to the community?"

"DISPUTANTS.

I. P. Proctor,	} <i>Affirmative.</i>	O. A. Woodbury,	} <i>Negative.</i>
J. D. Philbrick,		Otis Mudge.	

"NORTH DANVERS, December 18, 1839.

"MR. PHILBRICK :

"At a meeting of N. D. Lyceum you were chosen one of the Library Committee for coming season.

"I. P. PROCTOR, Secretary."

The BOWDITCH CLUB, which had its origin among the young men of Putnamville, grew to a flourishing and very useful existence, and lived far longer than such societies usually do. Its first meetings were held in the Putnamville school-house in 1857, and one of its original members and most enthusiastic supporters has informed the writer that so earnestly were questions debated that after adjournment certain members who lived at the Port would be accompanied and argued with all the way home.

The club held its meetings at the Plains after 1858 or 1859, and in 1870 moved into very comfortable quarters in the Bank Building. A half a dozen years later it died the inevitable slow death of its kind. It has left a fine record, and was long an efficient agency in the promotion of culture. The club maintained an annual lecture course, before the Peabody free course, and brought here the best talent to be had. Its own entertainments were of a high tone and always interesting. The "Bowditch Club Dinner" was long a feature of each winter, and a "picnic" was held each summer. It would be well, indeed, for the town, were just such another society in existence to-day.

The Holten Lyceum, Wadsworth Association, and perhaps other societies, have had their day and ceased to be, at the Centre. A number of others might be mentioned, the Shakespeare Club, the Atlas Society, etc., etc.

The Danvers Scientific Association was organized September 27, 1882, and has held fortnightly meetings at Peabody Institute. The Sawyer Club is an active literary and social organization composed principally of members of the Universalist Society.

THE DANVERS WOMEN'S ASSOCIATION.—On the 18th of April, 1882, a number of ladies met with Miss A. L. Page, under a call to all interested in forming a society among the women of Danvers for consideration of matters of common interest, furtherance of woman's work, general improvement and social enjoyment. One week later, the first regular meeting was held at Miss Shepherd's, where, also, officers were elected and a code of by-laws adopted, under the name of the "Danvers Women's Association;" and until November following, meetings were held in private houses. Then the Grand Army Hall was used until January 1, 1884, when the Association took and fitted rooms especially for its own use, in the Ropes building. Upon the completion of the new post-office building it moved into its present quarters, comprising the whole of both upper floors. The membership of the Association has been for some time necessarily limited to one hundred and twenty, and the number is always full. Meetings have been regularly held on Tuesday afternoons, for seven months each year, at which instructive papers or talks have been given, usually by friends from out of town. Three times each winter "social teas" have been held, to which gentlemen have been invited.

To a remarkable degree the club has been successful in its aim towards "general improvement and social enjoyment," and in tending to break down whatever prejudices or exclusiveness naturally clung to the several religious societies it has been a potent influence in the right direction. Mrs. Harriet L. Wentworth has been its president from its formation. The other officers at present (1887) are: Vice-Presidents, Mrs. E. A. Spofford, Mrs. C. E. Whipple. Treasurer, Mrs. V. A. Burrington. Secretary, Miss Mary W. Nichols. Directors, one year, Miss Maria L. Fowler, Mrs. Sarah D. Merrill, Mrs. Abby Hutchinson, Mrs. Alice G. Richards. Two years, Mrs. Mary L. Ewing, Mrs. Julia S. Spalding, Mrs. Hattie R. Keith, Miss Isabel B. Tapley.

SECRET SOCIETIES.—They are a small legion. Yet let no man with a new "improved" or "ancient" or otherwise peculiar "order" hesitate to come. There are still plenty of "joiners."

Free Masonry goes back nearly a hundred and ten years in Danvers, to the organization of the "United States Lodge," May 1, 1778. It ante-dated the Essex Lodge of Salem by one year. Among the members of the "United States" were Samuel Page, Jethro Putnam, Daniel Squiers and the famous drummer of New Mills, Richard Skidmore.

The latter was Tyler, and the jewels and regalia were destroyed at the burning of his house in 1805. The lodge had ceased to hold regular meetings be-

fore this, its decay being attributed to the enlistment of so many of its members in the Revolution. A new lodge—the Jordan Lodge—was established in 1808, the meetings of which were held many years at Berry's tavern, but during the anti-masonry excitement, from 1825 to 1835, meetings were held in South Danvers, and only often enough to preserve the charter. The furniture, regalia, etc., were moved there, and when regular meetings were resumed the lodge kept and has since retained its establishment in South Danvers (Peabody). Many North Danvers Masons went thither until 1863, when Amity Lodge was established here and provided itself with the comfortable quarters in the Bank building, which are exclusively used for secret society purposes. The first regular communication of Amity Lodge was held October 26, 1863. Seven years later thirty-three of the members petitioned for a new lodge, and the present Mosaic Lodge, which was chartered October 30, 1871, was the result.

The Holten Royal Arch Chapter was constituted March 12, 1872.

There is but one lodge of Odd Fellows,—Danvers Lodge, Number 153. It was instituted September 13, 1870.

The following list of other societies is perhaps not full; the date is that of establishment:

Ward Post 90, G. A. R.....	June 8, 1869
Agawan Tribe, Imp. Order of Red Men.....	Feb. 24, 1875
Fraternity Lodge, Knights of Honor.....	Mar. 14, 1877
Arcadian Council, No. 249, Royal Arcanum.....	Feb. 16, 1879
Danvers Union Equitable Aid, No. 28.....	Nov. 29, 1879
Danvers Lodge, A. O. of United Workmen.....	May 28, 1881
Tuesday Evening Aid Society.....	Oct. 24, 1881
Hawthorne Council, No. 755, Legion of Honor.....	Oct. 1881
State Grand Union Equitable Aid.....	May 15, 1882
Ward Relief Corps, No. 12 (Women).....	April 12, 1883
Waukegan Tribe, No. 16, Imp. Order of Red Men.....	April 3, 1886
Daughters of Pocahontas.....	1887

CHAPTER XXXIX.

DANVERS—(Continued).

CIVIL HISTORY.

OLD OFFICERS.—Under the act of February 13, 1789, any town might "give liberty for swine to go at large during the whole or part of the year," provided they were yoked throughout spring and summer, and "constantly ringed in the nose," the legal yoke to be "the full depth of the swine's neck, above the neck, and half as much below the neck, and the soal, or bottom of the yoke full three times as long as the breadth or thickness of the swines." To see that the laws were enforced, officers called "hog-reeves" were regularly elected until 1827. Many honorable and well-known men were incumbents of this office, seemingly not alluring to ambition. Israel

Hutchinson, Jonathan Osborn and Jonathan Trask were on the first board.

Daniel Rea was, in 1752, commissioned "to take care that ye Laws Relating to ye Preservation of Deer be observed." "Deer-reeves" were chosen from 1765 to 1797; the first, William Poole and George Wiatt; the last, Eleazer Putnam and Timothy Fuller.

A Sealer of Weights and Measures was first chosen in 1759, and but for the resignation of Francis Symonds, of the Bell Tavern, his posterity, instead of the descendants of Joseph Pairpont, might now claim the ancestral honor of having first adjusted the pints and pecks of the town to legal standard.

Sealers of Leather were chosen from the very first, and the office was not altogether discontinued until within a few years. Israel Cheever and James Upton were the first leather measurers. Deacon S. P. Fowler has in his possession one of the old iron seals mentioned in this memorandum:

"June 18, 1765. Two Sett of Marks or Seals, was Provided at the Cost of the Town for Sealing of Leather according to the Law of the Province and the same delivered to the Sealers of Leather for the Present year, the Tees are for Sealing of Tanned Leather, and the Cees for Curried Leather. By order of Selectmen.

"ARCH. DALE, T. Clerk."

"Wardens" were elected from 1761 to 1790. The first to hold that office were Jeremiah Page, Bartholomew Rea, Gideon Foster, and Joseph Osborne; and the last, Benjamin Proctor and Oliver Putnam.

The last "clerks of the market," chosen in 1800, were Joseph Osborn, Jr., Gideon Foster, Sannel Page and Nathaniel Putnam, Jr.

Whether or not it was common for the selectmen to appoint sextons, the only record of such appointments is in 1821, the appointees being Isaac Munro, Bartholomew Dempsey and William Johnson.

From 1752 to 1791 "haywards" were annually chosen. Jonathan Putnam and John Osborn were the first; Jno. Dodge and Gideon Putnam the last. That hay-scales were not in existence here earlier than 1770, witness the following interesting petition:

"The Petition of Francis Symonds to the Selectmen of Danvers for the Present year 1770 Signifieth that they grant him the following Request on the following Conditions Namely that he may Erect a Convenient pair of Skails or Stilyards that will answer to way Cart or Sled Leads of hay that are Bought and Sold in our Markets, and that Said Selectmen Enter it in our Said Danvers Town Book.

"That no other Person within two miles of the Petitioner shall have the Liberty or Grant from us to Entercept him by Entering the like or any Skails or Stilyards for said purpose for Twenty year provided and it is understood that said Symonds hath this Grant allowed him by us the said Select Men on these Conditions That he keep said Skails or Stilyards in good order and see them well fended and that he Charges no more for his waying hay or anything Ells Then the Comon Price Now Gentlemen as I trust you will Observe the need we have of such a Convenience and how Likely to Benefit our Nighbourhood for which Reason I trust you will due it as well as this to oblige your humble Servant. Signed Francis Symonds Danvers June 17th 1770.

"WILLIAM SHILLABER
"JONATHAN BUNTON
"JOHN PRESTON.
"JOHN PUTNAM.

"The four Persons Above named was Select Men of the Town of Dan-

vers for the year 1770; and I have Recorded the above in the Town Book According to their order.

"Att: SAM: HOLTEN JUN T. Cler.

Captain Jonathan Ingersoll, Benajah Collins and Samuel Page were chosen in 1811 "to consider the expediency of the Town erecting hay-scales," and their report sets forth the need of such scales near the south meeting-house, "and we also find that a considerable quantity of hay is annually purchased on the road leading from the plains (so-called) to Salem, and that a hay-scale erected in some suitable place on that road would make it very convenient for the inhabitants of that part of the Town, and further, we find from the best information we can obtain that the expense of erecting one hay-scale with all the apparatus thereto will amount to about one hundred and seventy-five dollars."

The acceptance of this report was doubtless the origin of certain massive arrangements of beams, tackle and steel-yards, which, within the memory of older citizens, stood nearly in front of the Baptist Church at Danversport, and which weighed whatever was driven beneath by lifting wagon and load bodily from the ground. The selectmen were, in 1836, instructed to sell "the Hay Scales at the Neck."

Among those who were licensed to knock down the goods and chattels of their friends and neighbors under the auctioneer's hammer in the first quarter of this century were Sylvester Proctor, John Fowler, Benjamin Porter, Captain Thomas Putnam, Eleazer Putnam, Joseph Shed, Porter Kettell and Stephen Upton. Dr. Shed was an auctioneer from 1818 nearly or quite all the time to his death, in 1853. Those who began service in the second quarter were William D. Joplin, Hathorne Porter, Edward Stimpson, Squires Shove, Daniel P. Clough, Thomas Trask; since 1850, Richard Hood, William Dodge, S. D. Shattuck, Alfred Porter, John A. Putnam, Charles H. Rundlett, William B. Morgan, George Faxon, T. P. Conway.

The tax collectors of the early years of the town glad enough doubtless to meet with ready payment in any sort of money, were nevertheless bothered to reduce the several kinds of currency, silver and continental notes of old and new issues, to a common standard. Distraining and tax sales were rare, and abatements common. The assessors left short minutes of their reasons for abatement, such as "Gone," "Poor and dead," "G. P's dam gave way," "Under captivity by the Indians," "Taxed twice," "Taxed wrong," "Old and lost his faculty," "Poor widow," "Being gone to sea fishing," "Being not well," "Broke his leg," "Not 16 years old."

A move was made as early as 1813 towards the creation of a Board of Health. At that time certain persons asked the town to petition the Legislature for authority to elect such officers. The proposition was dismissed, however, and not till nearly twenty years later, 1832, was the first board chosen. Its

members were Benjamin Jacobs, Oliver Saunders, J. W. Proctor, Thomas Cheever, Samuel Preston, Joseph Stearns, Jeremiab Putnam, Robert S. Daniels and Richard Osborn. Since then a Board of Health have been annually chosen.

TOWN CLERKS AND RECORDS.—The records of the town clerks have reached the thirteenth volume. As a whole, they have been kept remarkably well. A good recording officer must have continually in mind the fact that the writing will outlive the writer and must preserve in his records a full and clear statement of events which shall be of use when they can no longer be aided by the memory of any. Such true quality was possessed by our earliest town clerks, and the spirit has been, for the most part, transmitted through the line. In one hundred and thirty-five years of town life there have been twenty different clerks, the average length of whose terms is about six and a half years. Since 1800 there have been but seven, the terms of three of whom comprise seventy-three years. Here follows a complete list of

TOWN CLERKS.

1752-53. Daniel Epes, Jr.	1777. Samuel Flint.
1754-56. James Prince.	1778-86. Stephen Needham.
1757. Benjamin Prescott, Jr.	1787. Jonathan Sawyer.
1758-60. James Prince.	1788-90. James Porter.
1761. Benjamin Prescott, Jr.	1791-94. Gideon Foster.
1762. Gideon Putnam.	1795-1800. Joseph Osborn, Jr.
1763. Thomas Porter.	1801-28. Nathan Felton.
1764-66. Archelaus Dale.	1829-34. Benj. Jacobs.
1767. Thomas Porter.	1835-53. Joseph Shed.
1768-71. Samuel Holten, Jr.	1854-55. Nathan H. Poor.
1772. Gideon Putnam.	1856. Edwin F. Putnam.
1773-75. Samuel Holten, Jr.	1857-85. A. Sumner Howard.
1776. Stephen Needham.	1886. Joseph E. Hood.

Mr. Howard's twenty-eight years is the longest service, and was appropriately recognized by appreciative resolutions when he declined to serve longer. Mr. Poor, who was clerk of the old town at the time of division, has ever since been retained as clerk of South Danvers and Peabody. Before the building of the town-houses the records followed the abode of the clerks. A small projection in front of one of the houses where the old Ipswich Road crosses the Andover turnpike, and begins to climb Hog Hill, is recalled by a few aged people as the headquarters of Nathan Felton, whom they remember as an old man dispensing the rude justice of a country squire. Much of biographical interest might and ought to be written of many of these town clerks, but space here forbids. Perhaps the model clerk of all was Dr. Shed, a man who evidently loved to make his records clear and beautiful. He was a physician of the South Parish, residing on the main street opposite and a little below the old bank building, where he also had an apothecary store. Dr. Shed was a justice of the peace, and he drew and acknowledged most of the deeds by which his fellow-citizens made their real-estate conveyances. His death was formally announced at a meeting in Granite Hall April 11, 1853,

when Dr. Hunt presented resolutions of regret and respect, and the selectmen and other town officers were directed to attend, in official capacity, the funeral.

Up to the annual meeting of 1887, the town has held nine hundred and forty meetings. Of this number, 309 were held in the several meeting-houses of the First or North Church (of which number 25 were in the "Brick Meeting-house," and 22 at "Village Hall," the basement of the present meeting-house), 293 were held in the South Meeting-house, 2 in school-house No. 5, 17 at Liberty Hall, 2 at Chapman's Tavern, 4 at the hall of Benjamin Goodridge, 96 at Union Hall, 39 at Granite Hall (vestry of the Maple Street Church), 172 in the Town-Hall, 6 at places not named. One of the meetings at "Liberty Hall, in the house occupied by Geo. Southwick, Jun., Innholder," was called there in 1828 by reason of the refusal of the proprietors of the South Church to allow the use of their house, and at this meeting a familiar parliamentary form was slightly but pungently varied; it was voted "that the communication from the Proprietors of the South Meeting-house pass under the table."

The first attempt at a systematic index of the records was made in 1832. Then the selectmen were directed to have made a "digested index of the town records from the commencement thereof in a book specially for this purpose, with reference to the volume and page in which the subject may be found." They were to allow such compensation for the work as when completed they should judge it worth. Nine years later, on petition of J. W. Proctor and others, the index was brought up to date, and it was then made the duty of the clerk to make an annual index. Measures were taken in 1846 "for keeping the records in one office, rather than in separate places, as now kept." But the old indexes have been found to be imperfect, and, with the accumulated records of later years, need has been felt of a new index, based upon a thorough and systematic overhauling of the originals. A few years ago J. W. Porter, J. A. Putnam and I. W. Andrews were appointed to take the matter in hand. They consulted at first and from time to time with William P. Upham, an expert in such matters, and obtained the services of Miss Helen Tapley to do the practical work. The town clerk's records have all been thus indexed, and it is safe to say that no other town can surpass the accuracy and general excellence of this work, and but few can equal it. A new vault has been constructed for files and plans in the basement, and the old one for ordinary use has been much enlarged.

MODERATORS.—From 1752 to 1887, inclusive, thirty-five different men have presided over the one hundred and thirty-five annual town-meetings. A list of these moderators arranged chronologically according as their names first appear, with subsequent years of service, if any, given, is as follows, the right

hand column showing at a glance the total service of each:

	Years
Daniel Eges, Esq., 1752, '53.....	2
Capt. Thos. Porter, 1754.....	1
Daniel Eges, Jr., Esq., 1755, '56, '57, '59, '60, '63, '66, '67.....	8
Samuel Flint, 1758.....	1
Thomas Porter, 1761, '62, '63, '71, '72.....	5
Deacon Malachi Felton, 1764.....	1
Samuel Holten, Jr., 1768, '81, '84, '86, '87, '89, '90, 1796-1812.....	24
Gideon Putnam, 1769, '79, '83, '85, '93, '94, '95.....	7
Archelans Dale, 1770, '73, '76.....	3
Capt. Wm. Shillaber, 1774, '75, '77, '78, '88, '91, '92.....	7
Anos Putnam, 1780, '82.....	2
Samuel Page, 1813, '14.....	2
Dr. Andrew Nichols, 1815, '16, '17.....	3
Dr. Joseph Shed, 1818.....	1
Dr. George Osgood, 1819, '21, '25, '35.....	4
Capt. Thos. Putnam, 1820.....	1
Nathan Poor, 1822, '23, '24.....	3
Robert S. Daniels, 1826.....	1
Elias Putnam, 1827, '29, '31.....	3
Lewis Allen, 1828, '36, '38, '50, '52, '54.....	6
John W. Proctor, 1830, '32, '34, '36, '38, '40.....	6
John Preston, 1833, '37.....	2
Samuel P. Fowler, 1839, '43.....	2
Abel Nichols, 1841.....	1
Daniel P. King, 1842.....	1
Jonathan Shove, 1844.....	1
Moses Black, Jr., 1845, '47, '51.....	3
James D. Black, 1849, '53, '55, '57, '65.....	5
Israel W. Andrews, 1856, '70, '77.....	3
Wm. Endicott, 1858, '59, '62, '63, '66, '67, '68, '69.....	8
A. A. Putnam, 1860, '61.....	2
Charles P. Preston, 1864.....	1
George Tapley, 1871, '72, '74, '78, '79, '80, '81.....	7
George J. Sanger, 1873, '75, '76, '82, '83, '84.....	6
Daniel N. Crowley, 1885, '86.....	2
Alden P. White, 1887.....	1

It may be noticed with what regularity honors alternated from say, 1826, to division, 1856, the office being held by north parish men odd years, and by south parish men even years.

TREASURERS.—There have been from 1752 to 1887, inclusive, twenty-one treasurers of the town, as follows:

	Years
James Prince, 1752, '53.....	2
Samuel King, 1754.....	1
Joseph Osborne, 1755, '56.....	2
Cornet Samuel Holten, 1757, '58.....	2
Joseph Southwick, 1759.....	1
James Smith, 1760-69.....	10
Thos. Porter, 1770-72.....	3
Jeremiah Page, 1773, '74.....	2
Stephen Proctor, 1775-83.....	9
Gideon Putnam, 1784-88.....	5
Samuel Holten, 1789-1812.....	24
Samuel Page, 1813, '14.....	2
Ward Pool, 1815-18.....	4
Edward Southwick, 1819-21.....	6
Ebenezer Shillaber, 1825-31.....	7
Robert S. Daniels, 1832, '34-48.....	9
Stephen Lpton, 1833-40.....	8
Abner Sanger, 1849.....	1
Francis Baker, 1850-55.....	6
William L. Weston, 1856-82.....	27
A. Frank Welch, 1884-87.....	4

REPRESENTATIVES.—The following men have represented Danvers in the General Court, arranged by consecutive years after 1802, when the town began to send several representatives annually:

Daniel Epes, Jr., 1754, '55, '56, '57, '65, '67.
 Daniel Gardner, 1759.
 Thomas Porter, 1760, '61, '62, '63, '65.
 John Preston, 1761.
 Samuel Holten, Jr., 1768, '69, '70, '71, '72, '73, '75, '80, '87.
 Wm. Shillaber, 1775.
 Samuel Epes, 1776.
 Jeremiah Hutchinson, 1777, '78, '79, '80-83, '85-88.
 Gideon Putnam, 1784.
 Israel Hutchinson, 1789, '91-95, '97, '98.
 Caleb Low, 1790.
 Gideon Foster, 1796, '99, 1800-2.
 1804.—Gideon Foster, Capt. Samuel Page, Dr. Nathan Read.
 1805.—Gideon Foster, Samuel Page, Nathan Felton.
 1806.—Gideon Foster, Samuel Page, Nathan Felton.
 1807.—Nathan Felton.
 1808.—Samuel Page, Nathan Felton, Squiers Shove.
 1809.—Samuel Page, Nathan Felton, Squiers Shove.
 1810.—Samuel Page, Nathan Felton, Dennison Wallis.
 1811.—Samuel Page, Nathan Felton, Dennison Wallis, Daniel Putnam.
 1812.—Samuel Page, Nathan Felton, Dennison Wallis, James Foster.
 1813.—Samuel Page, Nathan Felton, Dennison Wallis, James Foster.
 1814.—Samuel Page, Nathan Felton, Sylvester Osborn, Hezekiah Flint.
 1815.—Nathan Felton, Sylvester Osborn, Hezekiah Flint, William P. Page.
 1816.—Nathan Felton, William P. Page, Frederick Howes, John Swinerton, Jr.
 1817.—Daniel Putnam, Sylvester Osborn, Frederick Howes, Thomas Putnam.
 1818.—Frederick Howes.
 1819.—Nathan Felton, Dennison Wallis, Daniel Putnam, Thomas Putnam.
 1820-21.—Nathan Felton.
 1822.—William Sutton.
 1823.—Ebenezer Shillaber, John Page, Nathan Poor, Nathaniel Putnam.
 1824.—Nathan Poor.
 1825.—John Page, John Endicott.
 1826.—Jonathan Shove, Rufus Choate.
 1827.—Rufus Choate, Jonathan Shove.
 1828.—Jonathan Shove, Nathan Poor, Robert S. Daniels.
 1829.—Jonathan Shove, Elias Putnam.
 1830.—Elias Putnam, Jonathan Shove, Robert S. Daniels, Nathan Poor.
 1831 (May).—Nathan Poor, John Page, William Sutton, John Preston.
 1831 (November).—John Page, John Preston, Nathan Poor, Jonathan Shove.
 1832.—John Preston, John Page, Ebenezer Shillaber, Jonathan Shove.
 1833.—Jonathan Shove, Henry Cook, John Preston, John Page.
 1834.—John Preston, Henry Cook, Andrew Lunt, Eben Putnam, Jacob F. Perry.
 1835.—Jacob F. Perry, Andrew Lunt, Daniel P. King, Allen Putnam, Joshua H. Ward.
 1836.—Joshua H. Ward, Jacob F. Perry, Andrew Lunt, Caleb L. Frost.
 1837.—Caleb L. Frost, Eben Putnam, Samuel P. Fowler, Lewis Allen.
 1838.—Lewis Allen, Samuel P. Fowler, Henry Poor, Abel Nichols.
 1839.—Joshua H. Ward, Henry Poor, Samuel P. Fowler, Allen Putnam.
 1840.—Allen Putnam, Fitch Poole.
 1841.—Fitch Poole, Samuel Preston.
 1842.—Daniel P. King, Samuel Preston.
 1843.—Frederick Morrill, Joshua Silvester.
 1844.—Richard Osborn, Henry Fowler.
 1845.—Henry Fowler, Richard Osborn.
 1846.—Henry Fowler, Elijah W. Upton.
 1847.—Elijah W. Upton, Joshua Silvester.
 1848.—William Walcott, William Dodge.
 1849.—A. A. Abbott, John Hines.
 1850.—William Walcott, Otis Mudge, Henry A. Hary.
 1851.—John Hines, Philemon Putnam, Alfred A. Abbott.
 1852.—William Walcott.
 1853.—David Daniels, Philemon Putnam, James P. King.
 1854.—Joseph Jacobs, Francis Dodge, Israel W. Andrews.
 1855.—Israel W. Andrews, Eben S. Poor, Alonzo P. Phillips.

1856.—Arthur A. Putnam, Israel W. Andrews, Richard Smith.
 1857-58.—Francis P. Putnam.
 1859.—Arthur A. Putnam.
 1860.—George Tapley.
 1861-62.—James W. Putnam.
 1863-64.—Charles P. Preston.
 1865-66.—Simcon Putnam.
 1867-68.—Edwin Mudge.
 1869.—Abbott Johnson, of Wenham.
 1870-71.—George H. Peabody.
 1872-73.—George J. Sauger.
 1874.—John L. Robinson, of Wenham.
 1875-76.—Charles B. Rice.
 1877.—Israel W. Andrews.
 1878.—Charles B. Rice.
 1879.—Henry Hobbs, of Wenham.
 1880-81.—Gilbert A. Tapley.
 1882.—Alonzo J. Stetson.
 1883.—Andrew H. Paton.
 1884.—N. Porter Perkins, of Wenham.
 1885-86.—Malcolm Sillars.

To the great convention called in 1820 to make the first revision of the State Constitution, in which Daniel Webster, Judge Story, Leverett Saltonstall, Josiah Quincy and others were prominent figures, Danvers sent Caleb Oakes, John Page, Ebenezer Shillaber and Ebenezer King. At the gubernatorial election of 1851 voters were called upon to decide whether or no a convention should be called for another revision of the Constitution. The citizens of this town said "No," 681 to 556. The next year on the same question, "Yes," 638 to 636; in each case the voice of the town was the voice of the State. Delegates were chosen to meet at the State House, May 4, 1853. In this convention were Rufus Choate, Sidney Bartlett, Nathan Hale, George S. Hillard and others from Boston. Robert Rantoul, Marcus Morton, Jr., Henry K. Oliver, John B. Alvey, R. H. Dana, Jr., Asahel Huntington, Otis P. Lord, Charles W. Upham and others from Essex County. John A. Putnam, now of Danvers, represented Wenham. At the election, March 7, 1853, the vote of Danvers was as follows:

Whole number of votes	736
Necessary to a choice.....	369
Milton P. Braman had	399
Samuel P. Fowler had	397
Alfred A. Abbott had.....	370
Andrew Nichols had	300
James D. Black had	297
Charles Estes had	289

Sixteen other candidates had from 1 to 39. Messrs. Braman, Fowler and Abbott were elected delegates. Each of the eight propositions submitted by the convention to the people were rejected by this town at the fall election of 1853 by an average vote of about 715 nays to 515 yeas.

Selectmen.—The following is a complete list:

1752.—Daniel Epes.	Captain Thomas Flint.
Captain Samuel Flint.	Corntt. Samuel Holten.
Dracou Cornelius Tarbill.	Samuel King.
Stephen Putnam.	Lieut. David Putnam.
Samuel King.	Ens. John Procter.
Daniel Gardner.	Jasper Needham.
Joseph Putnam.	
1754.—Daniel Epes, Jr.	Jasper Needham.
1755.—Daniel Epes, Jr.	

- Samuel Putnam.
James Prince.
Ebenezer Goodale.
1755.—Daniel Epes, Jr.,
Jasper Needham.
Capt. John Proctor.
James Prince.
Capt. Samuel Flint.
1756.—Daniel Epes, Jr.
Daniel Marble.
Capt. Thomas Flint.*
Deacon Cornelius Tarble.
James Prince.
1757.—John Preston.
Francis Nurse.
Daniel Gardner.
Benj. Prescott, Jr.
Joseph Southwick.
1758.—James Prince.
Nathan Procter.
Jasper Needham.
Bartholomew Rea,
Benj. Upton.
1759.—James Prince,
Capt. Samuel Flint.
John Epes.
Ezekiel Marsb, Jr.
Ebenezer Jacobs.
1760.—James Prince.
Jasper Needham.
John Epes.
John Nichols.
John Preston.
1761.—Samuel Holten.
Nathaniel Pope.
Abel Mackintire.
Lient. Saml. King.
Benj. Prescott, Jr.
1762.—Abel McFutire.
Benj. Russell, Jr.
Daniel Purrington.
Gideon Putnam.
Joseph Putnam.
1763.—Thos Porter.
Saml. Holten.
John Epes.
John Proctor, Jr.
John Preston.
1764.—Benj. Putnam.
Archalas Dale.
John Putnam.
Stephen Procter.
Benj. Moulton.
1765.—Benj. Moulton.
John Putnam.
Stephen Procter.
Jona. Buxton.
Arch. Dale.
1766.—Archelaus Dale.
Benj. Upton.
Jonathan Buxton.
John Swinerton.
Jonathan Tarble.
1767.—Samuel Holten, Jr.
John Epes.
Jonathan Tarbell.
Jonathan Buxton.
Ebenezer Goodell.
Gideon Putnam.
1768.—Jonathan Buxton.
John Epes.
Samuel Holten, Jr.
Ebenezer Goodell.
Gideon Putnam.
1769.—Samuel Holten, Jr.
Ebenezer Goodale.
Samuel Gardner.
William Shillaber.
Samuel King.
1770.—Saml. Holten, Jr.
Lieut. John Preston.
John Putnam.
Jonathan Buxton.
Capt. Wm. Shillaber.
1771.—Capt. Wm. Shillaber.
Jonathan Buxton.
Gideon Putnam.
Benj. Procter.
Samuel Holten, Jr.
1772.—Samuel Flint.
Wm. Shillaber.
Gideon Putnam.
Jonathan Buxton.
Benj. Procter.
1773.—Samuel Holten, Jr.
John Putnam.
Lieut. Arch. Putnam.
Benj. Porter.
Stephen Needham.
1774.—Samuel Holten, Jr.
Lieut. Arch. Putnam.
Wm. Poole.
Stephen Needham.
Jonathan Buxton.
1775.—Dr Saml. Holten.
Capt. Wm. Shillaber.
Capt. Wm. Putnam.
Stephen Needham.
Ezra Upton.
1776.—John Epes.
Wm. Shillaber.
Stephen Needham.
Ezra Upton.
Edmund Putnam.
1777.—Capt. John Putnam.
Capt. Samuel Flint.
Capt. Wm. Shillaber.
Stephen Needham.
Phineas Putnam.
Gideon Foster.
1778.—Stephen Needham.
Capt. Wm. Shillaber.
Benj. Procter.
Capt. John Putnam.
Phineas Putnam.
1779.—Colonel Enoch Putnam.
Ezra Upton.
Stephen Needham.
Major Samuel Epes.
James Prince.
1780.—Jona. Sawyer.
Daniel Putnam.
Capt. Joseph Porter.
Ezra Upton.
1781.—Capt. Joseph Porter.
Daniel Putnam.
Stephen Needham.
Samuel White.
Major Samuel Epes.
1782.—Stephen Needham.
Daniel Putnam.
Jonathan Sawyer.
Capt. Jos. Porter.
Capt. Gideon Foster.
1783.—Capt. Gideon Foster.
Daniel Putnam.
John Walcut.
Aaron Putnam.
Stephen Needham.
1784.—Stephen Needham.
Major Caleb Low.
Aaron Putnam.
Capt. Gideon Foster.
Daniel Putnam.
1785.—Jona. Sawyer.
David Prince.
Stephen Needham.
Daniel Putnam.
Col. Jeremiah Page.
1786.—Stephen Needham.
Stephen Putnam.
Daniel Putnam.
Capt. Jona. Procter.
Capt. Gideon Foster.
1787.—Jona. Sawyer.
Samuel Gardner.
Amos Tapley.
David Prince.
Timothy Leech.
1788.—David Prince.
Capt. Samuel Page.
Amos Tapley.
James Porter.
Stephen Needham.
1789.—David Prince.

One of the propositions for disposing of the new school building in the short-lived district No. 8 was to convert it to a lock-up and tramp-station, but the town then refused to believe itself sufficiently advanced in modern civilization to need a separate building devoted to such uses. Soon, however, 1864, accommodations for guests of the public, voluntary and otherwise, were fitted in the basement of the town-hall, and there for ten years some sin and vagrancy retired behind the bars. When in 1874, better conveniences were demanded, a part of the basement of Bell's Hall, on Maple Street, was fitted up. This past year, 1886, a considerable addition was made to the old brick school-house on School Street—the original building being now occupied by two companies of the fire department—and ample and respectable police headquarters have there been established, with plenty of room above for a local court,—when it comes. Michael J. Mead has been for some years chief of the small police force, which is efficient much beyond its numerical strength. William O'Neil presides over the station and dispenses the town's hospitality to certain of the traveling public.

CHAPTER XL.

DANVERS—(Continued).

THE CIVIL WAR.

AT twenty minutes past four o'clock on the morning of April 12, 1861, a shell from Sullivan's Island aimed at Fort Sumter announced the open defiance of rebellion. The loyal cities and towns of the North were alert for such tidings. About a week previously two of the selectmen of Danvers, William Dodge, Jr., and Charles Chaplin, had issued their warrant for a town meeting "to hear an act on the petition of A. A. Putnam and others to see if the town will raise or appropriate any money in aid of the families of such citizens of the town as may enlist to serve in the Volunteer Militia of the Commonwealth or take any action thereon." This is the first intimation on the town records of preparations for probable war. But the news from Sumter brought the citizens together sooner than the day appointed for town meeting. The first "war meeting" was held in the town hall, April 16th, and was crowded with earnest and enthusiastic men. Arthur A. Putnam, Esq., presided. In some recently written reminiscences he says, "the meeting, though stormy in applause and verbally bellicose, was very aimless and likely to end in talk alone until a modest and unfamiliar voice in the town hall reminded the assemblage that the meeting was not for eloquence, but enlistment." The voice was that of Nehemiah P. Fuller, who stepped forward to sign the company roll which Nathaniel A. Pope had received

permission from the State Department to recruit. At least one other name preceded Fuller's, that of Ruel B. Pray, who has the distinction of being the first recruit in a Danvers company; others followed that night, and in six days the roll was full and ready for organization. As the company was soon given the name of the Danvers Light Infantry, it will be spoken of by that name. Election of officers resulted as follows: Captain, Nehemiah P. Fuller; First Lieutenant, William W. Smith; Second Lieutenant, Ruel B. Pray; Third Lieutenant, William W. Gould; Fourth Lieutenant, D. W. Hyde. Captain Fuller, who was promoted during the war to major of the Second Heavy Artillery, was a son of Putnam Fuller, of this town, and a descendant of Lieutenant David, brother of General Israel Putnam, being a grandson of Major Ezra Putnam, one of the founders of Ohio. He had seen service in the Mexican War, and was just the man to command a company of willing but raw recruits. After the war he removed to Missouri, but returned here in broken health in the fall of 1880, and died February 3, 1881.

Immediately after the meeting of April 16th, some young men at the Plains took steps to organize another company. In the course of a week the number, fifty, were recruited, and met in the unfinished rooms of the Maple Street School-house, where the first lessons in drill were given by Benjamin E. Newhall. Organization was effected in due form, April 30th, in the Bank Hall, where the following officers were elected: Captain, Arthur A. Putnam; Lieutenants, Benjamin E. Newhall, Charles H. Adams, Jr., William J. Roome, George W. Kenney. Mr. Newhall not qualifying, the other lieutenants were each promoted one degree, and Elbridge W. Guilford was added.

Captain Putnam, then a lawyer here, now of Uxbridge, Mass., was a native of Danvers, a son of Hon. Elias Putnam. This year, 1887, he delivered the Memorial Day Address before an audience which included many survivors of his old comrades, and later published in the *Danvers Mirror* a full and interesting account of the history of his company up to the time of leaving for the front. Mr. R. B. Pray had previously printed a short sketch of Capt. Fuller's Company. A newspaper clipping says of Capt. Putnam that he had no previous military training, "but possessing that energy and spirit noted in the Puritan blood, will soon make himself a proficient commander."

No sooner had the two companies organized than the ladies of the town devoted their energies to the making of uniforms and other necessary clothing. Gothic Hall was the busy scene of their labors. The men who enlisted expected active service at once, and were eager for it. But the time which ensued between organization and final acceptance by the State authorities and assignment to a State camp extended from days to long weeks, and made it serious business

keeping the men together. Many of them had families to support, and while patriotism did not flag, the bread and butter question at home was quite as vital as the question of slavery a thousand miles away. There were no bounties at this time; it was only by constant and generous contributions of money and provisions that the men were encouraged to hold out. But by dint of much patient forbearance both companies were kept intact, and maintained thorough drill. Long practice marches were taken through neighboring towns, and charges were occasionally made at double-quick to dislodge an imaginary enemy on the top of Folly Hill. For some time the Light Infantry went into camp by themselves, at East Gloucester, such a move being deemed expedient. Captain Putnam's company used Berry's pasture, now the Trotting Park, for a training-field. The local newspapers of the day contain such items as these:

"On Sunday morning, May 19th, the two Danvers companies marched with drum and fife to the Maple Street Church, and in the afternoon they attended the Universalist Church.

"The appearance of the men, one company in grey, and one in blue, is described as having been remarkably fine."

"Tuesday, May 28th. The Putnam Guards, a well ordered company of 79 men, of an average age of 27 years, passed through our place this afternoon, on their way to Salem. Their motion was nimble, their action strong and their eye quick and piercing. They have been accustomed to toil and moderate fare without luxuries, and will do the State good service when summoned to the field."

Of the origin of the name of "Putnam Guards," Captain Putnam thus writes:

"Of visitors at Gothic Hall while the ladies, as before mentioned, were immersed in the manufacture of the uniforms, there came one day Mrs. Julia A. Philbrick, of Boston, who, warmed at the sight of the scene, went away carrying it as an impressive picture in mind. A few days later she addressed an appreciative letter to one of the chief workers, Miss Anne L. Page, and in it embraced a proffer in these pleasant words:—

"I have used my pen in your behalf, and to-day have the pleasure of informing you that, if your Company is called the *Putnam Guards*, they shall have a Banner worthy the name they bear. There is living in Peterborough, N. H., a most noble and patriotic lady, who bears that honored name, whose father, was born in Danvers, yes, beneath the very roof with the old General (that dear old home, the home of my childhood)—to this lady, Miss Catherine Putnam, you are indebted for this proffered benefaction."

"The proposition for the name was duly submitted to the Company, unanimously adopted and the Flag at once became a matter of joyous anticipation."

The presentation of the flag, May 22, 1861, was an event of great interest. A stand draped with the national colors was reared in front of the Bank Building, and during the exercises the Square and all the surrounding buildings were densely crowded with spectators. Mr. Nathaniel Hills, principal of the High School presided, and Hon. John D. Philbrick, then superintendent of schools in Boston, to whom this honor had been assigned by the donor of the flag, made the presentation speech. On the same occasion Rev. A. P. Putnam, then of Roxbury, a brother of the commander, presented each member of the company with a Bible, accompanying the act with an impressive address. The flag was of heavy silk, and a silver plate upon its oaken staff was thus inscribed:

"PRESENTED
to the
PUTNAM GUARDS
of
DANVERS, MASS.,
BY
MISS CATHERINE PUTNAM,
Daughter of a Son
of
DANVERS.
Our Birth-right is Freedom
and God is our Trust.
MAY, 1861."

It is now, and has been for many years, in the custody of John G. Weeden, one of the original members of the Guards. The Danvers Light Infantry were also given a reception before their departure for the State camp, on which occasion Rev. J. W. Putnam presented them with a silk banner in behalf of the citizens, and Allen Putnam, of Roxbury, in behalf of Miss Putnam, presented an elegant sash and sword to Captain Fuller. Side-arms were also presented to the officers by certain citizens.

It was nearly two months after the organization of the companies that they were finally called for by the State authorities. On June 11th, 1861, the Danvers Light Infantry were ordered to report at Camp Schouler, Lynnfield, and on June 24th the Putnam Guards reported at Fort Warren. The Light Infantry were assigned to the Seventeenth Volunteer Infantry, three years' men, as Company C, were mustered into the service of the United States July 22, 1861, and left for the front August 22d.

The Putnam Guards became Company I of the Fourteenth Volunteer Infantry, were mustered into service of the United States July 5, 1861, and left for the seat of war August 7th. The regiment was changed, January 1, 1862, to the First Massachusetts Heavy Artillery. It saw hard service and participated in engagements at Spottsylvania, North Anna, Tolopotomy, Cold Harbor, Petersburg, Strawberry Plains, Deep Bottom, Poplar Spring Church, Boydton Road, Hatcher's Run, Vaughn Road. The original members of both these Danvers companies may be determined by inspection of the list of soldiers which follow later on.

The first military funeral of the war, in Danvers, was that of Thomas A. Musgrave, of Captain Fuller's company, who died August 9, 1861, at the Lynnfield camp hospital. The whole regiment marched to the Universalist Church, where the services were held. Private William F. Guilford, a member of the Salem City Guards, was buried under arms a few weeks later from Dr. Braman's Church.

At the town meeting of May 25, 1861, which had been already called when news came of the attack on Fort Sumter, A. A. Putnam presided and Dr. Ebenezer Hunt presented a series of resolutions, which were adopted, one hundred and eighteen to three, in the following form,—the clergymen of the

town having first been added to the committee therein called for:

"WHEREAS, War has been forced upon us without justifiable cause by traitors whose avowed object is the subversion of the Government and the dissolution of the Union by armed resistance to Law, and whereas our Patriotic fellow-citizens have been barbarously slain while hastening to the defence of the Capitol at the call of the Chief Magistrate in pursuance of his solemn Oath of office, and whereas our flag has been insulted, and our existence as a nation put in peril, therefore,

"Resolved, By the citizens of Danvers, in town-meeting assembled, that we will co-operate, to the fullest extent in our power, with all the good citizens throughout the whole country, in prosecuting the war with such vigor as to bring it to a speedy close.

"Resolved, That animated by the glorious memories of the past, our duty to posterity, our love for the Union, our reliance upon a just God, in a righteous cause, we will devote our whole energies in the accomplishment of the object, regardless of its cost in treasure or in blood.

"Resolved, That in this Contest there can be no neutrality; whoever is not for us is against us; and that all bearing arms and not ranged beneath the flag of the Union, wherever found, shall be dealt with as traitors.

"Resolved, That the Treasurer of the town be authorized to borrow a sum, not exceeding Ten Thousand Dollars, for the uses of the town for the above purposes, which shall be designated as a War Fund. In order to carry out the above Resolutions it is further

"Resolved, That a committee consisting of the Selectmen of Danvers, together with Daniel Richards, John R. Langley, C. P. Preston, E. Hunt, S. P. Fowler (a committee appointed by the citizens to disburse the fund raised by Voluntary Contribution), and five other gentlemen be appointed to take into consideration all applications for aid consequent upon our citizens being called upon to enlist in the service of our Country, either during the time of Drilling in anticipation of being enrolled, or while in actual service, and the said Committee are hereby authorized and empowered to render such aid to the families of any such citizens as in their judgment is needful, by a draft on the Treasury of the Town, on the War Fund, signed by such a sub-committee as said Committee shall select; that said Committee shall hold stated and regular meetings as often as once in two weeks, of which due notice shall be given, and they may hold meetings at such other times as they may deem necessary and may make all such rules and regulations in reference to the disbursing of the money appropriated as a War Fund as may from time to time be deemed expedient.

"They recommend to fill the blank in the committee, by selecting the following gentlemen, who together with those above named will distribute the Committee in the various parts of the town, viz:

"Jesse W. Snow, Philemon Putnam, Nathaniel Tapley, Josiah Gray and John A. Sears. All of which is respectfully submitted."

Seven months after the first town meeting, another was called for December 19, 1861, to provide for aid to the families of soldiers agreeable to an act of the special session of the Legislature. Information was first desired as to the disbursement of the ten thousand dollars raised in May, and the committee were prepared with a report containing these items:

"There has been paid out for drilling \$1901.37. There has also been paid to one hundred and seventy-three families as aid in various sums of from one dollar to five dollars and a half per week, making in the gross amount \$8916.36. There is now due to families and undrawn one hundred and thirty-nine dollars, making the amount drawn from the Treasury \$9917.73. Of this sum your Committee estimate that the sum of five thousand-eight hundred dollars will be received from the Commonwealth."

"The Committee will also say that the number of families assisted at the present time is one hundred and forty-three, the amount now paid each family is from one to four dollars per week. Your Committee would further say, although the amount of money expended is a large sum in the aggregate, yet, when we consider the condition of many of the families of the Volunteers owing to the stagnation of business and the want of employment for several months previous to their enlistment, we think the wonder is that so little has answered for the purpose. If by even a greater sacrifice of property the Government of the Country is

rescued from the unscrupulous attacks of a widespread and atrocious rebellion, which threatens our very existence as a Nation, we ought to be exceedingly thankful:—at any rate, the tax-payers of the Town will have reason to feel that the old Town of Danvers, by encouragement of the enlistment of her patriotic sons, has not fallen from the reputation acquired in the times of the Revolution.

"And may God grant us a speedy and honorable peace. All of which is respectfully submitted. In behalf of the Committee.

"EBEN HUNT."

At an adjournment of this meeting \$5000 was appropriated for soldiers' aid, in accordance with the act of May, 1861, and \$500 additional to be expended under the authority of the committee appointed May 3d.

At the annual meeting, 1862, the finance committee recommended the adoption of annexed votes proposed by the chairman of the relief committee, which were, first, that a relief committee, like that of last year, be chosen for the ensuing year to aid in the distribution of the War Fund; second, that the sum of \$15,000 be raised and appropriated for aid to soldiers' families, under the statutes; and, third, that \$500 be placed at the disposal of the relief committee. These measures were all passed and the committee re-elected. \$1000 was at the same time added to the appropriation for the town's poor.

At a meeting held in midsummer, July 25, 1862, the Governor's call for one hundred and four volunteers was considered, and, agreeable to the expressed desire of a mass-meeting of citizens held ten days before, the matter of bounty was the chief object of action. The first offer of bounty here made by the town was on the adoption of J. D. Black's motion, 96 to 1, to pay \$125 "to whatever person may report himself to the selectmen of Danvers, upon his being or having been accepted into the United States service, as furnishing a part of our quota."

On August 4, 1862, the first draft was ordered, for 300,000 nine months men. Early in that month a town-meeting was held, at which it was first voted to continue the payment of bounty until our quota of volunteers was full, and to include also drafted men; but this action was reconsidered, and Henry Fowler, Wm. E. Putnam and the Selectmen were appointed "to wait upon the Governor and to ascertain if our quota can be reduced, to get further information in regard to the draft, and to report at the next town-meeting."

On the heels of this meeting came Lincoln's call for 300,000 more men. Immediately another warrant was posted, calling upon the citizens of Danvers to meet on Monday, August 25th, to consider the call. A motion that the selectmen open a recruiting office and pay \$100 bounty to each recruit volunteering and making one of the quota under the call, was successfully amended to \$125.

The committee appointed August 12th, to attempt to secure a reduction of the quota, presented a letter to the Adjutant-General in the following forcible and direct terms:

“To Hon. Wm. Schouler, Adjutant-General.

“DEAR SIR,—We, the undersigned, would represent that the town of Danvers has furnished the following volunteers for the war :

3 months men.....	37
3 years men, to June 1st, 1862.....	285
Salem Cadets, Fort Warren.....	10
Salem Light Infantry, Co. B.....	6
Under General Order No. 26.....	70
	398
3 months men re-enlisted.....	17
	381

“The Town has paid to Volunteers under General Order No. 26 Eight Thousand Seven Hundred and Fifty Dollars (\$8750). By the Adjutant-General's Report to the Leg. of 1862 the town of Danvers had furnished for the war Eight officers and Two hundred and fifty-six privates, giving one Volunteer to fifteen inhabitants of the town, under the State census of 1855.

“This proportion exceeds that of the towns of Beverly, Gloucester, Haverhill, Ipswich, Lawrence, Lynn, Marblehead, Newburyport, Salem and South Danvers, from 9 to 57 per cent.

“The ninety-nine Volunteers received and put into the service of the United States since last December makes the same disproportion between the town of Danvers and the towns above referred to, hold good.

“The assessors of 1861, in Danvers, mistaking the law on this matter, returned aliases on the Militia Roll, which materially increased our number liable to do military duty.

“The town of Danvers does not shrink from any duty imposed on her in this great crisis of our Country, neither will she fail to do her part in furnishing men to crush out this rebellion, but knowing from the above facts that the town has furnished more men in proportion to her inhabitants than the other large towns in the County, and feeling that the payment of the bounty to the thirty-four Volunteers required to fill the quota for Danvers of 104 men, will be burdensome beyond what strict equality would require of us, we ask, therefore, that the town, by furnishing seventy men under General Order No. 26, may be considered as having filled her quota.”

Respectfully submitted,

WILLIAM DODGE, JR.	} Selectmen of Danvers.
CHARLES CHAPLIN.	
AUGUSTUS FOWLER.	

Danvers, August 14, 1862.

Approved,
Wm. Schouler,
Adjt.-General.

In seventeen days, another meeting to act on propositions for more bounties, for three-years' men and drafted men, principals or substitutes. A motion made by Samuel Moore in the afternoon failed of passing, because but fifty-four voted for it, less than the by-laws required—it was hard work to get the requisite number together, so many were away during the war—but in the evening it passed, eighty to twelve, namely to pay one hundred and twenty-five dollars to each person, resident in town, who had enlisted for three years of the war, and was not already in receipt of a bounty, “provided said person has served nine months, or has been earlier discharged on account of injuries received in service; said bounty to be payable at the end of said volunteer's service.” It was immediately voted to extend the bounty to drafted men.

Busy times, these, for selectmen and voters. While this meeting of the 11th was in session a warrant for still another meeting had already been two days posted, the special object being the consideration of a matter, which was disposed of by the unanimous adoption, eighty-six voting, of these resolutions presented by W. L. Weston :

“WHEREAS, at a legal meeting of the town on the 25th day of August last, it was voted ‘to pay a bounty of \$125 to each recruit volunteering in the service of the United States, and making one of the town's quota under the call of the President for 300,000 military for nine months service,’ and

“WHEREAS, acting under the belief that the town might be called upon for a considerable number of recruits to fill this requisition, a successful effort has been made to raise a Company under Capt. A. G. Allen—said Company having made arrangements by which it is to form a part of the 8th Regt. now being recruited under Col. Coffin, and have already placed themselves in Camp, and

“WHEREAS, it now appears to be uncertain whether the men so raised will be required as part of the town's quota, thus rendering said vote inoperative,

“Therefore, in view of the patriotic action of the young men composing said Company, and that the faith of the town has been pledged to them and also in view of the fact that other calls for men may be made upon the town, it is hereby

“Voted, that the town will pay a bounty of 125 dollars to each resident of Danvers who has volunteered, or may volunteer as a member of Capt. A. G. Allen's Company, upon his having been accepted and sworn into the United States service.

“Voted, that the town Treasurer be and is hereby authorized to hire a sum of money sufficient to pay the bounties mentioned in the above vote.”

The names of the company here referred to, Company K, Eighth Regiment, nine months' men, mustered in October 1, 1862, and discharged August 7, 1863, will be found further on. The regiment sailed from Boston November 7, 1862, under Colonel Coffin, of Newburyport, for Newbern, N. C., and in June, 1863, was transferred to Baltimore, thence to Maryland Heights and experienced hard service in the pursuit of Lee after the battle of Gettysburg.

The adoption of the resolutions in regard to Captain Allen's company was the only business this meeting could in strictness consider. But there was a man present with something in his pocket to read, the man who in the first war town-meeting had voiced the determination of his fellow-citizens to stand by the government, who, long years before, had stood up to strike the first blow for temperance, and had been foremost in every reform and the uncompromising foe of wrong in whatever guise, and who, with the courage of his convictions, entered active service in the war despite his advancing years—Doctor Ebenezer Hunt. There is a ring to his words not unlike certain resolutions already quoted which came from the ancestors of these very men, citizens of Danvers in town-meeting assembled, in those other days which tried men's souls :

“WHEREAS—The town of Danvers has already furnished more than her full quota of men, and is ready and willing to send more if necessary, and to expend her last dollar in defence of the Common Country, Therefore—

“Resolved, that the citizens have a right to ask and do ask the Government for a vigorous prosecution of the war and that nothing shall be permitted to stand in the way of the progress of our armies in crushing out the rebellion and restoring to our country a speedy and permanent peace.

“Resolved—That had there been no slavery, there would have been no rebellion, and as the rebellion will continue so long as slavery exists, we, the citizens of Danvers, in town meeting assembled, ask, that the war forced upon us by the rebels in defence of slavery, shall be so prosecuted as to leave no vestige of that accursed institution.”

The first of these resolutions was passed unanimously ; three voters could not accept the second. At the fall

election, 1862, John A. Andrew received four hundred and twenty-six votes to one hundred and fifty for Charles Devens, Jr. February 9, 1863, five thousand dollars was appropriated for military aid.

At the annual meeting of 1863 the relief committee which had been at work during the previous year, reported that they had assisted two hundred and fifty-one families. "At the present time," they say, "the number is reduced to one hundred and ninety families receiving aid in various ways from one dollar per week to twelve dollars per month." A relief committee for the ensuing year were chosen,—Drs. Hunt and Chase, William Dodge, Jr., Nathan Tapley, John A. Sears, C. H. Gould, Josiah Gray, C. P. Preston, S. P. Fowler and Philemon Putnam.

At this time S. D. Shattuck and others petitioned for the purchase by the town of a lot in Walnut Grove Cemetery for the burial of deceased soldiers, and the selectmen were instructed to purchase the lot which has been used for this purpose.

The vote of September 11, 1862, as to bounty for three years' men was prospective; no appropriation was then made. It became necessary to think about a large appropriation. If at any time after nine months' service the war should end, these bounties would be at once payable. So in midsummer, 1863, a special meeting was called to see if the town would raise money to defray the expenditure contemplated by the vote of September 11th. This meeting, held first July 3d, after several adjournments unanimously voted to appropriate fifty thousand dollars for the purpose, a sum so large that Mr. Howard underlined the words when he entered the vote on the permanent records of the town. This amount was never paid nor raised, for the reason that certain citizens petitioned for an injunction, on the ground that such an appropriation was illegal, prohibiting the borrowing or payment of money under said vote. The case came before the Supreme Court in January, 1864, and is reported in Massachusetts Reports, 8 Allen 80, under the title "Samuel P. Fowler and others vs. Selectmen and Treasurer of Danvers." The decision turned on the interpretation of the statute of 1863, ch. 38, entitled "An act to legalize the doings of towns in aid of the war," and the court held that the statute while covering appropriations for bounties to induce enlistment, did not legalize a vote to pay money to persons who had already enlisted in the service of the United States.

There was a light vote for Governor in the fall of 1863,—Andrew receiving two hundred and seventy, Henry W. Paine forty-seven. At the March meeting of 1864, Dr. Hunt was again on hand with a report from his relief committee; two hundred and forty-five families, he said, had received State aid.

"Your committee propose to make no prediction in relation to a speedy peace. This subject is still a question of time. We can only say the omens are auspicious, and that if the people of the Loyal States shall do their duty in sustaining the Government in a vigorous prosecution of the war, and in following the leadings of Providence in the path

of Justice and Humanity, and if the heads of the Departments and other Politicians at the Capitol interest themselves as heartily in crushing out the Rebellion, as in making a new President, our honored flag will at length wave in triumph over a regenerated and glorious Union, inhabited only by Freemen."

At this same March meeting of 1864, fifteen thousand dollars were appropriated "for families of volunteers who have enlisted or may enlist during the present war." Once only in the summer of 1864 was there a special meeting, occasioned by the President's call for five hundred thousand more men, and at this time an appropriation of eleven thousand two hundred and fifty dollars was made for the purpose of filling our quota under this call.

At the presidential election in the fall of 1864, the Lincoln electors received five hundred and ninety-two Danvers votes against one hundred and twenty-five for the McClellan electors; John G. Whittier, of Amesbury, whom Danvers is now so proud to claim among its residents, was chosen elector from the Essex District over S. Endicott Peabody, of Salem. For Governor, John A. Andrew received five hundred and ninety-six votes; H. W. Paine, one hundred and twenty-five.

December 19, 1864, another call. "We're coming, Father Abraham, three hundred thousand more!" On the day after Christmas men read a warrant, summoning them to meet on the fourth day of the new year to face a demand for still more money. Voters were slow of coming forward, and, as on some other occasions during the war, adjournments and rallying-committee tactics were necessary; but finally, by a large vote, it was decided to pay another bounty of \$125 to each volunteer going to fill the town's quota under the new call.

Before November the men whom the majority of Massachusetts citizens had kept at the head of the State Government in these years of trial, had done with life. At the election of 1865 Danvers helped to elect his successor, Alexander H. Bullock, of Worcester, by a vote of 588, to 64 for Darius N. Couch, of Taunton.

Recruiting was ordered to be discontinued on April 13, 1865. Danvers furnished in all seven hundred and ninety-two men for the war, which was a surplus of thirty-six over and above all demands. Forty-four were commissioned officers. The total amount of money raised on account of the war, exclusive of State aid, was \$36,596. The amount of State aid raised during the war for soldiers' families, 1861-65, amounted to \$66,068.11. The appropriations for aid made subsequently were,—1871, \$5000; 1872, \$4000, also \$200 for special cases not within the law; 1873, \$2000 and \$200 special; 1874, \$4000, \$200 special; 1875, \$3500, also \$150 special; 1876, \$2500, \$150; 1877, \$2500, \$150; 1878, \$150; 1879, \$100; 1880, \$800; 1881, \$1000; 1882, \$1000; 1883, \$800; 1884, \$600; 1885, \$600; 1886, \$700; 1887, \$700.

Of the voluntary contributions all through the years of the war, of money, materials, labor, amount-

ing in value to perhaps thousands of dollars, and cheerfully given, no record has been kept.

In the warrant for the annual meeting of 1868 appeared this article: "To see what action the town will take on the petition of S. P. Cummings and others to appropriate a sum of money for the purpose of erecting a suitable monument or tablets whereon shall be inscribed the names, age and date of death, of all Danvers soldiers and sailors who fell in the late war for the union." The matter, when reached, was referred to a committee, one from each school district: No. 1, William Dodge, Jr.; No. 2, E. T. Waldron; No. 3, J. F. Bly; No. 4, William R. Putnam; No. 5, Dean Kimball; No. 6, George Andrews; No. 7, Timothy Hawkes; No. 8, Rufus Putnam. S. P. Cummings was added.

At an adjournment, this committee reported recommending the erection of a monument at a cost of not less than three thousand dollars, that fifteen hundred dollars be appropriated by the town and the balance by subscription, through a committee of one from each district. The committee already appointed were made a subscription committee, to report at a meeting specially called when they should have secured the required sum.

At the March meeting the next year, 1869, the committee reported that they "have attended to their duty, and by the patriotism and generosity of our citizens we have been enabled to raise the required sum. The committee would, with the consent of the Trustees of the Peabody Park, recommend that place as the most appropriate for the erection of said monument."

The old committee were elected for the ensuing year, with the addition of the selectmen. But the question of location was not easily settled. At the next March meeting, 1870, a motion was introduced to place the monument in front of the Town House, but was withdrawn to give place to the proposition that, at the adjourned meeting a ballot-box be so placed that citizens might informally express in writing their preferences for location. The result of this ballot showed ninety-three votes for Peabody Park, and sixty-six for the Town House yard.

May 2d, Simeon Putnam was added to the committee. On that same day it was reported that the Trustees of the Peabody Institute had declined, on account of some legal objection, to allow the monument to be erected in the park. In the meantime, March 21st, an additional appropriation of sixteen hundred dollars was voted.

In June a special meeting was called to consider several important subjects, first of which was the report of the monument committee. Those who strongly favored the park as a location disliked to accept the decree of the trustees as final. Some one, to fame unknown, succeeded in getting recorded a pithy motion "that the Monument be paid for and stored until consent be obtained of the original

grantors and the Trustees," but not in getting it passed.

Mr. Augustus Mudge moved that the committee be instructed to place the monument on the Common at Danvers Centre. The motion was declared carried, was doubted, and on division was declared carried, one hundred and thirty-five to eighty-five. To clinch the matter, a vote was taken to re-consider, and lost.

This seemed decisive. Doubtless the inhabitants of the Centre, as they passed old Deacon Ingersoll's training field on some of those summer evenings, saw with no great stretch of imagination certain ghostly monumental outlines rising from the green sod, where soon the substantial shaft would consecrate anew the historic ground. But no. In just one week a warrant was issued to act on a petition for the relocation of the Soldiers' Monument. The meeting was held July 11th. Dr. Hunt moved for a re-location within half a mile of the flag-staff at the Plains. On a large vote by ballot the motion was carried,—yeas, 264; nays, 161. The definite location was then left with the committee, who decided upon the Town House yard. The monument was dedicated November 30, 1870. It is of Hallowell granite, thirty-three and one-quarter feet high, and seven and three-quarters feet square at the base; its total cost, \$6298.-20, towards which sum Edwin Mudge contributed the larger part of his two years' salary as the Representative in the Legislature of the district composed of Danvers and Wenham, the remainder being presented to the latter town for a similar object. The names inscribed upon the monument are these:

MAJOR WALLACE A. PUTNAM,
LT. JAMES HILL.

Hector A. Aiken.	Daniel H. Gould.
Henry F. Allen.	Samuel S. Grout.
James Batty.	Ambrose Hinds.
Edwin Beckford.	Levi Howard.
Isaac Bodwell.	James J. Hurley.
Sylvester Brown.	Thomas Hartman.
James H. Burrows.	Abiel A. Horne.
Lewis Britton.	James H. Ham.
John H. Bridges.	Everson Hall.
William H. Croft.	Charles Hiller.

George T. Whitney.
Joseph F. Wiggins.
Charles H. Young.

A special meeting was called a week before Decoration Day, 1872, to see if the town would appropriate a sum of money in aid of Post 90, G. A. R., for the expenses of Memorial Day, and by a vote of eighty-four to two, two hundred dollars was appropriated. Each subsequent year at the annual meeting an amount varying from one hundred and fifty to two hundred dollars has been devoted to this purpose. Ward Post, 90, G. A. R., was organized June 8, 1869.

The list of Danvers volunteers which follows is made up chiefly from the official lists of Massachusetts volunteers compiled by Adjutant-General Schouler. These two large volumes contain a hundred and fifty thousand names, more or less, arranged only according to organization, and not according to towns, and therefore a close scrutiny of the entire list has been necessary to ascertain every Danvers volunteer credited to the quota of the State. It is thought that no omissions have been made. Some errors have been noticed and corrected; if others appear, the responsibility must rest on the official authority, referred to. The figures opposite the names give the age of first enlistment.

The members of the Danvers Light Infantry and of the Putnam Guards were not the first volunteers from Danvers. A number enlisted in the two Salem companies assigned to the Fifth Regiment, three months' men, mustered in May 1, 1861. In Company A, known as the Salem Mechanic Light Infantry, were these :

Age.		Age.	
James H. Sleeper, corporal.....	32	James Hill.....	20
Charles W. Allen.....	20	John H. Howard.....	19
Edwin Bailey.....	25	William Lufkin.....	25
Henry T. Briggs.....	21	Joseph C. Munsey.....	19
William Burroughs.....	28	James D. North.....	21
Jacob Burton.....	25	Chas. H. Phippen.....	22
Lyman D. Crosby.....	23	Chas. W. Ricker.....	18
George M. Crowell.....	29	Henry Sloper.....	29
George H. Fuller.....	25	Robert Smith.....	20
John T. Gilman.....	19	Mendall S. Webber.....	23

In Company H of the same regiment, the Salem City Guards, were these :

Age.		Age.	
Wm. F. Bickford.....	23	Henry H. Richardson.....	21
Charles W. Chase.....	20	Wm. H. Richardson.....	22
David A. Gilford.....	36	Edgar M. Riggs.....	24
John M. Hines.....	21	John N. Thompson.....	30
Edward Kelley.....	26	Herbert W. Very.....	22
James W. Lowe.....	19	George Webster.....	23

These men arrived at Annapolis April 24th, and were mustered into United States service as stated. They bore an honored part in the disastrous battle of Bull Run, July 21st, exactly three months after the regiment left Faneuil Hall. Henry T. Briggs was there taken prisoner, and was exchanged in 1862.

A list of Danvers volunteers in the three years' regiments :

Second Regiment.		Age.	Age.
David A. Fuller, Co. C.....	28	John Smith, Co. I.....	28
Levi E. Goodale, Co. C.....	19	James Patterson, recruit.....	32
John Stonehall, Co. C.....	20		

Ninth Regiment.		Age.	Age.
John Fitzpatrick, Co. B.....	26	Abram Yates, Co. E.....	21
James Brown, Co. D.....	23	Jas. McLaughlin, corp., Co. F.....	23
Daniel Buckley, Co. E.....	18	Ulick Burke, Co. F.....	24
Richard Bush, Co. E.....	32	Patrick Shea, Co. F.....	20

Tenth Regiment.		Age.	Age.
Wallace A. Putnam ¹	24	George W. Bigelow, 2d lieutenant.....	32

Eleventh Regiment.		Age.	Age.
Alexander Spinney, Co. C.....	29	George A. Ewell, Co. I.....	28
Michael McAuliffe, Co. D.....	22	Henry Beckett, recruit.....	22
Wm. Shackley, Co. G.....	30	James Finnerty, recruit.....	23
Horace L. Hadley, corp., Co. H.....	21	George A. Wilson, recruit.....	27

Fourteenth Regiment.
(See 1st Heavy Artillery below.)

Seventeenth Regiment.		Age.	Age.
Robert W. Jessop, Co. A.....	36	Chas. M. Goldthwait, Co. D.....	22
Geo. Putnam, Jr., corp., Co. B.....	18	Donnick McDavitt, Co. D.....	31
James Battye, Co. B.....	43	Thomas J. Shea, Co. D.....	26
Patrick Carr, Co. B.....	33	Artemas Wilson, Co. D.....	34
David Coleman, Co. B.....	44	Joseph H. Coley, Co. G.....	18
Lawrence Fox, Co. B.....	39	Nicholas Congdon, Co. G.....	25
George H. Goss, Co. B.....	22	Ephraim Getchell, Co. G.....	35
Thomas Hartman, Co. B.....	42	Wm. Ober, Co. G.....	27
James McCarty, Co. B.....	47	Seward Sylvester, Co. G.....	18
Andrew Patton, Co. B.....	38	Jas. Smith, sergt., 2d and 1st lieut., Co. I.....	30
George Pitman, Co. B.....	34		
Reuben H. Coffin, Co. D.....	29		

COMPANY C, SEVENTEENTH REGIMENT.—Those marked with a star were original members of the Danvers Light Infantry.

	Age.

Thomas H. Dodge..... 19	Jacob C. Spaulding..... 21	
John S. George..... 24	John Q. Welch..... 22	
Thomas B. George..... 27	Douglass R. Wilson..... 22	

Two companies of sharpshooters, three years' men, were recruited at Lynnfield, and left for Washington in December, 1861. In the first company, which was ordered to report to General Lander near Maryland Heights were the following Danvers men :

Age.		Age.
Chas. N. Ingalls, sergt..... 40	Joseph T. Smart..... 30	
Austin Upton, corp..... 37	Alfred M. Trask..... 21	
David S. Hase..... 18	Austin Upton..... 35	
Horace Kimball..... 34	Samuel A. Waitt..... 28	
Joshua Severance..... 37		

In the second company, attached to the Twenty-second Regiment Infantry, were these :

Age.		Age.
Wm. I. Adams..... 34	Richard Goss..... 40	
George Beard..... 35	Hiram B. Keniston..... 36	
Moses Deload..... 22		

In the Salem Cadets, which organization performed garrison duty in Boston Harbor from May 26, 1862, to October 11, 1862. were these Danvers men :

Age.		Age.
Eben F. Creesy..... 20	Aloozo Gray..... 24	
Florence H. Crowley..... 19	Samuel F. Gray..... 27	
John G. Dervau..... 19	Arthur C. Kenney..... 23	
George F. Dockham..... 18	John T. Ross..... 32	
Addison W. Fowler..... 21	Charles F. Sleeper..... 25	

In Company B, of the Seventh Regiment Infantry (six months), July 1, 1862, to December 31, 1862, were :

Age.		Age.
Geo. M. Crowell, sergt..... 29	Alexander Caird..... 19	
John H. Howard, corp..... 20	Warren P. Dodge..... 23	
Henry Sloper, corp..... 29	Richard Poor..... 19	

The company of Danvers men previously referred to as having been recruited in the summer of 1862, was as follows :

Company K. Eighth Regiment, Volunteer Infantry, Nine Months' men.

Albert G. Allen, capt..... 42	Lorenzo C. Rogers, corp..... 43
Edwin Bailey, 1st lieut..... 25	Denis W. Regan, corp..... 27
Benjamin E. Newhall, 2d lieut..... 27	Alfred Porter, corp..... 36
Charles W. Allen, 1st sergt.... 22	Frederick N. Putnam, corp.... 21
Thomas Barnett, sergt..... 37	John Proctor, corp..... 34
Henry D. Wallace, sergt..... 27	Abiel A. Horne, corp..... 32
James H. Sleeper, sergt..... 34	Jacob Bradbury..... 44
Samuel P. Fowler, sergt..... 24	William Brady..... 33

Age.		Age.
Thomas Carney..... 40	Cleaveland Gould..... 29	
Orion W. Clough..... 18	Daniel H. Gould..... 17	
Henry Collins..... 29	James P. Margeson..... 35	
Patrick Collins..... 20	John M. Martin..... 25	
Thomas Collins..... 22	John McAuliffe..... 30	
William Collins..... 18	William O'Neil..... 38	
Edward Darling..... 30	Albert Parry..... 34	
Judson W. Dodge..... 29	Amos Pearson..... 43	
Henry F. English..... 27	Charles W. Peart..... 22	
William T. Fay..... 38	Joel F. Phelps..... 40	
James L. Fish..... 18	Joseph M. Proctor..... 32	
William Fowle..... 41	Albert F. Putnam..... 21	
Cyrus Fuller..... 30	William Reynolds..... 47	
Solomon Fuller..... 26	John Russell..... 28	
Charles W. Giddings..... 23	John H. Sears..... 19	
Charles A. Gilman..... 19	Asa J. Spaulding..... 41	
Mark Glidde..... 43	Alonzo J. Stetson..... 24	
Samuel Glover..... 53	Walter F. Tarleton..... 27	
Charles Gooher..... 44	William Webber..... 18	
William W. Goodwin..... 31	Douglass R. Wilson..... 18	

In the other nine months' regiments which left for the front, in the latter part of 1862, were these :

	Age.
Salmon B. Lane, Co. C, 42d.....	30
Joseph N. Burchstead, Co. I, 47th.....	30
Michael Joyce, Co. E, 48th (deserted).....	27
Wendell P. Hood, Co. F, 48th.....	22
Augustine Upton, Co. E, 50th.....	18

But four men are credited to Danvers in the cavalry. These are

George S. Osborne, asst. surg., 1st Cav.....	24
Charles H. Lyons, Co. E, 1st Cav.....	21
Samuel W. Lewis, 1st sergt, 3d Cav.....	25
Reuben Leighton, Co. G, 5th Cav.....	18

But two are credited to the light artillery :

Daniel P. Avery, 2d Batt., 3 years (deserted).....	23
John L. Edwards, 4th Batt., 3 years.....	28

FIFTH REGIMENT, (100 days), mustered in July 23, 1864 :

William Metzgar, Co. C.....	18
Samuel W. Nourse, Co. C.....	23
Amos Pearson, Co. C.....	44
Gideon Rowell, Co. C.....	33
Samuel P. Trask, Co. C.....	19
Erdix T. Turner, Co. C.....	20

SIXTH REGIMENT, (100 days) mustered in July 15, 1864 :

George M. Crowell, 2d lieut., Co. I.....	34
Warren P. Dodge, corp., Co. I.....	25
Allen W. Bodwell, Co. I.....	18
Daniel A. Caskin, Co. I.....	20
Patrick Collins, Co. I.....	20
William Collins, Co. I.....	19
Thomas Hartuao, Co. I.....	22
Orris K. Huff, Co. I.....	21
William S. Inman, Co. I.....	18
Jeremiah Kirby, Co. I.....	19
Frank B. Messer, Co. I.....	19
Hugh Murphy, Co. I.....	18
Edward North, Co. I.....	21
Thaddens Osgood, Co. I.....	18
Richard Poor, Co. I.....	21
Walter F. Tarleton, Co. I.....	28
John Thompson, Co. I.....	21
Joseph Thompson, Co. I.....	18
Austin Towne, Co. I.....	19
Frederick Wright, Co. I.....	33

EIGHTH REGIMENT, (100 days) Dr. Ebenezer Hunt, aged 64, mustered in as assistant surgeon July 29, 1864 ; discharged November 10, 1864.

Andrew Nichols

VETERAN RESERVE CORPS, July, 1864:

	Age.		Age.
Thomas Caldwell.....	36	Wm. Reynolds.....	28
Hiram S. Faye.....	33	W. Shackley.....	28
John McCreary.....	44	Edward F. Welch.....	40
John O'Keefe.....	39		

THIRTEENTH, UNATTACHED COMPANY, INFANTRY (90 days), May, 1864, William Francis, aged 45.

TWENTY-NINTH, UNATTACHED COMPANY, HEAVY ARTILLERY (1 year) George W. Kenney, captain, aged 34.

REGULAR ARMY, Louis E. Goodale, Signal Corps, aged 21; John W. Wiley, Engineer Corps, aged 19.

BIOGRAPHICAL.

DR. ANDREW NICHOLS.

Dr. Andrew Nichols was born in the northern part of Danvers, on that portion of the "Prince Farm" now owned by heirs of Philip H. Wentworth, on the 22d of November, 1785. His father was Major Andrew Nichols, an efficient and progressive farmer. He introduced the Lombardy Poplar into this section of the country, his farm being lined with them. His mother was Eunice Nichols, the daughter of John Nichols and Elizabeth Prince. It was Elizabeth Prince, granddaughter of Captain Robert Prince, who set out the large elm tree now standing near the main entrance to the Wentworth estate. Sarah Warren, of Watertown, wife of Robert Prince, and grandmother of said Elizabeth, who was afterward married to Alexander Osborne, was eried out upon as a witch, and died in jail.

The first of his ancestors to settle in this country was William Nichols, born about 1596, who took grants of land in "Brooksby" (now Peabody), and settled on them in 1638. In 1652, as by his deposition on record in the office of the clerk of courts, he was living on his farm of about two hundred acres, situated between Ipswich River and Salem line. The farm in Middleton, now owned by Walter L. Harris, of Salem, and adjoining lands bounded by Nichols Brook, including the hill called "Fercroft," were a portion of it. His only son was John Nichols, who married Lydia Wilkins, a daughter of Bray Wilkins, of Wills Hill, Middleton. Their son, John Nichols, by his second wife, had two sons, John Nichols, who married Elizabeth Prince, before mentioned, and Deacon Samuel Nichols, who married Abigail Elliot, and they were the parents of Major Andrew Nichols. They were all well-to-do farmers, and lived within a mile and one half of Dr. Nichols' birth-place.

After the completion of the course at Phillips Academy, in Andover, in 1804, he studied with Dr. Waterhouse, at the famous "Cragie" or Longfellow Man-

sion at Cambridge, and attended the course of lectures at the Harvard Medical School in 1806 and 1807.

He commenced the practice of his profession in the southern part of the town (now Peabody), in 1811; it soon spread to every part of the old town, also to Middleton, Lynnfield and a portion of Topsfield and Salem, where, as the beloved physician, he might be seen early and late, either walking or riding. I think it can well be said, that no practitioner had more names of persons who were unable to pay upon his books than he. He seldom asked twice for the very moderate fee, and never asked for it where he knew or mistrusted it was hard for them to pay. But to rich or poor alike, he always responded cheerfully, and was very sympathetic to all. I have seen him performing surgical operations and appear to suffer more than the patient.

He was admitted to the Massachusetts Medical Society in 1811, and was for many years president of the Essex South District Medical Society. He was always a diligent student, and in the advance guard of his profession, delivering an essay on the irritation of the nerves before the Massachusetts Society in 1836.

He was interested in all that was going on about him. He was a charter member and first master of Jordan Lodge of Masons, and during his whole life an active member, of which his poem on "The Spirit of Free Masonry" in 1831, gave evidence.

He was a distinguished botanist, assisting Dr. Bigelow in his well-known book. He gave the first course of lectures ever delivered upon that subject in Salem in 1818; his keen love of it led him to discover the minute Arctic flower, the *Draba Ferna*, on the bleak hills of Peabody, upon the melting of the winter snows. He was the first president of the Essex County Natural History Society in 1836, which, with the Essex Historical Society of 1821, formed the Essex Institute of 1848.

Though in active practice and living in the southern part of the town, he showed a great interest in agriculture. He was intensely interested in the management of his farm in Middleton, some seven miles away next adjoining the old William Nichols farm of 1652, which fell to him through his first wife, Ruth Nichols.

He was one of the founders of the Essex Agricultural Society, and its treasurer for thirteen years. He delivered the address at its first cattle show, held at Topsfield, in 1820.

He was one of the old line Abolitionists, and at the head of the Free Soil party in Danvers. I have seen the poor fugitive slave at his house being fed and instructed on whom to call as he went northward. He carried on the anti-slavery lectures in town, lecturing and entertaining the lecturers of those days, Garrison, Phillips, Pillsbury, Pierpoint, Henry (Box) Brown and many others, and doing all in his power to advance the cause of the oppressed. He did not live

long enough to witness the results. In this connection I would state that his brother, Abel Nichols, cast the first vote in town in the anti-slavery cause, and the only one at that particular election.

The reading and study of the poets, ancient and modern, was a recreation which he thoroughly enjoyed, and which gave him many happy hours. He wrote many poems and hymns, some for special occasions, that have been published, among them the "Centennial" poem of Danvers in 1852.

It was his regular habit to write one every Sabbath, many times quite late at night, as his professional duties would give him no regular hour. Also poems to his wife, mother, children, friends and self, on their recurring birth-days.

He was active in the temperance cause, and as early as 1819 lectured before the "Society for Suppressing Intemperance and other Vices," of which he was a member. He took an active part in the Washingtonian movement in 1840, and in his profession he did all in his power to stay its evils.

He was very inventive, and constantly at work with mind or hands upon something to the advancement of science, as his improvement of Dr. Arnott's Hydrostatic Bed, upon one of which he died. He had, that very week, given instructions to a mechanic for additional improvements to it. The rubber air pillows and beds used at the present day take its place. Tubes for the introduction of fresh air from the window to the bed of the patient. The making of zinc paint. The coupling of railroad cars while in motion. Object cards and letters to place upon the blackboard in our schools while upon the School Committee, of which he was for many years a member. In this connection it is proper to state that he made the first move for the establishment of the High School within the town.

He was one of the founders of the First Unitarian Congregational Society of Danvers (now Peabody), and was a sincere friend and helper to all of its pastors from the first to the last. The Rev. Frank P. Appleton truly said of him, "His heavenly Father was a dear and sacred presence to him." In all the brighter scenes of life he saw that Father's love; and he laid his soul meekly, cheerfully before that infinite Friend . . . His was a guileless worship. He was open-hearted to God, as he was to man. No fear mingled in his communion; his cheerful love cast out all fear, or rather his unselfishness made fear of God impossible. . . . To serve his Father and to help his brethren, this was the aim of his life. He never lost his love for his fellow-beings,—they were always God's children; and the deep interest in others which rose uppermost in his heart during his last sickness, the sacred counsel, "*to live for man, to work for humanity*," which, with faltering lips, but unfaltering soul and faith he gave, were only simple repetitions of what his whole life had said.

His monument in the Monumental Cemetery in

Peabody has the expressive inscription, "Erected by the friends of Humanity to Humanity's Friend."

An intimate friend of George Peabody from his boyhood, in the apothecary shop, when he removed the wen from his forehead, to his success as a London banker, and corresponded with him until the time of his death.

He married his cousin, Ruth Nichols, daughter of Deacon John Nichols, of Middleton, and wife of Sarah Fuller, the 1st of June, 1809; she died without issue, March 31, 1832.

He married secondly, Mary Holyoke Ward, daughter of Joshua Ward, of Salem, and wife Susanna Holyoke, daughter of Dr. Edward Augustus Holyoke, the 3d of October, 1833.

He died the 30th of March, 1853, and his widow the 15th of April, 1880.

He left two children, Andrew Nichols, civil engineer, who now occupies the northwesterly corner of the Robert Prince farm, which, to this time, has never been out of the ownership of his descendants, though for one hundred years in the name of Nichols, and a daughter, Mary Ward Nichols.

Of the next generation four sons and three daughters are living children of Andrew Nichols and wife, Elizabeth P. Stanley, of Salem. The eldest Andrew inherits his grandfather's taste for Natural History.

HON. ELIAS PUTNAM.

Elias Putnam, son of Israel and Anna Putnam, was born in Danvers, Mass., June 7, 1789, and was descended from John and Priscilla Putnam, who, in or about the year 1634, as stated in a previous page, came from England to America with their three sons, and settled in Salem village. The second of these sons was Nathaniel, whose son John had a son, also named John, the father of Edmund and grandfather of the above mentioned Israel. Through the various matrimonial alliances of this line of ancestors, Elias might trace his pedigree back to many others of the emigrant colonists whose history has more or less been made known to us, and whose progeny is now very numerous throughout the country. Edmund Putnam dwelt for the greater part of his long life, and died in the year 1810, at the old Daniel Rea house, which still stands at the north of the Plains, and at a little distance east of the direct road from Salem to Topsfield, and which, having been the property and home of four successive generations of this branch of the Putnam family, passed many years ago into the possession of Mr. Augustus Fowler, who now occupies it. He was commonly known as "Deacon Edmund," having served as deacon of the First Church from 1762 until 1785, when he became a Universalist. While holding this office, he was unanimously chosen captain of a Danvers Alarm List Company, March 6, 1775. In 1776 he was made selectman and assessor, and in 1778 was appointed

James P. [unclear]

one of a committee of the town to consider and report upon the New State Constitution then proposed for adoption. Israel, the third of his five children, was born November 20, 1754, at the old Rea place just referred to, and his wife, Anna, was a daughter of Elias Endicott, Sr., and lineal descendant of the old Puritan Governor, John Endicott, whose "Orchard Farm" was her father's native spot. Immediately after their marriage, in 1788, they began housekeeping on another farm owned by the family, situated at a point on the road two miles farther north and about a third of a mile south of the Topsfield line. The house, which is still standing, was built during the last century, and marks the site of one of the earlier Porter homes, which was destroyed by fire. There Elias, and also two of four other children, were born, the family then removing for a time to the *New Mills* (Danversport), and next to the original homestead, where they might have a more immediate care of the grandparents in their declining years. It was here that Elias took his first real lesson in manual work, serving about the house and in the field in such ways as New England lads were then generally expected to learn and practice. Meanwhile, the short winter terms of the rural district schools, located about midway between the upper and lower farms, afforded him about all the opportunities for education, which he enjoyed in his boyhood. Early in 1812, in company with several other young men of the neighborhood, he entered Bradford Academy, but had not long been a student at that institution before he gave much offense to its teachers and officers by a composition which he prepared and presented as one of the required exercises, and in which he ably and boldly advanced views at variance with the theology there dominant and almost everywhere prevalent. Unwilling to remain where he found that he could not enjoy full religious freedom, he withdrew from the school and repaired to Topsfield for private instruction under Mr. Israel Baleh, and there finished the one short term that was to end his school-day life. His classmates or companions from Danvers sympathized with him, approved his action, and all joined him at once in his new scene of study and endeavor. Their concurrent and life-long testimony, as well as his own subsequent career, bore abundant witness to the fidelity with which, at both places, he improved his all too limited advantages, and to the rapid progress he made in his work. Desiring to qualify himself especially for the plain, practical pursuits that engaged so many of his fellow townsmen, he devoted himself to the common English branches, and gave particular attention to the art of surveying, which he so mastered that he subsequently made his proficiency in it, very useful to many others as well as to himself. But however much he might have been indebted to books and schools, nature gave him a still better outfit in a strong mind, in excellent judgment, good common

sense, a high moral purpose, indomitable energy and a spirit of industry and activity that never seemed, from first to last, to crave, or even need, relaxation or rest.

He was now twenty-three years of age, and was asked to teach the school of his native district for the following winter of 1812-13, and this he did. The old school-house had been condemned, and a new brick one had just been erected, of whose long line of "masters" he was to be the first, as a youngest son was to be the last, about forty years later. Having married Eunice Ross, daughter of Adam Ross, of Ipswich (who had been a soldier at Bunker Hill and in the Revolutionary War), he and his bride commenced housekeeping, like his parents before them, at the upper farm. His father had offered to send him to college, or to deed to him this estate, as he might choose. Too distrustful, perhaps, of his chances of success in professional life, and fond of agricultural pursuits, he decided to hold to his ancestral acres. Soon after he had served out his single term as a teacher, he concluded to unite with his occupation as a farmer, the business of manufacturing shoes. Amongst the intelligent and sturdy inhabitants of the district and its vicinity, this industrial interest, which was destined to be of prime importance to the town, had already attracted the attention and engaged the enterprising spirit of such men as Caleb Oakes, Zerobbabel Porter, Moses Putnam, Elias Endicott, Jr., and a few others of like character. Elias Endicott, Jr., was a near neighbor as well as an own uncle of the subject of our sketch. The latter had learned not a little from him about the art of the "gentle craft," and now wished to set up business on his own account. He bought the old abandoned school-house, moved it up near his own home, reconstructed and enlarged it, and began in it what was to be the chief avocation of his life. Not, however, without serious discouragement at the very outset; for, through the insolvency of a Southern tradesman to whom he had sold a large lot of goods, he lost the first thousand dollars he had earned by hard and patient work. But the misfortune only nerved him to greater exertion, and his shop, as well as his land, became ere long still more the busy scene of labor.

In 1814, or about that time, "Deacon Edmund" and his wife having died, Israel returned with his household to the scene of his early married life to spend the remainder of his days with the son and his family, enlarging the habitation with a northern "L," the future birth-place, it may be noted by the way, of that distinguished soldier and civilian of the West, Major-General Granville M. Dodge. Israel, like his father Edmund, was a Universalist, and soon began, with some of his neighbors, to take the necessary steps for the promulgation of the doctrine within the district. He presided over a meeting, held at the school-house, April 22, 1815, at which the friends of the new movement presented a declaration of their principles and

made arrangements to secure preachers. Here was the origin of the present Universalist Church of Danvers. Israel and Elias, both, were among the signers of the declaration, and the active participants in the enterprise, and they subsequently welcomed to their home many of the early apostles of the faith who came from time to time to expound it to such as were willing to hear, Hosea Ballou, Charles Hudson, the Streeters and many others. As the father was prominent in the society in its infant history, so the son was a staunch supporter of it in its more prosperous years, both of them being identified with its fortunes as long as they lived. Farmer Israel was a deeply religious, as well as a very intelligent man, and in his zeal for Universalism he wrote able sermons in its advocacy and defence, several of which were published in pamphlet form for circulation. He died in the summer of 1820, at the age of sixty-five, and the *Essex Register*, in announcing his decease, referred to him as "a highly respected and worthy citizen." His wife, who was characterized by a full share of the traits and qualities of her race, died long years afterward, at Danversport, at the residence of her only surviving daughter, Mrs. Mary P. Endicott.

In 1832 Elias, finding that shoe manufacturing was, and was likely to be, a more lucrative calling than farming, and that the prospective needs of his family of ten children, to which one other was added in the following year, required him to engage in it more extensively, let out his house and land and moved down once more to the ancient homestead on the lower and smaller farm, where he could be nearer the heart of the town, and enjoy ample facilities and opportunities for the end in view. Building for himself, out by the road-side, a more commodious factory than he had thus far occupied, he embarked more and more largely in business, furnishing employment to increasing numbers of workmen in Danvers and surrounding towns, and supplying with the products of their labor the markets of still other cities in the Middle, Southern and Western States.

The qualities of character which distinguished him had a long time before fixed the attention of his fellow-citizens, and he had already received not a few marks of their confidence and respect. He had again and again been chosen moderator of the annual town meetings, and had repeatedly been a member and also a chairman of the Board of Selectmen, in years when such offices were posts of honor more than they are now. In 1829 and also in 1830 he was elected as Representative to the General Court, and served for the two years. In 1833 he was chosen Senator and served for one term in that branch of the State Legislature. Here he had the great pleasure of renewing his former friendship with that sterling man, Charles Hudson, who had been an inmate of his home while preaching in Danvers ten or twelve years previously, but who had now entered political life, and was destined to high civic honors. The two

men were the members from the Senate of the joint standing committee on railways and canals. It was at an important juncture in the history of such internal improvements in the old commonwealth. The Boston and Lowell Railroad was the only one then in existence in Massachusetts. The eastern company was now fighting, against much opposition and under many difficulties, for a charter. Mr. Putnam was very earnest and active in his efforts in behalf of the measure, and his zeal for it, taken in connection with his acknowledged ability to deal with such matters as these, and his position as a leading member of the committee, and the only member of it from the county which he represented, and in which the line was to have one of its immediate termini, and with the interests and needs of which, so largely to be affected by a successful issue, he was quite well acquainted, enabled him to exert, as the late and lamented Mr. Joshua Silvester and others testify that he did, a very controlling influence towards the favorable result that was finally reached. In like manner he defended and supported other measures of public utility while thus at the capitol.

More and more, as life went on, Mr. Putnam had at heart the prosperity of his native town, and gave to it, in no stinted degree, his thought and care, his time and his means. With that object still in view, he was, as Mr. Silvester again remarks, in a recent biographical sketch of him, accompanied with some personal reminiscences, the first to propose the establishment of a bank in North Danvers. The two men were near neighbors, had already known each other for some years, were both engaged in the same kind of business, and were associated intimately in political, religious and other relations, and were on terms of mutual trust and friendship which continued to strengthen and ripen with each advancing year. "During all this time," says the account or tribute of the revered and veteran survivor of his long since departed companion and co-worker, "scarcely a day passed that we were not together. I can safely say that I knew the man perfectly. One day he asked me if I did not think we needed a bank in North Danvers? I told him, yes, I thought we did. We then called a meeting of the business men of the town at the old Berry Tavern to consider the matter. It was unanimously voted that application should be made for a charter, and that other necessary steps should be taken." The end was at length accomplished. The bank was duly incorporated in 1836, and Mr. Putnam was chosen the first president, and held the office to the close of his life. Mr. Silvester, who was made one of its directors, adds,—"the bank immediately went into a successful business, which was soon checked, however, by the general crash of 1837. Nearly all the banks of the country suspended specie payment, and well nigh all the business houses failed or asked extensions, in consequence of the embarrassments occasioned by the

removal of the government deposits and by the destruction of the National bank. There followed the greatest depression and stagnation ever known before or since to the industry and trade of the people. But under the management of Mr. Putnam, the village bank was safely carried through it, and to the most perfect satisfaction of the stockholders." And, notwithstanding great personal losses, the business of his own manufacturing establishment was conducted with like wisdom and success.

In 1842, with the view of extending still more his operations, he built in the village of the Plains, at a distance of about a mile south from his home, a dwelling-house, and a much larger factory than his last one, on land he had just purchased of Mr. Jonas Warren. Thither he moved his family in the following January, and soon took into business with him as a partner, his son, Elias E., giving to the firm the name of "Elias Putnam & Co."

It was in the summer of 1843 that he united with others to promote the plan of purchasing and laying out the beautiful grounds of the Walnut Grove Cemetery as a new and fitting place for the burial of the dead. In pursuance of the object, a suitable organization was formed at successive meetings of citizens, and on the 18th of October, the first regular officers of the corporation were chosen, Mr. Putnam being elected president. The consecration services took place June 23, 1844.

He was a warm friend of the cause of education. While in the Legislature he had made the acquaintance of Horace Mann, then and for a long time a member from Dedham, and was deeply interested in the better system of common schools which the future renowned philanthropist had already there advocated and urged. He became a diligent reader of his writings upon the subject, and especially of his long-continued and most useful *Common School Journal*. Some trace of this influence may perhaps be seen in the part which he took in causing the large amount of surplus revenue that was apportioned to Danvers in 1838, to be set apart as a permanent fund for the benefit of her schools. The proposition encountered much opposition, but it was finally carried a few years later, and John W. Proctor, Esq., in his Centennial address of 1852, says,—“Considering the many jealousies brought to bear on this topic, the act whereby the investment was made will ever remain most creditable to the town. No man did more to bring this about than the late Elias Putnam who, in this as in all his other public services, showed himself a vigilant friend of Danvers.” If, in the same connection, Mr. Proctor, long after Mr. Putnam's death, allowed himself to indulge so publicly in a less just and generous word, those who were then conversant with affairs, were not slow or mistaken in referring it to the old frequent controversies between the northern and southern sections of the town, in which these two men not seldom

stoutly and uncompromisingly antagonized each other, and in which the able and distinguished lawyer, as he could but remember, was not always successful, even as he was not always in the right.

Mr. Putnam was also among the very first to devise and agitate the project of a railroad that should connect Danvers and other towns north of it with the seaboard and more populous and commercial places at the south. One of his sons-in-law recalls a ride which he was early invited to take with him through Middleton to Andover, and the pleased interest with which the latter sought out and discovered a feasible route for the proposed line. Along that way the Essex Railroad, extending from Salem to Lawrence, was constructed at length, but comparatively few to-day are aware what a protracted and determined struggle it cost to give it that direction, and thus to ensure to Danvers the increased facilities and advantages for transportation and inter-communication which she has consequently so long enjoyed. The road was chartered in 1846, though not opened until 1848, and Mr. Putnam was one of the several persons in whose names the grant of incorporation was vested, and subsequently, at the organization of the Board, was made one of the directors, though he was not to live to see fully completed the enterprise which had commanded so much of his interest and energy, and which he had done so much to put into the way of success.

Among the numerous offices which he held at one time or another, was that of county commissioner, and on various occasions he was appointed a delegate to county, State and National political conventions. He was a member of the Whig party, and few felt more keenly disappointed than himself at the defeat of Henry Clay in 1844. As a personal friend, he had often taken counsel and been much associated in these relations, with such men as Daniel P. King, Rufus Choate, Leverett Saltonstall, Stephen C. Phillips and others of like repute in Danvers, Salem and vicinity, sharing fully their Whig principles and sympathies, and working with them to supplant the Democracy. He had a deep and abiding interest in political and national affairs, and kept himself well informed in regard to what was going on at Washington, as well as to matters of legislation nearer home. He had a natural and instinctive abhorrence of the system of slavery, and greatly desired to see it brought to an end, but he was opposed to all rash and violent measures to compass the result, and was persuaded that the best good of the country and the higher interests of freedom itself, would most surely be realized through the triumph and continued supremacy of the party with which he was connected and whose illustrious leaders and statesmen he sincerely trusted and honored. He was fond of argument, had debated similar questions long before in the old Danvers Lyceum, and still liked to discuss subjects of this kind with his friends and neighbors, and such

was the intelligence and candor of the man that they were equally ready and glad to exchange views with him, however much they might differ with him in opinion. Whatever his prepossessions, he was a lover of the truth, had an inquiring mind, aimed to get at the reasons of things, and was most conscientious and deliberate in arriving at his convictions. We quote again from Mr. Silvester,—“He had supreme control of himself under all circumstances, and was a deep thinker and reasoner. Every question, or new movement, presented to him he traced out in all its bearings to the end, after which he was ready to express his feelings on the matter, and when you got his opinion on any subject, you could rely on it as his best candid judgment and most likely to be correct.” Nor is it difficult to say where he would have stood had he lived somewhat longer, only to see his old party utterly recreant at last to its better principles and high trusts, and men taking sides anew for the momentous conflict at hand.

Mr. Putnam was, moreover, a person of rare inventive skill. As he was one of the early shoemakers of the town, so he was one of the very first in the country to invent machines to facilitate the various processes of the art, and to economize, in connection therewith, labor, time and material. It is a curious circumstance that when, in 1833, his neighbor, Mr. Samuel Preston who, like Mr. Silvester, was engaged in the same business, had invented a machine for pegging shoes and had got out a patent for it, Mr. Putnam had at the same time and in the same quiet or secret way, been studying and toiling to accomplish a like result, and had actually constructed a machine of his own that did the work. In a letter which he addressed to a friend, and a copy of which, in his own handwriting, lies before us, he manifests a desire to know more fully the principle of Mr. Preston's invention, having received an intimation that it was essentially the same as that of his own, yet suspecting his own might have certain merits which the other had not. Doubtless the discovered resemblance was such as to discourage him from applying for a patent in his own case, since, as a matter of fact, the two machines worked about equally well, though poorly at best. But neither of these gentlemen followed up his advantage so as to make his achievement practically useful to himself or others. It was reserved to men of a later time to bring to wonderful perfection what they had created as only humble beginnings. Mr. Putnam turned his attention to other contrivances, and a few years later obtained a patent for a machine which he had invented for splitting leather, and which was found to be of so much benefit to the manufacturers, that it commanded a brisk sale amongst them, far and near. Two others, of like utility, were soon afterward invented and patented, both ingenious, yet simple in plan. The inventor had connected with his shop a private apartment to which few were admitted, and in which, amidst a

promiscuous array of drawings, mouldings, castings and patterns of great variety, he beguiled in such studies or pursuits as these whatever hours he could snatch from his busy and stirring life in the world without. In such, as in so many other ways, he advanced the chief business of the town and wrought for the general good.

It has always and justly been said of him by those who knew him that he was one of the most public-spirited of men, and he was not less disinterested and benevolent in motive and feeling than he was honest and upright in thought, word and deed. His worldly possessions might have been abundant, indeed, had he not given himself so constantly and freely to the service of others. He was the helper and not the hinderer of men around him, and many were those, in Danvers and elsewhere, to whom he gave a good start in life, or whom he assisted in their worthy struggles by generous advances of money, or by other not less valuable forms of encouragement and aid. He was a prodigious worker himself, and he had a decided liking for men who had in them the very spirit of work, who were industrious and virtuous, and showed signs of thriftiness and prudent living, and it was a genuine pleasure to him to extend to them his sympathy and support whenever they chanced to get into a hard place and needed a friendly hand. In other words, he was ever quick to help those who tried to help themselves, and also those who were helpless, indeed, yet were really deserving. He had small patience with the lazy and shiftless ones, even as the vain, the double-minded and the false-hearted found him an uncongenial presence. It was pleasant to see what a wide reputation he had in Essex County for wisdom, goodness and rectitude, and in what varied and numerous ways the feeling of absolute trust, on the part of families or private individuals in the region round about, was wont to manifest itself. He was constantly called upon to arbitrate between contentious parties, to compose difficulties, to give advice, to settle estates, to readjust boundary lines and to be himself a sort of savings-bank for widows and orphans and others at a time when no legally incorporated institution of the kind existed in the town. Such depositors felt that their little all, principal and interest both, was safe for them beyond all question in the hands of “Squire Lias,” as he was popularly called, and so it was. It was often at no little inconvenience and sacrifice that he rendered these different kinds of service to strangers and acquaintance alike, but he never declined the request if it was in his power to fulfil it, and so to discharge an act of kindness. We can hardly refrain from quoting once more from the simple and heartfelt tribute of Mr. Silvester,—“His personal character,” he says, “was the noblest.” He was frank and generous, sincere in all he said and did, scorned a trick or an unworthy act, and was incapable of either, and he bore about with him wherever he went that

Alfred P. Putnam

deportment and dignity which secured for him the perfect confidence of every man with whom he came in contact. He was one of those who believe that there is a pleasure beyond that of benefiting one's self—the pleasure of doing good to others, and this he practiced. Selfishness was the last trait which the spirit of truth and goodness could have imputed to him."

In person he was tall, large and well proportioned of stature, was of reddish brown hair and fair florid complexion, with full blue expressive eyes, and was of great physical strength and of remarkably good health through all his life until his last, lingering and fatal sickness. He was generally of grave aspect, yet was not without a native element of humor and not seldom indulged in more hearty sportive moods, was marked by a certain puritan simplicity of manner, and was plain in his dress and frugal in his habits. He was a member of one of the earliest temperance societies in Essex County, and was a total abstinence man all his life, even at a time when it was well nigh a universal custom to make use, in some form or another, of spirituous liquors. He was an early riser, and was early to bed, filling the waking hours with incessant work, and while he was so faithful to all the many interests which we have enumerated he had a supreme and loving care of home and kindred.

After months of severe suffering, occasioned by a wrench or a strain of the side, which finally proved the cause of his death, he passed peacefully away, July 8, 1847, at his village home and in the presence of his family and other loving friends. The trustees, or directors, and officers, of the various institutions with which he had been prominently connected, such as the village bank, the Essex Railroad Company and the Walnut Grove Cemetery corporation at once met, passed resolutions expressive of their respect for the memory of their deceased associate, and of their deep sense of the great worth of his character and services, and of their own private as well as of the public loss, and voted to attend, each board as a body, his funeral obsequies. The local and other papers contained just tributes in his honor, voicing the general sorrow of the hour and the sentiments of high esteem and grateful regard entertained towards him by all who had known him. We copy from one or two of these journals the following extracts. Said the *Salem Gazette*, of July 12, 1847,—"It is with sincere regret that we are called upon to chronicle the decease of the Hon. Elias Putnam, of North Danvers, a gentleman of great worth, and a highly influential and useful member of the community where he dwelt. Mr. Putnam was much respected wherever he was known. Enterprising, sagacious, of comprehensive views and upright action he was foremost in all schemes for the promotion of the general good within the sphere where his influence could be felt, and filled many offices of public trust, from a State

Senator to those more immediately local, with unswerving fidelity and acknowledged usefulness. His death cannot but be regarded as a public loss by his own community, and he will be sincerely mourned by a very large circle of neighbors and friends." And the *Danvers Courier*, of July 10th, said,—“For many years he has been looked to as the counsellor and friend of all around him. Ever ready to lend his aid to all who asked it, ever cool and considerate in his judgment,—the want of his judicious advice will be deeply felt in the circle in which he moved. For the last thirty years he had been repeatedly called to the discharge of duties of trust and confidence by his fellow-citizens, and uniformly met them to their entire satisfaction. He never sought office, but never refused it when he thought he could be useful in the fulfilment of its duties. There are none among us who have done more to promote the prosperity of the town than Mr. Putnam. Discriminating in his judgment, persevering in his industry and efficient in his operations, the influence of his example will long be remembered with admiration.”

The funeral services were held at his residence, July 10, and were attended by a large assemblage of people, and the burial took place on the same day at the grounds which he had been so much interested in having set apart and consecrated as a receptacle of the dead. Shortly after, Rev. Mr. Hanson, the pastor of the Universalist Church, preached an eloquent sermon in which he bore touching testimony to the virtues and usefulness of his departed friend and parishioner, and to the conspicuous exemplification which his life and character had given of the value and power of the faith he had cherished.

Mrs. Putnam survived her husband twenty-six years. Of their eleven children, seven are still living. Of the other four, Emily died in 1843, and Elias Endicott, Israel Alden and Louisa Jane, in 1848.

REV. ALFRED P. PUTNAM, D.D.

Alfred Porter Putnam, the eighth child of Elias and Eunice (Ross) Putnam, was born January 10, 1827, in Danvers, Mass., in the house in which also his father was born thirty-eight years before. He was the lineal descendant of the famous John Putnam, who immigrated to this country in 1634, and whose death, eighteen years later, simultaneous with the appearance of a great comet, was publicly proclaimed, by the clergymen of the time, as affording this “very signal testimony that God had then removed a bright star and shining light out of the heaven of his church here into celestial glory above.”¹¹ In the female line he traces his pedigree to some of the ablest founders of our New England civilization, such as Governor John Endicott, Francis Peabody and William Hawthorne, men who have made their

¹¹ See Morton's "Memorial," pp. 251, 252.

impress on every succeeding generation in Essex County to the present day. Educated in the common schools of his native town, he first turned his attention to mercantile pursuits. After a short apprenticeship in the village bank of which his father was president, and, subsequently, a year's study at the Literary Institute at Pembroke, N. H. he entered, as book-keeper, a dry goods establishment in Boston, where he at once discovered an uncommon aptitude for a business career. The intellectual and reformatory movements of the time, however, soon engrossed his attention; and seeking a wider field and a higher aim for his life work, he determined to fit himself for college, and thus acquire a mental equipment with which, in the mighty contests then impending, he might do some service in behalf of his fellow-men.

Accordingly, in 1848, at the age of twenty-one, he began his preparatory studies at an academy in Vermont, and the next year entered Dartmouth College. Attracted by the new elective system under President Wayland at Brown University, Providence, he transferred his membership to that institution in 1850, where he was graduated with high honors in 1852, delivering, at the spring exhibition, the valedictory oration of his class on "Religion and Art." Thus, in the brief period of four years after leaving his desk in Boston, he had won his A. B.

During the following autumn, as in the preceding winters, he was engaged in teaching, and then he entered the Divinity School at Cambridge, under Drs. Noyes and Francis. Approbated in due time to preach by the Boston Association of Unitarian Ministers, he delivered his first sermon in the Unitarian Church at Sterling, Mass., December 17, 1854. The next year, and while yet a student he received unanimous calls to settle at Sterling, Bridgewater, Watertown and Roxbury, the latter of which he accepted. He was graduated at the Divinity School July 17, 1855, and was ordained to the ministry and installed as pastor of the Mount Pleasant Congregational (Unitarian) Church, Roxbury, December 19th, Rev. Dr. George W. Briggs, of Salem, preaching the sermon.

His ministrations at Roxbury continued, to the great acceptance of his people, nearly nine years, interrupted only by a visit to Europe, Egypt and the Holy Land in 1862-63. Perhaps the most notable incident, connected with his travels abroad, was the speech made by him at the dinner of Americans in London, on the Fourth of July, 1862. It was at one of the darkest periods of the Civil War. Banks' campaign in the valley of the Shenandoah had just culminated in disaster, and the Army of the Potomac, the focus of every loyal heart, seemed to hang on the perilous edge of annihilation, between the Chickahominy and the James. Under these disheartening circumstances and in the midst of a people flaming with prejudices, the assemblage of Americans to celebrate the anniversary of their national independence

was an event that gained wide publicity on both sides of the Atlantic. Called upon to respond to the toast, "The Constitution of the United States," Dr. Putnam rose to the full height of the occasion. It was a speech long to be remembered by those who heard it. Of commanding form and with a voice of extraordinary richness and power, he roused his audience to the highest pitch of enthusiasm. The following extract (which we copy from a London journal), referring to our flag, may afford some conception of the speech and the effect it produced at that critical juncture of our affairs:

"And then, sir, that old flag of the Union which so fittingly symbolizes what the constitution makes a reality—that, too, shall go down to those who are to come after us, more precious far than ever it has been before—more significant in its meaning—glowing with brighter radiance—not a single star erased from its field of blue—a thing of beauty and a joy forever. Baptized anew into ten thousand deaths, that azure field takes on a deeper blue for the faithfulness unto the end of all who have fallen martyrs to the righteous cause—those crimson stains wear an intenser red for the blood that has been shed so freely in our behalf—and every line and star of light upon that banner of our love is whiter still for the purity of the souls that have mounted from the battle-fields of the Union up to God. Oh! within these few past months, how many brave men has that national emblem made braver! How many a struggling host it has inspired and led on to victory! How many a noble fellow has been called upon to sleep his last sleep, unwrapped in its sacred folds! How many of our Southern brethren have wept like children as they have caught once more a glimpse of its stars and stripes! And what a promise it seems to give us of the hour when the great deliverance shall come to us all, freeing us not only from the hand that has been lifted up against our country, but also from that evil and scourge of our land which is the source of all our woe. Yes, sir, it is the flag of our pride and our affections, growing richer in associations and more terrible in might with every passing day. As new Stars shall be added to its already splendid constellation, it shall continue its mission of beneficence and power. It shall mean peace and love forever to all who befriend it—defiance and war to those only who insult it."

Returning home in 1863, Dr. Putnam delivered before various Lyceums lectures on "The Nile," the "World's Indebtedness to Egypt," and other topics suggested by his tour abroad, all of which added to his reputation and enlarged the sphere of his usefulness.

From time to time, while in Roxbury, urgent calls came to him to settle elsewhere,—from Salem, Boston and Chicago churches,—all of which, however, were declined. In the spring of 1864 the First Unitarian Church of Brooklyn, N. Y., presented a strong claim for his services. This was everywhere recognized as one of the most important posts in the denomination. To hold its ground in the City of Churches, it needed an exceptionally able and vigorous champion of the faith it professed. Considerations of duty, strongly urged upon him by leading men of the denomination, finally induced Dr. Putnam to sunder the peculiarly tender and affectionate ties that bound him to the hearts of his people in Roxbury. He accepted the call, and on the 28th of September following he was installed as pastor, Rev. E. S. Gannett, D.D., of Boston, preaching the sermon.

In the long and eventful pastorate that ensued, Dr. Putnam made his pulpit a centre of wide influence in the city.

His own society testified their appreciation of his pastoral work by the erection, in 1866, of a beautiful chapel for the use of its Sunday-school, and, at the same time, responded generously to his appeals for the religious instruction of the children of the poor, so many of whom he had observed spending the sacred hours idly in the streets and alley-ways of the crowded city.

For this class, accordingly, a Sunday-school was immediately opened in a room over the Wall Street Ferry-house, and after a time passed under the superintendency of Mr. A. T. White an active member and efficient co-worker in Dr. Putnam's Church. Six children only attended the first session, but by the persistent and indefatigable exertions of the founder and his willing assistants, the numbers rapidly increased, until now [1887], it is a large and flourishing institution, with a fine, commodious chapel, erected for its use, a permanently settled missionary to carry on its beneficent work, and a constituency of about a hundred families to share its blessings and send down the stream of its influence, it is to be hoped, to many succeeding generations.

Another philanthropic enterprise, to which Dr. Putnam directed his attention at this time, was the founding of the Union for Christian work, since become one of the most important and influential charities of Brooklyn. The first conferences of the projectors were held in his study. At a subsequent meeting, already large and enthusiastic, he presented the report, as chairman of the committee on constitution and by-laws, which was adopted, and, by request, delivered an address on the love, pursuit and practice of truth, striking the key-note of the organization and enlisting still broader sympathy in its behalf. From these beginnings, the Union has grown to be a recognized power in the community. Nobly endowed and established in a beautiful edifice of its own, with its library, reading and lecture rooms, its labor bureau and schools of industrial art, it stands to-day a worthy monument to those who, in the providence of God, laid its foundations deep in human brotherhood and love.

In 1867 Dr. Putnam again signalized his pastorate by the establishment of the Third Unitarian Church, in the suburbs of the city. The rapid growth of Brooklyn toward the East, which he foresaw, has abundantly justified the wisdom of the movement, though, at the time it was undertaken, there were not wanting among well-trying friends some misgivings of the result. Sunday services were opened at first in a small hall over a fish-market, and conducted there regularly, with ever deepening interest, for about a year, when Dr. Putnam, appealing to his people, secured the sum of ten thousand dollars for a house of worship. The building was dedicated December 9, 1868, Dr. Putnam preaching a powerful sermon on the "Freedom and Largeness of the Christian Faith." Latterly the society has again out-grown its accom-

modations, and has purchased and fitted up anew the ample and attractive structure it now occupies. Professor Foster, in his published sketch of the new church, thus testifies to its paternity: "Above all other human sympathy and aid, does it cherish the friendship and services of Rev. Alfred P. Putnam. It is simply just to affirm that the Third Unitarian Society of Brooklyn is the offspring of his hope and zeal."

During his ministry in Brooklyn Dr. Putnam delivered, from time to time, to his people courses of lectures on a variety of important subjects, such as the Great Religions of the World, the History of the Bible, the History of Sacred Song, the Doctrines of Liberal Christianity, the History of Unitarianism, the History of Universalism, the Religious Aspects of Europe, and on Egypt, Sinai and Palestine.

Two of these courses, on the Great Religions and the History of Sacred Song, were subsequently repeated to the students of the Meadville (Pa.) Theological School. Out of the latter series grew Dr. Putnam's "Singers and Songs of the Liberal Faith," a work which required the finest taste and most extensive research, and which gives biographical sketches of nearly one hundred Unitarian hymn-writers, with selections from each, and copious illustrative notes. This work was published in 1874, and received with high encomiums by the press, religious and secular, and by critics and reviewers of every sect. The late Dr. Ezra Abbott said of it: "It seems to me in every respect admirably edited. I find unexpected richness in the book every time I open it." Indeed, that a work like this, avowedly denominational in its scope, should yet, by the sweetness of its tone and the catholicity of its spirit, win universal praise, is almost without a parallel in our literature.

The terrible conflagration at the Brooklyn Theatre December 5, 1876, was an event that called forth the profoundest sympathies of every class in the community. In obedience to a common impulse, the citizens at large promptly organized a Relief Association for the benefit of the surviving sufferers and the families of the deceased. From this was formed an executive committee, and Dr. Putnam, who had delivered the address at the burial, in one common grave, at Greenwood Cemetery, of the unrecognized dead, was appointed a member to represent the churches and charities of the city. His capacity for hard work, combined with a practical knowledge of affairs, brought him at once to the front. The special disbursement of the fund among the beneficiaries for whom it was intended largely devolved upon him. The burden was cheerfully and faithfully borne. It may afford some conception of the extent of his labors in this cause, if it be stated that the sums disbursed, mostly in small checks about once a week and covering a period of two years, amounted to nearly fifty thousand dollars, and that the families receiving aid,

all of whom required personal visitation, numbered one hundred and eighty-eight. At the close of the trust, Dr. Putnam was requested by his associates to draw up the final report. This he did; and its publication in the daily papers and in pamphlet form was followed by a popular verdict of approval as spontaneous and hearty as it was well-deserved.

One of the most interesting events of his life in Brooklyn was the celebration of the centennial anniversary of Dr. Channing's birth, April 7, 1880. It may well be deemed a landmark in the history of the Christian Church in America. Representatives of every denomination took part in its impressive ceremonies. To Dr. Putnam, who conceived, and, as chairman of the committee, carried out the novel arrangements for the occasion, it was truly a labor of love, for Channing's spirit and teachings were greatly instrumental in leading him into the ministry and are still very dear to his heart.

A memorial service in the evening, at the Academy of Music, presided over by Mr. A. A. Low, brought the exercises to a fitting close. It was a brilliant assemblage. Five thousand people, including men eminent in every walk of life, filled the auditorium. Henry Ward Beecher, George William Curtis, Rufus Ellis, Robert Collyer and others made addresses, in which the dawn of a new and better era of Christian fellowship was confidently proclaimed. Dr. Putnam published the unique proceedings in a volume, entitled "The Brooklyn Channing Celebration," containing the addresses and letters of sympathy from distinguished theologians and publicists in all parts of the world.

He has also published during his ministry a considerable number of his sermons in pamphlet form, such as those on the "Death of Rev. George Bradford," 1859; the "Life to Come," delivered in 1865 at the Cooper Institute in New York and afterwards printed as a tract by the American Unitarian Association; "Edward Everett," 1865; the "Freedom and Largeness of the Christian Faith," 1869; "Unitarianism in Brooklyn," a historical address, preached on the twenty-fifth anniversary of the dedication of the First Church edifice, 1869; the "Unitarian Denomination, Past and Present," 1870; "Broken Pillars," 1873; "Christianity, the Law of the Land," 1876; a "Tribute to the Memory of Mrs. Elizabeth Frothingham," 1877; "William Lloyd Garrison," 1879; "The Whole Family of God," 1884. Also biographical memorials of Mrs. Josiah O. Low and Mr. Ethelbert M. Low, 1884; and of Mr. and Mrs. Ephraim Buttrick, 1885.

For many years, and until he removed from Brooklyn, Dr. Putnam was a director of the Long Island Historical Society, and much of the time chairman of its executive committee, writing its annual reports for publication during the period of 1876-81, and giving to its interests, at all times and in full measure, a firm and loving support. He was also correspond-

ing secretary and member of the invitation committee of the Brooklyn New England Society from the date of its organization, and at one of the annual dinners he gave an account of a visit made by him, in 1883, to Scrooby, the original seat of the Pilgrims in England.

In the line of historical investigation, which he pursued in intervals of leisure, *con amore*, we owe to his fruitful pen, strong articles, published in denominational and other magazines, on "Hosea Ballou," "A Visit to Haworth," "The Origin of Hymns," "Helen Maria Williams," "A Story of Some French Liberal Protestants," and "Paul's Four Great Epistles and his Visits to Jerusalem," etc. He also contributed one of the chapters in Judge Neilson's volume, "Memories of Rufus Choate."

Scores of extended articles in the *Danvers Mirror* on local history and traditions, running through a series of years, attest his fondness for this sort of literary work. Future historians will find in them a rich thesaurus of materials, historical, biographical and genealogical, carefully collated for their use.

In 1882, under the pressure of his long-continued and laborious pastorate, Dr. Putnam's health began to decline. His robust constitution could no longer resist the strain to which his multifarious cares and engagements subjected it. Promptly and affectionately, his church voted to give him a year's leave of absence, that he might revisit foreign shores, to continue to him his salary, and to supply his pulpit. He was also generously supplied with funds to defray his personal expenses abroad.

Removing his family for the year to Concord, Mass., the ancestral home of his wife, he sailed for Europe on his birthday, January 10, 1883. After a delightful winter in the south of France, where his restoration to health and to the natural elasticity of his spirits was, as he thought, assured, he visited London in May, and was a welcome guest at the Unitarian Conferences, then in session in the city. Here, before various bodies, he delivered several addresses, one of which, by special request, was on the Aspects of Unitarianism in America. Its decidedly conservative tone awakened at once a profound interest among his hearers, and at its close drew a running fire of criticism, for and against the positions assumed, from the eminent scholars and divines who were present. Subsequently, the discussion was taken up by the religious press, on both sides of the Atlantic, Dr. Putnam publishing trenchant articles in his own defence.

He sailed from Liverpool for home July 4, 1883. With some misgivings, confirmed indeed by medical advisers, he immediately returned to his pulpit, and re-assumed all the burdens his versatile talents had hitherto imposed upon him. The struggle, however, was in vain. His enfeebled constitution soon admonished him that a longer period of rest was imperatively necessary. Accordingly, early in April, 1886,

he resigned his pastoral office, with regretful sympathy on the part of the church he had so long and so faithfully served, and heartfelt sorrow on his own. A testimonial from his grateful parishioners, accompanied by the munificent gift of fifteen thousand dollars, fitly expressed their appreciation of his high character, and the esteem and affection in which they held him. Resolutions of similar import were passed by the other organizations with which he was officially connected; and the papers of the city made warm, eulogistic mention of his life and labors in Brooklyn.

The Long Island Historical Society generously put on record "the deep sense entertained by all its members of the value of the service which Dr. Putnam has cheerfully rendered it for many years, by his wise counsels, by his faithful and intelligent participations in its discussions, and his generous and efficient assistance in accomplishing its plans," Rev. Dr. Storrs, president, adding that "the highest regard and esteem of all the members of the board will follow Dr. Putnam to his future home, wherever that may be, with their best wishes for his speedy and complete restoration to health, and for his continued enjoyment and usefulness in the service which they do not doubt he will render elsewhere, as he has so signally rendered it here, to the cause of good letters, of historical enquiry, and of the best social culture."

The opening words of a *Brooklyn Eagle* editorial were as follows: "The resignation of the Rev. Dr. Putnam, of the First Unitarian Church, will occasion regret beyond the boundaries of the society. He has been a faithful and devoted pastor, and this implies a good deal in a term of service of twenty-two years, including, as it does, not merely the delivery of sermons, but the personal work which brings the minister into intimate relations with many people in the sharp crisis of life and death. Dr. Putnam, during that period, has been also an active and useful citizen, bearing an interested part in those public enterprises which in Brooklyn know no denominational lines. An unanimous expression of good will, with hearty hope for his restoration to health and his prosperity everywhere and at all times, will accompany him in his retirement."

The *Brooklyn Union* closed an article with this: "His name has been connected with many benevolent movements. He was an earnest worker for the Union for Christian Work, the Mission School and many other charitable enterprises. He was a conspicuous figure in helping to relieve the distress of those who were made widows and orphans by the destruction by fire of the Brooklyn Theatre. He also did much towards familiarizing people of all denominations with the life of Dr. Channing in the services which were held in his commemoration. Apart from his ministerial work Dr. Putnam has filled a large space in the public mind by his untiring labor in forwarding the great and growing interests of the city

in which, as pastor and citizen, he has spent the best years of his life."

Rev. Almon Gunnison, D.D., pastor of the All Souls' (Universalist) Church, in Brooklyn, wrote to the *Christian Leader*, of Boston, of which paper he has long been the regular correspondent:

"We record with great sorrow the resignation of Rev. Dr. A. P. Putnam, the pastor of the First Unitarian Church in Brooklyn. He has had a long and triumphant pastorate of over twenty years, and gives up a successful work on account of ill-health. He has gone South, and it is expected that freedom from care and rest, will bring complete restoration. Dr. Putnam is well-known in our denomination, as he is of Universalist parentage, and has always been in thorough sympathy with our faith and the genius of our church. He has been outspoken in his utterances and fraternal in his fellowships. A preacher of large ability, a gentleman of noble instincts, he has been identified with every good work in the City of Churches, and his strong personality has counted for much in educational, philanthropic, reformatory and religious work. He has been the most helpful of yoke-fellows, ready always for neighborly service, quick in his sympathy in sickness, swift to speak the appreciative word and to do the kind act. His resignation will be regretted not only by his own people, but by all liberal believers, and, in fact, by all of every faith, who can appreciate the influence of a strong, sweet-souled, consecrated Christian worker."

Of the various biographical sketches of him which have appeared from time to time, and to which we have been greatly indebted for our materials here, we copy the following extract from J. Alexander Patten's "Lives of the Clergy of New York and Brooklyn," as showing his character as a preacher and his theological position:

"Dr. Putnam preaches with much effectiveness. There is great comprehension in his thought, and he is able to give expression to it in terms of rare conciseness, and not less of beauty. All that he says has this vigor of meaning and force of application, and much of it is delivered in the most classic and glowing picturings of eloquence. In his argument, he addresses himself to an elaborate and practical consideration of his subject, and you are led along with him, without tediousness, but rather allured by the attractive interweavings of a warm and chaste fancy. And herein is it that this gifted preacher excels. Your attention is instantly riveted by the smoothness of his periods and the elegance of sentiment which usher you to profound discussion and lofty imagery. He belongs to the Channing school of Unitarianism. Holding to his particular tenets with all the strength of his intellect and his love, he stands prominent among their ablest expounders, and in a pure, consistent life seeks their practical illustration before his fellow-men."

One of his sermons, delivered in Roxbury in 1861, at the outbreak of the civil war, on the Flag of our Country, has become widely known, and is published in text-books, as a model of fine diction and impassioned eloquence.

Dr. Putnam received his degree of D.D., from his *alma mater*, Brown University, in 1871.

In 1877 he was invited to become the pastor of the Unitarian Church in Quincy, Mass., but he declined the call. While in Roxbury he was elected president of the Unitarian Sunday-school Society. After his removal to Brooklyn he was made vice-president of the New York and Hudson River Unitarian Conference, and was also elected as its president, but the latter position he declined. For a time he edited the *Liberal Christian*, a Unitarian weekly paper, published in New York City. When, years ago, the project was on foot to remove the Meadville (Pa.) Theological School to Chicago, Ill., and there enlarge

and endow it, the leading man of the denomination who had charge of the enterprise asked Dr. Putnam to become president of the new institution, but the friends at Meadville could not be reconciled to the loss of the school, and the plan was therefore abandoned. Dr. Putnam was a member of the Century Club in New York, and also of the similar organization, of later origin, in Brooklyn, the Hamilton Club, as well as of the Brooklyn Art Association. He is also a member of the New England Historical and Genealogical Society, and of the American Historical Association.

In politics Dr. Putnam was an ardent Free-Soiler in old anti-slavery days, and often preached from the pulpit and spoke at political meetings in behalf of the slave and the cause of liberty. While a student in the Divinity School in 1854, he was sent, as a delegate from his native town, to the convention at Worcester that founded the Republican party and gave it its name. He has generally acted with that party since, but not seldom has on occasion assumed a more independent attitude.

In his pleasant retirement at Concord, whither he has again removed his family, he is now rapidly regaining his health. Surrounded by his books, and by many beautiful works of art which are the mementoes of loving friends, or which have been gathered by him in his extensive travels at home and abroad, he is devoting his leisure to favorite literary pursuits.

In person Dr. Putnam is tall and imposing. His well-proportioned form, his cultivated bearing, his classic, intellectual face in which strength and benignity combine, make him always a marked man among men.

His voice, sonorous and flexible in a high degree, is also wonderfully sympathetic. It can touch the tenderest chords of feeling, or express in thunder tones, as so often wont to do, hatred of wrong and oppression. The courage of his convictions is invincible. No man has hurled more scathing anathemas against intolerance, or held up to public scorn corruption in high places, more fearlessly than he. Courteous, affable, open-hearted, blessed with hosts of friends, he has preserved in its freshness and integrity, through all the vicissitudes of a laborious and useful life, the charming personality with which nature so richly endowed him.

Dr. Putnam was married to Miss Louise P. Preston, daughter of Mr. Samuel Preston, of Danvers, January 10, 1856. She died in June, 1860. For his second wife he married, in 1865, Eliza K. Buttrick, of Cambridge, daughter of Ephraim Buttrick, Esq., long a prominent member of the Middlesex bar. Their five children are Endicott Greenwood, Alfred Whitwell, Helen Langley, Ralph Buttrick and Margaret Ross.

JONAS WARREN.

The man whose portrait accompanies this short sketch, one of the best business men who ever lived in Danvers, was not a native of the town. His au-

cestor, Joshua Warren, emigrated from Dover, England, and settled in Watertown. Joshua's son, Daniel, married Rebecca, daughter of Captain Benjamin Church, the famous Indian fighter. Daniel had fifteen children, and one of his sons, Phinehas had a family of the same number, of whom five sons were in the battle of Bunker Hill. Phinehas' youngest son, Jonas, married, first, Apphia Stickney, and they were the parents of the subject of this sketch, who was born in North Beverly July 29, 1787. In his early boyhood the family moved to Boxford, and there, when he was still quite young, the mother died. He was brought up by his uncle, Ancil Stickney, and when he reached the age when young men struck out for themselves, he came to Danvers, and soon found a place of usefulness in the store kept by Deacon Gideon Putnam in his old tavern, which stood at the corner of High and Elm Streets. Before many years he bought the whole establishment of the late Judge Samuel Putnam, son of Deacon Gideon. "Jonas," said the judge, "here you will live and here you will die." Though the prophecy was not fulfilled as to his death, Mr. Warren did live many years, full of activity and thrift, on the old corner, and he built up there a business more extensive than can be easily appreciated at this time. Some days, a half a century ago, as many as forty great teams came into Danvers Plains from surrounding towns and far back into the country, to dispose of their produce and take back a season's load of staple groceries. It was chiefly Mr. Warren's fair treatment and broad and far-sighted manner of doing business that transformed a mere country cross-roads into a busy commercial centre. The amount of goods handled thus in the way of sale and barter was enormous, and it was no rare thing for clerks to be obliged to work till midnight, loading these teams, so that customers could start away bright and early in the morning. His policy was to offer such inducements that there was no object to farmers to carry their produce four miles farther to find a market in Salem, and, as a consequence, he and "Uncle Johnnie" Perley, on the opposite corner, so controlled the situation that Salem dealers often had to come to Danvers to buy at second-hand, and, of course, at the seller's price. In all this there was no trickery or meanness on the part of Mr. Warren. Mr. Joshua Silvester, just deceased, was in his early days a clerk in the old store, and a few weeks before his death he was speaking of Mr. Warren: "For an up and down square dealer he had no superior."

In 1841 Mr. Warren sold out at the Plains and removed to the Port, where he became the pioneer of the wholesale flour and grain business, entering into the larger field with the same energy and sagacity which had characterized his previous operations. He was the first to bring grain to this port by water, and from the cargoes of the many vessels in his employment he supplied a very extensive inland trade.

James Warren

E. A. F.

Samuel T. Fowler

Mr. Warren was one of the earliest Unitarians of Danvers, and was always a steadfast supporter of that denomination. Long before the establishment of the church here, he regularly attended the church in North Beverly. Rev. E. M. Stone, long the pastor of that church, has written of Mr. Warren,—“He was a parishioner whose constant attendance on public worship greatly cheered my ministry. During the thirteen years of my pastorate there I do not recollect of his being absent from church for a single Sabbath, unless detained at home by sickness, and I do remember of his being present after heavy snow storms and before the roads were broken, when persons living near the church excused themselves from attendance for the same reason. He was an attentive hearer, a devout worshipper, and an unostentatious Christian believer.” He was much interested in the building of Unity Chapel in this town, and attended there as long as advancing age would permit, contributing always liberally towards its support.

He married Hannah, daughter of Enoch Kimball, of Boxford. She died the year following Mr. Warren's removal to Danversport. Mr. Warren was himself nearly ninety years old when he died. The date of his death was November 18, 1876, and the place, the home which he built, now occupied by his only daughter, on High Street. Besides his daughter, two sons survived him—Aaron W. and the late Harrison O. Warren. Mr. Warren was a director of the Naumkeag National Bank of Salem from its organization to near the close of his life. He was the last survivor of New Mills Alarm List of 1814.

Though Mr. Warren kept aloof from politics, and rarely, if ever, held office, his business relations were such that scarcely any man was more widely known in the county. His strict integrity secured the confidence of all. He wronged no man intentionally, and his word could always be depended upon. In his family, too, he was just and kind, a true husband, a wise father. He left to this community the priceless example of the life of an honest man, and to his family the legacy of an unspotted name.

SAMUEL P. FOWLER.

Samuel Page Fowler was born in Danvers New Mills (now Danversport), April 22, 1800. His parents were Samuel Fowler and Clarissa (Page) Fowler. Among his ancestors are to be found the names of men, who, by their patriotism, military genius, business activity and enterprise commanded the respect of their contemporaries, and left their impress upon the times in which they lived.

The first of the name who came to this country was Philip Fowler, born in Wiltshire, England, in 1590, settled in Ipswich, 1634. Joseph, his son, born in 1629, married Martha Kimball. Philip, their son, born in Ipswich, December 25, 1648, was “a man of superior ability, and as a merchant, deputy-marshal

and attorney, left a good record. He strongly opposed the witchcraft delusion, was employed as attorney by the Village Parish in its lawsuit with Mr. Parris, and in 1692 conducted the proceedings in Court against the head and front of the witchcraft prosecution.” He married Elizabeth Herrick, daughter of Henry and Editha (Laskin) Herrick, and died 1715. Their son Joseph, born August 7, 1683, married Sarah Bartlett, died December 25, 1745. Joseph, born October 9, 1715, married Mary Prince, died February 1, 1807. Samuel, their son, left Ipswich in 1765 and became one of the pioneer settlers of “Danvers New Mills.” A shipwright by trade he assisted in building many vessels, both before and after the Revolution, some of which he partly owned; he was a private in Captain Jeremiah Page's company, at the battle of Lexington. He married Sarah, daughter of Archelaus and Mehitabel (Putnam) Putnam. Deacon Putnam, in the spring of 1751 moved a small building used as a cooper's shop from his father's farm, now known as the “Judge Putnam farm,” by floating it down Crane River to the bank of the river at what is now Danversport. He fitted it up as a home for his family, and here his daughter Sarah was born, September 14, 1775. She was the first white child born in that part of the town, which was then covered with woods, where she was often lost when a child. She lived to see the small hamlet a prosperous village, and died in 1847, aged ninety-two years, having had six children, twenty-seven grand-children and sixty great-grand-children. Deacon Putnam built grist and chocolate mills near his house, which gave to this section of the town its name of New Mills.

Samuel Fowler, the son of Samuel and Sarah (Putnam) Fowler, was born in Danvers, September 15, 1776. He was a man of large enterprise and carried on the business of his grandfather, having a grist mill, a mill for pulverizing spices, as well as one for grinding bark, besides pursuing the occupation of a tanner. He died February 22, 1859. He married Clarissa Page, the daughter of Captain Samuel and Rebecca (Putnam) Page. “She was greatly endeared to a large circle of relatives and friends by her social and domestic virtues.” She died April 14, 1854. Captain Samuel Page was the son of Colonel Jeremiah Page and Sarah (Andrews) Page, born in Danvers, August 1, 1753. “He enlisted in the cause of his country at the breaking out of the Revolutionary War, and was engaged in the battles of Lexington, Monmouth, and Stony Point. He was with Washington at the crossing of the Delaware, and in the severe winter of 1777 shared in the sufferings of the American army at Valley Forge, and he, with his company, was present when Wayne stormed Stony Point. After the close of the war he successfully engaged in commercial pursuits.” He married Rebecca, the daughter of William and Elizabeth (Putnam) Putnam. William was a son of Lieutenant David Putnam (brother of General Israel Putnam) and Rebecca (Perley) Put-

nam. David was the son of Joseph and Elizabeth (Porter) Putnam. Joseph the son of Thomas Putnam and Mary Veren. Thomas was the son of John Putnam, 1st. Samuel Page's father, Colonel Jeremiah Page, was an officer in the Revolutionary War, and was the son of Samuel Page, who was the pioneer settler of Fitchburg, having been found there with his wife and family by the surveyors, sent out by the General Court, to lay out the town in 1719. Captain Page died in Danvers, September 2, 1814.

Descended from so worthy and patriotic an ancestry, we might reasonably expect that Mr. Fowler would inherit their many virtues and worthy traits of character, and in this we realize our expectations. In boyhood he attended the district school, where he read from the well-known books: "The Columbian Orator," and "American Preceptor," also "Jedediah Morse's Geography," then a popular reading book. He learned the rudiments of grammar from the "Young Ladies' Accidence," and mastered the difficulties of "Walsh's Popular Arithmetic," but the best advantages the town then furnished its children, were meagre when compared with those enjoyed by the youth of the present day.

New Mills at that time was the home of ship-owners and sea-captains, who, on their return from their voyages, would tell their listening townsmen of the lands they had visited, so that the boys of that period were made familiar with foreign countries and the characteristics of their inhabitants. Another factor which helped to develop a desire for knowledge and a taste for reading in the subject of this sketch, was the New Mills Social Library, formed in 1808, with the best books then to be found in the range of English literature, selected by Jeremiah Chaplin, D.D., pastor of the Baptist Church.

In the War of 1812 the inhabitants of Danvers shared in the excitement and the patriotic spirit of their more maritime neighbors, and Mr. Fowler, then a lad of twelve years, readily imbibed that love of country, and hatred of oppression, which he has shown through a long life.

He has always manifested a deep interest in everything pertaining to the welfare of the town, and has often been chosen to fill important offices, and to represent his fellow-citizens in many ways. Before the division of Danvers, he held the office of selectman and assessor from the years 1835 to 1840, was auditor in 1833, 1841 and 1842, moderator of town meeting in 1839, was a member of the school committee for seven years, and one of the board of health for three years. He was one of the fire-wards of the town upon the first organization of the fire department, and continued so for several years. He was elected representative to the General Court in the years 1837-38-39, and with the Rev. M. P. Braman and Hon. Alfred A. Abbott, represented the town in the Constitutional Convention held at Boston in 1853. He was one of the committee appointed to make arrangements for the cele-

bration of the One Hundredth Anniversary of Danvers, on the 16th of June, 1852, and at the dinner on that occasion responded to the following toast: "The Women of Danvers in Revolutionary Times—like the staple manufacture of the town—firm, tough and well *tanned*, but *unlike* it, as they were not to be *trampled* upon."

He was, also, one of the trustees elected by the town to hold the surplus revenue funds, and one of the members of the first committee chosen to confer as to the best methods of introducing water into the town. But it is as overseer of the poor, a position which he still holds, that Mr. Fowler's tenure of office has been the longest, extending over a period of forty-four years, with only one year's exception, and a greater part of the time he has been chairman of the board. His knowledge of the poor-laws is complete and exhaustive, and his decisions are undisputed in the settlement of the many vexatious questions which arise in the administration of these laws. His faithfulness to the interests of the town, and his kindness and consideration to the poor have given him for many years the nomination of all parties. Although taking such an active part in all town matters, Mr. Fowler has never been a politician, was a member of the old Whig party, and has been a supporter of the Republican party since its formation.

He was one of the trustees of the Peabody Institute, appointed by Mr. George Peabody, served as a member of the building committee, and upon the resignation of Rev. M. P. Braman, was chosen president of the board of trustees, which office he held till March, 1879. At the present time he is chairman of the committee on buildings and grounds, and in connection with Mr. Joshua Sylvester, has done much toward the laying out and beautifying of the park about the Institute, making it one of the most attractive places in the town. He has also been chairman of the lecture and library committee, and in the latter capacity gave much time and thought to the selection of those books which would instruct and elevate their readers, and cultivate in them a desire for useful knowledge, having the experience gained by many years of reading and study, to help him in this work. From his youth he has shown a great taste for natural history, and during his long life has been a close observer of nature, in all her varied forms. By constant observation and study, he made himself thoroughly conversant with the notes and habits of our native birds, and contributed a series of most interesting and instructive articles to the *New England Farmer*, on "The Birds of New England." A lover of flowers, he has always taken great pleasure in their cultivation, and has had equal success with plants from widely separated localities, so that in his garden the variously-tinted blossoms of our woods and fields grow side by side with the more gorgeous flowers of China and Japan. Nor is he selfish in the enjoyment of his garden, but freely gives its treasures to all—

from the little child, who timidly asks for a few flowers, to the learned botanist, who solicits specimens for analysis. It has been his pleasure for many summers to arrange a bouquet each week for the church, and the ladies of the Parish showed their appreciation of this work by presenting him with a beautiful engraving. He has not devoted his attention exclusively to the cultivation of flowers, but has also studied the characteristics of our native trees and shrubs. The results of his close observation in this direction are apparent in various articles written by him on our "Native Trees and Shrubs," published in the *New England Farmer*, in which he shows himself a nice and accurate observer in this department of nature. He has carefully noted the habits of the various insects injurious to vegetation, and in an essay read before the Essex County Agricultural Society, gives many valuable suggestions as to the best methods of destroying the numerous insects, which infest the orchards and gardens of the county. Possessing these tastes it might be expected that when the Essex County Natural History Society was formed, Mr. Fowler would be one of its first members. He is now the only one living of the founders of this organization. At its fiftieth anniversary, held at Topsfield, in June, 1884, he was present, and in an address delivered on that occasion, alluding to the first meeting of the society, says: "After dinner a stroll was taken in the woods and fields, and among the plants gathered was a fine specimen of Blood Root (*Sanguinaria Canadensis*) which was taken up with a spade, and upon our return it was placed in the middle of the table, with a newspaper under it, when we pledged ourselves to sustain the Essex County Natural History Society, and promote its interests." When the Essex Institute was formed by the Union of the Essex Historical and Essex County Natural History Societies in 1848, he was chosen curator of Natural History, and vice-president in that department in 1861, and remained so for several years; he was also on the Field committee as early as 1857.

Fond of historical research, the rich field of his town, county and State has furnished him abundant material, so that he has not his equal as a local historian, and has given especial time and thought to the study of the witchcraft delusion, and the causes which led to its origin and continuance. He has published an "Account of the Life and Character of the Rev. Samuel Parris, of Salem Village, and of his Connection with the Witchcraft Delusion of 1692," and edited an edition of "Salem Witchcraft, by Robert Calef, published by H. P. Ives and A. A. Smith, in 1861." He has also made a large manuscript collection bearing upon this subject, copied from the church and court records of that period. Upham, in speaking of Philip Fowler, of Ipswich, and the bold stand taken by him in 1692 against the decisions of the clergy and magistrates, says: "It is an interesting circumstance that one of the same name and

descent, in his reprint of the papers of Calef, and other publications, has done as much as any other person of our day to bring that whole transaction under the light of truth and justice." It is largely due to his research and interpretation of Mr. Parris' conduct in the affair, that has led to a more favorable construction of the motives which actuated him and the neighboring clergy in their treatment of those persons accused of practising witchcraft. Mr. Fowler has published in the Historical Collections of the Essex Institute the following articles: "Journal of Captain Samuel Page, in the Campaign of 1779, with Notes;" "Biographical Sketch and Diary of Rev. Joseph Green, an Account of the Life of Rev. Peter Clark and Rev. Benjamin Wadsworth, Ministers of Salem Village," (now Danvers Centre); "Records of Overseers of the Poor of the Old Town of Danvers for the years 1767 and 1768, by the Chairman of the Board, Captain Elisha Flint, with Notes." "Craft's Journal of the Siege of Boston, with Notes."

He is thoroughly conversant with the early history of the town, and often contributes to the columns of the local paper articles full of historical facts, which will yield a rich harvest to the town's future historian.

He became a member of the New England Historic Genealogical Society, in Boston, in 1862. His literary work has been performed in the midst of his regular occupations, for Mr. Fowler learned the trade of a tanner, and carried on the business in the same establishment formerly owned and occupied by his father, on Porters river.

He was one of the incorporators of the Danvers Savings Bank, incorporated in 1850, and one of its first trustees; he was also actively engaged in the formation of the First National Bank, and has been one of its directors since 1863. He was admitted to Jordan Lodge of Free and Accepted Masons, March 26, 1823, and is at present an honorary member, and one of the oldest masons in the State.

He has always shown a deep interest in the temperance cause, more especially before it became so intimately connected with the political questions of the day. At the annual meeting of the old town of Danvers, on the 4th of March, 1833, the subject of intemperance in the town being under consideration, an order and vote to be presented to the moderator was drawn up by J. W. Proctor, Esq., instructing the selectmen to prohibit the sale of intoxicating liquors in the town, which vote was presented to the meeting by Mr. Fowler, who is now the only one living of that band of temperance workers, who, in one of the square pews in the brick meeting-house at the Centre, conferred together as to the best means to arrest the drunkenness in their community. The passing of this vote made Danvers the first town in the State that took action in its corporate capacity against licensing the sale of intoxicating liquors, and it has ever since maintained the same position. Before the general awakening of the public mind to the subject,

Mr. Fowler was keenly alive to the fact that our burial-places were neglected and unattractive, and it was largely through his efforts, and that of his brother, Mr. Henry Fowler, that a tract of land was purchased to be laid out as a cemetery, and the Walnut Grove Cemetery Corporation formed, of which he has been president for many years.

In the year 1832, he joined the First Church during the pastorate of the Rev. M. P. Braman. When the Maple Street Church was organized in 1844, he became one of the original members, was chosen one of its first deacons, which office he still holds, and has ever been mindful of all that concerned the temporal and spiritual welfare of the church. He was a member of the building committee to erect the first meeting-house, and when this new and beautiful edifice was destroyed by fire only a few years after its completion, he was one of the members who bravely took up the work of building the present house of worship. He has been clerk of the parish for more than thirty years, and the distinctly written pages of this record will be a pleasure to the society's future historian. Before his advanced years he was a constant attendant upon the prayer-meetings of the church, contributing to their interest by his words of instruction and wisdom, and was for many years an efficient Sunday-school teacher.

Although in his eighty-eighth year, Mr. Fowler possesses the physical and mental activity of a man of much younger years, filling with acceptance and fidelity the various offices bestowed upon him by his townsmen. The reading of his favorite books, the cultivation of his garden are as great sources of pleasure to him as they ever were, and his interest is unabated in whatever concern the public goods.

The record of such a life shows what a man can accomplish for himself and others by habits of industry and patient thought, combined with a desire for the best good of those who are associated with him as fellow-citizens. The public favors he has received have not been obtained at the sacrifice of truth and honor, for in all things he has shown himself an honest man, just and upright in his dealings with others.

Mr. Fowler was married December 3, 1833, to Harriet Putnam (who was born in Danvers, May 11, 1806) daughter of Moses and Betsey Putnam. Like her husband, she retains in a remarkable degree her youthful feelings, possessing those virtues which make her a devoted wife, a good mother and an earnest Christian.

Their children are, (1) Clara Putnam, born March 20, 1836, married November 25, 1856, George E. DuBois, of Randolph, Mass., who died November 3, 1859; their child, Ellen Tucker, born December 16, 1857, married, April 22, 1886, Nathan Putnam Proctor, of Danvers; they have a son born June 7, 1887. (2) Samuel Page, Jr., born December 6, 1838. (3) Harriet Putnam, born July 25, 1842.

CHARLES LAWRENCE.

Mr. Lawrence was among the thirteen children of Abel and Abigail (Page) Lawrence, of Salem, Mass. He was descended in the seventh generation from John Lawrence, of Wisset, England, who came to this country and first settled at Watertown, but removed to Groton in 1662, where he died.

The subject of this notice was born October 7, 1795, and was graduated at Harvard University in the class of 1815.

About 1833 he married Miss Lucy A. Ward, sister of Thomas Ward, the banker of Boston. Delicate health prevented him from studying a profession or entering upon a business career. He made several voyages to India in early life, and spent a winter or two in the West Indies and Florida to combat dangerous symptoms of lung disease.

With his brother and sisters he afterwards left Salem and established a home upon what was then known as the Phillips Farm, Danvers. There for nearly forty years Mr. Lawrence resided and found occupation in open air pursuits, which no doubt were the means of prolonging to eighty-four years a life which was never robust. Gardening was a favorite occupation, and he had a passion for flowers, which always flourished under his care.

Combined with these pursuits was a love of literature, which did not fail him while life lasted.

Though mixing little with the world, he was always acquainted with the best and newest books, and wholly alive to the political questions of his time.

In November, 1820, he was made a member of the Salem East India Marine Society, and was elected corresponding secretary January, 1828, remaining in that position till January, 1838. He was also an original member of the Essex Institute, and through life he felt a strong interest in the welfare and success of that society.

A warm friend, a kind neighbor, a genial and pleasant companion; his charity to the unfortunate was only fully known to the many recipients of his benevolence. He died December 21, 1879.

GENERAL GRENVILLE M. DODGE.¹

Essex County has given birth to but few more remarkable men than General Grenville M. Dodge, now, and for many years, resident at Council Bluffs, Iowa. Perhaps no one of her sons has wrought a wider, and more varied and important public service than has he. He is not yet an old man, but is still in his prime, and is as active and busy as ever. Yet, as civil engineer, military commander, member of Congress, projector of many of the great railroad enterprises of the West and Southwest for the last thirty years or more, and as president or director of most of the companies established to forward and

¹ By Rev. A. P. Putnam.

Charles Lawrence

G. M. Dodge

complete these vast works of internal improvement and national development, he has done quite enough for fame, and quite enough to entitle him to the lasting gratitude and honor of his country. The story of his career, however much it has to do with practical matters, is yet invested with a wonderfully romantic interest, and we are glad to learn that a more extensive biography of him than we can give here, or than has ever been written of him, is in course of preparation by Mr. N. E. Dawson, of Washington, for a large, voluminous work to be entitled, "Iowa in the War." To Mr. Dawson's kindness we are indebted for some of the advance sheets of his full and excellent sketch, from which we have culled many of the facts of our hero's maturer life.

General Dodge is a native of Danvers, Mass., and was born April 12, 1831, in a farm-house which was situated a short distance south of the Topsfield line, and which was then the home of the family of Elias Putnam, who was himself born there more than forty years before, as stated elsewhere in this volume. Israel Putnam, the father of Elias, having removed his household, about the beginning of the century, several miles down the road, the premises were let to Captain Solomon Dodge, who had lived in Rowley, Mass., and was a descendant of one of the two brothers of the name who early emigrated from England, and settled in Essex County. There came with Solomon a son, Sylvanus, who had been born, November 25, 1800, at the old Rowley home, in what has long been known as the "Old Dodge House." Not long after the family had taken possession of their new quarters, the mother of Sylvanus died, and by and by, it is said, the surviving members returned to the ancestral seat whence they came. The son was married, November 22, 1827, at New Rowley (now Georgetown), by Rev. Dr. Isaac Braman, to Julia T. Phillips, who was born in that town January 23, 1802. The same evening the nuptial pair rode to Danvers, to enter there upon their early wedded life on the farm where the husband had lived as a little child, and in an L which the Putnams, who had themselves long before returned to the place, had attached to the northern side of the house. Their first child was born to them September 23, 1829, but died about two weeks afterward. The second was born April 12, 1831, as we have said, and received the name that had been given to the other, Grenville M. Dodge. He first saw the light in the chamber of the L. to which reference has been made, and which, many years later, was detached from the main part of the building and removed to a point about an eighth of a mile further south, on the other side of the road, where it was enlarged, and has since been tenanted by various families. The Dodges remained on the farm about six years, and then went to Rowley, where they lived for a year or two, at the expiration of which time they returned to their Danvers abode, which Mr. Putnam and family had recently left to fix their home two miles below, in the

old house now occupied by Augustus Fowler. While Sylvanus Dodge and his family came back to live again in one part of the farm-house, there came from Wenham, Benjamin Dodge and his family to dwell in the other. Sylvanus was then a butcher, and many of the present inhabitants of the town will recall his regular visits at their doors, as, arrayed in his clean white frock, he rode about in his well-covered and amply-supplied wagon and ingratiated himself into the favor of his patrons by his genial spirit and honest dealing. The slaughter-house was a barn which stood at the foot of the hill, a little distance north of the house, where there is now, if there was not then, a beautiful grove. Long afterward it was moved to the plains, and then again outside of the village, where it was finally burnt.

The second sojourn of Mr. Sylvanus Dodge and his family upon the farm continued for only about one year. Thence they proceeded to Salem, where also they spent a couple of years, and next went to Lynn, where they remained one year, living during the twelve-month in three different houses. In April, 1837, they found a home in South Danvers, now Peabody, where, August 20, of the same year, was born a third child, Nathan P. Dodge. In 1840 they removed to the north part of the old town, and settled for a time in Tapleville, the native place of their fourth and last child, Julia M. Dodge, now Mrs. J. R. Beard, born January 14, 1843. During their stay at Tapleville, Mr. Dodge was made postmaster for South Danvers, and accordingly returned thither with his wife and children, and there continued to reside until they all emigrated to the distant West. He held the office to which he was thus appointed for ten years, and through various changes in the national administration, securing the confidence and favor of both political parties and of his fellow-citizens generally. In politics he was a Democrat, and was an active and earnest friend of such men as Robert Rantoul, Jr., N. P. Banks and George S. Boutwell. In due time he came to be much interested in the organization of the Republican party, and was henceforth to the end of his life its sincere and efficient supporter.

Grenville, the eldest of the three living children, sought his fortunes in the West as early as 1851. Between the ages of ten and sixteen he had worked at gardening, had been employed as a clerk in a store, had attended the common schools, and had also improved his leisure hours in fitting himself for college. He entered the Military University at Norwich, Vt., in 1847, and there completed his course of education just before he set out to seek his fortunes in a more distant part of the country. He first settled in Peru, Illinois, as a civil engineer. He participated in the construction of the Chicago and Rock Island, and Peoria and Bureau Valley Railroads; and in 1853 he was appointed assistant engineer of the Mississippi and Missouri Railroad of Iowa, now the Chicago, Rock Island and Pacific Line. In the same year,

having removed to Iowa City, he explored and examined the country west of the Missouri, and became convinced that the great Pacific Railway would have its starting point where it now is, at Council Bluffs, or Omaha, on the Missouri river. At Council Bluffs, therefore, he decided to fix his permanent residence. He had married Miss Annie Brown, of Peru, Ill., at Salem, Mass., May 29, 1854, and in the following November he left Iowa City, where his brother Nathan from the East had already joined him, for his future home, accompanied by his wife. During the same month he made a claim, and opened a farm in the Territory of Nebraska, on the Elkhorn river, occupying it in February, 1855, but staying there only six months, the Indians driving him away, and obliging him to return with his family to Council Bluffs.

Early in 1855 his father, Sylvanus Dodge, went on from South Danvers, followed in the autumn by the mother. They lived, in the winter of 1855-56, at Omaha, which the reader will remember is on the western bank of the Missouri, directly opposite Council Bluffs on the eastern; and in May, 1856, they, too, sought a home on the Elkhorn, but at the expiration of eighteen months they returned to be with Grenville, and Council Bluffs has been the home of the family from then until now. The father had taken an active part in settling the territory and organizing the government of Nebraska, and was subsequently made the Register of the United States Land Office for the district where he had lived. He died about sixteen years ago, surrounded by his wife, children and grandchildren, and greatly respected and beloved by all who knew him, while his last days were made happy with the thought that, after all the toils and struggles, changes and pilgrimages of seventy years, his household was finally established in a secure home, and had risen to prominence and prosperity.

Grenville, after his return from the Elkhorn to Council Bluffs, in 1855, busied himself for several years in civil engineering, banking, real estate and mercantile business. He was active and influential in advancing the interests of the rising town, and organized for it a military company, known as "The Council Bluffs Guards." He was chosen its captain, and at the breaking out of the war he tendered the services of this company to the Governor of the State, as the nucleus of the First Iowa Infantry. The Governor deemed it best that this organization should remain where it was, in order to protect the exposed western frontier border; but accepted the individual services of Captain Dodge himself, and sent him to Washington to arrange for the arming and equipping of the Iowa troops. The result was that Captain Dodge, gaining the confidence and favor of Mr. Cameron, Secretary of War, was remarkably successful in his mission, and at once returned to raise the Fourth Iowa Infantry Regiment, of which he was duly commissioned as the colonel, and also the Second Iowa

Battery, which took his own name. With this command he marched, in July, 1861, to Northwestern Missouri, and drove out thence a considerable force of insurgents, who were under the lead of Poindexter. During the next month he reported with his regiment and battery to General Fremont at St. Louis, and, in October, was ordered by him to the frontier post at Rolla, Mo., where he was placed in command. At the head of the Fourth Brigade of the Army of the Southwest, he advanced upon Springfield, in the same State, and captured it. Pursuing the enemy southward, he led the advance, was in the engagements at Cane and Sugar Creeks, in February, 1862, and on the 27th of the same month, defeated Gates at Blackburn's Mills, Ark. He bore a very prominent part, and stubbornly met the very brunt of war, in the famous battle of Pea Ridge, where the rebel power was broken in Missouri and North Arkansas. Here he had three horses shot under him, and was severely wounded; and for his gallantry in this fight he was made brigadier-general, at the request of Major-General Halleck, who had succeeded Fremont in charge of the Western Department. After recovering from his wounds he reported by telegraph to the War Department, and was assigned to the command of the District of Columbus, Ky. Soon after receiving this appointment, he accomplished with great vigor and success the rebuilding of the Mobile and Ohio Railroad, which had been wholly destroyed by the rebels, and then, in June, he had a sharp skirmish with a body of the enemy, handling his forces with such skill and effect as to call forth the hearty commendation of both Halleck and Quimby. In further recognition of these services, he was honored with the command of the Central Division of the Mississippi, with headquarters at Trenton, Tenn. While here his troops captured various towns, and defeated Vilipligne on the Hatchee river, after which his command was enlarged, and his headquarters were again established at Columbus. He signalized his return to this post by another signal victory, capturing General Faulkner and his forces near island No. 10, and taking many prisoners.

In the autumn of 1862, immediately after the battle of Corinth, he was charged with the Second Division of the Army of the Tennessee, in the district organized and commanded by General Grant. Perhaps it was here that began the strong friendship which, for so many years, has subsisted between our hero and the great chieftain. General Dodge was soon assigned to the command of the District of Corinth. In the spring of 1863 he defeated the Confederate forces under Forrest and other conspicuous rebel officers. He raised and equipped large numbers of colored troops. His education and experience as a civil engineer proved of invaluable service to him and the cause in rebuilding the railroads destroyed by the enemy. But he knew how to smash things as well as to repair them, as when he shortly conducted the im-

portant campaign up the Tennessee Valley to the neighborhood of Decatur, in the rear of Bragg's army, breaking up its connections and cutting off and wasting its supplies, and aiding in the rout and destruction of that general's forces. The Confederate government estimated the stores and property of various kinds which he thus destroyed at many millions of dollars. On July 5, 1863, he was appointed to command the left wing of the Sixteenth Army Corps, with headquarters at Corinth, Miss. In connection with a movement from Vicksburg, he made a raid on Grenada, of that State, which drove the enemy south of the place, and resulted in the capture of an immense number of cars and locomotives. While at the head of the Sixteenth Army Corps he joined General Sherman in his march to Chattanooga, and wintered with his men on the line of the Nashville and Decatur Railroad. "He is an able officer," wrote Grant to Sherman, "one whom you can rely upon in an emergency." And the reliance was to be on his skill and energy as an engineer, as well as on his sagacity and prowess as a warrior. Grant could not subsist his forces at Chattanooga except as the Nashville and Decatur Railroad should be rebuilt; and this herculean task was fulfilled by General Dodge with amazing despatch and efficiency. Within about forty days he reconstructed and completed the whole line, including one hundred and eighty-three bridges, trestles and other structures, while in the same period he captured Decatur, Ala., with all its garrison, in a well-planned night attack. In the spring of 1864 he was entrusted with the advance of the Army of the Tennessee, one of the three armies consolidated for the Atlanta campaign. As the mighty host moved forward, Dodge drove back the enemy on their railway at Resaca, and participated in the battle at that place a few days later. He repulsed a dangerous night attack of the foe at Nickajack Creek, Dallas, and it was his men who reached nearest the rebel lines on the crest of Kennesaw Mountain. At Ruff's Mills he defeated a strong force from General Hood's Corps, and shortly afterward constructed, with his usual lightning speed and wonderful skill, a substantial double-track bridge across the Chattahoochee, seventeen hundred feet long and twelve feet high, over which the entire Army of the Tennessee, with all its trains and artillery, marched with safety. For his brave and faithful and effective services in this campaign he was made major-general by the government at Washington. When the Confederates under General Hood made the fierce attack under which McPherson fell mortally wounded, Dodge's corps bore the brunt of the encounter, and through his skill and intrepidity, rescued the Army of the Tennessee and turned the tide of battle, capturing eight flags and a very large number of prisoners. Says a competent authority: "It was one of the fiercest-fought contests of the whole war. It is not too much to say that here, as at Pea Ridge, General Dodge saved the Union army from terrible dis-

ter. Riding rapidly up and down his lines, he encouraged his men to hold their ground or die in the attempt. This corps was in all the battles in the march to Atlanta, and no one, in proportion to its size, in the whole consolidated army, lost so many killed and wounded."

During the siege of Atlanta General Dodge was himself again wounded, receiving a gun-shot in the forehead while he was standing in the rifle-pit on the skirmish line, superintending an advance. This was on the 19th of August, 1864. The writer of this sketch contributed some account of the hero and this peril to his life, together with a narrative of occurrences that took place immediately afterward, to the *Danvers Mirror*, in 1877; and the following extract from his communication may not be amiss here:

"The papers, I remember, reported him killed, and some of them gave obituary notices of him, which the general must have read some time afterward with a lively interest. Our sorrow was, however, soon turned to joy, for it was soon announced that he was not dead, but was still living and would doubtless recover. In his weakened condition he was granted a furlough, and took the opportunity to visit his friends at the East and there recruit his strength. I met him on his way to Boston, on board one of the Sound steamers. It had been many years since I had seen him, but I readily recognized him among the passengers who swarmed the deck, and we had a long chat about the recent occurrences, and the great events of the war, and about old personal friends and associations. I told him that Edward Everett was to speak on the afternoon of the next day at Faneuil Hall, in advocacy of the re-election of Abraham Lincoln, and that he ought certainly to be present. He said he had never heard Mr. Everett, and expressed a desire and purpose to be there. On our arrival at the Parker House early the next morning, I looked into the first-issued papers and ascertained who were the committee of arrangements for the meeting. The notices made mention of various distinguished men who were expected to grace the occasion, but the name of General Dodge was not in the list, for none knew of his coming. I immediately despatched a messenger to one of the committee, and informed him that General Dodge had just arrived in town. The general was speedily waited upon and invited to a place on the platform, with other eminent men, at the approaching meeting. The hour of assembling came at length, and I was with the crowd on the floor. By and by the long line of State and city officials, and of the gifted sons of Massachusetts who usually surrounded the matchless orator whenever he spoke in public there in Boston, began to file up from below and to appear upon the stage, where they seated themselves as best they could. The general was there, occupying a place at the left of the speaker and near the front of the platform, and arrayed, like certain other army officers who were with him, in his military costume.

Charles G. Loring presided, and in his opening and well-prepared address, referred to some of the renowned heroes of the war and friends of the country. I doubt whether he knew that General Dodge was close at hand. Certainly the thousands before him did not. But Mr. Everett did, and I shall never forget the thrilling effect which his words and action produced, when, on being presented to the vast multitude, he came forward in his most spirited, yet ever graceful manner, and said, with eloquent voice, that the chairman had given us the names of not a few who had deserved well of the nation, and whom they all delighted to honor, but he had forgotten to mention one who was present with them, who was fresh from the battle-fields, and who could tell us that all was well at the seat of war—*Major-General Dodge, of the Army of the West*. The enthusiasm was very great, and cries immediately came from all parts of the hall—"Dodge!" "Dodge!" "Dodge!" until the modest soldier was obliged to rise and allow himself to be seen of the assembled thousands. The applause that greeted him was simply tremendous, and the scene which was there witnessed, as the Western warrior with his ghastly wound, and the polished and silver-tongued orator of the East, stood side by side before the excited multitude, only lacked one thing to make it beggar all description. A master of the art like Mr. Everett could not fail at such a moment. "Yes! fellow-citizens," he exclaimed, with deepening emotion and ringing tones, as he pointed his quivering finger at the brow of the hero—"Yes, fellow-citizens, and wearing upon his forehead honorable scars, which he gained while imperiling his life in the defence of the Union!" This was the needed climax, and it was perfect. I think I do not say too much when I add that what I have here described was the most interesting and inspiring incident of the occasion, and I felt quite satisfied with the success of my little plan, and the reception which was extended to the Danvers soldier boy. The honors which were showered upon him a few days later, in his native town and its vicinity, your readers all remember."

Concerning the terrible wound which the general had received, a writer said: "The ball struck the forehead at the upper edge over the left eye, tore off a portion of the scalp, and then, passing backwards, tore a gutter two or three inches in length through the scalp. The skull is not fractured, though it received a severe stroke. He was immediately conveyed to his quarters, where he now lies. He will be sent North as soon as practicable."

As soon as he was again fit for duty, General Dodge once more reported to General Sherman, who thought he was still too weak to continue the great march to the sea, and President Lincoln, at the instance of General Grant, assigned him to the Department of the Missouri, where he relieved General Rosecranz. The national troops in Missouri had become quite demoralized, and the State was run over by guerillas

and marauders. General Dodge brought order out of anarchy, notwithstanding he had been called upon to send the great body of his organized troops to General Thomas at Nashville, who, by this timely aid, was all the more enabled to win the glorious victory he gained immediately afterwards. At the same time, Kansas and Utah were merged into his command, adding greatly to his cares and responsibilities. Winter had come, and the States and Territories which were entrusted to him were vast in extent; yet he set in motion the fresh forces he had raised from the loyal men in each county, broke up the bands of guerillas and marauders, and compelled the Indians, who were warring on the settlements from the Red River of the North to the Red River of Texas, to sue for peace. He received the surrender of four thousand of Kirby Smith's army in Missouri and of the Confederate General Jefferson Thompson, with eight thousand officers and men in Arkansas. His experience and observations in these parts of the country led him to advocate the handing over of the Indian tribes to the War Department, to be treated as wards of the nation and as no longer independent and treaty-making powers.

Of the military merit and the patriotic services of this gallant and battle-scarred soldier of the Union, it is meet that we should here let those testify who have been most competent to judge and from whose words there is no appeal. Among them are the greatest of the generals and not a few of the war Governors and other illustrious leaders of the nation's cause, to say nothing of the concurrent and unanimous voice of subordinate officers and privates in the armies which he commanded. He continuously and abundantly shared the trust and admiration of General Grant, through whose influence or direct appointments he was repeatedly promoted to higher positions and honors, as has already been sufficiently indicated. Their strong friendship for each other remained unbroken, and is a matter of history. Ex-Governor Noyes, of Ohio, himself a maimed and noble veteran of the war, says: "We all regarded General Dodge as one of the best officers of the army,—a man of great practical, common sense, of distinguished gallantry, of a patriotic spirit and of military genius." General Sherman writes: "General Dodge is one of the generals who actually fought throughout the Civil War with great honor and great skill, commanding a regiment, brigade, division, and finally a *corps d'armée*, the highest rank command to which any officer can attain." General Sheridan acknowledges the timely and effective aid he received from him while he himself was chief quartermaster and chief commissary, and says that he "did splendidly" at Pea Ridge, and was "spoken of by officers and men of the army in the very highest terms." Governor Kirkwood, of Iowa, writes: "General Dodge is one of the very best military men from this State. He is emphatically a fighting man. There is not a

more gallant soldier in the army, nor one more worthy or capable." Said the excellent Senator Grimes: "There are very few officers the equal, and none the superior, of General G. M. Dodge, of this State, now and for a long time in command at Corinth, Miss. He has always been selected for the most responsible posts, and has always filled the highest expectations formed of him." Judge Dillon, the eminent jurist, testifies: "No officer in the service from Iowa has acquired more just and deserved distinction; no one has been more faithful, and I may and should add, more useful and efficient;" and in the same connection he speaks of "his great experience, his sleepless vigilance, his unconquerable energy, and, above all, his solid judgment and great practical talents." Major General Oglesby, anxious to serve the country's best interests, urged on President Lincoln his nomination as major general, saying: "I know of no officer at this time more deserving, nor of any who seeks the honor less. I am willing to be held responsible for his official acts." But it is not necessary to proceed further with such tributes, which might easily be multiplied to whatever extent.

Another momentous service was entered upon by General Dodge after the war was ended. Soon after he first went to the West, and while yet a youth, he wrote to his father a prophetic letter, which was published in the local paper in his native town, and in which he indicated a plan or route for a transcontinental railway. It was a cherished dream which one day he was to see realized, and that, too, very largely through his own instrumentality. To this end, extensive surveys and reconnoissances were made by him as early as between the years 1853 and 1858. The Union Pacific Railroad was chartered by the United States Government, July 1, 1862, and the next year the first regular organization was effected, General John A. Dix being elected President. Other surveyors were in the field, and the work was in process of construction during the war. When the bloody conflict was well over, General Dodge was unanimously chosen by the directory as the chief engineer of the line. This was on the 1st of May, 1866. The service was most congenial to him, and he readily accepted it, General Sherman, who was in command of the vast department beyond the Mississippi, yielding his consent as General Dodge resigned for the purpose his commission in the army. The latter entered upon his new undertaking with all his accustomed courage and zeal, and "organized a systematic exploration of the country from the Arkansas River on the South to the Sweet Water on the North, and developed the country with preliminary lines from the mouth of the Lodge Pole through to the California State line." His judgment, long years before, as to the best practicable route for the road, was confirmed by these fresh and extensive surveys, and the Union Pacific of to-day follows very nearly the line which he himself was the first to mark out.

Scarcely had he begun thus to superintend this colossal enterprise, when his grateful and admiring fellow-citizens in Iowa, while he was absent from home, nominated him, in July, 1866, as representative to Congress. Although he had been and still was an ardent Republican, and had been a warm friend and supporter of President Lincoln and other great men of the party, it would have been strange if his name should have failed to win the sympathy and favor of men of other political associations. Consenting to be a candidate, he was triumphantly elected by about five thousand majority over a very popular competitor; but after serving for a single term at Washington, he declined to allow his name to be used again in this connection, choosing rather to return to a more uninterrupted, personal supervision of his responsible and gigantic interests and cares in the West. As a member of the National House of Representatives, he served on the Committee on Military Affairs, secured the reimbursement of Iowa for her expenses during the war, gave special attention to the re-organization of the army and to the defence of the border against the Indians, and advocated the claims of the Union Pacific Road upon the country's favor and support. He was not a frequent speaker on the floor; but whenever he felt called upon to address the house, his words were pertinent and weighty, and were listened to with marked attention. Yet his influence was more particularly exercised in a practical direction, and his exceptionally large and intimate acquaintance with military matters and with the immense Territories of the West, with all their native tribes and boundless resources and capabilities, enabled him to be a most valuable counsellor and helper in many important questions of legislative or governmental action.

From May, 1866, until May, 1869, the corps of engineers under the direction of General Dodge had run not less than fifteen thousand miles of instrumental lines and made as many as twenty-five thousand miles of reconnoissances, so as thoroughly to develop the country and determine the location of the road. Impressive or astonishing as may seem the bare statement, it yet fails to give any adequate idea of the toil and the hardships that were endured, and the difficulties and perils that were overcome, in this three years' service. The engineers were frequently exposed, not only to severe inclemencies of the weather and to much scarcity of food and water, but also and especially to the hostility of the Indians, whose roving bands or more formidable organized forces beset them and threatened them from beginning to end. Nothing could be done without the protection of troops; but even with this safeguard, members of the corps were often killed, and their parties dispersed. Again and again General Dodge and his men were obliged to give battle to these wily and savage foes, and rout them, and pursue them to a distance, so that the work could go on. It was not

alone that his explorers and surveyors had to find their hazardous way across streams, and through forests, and along deep valleys, and over high mountains, and amidst heavy falls of rain or snow; but at every point the location of the line had to be determined, with the utmost scientific skill, with reference to the extraordinary natural features of the territory, its climatic influences and the grade and protection necessary to guard the road against the effects of storms and floods. Not only was the general the chief engineer of the road, but he was also the agent and trustee of the company, to secure its right of way, to receive and dispose of the lands granted to it by the United States government and to lay out and locate the towns and town sites along the route. If he was brave to fight and strong to scatter the Indian bands that molested him, he knew well how to treat with them, dealing with them equitably and never betraying their confidence. So far as his engineering achievement was concerned, the chief difficulty was to be met in carrying the road over the Rocky Mountain range. But this Titanic work was accomplished at length. The tracks of the Central Pacific and the Union Pacific finally met on Promontory, and as the lightning flashed the intelligence to the nations, "swiftly the telegrams of congratulation began to pour in upon the then most conspicuous engineer in the world." General Sherman sent word to him: "All honor to you, to Durant, to Jack and Dan Casement, to Reed and the thousands of brave fellows who have wrought out this glorious problem spite of changes, storms, and even the doubts of the incredulous, and all the obstacles you have now happily surmounted." General Dodge was immediately charged with the delicate task of adjusting the relations between the two roads, and this, too, after much negotiation, was successfully done. And so another great victory was won in the brilliant and eventful career of this gifted and enterprising son of old Essex. In the prosecution of the undertaking, other difficulties than those which have been particularly referred to had to be met. There were unfriendly criticisms, and unfounded accusations, and nameless hindrances on the part of politicians and newspapers. But the general knew what he was about. The government saw, as well as himself, the unspeakable importance of this transcontinental railway to the nation then and in all the future. While he was in Congress and while he was out of it, he commanded the entire confidence of Lincoln and Johnson, Grant and Sherman, and all the leading men at Washington, as well as the officers of the company whose salaried servant or agent he was. Such was his influence with them that, in connection with others whose names will ever be honorably associated with the work, he was instrumental in securing the constantly favorable action of Congress, and so making sure the end in view. More and more, as the years go on, the vastness and beneficence of this service will be appa-

rent, and the approving words of the several successive committees appointed by Congress to examine, investigate and report in relation to it will find a still ampler justification.

While General Dodge still held the position as chief engineer, the famous Chinese embassy, with Anson Burlingame at its head, visited America, passed over the Union Pacific Road, and made known their desire to secure the services of some one who should take charge of like public works in their own vast empire. President Grant at once recommended to them General Dodge, who signified his readiness to accept the position, willing to serve for a limited time and desiring to see the country; but Burlingame died shortly after, and the plan was abandoned.

In 1868 General Dodge was elected a director of the Union Pacific Railroad Company, and has since remained in that relationship. The same year he was delegate-at-large from Iowa, and the chairman of the Iowa delegation to the National Republican Convention at Chicago, and was very influential in determining the results of the proceedings of that occasion. When, in 1870, the Iowa Legislature passed a law for the erection of a new State-house, he was made a member of the Board of Capitol Commissioners, and was charged with the duty of supervising the work. It was in 1870, also, that he tendered his resignation as the chief engineer of the Union Pacific, and received the "very hearty thanks" of the company for his "eminent services," Oakes Ames, the president, writing to him a letter in which he said, "When we consider the great difficulties and dangers that beset you on all sides while locating the road through an uninhabited country, and the rapidity with which the work was accomplished, we are gratified and surprised that you should have finished this work in so perfect and acceptable a manner." Early in April, 1872, he became the chief engineer of the company which had contracted to build the Texas and Pacific Railway, and has continued for ten years to develop the wild regions, and bring to light the hidden resources of the territory south of the Red River, as before he had rendered a like, yet larger, service north of it. A portion of the latter line was built by the Pacific Railway Improvement Company, a corporation which he organized, and of which he became the president. Of other such companies he has also been president: the American Railway Improvement Company, the International Railway Improvement Company, the Texas and Colorado Railway Improvement Company and the Missouri, Kansas and Texas Railway Company, and he is, at present, the president of the Pan Handle Construction Company and the Colorado and Texas Railway Construction Company. These lines have been projected with the view of connecting together the most important and widely-separated points in the West and Southwest, and of opening the vast interiors to the tide of immigration and

J. M. Wentworth

travel, and to the commerce of river, gulf and ocean. One has but to study a little the advancing railway system that is spreading over all those immense tracts of territory, to see what an inestimable service General Dodge is still rendering to his country and to the future.

Of all his pioneer life, and his explorations into every part of this mighty domain; his personal ventures, perils and escapes; his extensive banking and stock operations and connections; his active participation in political conventions and campaigns, and in reunions of military organizations; his repeated visits abroad and tours in other lands; his business interests at Council Bluffs and vicinity, and his domestic relations, there is not space here for us to write as we gladly would. In character he is modest, earnest, faithful and true. He is quiet, but forcible in conversation, using no superfluous words, but expressing his thought in language that is simple and direct. Possessed of a friendly spirit toward all, and most affectionate in his relations to family and kindred, he is an object of great regard and pride at home, and amongst all who know him. In person he is of medium height, of spare build and agile frame, with strongly marked features, indicative, in every line, of the patience and perseverance, the intelligence, courage and energy, that have crowned his career with such success.

The general's family consists of his wife and three children. Again and again, when he was sick or wounded during the war, Mrs. Dodge travelled great distances to be at his side, and to tenderly and faithfully nurse him into health and strength once more for his country's service. The children, who have received their education abroad as well as at home, are Lettie, Ella and Annie. The first is the wife of Mr. R. E. Montgomery, a lawyer of Fort Worth, Texas; the second married Mr. Frank Pusey, son of ex-Congressman Pusey, of Council Bluffs; the third lives with her parents, and "has displayed considerable literary talent, being an occasional contributor to some of the magazines." The family mansion is one of the finest and most attractive in the city, elegant in its appointments and beautiful for its situation. Nathan P. Dodge, the brother of the general, is a banker, and a prominent and very highly esteemed citizen of Council Bluffs. Julia, sister of the two brothers, married, as previously stated, Mr. J. B. Beard, and they also reside in the same place with their two sons. Living amongst this circle of her children and descendants of two or three generations is the venerable mother, Mrs. Sylvanus Dodge herself, now in her eighty-sixth year and much burdened with the infirmities of old age. From this remarkable woman the renowned engineer and soldier inherited no small share of his fortitude, energy and determination. In all her changeful and checkered life, and amidst all its manifold struggles and solicitations, her devotion to her family, and her faith in their

brighter future, have never flagged or wavered. For many years she has seen her hopes for their prosperity and usefulness pass into fulfillment, and she still survives to receive the grateful care and undying affection of the objects of her maternal love and service.

PHILIP H. WENTWORTH.

Philip Henry Wentworth, though not a native of Danvers, was a valued citizen of the town during many of the last years of his useful life, and there ended his days. He was born in Boston, July 6, 1818, and was the son of Philip Wentworth, who was born in the same city, in 1787. His mother's name, previous to her marriage, was Eliza Orrok. While yet very young he was sent to a boarding-school in Dorchester, kept by a Mr. Vose, and afterward to school at South Hadley. Subsequently, he attended the English High School in Boston. At the age of sixteen he entered the dry-goods commission house of Sayles & Hitchcock, better known in later years under the name of Sayles, Merriam & Co. Of this firm he became a partner when but twenty-one. In 1841 he married Mary M. Loing, of Newburyport, but formerly from the State of Maine. A twelve-month or more afterward he went to New York and accepted a partnership with Mr. C. Langley, in that city; but in 1848 returned to Boston, and thenceforth was prominently known as of the house of Stanfield & Wentworth, or, still later, Stanfield, Wentworth & Co. He had been for some years a resident of Roxbury, when, his wife having died, he was again married, June 4, 1856, to Miss Harriet Lucetta Daniell, daughter of the late Mr. and Mrs. J. N. Daniell, also of Roxbury, and both of blessed memory. Mr. Daniell will be remembered as having long been at the head of a large dry-goods establishment in Summer Street, Boston, and all who ever dealt with him or knew him, gratefully call to mind the purity, rectitude and loveliness of his character. Mrs. Daniell was a worthy helpmeet of such a man; possessing a singularly sweet and beautiful spirit, and richly adorned with the virtues and graces of Christian womanhood. The influence of such a parentage found a new sphere for its exercise as the new bride entered the home of the husband and his four motherless children. Early in 1865, he removed, with his family, to Danvers, and established himself on a large and valuable estate which, with its elegant mansion and charming grounds, continued to be the place of his residence to the end of his life. It was after four other children had been born to him under his second marriage and while yet he was pursuing still his successful business in Boston that the great fire which devastated so extensive a portion of that city and swept away in an hour the fortunes of so many of its merchants visited, with the rest, the house of Stanfield, Wentworth & Co., with its destructive fury. Like so many others, Mr. Wentworth never quite re-

covered from the terrible effects of the calamity. Says an obituary notice of him, which appeared in the *Commercial Bulletin*, shortly after his death,—“He met with heavy reverses at the time of the great fire; but, having the undiminished confidence of his business connections soon reinstated himself, and was for several years in active business in the firm of Wentworth & Case. Of late, he had withdrawn to a large extent from active business, spending much of his time at his home in Danvers, retaining, however, an office in Boston, where he was to be seen during business hours.”

Among the most marked features of Mr. Wentworth's character were his indomitable courage, energy and perseverance. Not even the appalling disaster that had befallen him, and that has just been referred to, had any effect to frighten or paralyze him. It only nerved him to more heroic exertions, and it was quite touching to see with what manly patience and determination he bravely strove, through successive years and against fearful odds, to retrieve his shattered fortunes. Thoroughly honest and just, he could not bear to owe a debt which he could not pay, and if ever one purposed and labored that none should be losers by any mishap or calamity of his own, it was he. It was quite wonderful what victory he wrung from the jaws of such defeat. His losses were great, but his gains were greater.

Whatever his discouragements, his cheerfulness never forsook him. His fine face was always lighted with its glow of good feeling and of the joy that was within and that was too deep to be much disturbed by change of outward circumstances. He was habitually hearty and cordial. His welcomes were warm and free, and his hospitality was genuine and bountiful. He was one of the most generous of men and was one of the truest of friends. He scorned things that were false or base, and impressed all who knew him or had to do with him with a sense of the nobleness of his nature. Nothing was more characteristic of him than his straightforwardness and transparency of mind and conduct. It was an element that revealed itself in every word, look and deed. He was just what he seemed, and no one could for a moment mistake his thought or motive, or misinterpret his action or life.

Full often the child is the father to the man, and a pretty story is told of Mr. Wentworth as a lad, that goes to show how the truthfulness and frankness that marked him in all his mature years, was with him even at the very first. It seems to us as good as the story of young George Washington and his hatchet, and we venture to say it is much more authentic. The boys of the neighborhood where “Phil,” or “Harry,” as he was also called, lived, were once on a time at their winter play on the Common in the vicinity of Tremont Street. There was then no fence, as now, between the mall and the thoroughfare, and where to-day extends along the

eastern side a row of shops and stores, there was a continuous line of handsome residences of princely merchants, “Harry” threw a snow-ball that went directly through a window of one of these fine mansions. The little urchins all knew very well that the proprietor was a hot-tempered and violent man, and at once cried out, “Run, Harry, run!” And run he did; not away, as doubtless many a boy would have done, but straight up the steps to tell the family within just what he had done. Before he had a chance to ring the bell, the old gentleman of the house appeared at the door in a furious state of mind, but at once grew calm and gentle as the little fellow openly acknowledged himself to be the offender and offered a manly apology. The affair was instantly treated as of no consequence, and “Phil's” companions were quite amazed at the friendly consideration which was accorded to him.

Very soon after their removal from Roxbury to Danvers, Mr. and Mrs. Wentworth were foremost in starting a new Unitarian Church in their adopted town. The history of this enterprise is related elsewhere in these pages, yet the briefest sketch of Mr. Wentworth's life would be defective, indeed, without a conspicuous reference to his agency and activity in this work and to all which such a beneficent service implies. It is no disparagement to the efforts and zeal of others who were associated with them to say that he and his wife were exceptionally prominent in the movement, watching and guiding faithfully the fortunes of the young society, and giving to it their time, means, energy and constant sympathy and presence for more than twenty years, and until their common devotion to it was broken by death. It was at their beautiful home that Rev. L. J. Livermore, who was so long the pastor of the church, and the many others who from time to time supplied its desk, were most heartily welcomed as guests and there found strength and encouragement in the work of the ministry. Both and all had the satisfaction of seeing that their unselfish labors and care were not in vain. A tasteful and convenient house of worship was ere long built and paid for, and it stands as no unfit monument of the earnest and unflinching fidelity of those who ensured its erection, but especially of him who was the one main reliance in “the day of small things,” as also afterward in seasons of greater prosperity. In such relations or interests Mr. Wentworth was ever ready and prompt to discharge any task or duty which seemed to be required of him, or in which he might be useful to the cause. Nothing here appeared to be menial or trivial. No matter what the service, it was to him important, and he was glad to do it, as unto the Lord. He made small pretensions or professions, but he was a man of deeds, and his whole soul was in what he wrought.

He died in the fulness of his manhood, April 10, 1886. His funeral obsequies took place on the 14th, at the church he had done so much to erect and in

Alfred Trask

which he had so often worshipped. The services, consisting of the reading of the Scriptures, by Rev. Mr. Hudson, of Peabody; prayer by Rev. Mr. Israel, of Salem, and an address by Rev. S. J. Barrows, editor of the *Christian Register*, were very appropriate and impressive, and a memorial pamphlet has since been published, giving just and eloquent tributes, from Mr. Barrows and others to the noble qualities of the departed. One who knew him perfectly has written of him,—“His spiritual and religious life grew and deepened to the end. He so loved to think and talk of the future life that, when the summons came, he was only happy in the thought of exchanging his faith in the unseen to the light of the glorious reality. It was such an accustomed thought that the change, though it came so suddenly, did not disturb his peace more than a summons to take a day's journey would have done.”

Mr. Livermore, his beloved pastor, survived him just seven weeks. In death, as in life, they were not divided. Their friendship for each other was peculiarly strong and affectionate, and the trust and admiration which the minister is well known to have cherished towards his parishioner could not have been warmer or profounder than the same sentiments entertained toward him by the writer of this sketch, who knew him even longer, had sustained like relations with him, had seen him much in the church, in the home and in society, and can only think of him as one who was, indeed, a man, in the true sense of the word.

ALFRED TRASK.

Alfred Trask was born in Newport, N. H., December 7, 1811, his father, John Trask,¹ having moved from Beverly, Mass., the previous year. He was the youngest of nine children, five sisters and three brothers. Mrs. Benjamin Woodbury, Mrs. John Moulton and Mrs. Andrew Boker resided in North Beverly; Mrs. Timothy Endicott, Mrs. Nathaniel Bachelder and a brother, John Trask, residents of Newport and Sunapee, N. H. Another brother, Israel Trask, settled in Gloucester, Mass.

From boyhood blest with perfect health and great energy, he early displayed good judgment and executive ability, developing in manhood sagacity in business affairs. He was repeatedly urged to accept positions of honor and trust, thereby proving the confidence and esteem reposed in him by his fellow-men, but preferred, with his retiring disposition, to see others enjoy the honor, and rely on his helping hand to sustain them in keeping it. With equal generosity is he ever interested in matters pertaining to the public welfare of the town.

At twenty-one, with an extremely limited school education, he started in life to make his own fortune

without a farthing. His mother gave him the *making* of a freedom suit, the cloth being afterwards paid for from his own earnings. For two summers he hired out for ten dollars a month, and the rest of the season logging and wood chopping engaged his attention. His twenty-third year, in company with others, he worked a farm on shares, clearing one hundred dollars profit. At twenty-four, tired of farming he left Newport and came to what was then called Danvers Plains, resolved to try his hand in business as drover. With the small amount of money saved he made short trips into the country, buying pigs and cattle, selling and trading them on his way home, where he arrived after two weeks' absence, usually with a profit that was an incentive to continue in this line of business, the same in which his father before him had engaged.

His indomitable will and self-reliance gained for him the encouragement he craved from business men who recognized his ability, and an offer of money to execute his plans was kindly tendered from an old resident of his boyhood home. The indebtedness of one hundred dollars was promptly paid and a continuance of the favor politely declined, but, with an energy redoubled and a renewed will to do and dare, he pluckily kept on. At twenty-eight years of age, on the 5th of March, 1839, he married Mary J. Blackey, of Sandwich, N. H. Of this union nine children were born.

Alfred Moulton Trask, born June 25, 1840; Julia Ann Trask, born December 15, 1841; Charles Wesley Trask, born February 14, 1844; Mary Elizabeth Trask, born February 26, 1846; George Edward Trask, born February 6, 1848; Sarah Bachelder Trask, born September 1, 1850; Nancy Ellen Trask, born January 18, 1853; Henry Woodbury Trask, born November 19, 1856; Frank Boker Trask, born February 12, 1859.

Realizing how much he lacked from his own limited amount of schooling, it was his greatest desire that his children should enjoy the advantages of a liberal education, and to further the project no expense was spared. After completing their education, with rare forethought and generosity, he established each in a good business and also purchased homes for those who were married.

The eldest, Alfred M. Trask, attended school at New London Academy, N. H., and afterwards was started in the stock business in Canada, and some years later settled in Brocton, where a house was presented to him.

The eldest daughter, Julia Ann, was graduated at Tilton Academy, N. H., but died September 7, 1862, in her twenty-first year.

Charles Wesley Trask, after graduating at the Danvers High School, also attended school in Tilton, and for a business was started in a fine market in Waltham, but for several years has been living on an extensive farm given by his father in Sandwich, N. H.

¹John Trask was a major and fought at Bunker Hill, also used his own oxen, horses and teams to throw up the earth works at the building of the entrenchments.

Mary Elizabeth Trask married quite young, but died when only twenty years of age, leaving one son, William Alfred Patch.

George Edward Trask was graduated from Danvers High School and afterwards attended a Commercial College in Boston. A house was given him in Western, and he started in the slaughtering business.

Sarah B. Trask attended school at the Female Academy in Ipswich, Mass., and on her marriage with Roswald D. Bates, was presented with a house on Conant Street, Danvers.

Nancy Ellen Trask was a graduate from the High School in Danvers and later from the Abbot Academy in Andover, and on her marriage with Henry W. Swett, was given a house in Haverhill, Mass.

Henry W. Trask also graduated at the Danvers High School and then attended the school of Technology in Worcester, Mass. At present he is unmarried and living in the State of Colorado.

The youngest son, Frank B. Trask, is the only member of the family residing in the old home. He learned the upholstery trade, and has recently opened an extensive furniture establishment on Maple Street, Danvers.

Aside from the benefits conferred on his own family, to numerous others has his helping hand been extended. By some the confidence has been abused, while others have profited by the aid rendered, to the mutual pleasure of all concerned. It is well to note the prominent characteristics that mark Alfred Trask one of the most successful self-made men of Essex County.

His business of drover was carried on for a period of thirty years, then he changed it to a wholesale butcher for ten years more, when he concluded to retire from active business and attend to private affairs and the care of his spacious house and grounds,—the realization of his boyhood's hopes, acquired by years of constant toil, backed by energy and courage, which the rising generation would do well to emulate.

June 8, 1872, he met with a great loss in the death of his wife who, with marked energy and frugality, had ever been a ready helper in amassing a competency for the future.

His second marriage occurred September 1, 1873, to a very estimable woman, Dora T. Webster, of Lawrence, Mass., who has made herself much beloved by all those who enjoy her acquaintance, and for the many Christian acts of unostentatious charity and kindness. To do good for others is the one thought uppermost, having great sympathy for young and old, and their good and welfare. The esteem in which she is held by the little flock of grandchildren must indeed be flattering to her, with her keen appreciation of the beautiful in all things in life.

May the Angel of Peace and Contentment hover for many years over the home of Mr. and Mrs. Alfred Trask, is the heart-felt wish of their numerous friends and acquaintances.

EBEN GARDNER BERRY.

For many years no man has been more familiarly associated with Danvers Plains than Eben G. Berry, and no portrait will be more generally recognized, not only by Danvers people, but by many others throughout the county, than that of him which here appears. For a period extending from 1808 the site of the present Hotel Danvers has been sufficiently identified by the name of "Berry's Corner." In the year named Ebenezer Berry, who had come down from Andover, bought out the old tavern and began inn-keeping. He married Hitty Preston, a daughter of Captain Levi Preston, of Danvers. The subject of this sketch, the son of these parents, was born February 19, 1809. He was the only son, and about the time of his coming of age he succeeded to his father's business. Since then, for nearly sixty years, both in the old tavern and in the new hotel which he himself built, he has either himself or by lessee entertained such of the public as sought his hospitality.

The hall of the old tavern was the scene of many events of great local historical interest, concerning which Mr. Berry has contributed many reminiscences, which have been incorporated in the sketch of the Plains in previous pages. These reminiscences, very properly a part of his biography, Mr. Berry modestly insists are sufficient to accompany his portrait. He has been twice married—first to Elizabeth J. Abbott of Andover; second to Mrs. Sarah (Nichols) Page. The latter died recently. He has but one surviving child—Mrs. Emily B., wife of Deacon John S. Learoyd. Another daughter was Caroline, wife of the late Captain James A. Johnson, who left two children, now living in Danvers. He has a sister, Mehitable, widow of Henry Sperry, living in close neighborhood to him. A few years ago he built the fine dwelling in which he resides, on Conant Street, next east of the hotel.

CHAPTER XLI.

IPSWICH.

BY M. V. B. PERLEY.

PRE-HISTORIC.

DISCOVERIES.

1. *Phenicians and Norwegians.*—This territory, once the abode of the red man, and known to him by the name of Agawam, was settled by our ancestors some more than two hundred and fifty years ago. It was, however, known to the white race, no doubt, at a very much earlier period. The learned suspect

(Eben C. Berry.)

that the Phœnicians visited our New England shores in ancient times, and that Norwegian adventurers sojourned here about nine hundred years ago. Certainly, their annals treat of voyages of adventure and discovery, and it only remains to find the places they describe. Their "vinland," Mr. Fewkes, a summer sojourner with us, and an archaeologist, declares to be located here, citing the ocean beacon, the changed channel, the cellars and foundations of nine houses, and the remains of three wells, which evince a greater antiquity than do any known works of a similar nature of Puritan origin.

2. *Maps*.—In the eagerness of navigators to find a short northwest route to the East, Canada was well and very accurately mapped, while New England's "cartography," says Kohl, "remained very defective through nearly the whole of the sixteenth century."

3. *Champlain*.—In 1604 Champlain, who afterwards attached his name to the beautiful lake at Vermont, explored the coast from the St. Lawrence River to Plymouth Bay, following the sinuosities of the shore. At Saco Bay he observed a marked change in Indian habits, mode of life and language. The tribes at the East were nomadic, living wholly by fishing and the chase. At Saco and at the West they were sedentary, and subsisted mainly on the products of the soil. Around their settlements were fields of Indian corn, gardens of squashes, beans and pumpkins, and a generous patch of tobacco. At the headland we call Cape Ann, the land of Masconomet, of whom we are soon to speak, the natives were cordial and highly intelligent. Furnished with a crayon, they made an accurate outline of Massachusetts Bay, and indicated their six tribes and chiefs by as many pebbles.

4. *Hardie et al.*—In 1611 Captain Edward Hardie and Nicholas Hobson were kindly received here. In 1614 the famous adventurer, John Smith, found "a multitude of people." He explored and mapped the territory, naming it Southampton, at the suggestion of Prince Charles, and thus described it,—“Here are many rising hills, and on their tops and descents are many corne fields and delightfull groues. On the east is an isle of two or three leagues in length, the one halfe plaine marish ground, fit for pasture or salt ponds, with many faire high groues of mulberry trees. There are also okes, pines, walnuts and other wood to make this place an excellent habitation.” A mere mention of these must suffice; though they may have left traces of their handiwork, they embalmed no thought or feeling.

INDIANS.

1. *Territory*.—The Atlantic Ocean on the east, Cochichawich (now Andover), on the west, the Merrimack (Sturgeon) River on the north, and the Naumkeag (now North) River, at Salem, on the south, enclosed the beautiful territory of one hundred and eighteen thousand five hundred acres, called Agawam. The name signified "Resort for fish of passage," and

was eminently appropriate. With the spring came the myriad-swarming alewife and the bone-burdened shad, and river and brook and pond became an Eden of new life. In late summer schools of mackerel darkened the waters of the bay, as they migrated to their southern sequestered home. Here the blue fish sported and the doughty sturgeon pursued his prey.

2. *Sagamore*.—The name of the Sagamore of this princely domain was Masconomet, sometimes called Masconomo, or John. His exact relation to other tribes is unknown. He may have been a sub-tribe of the Massachusetts, or the Aberginians, a great nation, the power of whose sachem is said to have extended from the Charles River to the Merrimac; but he seems to have been under the leadership of the powerful Pennacooks. His subjects are represented as kind-hearted and tractable. Captain Hardie and Nicholas Hobson, exploring the coast in 1611, testified to kinder treatment by these natives than by others.

3. *His Conversion*.—After Governor Winthrop had arrived in Salem harbor, 1629, Masconomet and one of his men went on board the Governor's ship, Sunday morning, June 13th, and remained all day. The governor's object in coming to New England was to Christianize the Indians. He so far succeeded here that March 8, 1644, Masconomet put himself, his subjects, and his possessions under the government protection of the Massachusetts Bay, and agreed to be instructed in the Christian religion. The purpose of this chief and a few of his friends is shown in the following examination:

1. *Will you worship the only true God and not blaspheme?* Ans. We do desire to reverence the God of the English, and to speak well of him, because we see He doth better to the English than other gods do to others. 2. *Will you cease from swearing falsely?* Ans. We know not what swearing is. 3. *Will you refrain from working on the Sabbath, especially in Christian towns?* Ans. It is easy for us—we have little to do any day, and can well rest on that day. 4. *Will you honor your parents and all your superiors?* Ans. It is our custom to do so. 5. *Will you refrain from killing any man without cause and authority?* Ans. It is good, and we desire it. 6. *Will you put away fornication, adultery, incest, rape, sodomy and bestiality?* Ans. Though some of our people do some of these things, we count them naught, and do not allow them. 7. *Will you put away stealing?* Ans. We answer this as the sixth question. 8. *Will you allow your children to read the word of God, so that they may know him aright, and worship him in his own way?* Ans. We will allow this as opportunity will permit, and as the English live among us, we desire to do so.

4. *Friendly Tokens*.—The examination was satisfactory; they were "solemnly received," and were then presented to the court. They gave the court twenty-six fathoms of wampum, and the court gave to each of them two yards of cloth, a dinner, and at their departure a "cup of sac."

5. *Depopulation*.—At the date of Champlain's and Hardie and Hobson's visits the tribe seemed numerous and valiant, but the pestilence that prevailed among the tribes generally, about 1617, reduced their number and greatly enfeebled the strength of this tribe.

6. *Suspicion*.—In 1642 several tribes were suspected

of an intention of rising against the English, and were, therefore, deprived of their arms for several months. But generally the English experienced no trouble from the Agawams.

7. *Tarratines*.—At the north of Agawam lay the imperial realm of the Pennacooks, and next to them, as allies, were the Pawtuckets on the north side of the Merrimack River, and the Penobscotts in the vicinity of the Penobscott, or, as they called it, Pentagoet River. Somewhere in that territory wigwamed the Tarratines, agile, warlike, blood-thirsty and, as some say, cannibal. It is said that Masconomet had slain some of the tribe, and so had incurred the price of blood, and endangered the safety of the English. Accordingly, July 5, 1631, he was banished from the house of every Englishman for one year, under penalty of ten beaver-skins for every offence. Of the Tarratines the Agawams had a mortal dread. In 1629, and several times after, they applied to Governor Endicott for aid, and received it. Sagamores James and John, of Saugust and Charlestown, often assisted them. One instance of such alliance was August 8, 1631, when the Tarratines, to the number of a hundred, in three canoes, surprised the Agawams, slew seven men, wounded Sagamores John and James and some others, and took, among other captives, the wife of James, who, however, was returned the following September with a demand of wampum and ten beaver-skins for her ransom.

8. *Indian Arts*.—Their arts were simple and their wants were few. Their wild dance and song were the life of the wigwam; tobacco was their solace; they delighted in smoking, or "drinking the pipe;" fishing and hunting were their sustenance, and they exulted in the capture of a salmon, a shad, or a sturgeon, of a fox, a bear, or a deer. In spring their food was largely fish, in summer berries, in autumn harvest products, and in winter clams. They cultivated only the Indian bean and corn, which was always their staple food. Rude granite mortars and pestles served to powder the corn; their tomahawks were stones about the length of a man's hand, with one end fashioned for a handle and with the other end beveled to an edge. Their arrow-heads were of slate, and a lapidary for their manufacture has been discovered near Prospect Hill. Abundance of clam-shells have been found on high ground, which, doubtless, mark the sites of their wigwams. These implements, even now after the flight of two hundred and fifty years, the plow-share sometimes discovers. Their highest art was expended upon the bow and arrow; their proudest skill was in throwing the tomahawk, shooting the arrow and spearing the fish.

9. *Masconomet's Death*.—Masconomet saw his tribe fade away, as a summer cloud; his rich domain become the abode of the pale-face; his scepter broken fall from his nerveless grasp. In 1655, 21st February, the selectmen granted him a life-interest in six acres of planting ground. He died 6th March, 1658.

The 18th of the following June, his widow was granted the same ground during her widowhood. Both were buried on Sagamore Hill in Hamilton. With him were interred his gun, his tomahawk and other implements of the chase. The tribe lived in scattered wigwams, much at the town charge, till it was practically extinct, about 1730.

PLANTERS.

1. *Definition*.—These were such as obtained tracts or parcels of land, and occupied them as fishing stations or for the purpose of traffic with the natives. Two parties principally are concerned in this history, John Mason and William Jeffrey.

2. *John Mason* was a member of the Plymouth Company, whose corporation was incident upon the published maps and description of this section, by Capt. John Smith, about 1615. Sir Ferdinand Gorges was president of the company. They held the land between the Charles and Merrimac Rivers, and had trading posts and fishing stations along the coast as early as 1619. About 1621, Mason obtained from the company the land between the Naumkeag and Merrimac Rivers. Perchance he never occupied the grant, or if he did, he had abandoned it and removed all trace of his occupancy, before the settlement by Winthrop in 1633; for to his claim made, in 1680, the settlers replied: "We have subdued the wilderness with great pains and cost; our lands have passed through several hands; we were confirmed in our rights by the law of 1657 for settling inheritances, which was not designed against Robert Mason, of whom and of whose claim we were then wholly ignorant. So we continued till surprised by order of the General Court, according to your letter of September 30th, requiring us to furnish agents and evidences, as to our lands." Thus it was; Ipswich had been settled; the lands bought, sold and improved; houses erected; and the bustle of business felt for nearly half a century, when suddenly before the king appeared Mason with his claim. He went before the local court for justice. Litigation continued two years and a half. At last Mason won his case. "The General Court allow John Wallace and Content Mason, relict of John Tufton Mason, to give deeds as her husband had done. Some paid a quit-rent of two shillings a year for every house built on the land of his grant, which was in their possession." Mason's heirs hoped to establish their inheritance, name it Mariana, and hold it "in fee and common socage." Thus the decision, which was against the settlers, was favorable.

3. *William Jeffrey* obtained his title to Jeffrey's Neck of the Indians and presumably of Masconomet. His alleged right to the territory of our Ipswich may have been derived from Mason. He was here very early. Winthrop called him "an old planter." He was probably associated with John Burslin, Edward Hilton and David Thomson, fishmonger of London, in

the employ of the Plymouth Company, and belonged to Robert Gorges' party, who settled at Wessagusset, in September, 1623. Mr. Fewkes' old cellars and wells, evincing to him traces of the Norsemen, referred to above, may have been Jeffrey's trading and fishing station; and so to Jeffrey's diminutive city-by-the-sea the Court of Assistants may have referred, when, in 1639, by warrant, they "ordered those planted at Agawam forthwith to come away." However this may be, William Jeffrey, in 1660, to satisfy his claim to Jeffrey's Neck within the bounds of Ipswich, is granted five hundred acres of land on the south side "of our patent, to be a final issue of all claims by virtue of any grant heretofore made by any Indians whatsoever."

4. *Notice.*—Mr. Jeffrey is referred to in one of the company's letters of instruction as "William Jeffries, Gentleman." He was an Episcopalian; was made freeman May 18, 1637; was one of the proprietors of Weymouth, in 1641-42, where he was commissioned to solemnize marriages. Very early he had property rights at the Isles of Shoals. He and his business associates,—Hilton, Blackstone, Burslin and Thomson's widow contributed to meet the expense of the expedition, that dislodged that "merry, rollicking, scholar, adventurer and scape-grace, Thomas Morton, Gentleman," from Merry-Mount, about 1628. In 1634 Morton called him "My very good gossip." He witnessed the will of William Waltham, of Weymouth, in 1642; and his daughter Mary was born there "20: 1:" of the same year.

CHAPTER XLII.

IPSWICH—(Continued).

MUNICIPAL.

SETTLEMENT.

1. *Pioneers.*—About twelve years after the Pilgrims landed at Plymouth, four and a half years after Captain John Endicott colonized Salem, and three years after Governor John Winthrop established the colony of Massachusetts Bay, a rumor spread in Boston that the Jesuits were about to establish a mission. This it was a part of the Governor's duty to prevent, and he immediately organized a company of thirteen men with his son John as leader, to forestall the movement. Accordingly Mr. John Winthrop, Jr., Mr. John Thorndyke, Mr. William Clark, John Biggs, Robert Cole, John Gage, Thomas Hardy, Thomas Howlett, William Perkins, William Sergeant and three others, in March, 1633, wooed and wed the virgin soil of Agawam.

2. *Incorporation.*—"A Court holden att Newe Towne,—Cambridge—August 5th, 1634, ordered that

36½

Agawam shallbe called Ipswitch," wherefore August 16th, new style, 1634, dates the beginning of our corporate capacity. The name is derived from Ipswich, England, "in acknowledgment of the great honor and kindness done to our people who took shipping there." The House of Commons, in the memorable resolve of the 10th of March, 1642, gave New England the title of *Kingdom*, and *Wonder-working Providence*, in consonance, calls Ipswich an *Earldome*.

3. *Deed.*—The colonial records read that Masconomet sold his fee in Ipswich to John Winthrop, Jr., March 13, 1633, and that he expressed himself satisfied with the consideration, March 5, 1639. The following is the deed:

"I Masconomet Sagamore of Agawam do by these presents acknowledge to have received of Mr. John Winthrop the sum of £20, in full satisfaction of all the right, property, and claim I have or ought to have, unto all the land, lying and being in the Bay of Agawam, alias Ipswich, being so called now by the English, as well as such land, as I formerly reserved unto my own use at Chelacco, as also all other land, belonging to me in these parts, Mr. Dimmer's farm excepted only; and I hereby relinquish all the right and interest I have unto all the havens, rivers, creeks, islands, huntings, and fishings, with all the woods, swamps, timber, and whatever else is, or may be, in or upon the said ground to me belonging; and I do hereby acknowledge to have received full satisfaction from the said John Winthrop for all former agreements, touching the premises and parts of them; and I do hereby bind myself to make good the aforesaid bargain and sale unto the said John Winthrop, his heirs and assigns forever, and to secure him against the title and claim of all other Indians and natives whatsoever.

Witness my hand, 28th of June, 1638.

Witness hereunto:

John Joyliffe,
James Downing,
Thomas Coytimore,
Robert Harding.

Masconomet..

his C mark.

Ipswich is ordered November, 5, 1639, by the Court, to refund to John Winthrop, Jr., the twenty pounds named in the above deed. The town voted February 22, 1705, "That Samuel Appleton, Esq., and our two representatives, Nehemiah Jewett and Nathaniel Knowlton, treat with Hon. Wait Winthrop about Masconomet's deed of Agawam, made to his father, deceased.

4. *Extent.* When the town was settled in 1633, the boundary on the north and west was the boundary of ancient Agawam; on the east the ocean; on the southeast Cape Ann. (Gloucester); and on the south Jeffrey's Creek. (Manchester); Enon, (Wenham); and Salem Village, (Danvers), four hamlets then belonging to Salem. Newbury, 12,300 acres, was set off in 1635, and contributed to the sisterhood Newburyport, 4575 acres, in 1764, and Parsons, 8072 acres, in 1819, which became West Newbury, June 14, 1820. The court, in 1636, established our western limit six miles in the country, the southern and eastern boundaries remaining the same. In 1639, Ipswich with Newbury contributed Rowley, 10,310 acres, for which the two towns received £800, and out of which were cut the towns of Bradford, 4564 acres, in 1675, of Boxford, 14,200 acres, in 1685, of Middleton, in part, about 2500 acres, in 1728, of Georgetown, 7548

acres, in 1838, and of Groveland, 5230 acres, in 1850. In 1650 Ipswich contributed the part of Topsfield, north of the river, part of 7375 acres. The Hamlet of Ipswich, 9440 acres, was incorporated Hamilton in 1793, and the Chebacco of Ipswich, 7839 acres, became Essex in 1819. In 1774, certain families of Ipswich were set off to Topsfield; in 1784 certain others to Rowley; and in 1846 still others to Boxford, and there now remains 25,478 acres, the heart of the grand old town, pulsating strong in her original integrity and enterprise, and in her wealth and pleasant memories.

5. *First Settlers.* These men were largely citizens of wealth and learning, and some were merchants. They were thoughtful, conscientious, heroic, righteous, God-fearing; thoughtful, for they had clear views of the tenets of their religion and of civil life; conscientious, for they could not brook known errors; heroic, for they suffered for principle; righteous, for they made a righteous civil code; God-fearing, for it was their purpose in all things to serve Him.

The Wonder-Working Providence reads:

"The peopling of this town is by men of good rank and quality, many of them having the yearly revenue of large estates in England before they came to this wilderness." In Rev. Joseph Felt's history of the town, we read: "A large proportion of the inhabitants possessed intelligent minds, virtuous hearts, useful influence and remarkable character. They well understood how the elements of society should be for the promotion of its welfare, and how such elements should be formed and kept pure from ignorance and idolatry. They were careful of their own example, and thereby gave force to their precepts. They attended to the concerns of society as persons, who felt bound to consult the benefit of posterity as well as their own immediate good."

6. *Citizenship.* The next month after the settlement by Winthrop and his associates, April 1, 1633, it was ordered by the Court of Assistants, that "no person whatsoever shall goe to plant or inhabit at Agawam, without leave from the Court." This order obtained for some time; there for a considerable period the rule and practice obtained that no one should be admitted as townsman without the consent of the town's freemen. This practice served to preserve the unity of their religious belief and the high standard of their civil and social life, by excluding the immoral and the idle, the ignorant and the contentious.

7. *Names.* The following catalogue has been gleaned from the town records, and, probably, contains nearly all the names of settlers in the town during the first twenty years, arranged in the years when they were first observed:

1633.

Winthrop, John, Jr.	Hardy, Thomas.
Thorndyke, John.	Howlett, Thomas.
Clark, William,	Perkins, William.
Biggs, John.	Sellman, Thomas.
Carr, George.	Sergeant, William.
Cole, Robert.	Shatswell, John.
Gage, John.	

1634.

"Probably some from New Town, now Cambridge, since 'they sent men to Agawam and Merrinack, and gave out that they would move'

to Connecticut; Rev. Thomas Parker and his company of about one hundred, from Wiltshire, England, sojourned here about a year before settling Newbury; there were also,—

Cnrrio, Matthias.	Newman, John.
Dillingham, John.	Parker, Thomas.
Easton, Nicholas.	Perkins, John.
Elliot.	Robinson, John.
Fawne, Jobo.	Sewell, Henry.
Frauklin, William.	Spencer, John.
Fuller, John.	Symonds, Mark.
Mannig, John.	Ward, Nathaniel.

1635.

Andrews, Robert.	Lancton, Roger.
Bartholomew, William.	Metcalf, Joseph.
Brace, Thomas.	Moody, William.
Bradstreet, Simon.	Mussey, John.
Bradstreet, Humphrey.	Mussey, Robert.
Bradstreet, Dudley.	Osgood, Christopher.
Cogswell, John.	Perley, Allan.
Coviogton, John.	Procter, John.
Cross, John.	Saltoostall, Richard.
Denison, Daniel.	Saunders, John.
Dudley, Thomas.	Sayward, Edmund.
Dudley, Samuel.	Scott, Thomas.
Firman, Thomas.	Sherratt, Hugh.
Foster, Regioald.	Short, Anthony.
Fowler, Philip.	Short, Henry.
French, Thomas.	Symonds, William.
Fuller, William.	Treadwell, Edward.
Gardner, Edmund.	Tuttle, John.
Gidding, George.	Varnum, George.
Goodhue, William.	Wade, Jonathan.
Haffield, Richard.	Wainwright, Francis.
Hassel, John.	Webster, John.
Hubbard, William.	Wells, Thomas.
Jackson, John.	White, William.
Jacob, Richard.	Whiteyear, John.
Johnson, John.	Williamson, Paul.
Jordan, Francis.	Woodmouse, Mr.
Kent, Richard.	Wyatte, John.
Kinsmao, Robert.	Wythe, Humphrey.
Knight, Alexander.	Yongglove, Samuel.

1636.

Bishop, Thomas.	Norton, John.
Clark, Daniel.	Norton, William.
Dorman, Thomas.	Peabody, Francis.
Hall, Samuel.	Rogers, Nathaniel.
Harris, Thomas.	Sawyer, Edmund.
Hart, Nathaniel.	Seaverns, Jobo.
Jennings, Richard.	Shermao, Samuel.
Lord, Robert.	Wilson, Theophilus.
Merrill, John.	

1637.

Appleton, Samuel.	Lord, Widow Katherine.
Archer, Henry.	Morse, Joseph.
Averill, William.	Northe, John.
Bishop, Nathaniel.	Perkios, Isaac.
Bixby, Nathaniel.	Pike, ———.
Boardman, Thomas.	Purrier, William.
Browning, Thomas.	Quilter, Mark.
Challis, Philip.	Rawlinsone, Thomas.
Clark, Thomas.	Reading, Joseph.
Colby, Arthur.	Symonds, Joseph.
Comesone, Symood.	Thornton, John.
Cross, Robert.	Turner, Capt.
French, Edward.	Viocent, Humphrey.
Hayes, Robert.	Warren, William.
Heldred, William.	Wattles, Richard.
Hovey, Daniel.	Wedgewood, John.
Jordao Stephen.	Whitted, William.
Kimball, Richard.	Whittighan, John.
Ladd, Daniel.	Williamson, Michael.
Lawson, William.	

1638.

Baker, John.
Brown, Edward.
Burnham, John.
Cochame, Henry.
Cartwright, Michael.
Comings, Isaac.
Cooley, John.
Crame, Robert.
Dane, John.
Dix, Widow.
Emerson, John.
Emerson, Joseph.
Emerson, Thomas.
English, William.
Eppes, Daniel.
Gibson, Thomas.
Graves, Robert.
Greenfield, Samuel.
Hanchet, John.
Kimball, Henry.
Kingsbury, Henry.

1639.

Andrews, John.
Belcher, Jeremiah.
Bellingham, Richard.
Bird, Jathnell.
Bird, Thomas.
Boardman, Samuel.
Bosworth, Nathaniel.
Button, Matthias.
Cochame, Edward.
Castell, Robert.
Chute, Lionell.
Davis, John.
Farnum, Ralph.
Filbrich, Robert.
Firman, Dr. Giles.

Bachelor, Henry.
Lee, John.

Hart, Thomas.
Hoyt, John.

Adams, William.
Annable, John.
Beacham, Robert.
Bitgood, Richard.
Brown, Thomas.
Brown, John.
Cowley, John.
Dane, Francis.
Davis, Richard.
Day, Robert.
Douglass, William.
Follets, William.
Green, Henry.
Howe, James.
Knight, Oleph.

Andrews, Richard.
Buckley, William.

Bridges, Edmund.
Chapman, Edward.
Chilson, Robert.

Burnham, Thomas.
Denison, John.
Heard, Luke.

Knight, William.
Lumkin, Richard.
Mitcafe, Thomas.
Miller, William.
Morse, John.
Newmarch, John.
Nichols, Richard.
Paine, William.
Scott, Robert.
Sherman, Thomas.
Silver, Thomas.
Stacy, Simon.
Swinder, William.
Taylor, Samuel.
Tredwell, John.
Tredwell, Thomas.
Whipple, Matthew.
Whipple, John.
Whitman, Robert.
Wilkinson, Henry.

Gilvin, Thomas.
Hadley, George.
Hodges, Andrew.
Humphrey, ———.
Hattley, Richard.
Knowlton, John.
Mohey, Robert.
Newman, Thomas.
Pitney, James.
Preston, Roger.
Smith, Thomas.
Storey, Andrew.
Thompson, Simon.
Tingby, Palmer.
Wallis, Robert.

1640.

Paine, Robert.
Urann, ———.

1641.

Safford, Thomas.

1642.

Knowlton, William.
Knowlton, Thomas.
Lee, Thomas.
Lamson, Edward.
Lammas, Richard.
Perry, Thomas.
Pettis, John.
Pinder, Henry.
Pengry, Moses.
Podd, Daniel.
Redding, John.
Scofield, Richard.
Setchell, Theophilus.
Smith, Richard.
Warner, Daniel.

1643.

Low, Thomas.
Windall, Thomas.

1644.

Roberts, Robert.
Wood, Daniel.
Whittingham, Thomas.

1647.

Hunter, Robert.
Lovell, Thomas.
Silsbee, Henry.

1648.

Appleton, John.
Ayers, John.
Betts, Richard.
Birdley, Gyles.
Bishop, Job.
Bosworth, Haniel.
Bragg, Edward.
Catchame, John.
Choate, John.
Chute, James.
Clark, Malachi.
Cogswell, William.
Colburn, Robert.
Dix, Ralph.
Dutch, Robert.
French, John.
Gilbert, Humphrey.
Gillman, Edward.
Granger, Lancelot.
Green, Thomas.
Gutterson, William.
Harris, Anthony.
Harris, Thomas.
Heiphar, William.
Lancton, Joseph.
Leighton, John.
Long, Philip.

Bixby, Joseph.
Palmer, George.
Potter, Anthony.

Griffin, Humphrey.
Harinden, Edward.

Long, Samuel.
Pierpont, Robert.
Pendleton, Bryan.
Perkins, Jacob.
Pindar, John.
Pengry, Aaron.
Podd, Samuel.
Ringe, Daniel.
Roffe, Daniel.
Roffe, Ezra.
Salter, Theophilus.
Satchell, Richard.
Smith, George.
Smith, Robert.
Stacy, Richard.
Stone, Nathaniel.
Story, William.
Walderne, Abraham.
Walderne, Edward.
Ward, Dr. John.
Warner, John.
Warren, Abraham.
West, John.
Whitred, Thomas.
Wooddam, John.
Woodman, John.

1649.

Prichard, William.
Wood, Obediah.

1651.

Leigh, Joseph.
Walker, Henry.

GOVERNMENT AND OFFICERS.

1. *Object and Origin.*—The object of our early ancestors was religious freedom, and when they had obtained the right and privilege to exercise it, they established governments to protect, sustain and foster it. The Bible was to them the Book of books: it contained the principles of all municipal, moral and religious governments, and was absolute authority in all such matters. Here is the origin of our unique town-government—a pure democracy—a government of the people, by the people, and for the people, which was confirmed and established by law, in 1636, when the General Court conferred upon the towns the power to grant lots of land, to make by-laws for their own common weal, under colonial approval, to impose and collect fines not above twenty shillings, and to elect such officers as necessity required. But March 3, 1635–36, it was ordered that at the next term of the General Court, Ipswich, with other towns, “shall have libertie to stay soe many of their ffreemen att home for the safety of their towne as they judge needful, and that the saide ffreemen that are appointed by the town to stay att home shall have libertie for this Court to send their voices by proxy.” Thus, necessity foreshadowed our present representative form, which was afterwards inaugurated in place of the unwieldy assemblies of the congregated towns. In 1631, it was enacted that only church members could vote, a law which was practically repealed in 1644. In 1692, a voter for representative must be worth a realty of forty shillings a year, or other estate of forty pounds, yet it was practically a government of equal rights.
