Ens. G. B. HANCOCK, in a TBM-3, on 26 March 1945, carried out a photographic mission over Keise Jima and Okinawa Shima in preparation for subsequent landings. He was instructed to take shots of the western coast of southern Okinawa with emphasis on the beach areas, to shoot the eastern islands and Keise Jima. He made two runs, one southward and one northward, of the western beaches, using a K-17 12" focal length, from 5000 feet. During these runs intense heavy and moderate medium and light anti-aircraft fire was encountered, most of it accurate. The majority of it came from the vicinity of Kadena and Naha airfields.

The cloud conditions of 2000 feet overcast prevented complete coverage of the eastern islands. The K-17, with 6" focal length, would not function so that only obliques could be taken, and this only of the southernmost of the eastern islands.

Again, Keise Jima had scattered clouds at 2000 feet but verticals were taken of this area with the K-17 12". All negatives were dropped on the U.S.S. HESTER at the conclusion of the hop.
