EDITOR'S PREFACE.

IN preparing this edition of Butler's Analogy the Editor has endeavored to adapt it to Students, and to render, in a simple and concise form, the aid they need.

The marginal titles, presenting the subjects of the paragraphs, and constituting an analysis of the several chapters, are an important part of his work.

He has given much attention to the text, which, with a few corrections obviously necessary, is that of the second edition, prepared by the Right Rev. William Fitzgerald, D.D., Lord Bishop of Cork, Cloyne, and Ross, published in London in 1860. Dr. Fitzgerald has given a collation of Butler's first edition of his work, which is a literary curiosity, and shows the singular pains he took with his style, in which he has commonly been censured for carelessness.

The Editor of this edition has taken the liberty to break up several long paragraphs into two or more, in order that their meaning may more readily be apprehended.

The Index has been made very full and complete.

It will afford great help to those who may wish to understand the work, or make occasional references to the sentiments of the author.

The Editor has taken from other editions, and from Dr. Chalmers, all the material he deemed of special value, and has added a few notes of his own.

He was led to prepare this edition with special reference to the wants of Students in our higher institutions of learning, but he hopes it will be found acceptable to Teachers, to Ministers, and to all others who desire a thorough acquaintance with this great work.

The Biographical Sketch was written by Professor Henry Rogers, author of "The Eclipse of Faith," "The Supernatural Origin of the Bible," etc. It was prepared for the "Encyclopædia Britannica." The same sketch is prefaced to the excellent edition prepared by Rev. J. T. Champlin, D.D.

. All the Notes except the Author's are inclosed in brackets. Dr. Fitzgerald is the author of the notes signed "F."

MIDDLETOWN, *May*, 1875.

SKETCH OF JOSEPH BUTLER.

JOSEPH BUTLER, Bishop of Durham—one of the most profound and original thinkers this or any other country ever produced—well deserves a place among the *dii majores* of English philosophy, with Bacon, Newton, and Locke.

The following brief sketch will comprise an outline of his life and character, some remarks on the peculiarity of his genius, and an estimate of his principal writings.

He was born at Wantage, in Berkshire, May 18, 1692. His father, Thomas Butler, had been a linen-draper in that town, but before the birth of Joseph, who was the youngest of a family of eight, had relinquished business. He continued to reside at Wantage, however, at a house called the Priory, which is still shown to the curious visitor.

Young Butler received his first instructions from the Rev. Philip Barton, a clergyman, and master of the grammar school at Wantage. The father, who was a Presbyterian, was anxious that his son, who early gave indications of capacity, should dedicate himself to the ministry in his own communion, and sent him to a Dissenting academy at Gloucester, then kept by Mr. Samuel Jones. "Jones," says Professor Fitzgerald with equal truth and justice, "was a man of no mean ability or erudition;" and adds, with honorable liberality, "could number among his scholars many names that might

confer honor on any university in Christendom.”* He instances among others Jeremiah Jones, the author of the excellent work on the *Canon*; Secker, afterward Archbishop of Canterbury; and two of the most learned, acute, and candid apologists for Christianity England has produced—Nathaniel Lardner and Samuel Chandler.

The academy was shortly afterward removed to Tewkesbury. While yet there Butler first displayed his extraordinary aptitude for metaphysical speculation in the letters he sent to Clarke on two supposed flaws in the reasoning of the recently published *à priori* demonstrations; one respecting the proof of the Divine *omnipresence*, and the other respecting the proof of the *unity* of the “necessarily existent Being.” It is but just to Clarke to say that his opponent subsequently surrendered both objections. Whether the capitulation be judged strictly the result of logical necessity will depend on the estimate formed of the value of Clarke’s proof of the truths in question—truths which are happily capable of being shown to be so, independently of any such *à priori* metaphysical demonstration. In this encounter, Butler showed his modesty not less than his prowess. He was so afraid of being discovered, that he employed his friend Secker to convey his letters to the Gloucester post-office, and bring back the answers.

About this time he began to entertain doubts of the propriety of adhering to his father’s Presbyterian opinions, and, consequently, of entering the ministry of that communion; doubts which at length terminated in his joining the Church of England. His father, seeing all opposition vain, at length consented to his repairing to

* *Life of Butler*, prefixed to Professor Fitzgerald’s very valuable edition of the *Analogy*, Dublin, 1849. The memoir is derived chiefly from Mr. Bartlett’s more copious “Life;” it is very carefully compiled, and is frequently cited in the present article.

Oxford, where he was entered as a commoner of Oriel College, March 17, 1714. Here he early formed an intimate friendship with Mr. Edward Talbot, second son of the Bishop of Durham, a connection to which his future advancement was in a great degree owing.

The exact period at which Butler took orders is not known, but it must have been before 1717, as by that date he was occasionally supplying Talbot's living, at Hendred, near Wantage. In 1718, at the age of twenty-six, he was nominated preacher at the Rolls, on the united recommendation of Talbot and Dr. Samuel Clarke.

At this time the country was in a ferment. What is called the "Bangorian Controversy," and which originated in a sermon of Bishop Hoadley, "On the Nature of Christ's Kingdom," (a discourse supposed to imperil "all ecclesiastical authority,") was then raging. One pamphlet which that voluminous controversy called forth has been attributed to Butler. "The external evidence, however, is," as Mr. Fitzgerald judges, "but slight; and the internal, for the negative, at least equally so." The writer says, "On the whole, I feel unable to arrive at any positive decision on the subject." Readers curious respecting it may consult Mr. Fitzgerald's pages, where they will find a detail of the circumstances which led to the publication of the pamphlet, and the evidence for and against its being attributed to Butler.

In 1721 Bishop Talbot presented Butler with the living of Haughton, near Dorkington, and Secker (who had also relinquished nonconformity, and after some considerable fluctuations in his religious views had at length entered the Church) with that of Haughton-le-Spring. In 1725 the same liberal patron transferred Butler to the more lucrative benefice of Stanhope.

He retained his situation of preacher at the Rolls till

the following year, (1726,) and before quitting it, published the celebrated *Fifteen Sermons* delivered there; among the most profound and original discourses which philosophical theologian ever gave to the world. As these could have been but a portion of those he preached at the Rolls, it has often been asked what could become of the remainder? We agree with Mr. Fitzgerald in thinking that the substance of many was afterward worked into the *Analogy*. That many of them were equally important with the *Fifteen* may be inferred from Butler's declaration in the preface, that the selection of these had been determined by "circumstances in a great measure accidental." At his death, Butler desired his manuscripts to be destroyed; this he would hardly have done, had he not already rifled their chief treasures for his great work. Let us hope so, at all events; for it would be provoking to think that discourses of equal value with the *Fifteen* had been wantonly committed to the flames.

After resigning his preachingship at the Rolls, he retired to Stanhope, and gave himself up to study and the duties of a parish priest. All that could be gleaned of his habits and mode of life there has been preserved by the present Bishop of Exeter, his successor in the living of Stanhope eighty years after, and it is little enough. Tradition said that "Rector Butler rode a black pony, and always rode very fast; that he was loved and respected by all his parishioners; that he lived very retired, was very kind, and could not resist the importunities of common beggars, who, knowing his infirmity, pursued him so earnestly as sometimes to drive him back into his house as his only escape." The last fact the bishop reports doubtful; but Butler's extreme benevolence is not so.

In all probability, Butler in this seclusion was meditating and digesting that great work on which his fame,

and what is better than fame, his usefulness, principally rests, the *Analogy*. "In a similar retirement," says Professor Fitzgerald, "The Ecclesiastical Polity of Hooker, The Intellectual System of Cudworth, and The Divine Legation of Warburton—records of genius 'which posterity will not willingly let die'—were ripened into maturity." Queen Caroline once asked Archbishop Blackburne whether Butler was not "dead." "No," said he, "but he is *buried*." It was well for posterity that he was thus, for awhile, entombed.

He remained in this meditative seclusion seven years. At the end of this period, his friend Secker, who thought Butler's health and spirits were failing under excess of solitude and study, succeeded in dragging him from his retreat. Lord Chancellor Talbot, at Secker's solicitation, appointed him his chaplain in 1733, and in 1736 a prebendary of Rochester. In the same year, Queen Caroline, who thought her Court derived as much luster from philosophers and divines as from statesmen and courtiers—who had been the delighted spectator of the argumentative contests of Clarke and Berkeley, Hoadley and Sherlock—appointed Butler clerk of the closet, and commanded his "attendance every evening from seven till nine."

It was in 1736 that the celebrated *Analogy* was published, and its great merits immediately attracted public attention. It was perpetually in the hands of his royal patroness, and passed through several editions before the author's death. Its greatest praise is that it has been almost universally read, and never answered. "I am not aware," says Mr. Fitzgerald, "that any of those whom it would have immediately concerned have ever attempted a regular reply to the *Analogy*; but particular parts of it have met with answers, and the whole, as a whole, has been sometimes unfavorably criticised." Of its merits, and precise position in rela-

tion "to those whom it immediately concerns," we shall speak presently.

Some strange criticisms on its general character in Tholuck's *Vermischte Schriften*, showing a singular infelicity in missing Butler's true "*stand-punkt*," as Tholuck's own countrymen would say, and rather unreasonably complaining of obscurity, considering the quality of German theologico-philosophical style in general, are well disposed of by Professor Fitzgerald. (Pp. 47-50.)

About this time Butler had some correspondence with Lord Kaimes, on the *Evidences of Natural and Revealed Religion*. Kaimes requested a personal interview, which Butler declined in a manner very characteristic of his modesty and caution. It was, "on the score of his natural diffidence and reserve, his being unaccustomed to oral controversy, and his fear that the cause of truth might thence suffer from the unskillfulness of its advocate."

Hume was a kinsman of Lord Kaimes, and when preparing his treatise of *Human Nature* for the press, was recommended by Lord Kaimes to get Butler's judgment on it. "Your thoughts and mine," says Hume, "agree with respect to Dr. Butler, and I should be glad to be introduced to him." The interview, however, never took place, nor was Butler's judgment obtained. One cannot help speculating on the possible consequences. Would it have made any difference?

In the year 1737 Queen Caroline died, but on her death-bed recommended her favorite divine to her husband's care. In 1738 Butler was accordingly made Bishop of Bristol, in place of Dr. Gooch, who was translated to Norwich. This seems to have been a politic stroke of Walpole, "who probably thought," says Fitzgerald, "that the ascetic rector of Stanhope was too unworldly a person to care for the poverty of his preferment, or perceive the slight which it implied." In the reply,

however, in which Butler expresses his sense of the honor conferred, he shows that he understood the position of matters very clearly. The hint he gave seems to have had its effect, for in 1740 the king nominated him to the vacant Deanery of St. Paul's, whereupon he resigned Stanhope, which he had hitherto held *in commendam*. The revenues of Bristol, the poorest see, did not exceed £400.

A curious anecdote of Butler has been preserved by his domestic chaplain, Dr. Tucker, afterward Dean of Gloucester. He says: "His custom was, when at Bristol, to walk for hours in his garden in the darkest night which the time of year could afford, and I had frequently the honor to attend him. After walking some time, he would stop suddenly and ask the question, 'What security is there against the insanity of individuals? The physicians know of none, and as to divines we have no data, either from Scripture or from reason, to go upon in relation to this affair.' 'True, My Lord, no man has a lease of his understanding any more than of his life; they are both in the hands of the Sovereign Disposer of all things.' He would then take another turn, and again stop short: 'Why might not whole communities and public bodies be seized with fits of insanity, as well as individuals?' 'My Lord, I have never considered the case, and can give no opinion concerning it.' 'Nothing but this principle, that they are liable to insanity equally at least with private persons, can account for the major part of those transactions of which we read in history.' I thought little of that odd conceit of the bishop at that juncture; but I own I could not avoid thinking of it a great deal since, and applying it to many cases."

In 1747, on the death of Archbishop Potter, it is said that the primacy was offered to Butler, who declined it, with the remark that "it is too late for me to try to

support a falling Church." If he really said so it must have been in a moment of despondency, to which his constitutional melancholy often disposed him. No such feeling, at all events, prevented his accepting the bishopric of Durham in 1750, on the death of Dr. Edward Chandler. About the time of his promotion to this dignity he was engaged in a design for consolidating and extending the Church of England in the American Colonies. With this object he drew up a plan marked by his characteristic moderation and liberality; the project, however, came to nothing.

Soon after his translation to the see of Durham, Butler delivered and published his charge on the Use and Importance of External Religion, which gave rise, in conjunction with his erection of a "white marble cross" over the communion table in his chapel at Bristol, and one or two other slight circumstances, to the ridiculous and malignant charge of popery; a charge, as Mr. Fitzgerald observes, "destitute of a shadow of positive evidence, and contradicted by the whole tenor of Butler's character, life, and writings."

The revenues from his see were lavishly expended in the support of public and private charities,* while his own mode of life was most simple and unostentatious. Of the frugality of his table the following anecdote is proof: "A friend of mine, since deceased, told me," says the Rev. John Newton, "that when he was a young man he once dined with the late Dr. Butler, at that

* Butler must have been of a naturally munificent as well as benevolent disposition. He was extremely fond, it appears, of *planning* and *building*; a passion not always very prudently indulged, or without danger, in early days, of involving him in difficulties; from which, indeed, on one occasion Secker's intervention saved him. He spent large sums in improving his various residences. It was probably in the indulgence of the love of ornamentation to which this passion led that the "marble cross," and other imprudent symbols which were so ridiculously adduced to support the charge of popery, originated.

time Bishop of Durham; and, though the guest was a man of fortune, and the interview by appointment, the provision was no more than a joint of meat and a pudding. The bishop apologized for his plain fare by saying that it was his way of living; 'that he had long been disgusted with the fashionable expense of time and money in entertainments, and was determined that it should receive no countenance from his example.'" No prelate ever owed less to politics for his elevation, or took less part in them. If he was not "wafted to his see of Durham," as Horace Walpole ludicrously said, "on a cloud of metaphysics," he certainly was not carried there by political intrigue or party maneuvers. He was never known to speak in the House of Peers, though constant in his attendance there.

He had not long enjoyed his new dignity before symptoms of decay disclosed themselves. He repaired to Bath in 1752, in the hope of recovering his health, where he died, June 16, in the sixtieth year of his age.

His face was thin and pale, but singularly expressive of placidity and benevolence. "His white hair," says Hutchinson,* "hung gracefully on his shoulders, and his whole figure was patriarchal." He was buried in the cathedral of Bristol, where two monuments have been erected to his memory. They record in suitable inscriptions (one in Latin by his chaplain, Dr. Foster, and the other in English by the late Dr. Southey) his virtues and genius. Though epitaphs, they speak no more than simple truth.

A singular anecdote is recorded of his last moments. As Mr. Fitzgerald observes, "it wants direct testimony," but is in itself neither un instructive nor incredible, for a dying hour has often given strange vividness and intensity to truths neither previously unknown nor influential. It is generally given thus: "When Bishop

* *History of Durham*, vol. i, p. 578; cited in Fitzgerald's "Life."

Butler lay on his death-bed, he called for his chaplain and said, 'Though I have endeavored to avoid sin, and to please God to the utmost of my power; yet, from the consciousness of perpetual infirmities, I am still afraid to die.' 'My Lord,' said the chaplain, 'you have forgotten that Jesus Christ is a Saviour.' 'True,' was the answer, 'but how shall I know that he is a Saviour for me?' 'My Lord, it is written, Him that cometh unto me, I will in nowise cast out.' 'True,' said the bishop, 'and I am surprised that though I have read that Scripture a thousand times over, I never felt its virtue till this moment; and now I die happy.'"

The genius of Butler was almost equally distinguished by subtilty and comprehensiveness, though the latter quality was perhaps the most characteristic. In his *juvenile* correspondence with Clarke—already referred to—he displays an acuteness which, as Sir James Mackintosh observes, "neither himself nor any other ever surpassed;" an analytic skill, which, in earlier ages, might easily have gained him a rank with the most renowned of the schoolmen. But in his mature works, though they are every-where characterized by subtle thought, he manifests in combination with it qualities yet more valuable: patient comprehensiveness in the survey of complex evidence, a profound judgment and a most judicial calmness in computing its several elements, and a singular constructive skill in combining the materials of argument into a consistent logical fabric. This "architectural power" of mind may be wholly or nearly wanting, where the mere analytic faculty may exist in much vigor. The latter may even be possessed in vicious excess, resulting in little more than the disintegration of the subjects presented to its ingenuity. Synthetically to reconstruct the complex unity, when the task of analysis is completed, to assign the reciprocal relations and law of subordination of its various

parts, requires something more. Many can take a watch to pieces who would be sorely puzzled to put it together again.

Butler possessed these powers of analysis and synthesis in remarkable equipoise. What is more, he could not only recombine, and present in symmetrical harmony, the elements of a complex unity when capable of being subjected to an exact previous analysis—as in his remarkable sketch of the Moral Constitution of Man—but he had a wonderfully keen eye for detecting remote analogies and subtle relations where the elements are presented intermingled or in isolation, and unsusceptible of being presented as a single object of contemplation previous to the attempt to combine them. This is the case with the celebrated *Analogy*. In the *Sermons on Human Nature*, he comprehensively surveys that nature as a *system* or *constitution*; and after a careful analysis of its principles, affections, and passions, views these elements in combination, endeavors to reduce each of these to its place, assigns to them their relative importance, and deduces from the whole the law of subordination—which he finds in the Moral Supremacy of Conscience, as a key-stone to the arch—the ruling principle of the “Constitution.” In the *Analogy* he gathers up and combines, from a wide survey of scattered and disjointed facts, those resemblances and relations on which the argument is founded, and works them into one of the most original and symmetrical logical creations to which human genius ever gave birth. The latter task was by far the more gigantic of the two. To recur to our previous illustration, Butler is here like one who puts a watch together without being permitted to take it to pieces—from the mere presentation of its disjointed fragments. In the former case he resembled the physiologist who has an entire animal to study and dissect; in the latter he resembled Cuvier, constructing out of

dissecta membra—a bone scattered here and there—an organized unity which man had never seen except in isolated fragments.

All Butler's productions—even his briefest—display much of this "architectonic" quality of mind; in all he not only evinces a keen analytic power in discerning the "differences," (one phase of the philosophic genius, according to Bacon, and hardly the brightest,) but a still higher power of detecting the "analogies" and "resemblances of things," and thus of showing their relation and subordination. These peculiarities make his writings difficult; but it makes them profound, and it gives them singular completeness.

It is not difficult to assign the precise sphere in which Butler, with eminent gifts for abstract science in general, felt most at home. Facts show us, not only that there are peculiarities of mental structure which prompt men to the pursuit of some of the great objects of thought and speculation rather than others—peculiarities which circumstances may determine and education modify; but which neither circumstances nor education can do *more* than determine or modify; but that even in relation to the very same subject of speculation, there are minute and specific varieties of mind, which prompt men to addict themselves rather to this part of it than to that. This was the case with Butler. Eminently fitted for the prosecution of metaphysical science in general, it is always the *philosophy of the moral nature of man* to which he most naturally attaches himself, and on which he best loves to expatiate. Neither Bacon nor Pascal ever revolved more deeply the phenomena of our moral nature, or contemplated its inconsistencies, its intricacies, its paradoxes, with a keener glance or more comprehensive survey, or drew from such survey reflections more original or instructive. As in reading Locke the young metaphysician is perpetually startled by the palpable

apparition, in distinct, sharply defined outline, of facts of consciousness which he recognizes as having been partially and dimly present to his mind before—though too fugitive to fix, too vague to receive a name; so in reading Butler he is continually surprised by the statement of moral facts and laws which he then first adequately recognizes as true, and sees in distinct vision face to face. It is not without reason that Sir James Mackintosh says of the sermons preached at the Rolls, “That in them Butler has taught truths more capable of being exactly distinguished from the doctrines of his predecessors, more satisfactorily established by him, more comprehensively applied to particulars, more rationally connected with each other, and therefore more worthy of the name of *discovery*, than any with which we are acquainted.”

His special predilections for the sphere of speculation we have mentioned are strikingly indicated in his choice of the *ground* from which he proposes to survey the questions of morals. “There are two ways,” says he, in the preface to his three celebrated sermons on Human Nature, “in which the subject of morals may be treated. One begins inquiring into the abstract relations of things; the other from a matter of fact, namely, what the particular nature of man is, its several parts, their economy or constitution; from whence it proceeds to determine what course of life it is which is correspondent to this whole nature.” As might be expected, from the tendencies of his mind, he selects his *latter* course.

The powers of *observation* in Butler must have been, in spite of his studious life and his remarkable habits of abstraction, not much inferior to his keen faculty of introspection, though this last was undoubtedly the main instrument by which he traced so profoundly the mysteries of our nature. There have doubtless been other men, far less profound, who have had a more quick and more vivid perception of the peculiarities

of character which discriminate individuals, or small classes of men, (evincing after all, however, not so much a knowledge of *man* as a knowledge of *men*;) still the masterly manner in which Butler often sketches even these, shows that he must have been a very sagacious observer of those phenomena of human nature which presented themselves from *without*, as well as of those which revealed themselves from *within*. In general, however, it is the characteristics of *man*, the generic phenomena of our nature, in all their complexity and subtilty, that he best loves to investigate and exhibit. The spirit of his profound philosophy is meantime worthy both of the Christian character and ample intellect of him who excogitated it. It is the very reverse of that of the philosophical satirist or caricaturist; however severely just the foibles, the inconsistencies, the corruptions of our nature, it is a philosophy everywhere compassionate, magnanimous, and philanthropic. Its tone, indeed, like that of the philosophy of Pascal, (though not shaded with the same deep melancholy,) is entirely modulated by a profound conviction of the frailty and ignorance of man, of the little we know compared with what is to be known, and of the duty of humility, modesty, and caution, in relation to all those great problems of the universe, which tempt and exercise man's ambitious speculations. His constant feeling amid the beautiful and original reasonings of the *Analogy*, is identical with that of Newton when, reverting at the close of life to his sublime discoveries, he declared he seemed only like a child who had been amusing himself with picking up a few shells on the margin of the ocean of universal truth, while the infinite still lay unexplored before him. In a word, it is the feeling, not only of Pascal and of Newton, but of all the profoundest speculators of our race, whose grandest lesson from all they learned was the vanishing ratio of man's knowledge

to man's ignorance. Hence the immense value (if only as a discipline) of a careful study of Butler's writings to every youthful mind. They cannot but powerfully tend to check presumption, and teach modesty and self-distrust.

The feebleness of Butler's imagination was singularly contrasted with the *inventive* and *constructive* qualities of his intellect, and the facility with which he detected and employed "analogies" in the way of argument. He is, indeed, almost unique in this respect. Other philosophic minds, (Bacon and Burke are illustrious examples,) which have possessed similar aptitudes for "analogical" reasoning, have usually had quite sufficient of the kindred activity of imagination to employ "analogies" for the purpose of poetical illustration. If Butler possessed this faculty by nature in any tolerable measure, it must (as has been the case with some other great thinkers) have been repressed and absorbed by his habits of abstraction. His defect in this respect is, in some respects, to be regretted, since unquestionably the illustrations which imagination would have supplied to argument, and the graces it would have imparted to style, would have made his writings both more intelligible and more attractive. It is said that once, and once only, "he courted the muses," having indited a solitary "acrostic to a fair cousin" who for the first and, as it seems, the only time, inspired him with the tender passion. But, as one of his biographers says, we have probably no great reason to lament the loss of this fragment of his poetry.

Butler's composition is almost as destitute of wit as of the graces of imagination. Yet is he by no means without that dry sort of humor which often accompanies very vigorous logic, and, indeed, is in some instances inseparable from it; for the neat detection of a sophism, or the sudden and unexpected explosion of a fallacy,

produces much the same effect as wit on those who are capable of enjoying close and cogent reasoning. There is also a kind of simple, grave, satirical pleasantry, with which he sometimes states and refutes an objection, by no means without its piquancy.

As to the complaint of obscurity, which has been so often charged on Butler's style, it is difficult to see its justice in the sense which it has usually been preferred. He is a *difficult* author, no doubt, but he is so from the close packing of his thoughts, and their immense generality and comprehensiveness; as also from what may be called the *breadth* of his march, and from occasional lateral excursions for the purpose of disposing of some objection which he does not formally mention, but which might harass his flank; it certainly is not from indeterminate language or (ordinarily) involved construction. All that is really required in the reader, *capable* of understanding him at all, is to do just what he does with lyrical poetry, (if we may employ an old, and yet in this one point not inapt comparison;) he must read sufficiently often to make all the transitions of thought familiar, he must let the mind dwell with patience on each argument till its entire scope and bearing are properly appreciated. Nothing certainly is wanting in the method or arrangement of the thoughts, and the diction seems to us selected with the utmost care and precision. Indeed, as Professor Fitzgerald justly observes, a collation of the first with the subsequent editions of the *Analogy* (the variations are given in Mr. Fitzgerald's edition) will show, by the nature of the alterations, what pains Butler bestowed on a point on which he is erroneously supposed to have been negligent. In subjects so abstruse, and involving so much generality of expression, the utmost difficulty must always be experienced in selecting language which conveys *neither more nor less* than what is intended; and this point Butler must have

labored immensely, it may be added successfully, since he has at least produced works which have seldom given rise to disputes as to his meaning. Though he may be difficult to be understood, few people complain of his being liable to be *misunderstood*. In short, it may be doubted whether any man of so comprehensive a mind, and dealing with such abstract subjects, ever condensed the results of twenty years' meditations into so small a compass with so little obscurity. No doubt greater amplification would have made him more pleasing, but it may be questioned whether the perusal of his writings would have been so useful a discipline, and whether the truths he has delivered would have fixed themselves so indelibly as they now generally do in the minds of all who diligently study him. It is the result of the very activity of mind his writings stimulate and demand. But, at any rate, if precision in the use of language, and method and consecutiveness in the thoughts, are sufficient to rebut the charge of obscurity, Butler is not chargeable with the fault in the ordinary sense. We must never forget what Whately in his *Rhetoric* has so well illustrated—that perspicuity is a “relative quality.” To the intelligent, or those who are willing to take sufficient pains to understand, Butler will not seem chargeable with obscurity. The diction is plain, downright Saxon-English, and the style, however homely, has, as the writer just mentioned observes, the great charm of transparent simplicity of purpose and unaffected earnestness.

The immortal *Analogy* has probably done more to silence the objections of infidelity than any other ever written, from the earliest “apologies” downward. It not only most critically met the spirit of unbelief in the author's own day, but is equally adapted to meet that which *chiefly* prevails in all time. In every age some of the principal, perhaps *the* principal, objections to the

Christian Revelation have been those which men's *pre-conceptions* of the Divine character and administration—of what God *must* be, and what God *must* do—have suggested against certain facts in the sacred history, or certain doctrines it reveals. To show the objector then (supposing him to be a theist, as nine tenths of all such objectors have been) that the very same or similar difficulties are found in the structure of the universe and the divine administration of it, is to wrest every *such* weapon completely from his hands, if he be a fair reasoner and remains a theist at all. He is bound by strict logical obligation either to show that the parallel difficulties do not exist, or to show how he can solve them, while he *cannot* solve those of the Bible. In default of doing either of these things, he ought either to renounce all *such* objections to Christianity, or abandon theism altogether. It is true, therefore, that though Butler leaves the alternative of atheism open, he hardly leaves any other alternative to nine tenths of the theists who have objected to Christianity.

It has been sometimes said, by way of reproach, that Butler *does* leave that door open; that his work does not confute the atheist. The answer is, that it is not its object to confute atheism; but it is equally true, that it does not diminish by one grain any of the arguments against it. It leaves the evidence for theism—every particle of it—just where it was. Butler merely avails himself of facts which exist, undeniably exist, (whether men be atheists or theists,) to neutralize a certain class of objections against Christianity. And, as the exhibition of such facts as form the pivot on which Butler's argument turns does not impugn the truth of theism, but leaves its conclusions, and the immense preponderance and convergence of evidence which establish them, just as they were, so it is equally true that Butler has sufficiently guarded his argument from any perversion; for

example, in Part I, chap. vi, and Part II, chap. viii. He has also, with his accustomed acuteness and judgment, shown that, even on the principles of atheism itself, its confident assumption that, *if* its principles be granted, a future life, future happiness, future misery, is a dream—cannot be depended on; for since men have existed, they may again; and if in a bad condition now, in a worse hereafter. It is not, on such an hypothesis, a whit more unaccountable that man's life should be renewed or preserved, or perpetuated forever, than that it should have been originated at all. On this point he truly says, "That we are to live hereafter is just as reconcilable with the scheme of atheism, and as well to be accounted for by it, as that we are now alive, is; and therefore nothing can be more absurd than to argue from that scheme that there can be no future state."

It has been also alleged that the analogy only "*shifts* the difficulty from revealed to natural religion," and that "atheists might make use of the arguments, and have done so." The answer is, not only (as just said) that the arguments of Butler leave every particle of the evidence for theism just where it was, and that he has sufficiently guarded against all abuse of them; but that the *facts*, of which it is so foolishly said that the atheist *might* make ill use, had always been the very arguments which he *had* used, and of which Butler only made a new and beneficial application. The objections with which he perplexes and baffles the deist, *he* did not give to the atheist's armory; he took them from thence merely to make an unexpected and more legitimate use of them. The atheist had never neglected such weapons, nor was likely to do so, previous to Butler's adroit application of them. The charge is ridiculous. As well might a man, who had wrested a stiletto from an assassin to defend himself, be accused of having put the weapon into the

assassin's hands! It was there before; he merely wrested it thence. It is just so with Butler.

Further, we cannot but think that the conclusiveness of Butler's work as against its true object, *The Deist*, has often been underrated by many even of its genuine admirers. Thus Dr. Chalmers, for instance, who gives such glowing proofs of his admiration of the work, and expatiates in a congenial spirit on its merits, affirms that "those overrate the power of analogy who look to it for any very distinct or positive contribution to the Christian argument. To repel objections, in fact, is the great service which analogy has rendered to the cause of Revelation, and it is the *only service* which we seek for at its hands."* This, abstractedly, is true; but *in fact*, considering the *position* of the bulk of the objectors, that they have been invincibly persuaded of the truth of theism, and that their objections to Christianity have been exclusively or chiefly of the kind dealt with in the *Analogy*, the work is much more than an *argumentum ad hominem*; it is not simply of negative value. To such *objectors* it logically establishes the truth of Christianity, or it forces them to recede from theism, which the bulk will not do. If a man says, "I am invincibly persuaded of the truth of proposition A, but I cannot receive proposition B, because objections $\alpha \beta \gamma$ are opposed to it; if these were removed, my objections would cease;" then, if you can show that $\alpha \beta \gamma$ equally apply to the proposition A, his reception of which, he says, is based on invincible evidence, you do really compel such a man to believe that not only B *may* be true, but that it *is* true, unless he be willing (which few in the parallel case are) to abandon proposition A as well as B. This is precisely the condition in which the majority of deists have ever been, if we may judge from their writings. It is usually the *à priori* assumption, that certain facts

* *Prelections on Butler*, etc., p. 7.

in the history of the Bible, or some portions of its doctrine, are unworthy of the Deity, and incompatible with his character or administration, that has chiefly excited the incredulity of the deist; far more than any dissatisfaction with the positive evidence which substantiates the Divine origin of Christianity. Neutralize these objections by showing that they are *equally* applicable to what he declares he cannot relinquish—the doctrine of theism—and you show him, if he has a particle of logical sagacity, not only that Christianity may be true, but that it is so; and his only escape is by relapsing into atheism, or resting his opposition on other objections of a very feeble character in comparison, and which, probably, few would have ever been contented with alone; for *apart* from these objections which Butler repels, the historical evidence of Christianity—the evidence on behalf of the integrity of its records, and the honesty and sincerity of its founders, showing that they *could* not have constructed such a system if they *would*, and *would* not, supposing them impostors, if they *could*—is stronger than that for any fact in history.

In consequence of this position of the argument, Butler's book, to large classes of objectors, though practically an *argumentum ad hominem*, not only proves Christianity *may* be true, but in all logical fairness proves it *is* so. This he himself, with his usual judgment, points out. He says: "And objections, which are equally applicable to both natural and revealed religion, are, properly speaking, answered by its being shown that they are so, *provided the former be admitted to be true.*"

The praise which Mackintosh bestowed on this great work is alike worthy of it and himself. "Butler's great work, though only a commentary on the singularly original and pregnant passage of Origen, which is so honestly prefixed to it as a motto, is, notwithstanding, the most original and profound work extant in any language on

the *Philosophy of Religion*."* The favorite topics of the *Sermons* are, of course, largely insisted on in the *Analogy*: such as the "ignorance of man;" the restrictions which the limitations of his nature and his position in the universe should impose on his speculations; his subjection to "probability as the guide of life;" the folly and presumption of pronouncing, *à priori*, on the character and conduct of the Divine Ruler from our contracted point of view, and our glimpses of but a very small segment of his universal plan. These topics Butler enforces with a power not less admirable than the sagacity with which he traces the analogies between the "Constitution and Course of Nature," and the disclosures of "Divine Revelation." These last, of course, form the staple of the argument; but to enforce the proper deductions from them the above favorite topics are absolutely essential.

It has been sometimes, though erroneously, surmised that Butler was considerably indebted to preceding writers. That in the progress of the long deistical controversy many theologians should have caught glimpses of the same line of argument, is not wonderful. The constant iteration by the English deists of that same class of difficulties to which the *Analogy* replies, could not fail to lead to a partial perception of the powerful instrument it was reserved for Butler effectually to wield. It has been here as with almost every other great intellectual achievement of man; many minds have been simultaneously engaged by the natural progress of events *about* the same subject of thought; there have been "coming shadows" and "vague anticipations," perhaps

* A far different and utterly inconsistent judgment in all respects is reported, in his "Life," to have fallen from him. But as Professor Fitzgerald shows, it is so strangely, and, indeed, amusingly contrary to the above, that it must have been founded on some mistake of something that must have been said in conversation.

even simultaneous inventions or discoveries; and then ensues much debate as to the *true* claimants. Thus it was in relation to the calculus, the analysis of water, the invention of the steam-engine, and the discovery of Neptune.

In the present case, however, there can be no doubt that the merit of the systematic construction of the entire argument rests with Butler. Nor would it have much detracted from his merit, even if he had derived far larger fragments of the fabric from his contemporaries than we have any reason to believe he did. They would have been but single stones; the architectural genius which brought them from their distant quarries and polished them, and wrought them into a massive evidence, was his alone.

Professor Fitzgerald has truly remarked, that the work of Dr. James Foster against Tindal (an author Butler evidently has constantly in his eye) presents some curious parallelisms with certain passages of the *Analogy*. We have ourselves noted in Conybeare's reply to the same infidel writer (published six years before the *Analogy*) other parallelisms not less striking. But it seems quite improbable that Butler should have derived aid from any such sources, since his work was being excogitated for many years before it was published; nay, as we have seen, it may be conjectured that he largely transfused into it portions of the sermons delivered so long before at the Rolls, and of which a far greater number must have been preached than the fifteen he published; so that, perhaps, it is more near the truth to say that contemporary writers had been indebted to him than he to them.

The "pregnant sentence" from Origen, however, is not the only thing which may have suggested to Butler his great work. Berkeley, in a long passage of the "Minute Philosopher," cited by Mr. Fitzgerald, clearly

lays down the *principle* on which such a work as the *Analogy* might be constructed.

The spirit of the *Analogy* is admirable. Though eminently controversial in its origin and purpose; and though the author must constantly have had the deistical writers of the day in his eye, his work is calm and dignified, and divested of every trace of the controversial spirit. He does not even mention the names of the men whose opinions he is refuting; and if their systems had been merely some new minerals or ærolites dropped upon the world from some unknown sphere, he could not have analyzed them with less of passion.

Of Butler's ethical philosophy, as expounded especially in the *Sermons on Human Nature*, Sir James Mackintosh's remarks prefixed to this Encyclopædia* supersede further notice in the present brief article. But it may be remarked in general of the sermons preached at the Rolls, that though not so much read (if we except, perhaps, the three just mentioned) as the *Analogy*, they are to the full as worthy of being read; they deserve all that is so strikingly said of them in the Preliminary Dissertation. Some of them fill one with wonder at the sagacity with which the moral paradoxes in human nature are investigated and reconciled. Take, for example, the sermon on Balaam. The first feeling in many a mind on reading the history in the Old Testament is, that man *could* not so act in the given circumstances. We doubt if ever any man deeply pondered the sermon of Butler, in which he dwells on the equally unaccountable phenomena of human conduct, less observed, indeed, only because more observable, and questioned any longer man's powers of self-deception, even to such feats of folly and wickedness as are recorded of the prophet.

The editions of Butler's writings, separately or alto-

* Encyclopædia Britannica.

gether, have been numerous, and it is impossible within the limits of this article to specify them, still less to do justice to the *literature* which they have produced. His commentators have been many and most illustrious: seldom has a man who wrote so little engaged so many great minds to do him homage by becoming his exponents and annotators. It may be permitted, however, to mention with deserved honor the remarks of Sir James Mackintosh, prefixed to this Encyclopædia; the "Prelections" of Dr. Chalmers on the *Analogy*; the valuable "Essay" of Dr. Hampden on the "Philosophical Evidences of Christianity;" some beautiful applications of Butler's principle in Whately's "Essays on the Peculiarities of Christianity;" and the admirable edition of the *Analogy* by Professor Fitzgerald, which is enriched by many very acute and judicious notes, and by a copious and valuable index.

ADVERTISEMENT PREFIXED TO THE FIRST EDITION.

IF the reader should meet here with any thing which he had not before attended to, it will not be in the observations upon the constitution and course of nature, these being all obvious; but in the application of them: in which, though there is nothing but what appears to me of some real weight, and therefore of great importance, yet he will observe several things which will appear to him of very little, if he can think things to be of little importance which are of any real weight at all upon such a subject as religion. However, the proper force of the following treatise lies in the whole general analogy considered together.

It is come, I know not how, to be taken for granted, by many persons, that Christianity is not so much a subject of inquiry, but that it is now at length discovered to be fictitious. And accordingly they treat it as if, in the present age, this were an agreed point among all people of discernment, and nothing remained but to set it up as a principal subject of mirth and ridicule, as it were, by way of reprisals for its having so long interrupted the pleasures of the world. On the contrary, thus much, at least, will be here found—not taken for granted, but proved—that any reasonable man who will thoroughly consider the matter may be as much assured as he is of his own being, that it is not, however, so clear a case that there is nothing in it. There is, I think, strong evidence of its truth; but it is certain no one can, upon principles of reason, be satisfied of the contrary. And the practical consequence to be drawn from this is not attended to by every one who is concerned in it.

INTRODUCTION.

PROBABLE Evidence is essentially distinguished from Demonstrative by this, that it admits of degrees; and of all variety of them, from the highest moral certainty to the very lowest presumption. We cannot, indeed, say a thing is probably true upon one very slight presumption for it; because, as there may be probabilities on both sides of a question, there may be some against it; and though there be not, yet a slight presumption does not beget that degree of conviction which is implied in saying a thing is probably true. But that the slightest possible presumption is of the nature of a probability appears from hence—that such low presumption, often repeated, will amount even to moral certainty. Thus a man's having observed the ebb and flow of the tide to-day, affords some sort of presumption, though the lowest imaginable, that it may happen again to-morrow. But the observation of this event for so many days, and months, and ages together, as it has been observed by mankind, gives us a full assurance that it will.

Difference between Probable and Demonstrative Evidence.

2. That which chiefly constitutes *Probability* is expressed in the word *likely*, that is, like some truth* or true event; like it in itself, in its evidence, in some more or fewer of its circumstances. †

Likeness constitutes Probability.

* Verisimile.

† [“Like it in itself,” seems to indicate the case in which we have ascertained the whole nature of the truth or known fact; for example, ascertained the whole of the conditions upon which a given conse-

For when we determine a thing to be probably true—suppose that an event has or will come to pass—it is from the mind's remarking in it a likeness to some other event which we have observed has come to pass. And this observation forms, in numberless daily instances, a presumption, opinion, or full conviction, that such event has or will come to pass; according as the observation is, that the like event has sometimes, most commonly, or always, so far as our observation reaches, come to pass at like distances of time, or place, or upon like occasions. Hence arises the belief that

Illustrations.

a child, if it lives twenty years, will grow up to the stature and strength of a man; that food will contribute to the preservation of its life, and the want of it for such a number of days, be its certain destruction. So, likewise, the rule and measure of our hopes and fears concerning the success of our pursuits; our expectations that others will act so and so in such circumstances; and our judgment that such actions proceed from such principles;—all these rely upon our having observed the like, to what we hope, fear, expect, judge; I say upon our having observed the like, either with respect to others or ourselves. And thus, whereas the prince * who had always lived in a warm climate naturally concluded, in the way of analogy, that there was no such thing as water's becoming hard, because he had always observed it to be fluid and yielding;—we, on the contrary, from analogy, conclude that there is no presumption at all against this; that it is supposable there

quence takes place. This is the case of a strict induction. "Like in its evidence," when the same testimony or proof which we have found credible for some cases leads us to believe something else. "Like in some more or fewer of its circumstances," refers to analogies, in the popular sense of the term, as before explained.—F.]

* The story is told by Mr. Locke, in the chapter on Probability. Essay on the Human Understanding, book iv, chap. xv, § 5.

may be frost in England any given day in January next ; probable that there will on some day of the month ; and that there is a moral certainty, that is, ground for an expectation, without any doubt of it, in some part or other of the winter.

3. Probable Evidence, in its very nature, affords but an imperfect kind of information, and is to be considered as relative only to beings of limited capacities. For nothing which is the possible object of knowledge, whether past, present, or future, can be probable to an Infinite Intelligence ; since it cannot but be discerned absolutely, as it is in itself, certainly true or certainly false. But, to us, probability is the very guide of life.

Probability the
guide of life in
Speculation and
Practice.

From these things it follows, that in questions of difficulty, or such as are thought so, where more satisfactory evidence cannot be had, or is not seen, if the result of examination be, that there appears, upon the whole, any, even the lowest, presumption on one side, and none on the other, or a greater presumption on one side, though in the lowest degree greater, this determines the question, even in matters of speculation ; and, in matters of practice, will lay us under an absolute and formal obligation, in point of prudence and of interest, to act upon that presumption, or low probability, though it be so low as to leave the mind in very great doubt which is the truth.* For surely a man is as really bound in prudence to do what, upon the whole, appears according to the best of his judgment to be for his happiness, as what he certainly knows to be so. Nay, further, in questions of great consequence, a reasonable man will think it con-

[* This course is reasonable, but more is required in religion. Its evidence must be sufficient not only to show how its duties may be performed, and to indicate the prudence of obedience, but strong enough to cause full belief in a reasonable mind. Belief is a condition of salvation, and is involved in full submission to God.]

cerns him to remark lower probabilities and presumptions than these; such as amount to no more than showing one side of a question to be as supposable and credible as the other; nay, such as but amount to much less even than this. For numberless instances might be mentioned respecting the common pursuits of life, where a man would be thought, in a literal sense, distracted, who would not act, and with great application, too, not only upon an even chance, but upon much less, and where the probability or chance was greatly against his succeeding.*

4. It is not my design to inquire further into the nature, the foundation, and measure of probability; or whence it proceeds, that *likeness* should beget that presumption, opinion, and full conviction which the human mind is formed to receive from it, and which it does necessarily produce in every one; or to guard against the errors to which reasoning from analogy is liable. This belongs to the subject of logic,† and is a part of that subject which has not yet been thoroughly considered. Indeed, I shall not take upon me to say how far the extent, compass, and force of analogical reasoning can be reduced to general heads and rules, and the whole be formed into a system. But though so little in this way has been attempted by those who have treated of our intellectual powers, and the exercise of them, this does not hinder but that we may be, as we unquestionably are, assured that analogy is of weight, in various degrees, toward determining our judgment, and our practice. Nor does it in any wise cease to be of weight in those cases, because persons, either given to dispute, or who require things to be stated with greater exactness than our faculties appear to admit of in practical matters, may find other cases, in which it is not easy to say whether it be, or be not, of any weight;

Analogy of
great weight
notwithstanding
objections.

* See part ii, chap. vi.

[† See Mills' System of Logic, book iii, chap. xx.]

or instances of seeming analogies, which are really of none. It is enough to the present purpose to observe, that this general way of arguing is evidently natural, just, and conclusive. For there is no man can make a question but that the sun will rise to-morrow, and be seen, where it is seen at all, in the figure of a circle, and not in that of a square.

5. Hence, namely from analogical reasoning, Origen* has with singular sagacity observed, that “he who believes the Scripture to have proceeded from Him who is the Author of Nature, may well expect to find the same sort of difficulties in it as are found in the constitution of nature.” And in a like way of reflection, it may be added, that he who denies the Scripture to have been from God, upon account of these difficulties, may, for the very same reason, deny the world to have been formed by him. On the other hand, if there be an analogy, or likeness, between that system of things and dispensation of Providence which revelation informs us of, and that system of things and dispensation of Providence which experience, together with reason, informs us of, that is, the known course of nature, this is a presumption that they have both the same author and cause, at least so far as to answer objections against the former being from God, drawn from any thing which is analogical or similar to what is in the latter, which is acknowledged to be from him; for an author of nature is here supposed.

* *Χρῆ μὲν τοι γε τὸν ἅπαξ παραδεξάμενον τοῦ κτίσαντος τὸν κόσμον εἶναι ταύτας τὰς γραφὰς πεπεισθαι, ὅτι ὅσα περὶ τῆς κτίσεως ἀπαντᾷ τοῖς ζητοῦσι τὸν περὶ αὐτῆς λόγον, ταῦτα καὶ περὶ τῶν γραφῶν.* — Philocal., p. 23, Ed. Cant. [This sagacious remark is, however, strangely misapplied by Origen to the establishment of one of his favorite theories—that there is a mystical meaning in every word, and even letter, of Scripture.—F.]

6. Forming our notions of the constitution and government of the world upon reasoning, without foundation for the principles which we assume, whether from the attributes of God or any thing else, is building a world upon hypothesis, like Descartes.

Hypothesis
vain—Analogy
allowable.

Forming our notions upon reasoning from principles which are certain, but applied to cases to which we have no ground to apply them, (like those who explain the structure of the human body, and the nature of diseases and medicines, from mere mathematics, without sufficient *data*,) is an error much akin to the former; since what is assumed in order to make the reasoning applicable is *hypothesis*. But it must be allowed, just to join abstract reasonings with the observation of facts, and argue from such facts as are known to others that are like them; from that part of the divine government over intelligent creatures which comes under our view, to that larger and more general government over them which is beyond it; and, from what is present, to collect what is likely, credible, or not incredible, will be hereafter.

7. This method, then, of concluding and determining being practical, and what, if we will act at all, we cannot but act upon in the common pursuits of

This method
conclusive—ap-
plied to religion.

life; being evidently conclusive, in various degrees, proportionable to the degree and exactness of the whole analogy or likeness; and having so great authority for its introduction into the subject of religion, even revealed religion, my design is to apply it to that subject in general, both natural and revealed; taking for proved that there is an intelligent author of nature, and natural governor of the world. For as there is no presumption against this prior to the proof of it, so it has been often proved, with accumulated evidence, from this argument of analogy and final causes, from abstract reasonings, from the most ancient tradition

and testimony, and from the general consent of mankind. Nor does it appear, so far as I can find, to be denied by the generality of those who profess themselves dissatisfied with the evidence of religion.

8. As there are some who, instead of thus attending to what is in fact the constitution of nature, form their notions of God's government upon hypothesis, so there are others who indulge themselves in vain and idle speculations,* how the world might possibly have been framed otherwise than it is; and upon supposition that things might, in imagining that they should, have been disposed and carried on after a better model than what appears in the present disposition and conduct of them. Suppose, now, a person of such a turn of mind to go on with his reveries, till he had at length fixed upon some particular plan of nature as appearing to him the best—one shall scarce be thought guilty of detraction against human understanding if one should say, even beforehand, that the plan which this speculative person would fix upon, though he were the wisest of the sons of men, probably would not be the very best, even according to his own notions of *best*; whether he thought that to be so which afforded occasions and motives for the exercise of the greatest virtue, or which was productive of the greatest happiness; or that these two were necessarily connected, and ran up into one and the same plan. However, it may not be amiss, once for all, to see what would be the amount of these emendations and imaginary improvements upon the system of nature, or how far they would mislead us. And it seems there could be no stopping till we came to some such conclusions

Vain speculations—their results.

[* In an illustration of these idle speculations, see Bayle's *Response aux Questions d'un Provincial*. See also notes to the Articles Manichæus, Origen, Paulicians, in Bayle's Critical Dictionary. Fitzgerald supposes Butler had Bayle in mind in this passage.]

as these :—That all creatures should at first* be made as perfect and as happy as they were capable of ever being; that nothing, to be sure, of hazard or danger should be put upon them to do, (some indolent persons would perhaps think, nothing at all,) or certainly, that effectual care should be taken that they should, whether necessarily or not, yet eventually and in fact, always do what was right and most conducive to happiness, which would be thought easy for infinite power to effect; either by not giving them any principles which would endanger their going wrong, or by laying the right motive of action, in every instance, before their minds continually in so strong a manner, as would never fail of inducing them to act conformably to it; and that the whole method of government by punishments should be rejected as absurd; as an awkward, roundabout method of carrying things on; nay, as contrary to a principal purpose for which it would be supposed creatures were made, namely, happiness.

9. Now, without considering what is to be said in particular to the several parts of this train of folly and extravagance, what has been above intimated is a full, direct, general answer to it, namely, that we may see beforehand that we have not faculties for this kind of speculation. For though it be admitted, that, from the first principles of our nature, we unavoidably judge or determine some ends to be absolutely in themselves preferable to others, and that the ends now mentioned, or, if they run up into one, that this one is absolutely the best, and, consequently, that we must conclude the ultimate end designed in the constitution of nature and conduct of Providence is the most virtue and happiness possible, yet we are far from being able to judge what particular

No faculties
for such specu-
lations. This
shown in little
affairs, etc.

[* That is, from birth, without the results of experience.]

disposition of things would be most friendly and assistant to virtue; or what means might be absolutely necessary to produce the most happiness in a system of such extent as our own world may be, taking in all that is past and to come, though we should suppose it detached from the whole of things. Indeed, we are so far from being able to judge of this that we are not judges what may be the necessary means of raising and conducting one person to the highest perfection and happiness of his nature. Nay, even in the little affairs of the present life, we find men of different educations and ranks are not competent judges of the conduct of each other. Our whole nature leads us to ascribe all moral perfection to God, and to deny all imperfection of him. And this will forever be a practical proof of his moral character to such as will consider what a practical proof is, because it is the voice of God speaking in us. And from hence we conclude, that virtue must be the happiness, and vice the misery, of every creature; and that regularity, and order, and right, cannot but prevail finally, in a universe under his government. But we are in no sort judges what are the necessary means of accomplishing this end.

10. Let us, then, instead of that idle, and not very innocent, employment of forming imaginary models of a world, and schemes of governing it, turn our thoughts to what we experience to be the conduct of nature with respect to intelligent creatures; which may be resolved into general laws or rules of administration, in the same way as many of the laws of nature respecting inanimate matter may be collected from experiments. And let us compare the known constitution and course of things with what is said to be the moral system of nature; the acknowledged dispensations of Providence, or that government which we find ourselves under, with what religion

Compare the teachings of Nature and Religion.

teaches us to believe and expect, and see whether they are not analogous and of a piece. And upon such a comparison it will, I think, be found that they are very much so; that both may be traced up to the same general laws, and resolved into the same principles of Divine conduct.

11. The analogy here proposed to be considered is of pretty large extent, and consists of several parts; in some more, in others less exact. In some few instances, perhaps, it may amount to a real practical proof, in others not so; yet in these it is a confirmation of what is proved otherwise. It will undeniably show, what too many want to have shown them, that the system of religion, both natural and revealed, considered only as a system, and prior to the proof of it, is not a subject of ridicule, unless that of nature be so too. And it will afford an answer to almost all objections against the system both of natural and of revealed religion; though not, perhaps, an answer in so great a degree, yet in a very considerable degree an answer, to the objections against the evidence of it; for objections against a proof, and objections against what is said to be proved, the reader will observe, are different things:

12. Now the Divine government of the world, implied in the notion of religion in general, and of Christianity, contains in it,—That mankind is appointed to live in a future state, (chap. i;) that there every one shall be rewarded or punished, (chap. ii;) rewarded or punished respectively for all that behavior here which we comprehend under the words virtuous or vicious, morally good or evil, (chap. iii;) that our present life is a probation, a state of trial (chap. iv) and of discipline (chap. v) for that future one, notwithstanding the objections which men may fancy they have, from notions of necessity, against there being

vine Govern-
ment contains.

any such moral plan as this at all, (chap. vi;) and whatever objections may appear to lie against the wisdom and goodness of it, as it stands so imperfectly made known to us at present, (chap. vii;) that this world being in a state of apostasy and wickedness, and consequently of ruin, and the sense both of their condition and duty being greatly corrupted among men, this gave occasion for an additional dispensation of Providence, of the utmost importance, (part ii, chap. i,) proved by miracles, (chap. ii,) but containing in it many things appearing to us strange, and not to have been expected, (chap. iii;) a dispensation of Providence, which is a scheme or system of things, (chap. iv,) carried on by the mediation of a divine person, the Messiah, in order to the recovery of the world, (chap. v;) yet not revealed to all men, nor proved with the strongest possible evidence to all those to whom it is revealed; but only to such a part of mankind, and with such particular evidence, as the wisdom of God thought fit. Chap. vi, vii.

13. The design, then, of the following Treatise will be to show that the several parts principally objected against in this moral and Christian dispensation, including its scheme, its publication, and the proof which God has afforded us of its truth; that the particular parts principally objected against in this whole dispensation are analogous to what is experienced in the constitution and course of nature or providence; that the chief objections themselves which are alleged against the former, are no other than what may be alleged with like justness against the latter, where they are found in fact to be inconclusive; and that this argument from analogy is in general unanswerable, and undoubtedly of weight on the side of religion, (chap. viii,) notwithstanding the objections which may seem to lie against it, and the real ground which there

The design of
this Treatise.

may be for difference of opinion as to the particular degree of weight which is to be laid upon it. This is a general account of what may be looked for in the following Treatise. And I shall begin it with that which is the foundation of all our hopes and of all our fears—all our hopes and fears which are of any consideration—I mean a Future Life.

THE
ANALOGY OF RELIGION.

PART I.
OF NATURAL RELIGION.

CHAPTER I.

OF A FUTURE LIFE.*

STRANGE difficulties have been raised by some concerning personal identity, or the sameness of living agents, implied in the notion of our existing now and hereafter, or in any two successive moments; which whoever thinks it worth while may see considered in the first Dissertation at the end of this Treatise. But, without regard to any of them here, let us consider what the analogy of nature, and the several changes which we have undergone, and those which we know we may undergo without being destroyed, suggest, as to the effect which death may, or may not, have upon us; and whether it be not from thence probable that we may survive this change, and exist in a future state of life and perception.

Difficulties—
the question to
be considered.

2. I. From our being born into the present world in

[* Chalmers regards this chapter as the least satisfactory in the book, because it is infected with the obscure metaphysics of the age. He particularly alludes to what Butler says of the indivisibility of consciousness, and his argument based on this. The argument is analyzed and severely criticised in Duke's Systematic Analysis of the Analogy, Appendix I. See also Whately's Essays on Some of the Peculiarities of the Christian Religion, page 63.]

the helpless, imperfect state of infancy, and having arrived from thence to mature age, we find it to be a general law of nature, in our own species, that the same creatures, the same individuals, should exist in degrees of life and perception, with capacities of action, of enjoyment and suffering, in one period of their being greatly different from those appointed them in another period of it. And in other creatures the same law holds. For the difference of their capacities and states of life at their birth (to go no higher) and in maturity; the change of worms into flies, and the vast enlargement of their locomotive powers by such change; and birds and insects bursting the shell, their habitation, and by this means entering into a new world, furnished with new accommodations for them, and finding a new sphere of action assigned them—these are instances of this general law of nature. Thus all the various and wonderful transformations of animals are to be taken into consideration here. But the states of life in which we ourselves existed formerly, in the womb and in our infancy, are almost as different from our present, in mature age, as it is possible to conceive any two states or degrees of life can be. Therefore, that we are to exist hereafter in a state as different (suppose) from our present as this is from our former, is but according to the analogy of nature; according to a natural order or appointment of the very same kind with what we have already experienced.*

* [I am not sure that this, at least at the present stage of the argument, is a perfectly fair statement of the matter. For there is this essential difference between the state in which death *appears* to place us, and any state previously known by experience—that in the former we seem wholly deprived of any bodily organization. Previous experience might, indeed, go the length of showing that a thinking being might continue the same, and retain the exercise of its living powers, under infinite varieties of organization. But this surely is a different thing from continuance without any organization whatever, nor capa-

3. II. We know that we are endued with capacities of action, of happiness, and misery; for we are conscious of acting, of enjoying pleasure, and of suffering pain. Now, that we have these powers and capacities before death, is a pre-^{The law of continuance indicates the same}sumption that we shall retain them through and after death; indeed, a probability of it abundantly sufficient to act upon, unless there be some positive reason to think that death is the destruction of those living powers: because there is in every case a probability that all things will continue as we experience they are, in all respects, except those in which we have some reason to think they will be altered. This is that *kind** of presumption or probability from analogy, expressed in the very word *continuance*, which seems our only natural reason for believing the course of the world will continue to-morrow, as it has done so far as our experience or knowledge of history can carry us back. Nay, it seems our only reason for believing that any one substance now existing will continue to exist a moment longer, the Self-existent Substance only excepted. Thus

ble of being reached by the present proof, unless we take in some such additional considerations as Butler proceeds to allege afterward. However, it is to be remembered that natural religion does not necessarily teach that we shall exist hereafter without any bodily organization,—for we may pass, at death, into a bodily organization, inappreciable by our present senses, for any thing we know to the contrary,—and revealed religion does expressly teach that, in at least one part of our future existence, we shall have a corporeal organization. In effect, the ancient theistical philosophers, who held a future state of retribution, almost universally supposed the soul to pass into or retain some other body after its separation from the present; either, as in the vulgar metempsychosis, passing into another gross body of the same kind, or retaining a certain ethereal vehicle of its own.—F.]

* I say *kind* of presumption or probability; for I do not mean to affirm that there is the same degree of conviction, that our living powers will continue after death, as there is that our substances will.

if men were assured that the unknown event, death, was not the destruction of our faculties of perception and of action, there would be no apprehension that any other power or event, unconnected with this of death, would destroy these faculties just at the instant of each creature's death; and therefore no doubt but that they would remain after it: which shows the high probability that our living powers will continue after death, unless there be some ground to think that death is their destruction.* For if it would be in a manner certain that we should survive death, provided it were certain that death would not be our destruction, it must be highly probable that we shall survive it, if there be no ground to think death will be our destruction.

4. Now, though I think it must be acknowledged that prior to the natural and moral proofs of a future life Two reasons for fear. commonly insisted upon, there would arise a general confused suspicion that in the great shock and alteration which we shall undergo by death, we, that is, our living powers, might be wholly destroyed; yet, even prior to those proofs, there is really no particular distinct ground or reason for this apprehension at all, so far as I can find. If there be, it must arise either from *the reason of the thing*, or from *the analogy of Nature*.

* *Destruction of living powers*, is a manner of expression unavoidably ambiguous; and may signify either *the destruction of a living being, so as that the same living being shall be incapable of ever perceiving or acting again at all*; or *the destruction of those means and instruments by which it is capable of its present life, of its present state of perception and of action*. It is here used in the former sense. When it is used in the latter, the epithet *present* is added. The loss of a man's eye is a destruction of living powers in the latter sense. But we have no reason to think the destruction of living powers in the former sense to be possible. We have no more reason to think a being endued with living powers ever loses them during its whole existence, than to believe that a stone ever acquires them.

But we cannot argue from *the reason of the thing*, that death is the destruction of living agents, because we know not at all what death is in itself; but only some of its effects, such as the dissolution of flesh, skin, and bones. And these effects do in nowise appear to imply the destruction of a living agent. And besides, as we are greatly in the dark upon what the exercise of our living powers depends, so we are wholly ignorant what the powers themselves depend upon; the powers themselves, as distinguished not only from their actual exercise, but also from the present capacity of exercising them; and as opposed to their destruction: for sleep, or however,* a swoon, shows us not only that these powers exist when they are not exercised, as the passive power of motion does in inanimate matter, but shows also that they exist when there is no present capacity of exercising them; or that the capacities of exercising them for the present, as well as the actual exercise of them, may be suspended, and yet the powers themselves remain undestroyed. Since, then, we know not at all upon what the existence of our living powers depends, this shows further, there can no probability be collected from the reason of the thing, that death will be their destruction: because their existence may depend upon somewhat in no degree affected by death; upon somewhat quite out of the reach of this kind of terrors. So that there is nothing more certain than that *the reason of the thing* shows us no connection between death and the destruction of living agents.

Nor can we find any thing throughout the whole analogy of Nature to afford us even the slightest presumption that animals ever lose their living powers; much less, if it were possible, that they lose them by death; for we have no faculties wherewith

* [However, in the sense of *at least*, or *rather*.]

to trace any beyond or through it, so as to see what becomes of them. This event removes them from our view. It destroys the *sensible* proof, which we had before their death, of their being possessed of living powers, but does not appear to afford the least reason to believe that they are then, or by that event, deprived of them.

And our knowing that they were possessed of these powers, up to the very period to which we have faculties capable of tracing them, is itself a probability of their retaining them beyond it. And this is confirmed, and a sensible credibility is given to it, by observing the very great and astonishing changes which we have experienced; so great, that our existence in another state of life, of perception and of action, will be but according to a method of providential conduct, the like to which has been already exercised, even with regard to ourselves; according to a course of nature, the like to which we have already gone through.

5. However, as one cannot but be greatly sensible how difficult it is to silence imagination enough to make the voice of reason even distinctly heard in this case, as we are accustomed, from our youth up, to indulge that forward delusive faculty, ever obtruding beyond its sphere, (of some assistance, indeed, to apprehension, but the author of all error :) as we plainly lose ourselves in gross and crude conceptions of things, taking for granted that we are acquainted with what, indeed, we are wholly ignorant of—it may be proper to consider the imaginary presumptions, that death will be our destruction, arising from these kinds of early and lasting prejudices; and to show how little they can really amount to, even though we cannot wholly divest ourselves of them. And,

I. All presumption of death's being the destruction of living beings, must go upon supposition that they are

Imaginary
presumptions.
1. We are com-
pound, so dis-
cernible.

compounded, and so discernible. But since consciousness is a single and indivisible power, it should seem that the subject in which it resides must be so too. For were the motion of any particle of matter absolutely one and indivisible, so as that it should imply a contradiction to suppose part of this motion to exist and part not to exist—that is, part of this matter to move, and part to be at rest—then its power of motion would be indivisible; and so also would the subject in which the power inheres, namely, the particle of matter: for if this could be divided into two, one part might be moved and the other at rest, which is contrary to the supposition.

In like manner, it has been argued,* and for any thing appearing to the contrary, justly, that since the perception or consciousness which we have of our own existence is indivisible, so as that it is a contradiction to suppose one part of it should be here and the other there; the perceptive power, or the power of conscious-

* See Dr. Clarke's Letter to Mr. Dodwell, and the Defenses of it.

[This celebrated controversy was occasioned by a strange book of Dodwell's entitled *An Epistolary Discourse Touching the Natural Mortality of the Human Soul*, etc., in which he maintained that the human soul is naturally mortal, but supernaturally immortalized by the Holy Spirit, conferred in the sacrament of baptism, when performed by legitimately ordained ministers. Dr. Clarke answered his book and wrote four tracts on the controversy. Anthony Collins wrote "in support of Dodwell's views of the natural mortality of the soul."—F.

Ancient writers believed the soul to be indivisible. Cicero makes Cato say, "The soul is a simple, uncompounded substance, without parts or mixture; it cannot be divided, and so cannot perish." And again, "I could never believe that the soul lost its senses by escaping from senseless matter; or that such a release will not enlarge and improve its powers. . . . I am persuaded that I shall only begin truly to live when I cease to live in this world." Xenophon reports Cyrus as saying, in his last moments, "O, my son, do not imagine that when death has taken me from you I shall cease to exist."—MALCOM.]

ness, is indivisible too; and consequently the subject in which it resides, that is, the conscious being. Now upon supposition that the living agent each man calls himself is thus a single being, which there is at least

Our organized bodies not ourselves. no more difficulty in conceiving than in conceiving it to be a compound, and of which there is the proof now mentioned; it follows

that our organized bodies are no more ourselves, or part of ourselves, than any other matter around us. And it is as easy to conceive how matter, which is no part of ourselves, may be appropriated to us in the manner which our present bodies are, as how we can receive impressions from, and have power over, any matter. It is as easy to conceive, that we may exist out of bodies as in them; that we might have animated bodies of any other organs and senses wholly different from these now given us, and that we may hereafter animate these same or new bodies variously modified and organized, as to conceive how we can animate such bodies as our present. And, lastly, the dissolution of all these several organized bodies, supposing ourselves to have successively animated them, would have no more conceivable tendency to destroy the living beings, ourselves, or deprive us of living faculties, the faculties of perception and of action, than the dissolution of any foreign matter, which we are capable of receiving impressions from, and making use of for the common occasions of life.

6. II. The simplicity and absolute oneness of a living agent cannot, indeed, from the nature of the thing, be

This proved by experience. properly proved by experimental observations. But as these *fall in* with the supposition of its unity, so they plainly lead us to *conclude* certainly, that our gross organized bodies, with which we perceive the objects of sense, and with which we act, are no part of ourselves, and therefore show us that we have no reason to believe their destruction to be ours;

even without determining whether our living substance be material or immaterial. For we see by experience that men may lose their limbs, their organs of sense, and even the greatest part of these bodies, and yet remain the same living agents. And persons can trace up the existence of themselves to a time when the bulk of their bodies was extremely small in comparison of what it is in mature age: and we cannot but think that they might then have lost a considerable part of that small body, and yet have remained the same living agents, as they may now lose great part of their present body and remain so. And it is certain, that the bodies of all animals are in a constant flux, from that never-ceasing attrition which there is in every part of them. Now, things of this kind unavoidably teach us to distinguish between these living agents, ourselves, and large quantities of matter, in which we are very nearly interested; since these may be alienated, and actually are in a daily course of succession, and changing their owners; while we are assured that each living agent remains one and the same permanent being.* And this general observation leads us on to the following ones.

(1.) That we have no way of determining by experience what is the certain bulk of the living being each man calls himself; and yet, till it be determined that it is larger in bulk than the solid Bulk of living being. elementary particles of matter, which there is no ground to think any natural power can dissolve, there is no sort of reason to think death to be the dissolution of it, of the living being, even though it should not be absolutely indiscernible.

(2.) From our being so nearly related to, An internal system of matter not the living being. and interested in, certain systems of matter, suppose our flesh and bones, and afterward ceasing to be at all related to them, the living agents,

* See Dissertation I.

ourselves, remaining all this while undestroyed, notwithstanding such alienation; and consequently these systems of matter not being ourselves: it follows, further, that we have no ground to conclude any other, suppose *internal systems* of matter, to be the living agents ourselves; because we can have no ground to conclude this but from our relation to, and interest in, such other systems of matter; and therefore we can have no reason to conclude what befalls those systems of matter at death, to be the destruction of the living agents. We have already, several times over, lost a great part, or perhaps the whole, of our body, according to certain common established laws of nature; yet we remain the same living agents; when we shall lose as great a part, or the whole, by another common established law of nature, death, why may we not also remain the same? That the alienation has been gradual in one case, and in the other will be more at once, does not prove any thing to the contrary. We have passed undestroyed through those many and great revolutions of matter, so peculiarly appropriated to us ourselves; why should we imagine death will be so fatal to us? Nor can it be objected, that

Objection — what is thus alienated, or lost, is no part of our original solid body, but only adventitious matter because we may lose entire limbs, which must have contained many solid parts and vessels of the original body: or if this be not admitted, we have no proof that any of these solid parts are dissolved or alienated by death; though, by the way, we are very nearly related to that extraneous or adventitious matter, while it continues united to and distending the several parts of our solid body. But after all, the relation a person bears to those parts of his body to which he is the most nearly related, what does it appear to amount to but this, that the living agent and those parts of the body mutually affect each other? And the

same thing, the same thing in kind though not in degree, may be said of *all foreign* matter which gives us ideas, and which we have any power over. From these observations the whole ground of the imagination is removed, that the dissolution of any matter is the destruction of a living agent, from the interest he once had in such matter.

(3.) If we consider our body somewhat more distinctly, as made up of organs and instruments of perception and of motion, it will bring us to the same conclusion. Thus, the common optical experiments show, and even the observation The body composed of organs, etc. how sight is assisted by glasses shows, that we see with our eyes in the same sense as we see with glasses. Nor is there any reason to believe that we see with them in any other sense; any other, I mean, which would lead us to think the eye itself a percipient. The like is to be said of hearing: and our feeling distant solid matter by means of somewhat in our hand, seems an instance of the like kind, as to the subject we are considering. All these are instances of foreign matter, or such as is no part of our body, being instrumental in preparing objects for, and conveying them to, the perceiving power, in a manner similar or like to the manner in which our organs of sense prepare and convey them. Both are, in a like way, instruments of our receiving such ideas from external objects as the Author of nature appointed those external objects to be the occasions of exciting in us. However,* glasses are evidently instances of this; namely, of matter which is no part of our body preparing objects for, and conveying them toward, the perceiving power, in like manner as our bodily organs do. And if we see with our eyes only, in the same manner as we do with glasses, the like may justly be concluded, from analogy,

* [In the sense of at least, at any rate. The case is presented as one that will not be disputed.]

of all our other senses. It is not intended, by any thing here said, to affirm that the whole apparatus of vision, or of perception by any other of our senses, can be traced through all its steps quite up to the living power of seeing, or perceiving; but that so far as it can be traced by experimental observations, so far it appears that our organs of sense prepare and convey on objects, in order to their being perceived, in like manner as foreign matter does, without affording any shadow of appearance that they themselves perceive. And that we have no reason to think our organs of sense percipients, is confirmed by instances of persons losing some of them, the living beings themselves, their former occupiers, remaining unimpaired. It is confirmed also by the experience of dreams; by which we find we are at present possessed of a latent, and what would otherwise be an unimagined, unknown power of perceiving * sensible objects in a strong and lively a manner without our external organs of sense as with them.

7. So, also, with regard to our power of moving or directing motion by will and choice: upon the destruction of a limb, this active power remains, as it evidently seems, unlesened; so as that the living being, who has suffered this loss, would be capable of moving as before, if it had another limb to move with. It can walk by the help of an artificial leg, just as it can make use of a pole or a lever to reach toward itself, and to move things beyond the length and the power of its natural arm: and this last it does in the same manner as it reaches and moves, with its natural arm, things nearer and of less weight. Nor is there so much as any appearance of our limbs being endued with a power of moving or directing themselves; though they are adapted, like the several parts of a ma-

Perception not traceable to its source.

Power remains after the organs are destroyed.

* [That is, of imagining or conceiving.]

chine, to be the instruments of motion to each other; and some parts of the same limb, to be instruments of motion to other parts of it.

8. Thus a man determines that he will look at such an object through a microscope; or, being lame, suppose, that he will walk to such a place with a staff a week hence. His eyes and his feet no more determine in these cases than the microscope and the staff. Nor is there any ground to think they any more put the determination in practice, or that his eyes are the seers, or his feet the movers, in any other sense than as the microscope and the staff are. Upon the whole, then, our organs of sense and our limbs are certainly instruments which the living persons, ourselves, make use of to perceive and move with:* there is not any probability that they are any more; nor, consequently, that we have any other kind

Illustrations:
the microscope,
staff, etc.

* ["S. What shall we say, then, of the shoemaker? That he cuts with his instruments only, or with his hands also?"]

"A. With his hands also."

"S. Does he use his eyes also in making shoes?"

"A. Yes."

"S. The shoemaker, then, and harper are different from the hands and eyes they use?"

"A. It appears so."

"S. Does a man then *use* his whole body?"

"A. Certainly."

"S. But he who uses, and that which he uses, are different?"

"A. Yes."

"S. A man, then, is something different from his own body?"

—Plato, *Alcibi. Prim.*, p. 129, D. Stallb. Ed.

"It may easily be perceived that the *mind* both sees and hears, and not those parts which are, so to speak, windows of the mind. Neither are we bodies; nor do I, while speaking this to thee, speak to thy body. What ever is done by thy mind is done by thee."—Cicero, *Tusc. Disput.*, I, 20, 46 and 22, 52.

"The mind of each man is the man; not that figure which may be pointed out with the finger."—Cicero, *de Rep.*, book vi, § 24.—MALCOM.]

of relation to them than what we may have to any other foreign matter formed into instruments of perception and motion, suppose into a microscope or a staff, (I say, any other kind of relation, for I am not speaking of the degree of it;) nor, consequently, is there any probability that the alienation or dissolution of these instruments is the destruction of the perceiving and moving agent.

9. And thus our finding, that the dissolution of matter in which living beings were most nearly interested is not their dissolution; and that the destruction of several of the organs and instruments of perception, and of motion belonging to them, is not their destruction; shows demonstratively that there is no ground to think that the dissolution of any other matter, or destruction of any other organs and instruments, will be the dissolution or destruction of living agents, from the like kind of relation. And we have no reason to think we stand in any other kind of relation to any thing which we find dissolved by death.

10. But it is said, these observations are equally applicable to brutes; and it is thought an insuperable difficulty, that they should be immortal, and by consequence, capable of everlasting happiness. Now this manner of expression is both invidious and weak; but the thing intended by it is really no difficulty at all, either in the way of natural or moral consideration. For, first, Suppose the invidious thing designed in such a manner of expression were really implied, as it is not in the least, in the natural immortality of brutes; namely, that they must arrive at great attainments, and become rational and moral agents; even this would be no difficulty, since we know not what latent powers and capacities they may be endowed with. There was once, prior to experience, as great presumption against human creatures, as there is

General conclusion.

Objections relative to brutes.
1. Invidious.

against the brute creatures, arriving at that degree of understanding which we have in mature age, for we can trace up our own existence to the same original with theirs. And we find it to be a general law of nature, that creatures endued with capacities of virtue and religion should be placed in a condition of being in which they are altogether without the use of them for a considerable length of their duration, as in infancy and childhood. And great part of the human species go out of the present world before they come to the exercise of these capacities in any degree at all. But then, secondly, The natural immortality of brutes does not, in the least, imply that they are endued with any latent capacities of a rational or moral nature. And the economy of the universe might require that there should be living creatures without any capacities of this kind. And all difficulties, as to the manner how they are to be disposed of, are so apparently and wholly founded in our ignorance, that it is wonderful they should be insisted upon by any, but such as are weak enough to think they are acquainted with the whole system of things. There is, then, absolutely nothing at all in this objection, which is so rhetorically urged against the greatest part of the natural proofs or presumptions of the immortality of human minds: I say, the greatest part; for it is less applicable to the following observation, which is more peculiar to mankind:—*

2. Weak.

* [This objection caused great perplexity formerly, and led Des Cartes, in order to evade its force, to maintain that brutes are little more than machines—an opinion maintained by leading materialists of the present day. The immortality of brutes is discussed in Des Cartes on the Passions; Baxter on the Nature of the Soul; Hume's Essays, Essay ix; Search's Light of Nature; Cheyne's Philosophical Principles; Wagstaff on the Immortality of Brutes; Edwards' Critical and Philosophical Exercitations; Watts' Essays, Essay ix; Colliber's Inquiry; Locke on the Understanding, book ii, chap. ix;

II. III. That as it is evident our *present* powers and capacities of reason, memory, and affection, do not depend upon our gross body, in the manner in which perception by our organs of sense does, so they do not appear to depend upon it at all in any such manner as to give ground to think that the dissolution of this body will be the destruction of these our *present* powers of reflection, as it will of our powers of sensation, or to give ground to conclude, even, that it will be so much as a suspension of the former.

Reason, memory, etc., depend not on the body as perception, etc.

Human creatures exist at present in two states of life and perception, greatly different from each other; each of which has its own peculiar laws, and its own peculiar enjoyments and sufferings. When any of our senses are affected, or appetites gratified with the objects of them, we may be said to exist, or live, in a state of sensation. When none of our senses are affected, or appetites gratified, and yet we perceive, and reason, and act, we may be said to exist or live in a state of reflection. Now it is by no means certain, that any thing which is dissolved by death is any way necessary to the living being, in this its state of reflection, after ideas are gained. For though from our present constitution and condition of being, our external organs of sense are necessary for conveying in ideas to our reflecting powers, as carriages and levers and scaffolds are in architecture; yet when these ideas are brought in, we are capable of reflecting in the most intense degree, and of enjoying the greatest pleasure, and feeling the greatest pain, by means of that reflection, without any assistance from our senses; and without any at all, which we know of, from that body which will

Power of reflection independent of death.

Ditton on the Resurrection; Willis' De Anima Brutæ; Bayle's Dictionary, under the articles Pereira and Rorarius; Polignac's Anti-Lucretius.]

be dissolved by death. It does not appear, then, that the relation of this gross body to the reflecting being is, in any degree, necessary to thinking; to our intellectual enjoyments or sufferings: nor, consequently, that the dissolution or alienation of the former by death will be the destruction of those present powers, which render us capable of this state of reflection.

12. Further, there are instances of mortal diseases, which do not at all affect our present intellectual powers, and this affords a presumption, that those diseases will not destroy these present powers. Mortal diseases do not destroy powers of reflection. Indeed, from the observations made above,* it appears that there is no presumption, from their mutually affecting each other, that the dissolution of the body is the destruction of the living agent.† And by the same reasoning it must appear, too, that there is no presumption, from their mutually affecting each other, that the dissolution of the body is the destruction of our present reflecting powers; but instances of their not affecting each other afford a presumption to the contrary. Instances of mortal diseases not impairing our present reflecting powers, evidently turn our thoughts even from imagining such diseases to be the destruction of them. Several things, indeed, greatly affect all our living powers, and at length suspend the exercise of them; as, for instance, drowsiness, increasing till it ends in sound sleep: and from hence we might have imagined it would destroy them, till we found, by experience, the weakness of this way of judging. But in the diseases now mentioned, there is not so much as this shadow of probability, to lead us to any such conclusion, as to the reflecting powers which we have at present; for in those diseases, persons, the moment before death, appear to

* Pages 52-54.

† [Observe the distinction between the "living agent" or living powers and "reflecting powers."]

be in the highest vigor of life. They discover apprehension, memory, reason, all entire; with the utmost force of affection, sense of a character of shame and honor; and the highest mental enjoyments and sufferings, even to the last gasp; and these surely prove even greater vigor of life than bodily strength does. Now what pretense is there for thinking that a progressive disease, when arrived to such a degree—I mean that degree which is mortal—will destroy those powers, which were not impaired, which were not affected by it, during its whole progress, quite up to that degree? And if death, by diseases of this kind, is not the destruction of our present reflecting powers, it will scarce be thought that death by any other means is.

13. It is obvious that this general observation may be carried on further: and there appears so little connection between our bodily powers of sensation and our present powers of reflection, that there is no reason to conclude that death, which destroys the former, does so much as suspend the exercise of the latter, or interrupt our *continuing* to exist in the like state of reflection which we do now. For suspension of reason, memory, and the affections which they excite, is no part of the idea of death, nor is implied in our notion of it. And our daily experiencing these powers to be exercised, without any assistance, that we know of, from those bodies which will be dissolved by death; and our finding often, that the exercise of them is so lively to the last; these things afford a sensible apprehension that death may not, perhaps, be so much as a discontinuance of the exercise of these powers, nor of the enjoyments and sufferings which it implies;* so that our posthumous life, what-

* There are three distinct questions relating to a future life here considered: Whether death be the destruction of living agents? If not, Whether it be the destruction of their *present* powers of reflec-

ever there may be in it additional to our present, yet may not be entirely beginning anew, but going on. Death may, in some sort, and in some respects, answer to our birth, which is not a suspension of the faculties which we had before it, or a total change of the state of life in which we existed when in the womb, but a continuation of both, with such and such great alterations.

14. Nay, for aught we know of ourselves—of our present life, and of death—death may immediately, in the natural course of things, put us into a higher and more enlarged state of life, as our birth does;* a state in which our capacities and sphere of perception and of action may be much greater than at present. For as our relation to our external organs of sense renders us capable of existing in our present state of sensation, so it may be the only natural hinderance to our existing, immediately and of course, in a higher state of reflection. The truth is, reason does not at all show us in what state death naturally leaves us. But were we sure that it would suspend all our perceptive and active powers, yet the suspension of a power and the destruction of it are effects so totally different in kind, as we experience from sleep and a swoon, that we cannot in anywise argue from one to the

Death may introduce us to a higher state.

tion, as it certainly is the destruction of their present powers of sensation? and, if not, Whether it be the suspension or discontinuance of the exercise of these present reflecting powers? Now, if there be no reason to believe the last, there will be, if that were possible, less for the next, and less still for the first.

* This, according to Strabo, was the opinion of the Brahmins: Νομίζειν μὲν γὰρ δὴ τὸν μὲν ἐνθάδε βίον, ὡς ἂν ἀκμὴν κνομένων εἶναι τὸν δὲ θάνατον, γένεσιν εἰς τὸν ὄντως βίον, καὶ τὸν εὐδαίμονα τοῖς φιλοσοφήσασι.—Lib. xv, p. 1039. Ed. Amst., 1707. To which opinion, perhaps, Antoninus may allude in these words: Ὡς νῦν περιμένεις, πότε ἐμβρῶν ἐκ τῆς γαστρὸς τῆς γυναικὸς σου ἐξέλθῃ, οὕτως ἐκδέχεσθαι τὴν ὥραν ἐν ἧ τὸ ψυχάριόν σου τοῦ ἐλύτρου τούτου ἐκπεσεῖται.—Lib. ix, c. 3.

other ; or conclude, even to the lowest degree of probability, that the same kind of force which is sufficient to suspend our faculties, though it be increased ever so much, will be sufficient to destroy them.

15. These observations together may be sufficient to show how little presumption there is that death is the destruction of human creatures. However, Analogy from plants fanciful. there is the shadow of an analogy, which may lead us to imagine it is—the supposed likeness which is observed between the decay of vegetables and of living creatures. And this likeness is indeed sufficient to afford the poets very apt allusions to the flowers of the field, in their pictures of the frailty of our present life. But in reason, the analogy is so far from holding, that there appears no ground even for the comparison, as to the present question ; because one of the two subjects compared is wholly void of that, which is the principal and chief thing in the other, the power of perception and of action ; and which is the only thing we are inquiring about the continuance of. So that the destruction of a vegetable is an event not similar, or analogous, to the destruction of a living agent.

16. But if, as was above intimated, leaving off the delusive custom of substituting imagination in the room of The conclusion. experience, we would confine ourselves to what we do know and understand ; if we would argue only from that, and from that form our expectations, it would appear at first sight that as no probability of living beings ever ceasing to be so, can be concluded from the reason of the thing, so none can be collected from the analogy of Nature ; because we cannot trace any living beings beyond death. But as we are conscious that we are endued with capacities of perception and of action, and are living persons, what we are to go upon is, that we shall continue so, till we foresee some accident or event which will endanger those

capacities, or be likely to destroy us; which death does in nowise appear to be.

17. And thus, when we go out of this world, we may pass into new scenes, and a new state of life and action, just as naturally as we came into the present. And this new state may naturally be The future state natural. a social one. And the advantages of it, advantages of every kind, may naturally be bestowed, according to some fixed general laws of wisdom, upon every one in proportion to the degrees of his virtue. And though the advantages of that future natural state should not be bestowed, as these of the present in some measure are, by the will of the society, but entirely by His more immediate action upon whom the whole frame of nature depends, yet this distribution may be just as natural, as their being distributed here by the instrumentality of men. And, indeed, though one were to allow any confused, undetermined sense which people please to put upon the word *natural*, it would be a shortness of thought scarce credible to imagine that no system or course of things can be so, but only what we see at present;* especially while the probability of a future life, or the natural immortality of the soul, is admitted upon the evidence of reason; because this is really both admitting and denying, at once, a state of being different from the present to be natural. But the only distinct meaning of that word is, *stated, fixed, or settled*; Meaning of natural. since what is natural as much requires and presupposes an intelligent agent to render it so—that is, to effect it continually, or at stated times—as what is supernatural or miraculous does to effect it for once. And from hence it must follow, that persons' notion of what is natural will be enlarged in proportion to their greater knowledge of the works of God, and the dispensations of his providence. Nor is there any absurdity

* See part ii, chap. ii, and part ii, chap. iii.

in supposing, that there may be beings in the universe whose capacities, and knowledge, and views may be so extensive, as that the whole Christian dispensation may to them appear natural; that is, analogous or conformable to God's dealings with other parts of his creation; as natural as the visible known course of things appears to us. For there seems scarce any other possible sense to be put upon the word, but that only in which it is here used: similar, stated, or uniform.

18. This credibility of a future life, which has been here insisted upon, how little soever it may satisfy our curiosity, seems to answer all the purposes of religion, in like manner as a demonstrative proof would. Indeed, a proof, even a demonstrative one, of a future life, would not be a proof of religion. For that we are to live hereafter is just as reconcilable with the scheme of atheism, and as well to be accounted for by it, as that we are now alive is; and therefore nothing can be more absurd than to argue from that scheme that there can be no future state. But as religion implies a future state, any presumption against such a state is a presumption against religion. And the foregoing observations remove all presumptions of that sort, and prove, to a very considerable degree of probability, one fundamental doctrine of religion; which, if believed, would greatly open and dispose the mind seriously to attend to the general evidence of the whole.

Probable evidence of a future life as effective as demonstration.

NOTE.

[As peculiar difficulty is often found in gaining a connected view of the whole argument in this important chapter, it seems advisable to subjoin an abstract of it.

We must remember that there are three questions involved in the subject of this chapter:—

Does death destroy the living agent we call ourself?

Does it destroy our powers of thinking, willing, etc.?

Does it destroy the exercise of those powers?]

Now the presumption in nature is always for the continuance of what we know to exist ; and, therefore, the antecedent presumption, in each of these three cases, is in favor of the negative. It is the same kind of presumption in each case, but it is much stronger in the two former than in the latter, because, though there are some appearances that might lead us to conjecture that death may interrupt the exercise of our living powers, there are none to favor the supposition of its destroying them or ourselves.

We are bound, then, to presume that we shall continue through and after death in the enjoyment and exercise of our present living powers, unless something appears from the reason of the thing, or the analogy of nature, to make us think that death destroys us, or those powers, or, at least, the exercise of them.

Now, nothing of this sort can be concluded directly, at least with respect to the two first questions, from the analogy of nature, because death removes a being wholly from our experience ; and, so far as any analogy can be drawn from other changes any way similar to death, we know that they do not destroy the living agent or its powers, even where (as in the case of sleep or a swoon) they suspend the exercise of those powers.

Any presumption from the nature of the thing must be founded upon the probability that we are discernible, and that our substance is actually discerned by death, since all we know of death is the effect which it produces in dissipating the grosser parts of our bodies.

Now, the absolute oneness of living agents cannot, indeed, be proved by actual observation, but it seems to follow as a consequence from what we know of the unity of consciousness ; and all that we observe falls as a consequence in with it, and, at any rate, certainly proves that our gross organized bodies are not ourselves ; whence it will follow, that we can have no reason to presume that what destroys them must needs destroy us.

1. For we see by experience that men lose their limbs, their organs of sense, and even the greatest part of their bodies, and yet remain the same living agents. Nay, it is probable that most men do, in their growth and decline from infancy to age, lose the whole frame of their body more than once, and yet remain the same ; whence it appears that, even though we are material, we cannot determine the bulk of the living agent, nor, consequently, conclude that it is affected by the dissolution of death.

2. Since the dissolution of systems of matter with which we are so nearly connected as our bodies, is not the destruction of ourselves, we can have no reason to think that we are any system of matter at all.

3. Since the loss of organs or limbs involves not the destruction of

the powers of perception or will, we must consider those limbs and organs merely as instruments ; and then the destruction of those instruments will no more involve a presumption of the destruction of the powers they ministered to, than the destruction of any other instruments of perception or motion, as an eye-glass or a walking-stick ; while the phenomena of dreaming show us that we have, in some cases, the power of receiving the impressions ordinarily conveyed by the organs of sense, without the aid of those organs.

It is no objection to the previous arguments that they apply equally to brutes as to men.

1. For, even if it were implied in the notion of their immortality, that brutes should hereafter become rational and moral agents, this is no more impossible than that a child should become such an agent, which we know, in fact, to be true.

2. The economy of the world may require the future as much as the present existence of brute natures, for any thing we know to the contrary.

However, there are other arguments for a future life to be enjoyed by man, which do not hold equally for brutes.

We exist, at present, in two different states, sensation and reflection ; and though, for the exercise of our powers of sensation, we ordinarily (except in the case of dreaming) require the instruments of bodily organs, we cannot perceive that our powers of reflection depend upon the body, even for their present exercise ; nay, the observing that severe illness has no tendency to impair them, even up to the point of death, makes it probable that death does not suspend their exercise.

We can thus trace, to some extent, some of our living powers up to death, and find them unaffected by it ; and, with respect to others, it is not impossible that our present bodily organs, while they are the means of giving us one sort of sensations, may be the impediment to receiving others ; or that the connection of the mind with the present body may be the limitation of its perceptivity to a narrow sensorium, so that death may be a change analogous to birth, and introduce us to a higher state of being.—FITZGERALD]

CHAPTER II.

OF THE GOVERNMENT OF GOD BY REWARDS AND PUNISHMENTS, AND PARTICULARLY OF THE LATTER.

THAT which makes the question concerning a future life to be of so great importance to us is, our capacity of happiness and misery. And that which makes the consideration of it to be of so great importance to us is, the supposition of our happiness and misery hereafter depending upon our actions here. Without this, indeed, curiosity could not but sometimes bring a subject in which we may be so highly interested, to our thoughts; especially upon the mortality of others, or the near prospect of our own. But reasonable men would not take any further thought about hereafter than what should happen thus occasionally to rise in their minds, if it were certain that our future interest no way depended upon our present behavior: whereas, on the contrary, if there be ground, either from analogy or any thing else, to think it does, then there is reason also for the most active thought and solicitude to secure that interest; to behave so as that we may escape that misery, and obtain that happiness, in another life, which we not only suppose ourselves capable of, but which we apprehend also is put in our own power. And whether there be ground for this last apprehension, certainly would deserve to be most seriously considered, were there no other proof of a future life and interest than that presumptive one which the foregoing observations amount to.

The question of a future life—wherein important.

2. Now, in the present state, all which we enjoy, and

a great part of what we suffer, *is put in our own power*. For pleasure and pain are the consequences of our actions; and we are endued by the Author of our nature with capacities of foreseeing these consequences. We find by experience he does not so much as preserve our lives, exclusively of our own care and attention to provide ourselves with, and to make use of that sustenance, by which he has appointed our lives shall be preserved, and without which he has appointed they shall not be preserved at all. And in general, we foresee that the external things which are the objects of our various passions, can neither be obtained nor enjoyed without exerting ourselves in such and such manners; but by thus exerting ourselves, we obtain and enjoy these objects in which our natural good consists; or by this means God gives us the possession and enjoyment of them. I know not that we have any one kind or degree of enjoyment but by the means of our own actions. And by prudence and care, we may, for the most part, pass our days in tolerable ease and quiet: or, on the contrary, we may, by rashness, ungoverned passion, willfulness, or even negligence, make ourselves as miserable as ever we please. And many do please to make themselves extremely miserable; that is, to do what they know beforehand will render them so. They follow those ways the fruit of which they know, by instruction, example, experience, will be disgrace, and poverty, and sickness, and untimely death. This every one observes to be the general course of things; though it is to be allowed, we cannot find by experience, that all our sufferings are owing to our own follies.

3. Why the Author of nature does not give his creatures promiscuously such and such perceptions, without regard to their behavior; why he does not make them happy without the instrumen-

Why has God thus ordered?

tality of their own actions, and prevent their bringing any sufferings upon themselves—is another matter.* Perhaps there may be some impossibilities in the nature of things which we are unacquainted with, (chap. vii;)

* [Butler here hints at several possible solutions of the old atheistical dilemma. God prevents not evil, either because he cannot, or because he will not. If he cannot, he is not Almighty: if he will not, he is not All-good. Butler shows us that neither conclusion can be safely drawn. The supposition that God cannot remove these evils does not necessarily imply any defect in power; because, for any thing we know to the contrary, the removal of them might involve a contradiction, and not to be able to do what is self-contradictory and impossible in the notion of it, is plainly no limitation of power. The supposition that, though he can, he will not remove them, does not necessarily imply a defect of benevolence, even taking benevolence in the sense of a simple desire of causing the greatest possible amount of happiness. Because it is possible that the happiness resulting from a good use made of a state of trial by free beings may, in the nature of it, be so much greater than what would result from any other method, as to make the sum of happiness so obtained, even when all the present incidental miseries have been deducted from it, larger than could be procured by providing against their contingency. Nor, even supposing that God's not choosing to remove the sources of these evils implied a defect of benevolence in the sense explained above, would it be certain that it implied a defect of benevolence, as it is a real perfection. For supreme benevolence may not be a disposition simply to make beings happy, but to make good beings happy. —F.]

[Some minds have great perplexity and trouble over the origin of evil and the permission of sin, and cannot see how they are reconciled with the Divine wisdom and goodness. God certainly did not will any sin and its consequent evil, but he did choose to create man, and in so doing to incur their liability. A voluntary being can sin, and while in the free exercise of his powers cannot be prevented by any external force from so doing. The only way God could prevent sin would be to bind nature fast in fate and not leave free the human or any other will.

The origin of evil involves no mystery in the Divine government, but is to be ascribed to the wickedness of voluntary beings, which God does all he consistently can to prevent. He has provided a remedy for sin, offered forgiveness to all, and provided a compensa-

or less happiness, it may be, and upon the whole, would be produced by such a method of conduct than is by the present: or, perhaps, Divine goodness, with which, if I mistake not, we make very free in our speculations, may not be a bare single disposition to produce happiness, but a disposition to make the good, the faithful, the honest man happy. Perhaps an infinitely perfect Mind may be pleased with seeing his creatures behave suitably to the nature which he has given them; to the relations which he has placed them in to each other; and to that which they stand in to himself; that relation to himself, which, during their existence, is even necessary;* and which is the most important one of all. Perhaps, I say, an infinitely perfect Mind may be pleased with this moral piety of moral agents, in and for itself, as well as upon account of its being essentially conducive to the happiness of his creation. Or the whole end for which God made, and thus governs the world, may be utterly beyond the reach of our faculties: there may be somewhat in it as impossible for us to have any conception of, as for a blind man to have a conception of colors. But however this may be, it is certainly matter of universal experience, that the general method of Divine administration is, forewarning us, or giving us capacities to foresee, with more or less clearness, that if we act so and so, we shall have such enjoyments; if so and so,

tion for those who suffer in consequence of others' folly and crime. All who will accept his favor may be saved.

When we ask was it wise to permit evil, we ask was it wise to create free agents; surely it will be admitted, that, on the whole, good will result to the universe and glory to God from the existence of angels and men.

Evil, in the sense of mistakes resulting from ignorance and imperfection, is necessarily connected with a limited progressive being. We presume no one will claim it were better such being did not exist.]

* [Our relation to God is necessary because we are his creatures, but our relation to other beings God might change.]

such sufferings; and giving us those enjoyments, and making us feel those sufferings, in consequence of our actions.

4. "But all this is to be ascribed to the general course of nature." * True. This is the very thing which I am observing. It is to be ascribed to the general course of nature; that is, not surely to the words or ideas, *course of nature*, but to Him who appointed it, and put things into it: or to a course of operation, from its uniformity or constancy, called natural, (pp. 64, 65,) and which necessarily implies an operating agent. For when men find themselves necessitated to confess an author of nature, or

Objection—All this to be ascribed to the course of nature.

* [The terms "nature" and course of nature are used in various senses. Some affirm that the frame of nature is a machine constructed so as to go on of itself, according to the fixed laws of its mechanism, so as to require no further act in the Deity but that which originally created it. See Law's Notes on King's Origin of Evil, chap. v, § 5, sub. 4, note 75.]

This representation of the world as a great machine, going on without God's agency, as a clock goes without the assistance of the clock maker, is the notion of materialism, and excludes God's government from the world. The believers of this theory regard the forces of nature as inhering in matter. Others, as does Dr. Clarke, regard the forces of nature as the immediate and continual operation of God or intermediate spirits upon matter.

"The terms nature, and powers of nature, and course of nature, and the like, are nothing but empty words, and signify merely that a thing usually or frequently comes to pass. The raising the human body out of the dust of the earth, we call a miracle; the generation of a human body in the ordinary way we call natural, for no other reason but because the power of God effects, one usually, the other unusually. The sudden stoppage of the sun (or earth) we call a miracle, the continual motion of the sun (or earth) we call natural, for the very same reason only, of the one being usual and the other unusual. Did men rise usually out of the grave, as corn grows out of seed sown, we should certainly call that also natural; and did the sun (or earth) constantly stand still, we should then think that to be natural, and its motion, at any time, would be miraculous."—Clarke's Controversy with Leibnitz, p. 351, Fifth Reply, 107–109. Modified from Fitzgerald's note.]

that God is the natural governor of the world, they must not deny this again, because his government is uniform; they must not deny that he does all things at all, because he does them constantly; because the effects of his acting are permanent, whether his acting be so or not; though there is no reason to think it is not. In short, every man, in every thing he does, naturally acts upon the forethought and apprehension of avoiding evil, or obtaining good: and if the natural course of things be the appointment of God, and our natural faculties of knowledge and experience are given us by him, then the good and bad consequences which follow our actions are his appointment, and our foresight of those consequences is a warning given us by him how we are to act.

5. "Is the pleasure, then, naturally accompanying every particular gratification of passion, intended to put

us upon gratifying ourselves in every such particular instance, and as a reward to us for so doing?" No, certainly. Nor is it to

be said that our eyes were naturally intended to give us the sight of each particular object to which they do or can extend; objects which are destructive of them, or which, for any other reason, it may become us to turn our eyes from. Yet there is no doubt but that our eyes were intended for us to see with. So neither is there any doubt but that the foreseen pleasures and pains belong to the passions, were intended, in general, to induce mankind to act in such and such manners.*

6. Now from this general observation, obvious to every one, that God has given us to understand he has appointed satisfaction and delight to be the consequences

* [Man has various faculties of mind and body whose office and design will be apparent on examination. The ultimate design of the exercise of their powers is not in any case mere animal gratification, but intellectual and moral improvement and happiness. The perversion of these powers is sin, and causes shame and misery.]

of our acting in one manner, and pain and uneasiness of our acting in another, and of our not acting at all; and that we find the consequences, which we were beforehand informed of, uniformly to follow; we may learn that we are at present actually under his government, in the strictest and most proper sense; in such a sense, as that he rewards and punishes us for our actions. An author of nature being supposed, it is not so much a deduction of reason as a matter of experience that we are thus under his government; under his government, in the same sense as we are under the government of civil magistrates. Because the annexing pleasure to some actions, and pain to others, in our power to do or forbear, and giving notice of this appointment beforehand to those whom it concerns, is the proper formal notion of government. Whether the pleasure or pain which thus follows upon our behavior be owing to the Author of nature's acting upon us every moment which we feel it, or to his having at once contrived and executed his own part in the plan of the world, makes no alteration as to the matter before us. For if civil magistrates could make the sanctions of their laws take place, without interposing at all, after they had passed them; without a trial, and the formalities of an execution: if they were able to make their laws execute themselves, or every offender to execute them upon himself, we should be just in the same sense under their government then, as we are now; but in a much higher degree, and more perfect manner.

We are under God's government of rewards and punishments.

Vain is the ridicule with which one foresees some persons will divert themselves, upon finding lesser pains considered as instances of divine punishment. There is no possibility of answering or evading the general thing here intended, without denying all final causes. For final causes being

Ridicule relative to little pains vain.

admitted, the pleasures and pains now mentioned must be admitted too, as instances of them. And if they are—if God annexes delight to some actions and uneasiness to others, with an apparent design to induce us to act so and so—then he not only dispenses happiness and misery, but also rewards and punishes actions. If, for example, the pain which we feel upon doing what tends to the destruction of our bodies, suppose upon too near approaches to fire, or upon wounding ourselves, be appointed by the Author of nature to prevent our doing what thus tends to our destruction; this is altogether as much an instance of his punishing our actions, and consequently of our being under his government, as declaring, by a voice from heaven, that if we acted so he would inflict such pain upon us, and inflicting it whether it be greater or less.

7. Thus we find, that the true notion or conception of the Author of nature is that of a master or governor, True notion of God. prior to the consideration of his moral attributes. The fact of our case, which we find by experience, is, that he actually exercises dominion or government over us at present, by rewarding and punishing us for our actions, in as strict and proper a sense of these words, and even in the same sense as children, servants, subjects, are rewarded and punished by those who govern them.

And thus the whole analogy of nature—the whole present course of things—most fully shows, that there is nothing incredible in the general doctrine of religion, that God will reward and punish men for their actions hereafter; nothing incredible, I mean, arising out of the notion of rewarding and punishing, for the whole course of nature is a present instance of his exercising that government over us which implies in it rewarding and punishing.

8. BUT, as divine punishment is what men chiefly object against, and are most unwilling to allow, it may be proper to mention some circumstances in the natural course of punishments at present, which are analogous to what religion teaches us concerning a future state of punishment; indeed, so analogous, that as they add a further credibility to it, so they cannot but raise a most serious apprehension of it in those who will attend to them.

Analogy between present and future punishments.

It has been now observed, that such and such miseries naturally follow such and such actions of imprudence and willfulness, as well as actions more commonly and more distinctly considered as vicious; and that these consequences, when they may be foreseen, are properly natural punishments annexed to such actions. For the general thing here insisted upon is, not that we see a great deal of misery in the world, but a great deal which men bring upon themselves by their own behavior, which they might have foreseen and avoided. Now the circumstances of these natural punishments particularly deserving our attention are such as these: That oftentimes they follow, or are inflicted in consequence of, actions which procure many present advantages, and are accompanied with much present pleasure; for instance, sickness and untimely death is the consequence of intemperance, though accompanied with the highest mirth and jollity: That these punishments are often much greater than the advantages or pleasures obtained by the actions of which they are the punishments or consequences: That though we may imagine a constitution of nature in which these natural punishments, which are in fact to follow, would follow immediately upon such actions being done, or very soon after; we find, on the contrary, in our world, that they are often delayed a great while, sometimes even till long after the actions occasioning them are forgotten; so that the constitution

of nature is such, that delay of punishment is no sort or degree of presumption of final impunity: That after such delay, these natural punishments or miseries often come, not by degrees, but suddenly, with violence, and at once—however, the chief misery often does: That as certainty of such distant misery following such actions is never afforded persons, so perhaps during the actions, they have seldom a distinct full expectation of its following:* and many times the case is only thus, that they see in general, or may see, the credibility, that intemperance, suppose, will bring after it diseases; civil crimes, civil punishments; when yet the real probability often is, that they shall escape: but things notwithstanding take their destined course, and the misery inevitably follows at its appointed time, in very many of these

cases. Thus also though youth may be alleged as an excuse for rashness and folly, as being naturally thoughtless, and not clearly foreseeing all the consequences of being untractable and profligate; this does not hinder but that these consequences follow, and are grievously felt throughout the whole course of mature life. Habits contracted, even in that age, are often utter ruin: and men's success in the world, not only in the common sense of worldly success, but their real happiness and misery, depends in a great degree, and in various ways, upon the manner in which they pass their youth; which consequences they, for the most part, neglect to consider, and perhaps seldom can properly be said to believe beforehand. It requires also to be mentioned, that in numberless cases the natural course of things affords us opportunities for procuring advantages to ourselves at certain times which we cannot procure when we will; nor ever recall the opportunities, if we have neglected them. Indeed, the general course of nature is an example of this. If,

Youthful
thoughtlessness
no excuse.

* See part ii, chap. vi.

during the opportunity of youth, persons are indocile and self-willed, they inevitably suffer in their future life for want of those acquirements which they neglected the natural season of attaining. If the husbandman lets his seed-time pass without sowing, the whole year is lost to him beyond recovery. In like manner, though after men have been guilty of folly and extravagance *up to a certain degree*, it is often in their power, for instance, to retrieve their affairs, to recover their health and character, at least in good measure; yet real reformation is, in many cases, of no avail at all toward preventing the miseries, poverty, sickness, infamy, naturally annexed to folly and extravagance, *exceeding that degree*. There is a certain bound to imprudence and misbehavior, which being transgressed, there remains no place for repentance in the natural course of things. It is, further, very much to be remarked, that neglects from inconsiderateness, want of attention,* not looking about us to see what we have to do, are often attended with consequences altogether as dreadful as any active misbehavior from the most extravagant passion. And lastly, civil government being natural, the punishments of it are so too; and some of these punishments are capital, as the effects of a dissolute course of pleasure are often mortal. So that many natural punishments are final † to him who incurs

Real reformation does not always prevent misery.

* Part ii, chap. vi.

† The general consideration of a future state of punishment most evidently belongs to the subject of natural religion. But if any of these reflections should be thought to relate more peculiarly to this doctrine as taught in Scripture, the reader is desired to observe that Gentile writers, both moralists and poets, speak of the future punishment of the wicked, both as to the duration and degree of it, in a like manner of expression and description as the Scripture does. So that all which can positively be asserted to be matter of mere revelation, with regard to this doctrine, seems to be, that the great distinction between the righteous and the wicked shall be made at the end

them, if considered only in his temporal capacity ; and seem inflicted by natural appointment, either to remove the offender out of the way of being further mischievous, or as an example, though frequently a disregarded one, to those who are left behind.

9. These things are not what we call accidental, or to be met with only now and then ; but they are things of every day's experience ; they proceed from These are essential analogies. general laws, very general ones, by which God governs the world, in the natural course of his providence.* And they are so analogous to what religion teaches us concerning the future punishment of the wicked, so much of a piece with it, that both would naturally be expressed in the very same words and manner of description. In the book of Proverbs, for instance, Wisdom is introduced as frequenting the most

of this world ; that each shall *then* receive according to his deserts. Reason did, as it well might, conclude that it should finally, and upon the whole, be well with the righteous and ill with the wicked ; but it could not be determined, upon any principles of reason, whether human creatures might not have been appointed to pass through other states of life and being before that distributive justice should, finally and effectually, take place. Revelation teaches us, that the next state of things after the present is appointed for the execution of this justice ; that it shall be no longer delayed ; but *the mystery of God*, the great mystery of his suffering vice and confusion to prevail, *shall then be finished* ; and he will *take to him his great power, and will reign*, by rendering to every one according to his works.

* [The paragraph of this chapter where the enumeration of these resemblances is given, presents us with one of the finest triumphs of the analogical argument, and in which its power as a weapon of defense appears to great advantage, cutting down, as with a scythe, a whole army of these objections, which are most frequent in the mouths of adversaries, being not only the most plausible in themselves, but the most formidable in point of effect, from a certain tone of generous denunciation against all arbitrary and tyrannical will in which they are propounded, and so as to associate the semblance of a protesting and moral indignancy with the infidel cause.—CHALMERS.]

public places of resort, and as rejected when she offers herself as the natural appointed guide of human life. "How long," speaking to those who are passing through it, "how long, ye simple ones, will ye love folly, and the scorers delight in their scorning, and fools hate knowledge? Turn ye at my reproof. Behold, I will pour out my Spirit upon you, I will make known my words unto you." But upon being neglected, "Because I have called and ye refused; I have stretched out my hand, and no man regarded; but ye have set at naught all my counsel, and would none of my reproof: I also will laugh at your calamity; I will mock when your fear cometh; when your fear cometh as a desolation, and your destruction cometh as a whirlwind; when distress and anguish cometh upon you. Then shall they call upon me, but I will not answer; they shall seek me early, but they shall not find me." This passage, every one sees, is poetical, and some parts of it are highly figurative; but their meaning is obvious. And the thing intended is expressed more literally in the following words: "For that they hated knowledge, and did not choose the fear of the Lord. . . . Therefore shall they eat of the fruit of their own way, and be filled with their own devices. For the security of the simple shall slay them, and the prosperity of fools shall destroy them." And the whole passage is so equally applicable to what we experience in the present world concerning the consequences of men's actions, and to what religion teaches us is to be expected in another, that it may be questioned which of the two was principally intended.

10. Indeed, when one has been recollecting the proper proofs of a future state of rewards and punishments, nothing, methinks, can give one so sensible an apprehension of the latter, or representation of it to the mind, as observing that after the many disregarded checks, admonitions, and

Present punishments give a vivid idea of the future.

warnings which people meet with in the ways of vice, and folly, and extravagance: warnings from their very nature; from the examples of others; from the lesser inconveniences which they bring upon themselves; from the instructions of wise and virtuous men; after these have been long despised, scorned, ridiculed; after the chief bad consequences, temporal consequences, of their follies, have been delayed for a great while; at length they break in irresistibly, like an armed force; repentance is too late to relieve, and can serve only to aggravate their distress; the case is become desperate; and poverty and sickness, remorse and anguish, infamy and death, the effects of their own doings, overwhelm them beyond possibility of remedy or escape. This is an account of what is in fact the general constitution of nature.

11. It is not in any sort meant, that according to what appears at present of the natural course of things, men are always uniformly punished in proportion to their misbehavior; but that there are very many instances of misbehavior punished in the several ways now mentioned, and very dreadful instances too, sufficient to show what the laws of the universe may admit; and if thoroughly considered, sufficient fully to answer all objections against the credibility of a future state of punishments from any imaginations that the frailty of our nature and external temptations almost annihilate the guilt of human vices: as well as objections of another sort; from necessity; from suppositions that the will of an infinite being cannot be contradicted; or that he must be incapable of offense and provocation.*

Such reflections cause terror, yet important to repress sin.

12. Reflections of this kind are not without their terrors to serious persons, the most free from enthusiasm, and of the greatest

* See chap. iv and vi.

strength of mind ; but it is fit things be stated and considered as they really are. And there is, in the present age,* a certain fearlessness with regard to what may be hereafter under the government of God, which nothing but a universally acknowledged demonstration on the side of Atheism can justify, and which makes it quite necessary that men be reminded and, if possible, made to feel, that there is no sort of ground for being thus presumptuous, even upon the most skeptical principles. For may it not be said of any person, upon his being born into the world, he may behave so as to be of no service to it, but by being made an example of the woe-ful effects of vice and folly ; that he may, as any one may, if he will, incur an infamous execution from the hands of civil justice ; or in some other course of extravagance shorten his days ; or bring upon himself infamy and diseases worse than death ? So that it had been better for him, even with regard to the present world, that he had never been born. And is there any pretense of reason for people to think themselves secure, and talk as if they had certain proof, that let them act as licentiously as they will, there can be nothing analogous to this with regard to a future and more general interest, under the providence and government of the same God ?

* [The age immediately following the corrupt reign of Charles II. For a vivid picture of the state of morals in his reign see Macaulay's History of England, vol. i, p. 140.—CHAMPLIN.]

CHAPTER III.

OF THE MORAL GOVERNMENT OF GOD.*

AS the manifold appearance of design and of final causes in the constitution of the world prove it to be the work of an intelligent mind, so the particular final causes of pleasure and pain, distributed among his creatures, prove that they are under his government—what may be called, his

Final causes
prove an intelli-
gent Governor.

* [The subject of the present chapter is as distinct from that of the former, as the generic idea of a government is distinct from the more particular idea of it as possessed of a certain character, or as being of a certain kind and species. If certain actions are followed up by pleasure and others by pain, and these are known beforehand, so that the agent can foresee the consequence of his doings, even as he would have done if under a proclaimed law, which told at the same time of its own rewards and its own penalties, these are enough of themselves to constitute a government having its regulations which are known, and its sanctions which are executed. So much for government in the general; but should it be found among these general phenomena, that those actions which are righteous were followed up by pleasure, and those actions which are wicked were followed up by pain, this would present us with a moral government enveloped, as it were, in the general and natural; and it is to the manifestations of such a government in the course and constitution of nature that the author now addresses his observations.—CHALMERS.]

[This chapter, more than any other, carries the force of positive argument. If in this world we have proofs that God is a moral governor, then in order to evince that we shall be under moral government hereafter, we have only to supply an intermediate consideration, namely, that God must be unchangeable. The argument assumes a substantive form: because admitted facts as to this world, exhibiting the very *principles* on which God's government goes at present, compel us not only to *suppose* that the principles of God's government will remain, but to *believe* so.—MALCOM.]

natural government of creatures endued with sense and reason. This, however, implies somewhat more than seems usually attended to when we speak of God's natural government of the world. It implies government of the very same kind with that which a master exercises over his servants, or a civil magistrate over his subjects. These latter instances of final causes as really prove an intelligent *governor* of the world, in the sense now mentioned, and before (chap. ii) distinctly treated of, as any other instances of final causes prove an intelligent *maker* of it.

But this alone does not appear, at first sight, to determine any thing certainly concerning the moral character of the Author of nature, considered in this relation of governor; does not ascertain his government to be moral, or prove that he is the righteous Judge of the world. Moral government consists, not barely in rewarding and punishing men for their actions, which the most tyrannical person may do; but in rewarding the righteous and punishing the wicked; in rendering to men according to their actions, considered as good or evil. And the perfection of moral government consists in doing this, with regard to all intelligent creatures, in an exact proportion to their personal merits or demerits.

2. Some men seem to think the only character of the Author of nature to be that of simple absolute benevolence. This, considered as a principle of action, and infinite in degree, is a disposition to produce the greatest possible happiness, without regard to persons' behavior, otherwise than as such regard would produce higher degrees of it. And supposing this to be the only character of God, veracity and justice in him would be nothing but benevolence conducted by wisdom. Now surely this ought not to be asserted unless it can be proved; for

Not necessarily a moral governor.

God not simply a benevolent but a righteous governor.

we should speak with cautious reverence upon such a subject. And whether it can be proved or not, is not the thing here to be inquired into; but whether, in the constitution and conduct of the world, a righteous government be not discernibly planned out; which necessarily implies a righteous governor. There may possibly be in the creation beings to whom the Author of nature manifests himself under this most amiable of all characters, this of infinite absolute benevolence; for it is the most amiable, supposing it not, as perhaps it is not, incompatible with justice: but he manifests himself to us under the character of a righteous governor. He may, consistently with this, be simply and absolutely benevolent, in the sense now explained; but he is, for he has given us a proof in the constitution and conduct of the world that he is, a governor over servants, as he rewards and punishes us for our actions. And in the constitution and conduct of it, he may also have given, besides the reason of the thing, and the natural presages of conscience, clear and distinct intimations that his government is righteous or moral—clear to such as think the nature of it deserving their attention, and yet not to every careless person who casts a transient reflection upon the subject.*

This govern-
ment is chiefly
moral but not
perfect.

3. But it is particularly to be observed that, the divine government, which we experience ourselves under in the present state, taken

* The objections against religion, from the evidence of it not being universal, nor so strong as might possibly have been, may be urged against natural religion as well as against revealed. And therefore the consideration of them belongs to the first part of this Treatise, as well as the second. But as these objections are chiefly urged against revealed religion, I chose to consider them in the second part. And the answer to them there, (chap. vi,) as urged against Christianity, being almost equally applicable to them as urged against the religion of nature; to avoid repetition, the reader is referred to that chapter.

alone, is allowed not to be the perfection of moral government.* And yet this by no means hinders, but that there may be somewhat, be it more or less, truly moral in it. A righteous government may plainly appear to be carried on to some degree; enough to give us the apprehension that it shall be completed, or carried on to that degree of perfection which religion teaches us it shall; but which cannot appear, till much more of the divine administration be seen than can in the present life. And the design of this chapter is to inquire, how far this is the case; how far, over and above the moral nature (Dissertation II) which God has given us, and our natural notion of him, as righteous governor of those his creatures to whom he has given this nature, (chap. vi;) I say how far, besides this, the principles and beginnings of a moral government over the world may be discerned, notwithstanding and amid all the confusion and disorder of it.

4. Now, one might mention here, what has been often urged with great force, that in general less uneasiness and more satisfaction are the natural consequences † of a virtuous than of a

Difficulty of the argument from the greater happiness of virtue.

* [Butler seems here to indicate the distinction between religious and irreligious *optimism*. Irreligious optimism considers the *present state* of things as absolutely the best. Religious optimism considers it as imperfect in itself, but necessary for bringing about that state which is absolutely the best possible. But this *best possible* must, as Bishop Hamilton (on the Attributes, p. 189) has very truly remarked, be understood with reference to such beings as *men*; not to mean the best possible scheme of created things, because no such scheme can be conceived. The difference between finite and infinite perfection must always be infinite, so that however excellent we may suppose any one scheme of created things, there will still remain the possibility of another more perfect, *in infinitum*. See on the general subject of the two schemes of optimism, Warburton's Reply to Cron-saz' *Criticism* on Pope, and Johnson's Review of Jenyn's Essay upon the Origin of Evil.—F.]

† See Lord Shaftesbury's Inquiry Concerning Virtue, part ii.

vicious course of life, in the present state, as an instance of a moral government established in nature; an instance of it, collected from experience and present matter of fact. But it must be owned a thing of difficulty to weigh and balance pleasures and uneasinesses, each among themselves, and also against each other, so as to make an estimate, with any exactness, of the overplus of happiness on the side of virtue. And it is not impossible, that, amid the infinite disorders of the world, there may be exceptions to the happiness of virtue, even with regard to those persons whose course of life, from their youth up, has been blameless; and more with regard to those who have gone on for some time in the ways of vice, and have afterward reformed. For suppose an instance of the latter case; a person with his passions inflamed, his natural faculties of self-government impaired by habits of indulgence, and with all his vices about him, like so many harpies, craving for their accustomed gratification,—who can say how long it might be before such a person would find more satisfaction in the reasonableness and present good consequences of virtue, than difficulties and self-denial in the restraints of it? Experience also shows, that men can, to a great degree, get over their sense of shame, so as that by professing themselves to be without principle, and avowing even direct villainy, they can support themselves against the infamy of it. But as the ill actions of any one will probably be more talked of, and oftener thrown in his way, upon his reformation; so the infamy of them will be much more felt, after the natural sense of virtue and of honor is recovered. Uneasiness of this kind ought indeed to be put to the account of former vices; yet it will be said, they are in part the consequences of reformation. Still I am far from allowing it doubtful whether virtue, upon the whole, be happier than vice in the present world: but if it were, yet the beginnings of a righteous admin-

istration may, beyond all question, be found in nature, if we will attentively inquire after them. And,

5. I. In whatever manner the notion of God's moral government over the world might be treated, if it did not appear whether he were, in a proper sense, our governor at all; yet when it is God naturally a moral governor. certain matter of experience, that he does manifest himself to us under the character of a governor, in the sense explained, (chap. ii,) it must deserve to be considered whether there be not reason to apprehend that he may be a righteous or moral governor. Since it appears to be fact, that God does govern mankind by the method of rewards and punishments, according to some settled rules of distribution, it is surely a question to be asked, What presumption is there against his finally rewarding and punishing them according to this particular rule, namely, as they act reasonably or unreasonably, virtuously or viciously? since rendering man happy or miserable by this rule certainly falls in, much more falls in, with our natural apprehensions and sense of things, than doing so by any other rule whatever; since rewarding and punishing actions by any other rule would appear much harder to be accounted for by minds formed as he has formed ours. Be the evidence of religion then more or less clear, the expectation which it raises in us that the righteous shall, upon the whole, be happy, and the wicked miserable, cannot, however, possibly be considered as absurd or chimerical; because it is no more than an expectation that a method of government already begun shall be carried on—the method of rewarding and punishing actions; and shall be carried on by a particular rule, which unavoidably appears to us, at first sight, more natural than any other, the rule which we call Distributive Justice. Nor,

6. II. Ought it to be entirely passed over, that tranquillity, satisfaction, and external advantages, being the

natural consequences of prudent management of ourselves and our affairs; and rashness, profligate negligence, and willful folly, bringing after them many inconveniences and sufferings, these afford instances of a right constitution of nature: as the correction of children, for their own sakes and by way of example, when they run into danger or hurt themselves, is a part of right education. And thus, that God governs the world by general fixed laws; that he has endued us with capacities of reflecting upon this constitution of things, and foreseeing the good and bad consequences of our behavior, plainly implies some sort of moral government; since from such a constitution of things it cannot but follow that prudence and imprudence, which are of the nature of virtue and vice,* must be, as they are, respectively rewarded and punished.

7. III. From the natural course of things, vicious actions are, to a great degree, actually punished as mischievous to society; and besides punishment actually inflicted upon this account, there is also the fear and apprehension of it in those persons whose crimes have rendered them obnoxious to it, in case of a discovery; this state of fear being itself often a very considerable punishment. The natural fear and apprehension of it, too, which restrains from such crimes, is a declaration of nature against them. It is necessary to the very being of society that vices destructive of it should be punished *as being so*; the vices of falsehood, injustice, cruelty: which punishment therefore is as natural as society, and so is an instance of a kind of moral government, naturally established and actually taking place. And since the certain natural course of things is the conduct of providence, or the government of God, though carried on by the in-

Prudence rewarded; imprudence punished.

Society punishes all vice as hurtful.

* See Dissertation II.

strumentality of men, the observation here made amounts to this, that mankind find themselves placed by him in such circumstances as that they are unavoidably accountable for their behavior, and are often punished, and sometimes rewarded, under his government, in the view of their being mischievous or eminently beneficial to society.

If it be objected that good actions, and such as are beneficial to society, are often punished, as in the case of persecution and in other cases, and that ill and mischievous actions are often rewarded, it may be answered distinctly, first, that this is in no sort necessary, and consequently not natural in the sense in which it is necessary, and therefore natural, that ill or mischievous actions should be punished; and in the next place, that good actions are never punished, considered as beneficial to society, nor ill actions rewarded, under the view of their being hurtful to it.* So that it stands good, without any thing on the side of vice to be set over against it, that the Author of nature has as truly directed that vicious actions, considered as mischievous to society, should be punished, and put mankind under a necessity of thus punishing them, as he has directed and necessitated us to preserve our lives by food.

Objection relative to the punishment of good actions, etc.

8. IV. In the natural course of things, virtue, *as such*,

* [These vicious actions are never rewarded *because* they are vicious, but *though* they are vicious; and virtuous actions are sometimes punished, yet never as virtuous, or never because virtuous, but though virtuous.—CHALMERS.]

[Dr. Mandeville, in his "Fable of the Bees," alleges that private vices are often public benefits, and that luxury is necessary to the well-being of society. Others have maintained the same opinion.

See this doctrine refuted in Browne on the Characteristics, Essay ii, § 5; Warburton's Divine Legation, book i, § 6; Berkeley's Minute Philosopher, dialogue ii. See also Whately, and other writers, on Political Economy.—F.]

is actually rewarded, and vice, *as such*, punished; which seems to afford an instance, or example, not only of government, but of moral government begun and established: moral in the strictest sense, though not in that perfection of degree which religion teaches us to expect. In order to see this more clearly, we must distinguish between actions themselves, and that quality ascribed to them, which we call virtuous or vicious. The gratification itself of every natural passion must be attended with delight; and acquisitions of fortune, however made, are acquisitions of the means or materials of enjoyment. An action, then, by which any natural passion is gratified or fortune acquired, procures delight or advantage, abstracted from all consideration of the morality of such action. Consequently, the pleasure or advantage in this case is gained by the action itself, not by the morality, the virtuousness or viciousness of it, though it be, perhaps, virtuous or vicious. Thus to say such an action or course of behavior procured such pleasure or advantage, or brought on such inconvenience and pain, is quite a different thing from saying that such good or bad effect was owing to the virtue or vice of such action or behavior. In one case, an action, abstracted from all moral consideration, produced its effect; in the other case—for it will appear that there are such cases—the morality of the action, the action under a moral consideration, that is, the virtuousness or viciousness of it, produced the effect. Now I say virtue, as such, naturally procures considerable advantages to the virtuous; and vice, as such, naturally occasions great inconvenience, and even misery, to the vicious, in very many instances.

The immediate effects of virtue and vice illustrate this.

The immediate effects of virtue and vice upon the mind and temper are to be mentioned as instances of it. Vice, as such, is naturally attended with some sort of uneasiness, and not

uncommonly with great disturbance and apprehension. That inward feeling, which, respecting lesser matters and in familiar speech, we call being vexed with one's self, and in matters of importance and in more serious language, remorse, is an uneasiness naturally arising from an action of a man's own, reflected upon by himself as wrong, unreasonable, faulty, that is, vicious, in greater or less degrees; and this manifestly is a different feeling from that uneasiness which arises from a sense of mere loss or harm. What is more common than to hear a man lamenting an accident or event, and adding—but, however, he has the satisfaction that he cannot blame himself for it; or on the contrary, that he has the uneasiness of being sensible it was his own doing? Thus, also, the disturbance and fear which often follow upon a man's having done an injury, arise from a sense of his being blameworthy; otherwise there would, in many cases, be no ground of disturbance, nor any reason to fear resentment or shame. On the other hand, inward security and peace, and a mind open to the several gratifications of life, are the natural attendants of innocence and virtue; to which must be added, the complacency, satisfaction, and even joy of heart, which accompany the exercise, the real exercise, of gratitude, friendship, benevolence.

And here, I think, ought to be mentioned the fears of future punishment, and peaceful hopes of a better life in those who fully believe or ^{Also hopes and fears for the future.} have any serious apprehension of religion;* because

* [When one supposes he is about to die there comes over him a fear and anxiety about things in regard to which he felt none before, for the stories which are told about *Hades*, that such as have practiced wrong must there suffer punishment, although made light of for awhile, then torment the soul lest they should be true. But he who is conscious of innocence has a pleasant and good hope which will support old age.—Plato, *Repub.*, i, § 5.—MALCOM.]

these hopes and fears are present uneasiness and satisfaction to the mind, and cannot be got rid of by great part of the world, even by men who have thought most thoroughly upon that subject of religion. And no one can say how considerable this uneasiness and satisfaction may be, or what, upon the whole, it may amount to.

In the next place, comes in the consideration that all honest and good men are disposed to befriend honest and good men, as such, and to discountenance the vicious, as such, and do so in some degree—indeed, in a considerable degree; from which favor and discouragement cannot but arise considerable advantage and inconvenience. And though the generality of the world have little regard to the morality of their own actions, and may be supposed to have less to that of others, when they themselves are not concerned, yet, let any one be known to be a man of virtue, somehow or other he will be favored, and good offices will be done him from regard to his character, without remote views, occasionally, and in some low degree, I think, by the generality of the world, as it happens to come in their way. Public honors, too, and advantages, are the natural consequences, are sometimes, at least, the consequences, in fact, of virtuous actions, of eminent justice, fidelity, charity, love to our country, considered in the view of being virtuous. And sometimes even death itself, often infamy and external inconveniences, are the public consequences of vice as vice. For instance, the sense which mankind have of tyranny, injustice, oppression, additional to the mere feeling or fear of misery, has doubtless been instrumental in bringing about revolutions which make a figure even in the history of the world. For it is plain, men resent injuries as implying faultiness, and retaliate, not merely under the notion of having received harm, but of having received wrong; and they have this resentment in be-

Also the disposition of good men toward the virtuous and the vicious.

half of others, as well as of themselves. So, likewise, even the generality are, in some degree, grateful, and disposed to return good offices, not merely because such a one has been the occasion of good to them, but under the view that such good offices implied kind intention and good desert in the doer. To all this may be added two or three particular things, which many persons will think frivolous; but to me nothing appears so which at all comes in toward determining a question of such importance, as whether there be or be not a moral institution of government, in the strictest sense moral, *visibly* established and begun in nature. The particular things are these: that in domestic government, which is doubtless natural, children and others also are very generally punished for falsehood, and injustice, and ill behavior, as such, and rewarded for the contrary; which are instances where veracity, and justice, and right behavior, as such, are naturally enforced by rewards and punishments, whether more or less considerable in degree: that though civil government be supposed to take cognizance of actions in no other view than as prejudicial to society, without respect to the immorality of them, yet as such actions are immoral, so the sense which men have of the immorality of them very greatly contributes, in different ways, to bring offenders to justice; and that entire absence of all crime and guilt, in the moral sense, when plainly appearing, will almost of course procure, and circumstances of aggravated guilt prevent, a remission of the penalties annexed to civil crimes, in many cases, though by no means in all.

The rule of domestic and civil government established.

9. Upon the whole, then, besides the good and bad effects of virtue and vice upon men's own minds, the course of the world does, in some measure, turn upon the approbation and disapprobation of them, as such, in others. The sense of well

The course of the world turns on the approbation of virtue, etc.

and ill doing, the presages of conscience, the love of good characters and dislike of bad ones, honor, shame, resentment, gratitude; all these, considered in themselves and in their effects, do afford manifest real instances of virtue, as such, naturally favored, and of vice, as such, discountenanced, more or less, in the daily course of human life; in every age, in every relation, in every general circumstance of it. That God has given us a moral nature,* may most justly be urged as a proof of our being under his moral government; but that he has placed us in a condition which gives this nature, as one may speak, scope to operate, and in which it does unavoidably operate, that is, influence mankind to act, so as thus to favor and reward virtue, and discountenance and punish vice; this is not the same, but a further additional proof of his moral government; for it is an instance of it. The first is a proof that he will finally favor and support virtue effectually; the second is an example of his favoring and supporting it at present, in some degree.

10. If a more distinct inquiry be made, whence it arises that virtue, as such, is often rewarded, and vice, as such, is punished, and this rule never inverted, it will be found to proceed, in part, immediately from the moral nature itself which God has given us; and also, in part, from his having given us, together with this nature, so great a power over each other's happiness and misery. For, *first*, it is certain that peace and delight, in some degree and upon some occasions, is the necessary and present effect of virtuous practice; an effect arising immediately from that constitution of our nature. We are so made that well-doing, as such, gives us satisfaction, at least, in some instances; ill-doing, as such, in none. And, *secondly*, from our moral nature, joined with God's hav-

Why virtue is
rewarded and
vice punished.

* See Dissertation II.

ing put our happiness and misery in many respects in each other's power, it cannot but be that vice, as such, some kinds and instances of it at least, will be infamous, and men will be disposed to punish it as in itself detestable; and the villain will by no means be able always to avoid feeling that infamy, any more than he will be able to escape this further punishment which mankind will be disposed to inflict upon him, under the notion of his deserving it. But there can be nothing on the side of vice to answer this, because there is nothing in the human mind contradictory, as the logicians speak, to virtue. For virtue consists in a regard to what is right and reasonable, as being so; in a regard to veracity, justice, charity, in themselves: and there is surely no such thing as a like natural regard to falsehood, injustice, cruelty. If it be thought that there are instances of an approbation of vice, as such, in itself, and for its own sake, (though it does not appear to me that there is any such thing at all,) but supposing there be, it is evidently monstrous; as much so as the most acknowledged perversion of any passion whatever. Such instances of perversion, then, being left out as merely imaginary, or, however, unnatural; it must follow, from the frame of our nature, and from our condition in the respects now described, that vice cannot at all be, and virtue cannot but be, favored, as such, by others, upon some occasions, and happy in itself, in some degree. For what is here insisted upon is, not the degree in which virtue and vice are thus distinguished, but only the thing itself, that they are so in some degree; though the whole good and bad effect of virtue and vice, as such, is not inconsiderable in degree. But that they must be thus distinguished, in some degree, is in a manner necessary; it is matter of fact of daily experience, even in the greatest confusion of human affairs.

Nothing in the mind contradictory to virtue.

11. It is not pretended but that, in the natural course of things, happiness and misery appear to be distributed by other rules than only the personal merit and demerit of characters. They may sometimes be distributed by way of mere discipline. There may be the wisest and best reasons why the world should be governed by general laws, from whence such promiscuous distribution, perhaps, must follow; and also why our happiness and misery should be put in each other's power, in the degree which they are. And these things, as in general they contribute to the rewarding virtue and punishing vice, as such; so they often contribute also, not to the inversion of this, which is impossible, but to the rendering persons prosperous though wicked, afflicted though righteous; and, which is worse, to the *rewarding some actions*, though vicious, and *punishing other actions*, though virtuous. But all this cannot drown the voice of nature in the conduct of Providence, plainly declaring itself for virtue, by way of distinction from vice, and preference to it. For, our being so constituted as that virtue and vice are thus naturally favored and discountenanced, rewarded and punished respectively as such, is an intuitive proof of the intent of nature that it should be so; otherwise the constitution of our mind, from which it thus immediately and directly proceeds, would be absurd. But it cannot be said, because virtuous actions are sometimes punished and vicious actions rewarded, that nature intended it. For, though this great disorder is brought about, as all actions are done, by means of some natural passion, yet *this may* be, as it undoubtedly is, brought about by the perversion of such passion, implanted in us for other, and those very good, purposes. And indeed these other and good purposes, even of every passion, may be clearly seen.

How happiness and misery are distributed.

Naturally distributed.

12. We have then a declaration, in some degree of

present effect, from Him who is supreme in nature, which side he is of, or what part he takes; a declaration for virtue and against vice. So God declares for virtue. far, therefore, as a man is true to virtue, to veracity and justice, to equity and charity, and the right of the case, in whatever he is concerned, so far he is on the side of the divine administration, and co-operates with it; and from hence, to such a man, arises naturally a secret satisfaction and sense of security, and implicit hope of somewhat further. And,

13. V. This hope is confirmed by the necessary tendencies of virtue, which, though not of present effect, yet are at present discernible in nature, and so afford an instance of somewhat moral in This hope confirmed by necessary tendencies of virtue. the essential constitution of it. There is, in the nature of things, a tendency in virtue and vice to produce the good and bad effects now mentioned, in a greater degree than they do in fact produce them. For instance, good and bad men would be much more rewarded and punished as such, were it not that justice is often artificially eluded, that characters are not known, and many who would thus favor virtue and discourage vice, are hindered from doing so by accidental causes. These tendencies of virtue and vice are obvious with regard to *individuals*. But it may require more particularly to be considered, that power in a *society*, by being under the direction of virtue, naturally increases, and has a necessary tendency to prevail over opposite power not under the direction of it; in like manner as power, by being under the direction of reason, increases, and has a tendency to prevail over brute force. There are several brute creatures of equal, and several of superior, strength to that of men; and possibly the sum of the whole strength of brutes may be greater than that of mankind: but reason gives us the advantage and superiority over them, and thus man is the acknowledged

governing animal upon the earth. Nor is this superiority considered by any as accidental; but as what reason has a tendency, in the nature of the thing, to obtain. And yet, perhaps, difficulties may be raised about the meaning, as well as the truth, of the assertion, that virtue has the like tendency.

14. To obviate these difficulties, let us see more distinctly how the case stands with regard to reason, which is so readily acknowledged to have this advantageous tendency. Suppose, then, two or three men of the best and most improved understanding, in a desolate open plain, attacked by ten times the number of beasts of prey; would their reason secure them the victory in this unequal combat? Power, then, though joined with reason, and under its direction, cannot be expected to prevail over opposite power, though merely brutal, unless the one bears some proportion to the other. Again, put the imaginary case, that rational and irrational creatures were of a like external shape and manner; it is certain, before there were opportunities for the first to distinguish each other, to separate from their adversaries and to form a union among themselves, they might be upon a level, or in several respects, upon great disadvantage, though united they might be vastly superior; since union is of such efficacy that ten men, united, might be able to accomplish what ten thousand of the same natural strength and understanding, wholly ununited, could not. In this case, then, brute force might more than maintain its ground against reason, for want of union among the rational creatures. Or suppose a number of men to land upon an island inhabited only by wild beasts; a number of men, who, by the regulations of civil government, the inventions of art, and the experience of some years, could they be preserved so long, would be really sufficient to subdue the wild beasts, and to preserve them-

Tendency of reason to triumph over brute force.

selves in security from them; yet a conjuncture of accidents might give such advantage to the irrational animals as that they might at once overpower, and even extirpate, the whole species of rational ones. Length of time, then, proper scope and opportunities for reason to exert itself, may be absolutely necessary to its prevailing over brute force.

Further still: there are many instances of brutes succeeding in attempts which they could not have undertaken had not their irrational nature rendered them incapable of foreseeing the danger of such attempts, or the fury of passion hindered their attending to it; and there are instances of reason and real prudence preventing men's undertaking what, it hath appeared afterward, they might have succeeded in by a lucky rashness. And in certain conjunctures, ignorance and folly, weakness and discord, may have their advantages. So that rational animals have not necessarily the superiority over irrational ones; but how improbable soever it may be, it is evidently possible that in some globes the latter may be superior. And were the former wholly at variance and disunited, by false self-interest and envy, by treachery and injustice, and consequent rage and malice against each other, while the latter were firmly united among themselves by instinct, this might greatly contribute to the introducing such an inverted order of things. For every one would consider it as inverted; since reason has, in the nature of it, a tendency to prevail over brute force, notwithstanding the possibility it may not prevail, and the necessity which there is of many concurrent circumstances to render it prevalent.

Now I say, virtue in a society has a like tendency to procure superiority and additional power, whether this power be considered as the means of security from opposite power, or of obtaining

Supposed triumph of brutes.
Inverted order.

Tendency of
virtue to superiority, etc.

other advantages. And it has this tendency, by rendering public good an object and end to every member of the society: by putting every one upon consideration and diligence, recollection and self-government, both in order to see what is the most effectual method, and also in order to perform their proper part, for obtaining and preserving it; by uniting a society within itself, and so increasing its strength, and, which is particularly to be mentioned, uniting it by means of veracity and justice. For as these last are principal bonds of union, so benevolence, or public spirit, undirected, unrestrained by them, is—nobody knows what.

15. And suppose the invisible world, and the invisible dispensations of Providence, to be in any sort analogous to what appears; or that both together make up one uniform scheme, the two parts of which, the part which we see, and that which is beyond our observation, are analogous to each other; then there must be a like natural tendency in the derived power, throughout the universe, under the direction of virtue, to prevail in general over that which is not under its direction; as there is in reason, derived reason in the universe, to prevail over brute force. But then, in order to the prevalence of virtue, or that it may actually produce what it has a tendency to produce, the like concurrences are necessary as are to the prevalence of reason. There must be some proportion between the natural power or force which is, and that which is not, under the direction of virtue: there must be sufficient length of time; for the complete success of virtue, as of reason, cannot, from the nature of the thing, be otherwise than gradual: there must be, as one may speak, a fair field of trial, a stage large and extensive enough, proper occasions and opportunities for the virtuous to join together, to exert themselves against lawless force, and to reap the fruit of their united labors.

Same tendency throughout the universe.

Now indeed it is to be hoped that the disproportion between the good and the bad, even here on earth, is not so great, but that the former have natural power sufficient to their prevailing to a considerable degree, if circumstances would permit this power to be united. For much less, very much less, power, under the direction of virtue, would prevail over much greater, not under the direction of it.* However, good men over the face of the earth cannot unite; as for other reasons, so because they cannot be sufficiently ascertained of each other's characters. And the known course of human things, the scene we are now passing through, particularly the shortness of life, denies to virtue its full scope in several other respects. The natural tendency which we have been considering, though real, is *hindered* from being carried into effect in the present state, but these hinderances may be removed in a future one. Virtue, to borrow the Christian allu-

Hinderances
may be removed
in a future state.

* [With reference to this point Fitzgerald quotes a forcible passage from Coleridge: "Often have I reflected with awe on the great and disproportionate power which an individual of no extraordinary talents or attainments may exert by *merely throwing off all restraint of conscience*. . . . It is not vice, as vice, which is thus mighty, but systematic vice. The abandonment of all principle of right enables the soul to choose and act upon a principle of wrong, and to subordinate to this one principle all the various vices of human nature. For it is a mournful truth, that as devastation is incomparably an easier work than production, so may all its means and instruments be more easily arranged into a scheme and system." (Friend, i, 158, 159; Pickering, 1837.)

As soon as it is understood that bad men make no profession of virtue, and have thrown off all the restraints of conscience, their power declines.

There is an intensity and continuity of effort in great wickedness, rarely manifested by most men who are esteemed as good, in the usual sense of the word. Moreover, the results of wickedness are more striking and directly manifest to the senses than the influence of virtue, which is often more quiet and unobserved, though more abiding and really more powerful.]

sion, is militant here, and various untoward accidents contribute to its being often overborne; but it may combat with greater advantage hereafter, and prevail completely, and enjoy its consequent rewards in some future states.* Neglected as it is, perhaps unknown, perhaps despised and oppressed here, there may be scenes in eternity lasting enough, and in every other way adapted to afford it a sufficient sphere of action, and a sufficient sphere for the natural consequences of it to follow in fact. If the soul be naturally immortal, and this state be a progress toward a future one, as childhood is toward mature age, good men may naturally unite, not only among themselves, but also with other orders of virtuous creatures in that future state. For virtue, from the very nature of it, is a principle and bond of union, in some degree, among all who are endued with it and known to each other; so as that by it a good man cannot but recommend himself to the favor and protection of all virtuous beings throughout the whole universe, who can be acquainted with his character, and can any way interpose in his behalf in any part of his duration.

And one might add, that suppose all this advantageous tendency of virtue to become effect among one or more orders of creatures, in any distant scenes and periods, and to be seen by any orders of vicious creatures, throughout the universal kingdom of God; this happy effect of virtue would have a tendency, by way of example, and possibly in other ways, to amend those of them who are capable of amendment, and being recovered to a just sense of virtue. If our notions of the plan of

* [This is an instance of Butler's care to avoid assuming more than his premises will warrant. He is arguing here on the foot of reason alone; and, as he had before observed that mere reason could not show that probation would terminate with this life, so he speaks here of the supposition (consistent with such a state of knowledge) of its passing through some state or states of *militancy* hereafter.—F.]

Providence were enlarged, in any sort proportionable to what late discoveries have enlarged our views with respect to the material world, representations of this kind would not appear absurd or extravagant. However, they are not to be taken as intended for a literal delineation of what is in fact the particular scheme of the universe, which cannot be known without revelation; for suppositions are not to be looked on as true because not incredible, but they are mentioned to show that our finding virtue to be hindered from procuring to itself such superiority and advantages is no objection against its having, in the essential nature of the thing, a tendency to procure them. And the suppositions now mentioned do plainly show this; for they show that these hinderances are so far from being necessary, that we ourselves can easily conceive how they may be removed in future states, and full scope be granted to virtue. And all these advantageous tendencies of it are to be considered as declarations of God in its favor. This, however, is taking a pretty large compass; though it is certain that as the material world appears to be, in a manner, boundless and immense, there must be *some* scheme of Providence vast in proportion to it.

These are suppositions—what they show.

16. But let us return to the earth, our habitation, and we shall see this happy tendency of virtue by imagining an instance not so vast and remote; by supposing a kingdom or society of men upon it, perfectly virtuous, for a succession of many ages; to which, if you please, may be given a situation advantageous for universal monarchy. In such a state there would be no such thing as faction, but men of the greatest capacity would, of course, all along, have the chief direction of affairs willingly yielded to them, and they would share it among themselves without envy. Each of these would have the part assigned him to

The triumph of virtue in a perfect state.

which his genius was peculiarly adapted; and others, who had not any distinguished genius, would be safe, and think themselves very happy, by being under the protection and guidance of those who had. Public determinations would really be the result of the united wisdom of the community, and they would faithfully be executed by the united strength of it. Some would in a higher way contribute, but all would in some way contribute to the public prosperity, and in it each would enjoy the fruits of his own virtue. And as injustice, whether by fraud or force, would be unknown among themselves, so they would be sufficiently secured from it in their neighbors. For cunning and false self-interest, confederacies in injustice, ever slight, and accompanied with faction and intestine treachery; these, on one hand, would be found mere childish folly and weakness when set in opposition against wisdom, public spirit, union inviolable, and fidelity on the other, allowing both a sufficient length of years to try their force. Add the general influence which such a kingdom would have over the face of the earth, by way of example particularly, and the reverence which would be paid it. It would plainly be superior to all others, and the world must gradually come under its empire; not by means of lawless violence, but partly by what must be allowed to be just conquest, and partly by other kingdoms submitting themselves voluntarily to it throughout a course of ages, and claiming its protection, one after another, in successive exigencies. The head of it would be a universal monarch, in another sense than any mortal has yet been, and the eastern style would be literally applicable to him, that *all people, nations, and languages should serve him*. And though, indeed, our knowledge of human nature, and the whole history of mankind, show the impossibility, without some miraculous interposition, that

No such state,
yet a tendency
toward it.

a number of men here on earth should unite in one society or government, in the fear of God and universal practice of virtue, and that such a government should continue so united for a succession of ages; yet, admitting or supposing this, the effect would be as now drawn out. And thus, for instance, the wonderful power and prosperity promised to the Jewish nation in the Scripture would be, in a great measure, the consequence of what is predicted of them; that the "people should be all righteous, and inherit the land forever;" were we to understand the latter phrase of a long continuance only, sufficient to give things time to work. The predictions of this kind, for there are many of them, cannot come to pass in the present known course of nature; but suppose them to come to pass, and then the dominion and pre-eminence promised must naturally follow, to a very considerable degree.

17. Consider now the general system of religion; that the government of the world is uniform, and one, and moral; that virtue and right shall finally have the advantage, and prevail over fraud and lawless force—over the deceits as well as the violence of wickedness—under the conduct of one supreme governor; and from the observations above made it will appear that God has, by our reason, given us to see a peculiar connection in the several parts of this scheme, and a tendency toward the completion of it, arising out of the very nature of virtue; which tendency is to be considered as somewhat moral in the essential constitution of things. If any one should think all this to be of little importance, I desire him to consider what he would think if vice had, essentially and in its nature, these advantageous tendencies, or if virtue had essentially the direct contrary ones.

Tendency of
virtue to a per-
fect moral gov-
ernment.

18. But it may be objected, that notwithstanding all these natural effects, and these natural tendencies of

virtue, yet things may be now going on throughout the universe, and may go on hereafter, in the same mixed

way as here at present upon earth; virtue sometimes prosperous, sometimes depressed; vice sometimes punished, sometimes successful.*

The answer to which is, that it is not the purpose of this chapter, nor of this treatise, properly to prove God's perfect moral government over the world, or the truth of religion, but to observe what there is in the constitution and course of nature to confirm the proper proof of it, supposed to be known, and that the weight of the foregoing observations to this purpose may be thus distinctly proved. Pleasure and pain are, indeed, to a certain degree, say to a very high degree, distributed among us without any apparent regard to the merit or demerit of characters. And were there nothing else, concerning this matter, discernible in the constitution and course of nature, there would be no ground, from the constitution and course of nature, to hope or to fear that men would be rewarded or punished hereafter according to their deserts; which, however, it is to be remarked, implies that even then there would be no ground, from appearances, to think that vice, upon the whole, would have the advantage, rather than that virtue would. And thus the proof of a future state of retribution would rest upon the usual known arguments for it; which are, I think, plainly unanswerable, and would be so though there were no additional confirmation of them from the things above insisted on. But these things are a very strong confirmation of them. For,

God not indifferent to virtue and vice.

19. First, They show that the Author of nature is not indifferent to virtue and vice. They amount to a declaration from him, determinate,

* [The objection is taken from Hume. Compare D. Stewart, *Active Powers*, vol. ii, pp. 226, etc. Archbishop Whately's *Essays on Peculiarities of Christian Religion*, note, Essay I, § 6.—F.]

and not to be evaded, in favor of one and against the other; such a declaration as there is nothing to be set over against, or answer, on the part of vice. So that were a man, laying aside the proper proof of religion, to determine, from the course of nature only, whether it were most probable that the righteous or the wicked would have the advantage in a future life, there can be no doubt but that he would determine the probability to be that the former would. The course of nature, then, in the view of it now given, furnishes us with a real practical proof of the obligations of religion.

20. Secondly, When, conformably to what religion teaches us, God shall reward and punish virtue and vice as such, so as that every one shall, upon the whole, have his deserts; this distributive justice will not be a thing different in *kind*, but only in *degree*, from what we experience in his present government. It will be that in *effect*, toward which we now see a *tendency*. It will be no more than the *completion* of that moral government, the *principles and beginning* of which have been shown, beyond all dispute, discernible in the present constitution and course of nature. And from hence it follows,

Future distributive justice — same in kind, different in degree.

21. Thirdly, That as under the natural government of God our experience of those kinds and degrees of happiness and misery which we do experience at present, gives just ground to hope for and to fear higher degrees and other kinds of both in a future state, supposing a future state admitted; so, under his moral government, our experience that virtue and vice are, in the manners above-mentioned, actually rewarded and punished at present, in a certain degree, gives just ground to hope and to fear that they *may be* rewarded and punished in a higher degree hereafter. It is acknowledged, indeed, that this alone is not sufficient ground to think that they *actually*

Expectation of greater rewards and of punishments.

will be rewarded and punished in a higher degree, rather than in a lower: but then,

22. Lastly, There is sufficient ground to think so, from the good and bad tendencies of virtue and vice. For these tendencies are essential, and founded in the nature of things: whereas, the hinderances to their becoming effect are, in numberless cases, not necessary, but artificial only. Now it may be much more strongly argued that these tendencies, as well as the actual rewards and punishments of virtue and vice which arise directly out of the nature of things, will remain hereafter, than that the accidental hinderances of them will. And if these hinderances do not remain, those rewards and punishments cannot but be carried on much further toward the perfection of moral government, that is, the tendencies of virtue and vice will become effect; but when, or where, or in what particular way, cannot be known at all but by revelation.

23. Upon the whole, there is a kind of moral government implied in God's natural government, (page 89;) This expectation—how strengthened. Recapitulation. virtue and vice are naturally rewarded and punished as beneficial and mischievous to society, (page 90,) and rewarded and punished directly as virtue and vice, (page 91, etc.) The notion, then, of a moral scheme of government is not fictitious, but natural; for it is suggested to our thoughts by the constitution and course of nature; and the execution of this scheme is actually begun in the instances here mentioned. And these things are to be considered as a declaration of the Author of nature for virtue, and against vice; they give a credibility to the supposition of their being rewarded and punished hereafter, and also ground to hope and to fear that they may be rewarded and punished in higher degrees than they are here. And as all this is confirmed, so the argument for

religion, from the constitution and course of nature, is carried on further by observing that there are natural tendencies, and in innumerable cases only artificial hinderances, to this moral scheme being carried on much further toward perfection than it is at present, (page 99, etc.) The notion, then, of a moral scheme of government much more perfect than what is seen, is not a fictitious but a natural notion; for it is suggested to our thoughts by the essential tendencies of virtue and vice. And these tendencies are to be considered as intimations, as implicit promises and threatenings, from the Author of nature, of much greater rewards and punishments to follow virtue and vice than do at present. And, indeed, every *natural* tendency, which is to continue, but which is hindered from becoming effect by only *accidental* causes, affords a presumption that such tendency will, some time or other, become effect: * a presumption in degree proportionable to the length of the duration through which such tendency will continue. And from these things together arises a real presumption that the moral scheme of government established in nature shall be carried on much further

* [The Archbishop of Dublin (Pol. Econ., lect. ix) has pointed out the ambiguity of the word *tendency*, which has been the occasion of much confusion of thought. Tendency toward a result sometimes (and strictly) only means the existence of a cause which, if *operating unimpeded*, would produce the result. But commonly it is used to imply the existence of such a state of things as makes it likely that the result *will actually* be produced, that is, in Butler's language, that the hinderances to its operation are *accidental*; such as do not act steadily and uniformly against the cause, as such, but only occasionally, and in consequence of its connection with other things with which it may or may not be united. There is the clear presumption in favor of *continuance* (noticed by Butler, part i, chap. i) for the tendency which we see steadily and uniformly operating, while there is nothing like the same presumption for the continuance of those causes of hinderances which are not permanent in their action, nor uniform in their nature.—F.]

toward perfection hereafter, and, I think, a presumption that it will be absolutely completed. But from these things, joined with the moral nature which God has given us, considered as given us by him, arises a practical proof* that it will be completed; a proof from fact, and therefore a distinct one, from that which is deduced from the eternal and unalterable relations—the fitness and unfitness of actions.

* See this proof drawn out briefly, chap. vi.

CHAPTER IV.

OF A STATE OF PROBATION, AS IMPLYING TRIAL,
DIFFICULTIES, AND DANGER.*

THE general doctrine of religion, that our present life is a state of probation for a future one, comprehends under it several particular things distinct from each other. But the first and most common meaning of it seems to be, that our future interest is now depending, and depending upon ourselves; that we have scope and opportunities

Difference between probation and moral government.

* [It might be, and often is, indeed, made an objection to the religious system, that our way to the everlasting blessedness which it proposes should be beset with so many lures which tempt us aside from the prosecution of it; and, on the other hand, that so many hardships and difficulties should be attendant on our steadfast perseverance in that way. The thing complained of is, that our great and ultimate good should have been made of such difficult attainment, insomuch that the frail powers of humanity, either for the achievement of what is good or the resistance of what is evil, are so greatly overtaken, as in the great majority of instances to be overborne. Now in this chapter we are presented with a complete and conclusive analogy, which, if it do not establish the reality of our religious trial, at least serves to vindicate it against the exceptions which we have just enumerated. Whatever doubt we may stand in regarding those doctrines which respect the future and the unseen, there can be no quarreling with present and actually observed facts. If the doctrine be, that the way to our eternal good is a way of labor and self-denial, it is in perfect analogy with the fact that this is the way to our temporal good also. It is quite palpable that often many toils must be undergone, and many temptations resisted, ere we can secure the most highly-prized advantages of the life that now is; and the conclusion is, not that similar toils and temptations *must*, but that they *may be*, the precursors and the preparatives of our happiness in another state of being.—CHALMERS.]

here for that good and bad behavior which God will reward and punish hereafter; together with temptations to one, as well as inducements of reason to the other. And this is, in great measure, the same with saying that we are under the moral government of God, and to give an account of our actions to him. For the notion of a future account, and general righteous judgment, implies some sort of temptations to what is wrong, otherwise there would be no moral possibility of doing wrong, nor ground for judgment or discrimination. But there is this difference, that the word *probation* is more distinctly and particularly expressive of allurements to wrong, or difficulties in adhering uniformly to what is right, and of the danger of miscarrying by such temptations, than the words *moral government*. A state of probation, then, as thus particularly implying in it trial, difficulties, and danger, may require to be considered distinctly by itself.

2. And as the moral government of God, which religion teaches us, implies that we are in a state of trial with regard to a future world; so also his natural government over us implies that we are in a state of trial, in the like sense, with regard to the present world. Natural government, by rewards and punishments, as much implies natural trial, as moral government does moral trial. The natural government of God here meant (chap. ii) consists in his annexing pleasure to some actions and pain to others, which are in our power to do or forbear, and in giving us notice of such appointment beforehand. This necessarily implies that he has made our happiness and misery, or our interest, to depend in part upon ourselves. And so far as men have temptations to any course of action which will probably occasion them greater temporal inconvenience and uneasiness than satisfaction, so far their temporal interest is in danger from themselves, or they are in a state of trial with respect to it. Now

This is a state of trial for the future and for the present world.

people often blame others, and even themselves, for their misconduct in their temporal concerns. And we find many are greatly wanting to themselves, and miss of that natural happiness which they might have obtained in the present life; perhaps every one does in some degree. But many run themselves into great inconvenience, and into extreme distress and misery, not through incapacity of knowing better, and doing better for themselves, which would be nothing to the present purpose, but through their own fault. And these things necessarily imply temptation, and danger of miscarrying, in a greater or less degree, with respect to our worldly interest or happiness. Every one too, without having religion in his thoughts, speaks of the hazards which young people run upon their setting out in the world—hazards from other causes than merely their ignorance and unavoidable accidents. And some courses of vice, at least, being contrary to men's worldly interest or good, temptations to these must at the same time be temptations to forego our present and our future interest.

Implied in our censures.

Thus in our natural or temporal capacity we are in a state of trial, that is, of difficulty and danger, analogous, or like, to our moral and religious trial. This will more distinctly appear to any one who thinks it worth while more distinctly to consider what it is which constitutes our trial in both capacities, and to observe how mankind behave under it.

3. And that which constitutes this our trial, in both these capacities, must be somewhat either in our external circumstances or in our nature. For, on the one hand, persons may be betrayed into wrong behavior upon surprise, or overcome upon any other very singular and extraordinary external occasions, who would, otherwise, have preserved their character of prudence and of virtue: in which

This trial originates in circumstances or nature.

cases, every one, in speaking of the wrong behavior of these persons, would impute it to such particular external circumstances. And on the other hand, men who have contracted habits of vice and folly of any kind, or have some particular passions in excess, will seek opportunities, and, as it were, go out of their way, to gratify themselves in these respects, at the expense of their wisdom and their virtue; led to it, as every one would say, not by external temptations, but by such habits and passions. And the account of this last case is, that particular passions are no more coincident with prudence, or that reasonable self-love, the end of which is our worldly interest, than they are with the principle of virtue and religion, but often draw contrary ways to one as well as to the other; and so such particular passions are as much temptations to act imprudently with regard to our worldly interest as to act viciously.* However, as when we say, men are misled by external circum-

stances of temptation, it cannot but be understood that there is somewhat within themselves to render those circumstances temptations, or to render them susceptible of impressions from them; so, when we say they are misled by passions, it is always supposed that there are occasions, circumstances, and objects, exciting these passions, and affording means for gratifying them. And therefore temptations from within and from without coincide, and mutually imply each other. Now the several external objects of the appetites, passions, and affections being present to the senses, or offering themselves to the mind, and so exciting emotions suitable to their nature, not only in cases where they can be gratified consistently with innocence and prudence, but also in cases where they cannot, and yet can be gratified imprudently and viciously; this as real-

* See Sermons preached at the Rolls, 1726, 2d ed., 205, etc. Pref., p. 25, etc. Serm., p. 21, etc.

ly puts them in danger of voluntarily foregoing their present interest or good as their future, and as really renders self-denial necessary to secure one as the other; that is, we are in a like state of trial with respect to both, by the very same passions excited by the very same means. Thus mankind having a temporal interest depending upon themselves, and a prudent course of behavior being necessary to secure it, passions inordinately excited, whether by means of example or by any other external circumstance, toward such objects, at such times, or in such degrees, as that they cannot be gratified consistently with worldly prudence, are temptations dangerous, and too often successful temptations, to forego a greater temporal good for a less, that is, to forego what is, upon the whole, our temporal interest, for the sake of a present gratification. This is a description of our state of trial in our temporal capacity. Substitute now the word *future* for *temporal*, and *virtue* for *prudence*, and it will be just as proper a description of our state of trial in our religious capacity, so analogous are they to each other.*

4. If, from consideration of this our like state of trial in both capacities, we go on to observe further how mankind behave under it, we shall find there are some who have so little sense of it that they scarce look beyond the passing day; they are so taken up with present gratifications as to have, in a manner, no feeling of consequences, no regard to their future ease or fortune in this life, any more than to their happiness in another. Some appear to be blinded and deceived by inordinate passion in

Similar recklessness with reference to the present and future.

* [If because of these things we must give up the God of religion, we should give up the God of nature also. If we persist in our objection notwithstanding these analogies, then should we conclude either that we are under the regimen of an unrighteous deity, or that there is no deity at all.—CHALMERS.]

their worldly concerns as much as in religion. Others are not deceived, but, as it were, forcibly carried away by the like passions against their better judgment, and feeble resolutions, too, of acting better. And there are men, and truly they are not a few, who shamelessly avow, not their interest, but their mere will and pleasure, to be their law of life; and who, in open defiance of every thing that is reasonable, will go on in a course of vicious extravagance, foreseeing, with no remorse and little fear, that it will be their temporal ruin; and some of them, under the apprehension of the consequences of wickedness in another state. And to speak in the most moderate way, human creatures are not only continually liable to go wrong voluntarily, but we see likewise that they often actually do so, with respect to their temporal interests as well as with respect to religion.

Thus our difficulties and dangers, or our trials in our temporal and our religious capacity, as they proceed from the same causes and have the same effect upon men's behavior, are evidently analogous and of the same kind.

5. It may be added, that as the difficulties and dangers of miscarrying in our religious state of trial are greatly increased, and one is ready to think, in a manner wholly *made* by the ill behavior of others; by a wrong education, wrong in a moral sense, sometimes positively vicious; by general bad example; by the dishonest artifices which are got into business of all kinds; and in very many parts of the world, by religion's being corrupted into superstitions which indulge men in their vices; so in like manner, the difficulties of conducting ourselves prudently in respect to our present interest, and our danger of being led aside from pursuing it, are greatly increased by a foolish education, and after we come to mature age, by the extravagance and carelessness of others whom we have intercourse with, and by mistaken notions, very

Similar diffi-
culties in both—
bad education,
etc.

generally prevalent and taken up from common opinion, concerning temporal happiness and wherein it consists. And persons, by their own negligence and folly in their temporal affairs, no less than by a course of vice, bring themselves into new difficulties, and by habits of indulgence become less qualified to go through them; and one irregularity after another embarrasses things to such a degree that they know not whereabouts they are, and often makes the path of conduct so intricate and perplexed that it is difficult to trace it out; difficult even to determine what is the prudent or the moral part. Thus, for instance, wrong behavior in one stage of life, youth; wrong, I mean, considering ourselves only in our temporal capacity, without taking in religion; this, in several ways, increases the difficulties of right behavior in mature age; that is, puts us into a more disadvantageous state of trial in our temporal capacity.

6. We are an inferior part of the creation of God: there are natural appearances of our being in a state of degradation, (part ii, chap. v;) and we certainly are in a condition which *does not seem*, by any means, the most advantageous we could imagine or desire, either in our natural or moral capacity, for securing either our present or future interest. However, this condition, low and careful and uncertain as it is, does not afford any just ground of complaint. For as men may manage their temporal affairs with prudence, and so pass their days here on earth in tolerable ease and satisfaction by a moderate degree of care; so likewise with regard to religion, there is no more required than what they are well able to do, and what they must be greatly wanting to themselves if they neglect.* And for persons to have that put upon them

Our unfavorable condition no ground for complaint.

* [This is an unsatisfactory statement, but judging of sentiments that are incorrect, or expressions imperfectly guarded, it is only just to take into consideration the well-known views of the author. But-

which they are well able to go through, and no more, we naturally consider as an equitable thing, supposing it done by proper authority. Nor have we any more reason to complain of it, with regard to the Author of nature, than of his not having given us other advantages belonging to other orders of creatures.

7. But the thing here insisted upon is, that the state of trial which religion teaches us we are in, is rendered

Trial credible from its similarity in both conditions. credible by its being throughout uniform, and of a piece with the general conduct of

Providence toward us, in all other respects within the compass of our knowledge. Indeed, if mankind, considered in their natural capacity as inhabitants of this world only, found themselves from their birth to their death in a settled state of security and happiness, without any solicitude or thought of their own, or if they

ler did not reject the doctrine of the fall of man. The criticism of Chalmers on this passage seems to us harsh when he says of Butler, "We fear that he here makes the first, though not the only, exhibition which occurs in the work of his meager and moderate theology. There seems no adequate view in the passage of man's total inability for what is spiritually and acceptably good; for by the very analogy which he institutes, the doctrine of any special help to that obedience which qualifies for heaven is kept out of sight. . . . There is no account made here of that peculiar helplessness which obtains in matters of religion, and does not obtain in the matters of ordinary prudence, yet a helplessness which forms no excuse, lying as it does in the resolute, and, by man himself, unconquerable aversion of his will to God and holiness." That the argument, properly used, is good, Chalmers admits when he says, "There is nothing in this (helplessness) to break the analogies on which to found the negative vindication that forms the great and undoubted achievements of this volume, and with which, perhaps, it were well if both its author and its readers would agree to be satisfied. The analogy lies here, that if a man wills to obtain prosperity in this life, he may, if observant of the rules which experience and wisdom prescribe, in general, make it good. And if he wills to attain to blessedness in the next life, he shall, if observant of what religion prescribes, and in conformity with the declaration that he who seeketh findeth, most certainly make it good.]

were in no danger of being brought into inconveniences and distress by carelessness or the folly of passion, through bad example, the treachery of others, or the deceitful appearances of things; were this our natural condition, then it might seem strange, and be some presumption against the truth of religion, that it represents our future and more general interest, as not secure of course, but as depending upon our behavior, and requiring recollection and self-government to obtain it. For it might be alleged, "What you say is our condition in one respect is not in any wise of a sort with what we find, by experience, our condition is in another. Our whole present interest is secured to our hands without any solicitude of ours, and why should not our future interest, if we have any such, be so too?" But since, on the contrary, thought and consideration, the voluntary denying ourselves many things which we desire, and a course of behavior far from being always agreeable to us, are absolutely necessary to our acting even a common decent and common prudent part, so as to pass with any satisfaction through the present world, and be received upon any tolerable good terms in it; since this is the case, all presumption against self-denial and attention being necessary to secure our higher interest is removed.

Had we not experience, it might, perhaps, speciously be urged that it is improbable any thing of hazard and danger should be put upon us by an infinite Being, when every thing which is hazard and danger in our manner of conception, and will end in error, confusion, and misery, is now already certain in his foreknowledge. And, indeed, why any thing of hazard and danger should be put upon such frail creat- ^{Why are we in danger?} ures as we are, may well be thought a difficulty in speculation; and cannot but be so till we know the whole, or, however, much more, of the case. But still the consti-

tution of nature is as it is. Our happiness and misery are trusted to our conduct, and made to depend upon it. Somewhat, and in many circumstances a great deal too, is put upon us, either to do or to suffer, as we choose. And all the various miseries of life which people bring upon themselves by negligence and folly, and might have avoided by proper care, are instances of this; which miseries are, beforehand, just as contingent and undetermined as their conduct, and left to be determined by it.

8. These observations are an answer to the objections against the credibility of a state of trial, as implying temptations, and real danger of miscarrying with regard to our general interest, under the moral government of God; and they show, that if we are at all to be considered in such a capacity, and as having such an interest, the general analogy of Providence must lead us to apprehend ourselves in danger of miscarrying, in different degrees, as to this interest, by our neglecting to act the proper part belonging to us in that capacity. For we have a present interest, under the government of God which we experience here upon earth. And this interest, as it is not forced upon us, so neither is it offered to our acceptance, but to our acquisition; in such sort, as that we are in danger of missing it, by means of temptations to neglect or act contrary to it; and without attention and self-denial, must and do miss of it. It is then perfectly credible, that this may be our case with respect to that chief and final good which religion proposes to us.

What this chapter shows.

NOTE.

[To the forcible reasoning of this chapter, many will object that the difference between temporal and eternal things is so vast the cases are not analogous. It cannot be denied, for it is a matter of open and daily observation, that loss, misery, and punishment follow neglect and misconduct here; but the doctrine is *resisted* and resented as an in-

credible outrage, that a ruined eternity should follow from the same causes. But the analogy is complete in *kind*, and the difference between the two hardships is only in *degree*. This difference of degree of suffering can form no basis for an objection unless it can be shown that similar results should not follow from similar causes in the two states of being. The principle would seem plain, that if there is injustice in the one case there is injustice in the other. What would be wrong on a great scale is wrong on a small one. Many seem ready to acquiesce in the operation of an unjust principle to smaller matters which they would regard as intolerable in things of higher moment. But he that is unjust in that which is least is unjust in much. The admission that the divine government is unjust in what may seem to be little and temporary matters would impeach the righteousness of God and destroy all reverence for his character.

It would be well for those who are ready to claim that the goodness manifested to man is a compensation for what they admit is an injustice to the lower orders of animals, in their suffering and destruction, to remember the consequences to which their principles would lead.

The admission of this doctrine might force on our attention the uncomfortable suggestion that our happiness, present and future, may be sacrificed, and as a compensation there may be increased blessedness given to beings far higher and nobler than we. Once admit injustice in any part of the divine government, and there is no conceivable limit to the extent to which it may be carried. There is no injustice in the dependence on each other of different orders of beings, or in any part of God's government. We know but parts of his ways and but little of his universe, but all the analogies of nature as well as the teachings of his Word assure us he has done all things well. He is just and holy in all his ways, and there is no unrighteousness in him. Consult Chalmers.]

CHAPTER V.

OF A STATE OF PROBATION, AS INTENDED FOR MORAL DISCIPLINE AND IMPROVEMENT.*

FROM the consideration of our being in a probation-state of so much difficulty and hazard, naturally arises the question, how we came to be placed in it. But such a general inquiry as this would be found involved in insuperable difficulties. For though some of these difficulties would be lessened by observing that all wickedness is voluntary, as is implied in its very notion, and that many of the miseries of life have apparent good effects, yet when we consider other circumstances belonging to both, and what must be the consequence of the former in a life to come, it cannot but be acknowledged plain folly and presumption to pretend to give an account of the whole reasons of this matter; the whole reasons of our being allotted a condition out of which so much wickedness and misery, so circumstanced, would in fact arise. Whether it be not beyond our faculties not only to find out, but even to understand, the whole account of this; or, though we should be supposed capable of understanding it, yet, whether it would be of service or prejudice to us to be informed of it, is impossible to say. But as our present condition can in nowise be shown

* [The present chapter stands in the same relation to the one preceding it, which that on the moral does to that on the natural government of God. It still treats of probation, but of probation with a particular end—even that of schooling men in the practice, so as to confirm them in the habits, of virtue.—CHALMERS.]

inconsistent with the perfect moral government of God, so religion teaches us we were placed in it that we might qualify ourselves, by the practice of virtue, for another state, which is to follow it. And this, though but a partial answer, a very partial one indeed, to the inquiry now mentioned, yet is a more satisfactory answer to another, which is of real and of the utmost importance to us to have answered—the inquiry, What is our business here? The known end, then, why we are placed in a state of so much affliction, hazard, and difficulty is, our improvement in virtue and piety, as the requisite qualification for a future state of security and happiness.

1. Now the beginning of life, considered as an education for mature age in the present world, appears plainly at first sight, analogous to this our trial for a future one; the former being, in our temporal capacity, what the latter is in our religious capacity. But some observations common to both of them, and a more distinct consideration of each, will more distinctly show the extent and force of the analogy between them; and the credibility which arises from hence, as well as from the nature of the thing, that the present life was intended to be a state of discipline for a future one.

Probation of youth. Its analogy.

2. I. Every species of creatures is, we see, designed for a particular way of life, to which the nature, the capacities, temper, and qualifications of each species are as necessary as their external circumstances. Both come into the notion

Man's adaptation to the present and to the future state.

of such state, or particular way of life, and are constituent parts of it. Change a man's capacities or character to the degree in which it is conceivable they may be changed, and he would be altogether incapable of a human course of life and human happiness; as incapable as if, his nature continuing unchanged, he were placed in a world where he had no sphere of action, nor

any objects to answer his appetites, passions, and affections of any sort. One thing is set over against another, as an ancient writer expresses it.* Our nature corresponds to our external condition. Without this correspondence there would be no possibility of any such thing as human life and human happiness: which life and happiness are, therefore, a *result* from our nature and condition jointly; meaning by human life, not *living* in the literal sense, but the whole complex notion commonly understood by those words. So that without determining what will be the employment and happiness, the particular life, of good men hereafter, there must be some determinate capacities, some necessary character and qualifications, without which persons cannot but be utterly incapable of it; in like manner as there must be some without which men would be incapable of their present state of life. Now,

3. II. The constitution of human creatures, and indeed, of all creatures which come under our notice, is such, as that they are capable of naturally becoming qualified for states of life, for which they were once wholly unqualified. In imagination, we may indeed conceive of creatures, as incapable of having any of their faculties naturally enlarged, or as being unable naturally to acquire any new qualifications; but the faculties of every species known to us are made for enlargement, for acquirements of experience and habits. We find ourselves, in particular, endued with capacities, not only of perceiving ideas, and of knowledge or perceiving truth, but also of storing up our ideas and knowledge by memory. We are capable, not only of acting, and of having different momentary impressions made upon us,

* [All things are double one against another: and He hath made nothing imperfect. One thing establisheth the good of another: and who shall be filled with beholding his glory!—Eccles. xlii, 24, 25.]

but of getting a new facility in any kind of action, and of settled alterations in our temper or character. The power of the two last is the power of habits. But neither the perception of ideas, nor knowledge of any sort, are habits, though absolutely necessary to the forming of them. However, apprehension, reason, memory, which are the capacities of acquiring knowledge, are greatly improved by exercise. Whether the word *habit* is applicable to all these improvements, and in particular how far the powers of memory and of habits may be powers of the same nature, I shall not inquire. But that perceptions come into our minds readily and of course, by means of their having been there before, seems a thing of the same sort, as readiness in any particular kind of action proceeding from being accustomed to it. And aptness to recollect practical observations of service in our conduct is plainly habit in many cases. There are habits of perception and habits of action. An instance of the former is our constant and even involuntary readiness in correcting the impressions of our sight concerning magnitudes and distances, so as to substitute judgment in the room of sensation, imperceptibly to ourselves. And it seems as if all other associations of ideas, not naturally connected, might be called passive habits, as properly as our readiness in understanding languages upon sight, or hearing of words. And our readiness in speaking and writing them is an instance of the latter, of active habits.

For distinctness, we may consider habits as belonging to the body or the mind, and the latter will be explained by the former. Under the Habits of body and mind. former are comprehended all bodily activities or motions, whether graceful or unbecoming, which are owing to use; under the latter, general habits of life and conduct, such as those of obedience and submission to authority, or to any particular person; those of veracity,

justice, and charity; those of attention, industry, self-government, envy, revenge. And habits of this latter kind seem produced by repeated acts, as well as the former. And in like manner, as habits belonging to the body are produced by external acts, so habits of the mind are produced by the exertion of inward practical principles; that is, by carrying them into act, or acting upon them—the principles of obedience, of veracity, justice, and charity. Nor can those habits be formed by any external course of action otherwise than as it proceeds from these principles; because it is only these inward principles exerted which are strictly acts of obedience, of veracity, of justice, and of charity. So, likewise, habits of attention, industry, self-government, are in the same manner acquired by exercise; and habits of envy and revenge by indulgence, whether in outward act or in thought and intention, that is, inward act; for such intention is an act. Resolutions also to do well are properly acts. And endeavoring to enforce upon our own minds a practical sense of virtue, or to beget in others that practical sense of it which a man really has himself, is a virtuous act. All these, therefore, may and will contribute toward forming good habits. But going over the theory of virtue in one's thoughts, talking well, and drawing fine pictures of it—this is so far from necessarily or certainly conducing to form a habit of it in him who thus employs himself, that it may harden the mind in a contrary course, and render it gradually more insensible, that is, form a habit of insensibility to all moral considerations. For, from our very faculty of habits, passive impressions, by being repeated, grow weaker. Thoughts, by often passing through the mind, are felt less sensibly; being accustomed to danger begets intrepidity, that is, lessens fear; to distress, lessens the passion of pity; to instances of others' morality, lessens the sensible apprehension of our own.

And from these two observations together, that practical habits are formed and strengthened by repeated acts, and that passive impressions grow weaker by being repeated upon us, it must follow that active habits may be gradually forming and strengthening, by a course of acting upon such and such motives and excitements, while these motives and excitements themselves are, by proportionable degrees, growing less sensible; that is, are continually less and less sensibly felt, even as the active habits strengthen. And experience confirms this; for active principles, at the very time that they are less lively in perception than they were, are found to be somehow wrought more thoroughly into the temper and character, and become more effectual in influencing our practice. The three things just mentioned may afford instances of it. Perception of danger is a natural excitement of passive fear and active caution; and by being inured to danger, habits of the latter are gradually wrought, at the same time that the former gradually lessens. Perception of distress in others is a natural excitement, passively to pity, and actively to relieve it; but let a man set himself to attend to, inquire out, and relieve distressed persons, and he cannot but grow less and less sensibly affected with the various miseries of life with which he must become acquainted; when yet, at the same time, benevolence, considered not as a passion but as a practical principle of action, will strengthen; and while he passively compassionates the distressed less, he will acquire a greater aptitude actively to assist and befriend them. So also, at the same time that the daily instances of men's dying around us give us daily a less sensible passive feeling or apprehension of our own mortality, such instances greatly contribute to the strengthening a practical regard to it in serious men; that is, to forming a habit of acting with a constant view to it.

As active habits become strong, passive impressions grow weak.

And this seems again further to show, that passive impressions made upon our minds by admonition, experience, example, though they may have a remote efficacy, and a very great one, toward forming active habits, yet can have this efficacy no otherwise than by inducing us to such a course of action; and that it is not being effected so and so, but acting, which forms those habits; only it must be always remembered, that real endeavors to enforce good impressions upon ourselves are a species of virtuous action. Nor do we know how far it is possible, in the nature of things, that effects should be wrought in us at once equivalent to habits,* that is, what is wrought by use and exercise. However, the thing insisted upon is, not what may be possible, but what is in fact the appointment of nature, which is, that active habits are to be formed by exercise. Their progress may be so gradual as to be imperceptible in its steps; it may be hard to explain the faculty by which we are capable of habits, throughout its several parts, and to trace it up to its original, so as to distinguish it from all others in our mind; and it seems as if contrary effects were to be ascribed to it. But the thing in general, that our nature is formed to yield in some such manner as this, to use and exercise, is matter of certain experience.

Thus, by accustoming ourselves to any course of action, we get an aptness to go on—a facility, readiness, and often pleasure in it. The inclinations which rendered us averse to it grow weaker; the difficulties in it, not only the imaginary but the real ones, lessen; the reasons for it offer themselves of course

* [In some of the miracles there seems to have been effects produced at once, equivalent to habits, as in the gift of tongues; and as pointed out by Dr. Drought (in Dean Graves' Works) in the miracle by which the blind man was enabled to *use* the sight which had been miraculously given to him.—F.]

to our thoughts upon all occasions; and the least glimpse of them is sufficient to make us go on in a course of action to which we have been accustomed. And practical principles appear to grow stronger, absolutely in themselves, by exercise, as well as relatively, with regard to contrary principles; which by being accustomed to submit, do so habitually and of course. And thus a new character, in several respects, may be formed; and many habitudes of life, not given by nature, but which nature directs us to acquire.

4. III. Indeed we may be assured, that we should never have had these capacities of improving by experience, acquired knowledge, and habits, had they not been necessary, and intended to be made use of. And accordingly we find them so necessary, and so much intended, that without them we should be utterly incapable of that which was the end for which we were made, considered in our temporal capacity only; the employments and satisfactions of our mature state of life.

Improvement
by experience
necessary to the
ends of life, and
even the maturi-
ty of our powers.

Nature does in nowise qualify us wholly, much less at once, for this mature state of life. Even maturity of understanding and bodily strength are not only arrived to gradually, but are also very much owing to the continued exercise of our powers of body and mind from infancy. But if we suppose a person brought into the world with both these in maturity, as far as this is conceivable, he would plainly at first be as unqualified for the human life of mature age as an idiot. He would be in a manner distracted with astonishment, and apprehension, and curiosity, and suspense; nor can one guess how long it would be before he would be familiarized to himself, and the objects about him, enough even to set himself to any thing. It may be questioned, too, whether the natural information of his sight and hearing would be of any manner of use at all to him in acting, before

experience. And it seems that men would be strangely headstrong and self-willed, and disposed to exert themselves with an impetuosity which would render society insupportable, and the living in it impracticable, were it not for some acquired moderation and self-government, some aptitude and readiness in restraining themselves, and concealing their sense of things. Want of every thing of this kind which is learned would render a man as incapable of society as want of language would; or as his natural ignorance of any of the particular employments of life would render him incapable of providing himself with the common conveniences, or supplying the necessary wants of it. In these respects, and probably in many more of which we have no particular notion, mankind is left by nature an unformed, unfinished creature, utterly deficient and unqualified, before the acquirement of knowledge, experience, and habits, for that mature state of life which was the end of his creation, considering him as related only to this world.

5. But then, as nature has endued us with a power of supplying those deficiencies by acquired knowledge, experience, and habits; so, likewise, we are placed in a condition in infancy, childhood, and youth, fitted for it; fitted for our acquiring those qualifications of all sorts which we stand in need of in mature age. Hence children, from their very birth, are daily growing acquainted with the objects about them, with the scene in which they are placed, and to have a future part; and learning somewhat or other necessary to the performance of it. The subordination to which they are accustomed in domestic life, teach them self-government in common behavior abroad and prepare them for subjection and obedience to civil authority. What passes before their eyes, and daily happens to them, gives them experience, caution against treachery and deceit, together with numberless little

Childhood favorable to improvement.

rules of action and conduct which we could not live without, and which are learned so insensibly and so perfectly as to be mistaken, perhaps, for instinct, though they are the effect of long experience and exercise; as much so as language, or knowledge in particular business, or the qualifications and behavior belonging to the several ranks and professions. Thus the beginning of our days is adapted to be, and is, a state of education in the theory and practice of mature life. We are much assisted in it by example, instruction, and the care of others; but a great deal is left to ourselves to do. And of this, as part is done easily and of course, so part requires diligence and care, the voluntary foregoing many things which we desire, and setting ourselves to what we should have no inclination to, but for the necessity or expedience of it. For that labor and industry which the station of so many absolutely requires they would be greatly unqualified for in maturity; as those in other stations would be for any other sorts of application, if both were not accustomed to them in their youth. And according as persons behave themselves, in the general education which all go through, and in the particular ones adapted to particular employments, their character is formed, and made appear; they recommend themselves more or less; and are capable of, and placed in, different stations in the society of mankind.*

* [We are too apt to overlook the effect of actions on the actor, (which is often the chief effect,) in improving or impairing his own powers. A razor used to cut wood or stone is not only put to an improper use, but spoiled for the use which is proper. But this is but a faint illustration. The razor may be sharpened again; but how shall we restore a blunted sensibility, or enfeebled judgment, or a vitiated appetite. Our wrong-doing inflicts worse results on ourselves than on our victims, and the evil may spread disaster over our whole future. Hence the young make a fatal blunder when they suppose an occasional indulgence or impropriety may be compatible with general welfare and improvement.—MALCOM.]

6. The former part of life, then, is to be considered as an important opportunity which nature puts into our hands, and which, when lost, is not to be recovered. And our being placed in a state of discipline, throughout this life, for another world, is a providential disposition of things, exactly of the same kind as our being placed in a state of discipline during childhood, for mature age. Our condition in both respects is uniform and of a piece, and comprehended under one and the same general law of nature.

And if we are not able at all to discern how, or in what way, the present life could be our preparation for another, this would be no objection against the credibility of its being so. For we do not discern how food and sleep contribute to the growth of the body, nor could have any thought that they would, before we had experience. Nor do children at all think, on the one hand, that the sports and exercises to which they are so much addicted contribute to their health and growth; nor, on the other, of the necessity which there is for their being restrained in them; nor are they capable of understanding the use of many parts of discipline which, nevertheless, they must be made to go through, in order to qualify them for the business of mature age. Were we not able, then, to discover in what respects the present life could form us for a future one, yet nothing would be more supposable than that it might, in some respects or other, from the general analogy of providence. And this, for aught I see, might reasonably be said, even though we should not take in the consideration of God's moral government over the world. But,

7. IV. Take in this consideration, and consequently that the character of virtue and piety is a necessary qualification for the future state, and then we may dis-

tinctly see how, and in what respects, the present life may be a preparation for it; since we *want*, How the mode may be known. *and are capable of, improvement in that character, by moral and religious habits*; and *the present life is fit to be a state of discipline for such improvement*; in like manner, as we have already observed, how and in what respects infancy, childhood, and youth are a necessary preparation, and a natural state of discipline, for mature age.

8. Nothing which we at present see would lead us to the thought of a solitary inactive state hereafter; but, if we judge at all from the analogy of nature, Active virtues in a future life. we must suppose, according to the Scripture account of it, that it will be a community. And there is no shadow of any thing unreasonable in conceiving, though there be no analogy for it, that this community will be, as the Scripture represents it, under the more immediate, or, if such an expression may be used, the more sensible, government of God. Nor is our ignorance, what will be the employments of this happy community, nor our consequent ignorance, what particular scope or occasion there will be for the exercise of veracity, justice, and charity, among the members of it with regard to each other, any proof that there will be no sphere of exercise for those virtues. Much less, if that were possible, is our ignorance any proof that there will be no occasion for that frame of mind or character which is formed by the daily practice of those particular virtues here, and which is a result from it. This at least must be owned in general, that as the government established in the universe is moral, the character of virtue and piety must, in some way or other, be the condition of our happiness, or the qualification for it.

9. Now from what is above observed concerning our natural power of habits, it is easy to see that we are *capable* of moral improvement by discipline. And how

greatly we *want* it, need not be proved to any one who is acquainted with the great wickedness of mankind, or even with those imperfections which the best are conscious of. But it is not, perhaps, distinctly attended to by every one, that the occasion which human creatures have for discipline to improve in them this character of virtue and piety, is to be traced up higher than to excess in the passions by indulgence and habits of vice. Mankind, and perhaps all finite creatures, from the very constitution of their nature, before habits of virtue, are deficient, and in danger of deviating from what is right, and therefore stand in need of virtuous habits for a security against this danger.* For, together with the general principle of moral understanding, we have in our inward frame various affections toward particular external objects. These affections are naturally, and of right, subject to the government of the moral principle as to the occasions on which they may be gratified; as to the times, degrees, and manner, in which the objects of them may be pursued; but then the principle of virtue can neither excite them nor prevent their being excited. On the

* [It is from this point of view that Aristotle determines οὐτ' ἄρα φύσει οὔτε παρὰ φύσιν ἐγγίνονται αἱ ἀρεταί, ἀλλὰ πεφυκόσι μὲν ἡμῖν δέξασθαι αὐτὰς, τελειομένοις δὲ διὰ τοῦ ἔθους.—*Ethic. Nicom.*, iii, i. "In order to understand this, it is to be observed that virtue may be considered either as the quality of an action or as the quality of a person. Considered as the quality of an action, it consists, even according to Aristotle, in the reasonable moderation of the affection from which the action proceeds, whether this moderation be habitual to the person or not. Considered as the quality of the person, it consists in the habit of this reasonable moderation, in its having become the customary and usual disposition of the mind. . . . If a single action was sufficient to stamp the character of any virtue upon the person who performed it, the most worthless of mankind might lay claim to all the virtues; since there is no man who has not, upon some occasions, acted with prudence, justice, temperance, and fortitude."—Smith's *Moral Sent.*, part vi, sec. 2.—F.]

contrary, they are naturally felt, when the objects of them are present to the mind, not only before all consideration whether they can be obtained by lawful means, but after it is found they cannot. For the natural objects of affection continue so; the necessaries, conveniences, and pleasures of life remain naturally desirable, though they cannot be obtained innocently; nay, though they cannot possibly be obtained at all. And when the objects of any affection whatever cannot be obtained without unlawful means, but may be obtained by them, such affection, though its being excited, and its continuing some time in the mind, be as innocent as it is natural and necessary, yet cannot but be conceived to have a tendency to incline persons to venture upon such unlawful means, and therefore must be conceived as putting them in some danger of it.

Now what is the general security against this danger—against their actually deviating from right?

As the danger is, so, also, must the security be from within, from the practical principle of virtue.* And the strengthening or improving this principle, considered as practical or as a principle of action, will lessen the danger or increase the security against it. And this moral principle is capable of im-

Virtuous habits a security against vice.

* It may be thought, that a sense of interest would as effectually restrain creatures from doing wrong. But if by a *sense of interest* is meant a speculative conviction or belief that such and such indulgence would occasion them greater uneasiness, upon the whole, than satisfaction, it is contrary to present experience to say that this sense of interest is sufficient to restrain them from thus indulging themselves. And if by a *sense of interest* is meant a practical regard to what is upon the whole our happiness, this is not only coincident with the principle of virtue or moral rectitude, but is a part of the idea itself. And, it is evident, this reasonable self-love wants to be improved as really as any principle in our nature. For we daily see it overmatched, not only by the more boisterous passions, but by curiosity, shame, love of imitation—by any thing, even indolence—especially if the interest, the temporal interest, suppose, which is the

provement, by proper discipline and exercise; by recollecting the practical impressions which example and experience have made upon us; and, instead of following humor and mere inclination, by continually attending to the equity and right of the case, in whatever we are engaged, be it in greater or less matters, and accustoming ourselves always to act upon it, as being itself the just and natural motive of action; and as this moral course of behavior must necessarily, under divine government, be our final interest. *Thus the principle of virtue, improved into a habit,* of which improvement we are thus capable, will plainly be, in proportion to the strength of it, a security against the danger which finite creatures are in, from the very nature of propension or particular affections.* This way of putting the matter supposes particular affections to remain in a future state, which it is scarce possible to avoid supposing. And if they do, we clearly see that acquired habits of virtue and self-government may be necessary for the regulation of them. However, though we were not distinctly to take in this supposition, but to speak only in general, the thing really comes to the same. For habits of virtue thus acquired by discipline are improvement in virtue; and improvement in virtue must be advancement in happiness, if the government of the universe be moral.

10. From these things we may observe, and it will end of such self-love, be at a distance. So greatly are profligate men mistaken when they affirm they are wholly governed by interestedness and self-love; and so little cause is there for moralists to disclaim this principle. (See pp. 116, 117.)

* [We do not understand that under the economy of grace the law of habit has been repealed, or any other indeed of those laws of our mental nature on which Butler proceeds in the reasoning of this chapter. Whatever the pretensions and expedients of the Gospel might be for the perfecting of our meetness for heaven, they supersede not the efficacy of that process under which, by reason of use, the senses are exercised to discern between good and evil.—CHALMERS.]

further show this our natural and original need of being improved by discipline, how it comes to pass that creatures made upright, fall; and that those who preserve their uprightness, by so doing raise themselves to a more secure state of virtue. To say that the former is accounted for by the nature of liberty, is to say no more than that an event's actually happening is accounted for by a mere possibility of its happening. But it seems distinctly conceivable from the very nature of particular affections or propensions. For suppose creatures intended for such a particular state of life, for which such propensions were necessary; suppose them endued with such propensions, together with moral understanding, as well including a practical sense of virtue as a speculative perception of it; and that all these several principles, both natural and moral, forming an inward constitution of mind, were in the most exact proportion possible; that is, in a proportion the most exactly adapted to their intended state of life; such creatures would be made upright, or finitely perfect. Now particular propensions, from their very nature, must be felt, the objects of them being present, though they cannot be gratified at all, or not with the allowance of the moral principle. But if they can be gratified without its allowance, or by contradicting it, then they must be conceived to have some tendency, in how low a degree soever—yet some tendency—to induce persons to such forbidden gratification. This tendency in some one particular propension may be increased, by the greater frequency of occasions naturally exciting it, than of occasions exciting others. The least voluntary indulgence in forbidden circumstances, though but in thought, will increase this wrong tendency, and may increase it further, till, peculiar conjunctures perhaps conspiring, it becomes effect; and danger of deviating from right, ends in actual de-

How upright
beings fall.

The mode il-
lustrated.

viation from it: a danger necessarily arising from the very nature of propension, and which therefore could not have been prevented though it might have been escaped, or got innocently through. The case would be, as if we were to suppose a straight path marked out for a person, in which such a degree of attention would keep him steady; but if he would not attend in this degree, any one of a thousand objects catching his eye might lead him out of it. Now it is impossible to say how much even the first full overt act of irregularity might disorder the inward constitution, unsettle the adjustments, and alter the proportions which formed it, and in which the uprightness of its make consisted. But repetition of irregularities would produce habits: and thus the constitution would be spoiled, and creatures made upright become corrupt and depraved in their settled character, proportionably to their repeated irregularities in occasional acts. But, on the contrary, these creatures might have improved and raised themselves to a higher and more secure state of virtue by the contrary behavior, by steadily following the moral principle, supposed to be one part of their nature, and thus withstanding that unavoidable danger of defection, which necessarily arose from propension, the other part of it. For by thus preserving their integrity for some time their danger would lessen, since propensions, by being inured to submit, would do it more easily and of course; and their security against this lessening danger would increase, since the moral principle would gain additional strength by exercise; both which things are implied in the notion of virtuous habits.*

How such beings might rise to a higher state.

* [Butler's statement how creatures made upright fall, and how they are restored to righteousness, has been severely criticised. In it, Chalmers says, we see the meagerness of his Christianity. It is alleged that in this chapter man's fall is represented as gradual, like

Thus, then, vicious indulgence is not only criminal in itself, but also depraves the inward constitution and character. And virtuous self-government is not only right in itself, but also improves the inward constitution or character; and may improve it to such a degree, that though we should suppose it impossible for particular affections to be absolutely coincident with the moral principle, and consequently should allow that such creatures as have been above supposed would forever remain defectible; yet their danger of actually deviating from right may be almost infinitely lessened, and they fully fortified against what remains of it; if that may be called danger against which there is an adequate effectual security. But still, this their higher perfection may continue to consist in habits of virtue formed in a state of discipline, and this their more complete security remain to proceed from them.

And thus it is plainly conceivable, that creatures with the departure, by slight variations, from a straight line, and that in his recovery from his lost condition nothing more is required than a strenuous, earnest exertion to change his course, to break the power of old habits and form new ones. In the Scripture the fall of man is represented as sudden and complete. By a single act man passed into a state of ruin. His recovery by his own effort is impossible. Gracious ability must be imparted by the Holy Spirit. This is ever and freely offered, and under its influence, not gradually, but by one act, man becomes reconciled to God and justified through the merit of Christ.

In the day man ate the forbidden fruit he "died," but in the moment he believed on Christ he passed from death into life and justification. The statement of Butler might have been better guarded against misapprehension, but we do not see that it contradicts the Bible doctrine. On any theory the first act must have been sudden, and Butler says it is impossible to tell how much disorder and evil might result from it; what he says about the formation and power of habit cannot be denied. The fall and consequent depravity is not the lowest condition possible to man, nor is the state of justification the highest. There are degrees of guilt and goodness that under man's circumstances depend on his efforts and habits.]

out blemish as they came out of the hands of God, may be in danger of going wrong, and so may stand in need of the security of virtuous habits, additional to the moral principle wrought into their natures by him. That which is the ground of their danger, or their want of security, may be considered as a deficiency in them, to which virtuous habits are the natural supply. And as they are naturally capable of being raised and improved by discipline, it may be a thing fit and requisite that they should be placed in circumstances with an eye to it; in circumstances peculiarly fitted to be, to them, a state of discipline for their improvement in virtue.

11. But how much more strongly must this hold with respect to those who have corrupted their natures, are fallen from their original rectitude, and whose passions are become excessive by repeated violations of their inward constitution? Upright creatures may want to be improved; depraved creatures want to be renewed. Education and discipline, which may be in all degrees and sorts of gentleness and of severity, is expedient for those, but must be absolutely necessary for these. For these, discipline, of the severer sort, too, and in the higher degrees of it, must be necessary, in order to wear out vicious habits; to recover their primitive strength of self-government, which indulgence must have weakened; to repair as well as raise into a habit, the moral principle, in order to their arriving at a secure state of virtuous happiness.

12. Now whoever will consider the thing, may clearly see that the present world is *peculiarly fit* to be a state of discipline for this purpose to such as will set themselves to amend and improve. For, the various temptations with which we are surrounded—our experience of the deceits of wick-

Perfect beings

Greater need
of improvement
in fallen beings.

This world pe-
culiarly fitted for
discipline.

edness, having been in many instances led wrong ourselves—the great viciousness of the world—the infinite disorders consequent upon it—our being made acquainted with pain and sorrow, either from our own feeling of it, or from the sight of it in others—these things, though some of them may, indeed, produce wrong effects upon our minds, yet when duly reflected upon have all of them a direct tendency to bring us to a settled moderation and reasonableness of temper; the contrary both to thoughtless levity, and also to that unrestrained self-will and violent bent to follow present inclination, which may be observed in undisciplined minds.

Such experience, as the present state affords of the frailty of our nature, of the boundless extravagance of ungoverned passion, of the power which an infinite Being has over us by the various capacities of misery which he has given us; in short, that kind and degree of experience which the present state affords us, that the constitution of nature is such as to admit the possibility, the danger, and the actual event of creatures losing their innocence and happiness, and becoming vicious and wretched; hath a tendency to give us a practical sense of things very different from a mere speculative knowledge that we are liable to vice and capable of misery. And who knows whether the security of creatures in the highest and most settled state of perfection may not, in part, arise from their having had such a sense of things as this formed and habitually fixed within them, in some state of probation? And passing through the present world with that moral attention which is necessary to the acting a right part in it, may leave everlasting impressions of this sort upon our minds.

But to be a little more distinct: allurements to what is wrong; difficulties in the discharge of our duty; our not being able to act a uniform right part without some thought and care;

This fitness seen in the efforts to practice virtue.

and the opportunities which we have, or imagine we have, of avoiding what we dislike or obtaining what we desire, by unlawful means, when we either cannot do it at all, or at least not so easily, by lawful ones; these things, that is, the snares and temptations of vice, are what render the present world peculiarly fit to be a state of discipline to those who will preserve their integrity: because they render being upon our guard, resolution, and the denial of our passions, necessary in order to that end. And the exercise of such particular recollection, intention of mind, and self-government, in the practice of virtue, has, from the make of our nature, a peculiar tendency to form habits of virtue, as implying not only a real, but also a more continued and a more intense exercise of the virtuous principle; or a more constant and a stronger effort of virtue exerted into act.

Illustration. Thus suppose a person to know himself to be in particular danger, for some time, of doing any thing wrong, which yet he fully resolves not to do; continued recollection, and keeping upon his guard, in order to make good his resolution, is a *continued* exerting of that act of virtue in a *high degree*, which need have been, and perhaps would have been, only *instantaneous* and *weak* had the temptation been so.

It is, indeed, ridiculous to assert that self-denial is essential to virtue and piety; but it would have been nearer the truth, though not strictly the truth itself, to have said that it is essential to discipline and improvement. For though actions materially virtuous, which have no sort of difficulty, but are perfectly agreeable to our particular inclinations, may possibly be done only from these particular inclinations, and so may not be any exercise of the principle of virtue, that is, not be virtuous actions at all; yet, on the contrary, they may be an exercise of that principle, and, when they are, they have a tendency to form and fix the

Use of self-denial.

habit of virtue. But when the exercise of the virtuous principle is more continued, oftener repeated, and more intense, as it must be in circumstances of danger, temptation, and difficulty, of any kind and in any degree, this tendency is increased proportionably, and a more confirmed habit is the consequence.

13. This undoubtedly holds to a certain length, but how far it may hold I know not. Neither our intellectual powers nor our bodily strength can be improved beyond such a degree; and both may be overwrought. Possibly there May the moral powers be over-tasked? may be somewhat analogous to this with respect to the moral character, which is scarce worth considering. And I mention it only, lest it should come into some person's thoughts, not as an exception to the foregoing observations, which perhaps it is, but as a confutation of them, which it is not. And there may be several other exceptions. Observations of this kind cannot be supposed to hold minutely, and in every case. It is enough that they hold in general. And these plainly hold so far, as that from them may be seen distinctly, which is all that is intended by them, that *the present world is peculiarly fit to be a state of discipline for our improvement in virtue and piety*; in the same sense as some sciences, by requiring and engaging the attention, not to be sure of such persons as will not, but of such as will, set themselves to them, are fit to form the mind to habits of attention.

14. Indeed the present state is so far from proving, in event, a discipline of virtue to the generality of men, that on the contrary they seem to make it a discipline of vice. And the viciousness of the world is, in different ways, the great tempta- The vice of the world a discipline to virtue. tion which renders it a state of virtuous discipline, in the degree it is to good men. The whole end, and the whole occasion, of mankind's being placed in such a

state as the present, is not pretended to be accounted for. That which appears amid the general corruption is, that there are some persons who, having within them the principle of amendment and recovery, attend to and follow the notices of virtue and religion, be they more clear or more obscure, which are afforded them; and that the present world is not only an exercise of virtue in these persons, but an exercise of it in ways and degrees peculiarly apt to improve it; apt to improve it, in some respects, even beyond what would be by the exercise of it required in a perfectly virtuous society, or in a society of equally imperfect virtue with themselves. But that the present world does not actually become a

The failure of discipline does not disprove the intention. Analogy from seeds, etc.

state of moral discipline to many, even to the generality, that is, that they do not improve or grow better in it, cannot be urged as a proof that it was not intended for moral discipline by any who at all observe the analogy of nature. For of the numerous seeds of vegetables and bodies of animals which are adapted and put in the way to improve to such a point or state of natural maturity and perfection, we do not see, perhaps, that one in a million actually does. Far the greater part of them decay before they are improved to it, and appear to be absolutely destroyed. Yet no one, who does not deny all final causes, will deny that those seeds and bodies which do attain to that point of maturity and perfection, answer the end for which they were really designed by nature; and therefore that nature designed them for such perfection. And I cannot forbear adding, though it is not to the present purpose, that the *appearance* of such an amazing *waste* in nature, with respect to these seeds and bodies, by foreign causes, is to us as unaccountable as, what is much more terrible, the present and future ruin of so many moral agents by themselves, that is, by vice.

15. Against this whole notion of moral discipline it may be objected, in another way, that so far as a course of behavior materially virtuous proceeds from hope and fear, so far it is only a discipline and strengthening of self-love.* But doing what God commands, because he commands it, is obedience, though it proceeds from hope or fear. And a course of such obedience will form habits of it: and a constant regard to veracity, justice, and charity, may form distinct habits of these particular virtues, and will certainly form habits of self-government, and of denying our inclinations, whenever veracity, justice, or charity requires it. Nor is there any foundation for this great nicety, with which some affect to distinguish in this case, in order to depreciate all religion proceeding from hope or fear. For veracity, justice, and charity, regard to God's authority, and to our own chief interest, are not only all three coincident, but each of them is, in itself, a just and natural motive or principle of action. And he who begins a good life from any one of them, and perseveres in it, as he is already in some degree, so he cannot fail of becoming more and more of that character which is correspondent to the constitution of nature as moral, and to the relation which God stands in to us as moral governor of it; nor, consequently, can he fail of obtaining that happiness which this constitution and relation necessarily suppose connected with that character.

16. These several observations concerning the active principle of virtue, and obedience of God's commands, are applicable to passive submission or resignation to his will; which is another essential part of a right character, connected with the former, and very much in our power to form

Ob. Such discipline is only of self-love.

Ob. Passive virtues considered —not needed in a future state.

* [The reference here is no doubt to Lord Shaftesbury's "Inquiry Concerning Virtue," part iii, § 3.—F.]

ourselves to. It may be imagined that nothing but afflictions can give occasion for or require this virtue; that it can have no respect to, nor be any way necessary to qualify for a state of perfect happiness; but it is not experience which can make us think thus. Prosperity itself, while any thing supposed desirable is not ours, begets extravagant and unbounded thoughts. Imagination is altogether as much a source of discontent as any thing in our external condition. It is indeed true that there can be no scope for patience when sorrow shall be no more; but there may be need of a temper of mind, which shall have been formed by patience. For though self-love, considered merely as an active principle leading us to pursue our chief interest, cannot but be uniformly coincident with the principle of obedience to God's commands, our interest being rightly understood, because this obedience and the pursuit of our own chief interest must be in every case one and the same thing; yet it may be questioned whether self-love, considered merely as the desire of our own interest or happiness, can, from its nature, be thus absolutely and uniformly coincident with the will of God, any more than particular affections can, (page 122;) coincident in such sort as not to be liable to be excited upon occasions and in degrees impossible to be gratified consistently with the constitution of things, or the divine appointments. So that habits of resignation may, upon this account, be requisite for all creatures; *habits*, I say, which signify what is formed by use. However, in general, it is obvious that both self-love and particular affections in human creatures, considered only as passive feelings, distort and rend the mind, and therefore stand in need of discipline. Now denial of those particular affections, in a course of active virtue and obedience to God's will, has a tendency to moderate them, and seems also to have a tendency to habituate the mind to be easy and

satisfied with that degree of happiness which is allotted us, that is, to moderate self-love.* But the proper discipline for resignation is affliction. For a right behavior under that trial, recollecting ourselves so as to consider it in the view in which religion teaches us to consider it, as from the hand of God—receiving it as what he appoints, or thinks proper to permit, in his world, and under his government—this will habituate the mind to a dutiful submission; and such submission, together with the active principle of obedience, make up the temper and character in us which answers to his sovereignty, and which absolutely belongs to the condition of our being as dependent creatures. Nor can it be said that this is only breaking the mind to a submission to mere power; for mere power may be accidental, and precarious, and usurped; but it is forming within ourselves the temper of resignation to his rightful authority, who is, by nature, supreme over all.

16. Upon the whole, such a character and such qualifications are necessary for a mature state of life in the present world, as nature alone does in nowise bestow, but has put it upon us in great part to acquire, in our progress from one stage of life to another from childhood

* [*Disengagement* is absolutely necessary to enjoyment; and a person may have so steady and fixed an eye upon his own interest, whatever he places it in, as may *hinder* him from *attending* to many gratifications within his reach, which others have their minds *free* and *open* to. Over fondness for a child is not generally thought to be for its advantage; and if there be any guess to be made from appearances, surely the character we call selfish is not the most promising for happiness. Such a temper may plainly be, and exert itself in a degree and manner which may give unnecessary and useless solicitude and anxiety—in a degree or manner which may prevent obtaining the means and materials of enjoyment, as well as the making use of them. Immoderate self-love does very ill consult its own interest; and how much soever a paradox it may appear, it is certainly true that, even from self-love, we should endeavor to get over all inordinate regard to and consideration of ourselves.”—*Sermons*, xi, p. 129.]

to mature age; put it upon us to acquire them, by giving us capacities of doing it, and by placing us, in the beginning of life, in a condition fit for it. And this is a general analogy to our condition in the present world, as in a state of moral discipline for another. It is in

Ob. Trouble and danger might have been avoided.

vain, then, to object against the credibility of the present life's being intended for this purposes, that all the trouble and the danger unavoidably accompanying such discipline might have been saved us by our being made at once the creatures and the characters *which we were to be*. For we experience that *what we were to be*, was to be the effect of *what we would do*; and that the general conduct of nature is, not to save us trouble or danger, but to make us capable of going through them, and to put it upon us to do so. Acquirements of our own, experience and habits, are the *natural* supply to our deficiencies, and security against our dangers; since it is as plainly natural to set ourselves to acquire the qualifications, as the external things which we stand in need of. In particular, it is as plainly a general law of nature that we should, with regard to our temporal interest, form and cultivate practical principles within us, by attention, use, and discipline, as any thing whatever is a natural law; chiefly in the beginning of life, but also throughout the whole course of it. And the alternative is left to our choice, either to improve ourselves and better our condition, or, in default of such improvement, to remain deficient and wretched. It is therefore perfectly credible, from the analogy of nature, that the same may be our case, with respect to the happiness of a future state and the qualifications necessary for it.

17. There is a third thing which may seem implied in

This world a probation for the display of character.

the present world's being a state of probation, that it is a theater of action for the manifestation of persons' characters, with

respect to a future one ; not, to be sure, to an all-knowing being, but to his creation, or part of it. This may, perhaps, be only a consequence of our being in a state of probation in the other senses. However, it is not impossible that men's showing and making manifest what is in their heart, what their real character is, may have respect to a future life in ways and manners which we are not acquainted with ; particularly it may be a means, for the Author of nature does not appear to do any thing without means, of their being disposed of suitably to their characters, and of its being known to the creation, by way of example, that they are thus disposed of. But not to enter upon any conjectural account of this, one may just mention that the manifestation of persons' characters contributes very much, in various ways, to the carrying on a great part of that general course of nature respecting mankind which comes under our observation at present. I shall only add, that probation, in both these senses, as well as in that treated of in the foregoing chapter, is implied in moral government ; since by persons' behavior under it, their characters cannot but be manifested, and if they behave well, improved.

CHAPTER VI.

OF THE OPINION OF NECESSITY,* CONSIDERED AS
INFLUENCING PRACTICE.

THROUGHOUT the foregoing Treatise it appears that the condition of mankind, considered as inhabitants of this world only, and under the government of God which we experience, is greatly analogous to our condition as designed for another world, or under that further government which religion teaches us. If, therefore, any assert, as a fatalist must, that the opinion of universal necessity is reconcilable with the former, there immediately arises a question in the way of analogy; whether he must not also own it to be reconcilable with the latter, that is, with the system of religion itself and the proof of it. The reader then will observe, that the question now before us is not absolute, whether the opinion of fate be reconcilable with religion; but hypothetical, whether, upon supposition of its being reconcilable with the constitution of nature, it be not reconcilable with religion also? or what pretense a fatalist—not other persons, but a fatalist—has to conclude, from his opinion, that there can be no such thing as religion? And as the puzzle and obscurity which must unavoidably arise from arguing

* [Necessity is an ambiguous word. There is, 1. Logical necessity, which implies that a consequent follows from a premise. 2. Moral necessity, which requires means in order to reach ends. 3. Physical necessity, which implies that in the material world consequences inevitably and by compulsion follow antecedents. 4. Metaphysical necessity, which belongs to God as existing eternally and immutably. The word is also used in other senses.]

upon so absurd a supposition as that of universal necessity will, I fear, easily be seen, it will, I hope, as easily be excused.

But since it has been all along taken for granted, as a thing proved, that there is an intelligent author of nature, or natural governor of the world; and since an objection may be made against the proof of this, from the opinion of universal necessity, as it may be supposed that such necessity will itself account for the origin and preservation of all things, it is requisite that this objection be distinctly answered; or that it be shown that a fatality supposed consistent with what we certainly experience, does not destroy the proof of an intelligent Author and governor of nature, before we proceed to consider, whether it destroys the proof of a moral governor of it, or of our being in a state of religion.

Necessity destroys not the proof of an intelligent author of nature.

2. Now, when it is said by a fatalist that the whole constitution of nature and the actions of men, that every thing, and every mode and circumstance of every thing, is necessary, and could not possibly have been otherwise, it is to be observed, that this necessity does not exclude deliberation, choice, preference, and acting from certain principles, and to certain ends; because all this is matter of undoubted experience, acknowledged by all, and what every man may, every moment, be conscious of. And from hence it follows, that necessity, alone and of itself, is in no sort an account of the constitution of nature, and how things came *to be* and *to continue* as they are; but only an account of this *circumstance* relating to their origin and continuance, that they could not have been otherwise than they are and have been. The assertion, that every thing is by necessity of nature, is not an answer to the question, Whether the world came into being as it is, by an intelligent agent forming it thus, or not; but to quite

Does not exclude design.

another question, Whether it came into being as it is, in that way and manner which we call *necessarily*, or in that way and manner which we call *freely*. For suppose, further, that one who was a fatalist, and one who kept to his natural sense of things and believed himself a free agent were disputing together, and vindicating their respective opinions, and they should happen to instance* in a house, they would agree that it was built by an architect. Their difference concerning necessity and freedom would occasion no difference of judgment concerning this, but only concerning another matter, whether the architect built it necessarily or freely.

Suppose, then, they should proceed to inquire concerning the constitution of nature: in a lax way of speaking, one of them might say it was by necessity, and the other by freedom; but if they had any meaning to their words, as the latter must mean a free agent so the former must at length be reduced to mean an agent, whether he would say one or more, acting by necessity; for abstract notions can do nothing. Indeed, we ascribe to God a necessary existence, uncaused by any agent. For we find within ourselves the idea of infinity, that is, immensity and eternity, impossible, even in imagination, to be removed out of being. We seem to discern intuitively that there must, and cannot but be, somewhat external to ourselves answering this idea, or the archetype of it. And from hence (for *this abstract*, as much as any other, implies a *concrete*) we conclude that there is, and cannot but be, an infinite and immense eternal Being existing, prior to all design contributing to his existence, and exclusive of it.† And from the scantiness of lan-

* [Take a house as an instance or illustration.]

† [This argument is taken by Butler from Dr. Clarke. Like all of Clarke's attempted demonstrations of the being of God, it has been closely scrutinized, and its validity questioned. See, for instance, Duke's Analysis of Butler's Analogy, Appendix, p. 83.]

guage, a manner of speaking has been introduced, that necessity is the foundation, the reason, the account of the existence of God. But it is not alleged, nor can it be at all intended, that *every thing* exists as it does by this kind of necessity, a necessity antecedent in nature to design; it cannot, I say, be meant that every thing exists as it does by this kind of necessity upon several accounts, and particularly, because it is admitted that design in the actions of men contributes to many alterations in nature. For if any deny this, I shall not pretend to reason with them.

From these things it follows, first, That when a fatalist asserts that every thing is *by necessity*, he must mean, *by an agent acting necessarily*: he must, I say, mean this; for I am very sensible he would not choose to mean it: and, secondly, That the necessity by which such an agent is supposed to act, does not exclude intelligence and design. So that were the system of fatality admitted, it would just as much account for the formation of the world as for the structure of a house, and no more. Necessity as much requires and supposes a necessary agent as freedom requires and supposes a free agent to be the former of the world. And the appearances of *design* and of *final causes* in the constitution of nature, as really prove this acting agent to be an *intelligent designer*, or to act from choice, upon the scheme of necessity, supposed possible, as upon that of freedom.

3. It appearing thus, that the notion of necessity does not destroy the proof that there is an intelligent author of nature and natural governor of the world, the present question, which the analogy before-mentioned (page 152) suggests, and which, I think, it will answer, is this: Whether the opinion of necessity, supposed consistent with possibility, with the constitution of the world, and the natural government which we experience exercised over it, destroys all rea-

Conclusions.
Necessity destroys not the proof of religion.

sonable ground of belief that we are in a state of religion; or whether that opinion be reconcilable with religion, with the system and the proof of it.

Suppose, then, a fatalist to educate any one from his youth up in his own principles; that the child should

Impracticable in education, etc. reason upon them, and conclude that since he cannot possibly behave otherwise than he does he is not a subject of blame or commendation, nor can deserve to be rewarded or punished; imagine him to eradicate the very perceptions of blame and commendation out of his mind by means of this system; to form his temper, and character, and behavior to it; and from it to judge of the treatment he was to expect, say, from reasonable men, upon his coming abroad into the world; as the fatalist judges from this system what he is to expect from the author of nature, and with regard to a future state. I cannot forbear stopping here to ask, whether any one of common sense would think fit that a child should be put upon these speculations and be left to apply them to practice? And a man has little pretense to reason who is not sensible that we are all children in speculations of this kind. However, the child would doubtless be highly delighted to find himself freed from the restraints of fear and shame with which his playfellows were fettered and embarrassed, and highly conceited in his superior knowledge, so far beyond his years. But conceit and vanity would be the least bad part of the influence which these principles must have, when thus reasoned and acted upon, during the course of his education. He must either be allowed to go on, and be the plague of all about him, and himself too, even to his own destruction, or else correction must be continually made use of to supply the want of those natural perceptions of blame and commendation which we have supposed to be removed, and to give him a practical impression of what he had reasoned himself

out of the belief of, that he was in fact an accountable child, and to be punished for doing what he was forbid. It is therefore, in reality, impossible but that the correction which he must meet with in the course of his education must convince him, that if the scheme he was instructed in were not false, yet, that he reasoned inconclusively upon it, and, somehow or other, misapplied it to practice and common life; as what the fatalist experiences of the conduct of Providence at present ought, in all reason, to convince him, that this scheme is misapplied when applied to the subject of religion. (Page 153.) But supposing the child's temper could remain still formed to the system, and his expectation of the treatment he was to have in the world be regulated by it, so as to expect that no reasonable man would blame or punish him for any thing which he should do, because he could not help doing it; upon this supposition, it is manifest he would, upon his coming abroad into the world, be insupportable to society, and the treatment which he would receive from it would render it so to him; and he could not fail of doing somewhat very soon for which he would be delivered over into the hands of civil justice. And thus, in the end, he would be convinced of the obligations he was under to his wise instructor.

Or suppose this scheme of fatality in any other way applied to practice, such practical application of it will be found equally absurd, equally fallacious, in a practical sense: for instance, that if a man be destined to live such a time, he shall live to it, though he take no care of his own preservation; or if he be destined to die before that time, no care can prevent it; therefore all care about preserving one's life is to be neglected; which is the fallacy instanced in by the ancients. But now, on the contrary, none of these practical absurdities can be drawn from reasoning upon

No absurdity
in freedom.

the supposition that we are free; but all such reasoning, with regard to the common affairs of life, is justified by experience. And therefore, though it were admitted that this opinion of necessity were speculatively true, yet with regard to practice, it is as if it were false, so far as our experience reaches; that is, to the whole of our present life. For the constitution of the present world, and the condition in which we are actually placed, is as if we were free. And it may, perhaps, justly be concluded that since the whole process of action, through every step of it, suspense, deliberation, inclining one way, determining, and at last doing as we determine, is as if we were free, therefore we are so.* But the thing here insisted upon is, that under the present natural government of the world we find we are treated and dealt with as if we were free, prior to all consideration

* [Compare Berkeley's Minute Philosopher, dial. vii, § 20:—

“*Euphr.* Tell me, Alciphron, do you think it involves a contradiction that God should make man free?

“*Alc.* I do not.

“*Euphr.* It is then possible that there may be such a thing?

“*Alc.* This I do not deny.

“*Euphr.* Would not such a one think that he acted, and condemn himself for some actions, and approve himself for others, etc.? Tell me, now, what other characters of your supposed free agent may not be found in man?”

So Clarke, Remarks on Collins' Inquiry, p. 24: “As to that which this gentleman calls the fourth (but which is, indeed, the only) action of man, namely, DOING *as we will*, or actually exerting this self-moving faculty. Of this I say, as before, that since, in all cases, it does now, by experience, seem to us to be free, that is, seems to us to be really a self-moving power, exactly in the same manner as it would do upon supposition of our being actually free agents; the bare physical possibility of our being so framed by the Author of nature, as to be unavoidably deceived in this matter by every experience of every action we perform, is no more any just ground to doubt the truth of our liberty, than the bare natural possibility of our being all our life-time, as in a dream, deceived in our belief of the existence of the material world, is any just ground to doubt of the reality of its existence.”—F.]

whether we are or not. Were this opinion, therefore, of necessity, admitted to be ever so true, yet such is in fact our condition and the natural course of things, that whenever we apply it to life and practice, this application of it always mis-

Necessity misleads with reference to the present and future.

leads us, and cannot but mislead us, in a most dreadful manner, with regard to our present interest. And how can people think themselves so very secure, then, that the same application of the same opinion may not mislead them also, in some analogous manner, with respect to a future, a more general, and more important interest? For religion being a practical subject, and the analogy of nature showing us that we have not faculties to apply this opinion, were it a true one, to practical subjects; whenever we do apply it to the subject of religion, and thence conclude that we are free from its obligations, it is plain this conclusion cannot be depended upon. There will still remain just reason to think, whatever appearances are, that we deceive ourselves; in somewhat of a like manner as when people fancy they can draw contradictory conclusions from the idea of infinity.

From these things together, the attentive reader will see it follows, that if upon supposition of freedom the evidence of religion be conclusive, it remains so upon supposition of necessity; be-

Necessity does not destroy religion.

cause the notion of necessity is not applicable to practical subjects; that is, with respect to them is as if it were not true. Nor does this contain any reflection upon reason, but only upon what is unreasonable. For to pretend to act upon reason in opposition to practical principles which the Author of our nature gave us to act upon, and to pretend to apply our reason to subjects with regard to which our own short views, and even our experience, will show us it cannot be depended upon,—and such at best the subject of necessity must be,—this is vanity, conceit, and unreasonableness.

4. But this is not all. For we find within ourselves a will, and are conscious of a character. Now if this in us be reconcilable with fate, it is reconcilable with it in the author of nature. And besides, natural government and final causes imply a character and a will in the governor and designer;* a will concerning the creatures whom he governs. The author of nature, then, being certainly of some character or other, notwithstanding necessity, it is evident this necessity is as reconcilable with the particular character of benevolence, veracity, and justice in him, which attributes are the foundation of religion as with any other character; since we find this necessity no more hinders *men* from being benevolent than cruel; true, than faithless; just, than unjust; or, if the fatalist pleases, what we call unjust. For it is said, indeed, that what, upon supposition of freedom, would be just punishment, upon supposition of necessity becomes manifestly unjust; because it is punishment inflicted for doing that which persons could not avoid doing. As if the necessity which is supposed to destroy the injustice of murder, for instance, would not also destroy the injustice of punishing it. However, as little to the purpose as this objection is in itself, it is very much to the purpose to observe from it how the notions of justice and injustice remain, even while we endeavor to suppose them removed; how they force themselves upon the mind, even while we are making suppositions destructive of them: for there is not, perhaps, a man in the world, but would be ready to make this objection at first thought.

5. But though it is most evident that universal neces-

* By *will* and *character* is meant that which, in speaking of men, we should express, not only by these words, but also by the words *temper, taste, disposition, practical principles; that whole frame of mind from whence we act in one manner rather than another.*

sity, if it be reconcilable with any thing, is reconcilable with that character in the author of nature which is the foundation of religion; "Yet, does it not plainly destroy the proof that he is of that character, and consequently the proof of religion?" By no means. For we find that happiness and misery are not our fate in any such sense as not to be the consequences of our behavior, but that they are the consequences of it, (chap. ii.) We find God exercises the same kind of government over us with that which a father exercises over his children, and a civil magistrate over his subjects. Now whatever becomes of abstract questions concerning liberty and necessity, it evidently appears to us that veracity and justice must be the natural rule and measure of exercising this authority, or government, to a being who can have no competitions, or interfering of interests, with his creatures and his subjects.

6. But as the doctrine of liberty, though we experience its truth, may be perplexed with difficulties which run up into the most abstruse of all speculations, and as the opinion of necessity seems to be the very basis upon which infidelity grounds itself, it may be of some use to offer a more particular proof of the obligations of religion, which may distinctly be shown not to be destroyed by this opinion.

The proof from final causes of an intelligent author of nature is not affected by the opinion of necessity; supposing necessity a thing possible in itself, and reconcilable with the constitution of things, (page 152, etc.) And it is a matter of fact, independent on this or any other speculation, that he governs the world by the method of rewards and punishments, (chap. ii;) and also that he hath given us a moral faculty, by which we distinguish between actions, and approve some as virtuous and of good desert, and disapprove others as vi-

cious and of ill desert, (Dissertation ii.) Now this moral discernment implies, in the notion of it, a rule of action, and a rule of a very peculiar kind; for it carries in it authority and a right of direction; authority in such a sense, as that we cannot depart from it without being self-condemned.* And that the dictates of this moral faculty, which are by nature a rule to us, are moreover the laws of God, laws in a sense including sanctions, may be thus proved. Consciousness of a rule or guide of action, in creatures who are capable of considering it as given them by their maker, not only raises immediately a sense of duty, but also a sense of security in following it, and of danger in deviating from it. A direction of the author of nature, given to creatures capable of looking upon it as such, is plainly a command from him: and a command from him necessarily includes in it, at least, an implicit promise in case of obedience, or threatening in case of disobedience. But then the sense or perception of good and ill desert, (Dissertation ii,) which is contained in the moral discernment, renders the sanction explicit, and makes it appear, as one may say, expressed. For since his method of government is to reward and punish actions, his having annexed to some actions an inseparable sense of good desert, and to others of ill, this surely amounts to declaring upon whom his punishments shall be inflicted, and his rewards be bestowed. For he must have given us this discernment and sense of things, as a presentiment of what is to be hereafter; that is, by way of information beforehand, what we are finally to expect in this world. There is, then, most evident ground to think that the government of God, upon the whole, will be found to correspond to the nature which he has given us, and that in the upshot and issue of things happiness and misery shall, in fact and event, be made to follow virtue

* Sermon ii at the Rolls.

and vice respectively; as he has already, in so peculiar a manner, associated the ideas of them in our minds. And from hence might easily be deduced the obligations of religious worship, were it only to be considered as a means of preserving upon our minds a sense of this moral government of God, and securing our obedience to it; which yet is an extremely imperfect view of that most important duty.

7. Now I say, no objection from necessity can lie against this general proof of religion; none against the proposition reasoned upon, that we have such a moral faculty and discernment; because this is a mere matter of fact, a thing of experience, that human kind is thus constituted: none against the conclusion; because it is immediate, and wholly from this fact. For the conclusion that God will finally reward the righteous and punish the wicked, is not here drawn, from its appearing to us fit* that *he should*, but from its appearing that he has told us *he will*. And this he hath certainly told us in the promise and threatening which, it hath been observed, the notion of

Necessity presents no objection to this general proof.

* However, I am far from intending to deny that the will of God is determined by what is fit, by the right and reason of the case; though one chooses to decline matters of such abstract speculation, and to speak with caution when one does speak of them. But if it be intelligible to say, that *it is fit and reasonable for every one to consult his own happiness*, then *fitness of action, or the right and reason of the case*, is an intelligible manner of speaking. And it seems as inconceivable to suppose God to approve one course of action, or one end, preferably to another, which yet his acting at all from design implies that he does, without supposing somewhat prior in that end to be the ground of the preference; as to suppose him to discern an abstract proposition to be true, without supposing somewhat prior to it to be the ground of the discernment. It doth not, therefore, appear, that moral right is any more relative to perception than abstract truth is; or that it is any more improper to speak of the fitness and rightness of actions and ends, as founded in the nature of things, than to speak of abstract truth as thus founded.

a command implies, and the sense of good and ill desert which he has given us more distinctly expresses. And this reasoning from fact is confirmed, and in some degree even verified, by other facts; by the natural tendencies of virtue and of vice, (page 99;) and by this, that God, in the natural course of his providence, punishes vicious actions as mischievous to society, and also vicious actions as such, in the strictest sense, (page 90, etc.) So that the general proof of religion is unanswerably real, even upon the wild supposition which we are arguing upon.

8. It must likewise be observed further, that natural religion hath, besides this, an external evidence, which the doctrine of necessity, if it could be true, would not affect. For suppose a person, by the observations and reasoning above, or by any other, convinced of the truth of religion; that there is a God, who made the world, who is the moral governor and judge of mankind, and will, upon the whole, deal with every one according to his works; I say, suppose a person convinced of this by reason, but to know nothing at all of antiquity, or the present state of mankind, it would be natural for such a one to be inquisitive, what was the history of this system of doctrine; at what time, and in what manner, it came first into the world; and whether it were believed by any considerable part of it. And were he upon inquiry to find, that a particular person, in a late age, first of all proposed it as a deduction of reason, and that mankind were before wholly ignorant of it; then, though its evidence from reason would remain, there would be no additional probability of its truth from the account of its discovery. But instead of this being the fact of the case, on the contrary, he would find what could not but afford him a very strong confirmation of its truth: *First*, That somewhat of this system, with more or fewer addi-

Does not affect
external evi-
dence.

tions and alterations, hath been professed in all ages and countries of which we have any certain information relating to this matter. *Secondly*, That it is certain historical fact, so far as we can trace things up, that this whole system of belief, that there is one God, the creator and moral governor of the world, and that mankind is in a state of religion, was received in the first ages. And, *Thirdly*, That as there is no hint or intimation in history that this system was first reasoned out; so there is express historical or traditional evidence, as ancient as history, that it was taught first by revelation. Now these things must be allowed to be of great weight. The first of them, general consent, shows this system to be conformable to the common sense of mankind. The second, namely, that religion was believed in the first ages of the world, especially as it does not appear that there were then any superstitious or false additions to it, cannot but be a further confirmation of its truth. For it is a proof of this alternative—either that it came into the world by revelation, or that it is natural, obvious, and forces itself upon the mind. The former of these is the conclusion of learned men. And whoever will consider how unapt for speculation rude and uncultivated minds are, will, perhaps, from hence alone be strongly inclined to believe it the truth. And as it is shown in the second part (chap. ii) of this Treatise, that there is nothing of such peculiar presumption against a revelation in the beginning of the world as there is supposed to be against subsequent ones; a skeptic could not, I think, give any account which would appear more probable, even to himself, of the early pretenses to revelation, than by supposing some real original one from whence they were copied. And the third thing above-mentioned, that there is express historical or traditional evidence, as ancient as history, of the system of religion being taught mankind by revelation; this must be admitted as some

degree of real proof of that it was so taught. For why should not the most ancient tradition be admitted as some additional proof of a fact against which there is no presumption? And this proof is mentioned here, because it has its weight, to show that religion came into the world by revelation, prior to all consideration of the proper authority of any book supposed to contain it; and even prior to all consideration whether the revelation itself be uncorruptly handed down and related, or mixed and darkened with fables. Thus the historical account which we have of the origin of religion, taking in all circumstances, is a real confirmation of its truth, no way affected by the opinion of necessity. And the *external* evidence, even of natural religion, is by no means inconsiderable.

9. But it is carefully to be observed, and ought to be recollected after all proofs of virtue and religion, which are only general, that as speculative reason may be neglected, prejudiced, and deceived, so also may our moral understanding be impaired and perverted, and the dictates of it not impartially attended to. This, indeed, proves nothing against the reality of our speculative or practical faculties of perception; against their being intended by nature to inform us in the theory of things, and instruct us how we are to behave, and what we are to expect, in consequence of our behavior. Yet our liableness, in the degree we are liable, to prejudice and perversion, is a most serious admonition to us to be upon our guard with respect to what is of such consequence as our determinations concerning virtue and religion; and particularly not to take custom, and fashion, and slight notions of honor, or imaginations of present ease, use, and convenience to mankind, for the only moral rule. (Dissertation ii.)

10. The foregoing observations, drawn from the nature of the thing and the history of religion, amount,

when taken together, to a real practical proof of it not to be confuted; such a proof as, considering the infinite importance of the thing, I apprehend would be admitted fully sufficient, in reason, to influence the actions of men who act upon thought and reflection; if it were admitted that there is no proof of the contrary. But it may be said: "There are many probabilities which cannot, indeed, be confuted; that is, shown to be no probabilities, and yet may be overbalanced by greater probabilities on the other side; much more by demonstration. And there is no occasion to object against particular arguments alleged for an opinion, when the opinion itself may be clearly shown to be false, without meddling with such arguments at all, but leaving them just as they are. (Pages 33, 42.) Now the method of government by rewards and punishments, and especially rewarding and punishing good and ill desert, as such, respectively, must go upon supposition that we are free, and not necessary agents.* And it is incredible, that the author of nature should govern us upon a supposition as true, which he knows to be false; and therefore absurd to think he will reward or punish us for our actions hereafter; especially that he will do it under the notion that they are of good or ill desert." Here, then, the matter is brought to a point. And the answer to all this is full, and not to be evaded: that the whole constitution and course of things, the whole analogy of providence shows, beyond possibility of doubt, that the conclusion from this reasoning is false, wherever the fallacy lies. The doctrine of freedom, indeed, clearly shows where—in supposing ourselves necessary, when in truth we are free agents. But upon the supposition of necessity, the fallacy lies in taking for granted that it is incredible necessary agents should be rewarded and punished. But that, somehow

Necessity makes
future rewards
and punish-
ments absurd.

* See note at the end of this chapter.

or other, the conclusion now mentioned is false, is most certain. For it is fact that God does govern even brute creatures by the method of rewards and punishments, in the natural course of things. And men are rewarded and punished for their actions; punished for actions mischievous to society as being so; punished for vicious actions as such, by the natural instrumentality of each other; under the present conduct of Providence. Nay, even the affection of gratitude, and the passion of resentment, and the rewards and punishments following from them, which in general are to be considered as natural, that is, from the author of nature: these rewards and punishments, being naturally* annexed to actions considered as implying good intention and good desert, ill intention and ill desert—these natural rewards and punishments, I say, are as much a contradiction to the conclusion above, and show its falsehood, as a more exact and complete rewarding and punishing of good and ill desert, as such. So that if it be incredible that necessary agents should be thus rewarded and punished, then men are not necessary, but free; since it is matter of fact that they are thus rewarded and punished. But if, on the contrary, which is the supposition we have been arguing upon, it be insisted that men are necessary agents, then there is nothing incredible in the further supposition of necessary agents being thus rewarded and punished, since we ourselves are thus dealt with.

II. From the whole, therefore, it must follow that a necessity supposed possible, and reconcilable with the constitution of things, does in no sort prove that the author of nature will not, nor destroy the proof that he will, finally and upon the whole, in his eternal government, render his creatures happy or miserable, by some means or other, as they behave well or ill. Or, to ex-

* Sermon viii at the Rolls,

press this conclusion in words conformable to the title of the chapter, the analogy of nature shows us, that the opinion of necessity, considered as practical, is false. And if necessity, upon the supposition above-mentioned, doth not destroy the proof of natural religion, it evidently makes no alteration in the proof of revealed.

From these things, likewise, we may learn in what sense to understand that general assertion, that the opinion of necessity is essentially destructive of all religion. *First*, In a practical sense; that by this notion atheistical men pretend to satisfy and encourage themselves in vice, and justify to others their disregard to all religion. And *secondly*, In the strictest sense; that it is a contradiction to the whole constitution of nature, and to what we may every moment experience in ourselves, and so overturns every thing. But by no means is this assertion to be understood, as if necessity, supposing it could possibly be reconciled with the constitution of things, and with what we experience, were not also reconcilable with religion; for upon this supposition it demonstrably is so.

[NOTE.—See page 167.]

[We must carefully distinguish between the religious and the irreligious necessitarians. The question between the maintainers of free will and the religious necessitarians is this: When I blame [or commend] myself for an action, is there necessarily involved in this moral judgment the consciousness that, under all the circumstances preceding the act of volition, I might have *willed* otherwise? The religious necessitarian holds the negative: the maintainer of free will, the affirmative; and the irreligious fatalists so far agree with the latter. They say that the sense or persuasion of liberty is requisite to constitute the sense of responsibility for the past,—requisite as a ground of hope or purpose for the future; that, without it, there would be no room for remorse for what we have done, or forethought for what we should do. But then they maintain, also, that this feeling is delusive; that it may be demonstrated to be a mistake; and that, consequently,

here is a conflict between the rational and the moral principles of our nature. Such a scheme is essentially skeptical, representing the immediate judgments of the mind as contradictory of each other. It represents the mind as pronouncing certain volitions, when viewed under a speculative aspect, to fall under the law of cause and effect; and yet, pronouncing the same volitions, when viewed under a practical aspect, to be exempt from it.

Now, upon such a scheme, as there is a direct conflict between the independent decisions of our own consciousness, it seems clear that we have no more right to pronounce the *moral* judgment delusive than the *rational*. Each would be brought equally into doubt if this statement were correct. But, even upon this statement the obligations of morality will remain. I know not, suppose, which judgment is true and which delusive; but still it is not, and cannot be a matter of indifference which of the two I practically follow; because, if I act in disregard of the moral consciousness, I am, by the very hypothesis, self-condemned. The moral faculty is the practical faculty; and, when the question is, What is to be done? I am in the sphere of action, not of speculation. Reason, in her province, may refuse to register the decree, but she does not, for she cannot, superinduce a contrary practical obligation.

The doctrine of necessity, in its religious form, takes this expression:—that moral acts of the will are determined by their motives (meaning by motive all that is the result of temper, organization, education, and outward circumstances) as certainly as physical consequences are by their antecedents; but that the acts which proceed from certain classes of motives are approved or condemned by the moral faculty, as being the results of certain motives, without the implied intervention of any such consciousness of freedom as the maintainers of the liberty of the will suppose.—F.]

CHAPTER VII.

OF THE GOVERNMENT OF GOD, CONSIDERED AS A SCHEME OR CONSTITUTION, IMPERFECTLY COMPREHENDED.

THOUGH it be, as it cannot but be, acknowledged, that the analogy of nature gives a strong credibility to the general doctrine of religion, and to the several particular things contained in it, considered as so many matters of fact; and likewise that it shows this credibility not to be destroyed by any notions of necessity; yet still, objections may be insisted upon against the wisdom, equity, and goodness of the divine government, implied in the notion of religion, and against the method by which this government is conducted, to which objections analogy can be no direct answer.* For the credibility, or the certain truth, of a matter of fact, does not immediately

The incomprehensibility of the divine government an answer to objections.

* [It is obvious that the *direct* way of showing a certain course of conduct to be wise or good is to show the precise relations which render it so; the goodness of the ends and the suitability of the means.

The *indirect* way is to show that there may be such relations, though we do not see them, coupled with the proof that such a course of conduct is the conduct of one whom we have good reason, on other grounds, to believe wise and good.

Indeed, there have not been wanting persons who have chosen to represent Butler's argument, throughout this analogy, as tending to overthrow the whole proof of God's attributes of justice, wisdom, and goodness, by establishing the matter of fact of our being under a government no way consistent with such attributes. The object of the present chapter is to obviate such a misrepresentation. Compare throughout, part ii, chap. viii.—F.]

prove any thing concerning the wisdom or goodness of it; and analogy can do no more, immediately or directly, than show such and such things to be true or credible considered only as matters of fact. But still, if, upon supposition of a moral constitution of nature and a moral government over it, analogy suggests and makes it credible that this government must be a scheme, system, or constitution of government, as distinguished from a number of single unconnected acts of distributive justice and goodness; and likewise that it must be a scheme so imperfectly comprehended, and of such a sort in other respects, as to afford a direct general answer to all objections against the justice and goodness of it; then analogy is, remotely, of great service in answering those objections, both by suggesting the answer and showing it to be a credible one.

2. Now this, upon inquiry, will be found to be the case.

How shown. For, *first*, Upon supposition that God exercises a moral government over the world, the analogy of his natural government suggests, and makes it credible, that his moral government must be a scheme quite beyond our comprehension; and this affords a general answer to all objections against the justice and goodness of it. And, *secondly*, A more distinct observation of some particular things contained in God's scheme of natural government, the like things being supposed, by analogy, to be contained in his moral government, will further show how little weight is to be laid upon these objections.

I. Upon supposition that God exercises a moral government over the world, the analogy of his natural government suggests and makes it credible that his moral government must be a scheme quite beyond our comprehension: and this affords a general answer to all objections against the justice and goodness of it. It is most obvious, analogy

Natural government an incomprehensible scheme.

renders it highly credible, that upon supposition of a moral government it must be a scheme—for the world, and the whole natural government of it, appears to be so—to be a scheme, system, or constitution, whose parts correspond to each other and to a whole, as really as any work of art, or as any particular model of a civil constitution and government. In this great scheme of the natural world, individuals have various peculiar relations to other individuals of their own species. And whole species are, we find, variously related to other species upon this earth. Nor do we know how much further these kinds of relations may extend. And as there is not any action, or natural event, which we are acquainted with, so single and unconnected as not to have a respect to some other actions and events; so possibly each of them, when it has not an immediate, may yet have a remote, natural relation to other actions and events, much beyond the compass of this present world. There seems, indeed, nothing, from whence we can so much as make a conjecture, whether all creatures, actions, and events, throughout the whole of nature, have relations to each other. But, as it is obvious that all events have future unknown consequences, so, if we trace any, as far as we can go, into what is connected with it, we shall find that if such event were not connected with somewhat further in nature unknown to us, somewhat both past and present, such event could not possibly have been at all. Nor can we give the whole account of any one thing whatever; of all its causes, ends, and necessary adjuncts; those adjuncts, I mean, without which it could not have been. By this most astonishing connection—these reciprocal correspondencies and mutual relations—every thing which we see in the course of nature is actually brought about. And things, seemingly the most insignificant imaginable, are perpetually observed to be necessary conditions to other

things of the greatest importance ; so that any one thing whatever may, for aught we know to the contrary, be a necessary condition to any other.

The natural world then, and natural government of it, being such an incomprehensible scheme,—so incomprehensible that a man must really in the literal sense know nothing at all, who is not sensible of his ignorance in it,—this immediately suggests, and strongly shows the credibility, that the moral world and government of it may be so too.* Indeed, the natural and moral constitution and government of the world are so connected as to make up together but one scheme : and it is highly probable that the first is formed and carried on merely in subserviency to the latter, as the vegetable world is for the animal, and organized bodies for minds. But the thing intended here is, without inquiring how far the administration of the natural world is subordinate to that of the moral, only to observe the credibility, that one should be analogous, or similar to, the other : that therefore every act of divine justice and goodness may be supposed to look much beyond itself and its immediate object ; may have some reference to other parts

* [Maimonides makes use of the following similitude : “ Suppose one of good understanding, whose mother had died soon after he was born, to be brought up on an island, where he saw no human being but his father, nor the female of any beast. This person when grown up inquires how men are produced. He is told that they are bred in the womb of one of the same species, and that while in the womb we are very small and there move and are nourished. The young man inquires whether, when thus in the womb, we did not eat and drink and breathe, as we now do, and is answered, No. Then he denies it and offers demonstration that it could not be so, ‘ For,’ says he, ‘ if either of us cease to breathe our life is gone ; and how could we have lived close shut up in a womb for months ? So if we cease to eat and drink we die, and how could the child live so for months ?’ And thus he satisfies himself that it is *impossible* that man should come into existence in such a manner.”—Stillingfleet’s *Origines Sacræ*, p. 434. London : 1663. Fitzgerald’s ed., p. 181.]

of God's moral administration, and to a general moral plan; and that every circumstance of this his moral government may be adjusted beforehand with a view to the whole of it. Thus for example: the determined length of time, and the degrees and ways in which virtue is to remain in a state of warfare and discipline, and in which wickedness is permitted to have its progress; the times appointed for the execution of justice; the appointed instruments of it; the kinds of rewards and punishments, and the manners of their distribution; all particular instances of divine justice and goodness, and every circumstance of them, may have such respects to each other as to make up altogether a whole, connected and related in all its parts; a scheme, or system, which is as properly one as the natural world is, and of the like kind. And supposing this to be the case, it is most evident that we are not competent judges of this scheme from the small parts of it which come within our view in the present life, and therefore no objections against any of these parts can be insisted upon by reasonable men.*

3. This our ignorance, and the consequences here drawn from it, are universally acknowledged upon other occasions; and

Our ignorance
an answer to ob-
jections.

* [Let us imagine a person to be taken to view some great historical painting, before which hangs a thick curtain. The attendant raises the curtain a few inches. Can the spectator from the unmeaning strip of foreground derive any conception of the figures yet concealed? Much less is he able to criticise their proportions, or beauty, or perspective, or even the design of the artist. The small fragment of a tree, or a flower, or animal, or building may seem quite unmeaning, and even ugly, though the whole would present beauty, fitness, or grandeur. Now the portion of God's dominions within our survey is as utterly insignificant, compared to the universe and its interminable duration, as an atom compared to a planet or a man's age to eternity.—MALCOM.]

[Chalmers has an able note on this subject, using a different illustration taken from Leibnitz.]

though scarce denied, yet are universally forgot when persons come to argue against religion. And it is not, perhaps, easy even for the most reasonable men always to bear in mind the degree of our ignorance, and make due allowances for it. Upon these accounts it may not be useless to go on a little further, in order to show more distinctly how just an answer our ignorance is to objections against the scheme of providence. Suppose, then,

Illustrations. a person boldly to assert that the things complained of—the origin and continuance of evil—might easily have been prevented by repeated interpositions, (pages 178, 179;) interpositions so guarded and circumstanced as would preclude all mischief arising from them; or, if this were impracticable, that a *scheme* of government is itself an imperfection; since more good might have been produced without any scheme, system, or constitution at all, by continued single unrelated acts of distributive justice and goodness; because these would have occasioned no irregularities. And further than this, it is presumed, the objections will not be carried. Yet the answer is obvious; that were these assertions true, still the observations above, concerning our ignorance in the scheme of divine government, and the consequence drawn from it, would hold in great measure, enough to vindicate religion against all objections from the disorders of the present state. Were these assertions true, yet the government of the world might be just and good notwithstanding; for at the most they would infer nothing more than that it might have been better. But, indeed, they are mere arbitrary assertions; no man being sufficiently acquainted with the possibilities of things to bring any proof of them to the lowest degree of probability. For however possible what is asserted may seem, yet many instances may be alleged, in things much less out of our reach, of suppositions absolutely impossible, and reducible to the

most palpable self-contradictions, which not every one by any means would perceive to be such, nor perhaps any one at first sight suspect.

From these things it is easy to see distinctly how our ignorance, as it is the common, is really a satisfactory answer to all objections against the justice and goodness of providence. If a man contemplating any one providential dispensation which had no relation to any others, should object that he discerned in it a disregard to justice, or a deficiency of goodness, nothing would be less an answer to such objection than our ignorance in other parts of providence, or in the possibilities of things no way related to what he was contemplating. But when we know not but the parts objected against may be relative to other parts unknown to us, and when we are unacquainted with what is, in the nature of the thing, practicable in the case before us, then our ignorance is a satisfactory answer; because some unknown relation, or some unknown impossibility, may render what is objected against just and good; nay, good in the highest practical degree.

4. II. And how little weight is to be laid upon such objections will further appear, by a more distinct observation of some particular things contained in the natural government of God, the like to which may be supposed, from analogy, to be contained in his moral government.

Argument from special things.

First. As in the scheme of the natural world no end appears to be accomplished without means, so we find that means very undesirable often conduce to bring about ends in such a measure desirable, as greatly to overbalance the disagreeableness of the means. And in cases where such means are conducive to such ends, it is not reason, but experience, which shows us that they are thus conducive. Experience also shows many means to be conducive and nec-

Means essential to ends.

essary to accomplish ends, which means, before experience, we should have thought would have had even a contrary tendency. Now from these observations relating to the natural scheme of the world, the moral being supposed analogous to it, arises a great credibility that the putting our misery in each other's power to the degree it is, and making men liable to vice to the degree we are, and in general, that those things which are objected against the moral scheme of providence may be, upon the whole, friendly and assistant to virtue, and productive of an overbalance of happiness; that is, the things objected against may be means by which an overbalance of good will, in the end, be found produced. And from the same observations it appears to be no presumption against this that we do not, if indeed we do not, see those means to have any such tendency, or that they seem to us to have a contrary one. Thus those things which we call irregularities may not be so at all, because they may be means of accomplishing wise and good ends more considerable. And it may be added, as above, that they may also be the only means by which these wise and good ends are capable of being accomplished.

After these observations it may be proper to add, in order to obviate an absurd and wicked conclusion from any of them, that though the constitution of our nature, from whence we are capable of vice and misery, may, as it undoubtedly does, contribute to the perfection and happiness of the world; and though the actual permission of evil may be beneficial to it, (that is, it would have been more mischievous, not that a wicked person had himself abstained from his own wickedness, but that any one had forcibly prevented it, than that it was permitted,) yet notwithstanding, it might have been much better for the world if this very evil had never been done. Nay, it is

Sin and misery not in themselves beneficial.

most clearly conceivable that the very commission of wickedness may be beneficial to the world, and yet that it would be infinitely more beneficial for men to refrain from it. For thus, in the wise and good constitution of the natural world, there are disorders which bring their own cures; diseases, which are themselves remedies. Many a man would have died, had it not been for the gout or a fever; yet it would be thought madness to assert, that sickness is a better or more perfect state than health; though the like, with regard to the moral world, has been asserted. But,

5. Secondly, The natural government of the world is carried on by general laws. For this there may be wise and good reasons: the wisest and best, for aught we know to the contrary.

Natural govern-
ment and gen-
eral laws.

And that there are such reasons, is suggested to our thoughts by the analogy of nature; by our being made to experience good ends to be accomplished, as indeed all the good which we enjoy is accomplished, by this means, that the laws by which the world is governed are general. For we have scarce any kind of enjoyments but what we are, in some way or other, instrumental in procuring ourselves, by acting in a manner which we foresee likely to procure them: now this foresight could not be at all, were not the government of the world carried on by general laws. And though, for aught we know to the contrary, every single case may be at length found to have been provided for even by these; yet to prevent all irregularities, or remedy them as they arise, by the wisest and best general laws, may be impossible in the nature of things, as we see it is absolutely impossible in civil government.

But then we are ready to think that the constitution of nature remaining as it is, and the course of things being permitted to go on, in other respects, as it does, there might be interpo-

Special inter-
positions would
cause evil rather
than good.

sitions to prevent irregularities, though they could not have been prevented or remedied by any general laws. And there would indeed be reason to wish—which, by the way, is very different from a right to claim—that all irregularities were prevented or remedied by present interpositions, if these interpositions would have no other effect than this. But it is plain they would have some visible and immediate bad effects; for instance, they would encourage idleness and negligence, and they would render doubtful the natural rule of life, which is ascertained by this very thing, that the course of the world is carried on by general laws. And further, it is certain they would have distant effects, and very great ones, too, by means of the wonderful connections before-mentioned. (Page 173, etc.) So that we cannot so much as guess what would be the whole result of the interpositions desired. It may be said, any bad result might be prevented by further interpositions, whenever there was occasion for them; but this again is talking quite at random, and in the dark. (Pages 175, 176.) Upon the whole, then, we see wise reasons why the course of the world should be carried on by general laws, and good ends accomplished by this means; and, for aught we know, there may be the wisest reasons for it, and the best ends accomplished by it. We have no ground to believe that all irregularities could be remedied as they arise, or could have been precluded by general laws. We find that interpositions would produce evil and prevent good; and for aught we know, they would produce greater evil than they would prevent, and prevent greater good than they would produce. And if this be the case, then the not interposing is so far from being a ground of complaint, that it is an instance of goodness. This is intelligible and sufficient; and going further seems beyond the utmost reach of our faculties.

6. But it may be said, “that after all, these supposed

impossibilities and relations are what we are unacquainted with; and we must judge of religion, as of other things, by what we do know, and look upon the rest as nothing; or however, that the answers here given to what is objected against religion, may equally be made use of to invalidate the proof of it, since their stress lies so very much upon our ignorance." But,

Our ignorance does not invalidate the proof of religion.

7. *First*, Though total ignorance, in any matter, does indeed equally destroy, or rather preclude, all proof concerning it and objections against it, yet partial ignorance does not. For we may in any degree be convinced that a person is of such a character, and consequently will pursue such ends, though we are greatly ignorant what is the proper way of acting in order the most effectually to obtain those ends; and in this case, objections against his manner of acting, as seemingly not conducive to obtain them, might be answered by our ignorance, though the proof that such ends were intended might not at all be invalidated by it.* Thus the proof of religion is a proof of the moral character of

* [The concluding observations of this chapter are all-important for the vindication of Butler's whole argument. They show most satisfactorily how our ignorance may invalidate the objections against, and yet not invalidate the proof of, the thing. The essence of the reasoning here lies in the distinction between our knowledge of God's will and our knowledge of his ways. We have positive proof of his moral character, in virtue of which he wills both the righteousness and the happiness of his creatures; and yet may be utterly in the dark as to the most effectual ways or methods of procedure by which these objects can be most fully accomplished. We may know the end, and yet not know the best means of bringing it about. A total ignorance would place both the objections and the proof alike beyond our reach, but a partial ignorance may not. God's wisdom may be learned by its vestiges within the limits of a mere handbreadth, as in the construction of an eye; yet, after having learned this, we may fail in our judgment of the subserviency of things that go out and far from view, whether widely in space or distantly in time. And so

God, and consequently, that his government is moral, and that every one upon the whole shall receive according to his deserts; a proof that this is the designed end of his government. But we are not competent judges what is the proper way of acting, in order the most effectually to accomplish this end. (Pages 40, 41.) Therefore our ignorance is an answer to objections against the conduct of providence in permitting irregularities, as seeming contradictory to this end. Now, since it is so obvious that our ignorance may be a satisfactory answer to objections against a thing, and yet not affect the proof of it; till it can be shown, it is frivolous to assert, that our ignorance invalidates the proof of religion, as it does the objections against it.

8. *Secondly*, Suppose unknown impossibilities and unknown relations might justly be urged to invalidate the proof of religion, as well as to answer objections against it, and that in consequence of this the proof of it were doubtful, yet still, let the assertion be despised or let it be ridiculed, it is undeniably true that moral obligations would remain certain, though it were not certain what would, upon the whole, be the consequences of observing or violating them. For these obligations arise immediately and necessarily from the judgment of our own mind, unless perverted, which we cannot violate without being self-condemned. And they would be certain, too, from considerations of interest. For though it were doubtful what will be the future consequences of virtue and vice, yet it is, however, credible that they may have those consequences which religion teaches us they will; and this credibility is a certain * obligation, in point of

within the homestead of one's own conscience may we read the lesson of a righteous God, and yet be wholly unable to pronounce on the tendency or effect of those measures which enter into the policy of his universal government.—CHALMERS.]

* Page 35, and part ii, chap. vi.

prudence, to abstain from all wickedness, and to live in the conscientious practice of all that is good. But,

9. *Thirdly*, The answers above given to the objections against religion cannot equally be made use of to invalidate the proof of it. For upon the supposition that God exercises a moral government over the world, analogy does most strongly lead us to conclude that this moral government must be a scheme, or constitution, beyond our comprehension. And a thousand particular analogies show us, that parts of such a scheme, from their relation to other parts, may conduce to accomplish ends which we should have thought they had no tendency at all to accomplish; nay, ends which, before experience, we should have thought such parts were contradictory to, and had a tendency to prevent. And therefore all these analogies show, that the way of arguing made use of in objecting against religion is delusive; because they show it is not at all incredible that, could we comprehend the whole, we should find the permission of the disorders objected against to be consistent with justice and goodness, and even to be instances of them. Now this is not applicable to the proof of religion, as it is to the objections against it;* and therefore cannot invalidate that proof, as it does these objections.

10. *Lastly*, From the observations now made, it is easy to see that the answers above given to the objections against providence, though in a general way of speaking they may be said to be taken from our ignorance, yet are by no means taken merely from that, but from somewhat which analogy shows us concerning it. For analogy shows us positively that our ignorance in the possibilities of things, and the various relations in nature, renders us incompetent judges, and leads us to false conclusions in cases similar to this, in which we pretend to judge and to object. So that the things above insisted upon

* Sermons at the Rolls, page 312, 2d edit.

are not mere suppositions of unknown impossibilities and relations; but they are suggested to our thoughts, and even forced upon the observation of serious men, and rendered credible, too, by the analogy of nature. And therefore to take these things into the account is to judge by experience and what we do know; and it is not judging so to take no notice of them.

CONCLUSION.

THE observations of the last chapter lead us to consider this little scene of human life, in which we are so busily engaged, as having a reference, of some sort or other, to a much larger plan of things. Whether we are any way related to the more distant parts of the boundless universe into which we are brought, is altogether uncertain. But it is evident that the course of things which comes within our view is connected with somewhat past, present, and future, beyond it. (Pages 172, 173.) So that we are placed, as one may speak, in the middle of a scheme, not a fixed, but a progressive one, every way incomprehensible; incomprehensible, in a manner, equally with respect to what has been, what now is, and what shall be hereafter. And this scheme cannot but contain in it somewhat as wonderful, and as much beyond our thought and conception, (part ii, chap. ii,) as any thing in that of religion. For will any man in his senses say, that it is less difficult to conceive how the world came to be, and to continue as it is, without than with an intelligent author and governor of it? or, admitting an intelligent governor of it, that there is some other rule of government more natural, and of easier conception, than that which we call moral? Indeed, without an intelligent author

and governor of nature no account at all can be given how this universe, or the part of it particularly in which we are concerned, came to be, and the course of it to be carried on as it is; nor any of its general end and design without a moral governor of it. That there is an intelligent author of nature, and natural governor of the world, is a principle gone upon in the foregoing treatise, as proved, and generally known and confessed to be proved. And the very notion of an intelligent author of nature, proved by particular final causes, implies a will and a character. (Page 160.)

Now as our whole nature, the nature which he has given us, leads us to conclude his will and character to be moral, just, and good; so we can scarce in imagination conceive what it can be otherwise. However, in consequence of this his will and character, whatever it be, he formed the universe as it is, and carries on the course of it as he does, rather than in any other manner; and has assigned to us, and to all living creatures, a part and a lot in it. Irrational creatures act this their part, and enjoy and undergo the pleasures and the pains allotted them, without any reflection. But one would think it impossible that creatures endued with reason could avoid reflecting sometimes upon all this; reflecting, if not from whence we came, yet at least whither we are going, and what the mysterious scheme in the midst of which we find ourselves will at length come out and produce; a scheme in which it is certain we are highly interested, and in which we may be interested even beyond conception.

For many things prove it palpably absurd to conclude that we shall cease to be at death. Particular analogies do most sensibly show us, that there is nothing to be thought strange in our being to exist in another state of life. And that we are now living beings, affords a strong probability that we shall *continue* so; unless there be

some positive ground, and there is none from reason or analogy, to think death will destroy us. Were a persuasion of this kind ever so well grounded, there would surely be little reason to take pleasure in it. But indeed, it can have no other ground than some such imagination, as that of our gross bodies being ourselves; which is contrary to experience. Experience, too, most clearly shows us the folly of concluding from the body and the living agent affecting each other mutually, that the dissolution of the former is the destruction of the latter. And there are remarkable instances of their not affecting each other, which lead us to a contrary conclusion. The supposition, then, which in all reason we are to go upon is, that our living nature will continue after death. And it is infinitely unreasonable, to form an institution of life, or to act upon any other supposition.

Now all expectation of immortality, whether more or less certain, opens an unbounded prospect to our hopes and our fears; since we see the constitution of nature is such as to admit of misery as well as to be productive of happiness, and experience ourselves to partake of both in some degree; and since we cannot but know what higher degrees of both we are capable of. And there is no presumption against believing further, that our future interest depends upon our present behavior; for we see our present interest doth; and that the happiness and misery which are naturally annexed to our actions, very frequently do not follow till long after the actions are done to which they are respectively annexed. So that were speculation to leave us uncertain, whether it were likely that the author of nature, in giving happiness and misery to his creatures, hath regard to their actions or not; yet, since we find by experience that he hath such regard, the whole sense of things which he has given us plainly leads us at once, and without any elaborate inquiries, to think that it may, indeed must,

be to good actions chiefly that he hath annexed happiness, and to bad actions misery; or that he will, upon the whole, reward those who do well and punish those who do evil.

To confirm this from the constitution of the world, it has been observed, that some sort of moral government is necessarily implied in that natural government of God which we experience ourselves under; that good and bad actions, at present, are naturally rewarded and punished, not only as beneficial and mischievous to society, but also as virtuous and vicious; and that there is, in the very nature of the thing, a tendency to their being rewarded and punished in a much higher degree than they are at present. And though this higher degree of distributive justice, which nature thus points out and leads toward, is prevented for a time from taking place, it is by obstacles which the state of this world unhappily throws in its way, and which therefore are in their nature temporary. Now as these things, in the natural conduct of Providence, are observable on the side of virtue, so there is nothing to be set against them on the side of vice. A moral scheme of government, then, is visibly established, and in some degree carried into execution; and this, together with the essential tendencies of virtue and vice duly considered, naturally raise in us an apprehension that it will be carried on further toward perfection in a future state, and that every one shall there receive according to his deserts.

And if this be so, then our future and general interest, under the moral government of God, is appointed to depend upon our behavior, notwithstanding the difficulty which this may occasion of securing it, and the danger of losing it; just in the same manner as our temporal interest, under his natural government, is appointed to depend upon our behavior, notwithstanding the like difficulty and danger. For, from our original constitution,

and that of the world which we inhabit, we are naturally trusted with ourselves, with our own conduct, and our own interest. And from the same constitution of nature, especially joined with that course of things which is owing to men, we have temptations to be unfaithful in this trust, to forfeit this interest, to neglect it, and run ourselves into misery and ruin. From these temptations arise the difficulties of behaving so as to secure our temporal interest, and the hazard of behaving so as to miscarry in it. There is therefore nothing incredible in supposing there may be the like difficulty and hazard with regard to that chief and final good which religion lays before us. Indeed the whole account, how it came to pass that we were placed in such a condition as this, must be beyond our comprehension. But it is in part accounted for by what religion teaches us, that the character of virtue and piety must be a necessary qualification for a future state of security and happiness, under the moral government of God; in like manner, as some certain qualifications or other are necessary for every particular condition of life, under his natural government; and that the present state was intended to be a school of discipline, for improving in ourselves that character. Now this intention of nature is rendered highly credible by observing, that we are plainly made for improvement of all kinds; that it is a general appointment of providence that we cultivate practical principles, and form within ourselves habits of action, in order to become fit for what we were wholly unfit for before; that in particular, childhood and youth is naturally appointed to be a state of discipline for mature age, and that the present world is peculiarly fitted for a state of moral discipline. And whereas objections are urged against the whole notion of moral government and a probation-state, from the opinion of necessity, it has been shown that God has given us the evidence, as it were, of expe-

rience, that all objections against religion on this head are vain and delusive. He has also, in his natural government, suggested an answer to all our short-sighted objections against the equity and goodness of his moral government, and in general he has exemplified to us the latter by the former.

These things, which, it is to be remembered, are matters of fact, ought in all common sense to awaken mankind, to induce them to consider in earnest their condition, and what they have to do. It is absurd—absurd to the degree of being ridiculous, if the subject were not of so serious a kind—for men to think themselves secure in a vicious life, or even in that immoral thoughtlessness which far the greatest part of them are fallen into. And the credibility of religion, arising from experience and facts here considered, is fully sufficient, in reason, to engage them to live in the general practice of all virtue and piety; under the serious apprehension, though it should be mixed with some doubt, (part ii, chap. vi,) of a righteous administration established in nature, and a future judgment in consequence of it; especially when we consider how very questionable it is whether any thing at all can be gained by vice, (page 87;) how unquestionably little, as well as precarious, the pleasures and profits of it are at the best; and how soon they must be parted with at the longest. For in the deliberations of reason concerning what we are to pursue and what to avoid, as temptations to any thing from mere passion are supposed out of the case; so inducements to vice, from cool expectations of pleasure and interest, so small and uncertain and short, are really so insignificant as, in the view of reason, to be almost nothing in themselves, and in comparison with the importance of religion, they quite disappear and are lost. Mere passion, indeed, may be alleged, though not as a reason, yet as an excuse for a vicious course of life. And how sorry

an excuse it is will be manifest by observing, that we are placed in a condition in which we are unavoidably inured to govern our passions, by being necessitated to govern them; and to lay ourselves under the same kind of restraints, and as great ones, too, from temporal regards, as virtue and piety, in the ordinary course of things, require. The plea of ungovernable passion, then, on the side of vice, is the poorest of all things; for it is no reason, and but a poor excuse. But the proper motives to religion are the proper proofs of it, from our moral nature, from the presages of conscience, and our natural apprehension of God, under the character of a righteous Governor and Judge; a nature, and conscience, and apprehension given us by him; and from the confirmation of the dictates of reason, by *life and immortality brought to light by the Gospel; and the wrath of God revealed from heaven against all ungodliness and unrighteousness of men.*

PART II.
OF REVEALED RELIGION.

CHAPTER I.

OF THE IMPORTANCE OF CHRISTIANITY.

SOME persons, upon pretense of the sufficiency of the light of nature,* avowedly reject all revelation as, in its very notion, incredible, and what must be fictitious. And, indeed, it is certain no revelation would have been given, had the light of nature been sufficient in such a sense as to render one not wanting and useless. But no man in seriousness and simplicity of mind can possibly think it so, who considers the state of religion in the heathen world before revelation, and its present state in those places which have borrowed no light from it, particularly the doubtfulness of some of the greatest men concerning things of the utmost importance, as well as the natural inattention and ignorance of mankind in general. It is impossible to say who would have been able to have reasoned out that whole system which we call natural religion, in its genuine simplicity, clear of superstition; but there is certainly no ground to affirm that the generality could: if they could, there is no sort of probability that they would. Admitting there were, they would highly want a standing admonition to remind them of it,

Rejectors of revelation. Why unreasonable.

* [This is the main argument of Tindal's famous book, "Christianity as Old as the Creation; or, the Gospel a Republication of the Law of Nature," first published in 4to., London, 1730.—F.]

and inculcate it upon them.* And further still, were they as much disposed to attend to religion as the better sort of men are, yet even upon this supposition, there would be various occasions for supernatural instruction and assistance, and the greatest advantages might be afforded by them. So that to say revelation is a thing superfluous, what there was no need of, and what can be of no service, is, I think, to talk quite wildly and at random.† Nor would it be more extravagant to affirm that mankind is so entirely at ease in the present state, and life so completely happy, that it is a contradiction to suppose our condition capable of being in any respect better.

2. There are other persons, not to be ranked with

* [See an excellent statement of the argument here glanced at in Leland's "Advantage and Necessity of the Christian Revelation shown from the State of Religion in the Ancient Heathen World," etc.]

† [It may be doubted whether Christian apologists are called upon to demonstrate elaborately the necessity of revelation, *prior* to the consideration of *its truth, as matter of fact*. Paley disposes of this whole question in a single sentence, by simply saying, "I deem it unnecessary to prove that mankind stood in need of a revelation, because I have met with no serious person who thinks that even under the Christian revelation, we have too much light, or any degree of assurance which is superfluous." Dr. Chalmers, on this topic, remarks, "Possessed as we are, of such competent proofs on the *credibility* of this said revelation, are we to suspend the determination of it, till the previous question of its *necessity* has been settled and set by? Are we to forego the consideration of the evidences which lie patent before us on the field of observation till we take up a matter, not so much, let it be noticed, of palpable fact as of recondite principle? The necessity of revelation involves in it topics that stand related both to God and to eternity—to the hidden counsels of the One, to the fathomless unknown, and by us, undiscoverable, of the other. The truth of revelation depends on credentials which lie on an open platform, or certain tangible things within the circle of our perceptions, which have been addressed to human eyes, which have been heard by human ears. It is not sound dialectics to suspend the second of these topics on the first of them."—DR. CROOKS.]

these, who seem to be getting into a way of neglecting, and as it were overlooking, revelation, as of small importance provided natural religion be kept to. With little regard either to the evidence of the former, or to the objections against it, and even upon supposition of its truth, “the only design of it,” say they, “must be to establish a belief of the moral system of nature, and to enforce the practice of natural piety and virtue. The belief and practice of these things were, perhaps, much promoted by the first publication of Christianity; but whether they are believed and practiced, upon the evidence and motives of nature or of revelation, is no great matter.”* This way of considering revelation, though it is not the same with the former, yet borders nearly upon it, and very much, at length, runs up into it, and requires to be particularly considered with regard to the persons who seem to be getting into this way. The consideration of it will likewise further show the extravagance of the former opinion, and the truth of the observations in answer to it, just mentioned. And an inquiry into the importance of Christianity cannot be an improper introduction to a treatise concerning the credibility of it.

Those who neglect it trusting to natural religion.

* *Invenis multos—propterea nolle fieri Christianos, quia quasi sufficiunt sibi de bona vita sua. Bene vivere opus est, ait. Quid mihi præcepturus est Christus? Ut bene vivam? Jam bene vivo. Quid mihi necessarius est Christus? Nullum homicidium, nullum furtum, nullum rapinam facio, res alienas non concupisco, nullo adulterio contaminoz. Nam inveniatur in vita mea aliquid quod reprehendatur, et qui reprehenderit faciat Christianum.—Aug. in Psal., xxxi.*

You find many who refuse to become Christians because they feel sufficient of themselves to lead a new life. We ought to live well, says one. What will Christ teach me—to live well? I do live well; what need have I of Christ? I commit no murder, no theft, no robbery. I covet no man’s goods, and am polluted by no adultery. Let some one find in me any thing to censure, and he who can do so may make me a Christian.

3. Now if God has given a revelation to mankind, and commanded those things which are commanded in Christianity, it is evident at first sight that it cannot in anywise be an indifferent matter whether we obey or disobey those commands; unless we are certainly assured that we know all the reasons for them, and that all those reasons are now ceased, with regard to mankind in general, or to ourselves in particular. And it is absolutely impossible we can be assured of this; for our ignorance of these reasons proves nothing in the case, since the whole analogy of nature shows, what is indeed in itself evident, that there may be infinite reasons for things with which we are not acquainted.

But the importance of Christianity will more distinctly appear by considering it more distinctly: first, as a republication and external institution of natural or essential religion, adapted to the present circumstances of mankind, and intended to promote natural piety and virtue; and secondly, as containing an account of a dispensation of things not discoverable by reason, in consequence of which several distinct precepts are enjoined us. For though natural religion is the foundation and principal part of Christianity, it is not in any sense the whole of it.

4. I. Christianity is a republication of natural religion.

Christianity important as a republication of natural religion.

It instructs mankind in the moral system of the world: that it is the work of an infinitely perfect Being, and under his government; that virtue is his law; and that he will finally judge mankind in righteousness, and render to all according to their works, in a future state. And which is very material, it teaches natural religion in its genuine simplicity, free from those superstitions with which it was totally corrupted, and under which it was in a manner lost.

Revelation is further an authoritative publication of natural religion, and so affords the evidence of testimony for the truth of it. Indeed, the miracles and prophecies recorded in Scripture were intended to prove a particular dispensation of providence—the redemption of the world by the Messiah; but this does not hinder but that they may also prove God's general providence over the world as our moral governor and judge. And they evidently do prove it, because this character of the author of nature is necessarily connected with, and implied in, that particular revealed dispensation of things: it is likewise continually taught expressly, and insisted upon by those persons who wrought the miracles and delivered the prophecies. So that, indeed, natural religion seems as much proved by the Scripture revelation as it would have been had the design of revelation been nothing else than to prove it.

5. But it may possibly be disputed how far miracles can prove natural religion; and notable objections may be urged against this proof of it, considered as a matter of speculation: but considered as a practical thing there can be none. For suppose a person to teach natural religion to a nation, who had lived in total ignorance or forgetfulness of it, and to declare he was commissioned by God so to do; suppose him, in proof of his commission, to foretell things future, which no human foresight could have guessed at; to divide the sea with a word; feed great multitudes with bread from heaven; cure all manner of diseases; and raise the dead, even himself, to life; would not this give additional credibility to his teaching—a credibility beyond what that of a common man would have, and be an authoritative publication of the law of nature, that is, a new proof of it? It would be a practical one of the strongest kind, perhaps, which

and prophecy
prove.

Practical effect
of the proof from
miracles. The
teacher, etc.

human creatures are capable of having given them. The law of Moses, then, and the gospel of Christ, are authoritative publications of the religion of nature: they afford a proof of God's general providence, as moral governor of the world, as well as of his particular dispensations of providence toward sinful creatures, revealed in the law and the gospel. As they are the only evidence of the latter, so they are an additional evidence of the former.

6. To show this further, let us suppose a man of the greatest and most improved capacity, who had never heard of revelation, convinced upon the whole, notwithstanding the disorders of the world, that it was under the direction and moral government of an infinitely perfect being, but ready to question whether he were not got beyond the reach of his faculties; suppose him brought, by this suspicion, into great danger of being carried away by the universal bad example of almost every one around him, who appeared to have no sense, no practical sense at least, of these things; and this, perhaps, would be as advantageous a situation, with regard to religion, as nature alone ever placed any man in. What a confirmation now must it be to such a person all at once to find, that this moral system of things was revealed to mankind in the name of that infinite Being whom he had, from principles of reason, believed in; and that the publishers of the revelation proved their commission from him by making it appear that he had intrusted them with a power of suspending and changing the general laws of nature.

Nor must it, by any means, be omitted, for it is a thing of the utmost importance, that life and immortality are eminently brought to light by the gospel.* The great

* [For even though natural religion might teach some efficacy to be in repentance, it could not certainly teach the efficacy of it in the Christian sense, that is, its efficacy wholly to cancel the punishment

doctrines of a future state, the danger of a course of wickedness, and the efficacy of repentance, are not only confirmed in the gospel, but are taught, especially the last is, with a degree of light to which that of nature is but darkness.

7. Further: As Christianity served these ends and purposes when it was first published, by the miraculous publication itself; so it was intended to serve the same purposes in future ages by means of the settlement of a visible Church; * of a society distinguished from common ones and from the rest of the world by peculiar religious institutions, by an instituted method of instruction, and an instituted form of external religion. Miraculous powers were given to the first preachers of Christianity in order to their introducing it into the world; a visible Church was established, in order to continue it, and carry it on successively throughout all ages. Had Moses and the prophets, Christ and his apostles, only taught, and by miracles proved, religion to their contemporaries, the benefits of their instructions would have reached but to a small part of mankind. Christianity must have been, in a
Design of the visible Church.

of sin, and restore us absolutely to God's favor. And though natural religion might show us much danger in wickedness, it could not show us, certainly, the great danger resulting from our probation being terminated forever by death, and the *everlasting* punishment which will *then* ensue.—F.]

* [In his sermon before the Society for the Propagation of the Gospel Butler says: "Christianity was left with Christians to be transmitted, in like manner as the religion of nature had been left with mankind in general. There was, however, this difference, that by an institution of external religion with a standing ministry for instruction and discipline, it pleased God to unite Christians into *visible Churches*, and all along to preserve them over a great part of the world, and thus perpetuate a general publication of the Gospel." Butler goes on to show that however corrupt the Churches may have become they were the repositories of the written oracles of God, and along with their errors carried their refutation.]

great degree, sunk and forgot in a very few ages. To prevent this appears to have been one reason why a visible Church was instituted; to be like a city upon a hill, a standing memorial to the world, of the duty which we owe our Maker; to call men continually, both by example and instruction, to attend to it, and by the form of religion ever before their eyes remind them of the reality; to be the repository of the oracles of God; to hold up the light of revelation in aid to that of nature, and propagate it throughout all generations to the end of the world—the light of revelation, considered here in no other view, than as designed to enforce natural religion. And in proportion as Christianity is professed and taught in the world, religion, natural or essential religion, is thus distinctly and advantageously laid before mankind, and brought again and again to their thoughts as a matter of infinite importance.

A visible Church has also a further tendency to promote natural religion as being an instituted method of education, originally intended to be of more peculiar advantage to those who would conform to it. For one end of the institution was, that by admonition and reproof, as well as instruction; by a general regular discipline, and public exercises of religion, *the body of Christ*, as the Scripture speaks, should be *edified*, that is, trained up in piety and virtue, for a higher and better state. This settlement, then, appearing thus beneficial; tending, in the nature of the thing, to answer, and in some degree actually answering, those ends; it is to be remembered that the very notion of it implies positive institutions, for the visibility of the Church consists in them. Take away every thing of this kind, and you lose the very notion itself. So that if the things now mentioned are advantages, the reason and importance of positive institutions in general is most obvious; since, without them, these advantages

The Church an agency for education.

could not be secured to the world. And it is mere idle wantonness to insist upon knowing the reasons why such particular ones were fixed upon, rather than others.

The benefit arising from this supernatural assistance which Christianity affords to natural religion, is what some persons are very slow in apprehending: and yet it is a thing distinct in itself, and a very plain, obvious one. For will any in good earnest really say that the bulk of mankind in the heathen world were in as advantageous a situation, with regard to natural religion, as they are now among us: that it was laid before them, and enforced upon them, in a manner as distinct, and as much tending to influence their practice?

8. The objections against all this, from the perversion of Christianity, and from the supposition of its having had but little good influence, Objection from the perversion of Christianity. however innocently they may be proposed, yet cannot be insisted upon as conclusive, upon any principles but such as lead to downright atheism; because the manifestation of the law of nature by reason, which, upon all principles of theism, must have been from God, has been perverted and rendered ineffectual in the same manner. It may, indeed, I think, truly be said, that the good effects of Christianity have not been small; nor its supposed ill effects any effects at all of it, properly speaking. Perhaps, too, the things themselves done have been aggravated; and if not, Christianity hath been often only a pretense; and the same evils in the main would have been done upon some other pretense. However, great and shocking as the corruptions Natural religion perverted. and abuses of it have really been, they cannot be insisted upon as arguments against it, upon principles of theism. For one cannot proceed one step in reasoning upon natural religion, any more than upon Christianity, without laying it down as a first principle that the dispensations of Providence are not to be

judged of by their perversions, but by their genuine tendencies; not by what they do actually seem to effect, but by what they would effect if mankind did their part: that part which is justly put and left upon them. It is altogether as much the language of one as of the other: "He that is unjust, let him be unjust still; and he that is holy, let him be holy still." Rev. xxii, 11. The light of reason does not, any more than that of revelation, force men to submit to its authority: both admonish them of what they ought to do and avoid, together with the consequences of each; and after this leave them at full liberty to act just as they please, till the appointed time of judgment. Every moment's experience shows that this is God's general rule of government.*

9. To return, then; Christianity being a promulgation of the law of nature; being moreover an authoritative promulgation of it, with new light, and other circumstances of peculiar advantage, adapted to the wants of mankind; these things fully show its importance. And it is to be observed further, that as the nature of the case requires, so all Christians are commanded to contribute, by their profession of Christianity, to preserve it in the world, and render it such a promulgation and enforcement of religion. For it is the very scheme of the gospel, that each Christian should, in his degree, contribute toward contin-

Christian obligations show the importance of Christianity.

* [It is no real objection to this, though it may seem so at first sight, to say that since Christianity is a *remedial* system, designed to obviate those very evils which have been produced by the neglect and abuse of the light of nature, it ought not to be *liable* to the same perversions. Because, 1. Christianity is not designed primarily to remedy the defects of *nature*, but of an *unnatural* state of ruin into which mankind were brought by the fall. And, 2. It is remedial of the defects of nature in a *great degree* by its giving additional advantages. 3. It might be impossible that it should be remedial in a greater degree than it is, without destroying man's free agency; which would be to destroy its own end, the practice of virtue.—FITZGERALD.]

uing and carrying it on; all by uniting in the public profession, and external practice of Christianity; some by instructing, by having the oversight, and taking care of this religious community—the Church of God. Now this further shows the importance of Christianity, and, which is what I chiefly intend, its importance in a practical sense, or the high obligations we are under to take it into our most serious consideration; and the danger there must necessarily be, not only in treating it despitefully—which I am not now speaking of—but in disregarding and neglecting it. For this is neglecting to do what is expressly enjoined us, for continuing those benefits to the world, and transmitting them down to future times. And all this holds, even though the only thing to be considered in Christianity were its subserviency to natural religion. But,

10. II. Christianity is to be considered in a further view, as containing an account of a dispensation of things not at all discoverable by reason, in consequence of which several distinct pre-^{Important as presenting new truths.}cepts are enjoined us. Christianity is not only an external institution of natural religion, and a new promulgation of God's general providence, as righteous governor and Judge of the world, but it contains also a revelation of a particular dispensation of providence, carrying on by his Son and Spirit, for the recovery and salvation of mankind, who are represented in Scripture to be in a state of ruin. And in consequence of this revelation being made, we are commanded *to be baptized*, not only *in the name of the Father*, but also *of the Son, and of the Holy Ghost*; and other obligations of duty unknown before, to the Son and the Holy Ghost, are revealed. Now the importance of these duties may be judged of by observing that they arise, not from positive command merely, but also from the offices which appear, from Scripture, to belong to those divine persons

in the gospel dispensation, or from the relations which we are there informed they stand in to us. By reason is revealed the relation which God the Father stands in to us. Hence arises the obligation of duty which we are under to him. In Scripture are revealed the relations which the Son and Holy Spirit stand in to us. Hence arise the obligations of duty which we are under to them. The truth of the case, as one may speak, in each of these three respects being admitted, that God is the governor of the world, upon the evidence of reason; that Christ is the Mediator between God and man, and the Holy Ghost our Guide and Sanctifier, upon the evidence of revelation, the truth of the case, I say, in each of these respects being admitted, it is no more a question why it should be commanded that we be baptized in the name of the Son and of the Holy Ghost, than that we be baptized in the name of the Father. This matter seems to require to be more fully stated.*

II. Let it be remembered, then, that religion comes under the twofold consideration of internal and external; for the latter is as real a part of religion, of true religion, as the former. Now when religion is considered under the first notion, as an inward principle, to be exerted in such and such inward acts of the mind and heart, the essence of natural religion may be said to consist in religious regards to *God the Father Almighty*; and the essence of revealed religion as distinguished from natural, to consist in religious regards to *the Son* and to *the Holy Ghost*. And the obligation we are under, of paying these religious regards to each of these Divine persons respectively, arises from the respective relations which they each stand in to us. How these relations are made known, whether by reason or revelation, makes no alteration in the case; because the

* See "The Nature, Obligation, and Efficacy of the Christian Sacraments," etc., and *Colliber* on Revealed Religion, as there quoted.

duties arise out of the relations themselves, not out of the manner in which we are informed of them. The Son and Spirit have each his proper office in that great dispensation of Providence, the redemption of the world: the one our Mediator, the other our Sanctifier. Does not, then, the duty of religious regards to both these divine persons as immediately arise to the view of reason, out of the very nature of these offices and relations, as the inward good-will and kind intention, which we owe to our fellow-creatures, arises out of the common relations between us and them? But it will be asked, "What are the inward religious regards, appearing thus obviously due to the Son and Holy Spirit, as arising not merely from command in Scripture, but from the very nature of the revealed relations which they stand in to us?" I answer, The religious regards of reverence, honor, love, trust, gratitude, fear, hope. In what external manner this inward worship is to be expressed is a matter of pure revealed command; as perhaps the external manner in which God the Father is to be worshiped may be more so than we are ready to think; but the worship—the internal worship itself—to the Son and Holy Ghost, is no further matter of pure revealed command than as the relations they stand in to us are matter of pure revelation; for the relations being known, the obligations to such internal worship are obligations of reason, arising out of those relations themselves. In short, the history of the gospel as immediately shows us the reason of these obligations, as it shows us the meaning of the words Son and Holy Ghost.

12. If this account of the Christian religion be just, those persons who can speak lightly of it, as of little consequence, provided natural religion be kept to, plainly forget that Christianity, even what is peculiarly so called as distinguished from natural religion, has yet somewhat very important,

Moral importance of Christianity overlooked.

even of a moral nature. For the office of our Lord being made known, and the relation he stands in to us, the obligation of religious regards to him is plainly moral, as much as charity to mankind is; since this obligation arises, before external command, immediately out of that his office and relation itself. Those persons appear to forget that revelation is to be considered as informing us of somewhat new in the state of mankind and in the government of the world; as acquainting us with some relations we stand in, which could not otherwise have been known. And these relations being real, (though before revelation we could be under no obligations from them, yet upon their being revealed,) there is no reason to think but that neglect of behaving suitably to them will be attended with the same kind of consequences under God's government, as neglecting to behave suitably to any other relations made known to us by reason. And ignorance, whether unavoidable or voluntary, so far as we can possibly see, will just as much, and just as little, excuse in one case as in the other: the ignorance being supposed equally unavoidable, or equally voluntary, in both cases.

13. If, therefore, Christ be indeed the Mediator between God and man; that is, if Christianity be true; if he be indeed our Lord, our Saviour, and our God, no one can say what may follow not only the obstinate, but the careless, disregard to him in those high relations. Nay, no one can say what may follow such disregard, even in the way of natural consequence. (Pages 64, 65, etc.) For as the natural consequences of vice in this life are doubtless to be considered as judicial punishments inflicted by God; so likewise, for aught we know, the judicial punishments of the future life may be in a like way, or a like sense, the natural consequence of vice, (chap. v;) of men's violating or disregarding the rela-

Peril of neglect.

tions which God has placed them in here, and made known to them.

Again: If mankind are corrupted and depraved in their moral character, and so are unfit for that state which Christ is gone to prepare for his disciples; and if the assistance of God's Spirit be necessary to renew their nature, in the degree requisite to their being qualified for that state; all which is implied in the express, though figurative, declaration, "Except a man be born of the Spirit, he cannot enter into the kingdom of God:" supposing this, is it possible any serious person can think it a slight matter whether or not he makes use of the means expressly commanded by God for obtaining this divine assistance? especially since the whole analogy of nature shows, that we are not to expect any benefits without making use of the appointed means for obtaining or enjoying them. Now reason shows us nothing of the particular, immediate means, of obtaining either temporal or spiritual benefits. This, therefore, we must learn either from experience or revelation. And experience the present case does not admit of.

The conclusion from all this evidently is, that Christianity being supposed either true or credible, it is unspeakable irreverence, and really the most presumptuous rashness, to treat it as a light matter. It can never justly be esteemed of little consequence till it be positively supposed false. Nor do I know a higher and more important obligation which we are under, than that of examining most seriously into the evidence of it, supposing its credibility; and of embracing it, upon supposition of its truth.

The two following deductions may be proper to be added, in order to illustrate the foregoing observations, and to prevent their being mistaken.

14. First, Hence we may clearly see where lies the distinction between what is positive and what is moral

in religion. Moral *precepts* are precepts the reasons of which we see; positive *precepts* are precepts the reasons of which we do not see.*

Distinction between positive precepts and obligations.

Moral *duties* arise out of the nature of the case itself, prior to external command. Positive *duties* do not arise out of the nature of the case, but from external command; nor would they be duties at all, were it not for such command received from him whose creatures and subjects we are. But the manner in which the nature of the case, or the fact of the relation, is made known, this doth not denominate any duty, either positive or moral. That we be baptized in the name of the Father, is as much a positive duty as that we be baptized in the name of the Son; because both arise equally from revealed command; though the relation which we stand in to God the Father is made known to us by reason; the relation we stand in to Christ, by revelation only. On the other hand, the dispensation of the gospel admitted, gratitude as immediately becomes due to Christ from his being the voluntary minister of this dispensation, as it is due to God the Father from his being the fountain of all good; though the first is made known to us by revelation only,

* This is the distinction between moral and positive precepts, considered respectively as such. But yet, since the latter have somewhat of a moral nature, we may see the reason of them considered in this view. Moral and positive precepts are in some respects alike, in others respects different. So far as they are alike, we discern the reasons of both; so far as they are different, we discern the reasons of the former, but not of the latter. (See p. 195, etc., and p. 207.) [It should be further added, to prevent misconceptions, that a precept may be *positive*, even though it have a ground or reason visible to us, if that reason do not, of itself, constitute the thing required an absolute duty. There are, for instance, visible reasons for the propriety of such an initiative rite as Christian baptism, and yet baptism is only a positive institution, because those reasons are not sufficient of themselves to make the observance of such a rite an absolute duty.—F.]

the second by reason. Hence, also, we may see, and for distinctness' sake it may be worth mentioning, that positive institutions come under a twofold consideration: They are either institutions founded on natural religion, as baptism in the name of the Father; though this has also a particular reference to the gospel dispensation, for it is in the name of God as the Father of our Lord Jesus Christ; or they are external institutions founded on revealed religion, as baptism in the name of the Son and of the Holy Ghost.

15. Secondly, From the distinction between what is moral and what is positive in religion, appears the ground of that peculiar preference which the Scripture teaches us to be due to the former.

Moral duties
superior to positive.

The reason of positive institutions in general is very obvious, though we should not see the reason why such particular ones are pitched upon rather than others. Whoever, therefore, instead of caviling at words will attend to the thing itself, may clearly see that positive institutions in general, as distinguished from this or that particular one, have the nature of moral commands; since the reasons of them appear. Thus, for instance, the *external* worship of God is a moral duty, though no particular mode of it be so. Care, then, is to be taken, when a comparison is made between positive and moral duties, that they be compared no further than as they are different; no further than as the former are positive, or arise out of mere external command, the reasons of which we are not acquainted with; and as the latter are moral, or arise out of the apparent reason of the case, without such external command. Unless this caution be observed we shall run into endless confusion.

16. Now this being premised, suppose two standing precepts enjoined by the same authority; that in certain conjunctures, it is impossible to obey both; that

the former is moral, that is, a precept of which we see the reasons, and that they hold in the particular case before us; but that the latter is positive, that is, a precept of which we do not see the reasons: it is indisputable that our obligations are to obey the former, because there is an apparent reason for this preference and none against it. Further, positive institutions, I suppose all those which Christianity enjoins, are means to a moral end; and the end must be acknowledged more excellent than the means. Nor is observance of these institutions any religious obedience at all, or of any value, otherwise than as it proceeds from a moral principle. This seems to be the strict logical way of stating and determining this matter; but will, perhaps, be found less applicable to practice than may be thought at first sight.

And therefore, in a more practical, though more lax way of consideration, and taking the words *moral law* and *positive institutions* in the popular sense; I add, that the whole moral law is as much matter of revealed command as positive institutions are; for the Scripture enjoins every moral virtue. In this respect, then, they are both upon a level. But the moral law is, moreover, written upon our hearts; interwoven into our very nature. And this is a plain intimation of the author of it, which is to be preferred, when they interfere.

17. But there is not altogether so much necessity for the determination of this question as some persons seem to think. Nor are we left to reason alone to determine it. For, *first*, Though mankind have, in all ages, been greatly prone to place their religion in peculiar positive rites by way of equivalent for obedience to moral precepts; yet, without making any comparison at all between them, and consequently without determining which is to have the preference, the nature of the thing abundantly shows all notions

If the two conflict, the moral to be obeyed.

The question as to relative authority not important.

of that kind to be utterly subversive of true religion; as they are, moreover, contrary to the whole general tenor of Scripture, and likewise to the most express particular declarations of it, that nothing can render us accepted of God without moral virtue.

Secondly, Upon the occasion of mentioning together positive and moral duties, the Scripture always puts the stress of religion upon the latter and never upon the former; which, though no sort of allowance to neglect the former when they do not interfere with the latter, yet is a plain intimation that when they do, the latter are to be preferred. And further, as mankind are for placing the stress of their religion anywhere rather than upon virtue, lest both the reason of the thing, and the general spirit of Christianity appearing in the intimation now mentioned, should be ineffectual against this prevalent folly, our Lord himself, from whose command alone the obligation of positive institutions arises, has taken occasion to make the comparison between them and moral precepts, when the Pharisees censured him for *eating with publicans and sinners*; and also when they censured his disciples for *plucking the ears of corn on the Sabbath day*. Upon this comparison he has determined expressly, and in form, which shall have the preference when they interfere. And by delivering his authoritative determination in a proverbial manner of expression, he has made it general, *I will have mercy, and not sacrifice*. (Matt. ix, 13, and xii, 7.) The propriety of the word *proverbial* is not the thing insisted upon, though I think the manner of speaking is to be called so. But that the manner of speaking very remarkably renders the determination general, is surely indisputable. For had it, in the latter case, been said only that God preferred mercy to the rigid observance of the Sabbath, even then, by parity of reasoning, most justly might we have argued that he preferred mercy likewise to the

observance of other ritual institutions, and in general, moral duties to positive ones. And thus the determination would have been general, though its being so were inferred and not expressed. But as the passage really stands in the gospel, it is much stronger; for the sense, and the very literal words of our Lord's answer, are as applicable to any other instance of a comparison between positive and moral duties, as to this upon which they were spoken. And if, in case of competition, mercy is to be preferred to positive institutions, it will scarce be thought that justice is to give place to them. It is remarkable, too, that as the words are a quotation from the Old Testament, they are introduced on both the fore-mentioned occasions, with a declaration that the Phari-sees did not understand the meaning of them. This, I say, is very remarkable; for since it is scarce possible for the most ignorant person not to understand the literal sense of the passage in the prophet, (Hosea vi,) and since understanding the literal sense would not have prevented their *condemning the guiltless*, (Matt. xii, 7,) it can hardly be doubted, that the thing which our Lord really intended in that declaration was, that the Phari-sees had not learned from it, as they might, wherein the *general* spirit of religion consists; that it consists in moral piety and virtue as distinguished from forms and ritual observances. However, it is certain we may learn this from his divine application of the passage in the gospel.

But as it is one of the peculiar weaknesses of human nature, when, upon a comparison of two things, one is found to be of greater importance than the other, to consider this other as of scarce any importance at all; it is highly necessary that we remind ourselves how great presumption it is to make light of any institutions of divine appointment; that our obligations to obey all God's commands whatever, are abso-

Both important.

lute and indispensable; and that commands merely positive, admitted to be from him, lay us under a moral obligation to obey them; an obligation moral in the strictest and most proper sense.

To these things I cannot forbear adding, that the account now given of Christianity most strongly shows and enforces upon us the obligation of searching the Scriptures, in order to see what the scheme of revelation really is, instead of determining beforehand from reason what the scheme of it must be. (Chap. iii.) Indeed, if in revelation there be found any passages, the seeming meaning of which is contrary to natural religion, we may most certainly conclude such seeming meaning not to be the real one.* But it is not any degree of a presumption against an interpretation of Scripture, that such interpretation contains a doctrine which the light of nature cannot discover, (pages 213, 214,) or a precept which the law of nature does not oblige to.

* [This sentiment must be received with caution and applied with care. It has often been used for evil purposes by those unfriendly to religion. Christianity cannot contradict any *truth*, but the results of imperfect investigations in science or natural religion must not hastily be assumed as *true*. Hitherto time has greatly modified or entirely removed what at first seemed to be formidable objections. The presumption is in favor of the received teachings of Christianity, and they must not be set aside for every hypothesis that opposers may wantonly and presumptuously set forth.]

CHAPTER II.

OF THE SUPPOSED PRESUMPTION AGAINST A REVELATION, CONSIDERED AS MIRACULOUS.

HAVING shown the importance of the Christian revelation, and the obligation which we are under seriously to attend to it, upon supposition of its truth or its credibility; the next thing in order is, to consider the supposed presumptions against revelation in general; which shall be the subject of this chapter; and the objections against the Christian in particular, which shall be the subject of some following ones. (Chapters iii–vi.) For it seems the most natural method to remove these prejudices against Christianity, before we proceed to the consideration of the positive evidence for it, and the objections against that evidence. (Chap. vii.)

It is, I think, commonly supposed that there is some peculiar presumption, from the analogy of nature, against the Christian scheme of things, at least against miracles; so that stronger evidence is necessary to prove the truth and reality of them, than would be sufficient to convince us of other events or matters of fact. Indeed, the consideration of this supposed presumption cannot but be thought very insignificant by many persons; yet as it belongs to the subject of this treatise, so it may tend to open the mind, and remove some prejudices, however needless the consideration of it be, upon its own account.

No presumption
against the gen-
eral scheme of
Christianity.

2. I. I find no appearance of a presumption, from the analogy of nature, against the general scheme of Christianity, that God

created and invisibly governs the world by Jesus Christ, and by him also will hereafter judge it in righteousness, that is, render to every one according to his works; and that good men are under the secret influence of his Spirit. Whether these things are or are not to be called miraculous, is perhaps only a question about words; or, however, is of no moment in the case. If the analogy of nature raises any presumption against this general scheme of Christianity, it must be either because it is not discoverable by reason or experience, or else because it is unlike that course of nature, which is. But analogy raises no presumption against the truth of this scheme upon either of these accounts.

3. First, There is no presumption, from analogy, against the truth of it, upon account of its not being discoverable by reason or experience. For suppose one who never heard of revelation, of the most improved understanding, and acquainted with our whole system of natural philosophy and natural religion, such a one could not but be sensible that it was but a very small part of the natural and moral system of the universe which he was acquainted with. He could not but be sensible that there must be innumerable things in the dispensations of Providence past, in the invisible government over the world at present carrying on, and in what is to come, of which he was wholly ignorant, (pages 174, 176,) and which could not be discovered without revelation. Whether the scheme of nature be, in the strictest sense, infinite or not, it is evidently vast, even beyond all possible imagination. And doubtless that part of it which is open to our view is but as a point in comparison of the whole plan of Providence, reaching throughout eternity past and future; in comparison of what is even now going on in the remote parts of the boundless universe: nay, in comparison of the whole scheme of this world. And

None, because
not discovered
by reason.

therefore, that things lie beyond the natural reach of our faculties is no sort of presumption against the truth and reality of them; because it is certain there are innumerable things, in the constitution and government of the universe, which are thus beyond the natural reach of our faculties.

Secondly, Analogy raises no presumption against any of the things contained in this general doctrine of Scripture now mentioned, upon account of their being unlike the known course of nature. For there is no presumption at all, from analogy, that the *whole* course of things, or divine government, naturally unknown to us, and *every thing* in it, is like to any thing in that which is known; and therefore no peculiar presumption against any thing in the former, upon account of its being unlike to any thing in the latter. And in the constitution and natural government of the world, as well as in the moral government of it, we see things, in a great degree unlike one another, and therefore ought not to wonder at such unlikeness between things visible and invisible. However, the scheme of Christianity is by no means entirely unlike the scheme of nature; as will appear in the following part of this treatise.

The notion of a miracle,* considered as a proof of a divine mission, has been stated with great exactness by divines; and is, I think, sufficiently understood by every one. There are also invisible miracles:† the incarnation of Christ, for instance, which, being secret, cannot

* [For a beautiful development of the idea of a miracle the reader is referred to Mr. Trench's work on the Miracles, preliminary essay.]

† [Papists have claimed transubstantiation as an invisible miracle. But in the case of an invisible miracle the circumstances exclude examination, while transubstantiation invites and is favorable to examination. It is claimed to be public and constant, yet it cannot be discovered to be a miracle. "It supposes the working of a second miracle to make the first invisible."]

be alleged as a proof of such a mission, but require themselves to be proved by visible miracles. Revelation itself, too, is miraculous, and miracles are the proof of it; and the supposed presumption against these shall presently be considered. All which I have been observing here is, that, whether we choose to call every thing in the dispensations of Providence not discoverable without revelation, nor like the known course of things, miraculous; and whether the general Christian dispensation now mentioned is to be called so or not, the foregoing observations seem entirely to show, that there is no presumption against it, from the analogy of nature.

4. II. There is no presumption, from analogy, against some operations which we should now call miraculous; particularly, none against a revelation at the beginning of the world; nothing of such presumption against it as is supposed to be implied or expressed in the word *miraculous*.

No presumption against a miraculous revelation at the beginning of the world.

For a miracle, in its very notion, is relative to a course of nature; and implies somewhat different from it, considered as being so. Now, either there was no course of nature at the time which we are speaking of; or, if there were, we are not acquainted what the course of nature is upon the first peopling of worlds. And therefore the question, whether mankind had a revelation made to them at that time, is to be considered, not as a question concerning a miracle, but as a common question of fact. And we have the like reason, be it more or less, to admit the report of tradition, concerning this question, and concerning common matters of fact of the same antiquity; for instance, what part of the earth was first peopled.

Or thus: When mankind was first placed in this state, there was a power exerted totally different from the present course of nature. Now, whether this power, thus

wholly different from the present course of nature, for we cannot properly apply to it the word *miraculous*; whether this power stopped immediately after it had made man, or went on, and exerted itself further in giving him a revelation, is a question of the same kind as whether an ordinary power exerted itself in such a particular degree and manner or not.

Or suppose the power exerted in the formation of the world be considered as miraculous, or rather, be called by that name, the case will not be different; since it must be acknowledged that such a power was exerted. For supposing it acknowledged that our Saviour spent some years in a course of working miracles; there is no more presumption worth mentioning, against his having exerted this miraculous power in a certain degree greater, than in a certain degree less; in one or two more instances, than in one or two fewer; in this, than in another, manner.*

* [This observation applies with great force against the modern rationalistic attempts to explain away some of our Saviour's miracles into natural events, as long as it is confessed that he wrought real miracles, or that his mission was really miraculous. Such explanations are really more improbable than the common ones which suppose a miracle, because there is no general improbability in supposing that a person endowed with the power of working miracles exerted it upon a particular occasion; whereas there is an improbability in supposing that an unusual natural event occurred; and when this system of interpretation is carried on, and applied to a great number of cases, the improbability of a whole series of strange natural events taking place unaccountably one after the other, amounts, I think, to a far greater improbability than is involved in the admission of miracles; because every thing that is improbable in the *physical* strangeness of miracles applies to such a series of odd events, while we are deprived of the means of accounting for them by supposing an extraordinary interposition of the Deity. A romance made up wholly of natural occurrences which happen sometimes, but very rarely, is just as incredible as a romance made up of stories about genii and enchanters, and things wholly supernatural. The improbability of both, with respect to *physical strangeness*, is just the same. "Some infidels,"

It is evident, then, that there can be no peculiar presumption, from the analogy of nature, against supposing a revelation when man was first placed upon the earth.

Add, that there does not appear the least intimation in history or tradition that religion was first reasoned out; but the whole of history and tradition makes for the other side, that it came into the world by revelation. Indeed, the state of religion in the first ages, of which we have any account, seems to suppose and imply that this was the original of it among mankind. And these reflections together, without taking in the peculiar authority of Scripture, amount to real and a very material degree of evidence that there was a revelation at the beginning of the world. Now this, as it is a confirmation of natural religion, and therefore mentioned in the former part of this treatise, (page 164, etc.,) so likewise, it has a tendency to remove any prejudices against a subsequent revelation.

5. III. But still it may be objected, that there is some peculiar presumption, from analogy, against miracles; particularly against revelation, after the settlement and during the continuance of a course of nature.

None after the course of nature was established.

Now with regard to this supposed presumption, it is to be observed in general, that before we can have ground for raising what can, with any propriety, be called an *argument* from analogy, for or against revelation considered as somewhat miraculous, we must be says the Archbishop of Dublin, “have labored to prove, concerning *some one* of our Lord’s miracles, that it might have been the result of an accidental conjuncture of natural circumstances; next they endeavor to prove the same concerning *another*, and so on; and thence infer that *all* of them, occurring as a series, might have been so. They might argue, in like manner, that because it is not very improbable one may throw sixes in any one out of a hundred throws, therefore it is no more improbable that one may throw sixes a hundred times running.”—*Logic*, book iii, § 11.—F.]

acquainted with a similar or parallel case. But the history of some other world, seemingly in like circumstances with our own, is no more than a parallel case; and therefore nothing short of this can be so. Yet could we come at a presumptive proof, for or against a revelation, from being informed whether such world had one, or not; such a proof, being drawn from one single instance only, must be infinitely precarious. More particularly:

6. First of all, There is a very strong presumption against common speculative truths, and against the most ordinary facts, before the proof of them; which yet is overcome by almost any proof.* There is a presumption of millions

Presumption
against common
facts—Cesar.

* [Mr. Mill (Logic, chap. xxiv, § 5) has pointed out a mistake into which writers against Hume's Essay on Miracles have fallen, in confounding the improbability that an event will occur, with the improbability it has occurred—improbability before the fact and improbability after it. La Place, differing widely from these writers on religious subjects, has sanctioned the same error in his Essay on Probabilities.

The presumption against a miracle cannot be estimated by comparing with the presumption of a previously conceived story, but with the presumption against the truth of a story already refuted, which relates to events not miraculous.

“Many events are altogether improbable to us before we are informed of their happening, which are not in the least incredible when we are informed of them, because not contrary to any, even approximate, induction.”

Suppose a thousand numbers to be put in a box, and that it is proposed to draw out the number 87. Now there are nine hundred and ninety-nine chances to one against drawing that or any other given number. But if any person of common veracity tells you he drew out a number which proved to be 87, you at once believe him, for as some number was drawn, it was as likely to be this as any other.

Butler can hardly be said to have fallen into the error noticed by Mr. Mill. He says, “There is a very strong presumption against common speculative truths, and against the most ordinary facts, *before the proof*, which yet is overcome by almost any proof.”

In the view of improbability above taken, “the proof of Christian-

to one against the story of *Cesar*, or of any other man. For suppose a number of common facts so and so circumstanced, of which one had no kind of proof, should happen to come into one's thoughts; every one would, without any possible doubt, conclude them to be false. And the like may be said of a single common fact. And from hence it appears, that the question of importance as to the matter before us is, concerning the degree of the peculiar presumption supposed against miracles; not whether there be any peculiar presumption at all against them. For, if there be the presumption of millions to one against the most common facts, what can a small presumption, additional to this, amount to, though it be peculiar? It cannot be estimated, and is as nothing.* The only material question is, whether there be

ity from prophecy becomes amazingly strong. There are many predictions, for instance, that Christ should be born at a certain time and place, and under very particular circumstances. The probabilities against such a *conjunction* of events are almost infinite, yet they happened exactly as foretold.”]

* [Butler supposes, in the first instance, a series of events to have come gratuitously into one's mind; and, after stating the almost infinite number of chances against its being true, supposes, in the second instance, these very events to be deposed to by a credible witness. Now, that both the first and the second of these things should happen in coincidence together were the strongest possible unlikelihood; and Butler says truly, that the presumption against a miracle is a small presumption additional to this; for, in fact, this were itself a miracle. The proper way of estimating the strength of the presumption against, or of the proof that would be necessary for the establishment of a miracle, is to bring it into comparison, not with the presumption against the truth of a previously conceived story, but with the presumption against the truth of an already reported story that related to events which were not miraculous. There will be found in this case a difference very much greater than the small additional presumption which Butler speaks of; and so, however striking or original his observation may be, there seems nothing in it which can guide us into a right track for the solution of the difficulty that since his time has so exercised the skill of controversialists.—CHALMERS.]

any such presumption against miracles as to render them in any sort incredible?

7. *Secondly*, If we leave out the consideration of religion, we are in such total darkness upon what causes,

Aside from religion our ignorance of causes, etc.

occasions, reasons, or circumstances the present course of nature depends, that there does not appear any improbability for or against supposing, that five or six thousand years may have given scope for causes, occasions, reasons, or circumstances from whence miraculous interpositions may have arisen. And from this, joined with the foregoing observation, it will follow, that there must be a presumption, beyond all comparison greater, against the *particular* common facts just now instanced in, than against miracles in *general*; before any evidence of either.

8. But, *thirdly*, Take in the consideration of religion, or the moral system of the world, and then we see distinct particular reasons for miracles; to afford mankind instruction additional to that

Religion affords reasons for miracles.

of nature, and to attest the truth of it. And this gives a real credibility to the supposition, that it might be part of the original plan of things that there should be miraculous interpositions.

9. Then, *lastly*, Miracles must not be compared to common natural events; or to events which, though

Miracles not to be compared with common events.

uncommon, are similar to what we daily experience; but to the extraordinary phenomena of nature. And then the comparison will

be between the presumption against miracles, and the presumption against such uncommon appearances, suppose, as comets, and against there being any such powers in nature as magnetism and electricity, so contrary to the properties of other bodies not endued with these powers. And before any one can determine, whether there be any peculiar presumption against miracles more than against other extraordinary things, he must consider

what, upon first hearing, would be the presumption against the last-mentioned appearances and powers to a person acquainted only with the daily, monthly, and annual course of nature respecting this earth, and with those common powers of matter which we every day see.

10. Upon all this I conclude, that there certainly is no such presumption against miracles as to render them in anywise incredible; that on the contrary, our being able to discern reasons for them, gives a positive credibility to the history of them, in cases where those reasons hold; and that it is by no means certain that there is any peculiar presumption at all, from analogy, even in the lowest degree, against miracles, as distinguished from other extraordinary phenomena; though it is not worth while to perplex the reader with inquiries into the abstract nature of evidence in order to determine a question which without such inquiries we see (page 217, etc.) is of no importance.

CHAPTER III.

OF OUR INCAPACITY OF JUDGING WHAT WERE TO BE EXPECTED IN A REVELATION ; AND THE CREDIBILITY, FROM ANALOGY, THAT IT MUST CONTAIN THINGS APPEARING LIABLE TO OBJECTIONS.*

BESIDES the objections against the evidence for Christianity, many are alleged against the scheme of it ; against the whole manner in which it is put and left with the world, as well as against several particular relations in Scripture : objections drawn from the deficiencies of revelation ; from things in it appearing to men *foolishness*, (1 Cor. i, 28 ;) from its containing matters of offense which have led, and it must have been foreseen would

Objections to Christianity itself.

* [The object of this chapter is to prove the likelihood, in the general, of a revelation being liable to objections, or at least that its being so forms no proper ground for the rejection of it. This reduces us to the consideration of its proofs, as the only relevant inquiry that we have to do with. Doubtless every objection against these proofs must be entertained, and satisfactorily disposed of. But this is different from objections against the subject-matter of a revelation. These form what are here called its internal improbabilities, much insisted on by Deists ; but all proceeding on the competency of the human understanding to decide upon a topic which is here shown to be much too high for it, we being no more judges beforehand of what a revelation ought to be, either in the way it ought to be conducted or what it should contain, than we are judges anterior to experience of what ought to be the course of nature. The alleged imperfections and anomalies in the methods by which Christianity distributed and gave forth her lessons, are most effectually met by the analogous imperfections and anomalies, if such they must be called, as contrary to all the likelihoods of previous expectation, that might be observed in the gifts and teaching of nature.—CHALMERS.]

lead, into strange enthusiasm and superstition, and be made to serve the purposes of tyranny and wickedness; from its not being universal; and, which is a thing of the same kind, from its evidence not being so convincing and satisfactory as it might have been; for this last is sometimes turned into a positive argument against its truth. (Chap. vi.)

It would be tedious, indeed impossible, to enumerate the several particulars comprehended under the objections here referred to, they being so various according to the different fancies of men. There are persons who think it a strong objection against the authority of Scripture that it is not composed by rules of art, agreed upon by critics, for polite and correct writing. And the scorn is inexpressible, with which some of the prophetic parts of Scripture are treated; partly through the rashness of interpreters, but very much also on account of the hieroglyphical and figurative language in which they are left us.

2. Some of the principal things of this sort shall be particularly considered in the following chapters. But my design at present is, to observe in general, with respect to this whole way of arguing, that upon supposition of a revelation, it is highly Such objections frivolous. credible, beforehand, we should be incompetent judges of it to a great degree; and that it would contain many things appearing to us liable to great objections, in case we judge of it otherwise than by the analogy of nature. And, therefore, though objections against the evidence of Christianity are most seriously to be considered, yet objections against Christianity itself are, in a great measure, frivolous; almost all objections against it, excepting those which are alleged against the particular proofs of its coming from God. I express myself with caution, lest I should be mistaken to vilify reason, which is, indeed, the only faculty we have wherewith to judge con-

cerning any thing, even revelation itself; or be misunderstood to assert, that a supposed revelation cannot be proved false from internal characters. For it may contain clear immoralities or contradictions; and either of these would prove it false. Nor will I take upon me to affirm, that nothing else can possibly render any supposed revelation incredible. Yet still the observation above is, I think, true beyond doubt, that objections against Christianity, as distinguished from objections against its evidence, are frivolous. To make out this is the general design of the present chapter. And with regard to the whole of it, I cannot but particularly wish that the proofs might be attended to, rather than the assertions caviled at upon account of any unacceptable consequences, whether real or supposed, which may be drawn from them. For after all, that which is true must be admitted; though it should show us the shortness of our faculties, and that we are in nowise judges of many things of which we are apt to think ourselves very competent ones. Nor will this be any objection with reasonable men; at least upon second thought it will not be any objection with such, against the justness of the following observations:—

3. As God governs the world, and instructs his creatures, according to certain laws or rules in the known course of nature, known by reason together with experience; so the Scripture informs us of a scheme of divine providence additional to this. It relates that God has, by revelation, instructed men in things concerning his government which they could not otherwise have known, and reminded them of things which they might otherwise know; and attested the truth of the whole by miracles. Now if the natural and the revealed dispensation of things are both from God—if they coincide with each other, and together make up one scheme of providence

Being incompetent judges of the natural dispensation, much more so of the revealed.

—our being incompetent judges of one must render it credible that we may be incompetent judges also of the other. Since, upon experience, the acknowledged constitution and course of nature is found to be greatly different from what, before experience, would have been expected; and such as, men fancy, there lie great objections against: this renders it beforehand highly credible that they may find the revealed dispensation, likewise, if they judge of it as they do of the constitution of nature, very different from expectations formed beforehand; and liable, in appearance, to great objections: objections against the scheme itself, and against the degrees and manners of the miraculous interpositions by which it was attested and carried on. Thus suppose a prince to govern his dominions in the wisest manner possible, by common known laws; and that upon some exigencies he should suspend these laws, and govern, in several instances, in a different manner: if one of his subjects were not a competent judge beforehand by what common rules the government should or would be carried on, it could not be expected that the same person would be a competent judge in what exigencies, or in what manner, or to what degree, those laws commonly observed would be suspended or deviated from. If he were not a judge of the wisdom of the ordinary administration, there is no reason to think he would be a judge of the wisdom of the extraordinary. If he thought he had objections against the former, doubtless it is highly supposable he might think, also, that he had objections against the latter. And thus, as we fall into infinite follies and mistakes whenever we pretend, otherwise than from experience and analogy, to judge of the constitution and course of nature, it is evidently supposable beforehand that we should fall into as great in pretending to judge, in like manner, concerning revelation. Nor is there any more

Illustration—
suspension of
common laws,
etc.

ground to expect that this latter should appear to us clear of objections than that the former should.

4. These observations relating to the whole of Christianity, are applicable to inspiration in particular. As we are in no sort judges beforehand by what laws or rules, in what degree or by what means, it were to have been expected that God would naturally instruct us; so upon supposition of his affording us light and instruction by revelation, additional to what he has afforded us by reason and experience, we are in no sort judges by what methods, and in what proportion, it were to be expected that this supernatural light and instruction would be afforded us. We know not beforehand what degree or kind of natural information it were to be expected God would afford men, each by his own reason and experience; nor how far he would enable and effectually dispose them to communicate it, whatever it should be, to each other; nor whether the evidence of it would be certain, highly probable, or doubtful; nor whether it would be given with equal clearness and conviction to all. Nor could we guess, upon any good ground I mean, whether natural knowledge, or even the faculty itself by which we are capable of attaining it, reason, would be given us at once, or gradually.

In like manner, we are wholly ignorant what degree of new knowledge it were to be expected God would give mankind by revelation, upon supposition of his affording one; or how far, or in what way, he would interpose miraculously to qualify them to whom he should originally make the revelation, for communicating the knowledge given by it; and to secure their doing it to the age in which they should live; and to secure its being transmitted to posterity. We are equally ignorant, whether the evidence of it would be certain, or highly probable, or doubtful, (see chap. vi;) or whether all

This analogy applied to inspiration.

who should have any degree of instruction from it, and any degree of evidence of its truth, would have the same: or whether the scheme would be revealed at once, or unfolded gradually. Nay, we are not in any sort able to judge whether it were to have been expected that the revelation should have been committed to writing, or left to be handed down, and consequently corrupted, by verbal tradition, and at length sunk under it, if mankind so pleased, and during such time as they are permitted, in the degree they evidently are, to act as they will.

5. But it may be said, "that a revelation in some of the above-mentioned circumstances, one, for instance, which was not committed to writing, and thus secured against danger of corruption, would not have answered its purpose." I

Objection to an unwritten revelation.

ask, what purpose? It would not have answered all the purposes which it has now answered, and in the same degree; but it would have answered others, or the same in different degrees. And which of these were the purposes of God, and best fell in with his general government, we could not at all have determined beforehand.

Now since it has been shown that we have no principles of reason upon which to judge, beforehand, how it were to be expected revelation should have been left, or what was most suitable to the divine plan of government, in any of the fore-mentioned respects; it must be quite frivolous to object afterward, as to any of them, against its being left in one way rather than another; for this would be to object against things upon account of their being different from expectations, which have been shown to be without reason.

6. And thus we see that the only question concerning the truth of Christianity is, whether it be a real revelation; not whether it be attended with every circumstance which we should have looked for: and concerning the authority

The only question is this, Is Christianity a real revelation?

of Scripture, whether it be what it claims to be; not whether it be a book of such sort, and so promulgated, as weak men are apt to fancy a book containing a divine revelation should. And, therefore, neither obscurity nor seeming inaccuracy of style, nor various readings, nor early disputes about the authors of particular parts, nor any other things of the like kind, though they had been much more considerable in degree than they are, could overthrow the authority of the Scripture; unless the prophets, apostles, or our Lord, had promised, that the book, containing the divine revelation, should be secure from those things. Nor, indeed, can any objections overthrow such a kind of revelation as the Christian claims to be, since there are no objections against the morality of it, (page 217, etc.,) but such as can show that there is no proof of miracles wrought originally in attestation of it; no appearance of any thing miraculous in its obtaining in the world; nor any of prophecy, that is, of events foretold, which human sagacity could not foresee. If it can be shown, that the proof alleged for all these is absolutely none at all, then is revelation overturned. But were it allowed that the proof of any one, or all of them, is lower than is allowed; yet while any proof of them remains, revelation will stand upon much the same footing it does at present, as to all the purposes of life and practice, and ought to have the like influence upon our behavior.

7. From the foregoing observations, too, it will follow, and those who will thoroughly examine into revelation will find it worth remarking, that there are several ways of arguing, which, though just with regard to other writings, are not applicable to Scripture; at least not to the prophetic parts of it. We cannot argue, for instance, that this cannot be the sense or intent of such a passage of Scripture, for if it had it would have been expressed more plainly, or

Modes of argument inapplicable to Scripture.

have been represented under a more apt figure or hieroglyphic; yet we may justly argue thus with respect to common books. And the reason of this difference is very evident; that in Scripture we are not competent judges, as we are in common books, how plainly it were to have been expected, what is the true sense should have been expressed, or under how apt an image figured. The only question is, what appearance there is that this is the sense? and scarce at all, how much more determinately or accurately it might have been expressed or figured?

8. "But is it not self-evident, that internal improbabilities of all kinds weaken external probable proof?" Doubtless. But to what practical purpose can this be alleged here, when it has been proved before, (page 217, etc.,) that real internal improbabilities, which rise even to moral certainty, are overcome by the most ordinary testimony? and when it now has been made appear, that we scarce know what are improbabilities, as to the matter we are here considering? as will further appear from what follows.

For though from the observations above made it is manifest that we are not in any sort competent judges what supernatural instruction were to have been expected; and though it is self-evident that the objections of an incompetent judgment must be frivolous; yet it may be proper to go one step further, and observe that if men will be regardless of these things, and pretend to judge of the Scriptures by preconceived expectations, the analogy of nature shows beforehand, not only that it is highly credible they may, but also probable that they will, imagine they have strong objections against it, however really unexceptionable; for so, prior to experience, they would think they had, against the circumstances, and degrees, and the whole manner of that instruction, which is afforded

Objection. Internal probabilities weaken external proof.

Similar objections against Scripture and instruction from nature.

by the ordinary course of nature. Were the instruction which God affords to brute creatures by instincts and mere propensions, and to mankind by these together with reason, matter of probable proof, and not of certain observation, it would be rejected as incredible, in many instances of it, only upon account of the means by which this instruction is given, the seeming disproportions, the limitations, necessary conditions, and circumstances of it. For instance: would it not have been thought highly improbable that men should have been so much more capable of discovering, even to certainty, the general laws of matter, and the magnitudes, paths, and revolutions of the heavenly bodies; than the occasions and cures of distempers, and many other things in which human life seems so much more nearly concerned than in astronomy? How capricious and irregular a way of information, would it be said, is that of *invention*, by means of which nature instructs us in matters of science, and in many things upon which the affairs of the world greatly depend; that a man should by this faculty be made acquainted with a thing in an instant, when perhaps he is thinking of somewhat else, which he has in vain been searching after, it may be, for years.

So, likewise, the imperfections attending the only method by which nature enables and directs us to communicate our thoughts to each other are innumerable. Language is, in its very nature, inadequate, ambiguous, liable to infinite abuse, even from negligence; and so liable to it from design, that every man can deceive and betray by it. And to mention but one instance more, that brutes without reason should act, in many respects, with a sagacity and foresight vastly greater than what men have in those respects, would be thought impossible. Yet it is certain they do act with such superior foresight; whether it be their own, indeed, is another question. From these things it is highly credible before-

hand, that upon supposition God should afford men some additional instruction by revelation, it would be with circumstances, in manners, degrees, and respects which we should be apt to fancy we had great objections against the credibility of. Nor are the objections against the Scripture, nor against Christianity in general, at all more or greater than the analogy of nature would beforehand,—not perhaps give ground to expect, for this analogy may not be sufficient, in some cases, to ground an expectation upon,—but no more nor greater than analogy would show it, beforehand, to be supposable and credible, that there might seem to lie against revelation.

9. By applying these general observations to a particular objection, it will be more distinctly seen how they are applicable to others of the like kind; and, indeed, to almost all objections against Christianity as distinguished from objections against its evidence. It appears from Scripture, that as it was not unusual in the apostolic age for persons, upon their conversion to Christianity, to be endued with miraculous gifts; so, some of those persons exercised these gifts in a strangely irregular and disorderly manner; and this is made an objection against their being really miraculous. Now the foregoing observations quite remove this objection, how considerable soever it may appear at first sight. For, consider a person endued with any of these gifts, for instance, that of tongues; it is to be supposed that he had the same power over this miraculous gift as he would have had over it had it been the effect of habit, of study, and use, as it ordinarily is; or the same power over it, as he had over any other natural endowment. Consequently, he would use it in the same manner he did any other; either regularly and upon proper occasions only, or irregularly and upon improper ones; according to his sense of decency, and his character of

Objection to
miraculous gifts
from their dis-
orderly use.

prudence.* Where, then, is the objection? Why, if this miraculous power was indeed given to the world to propagate Christianity, and attest the truth of it, we might, it seems, have expected that other sort of persons should have been chosen to be invested with it; or that these should, at the same time, have been endued with prudence; or that they should have been continually restrained and directed in the exercise of it: that is, that God should have miraculously interposed, if at all, in a different manner or higher degree. But, from the observations made above, it is undeniably evident that we are not judges in what degrees and manner it were to have been expected he should miraculously interpose; upon supposition of his doing it in some degree and manner. Nor, in the natural course of providence, are superior gifts of memory, eloquence, knowledge, and other talents of great influence, conferred only on persons of prudence and decency, or such as are disposed to make the properest use of them. Nor is the instruction and admonition naturally afforded us for the conduct of life, particularly in our education, commonly given in a manner the most suited to recommend it; but

* [Warburton, as quoted by Fitzgerald, points out the distinction between such supernatural endowments as the gift of tongues and others. "The power of healing or working miracles is, during the whole course of its operation, one continual arrest or diversion of the general laws of matter and motion. It was therefore fitting that this power should be given occasionally. But the *speaking with tongues*, when once the gift was conferred, became thenceforth a natural power; just as the free and perfect use of the members of the body, after they have been restored by miracles to the exercise of their natural functions. Indeed, to have *lost* the gift of tongues after this temporary use of it would imply another miracle; for it must have been by actual deprivation, unless we suppose the apostles were irrational organs through which divine sounds were conveyed. . . . In healing, the apostles are to be considered as the workers of a miracle; and in speaking strange tongues, as the persons on whom the miracle is performed."]

often with circumstances apt to prejudice us against such instruction.

10. One might go on to add, that there is a great resemblance between the light of nature and of revelation, in several other respects.* Practical Christianity, or that faith and behavior which renders a man a Christian, is a plain and obvious thing; like the common rules of conduct, with respect to our ordinary temporal affairs. The more distinct and particular knowledge of those things, the study of which the apostle calls "*going on unto perfection,*" and of the prophetic parts of revelation, like many parts of natural and even civil knowledge, may require very exact thought and careful consideration. The hinderances too, of natural and of supernatural light and knowledge, have been of the same kind. And as it is owned the whole scheme of Scripture is not yet understood, so, if it ever comes to be understood before the "*restitution of all things,*" and without miraculous interpositions, it must be in the same way as natural knowledge is come at, by the continuance and progress of learning and of liberty, and by particular persons attending to, comparing, and pursuing, intimations scattered up and down it, which are overlooked and disregarded by the generality of the world. For this is the way in which all improvements are made; by thought-

Other analogies between Christianity and nature.

* [This passage marks the essential difference between the Protestant and Roman notions of developments. The Protestant are: 1. Not developments of the *faith*, but of the *wisdom*, of the gospel; whereas the Roman are developments of mere necessary articles of faith. 2. The Protestant developments are arrived at by the free examination of Scripture with all the helps of learning and reason; whereas the Roman are principally drawn from tradition, and were elaborated in ages when the study of the original languages having been generally abandoned, and sound principles of criticism but little known, the Church was destitute of adequate means for developing the sense of the sacred writings.—FITZGERALD.]

ful men's tracing on obscure hints, as it were, dropped us by nature accidentally, or which seem to come into our minds by chance. Nor is it at all incredible, that a book which has been so long in the possession of mankind should contain many truths as yet undiscovered. For all the same phenomena, and the same faculties of investigation, from which such great discoveries in natural knowledge have been made in the present and last age, were equally in the possession of mankind several thousand years before. And possibly it might be intended, that events, as they come to pass, should open and ascertain the meaning of several parts of Scripture.

11. It may be objected, that this analogy fails in a material respect; for that natural knowledge is of little or no consequence. But I have been speaking of the general instruction which nature does or does not afford us. And besides, some parts of natural knowledge, in the more common, restrained sense of the words, are of the greatest consequence to the ease and convenience of life. But suppose the analogy did, as it does not, fail in this respect, yet it might be abundantly supplied from the whole constitution and course of nature; which shows that God does not dispense his gifts according to our notions of the advantage and consequence they would be of to us. And this in general, with his method of dispensing knowledge in particular, would together make out an analogy full to the point before us.

12. But it may be objected still further, and more generally—"The Scripture represents the world as in a state of ruin, and Christianity as an expedient to recover it, to help in these respects where nature fails; in particular, to supply the deficiencies of natural light. Is it credible, then, that so many ages should have been let pass before a matter of such a sort, of so great and so general impor-

Objection. Natural knowledge of little importance.

Objection from the delay in the diffusion of Christianity.

tance, was made known to mankind? and then that it should be made known to so small a part of them? Is it conceivable, that this supply should be so very deficient, should have the like obscurity and doubtfulness, be liable to the like perversions; in short, lie open to all the like objections, as the light of nature itself?" (Chap. vi.)

Without determining how far this in fact is so, I answer; it is by no means incredible that it might be so, if the light of nature and of revelation be from the same hand. Men are naturally liable to diseases; for which God, in his good providence, has provided natural remedies. (Chap. v.) But remedies existing in nature have been unknown to mankind for many ages; are known but to few now; probably many valuable ones are not known yet. Great has been, and is, the obscurity and difficulty, in the nature and application of them. Circumstances seem often to make them very improper where they are absolutely necessary. It is after long labor and study, and many unsuccessful endeavors, that they are brought to be as useful as they are; after high contempt and absolute rejection of the most useful we have; and after disputes and doubts, which have seemed to be endless. The best remedies, too, when unskillfully, much more if dishonestly, applied, may produce new diseases; and with the rightest application, the success of them is often doubtful. In many cases they are not at all effectual; where they are, it is often very slowly: and the application of them, and the necessary regimen accompanying it, is, not uncommonly, so disagreeable, that some will not submit to them; and satisfy themselves with the excuse that if they would, it is not certain whether it would be successful. And many persons, who labor under diseases, for which there are known natural remedies, are not so happy as to be always, if ever, in the way of them. In a word, the reme-

dies which nature has provided for diseases are neither certain, perfect, nor universal. And indeed the same principles of arguing, which would lead us to conclude that they must be so, would lead us likewise to conclude that there could be no occasion for them; that is, that there could be no diseases at all. And therefore our experience that there are diseases, shows that it is credible beforehand, upon supposition nature has provided remedies for them, that these remedies may be, as by experience we find they are, not certain, nor perfect, nor universal; because it shows, that the principles upon which we should expect the contrary are fallacious.

13. And now, what is the just consequence from all these things? Not that reason is no judge of what is offered to us as being of divine revelation. The province of reason. For this would be to infer that we are unable to judge of any thing because we are unable to judge of all things. Reason can, and it ought, to judge not only of the meaning, but also of the morality and the evidence, of revelation.

First. It is the province of reason to judge of the morality of the Scripture; that is, not whether it contains things different from what we should have expected from a wise, just, and good Being; for objections from hence have been now obviated, but whether it contains things plainly contradictory to wisdom, justice, or goodness; to what the light of nature teaches us of God. And I know nothing of this sort objected against Scripture, excepting such objections as are formed upon suppositions which would equally conclude that the constitution of nature is contradictory to wisdom, justice, or goodness; which most certainly it is not. Indeed, there are some particular precepts in Scripture, given to particular persons, requiring actions which would be immoral and vicious, were it not for such precepts. But

it is easy to see that all these are of such a kind as that the precept changes the whole nature of the case and of the action; and both constitutes and shows that not to be unjust or immoral, which, prior to the precept, must have appeared and really have been, so: which may well be, since none of these precepts are contrary to immutable morality. If it were commanded to cultivate the principles, and act from the spirit of treachery, ingratitude, cruelty; the command would not alter the nature of the case, or of the action, in any of these instances. But it is quite otherwise in precepts, which require only the doing an external action; for instance, taking away the property or life of any. For men have no right to either life or property, but what arises solely from the grant of God: when this grant is revoked, they cease to have any right at all in either; and when this revocation is made known, as surely it is possible it may be, it must cease to be unjust to deprive them of either. And though a course of external acts, which without command would be immoral, must make an immoral habit, yet a few detached commands have no such natural tendency. I thought proper to say thus much of the few Scripture precepts, which require not vicious actions, but actions which would have been vicious had it not been for such precepts; because they are sometimes weakly urged as immoral, and great weight is laid upon objections drawn from them. But to me there seems no difficulty at all in these precepts, but what arises from their being offenses; that is, from their being liable to be perverted, as indeed they are, by wicked designing men, to serve the most horrid purposes, and, perhaps, to mislead the weak and enthusiastic. And objections from this head are not objections against revelation, but against the whole notion of religion as a trial: and against the general constitution of nature.

Secondly. Reason is able to judge, and must, of the evidence of revelation, and of the objections urged against that evidence; which shall be the subject of a following chapter. (Chap. vii.)

14. But the consequence of the foregoing observations is, that the question upon which the truth of Christianity depends, is scarce at all, what objections there are against its scheme, since there are none against the morality of it; but *what objections there are against its evidence*: or, *what proof there remains of it, after due allowances made for the objections against that proof*: because it has been shown, that the *objections against Christianity, as distinguished from objections against its evidence, are frivolous*. For surely every little weight, if any at all, is to be laid upon a way of arguing and objecting, which, when applied to the general constitution of nature, experience shows not to be conclusive: and such, I think, is the whole way of objecting treated of throughout this chapter. It is resolvable into principles, and goes upon suppositions, which mislead us to think that the Author of nature would not act as we experience he does; or would act, in such and such cases, as we experience he does not in like cases. But the unreasonableness of this way of objecting will appear yet more evidently from hence, that the chief things thus objected against are justified, as shall be further shown,* by distinct, particular, and full analogies, in the constitution and course of nature.

But it is to be remembered, that as frivolous as objections of the foregoing sort against revelation are, yet, when a supposed revelation is more consistent with itself, and has a more general and uniform tendency to promote virtue, than, all circumstances considered, could have been expected from enthusiasm and political views; this is a presumptive proof of its not proceeding from

* Chap. iv, latter part; and v, vi.

them, and so of its truth; because we are competent judges what might have been expected from enthusiasm and political views.*

* [In arguing that a revelation cannot have come from perfect wisdom, because there are in it things which seem to us foolishness, we are arguing in the dark. But in arguing that it cannot have come from human fraud or enthusiasm, we are dealing with matters which we may perfectly understand, because coming within the sphere of our daily experience. See the latter argument admirably pressed in the Archbishop of Dublin's *Essay on the Peculiarities of the Christian Religion*, and on the Omissions of Scripture.—F.]

CHAPTER IV.

OF CHRISTIANITY, CONSIDERED AS A SCHEME OR CONSTITUTION, IMPERFECTLY COMPREHENDED.

IT hath been now shown* that the analogy of nature renders it highly credible, beforehand, that supposing a revelation to be made, it must contain many things very different from what we should have expected, and such as appear open to great objections; and that this observation, in good measure, takes off the force of those objections, or rather, precludes them. But it may be alleged that this is a very partial answer to such objections, or a very unsatisfactory way of obviating them; because it doth not show at all, that the things objected against can be wise, just, and good; much less that it is credible they are so. It will, therefore, be proper to show this distinctly, by applying to these objections against the wisdom, justice, and goodness of Christianity, the answer above † given to the like objections against the constitution of nature; before we consider the particular analogies in the latter to the particular things objected against in the former. Now that which affords a sufficient answer to objections against the wisdom, justice, and goodness of the constitution of nature, is its being a constitution, a system, or scheme, imperfectly comprehended; a scheme, in which means are made use of to accomplish ends, and which is carried on by general laws. For from these things it has been proved, not only to be possible, but also to be

Objections to be expected. How answered.

* In the foregoing chapter.

† Part i, chap. vii, to which this all along refers.

credible, that those things which are objected against may be consistent with wisdom, justice, and goodness; nay, may be instances of them: and even that the constitution and government of nature may be perfect in the highest possible degree. If Christianity, then, be a scheme, and of the like kind, it is evident the like objections against it must admit of the like answer. And,

2. I. Christianity is a scheme quite beyond our comprehension. The moral government of God is exercised by gradually conducting things Christianity beyond our comprehension. so, in the course of his providence, that every one, at length, and upon the whole, shall receive according to his deserts; and neither fraud nor violence, but truth and right, shall finally prevail. Christianity is a particular scheme under this general plan of providence, and a part of it, conducive to its completion with regard to mankind: consisting itself also of various parts, and a mysterious economy, which has been carrying on from the time the world came into its present wretched state, and is still carrying on, for its recovery, by a divine person, the Messiah; who is “to gather together in one the children of God that are scattered abroad,” (John xi, 52,) and establish “an everlasting kingdom, wherein dwelleth righteousness.” 2 Pet. iii, 13. And in order to it, after various manifestations of things relating to this great and general scheme of Providence, through a succession of many ages;—(for “the Spirit of Christ, which was in the prophets, testified beforehand his sufferings, and the glory that should follow: unto whom it was revealed, that not unto themselves, but unto us, they did minister the things which are now reported unto us by them which have preached the gospel; which things the angels desire to look into,” (1 Pet. i, 11, 12:))—after various dispensations, looking forward and preparatory to this final salvation, “in the fullness of time,” when Infinite Wisdom thought fit, He,

“being in the form of God, made himself of no reputation, and took upon him the form of a servant, and was made in the likeness of men; and being found in fashion as a man, he humbled himself, and became obedient to death, even the death of the cross: wherefore God also hath highly exalted him, and given him a name which is above every name: that at the name of Jesus every knee should bow, of things in heaven, and things in earth, and things under the earth; and that every tongue should confess, that Jesus Christ is Lord, to the glory of God the Father.” Phil. ii, 6-11. Parts, likewise, of this economy are the miraculous mission of the Holy Ghost, and his ordinary assistances given to good men; the invisible government which Christ at present exercises over his Church; that which he himself refers to in these words, “In my Father’s house are many mansions—I go to prepare a place for you,” (John xiv, 2;) and his future return to “judge the world in righteousness,” and completely re-establish the kingdom of God. “For the Father judgeth no man; but hath committed all judgment unto the Son; that all men should honor the Son, even as they honor the Father.” John v, 22, 23. “All power is given unto him in heaven and in earth.” Matt. xxviii, 18. “And he must reign, till he hath put all enemies under his feet. Then cometh the end, when he shall have delivered up the kingdom to God, even the Father; when he shall have put down all rule, and all authority, and power. And when all things shall be subdued unto him, then shall the Son also himself be subject unto him, that put all things under him, that God may be all in all.” 1 Cor. xv, 25-28. Now little, surely, need be said to show, that this system or scheme of things is but imperfectly comprehended by us. The Scripture expressly asserts it to be so. And indeed one cannot read a passage relating to this “great mystery of godliness,” (1 Tim. iii, 16,) but what imme-

diately runs up into something which shows us our ignorance in it, as every thing in nature shows us our ignorance in the constitution of nature. And whoever will seriously consider that part of the Christian scheme which is revealed in Scripture, will find so much more unrevealed, as will convince him, that, to all the purposes of judging and objecting, we know as little of it as of the constitution of nature. Our ignorance, therefore, is as much an answer to our objections against the perfection of one as against the perfection of the other. (Page 172, etc.)

3. II. It is obvious, too, that in the Christian dispensation, as much as in the natural scheme of things, means are made use of to accomplish ends. And Means used to accomplish ends. the observation of this furnishes us with the same answer to objections against the perfection of Christianity, as to objections of the like kind against the constitution of nature. It shows the credibility, that the things objected against, how *foolish* (1 Cor. i) soever they appear to men, may be the very best means of accomplishing the very best ends. And their appearing *foolishness* is no presumption against this, in a scheme so greatly beyond our comprehension. (Page 178.)

4. III. The credibility that the Christian dispensation may have been, all along, carried on by general laws, (pages 179, 180,) no less than the As in nature, so Christianity is carried on by general laws. course of nature, may require to be more distinctly made out. Consider, then, upon what ground it is we say, that the whole common course of nature is carried on according to general foreordained laws. We know, indeed, several of the general laws of matter; and a great part of the natural behavior of living agents is reducible to general laws. But we know in a manner nothing, by what laws storms and tempests, earthquakes, famine, pestilence, become the instruments of destruction to mankind. And the laws, by which

persons born into the world at such a time and place, are of such capacities, geniuses, tempers; the laws, by which thoughts come into our mind, in a multitude of cases; and by which innumerable things happen, of the greatest influence upon the affairs and state of the world; these laws are so wholly unknown to us, that we call the events which come to pass by them, accidental; though all reasonable men know certainly, that there cannot, in reality, be any such thing as chance; and conclude that the things which have this appearance are the result of general laws and may be reduced into them. It is, then, but an exceeding little way, and in but a very few respects, that we can trace up the natural course of things before us to general laws. And it is only from analogy that we conclude the whole of it to be capable of being reduced into them; only from our seeing that part is so. It is from our finding that the course of nature, in some respects and so far, goes on by general laws, that we conclude this of the rest. And if that be a just ground for such a conclusion, it is a just ground also, if not to conclude yet to apprehend, to render it supposable and credible, which is sufficient for answering objections, that God's miraculous interpositions may have been all along, in like manner, by *general* laws of wisdom. Thus, that miraculous powers should be exerted at such times, upon such occasions, in such degrees and manners, and with regard to such persons rather than others; that the affairs of the world being permitted to go on in their natural course so far, should just at such a point have a new direction given them by miraculous interpositions; that these interpositions should be exactly in such degrees and respects only; all this may have been by general laws. These laws are unknown, indeed, to us; but no more unknown than the laws from whence it is that some die as soon as they are born and others live to ex-

treme old age; that one man is so superior to another in understanding; with innumerable more things, which, as was before observed, we cannot reduce to any laws or rules at all; though it is taken for granted they are as much reducible to general ones as gravitation. Now, if the revealed dispensations of Providence and miraculous interpositions be by general laws, as well as God's ordinary government in the course of nature, made known by reason and experience; there is no more reason to expect that every exigence, as it arises, should be provided for by these general laws of miraculous interpositions than that every exigence in nature should, by the general laws of nature; yet there might be wise and good reasons, that miraculous interpositions should be by general laws; and that these laws should not be broken in upon, or deviated from, by other miracles.

5. Upon the whole, then, the appearance of deficiencies and irregularities in nature is owing to its being a scheme but in part made known, and of such a certain particular kind in other respects. Now we see no more reason why the frame and course of nature should be such a scheme, than why Christianity should. And that the former is such a scheme, renders it credible that the latter, upon supposition of its truth, may be so too. And as it is manifest that Christianity is a scheme revealed but in part, and a scheme in which means are made use of to accomplish ends, like to that of nature; so the credibility that it may have been all along carried on by general laws, no less than the course of nature, has been distinctly proved. And from all this it is beforehand credible that there might, I think probable that there would, be the like appearance of deficiencies and irregularities in Christianity as in nature; that is, that Christianity would be liable to the like objections, as the frame of nature. And these objections are answered

The scheme of nature and Christianity imperfectly understood. The inference.

by these observations concerning Christianity; as the like objections against the frame of nature are answered by the like observations concerning the frame of nature.

6. THE objections against Christianity, considered as a matter of fact, (page 222, etc.,) having in general been obviated in the preceding chapter; and the same considered as made against the wisdom and goodness of it having been obviated in this; the next thing, according to the method proposed, is to show that the principal objections, in particular against Christianity, may be answered by particular and full analogies in nature. And as one of them is made against the whole scheme of it together, as just now described, I choose to consider it here, rather than in a distinct chapter by itself.

The thing objected against this scheme of the gospel is, "that it seems to suppose God was reduced to the necessity of a long series of intricate means in order to accomplish his ends, the recovery and salvation of the world; in like sort as men, for want of understanding or power, not being able to come at their ends directly, are forced to go round-about ways, and make use of many perplexed contrivances to arrive at them." Now every thing which we see shows the folly of this, considered as an objection against the truth of Christianity. For according to our manner of conception, God makes use of variety of means, what we often think tedious ones, in the natural course of providence, for the accomplishment of all his ends. Indeed, it is certain there is somewhat in this matter quite beyond our comprehension; but the mystery is as great in nature as in Christianity. We know what we ourselves aim at as final ends, and what courses we take merely as means conducing to those ends. But we are greatly ignorant how far things are

Objection. God seems to be compelled to use intricate means to serve his purpose.

considered by the Author of nature, under the single notion of means and ends; so as that it may be said, this is merely an end, and that merely means, in his regard. And whether there be not some peculiar absurdity in our very manner of conception concerning this matter, somewhat contradictory, arising from our extremely imperfect views of things, it is impossible to say.

However, thus much is manifest, that the whole natural world, and government of it, is a scheme or system; not a fixed, but a progressive one; a scheme in which the operation of various means takes up a great length of time before the ends they tend to can be attained. The change of seasons, the ripening of the fruits of the earth, the very history of a flower, is an instance of this; and so is human life. Thus vegetable bodies, and those of animals, though possibly formed at once, yet grow up by degrees to a mature state. And thus rational agents, who animate these latter bodies, are naturally directed to form each his own manners and character by the gradual gaining of knowledge and experience, and by a long course of action. Our existence is not only successive, as it must be of necessity, but one state of our life and being is appointed by God to be a preparation for another; and that to be the means of attaining to another succeeding one: infancy to childhood; childhood to youth; youth to mature age. Men are impatient, and for precipitating things; but the Author of nature appears deliberate throughout his operations; accomplishing his natural ends by slow, successive steps.*

* ["We shall find that all the great developments of the moral being have resulted in the advantage of society, and that all the great developments of the social condition have raised the character of humanity. The movement takes its peculiar character from whichever of the two facts predominates and lends its luster.

"Sometimes, long intervals of time, a thousand transformations and obstacles, occur before the second fact is developed, and comes as it were to complete the civilization which the first had commenced.

And there is a plan of things beforehand laid out, which from the nature of it, requires various systems of means, as well as length of time, in order to the carrying on its several parts into execution. Thus in the daily course of natural providence, God operates in the very same manner as in the dispensation of Christianity, making one thing subservient to another; this to somewhat further; and so on, through a progressive series of means which extend both backward and forward, beyond our utmost view. Of this manner of operation, every thing we see in the course of nature is as much an instance as any part of the Christian dispensation.

But close observation convinces us of the bond which unites them. The ways of Providence are not confined within narrow limits; he hurries not himself to display to-day the consequence of the principle that he yesterday laid down; he will draw it out in the lapse of ages, when the hour is come; and even according to *our* reasoning, logic is not the less sure because it is slow. Providence is unconcerned as to time; his march (if I may be allowed the simile) is like that of the fabulous deities of Homer through space; he takes a step, and ages have elapsed. How long a time, how many events, before the regeneration of the moral man by Christianity exercised its great and legitimate influence upon the regeneration of the social state! It has succeeded, however; who can at this day gainsay it?"—GUIZOT'S *Lectures on Civilization in Europe*, Lecture I.]

CHAPTER V.

OF THE PARTICULAR SYSTEM OF CHRISTIANITY ; THE APPOINTMENT OF A MEDIATOR, AND THE REDEMPTION OF THE WORLD BY HIM.

THERE is not, I think, any thing relating to Christianity which has been more objected against than the mediation of Christ, in some or other of its parts. Yet, upon thorough consideration, there seems nothing less justly liable to it.* For,

I. The whole analogy of nature removes all imagined presumption against the general notion of “*a Mediator between God and man.*” (1 Tim. ii, 5.) For we find all living creatures are brought into the world, and their life in infancy is preserved, by the instrumentality of others; and every satisfaction of it, some way or other, is bestowed by the like means. So that the visible government which God exercises over the world, is by the instrumentality and mediation of others. And how far his invisible govern-

The analogy of nature removes the objection to a Mediator.

* [Philosophers make shameful and dangerous mistakes when they judge of the divine economy. He cannot, they tell us, act thus; it would be contrary to his wisdom or his justice, etc. But while they make these peremptory assertions, they show themselves to be unacquainted with the fundamental rules of their own science and with the origin of all late improvements. True philosophy would begin the other way, with observing the constitution of the world, how God has made us, and in what circumstances he has placed us, and *then*, from what he has done, form a sure judgment what he would do. Thus might they learn “the invisible things of God from those which are clearly seen,” the things which are not accomplished from those which are.—Powell’s Use and Abuse of Philosophy, quoted by Malcom.]

ment be, or be not so, it is impossible to determine at all by reason. And the supposition that part of it is so, appears, to say the least, altogether as credible as the contrary. There is, then, no sort of objection, from the light of nature, against the general notion of a mediator between God and man, considered as a doctrine of Christianity, or as an appointment in this dispensation; since we find by experience that God does appoint mediators, to be the instruments of good and evil to us, the instruments of his justice and his mercy. And the objection here referred to is urged, not against mediation in that high, eminent, and peculiar sense in which Christ is our mediator; but absolutely against the whole notion itself of a mediator at all.

2. II. As we must suppose that the world is under the proper moral government of God, or in a state of religion, before we can enter into consideration of the revealed doctrine concerning the redemption of it by Christ; so that supposition is here to be distinctly taken notice of. Now the divine moral government which religion teaches us, implies, that the consequence of vice shall be misery, in some future state, by the righteous judgment of God. That such consequent punishment shall take effect by his appointment, is necessarily implied. But as it is not in any sort to be supposed that we are made acquainted with all the ends or reasons for which it is fit future punishments should be inflicted, or why God has appointed such and such consequent misery should follow vice; and as we are altogether in the dark how or in what manner it shall follow, by what immediate occasions, or by the instrumentality of what means; there is no absurdity in supposing, it may follow in a way analogous to that, in which many miseries follow such and such courses of action at present; poverty, sickness, infamy, untimely death by diseases, death from the hands of civil jus-

Punishment will follow vice as a natural consequence.

tice. There is no absurdity in supposing future punishment may follow wickedness of course, as we speak, or in the way of natural consequence, from God's original constitution of the world; from the nature he has given us, and from the condition in which he places us; or in a like manner, as a person rashly trifling upon a precipice, in the way of natural consequence, falls down; in the way of natural consequence, breaks his limbs, suppose; in the way of natural consequences of this, without help, perishes.*

3. Some good men may perhaps be offended with hearing it spoken of as a supposable thing, that the future punishments of wickedness may be in the way of

* [There is a clear distinction between right and wrong, and innocence and guilt. Right and wrong depend on unchangeable relations, and consequent obligations; while innocence and guilt depend on conscious and avoidable revelations of God's love. Obedience to God's laws, whether intentional or not, whether rendered by a Christian or an infidel, brings naturally a degree of favor and benefit, just as cases of disobedience cause evil and suffering. Whether rashly and foolishly or ignorantly a man approaches a precipice and falls over, he will suffer and perhaps lose his life. If he takes poison intentionally or ignorantly he will suffer and die.

This natural relation between obedience or disobedience of law and consequences, good or evil, is readily perceived in ordinary life; but the same natural connection exists between willful sin and punishment, present and future. In no sense is this punishment merely arbitrary, which in any individual case the Divine will might suspend or remove. The principles of the Divine government that connect happiness with virtue and misery with vice were established before the existence of the sinner, and are as unchangeable as the character of Jehovah. God could as readily send a sinless archangel to perdition as free an unrepenting sinner from the consequences of sin and raise him to heaven. Both are impossible. In this view we can see how God consistently, with tenderness and earnestness, entreats man to turn from his evil way, and yet when he refuses leaves him to the consequences of guilt.

In Christ the law is satisfied and made honorable, and in the appointed way man may be saved, but God cannot save him otherwise.

natural consequence; as if this were taking the execution of justice out of the hands of God and giving it to nature. But they should remember that when things come to pass according to the course of nature, this does not hinder them from being his doing who is the God of nature; and that the Scripture ascribes those punishments to divine justice which are known to be natural; and which must be called so, when distinguished from such as are miraculous. But after all, this supposition, or rather this way of speaking, is here made use of only by way of illustration of the subject before us. For since it must be admitted that the future punishment of wickedness is not a matter of arbitrary appointment, but of reason, equity, and justice; it comes, for aught I see, to the same thing, whether it is supposed to be inflicted in a way analogous to that in which the temporal punishments of vice and folly are inflicted, or in any other way. And though there were a difference, it is allowable in the present case to make this supposition, plainly not an incredible one, that future punishment may follow wickedness in the way of natural consequence, or according to some general laws of government already established in the universe.

4. III. Upon this supposition, or even without it, we may observe somewhat, much to the present purpose, in the constitution of nature, or appointments of Providence: the provision which is made that all the bad natural consequences of men's actions should not always actually follow; or that such bad consequences as, according to the settled course of things, would inevitably have followed if not prevented, should in certain degrees be prevented. We are apt presumptuously to imagine that the world might have been so constituted as that there would not have been any such thing as misery or evil. On the contrary,

Objection. Then nature, not God, executes justice.

Natural escape from present punishment of vice.

we find the Author of nature permits it. But then he has provided reliefs, and, in many cases, perfect remedies for it, after some pains and difficulties; reliefs and remedies even for that evil which is the fruit of our own misconduct, and which, in the course of nature, would have continued, and ended in our destruction, but for such remedies. And this is an instance both of severity and of indulgence, in the constitution of nature. Thus all the bad consequences, now mentioned, of a man's trifling upon a precipice, might be prevented. And though all were not, yet some of them might, by proper interposition, if not rejected; by another's coming to the rash man's relief, with his own laying hold on that relief, in such sort as the case required. Persons may do a great deal themselves toward preventing the bad consequences of their follies; and more may be done by themselves, together with the assistance of others, their fellow-creatures; which assistance nature requires and prompts us to. This is the general constitution of the world.

Now suppose it had been so constituted, that after such actions were done, as were foreseen naturally to draw after them misery to the doer, it should have been no more in human power to have prevented that naturally consequent misery, in any instance, than it is in all; no one can say whether such a more severe constitution of things might not yet have been really good. But that, on the contrary, provision is made by nature, that we may and do, to so great degree, prevent the bad natural effects of our follies; this may be called mercy, or compassion, in the original constitution of the world; compassion as distinguished from goodness in general. And the whole known constitution and course of things affording us instances of such compassion, it would be according to the analogy of nature to hope, that, however ruinous the

This naturally expected relative to the future.

natural consequences of vice might be, from the general laws of God's government over the universe, yet provision might be made, possibly might have been originally made, for preventing those ruinous consequences from inevitably following; at least from following universally, and in all cases.

5. Many, I am sensible, will wonder at finding this made a question, or spoken of as in any degree doubtful. The generality of mankind are so far from having that awful sense of things, which the present state of vice and misery and darkness seems to make but reasonable, that they have scarce any apprehension, or thought at all, about this matter, any way; and some serious persons may have spoken unadvisedly concerning it. But let us observe, what we experience to be, and what, from the very constitution of nature, cannot but be, the consequences of irregular and disorderly behavior; even of such rashness, willfulness, neglects, as we scarce call vicious. Now it is natural to apprehend that the bad consequences of irregularity will be greater, in proportion as the irregularity is so. And there is no comparison between these irregularities and the greater instances of vice, or a dissolute profligate disregard to all religion; if there be any thing at all in religion. For consider what it is for creatures, moral agents, presumptuously to introduce that confusion and misery into the kingdom of God which mankind have in fact introduced; to blaspheme the sovereign Lord of all; to contemn his authority; to be injurious, to the degree they are, to their fellow-creatures, the creatures of God. Add that the effects of vice, in the present world, are often extreme misery, irretrievable ruin, and even death: and upon putting all this together it will appear, that as no one can say in what degree fatal the unprevented consequences of vice may be, according to the general rule

Presumption
against such es-
cape, yet ground
for hope.

of Divine government; so it is by no means intuitively certain how far these consequences could possibly, in the nature of the thing, be prevented, consistently with the eternal rule of right, or with what is, in fact, the moral constitution of nature. However, there would be large ground to hope, that the universal government was not so severely strict, but that there was room for pardon, or for having those penal consequences prevented. Yet,

6. IV. There seems no probability that any thing we could do, would alone, and of itself, prevent them; prevent their following, or being inflicted. But one would think, at least, it were impossible that the contrary should be thought certain. For we are not acquainted with the whole of the case. We are not informed of all the reasons which render it fit that future punishments should be inflicted; and therefore cannot know whether any thing we could do would make such an alteration as to render it fit that they should be remitted. We do not know what the whole natural or appointed consequences of vice are, nor in what way they would follow, if not prevented; and therefore can in no sort say whether we could do any thing which would be sufficient to prevent them. Our ignorance being thus manifest, let us recollect the analogy of nature, or providence. For though this may be but a slight ground to raise a positive opinion upon in this matter, yet it is sufficient to answer a mere arbitrary assertion, without any kind of evidence urged by way of objection against a doctrine the proof of which is not reason, but revelation. Consider then: people ruin their fortunes by extravagance; they bring diseases upon themselves by excess; they incur the penalties of civil laws, and surely civil government is natural; will sorrow for these follies past, and behaving well for the future, alone and of itself prevent the natural conse-

We can in no way prevent these consequences.

quences of them? On the contrary, men's natural abilities of helping themselves are often impaired; or if not, yet they are forced to be beholden to the assistance of others, upon several accounts and in different ways: assistance which they would have had no occasion for had it not been for their misconduct; but which, in the disadvantageous condition they have reduced themselves to, is absolutely necessary to their recovery and retrieving their affairs. Now since this is our case, considering ourselves merely as inhabitants of this world, and as having a temporal interest here, under the natural government of God, which, however, has a great deal moral in it; why is it not supposable that this may be our case also, in our more important capacity, as under his perfect moral government, and having a more general and future interest depending? If we have misbehaved in this higher capacity, and rendered ourselves obnoxious to the future punishment which God has annexed to vice, it is plainly credible, that behaving well for the time to come, may be—not useless, God forbid—but wholly insufficient, alone and of itself, to prevent that punishment, or to put us in the condition which we should have been in had we preserved our innocence.*

And though we ought to reason with all reverence, whenever we reason concerning the divine conduct, yet

* [Mr. Newman notices a distinction between the facts of revelation and its principles, and considers the argument from analogy more concerned with the latter than the former. "The revealed facts are special and singular from the nature of the case, but the revealed principles are common to all the works of God; and if the Author of nature be the author of grace, it may be expected that the principles discussed in them will be the same, and form a connecting link between them. In this identity of *principle* lies the analogy of natural and revealed religion in Butler's sense of the word. The incarnation is a fact, and cannot be paralleled by any thing in nature; the doctrine of mediation is a principle, and is abundantly exemplified in nature."—Essay on Developments, quoted by Malcom.]

it may be added, that it is clearly contrary to all our notions of government, as well as to what is, in fact, the general constitution of nature, to suppose that doing well for the future should, in all cases, prevent all the judicial bad consequences of having done evil, or all the punishment annexed to disobedience. ^{Reformation gives no hope of escape.} And we have manifestly nothing from whence to determine in what degree, and in what cases, reformation would prevent this punishment, even supposing that it would in some. And though the efficacy of repentance itself alone, to prevent what mankind had rendered themselves obnoxious to, and recover what they had forfeited, is now insisted upon in opposition to Christianity; yet, by the general prevalence of propitiatory sacrifices over the heathen world, this notion of repentance alone being sufficient to expiate guilt, appears to be contrary to the general sense of mankind.

Upon the whole, then; had the laws, the general laws, of God's government been permitted to operate without any interposition in our behalf, the future punishment, for aught we know to the contrary, or have any reason to think, must inevitably have followed, notwithstanding any thing we could have done to prevent it. Now,

7. V. In this darkness, or this light of nature, call it which you please, revelation comes in; confirms every doubting fear which could enter into the heart of man concerning the future unprevented consequence of wickedness; ^{Pardon taught by revelation.} supposes the world to be in a state of ruin; (a supposition which seems the very ground of the Christian dispensation, and which, if not provable by reason, yet it is in nowise contrary to it;) teaches us, too, that the rules of divine government are such as not to admit of pardon immediately and directly upon repentance, or by the sole efficacy of it: but then teaches at the same time, what nature might

justly have hoped, that the moral government of the universe was not so rigid, but that there was room for an interposition to avert the fatal consequence of vice ; which, therefore, by this means, does admit of pardon. Revelation teaches us, that the unknown laws of God's more general government, no less than the particular laws by which we experience he governs us at present, are compassionate, (page 252, etc.,) as well as good, in the more general notion of goodness ; and that he hath mercifully provided that there should be an interposition to prevent the destruction of human kind, whatever that destruction unprevented would have been. " God so loved the world, that he gave his only begotten Son, that whosoever believeth," not, to be sure, in a speculative, but in a practical sense, " that whosoever believeth in him should not perish," (John iii, 16 ;) gave his Son in the same way of goodness to the world as he affords particular persons the friendly assistance of their fellow-creatures, when, without it, their temporal ruin would be the certain consequence of their follies ; in the same way of goodness, I say, though in a transcendent and infinitely higher degree. And the Son of God " loved us, and gave himself for us," with a love which he himself compares to that of human friendship ; though, in this case, all comparisons must fall infinitely short of the thing intended to be illustrated by them. He interposed in such a manner as was necessary and effectual to prevent that execution of justice upon sinners which God had appointed should otherwise have been executed upon them : or in such a manner, as to prevent that punishment from actually following, which, according to the general laws of divine government, must have followed the sins of the world, had it not been for such interposition.*

* It cannot, I suppose, be imagined, even by the most cursory reader, that it is, in any sort, affirmed, or implied, in any thing said in

If any thing here said should appear, upon first thought, inconsistent with divine goodness, a second, I am persuaded, will entirely remove that appearance. For were we to suppose the constitution of things to be such as that the whole creation must have perished, had it not been for somewhat which God had appointed should be in order to prevent that ruin; even this supposition would not be inconsistent, in any degree, with the most absolutely perfect goodness. But still it may be thought that this whole manner of treating the subject before us supposes mankind to be naturally in a very strange state. And truly so it does. But it is not Christianity which has put us into this state. Whoever will consider the manifold miseries and the extreme wickedness of the world; that the best have great wrongnesses within themselves, which they complain of, and endeavor to amend; but that the generality grow more profligate and corrupt

Objection. Is it implied man is in a strange state?

this chapter, that none can have the benefit of the general redemption, but such as have the advantage of being made acquainted with it in the present life. But it may be needful to mention, that several questions, which have been brought into the subject before us, and determined, are not in the least entered into here; questions which have been, I fear, rashly determined, and perhaps with equal rashness, contrary ways. For instance: Whether God could have saved the world by other means than the death of Christ, consistently with the general laws of his government? And, had not Christ come into the world, what would have been the future condition of the better sort of men; those just persons over the face of the earth, for whom Manasses, in his prayer,* asserts repentance was not appointed? The meaning of the first of these questions is greatly ambiguous; and neither of them can properly be answered without going upon that infinitely absurd supposition, that we know the whole of the case. And perhaps, the very inquiry, *What would have followed if God had not done as he has?* may have in it some very great impropriety; and ought not to be carried on any further than is necessary to help our partial and inadequate conception of things.

* The Prayer of Manasses is one of the apocryphal books of the Old Testament which next precedes "Maccabees."

with age: that heathen moralists thought the present state to be a state of punishment; and what might be added, that the earth, our habitation, has the appearance of being a ruin; whoever, I say, will consider all these, and some other obvious things, will think he has little reason to object against the Scripture account, that mankind is in a state of degradation; against this being the fact; how difficult soever he may think it to account for, or even to form a distinct conception of, the occasions and circumstances of it. But that the crime of our first parents was the occasion of our being placed in a more disadvantageous condition, is a thing throughout, and particularly analogous to what we see, in the daily course of natural providence; as the recovery of the world, by the interposition of Christ, has been shown to be so in general.

8. VI. The particular manner in which Christ interposed in the redemption of the world, or his office as Mediator, in the largest sense, *between God and man*, is thus represented to us in the Scripture: "He is the light of the world;"* the revealer of the will of God in the most eminent sense: he is a propitiatory sacrifice;† the "Lamb of God;"‡ and as he voluntarily offered himself up, he is styled our High-priest.§ And, which seems of peculiar weight, he is described beforehand, in the Old Testament, under the same characters of a priest, and an expiatory victim.|| And whereas it is objected, that all this is merely by way of allusion to the sacrifices of the Mosaic law, the apostle, on the contrary, affirms, that

§ Throughout the Epistle to the Hebrews.

|| Isa. liii; Dan. ix, 24; Psa. cx, 4.

“the law was a shadow of good things to come, and not the very image of the things,” (Heb. x, 1;) and that the “priests that offer gifts according to the law—serve unto the example and shadow of heavenly things as Moses was admonished of God when he was about to make the tabernacle. For see,” saith he, “that thou make all things according to the pattern showed to thee in the mount,” (Heb. viii, 4, 5;) that is, the Levitical priesthood was a shadow of the priesthood of Christ, in like manner as the tabernacle made by Moses was according to that showed him in the mount. The priesthood of Christ, and the tabernacle in the mount, were the originals: of the former of which, the Levitical priesthood was a type; and of the latter, the tabernacle made by Moses was a copy. The doctrine of this epistle then plainly is, that the legal sacrifices were allusions to the great and final atonement to be made by the blood of Christ; and not that this was an allusion to those. Nor can any thing be more express and determinate than the following passage: “It is not possible that the blood of bulls and of goats should take away sin. Wherefore, when he cometh into the world, he saith, Sacrifice and offering”—that is, of bulls and of goats—“thou wouldst not, but a body hast thou prepared me—Lo, I come to do thy will, O God. By which will we are sanctified, through the offering of the body of Jesus Christ once for all.” Heb. x, 4, 5, 7, 9, 10. And to add one passage more of the like kind: “Christ was once offered to bear the sins of many; and unto them that look for him shall he appear the second time, without sin;” that is, without bearing sin, as he did at his first coming, by being an offering for it; without having our *iniquities* again *laid upon him*, without being any more a sin-offering:—“Unto them that look for him shall he appear the second time, without sin unto salvation.” Heb. ix, 28. Nor do the inspired writers at all confine themselves to this

manner of speaking concerning the satisfaction of Christ, but declare an efficacy in what he did and suffered for us additional to, and beyond mere instruction, example, and government, in great variety of expression: "That Jesus should die for that nation," the Jews, "and not for that nation only, but that also," plainly by the efficacy of his death, "he should gather together in one the children of God that were scattered abroad:"* that "he suffered for sins, the just for the unjust:"† that "he gave his life—himself—a ransom:"‡ that "we are bought—bought with a price:"§ that "he redeemed us with his blood: redeemed us from the curse of the law, being made a curse for us:"|| that "he is our advocate, intercessor, and propitiation:"¶ that "he was made perfect (or consummate) through sufferings; and being thus made perfect, he became the author of salvation:"** that "God was in Christ, reconciling the world to himself, by the death of his Son by the cross; not imputing their trespasses unto them:"†† and, lastly, that "through death he destroyed him that had the power of death."‡‡ Christ, then, having thus "humbled himself, and become obedient to death, even the death of the cross, God also hath highly exalted him, and given him a name which is above every name; hath given all things into his hands; hath committed all judgment unto him; that all men should honor the Son, even as they honor the Father."§§ For, "worthy is the Lamb that was slain, to receive power, and riches, and wisdom,

and strength, and honor, and glory, and blessing! And every creature which is in heaven, and on the earth, heard I saying, Blessing, and honor, and glory, and power, be unto him that sitteth upon the throne, and unto the Lamb, for ever and ever." Rev. v, 12, 13.

9. These passages of Scripture seem to comprehend and express the chief parts of Christ's office, as mediator between God and man, so far, I mean, as the nature of this his office is revealed; and it is usually treated of by divines under three heads.

First. He was, by way of eminence, the Prophet: "that Prophet that should come into the world," (John vi, 14,) to declare the divine ^{Christ as a Prophet.} will. He published anew the law of nature which men had corrupted; and the very knowledge of which, to some degree, was lost among them. He taught mankind—taught us authoritatively—to "live soberly, righteously, and godly, in this present world," in expectation of the future judgment of God. He confirmed the truth of this moral system of nature, and gave us additional evidence of it, the evidence of testimony. (Page 195.) He distinctly revealed the manner in which God would be worshiped, the efficacy of repentance, and the rewards and punishments of a future life. Thus he was a prophet, in a sense in which no other ever was. To which is to be added, that he set us a perfect "example, that we should follow his steps."

10. *Secondly.* He has a "kingdom, which is not of this world." He founded a Church, to be to ^{Christ as a King,} mankind a standing memorial of religion and invitation to it; which he promised to be with always, even to the end. He exercises an invisible government over it, himself, and by his Spirit; over that part of it which is militant here on earth, a government of discipline, "for the perfecting of the saints, for the edifying of his body; till we all come in the unity of the

faith, and of the knowledge of the Son of God, unto a perfect man, unto the measure of the stature of the fullness of Christ." (Eph. iv, 12, 13.) Of this Church, all persons scattered over the world, who live in obedience to his laws, are members. For these he is *gone to prepare a place*, and *will come again to receive them unto himself, that where he is, there they may be also; and reign with him for ever and ever*, (John xiv, 2, 3; Rev. iii, 21, and xi, 15;) and likewise "to take vengeance on them that know not God and obey not his gospel." 2 Thess. i, 8.

Against these parts of Christ's office I find no objections but what are fully obviated in the beginning of this chapter.

11. *Lastly*. Christ offered himself a propitiatory sacrifice, and made atonement for the sins of the world; which is mentioned last, in regard to what is objected against it. Sacrifices of expiation were commanded the Jews, and obtained among most other nations, from tradition, whose original probably was revelation. And they were continually repeated both occasionally and at the returns of stated times, and made up great part of the external religion of mankind. "But now once in the end of the world Christ appeared to put away sin by the sacrifice of himself." Heb. ix, 26. And this sacrifice was in the highest degree, and with the most extensive influence, of that efficacy for obtaining pardon of sin which the heathens may be supposed to have thought their sacrifices to have been, and which the Jewish sacrifices really were, in some degree, and with regard to some persons.

12. How, and in what particular way, it had this efficacy, there are not wanting persons who have endeavored to explain; but I do not find that the Scripture has explained it. We seem to be very much in the dark concerning the

Christ as a Priest.
How Christ's sacrifice is efficacious is not explained.

manner in which the ancients understood atonement to be made, that is, pardon to be obtained by sacrifices. And if the Scripture has, as surely it has, left this matter of the satisfaction of Christ mysterious, left somewhat in it unrevealed, all conjectures about it must be, if not evidently absurd, yet at least uncertain. Nor has any one reason to complain for want of further information, unless he can show his claim to it.

Some have endeavored to explain the efficacy of what Christ has done and suffered for us, beyond what the Scripture has authorized; others, probably because they could not explain it, have been for taking it away, and confining his office as Redeemer of the world to his instruction, example, and government of the Church. Whereas, the doctrine of the gospel appears to be, not only that he taught the efficacy of repentance, but rendered it of the efficacy which it is, by what he did and suffered for us: that he obtained for us the benefit of having our repentance accepted unto eternal life: not only that he revealed to sinners, that they were in a capacity of salvation, and how they might obtain it; but moreover, that he put them into this capacity of salvation by what he did and suffered for them; put us into a capacity of escaping future punishment, and obtaining future happiness. And it is our wisdom thankfully to accept the benefit, by performing the conditions upon which it is offered on our part, without disputing how it was procured on his. For,

13. VII. Since we neither know by what means punishment in a future state would have followed wickedness in this; nor in what manner it would have been inflicted, had it not been prevented; nor all the reasons why its infliction would have been needful; nor the particular nature of that state of happiness which Christ is gone to prepare for his disciples; and since we are ignorant

Objections
against what the
Mediator did ab-
surd.

how far any thing which we could do would, alone and of itself, have been effectual to prevent that punishment to which we were obnoxious, and recover that happiness which we had forfeited; it is most evident we are not judges, antecedently to revelation, whether a mediator was or was not necessary to obtain those ends; to prevent that future punishment, and bring mankind to the final happiness of their nature. And for the very same reasons, upon supposition of the necessity of a mediator, we are no more judges, antecedently to revelation, of the whole nature of his office, or the several parts of which it consists: of what was fit and requisite to be assigned him, in order to accomplish the ends of divine Providence in the appointment. And from hence it follows, that to object against the expediency or usefulness of particular things revealed to have been done or suffered by him, because we do not see how they were conducive to those ends, is highly absurd. Yet nothing is more common to be met with than this absurdity. But if it be acknowledged beforehand that we are not judges in the case, it is evident that no objection can, with any shadow of reason, be urged against any particular part of Christ's mediatorial office revealed in Scripture till it can be shown positively not to be requisite or conducive to the ends proposed to be accomplished; or that it is in itself unreasonable.

14. And there is one objection made against the satisfaction of Christ, which looks to be of this positive kind: that the doctrine of his being appointed to suffer for the sins of the world represents God as being indifferent whether he punished the innocent or the guilty. Now from the foregoing observations we may see the extreme slightness of all such objections, and (though it is most certain all who make them do not see the consequence) that they conclude altogether as much against God's

Objection. God represented as causing the innocent to suffer with the guilty.

whole original constitution of nature, and the whole daily course of divine Providence, in the government of the world, that is, against the whole scheme of theism and the whole notion of religion, as against Christianity. For the world is a constitution, or system, whose parts have a mutual reference to each other; and there is a scheme of things gradually carrying on, called the course of nature, to the carrying on of which God has appointed us in various ways to contribute. And when, in the daily course of natural providence, it is appointed that innocent people should suffer for the faults of the guilty, this is liable to the very same objection as the instance we are now considering. The infinitely greater importance of that appointment of Christianity which is objected against, does not hinder, but it may be, as it plainly is, an appointment of the very same kind with what the world affords us daily examples of. Nay, if there were any force at all in the objection, it would be stronger, in one respect, against natural providence than against Christianity; because under the former we are in many cases commanded, and even necessitated, whether we will or not, to suffer for the faults of others; whereas the sufferings of Christ were voluntary.

The world's being under the righteous government of God does indeed imply that finally, and upon the whole, every one shall receive according to his personal deserts: and the general doctrine of the whole Scripture is, that this shall be the completion of the divine government. But during the progress, and for aught we know, even in order to the completion of this moral scheme, vicarious punishments may be fit, and absolutely necessary. Men, by their follies, run themselves into extreme distress; into difficulties which would be absolutely fatal to them, were it not for the interposition and assistance of others. God commands by the law of nature that we afford them this assistance, in many cases

where we cannot do it without very great pains, and labor, and sufferings to ourselves. And we see in what variety of ways one person's sufferings contribute to the relief of another; and how, or by what particular means, this comes to pass, or follows, from the constitution and laws of nature, which come under our notice: and being familiarized to it, men are not shocked with it. So that the reason of their insisting upon objections of the foregoing kind against the satisfaction of Christ is either that they do not consider God's settled and uniform appointments as his appointments at all, or else they forget that vicarious punishment is a providential appointment of every day's experience: and then, from their being unacquainted with the more general laws of nature, or divine government over the world, and not seeing how the sufferings of Christ could contribute to the redemption of it, unless by arbitrary and tyrannical will, they conclude his sufferings could not contribute to it any other way. And yet, what has been often alleged in justification of this doctrine, even from the apparent natural tendency of this method of our redemption—its tendency to vindicate the authority of God's laws, and deter his creatures from sin; this has never yet been answered, and is, I think, plainly unanswerable: though I am far from thinking it an account of the whole of the case. But without taking this into consideration, it abundantly appears, from the observations above made, that this objection is not an objection against Christianity, but against the whole general constitution of nature. And if it were to be considered as an objection against Christianity, or, considering it as it is, an objection against the constitution of nature, it amounts to no more in conclusion than this, that a divine appointment cannot be necessary or expedient, because the objector does not discern it to be so; though he must own that the nature of the case is such as renders him incapable

of judging whether it be so or not; or of seeing it to be necessary though it were so.

15. It is indeed a matter of great patience to reasonable men to find people arguing in this manner, objecting against the credibility of such particular things revealed in Scripture, that they do not see the necessity or expediency of them.

Objections founded on our ignorance unreasonable.

For though it is highly right, and the most pious exercise of our understanding, to inquire with due reverence into the ends and reasons of God's dispensations; yet when those reasons are concealed, to argue, from our ignorance, that such dispensations cannot be from God, is infinitely absurd. The presumption of this kind of objections seems almost lost in the folly of them. And the folly of them is yet greater when they are urged, as usually they are, against things in Christianity analogous, or like, to those natural dispensations of Providence which are matter of experience. Let reason be kept to; and if any part of the Scripture account of the redemption of the world by Christ can be shown to be really contrary to it, let the Scripture, in the name of God, be given up; but let not such poor creatures as we go on objecting against an infinite scheme, that we do not see the necessity or usefulness of all its parts, and call this reasoning; and, which still further heightens the absurdity in the present case, parts which we are not actively concerned in. For it may be worth mentioning,

16. *Lastly.* That not only the reason of the thing, but the whole analogy of nature, should teach us not to expect to have the like information concerning the Divine conduct as concerning our own duty. God instructs us by experience, (for it is not reason, but experience, which instructs us,) what good or bad consequences will follow from our acting in such and such manners; and by this he directs us how we are to behave

Equal information relative to the Divine conduct and our duty not to be expected.

ourselves. But, though we are sufficiently instructed for the common purposes of life, yet it is but an almost infinitely small part of natural providence which we are at all let into. The case is the same with regard to revelation. The doctrine of a Mediator between God and man, against which it is objected that the expediency of some things in it is not understood, relates only to what was done on God's part in the appointment, and on the Mediator's in the execution of it. For what is required of us, in consequence of this gracious dispensation, is another subject, in which none can complain for want of information. The constitution of the world and God's natural government over it is all mystery, as much as the Christian dispensation. Yet under the first, he has given men all things pertaining to life; and under the other, all things pertaining unto godliness. And it may be added, that there is nothing hard to be accounted for in any of the common precepts of Christianity; though if there were, surely a Divine command is abundantly sufficient to lay us under the strongest obligations to obedience. But the fact is, that the reasons of all the Christian precepts are evident. Positive institutions are manifestly necessary to keep up and propagate religion among mankind. And our duty to Christ, the internal and external worship of him, this part of the religion of the gospel manifestly arises out of what he has done and suffered, his authority and dominion, and the relation which he is revealed to stand in to us. (Page 201, etc.)

CHAPTER VI.

OF THE WANT OF UNIVERSALITY IN REVELATION ;
AND OF THE SUPPOSED DEFICIENCY IN THE PROOF
OF IT.

IT has been thought by some persons, that if the evidence of revelation appears doubtful, this itself turns into a positive argument against it; because it cannot be supposed, that, if it were true, it would be left to subsist upon doubtful evidence. And the objection against revelation, from its not being universal, is often insisted upon as of great weight.

Objections.

Now the weakness of these opinions may be shown, by observing the suppositions on which they are founded, which are really such as these:—that it cannot be thought God would have bestowed any favor at all upon us, unless in the degree which we think he might, and which, we imagine, would be most to our particular advantage; and also, that it cannot be thought he would bestow a favor upon any, unless he bestowed the same upon all: suppositions which we find contradicted, not by a few instances in God's natural government of the world, but by the general analogy of nature together.

2. Persons who speak of the evidence of religion as doubtful, and of this supposed doubtfulness as a positive argument against it, should be put upon considering what that evidence, indeed, is, which they act upon with regard to their temporal interests. For it is not only extremely diffi-

We act on doubtful evidence in important matters.

cult, but in many cases absolutely impossible, to balance pleasure and pain, satisfaction and uneasiness, so as to be able to say on which side the overplus is. There are the like difficulties and impossibilities in making the due allowances for a change of temper and taste, for satiety, disgusts, ill health; any of which render men incapable of enjoying, after they have obtained, what they most eagerly desired. Numberless, too, are the accidents, besides that one of untimely death, which may even probably disappoint the best concerted schemes; and strong objections are often seen to lie against them, not to be removed or answered, but which seem overbalanced by reasons on the other side; so as that the certain difficulties and dangers of the pursuit are, by every one, thought justly disregarded, upon account of the appearing greater advantages in case of success, though there be but little probability of it. *Lastly.* Every one observes our liableness, if we be not upon our guard, to be deceived by the falsehood of men, and the false appearance of things; and this danger must be greatly increased if there be a strong bias within, suppose from indulged passion, to favor the deceit. Hence arises that great uncertainty and doubtfulness of proof, wherein our temporal interest really consists; what are the most probable means of attaining it; and whether those means will eventually be successful. And numberless instances there are, in the daily course of life, in which all men think it reasonable to engage in pursuits, though the probability is greatly against succeeding; and to make such provision for themselves as it is supposable they may have occasion for, though the plain, acknowledged probability is, that they never shall.

3. Then those who think the objection against revelation, from its light not being universal, to be of weight, should observe that the Author of nature, in numberless instances, bestows

Analogy shows the want of universality is no objection.

that upon some which he does not upon others, who seem equally to stand in need of it. Indeed, he appears to bestow all his gifts, with the most promiscuous variety, among creatures of the same species: health and strength, capacities of prudence and of knowledge, means of improvement, riches, and all external advantages. And as there are not any two men found of exactly like shape and features, so, it is probable, there are not any two of an exactly like constitution, temper, and situation, with regard to the goods and evils of life. Yet, notwithstanding these uncertainties and varieties, God does exercise a natural government over the world; and there is such a thing as a prudent and imprudent institution of life, with regard to our health and our affairs, under that his natural government.

As neither the Jewish nor Christian revelation have been universal, and as they have been afforded to a greater or less part of the world, at different times, so likewise, at different times, both revelations have had different degrees of evidence. The Jews who lived during the succession of prophets, that is, from Moses till after the captivity, had higher evidence of the truth of their religion than those who had lived in the interval between the last-mentioned period and the coming of Christ. And the first Christians had higher evidence of the miracles wrought in attestation of Christianity than what we have now. They had also a strong presumptive proof of the truth of it, perhaps of much greater force in way of argument than many think, of which we have very little remaining; I mean, the presumptive proof of its truth, from the influence which it had upon the lives of the generality of its professors. And we, or future ages, may possibly have a proof of it which they could not have, from the conformity between the prophetic history and the state of the world, and of Christianity.

And further: if we were to suppose the evidence which some have of religion to amount to little more than seeing that it may be true, but that they remain in great doubts and uncertainties about both its evidence and its nature, and great perplexities concerning the rule of life; others, to have a full conviction of the truth of religion, with a distinct knowledge of their duty; and others severally, to have all the intermediate degrees of religious light and evidence which lie between these two—if we put the case, that for the present it was intended revelation should be no more than a small light in the midst of a world greatly overspread, notwithstanding it, with ignorance and darkness; that certain glimmerings of this light should extend, and be directed, to remote distances, in such a manner as that those who really partook of it should not discern from whence it originally came; that some, in a nearer situation to it, should have its light obscured, and, in different ways and degrees, intercepted; and that others should be placed within its clearer influence, and be much more enlivened, cheered, and directed by it; but yet, that even to these it should be no more than *a light shining in a dark place*: all this would be perfectly uniform, and of a piece with the conduct of providence in the distribution of its other blessings. If the fact of the case really were, that some have received no light at all from the Scripture; as many ages and countries in the heathen world: that others, though they have, by means of it, had essential or natural religion enforced upon their consciences, yet have never had the genuine Scripture revelation, with its real evidence, proposed to their consideration; and the ancient Persians and modern Mohammedans may possibly be instances of people in a situation somewhat like to this: that others, though they have had the Scripture laid before them as of divine revelation, yet have had it with the system and evidence

of Christianity so interpolated, the system so corrupted, the evidence so blended with false miracles, as to leave the mind in the utmost doubtfulness and uncertainty about the whole; which may be the state of some thoughtful men in most of those nations who call themselves Christian; and *lastly*, that others have had Christianity offered to them in its genuine simplicity, and with its proper evidence, as persons in countries and Churches of civil and of Christian liberty; but, however, that even these persons are left in great ignorance in many respects, and have by no means light afforded them enough to satisfy their curiosity, but only to regulate their life, to teach them their duty, and encourage them in the careful discharge of it; I say, if we were to suppose this somewhat of a general true account of the degrees of moral and religious light and evidence, which were intended to be afforded mankind, and of what has actually been and is their situation in their moral and religious capacity, there would be nothing in all this ignorance, doubtfulness, and uncertainty—in all these varieties and supposed disadvantages of some in comparison of others, respecting religion—but may be paralleled by manifest analogies in the natural dispensations of providence at present, and considering ourselves merely in our temporal capacity.

4. Nor is there any thing shocking in all this, or which would seem to bear hard upon the moral administration in nature, if we would really keep in mind that every one shall be dealt equitably with; instead of forgetting this, or explaining it away, after it is acknowledged in words. All shadow of injustice, and indeed all harsh appearances, in this various economy of providence, would be lost, if we would keep in mind that every merciful allowance shall be made, and no more be required of any one than what might have been equitably expected of him, from the

All to be judged according to their knowledge and ability.

circumstances in which he was placed; and not what might have been expected, had he been placed in other circumstances: that is, in Scripture language, that every man shall be accepted "according to what he had, not according to what he had not." 2 Cor. viii, 12. This, however, doth not by any means imply that all persons' condition here is equally advantageous with respect to futurity. And providence, designing to place some in greater darkness with respect to religious knowledge, is no more a reason why they should not endeavor to get out of that darkness, and others to bring them out of it, than why ignorant and slow people, in matters of other knowledge, should not endeavor to learn, or should not be instructed.

5. It is not unreasonable to suppose, that the same wise and good principle, whatever it was, which disposed the Author of nature to make different kinds and orders of creatures, disposed him also to place creatures of like kinds in different situations; and that the same principle which disposed him to make creatures of different moral capacities, disposed him also to place creatures of like moral capacities in different religious situations: and even the same creatures, in different periods of their being. And the account or reason of this, is also most probably the account why the constitution of things is such as that creatures of moral natures or capacities, for a considerable part of that duration in which they are living agents, are not at all subjects of morality and religion; but grow up to be so, and grow up to be so more and more, gradually from childhood to mature age.

6. What, in particular, is the account or reason of these things, we must be greatly in the dark were it only that we know so very little even of our own case. Our present state may

Diversity in knowledge not more unreasonable than in capacities.

The reason of these things is that of our ignorance relative to them.

possibly be the consequence of somewhat past, which we are wholly ignorant of; as it has a reference to somewhat to come, of which we know scarce any more than is necessary for practice. A system or constitution, in its notion, implies variety: and so complicated a one as this world, very great variety. So that were revelation universal, yet from men's different capacities of understanding, from the different lengths of their lives, their different educations, and other external circumstances, and from their difference of temper and bodily constitution; their religious situations would be widely different, and the disadvantage of some in comparison of others, perhaps, altogether as much as at present. And the true account, whatever it be, why mankind, or such a part of mankind, are placed in this condition of ignorance, must be supposed also the true account of our further ignorance in not knowing the reasons why, or whence it is, that they are placed in this condition. But the following practical reflections may deserve the serious consideration of those persons who think the circumstances of mankind, or their own, in the fore-mentioned respects, a ground of complaint.

First. The evidence of religion not appearing obvious, may constitute one particular part of some men's trial in the religious sense: as it gives scope for a virtuous exercise, or vicious neglect, of their understanding, in examining or not examining into that evidence. There seems no possible reason to be given why we may not be in a state of moral probation with regard to the exercise of our understanding upon the subject of religion, as we are with regard to our behavior in common affairs. The former is as much a thing within our power and choice as the latter. And I suppose it is to be laid down for certain, that the same character, the same inward principle, which, after a man is convinced of the truth of religion, renders him obe-

This want of light a part of our trial.

dient to the precepts of it, would, were he not thus convinced, set him about an examination of it, upon its system and evidence being offered to his thoughts; and that in the latter state, his examination would be with an impartiality, seriousness, and solicitude, proportionable to what his obedience is in the former. And as inattention, negligence, want of all serious concern, about a matter of such a nature and such importance, when offered to men's consideration, is, before a distinct conviction of its truth, as real immoral depravity and dissoluteness as neglect of religious practice after such conviction; so active solicitude about it, and fair impartial consideration of its evidence before such conviction, is as really an exercise of a morally right temper as is religious practice after. Thus, that religion is not intuitively true, but a matter of deduction and inference; that a conviction of its truth is not forced upon every one, but left to be, by some, collected with heedful attention to premises: this as much constitutes religious probation—as much affords sphere, scope, opportunity, for right and wrong behavior—as any thing whatever does. And their manner of treating this subject, when laid before them, shows what is in their heart, and is an exertion of it.

8. *Secondly*. It appears to be a thing as evident, though it is not so much attended to, that if, upon consideration of religion, the evidence of it should seem to any persons doubtful, in the highest supposable degree; even this doubtful evidence will, however, put them into a *general state of probation*, in the moral religious sense. For, suppose a man to be really in doubt whether such a person had not done him the greatest favor; or, whether his whole temporal interest did not depend upon that person; no one who had any sense of gratitude and of prudence could possibly consider himself in the same situation, with regard to such persons, as if he had no such doubt. In truth,

Doubtful evidence puts men in a moral probation.

it is as just to say that certainty and doubt are the same as to say the situations now mentioned would leave a man as entirely at liberty, in point of gratitude or prudence, as he would be were he certain he had received no favor from such person, or that he no way depended upon him. And thus, though the evidence of religion which is afforded to some men should be little more than that they are given to see the system of Christianity, or religion in general, to be supposable and credible, this ought in all reason to beget a serious practical apprehension that it may be true. And even this will afford matter of exercise, for religious suspense and deliberation, for moral resolution and self-government; because the apprehension that religion may be true, does as really lay men under obligations as a full conviction that it is true. It gives occasion and motives to consider further the important subject; to preserve attentively upon their minds a general implicit sense that they may be under divine moral government, an awful solicitude about religion, whether natural or revealed. Such apprehension ought to turn men's eyes to every degree of new light which may be had, from whatever side it comes, and induce them to refrain, in the mean time, from all immoralities, and live in the conscientious practice of every common virtue. Especially are they bound to keep at the greatest distance from all dissolute profaneness, for this the very nature of the case forbids; and to treat with highest reverence a matter upon which their own whole interest and being, and the fate of nature, depends. This behavior, and an active endeavor to maintain within themselves this temper, is the business, the duty, and the wisdom of those persons who complain of the doubtfulness of religion; is what they are under the most proper obligations to; and such behavior is an exertion of, and has a tendency to improve in them, that character which the practice of all

the several duties of religion, from a full conviction of its truth, is an exertion of and has a tendency to improve in others; others, I say, to whom God has afforded such conviction. Nay, considering the infinité importance of religion, revealed as well as natural, I think it may be said in general that whoever will weigh the matter thoroughly, may see there is not near so much difference as is commonly imagined between what ought in reason to be the rule of life to those persons who are fully convinced of its truth, and to those who have only a serious doubting apprehension that it may be true. Their hopes, and fears, and obligations will be in various degrees; but, as the subject-matter of their hopes and fears is the same, so the subject-matter of their obligations, what they are bound to do and to refrain from, is not so very unlike.

9. It is to be observed, further, that from a character of understanding, or a situation of influence in the world, some persons have it in their power to do infinitely more harm or good by setting an example of profaneness and avowed disregard to all religion, or, on the contrary, of a serious, though perhaps doubting, apprehension of its truth, and of a reverend regard to it under this doubtfulness, than they can do by acting well or ill in all the common intercourses among mankind; and consequently they are most highly accountable for a behavior which they may easily foresee is of such importance, and in which there is most plainly a right and a wrong; even admitting the evidence of religion to be as doubtful as is pretended.

10. The ground of these observations, and that which renders them just and true, is that doubting necessarily implies some degree of evidence for that of which we doubt. For no person would be in doubt concerning the truth of a number of facts so and so circumstanced which should accidentally come

Religious doubt
does not lessen
responsibility.

Doubt implies
evidence.

into his thoughts, and of which he had no evidence at all. And though, in the case of an even chance, and where consequently we were in doubt, we should in common language say that we had no evidence at all for either side; yet that situation of things which renders it an even chance and no more, that such an event will happen, renders this case equivalent to all others, where there is such evidence on both sides of a question (Introduction) as leaves the mind in doubt concerning the truth. Indeed, in all these cases there is no more evidence on the one side than on the other; but there is (what is equivalent to) much more for either than for the truth of a number of facts which come into one's thoughts at random. And thus, in all these cases, doubt as much presupposes evidence, lower degrees of evidence, as belief presupposes higher, and certainty higher still. Any one who will a little attend to the nature of evidence, will easily carry this observation on, and see that between no evidence at all, and that degree of it which affords ground of doubt, there are as many intermediate degrees as there are between that degree which is the ground of doubt, and demonstration. And though we have not faculties to distinguish these degrees of evidence with any sort of exactness, yet in proportion as they are discerned, they ought to influence our practice. For it is as real an imperfection in the moral character not to be influenced in practice by a lower degree of evidence when discerned, as it is in the understanding not to discern it. And as, in all subjects which men consider, they discern the lower as well as the higher degrees of evidence, proportionably to their capacity of understanding; so, in practical subjects, they are influenced in practice by the lower as well as higher degrees of it, proportionably to their fairness and honesty. And as in proportion to defects in the understanding, men are unapt to see lower degrees of evi-

dence, are in danger of overlooking evidence when it is not glaring, and are easily imposed upon in such cases; so, in proportion to the corruption of the heart, they seem capable of satisfying themselves with having no regard in practice to evidence acknowledged real, if it be not overbearing. From these things it must follow, that doubting concerning religion implies such a degree of evidence for it as, joined with the consideration of its importance, unquestionably lays men under the obligations before-mentioned, to have a dutiful regard to it in all their behavior.

11. *Thirdly.* The difficulties in which the evidence of religion is involved, which some complain of, is no more a just ground of complaint than the external circumstances of temptation which others are placed in, or than difficulties in the practice of it after a full conviction of its truth. Temptations render our state a more improving state of discipline (part i, chap. v) than it would be otherwise; as they give occasion for a more attentive exercise of the virtuous principle, which confirms and strengthens it more than an easier or less attentive exercise of it could. Now speculative difficulties are, in this respect, of the very same nature with these external temptations. For the evidence of religion not appearing obvious, is to some persons a temptation to reject it, without any consideration at all; and therefore requires such an attentive exercise of the virtuous principle seriously to consider that evidence, as there would be no occasion for but for such temptation. And the supposed doubtfulness of its evidence, after it has been in some sort considered, affords opportunity to an unfair mind of explaining away, and deceitfully hiding from itself, that evidence which it might see: and also for men's encouraging themselves in vice, from hopes of impunity, though they do clearly see thus much at least,

Difficulties
in evidence no
more a cause of
complaint than
in practice.

that these hopes are uncertain: in like manner as the common temptation to many instances of folly, which end in temporal infamy and ruin, is the ground for hope of not being detected, and of escaping with impunity; that is, the doubtfulness of the proof beforehand, that such foolish behavior will thus end in infamy and ruin. On the contrary, supposed doubtfulness in the evidence of religion calls for a more careful and attentive exercise of the virtuous principle in fairly yielding themselves up to the proper influence of any real evidence, though doubtful; and in practicing conscientiously all virtue, though under some uncertainty whether the government in the universe may not possibly be such as that vice may escape with impunity. And in general, temptation, meaning by this word the lesser allurements to wrong, and difficulties in the discharge of our duty, as well as the greater ones; temptation, I say, as such, and of every kind and degree, as it calls forth some virtuous efforts, additional to what would otherwise have been wanting, cannot but be an additional discipline and improvement of virtue, as well as probation of it, in the other senses of that word. (Part i, chap. iv, and page 150.) So that the very same account is to be given why the evidence of religion should be left in such a manner as to require, in some, an attentive, solicitous, perhaps painful exercise of their understanding about it; as why others should be placed in such circumstances as that the practice of its common duties, after a full conviction of the truth of it, should require attention, solicitude, and pains; or why appearing doubtfulness should be permitted to afford matter of temptation to some; as why external difficulties and allurements should be permitted to afford matter of temptation to others. The same account also is to be given, why some should be exercised with temptations of both these kinds, as why others should be exercised with the latter in such very

high degrees as some have been, particularly as the primitive Christians were.

12. Nor does there appear any absurdity in supposing that the speculative difficulties in which the evidence of religion is involved may make even the principal part of some persons' trial. For as the chief temptations of the generality of the world are the ordinary motives to injustice or unrestrained pleasure; or to live in the neglect of religion, from that frame of mind, which renders many persons almost without feeling as to any thing distant, or which is not the object of their senses; so there are other persons without this shallowness of temper, persons of a deeper sense as to what is invisible and future, who not only see, but have a general practical feeling that what is to come will be present, and that things are not less real for their not being the objects of sense; and who, from their natural constitution of body and of temper, and from their external condition, may have small temptations to behave ill, small difficulty in behaving well, in the common course of life. Now when these latter persons have a distinct, full conviction of the truth of religion, without any possible doubts or difficulties, the practice of it is to them unavoidable, unless they will do a constant violence to their own minds; and religion is scarce any more a discipline to them, than it is to creatures in a state of perfection. Yet these persons may possibly stand in need of moral discipline and exercise in a higher degree than they would have by such an easy practice of religion. Or it may be requisite, for reasons unknown to us, that they should give some further manifestation (page 151) what is their moral character, to the creation of God, than such a practice of it would be. Thus in the great variety of religious situations in which men are placed, what constitutes—what chiefly and peculiarly constitutes—the probation, in all

Speculative difficulties to some the chief trial.

senses, of some persons, may be the difficulties in which the evidence of religion is involved; and their principal and distinguished trial may be, how they will behave under and with respect to these difficulties. Circumstances in men's situation in their temporal capacity, analogous in good measure to this respecting religion, are to be observed. We find some persons are placed in such a situation in the world, as that their chief difficulty, with regard to conduct, is not the doing what is prudent when it is known, for this, in numberless cases, is as easy as the contrary, but to some the principal exercise is recollection, and being upon their guard against deceits—the deceits, suppose, of those about them—against false appearances of reason and prudence. To persons in some situations, the principal exercise with respect to conduct is attention, in order to inform themselves what is proper, what is really the reasonable and prudent part to act.

13. But as I have hitherto gone upon supposition that men's dissatisfaction with the evidence of religion is not owing to their neglects or prejudices; it must be added, on the other hand, in all common reason, and as what the truth of the case plainly requires should be added, that such dissatisfaction possibly may be owing to those—possibly may be men's own fault. For,

Dissatisfaction
the fault of the
objector.

If there are any persons who never set themselves heartily, and in earnest, to be informed in religion; if there are any who secretly wish it may not prove true, and are less attentive to evidence than to difficulties, and more to objections than to what is said in answer to them; these persons will scarce be thought in a likely way of seeing the evidence of religion, though it were most certainly true, and capable of being ever so fully proved. If any accustom themselves to consider this subject usually in the way of mirth and sport; if they

attend to forms and representations, and inadequate manners of expression, instead of the real things intended by them, (for signs often can be no more than inadequately expressive of the things signified,) or if they substitute human errors in the room of divine truth; why may not all, or any of these things, hinder some men from seeking that evidence which really is seen by others; as a like turn of mind, with respect to matters of common speculation and practice, does, we find by experience, hinder them from attaining that knowledge and right understanding in matters of common speculation and practice which more fair and attentive minds attain to? And the effect will be the same, whether their neglect of seriously considering the evidence of religion, and their indirect behavior with regard to it, proceed from mere carelessness or from the grosser vices; or whether it be owing to this, that forms, and figurative manners of expression, as well as errors, administer occasions of ridicule, when the things intended, and the truth itself, would not. Men may indulge a ludicrous turn so far as to lose all sense of conduct and prudence in worldly affairs, and even, as it seems, to impair their faculty of reason. And in general, levity, carelessness, passion, and prejudice, do hinder us from being rightly informed with respect to common things; and they *may*, in like manner, and perhaps in some further providential manner, with respect to moral and religious subjects; may hinder evidence from being laid before us, and from being seen when it is. The Scripture* does de-

* Dan. xii, 10. See also Isa. xxix, 13, 14; Matt. vi, 23, and xi, 25, and xiii, 11, 12; John iii, 19, and v, 44; 1 Cor. ii, 14, and 2 Cor. iv, 4; 2 Tim. iii, 13; and that affectionate, as well as authoritative admonition, so very many times inculcated, "He that hath ears to hear, let him hear." Grotius saw so strongly the thing intended in these, and other passages of Scripture of the like sense, as to say, that the proof given us of Christianity was less than it might have been, for this very purpose: *Ut ita sermo Evangelii tanquam lapis esset*

clare, that every one *shall not understand*. And it makes no difference by what providential conduct this comes to pass; whether the evidence of Christianity was, originally and with design, put and left so, as that those who are desirous of evading moral obligations should not see it, and that honest-minded persons should, or whether it comes to pass by any other means.

14. Further: the general proof of natural religion and of Christianity does, I think, lie level to common men: even those the greatest part Proof level to common men. of whose time, from childhood to old age, is taken up with providing, for themselves and their families, the common conveniences, perhaps necessities, of life; those, I mean, of this rank, who everthink at all of asking after proof or attending to it. Common men, were they as much in earnest about religion as about their temporal affairs, are capable of being convinced, upon real evidence, that there is a God who governs the world; and they feel themselves to be of a moral nature, and accountable creatures. And as Christianity

Lydius ad quem ingenia sanabilia explorarentur. De Ver., R. C., lib. 2, toward the end. [We give the passage from Grotius in full: "If there be any one who is not satisfied with the arguments hitherto alleged for the truth of the Christian religion, but desires more powerful ones, he ought to know that different things must have different kinds of proof; one sort in mathematics, another in the properties of bodies, another in doubtful matters, and another in matters of fact. And we are to abide by that whose testimonies are void of all suspicion; if this be not admitted, not only all history is of no further use, and a great part of physic; but all that natural affection, which is between parents and children, is lost, who can be known no other way. And it is the will of God, that those things which he would have us believe, so as that faith should be accepted from us as obedience, should not be so very plain, as those things we perceive by our senses, and by demonstration; but only so far as is sufficient to procure the belief, and persuade a man of the thing, who is not obstinately bent against it: So that the gospel is, as it were, a touchstone, to try men's honest dispositions by."—DR. CROOKS.]

entirely falls in with this their natural sense of things, so they are capable, not only of being persuaded, but of being made to see that there is evidence of miracles wrought in. attestation of it, and many appearing completions of prophecy. But though this proof is real and conclusive, yet it is liable to objections, and may be run up into difficulties; which, however, persons who are capable, not only of talking of, but of really seeing, are capable also of seeing through; that is, not of clearing up and answering them, so as to satisfy their curiosity, for of such knowledge we are not capable with respect to any one thing in nature; but capable of seeing that the proof is not lost in these difficulties, or destroyed by these objections. But then a thorough examination into religion with regard to these objections, which cannot be the business of every man, is a matter of pretty large compass, and from the nature of it requires some knowledge as well as time and attention to see how the evidence comes out upon balancing one thing with another, and what, upon the whole, is the amount of it. Now if persons who have picked up these objections from others, and take for granted they are of weight, upon the word of those from whom they received them, or by often retailing of them come to see, or fancy they see, them to be of weight, will not prepare themselves for such an examination, with a competent degree of knowledge, or will not give that time and attention to the subject which, from the nature of it, is necessary for attaining such information; in this case they must remain in doubtfulness, ignorance, or error; in the same way as they must with regard to common sciences, and matters of common life, if they neglect the necessary means of being informed in them.

15. But still, perhaps, it will be objected, that if a prince or common master were to send directions to a

servant, he would take care that they should always bear the certain marks who they came from, and that their sense should be always plain, so as that there should be no possible doubt, if he could help it, concerning the authority or meaning of them. Now the proper answer to all this kind of objections is, that wherever the fallacy lies, it is even certain we cannot argue thus with respect to Him who is the governor of the world; and particularly, that he does not afford us such information, with respect to our temporal affairs and interests, as experience abundantly shows. However, there is a full answer to this objection, from the very nature of religion. For the reason why a prince would give his directions in this plain manner is, that he absolutely desires such an external action should be done, without concerning himself with the motive or principle upon which it is done; that is, he regards only the external event, or the things being done, and not at all, properly speaking, the doing of it, or the action. Whereas the whole of morality and religion, consisting merely in action itself, there is no sort of parallel between the cases. But if the prince be supposed to regard only the action; that is, only to desire to exercise, or in any sense prove, the understanding or loyalty of a servant, he would not always give his orders in such a plain manner. It may be proper to add, that the will of God, respecting morality and religion, may be considered either as absolute, or as only conditional. If it be absolute, it can only be thus that we should act virtuously in such given circumstances; not that we should be brought to act so by his changing of our circumstances. And if God's will be thus absolute, then it is in our power, in the highest and strictest sense, to do or to contradict his will; which is a most weighty consideration. Or his will may be considered only as conditional—that if we act so and so, we

Ob. The evidence should be as plain as the directions of a master to a servant.

shall be rewarded; if otherwise, punished; of which conditional will of the Author of nature, the whole constitution of it affords most certain instances.

16. Upon the whole: that we are in a state of religion necessarily implies that we are in a state of probation: and the credibility of our being at all in such a state being admitted, there seems no peculiar difficulty in supposing our probation to be, just as it is, in those respects which are above objected against. There seems no pretense, from *the reason of the thing*, to say that the trial cannot equitably be any thing, but whether persons will act suitably to certain information, or such as admits no room for doubt; so as that there can be no danger of miscarriage, but either from their not attending to what they certainly know, or from overbearing passion hurrying them on to act contrary to it. For since ignorance and doubt afford scope for probation in all senses, as really as intuitive conviction or certainty; and since the two former are to be put to the same account as difficulties in practice; men's moral probation may also be, whether they will take due care to inform themselves by impartial consideration, and afterward whether they will act as the case requires, upon the evidence which they have, however doubtful. And this, we find by *experience*, is frequently our probation, (pages 77, 282, etc.,) in our temporal capacity. For the information which we want, with regard to our worldly interests, is by no means always given us of course, without any care of our own. And we are greatly liable to self-deceit from inward secret prejudices; and also to the deceit of others. So that to be able to judge what is the prudent part, often requires much and difficult consideration. Then after we have judged the very best we can, the evidence upon which we must act, if we will live and act at all, is perpetually doubtful to a very high degree. And the constitution

Probation implied which may be in the things objected to.

and course of the world in fact is such, as that want of impartial consideration what we have to do, and venturing upon extravagant courses, because it is doubtful what will be the consequences, are often naturally, that is, providentially, altogether as fatal, as misconduct occasioned by heedless inattention to what we certainly know, or disregarding it from overbearing passion.

17. Several of the observations here made may well seem strange, perhaps unintelligible, to many good men. But if the persons for whose sake they are made think so; persons who object as above, and throw off all regard to religion under pretense of want of evidence; I desire them to consider again, whether their thinking so be owing to any thing unintelligible in these observations, or to their own not having such a sense of religion, and serious solicitude about it, as even their state of skepticism does in all reason require? It ought to be forced upon the reflection of these persons that our nature and condition necessarily require us, in the daily course of life, to act upon evidence much lower than what is commonly called probable; to guard not only against what we fully believe will, but also against what we think it supposable may, happen; and to engage in pursuits when the probability is greatly against success, if it be credible that possibly we may succeed in them.

We act on evidence lower than probable.

CHAPTER VII.

OF THE PARTICULAR EVIDENCE FOR CHRISTIANITY.*

THE presumptions against revelation, and objections against the general scheme of Christianity, and particular things relating to it, being removed, there remains to be considered, what positive evidence we have for the truth of it: chiefly in order to see what the analogy of nature suggests with regard to that evidence, and the objections against it; or to see what is, and is allowed to be, the plain, natural rule of judgment and of action in our temporal concerns, in cases where we have the same kind of evidence, and the same kind of objections against it, that we have in the case before us.

Proof aside
from miracles
and prophecy.

Now, in the evidence of Christianity, there seem to be several things of great weight, not reducible to the

* [At the place where we now find ourselves, Butler makes a transition in his argument: he passes from the subject-matter of Christianity to its evidence. He has hitherto been employed in removing the objections against Christianity itself by the argument of analogy, and by the same engine he now proceeds to remove the objections that may be leveled against the proof of it. The two objects are altogether distinct. . . . In the discharge of this second service, he is not called upon to propound very fully, or in the way of positive vindication, the evidences of Christianity. He adverts to them; he states what they are; he even renders a passing homage to their authority and force; but his proper task is to do by them what he had before done by the subject-matter of revelation, that is, clear away the objections, not now against the doctrine of Christianity, but against the proof of it, and that by showing that the similar or analogous objections in other cases are not admitted to have the validity which, in the case of the evangelical story, the opponents of the gospel would fain allow to them.—CHALMERS.]

head either of miracles or the completion of prophecy, in the common acceptation of the words. But these two are its direct and fundamental proofs; and those other things, however considerable they are, yet ought never to be urged apart from its direct proofs, but always to be joined with them. Thus the evidence of Christianity will be a long series of things reaching, as it seems, from the beginning of the world to the present time, of great variety and compass, taking in both the direct and also the collateral proofs, and making up, all of them together, one argument; the conviction arising from which kind of proof may be compared to what they call *the effect* in architecture or other works of art—a result from a great number of things so and so disposed, and taken into one view. I shall, therefore, *first*, make some observations relating to miracles, and the appearing completion of prophecy, and consider what analogy suggests in answer to the objections brought against this evidence. And *secondly*, I shall endeavor to give some account of the general argument now mentioned, consisting both of the direct and collateral evidence, considered as making up one argument: this being the kind of proof upon which we determine most questions of difficulty concerning common facts alleged to have happened, or seeming likely to happen; especially questions relating to conduct.

2. *First*, I shall make some observations upon the direct proof of Christianity from miracles and prophecy, and upon the objections alleged against it. Miracles.

I. Now the following observations, relating to the historical evidence of miracles wrought in attestation of Christianity, appear to be of great weight.

1. The Old Testament affords us the same historical evidence of the miracles of Moses and of the prophets as of the common civil history of Moses and the kings

of Israel; or, as of the affairs of the Jewish nation. And the Gospels and the Acts afford us the same historical evidence of the miracles of Christ and the apostles as of the common matters related in them.* This indeed could not have been affirmed by any reasonable man, if the authors of these books, like many other historians, had appeared to make an entertaining manner of writing their aim; though they had interspersed miracles in their works, at proper distances, and upon proper occasions. These might have animated a dull relation, amused the reader, and engaged his attention. And the same account would naturally have been given of them, as of the speeches and descriptions of such authors; the same account, in a manner, as is to be given why the poets make use of wonders and prodigies. But the facts, both miraculous and natural, in Scripture, are related in plain, unadorned narratives; and both of them appear, in all respects, to stand upon the same footing of historical evidence.

Further: some parts of Scripture, containing an account of miracles fully sufficient to prove the truth of Christianity, are quoted as genuine, from the age in which they are said to be written down to the present: and no other parts

Scripture quoted from age to age.

* [This was clearly observed and distinctly stated by Lord Bolingbroke: "The miracles in the Bible are not like those in Livy, detached pieces that do not disturb the civil history, which goes on very well without them. But the miracles of the Jewish historian are intimately connected with all the civil affairs, and make a necessary and inseparable part. The whole history is founded in them; it consists of little else; and if it were not a history of them, it would be a history of nothing."—*Bolingbroke's Posthumous Works*, vol. iii, p. 279. The state of the case seems to be, that the gravity, distinctness, and good sense of the Scripture histories, in relating civil affairs, prove those narratives not to be *mythical*, that is, not to be the product of imagination. And the intimate connection of the miraculous with the natural facts, proves that the former are not merely introduced for the sake of ornament.—F.]

of them, material in the present question, are omitted to be quoted in such manner as to afford any sort of proof of their not being genuine. And as common history, when called in question in any instance, may often be greatly confirmed by contemporary or subsequent events more known and acknowledged; and as the common Scripture history, like many others, is thus confirmed; so likewise is the miraculous history of it, not only in particular instances, but in general. For the establishment of the Jewish and Christian religions, which were events contemporary with the miracles related to be wrought in attestation of both, or subsequent to them, these events are just what we should have expected, upon supposition such miracles were really wrought to attest the truth of these religions. These miracles are a satisfactory account of those events, of which no other satisfactory account can be given, nor any account at all but what is imaginary merely and invented. It is to be added, that the most obvious, the most easy and direct account of this history, how it came to be written, and to be received in the world as a true history, is, that it really is so; nor can any other account of it be easy and direct. Now though an account not at all obvious, but very far-fetched and indirect, may indeed be and often is, the true account of a matter; yet it cannot be admitted on the authority of its being asserted. Mere guess, supposition, and possibility, when opposed to historical evidence, prove nothing but that historical evidence is not demonstrative.

3. Now the just consequence from all this, I think, is, that the Scripture history, in general, is to be admitted as an authentic genuine history till some-
 what positive be alleged sufficient to invalidate it. But no man will deny the consequence to be, that it cannot be rejected, or thrown by as of no authority, till it can be proved to be of none;

Scripture history to be admitted till invalidated.

even though the evidence now mentioned for its authority were doubtful. This evidence may be confronted by historical evidence on the other side, if there be any; or general incredibility in the things related, or inconsistency in the general turn of the history, would prove it to be of no authority. But since, upon the face of the matter, upon a first and general view, the appearance is that it is an authentic history, it cannot be determined to be fictitious without some proof that it is so. And the following observations, in support of these, and coincident with them, will greatly confirm the historical evidence for the truth of Christianity.

4. 2. The epistles of St. Paul, from the nature of epistolary writing, and moreover from several of them being written, not to particular persons, but to Churches, carry in them evidences of their being genuine beyond what can be, in a mere historical narrative, left to the world at large.* This evidence, joined with that which they have in common with the rest of the New Testament, seems not to leave so much as any particular pretence for denying their genuineness, considered as an ordinary matter of fact or of criticism. I say, *particular* pretence for *denying it*; because any single fact of such a kind and such antiquity may have *general doubts* raised concerning it, from the very nature of human affairs and human testimony. There is also to be mentioned a distinct and particular evidence of the genuineness of the epistle chiefly referred to here, the first to the Corinthians: from the manner in which it is quoted by Clemens Romanus, in an epistle of his own to that Church.† Now these epistles afford a proof of Christianity, detached

Evidence from Paul's epistles independent and peculiar.

* [The argument here hinted at is forcibly presented in Paley's admirable work, "Horæ Paulinæ." See also Blunt's "Undesigned Coincidences both of the Old and New Testaments."]

† Clem. Rom., Ep. I, ch. xlvii.

from all others, which is, I think, a thing of weight; and also a proof of a nature and kind peculiar to itself. For,

In them the author declares, that he received the Gospel in general, and the institution of the communion in particular, not from the rest of the apostles, or jointly together with them; but alone from Christ himself; whom he declares, likewise, conformably to the history in the Acts, that he saw after his ascension.* So that the testimony of St. Paul is to be considered as detached from that of the rest of the apostles.

And he declares further that he was endued with a power of working miracles, as what was publicly known to this very people; speaks of frequent and great variety of miraculous gifts as then subsisting in those very Churches to which he was writing; which he was reproving for several irregularities, and where he had personal opposers: he mentions these gifts incidentally, in the most easy manner, and without effort; by way of reproof to those who had them, for their indecent use of them; and by way of depreciating them, in comparison of moral virtues. In short, he speaks to these Churches of these miraculous powers in the manner any one would speak to another of a thing which was as familiar, and as much known in common to them both, as any thing in the world.† And this, as hath been observed by several persons, is surely a very considerable thing.

5. 3. It is an acknowledged historical fact that Christianity offered itself to the world, and demanded to be received, upon the allegation, that is, as unbelievers would speak, upon the pretense of miracles, publicly wrought to attest the truth of it in such an age; and that it was actually received by

Christianity
avowedly found-
ed on miracles.

* Gal. i; 1 Cor. xi, 23, etc.; 1 Cor. xv, 8.

† Rom. xv, 19; 1 Cor. xii, 8-28, etc., and chap. xiii, 1, 2, 8, and the whole xivth chap.; 2 Cor. xii, 12, 13: Gal. iii, 2, 5.

great numbers in that very age, and upon the professed belief of the reality of these miracles. And Christianity, including the dispensation of the Old Testament, seems distinguished by this from all other religions. I mean that this does not appear to be the case with regard to any other. For surely it will not be supposed to lie upon any person to prove, by positive historical evidence, that it was not. It does in no sort appear that Moham-medanism was first received in the world upon the footing of supposed miracles,* that is, public ones; for, as revelation is itself miraculous, all pretense to it must necessarily imply some pretense of miracles. And it is a known fact, that it was immediately, at the very first, propagated by other means. And as particular institutions, whether in paganism or popery, said to be confirmed by miracles, after those institutions had obtained are not to the purpose; so, were there what might be called historical proof, that any of them were introduced by a supposed divine command, believed to be attested by miracles, these would not be in any wise parallel. For single things of this sort are easy to be accounted for, after parties are formed, and have power in their hands; and the leaders of them are in veneration with the multitude; and political interests are blended with religious claims and religious distinctions. But before any thing of this kind, for a few persons, and those of the lowest rank, all at once, to bring over such great numbers to a new religion, and get it to be received upon the particular evidence of miracles—this is quite another thing.

And I think it will be allowed by any fair adversary

* See the Koran, chap. xiii and xvii. [The infidel says, unless a sign be sent down unto him from his Lord, we will not believe; thou art a preacher only.—Sale's Trans., p. 201, ed. 4to. "Nothing hindered us from sending thee with miracles, except that the former nations have charged them with imposture."]

that the fact now mentioned, taking in all the circumstances of it, is peculiar to the Christian religion. However, the fact itself is allowed, that Christianity obtained, that is, was professed to be ^{In this peculiar.} received, in the world, upon the belief of miracles, immediately in the age in which it is said those miracles were wrought: or that this is what its first converts would have alleged as the reason for their embracing it. Now certainly it is not to be supposed that such numbers of men, in the most distant parts of the world, should forsake the religion of their country, in which they had been educated; separate themselves from their friends, particularly in their festival shows and solemnities, to which the common people are so greatly addicted, and which were of a nature to engage them much more than any thing of that sort among us; and embrace a religion, which could not but expose them to many inconveniences, and indeed must have been a giving up the world in a great degree, even from the very first, and before the empire engaged in form against them: it cannot be supposed that such numbers should make so great, and, to say the least, so inconvenient a change in their whole institution of life, unless they were really convinced of the truth of those miracles upon the knowledge or belief of which they professed to make it.

And it will, I suppose, readily be acknowledged, that the generality of the first converts to Christianity must have believed them; that as, by becoming ^{First converts believed miracles.} Christians, they declared to the world they were satisfied of the truth of those miracles, so this declaration was to be credited. And this their testimony is the same kind of evidence for those miracles as if they had put it in writing, and these writings had come down to us. And it is real evidence, because it is of facts which they had capacity and full opportu-

nity to inform themselves of. It is also distinct from the direct or express historical evidence, though it is of the same kind; and it would be allowed to be distinct in all cases. For were a fact expressly related by one or more ancient historians, and disputed in after ages: that this fact is acknowledged to have been believed, by great numbers of the age in which the historian says it was done, would be allowed an additional proof of such fact, quite distinct from the express testimony of the historian. The credulity of mankind is acknowledged, and the suspicions of mankind ought to be acknowledged too; and their backwardness even to believe, and greater still to practice, what makes against their interest. And it must particularly be remembered, that education, and prejudice, and authority were against Christianity in the age I am speaking of. So that the immediate conversion of such numbers is a real presumption of somewhat more than human in this matter: * I say presumption, for it is not alleged as a proof, alone and by itself. Nor need any one of the things mentioned in this chapter be considered as a proof by itself; and yet all of them together may be one of the strongest.

6. Upon the whole: as there is large historical evidence, both direct and circumstantial, of miracles

* [Arnobius, one of the earliest Christian writers, says: "Shall we say that the men of those times were inconsiderate, deceitful, and brutish enough to feign having seen what they never saw? And that when they might have lived in peace and comfort they chose gratuitous hatred and obloquy?"

The rejection of Christianity by so many in the first ages was the result of the continual action of personal hereditary prejudice and depravity capable of resisting any supposable evidence. But the *reception* of Christianity by multitudes, under the same evidences, and to their immediate personal damage, shows strongly that there was enough evidence to produce those effects. Thus the rejection by some does not countervail the acceptance by others.—MALCOM.]

wrought in attestation of Christianity, collected by those who have writ upon the subject, it lies upon unbelievers to show why this evidence is not to be credited. This way of speaking is, I think, ^{Burden of proof with unbelievers.} just, and what persons who write in defense of religion naturally fall into. Yet in a matter of such unspeakable importance, the proper question is, not whom it lies upon, according to the rules of argument, to maintain or confute objections; but whether there really are any, against this evidence, sufficient in reason to destroy the credit of it? However, unbelievers seem to take upon them the part of showing that there are.

They allege that numberless enthusiastic people, in different ages and countries, expose themselves to the same difficulties which the primitive Christians did, and are ready to give up their ^{Objections founded on enthusiasm.} lives for the most idle follies imaginable. But it is not very clear to what purpose this objection is brought. For every one, surely, in every case, must distinguish between opinions and facts. And though testimony is no proof of enthusiastic opinions, or of any opinions at all; yet it is allowed, in all other cases, to be a proof of facts. And a person's laying down his life in attestation of facts, or of opinions, is the strongest proof of his believing them. And if the apostles and their contemporaries did believe the facts in attestation of which they exposed themselves to sufferings and death, this their belief, or rather knowledge, must be a proof of those facts; for they were such as came under the observation of their senses. And though it is not of equal weight, yet it is of weight, that the martyrs of the next age, notwithstanding they were not eye-witnesses of those facts, as were the apostles and their contemporaries, had, however, full opportunity to inform themselves whether they were true or not, and gave equal proof of their believing them to be true.

7. But enthusiasm, it is said, greatly weakens the evidence of testimony, even for facts, in matters relating to religion; some seem to think it totally and absolutely destroys the evidence of testimony upon this subject. And, indeed, the powers of enthusiasm, and of diseases too, which operate in a like manner, are very wonderful in particular instances. But if great numbers of men, not appearing in any peculiar degree weak, nor under any peculiar suspicion of negligence, affirm that they saw and heard such things plainly with their eyes and their ears, and are admitted to be in earnest; such testimony is evidence of the strongest kind we can have for any matter of fact. Yet possibly it may be overcome, strong as it is, by incredibility in the things thus attested, or by contrary testimony. And in an instance where one thought it was so overcome, it might be just to consider how far such evidence could be accounted for by enthusiasm: for it seems as if no other imaginable account were to be given of it. But till such incredibility be shown, or contrary testimony produced, it cannot surely be expected that so far-fetched, so indirect and wonderful an account of such testimony, as that of enthusiasm must be; an account so strange, that the generality of mankind can scarce be made to understand what is meant by it; it cannot, I say, be expected, that such account will be admitted of such evidence, when there is this direct, easy, and obvious account of it, that people really saw and heard a thing not incredible, which they affirm sincerely, and with full assurance, that they did see and hear.

Granting, then, that enthusiasm is not (strictly speaking) an absurd, but a possible account of such testimony, it is manifest that the very mention of it goes upon the previous supposition that the things so attested are incredible, and

Enthusiasm
weakens evi-
dence.

The objection
supposes the
things attested
incredible, hence
of no force.

therefore need not be considered till they are shown to be so. Much less need it be considered after the contrary has been proved. And I think it has been proved, to full satisfaction, that there is no incredibility in a revelation in general, or in such a one as the Christian in particular. However, as religion is supposed peculiarly liable to enthusiasm, it may just be observed, that prejudices almost without number, and without name, romance, affectation, humor, a desire to engage attention or to surprise, the party spirit, custom, little competitions, unaccountable likings and dislikings; these influence men strongly in common matters. And as these prejudices are often scarce known or reflected upon by the persons themselves who are influenced by them, they are to be considered as influences of a like kind to enthusiasm. Yet human testimony in common matters is naturally and justly believed notwithstanding.

8. It is intimated further, in a more refined way of observation, that though it should be proved that the apostles and first Christians could not, in some respects, be deceived themselves, and in other respects cannot be thought to have intended to impose upon the world, yet it will not follow that their general testimony is to be believed, though truly handed down to us; because they might still in part, that is, in other respects, be deceived themselves, and in part also designedly impose upon others; which, it is added, is a thing very credible, from that mixture of real enthusiasm and real knavery, to be met with in the same characters.

Self-deception
and knavery
combined in the
apostles.

And I must confess, I think the matter of fact contained in this observation upon mankind is not to be denied; and that somewhat very much akin to it, is often supposed in Scripture, as a very common case, and most severely reprov'd. But it were to have been expected, that persons capable of applying this observa-

tion, as applied in the objection, might also frequently have met with the like mixed character in instances where religion was quite out of the case. The thing plainly is, that mankind are naturally endowed with reason, or a capacity of distinguishing between truth and falsehood; and as naturally they are endued with veracity, or a regard to truth in what they say: but from many occasions, they are liable to be prejudiced, and biased, and deceived themselves, and capable of intending to deceive others, in every different degree; inso-much that, as we are all liable to be deceived by prejudice, so likewise it seems to be not an uncommon thing for persons who, from their regard to truth, would not invent a lie entirely without any foundation at all, to *propagate* it with heightening circumstances, after it is once invented and set agoing. And others, though they would not *propagate* a lie, yet, which is a lower degree of falsehood, will let it pass without contradiction. But notwithstanding all this, human testimony remains still a natural ground of assent; and this assent, a natural principle of action.

9. It is objected further, that, however it has happened, the *fact* is, that mankind have in different ages been strangely deluded with pretenses to miracles and wonders. But it is by no means to be admitted, that they have been oftener, or are at all more liable to be, deceived by these pretenses than by others.

It is added, that there is a very considerable degree of historical evidence for miracles which are on all hands acknowledged to be fabulous. But suppose that there were even *the like* historical evidence for these to what there is for those alleged in proof of Christianity, which yet is in nowise allowed, but suppose this; the consequence would not be, that the evidence of the latter is not to be admitted. Nor is there a man in the

world who, in common cases, would conclude thus. For what would such a conclusion really amount to but this, that evidence confuted by contrary evidence, or any way overbalanced, destroys the credibility of other evidence neither confuted nor overbalanced? To argue that because there is, if there were, like evidence from testimony for miracles acknowledged false, as for those in attestation of Christianity, therefore the evidence in the latter case is not to be credited; this is the same as to argue, that if two men of equally good reputation had given evidence in different cases no way connected, and one of them had been convicted of perjury, this confuted the testimony of the other.

10. Upon the whole, then, the general observation that human creatures are so liable to be deceived, from enthusiasm in religion, and principles equivalent to enthusiasm in common matters, and in both from negligence; and that they are so capable of dishonestly endeavoring to deceive others; this does, indeed, weaken the evidence of testimony in all cases, but does not destroy it in any. And these things will appear to different men to weaken the evidence of testimony in different degrees; in degrees proportionable to the observations they have made, or the notions they have any way taken up, concerning the weakness, and negligence, and dishonesty of mankind; or concerning the powers of enthusiasm, and prejudices equivalent to it. But it seems to me, that people do not know what they say, who affirm these things to destroy the evidence from testimony which we have of the truth of Christianity. Nothing can destroy the evidence of testimony in any case but a proof, or probability, that persons are not competent judges of the facts to which they give testimony; or that they are actually under some indirect influence in giving it, in such particular case. Till this be made out, the *natural* laws of human

Testimony may be weakened yet not destroyed.

actions require that testimony be admitted. It can never be sufficient to overthrow direct historical evidence, indolently to say, that there are so many principles from whence men are liable to be deceived themselves, and disposed to deceive others, especially in matters of religion, that one knows not what to believe. And it is surprising persons can help reflecting, that this very manner of speaking supposes, they are not satisfied that there is nothing in the evidence of which they speak thus; or that they can avoid observing, if they do make this reflection, that it is, on such a subject, a very material one.*

II. And over against all these objections, is to be set the importance of Christianity, as what must have engaged the attention of its first converts, so as to have rendered them less liable to be deceived from carelessness than they would in common matters; and, likewise, the strong obligations to veracity which their religion laid them under: so that the first and most obvious presumption is, that they could not be deceived themselves, nor would deceive others. And this presumption, in this degree, is peculiar to the testimony we have been considering.

In argument, assertions are nothing in themselves, and have an air of positiveness which sometimes is not very easy; yet they are necessary, and necessary to be repeated, in order to connect a discourse, and distinctly to lay before the view of the reader what is proposed to be proved, and what is left as proved. Now the conclusion from the foregoing observations is, I think, beyond all doubt this: that unbelievers must be forced to admit the external evidence for Christianity, that is, the proof of miracles wrought to attest it, to be of real weight and very considerable; though they cannot allow it to be sufficient to convince

* See the foregoing chapter.

them of the reality of those miracles. And as they must, in all reason, admit this, so it seems to me, that upon consideration they would in fact admit it; those of them, I mean, who know any thing at all of the matter: in like manner as persons, in many cases, own they see strong evidence from testimony for the truth of things, which yet they cannot be convinced are true; cases, suppose, where there is contrary testimony, or things which they think, whether with or without reason, to be incredible. But there is no testimony contrary to that which we have been considering; and it has been fully proved that there is no incredibility in Christianity in general, or in any part of it.

12. II. As to the evidence for Christianity from prophecy I shall only make some few general observations, which are suggested by the analogy of nature; that is, by the acknowledged natural rules of judging in common matters concerning evidence of a like kind to this from prophecy.

Prophecy—obscurity does not invalidate its proof.

1. The obscurity or unintelligibleness of one part of a prophecy does not in any degree invalidate the proof of foresight, arising from the appearing completion of those other parts which are understood. For the case is evidently the same as if those parts which are not understood were lost, or not written at all, or written in an unknown tongue. Whether this observation be commonly attended to or not, it is so evident that one can scarce bring one's self to set down an instance in common matters to exemplify it. However, suppose a writing, partly in cypher, and partly in plain words at length, and that in the part one understood, there appeared mention of several known facts; it would never come into any man's thoughts to imagine, that if he understood the whole, perhaps he might find that those facts were not in reality known by the latter. Indeed, both in this example, and the thing intended to be exempli-

fied by it, our not understanding the whole (the whole, suppose, of a sentence or a paragraph) might sometimes occasion a doubt whether one understood the literal meaning of such a part; but this comes under another consideration.

For the same reason, though a man should be incapable, for want of learning, or opportunities of inquiry, or from not having turned his studies this way, even so much as to judge, whether particular prophecies have been throughout completely fulfilled; yet he may see, in general, that they have been fulfilled to such a degree, as, upon very good ground, to be convinced of foresight more than human in such prophecies, and of such events being intended by them. For the same reason, also, though by means of the deficiencies in civil history, and the different accounts of historians, the most learned should not be able to make out to satisfaction that such parts of the prophetic history have been minutely and throughout fulfilled; yet a very strong proof of foresight may arise from that general completion of them which is made out: as much proof of foresight, perhaps, as the Giver of prophecy intended should ever be afforded by such parts of prophecy.

13. 2. A long series of prophecy being applicable to such and such events, is itself a proof that it was intended of them; as the rules by which we naturally judge and determine, in common cases parallel to this, will show. This observation I make in answer to the common objection against the application of the prophecies, that considering each of them distinctly by itself, it does not at all appear that they were intended of those particular events to which they are applied by Christians; and therefore it is to be supposed, that, if they meant any thing, they were intended of other events unknown to us, and not of these at all.

The applicability of a series of prophecies is proof of intended application.

Now there are two kinds of writing which bear a great resemblance to prophecy, with respect to the matter before us; the mythological and the satirical, where the satire is, to a certain degree, concealed. And a man might be assured that he understood what an author intended by a fable or parable, related without any application or moral, merely from seeing it to be easily capable of such application, and that such a moral might naturally be deduced from it. And he might be fully assured that such persons and events were intended in a satirical writing, merely from its being applicable to them. And agreeably to the last observation, he might be in a good measure satisfied of it, though he were not enough informed in affairs or in the story of such persons, to understand half the satire. For, his satisfaction that he understood the meaning, the intended meaning, of these writings, would be greater or less, in proportion as he saw the general turn of them to be capable of such application, and in proportion to the number of particular things capable of it. And thus if a long series of prophecy is applicable to the present state of the Church and to the political situations of the kingdoms of the world, some thousand years after these prophecies were delivered, and a long series of prophecy delivered before the coming of Christ is applicable to him; these things are in themselves a proof that the prophetic history was intended of him, and of those events; in proportion as the general turn of it is capable of such application, and to the number and variety of particular prophecies capable of it. And though in all just way of consideration, the appearing completion of prophecies is to be allowed to be thus explanatory of, and to determine their meaning; yet it is to be remembered further, that the ancient Jews applied the prophecies to a Messiah before his coming, in much the same manner as Christians do now; and that the primitive Christians inter-

preted the prophecies respecting the state of the Church and of the world in the last ages, in the sense which the event seems to confirm and verify. And from these things it may be made to appear,

14. 3. That the showing even to a high probability, if that could be, that the prophets thought of some other events, in such and such predictions, and not those at all which Christians allege to be completions of those predictions; or that

Mistakes as to the meaning of prophecy do not weaken its proof.

such and such prophecies are capable of being applied to other events than those to which Christians apply them—that this would not confute or destroy the force of the argument from prophecy, even with regard to those very instances. For, observe how this matter really is. If one knew such a person to be the sole author of such a book, and was certainly assured, or satisfied to any degree, that one knew the whole of what he intended in it, one should be assured or satisfied to such a degree, that one knew the whole meaning of that book; for the meaning of a book is nothing but the meaning of the author. But if one knew a person to have compiled a book of memoirs which he received from another of vastly superior knowledge in the subject of it, especially if it were a book full of great intricacies and difficulties, it would in nowise follow, that one knew the whole meaning of the book from knowing the whole meaning of the compiler; for the original memoirs, that is, the author of them, might have, and there would be no degree of presumption, in many cases, against supposing him to have, some further meaning than the compiler saw. To say, then, that the Scriptures and the things contained in them can have no other or further meaning than those persons thought or had who first recited or wrote them, is evidently saying that those persons were the original, proper, and sole authors of those books, that is, that they are not inspired; which

is absurd, while the authority of these books is under examination, that is, till you have determined they are of no divine authority at all. Till this be determined, it must in all reason be supposed, not indeed that they have, for this is taking for granted that they are inspired, but that they may have some further meaning than what the compilers saw or understood. And upon this supposition, it is supposable also that this further meaning may be fulfilled.

Now events corresponding to prophecies, interpreted in a different meaning from that in which the prophets are supposed to have understood them; this affords, in a manner, the same proof that this different sense was originally intended, as it would have afforded, if the prophets had not understood their predictions in the sense it is supposed they did; because there is no presumption of their sense of them being the whole sense of them. And it has been already shown, that the apparent completions of prophecy must be allowed to be explanatory of its meaning. So that the question is, whether a series of prophecy has been fulfilled, in a natural or proper, that is, in any real sense of the words of it. For such completion is equally a proof of foresight more than human, whether the prophets are, or are not, supposed to have understood it in a different sense. I say, supposed; for though I think it clear that the prophets did not understand the full meaning of their predictions, it is another question, how far they thought they did, and in what sense they understood them.

15. Hence may be seen, to how little purpose those persons busy themselves who endeavor to prove that the prophetic history is applicable to events of the age in which it was written, or of ages before it. Indeed, to have proved this before there was any appearance of a further completion of it, might have answered some purpose; for it might

Fulfillment
of prophecy not
confined to past
ages.

have prevented the expectation of any such further completion. Thus, could Porphyry have shown that some principal parts of the Book of Daniel, for instance, the seventh verse of the seventh chapter, which the Christians interpreted of the latter ages, was applicable to events which happened before or about the age of Antiochus Epiphanes; this might have prevented them from expecting any further completion of it. And unless there was then, as I think there must have been, external evidence concerning that book more than is come down to us, such a discovery might have been a stumbling-block in the way of Christianity itself; considering the authority which our Saviour has given to the Book of Daniel, and how much the general scheme of Christianity presupposes the truth of it. But even this discovery, had there been any such,* would be of very little weight with reasonable men now; if this passage, thus applicable to events before the age of Porphyry, appears to be applicable also to events which succeeded the dissolution of the Roman empire. I mention this, not at all as intending to insinuate that the division of this empire into ten parts, for it plainly was divided into about that number, were alone and by itself of any moment in verifying the prophetic history; but only as an example of the thing I am speaking of. And thus, upon the whole, the matter of inquiry evidently must be, as above put, Whether the prophecies are applicable to Christ, and to the present state of the world and of the Church; applicable in such a degree

* It appears that Porphyry did nothing worth mentioning in this way. For Jerome on the place says: "Duas posteriores bestias—in uno Macedonum regno ponit." And as to the ten kings: "Decem reges enumerat, qui, fuerunt sœvissimi; ipsosque reges non unius ponit regni, verbi gratia, Macedoniæ, Syriæ, Asiæ, et Ægypti; sed de diversis regnis unum efficit regum ordinem." And in this way of interpretation, any thing may be made of any thing.

as to imply foresight: not whether they are capable of any other application; though I know no pretense for saying the general turn of them is capable of any other.

16. These observations are, I think, just, and the evidence referred to in them real; though there may be people who will not accept of such imperfect information from Scripture. Some, too, have not integrity and regard enough to truth to attend to evidence which keeps the mind in doubt, perhaps perplexity, and which is much of a different sort from what they expected. And it plainly requires a degree of modesty and fairness beyond what every one has, for a man to say, not to the world, but to himself, that there is a real appearance of somewhat of great weight in this matter, though he is not able thoroughly to satisfy himself about it; but it shall have its influence upon him, in proportion to its appearing reality and weight. It is much more easy, and more falls in with the negligence, presumption, and willfulness of the generality, to determine at once, with a decisive air, there is nothing in it. The prejudices arising from that absolute contempt and scorn with which this evidence is treated in the world I do not mention. For what, indeed, can be said to persons who are weak enough in their understandings to think this any presumption against it; or, if they do not, are yet weak enough in their temper to be influenced by such prejudices, upon such a subject?

17. I shall now, *Secondly*, Endeavor to give some account of the general argument for the truth of Christianity, consisting both of the direct and circumstantial evidence, considered as making up one argument. Indeed, to state and examine this argument fully would be a work much beyond the compass of this whole treatise; nor is so much

Defects in character lessen the power of evidence.

General argument. Reasons for stating it.

as a proper abridgment of it to be expected here. Yet the present subject requires to have some brief account of it given. For it is the kind of evidence upon which most questions of difficulty, in common practice, are determined; evidence arising from various coincidences, which support and confirm each other, and in this manner prove, with more or less certainty, the point under consideration. And I choose to do it also: *first*, because it seems to be of the greatest importance, and not duly attended to by every one, that the proof of revelation is, not some direct and express things only, but a great variety of circumstantial things also; and that though each of these direct and circumstantial things is indeed to be considered separately, yet they are afterward to be joined together; for that the proper force of the evidence consists in the result of those several things, considered in their respects to each other, and united into one view; and, in the *next* place, because it seems to me, that the matters of fact here set down, which are acknowledged by unbelievers, must be acknowledged by them also to contain together a degree of evidence of great weight, if they could be brought to lay these several things before themselves distinctly, and then with attention consider them together; instead of that cursory thought of them to which we are familiarized. For being familiarized to the cursory thought of things, as really hinders the weight of them from being seen, as from having its due influence upon practice.

18. The thing asserted, and the truth of which is to be inquired into, is this: that over and above our reason and affections, which God has given us for the information of our judgment and the conduct of our lives, he has also, by external revelation, given us an account of himself and his moral government over the world, implying a future state of rewards

The point to be proved.

and punishments; that is, hath revealed the system of natural religion; for natural religion may be externally (page 194, etc.) revealed by God, as the ignorant may be taught it by mankind, their fellow-creatures—that God, I say, has given us the evidence of revelation, as well as the evidence of reason, to ascertain this moral system; together with an account of a particular dispensation of providence, which reason could no way have discovered, and a particular institution of religion founded on it, for the recovery of mankind out of their present wretched condition, and raising them to the perfection and final happiness of their nature.

19. This revelation, whether real or supposed, may be considered as wholly historical. For prophecy is nothing but the history of events before they come to pass; doctrines, also, are matters ^{The revelation is historical.} of fact; and precepts come under the same notion. And the general design of Scripture, which contains in it this revelation, thus considered as historical, may be said to be, to give us an account of the world in this one single view—as God’s world; by which it appears essentially distinguished from all other books, so far as I have found, except such as are copied from it. It begins with an account of God’s creation of the world, in order to ascertain and distinguish from all others who is the object of our worship by what he has done; in order to ascertain who he is concerning whose providence, commands, promises, and threatenings, this sacred book all along treats; the Maker and Proprietor of the world, he whose creatures we are, the God of nature: in order likewise to distinguish him from the idols of the nations, which are either imaginary beings, that is, no beings at all; or else part of that creation, the historical relation of which is here given. And St. John, not improbably with an eye to this Mosaic account of the creation, begins his gospel with an account of our

Saviour's pre-existence, and that "all things were made by him, and without him was not any thing made that was made," (John i, 3;) agreeably to the doctrine of St. Paul, that "God created all things by Jesus Christ." Eph. iii, 9. This being premised, the Scripture, taken together, seems to profess to contain a kind of an abridgment of the history of the world in the view just now mentioned: that is, a general account of the condition of religion and its professors during the continuance of that apostasy from God, and state of wickedness which it every-where supposes the world to lie in. And this account of the state of religion carries with it some brief account of the political state of things, as religion is affected by it. Revelation, indeed, considers the common affairs of this world, and what is going on in it, as a mere scene of distraction, and cannot be supposed to concern itself with foretelling at what time Rome, or Babylon, or Greece, or any particular place, should be the most conspicuous seat of that tyranny and dissoluteness which all places equally aspire to be; cannot, I say, be supposed to give any account of this wild scene for its own sake. But it seems to contain some very general account of the chief governments of the world, as the general state of religion has been, is, or shall be affected by them, from the first transgression, and during the whole interval of the world's continuing in its present state, to a certain future period, spoken of both in the Old and New Testament, very distinctly, and in great variety of expression; "The times of the restitution of all things," (Acts iii, 21;) when "the mystery of God shall be finished, as he hath declared to his servants the prophets," (Rev. x, 7;) when "the God of heaven shall set up a kingdom which shall never be destroyed; and the kingdom shall not be left to other people," (Dan. ii, 44,) as it is represented to be during this apostasy, but "judgment shall be given to the saints,"

(Dan. vii, 22,) and "they shall reign," (Rev. xxii, 5;) "and the kingdom and dominion, and the greatness of the kingdom under the whole heaven, shall be given to the people of the saints of the Most High." Dan. vii, 27.

20. Upon this general view of the Scripture, I would remark, how great a length of time the whole relation takes up, near six thousand years of which are past: and how great a variety of things it treats of; the natural and moral system or history of the world, including the time when it was formed, all contained in the very first book, and evidently written in a rude and unlearned age; and in subsequent books, the various common and prophetic history, and the particular dispensation of Christianity. Now all this together gives the largest scope for criticism; and for confutation of what is capable of being confuted, either from reason, or from common history, or from any inconsistency in its several parts. And it is a thing which deserves, I think, to be mentioned, that whereas some imagine the supposed doubtfulness of the evidence for revelation implies a positive argument that it is not true; it appears, on the contrary, to imply a positive argument that it is true. For could any common relation, of such antiquity, extent, and variety, (for in these things the stress of what I am now observing lies,) be proposed to the examination of the world; that it could not, in an age of knowledge and liberty, be confuted, or shown to have nothing in it, to the satisfaction of reasonable men; this would be thought a strong presumptive proof of its truth. And, indeed, it must be a proof of it, just in proportion to the probability, that if it were false it might be shown to be so; and this, I think, is scarce pretended to be shown, but upon principles and in ways of arguing which have been clearly obviated. (Chap. ii, iii, etc.) Nor does it at all appear that any set of men who believe natural religion

The length of time and variety of topics included.

are of the opinion that Christianity has been thus confuted. But to proceed:—

21. Together with the moral system of the world, the Old Testament contains a chronological account of the beginning of it, and from thence, an unbroken genealogy of mankind for many ages before common history begins; and carried on as much further as to make up a continued thread of history of the length of between three and four thousand years. It contains an account of God's making a covenant with a particular nation, that they should be his people, and he would be their God, in a peculiar sense; of his often interposing miraculously in their affairs; giving them the promise, and, long after, the possession, of a particular country; assuring them of the greatest national prosperity in it, if they would worship him, in opposition to the idols which the rest of the world worshiped, and obey his commands, and threatening them with unexampled punishments if they disobeyed him, and fell into the general idolatry; insomuch, that this one nation should continue to be the observation and the wonder of all the world. It declares particularly, that "God would scatter them among all people, from one end of the earth unto the other;" but that "when they should return unto the Lord their God, he would have compassion upon them, and gather them, from all the nations whither he had scattered them; that Israel should be saved in the Lord, with an everlasting salvation, and not be ashamed or confounded, world without end." And as some of those promises are conditional, others are as absolute as any thing can be expressed, that the time should come when "the people should be all righteous, and inherit the land forever; that though God would make a full end of all nations whither he had scattered them, yet would he not make a full end of them: that he would bring again the captivity of his

people Israel, and plant them upon their land, and they should be no more pulled up out of their land; that the seed of Israel should not cease from being a nation forever." * It foretells that God would raise them up a particular person, in whom all his promises should finally be fulfilled; the Messiah, who should be, in a high and eminent sense, their anointed Prince and Saviour. This was foretold in such a manner as raised a general expectation of such a person in the nation, as appears from the New Testament, and is an acknowledged fact; an expectation of his coming at such a particular time, before any one appeared claiming to be that person, and when there was no ground for such an expectation but from the prophecies; which expectation, therefore, must in all reason be presumed to be explanatory of those prophecies, if there were any doubt about their meaning. It seems, moreover, to foretell that this person should be rejected by that nation to whom he had been so long promised, and though he was so much desired by them. † And it expressly foretells, that he should be the Saviour of the Gentiles; and even that the completion of the scheme contained in this book, and then begun and in its progress, should be somewhat so great, that, in comparison with it, the restoration of the Jews alone would be but of small account: "It is a light thing that thou shouldst be my servant to raise up the tribes of Jacob, and to restore the preserved of Israel: I will also give thee for a light to the Gentiles, that thou mayest be for salvation unto the end of the earth." And, "In the last days, the mountain of the Lord's house shall be established in the top of the mountains, and shall be exalted above the hills; and all nations shall flow into it—for out of Zion shall go forth the law,

* Deut. xxviii, 64; xxx, 2, 3; Isa. xlv, 17; lx, 21; Jer. xxx, 11; xlvi, 28; Amos ix, 15; Jer. xxxi, 36.

† Isa. viii, 14, 15; xlix, 5; liii; Mal. i, 10, 11, and iii.

and the word of the Lord from Jerusalem. And he shall judge among the nations—and the Lord alone shall be exalted in that day, and the idols he shall utterly abolish.”* The Scripture further contains an account, that at the time the Messiah was expected a person rose up in this nation claiming to be that Messiah, to be the person whom all the prophets referred to, and in whom they should center; that he spent some years in a continued course of miraculous works, and endued his immediate disciples and followers with a power of doing the same, as a proof of the truth of that religion which he commissioned them to publish; that, invested with this authority and power, they made numerous converts in the remotest countries, and settled and established his religion in the world; to the end of which the Scripture professes to give a prophetic account of the state of this religion among mankind.

22. Let us now suppose a person, utterly ignorant of history, to have all this related to him out of the Scripture. Or, suppose, such a one, having the Facts submitted to a candid inquirer. Scripture put into his hands, to remark these things in it, not knowing but that the whole, even its civil history, as well as the other parts of it, might be, from beginning to end, an entire invention; and to ask, What truth was in it, and whether the revelation here related was real or a fiction? And instead of a direct answer, suppose him, all at once, to be told the following confessed facts, and then to unite them into one view.

Let him first be told, in how great a degree the profession and establishment of natural religion, the belief that there is one God to be worshiped, that virtue is his

* Isa. xlix, 6; ii; xi; lvi, 7; Mal. i, 11. To which must be added the other prophecies of the like kind, several in the New Testament, and very many in the Old, which describe what shall be the completion of the revealed plan of Providence.

law, and that mankind shall be rewarded and punished hereafter, as they obey and disobey it here ; Truths originated by revelation. Its importance and authority. in how very great a degree, I say, the profession and establishment of this moral system in the world is owing to the revelation, whether real or supposed, contained in this book ; the establishment of this moral system, even in those countries which do not acknowledge the proper authority of the Scripture. (Page 274.) Let him be told also what number of nations do acknowledge its proper authority. Let him then take in the consideration, of what importance religion is to mankind. And upon these things he might, I think, truly observe, that this supposed revelation's obtaining and being received in the world, with all the circumstances and effects of it, considered together as one event, is the most conspicuous and important event in the story of mankind : that a book of this nature, and thus promulged and recommended to our consideration, demands, as if by a voice from heaven, to have its claims most seriously examined into ; and that before such examination, to treat it with any kind of scoffing and ridicule is an offense against natural piety. But it is to be remembered, that how much soever the establishment of natural religion in the world is owing to the Scripture revelation, this does not destroy the proof of religion from reason ; any more than the proof of *Euclid's Elements* is destroyed by a man's knowing, or thinking, that he should never have seen the truth of the several propositions contained in it, nor had those propositions come into his thoughts but for that mathematician.

25. Let such a person as we are speaking of be, in the next place, informed of the acknowledged antiquity of the first parts of this book ; and that its chronology, its account Its antiquity. Its history confirmed and credible. of the time when the earth and the several parts of it

were first peopled with human creatures is no way contradicted, but is really confirmed, by the natural and civil history of the world, collected from common historians, from the state of the earth, and from the late invention of arts and sciences. And as the Scripture contains an unbroken thread of common and civil history, from the creation to the captivity, for between three and four thousand years; let the person we are speaking of be told, in the next place, that this general history, as it is not contradicted, but is confirmed, by profane history, as much as there would be reason to expect upon supposition of its truth; so there is nothing in the whole history *itself* to give any reasonable ground of suspicion of its not being, in the general, a faithful and literally true genealogy of men, and series of things. I speak here only of the common Scripture history, or of the course of ordinary events related in it, as distinguished from miracles, and from the prophetic history. In all the Scripture narrations of this kind, following events arise out of foregoing ones, as in all other histories. There appears nothing related as done in any age, not conformable to the manners of that age; nothing in the account of a succeeding age, which one would say could not be true, or was improbable, from the account of things in the preceding one. There is nothing in the characters which would raise a thought of their being feigned; but all the internal marks imaginable of their being real. It is to be added, also, that mere genealogies, bare narratives of the number of years which persons called by such and such names lived, do not carry the face of fiction; perhaps do carry some presumption of veracity: and all unadorned narratives, which have nothing to surprise, may be thought to carry somewhat of the like presumption too. And the domestic and the political history is plainly credible. There may be incidents in Scripture, which, taken alone in the

naked way they are told, may appear strange, especially to persons of other manners, temper, education; but there are also incidents of undoubted truth, in many or most persons' lives, which, in the same circumstances, would appear to the full as strange.* There may be mistakes of transcribers, there may be other real or seeming mistakes, not easy to be particularly accounted for; but there are certainly no more things of this kind in the Scripture than what were to have been expected in books of such antiquity; and nothing, in any wise, sufficient to discredit the general narrative. Now, that a history claiming to commence from the creation, and extending in one continued series through so great a length of time, and variety of events, should have such appearances of reality and truth in its whole contexture, is surely a very remarkable circumstance in its favor. And as all this is applicable to the common history of the New Testament, so there is a further credibility, and a very high one, given to it by profane authors; many

* [See this thought presented in a most agreeable and lively form in the Archbishop of Dublin's "Historic Doubts" concerning Napoleon Bonaparte. Compare the following conversation given in Boswell's Life of Johnson, (ann. 1763:) "Talking of those who deny the truth of Christianity, he said, 'It is always easy to be on the negative side. . . . I deny that Canada is taken, and I can support my denial by pretty good arguments. The French are a much more numerous people than we, and it is not likely that they would allow us to take it.' 'But the ministry have assured us, in all the formality of a Gazette, that it is taken.' 'Very true. But the ministry have put us to an enormous expense by the war in America, and it is their interest to persuade us that we have got something for our money.' 'But the fact is confirmed by thousands of men who were at the taking of it.' 'Aye, but these men have still more interest in deceiving us. They don't want that you should think the French have beat them, but that they have beat the French. Now, suppose you should go over and find that it really is taken; that would only satisfy yourself: for when you come back we will not believe you. We will say you have been bribed.'"—F.]

of these writing of the same times, and confirming the truth of customs and events which are incidentally, as well as more purposely mentioned in it. And this credibility of the common Scripture history gives some credibility to its miraculous history: especially as this is interwoven with the common, so as that they imply each other, and both together make up one relation.

24. Let it then be more particularly observed to this person, that it is an acknowledged matter of fact, which is indeed implied in the foregoing observation, that there was such a nation as the Jews, of the greatest antiquity, whose government and general polity was founded on the law here related to be given them by Moses as from heaven: that natural religion, though with rites additional, yet no way contrary to it, was their established religion, which cannot be said of the Gentile world; and that their very being, as a nation, depended upon their acknowledgment of one God, the God of the universe. For suppose, in their captivity in Babylon, they had gone over to the religion of their conquerors, there would have remained no bond of union to keep them a distinct people. And while they were under their own kings in their own country, a total apostasy from God would have been the dissolution of their whole government. They, in such a sense, nationally acknowledged and worshiped the Maker of heaven and earth, when the rest of the world were sunk in idolatry, as rendered them, in fact, the peculiar people of God. And this, so remarkable an establishment and preservation of natural religion among them, seems to add some peculiar credibility to the historical evidence for the miracles of Moses and the prophets; because these miracles are a full, satisfactory account of this event, which plainly wants to be accounted for, and cannot otherwise.

Antiquity of the Jews whose religion preserved their national existence.

25. Let this person, supposed wholly ignorant of his-

tory, be acquainted further, that one claiming to be the Messiah, of Jewish extraction, rose up at the time when this nation, from the prophecies above-mentioned, expected the Messiah: that he was rejected, as it seemed to have been foretold he should, by the body of the people, under the direction of their rulers: that in the course of a very few years he was believed on, and acknowledged as the promised Messiah, by great numbers among the Gentiles, agreeably to the prophecies of Scripture, yet not upon the evidence of prophecy, but of miracles, (page 297, etc.,) of which miracles we also have strong historical evidence; (by which I mean here no more than must be acknowledged by unbelievers; for let pious frauds and follies be admitted to weaken, it is absurd to say they destroy, our evidence of miracles wrought in proof of Christianity, (page 305, etc. ;) that this religion approving itself to the reason of mankind, and carrying its own evidence with it, so far as reason is a judge of its system, and being no way contrary to reason in those parts of it which require to be believed upon the mere authority of its Author; that this religion, I say, gradually spread and supported itself for some hundred years, not only without any assistance from temporal power, but under constant discouragements, and often the bitterest persecutions from it, and then became the religion of the world: that in the mean time, the Jewish nation and government were destroyed in a very remarkable manner, and the people carried away captive and dispersed through the most distant countries, in which state of dispersion they have remained fifteen hundred years: and that they remain a numerous people, united among themselves, and distinguished from the rest of the world, as they were in the days of Moses, by the profession of his law; and every-where looked upon in a manner, which one scarce knows how distinctly to

Messiah came, and, according to prophecy, suffered and triumphed.

express, but in the words of the prophetic account of it, given so many ages before it came to pass: "Thou shalt become an astonishment, a proverb and a by-word, among all nations whither the Lord shall lead thee." Deut. xxviii, 37.

26. The appearance of a standing miracle, in the Jews remaining a distinct people in their dispersion, and the confirmation which this event appears to give to the truth of revelation, may be thought to be answered by their religion's forbidding them intermarriages with those of any other, and prescribing them a great many peculiarities in their food, by which they are debarred from the means of incorporating with the people in whose countries they live. This is not, I think, a satisfactory account of that which it pretends to account for. But what does it pretend to account for? The correspondence between this event and the prophecies; or the coincidence of both, with a long dispensation of providence of a peculiar nature toward that people formerly? No. It is only the event itself which is offered to be thus accounted for; which single event, taken alone, abstracted from all such correspondence and coincidence, perhaps would not have appeared miraculous; but that correspondence and coincidence may be so, though the event itself be supposed not. Thus, the concurrence of our Saviour's being born at Bethlehem with a long foregoing series of prophecy, and other coincidences, is doubtless miraculous—the series of prophecy, and other coincidences, and the event, being admitted: though the event itself, his birth at that place, appears to have been brought about in a natural way; of which, however, no one can be certain.

27. And as several of these events seem, in some degree, expressly to have verified the prophetic history already; so likewise, they may be considered further, as having a

peculiar aspect toward the full completion of it; as affording some presumption that the whole of it shall, one time or other, be fulfilled. Thus, that the Jews have been so wonderfully preserved in their long and wide dispersion; which is indeed the direct fulfilling of some prophecies, but is now mentioned only as looking forward to somewhat yet to come; that natural religion came forth from Judea, and spread in the degree it has done over the world, before lost in idolatry; which, together with some other things, have distinguished that very place, in like manner as the people of it are distinguished: that this great change of religion over the earth was brought about under the profession and acknowledgment that Jesus was the promised Messiah: things of this kind naturally turn the thoughts of serious men toward the full completion of the prophetic history, concerning the final restoration of that people; concerning the establishment of the everlasting kingdom among them, the kingdom of the Messiah; and the future state of the world under this sacred government. Such circumstances and events, compared with these prophecies, though no completions of them, yet would not, I think, be spoken of as nothing in the argument by a person upon his first being informed of them. They fall in with the prophetic history of things still future, give it some additional credibility, have the appearance of being somewhat in order to the full completion of it.

The past fulfillment of prophecy renders the future probable.

Indeed, it requires a good degree of knowledge, and great calmness and consideration, to be able to judge thoroughly of the evidence for the truth of Christianity from that part of the prophetic history which relates to the situation of the kingdoms of the world, and to the state of the Church from the establishment of Christianity to the present time. But it appears, from a general view of it, to be very material. And those persons who

have thoroughly examined it, and some of them were men of the coolest tempers, greatest capacities, and least liable to imputations of prejudice, insist upon it as determinately conclusive.

28. Suppose now a person quite ignorant of history, first to recollect the passages above-mentioned out of Scripture without knowing but that the whole was a late fiction, then to be informed of the correspondent facts now mentioned, and to unite them all into one view: that the profession and establishment of natural religion in the world is greatly owing, in different ways, to this book, and the supposed revelation which it contains; that it is acknowledged to be of the earliest antiquity; that its chronology and common history are entirely credible; that this ancient nation, the Jews, of whom it chiefly treats, appear to have been, in fact, the people of God in a distinguished sense; that, as there was a national expectation among them, raised from the prophecies, of a Messiah to appear at such a time, so one at this time appeared claiming to be that Messiah; that he was rejected by this nation but received by the Gentiles, not upon the evidence of prophecy, but of miracles; that the religion he taught supported itself under the greatest difficulties, gained ground, and at length became the religion of the world; that in the meantime the Jewish polity was utterly destroyed, and the nation dispersed over the face of the earth; that, notwithstanding this, they have remained a distinct and numerous people for so many centuries, even to this day; which not only appears to be the express completion of several prophecies concerning them, but also renders it, as one may speak, a visible and easy possibility that the promises made to them as a nation may yet be fulfilled. And to these acknowledged truths, let the person we have been supposing add, as I think he ought, whether every one will allow

it or not, the obvious appearances which there are of the state of the world, in other respects besides what relates to the Jews, and of the Christian Church, having so long answered, and still answering to the prophetic history. Suppose, I say, these facts set over against the things before-mentioned out of the Scripture, and seriously compared with them; the joint view of both together must, I think, appear of very great weight to a considerate, reasonable person; of much greater, indeed, upon having them first laid before him than is easy for us, who are so familiarized to them, to conceive, without some particular attention for that purpose.

29. All these things, and the several particulars contained under them, require to be distinctly and most thoroughly examined into; that the weight of each may be judged of, upon such examination, and such conclusion drawn as results from their united force. But this has not been attempted here. I have gone no further than to show, that the general imperfect view of them now given, the confessed historical evidence for miracles, and the many obvious appearing completions of prophecy, together with the collateral things* here mentioned, and there are several others of the like sort; that all this together, which, being fact, must be acknowledged by unbelievers, amounts to real evidence of somewhat more than human in this matter; evidence much more important than careless men, who have been accustomed only to transient and partial views of it, can imagine; and, indeed, abundantly sufficient to act upon. And these things, I apprehend, must be acknowledged by unbelievers. For though they may say that the historical evidence of miracles, wrought in

These points worthy of special consideration.

Necessary concessions of unbelievers.

* All the particular things mentioned in this chapter, not reducible to the head of certain miracles, or determinate completions of prophecy. See pages 292, 293.

attestation of Christianity, is not sufficient to convince them that such miracles were really wrought, they cannot deny that there is such historical evidence, it being a known matter of fact that there is. They may say, the conformity between the prophecies and events is by accident: but there are many instances in which such conformity itself cannot be denied. They may say, with regard to such kind of collateral things as those above-mentioned, that any odd accidental events, without meaning, will have a meaning found in them by fanciful people; and that such as are fanciful in any one certain way, will make out a thousand coincidences which seem to favor their peculiar follies. Men, I say, may talk thus; but no one who is serious can possibly think these things to be nothing, if he considers the importance of collateral things, and even of lesser circumstances, in the evidence of probability, as distinguished in nature from the evidence of demonstration. In many cases, indeed, it seems to require the truest judgment to determine with exactness the weight of circumstantial evidence; but it is very often altogether as convincing as that which is the most express and direct.

30. This general view of the evidence for Christianity, considered as making one argument, may also serve to recommend to serious persons to set down every thing which they think may be of any real weight at all in proof of it, and particularly the many seeming completions of prophecy: and they will find, that, judging by the natural rules by which we judge of probable evidence in common matters, they amount to a much higher degree of proof, upon such a joint review, than could be supposed upon considering them separately, at different times, how strong soever the proof might before appear to them upon such separate views of it. For probable proofs, by being added, not only increase the evidence,

Force of the proof from the combination of these considerations.

but multiply it.* Nor should I dissuade any one from setting down what he thought made for the contrary side. But, then, it is to be remembered, not in order to influence his judgment but his practice, that a mistake on one side may be, in its consequences, much more dangerous than a mistake on the other. And what course is most safe, and what most dangerous, is a consideration thought very material, when we deliberate, not concerning events, but concerning conduct in our temporal affairs. To be influenced by this consideration in our judgment, to believe or disbelieve upon it, is indeed as much prejudice as any thing whatever. And like other prejudices, it operates contrary ways in different men. For some are inclined to believe what they hope, and others what they fear. And it is manifest unreasonableness to apply to men's passions in order to gain their assent. But in deliberations concerning conduct, there is nothing which reason more requires to be taken into the account, than the importance of it. For suppose it doubtful what would be the consequence of acting in this, or in a contrary manner; still, that taking one side could be attended with little or no bad consequences, and taking the other might be attended with the greatest, must appear to unprejudiced reason of the highest moment toward determining how we are to act. But the truth of our religion, like the truth of

* [If the thing to be proved have in it an apparent character of truth, this constitutes an improbability of its falsehood. If it have another character of truth, this constitutes another improbability of its falsehood. If this were a complete statement of the argument to be drawn from the coexistence of the two characters of truth, the second improbability would only require to be added to the first to give the value of the whole. But in reality the argument is much stronger. For the improbability that they should *simultaneously* exist in the thing under examination, and yet that thing be false, is evidently different from the sum of the improbabilities that each *separately* should exist in it if false.—F.]

common matters, is to be judged of by all the evidence taken together. And unless the whole series of things which may be alleged in this argument, and every particular thing in it, can reasonably be supposed to have been by accident, (for here the stress of the argument for Christianity lies,) then is the truth of it proved; in like manner as if, in any common case, numerous events acknowledged were to be alleged in proof of any other event disputed; the truth of the disputed event would be proved, not only if any one of the acknowledged ones did of itself clearly imply it, but though no one of them singly did so, if the whole of the acknowledged events taken together, could not in reason be supposed to have happened unless the disputed one were true.

It is obvious, how much advantage the nature of this evidence gives to those persons who attack Christianity, especially in conversation. For it is easy to show, in a short and lively manner, that such and such things are liable to objection, that this and another thing is of little weight in itself; but impossible to show, in like manner, the united force of the whole argument in one view.

31. However, *lastly*, as it has been made appear that there is no presumption against a revelation as miraculous; that the general scheme of Christianity, and the principal parts of it, are conformable to the experienced constitution of things, and the whole perfectly credible; so the account now given of the positive evidence for it shows that this evidence is such as, from the nature of it, cannot be destroyed, though it should be lessened.

Christian evidence cannot be destroyed.

CHAPTER VIII.

OF THE OBJECTIONS WHICH MAY BE MADE AGAINST ARGUING FROM THE ANALOGY OF NATURE TO RELIGION.

IF every one would consider, with such attention as they are bound, even in point of morality, to consider, what they judge and give characters of, the occasion of this chapter would be, in some good measure at least, superseded. But since this is not to be expected; for some we find do not concern themselves to understand even what they write against; since this treatise, in common with most others, lies open to objections which may appear very material to thoughtful men at first sight; and, besides that, seems peculiarly liable to the objections of such as can judge without thinking, and of such as can censure without judging; it may not be amiss to set down the chief of these objections which occur to me, and consider them to their hands. And they are such as these:—

2. “That it is a poor thing to solve difficulties in revelation by saying that there are the same in natural religion; when what is wanting is to clear both of them, of these their common, as Five objections. well as other their respective difficulties: but that it is a strange way indeed of convincing men of the obligations of religion, to show them that they have as little reason for their worldly pursuits; and a strange way of vindicating the justice and goodness of the Author of nature, and of removing the objections against both, to which the system of religion lies open, to show that the like

objections lie against natural providence; a way of answering objections against religion, without so much as pretending to make out that the system of it, or the particular things in it objected against, are reasonable—especially, perhaps, some may be inattentive enough to add, must this be thought strange, when it is confessed that analogy is no answer to such objections; that when this sort of reasoning is carried to the utmost length it can be imagined capable of, it will yet leave the mind in a very unsatisfied state: and that it must be unaccountable ignorance of mankind, to imagine they will be prevailed with to forego their present interests and pleasures, from regard to religion, upon doubtful evidence.”

Now, as plausible as this way of talking may appear, that appearance will be found in a great measure owing to half views, which show but part of an object, yet show that indistinctly; and to undeterminate language. By these means weak men are often deceived by others, and ludicrous men by themselves. And even those who are serious and considerate cannot always readily disentangle, and at once clearly see through, the perplexities in which subjects themselves are involved: and which are heightened by the deficiencies and the abuse of words. To this latter sort of persons the following reply to each part of this objection severally may be of some assistance, as it may also tend a little to stop and silence others.

3. *First.* The thing wanted, that is, what men require, is to have all difficulties cleared. And this is, or at least for any thing we know to the contrary, it may be, the same as requiring to comprehend the Divine nature, and the whole plan of Providence from everlasting to everlasting. But it hath always been allowed to argue, from what is acknowledged to what is disputed. And it is in no other sense a poor thing to argue from natural relig-

Answer to the first objection as to the mode of solving difficulties. What is wanted.

ion to revealed, in the manner found fault with, than it is to argue in numberless other ways of probable deduction and inference in matters of conduct, which we are continually reduced to the necessity of doing. Indeed the epithet *poor* may be applied, I fear, as properly to great part, or the whole, of human life, as it is to the things mentioned in the objection. Is it not a poor thing for a physician to have so little knowledge in the cure of diseases as even the most eminent have? to act upon conjecture and guess where the life of man is concerned? Undoubtedly it is: but not in comparison of having no skill at all in that useful art, and being obliged to act wholly in the dark.

4. Further: since it is as unreasonable as it is common to urge objections against revelation which are of equal weight against natural religion; and those who do this, if they are not confuted themselves, deal unfairly with others in making it seem that they are arguing only against revelation, or particular doctrines of it, when in reality they are arguing against moral providence; it is a thing of consequence to show, that such objections are as much leveled against natural religion as against revealed. And objections which are equally applicable to both, are, properly speaking, answered by its being shown that they are so, provided the former be admitted to be true. And without taking in the consideration how distinctly this is admitted, it is plainly very material to observe, that as the things objected against in natural religion are of the same kind with what is certain matter of experience in the course of providence, and in the information which God affords us concerning our temporal interest under his government; so the objections against the system of Christianity and the evidence of it are of the very same kind with those which are made against the system and evidence of natural

Objections
against revela-
tion as strong
against natural
religion.

religion. However, the reader, upon review, may see that most of the analogies insisted upon, even in the latter part of this treatise, do not necessarily require to have more taken for granted than is in the former; that there is an Author of nature, or natural Governor of the world: and Christianity is vindicated, not from its analogy to natural religion, but chiefly from its analogy to the experienced constitution of nature.

5. *Secondly.* Religion is a practical thing, and consists in such a determinate course of life, as, being what there

Answer to second objection as to men's having as little reason for worldly pursuits as religious.

is reason to think is commanded by the Author of nature, and will, upon the whole, be our happiness under his government. Now if men can be convinced that they have the like reason to believe this, as to believe that taking care of their temporal affairs will be to their advantage; such conviction cannot but be an argument to them for the practice of religion. And if there be really any reason for believing one of these, and endeavoring to preserve life, and secure ourselves the necessaries and conveniences of it; then there is reason also for believing the other, and endeavoring to secure the interest it proposes to us. And if the interest which religion proposes to us be infinitely greater than our whole temporal interest, then there must be proportionably greater reason for endeavoring to secure one than the other: since, by the supposition the probability of our securing one is equal to the probability of our securing the other. This seems plainly unanswerable; and has a tendency to influence fair minds, who consider what our condition really is, or upon what evidence we are naturally appointed to act; and who are disposed to acquiesce in the terms upon which we live, and attend to and follow that practical instruction, whatever it be, which is afforded us.

But the chief and proper force of the argument re-

ferred to in the objection, lies in another place. For it is said that the proof of religion is involved in such inextricable difficulties as to render it doubtful; and that it cannot be supposed, that, if it were true, it would be left upon doubtful evidence. Here then, over and above the force of each particular difficulty or objection, these difficulties and objections taken together, are turned into a positive argument against the truth of religion; which argument would stand thus: If religion were true, it would not be left doubtful, and open to objections to the degree in which it is: therefore, that it is thus left, not only renders the evidence of it weak, and lessens its force in proportion to the weight of such objections; but also shows it to be false, or is a general presumption of its being so. Now the observation that from the natural constitution and course of things we must, in our temporal concerns, almost continually, and in matters of great consequence, act upon evidence of a like kind and degree to the evidence of religion, is an answer to this argument; because it shows, that it is according to the conduct and character of the Author of nature to appoint we should act upon evidence like to that, which this argument presumes he cannot be supposed to appoint we should act upon: it is an instance, a general one made up of numerous particular ones, of somewhat in his dealing with us similar to what is said to be incredible. And as the force of this answer lies merely in the parallel which there is between the evidence for religion and for our temporal conduct, the answer is equally just and conclusive; whether the parallel be made out by showing the evidence of the former to be higher, or the evidence of the latter to be lower.

Force of the objection. God would not give doubtful evidence.

6. *Thirdly.* The design of this treatise is not to vindicate the character of God, but to show the obligations of men; it is not to justify his providence, but to show

what belongs to us to do. These are two subjects, and ought not to be confounded. And though they may at length run up into each other, yet observations may immediately tend to make out the latter, which do not appear, by any immediate connection, to the purpose of the former; which is less our concern than many seem to think.

Answer to third objection as to the mode of vindicating God's justice and goodness. These two things confounded.

For, first, It is not necessary we should justify the dispensations of Providence against objections any further than to show that the things objected against may, for aught we know, be consistent with justice and goodness. Suppose, then, that there are things in the system of this world, and plan of Providence relating to it, which, taken alone, would be unjust; yet it has been shown unanswerably, that if we could take in the reference which these things may have to other things present, past, and to come; to the whole scheme, which the things objected against are parts of; these very things might, for aught we know, be found to be not only consistent with justice, but instances of it. Indeed, it has been shown, by the analogy of what we see, not only possible that this may be the case, but credible that it is. And thus objections drawn from such things are answered, and Providence is vindicated, as far as religion makes its vindication necessary.

Hence it appears, secondly, That objections against the divine justice and goodness are not endeavored to be removed by showing that the like objections, allowed to be really conclusive, lie against natural providence; but those objections being supposed, and shown not to be conclusive, the things objected against, considered as matters of fact, are further shown to be credible from their conformity to the constitution of nature; for instance, that God will reward and punish men for their actions hereafter, from the observation that he does re-

ward and punish them for their actions here. And this, I apprehend, is of weight.

And I add, thirdly, It would be of weight, even though those objections were not answered. For, there being the proof of religion above set down, and religion implying several facts; for instance again, the fact last mentioned, that God will reward and punish men for their actions hereafter; the observation that his present method of government is by rewards and punishments, shows that future fact not to be incredible: whatever objections men may think they have against it, as unjust or unmerciful, according to their notions of justice and mercy; or as improbable from their belief of necessity. I say, *as improbable*, for it is evident no objection against it, *as unjust*, can be urged from necessity; since this notion as much destroys injustice as it does justice.

Then, fourthly, Though objections against the reasonableness of the system of religion cannot, indeed, be answered without entering into consideration of its reasonableness, yet objections against the credibility or truth of it may: Because the system of it is reducible into what is properly matter of fact; and the truth, the probable truth, of facts, may be shown without consideration of their reasonableness. Nor is it necessary, though in some cases and respects it is highly useful and proper, yet it is not necessary, to give proof of the reasonableness of every precept enjoined us, and of every particular dispensation of Providence which comes into the system of religion. Indeed, the more thoroughly a person of a right disposition is convinced of the perfection of the Divine nature and conduct, the further he will advance toward that perfection of religion which St. John (1 John iv, 18) speaks of. But the general obligations of religion are fully made out, by proving the reasonableness of the practice of it. And that the practice of religion is reasonable, may be shown, though no more

could be proved than that the system of it may be so, for aught we know to the contrary; and even without entering into the distinct consideration of this. And from hence, fifthly, It is easy to see that though the analogy of nature is not an immediate answer to objections against the wisdom, the justice, or goodness, of any doctrine or precept of religion, yet it may be, as it is, an immediate and direct answer to what is really intended by such objections; which is to show, that the things objected against are incredible.

7. *Fourthly.* It is most readily acknowledged, that the foregoing treatise is by no means satisfactory; very far, indeed, from it: but so would any natural institution of life appear, if reduced into a system, together with its evidence. Leaving religion out of the case, men are divided in their opinions, whether our pleasures overbalance our pains; and whether it be, or be not, eligible to live in this world. And were all such controversies settled, which perhaps in speculation would be found involved in great difficulties; and were it determined, upon the evidence of reason, as nature has determined it to our hands, that life is to be preserved; yet still, the rules which God has been pleased to afford us for escaping the miseries of it, and obtaining its satisfactions, the rules, for instance, of preserving health, and recovering it when lost, are not only fallible and precarious, but very far from being exact. Nor are we informed by nature, in future contingencies and accidents, so as to render it at all certain what is the best method of managing our affairs. What will be the success of our temporal pursuits, in the common sense of the word success, is highly doubtful. And what will be the success of them in the proper sense of the word; that is, what happiness or enjoyment we shall obtain by them, is doubtful in a much higher degree. Indeed, the

Answer to
fourth objection
that the argu-
ment is unsatis-
factory. This is
true in ordinary
life.

unsatisfactory nature of the evidence with which we are obliged to take up, in the daily course of life, is scarce to be expressed. Yet men do not throw away life, or disregard the interest of it, upon account of this doubtfulness.

The evidence of religion, then, being admitted real, those who object against it as not satisfactory, that is, as not being what they wish it, plainly forget the very condition of our being: for satisfaction, in this sense, does not belong to such a creature as man. And, which is more material, they forget also the very nature of religion. For religion presupposes, in all those who will embrace it, a certain degree of integrity and honesty; which it was intended to try whether men have or not, and to exercise, in such as have it, in order to its improvement. Religion presupposes this as much, and in the same sense, as speaking to a man presupposes he understands the language in which you speak; or as warning a man of any danger, presupposes that he hath such a regard to himself as that he will endeavor to avoid it. And, therefore, the question is not at all, Whether the evidence of religion be satisfactory: but, whether it be, in reason, sufficient to prove and discipline that virtue which it presupposes? Now the evidence of it is fully sufficient for all those purposes of probation; how far soever it is from being satisfactory as to the purposes of curiosity, or any other; and, indeed, it answers the purposes of the former in several respects, which it would not do, if it were as overbearing as is required. One might add further, that whether the motives or the evidence for any course of action be satisfactory, meaning here by that word, what satisfies a man that such a course of action will in event be for his good; this need never be, and I think, strictly speaking, never is, the practical question in common matters. But the practi-

The objection overlooks the nature of our being, also of religion.

cal question in all cases is, Whether the evidence for a course of action be such as, taking in all circumstances, makes the faculty within us which is the guide and judge of conduct, (see Dissertation ii,) determine that course of action to be prudent? Indeed, satisfaction that it will be for our interest or happiness, abundantly determines an action to be prudent; but evidence, almost infinitely lower than this, determines actions to be so too, even in the conduct of every day.

8. *Fifthly*. As to the objection concerning the influence which this argument, or any part of it, may or may not be expected to have upon men, I observe, as above, that religion being intended for a trial and exercise of the morality of every person's character who is a subject of it; and there being, as I have shown, such evidence for it as is sufficient, in reason, to influence men to embrace it; to object that it is not to be imagined mankind will be influenced by such evidence, is nothing to the purpose of the foregoing treatise. For the purpose of it is not to inquire, what sort of creatures mankind are; but, what the light and knowledge, which is afforded them, requires they should be: to show how, in reason, they ought to behave; not how, in fact, they will behave. This depends upon themselves, and is their own concern; the personal concern of each man in particular. And how little regard the generality have to it, experience indeed does too fully show. But religion, considered as a probation, has had its ends upon all persons to whom it has been proposed, with evidence sufficient in reason to influence their practice; for by this means they have been put into a state of probation, let them behave as they will in it. And thus, not only revelation, but reason also, teaches us, that by the evidence of religion being laid before men, the designs of Providence are carrying on, not only with regard to those who will,

Answer to fifth
objection that
such evidence
will not influ-
ence practice.

but likewise with regard to those who will not, be influenced by it. However, *lastly*, the objection here referred to allows the things insisted upon in this treatise to be of some weight; and if so, it may be hoped it will have some influence. And if there be a probability that it will have any at all, there is the same reason in kind, though not in degree, to lay it before men, as there would be if it were likely to have a greater influence.

6. And further, I desire it may be considered, with respect to the whole of the foregoing objections, that in this treatise I have argued upon the principles of others,* not my own; and have omitted what I think true, and of the utmost importance, because by others thought unintelligible or not true. Thus I have argued upon the principles of the Fatalists, which I do not believe; and have omitted a thing of the utmost importance, which I do believe—the moral fitness and unfitness of actions, prior to all will whatever: which I apprehend as certainly to determine the Divine conduct, as speculative truth and falsehood necessarily determine the Divine judgment. Indeed, the principle of liberty, and that of moral fitness, so force themselves upon the mind, that moralists, the ancients as well as moderns, have formed their language upon it. And probably it may appear in mine, though I have endeavored to avoid it; and, in order to avoid it have sometimes been obliged to express myself in a manner which will appear strange to such as do not observe the reason for it; but the general argument here pursued does not at all suppose, or proceed upon, these principles.

Now, these two abstract principles of liberty and

* By *arguing upon the principles of others*, the reader will observe is meant, not proving any thing *from* those principles, but *notwithstanding* them. Thus religion is proved, not from the opinion of necessity, which is absurd, but *notwithstanding*, or *even though*, that opinion were admitted to be true.

The author has argued on the principles of others.

moral fitness being omitted, religion can be considered in no other view than merely as a question of fact; and in this view it is here considered. It is obvious that Christianity, and the proof of it, are both historical. And even natural religion is properly a matter of fact. For, that there is a righteous Governor of the world, is so; and this proposition contains the general system of natural religion. But then, several abstract truths, and in particular those two principles, are usually taken into consideration in the proof of it; whereas it is here treated of only as a matter of fact. To explain this: that the three angles of a triangle are equal to two right ones, is an abstract truth; but that they appear so to our mind is only a matter of fact. And this last must have been admitted, if any thing was, by those ancient skeptics, who would not have admitted the former; but pretended to doubt, whether there were any such thing as truth; or whether we could certainly depend upon our faculties of understanding for the knowledge of it in any case.

So, likewise, that there is, in the nature of things, an original standard of right and wrong in actions, independent upon all will, but which unalterably determines the will of God, to exercise that moral government over the world which religion teaches, that is, finally and upon the whole to reward and punish men respectively as they act right or wrong; this assertion contains an abstract truth, as well as matter of fact. But suppose, in the present state, every man, without exception, was rewarded and punished, in exact proportion as he followed or transgressed that sense of right and wrong which God has implanted in the nature of every man; this would not be at all an abstract truth, but only a matter of fact. And though this fact were acknowledged by every one, yet the very same difficulties might be raised as are now concerning the abstract questions of liberty and moral fitness: and we should have a proof, even the certain

one of experience, that the government of the world was perfectly moral, without taking in the consideration of those questions: and this proof would remain, in what way soever they were determined.

And thus God, having given mankind a moral faculty, the object of which is actions, and which naturally approves some actions as right and of good desert, and condemns others as wrong and of ill desert; that he will, finally and upon the whole, reward the former, and punish the latter, is not an assertion of an abstract truth, but of what is as mere a fact as his doing so at present would be. This future fact I have not indeed proved with the force with which it might be proved, from the principles of liberty and moral fitness; but without them, have given a really conclusive practical proof of it, which is greatly strengthened by the general analogy of nature; a proof easily caviled at, easily shown not to be demonstrative, for it is not offered as such; but impossible, I think, to be evaded or answered. And thus the obligations of religion are made out, exclusively of the questions concerning liberty and moral fitness; which have been perplexed with difficulties and abstruse reasonings as every thing may.

10. Hence, therefore, may be observed distinctly what is the force of this treatise. It will be, to such as are convinced of religion, upon the proof arising ^{Force of this treatise.} out of the two last-mentioned principles, an additional proof and a confirmation of it: to such as do not admit those principles an original proof of it, (pages 161, etc.,) and a confirmation of that proof. Those who believe will here find the scheme of Christianity cleared of objections, and the evidence of it in a peculiar manner strengthened: those who do not believe, will at least be shown the absurdity of all attempts to prove Christianity false; the plain, undoubted credibility of it; and, I hope, a good deal more.

And thus, though some, perhaps, may seriously think that analogy, as here urged, has too great stress laid upon it; and ridicule, unanswerable ridicule, may be applied to show the argument from it in a disadvantageous light; yet there can be no question but that it is a real one. For religion, both natural and revealed, implying in it numerous facts; analogy, being a confirmation of all facts to which it can be applied, as it is the only proof of most, cannot but be admitted by every one to be a material thing, and truly of weight on the side of religion, both natural and revealed; and it ought to be particularly regarded by such as profess to follow nature, and to be less satisfied with abstract reasonings.

CONCLUSION.

WHATEVER account may be given of the strange inattention and disregard, in some ages and countries, to a matter of such importance as religion, it would, before experience, be incredible that there should be the like disregard in those who have had the moral system of the world laid before them, as it is by Christianity, and often inculcated upon them; because this moral system carries in it a good degree of evidence for its truth, upon its being barely proposed to our thoughts. There is no need of abstruse reasonings and distinctions to convince an unprejudiced understanding that there is a God who made and governs the world, and will judge it in righteousness; though they may be necessary to answer abstruse difficulties when once such are raised; when the very meaning of those words which express most intelligibly the general doctrine of religion is pretended to be uncertain, and the clear truth of the thing itself is obscured by the intricacies of speculation. But to an unprejudiced mind, ten thousand thousand instances of design cannot but prove a designer. And it is intuitively manifest, that creatures ought to live under a dutiful sense of their Maker; and that justice and charity must be his laws to creatures whom he has made social, and placed in society.

The incredible disregard of religion.

2. Indeed, the truth of revealed religion, peculiarly so called, is not self-evident, but requires external proof in order to its being received. Yet inattention, among us, to revealed religion, will be found to imply the same dissolute immoral

Immoral temper of mind implied.

temper of mind as inattention to natural religion; because, when both are laid before us, in the manner they are in Christian countries of liberty, our obligations to inquire into both, and to embrace both upon supposition of their truth, are obligations of the same nature. For revelation claims to be the voice of God; and our obligation to attend to his voice is surely moral in all cases. And as it is insisted that its evidence is conclusive, upon thorough consideration of it; so it offers itself to us with manifest obvious appearances of having something more than human in it, and, therefore, in all reason, requires to have its claims most seriously examined into.

3. It is to be added, that though light and knowledge, in what manner soever afforded us, is equally from God; yet a miraculous revelation has a peculiar tendency, from the first principles of our nature, to awaken mankind, and inspire them with reverence and awe: and this is a peculiar obligation, to attend to what claims to be so with such appearances of truth. It is, therefore, most certain, that our obligations to inquire seriously into the evidence of Christianity, and, upon supposition of its truth, to embrace it, are of the utmost importance, and moral in the highest and most proper sense. Let us, then, suppose, that the evidence of religion in general, and of Christianity, has been seriously inquired into by all reasonable men among us. Yet we find many professedly to reject both, upon speculative principles of infidelity. And all of them do not content themselves with a bare neglect of religion, and enjoying their imaginary freedom from its restraints. Some go much beyond this. They deride God's moral government over the world: they renounce his protection, and defy his justice: they ridicule and vilify Christianity, and blaspheme the Author of it; and take all occasions to manifest a scorn

Religion has the highest claims to attention.

and contempt of revelation. This amounts to an active setting themselves against religion; to what may be considered as a positive principle of irreligion; which they cultivate within themselves, and, whether they intend this effect or not, render habitual, as a good man does the contrary principle. And others, who are not chargeable with all this profligateness, yet are in avowed opposition to religion, as if discovered to be groundless.

4. Now admitting, which is the supposition we go upon, that these persons act upon what they think principles of reason, and otherwise they are not to be argued with; it is, really, inconceivable that they should imagine they clearly see the whole evidence of it, considered in itself, to be nothing at all; nor do they pretend this. They are far, indeed, from having a just notion of its evidence; but they would not say its evidence was nothing if they thought the system of it, with all its circumstances, were credible, like other matters of science or history. So that their manner of treating it must proceed either from such kind of objections against all religion as have been answered or obviated in the former part of this treatise; or else from objections and difficulties supposed more peculiar to Christianity. Thus, they entertain prejudices against the whole notion of a revelation and miraculous interpositions. They find things in Scripture, whether in incidental passages or in the general scheme of it, which appear to them unreasonable. They take for granted, that if Christianity were true, the light of it must have been more general, and the evidence of it more satisfactory, or rather overbearing; that it must and would have been, in some way, otherwise put and left than it is. Now this is not imagining they see the evidence itself to be nothing, or inconsiderable; but quite another thing. It is being fortified against the

Rejecters have
no just notion of
its evidence.

evidence, in some degree acknowledged, by thinking they see the system of Christianity, or somewhat which appears to them necessarily connected with it, to be incredible or false: fortified against that evidence, which might otherwise make great impression upon them. Or lastly, if any of these persons are, upon the whole, in doubt concerning the truth of Christianity; their behavior seems owing to their taking for granted, through strange inattention, that such doubting is in a manner the same thing as being certain against it.

5. To these persons, and to this state of opinion concerning religion, the foregoing treatise is adapted. For This treatise adapted to such objecters. Recapitulation. all the general objections against the moral system of nature having been obviated, it is shown that there is not any peculiar presumption at all against Christianity, either considered as not discoverable by reason, or as unlike to what is so discovered; nor any worth mentioning against it as miraculous, if any at all; none, certainly, which can render it in the least incredible. It is shown that upon supposition of a divine revelation, the analogy of nature renders it beforehand highly credible, I think probable, that many things in it must appear liable to great objections, and that we must be incompetent judges of it, to a great degree. This observation is, I think, unquestionably true, and of the very utmost importance: but it is urged, as I hope it will be understood, with great caution of not vilifying the faculty of reason, which is "the candle of the Lord within us;" though it can afford no light where it does not shine; nor judge, where it has no principles to judge upon. The objections here spoken of being first answered in the view of objections against Christianity as a matter of fact, are in the next place considered as urged more immediately against the wisdom, justice, and goodness of the Christian dispensation.

And it is fully made out, that they admit of exactly the like answer, in every respect, to what the like objections against the constitution of nature admit of: that, as partial views give the appearance of wrong to things, which, upon further consideration and knowledge of their relations to other things, are found just and good; so it is perfectly credible that the things objected against the wisdom and goodness of the Christian dispensation may be rendered instances of wisdom and goodness by their reference to other things beyond our view; because Christianity is a scheme as much above our comprehension as that of nature; and like that, a scheme in which means are made use of to accomplish ends, and which, as is most credible, may be carried on by general laws. And it ought to be attended to, that this is not an answer taken merely or chiefly from our ignorance; but from somewhat positive, which our observation shows us. For to like objections the like answer is experienced to be just, in numberless parallel cases.

The objections against the Christian dispensation, and the method by which it is carried on, having been thus obviated, in general and together; the chief of them are considered distinctly, and the particular things objected to are shown credible, by their perfect analogy, each apart, to the constitution of nature. Thus, if man be fallen from his primitive state, and to be restored, and infinite wisdom and power engages in accomplishing our recovery; it were to have been expected, it is said, that this should have been effected at once, and not by such a long series of means, and such a various economy of persons and things; one dispensation preparatory to another, this to a further one, and so on through an indefinite number of ages, before the end of the scheme proposed can be completely accomplished; a scheme conducted by infinite wisdom, and executed by almighty

power. But now, on the contrary, our finding that every thing in the constitution and course of nature is thus carried on, shows such expectations concerning revelation to be highly unreasonable, and is a satisfactory answer to them, when urged as objections against the credibility that the great scheme of Providence in the redemption of the world may be of this kind, and to be accomplished in this manner.

As to the particular method of our redemption, the appointment of a Mediator between God and man; this has been shown to be most obviously analogous to the general conduct of nature, that is, the God of nature, in appointing others to be the instruments of his mercy, as we experience in the daily course of Providence. The condition of this world, which the doctrine of our redemption by Christ presupposes, so much falls in with natural appearances, that heathen moralists inferred it from those appearances; inferred, that human nature was fallen from its original rectitude, and in consequence of this degraded from its primitive happiness. Or, however this opinion came into the world, these appearances must have kept up the tradition and confirmed the belief of it. And as it was the general opinion, under the light of nature, that repentance and reformation alone, and by itself, was not sufficient to do away sin, and procure a full remission of the penalties annexed to it; and as the reason of the thing does not at all lead to any such conclusion; so every day's experience shows us that reformation is not, in any sort, sufficient to prevent the present disadvantages and miseries which, in the natural course of things, God has annexed to folly and extravagance.

Yet there may be ground to think that the punishments which, by the general laws of divine government, are annexed to vice, may be prevented; that provision may have been even originally made that they should

be prevented, by some means or other, though they could not by reformation alone. For we have daily instances of such mercy, in the general conduct of nature; compassion provided for misery,* medicines for diseases, friends against enemies. There is provision made, in the original constitution of the world, that much of the natural bad consequences of our follies, which persons themselves alone cannot prevent, may be prevented by the assistance of others; assistance which nature enables, and disposes, and appoints them to afford. By a method of goodness analogous to this, when the world lay in wickedness, and consequently, in ruin, "God so loved the world, that he gave his only begotten Son," to save it; and, "he being made perfect by suffering, became the author of eternal salvation to all them that obey him." John iii, 16; Heb. v, 9. Indeed, neither reason nor analogy would lead us to think in particular, that the interposition of Christ, in the manner in which he did interpose, would be of that efficacy for recovery of the world which the Scripture teaches us it was: but neither would reason nor analogy lead us to think, that other particular means would be of the efficacy which experience shows they are, in numberless instances. And therefore, as the case before us does not admit of experience; so that neither reason nor analogy can show how, or in what particular way, the interposition of Christ, as revealed in Scripture, is of that efficacy which it is there represented to be; this is no kind or degree of presumption against its being really of that efficacy.

Further: the objections against Christianity, from the light of it not being universal, nor its evidence so strong as might possibly be given us, have been answered by the general analogy of nature. That God has made such variety of creatures, is indeed an answer to the

* Sermon vi, at the Rolls.

former; but that he dispenses his gifts in such variety, both of degrees and kinds, among creatures of the same species, and even to the same individuals at different times, is a more obvious and full answer to it. And it is so far from being the method of Providence, in other cases, to afford us such overbearing evidence, as some require in proof of Christianity, that, on the contrary, the evidence upon which we are naturally appointed to act, in common matters, throughout a very great part of life, is doubtful in a high degree. And admitting the fact, that God has afforded to some no more than doubtful evidence of religion, the same account may be given of it as of difficulties and temptations with regard to practice. But as it is not impossible, (page 284,) surely, that this alleged doubtfulness may be men's own fault, it deserves their most serious consideration, whether it be not so. However, it is certain that doubting implies a degree of evidence for that of which we doubt; and that this degree of evidence as really lays us under obligations as demonstrative evidence.

6. The whole, then, of religion is throughout credible; nor is there, I think, any thing relating to the revealed dispensation of things more different from the experienced constitution and course of nature, than some parts of the constitution of nature are from other parts of it. And if so, the only question which remains is, What positive evidence can be alleged for the truth of Christianity? This too, in general, has been considered and the objections against it estimated. Deduct, therefore, what is to be deducted from that evidence upon account of any weight which may be thought to remain in these objections after what the analogy of nature has suggested in answer to them; and then consider, what are the practical consequences from all this, upon the most skeptical principles one can argue upon, (for I am writing to persons who entertain these principles;) and

upon such consideration it will be obvious that immorality, as little excuse as it admits of in itself, is greatly aggravated in persons who have been made acquainted with Christianity, whether they believe it or not; because the moral system of nature, or natural religion, which Christianity lays before us, approves itself, almost intuitively, to a reasonable mind upon seeing it proposed.

In the next place, with regard to Christianity, it will be observed that there is a middle between a full satisfaction of the truth of it and a satisfaction of the contrary. The middle state of mind between these two consists in a serious apprehension that it may be true, joined with doubt whether it be so. And this, upon the best judgment I am able to make, is as far toward speculative infidelity as any skeptic can at all be supposed to go who has had true Christianity, with the proper evidence of it, laid before him, and has in any tolerable measure considered them. For I would not be mistaken to comprehend all who have ever heard of it; because it seems evident, that in many countries called Christian, neither Christianity nor its evidence are fairly laid before men. And in places where both are, there appear to be some who have very little attended to either, and who reject Christianity with a scorn proportionate to their inattention, and yet are by no means without understanding in other matters. Now it has been shown, that a serious apprehension that Christianity may be true, lays persons under the strictest obligations of a serious regard to it throughout the whole of their life; a regard, not the same exactly, but in many respects nearly the same, with what a full conviction of its truth would lay them under.

Lastly, it will appear, that blasphemy and profaneness, I mean with regard to Christianity, are absolutely without excuse. For

Blasphemy,
etc., without excuse.

The aggravated
immorality.

The middle
state of mind.

there is no temptation to it, but from the wantonness of vanity or mirth; and these, considering the infinite importance of the subject, are no such temptations as to afford any excuse for it. If this be a just account of things, and yet men can go on to vilify or disregard Christianity, which is to talk and act as if they had a demonstration of its falsehood, there is no reason to think they would alter their behavior to any purpose, though there were a demonstration of its truth.

DISSERTATIONS

ON

PERSONAL IDENTITY AND THE NATURE OF VIRTUE.*

DISSERTATION I.—OF PERSONAL IDENTITY.

WHETHER we are to live in a future state, as it is the most important question which can possibly be asked, so it is the most intelligible one which can be expressed in language. Yet strange perplexities have been raised about the meaning of that identity, or sameness of person, which is implied in the notion of our living now and hereafter, or in any two successive moments. And the solution of these difficulties hath been stranger than the difficulties themselves. For, personal identity has been explained so by some, as to render the inquiry concerning a future life of no consequence at all to us, the persons who are making it. And though few men can be misled by such subtleties, yet it may be proper a little to consider them.

Now, when it is asked wherein personal identity consists, the answer should be the same as if it were asked, wherein consists similitude or equality; that all attempts to define, would but perplex it. Yet there is no difficulty at all in ascertaining the idea. For as, upon two

* In the first copy of these Papers I had inserted the two following Dissertations into the chapters, *Of a Future Life*, and *Of the Moral Government of God*; with which they are closely connected. But as they do not directly fall under the *title* of the foregoing Treatise, and would have kept the subject of it too long out of sight, it seemed more proper to place them by themselves.

triangles being compared or viewed together, there arises to the mind the idea of similitude; or upon twice two and four, the idea of equality; so likewise, upon comparing the consciousness of one's self, or one's own existence in any two moments, there as immediately arises to the mind the idea of personal identity. And as the two former comparisons not only give us the ideas of similitude and equality, but also show us that two triangles are alike, and twice two and four are equal; so the latter comparison not only gives us the idea of personal identity, but also shows us the identity of ourselves in those two moments; the present, suppose, and that immediately past; or the present, and that a month, a year, or twenty years past. Or, in other words, by reflecting upon that which is myself now, and that which was myself twenty years ago, I discern they are not two, but one and the same self.

But though consciousness of what is past does thus ascertain our personal identity to ourselves, yet to say that it makes personal identity, or is necessary to our being the same persons, is to say that a person has not existed a single moment, nor done one action, but what he can remember; indeed, none but what he reflects upon. And one should really think it self-evident, that consciousness of personal identity presupposes, and therefore cannot constitute, personal identity, any more than knowledge, in any other case, can constitute truth which it presupposes.

This wonderful mistake may possibly have arisen from hence, that to be endued with consciousness, is inseparable from the idea of a person, or intelligent being. For this might be expressed inaccurately thus—that consciousness makes personality; and from hence it might be concluded to make personal identity. But though present consciousness of what we at present do and feel is necessary to our being the persons we now are; yet

present consciousness of past actions or feelings is not necessary to our being the same persons who performed those actions or had those feelings.

The inquiry, what makes vegetables the same, in the common acceptance of the word, does not appear to have any relation to this of personal identity; because the word *same*, when applied to them and to person, is not only applied to different subjects, but it is also used in different senses. For when a man swears to the same tree, as having stood fifty years in the same place, he means only the same as to all the purposes of property and uses of common life, and not that the tree has been all that time the same in the strict philosophical sense of the word. For he does not know whether any one particle of the present tree be the same with any one particle of the tree which stood in the same place fifty years ago. And if they have not one common particle of matter, they cannot be the same tree, in the proper philosophic sense of the word *same*; it being evidently a contradiction in terms to say they are, when no part of their substance, and no one of their properties, is the same: no part of their substance by the supposition; no one of their properties, because it is allowed that the same property cannot be transferred from one substance to another. And, therefore, when we say the identity, or sameness, of a plant consists in a continuation of the same life, communicated under the same organization, to a number of particles of matter, whether the same or not, the word *same*, when applied to life and to organization, cannot possibly be understood to signify what it signifies in this very sentence, when applied to matter. In a loose and popular sense, then, the life, and the organization, and the plant, are justly said to be the same, notwithstanding the perpetual change of the parts. But in a strict and philosophical manner of speech, no man, no being, no mode of being, no any thing, can be

the same with that with which it hath, indeed, nothing the same. Now, sameness is used in this latter sense when applied to persons. The identity of these, therefore, cannot subsist with diversity of substance.

The thing here considered, and demonstratively, as I think, determined, is proposed by Mr. Locke in these words, *Whether it, that is, the same self or person, be the same identical substance?* And he has suggested what is a much better answer to the question than that which he gives it in form. For he defines person, *a thinking, intelligent being, etc.*, and personal identity, *the sameness of a rational being.** The question then is, whether the same rational being is the same substance; which needs no answer, because being and substance, in this place, stand for the same idea. The ground of the doubt, whether the same person be the same substance, is said to be this: that the consciousness of our own existence, in youth and in old age, or in any two joint successive moments, is not *the same individual action*,† that is, not the same consciousness, but different successive consciousnesses. Now, it is strange that this should have occasioned such perplexities. For it is surely conceivable that a person may have a capacity of knowing some object or other to be the same now which it was when he contemplated it formerly; yet in this case, where, by the supposition, the object is perceived to be the same, the perception of it in any two moments cannot be one and the same perception. And thus, though the successive consciousnesses which we have of our own existence are not the same, yet are they consciousnesses of one and the same thing or object; of the same person, self, or living agent. The person of whose existence the consciousness is felt now, and was felt an hour or a year ago, is discerned to be, not two persons, but one and the same person; and therefore is one and the same.

* Locke's Works, vol. i, page 146.

† Locke, pages 146, 147.

Mr. Locke's observations upon this subject appear hasty: and he seems to profess himself dissatisfied with suppositions which he has made relating to it.* But some of those hasty observations have been carried to a strange length by others, whose notion, when traced and examined to the bottom, amounts, I think, to this: † "That personality is not a permanent, but a transient thing; that it lives and dies, begins and ends, continually: that no one can any more remain one and the same person two moments together, than two successive moments can be one and the same moment: that our substance is, indeed, continually changing; but whether this be so or not, is, it seems, nothing to the purpose; since it is not substance, but consciousness alone, which constitutes personality; which consciousness being successive, cannot be the same in any two moments, nor consequently the personality constituted by it." And from hence it must follow, that it is a fallacy upon ourselves to charge our present selves with any thing we did, or to imagine our present selves interested in any thing which befell us yesterday, or that our present self will be interested in what will befall us to-morrow: since our present self is not, in reality, the same with the self of yesterday, but another like self or person coming in its room, and mistaken for it; to which another self will succeed to-morrow. This, I say, must follow: for if the self or person of to-day, and that of to-morrow, are not the same, but only like persons, the person of to-day is really no more interested in what will befall the person of to-morrow than in what will befall any other person.

It may be thought, perhaps, that this is not a just representation of the opinion we are speaking of; because

* Locke, page 152.

† See an answer to Dr. Clarke's third defense of his letter to Mr. Dodwell, 2d edition, pages 44, 56, etc.

those who maintain it allow, that a person is the same as far back as his remembrance reaches. And, indeed, they do use the words *identity* and *same* person. Nor will language permit these words to be laid aside: since, if they were, there must be, I know not what ridiculous periphrasis substituted in the room of them. But they cannot, consistently with themselves, mean that the person is really the same. For it is self-evident that the personality cannot be really the same, if, as they expressly assert, that in which it consists is not the same. And as, consistently with themselves, they cannot, so, I think, it appears they do not, mean that the person is *really* the same, but only that he is so in a fictitious sense: in such a sense only as they assert; for this they do assert, that any number of persons whatever may be the same person. The bare unfolding this notion, and laying it thus naked and open, seems the best confutation of it. However, since great stress is said to be put upon it, I add the following things:—

First. This notion is absolutely contradictory to that certain conviction which necessarily, and every moment, rises within us, when we turn our thoughts upon ourselves: when we reflect upon what is past, and look forward upon what is to come. All imagination of a daily change of that living agent which each man calls himself for another, or of any such change throughout our whole present life, is entirely borne down by our natural sense of things. Nor is it possible for a person in his wits to alter his conduct, with regard to his health or affairs, from a suspicion that though he should live tomorrow he should not, however, be the same person he is to-day. And yet, if it be reasonable to act with respect to a future life upon this notion, that personality is transient, it is reasonable to act upon it with respect to the present. Here, then, is a notion equally applicable to religion and to our temporal concerns; and every

one sees and feels the inexpressible absurdity of it in the latter case. If, therefore, any can take up with it in the former, this cannot proceed from the reason of the thing, but must be owing to an inward unfairness, and secret corruption of heart.

Secondly. It is not an idea, or abstract notion, or quality, but a being only, which is capable of life and action, of happiness and misery. Now all beings confessedly continue the same during the whole time of their existence. Consider, then, a living being now existing, and which has existed for any time alive : this living being must have done, and suffered, and enjoyed, what it has done, and suffered, and enjoyed formerly, (this living being, I say, and not another,) as really as it does, and suffers, and enjoys what it does, and suffers, and enjoys this instant. All these successive actions, enjoyments, and sufferings, are actions, enjoyments, and sufferings, of the same living being. And they are so, prior to all consideration of its remembering or forgetting ; since remembering or forgetting can make no alteration in the truth of past matter of fact. And suppose this being endued with limited powers of knowledge and memory, there is no more difficulty in conceiving it to have a power of knowing itself to be the same living being which it was some time ago, of remembering some of its actions, sufferings, and enjoyments, and forgetting others, than in conceiving it to know, or remember, or forget, any thing else.

Thirdly. Every person is conscious that he is now the same person or self he was as far back as his remembrance reaches ; since, when any one reflects upon a past action of his own, he is just as certain of the person who did that action, namely, himself, the person who now reflects upon it, as he is certain that the action was at all done. Nay, very often a person's assurance of an action having been done, of which he is absolutely

assured, arises wholly from the consciousness that he himself did it. And this he, person or self, must either be a substance or the property of some substance. If he, if person, be a substance; then consciousness that he is the same person is consciousness that he is the same substance. If the person, or he, be the property of a substance, still consciousness that he is the same property, is as certain a proof that his substance remains the same, as consciousness that he remains the same substance would be; since the same property cannot be transferred from one substance to another.

But, though we are thus certain that we are the same agents, living beings, or substances, now, which we were as far back as our remembrance reaches; yet it is asked, whether we may not possibly be deceived in it? And this question may be asked at the end of any demonstration whatever; because it is a question concerning the truth of perception by memory. And he who can doubt whether perception by memory can in this case be depended upon, may doubt also whether perception by deduction and reasoning, which also include memory, or, indeed, whether intuitive perception, can. Here, then, we can go no further. For it is ridiculous to attempt to prove the truth of those perceptions, whose truth we can no otherwise prove than by other perceptions of exactly the same kind with them, and which there is just the same ground to suspect; or to attempt to prove the truth of our faculties, which can no otherwise be proved than by the use or means of those very suspected faculties themselves.

DISSERTATION II.—OF THE NATURE OF VIRTUE.

THAT which renders beings capable of moral government is their having a moral nature, and moral faculties of perception and of action. Brute creatures are impressed and actuated by various instincts and propensions; so also are we. But additional to this, we have a capacity of reflecting upon actions and characters, and making them an object to our thought: and on doing this, we naturally and unavoidably approve some actions, under the peculiar view of their being virtuous, and of good-desert, and disapprove others, as vicious and of ill-desert. That we have this moral approving and disapproving* faculty is certain from our experiencing it in ourselves, and recognizing it in each other. It appears from our exercising it unavoidably, in the approbation and disapprobation even of feigned characters; from the words *right* and *wrong*, *odious* and *amiable*, *base* and *worthy*, with many others of like signification in all languages, applied to actions and characters; from the many written systems of morals which suppose it; since it cannot be imagined that all these authors, throughout all these treatises, had absolutely no meaning at all to their words, or a meaning merely chimerical: from our

* This way of speaking is taken from Epictetus,* and is made use of as seeming the most full, and the least liable to cavil. And the moral faculty may be understood to have these two epithets, *δοκιμαστικῆ* and *ὑποδοκιμαστικῆ*, upon a double account; because, upon a survey of actions, whether before or after they are done, it determines them to be good or evil; and also because it determines itself to be the guide of action and of life, in contradistinction from all other faculties or natural principles of action: in the very same manner, as speculative reason *directly* and naturally judges of speculative truth and falsehood; and, at the same time, is attended with a consciousness, upon *reflection*, that the natural right to judge of them belongs to it.

* Arr., Epict., lib. i, cap. 1.

natural sense of gratitude, which implies a distinction between merely being the instrument of good and intending it; from the like distinction, every one makes between injury and mere harm, which, Hobbes says, is peculiar to mankind; and between injury and just punishment, a distinction plainly natural, prior to the consideration of human laws.

It is manifest, great part of common language, and of common behavior over the world, is formed upon supposition of such a moral faculty; whether called conscience, moral reason, moral sense, or divine reason; whether considered as a sentiment of the understanding or as a perception of the heart, or, which seems the truth, as including both.* Nor is it at all doubtful in the general, what course of action this faculty, or practical discerning power within us, approves, and what it disapproves. For, as much as it has been disputed wherein virtue consists, or whatever ground for doubt there may be about particulars, yet, in general, there is in reality a universally acknowledged standard of it. It is that which all ages and all countries have made profession of in public; it is that which every man you meet puts on the show of; it is that which the primary and fundamental laws of all civil constitutions, over the face of the earth, make it their business and endeavor to enforce the practice of upon mankind; namely, justice, veracity, and regard to common good. It being manifest, then, in general, that we have such a

* [Butler's meaning appears to be, that, if it be referred to the understanding, it differs from other acts of the understanding in partaking of the nature of feeling; and that, if it be referred to the heart or feelings, it must be allowed to partake of the nature of perception. Compare the language of Adam Smith, in describing the system of Hutcheson. "This *sentiment* being of a peculiar nature, distinct from every other, and the effect of a particular power of *perception*, they give it a particular name, and call it a moral sense."—Part vi, chap. iii, page 356.—F.]

faculty or discernment as this, it may be of use to remark some things, more distinctly concerning it.

First. It ought to be observed, that the object of this faculty is actions,* comprehending under that name active or practical principles; those principles from which men would act, if occasions and circumstances gave them power; and which, when fixed and habitual in any person, we call his character. It does not appear that brutes have the least reflex sense of actions, as distinguished from events; or that will and design, which constitute the very nature of actions as such, are at all an object to their perception. But to ours they are; and they are the object, and the only one, of the approving and disapproving faculty. Acting, conduct, behavior, abstracted from all regard to what is, in fact and event, the consequence of it, is itself the natural object of the moral discernment, as speculative truth and falsehood is of speculative reason. Intention of such and such consequences, indeed, is always included; for it is part of the action itself: but though the intended good or bad consequences do not follow, we have exactly the same sense of the action as if they did. In like manner, we think well or ill of characters, abstracted from all consideration of the good or the evil which persons of such characters have it actually in their power to do. We never, in the moral way, applaud or blame either ourselves or others for what we enjoy or what we suffer, or, for having impressions made upon us which we consider as altogether out of our power; but only for what we do or would have done had it been in our power; or for what we leave undone which we might have done, or would have left undone though we could have done it.

Secondly. Our sense or discernment of actions, as

* οὐδὲ ἡ ἀρετὴ καὶ κακία—ἐν πείσει, ἀλλὰ ἐνεργεία. M. Anton., lib. 9, 16.—Virtutis laus omnis in actione consistit. Cic. Offic., lib. i, c. 6.

morally good or evil, implies in it a sense or discernment of them as of good or ill desert. It may be difficult to explain this perception, so as to answer all the questions which may be asked concerning it; but every one speaks of such actions as deserving punishment; and it is not, I suppose, pretended that they have absolutely no meaning at all to the expression. Now the meaning plainly is not, that we conceive it for the good of society, that the doer of such actions should be made to suffer. For if, unhappily, it were resolved that a man who, by some innocent action, was infected with the plague, should be left to perish, lest, by other people's coming near him the infection should spread; no one would say, he deserved this treatment. Innocence and ill desert are inconsistent ideas. Ill desert always supposes guilt; and if one be not part of the other, yet they are evidently and naturally connected in our mind. The sight of a man in misery raises our compassion toward him; and, if this misery be inflicted on him by another, our indignation against the author of it. But when we are informed that the sufferer is a villain, and is punished only for his treachery or cruelty, our compassion exceedingly lessens, and, in many instances, our indignation wholly subsides. Now, what produces this effect, is the conception of that in the sufferer which we call ill desert. Upon considering, then, or viewing together, our notion of vice and that of misery, there results a third, that of ill desert. And thus there is in human creatures an association of the two ideas, natural and moral evil, wickedness and punishment. If this association were merely artificial or accidental, it were nothing; but being most unquestionably natural, it greatly concerns us to attend to it, instead of endeavoring to explain it away.

It may be observed, further, concerning our perception of good and of ill desert, that the former is very

weak with respect to common instances of virtue. One reason of which may be, that it does not appear to a spectator how far such instances of virtue proceed from a virtuous principle, or in what degree this principle is prevalent; since a very weak regard to virtue may be sufficient to make men act well in many common instances. And on the other hand, our perception of ill desert in vicious actions lessens, in proportion to the temptations men are thought to have had to such vices. For vice, in human creatures, consisting chiefly in the absence or want of the virtuous principle, though a man be overcome, suppose, by tortures, it does not from thence appear to what degree the virtuous principle was wanting. All that appears is, that he had it not in such a degree as to prevail over the temptation; but possibly he had it in a degree which would have rendered him proof against common temptations.

Thirdly. Our perception of vice and ill desert arises from, and is the result of, a comparison of actions with the nature and capacities of the agent. For the mere neglect of doing what we ought to do would, in many cases, be determined by all men to be in the highest degree vicious. And this determination must arise from such comparison, and be the result of it; because such neglect would not be vicious in creatures of other natures and capacities, as brutes. And it is the same also with respect to positive vices, or such as consist in doing what we ought not. For, every one has a different sense of harm done by an idiot, madman, or child, and by one of mature and common understanding; though the action of both, including the intention, which is part of the action, be the same: as it may be, since idiots and madmen, as well as children, are capable not only of doing mischief, but also of intending it. Now, this difference must arise from somewhat discerned in the nature or capacities of one, which renders the

action vicious; and the want of which in the other, renders the same action innocent or less vicious; and this plainly supposes a comparison, whether reflected upon or not, between the action and capacities of the agent, previous to our determining an action to be vicious. And hence arises a proper application of the epithets, *incongruous, unsuitable, disproportionate, unfit*, to actions which our moral faculty determines to be vicious.

Fourthly. It deserves to be considered, whether men are more at liberty, in point of morals, to make themselves miserable without reason, than to make other people so; or dissolutely to neglect their own greater good for the sake of a present lesser gratification, than they are to neglect the good of others, whom nature has committed to their care. It should seem, that a due concern about our own interest or happiness, and a reasonable endeavor to secure and promote it, which is, I think, very much the meaning of the word *prudence* in our language; it should seem, that this is virtue, and the contrary behavior faulty and blamable: since in the calmest way of reflection, we approve of the first and condemn the other conduct, both in ourselves and others. This approbation and disapprobation are altogether different from mere desire of our own, or of their happiness, and from sorrow upon missing it. For the object or occasion of this last kind of perception, is satisfaction or uneasiness; whereas the object of the first is active behavior. In one case, what our thoughts fix upon, is our condition; in the other, our conduct.

It is true, indeed, that nature has not given us so sensible a disapprobation of imprudence and folly either in *ourselves* or *others*, as of falsehood, injustice, and cruelty; I suppose, because that constant habitual sense of private interest and good, which we always carry about with us, renders such sensible disapprobation less necessary, less wanting, to keep us from imprudently neglect-

ing our own happiness, and foolishly injuring ourselves, than it is necessary and wanting to keep us from injuring others, to whose good we cannot have so strong and constant a regard; and also, because imprudence and folly, appearing to bring its own punishment more immediately and constantly than injurious behavior, it less needs the additional punishment, which would be inflicted upon it by others had they the same sensible indignation against it as against injustice, and fraud, and cruelty. Besides, unhappiness being in itself the natural object of compassion, the unhappiness which people bring upon themselves, though it be willfully, excites in us some pity for them; and this, of course, lessens our displeasure against them. But still it is matter of experience, that we are formed so, as to reflect very severely upon the greater instances of imprudent neglects and foolish rashness, both in ourselves and others. In instances of this kind, men often say of themselves with remorse, and of others with some indignation, that they deserved to suffer such calamities, because they brought them upon themselves, and would not take warning. Particularly, when persons come to poverty and distress by a long course of extravagance, and after frequent admonitions, though without falsehood or injustice; we plainly do not regard such people as alike objects of compassion with those who are brought into the same condition by unavoidable accidents. From these things it appears, that prudence is a species of virtue, and folly of vice: meaning by *folly*, somewhat quite different from mere incapacity; a thoughtless want of that regard and attention to our own happiness which we had capacity for. And this the word properly includes, and as it seems, in its usual acceptation; for we scarce apply it to brute creatures.

However, if any person be disposed to dispute the matter, I shall very willingly give him up the words

virtue and *vice* as not applicable to prudence and folly ; but must beg leave to insist, that the faculty within us, which is the judge of actions, approves of prudent actions, and disapproves imprudent ones ; I say, prudent and imprudent *actions* as such, and considered distinctly from the happiness or misery which they occasion. And, by the way, this observation may help to determine what justness there is in that objection against religion, that it teaches us to be interested and selfish.

Fifthly. Without inquiring how far, and in what sense, virtue is resolvable into benevolence, and vice into the want of it ; it may be proper to observe that benevolence, and the want of it, singly considered, are in no sort the whole of virtue and vice. For if this were the case, in the review of one's own character, or that of others, our moral understanding and moral sense would be indifferent to every thing but the degrees in which benevolence prevailed, and the degrees in which it was wanting. That is, we should neither approve of benevolence to some persons rather than to others, nor disapprove injustice and falsehood upon any other account than merely as an overbalance of happiness was foreseen likely to be produced by the first, and of misery by the second. But now, on the contrary, suppose two men competitors for any thing whatever, which would be of equal advantage to each of them ; though nothing, indeed, would be more impertinent than for a stranger to busy himself to get one of them preferred to the other ; yet such endeavor would be virtue, in behalf of a friend or benefactor, abstracted from all consideration of distant consequences : as that examples of gratitude and the cultivation of friendship would be of general good to the world. Again, suppose one man should, by fraud or violence, take from another the fruit of his labor, with intent to give it to a third, who, he thought, would have as much pleasure from it as would balance the pleasure which

the first possessor would have had in the enjoyment, and his vexation in the loss of it; suppose also that no bad consequences would follow; yet such an action would surely be vicious. Nay, further, were treachery, violence, and injustice, no otherwise vicious than as foreseen likely to produce an overbalance of misery to society; then, if in any case a man could procure to himself as great advantage by an act of injustice as the whole foreseen inconvenience likely to be brought upon others by it would amount to, such a piece of injustice would not be faulty or vicious at all, because it would be no more than, in any other case, for a man to prefer his own satisfaction to another's in equal degrees.

The fact, then, appears to be, that we are constituted so as to condemn falsehood, unprovoked violence, injustice, and to approve of benevolence to some preferably to others, abstracted from all consideration which conduct is likeliest to produce an overbalance of happiness or misery. And therefore, were the Author of nature to propose nothing to himself as an end but the production of happiness, were his moral character merely that of benevolence; yet ours is not so. Upon that supposition, indeed, the only reason of his giving us the above-mentioned approbation of benevolence to some persons rather than others, and disapprobation of falsehood, unprovoked violence, and injustice, must be, that he foresaw this constitution of our nature would produce more happiness than forming us with a temper of mere general benevolence. But still, since this is our constitution, falsehood, violence, injustice, must be vice in us, and benevolence, to some preferably to others, virtue, abstracted from all consideration of the overbalance of evil or good which they may appear likely to produce.

Now if human creatures are endued with such a moral nature as we have been explaining, or with a moral faculty the natural object of which is actions; moral gov-

ernment must consist in rendering them happy and unhappy, in rewarding and punishing them, as they follow, neglect, or depart from, the moral rule of action interwoven in their nature, or suggested and enforced by this moral faculty;* in rewarding and punishing them upon account of their so doing.

I am not sensible that I have, in this fifth observation, contradicted what any author designed to assert. But some of great and distinguished merit have, I think, expressed themselves in a manner which may occasion some danger to careless readers, of imagining the whole of virtue to consist in singly aiming, according to the best of their judgment, at promoting the happiness of mankind in the present state; and the whole of vice, in doing what they foresee, or might foresee, is likely to produce an overbalance of unhappiness in it; than which mistakes none can be conceived more terrible. For it is certain, that some of the most shocking instances of injustice, adultery, murder, perjury, and even of persecution, may, in many supposable cases, not have the appearance of being likely to produce an overbalance of misery in the present state; perhaps sometimes may have the contrary appearance. For this reflection might easily be carried on; but I forbear. The happiness of the world is the concern of him who is the Lord and the Proprietor of it; nor do we know what we are about, when we endeavor to promote the good of mankind in any ways, but those which he has directed; that is, indeed, in all ways not contrary to veracity and justice. I speak thus upon supposition of persons really endeavoring, in some sort, to do good without regard to these. But the truth seems to be, that such supposed endeavors proceed almost always from ambition, the spirit of party, or some indirect principle, concealed, perhaps, in great measure from persons themselves. And though it

* Part i, chap. vi, page 167.

is our business and our duty to endeavor, within the bounds of veracity and justice, to contribute to the ease, convenience, and even cheerfulness and diversion, of our fellow-creatures; yet from our short views, it is greatly uncertain whether this endeavor will, in particular instances, produce an overbalance of happiness upon the whole; since so many and distant things must come into the account. And that which makes it our duty, is, that there is some appearance that it will, and no positive appearance sufficient to balance this, on the contrary side; and also, that such benevolent endeavor is a cultivation of that most excellent of all virtuous principles, the active principle of benevolence.

However, though veracity, as well as justice, is to be our rule of life; it must be added, otherwise a snare will be laid in the way of some plain men, that the use of common forms of speech, generally understood, cannot be falsehood, and in general that there can be no designed falsehood without designing to deceive. It must likewise be observed, that in numberless cases a man may be under the strictest obligations to what he foresees will deceive, without his intending it. For it is impossible not to foresee that the words and actions of men in different ranks and employments, and of different educations, will perpetually be mistaken by each other; and it cannot but be so, while they will judge with the utmost carelessness, as they daily do, of what they are not, perhaps, enough informed to be competent judges of, even though they considered it with great attention.

INDEX.

Abstract Reasoning,

- May mislead, page 159.
- To be applied to practical subjects with great caution, 159.
- May be, with propriety, joined with the observation of facts, 37.
- From the opinion of necessity, fallacious, 157, 159.

Abstract

- Truths and matter of fact, how distinguished, 344.

Accidental

- Events of which we know not the laws, so termed, 244.

Action,

- This world a theater of, 150.
- As distinguished from the thing done, the chief object of religion, 289.

Actions,

- Meaning of the term in moral questions, 368.
- Pleasure and pain the consequences of our, 69, 70.
- To be distinguished from their moral quality, as virtuous or vicious, 92.
- The provision made that all their bad consequences should not always actually follow, 252.
- Will and design constitute their nature as such, 367.
- Distinguished from events, 358.
- What, exercise the principle of virtue, 145.
- Outward and inward, 128.

Affections,

- Particular, form part of our inward frame, 136.
- In what respects subject, of right, to conscience, 136.
- Necessarily excited by the presence of their objects, 137.
- Need restraint, 137.
- See *Passions*.

Affliction,

- The proper discipline for resignation, 148, 149.

Analogy,

- Butler's, a work demanded by the times in which it was written, page 21.
- Force of the argument in the, 22.
- Topics embraced in the, 42.
- The objection against, as being unsatisfactory, answered, 340, 341.
- Upon what principles the argument in is conducted, 342, 343.
- In general, a just and conclusive mode of reasoning, 36, 37.
- Origen's remark upon, 37.
- May reasonably be admitted to determine our judgment, 35.
- Lays us under an obligation to regard it in practice, 35.
- Requires the cases compared to be apparently similar in the respects which are the ground of inference, 64, 217.
- Plan of the, examined in this treatise, 42, 43.
- What is assumed in this, 38.
- Can directly only show things credible as matters of fact, 164.
- Yet suggests an answer to objections against the goodness and wisdom of the Divine conduct, 172.
- Whether it would be likely to influence men's practice, 345.
- This unlikelihood, though granted, no decisive objection against its use, 342.
- Design of, not to justify God's providence, but to show our duties, 337.
- When applied to religion, superior to hypothesis and speculation, 37-39.
- Affords no ground for believing that death will destroy our living powers, 49.
- Confirms the proof of the indiscernibility of living agents, 52.
- Of the case of brutes no objection, 58, 59.
- Of vegetables, 64.
- Gives credibility to the doctrine of future rewards and punishments, 76.
- Answers objections against future punishments, 77-81.
- Between our state of trial in our temporal and religious capacities, 114.
- In respect of the sources of danger, 115, 116.
- In respect of men's behavior under it, 117, 118.
- In respect of difficulties increased by outward circumstances, 118, 119.

Analogy,--continued.

- Force of, in answering objections, and raising a positive presumption, page 122.
- Suggests that this life is a preparation for another, 124-134.
- Although we saw not how, 134.
- Leads us to expect that the future state will be a community, 135.
- May subsist between limitations of possible perfectibility in moral character, and powers bodily and intellectual, 145.
- Of the waste of seeds, as answering the objection, that the present state is not, to many, a discipline in virtue, 146.
- Between the speculative reason and the moral understanding, 166.
- Argument from, not affected by the scheme of necessity, 152-172.
- Answers objections against the wisdom and goodness of God's government, *indirectly*, 171.
- Between God's natural and his moral government, as to their vastness and incomprehensibility, 172, 174.
- Between the natural and the moral world, as regards means and ends, 177, 178.
- What objections it cannot answer directly, 171.
- Affords no argument against the general scheme of Christianity, 212.
- No presumption from, against a revelation at the beginning of the world, considered as miraculous, 215-217.
- Supposed presumptions against miracles answered, 217-221.
- Shows objection against Christianity itself, as distinguished from objections against its evidence, to be frivolous, 223-226.
- Makes it probable that, if we judge of Christianity by preconceived expectations, we shall find many things seeming liable to objections, 225, 226.
- Between natural information and inspiration, 226, 227.
- More particularly between the limitations and hinderances of natural information and the instruction afforded us by revelation, 230, 233.
- Between the use of miraculous gifts and the use of the gifts of memory, eloquence, etc., 231, 232.
- Makes it credible that the Scripture contains truths as yet undiscovered, 233.
- Between Christianity, as a remedial system, and the natural remedies for disease, 235, 236.
- Answers objections against the wisdom of the means used by Christianity, 243.
- Makes it credible that the Christian dispensation may have been all along carried on by general laws, 243.

Analogy,--continued.

- Answers objections against Christianity, as being a slowly-operating and complicated scheme, page 246, 247.
- Removes all presumption against the general notion of a Mediator, 249.
- Makes it supposable that future punishment may follow vice by way of natural consequence, 250.
- Shows that we have no reason to believe that repentance alone will prevent future punishment, 255, 256.
- Answers the objection that the death of Christ represents God as indifferent whether he punishes the innocent or the guilty, 266-270.
- Shows that we cannot expect to have the like information concerning God's conduct as concerning our own duty, 269, 270.
- Answers objections from the want of universality in revelation and the doubtfulness of its evidence, 271, 272.
- Of a prince sending directions to his servants, whether applicable to God, 289.
- Between prophecy and satirical and mythologic writing, 309, 310.
- Between a prophet and a compiler of memoirs, 310.
- Objections against arguing from the analogy of nature to religion, 333-346.
- See *Objections*.

Brute Force,

Natural tendency of reason to prevail
over, 99-102.

Brutes,

Question of their natural immortality
argued, 58, 59.
Instinct of, superior in some things to
the reason of men, 230.
Have no reflex sense of actions, as dis-
tinguished from events, 230.

Cato,

Quoted, 51.

Certainty,

Moral, highest degree of probable evi-
dence, 33.
What it means, 35.

Chalmers, Dr.,

Quoted, 84, 91, 113, 117, 120, 124, 138,
181, 219, 222, 292.

Chance,

In reality no such thing as, 244.

Changes,

Which we have already undergone
afford a presumption in favor of a
future existence, page 45, 50-53.
The, which various creatures may un-
dergo without destruction, 45, 46.

Character,

What is meant by, 160 n.
Our capability of forming a new, 131.
Of virtue and piety, a necessary quali-
fication for a future state, 134.
Our capacity of improvement therein,
135-142.
Our moral, to be manifested to the cre-
ation by means of a state of trial, 150.

Childhood,

A state of discipline for mature age, 132.

Christ,

Our Lord, our Saviour, and our God,
204.
The scriptural representation of his in-
terposition as Mediator, 260-262.
His prophetic, regal, and priestly of-
fices, 263, 264.
His sacrifice not an allusion to the Mo-
saic sacrifices, 264.
Ground of the efficacy of his sacrifice
not explained in Scripture, 264.
Objection against the death of, as a pro-
pitiation sacrifice, 266-270.
Sufferings of, voluntary, 267.

Christians,

Primitive, their conversion and zeal, as
proving the reality of the Scripture
miracles, 299, 300.

Christianity,

Not, if it be from God, of small impor-
tance, 194.
A republication of natural religion, and
with what circumstances of advan-
tage, 194-201.
Has brought life and immortality to
light, 196.
Preserves the knowledge of religion for
all ages, by means of a visible Church,
197.
Good effects of, not small, and alleged
ill effects do not properly belong to
it, 199.
Contains an account of a dispensation,
not discoverable by reason, carried
on by the Son and Spirit, 201.
Enjoins, in consequence, new duties,
not otherwise to be ascertained, 201,
202.
No presumption against the general
scheme of, whether considered mir-
aculous or not, 212-215. None, be-
cause it is not discoverable by reason
or experience, 213, 215. None, be-
cause it is unlike the known course
of nature, 214, 215.

Christianity,—continued.

Objections against, as distinguished from objections against its evidence, frivolous, page 223.

True question concerning is, whether it be a real revelation, not whether it is such a one as we might have expected, 227.

What objections against, would be valid, 228.

Practical part of, plain and obvious, 233.

Objections against, from the long delay of its publication to the world, 234.

Objections against the goodness and wisdom of, not valid, 240, 245.

See *Revelation, Revealed Religion.*

Christian Dispensation,

The, may appear natural to some beings in the universe, 66.

Church,

The visible, design of the institution of, 197, 198.

The carrying out of its design implies positive institutions, 198.

Men are bound to become members of the, 200.

Circumstantial evidences of Christianity, 292, 314.

Often as convincing as direct testimony, 330.

Coincidence of natural and revealed religion, 224, 233.

Coincidences of Scripture, 296.

Cicero,

An example of those thinkers who would frame a world upon hypothesis, 38.

Desert,

Good and ill, the perception of, defined, 368.

Destruction

Of living powers, what it means, 48 n.

Different

Degrees of evidence in religious matters consistent with justice, 274.

Difference

Of men's situations in religious matters, to be accounted for in the same manner as their different situations in other respects, 276.

Would not be prevented, though revelation were universal, 277.

Difficulties

As to the *evidence* of religion, are analogous to those attending the practice of it, 282.

These may be the principal part of some persons' trial, 284.

In religion, unreasonable to expect to have them all cleared, 340-342.

Discipline,

Effect of, to improve the principle of virtue in us, 138.

Needed by upright creatures, 136-140.

Indispensably necessary for corrupt creatures, 142.

This world peculiarly fit to be a place of, for our moral improvement, 142-145.

Diseases

Of the body and the mind, analogy between the remedies for, 235, 236.

Mortal diseases, not affecting our intellectual powers, afford a presumption that those powers will not be destroyed by them, 61.

Are sometimes themselves remedies, 179.

Some operate like enthusiasm, 302.

Distress,

In others, the perception of a natural excitement to passive piety and active relief, 129.

Doubt

Implies some degree of evidence for that of which we doubt, 280.

With regard to religion, implies an obligation to regard it in practice, 282.

Dreams,

Our experience of, what it shows us, page 56.

Duties,

Our, to the Son and Spirit, arise out of their relations to us, and are strictly moral, 202, 203.

Moral and positive, distinguished, 205.

Earth,

Whether its appearance confirms the Scripture accounts of the fall, 260.

Ecclesiastes

Quoted, 126 n.

End,

We are greatly ignorant how far any thing is a final end in God's regard, 246.

The whole, for which God made and governs the world, may be utterly beyond the reach of our faculties, 72.

See *Means and Ends*.

Enthusiasm,

Christianity not such a scheme as would have been expected from, 238.

As an objection to the Christian evidences, considered and answered, 301-305.

Will not account for the conversion and zeal of the first Christians, 302.

Religion not peculiarly liable to, 303.

The case of enthusiasm and knavery combined considered, 303, 304.

General observations upon, cannot overthrow direct historical evidence, 305, 306.

Epictetus,

Quoted, 365 n.

Evidence,

Probable and demonstrative, distinguished, 33. See *Probable Evidence*.
The external, for natural religion, 164, 165.

Of Scripture, reason competent to judge of, 238.

Doubt implies some degree of, 280.

Circumstantial, often as convincing as the most direct, 330.

Not only increased, but multiplied, by the adding together of separate probable proofs, 350.

Evidence of Christianity,

The state in which it is left, not inconsistent with justice, 275. Not inconsistent with wisdom and goodness, 276-284.

Doubtfulness of, may put men into a state of trial, 278-281. A state of trial similar to that from external circumstances of temptation, 282-285.

Our dissatisfaction with, may be our own fault, 285, 286.

Evidence of Christianity—con'd.

- Lies level to men of common capacity, pages 287, 288.
- Total result of the direct and collateral, may be compared with *the effect* in architecture, 293.
- Direct and circumstantial, view of, as forming one argument, 313-332.
- Safer to admit it, than to reject it, 331.
- Cannot, from its nature, be destroyed, though it may be lessened, 332.
- True question with regard to, 341.

Evil,

- Origin of, 71, 124.
- Prevalence of, no argument against the power or goodness of God, 71 n.
- Permission of, may be beneficial to the world, 178.
- Yet would have been better if men had refrained from it, 179.
- Reliefs and remedies originally provided for, 253.

Example and Education,

- Effect of a bad, in increasing the dangers of our state of trial, 118.

Existence,

- Necessary, in what sense attributed to God, 153.

Experience

- Teaches us the good and bad consequences of our actions, 269.
- How it confirms the unity of the mind, 52.

Experimental

- Observations cannot prove the simplicity of a living agent, 53.

External

- Objects, as related to the particular affections of our nature, 136.
- Circumstances, one of the sources of trial in our present state, 115.

Faculties,

- Human, not given us in their full perfection at our birth, 131.
- Not adequate to discover how the world might be best constituted, 39, 40.
- Ridiculous to attempt to prove the truth of, 364.

Fall of Man,

- Explicable, from the nature of particular affections, 139.
- Not accounted for, solely from the principle of liberty, 139, 140.
- Appearances of a, in nature, 119.
- Our condition resulting from the, does not afford just matter of complaint, 119.
- The Christian dispensation grounded upon the supposition of a, 257.
- The scriptural account of it analogous and conformable to what we see and experience, 260.

Falsehood,

- The several kinds of it, page 304.
- Whether the use of certain forms of speech is, 375.

Fatalist, The,

- His scheme of the world stated, 153.
- Shown, by pertinent examples, to be absurd in practice, 156-159.
- His objection to the justice of punishments refuted, 160.
- Religious and irreligious fatalists distinguished, 169, 170.

Fate.

- See *Necessity*.

Fear and Hope,

- Legitimate moral motives, 147.
- Of future punishment and reward, cannot be got rid of by greater part of the world, 94.

Final Causes,

- The notion of, does not always imply that the end designed is answered, 146.
- The pleasures and pains attending our actions, instances of, 76.
- The proof from, of the existence of God, not destroyed by the schemes of necessity, 154, 155.

Fitness, Moral,

- Whether, and in what sense, it determines the will of God, 163 n.
- The proof of religion from, not insisted on in this treatise, 163, 343.
- And unfitness of actions, in what sense understood, 369, 370.

Fitzgerald, Professor,

- Quoted, 33, 37, 46, 71, 87, 104, 108, 111, 130, 136, 158, 169, 171, 191, 196, 206, 216, 233, 239, 294, 323, 366.

Folly,

- Defined and shown to be akin to vice, 370, 371.
- Of mankind, as to present and future interests compared, 116, 117.

Future State,

- A, will probably be a social one, 65, 135.
- Question of, why so important to us, 69.
- Three questions relative to, considered, 62 n.
- Demonstration of, not of *itself* a proof of religion, 66. Yet implied in religion, 66.
- Security of the good in, may be derived from the habits formed in a state of probation, 143.
- This life a state of discipline for, p. 1. ch. v.

Future Rewards and Punishments,

Will differ only in degree from those of our present state, page 109.
As conceived by natural reason, and as specially described in Scripture, 80 n.

Future Punishments,

General consideration of, belongs to natural religion, 110.
Doctrine of, shown by analogy to be altogether credible, 77-81.
May follow vice, by way of natural consequence, 250.
Reformation and repentance alone insufficient to prevent them, 256.
See *Punishments*.

General Laws,

The manifest wisdom of carrying on the natural government of the world by means of, 179.
Interruptions of, would produce evil and prevent good, 180.
Credible that the Christian dispensation may have been, all along, carried on by, 243-245.
Miracles may proceed from, 244.
Only from analogy that we conclude the *whole* course of nature to be carried on by, 244.

Gifts,

Superior, not always bestowed on persons of prudence and decency, 231, 232.

God,

True idea of, that of a governor, 76.
His existence: Why taken for granted in this treatise, 38.
His existence: Not disproved by the scheme of fatalism, 153, 154.
His existence: In what sense necessary, 154.
His will: How determined, 163 n.
His will may be considered as absolute or conditional, 270.
Resignation to his will, an essential part of virtue, 148, 149.
What temper of mind in us corresponds to his sovereignty, 149.
His character, what is meant by, as applied to him, 160.
His goodness: May seek to make only the good happy, 72.
His goodness shown by experience to be no good ground for expecting him to make us happy all at once, 150.
Does not give us the same information concerning his conduct as concerning our duty, 269, 270.
Dictates of conscience concerning, the laws of, 162.
Our duties to God the Father: to the Son and to the Holy Spirit, 201-203.

God's Government,

End of, probably beyond the reach of our faculties, page 72.
His *natural* government of us, by rewards and punishments, 69-82.
The course of nature but another name for, 75.
Not the less certainly established, though in it he act not immediately, 74, 75.
His Moral: Proofs of its existence and operation, 85-112.
Not yet, in this present state, carried on to its perfection, 87. Yet tends to perfection, 99.
His natural and moral government compared, 171-183.
Natural and Moral, may both together make up one scheme, 173, 174.
Likely that, as his natural government is a scheme beyond our comprehension, the moral may be such a one too, 172-177.
His visible government over the world exercised by the mediation of others, 91, 249.

God's Providence,

The series of his providential dispensations progressive, 233, 234.
Objections to his providence usually founded on our ignorance, 175.
How far we are concerned to answer objections against, 337-339.

Good and Evil,

Natural, the great variety and seeming inequality of their distribution, 271, 272.

Good Men,

Disposed to befriend good men, as such, 94.
Difficulties in the way of their union with each other here, 103.

Goodness,

The Divine. See *God*.

Government,

The formal notion of, what it consists in, 74.
Natural and moral defined, and distinguished from each other, 84, 85.
Domestic and civil, ordained of God, 95.
Punishes vice as such, and as hurtful to society, 95.

Grotius,

Quoted, 286 n.

Guilt,

The idea of, always associated in our minds with that of ill desert, 369.

Guizot,

Quoted, 248 n.

Habits,

- Defined, 127.
- Our capacity of acquiring them, 127.
- Distinguished as habits of perception and habits of action, habits of body, and habits of mind, page 127.
- Active, may be growing stronger, while passive impressions are becoming weaker, 128, 129.
- Of mind, produced by the exertion of inward practical principles, 128.
- The acquisition of, necessary to us, 131.
- Of virtue, necessary to all rational creatures, whether virtuous or depraved, 135.

Happiness,

- Our present, mainly depends upon our own behavior, 69, 70.
- Why not given to all promiscuously, without regard to conduct, 70, 72.
- A result from our nature and condition jointly, 125.
- Of virtue, possibility of exceptions to, 88, 98.
- Virtue produces, and *tends* to produce it in a still higher degree than at present, 89-95, 99-106.
- The fact that our present, is not to be secured without difficulty and trial, makes it credible that the same may be true of our *future*, 116, 117.
- Of mankind, the aiming at, without regard to veracity and justice, not a correct idea of virtue, 374.

Heathen

- World, state of, shows the importance of revealed religion, 191.
- Different relations of the, to the genuine Scripture revelation, 274.

Hinderances,

- The present, of the natural tendencies of virtue, only accidental, 111.

History,

- What account it gives of the origin of religion, 166, 217.
- The whole of revelation, including prophecy and doctrine, may be considered as a history, 315.
- The *common*, in Scripture, altogether credible, 322.
- The failure to invalidate the Scripture history, a strong argument in its favor, 317, 318.

Hume,

- Referred to, 108 n., 218 n.

Identity,

- Or sameness, different senses of the word, 358.
- In what sense applied to persons, 357.
- Not constituted by consciousness, but ascertained by it, 358.
- Absurdity of the supposition that we are not the same beings in successive periods of time, 362, 363.

Ignorance, Our,

- How* this life is a preparation for another, no objection against the credibility of its being so, page 134.
- Of the scheme of nature and of Providence, 174, 175.
- Partial and total, distinguished, 181.
- When an answer to objections against God's method of government, and when not, 177, 181.
- Even *total* ignorance of the *consequences* of our actions would not invalidate moral obligation, 182.
- The argument from, cannot be used equally for or against religion, 183.
- Arguments from, rather taken from what analogy teaches us about it, 183.
- In connection with the question of the credibility of miracles, 219, 244.
- In matters of religion, owing frequently to men's negligence and prejudices, 285, 286.
- Of the nature of our condition, natural and moral, and the reasons why we are placed in it, 275, 276.

Imagination,

- The source of erroneous presumptions that death will destroy us, 50.
- Must not be substituted for experience, 64.
- Men of warm, apt to fancy coincidences, 330.

Immorality,

- The charge of, against certain precepts in Scripture, 237, 238.
- Not valid, 237.

Improvement,

- Of our faculties, in all respects gradual, 131, 132.
- Our capacity for, 125-131.
- Necessity for our, in virtue, 131-134.
- Effected by the acquisition of moral and religious habits, 135.

Innocent,

- Persons, are appointed, in the course of nature, to suffer for the guilty, 267.

Inspiration,

- In what manner or degree it should be vouchsafed to mankind, not ascertainable by reason, 226, 227.

Interest,

- Sense of, defined, 137 n.
- In what sense consistent with virtue, and part of its idea, 137 n. As coincident with virtue, needs strengthening by discipline, 137 n.

Irregularities,

- Apparent, in nature and in Christianity, whence they arise, 245.
- Unreasonable to expect them to be remedied by occasional interpositions, 180.

Irreligion,

Its aggravated guilt, beyond that of other vice, page 254.

Especially in persons of high rank and character, 280.

Not justifiable upon any pretense of want of evidence in religion, 282.

Jews,

A summary of their history, as a nation, 324-326.

Their history, as contained in Scripture, confirmed by known fact, 324.

God's dealing with them, 325.

Continuance of the, as a distinct people in their dispersion, a standing miracle, and a confirmation of the truth of Scripture, 326.

Final restoration of the, 327.

John, Saint,

To what he probably alludes in the beginning of his Gospel, 315.

His doctrine of Christ's pre-existence conformable to that of St. Paul, 316.

His description of the perfection of religion, 339.

Kingdom,

Idea of a perfectly virtuous and happy, 105, 106.

Christ's, as described in Scripture, 263.

Knowledge,

Our, of Scripture, will be perfected in the same way as our knowledge of nature, 233.

Natural and ordinary methods of improving it, 233.

Analogy of the progress of natural and religious, 234.

Koran,

Quoted, 298 n.

Language,

In its very nature, liable to infinite abuse, 230.

Law, Bishop,

Quoted, 73 n.

Liberty,

Does not, of itself, account for the fall of finite creatures, 139.

Why the proof of religion from, is omitted in this treatise, 343, 344.

Implied in the constitution of the world, and our condition therein, 158.

Doctrine of, shows where the fallacy lies in the scheme of necessity, when reduced to practice, 167.

Life,

Our present, a probation for a future one. As implying trial and danger, 113-122. As intended for moral discipline, 125-150. For the manifestation of character, 150.

See *Future Life*.

Likeness,

Various species of, defined, page 33 n.

Living Powers,

Twofold sense of the phrase, 48 n.

Our, not likely to be destroyed by death, 48-64.

Their not being exercised, does not imply their non-existence, 49.

Locke,

Quotation from his chapter on Probability, 34.

His notion of personal identity examined, 360, 361.

Locomotive

Powers, to what they properly belong, 56.

Mohammedanism

Was not received in the world on the foot of public miracles, 298.

Maimonides,

Quoted, 174 n.

Manasses,

Prayer of, quoted, 259 n.

Mandeville, Dr.,

Quoted, 91 n.

Man,

An inferior part of creation, 119.

Capable of improvement, 135.

Connected with present, past, and future, 184.

Dealt with as if free, 158.

Has a moral nature, 96.

His fall not accounted for by his free agency, 139.

Knows nothing fully, 174.

May become qualified for new states, 126.

Not a competent judge of the schemes of God, 175.

Requires moral culture, 135.

Accepted according to what he hath, 276.

His circumstances no ground of complaint, 277.

His obligation to study the Scriptures, 211, 290.

Must be renewed, 205.

Martyrs,

The primitive: their sufferings a testimony to the truth of the Christian miracles, 299, 300.

Matter,

Indiscernibility of its elementary particles by any natural power, 53.

Our being affected by, does not prove it to be part of ourselves, 53.

See *Body*.

Matter of Fact,

The system of religion viewed as, irrespective of all speculation, page 161.
Distinguished from abstract truth, 311.
Objections to Christianity as, answered, Part II, chap. iii.

Means and Ends,

Events are related to each other as, 177.
Our incompetency, prior to experience, to judge of either, 178.
No presumption against the wisdom of the means used by Christianity, 243.
The objection that they are complicated, and of slow operation, answered, 246-248.

Mediator,

No presumption from the course of nature against the general notion of a, 249.
Scripture view of his office, 260-264.
Christian doctrine of, in what respect most objected to, 266.
This objection answered, 267-270.
See *Sacrifice*.

Microscopes and Glasses,

Our organs of perception compared with, 55, 65.

Mill, J. S.,

Quoted, 218 n.

Miracles

Prove the system of natural religion as well as the revealed, 195, 196.
No presumption against, at the beginning of the world, 215, 216.
The incarnation of Christ an invisible miracle, 214.
No argument from analogy against, after the settlement of the course of nature, 217.
No greater presumption against, than against ordinary facts before proof, 219.
Occasions may arise for, in the course of ages, 220.
The moral system of the world gives distinct reasons for, 220.
Must be compared with the extraordinary phenomena of nature, 220.
May be subject to general laws, 244, 245.
The Christian, are recorded in books of authentic, genuine history, 293-296.
The reality and truth of, affirmed in the epistles of St. Paul, 296, 297.
Christianity first preached and received upon the allegation of, 297-300.
Mohammedan and Popish not parallel, 298, 299.
Scripture history gives the same evidence for, as for common facts, 293.
Truth of them, accounts for the history, 295.
How referred to in St. Paul's epistles, 297.

Miracles,—continued.

What proof of their reality from the conversion and zeal of the first Christians, page 299.

Miraculous

Gifts, in the apostolic age; the objection from their disorderly exercise answered, 231, 232.
What events, seemingly natural, may be so esteemed, 326.

Mistakes

Of transcribers of Scripture: no more than were to have been expected in books of such antiquity, 323.

Moral

Action, whether the nature of, can be altered by a command, 237.
Duties, arise from revealed relations, as well as from those made known by reason, 206.
Faculty, our: its dictates the laws of God, in a sense including *sanctions*, 162.
Hence, affords a proof of religion not to be invalidated by fatalism, 162.
See *Conscience*.
Government. See *Government*.
Evil, voluntary in its very notion, 124.
Our inability to account for, 124.
Part of religion, why preferred in Scripture to the positive, 208-211.
Precepts. See *Positive*.
Understanding, our, liable to be impaired and perverted, 166.

Morality,

Of Scripture, reason competent to judge of, 236, 237.
Of actions, depends chiefly on the intention of the agent, 365, 366.
Partly, also, on a comparison of his intentions with his nature and capacities, 367.

Motion,

Supposed indivisible, compared with consciousness, 51.

Mysteries

To be expected, if we judge from experience, in such a scheme as Christianity, 224, 243.
As great in nature as in Christianity, 244, 245, 266-270.

Nature,

Light of, insufficient, 191.
Teachings of, as to a future state, and the efficacy of repentance, 79 n, 254-257.
Course of, implies an operating agent, 73, 252.
No presumption against revealed religion, from its being unlike the, 213, 214.

Nature,—continued.

- How ascertained to be by general laws, pages 243, 244.
 Is not a fixed, but a progressive scheme, 65.
 Our ignorance of the causes, etc., on which it depends, 220.
 We know not what is the, upon the first peopling of worlds, 215. As a source of our trial, 115, 116.

Natural,

- True sense of the term, 65.
 Our notion of what is, may be enlarged by a greater knowledge of the works and the providence of God, 65.
 God's natural government probably subservient to his moral, 174.
 Religion, Christianity a republication, and an external institution, of, 194-200.
 See *Government—Religion*.

Necessary

- Existence of God, in what sense to be understood, 154.

Necessity,

- Opinion of, Butler's mode of considering, 152.
 Does not exclude deliberation and choice, 154.
 Does not destroy the proof of an intelligent author and governor of nature, 155.
 Supposed reconcilable with the course of nature, is reconcilable also with the *system* of religion, 155-160.
 Does not destroy the *proof* of religion, 161-164.
 However true in speculation, yet shown by experience to be false in practice, 156-159.
 The attributes of veracity, benevolence, and justice in God, reconcilable with, 160.
 The conclusion from, that it is incredible that God should reward and punish us, fallacious, 166, 168.
 In what sense destructive of religion, and in what sense not, 169.

Negligence

- No more excusable in matters of revealed, than of natural religion, 200.
 Is one source of our dissatisfaction with the evidence of religion, 286, 287.

Newman,

- Quoted, 256 n.

Objections,

- Against a proof, and against the thing to be proved, different, 42.
 How far analogy answers both, in the case of religion, 42.
 Against the wisdom and goodness of things, not directly answered by analogy, 171.

Objections,—continued.

- Against the scheme of Christianity, as distinguished from its evidence, generally frivolous, pages 212, 222-227.
 What would be valid, 228.
 Drawn from ignorance, when peculiarly absurd, 269.
 What qualifications requisite for the due considering, 288.
 May be seen through, though not cleared up, 288.
 Against the whole way of reasoning from analogy of nature to religion, considered, Part II, chap. viii.
 1. That it does not clear up difficulties, 334.
 2. That it does not show the evidence of religion not to be doubtful, 336-338.
 3. That it does not vindicate God's character, 338.
 4. That it is not satisfactory, 340.
 5. That it is not likely to have influence, 342.
 Against our natural immortality from the case of brutes, 58.
 From that of vegetables, 64.
 Against the credibility of future punishments, 77.
 Against the final triumph of virtue, 108.
 Against this world's being a state of trial, how answered by analogy, 122.
 A state of discipline in virtue, from ignorance of the mode, 134.
 From its proving, in fact, a discipline in vice, 145.
 From its being a discipline in self-love, 147.
 No practical, from the scheme of necessity, against religion, 152, 168.
 Against the scheme of Providence, generally mere arbitrary assertions, 176.
 Drawn from seeming irregularities in the moral world, answered by the analogy of the natural, 177.
 Against the dispensations of Providence, how far we are concerned to answer them, 338.
 Against Christianity, from the sufficiency of the light of nature, 191, 192.
 Against its proof, from the supposed incredibility of miracles, 212-220.
 Why the matter of Christianity must appear liable to, Part II, chap. iii.
 From the unequal distribution of religious knowledge, 226.
 From its complex contrivances and slow development, 234.
 From supposed immorality of some of its precepts, 236.
 From its disappointing anticipations, 230.
 From the abuse of miraculous gifts, 231.
 From its being perverted, and having little influence, 199.
 From its mysteriousness, 241, 269.
 From its want of universality, 272-276.

Objections,—continued.

- From supposed deficiency of proof, pages 280-291.
 Against the Scripture doctrine of a Mediator, Part II, chap. v.
 Against Christ's sacrifice, as involving an unjust punishment of the innocent for the guilty, 266.
 This objection, if of force, would hold more strongly against the course of nature, Why? 267.
 Against the particular evidence for Christianity, Part II, chap. vii.
 Against the evidence for miracles, 299-304.
 From enthusiasm, 301-303.
 From the mixture of enthusiasm and knavery, 303.
 From stories of false miracles, 304, 305.
 To the evidence of prophecy, 296-313.
 From the obscurity of some parts of prophecy, 307.
 From the application of particular prophecies not appearing when considered each distinctly, 308, 309.
 From the supposition that the prophets intended something else, 310-312.
 Against Christianity offered in conversation, what advantage they have, 332.

Obligations

- Of duty, arising from the supposable-ness or credibility of religion, 182, 278, 279.
 Our, to the Son and Holy Spirit, from what they arise, 202, 203.

Obscurities

- In the Scriptures, no valid objection against them, 228, 229,

Optimism,

- Religious and irreligious, distinguished, 87 n.

Origen,

- His observation relative to the Scriptures and nature, 37.

Passions,

- As making part of our state of trial, 116.
 Are excited toward particular objects, whether we will or no, 136.
 Bare excitement of, not criminal, 137.
 Yet always dangerous, 137.
 The principle of virtue the intended security against this danger, 137.
 How the fall may be accounted for from them, 139.
 Supposable that they may remain in a future state, 138.
 Are often inconsistent with reasonable self-love, as well as with virtue and religion, 116.

Passive Impressions

- Grow weaker by repetition, 128.
 Were intended to lead to the formation of active, practical habits, 128, 130.

Paul, Saint.

- His testimony: to be considered as detached from that of the rest of the apostles, page 297.
 His epistles: evidence of their genuineness, 296.
 A distinct proof of Christianity to be derived from them, 296.

Perception.

- Our organs of sense merely the instruments of, 55.
 Our power of, in dreams, without the organs of sense, 56.
 Ridiculous to dispute the truth of our perceptions, 364.

Perfect

- Creatures described, 139. May be improved by habits of virtue, 140.
 Moral government, what is, 85.

Perfection

- Of religion, what, 339.
 Of moral government, 85.

Person

- Defined, 60.
 Sameness of, independently of all consideration of consciousness, 357.

Personality,

- Whether constituted by consciousness, 361-363.

Plato

- Quoted, 57, 93.

Pleasure and pain

- The consequence of our own actions, 70.
 The annexing of, to our actions, the proper notion of government, 75.
 Pleasure, attending the gratification of our passions, whether and how far intended to put us upon gratifying them, 74.
 Attached to actions when a *reward*, 85, 98.
 Whether our pleasures overbalance our pains, 340.
 See *Happiness*.

Porphyry.

- His objections to the book of Daniel, 312, 313.

Positive Institutions

- Implied in the notion of a visible Church, 197.
 Are founded on natural religion, as well as on revealed, 207, 208.
 In general, have the nature of moral commands, 207.
 Mankind prone to place the whole of religion in the observance of, without regard to moral, precepts, 208.
 Great presumption to make light of, 210.

Positive—continued.

- Precepts, wherein different from moral, page 206.
- In what cases they must yield to moral, 207, 208.
- Duties, distinguished from moral, 206.
- And moral duties should be compared no further than as they are different, 207.
- Christ's decision upon the relation between them, 209, 210.

Powers

- May be improved by exercise, 127.
- May be overtaken, 145.
- May exist and not be exercised, 49.
- No reason for supposing that death will destroy them, 50.

Practice,

- By what evidence matters of, are determined, 336, 337, 340-342.
- In matters of, their importance is always to be considered, 36, 331.
- In matters of, less proof than convinces judgment should influence behavior, 35, 278, 279, 291.

Precepts,

- None in Scripture, contrary to immutable morality, 237.

Prejudices,

- Several sorts of, 303.
- May hinder us from being rightly informed upon moral and religious subjects, 285, 286.
- Arising from contempt and scorn, weakness of yielding to them, 313.

Present existence

- Affords a presumption of continuance, 47.

Presumption,

- A slight, does not beget that degree of conviction, implied in calling a thing probably true, 33.
- The slightest possible, of the nature of probability, 33.
- That death will destroy us, 50.
- That it will suspend our existence, 62.

Presumptuousness

- Unjustifiable, 83.

Priest,

- Christ described as our, 263, 264.

Probable evidence

- Defined and distinguished from demonstration, 33.
- Foundation of, 33. Relative to finite beings only, 35.
- Men, of necessity, influenced and governed by, both in speculation and in practice, 35, 36.
- Probable proofs, being added together, multiply the evidence, 330.

Probation,

- The peculiar, of persons of a reflective cast of mind, page 284.
- Implied in religion, 290.
- Religion, considered as a probation, has had its end on all persons to whom it has been proposed, with evidence sufficient to influence practice, 342.
- See *Trial*.

Prophecy,

- The primary design of the prophecies recorded in Scripture, 195.
- How they confirm natural religion, 195.
- Proof of foresight from the completion of intelligible parts of prophecy, not invalidated by the obscurity of others, 307.
- The proof of foresight made out by a general completion of, 307, 308.
- The applicability of a long series of, to certain events, a proof that it was intended of them, 308, 309.
- The analogy, in this respect, between prophecy and satirical and mythological composition, 309, 310.
- How particular prophecies were interpreted by the ancient Jews and the primitive Christians, 309.
- Proof from, not destroyed by showing that the prophets applied them to other events than we do, or that we do not apply them to right ones, 310, 311.
- Of the future condition of the Jews, confirmed by their past and present history, 326, 327.
- The qualifications requisite to take the force of the argument from, 327.
- Conformity between the prophecies and the events, not accidental, 330.

Prophet,

- A, compared with a compiler of memoirs received from another person, 310.
- Christ a, in what sense, 263.

Providence,

- Never hasty, 243 n.
- Objections to, useless.
- The course of, progressive, 248.
- See *God*.

Prudence,

- Meaning of the word, 370.
- When a course of action may be called prudent, 342.
- And imprudence, akin to virtue and vice, 90, 369, 370.

Public spirit,

- The true notion of, 101.

Punishment,

- The proper notion of, 76.
- Natural, circumstances in, analogous to what religion teaches of future, 77-81.

Punishment—continued.

- Of vice, as folly, page 89. As mischievous to society, 90, 91. Of vice, *as such*, 91-94.
- Of virtuous persons, and of virtuous actions, by society explained, 91.
- Why, in the natural course of things, punishment does not always reach the vicious, 98.
- Ascribed, in Scripture, to God's justice, 252.
- Future. See *Future Punishment*.
- Vicarious, instances of, in the daily course of Providence, 267.
- As the method of our redemption; the objection against, answered, 266-269.
- What is meant by deserving punishment, 368, 369.

Reason,

- Can, and ought to judge of the meaning, the evidence, and the morality of Scripture, 236, 237.
- Natural tendency of, to prevail over brute force, 99, 100.
- Inability of, to determine for us whether the future punishment of sin could be prevented, 254, 255.
- Hopes and fears of, confirmed by revelation, 257, 258.
- A very incompetent judge of the conduciveness of means to ends, 177.
- Could not have discovered the scheme of Christianity, 203. No presumption against the scheme of Christianity on this account, 213.
- An incompetent judge of what was to be expected in revelation, 222, 223.
- Incompetent to judge beforehand, how revelations should have been left in the world, 226-228.
- Folly of objections to Christianity, upon supposed principles of reason, 349.

Reasoning,

- Upon the principles of others, what it means, 342.
- Abstruse, when necessary in matters of religion, 357.
- Upon the course of nature, without attending to known facts, apt to be fallacious, 37.
- See *Abstract*.

Redemption,

- Scripture doctrine of, stated, 260-265.
- Illustrated by the analogy of natural remedies, 252.
- Agreeable to our natural notions, our hopes and our fears, 256-258.
- The manner of its efficacy not made known, nor discoverable by reason, etc., 265.
- Rashness of seeking to explain it farther than Scripture has done, 265.
- See *Mediator, Punishment, Sacrifice*.

Reflection,

- Our present powers of, not likely to be destroyed or suspended by death, pages 60, 61.
- Does not depend upon our bodily powers of sensation, 62.
- May be improved by death, 68.

Reformation

- Does not always preclude punishment, 256.

Regard

- Due to the Son and Holy Spirit, 202.
- Due to God as Creator, the essence of natural religion, 203.

Relations,

- Of the several species and individuals in the natural world, impossible for us to say how far they extend, 173, 174.
- The revealed relations of the Son and the Holy Spirit to us, 201.
- Duties arising from, strictly moral, 202, 203.

Religion,

- The whole of, consists in action, 288.
- A practical thing, 336.
- Wherein it consists, 336.
- External and internal, 202.
- Essence of natural religion, 202.
- Revealed, 202.
- Wherein the *general spirit* of, consists, 210.
- The perception of, what, 339.
- The stress of, where laid by Scripture, 209.
- In what view considered by Butler, 340.
- How religion presupposes integrity in those who embrace it, 341.
- If founded in God's moral character, 161.
- Implies a future state, 66.
- Would not be proved by even a demonstrative proof of one, why, 66.
- Implies God's government by rewards and punishments, 76.
- Implies God's perfect moral government, 108.
- Proper proof of, in this view, 109-112.
- Collateral and practical proof, 108-112.
- Teaches our being in a state of probation, 113.
- As a matter of fact, proof of, 161.
- Obligations not destroyed by the opinion of necessity, 162.
- Proper motives to, 189, 190.
- Affords distinct particular reasons for miracles, 220.
- Degrees of knowledge of religion different among different men, 272-274.
- Why its evidence may have been left doubtful, 282-287.
- Such doubtfulness does not destroy its obligation, 278.
- Its importance, 189.

Religion—continued.

- Impugned on supposed principles of reason, page 348.
 Origin of, according to history and tradition, 165-217.
 General truth of, proved by a dilemma from its state in the first ages of the world, 165.
 State of, in the heathen world, 191.
 Apparently uncorrupted in the first ages, 165.
Natural, the system of, what, 42, 43, 164, 320.
 Not the only object of our regard, 193.
 Has external evidences, 165.
 Whether it could have been reasoned out, 191, 321.
 Taught by Christianity in its purity, 194, 195.
 How confirmed by the miracles and prophecies recorded in Scripture, 195.
 How promoted by the settlement of a visible Church, 197, 198.
 General proof of, level to common men, 287.
 The obligations of, as included by Christianity, lie obvious to all apprehensions, 354.
 What it teaches of a future life, and what not, 79, 80 n.
 Of the efficacy of repentance, 255.
 The profession and establishment of, how much owing to Scripture, 320.
 Even in countries not acknowledging the authority of Scripture, 321.
 Proof of, from reason, not destroyed hereby, 321.
 Analogy of, properly used to remove objections to revealed, 334, 335.
 Revealed, See *Revelation*.

Religious knowledge.

See *Knowledge—Analogy*.

Remedies,

- Some diseases are, 179.
 Analogy between natural, and Christianity, as a remedial provision for us, 235, 236.
 The provision of, an instance of compassion in the original constitution of the world, 353.

Repentance,

- Its insufficiency to expiate guilt argued from analogy, 257. Argued also from the general sense of mankind, 257.
 Its efficacy, whence derived, 264.

Resignation

- To God's will an essential part of virtue, 147.
 Afflictions, the proper discipline for, 149.
 Prosperity and imagination may give occasion for, 148.

Revelation,

- The particular scheme of the universe cannot be known without, 105.

Revelation—continued.

- Would not have been given if the light of nature rendered it superfluous, page 191.
 Manifestly not superfluous, 192.
 The great service it renders to natural religion, 194-199.
 Republishes and confirms natural religion in its purity, 194-196.
 Supplies new means for its preservation, 197-199.
 If really given, cannot be safely neglected, 194.
 Itself, in what sense miraculous, 215.
 At the beginning of the world, whether miraculous, 215.
 No presumption from analogy against such a, 215.
 Primitive, how far the belief of pure religion in the first age of the world favors the notion of one, 165.
 Historical and traditionary evidence of, as ancient as history, 165, 217.
 The early pretenses of false, probably imply a true one, 165.
 Supposed presumption against, as miraculous, considered, Part II, chap. ii.
 We are incompetent judges of what were to be expected in a, Part II, chap. iii.
 What reason can judge of in a revelation, 236-238.
 Discovers new relations, and consequently imposes new duties, 201-203.
 Probable origin of sacrifices, 264.

Revealed religion

- (The Christian) a fit subject of analogical reasoning, 38.
 What is implied in the scheme of, 42, 43, 204, 205, 212, 241, 242.
 May be considered as wholly historical, 315.
 Summary of, under that view, 315-317.
 Internal, as distinguished from natural, wherein the essence of, consists, 193.
 No presumption against its general scheme from the analogy of nature, 212.
 A particular scheme under the general plan of Providence, 241.
 Consists of various parts, and is carried on through a length of time, 241.
 Supposes mankind in a state of degradation, 234, 250, 259.
 The help of the Holy Spirit necessary to renew our nature, 205.
 Repentance naturally insufficient to present all the bad consequences of sin, 204, 205, 257-259.
 Its dispensation, whether carried on by general laws, 243, 244.
 May appear natural to some beings, 65.
 Evidence of. See *Evidence*.
 Objections to. See *Objections*.
 Analogy of, to natural, and the constitution and course of nature. See *Analogy*.

Rewards and punishments,

According to the natural constitution of things, correspond to virtue and vice, page 98.

Though not equally distributed now, yet, in all probability, will be hereafter, 102.

Hope of reward, a legitimate motive to obedience, 147.

See *Punishment*.

Ridicule,

How, obstructs men's seeing the evidence of religion, 285.

Though applied to show the argument from analogy in a disadvantageous light, yet cannot invalidate it, 75, 346.

Roman Empire,

Plainly, was divided into about ten parts, 312.

Bearing of that circumstance on the prophecy of Daniel, 312.

Rome, Babylon, and Greece,

How noticed in prophecy, 316.

Sacrifices,

Propitiatory, what the general prevalence of, shows us, 257.

How they originated among the Jews, and other ancient nations, 264.

The death of Christ a proper sacrifice, 260-262.

Its efficacy, 264.

Manner of its efficacy not explained, 265.

Objections against it on this ground highly absurd, 265, 266.

See *Mediator*.

Skepticism

Will not justify a presumptuous fearlessness with regard to what may be hereafter, 82.

Implies a general state of probation, in the moral and religious sense, 278, 279.

The immorality and irreligion of skeptics utterly inexcusable, 318.

How far toward speculative infidelity a skeptic can go, who has had true Christianity, with its proper evidence laid before him, and has considered them, 355.

See *Doubting*.

Scorn

Of religion, to what owing, 348-356.

Great weakness to be influenced by it, 313.

Parts of the prophetic writings, why treated with, 223.

Scripture

Considered in an historical view, 315.

How distinguished, by its design, from all other books, 315.

Why it begins with an account of the creation of the world, 315, 316.

Scripture,—continued.

In what view, contains an abridgment of the history of the world, page 316.

With what its notices terminate, 316, 317.

Considering the variety and extent of its matter, its not being confuted from reason, history, or internal inconsistency, is a strong presumption of its truth, 317.

Summary of its contents, 318-320.

Antiquity of its first part, 321.

Its chronology confirmed by the natural and civil history of the world, 321.

Its common history as much confirmed as we could expect by profane history, 322.

Has internal appearance of credibility, 322, 323.

No more appearances of strangeness, or mistakes of transcribers in Scripture, than in other writings of like antiquity, 323.

Credibility of the common history of Scripture, how it gives credibility to the miraculous, 293, 324.

Not always to be interpreted on the same rules as a common book, why? 211, 310, 311.

Its relations of miracles not easily accounted for on the supposition of their falsehood, 293, 294.

The truth of them, the obvious and direct account of their composition and reception, 294.

The profession and establishment of natural religion, how far owing to, 320.

Some precepts of, matters of offense, why? 237.

The province of reason to judge of its morality and evidence, 236-238.

May contain things not yet discovered, 233.

The ordinary means of discovering its meaning, 233.

The duty of searching, 211.

When we may determine the seeming meaning, not the true one, 202.

Its authority, the only question concerning, 227.

See *Analogy—History—Inspiration—St. Paul's Epistles—Prophecy—Revelation*.

Self,

Invisible, 50. Its sameness does not depend on the sameness of the body, 52, 53.

Self-denial,

The fact that it is necessary for our present happiness, makes it credible that it may be likewise necessary for our future, 115, 116, 120-122.

Necessity of, argued from the nature of particular affections, 139.

Productive of resignation to God's will, 147.

Self-love,

- Reasonable, is coincident with virtue, page 137 n.
- Is daily seen to be overmatched by passion, 116, 137 n.
- No cause for its being disclaimed by moralists as a motive, 138 n.
- Has need to be approved and disciplined, 137 n, 148.

Shaftesbury, Lord,

- His writings referred to, 87.

Simplicity,

- Of a living agent, argument to prove, 51.

Sin,

- Why not kept out of the world, 179.

Son of God

- The gift of the, to the world, 258.

Sorrow

- Cannot of itself restore abused benefits, 255.

Soul,

- A simple substance, 51.
- Not destroyed with the body, 48.
- Not naturally immortal, 50.
- Brutes, souls of, 58.

- Speaking with tongues, 231.

- Special interpositions of Providence, 179, 180.

- Speculative difficulties similar to external temptations, 282.

- The chief trial of some, 284-286.

- Spread of Christianity unaccountable if it were an imposture, 325.

- Stages of existence, 46.

- Standing ministry, what for, 197.

- State of probation, chap. iv.

- State of discipline and improvement, chap. v.

- Strangeness of some Scripture events, 323.

- Stupidity of the martyrs, if insincere, 299.

- Submissive temper necessary, 149.

- Subordinations exceedingly beneficial, 132.

- Subserviences in nature, 174.

- Subserviences, the world a system of, 247.

- Success, temporal, always uncertain, 340.

- Sufferings may be avoided, 70.

- Not necessary to the cultivation of virtue, 113.

- Suffering, ignorance does not prevent it either in temporal or spiritual things, 204.

- Sufferings of Christ vindicate God's law, page 267.

- Sufferings of the early Christians, 299.

- Sufficiency of light of nature pretended, 191.

- Summary of Jewish history, 318.

- Of the historical evidence of Scripture, 328.

- Supernatural instructions necessary from the first, 216.

Temptations,

- Implied in the idea of a state of probation, 114.

- Sources of our, 115-117.

- Those of our temporal and of our religious trial compared, 115-122.

- A means of disciplining the moral principle, 143, 144.

- Virtuous habits the proper security against, 136, 137.

- The supposition of them lessens, in certain cases, the perception of ill-desert, 369.

Tendency,

- Ambiguity of the word, 111 n.

- Tendencies of virtue will probably hereafter become effect, 111.

Testimony,

- When only it can be destroyed, 306.

- See *Evidence, Evidence of Christianity.*

Trial,

- Our, in our temporal, compared with that in our religious capacity, 115-118.

- Proceeds in both from the same causes, and has the same effect upon behavior, 117, 118.

- Difficulties of, increased by misbehavior of others, 118. Also by our own errors and follies, 119.

- Equitableness of our present state of, vindicated, 118, 119.

- Not possible for us to understand all the reasons of our being placed in, 124.

- End* of, our improvement in virtue and piety, as a qualification for a future state, 125.

- May also be intended for the manifestation of our characters to the rest of the creation, 151.

- The present state of the evidence of religion may be part of some men's trial, 276-287. And perhaps the chief part, 284, 285.

- Difficulties of belief afford a trial analogous to external temptations, 282-285.

Ultimate

- Design of man, 74 n.

Understanding,

Our probation with regard to the exercise of the, pages 277, 278.
May be perverted, 166.

Uneasiness produced by former sins, 88.

Union of good beings, 104.

Universality,

Objections to Christianity from the want of, considered, 271-291.

Universe and its government immense, 105.

Unjustifiableness of religious indifference, 83.

Upright creatures may fall, 139.
Need good habits, 140.

Vegetables,

The destruction of, not analogous to the death of living agents, 64.

What is meant by their identity, 359, 360.

Veracity,

Our natural regard to it, 373. When violated, 375.

Vice,

What it chiefly consists in, 368.

Does not consist merely in the intention to produce unhappiness, 372.

Whether folly be a species of it, 369-372.

Manner in which the habit of it is formed, 139, 140.

This life is to some practically a discipline in, 145.

Punished as imprudent, 89. As hurtful, 90. As vice, 92-97.

Whether ever rewarded as such, 92-98.

How the appearance of it is brought about, 98.

The pleasures of it scarce worth taking into account, 189.

Passion a sorry excuse for it, 189.

Natural bad consequences of, to be esteemed judicial punishments inflicted by God, 204.

Private, may be public benefits, and yet upon the whole it were more beneficial that men would refrain from them, 179.

Hinderances of its complete punishment *accidental*, 99-109.

Must be the misery of every creature, 41.

Considerations showing its enormity, 253.

Vicious

Actions never rewarded by society *because* they are vicious, 91.

Persons, prosperity of, reconciled with moral government, 98.

Viciousness

Of the world fits it for a state of trial to good men, page 146.

Virtue,

Possibility of exceptions to the happiness of, 88.

Social advantages of, a proof of an established moral government, 94.

Conditions necessary to its complete triumph over vice, 100, 101.

Its natural tendencies hindered in our present state, 103. May be more advantageously situated hereafter, 104.

A bond of union among all endured with it, 104.

Happy effects of, set forth in the instance of a perfectly virtuous kingdom, 105, 106.

Habit of, not formed by merely thinking and talking of virtue, 128.

And piety a necessary qualification for a future state, 135. Our capacity of improvement therein, by moral and religious habits, 135. Necessity of improvement argued, 136-142.

Habit of, the security against the undue operation of particular affections, 137-141.

There is a universally acknowledged standard of, 367.

Corresponds to our notion of good desert, 368.

Common instances of, do not raise a strong perception of good desert, and why, 369.

Prudence a part of, 371, 372.

Does not consist entirely in benevolence, 372, 373.

Virtuous

Actions never punished by society *because* they are virtuous, 91.

Persons, afflictions of, how reconciled with moral government, 98.

Beings need virtuous habits, 142.

Habits a security, 138. How formed, 128. Improve virtue, 138. Necessary in a future state, 135.

Virtue and Vice

Are, in the natural course of things, rewarded and punished, *as such*, 91.

As qualities of actions, effects of, on men's minds, 92, 94, 96.

Tendency of, to produce their effects in a greater degree than they do at present, 99-108.

Overbalance of happiness or misery not the standard of, 373, 374.

Voice of nature is for virtue, 99.

Warburton, Bishop,

Quoted, 91 n, 232 n.

Waste of seeds, 146.

Waterland, Dr.,

Quoted, page 202 n.

Whately, Archbishop,

Quoted, 217 n.

Wickedness,

May produce some benefits, 179.

Voluntary, 124.

Will and Character,

Explained, 160 n.

May be affirmed of the Author of Nature, notwithstanding the scheme of necessity, 160.

World,

The present, fit to be a state of discipline for moral improvement, pages 142-145.

A theater for the manifestation of persons' characters, 150.

Natural, intended to be subordinate to the moral, 174.

History of, how viewed in Scripture, 315.

Governed by fixed laws, 90.

Wickedness of, 259.

Youth.

The great importance of right direction in, 78, 132, 133.

Its beneficial subordinations, 132.
