Buckland's enthusiastic geological labours were recognised at Oxford in 1813 in his appointment to the Readership of Mineralogy. Six years later he was appointed to the newly endowed chair of geology. He became a very popular lecturer, making use of every available means to impress his ideas upon his class. When he failed to obtain actual specimens for exhibition he made a free use of pictures. His genial good-humour invariably aroused the sympathy of his hearers, upon which he appears to have been somewhat dependent. He once observed that he felt nervous in addressing large assemblies till he had once made them laugh, and then he was entirely at his ease. Sir Henry Acland relates his first experience at one of Buckland's lectures:—"He lectured on the cavern at Torquay, the now famous Kent's Cavern. He paced like a Franciscan preacher up and down behind a long show-case, up two steps, in a room in the old Clarendon. He had in his hand a huge hyena's skull. He suddenly dashed down the steps, rushed, skull in hand, at the first undergraduate on the front bench, and shouted 'What rules the world?' The youth, terrified, threw himself against the next back seat and answered not a word. He rushed then on me, pointing the hyena full in my face, 'What rules the world?' 'Haven't an idea,' I said. 'The stomach, sir,' he cried (again mounting his rostrum), 'rules the world. The great ones eat the less, and the less the lesser still.'"

Buckland's sense of humour prevented him from attitudinising after the manner of professional scientists. He was free from the faintest taint of pedantry. A letter written by him when upon a French tour in 1820 so well exhibits his saving grace and his sharp

observation of human nature that a short extract from it may be quoted:—"Three days brought me from London to Paris, where my first business was to call on Cuvier, who after receiving me with the greatest cordiality, and saluting my cheeks with more than English familiarity, immediately made a dinner for me, inviting Humboldt, Biot, Cordier, Bowditch, the African traveller, Frederick Cuvier, and several others of the savants of Paris, and giving me admission to the entire establishment of the Jardin du Roy. . . . I admired exceedingly the French style of lecturing, the manner and matter are extremely good, but the classes as ill-looking and ungentlemanly a set of dirty vagabonds as ever I set eyes on, and not more numerous than my own at Oxford. I attended also a meeting of the Institute, at which was announced the death of poor Sir Joseph Banks, who is not less regretted in France than in our own country. I saw there Gay Lussac, Menard, Vauquelin, Henry Raymond, Brockard, Bindon, and most of the first scientific men of France, whose love of science, however, does not induce them to attend without receiving about eight shillings a head for their hour's work. . . . I find them (the geologists) all most deplorably deficient in knowledge of their country, as well as in general geology. Our Society would number at least thirty members that would beat the best of them, and never did I feel myself more highly gratified in the article of pride than I was by the manner in which they flocked round me to propose their difficulties, and the passive obedience with which they received my oracular decisions."

In 1818 Buckland was elected a Fellow of the Royal Society, and in 1822 he communicated to the Society his paper describing the Kirkdale Cave, which was the first fossil cave known in England. A complete description of it and numerous other similar caves appeared in his "Reliquiæ Diluvianæ," published in 1823. No pains were spared by the author to verify his conclusions before giving them a place in this important work. In order to satisfy himself that the bones found in Kirkdale Cave were really the remains of animals devoured by hyenas, he procured a Cape hyena and supplied it with shins of beef, and compared the teeth marks on the bones with those observed on the fossils. The book achieved such a remarkable success that a second edition was required before the end of the year. In acknowledgment of a presentation copy the Emperor of Russia gave the author a gold snuff-box set with mosaic.

Through the instrumentality of Buckland and a few of his friends the Geological Society was incorporated by Royal Charter in 1825. He was elected the first President, and Charles Lyell one of the secretaries.

In the same year Professor Buckland was appointed to a canonry at Christ Church, Oxford, and received the degree of Doctor of Divinity. It was also during this year that he married Miss Morland, a lady who was almost as enthusiastic a scientist as himself. Of the many anecdotes illuminating the different phases of Buckland's character, perhaps the best is the one which deals with an incident of his wedding tour. When at Palermo he visited the shrine of Rosalia, the patron saint of the city, in which her bones were deposited in such a manner as to be visible to the pilgrims. Upon seeing these sacred relics the Oxford professor exclaimed, "Those are the bones of a goat, not of a woman!" This bold statement caused so great a scandal that the priests forthwith had the precious relics enclosed in a casket to screen them alike from the adoring gaze of the faithful and the sceptical scrutiny of the heretic.

Brewster's notion that "a craft should be built wherein the united crew of British science could sail" was heartily supported by Buckland. He was, therefore, bitterly disappointed because he

was unable to attend the inaugural meeting of the British Association at York in 1831. In the following year, however, when it met at Oxford, he was elected president, and he exerted all his influence to ensure a successful meeting. On the last day of what proved to be a most memorable gathering he delivered his celebrated lecture on the megatherium, which called forth the encomiums of Sir Charles Lyell in his letter to Mantell on the following day:—"Buckland," he wrote, "was really powerful last night on the megatherium—a lecture of an hour before a crowded audience; only standing room for a third. Lots of anatomists there; paper by Clift; the gigantic bones exhibited, and still to be seen there, but likely to be removed by-and-by. Buckland made out that the beast lived on the ground by scratching for yams and potatoes, and was covered, like an armadillo, by a great coat of mail to keep the dirt from getting into his skin as he threw it up. As he was as big as an elephant, the notion of some that he burrowed underground must be abandoned. 'We may absolve him from the imputation of being a borough-monger; indeed, from what I before said, you will have concluded that he was rather a radical.' He concluded with pointing out that as the structure of the sloth was beautifully fitted for the purpose for which he was intended, so was the megatherium for his habits. 'Buffon, therefore, and Cuvier even, in describing the sloth, and Cuvier the megatherium' as awkward, erred. They are as admirably formed as the gazelle,' etc. It was the best thing I have ever heard Buckland do."

On the occasion of Agassiz's first visit to this country in 1834 he became Buckland's guest at Christchurch. This was the beginning of a friendship which not only gave intense satisfaction to the two friends, but conferred a lasting benefit upon natural science. The unselfishness and sincerity of the older man found expression in the unstinted trouble he took in introducing Agassiz to all the material in this country which was serviceable to him in the preparation of his work on fossil fishes and in the frankness with which he accepted Agassiz's glacial theory, when once he was satisfied with regard to the soundness of the arguments in its favour.

The services rendered by Buckland to agriculture were, perhaps, greater practically than those he rendered to geology. He was greatly interested in land drainage, especially as applied to the reclamation of bogs, being convinced that "there can be no question but that it would be a natural advantage to convert to the purposes of supplying food to man those bleak, barren and dreary wastes which now answer no other purpose than that of supplying fuel." In 1845, when the potato disease was rampant, he made a thorough study of the matter and delivered a lecture upon it before the Ashmolean Society. This lecture he afterwards printed and circulated throughout the whole of England. One of his most useful contributions to practical agriculture was his demonstration that coprolites were the fossil dung of extinct animals. He succeeded in convincing Liebig of the truth of this. Upon his return to Germany Liebig put the matter to the test by subjecting coprolites to analysis and found that they contained a large amount of phosphate of lime. "This was the origin," says Lord Playfair in a letter to Mrs. Gordon, "of the great industry of superphosphates which has done so much for agriculture."

The Bridgewater Trustees, in 1830, invited Professor Buckland to write one of the eight treatises to "justify the ways of God to man." The work—"Geology and Mineralogy Considered with Reference to Natural Theology"—occupied him six years and, when published, created no small stir among those whose thoughts had not been previously directed to the researches of the author and his fellow labourers. Buckland's reputation as a writer probably rests more largely upon this treatise than upon any other of his many publications.

When over sixty years of age (1845) he was appointed, on the advice of Sir Robert Peel, to the Deanery of Westminster. The enthusiasm with which Buckland entered upon his new duties never failed until the mysterious depression and the clouded gloom of evening settled upon him. He set about the reformation of Westminster School; he gave great attention to the repair of the Abbey and its monuments and made many improvements in the organ. Mrs. Buckland started a coffee house in Pye Street, which, however, did not benefit the class for which it was intended [and was, therefore, subsequently converted into an industrial school for street boys. In connection with this philanthropic work Mrs. Buckland received much good counsel from Dean Hook, in one of whose letters to her occurs this noteworthy exhortation: "Be thankful for your successes, ignore your failures and always be attempting something new."

Almost the last important occasion on which Dean Buckland appeared in public was when the Wollaston medal was presented to him in 1848. Shortly afterwards his strange illness attacked him and as it refused to yield to treatment, his medical advisers recommended his removal to the rectory at Islip, where he passed away in 1856, at the age of seventy-three.

Buckland had honours bestowed upon him by almost every scientific society of renown, both British and foreign. He was a Fellow of the Royal Society; he was a member of the council for twelve years and a vice-president for one year (1832-33). Twice he was president of the Geological Society. The Royal Society's catalogue of scientific papers enumerates fifty-two papers of which he was the author.

RECENT WORK IN ORGANIC CHEMISTRY.*

BY HAROLD BROWN.

It is impossible, within the limits of a short report, to give a connected account of recent work in organic chemistry. I have therefore selected two of the more interesting pieces of work, and propose to deal with them in some detail. The first is the discovery of a new dibasic acid, resulting from the oxidation of tartaric acid, communicated to the Chemical Society by H. J. H. Fenton, M.A.

A New Dibasic Acid

The discovery of this new acid resulted from the observation made some time ago by Mr. Fenton (*Chem. Soc. Proc.*, 1893, 113) that when tartaric acid is treated with certain oxidising agents in presence of ferrous iron, a solution is obtained which gives a beautiful violet coloration on the addition of caustic alkali. Out of a large number of organic acids examined, only tartaric behaved in this way, and the reaction was suggested as a test for this substance. To a solution of the acid is added a drop of FeSO_4 solution, then a drop of H_2O_2 , and the liquid made alkaline with KOH .

Other oxidising agents may be employed, but H_2O_2 was found to give the best results. The colour is destroyed by acids, but restored by alkalis, while excess of ferrous salt or oxidising agent prevent or destroy the effect.

It was found that the iron could be precipitated from the acid solution by $\text{K}_4\text{Fe}(\text{CN})_6$. The filtered liquid possessed powerful reducing properties, and gave with FeCl_3 and alkali a violet colour. From a series of experiments made with standard solutions of $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$, FeSO_4 , and H_2O_2 , it was found that the maximum colour effect was produced when the $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$ and H_2O_2 were present in the ratio of one molecule of the former to one atom, or rather more, of available O; and the colour completely disappeared when the

* Report on Organic Chemistry read before the School of Pharmacy Students' Association, on June 11, 1896.

ratio was one molecule of acid to five atoms of available O. The amount of ferrous salt present could be considerably varied without affecting the above ratios, and it appeared that only a very small quantity of FeSO_4 was necessary to determine the oxidation of a large quantity of $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$ in this direction.

The isolation of the colour-giving substance was somewhat difficult to accomplish, owing to the instability of the solution. Several methods were tried, of which the following gave the best results.

Finely-divided iron (ferrum redactum) is added to a strong solution of $\text{H}_2\text{C}_4\text{H}_4\text{O}_6$, and the liquid boiled until the iron disappears. The liquid is filtered, cooled by being surrounded with ice, and the requisite quantity of H_2O_2 (20 vols.) added in small quantities at intervals of a few minutes. Nordhausen H_2SO_4 is then added through a thistle funnel in small quantities at a time, cooling between each addition.

This liquid, after standing surrounded by ice for a few hours deposits crystals—at first often small and discoloured, but the succeeding fractions beautifully white and pure. The crystals are washed with cold water and dried on filter paper exposed to the air. (For further details see *Chem. Soc. Trans.*, 1894, 899.)

The substance thus obtained is a shining crystalline mass with pearly lustre, undergoing no change on exposure to air at the ordinary temperature. It is sparingly soluble in cold water, ether, or acetic acid; more soluble in ethylic or methylic alcohol, warm water, or hot acetic acid.

The aqueous solution has an acid taste and gives acid reactions with indicators. It reduces silver, cupric and mercuric salts, etc. The solution in warm water is extremely unstable, splitting up almost quantitatively into glycollic aldehyde and CO_2 . The crystals give off water when heated or placed in vacuo over H_2SO_4 , a white amorphous powder being left.

Bromine in presence of water oxidises the acid quantitatively to dihydroxytartaric acid. Reduction with HI yields finally succinic acid, while if the action is limited racemic acid is formed. The acid also readily reacts with NH_2OH or $\text{N}_2\text{H}_3\text{C}_6\text{H}_5$ to form crystalline products. FeCl_3 gives a blackish colour with the free acid, changing to the characteristic violet colour on addition of caustic alkali.

To determine the composition of the acid—

- I. Analyses were made of the crystals, thoroughly air-dried.
- II. The water present in the crystals was determined,
 - a. By standing in vacuo over H_2SO_4 until the weight was constant.
 - β . By heating in dry H until of constant weight.

These experiments proved that the substance cannot be completely dehydrated in vacuo over H_2SO_4 .

- III. Analyses were made of the dehydrated substance.

The results of these analyses gave the empirical formula $\text{C}_2\text{H}_2\text{O}_3$ for the dehydrated acid, and $\text{C}_2\text{H}_2\text{O}_3 \cdot \text{H}_2\text{O}$ for the crystals.

The next point to determine was the molecular weight of the acid. Attempts were made to take the vapour density of the methylic salt, using both Hoffmann's and Dumas' method. These, however, were unsuccessful. The next experiments were made by the vapour-pressure method of Ostwald, using absolute alcohol as the solvent. Owing to difficulties in manipulation the results obtained were not very satisfactory, and values for the molecular weight were obtained, varying from 232 to 131. The mean value, however, indicated the molecular formula $\text{C}_4\text{H}_4\text{O}_6 = 148$.

Freezing-point determinations could not be made with the acid itself, owing to its sparing solubility in all the usual solvents. The boiling-point method was therefore tried, using a solution of the dried acid in absolute alcohol. The values found for the mole-

cular weight varied from 205 to 126, the mean again indicating the formula $\text{C}_4\text{H}_4\text{O}_6$.

The most satisfactory results were obtained by using the methylic salt of the acid. This dissolves fairly well in melted phenol or naphthalene, so that its molecular weight can be determined by the freezing-point method. The values obtained varied from 209 to 179. The molecular weight of $\text{C}_4\text{H}_2(\text{CH}_3)_2\text{O}_6 = 176$.

The ammonium, sodium, barium, and methylic salts of the acid were prepared and analysed. The numbers obtained corresponded very closely with those required by the following formulæ:—

The free acid was also titrated with a standard solution of NaOH , and the amount of the latter used in neutralisation agreed very closely with the theoretical required for a dibasic acid of formula $\text{C}_4\text{H}_4\text{O}_6$.

These results prove that the acid is dibasic, and that the molecular formula of the dehydrated acid is $\text{C}_4\text{H}_4\text{O}_6$, that of the crystals being $\text{C}_4\text{H}_4\text{O}_6 \cdot 2\text{H}_2\text{O}$.

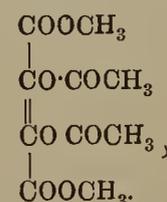

Constitution of the Acid.—Taking the foregoing facts into consideration, it is evident that only two formulæ can be suggested for the acid:—

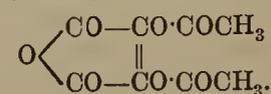

The first represents it as a ketone acid, containing one alcoholic hydroxyl group, and formed from tartaric acid by the oxidation of one CHOH group to CO . The second represents it as an unsaturated acid, containing two alcoholic hydroxyl groups, and formed by the removal of the two non-hydroxylic H atoms from the two CHOH groups in tartaric acid. The readiness with which the acid reacts with $\text{N}_2\text{H}_3\cdot\text{C}_6\text{H}_5$ and NH_2OH seemed to favour the ketone formula. On examination of the crystalline products of these actions, however, it was found that they were not the hydrazone and oxime but the normal phenyl-hydrazine and hydroxylamine salts of formula $\text{C}_4\text{H}_4\text{O}_6 \cdot 2\text{N}_2\text{H}_3\text{C}_6\text{H}_5$ and $\text{C}_4\text{H}_4\text{O}_6 \cdot 2\text{NH}_2\text{OH}$. The absence of a ketone group was further indicated by the fact that neither $\text{N}_2\text{H}_3\text{C}_6\text{H}_5$ or NH_2OH had any action upon the methylic or ethylic salt of the acid.

To determine the number of alcoholic hydroxyl groups present, the action of acetyl chloride on the free acid and its methylic salt was carefully examined, as well as the action of acetic anhydride and benzoyl chloride on the free acid.

By treating the methylic salt of the acid with acetyl chloride a crystalline product was obtained, which after purification by recrystallisation from hot water was analysed, and gave numbers corresponding to a di-acetyl derivative of formula—

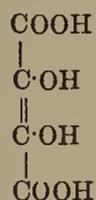

By acting upon the free acid with acetyl chloride or acetic anhydride, the di-acetyl anhydride was obtained—

Benzoyl chloride and the free acid gave a corresponding di-benzoyl anhydride.

From these results it is clear that the acid contains two alcoholic hydroxyl groups.

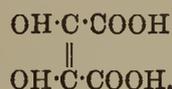

Taking all these points into consideration it is evident that the formula of the acid must be represented as—

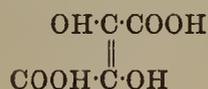

and that it is therefore dihydroxymaleic or dihydroxyfumaric acid.

The readiness with which the acid yields anhydrides on treatment with acetyl chloride, etc., is evidence in favour of the maleinoid constitution. This was further supported by the instability of its aniline salts. It has been shown that the aniline salts of acids of the maleic series are much less stable than those of the isomeric acids of the fumaric series.

The acid, therefore, appears to be dihydroxymaleic, and its formula must be further written—

The isomeric form of the acid, *i.e.*, dihydroxyfumaric of formula—

has been obtained by Mr. Fenton (*Chem. Soc. Trans.*, 1896, 560).

Recent Work on the Celluloses.

The second investigation to which I should like to direct your attention is the recent work upon the celluloses, which has been carried out by a number of workers, chief among whom are Messrs. Cross, Bevan, and Beadle.

At the present time we know very little indeed of the constitution of the celluloses, or of their relationships to the simpler carbohydrates. Much progress has been made recently, however, and it is hoped that the investigations now being conducted will throw considerable light on these problems. The investigation is a very wide one, and I can only indicate the main lines upon which it is proceeding.

The celluloses are divided into two main groups, according to their behaviour with hydrolytic agents:—

I. Celluloses resisting hydrolysis (chiefly fibrous celluloses).

II. Celluloses easily hydrolysed (chiefly cellular celluloses).

The latter group are celluloses of the starch type of aggregation, and yield, upon hydrolysis, hexoses and pentoses. They are known as hemicellulins. The first group is divided into three sub-groups, as follows:—

	A. Cotton Sub-group.	B. Wood Cellulose Sub-group.	C. Cereal Cellulose Sub-group.
Type	Cotton	Jute cellulose	Straw cellulose
Percentage { C	44-44.5	43-43.5	41-42
{ O	50	51	53
Yield of furfural on treatment with dilute acid	1-4 p. c.	3-5 p. c.	12-15 p. c.
Other characters ..	Quantitative regen- eration from solu- tion as xanthate	Partly hydrolysed by xanthate pro- cess	Considerably hy- drolysed by xan- thate process

The above is the classification adopted by Messrs. Cross, Bevan, and Beadle (*Chem. Soc. Trans.*, 1895, 439). It must be remembered that cellulose rarely occurs in plants in a perfectly pure condition,

usually containing other bodies mechanically bound up with it or chemically combined. The latter class are known as the compound celluloses, and occur in lignified and cuticularised tissue, etc.

Hydrolysis of Cellulose.—Cellulose, *i.e.*, typical cellulose as represented by cotton, shows a marked difference from starch in its resistance to hydrolysis. The problem of the hydrolysis of cellulose has great importance from a constitutional standpoint and has been attacked by various methods. Chief among these is the cycle of changes involved in what is known as the thio-carbonate reaction. When cellulose interacts with alkaline hydroxides in strong aqueous solution combination takes place in the ratio $\text{C}_6\text{H}_{10}\text{O}_5 : 2\text{NaOH}$ —the product being known as alkali-cellulose. This compound is decomposed by treatment with water and the cellulose is regenerated in a hydrated form, its composition changing to $2\text{C}_6\text{H}_{10}\text{O}_5\cdot\text{H}_2\text{O}$.

If the alkali cellulose is exposed to the action of CS_2 vapour, action occurs, and after an hour or two a yellow mass is obtained which swells up on treatment with water and finally completely dissolves. This soluble compound is a cellulose thio-carbonate, having the formula $\text{CS} < \begin{array}{l} \text{OX} \\ \text{SNa} \end{array}$, where X is the acting cellulose unit. This, however, is not a normal cellulose but an alkali-cellulose; hence we may write the formula $\text{CS} < \begin{array}{l} \text{O} \\ \text{SNa} \end{array} (\text{X}\cdot\text{ONa})$ which would represent the compound as the sodium salt of alkali-cellulose xanthic acid.

This product can be easily purified and on dissolving in water again a solution of extraordinary viscosity is obtained. The solution coagulates on standing or on heating, a hydrated cellulose separating. This is due to a dissociation of the substance into its constituents, *i.e.*, hydrated cellulose, NaOH and CS_2 . Coagulation may also be brought about by various reagents.

By putting celluloses belonging to the different groups through these changes and examining the regenerated celluloses the following facts have been ascertained:—

I. Celluloses of the cotton group pass through this cycle of changes without undergoing hydrolysis to form soluble derivatives.

The cellulose regenerated by this process from Swedish filter papers indicated an increase in weight of 1.1 per cent. From analyses of the regenerated substance its formula was found to be $4\text{C}_6\text{H}_{10}\text{O}_5\cdot\text{H}_2\text{O}$. The calculated increase in weight for this formula is 2.7 per cent. Slight hydrolysis to soluble products appears therefore to occur—falling no doubt on the oxy-celluloses invariably present. This, however, takes place to such a small extent that the normal celluloses may be said to be quantitatively regenerated from the xanthate solution—

II. Celluloses of the other two groups are partially hydrolysed, and the regenerated cellulose is different from the original, chiefly in respect of furfural yielding groups.

Specimens of these two groups were put through the xanthate process, and the regenerated cellulose examined for furfural yielding groups. These were found to be present in greatly diminished proportion—

		Furfural from original cellulose.	Furfural from regenerated cellulose.
(1) Cellulose from Pinus	B.	5.5	2.0
(2) " " Esparto	C.	13.5	5.0

The furfural yielding groups appear, therefore, to undergo hydrolysis in the process of conversion into xanthate, forming soluble derivatives.

In addition to which the cellulose undergoes change—probably deoxidation—which considerably diminishes the total yield of furfural. Thus

Esparto Cellulose (100)

dissolved as xanthate gives, on decomposition,

Insoluble cellulose (80) Soluble derivatives (20)
Yielding furfural 2 per cent. Yielding furfural 26.2 per cent.

The total amount of furfural from the products formed is, therefore, 6.84 per cent. The amount of furfural yielded by the cellulose in original state was 13.6 per cent.

Acid Hydrolysis.—In behaviour with acids typical cellulose again exhibits a marked difference from starch. Dilute acids have scarcely any action upon the cotton celluloses, the yield of furfural by this treatment being only .1 to .4 per cent. This slight hydrolysis is probably due to the oxy-celluloses present. Concentrated H_2SO_4 dissolves the cotton celluloses, forming a colourless solution. The products of this action depend upon the temperature and duration of the experiment. Stated briefly, they are sulphates of a series of compounds, of which celluloses and the dextrins are the extreme terms. By long-continued action the cellulose undergoes hydrolysis with the formation of dextrose.

The celluloses of groups B and C undergo partial hydrolysis with formation of soluble derivatives on treatment with dilute acids. The action is most pronounced in the case of the cereal celluloses, which yield by this process 12 to 15 per cent. of furfural.

In a recent paper communicated to the Chemical Society, but, unfortunately, not yet published, Messrs. Cross, Bevan, and Beadle have shown that by treatment with dilute acids the cereal celluloses may be resolved into soluble derivatives of their furfuroid constituents, leaving a residue of normal cellulose. The best method of effecting this is to treat with 1 per cent. H_2SO_4 for fifteen minutes at a pressure of three atmospheres.

The furfuroid produced was examined and shown to be a pentose mono-formal— $C_5H_8O_3 \left\langle \begin{array}{c} O \\ \diagup \quad \diagdown \\ O \end{array} \right\rangle CH_2$. The formaldehyde residue is not split off, but remains united by oxygen with the pentose residue which is simultaneously formed. Such a compound has the empirical formula of a normal cellulose, and could arise within a cellulose complex by transformation of the terminal CH_2OH group of a hexose molecule.

The Esters of Cellulose.—The determination of the number of OH groups in the cellulose unit is a matter of great importance in attacking its constitution. For a long time it was held that the unit formula was $C_6H_7O_2(OH)_3$, the highest known esters being the tri-nitrate and the tri-acetate.

Recently, however, Cross and his associates have shown that a tetracetate of formula $C_6H_6O(OAc)_4$ can easily be obtained. The substance possesses the characteristic properties of a cellulose compound, and it therefore appears that the special configuration of cellulose is maintained when four OH groups in the unit formula are replaced by negative radicles. The unit group of cellulose must therefore be written $C_6H_6O(OH)_4$, and if the remaining oxygen is present as a CO group, cellulose cannot be a polyaldose.

The following conclusions may be drawn from our present knowledge of the subject:—

I. Cellulose is differentiated in a most marked way from starch, and has the characteristics of a homogeneous compound rather than an aggregation of aldose groups.

II. Since it forms derivatives of general formula $n(C_6H_6O(OH)_4)$ without loss of any of the characteristic properties of cellulose compounds, it is probable that the synthesis of the individual C_6 -groups takes place by carbon and not by oxygen linkings.

III. The reactions of cellulose cannot at present be expressed by any constitutional formula. It has been shown, however, that of the four OH groups in the C_6 -unit two are basic and two acidic.

PARLIAMENTARY NOTES AND NEWS.

THE HOUSE OF LORDS Select Committee on the Companies Bill has quickly set to work, and at its meeting on the 19th instant, took the evidence of Mr. Budd, the President of the Incorporated Law Society, who, on behalf of his Society, objected to a number of clauses in the Bill as being likely to act prejudicially to *bona-fide* private companies. The evidence, as was natural, was of a very technical nature, and for the most part without interest to pharmacists. One or two things, however, transpired which are significant as showing the trend of opinion in commercial circles. Mr. Budd's objection to the compulsory publication of balance-sheets, for instance, on the ground that it would involve the disclosure of trade secrets and business details to rival traders, may be expected to have considerable weight with a committee including so many members of private companies. Mr. Budd may also be regarded as expressing the opinion of a large number of influential persons when he said that it would not be a bad thing to stop rotten companies altogether, but the difficulty is how to do it. In fact there appears to be a disposition to allow the tares to flourish for fear of spoiling one or two ears of wheat. Mr. Budd's examination is to be continued on the 25th instant.

EVIDENCE BEFORE THE COMMITTEE.—It is satisfactory to notice that the evidence to be taken before the above Committee will be quite open, and that the minutes will be printed for the use of the members of the House of Lords. Copies will not, however, be delivered except to members of the Committee, or to such other persons as the Committee may think fit. It will probably be of especial interest to chemists to learn that the President of the Pharmaceutical Society (Mr. Walter Hills) and Mr. Carteighe were among those present in the Committee Room during the examination of the Law Society's representative.

THE COURSE OF BUSINESS.—The uncertainty of things Parliamentary is almost proverbial, in fact, there is no department of human activity in which it is so unsafe to prophesy. Last week, on the public announcement of Mr. A. J. Balfour, we referred to the "winter session" which was to be utilised for the disposal of Government remanets. It now appears, however, that the finely-laid scheme of the First Lord of the Treasury has, like the Education Bill, been ruthlessly sacrificed upon the altar of expediency, and that there will be no supplementary sitting of the present session in January next. One would imagine that with Agricultural Rating, Finance, Light Railways, Irish Land, and other big measures there would be plenty of material for a supplementary sitting, even without taking into account the time which must be consumed in voting supplies.

POPPY CULTIVATION.—Replying to Sir W. Lawson (Cockermouth), who asked the question on behalf of Mr. H. J. Wilson (Holmfirth Div.), the Secretary of State for India (Lord G. Hamilton) stated in the House of Commons on Thursday last, that the total area under poppy cultivation in Behar and Benares during the last three seasons was:—1893-4, 458,181 acres; 1894-5, 513,804 acres; 1895-6, 519,072 acres. These figures show an increase of more than 60,000 acres during the past two years.

EARLY CLOSING.—As an item of news it may be noted that the Shops (Early Closing) Bill, which was fixed for consideration on the 16th inst. and deferred to the 17th, then further deferred till the 24th, was again put off till Thursday, the 25th inst. The Shop Assistants Bill has been deferred from time to time, and is now down for second reading on Monday, 29th inst.

COPPER IN PEAS.—Mr. G. Whiteley, who represents Stockport, has directed attention to the official condemnation of preserved peas by the London County Council, and to the fact that grocers are subject to prosecution for selling preserved peas, in the preparation of which sulphate of copper has been used. This he considers unfair, seeing that in France, the United States, and other countries, the amount of sulphate of copper used for the purpose is regarded as harmless, and that the Glasgow justices are apparently of the same opinion. The honourable member is hoping to get the views of the Home Department on the subject, and it is certainly one which should be settled with due regard to all concerned.

PHARMACEUTICAL JOURNAL.

A Weekly Record of Pharmacy and Allied Sciences.

ESTABLISHED 1841.

Circulating in the United Kingdom, France, Germany,
Austria, Italy, Russia, Switzerland, Canada, the
United States, South America, India,
Australasia, South Africa, etc.

Editorial Office: 17, BLOOMSBURY SQUARE, W.C.

Publishing and Advertising Office: 5, SERLE STREET, W.C.

LONDON: SATURDAY, JUNE 27, 1896.

A CHAPTER OF HORRORS.

THE annual report of the Chief Inspector of Factories and Workshops is a veritable "olla-podrida," with its numerous selections from the communications of inspectors under the Factories Acts, embodying suggestions of more and worse horrors than could well be imagined by the average middle-class individual who is not connected with any of the trades affected by the Acts. Moreover, the report shows clearly that the risk of poisoning is not confined to the substances retailed by chemists and scheduled as poisons in accordance with the provisions of the Pharmacy Act, 1868, but that it is of much wider extent. The reader puts down the bulky volume with a feeling that the very fact of such matters as are dealt with being recorded in a Blue-Book is satisfactory, inasmuch as proof is thus afforded that attention has been officially directed to the sources of danger indicated, and that in those instances where powers do not already exist to enforce a remedy, such powers are likely to be sought and received in the immediate future. In many cases where special machinery is concerned, it is, unfortunately, impossible at present to guard absolutely against risk of accident and death, whatever precautions may be taken and regulations enforced. Everything for the moment seems to depend upon the individual in those cases, and the least loss of self-control and relaxation of the watchful care that tends to become so habitual as to lead the uninitiated to regard it as non-existent, may only too often prove the sure precursor of maimed limbs or the oblivion that puts an end to toil and watchfulness alike. Inventive ingenuity must come to the rescue here before the repetition of mishaps that hardly bear description can cease to be common, and, no doubt, in the course of time, either unsafe machinery and processes will be replaced by others without the attendant risks, or means will be devised whereby those risks can be minimised without undue interference with industry. Meanwhile, the Juggernaut of commerce is insatiable, and human sacrifices seem an inevitable accompaniment of the fulfilment of certain requirements of civilisation.

To descend to details, we find that the carbonising of rags is held to be responsible for softening of gums, dropping out of teeth, general debility, chest and bronchial complaints;

wool sorting may carry anthrax in its train; the brimstone used in blanket stoving produces sickness and loss of appetite, and affects the chest; whilst French chalk, used in warp-dressing, is alleged to cause disease. In connection with the carbonising of rags, it is stated that the shaking of such rags before washing has been the cause of terrible explosions and loss of life. The process of dry cleaning may also be accompanied by explosions and conflagrations, escaping benzine fumes, centrifugal machines, or electricity induced by rubbing well-dried stuffs being the responsible agents. It is difficult to comprehend what is meant by the following extract on this subject from a lady inspector's report dealing with German factories:—

"If cleansing-benzine (*wasch benzin*), to which *anti benzin pyrin* is added, is replaced by sulphuric acid, the stream of electricity is stopped, because a separation of stearin acid takes place under the action of soluble sulphuret of magnesium. Since water is a good conductor of electricity, it is to be recommended that the air of the workrooms should be kept as damp as possible.

This may be intelligible to factory inspectors, and doubtless the advice given is sound, but the scientific and technical details appear to be somewhat at fault, and the only conclusion one can arrive at is that this must be an imperfect translation of a passage in a German report, by a person not thoroughly familiar with the terms employed.

Severe cases of mercurial poisoning have been caused by a sole-stitching machine, owing to the volatilisation of mercury, employed to ensure a gas-tight joint, by the heat of a little gas flame used in connection with the machine. Lead poisoning may result from inhalation and absorption of the metal during the polishing of flint glass, or the manufacture of glass-headed pins, and also whilst files are being cut, a block of lead being used to support the files during the operation. Violent headaches, nausea, paralysis, and even insanity are possible consequences of the constant inhalation of carbon bisulphide in india-rubber works; metallic poisoning may follow long-continued work with bronze dust; and swollen glands in the neck have occurred as the result of licking adhesive labels with the tongue instead of using proper dampers, even though pure gum alone was used on the labels. That aerated water bottles may burst and cause serious injury to operators is common knowledge, as are also the noxious effects of arsenic in dyes, phosphorus in matches, and the handling of white lead during the manufacturing process. Less is known, however, about the injurious effects of the inhalation of basic slag dust, and the particles of quartz and steel thrown off by grindstones. These inevitably set up chronic irritation of the lungs and the mucous membrane of the air passages, unless suitable respirators are worn, bronchitis and pneumonia being but the natural consequences. In conclusion, it is satisfactory to read the statement made by Mr. SPRAGUE ORAM—in this, his last, report as Chief Inspector, prior to retirement from the public service—that the favourable reception by manufacturers of the various alterations in the law has been greatly facilitated by the patient and unobtrusive efforts of the inspectors, and that the present sympathetic attitude of employers of labour has been earned by the quiet work of inspectors and their avoidance of undue friction. That this state of affairs may continue, and employers come in time to anticipate, instead of waiting for, suggestions of improvements tending to protect health and life, must be the fervent wish of everyone who peruses this painful, and yet hopeful, record.

CHINESE OPIUM.

FOR some years past the annual reports forwarded by British Consuls in China have recorded a steady decrease in the imports of foreign opium, and an equally steady increase in the supplies of the native drug. The reports for the past year show that the change indicated is progressing more rapidly than ever, and it seems not unlikely that Chinese opium may before long find a regular place on the London market. Thus, whilst at Swatow, there has been an enormous decrease in the imports of foreign opium during 1895 as compared with 1894, at Chungking and Ichang increasing quantities of the native drug—Szechuen and Yünnan—have been exported, the quantities and values being as represented in the following table :—

Port.	Year.	Imports.		Exports.	
		Quantity.	Value.	Quantity.	Value.
Swatow	{ 1894	772,276 lbs.	£473,839	—	—
	{ 1895	549,645 lbs.	£392,214	—	—
Chungking..	{ 1894	—	—	802,533 lbs.	£263,744
	{ 1895	—	—	1,570,533 lbs.	£478,410
Ichang.....	{ 1894	—	—	680,533 lbs.	£178,079
	{ 1895	—	—	1,544,000 lbs.	£394,532

The enhanced cost of Indian opium appears to be the cause of the steady falling-off in the import of that drug, the native article being used in increasing quantities to mix with it. There is no evidence that less opium is used in China, for though only 21,132 lbs. of native opium was imported by sea into Swatow during 1895, as against 7237 lbs. in 1894, it is estimated that the equivalent of 1000 chests (=about 150,000 lbs.) now annually reaches Chia Ying Chow, the great distributing centre for the Swatow district. Further, "whilst in former years more than 1000 chests were imported viâ Swatow for conveyance to Chia Ying Chow, and thence on to Kanchow and other places in Kiangsi and Hunan, none goes by that route now, supplies being shipped direct from Hong-Kong to Hankow, whilst in the opposite direction the requirements of the Hin Chow Prefecture are now supplied through Canton." The decrease has occurred in all kinds of the drug imported at Swatow, as shown by the following table :—

Year.	Quantity.				Total.
	Malwa.	Patna.	Benares.	Persian.	
1894.....	Chests. 2520	Chests. 2001	Chests. 498	Chests. 94	Chests. 5113
1895.....	1922	1257	433	29	3641
Decrease..	598	744	65	65	1472

At the same place the costliness of the foreign drug has recently led to experiments having for their object the assimilation in flavour of native and foreign opium. A coarse and rank flavour is imparted to the former by the presence of oil, but on undergoing treatment by processes in which Barbados aloes (*sic*) is understood to play an important part, "this objectionable taste is entirely removed, and the native-grown opium is worked up into a close semblance of the foreign article, the flavour of the new product being said to be equally good though it is less satisfying to the consumer." As showing that this business is being seriously taken up, it is stated that three skilled Indian workmen have been imported from Calcutta. It is worthy of note (*vide* page 510), that though Indian opium is gradually being ousted in China, its production seems to be on the increase in certain

districts, if we may judge from the fact that the area under poppy cultivation in Behar and Benares has been extended by more than sixty thousand acres during the past two years.

The Consul at Chungking speaks of native opium as having been the great feature in the export trade of 1895, since it was responsible for no less than £214,626 of the £233,176 representing the increase of exports over 1894. The upward tendency is best shown by the following comparative table, the figures in which, however, represent only the quantities passing through the foreign customs :—

Description.	Quantity.			
	1892.	1893.	1894.	1895.
Opium, Szechuen ..	332,533 lbs.	335,066 lbs.	704,000 lbs.	1,438,800 lbs.
„ Yunnan....	12,266 lbs.	11,333 lbs.	98,533 lbs.	131,733 lbs.

The crop of 1895 was an excellent one, and the demand was so great that difficulty was experienced at times in getting enough junks for transport. The merchants made very large profits, and there is said to be every probability that the opium-growing area will be further extended as time goes on. Both climate and soil seem to favour the cultivation of the poppy, and rice is not displaced by the crop, but wheat, beans, etc., are displaced, the balance of profit to the farmer of opium over wheat being about 80 per cent.

Finally, at Ichang, where opium is the chief staple of the export trade, the Consul shows that there has been a startling increase in the amount re-exported, being double what it was in 1894 and nearly twenty-eight times the amount recorded for 1891. The Szechuen opium is stated to be cutting out the more expensive Indian drug in markets further and further removed from the Yangtze valley, being heard of as far as the Canton province and also extending to the province of Fukien. Last year a few balls of Patna opium arrived at Ichang "for the private consumption of a few *gourmets* who could afford it, but the import of foreign opium is practically *nil*." The three local kinds of opium are Yünnan, Hupei, and Szechuen, their respective values being in the order stated.

PRESCRIPTIONS FOR POISONS.

THE *Lancet*, in reporting the circumstances connected with a recent case of poisoning by an overdose of morphine, remarks that they draw attention to "the very dangerous state of matters in regard to the supply of poison by prescription." It appears that the deceased person had been for a long time in the habit of using morphine, and was regularly supplied with a solution of morphine made up from a medical man's prescription. What the *Lancet* takes exception to is that the supply of this powerful drug should have been continued on the authority of a prescription presumably written many years ago. It is admitted that according to the present state of the law the druggist who supplied the morphine "was perfectly within his rights," but it is contended that the law ought to be altered in order to prevent such a prescription from being dispensed more than once without a fresh signature being attached. It may, however, be suggested that to ensure such a restriction no alteration of the law is requisite. The prescriber can attach such a direction as would effectively protect his patient from the consequences of misuse, and by this simple means danger may be averted so far as the obtaining of poisons or potent articles is effected by the aid of a physician's prescription.

ANNOTATIONS.

ANALYSTS AND THEIR OPINIONS.—The too common practice amongst public analysts of expressing opinions in the certificates they supply in connection with cases under the Sale of Food and Drugs Acts, received another check at Dartford Police Court on Saturday, June 13. Mr. Frank Cox, chemist and druggist, Swanley, Kent, was summoned for selling spirit of nitrous ether, alleged to be deficient in strength, but it was successfully contended on his behalf that the analyst, Dr. Adams, had prejudged the case without giving in his certificate materials on which the Bench could come to a decision. The certificate appears to have simply stated that the preparation was deficient in nitrous ether to the extent of 65·8 per cent., according to the B.P. standard, and the Bench therefore dismissed the case.

MR. J. H. MAIDEN, a corresponding member of the Pharmaceutical Society of Great Britain, and Curator of the Technological Museum, Sydney, has been appointed Government Botanist and Director of the Botanic Gardens at Sydney, in succession to Mr. Charles Moore, who has recently retired after a service, in those capacities, of nearly half a century. Mr. Maiden is well known as an indefatigable worker in economic botany, and it may be anticipated that the wider field now opened to him will be rendered very productive at his hands.

INTERNATIONAL CATALOGUE OF SCIENTIFIC LITERATURE.—The approaching International Conference, arranged by the Royal Society to consider proposals for an International Catalogue of Scientific Literature, will be formally opened at the apartments of the Society in Burlington House on Tuesday, July 14. A reception of the delegates will be held by the President of the Royal Society on the previous evening at Burlington House, and they will be entertained at dinner by the Society on the evening of the 14th at the Hotel Métropole. On July 15 the delegates will be received by the Lord Mayor at the Mansion House, and on the afternoon of the 16th they will be entertained by Dr. Ludwig Mond, F.R.S., at a garden party at his house in Avenue Road, London.

SIR JOSEPH PRESTWICH, the eminent geologist, died at Sevenoaks, on Tuesday last. He was educated at Paris and at University College, London, published his first geological paper at the age of twenty-three, and was the first to demonstrate the certainty of man's existence contemporaneously with the extinct mammalia. He was awarded the Royal Society's gold medal for his investigations on flint implements, and became Vice-President of that Society in 1870, as well as President of the Geological Society. Until a few years ago he was Professor of Geology at Oxford, and he was an honorary D.C.L. of that University.

"THE PROFITS OF PHARMACY."—A correspondent, referring to the paragraph published last week under the above heading, observes that it is enough to take away the breath of an ordinary layman, let alone a chemist who is supposed to steal his drugs and buy his bottles for nothing! He says: £100 is just 2000 shillings or 24,000 pence. This covers 12,000 (twelve thousand) twopenny drinks weekly, or in a working day of ten hours 200 per hour. And this is only yielding a weekly profit of £100! What must have been the size of the shop, the number of assistants, and the width of the several tills to take in all this money? "London correspondents should be a bit more careful, or they may make their illiterate and less-experienced provincial contemporaries laugh at their 'greenness' in asking us to take all this in at one gulp."

FATAL CASES OF POISONING WITH SORREL LEAVES.—Dr. Flemyng records in the *Lancet* two fatal cases of sorrel poisoning, in which two little girls succumbed to the effects of oxalic acid poisoning after eating sorrel leaves. The leaves were eaten in the afternoon of the day previous to that on which the children were brought for treatment, which consisted in the administration of chalk suspended in milk, with lime-water and castor oil. Both died, one eighteen and the other twenty hours after taking the poison. Post-mortem examination revealed no noteworthy appearances except slight congestion of the small intestine in one case. Toxicological examination indicated the presence of a small quantity of oxalic acid in each case. An exploration of the fields which the children visited gave no indication of any poisonous plants but arum and conium, besides the sorrel, and no trace of the two former was found in the stomach.

OLD-WORLD PHARMACY.—In a collection of documents preserved by the Marquis of Salisbury at Hatfield House, the Historical Manuscripts Commission has found the details of a curious mixture which was administered to Sir Henry Unton who was sent on a mission to the French King in Paris towards the end of the sixteenth century, and whilst there fell ill. The "Confectio Alcarmas," as it was named, was costly if not efficacious, for it was compounded of "musk, amber, gold, pearl, and unicorn's horn." The patient also had "pigeons applied to his side, and all other means that art could devise, sufficient to expel the strongest poison, and he be not bewitched withall," and yet he died, his end being probably hastened by irritation caused by the strange medicaments and crude treatment to which he was subjected.

BRITISH TRADE IN 1896.—According to the monthly trade supplement of the *Economist*, the quantity of alkali exported from this country during the five months that ended May 31 last was less by 464,272 cwts. than for the corresponding months of 1895. On the other hand, the value of the drugs and medicinal preparations exported showed an increase of £52,473 for the five months, and the total value of chemicals, chemical preparations, and medicinal preparations exported was greater by £270,508. During the same period imports of chemicals, dye-stuffs, and tanning substances increased in value by £446,724; oils imported were worth £261,318 more; and drugs (unenumerated) showed an increase of £31,310 over the corresponding period of the previous year.

A CHEMISTS' EXHIBITION, the second such organised in connection with the *British and Colonial Druggist*, will be held from August 24 to 28 next, at the National Skating Palace, Argyll Street, W. This is a commodious hall, very massively built in the form of a modern theatre, and the entire place will be well appointed, richly furnished, and decorated in a manner not usual in trade exhibitions. Music will be supplied every afternoon and evening by a special orchestra, and on one day medical men and nurses will be specially invited. Due notice of this will be given to exhibitors in order that they may specially display the articles in which the members of those professions are likely to be more immediately interested.

MORALITY AND NATURAL HISTORY.—The bearing of morality upon natural history constitutes a problem that few men of the world would care to be obliged to solve, but several members of the Haslemere Microscopic and Natural History Society seem to think they hold the necessary clue. After vainly opposing Mr. Grant Allen's election as President of that body, in succession to Mr. Jonathan Hutchinson, F.R.S., they have expressed their determination to resign, the cause of their dissatisfaction being "The Woman who Did," her code of sexual morality being strongly reprobated.

PHARMACEUTICAL SOCIETY

NORTH BRITISH BRANCH.

ELECTION OF EXECUTIVE.

A meeting of members and associates in business residing in Scotland was held in the Society's House, 36, York Place, Edinburgh, on Friday, June 19, at 11 a.m., Mr. J. Laidlaw Ewing in the chair.

The minutes of last meeting were read and approved.

Apologies for absence were intimated from Messrs. Dunlop, Glasgow; Lunan, Edinburgh; Maben, Hawick; and Storrar, Kirkcaldy.

Address by the Chairman.

The CHAIRMAN said: From the number of voting papers issued this year (400) it is gratifying to observe that the steady increase in the number of those connected with the Society in Scotland continues. This year shows an increase of 17 over last year (400 as compared with 383), and during the past five years there has been an increase of 76 (400 as compared with 324 five years ago). There is nothing in these figures to boast about. It is of the utmost importance in the interests of the pharmaceutical craft that every graduate in pharmacy should be a supporter of the Society, which has been invested with legislative and executive powers for the promotion and protection of those interests which come within the sphere of our Charter and the Pharmacy Acts by which it has been confirmed and extended. The interests of the Pharmaceutical Society are the interests of every member of the pharmaceutical craft, and only when the craft and the Society are practically co-extensive can the state of affairs as regards membership be considered satisfactory. That day has not yet come but, nevertheless, we are moving, perhaps too slowly, towards that goal. We have now in Scotland 96 pharmaceutical chemists, 52 chemist and druggist members and 252 associates in business connected with the Society. One notable feature in this year's increase is that it is largely the result of an effort made in Dundee by the local secretary there. On looking over the Benevolent Fund returns one also notes with satisfaction that the local secretary at Airdrie has secured a number of new subscribers in his district. The example set by these officers shows what can be done by a little local effort, and we all possess some influence which may be used with good effect.

From the number of voting papers returned on this occasion it does not seem that there is anything to cause special interest in the election—a result due, perhaps, to the absence of any special appeals on the part of those who have agreed to give their services, and also, perhaps, to a feeling that the present members are fairly representative of Scottish electors.

This year two well-known names are not found in the list of those willing to serve as members of Executive. Mr. Gibson retires after several years' service, and Mr. Nesbit, who has been for many years connected with the Executive, and who has occupied the highest position in it, retires; from a feeling that, seeing he is a member of the Board of Examiners, it may be well that others should take up the duties of the Executive. We will, I am sure, heartily thank both gentlemen for the work they have so cheerfully done, and we hope we may have the help and valued counsel of both at some future time.

You are probably already all acquainted with the work that has engaged the attention of the Executive during the last year, as it is described in the annual report submitted to the Council in May, and published in the *Pharmaceutical Journal* of May 8 last. You will have observed that there has been a considerable increase in the number of candidates presenting themselves for examination in Edinburgh. It would have been impossible to overtake the work in reasonable time or with any comfort in the old premises, but it has been found that the work can be done easily and speedily in the new premises, which have proved themselves admirably adapted for examination purposes. One unsatisfactory feature is the large percentage of failures in these examinations, and that is due for the most part to the want of thorough systematic training, especially in practical work. The failures in practical pharmacy seem more numerous than they should be if our system of apprenticeship is all that it ought to be. Since last meeting two members who have done excellent work as members of the Board have retired, for a time at least, namely, Messrs. Dott and Maben.

We in Scotland have reason to feel grateful to the Council for the generous way in which they have met the call for money demanded by the recent extension of buildings for the Society in Edinburgh, and the Council has not been slow to express the view which seems to be general—that the money has been expended by the Executive judiciously and to good purpose. There has been some delay in going on with some rearrangement of the Society's premises, now set free from examination work. This delay has been chiefly due to some negotiations, which have now proceeded so far that I may, without breach of confidence, refer to them. The Executive was approached some time ago by the Royal College of Physicians of Edinburgh, which generously proposed that its *Materia Medica* Museum should be transferred to the custody of the Pharmaceutical Society for preservation in the Society's house here. We have been in consultation with the authorities in London, and the transaction is now virtually completed, though it may be next year or near it before the actual transfer can be effected. Till this matter is completed, it will be necessary to delay the scheme which the Executive has been considering.

In this connection also it may be mentioned that we are at present considering a plan by which it may be possible to acquire an interesting collection of *materia medica*, made partly by Sir Douglas Maclagan, by Dr. Scoresby Jackson, and Dr. T. A. G. Balfour, all well-known Scottish pharmacologists. When these additions have been made our museum of *materia medica* will be one of the most interesting and extensive collections in Scotland.

During the year two interesting additions to our collection of paintings have been made. By the kindness of Dr. John Duncan, we have secured a portrait of his grandfather, Mr. John Duncan, the first President of the North British Branch, and just this week a portrait of Baillie J. F. Macfarlan has been presented by his daughters. He was the first member of the Council of the Society from Scotland. If we go on in this way we shall accomplish what would be a very desirable thing, and get together a representative gallery of distinguished Scottish pharmacists. There is no reason why we should be limited to Edinburgh or the East of Scotland, and any help in this direction would be very welcome.

During the year two law cases of the highest importance to all pharmacists have been decided in the Scottish Supreme Court. I refer to the prosecution of Messrs. Hume and Turnbull for the use of the title "chemist" in connection with the business of dealers in photographic and scientific apparatus and chemicals. It was not suggested that they had done so in wanton defiance of the law, and they pleaded that the use of a qualifying word obviated any objection to their use of the protected title. In our view the admission of such a claim would have been in the highest degree dangerous and prejudicial to the interests of registered and duly qualified chemists, and would practically have nullified those provisions of the Act which secure competent skill and knowledge on the part of those who undertake the responsible duty of dispensing physicians' prescriptions. The Council, therefore, wisely decided to contest the claim at all hazards, and we all rejoiced that, after a keen and persistent fight, they came out of the conflict completely victorious, and, after some grumbling, all parties seem now to have accepted the decision.

There is one feature of these cases in Scotland that we cannot regard as satisfactory. I refer to the great difficulty in recovering reasonable penalties and such decisions as shall really effect the manifest purpose of the law. But the Society, as has been said, has really had to educate the judges, and the evil is one which may be expected to grow less in course of time. As it is, these proceedings, which are undertaken in the interest of every registered chemist, have entailed a heavy expenditure, and all who participate in the benefit should in justice bear a helping hand. Another recent event which has an interest for Scottish pharmacists is the election of Professor I. Bayley Balfour as an honorary member of our Society in place of the late Dr. Cleghorn. The professor's father, Professor J. H. Balfour, was also an honorary member, and took a great interest in the work of the North British Branch. Sir Douglas Maclagan is now the oldest honorary member of the Society. It must be gratifying to all Scotch pharmacists to observe the handsome way in which the electors have returned our two Scotch members again to the Council of the Society, and we all feel glad that our interests should be watched over by two gentlemen in whom we have so much confidence, and who have already served us so well. They would all have observed, as the result of last Council, that the man who had for many years been head and shoulders above all his fellows, and who had excelled all his predecessors in the amount of time and

energy which he had so ungrudgingly devoted to the work of the Society, was no longer President. When Mr. Carteighe first came to Scotland he was regarded with something like suspicion, and for a time there was something like misunderstanding and antagonism. But as time passed and opportunities for personal intercourse were multiplied, all such ideas vanished. His sincerity and unexampled ability won their admiration, and now he felt sure Mr. Carteighe had no warmer friends anywhere than in Scotland, and, speaking for Scottish pharmacists, he could assure him of their grateful and affectionate esteem. In Mr. Walter Hills, the new President, they had a man who not only worthily represented a historic house, but one whose experience and personal qualities admirably fitted him for the high office to which he had been appointed. He felt sure that the interests of the Society would be safe in his hands, and it would be a great pleasure to Scottish pharmacists and to the Executive in Scotland to co-operate with him in promoting the work of the Society.

Scrutineers' Report.

The ASSISTANT-SECRETARY then read the report of the Scrutineers, as follows:—

"At a meeting held on April 17, 1896, the Executive appointed June 19, 1896, as the date of the election for the ensuing year.

"Four hundred nomination papers were issued by the Assistant-Secretary on May 25.

"The nomination papers returned showed that fifty-eight members and associates in business had been nominated, of whom the following twenty-three signified their willingness to act if elected:—

- Aitken, Robert, 73, Princes Street, Edinburgh.
- Baker, William Charles, 13, Dundas Street, Edinburgh.
- Bowman, John, 3, Duke Street, Leith.
- Coull, George, 17, Smith's Place, Leith Walk, Edinburgh.
- Currie, William Little, 223, Byres Road, Dowanhill, Glasgow.
- Davidson, Alexander, 172, High Street, Montrose.
- Dunlop, Thomas, 181, Albert Road, Pollokshields, Glasgow.
- Ewing, James Laidlaw, 9, Princes Street, Edinburgh.
- Fisher, John Hutchison, 66, High Street, Dunfermline.
- Hardie, James Miller, 68, High Street, Dundee.
- Henry, Claude Francis, 1, Brandon Terrace, Edinburgh.
- Kermath, William Ramsay, 1, North Bell Street, St. Andrews.
- Kerr, Charles, 56, Nethergate, Dundee.
- Lunan, George, 20, Queensferry Street, Edinburgh.
- M'Adam, Robert, 34, Virginia Street, Glasgow.
- M'Kellar, Arthur, 69, South Portland Street, Glasgow.
- Mackenzie, James, 45, Forrest Road, Edinburgh.
- M'Laren, David, 42, South Clerk Street, Edinburgh.
- Macpherson, Colin Allen, 97, Dalry Road, Edinburgh.
- Mitchell, Donald, 30, Union Street, Inverness.
- Moir, James, 447, Victoria Road, Crosshill, Glasgow.
- Paterson, James, 15, Regent Quay, Aberdeen.
- Strachan, Alexander, 138, Rosemount Place, Aberdeen.

"A voting list was accordingly drawn up, and on June 10 four hundred voting papers were issued.

"The Scrutineers met last night at 7 o'clock, and proceeded to examine the voting papers. The result was found to be as follows:—

Voting Papers issued	400
" returned	198
" informal	1

"There were thus 197 votes to be recorded. The following gentlemen have a majority of votes:—

- Bowman, John, 3, Duke Street, Leith.
- Coull, George, 17, Smith's Place, Leith Walk, Edinburgh.
- Currie, William Little, 223, Byres Road, Dowanhill, Glasgow.
- Davidson, Alexander, 172, High Street, Montrose.
- Ewing, James Laidlaw, 9, Princes Street, Edinburgh.
- Fisher, John Hutchison, 66, High Street, Dunfermline.
- Hardie, James Miller, 68, High Street, Dundee.
- Henry, Claude Francis, 1, Brandon Terrace, Edinburgh.
- Kermath, William Ramsay, 1, North Bell Street, St. Andrews.
- Kerr, Charles, 56, Nethergate, Dundee.
- Lunan, George, 20, Queensferry Street, Edinburgh.
- M'Adam, Robert, 34, Virginia Street, Glasgow.
- M'Laren, David, 42, South Clerk Street, Edinburgh.
- Mitchell, Donald, 30, Union Street, Inverness.
- Moir, James, 447, Victoria Road, Crosshill, Glasgow.
- Paterson, James, 15, Regent Quay, Aberdeen.
- Strachan, Alexander, 138, Rosemount Place, Aberdeen.

"The voting papers and all other documents connected with the election are submitted herewith.

"J. LAIDLAW EWING, Chairman.

William Burley.
Robert L. Hendry.

James Paton.
John Robertson.

"The actual result of the poll was as follows:—

Currie	172	Coull	131
Ewing	168	M'Adam	130

"Four voting papers were received too late for the enumeration."

Mr. NESBIT, Portobello, moved the adoption of the report, and in doing so referred to the comparatively small number of those who took the trouble to record their votes. He thought it was a pity that the members and associates of the Society did not take a greater interest in its proceedings.

Mr. KERMATH, in seconding the adoption of the report, expressed disappointment at the small attendance at the meeting. He thought those connected with the Society in the city might have endeavoured to spare a short time from business to attend the meeting and support the Chairman. They were much indebted to the Scrutineers for the trouble they had taken in preparing the report.

The report having been unanimously adopted, the Chairman declared that the first seventeen names on the list given by the Scrutineers—together with the President of the Society (Mr. Walter Hills), the Vice-President of the Society (Mr. John Harrison), Messrs. John Johnston (Aberdeen), and David Storrar (Kirkcaldy), as *ex-officio* members—would form the Executive for 1896-7.

On the motion of the Chairman, seconded by Mr. Nesbit, a vote of thanks was awarded to the Scrutineers.

Mr. W. L. CURRIE, Glasgow, said he wished to call attention to one little matter which had been mentioned by the Chairman, that was the very high position which the Scottish candidates occupied at the recent election of Council. He was present at the election, and he was very much disappointed at seeing so many papers returned to London with every name scored out with the exception of their two Scottish candidates. It was a matter of comment amongst the members that a hundred papers from Scotland came back to London with all the names scored out except the two Scottish candidates. Sometimes there would be one vote for Mr. Carteighe or some other gentleman, but, with very few exceptions, there was not more than four or five names. It was pointed out to him that this might have a very adverse influence on future elections, and he was instructed by the Chairman of the Scrutineers to ask the Scottish members to remember that more members of Council were required than two, and that the two Scottish members could not constitute the London Council. He thought it most natural that they should support the Scottish candidates, but it might not be so very marked by going *en masse* for one or two men. If Englishmen got to know that English candidates were scored out year after year they would retaliate and score out every Scottish candidate, and so prevent their return.

Mr. W. R. KERMATH said he questioned whether the Scrutineers were in order in sending a message like that. As a matter of honour, and as a matter of statutory enactment, he thought they must not tell what they saw. He was very glad that Mr. Currie should make his remarks as a hint to them, but he submitted that the Scrutineers were not acting quite on the square in telling what they saw. He did not know whether they were actually sworn in, but surely they should understand that it was a private transaction in which they were taking part. If their English friends got to know that the Scottish papers had that appearance, it would be the Scrutineers who were to blame. He did not want to speak too strongly, but it was a very great breach of faith to say what the papers were like.

Mr. JOHN NESBIT said he very much agreed with the remarks made by Mr. Currie. He himself always voted for the full number. They must have the proper number of Councillors in London, and unless they voted they had no share in the election. He liked to

select the men who took an interest in the work of the Society. There might have been something in Mr. Kermath's remarks if names had been mentioned, but when it was put generally, as it had been done, he did not think there was any breach of faith. He hoped Mr. Currie's remarks would have a good effect there.

Mr. C. F. HENRY said he approved of what Mr. Kermath had said. The same system should be adopted in electing the Council as they followed in electing the Executive. It should be done by ballot.

Mr. BURLEY also said the Scrutineers had no right to tell what they saw. They should keep it to themselves.

The CHAIRMAN said he did not wish to take part in this discussion. It was, perhaps, unfortunate that this subject had been raised just now. He wondered if the Chairman of the Scrutineers was quite sure that all the plumpers were Scottish voters. He happened to know that the convener of the Committee for the election of Scottish candidates received a communication from an English voter stating that he intended to vote only for the two Scottish representatives. He felt sure that if any number of Scottish electors had voted in the way alleged it must have been from mere inadvertence, and he was quite sure they had no desire to act unfairly towards the English members of Council.

Mr. MACLAREN said he observed in the report that the question of the circulation of the Journal was referred to, and he would like to know if anything had been done in regard in that matter.

The CHAIRMAN said the reference to the Journal was in the minutes of last meeting, and the subject had been dealt with by the Executive.

A vote of thanks to the Chairman, proposed by Mr. Coull, and a vote of thanks to the retiring Executive, proposed by Mr. Burley, were cordially passed, and the meeting then closed.

CHEMICAL SOCIETY.

The last meeting of the present session was held on May 18, Mr. A. G. Vernon Harcourt, F.R.S., President, in the chair.

The large audience which had assembled was doubtless attracted by an unusually varied programme. There were ten papers published for reading, and these were supplemented by about ten more, which had been added to the list hanging up in the hall. Being also a ballot night, there was every prospect of an exciting finish to the work of the session. No one, of course, expected that all the papers would be read, but it really seemed at one time as if the President were endeavouring to establish a record, so quickly did one paper succeed another.

At the very commencement of the evening's business, however, there was a hitch in the proceedings. Mr. Cassal stood up and requested that the certificates of certain candidates be read to the meeting in full. This was immediately objected to by a gentleman who was present evidently on behalf of one of the candidates, who was a medical man. His objection was that there was a systematic blackballing, by a certain clique in the Society, of all candidates who were medical men. He himself had been rejected, although he held a senior qualification of London University. Whether this qualification was at all connected with chemical science was not quite clear, but the President thought there was something invidious in picking out certificates, and Mr. MacEwan reminded the Fellows that it had been ruled on a former occasion that on a definite motion of the meeting certificates might be read. The President thereupon decided to take a show of hands, and it was at once evident that the meeting had no wish to have them read. Nevertheless, the result of the ballot showed that all the medical candidates had been rejected.

The address which had been presented to Lord Kelvin on the occasion of his jubilee as Professor of Natural Philosophy in the University of Glasgow was then read by Professor Dunstan.

The first paper was by Professor Tilden, F.R.S., on "The Action of Bromine on Pinene in Reference to the Question of its Constitution." This is simply a question as to whether pinene is capable of fixing four atoms of bromine, or only two. Some years ago in a former paper Professor Tilden stated that four atoms are combined, but Professor Wallach has since endeavoured to show that a dibromide is formed. Professor Tilden thinks that a tetrabromide or a dibromide is formed according to the manner in which the bromine is added to the hydrocarbon. In some respects he regards the dibromide as an accidental impurity.

The author mentioned that in the course of his investigations an acid had been isolated, having the composition $C_{10}H_{16}O_3$, a peculiar property of which being that it forms a remarkably insoluble sodium salt. He is not yet sure of its identity.

One gentleman present asked if the action of light had been studied in connection with the action of bromine on pinene, especially with reference to the rate at which combination takes place, to which Professor Tilden replied that he had experiments of that kind going on.

At this juncture the President stood up and announced to the meeting that M. Henri Moissan was present. The distinguished savant, however, did not make a speech.

The next paper was entitled "An Apparatus for Showing Experiments with Ozone," by G. S. Newth. This is a fragile and somewhat-elaborate piece of apparatus, designed to show the change of volume or contraction which takes place when oxygen to be ozonised is electrolysed in the usual way. Mr. Newth was at considerable trouble to show on the screen in front of the electric lantern the contraction taking place in an actual experiment, but at the critical moment something unfortunately went wrong, and the demonstration failed.

The President expressed his regrets at Mr. Newth's failure, and endeavoured to console him in a few words of encouragement.

"Note on Santalol and Some of its Derivatives," by A. C. Chapman and H. E. Burgess, the paper postponed from the last meeting, was now read. This Mr. Chapman did at lightning speed, and it was extremely difficult to follow him. It appears that two substances have been isolated by the authors from sandal wood oil, viz., santalal and santalol, having respectively the compositions $C_{15}H_{24}O$ and $C_{15}H_{26}O$. A considerable quantity of santalal, which is an aldehyde, is obtained when the oil is subjected to fractional distillation. When this aldehyde is oxidised it yields a white-crystalline acid, which melts at $76^\circ C$. The boiling point of this acid ($C_{15}H_{24}O_2$) is 140° to $145^\circ C$.

Professor McLeod, F.R.S., followed with his paper on "Further Observations on the Production of Chlorine by Heating a Mixture of Manganese Dioxide and Potassium Chlorate." In a former paper, in 1889, the author had shown that chlorine was one of the products of this reaction, but a certain German worker, Dr. Brunck, says that chlorine is not given off, but ozone, and maintains that potassium chloride is mechanically carried over. Professor McLeod handed round two photographs of the apparatus he employed. Manganese dioxide and potassium chlorate are heated in a bath of mercury vapour in a test-tube, and the gas evolved led into a suitable flask. On examining the gas in the flask by a beam of converged light, it was seen to be full of suspended matter. This was put aside until the solid matter had subsided and the clear gas passed into a solution of silver nitrate. The solution was acidified with nitric acid and a precipitate of silver chloride obtained, hence Professor McLeod concludes that chlorine, and not ozone, is the gas in question. Referring to the residue in the flask, the author mentioned that it was alkaline, but that it could not be estimated very well. On adding water to this residue there was an effervescence. The gas collected from this measured 16 C.c., and was entirely absorbed by pyrogallol.

The President said that all would agree that Professor McLeod had proved his point.

The next paper was a remarkable one, and of great interest, viz., "The Thermo-Chemical Peculiarities of Chloral and Bromal Hydrates," by W. J. Pope. Mr. Pope brought the lantern and screen to his aid to show by micro-photographs the progressive changes in crystalline structure which took place when fused chloral and bromal hydrates and menthol have been allowed to solidify. His interesting results had been brought about in trying to explain the abnormal thermo-chemical behaviour of these substances.

Professor Clower, D.Sc., was the next contributor. His paper was entitled, "Acetylene: Its Detection and Ignition in the Air." The author is well known as an expert on the explosion of combustible gases, and the present paper is another addition to the many he has already written. He shows that the percentage of combustible gas present in a maximum quantity prevents explosion.

Of hydrogen the minimum percentage is 5; maximum, 72. There is an explosion when 72 per cent. is present, but with 73 per cent. it ceases to explode.

CO	Min., 13 p.c.	Max., 75 p.c.
CH ₄	" 5 "	" 13 "
C ₂ H ₄	" 4 "	" 22 "
Acetylene	" 3 "	" 82 "

It will be seen that the explosive limit of acetylene is wider even than that of hydrogen.

Professor Clowes' method of detecting acetylene in the air is by the application of the hydrogen flame. When a hydrogen flame is brought into air containing a combustible gas there appears a flame-cap or halo, larger or smaller according to the percentage of gas present. By applying this method to air containing acetylene it is easy to detect minute proportions of the latter. For quantitative work the hydrogen flame is always of the same dimension; 0.25 per cent. of acetylene gives a flame-cap 77 millimetres in height; 0.5 per cent. gives a flame-cap 28 millimetres in height, and so on.

This brought the summer session to a close, and the President announced that the next meeting would take place on November 5.

The following papers were taken as read:—

"Absorption of Dilute Acids by Silk," by Professor Walker, D.Sc., and J. R. Appleyard.

"Double Sulphides of Gold and Other Metals: The Action of Sulphur at a Red Heat on Gold when alloyed with Other Metals," by J. S. Maclaurin, B.Sc.

"The Relative Weights of Gold and Silver Dissolved by Potassium Cyanide Solutions from Alloys of those Metals," by J. S. Maclaurin, B.Sc.

"Condensation of Chloral with Resorcinol," by J. T. Hewitt, M.D., D.Sc., and F. G. Pope.

"Synthesis of Pentacarbon Rings, Part III.; Condensation of Benzil with Lævulic Acid," by Professor Japp, F.R.S., and J. S. Murray, D.Sc.

"The Three Chlorobenzeneazosalicyclic Acids," by J. T. Hewitt, M.D., D.Sc. and H. E. Stevenson.

"The Rotation of Aspartic Acid," by B. M. C. Marshall.

"On the Occurrence of Quercetin in the Outer Skins of the Bulb of the Onion (*Allium cepa*)" by A. G. Perkin and J. J. Hummell.

"On the Colouring Matter contained in the Bark of the *Myrica nagi*," by A. G. Perkin and J. J. Hummell.

"Note on Some New Derivatives from Camphoroxime," by Dr. M. O. Forster,

SCHOOL OF PHARMACY STUDENTS' ASSOCIATION.

The annual general meeting was held on Thursday, June 18, Mr. E. J. Eastes, Vice-President, in the chair. After the minutes of the previous meeting had been read and confirmed, the following report was read by the Secretary (Mr. E. Goulding):—

ANNUAL REPORT OF EXECUTIVE COMMITTEE.

At the commencement of the session, in consequence of the resignation of Mr. F. W. Short, the School of Pharmacy Students' Association was left without a secretary. Mr. E. J. Eastes kindly stood in the breach and undertook the secretarial duties until after the election of the officers.

At the opening meeting on December 5, Professor Attfield resigned the office of President, which position he had held for twenty-one years, and Professor Reynolds Green was unanimously elected to fill his place, the late President accepting the appointment of Hon. Treasurer. The other officers elected were:—

Vice-Presidents: Messrs. E. J. Eastes and H. A. D. Jowett.

Secretaries: Messrs. T. Tickle and E. Goulding.

Committee: Messrs. Senter, Spurge, Stamp, and Umney.

The Executive Committee thus elected by the members has met seven times, and transacted business as follows:—

At a meeting on December 12, 1895, the Committee appointed the following gentlemen as reporters to the Association on subjects allied to pharmacy:—

Pharmacy	Mr. W. Moore.
Botany	Mr. C. E. Ashby.
Materia Medica	Mr. T. A. Henry.
Physics	Mr. H. T. Durant.
Organic Chemistry	Mr. H. Brown.
Inorganic Chemistry	Mr. H. Read.
Analytical Chemistry	Mr. J. R. Walker.

At a meeting of the Committee, held on January 30, 1896, the duties of the gentlemen appointed to report on physics and materia medica were at their request re-arranged, Mr. T. A. Henry electing to report on physics, and Mr. H. T. Durant on materia medica.

At a meeting on January 7, the Committee discussed the existing rules of the Association, and formulated certain amendments thereto,

which, together with certain additional amendments proposed by Messrs. T. A. Henry and H. Brown, were read at the meeting of the Association on January 9. These amendments were discussed seriatim at a meeting of the Association on January 23, and in each case carried *nem. con.*; they were then submitted to the Council of the Pharmaceutical Society, whose sanction they received.

On February 13 the Committee, in accordance with the revised rules, elected Messrs. H. Brown and H. Wilson as two additional members of Committee. At a meeting of the Committee on April 20, a letter was read from Mr. Tickle, addressed to the President, and announcing his resignation of the office of joint hon. sec. At the same meeting a grant of 8s. was made to Mr. H. A. D. Jowett to defray expenses incurred in connection with the demonstration of some effects of the Röntgen rays, given at a meeting of the Association on March 26.

The numerical strength of the Association has very slightly decreased, there being 45 ordinary and 14 life members, as against 52 ordinary and 10 life members last year. The number of meetings held, including to-night, has been 11, and the total attendance 242, making an average of 22 at each meeting, as against an average attendance of 15 last year. By kind permission of the Council of the Pharmaceutical Society the meetings have been held in the Hanbury Library.

The following eleven communications have been read:

Introductory Address.....	Prof. Attfield.
Antiquity of Man.....	Mr. R. Payne.
Flowers and their Visitors	Mr. A. Lander.
Report on Inorganic Chemistry	Mr. H. Read.
Report on Pharmacy	Mr. W. Moore.
Report on Analytical Chemistry	Mr. J. R. Walker.
Life and Work of Darwin	Miss Harrison.
Report on Botany	Mr. C. E. Ashby.
Report on Physics.....	Mr. T. A. Henry.
Gold-Mining in the Transvaal	Mr. H. T. Durant.
Report on Organic Chemistry	Mr. H. Brown.

The meeting on February 13 was devoted to a discussion on "A Students' Union for the School of Pharmacy," opened by Mr. T. A. Henry.

We have, for the first time in the history of the Association, introduced meetings of a social character, and, apparently, with great success. Two social evenings have been held; at one, on February 27, Prof. Greenish gave a most interesting and diverting account of "A Tour in Spain"; and at the other, held on May 7, we were favoured with a very instructive talk about "Fossil Plants," by Mr. A. C. Seward; on both occasions the subjects being illustrated by lantern slides. These meetings were of a more informal character than usual, smoking being permitted and refreshments provided at the close.

The Treasurer's accounts, to be presently audited, show that the receipts from members' subscriptions amount to £7 14s. 6d., and the total expenditure to £10 1s. 11d., leaving a balance of £22 0s. 4d.

Messrs. Fothergill and Tunbridge were appointed to audit the Treasurer's accounts, which they reported to be correct.

The report was then, on the motion of the Chairman, seconded by Mr. T. A. Henry, adopted by the meeting.

The proceedings then terminated.

PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION.

On Thursday, June 25, there was a good attendance of the Junior Section of this Association at the headquarters, Plymouth Octagon, and Mr. J. R. Johnson read an interesting paper entitled "Outlines of Chemical Philosophy." After discussing the molecular and kinetic theories, the author proceeded to explain the fusion of solids, the taking of melting-points and their value as a test of purity, solution and the selective power of solvents, liquid diffusion and dialysis, the conditions of, and difference between, evaporation and ebullition, the precautions necessary in taking boiling points, and the method and utility of fractional distillation. The properties of gases with regard to temperature and pressure were next treated of, the law of Boyle and the reason why it is not absolutely obeyed defined; atmospheric pressure, with description of principles and construction of the barometer, and the expansibility of gases and the law of Charles demonstrated. Continuing with the statement that

Avogadro's law was the outcome of his investigations on the behaviour of gases under similar conditions, molecules, atoms, and elements were then defined, and chemical affinity and the various theories to account for it discussed, the paper concluding with the explanation of the laws of combination of Dalton and Gay-Lussac, and the causes which led up to the revival in a modified form of the Epicurean theory of the constitution of matter. During the evening the principles and construction of the air-pump were described, and several experiments performed by the aid of the air-pump kindly presented to the Association by Messrs. Barclay and Sons.

EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION.

The first botanical excursion of the season, which had been arranged for June 5 to the Blackford Hill, was, unfortunately, made impossible by heavy rainfall. Mr. W. B. Cowie, who was to conduct the party, was the only person who turned out. A week afterwards, on Friday, June 12, the second summer meeting was held in the Pharmaceutical Society's House, 36, York Place, Mr. George Sinclair, Vice-President, in the chair. There was a good attendance, and a large collection of plants had been got together by Messrs. Center from Blackford Hill; Hill, Murray, and Sinclair from Colinton Dell; McBain, from Union Canal; and Syme, from Craigerook. An interesting collection, including *Viola tricolor*, *Potentilla tormentilla*, *Polygala vulgaris*, *Menyanthes trifoliata*, *Cardamine pratensis*, *Equisetum palustre* and *E. limosum*, *Pedicularis palustris*, *Ranunculus acris*, *Lotus corniculatus*, *Galium uliginosum*, *Armeria vulgaris*, *Cerastium vulgatum*, *Orchis maculata* and *O. mascula*, *Lychnis durna*, *Myosotis hirsutus*, *Primula vulgaris*, and a fine specimen of *Scilla verna* were sent by Mr. Alexander Sutherland, ex-President, from the island of Unst, the most northern of the Shetland group. The specimens were described by Mr. Hill, and the meeting concluded with votes of thanks to those who had collected specimens, to Mr. Hill and to the Chairman.

The second botanical excursion, conducted by Mr. William Duncan, took place to Colinton Dell, on Friday, June 19. About forty members left the Caledonian Station by train, at 8.30 p.m., and returned through the Dell, and then by Redhall to Slateford, where some took train back to town, while others walked in marching to the strains of popular choruses, led by Mr. Rowland. At present there is a proposal to have the paths in the Dell put in a better state, and at the opening of the Dell the party was intercepted by a collector, and 5s. 10d. collected towards the Improvement Fund. A large number of plants was collected, and the outing, notwithstanding the threatening character of the weather at the start, was greatly enjoyed.

EDINBURGH DISTRICT CHEMISTS' TRADE ASSOCIATION.

The third annual excursion of this Association took place on Wednesday, June 17, to Loch Long and Loch Lomond. About 100 members and friends started from the Waverley Station at 8.50 a.m. for Craighendran, where they were joined by a contingent of about forty from the Glasgow and West of Scotland Pharmaceutical Association. At Craighendran the company embarked on the steamer "Lady Rowena" and sailed by Dunoon, past the Holy Loch and Loch Goil, and up Loch Long to Arrochar, from which they drove to Tarbet, Loch Lomond. Most unfortunately, this part of the trip was seriously marred by foggy weather and a very heavy and continuous rainfall. Arrived at Tarbet a sumptuous luncheon in the Tarbet Hotel was done full justice to, and while it was in progress the heavy clouds rolled away, and the sun shone out brightly. At luncheon the chair was occupied by Mr. John Bowman, President of the Association, and among others present were Messrs. Storrar, Kirkcaldy; Laidlaw Ewing, Edinburgh; Boa, Edinburgh; Currie, Glasgow; McAdam, Glasgow; Nesbit, Portobello; Moir, Glasgow; Foster, Glasgow; Murdoch, Falkirk; D. Mackenzie, Edinburgh; D. Maclaren, Edinburgh; Lunan, Edinburgh; Rutherford Hill, Edinburgh; W. B. Cowie, C. F. Henry, Edinburgh, etc. Mr. W. L. Currie proposed "Success to the Annual Gathering and Prosperity to the Association," and said it was a great pleasure to the Glasgow pharmacists to join their

Edinburgh *confrères* on this occasion, and he trusted it was by no means the last time they would meet together on such a happy occasion. Some of them would have observed that they in Glasgow were likely to have a busy time of it next year in connection with the expected visit of the British Pharmaceutical Conference, at which they hoped to meet many pharmacists from the east of Scotland. He had great pleasure in coupling the toast with the name of Mr. John Bowman, the President of the Association. The toast having been enthusiastically responded to, Mr. Bowman in reply said they were now all impatient to get outside to enjoy the sunshine and the scenery of the Loch, and he would content himself by warmly thanking Mr. Currie for the eloquent way in which he had proposed the toast, and the company for the enthusiasm with which they had responded to it. He cordially reciprocated the kindly feeling expressed by Mr. Currie on behalf of Glasgow pharmacists, whom it was a great pleasure to meet on this occasion. The company then proceeded to the bowling-green, where they were photographed by Mr. James MacGlashan. After a short ramble the party returned to the hotel, where tea was served, and the company then embarked on the steamer at Tarbet Pier, and sailed down Loch Lomond to Balloch, which was reached about 6.30. With the exception of a short shower, this part of the journey was favoured with sunshine, and the mist having lifted from the hills and the summit of Ben Lomond, the glorious scenery of the Loch and its surroundings was revealed in all its beauty. An additional charm was given to the scene by the previous heavy rain, which brought down innumerable foaming torrents, which could be traced far up the mountain sides. Edinburgh was reached about 9.30 p.m., and in spite of the adverse weather every one seemed to have enjoyed the day's holiday. This was due in no small degree to the admirable travelling and hotel arrangements, which left nothing to be desired, and for which hearty thanks are due to Mr. Henry, the Hon. Secretary, and his Committee.

LEGAL REPORT.

ALLEGED BREACH OF CONTRACT.

Gibson v. Anderson.

A discussion took place last week before Lord Kincairney in the Court of Session, Edinburgh, in the action by Gibson and Co., chemists, Nicolson Street and Clerk Street, Edinburgh, against Anderson and Co., wholesale chemists, Leith, for payment of £500 as damages for breach of contract. Plaintiffs alleged that the defendants agreed to stop proceedings in an action raised in the Edinburgh Debts Recovery Court for payment of an account of £43 if they paid £25 in cash, and that they would give the plaintiffs time to pay the balance. The £25 was paid but the case went on and decree was obtained in absence, the result being that their name was published in the black-list. When the issue to be submitted to the jury was before His Lordship for adjustment, counsel for the defendants argued that there was no relevant case to set before the jury, there being no averment of malice and no averment of damage. For the plaintiffs it was argued that malice did not need to be averred in an action for breach of agreement. His Lordship held that the precedents quoted by defendants' counsel did not apply in this case. Deferring to a supposed case which had been stated by Lord McLaren in a previous action, the supposed circumstances being exactly similar to the present, he sustained the relevancy, holding that there need be no averment of malice. The question of damage was for the jury to decide.

OBITUARY.

- JARY.—On May 31, Jas. J. Jary, Chemist and Druggist, late of South Shields. (Aged 34.)
 BURTON.—On June 11, M. C. Barton, Pharmaceutical Chemist, late of Llandudno. (Aged 29.)
 WILLIAMS.—On June 11, John Williams, Chemist and Druggist, late of Wrexham.
 CAMPBELL.—On June 11, J. Campbell, Junr., Chemist and Druggist, late of Glasgow.
 COLE.—On June 13, Joseph Cole, Chemist and Druggist, late of Barton. (Aged 49.)
 CAMPBELL.—On June 22, Colin Campbell, Chemist and Druggist, late of Auchtermuchty. (Aged 42.)

CORRESPONDENCE.

All Articles, Letters, Notices, and Reports intended for publication in the Journal, Books for Review, and communications respecting Editorial matters generally must be Addressed "Editor, 17, Bloomsbury Square, London," and not in any case to individuals supposed to be connected with the Editorial Staff. Communications for the Current Week's Journal should reach the Office not later than Wednesday, but news can be Received by Telegraph until 4 p.m. on Thursday.

ANY INSTRUCTIONS from Members, Associates, and Students of the Pharmaceutical Society, with reference to the transmission of the Journal should be sent to the Secretary.—Mr. Richard Bremridge,—17, Bloomsbury Square, London.

BUSINESS communications—including advertisements, orders for copies of the JOURNAL, and instructions from Subscribers respecting transmission of same—must be addressed to the Publishers, 5, Serle Street, Lincoln's Inn, London. Cheques and money orders should be made payable to "Street Brothers."

CORRESPONDENTS who wish notice to be taken of their communications must write in ink, on one side of the paper only, and should authenticate the matter sent with their names and addresses—of course not necessarily for publication. No notice can be taken of anonymous communications.

DRAWINGS for illustrations should be executed twice the desired size; clean, sharp lines being drawn with a pen and liquid Chinese ink. Shading by washes is inadmissible. Photographs can be utilised in certain cases.

NAMES AND FORMULÆ should be written with extra care, all systematic names of plants and animals being underlined, and capital letters used to commence generic but not specific names.

REPRINTS of articles cannot be supplied unless authors communicate with the Editor before publication.

A PHOTOGRAPHIC QUERY.

Sir,—The suggestion that the darkening of a pigment containing zinc sulphide is due in any way to, or can be proof of, the existence of x -rays in sunlight is surely on a par with the statement that the darkening of silver chloride is due to x -rays. The light sensitiveness of some zinc salts have been known since 1801, when Professor H. F. Link, of Bost. ck, discovered the darkening of zinc oxide ('Ueber die Natur des Lichtes,' St. Petersburg, 1808). This was ascribed by Phipson (*Chem. News.*, vol. 43, p. 283; vol. 44, p. 73), to a new element "Actinum," the sulphide of which was darkened in sunlight, being reduced, but again became bright by oxidation in the dark. The light sensitiveness of zinc sulphide has also been confirmed within the last two years, although I am at present unable to lay my hand upon the exact reference, in consequence of having lent several books.

With regard to Mr. Nicol's curious experience, it is a little difficult to see how this can be a proof of the existence of x -rays in ordinary sunlight, unless they have the power of destroying the reflective properties of electro-plate on ordinary daylight, because one would naturally suppose that the teapot was polished, and therefore would be in the proper condition to reflect ordinary light. Surely, too, the conditions are not such as to allow us to assume for one minute that the absence of the teapot is a proof of x -rays, for presumably the camera must have been between the sitter and the light, which is the reverse to the usual way of obtaining radiographs.

The facts are these, a lady sits at a table brilliantly illuminated, and holding an electro-plated teapot, the camera must have been facing her either directly or at an angle. The lens saw through the teapot, therefore the x -rays must have proceeded from the lace and ornaments. One naturally asks was the hand visible? In the first place x -rays can only be very faintly reflected from brilliantly polished mirrors, therefore, the x -rays in the sunlight could not presumably have been reflected from the lace and ornaments. Further the x -rays cannot be reflected, hence they could not form an image of the lace and ornaments.

Your correspondent asks for an explanation, but it is impossible to hazard a guess without seeing a print.

London, June 15, 1896.

E. J. WALL.

THE SOCIETY AND ITS MEMBERS.

Sir,—You would have heard from me earlier but that I have been on holiday. Confirmatory evidence of the need for members of the Society to study procedure in the conduct of public business is supplied by the second letter of Mr. Coull (*ante*, p. 479). I am sorry our friend should have regarded my letter as a personal attack upon himself, which was not so intended, and that he should have retaliated under the impulse of passion, as his letter but too plainly

indicates. Under the circumstances it is easy to pass over what is personal and offensive in his and to dismiss altogether the idea of a "personal squabble."

I would point out that the North British Executive is neither more nor less than an assistant to the Council in conducting its North British Branch concern, and also that the "extraordinary question" I referred to is the one contained in Mr. Coull's former letter to you.

The subject he is driving at is that which he describes as "a manifest injustice" to Minor candidates in London. There is no suggestion of the injustice having been extended to candidates in Edinburgh. Not being in possession of evidence of facts in this case of "manifest injustice," I naturally have refrained from expressing any opinion upon it. Notwithstanding all Mr. Coull has said, it cannot be permissible for an assistant in a branch to interfere with a principal in his management of the affairs at headquarters, and in like manner it would be altogether out of place for the North British Executive to interfere with affairs of the Council in London. Since it is now known by members of Council that a grievance is alleged, we may expect it to be properly investigated and the wrong righted, if wrong there be. Since the allegation has been publicly made, it is to be hoped the result will also be made public.

Each one has his own ideas as to the reason for the Society being less popular and less effective than it might be, and people, as a rule, prefer to think themselves right and others wrong. In reality there must be many reasons to account for the condition, and there may be truth in the reason of each. Probably, one great reason for lack of interest is the great labour it takes to move our brethren in the direction we wish, and consequently comes inertia, the result of despair.

Members are babbling over with complaints, but get disgusted because the evils they complain of are not remedied. But do they use the proper means of remedy? In ordinary walking we take step after step towards where we would be at, and go by the most direct route, if time be a consideration and we mean business. Steps are not the end, but only means to the end in view. A company with baggage moves more slowly and requires a broader road. So with the Society's affairs. Discussion and its accompaniments are steps, but not necessarily steps in the right direction. Running to and fro or even backward movements are likely enough where folks do not know their way. Are even the functions of the Council, of the Executive, of District Secretaries, and of officials generally understood by the Society's members? Most emphatically I say no! And, if unable to define functions, need there be surprise at the blundering and nothingness resulting from the blind strugglings to get these somethings set in motion towards acquiring their desires? Indeed, sir, I would that members were lashed with lectures upon procedure and the means at their disposal to help themselves. Most of their brilliant ideas are lost for want of being directed aright. Every one of the members could be of real service, especially at particular times as, for instance, when a measure in which we are interested is before Parliament. It might easily be made possible not only for a circular letter to be sent to every Member of Parliament but for each to receive private letters from every chemist in his constituency at crucial moments on the signal being given by Council. Local Associations are right enough and should be fully used, but to the Society we look for full organisation of the pharmaceutical forces.

In the past the Society has been woefully weak in this respect, and though it may be uphill work, I appeal to members of Council to make it their immediate and earnest purpose to train the Society's members and to organise the body so as to make it an influence which can be brought to bear all over the country on the word being given.

Glasgow, June 22, 1896.

J. ANDERSON RUSSELL.

LIQUOR BISMUTHI ET AMMONIÆ CITRATIS.

Sir,—Although attention has already been called to the fact that the official solution of bismuth behaves differently with sodium bicarbonate to that of the 1867 Pharmacopœia, I think a little more may be said with advantage.

Quite recently a good deal of trouble was caused by a mixture containing liquor bismuthi et ammon. cit., with sodii bicarb., acid. hydrocyan. dilut., sp. chloroformi, and water, sent to a lady by her medical man in London from his own surgery. It was perfectly clear and the medical man declared that her chemist here ought to be able to make it the same. The injurious imputation upon the chemist's milky mixture was that his drugs were impure. Obtain

ing the doctor's address through the kindness of the patient's husband, I respectfully asked his ruling on the subject, submitting samples of mixtures made with liquor bismuthi—my own make—and with Schacht's—both milky. He courteously replied, sending a sample of his mixture—quite clear—and naming the source from which his drugs were obtained.

I asked the further favour of a small quantity of the liquor he used, saying that I attributed the difference to that ingredient. A two-ounce vial reached me, with an explanation that he always had it mixed for him with 3 drops of acid. hydrocyanic dil. to the fluid drachm. This may account for the sp. gr. 1.115 being slightly lower than that of the B.P. 1867, viz, 1.122, but I have no doubt that it was prepared by that formula. Comparing the two ounces of citric acid then used to the pint of liquor, with the 380 grains contained in the 800 grains of citrate of bismuth which are used to make a like quantity in the present Pharmacopœia, it will appear that 130 per cent. more citrate of ammonium exists in the older preparation. And I found that by adding $3\frac{1}{2}$ fluid drachms of liquor ammoniæ citr. to 1 fluid ounce of liq. bismuthi et ammonii cit., a liquor was obtained which, used in proper proportions, gave a perfectly clear mixture. Of course, a fourth of that quantity of the liq. am. cit. fortior would answer. The Pharmacopœia records as an alteration of name—ammonii *vice* ammoniæ citratis, but omits the change of composition, which is, perhaps, of more practical importance.

It is curious that no such precipitation occurs with potassium bicarbonate as with the sodium salt. My correspondence with the prescriber closed as follows:—"What I wish to press upon your attention is that while a medical man is perfectly unfettered in his choice of remedies, a dispensing chemist has no alternative but to dispense the official preparations in filling a prescription; unless the prescriber will be good enough to indicate the particular kind which he desires to employ."

Dover, June 23, 1896.

J. F. BROWN.

LEMON SYRUP—A CAUTION!

Sir,—In last week's *Success* is a receipt for lemon syrup. The ingredients include lump sugar and "oxalic" acid. Lest there should be any mistake about it, oxalic acid is repeated in the directions for mixing. This is in a prize competition, too! *Caveat lector!* This is the "prize" of many of those amateur recipes in weekly papers.

Lowestoft, June 22, 1896.

A. H. HINDE.

ANSWERS TO QUERIES.

[Queries addressed to the "Editorial Department, 17, Bloomsbury Square, W.C.," will be replied to in the Journal as early as possible after receipt, but the Editor cannot undertake to reply to them through the post, nor is it always possible to publish answers the same week. Questions on different subjects should be written on separate slips of paper, each of which should bear the sender's name or initials. Readers requiring working formulæ for special preparations, and intimating their wants to the Editor, will be assisted as far as may be practicable. The word "parts," when used in formulæ, invariably indicates parts by weight.]

ELEMENTARY PHOTOGRAPHY.—There is no work on elementary photography which treats it from a chemical standpoint and explains the various reactions. The best book on the chemistry of the subject is Meldola's 'Chemistry of Photography'; a careful study of this, backed up by Leaper's 'First Principles of Photography,' and his 'Materia Photographica,' should make anyone thoroughly *au fait* on the subject. [Reply to HYDROQUINONE.]

INSOLUBLE COLOURED GELATIN.—There would be considerable difficulty in chromatising gelatin coloured with coal-tar colours, because the colour is in many cases discharged or altered by exposure to light in the presence of a chromate salt. On the other hand it is very easy to try the effect by immersion of a slip of the coloured gelatin in a 3 per cent. solution of potassium bichromate, rendered alkaline with liq. ammoniæ for three minutes, then drying and exposing to light. There is the difficulty that the long washing required to remove the chromate salts would probably remove the colour also. It would be preferable to chromatise plain gelatin, expose to light, well wash, and then soak in solution of the desired colour and dry, or even better than this would be to

try the addition of some formic aldehyde—about 5 per cent. of the commercial 40 per cent. formalin—to the gelatin and colour, and then allow to dry. Gelatin treated with formalin will resist boiling water, but whether the formic aldehyde would attack the various colours is a question we cannot answer. [Reply to J. ROBB.]

POWDER MEASURING APPARATUS.—The apparatus described and illustrated in the Journal for February 1, page 90, is supplied by Fr. Hausmann, Hechtapotheke, Goliathgasse, St. Gallen, Switzerland. [Reply to J. A.]

PLANTS IDENTIFIED.—The specimens are (1) *Ranunculus flammula*, (2) *Linum cathartica*, (3) *Galium saxatile*, (4) *Veronica officinalis*, (5) *Vicia cracca*. [Reply to "SECUNDUS."]

LITHIA WATER IN SYPHONS.—The best method is to put the lithium carbonate in the water before aerating it. The exact method of doing this depends upon the kind of machine employed. Another way, if only a few syphons are required, is to make a solution of the carbonate in the least possible quantity of water, and inject the required quantity of solution into each syphon before filling with aerated water. Special hand syringes to do this are supplied by makers of aerated water machinery. They can be obtained to hold about $3\frac{1}{2}$ ozs. of solution, which is sufficient to take up the 15 grs. of lithium carbonate required for an ordinary 30 oz. syphon of B.P. lithia water. [Reply to H. S.]

STORAGE OF BENZINE.—The Petroleum Acts require benzine to be kept in separate glass, earthenware, or metal vessels, each of which contains not more than one pint, and is securely stopped. The aggregate amount so kept must not exceed three gallons. If these conditions are observed no licence is required. It is not permissible to retail the spirit "loose" in small quantities, but there does not appear to be any objection to putting up small bottles for retail sale so long as you leave none in bottles that are not securely stopped. [Reply to F. B.]

THE SO-CALLED "WIDOW'S" CLAUSE.—No mention is made of widows in Section xvi. of the Pharmacy Act, 1868, which simply specifies that upon the decease of any pharmaceutical chemist or chemist and druggist, actually in business at the time of his death, it shall be lawful for any executor, administrator, or trustee of the estate to conduct such business, if and so long only as such business shall be *bond fide* conducted by a duly qualified assistant. [Reply to J. N. F.]

SPECIMENS OF CAREX.—These are (1) *Carex binervis*; (2) *C. vesicaria*; (3 and 4) *C. glauca*; (5) *C. remota*; (6) *C. flava*; (7) *C. stellulata*. [Reply to "ASSOCIATE."]

NAME OF PLANT.—It is apparently a specimen of *Galega orientalis*, but please send a specimen in fruit. [Reply to I. F. J. RODGERS.]

MORPHINE SOLUTIONS.—We cannot spare further space for your communications on this subject, but have handed them over to the Editor of the 'British Pharmacopœia.' [Reply to G. W. BLYTHE.]

"ONE OF THEM."—Please supply your correct name and address, as a letter sent to the address given has been returned, marked "not known."

PUBLISHERS' NOTICE.

COVERS FOR BINDING.

CLOTH gilt lettered covers for binding the half-yearly volumes of the *Pharmaceutical Journal* are supplied by the Publishers.

THE charge, including postage, is 1s. 6d. each, and should be re-mitted to the Publishers, 5, Serle Street, London, W.C.

COMMUNICATIONS, LETTERS, ETC., have been received from Messrs. Allen, Atkinson, Blythe, Botham, Brodribb, Brown, Bussemer, Clay, Faulkner, Gippen, Harrison, Heanley, Hinde, Holt, Hooper, Hudson, Lancaster, Maiden, Martindale, Naylor, Parker, Price, Reeve, Rodgers, Russell, Salter, Saunders, Schneider, Umney, White, Whitehead, and Wright.

SUPPLEMENT

TO THE

PHARMACEUTICAL JOURNAL.

ROYAL INSTITUTION.

SOUND, HEARING, AND SPEECH.

On December 31, Mr. J. Gray M'Kendrick gave an address at the Royal Institution on "Some of the Phenomena of Sound." He described, and illustrated by means of scientific apparatus, Graham's mode of adapting the use of the microphone to enlarged telephones, and showed how, by means of electrical arrangements, musical sounds were capable of being produced. He then pointed out that the results thus educed contained the germs of a possible musical electrical instrument, which might be made entirely independent of any of the mechanical methods ordinarily applicable to the musical instruments at present known to the world. The conception of sound was, he explained, very much like the conception of pressure, the ear being actuated by the vibratory motion of the air, in the same way as the sense of touch was affected by contact with a definite and solid object. In the case of sound, it was, he stated, the rapidity of the vibratory movement which determined the loudness or otherwise of what sensation was received by the ear, the delicacy of which natural organ enabled it to record the impressions made by the wave sounds of the telephonic diaphragm to the extent of only two-millionths of an inch. One of the great peculiarities of sound was to be found in the character of its pitch, which was governed (as the lecturer showed by experiments) by the number of vibrations per second, the lowest audible note to be obtained from any instrument giving 32 vibrations per second; whilst the highest, which was that of the organ, gave 32,000. The lowest pitch of the human voice was put at 45 vibrations per second, while the highest soprano note yielded 720 vibrations. It was a fact well known to musicians that each instrument had its own pitch. The uses and powers of the micro-telephone were illustrated at the close of the lecture by the production of a number of pieces of concerted and vocal music, and the audience seemed to be listening to orchestras and human voices in the immediate vicinity of the lecture-hall.

TRADE NOTES AND NEWS.

APOLLINARIS WATER AT OSBORNE—In an article published in the *St. James's Gazette*, entitled "Yule-Tide at Osborne," one of the Royal Christmas menus is given. At the end of the wine list, it is stated that Balmoral whisky and Apollinaris are provided for the use of Her Majesty the Queen, "who takes nothing else."

THE LIQUOR CARNIS COMPANY has just published for the use of travellers selling the firm's goods a folding cloth case containing illustrations of the different foods manufactured at Aston Clinton, Bucks. Any reader requiring one should apply to the

Company. Another recent publication is 'Our Treasures and How to Keep Them,' dealing mainly with the value of fat as represented by "Virol," in infant feeding. Copies of this booklet are also sent free on application.

KEITH LONGSTAFF, of Fulham, S.W., sends specimens of his advertising literature, which seem well adapted to serve the desired purpose. Especially attractive to many readers will be the small book in which are recorded the impressions of a visit to Munster House, Fulham, formerly a hunting seat of Charles II., but now a private lunatic asylum, Nell Gwynne's Bower in the garden being converted into a mortuary.

Mr. DONALD WATSON, who for thirty-five years was connected with the firm of Johnson and Sons, the well-known makers of silver nitrate and other fine chemicals, has now joined Messrs. Fuerst Brothers, Philpot Lane, E.C.

THE CHEMICAL TRADE ON TEESIDE.—The negotiations by which Messrs. Brunner, Mond, and Co. acquire the soda works of Messrs. Bell Bros. (Limited) have been completed. The purchase includes a considerable tract of land, upon which Messrs. Brunner, Mond, and Co. will erect an extensive plant for the manufacture of soda. It is anticipated that the new works may be in operation by the end of 1896, or early in 1897. Some little time may elapse before they take actual possession of the soda works at Clarence, but for practical purposes the property becomes theirs tomorrow. It is stated that Alderman Hugh Bell joins the board of Messrs. Brunner, Mond, and Co.

THE ELEMENT OF LUCK IN PHOTOGRAPHY.*

Undoubtedly, the element of chance plays a more important part in the making of pictures by photography than it does in any other artistic pursuit. And herein lies a certain encouragement for the beginner and for the amateur.

If the untrained man is to play against the expert, he will obviously stand a better chance of holding his own in the throwing of dice or in the whirling of the rouge et noir wheel, than he will at such games, let us say, as billiards or chess. Similar comparisons may be made in respect to the formative arts. A happy combination of line or of mass may present itself to our view at an unexpected moment, and be portrayed and perpetuated by a single touch upon the button of the hand camera. On the other hand the painter and the sculptor labour for the attainment of their ideals with much less hope of assistance from the Goddess of Fortune. Hence it follows that, whilst but few of us can be even tolerable painters, most of us can become excellent photographers.

In landscape, for instance, Nature displays her beauties in an altogether impartial way, and dresses up her scenic effects of sunset and storm, of cloud-wreathed mountain and glittering sea, for all who will trouble them-

selves to give her their attention. These effects are always more or less fleeting; they may last but a few moments, and they may present themselves from but a single point of view. Now, before putting hand to work, the painter is obliged to absorb, as it were, all this into his very being. It is from the depths of his own inner consciousness that, as he stands for days before his easel, he laboriously transfers his impressions to canvas. In the sweep of the brush there is but little left to chance—and what little in the way of luck there may be is rather liable to frustrate than to further the intentions of the artist. "Alas," says the painter in Emilia Galotti, "that we cannot paint with our eyes, without intermediation! On that long way, from the eye, through the arm, to the brush, how much is there not lost?"

The more fortunate photographer, though his subjective impressions need not in themselves be so deep or so enduring, may secure his picture complete and perfect at the instant of exposure. The wreathed clouds, the shifting of the light and shade, even the uplifted waves of the sea, stand still for him, for that instant in which the shutter is passed before the lens. During the century which has elapsed since Lessing wrote, the desire of the poet's dream has become in great measure a reality.

That hard-headed collective wisdom of experience which manifests itself as public opinion and popular tendency knows this well. It is owing to a recognition of the fact that even the duffer may, by sheer chance, do an admirable thing in the photographic way that thousands and thousands take up with photography where but tens resort to sketching in water colours.

Art in photography is, indeed, almost entirely a matter of selection of subject. And, as he that goes farthest afield will see the most, so will he that is always accompanied by his camera, as by an artistic note book, secure, together with the most numerous, the most beautiful pictures, as well as the most interesting records. It is here that the veriest beginner will stand an almost equal chance with the most experienced professional. Let him but select with taste; in the way of accurate delineation his Kodak will do the rest.

What better proof could we desire of the fact that photography is largely a matter of luck than the constant complaints which the amateur makes against his camera, putting the fault of everything gone wrong upon that willing servant, who never retaliates, and who with half-way decent treatment, will do so much for him. It is merely the old story of the gambler cursing his luck—in our case a good, black, one-eyed genius "clothed all in leather."

There is, curiously enough, a decided element of favourable chance even in those often unpredictable transmutations to which photography subjects actinic values. The eminent photographer who so lately won the exhibition gold medal with his poetical "Moonlight on the Skedunk River," has confessed to his intimates that the negative was one of two careless snap-shots, decidedly under-exposed, made rather late in the afternoon, as the clouds were balling together after a rain, and the sun was making a discouraged attempt to shine on the dripping banks. After all, it does not detract from the beauty or the attractiveness of such pic-

* From *The Kodak News*.

tures to know that they were flukes, or that they were made first and named afterwards.

It is, however, in the portrayal of the fleeting emotions of the human face that luck—or if one prefer so to call it, opportunity—is well-nigh everything. In this field the home photographer has the real chances. His favourite subjects are depicted amidst their wonted-surroundings; in their everyday garb and characteristic postures. The shutter of his Kodak is kept set, for days if need be, until the opportune moment can be seized. And then, when years have gone by, appreciative ones say: "What a piece of luck to have caught just that expression!"

MARKET REPORT.

[Specially compiled for the *Pharmaceutical Journal*.]

[The quotations here given are in all cases the lowest net cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.]

LONDON, JANUARY 2, 1895.

There is but little to report in the chemical market this week, and the holidays have naturally interfered considerably with the course of business. The carbolic acid market remain very firm, and the prices of crystals and crude acid have again advanced. On the other hand, benzole has declined considerably. The makers of citric acid have lowered their prices, whilst tartaric acid is firm. Cream of tartar is unchanged on the spot, but for shipment to-day's quotations are firmer. Acetanilide is very firm, whilst the position of phenacetin is now attracting a good deal of attention, but it is extremely unlikely that the rumours of high prices will come to anything. Of other fine chemicals, chrysophanic acid is very firm, quinine is quiet, and sugar of milk and santolin are firm. In the drug market gentian root is very scarce. Full prices have been paid for galangal root, and Peruvian balsam is dearer. A good business continues to be done in most grades of Turkey opium, whilst Persian is firmly held. In the essential oil market star anise and cassia oils are firm. Japan peppermint oils are quiet, and cinnamon leaf oil is firmly held. Full details will be found below:—

ACACIA.—In *Persian* so-called insoluble gum a moderate business only has been done, but the market is steady. Fair sorts quote at 12s. 6d. to 13s. 6d., and fine pale at 20s. per cwt.

ACETANILIDE.—The market remains very firm. The prices generally quoted are 1s. 3d. to 1s. 4d. per lb., although it would still be possible to buy at 1s. 2d. per lb.

ACID, CARBOLIC.—The market is very firm and, a good demand for *Crystals* continuing, prices have been further advanced. The current quotations are now as follows:—*Crystals*: 34° to 35° C., 6½d.; 39° to 40° C., 7¼d.; 39° to 40° C. (*detached crystals*), 8¼d. per

lb. *Crude*: Dearer. 60 per cent. is now quoted at 1s. 9d. and 75 per cent. at 2s. 1d. per gallon. *Liquefied* and *creosylic* are unchanged at 1s. 1d., and 11½d. per gallon.

ACID CHRYSOPHANIC.—Continues very firmly held. For small quantities one of the *English* makers asks 24s. per lb. There is little or none to be had under 22s. for quantities of 28 lbs. The scarcity of good quality *Goa powder* continues.

ACID, CITRIC.—Since our last report the makers of *English* acid have lowered their price in consequence of second-hand cutting. They now quote 1s. 2½d. per lb., whilst second-hand holders offer at 1s. 2d. *Concentrated juice* still offers at £13 5s. to £13 10s. per pipe *f.o.b.*

ACID, TARTARIC.—Quiet, with but little inquiry. For *English* brands of acid in makers' hands, the spot price is still 1s. 2d. per lb., whilst for second-hand, 1s. 1¾d. would be accepted. *Foreign* brands of acid (not guaranteed B.P.) quote at 1s. 1¾d. for both *powder* and *crystals*, and for delivery, 1s. 1¾d. per lb. *c.i.f.* terms.

AMMONIA SALTS.—*Sulphate*: Rather firmer, although quotations are unchanged, £8 12s. 6d. being the price for grey 24 per cent. on the spot; £8 11s. 3d. for *Hull*, and £9 for *Berkton*. *Carbonate*: 3½d. to 3¾d. per lb. *Liquor*: 3¾d. to 3½d. per lb., less 5 per cent. *Sal ammoniac*: Firsts, 39s.; seconds, 37s.

ARSENIC.—Very firm at £15 15s. to £16 per ton for best white *powder*, landed terms.

CAFFEINE.—There is no change to record in the position of this article, which is quoted at 18s. to 19s. per lb., according to quantity.

CAMPHOR (CRUDE).—There has been little or no business doing, and quotations are nominally 177s. 6d. for *China*, and 185s. for *Japan*, *c.i.f.* terms.

CAMPHOR (REFINED).—During the last few days it has been expected that an advance would take place in *German* camphor, but nothing has yet transpired, although it may occur at any time. At present *German* refiners quote bells in quantities of one ton or more, 2s. 1½d.; half to one ton, 2s. 2d.; and 5 to 10 cwt., 2s. 2½d. per lb., with second-hand quotations ½d. per lb. less.

CASCARA SAGRADA.—Rather firmer. The current spot quotation is 18s. to 20s. per cwt.

COAL DISTILLATION PRODUCTS.—*Benzole*: Much easier. For 50 per cent. 1s. 11d. per gallon would now be accepted, and for 90 per cent. 2s. 3d. *Toluol*: Unchanged at 2s. 4d. per gallon for *pure*. *Creosote*: Steady at 1½d. per gallon. *Crude Naphtha*: 30 per cent. at 120° C. quotes at 9d. per gallon. *Solvent Naphtha*: Easier. 95 per cent. at 160° C. at 1s. 7d., 90 per cent. at 160° C. at 1s. 2½d., and 90 per cent. at 190° C. at 1s. 0½d. per gallon. *Anthracene*: 13A, 11½d.; B, 10d. per unit. *Pitch*: 37s. per ton *f.o.b.* *Tar*: 12s. 9d. per barrel for *refined*.

COPPER SULPHATE.—Continues to tend lower. On the spot, £15 5s. to £16 10s. is now quoted, the latter price being for the *Anchor* brand.

CREAM OF TARTAR.—Firm. *German* brands of powder are now quoted on the spot at 95s. to 97s. per cwt., whilst best white *French* crystals offer at 92s. 6d. For shipment the market is firmer, and 89s. to 90s. per cwt., *f.o.b.*, Bordeaux, is asked.

GALANGAL.—The supply of good quality root on the spot is very small. Since our last report 22s. 6d. per cwt. has been paid privately for root from *Hong Kong*.

GENTIAN ROOT.—There is very little to be had on the spot, and the supplies to come forward are very small. The nearest spot price is 16s. to 17s. per cwt.

MENTHOL.—Quiet. The spot price is 14s. 3d. to 14s. 6d. per lb. for good white *crystals*, whilst for shipment 14s., *c.i.f.*, is quoted.

OIL (COD LIVER).—The market remains very firm. The current quotations for fine non-congealing *Norwegian* oil is 180s. to 200s. per barrel. *Newfoundland* oil sells at 5s. to 5s. 3d. per gallon.

OILS (ESSENTIAL).—Reports from *China* state that the essential oil market continues very firm. *Star Anise* oil is still very scarce, whilst the supplies of *cassia* oil, which are only small, are said to be of somewhat better quality than those received recently. On the spot *Star Anise* oil is firm at 10s. 3d. per lb. During the past week bids of 10s. 1½d. per lb. have been refused. *Cassia* oil is also firm, 82 per cent. aldehyde strength oil being held for 11s. 6d., whilst 10s. is quoted for oil testing 65 per cent. *Lemon-grass* oil is firm at 2¼d. per oz. on the spot, whilst 2s. 1d. is now asked for *citronella* oil. Of *Peppermint* oils, *H. G. Hotchkiss'* brand is steady at 10s. 1½d. to 10s. 3d., on the other hand, *Japanese* oil is easier, 40 per cent. oil being offered at 8s. 6d., and *dementholised* at 6s. 6d. per lb. *Cinnamon leaf* oil is held for 5½d. per oz., whilst *Russian aniseed* oil is held for 9s. per lb.

OILS (FIXED) AND SPIRITS.—*Castor*: *Italian* oil is very firm at 30s. to 30s. 6d. per cwt., *c.i.f.*, for fine tasteless oil. *French medicinal* oil quotes at 3½d. to 3¾d. per lb. in tins (packed in cases), and *Calcutta* at 2¾d. to 2½d. for firsts and 2¾d. to 2½d. for seconds. *Cotton*: Slow of sale at a decline. *Refined* oil now quotes at £16 10s. to £17 5s., according to brand and package. *Coco nut*. The market is very firm, Ceylon being fully steady at £22 15s., whilst *Cochin* is dearer at £25 10s. *Linseed*: The market is very firm, and prices have advanced, oil in barrels being now quoted at £20 5s. *Olive*; *Syrian* quotes at £33; *Spanish*, £34. *Palm*: *Lagos* quotes at £22 10s. on the spot. *Turpentine*: Rather quiet and easier in price. *American* spirit being now quoted at 20s. 6d. on the spot. *Petroleum*: Slow of sale at a fall, *American* oil being now quoted at 6¼d. to 6½d.; *water white*, 8d. to 8¼d., and *Russian* at 6½d. to 6¾d. per gallon.

OPIUM ALKALOIDS.—The market is very firm, but no further change has occurred in the quotations. *Morphine* quotes at 4s. 3d. per oz. for *powder* in 10,000 oz. lots, whilst 2d. per oz. more is asked for *crystals*. *Codeine* quotes at 10s. 6d. per oz. in 100 oz. lots.

OPIUM.—The market continues very firm, and a good all-round inquiry is still shown, the following being the current quotations:—*Turkish*: *Soft shipping*, 10s. 9d. to 12s. 9d.; *Symrna*, 8s. to 9s.; *Constantinople*, 8s. 6d. to 9s. 6d.; *Druggists' Seconds*, 7s. 6d. to 8s. 6d. The market in *Persian* opium continues very firm, and fine *bricks* are held for 13s. 6d. per lb., but little or no business has been done. *Ordinary ball* quotes at 11s. to 12s. 6d. per lb.

PHENACETIN.—This article is attracting a good deal of attention at present, and all sorts of rumours are flying about concerning it. These seem to be due to the action taken by the Elberfeld manufacturers, who have registered the name in Germany, and a strong attempt is being made to run the price up, but whether it will come to anything is very uncertain. *Bayer's*, whose brand of phenacetin is one which has a strong hold, have recently issued three circulars concerning the position of this article, to the trade.

QUICKSILVER.—*Importers'* still quote £7 7s. 6d. per bottle, whilst in second-hand £7 5s. 6d. is asked.

QUININE SULPHATE.—The market remains quiet, with little or no business doing. Quotations for *B. & S.* and *Brunswick* remain 1s. 1½d. per oz.

SENEGA ROOT.—The current spot quotation is 1s. 3d. per lb. for good sound root.

SPERMACEITI.—The market is firm, and good refined *American* is quoted at 1s. 9d. per lb. on the spot.

WAX (JAPAN)—Very firm. Privately 30s. has been paid for good pale *squares*, and 32s. per cwt. is now asked.

SNAP SHOTS AND THE HAND CAMERA.

BY GORDON PARKER, WOBURN, MASS.

All dust-covered and neglected, the implements used in early efforts mark the course of advancement in our chosen lines of work and pleasure. The advanced amateur has forgotten the hand camera of his first steps in photography, or only remembers it to remark, "I did that once," as he meets the snap-shotting fiend everywhere wandering up and down the land.

But great strides have been taken in the manufacture of hand cameras and all the accessories, and the work that is possible, and the results that are obtained by the successful snap-shotter of to-day are alike a credit to him and his instrument and a wonder to all.

A hand camera should be a part of every amateur's outfit. Such an instrument could have been used to advantage the day of the Knights Templar parade in Boston, where a large tripod camera was useless and heavy baggage.

The qualifications necessary in the successful use of the camera are, a quick eye, judgment of distance, some idea of composition, courage, and a steady nerve. Possessed of these you can go anywhere it is right to go, and come away with good proof of your trip.

The film, a bugbear to many, is really the meat of the hand camera. You can do nothing with plates that can not be duplicated with the film. You can carry more of them, make the changes quicker, and consequently get more exposures. The small universal-focus, film and plate carrying cameras of recent manufacture answer all requirements and have many advantages.

We dress our windows to attract attention, and while our wares are capable of arrangements pleasing to the eye, the novelty wears away with repetition. It must have been observed how quickly pictures catch the eye and stop the feet. People are interested, study the display, smile, stop again as they return your way, and ask their friends if they have seen the pictures in

your window. It is something your neighbour cannot exactly duplicate. The negatives, the prints, the display is wholly your own, and a little intelligent talk, when the customer comes in, about the pictures, and the making of pictures, interests and pleases him.

Now the hand camera and snap-shot make this nearer and easier to you than the tripod and the larger box, because a larger variety can be shown. Some of the pictures can only be obtained that way; you come nearer to the great majority of picture takers. You can send your clerk, your family, your out-of-work friend off for what will interest them in obtaining and profit you in having; it will make trade for you in photographic material, and it comes nearest to the desired result of all window display by attracting favourable attention to your store and your goods.—*Spatula.*

PAINTING IRONWORK.

Considering the immense quantity of steel work now erected, the question of the best paint and the best method of applying the same is one of very great importance. In this country the choice usually lies between an iron oxide or a lead paint, both having a good record. Some links in the anchorage of the old Hammersmith suspension bridge were found in a perfect state of preservation when removed to the Forth Bridge, where they were employed for some of the temporary work. The pigment in this case was white lead, though ordinarily this has a bad reputation for this class of work. In America so-called asphaltum paints have also come largely into use, and in a recent communication to the American Society of Civil Engineers, Mr. E. Gerber gives the results of a careful investigation into the present state of a number of bridges which had been painted with one of the above three classes of paint. In all cases rust was found to a greater or less extent, occurring always in spots in the centre of clean metal. Most of this was thin, and was as bad in new structures as in old. It was, however, found that the iron oxide paints adhered more firmly to the metal than the lead paints, only one case being found in which the latter adhered well and was tough. It is suggested that much of this brittleness was due to adulteration of the oil by turpentine, benzene, or other petroleum products. There is more likelihood of such adulteration with lead paints than with iron oxide, as they are more difficult to spread, and there is thus more temptation to dilute the oil. In some cases, bridges coated with iron oxide eleven or twelve years ago were still in good condition, without having been repainted. Only two of the bridges examined had been painted with carbon or asphaltum paints, but the condition of things in these two cases was found to be not altogether satisfactory, as in neither case was the coating tough and adherent. The metal had, however been protected by them. Mr. Gerber considers that too little attention has, in the past, been paid to thoroughly cleaning the metal before the first coat of paint is applied. Most of the rust spots found had apparently been there from the outset, and had done no harm so long as not too far advanced. The best plan of securing clean surfaces, in

Mr. Gerber's opinion, would be to coat the metal with linseed oil as it left the rolls.—*Engineering.*

NEW BOOKS AND NEW EDITIONS.

[Publishers are requested to send particulars of new publications, addressed "Editor, 17, Bloomsbury Square, W.C."]

A MANUAL OF PHYSICS: being an Introduction to the Study of Physical Science. Designed for the use of University Students and Advanced Classes in Secondary Schools. By W. PEDDIE. 2nd edit. Revised and enlarged. Cr. 8vo., pp. 590. Price 7s. 6d. (University Series.) (Baillière, Tindall and Cox, London.)

EVENINGS AT THE MICROSCOPE; or, Researches Among the Minuter Organs and Forms of Animal Life. By P. H. GOSSE. A new edition revised by T. Jeffrey Bell. Cr. 8vo., pp. 448. Price 5s. (S.P.C.K., London.)

PRACTICAL INORGANIC CHEMISTRY. By G. S. TURPIN. Cr. 8vo., pp. 164. Price 2s. 6d. (Macmillan and Co., London.)

A CODE OF MEDICAL ETHICS: with General and Special Rules for the Guidance of the Faculty and the Public. By J. DE STYRAP. 4th ed., revised and enlarged, 8vo., pp. 104. Price 3s. 6d. net. (H. K. Lewis, London.)

A SYSTEM OF LEGAL MEDICINE. By A. McL. HAMILTON, L. GODKIN, and J. F. BABCOCK. Illustrated. 2 vols., 8vo. Price 60s. (Rebman, London.)

A SMALLER ATLAS OF ILLUSTRATIONS OF CLINICAL SURGERY, consisting of 136 plates with descriptive letterpress. By J. HUTCHINSON. 8vo., pp. 552. Price 31s. 6d. net. (West and N.)

MOLECULES AND THE MOLECULAR THEORY OF MATTER. By A. D. RISTEEN. Illustrated. 8vo. (Boston). Price 9s. (Sampson Low and Co., London.)

METHODS OF MICROSCOPICAL RESEARCH: a Practical Guide to Microscopical Manipulation. 2nd edit., much enlarged and in great part rewritten. By ARTHUR C. COLE. 8vo., pp. 216. Price 6s. (Baillière, Tindall and Cox., London.)

THE STRUCTURE AND DEVELOPMENT OF THE MOSES AND FERNS (ARCHEGONIAE.) By D. H. CAMPBELL. 8vo., pp. 552. Price 14s. net. (Macmillan and Co., London.)

THE STUDENT'S GUIDE TO PRACTICAL THERAPEUTICS. By A. WHEELER. Cr. 8vo. (Bryce, Edinburgh). Pp. 254. Price 5s. net. (Simpkin, Marshall and Co., London.)

LIVERPOOL MARKET REPORT.

[From our own Correspondent.]

JANUARY 1, 1896.

CANARY SEED: *Turkish* in slight demand at 33s. LINSEED: *Turkish*, 34s. 6d. to 35s. 6d. KOLA NUTS: 17 packages dried sold at 6d. to 7d. COCHINEAL: *Teneriffe* black sold at late rates. CARNAUBA WAX: 20 bags at 15s. 6d. CASTOR OIL: *Calcutta*, good seconds, 2½d.; *French*, 1st pressure, 2½d. to 2¾d.; *Madras*, 2 7/32d. to 2¼d. OLIVE OIL: Held for recent rates. LINSEED OIL: 20s. 6d. to 21s. 6d. for *Liverpool* makes. COTTON-SEED OIL: 17s. 3d. to 17s. 9d. for *Liverpool* refined. SPIRIT OF TURPENTINE: 21s. 9d. to 22s. for spot parcels. PETROLEUM: *Russian* refined, 7d.; *American*, 7¾d. to 8½d. CREAM OF TARTAR: 93s. spot. POTASH: 21s. 9d. PEARLASH: 37s. 6d. SODA NITRATE: 7s. 7½d. to 7s. 10½d.

PATENT SPECIFICATIONS PUBLISHED.

Vaginal douche (Rains, R. H.).—The instrument consists of a bulbous syringe having a small passage for the injection of the water, etc., into the vagina, and a number of openings passing into a large passage, through which the washings escape to a waste pipe. A clamp is fastened upon the waste pipe during the injection, but is opened when sufficient liquid has been forced in. An inflated annulus round the waste pipe closes the entrance to the vagina, and prevents escape of the waste outside the syringe. No. 20,821 of 1894.

Beverage (Christensen, H., and Hamann, R.).—Skimmed milk or whey is concentrated in vacuo or otherwise, and the firm mass obtained is moulded into pieces similar to coffee beans, followed by drying or roasting in an oven and powdering. The beverage is made from this powder "similarly to coffee." No. 13,886 of 1895.

Oxygen (Lapointe, H. L. A.).—The invention consists in preparing oxygen by the well-known process of alternately heating an alkaline manganate, such as that of soda, in presence of superheated steam and in presence of air. The action of steam on the manganate results in the evolution of oxygen and the reduction of the manganate to a mixture of manganese peroxide and soda, while the heating in air re-oxidises the mixture and reproduces the manganate. The invention refers to improved arrangements by which the action is said to be rendered more efficient, and by which the presence of nitrogen in the oxygen produced is obviated. No. 13,959 of 1895.

Feeding bottles (Woodmancy, W. S.).—Relates to a strap for securing the bottle to the dress of the child. No. 23,914 of 1894.

Crutches (Ward, R. A.).—The pad which comes beneath the wearer's arm is an india-rubber cushion inflated with air, and a solid indiarubber sphere is fitted in a socket at the foot of the crutch. No. 2391 of 1895.

Surgical bandages (Bingler, F.).—A gauze or other fabric is coated with warm glue or gelatine, and when nearly set, is covered with a layer of gypsum or "plaster." It is prepared for use by dipping in hot water. No. 14,601 of 1895.

EXCHANGE.

[For the convenience of readers, suitable notices, not exceeding thirty words in length, are inserted free in this column, if they do not partake of the nature of ordinary advertisements. They must relate to books, apparatus, shop fittings, etc., and arrive not later than Wednesday, addressed "Editorial Department, 17, Bloomsbury Square, W.C."]

OFFERED.

Thomé's 'Botany,' Brown's 'Manual of Assaying,' Taylor on 'Poisons,' Ganot's 'Philosophy,' all new. Muter's 'Analysis.' Will exchange for Green's or Oliver's 'Systematic Botany,' or Vines'—Dixon, 164, Aigburth Road, Liverpool.

Unused Portable Assay Balance, with rider to carry 2 grammes each pan, and turn with 0.1 milligramme, fitted in mahogany case. Price £4 4s.—J. Allen, 1, George Street, Plymouth.

Dispensing scales, new, glass case with sliding front; new hypodermic case containing graduated syringe, three needle-holders, three tubes, screw-stoppered for solutions. Particulars from—Adamson, 12, Russell Street, Southsea.

'Year-Book of Pharmacy,' 1874 to 1892 inclusive, new. What offers.—T. Spencer, Villetta, Drayton Park, Hanwell, London, W.

Blackie's 'Household Physician,' in 14 parts, excellent condition. Cost 28s. What offers?—E. S., 36, Eley Road, Wisbech.

Splendid Complete Mahogany Chemist's Fixtures, with good mirrors and mirrored backs to shelves, recessed labelled bottles and jars (pink). In perfect condition.—Bentley, Chemist, Goole.

Wright's 'Poultry Book,' 18s. 6d.; Orfila's 'Treatment of Persons Who Have Taken Poison,' 2s. 6d.; Liebig's 'Organic and Animal Chemistry,' 2 vols. (published 19s.), 5s. All free.—Davis, "Chestnuts," Gordon Hill, Enfield.

'Euripidis Tragediæ,' Greek, 6 vols., 3s. 6d.; 'Œuvres de Racine,' 4 vols., 2s. 6d.; Heyne's 'Homer,' Greek, 2s. 6d.; Dr. Johnson's 'Dictionary,' 1st octavo edition, 2 vols., 1756.—Davies, 33, Eglinton Road, Bow.

Microscope, 30s.; Minor and other books cheap; Microscopic Slides. Send for list or call and inspect any time.—Burge, 2, Fernhead Road, Harrow Road, W.

'Pharmacographia,' 10s.; 'U.S. Dispensatory,' unbound, in 7 parts, 25s.; Watts' 'Inorganic,' 4s. 6d. All new and latest editions. Carriage paid.—Solazzi, 21, Queen Street, Louth, Lincs.

WANTED.

Green's 'Botany,' Part I. 1895. Lowest offers to Robert L. Morris, care of John H. Fisher, Esq., Chemist, 74, High Street, Dunfermline.

Muter's 'Analytical Chemistry,' 6th edit.; Watts (Tilden) 'Inorganic Chemistry,' last edit.; Wills' 'Volumetric Analysis,' last edit.; Remsen's 'Organic Chemistry,' last edit.; Thorpe's 'Organic Chemistry.'—Smith, 3, Alma Cottages, Plymouth.

Cheap Galvanic Battery and Coil in case, with handles and electrodes; state how long used, kind, and lowest price, carriage paid, to—W., care of Mr. Plattin, chemist, Fakenham, Norfolk.

Second-hand Apparatus for Electrical Experiments. Lowest price to—A. H. Price, 32, Shaftesbury Road, Brighton.

London Pharmacopœia, 1851; 'Proceedings of British Pharmaceutical Conference,' 1864 and 1867.—Liverseege, 292, Rotton Park Road, Birmingham.

Attfield's 'Chemistry,' good condition, lowest price.—Jeffs, Lyddington, Uppingham.

** The attention of readers is directed to the conditions printed at the head of this column. Notices cannot be inserted unless they are in accordance with those conditions.

DIARY OF THE WEEK.

Secretaries of Societies are requested to send notices of forthcoming meetings not later than Wednesday in the previous week.

SUNDAY, JANUARY 5.

LIVERPOOL SUNDAY SOCIETY, at 3 p.m.

"A Trip to the Austrian Tyrol" (The Dolomites), by Paul Lange.

MONDAY, JANUARY 6.

SOCIETY OF CHEMICAL INDUSTRY (LONDON SECTION), at 8 p.m.

"A Technological Study of Comparative Affinities in the Case of Certain Salts of Ammonia," by Watson Smith.

"Colour Effect of Lime Salts on Hops in Brewing," by J. W. Lovibond.

ROYAL GEOGRAPHICAL SOCIETY, at 8 30 p.m.

"A Journey South Through Somaliland to Lakes Rudolf and Stefanie, and thence to Lamu by the Tana River," by Dr. Donaldson Smith.

TUESDAY, JANUARY 7.

PHARMACEUTICAL SOCIETY OF GREAT BRITAIN.

Benevolent Fund Committee.

Finance Committee.

General Purposes Committee.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.

"Sound, Hearing, and Speech" (experimentally illustrated), by Professor J. G. McKendrick.

WEDNESDAY, JANUARY 8.

PHARMACEUTICAL SOCIETY OF GREAT BRITAIN.

Council Meeting.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION, at 9 p.m.

"Ferments," by F. Casson.

SOCIETY OF ARTS (JUVENILE LECTURES), at 7 p.m.

"Earthquakes, Earth Movements, and Volcanoes," by Professor John Milne.

GEOLOGICAL SOCIETY OF LONDON.

"A Description of the Cenomanian in Western France and the South-West of England," by A. J. Jukes-Browne and William Hill.

"The Llandovery and Associated Rocks of Con-way," by Miss G. L. Elles and Miss M. R. Wood.

"The Gypsum Deposits of Nottinghamshire and Derbyshire," by A. T. Metcalfe.

THURSDAY, JANUARY 9.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.

"Sound, Hearing, and Speech" (experimentally illustrated), by Professor J. G. McKendrick.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 8 p.m.

Smoking Concert at the Frascati Restaurant, Oxford Street, W.

LIVERPOOL PHARMACEUTICAL STUDENTS' SOCIETY.

Annual Dinner.

PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION.

"An Essay on the Microscope," by W. S. Tavener.

GLASGOW AND WEST OF SCOTLAND PHARMACEUTICAL ASSOCIATION, at 9.15 p.m.

Social Meeting.

FRIDAY, JANUARY 10.

ROYAL ASTRONOMICAL SOCIETY, at 8 p.m.

Ordinary Meeting.

CAMBRIDGE PHARMACEUTICAL ASSOCIATION.

Annual Dinner.

SHEFFIELD MICROSCOPICAL SOCIETY, at 8 p.m.

"Filamentous Algae," by R. B. Greaves.

EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION, at 9.15 p.m.

"Pharmacy Notes," by W. Lyon.

"Random Notes from Macquer's Chemistry," by J. McBain.

ABERDEEN JUNIOR CHEMISTS' ASSOCIATION, at 9.30 p.m.

Questions.

Late Advertisement.

Assistant Wanted.

ASSISTANT, qualified, for dispensing business, at once. About 25. Out-door. State age, salary required, &c. MILLER, Chemist, 30, Tranquil Vale, Blackheath.

SUPPLEMENT

TO THE

PHARMACEUTICAL JOURNAL.

MISCELLANEOUS NEWS.

THE MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION.—The first musical and social evening of the above Association was held at the Exchange Rooms, on Wednesday, January 1, under the chairmanship of the President (Mr. T. C. Clarke). The arrangements were under the control of Mr. P. C. Arblaster, to whom hearty thanks were expressed for providing a most successful and enjoyable entertainment. The following gentlemen contributed to the evening's enjoyment:—Messrs. Thompson, Frost, Williams, Phillips, Hunt, Martin, Weaver, and Wilson.

ROYAL INSTITUTION.—On Tuesday next (January 14) Professor Charles Stewart, M.R.C.S., Fullerian Professor of Physiology, R.I., will begin a course of lectures at the Royal Institution on "The External Covering of Plants and Animals: Its Structure and Functions." On Thursday next (January 16) Mr. Phillip H. Wicksteed, M.A., will deliver the first of a course of lectures on "Dante," and on Saturday (January 18) Dr. A. Donaldson Smith, F.R.C.S., will deliver a lecture on "To the North of Lake Rudolf and Among the Gallas." The Friday evening meetings will begin on January 17, when the Right Hon. Lord Rayleigh, F.R.S., will deliver a discourse on "More About Argon."

DEATH OF A WELL-KNOWN SHEFFIELD CHEMIST.—The announcement of the death of Mr. Albert Archer, which took place on January 2, has come as a surprise to the members of the profession in Sheffield, as it was not generally known that he was seriously ill. A native of that city, Mr. Archer was apprenticed with Mr. Hill, a predecessor of Mr. C. O. Morrison's in West Street. At a later period Mr. Archer purchased the business at Steel Bank, which had been carried on by Mr. Taylor. While there he opened a branch at Woodhouse, a place some seven miles from Sheffield. Owing to indifferent health he was advised to go south, and after some delay he obtained a business at Torquay, and went to live there, but not receiving permanent benefit he returned to his native city, and in October, 1895, took a business in Abbeydale Road.

DEFECTIVE DRUGS IN YORKSHIRE.—Mr. A. H. Allen, the public analyst, in his quarterly report to the West Riding County Council, says some of the drugs received have been seriously deficient in the proportions of active ingredients. Thus tincture of rhubarb has been found deficient in alcohol and destitute, or nearly destitute, of saffron, which two ingredients are the most expensive of those used in its preparation. Quinine has been found with only one-half of the proper quantity of quinine; compound liquorice powder has been met with deficient in sulphur; beeswax containing no more than

25 per cent. of real beeswax, the remainder being resin, fatty matters, and paraffin wax. It is noteworthy that in this district, of which Sheffield is the centre, there is a very large number of dealers in drugs who are not registered chemists and druggists.

THE SUICIDE OF A TORQUAY CHEMIST'S ASSISTANT.—An inquest was held on Tuesday, January 7, by Dr. Fraser, of Totnes, deputy coroner, at the Upton Parochial Rooms, Torquay, touching the death of Charles Albert Snow, 19, chemist's assistant, in the employ of Mr. Bathe, chemist, of Fleet, who was found dead in his shop on Monday afternoon (see this week's Journal, p. 35).

Mr. Bathe, chemist, stated that the deceased was in his usual health and spirits on Monday morning. Witness left him at 1.30 to dine at his private house, and on his return at 2.30 he found several customers in the shop waiting to be served. He called the deceased, but there was no answer. On going upstairs he found the deceased lying dead upon the floor of the store-room. Beside him were three bottles labelled "prussic acid" and a glass measure. The atmosphere was impregnated with the poison.—Dr. Gardner said a post-mortem examination confirmed the opinion that deceased had taken prussic acid.—The jury returned a verdict of "Suicide whilst temporarily insane."

THE SALE OF LAUDANUM TO CHILDREN.—An inquest was held on January 6, at Preston, on the body of Samuel Ellithorne, hairdresser, whose death occurred on January 4, under peculiar circumstances.—Septimus Ellithorne, nine, son of the deceased, said his father had sent him to the druggist's shop for a pennyworth of laudanum on four occasions on Saturday night. He had seen his father drink laudanum each time that he went for it.—William Forrest Livesey, chemist, said he had supplied the boy once, and his assistant had supplied him three times.—The Coroner: Don't you think you ought to be very careful in supplying poisons openly in a glass without any further precaution?—Mr. Livesey: The precaution I took was to label the glass "poison."—The Coroner: But in the case of a child, do you think that sufficient?—Mr. Livesey: I told the boy to be careful, and that it was poison, and I thought that was sufficient.—The Coroner: I don't agree with you, and I don't think the jury will either.—Mr. Livesey, in reply to further questions, said a fatal dose of laudanum consisted of four drachms.—After further evidence had been taken the jury found that Ellithorne had met his death by misadventure, being of opinion that he had taken laudanum to induce sleep.—At the request of the jury the Coroner called Mr. Livesey into the room, and told him the jury was unanimously of opinion that he ought not to supply laudanum in an open glass, especially to young children. The practice was most reprehensible and objectionable.

DEFICIENT TINCTURE OF RHUBARB.—At the Wakefield Petty Sessions (West Riding Court) on December 30, Walter Batty, grocer, Warmfield, was charged with selling

adulterated tincture of rhubarb containing only two-fifths of the quantity of alcohol specified in the British Pharmacopœia, whilst it was altogether destitute of saffron.—Mr. Lodge, in defence, said defendant had bought a small bottle of tincture of rhubarb, for which he paid 2s., and he had sold it just as he bought it. The Bench imposed a penalty of £1, and expenses amounting to £1 12s. 6d. The Chairman observing that it seemed impossible for the adulteration to have arisen in any other way than by the deliberate addition of water.

SOCIETY OF PUBLIC ANALYSTS.—The twenty-first anniversary dinner of the Society of Public Analysts was held on Wednesday evening at the Criterion Restaurant. Dr. T. Stevenson presided, and among those present were Mr. Kearley, M.P., Mr. T. H. Elliott (Board of Agriculture), Dr. Thorne Thorne (Local Government Board), Professor Thorpe, Mr. A. Vernon Harcourt (President of the Chemical Society), Dr. Dupré, Mr. M. Carteighe (President of the Pharmaceutical Society), Mr. Tyrer (President of the Society of Chemical Industry), Dr. J. A. Voelcker, Mr. Otto Hehner, Dr. Adams, Mr. Allen, Mr. Cassal, Mr. Pattinson, Mr. E. W. Voelcker (Hon. Treasurer), and Dr. Bernard Dyer, and Mr. E. J. Bevan (Hon. Secretaries).

Mr. Helmer gave the toast of "The Houses of Parliament," which was responded to by Mr. Kearley, M.P.

Dr. Voelcker proposed "The Local Government Board and the Board of Agriculture," claiming that the post of public analyst could not now be held by anybody, but that a man required a special training before he could occupy it.

Dr. Thorne Thorne, in reply, assured the company that the aim of the Department at Whitehall was to raise the standard and status of the public analyst in the estimation of the public and in its scientific value.

"The Learned Societies," proposed by the President, was acknowledged by Mr. A. G. Vernon Harcourt; "The Society of Public Analyst," given by Mr. Carteighe, was responded to by the President; and other toasts followed.

THE CHEMISTS' CLUB.—Particulars will be found on page vii. of this week's advertisement pages of the proposed arrangements in connection with the establishment of a proprietary club in London. It is intended to provide a place in a central part of the metropolis where chemists may meet for social intercourse or for the transaction of business, and the premises may also be made use of as a place of call when visiting London. The subscription is merely nominal, and chemists wishing to join should send their names to the secretaries of Barclay and Sons, Ltd., or "Camwal."

MARRIAGE.

LEE—RENNIE.—On January 1, 1896, at Whitby Parish Church, J. Arthur R. Lee, Pharmaceutical Chemist, Guiseley, to Dorothy Elizabeth Rennie, eldest daughter of Mr. Thos. E. Rennie, Khyber House, Whitby.

MARKET REPORT.

[Specially compiled for the *Pharmaceutical Journal*.]

[The quotations here given are in all cases the lowest net cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.]

LONDON, JANUARY 9, 1896.

Business in the produce markets has hardly yet recovered itself after the holidays, and there are few changes to report this week. In the chemical market citric acid is firm, whilst tartaric is very strong and promises to advance. Carbolic acid is firm, but unchanged. Cream of tartar has advanced in price considerably, and seem likely to go higher. Of fine chemicals camphor is slow of sale at a weakening price, quinine is fully steady, and opium alkaloids very strong. In the drug market, we have to report an advance in Florentine orris root and Rio ipecacuanha, but on the other hand the Columbian root has declined. At to-day's sales Cape aloes, Kola nuts, dill seed, copaiba balsam, sold at full rates, whilst senna leaves are also firmer for better grades. Full details will be found below.

ACACIA.—At to-day's sales a total of 299 packages were catalogued. The majority of the *Trieste* gum was bought in, but 2 cases of medium yellow sold without reserve at 87s. 6d. per cwt. Pale grain was bought in at £5 10s. to £6, and medium grey at £7 10s. *Soudan* sorts were all bought in. Good ambery at 60s., and sorts at 40s. up to 58s., whilst brown gum from *Bombay* was held for 33s., and bold ambery from *Aden* for 40s. Privately the market is steady for *Persian*, so-called insoluble gum, being quoted at 12s. to 14s. for fair sorts, and 18s. to 22s. for pale selected.

ACID, CARBOLIC.—The market is firm, but quotations are practically unchanged as follows:—*Crystals*, 34° to 35° C., 6½d.; 39° to 40° C., 7¼d.; 39° to 40° C. (*detached crystals*), 8¼d. per lb. *Crude*: Unchanged, 60 per cent. being quoted at 1s. 9d., and 75 per cent. at 2s. 2d. per gallon. *Liquefied* and *creosylic* are quoted at 1s. 1d., and 11½d. per gallon respectively.

ACID, CITRIC.—Steady. *English* manufacturers still quote at 1s. 2½d. per lb., whilst second-hand holders are unchanged at 1s. 2d. per lb. *Concentrated juice* quotes at £14 5s. to £14 10s. per pipe *f.o.b.*

ACID, TARTARIC.—Very firm. The quotation for *English* brands of acid in manufacturers' hands is still 1s. 2d. per lb., but there is every likelihood of an advance. *Foreign* makes are dearer, and 1s. 2d. is now asked on the spot for both *powder* and *crystals*. In auction to-day 42 bags *Cape argol* were bought in at 57s. to 57s. 6d. per cwt.

ACONITE.—At to-day's sales 27 bags of *Japanese* root from *Hiogo* were bought in at 23s. per cwt.

ALOES.—*Cape* aloes was in unusually large supply to-day, being represented by 109 packages, and the rates paid show a fully steady market. Good bright hard was held for 23s. 6d. to 24s.; fair seconds sold at 22s. to 22s. 6d.; ordinary to medium ditto, part drossy, at 20s. to 21s. 6d.; dull mixed seconds at 18s. to 19s. 6d., down to 15s. for very drossy mixed with sand. *Curaçoa* aloes, of which 292 packages were shown, sold at 31s. to 35s. for medium livery, 15s. to 15s. 6d. for ordinary capey, and 8s. down to 6s. 6d. for drossy common grades. Twenty-two kegs of hard *Socotrine* aloes were bought in at 80s. to 90s. per cwt.

AMBERGRIS.—The large supply of 261 ounces was catalogued to-day, but none was sold in auction although a bid of 24s. per ounce was submitted for two tins of very ordinary quality.

AMMONIACUM.—Only 10 packages were offered in auction, and of these 25s. per cwt. was paid for fair almondy block, whilst very seedy lump was bought in at the same figure.

ANNATTO SEED.—In auction fair quality *Madras* seed was bought in at 3d., and small, rather dull, ditto at 2d per lb.

ASAFOETIDA.—Out of 102 cases offered, 5 cases medium greyish block, part pinky, sold at 50s. to 57s. per cwt.

BAEL FRUIT.—Forty bags of this drug, which is but seldom seen in public sale, sold at 2d. per lb.

BENZOIN.—A total of 288 cases were offered to-day, and fair inquiry was shown. *Sumatra* gum of which 123 packages were shown, sold at £11 10s. to £11 15s., for good almondy gum; £8 for almondy seconds, good centres, slightly false packed sides, and £5 15s. to £6 15s. for ordinary to medium seconds, fair centres, false packed sides. Of the *Siam* gum, £22 5s. was paid for a case of very nice pale, loose almonds, £15 for small loose, pale ditto. and £10 for medium bright almonds in brown block. Siftings in block were bought in at 65s. to 70s. per cwt.. Ordinary *Palembang* seconds sold at 32s. to 34s. 6d., whilst good almondy gum was bought in at 105s. per cwt. *Penang* gum, after an absence from the sales for some time, was represented by 34 packages, and bought in at 32s. 6d. to 38s. per cwt.

BUCHU.—Dull of sale. No business was done to-day, although some nice parcels were shown. Good *round* green leaves were held for 5d. per lb., whilst dull *long* narrow leaves were held for 6d. per lb.

CALUMBA.—No enquiry was shown in auction, and ordinary sorts, rather wormy, were bought in at 9s. to 9s. 6d. per cwt.

CANNABIS INDICA.—At to-day's sales the unusually large supply of 132 packages was offered but no sales were effected, greenish stalky tops being bought in at 4d. per lb. Privately brownish tops sell at 2½d., and greenish ditto at 3¼d. per lb.

CANADA BALSAM.—A cask of good bright balsam was bought in to-day at 1s. 6d. per lb.

CANTHARIDES.—At the drug sale 10 cases of medium *Chinese* flies were bought in at 1s. per lb.

CARDAMOMS.—The moderate supply of 141 packages was offered to-day, and met with a good demand, especially for seed. Of *Ceylon-Mysore* cardamoms some fine lots were shown, and the prices paid were as

follows:—Fine pale plump, 3s. 3d.; medium pale ditto, 2s. 10d.; medium to bold palish, 2s. 4d. to 2s. 6d.; small to medium plump and yellow, 1s. 11d. to 2s. 2d.; small to medium yellow, partly split, 1s. 7d. to 1s. 10d.; and 1s. 6d. down to 1s. for ordinary small and brown, part split and speckled. *Ceylon-Malabar*: For small to medium brown shrivelled, 1s. 5d. to 1s. 7d. per lb. was paid. *Seed*, which was in large supply, sold at an advance of 1d. per lb., 2s. 2d. to 2s. 3d. per lb. being paid.

CASCARA SAGRADA.—Since our last report there has been a good demand privately for this drug, and prices have advanced considerably. There is now but little good quality bark on the spot, and stocks in America are said to be low. On the spot 20s. has been paid earlier in the week for sound bark, and 25s. is now asked. In auction 15 bales of damaged quality bark from *San Francisco* sold at 18s. to 20s. per cwt.

CASCARILLA.—Very firmly held. In auction only 10 bales were offered. These consisted of good sound silvery quill, and were bought in at 55s. per cwt., after 48s. had been bid.

CINCHONA.—The opening sale of the year was held on Tuesday, when 1761 packages were offered, against 1071 at the previous sale. *Ceylon* bark was only represented by 43 packages, whilst Indian amounted to 1000 bales, the majority of which was good renewed *officinalis* bark, and sold at full rates. The average unit of rates remained unaltered at fully ½d. per lb. The prices paid were as follows:—*Ceylon*: Fair stem chips, 2½d. per lb. *Indian*: Red chips, 1½d.; *officinalis*, 2d. to 3¼d.; Ledger chips, 1½d. to 3¼d.; ditto brand, 1½d. to 2¾d.; ditto renewed chips, 2½d. per lb. *Java*: 2¾d. for natural stem chips. *South American*: Cultivated *Calisaya* galls, 3d. to 4½d. *Cuprea*: Old import, ½d. to ¾d. per lb. In auction to-day flat *Calisaya* bark was in good demand, and 159 bales sold at prices ranging from 8½d. for fair down to 4½d. for ordinary, whilst 1d. to 4d. was paid for damaged grades. Of *Crown* bark two serons from *Payta* sold at 5d., whilst 20 bales of long *Lowa* bark sold at 10d. to 1s. 1d. for fair quality, and 7d. to 9d. for ordinary to medium ditto.

COAL-DISTILLATION PRODUCTS.—*Benzole*: Rather firmer. For 50 per cent. 2s. per gallon in now asked, whilst 90 per cent. is unchanged at 2s. 3d. *Toluol*: Rather easier at 2s. 3d. per gallon for *pure*. *Crude Naphtha*: Firmer at 10d. per gallon for 30 per cent. at 120°.

COLOCYNTH.—Largely offered to-day, but no business was done. For fair *Turkish* apple, 2s. 4d. to 2s. 6d. per lb. was asked, whilst 1s. to 1s. 6d. was the price for broken *Spanish*. A parcel of *Almerian* colocynth was bought in at 7d. to 11d. per lb.

COPAIBA (BALSAM).—33 packages were offered, but the only lot sold was a cask of good bright *Maranham*, which realised 1s. 11d. per lb., whilst clear thin *Para* was bought in at the same figure.

CREAM OF TARTAR.—A very strong market at a considerable advance in price, both *crystals* and *powder* being fully 3s. per cwt. dearer than when last reported. *German* brands of powder are now quoted at 98s. to 100s. per cwt. on the spot, whilst 96s. is asked for best white *French* crystals. For

shipment from Bordeaux there are now no sellers under 90s. *f.o.b.*

CUBEBS.—This drug was only represented by 24 bags at to-day's sales, and the majority was bought in at 35s. for fair *Singapore* berries. The same quality sold previous to the auctions at 32s. 6d. per cwt.

CUTTLEFISH.—In auction 3 cases of fair bold, whole quality, realised 2d. per lb.

DRAGON'S BLOOD.—None was sold out of about 50 cases. Good finger in reeds from *Singapore* was bought in at £10, ditto mostly broken and separated from the covering, from *Shanghai*, at £8, whilst fair to good *Singapore* block was bought in at £9 to £10, and saucers at £6.

ELEMI.—Little inquiry is shown for this article in auction, and to-day 25 cases of clean pale *Singapore* gum were bought in at 30s. per cwt.

ERGOT.—A fair inquiry was shown to-day, and of 59 packages 7½d. per lb. was paid for dry mixed ergot, offered as "of the new crop," and 6¼d. for 8 bags of very wormy old ergot. The new crop of *Russian* ergot was represented by 18 bags, which were bought in at 10d. per lb.

GALANGAL.—22s. 6d. is the price asked for good bold root from *Hong Kong*.

GAMBOGE.—Rather slow of sale. The better grades were bought in to-day at £12 for good clean *Singapore* pipe. Two cases of ordinary mixed *Singapore* block sold at £9 5s., whilst £8 12s. 6d. was paid for bold pipe.

GUAIACUM GUM.—Out of 16 cases offered in auction, 1s. 9d. to 2s. 2d. was paid for 2 cases of fair glassy block, and 6d. for 6 cases of ordinary rather drossy lump.

GUARANA.—In auction to-day three cases of fair sausage were bought in at 2s. 9d. per lb.

GUINEA GRAINS.—In auction 78 bags from the West Coast of Africa were bought in at 20s. per cwt.

HONEY.—Very slow of sale, and but little business was done. Four cases of dark, rather foul *Jamaica* honey sold without reserve at 20s. per cwt., whilst 30s. was paid for 5 cases of *Honolulu* honey. *New Zealand* was bought in at 25s., and *Californian* was held for 42s.

INSECT FLOWERS.—The inquiry for this article has not been very brisk recently, but the quotations show little change. Wild closed flowers are quoted at 120s.; half-closed at 112s. 6d., and open at 79s. 6d. per cwt. *c.i.f.* terms. In auction to-day nine kegs of *insect powder* were bought in at 60s. per cwt.

IPECACUANHA.—A total [of 58 packages was offered, of which the *Brazilian* root comprised 31 packages. The prices paid show a marked advance of about 4d. per lb., 5s. 2d. to 5s. 5d. being paid for fair to good sound annulated, and 5s. to 5s. 2d. for damaged ditto. *Carthagena* root sold at a decline of 2d. per lb., 4s. to 4s. 1d. being paid for fair damaged quality.

JABORANDI.—Fair greyish mixed leaves were bought in to-day at 6d. to 8d. per lb.

JALAP.—Some good lots of *Vera Cruz* root were offered in auction, and a fair inquiry was shown, 8½d. to 9d. being paid for sound quality, 7½d. for damaged ditto.

JUNIPER BERRIES.—In auction 20 bags out of a parcel of 100 from *Leghorn* sold at 7s. 6d. per cwt.

KINO.—A box of astringent gum offered

under this name was bought in at 20s. per cwt.

KOLA.—In very moderate supply. Out of 16 bags shown to-day 11d. to 1s. was paid for good bright *West Indian* nuts, and 10½d. for good sound chips.

LIQUORICE ROOT.—At the sales 208 bags of rough *Bussorah* root were bought in at 8s. 6d. per cwt.

LIME JUICE.—Steady. To-day 11d. per gallon was paid for 12 barrels of *Barbados* juice.

MASTIC.—Little inquiry is shown for this drug in auction, except when offered without reserve. In the latter instance, 1s. 5d. to 1s. 6½d. was paid for five cases of pale gum. Ordinary pale to ambery drop was bought in at 1s. 8d. to 1s. 9d. per lb.

MENTHOL.—Still very slow of sale. The spot price is nominally 14s. per lb. for good white *crystals*, but it would be quite possible to buy under this figure. To-day 2 cases of the *Kobayashi* brand were bought in at 14s.

MYRRH GUM.—Very slow of sale. Out of 133 packages only 12 were apparently sold, 50s. being paid, subject to approval, for ordinary sorts. Fine picked gum was bought in 110s., ordinary sorts at 50s. to 55s., and pickings at 30s. per cwt.

NUX VOMICA.—No inquiry was shown to-day, and fair *Bombay* nuts were bought in at 6s. 6d., *Calcutta* at 4s. 6d., and *Cochin* at 7s. per cwt.

OIL (COD-LIVER).—In auction 10 casks of old *Norwegian* oil were bought in at 180s. per barrel, and *Newfoundland* oil at 6s. per gallon. The spot quotations for *Norwegian* oil are 185s. to 190s. for fine and 170s. for old ditto.

OILS (ESSENTIAL).—*Star Anise* oil is firm without much business doing at the moment. On the spot 10s. 3d. is generally asked, and 2 cases were bought in at the drug sales to-day at this figure. *Cassia*: Several parcels were offered to-day, and were all bought in at prices ranging from 11s. down to 8s. *Eucalyptus* oil was bought in at 1s. 10d. for *Globulus* oil, 1s. 8d. for *Native bear* ("Padlock brand"), and 2s. for *B. & Co.'s* oil. *Peppermint* oil was bought in at 8s. 6d. for 40 per cent. *Japan* oil, and 6s. 6d. for *dementholised*. For *Sassafras* oil ("P. and Co.'s") 9½d. was bid; *rose-oil* settlings sold at 1d. per oz.; *wood* oil at 1½d. per lb., and *nutmeg* oil at 1¼d. to 1½d. per oz. *Citronella* oil is held for 1s. 10d. to 2s. per lb. on the spot.

ORRIS ROOT.—The market is firmer, and prices are slightly advanced. Privately 71s. is asked for best *Florentine*, and 68s. per cwt. for good seconds *c.i.f.* terms. At the drug sales to-day fine *Florentine* root was bought in at 80s., and *Veronese* at 67s. 6d. per cwt., whilst *East Indian* root in dark lean pieces from *Aden*, sells privately at 35s.

PHENACETIN. One of the principal holders quoted *Bayers'* make at 9s. 6d. per lb. net at the beginning of the week, but 10s. is now generally asked. Other brands can be bought at 5s. per lb.

QUILLAI BARK.—£13 12s. 6d. per ton was the price asked at to-day's sales, when 4 tons were offered.

QUININE SULPHATE.—The market is quiet but steady. Business has been done to the extent of a few thousand ounces in the best *German* makes at 1s. 1¼d. to 1s. 1½d., closing at the latter figure.

RHUBARB.—Of 128 cases offered to-day, only about 10 sold. *Shensi*: Five cases of small to bold flat, three-fourths pinky and one-fourth dark fracture sold at 1s. 6d. per lb. *Canton*: Small trimmings, even pinky fracture sold at 1s. 2d., fair medium flat, grey fracture, at 11d., and good sound pickings, even pinky fracture but spongy, at 11d. per lb. *High dried*: Fine mixed even pinky fracture sold at 11d. per lb.

SANDALWOOD.—*Logs* were bought in to-day at £42 10s. per ton. *Chips* sold without reserve at 20s. per ton.

SARSAPARILLA.—Steady. A good business was done to-day in *Jamaica* root, which sold at 1s. 3d. to 1s. 4d. for sound, and 1s. 1d. to 1s. 2d. for damaged grades. *Lima-Jamaica* sold at 10½d. to 11d. per lb., whilst *Honduras* was bought in at 1s. 2d. per lb.

SEEDS (VARIOUS).—*Dill*. Ten bags of *Bombay* seed sold at 10s. 6d. per cwt. *Coriander* ordinary coarse *Calcutta* and *Bombay* seed sold at 3s. per cwt. For *Spanish Aniseed* 30s. per cwt. is asked. *Cumin* seed sold at 30s.

SENNA.—Of 507 packages of *Tinevelly* leaves the majority sold at higher prices, especially for the better qualities. The bulk of the catalogue was composed of ordinary small leaves. *Alexandrian* senna was all bought in.

SHELLAC.—At Tuesday's sale 1377 cases were offered, and a good competition was shown, but the prices showed at first a decline of 10s. to 15s. per cwt. on last week's rates for *Second Orange*, increasing to as much as 15s. and 20s. in some cases.

STROPHANTHUS SEED.—In auction 2 bags of good quality *Kombé* seed sold at 3s. per lb.

TURMERIC.—Remains dull of sale, and in auction on Tuesday the majority of the catalogue was bought in, *Madras* at 7s. 6d. to 8s. for wormy bulb and finger, and 6s. 6d. to 7s. for whole bulb. A few bags of lean finger *Cochin* sold at 5s. 9d. per cwt. None was sold at the drug sales.

WAX (BEES).—A fair demand was shown at fully steady rates as follows:—*Jamaica*. £7 17s. 6d. to £8; *Madagascar*, £6 12s. 6d. to £6 17s. 6d.; *Bombay*, £6 7s. 6d.; *Australian*, £6 17s. 6d. to £7; and *New Zealand* at £6 15s. per cwt.

WAX (JAPAN).—A good demand is shewn privately, with sales at full rates. To-day 30s. per cwt was paid for 50 cases of pale squares, and 25s. for ordinary quality offered without reserve.

THE DRUG SALES.—A meeting will be held on Monday next, the 13th inst., at 2 o'clock, in No. 2 Room of the Commercial Sale Rooms, to discuss the question of the drug sales being held fortnightly or monthly. Merchants, brokers, and all interested are invited to attend.

MESSRS. JOHN WRIGHT AND Co., of Bristol, publish a new chart holder with imperishable nickel-plated corners and eyelets, which pharmacists may find it useful to introduce to their medical friends and to hospitals. The holder can be made to suit charts of any size, with the name of the hospital stamped in gold over the chart. The prices range from 1s. each, for quantities. Single holders are supplied at 1s. 6d. each.

LIVERPOOL MARKET REPORT.

[From our own Correspondent.]

JANUARY 8, 1896.

LINSEED: 1000 bags of *Turkish* sold at 34s. CANARY SEED: 33s. to 34s. for spot parcels of *Turkish*. KOLA NUTS: 21 bags of dried sold at 6d. to 7d. BEESWAX: 19 bags *Chilian* at £7 7s. 6d., 4 lots of *Gambia* at £7 2s. 6d. CASTOR OIL: *Madras*, 2½d.; *Calcutta*, good seconds, 2½d.; *French*, 1st pressure, 2¾d. OLIVE OIL: Quiet, and tendency to become easier. LINSEED OIL: *Liverpool* pressed, 20s. 6d. to 21s. COTTON-SEED OIL: *Liverpool* refined, 17s. to 17s. 6d. SPIRIT OF TURPENTINE: 21s. 9d. PETROLEUM: *American*, 7¾d. to 8½d.; *Russian*, 7d. SAL AMMONIAC, "firsts," 39s.; "seconds," 37s. CARBONATE OF AMMONIA: 3½d. to 3¾d. SULPHATE OF AMMONIA: £8 13s. 9d. for good grey. BLEACHING POWDER: Hard, £7 to £7 10s. COPPERAS: *Lancashire*, 37s. 6d. COPPER SULPHATE: £15 17s. 6d. PHOSPHORUS: *Wedges*, 2s.; *sticks*, 2s. 1d.; *amorphous*, 2s. 8½d. POTASHES: 21s. 9d. PEARLASHES: 37s. 6d. SALTPETRE, 23s. 6d., kegs; 23s., barrels. PRUSSIAN OF POTASH: 8d. BICHROMATE OF POTASH: 4¾d. CREAM OF TARTAR: 93s. CAUSTIC SODA: 70 per cent., £7 10s.; 60 per cent., £6 10s. BICARBONATE OF SODA: £6 15s. SODA CRYSTALS: £2 7s. 6d. NITRATE OF SODA: 7s. 7½d. to 7s. 10½d. HYPOSULPHITE OF SODA: £7 5s. to £7 10s. BORAX: £19 10s., *lump*; £20 10s., *powder*.

NEWCASTLE CHEMICAL REPORT.

[From our own Correspondent.]

JANUARY 7, 1896.

The business in chemicals is opening out slowly, and the uncertain future, judged through present prospects, is making the contracting line a slow one. Although some of the articles are found to be scarce for prompt orders, values are little changed. Sulphate of ammonia remains quiet. Salt-cake steady. The annual exports from the Tyne are now published, and show decreases to be on the ascendant. Such are as follows:—

	1894.	1895.	Increase.	Decrease.
	Tons.	Tons.	Tons.	Tons.
Alkali and soda ash	9052	8715	—	337
Bleaching powder	17,822	16,148	—	1674
Caustic soda	11,894	11,040	—	854
Manure	23,994	15,799	—	8195
Soda crystals	8748	8543	—	205
Sulphate of soda	6611	9992	3381	—
Sulphur	8847	8860	13	—
Other chemicals	9923	10,163	240	—
Coal tar and pitch	272	119	—	153

Present prices are:—BLEACHING POWDER, £6 10s. to £7, according to market and packages. SODA CRYSTALS, 36s. to 42s. 6d., according to packages. SODA ASH: 48 to 50 per cent., £3 15s. to £4 15s. WHITE ALKALI, 48 to 52 per cent., £4 15s. to £5. LUMP ALUM, £5 10s. to £5 15s. nett. CAUSTIC SODA: 70 per cent., £7 5s. to £7 15s.; 76 per cent., £9 5s. SALTCAKE: 27s. 6d. SULPHUR: £3 17s. 6d. to £4. SULPHATE OF AMMONIA: £8 12s. 6d. PITCH: 37s. HYPOSULPHITE: £6 10s. to £7 5s., according to packages. SILICATE: £2 12s. 6d. to £3 7s. 6d., according to strength. ALUMINATE: £33 15s. per ton in small parcels; £28 10s. in 5-ton lots.

EXCHANGE.

[For the convenience of readers, suitable notices, not exceeding thirty words in length, are inserted free in this column, if they do not partake of the nature of ordinary advertisements. They must relate to books, apparatus, shop fittings, etc., and arrive not later than Wednesday, addressed "Editorial Department, 17, Bloomsbury Square, W.C."]

OFFERED.

Lavoisier's 'Elements of Chemistry,' translated by Robert Kerr, 3rd edition, 1796; also Foucroy's 'Chemistry,' 11 vols., translated by Nicholson, 1804. What offers. B. Knight, Torquay.

A B Daylight Kodak, takes 24, leather case, and spare film, 50s.; a lot of photo. annuals; Amateur Photographer and Photography, 10s. Exchange microscope.—Pike, 3, Hincley Road, Leicester.

Beard's Safety Regulator, new, 25s., cost 30s.; bamboo screen stand, 10 ft., will also make 4 ft., 6 ft., and 8 ft. square, 28s., cost 39s.—Cammack, Fulham.

'Lexicon Medicum' (Hooper), 7th edition, fair condition; Kelly's 'Chemists' Directory,' 3rd edition, good condition. Show jar for window, decorated inside, marked rhubarb, gilt top and stand complete.—Blukhorn, Chemist, Salisbury.

'Obstetrical Transactions,' 7 vols., 1887 to 1893, condition as new, 3s. 6d., or exchange microscopic slides, etc.—W. Pardoc, Westminster Union, Poland Street, W.

Curtis' 'Flora Londinensis,' in two volumes, good condition, leather bound, price £5 5s.—Stainer, 17, Cambridge Gardens, Folkestone.

Taylor on 'Poisons'; Thomé's 'Botany'; Ganot's 'Philosophy.' Will exchange for Maisch's 'Mat. Medica,' Vines' or Oliver's 'Systematic Botany'; Green's 'Botany,' or Strasburger. Must be latest.—Dixon, 164, Aigburth Road, Liverpool.

Lancaster's "Mulum in Parvo" enlarging camera, 12 by 10; portrait lens, by Lerebour et Secretan, Paris, 8½ focus, cost £4. What offers.—E. W. Male, Chemist, The Cross, Gloucester.

Gray's 'Supplement,' scarce, 7s. 6d.; Newman's 'British Ferns,' cost 12s., 5s.; Scoresby-Jackson's 'Materia Medica,' 3rd, published, 12s. 6d., 5s.; Bradbury's 'Nature Printed Ferns,' 50s., free.—Davis, "Chestnuts," Gordon Hill, Enfield.

Microscope, 30s.; Minor and other books cheap; Send for list or call and inspect any time. Dental Forceps wanted.—Burge, 2, Fernhead Road, Harrow Road, W.

Six 60-candle-power incandescent gas burners, complete and new, 7s. each, nett cash; also six with bye-passes, 9s. each, nett cash.—J. Hughes, 54, Beaumont Street, Liverpool.

Sowerby's 'English Botany,' 12 vols., good condition, cost £24; price £12.—Hudson, chemist, Cranbrook.

'Euripidis Tragediæ,' Greek, 6 vols., 3s. 6d.; 'Œuvres de Racine,' 4 vols., 2s. 6d.; Heyne's 'Homer,' Greek, 2s. 6d.; Johnson's 'Dictionary,' 1st octavo edition, 7s. 6d. All free.—Davies, 33, Eglinton Road, Bow.

Squire's 'Companion,' latest edition, never been used, 6s.; Proctor's 'Lectures on Practical Pharmacy,' 2s. 6d.; Balfour's 'Botany,' 2s. 6d.—Holmes, chemist, High Road, Upper Clapton, N.E.

WANTED.

Gray's 'Anatomy,' apply with price.—T. Richards, Chemist, Porth.

Apparatus for volumetric analysis and specific gravity bottle.—Johnson, 35, High Street, Leominster.

Green's 'Botany,' Part I., latest edition; Attfield's 'Chemistry,' latest edition, lowest prices to—W. H. R., 3, High Street, Iuvernness.

Copper furnace pan, in good condition, capacity from 10 to 30 gallons. State lowest price.—Pearson, Chemist, 15, Market Street, Ulverston.

Wanted latest editions, cheap, Bentley's 'Materia Medica,' Bentley's 'Structural Botany,' and Muter's Analytical Chemistry.—Dewar, Guildford House, Harrogate.

Vines' 'Text-Book of Botany,' Carpenter's 'Revelations of Microscope,' edited by Dr. Dallinger: state lowest cash price to—A. J. Callaway, "Cartref," St. Mark's Road, Salisbury.

Nitrous oxide gas apparatus, with Cattlin's bag and steel bottle, must be in perfect order.—Walker, Chemist, Bowes Park, N.

* * * The attention of readers is directed to the conditions printed at the head of this column. Notices cannot be inserted unless they are in accordance with those conditions.

DIARY OF THE WEEK.

Secretaries of Societies are requested to send notices of forthcoming meetings not later than Wednesday in the previous week.

SATURDAY, JANUARY 11.

PHARMACEUTICAL FOOTBALL CLUB v. Templars, at Wormholt Farm, Shepherd's Bush.

SUNDAY, JANUARY 12.

LIVERPOOL SUNDAY SOCIETY, at 3 p.m.

"Fairy Tales," by Professor Windle.

TUESDAY, JANUARY 14.

ROYAL PHOTOCGRAPHIC SOCIETY, at 8 p.m.

"Astigmatism and a New 'Stigmatic' Portrait Lens," by H. L. Aldis.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.

"The External Covering of Plants and Animals: Its Structure and Functions," by Professor Charles Stewart.

SOCIETY OF ARTS (APPLIED ART SECTION), at 8 p.m.

"The Poster, and its Artistic Possibilities," by Gleeson White.

BRIGHTON JUNIOR ASSOCIATION OF PHARMACY.

Sixth Annual Ball at Royal Pavilion.

MIDLAND PHARMACEUTICAL ASSOCIATION, at 8 p.m.

"The Sun and His Attendant Family," by F. Smith.

WEDNESDAY, JANUARY 15.

PHARMACEUTICAL SOCIETY OF GREAT BRITAIN.

Library, Museum, School, and House Committee.

CHEMISTS' BALL, at 9 p.m.

At the Portman Rooms, Baker Street, W.

SOCIETY OF ARTS, at 8 p.m.

"The Making of a Great University for London," by Professor Silvanus P. Thompson.

ROYAL MICROSCOPICAL SOCIETY, at 8 p.m.

Annual Meeting: Presidential Address by Mr. A. D. Michael.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION, at 9 p.m.

"Coal—in Relation to Pharmacy," by H. Jessop.

MANCHESTER PHARMACEUTICAL ASSOCIATION, at 7.30.

"The Sale of Poisons and of Poisonous Preparations," by Wm. Lane.

THURSDAY, JANUARY 16.

SOCIETY OF ARTS (INDIAN SECTION), at 4.30 p.m.

ROYAL INSTITUTION OF GREAT BRITAIN, at 9 p.m.

"More About Argon," by Lord Rayleigh.

SATURDAY, JANUARY 18.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.

"To the North of Lake Rudolf and Among the Gallas," by Dr. A. Donaldson Smith.

LATE ADVERTISEMENTS.

Assistant Wanted.

ASSISTANT, about 25, with some knowledge of French. MELLIN'S, 48, Regent's St., London, W.

Business for Disposal.

OLD-ESTABLISHED Retail, Dispensing and Prescribing BUSINESS for disposal, also Dental Practice (together or separately), situated in London, S.E. Long lease. Low rent. Every investigation allowed. Chance seldom met with. Particulars to FIDES, "Pharm. Journal" Office, 5, Serle St., London, W.C.

SUPPLEMENT

TO THE

PHARMACEUTICAL JOURNAL.

NOTES,

OLD-TIME PHARMACIES.—The request for information respecting the past history of premises where a drug business has been carried on for a prolonged period, has been responded to by several readers, who are cordially thanked for their offers of assistance. Further communications on the same subject will be gladly received.

THE USE OF FOOD PRESERVATIVES.—A case of considerable importance in regard to the preservation of food-stuffs was heard at Southwark Police Court on Wednesday last, the offence charged under the Sale of Food and Drugs Act being the coloration of green peas with an infinitesimal quantity of sulphate of copper. A report of the proceedings will be found on page 59 of this week's Journal. The case was not decided, but adjourned until next week.

LATE NEWS.

CLELAND VERSUS PHARMACEUTICAL SOCIETY OF IRELAND.—On Wednesday, the 15th inst., in the Queen's Bench Divisional Court, Dublin, judgment was given on the application of Mr. Cleland for a mandamus to compel the Irish Pharmaceutical Society to admit him to their examination for the licence.

Mr. Justice O'Brien, in giving judgment, said there was no doubt a great evil required to be checked by law, occurring chiefly in England, and consisting of the excessive increase of chemists' shops for the sale of comparatively valueless materials of mysterious virtues, and ministering to the infirmities, delusions, vanities, and gullibilities of a large portion of the population, and sometimes even to vicious and criminal tendencies, and affording a large sphere for charlatanism and negligence. This gave rise to the Irish Pharmacy Act of 1875, which was the first step in the creation of the monopoly of the sale of drugs, the bonds of which the Society had been tightening every day. The whole matter in the present case appeared to turn on the construction of the words in the regulations of the Society that an apprentice should serve his term with "a firm of pharmaceutical chemists." It was impossible in his opinion by any strain of reasoning to raise any question as to the meaning of those words. They meant individual pharmaceutical chemists. They could not be taken to mean a body including pharmaceutical chemists or a company. The word "firm" in the present case could not have its original commercial meaning, which was merely signature or authentication. He was therefore compelled to come to the conclusion that it was impossible to assist the applicant on the present occasion by granting a mandamus.

Mr. Justice Johnson concurred. This case appeared to him to be a very hard one. The applicant was apparently misled by being admitted to the Preliminary examination. He had no doubt the Council would see its way out of the difficulty in this exceptional case, but the Society was contesting the matter, as he understood, on principle, and he thought its contention was right. In his opinion the conditional order must be discharged on the ground that the applicant did not produce a statutory declaration signed by a pharmaceutical chemist, declaring that the candidate had served the prescribed period in the sole employment of such pharmaceutical chemist, or of a firm of duly qualified pharmaceutical chemists of which the person making the declaration was a member.

Mr. Justice Holmes, in the course of his judgment, said he was obliged to decide against the applicant in the present case. The regulation required a statutory declaration which the applicant had not made, and could not truthfully be made in the present case, as the applicant was apprenticed neither to an individual nor to a firm, all the members of which were qualified pharmaceutical chemists. The case was a hard one, so hard as to tempt a court to make bad law. He was against the applicant on the question that had been argued by his counsel. He was sure the Council of the Pharmaceutical Society was anxious to uphold the standard of a profession which was of great value to the country. If the Council had the power, as he was assured it had, irrespective of its regulations, to allow the applicant to be examined, the case was surely a fit one for the exercise of that power. Might he not ask why should this controversy between the limited company and the individual be fought out at all? The contest was hardly consistent with the dignity or even the interests of the Pharmaceutical Society. As far as the public was concerned, an assistant in the employ of a joint stock company with a properly qualified manager was just as likely to be well trained as any other. Surely it would be prudent for the Council to reconsider the matter before they engaged in a crusade against bodies that for more than twenty years had been permitted to carry on business, never, as far as he was aware, to the injury of the public.

Mr. Justice Gibson concurred.

Mr. Day, on the part of the Society, said he was instructed by the President of the Council to state that after the remarks which had fallen from their Lordships the Council would, if it was in its power to do so, admit Mr. Cleland to examination, but his case should not be taken as in any way applying to similar cases afterwards.

SOCIAL MEETING AT EDINBURGH.—The annual assembly of the staff of Messrs. T. and H. Smith and Co., Edinburgh, took place on Friday, January 10, in the "Lodge of Edinburgh," Masonic Hall, Hill Street. Messrs. Anderson and Dey acted as stewards, and the duties of M.C. were efficiently discharged by Mr. W. R. Cunningham. A very pleasant evening was spent, and the proceedings were diversified with songs at intervals.

TRADE NOTES AND NEWS.

MR. ERNEST STAPEL says his attention has just been called to Messrs. Kennedy and Co.'s statement in the *Supplement* for November 30 last, that "a Mr. Spence is trading under the style of Stapel and Co." In reply he explains that he is the sole proprietor of the business in question. He also holds "Spence's Patent" to be good, and claims that Mr. Kennedy's so-called registered shield is an infringement.

MESSRS. THOMAS CHRISTY AND CO. announce that the *Farbenfabriken vorm. Friederich Bayer and Co.* has asked the firm to continue the agency for Analgen (Dr. Vis) in Great Britain, to which the London firm has agreed. This substance, originally manufactured by Messrs. Dahl and Co., of Barmen, was introduced here by Messrs. Christy successfully, and the rights for it have been purchased by the *Farbenfabriken vorm. Friederich Bayer and Co.*, who will manufacture it for the future. It has recently proved very successful in the treatment of gout and of malarial fever, for which it is now being extensively tried.

MR. B. KÜHN, of 36, St. Mary-at-Hill, Eastcheap, London, E.C., has submitted samples of a new antiseptic and disinfectant, which he is just introducing. "CHINOSOL," as the substance is named, is claimed to be non-poisonous, non-corrosive, readily soluble in cold water in any proportion, and a deodoriser. It does not coagulate albumin, and has only a slight and not disagreeable odour.

MESSRS. EVANS, GADD, AND CO., of Exeter, do an extensive business in packed goods, etc., and their new nett price list, which they are now issuing together with their monthly price current of drugs, chemicals, and pharmaceutical preparations, will be sent free to any chemist in business on application.

MESSRS. D. AND W. GIBBS, of the City Soap Works, London, E.C., refer to a recently-published paragraph stating that their business has been converted into a limited liability company. This is said to be correct, but it omits to state the most important factor in the case, viz., that no shares are offered to the public, the entire share capital being taken up by the present partners. As the necessary formalities are not yet completed, the firm has deferred advising its many friends and customers of this change.

MESSRS. SAVORY AND MOORE call attention to *Café Zylak*—their new preparation of coffee with peptonised milk. It has been frequently suggested to them that a preparation of the kind would meet a largely-felt want in the case of invalids and delicate people, and the matter has engaged their attention for some considerable time. There were many practical difficulties in the way of obtaining a preparation which sufficiently conserved the aroma of coffee, but after continued experiment and the use of specially devised machinery, these have been successfully overcome. The resulting preparation will be found a most valuable

addition to the condensed peptonised milk foods which have met with such complete approval from the medical profession. It is sold in tins at 1s. 6d. and 2s. 6d.

MESSRS. PARKE, DAVIS AND Co. submit samples of "TAKA-DIASTASE," a ferment prepared by a process based upon the investigations of Mr. Jokichi Takamine, a Japanese chemist, and obtained by the cultivation of a fungus growth on wheat bran, the method being similar to malting. From the cultivated fungus an extract is produced, and the exceedingly powerful diastase separated by subsequent manipulation. It is claimed that taka-diastase will convert at least 100 times its weight of dry starch by proper tests, and that it is absolutely permanent. Taka-diastase is concentrated in form, requiring a dose of from 1 to 5 grains, and, being an isolated ferment, is free from sugar. It is perfectly soluble and is compatible with other medicaments, in neutral or slightly alkaline medium. It is also economical, owing to its small dosage.

THE IMPERIAL EAU DE COLOGNE COMPANY, LIMITED, was registered on January 1 by Ewbank and Co., 3, South Square, Gray's Inn, with a capital of £4500 in £1 shares. Objects: To enter into an agreement, made December 16, with E. Cox, and to carry on business as manufacturers of and dealers in eau de Cologne, lavender water, etc., and as chemists and druggists generally. The directors are L. Campbell-Johnston, A. J. Beaumont, and S. H. W. Heron-Maxwell. Qualification, £100. Remuneration to be fixed by the company.

THE DRUG SALES.

A meeting of those interested in the question of holding the drug sales fortnightly—as at the present time—or once a month, was held on Monday last in the London Commercial Sale Rooms, and naturally was largely attended by a representative gathering of merchants, brokers, and others. Mr. Hovill, of the firm of King and Hovill, President of the Brokers' Association, having taken the chair, Mr. Ziegler, on behalf of the exporters, formally moved that the sales should be held monthly, and this proposition was seconded by Mr. Blum. A lively discussion followed, in the course of which, Mr. Richard Barron, on behalf of the wholesale druggists, stated that the members of the Drug Club would not vote, as they had already decided against the proposed innovation. A strong protest was made by several of the exporters, Messrs. Ziegler, Blum, and Ashworth amongst others, against the brokers being allowed to vote on the motion, but the attempt fell through after a lengthy discussion, in which Messrs. Andrew Devitt, R. Dalton, and others joined.

As the result of Mr. Ziegler's motion being put to the vote, it was found that, excluding the brokers, there was a slight majority in favour of monthly sales, but when their votes were added the balance of opinion was in favour of continuing the sales as at present.

Mr. Price then suggested that a representative committee should be appointed to

consider the whole question of the days for holding the drug sales, but Mr. Dunlop, in forcible language, expressed the opinion that it was absurd to recommend this step, seeing that a motion had only just been passed to decide the matter, and that the reconsideration of all the interests connected with the matter would be necessitated.

The outcome of the meeting seems to be that the drug sales will continue to be held as heretofore, but it is not improbable that steps will be taken to prevent any single lot being offered in public sale which is not of the value of £25 or thereabouts. If this should be adopted, it will affect a good many rather seriously, but of course the sales would be got through in about half the time. It has again been suggested that the Vanilla sales should be held on some other day than the drugs, seeing that the persons interested are in many cases not directly connected with the drug trade.

MARKET REPORT.

[Specially compiled for the *Pharmaceutical Journal*.]

[The quotations here given are in all cases the lowest net cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.]

LONDON, JANUARY 16, 1896.

Business in the produce markets directly and indirectly connected with the drug trade has continued to drag considerably since our last report, and the amount of business done has but been very extensive. In the chemical market continued attention has been paid to cream of tartar, which is considerably dearer, closes firm, and promises to go higher. Tartaric acid is also a very strong market, and the English manufacturers' quotations have been twice advanced since our last report. Citric acid is firm, and the same remark to carbolic acid and all other varieties of coal distillation products. Amongst fine chemicals, quinine is in good demand, and closes very firm. Opium alkaloids are very steady, pilocarpine is scarce and dear, whilst caffeine and camphor are dull of sale and neglected. Santonin seems likely to go higher, sugar of milk is much dearer, and tannic acid is very firm. In the drug market proper there is not much to report. Gentian root continues to advance in price, and is very firmly held, whilst business has been done in cascara sagrada and orris root at an advance. The new season's cod-liver oil is now on the market, and reports indicate every probability of another year of high prices. In the heavy oil market castor oil is very strong, whilst linseed, rape, and cotton oils are lower. Shellac has recovered considerably in price and closes firm after a brisk demand in auction. Spices generally

are unchanged, whilst the essential oil market is quite devoid of interest. Full details will be found below:—

ACETANILIDE.—This article is reported likely to advance, owing to the price of benzole. At the present time 1s. 3d. to 1s. 4d. per lb. is the spot quotation, according to holder.

ACID, CARBOLIC.—The market is firm, and quotations are as follows:—*Crystals*, 34° to 35° C., 6½d.; 30° to 40° C., 7¼d.; 39° to 40° C. (*detached crystals*), 8¼d. per lb. *Crude*: Unchanged, 60 per cent. is quoted at 1s. 9d., and 75 per cent. at 2s. 2d. per gallon. *Liquefied* and *creylic* are unchanged at 1s. 1d., and 11½d. per gallon respectively.

ACID, CITRIC.—Firm. *English* manufacturers still quote 1s. 2½d. per lb., whilst second-hand holders are unchanged at 1s. 2d. per lb. *Concentrated juice* quotes at £14 5s. to £14 10s. per pipe, *f.o.b.*

ACID, TANNIC.—One of the makers has advanced his prices ¼d. per lb. for ordinary qualities, and for *B. P. Lewis's* ½d. per lb., but the change has not been a general one. The market is firm.

ACID, TARTARIC.—A very firm market. The spot quotation for *Kemball's* and *Lawes'* brands has been advanced 1d. per lb., 1s. 3d. being now asked. *Foreign* brands both in *crystal* and *powder* are also held for 1s. 2½d. on the spot, and 1s. 3d. per lb. for forward delivery.

AMMONIA SALTS.—*Sulphate* is quiet at £8 12s. 6d. for grey 24 per cent. on the spot, whilst *Hull* quotes at £8 10s. and *Beckton* at £8 12s. 6d. *Carbonate*: 3½d. to 3¾d. per lb. *Liquor*: 3¼d. to 3½d. per lb., less 5 per cent. *Sal ammoniac*: Firsts, 39s.; seconds, 37s.

ARSENIC.—Rather firmer at £15 15s. to £16 per ton, bonded terms, for best white powder.

BORAX.—The *Convention* price is still 21s. for powder and 20s. for crystals, whilst second-hand holders offer at 20s. 6d. and 19s. 6d. respectively.

CASCARA SAGRADA.—Business has been done during the week in good quality bark at 22s. per cwt., and holders now ask 23s. There seems every likelihood of higher prices.

COAL-DISTILLATION PRODUCTS.—*Benzole* is firm. For 50 per cent. 2s. per gallon is still asked, and for 90 per cent. 2s. 3d. *Toluol* is steady at 2s. 3d. per gallon for pure. *Creosote*, 1½d. per gallon. *Crude Naphtha*: 30 per cent. at 120° C. quotes at 10d. per gallon. *Solvent Naphtha*: 95 per cent. at 160° C. quotes at 1s. 6d.; 90 per cent. at 160° C. at 1s. 3½d.; and 90 per cent. at 190° C. at 1s. 2d. per gallon. *Anthracene*: 13A, 11½d.; B, 10d. per unit. *Pitch*: 37s. 6d. per ton *f.o.b.* *Tar*: *Refined* and *crude* quote at 12s. 6d. and 12s. per barrel respectively.

COPAIBA (BALSAM).—*Maranhã* sells privately at 1s. 11d. per lb. for good bright quality. During the week business has been done in thick, cloudy balsam, imported *vid* Hamburg, at 1s. per lb.

CREAM OF TARTAR.—Continues to advance steadily in price, and the market closes very strong with a probability of higher prices. *German* brands of powder are now quoted at 101s. to 102s. per cwt. on the spot, whilst 99s. is asked for fine white *French* crystals, both prices showing an advance of 2s. to 3s. on last week's quotations. For shipment

from Bordeaux the last price we heard was 95s. *f.o.b.*

GALLS.—The market in *Chinese* galls remains unchanged, with but little business doing. On the other hand, a good demand continues to be shown for *Persian*, with sales of *blues* at 55s. per cwt. There are also inquiries for *greens* and *whites*, but in the absence of sellers little has been done.

GENTIAN ROOT.—Continues to advance in price. A day or two ago 20s. was accepted, but yesterday 21s. was bid and refused, 22s. per cwt. being the lowest figure. For arrival the last quotation we heard was 19s. per cwt. *f.o.b.*

GLYCERIN.—No change is reported in the prices of this article. Second-hand holders quote 70s. per cwt. for prompt delivery.

GUARANA.—Sells privately at steady rates, 2s. 3d. per lb. having been paid during the week for fair quality.

MANNA.—Reports from Messina state that the market is firm, and prices are higher. The current quotations are as follows:—Large flake in 20 lb. boxes, 1s. 9d.; medium, 1s. 4d.; small, 8d., down to 6½d. per lb. for sorts, *f.o.b.*

MENTHOL.—Very slow of sale. Nominally, 14s. 3d. to 14s. 6d. per lb. is quoted on the spot, but this price would have to be shaded in order to lead to business.

OIL (COD-LIVER).—Reports from Bergen go to show that another season of high prices may be expected. One of the first consignments of new oil has arrived in Bergen, and the holders ask from 180s. per barrel upwards. On the spot old oil quotes at 165s. to 175s. per barrel, whilst for *Newfoundland* oil, 5s. 3d. to 5s. 6d. per gallon is asked.

OIL OF MYSBANE.—Tending higher; 7d. per lb. is now the current quotation.

OILS (ESSENTIAL).—This market is exceedingly quiet at present, but there are no changes in price to report. *Star Anise* oil is held for 10s. 3d. per lb. on the spot, 10s. 1½d. having been refused during the week. *Cassia* oil is unchanged and nominally quoted, better grades continuing firmly held. *Peppermint* oil is unchanged at 10s. to 10s. 3d. for *H. G. Hotchkiss'* oil. *Japan* oil containing 40 per cent. of menthol is quiet at 8s. 6d. to 9s., and *dementholised* at 6s. 9d. to 7s. 9d. The *Italian* market is firm, oils of guaranteed purity being quoted at 4s. 6d. for *Lemon*, 6s. 9d. for *Sweet Orange*, and 9s. 10d. for *Bergamot*, all *f.o.b.*, Messina. Varying reports are to hand with regard to the price of *lemon*, on the one hand an early advance being expected, whilst on the other it is said that no change is probable.

OILS (FIXED) AND SPIRITS.—*Castor*: The market is very firm for *Italian* oil, and quotations seem likely to advance. At present 30s. to 30s. 6d. *c.i.f.* is quoted for best tasteless quality. *Cotton* has declined still further since our last report, but closes firm. On the spot £16 10s. to £17 5s. is quoted for *refined* oil, according to brand and package. *Coco-nut* is firm, and *Ceylon* is now quoted at £22 10s. to £22 15s., whilst *Cochin* is steady at £25 10s. on the spot. *Linseed*: Quiet. Oil in barrels is quoted at £20 on the spot. *Rape* oil is again dearer, and £24 15s. to £25 is now quoted for *refined* oil. *Olive*: Reports from Messina state that the yield of olives in Gioja and East Calabria will be less than last season,

although this diminution will probably be compensated for by good yields in other parts of Southern Italy and Sicily. The current quotations are: *Messina*, £29 7s. 6d.; *Gioja*, £33 12s. 6d.; *Gallipoli*, £32 12s. 6d. *Palm*: Lagos oil quotes at £22 10s. on the spot. *Turpentine* is firm at 21s. 1½d. to 21s. 3d. for *American* spirit on the spot. *Petroleum* oil is firm, but quiet, at 6½d. to 6¾d. on the spot for *American* spirit. *Water white* at 8d. to 8½d., and *Russian* at 6½d. to 6¾d. per gallon.

OPIUM.—The London market continues very firm, with a good inquiry shown, especially for *druggists'* and *soft shipping* varieties. The current quotations are:—*Turkish*: *Soft shipping*, 10s. 9d. to 12s. 9d.; *Smyrna*, 8s. to 9s.; *Constantinople*, 8s. 9d. to 9s. 6d.; *Druggists' seconds*, 7s. 6d. to 8s. 6d. per lb. The market in *Persian* opium continues very strong, but business is restricted, owing to the small supplies. Fine *bricks* are held for 13s. 6d., and *balls* from 11s. to 12s. 6d. per lb.

ORRIS ROOT.—Continues very firm, but there is no appreciable change in price to note. On the spot holders ask 72s. 6d. to 75s. for fine *Florentine* root, whilst for delivery 71s. per cwt. *c.i.f.* is still quoted. *Veronese* root is scarce on the spot, and firmly held. Privately 67s. 6d. has been paid during the week for good quality.

PHENACETIN.—There is nothing fresh to report in the position of this article, although some holders have advanced their quotations to 7s. per lb. *Bayer's* make could be bought in second hand at 10s. per lb., whilst there are sellers of other makes at as little as 6s.

PILOCARPINE.—Very scarce and dearer, and there is little or none to be had under 9s. 6d. to 10s. per gramme for nitrate.

QUININE SULPHATE.—Very firm. A brisk business has been done during the week in the best *German* brands at 1s. 1½d., and to-day 1s. 1½d. has been paid. The market closes strong.

SANTONINE.—is reported rather firmer, but no absolute change has occurred in the price. The makers' quotation is still 7s. 6d. per lb., whilst in second-hand 7s. 3d. would buy.

SEEDS (VARIOUS).—*Anise*: Good quality has sold during the week at 31s. per cwt. for *Spanish*. *Cumin*: The spot price is now 36s. per cwt for *Mogador* seed. *Stavesacre* seeds are held for 95s. per cwt. on the spot for good quality.

SHELLAC.—A reaction appears to have commenced in this article after last week's "slump," and a decidedly firm tone is shown in all positions. On the spot there have been sales of *TN Orange* on a basis of 95s., whilst *AC Garnet* is quiet, but firm, at 90s. A fair business has been done for arrival, including *TN Orange* at 83s. 6d. to 85s., *c.i.f.* (February–April, and March–May shipment), and *AC Garnet*, same shipment, at 85s., *c.i.f.* At the weekly auctions, a moderate catalogue only was offered, but a good demand was shown, and the bulk was disposed of at prices showing an advance of 4s. to 10s. for *Second Orange*, which closed at 94s. to 95s. for *TN* quality. All the *Button* was bought in, and no *Garnet* was offered. Since the auctions, a further advance has occurred, and *TN Orange* has sold at 96s. per cwt., whilst the arrival market is very firm.

SODA COMPOUNDS.—*Nitrate* is slow of sale at £7 12s. 6d. per ton for *ordinary* and £8 5s. for *refined* on the spot. *Bicarbonate*: Still quoted at £7 5s. per ton on the spot, landed terms, and £6 15s. in Liverpool. *Crystals*: 42s. 6d. *ex ship* or wharf. The Liverpool price is 50s. *f.o.b.* *Caustic*: Steady at £7 15s. for 70 per cent. white on the spot, with 60 per cent. £1 less. The Liverpool prices are £7 10s. and £6 10s. respectively, *f.o.b.* *Hyposulphite*: Scarce and firm at 8s. 3d. to 8s. 6d. per cwt. in kegs on the spot.

SOY.—*Chinese* soy is quiet, but steady. Fair quality still quotes at 1s. 1d. per gallon.

SPERMACELE.—Firmly held at 1s. 9d. on the spot for *refined American*.

SPICES (VARIOUS).—*Cloves* are steady. In auction about half the catalogue sold at 2d. for good fair *Zanzibar*, fair ditto, 1½d., medium dark, 1¾d., and ordinary ditto at 1¾d. *Cassia lignea*: Medium good sound quality was bought in at 32s., and common to fair broken at 18s. 6d. to 24s. per cwt. *Cinnamon chips*: Fine quillings sold in auction at 7½d. per lb. *Ginger*: *Jamaica* sold at a further advance in auction, 80s. per cwt. being paid for ordinary medium, dull quality. *Cochin* is still dull of sale. Medium to small washed rough sold at 33s. per cwt. without reserve. *Chillies*: *Zanzibar* was bought in at 50s. for good red. Fine damaged *Japan* sold at 41s. per cwt. *Arrowroot* is dull and in large supply. In auction *St. Vincent* sold at steady rates, ranging from 1½d. for ordinary up to 1¾d. for good. *Pimento* sold slowly at 2¾d. for medium, and 2½d. for fair quality.

SUGAR OF MILK.—Dearer. The price for this article continues to advance steadily, and holders now ask 87s. 6d. for good brands of *crystals*, and 89s. for *powder*.

TOLU (BALSAM).—The demand for this article has slackened off, and 2s. 6d. per lb. is now accepted for genuine balsam on the spot. For shipment from New York the last quotation was 2s. 1d. per lb., *c.i.f.* terms.

TRAGACANTH (GUM).—The market remains very firm, although few sales are reported. The current quotations are now as follows:—*Firsts* (fine pale "druggists'" gum), £15; *seconds*, £13 to £14 10s.; *thirds*, £11 10s. to £13; *fourths*, £9 to £11; yellow and pinky, £7 10s. to £8 10s.; and other grades, £2 to £7 per cwt.

TURMERIC.—Prices are fairly steady in spite of a quiet market. Privately sales of *Bengal* have been made during the week at 7s. 3d. per cwt. In auction on Tuesday 20 bags were bought in at 7s. 6d. per cwt.

WAX (JAPAN).—There is none to be had on the spot under 30s. for pale *squares*, and as much as 35s. is in some cases asked. For delivery 40s. per cwt. *c.i.f.* is quoted.

NEWCASTLE CHEMICAL REPORT.

[From our own Correspondent.]

JANUARY 14, 1896.

The chemical trade on this market does not as yet give out signs of much new immediate business. The usual annual contracting goes on very slowly. Home orders keep dropping in, but not to that material extent to prevent stocks from accumulating. Sulphur and salt-cake continue scarce; other articles fairly plentiful. Prices, however, go pretty much without change. Prices are:—BLEACHING POWDER: £6 10s. to £7 5s., according to market and packages. SODA CRYSTALS: 37s. 6d. to 45s. according to market and packages. CAUSTIC SODA: 70 per cent., £7 10s. to £7 15s. RECOVERED SULPHUR: £3 17s. 6d. to £4. SODA ASH: 48 per cent., £3 15s. to £4; 52 per cent., £3 17s. 6d. to £4 2s. 6d. ALKALI: 48 per cent., £4 10s. HYPOSULPHITE: £6 5s. to £7, according to packages. SILICATE: £2 12s. 6d. to £3 7s. 6d., according to packages. SULPHATE OF AMMONIA: Leith, £8 10s. PITCH: 37s. SALTCAKE: 27s. 6d. to 30s. ALUM: In lump, Glasgow, £5 10s. nett.

LIVERPOOL MARKET REPORT.

[From our own Correspondent.]

JANUARY 15, 1896.

LINSEED: *Turkish*, 35s. 3d. to 35s. 6d. per 416 lbs.; *Trebizonde*, 32s. 6d. CANARY SEED: *Turkish*, 33s. to 34s. per 464 lbs. CARNAUBA WAX: Yellow, 135s.; grey, 120s. HONEY: *Chilian*, 21s. 3d. KOLA NUTS: Fresh, 8d.; dried, 7d. COCHINEAL: Small amounts of black *Teneriffe* have changed hands at recent rates. OLIVE OIL: *Seville*, £30 10s. per tun. CASTOR OIL: *Calcutta*, good seconds, 2½d.; *Madras*, 2¾d. *ex quay*, 2½d. *ex store*; *French*, 1st pressure, 2¾d. LINSEED OIL: 20s. 6d. to 21s. for *Liverpool* makes. COTTONSEED OIL: *Liverpool* refined, 17s. to 17s. 6d. in export barrels. SPIRIT OF TURPENTINE: 21s. 9d. PETROLEUM: *Russian*, 7d.; *American*, 7¾d. to 8¾d. SAL AMMONIAC: "firsts," 39s.; "seconds," 37s. per ton. ARSENIC: Powder, 16s. per cwt.; lump, 27s. BLEACHING POWDER: £7 per ton for hard in casks, *f.o.b.*, *Liverpool*. COPPERAS: 38s. per ton, *Lancashire*. CHLORATE OF POTASH: 4½d. per lb. PRUSSIAN OF POTASH: 8d. per lb. CREAM OF TARTAR: 100s. to 102s. 6d. for best white. CAUSTIC SODA: 70 per cent., £7 15s. to £8 per ton; 60 per cent., £6 15s. to £7. SODA CRYSTALS: £2 10s. per ton. BICARBONATE OF SODA: £7 per ton. BORAX: lump, 19s. 6d. per cwt.; powder, 20s. 6d. NITRATE OF SODA: Quiet at 7s. 7½d. to 7s. 10½d. per cwt.

LATE ADVERTISEMENTS.

Assistant Wanted.

CHEMIST'S.—Smart active JUNIOR for front counter and occasional dispensing. Out-door. Address, with full particulars, MANAGER, Palmeira House, Hove, Brighton.

Business for Disposal.

TWO Chemists and Druggists.—The BUSINESS for many years carried on by the late Mr. Love, in Launceston, is now for disposal, for which no goodwill is required, the incoming being the value of the drugs, &c. Full particulars of Messrs. BOWEN & Co., Auctioneers and Valuers, 9, Frankfort St., Plymouth.

EXCHANGE.

[For the convenience of readers, suitable notices, not exceeding thirty words in length, are inserted free in this column, if they do not partake of the nature of ordinary advertisements. They must relate to books, apparatus, shop fittings, etc., and arrive not later than Wednesday, addressed "Editorial Department, 17, Bloomsbury Square, W.C."]

OFFERED.

Thorpe's 'Chemistry' (2 vols.), good as new, 3s. 6d., post free.—Robinson, 125, South Lambeth Road, S.W.

Poncet's 'History of Drugs,' done into English from the original, fourth edition, 1748, bound in leather, and in good condition, with many woodcuts.—J. Howorth, Thorne Road, Doncaster.

Abel and Bloxam's 'Handbook of Chemistry,' 1854; Royle's 'Materia Medica,' 1856; Garrod's 'Materia Medica,' 1864; 'Pharmaceutical Journal,' last ten years. Any fair offer.—Owles, 3, Queen Street, Portsea.

What offers, 'Chemist and Druggist,' 1895; 'British and Colonial Druggist,' and 'Pharm. Journal,' 1892, to present time; also 'B. and C. D.,' and 'Chemist and Druggist' Diaries for last six years.—Ross, Chemist, Castlegate, Aberdeen.

Wills' 'Flowers and Fruits,' 'Materia Medica,' and 'Elements of Pharmacy'; all latest editions, new. What Offers?—F. Charnock, Cornhill, Bury St. Edmunds.

Two plates ruby glass, lettered in white, Jones, chemist, as Maw's Fig. 21; will fit ordinary street lamp. What offers?—Faraday, Saffron Walden.

Prantl and Vines' 'Botany,' new, 5s. 6d.; Holmes' 'Botanical Note-Book,' 2s.; Hayward's 'Botanist's Pocket-Book,' new, 3s.; Thorpe's 'Chemistry,' 'Metals and Non-Metals,' 3s. 6d. the two.—Burge, Fernhead Road, St. Peter's Park, W.

Free. Holden's 'Manual of Dissections,' 6s., published 16s.; Cooper's 'Dictionary of Surgery,' 5s., published 30s.; Quain's 'Anatomy,' 3rd. ed., 6s.—Davies, 33, Eglinton Road, Bow.

Gray's 'Supplement,' scarce, 10s. 6d.; Newman's 'British Ferns,' cost 12s., 5s.; Scoresby-Jackson's 'Materia Medica,' 3rd. published, 12s. 6d., 5s.; Bradbury's 'Nature Printed Ferns,' 50s., free.—Davis, "Chestnuts," Gordon Hill, Enfield.

Best Pale, Norwegian Cod-Liver Oil. One gallon, 9s. 6d.; two gallon lots, 9s. Cash with order.—Wood, chemist, Oldham.

Prantl and Vines' 'Botany,' Remson's 'Organic Chemistry,' Armstrong's 'Organic Chemistry,' Tilden's 'Chemical Philosophy.' All half price, carriage paid. Exchange for apparatus or dental forceps.—"Spigelia," 33, Lower Kennington Lane, S.E.

WANTED.

Gray's 'Anatomy,' recent edition. Price to D. M. Macdonald, 124, Crown Street, Aberdeen.

'Pharmaceutical Journal' offered for 'Chemist and Druggist,' posted on Mondays.—Griffin, Chemist, 139, Monument Road, Birmingham.

One-twelfth inch Oil Immersion Lens and Condenser Leitz or other good make; also bacteriological apparatus.—Broom, Houghton-le Spring.

Plain dental chair. Price to Smith, chemist, Workington.

Green's 'Botany,' Bentley's 'Systematic Pharmacographia,' Holmes' 'Botanical Note-Book,' Meyers' 'Outlines' Thorpe's 'Metals and Non-metals,' Perkin and Kipping's 'Organic Chemistry' (Part II.), latest editions.—Morrell, Norton Road, Stockton, Durham.

** The attention of readers is directed to the conditions printed at the head of this column. Notices cannot be inserted unless they are in accordance with those conditions.

MARRIAGE.

FAIRHURST — GARLAND. — At Chapel Street Congregational Church, Blackburn, on Tuesday, December 31, Mr. Harry S. Fairhurst, architect, of Manchester and Blackburn, to Miss Garland, daughter of Mr. A. P. Garland, pharmaceutical chemist, Blackburn.

DIARY OF THE WEEK.

Secretaries of Societies are requested to send notices of forthcoming meetings not later than Wednesday in the previous week.

MONDAY, JANUARY 20.

SOCIETY OF ARTS (CANTOR LECTURES), at 8 p.m.
"Alternate Current Transformers," by Dr. J. A. Fleming.

TUESDAY, JANUARY 21.

MIDLAND PHARMACEUTICAL ASSOCIATION, at 8.30 p.m.

"The Sun and his Attendant Family," by Mr. F. Smith.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"External Covering of Plants and Animals" (II.), by Professor C. Stewart.

ROYAL PHOTOGRAPHIC SOCIETY, at 8 p.m.
"On Irregular Grained Screens," by E. Sanger Shepherd.

GRESHAM COLLEGE, at 6 p.m.
"The Climate of the South of England: The South Coast," by Professor E. Symes Thompson.

WEDNESDAY, JANUARY 22.

WESTERN CHEMISTS' ASSOCIATION.
Smoking Concert at the Westbourne Restaurant, 1, Craven Road, W., at 8.30 p.m. precisely.

SOCIETY OF ARTS, at 8 p.m.
"Supply of Sea-water to London," by Frank W. Gricson.

GRESHAM COLLEGE, at 6 p.m.
"The Channel Islands" (II.), by E. Symes Thompson.

MANCHESTER PHARMACEUTICAL ASSOCIATION.
Annual Ball and Musical Promenade at the Hulme Town Hall.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION, at 9 p.m.
Description: "My Experiences of the Minor," by T. C. Clarke.

THURSDAY, JANUARY 23.

CHEMICAL SOCIETY, at 8 p.m.
"Helmholtz Memorial Lecture," by Professor G. F. Fitzgerald.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"Dante," by P. H. Wicksteed.

IMPERIAL INSTITUTE, at 4.30 p.m.
"Co-operation as applied to Agriculture," by R. H. Rew.

GRESHAM COLLEGE, at 6 p.m.
"Health Resorts of South Coast" (III.), by E. Symes Thompson.

LIVERPOOL PHARMACEUTICAL STUDENTS' SOCIETY, at 8.30 p.m.
"Albumin and its Allies" (Illustrated), by J. R. Logan.

SCHOOL OF PHARMACY STUDENTS' ASSOCIATION, at 6 p.m.
"Flowers and Their Visitors," by A. Lander. Amendment of Rules.

LIVERPOOL CHEMISTS' ASSOCIATION, at 7 p.m.
"The Illuminating Powers of Hydrocarbons" (Illustrated), by Edward Davies. Election of Council.

GLASGOW AND WEST OF SCOTLAND PHARMACEUTICAL ASSOCIATION, at 9.15 p.m.
Short Papers by Members.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 8.30 p.m.
"The Structure of the Human Eye, and the Action of Certain Drugs upon it," by Dr. Juler.

FRIDAY, JANUARY 24.

ROYAL INSTITUTION OF GREAT BRITAIN, at 9 p.m.
"Ludwig and Vitalism," by Professor Burdon Sanderson.

GRESHAM COLLEGE, at 6 p.m.
"Choice of Southern Climates" (IV.), by E. Symes Thompson.

SHEFFIELD MICROSCOPICAL SOCIETY, at 8 p.m.
Practical Night.

EDINBURGH CHEMISTS' ASSISTANTS' AND APPRENTICES' ASSOCIATION, at 9.15 p.m.
"The Irreducible Minimum: A Study," by Alex. Sutherland.

ABERDEEN JUNIOR CHEMISTS' ASSOCIATION, at 9.30 p.m.
"The Chemist's Apprentice—His Origin, Life, History, and Final Transformation," by W. Pennie.

SATURDAY, JANUARY 25.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"The Valley of Kashmir," by Walter R. Lawrence.

SUPPLEMENT

TO THE

PHARMACEUTICAL JOURNAL.

TRADE NOTES AND NEWS.

MESSRS. REYNOLDS and BRANSON, of Leeds, have added one more to their list of useful novelties, in the enema syringe cupboard. The almost universal adoption of indiarubber enema syringes by the medical profession and the public makes an improved method of storage a matter of considerable importance. If folded and shut up in their boxes, they will suffer more from the tubes remaining bent than from any wear when in use. The cupboard suspends enemas in the only position in which they should be stored, as shown in the illustration, keeps them free from dust, saves any mess from drip, and provides that proper place for them which is consistent with forethought and good order. The cupboard is made of stout pasteboard, and is fitted with a rack to suspend the syringe from, whilst a vial is fixed at the lower end to catch any drip. The price is 1s. only, or post free, 1s. 3d. If with lock and key, 6d. extra.

Dimensions 26 inches long by 2½ wide.

THE BRITISH MEDICINAL CAPSULES COMPANY, LIMITED, was registered on January 1, by Harris and Chethani, 35, Finsbury Circus, E.C., with a capital of £1,500 in £1 shares. Objects: To acquire and carry on the business of manufacturers of gelatine capsules, suspensory bandages, and indiarubber goods, as now carried on by Frances E. Lewin, of 37, Theobald's Road, Holborn, as the British Medicinal Capsules Company, and the similar business carried on by the said Frances E. Lewin, at 10, Wharf Road, Pritchard's Road, Hackney Road, Bethnal Green, as the British Surgical Rubber Company, and to enter into an agreement with the said vendor and Maurice Lewin, her husband. The regulations of Table A mainly apply.

MR. W. SHEPPERSON, the principal of the Liquor Carnis Co., is on the Riviera making a business survey, and letters should be addressed up to the 5th prox. to the Grand Hotel, Nice. Chemists in the Riviera desirous of opening business relations are specially invited to write.

MESSRS. FLETCHER, FLETCHER AND Co. reproduce clinical reports upon the administration of cinchona in the form of their special preparations, as an elegant booklet, special prominence being given to "Vibrona," a combination of hydrobromic extract of cinchona with port wine.

MR. D. M. C. REIMERS, of Aarhus, Denmark, has published a historical account of his firm, which dates from the year 1596, and has, therefore, been established 300

years. The book contains a brief history of each of the successive owners, with copies of some legal documents of considerable antiquarian interest, and a large amount of domestic history as to births, deaths, and marriages, which can only be of interest to genealogists. The present appearance of the shop as shown in the illustration, indicates that it is fitted up in a manner worthy of its ancient reputation, *i.e.*, it is quite up to date.

MESSRS. KENNEDY AND Co. write as follows:—"Referring to Mr. Ernest Stapel's statement to which you allude in your valuable journal, dated 18th inst., we beg to call the attention of your readers to the specification of Letters Patent No. 2463, of 1873; in that specification your readers will find every feature that Mr. Spence can possibly claim, or even show in his shields. As this patent has long lapsed, no exclusive right in the shields exists, and it is preposterous to say that any later patent can be upheld. Why does not Mr. Stapel or Spence sue us—if he dare? Thanking you in anticipation for publishing this letter."

MISCELLANEOUS NEWS.

THE WESTERN CHEMISTS' ASSOCIATION (OF LONDON).—During the interval at the smoking concert held by this Association on Wednesday evening, the President, Mr. Hyslop, briefly alluded to the manner in which the administration of the Food and Drugs Act is at present being carried out. He was of opinion that in view of the seidlitz powder prosecution (*vide* p. 77 of this week's Journal), it was advisable that a discussion should take place at the next monthly meeting of the Association in regard to the extent to which a chemist was responsible for the quality of factory-made articles, and he would be glad if some members would volunteer to initiate a debate on the subject. Proceeding, he warned chemists in the district to be on the look-out for wax prosecutions next. He himself had attempted to obtain pure beeswax with a guarantee from a well-known wholesale house, but without success, and he was informed that there was none to be had at the present time. He believed that the matter was at present engaging the attention of the Food and Drugs inspectors.

JARVIS.—At Pau, Basses Pyrenees, France, on January 8, Anna Maria Paulina, the beloved wife of John Jarvis, English chemist, died in her fifty-third year.

PHOTOGRAPHY UP TO DATE.—THE current issue of the *Amateur Photographer* contains two instructive articles:—(1) The first public communication respecting Professor Herkomer's new black and white process, and (2) an efficient and lucid explanation of the much-talked-of discovery of Professor Röntgen of Vienna.

SOUTHAMPTON WINTER EXHIBITION OF ARTS AND CRAFTS.—Messrs. W. Bates and Co. here exhibit three very handsome cases of surgical, optical, and pharmaceutical goods, and there was no other stand that attracted so much notice or was so worthy of inspection. The majority of the local medical men visited the exhibition. In the

centre case were displayed the special surgical manufactures, for which the firm have distinguished themselves. Here was to be seen Mr. Bates' patent truss, an improved abdominal support, and some exquisitely made orthopaedic instruments, spinal supports, as well as several new pessaries which have been made for a local surgeon: in the upper part of the case were displayed surgical instruments, hypodermic syringes, some new oil and water sprays, some aluminium instruments, and several new intra-uterine instruments, catheters, specula, etc. In the optical case were displayed ophthalmic test cases, large specimens of uncut pebbles, ophthalmoscopes, some new clips and spectacles made in aluminium alloy, also Mr. Bates' easy-fitting folder, field and marine glasses, process tools used in the manufacture of cylindrical and spherical lenses, cameras, kodaks, kodets, Frenas and Mr. Bates' exhibition hand camera. There were also some interesting scientific instruments shown, made by Mr. Jas. Hicks, including the Watkin aneroid. The third case was devoted to a very elaborate exhibit of the specialties of Messrs. Burroughs, Wellcome, and Co., special prominence being given to their tabloid pocket cases and chests, the Stanley and Yacht chests being much admired.

Advertisement.

EDWIN APPLGATE, Deceased.

PURSUANT to the Statute 22nd and 23rd Vic., chapter 35, intituled "An act to further amend the law of Property and to relieve Trustees," Notice is hereby given that all creditors and other persons having any debts, claims or demands against the estate of Edwin Applegate, formerly of 506, Holloway Road, but late of 46, Tufnell Park Road and 84, West Green Road, South Tottenham, all in the County of Middlesex, Pharmaceutical Chemist (trading at the latter place as Collett & Co.), who died at No. 15, Tufnell Park Road, aforesaid, on the 1st of January, 1896, and to whose Estate Letters of Administration, with the Will annexed, were granted by Her Majesty's High Court of Justice at the Principal Probate Registry, on the 17th day of January, 1896, to John William Applegate, of Dewsbury, in the County of York, Surgeon, the son of the deceased, are hereby required to send the particulars in writing of their claims or demands, to me the undersigned, Alfred Armstrong, of 115, Chancery Lane, W.C., Solicitor, on or before the 28th of February next, after which date the administrator will proceed to distribute the assets of the said deceased among the parties entitled thereto, having regard only to such debts, claims, or demands, of which they shall have then had notice. And that the said Administrator will not be liable for the assets or any part thereof so distributed to any person, or persons of whose claim or demand he shall not have had notice at the time of the distribution.

Dated 23rd day of January, 1896.

ALFRED ARMSTRONG,

115, Chancery Lane, W.C.

Solicitor for John William Applegate,
re Administrator.

MARKET REPORT.

[Specially compiled for the *Pharmaceutical Journal*.]

LONDON, JANUARY 23, 1896.

Business in the produce markets have been generally slow this week, with few changes of importance to report. The drug sales to-day were unusually short, and little of importance transpired. Aloes were in small supply, no East Indian or Cape varieties being shown. Gum benzoin however, was well represented, and sold at full rates for Sumatra, whilst the Siam gum was all bought in. Copaiba balsam sold at firm rates for Maranham, whilst, on the other hand, tolu balsam is declining in value. Buchu leaves are firm, but guarana sold at lower rates than those paid privately. Cascara sagrada bark is fully steady, whilst ipecacuanha is firmly held for both varieties of root. Of other drugs, gentian root, Peruvian balsam, and Jamaican honey are steady, whilst nux vomica sold at an advance. There is little to report in the essential oil market, but the heavy oil market has been very active, and nearly everyone has advanced during the week. Shellac is firming up, whilst spices generally are unchanged. In the chemical market the most notable feature is the continued advance in cream of tartar. Full details will be found below of the various articles:—

ACID, CARBOLIC.—The market is firm^r current quotations being as follows:—*Cry-stals*: 34° to 35° C., 6½d.; 39° to 40° C., 7¼d.; 39° to 40° C. (detached crystals), 8¼d. per lb. *Crude*: 60 per cent. is rather firmer, and now quoted at 1s. 10d., with 75 per cent. at 2s. 2d. per gallon. *Liquefied* and *oresylic* are unchanged at 1s. 1d. and 11½d. per gallon respectively.

ACID, CITRIC.—Firm. The *English* manufacturers' spot price is 1s. 2½d. per lb. on the spot, whilst it can still be bought in second-hand at 1s. 2d. *Concentrated juice* offers at £13 15s. to £14 per pipe *f.o.b.*

ACID, TARTARIC.—Very strong. The *English* manufacturers' quotation is still 1s. 3d. per lb. on the spot. *Foreign* brands of acid (not guaranteed B.P.), both in crystal and powder are still quoted at 1s. 2½d. per lb. on the spot, and 1s. 3d. for forward delivery.

ACACIA.—At to-day's drug sales a moderate supply only was catalogued, and little inquiry was shown. Two cases of medium yellowish *Trieste* gum sold without reserve at 94s. per cwt., the remainder being bought in at prices ranging from £12 10s. for good hard medium to bold grey, £6 for fair grain, down to £5 for medium yellow. *Soudan* sorts were bought in at 60s. for bold ambery, and 70s. for medium to bold yellow. Privately the demand for *Bushire* so-called insoluble gum, has fallen off considerably, but quotations remain unchanged, fair sorts being quoted at 10s. to 14s., and pale selected at 18s. to 22s. per cwt.

ALOES were in exceptionally small supply to-day, there being no *Cape* nor *Socotrine* in the catalogue. The stock of the latter was increased by an arrival of 50 kegs on Wednesday, bringing the total amount on the spot up to about 70 packages. To-day several parcels of *Curacao* also were offered, but the majority was bought in. For good

livery 35s. was paid, and for ordinary water damaged, 9s. 6d. per cwt.

AMBERGRIS.—The supply offered to-day only amounted to about 18 ozs., of which 7s. 6d. per oz. was paid for 7¼ ozs. of very low common quality, whilst the remainder was bought in at 60s. per oz.

AMMONIA SULPHATE is 2s. 6d. lower than last week, but at the close is firmer. Grey 24 per cent. being quoted at £8 10s. on the spot. *Hull* is worth £8 8s. 9d., and *Beckton*, £8 10s.

ARECA NUTS.—Steady. In auction 4 bags of good quality *Colombo* nuts sold without reserve at 11s. 6d. per cwt.

BAEL FRUIT.—Two cases of this drug imported from *Bombay* were bought in at 2d. per lb. for fair quality.

BENZOIN.—A moderate supply was offered to-day. *Sumatra* gum was in good supply, and £8 to £8 5s. was paid for good, small to medium pale almony seconds slightly false packed, whilst fair seconds rather false packed realised £6 to £6 15s. per cwt. *Siam* gum was in moderate supply, and was all bought in, good medium to small loose almonds at £17, and small pale almonds part loose and part block at £10 per cwt. *Palem-bang* gum sold at 29s. for fair seconds offered without reserve, and 15s. for drossy thirds, whilst fine almony quality was bought in at 60s. per cwt. *Penang* gum, of which the supply at present is very small, was bought in at 90s. for good seconds (after 80s. had been bid), and 105s. for fine ditto.

BUCHU.—Steady. An average supply was shown to-day, but the demand was only moderate. For fine bright green *round* leaves 5d. was paid, whilst 4¼d. was accepted for medium greenish, and 3d. for yellowish leaves. No *long* leaves were shown.

CALAMUS ROOT.—To-day sixteen bales offered without reserve sold at 16s. per cwt.

CALUMRA.—No inquiry was shown for this article to-day, and ordinary wormy sorts from *Zanzibar* were bought in at 9s. per cwt., and mixed ditto at the same figure.

CAMPHOR.—The market continues very quiet, and prices are lower, although the business done has been more or less nominal. *Formosan* camphor is quoted at 162s. 6d. per cwt., *c.i.f.*, January to March shipment, whilst *Japan* is nominally at 187s. 6d. for the same shipment. At the drug sales to-day 45 tubs of *Japan* camphor were bought in at 195s. per cwt., and 12 cases of *refined Japan* camphor, in squares of 2 lbs. each at 2s. per lb.

CANTHARADES.—The spot price for fair *Chinese* flies is, 1s. per lb. To-day 12 cases were held for this figure.

CARDAMOMS.—A very moderate supply was shown to-day, and the catalogue did not include any very fine qualities. In spite of this a good demand was shown especially for *seed* which sold at an advance of fully 2d. per lb. The prices paid were as follow:—*Ceylon-Mysore*: Medium pale, 2s. 10d.; fair to medium palish, 2s. 7d. to 2s. 8d.; good pale small to medium, 2s. 3d. to 2s. 5d.; medium yellowish, 1s. 9d. to 2s.; mall yellowish, 1s. 7d., down to 1s. 4d. for lean brownish. *Seed* sold at 2s. 6d. per lb.

CASCARA SAGRADA.—Very firm. The spot price for good quality bark is 22s. per cwt., and this price has been paid during the week. At to-day's sales 25s. was the limit for good sound quill from *San Fran-*

cisco, whilst 20s. was paid for ordinary quality.

CASCARILLA.—To-day 28 bales of bark from *New York* were offered, and met with a good inquiry, all being sold at 40s. to 41s. for good silvery, and 35s. to 39s. for rather thin grey ditto.

CHIRETTA.—Fourteen bales were bought in to-day at 4d. per lb.

CINCHONA.—At the drug sales a parcel of flat *Calisaya* bark from *Antifogasta* met with a good demand, all being sold at prices ranging from 1s. 4d. to 1s. 6d. for sound, 11d. for damaged, down to 3d. per lb. for bad damaged. *Maracaibo* bark was bought in at 9d. per lb. The exports from Java to all ports from October 1 to December 31, 1895, were 3,002,800 Amsterdam pounds, against 2,417,849 in 1894, and 1,788,194 in 1893.

COAL-DISTILLATION PRODUCTS.—*Toluol* is still quoted at 2s. 3d. per gallon for *pure*. *Benzole* is rather easier at 1s. 11d. per gallon for 50 per cent., whilst 90 per cent. is still quoted at 2s. 3d. per gallon. *Creosote*: 1½d. per gallon. *Crude naphtha*: 30 per cent. at 120° C., 10d. per gallon.

COLOCYNTH.—A large supply was offered, but no business was done. Of *Turkey*, 16 cases were offered and bought in at 3s. per lb. for good apple. The price asked is 2s. 10d. per lb. The supply to come forward is said to be very small. *Spanish* colocynth was bought in at 1s. 2d. for good quality, and 10d. for very seedy ditto.

COPAIBA.—In auction 5 casks of bright pale *Maranhm* balsam were shown. Of these, one sold at 1s. 11d.; the remainder was bought in at 2s. per lb.

CREAM OF TARTAR.—Continues to advance rapidly in price, and on the spot best white *French* crystals are now quoted at 105s., with *German* brands of powder at 107s. 6d. per cwt., showing an advance of about 6s. on last week's closing price. For shipment from *Bordeaux* 100s. *f.o.b.* is now asked.

DRAGON'S-BLOOD.—Out of an average supply offered, £6 was paid for 6 cases of very seedy lump, but of fair bright colour, offered without reserve, whilst £9 10s. was accepted for 3 cases of good bright gum imported *via* Hamburg. Dark saucers were bought in at £6, and small gum in reeds at the same figure.

ELEMI (GUM).—Tending rather lower. To-day 25 cases of fair pale *Singapore* gum were bought in at 28s. per cwt.

ERGOT OF RYE.—The only parcel sold in auction consisted of 8 bags of very wormy old ergot, which fetched 5½d. to 5¼d. per lb. A parcel of new *Spanish* ergot was bought in, and another parcel of small old *Russian* at 8d. per lb.

EUPHORBIVM.—The stock of this article at present in London is said to be very low. To-day 6 serons from *Las Palmas* were bought in at 35s. per cwt.

GALLS.—The position of *Persian* galls is practically unchanged, *blues* being firmly held for 55s. per cwt., whilst there are no *greens* and *whites* offering. *China* galls are quiet, but firm. In auction, good small plum-shaped were bought in at 65s., whilst business has been done for arrival at 57s. 6d., *c.i.f.*, per cwt. At the drug sales, 23 cases of *China* galls were bought in at 65s., whilst 3 bags of *Turkey* sold at 44s. per cwt.

GAMBOGE.—An average supply was offered in auction, and met with an improved

inquiry, £10 to £10 2s. 6d. being paid for mixed broken pipe and block, £9 10s. for dull hard, and £9 2s. 6d. for soft small *Singapore* gum, whilst £8 5s. was accepted for broken pipe. A parcel of fine bright gum of clean fracture had been disposed of previous to the sale.

GENTIAN ROOT is still advancing in price. During the last few days 22s. per cwt. has been paid on the spot, and 22s. 6d. would probably be the lowest figure now. The stock on the spot is very low. At the drug sales to-day two bags of powder were held for 18s. per cwt.

GUARANA—Lower. To-day 2s. per lb. was accepted for a case of fair sausage showing a decline of 3d. per lb. on the rates paid privately recently.

GUINEA GRAINS.—In auction, 78 bags from the West Coast of Africa all sold at 16s. to 16s. 6d. per cwt.

HONEY.—In small supply and very slow of sale. In auction 24s. per cwt. was paid for 10 cases of nice clean mixed, and 19s. 6d. for dark foul quality. *Brisbane* honey was bought in at 25s. (after 21s. had been bid), and *Chilian* at 26s. per cwt.

IPECACUANHA.—An average supply was offered to-day, and was very firmly held. All the *Carthagenia* (*Columbian*) root was held for 4s. 4d. per lb., and this price has been paid privately during the week. *Rio* (*Brazilian*) root was mostly bought in, but a few bales of damaged root sold at 5s. to 5s. 3d. per lb., according to condition, whilst fine picked was held for 6s. 6d. per lb.

KAMALA.—Rather firmer. To-day 2 cases from *Cannopore* (*via* Bombay), sold at 9½d. per lb. for good quality.

KOLA NUTS.—Fully steady. At the spice sales on Wednesday, 5 bags of *Grenada* small to bold brown and dark sold at 9½d. to 10½d. per lb. To-day the supply offered was only moderate, and good bright *West Indian* were bought in at 1s. 1d., fair ditto at 11d., whilst a 16 lb. box of *Grenada* nuts rather mouldy, sold at 7d. per lb.

LIME JUICE.—No business was done in this article. Seven barrels of *Antiguan* juice were bought in at 1s. per gallon.

LIQUORICE ROOT.—The stock on the spot has been increased by an arrival of *Bussorah* root during the last few days, but the amount of business being done is very small, and ordinary rough quality still quotes at 7s. to 7s. 6d. for ordinary rough quality.

MUSK SEEDS.—1s. 6d. per lb. is the price asked for this article, of which 2 bales were bought in at to-day's sales.

MYRRH (GUM).—To-day clean native-picked gum was bought in at £5 10s., whilst 23s. per cwt. was paid for 17 bales of low drossy sorts.

NUX VOMICA.—To-day 51 bags of *Bombay* sold at 7s. per cwt. for sound and 6s. for oil damaged quality, whilst another parcel from *Madras* and *Calcutta* were bought in at 4s. 6d. per cwt. A parcel consisting of 80 bags from *Cochin* sold without reserve at 6s. 1d. per cwt.

OIL (COD LIVER).—During the week business has been done in the new season's cod liver oil, at 185s. per barrel of 25 gallons for fine non-congealing *Lototen* oil, but the supply is very small, and prices are likely to advance. Old oil is quoted at 165s., whilst *Newfoundland* sells privately at 5s. 6d. to 6s. per gallon.

OILS (ESSENTIAL).—*Star Anise* oil is quiet

but steady. During the week 10s. 2d. has been bid and refused on the spot, and holders still ask 10s. 3d. *Cassia* oil is also very firm, with little good quality oil available. At the drug sales 2 leads of oil testing 76 per cent. of cinnamic aldehyde were bought in at 11s. per lb. *Eucalyptus*. *Dawson's* brand was bought in to-day at 1s. 6d. per lb. Privately 1s. 9d. per lb. has been paid for *Ammydalina* oil. *Sweet Orange*: Eight bottles sold in auction at 4s. 5d. per lb. *Citranello* oil (in drums) is held for 1s. 11d. per lb. on the spot. *Cinnomon leaf* oil sold at 5d. per oz.

OILS (FIXED) AND SPIRITS.—*Castor*: The market for *Italian* oil remains very firm at late rates, 30s. to 30s. 6d., *c.i.f.*, per cwt. being quoted for best quality tasteless oil. *Marseilles* oil is quoted at the full rates of 3½d. to 3¾d. per lb. in tins (packed in cases). *Cotton* is a very strong market, and likely to advance further. The closing price of *refined* oil is £17 to £17 10s. on the spot, according to brand and package. *Coco-nut* is also very firm, and *Cochin* has advanced in price £1 since our last report, closing at £26 10s., whilst *Ceylon* is quoted at £22 15s. *Linseed*: Dearer by 2s. 6d. to 5s., and oil in barrels is now quoted at £20 2s. 6d. to £20 5s. *Rape*: Has advanced in price 10s., refined oil being now worth £25 5s. to £25 10s. *Olive*: *Tunis*, £32; *Spanish*, £32; *Palm*: *Lagos* quotes at £22 on the spot. *Turpentine*: Quiet at a decline, *American* spirit being now worth 20s. 9d. to 20s. 10½d. *Petroleum* oil is also weaker, and lower in price at 6¾d. for *American*, 7¾d. to 7¼d. for *Water white*, and 6½d. to 6¼d. for *Russian* on the spot. *Petroleum Spirit*: *American* spirit quotes at 9d. to 9¼d., and *deodorised* at 9¼d. to 9¾d. per gallon.

OPIUM.—A fair inquiry for *druggists'* opium is still shown, and the market is firm. The current quotations are:—*Turkish*, soft shipping, 10s. 9d. to 12s. 9d.; *Smyrna*, 8s. to 9s.; *Constantinople*, 8s. 6d. to 9s. 6d.; and *Druggists' seconds* at 7s. 3d. to 8s. 3d. The market in *Persian* opium is rather easier, owing to fresh consignments being near at hand. Fine "bricks" offer at 13s. per lb., and "ball" at 12s. 3d. to 12s. 6d.

ORRIS ROOT.—Fine *Florentine* root was bought in to-day at 80s. per cwt., and pale cuttings at 50s. *Veronese* is quoted at 67s. 6d. per cwt. for good sorts.

PERU (BALSAM).—There has not been much inquiry for this article lately, but the market is firm. During the week 9s. has been paid privately for genuine balsam of direct import.

QUASSIA CHIPS.—3 tons were bought in to-day at £8 per ton.

QUILLAIA BARK.—13s. 6d. is the price asked on the spot for this article. Two tons was bought in at the sales to-day.

QUININE SULPHATE—Remains very dull, with little business doing. The best *German* brands are offering at 1s. 1½d. for *B. & S.* and *Brunswick*.

SEEDS (VARIOUS).—*Coriander*: At the spice sales small *Madras* seed was bought in at 18s. per cwt., whilst ordinary coarse *Coconada* sold at 4s. 6d. To-day 40 bags of ordinary *Bombay* seed sold at 4s. 6d. per cwt. *Canary*: In auction fine *Spanish* seed sold at 47s. per quarter, of 464 lbs. *Cumin*.—*Maltese* seed was bought in to-day at 35s. *Aniseed*.—*Russian* was bought in at 25s. *Star Aniseed*.—Genuine *Chinese* were

held for 95s. per cwt. *Dill*.—*Bombay* seed was bought in at 13s. *Fennel*.—Ordinary mixed quality from *Bombay* was held for the same figure.

SARSPARILLA—Steady. Sound *Jamaica* root sold at 1s. 4d. per lb. to-day, whilst 1s. 2d. was accepted for slightly damaged ditto. For *Lima-Jamaica*, 1s. per lb. was paid, showing an advance of fully 1d. per lb. *Honduras* was bought in at 1s. per lb.

SENNA.—Only a few bales of *Tinnivelly* leaves were shown to-day, and the prices paid were only nominal, including small yellowish at 1½d. to 2½d., and damaged brownish at ½d. to ¾d. per lb.

SHELLAC.—A moderate business has been done privately since our last report at steady rates, including *TN* basis at 94s., whilst *Button* has sold at an advance of about 5s. on the last auction rates, including cakey *BL 1* at 91s. to 92s. The arrival market is firm, with sales of *TN Orange* at 78s. *c.i.f.* for April to June steamer, and 82s. *c.i.f.* for January to March ditto. At the weekly sales held on Tuesday only 664 cases were actually offered, and a brisk competition was shown, although the prices realised were irregular, *Second Orange* at the outset selling at a decline of 3s. to 4s., but afterwards firming up, closed at a slight advance on the last sale rates. *Garnet* was all bought in, whilst resinous *Button* sold at a decline.

SPICES (VARIOUS).—*Cloves* are quiet, but steady. In auction good bright *Zanzibar* sold at 2½d.; medium dark at 1½d.; and ordinary at 1¼d. per lb., whilst picked *Penang* was bought in at 6¾d. *Ginger*: *Cochin* is still slow of sale. At the sales on Wednesday, small to medium washed rough sold at 33s., and small to bold brown ditto at 34s. to 35s. per cwt. Of *Bengal* 100 bags sold at 16s. 6d., whilst limed *Japan* was bought in at 24s. *Cassia lignea*: In auction ordinary mixed sold at 16s. 6d. per cwt. *Chillies*: Fair quality *Zanzibar* sold at 33s. *Capsicums*: Dull red *East Indian* sold at 19s., and good long red and yellowish *Japan* at 20s. to 22s. per cwt. *Pepper*: Good bright washed *Singapore* sold in auction at 2¼d. per lb. *White pepper*: The demand is only moderate, but prices are firming. On Wednesday, fine bold *Singapore* sold at 5¼d. per lb. *Arrow-root*: The supplies continue far in excess of the demand, and all the *St. Vincent* was bought in at the sales except 20 barrels which sold at 3d. for very good, and 4¼d. for fine *W. Indian*.

SQUILLS.—In auction yellowish seconds sold at 1d. per lb., and ordinary brownish at ½d. (without reserve).

TOLU (BALSAM).—Tending lower. To-day several parcels were offered in auction, and 1s. 10d. was accepted for two cases offered without reserve, whilst 3½d. was accepted for three cases of so-called tolu balsam. The quotation for shipment from New York is still 2s. 3d. per lb., *c.i.f.*

WAX (BEES).—*Jamaica* wax was in good demand, and sold at an advance of 2s. 6d. per cwt., £7 15s. to £8 2s. 6d. being paid for fair to good quality. *Mozambique* cold at £6 12s. 6d. *Madras* at £6 7s. 6d. *Australian* at £7, and *Madagascar* at £6 5s. to £6 12s. 6d.

WAX (JAPAN).—Very firmly held. Fair pale squares are held for 34s. on the spot. Several parcels were bought in to-day.

NEWCASTLE CHEMICAL REPORT.

[From our own Correspondent.]

JANUARY 21, 1896.

Over-sea business continues quiet, but home orders, which keep dropping in with regularity, prevent stocks from increasing to any material extent. Sulphur is still very scarce. Prices are little changed, and are:—
BLEACHING POWDER: £6 5s. to £7 5s., according to market and packages. SODA CRYSTALS: 36s. to 42s. 6d. CAUSTIC SODA: 70 per cent., £7 5s. to £7 15s. SODA ASH: 52 per cent., £4. ALKALI: 52 per cent., £4 15s. SULPHUR: £3 17s. 6d. to £4. SOUTH DURHAM SALT: 9s. 6d. per ton.

LIVERPOOL MARKET REPORT.

[From our own Correspondent.]

JANUARY 22, 1896.

CANARY SEED is in but little demand; price remains at or about 33s. 6d. per 464 lbs. for *Turkish*, at which figure 50 bags were sold yesterday. GUM ARABIC meets with fair inquiry, and is selling at very steady rates. BEESWAX: 14 barrels of *St. Domingo* sold at £6 10s. per cwt. HONEY: At auction *Chilian* Pile 3 brought 21s. 6d. per cwt., and Pile 2 22s. 3d. *ex quay*. CASTOR OIL remains steady at recent rates, with moderate business passing; good seconds, *Calcutta*, 2½d. per lb.; *Madras*, 2¾d. to 2½d.; *French*, 1st pressure, 2¾d. OLIVE OIL is dull at recent rates. *Spanish* oils are easier; *Seville*, £30 to £30 10s. per tun; *Malaga*, £31 per tun. COTTONSEED OIL has advanced to 17s. 6d. to 18s. per cwt. for *Liverpool* refined in export barrels. LINSEED OIL remains at last week's rates, 20s. 6d. to 21s. per cwt. *Liverpool* pressed. SPIRIT OF TURPENTINE has become a little easier in price, and stands at 21s. 6d. per cwt. PETROLEUM: *Russian*, 6½d. per gallon; *American*, 7d. to 8¼d. per gallon. AMMONIA CARBONATE: 3½d. to 3¾d. per lb. AMMONIA SULPHATE: £8 12s. 6d. spot price for good grey. SAL AMMONIAC: "First," 39s.; "second," 37s. per cwt. BLEACHING POWDER: *Hard f.o.b.*, £7 to £7 10s. per ton. BORATE OF LIME: 560 bags sold here *ex quay* at £10 per ton. COPPERAS: *Lancashire*, in good demand at 37s. 6d. per ton. SULPHATE OF COPPER: £15 7s. 6d. to £15 10s. per ton. CHLORATE OF POTASH: 4¾d. per lb. SALT-PETRE: 23s. 6d., kegs; 23s. per cwt., barrels. PRUSSIAN OF POTASH: 8d. per lb. CREAM OF TARTAR: Remains very firm at recent advance, 100s. per cwt. is about the price for 1st white cream. BICARBONATE OF SODA: £6 15s. per ton. SODA CRYSTALS: £2 7s. 6d. to £2 10s. per ton. CAUSTIC SODA: 70 per cent., £7 10s.; 60 per cent., £6 10s. per ton in 5 ton lots. HYPOSULPHITE OF SODA: £7 to £7 10s. per ton. SULPHATE OF SODA: Refined, £2 7s. 6d. to £2 10s. per ton. BORAX: £19 10s. crystals, £20 10s. for powder. SULPHUR: Flour, £7 10s. per ton; roll, £5 5s.; recovered, £3 17s. 6d., in bags; £4 5s., in barrels. PHOSPHORUS. Wedges, 2s.; sticks, 2s. 1d. per lb.; amorphous, 2s. 8½d. per lb.

EXCHANGE.

[For the convenience of readers, suitable notices, not exceeding thirty words in length, are inserted free in this column, if they do not partake of the nature of ordinary advertisements. They must relate to books, apparatus, shop fittings, etc., and arrive not later than Wednesday, addressed "Editorial Department, 17, Bloomsbury Square, W.C."]

OFFERED.

Day's Patent Air-Tight Covers; cost £2 2s.; take £1 1s.—Dyer, Pharmacist, Honiton.

Unused Portable Assay Balance, with rider to carry 2 grammes each pan, and turn with 0.1 milligramme, fitted in mahogany case. Price £4 4s.—J. Allen, 1, George Street, Plymouth.

Edward I. or II. and Henry III. Silver Pennies, guaranteed genuine specimens, 1s. each, post free; some others.—Arthur Graeme, 54, Fremantle Road, Kingsdown, Bristol.

Martindale's 'Extra Pharmacopoeia,' good as new, seventh edition, 6s.; Squire's 'Pharmacopoeia,' fifteenth edition, 6s., good condition.—Chemist, 141, Upton Lane, Forest Gate, E.

Apparatus for Minor, complete. Attfield's, Bernay's, and Wills' 'Chemistries'; Prantl and Vines' 'Botany'; Wills' 'Materia Medica'; Muter's 'Analytical Chemistry'; recent books.—Bienvenu, Andover, Hants.

Zucatto's Typograph, note size, gives any number of copies of circulars, etc., in black, full supply of materials, in box, complete, 15s., cost 31s. 6d.—Elliott, Chemist, Southport.

'Pharmaceutical Journal,' complete, January, 1873, to December, 1895, unbound, cash or exchange.—J. Hearn, 38, Southwark Street, London, S.E.

Surplus Stock. Two Doz. Holloway's Pills in half dozens at 8s. 3d.; Pot. Permang. in 4 and 7 lb. parcels at 6d.; cash with order, carriage forward.—Eastman, Forest Lane, Stratford.

Two sheets plate glass, embossed pattern, 2 by 6 feet each. Accept offer, or exchange for useful galenical apparatus, as large percolator, etc.—Smith, Chemist, Archer Street, Bayswater.

'Pharmaceutical Journal' and 'Chemist and Druggist' offered in exchange for 'Science Gossip' or a church monthly.—Holmes, Brill.

Arnott's 'Physics,' 2 vols., published £1 11s. 6d., 6s.; Kirby and Spence's 'Entomology,' 4 vols., published £3, 10s. 6d.; Faraday's 'Chemical Manipulation,' scarce, 6s. 6d. free.—Davies, 33, Eglinton Road, Bow.

Hall's Six-Guinea Typewriter in perfect condition, sell or exchange for anything useful in trade.—Bentley, Chemist, Limehurst, Goole.

Ganot's 'Physics,' 5s.; Martindale's 4th edition, 2s. 6d.; Squire's 'Pharmacopoeia London Hospital,' 5th edition, 2s. 6d.; Royle's 'Materia Medica,' 6th edition, 2s. 6d.; Brunton's 'Materia Medica,' tabulated, 2s.—Burge, 2, Fernhead Road, Harrow Road, W.

B.P., equal to new, containing recent Minor notes, 5s. 6d.; Wills' 'Volumetric,' 1s. 8d.; post free.—Dispenser, 23, Fulham Road, S.W.

Hooper's 'Lexicon Medicum,' 7th edition, fair condition; Kelly's 'Chemists' Directory,' 3rd edition, good condition; Show Jar for window, decorated inside, marked rhubarb, gilt top and stand, complete.—Blinkhorn, Chemist, Salisbury.

Surplus Stock. Finest Norwegian Cod-Liver Oil, three Winchester, 4s. 6d. each, cash with order.—Ellis, Chemist, Kingscliff, Northamptonshire.

Pomet's 'History of Drugs,' done into English from the original, fourth edition, 1748, bound in leather, and in good condition, with many woodcuts.—J. Howorth, Thorne Road, Doncaster.

Books on 'Microscope,' by Hogg, Cole, Lankester, Slack, Gosse, Griffith and Henfrey, etc. Returnable list.—Apply to Davis, "Chestnuts," Gordon Hill, Enfield.

'American Dispensatory,' unbound, 7 parts, 21s.; Watts' 'Inorganic,' 4s. 6d.; Bentley's 'Students' Botany,' 3s. 6d. New; latest editions. Carriage paid.—"Solazzi," 21, Queen Street, Louth, Lincs.

Wills' 'Pharmacy' (soiled), 3s.; Wills' 'Practical Botany,' 2s. 6d.; Wright's 'Physics,' 2s.; Davis' 'Microscopical Botany,' 1s. 6d.; Davis' 'Volumetric Analysis,' 1s.—"Minor," 4, Maclise Road, West Kensington, W.

WANTED.

Kelly's 'Directory of Chemists and Druggists.'—Tully, Chemist, Hastings.

Gray's 'Anatomy' latest edition. Price to J. E. Thomas, 7, Station Street, Porth, Glam.

A pair of large second-hand swan-necked window carbos. State size and lowest price.—Randall and Son, Chemists, Wareham, Dorset.

Paraffin Oil Pump.—Ellis, Chemist, Kingscliff, Northamptonshire.

Dr. Muter's 'Analytical Chemistry,' fifth edition.—O. T. W., 6, The Drapery, Northampton.

Latest edition Green's 'Botany,' Part I. Lowest price to—J. L.R., 23, Treherne Road, North Brixton.

* * * The attention of readers is directed to the conditions printed at the head of the previous column. Notices cannot be inserted unless they are in accordance with those conditions.

DIARY OF THE WEEK.

Secretaries of Societies are requested to send notices of forthcoming meetings not later than Wednesday in the previous week.

SATURDAY, JANUARY 25.

PHARMACEUTICAL FOOTBALL CLUB v. Mount View, at East Finchley.

SUNDAY, JANUARY 26.

LIVERPOOL SUNDAY SOCIETY, at 3 p.m.

"Stageland: its Lights and Shadows," by T. H. Hardman.

MONDAY, JANUARY 27.

SOCIETY OF ARTS (CANTOR LECTURES), at 8 p.m.

"Alternate Current Transformers" (II.), by Dr. J. A. Fleming.

ROYAL GEOGRAPHICAL SOCIETY, at 8 p.m.

"The First Crossing of the Southern Alps of New Zealand," by E. A. Fitzgerald.

TUESDAY, JANUARY 28.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.

"External Covering of Plants and Animals" (III.), by Professor C. Stewart.

ROYAL PHOTOGRAPHIC SOCIETY.

"Dr. Rudolph's Method of Lens-Testing, and Some of his Results," by J. H. Agar Baugh.

"Stereo-Micrography with New Colour-tone Effects," by F. Iles.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 8.30 p.m.

Cinderella Dance at the Portman Rooms.

SOCIETY OF ARTS (FOREIGN AND COLONIAL SECTION), at 8 p.m.

"Stamboul: Old and New," by R. Davy.

EDINBURGH DISTRICT CHEMISTS' TRADE ASSOCIATION, at 9 p.m.

Continuation of discussion on "Some Relations between Prescriber and Dispenser." Consideration of letter from Edinburgh Decimal Association.

WEDNESDAY, JANUARY 29.

SOCIETY OF ARTS, at 8 p.m.

"Standards of Light," by W. J. Dibdin.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION, at 9 p.m.

"Chemistry, Past and Present," by A. L. Taylor.

BRIGHTON JUNIOR ASSOCIATION OF PHARMACY, at 9 p.m.

"The Pharmaceutical Society." Debate introduced by T. F. Grindley and C. A. Blamey.

SHEFFIELD PHARMACEUTICAL AND CHEMICAL SOCIETY, at 8.30 p.m.

"The Swiss Alps," by W. L. Howie.

THURSDAY, JANUARY 30.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.

"Dante" (III.), by P. H. Wickstead.

IMPERIAL INSTITUTE, at 5.30 p.m.

"The Fish and Fisheries of Australia," by W. S. Kent.

PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION.

"Dispensing Notes, Pill Coating, etc.," by J. Cocks.

FRIDAY, JANUARY 31.

ROYAL INSTITUTION OF GREAT BRITAIN, at 9 p.m.

"National Biography," by S. Lee.

SATURDAY, FEBRUARY 1.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.

"Realism and Idealism in Musical Art," by Professor C. H. H. Parry.

SUPPLEMENT
TO THE
PHARMACEUTICAL JOURNAL.

SPECIAL ISSUE of the JOURNAL

THE
PHARMACEUTICAL JOURNAL

Of February 29, 1896,

will be sent to

EVERY CHEMIST & DRUGGIST whose name appears on the New Register (1896), whether residing in **THIS COUNTRY, THE COLONIES, OR ABROAD.**

The object is to increase the interest of the Trade in the Benevolent Fund.

The total guaranteed circulation at home and abroad will exceed

16,000 copies,

and Advertisers will find this by far the most favourable opportunity offered during the year to bring their announcements under the notice of Buyers, as

EVERY CHEMIST IN BUSINESS will receive a copy in addition to many others who are directly interested in the various branches of the Drug and Chemical Trades.

Advertisements should be sent without delay to

THE "PUBLISHERS," 5, SERLE STREET, LINCOLN'S INN, LONDON, W.C.

ASSOCIATION OF MANUFACTURERS AND DISTRIBUTORS OF PROPRIETARY ARTICLES.

A General Meeting of the Association of Manufacturers and Distributors of Proprietary Articles was held at Anderton's Hotel, Fleet Street, on Wednesday, January 29, 1896. The meeting was a large one—between fifty and sixty being present. Amongst those who attended were the following:—Messrs. G. R. Barclay (Barclay and Sons, Ltd.), F. J. Hanbury (Allen and Hanburys, Ltd.), J. Shorrock (Bovril, Ltd.), C. H. Barstow (Powell's Balsam of Aniseed), Brandreth (Homocea Co.), Neave and Co., A. Hayman and Co., F. W. Nelson (Nelson, Dale and Co.), C. H. McLean (Allcock's Corn Shields), M. E. Swan (Whelpton and Sons), J. Thompson (Maw, Son, and Thompson), S. Roberts (May, Roberts and Co.), H. S. Norris (Condal Water Co.), S. W. Rowland (A. Rowland and Sons), S. Sainsbury, W. Owen

(Chemists' Association), B. Hirst (Hirst, Brooke and Hirst), J. Sanger and Sons, B. Cadbury (Cadbury Bros.), Tebbutt (W. Sutton and Co.), Gilligan (Liebig's Co.), Coleman, Ltd., of Norwich, A. Bird, of Birmingham, J. W. Lee (Frame Food Co., Ltd.), W. Edwards, jun. (W. Edwards and Sons), J. Morris (Morris and Jones, Liverpool), C. Wilkes (W. T. Owbridge, Hull), Petty, Wood, and Co., J. Barrett (Mandrake), C. E. Garman, Albert Cooper, and W. Johnson.

Mr. Barclay was called upon to take the chair.

Letters apologising for absence were received from Messrs. Elliman, Sons, and Co., and Mr. Gade, of Exeter.

The Secretary (Mr. W. S. Glyn-Jones) read a report of what had transpired since the previous meeting, and said that the following firms had already joined the Association:—Messrs. Allen and Hanburys, Barclay and Sons, Thos. Beecham, Bovril, Brandreth (Homocea Co.), Burroughs, Wellcome, and Co., Butler and Crispe, Cadbury, Chemists' Association, Coleman, Ltd., Norwich, Condal Water Co., Corneille, David and Co. (Liebig Co.), W. Edwards and Sons (Frame Food Co.), Hirst, Brooke and Hirst, C. H. McLean (Allcock's), May, Roberts and Co., Maw, Son and Thompson, Morris and Jones, A. Rowland and Son, W. Sutton and Co., J. Sanger and Son, Whelpton and Sons.

The minutes of the past meeting were read and confirmed.

The meeting then proceeded to discuss the rules submitted to it by the Committee, which had been appointed to draw them up.

A letter was read from the Trade Committee of the Birmingham Pharmaceutical Association offering several suggestions in regard to the rules, several of which were ultimately accepted by the meeting.

The following are the rules as finally passed:—

Title.—"The Proprietary Articles Trades Association."

2. Objects.—That the following be the objects of the Association:—

- (a) The discussion of matters of common interest to the branches of the trades represented, with a view to decision, and, if necessary, concerted action.
- (b) To take such steps as the Association may be advised are legal to deal with extreme cutting of prices, and to give advice and render assistance to its members in preventing substitution.
- (c) To do all such other things as may appear to be of benefit to the Trade.

3. Constitution.—That the Association shall consist of Manufacturers of Proprietary Articles, and of Wholesale and Retail Vendors of the same, who give evidence of their being in sympathy with the objects of the Association.

4. Government.—That the affairs of the Association shall be under the entire management and control of a Council consisting of thirty members.

That the Council shall comprise ten owners of proprietary articles, ten wholesale, and ten retail vendors; each section of the Council to be elected by the members of the Association belonging to the three respective branches of the trade.

That members of the wholesale or retail trade be not eligible to sit on the Council as representatives of "owners."

That the election of the Council shall take place annually.

That the three sections of the Council constitute three Committees, to whom matters particularly affecting either branch of the trade be referred; but any decision arrived at by such Committee to be subject to the ratification of the Council.

That the meetings of the Council shall be held monthly, at such time and place as the Council may direct.

That all questions before the meetings of the Association, Council, or Committees shall be decided by vote, and that in the case of equality the Chairman shall have a second or casting vote.

That the Council be authorised to make rules and regulations for its own government and that of the Association, and to annul or alter the same from time to time as occasion may require, but any alteration of rules to be subject to the ratification of subscribers of £5 5s.

5. Officers. That the Council be empowered to elect the officers of the Association and to decide what shall constitute the various duties, privileges, and emoluments in connection with such offices. That the officers shall retire from office each year, but shall be eligible for re-election.

6. Subscription. That the following be the annual subscriptions to the Association:—Owners of Proprietary Articles, five guineas; Wholesale Vendors, five guineas; Retail Vendors, five shillings.

That the above subscriptions be due in January of each year, and if remaining unpaid after March 31, that the defaulting member's name be removed from the register of the Association.

The meeting decided that as it was very probable many firms would join during the coming few months, it was desirable that the Council to be elected at that meeting should act for three months only, and after some discussion it was decided that this preliminary Council should consist of all £5 5s. subscribers, and of ten representatives of the retail subscribers.

Mr. Brandreth laid before the meeting a scheme which it is the intention of the Homocea Company to introduce at an early date, in which they propose to insure the distributors of their articles a very fair profit. Some discussion took place on the details of this scheme, and several representatives of the wholesale trade pointed out that some of these details were unworkable, so far as they were concerned. The Secretary pointed out, however, that the scheme which Mr. Brandreth had described to the meeting, good as it was, had not been adopted by the Association. He said that the object of the Association was to devise some scheme or schemes by which the trouble entailed in carrying out several of the anti-cutting schemes already in force would be, if not altogether avoided, to a great extent minimised, and Mr. Brandreth told the meeting that they were prepared to consider any scheme the Association suggested, and, if possible, to adopt it. Mr. Brandreth's declarations of the intention of his firm to protect the distributors was very cordially received by the meeting. He pointed out

that they recognised that the distributors of their articles had a perfect right to expect a fair remuneration for such work, and that therefore it was their intention to ensure a good working profit to everyone who was prepared to deal fairly with their articles.

The date of the next meeting of the Council was fixed to take place at Anderson's Hotel on February 12 next at 3 p.m.

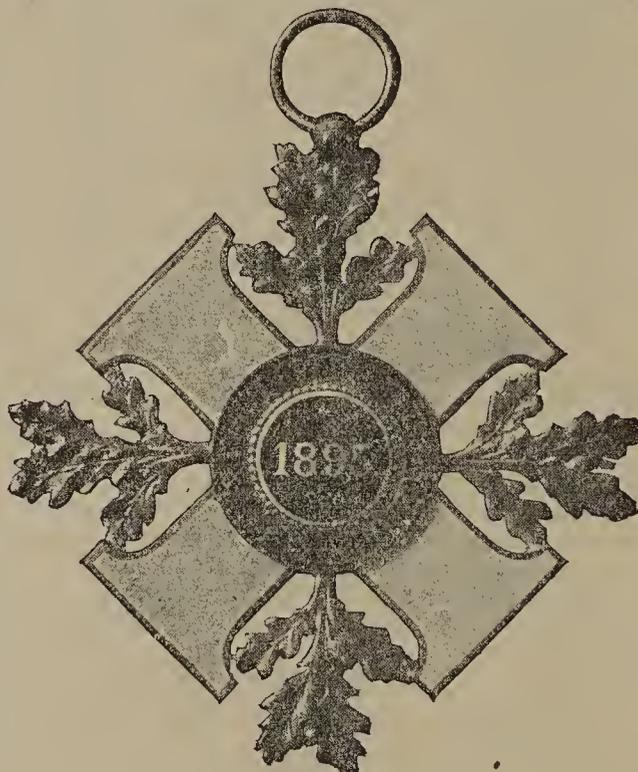

We have since learned from the Secretary that he omitted to state in his report that Mr. Elliman had subscribed £100 to the funds of the Association, and Mr. H. J. Hall, of Stephen Smith and Co., the proprietors of Hall's Coca Wine, £10.

TRADE NOTES AND NEWS.

ICKRINGILL'S PATENT HYGIENIC AND ELASTIC CLOTH is a distinct novelty, and should find a wide application for many purposes. Its construction is such as to allow free play to the natural tendency of the wool or hair employed to stand on end, thus permitting a large quantity of air to remain within its open spaces and keep a constant supply of warm air on the surface of the skin, besides allowing the free evaporation of perspiration. Vests, belts, bandages, etc., made from the cloth retain their elasticity and the stability of the structure of the fibre is not impaired after repeated washing with warm water and soap. Further, the yielding character of the material enables it to adapt itself to every movement of the body or limb enclosed. Efficiency, economy, and comfort are thus alike secured. Perhaps the abdominal and other supporting belts best display the advantages of the cloth, but the elastic stockings and kneecaps, chest and lung protectors, under vests, and bandages all appear to possess advantages over similar articles made from ordinary materials. They are also less expensive than the india-rubber and silk elastic appliances usually sold. The claim of the makers that their elastic cloth is hygienically the most perfect covering for the human body receives support from the fact that, in the limited time it has been on the market, they have received a very large number of repeat orders from medical men. The cloth belt bandages and other articles have been exhibited at the Montreal and Central Canada (Ottawa) Exhibitions, September, 1895, and although exhibited in classes where no awards were usually made, they gained special diplomas. As has been stated, the possibilities of the fabric are wide, but it may be added that it can be used for all kinds of compressive appliances, including ladies' belt and corset combinations, but particularly for lady cyclists' supporting corsets which are intended to be worn next to the skin, for which their soft and velvety texture well adapts them. The ICKRINGILL'S PATENT HYGIENIC AND ELASTIC CLOTH SYNDICATE, LIMITED, is at present desirous of securing a wider representation in their agency department, and chemists and druggists in the provinces and colonies where not already represented are invited to apply to the Secretary, Mr. E. J. Pryse, 35, Devonshire Street, Keighley, for agency terms, catalogues, descriptive pamphlets, etc., etc.

MESSRS. S. MAW, SON, AND THOMPSON intimate that the management of their surgical instrument department, formerly in the hands of the late Mr. John Banks, will be taken over by Mr. Henry Trentham Maw, second son of Mr. Charles Maw, senior partner in the firm, assisted by the present staff, most of whom have been for many years employed in the department. Mr. Henry Trentham Maw was educated at Cambridge and St. Bartholomew's Hospital. He took his degrees of M. A. and M.B. at Cambridge University, is a member of the Royal College of Surgeons, and has had considerable experience in London and other hospitals.

MESSRS. BURROUGHS, WELLCOME AND Co. have been granted three gold medals for the varied exhibit of their preparations at the Atlanta Exposition. The accompanying illustration is a fac-simile repro-

duction of the Grand Cross of Honour recently granted for the same firm's preparations by the committee of the Amsterdam Exhibition of 1895. This was accompanied by a very artistic diploma of quaint design, colouring, and lettering, signed for the Exhibition authorities by the Burgomaster of Amsterdam (the President of the Exhibition), the Chairman of the International Jury, and other officials.

THE THORNTON-PICKARD MANUFACTURING COMPANY has published an attractive book of photographs, showing the different departments of their works, and also a finely-printed new illustrated catalogue for 1896. In the latter all the firm's specialties are fully described, including the well-known Thornton-Pickard time and instantaneous shutter, which is now universally acknowledged to be the simplest and most reliable shutter for all-round work. The "Ruby" camera has been improved in several details, and is now made so that it can be used either as a hand camera or on a tripod. The camera is so constructed that the half-plate (as well as the larger sizes) can be used for stereoscopic work, in addition to ordinary pictures, if desired.

MESSRS. PARKE, DAVIS, AND Co. send a copy of their new price-list for 1896. It contains more than two hundred pages, and is published in a very handy form, giving full details of all the firm's preparations.

MESSRS. A. AND M. ZIMMERMANN refer to the suggestion in last week's *British Medical Journal* (*vide*, p. 237) that science has not yet found a better remedy for malaria than quinine sulphate. As refuting this assumption, they point out that in the *Rassegna Medica*, Dr. Gino Righi, of Padua, gives a tabular statement which shows that of 274 cases of malaria treated with "Phenocoll," only 70 (or 26 per cent.) resisted the effects of that drug.

MISCELLANEOUS NEWS.

THE NEW PHOTOGRAPHY: INTERESTING EXPERIMENTS AT CHARD.—Mr. J. W. Gifford, Fellow of the Royal Photographic Society of Chard, who, a short time since, had the distinction of exhibiting in London the results of some experiments he had made in connection with Professor Röntgen's discovery, has been prosecuting further results in the matter, with some curious and interesting results. A photograph of a foot which had been obtained showed an osseous protuberance of the metatarsus, causing a deformity of the great toe, and the defect had been supposed to be due to an enlarged great toe-joint. This photograph, together with other results of experiments made by Mr. Gifford, are on view at the rooms of the Royal Photographic Society. By means of a metal plate perforated by a hole and placed over the cardboard box containing the sensitive film, and between the Crookes' tube and the box, a distinctly recognisable image of the tube has been obtained. Mr. Gifford has also made experiments which show that the supposed polarisation effects obtained between the discs when using the Crookes' tube in Professor Röntgen's way have been produced by using a Harty radiator of recognised form instead of the Crookes' tube.

CLAIM FOR DAMAGES AT NORWICH ASSIZES.—The case of *Wells v. Annett* has been heard, being a claim for damages brought by Mr. A. J. Wells, late Young and Co., Ramsgate, against Mr. A. G. Annett, late Beedzler and Co., Norton Folgate, for misrepresentation in sale of a business in Yarmouth, was settled by solicitors before going into court; defendant agreeing to pay substantial damages and all expenses. Mr. Murphy, Q.C., was briefed as leader for plaintiff, and Mr. Kemp, Q.C., for defendant.

OFFENCES UNDER THE MEDICINE STAMP ACT.—At Dundee, on January 27, Thomas Morrison, medical herbalist, Hawkhill, was charged with three contraventions of the Medicine Stamp Act. The complaint set forth that on October 24 last, Morrison, in his premises at Hawkhill, vended to an officer of Inland Revenue a bottle containing "concentrated extract for indigestion," a box containing "aperient pills," and a packet of powders, all of which were preparations within the meaning of the Act, and liable to the stamp duty charged in respect of medicines without the necessary

labels denoting the duty charged upon the articles. He pleaded guilty, remarking that he was ignorant of the law relating to stamp duty. A fine of 18s., with the alternative of five days' imprisonment, was imposed. Morrison afterwards pleaded guilty to another contravention of the Stamp Act, in so far as he sold a bottle of "concentrated extract for indigestion" without having taken out a licence as required by the Stamp Act. He was ordered to pay a fine of 6s., or suffer five days in goal.—William Kershaw, Crumbles Street, Leeds, described as a chemist, though no such name appears on the Register of Chemists and Druggists with that address, was accused of having sold a box of Beecham's pills in premises in Lochee Road, Dundee, occupied by him, on October 24 last, without being possessed of the necessary licence. Accused failed to appear, but evidence was led, and the charge was found proved. A fine of £2, or ten days' imprisonment, was imposed.

INVERNESS CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION.—On Friday, January 24, this Association held its first "At Home," at the Palace Hotel, Inverness. Mr. Lewis Macleod presided at the concert preceding the dance, and acted in a similar capacity at the supper, which was served shortly after midnight. The concert programme was sustained by Mrs. Bethune and Miss Madge Martin, who contributed pianoforte selections with great taste and precision; and by Messrs. R. Macleod, D. Shaw, J. Michie, and Wm. Turnbull, who rendered songs with much acceptance. The attendance of ladies and gentlemen was large, and the meeting was a decided success. Mr. and Mrs. Black were commended for the manner in which they catered for the company. Mr. Tuff and his band supplied excellent music, the secretary for the arrangements being Mr. J. Michie.

EDINBURGH DISTRICT CHEMISTS' TRADE ASSOCIATION.—At the meeting of this Association, held on Tuesday, January 28, Mr. Peter Boa, President, took the chair, and the Secretary intimated the receipt of a cheque for £27 from Mr. D. Maclaren, being the balance handed to the Association by the Edinburgh Chemists' Ball Committee. The discussion, opened by Mr. Boa at the previous meeting and reported at the time (see *Ph. J.*, December 7, 1895, p. 486), was then resumed and continued at considerable length, Messrs. Lunan, Dewar, Macpherson, Bowman, Hill, Boa, and Hendry taking part. A letter from the Edinburgh Decimal Association was next read, the Association being requested to send a memorial to the Government in favour of the legalisation and subsequent compulsory enforcement of the metric system of weights and measures for all purposes in this country. Consideration of this latter was deferred until next meeting, Mr. McGlashan giving notice that he would then move a resolution in favour of the proposal.

CAMBRIDGE PHARMACEUTICAL ASSOCIATION.—The annual dinner of the above Association took place on Friday, January 10, at the Prince of Wales Hotel, Cambridge. The President, Alderman Deck, F.C.S., occupied the chair, and there were about thirty members and friends present. The

toast of the "Pharmaceutical Society" was proposed by Mr. A. Sidney Campkin, J.P., and responded to by Mr. Deck, local secretary for Cambridge. Other toasts were the "Town and University of Cambridge," the "Cambridge Pharmaceutical Association," and the "Chairman." Songs were rendered during the evening by Messrs. Dennis Greenwood, Plumb, and Church.

A LEEDS GIRL'S SUICIDE.—On January 27 the Leeds City Coroner (Mr. J. C. Malcolm) held an inquest at the Hyde Park Hotel, Leeds, on the body of May Greison, 14, the daughter of a gardener residing at Victoria Road, Leeds, who had committed suicide by poisoning. The mother of the girl said that on Sunday afternoon she saw her go into a bedroom at home, and afterwards heard her call for help. On going to her, she found her suffering from dreadful agonies, and in reply to questions she said she had taken poison. She said she had got it at a chemist's shop in King's Road. She sent for a doctor at once. The mother's evidence further showed that on Saturday last the girl had been sent for groceries to the Co-operative Stores, off Brudenell Road; that she had been charged with stealing some chocolates while in the shop, and that her father had been communicated with. The girl had denied that she intended to steal the chocolate. Witness identified a letter, in which the girl said:—"My dear mother,—I am tired of life, so I want to confess I am poisoning myself. I thought people might think you or dear father had done it, and so I write this asking you to forget and forgive me. I am sorry for the wrong I have done, and God has forgiven me."—Mr. Howard, chemist, King's Road, said that on Sunday afternoon the deceased came to his shop and said her father had sent her for some vermin-killer, as there was a rat in the shed.—Dr. Newstead said that when called in he found in the child all the symptoms of strychnine poisoning, and she died soon afterwards. He was directed by the Coroner to conduct a post-mortem examination of the body.—The jury returned a verdict of "Suicide whilst of unsound mind."

CHEMISTS' ASSISTANTS' ASSOCIATION (LONDON).—At the meeting of this Association on Thursday, January 23, a paper was read on "The Structure of the Human Eye, and the Action of Certain Drugs upon it," by Dr. Juler. Mr. Joseph Ince is announced to read a paper on "British and Foreign Syrups," at the meeting on Thursday next, February 6.

MESSRS. IDRIS AND CO.'S NEW YEAR'S ENTERTAINMENT TO THEIR EMPLOYÉS.—Messrs. Idris and Co., the well-known mineral water manufacturers of Camden Town, have for a number of years past allowed their workpeople to share in the profits of their business, and during the past week the employés' share of the profits for the past year have been handed to them. The circumstances under which the distribution was made were publicly referred to by the founder of the firm, Mr. T. H. W. Idris, L.C.C. for North St. Pancras, at an enthusiastic gathering of the employés, some 500 in number, who in response to the invitation of the directors, assembled at the works on Friday the 17th

ult. for the annual New Year's entertainment given by the firm to all their workpeople. In the earlier part of the evening the guests were regaled with a substantial and excellent tea, provided by the firm, and this was followed by an entertainment, also of excellent quality, arranged by Mr. Maldwyn Humphreys.

It was in the interval between the two parts of the entertainment that Mr. Idris, who was supported by his co-directors, Mr. Deputy Hughes, Mr. Adpar Jones, and Mr. Bishop, made the statement in reference to the division of the profits. Addressing his auditors as "fellow workers in the firm of Idris and Co.," he said that the report he had to make to them would be more satisfactory to the employés than any he had been able to make before, and it was more satisfactory to the proprietors. They all recognised that every one connected with the firm did, more or less, push forward the interests of Idris and Co., and the result of their united endeavours was that the firm had prospered very well in the past. Their last season, in particular, was an exceptionally good one, and the firm felt justified in taking the step they had. In the distribution of shares they had had some regard for what the employés had done with their profits in past years, for there had been some workers who, because the money was obtained easily, thought it should be spent just as easily. The firm was, therefore, prepared to take the money from their employés; of the security there could be no question, and they would give the employés 5 per cent. interest for their money as an inducement to the workers to continue to take an interest in the business. The firm had placed £500 to the profit-sharing fund, which would be distributed to the workers, and no boy or girl who had been in the employ of the firm for twelve consecutive months would receive less than £1, while many would receive more.

Mr. Idris and his partners desired that the best of everything should be provided for the entertainment of their workpeople, this desire extending to the musical "fare," and Mr. Humphreys secured the co-operation of Miss Rose Williams, Mr. Tom Phisick, Mr. D. Hughes, Mr. George Pritchard, Mr. R. B. Hopkins, and Mr. Will Edwards.

THE SALE OF BEESWAX.—At Ashford Police Court, last week, Harold Kay, manager of the Ashford Co-operative Society's stores in High St., was summoned for selling as beeswax a substance which was not of the nature and quality demanded. The analyst's certificate showed that it was adulterated with 50 per cent. of paraffin which was put in. The price given for the wax was 6d. for the quarter pound.—Dr. M. A. Adams, the public analyst, was called in support of the case, and he stated that he was a medical man, and had been analyst for many years. He had no hesitation whatever in describing beeswax as a drug according to the definition given in the Act of Parliament. That Act defined a drug as a medicine used for internal or external application. The British Pharmacopœia mentioned yellow wax as entering directly into the composition of no fewer than twelve articles, and indirectly into that of eight more. It was the fundamental substance in the preparation of no less than twenty separate things for medicine

mentioned in the British Pharmacopœia. It was used in making pills (particularly phosphorus pills) and plasters, and was undoubtedly a drug. The Bench decided that beeswax must be considered a drug, and imposed a fine of 10s. and £1 18s. 8d. costs.

THE ILLEGAL USE OF MEDICAL TITLES.—At Marlborough Street Police Court, on January 28, Albert Bell, 175, Wardour Street, Oxford Street, was summoned for using the title of M.D. and Doctor without being a duly-qualified medical practitioner. There was also a second summons against Bell under the same Act. Mr. Muir Mackenzie, barrister, prosecuted, and Mr. Bernard Abrahams, solicitor, defended. On the defendant's name being called, there was no answer. Mr. Hannay: Is the defendant here? Mr. Abrahams: No, Sir, he has been dead several years. The fact is, my client bought the business from Bell. Mr. Lyell (the Chief Clerk). Then the summonses must be amended. Mr. Abrahams: I am quite willing that they should be. The summonses were then amended, the name Bell being struck out, and that of Henry Walters inserted. Mr. Abrahams said to save the time of the court, he would mention that his client had removed the letters objected to that had been on a plate outside his door. The business of "Dr. Bell" had been carried on for many years, and consisted of the selling of patent belts invented by Dr. Bell. His client did not prescribe medicine to those who went to him, all he did being to recommend them to use of his belts, "which would cure anything and everything in a month." Evidence having been given in support of the prosecution, Mr. Hannay imposed a fine of £20, with £6 6s. cost, with an alternative in default of distress of two month's imprisonment.

DEATH FROM AN OVERDOSE OF CHLORODYNE.—An inquest was held at Eastbourne on January 24 concerning the death of Colonel William Western Taylor, fifty-one years of age, late of the 87th Regiment. The deceased was wintering at Eastbourne. He had not been well since an attack of influenza last February, and was suffering from sleeplessness. He was in the habit of taking large sleeping draughts. He recently consulted a specialist about his eyesight, which was failing, and though told that he might go blind, he was not troubled or depressed. The deceased was found dead in bed, a glass and bottle which had contained chlorodyne being in the room.—The medical evidence showed that death was due to an overdose of chlorodyne.—The jury were of opinion that the deceased administered a dose to induce sleep, and returned a verdict of "Misadventure."

DENTISTRY AT THE SHEFFIELD HOSPITAL.—At a meeting of the Governors of the Sheffield Royal Hospital on Tuesday a new code of rules was adopted, which provide for the establishment of a dental department in connection with the institution. It has been found that there is a widespread need for dental treatment among the poor of Sheffield, and hitherto it has been impossible to make efficient provision for it at

the hospital. Now, however, a new and convenient out-patient department makes the scheme feasible. A staff of honorary dental surgeons is to be appointed, one of whom will attend each morning to give his services to dental treatment, which lies beyond the scope of that which is now attended to by the house surgeon.

MESSRS. J. AND A. CHURCHILL, the well-known medical publishers, intimate that the lease being about to expire of the house—No. 11, New Burlington Street—so long associated with their business, they have taken advantage of the opportunity to secure more commodious premises at No. 7, Great Marlborough Street, London.

Trade Correspondence.

ANTI-CUTTING—AN APPEAL.

Sir,—There is to be a meeting of the Council of the Association of Manufacturers and Distributors of Proprietary Articles to arrange a *modus operandi*. It is almost certain that one of the rules which will then be made will throttle substitution in handling Association articles. With that proposal I have no fault to find, seeing that I was the framer of it (in circular issued five or six years ago); but there is a danger in connection with it at the present juncture which it is most desirable should be averted. In the agreement, in circular referred to, about 25 per cent. profit was the limit below which there was to be no anti-substitution clause; and it was on that understanding that the hundreds of retailers consulted agreed to endure the restriction.

What I fear is that those in the Association who assure only 15 or 20 per cent. will also want to share the benefit of the anti-substitution clause—a proposition which cannot be too strongly condemned. May I earnestly appeal to those of your readers who sympathise with the anti-cutting movement, but have not yet joined the Association, to lose not a day in doing so? The retail section of the Council is not yet elected, and those who join at once will have a voice in the election. I hope only those who will uphold the 25 per cent. minimum will be elected. Readers who take this advice might intimate their wishes as plainly as possible to the Secretary, Mr. Glyn-Jones, 2, Stonecutter Street, London, E.C., when forwarding their subscriptions. The Association is not strong enough yet in the retail element, and I sincerely hope that the subscription payable (5s. for retail members) will not be considered a bar to many more chemists lending a helping hand at this critical time. It is even worth the while of poor chemists, with few five-shilling pieces to spare, to make a little sacrifice for once.

At the meeting this afternoon gratifying evidence was forthcoming that anti-cutting will presently be introduced into the business of some more of the large makers. Who they are will appear in due time. What is wanted at present is more hearty assistance from the retail trade in keeping the ball rolling, and keeping it rolling straight.

Brixton, S.W. WILLIAM JOHNSTON.
January 29, 1896.

IRISH NEWS.

SIR JAMES HASLETT, a leading light of the North of Ireland druggists, has been elected Member of Parliament for North Belfast.

DR. RODOLPH BURNES, formerly a Pharmaceutical Councillor, has been suffering from an attack of blood poisoning, occasioning the temporary disablement of his right hand, but not otherwise interfering with his professional duties.

MESSRS. FANNIN AND COMPANY, LIMITED, have, it is reported, notified the Dublin medical men that they have opened a compounding department at 41, Grafton Street, Dublin.

PATENT SPECIFICATIONS PUBLISHED.

Inhaler (Horner, E., communicated from Reed, J. H., and Bury, T.).—Relates to a sheet metal casing fitted with an arrangement for holding a tablet of a medicated compound during burning, and so arranged that the fumes all pass through a tube or funnel where they may be inhaled. No. 14,683 of 1895.

Eyeglasses (Heilborn, F.).—For myopia or irregular astigmatism, the inventor employs thin plates having a series of small radial perforations, and used in conjunction with or in place of the glasses ordinarily used for these complaints. The cutting off of part of the light and the passage of that which reaches the eye through the specially arranged perforations, is said to be beneficial. No. 14,821 of 1895.

BUSINESS CHANGES.

Mr. Charles Scanlon, chemist and druggist, Manchester, has disposed of his business at 192, Hyde Road, Ardwick, and is opening a new pharmacy at 12, Croft's Bank Road, Urmston.

The business carried on by John Currie and Son, Pharmaceutical Chemists, 479, Sauchiehall Street, Glasgow, has been acquired by Mr. John Foster, Chemist, Sauchiehall Street, who will carry it on in all its details as before.

LATE ADVERTISEMENT.

Assistant Wanted.

LINCOLN COUNTY HOSPITAL.—Wanted for the County Hospital, Lincoln, a MALE DISPENSER, not over 35 years of age, who must have passed the examination of the Pharmaceutical Society or of the Apothecaries' Hall. The person appointed will have to give his whole time to the service of the Hospital. Salary £100 per annum. A house in the grounds of the Hospital can be rented, if desired, at £15 per annum, free of rates and taxes. Applications, stating age and previous experience, with copies of not more than three recent testimonials (which will not be returned), to be sent to Mr. W. B. DANBY, Secretary, Lincoln County Hospital, Bank St., Lincoln, on or before Monday, 10th February, 1896.

Board Room, Lincoln,
27th January, 1896.

MARKET REPORT.

[Specially compiled for the *Pharmaceutical Journal*.]

[The quotations here given are in all cases the lowest net cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.]

LONDON, JANUARY 30, 1896.

There have not been any changes of great importance in the product markets connected with the drug trade since our last report, and business generally drags somewhat. In the chemical market cream of tartar has again advanced in price, and closes very firm. Tartaric and citric acid are very firm, without having changed in price. Arsenic is very scarce on the spot, and firmly held at a considerable advance in price. Copper sulphate is also very firm. Amongst fine chemicals, carbolic acid is firm, whilst quinine is very quiet without any demand. The most important change, however, is in pilocarpine, the price for which has dropped by 4s. 6d. per gramme during the week, but its present position is not likely to continue very long. Opium alkaloids are very steady, cocaine neglected and caffeine firm. In the drug market proper we have to report an advance in damiana leaves, whilst Peruvian balsam, cascara sagrada, and gentian are very firm, with a tendency to higher prices. Cod-liver oil is very firm, and the small quantity of oil obtained from December fishing is held for higher prices. In the heavy oil market, cotton, coconut, and linseed oils have advanced in price, and close very firm, whilst turpentine and petroleum have declined. Shellac and spices are steady. Full details will be found below:—

ACID, CARBOLIC.—The market is very firm, the following being the current quotations:—*Crystals*: 34° to 35° C., 6½d.; 39° to 40° C., 7¼d.; 39° to 40° C. (*detached crystals*), 8¼d. per lb. *Crude*: Unchanged; 60 per cent. is quoted at 1s. 9d., and 75 per cent. at 2s. 2d. per gallon. *Liquefied* and *oresylic* are unchanged at 1s. 1d. and 11½d. per gallon respectively.

ACID, CHRYSOPHANIC.—Very firm, although we have not heard of much business in this article lately. One of the makers quotes 21s. per lb. for quantities of not less than 28 lbs., with smaller quantities at 24s. One of the *German* makers quotes as low as 19s. per lb.

ACID, CITRIC.—Shows no alteration in price, but the market is firm. *Manufacturers* of English acid quote 1s. 2½d., whilst in second hand it offers at 1s. 2d. per lb. *Concentrated juice* is quoted at £13 15s. to £14 per pipe *f.o.b.*

ACID, TARTARIC.—The market is very firm. *English* makers still quote 1s. 3d. per lb. on the spot, whilst for *foreign* brands of acid (not guaranteed B.P.) both in *crystals*

and *powder* 1s. 2½d. is asked on the spot, and 1s. 3d. for forward delivery.

ALON.—The current quotation for *American* brands is 2s. 10d. per lb.

AMMONIA COMPOUNDS.—*Sulphate*: The market is firm, grey 24 per cent. being still quoted at £8 10s. on the spot, *Hull* is firmer at £8 10s., whilst *Leith* is quoted at £8 8s. 9d., to £8 10s., and *Beckton* terms at £8 7s. 6d. to £8 8s. 9d. *Carbonate*: 3½d. to 3¾d. per lb. *Liquor*: 3¼d. to 3½d., less 5 per cent. *Sal ammoniac*: *Firsts*, 39s.; *seconds*, 37s.

ARSENIC.—Very scarce and practically unobtainable on the spot. Good white *powder* is nominally quoted at 19s. to 19s. 6d. on the spot, landed terms, whilst for *lump* 28s. is still the quotation.

ASHES.—Best *Montreal* potashes quote at 22s. 6d., and *pearlashes* at 37s. 6d. per ton, *f.o.b.*

CAFFEINE.—Steady. The *manufacturers'* quotations for 1-cwt. lots is 18s. per lb., net, prompt delivery, and a fair amount of business is being done, (especially for the *American* market) at this rate.

CALABAR BEANS.—The demand for this drug is only slight. The current quotation is 2½d. per lb.

CAMPHOR (CRUDE).—*Formosan* camphor has fluctuated since our last report. Closing at 160s. to 162s. 6d. *c.i.f.* for January to March shipment, the quotations declined to 152s. 6d., at which price the *Syndicate* stepped in and bought 900 cases for February to April shipment. A small parcel of *Formosan* camphor has also been offering at 152s. for January to March shipment. At the close the market is firmer, and there are no sellers under 155s. *c.i.f.* for January to March shipment. A moderate business has been done in *Japan* at 182s. 6d. per cwt. *c.i.f.* Continent.

CASCARA SAGRADA.—The lowest spot price for good quality bark is 22s. 6d. per cwt. on the spot, and at this figure only a small quantity of bark is available. In fact, the general asking price is 25s. per cwt., and advices from *America* state that there is no bark coming forward from *Oregon*. For shipment from *New York*, new bark is now quoted at 21s. 6d., *c.i.f.*, and two years old at 22s. 6d., *c.i.f.*

COAL DISTILLATION PRODUCTS.—*Benzole* is quiet but firm, 50 per cent. being quoted at 1s. 11d. to 1s. 11½d., and 90 per cent. at 2s. 3d. to 2s. 3½d. per gallon. *Toluol* quotes at 2s. 3d. per gallon for *pure*. *Creosote* 1½d. per gallon. *Crude Naphtha*: 30 per cent. at 120° C. quotes at 10d. per gallon. *Solvent Naphtha*: 95 per cent. at 160° C., is quoted at 1s. 6d.; 90 per cent. at 160° C. at 1s. 3½d., and 90 per cent. at 190° C., at 1s. 2d. per gallon. *Anthracene*: 13A., 11½d.; B., 10d. per unit. *Pitch*, 37s. 6d. per ton, *f.o.b. Tar. Refined* and *crude* quote at 12s. 6d., and 12s. per barrel respectively.

COLOCYNTH.—Very firm. Business has been done privately at 1s. per lb. for good *Spanish* colocynth. *Turkish* is very firmly held, and nothing less than 2s. 10d. would be accepted for good apple.

CORIANDER SEED.—In auction on Wednesday 4s. 6d. per cwt. was paid for medium *Bombay*, offered without reserve, and 3s. to 3s. 6d. for low coarse broken and foul.

CREAM OF TARTAR.—Continues to advance in price, and best white *French* crystals are now quoted at 106s. to 107s. on the spot,

whilst for *German* brands of *powder* 108s. to 110s. per cwt. is asked. For shipment from *Bordeaux* nothing under 101s., *f.o.b.*, would be accepted.

DAMIANA LEAVES.—A fair demand has been shown lately for this article which is in only moderate supply, and advanced prices are asked, 8½d. being the current quotation for good quality *Californian* leaves.

GALLS.—The market is quiet, but steady. For arrival *China* are quoted at 57s. 6d., and *Japan* at 52s. 6d. per cwt. *c.i.f.* terms. Business in *Bussorah* galls has been confined to small sales of *blues* at fully steady rates. No *greens* or *whites* are offering. Quotations are as follows:—*Blues*, 53s. to 55s.; *greens*, 42s. 6d. to 43s. 6d., and *whites*, 43s. to 45s. per cwt.

GENTIAN ROOT.—Steady. The spot quotations for good *French* root range from 22s. to 22s. 6d. per cwt., whilst for shipment, 18s. 6d., *f.o.b.*, is asked.

GINGER.—In auction *Cochin* met with only a poor demand, but the market is steady. Of the new crop, medium and small bright washed sold at 34s. to 34s. 6d., brown rough, 34s., whilst old low cuttings sold at 23s., mixed ends, 26s. 6d., and ordinary medium to small lean at 31s. In addition, small to bold mature half-cut realised 52s., ordinary dull C cut, 45s. to 45s. 6d., and B cut, 58s. per cwt. *Jamaica* sold at a decline, 59s. to 60s. being paid for common lean and dark *Rhatoon*.

GLYCERIN.—Fairly steady. *Schering's* brand of 1·260 double distilled quality quotes at 75s. per cwt., whilst second-hand holders of *English* and *German* glycerin offer at 70s. per cwt.

GUARANA.—Is firm, and 2s. 3d. is probably the lowest price which would be accepted for good quality. The case which was sold at the drug auctions last week was of an inferior description.

JALAP.—Steady. Sales of fair *Vera Cruz* have been made privately at 9d. per lb.

LIQUORICE ROOT.—There is now a fair supply of *Bussorah* root on the spot, but, in the absence of any inquiry, quotations remain unchanged at 7s. to 7s. 6d. per cwt. for ordinary rough.

MENTHOL.—Very slow of sale, and as low as 13s. would probably be now accepted for good *crystals* on the spot in order to effect a sale.

OIL (COD-LIVER).—The fishing in the *Lafoten* district has now about commenced, but there is not likely to be any 1896 oil on the London market until towards the end of next month. Prices are firmly maintained, and there are no offers for delivery under 180s., and one of the chief importers refuses to quote even at 200s. Prime non-coagulating 1895 oil is quoted at 175s. on the spot, whilst for *Newfoundland* oil of good quality 5s. 3d. to 5s. 6d. is asked.

OILS (ESSENTIAL).—Reports from *China* advise a very firm market in *Star Anise* and *Cassia* oils, and in the case of the latter the scarcity of good oil continues, any parcels of highly aldehydic strength being at once snapped up. Lower grades do not meet with much demand. On the spot *Star anise* oil is firm, and 1s. 3d. is still asked. *Cassia* oil is firmly held for good qualities, whilst *Peppermint* oils are unchanged. *Italian* essences are practically

unchanged, with the exception of *Bergamot*, which is tending to lower rates.

OILS (FIXED) AND SPIRITS.—*Cotton* continues to be a very strong market, and has advanced 10s. since our last report, closing at £17 10s. to £18 on the spot for *refined* oil, according to brand and package. *Coco-nut* is also a very active market, especially for *Cochin*, which is now quoted at £27 on the spot, whilst *Ceylon* is steady at £22 15s. *Linseed*: Again dearer by 2s. 6d., and oil in barrels is now quoted at £20 5s. to £20 7s. 6d. on the spot. *Rape*: Very firm. *Refined* oil is still offering at £25 5s. to £25 10s. on the spot. *Olive*: Rather easier, *Tunis* being quoted at £31 to £32; and *Spanish* at the same rates. *Palm*: *Lagos* still offers at £22 on the spot. *Turpentine*: Again rather easier, *American* spirit being on offer at 20s. 7½d. to 20s. 9d. *Petroleum* oil is, if anything, rather firmer at the close, although the quotations show a marked decline on those of last week, *American* being offered at 5½d. to 6d., *Water white* at 7¼d. to 7½d., and *Russian* at 5¾d. to 5½d. *Petroleum Spirit* is unchanged, *American* being quoted at 9d. to 9¼d., and *deodorised* at 9¼d. to 9¾d. per gallon.

OPIUM ALKALOIDS.—The market is very firm, but no change has occurred in the quotations. *Morphine* is quoted at 4s. 3d. per oz. for 1000 oz. lots of *powder*, whilst for *crystals* 2d. per oz. more is asked. *Codeine* quotes at 10s. 6d. per oz. for 100 ozs. lots.

OPIUM.—The London market continues firm for *Turkish* opium, with a fair business passing in *druggists'* varieties. The current quotations are:—*Soft shipping*, 11s. 6d. to 12s. 6d.; *Smyrna*, 8s. to 8s. 6d.; *Constantinople*, 8s. to 9s., with *druggists' seconds* at 7s. 6d. to 8s. *Persian* opium is firmer, and business has been done during the week in *fine bricks* at 13s., the stocks being now practically exhausted until the new crop comes to hand.

ORRIS ROOT—Is tending rather easier, and *fine Florentine* root is now offering at 75s., and good *Veronese* at 65s. per cwt.

PERU (BALSAM)—Firmer. Business has been done since our last report at 9s. per lb. on the spot for genuine balsam of direct import, and as much as 9s. 6d. is now asked. The quotations for shipment have also advanced to 9s. 3d. per lb., *c.i.f.* terms.

PHENACETINE.—One of the principal holders quotes *Bayer's* make at 13s. per lb., and another brand at 5s. 6d.

PILOCARPINE.—One of the *German* makers of this alkaloid has lowered his quotation earlier in the week for the salts from 9s. 6d. to 5s. per gramme. The other one has since followed suit, but it is not at all likely that this price will be maintained, as there is only a small supply offering.

PODOPHYLLIN—The current quotation for *American* brands of *resin* is 7s. 6d. per lb. *Root* is very scarce on the spot and firmly held. Nominally the price is 2¾d. to 3d. per lb.

POTASH COMPOUNDS.—*Chlorate*: Offers at 4¾d. per lb. in London, both for spot and forward delivery. *Permanganate*: Firm at 60s. to 62s. 6d. for *small*, and 65s. to 67s. 6d. for *large crystals* on the spot. *Cyanide*: 98 per cent. quotes at 1s. 4d. to 1s. 6d. per lb. *Prussiate*: 7½d. to 8d. per lb. on the spot, according to brand. *Bichromate*: 4¾d. per lb. *Saltpetre*: 21s. 9d. to 22s. 9d. for *British* refined; 17s. 6d. for

Bengal, 3½ to 5 per cent. *Sulphate*: £9 7s. 6d. to £10 per ton.

QUININE SULPHATE.—The market is very dull, and little or no business is doing. *B. & S.* and *Brunswick* brands offer at 1s. 1¼d. nominally, whilst *Whiffen's* make quotes at 1s. 2d. per oz. in bulk, and 1s. 4d. per oz. in bottles.

SAFFRON.—The market is quiet, but steady. *Valencia* is quoted at 26s. 6d. to 29s. 6d. for finest, and 24s. 6d. to 25s. 6d. for good quality, according to holder, with *Bayo* at 23s. 6d. *Alicante* offers at 18s. per lb.

SENEGA ROOT.—Good quality root offers at 1s. 3d. per lb., and for shipment from New York at 1s. 2d. per lb., *c.i.f.* terms.

SHELLAC.—This market is quiet, but steady, and business has been done privately in *TN Orange* on a basis of 94s. to 95s. For shipment the market is firmer, and *TN* is quoted 87s. per cwt., *c.i.f.*, January to March, whilst business has been done at 82s., *c.i.f.*, for March to May, and 81s. to 82s., *c.i.f.*, for January to March shipment in *AC Garnet*. At the weekly sales a moderate supply only was offered, the bulk of which was *Second Orange*, but the quality was considerably better than has been shown for some time. In spite of this the demand was poor, and only about one-fourth found buyers at steady rates. The prices paid were as follows:—*Fine Orange*, good to fine pale in octagon, 115s. to 117s. 6d.; *Second Orange*: Pale lemony free, 105s., good pale ditto, 101s., whilst strong curly *AA* in circle was bought in at 110s. *Blocky TN* sold at 86s., and reddish cakey at 83s. to 84s. *Button*: Fine pale free sold at 110s. to 112s., ditto more resinous, 105s.; fair firsts, 98s. to 100s.; and seconds, 85s. to 87s.

SODA COMPOUNDS.—*Nitrate* quotes at £7 12s. 6d. to £7 15s., and *refined* at £8 3s. 9d. to £8 5s. on the spot. *Caustic* is quoted at £8 per ton on the spot for 70 per cent. with 60 per cent. at £1 less. *Soda crystals*: Unchanged at 42s. 6d. per ton *ex wharf* or ship. *Bicarbonate*: £7 5s. per ton landed terms, London. *Bichromate*: 3¾d. per lb. on the spot. *Hyposulphite*: 8s. 0d. to 8s. 3d. per cwt. in kegs on the spot.

SOY—Remains quiet but steady at 1s. per gallon for fair *China*.

SPERMACEIN—Still tending lower, and good refined *American* now offers at 1s. 7d. per lb. on the spot.

SPICES (VARIOUS).—*Cloves* are steady. In auction medium dark *Zanzibar* sold at 1¾d.; fair, 1½d.; and fine bright at 2¾d. per lb. Ordinary *Amboyna* was bought in, and fair picked *Penang* at 8d. *Cassia lignea*: In auction 105 boxes of unworked quality sold at 31s., whilst broken was bought in at 18s. to 19s. *Capsicums*: *East Indian* were bought in at 20s. for ordinary brown small round, 25s. for large red off-stalk, whilst very fine long red *Japan* sold at 46s. 6d., and ordinary brown off-stalk at 13s. 6d. per cwt. *Pimento* remains quiet, 2½d. being paid in auction for fair quality. *Arrowroot*: At the sales good quality *St. Vincent* sold at 2¾d., whilst 2½d. to 2¼d. was paid for fair ditto, offered without reserve. *Bermuda* was bought in at 1s. 3d. per lb. *White Pepper* is rather easier. In auction fair dull *Penang* sold at 2½d., and good sea-damaged at the same figure. Fine bold *Singapore* sold at 4¾d. to 5d. per lb.

St. IGNATIUS BEANS.—The current quotation is 8d. to 9d. per lb.

SUGAR OF MILK.—Very firm. Holders of best brands of *powder* ask 85s. per cwt., whilst *crystals* are quoted at 87s. 6d.

TRAGACANTH (GUM)—Some sales have been made of the new arrivals of gum, and prices remain firm. Firsts quote at £15; seconds at £13 to £14 10s.; thirds at £11 10s. to £13; fourths at £9 to £11, with yellow and pinky at £7 10s. to £8 10s., and other qualities at £7, down to £2.

TURMERIC.—The market is very quiet, and no business has been done. Fair *Bengal* offers on the spot at 7s. per cwt.

WAX.—*Japan* continues very firm, with a small business doing at 34s. to 35s. per cwt. on the spot for pale *squares*. For arrival the quotation is still 37s. 6d. per cwt., *c.i.f.* terms. *Paraffin. Crude*, is quoted at 1¼d. to 2¼d., and *refined* at 2¼d. to 3¼d. per lb.

NEW BOOKS AND NEW EDITIONS.

[Publishers are requested to send particulars of new publications, addressed "Editor, 17, Bloomsbury Square, W.C."]

A HANDBOOK OF INDUSTRIAL ORGANIC CHEMISTRY, adapted for the Use of Manufacturers, Chemists, and all Interested in the Utilisation of Organic Materials in the Industrial Arts. By S. P. SADTLER. 2nd revised and enlarged edit. Roy. 8vo., pp. 538. Price 25s. (J. B. Lippincott Company, London and Philadelphia.)

PHOTOGRAPHY IN A NUTSHELL. By "The Kernel." Enlarged. 14th Thousand. Cr. 8vo., pp. 144, sewed. Price 1s. (Iliffe and Son, London.)

FIELD FLOWERS: A Handy Book for the Rambling Botanist, suggesting what to look for and where to go in the Outdoor Study of British Plants. By S. HIBBERD. New edit. 80 Coloured Plates and Engravings. Cr. 8vo., pp. 156. Price 3s. 6d. (Collingridge.)

SEA-SICKNESS (Cause, Treatment, and Prevention), Voyaging for Health, Health Resorts: A Concise Practical Treatise. By S. DUTTON. 4th edit., cr. 8vo., pp. 141, sewed. Price 1s. (Hirschfeld Bros., London.)

MANUAL OF PHOTOGRAPHY. By W. K. BURTON. 12mo., pp. 184, sewn. Price 1s. net (Lund.)

Advertisements in the Pharmaceutical Journal.

ALL ADVERTISEMENTS must be sent to the Office, 5, Serle Street, Lincoln's Inn, W.C., where replies to prepaid advertisements may be addressed, and will be redirected free of charge. Postal Orders should be made payable at Lincoln's Inn, W.C., to STREET BROS. Cheques should be crossed "London Joint Stock Bank."

PREPAID ADVERTISEMENTS.—Advertisements of Assistants Wanted, Apprenticeships, For Sale, Partnerships, Businesses for Disposal, Businesses Wanted, and Premises to Let are charged as follows:—Fifty words or less, 3s. 6d. Each additional ten words or less, 6d.

ADVERTISEMENTS of a general character are inserted at 4s. 6d. each for seven lines (50 words) or less, and each additional line of seven words, 6d.

FREE ADVERTISEMENTS.—Advertisements of Assistants seeking Engagements will be inserted Free of Charge, subject to conditions mentioned in each number of the Journal.

LIVERPOOL MARKET REPORT.

[From our own Correspondent.]

JANUARY 29, 1896.

LINSEED: Small amount offering, and price asked being for *Turkish*, 36s. 6d. per 416 lbs., ex store. CANARY SEED: Flat; price still stands at 33s. to 34s. per 464 lbs. for *Turkish*. KOLA NUTS: 80 packages have been sold, fresh at 6d. to 6½d. per lb., dried at 7d. QUILLARIA BARK: 25 tons of *Chilian* have been sold ex store at £12 2s. 6d. per ton. COCHINEAL: *Teneriffe* "grey," 5 bags changed hands at 1s. 2d. per lb. Price of "black" is now put at 1s. 2½d. to 1s. 3d. per lb. OLIVE OIL: Fair business doing at recent rates. CASTOR OIL is firmer. *Calcutta* good seconds rather short, 2½d. per lb. being asked; *French* 1st pressure and *Madras*, 2¾d. per lb. LINSEED OIL: *Liverpool* pressed remains at 20s. 9d. to 21s. per cwt. in export casks. COTTONSEED OIL is firmly held for 17s. 9d. to 18s. per cwt. in export barrels. SPIRIT OF TURPENTINE is steady at 21s. 6d. per cwt. PETROLEUM: *Russian*, 6½d. per gallon; *American*, 7d. to 8¼d. per gallon. SAL AMMONIAC: 39s. per cwt., first quality; 37s., second quality. ARSENIC: £16 10s. per ton, powder; £26 10s. per ton, lump. BLEACHING POWDER: £7 to £7 5s. per ton. COPPERAS: *Lancashire*, 38s. per ton; *Welsh*, 36s. 6d. SULPHATE OF COPPER: £15 12s. 6d. per ton. CHLORATE OF POTASH: 4¼d. per lb. PRUSSIAN OF POTASH: 8d. per lb. BICROMATE OF POTASH: 4¾d. per lb. CREAM OF TARTAR: Best white is scarce, only a small amount is offering at 105s. per cwt. BICARBONATE OF SODA: £7 per ton. CARBONATE OF SODA: £2 10s. per ton. CAUSTIC SODA: 70 per cent., £7 12s. 6d. to £7 15s. per ton; 60 per cent., £6 12s. 6d. to £6 15s. BORAX: Lump, 19s. 6d. per cwt.; powder, 20s. 6d. NITRATE OF SODA has advanced, now quoted at 7s. 9d. to 8s. per cwt.

NEWCASTLE CHEMICAL REPORT.

[From our own Correspondent.]

JANUARY 28, 1896.

This market is a shade steadier, spring inquiries for over-sea shipment being more in evidence. The home trade continues to draw fairly well on bleaching powder stocks, and soda crystals are not kept idle similarly. Sulphur and saltcake are still on the scarce side. Sulphate of ammonia continues weak, London makers forcing markets. Carbolic acids firm; pitch, easy. South Durham salt, steady. Prices are:—BLEACHING POWDER: £6 5s. to £7 5s., according to markets and packages. SODA CRYSTALS: 37s. 6d. to 45s., according to packages. SULPHUR: £3 17s. 6d. to £4. SALTCAKE: 27s. 6d. SODA ASH: 48 to 50 per cent., £3 15s. to £4 15s. WHITE ALKALI: 48 to 52 per cent., £4 10s. to £5. CAUSTIC SODA: 76 to 77 per cent., £9 5s.; 70 per cent., £7 15s. HYPOSULPHITE OF SODA: 5 to 7 cwt. casks. £6 5s. ALUM IN LUMP: £5 15s. CHLORATE OF POTASH: 5d. per lb. CRUDE CARBOLIC ACID: 60 per cent., 1s. 9½d. CRYSTALS: 40 per cent., 6½d. SULPHATE OF AMMONIA: £8 10s. to £8 11s. 3d., Leith. PITCH: 36s. SOUTH DURHAM SALT: 9s. to 9s. 6d. per ton, *f.o.b.*, Tees,

EXCHANGE.

[For the convenience of readers, suitable notices, not exceeding thirty words in length, are inserted free in this column, if they do not partake of the nature of ordinary advertisements. They must relate to books, apparatus, shop fittings, etc., and arrive not later than Wednesday, addressed "Editorial Department, 17, Bloomsbury Square, W.C."]

OFFERED.

Southall's *Materia Medica* Cabinet, containing official specimens in boxes; also collection unofficial specimens, the whole comprising the specimens required to be recognised for the Minor. What offers?—Walker, Chemist, Willenhall.

Complete set Dickens' works, handsomely bound vols., cost 80s. Exchange ½-plate photo. set of good make. Sets 'Review of Reviews,' 'Strand Magazine,' bound. What offers?—Pike, Dentist, Leicester.

Squire's 'Methods and Formulæ' (microscopical) perfectly clean and new. Will exchange for recent edition either Cross and Coles' 'Microscopy,' Bowers' or Oliver's 'Botany.'—Smalley, Irvin Street, Preston.

Wills' 'Pharmacy' (soiled), with copious notes, sixth edition, 2s. 6d.; Bentley's 'Botany,' good as new, 3s. 6d.; Smith's 'Appendix to Principia Latina,' new, 1s. 6d.—Daybell, 5, Pimlico Road, S.W.

Maw's Circular Mahogany Soda-Water Stand, marble top, 22 in. diam.; also Leech Aquarium, 15 in. diam. What offers?—Dyer, Pharmacist, Honiton.

Half-plate Camera (Lancaster's "Instanto"), two double slides, tripod achromatic lens, with iris diaphragm, T. T. and H. view finder, and canvas case; good condition; £3 10s.—J. H. H., Marine House, Clevedon.

Professor Tyndall on 'Faraday,' 3s.; Golding Bird's 'Experimental Physical Science' (Churchill's), 12s. 6d.; 'Manual,' 4s.; Graily Hewitt's 'Diseases of Women' (16s.), 5s. All free.—Davis, "Chestnuts," Gordon Hill, Enfield.

Two Pear-shaped Carboys, 12 gallons, with stands, largest size, and one glass sign in frame, 48 in. by 21 in., with "Dispensing Chemist." What offers?—R. S. Brearley, 66, Trafalgar Road, E. Greenwich.

Fine copies, free. Thomson's 'Wanderings Among Wild Flowers,' 5s.; 'Poisonous and Noxious Plants of Britain,' coloured, 5s.; Barton and Castle's 'British Medical Plants,' half price, 15s.—Davies, 33, Eglinton Road, Bow.

Specie Jar, 36 in. high and 49 in. circumference, decorated inside, labelled "sodæ bicarb.;" good as new; what offers?—"Last," 5, High Street, Barnes, S.W.

Balances for sale. One each, Nos. 5 and 9, Oertling's, good condition, cost 18 guineas each. Price 10 guineas each.—Dryden, Chemist, Landore, R.S.O.

Bargain. Roller printing press, mounted on handsome oak cabinet, glazed panels and drawers; about 1½ cwt. beautifully cut type, all accessories, price £5 5s., cost £20. Particulars from Phillips, Chemist, Horwich, Lanes.

Bell and Redwood's 'Progress of Pharmacy,' 4s.; Drautt's 'Surgeons' Vade-Mecum,' 9th edition, 5s. 6d.—Chemist, 141, Upton Lane, Forest Gate, E.

Wills' 'Analysis,' 1s. 6d.; 'Vegetable Materia Medica,' 3s. 6d.; 'Flowers and Fruits,' 2s. 6d.; Edmond's 'Botany,' 1s. 6d.; Holmes' 'Botanical Note-book,' 2s. Exchange 'Veterinary Counter Practice'; Dental Forceps.—Burge, Chemist, Fernhead Road, W.

WANTED.

Good microscope, in exchange for Darton's medical battery in mahogany case, new, cost £3.—J. E. Whitaker, care of Mr. J. S. Ormandy, Chemist, Barrow-in-Furness.

Newman's 'British Butterflies and Moths,' or similar work, fully illustrated.—Mander, Chemist, Malvern.

Kelly's 'Directory of Chemists and Druggists,' state date of publication; Bent Front Tooth Brush Case; Clarke's Syphon Gas Stove; Ton Foot Dispensing Screen and Glass-Fronted Counter for underneath same.—Griffin, Chemist, Kidderminster.

Newth's 'Chemistry' and Edmund's 'Botany.' Lowest prices to—"Last," 5, High Street, Barnes, S.W.

Two Mahogany Pillars, about 30 in. high, for supporting large carboys. Price to—Harries, 12, Hamilton Terrace, Milford Haven.

** The attention of readers is directed to the conditions printed at the head of this column. Notices cannot be inserted unless they are in accordance with those conditions.

DIARY OF THE WEEK.

Secretaries of Societies are requested to send notices of forthcoming meetings not later than Wednesday in the previous week.

SATURDAY, FEBRUARY 1.

PHARMACEUTICAL FOOTBALL CLUB v. Melrose Rovers, at Wormholt Farm.

MONDAY, FEBRUARY 3.

ROYAL INSTITUTION OF GREAT BRITAIN, at 5 p.m. General Monthly Meeting.

SOCIETY OF ARTS (CANTOR LECTURES), at 8 p.m. "The Testing of Current Transformers," by Dr. J. A. Fleming.

SOCIETY OF CHEMICAL INDUSTRY, at 8 p.m. "Manufacture of Linoleum," by W. F. Reid.

TUESDAY, FEBRUARY 4.

PHARMACEUTICAL SOCIETY OF GREAT BRITAIN. Benevolent Fund Committee. Finance Committee.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m. "The External Covering of Plants and Animals: Its Structures and Functions" (IV.), by Professor C. Stewart.

SOCIETY OF ARTS (APPLIED ARTS SECTION), at 8 p.m. "The Garden in Relation to the House," by F. T. Thomas.

WEDNESDAY, FEBRUARY 5.

PHARMACEUTICAL SOCIETY OF GREAT BRITAIN. Council Meeting.

SOCIETY OF ARTS, at 8 p.m. "The Mexican Drainage Canal," by F. H. Cheesewright.

Musical and Social Evening, at 9 p.m., at the Exchange Rooms, Birmingham.

BRIGHTON JUNIOR ASSOCIATION OF PHARMACY, at 9 p.m. Social Evening.

EDINBURGH CHEMISTS' BALL. At the Freemasons' Hall, George Street, Edinburgh.

THURSDAY, FEBRUARY 6.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m. "Dante" (IV.), by P. H. Wicksteed.

IMPERIAL INSTITUTE, at 4.30 p.m. "Forestry and Agricultural Depression," by Professor C. E. Curtis.

LINNEAN SOCIETY OF LONDON, at 8 p.m. "Polystelic Roots of Certain Palms," by B. J. Cormack.

"A Remarkable Use of Ants in Asia Minor," by R. M. Middleton.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 8.30 p.m. "British and Foreign Syrups," by Joseph Ince.

CHEMICAL SOCIETY, BURLINGTON HOUSE, at 8 p.m. "The Molecular Weight and Formula of Phosphoric Anhydride and of Meta-Phosphoric Acid," by Prof. Tilden and R. E. Barnett.

"Lead Tetracetate and the Plumbic Salts," by A. Hutchinson and W. Pollard.

"An Improved Mode of Determining Urea by the Hypobromite Process," by A. H. Allen.

"An Examination of the Products Obtained by the Dry Distillation of Bran with Lime," by W. F. Laycock.

GLASGOW AND WEST OF SCOTLAND PHARMACEUTICAL ASSOCIATION, at 9.15 p.m. Social Evening.

LIVERPOOL PHARMACEUTICAL STUDENTS' SOCIETY, at 8.30 p.m.

"Some Aquatic Plants," by W. A. Cockshott.

"Quacks and Quackery," by H. B. Morgan.

FRIDAY, FEBRUARY 7.

ROYAL INSTITUTION OF GREAT BRITAIN, at 9 p.m. "Portrait Painting in its Historical Aspects," by J. Collier.

GEOLOGICAL SOCIETY OF LONDON, at 7.30 p.m. "Some Structural Characteristics of the Granite of the N.W. Himalayas" (illustrated), by C. A. McMahon.

ABERDEEN JUNIOR CHEMISTS' ASSOCIATION, at 9.30 p.m. Social Evening.

EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION, at 9.15 p.m.

"Flame Tests," by George Coull.

SATURDAY, FEBRUARY 8.

PHARMACEUTICAL FOOTBALL CLUB v. VAMPIRES, at Wormholt Farm.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.

"Realism and Idealism in Musical Art" (II.), by C. H. H. Parry.

Now Ready. Price 5s., or by Parcel Post, 5s. 4½d.

THE REGISTER

OF PHARMACEUTICAL CHEMISTS AND CHEMISTS AND DRUGGISTS

For 1896.

Published pursuant to the "Pharmacy Act, 1868."

SINCE the last issue the Register has undergone a complete revision, the Registrar having availed himself of the provisions set forth in the 10th Section of the Pharmacy Act, 1868, to remove from the Register the names of all persons whom two registered letters, sent at an interval of six months, had failed to reach. A number of names have thus been removed, and a large number of corrections have been made in the addresses of other persons.

Copies may be obtained from the REGISTRAR, 17, Bloomsbury Square, London, W.C.

IMPORTANT ANNOUNCEMENT.

THE

City School of Pharmacy & Chemistry

27, CHANCERY LANE, E.C.

Change of Proprietorship. Courses Re-modelled.

This well-known School of Chemistry (so centrally situated and easily accessible from all parts) has now been acquired by Mr. GEO. E. SKERRY, M.A., F.R.G.S., etc., Principal of the London Civil Service and University College, Limited.

The Teaching Staff is as follows:—

CHEMISTRY, MATERIA MEDICA, AND PHARMACY:

MR. F. A. HOCKING, B.Sc., Lond., M.P.S.

PRACTICAL CHEMISTRY AND BOTANY:

MR. T. HUMPHREYS, B.A., Lond., Inter. B.Sc., Assistant Analyst.

MICROSCOPY AND HISTOLOGY:

MR. MARTIN COLE.

PRELIMINARY EXAMS.:

MR. STEWART, M.A.

Lectures now in progress for April and June Exams. Laboratories well equipped. Individual tuition to backward men. Special arrangements for Major. Moderate Fees. Prospectuses and full details free. Write or call.

Mr. SKERRY, M.A., Principal, 27, Chancery Lane

SUPPLEMENT TO THE PHARMACEUTICAL JOURNAL.

TRADE NOTES AND NEWS.

WILCOX AND Co., "Foreign Chemists, Limited," 239, Oxford Street, London, W.—At a meeting of members of this Company, held on January 30, the audited balance sheet for the six months ending December 31 last was submitted, showing total sales £22,612 6s. 9d., and a net profit of £3187 13s. 10d., and it was resolved that a dividend at the rate of £10 per cent. per annum, free of Income Tax, be forthwith paid.

MESSRS. REYNOLDS AND BRANSON'S latest invention, the Pneumatic Ear Cushions, are far better than the softest pillow, and save the aching and painful feeling experienced

REYNOLDS & BRANSON LEEDS
Method of Application.

by persons who, owing to illness, have to lie in bed. Each cushion is about five inches long, and three and a quarter inches broad; and is fitted with loops at both ends, so that it can be connected by tapes with its fellow, and so kept in position. The ear fits into the central oval space, and the surrounding inflated ring

effectually prevents pressure upon the organ of hearing. The cushions are retailed at five shillings per pair, and are made only by Reynolds and Branson, 13, Briggate, Leeds.

MESSRS. BURROUGHS, WELLCOME AND Co. state that, owing to the recent publication of full accounts of the methods adopted by Dr. C. L. Schleich, of Berlin, for the production of local anaesthesia by infiltration, many requests have been made to them for "tabloids," by means of which the necessary solutions could be prepared, at the instant they are required. In accordance with this suggestion they now prepare "tabloids" of the following formulæ:—

No. 1—"Strong": Cocaine hydrochlor., 1-5 grain; morph. hydrochlor., 1-40 grain; sodium chloride, 1-5 grain.

One "tabloid" dissolved in 100 minims of water yields the "strong" solution.

No. 2—"Normal": Cocaine hydrochlor., 1-10 grain; morph. hydrochlor., 1-40 grain; sodium chloride, 1-5 grain.

One "tabloid" dissolved in 100 minims of water yields the "normal" solution.

No. 3—"Weak": Cocaine hydrochlor., 1-100 grain; morph. hydrochlor., 1-40 grain; sodium chloride, 1-5 grain.

One "tabloid" dissolved in 100 minims of water yields the "weak" solution.

MESSRS. P. B. BURGOYNE AND Co., of 6, Dowgate Hill, E.C., intimate that they have received such an enormous number of applications for samples of their Australian wines in response to an offer they recently made to the whole of the medical profession

(24,000), that it is impossible for them to acknowledge each one separately. They beg, therefore, to assure their correspondents that every application shall be attended to in due course.

MISCELLANEOUS NEWS.

IS BEESWAX A DRUG?—At the Tonbridge Police Court, on Tuesday, January 21, James Wickham and Co., trading as the Co-operative Stores, High Street, Tonbridge, was summoned by Supt. Bartlett for selling to the prejudice of the purchaser a certain drug, to wit, beeswax, which was not of the nature, substance, and quality of the article demanded by the purchaser, at Tonbridge, on January 10.—Supt. Bartlett, inspector under the Foods and Drugs Act for the County Council for the Tonbridge division, stated that on December 10, he sent to the defendant's shop to purchase several articles, including beeswax. On the morning of December 11 witness handed over the sample to Mr. Adams, the public analyst, who had since sent the certificate produced, which showed that the sample consisted of fifty parts of beeswax and fifty parts of paraffin. The witness now produced a copy of the British Pharmacopœia, which he said showed that beeswax was a drug.—Mr. Wardley addressed the Bench for the defence and said that the beeswax was supplied by Messrs. Pisk and Co. in boxes, and from these boxes it was sold by the defendants. This beeswax was not sold as an article of food, and the mere production by the prosecution of the British Pharmacopœia did not prove beeswax to be a drug within the meaning of the Act.—After a brief deliberation the Chairman said the Bench had unanimously decided to convict, but considering the very high character of the defendant and the manner in which he had previously conducted his premises there would only be a fine of 1s. and the costs 12s.

GLASGOW CITY PARISH COUNCIL AND REGISTERED CHEMISTS.—At a meeting of the Medical Sub-Committee of the City Parish Council of Glasgow it was put to a vote whether the dispensing of parish medicines should be transferred from Dr. McKee, Springburn, to Mr. G. L. Anderson, registered chemist, Springburn. On a vote, four voted each way, and the question was remitted to the Parish Council. This body met on Tuesday last, and the chairman, Mr. Maclure, ruled that inasmuch as the Council had, on July 2 last, decided that only registered chemists should, except in very exceptional cases, be charged with the dispensing of medicines, no discussion could take place on the matter. Accordingly it was agreed that Mr. Anderson, who is a qualified chemist, should have the dispensing of medicines in the district.

SUPPLY OF MEDICINES FOR GLASGOW CITY PARISH.—At a meeting of the Glasgow City Parish Council on Tuesday last it was agreed to accept the offer of Mr. James Taylor to supply medicines for £19 13s. 7½d. It was also agreed to purchase the following lots:—120 lbs. best grey cotton-wool at 6d. per lb. from Glasgow Apothecaries' Company, and 150 lbs. Robinson's gamgee tissue at 1s. 1½d. per lb., and 160 lbs. best castor oil at 36s. per cwt. from James Taylor.

NEWCASTLE CHEMICAL REPORT.

[From our own Correspondent.]

FEBRUARY 4, 1896.

A slight improvement in general demand is experienced. Inquiries for spring shipments are on a larger scale, particularly for bleaching powder and caustic soda. Sulphur and saltcake are still sought after, and scarceness keeps up values. Alkali quotations are well maintained. Sulphate of ammonia continues weak through enforced sales by London makers. Carbolic acid continues firm. South Durham steady, shipments being somewhat better. Prices are:—BLEACHING POWDER: £6 5s. to £7 10s., according to markets and packages. SODA CRYSTALS: 37s. 6d. to £2 5s., according to packages. CAUSTIC SODA: 70 per cent., £7 15s.; higher strength, £9 5s. SODA ASH: 48 per cent., £3 15s. to £4. SULPHUR: £3 17s. 6d. to £4. SALTCAKE: 27s. 6d. SULPHATE OF AMMONIA: £8 10s., Leith. HYPOSULPHITE: £6 5s. to £7 in casks of 1 to 7 cwt. PITCH: 36s. CARBOLIC ACID: 60 per cent., crude, 1s. 11d. CRYSTALS: 40 per cent., 7d. SILICATE OF SODA: 75 per cent., £2 12s. 6d. CHLORATE OF POTASH: 5d. per lb. SOUTH DURHAM SALT: 9s. 6d. per ton, *f.o.b.*, Tees.

LIVERPOOL MARKET REPORT.

[From our own Correspondent.]

FEBRUARY 5, 1896.

CANARY SEED, 33s. to 34s. per 464 lbs. KOLA NUTS, 6d. to 6½d. per lb. QUILLARIA BARK: *Chilian* has been selling at £12 10s. per ton *ex store*. BEESWAX: *Gambier*, £6 18s. 9d. CASTOR OIL: *Calcutta good seconds*, 2½d. *ex quay*; 2½d. *ex store*. *French* 1st pressure and *Madras*, 2½d. per lb. OLIVE OIL: *Malaga* £29 10s. per tun. COTTON-SEED OIL: *Liverpool* refined 17s. 6d. to 17s. 9d. LINSEED OIL: 20s. 9d. to 21s. in export casks. SPIRIT OF TURPENTINE: 21s. 6d. PETROLEUM: *Russian* declined to 6½d.; *American* to 6½d. to 7½d. per gallon. SAL AMMONIAC: first, 39s.; second, 37s. per cwt. CARBONATE OF AMMONIA: 3½d. to 3¾d. per lb. BLEACHING POWDER: £7 to £7 5s. per ton for hard. COPPERAS: *Lancashire*, 38s. per ton; *Welsh*, 36s. SULPHATE OF COPPER: *Dearer*, £16 per ton. CHLORATE OF POTASH: 4½d. per lb. PRUSSIAN POTASH: 8d. per lb. BICROMATE OF POTASH: 4½d. per lb. NITRE: 23s. 6d. per cwt.; 23s. for barrels. CREAM OF TARTAR: Holders of finest white ash, 105s. per cwt. SODA CRYSTALS: £2 7s. 6d. to £2 10s. per ton. BICARBONATE OF SODA: £6 15s. per ton. BORAX, crystals £19 10s. per ton; powder, £20 10s. per ton. CAUSTIC SODA: 70 per cent., £7 10s.; 60 per cent., £6 10s. per ton. HYPOSULPHITE OF SODA: £7 to £7 10s. per ton. NITRATE OF SODIUM is rising in price owing to combination, and no spot quotations are obtainable. SULPHUR rolls £5 5s. per ton; flour, £7 10; recovered, barrels, £4 5s.; bags, £3 17s. 6d. MAGNESIA, calcined, 1s. to 1s. 4d. per lb. PHOSPHORUS, *wedges*, 2s. per lb.; *sticks* 2s. 1d.; *amorphous*, 2s. 8½d.

MARKET REPORT.

[Specially compiled for the *Pharmaceutical Journal*.]

LONDON, FEBRUARY 6, 1896.

There is very little to report in the Chemical Market this week, very few changes of any moment having occurred. Cream of tartar is rather firmer, although there seems to be a tendency to run the prices down in some quarters. Tartaric and citric acids are very firm, without change in price. Arsenic is still very scarce, and copper sulphate is firmly held. Of the fine chemicals, carbolic acid is steady, in sympathy with coal distillation products. Quinine is easier, whilst opium alkaloids are very firm indeed. In the Drug Market nothing of any particular moment has occurred, and the most important changes are briefly as follows:—Insect flowers are dearer, whilst Rio ipecacuanha, guaiacum gum, and caramoms sold at advanced prices to-day, as did some grades of Sumatra benzoin. On the other hand, senega root is easier, as is jalap. Kola nuts sold at steady rates, and the same applies to Carthagena ipecacuanha. The heavy oil market is irregular, with a downward tendency. Shellac is flat, and spices mostly unaltered. Full details will be found below:—

ACACIA (GUM)—A fairly plentiful supply was shown to-day amounting to about 200 packages. *Trieste* gum was in moderate supply and slow of sale; the only parcel sold being a case of medium bright, which realised 90s., whilst 64s. was paid for three cases of picked medium, yellow, offered without reserve. *Soudan* sorts were for the most part bought in, but 35 bales of medium palish gum from Suez realised 55s. to 55s. 6d., offered without reserve. Bold ambery sorts from Aden were bought in at 42s. 6d., and small mixed ditto at 26s. per cwt. No grain *Triestegum* was offered, whilst medium picked grey was bought in at £7 to £7 10s. per cwt.

ACID, CITRIC.—There has been no change in the position of this article, and the market remains firm. *Manufacturers* of *English* acid quote 1s. 2½d. per lb., whilst in second hand it can be bought for 1s. 2d. *Concentrated lemon juice* quotes at £14 to £14 2s. 6d. per pipe *f.o.b.* Messina.

ACID, TARTARIC—Very firm. *English* makers still quote at 1s. 3d. per lb. on the spot, whilst 1s. 2¾d. would buy in second hand. *Foreign* brands of acid, both in *powder* and *crystal*, quote at 1s. 2½d. on the spot, and 1s. 2¾d. for forward delivery.

ALOES.—A total of 34 packages were catalogued for to-day's sale. *Cape* aloes, which were represented in auction by 48 cases, sold at an advance of 6d. per cwt., 22s. to 22s. 6d. being paid for good bright hard, 21s. 6d. for fair ditto, 20s. for slightly drossy quality, down to 18s. for drossy mixed. *Socotrine* aloes was in unusually large supply, the London stock having been replenished by recent arrivals of the new crop, but only 5 kegs found buyers out of a total of 87, 80s. being paid for good softish of fair aroma. *Curaçoa* aloes were all bought in at prices ranging from 36s. for dark livery, down to 27s. 6d. for medium ditto.

AMBERGRIS.—This article was represented

in auction by about 70 ozs., of which two sold at 45s. and 35s. per oz. respectively, for ordinary quality.

ANTIMONY.—In auction to-day 40 cases crude *Japan* were bought in at £17 per ton.

ARECA NUTS—Steady. A parcel of 16 bags from *Colombo* sold at 11s. 6d. for good sound, and 10s. for damaged quality.

ARGOL.—In rather large supply, and selling with good competition. The prices paid ranged from 62s. 6d. down to 30s. per cwt., according to quality.

ASAFCETIDA.—Very slow of sale. Out of about 200 packages only about a dozen found buyers, 40s. being paid for a few cases of medium mixed lump, few almonds, and 30s. for 6 boxes of ordinary mixed softish.

BAEL FRUIT.—Two cases of whole fruit imported from *Bombay* sold to-day at 1d. per lb. for fair quality.

BENZOIN (GUM).—A total of about 400 packages was offered in auction to-day. *Sumatra* gum, which was represented by some good parcels, was in fair demand, and £8 7s. 6d. to £8 12s. 6d. was paid for good seconds, evenly packed throughout, £8 5s. for fair seconds, with fair almondy centres, rather false packed sides; £5 5s. for ordinary dull seconds, and £4 10s. for very ordinary dull seconds, few almonds in centres, very false packed sides. *Palembang* gum was mostly bought in, but 51s. was paid for fair bright in tins, and 35s. to 40s. for medium ditto. Of the *Siam* gum £16 to £18 was the limit fixed for medium palish, part loose, and part block almonds, whilst £10 10s. was the buying-in price for small almonds in brown block, and 60s. to 75s. for siftings in block. Five cases of *Siam* gum of 1887 import offered without reserve sold at £5 2s. 6d. to £5 5s. for small almondy gum in dark brown block.

BUCHU—Fully steady, but in very slight demand. A total of 49 packages was offered to-day, and of these 5d. was paid for good bright *round* green leaves; 3d. for medium greenish ditto, whilst *long* narrow leaves were bought in at 6d. per lb.

CACAO BUTTER—Lower. In auction on Tuesday 500 cases (representing 50 tons) of *Cadbury's* make sold at an average of fully 13d. per lb., against 13¾d., which was the price realised at the January sales.

CALUMBA ROOT.—Steady. In auction to-day 18s. per cwt. was paid for 10 bags of good washed root, and 9s. for mixed sorts from *Zanzibar*.

CANARY SEED.—At the spice sales on Wednesday, 32s. to 33s. per 464 lbs. was paid for *Turkish* seed, and 31s. 6d. to 32s. for *Bombay*, both offered without reserve, whilst *Japan* seed was bought in at 38s.

CANNABIS INDICA.—Absolutely without inquiry. To-day about 150 robbins were bought in at 2½d. to 3d. per lb.

CANTHARIDES.—Fair *Chinese* flies are held for 1s. per lb. on the spot. Twenty cases were bought in to-day at 1s. to 1s. 1d. per lb.

CARDAMOMS.—An average supply was shown to-day, and met with a good demand, the tendency being decidedly to dearer prices for the *fruit*, whilst *seed* sold at full rates. The prices paid were as follows:—*Ceylon-Mysore*: Medium to bold pale, 2s. 10d. to 2s. 11d.; good pale, small to medium, 2s. 3d. to 2s. 6d.; medium yellowish, 1s. 10d. to 2s.; and small yellowish and brown,

1s. 6d. down to 1s. 4d. *Seed* sold at full rates, 2s. 6d. per lb. being paid.

CASCARILLA.—The only parcel offered to-day consisted of 2 bags good silvery quill, which were bought in at 55s. per cwt.

CASCARA SAGRADA.—A parcel of 70 bags of small broken quill from *San Francisco* offered in auction to-day was bought in at 21s. per cwt.

CINCHONA.—A parcel of bright *Maracaibo* bark from New York sold with good inquiry to-day at prices ranging from 7d. for sound, 5½d. for medium, down to 4d. for damaged. Fifty-four bales of flat *Calisaya* bark also found buyers, 1s. 5d. to 1s. 6d. being paid for good bright yellow, and damaged qualities at 9d. down to 3d., according to condition. *Succirubra* bark was bought in at 3s. 6d. to 4s. 6d. per lb.

COCA LEAVES.—Firmer. In auction 3 bales of broken greenish *Truxillo* leaves, of good quality, sold at 1s. per lb.

COLOCYNTH.—*Turkey* colocynth was the only kind to meet with any demand, and 2s. 6d. was paid for 5 packages of good sound apple, and 2s. 3d. for pulp. A parcel of fair *Spanish* was held for 1s. per lb., whilst another lot of damaged *Almerian* was bought in at 11d. down to 7d., according to condition.

COPAIBA (BALSAM).—In auction 3 casks of good pale *Maranhm* were bought in at 2s. per lb., and 4 casks of thick bright brown balsam at 1s. 7d. Privately good *Para* sells at 1s. 5d., and dark to fair *Bahia* at 1s. to 1s. 4d. per lb.

CORIANDER SEED.—At the spice sales common, coarse, and wiry *Bombay* was bought in at 11s., and small from *Dunkirk*, at 20s. per cwt.

CREAM OF TARTAR.—The market is very firm, and quotations are if anything advanced. For best white *French* crystals on the spot, 107s. per cwt. is the lowest price, whilst for *German* brands of powder, 109s. to 110s. is asked. For shipment from *Bordeaux* 102s. per cwt. *f.o.b.* may be taken as the value, although we have heard of offers at 99s. *f.o.b.*

CROTON SEEDS.—This article (which has been very scarce for some time) was represented to-day by 20 bags from *Colombo*, and sold at 40s. to 41s. per cwt. for good quality.

CUTTLEFISH.—Five casks of fair, clean bone from *Las Palmas* were bought in to-day at 2d. per lb.

DRAGON'S BLOOD.—An average supply of about 34 cases was shown to-day, and met with a good inquiry. For medium bright *Singapore* block £8 was paid, and for fair squares £6 15s., whilst £4 10s. to £5 2s. 6d. was accepted for 4 cases of dark gum in reeds, much of which was broken and separated from the coverings. Eight cases of dull dark saucers sold at £4 to £4 10s. per cwt.

ERGOT OF RYE.—This article was again fully represented in auction, but the demand is not very brisk. For 6 bags of smallish clean *Russian* ergot 6½d. per lb. was paid, whilst the same price was paid for a parcel offered without reserve. *Spanish* ergot was held for 9d. for good bold, and 7d. for medium clean.

GAMBOGE.—Absolutely without inquiry. Fifty-seven packages were bought in to-day at prices ranging from £10 10s. for damp

blocky *Singapore* gum, £9 10s. for pickings, and £9 for fair blocky pipe.

GALANGAL.—Fifty bales of good root from *Hong-Kong* were held to-day for 22s. 6d. per cwt.

GALLS.—In auction five bags of *Chinese* galls sold at 57s. 6d. per cwt.

GENTIAN ROOT.—Four bales were offered in auction and held for 22s. per cwt., after a bid of 19s. 6d. had been refused.

GINGER.—The market is steady, but the demand is only moderate. In auction on Wednesday, old fair washed rough sold at 33s., and new medium and small brown rough at 34s. to 35s. *Bengal* was bought in at 18s., whilst inferior quality from *Calcutta* sold without reserve at 15s. per cwt. *Jamaica* sold at irregular but, for the most part, lower rates, 53s. 6d. to 55s. 6d. being accepted for lean *Rhatoon*, 60s. for good common ditto, and 74s. for small scraped.

GUAIACUM (GUM).—A parcel of very fine bright glassy block of new, import, was offered to-day, and sold at the extreme rates of 2s. 4d. to 2s. 5d. per lb.

HONEY.—Very slow of sale. Out of about 90 packages offered, the only parcel sold consisted of 4 packages of clean *New Zealand* in tins, which realised 20s. per cwt.

INSECT FLOWERS.—Within the last few days there has been considerable activity in this market, and quotations have advanced, the following being the current rates: Wild closed, 135s.; cultivated closed, 116s. 6d.; half closed, 72s. to 96s., and open, 67s. 6d. per cwt., all *c.i.f.* terms.

IPECACUANHA.—*Rio (Brazilian)* root sold at an advance of about 2d. per lb. in auction, 5s. 5d. to 5s. 6d. being paid for fair to good sound annulated, 5s. 2d. to 5s. 3d. for slightly damaged ditto, and 4s. 9d. for thin wiry root. *Carthagena* root sold at steady prices as compared with those last paid in auction, 4s. to 4s. 1d. being paid for good stout slightly damaged quality.

JALAP.—In auction 8d. per lb. was accepted for 3 bales of fair quality *Vera Cruz* root.

KINO (GUM).—A box of genuine gum was bought in to-day for 20s. per lb., whilst another parcel, said to be genuine, was bought in for 15s.

KOLA.—At the spice sales good dry *West Indian* sold at 11d., ordinary quality at 6d., and mouldy at 4d. per lb. To-day 1s. was paid for good bright sound quality, and 9d. for fair ditto.

LIQUORICE ROOT.—The current quotation for decorticated *Russian* root is 28s. per cwt. *c.i.f.* In auction *Bussorah* root was bought in at 9s. per cwt. The spot value is about 7s. 6d. per cwt. for ordinary rough quality.

MYRRH (GUM).—To-day 112 packages were offered. The only parcels sold were a few casks of small gum, which realised 60s. per cwt., whilst 55s. was accepted for ordinary sorts.

OIL (COD-LIVER).—At the drug sales 5 casks of *Norwegian* oil (imported in March, 1895) sold at 140s. per barrel. Good quality *Newfoundland* oil is held for 5s. 6d. per gallon.

OILS (ESSENTIAL).—*Aniseed*: *Russian* oil is quoted at 10s. 6d. per lb. on the spot. *Lemon* oil continues to advance in price, and the current quotations range from 3s. 9d. to 5s. 3d. per lb., *f.o.b.*, according to brand. To-day *Rose* oil settlings were sold for 1d. to

1½d. per oz. *Cassia* oil testing 71 per cent of cinnamic aldehyde were bought in at 10s., whilst another parcel testing 45 per cent. was also withdrawn. *Ylang-Ylang*: Four cases sold without reserve at 3s. 3d. to 4s. 3d. per oz. *Cinnamon* bark oil was held for 9d. per oz. *Cinnamon* leaf oil was bought in at 5l., *Nutmeg* at 2½d., and *Cumming's Eucalyptus* oil at 1s. 4d. to 2s. per lb. A case of *Lime* oil sold at 4s. 9d., and another of *Orange* at 4s. 6d. per lb., whilst *Coching's* and *Raspe's peppermint* oils were bought in at 6s. 9d. per lb.

OILS (FIXED) AND SPIRITS.—*Castor*: *Italian* oil is quoted dearer, and 30s. 6d. to 31s. per cwt. *c.i.f.* is now asked for best quality. *French* medicinal oil still quotes at 3½d. to 3¾d. per lb. in tins (packed in cases), whilst *Calcutta* is worth 2¾d. to 2½d. for firsts, and 2½d. to 2¼d. for seconds. *Cotton* has declined 10s. since our last report, but at the close is steady. *Refined* oil is quoted at £17 to £17 10s. on the spot, according to brand and package. *Coco-nut* is very firm at unchanged rates, *Ceylon* and *Cochin* being still quoted at £22 15s. to £27 respectively on the spot. *Linseed*: Much weaker and the market closes quiet, oil in barrels being now offered at £20 on the spot. *Rape*: Very firm. *Refined* oil is returned at £25 to £25 15s. on the spot. *Olive*: Quiet, but steady. *Spanish* and *Tunis* are both quoted at £31 to £32. *Palm*: Lagos still quotes at £22 on the spot. *Turpentine*: The price quoted shows a decline of about 4½d. on that of last week, but the market closes steady. American spirit is worth 20s. 4½d. to 20s. 6d. on the spot. *Petroleum*: Firm. *American* oil is quoted at 5½d. to 6d., *Water white* at 7¼d. to 7½d., and *Russian* at 5½d. *Petroleum spirit*: *Ordinary* is quoted at 9d. to 9¼d., and *deodorised* at 9¼d. to 9¾d. per gallon.

ORANGE PEEL.—A few cases of the new arrivals of *Maltese* peel sold to-day at 8d. per lb. for thin cut (good aroma), and 3d. for damaged quality.

ORRIS ROOT.—*East Indian* orris was in good inquiry to-day, and sold at full rates, 29s. to 35s. being paid for medium dark, 23s. to 24s. for ordinary ditto, and 17s. to 20s. very ordinary dull lean.

QUININE SULPHATE.—The market is quite neglected, and no business is doing. The current quotation of 1s. 1d. for the best *German* brands shows a decline on that of last week. To-day 6000 ozs. of the "Imperial" brand of *English* quinine was offered, and bought in at 1s. 2d. per oz., the limit bringing 1s. 1½d. per oz.

RHUBARB.—Out of 85 chests offered to-day about 28 found buyers at the following prices:—*Canton*: Good bold flat, fair fracture, 1s. 4d.; good trimings, 1s. 3d.; medium round and flat fair coat and fracture, 1s. to 1s. 1d.; ditto flat fair coat, dull fracture, 10½d. *Shensi*: Medium round, pale coat, fair fracture, 1s. 2d.; wormy flat, 9d. per lb. *High dried*: Medium flat good even pinky fracture, 10d. to 11d. per lb.

SANDAL-WOOD.—In auction 162 bales sold without reserve at 5s. per ton.

SARSAPARILLA.—*Jamaica* sold to day at steady rates, 1s. 3d. to 1s. 4d. being paid for sound root, whilst for *Lima-Jamaica* (freed from stones) 11¼d. was accepted. *Honduras* was all bought in at 1s. 3d. to 1s. 6d. per lb.

SCAMMONY.—Ten boxes were bought in to-day of *Turkish Virgin* resin at 32s. 6d. to

33s. per lb., whilst *root* was also bought in at 55s. per cwt.

SEEDS (VARIOUS).—*Aniseed*: In auction 60 bags of fair *Spanish* seed sold at 22s. per cwt., whilst for damaged quality 20s. was accepted. Another parcel sold without reserve at 16s., whilst *Russian* seed was bought in at 23s. *Cumin*: *Maltese* seed was held to-day for 33s. to 35s. per cwt. *Jamboul* seed sold to-day at 10d. per lb. *Fennugreek* sold at 6s. per cwt.

SENEGA.—Easier. To-day 1s. 1d. per lb. was accepted for 5 bales of fair quality root.

SENNA.—Only about 100 bales were offered to-day, and the majority of these were bought in. A few bales of small *Alexandrian* leaves sold at 2¾d. per lb. *Tinevelly*: For medium greenish leaves 3d. per lb. was paid, and for small yellowish 1½d. to 1¾d., and damaged 1d. to 1¼d. per lb.

SHELLAC.—There has been a fairly steady demand privately, but the amount of business done has not been very extensive. For *TN Orange* 89s. to 90s. has been accepted for fair quality on the spot. In auction on Tuesday a moderate supply only was offered, and met with a poor demand, *TN* selling at fully steady rates, but other grades were easier. *Button* sold at full to higher rates, whilst no *Garnet* was offered. The prices paid were as follows:—*Fine Second Orange*, 107s. 6d. for broken *AA*, up to 112s. 6d. for fine pale *SD*. *TN Orange*: Good medium light *Calcutta* sold at 95s. to 97s., fair reddish free at 89s. to 90s., strong livery free at 85s., fair bright reddish part block, 79s. to 80s., and livery blocky, 77s.

SPICES (VARIOUS).—*Cloves* are firm. In auction *Zanzibar* sold at 2d. for good fair; 1½d. for fair, and 1¼d. for medium. *Seychelles* was bought in, as was picked *Penang*, at 7d. *Cassia lignea*: Good quality was bought in at 32s., whilst 17s. was accepted for a parcel of common broken, offered without reserve. *Cassia vera*: Mixed quill, mostly coarse, was bought in at 23s. 6d. in auction. *Cinnamon chips*: Broken quill sold at 8d., and chippings at 7d. *Pimento*: Very firm, and in good demand; ordinary to medium sold in auction at 2½d. to 2¾d., whilst 2½d. was paid for good fair. *Capsicums*: Small round red *Bombay* was bought in at 28s. per cwt. *Arrowroot* is still dull of sale, and in auction all the *St. Vincent* was bought in, fair to fine, at 1¾d. to 2¼d., except one lot, for which 2¾d. was paid, whilst 2½d. was paid for a few cases of tins. *Pepper*: In auction *Aleppo* was bought in at 2¾d., and damaged at 2½d. *White Pepper*: Very flat. Fine bold *Singapore* sold without reserve at 4¾d., whilst fine bold was bought in at 5d. to 6d. *Chillies*: Quiet. Fair *Zanzibar* sold at 33s. 6d.; medium red and brownish at 31s. 6d., and fine bright *Japan* at 78s. 6d.

TAMARINDS.—At the drug sales 7s. per cwt. was paid for 7 cases of *East Indian*.

TOLU (BALSAM).—None was sold in auction to-day. Two cases of genuine quality being bought in at 2s. 2d. per lb. Privately, 2s. has been paid for the same grade drug this week.

WAX (BEES).—*Australian*: About 5s. per cwt. lower, £6 15s. being accepted to-day. *Jamaican* sold at £8; *Zanzibar* at £6 10s. to £6 15s.; *Madagascan* at £6 15s.; *South American* at £7 5s. to £7 10s.; and *Mozambique* at £7 2s. 6d. ;

EXCHANGE.

Readers requiring, or having for disposal, books, appliances, shop-fittings, and other matters more or less directly connected with the business of pharmacy, may intimate the fact free of cost. The notices must not include more than thirty words each, and should be written on post-cards, addressed "Editorial Department, 17, Bloomsbury Square, London, W.C."

* * The Editor reserves the right to omit any notice he thinks necessary.

OFFERED.

Stereoscopic Camera, by Stereoscopic Company, complete in box, with stand, bottles, dishes, and accessories, £4; also Lantern, 4 in. condenser, three-wick lamp, complete, £1 1s.—Barnes, Terrace Road, Plaistow, E.

Green's, Bentley's (15s.), Edmunds', Oliver's, and Cook's 'Botany,' and Atfield's 'Chemistry'; what offers?—"Ebor," 49, Lyme Street, Dryden Street, Manchester.

Stokes' Patent Check Till, with spare rolls of paper, in proper working order.—Write to E. Brackenbury, Chemist, Bardney, Lincoln.

Wills' 'Notes on Flowers,' 2s. 6d.; 'Volumetric Analysis,' 1s. 3d.; 'Chemistry,' 2s.; Prantl and Vines' 'Botany,' 5s. 10d.; Stirling's 'B.P. Tinctures,' 7d.; 'Equations,' 9d.; excellent condition.—X., 13, Market Street, Scunthorpe Doncaster.

A Ross 12 in. Concentric Lens for sale. Cost £11 10s. last summer; not been used half a dozen times; owner, wanting money, will accept £5 5s.—Hampson, Chemist, Leigh, Lancashire.

Zuccatto's Trypograph, foolscap size, gives any number of copies of circulars, etc., in black, complete with materials, in box, 20s., cost 40s.—Elliott, Chemist, Southport.

Handsome Chemists' Fixtures in mahogany—mirrors and plate glass shelves; everything necessary to commence; sell for valuation, or half Maw's prices in catalogue.—Bentley, Limehurst, Goole.

Sixty ounces B.P. quinine at 1s. 3d.; Maw's Electro-Magnetic Apparatus, fig. 50, nearly new, 10s. 6d.; eight years' 'Pharmaceutical Journal,' well bound, 8s.; 1 Cwt. cask Glaubers, 6s. or exchange.—Smith, chemist, Portsea.

Six Magnetic Belts, sold at a guinea each, for 50s.—Orchard, Salisbury.

Daniel Hanbury's 'Pharmacological and Botanical Papers,' cost 16s., for 8s. free; Newman's 'British Ferns,' well illustrated, cost 12s., 4s. free.—Davies, 33, Eglinton Road, Bow.

Balance.—One Oertling's, No 9, for gold and silver assays, cost 18 guineas, will take 10 guineas, excellent condition.—Dryden, Chemist, Landore, R.S.O.

Surplus Stock. Twenty-four 8-ounce bottles Southall's A1 Cod-Liver Oil, capsuled, unlabelled, 11s., car. forward. Cash with order.—Eastman, Forest Lane, Stratford.

'Pharmaceutical Journal'; first 15 volumes for sale, cheap, and sundry imperfect years of the weekly series.—Davis, "Chestnuts," Gordon Hill, Enfield.

'Minor Ailments,' nearly new; Liston's 'Practical Surgery,' 4th edition. What offers?—Leeffe, 114, High Road, Streatham, S.W.

Two Pear-Shaped Window Carboys, with handsome glass stoppers, each holding 6½ galls.; offers invited by—J. Hill, Norton Villa, Britonferry, Glamorgan-shire.

Prantl and Vines' 'Botany' (5th), 4s. 6d.; Thorpe's 'Chemistry,' 2 vols., 3s. 6d.; Remsen's 'Chemistry' (Organic), 3s.; Whitl's 'Pharmacy' (5th), 4s.; Ganot's 'Physics' (13th), 8s. 6d. All as good as new.—95, Kennington Park Road, S.E.

Everett's 'Text-book of Physics'; Wills' 'Manual of Materia Medica'; both quite new. Any reasonable offer.—Student, 17, Bloomsbury Square.

Martindale's 'Extra Pharmacopœia,' seventh edition, 6s.; Bell and Redwood's 'Progress of Pharmacy,' 4s.; good as new; Drutt's 'Surgeons' Vade-Mecum,' 5s.—Chemist, 141, Upton Lane, Forest Gate, E.

WANTED.

Atfield's 'Chemistry,' latest edition, and other books for 'Minor.'—Stokoe, 15, Argyle Square, Sunderland.

Maisch's 'Materia Medica.'—"Ebor," 49, Lyme Street, Dryden Street, Manchester.

Specie Jar, 2½ inches high, decorated inside, good condition.—Winter, Llandudno.

Wanted to hire or purchase, Gower's Hæmacytometer.—Edward Peck, Chemist, East Dereham, Norfolk.

'Minor Ailments,' or good book, for 'Counter Prescribing.' Price to R. B. Hill, Market Place, Howden, E. Yorks.

A Mahogany Shop Door; also a Set of York Glass Bees-labelled Bottles.—Walker, West Kirby.

Kelly's 'Directory of Chemists and Druggists,' state date of publication; Bent Front Tooth Brush Case; Clarke's Syphon Gas Stove; Ten Foot Dispensing Screen and Glass-Fronted Counter for underneath same.—Griffin, Chemist, Kidderminster.

Rectilinear Lens for half plate. Must be cheap.—Lawrence, Chemist, Oban.

Weighing Machine up to 20 stone; Truck for taking out mineral waters; in good condition and cheap for cash.—Tupholme, Coleherne Terrace, Earl's Court, London.

Ince's 'Latin Grammar' or similar work. Particulars to "Vox," 109, Fentiman Road, S.W.

Remsen's 'Organic Chemistry.'—Student, 17, Bloomsbury Square.

'Veterinary Counter Practice' and Dental Forceps bicuspid and wisdom.—Burge, Fernhead Road, W.

TRADE CORRESPONDENCE.

THE ANTI-CUTTING CAMPAIGN.

Sir,—Now the Proprietary Articles' Trade Association is fairly launched, allow me to suggest that the ten retailers should be chosen from different centres. As there is certain to be a large amount of committee work, five should be chosen from the London district, the remainder from large centres, such as Edinburgh, Glasgow, Liverpool, Manchester, Sheffield, Nottingham, Birmingham, Plymouth, and Brighton, each representative to be chosen by the Local Association or other body of retailers called together for that purpose.

The owners of proprietary articles having shown a desire to consider and put into force some reasonable scheme which will not only benefit themselves, but retail pharmacists in an equal degree, it is only natural to expect the retail trade to respond by giving all the help they can, 1st, by holding meetings; 2nd, by appointing some one to whom the secretary (Mr. Glyn Jones) could communicate to carry out the various suggestions which will be made from time to time.

CHAS. THOMPSON.

Birmingham, February 5, 1896.

MARRIAGE.

STONE — BALL. — February 1, at St. Philip's Church, Heigham, Norwich, by the Rev. A. G. Blythe, George Percival Robert Stone, A.P.S., of Norwich, to Ada, youngest daughter of D. Ball, Southport.

DIARY OF THE WEEK.

Secretaries of Societies are requested to send notices of forthcoming meetings not later than Wednesday in the previous week.

MONDAY, FEBRUARY 10.

ROYAL GEOGRAPHICAL SOCIETY, at 8.30 p.m.
"Movements of the Earth's Crust" (Illustrated), by Professor J. Milne.

TUESDAY, FEBRUARY 11.

PHARMACEUTICAL SOCIETY (LONDON), at 8 p.m.
Formal Transfer of the Burroughs' Memorial Fund.

"Estimation of Aconitine" (1), by Prof. Dunstan and Thomas Tickla.
"The Detection of Aconitine" (2), by Prof. Dunstan and F. H. Carr.
"Essential Oils of Black and White Peppermint" (3), by J. C. Umney.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"The External Covering of Plants and Animals: its Structure and Functions" (V.), by Professor O. Sewart.

ROYAL PHOTOGRAPHIC SOCIETY, at 3 p.m.
Annual General Meeting.
"The New Shadow Photography" (illustrated), by A. A. C. Swin'oon.

MIDLAND PHARMACEUTICAL ASSOCIATION, at 8.30 p.m.
"Vegetable Histology" (illustrated), by F. H. Allcock.

WEDNESDAY, FEBRUARY 12.

PHARMACEUTICAL SOCIETY OF GREAT BRITAIN.
Library, Museum, School, and House Committee.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION, at 9 p.m.

"Laboratory Notes," by J. Barclay.
SHEFFIELD PHARMACEUTICAL AND CHEMICAL SOCIETY, at 8.30 p.m.

"Mediæval Natural History," by Dr. Sorby.
BRIGHTON JUNIOR ASSOCIATION OF PHARMACY, at 9 p.m.

"Trade: An Historical Sketch," by G. Long.

THURSDAY, FEBRUARY 13.

SOCIETY OF ARTS (INDIAN SECTION), at 4.30 p.m.
"Punjab Irrigation—Ancient and Modern," by Sir J. B. Lyall.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"Some Aspects of Modern Botany" (I.), by Professor H. M. Ward.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 8.30 p.m.
"The Chemical Training of Pharmacists," by J. C. Evans.

SCHOOL OF PHARMACY STUDENTS' ASSOCIATION, at 6 p.m.
Discussion on "A Student's Union for the School of Pharmacy," opened by Mr. T. A. Henry.

FRIDAY, FEBRUARY 14.

ROYAL INSTITUTION OF GREAT BRITAIN, at 9 p.m.

"Fish Culture," by J. J. Armistead.
ROYAL ASTRONOMICAL SOCIETY, at 3 p.m.
Anniversary Meeting.

SHEFFIELD MICROSCOPICAL SOCIETY, at 8 p.m.
Botanical Demonstration by Messrs. Hoole and Harrow.

WESTMINSTER COLLEGE OF PHARMACY.
Annual Gathering at the Bridge House Hotel, London Bridge, at 8 p.m.

SATURDAY, FEBRUARY 15.

PHARMACEUTICAL FOOTBALL CLUB v. Breweries, at Shepherd's Bush.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"Realism and Idealism in Musical Art" (Illustrated III.), by C. H. H. Parry.

Late Advertisement.

Engagement Wanted.

MR. FEAST, 31, Gladstone Pl., Lewes Rd., Brighton, desires an appointment as BRANCH MANAGER, to live on the premises with his family; 5 at home. Widower. Age 58. Registered. At liberty. An abstainer 14 years.

SUPPLEMENT

TO THE

PHARMACEUTICAL JOURNAL.

MISCELLANEOUS NEWS.

THE SALE OF ARSENICAL FLY-PAPERS.—We understand that there is a probability that the appeal in the fly-paper case, which came before His Honour Judge Bacon, at the Bloomsbury County Court, on January 21 (see *ante*, p. 62), will not be proceeded with.

JUNIOR PHARMACY BALL.—The fifteenth annual ball was held at the Portman Rooms, Baker Street, on Wednesday last. This dance appears to increase in popularity year by year. It is the fifth opportunity London pharmacists have had of indulging in the terpsichorean art this season, and the number that attended this function exceeded that at any of the others. Mr. H. Arliss Robinson (the Hon. Secretary) reports that over 350 guests sat down to supper, the large ball-room was filled to its utmost during the middle of the evening. The disposal of the couples for the square dances gave the M.C. (Mr. C. W. Martin) ample opportunity for displaying the tact for which he is famous. Mr. Carteighe took the chair at supper, and afterwards proposed the usual toast—"The Ladies," coupled with the name of the Hon. Sec. He also drew attention to the fact that Mr. T. C. W. Martin was for the first time absent from this gathering. We regret to learn that indisposition was the cause. The Secretary then rose to reply. He was greeted by such an enthusiastic uproar that "Chair" was the only word distinctly audible for at least five minutes. In thanking Mr. Carteighe for presiding, he remarked that he was always to the fore with his helpful presence whether at dinners, balls, or concerts. The party dispersed at 4 a.m. on Thursday, after a most enjoyable evening.

MIDLAND PHARMACEUTICAL ASSOCIATION.—A meeting of the Midland Pharmaceutical Association was held on Feb. 11, at the Mason College, Birmingham, Mr. R. Darton Gibbs (President) in the chair. Mr. F. H. Alcock read an interesting paper on 'Vegetable Histology,' at the conclusion of which a series of photographs taken by the Röntgen process were exhibited by Mr. C. F. Jarvis.

THE PROPRIETARY ARTICLES TRADES' ASSOCIATION.—The first meeting of the Council of the above Association was held at Anderton's Hotel, Fleet Street, London, on Wednesday, February 12. Almost all of the members of the Council were represented at the meeting.

The first business was that of the election of officers for the first three months. The following gentlemen were ultimately elected: President, Mr. Elliman; Vice-presidents, Mr. Gilligan (Liebig Co.), and Mr. G. R. Barclay (Barclay and Sons). Mr. Barclay was also asked to continue for the present in the office of Treasurer, and Mr. Glyn-Jones was elected Secretary.

The Secretary announced that he had communicated with the retail members who had up to last week joined the Association, asking them whether they would be prepared to act upon the Council for the first three months. Ten gentlemen had consented, and it was therefore decided that they should be elected as the retail section of the Preliminary Council. The following are the names:—W. Johnson, 69, Loughborough Road, Brixton, London, S.W.; A. J. Gower, Chemist, Tonbridge; Morgan W. James, Llanelly, South Wales; S. Lister, Chemist, Great Horton; W. Jones (Morris, Banks and Co.), 2, High Street, Birmingham; W. R. Barnes, Chemist, Upton Manor, London, E.; Albert Cooper, 80, Gloucester Road, South Kensington, London, S.W.; James Cocks, 8, Edgecumbe Street, Stonehouse, Devon; E. A. Holloway, 34, Fleet Street, Torquay; T. P. Garrett, 33, Commercial Street, Newport.

It was decided to form an Executive Committee for dealing with matters of finance and emergency, to consist of the officers above mentioned, and Messrs. Hall (Hall's Coca Wine), Tebbutt (W. Sutton and Co.), and Johnson, chemist, Brixton.

The Secretary said that he had received several communications from country members, suggesting that the expenses of attending meetings of the Council should be refunded to them. After some discussion it was decided that, at any rate for the present, this would not be advisable.

The absence of any member of the retail grocery trade upon the Council was commented upon. The Secretary explained that as the grocery trade had not been directly communicated with, with one or two exceptions, no member of that trade had joined the Association. He said he hoped that that meeting would empower him to take steps to communicate with the Grocers' Federation, with the view of soliciting their co-operation, and that as the result of such action by the time the first annual Council would be elected, a sufficient number of retail grocers, who were handling proprietary articles, would have joined the Association, and that the Council could thus consist of members both of the wholesale and retail grocery trades. A motion was moved by Mr. Johnson, seconded by Mr. Gilligan, and unanimously carried, that the Secretary be instructed to communicate with the Secretary of the Grocers' Federation, and also with each of the Secretaries of the local Pharmaceutical Associations, drawing their attention to the formation of this Association and soliciting the assistance and co-operation of their respective organisations.

The scheme for carrying out the objects of the Association drawn up by the Secretary was then submitted to the meeting. Mr. Jones, of Birmingham, who had been sent to the meeting as a delegate of the Trade Committee of the Birmingham Pharmaceutical Association, to whom a copy of the scheme had been submitted, said that his Committee had instructed him to say that in their opinion any system of rebate was objectionable, and that they thought a scheme on the lines of Mr. Elliman's, but enlarged so as to embrace other articles, was preferable. The consensus of opinion at the meeting was decidedly in keeping with these views, and it was felt that the scheme

suggested by the Secretary was too cumbersome and too expensive in its working, and it was therefore withdrawn.

Mr. Bird, of Birmingham, Mr. Gilligan, and several other gentlemen explained that it would be well if this Council would communicate with Mr. Giles, of the Grocers' Federation asking him whether a conference could not be arranged between representatives of this Association and the Committee of the Grocers' Federation, which at present had this matter under consideration. This was afterwards put in the form of a motion, and unanimously agreed to. In the event of a favourable reply being received from the Grocers' Federation it was decided that the Executive Committee, with Mr. Roberts (May Roberts and Co.) and Mr. Bird, of Birmingham, be asked to attend the conference.

THE CRYPTOSCOPE.—The Vienna correspondent of the *Daily Telegraph* states that the reported invention by Salvioni of an instrument for enabling the eye to see objects which are covered by materials that were heretofore opaque is confirmed. The instrument consists of a cylinder of cardboard, the inner surface of which is coated with a substance that becomes fluorescent under the action of Röntgen's rays. The other end is provided with a lens. The object to be examined and the cylinder are placed before the invisible rays developed by a Crookes' tube, when by applying the eye to the lens the observer sees on the fluorescent substance the shadow of the objects that are impenetrable to the rays. The instrument is called a cryptoscope, and hopes are entertained that it will shortly be perfected.

CARBOLIC ACID AGAIN.—A woman named Agnes Fairlie, 6, Drummond Street, Edinburgh, was admitted to the Edinburgh Royal Infirmary on Wednesday week, suffering from the effects of carbolic acid poisoning, and died on February 11.—A woman, wretchedly clad, was found lying insensible on a stair at 18, St. Andrew Street, Glasgow. She was suffering from carbolic acid poisoning, and, her stomach having been pumped, she was removed to the Royal Infirmary. A gill bottle, labelled "Strong Carbolic Wash," containing a small quantity of the fluid, was found underneath her on the stair.

POISONING BY LAUDANUM.—An inquest was held at the Thomas Arms Hotel, Llanelly, on Monday, before the deputy coroner (Mr. Henry W. Spowart), relative to the death of Robert Margrave, a veterinary surgeon, who died on Sunday afternoon.—Evidence was given by Henry Harries, a groom in the employ of the deceased, to the effect that on Sunday deceased appeared to be very down-hearted, and went into his surgery, where he took a quantity of tincture of opium. Hot water and mustard were administered, but in a few minutes deceased became unconscious. Soon after his breathing stopped, but he rallied a little when artificial respiration was resorted to. He never recovered, however, and death took place about five o'clock.—After a brief summing up the jury returned a verdict of death from misadventure, arising from an overdose of opium.

MARKET REPORT.

[Specially compiled for the *Pharmaceutical Journal*.]

LONDON, FEBRUARY 13, 1896.

With the exception of one or two articles, there are but few changes to report this week in either the chemical or drug market. In the chemical market cream of tartar is tending easier on the spot, although for shipment importers maintain full rates. Tartaric and citric acids are firm, without change in value. Arsenic is still very scarce, and copper sulphate firmly held. Amongst pure chemicals carbolic acid is considerably dearer, tannic and gallic acids are very firm and likely to advance in price, whilst acetanilid is firmly held. Some holders of permanganate of potash have raised their quotation, and a general advance is probable. A good business has been done in crude camphor during the week at advanced prices. None of the alkaloidal salts call for remark. In the drug market we have to report a firm market in orris root, cascara sagrada, gentian root, and insect flowers, whilst bayberry bark is scarce on the spot and firmly held. Cod-liver oil is exceedingly scarce, and owing to the feature of the fishing season, famine prices are likely to be realised. The heavy oil and spice markets are unchanged, and the same applies generally to essential oils.

ACACIA (GUM).—The market for *Bushire* gum is quiet, with little business doing. Fair so-called insoluble sorts are quoted at 11s. 6d. to 13s. 6d., and fine pale selected gum at 16s. to 20s. per cwt.

ACETANILID.—Very firm, and likely to advance in price. At present 1s. 3d. to 1s. 4d. per lb. is still the spot price, according to quality and holder.

ACID BORACIC.—The current quotation for crystals is 30s., and powder, 32s. per cwt. on the spot.

ACID CARBOLIC.—A very brisk market, and prices continue to advance steady, the following being the current quotations:—Crystals: 39° to 35°, 6¼d.; 39° to 40°, 7¼d.; 31° to 40° (*detached crystals*), 8¼d. per lb. Crude has also advanced, and now quotes at 2s. for 60 per cent., and 2s. 4½d. for 75 per cent. per gallon. *Liquefied* and *creylic* are unchanged at 1s. 1d. and 1s. per gallon.

ACID, CITRIC.—Shows no alteration in price, but the market is firm. Makers *English* acid still quote 1s. 2½d. per lb., whilst second-hand holders offer at 1s. 2d. *Concentrated lemon juice* still quotes at £14 to £14 2s. 6d. per pipe *f.o.b.* Messina.

ACID TANNIC.—Although there has been no change in the prices of this article, the market is very firm, and quotations are likely to advance shortly, and the same applies to *Gallic* acid.

ACID, TARTARIC.—This market is quite steady at firm rates. Manufacturers of *English* acid still quoting at 1s. 3d. per lb. on the spot, whilst for *foreign* brands of acid (not guaranteed B.P.), both in *crystals* and *powder*, 1s. 2½d. per lb. is asked on the spot, and 1s. 2¼d. for forward delivery.

AMMONIA COMPOUNDS.—*Sulphate*: The market is steady at unchanged rates, grey 24 per cent. being still quoted at £8 10s. on

the spot, with *Hull* at the same figure, *Leith* at £8 10s., and *Beckton* at £8 12s. 6d. *Carbonate*: 3½d. to 3¾d. per lb. *Liquor*: 3¼d. to 3½d., less 5 per cent. *Sal Ammoniac*: Firsts, 39s.; seconds, 37s. per ton.

ARSENIC.—Remains very scarce at present. Good white *powder* is still nominally quoted at 19s. to 19s. 6d. on the spot, whilst for *lump* 28s. is returned.

ASHES.—Best *Montreal* potashes quote at 22s. 6d., and *pearlashes* at 37s. 6d. per ton, *f.o.b.*

BARBERRY BARK.—There is none of this drug available now under 8d. per lb. on the spot, whilst for shipment from New York 7d. is quoted.

CAMPHOR.—The market has become much more active, and as much as 210s. has been paid on the spot during the week for *Japan* camphor, whilst business has been done to arrive near at hand at 185s. Nothing is doing in *China* camphor which quotes at 172s. 6d., *c.i.f.*, February to April shipment. The agent for one of the refiners has issued a circular during the week, in which it is stated that a sliding scale will be charged for *refined* camphor directly dependent upon the price of *crude* on the basis of 2s. 3d. per in 1 ton lots of refined, when the price of *crude* is 185s. on the spot.

CASCARA SAGRADA.—Remains very firm. Good quality bark is still quoted at 22s. 6d. per cwt. on the spot. For shipment from New York new bark is offered at 20s. 6d. *c.i.f.*, and two year old at 22s. *c.i.f.* terms per cwt.

COCA LEAVES.—There are no *Truxillo* leaves of good quality available in importers' hands at present. For damaged *Bolivia* leaves, 1s. 2d. per lb. is the price.

COAL DISTILLATION PRODUCTS.—*Toluol* is rather easier, and *pure* is now quoted at 2s. 2d. per gallon. *Benzole* is also lower, and 50 per cent. now offers at 1s. 10d., and 90 per cent. at 2s. 2d. per gallon. *Creosote*: 1½d. per gallon. *Crude Naphtha*: 30 per cent. at 120° C. quotes at 10d. per gallon. *Solvent Naphtha*: 95 per cent. at 160° C. s quoted at 1s. 5d.; 90 per cent. at 160° C. at 1s. 2½d., and 90 per cent. at 190° C. at 1s. 1½d. per gallon. *Anthracene*: 13A., 11½d.; B., 10d. per unit. *Pitch*, 34s. 6d. per ton, *f.o.b.* *Tar*: *Refined* quotes at 11s. 9d. per barrel.

COLOCYNTH.—Remains very firm. Business has been done during the week privately at 1s. per lb. for good *Spanish* colocynth, showing a steady rate, whilst good *Turkey* apple is held for 2s. 9d. per lb.

CREAM OF TARTAR.—On the spot the market is weakening, although there is no great change in the quotations. For best white *French* crystals, 106s. would now be accepted, whilst for *German* brands of powder 108s. to 110s. is quoted. For shipment holders are firm, and 102s. *f.o.b.* is still quoted from Bordeaux, and 101s. *f.o.b.* from Barcelona.

GALLS.—*Persian* kinds are very quiet, with *blues* quoted nominally at 53s. to 55s.; *greens*, of which there are little offering, at 42s. 6d. to 47s. 6d., and *whites* at 42s. to 45s. per cwt. *Chinese* galls are steady. Business has been done for arrival during the week at 57s. to 57s. 6d. per cwt., *c.i.f.*, February to April shipment, whilst the spot quotation is 64s.

GENTIAN ROOT.—Very firm. Four bales of fair quality root bought in at the last

sales have since been sold at 22s. per cwt., and there are now no sellers on the spot under 22s. 6d. The shipment quotation for *French* root has also advanced, and 20s., *f.o.b.*, is now asked. *Powder* offers at 18s. on the spot.

GINGER.—Steady. At the sales on Wednesday some of the new crop *Cochin* root was offered, but only a moderate amount was sold. Small rough cut realised 42s. 6d., medium half-cut, 55s., and medium half-cut, 62s. per cwt. *Bengal* was bought in at 17s. 6d. per cwt.

GLYCERINE.—The market is tending easier. *Schering's* brand of 1.260 double distilled glycerin still quotes at 75s. per cwt., but second-hand holders of *English* and *German* glycerine offer at 68s. to 70s. per cwt.

GOLDEN SEAL ROOT.—A fair inquiry is shown for this article privately, and 1s. per lb. is the current quotation.

INSECT FLOWERS.—In the London market business is quiet in this article, but a good demand is reported from Trieste, and stocks are said to have been reduced to very small dimensions. The current quotations are as follows:—Closed wild flowers, 132s. 6d.; cultivated closed ditto, 116s.; half closed, 76s. to 95s.; and open 66s. per cwt., all *c.i.f.* terms.

JALAP.—One of the holders has cleared out nearly all his stock of fair *Vera Cruz* root at 8½d. per lb., with the exception of a parcel for which his strict limit is 9d. per lb.

MASTIC (GUM).—The market in this article is somewhat overstocked at present, and 1s. 8d. per lb. would be accepted on the spot for good bright drop.

OIL (COD-LIVER).—Through the courtesy of Messrs. Jenkin and Phillips, 21, Mincing Lane, we have received a copy of the official report, which was issued on the 8th inst. From this we learn that the catch up to date amounts to 160,000 cod fish, equivalent to 200 hectolitres liver, and 18 hectolitres of cod-liver oil, whilst the fineness of the livers ranges from 570 to 700 per hectolitre. From this it will be seen that the present season's catch in the Lofoten district is the poorest on record for many years past, and when it is considered that the fishing in the Vesteraalen and Senjen districts is now practically finished, the dismal prospect in store will be realised, since it has been a complete failure. A cablegram received to-day just as we go to press states that there is nothing whatever doing in the Lofoten district, from which it may be concluded that no fresh arrivals of fish have arrived at the factories. The nearest price for new oil to arrive is 220s. per barrel of 25 gallons *c.i.f.* terms, whilst 1895 oil of good quality is quoted at 180s., and *Newfoundland* at 5s. 6d. per gallon.

OILS (ESSENTIAL).—Reports from *China* state that there is still no good quality *Cassia* oil available, whilst *Star anise* oil is held for an extremely high price. On the spot a large business has been done in *Star anise* oil at 10s. 1½d. per lb. during the week, and some holders now ask 10s. 3d. per lb. *Cassia* oil is unchanged. *Peppermint* oils have an easier tendency generally, and during the week 6s. 1½d. has been accepted on the spot for *dementholised* oil. The market in *Italian* oils is very active,

and prices have again advanced. *Lemon* is quoted at 3s. 9d. to 5s. 6d. per lb., *f.o.b.* *Sweet Orange* at 6s. 10d. to 8s. 6d., and *Bergamot* at 7s. 5d. to 9s. per lb., all *f.o.b.* Messina according to brand.

OILS (FIXED) AND SPIRITS.—*Castor* continues to harden in price, and best quality *Italian* oil is now quoted at 31s. per cwt. *c.i.f.* terms. *Marsilles* medicinal oil is very firm at 3½d. to 3¾d. per lb. in tins (packed in cases), whilst *Calcutta* is quoted at 2¾d. to 2½d. on the spot for firsts, and 2½d. to 2¼d. for seconds. *Cotton*: The closing price shows a further weakening on last week's quotation, but the market is now firmer. *Refined* oil offers at £17 to £17 5s. on the spot according to brand and package. *Cocoonut*: The market is firm, *Ceylon* and *Cochin* oils being quoted at £22 15s. and £26 15s. respectively on the spot. *Linseed*: The market continues to weaken and oil in barrels now offers at £19 15s. to £19 17s. 6d. on the spot. *Rape*: Quiet but fairly steady, *refined* oil being returned at £25 to £25 10s. on the spot. *Olive*: *Tunis* and *Spanish* are both quoted at £31 to £32. *Turpentine* has declined still further on last week's quotation, and *American* spirit is now quoted at 20s. 3d. on the spot. *Petroleum*: Easier. *American* is quoted at 5½d. to 5¾d.: *Water white* at 7½d. to 7¾d., and *Russian* at 5½d. per gallon on the spot. *Petroleum spirit*: *American*, 9d. to 9¼d.; *deodorised*, 9¼d. to 9¾d. per gallon.

OIL (MYRBANE)—Very firm at 6¾d. per lb.

OPIUM.—The London market remains steady, with a fair business doing in *druggists'* kinds. The current quotations are:—*Soft shipping*, 11s. 6d. to 12s. 6d.; *Smyrna*, 8s. to 8s. 6d.; *Constantinople*, 8s. to 9s., and *druggists' seconds* at 7s. 6d. to 8s. per lb. *Persian* opium is firm, the arrivals of the new crop being held for 13s. to 13s. 3d. per lb. for fine *bricks*. Business has been done at the former price during the week.

ORRIS ROOT.—The market is firm, without much inquiry at present. Best selected *Florentine* root quotes at 69s. per cwt., *c.i.f.* terms, whilst on the spot it offers at 75s., and good quality *Veronese* (which is extremely scarce) at 69s. per cwt.

POTASH COMPOUNDS.—*Chlorate*: Very firm, and 4½d. is now the lowest manufacturers price in London. *Pemanganate*: Likely to advance in price. Holders of small *crystals* now ask 60s. to 65s. per cwt., whilst 65s. to 70s. is quoted for *large*. *Cyanide*: 98 per cent. quotes at 1s. 6d. per lb. *Prussiate*: 7½d. to 8d. per lb. on the spot, according to brand. *Bichromate*: 4½d. per lb. *Salt-petre*, 21s. 9d. to 22s. 9d. per cwt. for *British* refined; 17s. 6d. for *Bengal*: 3½ to 5 per cent. *Sulphate*: £9 7s. 6d. to £10 per ton.

QUICKSILVER.—On the 7th inst. the importers lowered the price 5s. per bottle, from £7 7s. 6d. to £7 2s. 6d., and a large business has been done at the latter figure. Second-hand holders offer at £7 2s. This reduction has not as yet affected the price of *Mercurials*.

QUININE SULPHATE.—The market is quite devoid of interest at present. The best *German* makes quote at 1s. 1¼d. on the spot, but the amount of business done has been merely nominal.

SCAMMONY.—Since the drug auctions business has been done in *Turkish* virgin resin at 30s. per lb., and 31s. to 32s. is now the general "asking" price. Of *Skillippe* there is little or none on the spot. *Root* is held for 45s. to 50s. per cwt.

SENEGA ROOT—Very slow of sale. For good quality root 1s. 3d. per lb. is the general spot price.

SHELLAC.—Privately the market is quiet, but steady, and there have been sales of *TN Orange* at 93s., and good free *AC Garnet* at 88s. on the spot. The arrival market is also firm, with a small business done in *Second Orange* at 83s. *c.i.f.* for April to June shipment. At the weekly sales steady prices were paid generally, but the market was somewhat irregular for *Second Orange*, whilst *Garnet* was rather easier. The prices paid were as follows:—*Second Orange*, good pale *SSO*, 99s. to 102s.; fair red *TN*, 90s. to 91s.; dark ditto, 86s.; blocky red-dish, 83s. to 84s.; cakey, 78s. to 79s.; and broken livery, 77s. to 79s. per cwt. *Garnet* sold at 84s. to 87s. for cakey *AC*, and 76s. to 77s. for blocky. *Button*, *BL1* realised 95s.; *BL2*, 77s. to 80s.; and *BL3*, 71s. per cwt.

SPERMACETI—Continues to become easier in price, and refined *American* can now be bought at 1s. 6d. per lb. on the spot.

SPICES (VARIOUS).—*Cloves*: Very firmly held. In auction, all the *Zanzibar* were bought in, dark to good at 1½d. to 2¼d. per lb. *Penang* sold at 10d. for fine bold picked, and very fine ditto at 11d. to 11¼d. *Cassia lignea*: A lot of sea-damaged bark was bought in at the sales, as well as broken quill at 18s. to 23s., but 16s. was paid for a parcel of inferior quality offered without reserve. *Pimento* remains quiet, but steady. In auction the small supply offered was bought in at 2¾d. per lb. *Capsicums*: One hundred bales of *Bombay* off-stalk were bought in. *Chillies*: Ordinary to medium brownish *Zanzibar* was withdrawn at 31s. to 35s. per cwt. *White pepper*: Slow of sale. In auction *Penang* were bought in at 3d., and good *Singapore* at 4½d., whilst fine bold ditto realised 4¾d. to 4¾d. per lb. *Pepper*: A small proportion only was sold in auction, including *Penang* at 2½d., whilst *Trang* were bought in at 2¾d., and good *Tellicherry* at 2¾d. per lb. *Arrowroot* remains slow of sale. Fine *St. Vincent* sold at 4¼d. per lb., the remainder being bought in at 1½d. to 3¼d. per lb.

SOY.—Fair *China* offers at 1s. to 1s. 1d. per gallon on the spot.

SUGAR OF MILK.—The position is unchanged. Holders of good brands of *crystals* ask 87s. 6d., and of powder, 85s. per cwt. on the spot.

TURMERIC—Remains slow of sale. At the sales on Tuesday, the majority offered was bought in including fair to good bright *Madras* finger at 7s. 6d. to 8s. 6d., and good *Cochin* bulbs at 6s. per cwt. Some small sales of damaged finger were made at 3s. to 5s. 9d. per cwt., whilst fair *Bengal* was bought in at 9s. per cwt.

TURPENTINE.—The current quotation for *Venice* is 65s. per cwt., whilst *Chian* offers at 10s. per lb.

WAX (JAPAN)—Very firm. During the week there have been sales privately of good pale *squares* on the spot at 34s. 6d., whilst 37s. 6d. *c.i.f.* is the nominal quotation for arrival.

NEWCASTLE CHEMICAL REPORT.

[From our own Correspondent.]

FEBRUARY 11, 1896.

The General Prices are as follows:—**CAUSTIC SODA**: 70 per cent., £7 10s. to £7 15s.; same 76 to 77 per cent., £9 5s. **SODA CRYSTALS**: In bags, 42s. 6d. to 45s. **BLEACHING POWDER**: In softwood casks, £7 5s.; hardwood, £7 10s. **SULPHUR**: £3 17s. 6d. to £4. **SALTCAKE**: 27s. 6d. **SODA ASH**: 48 to 50 per cent., £3 15s. to £4 15s. **ALKALI**: 48 to 52 per cent., £4 10s. to £5. **LUMP ALUM**: £5 10s. **HYPOSULPHITE**: 5 to 7 cwt. casks, £6 5s.; kegs, 1 cwt., £7. **PITCH**: 35s. 6d. to 36s. **SULPHATE OF AMMONIA**: Leith, £8 7s. 6d. to £8 8s. 9d. **SOUTH DURHAM SALT**: *F.o.b.*, Tees, 9s. 6d. per ton. January shipments of chemicals from Tyne, and compared with the same period for 1895, are thus:—

	1895.	1896.	Increase.	Decrease.
	Tons.	Tons.	Tons.	Tons.
Alkali and soda ash	623	147	—	476
Bleaching powder..	510	773	263	—
Caustic soda	510	585	75	—
Manure	524	1829	1305	—
Soda crystals.....	253	632	379	—
Sulphate of soda ...	425	965	540	—
Sulphur	745	454	—	291
Other chemicals ...	589	1098	509	—
	4179	6483	2304	—

LIVERPOOL MARKET REPORT.

[From our own Correspondent.]

FEBRUARY 12, 1896.

LINSEED has declined 6d. to 1s. per 416 lbs. **HEMPSEED**: *Chilian* has been sold at 29s. per 336 lbs. **CANARY SEED** is stagnant; 140 bags of *Turkish* brought 32s. 6d. per 464 lbs. **CASTOR SEED**: 45 bags *Brazilian* sold *ex quay* for 7s. 3d. per cwt. **KOLA NUTS**: 70 bags dried sold at 4d. to 6¾d. per lb. **BEESWAX**: 8 sacks of *Chilian* have been disposed of at £8 per cwt.; 12 bales *Gambia* at £7, and small lots of *Italian* at £6 12s. 6d. **GUINEA GRAINS**: 15 bags sold at 16s. per cwt. **CASTOR OIL** is firm. *French*, 1st pressure, held for 27d. per lb.; *Madras*, 2¾d. per lb.; good seconds, *Calcutta*, 2½d. to 2½d. **OLIVE OIL** is advancing. *Spanish* oils are rising in price; *Seville* closed at £29 to £30 per tun; *Malaga*, £29 10s. to £30 10s.; *Candia*, £31 per tun. **LINSEED OIL**: Remains at 20s. 9d. to 21s. per cwt. in export casks for *Liverpool* makes. **COTTONSEED OIL**: 17s. 6d. to 17s. 9d. per cwt. **SPIRIT OF TURPENTINE**: In fair request at 21s. 6d. per cwt. **PETROLEUM**: *Russian*, 6¾d. per gallon; *American*, 6¾d. to 7¾d. **SAL AMMONIAC**: 39s. per cwt.; seconds, 37s. **CARBONATE OF AMMONIA**: 3½d. to 3½d. per lb. **SULPHATE OF AMMONIA**: £8 12s. 6d. to £8 15s. for good grey on the spot. **BLEACHING POWDER**: Hard, *f.o.b.*, £7 to £7 5s.; soft, £7. **COPPERAS**: *Lancashire*, 38s.; *Welsh*, 36s. per ton. **SULPHATE OF COPPER**: £16 10s. to £17 per ton. **SALTPETRE**: 23s. 6d., kegs; 23s., barrels per cwt. **CHLORATE OF POTASH**: 4½d. per lb. **BICHROMATE OF POTASH**: 4½d. per lb. **PRUSSATE OF POTASH**: 8d. per lb. **CREAM OF TARTAR**: Price asked here for finest white is still 105s. per cwt. with but little offering. **CAUSTIC SODA**: 70 per cent., £7 10s.; 60 per cent., £6 10s. per ton. **SODA CRYSTALS**: £2 7s. 6d. to £2 10s. per ton.

EXCHANGE.

Readers requiring, or having for disposal, books, appliances, shop-fittings, and other matters more or less directly connected with the business of pharmacy, may intimate the fact free of cost. The notices must not include more than thirty words each, and should be written on post-cards, addressed "Editorial Department, 17, Bloomsbury Square, London, W.C."

* * The Editor reserves the right to omit any notice he thinks necessary.

OFFERED.

Wills' 'Advanced Materia Medica,' with plates, quite new, 6s 6d.—Frank Young, 493, Seven Sisters Road, South Tottenham, N.

What offers, 20 x 4 oz. bots., Howard's quinae. etc., in good condition.—H. Rose, St. Mary's Hospital.

'Pharmaceutical Journal and Transactions,' edited by J. Bell, vols. 1 to 15 inclusive, half calf, 1842-56, 30s. only.—Davis, "Chestnuts," Gordon Hill, Enfield.

Wills' 'Analysis,' 1s. 6d.; 'Materia Medica,' 3s 6d.; 'Flowers and Fruits,' 2s. 6d.; Holmes' 'Botanical Note-book,' 2s.—Burge, Chemist, Fernhead Road, W.

What offers for 'Pharmacographia.' Thorpe's 'Quantitative Analysis,' Thorpe's 'Non Metals,' Roscoe's 'Lessons in Elementary Chemistry.' All good as new.—W. S. Gill, Chemist, Southport

Reynolds and Branson's patent long-focus camera, 7½ by 5, with three double backs, cost £7 10s.; also good tripod, perfect condition, take £3.—Booth, 72, Roe Lane, Southport.

Henfrey's 'Elementary Course of Structural, Physiological, and Systematic Botany,' fourth edition, quite new, never been used. Any reasonable offer.—J. G. N., 27, Valmar Road, Camberwell, S.E.

Beck's "Star" Microscope, with eye-piece, ¼ inch and 1 inch object glasses, stage condenser, turntable, glass slides and circles, in box, complete, quite new, £3.—E. Norman, 35, High Street, Weston-super-Mare.

Set of Oertling's Grain Weights, from 1000 grs. to 1/100 gr., in mahogany case, cost 35s., new; will take half.—W., 20, Lynn Street, West Hartlepool.

Vol. I. Braithwaite's 'British Moss Flora,' Prantl and Vines' 'Botany,' 3rd edition. Both in excellent condition. What offers?—L. Turner, Dumfries.

Twelve-cell Bichromate Battery, brass screw connections, winding arrangement for lifting plates from cells. Nearly new (cost £3 10s.). take £1, or exchange for good lens (¼ plate).—G. Drayton, Bridport.

Whitla's 'Pharmacy,' Prantl and Vines' 'Botany,' Fisher's 'Elementary Chemistry,' latest edition, B.P. with notes and appendix, 1890, all equal to new. What offers?—Bastow, Boulevard Pharmacy, Weston-super-Mare.

Balance in splendid condition, with perfect set of weights, etc., cost £35, will take £25.—Tinctura, 15, Market Street, Ulverston.

Martindale's 'Extra Pharmacopœia,' fifth edition, 2s. 6d., post free.—Whyte, Chemist, Arbroath.

Gray's 'Operative Chemist,' 1831, scarce work, 4s. 6d.; Gray's 'Supplement,' incomplete, also scarce, 5s.; Ure's 'Chemistry,' 1831, 2s. 6d.; Semple's 'Materia Medica,' 3 vols, 6s. All free.—Davies, 33, Eglinton Road, Bow.

Thermopile and Galvanometer, cost over £6, take £2 15s., or exchange photographic apparatus.—J. Williamson, 144, Church Road, Hove, Brighton.

Lindley's 'School Botany'; Bentley's, third edition; Proctor's 'Pharmacy'; Hargreave's 'Venereal Diseases'; Quain's 'Dictionary of Medicines,' 6 vols., cost 45s., gilt edges. Cash offers.—Chemist, 85, Unthanks Road, Norwich.

Surplus stock, 4 ozs. iodoform, 3s. 6d.; 4 ozs. quinine, 4s.; 2 dozen Cockles' pills, at 8s. 4d.; 7-pound parcels patass. permang., at 7d., car. forward. Cash with order.—Eastman, Forest Lane, Stratford.

Handsome Complete Chemist's Fixtures, nearly new, mahogany, mirrors, plate glass; everything necessary to commence; sell half Maw's catalogue prices. Also Hall's Typewriter, perfect condition; cash or exchange.—Bentley, Chemist, Gooles.

'Pharmaceutical Journal,' January, 1842, to June, 1843, well bound, good condition, with frontispiece, portrait of William Allen, first President; offers, cash or book exchange.—J., 30, Little South Street, Wisbech.

Wills' 'Chemistry,' 'Prescripta,' 'Autograph Prescriptions,' 'Volumetric Analysis,' 'Habitat Map,' Prantl and Vines' 'Botany,' what offers.—S., 13, Manley Street, Scunthorpe, Doncaster.

B.P., Attfield's 'Green's 'Botany' (vol. 1); Wills' 'Analysis,' 'Materia Medica,' 'Pharmacy'; Selecta à Prescriptis'; Wootton's 'Physics'; Turner's 'Organic'; Stirling's 'B.P. Strengths,' 25s.—14, Culcheth Lane, Newton Heath, Manchester.

Aitken's 'Medicine,' 2 vols.; Playfair's 'Midwifery,' 2 vols.; Erichsen's 'Surgery,' 2 vols., price for lot 1 guinea. A list sent on application to—Rawlings, Chemist, Torquay.

Two 4-gal. pear-shaped carboys, 15s. each; 1 specie jar as Maw's (with royal arms), height 24 inches, magnesia, £3.—D., 9, Boreham Road, Warminster.

Taylor on 'Poisons'; Thomé's 'Botany'; Ganot's 'Natural Philosophy'; Attfield's 'Chemistry.'—Dixon, 164, Aigburth Road, Liverpool.

Attfield's 'Chemistry' (good condition), 5s.; Remsen's 'Elements of Chemistry' (good condition), 1s. 6d.; Edmond's 'Elementary Botany' (good as new), 1s. 9d.; Newsholm's 'Hygiene' (good as new), 2s. 6d.—Rad. Rhei, 8, High Street, Windermere.

Surplus stock, Quicksilver, 2s. lb., carriage forward, cash with order.—Jinks, Chemist, Ironbridge, Salop.

Carboys for disposal. Five 2-gallon and two 1-gallon, cut stoppers, pear shape, any reasonable offer accepted to clear.—Apply Cullen, Chemist, Norwich.

What offers for 144 pairs of spectacles and eye-glasses? Good saleable condition, many pairs retail at 5s. and upwards. First reasonable offer has them.—Address Specs, 260, Upper Street, Islington.

WANTED.

Cheap Dispensing Scales; also Leathart's Hair-Dye, dark brown preferred; full price given for latter.—Cripps, Hayward's Heath.

Muter's 'Short Manual of Analysis,' last edition, in exchange for Remsen's 'Organic Chemistry,' last edition, unsoiled, or lowest cash price.—Donnan, Chemist, 56, Park Ridings, Hornsey, N.

Thorpe's 'Metals and Non-Metals,' Southall's 'Materia Medica,' Thomé's 'Structural Botany,' Ince's 'Grammar' and 'Art of Dispensing,' Cripps' 'Pharmacy,' 'B.P.' Latest editions and good condition.—Lurcock, 21, High Street, Sutton, Surrey.

A good balance, acting accurately to a tenth of a grain. Describe fully, and state lowest price to—Kemp, 254, Stretford Road, Manchester.

Bunte's (or similar) gas burette with 3-way tap, price to—Wm. Moore, 8, Montague Place, W.C.

Kelly's 'Directory of Chemists and Druggists,' state date of publication; Bent Front Tooth Brush Case; Clarke's Syphon Gas Stove; Ten Foot Dispensing Screen and Glass-Fronted Counter for underneath same.—Griffin, Chemist, Kidderminster.

TRADE NOTES AND NEWS.

THE LIQUOR CARNIS Co, yielding to the desire of a large number of chemists in the South of France, has opened a Paris dépôt where all the firm's goods can now be obtained at advantageous prices. Messrs. C. Buchet and Co., Pharmacie Central de France, Paris, are now the firm's appointed wholesale agents.

RUDDOLPH DRUG COMPANY, LIMITED.—Registered January 20, by W. H. Sargeant, 28, Budge Row, E.C., with a capital of £5000 in £10 shares. Object, to enter into an agreement with W. H. Sandwith, of Bracknell, Berks, for the acquisition of the business of the Ruddolph Laboratory Company, Limited, now carried on at London Road, Reading, and to develop and extend the same. The directors are John F. Sargeant, John H. Knowles, and W. H. Sandwith. Qualification, 250 shares. Remuneration to be fixed by the company.

WOMAN POISONED AT GOUROCK.—A young woman named Margaret Dunbar, employed as a domestic servant at Craigard, Gourrock, died on Sunday night from the effects of laudanum poisoning. On Friday night she took laudanum to alleviate pain, and the dose being excessive, she never rallied from its effects.

DIARY OF THE WEEK.

Secretaries of Societies are requested to send notices of forthcoming meetings not later than Wednesday in the previous week.

SUNDAY, FEBRUARY 16.

LIVERPOOL SUNDAY SOCIETY, at 3 p.m.
"The Evolution of the British Isles," by R. D. Roberts.

MONDAY, FEBRUARY 17.

IMPERIAL INSTITUTE, at 8.30 p.m.
"The New British Route to the Pacific," by Colonel J. Harris.

TUESDAY, FEBRUARY 18.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"The External Covering of Plants and Animals: its Structure and Functions" by Professor C. Stewart.

SOCIETY OF ARTS (FOREIGN AND COLONIAL SECTION), at 8 p.m.

"Recent Developments in Electrical Enterprise in America," by G. F. Parshall.

WEDNESDAY, FEBRUARY 19.

SOCIETY OF ARTS, at 8 p.m.
"Report of the Royal Commission on Secondary Education," by H. C. Macan.

WESTERN CHEMISTS' ASSOCIATION, at 9 p.m.
Discussion on the British Pharmacopœia as a Standard under the Foods and Drugs Acts, to be opened by the President.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION, at 9 p.m.

"Coal in Relation to Pharmacy" (II.), by H. Jessop.

BRIGHTON JUNIOR ASSOCIATION OF PHARMACY, at 9 p.m.
Social Meeting.

ROYAL MICROSCOPICAL SOCIETY, at 8 p.m.

"On the Male of *Stephanoceros eichhornii*" by F. R. Dixon Nuttall.

"New Freshwater Algae," by W. and G. S. West. THURSDAY, FEBRUARY 20.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.

"Some Aspects of Modern Botany" (II.), by H. M. Ward.

CHEMICAL SOCIETY, at 8 p.m.

"Origin of Colour; the Yellow 2 : 3 Hydroxynaphthoic Acid"; "Note on Etherification."

"The Relation of Pinene to Citrene," by Professor Armstrong.

LINNEAN SOCIETY OF LONDON, at 8 p.m.

"Discoveries Resulting from the Division of a *Prothallus* of a Variety of *Scolopendrium vulgare*," by E. J. Lowe.

LIVERPOOL PHARMACEUTICAL STUDENTS' SOCIETY, at 8.30 p.m.

Exhibition of New Suppository Mould by the President.

"Facts," by Dr. Larkin.

LIVERPOOL CHEMISTS' ASSOCIATION, at 7 p.m.

"The Bacterial Analysis of Water," by Professor Robert Boyce.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 8.30 p.m.

"Filtration," by W. Manger.

FRIDAY, FEBRUARY 21.

ROYAL INSTITUTION OF GREAT BRITAIN, at 9 p.m.

"Past, Present, and Future Water Supply of London," by E. Frankland.

ABERDEEN JUNIOR CHEMISTS' ASSOCIATION, at 9.30 p.m.

Short Papers by A. Deans.

EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION, at 9.15 p.m.

Open Meeting—Conducted by W. B. Cowie.

SATURDAY, FEBRUARY 22.

PHARMACEUTICAL FOOTBALL CLUB v. Polytechnic, at Wormholt Farm, Shepherd's Bush.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.

"Light," by Lord Rayleigh.

SUPPLEMENT

TO THE

PHARMACEUTICAL JOURNAL.

MISCELLANEOUS NEWS.

PARAFFIN IN WHITE WAX.—Mr. Curtis Bennett has decided, in a case heard at the Marylebone Police Court, that the sale of white wax containing 38 per cent. of paraffin was to the prejudice of the purchaser, and the defendant was therefore fined forty shillings, with two guineas costs. The magistrate found as a fact that there are two distinct articles obtainable—white wax and a commercial wax—but refused to state a case for appeal.

WESTMINSTER COLLEGE OF PHARMACY.—The annual gathering of Westminster College students took place at the Bridge House Hotel, on St. Valentine's Day, to celebrate the birthday of the founder of the College, Mr. G. S. V. Wills. A capital concert was given by the students, the character songs being especially well rendered and enjoyed. In the course of the evening handsome presentations were made to the Principals—Mr. G. S. V. Wills and Mr. H. Wootton, and to the Secretary, Mr. E. Walden. Musical honours were rendered, and "Success to the College" drunk, with much enthusiasm. A very pleasant and successful evening was closed by the singing of "Auld lang Syne," Welsh and English National Anthems.

DANCE OF THE GLASGOW CHEMISTS.—Under the auspices of the Glasgow and West of Scotland Pharmaceutical Association, the Glasgow chemists held their annual dance in the Windsor Hotel, St. Vincent Street, on the evening of Thursday of last week. There was an attendance of about eighty couples, including the leading members of the Association and their friends. Mr. W. L. Currie, President, bade the guests welcome heartily, and expressed the hope that they would enjoy themselves. Dancing was gone into with spirit and zest, and the fine floor of the ballroom, which is the finest in Glasgow, together with up-to-date music, beautifully played by Herr Iff's band, added to the pleasures of the dance. The programme was well arranged, and the gathering broke up in the early hours after a very enjoyable night.

WILLIAM JAMES BUTCHER, son of G. S. Butcher, Chemist, Salford, was one of the successful candidates at the Preliminary scientific (M.B.) examination of the University of London, recently held.

SUICIDE BY STRYCHNINE.—The suicide by means of strychnine of the Mayor of Lourmel, Algeria, is reported. The deceased had been arrested the previous evening on a serious charge, and during the night the attention of his gaolers was attracted by the groaning of the prisoner,

when it was discovered that he had taken some poison which he possessed for the purpose of destroying noxious animals.

DEATH OF A WELL-KNOWN EXETER CHEMIST.—Chemists in the Exeter district will have heard with deep regret of the death at Branscombe, of Mr. George Cooper, who for many years carried on an extensive business as a wholesale chemist and stationer at Exeter. The deceased went to Exeter about sixty years ago as traveller for the late Mr. Matthews of Fore Street, with whom he eventually entered into partnership. He subsequently became sole proprietor of the business, which he carried on until his establishment was destroyed by fire some twenty years ago. He then sold his drug business and afterwards his stationery business, and retired to live at Branscombe. The deceased was in his 85th year, and was twice married, but his son died in infancy. He took an active part in public life and filled many offices. He represented St. David's ward in the City Council in succession to the late Mr. Peter Lisson for many years, and was appointed an Alderman on the retirement of Mr. Edwin Force. In the first year of the mayoralty of Mr. R. T. Head—in 1864-5—he served the office of Sheriff of the City. Mr. Cooper continued to be a member of the Council until 1880, when he retired from public life, and just before he left the city in 1882, he was presented on his 71st birthday with a diamond ring by many friends, he being held in high respect and esteem.

R. B. WILD, M.D., M.Sc., assistant lecturer in pharmacology and therapeutics in the Owens College, Manchester, has been awarded the Parkin Prize of £100 of the Royal College of Physicians, Edinburgh, for an essay upon "Charcoal as a Therapeutic Agent." This prize is awarded once every three years.

BURNED TO DEATH BY SULPHURIC ACID.—On Monday, 17th inst., David Ritchie, aged 24, died in the Glasgow Royal Infirmary from scalding injuries received by falling into a vat of boiling sulphuric acid at Shawfield Chemical Works.

SUICIDE BY PRUSSIC ACID.—On Monday night, February 17, Peter Gentleman, jobbing butcher and cattle drover, Falkirk, committed suicide by swallowing a dose of prussic acid. He obtained it from a chemist on the assumption that it was for poisoning a dog. It is understood that Gentleman had been drinking heavily for some time past. He was 40 years of age and unmarried.—*Edinburgh Evening News.*

THE LIMITED COMPANY verdict last week is naturally the chief topic of discussion in Irish pharmaceutical circles, and great dissatisfaction is expressed with the decision. It is generally felt that the learned judges did not give the case that consideration which the importance of the question involved demanded, and very great disappointment is felt that there is no appeal to a higher Court. It is hoped that the Council may devise some means by which what is considered the severest blow that Irish pharmacy has ever received may be mitigated.

MEDICAL SPECIALTIES IN PERU.—The Peruvian Customs House places under this heading such pharmaceutical specialties as Savory's pancreatic emulsion, Guyot's liquid tar, special cod-liver oil, etc. The duty is uniformly fixed at 45 per cent., excepting in the case of surgical and orthopaedic instruments, which pay 10 per cent. These goods are chiefly of French origin, England and Germany doing but very little, relatively speaking. The imports from Belgium amount to a value of 993 sols.—*Belgian Consul-General at Santiago de Chili, July 3, 1895.*

DR. OLIVER WENDELL HOLMES.—"I shall never forget that breakfast in the historical house in which the famous breakfasts had taken place, and where so many good things had been said, as they appear in the pages of the *Autocrat*. Of the meal itself there were almost as many dishes as one could have procured at that Piccadilly resort of gourmets, Hatchett's, when Pratti is on his mettle. It was not a mere tea and coffee affair, with rounds of toast, the inevitable egg, and strips of bacon; but there were solids, like cold chicken, veal patties, liver on toast, game, and Cumberland ham, with choice wines and acceptable Apollinaris Water, which capital diluent, by the way, is as popular a table tippie in the United States as it is in Europe. It was a veritable *embarras de richesse*. The Man of Letters was determined that his guests should have a variety to choose from."—*"Dinners with Celebrities,"* by Howard Paul.

CARBOLIC ACID FOR HOP BITTERS.—On February 17, Robert Fielding, labourer, Goodwin Street, Bolton, got up to go to work, and before leaving the house picked up what he thought was a bottle of hop bitters and drank part of the contents. The liquid proved to be carbolic acid. Fielding at once aroused his wife, and then ran a quarter of a mile to the nearest doctor. He fell exhausted in the surgery, and died soon afterwards, after acute suffering.

NEWCASTLE CHEMICAL REPORT.

[From our own Correspondent.]

FEBRUARY 18, 1896.

This market on the whole remains on the quiet side. Business is more of a prospective nature, inquiries being preliminary to the usual contracting for the Baltic shipping season. Prices are:—BLEACHING POWDER: £6 5s. to £7 5s., according to casks, packages, and markets. SODA CRYSTALS: 37s. to 45s. CAUSTIC SODA: 76 to 77 per cent., £9 5s.; for 70 per cent., £7 15s. CHLORATE OF POTASH: 5d. per lb. RECOVERED SULPHUR: £3 17s. 6d. SODA ASH: 48 per cent., £3 15s. HYPOSULPHITE OF SODA: 5 to 7 cwt., £6 5s.. SOUTH DURHAM SALT: 9s. 6d. per ton, *F.o.b.*, Tees.

MARKET REPORT.

[Specially compiled for the *Pharmaceutical Journal*.]

[The quotations here given are in all cases the lowest net cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.]

LONDON, FEBRUARY 20, 1896.

Few changes have occurred in the Chemical Market since our last report. Cream of tartar remains neglected, but without any great change in price. Citric and tartaric acids are firm at unchanged rates. Arsenic remains scarce and dear, whilst sulphate of copper is dearer for some brands. The principal change in the week has been in the price of carbolic acid, which both for crystal and crude acid has advanced considerably. There is said to be a considerable amount of business being done on foreign account. Quinine is neglected, whilst there is no change to report in the other alkaloids. In the Drug Market an improved inquiry generally was shown at the drug sales to-day. The principal points of interest are as follows:—Tinevelly senna, insect flowers, and cardamoms seeds are dearer; whilst ipecacuanha, sarsaparilla, gum benjamin, and rhubarb are fully steady. Full details will be found below:—

ACACIA (GUM).—*Trieste* gum was quite neglected in auction, all being bought in at prices ranging from £7 10s. for medium grey down to £5 for ordinary yellowish, whilst bold palish and mixed grey were withdrawn at £9 10s. to £10 15s. respectively. Of *Soudan* sorts, ten bales of medium mixed gum from Aden sold without reserve at 50s., whilst 27s. was accepted for seven bags of ordinary small sorts.

ACID, CARBOLIC.—This article continues to advance steady in price in consequence of a brisk demand, mostly on foreign account. The current quotations are now as follows:—*Crystals*, 34° to 35° C., 7½d.; 39° to 40° C., 8½d.; 39° to 40° C. (*detached crystals*), 9½d. per lb. *Crude* is also about 3d. dearer, 60 per cent. being now quoted at 2s. 3d. and 75 at 2s. 7d. per gallon. *Liquefied* and *cresylic* are unchanged at 1s. 1d. and 11d. respectively per gallon.

ALOES.—*Cape* was in large supply, and steady prices were paid, fair to good bright hard, being disposed of at 22s. to 22s. 6d.: ordinary quality, rather drossy at 21s. and drossy mixed with sand at 14s. per cwt. *Curacoa* was largely offered, and a fair amount was sold at 38s. to 41s. for good livery, whilst *gourds* realised prices ranging from 32s. for good brown. 18s. for ordinary capey, down to 14s. and 10s. for drossy qualities.

AMMONIACUM (GUM). Two cases of fair block with a few loose almonds sold without reserve at 30s. per cwt., whilst a parcel of part blocky drop was bought in at 50s. per cwt.

ASAFOETIDA (GUM)—A large supply was offered to-day, but the inquiry was somewhat limited. For good mixed greyish and pinky block 54s. was paid, whilst about 55 cases of fair soft block, mixed with straw, sold at 29s. to 33s. per cwt.

BENZOIN (GUM)—Was in plentiful supply to-day, a total of 361 cases being offered. *Siam* gum was represented by some nice parcels, of which a case of good pale loose almonds sold at £23 10s., whilst small pale drop gum, part loose and part in block, realised £8. £10 10s. was the buying-in price of bright brown almondy block, and 60s. of dark siftings in block. *Sumatra* gum was mostly bought in, but £8 17s. 6d. was paid for 8 cases of fine almondy seconds, evenly packed throughout, and £8 12s. 6d. for good ditto, also well packed. Fair seconds were all bought in at from £6 10s. to £7 15s., according to packing. *Penang*: Three cases of old break glassy gum sold at 70s. per cwt. *Palembang* gum was all bought in at 33s. to 37s. 6d. for fair seconds in tins.

CALUMBA ROOT.—Rather easier. To-day 8s. 6d. was accepted, subject to approval, for a parcel of 155 bags of ordinary dark roots, imported *via* Hamburg.

CAMPHOR (CRUDE).—At to-day's sales 49 cases of *Chinese* camphor sold at 165s. per cwt.

CANNABIS INDICA.—It was quite a novelty to find any of this article sold in auction to-day, when 160 robbins were offered, about two-thirds sold at 2½d. per lb. for green tops.

CANTHARIDES—Remain very slow of sale in auction. To-day several parcels of *Chinese* flies were bought in at 1s. per lb. The new crop of *Russian* cantharides offers at 2s. 11d. per lb. *c.i.f.* terms.

CARDAMOMS—In moderate supply, but selling with good demand at full rates to dearer rates. The following prices were paid:—*Ceylon - Mysore*: Medium to bold pale plump, 2s. 10s. to 2s. 11d.; medium plump pale to yellow, 2s. 5s. to 2s. 7d.; small to medium yellowish, 2s. to 2s. 2d.; small brownish, 1s. 9d. to 1s. 10d.; small to medium partly brown and speckled, 1s. 6d. to 1s. 8d. *Ceylon - Mangalore*: Palish plump sold at 2s. 5d. *Seed* None was offered in auction. A case which had been catalogued was sold previously at 2s. 6d. per lb. Privately 2s. 9d. is asked for good quality.

CASCARILLA.—In auction 44s. was accepted for twelve bales of sound brown quill, whilst five barrels of siftings were bought in at 30s. per cwt.

CASSIA FISTULA.—In auction 17 bales of ordinary lean pods, part broken, imported *via* Hamburg, sold without reserve at 8s. to 8s. 6d. per cwt.

CINCHONA.—At the periodical sales held on Tuesday, the large supply of 2731 packages was offered, against 1761 at the January auction. The larger portion of the catalogue consisted of good quality *Officinalis* bark, which sold at fully steady rates. The average improvement unchanged at ½d. per lb. The prices paid were as follows:—*Ceylon*: *Succirubra*, fair to good stem chips and shavings, 1½d. to 1½d.; ditto root, 1½d.; ordinary to fair renewed chips and shavings, 1d. to 1½d. per lb. *Officinalis*: Ordinary stem chips, 1d.; good branch, 1½d. to 1½d.; good root, 1½d. to 1½d. per

lb. *Indian*: *Succirubra*, fair to good chips and shavings, 1½d. to 2½d.; reserved ditto, 2½d. to 2½d.; good quill, 3½d. to 4½d. *Officinalis*: Ordinary to fair stem chips and shavings, 1½d. to 2d.; good rich ditto, 2½d. to 3d.; fair to good root, 2d. to 2½d., and renewed chips and shavings, 1½d. to 3½d. per lb. *Java*: *Ledger* chips, 2½d. to 2½d.; branch, 2½d., and root, 1½d. to 2d. *South American*: Cultivated *Calisaya* quills, ordinary to fair, 2½d. to 3½d.; damaged, 1½d. to 3½d. per lb. The total exports from Ceylon from January 1 to 31 were: Season 1896, 30,000 lb.; 1895, no shipments; 1894, 310,000 lb.; and the total exports from Java from October 1 to January 31: Season 1895-96, 3,982,800; 1894-95, 2,787,624; 1893-94, 2,684,055 Amsterdam lb. At the drug sales a parcel of flat *Calisaya* bark sold at 5d. to 7d. per lb., according to condition, with bad damaged at 1d. *Succirubra* was bought in at 1s. 3d., *Maracaibo* at 9d., and flat *Carthagena* at 7d. to 10d. Twenty-six serons of *Loxa* bark from Payta sold at 10d. to 1s. per lb.

COCA LEAVES.—In auction 6 bales of *Bolivian* leaves imported *via* Hamburg, were bought in at 1s. 6d. per lb., whilst 5 bales of ordinary damaged quality sold without reserve at 7½d. per lb. There are no *Truxilo* leaves on the spot at present. The quotation for shipment is 1s. *c.i.f.*

COCCULUS INDIAN.—Twenty bags of this drug imported from Bombay were bought in to-day at 8s. 6d. per cwt.

COAL DISTILLATION PRODUCTS.—*Toluol* is again rather easier, being now quoted at 2s. 1d. per gallon. *Benzole* is steady at 1s. 10d. per gallon for 50 per cent., whilst 90 per cent. is returned at 2s. 2d. per gallon. *Creosote*: 2d. per gallon. *Crude Naphtha*: 30 per cent. at 120° C. quotes at 10d. per gallon. *Pitch*, 35s. per ton, *f.o.b.* *Tar* is quoted at 11s. per barrel for refined and 13s. for crude.

COLOCYNTH.—*Turkey* was in average supply to-day. Three casks of fair apple sold at 2s. 5d. per lb., whilst another parcel was bought in at 2s. 6d. *Almerian* were all bought in, sound at 1s. 6d., and damaged at 11d. down to 7d., according to condition.

DRAGON'S BLOOD—Was represented at to-day's sale by a total of 48 cases. For 12 cases of very seedy *Singapore* lump, fair colour, offered without reserve, £6 2s. 6d. to £6 5s. was paid, whilst four cases of very dull bricky saucers sold at £4 5s. Dark saucers were bought in at 110s. to 220s., reeds at £5, and very low block at 45s. per cwt.

ELEMI (GUM)—Very slow of sale in auction. To-day 25 cases of palish clean *Singapore* gum were bought in at 30s. per cwt.

ERGOT OF RYE—Quiet and difficult of sale, except when offered without reserve. In this instance 6½d. per lb. was accepted for 16 bags of thin *Russian*, whilst the same price was paid for 4 bags of *Spanish*, and 5d. for 12 bags of old re-sifted *Spanish*. Good *Spanish* of the new crop was bought in at 10d. per lb.

GALANGAL.—Twenty bags of good quality root from *Hong Kong* were bought in to-day at 22s. per cwt.

GALBANUM (GUM).—Nine bags containing 2 cwt. each were offered in auction. Four sold at 1s. per lb. for fair almondy block.

GAMBOGE.—A rather moderate supply, amounting to 24 cases, was offered to-day, and the majority of this found buyers. For fair mixed ricey *Singapore* block £9 to £9 10s. was paid, whilst good pickings realised £8 17s. 6d., and very soft mixed damaged block £7 15s. per cwt.

GINGER.—At the sales on Tuesday a moderate supply of *Cochin* root was offered, mostly of the new crop, which met with a good demand at firmer prices. Washed rough root sold at 38s. to 39s., small to medium part lean rough, 35s. 6d. to 36s.; small and shrivelled rough, 30s. to 30s. 6d.; whilst medium mature cut sold at 53s. to 53s. 6d. per cwt. *Jamaica* root was also in good demand, and the majority of the catalogue sold at an advance of 2s. 6d. to 7s. 6d., including medium small washed at 74s. 6d. to 80s. 6d. and ordinary brown scraped to low medium washed, 64s. to 69s. 6d., and lean dark *Rhatoon* at 57s. 6d. to 60s. 6d.

HONEY.—A good supply was shown, and a fair amount of business resulted. A parcel of *Californian* was bought in at 32s. 6d. per cwt. for nice clean ambery, whilst another lot, consisting of 25 cases, sold at 28s. to 28s. 6d. per cwt., subject to approval. *Australian* honey from Brisbane realised 20s., and brown *Jamaican*, 25s. *Honolulu* in tins was bought in at 26s. 6d., and fine pale *Chilian* at 42s. to 45s. per cwt.

INSECT POWDER.—There is no change to report in the position of this article in London, but the Trieste market is very active, and prices have advanced considerably owing to the smallness of the stocks. The present quotations are:—Closed wild flowers, 142s. 6d. to 145s.; cultivated closed ditto, 130s.; half closed, 87s. 6d.; and open, 80s. per cwt., all *c.i.f.* terms.

IPECACUANHA.—*Rio* (Brazilian) root is as represented in auction by about 60 bales, which sold at very irregular rates, but generally speaking was fully steady. The prices paid were as follows:—5s. 8d. for sound annulated root, 5s. 6d. for good sound fleshy, and 5s. 3d. to 5s. 5d. for fair to good slightly damaged annulated. *Carthagena* (Columbian) root sold at an advance in some cases, 4s. 1d. to 4s. 3d. being paid for good stout slightly damaged quality. A case of picked *Singapore* root was bought in at 5s. 10d. per lb.

KOLA NUTS.—An average supply was offered, but sales were made with difficulty. A few bags of dull *African* kolas sold at 7d. per lb., whilst fair bright *West Indians* were bought in at 1s. 2d. per lb.

LIME JUICE.—To-day 5 hogsheads of *Jamaica* juice were bought in at 1s. 3d. per gallon.

MYRRH (GUM).—Remains quite neglected, and the only lot sold was three bales of fair sorts, which fetched 55s. per cwt.

NUX VOMICA.—A comparatively large supply was offered to-day, but little found buyers. A parcel of 38 bags of *Bombay* seed sold at 6s. per cwt., whilst 2s. 6d. was accepted for a bag of sweepings.

OIL (COD-LIVER).—There is no change to report in the position of this article. The new season's *Lofoten* oil is quoted to arrive at 220s. per barrel of 25 gallons, *c.i.f.* terms. On the spot, business

has been done at 175s. in good quality 1895 oil, and 180s. is now the lowest price, whilst good *Newfoundland* oil offers at 6s. per gallon. At to-day's drug sales 10 casks of old yellow *Norwegian* oil sold at 155s. per barrel.

OILS (ESSENTIAL).—*Star Anise* oil is decidedly easier, and as little as 9s. 9d. per lb. has been accepted during the week, a fair business having been done at this rate. Some holders, however, have refused to sell under 10s. Two cases which were bought in at the sales at 10s. 6d. per lb. were disposed of subsequently at 9s. 9d. Business has been done in *H. G. Hotchkis'* brand of *Peppermint* oil at 9s. 9d. to 9s. 10½d. on the spot, which shows an easier market, whilst *dementholised* Japan oil offers at 5s. 6d. on the spot. At the drug sales two cases of *Japan* oil (Popp and Co's brand from Kobe), guaranteed to contain over 40 per cent. of menthol per lb. sold without reserve at 6s. to 6s. 3d. *Cajeput*: Ten baskets were bought in at 2s. 7d. per lb. *Lemon*: *Fisher's* brand was bought in at 2s. 6d. *Giovanni Hamnett's* brand of *Sweet Orange*, at 9s. per lb. after 5s. 3d. had been bid. A case of *Cocking's* *Orange* oil was bought in at the same figure. *Cinnamon*: Two cases of *Perera's* genuine bark oil sold at 7d. per oz. *Bergamot*: Four half coppers sold without reserve at 4s. 8d. per lb. *Eucalyptus* was in good demand in auction, 1s. 8d. to 1s. 9d. being paid for the *Eagle* brand, subject to approval, 1s. 6d. for the *P.B.* brand, and 10d. for the *Padlock* brand. In addition to the above, several lots of essential oils were bought in, including *Bay* oil at 10s. per lb., *Cedar wood* at 1s. 4d., and *Cassia* ("Yee Tack" brand, analysis 45 per cent. of aldehyde) at 6s. 6d. and ("Van Loong" brand, analysis 55 per cent. of aldehyde) at 7s. per lb. Privately *Cassia* oil is easier, and 80 to 85 per cent. oil offers at 9s. 6d., and 70 to 75 per cent. at 8s. 6d. to 9s. per lb. on the spot.

OILS (FIXED) AND SPIRITS.—*Castor* continues very firm, *Italian* oil, best quality, being quoted at 31s. per cwt., *c.i.f.* terms. *Cotton* has weakened still further since our last report, the closing price being a decline of 5s. to 10s. for refined oil, which is now quoted at £16 10s. to £17 on the spot. *Cocunut* is steady at unchanged rates, *Ceylon* and *Cochin* being quoted at £22 15s. to £26 15s. respectively on the spot. *Linseed* remains very quiet, and prices have declined about 2s. 6d., oil in barrels being now quoted at £19 12s. 6d. to £19 15s. on the spot. *Rape*: Barely steady. *Refined* oil is worth £24 15s. to £25 10s. on the spot. *Turpentine*: Slightly easier. *American* spirit is quoted at 20s. 1½d. to 20s. 3d. on the spot. *Petroleum*: Unchanged, *American* oil being quoted at 5½d. to 5¾d., *water white* at 7½d. to 7¼d., and *Russian* at 5½d. per gallon on the spot.

OLIBANUM (GUM).—A single case was sold to-day at 27s. per cwt.

ORRIS ROOT.—To-day best selected *Florentine* root was bought in at 85s. per cwt., and 9 bales of powder at 90s. per cwt.

QUILLAIA BARK.—Lower. In auction to-day £12 10s. per ton was accepted for 5 tons of this article.

QUININE SULPHATE.—Remains very slow of sale, and practically neglected at 1s. 1¼d. for the best *German* makes. To-day 13,000

ozs. of the "Imperial" brand of *English* quinine were bought in at 1s. 2d. per oz.

RHUBARB.—Very slow of sale. Out of 186 cases offered to day, only seventeen found buyers, prices being unchanged. *Shensi*: Bold flat, rather rough coat, fair fracture sold at 1s. 2d., whilst 1s. 10d. was paid for fair round trimmings. *Canton*: Very bold, flat, slightly wormy, sold at 1s. 3d.; medium bold, round, fair grey and pinky fracture, at 1s. 2d.; and bold mixed pickings at 11d. to 1s. 1d. *High-dried*: For four cases of low, rough, round, wormy pickings, 4d. per lb. was paid.

SARSAPARILLA.—Was in large supply to-day, and sold at fully steady rates, 1s. 3d. to 1s. 4d. being paid for sound *Jamaica* root, and 11½d. to 1s. 1d. for damaged quality, according to condition. *Guayaquil* sold at 11¼d. to 1s., and *Lima-Jamaica* at 1s. 0½d. for sound, and 11d. to 11½d. for damaged quality. A few bales of *Mexican* also found buyers at 4d. per lb., whilst sound *Honduras* was bought in at 1s. 4d. per lb.

SEEDS (VARIOUS).—*Coriander*: Ordinary mixed bright *Bombay* seed sold without reserve at the spice sales at 7s. 6d. to 9s. per cwt. *Anise*: Fifteen bags of *Spanish* seed sold at 26s. *Cumin*: *Maltese* seed was bought in at 42s. *Stavesacre*: Fair quality was bought in at 95s. per cwt., and *Jamboul* seed at 1s. per lb. *Star Anise*: Five cases of genuine *Chinese* seed sold at 90s. per cwt.

SENNA.—*Tinevelly*. An improved supply amounting to about 250 bales, was offered to-day, and met with a very good demand for every grade, the prices realised showing an all round advance as follows:—medium greenish, 4d. to 4¼d.; small to medium yellowish, 3d. to 3¾d.; ditto, brownish, 1d. up to 2½d., with common at ¾d. to ¾d. per lb. *Pods* sold at 1¼d. *Alexandrian*: A single case of small leaves sold at 1s. per lb.

SPICES (VARIOUS).—*Cloves*: In auction fair *Zanzibar* sold at 2d., and fine bright at 2½d. per lb., whilst *Amboyna* was bought in at 4d. per lb. *Penang* sold at 9d. per lb. for good bold bright picked. *Cassia lignea*: In auction 1000 cases (old import) sold at 30s. to 30s. 6d. per cwt. *Cassia vera* sold at 15s. to 15s. 6d. per cwt. for coarse dark *Japan* root. *Pimento* is firm, medium greyish selling in auction at 2¾d. per lb. *Capsicums* sold at 21s. 6d. per cwt. for small bright off stalk, and 26s. for bold bright red ditto.

SQUILLS.—Sales of pale "firsts" have been made during the week at 3½d. per lb., whilst fair ditto sell at 3d., and brownish seconds at 2d. per lb.

STICKLAC.—The market is firm but quiet. In auction to-day several parcels of bold, partly woody, lac were bought in at 70s. per cwt.

TURMERIC.—Very slow of sale. In auction several parcels of good bright parcels of good bright finger at 9s. 6d. to 10s., whilst 7s. 6d. was accepted, subject to approval, for 51 bags of fair bright *Bombay*.

WAX (BEES).—In moderate demand only, and prices are unchanged, with the exception of *Jamaican*, which is dearer. *Californian* wax was bought in at £7 12s. 6d. Fine *Jamaican* sold at £8 5s., *Mexican* at £6 17s. 6d., fair to good *Zanzibar* at £6 10s. to £7, *Madagascar* at £6 15s. to £6 17s. 6d., and *Australian* at £7.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

4 ft. Mahogany and Plate-glass Dispensing Screen in good condition; two Plate-glass Counter Cases, 4 ft. by 1½ ft.—Barrow, Chemist, Newmarket.

About 4 dozen different size narrow and wide-mouth Stoppered Bottles, in boxwood cases, including 5 ether Bottles and Expeditive Digne Cachet Apparatus for 3 sizes, 30s. the lot.—Reece and Co., 168, Piccadilly, W.

Day's Patent Air-tight Covers, good condition.—W. F. Noak, Chemist, Berkeley.

Thorpe's 'Chemistry,' Vol. II.—Metals, 2s. 3d., post free, new; Wills' 'Prelim. Exes.,' 1s. 6d.—C. A. Stokes, 45, Stapleton Road, Bristol.

Maw's Gas Fittings, compo. pipe, etc., for disposal, eighteen months' use, superseded by electric light.—Postlethwaite, Southsea.

Prantl and Vines' 'Botany,' Watts' 'Inorganic Chemistry,' 'Selecta Præscriptus,' Oliver's 'Botany,' Serton's 'Quantitative Analysis.' What offers?—Thos. Thompson, 6, Lower Belgrave Street, London, S.W.

Attfield's 'Chemistry' and Bentley's large 'Botany,' latest editions, comparatively new. Best offers.—Woodruff, 218, Bury New Road, Manchester.

Saxon Silver Penny of Edward the Confessor, effigy and lettering distinct, guaranteed genuine. Post free, 3s. 6d.—A. G., 54, Fremantle Road, Kingsdown, Bristol.

Five Two-Gallon Carboys, pear shape, cut stoppers, equal to new; accept 16s. 6d. for the lot, or 4s. each, to clear, packages, and put on rails free.—Cullen, Chemist, Norwich.

'Pharmaceutical Journal,' first 15 vols., half calf, 30s., offered at, not yet sold, a good set and scarce.—Davis, "Chestnuts," Gordon Hill, Enfield.

Scarce Books, all free: Phillips' 'Translation of the Ph.,' 1836, gives all synonyms, 3s.; Thomson's 'Materia Medica,' a volume of over 1000 pages, 6s., cost 31s. 6d.—Davies, 33, Eglinton Road, Bow.

Frena No. 1 Hand Camera, 3¼ × 3¼, takes 40 films, £2 12s. 6d.. lens alone cost more; beautiful slides can be made from negatives taken in it.—Matthew, 529, Battersea Park Road.

Thorpe's 'Chemistry,' 2 vols., 3s.; Watts' 'Chemistry,' 2 vols., 'Organic and Inorganic,' 6s.; Ince's 'Latin Grammar,' 1s. 6d.; Mitchell Bruce's 'Materia Medica,' 2s. All in perfect condition.—Stark, 128, Victoria Street, S.W.

Lawrance's "Clifford" Hand camera; Taylor and Hobson's 6 inch focus R.R. lens; Iris diaphragms, 2 crystal view finders to focus from 5 to 20 feet, in leather sling case in perfect condition, carries 12 plates, 20 plates, or 30 films. What offers?—Cammack, Chemist, Fulham.

Surplus stock, 2 cwt. best double distilled Glycerin, 1:260; 10 × 1 lb. original bottles Phenacetine (Bayer's).—D. S. G. Reid, Chemist, 155, New City Road, Glasgow.

Attfield's 'Chemistry' (13th), 7s. 6d.; Wills' 'Materia Medica,' 5s.; 'Pharmacy,' 2s. 6d.; 'Selecta Præscriptus,' 2s.; Wurtz's 'Chemistry,' 5s.; Martindale's (7th), 3s.—14, Culcheth Lane, Newton Heath, Manchester.

'United States Dispensary,' unbound, in seven parts; Watts' 'Inorganic Chemistry,' latest editions, new.—"Solazzi," 21, Queen Street, Louth, Lincs.

'Selecta Præscripta,' Wills' 'Elements of Pharmacy,' Gerrard's 'Materia Medica,' Smith's 'Pharmaceutical Guide.' All recent editions; 10s. 6d. the lot, post free.—Wilson, 10, Nevill Street, Southport.

Aitken's 'Medicine,' 2 vols.; Playfair's 'Midwifery,' 2 vols.; Erichsen's 'Surgery,' 2 vols., price for lot 1 guinea. A list sent on application to—Rawling, Chemist, Torquay.

Martindale's 3rd and 4th editions of 'Extra Pharm.'; Squire's 'Companion,' 9th edit., 3s. 6d. lot; Ringer's 'Therapeutics,' 8th edit., 3s.; Bristowe's 'Theory and Practice of Medicine,' 2nd edit., 5s.—Botham, Higher Broughton, Manchester.

WANTED.

Richter's 'Organic Chemistry'; Reynold's 'Organic Chemistry'; Attfield's (last edition); Squire (1894 edition); Tilden's 'Chemical Philosophy'; Bernthsen's 'Organic Chemistry'; Vines' 'Text-Book of Botany'; Newth's 'Inorganic Chemistry.'—Baxter, Bramley, Leeds.

Wide Angle, symmetrical or rectilinear, whole plate, cheap, state focus and maker.—Bush, Chemist, Melksham.

Second-hand Frena Camera, lantern size, in good condition; state lowest cash price.—Brackenbury, 106, Patrick Street, Cork.

Tilden's 'Chemical Philosophy'; Bower's 'Practical Botany'; Remsen's 'Organic Chemistry'; Southall's or Bentley's 'Materia Medica.' Lowest price for one or more to—Monro, 5, Market Terrace, Wood Green, N.

** Attention is specially directed to the new conditions of the "Exchange," in accordance with which a small charge will in future be made for the insertion of notices. It should be noted that a special opportunity will be afforded to those who advertise in the next number of the Journal, as it will be sent to more than sixteen thousand individuals directly connected with pharmacy.

LIVERPOOL MARKET REPORT.

[From our own Correspondent.]

FEBRUARY 19, 1896.

CANARY SEED: Rather more inquiry, 100 bags of *Turkish* sold at 33s. per 464 lbs. LINSEED: Steady, but "forward" business slack, 300 bags of *Trebizonde* sold at 32s. 6d. to 33s. per 416 lbs. *ex* quay. CHILLIES: *Sierra Leone* in small amount sold at 25s. per cwt. *ex* quay. GINGER: 300 bags good *Sierra Leone* sold at 20s. 6d. to 21s. per cwt., and 100 bags medium *Sierra Leone*, at 18s. per cwt. QUILLARIA BARK: Small sales of *Chilian* are reported at £12 12s. 6d. per ton. KOLA NUTS: 15 bags dried sold at 7d. per lb. BEESWAX: 6 bales of *Gambia* brought £6 18s. 9d. per cwt. OLIVE OIL is rapidly advancing; *Malaga* is £2 per tun dearer, and the market is cleared of *Candia*. CASTOR OIL is very steady; good seconds, *Calcutta*, 2½d. to 2¾d.; *Madras*, 2¾d.; 1st pressure, *French*, 2¾d. per lb. LINSEED OIL: Quiet at 20s. 6d. to 21s. for *Liverpool* makes in export casks. COTTONSEED OIL: Slow of sale at easier rates; 17s. 3d. to 17s. 6d. per cwt. SPIRIT OF TURPENTINE: Remains firm and in good demand at 21s. 6d. per cwt. PETROLEUM: Very quiet; *Russian*, 6d. per gallon; *American*, 6½d. to 7½d. ARSENIC: Lump, £26 10s. per ton; powder, £16 10s. BLEACHING POWDER: £7 to £7 5s. per ton. COPPERAS: *Lancashire*,

38s. per ton; *Welsh*, 36s. 6d. COPPER SULPHATE: £16 10s. per ton. PRUSSIAN OF POTASH: 8d. per lb., crystals. BICROMATE OF POTASH: 4½d. per lb. CHLORATE OF POTASH: 4¾d. per lb. CAUSTIC SODA: 70 per cent., £7 12s. 6d. to £7 15s.; 60 per cent., £6 12s. 6d. to £6 15s. per ton. BICARBONATE OF SODA: £7 per ton. SODA CRYSTALS: £2 10s. per ton. BORAX: Lump, 19s. 6d.; powder, 20s. 6d. NITRATE OF SODA: Held firmly at 7s. 10½d. to 8s. 1½d. per cwt. on the spot. SAL AMMONIAC: 39s. per cwt., firsts, POTASHES: 21s. 6d. per cwt. PEARLASHES: 37s. 6d. per cwt.

DIARY OF THE WEEK.

Secretaries of Societies are requested to send notices of forthcoming meetings not later than Wednesday in the previous week.

SUNDAY, FEBRUARY 23.

LIVERPOOL SUNDAY SOCIETY, at 3 p.m.
"Interviews and Interviewing," by Harry How.

MONDAY, FEBRUARY 24.

IMPERIAL INSTITUTE, at 8.30 p.m.
"The Lighthouses of the British Isles," by C. A. Kent.

SOCIETY OF ARTS (CANTOR LECTURES), at 8 p.m.
"The Chemistry of Certain Metals and their Compounds Used in Building" (II.), by Professor J. M. Thompson.

ROYAL GEOGRAPHICAL SOCIETY, at 8.30 p.m.
"A Journey Across Tibet from North to South," by St. George R. Littledale.

TUESDAY, FEBRUARY 25.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"The External Covering of Plants and Animals: its Structure and Functions" (VII.), by Professor C. Stewart.

ROYAL PHOTOGRAPHIC SOCIETY, at 8 p.m.
"The Stereoscopic Photochromoscope," by F. E. Ives.

Messrs. Newton's Simple Method of Projecting Stereoscopic Pictures," by T. E. Freshwater.
"Stellar Photographs Taken without a Driving Clock," by J. Lunt.

WEDNESDAY, FEBRUARY 26.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION, at 9 p.m.
"A Botanical Romance," by A. McD. Cobban.
BRIGHTON JUNIOR ASSOCIATION OF PHARMACY, at 9 p.m.
"Hints on 'First Aid' Ambulance Work," by F. J. Paley.

THURSDAY, FEBRUARY 27.

SCHOOL OF PHARMACY STUDENTS' ASSOCIATION.
Social Evening at 6.30. Professor Greenish will exhibit a series of lantern slides illustrating a trip in Spain.
ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"Some Aspects of Modern Botany" (III.), by Professor H. M. Ward.
SOCIETY OF ARTS (INDIAN SECTION) AT THE IMPERIAL INSTITUTE, at 4.30 p.m.
"The Tobacco Industry of India and the Far East," by C. Tripp.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 8.30 p.m.
"The Digestive Ferments of the Pancreas," by R. H. Jones.
GLASGOW AND WEST OF SCOTLAND PHARMACEUTICAL ASSOCIATION, at 9.15 p.m.
"The Phosphates of Iron and Calcium in Pharmaceutical Syrups," by J. Black.

FRIDAY, FEBRUARY 28.

ROYAL INSTITUTION OF GREAT BRITAIN, at 9 p.m.
"Marine Organisms and Their Conditions of Environment," by J. Murray.
SHEFFIELD MICROSCOPICAL SOCIETY, at 8 p.m.
Practical Night.

SATURDAY, FEBRUARY 29.

PHARMACEUTICAL FOOTBALL CLUB *v.* Fulham Football Club, at Wormholt Farm, Shepherd's Bush.
ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"Light" (II.), by Lord Rayleigh.

MARKET REPORT.

[Specially compiled for the *Pharmaceutical Journal*.]

[The quotations here given are in all cases the lowest net cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.]

LONDON, FEBRUARY 27, 1896.

Business in the chemical market has been quiet during the week, but quotations generally remain steady. Cream of tartar is quiet but the holders do not seem disposed to give very much in the way of price, except for shipment, where the quotations are decidedly easier. Tartaric and citric acids are very firm, but without change in price. Chrysophanic acid is very firm, and good araroba seems more unobtainable than ever. Arsenic is very strong, and the same applies to all brands of sulphate of copper. Carbolic acid is very firmly held for crystals especially, whilst acetanilide is unchanged. Amongst the alkaloidal salts, morphine has been advanced in price, but this does not apply to codeine. Caffeine and quinine are devoid of interest. In the drug market, we have to report an advance in insect flowers, and some grades of opium, whilst cascara sagrada, gentian root and orris root are very firm. Cod liver oil is very strong, and advancing in price, whilst castor oil is also inclined to higher prices. The spice market generally is active, a good business at advanced rates having been done in cloves and ginger especially. Shellac is also decidedly dearer. The essential oil market is quite devoid of interest. Full details will be found below:—

ACACIA GUM.—*Persian* so-called insoluble gum remains in very large supply, but the amount of business doing is very much restricted. Fair sorts offer at 13s. 6d. to 14s., whilst business has been done in fine block at 8s. 6d. per cwt.

ACID CARBOLIC.—The manufacturers report a continued brisk demand for this article, and some difficulty is experienced in executing the orders received—especially on foreign account—sufficiently quickly. Current quotations are as follow:—*Crystals*: 34° to 35° C., 7½d.; 39° to 40° C., 8½d.; 39° to 40° C. (*detached crystals*), 9½d. per lb. *Crude* is unchanged, 60 per cent. being still quoted at 2s. 3d., and 75 per cent. at 2s. 7d. per gallon. *Liquified* and *Cresylic* are unchanged at 1s. and 11½d. per gallon respectively.

ACID CITRIC.—Shows no alteration in price, but the market is firm. Makers of *English* acid still quote 1s. 2½d. per lb., whilst second-hand holders offer at 1s. 2¼d.

ACID, TARTARIC.—Is very firm, without any change in price. *English* makers continue to ask 1s. 3d. per lb. on the spot for prompt delivery, and 1s. 3½d. for forward. Foreign brands of acid (not guaranteed B.P.) both in *powder* and *crystals*, are quoted at 1s. 2½d. to 1s. 2¾d. on the spot.

AMERICAN DRUGS.—The current spot quotations for some of the more generally used American drugs are as follows:—*Condurango bark*, 5½d. per lb. *Black willow bark*, 14s. per cwt. *Golden seal root*, 1s. per lb. *Senega root*, 1s. 3d. *Damiana leaves*, 6d. *Canada Balsam*, 1s. 2d. *Slippery elm bark*, 5d. *Snake root*, 1s. *Podophyllin root*, 3½d. per lb.

AMMONIA COMPOUNDS.—*Sulphate* is slow of sale, grey 24 per cent. being quoted at the unchanged rate of £8 10s. on the spot, with *Hull* rather easier at £8 8s. 9d., *Leith* at the same figure, and *Beckton* at £8 7s. 6d. *Carbonate*: 3¼d. to 3½d. per lb. *Liquor*: 3¼d. to 3½d. per lb. less 5 per cent. *Sal ammoniac*: Firsts, 39s.; seconds, 37s. per ton,

ARSENIC.—Very firmly held, the supplies continuing to be very limited. Best white *powder* is held for 20s. on the spot, whilst for *lump* 28s. is asked.

CASCARA SAGRADA.—Steady. Business has been done at 21s. per cwt. on the spot, and this price up to 21s. 6d. is the current quotation. For shipment from New York quotations have advanced, 21s. per cwt. *c.i.f.* being now asked for new, and 22s. 6d. *c.i.f.* for two-year-old bark.

COAL DISTILLATION PRODUCTS.—*Toluol* is quoted at 1s. 8d. for 90 per cent. *Benzole* is steady at unchanged rates, 1s. 10d. per gallon being quoted for 50 per cent., whilst 90 per cent. is worth 2s. 2d. *Creosote*: 2d. per gallon. *Crude Naphtha*: 30 per cent. at 120° C. quotes at 10l. per gallon. *Solvent Naphtha*: 95 per cent. at 160° C. quotes at 1s. 5d.; 90 per cent. at 160° C. at 1s. 3d.; and 90 per cent. at 190° C. at 1s. 2d. per gallon. *Anthracene*: 13A quotes at 11½d. per unit; B at 10½d. per lb. *Pitch*: 35s. 6d. per ton *f.o.b.* *Tar*: *Refined* and *crude* at 13s. and 11s. per barrel respectively.

COCA LEAVES.—A parcel of good green *Truxillo* leaves has arrived during the week for which the holder asks 1s. 3d. per lb. Ordinary *Bolivian* cocas offer at 1s. 2d. per lb. for damaged quality.

CONCENTRATED LEMON JUICE.—Is quoted at £14 to £14 2s. 6d. for pipe, *f.o.b.*, Messina.

COPAIBA (BALSAM).—The total amount of *Copiaba* balsam exported from *Maranham* in the year ending June 30, 1895, was 12½ tons, of a value of £1290, against 14 tons, valued at £1460 in the previous year.

CREAM OF TARTAR.—This market is quiet, and shows continued evidence of weakening, although the prices do not show a marked decline. On the spot, best white *French* crystals offer at 105s. per cwt., whilst for *German* brands of powder 108s. would be accepted. For shipment from *Bordeaux* 99s., *f.o.b.*, is quoted.

ERGOT OF RYE.—Privately, sales of fair quality *Russian* ergot have been made at 7½d. per lb. The spot quotation is now

7d. per lb., but there is little inquiry for either this variety or *Spanish*.

GALLS.—No business is reported in *Persia* kinds but prices are firm as follows:—*Blues*, 53s. to 55s.; *greens*, 45s. to 47s. 6d., and *whites* 42s. 6d. per cwt. *China* galls are quiet but firm, whilst *Japan* are quoted at 52s. 6d. per cwt. *c.i.f.* terms.

GENTIAN ROOT.—Is steady. Good quality *French* root is still held for 22s. 6d. per cwt. on the spot. Shipment quotations are rather easier, 19s. 6d., *f.o.b.*, being now quoted.

GERMAN DRUGS.—The current quotations for bulk quantities of some of the more important raw drugs imported from Germany are as follows:—*Aconite root*, 40s.; *leaves*, 33s. *Arnica flowers*, 31s.; *root*, 53s. *Alkanet root* (best quality), 30s. *Angelica root*, 30s. *Belladonna leaves* (best quality), 45s.; *root*, 27s. 6d. *Cevadilla seed*, 125s. *Colchicum seed*, 38s.; *root*, 32s. *Elder flowers*, rubbed, 50s.; bunches, 40s.; *Henbane leaves*, 32s. *Hellebore root*, 22s. *Male fern root* (decorticated), 46s.; *Stramonium seed*, 15s.; *Stavesacre seeds*, 85s.; *Taraxacum root*, 32s. 6d. All per cwt. *c.i.f.* terms., London or Liverpool.

GINGER.—All varieties are very firm. At the weekly sales the majority of the *Cochin* root was bought in, ordinary to good washed old at 38s. to 40s., but cuttings sold without reserve at 26s., rough small, and ends, 31s. to 31s. 6d., and good washed at 40s. In addition, ordinary *B* old cut realised 60s., whilst *C* was bought in at 50s. New medium cut native sold at 55s. 6d. to 56s. 6d., and limed *Japan* at 23s. A moderate supply of new *Jamaica* root was offered, and sold with good competition at a further marked advance, 62s. to 63s. being paid for common lean and dark *Rhatoon*, 68s. 6d. to 69s. for good common ditto, 73s. to 77s. 6d. for small scraped, and 96s. for good medium washed.

INSECT FLOWERS.—There is nothing fresh to report in regard to the London position of this article, but the Trieste market is reported to be very active, and prices have again advanced, the current quotations being now as follows:—Closed wild flowers, 142s. 6d. to 145s.; closed cultivated flowers, 132s. 6d.; half-closed, 95s.; and open, 90s. per cwt., all *c.i.f.* terms.

JABORANDI.—The reports of *jaborandi* leaves from *Maranham*, in *Brazil*, during the year ending June 30, 1895, amounted to 7½ tons, of a value of £681, whilst during the corresponding twelve months ending June 30, 1894, the exports were 41 tons, valued at £2970.

OIL (COD-LIVER).—The London market is exceedingly firm. Mail reports received from the *Lofoten* district, dated the 18th inst., state that the previous week's catch was very poor, the fishermen not being able to put out to sea on account of the bad weather prevailing, whilst the quality of the liver is very lean. From the latest Government official report we learn that the total result of the *Lofoten* fishing up till the 22nd inst., amounts to 270 hectolitres of the crude oil, which represents about 160 barrels of refined non-congealing oil. Last year the catch for the same period amounted to about 840 hectolitres. On the spot the quotations for 1896 vary considerably, according to holder. There appears to be little or none in Lon-

don, and 220s., *c.i.f.*, per barrel of 25 gallons may be taken as the lowest price, although some holders ask 240s. Business has been done in old oil at 180s. per barrel, and 185s. is now asked, whilst good quality *Newfoundland* oil is quoted at 6s. to 6s. 6d. per gallon according to quantity.

OILS (ESSENTIAL). *Star Anise* oil unchanged but little business is reported. On the spot 9s. 9d. to 9s. 10½d. is the current quotation, whilst for arrival sales have been made at 9s. 3d. *c.i.f.* terms. *Cassia* oil is quiet. Nominally 10s. is asked for 80 to 85 per cent. oil, and 8s. 6d. for 70 per cent. *Citronella* is firm at 2s. on the spot, whilst for fine June shipment 1s. 9d. *c.i.f.* was quoted. *American* peppermint oil is quiet at 9s. 9d. for *H. G. Hotchkiss'* brand, whilst *Japan* oil is quoted at 6s. 6d., and *dementholised* at 5s. 9d. per lb. nominally. *Eucalyptus*: There have been sales of the *Platypus* brand at 2s. 2d. per lb. during the week. *Italian* oils are very firm, and reports advise a probable further advance.

OILS (FIXED) AND SPIRITS—*Castor* continues very firm, *Italian* oil of best quality being quoted at 31s. 6d. per cwt. *c.i.f.* terms, with a probability of a further advance shortly. There have been sales of *Calcutta* oil at 2¼d. to 2½d. per lb. on the spot for first quality, whilst "seconds" quote at 2¾d. to 2½d. per lb. *Marsilles* medicinal oil is firm at 3¼d. to 3½d. per lb. on the spot in tins (packed in cases). *Cotton* is steady, but quiet, the closing price of *refined* oil remaining £16 10s. to £17 on the spot. *Cocoonut* is a trifle easier, *Ceylon* and *Cochin* being now quoted at £22 10s. to £22 15s., and £26 10s. respectively on the spot. *Linseed* is firm, oil in barrels being still quoted at £19 12s. 6d. to £19 15s. on the spot. *Rape*: Steady. *Refined* oil is still quoted at £24 10s. to £25 10s. on the spot. *Turpentine*: Quiet but steady, *American* spirit being still quoted at 20s. 1½d. to 20s. 3d. on the spot. *Petroleum* is easier, *American* oil quoted at 5½d., *Water white* at 7d., and *Russian* at 5¾d. per gallon on the spot. *Petroleum Spirit*: *American* quotes at 9d. to 9¼d., and *deodorised* at 9¼d. to 9½d. per gallon.

OIL (OLIVE).—The amount of oil exported from *Tunis* in 1894 showed a large increase on the previous year, amounting to 9855 tons, valued at £275,955, against 5608 tons of a value of £130,026 in the previous twelve months.

OPIUM.—The London market is very firm, and a good business has been done in manufacturing kinds during the week at an advance of about 6d. per lb. The following are the current quotations:—*Soft shipping*, 12s. to 12s. 9d.; *Smyrna*, 8s. 6d. to 9s.; *Constantinople*, 8s. 6d. to 9s. 6d., and *druggists seconds*, 8s. to 8s. 6d. per lb. *Persian* opium is very firm, there being only a very limited amount available on the spot. An arrival of the new crop in *bricks* just to hand is held for 13s. 6d. per lb., and business has been done at this rate.

OPIUM ALKALOIDS—Dearer. *Morphine* has advanced in price 4d. per oz. since our last report, and manufacturers' quotations are now 4s. 7d. per oz. for *powder*, and 4s. 9d. for *crystals* in 1000-oz. lots. *Codeine* is very firm at unchanged rates, 10s. 6d. to 11s. being quoted, according to quantity.

POTASH COMPOUNDS—*Chlorate*: Very firm at 4¼d. per lb., which is the lowest

manufacturers' quotation. *Permanganate*: Very firm. Holders of *small crystals* ask 65s., whilst 70s. appears to be the lowest price per *large ditto*. *Cyanide* 98 per cwt. quoted at 1s. 6d. per lb. *Prussiate* is quoted at 7½d. to 8d. per lb. on the spot according to brand. *Bichromate* 4½ per lb.

SCAMMONY.—The market is firm, *root* being held for 47s. 6d. to 50s. *Turkish* virgin scammony resin is very firmly held. Business has been done at 30s. per lb., and this is quite the lowest in price.

SHELLAC.—The market is very firm and prices continue to advance, business being somewhat limited privately owing to the absence of sellers. On the spot *TN Orange* is worth 97s. and *AC Garnet* 92s. 6d. per cwt. For arrival, sales of *Second Orange* have been made at 95s. *c.i.f.*, of *TN Orange* at the same figure (January to March shipment), and *AC Garnet* at 85s. to 85s. 6d. *c.i.f.* (February to April shipment). At the weekly sales small supplies only were offered and met with a good demand, *Second Orange* selling at an advance of 2s. to 3s., whilst *Button* sold at full rates. The following were the prices paid:—*Second Orange*: Fine pale free, 105s. to 106s.; good pale curly, 100s. to 102s.; and flat reddish livery at 94s. *Button*: Ordinary *BL2* sold at 85s., whilst fair firsts were bought in at 110s. per cwt.

SODA COMPOUNDS.—*Bicarbonate*: £7 5s. per ton in London; £6 15s. in Liverpool. *Nitrate* quotes at £8 for ordinary, and £8 5s. for refined. *Caustic Soda*: 70 per cent. is held for £8, and 60 per cent. for £1 less.

SOY.—Very slow of sale, and fair *China* offers at 11d. per gallon on the spot.

SPERMACETI.—Rather dull of sale at 1s. 6d. per lb. for good refined *American*.

SPICES (VARIOUS).—*Cloves* are dearer. Privately holders are very firm, business having been for arrival at 2½d. to 2¾d. per lb. for June to August shipment, and on the spot at 2½d. In auction *Zanzibar* sold at a slight advance as follows:—Medium dark, 2½d.; fair to good fair 2½d. to 2¾d.; good bright, 2¾d.; whilst fine pale was bought in at 2½d. to 2¾d. Dark *Ceylon* sold at 3½d. per lb. All the *Penang* was bought in except three cases of very good picked, which realised 9½d. per lb. *Cassia lignea*: 30 bales of broken common quality sold at 16s. per cwt. *Cinnamon chips*: Ordinary coarse *Ceylon* sold at 2½d. *Pimento* is steady, ordinary grey selling in auction for 2½d., fair at 2¼d. to 2½d., and good at 2¾d. per lb. *Capsicums*: Ten bags of large red *Bombay* off stalk sold at 23s. 6d. per cwt. *Chillies*: Slow of sale. A few cases of good bright clean red *Japan* sold at 72s. 6d. to 75s. 6d. per cwt. *Pepper*: In fair demand, 2¼d. being paid in auction for ordinary *Singapore*, and 2½d. for fine sea damaged. Fine *Aleppo* sold at 2¼d., whilst extra bold *Mangalore* was bought in at 4¼d.

TOLU (BALSAM)—Remains very slow of sale. Privately 2s. per lb. is asked for good genuine quality, but we have not heard of any business. The shipment quotation is 1s. 10d. per lb. *c.i.f.* terms.

TRAGACANTH (GUM).—A fair amount of business is being done in the arrivals of new crop gum at steady rates, the current quotations being as follows.—Firsts (fine pale "druggists"), £15; seconds, £13 to £14 10s.; thirds, £11 10s. to £13; fourths, £9 to

£10 10s.; yellow and pinky, £6 10s. to £8; with other grades 40s. to 130s. per cwt. *Hog* is very slow of sale, with nominal quotations ranging from 30s. to 80s. per cwt.

WAX (JAPAN).—There has not been so much inquiry lately for the article, although the market is firm. Good pale *squares* are quoted at 34s. 6d. per cwt. on the spot, and 37s. 6d. for arrival, *c.i.f.* terms.

LIVERPOOL MARKET REPORT.

[From our own Correspondent.]

FEBRUARY 26, 1896.

LINSEED: *Turkish*, 35s. 9d. to 36s. per 416 lbs.; *Trebizonde*, 32s. 6d. to 33s. spot prices. KOLA NUTS: 24 bags at 5d. GINGER: *African* new crop, to arrive, 20s. to 21s. 6d. per cwt., small quantities, *ex quay*, at 22s. 6d.; 100 bags *Sierra Leone*, 18s. CHILLIES: 250 bags *Sierra Leone*, 24s. to 26s., and 75 bags *Sierra Leone*, new crop, 32s. 6d. CARNAUBA WAX: 28 bags grey at 100s., yellow, 110s. BEESWAX: 20 sacks of *Chilian*, £7 7s. 6d. to £7 15s. CASTOR OIL: Good seconds *Calcutta* and 1st pressure *French*, 2½d. to 2¾d.; *Madras*, 2½d. OLIVE OIL: Spanish oils rising. *Malaga*, £29 10s. to £30 10s. per tun; *Seville*, £29 to £30. LINSEED OIL: 20s. 6d. to 21s. for *Liverpool* makes. COTTONSEED OIL: 17s. 3d. to 17s. 6d. for *Liverpool* refined. SPIRIT OF TURPENTINE: 21s. 6d. PETROLEUM: *Russian*, 5¼d.; *American*, 6¾d. to 7½d. SAL AMMONIAC: firsts, 39s.; seconds, 37s. per cwt. CARBONATE OF AMMONIA: 3½d. to 3¾d. SULPHATE OF AMMONIA: £8 12s. 6d. to £8 15s. for good grey. BLEACHING POWDER: £7 *f.o.b.* for soft; £7 5s. hard. COPPERAS: *Lancashire*, 38s.; *Welsh*, 36s. SULPHATE OF COPPER: £16 15s. to £17. PRUSSATE OF POTASH. 8d. CHLORATE OF POTASH: 4¾d. BICHROMATE OF POTASH: 4¾d. NITRE; 23s. 6d. kegs, 23s. barrels. CREAM OF TARTAR: 105s. SODA CRYSTALS: £2 7s. 6d. to £2 10s. BICARBONATE OF SODIUM: £6 15s. CAUSTIC SODA: 70 per cent., £7 10s.; 60 per cent., £6 10s. BORAX: £19 10s. crystals; £20 10s. powder. HYPOSULPHITE OF SODA: £7 to £7 10s. NITRATE OF SODA: 8s. to 8s. 3d.

Late Advertisements.

Wanted to Purchase.

A GENUINE Chemist's and Druggist's BUSINESS in London or suburbs. Address, with full particulars, Mr. GEISEL, Frankfort Ter., Harrow Rd., W.

Assistant Wanted.

A SMART JUNIOR, not under 5ft. 7in. Time for study and no Sunday duty. Apply, J. NORTHWAY, 27, Gt., Tower St., E.C.

Engagement Wanted.

JEUNE Français, bonne famille, très au courant, depuis 7 ans premier élève dans pharmacies de premier ordre en France, désire place stable et lucrative dans pharmacie, quartier français de Londres ou chez un Médecin faisant la pharmacie. Bonnes notions de langue et de pharmacie anglaises. S'adresser à, MEDHURST, City of London College, White St., E.C.

REMEDIES INTRODUCED IN 1895.*

Adhesol.—Mixture of copal resin (35), gum benzoin (3), balsam tolu (3), ether (2), oil thyme (2).—Surgical dressing.
Airol.—Bismuth Oxyiodogallate.—Surgical antiseptic.
Akolethe.—Proprietary “solution of the sedative principles of opium.”
Alpha-cresote.—Mixture of normal constituents of creosote, containing 25 per cent. of crystallised guaiacol.
Alpha-guaiacol.—Crystallised synthetic guaiacol.
Aminol.—Solution of calcium oxide, sodium chloride, and trimethylamine.—Antiseptic.
Ammonium Glycerinophosphate.—Nervine.
Ammonium Persulphate.—(NH₄)₂S₂O₈.—Antiseptic and deodorant.
Ammonol.—Ammoniated phenylacetamide.—Analgesic and antipyretic. Dose: 0.3–1 Gm. (4½–15 Grn.).
Ammonol Salicylate.—Analgesic and anti-rheumatic. Dose: 0.5–1.5 Gm. (7½–23 Grn.).
Amygdophenin.—Para-amidophenol amygdalate.—Antipyretic and analgesic. Dose: 1 Gm.

Anhalonine Hydrochlorate.—C₁₂H₁₅NO₃.—Spastic and nervine, like strychnine.
Aniline Sulphate.—C₆H₇N·H₂SO₄.—Internal cancer-remedy. Dose: 0.1 Gm., gradually increased to 0.8 Gm. daily.
Anthion.—Compound consisting chiefly of potassium supersulphate. Substitute for Javelle water or hydrogen peroxide in photography.
Anticancerin.—Prof. Emmerich and Scholl's cancer-serum used in erysipelas.
Antinosin.—Sodium salt of nosophen.—Antiseptic.
Antiphlogistine.—Proprietary antipyretic.
Antipyonin.—Sodium tetraborate or polyborate.—Antiseptic.
Antistreptococcin.—Serum preparation used against erysipelas.
Apolysin.—Monoparaphenetidine - citric acid, C₃H₄(OH)(CO)(OH)₂CO·NH·C₈H₄OC₂H₅.—Analgesic and antipyretic. Dose: 0.5–1.5 Gm.
Arecoline Hydrobromate.—Salt of alkaloid from *Areca catechu*.—Myotic (in 1 per cent. solut.) and veterinary laxative, like physostigmine.
Argonin.—The soluble silver casein salt obtained by treating a solution of casein-sodium with silver nitrate.—Antiseptic and astringent, like silver nitrate.

Baptolene.—Compound antiseptic solution.
Benzacetine.—Acetoamidomethylsalicylic acid.—Antineuralgic.
Bismuth Oxyiodogallate.—See Airol.
Bismuth Phosphate, Soluble.—Contains 20 per cent. Bi₂O₃.—Gastro-intestinal antiseptic. Dose: 0.2–0.5 Gm.
Bismuth Pyrogallate.—Known also as “Helcosol.”—Succedaneum for pyrogallol internally.
Bismuthol.—“Bismuth-sodium phosphosalicylate”; soluble bismuth phosphate.—External astringent and antiseptic.
Borine.—Compound antiseptic solution.
Borsalicyl.—Result of the action of boric acid (25) on sodium salicylate (32).—Antiseptic.
Bromalin.—Hexamethylenetetramine bromethylate; Bromethylformine.—Antiepileptic. Dose: 1–4 Gm.
Bromhemol.—Bromated hemol.—Antiepileptic.
Bromophtharin.—Mixture of calcium and iron oxides, calcium carbonate and sulphate, sodium sulphate, sand, and yellow colouring-matter.
Byrolin.—Antiseptic ointment and cosmetic in collapsible tubes.
Caesium Bitartrate.—C₃C₄H₄O₆.—Nervine and cardiac.

(To be continued.)

MODERN PHARMACEUTICAL INDUSTRIES.

IDRIS AND COMPANY, LIMITED.

THE ORIGIN OF THE FIRM.

The name of Idris is now so familiar to the retail pharmacist that it is somewhat difficult to imagine that it is only some five and twenty years since the founder of the firm, Mr. Thomas Howell Williams (now Mr. T. H. W. Idris, J.P., L.C.C.) commenced the manufacture of mineral waters. But after a brief acquaintance with Mr. Idris, one ceases to wonder at the marvellous rate with which the business of the firm has been developed. Although the senior director of the firm has so much time occupied by work on the London County Council—where he fills the position

of orange wine, as well as for brewing ginger beer which during the last few years has re-asserted its popularity in such a marked degree. It is so seldom architectural appearances are considered in the realm of factories, that the pleasing effect conveyed to the eye when the building is viewed from the roadway was commented on to Mr. Idris. "I have been chaffed on some occasions," he said, "owing to my weakness in that direction, but I really fail to see why factories should necessarily be eyesores."

PLAN OF THE WORKS.

Although this visit of inspection took place during winter time, there was still every evidence of a brisk business being done in all the departments. On the left-hand side of the yard, shown to the right of the first illustration, is situated the factory

VIEW OF FACTORIES,
CAMDEN TOWN, LONDON, N.W.

of Chairman of the Water Committee—as well as by his magisterial duties, that he is now compelled to relegate most of the business of the factory to his partners, Messrs. Adpar Jones, J. Hughes, and E. K. Bishop, he readily placed himself at our disposal to act as guide during an inspection of the various departments of the works.

Allusion has already been made to the unpretentious manner in which this business was inaugurated. As time went on, fresh premises were occupied and in turn discarded, until some two and a half years ago a plot of land was acquired in Pratt Street, on which was built, from the firm's own designs, the factory under notice, which is undoubtedly most perfectly appointed in every respect. Even now it is by no means completed, additional premises having been acquired on the eastern side, part of which will be utilised for the reception of electrical plant, whilst an extensive wing is in course of erection which will serve for the manufac-

proper, whilst the stables, foundries, and other workshops lie on the opposite side, the water-distilling apparatus being placed at the top of the block of buildings shown at the extreme end. This yard is used solely for the dispatch of goods, empties being brought in at a separate entrance, and it will be noticed that the ground floor is of such an elevation that the tail-boards of the waggons are on a level with it. Some of these details were noticed on the way to the counting-houses, whence it is not far to the board-room, the walls of which are covered with awards which have been gained by the firm on various occasions, as well as by photographs of the factory. A portrait of the President of the Pharmaceutical Society occupies a prominent place, whilst at one end stands a handsome show-case which has done duty on several occasions.

THE BREWING OF GINGER BEER.

Mr. Idris first drew attention to the view of the factory

as seen from the roof, and then led the way to the department devoted to the brewing of ginger beer. This article is now made under strictly scientific principles and a visitor in the course of his perambulations sees the different stages in operation. Commencing with the maceration of the bruised ginger in water, the infusion is next run off into shallow tanks to cool and settle, whence the clear liquor is again run off. Subsequently, on the ground floor, are to be seen hundreds of gross of the finished product stored in rooms, the temperature of which is regulated so as to perfect after fermentation. In another room attention is attracted by an ingenious cork-squeezing apparatus, by means of

usually it is then ready for making the solutions of the required salts, whilst if distilled water is required, an apparatus worked by steam pipes is used, which obviates the objectionable taste perceptible in water which has simply been condensed directly from waste steam. The means adopted to ensure the absolute purity of the water used in the products of this factory have been dwelt upon somewhat particularly, as that is obviously a cardinal point, and it may be said that the evidence of care in this department is typical of the methods used throughout.

THE CHEMICAL LABORATORIES.

This fact is still further impressed when one comes to the

THE MAIN LABORATORY.

which all dust and loose particles are got rid of previous to use.

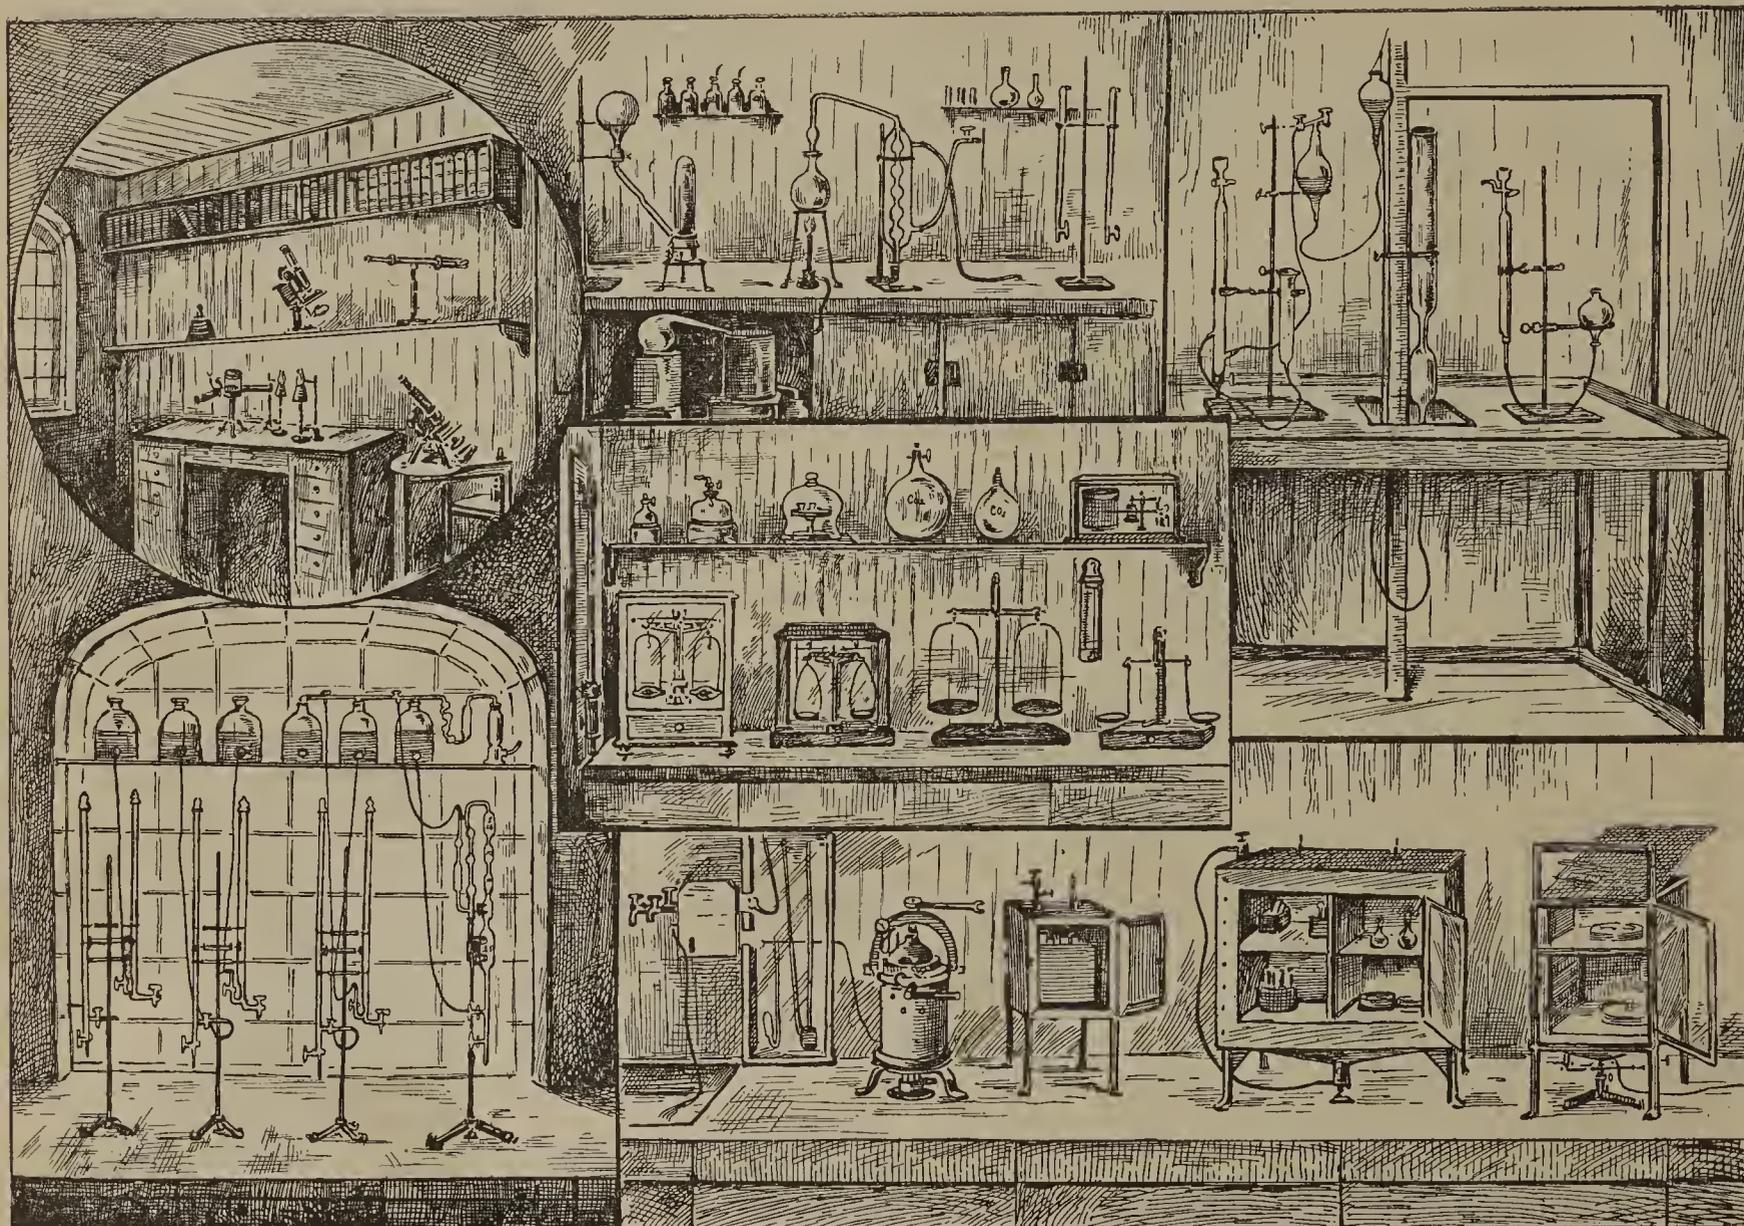

PURIFICATION OF THE WATER.

The means adopted in this factory to ensure perfect purity of the water used in all the preparations deserves attention. First of all, the water from the main—which is supplied by the New River—goes under an elaborate process of filtration, through a cylindrical apparatus packed with charcoal and glass-wool at each end, whilst the centre is filled with sand; it is then treated with lime, which reduces the hardness from 13° down to about 7° , and in addition removes micro-organisms. The second stage of the purification takes place in large slate tanks, which are used in turn, and are thoroughly cleaned out after every use. If necessary, the softened water undergoes a further process of filtration, but

chemical laboratories, the equipment of which is probably quite unrivalled by any other mineral water factory. These are three in number, all of which were designed by Dr. W. H. Symons, F.I.C.—for many years the scientific adviser and consulting chemist to the firm—and are now under the supervision of Mr. Frank Stephens, F.C.S., and a staff of detail workers. The second illustration gives some idea of the equipment of the main laboratory, where the daily routine work of testing the solutions is done, as well as general chemical work. This is a large well-lighted room some 25 feet square, in the centre of which is a stand on which the various reagents and chemicals are grouped. Benches are fitted round the sides, one of which is covered by an adjustable glass hood, so that all operations involving evaporation, or any

experiments in which noxious fumes are evolved can be carried on without contaminating the air of the laboratory. Injector pumps are connected with the various benches, water at low pressure being supplied to the condensers, hot water funnels and ovens, which are arranged to keep at a constant level. Here also was seen the apparatus whereby a constant check is kept over the carbonic acid gas used on the works. A connection is made with the bell in the engine room, so that quantities can be examined at any time. The apparatus used, which is shown in the third illustration, consists of a 500 C.c. receiver filled with the gas, which is forced by means of a levelling tube containing brine into a eudiometer containing potash. The

the detection of impurities in water. In addition, waters from all parts of the kingdom are examined here chiefly for organic contamination and, now that the science of bacteriology is playing such an important part in water analysis, the firm have set apart a room for that particular branch, which is fitted with steam and hot air steriliser, Hearson's incubator and all the necessary appliances for the bacteriological examination of water and for the cultivation of the various ferments used in the production of ginger beer. There are also microscopes by Watson, Swift, and Crouch. A dark room, used for polariscopic and spectroscopic analysis, together with a library of technical literature, completes this department.

LABORATORY APPARATUS.

amount of gas undissolved divided by five gives the percentage of air present, which is always kept below 0.5 per cent. The operation is very rapid and allows of as many as half a dozen determinations being completed within an hour. A centrifugal machine, reverberatory and muffle furnaces and fume chambers are also in evidence, in addition to the various paraphernalia of a laboratory. The adjoining room is set apart for volumetric work. The number of determinations performed daily sometimes reaches the total of 200. They include the volumetric testing of every tank of water, lemon syrup, various cordials, and the numerous articles manufactured. The test solutions are kept in five litre aspirators about four feet above the level of the burettes, so that the time required in filling the burette after each operation is reduced to a minimum. The benching in this room is covered with white glass, which facilitates

ENGRAVING SYPHONS AND BOTTLES.

Leaving this interesting section, the visitor is next interested in the processes involved in the engraving of names and designs on siphons and bottles, which has now become a very important adjunct in the business of the firm. Not only is this work carried out for their own requirements but a large staff of workers are engaged in engraving the glassware for other firms. For the sand blast, machines are used involving in some cases jets of air and in others of steam. In addition many hands are occupied in the preparation of glass show tablets, designed for the use of the customers of the firm. Surprise was caused by the space devoted to these operations and, in reply to some remark to that effect, Mr. Idris stated that it is intended to increase this branch considerably in the near future.

PREPARATION OF FRUIT CORDIALS AND SYRUPS.

The next place visited was a room in which several girls were engaged in peeling lemons by means of machines, which automatically pare off the rind in a very rapid fashion. In another corner stands a large Tangye press used for pressing out fruit juices. This led to a remark on the comparative utility of hydraulic and screw presses, and Mr. Idris expressed the opinion that the former are by no means so satisfactory when working on a large scale as the latter and he contemplates reverting to the use of the old-fashioned form in future. A large store-room is devoted to the processes of filtering, clarifying, and bottling fruit cordials and

65,000 cubic feet, the walls being covered with Doulton tiles, which give it an artistic appearance; the roof is of varnished wood and there is positively no foothold for dust or micro-organisms. The syphon fillers are arranged in a long row, and the syphons are conveyed to them by a series of elevated tram lines, subsequently passing on to the next department, where they are all inspected, labelled and finally admitted into stock. Parallel rows of bottle fillers occupy the remainder of the room. The engines, cylinders and pumps occupy a room of the same size immediately underneath.

MINOR DEPARTMENTS.

The ground floor of the building on the opposite side of the roadway

THE FILLING AND BOTTLING DEPARTMENT.

syrops, which, it may be said, are in practically every instance really prepared direct from the fruit and not flavoured artificially. Mr. Idris acknowledged that, at the outset, some trouble was experienced in devising a satisfactory method of filtration for this class of preparation, but the present arrangement works very well, the clarification being mainly effected by means of paper pulp. After a peep into a room which is used for storing orange and medicated wines, the factories on the ground floor claimed attention.

SYPHON-FILLING AND BOTTLING DEPARTMENT.

There is no necessity to enter into details respecting the filling, labelling, and packing, as these are much the same in all mineral water factories, although they are in this instance carried out on a gigantic scale, Idris and Co. being the largest syphon fillers in the world. The filling room is light and lofty, occupying a space of

is devoted to sand blasting, whilst on the top storey is fitted the apparatus for preparing distilled water and supplying steam to the different parts of the factory. In the adjoining department considerable space is devoted to the casting and finishing of the syphon tops, which are all made and fitted on the premises and furnish employment for a considerable staff. The glass syphons and syphon tubes are not made in this country, but are imported direct from Bohemia, the tops being made of pure block tin, which are silver-plated if required. Recently it has been found necessary to restrict the use of this material to the ordinary aerated waters, lemonade and ginger ale being supplied in syphons, the tops of which are porcelain lined, this precaution being taken to prevent any solvent action of the acid upon the metal,

HISTORY OF THE FIRM OF ROBINSON AND SONS, LTD.

ALMOST within the shadow of the curiously distorted spire of All Saints' Church, Chesterfield, some sixty years ago, a wholesale and retail druggist's business was being conducted by Mr. John Bradbury Robinson. He also cultivated plants for medicinal purposes, including

poppies, roses for the sake of their petals, and purple pansies for the preparation of a coloured solution, called "Anthokyan," which was extensively sold and employed for preparing syrup of violets. In addition, he did a considerable trade in druggists' sundries, and, in respect to certain articles, this developed to such an extent that he began to entertain the idea of manufacturing for himself. The first step taken in this direction was the purchase of a small pill-box business, carried on by a Mr. Fletcher, near Middleton-by-Youlegrave, a little village in one of the North Derbyshire dales. In 1839, this business was transferred to Wheat Bridge House, near Chesterfield, where work was commenced with a staff of two girls, the new proprietor having been informed by his predecessor that he might consider he had done a good week's work if he managed to dispose of twenty gross of one ounce nested pill-boxes per week. At the present time boxes of various kinds are turned out by the million weekly and a staff of two hundred workers is employed for that purpose alone, whilst altogether some seven hundred and fifty persons are kept actively employed by the firm of Robinson and Sons, Ltd. and the business is still growing.

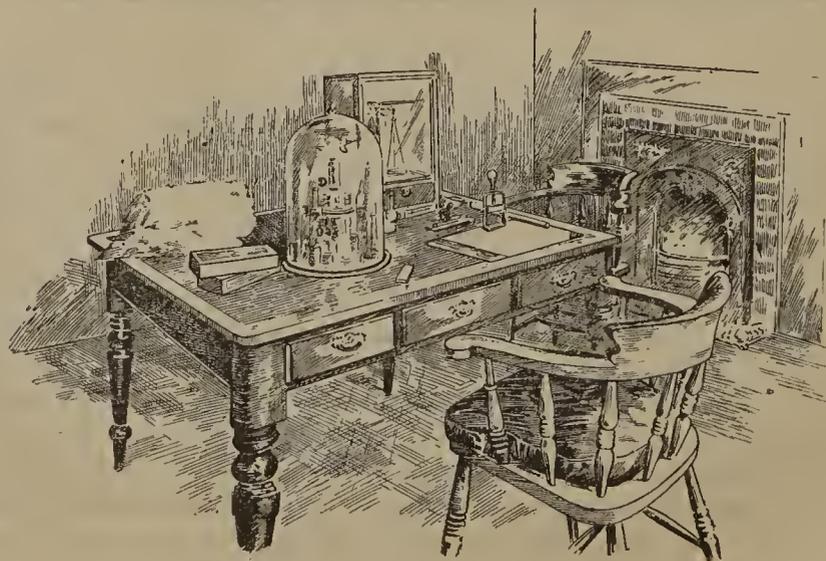

The present head of the firm, Mr. William Bradbury Robinson, joined his father, the founder, fifty-six years ago. He was then but fourteen years old and appears to have been blessed with a decided inventive genius. Lint was in those days made almost entirely by hand and a woman who was engaged in the manufacture was employed by the firm to teach a staff of girls the same art. A treadle machine was first devised to allow of the cloth being scraped more rapidly and evenly, but considerable hindrance to the business being caused by an affection of the ankle induced in the case of one of the best workers, the inventive faculties of the younger partner were set to work and this resulted in the production of the first automatic lint-making machine. The movements in this were virtually the same as in the old hand and treadle machines, but improvements have been continually effected until the present marvellously efficient power machines were produced. Lint and

bandages are now turned out by the mile where formerly they were produced by the yard and, at the same time, they are finished more uniformly and more satisfactory generally.

THE MANUFACTURE OF LINT AND BANDAGES.

A visitor to the Wheat Bridge works, which are plain in their elevation and erratic in their general plan, as is to be expected considering how the business has gradually but steadily increased, is impressed at the outset by the enormous bales of raw cotton, for the firm not only prepares the lint and other products, but also manufactures all its own cloth, thus ensuring the purity of all its goods. Tons of cotton are imported from America and elsewhere; after being carefully freed from all mechanical impurities, it is properly blended, then opened to loosen the fibres, carded and spun, to produce the yarn. Most of the machinery is driven by steam engines of about 420 horse power, or by means of electricity, three dynamos and five electro-motors being employed throughout the extensive works, which are also illuminated with the electric light, whilst all departments are connected with the principal's office by telephone. Besides steam and electricity, however, gas and water are also utilised as sources of power, the gas engine employed being about 20 horse-power and the water wheel of about 12 horse-power. As to the intricate spinning machines, so ingeniously are they constructed that the breaking of a single thread suffices to cause a stoppage and draw attention to the accident so as to prevent the production of imperfect material.

After being conducted through the rooms where the earlier operations are performed and being partly whitened by the mimic snow-

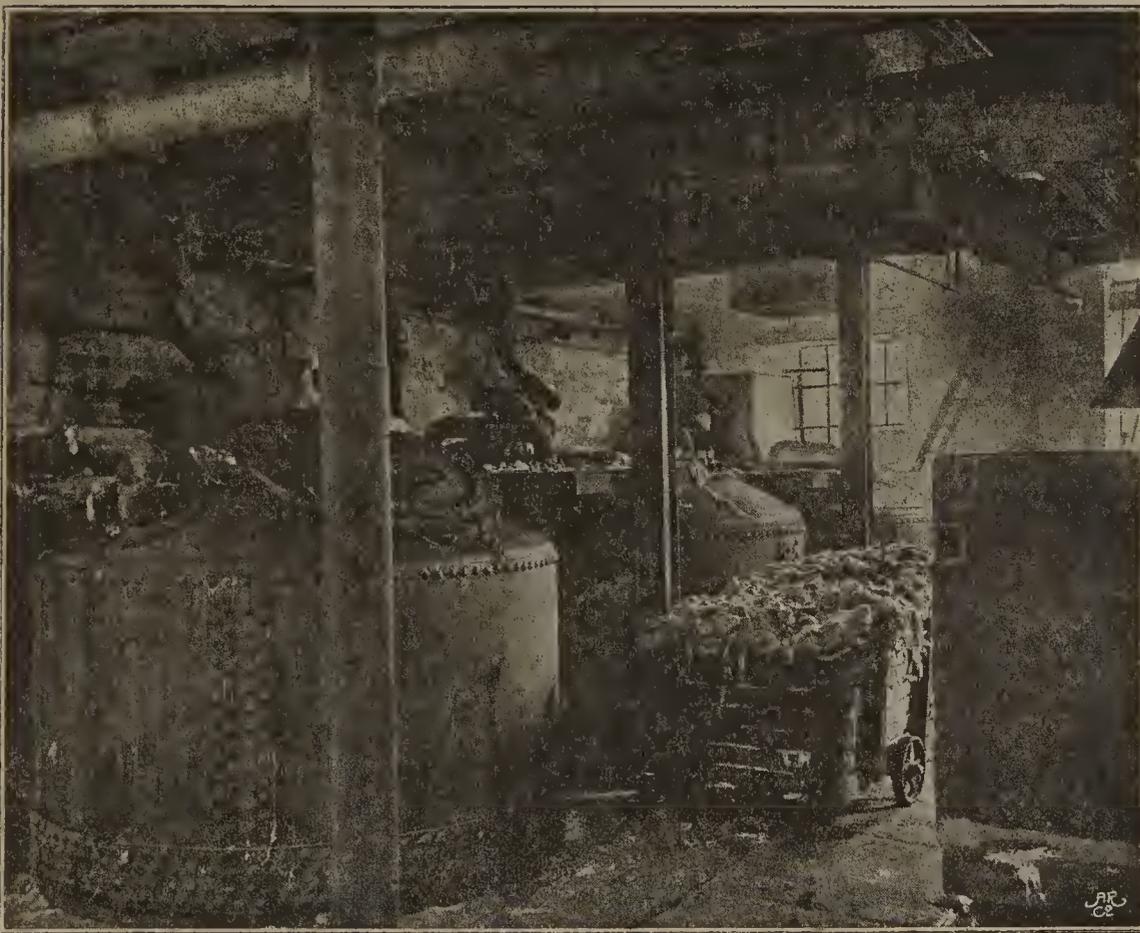

THE CHEMIST'S OFFICE.

storm in an apartment heated considerably above the normal, the visitor who is specially favoured is successively shown the opera-

almost everywhere. Curiously enough one of the last strongholds of the original article is the British army, the authorities yet persisting in the use of the higher priced article, which does not serve the desired purpose so well. Lint for the Indian army however must be made of cotton exclusively. This is surely an instance of red-tape rampant.

ABSORBENT COTTON WOOL.

Of even greater importance than lint, from a manufacturing point of view, is cotton wool, especially the absorbent variety, and probably nowhere can the preparation of this important adjunct to the surgeon's art be seen to greater advantage than at the Wheat Bridge Mills. The cotton is freed from grease, by the action of alkalis, in enormous "kiers." In these the cotton is boiled under pressure, and it is then ready to be bleached, the latter process being performed in huge stone vats, in which the cotton is successively subjected to the action of chlorinated lime and hydrochloric acid. After washing to remove the residual acid, the cotton is partially dried in large hydro-extractors which revolve at an enormous speed and remove most of the water; the final drying then takes place in large wood-lined ovens, which are protected against overheating by automatic sprinklers fixed at the top. These sprinklers have proved effectual on several occasions, and

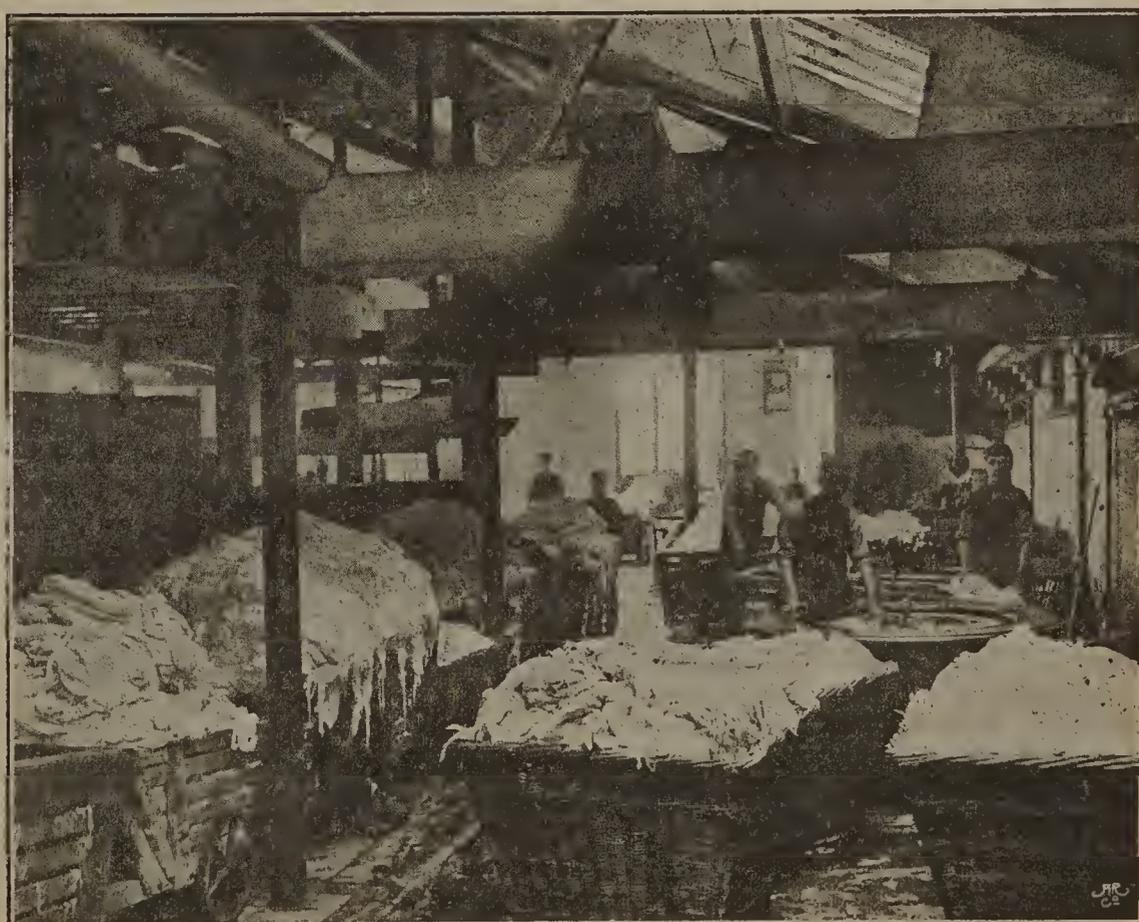

HIGH-PRESSURE BLEACHING KIERS FOR ABSORBENT WOOL.

tions of weaving the cloth and scraping it to produce the lint. In like manner he sees the weaving and finishing of surgical bandages of all kinds and will probably have his attention drawn to the enormous piles of packages intended for export to the Congo State, or for the use of the British and Indian armies, or hospitals in various parts. White, open-weave absorbent bandages were first introduced to the medical profession by Mr. W. B. Robinson and they have been a great success. They are cut up into ribbons by steam machinery and rollers and measured by an automatic machine also invented by Mr. Robinson. The length of bandages produced weekly is about one hundred and sixty miles.

are now fitted to the ceilings of all the work-rooms.

The earlier stages in the preparation of cotton wool are prac-

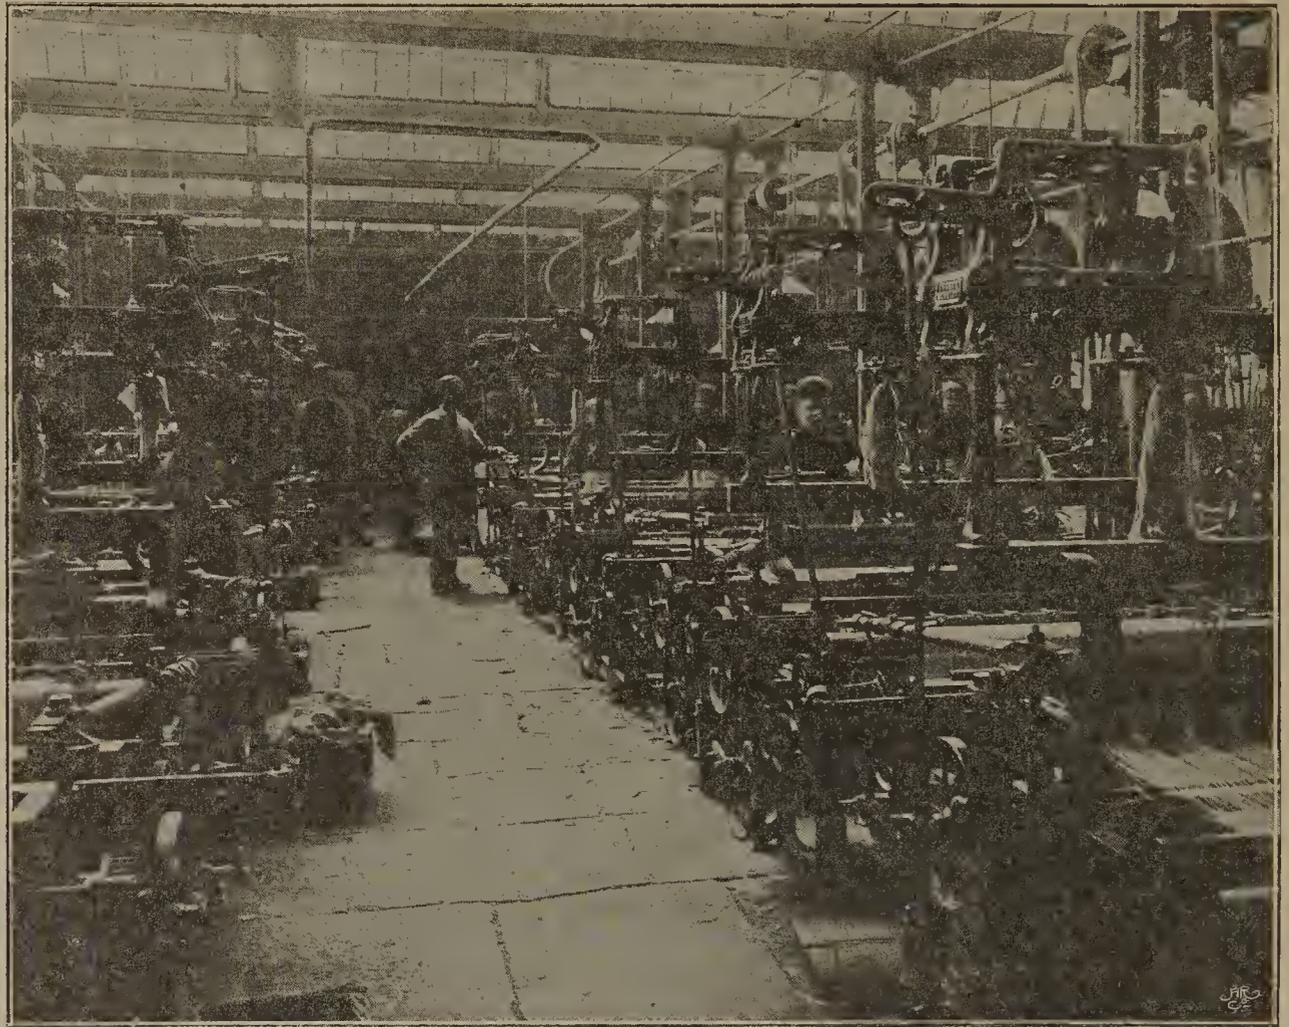

As is well known, lint was originally prepared from flax and, in some instances, though never by the firm under consideration, cotton lint was at the beginning of its career sold as flax lint, that course being adopted on account of the almost insuperable prejudices that prevented the sale of any other product than that of the flax plant. These objections Mr. W. B. Robinson prides himself upon having been mainly instrumental in removing, by being enabled practically to demonstrate the superiority of cotton lint to influential medical men. Today the triumph of the newer product is complete, flax lint having been ousted

BLEACHING COTTON WOOL.

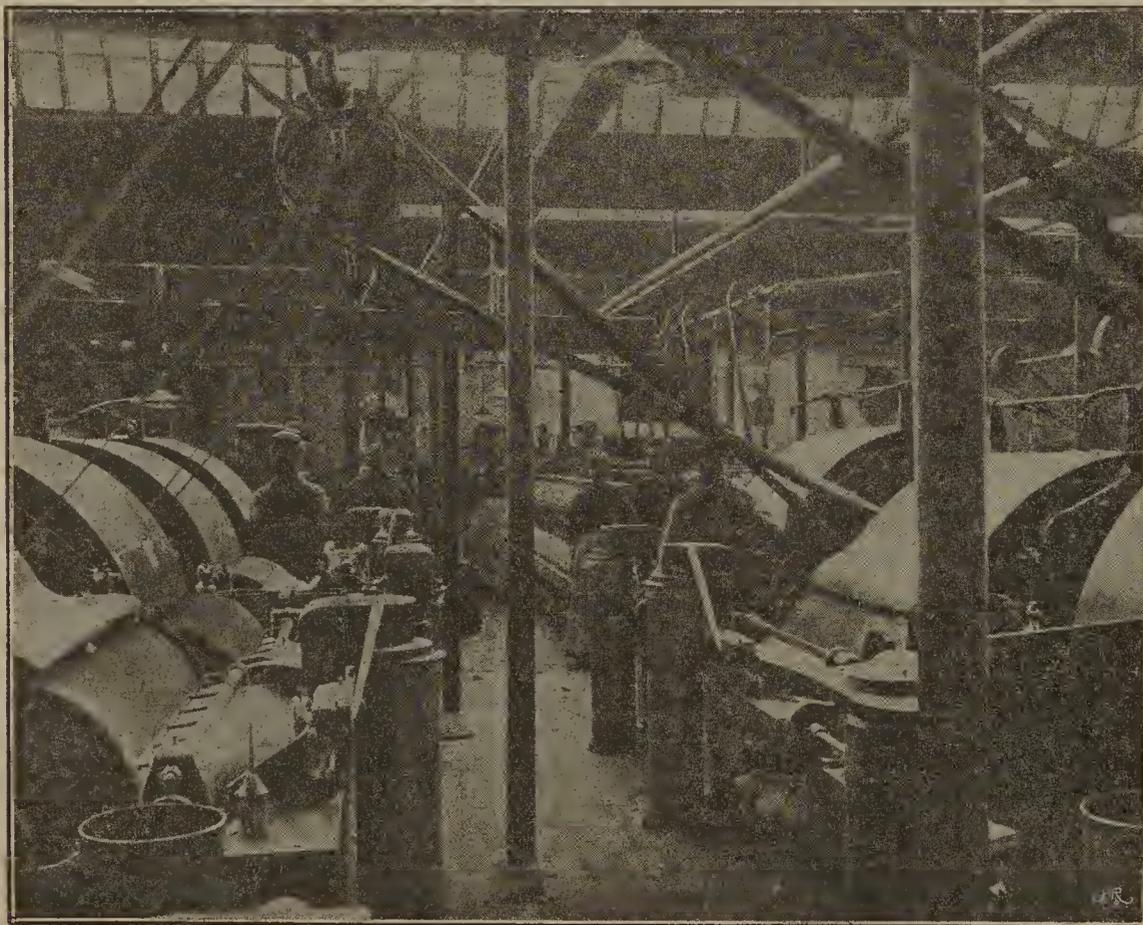

tically the same as those adopted in the production of the yarn for lint. The later stages, however, are essentially different, the object being to open the fibres thoroughly, yet uniformly, instead of weaving them into a fabric. It is impossible to speak other than generally of the processes here. Suffice it to say that the fleecy clouds are to be seen floating over the enormous rollers, apparently aimlessly yet strictly under control, millions of detached fragments being brought together to produce a brilliant white downy pile, of equal thickness and unexampled softness. Messrs. Robinson and Sons were the first to manufacture the well-known "Gamagee" tissue, having been asked to do so by the late Professor Gamagee, who patented the idea on which its production is based. The tissue consists of a thick layer of absorbent cotton, enclosed between two sheets of muslin. It may be noted by the way that even this muslin is manufactured by the firm.

ANTISEPTIC DRESSINGS.

But the most interesting application of absorbent cotton and gauze at the present day is un-

SPINNING THE YARN

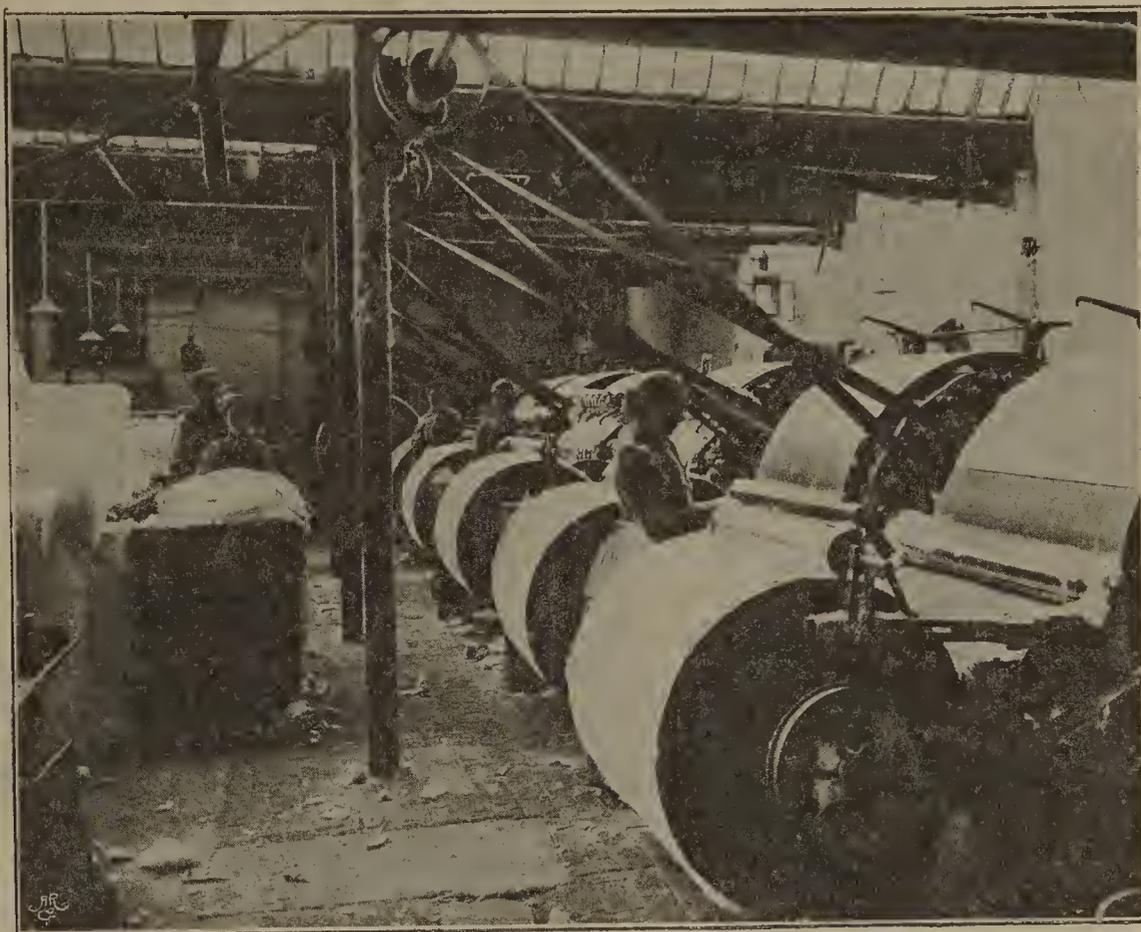

PREPARING COTTON WOOL.

doubtedly their use for antiseptic dressings. In this direction Messrs. Robinson and Sons have made enormous strides during recent years; the firm is now probably the largest producer of surgical dressings in this country, more than ten tons being turned out weekly. Great personal interest is taken in this branch by the manager, Mr. William Bradbury Robinson, junr., and the department is in charge of Mr. J. Bainbridge, a skilled chemist, who received his special training in the subject under Mr. Edmund White, of St. Thomas's Hospital, a pharmacist who is specially qualified to impart the necessary instruction. A three-storeyed building has been adapted for the purpose of Mr. Bainbridge's staff and here may be witnessed the medication of lints, cotton wools and gauzes, with all the different antiseptics used in the Listerian system of surgery. Alembroth, boric, carbolised, eucalyptus, iodoform, zinc sulphate, salicylic, sublimate, thymol, and zinc and mercury cyanide dressings are those in chief demand. The gauzes are coloured differently, according to the medicaments with which they are to be impregnated, then immersed in vats containing the medicated solutions and passed over heated rollers as

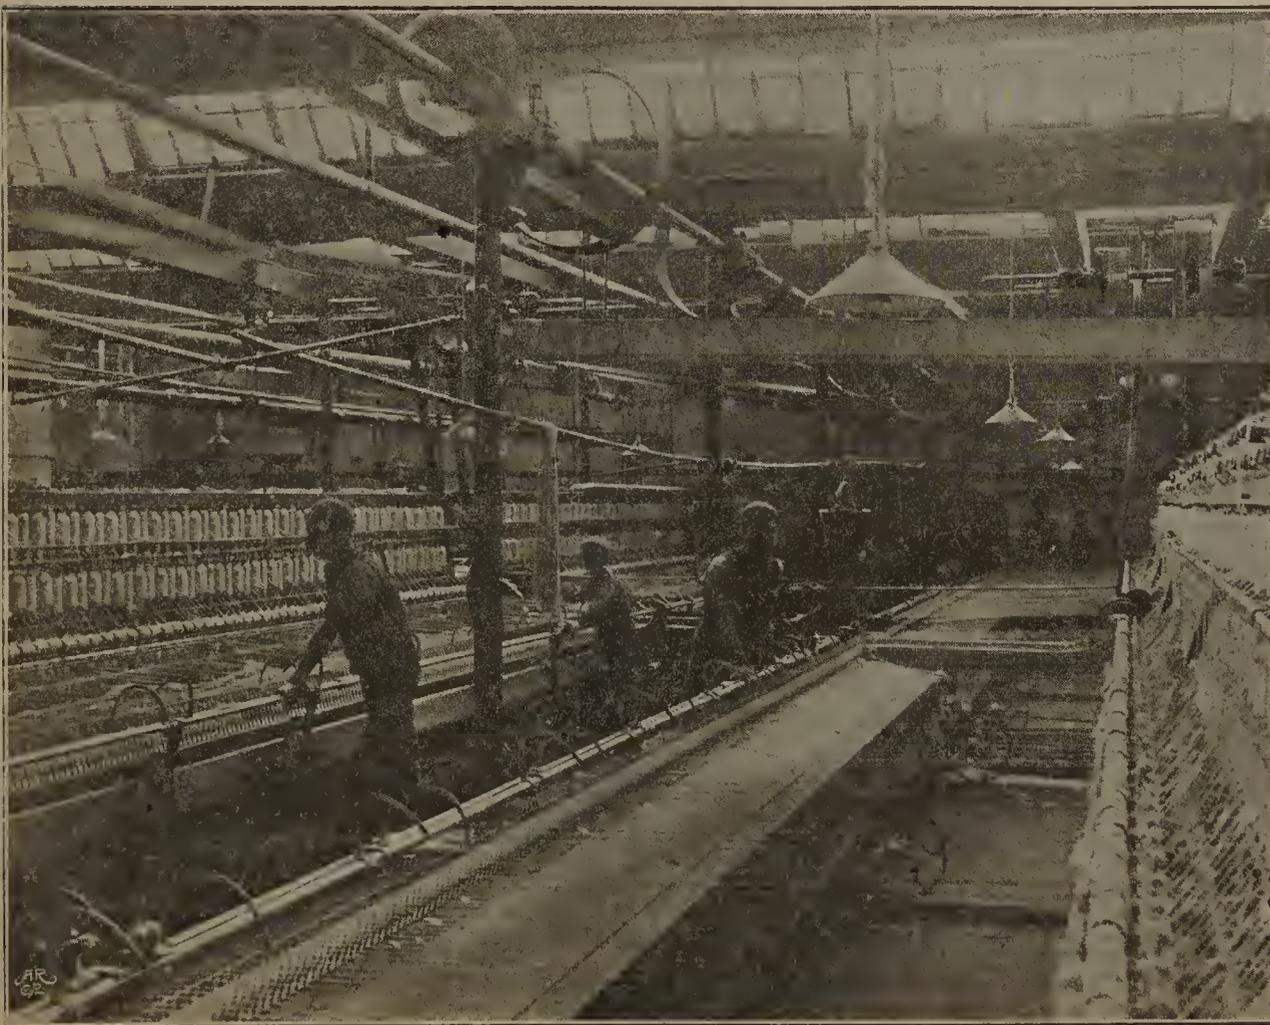

they are withdrawn, being subsequently finished and folded, and enclosed in air-tight cases. The lints and cotton wools are impregnated by packing them in the revolving drum of a large hydro-extractor, then spraying them with the solution by means of a leather hose. The excess of liquid drains off through holes to the revolving drum, and the latter is kept revolving at a high rate of speed for some time longer, until the dressings are almost dry. All the floors and benches in this department are cemented, the dressings are kept covered with sublimate cloths (not shown in the sketch), and the workers wear special dresses, besides being compelled to wash their hands frequently in antiseptic solutions, every possible care being thus taken to avoid contamination. It may be noted also that very completely fitted chemical and bacteriological laboratories are placed at the disposal of the head of this department, so that all the materials used may be tested, and the strength of the finished products determined.

CELLULOSE WADDING.

The most novel of the dressings prepared by the firm, which is left for notice until the last, seems also destined to become the most important. This is the new cellulose wadding, manufactured under Feirabend's

FINISHING COTTON WOOL.

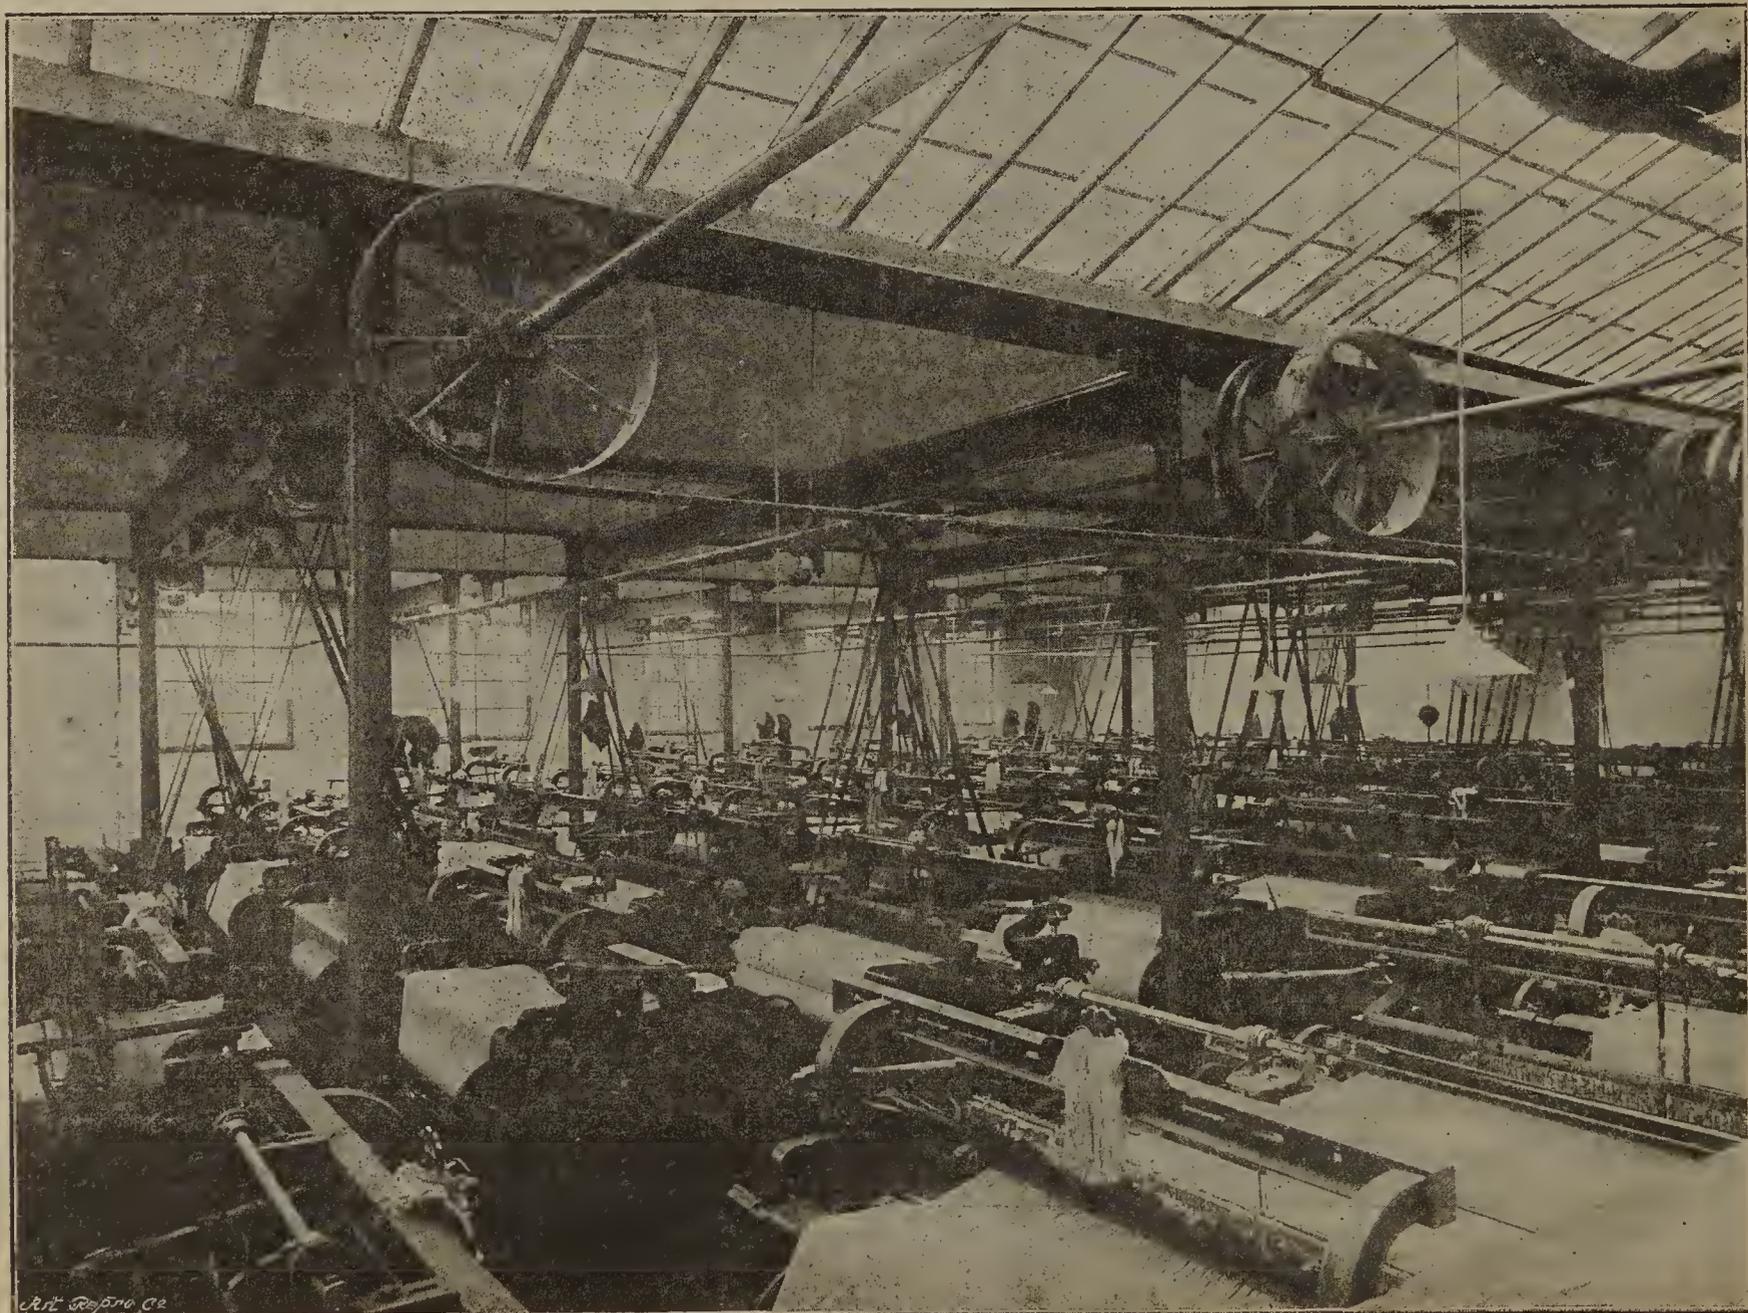

MULES FOR SPINNING WEFT FOR BANDAGES.

patent, the rights in which have been acquired by Messrs. Robinson and Sons, in so far as they relate to this country. The wadding is prepared from wood pulp, is both less expensive and lighter than absorbent cotton wool, and about five times as absorbent. Not only is it more absorbent, but its diffusive power is also greater. Thus, whereas in a pad of absorbent wool the discharge is absorbed within somewhat narrowly circumscribed limits, and soon makes its appearance on the outside of the dressing, a similar pad of the new cellulose wadding will retain the discharged matter until it is permeated throughout. The wadding is naturally sterilised in the process of manufacture, makes admirable sponges, sanitary pads, etc., etc., and seems superior to the best absorbent cotton wool for most, if not all, of the purposes for which the latter is usually employed. Great difficulty already exists in coping with the numerous large orders received for this product, and there is necessarily unavoidable delay in the execution of orders for the new dressing. The

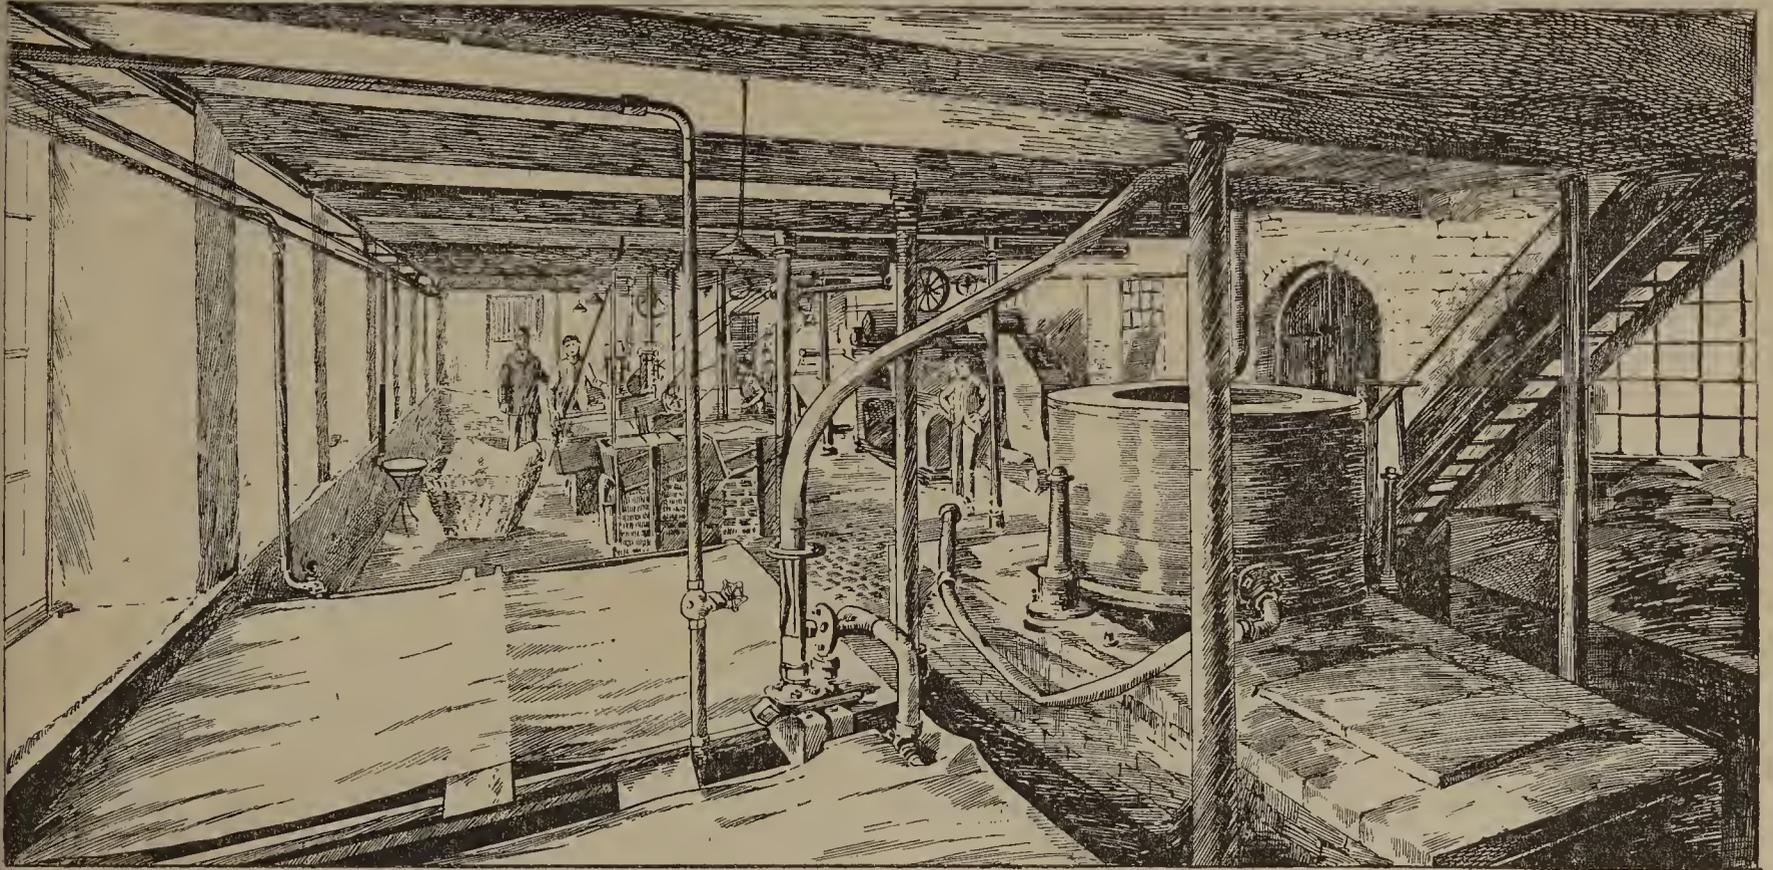

WRAPPING ROOM, WHERE MEDICATED DRESSINGS ARE MADE INTO PACKAGES.

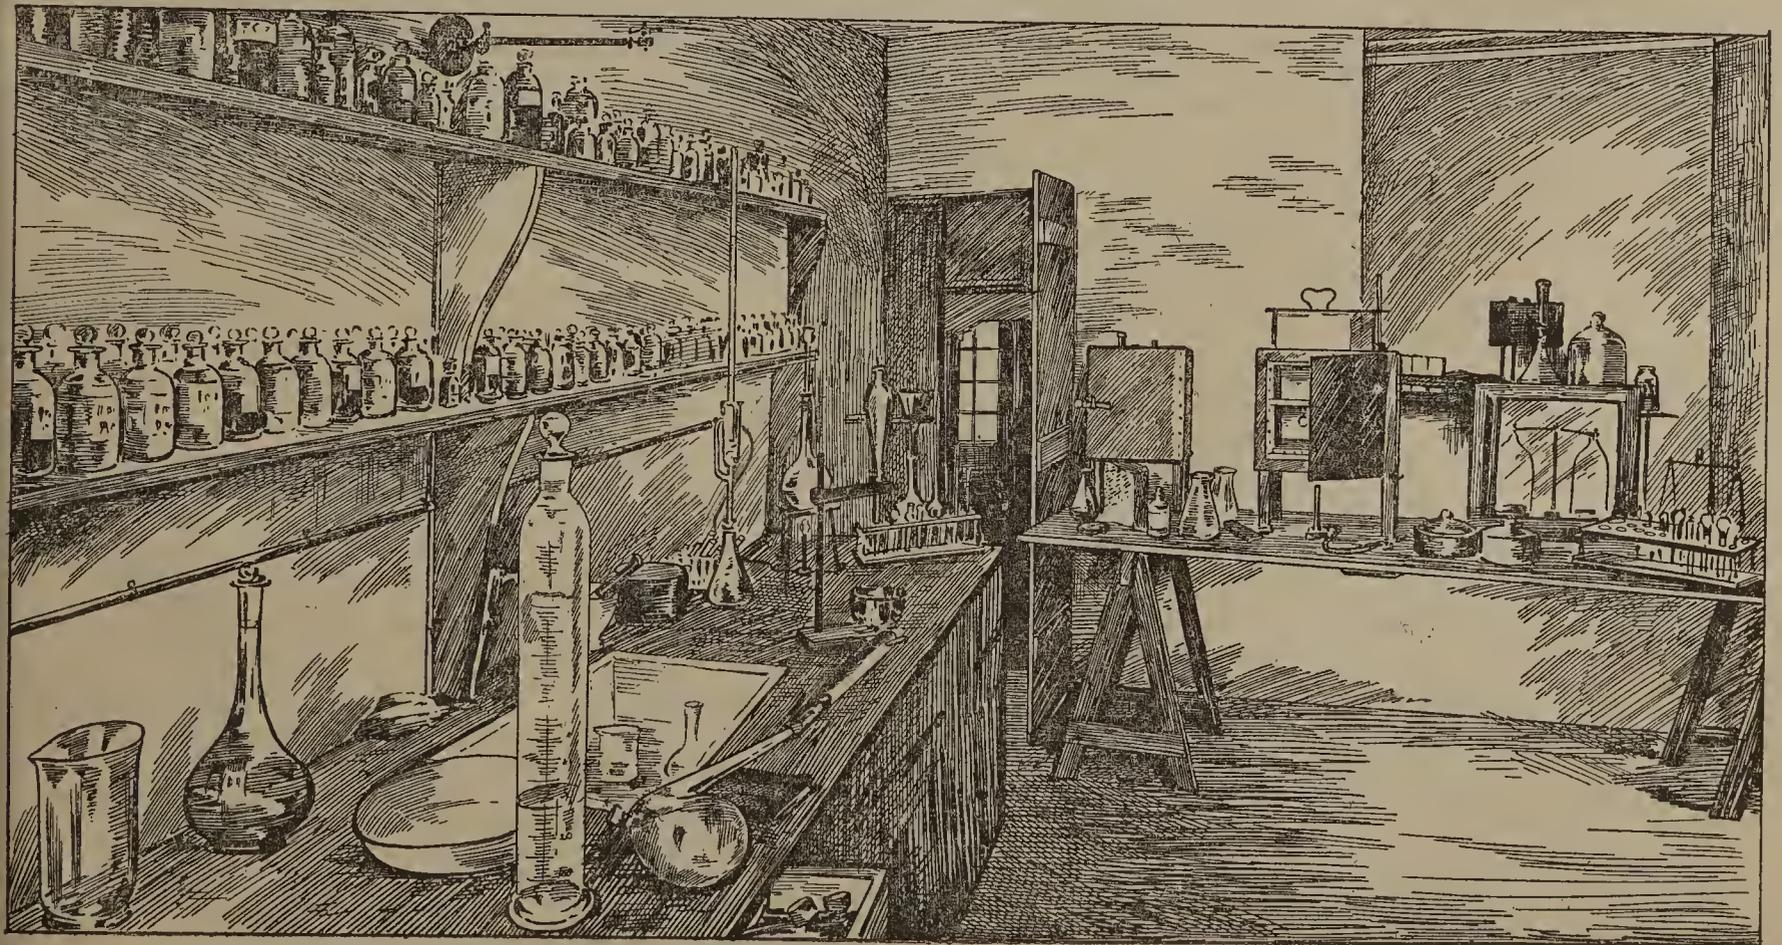

WEAVING THE CLOTH FOR MAKING LINT.

experimental stage is now well over, however, and as soon as new plant is completed the cellulose wadding will be supplied regularly in any quantity, and may be expected to displace many of its rivals,

ment of the firm's business, and can be only briefly referred to here. This branch of the business is under the management of Mr. Charles Portland Robinson, and also shows signs of great and continued

PROCESS OF MEDICATING DRESSINGS—HYDRO-EXTRACTOR IN THE FOREGROUND, WITH MEDICATING VATS AND HEATED ROLLERS BEHIND.

CHEMICAL LABORATORY SHOWING BACTERIOLOGICAL APPARATUS temporarily removed from BACTERIOLOGICAL LABORATORY. on account of its relative cheapness as well as its undoubted superiority.

CARDBOARD BOXES.

The manufacture of cardboard boxes is an entirely distinct depart-

ment, an additional building at the Holme Brook Mills having been quite recently finished. The ordinary round pill-boxes are made in enormous quantities, as many as a quarter of a million of one kind alone being turned out in a week. Pill-boxes, however,

constitute but a small proportion of the total output. Homœopathic bottle cases, camphor ball boxes, insect powder boxes, magnesia boxes, and many other varieties are manufactured on a proportionately large scale. Square boxes are also made in great variety with loose or hinged lids, as well as sliding boxes, others fastened with metal edges or studs so as to avoid the use of glue or paste, and folding boxes and cases. In every case any desired matter is printed upon the boxes or cases, thus avoiding the use of separate labels, the firm having a very complete printing outfit, capable of doing whatever is necessary in this direction.

CONCLUSION.

This necessarily brief description of a huge undertaking that has developed from an ordinary druggist's business requires, for the sake of completeness, that two points should be emphasised. Those are that the heads of the firm appear always to have devoted themselves to the conduct and development of their business, and that they have never continued to purchase manufactured articles when they could profitably make similar goods for themselves. The fact that the machine shop, where new machines are continually being made and suggested improvements tested, is one of the largest engineering works in the neighbourhood, and that every step in the production of the firm's different specialties from the raw material is taken under its own supervision, should suffice to prove the wisdom of the position it has taken up. Self-dependence and enterprise, coupled with a shrewd appreciation of the value of applying science in practice, have served to create a business in things that seem trifling in themselves, which may fairly be regarded as being far from the least of the commercial successes of the century.

ENGLISH NEWS.

ROYAL INSTITUTION.—On Saturday afternoon last, Lord Rayleigh began a course of six lectures on light. According to the *Daily News*, he spoke at the outset of the wave length of light, its velocity, and its periodic time, things which were closely connected. As illustrating the rapidity of light he caused a disc of very narrow alternate black and white teeth to rotate with great rapidity, so that in the ordinary light it appeared to the eye as a neutral grey. The light was then turned down, and a spark, which occupied probably not more than the ten thousandth part of a second in duration, was flashed upon the disc, with the result that the black and white teeth were seen for the short period of time that the spark lasted as though standing perfectly still. The light had enabled the eye to see the disc when it was at a given point, and then had gone with startling rapidity before the revolution of the disc could destroy the illusion of stillness. Passing on to the law of refraction the lecturer explained that the angle of refraction was not always in proportion to the angle of incidence, though it might be fairly so when the angle was small, as Descartes and Snell had discovered. In optical experiments they had to deal with a more complicated matter than passage through water or glass. If two sides at which light entered were not parallel, they found certain effects, which were noticeable in a prism, either of glass or liquid. If they passed white light through a prism it was split up, as shown in the spectrum which Newton first explained. To say that the coloured lights were contained in the white light was the only way of speaking of the matter, but there was a paradox in it all the same. A line in the wax of a phonograph contained the elements of speech, and that was an illustration of a line of light and what it contained. It was difficult sometimes, however, to say that certain colours were present and others absent. This led him to speak of the effects of absorbing agents or media upon the spectrum. Throwing the several colours of the spectrum upon the screen, he showed that the application of bichromate of potash made the blue dark, that a red glass cut almost everything away except the red, and that sulphate of copper cut away the red. In light, colours acted by subtraction and the result of putting blue and red together was not to give a mixed colour, but blackness or opacity. This also he illustrated by the colours of the spectrum. A red paper disc held over the red line appeared transparent, but over the other lines it was black. Similarly a green disc was transparent over the green line, and black over the others,

and the same effect was shown with the blue and other colours. A further interesting experiment to illustrate the principle of absorption was made with a dish containing a liquid placed on the floor of the theatre. No one remaining seated could distinguish the colour of the liquid, which was ultimately found to be yellow.

INTERESTING DEBATES BY LAW STUDENTS' SOCIETIES.—The *Manchester Guardian* reports that at a meeting of the Manchester Law Students' Society, a debate was opened on the following lines:—"Mr. H., a business man, making by his personal exertions a large income, about fifty years of age, and in good general health, purchases at the shop of Mr. B. a dose of phenacetine as a cure for headache. Within an hour of taking it he dies, poisoned by strychnine. The dose was served out of a bottle supplied to Mr. B. by Messrs. W., ordered as and labelled 'phenacetine,' which is a harmless and non-poisonous drug. On being analysed after Mr. H.'s death, it was found that the contents of the bottle consisted of phenacetine mixed with about 30 per cent. of strychnine. Mr. B. had ordered at the same time from Messrs. W. a bottle of strychnine for making up vermin-killer; part of the contents of the bottle supplied in accordance with this order, and duly labelled 'strychnine' and 'poison,' were unused, and on being analysed were found to consist of phenacetine only. The contents of the two bottles had therefore somehow become mixed, but how was not very clear. Can Mr. H.'s executors sue either Mr. B., the chemist, or Messrs. W., the wholesale druggists, or both, for damages?—Mr. Z. M. Lord, for the affirmative, maintained that an action on contract would lie against the retail dealer under the Sale of Goods Act, and that by Lord Campbell's Act an action would pass to H.'s executors against Messrs. W. as having dealt negligently with goods of a known dangerous description (citing *Thomas v. Winchester*, an American case; *George v. Scivington*, and *Bowater v. Smith*).—Mr. E. H. Coombs, in reply, referred to the well-known doctrine of *caveat emptor*, and argued that the case of negligently dealing with poisons had never come before the English Courts, that even in America the retail dealer was always considered free from liability, and that in commenting on the American cases on poison the English Courts had held that they went too far.—The President (His Honour Judge Parry) summed up strongly in favour of the affirmative, pointing out that special caution had always to be used in dealing with goods of a dangerous character, and the meeting thereupon decided by a large majority in favour of H.'s executors having a right of action on contract against B., and on tort against the wholesale dealers. According to the *Blackburn Telegraph*, the Blackburn and Bolton law students have held a joint debate on the same subject. Mr. F. W. Cooper, of Bolton, presided, and the decision was to the effect that the retail chemist and wholesale druggist were responsible in damages.

PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION.—In consequence of the success which attended the first West of England Pharmacy Ball, held at Stonehouse Town Hall recently, the ball committee sent invitations to members of the Association to join in a dinner last week, which was well served at the Liberal Club, Plymouth. The attendance included Messrs. C. J. Park (President), J. G. Netting and Doble (Vice-Presidents), J. H. Bailey (Treasurer), J. Cocks (Hon. Sec.), Perkins, J. W. Swainson, Hester, Ralph, A. D. Breeze, R. F. Roper, Menhennick, J. D. Turney, G. Fairweather, P. A. Kelly, J. Lamble, Johnson, H. Cattle, J. Maurice, Vickery, G. Cocks, F. Maitland, and H. O. Westcott (Secretary to Ball Committee). The loyal toasts having been duly honoured, Mr. Breeze proposed the "Ball Committee," which Messrs. Maitland and Westcott acknowledged. "The Association" was given by Mr. Roper, and responded to by Messrs. C. Park, J. G. Netting, Doble (Tavistock), and J. Cocks. Mr. Fairweather (Jun. Sec.), gave a very satisfactory account of the junior section and praised the seniors for their kind attention. The ball committee agreed to purchase a microscope for the Association from the surplus gained over the ball. A most enjoyable musical programme was submitted.

POISONED BY OPIUM.—An inquest was held at Liverpool on Saturday last by the City Coroner, Mr. T. E. Sampson, regarding the death of William East Watson, 32 years of age, who lived at 124, Albert Edward Road. On the previous day he sent an errand boy for twopennyworth of laudanum, which he wanted for a cut finger. Shortly afterwards he gave the bottle, which was then empty, to the boy, who then by his orders bought another two-

pennyworth of laudanum from another chemist. George Martin, licensee of a public house in Wavertree Road, stated that the man went to his place about noon and asked for a small whisky. Witness saw that he had a small bottle in his hand; he refused to serve him, and suspecting something was wrong he took the bottle from him with great difficulty, and saw that it contained laudanum. He at once sent the man back to the shop and followed him. Shortly afterwards the man died, the medical evidence being that death was due to opium poisoning.—The jury found that the deceased died through opium poisoning by misadventure.

DEATH OF A DOCTOR FROM OPIUM POISONING.—The Coroner for the Isle of Ely, Mr. W. Welshman, held an inquest at Doddington, on February 20, on the body of Dr. C. B. Stephens, who had been bedridden and a great sufferer for some time, and was in the habit of taking opium to induce sleep. On the previous Monday evening he took an overdose, and in spite of the efforts of his son, Dr. C. B. Stephens, to counteract the drug, he gradually sank, and died from exhaustion the following afternoon.—The jury returned a verdict of "Death from exhaustion, consequent on an overdose of opium inadvertently administered by himself."

ANOTHER SEIDLITZ POWDER CASE.—At West Bromwich on February 24 John Salmon Mould, trading in High Street, West Bromwich, as the Wolverhampton Drug Stores, was summoned for selling seidlitz powders on December 17 last, which were not of the nature, quality, and substance demanded.—Mr. A. Caddick prosecuted on behalf of the Corporation of West Bromwich, and Mr. Vachell defended.—George William Davis (inspector) gave evidence as to the purchase of the powders, and said a third portion of them was handed over to the borough analyst.—In reply to Mr. Vachell, Mr. Davis said he did not complain of the quality or of the nature of the ingredients, or even of the introduction of any foreign ingredients, it was simply a question of weight as given in the British Pharmacopœia.—Mr. Vachell urged that the powders should have been mixed together, and then divided into three portions. Mr. Vachell contended that the British Pharmacopœia for the first time published a description of what seidlitz powders should be composed of in 1890, and chemists made up two classes of powders.—The Stipendiary said Mr. Vachell seemed to suggest that the British Pharmacopœia was not the standard for making up seidlitz powders.—Harry Sylvester, borough analyst, said that the average deficiency of the blue papers was 9.1 grains, whilst in the white paper there was an excess of 3½ grains. He did not examine each packet separately. He mixed them all together, and then made the analysis. He admitted in reply to Mr. Vachell that the powders submitted to him were exactly of the same nature, quality and substance as those prescribed in the British Pharmacopœia. It was a question of the packets being short measure.—Arthur Winterbottom, chemist, said the proper way to deal with seidlitz powders was to weigh them, and he considered the standard of the British Pharmacopœia the proper one. If the mixture was not properly made up serious results might accrue.—The Stipendiary ultimately dismissed the summons on the ground that the samples had not been divided in accordance with the Act of Parliament.

THE HOLBORN EXPLOSION.—At Holborn Town Hall on February 24, Dr. Danford Thomas opened an inquest with reference to the death of Arthur French St. George, age 34, a chemist, who resided at Earlswood, Surrey, and was the victim of an explosion which occurred on Thursday, February 22, in the laboratory of Messrs. Redwood and De Hailes, analytical chemists, 15, Red Lion Square. Mr. A. Spencer, chief officer of the Public Control Department of the London County Council, was present at the inquiry.

The Coroner stated that he had been in communication with Sir V. D. Majendie, inspector to the Board of Trade under the Explosives Act, who wrote that Dr. Dupré and himself had not yet concluded their investigations into the case, and he suggested an adjournment of the inquest to enable him to make his report.

Agnes St. George, widow of the deceased, residing at Coxwold House, Earlswood, Surrey, stated that her husband went to 15, Red Lion Square, for the purpose of conducting some chemical experiments in which he was interested. He did so on Thursday. He left home apparently well and cheerful. Subsequently she learnt that he had met with an accident.

Mr. Alfred James de Hailes, analytical chemist, in partnership with Mr. Redwood, at 15, Red Lion Square, said that he had only known the deceased a week. He (the deceased) was bringing out

a patent relating to the preparation of grease for the manufacture of candles. He visited the laboratory on Thursday. The witness said, in the interests of the widow, it was desirable that he should not reveal the nature of the invention the deceased intended patenting. He was working on Thursday on a small oxygen cylinder, and there was nothing in what he had to do likely to prove dangerous. Shortly before one on Thursday afternoon, whilst the witness was in his private room on the second floor adjacent to the laboratory occupied by Mr. St. George, he heard a terrific explosion in the latter room, and was enveloped in the smoke of burnt sugar. The witness called to his man Glass, asking him if he was all right, and he replied, "Yes." The witness, looking on the floor of the laboratory, found the deceased lying on the floor as depicted in the photograph produced. The top of his skull was completely blown away, and he was otherwise frightfully injured. The cylinder which the deceased was using was an absolutely new cylinder, and it was empty. It was about a foot long, and four or five inches in diameter. It would hold about 10 feet of compressed gas. The witness added that he did not like the look of the cylinder, and asked the deceased what he was going to do with it. He said, "I want to heat it up to 30 lb. pressure," which was nothing serious. The cylinder was guaranteed to bear a pressure of 1½ ton. Mr. Glass observed the movements of the deceased, and took notes. From these notes the witness arrived at the conclusion that Mr. St. George was doing a foolish thing, and he was not surprised the cylinder burst. Certain articles were deposited in the cylinder, which was then screwed down. The cylinder was then placed on a gas furnace. The former was absolutely sealed up. Considering the temperature to which it was exposed, an explosion would naturally, in the witness's opinion, result. The cylinder was placed on the gas furnace twenty minutes before the explosion occurred.

Mr. Spencer: When he said he wanted a pressure of 30 lb. didn't he mean a pressure of two temperatures, or 30 lb. to the square inch?—The Witness: I didn't give it a thought.

If you had known that he was applying heat to a full cylinder without any safety valve at all, you would probably have stopped him at once?—Certainly.

By the Coroner: I should consider Mr. St. George was an expert, a very capable chemist indeed.

Dr. W. R. Gould, 10, Lamb's Conduit Street, who was called in, stated that he found the deceased lying on the floor of the laboratory. The roof of the head was absent, and the brain was blown into an adjoining room 15 feet away from the scene of the accident. Death must have been instantaneous. Part of the cylinder was lodged in the ceiling. He could not see where the cylinder had burst.

Mr. De Hailes (recalled) said that the cylinder was ripped up on one side and driven into the ceiling.

The Coroner: If you were to seal up the outlets of a kettle you would have an explosion similar to this.

Richard Russell, who was the deceased's assistant, but did not happen to be in the laboratory at the time of the explosion, said the cylinder was filled with a kind of liquid. Having been screwed up the cylinder was placed on the gas furnace. It was hermetically sealed.

The inquiry was adjourned.

SCOTTISH NEWS.

EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES ASSOCIATION.—The sixth meeting of the eighteenth session was held in the Pharmaceutical Society's Hall, 36, York Place, on Friday, February 21, at 9.15 p.m., Mr. J. Mackintosh Cameron President, in the chair.

The minutes of last meeting were read and approved.

Mr. W. B. Cowie gave an interesting lecture, fully illustrated by diagrams and drawings, of the systems of reproduction in a fern, a pine, and an ordinary flowering plant, the homologous parts of each being compared. He also exhibited under the microscope and described the prothallus of a fern.

The next communication was entitled "Landmarks in the Progress of Organic Chemistry," by G. G. Davidson. The author referred to the synthesis of urea by Wöhler and Liebig, and dealt more especially with the employment of electricity in the production of calcium carbide, and the use of the latter in the production of acetylene. He sketched the possible uses to which this discovery could be put, and referred to its probable importance as a source of pure organic substances for pharmaceutical and medical use.

Mr. Cowie then demonstrated the combustion of common air in an atmosphere of coal gas, and *vice versa*, by means of the glass chimney of an ordinary paraffin lamp. The lower end of the chimney was closed with a cork perforated so that two glass tubes passed through it. One tube was connected with the ordinary gas supply and the other admitted air. On lighting the gas and admitting sufficient of it, the chimney became filled and the flame passed from the gas pipe to the air pipe, thus showing combustion of air in coal gas. The excess of gas could be lighted at the upper end of the chimney. On reducing the supply of gas the air again predominated, and the flame passed back to the gas pipe.

On the motion of the Chairman votes of thanks were awarded to Messrs. Davidson and Cowie.

EDINBURGH ROYAL DISPENSARY PHARMACY STUDENTS' SUPPER.—The eighth annual supper of the pharmacy students connected with the Edinburgh Royal Dispensary School of Pharmacy, took place in the Grand Restaurant, St. Andrew Street, on the evening of Friday, February 21. Mr. William Duncan, Principal, occupied the chair, and Messrs. German and McVitie acted as croupiers. Among others present were Mr. Peter Boa, President of the Edinburgh District Chemists' Trade Association; Mr. Herbert B. Ezard, L.D.S., Secretary Edinburgh Odontological Society; Parish Councillor D. Maclaren, Mr. George Coull, B.Sc., Mr. J. Rutherford Hill, etc. The toast list included "The Pharmaceutical Society," proposed by Mr. D. Maclaren, acknowledged by Mr. George Coull, B.Sc.; "The Scotch Board of Examiners," proposed by Mr. McVitie, acknowledged by Mr. P. Boa; "The Pharmacy Students," proposed by Mr. Boa, acknowledged by the Chairman; "The Ladies," proposed by Mr. Hume, acknowledged by Mr. Kitson. In the course of the evening handsome presentations were made of a silver coffee-pot to Mr. Duncan, a case of brier tobacco pipes to Mr. W. G. Mackenzie, and a gold signet ring to Mr. German. Mr. Hudson acted as pianist, and an exceedingly pleasant evening was enlivened by songs and recitations contributed by Messrs. Fletcher, Arries, Westland, Cook, Mennie, Rowland, Duncan, Hogg, Adamson, McLaren, Ezard, and Kitson.

MR. JAMES CHALMERS, chemist and druggist, has purchased the business formerly carried on by Mr. John McCurrie, at Main Street, Kelty, Fifeshire.

DEATH IN AN AIRDRIE DRUG SHOP.—On February 24, James Gray, of Airdrie, was found lying dead on the floor of the shop in South Bridge Street, which he used as a consulting room, though not registered as a medical man. He had been in a weakly state of health for some time. On Sunday night he had gone to see a patient at Coatdyke, and had got the key of the shop in order that he might make up any medicine that was needed. On getting inside he had locked the door, and was not seen again till the body was discovered on the shop being opened yesterday. The cause of death was failure of the heart's action. In the shop where the event took place, a drug business is carried on though the proprietor is not registered.

A CROFTER'S FAMILY POISONED.—A peculiar case of poisoning is occupying the attention of the Inverness-shire police. Last week the wife and the children of Mr. MacLean, crofter, of Kiltarlity, were seized with sudden illness, which proved fatal in the case of a girl aged four, whilst another child is not yet out of danger. The doctors believe that death was due to narcotic poisoning.

IRISH NEWS.

PHARMACISTS AND PLUMBERS.—In the course of a lecture last week on "Sanitary Reform," Mr. W. Kaye Parry, C.E., the eminent Dublin sanitary specialist, remarked that the Legislature insisted that only properly qualified persons should practise pharmacy, and as our lives were just as much at the mercy of the plumber as the chemist, the law should insist on no one but competent men acting as plumbers.

SULPHURIC ETHER, in about fifty 5-gallon tins, was discovered floating in the sea last week outside Queenstown. Sulphuric ether was added to the Irish scheduled poisons a few years ago, owing to the extensive use of it as an intoxicant in some parts of Ireland.

MUNICIPAL APPOINTMENT.—Mr. George H. Grindley, junr., son of an Irish Pharmaceutical Councillor, has been appointed assistant secretary to the Rathmines Commissioners.

THE ASSISTANTS' ASSOCIATION is shortly to commence holding its meetings in the Pharmaceutical Society's House, at Dublin. Much gratification has been expressed by the assistants at the generous way in which the Council has treated them.

PARLIAMENTARY INTELLIGENCE.

SHOPS (EARLY-CLOSING) BILL.—This measure stands for Committee on the 28th inst., and from the couple of pages of amendments on the Notice Paper, it may be assumed that the fortune which favoured its early parliamentary progress this session is temporarily clouded. Eight members have recorded suggestions, based on their individual convictions, for the improvement of the Bill. With most of such suggestions chemists have very little to do, but the amendments standing in the names of the Hon. H. Duncombe (Egremont), Mr. F. G. Banbury (Peckham), and Mr. C. B. Renshaw (W. Renfrew), merit attention. Clause 9 of the Bill runs as follows:—"A pharmaceutical chemist or chemist and druggist shall not be liable to any fine under this Act for supplying medicines, drugs, or medical appliances after the hour appointed by an order made under this Act for the closing of shops; but this section shall not be deemed to authorise the shop of a pharmaceutical chemist or chemist and druggist to be open after the said hour, save so far as may be necessary for the purpose aforesaid." The honourable gentlemen representing Peckham and W. Renfrew, wish that saving clause deleted, and propose to add to the schedule to the Bill (which exempts certain businesses) the words "chemists' shops," or "pharmaceutical chemists, or chemists and druggists." The effect of these amendments would be to entirely exempt the business of a chemist and druggist from the provisions of the Bill. Mr. Duncombe proposes to bring about much the same result by moving the deletion of all the words from and including "but" on line 5 of the above clause. It is difficult indeed to see why chemists should not enjoy the same degree of freedom from the pains and penalties of the Bill as that accorded to refreshment-house keepers, publicans, tobacconists, and newsagents. In any case there is ground for anticipating that the measure, should it become law, will prove an extremely remunerative piece of legislature to the legal profession.

FOOD PRODUCTS ADULTERATION.—On the motion of Sir W. H. Walrond, Bart., M.P. for Tiverton, and Patronage Secretary to the Treasury, a Select Committee of nineteen members has been ordered to inquire into the working of the Margarine Act, 1887, the Food and Drugs Act, 1875, and any Acts amending the same. The commission, which has power to send for "persons, papers, and records," is to report as to the amendments (if any) desirable in the law relating to adulteration. The names of the commissioners will be given in this column in due course.

PETITIONS.—Petitions have arrived from Lanark and elsewhere in favour of the adoption of the metrical system of weights and measures; also further petitions for the early report of the Royal Commission on Vaccination. These are all ordered to lie on the table.

VACCINATION COMMISSION.—Mr. Benjamin Cohen (L.), Member for East Islington, elicited from the President of the Local Government Board on the 19th instant that the report of the Vaccination Commission, constituted in 1889, might be expected very shortly.

TUBERCULOSIS COMMISSION.—The Member for West Salford, Mr. Lees Knowles, has a notice on the paper, calling attention to the report of the Royal Commission on Tuberculosis. He proposes to move for the re-appointment of the Commission with extended scope, so that it may report on the administrative procedure available for reducing the amount of tuberculous material in animal food. No date has yet been assigned for the notice. The old Commission included Professor G. T. Brown, the late Sir G. Buchanan, Dr. J. F. Payne, and Professor Burdon Sanderson.

LEGAL REPORTS.

PROCEEDINGS UNDER THE SALE OF FOOD
AND DRUGS ACTS.

THE SALE OF WHITE WAX.

At the Marylebone Police Court on February 13, before Mr. Curtis Bennett, Richard Jefferson Dodd, chemist and druggist, 146, Edgware Road, London, was summoned at the instance of the Marylebone Vestry authorities for selling, to the prejudice of the purchaser, 2 ounces of white wax, which was adulterated with paraffin to the extent of at least 38 per cent. The prosecution was supported by Mr. Greenwell, solicitor, and Mr. John Hunt, barrister, defended.—Mr. Greenwell stated that the definition of drug in the Food and Drug Act was that it should "include medicine for internal or external use." White wax was used extensively in ointments for external application, and also in surgical cases. It was most desirable from the point of view of the public that if white wax was asked for, it should be supplied unadulterated with paraffin wax.—The defence having agreed to accept the analyst's certificate, Daniel Jas. Andrews, inspector under the Food and Drug Act, deposed to making the purchase at the defendant's shop. He asked for white wax, was served by the defendant's manager, and paid him 4*d.* for the 2 ozs. Having informed the manager who he was and having gone through the usual formalities, he submitted the wax to the public analyst, whose certificate he produced.

Dr. Wynter Blythe, public analyst for Marylebone and medical officer of health, said he examined the wax purchased by the last witness, and gave the certificate produced. White wax ought not to contain any extraneous drug—paraffin or anything of that sort. It was merely the wax secreted by the bee, bleached, and should not contain paraffin. The term "wax" applied to a great many other things besides beeswax. The object of the British Pharmacopœia was to serve as a standard for making up pharmaceutical preparations. Beeswax was decidedly a drug. It was frequently used for ointments and plasters as a carrier of more active preparations. Witness was not aware that the white wax of commerce was mixed with paraffin. Pereira's book—which said "I have never met with wax purely white"—was a valuable one, and Pereira was a great authority, but not upon this particular point. White wax was used for waxing cotton and silk, and for laundry purposes, and as so used he did suppose the admixture of paraffin would be prejudicial. White beeswax cost about 3*s.* 6*d.* lb., and paraffin wax about 9*d.* lb., so that it was greatly to the advantage of the seller to mix paraffin with the wax if he could sell it as white beeswax. He did not think people went to druggists for white wax for commercial purposes. If he was prescribing a simple ointment, he should expect it to be made with pure white wax, and not with wax plus paraffin; he should expect that defined by the British Pharmacopœia.

Mr. Hunt, addressing the magistrate for the defence, said his contention would be that there were two kinds of wax; the pure beeswax bleached, and the white wax of commerce which was used for other purposes. That sold by his client was a composite wax.—The magistrate interrupting, said that if that was so the customer should be so informed, and should be asked which he wanted. To sell as white wax something which was not white wax was not right.—Mr. Hunt went on to contend that the article sold did not come within the definition of the Act, it was not a drug.—The magistrate said he admitted that the article supplied did not, but what was asked for did.—Mr. Hunt replied that this was not a medicine. The wax was not used for the effect it would have upon the system, but as a means of transmitting another body to the system. It was used to give the ointment consistency; the effect on the body was *nil*. This wax, he contended, was not a drug, but if the magistrate was against him on that point he would show that the case came within Section 6, Sub-section 1, viz., that it was used for commercial purposes.—The magistrate said it should be labelled and sold as such, and the purchaser should be asked whether he wanted the three and sixpenny article or the ninepenny. He (the magistrate) knew perfectly well what the worldly man would say.—Mr. Hunt pointed out that there was nothing in the Act which compelled sellers to tell the purchaser that the article

sold was not a drug. In common parlance "white wax" was the white wax they had sold; the other kind was called pure white wax.

Mr. Dodd, the defendant, was then called as a witness, and in reply to Mr. Hunt said there were two kinds of wax, pharmaceutical wax, or white beeswax, which, by the way, was not white, and commercial white wax. The latter was composed of a mixture of paraffin wax and white wax, and it was sold to meet the demands of the public. The paraffin wax was added to whiten the pharmaceutical wax. The magistrate suggested whether it was not added to secure larger profits, but witness asserted he could show that, in fact, he had made less profit. Further questioned by the magistrate, witness said there was absolutely no difference in the sale price of the two articles; he got 2*d.* per ounce for both. The cost price of commercial white wax was 2*s.* lb., and of pure white wax 2*s.* 3*d.*, not 3*s.* 6*d.*, as had been stated. Witness sold the article at 3*d.* oz. It was impossible to get bleached wax that was white. In dispensing a prescription in which white wax was an ingredient, witness would always use the pure wax. Witness was a member of the Vestry of St. Pancras and knew that that body had refused to prosecute in these cases, as both Dr. Stevenson and Dr. Sykes had said the article was not a drug. At this point the case was adjourned.

Upon the matter again coming before the Court, the magistrate, replying to a question by Mr. Hunt, said he could not see his way to hold that the article sold was not a drug. If a person went to a chemist's shop and asked for white wax, he would not expect to get the white wax of commerce. Mr. Hunt said he should endeavour to show the contrary, and called Dr. John Frederick Sykes, lecturer of health at Guy's Hospital, and officer of health for the parish of St. Pancras, to support his contention. Mr. Arthur Philpot, traveller to Messrs. Harker, Stagg, and Morgan, wholesale druggists, Dr. John Hincks Vinrace, physician at St. John's Hospital for Skin Diseases, and other witnesses having also given evidence for the defence,

Mr. Curtis-Bennett gave his decision. He said he had no doubt, after hearing the evidence for the prosecution, that there were two kinds of wax—white wax properly so-called, and another article of commerce called white wax, which was white wax plus something else, spermaceti or paraffin. If there was any doubt about it, it had been abundantly proved by the defendant's own witness. The defence had gone out of their way to prove that which was abundantly clear. The evidence showed, and he had no doubt that the article in question was a drug within the meaning of the word drug as used in the Act. When one asked for white wax he expected it, and not that article plus something else. If persons asked for the white wax of commerce, then, he admitted, they should be supplied with the compound article. It ought, however, to be labelled. To sell to the purchaser that which was not white wax, was "to the prejudice of the purchaser." This was clearly a case in which a conviction must follow. He did not think the case called for an exemplary fine, because he had no doubt a great many other people had been doing wrong in the matter. If, however, persons were brought before him in future—if chemists continued to carry on their business without making a distinction between the articles—the fines would increase as the offences increased. He fined the defendant forty shillings and two guineas costs. In reply to Mr. Hunt, the magistrate said he found, as a fact, that there were two waxes—a pure white wax and a wax of commerce—and that the defendant had sold "to the prejudice of the purchaser."

Mr. Hunt: Will you state a case, sir?

Mr. Curtis-Bennett: No. You can appeal at the Sessions if you care to.

COURT OF CHANCERY.

FRANZ JOSEF MINERAL WATER.

Three actions which have been pending for some time before Mr. Justice Stirling, one by Messrs. Hertz and Collingwood against Mr. Hirschler for specific performance of an agreement, and two by Mr. Hirschler and the Franz Josef Water Co. respectively, against Messrs. Hertz and Collingwood for an injunction to restrain the use of labels, and for damages, were set down on Saturday, February 22, as a short cause and an order taken by consent. The details were not given, but it was stated that the agreement was to be treated as no longer subsisting; there was an injunction against imitating the labels, and a provision for the payment of damages, not to be enforced unless there were a breach of the injunction, and not in any event without the sanction of the Court.

REPORTS, ANALYSES, AND NOTES ON NEW INVENTIONS.

TAKA-DIASTASE.

A starch digestant possessed of a sufficiently high diastatic power to be of service in cases of salivary indigestion and allied troubles has long been a desideratum with the medical profession. The objection to malt extracts as a class has been that although doubtless beneficial from their nutrient properties, their action on starch is often far from satisfactory, whilst the excessive amount of sugar present is frequently objectionable. Taka-diastrase, a preparation introduced by Messrs. Parke, Davis and Co., is stated to be the produce of a fungus of the genus *Aspergillus*, discovered by Mr. Takamine, of the University of Tokio. Experiments fully substantiate the statement that it is capable of dissolving 100 times its weight of starch under proper conditions. To a stiff mucilage of arrowroot starch containing 50 grains in 4 fluid ozs. of distilled water, which was kept at a temperature of 99° F., half a grain of the preparation was added. The converting action was practically instantaneous, the whole of the starch being rendered soluble within five minutes, whilst further examination, both by means of the iodine and copper tests, showed that digestion at the temperature for sixty minutes was sufficient to effect complete conversion of the starch into glucose. The most important of the claims advanced by the makers was therefore substantiated, but it may be stated, in addition, that it is perfectly soluble in water, practically without smell or taste, and does not appear to be in any way liable to deterioration by keeping. Its price is not excessive if it be remembered that the dose is only from 1 to 5 grains. Taka-diastrase is certainly possessed of a much greater power of converting starch than any similar substance which has recently come to the fore in pharmacy.

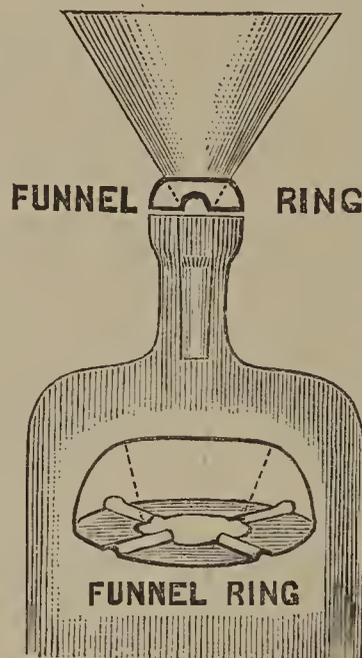

"LEHLIA" TOILET REQUISITES.

The difficulty of finding a name for proprietary preparations that will constitute a perfectly good trade mark, seems to have been overcome by Squire and Sons, of 413, Oxford Street, W., who use the registered word "LEHLIA" to distinguish a new series of toilet preparations. Lehlia Cream is a very seasonable article at present, being specially designed for application to the face and hands in frosty weather. It is of uniform consistence, perfumed just enough, and put up in attractive red celluloid boxes, with the name embossed in gilt lettering on the lids. Lehlia Soap belongs to the superfatted variety, and causes no irritation or roughness on the most sensitive skins. Lehlia Dusting Powder (absorbent and soluble), and Lehlia Face Powder, are delicately perfumed, and appear well adapted for their intended purposes. They are supplied in specially adapted boxes, containing small powder puffs. Lehlia Extract is a fluid preparation, intended to remove the ill-effects of wind and sun on the skin, and the list is completed by the Lehlia Dentifrice, which is harmless in use, yet perfectly efficient, and, withal, agreeable. It is satisfactory to find that a firm in the front rank of pharmacy is yet so careful of its

reputation that even its extra-pharmaceutical preparations are produced and finished with the same extreme care that is associated with its medicinal products.

PATENT FUNNEL RINGS.

The pharmacist does not exist who has not been worried by funnels tipping when inserted in the necks of bottles, or by the difficulty of securing free egress of air as the filtered liquid passes through. Green's Patent Funnel Rings are intended to obviate these troubles. They consist of rubber

rings so shaped as to hold glass funnels firmly in an upright position. The under side of each is flat, so as to rest securely upon a bottle-neck, and grooved to permit the escape of air. The rings are made in four sizes, and supplied in sets of six at 1s. each, by W. Toogood, Heddon Street, Regent Street, W. Convenient glass funnels can also be obtained ready fitted with the rings, which are very durable in use, seeming none the worse after six months' constant use for dispensing purposes.

ALUMINIUM UMBILICAL PADS.

After a time the trade will probably become accustomed to the frequent outbursts of Mr. Fred Reynolds' inventive genius, but at present the prevailing idea is that he must resemble a very active volcano, ever and anon overflowing. The latest of his ideas (for it must be his) realised by the firm of Reynolds and Branson, of Leeds, is an aluminium umbilical pad for infants. This is, of course, exceedingly light, and it is conveniently perforated so that it can be sewn on the body belt. The pads are sold at 4s. the dozen, and are certainly what they are claimed to be—cheap, light, and clean.

PATENT LENTILINE BISCUITS.

Made of pure Egyptian lentil flour and English wheat meal, Marriott's Patent Lentiline Biscuits possess valuable sustaining properties, and are especially adapted for rearing growing children, the makers claiming that they present all the elements necessary to the formation of bone and muscle, and so ensuring a full development, whilst

imparting a vigorous and healthy tone to the system. They are easily digested, and suitable in cases of dyspepsia, weak digestion, or habitual constipation. In addition to the plain lentiline biscuits, the makers also supply lentiline and charcoal biscuits, which are, of course, peculiarly suitable as an article of diet for persons suffering from dyspepsia, indigestion, flatulence, etc. Both varieties can be obtained of the makers, E. Marriott and Co., 49, Upper Parade, Leamington, or through the London sundries houses.

THE NEW PHOTOGRAPHY.

There has been great difficulty in obtaining suitable vacuum tubes for producing the Röntgen X rays for photographic purposes, chiefly because the best conditions were not known. A long series of careful experiments has been made to ascertain the conditions of success at King's College, London, which has resulted in a tube of different shape, size, and degree of vacuum to those previously employed. One important result of this is that far less current can be employed, and that a simple battery and coil may be used without Tesla apparatus. These tubes are all London made, and supplied by Newton and Co., 3, Fleet Street, London, at 25s. each. Owing to the great interest excited by the experiments of Prof. Röntgen in photographing metallic weights, coins, etc., when enclosed in a wooden box, and other similar objects by means of the rays from a radiant-matter tube, Messrs. Newton and Co. have also made arrangements to supply lantern slides at 2s. 6d. each, printed from negatives taken in the same manner by Mr. A. A. C. Swinton, who has produced perhaps the most successful results yet obtained. A list of these will be sent on application to Messrs. Newton and Co.

WARNER'S PHARMACEUTICAL SPECIALTIES.

The preparations of the firm of W. R. Warner and Co., whose English agents are F. Newbery and Sons, King Edward Street, London, are too well known to require detailed description. Their lentiforms of extract of cascara sagrada are worthy of special mention, however, on account of the excellence of their finish. They possess the shape of a double convex lens, contain 2 grains of extract, and are pearl coated. Other notable products by the same firm are their parvules or minute pills, which are quickly soluble and designed for the administration of remedies in small doses. Ingluvin, or chicken pepsin, is recommended as a specific for vomiting in gestation. Details of other preparations supplied by the firm or their agents may be found by referring to Warner's 'Therapeutic Reference Book,' a handy guide for physicians and others, which treats of posology, incompatibles, the digestibility of foods, and numerous other matters of prime importance to medical men and pharmacists.

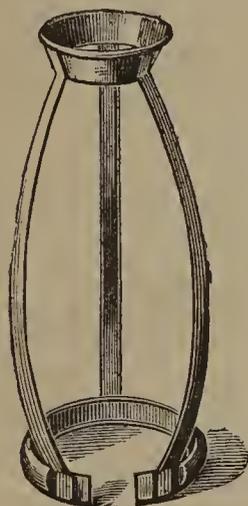

THE "BILTOR" PIPE.

The number of pharmacists addicted to the use of the soothing weed is sufficiently great to justify a reference in these columns to a tobacco pipe constructed on sound hygienic principles. The "Biltor" pipe is supplied in various qualities, but the prin-

ciple is the same in all, a small cartridge of absorbent paper being inserted in the stem so as to filter the smoke and retain all moisture and impurities. The makers—the "Bilitor" Co., 93, Oxford Street, London—claim that this pipe makes smoking cleaner and cooler than any other.

HYGIENIC AND ELASTIC CLOTH.

The claim of Ickringill's Patent Hygienic and Elastic Cloth Syndicate, Ltd., Keighley, that their cloth will retain its elasticity, and the stability of the fibre not be impaired, after washing with warm water and soap, has been tested by having samples of the different varieties of the cloth subjected to the same treatment as ordinary woollen and cotton goods that require cleansing. As a result, the claim appears to be fully borne out, no shrinkage or loss of elasticity having occurred in the process of washing.

THE SPARE HAND.

An ingenious and excellent time-saving device is the "Spare Hand," invented by Mr. A. Haslewood, of Buxton. Its purpose is to support a funnel, and the patent vulcanite "Universal Funnel," specially designed for use with it, enables a dispenser to utilise it with advantage for bottles of any size—from 2 drachms to 30 ounces.

DIKE'S PEPSIN.

In spite of the multitude of pepsins which have been brought forward at different times during the last few years, it is comparatively seldom that a brand is met with which always fulfils the claims advanced by the manufacturers. Dike's pepsin is said to possess a solvent action on albumin to the extent of 3000 times its own weight when tested according to the United States Pharmacopœia and, in addition, to be perfectly soluble in water, forming a clear solution. It would obviously be more in accordance with the requirements of pharmacists in this country if its power when tested according to the B.P. were stated. Recent examination of this article affords confirmation of the statements as to its solvent action on albumin when tested according to the U.S.P., and this strength it should be noted corresponds to a strength of 1:250 if the test be carried out in accordance with the B.P. If it be borne in mind that this high proteolytic powder is accompanied by freedom from disagreeable taste and smell, non-hygroscopicity and perfect solubility in water, it will readily be appreciated that the present satisfactory quality being maintained, Dike's pepsin is likely to occupy a prominent position as a high class preparation. It is manufactured by Frederick Stearns and Co., Detroit, Mich., whose sole agents in Great Britain are Thomas Christy and Co., 25, Lime Street, E.C.

MISCELLANEOUS NEWS.

THE EARLY CLOSING BILL.—Mr. Geo. P. Pond sends copies of correspondence with respect to this Bill, as follows:—

"68, Fleet Street, E.C.
"Feb. 26, 1896.

"To SIR JOHN LUBBOCK.

"Sir,—As a chemist, with your kind permission, permit me to say a word about the special saving Clause for chemists. This Clause will render the Act null and void for two reasons. Firstly, unless you can decide what is a drug, and what is a medical appliance. Example—A magistrate has just decided that wax is a drug. Camphorated chalk is either a food or a drug, and a tooth brush is certainly a medical appliance, so is a sponge and a hair brush. Secondly, when is a shop to be considered open, and when shut? Most shops have no shutters, but a gate. When the gate is up and a little door in the gate is open, will the shop be then closed or open; or, if the side door be open and the front door be closed, is the shop shut? Can anyone decide the import of the words "So far as may be necessary," in reference to drugs, medical appliances, and when the shop is open? If the Clause remain and the Act perchance be enforced, it will cause a very great amount of vexatious proceedings. But it matters little whether it pass or not, because it will never come into operation, as you will not get two-thirds of chemists in any district to agree to close. To give your Act a better chance of success, if you think there is any good to come from it, you should excuse, at present, chemists altogether from it, or impose a fine upon any employer who should employ anyone over a certain number of hours in a week.

"This might be made applicable to nearly all work; although objectionable, is not so objectionable as to force the closing of shops, and it would be legislating for the health and strength of the country if applied all round, and would gradually bring about what you desire, an earlier closing hour in all businesses, while your Bill interferes with the liberty of the person and the freedom of trade.—Your humble servant,

"GEO. P. POND."

[The Reply.]

"2, St. James's Square,
"February 26, 1896.

"To G. P. POND, ESQ.

"Sir,—I beg to acknowledge the receipt of your letter.

"The technical difficulty to which you refer now arises on Sundays.

"In reality I do not think it would be found a practical objection.

"Yours sincerely,
"JOHN LUBBOCK."

MR. H. KEARLEY, M.P. for Devonport, is promoting the Early Closing Bill in the House of Commons, and the Plymouth Chemists' Association is giving him its support.

"K.O.P." CONVERSAZIONE.—The members of the latest social club, which rejoices in the mysterious title of "K.O.P.," held a conversazione at their headquarters, the Elephant and Castle Hotel, Shrewsbury, last week. About fifty gentlemen responded to the invitation of the Committee, among those present being Alderman W. G. Cross (who occupied the chair), Alderman Corbett, Councillor Brace, etc. The proceedings commenced with a smoking concert, which was admirably arranged and carried out with complete success, and during an interval supper was served in an adjoining room.

SEEING THE INVISIBLE.—Mr. A. A. C. Swinton has written to the *Standard* to say he has succeeded, by means of the Röntgen rays, in "actually seeing the coins inside a leather purse, the metal instruments inside a closed wood and leather case, a coin through a piece of wood half-an-inch in thickness, and also through a sheet of aluminium."

THE SALE OF METHYLATED SPIRIT IN GLASGOW.—At the Justice of Peace Court, Glasgow, on February 21, Messrs. John Shaw, Craig and Co. (Limited), licensed retailers of methylated spirit, Paterson Street, Glasgow, were charged with selling to an officer of the Inland Revenue, on January 8 last, a quart of methylated spirit in which mineralised naphtha had not been dissolved.—Respondents admitted the sale, but pleaded that it had been effected by a clerk, ignorant of the fact that his action was against the law.—The Supervisor of the Inland Revenue, who prosecuted, said the object of the prosecution was to put a stop to the sale of methylated spirit mixed with peppermint as a beverage. Methylated spirit, he would point out, reduced a little, and with a little peppermint added, used to be extensively drunk in Glasgow, and as the beverage was more harmful and intoxicating than whisky even, and much cheaper, the Court would see how necessary it was to put down the sale.—The Court imposed a mitigated penalty of £5.

EXETER ASSOCIATION OF CHEMISTS AND DRUGGISTS.—An impromptu meeting of the members of this Association was held at the Albert Memorial Museum, on Wednesday, last (February 26), to make arrangements for a conference proposed to be held in connection with the anti-cutting movement. Mr. Hy. Gadd (the President of the Association) presided. It was stated that the Association had received an offer from Mr. Glyn-Jones, the Secretary of the Proprietary Articles Trade Association, to address a meeting of the chemists of the Exeter district on the question, and the meeting was accordingly convened for Thursday, March 5, at the Exeter Arcade Lecture Hall, at 3 p.m. A discussion will follow the lecture. Notices of the meeting have been sent to all chemists in the district.

A CHEMICAL LABORATORY AT GALATA.—The Customs Department is about to establish a laboratory at Galata for the analysis of pharmaceutical produce.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Books, etc.

Cassell's 'Family Physician,' volumes I. and II., quite new, cost 7s. 6d. each. What offers?—Williams, 193, Knight's Hill Road, West Norwood, S.E.

Offers wanted for 'Chemical Journal,' Jan., 1872, to Dec., 1890; 'Chemical Industry Journal,' Jan., 1883, to Dec., 1895; 'Year-Book of Pharmacy,' 1874 to 1894; Ganot's 'Physics,' 1877; Pereira's 'Materia Medica,' 3 vols.; 'Pharmaceutical Journal,' complete, 54 vols.; Publications of Cavendish Society, viz., Gmelin's 'Chemistry,' 18 vols. and index; 'Life of Cavendish,' 'Life of Dalton,' Laurent's 'Chemical Method,' Bischof's 'Chemical and Physical Geology,' 3 vols., Lehman's 'Physiological Chemistry,' 3 vols., Funke's 'Physiological Atlas.'—Beta, care of 'Pharmaceutical Journal,' 5, Serle Street, London, W.C.

Curtis' 'Flora Londinensis,' 2 vols., good condition, £5 5s. Nine-foot Portable Screen, with frame, and tackle and box, new, £1 10s. Stainer, Folkestone.

'Squire's Companion,' 15th edit. (1890), with additional supplement. 5s. 6d. Post free.—Baxter, Bramley, Leeds.

Post Free. Prof. Parker's 'Zootomy,' cost 8s., 4s.; Ecoresby-Jackson's 'Materia Medica,' 3rd. edit., cost 12s. 6d., 6s. 6d.; Hooper's 'Medical Dictionary,' cost 30s., 5s.—Davies, 33, Eglinton Road, Bow.

British Pharmacopœia, 1885, and Supplement, with Minor Notes, 4s. 6d.; Muter's 'Analytical Chemistry,' 3s. 6d.; 'Minor Chemistry Notes,' 5s. 6d.; Set of Boxing Gloves, new 6s.—Pearce, 2, Queen Street, Exeter.

'Journal of Society of Arts,' 1867-88, 25s.; Woodville's 'Medical Botany,' 3 quarto volumes, complete. many coloured plates, 21s. only, original cost £4. Davis, "Chestnuts," Gordon Hill, Enfield.

'United States Pharm.,' 1874 edit., 3s. 6d.; Bristowe's 'Theory and Practice of Med.,' 2nd edit., 5s.; Gregory's 'Elements of Practice of Med.,' 6th edit., 5s.; Phillips' 'Translation of Pharm.,' 1851, with notes and illustrations (scarce), 8s. 6d.—Botham, Higher Broughton.

'Pharmaceutical Journal,' the whole of the third series, 25 volumes, perfect, any reasonable money offer accepted, or exchange for anything useful, no books nor drugs.—S. Barlow, Chemist, Darlington.

A book of 130 Well-tryed Recipes for Chemists and Druggists, comprising well-selected formulæ for general, remedial, veterinary, toilet, and everyday preparations. Post free 1s. 6d.—Tully, Chemist, Hasting.

Muspratt's 'Chemistry,' 7 vols.; 'Year-Book of Pharmacy,' 20 vols.; both unsoiled. What offers?—Boyce, Clarence Road, Windsor.

What offers for 16 years' 'Pharmaceutical Journals,' complete, dating from 1879 to 1895. Apply at once to—J. C. Gibson, Chemist, Nottingham Street, Sheffield.

'Pharmaceutical Journal,' 1880-94, unbound, clean, 5 bound vols., 1883-7; 'Review of Reviews,' 1894, unbound; 'Sketch,' 62 recent Nos.; Britten's 'Dispensers' Vade-Mecum,' cheap. Offers cash or exchange.—Hinde, Chemist, Lowestoft.

Martindale's 'Extra Pharmacopœia,' 5th edit. 1s. 6d.; 6th edit., 2s. 6d.; 7th edit., 3s. 6d.—W. R. Gossling, 7, The Strand, Southsea.

Appliances.

Two Siegle's Steam Sprays for 5s.; No. 10 Wedgwood Funnels, slightly snipped at tips, half cost price: one large and one small Electro-Magnetic Machine as Maw's No. 50, 12s. and 8s. 6d., baywood cases; two portable Electric Bells on baywood stands, Battery, Push, and 20 yards of Wire all complete, easily fixed, 15s. lot.—Botham, Higher Broughton, Manchester.

Miscellaneous.

For Sale.—Eight Carbolie Smoke Balls, stamped, 8s. each.—James Watson, Rose Corner, Norwich.

For Sale.—About 4 lbs. finest Mitcham OL Lavand., 100s. per lb.—James Watson, Rose Corner, Norwich.

Surplus stock, 6 B. & W's. Pinol Eucalyptia Inhalers, 9d. each; 3 Fairchild's Zymine Tablets, 10d. each; ¼-oz. Fairchild's Zymine, 1s.; 4s. 6d. Carlsbad Salts, 3s., good condition.—Matthew, 529, Battersea Park Road.

Southall's Model of Cod-Liver Oil Factory. New, Jan. 1895. Cost 21s. What offers?—Allenby, Chemist, Helmsley, Yorks.

Lancaster's "International" Camera, 10 by 8, tripod-stand, two double dark slides, time and instantaneous shutter inside camera, Voigtlander's Rapid Euryscope Lens (No. 4), and studio stand; the whole cost £24; what offers?—Bienvenu, Andover.

WANTED.

Books, etc.

Richter's 'Organic Chemistry' (Kegan Paul, 1892). Whitla's 'Pharmacy'; Remington's 'Practice of Pharmacy.'—Baxter, Bramley, Leeds.

Kelly's 'Directory of Chemists and Druggists' State date of publication. Bent Front Tooth brush Case; Clarke's Syphon Gas Stove; 10-ft. Dispensing Screen with Mirror Centre and Glass; Fronted Counter for underneath same.—Griffin, Chemist, Kidderminster.

'London Pharmacopœia,' 1851, or Translation; 'Proceedings of the British Pharmaceutical Conference,' 1864 and 1867.—Liverseege, 292, Rotton Park Road, Birmingham.

Appliances.

Aerated Water Plant, hand-power, Haywood, Tylor, or other good maker, equal to new; also Bracher's mixer for 28 lbs., good order. Particulars, etc., to—Chemist, 113, Mowbray Street, Heaton, Newcastle-on-Tyne.

Miscellaneous.

Show Jar, 21 inches. Arms of Great Britain, as Maw's Fig. 1, but white ground.—W. R. Gossling, 7, The Strand, Southsea.

Personal Weighing Machine, must be small, neat, and in good condition. State lowest price and fullest particulars.—Tovey, Chemist, Shanklin, I.W.

Twelve Window Tablets, special size and lettering. Write to—F. Dickins, 7, Prince Street, Bridlington Quay.

Microscope, suitable for students, good condition, new or second-hand, full particulars with lowest cash price—Association, care of F. Matland Chemist, 31, Chapel Street, Stonehouse, Plymouth.

* * Attention is specially directed to the new conditions of the "Exchange," in accordance with which a small charge will in future be made for the insertion of notices. The careful observance of those conditions will tend to obviate much inconvenience and possible delay.

NEWCASTLE CHEMICAL REPORT.

[From our own Correspondent.]

FEBRUARY 25, 1896.

Business in the chemical line is somewhat on the quiet side. With the exception of the regular orders for the trading steamers to Hamburg, Holland and English coast, little is doing. Prices are practically without change and are quoted as follows:—SODA CRYSTALS: 37s. 6d. to 45s. in casks or bags. BLEACHING POWDER: £7 5s. to £7 10s. according to packages. SULPHUR: £3 17s. 6d. to £4. CAUSTIC SODA: 76 to 77 per cent., £9 5s.; 70 per cent., £7 15s. SODA ASH: 48 per cent., £3 15s.; 56 per cent., £4. HYPOSULPHITE OF SODA: £6 5s. to £7. ALKALI: 48 per cent., £4 10s. PITCH: 35s. SULPHATE OF AMMONIA: £8 11s. 3d. to £8 12s. 6d, Leith. SAL AMMONIAC, WHITE: £37 to £39. SALT-CAKE: 27s. 6d. ENGLISH BORAX, REFINED: £20. ALUM IN LUMP: £5 10s. SOUTH DURHAM SALT: 9s. 6d. per ton, *f.o.b.* Tees.

DIARY OF THE WEEK.

Secretaries of Societies are requested to send notices of forthcoming meetings not later than Wednesday in the previous week.

MONDAY, MARCH 2.

ROYAL INSTITUTION OF GREAT BRITAIN, at 5 p.m.

General Monthly Meeting.

SOCIETY OF CHEMICAL INDUSTRY, at 8 p.m.

"Artificial Silk," by Messrs. Cross and Bevan.

TUESDAY, MARCH 3.

PHARMACEUTICAL SOCIETY OF GREAT BRITAIN.

Benevolent Fund Committee.

Finance Committee.

General Purposes Committee.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.

"External Covering of Plants and Animals: its Structure and Functions" (VIII.), by Professor C. Stewart.

WEDNESDAY, MARCH 4.

PHARMACEUTICAL SOCIETY OF GREAT BRITAIN.

Council Meeting.

SOCIETY OF ARTS, at 8 p.m.

"Rontgen's Photography of the Invisible," by A. A. C. Swinton.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION.

Musical and Social Evening, at 8 30 p.m.

BRIGHTON JUNIOR ASSOCIATION OF PHARMACY.

Social Evening, at 8 p.m.

THURSDAY, MARCH 5.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.

"Voltaire," by Reverend W. Barry.

IMPERIAL INSTITUTE, at 4.30 p.m.

Afternoon Paper in Connection with the Indian

Section of the Society of Arts.

CHEMICAL SOCIETY, at 8 p.m.

"On the Explosion of Cyanogen," by H. B. Dixon, E. H. Straggl, and E. Graham.

"On the Mode of Burning of Carbon," by H. B. Dixon.

"On the Detonation of Chlorine Peroxide," by H. B. Dixon, and J. A. Harker.

"The Constitution of a New Acid Resulting from the Oxidation of Tartaric Acid," by H. J. H. Fenton.

LINNEAN SOCIETY OF LONDON, at 8 p.m.

"Segmentally Disposed Thoracic Glands in the Larvæ of Trichoptera," by Professor Gustav Gilson.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 8.30 p.m.

Annual Dinner at the King's Hall, Holborn

Restaurant.

LIVERPOOL PHARMACEUTICAL STUDENTS' SOCIETY.

Exhibition of Lantern Slides, at 8.30 p.m.

GLASGOW AND WEST OF SCOTLAND PHARMACEUTICAL ASSOCIATION, at 9.15 p.m.

Open Meeting.

FRIDAY, MARCH 6.

ROYAL INSTITUTION OF GREAT BRITAIN, at 9 p.m.

"The Tunnel Under the Thames at Blackwall, by A. R. Binnie.

EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION, at 9.15 p.m.

"The Darwinian Theory," by A. S. Birnie.

ABERDEEN JUNIOR CHEMISTS' ASSOCIATION, at 9.30 p.m.

"Humorous Paper," by C. Forbes.

SATURDAY, MARCH 7.

PHARMACEUTICAL FOOTBALL CLUB v. Mount View, at

Wornholt Farm, Shepherd's Bush.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.

"Light" (III.), by Lord Rayleigh.

SUPPLEMENT

TO THE

PHARMACEUTICAL JOURNAL.

MISCELLANEOUS NEWS.

"ANTI-CUTTING" MEETING AT PLYMOUTH.—Under the auspices of the Plymouth, Devonport, Stonehouse and District Chemists' Association, a meeting was called last Wednesday afternoon, at the Foresters' Hall, Plymouth, for the purpose of explaining the objects of the "anti-cutting" scheme. Invitations were extended to all chemists from Newton Abbot, Devon, to Penzance, Cornwall. Mr. J. C. Park, President, occupied the chair, and introduced the following delegates from the Proprietary Articles Trades' Association:—Mr. Glyn-Jones (Sec.), Mr. A. Tibbutt (Messrs. Sattton and Co.), Mr. G. R. Barclay (Messrs. Barclay and Son), Mr. H. S. Norris (Condal Water Co.). Amongst those present were Messrs. J. G. Netting, R. H. Rendle, and Doble (Vice-Presidents); J. H. Bailey, Treasurer; J. Cocks, Secretary; A. D. Breeze, F. Maitland, F. W. Hunt, P. A. Kelly, A. Davey, Committee. Letters regretting absence were read.—Mr. Glyn-Jones gave an impressive and interesting address respecting the objects of the scheme they had in hand, and asked whether the chemists intended to let the cutter have all his own way, or if they should meet him with the object of the "anti-cutting" movement. The Association was formed about four months ago, and they then had 80 members. Their membership was now 220, which appeared very small in the face of the very large number of chemists in the United Kingdom. He urged those present to strengthen the movement by joining, and doing their utmost to secure other members, and bring the Association's objects to the front.—The President proposed the following resolution: "That this meeting, having heard the report of the representatives of the Proprietary Articles Trades' Association, pledges itself to support that organisation in its endeavour to place proprietary articles upon a sound and equitable basis.—Mr. Rendle seconded.—In answer to Mr. Balkwill's question as to what the Pharmaceutical Society intended to do in the movement, Mr. Glyn-Jones said he did not know.—Mr. Rendle maintained that the manufacturers held the key of the situation, and he did not agree with the present composition of the Council. He thought the representation should be ten manufacturers, five wholesale men, and fifteen retailers would be a better representation.—After a few remarks by Messrs. Maitland, Condy U'Ren, Kelly, Roper, and Hunt, Mr. Barclay said that they would have to decide whether they would be coerced by the "cutters" or if their Association should coerce the "cutters."—Mr. Tibbutt maintained that it was the Civil Service Stores that commenced "cutting," and pointed out that the wholesale houses had as great an interest as the retailers, and thought by the joint support of them all they could control the "cutting" matter.—Mr. Norris

was very glad to see that the most "cutting" firms were joining the Association, and thought it was wise to stimulate them.—Mr. Kelly proposed: "That this meeting of registered chemists in Plymouth and its neighbourhood requests the Council of the Plymouth, Devonport, Stonehouse and District Chemists' Association to act as a local executive in connection with the Proprietary Articles' Trade Association."—Mr. U'Ren seconded.—Mr. F. Maitland also proposed: "That this meeting of registered chemists residing in Plymouth and its neighbourhood desires to express its pleasure at seeing that a number of influential manufacturers have already joined the Association, and to assure them and all other manufacturers that any steps they may take in connection with the Association to insure fair profits would meet with the approval and cordial support of every legitimate retail trader."—Mr. Hearder seconded, and all three resolutions were unanimously carried. A vote of thanks was accorded the delegates, and Mr. Barclay replied.

THE SUPPLY OF DRUGS TO UNREGISTERED PERSONS.—At the Sheffield County Court, on Wednesday, before His Honour Judge Ellison, an interpleader action was heard, Messrs. Lofthouse and Saltmer, wholesale druggists, of Hull, claiming the stock-in-trade and goods of John William Sales, of Gower Street, Sheffield, an unregistered dealer in drugs, under a bill of sale. The evidence revealed the following circumstances.—Messrs. Kino, the tailors, had levied an execution upon Sales in respect of an unpaid account for clothes supplied. The claimants paid out the execution creditor under protest, lodging the money in court. The bill of sale was produced in court, and it transpired that Sales executed it last September in consideration of a sum of £175 5s. 2d. There was no attempt to dispute the validity of the document, but it was urged on behalf of the execution creditor that new goods had been added to the stock since the deed had been executed, and that upon those he had a right to distrain. It was stated that a fire had recently occurred on the premises, which destroyed some of the stock and the fittings, and that a portion of the stock had since been replaced. In reply to this piece of evidence, Sales said the change in the stock had been but small.—His Honour said he considered it advisable that the claimant should take stock afresh, and bring the revised schedule into Court. It would then be possible to ascertain the value of the goods acquired since the bill of sale was executed.—An adjournment until the 25th inst. was granted in order to allow this to be done.—Mr. C. W. Robinson represented the claimants and Mr. A. Neal the execution creditor.

SHADOW PHOTOGRAPHY.—At the Society of Arts on Wednesday a lecture was given by Mr. A. A. SWINTON on "Röntgen's Photography of the Invisible." The lecturer also related to the new power of seeing direct the effects of the X rays by means of a screen of fluorescent substance, as also the superior effects of Crookes' tubes when furnished with an internal small platinum reflector, by which the rays are thrown off

more nearly, as it were, from a point, the definition of the results being thereby greatly improved. Another peculiar effect of these rays has been investigated by Professor J. J. Thomson, namely, the facility with which they discharge an insulated body charged with either positive or negative electricity. In fact, any substance, however good an insulator it may be under ordinary circumstances, seems to become a conductor of electricity during the time the Röntgen rays are passing through it. This was demonstrated by a gold leaf electroscope. The new form of Crookes' tube above referred to has been made by Messrs. Newton from a design emanating from King's College. Among the new photographs shown on the screen was that of a puppy one day old, in which the gelatinous bones showed the commencement of the concretions of phosphatic material to form the solid bony structure. It also evidenced the manner and progress of its development. The mode of rendering visible to the eye the shadows cast by the Röntgen rays through the substances exposed in thin parts, as practised by Professor Salvioni, of Perugia, was also demonstrated; and the Chairman, Professor Dewar, of the Royal Institution, by its means declared the contents of a purse placed between two boards in the path of the rays. The apparatus is a cardboard tube, small at the end to which the eye is applied; the other, or broad end, being furnished with a screen opaque to ordinary light, but coated on its inner side with fluorescent material. The screen is more or less fluorescing, according to the depth of shadow thrown upon it.—In proposing a vote of thanks to Mr. Swinton, the Chairman remarked on the immense value given to the Röntgen discovery by the widespread attention which had been given to it, and the rapidity with which it had been investigated and applied to practical surgery and other purposes. The discoveries of science were not monopolies, and there was far more advantage to the world by the rapid combinations of intellect than could be secured by any possible title to exclusive rights by a discoverer.—*Standard.*

SCHOOL OF PHARMACY STUDENTS' ASSOCIATION.—A meeting of this Association was held on Thursday, February 27, Professor J. Reynolds Green, President, in the chair. Professor Greenish entertained the members present by exhibiting a series of lantern slides illustrative of a tour in Spain. The principal places of interest visited were Gibraltar, Malaga, Granada, Seville, Cordova, Madrid, Toledo, the Escorial, Segovia, and Burgos, the views of Granada and Cordova being especially beautiful and interesting. A hearty vote of thanks to Professor Greenish terminated the meeting, which was entirely of a social character and was well attended by members and their friends.

PROFESSOR A. LOISETTE, founder of the popular memory system, wishes it to be known that he has removed his school and offices to 200, Regent Street, W. He will be glad to send the pamphlet explaining his system to any of our readers who may be interested in the subject.

MARKET REPORT.

[Specially compiled for the *Pharmaceutical Journal*.]

LONDON, MARCH 5, 1896.

There is not much interest to report in the Chemical Market this week. Citric acid is firm, whilst tartaric acid, although unchanged as regards English brands, is easier for foreign makes. Cream of tartar is quite neglected, and very slow of sale. On the other hand, permanganate of potash is very scarce and likely to go dearer. At the present time makers have a difficulty in filling their contracts. Arsenic and copper sulphate are very firm. Of the fine chemicals, carbolic acid is unchanged, sugar of milk is quite steady, and chrysophanic acid firmly held. Of the various alkaloids and salts, those of opium are firm and unchanged in value, atropine has been advanced in price, whilst quinine is decidedly dearer. The fortnightly drug sales which were held to-day passed off quietly. The most important changes are as follows:—Bæswax, cardamoms, senna, and Chinese soy are dearer. Sumatra benzoin, Rio ipecacuanha, and Calumba root are fully steady. Buchu leaves, cumin seeds, Carthagenia ipecacuanha and virgin scammony resin have declined in value. Cod-liver oil continues to advance steadily in price, and much higher prices have been paid for 1895 oil since our last report. Castor oil is very firm, and likely to advance, whilst the heavy oil market is rather firmer generally. Essential oils are practically unchanged. Shellac, although firm on the spot, is easier for delivery, spices are firm, with cloves and Jamaica ginger quoted dearer. Full details will be found below:—

ACACIA (GUM).—An average supply amounting to about 150 packages, was offered at the drug sales, but the majority was bought in. Five cases of greyish picked *Trieste* gum sold without reserve at £6 7s. 6d. to £6 12s. 6d. per cwt., whilst a case of medium yellowish realised 83s., also without reserve. Several parcels of *Soudan* and *Persian* sorts were also offered, but no sales were effected, 52s. 6d. to 62s. 6d. being the buying-in prices of mixed sorts from *Suez*.

ACCROIDES (GUM).—A parcel of this gum amounting to 55 bags, imported from Sydney, was offered to-day and bought in at 46s. per cwt.

ACID, CARBOLIC.—The market remains firm, a brisk demand being reported for *crystals* especially. Quotations are as follows:—*Crystals*: 34° to 35° C., 7½d.; 39° to 40° C., 8½d.; 39° to 40° C. (*detached crystals*), 9½d. per lb. *Crude* is unchanged. 60 per cent. being still quoted at 2s. 3d. and 75 per cent. at 2s. 7d. per gallon. *Liquefied* and *cresylic* are unchanged at 1s. and 11d. per gallon respectively.

ACID, TARTARIC.—Although the quotations of *English* makes are unchanged, *foreign* acid is decidedly easier, both *powder* and *crystals* (not guaranteed B.P.) offering at 1s. 2½d. per lb. on the spot. *Laves'* and *Kembell's* makes are still quoted at 1s. 3d. per lb. At the drug sales several parcels of *Cape Argol* were offered, and found ready buyers at prices ranging from 43s. to 60s., according to quality.

ALGÆS.—A total of 291 cases was offered at the drug auctions. *Cape* aloes, which was represented by 21 packages, was mostly bought in, but 5 cases of ordinary quality, rather drossy, realised 20s. to 21s. per cwt., the buying-in prices of the remainder being 23s. to 21s. for fair to good bright hard. Ten boxes of *Barbadoes* aloes, new import, sold at 15s. per cwt., whilst 12 kegs of *Socotrine* were bought in at 57s. 6d. to 85s. per cwt. *Curaçoa* was in large supply, but only a small proportion found buyers, 40s. being paid for good livery, 25s. to 30s. for fair brown, 20s. for ordinary ditto, and 17s. down to 12s. for water-damaged qualities.

AMMONIACUM (GUM).—Was in unusually large supply to the amount of 28 packages. Two cases of mixed pale, loose and block almondy gum sold without reserve at 30s. per cwt., whilst 17s. to 20s. was paid for four cases of drossy lump, with a few almonds, from Bombay. Fine pale drop was bought in at 60s., and good ditto, slightly blocky, at 50s. per cwt.

ANNATTO SEEDS.—None was sold in auction, although 26 packages were offered. Dull Madras seed was bought in at 3d., and common bricky ditto at 1d. per lb.

ARECA NUTS.—Thirty bags of wormy nuts, part broken, 1893 import, sold in auction to-day at 8s. 6d. per cwt.

ASAFCETIDA (GUM).—The large supply of 803 cases were offered to-day, but only a limited inquiry was shown. One broker sold a fair proportion of his catalogue at prices ranging from 52s. 6d. down to 23s. per cwt.

BENZOIN (GUM).—A moderate supply only was offered, amounting to 242 cases. *Siam* gum, which was represented by 18 cases, sold at £20 for one case of good bold loose almonds, £11 for small almonds in bright brown block, 57s. 6d. for siftings in block, and 42s. 6d. for drossy dark siftings in block. *Sumatra* gum was in good demand, and £8 10s. to £8 12s. 6d. was paid for good seconds, small to medium almonds, fairly well packed, £7 to £7 5s., for fair ditto pale almondy centres, rather false packed sides, and £6 to £6 2s. 6d. for ordinary seconds. Four cases of dull *Sumatra* thirds sold at 70s. per cwt. *Palembang* gum was all bought in, almondy seconds in tins at 37s. 6d., and ordinary thirds in cases at 27s. 6d.

BUCHU.—The large supply of 96 packages was offered to-day. The majority of this consisted of new arrivals of good bright, round green leaves. For these the prices paid show a decline of ½d. to ¾d. per lb., 3½d. to 3¾d. being paid, whilst 3d. was accepted for greenish, 2½d. to 2¾d. for yellowish-green round leaves, and 2d. for yellow stalky ditto. A single bale of dull long green leaves sold at 5d. per lb.

CALUMBA.—Steady. To-day a parcel of ordinary unmixed sorts from Zanzibar via Hamburg, sold at 8s. 6d. to 9s. per cwt., and 3s. for damaged quality.

CANNABIS INDICA.—Firm. In auction, four bales of stalky greenish tops from Bombay sold at 2½d. per lb.

CANTHARIDES.—There is no inquiry whatever for this article. To-day 17 cases of *Chinese* flies were held for 1s. per lb. Privately, the new *Russian* crop offers at 2s. 11d. per lb. *c.i.f.* terms.

CACAO BUTTER.—Easier. In auction on

Tuesday 500 cases, representing 50 tons, of *Cadbury's* make, sold at an average of 12½d. per lb., against fully 13d., which was the price paid at the February sales.

CARDAMOMS.—The moderate supply of 70 cases offered to-day did not include any very fine grades, but firm to slightly dearer prices were paid as follows:—*Ceylon-Mysore*: Medium fair pale, 2s. 9d.; fair small pale, 2s. 4d. to 2s. 5d.; bold yellowish, 1s. 11d. to 2s. 1d.; small to medium yellow, 1s. 5d. to 2s. 1d. per lb. *Ceylon-Malabar*: 30 cases of medium yellowish sold at 2s. 4d. per lb. No seed was offered.

CASCARA SAGRADA.—The demand seems to have quite died out. To-day 60 bags of fair medium bark from San Francisco were bought in at 21s. 6d. per cwt.

CHIRETTA.—Nine bales of this drug were bought in at 4d. per lb. Privately, 3½d. has been paid during the week.

CINCHONA.—Several parcels of *Crown* bark were offered at to-day's sales, and met generally with a good inquiry, 8d. to 1s. being paid for ordinary to fair *Loxa* and *Huanoco* bark imported from Callao and Payta, and 7d. for damaged ditto. *Calisaya* bark sold at 11d. to 1s. 2d. for bold flat, and 5½d. for papery ditto. A parcel of *Mara-caibo* bark sold for the most part at 4¾d. to 5d. for sound, and 2d. for damaged quality.

COCA LEAVES.—A parcel of damaged *Ceylon* leaves was bought in to-day at 1s. per lb. Privately, 1s. 2d. has been paid for greenish broken *Truxillo* leaves.

COLOCYNTH.—Firm. Two cases of fair *Turkey* apple catalogued to be offered to-day had been sold previously at 2s. 6d. per lb. A parcel of *Almerian* colocynth was bought in at 10d. to 11d., for fair, 7d. to 8d. for ordinary, and 4d. for damaged quality.

COPAIBA (BALSAM).—Very firm. A parcel of bright brown balsam was bought in at 1s. 8d. to 1s. 11d., and thick pale *Maranham* at 2s. per lb.

CUBEBS.—In moderate supply. Five cases of fair quality *Singapore* berries sold to-day at 32s. 6d. per cwt.

CUS-CUS ROOT.—About 150 bales of this article, offered without reserve, were cleared off to-day at 5s. 6d. to 6s. 6d. per cwt. for sound, and 4s. for damaged quality.

DRAGON'S BLOOD.—None was sold in auction, good bright *Singapore* lump being bought in at £9, and dark saucers at £5 per cwt.

ERGOT OF RYE.—Remains very dull and difficult of sale under any conditions. To-day 27 out of 43 bags of ordinary *Russian* fetched 4¾d. to 5d. per lb., whilst fair *Spanish* was bought in at 9d. to 10d. per lb.

GALBANUM (GUM).—Two bags of fair almondy block were bought in to-day at 1s. 3d. per lb. Privately good dry gum offers at 1s. 10d. per lb.

GALANGAL.—A parcel from *Hong Kong* was bought in at 22s. per cwt.

GAMBOGE.—An average supply, amounting to 19 cases, was offered, but the only lot sold was a case of good clean bright *Singapore* pipe, for which £9 15s. was paid.

GINGER.—At the weekly sales *Cochin* proved in quiet demand, and the whole supply was bought in, *A* at 72s. 6d., *B* at 62s. 6d., *C* cut at 50s., and cuttings at 27s. to 28s. per cwt. *Bengal* was also bought in for 18s. 6d. *Jamaica* root was in very good demand, and higher prices were paid for the better qualities, a few cases of medium

washed selling at 84s. to 85s., whilst partly scraped *Rhatoon* realised 69s., and dark to good ordinary ditto, 60s. to 66s. 6d. per cwt.

HONEY.—A good supply amounting to 146 cases was shown, and met with a fairly brisk inquiry. *Jamaican* was rather dearer, 26s. 6d. being paid for good clean bright, and 19s. to 21s. for ambery, part rather foul. *Chilian* sold at 21s. for 6 kegs of fair quality, whilst 20 casks of fine pale were bought in at 40s. A parcel of good pale *New Zealand* sold at 45s. per cwt.

IPECACUANHA.—*Rio* (Brazilian) root was represented at the sales by about 58 packages, and the prices paid showed a firm market, the majority of the business done being in drossy pickings mixed with a lot of stalk and dust. For 18 packages of this stuff, 3s. per lb. was paid, with the exception of one, which went for 1s. The prices paid for good root were as follows:—5s. 7d. for sound annulated, 5s. 6d. for good sound stout, and 5s. 4d. to 5s. 5d. for fair to good slightly damaged annulated, whilst 5s. to 5s. 1d. was paid for damaged root. *Carthagena* (Columbian) root sold at a decline of 3d. to 4d. per lb., 3s. 10d. to 3s. 11d. being accepted for sound damaged quality.

JALAP.—Is firm. Of 68 packages offered in sale to-day, 8d. per lb. was paid for a few, whilst privately business has been done in fair *Vera Cruz* at 8½d. per lb.

KOLA NUTS.—Although 49 packages were offered, little business was done. A box of ordinary dark grey *West Indian* sold at 5d per lb. Sound quality were bought in at 9d. to 1s.

LIQUORICE ROOT.—*Persian* root is very slow of sale, and with large stocks quotes nominally at 6s. to 7s. 6d. per cwt. on the spot. Decorticated *Russian* root quotes at 28s. 6d. per cwt., *c.i.f.* terms.

MENTHOL.—Is quiet. Business has been done during the week at 13s. per lb., but it is doubtful if this price could now be obtained, and quotations range from 12s. 3d. to 12s. 9d. per lb. on the spot. For delivery the last price we heard was 11s. 6d. per lb. *c.i.f.* terms. At the drug sales 3 cases of *Cocking's* brand were bought in at 17s.

MYRRH (GUM).—A very large supply was offered, but proved very slow of sale. For 3 bales of clear native picked gum, 75s. to 77s. 6d. per cwt. was paid, but all the other parcels were bought in.

OIL (COD-LIVER).—The market remains in an unsettled condition, with every prospect of greatly advanced prices for 1896 Norwegian oil. At the present time quotations vary exceedingly, but we think that 220s., *c.i.f.*, would certainly be the lowest price at which the new season's oil could be bought, in fact some holders ask 240s. per barrel. On the spot, business has been done at greatly advanced prices in 1895 oil, 195s., followed by 200s., having been paid for good quality. *Newfoundland* oil is also exceedingly scarce and dear, business having been done privately at 6s. 6d. per gallon, whilst a cask which was catalogued for to-day's sale had been disposed of privately at this figure.

OILS (ESSENTIAL).—*Star anise* oil is unchanged, but there is now a decided disposition to sell. Business has been done during the week at 9s. 10½d. to 10s. per lb., but no doubt 9s. 9d. would be readily accepted. *Eucalyptus*: Business has been

done privately in the *Platypus* oil (testing 55 per cent. eucalyptol) at 2s. 2d. per lb. For nine cases of this oil 2s. was refused to-day in sale. *Peppermint*. *H. G. Hotchkiss's* oil offers at 9s. 9d. per lb. *Japan* oil testing 40 per cent. of menthol was bought in to-day at 7s. per lb., whilst *dementholised* offers at 5s. 3d. to 5s. 6d. per lb. on the spot. Several parcels of essential oils were bought in to-day, including *Bombay Rose* oil at 4d. per oz.; *Ylang-Ylang* at 5s. per oz.; *Sandalwood* (McD., S. and Co.'s) at 9s. per lb.; *Sweet Orange* (G. Hamnett's) at 8s. per lb.; *Citronella* at 2s. 2d. per lb.; and *Japan Camphor* oil at 50s. per cwt.

OILS (FIXED) AND SPIRITS.—*Castor* is very firm, and likely to advance. Best quality *Italian* oil is now quoted at 31s. 6d. per cwt., *c.i.f.* terms. *Cotton* is rather firmer, the closing price for *refined* oil being £16 10s. to £17 5s. on the spot. *Cocunut* is firmly held, and prices seem likely to advance further. *Ceylon* is now quoted at £23 on the spot, and *Cochin* at £27, showing an advance of 5s. to 10s. *Linseed* is to-day firm, but prices show a decline on those of last week, oil in barrels being now quoted at £19 10s. to £19 12s. 6d. on the spot. *Rape* is quiet, but firm, *refined* oil being worth £24 10s. to £25 on the spot. *Turpentine* is rather firmer, but quotations remain unchanged at 2s. 1½d. on the spot for *American* spirit. *Petroleum* is practically unchanged in price after being easier earlier in the week. *American* oil quotes at 5½d.; *water white* at 6¼d. to 6½d., and *Russian* at 5¾d. to 5½d. on the spot.

ORRIS ROOT.—A large supply of *East Indian* root from Aden was offered at to-day's sales, but was all bought in at 20s. to 30s. for ordinary to fair dark lean sorts. Eight bales of fine *Florentine* root were also withdrawn at 80s. per cwt.

POTASSIUM PERMANGANATE.—A very firm market, and likely to advance further, the supplies being very limited. At present the lowest price for small *crystals* seems to be 67s. 6d., and for large, 70s. to 72s. 6d. per cwt. on the spot.

QUASSIA.—In auction, 8 tons of *wood* sold without reserve at 77s. 6d. per ton, whilst £6 15s. was paid for a ton of *chips*.

QUININE SULPHATE.—This market has been generally quiet since our last report, but revived considerably during the last few days. Earlier in the week the best *German* brands were quoted at 1s. 1½d. per oz., with no business reported, but on Wednesday, 1s. 1½d. was paid. The market closed firm.

RHATANIA ROOT.—Five bales of this drug sold at 9d. per lb.

RHUBARB.—Very slow of sale. Out of 149 cases offered only 4 found buyers, 5d. per lb. being paid for small wormy rough high-dried, and 7d. for flat wormy ditto, whilst a case of medium round *Canton*, part wormy, realised 10d., and ditto flat, 8½d. per lb.

SARSAPARILLA.—Only one bale of *Jamaica* was offered to-day, which sold at 11d. per lb. for damaged quality. Ordinary to sound *Honduras* was bought in at 1s. 1d. to 1s. 5d. per lb.

SEEDS (VARIOUS).—*Anise*: Good *Spanish* seed was bought in to-day at 28s. to 30s. per cwt. *Cumin*: Easier. Fourteen bags of

Maltese sold to-day at 33s. 6d. per cwt. for sound, and 30s. for slightly damaged quality. *Coriander* 70 bags of *Bombay* seed were bought in at 9s. 6d. per cwt. *Star Aniseed*: Genuine *Chinese* was bought in at 95s., and spurious ditto at 35s. per cwt. *Stavesacre*.—85s. per cwt. is asked privately for this article.

SCAMMONY.—Turkish *virgin* resin is tending easier. To-day 4 boxes, for which the limit recently was 31s. per lb., were bought in at 26s. to 30s. per lb.

SENNA.—The supply of 296 packages of *Tinevelly* leaves met with a fair inquiry at fully steady to dearer rates as follows:—Good bright green, 5d.; fair bright green, 3½d. to 4½d.; medium greenish, 3d. down to 1½d. per lb. *Pods* sold for 3¼d. per lb. No *Alexandrian* leaves were sold.

SHELLAC.—Privately the market is firm, but very quiet basis. *Second Orange TN* being quoted at 97s. 6d., and free *AC Garnet* at 92s. 6d. per cwt. For arrival, quotations are easier, business being done in *TN Orange*, January to March steamer, at 91s., *c.i.f.* terms. At the weekly sales a good competition was shown, and steady prices were paid for *Second Orange*, whilst *Garnet* was steady, and *Button* rather dearer. The prices paid were as follows:—*Fine Second Orange*: Pale free *DJ*, in diamond, 107s. *TN Orange*: Good strong pale free, 97s. to 98s.; fair bright curly free, 97s.; fair bright cakey, 95s. to 96s.; red livery free, 90s. to 91s., and low blocky liver 37s. to 38s. *Garnet*: Flat free ambery *G*, 90s.; block *OCC*, 82s. *Button*: Pale *A1*, 108s. to 109s.; blocky *BL2*, 84s. per cwt.

SOY.—A parcel of good thick *China soy* amounting to 142 casks, sold without reserve at 10d. to 10½d. per gallon, which shows a slightly firmer market on the rates recently paid privately. In addition, 4½d. to 6¼d. per gallon was paid for 94 casks of *Japan*.

SPICES (VARIOUS).—*Cloves*: A good demand has been shown privately, and advanced prices have been paid to arrive, including 2¾d. to 2 11/32d. for March–May delivery, and 2¾d. to 2 15/32d. for June–August ditto. At the weekly sales, firmer prices were paid, low medium ordinary *Zanzibar* selling at 2d. to 2½d., medium at 2¾d., fair quality at 2¼d. to 2¾d., and good at 2¾d. Picked *Penang* was bought in at 7d. to 9d. per lb. *Pimento* is steady, ordinary grey selling in auction for 2½d., fair for 2¾d., and good fair for 2¾d. per lb. *Capsicums*: Very fine bright red, sold at 32s., and fine medium ditto at 46s. per cwt. *Chillies* are slow of sale; ordinary dull old *Zanzibar* realised 22s. 6d. in auction, and very ordinary stalky brown, 9s. 6d., per cwt, *Cassia vera*: In auction damaged quality sold at 16s. to 17s. per cwt.

SQUILLS.—Pale "firsts" sell privately at 3d. per lb., and medium "seconds" at 2½d.

TURPENTINE (CHIAN).—A case of this article inferior quality sold at 2s. 7d. per lb.

WAX (BEES).—Very firm, and prices have advanced considerably all round. *Jamaica* wax is about 10s. per cwt. higher, £8 10s. to £8 15s. being paid to-day for good red, and £8 2s. 6d. to £8 7s. 6d. for other grades. *Madagascar* is 2s. 6d. dearer, £6 17s. 6d. to £7 being paid to-day. For *East Indian*, £6 12s. 6d. to £6 15s. was paid, and £6 for *Spanish*.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Books, etc.

Eight years' 'Pharm. Journal,' 1869 to 1878, good condition, bound, 7s.; several new glass retorts, receivers, etc., half cost; 4 oz bottles B.P. quinine. Offers or exchange.—Smith, Chemist, Portsea.

A book of 130 Well-tryed Recipes for Chemists and Druggists comprising well-selected formulæ for general, remedial, veterinary, toilet, and everyday preparations. Post free, 1s. 6d.—Tully, Chemist, Hastings.

For Sale.—Aitken's 'Medicine,' Playfair's 'Midwifery,' Erichsen's 'Surgery,' Walshe's 'Diseases of Heart,' Walshe's 'Diseases of Lungs,' Malgaigne's 'Operative Surgery,' Virchow's 'Cellular Pathology.' Particulars and prices forwarded by Rawling, Chemist, Torquay.

Miscellaneous.

Ruhmkorff Surgical Coil, splendid condition, in strong case, with four half-pint bichromate batteries, price 26s., worth 40s.—Address, W. J. Lewis, King Richard's Road, Leicester.

Typewriter, Caligraph, No. 2; perfect order and condition, cost £20, lowest price £8.—"Bargain," 'Pharmaceutical Journal' Office, 5, Serle Street, London, W.C.

Southall's Norwegian Fishing Station Model; 'Post Office London Directory,' 1895, published at 32s. What offers? 3 ozs. quinine salicylate, 1s. 8d. oz.; 3 doz. floral vinolia soap, 3s. 8d. doz.—Matthew, 529, Battersea Park Road.

Shop Fittings.

Richard Pickering, chemist, Bryn, near Wigan, having closed branch will accept stock or any useful exchange for fittings, bottles, scales, mortars, jars, carboys, etc., complete.—Offers will oblige.

WANTED.

Wanted. Muter's 'Analytical Chemistry,' latest edition. Offers to—R. L. Morris, 18, Victoria Street, Dunfermline.

'Pharmaceutical Journal,' first 23 vols., bound, good condition.—Greenish, 20, New Street, Dorset Square, N.W.

Plate-glass Shelves and brackets, for window enclosure, give size and price.—Alfred Smales, Chemist, New Shildon.

** Attention is specially directed to the new conditions of the "Exchange," in accordance with which a small charge will in future be made for the insertion of notices. The careful observance of those conditions will tend to obviate much inconvenience and possible delay.

LIVERPOOL MARKET REPORT.

[From our own Correspondent.]

MARCH 4, 1896.

LINSEED: Firmer, and spot parcels in good demand at higher rates. *Turkish*, 35s. 9d. to 36s. *Tribizonde*, 32s. 6d. to 33s., per 416 lbs. CANARY SEED is quiet at reduced prices; *Turkish*, 32s. to 33s.; *Barbary*, 35s. to 37s. 6d., and *Spanish*, 44s. to 46s. per 464 lbs. KOLA NUTS: 8 bags of fresh have been sold at 7d. per lb.; 58 bags *Gold Coast* dried, sold at 3½d., per lb. GINGER. 25 bags of old crop *Sierra Leone* have been disposed of at 23s. per cwt. *ex store*; also 50 bags of *Sierra Leone* at 24s. CHILLIES: 200 bags of *Sierra Leone* sold at 23s. to 32s. 6d. per cwt. CARNAUBA WAX: A good amount of business has been done during the week, present price for good grey is 100s. per cwt., and yellow 125s., sales of ordinary grey have been made at 95s. OLIVE OIL is still strongly maintaining its recent advance, *Malaga* is £29 10s. to £30 10s., per tun, and *Seville*, £29 to £30. CASTOR OIL is very steady; *Madras*, 2½d. to 2½d. per lb.; *Calcutta*, good seconds, held for 2½d. *French*, 1st pressure, 2½d. to 2½d. per lb. LINSEED OIL. Quiet at 20s. 3d. to 21s. per cwt. COTTONSEED OIL: remains steady at 17s. 3d. to 17s. 6d. per cwt. SPIRIT OF TURPENTINE: firm on the spot at 21s. 3d. per cwt. PETROLEUM: *American*, 6½d. to 7½d. per gallon; *Russian*, 5½d. SAL AMMONIAC: 39s. per cwt. for first quality; 37s. for second. BLEACHING POWDER: Steady at £7 to £7 5s. per ton *f.o.b.* in hardwood casks. COPPERAS: *Lancashire*, 38s. per ton *f.o.b.*; *Welsh*, 36s. 6d. SULPHATE OF COPPER has advanced to £16 15s. to £17 per ton. PRUSSIAN OF POTASH: 8d. per lb. BICHROMATE OF POTASH: 4½d. per lb. CHLORATE OF POTASH: 4½d. to 4½d. per lb. CREAM OF TARTAR is steady at 105s. per cwt. for finest white. SODA CRYSTALS: £2 10s. per ton. SODA BICARBONATE: £7 per ton. CAUSTIC SODA: 7d. per cent., £7 12s. 6d. to £7 15s. per ton; 60 per cent., £6 12s. 6d. to £6 15s. BORAX: Crystals, 19s. 6d. per cwt.; powder, 20s. 6d.

NEWCASTLE CHEMICAL REPORT.

There are now evidences that the general improvement in trade is beginning to influence the chemical market. A distinctly better inquiry is now reported for home consumption, though shipping orders are still naturally slow at this season of the year. But as the spring advances these will come to hand more freely. There is no change in prices so far, but the tone is steadier, and the following quotations are well held:—SODA CRYSTALS: 36s. to 42s. 6d.; SODA ASH: (50 per cent.), £4; CAUSTIC SODA: (70 per cent.), £7 5s. to £7 15s.; BLEACHING POWDER: £6 10s. to £7 5s., according to destination. SULPHUR: £3 17s. 6d. SOUTH DURHAM SALT is in fair request at 9s. 6d. a ton *f.o.b.* for ordinary qualities.

NEW BOOKS AND NEW EDITIONS.

[Publishers are requested to send particulars of new publications, addressed "Editor, 17, Bloomsbury Square, W.C."]

SYNOPTICAL FLORA OF NORTH AMERICA. By A. GRAY, S. WATSON, and B. L. ROBINSON. Vol. 1, Part 1, Fascicle 1: Polypetalæ from the Ranunculaceæ to the Frankeniaceæ. Imp. 8vo., pp. 220, sewed. Price 11s. net. (Wm. Wesley and Son, London.)

AN EXERCISE BOOK OF ELEMENTARY PRACTICAL PHYSICS for Organised Science Schools under the Department of Science and Art, Evening Continuation Schools, and Elementary Day Schools, arranged according to the Headmasters' Association's Syllabus of Practical Physics. By R. A. GREGORY. 4to., pp. 190, sewed. Price 2s. 6d. (Macmillan and Co., London.)

LATE ADVERTISEMENT.

WANTED. — A Qualified ASSISTANT. About 25. London experience. Indoors. Single-handed, and to take charge when principal absent. Full particulars to PHARMACIST, 13, Hereford Rd., Bayswater. Seen by appointment.

DIARY OF THE WEEK.

Secretaries of Societies are requested to send notices of forthcoming meetings not later than Wednesday in the previous week.

MONDAY, MARCH 9.

IMPERIAL INSTITUTE, at 8.30 p.m.

"A Tour through Australia," by H. Haywood.

TUESDAY, MARCH 10.

PHARMACEUTICAL SOCIETY (LONDON), at 8 p.m.

"The Pharmacy of Phosphorus," by Wm. Martindale.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.

"The External Covering of Plants and Animals: its Structure and Functions," by Professor C. Stewart.

IMPERIAL INSTITUTE, at 5 p.m.

"My Twelve Years' Stay in Cyprus" (II.), by Dr Max Ohnefalsch-Richter.

SOCIETY OF ARTS (APPLIED ART SECTION), at 8 p.m.

"English Book Illustrations, 1860-70," by J. Peonell.

ROYAL PHOTOGRAPHIC SOCIETY, at 8 p.m.

"Notes on Medical Photo-Micrography," by E. Roughton and C. Cosens.

ROYAL COLONIAL INSTITUTE, at 8 p.m.

"The Development of Tropical Africa," by Sir George Baden-Powell.

MIDLAND PHARMACEUTICAL ASSOCIATION, at 8.30 p.m.

"Laboratory Notes," by H. S. Shorthouse.

WEDNESDAY, MARCH 11.

PHARMACEUTICAL SOCIETY OF GREAT BRITAIN.

Library, Museum, School, and House Committee.

BRIGHTON JUNIOR ASSOCIATION OF PHARMACY, at 9 p.m.

Short Papers by Messrs. Jeeves, Lemon, and Yates.

SHEFFIELD PHARMACEUTICAL AND CHEMICAL SOCIETY, at 8.30 p.m.

A Paper by G. T. W. Newsholme.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION, at 9 p.m.

Short Papers by Members.

THURSDAY, MARCH 12.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.

"Masters of Modern Thought" (II), Rousseau," by Reverend W. Barry.

SCHOOL OF PHARMACY STUDENTS' ASSOCIATION, at 6 p.m.

"Report on Inorganic Chemistry," by H. Reed.

"Report on Pharmacy," by W. Moore.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 8.30 p.m.

"Nutrient Preparations of Beef," by A. W. Gerrard.

FRIDAY, MARCH 13.

ROYAL INSTITUTION OF GREAT BRITAIN, at 9 p.m.

"The Theory of the Ludicrous," by W. S. Lilly.

SHEFFIELD MICROSCOPICAL SOCIETY, at 8 p.m.

"Starch," by C. Carr.

SATURDAY, MARCH 14.

PHARMACEUTICAL FOOTBALL CLUB v. St. Michael's, at Wormthorpe Farm, Shepherd's Bush.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.

"Light," by Lord Rayleigh.

SUPPLEMENT

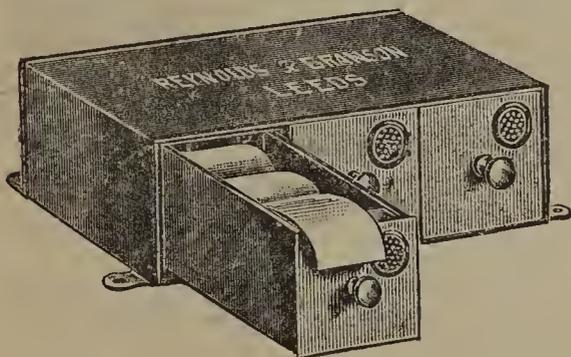

TO THE

PHARMACEUTICAL JOURNAL.

REPORTS, ANALYSES, AND NOTES ON NEW INVENTIONS.

STORAGE OF SURGICAL DRESSINGS.

THE PATENT DUST-PROOF SELF-CLOSING DRAWERS, made by Reynolds and Branson, of Leeds, are peculiarly adapted for the storage of surgical dressings. As is well known, when the temperature of a room sinks the air contracts, and when it rises the air expands, and as all boxes, drawers, etc., contain air, naturally the dust floating about in a room must with a fall of temperature be sucked into any ordinary box or drawer and there deposited, this process continually going on. For example, everyone must have noticed at some time or another the peculiar brown-fogged marks under the glass of an engraving, or on the white mounts of

water-colour drawings. It has been proved by careful experiments that the air will take the easiest passage, therefore, Messrs. Reynolds and Branson make all parts of these drawers tight-fitting, except a portion in front serving as an air filter. This is loosely packed with a suitable filtering medium, which can be renewed by anyone at pleasure without cost. By this means the air is filtered as it passes into the drawer. After a time the air filtering medium will be found darkened by dust that has been intercepted. Mr. Pridgin Teale, F.R.S., and other authorities are said to be delighted with these drawers, which are self-closing, though they will stop open when fully drawn out.

POWER FOR CHEMISTS.

THE need of convenient sources of power on a small scale is frequently felt in many of the details of every-day life and work. Messrs. F. Darton and Co., 142, St. John Street, Clerkenwell, should therefore have many enquiries respecting their recently introduced series of gas engines and dynamos, which are well worthy of attention. The smallest size gas engine costs 90s., whilst 50s. is the price of a ten-volt dynamo intended to work with it, but in addition there are larger sizes, some of which seem to be very applicable to the needs of pharmacists in want of a small installation of power. They also serve for illuminating purposes. In every instance the workmanship is excellent, whilst joint considerations of compactness, strength, and price are all that could be desired.

CREOCIDE.

BOTH the carbolated and non-carbolated forms of this new germicide, made by the Sanitas Co., Limited, Bethnal Green, E., have been examined and reported upon by Dr. S. Rideal, F.I.C., of Westminster. "Creocide" is a slightly alkaline mixture, consisting of the basic constituents of coal tar without any appreciable quantity of tar acids, mixed with a considerable amount of the principles of oxidised essential oils. "Carbolated creocide" is also alkaline, but contains tar acids with a correspondingly smaller quantity of the principles of oxidised essential oils. The 20 per cent. carbolated preparation "sterilised" bouillon cultures of *Staphylococcus pyogenes aureus*, *Bacillus coli communis*, *B. typhosus*, *B. diphtheriae*, and *Spirillum cholerae* in less than 5 minutes when added in the proportion of 2 per cent., whilst the non-carbolated creocide possesses about half that activity, and should not be used in solutions of a strength less than 2 per cent.

REMEDIES INTRODUCED IN 1895.*

(Continued from p. xxxix.)

Caesium Bromide.—Nervine and cardiac. Dose: 0.2-0.3 Gm.

Calcium Borate.—Antiseptic astringent. Dose 0.3-0.4 Gm. (in children).

Calcium Sulphocarbonate.—Internal antiseptic and disinfectant. Dose: 0.1-0.3 Gm.

Carniferrin.—"Compound of iron and phospho-sarcosolactic acid."—Hematinic. Dose: 0.5 Gm. per day.

Casein Ointment.—Casein (14), potassium and sodium hydroxide 4:1 (0.43), glycerin (7), vaselin (21), salicylic acid or borax (1), and water (56.57).—Dermic vehicle.

Chlorolin.—Mixture of mono- and trichlorophenols.—Antiseptic and disinfectant.

Citrophen.—Paraphenetidine citrate.—Antipyretic and analgesic. Dose: 0.5-1 Gm.

Cocaine-Alum.—Crystalline compound of cocaine and aluminium sulphates.—Local anaesthetic and astringent.

Collesin.—Professor Schiff's skin-varnish.

Copper Resinate.—Compound of cupric sulphate and resin, introduced as a remedy against fissured hoofs in veterinary medicine.

Cotarmine Hydrochlorate.—Salt of a base obtained by fractionation of narcotine.—Hemostatic.

Creosal.—Compound of creosote and tannic acid.—Astringent and antiseptic. Dose: 3 Gm. (representing 1.8 Gm. creosote) per day.

Creosote Calcium Hydrochloro-phosphate.—Antitubercular and antiscrophulotic. Dose: 0.1-0.3 Gm., in emulsion.

Crystalline.—Sodium salt of puresaccharin.—Sweetener.

Cutin.—Substitute for silk or catgut; prepared from the gut of cattle.

Cupratin.—Organic copper compound analogous to ferratin, containing 6 per cent. of cupric oxide.—Nervine.

Cuprohemol.—Copper hemol.—Succedaneum for the older copper compounds in tuberculosis, scrophnlosis, etc.—Dose: 0.2-0.15 Gm.,

Diacetylalphadiam-idophenetol.

Dihydroresorcin.—Antiseptic.

Diiodocarbazol.—Antiseptic.

Dithiochlorosalicylic Acid.— $S_2C_6H_4ClOH$ COOH.—Substitute for iodoform.

Enterol.—Liquid intestinal antiseptic. Dose: 0.005-0.015 Gm.

Eudoxin.—Bismuth salt of nosophen (tetraiodophenolphthalein), containing 52.9 per cent. of iodine.—Intestinal antiseptic. Dose: 0.3-0.5 Gm.

Euthymol.—Compound antiseptic solution.

Fellitin.—"Natural" medicinal soap, prepared from bile.—Chilblain remedy.

Fer Cremol.—Iron compound obtained from blood by the action of a "dilute neutral iron solution" containing 3 per cent. Fe.—Hematinic. Dose: 0.2-0.5 Gm.

Ferrohemol.—Ferrated hemol.—Hematinic. Dose: 0.5 Gm.

Ferropyrine.—Ferripyryne; compound of three molecules antipyrine and one molecule ferric chloride.—Chalybeate, analgesic, and astringent. Dose: 0.5-1 Gm.

Ferrosine.—Composition consisting of ferric oxide (70.75 per cent.), lime and albumin (10.20 per cent.), water, etc. (10-15 per cent.).—Paint for iron, as a colour, polishing material etc.

Fluorol.—Synonym of sodium fluoride.

Gallicin.—Methylic ether of gallic acid, $C_6H_2(OH)_2COOCH_3$.—Topical antiscrophulotic.

Glucin.—"Sodium amidotriacinsulphonate." Sweetener, 100 times as sweet as sugar.

Guaiacol Phosphate.— $PO(C_6H_4OCH_3)_2$.—Antitubercular.

Guaiacol Succinate.— $C_4H_4O_4(C_6H_4OCH_2)_2$.—Antitubercular.

Gynocyanauridzarin.—From *Gynocardia lancifoliata* and gold.—Antitubercular. Dose: 0.03-0.2 Mg.

Hemostaticum.—Extract thymus gland with 7 per cent. calcium chloride, rendered alkaline with soda solution.

Hematin-Albumin.—Dried albumin from ox-blood.—Hematinic. Dose: 1 or 2 teaspoonfuls.

Hexamethylenetetramine.—See Urotropin.

Hypnoacetin.—Acetophenonacetyl-paraamidophenol.—Hypnotic and antirheumatic.

Iodiformal.—Substitute for iodoform, similar to iodoformin.

Iodoformin.—Compound of iodoform and hexamethylenetetramine, containing 75 per cent. of iodoform.—Succedaneum for iodoform.

Iodogenin.—Mixture of powdered charcoal and potassium iodate, or some other oxygen compound of iodine, moulded into cones or pastilles.—Fumigant and disinfectant (for ignition).

Iodohemol.—Iodised hemol.

Iron Glycerino-phosphate.—Nervine. Dose: 0.15-0.3 Gm.

Iodoiodoformin.—Compound of iodine and iodoformin.—Succedaneum for iodoform.

Iodsuccinimide.—Succedaneum for iodoform.

Iron-Casein.—Compound of iron with casein.—Hematinic and nutritive.

Kreplinum.—Tincture Panama bark mixed with small quantities of aromatic oils.

Lactyltropeine.—From action of lactic acid on tropeine.—Cardiac tonic.

Laifan.—Crude, watery borneol, probably identical with Ngai camphor, and obtained from *Blumea balsamifera*.—Topical anodyne.

Lamolein.—Wool-fat.—Ointment base.

(To be continued.)

* Reprinted from *Merk's Market Report*.

MARKET REPORT.

[Specially compiled for the *Pharmaceutical Journal*.]

[The quotations here given are in all cases the lowest net cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.]

LONDON, MARCH 21, 1896.

Business in the chemical market has not developed any very striking features during the week, and where quotations have changed they have mostly been on the down line. The principle change amongst the chemicals has been the lowering of the price of cocaine hydrochlorate, which would now seem to have reached its limit. Opium alkaloids are very firm, quinine quiet and featureless, and caffeine flat. Arsenic is as scarce as ever, and is perhaps a trifle dearer. Carbolic acid is decidedly easier for crystals, whilst other varieties are unchanged. Citric acid is dull of sale at lower rates, whilst tartaric acid is quiet at unchanged rates. Cream of tartar is now quite a dead letter. Chrysophanic acid is firm, and there are no new developments to report in the price of atropine sulphate. The manufacturers of lithia salts have issued a circular during the week which intimates an all-round advance in the quotations. Permanganate of potash is very scarce, and rather dearer, whilst copper sulphate is firm at steady rates. In the drug market cod-liver oil continues to advance in price, and the prospects for the year are quite alarming. Opium is very fair, and the same applies to Persian gum acacia. We have to report an advance in insect flowers, whilst insect powder is also very firm. Peruvian balsam is quiet, and the same applies to cascara sagrada bark. Castor oil is very firm for the Italian variety, whilst the heavy oil market generally is unchanged. Spices are mostly steady, but the demand is not brisk. Shellac, after showing symptoms of a decline at the sales, has since firmed up somewhat. The only feature of the essential oil market is the advance in oil of star anise, in which a good business has been done. Full details will be found below:

ACACIA (GUM).—Business in *Persian* insoluble is greatly restricted, owing to the firmness of holders. For fair sorts, 13s. 6d. to 14s. per cwt. would be readily paid, whilst some sales of fine picked gum have been made at fully steady rates.

ACID (CARBOLIC).—The market has weakened since our last report, and *crystal* acid especially is considerably easier. Current quotations are now as follows:—*Crystals*, 34° to 35° C., 7d.; 39° to 40° C., 7½d.; 39° to 40° C. (*detached crystals*), 8½d. per lb. *Crude*: 60 per cent. quotes at 2s. 3d., whilst 75 per cent. is also unchanged at 2s. 7d. per gallon. *Liquefied* and *Cresylic* are returned at 1s. and 11½d. per gallon respectively.

ACID, CITRIC.—Very slow of sale at easier rates. Makers of *English* acid now quote 1s. 2¼d. per lb., whilst second-hand holders offer at 1s. 2d. per lb. *Concentrated lemon juice* is quoted at £14 to £14 2s. 6d. per pipe *f.o.b.* Messina.

ACID, TARTARIC.—The market is quiet, manufacturers of *English* acid still quote 1s. 3d. per lb., but holders of *foreign* brands, both in *powder* and *crystals* (not guaranteed B.P.) offer at 1s. 2d. to 1s. 2¼d. per lb. on the spot.

AMMONIA COMPOUNDS.—*Sulphate* is still slow of sale, grey 24 per cent. being still quoted at the unchanged rate of £8 10s. per ton on the spot, whilst *Hull* is worth £8 8s. 9d., and *Leith* and *Beckton* £8 7s. 6d. *Lignea*: 3¼d. to 3½d. per lb. less 5 per cent. *Sal Ammoniac*: Firsts, 39s.; seconds, 37s. per ton.

ARSENIC.—Is still very scarce, and firmly held. Good white powder is nominally quoted at 20s. and 20s. 6d. on the spot, whilst for lump, 28s. is the price.

ASAFCETIDA (GUM).—Since the drug sales a good business has been done, both in first and second hand, at advanced prices.

BORAX.—Very dull of sale. It was announced to-day that the Convention price had been lowered, but we have heard no confirmation of this. Second-hand holders offer at 19s. 6d. for *crystals*, and 20s. 6d. for *powder*, but the Syndicate prices are 20s. to 21s. respectively.

CAMPHOR (CRUDE).—The market is firm but quiet. Earlier in the week business was done in *Formosan* camphor to the extent of 100 piculs at 167s. 6d. for March to May shipment, but although there are further buyers at this rate there is none to be had. *Japan* is firm, being quoted nominally at 187s. 6d., *c.i.f.* terms. The shipments from *Japan* during February only amounted to 800 piculs. It is said that the steamer *Spondilus*, which was wrecked at Cape Varella, had on board 2000 piculs of *China* and 1000 piculs of *Japan* camphor.

COAL DISTILLATION PRODUCTS.—*Toluol* is quoted at 2s. per gallon for *pure*. *Benzole* is easier, 50 per cent. being now worth 1s. 9d., whilst 90 per cent. is quoted at 2s. 1d. per gallon. *Creosote*: 1½d. per gallon. *Solvent naphtha*: 95 per cent. at 160°, quotes at 1s. 6d.; 90 per cent. at 160° C., at 1s. 3d., and 90 per cent. at 190° C., at 1s. 1½d. per gallon. *Pitch*: 34s. per ton *f.o.b.* *Tar* quotes at 12s. per barrel for *refined*.

COCAINE.—Since our last report the majority of the *German* makers of *hydrochlorate* have reduced their quotations, and now offer 100 oz. lots (in tins) at 12s. 10d. per oz., 1-oz. bottles being charged 2d. per oz. more. One brand is, however, still quoted at 14s. 6d. per oz. This reduction in price is said to be partly due to the large amount of crude cocaine which has recently arrived, and partly with a view to under-selling possible outside makers.

CREAM OF TARTAR.—Is now quite a dead letter, and prices have dropped considerably. On the spot best white *French crystals* offer at 95s., and *German* brands of *powder* at 92s. per cwt.

GALLS.—There is very little business doing in *Persian* galls. Some small sales have been made of fine *blues* at 54s. to 55s., and *greens* at 47s. 6d. per cwt., whilst *whites* are quoted nominally at 45s., but there are

no offers. In auction on Tuesday 25 cases of fair *Japan* galls were bought in at 55s. per cwt.

GINGER.—Is rather slow of sale. In auction on Wednesday about half the *Cochin* root offered sold at about steady rates, 26s. to 26s. 6d. being paid for cuttings, 31s. for small and rough ends, 34s. to 35s. for washed rough, and 47s. for medium half cut, whilst medium to bold native cut realised 55s. to 58s., and bold ditto 67s. 6d. New *Jamaica* root of good quality sold at fully steady rates, 95s. being paid for medium washed, 71s. 6d. to 80s. 6d. for medium scraped, 66s. to 69s. for small *Rhatoon*, and 60s. to 65s. for small dark ditto.

INSECT FLOWERS.—Are very firmly held at a slight advance in price, the following being the current quotations:—Closed wild flowers, 145s.; closed cultivated flowers, 135s.; half closed, 102s. 6d.; and open, 85s. per cwt., all *c.i.f.* terms. *Powder* is quoted at 102s. 6d. per cwt., *c.i.f.* terms.

LITHIA SALTS.—The makers of *lithia* compounds have advanced their prices since our last report, and now quote for *carbonate* and *citrate* as follows:—Small lots, 9s. 6d. and 6s.; 28 lb. lots, in one delivery, 9s. 3d. and 5s. 9d.; 112 lbs., in one delivery, 9s. 1d. and 5s. 7d.; 2 cwt., contract over three months, 8s. 11d. and 5s. 6d. These prices are for pure *carbonate* and crystallised *citrate* respectively, powdered *citrate* being charged 3d. per lb. more.

MENTHOL.—Very quiet on the spot, with nominal quotations varying from 12s. 3d. to 12s. 9d. per lb. The shipment price is 12s. to 12s. 3d. per lb., *c.i.f.* terms.

OIL (COD-LIVER).—The last official report, dated March 2, gives the following particulars:—

	Fish caught (thousands).		
	1894.	1895.	1896.
Lofoten	5700	5000	1200
Winter districts	5871	3683	1623
	11571	8683	2823

	Cod-liver oil in hectolitres.		
	1894.	1895.	1896.
Lofoten	2713	1664	400
Winter districts	3603	1738	661
	6316	3402	1061

It is also stated that nothing was done in Lofoten or the winter districts during the week previous to the issue of the report, but the weather has now improved considerably, and better results may be expected. The production of cod-liver oil in the Lofoten district up to March 7 for the last four years compares as follows:—

1896	904	hectolitres.
1895	3713	"
1894	4460	"
1893	8548	"

On the spot a good business has been done, but owing to the extreme prices asked for

new *Norwegian* oil, a large portion has been in 1895 oil, for which 200s. to 210s. is the current quotation on the spot. The new season's oil has sold at 240s. *c.i.f.* per barrel of 25 gallons, and this is certainly the lowest price at which it can be bought, in fact some holders ask 260s. *c.i.f.* The position of *Norwegian* oil has naturally caused considerable attention to be paid to *Newfoundland* oil, in which a good business has been done at prices varying between 6s. 6d. and 7s. per gallon. The latter variety bids fair to become a formidable opponent to *Norwegian* oil, as the quality has been considerably improved of late, the erection of new factories and machinery having enabled the producers to put a non-congealing oil on the market.

OILS (ESSENTIAL).—The feature of the essential oil market during the week has been the advance in *Star Anise* oil, which has revived considerably in price. During the week, sales have been made at 10s., followed by 10s. 3d., the latter price having been paid for considerable quantities. Since then, 10s. 4½d. has been bid and refused, and some holders now ask 10s. 6d. per lb. The stocks, both in London and Hamburg, are very low. The last shipment quotation was 10s. 10d. per lb., *c.i.f.* terms. *Cassia* oil is slow of sale, 8s. to 8s. 6d. being nominally quoted for 70 per cent. oil. There is nothing to report in any other oil.

OILS (FIXED) AND SPIRITS.—*Castor*: *Italian* oil is very firmly held in consequence of the scarcity of the raw material, best quality being quoted at 30s. 6d. per cwt. *c.i.f.* terms. *Cotton* is rather quiet, but fully steady, *refined* oil being still quoted at £16 10s. to £17 5s. on the spot. *Coco-nut* is very firm, *Ceylon* being, if anything, a trifle dearer at £23 to £23 5s., whilst *Cochin* is still quoted at £27. *Linseed* is quiet, but practically unchanged in value, oil in barrels being quoted at £19 10s. on the spot. *Rape* is slow of sale, but the quotations are steady at £24 10s. to £25 for *refined* oil on the spot. *Turpentine* is steady at unchanged rates, *American* spirit being quoted at 20s. 1½d. on the spot. *Petroleum*: The market for *American* oil is firmer, a better inquiry being shown. Quotations range from 5½d. to 5¾d., whilst *water white* is quoted at 6¾d. to 6¼d., and *Russian* at 5¾d. to 5¼d. on the spot. *Petroleum spirit*: *Ordinary* quotes at 9d. to 9¼d., and *déodorised* at 9¼d. to 9½d. per gallon.

OPIUM.—The London market continues very firm, without any change in the quotations, which are as follows:—*Soft shipping*, 12s. to 12s. 9d.; *Smyrna*, 8s. 6d. to 9s.; *Constantinople*, 8s. 6d. to 9s. 6d.; and *druggists' seconds*, 8s. to 8s. 6d. per lb. Business has been done in fine *Persian bricks* at 13s. per lb., and there is some likelihood of advanced prices for this quality. *Fair ball* is quoted at 12s. to 12s. 6d. per lb.

OPIUM ALKALOIDS.—Very firm, without any change in price, *morphine*, in 1000 oz. lots, being quoted at 4s. 7d. for *powder*, and 4s. 9d. for *cubes*, whilst *codeine* is quoted at 10s. 6d. to 11s. per oz.

POTASH COMPOUNDS.—*Chlorate* is steady at 4½d. per lb. on the spot or for forward delivery. *Permanganate* is exceedingly scarce, and continues to advance in price, 70s. being now asked for small, and 75s. per cwt. for large *crystals*. *Bichromate*: 4½d.

per lb. *Yellow Prussiate* is quoted at 8d. per lb. for ordinary brands. *Cyanide*: For 98 per cent. 1s. 5d. per lb. is asked. *Bromide* quotes at 1s. 8d. per lb.

QUICKSILVER is steady. Importers still ask £7 2s. 6d. per bottle, and there are no sellers in second-hand under £7 2s.

QUININE SULPHATE—The market for the best *German* makes has lapsed into a quiet and featureless condition, with little or no business reported. The nearest quotation for *B. & S.* and *Brunswick* is 1s. 1¼d. per oz. During February the landings were 24,496 ozs. and the deliveries 68,016 ozs., making the stock on the 29th February 1,930,369 ozs., against 2,609,008 ozs. at the corresponding period in 1895.

SHELLAC.—A somewhat improved demand has been shown since last week's auction, and moderate sales of ordinary to fair *Second Orange* have been made at 92s. to 96s. per cwt. on the spot. The arrival market is quiet, *T.N. Orange* being quoted nominally at 88s. to 90s. *c.i.f.* terms. In auction on Tuesday a fair demand only was shown, and *T.N. orange* barely maintained its previous value, in some cases selling at 1s. decline. *Garnet* was all bought in, whilst *Button* was lower. Since the sales the market has been firmer, 500 cases of *Second Orange* having been sold for arrival at 90s., *c.i.f.*, April to June shipment, whilst for July delivery an additional 500 cases have been sold without mention of the price.

SODA COMPOUNDS.—*Hyposulphite* is quiet, the spot price being £7 7s. per ton in kegs, whilst casks offer at £6 15s. *f.o.b.*, Tyne. *Caustic soda* is quoted at £7 15s. for 70 per cent. on the spot, with 60 per cent. offering at £1 less. *Soda crystals*. 42s. 6d. ex-ship or wharf, London. *Prussiate*, 6d. per lb. *Bicarbonate*: £7 10s. per ton on the spot. *Nitrate* is quoted at £8 5s. on the spot for *refined*, and £8 for *crude*.

SPICES (VARIOUS).—*Cloves* are quiet, but steady. In auction ordinary dark *Zanzibar* realised 2d., and good fair, 2¼d. per lb., whilst common dark *Amboyna* fetched 2¼d. *Cassia lignea*: None was sold in auction, unworked being bought in at 31s., and common to good broken at 18s. to 24s. per cwt. *Pimento*: Quiet, but steady, 2¾d. being paid for ordinary grey, 2¾d. for fair ditto, and 2½d. for good quality. *Cayenne pepper*: Six cases of *Natal*, 1895 import, sold without reserve at 9½d. to 10d. per lb. *Chillies* are dull of sale. For fairish dull *Zanzibar* 29s. was paid, and 11s. 6d. for brown stalky *Java*, offered without reserve. Good bright red *Japan* realised 75s. per cwt. *Capsicums*: Long red off stalk *East Indian* sold at 16s. to 23s. 6d. *Pepper*: Ordinary grey *Singapore* sold at 2¾d. per lb. *White pepper*: Sea-damaged *Penang* sold at 2¼d. to 2½d., whilst 4½d. was paid for fine *Singapore*, and 5d. for very fine ditto.

A NEW SYNTHETIC OIL.

The inferior quality of the majority of cassia oils at present on the market has induced Messrs. Schimmel and Co. to bring out a synthetic oil, which has obvious claims to consideration. This product is guaranteed to contain 98 per cent. of cinnamic aldehyde, and its price is very moderate when compared with

the natural product. It is said that comparative experiments made with soap, perfume mixtures have demonstrated that Schimmel's preparation is 25 per cent. stronger than a normal cassia oil containing 75 per cent. of aldehyde. In appearance it is of a golden-yellow colour of cinnamon like taste and odour. It has a specific gravity of 1.056, and is readily soluble in rectified spirit, even when diluted.

NEWCASTLE CHEMICAL REPORT.

The chemical market here continues quiet and without change. There is a fair inquiry for staple products for home consumption, but export business is still very slow, though the probable early opening of the Baltic may shortly be expected to have some effect upon this branch of the trade. The chief feature of the week has been the advance in sulphate of copper, which is now quoted at £19 per ton. Quotations to-day are as follows:—BLEACHING POWDER: £6 10s. to £7 5s.; SODA ASH: (52 per cent.), £4; SODA CRYSTALS: 36s. to 42s.; SULPHUR: £3 17s. 6d.; SOUTH DURHAM SALT: 9s. 3d. to 9s. 6d.; CAUSTIC SODA: (70 per cent.), £7 5s. to £7 15s.

LIVERPOOL MARKET REPORT.

[From our own Correspondent.]

MARCH 11, 1896.

CANARY SEED: *Spanish*, 46s.; *Turkish*, 32s. to 33s. per 464 lbs. KOLA NUTS: dried, 5d.; fresh, 7d. GINGER: *African*, old crop, 24s. to 24s. 6d.; new, 24s. CHILLIES: medium *Sierra Leone*, 24s.; good, 29s. 6d. to 30s. GUINEA GRAINS: 15s. 9d. to 16s. BEE-WAX: *Chilian*, £7 17s. 6d. to £8; *Gambier*, £7 2s. 6d. HONEY: *Mexican*, 24s. COCHINEAL: *Teneriffe* black in small amount at late rates. GUMS: *Arabic* quiet, *Hog Tragacanth*, 52s. 6d. TURMERIC: *Cochin* bulb and finger at recent prices. CASTOR OIL: *Calcutta*, good seconds, ex quay, 2 15/32d., ex store, 2½d.; *Madras* and 1st pressure *French*, 27½d. to 2½d. OLIVE OIL: *Malaga*, £30; *Seville*, £29 to £29 10s. SPIRIT OF TURPENTINE: 21s. 3d. LINSEED OIL: *Liverpool* makes, 20s. 3d. to 21s. COTTONSEED OIL: 17s. 3d. to 17s. 6d. in export barrels. COD OIL: *Newfoundland*, £17. PETROLEUM: *American*, 6d. to 7½d.; *Russian*, 5½d. to 5¼d. AMMONIUM CARBONATE: 3¾d. to 3½d. AMMONIUM SULPHATE: "Good grey," £8 12s. 6d. to £8 15s. SAL AMMONIAC: First quality, 39s. BLEACHING POWDER: £7 to £7 5s. for hard *f.o.b.* COPPERAS: *Lancashire*, 38s.; *Welsh*, 37s. COPPER SULPHATE: £19 10s. to £20. PRUSSATE OF POTASH: 8d. CHLORATE OF POTASH: 4¾d. NITRE: Kegs, 23s. 6d.; barrels, 23s. CREAM OF TARTAR: Finest white, 103s. to 104s. PHOSPHORUS: *Wedges*, 2s.; *sticks*, 2s. 1d.; *amorphous*, 2s. 8½d. BICARBONATE OF SODA: £6 15s. SODA CRYSTALS: £2 7s. 6d. to £2 10s. CAUSTIC SODA: 70 per cent., £7 10s.; 60 per cent., £6 10s. BORAX: Crystals, £19 10s.; powder, £20 10s. HYPOSULPHITE OF SODA: £6 15s. to £7 5s. NITRATE OF SODA: 7s. 10½d. to 8s. 3d. SULPHUR: Recovered, £3 17s. 6d. in bags; roll, £5 5s.; flour, £7 10s.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Books, etc.

A book of 130 Well-tried Recipes for Chemists and Druggists, comprising well-selected formulæ for general, remedial, veterinary, toilet, and everyday preparations. Post free, 1s. 6d.—Tully, Chemist, Hastings.

'Ure's Dictionary of Arts, Manufactures, and Mines,' 2100 engravings; 4 vols. complete, perfect condition, never used; published at £7 7s. Offers, cash or exchange.—Place, Betley, Crewe.

'Pharmaceutical Journal,' complete 54 vols.; vols. 1 to 36 bound, half calf, rest in numbers; good condition, £3 10s. 'Garrard's Herbal,' best edition, half morocco, fine condition, 35s.—Tanner, Westminster Hospital.

Miscellaneous.

Typewriter, Caligraph, No. 2; perfect order and condition, cost £20, lowest price £8.—"Bargain," 'Pharmaceutical Journal' Office, 5, Serle Street, London, W.C.

Indiarubber Mat, 36 ins. by 24 ins., quite new, perfect bargain, 16s. 6d.; also one 30 ins. by 24 ins., 15s., half cost, pattern perforated, and fluted surface; 11½ lbs. cetaceum opt., 15s., bargain.—Chemist, 4, Commercial Road, Peckham, S.E.

Two 4s. 6d. Wright's Liq. Carb. Deterg., 2s. 6d. each; 2 2s. 9d. Schouwer's Red X Pills, 1s. 6d. each; Paul's 2s. 6d. Ceraline, Creme Camélia, Poudre Lustrale, 1s. each—Matthew, 529, Battersea Park Road.

Telescope, 1½-inch object glass by Wray, ¼-inch Huyghenian eye-piece, mounted in polished brass, gives excellent definition, will divide a Gemini; price £2.—Brauer, Middlewich.

Spinal Jacket, good as new, cost £2. What offer?—Hardie, 8, Ealing Green, London, W.

Surplus stock, Spanish Herbal Cigarettes and Smoking Mixture. 1 doz. each 2s. 6d. cigarettes and smoking mixture; 2 doz. 1s. 6d. cigarettes and 1 doz. 1s. 6d. smoking mixture; 2 doz. each 1s. cigarettes and smoking mixture, newly stocked. Offers wanted for whole or part.—J. Pirie, Chemist, Keith, N.B.

WANTED.

'Wanklyn's Water Analysis,' 2 copies; U.S.P., 1894.—Barfoot, West Bars, Chesterfield.

Cushion or Pneumatic Safety; give 900 lbs. (about) MacLood's sheep dip, retail 6d. per lb., and 2 by 2 gals. charcoal filters, retail 25s. each.—Palmer, East Gates, Lynn.

* * * Attention is specially directed to the new conditions of the "Exchange," in accordance with which a small charge will in future be made for the insertion of notices. The careful observance of those conditions will tend to obviate much inconvenience and possible delay.

TRADE NOTES AND NEWS.

MR. VINCENT WOOD, the manufacturer of elastic surgical hosiery, whose works and rubber mills are situated in Nottingham, intimates that he has opened a new manufactory in London, fitted with all modern accessories, and is now in a position to guarantee the delivery of special orders the same day as received. This firm has now seven factories exclusively devoted to the manufacture of elastic hosiery, the whole of the material used from the rubber itself to the bindings being made by the firm's employes. Silk and cotton dyeing for their own needs, and for those of other firms, also forms an important department.

THE BRITISH ANTITOXINE MANUFACTURING COMPANY announce that the price of antitoxine—the anti-pyretic—has been reduced to 3s. per ounce.

MESSRS. EVANS, SONS, AND Co., of Liverpool, and Messrs. Evans, Lescher, and Webb, of London, publish a half-yearly price current of drugs, chemicals, druggists' sundries, proprietary articles, etc., which is a wonderful production. It contains more than 120 pages, devoted to price lists of the various products offered by the firm, and as many more which serve as a general buyer's guide, selected advertisements having been accepted for publication in the book.

FOOTBALL

METROPOLITAN v. WESTMINSTER.—This match was played on Tooting-Bec Common, Saturday, 7th inst., resulting in a victory for the Metropolitan by 7 goals to *nil*. On a previous occasion the Metropols also were victorious against the South London School of Pharmacy by 4 goals to 2.

DIARY OF THE WEEK.

Secretaries of Societies are requested to send notices of forthcoming meetings not later than Wednesday in the previous week.

MONDAY, MARCH 16.

IMPERIAL INSTITUTE, at 8.30 p.m.
"The Technical Characteristics of Modern Pictorial Art," by C. Dyall.
PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION.
General Meeting.

TUESDAY, MARCH 17.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"The External Covering of Plants and Animals: its Structure and Functions" (X.), by Professor C. Stewart.
SOCIETY OF ARTS, at 8 p.m.
"Bahamas Sisal Industry," by Dr. D. Morris.
IMPERIAL INSTITUTE, at 5 p.m.
"My Twelve Years' Stay in Cyprus" (III.), by Dr. Max Ohnefalsch-Richter.
ROYAL PHOTOGRAPHIC SOCIETY, at 8 p.m.
"Screens for Process Work."
"Note on Photogravure," by Cap'tain Collardon.
MIDLAND PHARMACEUTICAL ASSOCIATION, at 8 p.m.
Smoking Concert.

WEDNESDAY, MARCH 18.

PHARMACEUTICAL FOOTBALL CLUB AND CRICKET CLUB, at 7 p.m.
Annual Dinner.
ROYAL MICROSCOPICAL SOCIETY, at 8 p.m.
"Some American Rotifera," by Dr. A. C. Stokes.
WESTERN CHEMISTS' ASSOCIATION, at 9 p.m.
Discussion on "The Prescribing of Proprietary Medicines," to be opened by R. H. Parker.
MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION, at 9 p.m.
"Cod-liver Oil and Its Emulsification," by P. C. Arblaster.
BRIGHTON JUNIOR ASSOCIATION OF PHARMACY, at 9 p.m.
Social Evening.
MANCHESTER PHARMACEUTICAL ASSOCIATION.
Distribution of Prizes.

THURSDAY, MARCH 19.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"Goethe," by Reverend W. Barry.
LINNEAN SOCIETY OF LONDON, at 8 p.m.
"On the Structure of the Female Flowers and Fruit of Sararanga, Hemsl. (Pandanaeae)," by Dr. A. Stapf.
"On Two Little-known Opisthognathous Snakes," by G. S. West.
CHEMISTS' ASSISTANTS' ASSOCIATION, at 8.30 p.m.
"The Rational Pharmacist," by C. Morley.

LIVERPOOL PHARMACEUTICAL STUDENTS' SOCIETY, at 8.30 p.m.

"Solution," by R. C. Cowley.
"Some Weak Points in our Trade Morality," by H. Peirson.
GLASGOW AND WEST OF SCOTLAND PHARMACEUTICAL ASSOCIATION, at 9.15 p.m.
"Coal and Coal-Gas," by R. Tocher.
CHEMICAL SOCIETY (BURLINGTON HOUSE), at 8 p.m.
"The Constitution of a New Organic Acid," by H. J. H. Fenton.
"The Volume and Optical Relationships of the Monoclinic Series of Double Sulphates R₂M(SO₄)₂·6H₂O," by A. E. Tutton.

FRIDAY, MARCH 20.

ROYAL INSTITUTION OF GREAT BRITAIN, at 9 p.m.
"Immunitation Against Serpent's Venom and the Treatment of Snake-Bite with Antiveneno," by Professor T. R. Fraser.
ABERDEEN JUNIOR CHEMISTS' ASSOCIATION, at 9.30 p.m.
"Taxonomic Botany," by H. Fraser.
EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION, at 9.15 p.m.
"Demonstration of Granulation on a Small Scale," by G. Lunan.

SATURDAY, MARCH 21.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"Light" (V.), by Lord Rayleigh.
PHARMACEUTICAL FOOTBALL CLUB v. Breweries, at Wormholt Farm, Shepherd's Bush.

PERSONAL.

MISS CATHERINE PERKINS, pharmaceutical chemist, M.P.S., was on Saturday last appointed dispenser to the Small Heath branch of the Birmingham and General Dispensary.

MESSRS. CARMAN AND WORKMAN announce in the *Cape Argus* that they have purchased the chemist's business, until recently carried on by Mr. F. P. Hutchinson, at Woodstock and Salt River. Mr. Carman holds the Major certificate of the Pharmaceutical Society of Great Britain, and is a member of that Society. He has been manager for Mr. Hutchinson at Salt River for over two years, and previous to leaving England was Dispenser to the Society of Apothecaries, Apothecaries' Hall, London. Mr. Workman holds the certificate of the Colonial Pharmacy Board, and has had varied English and Colonial experience.

SUPPLEMENT

TO THE

PHARMACEUTICAL JOURNAL.

REPORTS, ANALYSES, AND NOTES ON
NEW INVENTIONS.

THE "AREMA" VAPORISER.

The vaporiser manufactured by the "Arema" Manufacturing Company, High Holborn, W.C., appears to be one of the best appliances of its kind. It consists of a polished wood stand, 6 ins. in diameter, with stout brass rods springing from two sides and uniting at the top to form a handle. Sliding on these rods is a brass ring which supports a copper water bath, tinned inside and covered with an enamelled vaporising pan. Notches in the brass rods enable the ring to be supported at definite points, so that the temperature can be maintained at 110°, 130°, or 160° F. respectively. The source of heat is a night-light in a glass container and protected from draughts by a glass shade. In

use, water is heated in the outer copper pan, and gradually imparts its acquired heat to the liquid to be vaporised, which is contained in the enamelled pan. The complete apparatus is sold at 10s. 6d., but a less expensive form in tin retails at 5s. The "Arema" night-lights are made specially for the vaporiser, and burn for twelve hours. If desired, however, a wick floating on oil in the glass container can be used. Special non-

poisonous antiseptic inhalants are prepared for use with the vaporiser. These consist of a camphoraceous oil, pine oil, eucalyptus oil, and pure terebene, variously blended with benzoin, storax, tolu balsam, oil of amber, iodoform, thymol, and beechwood creosote, according to the purpose for which the inhalant is to be used. But the vaporiser is well adapted for diffusing any volatile substance, and ought to meet with considerable favour.

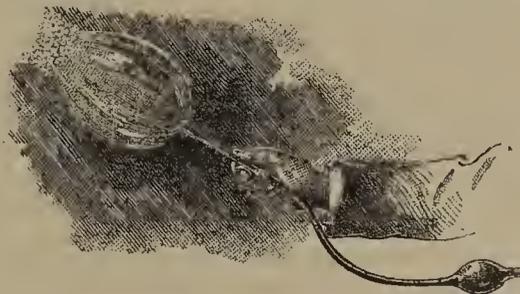

SAVAR'S COCA WINE.

Every chemist knows that few of the multitudinous coca wines on the market contain the proportion of alkaloid required by the Inland Revenue authorities in order to make them non-excisable. Recognising this fact, Messrs. Evans, Lescher, and Webb, 60, Bartholomew Close, E.C., have recently introduced a coca wine which is claimed to contain half a grain of cocaine alkaloid in each fluid ounce. Sample bottles have been distributed amongst the medical profession in London, and examination shows that the preparation is likely to be extensively prescribed whenever a standard preparation of coca is indicated. The vehicle used is a wine of Marsala character, and a clear mix-

ture is produced when it is added to either wine or water, which is by no means unpalatable. A dose of a dessert-spoonful is suggested as a suitable one to begin with, this being equivalent to about one-eighth of a grain of cocaine. The innovation is likely to maintain the prestige which the "Savar" series of pharmaceutical preparations has always possessed.

THE BALL NOZZLE SYRINGE.

This is one of the most ingenious modifications of a syringe nozzle that have yet been produced. A ball is placed loosely in a bell-shaped nozzle, and however great the pressure of water ejected, the ball remains in position and causes the issuing film of fluid to assume an unbroken egg-shape. For vaginal and rectal syringes, therefore, the

ball nozzle is perfect. The idea has also been applied to bath sprays, lawn sprinklers, fountains, and fire extinguishing apparatus. The address of the British-American Ball Nozzle Company is 52, Oxford Street, W., and the wholesale agents are Messrs. S. Maw, Son, and Thompson, Aldersgate Street, E.C. The ball nozzle syringe pipe in ebonite retails at 3s., but can also be obtained adapted to various kinds of syringes. The list price of the bath spray, a most welcome addition to the ordinary bath, is from 5s. upwards.

ORISINE.

An antiseptic mouth wash, consisting of a saturated solution of the antiseptic constituents of thyme, eucalyptus, wintergreen, and cloves, in conjunction with benzoic and boric acids, etc., is thus named by the maker—Mr. Anthony Nichol, pharmaceutical chemist, Carlisle. ORISINE is a clear, pinkish liquid, possessing a very agreeable aromatic odour. It mixes in all proportions with water, and possesses special advantages as a mouth wash in that it is neither poisonous nor irritant. It is neatly put up in white panelled flats with sprinklers, which retail at 2s. and 3s. 6d. each, and forms a decidedly elegant preparation.

TRADE NOTES AND NEWS.

THE LIQUOR CARNIS CO., LTD., announces that, owing to the scarcity and difficulty of obtaining Red Marrow, it has become necessary to increase the prices of VIOL SANS SUCRE from 9d. and 3s. 6d. to 1s. and 5s. retail. The trade discount remains as before.

MESSRS. REYNOLDS AND BRANSON, of Leeds, submit a price-list of their PATENT DUST-PROOF SELF-CLOSING DRAWERS, described in last week's Supplement. According to this, the price of a single drawer is 7s. 6d., a set of four is supplied for 25s., and a set of eight costs £2 2s.

NEWCASTLE CHEMICAL REPORT.

[From our own Correspondent.]

MARCH 17, 1896.

This market remains on the quiet side; over-sea orders, although the Sound ports and lower Baltic are open, not coming to hand readily. Home business runs steadily on, but not to any material extent to change values. Alkali has been advanced 5s. to 10s. per ton more through a restricted make than otherwise. Sulphate of ammonia is more stirring at late figures. Pitch easy. South Durham salt steady. Prices are:—SODA CRYSTALS: 36s. to 45s. BLEACHING POWDER: Softwood casks, £7 5s.; hardwood, £7 10s. CAUSTIC SODA: 76 to 77 per cent., £9 5s.; 70 per cent., £7 10s. to £7 15s. RECOVERED SULPHUR: £3 17s. 6d. SODA ASH: 48 per cent., £3 15s. ALKALI: 48 per cent., £4 10s. to £4 15s. HYPOSULPHITE OF SODA: Casks, £6 5s.; 1-cwt. kegs, £7. SULPHATE OF AMMONIA (Leith): £8 7s. 6d. PITCH: 34s. SOUTH DURHAM SALT: 9s. per ton *f.o.b.* Tees.

LIVERPOOL MARKET REPORT.

[From our own Correspondent.]

MARCH 18, 1896.

CANARY SEED: *Turkish*, 31s. per 464 lbs. LINSEED: *Turkish*, 35s. to 36s. per 416 lbs. *Samsoun*, 34s. CHILLIES: *African*, 24s.; *Sierra Leone*, 30s. 6d. HEMPSEED: *Chilian*, *ex store*, 28s. per 336 lbs. GUMS: 10 serons of *Arabic* "sorts" sold on private terms at slightly less than recent prices. KOLA NUTS: Scarce, dried medium, 4d.; fresh, 7d. OLIVE OIL: *Syrian*, £28 10s. CASTOR OIL: *Calcutta*, good seconds, 2 15/32d. to 2 1/2d.; *Madras* and *French* 1st pressure, 2 7/8d. to 2 3/4d. LINSEED OIL: 19s. 9d. to 21s. for *Liverpool* makes in export casks. COTTONSEED OIL: 17s. to 17s. 6d. in export barrels. SPIRIT OF TURPENTINE: Steady at 21s. 3d. PETROLEUM: *Russian*, 5 1/2d. to 5 3/4d.; *American*, 6d. to 7 1/2d. SAL AMMONIAC: First quality, 39s.; second quality, 37s. SULPHATE OF AMMONIA: £8 10s. for good grey. BLEACHING POWDER: £7 to £7 5s. COPPERAS: *Lancashire*, 38s.; *Welsh*, 37s. SULPHATE OF COPPER: Second-hand, £18 to £19. BICHROMATE OF POTASH: 4 1/2d. CHLORATE OF POTASH: 4 1/2d. PRUSSIAN OF POTASH: 8d. SALTPETRE: 85 bags of *Kurrachee* sold on private terms *ex quay*. CREAM OF TARTAR: Slow of sale, 103s. to 104s. for best white. BICARBONATE OF SODA: £7. SODA CRYSTALS: £2 10s. BORAX: Lump, 19s. 6d.; powder, 20s. 6d. CAUSTIC SODA: 70 per cent., £7 12s. 6d. to £7 15s.; 60 per cent., £6 12s. 6d. to £6 15s.

FOOTBALL.

METROPOLITAN COLLEGE v. BARRON HARVEY'S AND Co.—The above match was played on Tooting Bec Common on Saturday, March 14, and ended in a win for the Metropolitan College—8 goals to *nil*.

MARKET REPORT.

[Specially compiled for the *Pharmaceutical Journal*.]

LONDON, MARCH 19, 1896.

There are few important changes to report in the chemical market this week. Citric acid is quiet but steady, and the same applies to tartaric acid, whilst carbolic acid has firmed up again somewhat. Cream of tartar remains neglected, sulphur of copper very strong, ammonia compounds weak, and arsenic as scarce as ever. Potassium permanganate is very scarce and dearer, and likely to advance. Amongst the fine chemicals, camphor is quiet, whilst the various ackoloidal salts are unchanged in price. The fortnightly drug sales were held to-day, when the most important changes were as follow:—Brazilian and Columbian ipecacuanha, dragon's blood, gamboge, gum acacia, senna and cardamoms are all decidedly dearer. Sumatra benzoin, buchu leaves, and aloes are unchanged. Cod-liver oil continues very firm, and the scarcity of the new oil is as pronounced as when last reported on. Italian castor oil is rather easier, and the heavy oil market generally is slack. Shellac is rather easier, and spices are generally dull of sale. At the monthly cinchona auctions the unit declined in value.

ACACIA (GUM).—Previous to the sale a good business was done in *Soudan* sorts at considerably advanced rates, and this variety is now very firmly held. The present position of affairs in Egypt is, of course, directly connected with this renewed inquiry, as there is a possibility that supplies will be curtailed considerably. At to-day's drug sales a total of 172 packages were offered but no Turkey sorts were sold, medium to bold palish gum from Suez being bought in at 80s., and it was stated that this price has been paid. Three casks of bold ambery *Mogador* gum realised 37s. per cwt., whilst 42s. 6d. was paid for medium pale ditto. *Trieste* gum was in moderate supply only. For 6 cases of pale grain £5 10s. to £5 12s. 6d. per cwt. was paid, whilst a case of medium to bold picked greyish sold at £6 17s. 6d.

ACID, CARBOLIC.—The market is firm, in fact, *crystal* acid is rather dearer, the following being the current quotations:—*Crystals*: 34° to 35° C., 7¼d.; 39° to 40° C., 8d.; 39° to 40° C. (*detached crystals*), 9d. per lb. *Crude* is quoted at 2s. 3d. for 60 per cent. and 2s. 7d. per gallon for 75 per cent. *Liquefied* and *creylic* are unchanged at 1s. and 11½d. per gallon respectively.

ACID, TARTARIC.—The market is quiet. *English* makers still quote 1s. 3d. per lb., whilst holders of *foreign* acid, both in *powder* and *crystals* (not guaranteed B.P.), offer at 1s. 2d. to 1s. 2¼d. per lb. on the spot. At the sales on Tuesday *Cape argol* sold at steady rates, 51s. being paid for ordinary grey, 40s. for ordinary pink, whilst good grey was bought in at 65s. per cwt.

ALOES.—An average supply of 323 packages was offered in auction. *Cape* aloes, which was represented by 28 cases, was mostly bought in, but 20s. to 21s. was paid for ordinary quality rather drossy, which

shows no change in price. Fair to fine bright hard was bought in at 23s. to 25s. per cwt. All the best qualities of *Curaçoa* aloes, of which 283 packages were offered, were bought in, some damaged lots selling at 17s. down to 5s. per cwt., according to condition. Twelve kegs of *Socotrine* aloes were bought in at 60s. to 82s. 6d. per cwt.

AMMONIACUM (GUM).—Only 6 cases were offered to-day. Of these, 5, which consisted of good yellow loose drop, were bought in at 55s. per cwt.

ANNATTO SEEDS.—The unusually large supply of 75 packages was offered, but the demand was very moderate. For 2 bags of good bright *Colombo* seed 5d. per lb. was paid, whilst 2¼d. to 2½d. was accepted for ordinary dull seed from *New York*. *Madras* seed of good red colour was bought in at 8d. per lb.

BAEL FRUIT.—Three bags of this drug in slices were bought in to-day at 1s. per lb.

BENZOIN (GUM).—A good supply, amounting to 363 cases, was offered. *Siam* gum, which was only represented by 13 cases, was mostly bought in, but £10 was paid for a case of good bright brown almondy block, whilst medium to bold pale almonds, most loose, were bought in at £16, and siftings in block at 70s per cwt. *Sumatra* gum was in moderate demand for ordinary qualities, but a parcel of good seconds, small to medium almonds, fairly well packed, sold at £8 2s. 6d. to £8 10s., and a good inquiry is shown for this grade of gum. For ordinary dull false packed seconds, with few almonds, £5 15s. was accepted. *Palembang* gum was all bought in; fair seconds in tins at 35s., good pale almondy ditto, at 55s., and ordinary thirds in cases at 27s. per cwt. No Penang gum was shown.

BUCHU.—The supply offered to-day was only 39 packages, as compared with 96 last week, and even for these no inquiry at all was shown. Good *round* green were bought in at 4d., and broken greenish ditto, at 3¼d., whilst a single bale of fair stalky, greenish leaves fetched 2¼d. per lb.

CALUMBA ROOT.—Very slack. To-day, ordinary dark mixed *Zanibar* sorts were bought in at 9s., and good washed at 33s. per cwt.

CANELLA ALBA.—Five bales of mixed quill, imported from New York, were bought in to-day at 30s. per cwt.

CANNABIS INDICA.—Rather dearer. To-day 3d. per lb. was paid in auction for 10 robbins of greenish tops, whilst brown stalky ditto were bought in at 2¼ per lb.

CARDAMOMS.—An excellent demand was shown for this article to-day, when about 190 packages were offered. Some fine grades of *Mysore* cardamoms were offered, and an average advance of 3d. to 4d. per lb. was indicated, whilst *seed* was about 6d. per lb. dearer. The following prices were paid:—*Ceylon-Mysore*: Medium to bold pale, 3s. to 3s. 3d.; medium plump yellowish, 2s. 9d. to 3s.; small to medium pale, 2s. 4d. to 2s. 8d.; small to medium brown, 1s. 8d. to 2s. 3d.; and ordinary brown, 1s. 6d. to 1s. 7d. per lb. For *seed* 3s. per lb. was readily paid.

CASCARILLA.—Which was represented by 60 packages, sold readily at an advance, 50s. to 51s. per cwt. being paid for good round, silvery quill, whilst 32s. to 37s. was accepted for thin, stringy, brown bark, part grey.

CINCHONA.—An average supply was

offered at the fortnightly sales. The majority of the catalogue consisted of good manufacturers' bark, but only a moderate demand was shown, and easier rates were paid, the average amount being reduced from ¾d. to ½d. per lb. The prices paid were as follows:—*Ceylon*: *Succirubra* stem chips, 1d. to 1½d.; ditto renewed, 1d. *Officinalis* matured stem chips, 1½d. to 2d. Other descriptions, 1d. to 2¼d. *Indian*: *Succirubra* chips and shavings, 1¼d. to 2d.; fair ditto renewed, 1¾d. to 1¼d. per lb. *Officinalis* chips and shavings, 1¼d. to 2¼d.; short druggists' quill, 2d. *Ledger*: Fair matured chips, 1½d. per lb. *Java*: Rich stem chips, 3¼d. to 4d. *South American*: Cultivated Bolivian *Calisaya*, 2½d. to 3d. for ordinary quill, and 2½d. for fair chips. *African*: 2d. to 2½d. per lb. for fair quill and shavings. The total exports of cinchona bark from Ceylon from January 1 to February 29 were: Season 1896, 112,000 lbs.; 1895, 79,000 lbs.; 1894, 484,000 lbs.; and the total exports from Java from October 1 to February 29: Season 1895-96, 4,556,307; 1894-95, 3,700,624; 1893-94, 3,195,303 Amsterdam lbs. At the drug sale a parcel of *Maracaibo* bark, consisting of 32 bales, sold at 6½d. to 7d. per lb., whilst *Succirubra* bark was bought in at 4d. to 10d. per lb.

COCA LEAVES.—Ordinary brownish *Bolivian* leaves were bought in to-day at 1s. 8d. For *Truxillo* leaves, of good green colour, 1s. 3d. per lb. is asked privately. Eight bales of sound quality, but broken, were bought in at 1s. 4d. to 1s. 6d. per lb.

COPAIBA (BALSAM).—Very firm. To-day two casks of bright reddish *Maracaibo* balsam sold at 1s. 8d., whilst five cases of clear thin *Para* were bought in at 1s. 11d. per lb.

COLOCYNTH.—Is steady. A few cases of good *Turkey* apple sold in auction at 2s. 6d. per lb., whilst *Spanish* was bought in at 1s. 2d. to 1s. 4d. for sound, and 10d. for damaged quality.

CUBEBS.—Were in large supply, but absolutely no inquiry was shown, fair quality *Singapore* berries being all bought in at 33s. to 35s. per cwt.

DRAGON'S BLOOD.—Was represented in auction by 34 packages. For 2 cases of fine bright *Singapore* lump £9 15s. 6d. to £10 10s. was paid, whilst £6 was accepted for fair quality ditto. Dark saucers were bought in at £4 10s. to £5 10s., and reeds at £5 for dark (much broken and separated), and £3 10s. for good quality.

ELEMI (GUM).—This article proves quite unsaleable. To-day 25 cases of palish *Singapore* gum were bought in at 30s. per cwt.

ERGOT OF RYE.—Is still very dull of sale. To-day, out of 69 packages, 5d. to 5¼d. per lb. was paid for old wormy *Spanish* ergot, whilst fair quality was bought in at 9d. per lb. *New Russian* was also bought in at 7½d. per lb.

GALLS.—The market is quiet. At the sales on Tuesday, 100 cases of *China* galls sold without reserve at 57s. 6d. per cwt. for fair plum shape, the remainder being bought in, fair quality at 65s. per cwt. *Persian* galls are steady, *blues* being quoted at 53s. to 55s.; *greens* at 42s. 6d. to 44s. 6d., and *whites* at 43s. to 45s. per cwt.

GAMBOGE.—Was in very good supply, and selling with brisk demand at an advance in prices. For good clean bright *Singapore* pipe £10 was paid, whilst £9 5s. was accepted for medium quality. For fair damp

blocky pickings £8 2s. 6d. to £8 12s. 6d. was paid.

GENTIAN ROOT is very slow of sale. To-day 43 bales of fair quality *French* root were bought in at 23s. per cwt.

GINGER.—*Cochin* is steady, but slow of sale. In auction on Wednesday about a third of the catalogue sold, 70s. 6d. to 71s. being paid for fine bold native cut, 55s. to 55s. 6d. for good medium ditto, and 42s. to 45s. for good small ditto, whilst good cuttings realised 27s., and fair washed 34s. 6d. to 35s. All the *Bengal* and *Japan* root was bought in. *Jamaica* was in good supply, but only quiet demand. Good qualities fetched steady prices, but ordinary root sold at some decline. For low lean *Rhatoon* 53s. 6d. was paid, for good common 60s. to 63s., for ordinary medium washed 70s. to 74s., for medium bright washed 76s. to 80s., whilst 100s. was paid for a half barrel of fine quality.

GUAIACUM (GUM).—Out of 21 cases of this article offered in sale to-day, 2s. to 2s. 3d. was paid for good bright glassy block, and 2½d. to 4½d. per lb. for drossy mixed grades.

HONEY.—A good supply amounting to 355 packages was offered, and steady rates were paid, 20s. to 22s. being the price for ambery *Jamaican*, 25s. for pale *Honolulu*, and 21s. 6d. for *Chilian*. Good pale *Californian* was bought in at 38s. per cwt.

INSECT FLOWERS are very firmly held at the following quotations:—Closed wild flowers, 145s.; closed cultivated flowers, 135s.; half-closed, 102s. 6d.; and open, 85s. per cwt., all *c.i.f.* terms. To-day 4 bales were bought in at 100s. per cwt., whilst 10 kegs of so-called *insect powder* sold at 2d. per lb.

IPECACUANHA.—*Rio* (Brazilian) root was in very small supply to-day, and the bulk of the catalogue consisted of second-hand parcels. The prices paid show a very strong market, but nearly all was bought in. For fair quality, slightly damaged annulated root, 5s. 7d. was paid, showing an advance of about 3d. per lb., whilst 5s. 1d. was accepted for ordinary damaged quality. *Carthagena* (Columbian) root sold at an advance of 3d. to 4d. per lb., 4s. 2d. being paid for 7 bags of sound damaged quality.

KOLA NUTS—Are dull of sale. Out of 77 packages 10½d. was paid for sound *Grenada* nuts, and 7d. for seven bags of undried *West Indian* kolas.

KINO (GUM).—Thirteen packages of gum offered under the name of kino were offered to-day, but the majority was bought in. Six bags of the *African* variety were withdrawn at 15s. per lb., whilst a case containing eleven 7-lb. packets realised 9s. 6d. per lb. Four cases of astringent gum (mixed with bark) of a dark red colour were bought in at 45s. per cwt., and a box of gum, similar in appearance to the genuine gum, at 15s. per lb., after a bid of 10s. had been refused.

LIQUORICE ROOT.—Ten bales of *Persian* root of ordinary rough quality sold to-day at 7s. 6d. per cwt., whilst 2 bales of unpeeled *Russian* root realised 10s. per cwt.

MERCURIALS.—In consequence of the fall in the price of quicksilver, the manufacturers of *mercurials* on Tuesday announced a reduction of 1d. per lb. all round, and the following are now the current quotations for quantities of not less than 56 lbs.:—*Calomel*, 2s. 10d.; *corrosive sublimate*,

2s. 6d.; *red precipitate*, 3s. 1d.; *ditto levigated*, 3s. 1d.; *white precipitate*, 3s. 1d.; *yellow subsulphate*, 3s. 1d.; *persulphate*, 2s. 2d.; *sulphur with sulphur*, 2s. 1d.; *mercury with chalk*, 1s. 0d. per lb.

MYRRH (GUM)—In unusually large supply to-day, amounting to nearly 200 packages. The majority of this was, however, bought in, fine pale native packed at 110s., and good pickings at 65s. Twenty-one bales of ordinary drossy pickings fetched 21s. 6d. to 22s. 6d. per cwt., whilst 29 bags of ordinary sorts from Aden sold without reserve at 45s. per cwt.

OIL (COD-LIVER).—The London market continues very firm, and the prices asked for new *Norwegian* oil are so prohibitive that business in it is almost at a standstill. During the week 240s. per barrel *c.i.f.* terms has been paid, but although 260s. is asked in several quarters, we have not heard of this being paid. For 1895 oil of good quality quotations being from 210s. to 220s. per barrel, and a good business has been done during the week. *Newfoundland* oil is also in good demand, and 7s. 6d. per gallon is now asked for good quality, 7s. having been paid during the last few days. At to-day's sales, 21 casks of 1895 *Norwegian* oil were offered. Part of the parcel was bought in at 220s. per barrel, whilst the remainder, amounting to 75 casks, sold at 187s. 6d. According to the official report, the production of cod-liver oil this year in *Lofoten* up till—

March 14, 1896,	was 2090	hectolitres,
Against 1895	6467	"
" 1894	5360	"
" 1893	12845	"

OILS (ESSENTIAL).—*Rose*: Five pots sold in auction without reserve at 1d. per oz. *Cassia*: 13 drums of unworked oil imported from Hong Kong (*via* Bremen) were bought in at 10s. per lb., with oil testing 49 per cent. of aldehyde at 6s. *Eucalyptus*: Four cases of Tasmanian oil (*Eagle* brand) sold at 1s. 8d., and three cases of Australian oil (*R.M.* brand) at 1s. 7d. per lb. subject. In addition, three cases realised 9d. to 10d. per lb. *Citronella*: Five cases of *Fisher's* oil sold at 2½d. per oz., whilst for a case of so-called *Bergomot* oil, offered without reserve 2s. 6d. per lb. was paid. In addition the following oils were bought in at the drug sales:—*Cinnamon bark* oil at 7d. per ounce; *Cinnamon* at 1s. per ounce; *Cajeput* at 2s. 6d. per lb.; *Pascall's Lavender* at 11s. per lb.; *Mitcham Lavender* at 100s. per lb.; *Wintergreen* (*D. and O.'s* brand) at 6s. 3d. per lb., and white *Camphor* oil at 47s. 6d. per cwt.

OILS (FIXED) AND SPIRITS.—*Castor*: *Italian* oil is tending rather easier, and 20 case lots now offer at 30s. 6d. per cwt. *c.i.f.* terms. At to-day's drug sales 20 cases of of *Schmidt's Italian* oil offered without reserve sold at 30s. per cwt. *Cotton* has been very slow of sale, and prices being considerably lower, closes at £16 5s. to £16 10s. on the spot for *refined* oil. *Coco-nut* is very firm at unchanged rates, *Ceylon* being quoted at £23 to £23 5s. and *Cochin* at £27 on the spot. *Linseed* is, if anything, a trifle firmer, but the demand has not been very brisk. Oil in barrels offers at £19 10s. to £19 12s. 6d. on the spot. *Rape* is quiet, and *refined* oil now offers at £24 10s. to £24 15s. on the spot. *Turpentine* is quiet at

easier rates, *American* spirit being quoted at 20s. on the spot. *Petroleum* is decidedly firmer, a better inquiry being shown all round. *American* oil is quoted at 5½d. to 5½d., *Russian* at 5½d. to 5½d., and *water white* at 6½d. to 7d. per gallon on the spot.

ORRIS ROOT—Is slow of sale, but the market is firm. To-day lean dark *Aden* sorts were bought in at 25s. to 30s. per cwt., and best selected *Florentine* at 85s.

QUICKSILVER.—A large business has been done during the earlier part of the week, and on the 17th inst. the importers reduced their price 5s. per bottle, making the current quotation £6 17s. 6d.

RHUBARB—Was represented by about 190 chests, but the demand was only moderate, about 50 chests finding buyers at the following prices:—*Shensi*: Fine bold flat, good even pinky fracture, 2s. 5d.; ditto medium, 2s. 3d.; medium flat, fair fracture, 1s. 5d.; mixed round and flat pickings, 10d.; bold rough round (without reserve), 7d.; and very wormy round, 5d. per lb. *Canton*: About 40 cases, more or less wormy root, were cleared off at prices ranging from 7½d. to 8d. per lb., whilst pickings realised 6½d., and medium round, 7d. per lb.

SARSAPARILLA.—In very good supply and selling at steady rates, 1s. 3d. to 1s. 4d. being paid for good grey *Jamaica*, 9½d. to 1s. for *Lima-Jamaica*, and 1d. for *East Indian* sarsaparilla (*smilax*), whilst *Honduras* was bought in at 1s. 1d. to 1s. 4d.

SCAMMONY.—Fine *Turkish* virgin resin was bought in to-day at 31s. per lb. and *Skillippe* at 11s. *Root* sold at full rates 50s. down to 32s. per cwt. being paid for damaged grades according to condition.

SEEDS (VARIOUS).—*Turkish*: Several parcels of *Russian* seed were bought in at 22s. per cwt. *Cumin*: 61 bags of *Maltese* seeds, part sold at 30s. to 32s. 6d. per cwt. *Strophanthus*: *Kombe* seed was bought in at 3s. 9d. per lb.

SHELLAC.—Privately the demand has been quiet since our last report, but prices are fairly steady, *TN Orange* being quoted 95s. to 96s. In auction on Tuesday supplies were only small, but there was only a moderate demand, and owing to the firmness of holders, little business was done. A small quantity of ordinary red *Orange* sold (without reserve in some instances) at 93s. for fair red shivered, 90s. to 91s. for ordinary free livery, and 85s. for broken liver. A few cases of *Garnet* also sold at 88s. without reserve for blocky *AC*. Since the sales the arrival market has been firmer, business having been done in *Second Orange*, January to March shipment, at 91s. to 92s. per cwt.; also in *AC Garnet* at about 83s., February to March shipment.

WAX (BEES)—Very firm. *Jamaican* sold at £8 to £8 10s. for good quality; *Zanzibar* at £6 5s.; *Mogador* at £6 to £6 10s., and *Madagascar* at £6 10s. to £6 17s. 6d. per cwt.

A FORMER well-known figure in Mincing Lane circles has been removed in the person of Mr. Matthew Hale, formerly senior partner in the firm of Hale and Son, who died at his residence at Claydon (Suffolk) last Tuesday. The deceased who was in his eighty-four year had retired from active business pursuits for some years, and had devoted his time to country pursuits. The interment takes place on the 20th inst.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Books, etc.

Wills' 'Fruits and Flowers'; Wills' 'Volumetric Analysis'; Wootton's 'Chemical Physics'; Scott's 'Structural and Physiological Botany'; Roscoe's 'Chemistry.' What offers?—"Chemist," 52, Ferndale Road, S.W.

'Pharmaceutical Journals,' complete, 54 vols., good condition, vols. 1 to 36 bound, half calf, rest in numbers, £3; 'Gerarde's Herball,' best edition, half morocco, fine condition, 30s.—Tanner, Westminster Hospital.

'MacNish's Drunkenness,' scarce, 3s. 6d.; 'Greek Euripidis,' 6 vols., 3s. 6d.; 'Parker's Zoology,' 3s. 6d.; 'Faraday's Chemistry of Candle,' 2s. 6d.; 'Golding Bird's Natural Philosophy' (12s. 6d.), 3s. 6d.—Davies, 33, Eglinton Road, Bow.

'Tannor's Practice,' 2 vols., 'Squire's Companion,' 10th, for 'Martindale's Pharmacopoeia,' 8th, 'Beasley's Receipts,' 10th, and good pharmacy or veterinary work, or offers.—Jones, Greenfield Villas, Llanely.

A book of 130 Well-tryed Recipes for Chemists and Druggists, comprising well-selected formulæ for general, remedial, veterinary, toilet, and everyday preparations. Post free, 1s. 6d.—Tully, Chemist, Hastings.

Sir Thos. Watson's 'Practice of Physic,' 2 vols. (published £3), 7s. 6d.; Graily Hewitt's 'Diseases of Females' (published 16s.), 5s.; Liebig's 'Chemistries,' 2 vols. (published 19s.), 5s.—Davis, "Chesnuts," Gordon Hill, Enfield.

WANTED.

Fell's Australian Balm, 1s. 1½d. size. State quantity and price to—Gatward and Wright, Yeovil.

. Attention is specially directed to the new conditions of the "Exchange," in accordance with which a small charge will in future be made for the insertion of notices. The careful observance of those conditions will tend to obviate much inconvenience and possible delay.

MISCELLANEOUS NEWS.

FOOD ADULTERATION.—In again giving evidence before the Committee on Food Products Adulteration, on Tuesday last, Dr. Otto Hehner expressed the opinion that the fines inflicted upon offenders under the Food and Drugs Act were ridiculously insufficient. Then the law as to drugs, he said, was in a most chaotic state, and was fraught with no small danger to health. The law should state what a pure drug is. He also alleged that practically the whole body of public analysts differed in their analyses from those of Somerset House. In this connection the Chairman of the Committee stated that the Somerset House authorities had applied to be allowed to give rebutting evidence, and he thought the matter might well be fought out before the Committee.

PROPRIETARY ARTICLES TRADES' ASSOCIATION.—At a meeting of the Wholesale Section of this Association, on March 11, Mr. J. Thompson (S. Maw, Son and Thompson) occupied the chair, and a plan was considered which had been suggested for the wholesale trade by Mr. Thompson. The Secretary then reported what had been done at various meetings of the trade held throughout the country, and stated that the Manufacturers' Section had unanimously agreed to adopt the following scheme:—

"That as many manufacturers as chose to combine issue a circular to the wholesale trade, first fixing the minimum price they are to sell at, and requiring them to sign an agreement to maintain these prices, and also not to supply any of the articles included in the combination to any retailer whom the Association might notify as cutting, except at maximum retail prices."

After discussion, the meeting agreed to this scheme. Subsequently the question of a fair retail profit on proprietary medicines was gone into, and it was also agreed to support Mr. Park, of Plymouth, in his candidature for a seat on the Pharmaceutical Council.

COLIFORM BACILLI have been within the past few days discovered in the drinking water of two of the Dublin military barracks.

DEATH FROM AN OVERDOSE OF LAUDANUM.—On March 17, Mr. E. Hooper held an inquiry at the Leopard Inn, Horseley Heath, touching the death of Phyllis Smith, aged nine months.—The mother had been giving her cough mixture, purchased in pennyworths from a neighbouring beerhouse. On the night of March 13 she sent to a chemist for a pennyworth each of castor oil, laudanum, and syrup of rhubarb. These were mixed, and subsequently put into bottles that had contained the "cough syrup." Early on the morning of the following day the baby appeared to be restless, and was given a teaspoonful of the mixture, from the effects of which she died.—Dr. A. S. Underhill said the baby was brought to him and was then pulseless. It was with very great difficulty he aroused her. The child was evidently suffering from narcotic poisoning, and he was of opinion that too big a dose of the mixture had been given. Mixtures containing opium were sold at little shops, and it was no uncommon thing for children to be taken to his surgery after having had too large a dose of a sedative mixture.—The jury returned a verdict that the child died by taking an overdose of poison administered inadvertently.

A **HEAVY BILL** has been presented by the Clerk to the South Dublin Guardians, of over £50, for the expenses of taking a boy to the Pasteur Institute in Paris, and occasioned some strong language. One guardian said their clerk travelled like a nobleman.

LATE ADVERTISEMENT.

Pharmacist Wanted.

A **LEADING** London firm of manufacturing Chemists require a young **PHARMACIST** of ability, to superintend their Sugar-coating department. Must have had first-class practical experience in this class of work. Good prospects for the right man. Apply by letter, giving usual particulars as to age, experience, salary required, &c., to **EXCELLENCE**, care of 28, Gt. Marlborough St., London, W.

DIARY OF THE WEEK.

Secretaries of Societies are requested to send notices of forthcoming meetings not later than Wednesday in the previous week.

MONDAY, MARCH 23.

IMPERIAL INSTITUTE, at 8.30 p.m.

"The Migration of Birds," by Dr. B. Sharpe.

TUESDAY, MARCH 24.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.

"The External Covering of Plants and Animals: Its Structure and Functions" (XI.), by Professor C. Stewart.

SOCIETY OF ARTS (FOREIGN AND COLONIAL SECTION) at 8 p.m.

"The Colonies and the Supply of Dairy Produce and Products of Petite Culture," by C. R. Valentine.

WEDNESDAY, MARCH 25.

SOCIETY OF ARTS, at 8 p.m.

"Our Food Supply, as Affected by the Farming of the Future," by Professor J. Long.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION, at 8.30 p.m.

First Annual Dinner at the Colonnade Hotel, Birminghham.

BRIGHTON JUNIOR ASSOCIATION OF PHARMACY, at 9 p.m.

Prize Essays on Dispensing.

THURSDAY, MARCH 26.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.

"Spinoza," by Reverend W. Barry.

SCHOOL OF PHARMACY STUDENTS' ASSOCIATION, at 6 p.m.

"The Work of Darwin," by Miss Harrison.

"Report on Analytical Chemistry," by J. R. Walker.

SOCIETY OF ARTS (INDIAN SECTION), at 8.30 p.m.

"Kashmir: its People and its Products," by W. R. Lawrence.

CHEMICAL SOCIETY, at 8 p.m.

Anniversary Meeting.

President's Address.

Election of Officers and Council.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 8.30 p.m.

Social Evening.

LIVERPOOL PHARMACEUTICAL STUDENTS' SOCIETY, at 8.30 p.m.

"Some Pleasant Memories of Bygone Chemists," by C. Sharp.

FRIDAY, MARCH 27.

ROYAL INSTITUTION OF GREAT BRITAIN, at 9 p.m.

"New Researches on Liquid Air," by Professor Dewar.

SUPPLEMENT

TO THE

PHARMACEUTICAL JOURNAL.

MISCELLANEOUS NEWS.

IN RE NYRAM JONES AND ELVEN'S PATENT.—In the Court of Chancery on Thursday, March 26, before Mr. Justice Romer, a petition for the revocation of this patent was presented by the Pharmaceutical Society of Great Britain. The respondents did not appear, but as they had declined to acquiesce in the revocation when the petition originally came before Mr. Justice North, it was ordered to go into the list of witness actions for trial. — Mr. Roger Wallace, Q.C., and Mr. Sebastian appeared for the petitioners; and Mr. Michael Car-teighe having stated that the ingredients mentioned in the patent were all well known and in common use at the date of the patent, Mr. Justice Romer ordered the patent to be revoked, and gave the petitioners the cost of the petition.

ILLEGAL SALE OF POISON.—At the County Petty Sessions, Tenbury, before Major Decie, Colonel Wheeler, and Mr. Godson, George Turley, of High Street, Tenbury, was summoned for selling strychnine, he not being a qualified chemist, and also with keeping a shop for the sale of poisons. Mr. A. Spencer Thursfield, of Kidderminster, prosecuted, on behalf of the chief constable of Worcestershire.—It was explained that of late many animals had been poisoned in the district, and the sale of the poison could not be traced. A portion of a valuable pack of hounds had been destroyed, and many foxes had been found dead. One fox was opened, and a quantity of strychnine was found in the intestines. Acting under authority, a man went to the defendant's shop and asked for a shillingworth of strychnine. In serving him with the poison, the defendant asked him not to tell anyone where he had it from. The poison was handed to Sir William Chetwynd, the master of the hounds, who placed himself in communication with the chief constable.—The county analytical chemist declared that there was sufficient poison purchased by the man to destroy a small army.—The defendant was fined £3 10s., with the alternative of one month's imprisonment.—*Birmingham Post.*

BOY POISONED BY TRANSFER PICTURES.—An adjourned inquest was held at Seaforth, Liverpool, on Friday, 20th inst., on the body of a boy of four who died recently from irritant poisoning. The lad had been using "transfer pictures," highly coloured devices sold in toy shops, popular amongst children. These are made in Germany, and are usually licked with the tongue and pressed on the hand, the coloured impression being thus transferred. Since the first sitting of the jury an analysis of these pictures was made, with the result that they were

shown to contain lead. The Jury found this was the cause of death, and made a presentment that the sale of such pictures should be stopped.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION.—The first annual dinner of the Midland Chemists' Assistants' Association was held on Wednesday night at the Colonnade Hotel, Birmingham, Mr. R. Darton Gibbs (President of the Midland Pharmaceutical Association) presiding. There was a large attendance.—After the loyal toasts Mr. R. M. Williams proposed "The Pharmaceutical Society." He said it had been in existence for fifty years, and during that period its progress had been very marked alike from the educational, benevolent, and defensive standpoints. He urged that there should be more unity amongst chemists, and that they should give greater adherence to the Pharmaceutical Society. He wished that Society all prosperity, and hoped it would make as much progress in the next fifty years as it had done in the past.—Mr. C. Thompson, in reply, advocated further support being given to the Pharmaceutical Society, especially by the younger members of the profession. Their Association could assist materially in the anti-cutting scheme which was now under consideration. There were certain manufacturers in London who would not join the movement, and who were waiting to see which way the cat jumped. The way the assistants could aid those who desired to legitimately raise prices was by putting such manufacturers' advertisements under the counter, and their literature into the waste paper basket, and by urging their employers to stir up those manufacturers to join the anti-cutting scheme. He spoke in favour of Sir John Lubbock's early closing Bill, and urged upon qualified assistants not to sell their qualifications to companies formed of persons who were not qualified. If they made up their minds to do that, the problem of company trading would soon be solved.—The Chairman gave "The Midland Chemists' Assistants' Association," and said that in the efforts at combination which they had made he was quite sure they had the best wishes of all who took an interest in pharmacy.—Mr. T. C. Clarke, in response, said although the origin of the Society was of recent date, no fewer than seventy members had been enrolled.

CHEMISTS AND LOCAL AFFAIRS.—Mr. James Cocks, of Edgecumbe Street, Stonehouse, the energetic honorary secretary of the Plymouth, Devonport, Stonehouse and District Chemists Association, is one of twelve gentlemen nominated to fill five vacancies on the Stonehouse District Council. Mr. Maitland, a Stonehouse chemist, is already on the Council. Mr. Maunder, chemist, has been elected on the Stonehouse Board of Guardians.

MR. J. R. D. BARFOOT, chemist and druggist, Chesterfield, has dissolved partnership with Mr. G. Sampson, and opened a new place of business at West Bars. The old business will be carried on by Mr. Sampson.

THE ADMINISTRATION OF HYPODERMIC INJECTIONS.—On March 23, an inquiry was held as to the death of Frederick Weatherall, thirty-nine years of age, a fish hawker, who died in the Birmingham Workhouse Infirmary on the 18th inst. The deceased had been ordered a hypodermic injection of strychnine, but Nurse Harris, in mistake, injected a small quantity of morphine solution. She quickly found out her mistake, and called Dr. Smyth, but the deceased died two hours later. Medical evidence showed that the injection accelerated death. A verdict of death from misadventure was returned, and the jury added that in their opinion, so far as practicable, all poisonous subcutaneous injections should be given under the superintendence of the resident medical officers.

SINGULAR DEATH OF A RELIEVING OFFICER.—On Monday, March 9, Mr. R. Jones-Roberts, Coroner for Anglesey, held an inquiry at Dwyran, touching the death of Captain Ellis, relieving officer for the Llanidan district of the Carnarvon Union. On the 28th ult. he met a mole-catcher named Hugh Morris, and in the course of conversation the latter said he had in his pocket a bottle containing hydrochloric acid and camphor for the purpose of curing mole skins. Deceased asked to see the bottle, and drank some of the contents, from the effects of which he died, after stating that he had no intention of harming himself. The Jury found that death had ensued from inflammation of the lungs, caused by the consumption of poison unintentionally taken.

ROYAL INSTITUTION.—The following are the lecture arrangements after Easter:—Professor James Sully, of University College, London, three lectures on "Child-Study and Education"; Mr. C. Vernon Boys, three lectures on "Ripples in Air and on Water"; Professor T. G. Bonney, two lectures on the "Building and Sculpture of Western Europe" (the Tyndall lectures); Professor Dewar, three lectures on "Recent Chemical Progress"; Mr. W. Gowland, three lectures on the "Art of Working Metals in Japan"; Dr. Robert Monro, two lectures on "Lake Dwellings"; Professor W. B. Richmond, R.A., three lectures on "The Vault of the Sixtine Chapel"; Mr. F. Corder, Curator of the Royal Academy of Music, three lectures on "Three Emotional Composers"—Berlioz, Wagner, Liszt (with musical illustrations); Mr. E. A. Wallis Budge, of the British Museum, two lectures on "The Moral and Religious Literature of Ancient Egypt." The Friday evening meetings will be resumed on April 17, when a discourse will be given by M. G. Lippmann on "Colour Photography"; succeeding discourses will probably be given by Professor G. V. Poore, Colonel H. Watkin, C.B., Professor Silvanus P. Thompson, Professor J. A. Ewing, Professor J. A. Fleming, and other gentlemen.

MR. OWEN I. JONES, chemist and druggist, Llanrwst, has been elected Vice-Chairman of the Denbighshire County Council.

FOOD PRODUCTS ADULTERATION.—A meeting of the House of Commons Committee on Food Products Adulteration was held on Wednesday, Mr. T. W. Russell in the chair, when Mr. R. Bannister, Analyst of the Inland Revenue Laboratory at Somerset House, gave rebutting evidence in reply to that tendered by the Society of Public Analysts, especially in regard to the analyses of butter and milk in those cases in which Somerset House analysts had differed from the conclusions arrived at by public analysts. He said that the Food and Drugs Act did not lay down any standard for butter or milk, and, therefore, there was nothing to prevent poor milk and poor butter being sold as genuine so long as they were not adulterated. He was of opinion that a great many traders had been convicted in those cases in which no appeal was made to Somerset House, owing to the incorrect standards adopted by public analysts. During the last five years Somerset House had instituted 1933 prosecutions, of which only 14 had failed, and fines were inflicted to the amount of £17,223. Referring to the difference between the Somerset House analysis of a sample of vinegar and that of a public analyst, the Chairman said that when he found that analysts of eminence differed so over the analysis of an ordinary sample of vinegar, he was bound to say, speaking as a member of the public, that his confidence in the whole system was destroyed.

USE AND STORAGE OF PETROLEUM.—A Select Committee of the House of Commons, presided over by the Right Hon. A. J. Mundella, sat on Wednesday to inquire into questions connected with the use and storage of petroleum. Colonel Sir Vivian Majendie, Her Majesty's Chief Inspector of Explosives, who was the first witness, stated that the great mass of petroleum used in this country was not regulated in any way by law, but only that kind which had a flash point below 73° Fahr., close test. Thus, while the sale of that form of petroleum known as benzoline was regulated, that form which was burned in lamps was under no restriction. He was decidedly of opinion that the present law did not sufficiently provide for the public safety, even as regards that form of petroleum which was regulated. The law was very incomplete, and gravely deficient in elasticity. There was no statutory disability which would prevent anybody from storing any number of thousands of barrels in any part of London, or in any part of any other populous place. There was no regulation prescribing the use of suitable packages for the conveyance of the oil, and there was generally no power vested in any central authority to impose or require to be made regulations enjoining due precautions in the conveyance of petroleum, this being an omission which, in view of the increasing trade in bulk, was of a serious character.

THE "KEPLER" MUSICAL SOCIETY, the president of which is Mr. R. C. Sudlow, held a smoking concert at the Masons' Hall Tavern, Coleman Street, E.C., on Thursday evening last, and it is needless to say that the musical fare provided was of the usual high class.

MARKET REPORT.

[Specially compiled for the *Pharmaceutical Journal*.]

[The quotations here given are in all cases the lowest net cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.]

LONDON, MARCH 26, 1896.

A very quiet week in the produce markets must be reported, and changes have been but few, and not strikingly important. There is nothing new to report in the various alkaloids, cocaine being unchanged, opium alkaloids very firm, quinine and caffeine quite featureless. arsenic is still very scarce, and firmly held at nominal rates. Carbolic acid has not maintained its position, and crystal acid is particularly easier. Citric acid is dull of sale at unchanged rates, tartaric acid is quiet, whilst chrysophanic acid is very firmly held. Per. manganate of potash and sulphate of copper remain very firm. In the drug market we have to report a firm market in opium, which is advised dear from Smyrna, whilst the London market is also very firm. The insect flower market is very firm, stocks being reported very low in Trieste, whilst saffron has also a tendency to dearer rates. Peruvian balsam is easier, whilst on the other hand tolu balsam inclines to dearer rates. Cod-liver oil from its present position does not seem likely to reach the price which was predicted, and the market is decidedly easier. The heavy oil market is unchanged, and the same applies to spices, whilst shellac is rather slow of sale. The essential oil market is featureless. Full details will be found below:—

ACACIA (GUM).—There has been a steady demand for *Persian* so-called insoluble gum, and a fair business has been done in good sorts up to 15s. per cwt, and in best pale selected gum at 22s. There is a strong tendency to hold for higher prices.

ACID, CARBOLIC.—The market has a decidedly easier tendency, especially for *crystal acid*. The following are now the current quotations:—*Crystals*: 34° to 35° C., 7d.; 39° to 40° C. 7½d.; 39° to 40° C. (*detached crystals*) 8½d. per lb. *Crude* is still quoted at 2s. 3d. per gallon for 60 per cent., and 2s. 7d. for 75 per cent. *Liquefied* and *eresylic* are unchanged at 1s. and 11½d. per gallon respectively.

ACID, CHRYSOPHANIC—Remains very firmly held. *English* makers ask 25s. per lb. for 28-lb. lots, and this price is also quoted

for *foreign* brands. Good quality *goa powder* is just as unobtainable as ever.

ACID, CITRIC.—The market remains unchanged. *English* acid still quotes at 1s. 2½d. per lb. in manufacturers' hands, whilst second hand holders offer at 1s. 2d. *Concentrated lemon juice* is quoted at £14 to £14 2s. 6d. per pipe *f.o.b.* Messina.

ACID, TARTARIC.—The market is quite inactive, *English* brands of acid are still quoted at 1s. 3d. per lb., whilst holders of *Foreign* acid (not guaranteed B.P.), both in *powder* and *crystals* offer at 1s. 2d. to 1s. 2½d. per lb. on the spot.

AMMONIA COMPOUNDS.—*Sulphate* is very dull of sale at easier rates, grey 24 per cent. being now quoted on the spot at £8 5s., with *Hull* and *Leith* at the same figure, and *Beckton* at £8.

ARSENIC.—The scarcity of this article is as pronounced as ever. Good white *powder* is quoted on the spot at 21s. to 22s. per cwt. nominally, according to package, but there is only a small quantity available. *Lump* is quoted at 28s.

BORAX.—There is no alteration to announce in the price of this article. The *Convention* price is still 20s. for *crystals*, and 21s. for *powder*, but outside makers quote 19s. 6d. and 20s. respectively.

CAMPHOR (CRUDE).—No business appears to have been done in this article during the last week, but the market is decidedly easier. *Formosan* camphor March to May and April to June shipment is quoted at 160s. per cwt., *c.i.f.*, whilst *Japan* offers at 175s., same shipments.

COAL DISTILLATION PRODUCTS.—*Toluol* is quiet at 2s. per gallon for *pure*. *Benzole* is firm, 50 per cent. being quoted at 1s. 8d., and 90 per cent. at 2s. 3d. per gallon. *Creosote*: 1½d. per gallon. *Solvent Naphtha*: 95 per cent. at 160° C. quotes at 1s. 6d.; 90 per cent. at 160° C. at 1s. 3d.; and 90 per cent. at 170° C. at 1s. 1½d. per gallon. *Pitch*: 34s. per ton *f.o.b.* *Tar* is quoted at 12s. per barrel free price.

COCA LEAVES.—Business has been done privately in good quality *Truxillo* leaves at 1s. 2d. per lb. The shipment quotation is 1s. per lb. *c.i.f.* terms. Sound *Bolivian* leaves are in exceedingly small supply, and firmly held.

COPPER SULPHATE—Is very firm at steady rates, and there is little available in first-hand for prompt delivery. The current quotations are £18 to £19, according to brand.

CREAM OF TARTAR—Is still a very weak market, and fine white *French crystals* are quoted at 92s., with *German* brands of *powder* at 94s. per cwt. For shipment from Bordeaux, 80s., *f.o.b.*, is quoted, and 84s., *f.o.b.*, from Barcelona.

GINGER.—*Cochin* is dull of sale, and in auction the small amount of business done was mostly confined to cut root, which sold at 43s. to 45s. per cwt., washed rough being bought in at 34s. to 35s. Of native cut kinds, good bold sold at 56s. 6d. to 57s. 6d.; bold and medium at 53s., and small at 45s. per cwt. *Bengal* was bought in at 17s. 6d., and limed *Japan* at 23s. *Jamaica* root was rather easier, 68s. to 71s. being paid for small and medium dull, and 65s. to 67s. for mouldy.

INSECT FLOWERS—The London market is very firm, especially for *closed* and *half-closed* flowers, which are inclined to dearer

rates. It is said that the stock in Trieste is only about one-third of what it was at this time last year. The following are the current quotations:—Closed wild flowers, 145s.; closed cultivated flowers, 135s.; half closed, 102s. 6d. to 105s., and open, 85s. per cwt., all *c.i.f.* terms.

MENTHOL.—Slow of sale at fairly steady rates. During the week 13s. per lb. has been paid on the spot for single cases, and 12s. 9d. to 13s. is the current quotation. The last shipment price we heard of was 12s. 6d. *c.i.f.*

OIL (COD-LIVER)—The market is easier. This state of things is due to the favourable weather, which has enabled a good catch to be secured in the fishing districts during the last week. In addition, the spring season having now fairly commenced, the most important demand is practically over. Finest new season Norwegian oil is quoted at various prices, according to holder, but 225s. *c.i.f.*, may be regarded as a fair value, whilst 212s. 6d. is the highest price which we have heard paid for good 1895 oil. For Newfoundland oil of good quality 6s. 6d. has been paid during the week, and 7s. per gallon is now asked.

OILS (ESSENTIAL).—*Star Anise* oil is fairly steady. Most of the holders ask 10s. 6d. per lb., although an offer of 10s. would probably be entertained in some quarters. Dementholised Japan *peppermint* oil is quoted at 5s. 3d. to 5s. 6d. per lb. on the spot. The Italian oil market is said to be tending towards higher prices.

OILS (FIXED) AND SPIRITS.—*Cotton* is quiet but steady, and refined oil is still quoted at £16 5s. to £16 10s. on the spot. *Coco-nut* remains at prices which are practically unchanged. *Ceylon* being if anything a trifle firmer at £23 5s., whilst *Cochin* is quoted at £26 15s. on the spot. *Linseed*: The market is very flat, and the current rates show a decline of 7s. to 7s. 6d. per barrel, the spot price being now £19 5s. *Rape* is also very slow of sale, refined oil close; at £24 to £24 10s., a decline of 5s. to 10s. *Turpentine* is quiet but steady, *American* spirit being still quoted at 20s. on the spot. *Petroleum* is quiet at rather easier prices, *American* oil being quoted at 5½d. to 5¾d., *water white* at 6¾d. to 6¾d., and *Russian* at 5¼d. to 5¾d. on the spot. *Petroleum spirit*: Ordinary quotes at 9d. to 9¼d., and *deodorised* at 9¼d. to 9¾d. per gallon.

OPIUM.—The London market is very active, and prices are generally advanced about 6d. per lb., whilst reports from Smyrna advise a rise equivalent to about 8d. per lb. The current quotations are as follows:—*Soft shipping*, 12s. 6d. to 13s. 3d.; *Smyrna*, 9s. to 9s. 6d.; *Constantinople*, 9s. to 9s. 6d.; and *druggists' seconds*, 8s. 6d. to 9s. per lb. Business has been done in fine *Persian* bricks to the extent of a few cases at 13s. per lb., showing a firm market.

PERU (BALSAM).—Decidedly firmer. During the week 7s. 9d. has been accepted on the spot for genuine balsam in importers' hands.

QUICKSILVER—Is firm at unchanged rates, the importers' price being still £6 17s. 6d., whilst second-hand holders offer at £6 16s. 6d.

QUININE SULPHATE—Is very quiet, and devoid of any feature of interest, *German*

brands being quoted nominally at 1s. 1¼d per oz on the spot.

SAFFRON.—The market is firm, and there is every indication of a tendency to higher prices. At the present time finest *Valencia* saffron is quoted at 26s. 6d. to 30s., and *Bajo* at 23s. 6d. to 25s. per lb. on the spot.

SEEDS (VARIOUS).—*Canary*: At the spice sales on Wednesday 100 bags of *River Plate* seed sold without reserve at 28s., also 5 bags of *Japan* at 31s. 6d. per cwt. *Coriander*: Coarse *Bombay* seed sold in auction without reserve at 8s., and small brownish *Russian* at 13s. 6d. to 14s. per cwt. *Stavesacre*: Quoted at 85s. per cwt. for good quality on the spot. *Aniseed*: *Spanish* seed is quoted at 26s. to 28s., and *Russian* at 22s. per cwt. on the spot. *Cumin*: Rather firmer. 35s. is now asked for good *Mogador* seed.

SHELLAC.—The market has been quiet during the past week, and only a small business has been done at about steady rates. At the weekly sales a small catalogue was offered. *Second Orange* sold at about previous prices, *TN* basis at 95s. to 96s. *Button* and *Garnet* had an easier tendency. The following were the quotations:—*Second Orange*: All was bought in, *Y* in diamond at 100s., and *MM* in double triangle pale curly at 100s. *TN Orange*: Good bright cakey and blocky sold at 94s. to 96s., and fair free reddish at 94s. to 95s. *Garnet*: Flat glassy *AC* sold at 89s. *Button*: Good pale sold at 105s. to 106s.; good strong firsts at 100s. to 101s.; blocky at 86s.; and ordinary dark firsts at 77s. per cwt. Since the sales there has been a good inquiry for *Button* at full rates, but *Second Orange* and *Garnet* are very quiet. The arrival market is dull, with sales of *Second Orange*, January to March shipment, at 93s. *c.i.f.*

SPICES (VARIOUS).—*Cloves* are quiet. In auction fair *Zanzibar* sold at 2½d., whilst picked *Penang* were bought in at 9d. *Cassia lignea*: Broken quality sold without reserve at 16s. to 17s. per cwt. *Chillies*: *Zanzibar* are cheaper, 25s. 6d. to 26s. being paid in auction for fair mixed, whilst extra fine bright *Japan* realised 60s. to 60s. 6d. per cwt. *Capsicums* are slow of sale. In auction 26s. 6d. was paid for bold and medium dull off-stalk *Japan*. *Pimento* is quiet, but fairly steady, 2¾d. being paid for medium, and 2½d. for fair quality. *White Pepper*: In auction *Penang* was bought in at 3d. to 3½d., whilst fine bold *Singapore* sold at 4¾d., and extra fine ditto at 3¾d. per lb. *Arrow-root* is still dull of sale, and in auction all the *St. Vincent* was bought in at 1½d. to 2½d. for ordinary to good quality, except 5 barrels, which sold at 1¼d. per lb.

TOLU (BALSAM).—Reported rather firmer. For good, genuine quality balsam 2s. per lb. is now asked privately.

TRAGACANTH (GUM).—The market is decidedly easier, and the business which has been done has been for the most part restricted to the lower grades. The current quotations are as follows:—Firsts (fine pale druggists' gum), £14 10s.; seconds, £12 10s. to £13 10s.; thirds, £11 to £11 10s.; fourths, £8 10s. to £10, and other qualities, £8 down to £2. *Hoq* has sold at 75s. per cwt.

WAX.—*Japan* wax is firm at full rates, the current quotation being 37s. 6d. on the spot for good pale squares. *Paraffin*: The current quotations are 1¼d. to 2¼d. for *crude*, and 2¼d. to 3¼d. for *refined*.

REMEDIES INTRODUCED IN 1895.*

(Continued from p. lxi.)

Lanichol.—Purified wool-fat.—Ointment base.

Lignosulfit.—Side product in the manufacture of cellulose.—Inhalation antitubercular.

Lysolum Bohemicum.—"Derivative of tar."—Antiseptic.

Magnesium Sulphocarbonate.—(C₆H₅SO₄)₂ Mg.—Laxative and intestinal antiseptic. Dose: 1-2 Gm.

Mallein.—Specifically active metabolic products of the bacillus of glanders.—Diagnostic of glanders.

Marrol.—Dietetic preparation said to consist of ox marrow, malt extract, and hop extract.

Medulladen.—Extract of spinal cord, used against gout.

Mercuriodohemol.—Mercuriodised hemol.—Anti-syphilitic. Dose: 0.2-0.5 Gm.

Mercury Oxycyanide.—HgO·HgCy₂—Surgical antiseptic.

Methylpyridine Sulphocyanate.—Antiseptic.

Mydrine.—Combination of ephedrine and homatropine.—Mydriatic.

Myronin.—Mixture of soap, carnauba wax, and chenoceti oil.—Ointment base.

Neurosin.—Generic name of a number of French preparations containing calcium glycerinophosphate.

Noitol.—Proprietary eczema remedy.

Nosophen.—Tetraiodophenolphthalein.—Surgical antiseptic, like iodoform.

Oil Ledum palustris.—External anti-rheumatic and alterative.

Oxysparteine.—From sparteine by slight oxidation. Cardiac tonic. Dose: 0.02-0.04 Gm.

Paracetamidophenol Ethylcarbonate.—Antipyretic and analgesic. Dose: 0.5-1 Gm.

Parachlorsalol.—Parachlorphenol salicylate.—Intestinal antiseptic, like salol. Dose: 2-4 Gm. per day.

Peptone Paste.—Mixture of Adam Kiszewicz's peptone, "wax-paste," acacia, zinc oxide, and starch.—Dressing-fixer.

Phanero-gen.—Photographic developer.

Phenosucein.—Obtained by the action of succinic acid on para-amidophenol.—Analgesic and antipyretic.

Phosphergot.—Generic name given to a mixture of sodium phosphate and ergot, occurring in three modifications.—Tonic. Dose: 0.5-1 Gm.

Piperovatine.—Alkaloid from *Piper ovatum*.—Spastic.

Pixol.—"Spirit of Liquid Tar."—Proprietary remedy against influenza.

Potassium Glycerinophosphate.—Nervine. Dose: 0.2-0.3 Gm.

Potassium and Aluminum Salicylate.—Astringent antiseptic.

Propylamine, Anhydrous.—Antichoreic. Dose: 2-5 Gm. per day.

Prostaden.—Extract of prostate gland used in enlarged prostate.

Quinosol.—Quinoline compound, said to possess bactericidal powers.

Rhinalgin.—Mixture of alumnol, menthol, valerian oil, and cacao butter in suppository form.—Coryza remedy.

(To be continued.)

* Reprinted from *Merck's Market Report*.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Books, etc.

A book of 180 Well-tried Recipes for Chemists and Druggists, comprising well-selected formulæ for general, remedial, veterinary, toilet, and everyday preparations. Post free, 1s. 6d.—Tully, Chemist, Hastings.

What offers? Atfield's 'Chemistry,' fifteenth edition; 'Pharmacopœia,' reprint, 1893, and 'Addendum.' All good as new.—Thomson, care of Hay, 137, Shields Road, Glasgow.

'Pharmaceutical Journal,' from commencement in 1842, 15 thick vols., well bound, 30s.; Woodville's 'Medical Botany,' 3 quarto vols., over 200 beautifully coloured plates, 21s., free.—Davis, "Chestnuts," Gordon Hill, Enfield.

Post Free. 'MacNish's Drunkenness,' scarce, 3s. 6d.; 'Greck Euripidis,' 6 vols., 3s. 6d.; 'Parker's Zootomy,' 3s. 6d.; 'Faraday's Chemistry of Candle,' 2s. 6d.; 'Golding Bird's Natural Philosophy' (12s. 6d.), 3s. 6d.—Davies, 33, Eglinton Road, Bow.

Miscellaneous.

100 ounces Howard's Sulphate of Quinine in 4-oz. bottles; offers wanted for part or whole.—G., 172, Albany Street, N.W.

Offers for 3-4 gal., 2-1 gal. Carboys; 15 Oil., 50 Oil. shop rounds; 4 glass-cupd. oils, Oil.; 9 Oil. blue syrups, gold-labelled, practically new.—Mallett, Mill Hill Road, Norwich.

What offers for Howard's Quin. Sulph. in 4-oz. bottles; also 'Pharmaceutical Journals' bound in cloth, 1870-95.—Rose, 38, Calcott Road, Brondesbury

NEWCASTLE CHEMICAL REPORT.

[From our own Correspondent.]

MARCH 24, 1896.

Coasting and inland orders for soda crystals and alkali just keep business moving. So far little contracting for the upper Baltic ports for bleaching powder is reported. Sulphate of ammonia and other products are practically unchanged in values. Prices are:—BLEACHING POWDER: In softwood casks, £7 5s.; hardwood casks, £7 10s. SODA CRYSTALS: In bags, 36s.; in casks, 45s. CAUSTIC SODA: 76 to 77 per cent., £9 5s.; 70 per cent., £7 10s. to £7 15s. RECOVERED SULPHUR: £3 17s. 6d. SODA ASH: 48 per cent., £3 15s. ALKALI: 48 per cent., £4 10s. to £4 15s. HYPOSULPHITE OF SODA: Casks, £6 5s.; 1-cwt. kegs, £7. SULPHATE OF AMMONIA (Leith): £8 7s. 6d. PITCH: 34s. SOUTH DURHAM SALT: 9s. per ton *f.o.b.* Tees.

LIVERPOOL MARKET REPORT.

[From our own Correspondent.]

MARCH 25, 1896.

LINSEED: 100 tons *River Plate* to arrive, sold at 30s. 9d. per 416 lbs. CANARY SEED: *Turkish*, 30s. per 464 lbs. KOLA NUTS: Plentiful, good dried, 4d. to 4½d.; "poor" dried, 2d. to 4d.; fresh, 7d. CHILLIES: *Sierra Leone*, 24s. to 25s. GINGER: *Bombay*, 35s. CARNAUBA WAX: Finest yellow, 127s. 6d. to 130s. BEESWAX: *Chilian*, £7 17s. 6d., and a small lot of *Ceará* on private terms. GUM ARABIC: Price for "sorts" advancing. CASTOR OIL: *French*, 1st pressure, and *Madras*, 2¾d. to 2½d.; good seconds, *Calcutta*, 2 15/32d. to 2½d. OLIVE OIL: *Malaga*, £30; *Seville*, £29 to £29 10s.; *Syrian*, £28 10s. LINSEED OIL: 19s. 9d. to 21s. COTTONSEED OIL: 17s. SPIRIT OF TURPENTINE: 21s. 3d. PETROLEUM: *Russian*, 5¾d.; *American*, 6¾d. to 7¾d. SAL AMMONIAC: First quality, 39s. CARBONATE OF AMMONIA: 3¾d. to 3½d. SULPHATE OF AMMONIA: Good grey, £8 11s. 3d. ARSENIC: Lump, £28; powder, £20 to £21. BLEACHING POWDER: £7 to £7 5s. COPPERAS: *Lancashire*, 38s.; *Welsh*, 36s. SULPHATE OF COPPER: £20. POTASHES: 21s. to 21s. 6d. PEARLASH: 37s. 6d. CREAM OF TARTAR: 98s. for spot parcels. PRUSSIAN OF POTASH: 8d. CHLORATE OF POTASH: 4¾d. BICROMATE OF POTASH: 4¾d. SALTPETRE: 23s. 6d., in kegs. BICARBONATE OF SODA: £6 15s. SODA CRYSTALS: £2 7s. 6d. to £2 10s.

TRADE NOTES AND NEWS.

MESSRS. ROSS and Co., manufacturing opticians, 111, New Bond Street, London, W., submit copies of their new catalogues. Catalogue No. 1 includes illustrated descriptions and other particulars of the high-class photographic apparatus—lenses, cameras, etc.—manufactured by the firm; and Catalogue No. 2 gives prices and descriptions of microscopes and objectives, telescopes, opera glasses, barometers, thermometers, surveying and drawing instruments, etc., etc. Either of these catalogues will be sent post free on receipt of six stamps.

MESSRS. BURROUGHS, WELLCOME AND Co., have added to their list of novelties, compound caffeine tabloids. These contain caffeine, 1 grain, and antipyrin, 3 grains, each, and are supplied in tubes containing 25 and 100 respectively. Like all other tabloids intended for internal administration, they disintegrate immediately on coming into contact with water or the juices of the stomach. As pointed out by the makers, the specific action of caffeine on the secreting cells of the kidney is well known, and as a diuretic, analgesic, and cardiac tonic this alkaloid has many important uses. In addition, the analgesic action of small doses of antipyrin has been frequently proved, and it is hoped that the above combination will prove very useful in many forms of neuralgia in which it is inadvisable to give antipyrin without an accompanying heart tonic.

MESSRS. DUNCAN, FLOCKHART AND Co. ask us to state that their London branch will not be open till May 4, and that they do not propose to carry on a general drug business there, their object being to bring their capsules and other special preparations before the medical profession in the metropolis. Orders should not, therefore, be left at 38, Snow Hill, but sent to the Edinburgh address as usual. In consequence of the announcement in the Journal for March 7, quite a number of orders have been left at the London address.

MESSRS. INGRAM AND ROYLE, of 52, Farringdon Street, inform the trade that they are now able to supply the Hunyadi Janos Water at the lowest carriage paid prices, with special terms for quantities, as fixed by the proprietor, Mr. Andreas Saxlehner, of Buda-Pesth.

DIARY OF THE WEEK.

Secretaries of Societies are requested to send notices of forthcoming meetings not later than Wednesday in the previous week.

TUESDAY, MARCH 31.

PHARMACEUTICAL SOCIETY OF GREAT BRITAIN.
Benevolent Fund Committee.
Finance Committee.
General Purposes Committee.

WEDNESDAY, APRIL 1.

PHARMACEUTICAL SOCIETY OF GREAT BRITAIN.
Council Meeting.
MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION, at 8.30 p.m.
Musical and Social Evening.
PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION, at 7 p.m.
"Three Years in a South African Pharmacy," by Mr. R. S. Doble.
BRIGHTON JUNIOR ASSOCIATION OF PHARMACY, at 9 p.m.
Final Soc'ial Evening.

THURSDAY, APRIL 2.

LINNEAN SOCIETY OF LONDON, at 8 p.m.
"Monograph of the Genus *Stemona*, Lour," by C. H. Wright.
"On African Algae," by W. and G. S. West.
GLASGOW AND WEST OF SCOTLAND PHARMACEUTICAL ASSOCIATION, at 9.15 p.m.
Annual Business Meeting.

FRIDAY, APRIL 3.

ABERDEEN JUNIOR CHEMISTS' ASSOCIATION, at 9.30 p.m.
"Photography," by R. Urquhart.

NEW BOOKS AND NEW EDITIONS.

DIET IN SICKNESS AND IN HEALTH. By Mrs. ERNEST HART. With an Introduction by Sir Henry Thompson, F.R.C.S. 8vo., pp. 224. Price 3s. 6d. (Scientific Press, London.)

MEDICAL DIRECTORY FOR 1896: including the London Medical Directory, the Provincial Medical Directory, the Medical Directory for Wales, the Medical Directory for Scotland, the Medical Directory for Ireland, the Medical Directory of Registered Practitioners resident Abroad; the Medical Directory of the Naval, Military, and Indian Services; Licentiates in Dental Surgery; also Statistical and General Information of the Universities, Colleges, Schools, Hospitals, Dispensaries, Lunatic Asylums, Societies, Sanitary Medical Service, Public Services, etc. 8vo., pp. 1824. Price 14s. (J. and A. Churchill, London.)

SUPPLEMENT

TO THE

PHARMACEUTICAL JOURNAL.

MISCELLANEOUS NEWS.

LIVERPOOL PHARMACEUTICAL STUDENTS' SOCIETY, March 26.—Mr. T. S. Wokes, President, in the chair. A photographic communication was given by Mr. R. H. Mitchell to the effect that, in a magazine camera, holding twelve plates held in metallic slides numbered on the back with red oil colours, the negatives on development showed a faint number in the centre of each corresponding with that on the neighbouring slide. In another similar camera, with slides numbered in alike way, but with water-colours, the negatives showed no such impression. His theory was that the oil colour, containing probably metallic sulphides, had absorbed light, and by phosphorescence had affected the plate lying over it in the camera. An optician had explained it by saying it was due to the reducing action on the silver salt in the film of the turpentine in the paint. Mr. Cowley thought it was caused by reflection of light passing through the plate striking the shining surface of the oil colour, and was simply an instance of what is called "halation" by photographers.

The President mentioned that he recently had a pair of belladonna plasters to spread on moleskin for the breast, each of which measured the out-of-the-way size of twelve inches in diameter.

In a communication from Mr. John Welsh, a Chester member of the Society, the writer asked for information respecting a black coloured precipitate deposited from the following mixtures:—

℞ Syr. Ferri Phosph. Co.	ʒi.
Sp. Chlorof.	ʒiij.
Liq. Strychninæ	ʒss.
Quininae Hydrochlor.	gr. xxx.
Glycerini Pepsinæ Acidi	ʒiiss.
Aq. Destillatæ.	ad ʒviii.
℞ Sp. Chlorof.	ʒiij.
Liq. Strychninæ	ʒ 40.
Liq. Anserini Hydroch.	ʒ 30.
Quininae Hydrochlor.	gr. 16.
Syr. Ferri Phosph. Co.	ad ʒiv.

From various experiments he had tried he was led to believe that the disturbing cause was the quinine hydrochlorate, but he should like to know what the black colour was due to.

The President said it was an interesting point requiring elucidation, and he hoped a solution of the difficulty would be forthcoming. The explanation Mr. H. Wyatt, jun., gave was that the very soluble hydrochlorate of quinine in the presence of free phosphoric acid formed phosphate of quinine, much less soluble, but held in solution by the hydrochloric acid liberated, assisted by the phosphoric acid of the syr. ferri phosph. co. The ferrous phosphate on this withdrawal of part of the acid, which kept it in solution, was partly precipitated as greenish, partially oxidised ferrous phosphate, holding possibly a good deal of the colouring matter of the syrup mechanically as a kind of "lake." If

the original Parrish's syrup, containing but slight excess of free phosphoric acid, were used, the precipitate would form rapidly, but many commercial syrups would not give any precipitate from being strongly acid. The addition of a little extra acid to the mixture would remedy the difficulty.

The President then called upon Mr. Charles Sharp, F.L.S., to give an address on "Dickens and His Works," at the close of which a hearty vote of thanks was accorded Mr. Sharp for his happy innovation."

CHEMISTS' ASSISTANTS' ASSOCIATION.—The meeting held on the 26th ult., when the President (Mr. E. W. Hill) occupied the chair, was devoted to a musical and social gathering. There was an excellent attendance, and the programme, which had been arranged by Messrs. Hill and Guyer (Hon. Sec.) was thoroughly appreciated. Amongst those who contributed to the evening's entertainment were Messrs. Burgess, Latreille, Pasco, H. H. Robins, A. E. Robins, Summers, Walton, and Williams, whilst Mr. E. J. Eastes undertook the duties of accompanist at the piano. During the interval Dr. B. H. Paul and Professor H. G. Greenish were elected patrons of the Association. The general arrangements reflected credit upon those responsible for them.

MR. GORDON SMART, assistant to Mr. C. F. Henry, Brandon Terrace, Edinburgh, has purchased the business of the late Mr. Alexander Mair, at 162, Ferry Road, Leith.

MR. D. B. DOTT is leaving the laboratory of Messrs. Duncan, Flockhart and Co. and entering that of Messrs. J. F. Macfarlan and Co., an arrangement which has the full approval of both the firms mentioned.

MR. G. S. BALL, Pharmaceutical Chemist, Weston-super-Mare, has for a second time been elected to a seat on the Urban District Council for the West Ward of that town, this time heading the poll by securing a greater number of votes than any candidate in either ward. The election was contested on the question of constructing a marine lake on the foreshore, of which scheme Mr. Ball is an ardent supporter.

YORKSHIRE RELISH.—The appeal of the defendants in the action of Powell v. Birmingham Vinegar Brewery Co., Ltd., the hearing of which occupied the attention of Lords Justices Lindley, Kay, and Smith for five days, was dismissed with costs on Tuesday last. The plaintiff (who trades as Goodall, Backhouse and Co.) carries on business as a drysalter and druggist at Leeds, and he sought to restrain the defendants from using the words "Yorkshire Relish" in connection with sauce made by them without clearly distinguishing it from that manufactured by the plaintiff. Mr. Justice Stirling granted an injunction, and from this order the defendants appealed. It appeared that the plaintiff had for the last thirty-four years manufactured Yorkshire Relish, which had now enormous sale, due no doubt, to an expenditure of some £400,000 in advertising, and the defendants having succeeded in getting the register of trade marks rectified by the removal of the words "Yorkshire Relish" as a trade mark commenced to sell a sauce bearing a similar

name, which they alleged was the same sauce. A large body of evidence was given by chemical experts in the Court below to show that the two sauces were identical in composition. The defendants contended that the words "Yorkshire Relish" merely described a particular kind of sauce, which anyone was at liberty to make, whereas the plaintiff alleged that the sauce was made from a secret recipe, that the words denoted to the public the manufacture of his firm, and that the use of them by the defendants in connection with the label and general get-up was calculated to deceive. Mr. Moulton, Q.C.; Mr. Buckley, Q.C.; and Mr. Waggett appeared for the appellants; Mr. Hastings, Q.C.; Mr. John Cutler, and Mr. Hampson represented the respondent.

THE NEW PHOTOGRAPHY.—Professor Winkelmann and Dr. Straubel, of the University of Jena, have succeeded in discovering a new method of photographing with Röntgen rays, by which the length of exposure is reduced from ten or fifteen minutes to only a few seconds. The method is based on a conversion of the x -rays into rays of other undulations, by means of fluor spar crystal. If the Röntgen rays are allowed to fall upon a photographic plate, the sensitised film of which is turned away from them, and covered with fluor spar, the rays—after passing the film—will be absorbed by the fluor spar, and there undergo the modification spoken of. The new rays now act upon the photographic plate, and indeed much more strongly than did the Röntgen rays on passing through. As large fluor spar plates are to be had with difficulty, powder of the same crystal was tried in their place, and as this succeeded, nothing stands in the way of the further application of the method. The new rays emitted by the fluor spar were minutely examined by the discoverers. They succeeded in determining the frangibility, and from this the length of the undulations. The rays lie far beyond the ultra violet end of the visible spectrum.—*Daily News.*

DID TOO MUCH!—Dr. McWeeney, analyst to the Richmond Lunatic Asylum, Dublin, has been allowed to withdraw his resignation, which was sent in under a misapprehension as to the duties he was expected to perform.

AN ALCOHOLIC PRESCRIPTION.—Considerable discussion took place a few days ago at the meeting of the Ross (Co. Cork) Poor Law Guardians over a requisition of the medical officer for a month's supply of whisky to one patient (suffering from pneumonia) at the rate of five or six glasses per day. Finally, the supply was allowed to run for a fortnight.

PRESIDENCY OF THE ROYAL COLLEGE OF PHYSICIANS.—Dr. Samuel Wilks, F.R.C.P., has been selected to succeed Sir Russell Reynolds as President of the Royal College of Physicians. Dr. Wilks received his medical education at Guy's Hospital, and was gold medallist at the London M.D. examination in 1850. He is now a member of the Senate of the University of London, and consulting physician to Guy's Hospital, and to the Royal Hospital for Children, Waterloo Road, S.E.

THE EARLY CLOSING BILL.—The members who are hostile to the Shop Hours Bill, in the form in which it has left the Standing Committee, intend to offer a vigorous opposition to the provisions of the measure on Report. They will, in the first place, move the re-committal of the Bill; and, failing that, they will propose afresh most of the chief amendments which were defeated in Committee. A special effort will be made to carry an amendment, providing that the Bill shall not apply to shops where a mixed business is carried on, any branch of which is among the trades scheduled as exempt from the operation of the measure. . . . An endeavour will also be made to insert a better definition in regard to the classification of shops, and to provide that the "local authority" in London shall be the vestries, and not the County Council. A meeting of the London Unionist members will be held immediately after the Easter holidays to consider their action on the Report stage of the Shop Hours Bill. A large majority of the London Unionists are believed to be opposed to the measure in its present shape. An active canvass is also to be instituted among country members on the Unionist benches, with the object of ascertaining the general feeling in regard to the leading provisions of the Bill.—*Standard*.

An influential minority of the Grand Committee protest against the numberless blemishes that disfigure the Shops Early Closing Bill, and declare that the House of Commons will never permit the measure to become law in its present anomalous shape. It is pointed out that local veto of the most objectionable character is to be established; that jurisdiction which ought to be entrusted to the London vestries has been thrust upon the County Council, who are also called upon to do a variety of matters that Parliament should itself perform. . . . A sharp fight on the report stage is inevitable.—*Daily Telegraph*.

On the Shops Early Closing Bill, which has passed the Grand Committee on Trade, being reported to the House of Commons, a determined effort will be made to have it recommitted to a Committee of the whole House. It is not likely this attempt to shut out the services of a Grand Committee will prove successful.—*Daily News*.

THE SALE OF POISONED GRAIN.—At Beccles Police Court, on Friday, March 27, Samuel Bullen, of Ditchingham, was charged with unlawfully selling grain steeped in poison, at Beccles, on March 6. Police-constable James Philippo said he bought a packet of wheat of the defendant, and handed the packet to Supt. Shipp in the same state as when he bought it of the defendant.—Supt. Shipp said he took 30 grains from the packet and gave it to a live pigeon, on the 7th inst. It died in about five minutes. He sealed up the rest of the wheat and sent it to Mr. Napier, analyst, of Ipswich.—Mr. James Napier, county analyst, said on analysing the sample he found a large proportion of strychnine.—Defendant, who had pleaded guilty, said he had sold it all his lifetime, and his father before him.—Mr. Rix (Magistrates' Clerk) said defendant had been convicted of the same offence at Halesworth, Bungay, and

Norwich. The penalty for which he was liable was £10; the costs, £2 3s 8d.—Supt. Shipp said he had had complaints from all round the district—Lowestoft, Gorleston, and this neighbourhood as well. If people got poisoned wheat, it always came from Beccles.—The Chairman said it was a very serious offence, and defendant persistently defied the law. A repetition of the offence did not make it right.—Defendant was understood to say he supplied a dozen or fourteen magistrates, who regularly used it. He was fined £5, and £2 3s 8d. costs; or 21 days hard labour.

THE RÖNTGEN RAYS.—Mr. Swinton delivered a lecture on Tuesday on the Röntgen photography, at St. Thomas's Hospital, when there was a very large attendance. The tickets were issued on payment, and the results handed over to the funds of the Hospital. The Treasurer, Mr. Wainwright, stated that successful use had been made of the new shadow photography in several of the wards.

PROPRIETARY ARTICLES' TRADE ASSOCIATION.—A public meeting of South London chemists has been convened by a local committee to enable them to discuss the anti-cutting question, particularly with reference to the Proprietary Articles' Trade Associations. Mr. W. Johnston, of Brixton, is acting as honorary secretary, and the meeting will be held on Wednesday, April 8 next, at Gresham Hall, Gresham Road, near Brixton Station. The Secretary of the Proprietary Articles' Trade Association will attend to explain its objects and proposals, and will be accompanied by some of the members of the manufacturers and wholesale sections of its Council. The chair will be taken by G. R. Barclay, Esq., at 9.30 p.m., and all chemists and druggists are cordially invited to be present.

EDINBRO' PHARMACY ATHLETIC CLUB.—The Golfing Section of this Club held its monthly competition for the Dick Handicap Challenge Medal on Friday and Saturday last, when a large number of members competed. Mr. W. M. Manson was the winner with the net score of 92.

DIARY OF THE WEEK.

Secretaries of Societies are requested to send notices of forthcoming meetings not later than Wednesday in the previous week.

WEDNESDAY, APRIL 8.

PHARMACEUTICAL SOCIETY OF GREAT BRITAIN.
Library, Museum, School, and House Committee.
BRIGHTON JUNIOR ASSOCIATION OF PHARMACY, at 9 p.m.

General Meeting.
SHEFFIELD PHARMACEUTICAL AND CHEMICAL SOCIETY,
at 8.30 p.m.
"Electricity," by T. Scott Anderson.

PROPRIETARY ARTICLES TRADE ASSOCIATION, at 9.30 p.m.
Public Meeting of South London Chemists at Gresham Hall, near Brixton Station.

THURSDAY, APRIL 9.

LIVERPOOL PHARMACEUTICAL STUDENTS' SOCIETY, at 8.30 p.m.
Musical and Social Evening.

FRIDAY, APRIL 10.

PHARMACEUTICAL CHEMISTS' AND APOTHECARIES' ASSISTANTS' ASSOCIATION OF IRELAND, at 8.30 p.m.
Ordinary Meeting.

MARKET REPORT.

[Specially compiled for the Pharmaceutical Journal.]

LONDON, APRIL 2, 1896.

We are unable to report any improvement in the produce markets connected with the drug trade since our last report, although one or two important changes have taken place. In the various alkaloids there is nothing new to report, cocaine being unchanged, caffeine and quinine very slow of sale, and opium alkaloids very firm. Carbolic acid is still quite easy, especially for crystal acid. Citric acid is very slow of sale at rather easier rates, whilst tartaric acid is also dull of sale. The most important point of interest is the fact that the makers of salicylic acid and salicylates have intimated the abolition of the special discount which has been given for some little time, and the prices now revert to their old conditions. The English camphor refiners lowered their prices a few days ago, and this move was followed by a corresponding drop yesterday by the German makers. In the drug market we have to report a very firm market in saffron, with a slight tendency to higher rates, whilst on the other hand, orris root is a trifle easier. Insect flowers are very firm at full rates, and the same applies to ipecacuanha root, which is, if anything, rather dearer. Gentian root, cascara sagrada bark, and Peruvian balsam are very quiet, whilst tolu balsam is very firmly held for genuine qualities. Cod-liver oil is steady, and in some quarters an advance is anticipated in the immediate future. The heavy oil market is quiet, and the remark applies to spices and shellac. Full details will be found below:—

ACACIA (GUM)—There has been an improved demand for *Persian* so-called insoluble gum in sympathy with the market in *Turkey* sorts. Business has been done in good sorts up to 17s. 6d. per cwt., whilst small sales of pale selected gum have been made at 22s. Contrary to what seemed probable from the result of the last week's gum sales, *Soudan* sorts have not been in very active demand, and quotations range from 67s. 6d. to 87s. 6d. per cwt., according to quality. On the other hand, there has been a good demand for *East Indian* gum at advanced prices, and sales are reported of *Mogador* up to 65s., of *Ghatti* up to 60s., and *Bombay* up to 52s. 6d. per cwt.

ACID, CARBOLIC—Is decidedly easy, especially for *crystal* acid, and the following are the current quotations:—*Crystals*, 34° to 45° C, 7d.; 39° to 40° C., 7½d.; 39° to 40° C. (*detached crystals*), 8½d. per lb. *Crude* is rather easier at 2s. 2d. for 60 per cent., whilst 75 per cent. is quoted at 2s. 7d. per gallon. *Liquefied* and *cresylic* are returned at 1s. and 11d. respectively.

ACID, CITRIC.—The market is rather easier. *English* acid now quotes at 1s. 2d. per lb. in manufacturers' hands, whilst second-hand holders offer at 1s. 1½d. Concentrated *Lemon juice* is quoted at £14 to £14 2s. 6d. per pipe, *f.o.b.*, Messina.

ACID, SALICYLIC.—A circular has been issued during the week to members of the wholesale drug trade and other interested parties to the effect that the special allowance of 15 per cent. discount from the net invoice prices will now be abolished. This, of course, does not effect the actual quotation of salicylic acid and its salts, which are as follows, the ordinary rates of discounts remaining as heretofore:—

	In 1 cwt. kegs.	In 1 b. cardboard boxes.	In 1 lb. bottles.
Salicylic acid:—	Per lb.	Per lb.	Per lb.
<i>Powder</i>	2s. 3d.	2s. 6d.	2s. 8d.
<i>Crystals</i>	—	2s. 9d.	2s. 11d.
<i>Phys. pure</i>	—	4s. 6d.	4s. 8d.
Sod. Salicylate:—			
<i>Powder</i>	—	2s. 7d.	2s. 9d.
<i>Crystals</i>	—	3s. 2d.	3s. 4d.
<i>Phys. pure</i>	—	—	4s. 4d.

ACID, TARTARIC.—Quite inactive. *English* makers still quote 1s. 3d. per lb., whilst holders of *foreign* acid (not guaranteed B.P.), offer at 1s. 2d. to 1s. 2½d. per lb. on the spot for both *powder* and *crystals*.

AMMONIA COMPOUNDS.—*Sulphate* continues to decline in price, and grey 24 per cent. now offers at £8 2s. 6d. on the spot, whilst *Hull*, *Leith*, and *Beckton* are all quoted at £8.

CAMPHOR (REFINED).—Since our last report the *English* refiners reduced their prices 2d. per lb., making the current quotations as follows for quantities of 1 ton:—*Bells*, 2s. 1½d.; *Blocks*, 1 lb., ½ lb., and ¼ lb., packed in 7, 14, and 28 lb. wooden boxes, 2s. 1½d.; 1 and 2 oz., packed in 7 and 6 lb. wooden boxes, 2s. 3d.; ½, ¼, and ⅛ oz., packed in wooden boxes, 2s. 3½d. per lb. If packed in tins, an extra charge of ¼d. to ½d. per lb. is made. *Flowers*: 2s. 1½d. if packed in 5 or 10 lb. boxes. If packed in 1 lb. boxes, 2s. 2½d. per lb. This change in price was taken with a view to meeting the competition of the *German* refiners, but the latter returned the lead by also reducing their price 2d. per lb. on the 1st inst., making the present quotation 1s. 11½d. for 1 ton quantities of *bells* and *flowers*, with *squares* at proportionate rates.

CAMPHOR (CRUDE).—The market is very quiet, and only a moderate amount of business has been done. During the week a few hundred piculs of *China* camphor have sold at 157s. 6d., but 150s. would probably be accepted now. *Japan* is quiet, but steady at 167s. 6d. *c.i.f.* per cwt.

CANARY SEED.—In auction on Wednesday 100 bags of *River Plate* seed sold without reserve at 28s. per cwt.; also five bags of *Japan*, at 31s. 6d.

COCA LEAVES.—Very firm. Privately 1s. 2d. per lb. has been paid for good greenish broken leaves. For damaged *Bolivian* leaves, 1s. 6d. per lb. is asked.

CORIANDER SEED.—Coarse *Bombay* seed sold in auction at 8s. per cwt.; also small brownish *Russian* at 13s. 6d. to 14s. per cwt.

ERGOT OF RYE.—Is still very slow of sale. Business has been done privately in fair

Russian at 6½d. per lb., showing a steady rate.

GINGER.—Tending easier. In auction *Cochin* root was in poor demand, and the majority of the catalogue was bought in. Of native cut kinds, good bold half-cut sold at 56s. 6d. to 57s. 6d.; bold medium at 53s., and small at 45s. *Bengal* was bought in at 17s. 6d., and limed *Japan* at 23s. *Jamaica* root sold at easy rates, 68s. to 71s. being paid for low and small medium dull, and 65s. to 67s. for mouldy.

INSECT POWDER.—The market is very firm, and quotations are in some instances higher. The following prices are quoted:—Closed wild flowers, 145s.; closed cultivated flowers, 140s.; half-closed, 105s., and open, 90s. per cwt. all *c.i.f.* terms.

IPECACUANHA.—The market is very firm. Business has been done in *Carthagena* (*Columbian*) root during the week at 4s. 5d. for good damaged qualities, and 4s. 6d. is now the lowest price. *Rio* (*Brazilian*) root has also sold steadily at full rates.

JALAP.—Is tending slightly easier. Business was done recently in good *Vera Cruz* root at 8½d. per lb., but lower rates would now be accepted.

MASTIC (GUM).—The market is firm, but quiet. During the week, pale drop has sold at 1s. 8d. per lb.

OIL (COD-LIVER).—The market is steady. On the spot business has been done during the week in 1895 *Norwegian* oil at 220s. per barrel of 25 gallons, and 225s. is the price generally asked by importers. We have heard of business in second-hand at 210s. to 215s., but 220s. is the lowest price at which it would be possible to buy in first-hand. A very large business has been done during the last few weeks in 1895 oil, and the result is that the market is now practically cleared of all the parcels, offered. The spot price for good oil is 220s. Business has been done during the week in *Newfoundland* oil at 6s. 6d. per gallon, but the holder is not inclined to go on at the price, and now asks 7s. per gallon. From all accounts, it seems very probable that an advance will take place in 1896 *Norwegian* oil when the Easter holidays are over, since the latest official reports are very unfavourable and the Lofoten fishing season ends on the 3rd inst.

OILS (ESSENTIAL).—*Star Aniseed* is quiet, but steady. Most of the holders ask 10s. 6d., but little business has resulted, although there are ready buyers at 10s. 3d. *Peppermint* oils are very quiet, *H. G. Hotchkiss'* brand being quoted at 9s. 3d. to 9s. 6d., *Japan* oil, testing 40 per cent. of menthol, at 6s. 3d., and *dementholised* at 5s. to 5s. 3d. *Lemon grass* oil is quiet at 2½d. per oz., whilst *Citronella* is slow of sale at unchanged rates. *Italian* essences are reported rather easier, in consequence of the momentary unfavourable Italian exchange, but the drop is not likely to be of a permanent nature.

OILS (FIXED) AND SPIRITS.—*Cotton* is quiet, but steady. *Refined* oil being quoted at £16 to £16 10s. on the spot. *Coco-nut* is a trifle easier, *Ceylon* being now quoted at £23 and *Cochin* at £26 15s. to £27 on the spot. *Linseed*: The market during the last day or two has been very firm, and higher prices are anticipated. The closing quotation of £19 2s. 6d. shows, however, a slight decline upon last week's price. *Rape*

is steady, and a fair business is reported refined oil being quoted at £24 to £24 10s. on the spot. *Turpentine* is quiet but steady, *American* spirit being still quoted at 20s. on the spot. *Petroleum* is very firm, *Russian* being quoted at 5½d. to 5¾d., *American* at 5½d. to 5¾d., and *water white* at 6¼d. to 6½d. per gallon on the spot.

OLIBANUM (GUM).—Is rather easier in price, although more business has been done. In auction fair pale selected drop sold at 39s. to 42s. 6d. Garbling good at 16s. 6d., medium at 12s., and ordinary woody at 10s., whilst for fair to good siftings 12s. to 14s. 9d. per cwt. has been paid.

ORRIS ROOT.—Is reported to be rather easier owing to the present unfavourable Italian exchange. For fine selected *Florentine* root, 68s. per cwt. *c.i.f.* would now be accepted, whilst good sorts offer at 63s. On the spot good picked root offers at 72s. 6d., whilst of *Veronese* there is little or none to be had.

QUICKSILVER.—Is quiet at unchanged rates, and offers at £6 17s. 6d. per bottle in importers' hands, and £6 16s. 6d. in second hand.

QUININE SULPHATE.—The market remains very quiet, with *B & S* and *Brunswick* offering at 13¼d. per oz. on the spot.

SCAMMONY.—*Resin* is very firmly held. For fine *Turkish origin* 30s. to 32s. per lb. is asked, whilst business has been done in good seconds during the week at 28s. *Skillippe* is quoted at 10s. 6d. per lb. *Root* is very sparingly offered, the majority of the stock on the spot being held for higher rates.

SHELLAC.—There has been no improvement in the demand for *Second Orange*, and prices are rather easier, *T.V* being quoted at 95t. cash. Fine *Second Orange* is also dull of sale, *AA* in circle having sold at 101s. to 102s. *AC Garnet* is easier at 189s. for good free. At the weekly sales the supplies were small, *Second Orange* sold at fairly steady rates as compared with the last auction. Good firsts' *Buton* sold at a reduction, whilst *Garnet* was also easier.

SOY.—The market is very quiet at 10d. to 10½d. per gallon for fair *China*.

SPICES (VARIOUS).—*Cloves* are quiet, but steady. In auction on Wednesday fair *Zanzibar* sold at 2½d., whilst picked *Penang* were bought in at 9d. The delivery market has been firm, and a good business was done at full rates, but at the close the market is quiet. *Cassia lignea*: Broken quality sold without reserve in auction at 16s. to 17s. per cwt., whilst fair quality have sold privately at 29s. 6d. to 30s. *Pimento* is still slow of sale. Medium sold in auction at 2¾d., and fair quality at 2½d. *Chillies* are easier. In auction fairish mixed *Zanzibar* sold at 25s. 6d. to 26s., whilst extra fine bright *Japan* realised 60s. to 60s. 6d. per cwt. *White pepper*: In auction fine bold *Singapore* sold at 4½d., and extra fine ditto at 5½d. per lb.

TURMERIC.—The market is very quiet. A moderate business has been done in fair *Bengal* at 7s. 6d., whilst *Madras* has sold at 8s. to 8s. 6d. for dull finger, 9s. 6d. for good bright, and 7s. for bulbs. At the weekly sales, the whole of the *Bengal* root offered was bought in.

WAX (JAPAN).—The market is easier, and 35s. 6d. to 36s. would now be accepted on the spot for good pale *squares*.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Books, etc.

All free. Coope's 'Surgical Dictionary,' well bound, 5s. (published 30s.); Scoresby-Jackson's 'Matr. Medica,' last edition, 5s. 6d. (published 12s. 6d.); Winslow's 'Mental Diseases,' 6s. (published 21s.).—Davies, 33, Eglinton Road, B.W.

A book of 130 Well-tried Recipes for Chemists and Druggists, comprising well-selected formulæ for general, remedial, veterinary, toilet, and everyday preparations. Post free, 1s. 6d.—Tully, Chemist, Hastings.

'Pharmaceutical Journal,' from commencement in 1842, 15 thick vols., well bound, 30s.; Woodville's 'Medical Botany,' 3 quart. vols., over 200 beautifully coloured plates, 21s., free.—Davis, "Chestnuts," Gordon Hill, Enfield.

Miscellaneous.

Surplus Stock. One 10 lb. Copper Good Essence Lemon, 27s, carriage paid. Sample 4 stamps; or exchange anything saleable.—Hare, Chemist, Nottingham.

Four 3s. 9d. Professor Tuson's Sheep Dip, half price; "Enterprise" Tincture Press, 10s., delivered; Hancock Mixer, 7s. 6d.—Smith, Chemist, Stroud.

Disarticulated Skull, good condition, 10s. Fine Mahogany Case Chemical Balance Weights, 200 grms. to 1 mgr., with riders tweezers, etc.; new; price 27s. 6d.—Hatfield, Chemist, Limehouse.

WANTED.

Wanted, Complete vols. of 'Pharmaceutical Journal' from 1859 to date; 'Chemical News,' any volumes up to 1892; 'Year-Book of Pharmacy' (1892-93); 'American Chemical Journal,' vols. 1-6, 14-17 'American Chemical Society Journal,' any volumes; 'Analyst,' any volumes. Address offers—Atropis, 'Pharmaceutical Journal' Office, 5, Serle Street, W.C.

NEWCASTLE CHEMICAL REPORT.

[From our own Correspondent.]

MARCH 31, 1896.

The trade in a general way is slower, even in home business. Steamers, however, are now being put on the berth for Baltic and Continental ports, which will quicken matters somewhat. Prices all round are little changed, and are quoted thus:—SODA CRYSTALS: 36s. to 45s. in bags and casks respectively. BLEACHING POWDER: £7 5s. to £7 10s. CAUSTIC SODA: 76 to 77 per cent., £9 5s.; 70 per cent., £7 10s. to £7 15s. RECOVERED SULPHUR: £3 17s. 6d. SODA ASH: 48 per cent., £3 15s. ALKALI: 48 per cent., £4 10s. to £4 15s. HYPOSULPHITE OF SODA: £6 5s. to £7, according to packages. SULPHATE OF AMMONIA (Leith): £8 7s. 6d. PITCH: 34s. SOUTH DURHAM SALT: 8s. 6d.; agricultural purposes, 9s. per ton shipment.

LIVERPOOL MARKET REPORT.

[From our own Correspondent.]

APRIL 1, 1896.

LINSEED: advanced 3d. per 416 lbs. for forward delivery. CANARY SEED: *Turkish*, spot parcels, 30s. to 32s. per 464 lbs.; *River Plat*, 27s. PENUGREEK SEED: *Egyptian*, 7s. 6d. ex quay. KOLA NUTS: dried, 2½d. to 4d. BEESWAX: *Chilian* £7 17s. 6d., *Sierra Leone*, £6 15s. HONEY: *Chilian*, 30s. for Pile X; 21s. to 22s. for Pile 1; 20s. 6d. to 22s. for Pile 2; and 19s. 6d. to 20s. for Pile 3. GUM ARABIC: 25s. to 30s. OLIVE OIL: Steady at recent rates. CASTOR OIL: *Calcutta* good seconds, 2 15/32d.; *French* 1st pressure, 2¾d. to 2½d.; *Madras*, ditto. LINSEED OIL: *Liverpool* makes, 19s. 9d. to 21s. per cwt. COTTONSEED OIL: 17s. to 17s. 6d. SPIRIT OF TURPENTINE: Steady at 21s. 3d. PETROLEUM: *Russian*, 5¾d.; *American*, 6¾d. to 7½d. SAL AMMONIAC: First quality, 39s. SULPHATE OF AMMONIA: £8 5s. BLEACHING POWDER: £7 to £7 5s. COPPERAS: *Lancashire*, 38s.; *Welsh*, 36s. SULPHATE OF COPPER: £18 to £19; forward, £16 15s. to £17. POTASHES: 21s. to 21s. 6d. PEARLASH: 37s. 6d. CHLORATE OF POTASH: 4¾d. BICHROMATE OF POTASH: 4¾d. PRUSSIAN OF POTASH: 8d. CREAM OF TARTAR: Finest white, 96s. BICARBONATE OF SODA: £7. SODA CRYSTALS: £2 10s. BORAX: Lump, 19s. 6d.; powder, 20s. 6d. CAUSTIC SODA: 70 per cent., £7 12s. 6d. to £7 15s.; 60 per cent., £6 12s. 6d. to £6 15s.

LATE ADVERTISEMENTS.

Engagements Wanted.

MANAGER, TRAVELLER, or LOCUM TENENS. Qualified. Age 52. PHILO, 5, Serle St., W.C.

MANAGER or LOCUM. Qualified. Best London experience. Age 28. Good-class trade. E. C., 1, King St., Weymouth.

HOLIDAY LOCUM. 32. Disengaged. Highest references. Temperate. Could come at once. CHEMIST, Whitechurch, Fants.

ASSISTANT. 29. Dispenser. Counterman. Permanency or Locum. J. H., 6, St. Leonards Villas, St. Leonards Rd., Surbiton.

DURING May. South Africa preferred. Age 20. 4 years' excellent experience. Extractor. COOPER, Market Hill, Diss, Norfolk.

PART-TIME. London. DISPENSER or COUNTERMAN. Quick work preferred. Age 23. Height 5ft. 10in. Abstainer. J. EADES, 17, West Sq., Southwark, S.E.

AS LOCUM or TEMPORARY. Highly recommended. Qualified. Experienced. Trustworthy. Age 27. THOMAS care of Southall Bros. & Barclay, Birmingham.

PART-TIME JUNIOR or DISPENSER to Surgeon. Out-door. London only. Minor student. Age 22. Seven years' good experience. ARGON, 162, Kennington Park Rd., S.E.

Assistants Wanted.

JUNIOR ASSISTANT wanted. Age about 22. Accustomed to good-class Dispensing. Apply W. H. A. CARTER, 56, London Rd., Southampton.

JUNIOR, about 22 years of age, who can be well recommended. State age, experience, when disengaged, and salary expected. M., 346, Essex Rd.

EARLY in May.—Qualified out-door ASSISTANT, about 24, in an old-established Family and Dispensing business. Neat writing and Dispensing indispensable. A gentleman of quiet habits with some knowledge of Photography, and desiring permanency preferred. Height, terms, and references, with carte, to W. CLARK, Pharmaceutical Chemist, Dorking, Surrey.

AN ASSISTANT. Qualified. Single. Indoors. Permanency. One accustomed to a country business preferred. Apply, with photo if convenient (to be returned), and all usual particulars, to DEIGHTON & SMITH, Pharmaceutical Chemists, Bridgnorth.

TRADE NOTES AND NEWS.

MESSRS. HERTZ AND COLLINGWOOD, of 38, Leadenhall Street, E.C., are now stocking all their specialties in larger premises at 20, Bury Street, St. Mary Axe.

MESSRS. JOHN LEYLAND AND Co., of Byfleet, Surrey, the well-known growers of lavender, roses, peppermint, and other plants, have opened a London office at 110, Cannon Street, E.C.

HOFF'S MALT EXTRACT will henceforth be supplied in the United Kingdom by M. Hoff, of Hamburg, exclusively, an arrangement having been concluded with Johann Hoff, of Berlin, to that effect.

MESSRS. T. CHRISTY AND Co. have been appointed agents for a litmus pencil brought out by an American pharmacist. One end is red and the other blue, and the pencil is intended to replace litmus paper in testing for alkalies and acids.

THE ROSBACH SPRINGS, LIMITED, notifies the removal of the firm's warehouse from 4, Sussex Place, E.C., to 20, Bury Street, E.C. All deliveries of goods should be tendered there, but all communications should be addressed to the offices of the Company, 38, Leadenhall Street.

THE LIQUOR CARNIS Co. directs attention to Mr. A. W. Gerrard's recommendation of Caffyn's Liquor Carnis, which he reported "is quite a unique preparation, having a special value both as a food and medicine, which renders it far superior to ordinary meat extracts."

THE BON MARCHE (LIVERPOOL), LIMITED, was registered on March 19, by T. T. Hull, 22, Chancery Lane, W.C., with a capital of £3000 in £1 shares, the objects specified being to carry on business as chemists, druggists, and patent medicine vendors. The directors are L. S. Cohen, P. de Jong, and H. S. Levy. No qualification or remuneration is specified.

SUPPLEMENT

TO THE

PHARMACEUTICAL JOURNAL.

THE PROTOPLAST CELL.

You have caught me at last and caged me,
and think you can make me reveal
The secret of life's creation, of which I am
sign and seal.
Ho, gauge me by lineal inches, scarce seen in
your microscope;
I have clothed the earth with her beauty,
plain, valley, and mountain slope.
When the world from incandescent gases
congealed into form, I was there,
And the sea was without a tenant, the land
was lifeless and bare;
But I bore the infinite promise of verdure,
and flower, and tree,
I covered the living myriads that people air,
earth, and sea.
I, the all-bearing mother, transmitter to all
of life,
Have yet suffered no diminution, unfailling
through stress and strife;
Protophyte even as mammoth, and each as
the other complete,
In me finds its primal parent, in me all
divergents meet.
You stand against increase of matter! Why
not against increase of mind?
Since nothing is made out of nothing, can
the higher growth be defined?
Or of life? Can life be created, or spring
forth where none has been?
The word made flesh, if you trace it, comes
only through me I ween.
So, you fail to perceive a radiant where
higher and lower swerve!
You say that no sense of vision preceded an
optic nerve.
In your wild unrest with the future, while
trembling upon its brink,
You hesitate whether 'tis better to know or
only to think.
And still I go on increasing the visible forms
of life,
Fulfilling my primal function wherewith all
creation is rife.
Still unchanged amid all time's changes,
which carry an upward sway,
An impulse from simple to complex my off-
spring must all obey.
I know not a higher or lower throughout the
length of the line,
Macro- or micro-cosm no nearer is to the
Divine.
Protozoan, animal, vegetal, linked by un-
changeable law,
Are equally interdependent for the vital
breath which they draw.
From the inorganic is fashioned all living,
how varied or fair!
What, though, it is only the garment which
for a brief season they wear?
And even your leaders in science, who mar-
shal life's orders up,
Make the summit and crown of the ages
the child and the buttercup.

Glasgow.

ALEXR. LAING.

MISCELLANEOUS NEWS.

EXETER ASSOCIATION OF CHEMISTS AND DRUGGISTS.—The materia medica cabinet presented to the members of the Exeter Association of Chemists and Druggists by the Pharmaceutical Society of Great Britain has been placed in the Albert Memorial Museum for the use of students, the pharmaceutical classes, recently started in Exeter, being conducted there by Mr. Ware.

PRESCRIBING PROPRIETARY MEDICINES.—At the meeting of Glasgow City Parish Council, on Tuesday, the minutes of the Medical Committee stated that Mr. J. Anderson Russell (who is hon. secretary and treasurer of the Glasgow and West of Scotland Pharmaceutical Association) had drawn attention to the fact that one of the outdoor medical staff had again prescribed a proprietary cod-liver oil cream, notwithstanding the arrangement come to, and the inspector was instructed to write to the doctor asking for an explanation. At the same meeting, Dr. McLaughlin moved "That the resolution come to at this Committee on June 20 last, as to medicines being dispensed by qualified chemists only, which was approved at the meeting of Council on July 2, 1895, be rescinded." The previous question was carried by eight votes to four.

PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION held its quarterly meeting on April 1 at the Foresters' Hall, Octagon, Plymouth, Mr. C. J. Park, President, in the chair.—Mr. R. D. Doble, of Tavistock, gave a most interesting lecture, entitled "Three Years in a South African Pharmacy." The lecturer illustrated his remarks on the various places of note—including Cape Town, Johannesburg, Port Elizabeth, Table Mountains, and King William's Town—by means of some fifty excellent limelight views.

EDINBURGH PHARMACY ATHLETIC CLUB.—GOLFING SECTION.—Messrs. H. D. Alexander and Geo. Lunan met Messrs. Geo. Robertson and Jas. Stott in the final round in the T. and H. Smith Challenge Trophy competition on Friday, April 3, at the Braids. After a close game Messrs. Alexander and Lunan won by 2 up, and 1 to go.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION.—The most highly successful smoking concert of the season was held on Wednesday, April 1. The best items of an excellent programme were those of Mr. Aston, who gave solos upon "the bones" and upon a single-stringed broomstick and a cigar box, and the recitations and sketch of Messrs. Firkin and Martin, which were much appreciated. Excellently rendered songs were given by Messrs. Judd, Firth, Firkin, Cornish, Wilson, Rushton, Aston, and Jones. Mr. Cartwright presided at the "box of dominoes," and banjo solos were given by Messrs. Rogers.

HUXLEY MEMORIAL MEDAL.—It has been decided by the Huxley Memorial Committee to strike a medal for award by the Royal College of Science, and the Committee desires to obtain the design for the medal,

if possible, by competition. Further particulars will be furnished on application, which must be sent in before May 1, to the Honorary Secretary of the Huxley Memorial Committee, Professor G. B. Howes, Royal College of Science, South Kensington.

INLAND REVENUE PROSECUTION.—William Thomas Blewett, chemist, Hayle, was charged at Camborne last week by the Inland Revenue with selling a bottle of brandy on December 16, without being properly licensed to do so.—Mr. Vivian Thomas appeared for defendant, who pleaded guilty.—The Supervisor of Excise (Mr. Williams) stated that defendant was Gilbert's agent, and as such held a licence for the sale of foreign wines, but he held no licence for the sale of spirits. If under this charge defendant was convicted, he would have to forfeit the wine licence now held, and could never take a licence under the Inland Revenue again. The cost of licences to sell spirits in the way defendant did on that day was thirteen guineas a year. By not having such licence he entered into unfair competition with others, and escaped the superintendence of the police.—Mr. Vivian Thomas stated that the servant of one of the defendant's customers asked him to sell a bottle of brandy to him for his master, who was ill. He replied that he had no licence and could not do so, but as the servant was excited and pressed for it, he took a bottle from his private stock and sold him. Several people had lately tried to induce defendant to sell spirits, but he had refused them, and this was the only case in which he had supplied spirits.—Fined two guineas.

WEED-KILLER FOR CIDER.—A mason named Turner died at Stockland, near Axminster. Becoming thirsty he drank from a jar what he supposed to be cider. At the inquest a verdict was returned that he died through accidentally drinking weed-killer from a stone jar in mistake for cider. The jar was labelled poison.

SENSIBLE ADVICE.—Our friends and subscribers, or those among them who do not happen to be registered chemists, ought by now, one might suppose, to understand that all proprietary articles which contain any of the scheduled poisons must not, under any circumstances whatever, be sold or offered for sale by them. If they do not understand it is surely due to no fault of ours, for we have drawn attention to the question several times. The various prosecutions which are continually being reported seem, however, to indicate that there are still many whose ignorance or perversity leads them into trouble. What is the use of it? The Pharmacy Act is a fact, a law, and it must be observed. Its provisions are not altogether popular, I know, but that will not save the man from penalties who is wrong-headed enough to go against it. Therefore, grocers and other "unregistered persons" should stop off all poisonous proprietaries. The above remarks apply to disinfectants, fly papers, etc., made with poisonous ingredients.—*Patent Medicines Journal*.

SIR JAMES H. HASLETT, M.P., chemist, Belfast, has been elected Vice-President of the Ulster Conservative Association.

DR. JOSEPH E. KENNY, a prominent Dublin apothecary and Parliamentary representative of the College Green Division, has been appointed to the Stewardship of the Chiltern Hundreds. Press of business is the cause of Dr. Kenny's retirement from the "House."

A FATAL SLEEPING DRAUGHT.—Thomas McCarthy, a labourer, obtained last week from Dr. Scannel's Medical Hall, Cork, a sleeping draught containing morphine, and died some hours after taking it. The viscera of deceased is being analysed to determine the quantity of morphine taken.

'THE PHARMACEUTICAL ERA,' one of the most important organs of the craft in the United States, was commenced on January 1, 1887, and the wonderful growth of the paper during the past nine years is shown by the fact that whilst the volume for 1887 weighed 3 lbs. 14 ozs., the two volumes published during 1895 weigh 20 lbs. 11 ozs.

THE RÖNTGEN RAYS.—The Paris correspondent of the *Daily News* writes: The Academy of Sciences met for a short time on Tuesday. The business of the day was the granting of the honours of the sitting to Professor Ramsey, the discoverer of argon, and Professor Sylvanus Thompson. The scientific subject discussed was the deviation of α -rays by the magnet. Professor Sylvanus Thompson read a paper on a means he has devised for concentrating and strengthening α -rays and getting clearer photographs.

APPOINTMENT OF PUBLIC ANALYST FOR SHEFFIELD.—The annual report of Mr. A. H. Allen, F.C.S., public analyst for Sheffield, was submitted to the City Council on Wednesday, April 8. Mr. Allen stated that he had received and analysed under the Sale of Food and Drugs Act, 311 samples, including 201 samples of milk, 45 of butter, 10 of lard, 6 of mustard, 10 of coffee, 10 of malt vinegar, 6 of paregoric, 6 of laudanum, and 17 of spirit. Mr. Allen's term of appointment as public analyst being about to expire, a resolution was passed by the Council appointing him for a further period of one year, at a salary of £100 for 150 samples analysed, and 10s. 6d. for each sample analysed over that number.

PRESENTATION AT BRADFORD.—Last Saturday an interesting presentation took place at the Infirmary Pharmacy, Bradford, Mr. T. G. Forshaw, M.P.S., being presented with a massive gold chronometer watch, by a few friends, to mark the completion of fifty-two years' connection with pharmacy.

ROYAL INSTITUTION.—On Tuesday next (April 14), Professor James Sully will begin a course of three lectures on "Child-Study and Education"; on Thursday (April 16), Professor Dewar will begin a course of three lectures on "Recent Chemical Progress"; and on Saturday (April 18), Professor W. B. Richmond, R.A., will begin a course of three lectures on "The Vault of the Sixtine Chapel." The Friday evening meetings will be resumed on April 17, when Professor G. Lippmann will deliver a discourse on 'Colour Photography.'

SUICIDE BY COCAINE.—An inquest was held by Mr. Troutbeck, on Wednesday last, in connection with the death of Reginald Norman, who died at 37, Gloucester Street, Pimlico, after taking a quantity of cocaine. It was stated in evidence that deceased, who had been intemperate of late, had swallowed the contents of a bottle in which 5s. worth of cocaine had been supplied by the Civil Service Stores, Bedford Street, London, to a girl of sixteen. The coroner commented upon the loose system which enabled such a transaction to be effected, and the jury returned a verdict of suicide while temporarily insane.

REMEDIES INTRODUCED IN 1895.*

(Concluded from p. lxxi.)

Rubrol.—Solution boric acid, thymol, and some "coal-tar derivative."—Injection in gonorrhœa.

Salactol.—Sodium salicyl-lactate.—Antidiphtheritic.

Salazolol.—Synonym of salipyrine.

Saligenin.—Ortho-oxybenzylic alcohol; salicylous alcohol.—Anti-rheumatic. Dose: 0.5-1 Gm.

Salipyraxolin.—Synonym of salipyrine.

Salithymol.—Thymol salicylate.—Antiseptic.

Septentrionaline.—Alkaloid from *Aconitum septentrionale.*—Sensory paralyzant and antitetic.

Serum Paste.—Serum powder with wax and zinc oxide.—Wound protective.

Serum Powder.—Dried, powdered, and sterilised blood-serum.—Wound protective.

Silver Fluoride.—AgFl.—Antiseptic and caustic.

Sodium Cinnamate.—Topical antitubercular.

Sodium Glycerinophosphate.—Nervine. Dose: 0.2-0.3 Gm.

Sodium Phenosuccinate.—Sodium salt of anthoxylphenylsuccinamic acid.—Analgesic and antipyretic.

Stypticin.— $C_{12}H_{13}NO_3 + H_2O \cdot HCl.$ —Hemostatic. Dose: 0.03-0.2 Gm.

Tetania.—Tetanotoxin, ptomaines isolated from tetanus cases.

Thiotone.—Solution ammonium sulphide, used for toning silver-chloride gelatin prints.

Thyraden.—Concentrated extract of thyroid gland, used against gôitre, myxœdema, etc.

Thyroantitoxin.—Crystalline substance from thyroid extract after removal of the albuminoids.— $C_7H_{11}N_3O_5.$

Traumamol.—Iodocresol, $C_7H_7IO.$ —Surgical antiseptic.

Tribromsalol.— $C_6H_4 \cdot OH \cdot COO \cdot C_6H_2Br_3.$ —Intestinal antiseptic, like salol.

Triphenin.— $C_6H_4 \cdot C_2H_5O \cdot NH \cdot (CH_2 \cdot CH_2 \cdot CO).$ —Antipyretic and antineuralgic. Dose: Antipyr., 0.3-0.6 Gm. ($4\frac{1}{2}$ -9 Grn.); antineur., 1 Gm. (15 Grn.).

Urotropin.—Hexamethylenetetramine, $C_6H_{12}N_4.$ —Uric-acid solvent. Dose: 0.5-2 Gm. per day.

Zinc Subgallate.—Astringent and antihidrotic. Dose: 0.05-0.25 Gm.

Zincohemol.—Zincated hemol.—Antichlorotic and antidiarrhœic. Dose: 0.5 Gm.

MAXIMUM DOSES OF SOME OF THE NEWER REMEDIES.*

MARKET REPORT.

[Specially compiled for the *Pharmaceutical Journal*.]

LONDON, APRIL 9, 1896.

Business has naturally been greatly restricted since our last report, and, in spite of this, one or two important changes have taken place in the chemical market. The English camphor refiners have again lowered their prices 2d. per lb., which move will probably lead to a further reduction in the price of the German article. The market in crude camphor is flat, and prices are tending lower. There is nothing to report in the alkaloids, quinine being quite featureless, the same remark applying to caffeine, whilst morphine and codeine are firm. Carbolic acid is rather firmer for crystals, but the crude acid is easier. Citric acid is dull of sale at unchanged rates, whilst tartaric acid is also quite neglected. The manufacturers of mercurials to-day announced a reduction in the price amounting to 3d. per lb., with a view to greater uniformity between the quotations for large and small contracts. In the drug market we have to report a firm market in orris root and saffron, with a slight tendency to higher rates. Carthagena ipecacuanha continues to sell privately at very firm rates, whilst a good business has been in Alexandrian sena for which there is still a brisk inquiry. Insect flowers are firm and the same applies to Peruvian balsam. There is nothing of note to report in gum arabic, which is firmly held at late rates. Cod-liver oil is steady, and the same applies generally to the heavy oil market, whilst shellac, and the spice and essential oil markets do not present any features of interest. Full details will be found below:—

ACACIA (GUM).—The market for *Soudan* sorts is firm, but quiet. Pale hard gum has sold privately during the week at 85s. per cwt. For *Persian* so-called insoluble gum there has again been a fair inquiry, and good palish sorts have sold at 18s. per cwt. Holders are very firm.

ACID, CARBOLIC.—The market for *crystals* is very firm, but *crude acid* is rather easier. The current quotations are as follows:—*Crystals*, 34° to 35° C., 7½d.; 39° to 40° C., 8d.; 39° to 40° C. (*detached crystals*), 9d. per lb. *Crude* is again easier at 2s. 1d. for 60 per cent., whilst 75 per cent. is returned at 2s. 6d. per gallon. *Liquefied* and *creylic* are unchanged at 1s. and 11d. per gallon respectively.

ACID, CITRIC.—The market is flat. *English acid* is still quoted at 1s. 2d. per lb. in manufacturers' hands, whilst second-hand holders offer at 1s. 1¼d. *Lemon juice* is quoted at £14 to £14 2s. 6d. per pipe, *f.o.b.*, *Messina*.

ACID OXALIC.—Still quoted at 3½d. per lb., delivered free in London.

ACID TARTARIC.—The market is quiet. *English* manufacturers still quote 1s. 3d. per lb., whilst *foreign acid* (not guaranteed

B.P.) both in *powder* and *crystals* is returned at 1s. 2d. per lb.

AMMONIA COMPOUNDS.—*Sulphate* is very slow of sale, grey 24 per cent. being quoted at £8 2s. 6d. on the spot, whilst *Hull* and *Beckton* are quoted at £8, and *Leith* at £7 17s. 6d. *Sal Ammoniac* is unchanged at 39s. for firsts, and 37s. for seconds. *Carbonate* quotes at 3½d. to 3¼d. per lb., according to package. *Liquor*: Unchanged at 3¼d. to 3½d. per lb. less 5 per cent.

ASAFOETIDA (GUM).—The prices now asked by holders are quite prohibitive to business, and buyers are not disposed to make any advance upon the rates paid at the last drug sales.

CAMPHOR (CRUDE).—The market is very quiet, and quotations are lower. For arrival, *Formosan* camphor offers at 145s., and *Japan* at 160s. per cwt. *c.i.f.*, but there are no inquiries whatever.

CAMPHOR (REFINED).—To-day the *English* refiners again reduced their quotations 2d. per lb. all round, making the present quotations for *bells* and *flowers* in half-ton lots 1s. 11½d. per lb, with *squares* at 2s. 0½d., and proportionate rates. This decline was occasioned by a desire to bring the prices on a par with those of *German* camphor, but it is expected that a drop in the latter variety will be announced in a day or two, although at present the quotations are the same as those for *English* camphor.

COAL DISTILLATION PRODUCTS.—*Toluol* quotes at 2s. per gallon for *pure*. *Benzole* 50 per cent. is quoted at 1s. 8d., and 90 per cent. at 2s. 1d. per gallon. *Creosote*: 1¼d. per gallon. *Crude naphtha*: 30 per cent. at 120° C. quotes at 10d. per gallon. *Solvent naphtha* is lower; 95 per cent. at 160° C. is quoted at 1s. 5d.; 90 per cent. at 160° C. at 1s. 2d., and 90 per cent. at 190° C. at 1s. 1d. per gallon. *Anthracene*: 13A quotes at 11d., and B at 9d. per gallon. *Pitch*: 33s. per ton, *f.o.b.* *Tar*: 12s. per barrel for *crude*, and 12s. 6d. for *refined*.

COPPER SULPHATE.—Is firm, the current spot quotations being £17 10s. to £18 15s., the latter being the price asked for the *Anchor* brand.

CREAM OF TARTAR.—Is very slow of sale. On the spot, best white *French* crystals are quoted at 90s. to 91s. per cwt., whilst *German* brands of *powder* are returned at 92s. to 93s. For shipment from *Bordeaux* the current quotation is 84s. to 85s., *f.o.b.*

GALLS.—The market is firm, but there is only a moderate inquiry for all varieties. *Persian* galls quote at 53s. to 54s. for *blues*, 42s. 6d. to 47s. 6d. for *greens*, and 42s. to 45s. for *whites*.

LIQUORICE ROOT.—The current quotations for fine quality *Russian* decorticated root is 28s. 6d. per cwt., *c.i.f.* terms, whilst ordinary rough *Persian* root offers at 6s. to 7s. 6d. per cwt. on the spot.

MERCURIALS.—To-day the manufacturers of *Mercurials* announced a reduction of 3d. per lb. all round, and the following are now the current quotations for not less than 56 lbs.:—*Calomel*, 2s. 7d.; *corrosive sublimate*, 2s. 3d.; *red precipitate*, 2s. 10d.; *white ditto*, 2s. 10d.; *red ditto (levigated)*, 2s. 10d.; *yellow subsulphate*, 2s. 10d.; *persulphate*, 2s. 11d.; *sulphur with sulphur*, 1s. 10d. per lb. This drop was in some degree occasioned by the need for less disproportion between the rates fixed for large and small quantities of these chemicals.

OIL (COD-LIVER).—The position is unchanged. The leading brands of new season's *Norwegian* oil are quoted at 220s. to 225s. per barrel of 25 gallons, whilst good quality 1895 oil is firmly held at 212s. 6d., and is in but poor supply. For *Newfoundland* oil of good quality 7s. per gallon is asked.

OILS (FIXED) AND SPIRITS.—*Castor*: *Italian* oil is very firm, and fine quality oil is still quoted at 30s. 6d. to 31s. per cwt. *Cotton* is steady, but quiet. *Refined* oil is still quoted at £16 to £16 10s. on the spot. *Coconut* is quiet, but unchanged, *Ceylon* being quoted at £23 and *Cochin* at £26 15s. to £27 on the spot. *Linseed*: The market is firm, and the quotation for oil in barrels is unchanged at £19 2s. 6d. *Rape* is quiet but firm, *refined* oil being still worth £24 to £24 10s. *Turpentine* is dearer, and *American* oil is now quoted at £20 3s. on the spot. *Petroleum*: The market is very slow. *Russian* is now quoted at 5¼d. 5½d., *American* at 5½d. to 5¾d., and *water-white* at 6¼d. to 6½d. per gallon on the spot.

OPIUM.—The London market is firm, but quiet. The following are the current quotations:—*Soft shipping*, 12s. to 13s.; *Smyrna*, 9s. to 9s. 6d.; *Constantinople*, 9s. to 9s. 6d.; and *druggists' seconds*, 8s. to 8s. 6d. per lb. *Persian* opium is firm, 13s. per lb. for best brics.

ORRIS ROOT.—The market is firm, and best *Florentine* root is quoted at 67s. 6d., with good sorts at 63s. 6d., and small ditto for grinding purposes at 57s. 6d. (*c.i.f.* terms) per cwt. For good quality *Veronese* root 56s. 6d. per cwt., *c.i.f.*, is asked.

PERU (BALSAM).—The market is quite cleared of first-hand parcels, there having been a fair business done during the week at 7s. 3d. to 7s. 6d. per lb. Holders now ask 7s. 9d. to 8s.

QUICKSILVER.—Is quiet at the unchanged rate of £6 17s. 6d. in *importers'* hands, whilst £6 16s. 6d. is still the price asked by second-hand dealers.

QUININE SULPHATE.—The market is very quiet, and best *German* makes are unchanged at 13¼d. per oz. on the spot.

SENNA.—A good demand is reported for *Alexandrian* leaves, in which a large business has been done privately at fully steady to rather dearer rates.

SHELLAC.—The market is quiet, but steady. Privately moderate sales of *Second Orange* have been made at 90s. to 96s. per cwt. for ordinary to good *TN*, and 107s. for fine quality ditto, whilst *AC Garnet* has sold at 88s. for free and ordinary thirds *Button* at 79s.

SPICES (VARIOUS).—*Cloves*: Privately the market is barely steady. Business has been done in fair *Zanzibar* to arrive at 2 11/32d. per lb., *c.i.f.* terms. *Pepper*: The arrival market is very firm, and advanced rates have been paid, including 2½d. for fair *Singapore* April to June shipment.

TRAGACANTH (GUM).—The market is firm, but moderate sales only are reported. Fine pale firsts quote at £14 10s., seconds at £12 10s. to £13 10s., thirds at £11 to £11 10s., fourths at £8 10s. to £10, and other grades at 35s. to £7. The supply of *hoj* is very large, and prices are merely nominal at 30s. to 80s. per cwt.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Books, etc.

All free. Plesse's 'Art of Perfumery,' scarce, 8s. 6d.; Professor Parker's 'Zootomy,' illustrated (8s. 6d.), 4s.; Newman's 'British Ferns' (pub. 12s.) and three other illustrated fern books, 7s. 6d.—Davies, 33, Eglinton Road, Bow.

A book of 130 Well-tryed Recipes for Chemists and Druggists, comprising well-selected formulæ for general, remedial, veterinary, toilet, and everyday preparations. Post free, 1s. 6d.—Tully, Chemist, Hastings.

Gray's 'Supplement to Pharmacopœia,' very scarce book, 10s. 6d.; another copy, imperfect, 6s.; Gray's 'Operative Chemist,' 100 plates, 5s.; Daniel Hanbury's 'Pharmacological Papers' (16s.), 6s. 6d. All free.—Davis, "Chestnuts," Gordon Hill, Enfield.

Miscellaneous.

Caligraph No. 2, excellent condition, cost us £22, will sell for £9.—The Liquor Carnis Co. (London), apply Head Office, Aston Clinton.

WANTED.

Wanted, complete set of 'Pharmaceutical Journal,' from 1841 to 1888, preferably unbound. State price

to—M. D. C., 'Pharmaceutical Journal Office,' 5, Serle Street, W.C.

Wanted, Complete vols. of 'Pharmaceutical Journal' from 1859 to date; 'Chemical News,' any volumes up to 1892; 'Year-Book of Pharmacy' (1892-95); 'American Chemical Journal,' vols. 1-6, 14-17; 'American Chemical Society Journal,' any volumes; 'Analyst,' any volumes. Address offers.—Atropa, 'Pharmaceutical Journal' Office, 5, Serle Street, W.C.

Wanted, latest editions, cheap, Ganot's 'Physics'; Remsen's 'Organic Chemistry'; John's 'Flowers of the Field'; cash.—E. O. T., 10, Clarendon Avenue, Leamington.

LIVERPOOL MARKET REPORT.

[From our own Correspondent.]

APRIL 8, 1896.

LINSEED is very firm in tone. Sellers have advanced their demands 3d. to 6d. per 416 lbs. over recent rates. 200 bags *Samsorn* sold at 33s. 6d., and ordinary *Turkish* at 34s. 6d. per 416 lbs. *ex quay*. CANARY SEED is quiet, with no change in prices to report. TURMERIC: *Cochin* finger and bulb have been selling well at late rates. GINGER: 25 tons of *African* new crop have been sold on private terms. A marked improvement in quality is noticeable in this last crop. GUM ARABIC continues very firm, and full prices are asked for the little offering. BEESWAX: 10 sacks of *Chilian* sold at £7 15s. per cwt. CASTOR OIL quiet at the following rates:—*Calcutta* good seconds, 2 $\frac{7}{8}$ d. to 2 15/32d. per lb.; *French* 1st pressure and *Madras*, each 2 $\frac{3}{4}$ d. to 2 $\frac{7}{8}$ d. per lb. OLIVE OIL: Slow demand, but recent prices well maintained. LINSEED OIL is firmer, but price is as last week, 19s. 9d. to 21s. per cwt. for *Liverpool* makes in export casks. COTTON-SEED OIL: *Liverpool* refined, 17s. to 17s. 6d. in export barrels. SPIRIT OF TURPENTINE: 21s. 3d. per cwt. PETROLEUM: *Russian*, 5 $\frac{3}{4}$ d. per gallon; *American*, 6 $\frac{3}{4}$ d. to 7 $\frac{1}{2}$ d. per gallon. CREAM OF TARTAR: Neglected, but price is nominally as last week. POTASHES: 21s. to 21s. 6d. per cwt. PEARLASH: 36s. 6d. per cwt. SALTPETRE: 100 bags *Calcutta* sold *ex quay* at 16s. 6d. to 16s. 9d. per cwt. NITRATE OF SODA: 8s. to 8s. 3d. per cwt.

MARRIAGES.

SMITH—EAST.—On April 2, at Tonbridge, by Rev. T. Hancocks, assisted by Rev. J. H. Blake, R. Sidney Smith, pharmaceutical chemist, of Loughton, to Laura, only daughter of Mr. Frank East, J.P.

WEST—HANCKETT.—On April 2, at St. Matthew's Church, Stretford, by the Rev. Dudley Hart, M.A., Rector, Henry Thomas, eldest surviving son of Thomas West, chemist, Stretford, to Fanny Victoria, only daughter of Mr. William Hanckett, of Belmont Place, Stretford.

TRADE NOTES AND NEWS.

MESSRS. BURROUGHS, WELLCOME AND Co. have considered it advisable to issue cerium oxalate in compressed form, owing to its constantly increasing administration in the treatment of the vomiting of pregnancy and of sea-sickness. As the tonic and sedative properties of cerium oxalate seem to be commending it more and more to prescribers, they anticipate that these new "tabloids," each containing five grains of the salt, will give excellent results in the treatment of pyrosis, gastrodynia, and various forms of dyspepsia, and of chronic, spasmodic, or phthisical cough. It is claimed that while the "tabloid" method of administering cerium oxalate equals all others in efficacy, it far surpasses them in convenience.

MESSRS. A. AND M. ZIMMERMANN are introducing a new preparation, called GLUTOL, for use as a surgical dusting powder. It is prepared by acting upon gelatin with formalin, and gives off formic aldehyde when dusted upon wounds, thus serving as an antiseptic.

MESSRS. EVANS, GADD AND Co., of Exeter, are issuing an attractive special summer circular, in which they give particulars of their spring and summer specialties, including toilet preparations, spring tonics, effervescent preparations, and flavouring essences. The articles are put up in good style, and provision is made for printing the retailer's name and address on the label if desired.

LATE ADVERTISEMENTS.

Business for Disposal.

CHEMISTS' BUSINESS, City, leading thoroughfare, commanding shop, low rent, for sale. Write to TRUSTEE, 21, Childebart Rd., Upper Tooting, S.W.

Assistants Wanted.

ISLE OF WIGHT.—A good JUNIOR. Apply, stating age, salary, and usual particulars, to VECTIS, care of Hearon, Squire & Francis, 38, Southwark St., S.E.

QUALIFIED ASSISTANT for Dispensing business, of good address. Apply, giving experience, salary, height, &c., to W. C. RICHARDSON, Promenade, Blackpool.

DIARY OF THE WEEK.

Secretaries of Societies are requested to send notices of forthcoming meetings not later than Wednesday in the previous week.

MONDAY, APRIL 13.

ROYAL INSTITUTION OF GREAT BRITAIN, at 5 p.m.
General Monthly Meeting.
ROYAL GEOGRAPHICAL SOCIETY, at 8.30 p.m.
"Popocatepetl and the Volcanoes of the Valley of Mexico," by O. H. Howarth.
SOCIETY OF CHEMICAL INDUSTRY, at 8 p.m.
Election of Officers for the Session 1896-7.
(1) "The Estimation of Moisture in Wood-Pulp," by R. W. Tindall.
(2) "A Study of Comparative Affinities in the Case of Certain Salts of Ammonia" (II.), by Watson Smith.

TUESDAY, APRIL 14.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"Child-Study and Education" (I.), by Professor James Sully.
ROYAL COLONIAL INSTITUTE, at 8 p.m.
"One Hundred Years of British Rule in Ceylon," by L. B. Clarence.
ROYAL PHOTOGRAPHIC SOCIETY, at 8 p.m.
Ordinary Meeting.
MIDLAND PHARMACEUTICAL ASSOCIATION, at 8 p.m.
Paper by J. Barclay, at Mason College.

WEDNESDAY, APRIL 15.

PHARMACY CLUB, at 6.45 p.m.
Dinner at the Café Royal, Regent Street.
GRESHAM COLLEGE, at 6 p.m.
"The Latency of Disease" (II.), by Professor E. Symes Thompson.
ROYAL MICROSCOPICAL SOCIETY, at 8 p.m.
Ordinary Meeting.
WESTERN CHEMISTS' ASSOCIATION, at 8.30 p.m.
Musical and Social Evening at the Westbourne Restaurant, 1, Craven Road, W.
MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION, at 9 p.m.
Discussion on the Shops (Early Closing) Bill and other matters.

THURSDAY, APRIL 16.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"Recent Chemical Progress" (I.), by Professor Dewar.
LINNEAN SOCIETY OF LONDON, at 8 p.m.
"Berkeley's Types of Fungi Re-described," by G. Massee.
"The Internal Anatomy of *Bdella*, Latr.," by A. D. Michael.
CHEMISTS' ASSISTANTS' ASSOCIATION, at 8.30 p.m.
Short Papers by Members.

FRIDAY, APRIL 17.

ROYAL INSTITUTION OF GREAT BRITAIN, at 9 p.m.
"Colour Photography," by M. G. Lippmann.
GRESHAM COLLEGE, at 6 p.m.
"The Latency of Disease," by Professor E. Symes Thompson.
EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION, at 9.15 p.m.
Annual Business Meeting.
ABERDEEN JUNIOR CHEMISTS' ASSOCIATION, at 9.30 p.m.
General Meeting.

SATURDAY, APRIL 18.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"The Vault of the Sixtine Chapel" (I.), by Professor W. B. Richmond.

SUPPLEMENT

TO THE

PHARMACEUTICAL JOURNAL.

MISCELLANEOUS NEWS.

NEW ADMIRALTY ORDER.—The Admiralty has within the past week issued a notice to medical dispensers engaged in the naval hospitals, placing those who have passed the Minor examination on an equal footing with those who have acquired the Major certificate. The order takes effect from April 1, 1896, and the average naval hospital dispenser will undoubtedly regard it with a kindly eye. Up to the present time only those who have passed the Major have been eligible to take charge of stores, and so become entitled to 2s. a day in home service, and 1s. a day abroad. It frequently happens, however, that on a foreign station only one dispenser is necessary, and unless he is a "Major" man he does not become entitled to the extra 1s. a day, although he may have full charge of a store, and have to do the extra work due to a storekeeper. To such individuals the new Admiralty order will come as a boon, but to those naval dispensers who have devoted time and money to preparing for the Major examination it is a trifle disappointing.

CASE UNDER THE SALE OF FOOD AND DRUGS ACT.—A case was heard at Clerkenwell Police Court on April 15, before Mr. Bros, in which Mr. J. C. Meacher, of 61, Stroud Green Road, N., was charged by the Islington Vestry with supplying the following mixture, deficient in iodine to the extent of 14.8 per cent., and containing an excess of 9.3 per cent. of potassium iodide:—

R Pot. Iodidi	grs. 99.
Iodini.....	grs. 66.
Aq. destil. ad	ʒij.
Ft. lotio.	

Defendant had maintained the accuracy of his dispensing when the case was first heard on March 25, and the trial was therefore deferred pending an analysis by the Somerset House authorities. As a result the proportion of iodine was found to be equal to 92.4 grains, and of potassium iodide 103.8 grains, in the 3 fluid ounces, both in excess of the quantities ordered. The magistrate decided to dismiss the case, and allowed the defendant 10s. 6d. costs.

THE KINNINMONT PRIZE.—Intending candidates are reminded that the competition will take place in May or June. Names should be sent before the end of April to Mr. William L. Currie, 223, Byres Road, Dowanhill, Glasgow, from whom all information may be obtained.

GLASGOW AND WEST OF SCOTLAND SCHOOL OF PHARMACY STUDENTS' ASSOCIATION, April 13.—Mr. P. Thomson read a paper on fermentation, in which he briefly sketched the present day theories, dealing with the subject to the advantage of those present. After a short discussion a hearty vote of thanks was awarded to Mr. Thomson for his instructive paper.

MIDLAND PHARMACEUTICAL ASSOCIATION AND CUTTING IN PRICES.—On Wednesday last a well-attended meeting was held under the auspices of the Midland Pharmaceutical Association, at the Grand Hotel, Birmingham, for the purpose of considering the report of the Trade Committee on the question of undue cutting. Mr. R. Darton Gibbs (President), occupied the chair, and a deputation was present from the Proprietary Articles Trade Association. Mr. W. Jones presented the report, which stated that the Committee had made various suggestions to the London Association, and in the majority of cases these had been adopted, notably the rejection of the rebate scheme, and the substitution of a scheme on lines similar to that of Elliman's. The Committee also suggested modifications of the composition of the P. A. Trade Association's Council, on which they thought the retail trade was insufficiently represented. These they regretted to say were not carried, but they hoped to see their modification adopted at some future time. The Committee offered the following recommendations to the meeting:—1.—That the members of our Association should become members of the Proprietary Articles Trade Association, as this being a National Association would have a greater weight and influence than a local one. 2.—That individual pressure should be brought to bear upon manufacturers who have not as yet joined the P. A. Trades Association, to supplement the efforts of the London Committee. 3.—That any scheme dealing with the guarantee of profit should not contain any system of rebate, which system they consider unworkable and unsatisfactory. 4.—That the system of bonus given by co-operative societies to their customers be fully considered and arranged for before any scheme of guaranteed profit is definitely settled. 5.—That members pledge themselves not to distribute handbills nor in any way assist the sale of any proprietary articles upon which a profit is not guaranteed, or whose proprietor has not joined the Proprietary Trades Association. 6.—That a Trade Committee of the Midland Pharmaceutical Association be permanently appointed. After a lengthy discussion it was unanimously agreed that the report should be received and adopted, and it was subsequently stated that every member of the retail trade present had joined the P. A. Trade Association.

IRISH DRUG CONTRACTS.—The annual drug contracts are now in full swing throughout Ireland, and local Boards of Guardians are busily engaged in examining tenders and reporting thereon. The majority of the contracts have up to the present been secured by Dublin chemical and drug firms, but owing to the severe competition, prices all round are "cut" to the finest possible margin.

A DIRECT SOLVENT FOR COTTON.—A chemical discovery of enormous public interest has just been made by a London analyst, who has already secured the assistance of the British Government for a practical test of its charms. This is no less than a direct solvent for cotton, which is itself volatile, and leaves behind it nothing but pure cotton cellulose—that is to say,

cotton fibre reduced to an amorphous pulp. This substance differs radically from nitro-cellulose, the highly inflammable and odorous compound which in one of its forms becomes gun-cotton and in another vegetable ivory. The possible uses of the new material are innumerable. It has already been experimentally moulded into buttons and billiard balls, being less than half the price of celluloid or xylonite, while the fact that it is incombustible will enable it to be adopted for many domestic uses for which the camphorated material is unsuited. When it is added that the specific form of the departmental encouragement above referred to is a definite contract for sacks in this new cotton pulp, to which the name of viscose is given, it will be understood that we are on the threshold of a new industry, in which Manchester is not unlikely to find itself directly interested. — *Manchester Evening News.*

WESTERN CHEMISTS' ASSOCIATION (OF LONDON).—The meeting of the Association held on Wednesday last, the 15th inst., at the Westbourne Restaurant, 1, Craven Road, W., was a "Musical and Social Evening," and there was, as usual on such occasions, an excellent programme of vocal and instrumental music.

ROYAL INSTITUTION.—A general monthly meeting of the members of the Royal Institution was held Monday, April 13, Sir James Crichton-Browne presiding. The following were elected members: Mr. Robert James Forrest, Major-General Sir Francis Grenfell, K.C.M.G., K.C.B., and Mr. M. W. Zambra.

MANCHESTER LITERARY AND PHILOSOPHICAL SOCIETY.—At a meeting of this Society, on April 14, Professor Reynolds exhibited a slab of Itacolomite, a flexible stone which is associated with the presence of the diamond. Mr. R. L. Taylor exhibited a simple form of apparatus for liquefying some of the more easily liquefiable gases by means of the compressed gas in an ordinary cylinder of oxygen. Mr. Barnes read an extract from a paper in the "Philosophical Transactions," for 1826, by Jacob Perkins, "On the progressive compression of water by high degrees of force, with some trials of its effects on other fluids," in which the writer described the liquefaction of air at 1000 or 1200 atmospheres, and of carburetted hydrogen at 40 atmospheres and upwards. As no cooling of these gases was described, it is obvious that the liquefaction could not possibly be accomplished, the temperatures being far above the critical points. Professor Dixon suggested that it was the aqueous vapour which condensed. This explanation seems most probable in the absence of any special attempt to dry the gases. Mr. Alfred Brothers exhibited two ruled plates containing 132 lines to the lineal inch, the plates when revolved on each other producing remarkable diaphragm effects. Dr. Bowman exhibited two receipts by Dr. John Dalton, dated respectively June 24 and September 29, 1831, for payments for private lessons in chemistry at 1s. 6d. each, as illustrating the low cost of scientific education sixty-five years ago.

MARKET REPORT.

[Specially compiled for the *Pharmaceutical Journal*.]

LONDON, APRIL 16, 1896.

There are only a few important changes to be noted in the Chemical Market this week. Citric and tartaric acids are quiet, whilst carbolic acid has declined in value. Cream of tartar is quite neglected. Copper sulphate is firm and arsenic still scarce. Amongst fine chemicals, the German camphor refiners have reduced their prices again, as seemed likely to occur last week, and the crude camphor market is very quiet. Menthol is very slow of sale, whilst of the various alkaloids, those of opium are very firm, caffeine and quinine being, on the other hand, quite neglected. The drug sales held to-day after a month's interval passed off very quietly without very startling changes. Both varieties of ipecacanha are cheaper, and the same applies to buchu leaves, and guaiacum gum. On the other hand, cardamoms and senna leaves are fully steady, whilst all varieties of acacia are dearer. Opium is very firm. Cod-liver oil quiet but steady, and Italian castor oil likely to go dearer. The spice, shellac, and oil markets do not present any very striking features. Full details will be found below:—

ACACIA (GUM).—The London market is very active for all varieties. There has been a very good demand for *Persian* so-called insoluble gum, which has sold privately at prices ranging up to 18s. for good sorts and 22s. to 26s. for fine picked. *Soudan* sorts have sold privately at prices ranging up to 120s. for fine soft. At to-day's drug sales a large catalogue was offered amounting to about 1100 packages, but holders were very firm, and only a moderate portion sold. *Trieste* gum was in small supply, and of eight cases £8 7s. 6d. to £8 12s. 6d. was paid for medium pale, £6 15s. for medium yellowish, and £6 15s. for pale grain. All the *Persian* and *Indian* gum was held for extreme prices except 5 cases of *Bombay* gum, which sold at 70s. per cwt. Cabled reports from Bordeaux advise a very strong market, and during the last few days an advance equivalent to about 12s. per cwt. has taken place in the prices of *Senegal* gum. The stock now on the spot is about 12,000 bags.

ACID, CARBOLIC.—The market is quiet, and quotations for *crystals* are easier, the following being the current rates:—*Crystals*: 34° to 35° C., 7d.; 39° to 40° C., 7½d.; 39° to 40° C. (*detached crystals*) 8½d. per lb. *Crude* is still quoted at 2s. 1d. per gallon for 60 per cent., with 75 per cent. at 2s. 6d. per gallon. *Liquefied* and *Cresylic* are unchanged at 1s. and 11d. per gallon respectively.

ACID, TARTARIC.—Remains quiet. *English* manufacturers quote 1s. 3d. per lb., whilst *foreign acid* (not guaranteed B.P.), both in *powder* and *crystals*, is offered at 1s. 1¼d. to 1s. 2d. on the spot. At the drug sales a parcel of *Cape argol* was offered, part of which sold at 45s. to 55s. per cwt.

ALOES.—A very moderate supply, amounting to about 200 packages, was offered to-

day. *Cape aloes*, of which 32 cases were shown, sold at an advance of fully 1s. per cwt., 24s. to 25s. being paid for good to fine bright hard, and 22s. to 23s. for medium ditto, part slightly drossy. No *East Indian* aloes was sold, 31 kegs of *Socotrine* being bought in at 35s. to 85s. per cwt. *Curaçoa*, in boxes, was bought in at 42s. for fair livery down to 20s. for damaged grades, whilst *Zanzibar* aloes, in tins, was withdrawn at 34s. per cwt.

ANNATTO SEEDS.—This article was again in large supply to-day, 79 cases being offered, but only seven found buyers, 1½d. being paid for dull *Ceylon* of damaged quality, and ¼d. for bad mouldy ditto. Good bright *Madras* seed was bought in at 6d. per lb. The spot stock is now greatly in excess of the demand.

ARECA NUTS.—Dearer. To-day five bags of good bold *Ceylon* nuts sold at 12s. 6d. per cwt.

ASAFŒTIDA (GUM).—Was represented in auction by 215 packages. The majority of this was however, withdrawn, but fourteen cases of ordinary soft block sold at 28s. to 30s. per cwt.

BENZOIN (GUM).—Continues slow of sale. To-day about 360 packages were shown. *Siam* gum, which was represented by 27 cases, sold at £20 15s. for medium pale loose almonds, £9 7s. 6d. for small pale almonds in block, and 49s. to 52s. 6d. for dark siftings in block, whilst pale siftings in block were bought in at 70s. per cwt. *Sumatra* gum was mostly bought in, but £8 7s. 6d. was paid for good pale almondy seconds well packed, £7 to £7 15s. for medium ditto, slightly false packed, and £6 5s. to £6 10s. for ordinary seconds, fair centres, false packed sides. Ordinary seconds *Palembang* were bought in at 35s. per cwt.

BUCHU.—About 130 bales were offered to-day, and for this only a moderate demand was shown, the prices paid showing a decline of fully 1d. per lb. For good round green leaves 3d. to 3¼d. was paid, whilst 2d. to 2¾d. was accepted for fair greenish ditto, and 1¾d. for round stalky leaves of fair colour. No long leaves were offered.

CACAO BUTTER.—Slightly firmer. In auction on Tuesday 500 cases, representing 50 tons of Cadbury's make, sold at 12¼d. to 13d. against an average of 12½d. per lb. at the March sales.

CALUMBA ROOT.—No inquiry is shown for this article in auction. To-day, ordinary *Zanzibar* sorts were bought in at 7s. per cwt.

CAMPHOR (CRUDE).—The market is quite devoid of interest, and prices are merely nominal. For arrival, *Iormosan* camphor is quoted at 142s. 6d., and *Japan* at 162s. 6d. per cwt., *c.i.f.* terms, April to June shipment. At the drug sales 70 tins of *Japan* camphor sold at 165s. per cwt.

CAMPHOR (REFINED).—In accordance with the general expectation, the *German* refiners have also reduced their prices following the drop in *English* camphor, and now quote as follows:—*Bells* and *flowers*, 1-ton lots, 1s. 10½d.; ½-ton ditto, 1s. 11d.; and small quantities 1s. 11½d. per lb. *Squares* are quoted at proportionate rates. The *English* refiners generally adhere to last week's prices of 1s. 11½d. for ½-ton lots of *bells* and *flowers*, but one of them on Monday fixed his price at 1s. 10½d.

CANELLA ALBA.—Three bales of fair

mixed quill imported from New York sold in auction at 22s. per cwt.

CANNABIS INDICA.—Brown stalky tops were bought in to day at 2d., and greenish ditto at 3½d. per lb.

CARDAMOMS.—The supply offered in auction to-day was again large, amounting to over 200 packages, and a fully steady market was shown on the average prices, although in some cases the better kinds were rather easier. The following prices were paid. *Ceylon-Mysore*: Medium full palish, 3s. 1d.; medium long pale, 2s. 9d. to 2s. 10d.; small to medium broad, 2s. 4d. to 2s. 7d.; small to medium brownish, 1s. 8d. to 2s. 2d. down to 1s. 1d. for small shrivelled and split. *Ceylon-Malabar*: Medium round palish sold at 2s. 1d. per lb. *Seed*: Fully steady, from 3s. to 3s. 2d. being paid in auction.

CASCARILLA.—This article is rather irregular in price, but sold somewhat cheaply to-day, 20s. being paid for two bales of damaged greyish stringy bark. Privately 60s. per cwt. has been paid for good quality silvery quill, which shows a firmer market.

CASSIA FISTULA.—Fourteen baskets of lean wormy pods sold to-day at 17s. to 17s. 6d. per cwt.

CINCHONA.—A moderate catalogue was offered at the monthly sales. The majority consisted of *East India* growths, mostly comprising good manufacturers' bark, but no *Ceylon* was offered. The result of the sales shows a fully steady market, although at the outset bidding was slow. The average unit remains unchanged at ½d. per lb. The following prices were paid: *East India*: *Succirubra* chips and shavings, ¾d. to 1¼d.; renewed ditto, 1½d. to 2½d.; fine mossy quill 8½d.; ordinary damaged ditto, 3½d. *Officinalis* stem chips and shavings, 1½d. to 2½d.; renewed ditto, 2d. to 3¼d. *Java*: *Ledger* natural stem, 3¼d. to 3½d., branch, 2½d. to 3d., and root: 1½d. per lb. *South America* *Calisaya* quills 3¼d.; *Carthagena* 1¼d. *Africa*: Broken to fair quill 1½d. to 2¼d. At the drug sales 14 serons of *Crown* bark sold at 7d. to 8d. for sound, and 5d. for damaged quill.

COAL DISTILLATION PRODUCTS.—Are mostly unchanged. *Toluol* is returned at 2s. per gallon for *pure*. *Benzole*: 50 per cent. is still worth 2s. 8d., and 90 per cent., 2s. 1d. per gallon. *Creosote*: 1½d. per gallon. *Crude Naphtha*: 30 per cent., at 120° C., quotes at 10d. per gallon. *Pitch*: 33s. per ton, *f.o.b.* *Tar*: Refined quotes at 12s. 6d., and *crude* at 11s. 6d. per gallon.

COCCULUS INDICUS.—A parcel of 102 bags offered to-day, imported from *Cochin*, were bought in at 8s. per cwt.

COLOCYNTH.—*Turkey* colocynth is decidedly easier. To-day, when about 33 packages were offered, 2s. 2d. to 2s. 4d. was paid for fair quality apple. Privately 1s. is still asked for sound Spanish.

COPAIBA (BAISAM).—Good qualities are firmly held, and none was offered in auction. Privately, bright *Para* is quoted at 1s. 5d., good *Maranhã* at 1s. 4d., and *Bahia* at 1s. to 1s. 4d. per lb. for dark and mixed quality.

CROTON SEEDS.—This article, which is very scarce, and whenever offered in auction is readily bought up, was represented to-day by 10 bags, which sold at 65s. per cwt.

CUBEBS.—No inquiry is shown for this drug in auction. To-day fair *Singapore*

berries without stalk were bought in at 32s. 6d. to 35s. per cwt.

DRAGON'S BLOOD.—An average supply of about 30 cases was offered. Of this a few lots sold at £7 10s. for fairly bright *Singapore* lump, but the majority was bought in at £6 for dark saucers, £8 for dull reeds, and £7 17s. 6d. for lump.

ERGOT OF RYE.—Very slow of sale. To-day 5½d. was paid for fifteen bags of fair *Russian* ergot, and 1½d. to 2d. for very wormy *Spanish*. Sound *Spanish* was bought in at 9d. to 10d. per lb.

GAMBOGE.—About 70 packages were offered to-day, but proved very slow of sale. For fair mixed blocky pipe, £8 17s. 6d. was paid, whilst fair to common pickings sold at £7 5s. to £6 5s. per cwt.

GENTIAN ROOT.—Steady, but slow of sale. Twenty-three bales of good *French* root were bought in to-day at 23s. per cwt.

GINGER.—In auction *Cochin* proved slow of sale, and the majority of the rough kinds were bought in, except 20 bags, which sold at 34s. per cwt. Bold cut *A* sold at 30s., and medium, part cut, at 43s. *Jamaica* root was in good demand, and nearly all was sold at fully steady rates for low qualities, whilst better kinds realised dearer rates.

GUAIACUM (GUM).—This article sold at a big drop to-day, 10½d. to 1s. 1d. being accepted for fair glassy block, according to fracture. These prices show a decline of about 40 per cent.

HONEY.—Very dull of sale. Not a single package found a buyer out of about 350 offered. *Californian* was bought in at 35s.; *Jamaican* at 20s. to 24s.; *Australian* at 21s.; and *Italian* at 26s. to 37s. per cwt.

HYDROKINONE.—*Schering's* price for 28 lb. quantities of this developer has been raised 2d. per lb, but the quotation for 56 lb. lots still remains 6s. 6d. per lb.

IPECACUANHA.—The market is decidedly easier, but prices are irregular. At the commencement of the sale *Rio* (Brazilian) root sold at a decline of quite 2d. per lb., but afterwards it firmed up and closed at a decline of about 1d. only. The prices paid to-day were 5s. 9d. for fine annulated plump root, 5s. 3d. to 5s. 6d. for fair to good sound annulated, 5s. to 5s. 2d. for ordinary, and 4s. 7d. (subject) for low damaged root. *Carthagena* (Columbian) root was also decidedly easier, 4s. 1d. being accepted for fair stout root in good condition.

JUNIPER BERRIES.—To-day 50 bales of good quality fine *Leghorn* were bought in at 20s. per cwt.

KINO (GUM).—A case of astringent gum catalogued under this name was bought in to-day at 20s. per lb. after a bid of 12s. 6d. had been refused.

KOLA NUTS.—Very dull of sale. To-day out of 78 packages, the only lot sold was 2 bags of good sound *Grenada* nuts, which fetched 1s. per lb. Undried kolas were bought in at 6d. to 7d., after 4¾d. had been refused.

LIME JUICE.—*Jamaican* juice was bought in to-day at 1s. 3d. per gallon, whilst 5 barrels of *Antiguan* sold at 1s. 1d. Twenty-four pipes of *lemon juice* were bought in at 1s. 3d. per gallon.

MENTHOL.—The market is exceedingly flat. On the spot, 12s. 3d. has been paid for small lots of *crystals* during the week, and this price to 12s. 6d. is now the current

quotation. The last shipment quotation was 11s. 6d., *c.i.f.* terms. At the drug sales 10 cases of *Raspe's* menthol (from *Yokohama*) were bought in at 12s. 3d., and *Cocking's* at 17s. per lb.

MYRRH (GUM).—Still very quiet. Although 113 packages were offered, only a single case of fair pickings sold, which realised 30s. per cwt.

OIL (COD-LIVER).—The market is rather quiet, but prices are firm generally, although the fact that some of the prominent brands have recently been brought more on a par with the others leads to an impression that the market is much easier. There is still little to be had under 225s., this being the price generally asked for new season's *Norwegian* oil. The fishing season in *Lofoten* is now practically over, and fish are becoming scarce. The last report states that the production of steam refined oil in this district amounts to 6650 barrels. Holders on the spot ask 215s. per barrel for 1895 oil, but there is only a small amount available. *Newfoundland* continues to sell privately at 6s. 6d. per gallon for good quality.

OILS (ESSENTIAL).—*Star Anise*: The market is easier, and although 10s. 3d. has been refused earlier in the week, this price would now be generally accepted. *Japan* peppermint oils are very slow of sale, and oil testing 40 per cent. of menthol now offers at 6s. to 6s. 3d. per lb. on the spot, with *dementholised* at 4s. 6d. *Citronella* (in drums) offers at 1s. 7d. to 1s. 8d. per lb. on the spot. *Cassia* is quoted at nominal rates, oil of 65 to 70 per cent. aldehydic strength being offered at 6s. 6d. per lb. *Juniper wood* fine quality *Hungarian* oil offers at 1s. 4d. per lb. on the spot. At the drugs sales two cases of oil labelled *Pimento* oil (English) sold at 3s. 5d. per lb. *Rose* oil fetch 4d., and settlings ½d. per oz. In addition, *Eucalyptus* was bought in at 1s. 6d. per lb. for the *Cygnat* brand, *White Japan Camphor* oil (from *Kobé*) at 47s. 6d. per cwt., *Cinnamon leaf* oil at 7d., and *Cinnamon bark* oil at 1s. per oz.

OILS (FIXED) AND SPIRITS.—*Castor*: It is said that owing to the bad prices now obtainable for *Italian* oil only a small acreage will be sown this year, and in consequence higher prices are likely to follow. At present fine quality oil quotes at 30s. 6d. to 31s. per cwt. *c.i.f.* terms. *Cotton* is very firm at an advance of about 5s. *Refined* oil being now quoted at £16 5s. to £16 15s. on the spot. *Coco-nut* is rather easier. *Ceylon* being now worth £21 15s. to £23; and *Cochin* £22 15s. to £27 on the spot. *Linseed* is quiet at the unchanged rate of £19 2s. 6d. for oil in barrels on the spot. *Rape* is rather easier, *refined* oil being now quoted at £23 15s. to £24 5s. on the spot. *Turpentine* is a very firm market at a further advance, and *American* spirit is now quoted at 20s. 4½d. to 20s. 6d. on the spot. *Petroleum* oil is quiet, but steady, *Russian* oil being quoted at 5½d. to 5¾d., *American* at 5¾d. to 5½d., and *water white* at 6¾d. to 6½d. *Petroleum spirit*: *Ordinary*, 9d. to 9¼d.; *deodorised*, 9¼d. to 9¾d. per gallon.

OPIUM.—The London market is very active, and quotations are about 6d. dearer all round, the following being the current quotations for *Turkey* opium:—*Soft shipping*, 12s. 6d. to 13s. 3d.; *Smyrna*,

9s. 6d. to 9s. 9d.; *Constantinople*, 9s. 6d. to 10s.; and *druggists' seconds*, 8s. 6d. to 9s. *Persian* opium is steady at 13s. for fine bricks. *Opium alkaloids* are exceedingly firm, and although prices are at present unchanged, an advance is very probable. At to-day's drug sales ten cases of *powdered opium*, a portion of the salvage of the ss. "Missouri," the drug being more or less damaged by water, sold at 7s. 3d. to 7s. 6d. per lb. Another case, offered as "opium," but which was almost entirely composed of "hashish," was bought in without a bid.

ORANGE PEEL.—A very large supply was catalogued, but only a few bales found buyers, 2¼d. being paid for ordinary dark, and 4d. for fair thin *Maltese* peel.

ORRIS ROOT.—Lean dark *East Indian* root from *Aden* was bought in to-day at 35s., and good pale *Florentine* root at 70s. per cwt. A cask of *orris root* in small pieces sold without reserve at 44s. per cwt.

RHUBARB.—Very quiet, but prices are unchanged. About 25 cases out of 166 sold, 10½d. being paid for flat medium pinky *high dried*, 8¾d. to 9d. for medium and bold ditto very slightly wormy, 1s. 1d. for *Canton* trimmings, and 1s. 5d. for good medium flat *Shensi*.

SARSAPARILLA.—Very quiet. *Honduras* of damaged quality sold to-day at 1s. to 1s. 1d. per lb., whilst 4 bales of "Smilax" (*East Indian sarsaparilla*) realised ¾d. per lb.

SEEDS (VARIOUS).—*Coriander*: On Wednesday ordinary coarse *Bombay* seed was bought in at 10s. per cwt. *Canary*: *Turkish* was bought in at 31s. per 64 lbs., whilst *River Plate* sold without reserve at 26s. 6d. *Fennel*: Fifty bags of *Turkish* sold at 16s. 6d. per cwt. *Aniseed*: *Spanish* seed sold at 30s. per cwt.

SHELLAC.—The market is slow. Privately business has been very slack, although for arrival a rather firmer tone is noticeable, and *Second Orange* has sold in second hand at 91s. 6d. to 92s. *c.i.f.* terms. The sales went off quietly, and only about one-third of the catalogue was sold, the prices showing a decline of about 2s. on the last sale rates of *second orange*, whilst *Garnet* was firm, but *Button* easier. The following prices were paid:—*Fine Second Orange*: Good bright *AA* in circle, 95s. to 96s., and ditto part hard block, 91s. *TN Orange*: Good bright cakey, 91s., dull flat free, 90s., and hard block, 86s. to 88s. *Garnet*: Fine free *AC*, 89s.; *Button*: Fair *BL2*, 86s. to 87s., circle is 80s., and resinous block, 80s. to 81s.

TAMARINDS.—Slow of sale. At the spice auctions, new *Barbadoes* were bought in at 20s. per cwt., whilst 14s. 6d. was paid for part of another parcel.

TURMERIC.—Continues very slow of sale. In auction on Wednesday, lean *Bengal* of fair quality was bought in at 8s. per cwt., and good bright *Madras* at 10s. 6d. per cwt.

WAX (BEES).—Very firm. To-day *Jamaican* sold at £8 7s. to £8 10s. 6d.; *Zanzibar* at £6 10s.; *Madagascan* at £6 15s.; *African* at £6 15s.; *East Indian* at £6 2s. 6d.; *San Domingo* at £6 7s. 6d.; and *Australian* at £7 7s. 6d.

WAX (JAPAN).—The market is very firm, and for good pale *squares* 37s. 6d. is still asked on the spot, whilst for delivery 42s. 6d., *c.i.f.*, is the current quotation.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Books, etc.

All free. Plesse's 'Art of Perfumery,' scarce, 8s. 6d.; Professor Parker's 'Zootomy,' illustrated (8s. 6d.), 4s.; Newman's 'British Ferns' (pub. 12s.) and three other illustrated fern books, 7s. 6d.—Davies, 33, Eglinton Road, Bow.

What offers? 'Pharmaceutical Journal' from 1842 to 1867, 25 vols., all neatly bound; 'Year-Book,' 1871 to 1895, complete.—Garva, Chemist, Lower Clapton Road, N.E.

A book of 130 Well-tryed Recipes for Chemists and Druggists, comprising well-selected formulæ for general, remedial, veterinary, toilet, and everyday preparations. Post free, 1s. 6d.—Tully, Chemist, Hastings.

Pratt's 'Poisonous Plants,' coloured plates, 3s.; John's 'Flowers of the Field,' 2 vols., 6s.; Tyas' 'Wild Flowers of England,' coloured plates, 3s. 6d. All like new. Free.—Davis, "Chestnuts," Gordon Hill, Enfield.

Soda-Water Appliances.

Soda-Water Machine, Barnett and Foster's, No. 2; list price £45; sell for £15; good condition.—Apply to H., 1, Southwick Street, Hyde Park.

Miscellaneous.

Chemist's Stock, Utensils, etc. Offers are invited for the stock, fixtures, and working utensils of a chemist's shop; in good condition.—A., 33, Fernhead Road, Paddington.

Sulphur Tablets 6-7 lb. boxes, 1 box 6½d.; 6 boxes at 6d. lb.; Tinnevelly Senna, 9d. lb., unpicked ditto, 6d. lb.—Johnson, Chemist, Edward Street, New Cross.

WANTED.

'Veterinary Counter Practice,' 'Minor Ailments,' set of extraction forceps, or single ones. Send fullest particulars and lowest price to—Alford Rogers, Chemist, Llanelly.

Wanted, Roscoe's 'Elementary Chemistry'; 'The Art of Dispensing'; and Ince's 'Latin Grammar'; must be latest editions, cheap, and in good condition.—Address offers "Cerofox," 5, Serle Street, W.C.

Wanted, second-hand, Atfield's 'Chemistry,' and Prantl and Vines' 'Botany.'—M. S. Rostrevor, Eaton, Norwich.

Wanted, Chemical Balance, second-hand, must be perfect.—Particulars and price, W. Forster, Railway Street, Seaham Harbour.

NEWCASTLE CHEMICAL REPORT.

[From our own Correspondent.]

APRIL 14, 1896.

Shipping orders from the Baltic upper ports are now more in evidence, but not to any material extent. Bleaching powder is inquired after. Caustic soda and alkali coming in rotation. Soda crystals are slow, except for home business. Sulphate of ammonia is moving a shade more freely. Prices on the whole little altered:—BLEACHING POWDER: £7 5s. to £7 10s., according to packages. SODA CRYSTALS: In bags, 36s.; in casks, 45s. CAUSTIC SODA: 76 to 77 per cent., £9 5s.; 70 per cent., £7 10s. to £7 15s. SULPHUR: £3 17s. 6d. to £4. ALKALI: 48 per cent., £4 10s. SODA ASH: 48 per cent., £3 15s. HYPOSULPHITE: £6 10s. to £7. SULPHATE OF AMMONIA (Leith): £8 10s. PITCH: 35s. SOUTH DURHAM SALT: For agricultural purposes, 8s. 6d.; shipment, 9s., *f.o.b.*, Tees.

LIVERPOOL MARKET REPORT.

[From our own Correspondent.]

APRIL 15, 1896.

KOLA NUTS: Dried, 3¼d. to 4¼d.; fresh, 6d. CHILLIES: *Sierra Leone*, 32s. 6d. GINGER: 20s. to 20s. 3d. GUM ARABIC: Extreme prices asked for "sorts." BEES-WAX: *Sierra Leone*, £6 17s. 6d. CASTOR OIL: *Calcutta* good seconds, 2¾d. to 2⅞d.; *French* 1st pressure and *Madras*, 2¾d. to 2⅞d. OLIVE OIL: Better class *Spanish* oils, £29 to £29 10s.; *Syrian*, £28 to £28 10s. LINSEED OIL: *Liverpool* makes, 19s. 9d. to 21s. COTTON-SEED OIL: *Liverpool* refined, 17s. to 17s. 6d. TURPENTINE: 21s. 6d. PETROLEUM: *Russian*, 5¼d.; *American*, 6¼d. to 7¼d. SAL AMMONIAC: First quality, 39s. COPPERAS: *Lancashire*, 38s. SULPHATE OF COPPER: £18. BLEACHING POWDER: £7 to £7 5s. PRUSSIAN OF POTASH: 7½d. CREAM OF TARTAR: Prices uncertain and only nominal. POTASHES: 21s. PEARLASH: 36s. 6d. CHLORATE OF POTASH: 4¼d. BICHRIMATE OF POTASH: 4¼d. BICARBONATE OF SODA: £7. SODA CRYSTALS: £2 10s. CAUSTIC SODA: 70 per cent., £7 12s. 6d. to £7 15s.; 60 per cent., £6 12s. 6d. to £6 15s.

TRADE NOTES AND NEWS.

MESSRS. BURROUGHS, WELLCOME AND Co. have a few spare copies of the 'Chemists' Vest Pocket Diary for 1896,' and it will give them great pleasure to forward one of these to any apprentice or assistant who will send a post-card requesting a copy, stating at the same time the name of the pharmacist with whom he is living.

MESSRS. DOWDEN AND Co., LIMITED, of St. Paul's Lane, Bournemouth, supply a saleable novelty in their CONCENTRATED FRUIT CRYSTALS. These are flavoured with citron, clove, ginger, lemon, lime, raspberry, etc., and only require mixing with boiling water and sugar to make agreeable drinks for summer weather.

MR. J. H. HAYWOOD, of Nottingham, is the patentee of a new seamless pad for trusses, which can easily be detached for washing, an extra pad replacing it meanwhile.

MESSRS. ARNOLD AND SONS, of West Smithfield, E.C., make a clinical thermometer with flattened back, the case of which is similarly shaped, so that neither thermometer nor case can roll off the table when placed thereon. The scale is on the back, and it is thus rendered more easy to take accurate readings, the mercury column not being obscured by the figures and graduations, or shadows cast by them.

APENTA WATER is found by Professor Tichborne to contain per gallon—

Magnesium sulphate	1474 grains.
Sodium sulphate	1307 "
Calcium sulphate	184 "
Sodium chloride	123 "
Magnesium bromide	traces.
Lithium salts	} weighable quantities.
Iron salts	
Potassium	

He describes it as a strong purgative, bitter water, most pleasant to the palate, and possessing special properties, which are found combined in very few natural mineral waters.

DIARY OF THE WEEK.

MONDAY, APRIL 20.

SOCIETY OF ARTS (CANTOR LECTURES), at 8 p.m.
"Precious Stones," by Professor H. A. Miers.

TUESDAY, APRIL 21.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"Child-Study and Education" (II.), by Professor J. Sully.

WEDNESDAY, APRIL 22.

PROPRIETARY ARTICLES' TRADE ASSOCIATION, at 8.30 p.m.

Meeting of Local Chemists in the Masonic Hall, Goldsmith Street, Nottingham, to consider the Anti-Cutting Question.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION, at 9 p.m.

"The Spectroscope and some of its Work," by F. Smith.

BRITISH PHARMACEUTICAL CONFERENCE at 4.30 p.m.
Meeting of Executive Committee, at 16, Bloomsbury Square.

THURSDAY, APRIL 23.

CHEMICAL SOCIETY (BURLINGTON HOUSE), at 8 p.m.

"On the Temperature of Certain Flames," by Professor W. N. Hartley, F.R.S.

"Halogen Additive Products of Substituted Thiosinnamines," by Augustus E. Dixon, M.D.

"The Constitution of Cereal Celluloses," by C. F. Cross, E. J. Bevan, and Claud Smith.

"An Apparatus for the Detection of Boric Acid," by W. M. Doherty.

"Ethereal Salts of Optically Active Malic and Lactic Acids," by Professor Purdie, F.R.S., and S. Williamson, Ph.D.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 8.30 p.m.
"Cinderella Dance" at the Portman Rooms.

LIVERPOOL CHEMISTS ASSOCIATION.
"Notes on Cream of Tartar, Sodium Bromide and Extract of Malt," by M. Conroy.

FRIDAY, APRIL 24.

ROYAL INSTITUTION OF GREAT BRITAIN, at 9 p.m.
"The Circulation of Organic Matter," by Professor G. V. Poore.

SATURDAY, APRIL 25.

ROYAL INSTITUTION OF GREAT BRITAIN, at 8 p.m.
"The Vault of the Sixtine Chapel" (II.), by Professor W. B. Richmond.

ROYAL BOTANIC SOCIETY, at 3.45 p.m.
Ordinary Meeting.

LATE ADVERTISEMENT.

Engagement Wanted.

ASSISTANT or Branch MANAGER. Unqualified. Married. Out-door. Good London experience, prescriber and extractor. Good salesman. Disengaged early in May. Address, STEWART, Assistant Manager, care of Portway & Co., 225, Jamaica Rd., S.E.

SUPPLEMENT

TO THE

PHARMACEUTICAL JOURNAL.

MISCELLANEOUS NEWS.

PETITIONS continue to be deposited on the table of the House of Commons in favour of legalising the metric system of weights and measures in this country. The latest additions are from Newcastle, Leicester, and Hull. Six memorials adverse to the Early Closing Bill have also been recently received. Five of these are London memorials.

REPORTED NEW SOURCE OF PLATINUM.—If the reports to hand are true, there ought shortly to be a big drop in the price of platinum, for it is stated that a rich seam of platiniferous lead over a mile long has been discovered in New South Wales. The ore is said to yield seventy-five per cent. of platinum. This ought to be a good thing for the users of platinotype paper.—*Photography.*

REFUSAL OF A CHEMIST'S APPLICATION FOR A WINE LICENCE.—The annual licensing Court for Dingwall burgh was held on April 14th, when the only new application before the court was one by Mr. J. M. Frew, chemist, for a "medicated wine" licence. Mr. Frew said he had been informed that the case had been somewhat prejudged, and he asked the Justices to dismiss from their minds the opinions of newspapers or persons interested. The Provost said the Justices were there to do their duty, irrespective of any comments from any quarter. He had made inquiries on the subject, and had ascertained that in law there was no such thing as a "medicated wine" licence. Any licence that would be given would require to be a wine licence purely and simply. He had ascertained that there was no inconvenience felt in the matter by the other chemists in town, and the application must therefore be refused.

VOLUNTARY EARLY CLOSING.—The mid-week half-day holiday is now extensively adopted by Hunslet shopkeepers, the latest recruits to the movement being the chemists and druggists, who have decided to close their premises every Wednesday afternoon up to the last Wednesday in October.

DAMAGE TO AERATED WATER BOTTLES.—A number of lads were summoned at the Sheffield Police Court, on April 17, on a charge of doing wilful damage to mineral water bottles. The prosecutor was Mr. B. Chapman, mineral water manufacturer, of Sheffield, who stated that the mineral water manufacturers were heavy losers by the mischievous practice of boys in destroying bottles in order to obtain the indiarubber rings and the stoppers. They played at marbles with the stoppers and made chains of the rings. The lads in question were discovered smashing a number of Mr. Chap-

man's bottles in order to obtain the rings and stoppers. Mr. Chapman having stated that he brought the case as a warning and did not wish to press it, a fine of 2s. 6d. each defendant was imposed.

DEATH UNDER CHLOROFORM.—On Saturday, April 18, a protracted inquiry was held at Idle, near Bradford, before Major Taylor, district coroner, into the circumstances attending the death of Lavinia Sawdon, 15, a domestic servant, who died while under the influence of chloroform, administered by Joseph Priestley, who has practiced dentistry at Idle for about seven years, but whose name does not appear on the register. Priestley used about half an ounce of chloroform, which was administered in two doses. The patient's condition suddenly became alarming, and medical aid was summoned, but death occurred before the doctor arrived. Dr. Honeyburne stated that he had conducted a post-mortem examination of the body, and in his opinion the cause of death was chloroform. There was nothing else that could account for it, no traces of weakness or disease. Having regard to the healthy condition of the deceased and the quantity of chloroform administered, he was not surprised at the result. The jury, after deliberating in private, returned a verdict of manslaughter against Priestley, who was immediately placed under arrest.

PROFESSOR LOISETTE, of the School of Memory, 200, Regent Street, W., is forming special correspondence classes for matriculation, Civil Service, and Privy Council Certificate students, which will be continued during the summer session.

NEW LABORATORY AT BATH.—In the new municipal buildings, opened by the Right Hon. Sir William Hart-Dyke at Bath, last week, is a chemical and physical laboratory, situated on the second floor. It is arranged for twenty-four students in chemistry, and for the same number in physics.

BEESWAX NOT A DRUG.—At the Neath County Police Court, on Friday, April 17, Elizabeth Morgan, described as a grocer, of Aberdulais, was charged with selling four ounces of beeswax, which was not of the requisite quality, to P.S. Evans, on the 17th March. The majority of the Bench decided that beeswax was not a drug, and the case was dismissed.

MR. W. H. PASSMORE, son of Mr. E. Passmore, late of Grilstone, Northmolton, has been appointed demonstrator in materia medica at the Charing Cross Hospital.

NEW CHEMICAL LABORATORY AT BIDEFORD.—In the Bideford New Science, Art, and Technical School, in aid of which a bazaar was held last week, is a chemical laboratory, 25 feet by 20 feet. It is fitted with fume closets and Hooftman hood and there are benches, elaborately fitted with gas jets, connections and tubes, etc., for sixteen students.

PHARMACEUTICAL CHEMISTS AND APOTHECARIES' ASSISTANTS' ASSOCIATION OF IRELAND, April 17.—Mr. J. B. Alister, M.P.S.I., President, in the chair.—Mr. G. T. Nagle, L.P.S.I., read a paper on—

PLASTER SPREADING.

Mr. Nagle introduced his subject by a brief allusion to the growing fashion for drugs and medicinal compounds prepared by machinery instead of by hand. Since the introduction of machine-made plasters the art of spreading had become more honoured in the breach than in the observance, and at present it threatened to become lost. But as candidates for the licence of the Pharmaceutical Society occasionally found the subject of plaster spreading cropping up in the questions on practical pharmacy, it might be well to consider the art of spreading blisters, etc., as one likely to survive. They all knew that plasters were substances intended for external use, and of such consistence that they adhere to the skin, and required the aid of heat in spreading. The word plaster was applied not only to the solid substance used in spreading upon the muslin, leather, or other substance which served to hold it, but to the spread plaster itself. The basis of most of the official consisted either of lead plaster, gum resin, or Burgundy pitch.

Care was requisite in the preparation of plasters lest the heat applied be too great, as this would produce decomposition, and if long continued would drive off any volatile ingredient which might be contained in the plaster. A good plaster when spread should remain soft, pliable and adhesive, and ought not to melt at the heat of the human body. When plasters were kept any length of time they were liable to become brittle and hard and an alteration of colour took place, commencing on the surface of the plaster. It was evident from this that the atmosphere had something to do with the change, and it was therefore necessary to protect the plaster from air as much as possible by placing antiseptic muslin over the face of the plaster and afterwards storing in suitable cardboard boxes or air-tight presses. Should the plaster become hard despite these precautions, it might readily be softened by lightly brushing it with spirits of camphor or olive oil, and then gently warming it.

Leather seemed to be the most used for spreading plasters upon, especially those known in trade as hemlock splits, and the leather answered the purpose admirably, especially when the plaster was to be applied to the sound or unbroken surface, but muslin was preferable when the application was to be made to an abraded surface, or for drawing together the edges of cuts, because of its greater pliability as compared with leather: it could, moreover, be adjusted more easily to the shape of the part to which it was to be applied.

Brown paper spread with tallow or Burgundy pitch formed a favourite household plaster amongst the inhabitants of rural districts, and the power of healing pains, ague, and banishing witchcraft was ascribed to it. This kind of plaster was not, however useful, sufficiently elegant for the pharmacy, but it served the apprentice admirably for practice in the laboratory on account of its inexpensiveness. Silk only turned in for the finer descriptions of plaster, such as court

plaster, etc. The porous linen plasters did not seem to be any better than the ordinary ones, as the holes became choked up as soon as the plaster got heated. Sheet-tin shapes were the best for plasters, and a liberal stock of them should be kept in every pharmacy. The use of these shapes saved time and trouble, and obviated the necessity for fastening the foundation of the plaster to the counter, as was sometimes done. An adhesive margin should in all cases be attached. The plaster iron most to be recommended was that which was heated by means of gas. The iron had a detachable india-rubber tube, one end of which was attached to a gas burner, and the other end to the handle of the iron, and the gas was lighted at the back of the blade, thereby ensuring a uniform heat, and the iron could be used to spread any quantity of plasters desired without the necessity of heating and cleaning, as had to be done with the old style of iron. A sufficient portion of the plaster to be spread should first be melted by the heated iron, and having been received on a piece of coarse stiff paper or in a shallow tin tray open at one side, should, when nearly cool, be transferred to the leather and applied quickly and evenly over its surface. By this plan the melted plaster was prevented from penetrating the leather, as it would be apt to do if applied too hot.

When sending out a plaster the surface should be covered with antiseptic muslin, over which might be placed a sheet of specially prepared paper with printed directions for its removal before applying the plaster, and also the length of time the plaster was to be kept on the user. Specially prepared plasters should bear no advertising matter, as such smacked too much of the machine-made article. The plaster should be made up for transmission in a cardboard box to prevent crushing in transit. Explicit directions as to use should also be given, and if this were invariably observed the joke about the country joiner who applied a plaster to his chest—of tools—would not have arisen. The essayist here showed a quantity of specimen shapes cut out of cardboard and painted with a solution of permanganate of potash to resemble the genuine article, and commented at some length on an important plaster for face-ache and neuralgia of the fifth nerve, called "emplastrum hirudo," from its resemblance to a leech; this plaster was composed of menthol spread on linen. Another plaster for the breast was exhibited. This should always have a slit let into the sides to fit the convexity of the breast, and have an aperture for the nipple to be uncovered, a desideratum which machine-spread plasters did not possess. A plaster for the kidneys attracted much attention. It was saddle-shaped, the wings covering the region of the kidneys and the main portion extending along the spine.

The paper was well received and discussed by a number of members. Mr. Payne disagreed with the use of sheet-tins, and deprecated the practice of nailing the foundation of the plaster to the counter. This method interfered with the turning round of the groundwork. He suggested the use of an artist's board, and thought the plaster could be attached thereto by means of drawing pins. He would

include chamois leather as a plaster back. English physicians greatly approved of this leather. Mr. Hardy, L.P.S.I., thought the new belladonna plasters in the British Pharmacopœia were inferior to those prepared under the old method, which ensured a more uniform temperature and consequently better melting. Mr. Ewing's plan was to melt his ingredients in a galley-pot heated on a warm bath. He deprecated the use of the plaster iron, and preferred to use a spatula. He gave his opinion as to the correct method of spreading a plaster. Mr. Hunt, L.P.S.I., strongly condemned the machine-made plaster. He believed they were not prepared in accordance with the official formulæ, as something had to be added to keep them from decomposing. The "thumb" spreading practice, and also the use of vaselin paper in connection, were condemned by Mr. Nagle, to whom a vote of thanks was accorded for the paper.

Messrs. D. GALBRAITH, pharmacists, Londonderry, and Leslie and Co., wholesale druggists, Dublin, have been appointed drug and medicine contractors to the Letterkenny Union and the South Dublin Union respectively. On each occasion six tenders were received. In the case of Dublin the highest tender was £1321, and the cheapest (Leslie's) £974 for the same articles.

PHARMACEUTICAL SOCIETY OF IRELAND.—At an examination for Registered Druggist Licence held at Queen's College, Belfast, the following have passed:—Messrs. W. C. Adams, J. S. Balmer, J. Goudy, and J. Moore. Five candidates were rejected.

A SERIOUS ACCIDENT occurred at Dublin to Dr. Alexander Gordon, L.P.S.I., on Friday, the 17th instant, while driving. The doctor had just turned into the crowded thoroughfare of College Green when he observed an old man right before him, whom he only avoided running over by pulling his horse down, but in doing so was himself thrown on the roadway—fracturing one of his legs. He is at present under the care of Surgeon Hulston, M.D., and is progressing favourably.

PROFESSOR DIXON has returned from the United States, and has resumed his duties as conductor of the botany class in the Pharmaceutical School, Dublin.

DRUG AND MEDICINE TENDERS AND THE LOCAL GOVERNMENT BOARD.—The Dispensary Committee of the South Dublin Union has addressed a strong protest to the guardians on the subject of the drug and medicine tender which has been revised by the Local Government Board and returned to them for correction. The Committee fails to see upon what principle many items, B.P. preparations, have been struck out of the tender, and with regard to "spread plasters" it is stated that it is nowadays well known that such plasters can be had much more cheaply owing to machine work. The advance of medical science is so rapid in these days that a pharmacopœia issued this year becomes in two years inadequate to supply the necessary requirements of surgeons and physicians, and the Committee

protests against any curtailment of its rights, as it is the best judge of what medicines are most needed for the requirements of the patients. The Local Government Board has been asked to allow the Committee a free hand in this matter.

A TRIFLING MATTER is how Professor Birmingham, the Registrar of the Catholic University School of Medicine, Dublin, refers to "the art and mystery of an apothecary" in a "Guide for Medical Students," and he declares that "it is folly wasting several months in a chemist's shop to pick up what can be learnt later in one-tenth of the time." The learned professor seems to be very ignorant on this subject, although no doubt a very able teacher of anatomy and rather hazy as to the way in which an apprentice in a pharmacy is generally instructed in the art of compounding. Certainly if all medical men had received a thorough training in pharmacy in good chemists' shops, pharmacists would probably not be troubled with such "trifling matters" as incompatibilities and overdoses in prescriptions.

REASONABLE REMUNERATION.—At the quarter sessions, Cootehill, on Friday last, Dr. Moorehead, *locum tenens* for Dr. McQuaide, apothecary, sued the Cootehill Board of Guardians to recover £12 due for services rendered. He refused to take £8 tendered for four weeks' work as dispensary officer, and brought the present action. The judge gave a verdict, with costs, for the plaintiff, and said the claim was a reasonable one.

LIVERPOOL MARKET REPORT.

[From our own Correspondent.]

APRIL 22, 1896.

CANARY SEED.—*Turkish*, 29s. 6d. per 464 lbs. COCHINEAL black *Teneriffe*, 1s. 1½d. KOLA NUTS: Fresh, 6d. to 7d. dried, 4½d. to 4¾d. CARNAUBA WAX: 92s. 6d. to 120s. GINGER: *Sierra Leone*, 20s. to 20s. 3d. BEESWAX: *Sierra Leone*, £6 15s.; *Gambia*, £7 7s. 6d.; *Chilian*, £7 10s. CASTOR OIL: *Calcutta* good seconds 2¾d. to 2¾d.; 1st pressure, *French* and *Madras*, 2¾d. to 2¾d. OLIVE OIL: *Syrian*, £28 10s.; fine clear *Spanish*, £29 to £30. LINSEED OIL: *Liverpool* pressed, 19s. 9d. to 21s. COTTON-SEED OIL: 17s. to 17s. 6d. in export barrels. SPIRIT OF TURPENTINE somewhat scarce at 22s. 3d. PETROLEUM: *Russian* refined, 5¾d.; *American*, 6¾d. to 7¾d. SAL AMMONIAC: Firsts, 39s.; seconds, 37s. CARBONATE OF AMMONIA, 3¾d. to 3¾d. BLEACHING POWDER: Soft, £7; hard, £7 to £7 5s. COPPERAS: *Lancashire*, 38s.; *Welsh*, 36s. SULPHATE OF COPPER: Prices very irregular; second-hand, £18 to £18 10s.; June delivery, £16 15s. to £17. PRUSSIAN POTASH: 7¾d. CREAM OF TARTAR: Firm at 92s. 6d. to 95s. CHLORATE OF POTASH: 4¾d. BICHROMATE OF POTASH: 4¾d. SALTPETRE: 23s. 6d.; barrels, 23s. POTASHES: 21s. PEARLASH: 36s. 6d. BICARBONATE OF SODA: £6 15s. SODA CRYSTALS: £2 7s. 6d. to £2 10s. CAUSTIC SODA: 70 per cent., £7 10s.; 60 per cent., £6 10s. HYPOSULPHITE OF SODA: £6 15s. to £7 5s. BORAX: £19 10s.

MARKET REPORT.

[Specially compiled for the *Pharmaceutical Journal*.]

LONDON, APRIL 23, 1896.

Business in the produce market can only be described as dull, but in spite of this one or two rather important changes have occurred in the Chemical Market. The English camphor refiners have again reduced their prices 1d. per lb., which change brings them on a level with those of the Germans. The market in crude camphor has been flat, and the prices show a serious drop, but at the close the market is rather firmer. Menthol continues on the down line, and there is nothing to report in the alkaloid market except that quinine is offering at easier rates. Caffeine is quiet, but steady, and opium alkaloids are firm. Carbolic acid is decidedly easier, whilst citric and tartaric acids are both slow of sale. On the other hand, cream of tartar has revived considerably in price during the last few days, and closes firm at a marked advance. The importers of quicksilver reduced their quotations on Wednesday. In the Drug Market a firm market is to be reported in orris root, insect flowers, ipecacuanha, and saffron, whilst, on the other hand, cascara sagrada bark and senega root are tending easier. Cod-liver oil is rather easier, and the same remark applies to shellac, whilst the heavy and essential oil markets do not present any important changes. Full details will be found below:—

ACID, CARBOLIC.—The market is easier, and the current quotations are now as follows:—*Crystals*: 34° to 35° C., 6¾d. to 7d.; 39° to 40° C., 7½d.; 39° to 40° C. (*detached crystals*), 8½d. per lb. *Crude* is now quoted at 1s. 11d. per gallon for 60 per cent., with 75 per cent. at 2s. 4½d. *Liquefied* and *resylic* are unchanged at 1s. and 11d. per gallon respectively.

ACID, TARTARIC.—Very dull of sale, but quotations are unchanged. *English* manufacturers quote 1s. 3d. per lb., whilst *foreign* makers of acid (both in *powder* and *crystals*), not guaranteed B.P., offer at 1s. 1¾d. to 1s. 2d. per lb.

AMMONIA COMPOUNDS.—*Sulphate* is very slow of sale, at a decline, and grey 24 per cent. now offers at £8 on the spot, whilst *Hull* is quoted at £7 15s. to £7 16s. 3d., *Leith* at £7 15s., and *Beckton* at £8. *Sal ammoniac* is unchanged at 39s. for *firsts*, and 37s. for *seconds*. *Carbonate* has been lowered in price by the *English* makers, and is now quoted at 3d. to 3¾d. per lb., according to package. *Liquor* is unchanged at 3¾d. to 3½d. per lb., less 5 per cent.

BELLADONNA ROOT.—There is very little good *Hungarian* root obtainable, and 36s. per cwt. is now the current quotation on the spot.

CAFFEINE.—Is quiet, but steady, and the previous quotation of 18s. to 19s. per lb. is maintained.

CAMPHOR (CRUDE).—This article continues to be much neglected, and quotations show a considerable drop on last week's prices. For arrival, *Formosa* camphor is now quoted at 132s., and *Japan* at 152s. 6d. per cwt. *c.i.f.* terms, April to June shipment.

CAMPHOR (REFINED).—This article con-

tinues to decline in price, and at the beginning of the week the *English* refiners again lowered their prices by 1d. per lb., and now quote 1s. 10½d. for 1 ton lots of *bells* and *flowers*, with squares at 1s. 11½d. and proportionate rates. This alteration brings the quotations for both *English* and *German* refined camphor on to a level.

CASCARA SAGRADA.—Decidedly easier. Good quality bark is readily obtainable now at 18s. to 19s. per cwt. on the spot, whilst for shipment from San Francisco it is quoted at 16s. 6d., *c.i.f.* terms.

CASCARILLA BARK.—Good quality bark is very scarce on the spot and firmly held, 50s. to 60s. being now asked for second-hand parcels.

CREAM OF TARTAR.—During the last few days this chemical has revived considerably in price, and quotations show an all-round advance of fully 5s. per cwt. On the spot best white *French* crystals are now quoted at 95s. per cwt., whilst for *German* brands of powder 97s. to 100s. is asked. The last quotation for shipment from Bordeaux was 93s. per cwt. *f.o.b.*

GALLS.—Are quiet, and difficult of sale. In auction plum-shaped *China* were bought in at 60s. to 62s. 6d. per cwt. *Persian* galls are quoted at 52s. to 54s. for *blues*; 42s. 6d. to 47s. 6d. for *greens*, and 40s. to 45s. for *whites* per cwt.

MENTHOL.—Continues to decline in price, and good crystals now offer at 12s. per lb. on the spot, and probably a shade lower figure would buy.

OIL (COD-LIVER).—The market is easier. Fine new season's *Norwegian* oil can now be bought at 210s., and there have been one or two offers of cheap parcels at 205s., but we are unable to speak of the quality of the latter. For good *Newfoundland* oil, 7s. per gallon is still asked.

OILS (ESSENTIAL).—*Star Anise* oil is slow of sale, and is now readily obtainable at 10s. 3d. per lb. *Peppermint* oils are all dull of sale. *H. G. Hotchkiss'* oil is offered at 9s. 3d. on the spot, whilst the *Mc. & R.* brand is quoted at 7s. 9d., with *dementholised* Japan oil at 4s. 3d. to 4s. 9d., and 40 per cent. at 6s. to 6s. 6d. nominally. *Citronella* offers at 1s. 7d. to 1s. 8d. per lb. on the spot in drums. *Cassia* has sold during the week at 7s. 5½d. per lb. *c.i.f.* terms, for oil testing 75 to 80 per cent. of aldehyde. *Otto of Rose*: It is said that a heavy fall of snow during the past week in the Balkans has done a considerable amount of damage to the rose buds.

OILS (FIXED) AND SPIRITS.—*Castor*: *Italian* oil is very firm at an advance of about 6d. per cwt., fine quality being now quoted at 31s. to 31s. 6d. per cwt. *Cotton* is again a very firm market, and *refined* oil is now quoted at £16 10s. to £17 on the spot, which shows an advance of about 5s. *Coco-nut* is steady at unaltered rates, *Ceylon* being quoted at 23s. and *Cochin* at £26 15s. to £27 on the spot. *Linseed* is a trifle easier, oil in barrels being now quoted at £19 on the spot. *Rape* is again easier by 5s., and *refined* oil is now quotable at £23 10s. to £24 on the spot. *Turpentine* is a very strong market at an advance of fully 6d., *American* spirit being now worth 21s. on the spot. *Petroleum* is easier, and *Russian* oil quote at 5¾d. to 5½d., whilst *American* is worth 5¾d. to 5½d. and *water white* 6¾d. per gallon.

OPIUM.—The London market continues to be very firm, and the following are the current quotations for *Turkey* opium:—*Soft shipping*, 12s. 6d. to 13s. 3d.; *Smyrna*, 9s. 6d. to 10s.; *Constantinople*, 9s. 6d. to 10s.; and *druggists' seconds* 8s. 6d. to 9s. *Persian* opium is very firm at 13s. for fine *bricks*.

QUICKSILVER.—On Wednesday the importers reduced their quotations 2s. 6d. per bottle, making the present quotation £6 15s. A good business is reported during the last few days.

QUININE SULPHATE.—The market is quite devoid of interest, and there are now sellers of the best *German* brands at 1s. 0½d., but no buyers above 1s. 0½d.

SEEDS (VARIOUS).—*Coriander*: Small to medium *Russian* were bought in at 13s. to 13s. 6d., and coarse *Bombay* at 8s. per cwt. *Canary*: For *River Plate* seed 27s. to 27s. 6d. was paid in auction. *Mustard*: *Bombay* seed realised 6s. 3d. per cwt.

SENEGA ROOT.—Is tending lower, and 1s. 2½d. per lb. would now buy good quality root on the spot.

SHELLAC.—The market is flat. Privately, a small amount of business has been done at about steady rates, *TN Orange* being quoted at 89s. per cwt., *c.i.f.*, April to June shipment. In auction the small supply offered sold at irregular rates, *TN Orange* showing a decline of about 2s., whilst common qualities were still cheaper. *Garnet* was bought in at steady rates, whilst *Button* was quiet. *Seedlac* was bought in at 100s. per cwt. for clean bright red. *Sticklac* was also all bought in; fair free Siam at 62s. 6d. to 65s.; siftings at 60s., and block at 50s. per cwt.

SPICES (VARIOUS).—*Cloves* are very dull of sale, and in auction on Wednesday the whole of the *Zanzibar* were bought in, medium to fine at 2½d. to 3d. per lb. For fair *Amboyna* 4½d. was paid, and for ordinary mixed ditto 3¾d. per lb. *Nutmegs* are still very dull of sale, and only ten cases of *Penang* found buyers, 8d. being paid for part wormy quality. *Pimento*: All were bought in for 2½d. per lb. *Capsicums*: Dull red *Japan* were bought in at 28s., long red off-stalk *Ceylon* at 23s., good bright *Madras* at 25s., and ordinary thin *Bombay* at 12s. *Chillies* are dearer. In auction a good demand was shown for *Zanzibar*, which were nearly all sold at 35s. for ordinary quality; 33s., for medium brownish, and 30s. for ordinary ditto; in addition good bright *Japan* sold at 66s. per cwt. *Cinnamon chips* sold at 3½d. per lb. in auction. *White pepper* is in slow demand. *Penang* were bought in at 3½d. to 3¾d., and *Siam* at 4½d., whilst for good *Singapore*, 4¼d. was paid.

TURMERIC.—Is still slow of sale. In auction 100 bags of *China* root were bought in at 11s., in addition to a quantity of *powder* and *chips*.

TRAGACANTH (GUM).—It is reported that there has been rather more business doing in this article during the week, and prices are quite steady. *Firsts* (fine pale "druggists'" gum) are quoted at £14 10s., *seconds* at £12 15s. to £12 10s., *thirds* at £11 to £11 10s., and *fourths* at £8 10s. to £10.

WAX (JAPAN).—Is firm at 37s. on the spot for pale *squares*, whilst for arrival business has been done during the week at 35s., *c.i.f.* terms.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Books, etc.

All free. Piesse's 'Art of Perfumery,' scarce, 3s. 6d.; Professor Parker's 'Zootomy,' illustrated (8s. 6d.), 4s.; Newman's 'British Ferns' (pub. 12s.) and three other illustrated fern books, 7s. 6d.—Davies, 33, Eglinton Road, Bow.

A book of 130 Well-tried Recipes for Chemists and Druggists, comprising well-selected formulæ for general, remedial, veterinary, toilet, and everyday preparations. Post free, 1s. 6d.—Tully, Chemist, Hastings.

Soda-Water Appliances.

Soda-Water Machine, Barnett and Foster's, No. 2; list price £45; sell for £15; good condition.—Apply to H., 1, Southwick Street, Hyde Park.

Miscellaneous.

Surgeon, having purchased chemist's retail, has a few patents to dispose of, in good condition.—Foster, M.R.C.S., 139, Great Suffolk Street.

Carboys.—Four upright (Fig. 2, Evans), one damaged; capacity, 10 quarts. Also two; capacity, 3 quarts. What cash offers?—J. Lambert, Chemist, Medical Hall, Durham.

Two doz. 3s., 1 doz. 5s. 6d. Dobson's Black-leg Drinks. What offers?—Barrat, Chemist, Sevenoaks.

Violas! Violas!! Violas!!! should be grown by all who have a garden, they bloom freely all the summer; 12 beautiful varieties, suitable for exhibition, free for 2s. 6d.—Henry Pattison, chemist, Shrewsbury.

Three gross of each, Tincture and Pilules, Keel. J. Ashwell's Homœ. Medicines, perfect condition; Southall's Materia Medica Cabinet and Materia Medica. Cash offers wanted.—Spinks, Chemist, 97, Westminster Road, Liverpool.

WANTED.

Wanted, Reynolds Green's 'Botany,' latest edition, State lowest price to—Smith, 45, Wilson Road, Camberwell, S.E.

NEWCASTLE CHEMICAL REPORT.

[From our own Correspondent.]

APRIL 21, 1896.

A trifle steadier tone prevails in this market, but prices as a whole are unchanged. Enquiries for over-season delivery over-sea are moving with more freedom. Prices are:—SULPHUR: £3 17s. 6d. CAUSTIC SODA: 76 to 77 per cent., £9 5s.; 70 per cent. £7 10s. to £7 15s. BLEACHING POWDER: £7 5s. to £7 10s., according to markets. SODA ASH: 48 per cent., £4. ALKALI: 48 per cent., £4 10s. HYPOSULPHITE OF SODA: £6 5s. to £7 per ton, according to packages. SODA CRYSTALS: 37s. 6d. in bags, 45s. in casks.

LATE ADVERTISEMENTS.

For Disposal.

TO Chemists and others with leisure.—An absolute cure for Eczema. Formula, treatment and considerable connection to be disposed of through the death of late proprietor, who cleared over £500 per annum for some years. Could be worked as a patent medicine. Thorough investigation invited. Address, W. E. C., "Pharm. Journal" Office, 5, Serle St., W.C.

Dental Pupil.

TO Parents and Guardians.—Mr. C. W. LARGE, Dental Surgeon, has a vacancy for an ARTICLED PUPIL. 60, Holland Park Avenue, W.

Engagements Wanted.

JUNIOR. Season. 3½ years' experience. 6ft. Well up in Photography. Photo sent. ANILINE, 5, Serle St., W.C.

LOCUM. Disengaged after Whitsun. Qualified. 25. First-class West-end and South Coast experience. Moderate terms. Town or country. COCAINE, 3A, Market Pl., Oxford Market, London, W.

Apprentice Wanted.

APPRENTICE.—A vacancy occurs in a good class Retail Pharmacy. A thorough practical knowledge gained. Time for study and recreation allowed. Moderate premium. Apply, F. E. PALMER, 12, Carr St., Ipswich.

TRADE NOTES AND NEWS.

MESSRS. BURROUGHS, WELLCOME AND Co. have made an important addition to the list of "Soloids" of Compressed Antiseptics, by the introduction of a safe and convenient method of carrying definite quantities of undiluted carbolic acid, ready for the instant preparation of the many antiseptic solutions used in surgical, gynaecological and sanitary work. These new "Soloids" are supplied in blue bottles containing 25 and 100 respectively. They contain exactly five grains of crystallised carbolic acid each and are made of a characteristic shape and colour to distinguish them from "Tabloids" intended for internal administration, being flat on one side and yellowish brown in colour. The distinctive colour is communicated to the liquid in which they are dissolved, so that it cannot be confused with any other solution in general use at the operating table or in the sick room. For use as an escharotic one "Soloid" may be held in a small piece of cotton wool and gently rubbed over indolent and foul ulcers or applied for the removal of growths. Dissolved in five ounces of water, one "Soloid" makes a solution suitable for use as a disinfectant or antiseptic spray for application to the mucous membranes of the mouth, pharynx, larynx, nasal cavities, etc., etc.

MESSRS. BROWN BROTHERS AND Co., wholesale chemists, Glasgow, are re-organising their business. Mr. G. Macfie Smith, who has had an extensive commercial experience at home and abroad, has been intrusted with the management, while Mr. Alexander Bruce, a gentleman with a large circle of friends among chemists and medical practitioners in Glasgow and the West of Scotland, has been engaged to travel. Mr. Colvin Gates, a well-known laboratory assistant and possessing the Major qualification of the Pharmaceutical Society, joins the firm to undertake the supervision of the laboratory, and Mr. William Hindman, who has been for a number of years in the firm's employment, has now charge of the warehouse and attends to the buying. The firm of Brown Brothers and Co. has been in existence since 1827, and has always been favourably known in the trade. We understand that its present head,

Mr. Robert Brown, B.Sc., intends to enlarge the firm's business in various directions, but that the firm will remain, as at present, strictly in the wholesale line.

MARRIAGE.

ROBERTSON—WALKER.—At the Windsor Hotel, Glasgow, April 20, by the Rev. James B. Johnston, B.D., the Free Church, Falkirk, assisted by the Rev. Thomas Adamson, B.D., Free Anderston Church, Glasgow, George Robertson, chemist, Partick, to Jane, daughter of the late William Walker, file manufacturer, Larbert.

DIARY OF THE WEEK.

Secretaries of Societies are requested to send notices of forthcoming meetings not later than Wednesday in the previous week.

MONDAY, APRIL 27.

ROYAL GEOGRAPHICAL SOCIETY, at 8.30 p.m.
"Journeys in the Native Malay States," by H. Clifford.

"A Journey Round Siam," by J. S. Black.

TUESDAY, APRIL 28.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"Child-Study and Education" (III.), by Professor J. Sully.

WEDNESDAY, APRIL 29.

SOCIETY OF ARTS, at 8 p.m.
"Fruit Drying or Evaporation," by E. W. Badger.
PROPRIETARY ARTICLES' TRADE ASSOCIATION, at 8.30 p.m.

Meeting of Local Chemists at Queen's Gate Hall, Harrington Road, South Kensington, to consider the Anti-Cutting Question.

MIDLAND CHEMISTS' ASSISTANTS' ASSOCIATION, at 9 p.m.
Musical and Social Evening.

THURSDAY, APRIL 30.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"Recent Chemical Progress" (III.), by Professor Dewar.

CHEMISTS' ASSISTANTS' ASSOCIATION, at 8.30 p.m.
Paper by T. H. W. Idris.

PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION.
"Foreign Prescriptions and Dispensing," by C. J. Park.

FRIDAY, MAY 1.

ROYAL INSTITUTION OF GREAT BRITAIN.
Annual Meeting, at 5 p.m.
"Chronographs and their Application to Gun Ballistics," by Colonel H. Watkin, at 9 p.m.,

PROPRIETARY ARTICLES' TRADE ASSOCIATION, at 10.30 p.m.

Meeting of Local Chemists at 36, York Place, Edinburgh, to consider the Anti-Cutting Question.

SATURDAY, MAY 2.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"The Vault of the Sixtine Chapel" (III.), by Professor W. B. Richmond.

SUPPLEMENT

TO THE

PHARMACEUTICAL JOURNAL.

MARKET REPORT.

[Specially compiled for the *Pharmaceutical Journal*.]

[The quotations here given are in all cases the lowest net cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.]

LONDON, APRIL 30, 1896.

There are few changes to note in the chemical market, but these are of importance. Citric and tartaric acids are quiet, whilst carbolic acid has declined still further in price. Cream of tartar continues a very strong market at a marked advance, whilst copper sulphate is firm. Amongst fine chemicals, the English camphor refiners have further reduced their prices by 1d. per lb., making the current quotation 1s. 10½d. for bells and flowers. Crude camphor is quiet and neglected. A large parcel was cleared off to-day in public sale. [Menthol is much cheaper, whilst of the various alkaloids morphine is dearer, codeine unchanged, and quinine quite neglected. The drug sales passed off to-day fairly briskly. The principal changes were as follows:—Guaiacum, gum elemi, cascarilla, cardamom seeds, areca nuts, buchu leaves, and Japan wax sold at easier rates. On the other hand, Jamaica ginger, Cape aloes, Sumatra benzoin, and calumba root are dearer. Ipecacuanha, cotton seeds, senna, and cubebes are fully steady. In the essential oil market star anise [oil is easier, cassia firmly held, and peppermint oils very flat. The heavy oil and shellac markets do not present any important features. Full details will be found below:—

ACACIA (GUM).—The market is flat. To-day a total of 341 packages were offered, but the high views of holders prevented business, and not a single package changed hands. The general impression seems to be that the prices now asked are not warranted and buyers refuse to sell on the present terms, which will probably be greatly reduced shortly. *Trieste* gum was held to-day for high prices, £14 for fine pale picked, down to £7 for yellow mixed. *Soudan* sorts were bought in at 70s. to

100s. per cwt. *Persian* gum is very firmly held, but the high prices asked stop business to a great extent. Nominally fine pale picked gum is quoted at 25s. to 30s., with sorts at 20s. to 22s. for fair to good, 17s. for siftings, and 10s. to 12s. for block.

ACID, CARBOLIC.—Is still a very weak market, and prices are again lower, the current quotations being now as follows:—*Crystals*: 34° to 35° C., 6¼d.; 39° to 40° C., 7¼d.; 39° to 40° C. (*detached crystals*), 8¼d. per lb. *Crude*: 60 per cent. is quoted at 1s. 11d. and 75 per cent. at 2s. 4d. per gallon. *Liquefied* is unchanged at 1s. for 95 per cent., whilst *eresylic* is easier at 10d. per gallon.

ACID, TARTARIC.—The market is quiet, but steady. The *English* makers still quote 1s. 3d. per lb., but *foreign* acid (in both *powder* and *crystals*) can be bought at 1s. 1¾d. to 1s. 2d. At the drug sales 41 bags of *Cape Argol* sold at 55s. to 58s. for pink, and 47s. to 51s. for greyish.

ACONITE (JAPAN).—To-day a parcel of 15 bales from *Kobé* were bought in at 21s. per cwt.

ALOES.—In moderate supply only to the amount of 203 packages. *East Indian* aloes, which was represented by 42 packages sold at 80s. per cwt. for good soft brown, whilst *East Indian* aloes in skins was bought in at 70s. per cwt. *Cape* aloes sold at fully steady to dearer rates, 25s. to 25s. 6d. being paid for good bright hard, 22s. 6d. to 23s. 6d. for fair ditto, slightly drossy, and 19s. for ordinary dull. *Curacoa* aloes were mostly bought in, but 25 boxes of dark dull quality sold at 25s. per cwt., subject to approval.

AMBERGRIS.—One tin out of five offered sold at 55s. per cwt.

AMMONIACUM (GUM).—Sixteen packages were offered to-day, but none found buyers. Good to fine pale drop was bought in at 55s. to 70s., bids of 50s. and 61s. being respectively refused, whilst seedy block, partly loose, with a few almonds, were withdrawn at 25s. to 32s. 6d. per cwt.

ANNATTO SEEDS.—A large supply, amounting to 65 packages, was again offered to-day, but no demand was shown. Fair bright *Madras* and *Jamaican* seed was bought in at 4½d. to 5½d. per lb. whilst nine cases of mouldy damaged seed offered without reserve sold at prices ranging from ¼d. up to 1¼d. per lb.

ARECA NUTS.—Rather easier. To-day 10 bags of good quality *Colombo* nuts sold at 12s. per cwt.

BENZOIN (GUM).—A good demand was shown to-day for *Sumatra* gum, which was represented by 140 packages. Good pale, almondy seconds, slightly false packed fetched £8 to £8 7s. 6d., which shows a marked advance, whilst £5 12s. 6d. to £6 2s. 6d. was paid for ordinary dull ditto, with false-packed sides part offered without reserve, and £4 10s. to £5 15s. for very false packed dull seconds. Only 16 cases of *Siamese* gum were shown, and £6 was accepted for two cases of small almondy brown block. *Penang* gum sold at 95s. for fair almondy block. *Palembang* was mostly bought in at 37s. 6d. for fair seconds in tins, and 27s. 6d. for dull thirds, but 38 cases of dull seconds sold cheaply at 25s. per cwt.

BUCHU.—An average supply of 133 bales was offered to-day, but the demand is very moderate and the market weakened ½d. per lb., for although 3d. was paid for a few bales

of fine bright green, 2½d. was afterwards accepted, whilst 2¼d. to 2½d. was paid for fair greenish *round* leaves, and 1¼d. to 2¼d. for yellowish.

CALUMBA ROOT.—Good bold root was bought in to-day at 20s. per cwt., whilst 8s. 6d. was paid for 20 bags of ordinary dark *Zanzibar* sorts—a very good price.

CAMPOR (CRUDE).—This article has been quite a dead letter since our last report, and no business whatever is reported. *Formosan* camphor is now quoted for arrival at 130s., and *Japan* at 142s. 6d. per cwt. *c.i.f.* terms, April to June shipment. At the drug sale a parcel of *Formosan* camphor, offered without reserve, all sold at 22s. 6d. to 25s., whilst 217 cases sold under ordinary conditions at 129s. per cwt.

CANNABIS INDICA.—Greenish tops were bought in to-day at 3½d., and brownish stalky ditto at 2d. per lb.

CARDAMOMS.—An average supply, amounting to about 170 packages, was offered to-day, and sold with fair inquiry at fairly steady rates, but *seed* showed a decline of 3d. to 4d. per lb. The prices paid were as follows:—*Ceylon - Mysore*: Fine bold plump pale, 3s. 7d.; medium to bold pale, 3s.; medium long pale, 2s. 8d. to 2s. 9d.; medium yellowish, 2s. 4d. to 2s. 6d.; small to medium brownish, 1s. 7d. to 2s. 2d. *Ceylon-Malabar*: Small to medium good, 2s. 3d. to 2s. 6d. per lb. *Seed*: 2s. 8d. to 2s. 9d. per lb.

CASCABILLA.—This article was again rather irregular in price, and if anything slightly cheaper. Fair silvery quill sold in auction at 45s. to 50s. per cwt., whilst 30s. was paid for dull brown thin bark. For ten barrels of *siftings*, 35s. per cwt. is asked.

CASSIA FISTULA.—Thirty bags of very lean wormy pods sold to-day at 8s. 6d. to 9s. 6d. per cwt.

CHIRETTA.—Ten bales of this drug imported from *Calcutta* sold without reserve to-day at 2d. per lb.

COCCULUS INDICUS.—A parcel of 50 bags imported from *Cochin* were bought in at 7s. 6d. per cwt.

COLOCYNTH.—*Turkey* colocynth was bought in at 2s. 7d. for good bold apple, and fair quality *Spanish* at 1s. 2d. A case of broken colocynth imported from *Malaga* sold at 9d. per lb.

COPAIBA.—Very firm. To-day 4 kegs of good pale thin *Para* balsam sold at 1s. 11d. per lb., whilst 1s. 2d. was accepted subject to approval for six cases of cloudy thick balsam of the same variety, imported from *Savanilla*.

COWHAGE.—Five tins imported from *Bombay* were bought in at 4d. per oz.

CREAM OF TARTAR.—Has continued a very strong market during the week, and prices have advanced considerably. On the spot 100s. is now asked for best white *French* crystals, whilst *German* brands of *powder* are quoted at 102s. to 105s. per cwt.

CROTON SEEDS.—Very firm. Five bags of this drug sold in auction at 65s. per cwt.

CUBEBS.—Firm. Four bags of good quality *Singapore* berries without stalk sold to-day without reserve at 33s. per cwt.

DRAGON'S BLOOD.—Twenty-five cases were offered in auction, but none sold, dark saucers being bought in at 90s. to 95s., reeds at £9, and fair bright lump at £6 10s.

ERGOT OF RYE.—Still very dull of sale, but the market is steady. To-day 5½d. was

paid for 5 bags of small *Russian* ergot, whilst ordinary wiry ditto realised 4d. per lb. Wormy to good sound *Spanish* was bought in at 5d. to 7½d. per lb.

ELEMI (GUM)—So d at a large decline to-day, 21s. per cwt. being accepted for 4 cases of fair yellowish gum.

GAMBOGE.—About 50 packages were shown to-day, but the demand was very slow. For 3 cases of good mixed clean pipe and block £10 was paid, subject to approval, whilst £8 15s. was accepted for fair mixed blocky pipe, and £7 5s. (subject) for fair pickings.

GINGER.—*Cochin* root is still slow of sale. At the weekly sales, 25s. was paid for cuttings; 32s. 6d. for dull-washed rough; 34s. to 34s. 6d. for small brown ditto. In addition, bold rough cut realised 61s. 6d., and fair to good bold A cut, 65s. to 70s. per cwt. *Bengal* was bought in at 16s., whilst limered *Japan* sold at 22s. per cwt. A good demand was shown for *Jamaican* root, and the whole of the catalogue sold at an advance of 2s. to 5s. per cwt.; fine to fine bold bright fetching 101s. to 111s.; medium to good washed, 79s. to 95s.; ordinary medium ditto, and scraped, 69s. 6d. to 78s. 6d.; and ordinary small and brown, 57s. to 69s. per cwt.

GUAIACUM (GUM).—Good bright almondy block was bought in to-day at 2s. 2d., whilst six boxes of drossy sorts sold without reserve at 5½d. per lb.

GUARANA.—Lower. To-day a single box sold at 1s. 10d. per lb., which shows a marked decline over the rates paid privately.

HONEY.—Was again in large supply, at to-day's sales, 314 packages being offered. The only variety which attracted attention, however, was *Jamaican*, which sold at 17s. 6d. to 23s. 6d., according to condition. A hogshead of *French* honey sold at 15s. subject, and 15 casks of *Californian* at 25s. to 27s. per cwt.

IODINE.—For the last few months the price of iodine has not been regulated by the Convention, and makers of iodides have been supplied with iodine without any fixed rates being invoiced. It has been a matter of surprise that such a long delay has occurred before some official intimation of the Syndicate's intention in regard to prices. This was settled on Friday last, when it was stated that 9d. per oz. would, until further notice, be the price of iodine. Since then one of the makers of iodides has stated in his prices current that the price is fixed as above mentioned.

IPECACUANHA.—Is quiet, but steady. At to-day's sales 49 bales only of *Rio* (Brazilian) root were offered, and 5s. to 5s. 3d. was paid for fair to good annulated, and 4s. 10d. to 4s. 11d. for ordinary rather thin. No *Carthagena* (Columbian) root was sold, 21 bags being bought in at 4s. to 4s. 2d. per lb.

KOLA NUTS.—Were in moderate supply, and selling at fairly steady rates, 1s. being paid for good bright *Grenada* nuts, and 8d. for fair sound ditto.

MENTHOL.—Sold at a remarkable drop to-day, 6 cases of *Raspes'* brand of *Japan* menthol fetching only 9s. 6d. to 9s. 9d. per lb.

MUSK.—The only lot sold in auction was one tin of *Tonquin* pile II, which realised 40s. per oz.

MYRRH (GUM).—Is still in large supply, ut very slow of sale. To-day 85s. was aid for 7 cases of fine native picked gum,

whilst chips were bought in at 60s. to 70s.; siftings at 30s., and pickings at 25s. per cwt.

NUX VOMICA.—Twelve bags of fine bold *Bombay* nuts sold in auction at 7s. 6d. per cwt, with pickings at 4s. 6d.

OIL (COD-LIVER).—The market is easier. There would be no difficulty now in buying fine new season's *Norwegian* oil at 200s. per barrel of 25 gallons. To-day 10 barrels of new oil were offered in auction, and bought in at 235s., after 210s. had been bid, the limit being said to be 220s. *Newfoundland* oil was also bought in at the drug sales at 6s. 6d. per gallon.

OILS (ESSENTIAL).—*Star Anise* oil is much easier, and although 9s. 9d. is now quoted, it would no doubt be quite possible to buy at 9s. 7½d. per lb. on the spot. *Cassia* is quoted 9s. 6d. per lb. for 80 to 85 per cent. oil, and 8s. for 70 to 75 per cent. *Citronella* is quoted at 1s. 6½d. per lb. in tins, and 1s. 5d. in drums on the spot. *Peppermint* oil sold at 3s. 10d. per lb. in auction for *Raspes'* brand of *Japan dementholised* oil. *Kananga*: A case sold in auction at 1s. per oz. *Eucalyptus*: *Platypus* oil was bought in at 2s. 6d., whilst 1s. per lb. was paid for the *Cygnat* brand. *Lavender*: Ten cases of *Lavande des Alpes Maritimes* were held for 6s. 3d. per lb. *Bay* oil was bought in at 10s. per lb.; *Cinnamon* at 1s.; *Cinnamon leaf* at 9d., and *Ylang Ylang* at 5s. per oz.

OILS (FIXED) AND SPIRITS.—*Castor* remains very firm, 31s. to 31s. 6d. *c.i.f.*, being still quoted for best quality *Italian* oil. *Cotton* is again a firm market at unchanged rates, £16 10s. to £17 being quoted for *refined* oil on the spot. *Coco-nut* is a trifle easier. *Ceylon* being now quoted at £22 15s., and *Cochin* at £26 15s. on the spot. *Linseed* is if anything rather firmer, £19 2s. 6d. being now asked for oil in barrels, landed terms. *Rape* is unchanged, £23 10s. to £24 is quoted for *refined* oils. *Turpentine* is very firm at an advance of 3d. *American* spirits being now worth 20s. 3d. on the spot. *Petroleum* is very dull of sale and a trifle easier in price. *Russia* oil being quoted at 5½d. *American* at 5½d. and *water white* at 6½d. per gallon on the spot.

OPIUM ALKALOIDS.—The firm position of opium has caused an advance of 2d. per oz. in the price of *morphine*, and manufacturers' quotations are now 4s. 9d. per oz. for *powder*, and 4s. 11d. for *crystals* in 1000-oz. lots. *Codeine* is very firm at the unchanged rate of 10s. 6d. to 11s. per oz., according to quantity.

ORRIS ROOT.—*Florentine* root was bought in to-day at 70s. to 72s. 6d., and *East Indian* at 21s. to 25s. per cwt.

QUASSIA WOOD.—About 7 tons sold at £4 5s. per ton.

QUININE SULPHATE.—Is still quite neglected, and the best *German* makes offer at 12½d. per oz., but no business is reported. Fifteen cases of the *Imperial* brand of *English* quinine, representing 7500 ozs., were bought in to-day at 1s. 4d. per oz.

RHUBARB.—Still very dull of sale. Of 157 cases about 20 sold, at the following rates:—*Shensi*: Fine bold round pinky, 1s. 9d.; fine round trimmings 1s. 7d.; medium round part pinky, 1s. 4d.; medium flat ditto, 1s. 5d.; and pickings, 10d. per lb. *Canton*: Medium round sold at 7½d. per lb. *High dried*: Medium pinkish flat, slightly

wormy, sold at 10½d., and small flat at 10d. per lb.

SARSAPARILLA.—*Jamaican* root was in large supply to-day, and sold at full to dearer rates, 1s. 4d. to 1s. 5d. being paid for sound grey and 1s. 3d. for bright red. In addition, a few bales of damaged *Jamaican* sold at 11½d. to 1s., whilst *Honduras* was bought in at 1s. to 1s. 1d. per lb.

SEEDS (VARIOUS).—*Coriander*: Ordinary coarse *Bombay* were bought in at the spice sales at 7s. and *Morocco* at 11s. per cwt. *Canary*: 27s. 6d. per quarter was paid for 30 bags on Wednesday. *Cumin*: Ten bags of *Maltese* seed sold at 29s. per cwt. *Anniseed*: *Russian*, sold at 18s. to 18s. 3d. per cwt. *Musk* was bought in at 1s. to 1s. 3d. per lb. *Strophanthus*. *Kombe* seed was bought in at 3s. 6d. to 3s. 9d. per lb.

SHELLAC.—Firmer. A moderate business has been done privately at rather firmer rates, including *TN Orange* at 91s. At the weekly sales about half the catalogue was sold, fair to good *Second Orange* showing an advance of 1s. per cwt., whilst low grades sold irregularly at about firm rates. *Garnet* sold at easy rates, *AC* being quoted at 88s., whilst all the *Button* was withdrawn. Since the sales the market has been rather firmer, but little business has been done. *Second Orange* has sold at 93s., *c.i.f.*, June delivery, whilst *TN* is quoted at 89s. to 90s. on the spot.

SOY.—Good *China* soy was bought in to-day at 1s. per gallon, whilst 8½d. was paid for 4 casks which had been filled with odd lots.

SPICES (VARIOUS).—*Cloves*: No *Zanzibar* cloves were offered in auction. Medium to fair *Amboyna* were bought in at 4d. to 4½d., and *Java* kind at 4¼d. per lb. Good picked *Penang* sold at 7d. per lb. without reserve, which shows a decline, whilst 4d. was paid for *Ceylon*. *Pimento* is still slow of sale. In auction medium to fair quality was bought in at 2½d. to 2¾d. per lb. *Chillies* are firm, 33s. being paid for medium dull *Zanzibar*. *Cassia vera* was bought in at 24s. for coarse *Padarg* quill. *White pepper*: Slow of sale. All the *Siam* and *Penang* kinds were withdrawn or bought in. For fair to good *Singapore* 4¼d. to 4¾d. was paid, and 5½d. to 5¾d. for fine bright ditto. *Arrowroot*: Very dull. A few barrels of *St. Vincent* sold in auction for 2½d. per lb.

TAMARINDS.—About 40 casks of *Barbados* tamarinds sold to-day at 15s. per cwt.

TONQUIN BEANS.—Frosted *Para* beans were bought in at 2s. per lb., whilst 4d. to 7d. was paid for 16 cases of dark and foxy quality.

TURMERIC.—Still slow of sale. At the spice sales, fair bright split *Cochin* bulbs sold at 5s. 6d. to 5s. 9d. per cwt.

WAX (BEES).—Very firm and in good demand. *Jamaican* wax sold to day at full rates, £8 to £8 10s. being paid. In addition, *West Indian* sold without reserve at £6 10s., *Madagascar* at £6 5s. to £7, *East Indian* at £4 16s. to £6, *Spanish* at £6 15s., and *Australian* at £6 17s. 6d., whilst *Zanzibar* was bought in at £6 10s. to £6 15s., and *Mogador* at £6 per cwt.

WAX (JAPAN).—The market is a trifle easier. To-day 36s. was accepted for three cases of pale *Japan* squares, whilst 50 cases were bought in at 40s. per cwt.

LIVERPOOL DRUG AND CHEMICAL MARKET.—Our Liverpool correspondent writes as follows:—April 29.—Linseed: very firm; *River Plate*, 32s. per 416 lbs. ex quay. Canary-seed: *Turkish*, 29s. 6d. to 31s. per 364 lbs. Chillies: *Sierra Leone*, 30s. Ginger: *Sierra Leone*, 20s. to 20s. 3d. Kola Nuts, dried 4d. to 5d. Beeswax: *Chilian*, £7 10s. to £8; *Peruvian*, £7 15s. Gums: *Arabic* varieties at extreme prices. Hog Tragacanth, 52s. 6d. Carnauba Wax: good yellow 2s. 6d. Castor oil: Slow of sale, good seconds *Calcutta*, 2½d. to 2¾d.; *French* first pressure and *Madras*, 2½d. to 2¾d. Olive oil: Firm. *Malaga*, £29 to £30; *Seville*, £28 to £29; *Syrian*, £28 to £28 10s. Linseed oil: 19s. 9d. to 21s. for *Liverpool* pressure. Cotton-seed oil, slow of sale at 17s. to 17s. 6d. Spirit of turpentine: Supply short, 22s. 6d. per cwt. Petroleum: *Russian*, 5¼d.; *American*, 6¼d. to 7¼d. per gallon. Bleaching powder: £7 to £7 5s. Sal ammoniac: 39s., first quality. Copperas: *Lancashire*, 38s.; *Welsh*, 36s. Sulphate of copper: £18; July and August delivery, £16s. 15s. Borax: Lump, 19s. 6d.; powder, 20s. 6d.; *Tinca* small sales at 19s. 6d. ex quay. Bicarbonate of soda: £7. Soda crystals: £2 10s. Caustic soda: 70 per cent., £7 12s. 6d. to £7 15s.; 60 per cent., £6 12s. 6d. to £6 15s. Nitrate of soda: 8s. to 8s. 3d. Chlorate of potash: 4¼d. Bichromate of potash: 4½d. Prussiate of potash: 7½d. Potashes: 21s. 3d. Pearl ashes: 36s. 6d.

NEWCASTLE CHEMICAL MARKET.—Our Newcastle correspondent writes as follows:—April 28.—New export business moves slowly. Against this, however, may be set that home orders for soda crystals, alkali, and soda ash are in circulation, and as a restricted produce for some makes continues, prices are firmly quoted. Sulphur still very scarce, and a better demand for South Durham salt is experienced for shipment. Prices are:—Sulphur: £3 17s. 6d. Hyposulphite: £5 10s. to £7, according to packages. Soda crystals in bags, 36s.; in casks, 42s. 6d. to 45s. Soda ash: 48 per cent., £4 to £4 5s.; 52 per cent., £4 10s. to £4 12s. 6d. Alkali: 48 per cent., £4 10s. to £4 15s.; 52 per cent., £5 to £5 5s. Caustic soda: 70 per cent., £7 5s.; 76 per cent., £8 10s. to £9. Bleaching powder: £7 5s. to £7 10s., according to markets.

MANCHESTER CHEMICAL MARKET.—Our Manchester correspondent writes as follows:—April 28.—There is a better feeling prevalent here, and prices are tending higher. No doubt the inquiry for spring shipments to the North has much to do with this. There is no change in sulphate of ammonia, but in other respects the feeling forward is better. Sulphate of copper is in fair request at £18, with 10s. less asked for re-sale lots, and £17 June delivery. Heavy chemicals are without change. Soda crystals are dull at 42s. per ton in bags delivered Manchester. Yellow prussiate is easier at 7¼d. per lb., delivery U.K.; a lower quality, suitable for calico printers, is about a farthing less. Both Glauber and Epsoms are dull. Acids are without change. Oxalic, for local makes, sells at 3¼d., notwithstanding lower figures quoted elsewhere. Cream of tartar is at 104s. to 105s. per cwt. for best white powdered here.

MISCELLANEOUS NEWS.

GUY'S HOSPITAL.—The Treasurer acknowledges with grateful thanks the receipt of a donation of 100 guineas towards the special re-endowment fund from the Liebig's Extract of Meat Company, Ltd.

EXPOSING POISON.—At the Londonderry Record Court on April 16, Judge Overend decided, in a case affecting the poisoning of lands, that a landowner is not justified in placing poison on his grounds, even though he notify the police beforehand of his intention to do so.

EDINBURGH PHARMACY ATHLETIC CLUB.—The annual general meeting of the Club took place on Friday, April 24, at 9.15 p.m., Mr. John Brown, President, in the chair. The Secretary's report showed that there was an increased membership, now numbering ninety-four, and that the past year had been a most successful one. The Treasurer's report showed an income of £119, and an expenditure of £93 8s. 2d., leaving a balance in hand of £15 11s. 10d. On the motion of Mr. Welsh, seconded by Mr. Stott, the reports were adopted, and it was agreed to send a letter of thanks to the Executive of the North British Branch for the privilege of meeting in the Pharmaceutical Society's House. The office bearers for the ensuing year were then elected, as follows: Honorary President, Donald Mackenzie (T. and H. Smith and Co.); President, John Brown; Vice-President, James McBain; Hon. Secretary, J. P. Gibb, 8, Buccleuch Place; Assistant-Secretary, A. G. Paterson; Treasurer, A. S. Birnie; and as members of Committee, Messrs. G. F. Anderson, Bart, Hugh France, R. K. Kinnimont, J. D. Sinclair, Somerville, and J. Stott.

The golf section held their monthly competition on the Braid Hills course for the "Dick Handicap Challenge Medal" on Friday and Saturday, 24 and 25 April, when over thirty members competed. Mr. George Lunan was the winner, with the score of 101 less 10—91.

DEATH OF MR. WILLIAM HUTTON, OF EDINBURGH.—The death occurred, at 8, Bath Street, Portobello, on Sunday, April 26, of Mr. William Hutton, who was for several years principal assistant in the West-End establishment of Messrs. Duncan, Flockhart and Co., and retired a few years ago owing to a chest affection which has now proved fatal, at the early age of 40 years. He acted for some years as Honorary Treasurer to the Edinburgh Chemists', Assistants', and Apprentices' Association, and has been an associate of the Pharmaceutical Society for seventeen years. He leaves a widow and family.

MR. PHILIP FLOOD, L.P.S.I., Dublin, has been presented with a handsome address and substantial souvenir on the occasion of his departure for London, wherein he intends to practise medicine. The address was read by Mr. H. C. McWeeny, F.R.U.I., and kindly wishes for Dr. Flood's success in his new sphere of life were general. Dr. Flood suitably responded. Melody and monologue succeeded.

MINERAL WATER TRADE PROTECTION ASSOCIATIONS AND THEIR RIGHTS.—A case of the utmost interest to the mineral water trade was heard at the Manchester County Court on Monday before His Honour Judge Parry. The Heywood Mineral Water and Bottling Company, Limited, are members of the Manchester District Mineral Water Trade Association, which is as is well known, formed to protect the interests of the mineral water trade, and more especially to prevent the practice by which bottles are indiscriminately collected and filled with the waters of other manufacturers promiscuously. The Inspector of the Manchester Association made a complaint against the Heywood Company for a breach of the rule by which this practice was sought to be prevented. The summons was accordingly issued for them to attend a meeting of the Manchester Association, and the Heywood representatives declined to sign a paper whereby the matter would be dealt with by the Council of the Association. The Chairman of the Heywood Company, however, was a member of the Council, and he having signed a paper, the Council fined his company ten guineas, and the action was brought to recover that amount. The case turned mainly on the point whether the Manchester Association had power by their articles of association to inflict fines of this character. His Honour was not at all satisfied as to this, and gave a verdict for the defendant company with costs.

CHEMISTS' ASSISTANTS' ASSOCIATION.—The fourth and last Cinderella dance of the season was held at the Portman Rooms, Baker Street, on April 23, and was equally as enjoyable in every detail as the preceding ones, a large company putting in an appearance to assist at the winding up of the social programme. The conspicuous success which has attended this innovation reflects credit on those responsible for the arrangements, and will, no doubt, lead to it becoming a permanent institution.

PROPRIETARY ARTICLES TRADE ASSOCIATION.—The following meetings have been arranged to be held next week under the auspices of the Local Associations: At Leeds, on Tuesday, May 5, at 8 p.m., in the Law Library, Albion Place; at Bradford, on Wednesday, May 6, at the Mechanics Institute, at 8 p.m.; and at Halifax, on Thursday, May 7, in the Old Hall, Old Cock Hotel, at 8 p.m. A meeting will also be held at Sheffield, in the Montgomery Hall, at 8.30 p.m., on Friday, May 8, independently of the Local Association.

ANOTHER DUBLIN PHARMACIST, Mr. Isaac Bernard, Member of Council, has met with a driving accident, involving the fracture of his left arm. Both he and Dr. Gordon, are however, progressing most favourably towards recovery.

A CORRECTION.

"THE PHARMACOLOGY OF IZAL."—Dr. Tunnicliffe points out that by an oversight in correcting the proof of his paper, the toxicity of biniodide of mercury was printed (see p. 303) as .15 gramme instead of .015 gramme.

 Owing to pressure on our space, a number of news items are left over.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

Books, etc.

A book of 130 Well-tryed Recipes for Chemists and Druggists, comprising well-selected formulæ for general, remedial, veterinary, toilet, and everyday preparations. Post free, 1s. 6d.—Tully, Chemist, Hastings.

Dr. Miller's 'Elements of Chemistry,' complete, in 3 vols., cloth, published £2 12s. 6d., interleaved with many brilliantly hand-coloured plates of cube system, unique, 21s.—Davis, "Chestnuts," Gordon Hill, Enfield.

McLaren's 'Atlas of Venereal Diseases,' ten parts, beautiful plates, unsoiled, cost £3, accept £2 or offers; useful to medical student or chemist beginning business.—A. Richardson, Chemist, Hessle Road, Hull.

Free.—Pratt's 'Poisonous Plants,' 44 coloured plates (6s.), 3s. 6d.; Paxton and Lindley's 'Botanical Dictionary,' new edition, 5s.; 'Through Kew Conservatories,' illustrated, 1s. 6d.; Tyndall's 'Faraday,' 3s. 6d.—Davies, 33, Eglinton Road, Bow.

Miscellaneous.

Three 4-gal. Pear-shaped Carboys, any reasonable offer accepted.—H. P. Mallett, 85, Mill Hill Road, Norwich.

Two gross Kent's 5-row gents' tooth-brushes; Kelly's 'Chemists' Directory,' 1885; Brande's 'Chemistry,' 2 vols.; Masseur's 'British Fungi,' new; 'Nature,' 10 vols., May 2, 1889, to March 15, 1894, clean; what offers?—Dobson, Chemist, Leicester.

Brass Counter Scales on mahogany stand, with drawer, 12-inch beam, Avery's make, no weights. What cash offers?—Smith, Chemist, Coleford, Glos.

Soda Water Appliances.

Soda-Water Machine, Barnett and Foster's, No. 2; list price £45; sell for £15; good condition.—Apply to H., 1, Southwick Street, Hyde Park.

ADDRESS WANTED.

Wanted, the address of Mr. Noyes, lately at S Leonard's and Eastbourne, prescriptions signed R. H.—Address, Hasselby, St. Leonard's.

TRADE NOTES AND NEWS.

MESSRS. B. J. EDWARDS AND CO., the well-known photographic plate makers, supply a special plate, the Edwards "Cathodal" plate for x-radiography. These plates are made on lines suggested by Professor Oliver Lodge, of University College, Liverpool.

THE ACETYLENE GAS COMPANY, Hythe Road, Ashford, Kent, make the Simplex generators and gasometers, which, on account of their freedom from complicated mechanism or skill in using them, must rank amongst the very first on the market. The chief characteristic of the Simplex generator is its automatic action and consequent safety. The pressure in gasometer never exceeds 2 lbs. to the square inch, and when the gasometer is full it stops generating until the contents are used up.

MESSRS. CHAS. M. HIGGINS AND CO., of 106, Charing Cross Road, W.C., are the makers of HIGGINS' PHOTO MOUNTER, the new adhesive for mounting photographs, etc. This is not a starch or flour paste, but a "Vegetable Glue," semi-fluid, and always ready for use without preparation. It is absolutely uniform, free from lumps, of soft and unctuous consistency and pure white colour, and never spoils or changes; spreads very smoothly and easily, adheres at once, dries quickly, does not warp, cockle, or strike through the mount, and is warranted by the makers not to injure the tone or colour of any mount.

MESSRS. RAPHAEL AND CO., manufacturing opticians, are removing from 13, Oxford Street, London, to 51, Clerkenwell Rd, E.C., their old premises being required in connection with the proposed Central London Railway. The case, Raphael v. Central London Railway, was settled on Friday, April 25, at the Westminster Guildhall, when the Company was represented by Mr. Freeman, Q.C., and counsel for Messrs. Raphael were Mr. Cripps, Q.C. and Mr. McCall, Q.C. In consequence of this forced removal the firm will be clearing their stock of spectacles, field-glasses, operas, thermometers and barometers, at very reduced rates within the next few days.

MESSRS. BURROUGHS, WELLCOME AND CO. draw attention to purified ox-bile tabloids, a recent addition to their list of compressed drugs. These are prepared from ox-bile from which the tissue, *débris*, mucilaginous bodies, and unnecessary colouring matter have been separated. The emulsifying, antiseptic, and stimulating principles in the bile are supplied, therefore, in an active and compendious form. In order to avoid the irritating effect of bile on the mucous membrane of the stomach, these "tabloids" are keratin-coated, so that they do not disintegrate until they reach the alkaline contents of the intestines. Another useful addition to the firm's list of products is their new effervescent lithia citrate tabloid, containing exactly four grains of lithium citrate. This tabloid may be administered (a) by dissolving in water, the solution being swallowed after effervescence has ceased; (b) by crushing, stirring with a wineglassful of water, and taking as an effervescent draught; or (c) by placing on the tongue and allowing it to dissolve slowly. Probably the last method is the most pleasant and, at the same time, most convenient, the piquant effervescence on the tongue entirely covering the peculiar taste of the drug.

MESSRS. MARION AND CO., Soho Square, London, are now issuing a new edition of the firm's exhaustive and handsome catalogue. It is sent post free for 1s., and constitutes a most useful stock book of reference.

MESSRS. R. AND J. BECK AND CO., 68, Cornhill, London, have made their catalogue for the current year exceedingly attractive. It contains some seventy pages, which are fully illustrated and indexed.

LATE ADVERTISEMENT.

Assistant Wanted.

QUALIFIED ASSISTANT, about 25, with good experience, speaking French. Apply with full particulars to MELLIN'S Pharmacy, 48, Regent St., W.

PERSONAL.

MR. D. M. INGRAM, who for some time was with Messrs. Fasset and Johnson, is now representing Messrs. C. R. Harker, Stagg and Morgan of 15, Laurence Pountney Lane, E.C., in the north of England and part of Scotland.

MR. G. T. W. NEWSHOLME, the new Chairman of the Sheffield Board of Guardians, is one of the best known and most respected of local pharmacists, and a member of the Pharmaceutical Council. Mr. Newsholme has been from the beginning a warm supporter of the famous scheme of the guardians for providing isolated cottage homes in the suburbs of the city for the pauper children. These little waifs are now entirely removed from the workhouse taint. They never go near that institution, but are brought up in homes containing about a score under the care of foster-parents, and attend the ordinary elementary and Sunday schools.

DIARY OF THE WEEK.

- MONDAY, MAY 4.
SOCIETY OF CHEMICAL INDUSTRY, at 8 p.m.
"The Reproduction of Colour by Photography," by E. J. Wall.
"Artificial Silk," by Messrs. Cross and Bevan.
- TUESDAY, MAY 5.
PHARMACEUTICAL SOCIETY.
Benevolent Fund Committee.
Finance Committee.
General Purposes Committee.
SOCIETY OF ARIS (FOREIGN AND COLONIAL SECTION), at 8 p.m.
"Australia's Prospects in British Markets," by J. F. Dowling.
- WEDNESDAY, MAY 6.
PHARMACEUTICAL SOCIETY.
Council Meeting.
- THURSDAY, MAY 7.
SCHOOL OF PHARMACY STUDENTS' ASSOCIATION, at 7 p.m.
Social Evening.
"Fossil Plants," by A. C. Seward.
LINNEAN SOCIETY OF LONDON, at 8 p.m.
"On the Tooth-genesis of the *Canida*," by Dr. H. Marett-Tims.
"Lantern-slides Illustrative of the Habits of the Tiger Beetle, *Cicindela campestris*," by F. Enock.
"Preparations of the Hermaphrodite Glands of *Apus*," by H. M. Bernard.
- CHEMISTS ASSISTANTS' ASSOCIATION, at 8.30 p.m.
Annual General Meeting and Election of New Council.
- CHEMICAL SOCIETY, at 8 p.m.
"Luteolin" (II.), by A. G. Perkin.
"Morin" (I.), by Hermann Bablick and A. G. Perkin.
Ballot for Election of Fellows.

SUPPLEMENT

TO THE

PHARMACEUTICAL JOURNAL.

MISCELLANEOUS NEWS.

PHOTOGRAPHS OF THE SOCIETY'S PREMISES.—The Pharmaceutical Society has been presented by the Sandell Works Company, of South Norwood, with a series of photographs of the Society's premises, including the Examination Hall, Laboratory, Museums, and Council Chamber. The photographs measure 15 by 12 inches and 12 by 10 inches, and were taken by Mr. J. T. Sandell, an Associate of the Pharmaceutical Society, on the Sandell Multiple-Coated Plates. They illustrate fully the perfection in the rendering of perspective and gradation of tones that can be obtained by the use of a combination of films of varying degrees of sensitiveness. We understand that the Sandell Works Company intends shortly to bring out an album of these views in colotype at a very reasonable price, but it will be issued to subscribers only.

EXCISE PROSECUTIONS.—At Dublin last week Mr. John Gerrard, chemist and druggist, was prosecuted by the Excise authorities for selling S.V.M. without a licence. Evidence of the purchase was given. The stuff was divided into three parts in compliance with the Act of Parliament. Mr. Holmes, analyst, Somerset House, deposed that the sample examined by him contained methylated spirit prepared for sale. It contained no gum resin as alleged. Finish should contain three ounces of gum resin in solution to the gallon. Defendant said he had purchased the stuff from Messrs. Hayes, of Grafton Street, as finish, and he sold it as such. He asked and was granted permission to have the sample in his possession analysed. Mr. Joliffe, who represented the Excise authorities, said if the defendant's statement be true, he had his remedy against the wholesale house. The case was adjourned for a week.—Two traders were fined £12 10s. each at the Coolock Petty Sessions last week for selling methylated spirit without a licence.

THEFT FROM A CHEMIST.—At the Plymouth Police Court on April 26, William Edwards (13) and James Luke (11) were charged with stealing about 10s. from a till in the shop of Mr. J. G. Netting, chemist, North Road. Edwards went into the shop during the evening twice, and the second time purchased a packet of salts. Complainant afterwards left the counter for about a minute, and on returning found the till open and the silver left in the bowl for change gone. Mr. Netting's errand boy, named Rapson, said he was sweeping the front at the time, and the boy Luke talked with him. He saw the elder defendant enter the shop three times, and shortly afterwards witness went into the shop and saw the hatchway leading behind the counter open. The Bench dismissed the case, the Chairman observing that although there was not sufficient evidence to convict the elder boy, a good deal of suspicion attached to him.

CHEMISTS' AND DRUGGISTS' INDEMNITY INSURANCE.—The Directors of the Northern Accident Insurance Company, Limited, have recently had brought pointedly under their notice certain striking examples of the risks connected with the dispensing and sale of drugs and medicines by chemists and druggists. These were most forcibly illustrated by the action that was heard at the Birmingham Assizes in December last, when damages to the extent of £2800 and costs were awarded, strychnine having been supplied in mistake for phenacetin under circumstances that are generally known. Another case of interest was recently heard in the Court of Session, Edinburgh, when an action against a druggist in Glasgow for £2250 was decided, the ground of action being an alleged mistake in dispensing. The case, as it happened, was successfully defended, but the expenses amounted to a very considerable sum. Another striking case is recorded in which compensation was awarded to the widow and family of the victim of another error in dispensing. This Directors of this Company are prepared to grant protection against such occurrences, undertaking to indemnify policyholders to the extent of a sum to be agreed upon. If the defence of any action should be necessary, the Company will undertake the same, and be liable for the payment of the costs in connection therewith, and the amount of the verdict returned (if any) to the limit referred to. The premium is based on the number of persons engaged in the dispensing and sale of drugs and medicines, and the limit required—a rate of 2s. 6d. per head being charged, with an additional 10s. per cent. on the amount of limit to be covered. The General Manager and Secretary of the Company is Mr. R. W. Thompson, 19, West Nile Street, Glasgow.

ROYAL SOCIETY CONVERSAZIONE.—Electricity and photography again held the first place at the Conversazione of the Royal Society on Wednesday, observes the *Daily Telegraph*. In their combined form in the Röntgen rays they naturally constitute an absorbing theme. Mr. A. C. Swinton gave some excellent demonstrations, and Mr. Sydney Rowland exhibited a fine series of the new photographs. A remarkable demonstration was that of Professor Worthington and Mr. Cole, who by means of instantaneous photographs taken by electric sparks, which lasted "less than three-millionths of a second," produced a set of plates showing exactly what happens when a drop of water or a small solid body is allowed to fall into a liquid. Lastly, Mr. Friese-Greene exhibited a "Rapid Photographic Printing Machine," which, combined with an apparatus for type-setting that actually dispenses with type altogether, will, if its inventor's anticipations are realised, revolutionise the art of printing. Mr. Norman Lockyer and Mr. McClean each sent a number of noteworthy astronomical photographs. Mr. Ives explained how to combine "positivos" so as to produce coloured pictures, and Professor Meldola repeated the pretty demonstration of Lippmann's colour photographs. For geologists, Mr. Seton-Karr and Sir John Evans showed some fine palaeolithic implements from Somaliland. Late at night Professor Dewar delighted the company by some of his experiments with liquid air. He

showed the savants the ordinary atmosphere of London condensed into milky fluid, owing to its impurities, and in its distilled, wholesome state a translucent blue. More striking than any other fact of the demonstration was the ease and rapidity with which the Professor produced the liquid air and oxygen, one hundred cubic centimetres—about the tenth-part of a pint—being yielded in a few minutes.

THE DISPENSING OF DRUGS AT EXETER WORKHOUSE.—At the last meeting of the Exeter Corporation of the Poor, the resolution passed by the court on March 3 last (see *Ph. J.* of March 7, page 197) "That if the medical officer required assistance in dispensing, the duties should be performed by a person from outside the workhouse and not by nurses," was, on the motion of Mrs. Chorley, rescinded, and the matter left in the hands of the doctor.

THE CHEMIST'S CLUB.—A smoking concert is announced to take place in the Club Room, 2, Farringdon Avenue, E.C., on Thursday next, May 14, to commence at 8 p.m. All members are cordially invited. Chemists who are non-members will be admitted on production of their business cards.

THE RÖNTGEN X-RAYS IN DUBLIN.—There was a very large gathering of scientists at St. Vincent's Hospital on Friday April 24, when Professor Barrett and Surgeon McArdle demonstrated the chief features of interest connected with the x-rays, the professor dealing with the experimental science part of the programme and the surgeon treating the subject in its application to the practice of surgery. In the course of a number of interesting demonstrations, the hand of Mrs. Quinlan, wife of the Professor of Pharmacy at the Catholic University School, was successfully photographed by means of the rays.

ACCIDENT TO A SHEFFIELD CHEMIST.—A serious accident occurred recently to Mr. Thomas Strain, chemist and druggist, of Upper Allen Street, Sheffield, who was driving with his wife and sister into the country in a light vehicle when the horse slipped upon some granite paving and pitched the occupants of the trap out upon the road. Mr. Strain was considerably injured, and, in addition to the shock, is suffering from a dislocated wrist, a bruised face and shoulder. The ladies escaped injury.

PHARMACY APPEAL.—At Newry Quarter Sessions on Saturday, April 25, David Wilson, grocer, Church Street, Rathfriland, appealed against orders of the justices sitting at Rathfriland, on the 3rd day of January, 1896, whereby he was fined in two sums of £5, with £1 costs in each case—first, for having, on the 17th October, 1895, sold cantharides contained in a bottle of Leeming's essence; and secondly, for having kept open his shop for the retailing and dispensing of poisons on the same date. The appeals were fully heard at last sessions by Mr. Craig, Q.C., who reserved judgment on that occasion. His Honour now affirmed the two convictions, but did so without costs.

BEEF TEA AND INSANITY.—A whole family in Ballinasloe, named Kane, with one exception, a young girl aged 19, have been committed to the County Galway Lunatic Asylum suffering from advanced insanity. The cause of the malady is said to be traceable to beef tea (*sic*) of which all the members of the family, save the girl mentioned, partook a few days ago. At present the lunatics are dangerous. Up to their partaking of the beef tea none of the family had ever shown the slightest sign of insanity.

ACCIDENTAL POISONING BY LAUDANUM.—An inquest was held at Sheffield on Tuesday respecting the death of a three-month-old child named Hancock. The child's mother administered to it about twelve drops of laudanum in mistake for Hawksworth's mixture. Two doctors were called in, but their efforts to save the child were unavailing. The verdict was to the effect that death was due to an overdose of laudanum given by misadventure.

INTERNATIONAL EXHIBITION AND COMPETITION AT BADEN-BADEN.—An international exhibition will take place during the months of August and September next in the world-famed watering-place, Baden-Baden. The competition will include hygiene, food for the people, army requisites, sporting and tourist articles. There will also be a special international department for beer, bottled wines for export, brandy, etc.; champagne and effervescing drinks; cigars, cigarettes and tobacco, also all things necessary for sea voyages and the navy; gas cooking and heating apparatus, etc. This undertaking has the support of the Government and town authorities, and the Committee consists of the leading men of the country. It is the first enterprise of the kind in South Germany, and intending exhibitors must announce themselves to the Exhibition Committee at Baden-Baden by June 15, 1896, at latest. The Secretary is Herr Ph. Bussemer, Kaufmann, Stadtverordneter und Vorstand der Handelsgenossenschaft Baden-Baden.

CARBOLIC ACID INSTEAD OF BRANDY.—The Rev. E. Templeman, late rector of Pitecott, who was not in the habit of taking alcoholic stimulants, agreed to do so on the advice of his wife, as he felt weak and giddy. He had a peculiar habit of drinking directly out of a bottle, and it is assumed that, having a fit of faintness, he went to the storeroom adjoining the dining-room, and owing to the darkness could not distinguish the difference between the brandy bottle and one kept for carbolic acid, so that he drank out of the wrong bottle. On being called for dinner he was found to all appearances in a dead faint. The doctor was called for, but on his arrival death had already taken place. The post-mortem examination showed a quantity of carbolic acid in the stomach, and that the mouth and stomach were charred by the action of the crude acid. The jury brought in a verdict that the deceased had been accidentally poisoned, but thought there had been great neglect in allowing a poison bottle to be mixed with liquor bottles.—*Eastern Morning News.*

MARKET REPORT.

[Specially compiled for the *Pharmaceutical Journal.*]

[The quotations here given are in all cases the lowest net cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.]

LONDON, MAY 7, 1896.

Business in the produce markets, directly or indirectly connected with drug trade, has been quiet since our last report. The market in crude camphor is in a very uncertain condition, and prices have declined considerably. No change has, however, occurred in the refined article. Menthol is very quiet, quinine rather firmer, with a better enquiry and opium alkaloids very steady. Caffeine is unchanged but quiet. Carbolic acid is again easier, tartaric acid firm, citric acid unchanged, cream of tartar steady on the spot but easier for delivery, whilst arsenic is still scarce. In the drug market opium, insect flowers, ipecacuanha, coca leaves, and orris root are firm, jalap quiet, and senegar offering at easier rates. Cod-liver oil is neglected, shellac very firm, whilst the heavy and essential oil markets are but little changed. Full details will be found below:—

ACID, CARBOLIC.—This market continues to weaken, especially for *Crystals*, and the current quotations are now as follows:—*Crystals*: 34° to 35° C., 6½d.; 39° to 40° C., 7d.; 39° to 40° C. (*detached crystals*), 8d. per lb. *Crude*: 60 per cent. is now quoted at 2s. with 75 per cent. at 2s. 4½d. per gallon. *Liquefied* and *Cresylic* are quiet at 1s. and 11d. per gallon respectively.

ACID, CITRIC.—Is quiet, and uncharged in price, 1s. 2d. being still quoted on the spot for *English acid*. *Concentrated juice* offers at £13 5s. per pipe, *f.o.b.*, Messina.

ACID TARTARIC.—The market is very firm at an advance in price, the bottom price for *foreign acid* on the spot being now 1s. 2¼d. per lb., and 1s. 2½d. is quoted by the agents of some of the makers. *Laves'* and *Kemball's* brands of *English acid* are still quoted at 1s. 3d. per lb. on the spot.

AMMONIA COMPOUNDS.—*Sulphate*: The market is quiet but steady, grey 24 per cent. being quoted at £8 2s. 6d. on the spot, whilst *Hull* is quoted at £8, *Leith* at the same figure, and *Beckton* terms at £8 2s. 6d. forward terms. *Sal ammoniac* is unchanged at 39s. for *firsts*, and 37s. for *seconds*. *Carbonate* quotes at 3d. per lb. in casks, 3½d. in kegs, 3¾d. in jars, with *powder* ¼d. per lb. extra. *Liquor* is unchanged at 3d. to 3¾d. per lb., less 5 per cent.

CACAO BUTTER.—*Easier*. In auction on Tuesday 600 cases, representing 60 tons of *Cadbury's* make, sold at an average of

12½d. per lb., against 12¾d., the price paid at the April sale.

CAMPHOR (CRUDE).—This article has attracted considerable attention during the week, which was naturally accentuated by the death of Col. North, and developments will be awaited with considerable interest. Much uncertainty prevails as to the line of action which the Syndicate, of which the deceased was one of the principal members, will pursue, but at the present time appearances seem to indicate a "slump." *Formosan* camphor closed last week with buyers at 125s., *c.i.f.*, May to July shipment. On Tuesday 120s., *c.i.f.*, was paid for 300 piculs, followed by 400 piculs on Wednesday at 114s., down to 112s. 6d., *c.i.f.*, a sale being reported at the close at 110s., *c.i.f.*, May to June shipment. At the last price there are ready sellers, and a further decline is very probable. *Japan* camphor has not attracted any attention, and the quotation of 125s. *c.i.f.*, is quite nominal. The shipments of *Japan* camphor during April are cabled as 900 piculs.

CINCHONA BARK.—A parcel of fine mossy *Madras* quill, recently arrived, will be offered in auction next week. For this the holder hopes to get 1s. 6d. per lb.

COAL DISTILLATION PRODUCTS.—*Toluol* quoted at 2s. per gallon for *pure*. *Benzo* is quiet at 1s. 8d. for 50 per cent., whilst 7 per cent. offers at 2s. per gallon. *Creasote*: 1s. 8d. per gallon. *Crude Naphtha*: 30 per cent., at 120° C., offers at 10d. per gallon. *Solvent Naphtha*: 95 per cent., at 160° C., quotes at 1s. 5d.; 90 per cent., at 160° C., at 1s. 3d.; and 90 per cent., at 190° C., at 1s. 1d. per gallon. *Anthracene*: *13A* is quoted at 10½d. and *B* at 9d. per unit. *Pitch*: 33s. per ton, *f.o.b.* *Tar*: *Refined* quotes at 12s. per barrel.

COCA LEAVES.—A parcel of good *Truxillo* leaves recently arrived have been sold during the week at 1s. 2d. for good green, and 1s. 1d. for yellowish. *Bolivian* cocas, of ordinary quality, offer at 1s. 4d. per lb. on the spot.

COPAIBA (BALSAM).—The market is firm. For good *Maranhm* 2s. is asked, whilst a parcel of genuine balsam of *Para* character offers at 1s. 6d. per lb. on the spot.

CREAM OF TARTAR.—On the spot the market is steady, best white *French crystals* being quoted at 100s. per cwt., whilst for *German* brands of *powder* 102s. to 105s. is asked. The forward market is, however, easier, and *crystals* offer at 94s. per cwt., *f.o.b.*, for shipment from Bordeaux.

GALLS.—The market is quiet. In *Persian* galls a moderate business has been done in *blues* at full rates, whilst for other descriptions no inquiry is shown. The current quotations are:—*Blues*: 52s. 6d. to 54s. 6d.; *greens*, 42s. 6d. to 47s. 6d., and *whites*, 40s. to 45s. per cwt.

GINGER.—Is dull of sale for *Cochin* root, but the prices are about steady. For medium and small washed, 32s. to 32s. 6d. was paid, whilst limed native cut realised 32s. 6d. to 42s. 6d. for ordinary to small half cut, and 43s. for medium ditto. *Jamaica* root was in excellent demand, the whole of the catalogue being disposed of at an advance of 1s. to 3s. per cwt. for ordinary kinds, whilst medium and fine ditto were steady. The prices paid were as follows:—*Rhatoon*: Fine bright, 99s. to 110s.; medium to medium bright, 79s. to 90s. 6d.;

ordinary medium brownish, 71s. to 78s., and common, 58s. to 69s. per cwt.

IPECACUANHA.—The market is firm. There has been a steady demand privately from *Rio* (Brazilian) root, whilst *Carthagena* (Columbian) root is quoted at 4s. to 4s. 1d. per lb.

JALAP—Is offering at low rates on the spot in spite of the reports from New York to the effect that the market is advancing. For fair *Vera Cruz* root, 6½d. is now the current quotation, and this price is not likely to see any improvement yet awhile, as there are plenty of offers from Hamburg at 5d. per lb. *c.i.f.* terms.

LIQUORICE ROOT.—*Persian* root is very slow of sale, ordinary rough quality being quoted nominally at 2s. to 3s. 6d. per cwt. Decorticated *Russian* root offers at 29s. per cwt, *c.i.f.* terms.

OIL (COD-LIVER).—The market is very quiet, the demand being now very small. The spot quotation for fine new *Norwegian* oil is 200s., and although one or two holders ask more, this price may be regarded as the value. A parcel of fine 1895 oil has been offering during the week at 195s. per barrel, but we have not heard of any business. *Newfoundland* oil is only in small supply, and for good quality oil, 6s. 6d. per gallon is asked.

OILS (ESSENTIAL).—*Star Anise* oil is dull of sale at 9s. 7½d. to 9s. 9d. per lb. on the spot, according to holder. *Peppermint* oils are still devoid of interest, *American* being offered at 9s. 1½d., and *Wayne County* at 7s. 3d. on the spot. *Eucalyptus* has sold at 1s. 6d. during the week for the *J. & Co.* brand. *Sassafras* seems to be the only oil to attract interest, and prices are likely to advance. Concerning *Otto of Roses*, more hopeful news has come to hand in regard to the new crop. The *Italian* essence market is unchanged.

OILS (FIXED) AND SPIRITS.—*Castor* is steady, but unchanged in price, 30s. to 31s. 6d. per cwt., *c.i.f.*, being still quoted for fine quality *Italian* oil. *Cotton* is very quiet at a decline of 5s., £16 5s. to £16 15s. being now quoted for *refined* oil on the spot. *Coco-nut* is slow of sale, but prices are unchanged, *Ceylon* being worth £22 15s. and *Cochin* £26 15s. on the spot. *Linseed* is steadier at the close, but the current quotation of £19 shows a slight decline on last week's price. *Rape* is a trifle firmer, £23 10s. to £24 5s. being now quoted for *refined* oil. *Turpentine* is steady at the unchanged rate of 21s. 3d. on the spot, but the market for forward delivery is quiet. *Petroleum* is still very dull of sale, and, if anything, a trifle easier, *Russian* oil being quoted at 5½d. to 5¼d., *American* at 5¾d. to 5½d., and *water-white* at 6½d. per gallon on the spot.

OPIUM.—The London market continues very firm. *Persian* opium was sold during the week at 13s. per fine bricks. The current quotations for *Turkish* opium are as follows:—*Soft shipping*, 12s. 6d. to 13s. 3d.; *Smyrna*, 9s. 6d. to 10s.; *Constantinople*, 9s. 6d. to 10s., and *druggists' seconds* 8s. 6d. to 9s.

ORRIS ROOT.—The market is quiet. Small root for grinding offers privately at 58s. per cwt., *c.i.f.*, whilst good *Veronese* quotes at 57s. 6d. On the spot 70s. to 72s. 6d. is asked for best *Florentine* root.

POTASH COMPOUNDS.—*Permanganate* is very firm and scarce on the spot at 67s. 6d.

to 70s. for small and 72s. 6d. to 75s. for large *crystals*. *Chlorate* is quiet at 4½d. on the spot. *Prussiate* (yellow) quotes at 7¾d. for *English* and 7d. for *Beckton*.

QUININE SULPHATE.—On the spot the market is quiet, but prices are steady, and there are buyers of *B. and S.* and *Brunswick* at 12½d. per oz. For forward delivery there has been a fair business done in the best German makes, 12¾d. having been paid on Wednesday for 10,000 ozs., August delivery. The market closes firm. The landings during April were *nil* ounces, and the deliveries, 48,024 ozs., making the stock, on April 30, 1,817,224 ozs., against 2,427,200 at the corresponding date in 1895.

SENEGA ROOT—Is offering at extremely low prices, fair quality root being quoted at 1s. 1d. per lb. on the spot.

SHELLAC.—A firm market. No public sales were held this week, the 150 cases advertised being withdrawn. Privately there has been a good demand for *Second Orange*, with sales of *TN* at 93s. *Button* is firm and rather more active, but *Garnet* is quiet at 87s. for fair free, and 84s. to 85s. for other marks.

SPERMACEI.—Is very quiet. Good refined *American* offers at 1s. 4½d. per lb. on the spot, and 1s. 3 d. *c.i.f.* for shipment from New York.

SPICES (VARIOUS).—*Cloves*: In small supply, and no demand shown, *Zanzibar* being bought in at 2½d., and good to fine bright *Penang* at 8d. to 10d. per lb. For delivery *Zanzibar* is quoted at 2½d. *c.i.f.* per lb. nominally for June to September shipment. *Nutmegs* are quiet. A few cases of *Penang* sold at 1s. 9½d. for 81's, whilst common broken *Bombay* realised 3d. to 3¼d., and *Travancore* 7d. to 8d. for shrivelled, 1s. for 136's, and 1s. 5d. for 106's. *Mace* continues dull of sale at easier rates, *Penang* selling at 1s. 4d. for wormy, and 1s. 2d. for pickings; whilst 1s. 2d. to 1s. 3d. was paid for *Travancore*, and 1s. 2d. to 1s. 5d. for ordinary, and 2s. 10d. for fine pale *West Indian*. *Cassia buds*: *Wild Bombay* sold in auction for 20s. per cwt. *Cinnamon quillings*: Good broken realised 9d.; clippings, 8¼d., and featherings, 6d. to 6¾d. per lb. *Pimento* is still dull of sale, but fairly steady, 2¾d. being paid in auction for ordinary quality, 2½d. for fair, and 2¾d. for good clean ditto. *Chillies* are steady. Medium dull *Zanzibar* realised 34s. 6d. to 35s., and good bright red *Japan*, 56s. 6d. to 62s. per cwt. *White pepper* sold at 5½d. for very fine bold *Singapore*. *Pepper*: For dull *Singapore* 2½d. was paid, and 2½d. to 2¾d. for good fair ditto, showing an easier rate. *Arrowroot*: Flat. *St. Vincent*: sold at 1½d., and *Bermuda* at 1s. 7d. per lb.

TAMARINDS—Are still dull of sale, and in auction all the new *Barbados* were bought in. A few barrels of *Antiquan* sold at 14s.

TOLU BALSAM.—The market is firm although there does not seem to have been much business done. On the spot 2s. 2d. to 2s. 6d. per lb. is asked for genuine old-fashioned balsam, according to holder. Cabled advices from New York point to a firm market there, the supply being very limited.

WAX.—*Japan* is quiet at 36s. per cwt. on the spot, 34s. per cwt., *c.i.f.* being quoted for forward delivery. *Paraffin* is quoted at 1¾d. to 2¼d. for *crude*, and *refined* at 2¼d. to 3¼d. per lb.

NEWCASTLE CHEMICAL MARKET, May 5.—A shade more business is passing in caustic soda and alkali. Over-sea orders are a trifle better. Soda ash is a trifle scarce and Sulphur is much in the same position. Prices are little changed and stand thus:—Bleaching powder: £7 5s. to £7 10s. Sulphur: £3 17s. 6d. to £4. Caustic soda: 70 per cent., £7 5s.; 76 per cent., £8 10s. to £9. Hyposulphite of soda: £5 10s. to £7, according to package. Alkali: 48 per cent., £4 10s. to £4 15s.; 52 per cent., £5 to £5 5s. Soda crystals in bags, 36s.; in casks, 42s. 6d. to 45s. Soda ash: 48 per cent., £4 to £4 5s.; 52 per cent., £4 10s. to £4 12s. 6d. South Durham salt 9s. per ton *f.o.b.* Tees.

MANCHESTER CHEMICALS AND DRY-SALTERIES, May 5.—Now that it is well known that the United Alkali Company will continue to book orders for heavy chemicals up to the end of June, there is some pressure to secure orders for prompt delivery. Bleaching powder can be readily purchased at £6 17s. 6d., soft wood casks on rails. In drysalteries there is very little doing. Epsom salts are quoted 55s. per ton delivered. Manchester and Glaubers (two ton lots), 23s. 6d., on rails here. Pitch is lower, and can be bought at 30s. alongside Salford docks. Sulphate of copper, which closed firmly at the end of the week at £18 10s., has gone down to £18 and £18 5s. Owing to the reduced demand for South Africa, the market has been flooded with foreign yellow prussiate, which can be had at 7d.: local makers, however, hold for 7½d. Sulphate of ammonia remains flat at £7 12s. 6d. to £7 15s., here; £8, *f.o.b.*, Liverpool. Bicarbonate of soda, £6 15s. per ton, one cwt. kegs; Industrial bi-carbonate (for mineral waters), £4 4s. per ton, in bags, on rails at works, Northwich. Naphthas are lower, both miscible and solvent wood. Benzols dull, but carbolic steady.

LIVERPOOL MARKET REPORT, May 6.—Linsced: Flat. *River Plate*, 31s. per 416 lbs.; *Turkish*, 36s. 6d. Canary-seed: *Turkish*, 29s. 6d. to 31s. per 464 lbs. Calabar beans: 1½d. *ex store*. Kola Nuts: Plentiful. Fresh, 6d. to 7d.; dried, 4d. to 5d. Ginger: *Sierra Leone*, 20s.; *Bombay*, 32s. Jaborandi leaves: 2s. 1d. Honey: *Chilian*, Pile 2, 20s. 3d. Beeswax: *Sierra Leone*, £5 15s. Olive oil: Very firm, and prices rising, especially best *Spanish* varieties; *Candia*, £31 10s.; *Malaga*, £30; *Seville*, £29 10s. Castor oil: Steady, good seconds *Calcutta*, 2½d. to 2¾d.; first pressure *French* and *Madras*, 2½d. Linseed oil: *Liverpool* makes 19s. 6d. to 20s. 6d. Cotton-seed oil: 17s. to 17s. 6d. per cwt. Spirit of turpentine: Scarce at 22s. 6d. Petroleum: *Russian*, 5¾d.; *American*, 6¼d. to 7¼d. Carbonate of ammonia: 3½d. to 3¾d. Sal ammoniac: firsts, 39s.; seconds, 37s. Sulphate of ammonia: £8 5s. to £8 6s. 3d. Bleaching powder: Hard, £7 to £7 5s. Copperas: *Lancashire*, 38s.; *Welsh*, 36s. Sulphate of copper: £18 10s. to £19 for May shipment. Chlorate of potash: 4¾d. Prussiate of potash: 7¾d. Bichromate of potash: 4¾d. Potashes: 21s. 3d. Pearl-ash: 35s. Saltpetre: 23s. 6d., kegs; 23s., barrels. Cream of tartar: Finest white is steadily held at 100s. Bicarbonate of soda: £6 15s. Soda crystals: £2 7s. 6d. to £2 10s. Borax: Crystals, 20s.; powder, 21s. Tincal, 19s. 6d.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Books, etc.

A book of 130 Well-tried Recipes for Chemists and Druggists, comprising well-selected formulæ for general, remedial, veterinary, toilet, and everyday preparations. Post free, 1s. 6d.—Tully, Chemist, Hastings.

Thorpe's 'Chemistry,' 2 vols.; Clowes' 'Quantitative Analysis,' in good condition. What offers?—Davies, 22, Rumsey Road, S.W.

Dr. Miller's 'Elements of Chemistry,' complete, in 3 vols., cloth, published £2 12s. 6d., interleaved with many brilliantly hand-coloured plates of cube system, unique, 21s.—Davis, "Chestnuts," Gordon Hill, Enfield.

All free. Piesse's 'Art of Perfumery,' scarce, 7s. 6d.; Woodville's 'Medicinal Plants,' 3 vols., 210 coloured plates (published £4 4s.), 21s.; Cooper's 'Surgical Dictionary' (30s.), 5s.; Daniel Hanbury's 'Pharmacological Papers' (16s.), 7s. 6d.—Davis, "Chestnuts," Gordon Hill, Enfield.

Miscellaneous.

Marble Mortars, one 6 pint capacity and one 3½ gallons, perfect condition. What offers?—Du Var, 13, Orford Hill, Norwich.

Complete Wall Fitting, 12 ft. long, sixty mahogany fronted drawers, glass labels, cut glass knobs, bottle lockers under, shelving, pilasters, cornice over, £12 10s.—Philip Josephs, 54, Old Street, City Road, London, E.C.

Student's microscope, 1-in. and 1/6-in. objectives (Crouch), two eye-pieces, sub-stage condenser, with iris diaphragm, polariser, camera lucida (Beale), £5.—"A.," 30, Conduit Street, W.

India-rubber Mats, Manufacturers' surplus, half cost, per contra account; one each, 36 in. by 24 in., unlettered; 33 by 24, lettered "Drug store"; 36 by 24, "Store prices."—"Chemist," 4, Commercial Road, Peckham, S.E.

What offers, cash? 5 ozs. Otto rose virgin; 100 ozs. Howard's quinine sulphate, 4-oz. bottles.—Sinclair, Chemist, Alfreton Road, Nottingham.

Soda Water Appliances.

Soda-Water Machine, Barnett and Foster's, No. 2; list price £45; sell for £15; good condition.—Apply to H., 1, Southwick Street, Hyde Park.

PERSONAL.

PROFESSOR EHRLICH has been appointed Director of the new State Institute at Berlin, for the testing of therapeutic serum.

DR. A. P. LUFF, Analyst to the Home Office, has been elected a Fellow of the Royal College of Physicians.

DR. W. H. SYMONS, D.P.H., who recently retired from the London Board of Examiners of the Pharmaceutical Society, has been appointed Medical Officer for Bath.

SIR JOSEPH LISTER, President of the Royal Society, is the latest addition to the series of "Scientific Worthies," a biographical sketch and photogravure appearing in *Nature* this week.

DR. J. E. AITCHESON, C.I.E., who has for the past four years or more been investigating the flora and fauna of North-West India and Kashmir, has now returned to London.

MR. E. B. FORD, chemist, Pontypool, has been elected chairman of the Pontypool Urban District Council, and Mr. H. M. Davies, chemist, Blaenavon, re-elected chairman of the Blaenavon Urban District Council.

MR. CORNELIUS HANBURY recently had his portrait, by Mr. Percy Bigland, presented to him by the employes of the firm of Allen and Hanburys, Limited, and we understand that the picture is one of the exhibits at the Royal Academy this season, and will be reproduced in this week's *Illustrated London News*.

MR. PERCIVAL TURNER, medical and dental transfer agent, 4, Adam Street, Adelphi, has just added the department of chemists' transfer agency to his business, which he has placed under the management of Mr. Frederic Durant, pharmaceutical chemist, late of 137, Queen's Crescent, N.W.

TRADE NOTES AND NEWS.

THYRO-IODIN—the new thyroid preparation—discovered by Professor Baumann and Dr. Roos, and prepared by Messrs. Fr. Bayer and Co., of Elberfeld, can be now obtained in London from the Farbenfabriken Company, 19, Dunstan's Hill, E.C.

IN response to several inquiries we have ascertained that EUCAINE, the new substitute for cocaine introduced by the Schering Company, is supplied by Messrs. A. and M. Zimmermann, 6 and 7, Cross Lane, London.

MR. WILLIAM POPPELREUTER, of Manchester, has published, in pamphlet form, an extract from Heinrich Haensel's quarterly report for April on essential oils and fruit essences, in which interesting information is given respecting a large number of oils.

MESSRS T. NEWBERRY AND SONS' annual catalogue of druggists' sundries, etc., for 1896, is a portly volume of five hundred pages or more. An exceedingly useful section of the book is that devoted to "Remarks on the Medicine Duty," with extracts from official documents bearing upon the practical administration of the Acts of Parliament regulating sales of proprietary medicines. Lists are also given of wines, etc., which may or may not legally be sold by vendors holding an Excise wine licence. Every chemist and druggist should send for a copy of this catalogue.

MESSRS. BURROUGHS, WELLCOME AND COMPANY now supply pancreas substance tablets, 5 grains in each, in bottles containing 100. They represent the whole substance of the gland in a pure reliable form, and contain all the active principles in an unchanged state. They are keratin-coated, so that they pass unchanged through the stomach, and are not dissolved until they reach that part of the alimentary tract where their action is required. The same firm is supplying a new effervescent tabloid of lithium bitartrate, also in bottles containing 100 5-grain tabloids. The preparation of this salt in the compressed effervescent form has been suggested, because it is held that the acid tartrate increases the normal alkalinity of the blood, eliminat-

ing uric acid. Further, it is said not to have those unpleasant after-effects sometimes attributed to alkaline combinations of lithia.

MESSRS. W. WATSON AND SON, 313, High Holborn, W.C., make a special feature of apparatus for work with the Röntgen rays. They have also made a number of electrographs of difficult subjects, and announce that surgical cases will be undertaken at short notice. The firm's list of x-ray apparatus, in which the essentials are described and priced, includes vacuum tubes, coils, batteries, etc., as well as complete outfits, from £9 upwards.

MESSRS. WILCOX AND Co., who have been established for fifty years in Oxford Street, W., are being disturbed by the Central London Railway, and the matter was to be argued at the Guildhall, Westminster, on Friday, this week.

DIARY OF THE WEEK.

MONDAY, MAY 11.

ROYAL GEOGRAPHICAL SOCIETY, at 8.30 p.m.
"Through the Central Soudan to Sokoto," by W. Wallace.
"Hausaland," by Rev. Chas. H. Robinson.

TUESDAY, MAY 12.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"Ripples in Air and on Water" (II.) by E. Vernon Boys.
ROYAL COLONIAL INSTITUTE, at 8 p.m.
Ordinary Meeting.

WEDNESDAY, MAY 13.

PHARMACEUTICAL SOCIETY.
Library, Museum, School, and House Committee.

THURSDAY, MAY 14.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"The Art of Working Metals in Japan" (II.), by W. Gowland.

FRIDAY, MAY 15.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"Cable Laying on the Amazon River," by A. Siemans.

LATE ADVERTISEMENT.

Assistant Wanted.

JUNIOR wanted. Qualified for light Retail and Dispensing business in West-end. In-doors. State full particulars as to former experience. G. H., care of Barron, Harvey & Co., Giltspur St., E.C.

SUPPLEMENT

TO THE

PHARMACEUTICAL JOURNAL.

MARKET REPORT.

[Specially compiled for the Pharmaceutical Journal.]

LONDON, MAY 14, 1896.

Business in the produce markets connected with the drug trade can only be described as slack. The crude camphor market continues very uncertain, but there is no notable change. On the other hand, the German refiners have lowered their quotations 4d. per lb., and this move has been followed by one of the English refiners. Menthol is very quiet, cinchonine dearer, morphine and codeine very firm, and quinine inclined to go better, whilst caffeine is quiet. Cocaine is reported in good demand and likely to advance in price. Carbolic acid has firmed up somewhat, tartaric acid is very firm, cream of tartar easier, whilst arsenic is still very scarce. At the drug sales held to-day no notable changes occurred. Both varieties of ipecacuanha are cheaper, and the same applies to ergot, whilst on the other hand benchn leaves, Jamaican wax, gum elemi, better quality senna leaves, and sarsaparilla are dearer. Cod-liver oil is easier. Shellac is quiet whilst the spice and oil markets show no important features:—

ACACIA (GUM).—The market has again been exceedingly quiet. To-day the moderate amount of 91 packages were offered, but no sales were effected and the views of holders seem far too high to lead to any business. *Trieste* gum, which is in moderate supply only, was bought in at £15 for fine picked greyish, £8 for medium yellowish, and £7 for pale grain. *Soudan* sorts were bought in at 80s. for small sorts, to 100s. for medium yellowish. In *Persian* so-called insoluble gum, no business is reported and quotations remain nominally 25s. to 30s. for fine pale picked, 20s. to 22s. for fair to good sorts, and 17s. to 18s. for siftings.

ACID, CARBOLIC.—Since our last report the market for *crystals* has firmed up somewhat, and the current quotations are now as follows: *Crystals*: 34° to 35° C., 6¼d.; 39° to 40° C., 7¼d.; 39° to 40° C. (*detach ed crystals*), 8¼d. per lb. *Crude*: 60 per cent. is quoted at 2s., and 75 per cent. at 2s. 4d. per gallon. *Liquefied* and *creylic* are unchanged at 1s. and 11d. per gallon respectively.

ALOES.—In auction the average supply of 298 packages was offered. *Cape* aloes, which was represented by 55 cases, sold at fully steady rates, 25s. to 25s. 6d. being paid for good bright hard, 22s. 6d. to 24s. 6d. for ordinary to fair ditto, partly drossy, and 20s. 6d. to 21s. 6d. for ordinary softish. No *East Indian*

aloes was sold, ten tins being bought in at 50s. per cwt. Of *Curacoa* aloes ordinary dark to good brown, in gourds, sold at 24s. to 37s. per cwt., whilst fair capey in boxes realised 17s. to 19s., and drossy quality, 8s. 6d. per cwt.

AMMONIACUM (GUM).—Three cases of fine selected pale drop were bought in at 60s. per cwt., whilst a case of ordinary seedy mixed gum, with a few almonds, was also withdrawn at 35s. None was sold in auction.

ANNATTO SEEDS.—None were sold, although a good supply was again offered. Fair bright *Madras* seed was bought in at 5¼d. per lb. Fifteen cases of *annatto paste* from New York sold at 1s. 10d. per lb.

BENZOIN (GUM).—A fair supply, amounting to nearly 300 cases, was offered. For *Sumatra* gum of good quality fair inquiry was shown and about steady rates were paid, £8 5s. being the price of 4 cases of good pale almondy seconds, slightly false packed. In addition, £6 10s. was paid for fair almondy centred seconds, but largely false-packed sides, and £3 5s. to £3 15s. for low thirds. Of *Siam* gum, some remarkably fine parcels were shown, exceptional prices being realised. For a small case of very fine bold clean pale drop £36 10s. was paid, whilst £33 10s. was accepted for a similar lot, but in this case the almonds were not so fine. For medium loose drop £18 10s. was paid, and £11 for small ditto, and £4 14s. to £4 15s. for very small loose ditto. *Penang* gum, which has been in very moderate supply of late, was represented by 6 cases of glassy seconds, which fetched 97s. 6d. per cwt., whilst good *Palembang* seconds realised 52s. 6d., and low thirds 20s. per cwt.

BIRDLIME.—Nine cases of this article imported from Japan sold without reserve at 6d. to 6¼d. per lb.

BUCHU.—The supply offered to-day was only moderate, amounting to about 90 bales. A good demand was shown, and the bulk of the catalogue sold at an advance of about ¼d. per lb., 2¼d. to 3d. being paid for fair green round leaves, and 2½d. for yellowish ditto.

CALUMBA.—Firmer. A parcel of 94 bags of brownish sorts from Bombay sold to-day at 9s. to 9s. 6d. per cwt. Twenty bags of small pieces were bought in at 15s., and a parcel of picked root at 17s. per cwt.

CAMPHOR (CRUDE).—There has been nothing in this article since our last report, but the tone of the market is decidedly weaker. Nominally *China* camphor is quoted at 107s. 6d., and *Japan* at 117s. 6d. per cwt., *c.i.f.* terms. To-day several parcels were offered, but no business was done. In one instance 288 cases of *Formosan* camphor were bought in at 110s., after 87s. 6d. had been bid. Probably a moderate advance only on the buying-in price would have led to business.

CAMPHOR (REFINED).—On Tuesday the *German* refiners reduced their quotations by 4d. per lb. This move was followed by a corresponding reduction on the part of one of the *English* refiners, making the current quotation 1s. 5d. for ½-ton lots of *bell & flowers*

CANTHARIDES.—Very slow of sale in auction. To-day 115 cases of dusty *Chinese* flies were bought in at 1s. to 1s. 2d. per lb.

CARDAMOMS.—An average supply was catalogued to-day amounting to about 110 packages. The prices paid show a steady market, whilst *seed* also realised full rates.

The quotations are as follows:—*Ceylon-Mysore*: Good pale bold, 3s. 1d.; small pale long, 2s. 4d.; small yellowish, 2s. 1d.; small to very small pale, 1s. 11d. to 1s. 8d. per lb. *Seed* sold at 2s. 10d. per lb.

CASCARILLA.—A good supply was offered, amounting to about 48 packages, and about half sold at steady rates, 47s. being paid for fair grey quill, 40s. to 42s. for small grey and brown ditto, and 35s. 6d. to 38s. for thin brown bark. Ten barrels of *siftings* were bought in at 35s. per cwt.

CASSIA FISTULA.—In auction 86 baskets of lean, mouldy and wormy pods sold without reserve at 5s. 6d. to 5s. 9d. per cwt. Fair quality were bought in at 18s. per cwt.

CINCHONA.—A moderate catalogue was offered at the monthly sale, and keen competition was shown, the bulk consisting of *East Indian* barks, selling at fully steady rates to an advance for good bark and quills. The unit remains unchanged at ½d. per lb. The prices paid were as follows:—*Ceylon Succirubra*: Ordinary to good stem chips, ¾d. to 2¼d. per lb. *Indian*: *Succirubra* chips and shavings, 1¼d. to 1¾d.; ditto root, 1¾d. to 2d.; ditto fair quill, 2½d., and good to fine silvery, 4¼d. to 7¼d. per lb. *Officinalis*: Fair to good chips and shavings, 1¼d. to 2½d.; ditto root, 1¼d. to 2¼d. *Ledger*: Stem chips and shavings, ¾d. to 2¼d.; good rich ditto, 2¼d. to 3½d. *African*: Sound quills, 2¼d. to 2½d., and broken, 1¼d. to 2d. per lb. At the drug sales a parcel of flat *Calisaya* was bought in at 6d. to 10d. per lb.

COCA LEAVES.—A single bale of fair greenish *Truxillo* leaves sold in auction at 1s. per lb. Damaged *Ceylon* were bought in at 1s. 6d.

COCAINE.—A good demand is reported for this article, and there is said to be a probability of an advance on the present quotation.

COLOCYNTH.—*Turkey* colocynth is very firmly held. Business has been done privately in good apple at 2s. 6d. per lb. Fair *Spanish* was bought in to-day at 1s.

COPAIBA (BALSAM).—Three barrels of bright brown *Para* balsam were bought in at 1s. 9d. per lb.

CUTTLEFISH.—Twenty-one casks of small grey, part-broken, bone from Bombay sold to-day at ¼d. to 1½d. per lb.

DRAGON'S BLOOD.—Very slow of sale. About 27 packages were bought in to-day, including damp bright lump at £6 10s., and dark saucers at 85s.

ELEMI (GUM).—A total of seventy-nine cases were offered to-day. A parcel of clean *Singapore* gum of good aroma, sold at 24s. to 28s. per cwt.

ERGOT OF RYE.—Is tending slightly easier. Sixty-six bags of good sound *Russian* ergot sold at 5¼d. per lb. in auction. This price was refused for the same quality at the last sale. A parcel of wormy *Spanish* was bought in at 6d. per lb.

GALLS.—The market in *Persian* galls remains very dull, and the new crop is held for advanced rates. Quotations are: *Blues*, 52s. to 54s. 6d.; *greens*, 42s. 6d. to 47s. 6d.; and *whites*, 40s. to 45s. per cwt. To-day 6 bags of *Turkey* galls sold at 47s. 6d. per cwt.

GAMBOGE.—Quite neglected. Of thirty-one packages not a single case was sold. Partly broken pipe of good fracture was bought in at £10 10s., and fair quality ditto at £9 per cwt.

GINGER.—*Cochin* root remains dull of sale. In auction about two-fifths of the catalogue sold at a decline of about 1s., 32s. to 32s. 6d. being paid for fair medium washed, and 31s. to 31s. 6d. for brownish rough, whilst limed native cut realised 49s., and bold rough cut 65s. per cwt. For *Jamaican* root there was again a good demand, but the prices paid were irregular, fine qualities selling at full rates, medium to good at a decline of 2s., whilst low grades realised steady prices.

GUAIACUM (GUM).—Twelve boxes of ordinary quality gum sold at 6d. to 6½d. for dusty mixed gum, and 9d. for slightly better quality.

HONEY.—*Jamaican* honey again sold to-day at very low rates, 20s. per cwt. being paid for 10 casks of good yellow, whilst thin dark ditto realised 18s. 6d. per cwt. *Honolulu* honey was bought in at 26s., and *New Zealand* at 45s. per cwt.

IPECACUANHA—Thirty-nine bales of *Brazilian* root were offered to-day. The prices paid show a decline of about 1d. per lb. Fair sound root realised 5s. 2d. down to 5s. per lb. and damaged ditto 4s. 11d. down to 4s. 8d. per lb. *Carthagena* (Columbian) root, of which 18 bags were offered, was mostly bought in, but five sold at 3s. 10d. to 4s. for sound damaged quality.

KOLA NUTS.—A moderate supply was offered and sold at steady rates, 11d. to 1s. being paid for sound *Grenada* and *Demerara* nuts; whilst undried kolas were bought in at 7d., and the new crop at 1s. per lb.

MENTHOL—Very slow of sale. To-day *Raspe's* menthol was bought in at 9s. 9d., and another brand at 10s. per lb.

OIL (COD LIVER). Very quiet and quoted nominally at 195s. to 200s. per barrel for new season's oil, ascending to holder.

OILS (ESSENTIAL).—*Star Anise* oil is dull of sale at 9s. 6d. to 9s. 7½d. per lb. on the spot. *Cassia*: Ten cases testing 63.5 per cent. of cinnamic aldehyde, offered without reserve, sold at 5s. 1d. to 5s. 3d. per lb. *Eucalyptus* was bought in at 1s. 6d., for the *Cygnets* brand; and 1s. 2d. for the *J.T.C.* brand. *Lavender*: *Peidmontese Alps* oil was bought in at 7s. per lb. *Citronella* was bought in at 1s. 4d. to 1s. 6d. per lb., and *Peppermint* at 6s. 6d. for *Cockings'*, and 7s. for *Wayne County* oil.

OILS (FIXED) AND SPIRITS.—*Castor*: The market remains firm in spite of the unfavourable *Italian* exchange. For best quality oil 31s. to 31s. 6d. per cwt., *c.i.f.*, is still quoted. *Cotton* is still very quiet, and refined oil has again declined 5s., £16 to £16 10s. being now quoted on the spot, according to brand and package. *Coco-nut* is quiet but unchanged in price, *Ceylon* being quoted at £22 15s., and *Cochin* at £26 15s. on the spot. *Linseed* is quiet, at a decline of 9s. 6d. to 5s., £18 15s. to £18 17s. 6d. being now quoted for oil in barrels on the spot. *Rape* is much easier, and is now quoted at £23 to £23 10s. on the spot. *Turpentine* is steady at the unchanged rate of 21s. 3d. on the spot for *American* spirit. *Petroleum* is still very dull. *Russian* oil being quoted at 5¾d. to 5¼d., *American* at 5½d. to 5¼d., and *water-white* at 6½d. per gallon on the spot.

ORRIS ROOT—Was in fair supply. To-day a large amount of good *Florentine* root was offered, but all was bought in at 70s. to 72s. per cwt. Lean palish *Mogador* root was

bought in at 53s. to 54s. per cwt., and dark lean *East Indian* at 20s. per cwt.

QUININE SULPHATE—The market is quiet but there has been rather more inquiry for *B. and S.* and *Brunswick*, with reported sales at 1s. 0½d., but the amount of business done at this rate has been limited, there being few sellers under 1s. 0¼d.

RHUBARB.—In auction only 88 cases were offered, of which 13 sold. *Shensi* trimmings realised 1s. 9d., and medium round, rather dull coat, 1s. 2d. per lb. *Canton*: Bold rough root sold at 10d., mixed ditto at the same figure, and pickings at 9d. per lb.

SAFFRON—Continues to advance in price. Finest *Valencia* saffron is now quoted at 27s. 6d. to 28s. per lb. according to holder, whilst seconds are quoted at 25s. 6d. to 26s.

SARSAPARILLA—In excellent demand to-day, especially for *Jamaican* root, which sold at an advance of 1d. per lb., 1s. 6d. being paid for genuine sound grey root, and 1s. 4d. to 1s. 5d. for damaged quality. For 13 bales of *Lima-Jamaican* root, 1s. to 1s. 1d. was paid, and 1s. 1d. for *Honduras*.

SEEDS (VARIOUS).—*Fennel*: Seventy-six bags of *Bombay* seed were bought at 17s. 6d. per cwt. *Musk*: Five barrels from New York were bought in at 1s. 3d. *Anise*: 107 bags of *Russian* seed sold at 18s. to 18s. 3d. per cwt. *Coriander*: 100 bags of seed fine *Fiume* were bought in at 18s. per cwt. *Star Aniseed*: One case sold without reserve at 53s. per cwt. *Cumin*: Maltese seed was bought in at 35s. per cwt.

SENNA.—Good quality *Tinnevelly* leaves are very scarce, and command good prices whenever obtainable. To-day the small catalogue offered sold at full to slightly advanced rates. No *Alexandrian* leaves were offered.

SHELLAC.—The market is quiet. Privately *Second Orange* has sold at a slight advance on the last auction rates, but the arrival market is dull, there being second-hand sellers of *TN Orange*, April to June shipment, at 90s. *c.i.f.* At the weekly sales *TN Orange* sold at barely steady rates, whilst *Button* was quiet. The prices paid were as follows:—*Second Orange*, good bright curly '95 ditto, matted and cakey, 91s. to 92s.; fair bright ditto, 90s. to 91s.; mixed livery ditto, 88s. to 89s. *Garnet* was all bought in, *OCC* at 87s., and *MGG* at 86s. *Button* sold at 89s. for fair blocky firsts, and 83s. for good seconds.

SPICES (VARIOUS).—*Cloves*: *Zanzibar* was bought in at 2½d. to 2¼d. in auction. The market is very flat. *Cinnamon*: For 48 bales of broken *Tellicherry* 9d. to 9¼d. per lb. was paid. *Chillies*: *Zanzibar* were bought in at 37s. 6d. to 40s., and medium to good *Sierra Leone* at 36s. to 42s. per cwt. *Capsicums*: *East Indian* (1895 import) sold without reserve at 13s. 6d. for medium long yellow off stalk, 11s. to 15s. for ordinary to medium large red, and 8s. for lean yellow. *Pimento*: Still dull of sale, but steady, 2½d. to 2¼d. being paid in auction for medium to fair.

TURMERIC.—The market is quiet. In auction *Madras* sold at improved rates, 9s. per cwt. being paid for dull finger and 7s. for *Chinese* mixed finger and bulb.

WAX (BEES).—Again in good demand, and selling at advanced rates for *Jamaican* wax, £8 12s. 6d. to £8 15s. being paid for fine yellow quality. In addition, *Zanzibar* brought £6 5s., *West Indian* £6 15s., *Zanzibar* £6 7s. 6d., and *Australian* £7 7s. 6d.

LIVERPOOL DRUG AND CHEMICAL MARKET, May 14.—Ginger: *Sierra Leone*, 19s. 6d. Castor oil: *Calcutta*, good seconds 2½d. *ex quay*; 2¾d. to 2½d. *ex store*; *Madras* and *French*, first pressure, 2¼d. to 2½d. Olive oil: *Seville*, £29 10s.; *Candia*, £31 10s.; finest oils, £35. Linseed oil: 19s. 6d. to 20s. 6d. in export casks. Cottonseed oil: 16s. 6d. to 17s. 3d. in export barrels. Spirit of turpentine: Scarce, 22s. 6d. Petroleum: *Russian* at 5¼d.; *American* at 6¼d. to 7¼d. Sal ammoniac: 39s.; seconds, 37s. Sulphate of ammonia: £8 2s. 6d. Bleaching powder: £7 to £7 5s. Copperas: *Lancashire*, 38s.; *Welsh*, 36s. Sulphate of copper: £19, prompt delivery. Cream of tartar: Finest white firmly held at 100s. Potashes: 21s. 3d. Pearl-ash: 35s. Prussiate of potash: 7¼d. Bichromate of potash: 4½d. Chlorate of potash: 4¼d. Bicarbonate of soda: £7. Soda crystals: £2 10s. Caustic soda: 70 per cent., £7 12s. 6d. to £7 15s.; 60 per cent., £6 12s. 6d. to £6 15s. Nitrate of soda: 8s. to 8s. 3d. Borax: Lump, £19; powder, £20.

MANCHESTER CHEMICALS AND DRY-SALTERIES, May 14.—There is no change to report in heavy chemicals, and drysalteries are still quiet. Tartaric and citric acids, no doubt influenced by the sudden spell of fine weather, tend upwards, and oils generally are firm. Gum arabic is slow, but of gum tragacanth small stocks are reported. Best re-distilled glycerin is quoted 65s. on rails, Manchester. Lime salts are easier, but unchanged in price; 58 per cent. ammonia alkali, £3 7s. 6d. per ton in bags on rails at works; £3 17s. 6d. Dublin, and £3 12s. 6d. Belfast. Soda crystals, 37s. 6d. per ton in bags on rails; £2 7s. 6d. Dublin, and £2 2s. 6d. Belfast; barrels, 7s. extra. Bicarbonate of soda, £6 15s. per ton, 1-cwt. kegs, *f.o.b.* Liverpool. Industrial bicarbonate (for mineral waters), £4 5s. per ton in bags, and £5 10s. in 1-cwt. kegs on rails at works, Northwich; 2s. 6d. extra *f.o.b.* Liverpool. Bleaching powder, £6 17s. 6d. per ton on rails, softwood casks; £7 2s. 6d. Belfast, and £7 7s. 6d. Dublin; 70 per cent. white caustic soda, £7 7s. 6d., *f.o.b.*, Liverpool; £7 10s. Belfast; and £7 15s. Dublin. White powdered arsenic, scarce and dearer, at £24 17s. 6d. to £25, here. Chlorate of soda tends downwards. Yellow prussiate: *Lancashire*, 7¼d.; *Foreign*, 7d., all U. K. delivery. Chlorate of potash, 4¼d. Alum, £5 2s. 6d. per ton, in tierces, on rails, Manchester. Tartaric acid, 1s. 2d. per lb., *foreign*, and 1s. 3d., *English*. Citric, 1s. 3d. Oxalic acid, 3¾d. here, and 4d. Dublin or Belfast. Sulphate of copper, £18 to £18 10s. per ton best brands, delivered Manchester. Cream of tartar, 103s. to 104s. per cwt., best white powdered, Manchester. Carbolic acid unchanged, but crystals a trifle easier.

NEWCASTLE CHEMICAL MARKET, May 14. Bleaching powder: £7 5s. and up according to markets and packages. Soda crystals in 2 cwt. bags, 38s. to 40s.; in casks, 42s. 6d. to 45s. according to markets. Caustic soda: 70 per cent., £7 10s. to £7 15s.; 76 to 77 per cent., £9 to £9 5s. Sulphur: £3 17s. 6d. to £4. Soda ash: 48 per cent., £4; 50 per cent., £4 5s.; 52 per cent., £4 10s. Alkali: 48 per cent., £4 10s.; 50 per cent., £4 15s. Pitch, 34s. to 35s. South Durham salt 9s. per ton *f.o.b.* Tees.

MISCELLANEOUS NEWS.

The Pharmaceutical Journal will have a large extra circulation next week, copies being sent to all Chemists and Druggists in business throughout Great Britain and Ireland. The total number issued will exceed 11,000 copies.

INDECENT ADVERTISEMENTS—At a recent meeting of the Society of Berlin Pharmacists, Herr Froelich, President of the Apotheker-Verein, called attention to the objectionable procedure of manufacturers of articles which have hitherto only been advertised in obscure corners, but are now commonly announced in the daily papers, as being sold by all pharmacists, druggists, and the better class of barbers. He thought it was the duty of that Society, as representing pharmacists, to protest against the shameless proceeding, and he was supported in that opinion by the President of the Society, Dr. Batcke, whilst the meeting was entirely in accord with both speakers.

FIRE AT A WHOLESALE DRUGGIST'S.—A fire broke out at about 3 o'clock on Tuesday morning, the 12th instant, in the packing-case store of Messrs. Hugh Moore and Co., Linen Hall, Dublin. Fortunately the fire brigade were quickly on the scene, and prevented the flames extending to the other premises.

PLYMOUTH CHEMISTS' OUTING—A meeting of Plymouth, Devonport, Stonehouse and District Chemists' Association was presided over by Mr. J. G. Netting (vice-president) last Tuesday evening. The meeting was called to make the final arrangements for the summer outing which will take place on June 10. The members, together with their friends—including ladies—will journey to St. German's, Cornwall, by train, and will be met there by wagonettes which will convey them to St. German's Hut and eventually to Dowerry; a high tea at the latter place to be followed by a musical programme. Mr. A. D. Breeze has been elected hon. sec. and treasurer of the outing committee, and the tickets are 5s. inclusive.

REMARKABLE DISCLOSURES ABOUT A DRUG BUSINESS.—At the Hanley County Court, on May 12, Judge Jordan—in giving judgment in an action brought by Hugh William Hulme, of Market Street, Fenton, to recover from William Edwin Ward, of High Street, Fenton, the sum of £25, which formed the balance of the purchase money for the sale of a drug business which had been purchased by the defendant for the plaintiff—said the evidence disclosed a very extraordinary state of things. It was alleged by the defendant that the plaintiff had carried on a criminal business by making up medicines for an improper purpose, and he had produced the prescriptions which Hulme left behind him, and were in Hulme's own handwriting. This was a very serious thing for Hulme, for although he denied having prescribed the medicine, his apprentice swore that he made it up weekly. Doubtless, if Hulme had carried on a business of that kind, it would be a very profitable

one, and his statement of the takings might be true. Most unpleasant facts had transpired, for if the evidence for the defence was true, and he was inclined to think it was, plaintiff had been carrying on a nefarious business. He gave judgment for the plaintiff for the amount due, and the same sum for the defendant for fraudulent misrepresentation, but without costs to either side.

THE "PRESERVED PEAS" CASE.—At the London County Sessions, on April 28, before Mr. G. Somes, sitting at Newington, an appeal was heard against a conviction by Mr. Fenwick, at Southwark Police Court, in the "coppered peas" case, which occupied the attention of the magistrates for several days, and resulted in a fine of 40s. and costs (see *Pharm. Journ.*, Jan. 18 and 25 and Feb. 1 and 8).—Mr. Bonsey and Mr. Elliott appeared for the appellant, a provision dealer in the borough, and Mr. Frank Dodd and Mr. Clarke Hall were for the respondent, a sanitary inspector in the service of the St. Saviour's District Board of Works.—Evidence having been given by the respondent and his daughter as to the purchase of the peas, Mr. Bodmer, public analyst, spoke to the result of his analysis, and the testimony of medical and chemical experts was then proceeded with.—Dr. Stevenson, analyst to the Home Office, gave it as his opinion that peas containing such a proportion of copper were injurious to health. There was no case of poisoning from them recorded in the books, but Dr. Dupré had informed him of one which occurred at Edmonton. Drs. Leonard Wilde, F. J. Waldo, B. H. Paul, and F. J. Smith also gave evidence, and were followed by Mr. Richard Bannister, of Somerset House, and Drs. Hine, Biss, and Burney Yeo. Judgment was deferred until Wednesday last, when Mr. Somes said the evidence as to whether or not the quantity of copper present—three grains per pound—was innocuous was very conflicting. After the most careful consideration, he was forced to the conclusion that where the opinions of eminent authorities were still in a state of uncertainty, it would be mischievous to countenance an addition of this foreign substance to articles of food in a larger proportion than that which they suggested. The quantity in this case was considerably in excess of that quantity. He was, therefore, of opinion that the conviction should be upheld, and the appeal was dismissed with costs.

A LECTURER IN CHEMISTRY WANTED.—In connection with the County Borough of Salford Municipal Technical Institute, the appointment is about to be made of a Chief Lecturer in Chemistry, at a salary of £200 per annum. Forms of application and particulars of the duties may be obtained upon application to the Secretary, at the Institute, Peel Park, Salford.

BOTANICAL RAMBLES IN DEVONSHIRE.—The first of the series of botanical rambles in connection with the junior section of Plymouth, Devonport, Stonehouse and District Chemists' Association took place on the 6th inst., when there was a capital attendance. Conducted by Mr. Reade, the members spent a pleasant and instructive afternoon.

GLASGOW HUMOUR.—An itinerant vendor of pills named William Wallace was brought up at the Glasgow Central Police Court recently, charged with causing an obstruction at the entrance to the Green, where he was surrounded by a crowd. Police Judge Morrin, addressing the accused, said:—"You are taking away the legitimate trade from the apothecaries, and you do not pay a farthing of rent or taxes. You cure the people, and then they do not require to consult a doctor." Wallace was dismissed from the Bar on promising not to stand selling at the same place again.

SALE OF POISONED GRAIN.—At Halesworth Petty Sessions on May 7, Samuel Bullen pleaded guilty to selling to Wm. Balls, of Cookley, farmer, grain steeped in poison, at Halesworth, and several previous convictions having been notified to the Bench, some of them of recent date, the Chairman characterised the case as one of the worst that had come before them. Defendant appeared to have bid the law defiance, and the magistrate had decided to inflict the full penalty of £10, and costs £1 17s. 4d., in default of distress, six weeks' hard labour.

THE NEW PHOTOGRAPHY.—At the spring meeting of the Fifeshire Medical Association, held at St. Andrews on May 8, Professor Butler gave a demonstration in the natural philosophy classroom of the United College, illustrative of the practical application of the new photography as applied to surgery and other interesting subjects. A variety of plates were shown on the screen, the negatives having been taken by Professor Butler and his assistants. Afterwards those present were invited to inspect the Crookes' tube and phosphorescent screen in operation. A lady present, who had been troubled with a portion of a needle in her thumb for the last eight years, was operated upon. Seating herself on the bench, the rays were turned on, and in a very few minutes Mr. Robson, assistant to the professor, returned to the classroom with a well-developed negative, showing very plainly the shadow of the metallic object. Professor Butler explained the Röntgen rays, and pointed out that the University is in possession of one of the largest coils.

CASE UNDER THE IRISH PHARMACY ACT. At the Newry Quarter Sessions, Mr. J. Walker Craig, Q.C., delivered judgment in the appeal brought by David Wilson, a Rathfriland trader, against the decision of the lower court, imposing on him fines amounting to £10 for alleged breaches of the Pharmacy Act, consisting of the sale of cantharides contained in a bottle of Leeming's essence, and for retailing and dispensing poison. The case was fully gone into at the last sessions, and the appellant at the time pleaded ignorance of the knowledge that the sale of Leeming's essence was contrary to law, and submitted that as both offences related to but one transaction the justice of the case might be met by reversing one conviction and affirming the other. His Honour now regretted his inability to do so, and affirmed both convictions without costs.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Books, etc.

All free. Piesse's 'Art of Perfumery,' scarce, 7s. 6d.; Woodville's 'Medicinal Plants,' 3 vols., 210 coloured plates (published £4 4s.), 21s.; Cooper's 'Surgical Dictionary' (30s.), 5s.; Daniel Hanbury's 'Pharmacological Papers' (16s.), 7s. 6d.—Davis, "Chestnuts," Gordon Hill, Enfield.

Gray's 'Operative Chemist,' 1831, scarce work, 4s. 6d.; Gray's 'Supplement,' slightly incomplete, also scarce, 5s.; Ure's 'Chemistry,' 1831, 2s. 6d.; Semple's 'Materia Medica,' 3 vols., 6s. All free.—Davies, 33, Eglinton Road, Bow.

A book of 130 Well-tryed Recipes for Chemists and Druggists, comprising well-selected formulæ for general, remedial, veterinary, toilet, and everyday preparations. Post free, 1s. 6d.—Tully, Chemist, Hastings.

 The Journal of May 23 (next week) will have a large extra circulation, and will be sent to all Chemists and Druggists in business throughout Great Britain and Ireland. The total number issued will exceed 11,000 copies.

Spotton's 'Structural Botany,' 'Canadian Plants,' and 'Examination Papers,' 3s. 6d.; John's 'Flowers of the Field,' and 'Forest Trees of Britain,' 4 vols., profusely illustrated. 8s. 6d., cost 16s.; as new. Free.—Davis, "Chestnuts," Gordon Hill, Enfield.

For sale, Southall's Materia Medica Cabinet, cost £2; capital Microscope, as recommended by South Kensington Science and Art Department, cost three guineas, good as new; full particulars on letter of inquiry. Peretra 'Selecta e Præscripta'; Oliver's 'Botany'; Wills' 'Materia Medica.'—Address, Oliver, Chemist, Chard, Som.

Lawrance's Spectacles and Folders, nett cost £14, will accept any reasonable cash offers.—Pritchard, Ebenezer, Carnarvon.

Four gross heavy flat, 10½ oz. capacity, 42s., delivered; leather bottle, three antique jars, lamp and shade, brazier, old mortar, lot 10s.; list of old books.—R. C. Mason, Bromsgrove.

Miscellaneous.

Fifteen quires Oakey's 0 emery cloth, 10s.; 1 each 4s. 6d. Cavanaugh's lotion, lotion powder, tapeworm powder, 1 each 2s. 9d. Abyssinian ointment, worm powder, French drops, Canadian pills, cough pills, 1 ls. 1½d. worm powder, good condition, 10s.—Jones, Swinton, Rotherham.

Forty half-gallons Hayward's Specific, 12 dozen 5s. Cattle Oil, and 3 gross Foot-Rot Paste, some slightly soiled; 25 per cent. off cost price to clear.—Timothy White Company, Chemists, Portsmouth.

Soda Water Appliances.

Soda-Water Machine, Barnett and Foster's, No. 2; list price £45; sell for £15; good condition.—Apply to H., 1, Southwick Street, Hyde Park.

WANTED.

Pair Swan-Neck Carboys, matched, cut spiral stoppers, 4 or 6 galls., perfect. Cash.—Glass, 193, Morningside Road, Edinburgh.

PERSONAL.

MR. F. W. DOWN, chemist and druggist, Northam, having disposed of his business, is taking up his residence at Plymouth.

MR. F. BIRD, chemist, Spon Street, Coventry, together with his son, F. W. Bird, A.P.S., has taken the old-established business of Mr. David Mason, Swanswell Street, Coventry. The business will be carried on in the name of F. Bird and Son, under the management of Mr. F. W. Bird.

DR. H. SALZMANN will in future act as editor of the *Apotheker Zeitung*, Dr. Thoms having resigned the post.

MR. JOHN GERRARD, whose case was reported in last week's Supplement, page xciii., is neither a "chemist and druggist" (as stated) nor a "registered druggist."

MR. ROBERT BARRON, L.P.S.I., having had occasion to cross a well which was boarded over, the boards gave way, and he was precipitated to the bottom, severely injuring one of his knees.

MR. ROBERT JOHN MONTGOMERY, apothecary, Dublin, has been elected examiner of languages to the Royal College of Surgeons in Ireland.

PROFESSOR C. O. CURTMAN, M.D., of the St. Louis College of Pharmacy and Missouri Medical College, and a member of the U.S.P. Revision Committee, died of influenza after a few days' illness, on April 22. His death is a great loss to American pharmacy.

PROFESSOR HENRY SIDGWICK, of Cambridge, is to receive from the University of Buda-Pesth the honorary degree of Doctor of Political Economy; Sir Joseph Lister, the honorary degree of Doctor of Medicine; Professor James Bryce, M.P., Mr. Herbert Spencer, Professor Lord Kelvin, and Professor Max Müller the honorary degree of Doctor of Philosophy.

MR. JAMES STENHOUSE was presented with a gold albert and appendage on April 30. He has been for ten years chemist at New Street Gas Works, and the presentation was made by the officials at the works, the occasion being his leaving to be assistant chemist under Dr. Clark, of Messrs. Duncan, Flockhart, and Company. The presentation was made by Mr. Robert Mitchell, engineer and manager.

A WELL-KNOWN PHARMACEUTICAL COUNCILLOR in Dublin is stated to have realised the sum of £5000 within the last week or so over the sale of pneumatic tyre shares.

LATE ADVERTISEMENTS.

Assistant Wanted.

BRANCH MANAGER. Qualified. In-doors. By 26th. None but good business men need apply to WILLIAMS, Chemist, King's Rd., Canton, Cardiff.

Business Wanted.

WANTED to purchase a thoroughly sound BUSINESS, provincial or suburban, showing a clear income of about £1000. Principals or their Solicitors only treated with. References given and required. Address, PHARMACIST, "Pharm. Journal" Office, 5, Serle St., W.C.

Businesses for Disposal.

SURREY.—First-class Light Retail and Dispensing BUSINESS. Return £1200. Net profit £400. Dispenses about 9000 prescriptions yearly. Elegantly fitted Pharmacy. Central position. Price £950. Fullest investigation allowed. HYDRATE, "Pharm. Journal" Office, 5, Serle St., W.C.

£225, or offer will buy a nice compact ready-money BUSINESS in northern health resort. Doing last year over £400 at exceptional profits. P.O. attached. Residential population. Small house attached. Apply REX, 582, Mile End Rd., London.

DIARY OF THE WEEK.

Secretaries of Societies are requested to send notices of forthcoming meetings not later than Wednesday in the previous week.

MONDAY, MAY 18.

SOCIETY OF ARTS (CANTOR LECTURES), at 8 p.m.
"Applied Electro-Chemistry" (IV.), by J. Swinburne.

TUESDAY, MAY 19.

PHARMACEUTICAL SOCIETY.
Annual Dinner at the Holborn Restaurant, W.C., at 6.45 p.m.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"Ripples in Air and on Water" (III.), by C. Vernon Boys.

SOCIETY OF ARTS (APPLIED ARTS SECTION), at 8 p.m.
"Bronze Casting in Europe," by G. Simonds.

ROYAL PHOTOGRAPHIC SOCIETY, at 8 p.m.
"Photo-Mechanical Methods in Austria," by Ignatz Herbst.

MIDLAND PHARMACEUTICAL ASSOCIATION, at 7.30 p.m.
Annual Meeting and Election of Council, at Mason College.

Annual Supper at the Grand Hotel, Birmingham.
WEDNESDAY, MAY 20.

PHARMACEUTICAL SOCIETY.
Meeting of Council at 11 a.m.
Annual General Meeting at 12 noon.

WESTERN CHEMISTS' ASSOCIATION OF LONDON.
"The Anti-Cutting Movement." Discussion at the Westbourne Restaurant, 1, Craven Road, at 9 p.m.

SOCIETY OF ARTS, at 8 p.m.
"Orthochromatic Photography," by Captain W. de W. Abney.

ROYAL MICROSCOPICAL SOCIETY, at 8 p.m.
Ordinary Meeting.

NOTTINGHAM AND NOTTS CHEMISTS' ASSOCIATION, at 9 p.m.
Annual Meeting at the Masonic Hall, Goldsmith Street, Nottingham.

THURSDAY, MAY 21.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"The Art of Working Metals in Japan" (III.), by W. Gowland.

CHEMICAL SOCIETY, at 8 p.m.
"The Diphenylbenzenes I Meta Diphenylbenzene," by F. D. Chattaway, and R. C. T. Evans.

"Derivatives of Camphoric Acid," by Dr. F. S. Kipping.

"Some Substances Exhibiting Rotatory Power, both in the Liquid and Crystalline States," by W. J. Pope.

FRIDAY, MAY 22.

ROYAL INSTITUTION OF GREAT BRITAIN, at 9 p.m.

"Hysteresis," by Professor J. A. Ewing.
SATURDAY, MAY 23.

ROYAL INSTITUTION OF GREAT BRITAIN, at 3 p.m.
"Liszt," by F. Corder.

NEW IDEAS.

INSURANCE AGAINST RISKS CONNECTED WITH DISPENSING.

In connection with the chemists' and druggists' indemnity insurance scheme, formulated by the Northern Accident Insurance Company, Limited, particulars of which were recently published in the *Ph. J. Supplement* (*ante*, p. xciii.), it may be pointed out that in France similar ground is covered by the Société Mutuelle d'Assurance contre les Accidents de Pharmacie (see *Ph. J.*, Jan. 18, p. 58). The members of that Society pay an entrance fee of twenty francs, and an annual subscription of five francs, the charges against the insurance fund thus provided being totalled at the end of the year, and levied in equal shares upon the members. No such scheme appears, however, to have been brought forward in this country up to the present, and the Northern Accident Insurance Company is therefore the pioneer in assuring chemists and druggists against the risk of errors which, though fortunately exceedingly rare, are apt to entail very serious consequences when they do occur. As is well known, too, proprietors of pharmacies are liable for accidents due to mistakes on the part of their assistants, and it seems well worth the while of chemists and druggists in business to consider carefully whether or not the advantages offered by this novel insurance scheme are such as to warrant the outlay on premiums. Full information will be supplied on application to the chief offices of the Company, 19, West Nile Street, Glasgow; the London office, 23, Coleman Street, E.C.; or any of the numerous branch offices.

EDME MALT EXTRACT.

This preparation is one which is not as well known to the retail chemist as some that could be mentioned, but examination of it shows that it possesses claims which entitle it to extended patronage. When digested with a mucilage of arrowroot starch at a temperature of 99° to 100° F., it is capable of converting five times its weight in twelve minutes. The result of this test proves the extract to be of unusually high diastasic value, and it is equally satisfactory in all other respects. The makers are the English Diastasic Malt Extract Company, whose factory and maltings are situated at Mistley, Essex.

THE LANTERN IN EDUCATIONAL WORK.

The great advances made in photography in recent years have enabled lecturers to produce lantern slides readily and cheaply, and thus illustrate their lectures, even when delivered in the daytime, in a way that was quite out of the question a few years ago. Amongst others, Mr. Charles Turner, of the Manchester School of Pharmacy, who is an enthusiastic working botanist, has taken advantage of recent developments to supplement the courses of instruction at that institution by lantern illustrations, and an inspection of some lantern slides and photographs prepared by him for class work in botany is instructive as showing how considerably the ordinary methods of tuition are improved by their use. Some three hundred slides are used to illustrate the

lecture course at this school, and the result of their employment is that difficulty of perception on the part of students becomes less and less of a stumbling block. The testimony thus afforded as to the value of lantern illustrations is fully confirmed by experience at the Pharmaceutical Society's School, where the materia medica lectures are regularly illustrated by means of lantern slides, depicting typical pieces of crude drugs, sections, etc., etc., and there is little doubt that the time is approaching when the lantern will be regarded as an essential auxiliary of most courses of lectures.

SUMMER TOURS IN SCOTLAND.

The approach of the holiday season is indicated by the publication of a new edition of Mr. David MacBrayne's official guide-book and tourist programme of excursions to the Scottish Highlands. This well-written and beautifully illustrated little work is published at the nominal price of sixpence, and gives detailed information—including fares, hotel, steamers, etc.—regarding excursions from Glasgow, Oban, Ardrishaig, Banavie, Ullapool, Gairloch, Portree, and Stornoway, to the most delightful spots in the northern kingdom.

PHARMACEUTICAL SPECIALTIES.

Everything tends at the present day to confirm the view, long acted upon by many, that it is much more profitable in the long run for a chemist and druggist to sell his own specialties than to act as an agent for those of other people. In numerous instances, however, it is scarcely profitable to put up the limited number of articles required in a retail business, and to meet this difficulty Messrs. Lorimer and Co. have produced a series of specialties which for quality and finish are not likely to be easily beaten. Most of these are supplied ready labelled with the retailer's own name and address, so that they are to all intents and purposes his own specialties, and they all yield a satisfactory profit. The medicinal preparations proper include a palatable Coca Wine, made apparently with Tarragona port; a well-made Petroleum Emulsion, containing 50 per cent. of odourless and tasteless mineral oil, with the hypophosphites of lime, soda, and potash; Magnesia Milk or "Saccharised Hydrate of Magnesia"; Granular Effervescent Sulphate of Sodium in small but uniform granules; a pleasant and refreshing Effervescent Saline Aperient; Syrup of Figs, a specially attractive laxative for children; Bland's Pills, both white and pink; and a pleasantly perfumed Arsenical Soap for toilet purposes. Castile Soap is also supplied in conveniently shaped tablets. Liebig's Extract of Meat, manufactured in South America, "Our Own Sauce," Egg Julep for cleansing the hair; the Royal Furniture Polish, and Rennet Tablets are other articles on the list. The last-named act satisfactorily, but they are being improved on and will shortly be produced better as regards shape, appearance, and stability. A specially fine line of preparations is seen in the well-made Fruit Syrups—Black Currant, Red Currant, Lime Fruit, Cherry, Ginger, Lemon, Orange, Strawberry, Raspberry, Raspberry and Red Currant, and Pineapple. These are guaranteed to be

made from the juice of sound, ripe fruit and the finest English refined sugar, and it is difficult to imagine how the bottles containing them could be made more attractive. Finally, there is a fragrant "Old English Lavender Water;" "Lavender" Toilet Ammonia that should prove exhilarating in use; "Dulcipedo," an antiseptic dusting powder for the feet; and delicately flavoured "Floral Lozenges," the shape and size of ordinary compressed tablets.

FLUORESCENT SCREENS.

The prevalence of the "new photography craze," as it has been termed, may best be judged perhaps from the continually increasing number of announcements of special apparatus and appliances for work with the *x*-rays. Later experiments tend to remove the subject from the domain of photography to a considerable extent, since the use of fluorescent screens enables observers to see the images of the objects revealed by the rays, and so save all the trouble of exposing and developing plates. Elaborately mounted screens are expensive luxuries, however, and Messrs. Harrington Brothers, of Cork, the noted manufacturers of fine chemicals, are doing a public service by placing upon the market unmounted screens at a moderate price. They are coated with platino-cyanide and very sensitive. The price of a 6½ in. × 4½ in. screen, unmounted, is 10s. only, and larger sizes can be supplied at proportionate prices, which can be obtained by applying to the London office, Oliver's Yard, 55A, City Road, E.C. The screens are easily fitted up for use, simply requiring to be mounted on a cigar-box or something similar to make them ready for use.

A HANDY INDICATOR.

The new litmus pencil (Tyree's), for which Messrs. T. Christy and Co. are agents, should be found particularly useful by medical practitioners and others who find it desirable to carry indicators for acids and alkalies in their pockets. They are much handier for that purpose than litmus books, the more especially as both blue and red litmus are contained in the same pencil, one at each end. The pencil is sharpened in the ordinary way, the point moistened, and a mark made upon paper, which is then used in the same way as ordinary litmus paper. If care be taken not to make very heavy marks on the paper this will be found to be at least as sensitive as the prepared paper. The maker claims that by the use of the pencil, a much smaller proportion of acid or alkali may be detected, on account of the special purity of the litmus employed, and experiments certainly seem to show that much less of this is required than ordinary litmus to produce an equivalent effect.

A BOOK ABOUT DOCTORS.

How Mr. G. du Maurier, as personified in "A Patient," found out from studying the pages of the *Lancet* and consulting various medical dictionaries, that there was not a disease "in the whole system of Nosology" from which he had not suffered in turn, ought to interest numerous pharmacists who can doubtless "cap" many of the stories he relates. The big-wig of Harley Street, the specialist, "my lady doctor," the country doctor, the homœo-

path, and the dentist are all admirably hit off to the life, and the concluding chapter of anecdotes serves as a piquant sauce to the rest of the book. Messrs. Skeffington and Son, of Piccadilly, W., are to be congratulated, no less than the author, in so speedily getting the book into its tenth edition.

TRADE NOTES AND NEWS.

MESSRS. BURROUGHS, WELLCOME AND Co. have been awarded a Diploma of Honour for their exhibit of Wyeth beef juice, beef and iron wine, Kepler extract of malt, Kepler solution of cod-liver oil in malt extract, tea tabloids, Fairchild peptonising tubes, peptogenic milk powder, panopepton, and pepsencia, by the Executive Council of the Universal Food and Cookery Exhibition, held at the Imperial Institute in May of this year.

THE CHEQUE BANK, LIMITED, 93, Bishopsgate Within, London, E.C., has published a new edition of the Bank's 'Handbook,' which shows that a large number of additional agents have been appointed for the sale and encashment of the Bank's cheques. There are now few places in the civilised world where the Bank is not represented, and the list is being reduced daily. It is needless to point out the increased convenience to travellers and those having home and foreign remittances to make, which the Bank now affords even in the most remote districts.

MESSRS. R. W. GREEFF AND Co, 3, Eastcheap, E.C., have been entrusted with the sale of the following serums prepared at the Bacteriological Institute of the Société Chimique des Usines du Rhone, Lyons: Anti-venomous serum, anti-diphtheritic serum, and vaccine (Jenner), prepared by Dr. Calmette of the Pasteur Institute, Lille, the last named being specially prepared for warm climates. Also anti-streptococcic serum, prepared according to Marmorek's method by Mérieux and Carré, ex-assistants of the Pasteur Institute, Paris.

MESSRS. SINGLETON AND COLE, LTD, of Cannon Street, Birmingham, are issuing a new price list containing more than 200 pages, which is the largest and most comprehensive list ever issued in connection with the tobacco trade. It is profusely illustrated, and will be a most valuable work of reference for all people dealing in tobaccos, cigars, and cigarettes, or tobacco-merchants' fancy goods, the items being so classified that the many thousands listed can be got at without any difficulty. The classification of the various discounts is also arranged on such a simple principle that a school boy can lay his hand upon any quotation or discount at a moment's notice. Chemists throughout the country are notified that they may get this new price list, post free, by applying for it.

MESSRS. A. and M. ZIMMERMANN have removed to more convenient and spacious premises at 9 and 10, St. Mary-at-Hill, Eastcheap, E.C.

MESSRS. FR. BAYER AND Co. submit a sample of the new thyroid preparation—Thyro-iodin—in which the separated active principle of the gland is diluted with milk sugar.

MESSRS. WARRICK BROTHERS are removing from Old Swan Lane to 7, Portpool Lane (off Gray's Inn Road), where they have taken larger premises.

MESSRS. BARCLAY AND SONS, LTD, of 95, Farringdon Street, E.C., send a copy of their 1896 list, which contains particulars of the thousand and one articles that the chemist and druggist of to-day is accustomed to sell, to eke out his none too great profits from legitimate pharmacy. The list of druggists' sundries, photographic requisites, and miscellaneous articles stocked by the firm is conveniently arranged, well illustrated, and deserves a place in every pharmacy.

MESSRS. HARRINGTON BROTHERS, of the Shandon Chemical Works, Cork, furnish copies of their price lists of fine chemicals—inorganic and organic. Much valuable information is contained in these lists, concerning the chemistry and physical properties of uncommon chemicals, as well as those in everyday demand.

MR. J. HICKISSON, of "John Bond's Marking Ink" fame, also manufactures rubber stamps and endorsing inks on a large scale, and a very cursory inspection of his illustrated price list suffices to convince the reader that no one can supply them on better terms. Those who doubt this statement should write to 75, Southgate Road, London, N., for a copy of the list. JOHN BOND'S MARKING INK still keeps to the fore, last year's sales of the ink having constituted a record, and the proprietor continues his endeavours to interest chemists and druggists in the article by offering sample rubber stamps to those who will trouble to send him their trade cards. He is also offering extra good terms to the trade.

THE SHARP BROTHERS' SOAP AND PERFUMERY COMPANY, LIMITED, Red Lion Square, W.C., offers a large variety of toilet soaps, perfumery, and other toilet goods in a twelve-page price list, and many of the items should appeal to chemists who do a "fancy" business.

THE LIEBIG EXTRACT OF MEAT Co., LIMITED, holds its thirty-first annual meeting at the Cannon Street Hotel, E.C., on Thursday, June 4, at 2 p.m. The thirtieth annual report and balance sheet which will then be presented show that the Company's business is in a satisfactory condition. The balance of profit for the year 1895 is shown to be £104,757 12s. 11d., out of which an interim dividend of 5 per cent. was paid on February 15 last. The directors now propose to pay a final dividend of 12½ per cent, making in all 17½ per cent. free of Income Tax for the year. In addition, the sum of £1000 is carried to the Employés' Provident Fund, and £7171 2s. 3d. carried forward to Profit and Loss New Account, as against £5653 16s. 3d. brought forward a year ago.

LEGAL INTELLIGENCE.

ACTION FOR DAMAGES AGAINST A CHEMIST.—On Friday, the 18th inst., His Honour Judge Whitehorse, Q.C., and a jury, tried an action at the Birmingham County Court, in which Samuel Darby, 12, Chestnut Place, Highgate, sued Josiah Blackwell, Bull Street and Moseley Road, chemist, to recover damages for injuries sustained through the alleged unskilful treatment of defendant's assistant in the extraction of a tooth. Mr. Vachell stated that on June 24 last year plaintiff was suffering from toothache, and having seen a notice in defendant's shop window, in Moseley Road, to the effect that teeth were extracted there, he entered the shop and requested Mr. Place, the assistant, to extract a troublesome double tooth from the right lower jaw. The assistant used the forceps, and after a considerable struggle a portion of the tooth came away. Dr. Mackay, his club doctor, came to the conclusion that in addition to half the tooth having been broken off, the jawbone had also been splintered. Plaintiff became an out-patient at the Queen's Hospital, and underwent several operations, necrosis having set up as the result of the injury to the bone. Evidence having been taken, counsel for the defence argued that there was nothing to show that the plaintiff's injury was the result of defendant's assistant's action, and there was absolutely nothing to show incompetence or want of skill on the part of Mr. Place. After a brief consultation the jury found a verdict for defendant.

FINANCIAL DIFFICULTIES OF AN UNREGISTERED DEALER IN DRUGS.—An interpleader of a more than ordinarily interesting character came before His Honour Judge Parry, at the Manchester County Court, on May 14, the debtor being James Street, Hyde Road, Gorton, described as a chemist, but not on the Register of Chemists and Druggists. The debtor, in his transactions with the plaintiff, Mr. William Spibey, drysalter, Ashton-under-Lyne, got into his debt, and Spibey, being anxious to secure himself, issued a writ in the Court of Record for the amount of promissory notes which Street had given him, representing payments for rent and certain debts and costs he was liable for. Judgment was entered in his favour for £22 5s., execution was levied on the goods on the same day, and on March 6 the head bailiff of the Salford Hundred Court of Record got an order to sell the goods by private treaty, and Spibey paid over £25 5s. 7d., the amount at which the goods were valued. A week afterwards the plaintiff entered into a hiring agreement with Street. The hiring agreement was not for the hire purchase of the goods, for there was to be no change of the property at any time, and provision was not made even for purchase. It was submitted, therefore, that the beneficial interest was vested in Spibey. The plaintiff said he had never heard of Sanderson and Co., who now appeared as execution creditors, and did not know there were any creditors at all. Street told him there were none. Those creditors whom he had subsequently discovered he had paid. His Honour said he should give judg-

ment for plaintiff, but he did so only because he believed Mr. Spibey's statement that money was owing to him, and that he was really endeavouring to secure himself for money advanced. Great care would need to be exercised by the High Bailiff of the Salford Hundred Court in granting private sales. It was perfectly obvious that most dishonest transactions might be carried through in that way.

ACCIDENTALLY POISONED BY ESSENCE OF ALMONDS.—At Kendal, on May 19, Miss Edith Thwaites, daughter of a bank manager, poisoned herself by misadventure, having taken essence of almonds by mistake for essence of ginger, which she was using as a remedy for an internal complaint.—The jury at an inquest yesterday returned a verdict of accidentally poisoned.

COPPER IN GREEN PEAS.—At the Carnarvon Borough Police Court, on May 18, the police summoned the Star Supply Company for selling green peas adulterated with $2\frac{1}{2}$ grains to the pound of sulphate of copper. The case had been adjourned pending the decision on appeal of a similar case in England. Mr. Lloyd Carter, for the defence, said that as the appeal had gone against the appellants, he would plead guilty, and in view of the fact that the sale of the peas had been stopped, he asked that only a nominal fine should be imposed. There were two charges, and the Bench inflicted a fine of 5s. and costs in respect of each.

DEATH FROM AN OVERDOSE OF CHLORODYNE.—At Kensington Town Hall, Mr. Luxmore Drew held an inquiry, on Saturday, May 9, touching the death of Eliza Sheehan, aged 31, a housemaid in the service of Lady Leach, the wife of Lieut.-Colonel Sir George Leach, of 6, Wetherby Gardens, South Kensington, who died from an overdose of chlorodyne on Wednesday. Mary Brown, kitchenmaid, said that on Tuesday deceased complained of neuralgia, and said she had heard that chlorodyne would relieve the pain. Witness purchased her a 1s. bottle at a chemist's at Gledhow Terrace, and the same evening she took a dose of thirty drops. She could not be roused next morning, and a doctor was sent for. William John Bickle, a registered chemist, and assistant to Mr. Spiers, at 13, Gledhow Terrace, said he sold the chlorodyne, which did not require an entry of the sale. He could not say how much morphine it contained, but the label said thirty drops was the maximum dose. Dr. Augustus W. Addinsell, of 30, Ashburn Place, said death was due to coma from morphine poisoning. The deceased had taken nearly the bottle full of chlorodyne, which contained about two and a half drachms. He believed it was a case of misadventure, and that the girl took it not knowing how fatal it was. The jury returned a verdict of death from misadventure.

MARRIAGE.

COLLEY—THOMPSON.—May 20, at Marton-in-Cleveland, by the Rev. G. W. Trevor, Herbert William Colley, chemist and optician, Grimsby, to Eliza Margaret, youngest daughter of the late Joseph Thompson, of Marton Farm.

ENGLISH NEWS.

WESTERN CHEMISTS' ASSOCIATION OF LONDON.—At a largely attended meeting of this Association, held on Wednesday evening last, the chair was taken by Mr. J. C. Hyslop, and an animated discussion took place on the anti-cutting movement. No definite result had been arrived at, however, when the meeting terminated.

THE RÖNTGEN RAYS.—At Plymouth a practical illustration of the great value in surgical operations of Professor Röntgen's discovery was recently given at the Technical Schools. Some time ago part of a needle penetrated the hand of a sempstress, preventing her from following her occupation. By aid of a radiogram taken at the Technical Schools the position of the needle was very clearly indicated, and the surgeons at the hospital were enabled to operate with confidence, and eventually succeeded in removing the piece of needle, five-eighths of an inch in length.

INSTITUTE OF CHEMISTRY.—The next examinations for the membership of this Institute will be held on Tuesday, July 21, 1896, and three following days. In consequence of the increase in the number of candidates whose applications for examination have been accepted by the Council, it is probable that more than the two ordinary examinations (January and July) may be held this year. All candidates must produce evidence of having passed a Preliminary examination in subjects of general education, and of having taken a systematic course of at least three years' study in one of the colleges approved by the Council, or of having been engaged for two years in the laboratory of a Fellow of the Institute, and for two other years in one of the approved colleges. The Council desires it to be understood that the right to use the letters A.I.C. and F.I.C. belongs only to persons who have passed through the course of study and the examinations prescribed by the Institute. A prospectus containing full particulars of the regulations for admission to the membership of the Institute may be obtained from Messrs. Blundell, Taylor, and Co., 173, Upper Thames Street, London, E.C., price one shilling.

COMPETITION AT PLYMOUTH.—The Plymouth, Devonport, Stonehouse and District Chemists' Association is offering prizes to the Junior Section for competition in elementary practical chemistry for unqualified members of that section. Mr. Brown, B.Sc., has very kindly consented to conduct the examination, which will take place on Wednesday, June 3, from 7 to 9 p.m., at the Technical Schools, Plymouth. We are asked to state that May 27 is the latest date for receiving competitors' names.

THE USE OF DRUGS AT EXETER HOSPITAL.—At the annual meeting of the Governors of the Devon and Exeter Hospital, held at the Institute on Thursday (May 7), the annual report of the Committee stated that the amount expended under the heading of drugs was £1083 12s., an increase of £68 7s. 8d., as compared with last year's report. The President (Mr. A. M. H.

Walrond) said he regretted this increase, and hoped the medical staff would see their way to reduce the quantity of drugs used. He understood that the "modern" medicines now used cost more than those used formerly.

ROYAL INSTITUTION.—On Tuesday next, May 26, Professor T. G. Bonney, D.Sc., LL.D., F.R.S., will begin a course of two lectures at the Royal Institution, on "the building and sculpture of Western Europe." The Tyn-dall lectures.—On Thursday, May 28, Mr. Robert Munro, M.D., M.A., Secretary of the Society of Antiquaries of Scotland, will deliver the first of two lectures on "Lake dwellings"; and on Saturday, May 30, Dr. E. A. Wallis Budge, Keeper of the Egyptian and Assyrian antiquities, British Museum, will begin a course of two lectures on "The moral and religious literature of ancient Egypt." The Friday evening discourse on May 29 will be delivered by Mr. Augustine Birrell, Q.C., M.P., his subject being "John Wesley: some aspects of the eighteenth century." That on June 5, will be on "Electrical and magnetic research at low temperatures," the lecturer being Professor J. A. Fleming, F.R.S.

SCOTTISH NEWS.

THE EDINBURGH PHARMACY ATHLETIC CLUB'S fifth annual sports come off on Tuesday evening next, and a rare night's sport will be provided for the club members and those patronising the meeting. The proceedings will commence at 6.45 and will continue till 9 o'clock. There will be a 220 yards, 300 yards, and half-mile handicaps, confined to those in the drug trade, as well as a one mile bicycle handicap. The final football tie will also be played and should rouse the enthusiasm of those present. To give a fillip to the evening's proceedings there are also a 120 yards and one mile flat race handicap, and a one mile handicap open to all amateurs. It is satisfactory to learn that all the events have filled well, and it is to be hoped that masters will stretch a point that night and let off their assistants and apprentices a little earlier to assist in the good work done by the athletic club. Mr. D. Mackenzie, of Messrs. T. H. Smith and Co., will preside at the presentation of prizes, and Messrs. D. B. Dott and Geo. Coull will be among the officials.

THE SALE OF INSECT POWDER.—At the Court of Sessions, Edinburgh, last week, Lord Moncreiff closed the record in an action brought by Thomas Keating, manufacturer and vendor of insect powder, against Alexander Malcolm, chemist, 124, Victoria Road, Dundee. Declarator is asked that the defender is not entitled to sell as the pursuer's powder a powder which is not his as his, and interdict is asked of his doing so. There is also a conclusion for £100 as damages. The defender is said to have sold powder which was not the pursuer's in August, September, October, and January last. Defender denies that he has sold powder as the pursuer's. He maintains that the pursuer has no right to sue, and states that insect powders consist of flowers of the *Pyrethrum roseum*, or the

Pyrethrum carneum ground to powder. A large number of insect powders are made from those flowers, and are sold under different names at different prices.

IRISH NEWS.

WAS IT POISON?—A herd of cattle in County Kerry having taken suddenly ill, and eleven having died, malicious poisoning is suspected, and the intestines have been forwarded to Sir Charles Cameron, the Dublin Corporation Chemist, for analysis.

PRUSSIC ACID OR HEART DISEASE?—Mr. Daniel Corcoran, surgical instrument maker, Dublin, was found lying dead in his shop on the 15th inst., with an empty prussic acid bottle beside him, which with other circumstances gave rise to a suspicion of suicide; but the coroner's inquest proved that death was due to cardiac syncope.

AN OVERDOSE OF LAUDANUM caused the death of a man named Thomas Shannon, at Armagh, on the 15th inst. At the inquest held on the following day, evidence was given that the laudanum (about half-ounce) was supplied to deceased's daughter in a tea-cup, and was not labelled.

MEDICAL STUDENTS AND LADY EXAMINERS.—The Dublin medical students object to the appointment of a lady examiner in midwifery to the R.C.S.I. and have held a mass meeting about the matter. They threaten to go elsewhere for their lectures if the appointment is not cancelled.

ALLEGED IMPURE DRUGS.—In his report to the Local Government Board on the quality of the drugs supplied by Messrs. Leslie and Co., Dublin, to the South Dublin Union, Sir Charles Cameron, public analyst, effectually dispels the mistaken notion, which led to the inquiry, that the drugs were of inferior quality.

CONTRACTS FOR THE SUPPLY OF DRUGS, medicines, surgical and medical appliances have been entered into by the following poor-law boards:—Ballinrobe workhouse and five dispensaries, Messrs. P. A. Leslie and Co., chemists, Dublin; Ballyshannon union and five dispensaries, Messrs. J. Clark and Co., Limited, chemists and druggists, Corporation Street, Belfast; Boyle workhouse and five dispensaries, Messrs. P. A. Leslie and Co., Dublin; and Castlerea board of guardians, Mr. W. J. Hartnett, Castlerea. The competition in each case was very keen, as many as seven drug houses competing for one of the vacancies.

A DUBLIN PHARMACIST'S ALLEGED LUNACY.—The Lord Chancellor, Dublin, is holding an inquiry into the alleged lunacy of Mr. Thomas Collins, apothecary and ex-councillor of the Pharmaceutical Society of Ireland, whose transfer of £2096 India stock to the Charitable Bequests Commission in 1895 is disputed by his relatives on the ground that at the time of the transfer he was mentally incapable of transacting business.

MARKET REPORT.

LONDON, MAY 21, 1896.

We have to report a very quiet week, and, indeed, this is only to be expected with the proximity to the holidays. There are few changes to report in the heavy chemicals. Citric and tartaric acids are firm at unchanged rates, cream of tartar is again considerably lower, whilst arsenic is easy. Borax is firm, permanganate of potash very scarce, and glycerine steady. Carbolic acid is easier, quinine is quiet at unchanged rates, and caffeine is steady without any alteration in price. Crude camphor continues to decline in price, although the market at the close is firmer. The refined article is very quiet. In the drug market saffron, orris root, insect flowers, and ipecacuanha are firm, but there is little business doing. Cod-liver oil is neglected, shellac is quiet, whilst the heavy and essential oil markets present no important features. Full details will be found below:—

ACID, CARBOLIC.—The market is again very quiet, and crystals have slightly weakened in price since our last report. The current quotations are now as follows:—Crystals: 34° to 35° C., 6½d.; 39° to 40° C., 7d.; 39° to 40° C. (detached crystals), 8d. per lb. Crude is rather easier at 1s. 11d. per gallon for 60 per cent., with 75 per cent. still quoted at 2s. 4d. per gallon. Liquefied and cresylic are unchanged at 1s. and 11d. per gallon respectively.

ACID, CITRIC.—The market is quiet, but prices are unchanged. English manufacturers quote 1s. 2d. per lb. on the spot, but it would no doubt be possible to buy at 1s. 1¾d. Concentrated juice offers at £13 5s. per pipe, f.o.b., Messina.

ACID, TARTARIC.—The market is firm. Laves' and Kembal's brands of English acid still quote at 1s. 3d. per lb., whilst foreign acid, both in powder and crystals, is quoted at 1s. 2½d. to 1s. 2¾d. per lb., according to brand.

ALUM.—The current quotations are £5 12s. 6d. to £5 15s. per ton for lump, and £6 5s. for powder on the spot.

AMMONIA COMPOUNDS.—Sulphate is steady, grey 24 per cent. being still offered at £8 2s. 6d. per ton on the spot, whilst Hull has sold at £8 2s. 6d. for June delivery, Leith being quoted at £8 spot, Beckton at £8 10s. forward, and Beckton terms at £8 2s. 6d. Sal Ammoniac is unchanged at 39s. for firsts, and 37s. for seconds. Carbonate quotes at 3d. per lb. in casks, 3¾d. in kegs; 3¾d. in jars, with powder ¼d. per lb. extra. Liquor is unchanged at 3d. to 3¾d. per lb., less 5 per cent.

BORAX.—The syndicate rates are now 20s. for crystals, and 21s. for powder, but outside makers offer at 19s. 6d. and 20s. 6d. respectively.

CAFFEINE.—The market is quiet but steady. The manufacturers still quote 18s. per lb. for quantities not less than 1 cwt., with smaller quantities at proportionate rates.

CAMPHOR (CRUDE).—Since our last report 200 cases of China camphor have been sold out of sale at 95s. per cwt., and since then the market has been rather steadier, with

sales of Formosan camphor, May to July shipment, at 95s. to 97s. 6d. c.i.f., mostly the latter figure.

CAMPHOR (REFINED).—The market is very quiet, and quotations are unchanged. The English refiners still offer bells and flowers at 1s. 5d. per lb. in 1-ton lots, with ½-ton ditto at 1s. 5½d., and smaller quantities at 1s. 6d., whilst German refined camphor is offered at ½d. per lb. less all round. Tablets are quoted at proportionate rates.

COAL DISTILLATION PRODUCTS.—Toluol is firmer, being now quoted at 2s. 2d. per gallon for pure. Benzole is also much dearer, 50 per cent. being quoted at 2s. 1d., and 90 per cent. at 2s. 3d. per gallon. Creosote: 1s. 8d. per gallon. Crude naphtha: 30 per cent. at 120° C. is quoted at 11d. per gallon. Solvent Naphtha quotes at 1s. 6d. per gallon for 95 per cent. at 160° C.; 1s. 4d. for 90 per cent. at 160° C.; and 1s. 1d. for 90 per cent. at 190° C. Anthracene: 13 A quotes at 10½d. per lb., and B at 9d. per lb. Pitch: 33s. per ton f.o.b. Tar: 12s. per barrel for refined.

CREAM OF TARTAR.—Shows a marked decline since our last report, and best white French crystals now offer at 95s. per cwt. on the spot, whilst German brands of powder are quoted at 98s.

EUCAINE.—Messrs. A. & M. Zimmermann, 9 and 10, St. Mary-at-Hill, report that they are now in a position to supply this substitute for cocaine promptly, packed in 1 gramme bottles at 9s. per oz.

GALLS.—China are very slow of sale and quoted at 58s. to 59s. per cwt. In Persian galls a small business has been done with greens at 45s. 6d. to 47s. 6d. per cwt. There is no demand for blues or whites.

GINGER.—The market in Cochín root is very quiet, and only a small proportion of the catalogue offered on Wednesday found buyers, prices being about steady. The prices paid were as follows:—Rough cuttings, 22s. to 22s. 6d.; dull to good bright washed rough, 32s. 6d. to 35s.; and bold native cut, 73s. Bengal was bought in at 16s., and limed Japan at 20s. Jamaica root was in good demand, and all sold at full rates, including fine bold bright at 96s. to 111s., ordinary medium to good washed, 73s. 6d. to 83s. 6d.; ordinary small to medium brownish, 63s. 6d. to 72s. 6d., and low root, 60s. to 63s. per cwt.

OIL (COD LIVER).—The market is very quiet, the consuming season being now practically over. There have been offers of fine new season's Norwegian oil at 180s. per barrel, but we have not heard of any business being done. Newfoundland oil is quoted at 6s. per gallon nominally.

OILS (ESSENTIAL).—Star Anise oil is offering at lower rates. Nominally 9s. per lb. is quoted on the spot but there would be no difficulty in buying at 8s. 9d. and perhaps less. Citinella is firmer. Business has been done during the week at 1s. 4½ per lb. c.i.f. terms. The current spot quotation for oil in drums is 1s. 4½d. to 1s. 5d. per lb. Peppermint oils are all dull of sale. H. G. Hotchkiss' brand of American oil being quoted at 9s., whilst Japan oil has sold during the week at 4s. 6d. on the spot for dementholised oil. No business is reported in 40 per cent. oil.

OILS (FIXED) AND SPIRITS.—Castor is firm, best quality Italian oil being still quoted at 31s. to 31s. 6d. per cwt., c.i.f. terms,

Cotton is steady at unchanged rates, refined oil being quoted at £16 to £16 10s. on the spot, according to brand and package. *Cocunut* is quiet, but fairly steady, *Ceylon* being quoted at £22 10s. to £22 15s., and *Cochin* at £26 15s. on the spot. *Linseed* is quiet and rather easier in price, oil in barrels being worth £18 15s. on the spot. *Rape* is firm at unchanged rates, refined oil being still quoted at £23 to £23 10s. on the spot. *Turpentine*: The market is quite demoralised, and business has been done on the spot at rates ranging from 21s. 3d. down to 20s. 3d. for *American* spirit. The market is very weak. *Petroleum* is dull of sale at easier rates. *Russian* oil being quoted 5½d. to 5¾d.; *American* at 5½d. to 5¾d., and *water white*, at 6½d. to 6¾d. per gallon.

OPIUM.—The London market is quiet, but firm. The current quotations for Turkish opium are as follows:—*Soft shipping*, 12s. 6d. to 13s. 6d.; *Smyrna*, 9s. 6d. to 10s. 6d.; *Constantinople*, 9s. 6d. to 10s. 6d.; and *druggists' seconds*, 8s. 6d. to 9s. 6d. per lb. *Persian* is steady at 13s. for fine bricks.

OPIUM ALKALOIDS.—Manufacturers' quotations are firm at 4s. 9d. per oz. for powder, and 4s. 11d. for crystals in quantities of 1000 ozs. Crystals are unchanged at 10s. 6d. per oz. in quantities of 100 ozs.

ORRIS ROOT.—The market is firm. Good pale *Florentine* root is still quoted at 68s. *c.i.f.*, whilst seconds are worth 64s. per cwt., also *c.i.f.* terms.

QUICKSILVER.—The market is quiet. Importers still ask £6 15s., whilst second-hand holders offer at £6 14s. per bottle.

SAFFRON.—The market continues exceedingly firm, and prices are tending higher. Finest *Valencia* saffron is now quoted at 29s. to 30s. 6d. per lb., and second quality at 26s. 6d. to 27s. 6d. per lb.

SHELLAC.—The market is very flat. Little demand was shown at the weekly sales, when the supplies consisted chiefly of good to fine *Orange* and low grades. For good marks there was no demand, but sellers were firm. Medium and common livery were fully 3s. lower, *TN* basis being quotable at 87s. Of *Garnet* no *AC* was offered, whilst *ruby G* was all bought in.

SPICES (VARIOUS).—*Cloves* are slow of sale. In auction medium *Zanzibar* sold at 2d. per lb. *Mace* is flat. In auction 1s. 4d. was paid for ordinary brownish *Penang*, and 1s. 2d. for pickings. Ordinary *West Indian* sold at 1s. 3d. to 1s. 4d., and fine pale at 1s. 11d. per lb. *Cinnamon chips*: Good *Ceylon* sold at 3¾d. to 3¾d. per lb. *Cassia vera*: Coarse quill was bought in at 23s. per cwt. *Cassia lignea*: Broken quality was bought in at 20s. per cwt. *Pimento* is still slow of sale. In auction medium quality sold at 2¾d. and fair ditto at 2½d. per lb. *Chillies*: *Zanzibar* were bought in at 45s., and extra fine bright *Japan* at 55s. to 60s. per cwt. *Arrowroot* is still dull of sale, *St. Vincent* being bought in at 1¾d. per lb.

TRAGACANTH (GUM).—A rather improved demand is reported in this article, and a fair amount of business has been done at fairly steady rates. The current quotations are £14 10s. for firsts, £12 10s. to £13 10s. for seconds, £11 to £11 10s. for thirds, £8 to £10 for fourths, and £6 10s. to £7 10s. for yellow and pink.

MANCHESTER CHEMICALS AND DRY-SALTERIES, May 20.—The shadow of the forthcoming holidays seems to be hanging over Manchester, for Whitsuntide is near, and it is then that Mancunians hold high carnival with zest and relish, unsurpassed by any other community in the country. Already travellers are beginning to complain that in the city orders are not to be had, except in small quantities, and drysalters are even in worse case. The alkali trade is not by any means brisk, but prices are fairly maintained, though in some minor articles the tendency is downwards. Generally speaking, the following quotations are current:—70 per cent. caustic soda, £7 7s. 6d., *f.o.b.*, Liverpool; £7 17s. 6d., Dublin; £7 12s. 6d., Belfast. 58 per cent. ammonia alkali, £3 7s. 6d. on rails in bags; £3 12s. 6d. Belfast; and £3 17s. 6d., Dublin. Bicarbonate of soda, £6 15s. per ton, *f.o.b.*; £7 2s. 6d., Dublin; and £6 17s. 6d., Belfast, 1-cwt. kegs. Industrial bicarbonate, £5 10s. on rails at works, Northwich; £6 2s. 6d., Dublin; £5 15s., Belfast. Sulphate of ammonia is unchanged. Soda crystals are dull. For sulphate of copper quotations vary, best brands being £18 10s. to £19 Liverpool, with 20s. less next month's delivery. Naphthas are dull and offering freely at lower prices. Recovered sulphur firm at £3 12s. 6d. to £3 17s. 6d. Lancashire prussiate (yellow) maintains its price, and local makers firm at 7¼d. to 7½d. Chlorate of soda down to 6d. Chlorate of potash unchanged at 4¼d. Green copperas firm. Manganese scarce. Acids are improving. Tartaric, English, 1s. 3d.; foreign, 1s. 2½d. Citric, 1s. 2½d. Oxalic acid, 3¾d.

NEWCASTLE CHEMICAL REPORT, May 20.—More shipping orders are in circulation for the upper Baltic ports, principally for bleaching powder. Soda crystals are moving a trifle better against home requirements. Some makes of chemicals keep on the scarce side. Prices in general, however, go practically unchanged. Such are:—Bleaching powder: £7 to £7 5s., according to markets and packages. Soda crystals in 2 cwt. bags, 38s. to 40s.; in casks, 42s. 6d. to 45s. according to markets. Caustic soda: 70 per cent., £7 10s. to £7 15s.; 76 to 77 per cent. strength, £9. Sulphur: £3 17s. 6d. to £4. Soda ash: 48 per cent., £4; 50 per cent., £4 5s.; 52 per cent., £4 10s. Alkali: 48 per cent., £4 10s. to £4 15s. Pitch, 34s. to 35s. South Durham salt 9s. per ton *f.o.b.* Tees.

LIVERPOOL MARKET REPORT, May 20.—Canary seed is in fair demand at low prices, 29s. being asked by holders for Turkish per 464 lbs. Ginger: African has been selling briskly; 60 bags best Sierra Leone sold at 19s. 6d. per cwt., and 400 bags medium at 19s.; later Sierra Leone medium sold at 18s. 3d. per cwt. Beeswax: Peruvian has sold at £8 per cwt., and some Chilian privately at late rates. Honey: 100 barrels Peruvian Pile 3 sold at 18s. 6d. per cwt.; rates now ruling are, for Chilian Pile 3, 20s.; Pile 2, 20s. 6d.; Pile 1, 22s. to 23s.; and Pile X, 28s. to 30s. per cwt. Calabar beans: 22 bags went for 1½d. per lb. *ex-store*. Oils: Castor oil continues steady at fully the recent prices, 2nds Calcutta 2¾d. to 2¾d. per lb, French 1st pressure and Madras 2¾d. to 2¾d. per lb. Olive oil is very firm; *Malaga* has advanced to £29 10s. per tun. Linseed oil remains

at 19s. 6d. to 20s. 6d. per cwt. for *Liverpool* pressed. Cotton-seed oil: Steady at 16s. 6d. to 17s. per cwt. *Liverpool* refined, and 17s. *American*. Spirits of turpentine: 22s. 3d. to 22s. 6d. per cwt. Petroleum: Quiet. *Russian*, 5¼d.; *American*, 6¼d. to 7¼d. per gallon. Carbonate of ammonia; 3¾d. to 3¾d. per lb. Sal ammoniac: Firsts, 39s.; seconds, 37s. per cwt. Sulphate of ammonia: £8 5s. per ton. Bleaching powder: Hard, £7 to £7 2s. 6d. per ton *f.o.b.* Copperas: *Lancashire*, 37s.; *Welsh*, 35s. per ton. Sulphate of copper: £18 15s. to £19 per ton; forward, June and July, £17 10s. to £18. Potashes: 21s. 3d. per cwt. Pearl-ash: 35s. Cream of tartar: Remains steady at 100s. per cwt. for best white. Saltpetre: 23s. 6d. per cwt. Prussiate of potash: 7¼d. per lb. Chlorate of Potash: 4¼d. per lb. Bichlorate of potash: 4¼d. per lb. Bicarbonate of soda: £6 15s. per ton. Soda crystals: £2 7s. 6d. to £2 10s. per ton. Caustic soda: 70 per cent., £7 3s. 9d. per ton; 60 per cent., £6 8s. 9d. Hyposulphite of soda: £5 12s. 6d. to £6 2s. 6d. per ton.

PHARMACISTS AS PHOTOGRAPHERS

MARTIN AND CO.'S GENERAL PHOTOGRAPHIC WORKS.

The widespread taste for photographic manipulations and the "dreadful facility" of the camera has obliged many pharmacists to add to their more legitimate business that of dealers in photographic chemicals and apparatus, and this has led to their receiving from amateurs negatives for printing and enlarging. These are usually passed on to those who specially undertake such work for the convenience of dealers. One such firm is that of J. Martin and Co., of New Southgate, London, N., and an extreme case of the pharmaceutical photographer is that of Mr. James Martin, the head of the firm, who, was at one time engaged in the Pharmaceutical Society's laboratory and acted as assistant to the late Professor Redwood. Later, he worked for a firm of manufacturing chemists, then for several leading firms of photographers, and finally founded the business which he now carries on in conjunction with his son and a large staff. The specialties of the firm are enlarging and finishing, and the well-fitted works afford accommodation for exposing nearly a thousand printing frames at one time. There are large and well-lighted mounting and drying rooms, with broad benches and the latest machines for rolling and burnishing. Fresh sensitised paper is prepared every day, plate-glass dishes being used for this purpose, whilst the constant increase of work has necessitated considerable extension in the enlarging department. Everything is done under the personal superintendence of Mr. James Martin, who recalls the days when pyrogallic acid was sold at ten shillings per drachm, and hyposulphite at three shillings per pound. He has travelled round the world and spent some years in Australia, and has been a constant attendant at photographic meetings and contributor to photographic journals. A recent specialty of this firm is that of copying, by a special process, letters and manuscripts in facsimile for legal and other purposes.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Books, etc.

Offers requested for 'Pharmaceutical Journal,' complete set from 1841, mostly well bound, or for single volumes or odd numbers; 19x., 1s.; 2x., 7s. 6d., "Ilford P.O.P.," not quite perfect condition.—Griffin, Chemist, Kidderminster.

Each work free for 15s., about half price:—Barnes great illustrated work on 'Obstetric Medicine and Surgery,' 2 thick volumes, 1885; Boag's 'Imperial Illustrated Lexicon,' 2 large vols., well bound.—Davis, "Ches'nuts," Gordon Hill, Enfield.

2s. 6d. each, free: Pratt's 'Poisonous Plants,' 44 cold. plates; Druitt's 'Surgeons' Vade Mecum'; Hooper's 'Anatomists' Vade Mecum'; 'Nomenclature Diseases,' last; South's 'Emergency Surgery'; Daventer's 'Midwifery,' plates.—Davis, "Ches'nuts," Gordon Hill, Enfield.

Wills' 'Special Chemical Lectures,' as used only in College, printed, Wills' 'Prescriptia,' Olivers' 'Botany,' Edmunds' 'Botany.' A bargain, 4s.—'Retlas,' 12, Plainmoor Terrace, St. Mary Church, Torquay.

Thirty-six vols. 'Pharmaceutical Journal,' bound, good condition, 1842 up.; twenty-four unbound, clean, suitable present for a library; 'Pharmaceutical Times,' 2 vols., 1847; offered cheap.—Miller, 46, Clarendon Square, London, N.W.

A book of 180 Well-tryed Recipes for Chemists and Druggists, comprising well-selected formulæ for general, remedial, veterinary, toilet, and everyday preparations. Post free, 1s. 6d.—Tully, Chemist, Hastings.

Soda Water Appliances.

Soda-Water Machine, Barnett and Foster's, No. 2; list price £45; sell for £15; good condition.—Apply to H., 1, Southwick Street, Hyde Park.

Miscellaneous.

Lens, Clement and Gilmour's ½-plate snap-shot, new, cost 50s. What cash offers?—Taylor, 39, George Street, Perth.

Bargain in Spectacles and Folders.—Lot of 1s., 1s. 6d., 2s., and 2s. 6d. ones at quarter retail price, or offers in exchange. Also 35s. counter spectacle case at half price.—Griffin, Chemist, Kidderminster.

Bargains.—60 1s. Hayward's Sheep Dip for 30s.; 6 2s. Bigg's Sheep Dip, 6s.; 60, 1s. Mellin's Emulsion, 40s.; 36 2s. 6d. for 48s., or offers in exchange.—Griffin, Chemist, Kidderminster.

About 2 cwt. finest English honey; best procurable for pharmaceutical purpose. Small quantities, 6d. per pound. Reasonable offer accepted for the whole, packed free.—Address, Davies, Park Farm, Wallingford.

Violas! Violas!! Violas!!! should be grown by all who have a garden, bloom freely all the summer; 12 beautiful varieties, suitable for exhibition, free for 2s. 6d.—Henry Pattison, Chemist, Shrewsbury.

Pansies! Pansies!! Pansies!!! 12 of the best exhibition varieties, good roots, correctly named, sent post free for 3s. 6d.—Henry Pattison, Chemist, Shrewsbury.

Maw's Pillar Dispensing Scales, Figure 9, 12s.; Waterlow's Lithographic Press, 35s.; 11 Victoria Pills, 6s.; 10 2s. 6d. Faraday's Hair Dye, 17s.; 4s. 6d. Jayne's Expectorant Dusat Syrup, 1s. 9d.—Cooke, Chymist, Surbiton.

Garden Tent (circular), in splendid condition, originally cost £5, complete with all accessories, 25s.—Aukland, Homeopathic Chemist, 46, Camden Road, London, N.W.

Job Lines.—Bargains. Lovely, perfect, velvety, dispensing corks, 6 gross vials for 5s.; 4 gross 6 and 8-oz. ditto, 5s. Samples free; nothing better cut. Fancy coloured Japanese Baskets, for bazaars, etc., 5 gross package (4 gross large, 1 gross small) for 6s. 6d. Six black, polished, seamless Enemas, complete in box, 12. 6d.; 3 for 6s. 6d. All carriage paid.—Tom Brooks, Chemist, Hornsey, London, N.

To be sold, Drugs, stock and fittings of chemists in one lot, red lamp, carbons, and sundries.—Walter Roberts, 23, Handel Street, Brunswick Square.

Four gross 12-oz. heavy Flats, 10½ oz. capacity, 48s. lot, delivered.—Mason, Chemist, Bromsgrove.

Recipes.—The following Ten Specials are most certain money-makers and custom-retainers:—"The Golden Tonic" (quina, etc.); elegant preparation, keeps indefinitely, pleasant to take, non-constipating, 6-oz. bottles cost 5d. "Vincopona," infallible embrocation for rheumatism, etc.; rubs in nicely, acting instanter, 4-oz. bottles for 1s., stamped, pay half. "Peptonic Elixir," pepsin, bismuth, etc., an ideal remedy for indigestion; pleasant and rapidly efficacious. "Tobranol," antiseptic absorbent powder, for tender feet and unpleasant perspiration; nothing better offered. "Maltussine," a splendid bright, pleasant-tasting cough-mixture, with malt and glycerine; sells on its merits. "Mist. Copaiba Comp.," one bottle often cures; will keep for some time; less nauseous than similar ones; 8-oz. bottle costs 4d. "Aurean Fluid," or golden gloss; an improved golden hair-dye; gives a richer colour than peroxide; less like tow; keeps better. "Parolia," a new hair cream and gloss; contains paraffin and glycerine, but is neither sticky nor greasy; profitable and liked. "Aromatic Cloudy Ammonia," as good as any in the market; decidedly sweeter and more liked than many; cheap. "Hair-curl." This is the best preparation of the sort in the market; it does what it professes. One bottle will prove its worth; quickly and easily made. Recipes, with full instructions, together with a sample label for each. The lot for 15s.; five for 10s.; odd ones 2s. 6d., post free.—Tom Brooks, Chemist, Hornsey, London, N. Lists free.

WANTED.

Bougie mould, 1-drachm pessary mould, a good sifting machine to hold about 4 lbs., recess labelled bottles and extract pots.—F. G. Curris, Pharmaceutical Chemist, Sandgate Road, Folkestone.

PERSONAL.

PROFESSOR BARRETT, of the Royal College of Science, Dublin, has been very busy lately with the x-rays, and gave two demonstrations recently to crowded audiences. He has been able to convince the most sceptical of the great aid the discovery is to surgical diagnosis.

MR. CLEMENTS ROBERT MARKHAM, C.B., President of the Royal Geographical Society, has been promoted to be K.C.B., on the occasion of the Queen's birthday. Mr. Markham is perhaps best known as the introducer of cinchona cultivation into India.

MR. EDWARD CHARLES ANGEL, chemist and druggist, who started last August to fill a four years' engagement with the Colombo Apothecaries Company, died suddenly about three weeks ago at Colombo. Previous to taking the foreign appointment he was engaged at Clapham and Bath. Death was due to the excessive heat. During the time he was at Colombo he had become a great favourite.

MESSRS. BERNARD AND GORDON, the two Dublin pharmacists who are suffering from a broken arm and leg respectively, owing to carriage accidents within the past few days, are reported to be making satisfactory progress.

MR. J. WELLESLEY DOUGLAS, A.P.S., will give a musical and dramatic entertainment, in conjunction with Mr. Leonard Howard, at the Victoria Mansions Restaurant, Westminster, on Thursday next, May 28. The performance is timed to begin at 8.15 p.m., an exceedingly attractive programme is offered, and the doors will be kept closed during the performance of each item.

DR. THOMAS COLLINS, L.A.H., one of the founders of the Pharmaceutical Society of Ireland, has been adjudged by the Lord Chancellor of Dublin to be of unsound mind, memory and understanding, at the time he transferred, twelve months ago, the sum of £2096 5s. 8d. to the Commissioners of Charitable Donations and Bequest. Dr. Collins is an octogenarian.

MR. T. SPRING SMYTH has transferred the business carried on by him at 117, Westbourne Grove to Mr. William Andrew, of 14A, Garway Road, W.

MR. HOSEASON, of Owen's College, Manchester, and Mr. LOTHIAN, of Edinburgh, have taken over the Glasgow School of Pharmacy, successfully conducted for sixteen years past by Dr. David Lees. The transfer will take effect at the commencement of the winter session in October.

MR. EX-PRESIDENT HAYES has left Dublin for St. Petersburg, en route for Moscow, to attend the coronation of the Czar.

DIARY OF THE WEEK.

- MONDAY, MAY 25.
LINNEAN SOCIETY OF LONDON.
Anniversary Meeting.
- TUESDAY, MAY 26.
ROYAL INSTITUTION, at 3 p.m.
"The Building and Sculpture of Western Europe" (Lecture I.), by Professor T. G. Bonney.
- WEDNESDAY, MAY 27.
PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION (JUNIOR SECTION).
Botanical Excursion to Beer Ferrers, Devon.
- THURSDAY, MAY 28.
SCHOOL OF PHARMACY STUDENTS' ASSOCIATION, at 6 p.m.
"Report on Botany," by C. E. Ashby.
"Report on Physics," by T. A. Henry.
CHEMICAL SOCIETY, at 8 p.m.
"Lothar Meyer: Memorial Lecture," by Professor P. Phillips Bedson.
- THE PROPRIETARY ARTICLES' TRADE ASSOCIATION, at 3 p.m.
A Meeting of the Chemists of Cardiff, Newport, and District will be held at Cardiff Mayer's Court, Town Hall.
- FRIDAY, MAY 29.
ROYAL INSTITUTION, at 9 p.m.
"John Wesley: Some Aspects of the Eighteenth Century," by Augustine Birrell.

LATE ADVERTISEMENTS.

Assistants Wanted.

AN experienced ASSISTANT, about 25. In-door. Apply to W. F. PASMORE, 320, Regent St., London, W.

PART-TIME (Out-door). Wanted an ASSISTANT for the West-end. Apply to H. M., "Pharm. Journal" Office, 5, Serle St., W.C.

Leading "Prescribed Preparations" of

Wm. R. WARNER & CO.

Each Tablet containing two grains Citrate of Lithia affords a convenient method for administering a definite quantity of soluble Lithia in a pleasant form, besides the advantage of having fresh water with each dose; presenting a therapeutic value of a higher standard than the various spring waters which often contain but an indefinite quantity of the needed salt. The dose is usually one Tablet in a glass of pure water three times daily.

"Effervescent Vichy Tablets appear to us to be a distinct advance in the mode of administration of mineral waters. These Tablets may be held to replace the bottled spring waters, which are cumbersome and often of doubtful strength medicinally. They are portable, economical, and of definite strength."—MEDICAL PRESS AND CIRCULAR, August 21st, 1895.

IN POWDER **WARNER'S INGLUVIN REGISTERED** OR TABLETS.

The essential principle of the gizzard, and bearing the same relation to poultry that pepsin does to the higher animals. Where pepsin refuses to act, and where, in severe cases, it has even been rejected by the stomach, Ingluvin has effected relief rapidly and with ease. Unstamped for Dispensing. Also in compressed form, and in bulk bottles for dispensing.

Are not Granules, but a distinct class of preparations, being perfectly soluble and definite in their action.

Their well-merited success has given rise to numerous imitations, under various titles. Unscrupulous competition renders it necessary for the profession to particularly specify PARVULES, and thus to avoid unworthy efforts at substitution.

Disappointment from the use of Cascara preparations has resulted from the use of an inferior drug, or from an unstable preparation. The Elixir prepared by W. R. W. & Co. is palatable and reliable. Its pleasant taste, free from the characteristic bitterness of the drug, renders it peculiarly acceptable to ladies and children.

SOLE DEPOT IN GREAT BRITAIN—

F. NEWBERY & SONS,

Chemists are invited to send for new and full list of W. R. Warner & Co.'s Soluble Coated Pills and other "Galenicals," revised to current date, with complete formulæ.

Chemists are reminded that the season for effervescent is approaching. Bromo Soda and the various Salines of W. R. Warner & Co. are in frequent request for dispensing.

MARKET REPORT.

[Specially compiled for the *Pharmaceutical Journal*.]

[The quotations here given are in all cases the lowest net cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.]

LONDON, MAY 28, 1896.

Whitsuntide has had the natural effect upon business this week, and although the drug sales were held, the catalogues were very small. In fine chemicals carbolic acid is unchanged, refined camphor is quiet, and offering in second hand at a further decline upon last week's rates. Citric and tartaric acids are steady, but without change. In the alkaloid market quinine is quiet, but steady opium alkaloids are firm, and caffeine unchanged. In heavy chemicals cream of tartar is rather easier, arsenic offering cheaply, and soda and potash salts unchanged. A good demand has been shown lately for crude glycerin. At the drug sales to-day there were few changes noticeable. Aloes sold at steady rates, and the same applies to ipecacuanha, whilst cardamoms fetched rather higher prices, and senna sold freely. Ergot of rye is steady, and the same may be said of Turkey colocyth. The essential and heavy oil markets show little change. Full details will be found below of the various articles of interest:—

ACACIA (GUM)—There is very little inquiry for any variety. In auction only seventy-three packages were offered, and the majority of this moderate supply was bought in, the only parcel sold being ten serons of mixed hardish *Soudan* sorts, which realised 70s. per cwt. *Trieste* gum was all bought in, medium greyish picked at £7 10s., and pale yellowish grain at £6 10s. per cwt. Privately the market in *Persian* so-called insoluble gum remains unchanged. Fine picked gum is quoted at 24s. to 26s.; good sorts at 18s. to 20s. per cwt.

ACID, CARBOLIC.—The market is firm but quiet, and quotations are unchanged as follows:—*Crystals*: 34° to 35° C., 6½d.; 39° to 40° C., 7d.; 39° to 40° C. (*detached crystals*), 8d. per lb. *Crude* quotes at 2s. for 60 per cent., whilst 75 per cent. is worth 2s. 4½d. per gallon. *Liquefied* and *cresylic* are unchanged at 1s. and 11½d. per gallon respectively.

ACID (TARTARIC).—Their is no change to report in the position of this article, but the market is firm. *English* makers still quote 1s. 3d. per lb. on the spot, whilst *foreign* brands of acid both in *powder* and *crystals* are offered at 1s. 2¼d. to 1s. 2½d. per lb. At to-day's drug sales twelve bags of *Cape Argol* sold at 56s. to 57s. for pinkish, whilst for brown, 48s. was paid.

ALOES.—The moderate supply of 224 packages of all varieties was offered to-day, but the market generally was firm. *Cape* aloes, which was represented by 60 cases, sold to the extent of 40 of this number at 25s. 6d. for good bright hard, 23s. to 24s. for fair bright, and 21s. to 22s. for ordinary part drossy and softish. 37 kegs of very soft *West Indian* aloes in kegs, of sour flavour sold at 57s. 6d. for fair quality, 35s. to 42s. for ordinary ditto, and 9s. for common drossy. *Curacao* aloes in boxes was in fair supply, and sold at 21s. for dark brown, and 19s. down to 17s. for fair capey.

ANNATTO SEEDS—Are very slow of sale. To-day none were sold out of 48 packages, fair bright *Coconada* and *Madras* seed being bought in at 5d. to 5½d. per lb.

AMMONIACUM (GUM)—Three cases of dark mixed almondy lump sold in auction at 29s. per cwt. subject to approval, whilst the same quantity of pale free drop was bought in at 60s.

BENZOIN (GUM)—Was in average supply to-day, about 270 cases being offered. Moderate inquiry only was shown for *Sumatra* gum, but fairly steady rates were paid, good pale almondy centred seconds, with slightly false-packed sides, realising £8, whilst £7 2s. 6d. to £7 5s. was paid for fair seconds with good centres but brown sides. Some very fine *Siam* gum was again shown, similar to that which realised such a high price at the last sale. The first case, which consisted of large pale loose clean almonds, some of which were about 2 inches in length, was bought in at £40, whilst for the second, which was made up of medium pale loose drop, £22 was accepted. In addition, £11 was paid for small palish, partly blocky gum, small bright almonds in brown block being bought in at £13, and siftings at 60s. to 80s. per cwt. *Palembang* gum was all bought in, good almondy seconds in tins at 50s., and ordinary ditto in cases at 26s. to 35s. per cwt.

BIRDLIME—Nine cases of this article offered without reserve sold at a decline of about 1d. on the rates paid at the last auction, 5d. to 5½d. being accepted to-day for firsts and 4d. to 4¼d. for seconds.

BUCHU LEAVES.—The moderate supply offered, amounting to 52 bales, was only in moderate demand. For fair *round* greenish leaves 3d. was paid, which shows a steady market. In addition, 2d. was accepted for ordinary yellow quality.

CALUMBA ROOT—Is dearer. In auction 95 bags of ordinary dark wormy sorts sold at 11s. per cwt. A parcel of small sound washed root was bought in at 18s., whilst 11 bales of fair washed realised 13s. 6d. per cwt.

CAMPHOR (CRUDE).—The market is if anything rather firmer than at the close of last week, but there has been little business doing. The closing quotation for *Formosan* camphor is, sellers at 92s. 6d. and buyers at

92s. 6d. per cwt. *c.i.f.* terms. There is nothing to report in *Japan* camphor.

CAMPHOR (REFINED).—The *English* refiners have made no change in their prices, and still quote *bells* and *flowers* in 1 ton lots at 1s. 5d., with ½ ton ditto at 1s. 5½d., whilst smaller quantities are quoted at 1s. 6d. The majority of their *German* competitors offer at 1d. per lb. less, but the agent of one of them has been offering ½-ton lots of *bells* and *flowers* during the week at 1s. 4d. This is, however, a second-hand parcel, and there has been no further general reduction. At to-day's drug sales three casks of *German* camphor in *bells* sold at 1s. 3¾d. per lb. subject to approval.

CANTHARIDES—This drug is very difficult of sale in auction. To-day six cases of dusty *Chinese* flies were bought in at 1s. 2d. per lb.

CARDAMOMS—Were in average supply to-day to the amount of about 110 packages. The prices paid show a very firm market, *seed* especially being in good demand. The quotations were as follows:—*Ceylon-Mysore*: Fine bold pale plump, 3s. 3d. to 3s. 4d.; good bold pale, 3s.; medium pale, 2s. 6d. to 2s. 9d.; small ditto, 2s. 3d. to 2s. 4d.; small yellowish, 2s. to 2s. 2d., down to 1s. 8d. for brownish shrivelled. *Ceylon-Malabar* sold at 1s. 11d. for medium yellowish shrivelled. *Seed* sold at 2s. 9d. to 3s. 2d. per lb.

CASCARILLA—Was in moderate supply, and no demand was shown, thin brown bark being bought in at 37s. 6d., fair greyish quill at 50s., and siftings at 35s. per cwt.

CASSIA FISTULA.—Thirty bags of ordinary quality lean pods sold in auction to-day at 17s. 6d. per cwt.

CINCHONA.—Several parcels were offered to-day, and a fair proportion was sold. For 2 serons of damaged bark imported from *Payta* of *Lova* character, 1¾d. was paid, whilst 27 out of 101 bales of flat *Calisaya* quills sold at 1s. 4d. to 1s. 6d. per lb.

COCA LEAVES—Good sound green *Truxillo* leaves were bought in to-day at 1s. 6d., and brownish *Ceylon* at 1s. 4d. per lb.

COCCULUS INDICUS.—Five bags of this drug imported from *Cochin* sold in auction at 8s. per cwt.

COLOCYNTH.—*Turkish* is fully steady. To-day 3 barrels of fair sound apple sold at 2s. 3d. to 2s. 5d. per lb. *Spanish* was bought in at 1s. 2d. per lb.

COPAIBA (BALSAM).—Good quality balsam is rather scarce and firmly held. For thin pale *Maranham* 1s. 11d. is asked privately, whilst good *Para* is quoted at 1s. 9d. To-day two cases of bright red balsam were bought in at 1s. 10d. per lb.

CREAM OF TARTAR.—Is very quiet, and if anything easier in price. *French Crystals* still offer at 95s. per cwt., whilst for *German* brands of *powder* 97s. is quoted.

DRAGON'S BLOOD.—In very moderate supply. The only parcel offered to-day was two cases of dull *Singapore* saucers, for which 80s. was paid when offered without reserve.

ERGOT OF RYE.—The market is dull, but quiet. To-day 14 bags of fair *Russian* ergot sold without reserve at 4¾d. per lb., whilst in addition 5¾d. was paid for 17 bags of good quality. No *Spanish* ergot was sold, and good quality of this variety is in very poor supply at present, and firmly held, 9d. per lb. being asked privately.

ELEMI (GUM).—To-day 20 cases out of a

parcel of 87, consisting of fair quality gum, not very clean, from *Singapore* sold without reserve at 20s. per cwt.

GALLS.—The market in *Persian* galls remains quiet, the only kind attracting notice being *greens*, in which a small business has been done at steady rates. The current quotations are: *Blues*, 52s. to 54s.; *sorts*, 48s. to 50s.; *greens*, 44s. to 47s.; and *whites*, 42s. to 45s. per cwt. Several lots of *Turkey* galls were bought in to-day at 50s. to 60s. per cwt.

GAMBOGE.—In very moderate supply to the amount of 11 cases only. Two cases of fair clean *Singapore* pipe sold without reserve at £9 2s. 6d. per cwt., whilst pickings were bought in at £9 5s. per cwt.

GUAIACUM (GUM).—The market is steady. For a case of fine, bright, clean, glassy block 1s. 10d. per lb. was paid in auction.

HONEY.—About 100 packages were shown to-day, and the only lot sold was 3 cases of *Australian*, for which 21s. per cwt. was paid. *Honolulu* honey was bought in at 28s. per cwt.

IPECACUANHA.—In auction thirty-five packages of *Rio* (Brazilian) root were offered, and a few of these sold at fully steady rates, but the majority were bought in. For fair to good sound annulated root, 5s. to 5s. 3d. was paid, and 4s. 10d. for damaged ditto. One bag of *Carthagenia* (Columbian) root out of 10 which were offered sold at 3s. 9d. for sound damaged quality, which shows a steady rate.

LIQUORICE ROOT.—*Russian* root is quoted dearer, and for decorticated 30s. per cwt., *c. i. f.*, is now asked.

KOLA NUTS.—Were rather freely offered to-day, but none were sold. Fair *West Indian* were bought in at 1s., and ordinary ditto at 6d. to 9d. per lb., whilst 33 baskets of fresh kolas were also bought in at 5d. per lb.

MUSK.—A rather improved inquiry was shown in auction to-day, and two tins (pile I) sold at 58s. to 67s. 6d. per oz.

MYRRH (GUM).—Is very difficult of sale except when offered without reserve. In this instance a few barrels of fair pickings sold to-day at 31s., and drossy ditto at 14s. per cwt., whilst for siftings 31s. was paid. Good native picked gum was bought in at £5 10s. per cwt. and chips at 7s.

NUX VOMICA.—For 102 bags of sound quality nuts 7s. per cwt. was paid in auction.

OILS (FIXED) AND SPIRITS.—*Castor*: *Italian* is steady at 31s. per cwt., *c. i. f.*, for fine tasteless. *Calcutta* oil was bought in to-day at 3¼d. per lb. for the best quality. *Cotton* is steady at unchanged rates, *refined* oil being quoted at £16 to £16 10s. on the spot, according to brand and package. *Coco-nut* is quiet, but prices are unaltered, *Ceylon* being worth £22 10s. to £22 15s., and *Cochin* £26 15s. on the spot. *Linseed* is again easier in price, oil in barrels being now worth £18 10s. on the spot. *Rape* is firm at unchanged rates, *refined* oil being quoted at £23 to £23 10s. on the spot. *Turpentine*: The market is quiet at a further decline, *American* spirit being now quoted at 19s. 10½d. on the spot. *Petroleum* is very dull, *Russian* being quoted 5½d. to 5¾d.; *American*, 5½d. to 5¾d.; and *water white* at 6½d. to 6¾d.

OILS (ESSENTIAL).—*Star Anise* oil is still very dull of sale, and offering at 9s. nominally, though less would be accepted.

Cassia: 10 cases testing 63 to 65 per cent. of cinnamic aldehyde sold in auction to-day at 4s. 8d. to 4s. 9d. per lb. *Sassafras* oil (*D. & O.* brand), sold in auction at 1s. 9d. Nine cases of *Eucalyptic* oil sold at 1s. per lb. *Russian aniseed* oil of guaranteed purity offers at 8s. 6d. per lb. *Ligualoes* oil was bought in at 4s. 6d. per lb. *Nutmeg* at 3¼d. per oz., whilst *Cedarwood* sold at 1s. 10d. per lb. subject to approval.

ORRIS ROOT.—The market is firm, but there seems to be very little business doing in this article. At the drug sales a few parcels of lean dark *Aden* sorts were bought in at 20s., whilst *Italian* was bought in at 72s. 6d. to 77s. 6d. per cwt.

QUILLAIA BARK.—Is rather easier, £11 17s. 6d. being accepted to-day for four tons.

RHUBARB.—Very slow of sale. Although some 80 chests were shown to-day, the only lot sold was 3 cases of good medium round *Shensi*, for which 1s. 5d. to 1s. 6d. per lb. was paid.

SAFFRON.—Continues a very firm market, and on the spot holders now quote 30s. to 32s. per lb. for best *Valencian*, 28s. to 29s. for good ditto, and 25s. to 27s. for ordinary ditto.

SARSAPARILLA.—A parcel of grey *Jamaican* root sold to-day at the steady rate of 1s. 4d. to 1s. 5d. per lb. No *Honduras* or *Lima* root was offered.

SEEDS (VARIOUS).—Several parcels of seed were offered and bought in to-day, including *Aniseed* from Marseilles at 25s., *Fennel* from Bombay at 18s., and from Koenigsberg at the same figure, Bombay *Dill* seed at 11s. per cwt., Maltese *Cumin* at 40s., and genuine China *Star Anise* at 92s. 6d. per cwt.

SENNA.—Good quality *Tinevelly* leaves are hardly procurable, and command high prices. In auction to-day the supply was of poor quality, but good prices were paid, including 2d. for yellowish, and 1¼d. to 1¾d. ordinary yellowish and dark. For *Pods*, 3d. was paid.

TAMARINDS.—Are in large supply but difficult of sale. To-day *Montserrat* tamarinds sold at 10s. to 11s. whilst *Antiguan* were bought in at 13s. to 15s. per cwt.

WAX (BEES).—*Jamaican* beeswax was in very moderate supply, only one barrel being offered, and sold at £8 5s. per cwt. In addition, *Madagascar* sold at £6, 10s. to £7, *Mozambique* at £7 7s. 6d., *South American* at £7 7s. 6d., and *Australian* at £7 5s.

MANCHESTER CHEMICALS AND DRY-SALTERIES, May 26.—To-day the market practically closes for the week, and the remaining days of it are given over to holiday making. Since our last report there has been a hardening tendency in some articles, but little change in others. High strength caustic of best makes, 77 per cent. is quoted 5s. per ton, and recovered sulphur is about 2s. 6d. higher and scarce. The unfortunate state of things in the Transvaal causes yellow prussiate to rule low, and a large quantity of foreign has been thrown on this market. Local makers hold firmly, however, and English is a point higher, ranging from 7¼d. to 7½d. Best redistilled glycerin still at 65s. on rails here. White powdered arsenic unchanged and still scarce. Acids on the whole are lower, and best white powdered cream of tartar varies from 98s. to 101s. per cwt.

Benzols are easier, but carbolic acid is improving. Other quotations are:—58 per cent. ammonia alkali, £3 7s. 6d. per ton in bags, on rails; £3 17s. 6d., Dublin, and £3 12s. 6d., Belfast. Soda crystals; 35s. to 37s. 6d. per ton in bags on rails; 45s. to 47s. 6d., Dublin; 40s. to 42s. 6d., Belfast, barrels 5s. extra. Bi-carbonate of soda; £6 10s. to £5 15s., *f. o. b.*, Liverpool, according to package. Industrial bicarbonate (for mineral waters); £4 5s. per ton, bags; £5 10s., 1-cwt. kegs; on rails at works, Northwich, 2s. 6d. extra, *f. o. b.*, Liverpool, and 5s. and 10s. extra Belfast and Dublin. Bleaching powder: £6 15s. to £7, softwood casks on rails. Chlorate of soda: 6d. per lb., U.K. delivery. Chlorate of potash: 4¼d. to 4¾d. Alum: £5 2s. 6d. per ton, lump in tierces; £5 12s. 6d., ground, in bags, on rails here. Glanber salts: 30s. per ton, bags. Epsom salts: 48s. to 55s., according to delivery. Pitch: 30s. per ton, *f. a. s.*, Salford docks; 32s. 6d. East or West coast delivery.

NEWCASTLE CHEMICAL REPORT, May 26.—Not much change to report. Shipping orders are a shade more stirring, mostly for the Baltic. Home business likewise a trifle more active. Prices practically unaltered, and remain as follows:—Bleaching powder, £7 5s. and upwards, according to markets, etc. Soda crystals in casks and bags, 37s. 6d. to 45s. Caustic soda: 70 per cent., £7 10s. to £7 15s.; higher strength, £9 to £9 5s. Sulphur: £3 17s. 6d. to £4. Soda ash: 48 per cent., £4; 50 per cent., £4 5s. to £4 10s. Alkali: 48 to 50 per cent., £4 10s. to £5. Pitch, 35s. South Durham salt 9s. per ton *f. o. b.* Tees.

LIVERPOOL MARKET REPORT, May 27.—Linseed is offering freely on the spot. 1650 bags of River Plate were sold ex quay at 30s. 9d. per 416 lbs. Canary seed is unchanged in value and very slow of sale at 28s. 6d. to 29s. per 464 lbs. Kola nuts are plentiful, 30 bags of dried sold at 3¼d. per lb. Ginger: African (*Sierra Leone*) has been selling well at 18s. 3d. to 19s. per cwt. Olive oil continues steady at recent rates, but business is slow. Castor oil is in moderate demand, good seconds *Ca'cutta* 2¾d. to 2½d. per lb., *Madras* and first pressure French 2¼d. to 2½d. per lb. Linseed oil remains steady at 19s. 6d. to 20s. 6d. per cwt. for Liverpool makes. Cottonseed oil: Inactive Liverpool refined, 16s. 6d. to 17s. 3d. per cwt.; American, 17s. Spirits of turpentine is in fair demand for the small amount offering at 22s. to 22s. 3d. per cwt. Petroleum: Russian, 5¾d.; American, 6¼d. to 7½d. per gallon. Sal ammoniac: 39s. per cwt., first; 37s., second quality. Sulphate of ammonia, £8 2s. 6d. per ton. Bleaching powder: Hard, £7 to £7 5s. per ton. Copperas: Lancashire, 38s. per ton; Welsh, 36s. Sulphate of copper, for immediate delivery, £19 per ton. Cream of tartar is steady, but slow of sale at 100s. per cwt. for finest white. Potashes—Very quiet at 21s. 3d. per cwt. Pearlash: 35s. per cwt. Bichromate of potash: 4¾d. per lb. Prussiate of potash: 7¼d. per lb. Chlorate of potash: 4¾d. per lb. Nitrate of soda unaltered at 8s. to 8s. 3d. per cwt. Bicarbonate of soda: £7 per ton. Soda crystals: £2 10s. per ton. Borax: Lump, 20s.; powder, 21s. per cwt. Canstic soda: 70 per cent., £7 12s. 6d. to £7 15s. per cwt.; 60 per cent., £6 12s. 6d. to £6 15s. per cwt.

MISCELLANEOUS NEWS.

WOMEN IN MEDICINE.—The Pathological Society continues to refuse the privileges of membership when applied for by duly qualified women medical practitioners, several rejections being recorded at the last meeting of the Society. The *Echo*, in reporting the incident, wrongly credits the Pharmaceutical Society with this retrograde step, ignorant apparently of the fact that the Society already numbers several women members in its ranks, and is quite ready to welcome more.

NEWARK TRADESMEN AND THE HALF-HOLIDAY.—An endeavour by Mr. J. H. Smith, Pharmaceutical Chemist, Newark, as Secretary of the Local Thursday Half-Holiday Association, to induce the members of the Newark Tradesmen's Association to close their shops two hours earlier on the occasion of the annual picnic of the first-named Association, has failed owing to lack of support. He regards this as equivalent to spoiling the picnic.

SUSPECTED POISONING OF CATTLE.—The viscera of cattle which died suddenly in County Kerry (as reported last week) having been examined by Sir Charles Cameron, analytical chemist, Dublin, have been found by him to contain arsenic.

GOLF MATCH.—Teams of six aside of assistants from the East and West-end establishments of Duncan, Flockhart and Co. had a friendly game over the Braids on the 16th, resulting in a win for the East-end by 17 holes.

THE APOTHECARIES' HALL OF IRELAND.—The Conductorship (as it is called) of this body has just become vacant, owing to the death of Mr. Harry Clark, M.P.S.I., from pneumonia, after a few days' illness. Mr. Clark, who was only thirty-six years of age, had been, previous to his appointment about two years back, Manager of the Compounding Department of the Junior Army and Navy Stores, Dublin. The office of "Conductor" has to do entirely with the commercial side of the business of "The Hall."

BIRCH AND CO., LIMITED.—This company was registered on May 14 by Waterlow and Sons, Limited, London Wall, E.C., with a capital of £3000 in £1 shares. Objects: To acquire and carry on the business of chemists, druggists, drysalters, etc., carried on as "John Birch and Co.," 37 and 39, Frederick Street, Rotherham, Yorks. Registered without articles of association.

DOCTOR'S FATAL MISTAKE.—An inquest was held at Northampton, on May 22, on the body of Mr. William Kennedy, a surgeon, who died suddenly. The evidence showed that deceased drank about 8 ozs. of colchicum wine in mistake for beer. Verdict: Death from misadventure.

OILMEN AND THE SALE OF POISONS.—On May 16, at the King's Arms Inn, Dr. Vere Benson, deputy coroner, held an inquest on the body of Alfred Samuel Stokes, aged seven years, whose parents live at 4, Ham-

terrace, New Brentford, and who died from the effects of drinking a quantity of vitriol in a bottle on the kitchen table. Thomas Lewington, the lad who went to fetch the vitriol, having given evidence, Mr. Knight, oilman, of 189, High-street, Brentford, who supplied him with the acid, stated that he cautioned him. He gave about half a gill for a penny, and told him to be careful. He put a label on it stating it was poison, but he was not under any compulsion, such as chemists were (*sic*), to put a red label on the bottle. He put the label on as a precautionary measure. Dr. F. N. Williams said that death was due to shock caused by the corrosive action of the acid. It was not necessary for a person obtaining poison at an oilshop to sign his name, or for the oilman to put any label on the bottle.—The jury returned a verdict of "Accidental death," and added a rider that in their opinion the law should be amended to prevent the sale of vitriol or other poisonous substances to all persons, in all kinds of bottles, without precautions.

DRUG TENDERS.—The Lismore Board of Guardians, in accepting a tender for drugs from Messrs. Leslie and Co., Dublin, at £74 13s. 7d., against a similar tender from another contractor at £123 15s., agreed that samples of the accepted medicines be sent to each of the dispensary doctors, who should be instructed to pay particular attention to any drugs marked at unduly low figures, and in the event of their not being satisfied with the quality to have them sent to Sir Charles Cameron for analysis.

OBTAINING MEDICINES BY FALSE PRETENCES.—Thomas Smith, *alias* Aherne, has been sent for trial at Cork on a charge of obtaining goods and money by false pretences from the Cork Chemical and Drug Company, Limited. Mr. Fielding, manager of the company, deposed that the prisoner presented an order for medicine which purported to be signed by Dr. Lawton, of Midleton. On the strength of the "order," witness gave him drugs to the value of 3s. and also 5s. in cash. Dr. Lawton stated that the signature on the order was a clever forgery, and that he did not authorise the prisoner to get the medicine.

NOVEL WINDOW DISPLAYS IN AMERICA.—An American pharmacist describes, with apparent pride, in the *Druggists' Circular*, his latest efforts in the window advertisement line. One of these consisted of a "nursery display, in which a mother with a 'live baby'" was exhibited. The mother busied herself in preparing different kinds of foods, and the baby amused itself playing with rattles, etc. The rest of the window was filled with every conceivable kind of nursery requisite, feeding bottles, etc., etc. "It made a delightful *séance*," the writer adds complacently. The other display was soap. Monster cakes of soap and a large building formed of soap were exhibited, while a coloured boy in the window was occupied in making soap bubbles, which attracted such crowds that boys had to use stilts to look into the window.

EDINBURGH PHARMACY ATHLETIC CLUB.—In connection with the annual sports, a

report of which appears on page 436 of this week's Journal, the judges were Messrs. D. B. Dott and George Coull. The donors of prizes were Messrs. Anderson and Company, Messrs. Duncan, Flockhart, and Company, Messrs. Maw, Son, and Thompson, Messrs. Raimes, Clark, and Company, Messrs. Burroughs, Wellcome, and Company, and Mr. Thomas Welsh.

ALLEGED BREACH OF AGREEMENT.—In the Court of Session, Edinburgh, on May 27, Lord Kincairney ordered issues for jury trial of an action in which Gibson and Co., retail chemists and druggists, 8, Nicolson Street, and 19, South Clerk Street, Edinburgh, sue Anderson and Co., wholesale manufacturing chemists and druggists, Junction Bridge, Leith, for £500 damages for alleged breach of agreement. The pursuers have had a series of transactions with the defenders, and at November 5, 1895, were due to them £43 14s. 6d., for which a debts-recovery summons was served. An agreement was come to under which, as the pursuers aver, the defenders agreed to stop legal proceedings on receiving payment of £25. Notwithstanding this agreement decree in absence passed against the pursuers, and their name appeared in the Black List, to the detriment of their credit. The defenders admit that an agreement was come to that the pursuers would be allowed a reasonable time to pay the balance of their account on payment of £25. Payment of this sum was received on November 8, and the defenders gave instructions that proceedings should be stopped by letter, which was posted on the afternoon of Saturday, November 9. Decree in absence was, however, taken on November 11 for £18 4s. 6d. While denying liability, the defenders express regret if the pursuers were put to any inconvenience, and offer payment of £5 5s. in name of damages, with expenses.

A SHEFFIELD DENTIST AND HIS PATIENT.—At the Sheffield County Court, on Thursday, his Honour Judge Waddy, Q.C., made the final order in a long standing case, in which Mr. Frank Harrison, surgeon dentist of Glossop Road, Sheffield, was the plaintiff. Mrs. K. Kenworthy, the defendant, had declined to pay for a set of teeth supplied, on the ground that they were an imperfect fit. The case for the plaintiff was that the workmanship left nothing to be desired, and that defendant did not wear them long enough to enable them to be adapted to her mouth and the irritation to pass away. By mutual consent the point was referred to an independent dentist. This gentleman's report was entirely in favour of the case set up by his brother professional, and his Honour gave judgment for the plaintiff with costs.

SYNTHESIS OF EUGENOL.—By the action of allyl iodide on veratrol, methyl eugenol is obtained, which is, according to Moureau (*Comptes Rendus*, cxxi., 721) identical with the natural product. This methyl eugenol, when boiled with alcoholic potash, is converted into isomethyl eugenol; with chromic acid, or with potassium permanganate, it yields methyl vanillin and methyl vanillic acid.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Books, etc.

A book of 130 Well-tried Recipes for Chemists and Druggists, comprising well-selected formulæ for general, remedial, veterinary, toilet, and everyday preparations. Post free, 1s. 6d.—Tully, Chemist, Hastings.

Miscellaneous.

Lens, Clement and Gilmour's $\frac{1}{4}$ -plate snap-shot, new, cost 50s. What cash offers?—Taylor, 29, George Street, Perth.

Steam Jacketed Pan for sale, 110 gallons, jacket and pan all copper, can be tried under steam. Price £22.—Moss, 15, Church Street, New Lenton, Nottingham.

To be sold, Drugs, stock and fittings of chemists in one lot, red lamp, carboys, and sundries.—Walter Roberts, 28, Handel Street, Brunswick Square.

Violas! Violas!! Violas!!! should be grown by all who have a garden, bloom freely all the summer; 12 beautiful varieties, suitable for exhibition, free for 2s. 6d.—Henry Pattison, Chemist, Shrewsbury.

Pansies! Pansies!! Pansies!!! 12 of the best exhibition varieties, good roots, correctly named, sent post free for 3s. 6d.—Henry Pattison, Chemist, Shrewsbury.

Two 2-gals. Carboys, pear-shaped, 5s. each; two 4-gals. Carboys, 12s. each; handsome Specie Jar, 24 inches, R. Arms Magnesia (as Maw's), £3; Pill Machine, 18×15 grains, 10s.; Pill Machine, 24×5 grains, £1.—Davies, Chemist, Boreham Road, Warminster.

Balance—Becker's Students' Balance, new, used once, with weights; for volumetric, milk, or water analysis; polished case; carriage paid, £2 10s. or offers; reason for sale going abroad.—Curry, Chemist, Reigate.

Garden Tont (circular), in splendid condition, originally cost £5, complete with all accessories, 23s. 6d., carriage forward.—Aukland, Homeopathic Chemist, 46, Camden Road, London, N.W.

Twenty-gallon Iron Cistern, with strong brass tap, 10s.; Pill Machine, 10s.; Pea Sheller, 3s.; pair of copper-bottom Scales, stamped, 5s.; 5 cwt. Chloride Barium, cheap.—Advertiser, 75, Malinda Street, Snefield.

Soda Water Appliances.

Soda-Water Machine, Barnett and Foster's, No. 2; list price £45; sell for £15; good condition.—Apply to H., 1, Southwick Street, Hyde Park.

WANTED.

'Manual of Botany' (Bentley); 'Short Manual of Analytical Chemistry' (Muter); '1885 B.P. and Additions,' in good condition. State lowest price to—T. M. Kerruish, Fore Street, Hertford.

AMERICAN NOTION ON SERUM TREATMENT.—If, says the *Pacific Record*, by tapping a horse filled with diphtheria bacilli we can obtain a cure for that disease, why should not we tap an old Kentucky colonel and get a toxine that would knock the gold cure out of sight.

AN IRISH LIMITED DRUG COMPANY.—The firm of Messrs. William Corry and Co., chemists, Belfast, has been converted into a limited liability company with a share capital of £30,000 in £10 shares. The promoters are all one family, and the directors consist of Messrs. W. F. C. S., G. S. and E. S. Corry.

RUN ON THE *Ph. J.*—A curious "run" on last week's issue of the *Pharmaceutical Journal* took place a few days ago at the National Library of Ireland, Dublin. Almost simultaneously three readers, strangers to one another, requisitioned the paper, and the coincidence of the demand caused no little amusement.

OPENING OF COUNTY MONAGHAN NEW INFIRMARY.—The town of Monaghan was *en fête* on Friday the 22nd instant, to welcome his Excellency the Lord Lieutenant of Ireland, on the occasion of the opening by him of the new county infirmary, of which institution Mr. M. R. Whitla, Pharmaceutical Councillor, is Apothecary and Registrar, and to whose labours much of the credit of the project is due.

LATE ADVERTISEMENT.

Assistant Wanted.

IMMEDIATE.—Wanted, a trustworthy indoor Minor or Junior ASSISTANT. One who has been accustomed to a good-class Retail and Dispensing business. Must be well recommended. Apply or address, with full particulars, age, height, salary, reference, and photo (to be returned), to PHENASETIN, 317, Fulham Rd., South Kensington, London.

PERSONAL.

MR. STANLEY HARRINGTON, director of the Cork Chemical and Drug Company, Limited, has been re-elected a director of the National Assurance Company of Ireland.

DR. LEYBURNE, L.P.S.I., Dublin, is reported to be now recovered from his recent serious illness.

DR. T. C. S. CORRY, proprietor of the Medical Hall, Cromac Street, Belfast, died on the 21st inst. The deceased, who was over fifty years in business, was the first to export mineral waters from Ulster. He was dispensary officer during the great epidemic of cholera which visited Belfast in 1845, and rendered valuable service at that time. Widespread regret is expressed at Dr. Corry's demise.

MR. MICHAEL HANRAHAN, pharmacist to the Cork Dispensary Committee, has tendered his resignation of that position, in consequence of failing health. The Committee have accepted the resignation with much regret, and have placed on record their appreciation of Mr Hanrahan's services for over the past seven years. Mr. Sweeny, of Messrs. Harrington and Sons, has been employed temporarily, pending the appointment of a successor to Mr. Hanrahan.

MR. T. H. HUSTWICK, pharmaceutical chemist, Wellington, N.Z., has been appointed an inspector and analytical chemist under "the Alcoholic Liquors Sale Control Amendment Act, 1895." This is the first appointment under the new Act. Mr. Hustwick is an old pupil at Bloomsbury Square; he passed the Minor examination in December, 1860, and the Major in March following. He was also an "Honours" man of his year.

DIARY OF THE WEEK.

Secretaries of Societies are requested to send notices of forthcoming meetings not later than Wednesday in the previous week.

MONDAY, JUNE 1.

SOCIETY OF CHEMICAL INDUSTRY (LONDON SECTION), at 8 p.m.

"Japanese Metallurgy, Part I. Gold and Silver and their Alloys," by W. Gowland.

"The Electro Deposition of Zinc," by Sherard Cowper-Coles.

ROYAL INSTITUTION, at 5 p.m.
General Monthly Meeting.

ROYAL GEOGRAPHICAL SOCIETY, at 8.45 p.m.

"Journey in North-Eastern Sudan," by J. Theodore Bent.

TUESDAY, JUNE 2.

PHARMACEUTICAL SOCIETY.

Benevolent Fund Committee.
Finance Committee.

General Purposes Committee.

ROYAL INSTITUTION, at 3 p.m.

"The Building and Sculpture of Western Europe" (Lecture II.), by Professor T. G. Bonney.

WEDNESDAY, JUNE 3.

PHARMACEUTICAL SOCIETY.

Council Meeting at 11 a.m.

ROYAL INSTITUTION, at 3 p.m.

"The Vault of the Sixtine Chapel" (Lecture III.), by Professor W. B. Richmond.

BRITISH PHARMACEUTICAL CONFERENCE.

Meeting of Executive Committee at 3.15 p.m.

THURSDAY, JUNE 4.

CHEMICAL SOCIETY, at 8 p.m.

"The Magnetic Rotation of Organic Substances, with especial reference to Benzenoid Compounds," by Dr. W. H. Perkin.

PROPRIETARY ARTICLES TRADE ASSOCIATION.

Meeting at the Longlands Hotel, Swansea, at 3 p.m., to discuss the anti-cutting question.

ROYAL INSTITUTION, at 3 p.m.

"Lake Dwellings" (Lecture II.), by Robert Munro.

FRIDAY, JUNE 5.

EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES ASSOCIATION:—

Botanical Excursion to Blackford Hill. The company will meet at Blackford Hill Station at 8.30 p.m., and be led by Mr. W. B. Cowie.

ROYAL INSTITUTION, at 9 p.m.

"Electric and Magnetic Research at Low Temperatures," by Professor J. A. Fleming.

SATURDAY, JUNE 6.

ROYAL INSTITUTION, at 3 p.m.

"The Moral and Religious Literature of Ancient Egypt" (Lecture II.), by Dr. E. A. Wallis Budge.

MARKET REPORT.

[The quotations here given are in all cases the lowest net cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.]

LONDON, JUNE 4, 1896.

Business in the produce markets has been very quiet during the week, and some of the periodical sales have not yet been resumed. There are few changes to report. In the heavy chemicals citric and tartaric acids are quiet, the former being, if anything, rather easier. Cream of tartar is unchanged, but dull of sale, whilst arsenic is quiet. Sal ammoniac is lower, permanganate of potash very firm, and copper sulphate inclined to dearer rates. Carbolic acid is unchanged, quinine is quiet, caffeine steady, and opium alkaloids rather dull of sale. The importers to-day lowered the price of quicksilver 5s. per bottle, which will, no doubt, lead to a decline in mercurials. Crude and refined camphor are unchanged. In the drug market jalap is dearer, whilst saffron and insect powder are both exceedingly firm. Tolu balsam quotes for delivery at an advance. There is nothing doing in cod-liver oil, shellac is unchanged, whilst among essential oils the principal feature is the continued decline in the price of star anise oil. Full details will be found below:—

ACID, CARBOLIC.—The market is quiet and unchanged, the following being the current quotations:—*Crystals*: 34° to 35° C., 6½d.; 39° to 45° C., 7d.; 39° to 48° C. (*detached crystals*), 8d. per lb. *Crude* is rather firmer, 60 per cent. being quoted at 2s., whilst 75 per cent. is worth 2s. 5d. per gallon. *Liquefied* and *creosylic* are firm at 1s. and 1½d. respectively.

ACID CITRIC.—The market is quiet but quotations are unchanged. For *English* acid the manufacturers still quote 1s. 2d., but second-hand holders offer at 1s. 1¾d. *Concentrated juice* offers at £13 5s. *f.o.b.* Messina.

ACID, TARTARIC.—The market is very quiet. *Laves'* and *Kemball's* brands of *English* acid still offer at 1s. 3d. per lb., but *foreign* acid, both in *powder* and *crystals*, can be bought at 1s. 2d. to 1s. 2¼d. per lb. according to brand.

AMMONIA COMPOUNDS.—*Sulphate* is quiet but steady. On the spot *grey* 24 per cent. is quoted at £8 2s. 6d., whilst *Hull* offers at £8 1s. 3d., *Leith* at £8, *Beckton* at £8 10s. forward, and *Beckton* terms at £8 5s. spot. *Sal Ammoniac* is lower and *firsts* are now offered at 37s., and *seconds* at 35s., which shows a decline of 2s. *Carbonate* still quotes at 3d. per lb. in *casks*, 3½d. per lb. in *kegs*, and 3¼d. per lb. in *jars*, with *powder* ¼d. per lb. extra. *Liquor* is unchanged at 3d. to 3¼d. per lb., less 5 per cent.

CACAO BUTTER.—Lower. At the monthly sales 500 cases of *Cadbury's* make, repre-

senting 50 tons, sold at an average of 12½d. against 12½d., which was the price paid in May.

CAFFEINE.—There is no change in the manufacturer's quotations, which are still 18s. per lb. for quantities of not less than 1 cwt., with smaller quantities at proportionate rates.

CAMPHOR (CRUDE).—The market is exceedingly quiet, *China* camphor being quoted nominally at 92s. 6d. *c.i.f.*

CAMPHOR (REFINED).—The market is very quiet, and there has been no further change in price. *English* refiners offer *bells* and *flowers* in 1-ton lots at 1s. 5d., with ½-ton ditto at 1s. 5½d., whilst smaller quantities are quoted at 1s. 6d. The *German* refiners generally quote 1-ton lots of *bells* and *flowers* at 1s. 4½d.

CASCARILLA.—During the week a parcel of fair greyish bark which was bought in at the last drug sales has been sold privately at 45s. per cwt. For *siftings* 35s. is asked.

COAL DISTILLATION PRODUCTS.—*Toluol* is much easier, and is now offered at 1s. 8d. per gallon for *pure*. *Benzole* is firmer, 50 per cent. being now worth 2s. 3d., whilst 75 per cent. is quoted at 2s. 6d. per gallon. *Creosote*: 1½d. per gallon. *Crude naphtha*: 30 per cent. at 120° C. quotes at 10½d. per gallon. *Solvent naphtha*: 95 per cent. at 160° C. quotes at 1s. 6d., 90 per cent. at 160° C., at 1s. 4½d., and 90 per cent. at 190° C., at 1s. 1d. per gallon. *Anthracene*: 13A. quotes at 10½d.; B., at 9d. per lb. *Pitch*: 32s. 6d. per ton, *f.o.b.* *Tar*: *Refined*, 13s. 6d.; *Crude*, 11s. 6d. per gallon.

COCA LEAVES.—Good *Truxillo* leaves quote privately at 1s. 1d. to 1s. 2d., whilst for *Ceylon* 1s. 4d. per lb. is quoted for fair quality.

COPPER SULPHATE.—The market is very firm, and spot quotations now range from £18 to £20, the latter price being paid for the *Anchor* brand.

CREAM OF TARTAR.—The market is quiet, but spot quotations are practically unchanged. Fine white *French crystals* offer at 95s. per cwt., whilst *German* brands of *powder* are quoted at 97s.

COLOCYNTH.—The market is very firm. During the week business has been done privately in good *Turkey* apple at 2s. 6d., whilst fair *Spanish* has sold at 1s. per lb.

GALLS.—The market is extremely dull in spite of new parcels being offered. Quotations for *Bussorah* galls are as follows:—*Blues*, 52s. to 54s. *sorts*, 48s. to 50s.; *greens*, 44s. to 47s.; and *whites*, 42s. to 45s. per cwt.

INSECT FLOWERS.—It is reported that the first arrivals of the new crop of flowers in Trieste are held for very high rates, and it is generally expected that the crop this year will only be about two-thirds of an average one.

IPECACUANHA.—The market is quiet, but steady. For sound *Carthagena* root 4s. per lb. is asked privately.

JALAP.—The market is firmer, and private holders now ask 7d. per lb. for fair *Vera Cruz*, which offered recently at 6½d.

LIQUORICE ROOT.—Very firm. Best *Russian* decorticated root is now held for 30s. per cwt. *c.i.f.* terms. The stocks are said to be getting very low.

OIL (ESSENTIAL).—*Star anise* oil is considerably lower, and now offers

at 8s. to 8s. 3d. per lb. on the spot according to holders. For *Russian anise* one holder asks 8s. 9d. nett, but quotations vary considerably. *Cassia* quotes at 7s. 6d. to 8s. for 75 per cent, whilst lower grades offer at nominal prices. *Citronella* is firmer and is now offering at 1s. 5d. to 1s. 6d. per lb. *c.i.f.* terms. *Bombay Rose* oil is 3¼d. per oz. *Peppermint* oil quotes at 9s. 1½d. to 9s. 3d. for *H.G.H.* brand, whilst *Japan* oil of 40 per cent. menthol strength offers at 6s. 6d., and *dementholised* at 4s. 9d. per lb. nominally. Privately a fair business has been done in *Eucalyptus* (*M.D.S.* brand) at 2s. per lb.

OILS (FIXED) AND SPIRITS.—*Cotton* is quiet, and quoted at unchanged rates, *refined* oil being worth £16 to £16 10s. on the spot, according to brand. *Coco nut* is dull without alteration, *Ceylon* being worth £22 15s., and *Cochin* £26 15s. on the spot. *Linseed* is again rather easier in price, but the market closes firmer. Oil in barrels is now worth £18 7s. 6d. to £18 10s. per barrel on the spot. *Rape* is unchanged at £23 to £23 10s. for *refined* oil. *Turpentine.*—After seeing a much higher figure the market closes easy, still the quoting, 20s. 3d. shows an advance of 4½d. over last week's price. *Petroleum.*—Flat. *Russian* still quotes at 5½d. to 5¾d., *American* at 5½d. to 5¾d., and *water white* at 6½d. to 6¾d. per gallon on the spot.

OPIUM.—The market is very quiet, and quotations remain practically unchanged for *Turkish*. *Persian* is steady, and a fair business has been done in fine *bricks* at 13s., and ordinary *ball* at 11s. per lb.

ORRIS ROOT.—The market is dull, but firm. Good *Florentine* root offers at 65s. and best selected at 68s. per cwt., both *c.i.f.* terms.

QUICKSILVER.—To-day the importers reduced their quotations 5s. per bottle, making the price £6 10s. The change was not unexpected, as second-hand holders had been offering at prices considerably below Rothschild's price for some days. The alteration has not as yet affected *Mercurials*, but no doubt will do so in the course of a day or two.

SAFFRON.—The market is very firm, although quotations are unchanged. For *Valencia* saffron 32s. to 33s. is asked for best quality, whilst 27s. to 28s. is quoted for seconds. The continued drought is causing considerable anxiety in Spain, and much harm has been inflicted on the new crop.

SHELLAC.—The market is quiet and but little business has been done privately in spite of the suspension of the weekly sales. Prices are fairly steady, *Second orange* having sold at 81s. to 88s. for *T.N.*, whilst *A.C. Garnet* is quoted at 84s. For April to June shipment 85s. per cwt. has been refused for *T.N. orange*.

TOLU (BALSAM).—The market is firm. The current quotation for good old-fashioned balsam is now 2s. 3d. per lb., *c.i.f.* terms, whilst business has been done lately in dark glassy stuff at 1s. 11d. to 2s. per lb.

TRAGACANTH (GUM).—Steady. Privately a moderate business has been done, chiefly in thirds and fourths, prices remaining about steady. The current quotations are as follows:—*Firsts*, £14 10s.; *seconds*, £12 10s. to £13 10s.; *thirds*, £11 to £11 10s.; *fourths*, £8 to £10; and other qualities, £6 10s. down to £1 15s. per cwt.

MANCHESTER CHEMICALS AND DRY-SALTERIES, June 3.—There is little change to report, and last week's position is well maintained. This applies especially to heavy chemicals, but drysalteries and drugs are rather dull. Soda crystals, owing to the continued hot weather, are somewhat scarce, but there is no change in price. Yellow prussiate is still firmly held by local makers at 7½d. to 7½d., and it is said that Scotch producers also decline to concede any point in late rates. High strength white caustic soda (77 per cent.) is still quoted £9 7s. 6d. to £9 10s. *f.o.b.*, Liverpool, for certain makes, and 70 per cent., £7 5s. to £7 12s. 6d., with 10s. and 2s. 6d. extra Dublin and Belfast respectively. Bicarbonate of soda is quoted £6 12s. 6d. per ton for 1 cwt. kegs, *f.o.b.* industrial. Bicarbonate: £4 5s. per ton bags, and £5 10s. per ton, cwt. kegs, on rails at works, Northwich, Cheshire. Ammonia alkali: 58 per cent., £3 7s. 6d. per ton, in bags, on rails, Lancashire and Cheshire. Bleaching powder: £6 15s. to £7 per ton, on rails, soft wood casks. Sulphate of copper remains firm at £19 per ton, best brands delivered here. Sulphate of ammonia improving and firm at £8 2s. 6d. all ports. Alum dull but unchanged at £5 per ton, for loose lump, £5 2s. 6d. tierces, and £5 10s. to £5 12s. 6d. ground in bags. Naphthas are lower, and miscible is down to 3s. per gallon, with solvent wood at about the same price. Acids, notwithstanding the hot weather, are dull. Tartaric, English 1s. 3d.; foreign 1s. 2d. to 1s. 2¼d.; citric, 1s. 2d.; oxalic, 3¼d. Carbolic acid is firm. Cream of tartar is the turn dearer since last week, and is to-day quoted 98s. to 102s. per cwt. for best white powdered delivered here. Chlorate of potash easier.

NEWCASTLE CHEMICAL MARKET, June 3.—This market is, on the whole, slower. Shipping and inland orders are being put forward for execution, but animation is lacking. Foreign competition is telling the tale against British production in markets which have for some time now been "special" for this district. Prices are little altered, and are thus:—Bleaching powder: £7 to £7 5s., and up, according to markets. Caustic soda: 70 per cent., £7 5s. to £7 15s. Soda crystals: 37s. 6d. to 45s. Soda ash: 52 per cent. £4 5s. Alkali, 52 per cent., £5. Sulphur: £3 17s. 6d. to £4. Pitch: 35s. South Durham salt; 9s. per ton, *f.o.b.*, Tees.

LIVERPOOL DRUG AND CHEMICAL MARKET, June 3.—Linseed is very quiet and inactive, buyers showing no disposition for spot or forward business. Canary seed has improved in demand, 790 bags of Turkish have been sold at 28s. per 464 lbs. Ginger: A large amount of business has been done in Sierra Leone lately, 1000 bags selling at 19s. per cwt. Ko'a nuts are plentiful, and 235 bags of dried have made 3d. to 3½d. per lb. Beeswax: A small parcel of Sierra Leone sold at £6 5s. per cwt. Chillies: Sierra Leone have sold at 27s. per cwt. for medium quality. Castor oil is somewhat limited in sale, Calcutta good "seconds" is at 2½d. per lb. ex quay, and 2¾d. to 2¾d. ex store, French first pressure and Madras are 2¼d. to 2¾d. per lb. Olive oil continues very firm at recent prices, ranging from £28 to £35 per ton. Linseed oil is

quiet at 19s. 6d. to 20s. 6d. per cwt. Cottonseed oil remains at 16s. 3d. to 17s. per cwt. for Liverpool refined, and American, 16s. 9d. to 17s. Spirits of turpentine is scarce at 22s. 6d. on the spot; to arrive there are sellers at 20s. 9d. per cwt. Petroleum: Russian refined, 5¼d.; American refined, 6¼d. to 7¼d. per gallon. Sal ammoniac: Firsts, 39s.; seconds, 37s. per cwt. Carbonate of ammonia: 3½d. to 3¾d. per lb. Sulphate of ammonia: £8 7s. 6d. per ton. Bleaching powder: £7 to £7 2s. 6d. per ton. Copperas: Lancashire, 37s.; Welsh, 35s. per ton. Sulphate of copper: £19 per ton. Potashes: 21s. per cwt. Pearlashes: 35s. per cwt. Cream of tartar is firm at 100s. per cwt.; the price "to arrive" is hardening. Prussiate of potash: 7¼d. per lb. Chlorate of potash: 4¼d. per lb. Saltpetre: 23s. 6d. per cwt. Caustic soda: 70 per cent., £7 8s. 9d.; 60 per cent., £6 8s. 9d. per ton. Bicarbonate of soda: £6 15s. per ton. Soda crystals: £2 7s. 6d. to £2 10s. per ton. Borax: 20s. per cwt., crystals; powder, 21s. Nitrate of soda: Steady at 8s. to 8s. 3d. per cwt. Phosphorus: 2s. per lb. wedges; 2s. 1d. sticks amorphous, 2s. 8½d. per lb.

THE NURSING EXHIBITION AND CONFERENCE.

An exhibition was opened on Monday last, in St. Martin's Town Hall, and will remain open until the 13th inst. As the title indicates, it is mainly devoted to appliances connected with this profession. Efforts have naturally been made to popularise the proceedings by giving concerts at intervals during the afternoons and evenings, whilst a series of papers and discussions have also figured in the programme, in which several of the leading lights in hospital work have taken part. A visit paid to the exhibition during the week proved that the names of firms most familiar at functions of this nature were well represented, although there was not a great deal to be said in respect to novelty.

MESSRS. MAW, SON AND THOMPSON, 7-12, Aldersgate Street, have an extensive exhibit devoted to every variety of surgical appliance, in regard to which it can only be said that the reputation of the firm is fully sustained. Not only is there a fine display of instruments designed for all forms of disease, but antiseptic dressings, chate'laines, pocket cases, sterilising apparatus, and obstetrical appliances are also duly represented.

BURROUGHS, WELLCOME AND Co., Snow Hill Buildings, E.C., give particular prominence to the Fairchild digestive ferments, a large array of bottles of pepsin, both in powder and tabloids, pepsencia, panopepton, peptogenic milk powder, and zymine being in evidence. In addition, the Wyeth beef-juice in its perfected form, the Kepler diastatic products, hazeline, and every variety of tabloid are shown. In connection with the latter it may be said that the tea tabloids make an attractive display, and the visitors readily availed themselves of the samples which were at their disposal.

The exhibit of REYNOLDS AND BRANSON, 13, Briggate, Leeds, causes one to appreciate the varied outlets which Mr. Fred Reynolds' inventive genius has found. Here are shown all the novelties which have been noticed in the *Pharmaceutical Journal* from

time to time, including the bandage shoot pill-box shoots, enema syringe cupboard, non-runaway bandage, enema clips and racks, and others too numerous to mention. It should, however, be noticed that the enema syringe cupboard, which, when first introduced, was made in cardboard, has been much improved by being now made in tin only, and is provided with a small padlock. It now retails at 1s. 6d. instead of 1s., and the old kind is no longer made. The self-closing dust-proof drawers for storing surgical dressings are now fitted with a glass slab, which slides along the whole length of the tin at the top, serving for placing the dressing upon, and is automatically wiped when drawn out.

SOUTHALL BROTHERS AND BARCLAY, Birmingham, draw attention to their well-known series of sanitary appliances, which are fully represented. The series of sanitary towels has recently been extended and improved in several details. They also show a variety of nursing appliances, including wallets, chate'laines, insufflators, douches, and the "Kenilworth" violet powder, which is one of the firm's specialties.

LIEBIG'S EXTRACT OF MEAT COMPANY, LIMITED, 9, Fenchurch Avenue, have a very handsome case in which are attractively displayed various-sized jars of the extract of meat and peptone of beef (peptarnis). The latter is now being extensively pushed by the makers, who claims that it contains the largest amount of nourishment in the most easily digestible form of any meat preparation offered. Attractive advertising matter is distributed to visitors in the shape of their 'Practical Cookery Book,' menu-cards and book-marks.

PRICE'S PATENT CANDLE COMPANY, Belmont Works, Battersea, S.W., shows a series of night-lights, including the "New Patent," "Palmatine," "Royal Castle," and "Child's," in addition to a good display of toilet soaps, prominence being given to combinations of coal tar, thymol, eucalyptol, and salicylic acid. Needless to say, the different varieties of glycerin are also shown, as well as two special toilet preparations, "Ceratine" and "Demulcine," which are recommended as preventatives for chapped hands, and sunburn.

THE AREMA MANUFACTURING COMPANY, 20, Victoria Chambers, and 55 and 56, Chancery Lane, W.C., shows three qualities of the vaporiser which was described in the *Ph. J.* Supplement a few weeks back, and five varieties of inhalants intended for use with the apparatus.

In addition the aforementioned INGRAM AND ROYLE, 52, Farringdon Street, E.C., have a display of Carlsbad and Vichy water, salts and pastilles; the FRAME FOOD COMPANY show their extract, diet, and jelly, and STEPHEN SMITH AND Co., Bow, E., give prominence to Halls' Coco Wine and the Liebig Company's Extract of Meat and Malt Wine. The SANITAS COMPANY, LIMITED, have a tasteful display of every variety of their products, most of which are familiar to the pharmacist. BOVRIL, LIMITED, show an interesting series of the various constituents of foods, such as animal and vegetable fats, Australian and South American meat extracts, malt, mutton and kidney extracts, fibrine, albumin, etc., in addition to the various varieties of bovril.

INQUESTS.

"CHRONIC OPIUM POISONING" was the verdict of a Leicestershire jury which last week inquired into the circumstances relative to the death of Ann Reeves, a widow, fifty-five years of age, of Huncote and formerly of Leicester, who died on the 22nd ult. The evidence of a Mrs. Knight showed that deceased bought an ounce of laudanum, and the witness gave half of it to her in a little water, and the other half in the second half of the day. The deceased seemed drowsy throughout the day, but witness could not explain why she gave her laudanum twice in one day. Deceased had been in the habit of taking laudanum for years past, and knew she had been told that if she continued the practice it would eventually kill her. Another witness stated that deceased had been in the habit of taking from half an ounce to two ounces of laudanum a day.—The jury returned a verdict of death from syncope due to chronic opium poisoning, and the Coroner, at the request of the jury, censured Mrs. Knight for administering the laudanum, and also for the unsatisfactory manner in which she gave her evidence.

THE LABELLING OF UNSCHEDULED POISONS.—Mr. H. W. Hooper, the Exeter City Coroner, held an inquest at the Devon and Exeter Hospital, on Wednesday morning (June 3) into the circumstances attending the death of Harry James Holt, aged ten weeks, who died at that Institution on the previous day from the effects of poison. From the evidence adduced it appeared that the mother, who belonged to Plymouth, was on a visit to her mother at Exeter. The child was suffering from a cold, and her mother advised castor oil for it, remarking that she had some in the house. She then went upstairs and brought down a bottle, which she thought contained castor oil. She poured out about half-a-teaspoonful, and adding a little moist sugar to it gave it to the child, but she immediately found that a mistake had been made, the bottle having contained creosote. The woman did not know she had such a poison in her house, but supposed that a daughter who resided with her must have obtained it for tooth-ache. The bottle was labelled "Creosote," and the label also bore the name of a local firm of chemists and druggists, but underneath could be seen an old label marked "Castor Oil," the oil having made the paper transparent. The grandmother did not read the label, neither did she smell the mixture.—Mr. H. Andrew, house surgeon at the Hospital, said the child was admitted on Monday, suffering from the effects of an irritant poison. The stomach was washed out, and the usual treatment adopted, but the child died on the following day. Witness thought there ought to have been a poison label put on the bottle in this case.—The Coroner, in summing up, said the case was a very painful one. The labelling of the bottle had been done in a very clumsy manner. To put a creosote label over a castor-oil bottle, as was done in this case, made it deceptive. It would have been better if the chemist had put the label on a clean bottle instead of sticking it over another label. He thought it was clumsily done, to say the least of it.—The jury returned a verdict of "Death by misadventure."

MISCELLANEOUS NEWS.

JACOB BELL AND MR. FRITH'S "DERBY DAY."—Wednesday last was Derby Day, and in connection with this it is interesting to note that the manner in which the idea of painting the famous picture of the Derby Day occurred to Mr. Frith is related in his 'Reminiscences.' He was walking along the race-course at Kempton Park with a lady friend who formed one of his party, when he felt impelled to say: "Here is a scene I should like to paint—'modern life' with a vengeance." With this idea firmly fixed in his mind he went to the Derby, and—those not being the days of Kodaks—made arrangements with a photographer, whose negatives proved to be useless. So he trusted to memory, made a pen and ink sketch, and then a study in oils. He continues as follows:—"No sooner did Mr. Jacob Bell, the collector, see the sketch than he gave me a commission for the sum of £1500, and I set to work at once, but not till after fifteen months of assiduous and incessant labour did I get the picture finished."

PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION.—The Committee of this Association announces that the annual excursion has been fixed for Wednesday, June 10, 1896, when the members and friends will proceed by Great Western Railway, in saloon carriages, to St. Germans, and thence, by wagonettes, to St. Germans Hnt, when during a stay of one hour the party will be photographed by Mr. Wildman, photographer, of Union Street, Plymouth, afterwards proceeding to Donderry, where fishing, boating, bathing, etc., may be indulged in. High tea will be served in the pavilion at 6 o'clock prompt. The chair to be taken by the President, Mr. C. J. Park, member of the Council of the Pharmaceutical Society of Great Britain. After tea, sports will be indulged in, when the struggle for the cup (kindly presented by Mr. J. Kinton Bond), held over from last year, will be renewed. Tugs-of-war, married *v.* single, major *v.* minor, seniors *v.* juniors, etc., etc. Entries to be made to the Secretary on the ground. The cup will be held by the winning team for the ensuing year, and kept on view at the room of the Association.

MUSICAL PHARMACISTS.—An excellent concert was given on Thursday, May 28, at the Victoria Mansions Restaurant, by Mr. J. Wellesley Douglas, A.P.S., and Mr. Leonard Howard, and was attended by a large audience, among whom were several South London chemists. Mr. Douglas is a pupil of Rosario Scalero, one of Italy's most eminent violinists, and he played several high-class solos by Wirniawski, De Beriot, Schumann, and that sweet melody "Cavatina," by Kaff. He showed great artistic ability, which the audience appreciated. He was assisted by Mrs. Douglas, who is a charming contralto from the Guildhall School of Music, and who sang Cowen's "Voice of the Father" and "Happy Days," by Shelezki, delightfully. Mr. Leonard Howard recited with great merit and dramatic power. Mr. Charles Leroux presided at the piano, and delighted the audience with solos by Godard, and espe-

cially "Marche-Hongroise," by Kowalski, which was performed in a masterly way. The evening was undoubtedly a success. It seems strange that Mr. Douglas should stick so closely to pharmacy instead of taking music as a profession.

PHARMACEUTICAL SOCIETY OF IRELAND.—The monthly meeting of the Council was held on Wednesday, the 3rd instant, at 67, Lower Mount Street, Dublin. The President, Mr. W. H. Wells, junior, presided, and the other members of Council who attended were the Vice-President, and Messrs. Bernard, Murray (Clones), Whitla (Monaghan), Conyngham, and Kelly.

A memorial which Mr. David Wilson, of Rathfriland, had sent to the Lord Lieutenant asking for the remission of two penalties of £5 each imposed on him by the magistrates of that place for selling poison and for keeping open shop, and which had been affirmed by the County Court Judge, but without costs, was enclosed from the Privy Council office, and the opinion of the Council was asked thereon.

On the motion of Mr. Bernard, seconded by Mr. Conyngham, the President was requested to reply that the Council were of opinion that the prayer of the memorial ought not to be acceded to, and to state fully their reasons for that conclusion.

Mr. A. L. Donan was re-elected examiner in Pharmaceutical and General Chemistry; and Mr. T. W. Robinson and Dr. D. J. McKinney were re-elected Examiners of the Qualification of Assistants to Pharmaceutical Chemists for Dublin and Belfast respectively.

Owing to a quorum not having been obtained until an hour after that appointed for the meeting, the rest of the business was postponed.

SOCIETY OF CHEMICAL INDUSTRY.—A meeting of the Yorkshire section of this Society took place on June 1, at the Queen's Hotel, Leeds, Mr. C. Rawson presiding. Amongst those present were Professor Smithells, Professor Hummel, Mr. R. B. Brown, Mr. George Ward, Mr. Thomas Fairley, Mr. A. G. Perkin, and Mr. H. R. Procter. A paper was read by Mr. Joseph Barnes, F.I.C., on "Oxide of Titanium as a mordant for wool," and Professor Hummel and Mr. R. B. Brown presented "Notes on the dyeing properties of catechin and catechutannic acid." The latter paper was based on experiments made in the dyeing department at the Yorkshire College. An interesting discussion followed.

THE DEATH OF AN EX-PHARMACEUTICAL COUNCILLOR, Dr. John Ryan, of Francis Street, Dublin, at a very advanced age, occurred a few days ago at his residence. Dr. Ryan was one of the twenty-one founders of the Pharmaceutical Society of Ireland, whose names are mentioned in the Pharmacy Act, 1875. Although the appearance of the old-time pharmacy—it had been carried on at the same address for very many years—and the reduced condition of the neighbourhood were not calculated to give rise to feelings of envy, Dr. Ryan must have found it a veritable mine of wealth, as he is stated to have amassed a fortune of £40,000.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Books, etc.

A book of 130 Well-tryed Recipes for Chemists and Druggists, comprising well-selected formulæ for general, remedial, veterinary, toilet, and everyday preparations. Pbst free, 1s. 6d.—Tully, Chemist, Hastings.

Free.—Woodville's 'Medical Botany,' 3 large vols., 210 cold-plates, 20s., published, £8 15s.; Withering's 'British Plants,' 4 vols., 10s. 6d., published, £2 8s.; Tanner's 'Practice of Medicine,' 2 thick vols., cheap, 10s. 6d.—Davis, "Chestnuts," Gordon Hill, Enfield.

Offered.—Bentley's 'Student's Botany,' in excellent condition, 3s. 6d.; will exchange for 'Art of Dispensing' (Southall's) or Wills' 'Materia Medica.'—T. P., 40, Hatherley Street, Liverpool.

Miscellaneous.

Fallowfield's seven-guinea Focussing Facile Hand Camera, perfect condition, £4 10s., or exchange for photo sundries or set.—Eastwood, Chesterton, Staffs.

Microscope (Watson), 1-in. and ½-in. objectives, in mahogany case, good as new, cost £5 5s., price £3 10s. or offer.—Edwards, 18, St. Michael's Road, Stockwell.

Set of 11 Evvard's Extraction Forceps, in pouch, good condition, spot price, £1. A four feet run of 36 mahogany-fronted, second-hand, Shop Drawers, with two lockers, spot price, £1. Also a 400-gallon iron Oil cistern (square), with tap, spot price, £3 10s.—Randall and Son, Chemists, Wareham.

Surplus Stock.—14 lbs. pulv. extract. coloc. co., in 1-lb. bottles; 1 lb. and upwards at half wholesale drug-list price, in perfect condition.—Worsley, Chemist, Market Place, Wigan.

Soda Water Appliances.

Soda-Water Machine, Barnett and Foster's, No. 2; list price £45; sell for £15; good condition.—Apply to H., 1, Southwick Street, Hyde Park.

NEW IDEAS.

A NEW ADHESIVE PASTE.

The preparation known as Morgan's "Hungarian Adhesive Paste" is one of the best of its kind, possessing strong adhesive qualities. It is not so liable as are many such pastes to harden and decompose unless they are in constant use. It spreads easily, and seems to be very tenacious. In addition to the ordinary purposes for which pastes are used, this kind may be used for labeling bottles and tinware. It can be obtained from Messrs. Bemrose and Sons (Limited), Old Bailey, E.C., price 1s. per bottle, with polished cap and brush complete.

NOVEL SERUMS AND TABLOIDS.

Serums and animal extracts are at present receiving considerable attention from manufacturers of pharmaceutical products. Amongst others, liquid Anti-Syphilitic and Anti-Typhoid Serums are now being issued by Messrs. Burroughs, Wellcome and Co., in 10 C.c. bottles at 5s. each, for general supply to the medical profession, after careful trials of their value, extending over many months. The same serums are also made in the dried form, possessing the full potency of the liquid preparations—anti-syphilitic in vials (1s. 9d.), containing the equivalent of 3 C.c. of the liquid preparation, and anti-typhoid (5s.), the equivalent of 10 C.c. These scale serums are much more resistant to adverse climatic conditions than the corresponding liquid products, and yet are readily soluble in distilled water. The latest addition to the list of these preparations is Anti-Streptococcic Serum, which is supplied in vials containing 20 C.c. at 5s. each. The same firm is offering quite a number of tabloids prepared from medicinal animal products, including Tabloids of the Salivary Gland, Cervical Lymphatic Gland, and Pineal Gland; Nuclein, Kidney Substance, Fallopian Tube, Liver, and Spinal Cord. These tabloids are said to contain the whole of the substance and all the active principles of the carefully-selected organs from which they are prepared, thus ensuring full activity, uniformity of effect, and perfect preservation.

TRADE NOTES AND NEWS.

THE IRON AND STEEL PLANT CO. LIMITED, has just completed an order for over two hundred and fifty steel barrels for the Andrée Polar Expedition. These are to be used for the transportation of the sulphuric acid with which it is intended to manufacture the gas for Captain Andrée's balloon. Having made various experiments, the firm is satisfied that its special steel barrels are eminently suitable for the carriage of sulphuric acid.

THE LIQUOR CARNIS COMPANY, in again submitting samples of their Liquor Carnis (Caffyn), point out that great improvements have been made in covering the raw-meat flavour, and they have been able to increase the proportions of muscle-plasma or nourishing material. Special attention is directed to the fact that Liquor Carnis may be given in combination with hot beef-tea or soups without deteriorating its food-value. It is an English product, and is claimed to afford the best value among meat juices, none excepted. The full retail price for a three-ounce bottle is now 1s. 9d. To those who like a pronounced cooked-meat taste, the firm supplies a preparation of Liquor Carnis in which the roast-meat flavour or stimulating properties of meat have been imparted, under the mark of L.C.C. meat juice (Liquor Carnis Co.'s), a two-ounce bottle retailing at 1s. 9d.

MESSRS. GRIMWADE, RIDLEY AND Co. announce the sudden death of their senior partner, Mr. A. C. Ridley, which took place on Friday, May 15. The business will continue to be carried on by the remaining partners, Henry Ridley and Albert Paul Ridley, in conjunction with the other executors.

MARRIAGES.

BOARDMAN—DONALDSON.—On May 25, at Drumcondra Church, by the Rev. E. T. Crozier, A.B., John H. Boardman, L.P.S.I., Inchecore, to Annie Mena, eldest daughter of Theodore Donaldson, Windsor Avenue, Fairview, Co. Dublin.

HOWARD—KAVANAGH.—The marriage, at Arklow, has been solemnised of Mr. Richard Howard, apothecary, to Miss Sarah Lavina, daughter of the late Mr. Patrick Kavanagh.

PERSONAL.

PAST GRAND MASTER, COUNCILLOR A. SIDNEY CAMPKIN, J.P., of Cambridge, who was a candidate for the Pharmaceutical Council at the recent election, has again been elected on the Board of Directors of the Manchester Unity, at the conclusion of business at the recent A. M. C. at Bristol, on May 29 last, which position he has held since 1884, being annually re-elected by large majorities. There were twenty-four candidates for the nine members of the directorate, Mr. Campkin heading the poll with 368 votes.

DIARY OF THE WEEK.

TUESDAY, JUNE 9.
ROYAL PHOTOGRAPHIC SOCIETY, at 8 p.m.
"Cellulose and its Derivatives," by Cross and Bevan.

WEDNESDAY, JUNE 10.
PHARMACEUTICAL SOCIETY.
Library, Museum, School, and House Committee.

THURSDAY, JUNE 11.
SCHOOL OF PHARMACY STUDENTS' ASSOCIATION, at 6 p.m.
"Gold Mining in the Transvaal," by H. T. Durant.
"Report on Organic Chemistry," by H. Brown

FRIDAY, JUNE 12.
EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION:—
Botanical Meeting at 36, York Place, from 8.30 to 10 p.m.

LATE ADVERTISEMENTS.

To be Let.

CHEMISTS.—To be Let (splendid opening), capital corner SHOP, convenient dwelling-rooms, side entrance, No. 63, Crownfield Rd., Leytonstone Rd., Maryland Point Station. Densely-populated district. No Chemist near. Rent £28. Apply on premises, or Mr. BACON, 25, Liverpool St., E.C.

Assistants Wanted.

ATHOROUGHLY good fully-qualified Chemist to manage a DISPENSARY in the hills in India. Perfect climate. Must be single. Apply, with full particulars, to L. S. & Co., care of Styles, 7, St. Mary Axe, E.C.

OUT-DOOR ASSISTANT in high-class Retail and Dispensing business about 20 miles from London. Must be qualified and of good appearance and address. Send full particulars, with photo (to be returned), to SAPIENS, "Pharm. Journal Office, 5, Serle St., W.C.

MARKET REPORT.

LONDON, JUNE 11, 1896.

We have not much to report in the chemical market this week. Carbolic acid is quiet, citric and tartaric acids unchanged and cream of tartar dull of sale. No change has occurred in the price of mercurials. Crude camphor is a trifle firmer, after having been very slack, but the refined article continues to droop. The drug sales passed off to-day fairly briskly. The following are the most important changes:—Buchu leaves, annatto seeds, Turkey colocynth, senna leaves, saffron, croton seed, tolu balsam, and jalap are dearer. All varieties of aloes, honey, calumba root, ipecacuanha, gum elemi, and insect flowers are fully steady, whilst Sumatra benzoin, senega, cubebs, and Japan wax are lower. Shellac is firmer, whilst essential and heavy oil markets show little change. Full details will be found below:—

ACACIA (GUM).—The market remains very flat and no demand whatever is shown. At to-day's auctions a total of about two hundred packages were offered without finding a buyer. *Trieste* gum was bought in at £8 10s. for medium yellowish, £7 for palish grain, and £7 10s. to £8 10s. for medium greyish. In addition *Persian* gum was bought in at 16s. for bold amberly sorts, and 14s. for ordinary palish siftings. Several parcels of *Soudan* sorts were also withdrawn. High prices are still asked for *Bushire* insoluble gum, but little business has been done. Nominally fine pale picked is quoted at 24s. to 26s.; good sorts at 18s. to 20s.; reddish at 16s. and block at 10s. to 12s. per cwt.

ACID, CARBOLIC.—The market is quiet, but steady, at the following rates:—*Crystals*: 34° to 35° C., 6½d.; 39° to 40° C., 7d.; 39° to 40° C. (*detached crystals*), 8d. per lb. *Crude* is still quoted at 2s. and 2s. 5d. for 60 and 75 per cent. respectively. *Liquefied* and *creosylic* are unaltered.

ACID, TARTARIC.—The market is quiet, but steady. For *English* acid the makers still quote 1s. 3d., whilst *foreign* brands, both in *powder* and *crystal*, offer at 1s. 2d. to 1s. 2¼d. per lb., according to brand. To-day 8 bags of greyish *Cape argol* sold at 55s. per cwt.

ALOES.—A comparatively small supply was offered to-day, but the market for all varieties is firm. *Cape* aloes, of which fifteen cases were shown, sold at steady rates, 25s. to 25s. 6d. being paid for good bright hard. The greater portion of the *East Indian* aloes was bought in, but ten kegs of good soft *Socotrine* of fair aroma fetched 80s. per cwt. *Curacao* aloes in gourds sold at 37s. per cwt., subject to approval for good quality, whilst about 120 boxes sold at 25s. for good brown; 20s. for medium ditto; 17s. to 18s. for fair capey, down to 11s. 6d. per cwt. for ordinary dark. The majority of the latter kind was offered without reserve.

AMBERGRIS.—Continues dull of sale, although a considerable quantity was offered to-day. The only lot sold was a tin of dark quality of poor aroma, for which 25s. per oz. was paid.

AMMONIACUM (GUM).—Fourteen cases were shown, but found no buyers. Fine

pale free drop was bought in for 65s., part blocky palish for 50s., seedy gum, part block, with a few almonds for 35s., and pickings for 27s. 6d. per cwt.

ANNATTO SEEDS.—A rather improved demand was shown for this article, which was represented by 69 packages. Five cases of good bright *Madras* seed sold at 5d. per lb., a very good price, whilst dull damaged quality realised 1¼d. to 2¼d. per lb. Ten cases of *Annatto paste* from New York were bought in at 2s. per lb.

ASAFŒTIDA (GUM).—A considerable amount of this article was cleared off to-day without reserve, about 125 cases selling very cheaply at 26s. to 30s. for fair blocky; 23s. to 25s. for ordinary ditto, and 21s. to 22s. 6d. for common ditto. The better grades were all bought in.

BENZOIN.—The market is quiet generally. A small supply was offered in auction, and met with little inquiry, *Sumatra* selling at a decline of about 10s. per cwt. For good pale almondy centred seconds £7 15s. was accepted, whilst £7 5s. was paid for fair ditto with brown sides, and £5 10s. for ordinary rather dull seconds fair centres, very false packed sides. A case of very fine bold pale loose *Siam* almonds sold at £34, whilst 52s. 6d. was paid for a case of siftings, and 60s. per cwt. for dull part loose pickings. *Palembang* gum was all bought in although some nice lots were shown. Fine pale almondy seconds in tins being withdrawn at 47s. 6d.; fair ditto at 37s. 6d., and ordinary dark in cases at 32s. 6d.

BIRDLIME.—Sixteen cases of this article were offered and bought in to-day at 7½d. per lb.

BUCHU LEAVES.—The market is rather firmer. The majority of a moderate supply, amounting to 35 bales, found buyers, 3d. being paid for fair *round* yellowish-green leaves, and 3¼d. for those of a rather brighter colour. No *long* leaves were offered.

CALUMBA ROOT.—In fairly good demand at firm rates. Forty bags ordinary dark *Bombay* sorts, part wormy, sold at 13s. per cwt., whilst good yellow was bought in at 25s., and fair ditto at 18s. per cwt.

CAMPHOR (CRUDE).—There has been a rather better inquiry during the last few days for *Formosan* camphor near at hand, but no business appears to have been done. Probably there would be ready buyers at 85s. per cwt., *c.i.f.* *Japan* camphor is quoted at nominal rates.

CAMPHOR (REFINED).—There is no change to report in the position of this article. The *German* refiners still quote *bells* and *flowers* in lots of 5 to 10 cwt., at 1s. 4½d. with lots of 10 to 20 cwt. at 1s. 4d., and lots of 1 ton and above at 1s. 3½d. The agent for one of the *German* makers now quotes *bells* and *flowers* for August delivery at 1s. 2½d. per lb., *c.i.f.* in 1-ton lots. *English* refiners' quotations are unchanged. At the drug sales 2 cases of *German refined* camphor were bought in at 2s. 4d. per lb.

CANARY SEEDS.—At the spice sales 400 bags of new crop *River Plate* seed sold at 25s. to 25s. 6d. per quarter of 464 lbs.

CANNABIS INDICA.—Lower. To-day 17 bales of brownish tops sold at 1½d. to 1¼d. per lb., whilst greenish ditto was bought in at 4d., and very dusty ditto at 3d. per lb.

CANTHARIDES.—*Chinese flies* are still very slow of sale. To-day very dusty mixed

quality was bought in at 1s., and cleaner ditto at 1s. 2d. per lb.

CARDAMOMS.—An average supply amounting to about 100 packages met with a good demand, and steady prices were paid, as follows:—*Ceylon-Mysore*: Good pale sound, 2s. 11d.; medium to bold good palish, 2s. 6d. to 2s. 7d.; medium yellowish, 2s. 2d. to 2s. 5d.; small pale, 1s. 11d. to 2s. 1d. down to 1s. 9d. for small yellowish. *Seed* sold at full rate, 3s. 2d. being paid.

CASCARILLA BARK.—Was represented by 20 packages, which were all bought in, *siftings* at 36s., and good greyish at 50s. per cwt.

CINCHONA.—At the monthly sales the moderate supply of 2309 packages were offered against 2345 at the previous sale, the bulk consisting of *East Indian* bark. A very good demand was shown for all varieties, and the whole catalogue was disposed of at fully steady to dearer rates, the unit still remaining fully ½d. per lb. The following prices were paid:—*Ceylon*: *Succirubra* stem chips, 1d. to 1¼d.; stem chips, 1½d. to 2¼d.; root, 1½d.; renewed chips and shavings, 1½d. to 3¼d. *Ledger* shavings, 2½d. to 2¾d. *East Indian*: *Succirubra* chips and shavings, 1¼d. to 2¼d.; root, 1¼d. to 2¾d. *Officinalis*: Stem chips and shavings, 1½d. to 2½d.; root, 3¼d. to 3½d.; renewed chips and shavings, 1½d. to 2¼d. *Ledges*: Ordinary to good natural chips and shavings, 1½d. to 3½d. *Ledger* branch, 1½d. to 2½d.; root, 3¼d.; and renewed chips and shavings, 2½d. to 3¼d. *Java*: *Ledger* stem chips, 4½d. to 4¾d.; ditto branch, 2½d. to 2¾d. *African*: Fair to good quill, 2½d. to 3d.; and broken ditto 2d. to 2½d. per lb. The next Dutch auctions will be held in Amsterdam on the 11th inst., when the good supply of 5437 packages of *Java* bark will be offered. At the drug sales a parcel of *Calisaya* bark in quills sold at 2¼d. to 3d. per lb., whilst 1½d. was paid for broken greyish quill and 7d. for thin flat bark. In addition, 23 serons grey of *Guayaquil* bark sold at 7d. for fair quality, 4d. for ordinary ditto, and 1d. for bad damaged, whilst 11d. was paid for sound quality.

COLOCYNTH.—The market is firmer. A fair supply was offered to-day of both varieties, and 2s. 7d. was paid for good sound *Turkey* apple, showing an advance of 1d. per lb. on the rates paid privately. *Spanish* was bought in at 10d. to 1s. 4d. per lb.

COPAIBA (BALSAM).—The market is quiet but prices are steady. Privately, fair *Para* quotes at 1s. 5d., good *Maranham* at 1s. 11d. and dark to fair *Bahia* at 1s. to 1s. 4d. At the drug sales a cask of dark red thin *Para* balsam was bought in at 2s., and brown thick quality at the same figure.

COTO BARK.—This drug has not been shown in public sale for some little time. To-day 16 bales sold readily at 1¼d. to 1½d. per lb.

CROTON SEED.—Dearer. Eight bags imported from Colombo of fair quality seed sold in auction at 66s. per cwt.

CUBEBS.—Much lower. For twelve bags of *Singapore* berries of fair quality, 25s. 6d. per cwt. was paid in auction.

CUTTLE-FISH.—A parcel of common quality bone was cleared off in auction, 2¼d. to 2½d. being paid for small dirty, 1½d. for broken, and ¾d. per lb. for damaged quality.

ELEMI (GUM).—Firm. Out of 50 cases offered to-day 10 cases of medium greyish *Singapore* gum with fair aroma sold at 20s.

per cwt., which shows no alteration in price.

ERGOT OF RYE—Shows no appreciable change in price, but the market is firm. To-day 32 bags of *Russian* ergot of sound quality sold at 4d. to 5d. per lb., according to condition. Sound *Spanish* was bought in at 9d. per lb.

GALANGAL ROOT.—A parcel of more or less sea-damaged root amounting to 199 bags sold without reserve at 11s. to 13s. per cwt.

GAMBOGE.—This article is still neglected, although some good parcels were offered amongst the 65 shown. The only lot sold was 2 cases of damp blocky pipe of good fracture, which realised £8 10s. per cwt.

GINGER.—*Cochin* root continues dull of sale. On Wednesday only a small amount found buyers, 34s. to 34s. 6d. being paid for dull washed rough, 25s. 6d. for low tips, fair washed being bought in at 35s. to 35s. 6d. Native kinds sold at 52s. for bright medium half cut, 58s. for bold limed, and 65s. to 70s. 6d. for ordinary to bold *A* cut. In addition, limed *Japan*, slightly mouldy, sold at 19s. per cwt. *Jamaican* root for the most part was disposed of at fully steady to dearer rates as follows:—Fine to choice, 91s. to 120s.; good to fine bold, 79s. to 100s.; medium to good medium washed, 73s. 6d. to 78s.; and common to medium brownish, 63s. to 73s. per cwt.

HONEY—Was in better demand in auction, and a fair amount found buyers. Thin amber *Jamaican* sold at 25s. to 28s., and rather dirty thick ditto at 19s. to 22s. 6d., whilst a parcel of 77 kegs of pale *Chilian* all found buyers at 15s. to 17s., and four tins of yellow thick *Spanish* at 15s. per cwt.

INSECT FLOWERS.—The new crop of flowers will soon be ready for shipment to this country, but none has been despatched as yet. The current quotations are:—Open flowers, 85s.; half closed, 105s.; closed, 137s. 6d.; wild buds, 145s. per cwt., all *c.i.f.* terms. At the drug sales 30 bales of open flowers sold at 85s., and 4 of half-closed ditto at 102s. 6d. per cwt.

IPECACUANHA.—The market is quiet, and little is doing in the drug at present, although prices are unchanged. To-day a few bales of fair to good sound annulated *Rio* (Brazilian) root sold at 4s. 10d. to 5s. 2d., which shows a steady rate, whilst all the *Carthagena* was bought in at 3s. 10d. to 4s. per lb.

JALAP.—The market is very firm and there are no sellers now under 7d. per lb. for good quality. To-day ten bales of fair *Vera Cruz* sold at 6¼d. to 7d. per lb. The last shipment quotation we heard was 5½d. per lb. *c.i.f.* terms.

LAVENDER FLOWERS.—Six bales of this article sold without reserve at 12s. per cwt.

LIME JUICE.—Several parcels were bought in to-day at 1s. 1d. to 1s. 2d. per gallon.

MASTIC (GUM).—A case of fair pale drop sold to-day at 1s. 5d. per lb.

MENTHOL.—Is said to be rather firmer, but we have not heard of any business being done. Nominally 9s. 6d. to 10s. is quoted on the spot.

MYRRH (GUM).—Remains very plentiful, but with little inquiry. The only parcel sold to-day was 25 bags of fair dusty sorts, for which 33s. 6d. to 35s. was paid. Good native picked was bought in at 90s. to 92s. 6d., and fair sorts at 60s. per cwt.

OILS (ESSENTIAL).—*Star Anise* oil is still

nominally quoted at 8s. per lb., but there is no demand. *Calamus* oil sold without reserve to-day at 2s. 2d. per lb. *Peppermint* oils are cheaper. Business has been done in *H. G. Hotchkiss'* brand at 8s. 9d., whilst *Japan* offers at 5s. 6d. for the 40 per cent. menthol strength, and 3s. 9d. for *dementholised*.

OILS (FIXED) AND SPIRITS.—*Almond*: *Foreign* oil expressed from the sweet kernels is quoted at 78s. 6d. per cwt., *c.i.f.* terms. *Castor*: The market continues very firm for *Italian* oil, and importers still ask 30s. 9d. to 31s. 6d. per cwt., *c.i.f.*, terms for best quality oil. *Cotton* is quiet, and quoted at the unchanged rate of £16 to £16 10s., according to brand and package. *Coco-nut* is slow of sale at rather easier rates, *Ceylon* being now worth £22 10s. and *Cochin* £26 10s. to £26 15s. on the spot. *Linseed* is very dull, and prices have fallen, oil in barrels being now quoted at £18 5s. to £18 7s. 6d. on the spot. *Rape* is rather easier at £23 on the spot for *refined*. *Palm*: *Lagos* quotes at £20 10s. *Olive*: *Spanish* is quoted at £29 to £30, and *Levant* at £29. *Turpentine* is a trifle easier, and *American* spirit offers at 20s. 1½d. to 20s. 3d. on the spot. *Petroleum* is lower. *Russia* quotes at 6½d., *American* at 5½d., and *water white* at 6½d. per gallon on the spot. *Castor*: At the drug sales 50 cases of *Madras* oil sold at 2¼d., whilst No. 1 *Calcutta* oil was bought in at 3¼d. per lb.

PAREIRA BRAVA.—Twenty bales of this drug sold without reserve to-day at 8s. 6d. to 10s. 9d. per cwt.

PATCHOULI LEAVES.—Two cases of ordinary damaged quality sold in auction at 5d. per lb.

QUICKSILVER.—Steady, at unchanged prices. The importers' price is still £6 10s., whilst second-hand holders offer at £6 9s. 6d. No change has taken place in the price of *mercurials* as yet.

QUININE SULPHATE.—This market is quite devoid of interest, no business being reported. Nominally, the nearest value of *B. and S.* and *Brunswick* is 12½d. per oz. The landings during May were 40,288 ozs., and the deliveries 59,056 ozs., making the stock, on May 31, 1,798,464 ozs., against 2,332,160 ozs. in 1895. To-day ten 100-oz. tins of the *Imperial* brand of *English* quinine were bought in at 1s. 2d., whilst 1000 ozs. of *Honard's* in 1-oz. vials were also withdrawn at 1s. 4d. per oz.

RHUBARB.—In rather improved enquiry to-day, when 140 chests were shown of which about 30 found buyers at the following rates:—*Canton*: Good medium round, 10d. to 10½d.; bold flat good even pinkey fracture, 1s. 3d.; mixed pickings, 9½d.; very wormy flat, 6¼d. per lb. *High dried*, slightly wormy, medium flat, 10d.; round rough, 7d.; and good medium flat, 7½d. to 8d. per lb. No *Shensi* was sold.

SAFFRON.—Continues to advance in price, and seems likely to become dearer still. For fine *Valencia* saffron, 30s. to 33s. 6d. is now asked, whilst seconds are quoted at 28s. to 29s. 6d., and thirds at 27s. to 27s. 6d. per lb.

SARSAPARILLA.—Good red *Jamaica* sold to-day at 1s. 4d. to 1s. 5d. per lb., whilst for grey ditto 1s. 3d. was paid, and 1s. 0½d. for damaged. *Lima-Jamaica* sold at 1s. to 1s. 1d., *Honduras* at 1s., whilst *Mexican* was bought in at 5d. per lb.

SHELLAC.—The market is firmer in all

positions. Moderate sales have been made privately at the auction rates, 86s. to 87s. *c.i.f.* having been paid for 600 cases of *Second Orange*, May to June shipment, whilst *Calcutta* shipment is quoted at 92s. 6d. *c.i.f.* At the sales which were resumed this week, the market was firm, and *Second Orange* sold at an advance of about 3s.; 90s. per cwt. being now the spot value of *Second Orange*. *Garnet* and *Button* were quiet, and in but small supply. Since the sales, business has been done in *Second Orange*, medium to fair *TN* at 89s. to 90s., and *Button* firsts at 95s. per cwt.

SENEGA ROOT.—Sold at a decline, 1s. per lb. being accepted for 5 bales of fair quality root.

SOY.—Fair quality *China* offers at 10d. to 10½d. per gallon. To-day 17 casks more or less mixed with dirt sold at 8½d. to 9d. per gallon.

SPICES (VARIOUS).—*Cloves*: In auction medium dark *Zanzibar* sold at 2d. and ordinary dark *Amboyna* at 3d. per lb., whilst fair to good *Penang* were bought in at 7d. to 8d. per lb. *Cassia Lignea*: Broken quality sold at 20s. 6d. per cwt. *Pimento*: Still slow of sale, but steady, 2½d. being paid in auction for good clear, 2½d. for fair, 2¼d. for medium, and 2¼d. for ordinary. *Chillies* were bought in at 34s. to 42s. 6d. for *Zanzibar*, and 65s. to 75s. for fine bright *Japan*. *White Pepper*: Quiet. Fine to extra fine bold bright *Singapore* 4½d. to 5½d. per lb., whilst *Ceylon* was bought in at 4¼d. per lb.

TOLU (BALSAM).—Good quality is scarce and dear. The nominal spot price is 2s. 6d. for good old-fashioned balsam, and business has been done for arrival at 2s. 3d., *c.i.f.* To-day two cases were bought in at 3s. per lb.

TURMERIC.—The market remains quiet. About one-sixth only of the catalogue offered at the spice sales found purchasers, 8s. 3d. being paid for dull *Madras* finger. Good bright finger was bought in at 10s. 6d., and whole bulbs at 7s. 6d. per cwt., whilst, in addition, 7s. 6d. to 8s. 6d. was the buying-price of *Cochin* finger, 6s. of whole rough bulbs, and 7s. 6d. of split damaged ditto.

WAX (BEES).—There was again a good demand for *Jamaican* wax to-day, which sold at full rates, £8 10s. being paid for good yellow, and £8 5s. for fair ditto. In addition *Australian* sold at £7 to £7 7s. 6d.; *Madagascar* at £7 to £7 5s., and *Zanzibar* at £6 to £6 5s.

WAX (JAPAN).—Lower. To-day a fair business was done in pale *squares* at 33s. to 34s. per cwt., partly without reserve, which shows a slight decline on the rates which have been asked privately.

LIVERPOOL DRUGS AND CHEMICALS, June 10.—Canary seed, 27s. to 28s. per 464 lbs. Ginger: *Sierra Leone*, 19s. to 19s. 6d. per cwt. *ex quay*. Kolanuts: 37 bags of dried have sold at 3d. per lb. *ex store*. *Cochineal*: Black grain *Teneriffe* is scarce, and holders are asking 1s. 3d. to 1s. 4d. per lb. *Beeswax*: 9 bales of *Gambia* realised £7 10s. per cwt. *Gum*: Arabic sorts steadily maintain their price. *Ceará gum*, 50s. per cwt. *Sal ammoniac*: 37s. per cwt. for first; 35s. for second quality. *Bleaching powder*: £7 to £7 5s. per ton. *Copperas*: *Lancashire*, 38s. per ton; *Welsh*, 36s. *Sulphate of copper*: £19 per ton for immediate delivery. *Potashes*: 20s. 9d. to 21s. per cwt. *Pearl-*

ash: 35s. per cwt. Cream of tartar is quiet at 100s. per cwt. Prussiate of potash: $7\frac{1}{4}$ d. per lb. Bichromate of potash: $4\frac{1}{2}$ d. per lb. Chlorate of potash: $4\frac{1}{4}$ d. per lb. Caustic soda: 70 per cent., £7 12s. 6d. to £7 15s.; 60 per cent., £6 12s. 6d. to £6 15s. per ton. Borax: Powder, 21s. per cwt.; crystals, 20s. Bicarbonate of soda: £7 per ton. Soda crystals: £2 10s. per ton. Soda nitrate: 7s. $10\frac{1}{2}$ d. to 8s. $1\frac{1}{2}$ d. per cwt. Sulphur: Flour, £7 10s.; roll, £5 10s. per ton. Castor oil has developed a very firm tone; Calcutta "good seconds" has advanced to $2\frac{1}{2}$ d. per lb., though 100 cases sold early in the week at $2\frac{3}{4}$ d.; French 1st pressure and Madras remain at $2\frac{1}{4}$ d. to $2\frac{5}{8}$ d. per lb., and 50 barrels French have been sold at $2\frac{1}{4}$ d. per lb. Linseed oil is slightly easier in price; Liverpool makes are now quoted at 19s. to 20s. 6d. per cwt. Cottonseed oil is steady at 16s. 3d. to 17s. for Liverpool refined, and 16s. 9d. to 17s. per cwt. for American. Spirit of turpentine on the spot is very scarce, holders asking 23s. per cwt.; to arrive there are sellers at 20s. 6d. Petroleum: Russian, $5\frac{1}{4}$ d. per gallon; American, $6\frac{1}{4}$ d. to $7\frac{1}{2}$ d. per gallon.

MANCHESTER CHEMICALS AND DRY-SALTERIES, June 10.—Chlorate of soda, 6d. Yellow prussiate, $7\frac{1}{4}$ d. to $7\frac{1}{2}$ d., according to quality. Sal ammoniac has gone down to £37 per ton firsts, and £35 seconds. Soda crystals are lower, and may be quoted at 35s. to 37s. 6d. per ton, bags, on rails; 5s. to 6s. extra, casks; 40s., *f.o.b.*, Liverpool. Bleaching powder is in request at £6 15s. to £7 per ton on rails, softwood casks; £7 10s. at Dublin, and £7 5s., Belfast. Chlorate of potash is lower, and quiet at $4\frac{1}{2}$ d., U.K. delivery. Sulphate of copper lower, and quoted £18 per ton best brands, delivered Manchester, £17 10s., July delivery. Bicarbonate of soda, £6 per ton casks; £6 12s. 6d. one cwt. kegs. Industrial Bicarbonate (for mineral waters), £4 5s. per ton, in bags, and £5 10s. per ton, 1-cwt. kegs, on rails at works, Northwich. Acids still dull here. Citric: 1s. 2d. Tartaric: 1s. 2d. to 1s. $2\frac{1}{4}$ d., foreign; 1s. 3d., English. Oxalic: $3\frac{1}{4}$ d.; Dublin or Belfast, 4d. Cream of tartar varies from 98s. to 100s. per cwt., best white powdered.

NEWCASTLE CHEMICAL MARKET, June 10. Prices are:—Bleaching powder, £7 to £7 5s., according to markets; soda crystals, 37s. 6d. to 45s.; caustic soda, 70 per cent., £7 5s. to £7 15s.; higher strengths, £9 to £9 10s.; soda ash, 52 per cent., £4 5s.; alkali, 52 per cent., £5; sulphur, £4 per ton.

MARRIAGE.

HEALE—ADAMS.—On June 2nd at Clapham parish church, by the Rev. Noel P. Tower, Thomas Albert Oakley Heale, chemist and druggist, of Messrs. Burroughs, Wellcome and Co., to Annie, only daughter of John Adams, St. Luke's Road, Clapham.

THE PRINCE OF WALES AND GUY'S HOSPITAL.—A banquet and reception were held at the Imperial Institute, on Wednesday last, in aid of the funds of Guy's Hospital. The Prince of Wales acted as Chairman, and there was a very large and distinguished company present, whilst the subscription list was announced to have reached the immense total of nearly £160,000.

MISCELLANEOUS NEWS.

PLYMOUTH AND DISTRICT CHEMISTS' OUTING.—The Plymouth, Devonport, Stonehouse and District Chemists' Association held its annual outing last Wednesday, the Committee, consisting of Messrs. C. J. Park (President), J. G. Netting (Chairman), J. Cocks, P. A. Kelly, H. O. Westcott, E. T. Cocks, and A. D. Breeze (Secretary), having arranged an extremely picturesque trip in Cornwall, with that charming little village Donderry as the destination. It is said, and with undeniable truth, that the law of science is progression, and to appearances the Plymouth Chemists' Association has adopted a similar law. Established in 1893, the Association has made rapid strides and has in a practically short time instituted first-class annual functions. The summer outing to Lidford, last year, was attended by about thirty; on Wednesday, however, that number was more than doubled. At 1.20 p.m. the party assembled at Millbay Railway Station, Plymouth, and through the courtesy of the Great Western Railway Company, who placed two saloon carriages at the disposal of the Committee, the pleasant ride to St. Germans, a distance of about ten miles, was an enjoyable start.

On arrival at St. Germans, the train was met by nine conveyances, which took the visitors for a beautiful drive to Donderry, *via* St. German's Hut. The weather was beautifully fine, an invigorating and refreshing breeze blowing in from the sea. Fortunately for lovers of magnificent scenery, dust was conspicuous by its entire absence, making matters far more pleasant all round. At St. Germans Hut a brief halt was made in the journey with a double object—viewing the interesting little spot and photographing the party. The latter was successfully undertaken by Mr. Wildman, of Union Street, Plymouth. Having been photographed, the party proceeded to Donderry. Several of the ladies rode, whilst the majority preferred to cover the short distance on foot, walking across the headlands. The water was somewhat rough, otherwise fishing and boating might have been indulged in. In the spare time before tea, however, a pleasant hour or two was spent on the sands, several of the young fellows enjoying a "dip in the briny." High tea was served in the pavilion by Mr. Broad at six o'clock, a sumptuous meal being provided, and Mr. C. J. Park, President of the Association, and member of the Pharmaceutical Society Council, occupied the chair.

Immediately after tea Mr. J. G. Netting (Vice-President) spoke at length of the successful career of the Association, and the rapid progress it had made within the three years of its existence. He congratulated the President (Mr. C. J. Park) on being recently elected on the Council of the Pharmaceutical Society, and thought it highly satisfactory that the West of England was now represented on that influential body—for the first time. He congratulated Mr. Cocks on being appointed on the Committee of the Anti-Cutting Association, and also Mr. A. D. Breeze, on being elected Honorary Secretary to the Plymouth Mercantile Association. Special thanks, he said, were due to the latter for the untiring manner in which he had worked as Hon. Sec. and

Treasurer to the Outing Committee. Mr. C. J. Park, in reply, was glad to see the ladies present, and trusted they would accompany them on all similar occasions in the future. Messrs. J. Cocks and A. D. Breeze also briefly replied, and mention was made of a subscription of £10 10s., which is being raised by the Association to be given in conjunction with the Bell Scholarship if won by any of the Junior Section of the Association within three years. The hope was expressed that the further prize would act as a stimulant to local junior chemists. After tea various games were indulged in, and much interest was centred in the tug-of-war. The "single" gentlemen beat the married, and were presented with a hundred years' old china mug given by Mr. J. K. Bond. Mr. P. A. Kelly captained the winning team. Soon after eight a move was made for home, the drive to St. Germans through Hossenford village being very picturesque. The party arrived at Plymouth shortly after ten o'clock.

PROPRIETARY ARTICLES TRADE ASSOCIATION.—The following gentlemen have been elected to the Retail Section of the Council of the above Association:—Barnes, W. R., Upton Manor, London, E.; Cocks, James, 8, Edgscumbe Street, Stonehouse, Devon; Cooper, A., 80, Gloucester Road, South Kensington, London, S.W.; Garrett, T. P., 33, Commercial Street, Newport; Johnston, W., 69, Loughborough Road, Brixton, London, S.W.; Jones, W., 2, High Street, Birmingham; Lister, S., Great Horton, Bradford; Pickard, S. N., 74, Manningham Lane, Bradford; Seely, H. W., 14, Southgate, Halifax; Williams, J., 47, Wilmslow Road, Didsbury. The votes were counted at the office of the Association, 2 and 3, Stonecutter Street, London, E.C., by Mr. G. R. Barclay (of Messrs. Barclay and Sons) and Mr. Newton Spyer, chemist, 13, Gledhow Terrace, South Kensington, London, S.W.

"PURCHASING A CHEMIST'S BUSINESS."—On Thursday, the 10th inst., Mr. Justice Grantham had before him the case of *Berry v. The Trust Agency, Etc., Co., Limited*. The plaintiff, Mr. Berry, who formerly carried on the business of a chemist and druggist, at Gloucester, brought his action on a contract which he had entered into with the defendants to sell his business to them. The defendants agreed to purchase the plaintiff's business for £1850 within one month from the date of the contract, depositing a sum of £30. As the defendants failed to complete the purchase within the stipulated time, the plaintiff had sold the business for £1450, and he now brought his action to recover the difference between the price he realised and the sum agreed to be paid by the defendants, plus a small sum for solicitor's costs and personal expenses. Mr. Berry was called, and said that the reason the contract between him and the defendants fell through was because the latter wanted him to take part of the purchase price in shares of the defendant's company. This he was not prepared to do. There was no defence to the action, and his Lordship gave judgment for the plaintiff for the amount claimed.

EXCHANGE.

OFFERED.

Books, etc.

A book of 130 Well-tryed Recipes for Chemists and Druggists, comprising well-selected formulæ for general, remedial, veterinary, toilet, and everyday preparations. Post free, 1s. 6d.—Tully, Chemist, Hastings.

Free.—Woodville's 'Medical Botany,' 3 large vols., 210 cold-plates, 20s., published, £8 15s.; Withering's 'British Plants,' 4 vols., 10s., published, £2 8s.; 'Hempel's Materia Medica, with Repertory,' by Watts, 2 thick vols., cheap, 10s.—Davis, "Chest-nuts," Gordon Hill, Enfield.

What offers? Holmes' 'Botanical Note-Book,' Tilden's 'Chemical Philosophy,' Fownes' 'Chemistry' (1848), Carnegie's 'Law and Theory,' Wills' 'Pharmacy' (soiled), Austen's 'Metallurgy' (new), Proctor's 'Pharmacy,' Roscoe's 'John Dalton and Rise of Modern Chemistry,' Thornton's 'Physiology' (soiled).—S. Holliday, 19, West Street, Warwick.

Miscellaneous.

Surplus Stock.—14 lbs. pulv. extract. coloc. co., in 1-lb. bottles; 1 lb. and upwards at half wholesale drug-list price, in perfect condition.—Worsley, Chemist, Market Place, Wigan.

Taken in payment for adverts., cannot be repeated, all new:—Camera half-plate, London make, reversing, swing back, four double slides, with R R 7 × 5 lens, iris, tested by expert, £5. Lens, R R 5 × 4 iris, leather case, 22s. 6d. Developing Trays (three gross), xylonite, $\frac{1}{4}$, 3s. 9d.; $\frac{1}{2}$, 6s.; $\frac{1}{1}$, 8s. 6d.; enamelled iron, $\frac{1}{4}$, 4s. 3d.; $\frac{1}{2}$, 6s. 6d.; 12 × 10, 18s. dozen. Printing Frames, rounded corners, brass springs, $\frac{1}{4}$, 4s.; $\frac{1}{2}$, 8s.; $\frac{1}{1}$, 15s. dozen. Dark Slides, double, fit Lancaster's Instantograph, two dozen each, $\frac{1}{4}$, 4s.; $\frac{1}{2}$, 5s. 6d. Glass Measures, graduated, six dozen each, 2-dr., 5s.; 2-oz., 4s.; 4-oz., 6s. 3d.; 10-oz., 10s. dozen. Focussing Covers, black twill, lined ruby, two dozen, 30 × 34, 1s. 3d.; 30 × 51, 1s. 9d.; 60 × 48, 2s. 6d. Packages free, cash with order, returned if sold.—Warnes, 6, Rochester Square, N.W. Offers entertained.

Elam's Brass Breast Pump, 6s.; 4 ovifum Ivory, 5 ebony Pessaries, 9s.; 2s. 9d. Dusart's Syrup, 1s. 9d.; 3 ls. 1½d. Smith's Pectorine, 1s. 6d.; 10 2s. 6d. Farady's Hair Dye, 17s.—Cooke, Chymist, Surbiton.

Fallowfield's seven-guinea Focussing Facile Hand Camera, perfect condition, £4 10s., or exchange for photo sundries or set.—Eastwood, Chesterterton, Staffs.

Soda Water Appliances.

Soda-Water Machine, Barnett and Foster's, No. 2; list price £45; sell for £15; good condition.—Apply to H., 1, Southwick Street, Hyde Park.

WANTED.

Wanted.—'Attfield's Chemistry,' late edition, cheap.—W. A. L., 21, Heath Street, Hampstead.

Wanted.—Pair Carboys, about 6 gals., cut stoppers, cheap.—Perkin, 105, Church Street, Croydon.

SALE OF A BUSINESS.—The case of *Piggott v. Palmer*, which was tried before Mr. Justice Grantham and a common jury on Wednesday last, was brought to recover commission upon the sale of a chemist's business in George Street, Richmond. The plaintiff, who carries on business as an auctioneer and estate agent at Richmond, hearing that Parke's Drug Stores desired to secure premises in Richmond, called upon the defendant, Mr. Jas. Taylor Palmer, a chemist and druggist, and asked him whether he would sell his business. Defendant offered to part with his business for £2500, which sum the company declined to give. Plaintiff alleged that the defendant afterwards went behind his back and sold the business to Parke's Drug Stores for £2400, and commission upon this amount was now sought to be recovered. The defendant denied that he had employed the plaintiff to procure a purchaser, and called in support of his case Mr. John Murison, the managing director of Parke's Drug Stores, Limited, who, however, admitted that he called upon Mr. Palmer in consequence of having heard through Mr. Piggott that the business was for sale. The jury found for the plaintiff for £120, and his Lordship entered judgment accordingly.

LADIES' NIGHT AT THE ROYAL SOCIETY.—The second soirée of the season was held on June 10 at the Royal Society's rooms in Burlington House, Piccadilly, W., and the *Standard* reports that the exhibition was more than usually interesting. In the reception room the exhibits of the Applied Mathematics Department of the University College, illustrative of the applications of the theory of frequency, and diagrams illustrating the barometric frequency over the British Isles, attracted some attention. In the adjoining Council room were a series of very fine sea-scape photographs by Mr. F. H. Worsley-Benison. Professor Sylvanus Thompson, who is always a popular experimenter, had a large and excellent collection of Röntgen ray apparatus, of which he made very interesting displays. Amongst his experiments was the production of electric dust-shadows. In the principal Library Mr. M'Lean had some very fine photographic stellar spectra. Messrs. Siemens had a large and important number of illustrations of electric discharges *in vacuo*. The apparatus was headed by a facsimile of the first vacuum tube ever produced, namely, that

employed by Dr. Watson in 1751 for his experiments at that period. There was also a facsimile of Lord Cavendish's double barometer, and of Dr. Morgan's shortened barometer of 1785, in which, by long-continued boiling of the mercury, he effected a vacuum of such excellence that no discharge would pass, showing it thus to be equal, therefore, to a Crookes or Hittorf tube of the present day. It is probable that it would have sufficed for the production of the Röntgen rays. Messrs. Siemens had also a most interesting apparatus for showing the electrical discharges at different degrees of exhaustion. The stereoscopic photo-chroscope was again in high favour, and Sir John Evans contributed a sort of toy experiment in the singular behaviour of certain of the ancient flint implements of pre-historic man. In the archives room Mr. Herbert Jackson made a demonstration of the use of phosphorescent materials for rendering Röntgen rays visible, and in the meeting room electric lantern exhibitions drew, from time to time, large audiences.

LATE ADVERTISEMENTS.

Assistant Wanted.

CHINA.—Wanted an ASSISTANT, not over 30 years of age, accustomed to first-class retail and dispensing business. References must bear strict investigation. 4 years' agreement. Passage paid both ways. Address, with full particulars, CHINA, c/o A. S. Watson & Co. (Limited), 8, Fenchurch Bldgs., E.C.

Businesses for Disposal.

LONDON, North.—A good thriving Light RETAIL. Established 4 years. Under management. Rapidly increasing. Present gross receipts nearly £800. Net profit, £235 to £250. 20 years' lease, at £30 only. A rare opportunity for any one who can command not less than £500 cash. Full details and reasons for disposal, H. H., "Pharm. Journal" Office, 5, Serle St., W.C.

LONDON, extreme E.C. District, principal thoroughfare. Receipts, under management, £300. Well-stocked and fitted. Plate-glass front. Will accept £175. Good lease. Opportunity for large increase, as important additions and improvements about completing in neighbourhood. A bargain. Apply for full particulars, F. E. B., "Pharm. Journal" Office, 5, Serle St., W.C.

DIARY OF THE WEEK.

WEDNESDAY, JUNE 17.

EDINBURGH DISTRICT CHEMISTS' TRADE ASSOCIATION. Excursion to Loch Long and Loch Lomond, starting from Waverley Station at 8.50 a.m.

THURSDAY, JUNE 18.

CHEMICAL SOCIETY, at 8 p.m.

"The Action of Bromine on Pinene in Reference to the Question of Its Constitution," by Prof. Tilden.

"Note on Santalal and Some of Its Derivatives," by A. C. Chapman and H. E. Burgess.

"The Explanation of Some Anomalies in Thermochemistry, Chloral and Bromal Hydrates," by W. J. Pope.

"Further Observations on the Production of Chlorine by Heating a Mixture of Manganese Dioxide and Potassium Chlorate," by Prof. McLeod.

"The Rotation of Aspartic Acid," by B. M. C. Marshall.

"On the Occurrence of Quercetin in the Outer Skins of the Bulb of the Onion (*Allium cepa*)," by A. G. Perkin and J. J. Hummel.

"The Colouring Principle Contained in the Bark of *Myrica nagi* (Part I.)," by A. G. Perkin and J. J. Hummel.

"Note on Some New Derivatives from Camphorose," by Dr. M. O. Forster.

"Acetylene, Its Detection and Ignition in the Air," by Prof. Clowes.

Ballot for Election of Fellows.

SCHOOL OF PHARMACY STUDENTS' ASSOCIATION, at 6 p.m.

Annual Business Meeting. Prof. J. Reynolds-Green, F.R.S. (President), in the Chair.

FRIDAY, JUNE 19.

EDINBURGH CHEMISTS', ASSISTANTS', AND APPRENTICES' ASSOCIATION:—

Botanical Excursion, Colinton Dell. Meet at Caledonian Station at 8.30 p.m. Conductor, W. Duncan.

PHARMACEUTICAL SOCIETY (NORTH BRITISH BRANCH). Meeting of Members and Associates in Business at 36, York Place, Edinburgh, at 11 a.m.

PERSONAL.

MR. JAMES ACHESON, L.P.S.I., Ballymena, has been appointed compounder to the Board of Guardians of that town.

MR. ERNEST SAVILLE PECK, pharmaceutical chemist, of Cambridge, has taken the Cambridge B.A. degree, his name occurring in Class I. The greatest credit is due to him because he has gained the degree whilst also attending to his daily business.

MR. WILLIAM LAMONT has purchased the business of the late Mr. Alexander Mair, at 162, Ferry Road, Leith.

MARKET REPORT.

LONDON, JUNE 18, 1896.

There are few changes in the chemical market to quote this week. Carbolic acid is quiet, tartaric and citric acids are dull, whilst cream of tartar is in rather improved demand. Crude camphor has a firmer tendency, being quoted at higher prices from Japan, and the position has had a decided effect upon the refined article, which closes very steady. The most important feature has been the announcement of a reduction in the price of salol. The position of this article is still in an uncertain position, and the present quotation can hardly be regarded as one likely to hold good for some time. The alkaloid market generally, droops very much. Amongst crude drugs jalap is very firm, a good business having been done since the sales at full rates. Colocynth has sold at an advance for good Turkey, and the supplies of this variety appear to be very limited. Brazilian ipecacuanha has sold privately at full rates, whilst senega and tolu balsam are held for late rates. Amongst other articles glycerin is very strong at an advance; menthol must also be quoted dearer, whilst shellac has attracted considerable attention. Spices are generally unchanged, and the same applies to heavy oils. In regard to essential oils the most noteworthy feature is the continued decline in the value of star anise oil. Full particulars will be found below:—

ACID, CARBOLIC.—The market is flat, and quotations run as follow:—*Crystals*: 34° to 35° C., 6½d.; 39° to 40° C., 7d.; 39° to 40° C. (*detached crystals*), 8d. per lb. *Crude* is quoted at 2s. for 60 per cent., with 75 per cent. at 2s. 5d. per gallon. *Liquefied* and *creylic* are worth 1s. and 11d. per gallon respectively.

ACID, CITRIC.—There is no change to report in the position of this article, the market being quiet. Makers of *English* acid still quote 1s. 2d. per lb., whilst second-hand holders offer at 1s. 1¼d. *Concentrated lemon juice* offers at £13 5s. *f.o.b.*, Messina.

ACID TARTARIC.—No change is to be noted. The maker's price of *English* acid is still 1s. 3d., whilst *foreign* ditto, both in *crystal* and *powder*, offers at 1s. 2d. to 1s. 2¼d. per lb., according to brand.

AMMONIA COMPOUNDS.—*Sulphate* is steady with rather better enquiry, but £8 2s. 6d. is still quoted for grey 24 per cent. on the spot. *Hull* offers at £8, *Leith* at £7 17s. 6d. to £7 18s. 9d., *Beckton* at £8 10s. forward, and *Beckton* terms at £8 spot. *Sal ammoniac* is quoted at the decline noted a fortnight ago, *firsts* being offered at 37s., and *seconds* at 35s. *Carbonate* quotes at 3d. in *casks*, 3½d. in *kegs*, and 3¼d. in *jars*, with *powder* ¼d. per lb. extra. *Liquor* is unchanged at 3d. to 3¼d. per lb., less 5 per cent.

CAFFEINE.—Is very dull, but manufacturers' quotations are unchanged, 18s. being the lowest price for 1-cwt. lots, prompt delivery.

CAMPHOR (CRUDE).—The market is quiet, but prices are very steady in sympathy with cabled advices, which report *China* camphor at 87s. 6d. to 90s., and *Japan*, at 110s., both *c.i.f.* terms. No business is reported during the last few days.

CAMPHOR (REFINED).—There is no appreciable change in the prices quoted, but the market is certainly firmer. The *German* agent who was last week offering *bells* at 1s. 2½d. per lb., *c.i.f.*, prompt delivery, is not prepared to execute further orders at this rate. In fact, it is somewhat doubtful if 1s. 3d. per lb. would be accepted in some instances. Otherwise it may be said that *English* and *German* refiners' quotations are unaltered.

CASCARA SAGRADA.—Is very quiet. The nominal spot quotation for old bark is 15s. to 16s. per cwt.

CREAM OF TARTAR.—Is dull of sale at unchanged rates, fine white *French crystals* being worth 95s., whilst *German* brands of *powder* are quoted on the spot at 97s. For shipment from *Bordeaux* the last quotation was 89s. per cwt., *f.o.b.* At the close the market is rather firmer.

COAL DISTILLATION PRODUCTS.—*Toluol* quotes at 1s. 8d. per gallon for *pure*. *Benzole* is firmer, 50 per cent. being now worth 2s. 4½d., whilst 90 per cent. is quoted at 2s. 9d. per gallon. *Creosote*: 1¾d. per gallon. *Crude naphtha*: 30 per cent. at 120° C. quotes at 10½d. per gallon. *Solvent naphtha*: 95 per cent. at 160° C. is worth 1s. 6d. per gallon. *Pitch*: 32s. 6d. per ton, *f.o.b.* *Tar*: 11s. 9d. per barrel for *crude*.

COLOCYNTH.—Dearer. Good *Turkey* colocynth has sold this week at 2s. 8d. per lb., and sound apple is scarce and firmly held. It is believed that the supplies to come forward are very limited. Fair *Spanish* is quoted at 1s. to 1s. 2d. per lb.

COPAIBA (BALSAM).—Is very firm, and good qualities are rather scarce. *Maranhão* is quotable at 1s. 11d. to 2s., fair *Para* at 1s. 5d. to 1s. 6d., and *Bahia* at 1s. to 1s. 4d. per lb.

ERGOT OF RYE.—The market remains very dull, and there is only a limited amount of good quality available. For sound *Spanish* 9d. would be paid, whilst 7d. is asked for *Russian*.

GALLS.—The market in *Persian* galls is quiet but steady. Business has been for the most part confined to *greens*, *blues* being neglected. No good *whites* are offering. Quotations run as follows:—*Blues*, 52s. to 54s.; *greens*, 42s. 6d. to 47s.; *whites*, 37s. 6d. to 42s. 6d., and *sorts*, 48s. to 50s. per cwt.

GENTIAN ROOT.—Steady. Good quality *French* root has sold privately this week at 22s. per cwt.

GINGER.—Is firm. *Cochin* in auction sold slowly, but prices were fairly maintained, fair medium and small rough being quoted at 33s. to 35s. Native kinds sold at 63s. to 73s. 6d. for bold rough cut A to fine bright ditto, whilst medium and small dull sold at 45s. *Bengal* kinds were bought in at 15s. *Japan* sold at 19s. for fair, and 21s. for good bright limed. *Jamaican* root sold at fully steady to dearer rates, 83s. being paid for good bright, and 72s. 6d. to 79s. for medium washed.

GLYCERINE.—A very firm market. *Crude* has been selling during the week at advanced prices, and a big business has been done in *German* brands of double-distilled glycerine at prices ranging from 70s. to 73s. per cwt. For the *B and S* brand 73s. is now asked, whilst second-hand holders of *German* glycerine quote 70s. to 72s.

IPECACUANHA.—During the week a fair amount of business has been done privately in *Brazilian* root at fully steady rates, and the market is very firm. *Columbian* root offers privately at 4s. A new arrival of the latter variety will be offered in the next drug rates.

JALAP.—A brisk business has been done since our last report in fair quality *Vera Cruz* at 7d. per lb., which shows a fully steady rate. The market closes very firm.

LIQUORICE ROOT.—*Russian* root is very firmly held, and there is very little now to be had. For best *decorticated* 30s. *c.i.f.* per cwt. is quoted nominally. Rough *Persian* root offers at 7s. to 7s. 6d. per cwt. nominally.

MENTHOL.—Is decidedly firmer, and business has been done at advancing prices since our last report, 11s. being now quoted for good white *crystals* on the spot. Offers from *Japan* vary in price, 9s. 9d. to 10s. 6d. per lb., *c.i.f.*, being variously quoted.

OIL (COD LIVER).—A trade report published by an American firm gives the following particulars in regard to the yield in the *Lofoten* and *Finmarken* districts during the past six seasons:—

The fishing in *Lofoden* terminated on May 7, and, although the catch in *Finmarken* will not be completed until about June 10, reliable cable reports from there state that the weather for the past two weeks has been so unfavourable that if 100 hectoliters be added to the known output we can arrive at a fair estimate of what the crop will be in that district. The following statistics have been obtained from trustworthy sources, and the final result will differ but little from the figures here given:—

	Barrels unrefined oil.
Total result of the fishing in Norway, south of Lofoten	3,210
Total result of the fishing in Lofoten	7,790
Total result of the fishing in Finmarken (estimated).....	5,000
Total for all Norway, season 1896	16,000
Total for all Norway, season 1895	14,123
Total for all Norway, season 1894	16,026
Total for all Norway, season 1893	20,869
Total for six years, 1895 to 1890	18,500

To arrive at the quantity of medicinal refined non-freezing oil, ready for export, we must deduct 25 per cent. from above figures, and it will therefore be seen that the available crop is about 12,000 barrels all told.

OILS (ESSENTIAL).—*Star Anise* oil is again lower, and now offers at 7s. 9d. to 8s. per lb. on the spot. The market is very flat. There are no reliable quotations for *Cassia*, no business appearing to have been done during the week in any variety. *American peppermint* oil is quiet, *H. G. Hotchkiss'* brand being still quoted at 8s. 9d. to 9s. per lb. on the spot, whilst *Wayne County* quotes at 6s. 6d. to 7s. per lb. No *Japanese* oils are offering, and 40 per cent. quotes nominally at 6s., and *dementholised* at 3s. 9d. to 4s. *Citronella* is very firm at 1s. 6d. per lb. in tins, and 1s. 5d. in drums on the spot, but

no business is reported. *Patchouli* is scarce, and held for 1s. 4d. per ounce on the spot. *Italian* oils are generally unchanged, with the exception of *orange*, one brand of which now offers at 6s. 1d. per lb., *f.o.b.* Messina.

OILS (FIXED) AND SPIRITS—*Castor*: *Italian* oil is firm at the unchanged rate of 30s. 9d. to 31s. 6d. per cwt. *c.i.f.* for best quality. A recent Bengal commercial report comments upon the fact that a sufficient quantity of first quality oil from Indian grown seed is now expressed in this country, consequently the demand for this grade for the United Kingdom is likely to be very small in future. *Cotton* is quiet at a decline. *Refined* oil being now quoted at £15 15s. to £16 5s. on the spot. *Coco-nut* is in fair demand at unchanged rates, *Ceylon* at £22 10s., and *Cochin* at £26 15s. *Linseed* is again lower by about 5s., oil in barrels on the spot being now quoted at £18, and this price has been paid. *Rape* is a trifle easier at £22 15s. to £23 on the spot for refined quality. *Palm*: *Lagos* quotes at £20 10s. *Olive*: *Spanish* is quoted at £29 to £30, and *Levant*, at £29. *Turpentine* is again lower, but closes steady at 20s. on the spot for *American* spirit. *Petroleum* is quiet. *Russian* still quotes at 5d., and *water white*, at 6½d., whilst *American* is a trifle firmer at 5½d. per gallon.

OPIUM.—The London market is very quiet, and there is a decided disposition amongst holders to accept lower rates. The current quotations are as follows: *Turkish*: *Soft shipping*, 12s. to 12s. 9d.; *Smyrna*, 9s. to 10s.; *Constantinople*, 9s. to 10s.; *drug-gists' seconds*, 8s. to 9s. per lb. *Persian* is very quiet, and owing to larger recent arrivals prices are inclined downwards. Nominally fine "bricks" quote at 13s., and ordinary "ball" at 11s. to 11s. 6d. per lb.

ORRIS ROOT—Quiet but steady. Business has been done privately in pale picked *Florentine* root at 75s. per cwt. on the spot, whilst for fair *Veronese* 65s. is quoted.

PERU (BALSAM)—Is very quiet, although the supply is small. Quotations in first hand range from 8s. 3d. to 8s. 6d. per lb. for good balsam.

QUICKSILVER.—The market is steady, and prices are unaltered. The importers' price is still £6 10s., whilst second-hand holders offer at £6 9s. 6d.

QUININE SULPHATE—Remains in absolutely a lifeless state, with no business whatever doing. The best *German* makes quote nominally at 1s. 0½d. per oz.

SALOL.—On Monday the price of this article was lowered to 4s. 6d. per lb. It is probable that this step was taken so as to meet the outside competition which the Syndicate of manufacturers have had to contend with. At the same time the parity of the price now quoted in France for the article is considerably lower than the reduced figure given above, so it is not improbable that a further decline will take place.

SENEGA ROOT—Is still quoted at the low price which was paid in auction, viz., 1s. per lb., which is the lowest price this drug has ever touched. The holder will not make any reduction on this figure, and 11½d. has been refused.

SHELLAC.—The market is very firm. Privately a moderate business has been done on the spot in *Second Orange* and

Button on the basis of last week's prices, with *Garnet* dull of sale at 83s. 6d. for *AC*. For arrival no business has been done, although there would be buyers of *Second Orange*, May to June shipment, at 89s. to 90s., *c.i.f.* terms. At the weekly sales the supplies offered were small, but *TN* qualities of *Second Orange* met with a brisk demand at a further advance of 3s., closing at 93s. Good grades remain neglected. *Garnet*: A few cases of *PB, G* sold at an advance of 2s. to 3s., *Button* sold well at 88s. to 91s. for blocky fair to good firsts, and 84s. for seconds. Since the sales there has been a good demand for *Button* at full rates, whilst *TN Orange* has sold at 93s. to 93s. 6d., short prompt.

SPICES (VARIOUS).—*Cloves*. In auction no Zanzibar were offered, but 20 cases of ordinary quality *Amboyna* sold at 3d. per lb. *Mace* remains flat, *Penang* being all bought in, pickings at 1s. 2d. to 1s. 3d., ordinary brown and red at 1s. 4d. to 1s. 5d. per lb. *Cinnamon quillings*: *Ceylon* sold at 7¼d. to 7½d., broken quill, at 9d., and chips at 4¼d. per lb. in auction. *Cassia vera*: Coarse *Padang* quill was bought in at 24s. per cwt. in auction. *Pimentine*. Bought in at 2½d. per lb. *Pimento* sold at a decline of ½d. to ¼d. per lb., 2½d. being accepted for good fair, 2¼d. for fair, and 2d. to 2½d. for medium grey and mixed. *Capsicums*: Long thin red *Japan* sold at 13s., whilst *East Indian* kinds were all bought in. *Chillies*: Ordinary *Zanzibar* were bought in at 40s., whilst fine bright red *Japan* sold at 51s. 6d. *White Pepper*: Fairly steady. *Penang* sold at 2½d.; *Siam* were bought in at 3½d., whilst *Singapore* part sold at 4d. for good quality; *Arrowroot* remains flat, but prices are steady, 1½d. being paid for ordinary *St. Vincent*, whilst sea-damaged sold at 2¼d.

STICKLAC—Very quiet. *Rangoon* was all bought in at the sales, small thin sticks at 97s. 6d., and small dusty at the same figure. A few bags of *Seedlac* sold at 65s. to 66s. per cwt.

TOLU (BALSAM)—Is firm. For good, "old-fashioned" balsam 2s. 6d. is still asked on the spot, the shipment quotation from New York being 2s. 3d. per lb., *c.i.f.* terms.

TRAGACANTH (GUM)—There has again been a good inquiry for this article, but little business has resulted. The market remains firm at the following prices:—Firsts, £14; seconds, £12 10s. to £13; thirds, £10 10s. to £11 10s.; fourths, £8 10s. to £10s.; yellow and pinky, £6 to £7 10s., with other qualities at 35s. to £6 per cwt.

TURMERIC.—The market is very quiet: fair *Bengal* has been selling quietly at 7s. 6d. per cwt.

MANCHESTER CHEMICALS AND DRY-SALTERIES, June 17.—It is difficult to focus the market with any degree of accuracy. It is certain, however, that in some respects, notwithstanding the diminished exports of heavy chemicals, there is a better home demand. This is borne out by reports a 1 round Bleaching powder has been reduced for the United States market. Recovered sulphur is firmer at £3 17s. 6d. per ton. Soda crystals range from 35s. to 37s. 6d. per ton in bags on rails at works; £2 7s. 6d., Dublin; £2 2s. 6d., Belfast; barrels, 7s. extra. Bicarbonate of soda

firmer. £6 12s. 6d. to £6 15s. *f.o.b.*, Liverpool. Industrial bicarbonate for mineral waters unchanged on last week. Acids very easy, and cream of tartar, 98s. to 100s. for best white powdered here. Benzols, firm. Carbolic acid unaltered, but firm. Naphthas inclined to lower figures.

NEWCASTLE CHEMICAL MARKET, June 17.—The market continues to move steadily. Oversea shipments are a shade better, principally to the Baltic ports. Home inquiries are a shade fuller. Prices, however, are a little changed, and quotations keep as follow:—Bleaching powder: £7 5s. to £7 10s., according to markets. Soda crystals: 37s. 6d. to 45s. Caustic soda: 70 per cent., £7 5s. to £7 15s.; higher strengths, £9 to £9 10s. Alkali: 52 per cent., £5. Soda ash: 52 per cent., £4 5s. Sulphur: £3 17s. 6d. to £4 per ton, *f.o.b.*

LIVERPOOL MARKET REPORT, June 17.—Hempseed: 50 bags of Chilean have sold at 27s. 6d. per 384 lbs. Canary seed is very flat, though prices are very favourable to buyers; Turkish, 27s. to 28s. per 464 lbs. Foenugrec seed: 60 bags of Egyptian *ex quay* brought 7s. 6d. per cwt. Ginger: African varieties are plentiful; 250 bags Sierra Leone sold at 19s. per cwt., and Monrovia, 17s. Beeswax: Gambia has been selling in fair amount between £7 8s. 9d. and £7 10s. per cwt., and 25 sacks of Chilean brought £7 13s. 9d. Kola nuts: Fresh nuts recently have been difficult to dispose of, and the price of some 20 baskets fell to 2¼d. per lb. to clear. Gum: Arabic varieties are slow of sale, but prices are steady. Sales of hog tragacanth have been made at 45s. per cwt. Castor oil is firm in tone and in good demand; good 2nds Calcutta are at 2½d. per lb., 1st pressure French at 2¾d., and Madras 2½d. per lb. Olive oil is in somewhat limited demand at prices between £28 and £35 per tun. Spanish oils fetch very steady prices. Linseed oil is quiet at 19s. to 20s. 6d. per cwt. for Liverpool makes. Cottonseed oil: Liverpool refined unchanged at 16s. 3d. to 17s.; American refined, 16s. 9d. to 17s. per cwt. Spirits of Turpentine: Recent arrivals have lowered the price to 20s. 9d. per cwt., spot value. Petroleum: Russian refined, 5¾d.; American, 6¼d. to 7½d. per gallon. Sal ammoniac: First quality, 37s. per cwt.; second, 35s. Carbonate of ammonia: 3½d. to 3¾d. per lb. Sulphate of ammonia: £8 7s. 6d. per ton. Bleaching powder: Hard: £7 per ton. Copperas: Lancashire, 37s. per ton; Welsh, 35s. Sulphate of copper: £18 10s. per ton. Potashes: 20s. 9d. per cwt. Pearlash: 35s. per cwt. Chlorate of potash: 4¾d. per lb. Bichromate of potash: 4¾d. per lb. Prussiate of potash: 7d. per lb. Cream of tartar is steady at 100s. per cwt. for spot parcels. Bicarbonate of soda: £6 15s. per ton. Soda crystals: £2 7s. 6d. to £2 10s. per ton. Caustic soda: 70 per cent., £7 8s. 9d. per ton; 60 per cent., £6 8s. 9d. Nitrate of soda steady at 7s. 10½d. to 8s. 1½d. per cwt. Borax: 20s. per cwt. lump; 21s., powder. Hyposulphite of soda: £5 10s. to £6 per ton.

THE RÖNTGEN RAYS AT CORK have proved successful in demonstrating the exact position of a bullet in a lad's thigh after several futile attempts to find it by the ordinary method.

NEW IDEAS.

ALAPURIN.

Messrs. Thomas Christy and Co. submit a sample of "Alapurin" or Adeps Lanæ Puriss, N.W.K. This substance differs from all other preparations of wool-fat, inasmuch as it is almost white in the anhydrous state; not only in colour does it surpass other preparations of pure wool-fat, but also in odour, the objectionable smell of crude wool-fat, which to a certain extent was always present in the best preparations hitherto on the market, being entirely removed, and the slight odour which this substance now possesses is quite an agreeable one. Alapurin is equally as soft and supple as adeps lanæ, N.W.K., and has a definite melting point of 41° C. The preparation is one that it would be difficult to improve upon as an absorbent ointment basis.

STYPTICIN—A NEW UTERINE HÆMOSTATIC.

Stypticin is a coined name for hydrochloride of cotarnin, one of the oxidation products of the alkaloid narcotine. In chemical structure and therapeutic action it is closely allied to hydrastinin, and considerable attention has been directed to its use in the treatment of uterine hæmorrhage. Gottschalk found that stypticin promptly checks hæmorrhage due to muscular atony, and leading clinicians, who have undertaken the investigation of its therapeutic effects along the lines laid down by Gottschalk, have fully confirmed his results. In response to suggestions to prepare the drug in concentrated form, so that physicians desirous of conducting trials may have within their reach a convenient preparation of undoubted purity and accuracy of dose, Messrs. Burroughs, Wellcome and Co. have prepared "tabloids" for administration both hypodermically and by the mouth. They supply the former in tubes containing twelve $\frac{1}{4}$ -grain "tabloids" at 8d. each, and the latter in bottles containing twenty-five $\frac{3}{4}$ -grain "tabloids" at 4s. each.

COMPRESSED LITHIA AND VICHY LENTIFORMS.

The large compressed tablets known as "lentiforms" are especially suitable for the extempore preparation of effervescent mineral waters, and Warner's Effervescent Lithia and Vichy Lentiforms, specimens of which have been sent by Messrs. F. Newbery and Sons, seem well adapted for presenting the remedies in a portable, economical, and pleasant form, besides ensuring a definite strength at all times. The lithia lentiforms contain 3 grains of lithium citrate each, and the Vichy lentiforms are intended to replace the bottled spring waters. Since their first introduction the lentiforms have been materially improved, and they are now capable of preservation for a much longer period than formerly, without impairment of their medicinal qualities.

IMPROVED SELTZOGENE CHARGES.

Hargreaves' patent seltzogene charges are distinctly novel, and possess several advantages over others. The complete charge is contained in one packet, in which fused sodium bisulphate is surrounded by powdered sodium bicarbonate, so that the operation of charging the seltzogene is simplified,

and it is impossible to make any mistake. As a result of the special method of preparation it is also impossible for a charge to produce more than the correct quantity of gas, the safety of the seltzogene being thus assured. The acid is in the form of solid blocks, instead of small crystals, so that the gas is evolved more gradually, and is more steadily absorbed by the water. Finally, owing to the superior form of wrapping employed, each package being enveloped in both waxed paper and heavy tinfoil, the charges are not subject to deterioration by changes of climate. The aerated water produced by these charges is excellent in flavour and full of gas. They are supplied by Mr. James Hargreaves, Farnworth, Widnes.

MISCELLANEOUS NEWS.

DRUG STORES AND THE PUBLIC.—According to the *Medical Press and Circular*, a case was down for hearing in the Court of Queen's Bench last week, which exemplified in a striking manner the "danger of dealing with cheap drug stores." Some months ago a lady called at an establishment of this kind and asked for a dose of sal-volatile for a headache. Strong solution of ammonia was given, with the effect of causing the greater part of the mucous membrane of the œsophagus to come away in sloughs, and after being in a critical state for some time and a tedious convalescence, the patient recovered to find that her sense of taste was gone. Damages were laid at £1000, but at the last moment the case was settled out of court, on terms which were understood to be favourable to the plaintiff, the defendants undertaking to pay all costs. As the *Medical Press and Circular* remarks, the occurrence of this mishap would have been impossible with the exercise of ordinary skill and care.

THE CHEMISTS' CLUB.—The Committee of this Club has arranged for a series of Sunday outings, the first of which will take place on Sunday next, June 21, to Windsor, starting from Waterloo 10.25 a.m. Dinner is arranged at the Star and Garter Hotel at 1 p.m. The Honorary Secretary, Mr. L. Lionel Cannar, 2, Farringdon Avenue, E.C., will be happy to give any further information to chemists and members on application.

BOVRIL TRADE MARK.—On Friday, June 12, Lords Justices Lindley, Lopes, and Rigby heard an appeal by John Rose-tree from the refusal of Mr. Justice Kekewich to rectify the Register of Trade Marks by removal therefrom of the "Bovril" trade mark, No. 58,405. The mark, which was originally registered by Mr. John Lawson Johnston, on November 2, 1886, and transferred to the Bovril Co. on April 6, 1889, in Class 42, was for substances used as food, and the question for the Court was whether "Bovril" was a fancy word not in common use within the meaning of Sec. 64, Subsec. 1, Clause C of the Act of 1883. On behalf of the appellant, who claimed to be a person "aggrieved," it was urged that the word was descriptive, meaning ox, and therefore ought never to have been registered, but the Court took a different view, and dismissed the appeal with costs, holding that the word

had never been known until it was coined by Mr. Johnston. Mr. Bower and Mr. Drew appeared for the appellant; Mr. Moulton, Q.C., Mr. Warmington, Q.C., and Mr. John Cutler for the respondents.

INTER-HOSPITAL BOAT RACE.—On Thursday, June 11, the Annual Inter-Hospital Boat Race took place from Hammersmith to Putney, in brilliant weather, and was witnessed by a large assemblage. Three hospitals were represented, viz.—Middlesex Hospital, Middlesex station; St. George's Hospital, centre station; London Hospital, Surrey station. At the first attempt a foul took place between St. George's and Middlesex, and the crews were ordered back to the stake boats. After a short delay, necessitated by the rupture of a thowl string in the St. George's boat, a fresh start was made. Another slight foul between St. George's and London enabled Middlesex to get away with a slight lead. A grand race now ensued for the first mile between Middlesex and St. George's, the former, however, gradually increasing their lead. At the point opposite to the Ranelagh Club, the St. George's crew were evidently beaten, and the Middlesex holding the race well in hand passed under Putney Bridge with a clear lead of 2½ lengths. London, who rowed a plucky, stern chase, finished five lengths behind. The winners carried the course in the excellent time of 9 minutes 3 seconds. The members of the winning crew were as follows:—

	st.	lbs.
Bow, C. H. Reissmann	10	4
2, H. C. Whiteside	11	7
3, G. P. Bletchley.....	11	11
Str., C. Chamoock Smith....	10	0
C., W. G. Higgins.....	9	2

PHARMACEUTICAL CRICKET.—The following match was played at Nunhead on Saturday the 6th inst., between Metropolitan College of Pharmacy and Westminster College of Pharmacy, which ended in a victory for the former by twenty-nine runs. The following were the results:—Metropolitan College of Pharmacy, 90 runs; Westminster College of Pharmacy, 61 runs.

PHARMACEUTICAL SOCIETY OF IRELAND.—The last days for entrance for the July examinations will be as follow: For the Preliminary examination, Monday, the 22nd inst.; for the Pharmaceutical Licence examination, Wednesday, the 24th inst.; for the Pharmaceutical Assistants' examination, Monday, the 29th inst.; for the Registered Druggist examination, Tuesday, the 30th inst.

THE VALUE OF A DISPENSER.—According to the Local Government Board, £40 per annum is enough for a compounder of drugs. The Castlereagh Board of Guardians thinks differently, and insist on their apothecary getting £100 a year.

CLASSES AT EXETER.—In connection with the technical department of the Exeter Technical and University Extension College, summer classes in practical chemistry, physics, and systematic botany, etc., have been arranged.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Books, etc.

A book of 130 Well-tryed Recipes for Chemists and Druggists, comprising well-selected formulæ for general, remedial, veterinary, toilet, and everyday preparations. Post free, 1s. 6d.—Tully, Chemist, Hastings.

The 'Analyst,' vol. 17 for 6s, vol. 18 for 11s.; Liddell and Scott's Greek-English Lexicon (7s. 6d.), 4s.; Smith's Latin-English Dictionary (7s. 6d.), 3s.; Remsen's 'Organic Chemistry,' 3s. 3d.; Kelly's 'Directory of Chemists and Druggists' (20s.), 6s. 6d.—Beta, 1, Eagle Villas, Pennfields, Wolverhampton.

Miscellaneous.

Two Mahogany Chairs, 25s; three Nests Mahogany Drawers, bevelled edge, gilt, glass labels, £5; Mahogany T.p. Counters; Round Ruby Glass Lamp, £2. Stamp for particulars.—Burge, 2, Fernhead Road, Paddington.

Taken in payment for adverts., cannot be repeated, all new:—Camera half-plate, London make, reversing, swing back, four double slides, with R.R. 7 × 5 lens, iris, tested by expert, £5. Lens, R.R. 5 × 4 iris, leather case, 22s. 6d. Developing Trays (three gross), xylonite, $\frac{1}{4}$, 3s. 9d.; $\frac{1}{2}$, 6s.; $\frac{1}{8}$, 8s. 6d.; enamelled iron, $\frac{1}{4}$, 4s. 3d.; $\frac{1}{2}$, 6s. 6d.; 12 × 10, 18s. dozen. Printing Frames, rounded corners, brass springs, $\frac{1}{4}$, 4s.; $\frac{1}{2}$, 8s.; $\frac{1}{8}$, 15s. dozen. Dark Slides, double, fit Lancaster's Instantograph, two dozen each, $\frac{1}{4}$, 4s.; $\frac{1}{2}$, 5s. 6d. Glass Measures, graduated, six dozen each, 2-dr., 5s.; 2-oz., 4s.; 4-oz., 6s. 3d.; 10-oz., 10s. dozen. Focusing Covers, black twill, lined ruby, two dozen, 30 × 34, 1s. 3d.; 30 × 51, 1s. 9d.; 60 × 48, 2s. 6d. Packages free, cash with order, returned if sold.—Warnes, 6, Rochester Square, N.W. Offers entertained.

For sale. Bent Glass Counter-Case, as Fig. 5 Maw's, little used, splendid condition, length 5 ft. Full particulars and dimensions from—L. L. Stroud, Tewkesbury.

A Trolley which a boy of eight can easily convey 3 dozen syphons and cases on, price 35s.—Arthur and Co., Chemists, Cambridge.

Recipe.—Superior Lavender Water, guaranteed the best in the market, may be considerably reduced, suitable for retail price, 2s., post free.—Mr. McCave, 3, Cottage Place, Romney Street, S.W.

Recipe.—Superior Dental Essence, elegant preparation for the toilet, for cleaning the teeth and imparting an agreeable freshness to the mouth, 2s., post free.—Address as above.

Recipe.—Acid. Acetic, Aromat. Fort., superior preparation, elegant aroma, may be reduced one-half or more with s.v.r. for retail price, 2s. 6d., post free.—Address as above.

Soda Water Appliances.

Soda-Water Machine, Barnett and Foster's, No. 2; list price £45; sell for £15; good condition.—Apply to H., 1, Southwick Street, Hyde Park.

TRADE NOTES AND NEWS.

THE ANDERSTON'S APOTHECARIES' CO., Washington Street, Glasgow, a wholesale and retail business, is understood to be for disposal.

MESSRS. BURROUGHS, WELLCOME AND CO., Snow Hill Buildings, London, E.C., announce that during the months of June, July, and August their London offices, warehouses, and wharf will be closed at 1 o'clock on Saturdays.

MESSRS. S. MAW, SON AND THOMPSON, 7 to 12, Aldersgate Street, London, E.C., announce that on and after July 4 their establishment will close on Saturdays at 1 p.m., instead of 2 p.m. as heretofore.

THE LIQUOR CARNIS COMPANY write with respect to the medal or award allotted to them at the Chicago Exhibition of 1893, which they have not up to the present received. They also enclose a communication from their representative at the exhibition, who points out that the fund reserved for the "distribution of awards" is only £15, a sum ridiculously inadequate for the purpose, and says, "as far as I am able to judge you will receive your diplomas and medals about the same time as the arrival of the Greek Kalends."

MARRIAGE.

PATTISON—JONES.—On the 11th inst., at St. John's, Birkenhead, by the Rev. H. E. Nixon, Joseph Henry Pattison, photographer, Carnarvon, eldest son of Mr. Pattison, chemist, Shrewsbury, to Margaret Jane, daughter of Mr. Henry Jones, Cloughton Road, Birkenhead.

PERSONAL.

MR. A. D. BREEZE, a very active member of Plymouth and District Chemists' Association, has been elected honorary secretary of Plymouth Mercantile Association.

MR. J. COCKS, the energetic hon. sec. of Plymouth and District Chemists' Association, headed the list in the retail section of the successful candidates of the Proprietary Articles Trade Association election.

MR. DAVID HOOPER has been appointed by the Madras Government to officiate as Government botanist and director of cinchona plantations, Nilgiris, until further orders.

DR. ALEXANDER GORDON, L.P.S.I., Dublin, has quite recovered from his recent accident, and has resumed practice.

MR. WM. TAYLOR, chemist and druggist, of Red Lion Square, Heanor, is suffering from the effects of an ammonia bottle bursting, the contents having badly injured his eyes.

COMPANY BUSINESS.

C. I. HOOD AND CO., LIMITED.—This company was registered on May 21, by Isitt and Co., 6, Old Jewry, E.C., with a capital of £10,000 in £1 shares. Object: To acquire and carry on the business of drug and patent medicine manufacturers and vendors, chemists, etc., carried on in the United Kingdom by C. I. Hood and Co. The directors are C. I. Hood, C. Stickney, C. Gordon, and W. Everett.

LATE ADVERTISEMENT.

Assistant Wanted.

ALTRINCHAM HOSPITAL AND PROVIDENT DISPENSARY.—Wanted a Qualified Chemist as DISPENSER and to receive subscriptions of provident members. Applications, stating age and salary required, with recent testimonials, should be sent to the MEDICAL STAFF, Altrincham Hospital, Cheshire, not later than June 30.

DIARY OF THE WEEK.

Secretaries of Societies are requested to send notices of forthcoming meetings not later than Wednesday in the previous week.

TUESDAY, JUNE 23.

ROYAL PHOTOGRAPHIC SOCIETY, at 8 p.m.
"A Practical Demonstration of Colour Screen-Making and Testing" by F. E. Ives.
PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION.
Committee Meeting.

WEDNESDAY, JUNE 24.

PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION (JUNIOR SECTION).
Botanical Excursion to Yelverton and Burrator, conducted by O. A. Reade, leaving Millbay at 2.50 p.m.

THURSDAY, JUNE 25.

PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION (JUNIOR SECTION).
"Outlines of Chemical Philosophy," by J. R. Johnson.

NEW BOOKS AND NEW EDITIONS.

CLINICAL DIAGNOSIS. A practical handbook of chemical and microscopical methods. By W. G. AITCHISON ROBERTSON. 6s. (The Scientific Press, Ltd.)
CHEMISTRY IN DAILY LIFE. Popular lectures by Dr. LASSAR COHN. Translated by M. M. Pattison Muir, M.A. 6s. (H. Greval and Co.)
INVENTIONS AND THEIR COMMERCIAL DEVELOPMENT. A practical handbook for inventors and investors, showing how to invent, what to invent, how to patent, and how to make money by inventions. By JOHN SAMSON, C.E. 1s. (South American Journal, Dashwood House, E.C.)
BURDET'S HOSPITALS AND CHARITIES. 1896. 5s. (The Scientific Press, Ltd.)
THE LANCET AND THE HYDERABAD COMMISSION OF CHLOROFORM. (The Lancet Office, Strand.)
THE FLORA OF DUMFRIESSHIRE. By G. F. SCOTTELLIOTT, assisted by various writers. (Dumfries: Maxwell and Son.)
ELEMENTARY ANATOMY AND SURGERY FOR NURSES. A series of lectures delivered to the Nursing Staff of the West London Hospital. By W. MCADAM ECCLES, M.S. Lond., F.R.C.S. (Scientific Press, Ltd.)
THE FLORA OF THE ALPS. By ALFRED W. BENNETT M.A., B.Sc., F.L.S. In two vols. 30s. (John C Nimmo.)
PHOTOGRAPHY FOR ARTISTS. Brief and useful information respecting the many uses of Photography in various walks of the Pictorial and Allied Arts. By HECTOR MACLEAN, F.R.P.S., F.G.S. (Percy Lund and Co., Ltd., The County Press, Bradford, and Memorial Hall, Ludgate Circus, London.)

MARKET REPORT.

[The quotations here given are in all cases the lowest net cash prices for bulk quantities, and often the articles quoted have to be sorted in order to suit the requirements of the retail pharmacist. The cost of freightage from the chemical and drug works to the various distributing centres must also be considered. It is important that these conditions should be borne in mind in making any comparison between the prices quoted and those of the wholesale drug trade.]

The markets have been generally steady since our last report, and a fair amount of business seems to have been done in most branches. In regard to chemicals, carbolic acid is quiet, tartaric and citric acids are dull, whilst cream of tartar is decidedly firmer. Crude camphor is quite neglected, but the refined article is very firm, and the makers are busily engaged executing orders. Amongst other fine chemicals it may be mentioned that the makers of pilocarpine, having come to an understanding, have raised the price for the alkaloid and its salts. Santonin is offering at easier rates, 6s. to 6s. 3d. being now quoted by the makers. Alkaloids generally quiet and unchanged. Glycerine is very firm, and likely to see much higher prices, whilst menthol is very firmly held at higher rates, 10s. 6d. to 10s. 9d. being now the spot quotation. The drug sales passed off to-day quietly. *Jamacia sarsparilla* sold at a marked advance, whilst good prices were also obtained for *cascarilla bark*. On the other hand, *ipecauanba* is lower, the same applying to *Sumatra benzoin*, *gamboge*, *Jamaican beeswax*, and *cardamom seeds*. Spices are generally unchanged, and the same applies to most heavy oils. Amongst the essential oils star anise and cassia show a further decline. Full details will be found below:—

ACACIA (GUM).—The high prices asked for *Persian gum* are prohibitive and little business has been done. The quotations range from 24s. to 26s. for fine picked, 18s. to 20s. for good sorts, down to 10s. for ordinary block. The market for other varieties remains very flat, without any business recorded. At to-day's auction an average supply amounting to 142 packages was shown, but not a single package sold. *Trieste gum* is in moderate supply and firmly held. A case of medium greyish picked was bought in at £8, and pale grain at the same figure. In addition good amber *Aden* sorts were bought in at 70s. to 80s., medium palish *Suez* at 75s., and frosted brown *Australian* at 46s. per cwt.

ACID, CARBOLIC.—The market is quiet but steady. The current quotations are:—*Crystals*: 34° to 35° C., 6½d.; 39° to 40° C., 7d.; 39° to 40° C. (*detached crystals*), 8d. per lb. *Crude* is quoted at 2s. for 60 per cent., with 75 per cent. at 2s. 4½d. *Liquefied and cresylic* are worth 1s. and 11½d. per gallon respectively.

ALOES.—A very moderate supply only was offered at the sales. The *Cape* variety, which was the only one to attract buyers, showed a slightly easier tendency, 25s. being accepted for fine bright hard, 23s. to 24s. for medium ditto, and 22s. for fair partly

drossy. A parcel of *Curacao aloes* in boxes was all bought in, good brown at 37s. 6d. to 42s., medium ditto at 30s., and ordinary dark capey at 15s. to 20s. per cwt. No *East Indian aloes* was shown.

AMMONIACUM (GUM).—Supplies of this article are small, but, on the other hand, little demand has been shown lately. To-day 2 cases of palish loose drop were bought in at 55s. per cwt.

ANNATTO SEEDS.—A moderate supply, amounting to 25 cases, was offered, but met with little inquiry. The only parcel sold was 7 bags of fair bright *Coconada* seed, which realised 3d. per lb., subject to approval, whilst *Jamaican* seed was bought in at 3½d., and *Madras* at 5d. per lb. The market is tending lower.

ANTIMONY.—Fifty cases of crude *Japan* antimony were bought in to-day at £19 10s. per ton.

BENZOIN (GUM).—The market is still quiet and the majority of the catalogue to-day was bought in at nominal rates. Out of a total of 296 packages, *Siam gum* was represented by five cases. For a case of medium to bold loose pale almonds £31 was accepted, whilst £19 10s. was paid for small ditto; £12 10s. for palish mixed loose and blocky small almonds, and 43s. for dark siftings in block. The remaining case of the parcel, which consisted of small loose, clean drop was bought in for £10 per cwt. *Sumatra gum* met with hardly any inquiry, and sales were only made at a further decline of about 7s. 6d. per cwt., £7 17s. 6d. being accepted for eight cases of good pale clean marbled seconds. The only additional lot sold was seven cases of ordinary, rather dull, seconds, with fair centres, but very false packed sides. *Palembang gum* was all bought in, fair seconds in tins at 35s., and barky thirds at 27s. 6d. per cwt.

BUCHU LEAVES.—The market is tending easier. At to-day's sales 66 bales of *round* leaves were shown, but the demand was very moderate and prices irregular, since at first 3¼d. was paid for fairly bright yellowish-green leaves, but subsequently 3d. was accepted for the same quality, and 2¼d. for a rather duller grade.

CALUMBA ROOT.—No sales were effected to-day, all the parcels shown being held for high prices. Ordinary brownish sorts were bought in at 15s. to 16s. per cwt, whilst fair yellow washed root is held for 40s. per cwt.

CAMPHOR (REFINED).—There is no change in the manufacturers' quotations, but the market is very firm, and the makers are busily engaged executing orders.

CAMPHOR (CRUDE).—The market is unchanged and no business is reported. The nearest quotation for *Formosan* camphor is 80s. per cwt. *c.i.f.* July to August shipment.

CANNABIS INDICA.—Forty bales of greenish-brown stalky *Bombay* tops were bought in at 2½d. per lb.

CARDAMOMS.—A good supply, amounting to about 180 boxes, was shown to-day, and about half of these sold at rather easier rates, especially for *seed*, which shows a drop of about 6d. per lb. The following prices were paid:—*Mangalore*: Fine bold plump pale, 2s. 10d. to 2s. 11d.; small yellowish, part split, 2s. 2d. to 2s. 3d. *Mysore*: Extra fine bold pale, 3s.; medium to bold plump pale, 2s. 6d. to

2s. 11d.; good plump palish medium, 2s. 2d. to 2s. 4d.; medium yellowish, 1s. 10d. to 2s. 11d.; small mixed browaish speckled and split, 1s. 7d. to 1s. 9d. For *seed* 2s. 6d. to 2s. 9d. was paid. A parcel of 20 cases of seeds, catalogued as *cardamom seeds*, but which were really "camphor seeds," was bought in.

CASCARILLA BARK.—Is in very good demand at advanced rates. To-day forty packages were shown. For good sound silvery quill 47s. to 49s. was paid, whilst 40s. to 45s. was accepted for fair brown part stringy bark and 33s. 6d. for siftings.

CASSIA FISTULA.—Forty bags of fair *Dominica* pods realised 16s. per cwt. in auction to-day. Another parcel of lean wormy quality was bought in.

CASTOREUM.—Four packages of this article were shown to-day. A box of pile I. was bought in at 55s., pile II. at 45s., whilst the remainder, which consisted of pile III. and trimmings, realised 27s. 6d. per lb.

COCA LEAVES.—None were sold in auction. Some good green *Truxillo* leaves were bought in at 1s. 3d., whilst *Huanoco* of fair quality were withdrawn at 1s. 2d. per lb.

COLOCYNTH.—The market is very firm. Thirteen cases were catalogued of *Turkey colocynth*, but none was sold. It was stated, however, that a portion had been sold previously at 2s. 8d., and the remainder of the parcel was bought in at 3s. per lb. Fair *Spanish* offers at 1s. to 1s. 2d. per lb.

COAL DISTILLATION PRODUCTS.—*Toluol* is much dearer, and now quoted at 2s. 6d. per gallon for *pure*. *Benzole* is a trifle easier at 2s. 4d. for 50 per cent., with 90 per cent. at 2s. 8d. per gallon. *Creosote*: 1½d. per gallon. *Crude naphtha*: 30 per cent., at 120° C, quotes at 11d. per gallon. *Pitch*: 33s. per ton *f.o.b.* *Tar*: 11s. 6d. per barrel for *refined*, and 13s. for *crude*.

CREAM OF TARTAR.—On the spot quotations are unchanged for fine white *French Crystals*, which are quotable at 95s., but *powder* is rather firmer at 97s. to 100s. for German brands. Cablegrams from Bordeaux advise a firm market, 90s. *f.o.b.* having been paid.

CUTTLEFISH.—Ten casks of good white dry bone, part broken, from Port Chalmers sold at 3¼d. per lb. in auction.

ELEMI (GUM).—The market is overstocked with this article, and it seems difficult to find buyers at the prices now asked. Twenty-one cases were shown to-day, but none found buyers. *Singapore gum*, rather dirty, but of good aroma, was bought in at 21s., and pale clean *Manilla* at 25s. per cwt.

ERGOT OF RYE.—Is still very slow of sale. The supply offered to-day was only moderate, but the business was confined to thirty bags of bold wormy old *Spanish* ergot, which changed hands at 4d. per lb. Sound quality is held for 9d. per lb.

EUPHORBIIUM.—Ten serons of ordinary small gum sold in auction at 18s. 6d. per cwt.

GALLS.—*China* are quite neglected, and quoted nominally at 56s. to 57s. per cwt. In *Persian* galls a fair business has been done in *blues* at 53s., and *greens* at 45s. There are also enquiries for *whites*, but few parcels are offering.

GAMBOGE is again lower. Twenty-eight cases were offered to day, and met with a good demand, although the prices paid show a distinct decline on those of last week. Ten

cases of good free *Siam* pipe slightly blocky realised £8 15s., whilst £7 5s. was paid for medium ditto subject to approval and £7 10s. for good pickings. In addition, seven cases of mixed blocky and free *pipe* sold at £8 per cwt.

GINGER.—*Cochin* root is steady, but quiet. In auction 33s. to 35s. was paid for ordinary to fair lean rough small, and 28s. 6d. for common ditto. Native kinds sold at 52s. for medium half cut, and 62s. 6d. for bold ditto. *Bengal* root was bought in at 15s., whilst mouldy limed *Japan* realised 15s. to 16s. per cwt. *Jamaican* root sold at full to rather dearer rates, 84s. 6d. to 88s. 6d. being paid for good bright, and 70s. to 80s. for ordinary medium to fair bright washed.

GLYCERIN—Remains a very firm market, with quotations ranging from 70s. to 73s. for double distilled *German* glycerin of 1260 gravity. It is generally expected that much higher prices will be seen very shortly.

GUAIACUM (GUM).—No good quality was offered to-day. Thirty cases of drossy quality were bought in at 9d. to 1s. per lb.

HONEY—Was in fair demand to-day, with out any alteration in price. Nineteen packages of *Jamaican* sold at prices ranging from 28s. 6d. for good pale clean, 23s. for fair yellow down to 20s. 6d. for rather foul brown. A parcel of *Californian* honey also changed hands at 25s. to 29s. per cwt., whilst pale *Honolulu* was bought in at 25s., and *New Zealand* at 45s. per cwt.

IPECACUANHA—Was in moderate supply to-day, but a fair amount of business was done. Of 24 bales of *Rio* (Brazilian) 18 sold at a decline of 1d. to 2d. per lb., 5s. to 5s. 3d. being paid for medium to good stout annulated root. 11 bags of *Carthagena* (Columbian) root all sold at 3s. 10d. to 4s. for stout root of good quality.

INSECT FLOWERS.—Twelve bales of open, part broken flowers were bought in to day at 115s. per cwt. Six kegs of *powder* sold without reserve at 7d. per lb. The *Apotheker Zeitung* reports that this year's crop of pyrethrum flowers will be very small, as the plants have suffered much from the attacks of an insect analogous to phylloxera, and large districts, in which the plants were formerly cultivated, have been devoted to the growth of tobacco. Sellers are stated to ask absurdly high prices, and to be unwilling to sell, as they anticipate a rise in price.

JALAP—Very firmly held. Twenty-one bags of sound *Vera Cruz* root were bought in to day at 8d. per lb. There are no sellers under 7d. per lb.

KOLA NUTS—Are selling at lower rates. To-day a bag of fair *West Indian* nuts sold at 6½d. per lb., whilst 5½d. was accepted for a box of slightly wormy and mouldy quality, and 4d. for bad mouldy ditto.

LIME JUICE.—Good *Jamaican* juice was bought in to-day at 1s. 3d. per gallon, whilst dark quality, offered without reserve, fetched 7d. to 9d.

MUSK—A moderate supply only was offered and met a fair demand. Six tons of pile I pods, partly thin blue skin, sold at 55s. per oz., whilst 4d. was paid for trimmings.

MATICO—Good quality leaves offer privately at 1s. 2d. per lb. To-day three serons of ordinary stalky quality were bought in at this figure.

MYRRH (GUM).—Very freely offered, but

little business is done, except when offered without reserve. In this instance medium to fair native picked gum sold to-day at 50s. to 60s., dusty siftings at 19s., and pickings at 12s. per cwt. Fine native picked was bought in at £5 10s., and chips at 75s. per cwt.

OILS (ESSENTIAL).—*Star anise* oil is again lower, and can be bought on the spot at 7s. 6d. per lb. For delivery 6s. 4d. *c.i.f.* is quoted for July delivery, and 5s. 9d. *c.i.f.* for October to December ditto. Business has been in *Cassia* oil of 70 to 75 aldehydic strength at 7s. 6d. on the spot, whilst for distant shipment 5s. 9d. per lb., *c.i.f.* terms, is quoted. *Ylang-Ylang*: 5 bottles sold to-day at 3s. 9d. to 4s. 2d. per oz. *Sassafras*: 1 case realised 2s. 3d. per lb. In addition, several lots of essential oils were bought in at the drug sales, including *Citronella*, at 1s. 6d.; *Fisher's Nutmeg*, at 6d.; fair native *Sandalwood* at 7½d. per oz.; *H. G. Hotchkiss' Spearmint* at 10s. 6d.; and *Cinnamon* at 6d. to 1s. per oz.

OILS (FIXED) AND SPIRITS.—*Castor*: *Italian* oil is still quoted at 30s. 9d. to 31s. 6d. per cwt. *c.i.f.* terms for best quality oil. *Cotton* is firm. *Refined* oil quotes at £15 15s. to £16 5s. on the spot according to make and package. *Coco-nut* is in fair demand at unchanged prices; *Ceylon* at £22 10s. for pipes, and *Cochin* at £26 10s. to £26 15s. *Linseed* is firmer, and for oil in barrels £18 2s. 6d. is now asked. *Rape* is much dearer and the closing prices show an advance of about 30s. on those of last week. For *Refined* oil on the spot £24 to £24 10s. is now asked. *Palm Lagos* is dearer, and now quotes at £25 15s. on the spot. *Olive*: *Spanish* quotes at £29 to £30, and *Lerant* at £29 on the spot. *Turpentine* is rather lower in price than when last reported, but the market closes firm at 19s. 10½d. for *American* spirit on the spot. *Petroleum* oil is flat, but practically unchanged. *Russian* being quoted at 5d., *American* at 5½d. to 5¾d., and *water white* at 6½d. per gallon. *Castor*: At the drug sales *East Indian* firsts were bought in at 3½d., and seconds at 3d. per lb., whilst *Italian* oil was withdrawn at 4d. per lb.

PURGE.—One case out of three offered in auction sold at 6s. per lb.

QUINCE SEEDS.—Out of ten bags of broken seed imported from the Cape two sold in auction at 1s. 5d. per lb.

RHURARB.—The supply offered to-day was very moderate amounting only to about 90 chests—Of these 28 changed hands at the following rates:—*Shensi*.—Smallish round trimmings, mixed fracture, 1s.; medium to bold round spongy with mixed fracture, 9½d.; round boldish pickings, 9d. per lb. *Canton*: Bold, round and flat three-fourths inky fracture, 1s. 1d.; medium flat, with pinky fracture, 11d.; good bold round pickings, 11d.; medium round, with even pinky fracture, 10d. to 10½d. *High dried*, medium and bold flat mixed fracture, 8½d. per lb.

SARSAPARILLA.—*Jamaican* root is much dearer. To-day 9 bales of genuine grey root, newly arrived, sold readily at 1s. 8d. to 1s. 9d. per lb., whilst a single bale of mixed red and yellow *Jamaican* fetched 1s., subject to approval. *Honduras* was bought in at 1s. 1d., and *Mexican* at 6d. per lb.

SEEDS (VARIOUS).—*Coriander*: At the spice sales 40 bags of *Morocco* seed realised

8s. 9d. per cwt. *Foenugreek*: Six bags sold to-day at 7s. 6d. per cwt. *Fennel*: Bought in at 17s. 6d. to 20s. per cwt. *Maltese Cummi* was bought in at 35s. to 37s., *Manila Sesame* at 25s., and genuine *China Star Anise* at 92s. 6d. per cwt.

SENNA—Was in moderate supply, and the majority of the catalogue was bought in. 15 bales of *Tinnevely* pods realised 2¼d. per lb., whilst ordinary dull yellowish to bold green leaves sold at 1¼d. to 3¼d. per lb.

SHELLAC.—There has been a steady demand during the week, and a fair business has been done, especially in *Second Orange*, at fully steady rates, *TN* basis being quoted at 93s. per cwt. The weekly sales passed off very quietly. *TN Orange* sold at about steady rates, 92s. to 93s. being paid. *Garnet* was quiet, whilst *Button* sold without reserve at easy rates. The prices paid were as follows:—*Orange*: Bright curly *SM*, 94s. Strong red curly *TN*, 92s. to 93s.; weak red flat, 91s.; fair cakey, 90s., down to 88s. for weak livery. *Garnet*: Fine *AC* sold at 84s., and cakey "snake" at 83s. *Button* sold at 84s. to 88s. for fair to good pale firsts, with *BL1* at 84s., and *BL2* at 83s. per cwt.

SPICES (VARIOUS).—*Cloves* are very dull of sale. A few bales only of fair quality *Zanzibar* sold at 2d. per lb. in auction, whilst *Am'oyna* were bought in at 3½d. per lb. *Cassia lignea*: Broken quills were bought in at 22s. per cwt., whilst privately good quality has sold for 32s. *Pimento*: The market is quiet but steady, 2½d. to 2¾d. being paid in auction for medium to good fair quality. *Capsicums*: Medium to small yellow *Coconada* sold without reserve at 8s., whilst medium bright *Telicherry* were bought in at 24s. A few kales of ordinary thin *Bombay* fetched 6s. 6d. per cwt. *Chillies*: Ordinary *Zanzibar* were bought in at 27s., with extra fine *Japan* at 60s. per cwt. *Pepper*: Quiet. In auction *Singapore* was bought in at 2¾s.; *Aleppo* sold at 2¾d., and fine bold *Mangalore* at 4¼d. to 4¾d. *White pepper*: Dull of sale, *Penang* being all bought in at 3¾d., whilst *Siam* sold at 3¾d., and mixed *Ceylon* at 3¾d. per lb.

TURMERIC—Remains dull of sale. A few bags of rough bulby *Chinese* finger sold at the spice sales at 6s. per cwt.

TRAGACANTH (GUM)—Is steady, a fair amount of business having been done privately since the last gum sales. The current quotations are as follows:—Firsts (fine pale "druggists" gum), £14; seconds, £12 to £13; thirds, £10 10s. to £11 10s.; fourths, £8 to £10; yellow and pinky, £6 to £7 10s., down to 35s. per cwt.

VALERIAN ROOT.—Good *Belgian* root offers privately at 23s. per cwt. To-day four bales were bought in at 25s. per cwt.

VERMILLION.—Twenty cases of *Chinese* vermilion ("Wingkat" brand) newly arrived were bought in to-day at 2s. 5d. per lb.

WAX (BEES).—*Jamaica* wax to which variety the majority of to-day's business was confined sold at a decline of about 2s. 6d. per cwt., £8 to £8 7s. 6d. being paid. For *Madagascar* of fair quality, £6 15 was paid, whilst £6 10 to £7 10s. was accepted for *Australian*, £7 5s. for *South American*, and 30s. for greasy *Aden* offered without reserve.

MANCHESTER CHEMICALS AND DRYSALTERIES, June 23.—The market is quiet, with no change in heavy chemicals to note specially. Bleaching powder is, perhaps, a turn easier. One feature is the hardening tendency of yellow prussiate. Although a large quantity of foreign has been thrown on the market, local makers hold firmly for 7½d., and the probability is that before the end of the week another farthing will be added. Sulphate of copper is rather lower, £18 being the figure for best brands here. Brown acetate remains very dull at £4 5s. per ton at station here. Green copperas is firm at 33s. alongside ship Salford docks, and 38s., *f.o.b.*, Liverpool for best Lancashire. Alum continues well sold, and sulphate of alumina is firm at £4 17s. 6d. for small lots, ex warehouse. Lump alum in tierces, £5 2s. 6d., on rails. A fair business passing in drysalteries, but anilines are quiet. Benzols and carbolics dull.

NEWCASTLE CHEMICAL MARKET, June 23.—This line of business on Tyneside jogs along steadily, Baltic shipments continuing fair. New orders, however, drop in slowly. Prices practically unchanged thus:—Bleaching powder, according to markets, £6 10s. to £7 10s. Soda crystals, 37s. 6d. to 45s. Caustic soda, 70 per cent., £7 5s. to £7 15s. Soda ash, 52 per cent., £4 5s. Alkali, 52 per cent., £5. Sulphur, £3 17s. 6d. to £4.

LIVERPOOL MARKET REPORT, June 24.—Linseed is dull and inactive in all positions; 200 bags of good Turkish sold at 35s. per 416 lbs., and 100 superior Turkish at 36s. to 36s. 3d. Canary seed is in little demand, and the few sales made have been Turkish at 27s. to 28s. per 464. Quillaya bark: 4 tons of Chilian have been disposed of at £12 5s. per ton, and smaller quantities better quality at £12 10s. Beeswax: 14 bales of Gambia sold at £7 12s. 6d. per cwt., and 5 sacks of Chilian at £7 7s. 6d. per cwt. Carnauba wax, yellow varieties, is in good demand. Kola nuts: 8 bags dried secured buyers at 3½d. per lb. Chillies: Good Sierra Leone fruit bring 33s. per cwt. Ginger: About 600 bags of African have changed hands during the week, Sierra Leone at 19s. per cwt., Moravian at 16s. 6d. to 17s. Castor oil shows a steady upward inclination; Calcutta, good seconds, is now at 2¾d. per lb.; French, first pressure, at 2½d.; Madras at 2¾d. to 2½d.; and Belgian, to arrive, at 2¾d. per lb. Olive oil is slightly easier in price. Malaga is at £29 10s. per tun, and prices generally range from £28 to £35. Linseed oil: Liverpool makes, 18s. 9d. to 20s. per cwt. Cottonseed oil steady at 16s. 3d. to 17s. per cwt. for Liverpool refined; American cheaper, 16s. 9d. per cwt. Spirits of turpentine is again cheaper, 20s. 3d. to 20s. 6d. per cwt. Petroleum: Russian, 5¾d. per gallon; American, 6¾d. to 7½d. per gallon. Sal ammoniac: £37 per ton, £35 for seconds. Bleaching powder: £7 to £7 5s. per ton. Copperas: Lancashire, 38s. per ton; Welsh, 36s. Sulphate of copper: £18 per ton. Potashes: 20s. 9d. per cwt. Pearlash: 35s. per cwt. Cream of tartar: Spot price for finest white 100s. per cwt., prices for forward delivery are firmer. Chlorate of potash: 7½l. per lb. Prussiate of potash: 7¾d. per lb. Bichromate of potash: 4½l. per lb. Caustic soda: 70 per cent., £7 12s. 6d. to £7 15s.; 60 per cent., £6 12s. 6d. to £6 15s.

MISCELLANEOUS NEWS.

FOOD AND DRUGS ACT CASES.—At the Wolverhampton Stipendiary's Court on June 10, John Caswell, chemist, and Charles Frank Lloyd, were fined, the first-named 20s. and costs, for selling quinine wine minus 20 per cent. of the prescribed proportion of quinine, and Lloyd 40s. and costs for selling ipecacuanha wine adulterated with salicylic acid contrary to the Pharmacopœia. The defence in each case was that the wines were sold as received. Caswell admitted that a much larger quantity of his wine would have to be drunk for purchasers to derive the benefit to which they were entitled.

THE PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION held a committee meeting last Monday morning at headquarters, those present being Messrs. C. J. Park, J. G. Netting, J. Cocks, F. Maitland, A. D. Breeze, J. H. Bailey, and J. W. Hunt. The result of the chemistry examination held on June 3, at Plymouth Science, Art, and Technical Schools, was brought forward by the Secretary (Mr. J. Cocks). The examination was promoted by the Local Chemists' Association, and the examiners, Mr. J. Burns Brown and Dr. Thackrah, allowed 100 marks for the written paper, and 100 marks for the practical work. Prizes have been awarded the first three of the following:—

	Practical.	Theoretical.	Total percent.
1. Herbert J. Reynolds	95	70	82½
2. Alfred Downing	75	75	75
3. Maurice Treener	70	78	74
4. Samuel H. Estlick	80	55	67½
5. Thomas Darke	35	55	45
6. John Waldon	30	35	32½

A vote of thanks was accorded Mr. J. B. Brown and Dr. Thackrah for lending their services in examining the papers.

A "FARCICAL" ANALYSIS!—The North Dublin Guardians cannot understand why Sir Charles Cameron, in analytical reports on samples of milk, refers to one containing 12 per cent. of cream as "very poor," while another with only 9 per cent. is said to be "rich." Some of the Guardians said the analyses were a "farce." Sir Charles Cameron attributes the apparent discrepancy to the unreliability of the milk testers, and says that the dozens of people who have on his certificates been heavily fined can hardly regard chemical analysis as a "farce."

OXALIC ACID IN MISTAKE FOR SALTS.—An inquest was held last week at Cheltenham on the body of Joseph Horsham, labourer, who died at the hospital on the 5th inst., from the effects of oxalic acid taken in mistake for Epsom salts. The Jury returned a verdict of "Death by misadventure."

THE SALE OF CHLOROFORM.—Dr. J. E. Kenny, City Coroner, held an inquest on Tuesday in the Meath Hospital with respect to the death of Mrs. Anne Kerrigan, 16 Rathlin Terrace, Kimmage, County of Dublin. The Jury found that death was due to poisoning by chloroform accidentally taken to relieve neuralgia. They added the following: "We consider that the sale of

chloroform under circumstances such as were detailed in this case without an order from a doctor is dangerous and ought to be discouraged."

ROBBERY AT A LONDON POST OFFICE.—Mr. W. H. Jones, chemist and druggist, 406, Caledonian Road, King's Cross, is also a sub-postmaster. Early in the present week, according to his statement, a fashionably attired young lady entered his shop, and after purchasing a few stamps, she turned to leave the shop, upon which Mr. Jones retired to his parlour, thinking the lady had left. However, on being called to serve another customer, he discovered that the till had been robbed of about £130 in cash, and stamps to the value of £25.

INCANDESCENT MANTLES.—At the meeting of the Association of Gas and Water Engineers in Berlin, Dr. Kossmann reported that he had discovered in monacite a hitherto unknown earth, which he has named Kossmium oxide. It is said to possess important advantages in connection with the preparation of incandescent mantles. He stated that it is more abundant than thoria, and can be produced at a cheaper rate.

CHEMIST'S CLUB OUTING.—The first outing of the Chemist's Club took place on Sunday last, when a very pleasant day was spent at Windsor, and every district in London was represented. Driving and boating parties were organised during the afternoon, and the party returned after a most enjoyable day. These outings will be held on the third Sunday in each month till the end of September, and the July outing will be a drive to Weybridge. Particulars can be obtained by sending a post card to Mr. Cannar, Hon.-Sec., Gen. Committee, Chemist's Club, 2, Farringdon Avenue, Ludgate Circus, E.C.

THE 'TOURIST GUIDE TO THE CONTINENT,' published for the Great Eastern Railway Company at 30, Fleet Street, E.C., at the price of sixpence, is an excellent illustrated handbook, and should be obtained by everyone proposing to spend a holiday abroad. Among the fresh features of this edition are a series of Continental maps, a chapter upon cycling routes in Holland, Belgium, and Germany, and a chapter entitled "Dull Useful Information," giving particulars as to the cost of continental travel.

AN AUSTRALIAN "CANCER SPECIALIST," Joseph Alfred Davis, was convicted recently at the criminal sittings at Melbourne, Australia, before Mr. Justice Hood, for causing the death of two persons who had gone to him for treatment. In passing sentence, the judge said that Davis, without having the slightest knowledge of anatomy, had burned a hole through the abdominal wall in order to apply an ointment containing corrosive sublimate—an old remedy to external cancer, but quite inapplicable for internal cancer. The man was either inconceivably ignorant or rash to the verge of insanity. Davis was sentenced to six months' imprisonment on each charge, the sentences to be concurrent.

EXCHANGE.

Prepaid Notices not exceeding thirty words, including name and address, are inserted at a fee of Sixpence each, if they do not partake of the nature of ordinary advertisements. For every twelve words (or less) extra, the charge is Sixpence. A price, or two initials, will count as one word. The fee for use of the Serle Street address, including re-direction of replies, is Sixpence. The right is reserved to omit any notice if considered necessary. All communications should be addressed "Pharmaceutical Journal," 5, Serle Street, Lincoln's Inn, London, W.C., where notices can be received until 10 a.m. on Thursdays.

OFFERED.

Books, etc.

A book of 130 Well-tryed Recipes for Chemists and Druggists, comprising well-selected formulæ for general, remedial, veterinary, toilet, and everyday preparations. Post free, 1s. 6d.—Tully, Chemist, Hastings.

Free. Dr. Woodville's 'Medical Plants,' 3 quarto volumes, 210 finely-coloured plates, pubd. £8 11s. 6d., only 15s.; 'Pharm. Journ.,' first 15 vols., bound, 15s.; Barnes' 'Practical Midwifery,' two illustrated

vols., pubd. 36s., 12s. 6d.—Davis, "Chestnuts," Gordon Hill, Enfield.

Miscellaneous.

For Sale, Pindar's Fig. B. Rotary Pill Machine, 5 gr. pills, extra rollers and plates for 3 and 4 grs., and Fig. 3, No. 1, 5 gr. piping press, altogether costing £19 5s., thoroughly good condition, first best offer taken.—Du Var, 13, Orford Hill, Norwich.

Lot of good Shop Fittings, cheap. Mahogany drawers, with bevel-edge glass labels; mahogany-top counters, shelving, cornice, round ruby lamp. Offers invited. Stamp for particulars.—Burge, 2, Fernhead Road, Paddington, W.

Photographic.

"A" Ordinary Kodax, fully charged with spool for 24 exposures. Has been very little used. Cost 26s. Sent, carriage paid, half-price.—"Photo," 'Pharmaceutical Journal' Office, 5, Serle Street, Strand, W.C.

WANTED.

Year-Books of Pharmacy, published before 1892. State lowest price to—"Year-Book," c.o. 'Pharm. Journal,' 5, Serle Street, W.C.

FIRE AT ROTHBURY.—Early on Wednesday morning, June 3, smoke was observed issuing from the premises of Mr. Athey, pharmaceutical chemist, Rothbury, but willing helpers being promptly on the scene, the fire was extinguished before much damage had been done.

EXPENSES PAID!—The Dublin Corporation resolved recently, in a temporary fit of economy, to allow their chemist, Sir Charles Cameron, to attend the forthcoming Sanitary Congress at Glasgow at his own expense; they have now decided to send him as a delegate at the expense of the city.

FROM DISPENSARY TO WORKHOUSE.—At a recent meeting the South Dublin Guardians objected to laxity on the part of some of the dispensary doctors in not defining in many cases the complaints, except as "pains," in tickets for admission to the workhouse.

DRUG CONTRACTS IN IRELAND—In consequence of the alleged irregular appointment by the Mullingar Board of Guardians of a local drug and medicine contractor, without first making a comparison between the several tenders submitted, and of the serious loss thereby entailed on the rate-payers of the Union, the Local Government Board has directed an inquiry on oath into the matter on the 15th inst. and following days. It is stated that the most commonly used drugs could have been supplied at a much cheaper rate by the rejected than by the successful contractor, and that the guardians had improperly permitted the existing contractor to make special charges for drugs not on the authorised list. The guardians meanwhile plead justification for their action, and have instructed their solicitor to represent them at the inquiry.

THE ABERDEEN CHEMISTS' ANNUAL EXCURSION has been postponed from July 1 to Wednesday, July 8, when the members and friends will proceed by the first train to Aboyne. Permission has been granted by Sir W. C. Brooks to drive through the Forest of Glen Tana to the foot of Mount Keen. Ample time will be allowed for those who may wish to ascend the mountain. Mr. John Cruickshank, Hon. Sec., 42, George Street, Aberdeen, will be glad to hear from those who propose to attend before Wednesday, July 1.

PERSONAL.

SIR ROBERT JACKSON, Governor of the Apothecaries' Hall of Ireland, has been elected Chairman of the Pembroke Town Commissioners, Dublin.

MR. E. SAVILLE PECK, pharmaceutical chemist, and Hon. Sec. of the Cambridge Pharmaceutical Association, has had the B.A. degree of the Cambridge University conferred upon him, being the only one in the First Class of the Chemistry Special, Part II. Mr. Peck some years ago obtained the Pharmaceutical Society's Herbarium medal, and it is his intention to continue in the practice of pharmacy.

MR. J. ARTHUR HUGHES, analytical and pharmaceutical chemist, son of Mr. J. P. Hughes, of Crickhowell and Abercorn, has been elected a Fellow of the Chemical Society.

MARRIAGE.

BOTHAM—PULLEN.—On June 18, at St. John's, Brixton, London, by the Rev. A. E. Tonkin, William Bland Botham, pharmaceutical chemist, Bournemouth, to Florence, daughter of the late William Pullen, Brixton.

LATE ADVERTISEMENTS.

Agency.

A FIRM with very commodious offices, show and stock rooms, in one of the wealthiest and most important positions, are open to undertake sole London AGENCY for a good manufacturing house, provincial or foreign. Could push business through travellers. Address, AGENCY, care of T. B. Browne's Advertising Offices, 163, Queen Victoria St., E.C.

Assistant Wanted.

SHANGHAI.—Junior ASSISTANT wanted for a firm of Chemists and Druggists. One who has had about 4 years' experience of the business. Age 18 or 19. Scotchman preferred. Must be sharp, and good writer. 4 years' agreement to be signed. Passage paid out. Apply, stating full particulars of experience, to T. L., "Pharm. Journal" Office, 5, Serle St., London, W.C.

Engagement Wanted.

DISPENSER. Apoth. Hall Qualification. Æt. 31. 10 years last berth. Well up in Photography. Foreign appointment preferred. **RAND**, 14, Bloom Park Rd., Fulham, S.W.

DIARY OF THE WEEK.

Secretaries of Societies are requested to send notices of forthcoming meetings not later than Wednesday in the previous week.

TUESDAY, JUNE 30.

PHARMACEUTICAL SOCIETY.
Benevolent Fund Committee.
Finance Committee.
General Purposes Committee.

WEDNESDAY, JULY 1.

PHARMACEUTICAL SOCIETY.
Council Meeting at 11 a.m.
PLYMOUTH, DEVONPORT, STONEHOUSE AND DISTRICT CHEMISTS' ASSOCIATION (JUNIOR SECTION).
Botanical Ramble to Batten, Doversand, and Wembury, leaving Headquarters at 2.30 p.m.

TRADE NOTES AND NEWS.

MESSRS. BARCLAY AND SONS, LTD., of Farringdon Street, E.C., send a handy price-list of goods in constant demand, including disinfectants, medicines, hair washes, toilet articles, photographic goods, and miscellaneous articles. Many of these are put up specially with the retailer's name and address printed upon the label, and chemists and druggists who deal in specialties will find the list well worthy of reference.

MIDLAND APOTHECARIES' CO., LTD.—The annual meeting of this Company was held at 37, Waterloo Street, Birmingham, on Friday, 19th inst., Mr. F. H. Prosser in the chair, when a dividend of 7½ per cent. was declared. It was also resolved to purchase the business of Messrs. Lake, Millar and Co., of Birmingham, chemists' sundries manufacturers, and to appoint Mr. E. J. Lake one of the managing directors.

MESSRS. WRIGHT, LAYMAN AND UMNEY, of Southwark Street, announce that their warehouse will be closed for stock-taking on Monday, June 29, and Tuesday, June 30. They desire their friends to anticipate their requirements as far as possible.

MESSRS. BLONDEAU ET CIE. announce that during the months of June, July, and August of this year the closing time on Saturdays for their factories, warehouse, and offices will be one o'clock.

ORPHAN FUND

OF THE

Pharmaceutical Society of Great Britain

(FOUNDED BY THOMAS HYDE HILLS, 1891.)

For securing the admission of Orphans of Members and Associates of the Society who were subscribers to the Benevolent Fund for 3 years and upwards into Orphan Schools or Asylums.

Subscriptions and donations to this Fund are invited. Donations and legacies are invested, and the income derived therefrom, together with such portion of the Annual Subscriptions as may be deemed necessary, are devoted to the object contemplated by the late Mr. Hills.

Legacy and Donations which have been received.
