P R E F A C E.

As this work differs in many material points from anything which has hitherto been offered to the public, a few observations may be deemed necessary to explain the views of the Compiler with regard to his plan, and the execution of it.

To present the curious reader with a clue for understanding every subject which may incidentally come before his notice was one of his primary objects; and, next to this, he proposed to himself to furnish the inquirer with the means of extending his knowledge as far as he pleased. For the attainment of the first object, he has made his selection of words as copious as possible; and, at the same time, by consulting brevity in his definitions, has endeavoured to keep the work within a convenient size. In the catalogue of words there may possibly be some so obsolete, or grown out of use, and others so modern, or come so little into use, that they may rarely, if ever, be called for by any class of readers: but, as they occur in the writings of those who have acquired an authority or a name, the Compiler did not feel himself justified in rejecting such words, according to his own private opinion. But, in regard to the extent of the definitions and explanations to be given under each head, he had no other rule to follow than his own judgment. Considering himself in the character of a general reader, he looked upon every thing that was necessary to illustrate the meaning and application of technical terms as essential to be admitted into this work; and, on the other hand, whatever did not immediately answer this end, he regarded as irrelevant. The only deviation from this plan will be found under the Synopses of the Sciences, where, to preserve a connection between the different parts of any science, something more than the simple terminology has been occasionally introduced.

As this work is compiled for the use of readers of all descriptions, it is very natural to expect that many will be disappointed at not finding their favourite study more largely discanted upon, and will be apt to charge this omission upon the inadvertence of the compiler; but a moment's reflection will convince every candid reader, that to make a consistent work, suited to the object proposed, it was essential for him to pursue one uniform rule throughout. To have given copious details on any

particular science would have justly subjected him to the charge of having capriciously deviated from his plan; but to have entered equally at large into all the sciences, would have been to make a work totally different from the one proposed. Nothing remained, therefore, but, by following one uniform plan, to comprehend whatever would be most generally useful. It was presumed that no one would refer to a work of this kind for information on a subject in which he was a proficient; but, as few persons are perfectly versed in more than one art or science, they will of course find it serviceable to refer to on subjects with which they are less familiar; and those who wish for more information than what it immediately affords, may gratify their curiosity by consulting the original authors referred to in the body, and at the end, of the Dictionary; by the insertion of which, the Compiler's second principal object has been attained.

It would have been very agreeable to him, if, in every instance, he could have rendered his definitions and explanations correct and distinct; but, owing to the scanty information to be derived from ancient sources, and the vague, fluctuating, and often contradictory representations of modern writers, he has not been enabled always to succeed to the extent of his wishes. In some sciences, as Chemistry, both the nomenclature of the science, and the science itself, are subject to such changes, as to render the most general statements necessary in order to guard against falling into contradictions: in Botany, and other branches of Natural History, writers have made so free with the nomenclature, by coining terms of their own, that they have involved the whole in a labyrinth of words, from which no one could extricate himself, but by adopting some such course as that which has been pursued throughout this work,—of translating all the synonymous appellations of different writers into one language, like that of Linnæus, which has justly acquired a higher degree of authority than that of any other writer of the same date. The Compiler feels it, however, necessary to add, that he has made these remarks less with a view of casting a censure on others, than of pointing out the difficulties to which he himself has been exposed.

There is one more particular, in respect to the plan of this work, which may demand some explanation in order to guard against disappointment; namely, that, although this work professes to embrace the whole circle of the Arts and Sciences, yet the proper names of particular persons and places are excluded from the number, on the ground that they admit of description rather than definition, and are, therefore, more fitted for an Historical than a Technological Dictionary. But the names of communities, sects, &c. were not considered of this sort; because, being given on the ground of some general principle, or common property, they admitted of a precise explanation like other common names.

Although the Compiler has thought proper to say thus much by way of explanation, he is far from supposing that, in a work of this magnitude and multifarious nature, there are not oversights and inaccuracies which will call for the indulgence of the reader; but he trusts that no error has been suffered to escape the press which can materially affect the sense, or diminish the usefulness, of the work.

For the purpose of preserving an orderly arrangement, and assisting the reader in finding the particular application of any word, each definition has been headed by the name of the science to which it belongs, put in an abbreviated form; of which the following is an explanation:—

LIST OF ABBREVIATIONS.

AGRIC. Agriculture.	DIAL. Dialling.	MECH. Mechanics, or Me-
ALCH. Alchemy.	DIOPT. Dioptrics.	chanic Arts.
ALGEB. Algebra.	ECC. Ecclesiastical History.	MED. Medicine.
ANAT. Anatomy.	ELEC. Electricity.	MET. Metaphysics.
ANT. Antiquities.	ENT. Entomology.	METAL. Metallurgy.
ARCHÆOL. .. Archæology, or Anti-	ETH. Ethics.	MIL. Military Affairs.
quities of the Middle	FALCON. .. Falconry.	MIN. Mineralogy.
Ages.	FLUX. Fluxion.	MUS. Music.
ARCHER. .. Archery.	FORT. Fortification.	MYTH. Mythology.
ARCHIT. .. Architecture.	GEOG. Geography.	NAT. Natural History.
ARITH. Arithmetic.	GEOM. Geometry.	NUMIS. Numismatics.
ASTROL. .. Astrology.	GRAM. Grammar.	OPT. Optics.
ASTRON. .. Astronomy.	HER. Heraldry.	ORN. Ornithology.
BIBL. Biblical Subjects.	HORT. Horticulture.	PALM. Palmistry.
BOT. Botany.	HUSBAND. .. Husbandry.	PER. Perspective.
CARP. Carpentry.	HYD. Hydrostatics.	PHY. Physics.
CATOP. Catoptrics	ICH. Ichthyology.	POET. Poetics.
CHEM. Chemistry.	LAW Law.	POLIT. Political Concerns.

ERRATA.

ANATOMY, Plate No. I. (9), *read* No. I. (7).

Ditto Ditto No. II. (10) — No. II. (8).

In the reference to the Plate of Printing (56), fig. 5, referring to the *Press*, should be 6.

ASTRONOMY; the Satellites of } *read* the Satellites of Saturn are seven in number.
Saturn are five in number, &c.. }

AURUM, Gold, the heaviest of } — the heaviest of all the metals *except Platina*.
all metals }

BELUEDERE — BELVEDERE.

There are also some inaccuracies in the Greek accentuation in the former part of the work, which unfortunately escaped the press; but, being of a nature not the least calculated to mislead any who take an interest in this part of the subject, it has not been deemed necessary to notice them as Errata.

N. B. *The Binder will place Plates 1 to 36 inclusive at the end of the first volume, in their numerical order, and Plates 37 to 60 at the end of the second in like manner.*

UNIVERSAL TECHNOLOGICAL DICTIONARY.

A.

A, the first letter of the alphabet, is used either as a word, an abbreviation, or a sign.

A (*Bibl.*) for α , *alpha*, is used in the Revelations of St. John, for the beginning or first; and ω , *omega*, for the end or last.

A (*Ant.*) as a preposition, was employed to signify an office or situation; as,

A *libellis*, he who received all the petitions addressed to the prince: "Epaphroditum *a libellis*, capitali pœna condemnavit." *Suet. Domit.* c. 14. Also on an inscription by Gruterus. D. M. QUADRATO. SCRINIANO. A. LIBELLIS. CLAUDIA. TRYPHERA. FECIT. *Divino Monitu Quadrato Scriniano a libellis Claudia Tryphera fecit.*

A *manu*, i. e. *servus a manu*; a scribe or amanuensis. "Thallo *a manu*, crura effregit." *Suet. Aug.* c. 67. Also on an inscription. QUINTAE. GAM. MARTIAE. N. L. F. AN. VI. ATTICUS. A. MANU. SPONSUS. LOC. D. EX. D. D. *Quintæ Gamie Martiæ Numerii Lucii filie anno VI Atticus a manu sponsus Locus datus ex decreto Decurionis.*

A *memoriâ*, he who dictated the answers of the emperor to petitions, &c. as Festus did for Antoninus, according to Herodian: "Ὁ τῆς δὲ βασιλείας μνήμωνος προσῶς, qui erat imperatori à memoriâ." *Herod.* l. 4, c. 14.

A *pedibus*, a running footman, who attended his master wherever he went: "Pollucem servum *a pedibus* mecum Romam misi." *Cic. ad Atticum*, lib. 8, ep. 5.

A *rationibus*, he who acted as house steward, by keeping the private accounts, &c. "Ante omnes Pallantem *a rationibus* suspexit." *Suet. Claud.* c. 28.

A *studiis*, he who managed the literary pursuits of his master: "Super hos Polybium *a studiis* suspexit." *Suet. Claud.* c. 28. Also on an inscription. TI. CLAUDIUS. LEMNUS. DIVI. CLAUDII. AUGUSTI. LIB. A. STUDIIS. *Titus Claudius Lemmus divi Claudii Augusti libertus a studiis.*

A *voluptatibus*, he who catered for the pleasures of the prince: an office first appointed by Tiberius, according to Suetonius. [For similar examples, vide *Mari. Smet. Inscription.*; *Gruter. Inscription. Vet.*; *Goltz. Thesaur.*; *Spon. Miscell. Antiq.*]

A, as an abbreviation [vide *Abbreviation*] was employed by the Romans on different occasions. 1. By the judges, who, in passing sentence, threw tablets into a box or urn containing the letter A, for *absolvo*, I acquit, if they acquitted the accused: hence this letter is called by Cicero, *litera salutaris*, a salutary or saving letter: but if they condemned the person, they employed the letter C, for *condemno*, I condemn, hence styled *litera tristis*, the sad letter: and in dubious cases they used the letters N. L. *non liquet*, it does not appear plain. 2. By the people in repealing of

laws, when they used the letter A, for *antiquo*, I reject. 3. On inscriptions, coins, &c.; if Greek, A stood for *Argos*, *Athens*, &c.; if Roman, for *Augustus*, *Aulus*, *Atticus*, &c.: when double it signified *Augusti*: when treble, A. A. A. *auro*, *argento*, *œre*; as A. A. A. F. F. *auro*, *argento*, *œre*, *flando*, *feriundo*. 4. In marking the day, A stood for *ante*, as A. D. *ante diem kalendarum*, before the calends. *Val. Prob. Pet. Diacon. et alii Grammat. Veter.*; *Goltz. Fasti., Græc., et Thesaurus*; *Smet. Inscript. Vet.*; *Vailant. Numismat. Græc., Numismat. Imperat. Roman. Roman. Famil., et Seleucidarum, &c.*; *Grut. Thesaur. Inscript. Antiq.*; *Spanheim. Dissert.*; *Patin. Imperat. Roman. et Roman. Famil.*; *Morel. Thesaur.*; *Gesner. Numis. &c.*

A (*Numis.*) as a sign, stands on Greek coins and inscriptions for πρώτος, πρώτης, πρώτων, denoting propriety and dignity. *Vaill. Numism. Græc.*

A (*Archæol.*) as a sign, was sometimes used for the number of 500; and with a superscription, thus, \bar{A} , for 5000.

A (*Lit.*) stands as an abbreviation for *artium*, in marking University degrees; as, A. M. *artium magister*, master of arts; A. B. *artium baccalaureus*, bachelor of arts.

A (*Chron.*) as an abbreviation, stands commonly for *anno* or *ante*; as, A. C. *ante Christum*, before Christ; A. D. *anno Domini*, the year of our Lord; A. M. *anno mundi*, the year of the world. [vide *Abbreviation*] As a sign, it is used in the Gregorian and Julian calendars for the first of the dominical letters. [vide *Chronology*]

A (*Astron.*) as an abbreviation, stands for *ante*, to mark the time of day; as, A. M. *ante meridiem*, before noon or mid-day, in distinction from P. M. *post meridiem*, afternoon.

A (*Com.*) is employed by merchants as an abbreviation for *accepté*, accepted, on bills of exchange; as, A. S. P. *accepté sous protest*. As a sign in a merchant's accounts, A denoting the first set of books, B the second, &c.

A (*Mus.*) as a preposition, French and Italian, is used in music books. 1. To denote the number of voices, answering to the English *for* before any figure; as *à 2*, for 2 voices; *à 4*, for 4 voices, &c. 2. To denote the style of composition and performance; as, *à ballata*, after the manner of a ballad; *à la Grec*, in the Greek style; *à cembalo*, for the harp, &c.

A, as a sign, is used in music books by itself, for the sixth note in the gamut, answering to the monosyllable *la*, contrived by Guido Aretino.

A above G *gamut* signifies the note one tone higher than G *gamut*.

A above the bass *cliff*, the note a third higher than the bass *cliff*.

A above the treble *cliff*, the next note higher than the treble *cliff*.

- A (*Algeb.*) as a sign, stands for the known quantity; as, *a, b, c*, in distinction from the unknown quantities *x, y, z*. [vide *Algebra*]
- A (*Her.*) as a sign, stands for the *dexter chief*, or chief point in an escutcheon. [vide *Heraldry*]
- A (*Chem.*) when triple, as A.A.A. denotes *amalgama*, or amalgamation.
- A (*Log.*) is employed as a sign to denote an universal affirmative proposition, according to the verse,

Asserit A, negat E, verum generaliter ambæ.

Thus in the first mood, a syllogism consisting of three universal propositions, is said to be in *BARBARA*, the A thrice repeated denoting three universal propositions. [vide *Logic*]

- A (*Gram.*) in words of Greek derivation, as a preposition in composition, has a privative or negative sense; as *acatalectic*, &c.; in Saxon words it is equivalent to *on* or *in*, as *ashore*, *abed*, &c.
- A (*Med.*) marked thus, \bar{A} , is used in prescriptions for the Greek preposition *éviz*, each, as \bar{A} , or $\bar{A}.\bar{E}.\bar{P}$. of each, i. e. of each ingredient, equal parts.
- A (*Alch.*) i. e. α , *alpha*, stands for the restitution of a long life, ω , *omega*, for the end.
- AABA'N (*Chem.*) lead.
- AAM (*Com.*) a liquid measure at Amsterdam, containing about sixty-three pounds Avoirdupois weight.
- AA'NES (*Mus.*) the modes and tones of the modern Greeks.

AAVORA (*Bot.*) a species of palm.

AB (*Ant.*), as a preposition, is employed with nouns to denote a relation, office, &c. after the same manner as *a*; as, *ab epistolis*, a scribe or secretary, to be found on inscriptions and elsewhere. SEX. POMPEIUS. SEX. F. FELIX. SEX. POMPEII. AB. EPISTOLIS. *Sextus Pompeius Sexti filius, Felix Sexti Pompeii ab epistolis*. [vide *A.*]

AB (*Archæol.*) as an abbreviation, stands for abbots or abbey, and when affixed to the names of places, it shows, probably, that they belonged to some abbey. *Blount*.

AB (*Chron.*) the fifth month of the Jewish sacred year, and the eleventh of the civil year.

A'BAB (*Mil.*) a sort of militia among the Turks.

ABAB'LO (*My.*) or *Abibil*; an unknown or fabulous bird, mentioned in the Koran. Said Ben Giabin asserts that it had the beak of a bird and the foot of a dog. *Boch. Hieroz.* 1. 6, c. 14.

A'BACA (*Com.*) a sort of hemp or flax, prepared from an Indian plantain.

ABACINA'RE (*Archæol.*) to deprive of one's eyes, particularly by red hot irons, which the Italians call *bacini*.

ABACISTA (*Archæol.*) λογιστής, *ratiocinator*, in the East *algorista*, in Italian, *abbachiere*, and *abbachista*; an arithmetician, or one who addicted himself to the study of the abacus. "Abacum certè primus Gebertus a Saracenis capiens regulas dedit, quæ a sudantibus Abacistis vix intelliguntur." *Will. Malmesb. Hist. Angl.* 1. 2, c. 10.

ABACK (*Mar.*) the situation of the sails of a ship when they are pressed against the masts by the force of the wind; so the sails are said to be *taken aback* when by a change of wind or otherwise they are put into that situation, or *laid aback* to effect an immediate retreat.

A'BACOT (*Archæol.*) a cap of state in the form of a double crown, worn by the ancient kings of England. *Chron. An.* 1463.

ABA'CTOR (*Archæol.*) from *abigo*, to drive away: a stealer of cattle in herds or large numbers, in distinction from the *fur*, or thief, who took one or two. *Isidor. Etymol.* 1. 12.

A'BACUS (*Ant.*) from ἄβαξ, *abaxos*, i. e. α , priv. and βάσις, not having a basis or stand: 1. A cup-board or board fixed

against the wall, on which were placed the cups and vessels for supper. *Juv. Sat.* 3, v. 203.

*Lectus erat Codro Proculâ minor, urceoli sex
Ornamentum abaci.*

Cic. in Verr. 1. 4. c. 16; *Liv.* 1. 39, c. 7; *Plin.* 1. 37, c. 2; *Buleng. de Imperat. Rom.* 1. 2, c. 34; *Salmas. ad Jus. Attic et Rom.* c. 23. 2. A draught or dice-board, on which the ancients used to play with dice or small stones. *Macrob. Saturn.* 1. 5; *Stuck. Ant. Conviv.* 1. 11, c. 16; *Buleng. de Lud. Vct.* c. 58.

ABACUS (*Math.*) Heb. אבאק, *abak*. "Mensula hyalini pulveris respersione colorata, in qua calculatores numeros et figuras delineant." *Mart. Capell. de Septem. Lib. Art.* 1. 6. *Pers. Sat.* 1, v. 131.

*Nec qui abaco numeros et secto in pulvere metus
Scit risisse vafes.*

The *abacus* was an instrument for calculations, used, with some variations, both by the ancients and moderns, consisting of a board of the oblong figure, divided by several lines or wires, and mounted with an equal number of little ivory balls or pegs, by the arrangement of which they expressed units, tens, hundreds, thousands, &c. according to the subjoined figure.

The value of each ball or peg on the lowest line is 1, on the second 10, on the third 100, on the fourth 1000, on the fifth 10,000; and the balls in the middle spaces signify half as much as each of those in the lines above them: the amount of all the balls represented in the above figure will, therefore, be 37,391. *Bud. in Pandect.* p. 128; *Volaterran. Comm. Urban.* p. 1033; *Ferret. Mus. Lapid.* 1. 1, *Memor.* 33; *Velsler. Rer. Vindel.* p. 221; *Ful. Ursin. et Ciaccon. in Explic. Inscr. Diullianæ et Lib. de Numm.*; *Ant. Augustin. Numis. Dial.* 9; *Pignor. Comm. de Serv.* p. 339.

ABACUS *Pythagoricus* (*Arith.*) the table of Pythagoras, for the more easy learning of numbers and calculations, similar to our multiplication table.

ABACUS *Logisticus*, a right-angled triangle, whose sides, about the right angle, contain all the numbers from 1 to 60, and its area, the products of each two of the opposite numbers: also called a *canon of sexagesimals*, which is in fact a multiplication table carried to 60 both ways.

ABACUS, also Arithmetic itself, according to Lucas Pacioli, probably contracted from Arabicus.

ABACUS (*Archit.*) or *Abaciscus*, the upper member of the capital of a column, which serves as a crowning to the whole. The invention is ascribed to Callimachus, a statuary of Athens, who took the idea from an acanthus growing out from a basket covered with a tile, so as to form a kind of scroll after the shape of the tile, whence he made the abacus to be represented by the tile, the acanthus by the volutes, and the basket by the body of the capital. In the Tuscan, Doric, and Ionic orders, the *Abacus* is most commonly square; but in the Corinthian and Composite orders its figure varies, the four faces being circular, and hollowed inwards, the four corners cut off, as in the annexed figure, where *a b c d* represent a square, equal to the plinth of the base; *a b, b c, c d*, and *a d*, the circular arches, drawn from centres that are the vertices of equilateral triangles: then if the ends of the arches be cut off by the equal lines *A B, C D, E F, G H*, the figure *A B C D E F G H*

is a section of the abacus. The term abacus is applied to different members by different writers. *Vitruv.* l. 4, c. 1; *Senec. Epist.* 87; *Bald. Lex. Vitruv.*; *Pallad. de Archit.* l. 1, &c.; *Scamoz. dell' Archit. Univ. Part 2.* l. 6, c. 29, &c.

ABACUS (*Mus.*) a key-board or instrument of ancient invention, for dividing the intervals of the octave.

ABACUS *et Palmule*, an ancient contrivance, by which the strings of the polypletra, or many-stringed instruments, were struck with a plectrum made of quills.

ABACUS *Harmonicus*, the structure and disposition of the keys of a musical instrument, either to be touched with the hands or the feet, according to *Kircher*.

ABACUS *Major* (*Min.*) a trough in which the ore is washed. *Agric. de Re. Metal.* l. 8.

A'BADA (*Zool.*) an animal on the coast of Bengal with two horns, one on the forehead, and one on the neck. It is said to be about the size of a fowl, having the tail of an ox, and the mane and head of an horse; but the existence of such an animal is not yet ascertained.

ABA'FT (*Mar.*) the hinder part of a ship; as, *abaft* the main-mast, i. e. nearer to the stern.

ABAFT the beam, i. e. the relative situation of an object in some part of the horizon, contained between a line drawn at right angles to the keel, and the point to which the ship's stern is directed.

A'BAGÜN (*Or.*) or the stately abbot, as its name imports, is an Ethiopian bird, remarkable for its beauty, and for a sort of horn growing on its head, instead of a crest, which has the appearance of a mitre. *Lobo. Relat.* p. 71.

A'BAJOUR (*Archit.*) a sky-light or small sloping aperture, which is made in the walls of prisons and subterraneous buildings for the reception of light.

ABA'SIR (*Chem.*) another name for Spodium.

ABALIENATIO (*Ant.*) est ejus rei quæ est mancipi, aut traditio alteri nexu; a sort of alienation, a legal cession or transfer to another of that which one holds in one's own right. The effects called here *res mancipi* were cattle, slaves, and other possessions within the Italian territories. The formula called *traditio nexu* was a formal renunciation either in the presence of a magistrate, or by the ceremony of weights and money in hand. *Cic. Top.* c. 85; *Ulp. Institut.* c. 19; *Augustin. ad Leg. xii. Tab.* § 25; *Bud. in Pandect.* p. 26.

ABALIENATUS (*Med.*) corrupted; *Membra abalienata*, limbs dead or benumbed. *Celsus*; *Scribonius Largus*.

to ABA'NDON (*Mil.*) to leave a place to the mercy of an enemy.

ABA'NDONED (*Law*) an epithet for goods knowingly and willingly renounced by the proprietor; also for lands which the sea has retired from and left dry.

ABA'NDONING (*Law*) the voluntary or forcible yielding the possession of goods: if to creditors it is termed *cession*; if in order to be free from the charges to which one is subject by possessing them, it is called *giving up*.

ABA'NDUM (*Archæol.*) abandonment, *res in bannum missa*; in French, *chose abandonnée*: any thing confiscated or proscribed, from the three words *a ban don*, i. e. given to the ban.

A'BANET (*Ant.*) or *Abnet*, אבנט, אבנאט; a girdle that priests wore among the Jews.

ABA'NGA (*Bot.*) or *Palma Ady*; a species of palm-tree in the island of St. Thomas. *C. Bauh.*

ABAPTISTON (*Surg.*) vel *Abaptista*, αβᾰπτιστον, from α, priv. and βᾰπτίζω, *mergo*, to sink; a kind of trepan made so as not to sink into the brain. *Gal. de Meth. Med.* l. 4, c. 6.

ABA'REA (*Archæol.*) a sort of shoe among the Spaniards.

ABARE'MO *Temo* (*Bot.*) a tree which grows in Brazil, the roots of which are a deep red, and its bark of an ash colour, bitter to the taste, and yielding a decoction fit for the detersion of inveterate ulcers.

A'BARI (*Bot.*) *Abaro* or *Abarum*; a great tree of Ethiopia that bears a fruit like a pompon.

ABARNA'RE (*Archæol.*) to disclose a crime to a magistrate. *Leg. Canut. apud Brompton.*

ABARTA'MEN (*Min.*) another name for lead.

ABARTICULATION (*Med.*) a species of articulation of the bones, admitting of a manifest motion called also *diarthrosis* and *dearticulatio*, to distinguish it from another sort of articulation called *synarthrosis*, which admits of a very obscure motion.

A'BAS (*Med.*) the same as Epilepsia.

ABAS (*Com.*) a weight used in Persia for pearls, equal to three grains and a half.

ABAS (*Ent.*) a species of Bombyx.

ABA'SED (*Her.*) an epithet for the vol or wing of an eagle, turned downwards towards the point of the shield, or when the wings are sluit, the natural way of bearing them being to be displayed. A bend, chevron, pale, &c. is said to be *abased* when their points terminate in or below the centre of the shield; an ordinary is said to be *abased* when below its due situation.

ABA'SIR (*Chem.*) another name for Spodium.

ABA'SSI (*Com.*) a Persian silver coin nearly equal in value to a shilling. *Fryer's New Account of India and Persia.*

ABA'T-CHAUVÉE (*Com.*) a sort of wool of subaltern quality in France.

to ABA'TE (*Law*) from the Fr. *Abattre*. 1. To destroy or remove, as to *abate* a nuisance. *Vet. Nat. Br.* 45; *Stat. Westm.* l. 1, c. 17. 2. To defeat, as to *abate* a writ by showing some error or exception. *Brit. c.* 48; *Stat. 34 E.* 1; *Stat. 11 H.* 6, c. 2; *Staundf. P. C.* 148. 3. To get possession by intrusion, in contradistinction to disseise: thus an *abator* is one who steps in between the former possessor and his heir. Coke, in his first Institutes, explains the difference between the words *Disseisin*, *Abatement*, *Intrusion*, *Deforciamen*, *Usurpation*, and *Perpresture*. *Bract.* l. 4, c. 2; *Britt.* c. 51; *Vet. N. B.* 115; 1 *Inst.* 277, a.

to ABATE (*Man.*) a horse is said to *abate* when, working upon curvets, he puts both his hind legs to the ground at once, and observes the same exactness successively.

ABATE'LEMENT (*Com.*) an interdict of the Consuls, barring all merchants and dealers of the French nation from carrying on any trade, who disavow their bargains or refuse to pay their debts.

ABA'TEMENT (*Law*) 1. The act of abating in the different senses of the verb. [vide *Abate*] 2. A plea in abatement is a plea put in by the defendant, praying that the writ or plaint may abate, that is, that the suit of the plaintiff may cease for the time being. The following are the principal pleas in abatement: 1. To the jurisdiction of the court. 2. To the person of the plaintiff in case of—a, outlawry; b, excommunication; c, alienage; d, attain, &c. 3. To the person of the defendant in case of—a, privilege; b, misnomer; c, addition. 4. To the writ and action. 5. To the count or declaration. 6. On account of—a, the demise of the king; b, the marriage or death of the parties, &c. *Bracton.* l. 4, c. 2; *Britt.* c. 51, &c.; *Vet. N. B.* fol. 114, 115; *Staundf. P. C.* 148, &c.; *Thel. Dig.* l. 10, c. 1, sect. 5; *Co. Lit.* 303, a.

ABATEMENT (*Her.*) a certain mark of disgrace added to the coat-armours of certain persons. *Abatements* are called in Latin *Diminutiones vel Discernula Armorum*, of which Guillim mentions nine different sorts, as follow: 1. The *Delf*, exactly a square in the middle of the coat. 2. An *Escutcheon reversed*, or a small escutcheon turned upside down in the middle of the coat. 3. A *Point parted dexter*, when the upper right corner of the escutcheon is parted from the whole. 4. A *Point in Point*, when the ends of two arched lines are joined in the middle of the escutcheon so as to part off the base from the rest. 5. A *Point Champagne*, or a hollow arched line cutting off the base of the escutcheon. 6. A *Plain Point*, or a straight line parting

off the base of the escutcheon. 7. A *Gore*, or two hollow lines between the sinister chief and the sinister base. 8. A *Gusset*, or a line sloping a little, and then perpendicular from the upper corner to the bottom or base. These eight *Abatements*, if ever they were used, required to be of a stained colour, *i. e.* *Sanguine* or *Tenne*; but it is supposed by modern heraldic writers that these distinctions were only imaginary. 9. The ninth and last abatement is when the whole coat is reversed, which was never done but to a traitor. An instance of this kind occurs in the arms of Sir Andrew de Harcla, Knt. who for his treachery towards his master king Edward II, by taking a bribe from the Scots, was first degraded, then drawn, hanged, beheaded, and quartered, in 1322. He beareth *White*, a *Red Cross*, and, in the first quarter, a *Black Martlet*, according to the annexed cut. *Selden. Tit. of Honour*, p. 337, 338; *Guill. Disp. of Herald.*

ABATEMENT (*Com.*) or *Rebate*. 1. A discount in the price of commodities when the buyer advances the sum directly for which he might have taken time. 2. A deduction from the duties paid for goods, when they are found to have been damaged.

A'BATIS (*Archæol.*) he who measures out corn with *batis*, *i. e.* *mensuris*, an avener or steward of the stables.

ABATIS (*Mil.*) or *Abbatis*, an intrenchment formed by trees felled and laid together.

ABA'TOR (*Law*) one who intrudes into houses or lands that are void by the death of the former possessor, and not yet entered upon by his heir. 1 *Inst.* sect. 475.

A'BATOS (*Ant.*) from *α*, priv. and *βαίνω*, *eo*, to go, *viz.* inaccessible, an epithet for a rock or island of the Nile on which none dare set foot but the priests; the same epithet was applied to the inmost recesses of the temple, called by the Latins *Penetralia*.

Lucan. l. 10, v. 323.

*Hinc abaton quam nostra vocat veneranda vetustus
Terra potens, primos sensit percussa tumultus.*

Sen. Nat. Quest. l. 4, c. 6; *Fest. de Signif. Verb.*

ABATTUTA (*Mus.*) an Italian expression employed in music books after a break in the time of any piece, signifying that the time is to be *beaten* as before.

ABATUDA (*Archæol.*) an epithet for any thing diminished in value, particularly money, as *moneta abatuda*, clipt money.

A'BATURES (*Sport.*) the sprigs or grass that the stag throws down in passing by.

ABA'VI (*Bot.*) a large tree in Æthiopia, bearing fruit like a gourd. *Raii Hist. Plant.*

ABB (*Mech.*) or *Abwool*, the yarn of a weaver's warp.

A'BBACY (*Ecc.*) *Abbatia*, the government of an abbey.

ABBATISSEUR (*Anat.*) one of the muscles of the eye. *Winslow.*

A'BBATIS (*Mil.*) vide *Abatis*.

A'BBEY (*Ecc.*) a religious house under the government of an abbot: anciently one third of the benefices in England were, by the Pope's grant, appropriated to the abbeyes, and other religious houses, which at their dissolution amounted to the number of 190, that became lay-fees, the revenue of which were from 200*l.* to 3,500*l.* per annum, amounting on an average calculation to 2,853,000*l.* per annum. *Burn. Hist. Ref.*

A'BBOT (*Ecc.*) *Abbas*, *Abbat*, from *Abba*, *Father*, the head or governor of an abbey, of which there were different descriptions; as,—*Bishop Abbots*, whose abbeyes have been erected into bishopricks;—*Cardinal Abbots*, who are also cardinals;—*Commendatory Abbots*, or bishops in *commendam*, who are seculars, performing no spiritual office, and having no spiritual jurisdiction, although they have undergone the tonsure, and are obliged by their bulls to take

orders when they come of age;—*Croziered Abbots*, such as bear the crozier or staff;—*Mitred Abbots*, *i. e.* sovereign or general abbots, who were lords of parliament, and independent of any person but the pope. They were called mitred, from the mitre which they wore;—*Secondary Abbots*, the same as priors;—*Regular Abbots*, real monks, who have taken the vow, and wear the habits.

ΑΒΒΟΤ (*Polit.*) or *Abbot of the people*, a chief in the republic of Genoa, who was chosen by the people in the fourteenth century.

ABBREVIATED (*Bot.*) *abbreviatus*, an epithet for the perianth; *perianthium abbreviatum*, an abbreviated perianth, when it is shorter than the tube of the corolla, as in *Pulmonaria maritima*. *Linn. Phil. Bot.*

ABBREVIATION (*Gram.*) a contracted manner of writing words so as to retain only single letters. Such abbreviations were common among the Greeks and Romans, as they are now among the moderns.

W.

W. or wk. weeks.

X.

Xmas. Christmas. Xn. Christian. Xper. Christopher.

Y.

Ye. the. Ym. them. Yn. then. Yr. your and year. Ys. this. Yt. that.

ABBREVIATION (*Math.*) the reducing of fractions to the lowest terms, which is performed by dividing both the numerator and denominator by any term which will divide them, without leaving a remainder; thus, $\frac{12}{14}$ becomes

equal to $\frac{6}{7}$, to $\frac{4}{5}$, and lastly to $\frac{2}{3}$, the lowest terms if divided successively by 2; and in Algebra $\frac{12 abx^2}{4 acx}$ becomes equal to $\frac{3 bx}{c}$ if divided by $4 ax$. *Wallis. Math.*

ABBREVIATION (*Print.*) characters or signs are called abbreviations, which stand for any word or syllable, as *y'* for *the*, or *ē* for *em*, *en*, *y'* for *that*, &c. These were formerly in use, but are now obsolete.

ABBREVIATION (*Alch.*) a short way of performing a process.

ABBREUVOIRS (*Arch.*) vide *Abreuvoir*.

ABBRO'CHEMENT (*Law.*) *Abbrocamentum*, forestalling a market or fair.

ABBUTTALS (*Law*) vide *Abuttals*.

ABDALS (*Hist.*) from *abda*, a pious man, a hermit; a sect of enthusiasts among the Persians, who pretended to inspiration. An *abdal* was *furens deo*, like the Sybils of old.

ABDAR (*Polit.*) an officer of the King of Persia, who acted as his cup-bearer.

ABDELA'RI (*Bot.*) an Egyptian plant, the fruit of which would nearly resemble a melon if it were not so oblong, and its extremities so acute. *Raii Hist. Plant.*

ABDELA'VI (*Bot.*) an Egyptian plant, very like a melon: Melo *Ægyptius*. *C. Bauh. Pin.*; *Prosp. Alp. Ægypt.*

ABDEST (*Theol.*) the ablution or washing of the hands, face, and other parts, according to the religious rites of the Mahometans. "I have seen many go out of the mosque in the midst of their devotions to take fresh abdest." *Pitt's faithful Account of the Mahometans.*

ABDEVENAM (*Astrol.*) the head of the twelfth figure of the heavens.

ABDICATIO (*Ant.*) ἀποκήρυξις, a formal renunciation of children by their parents, which was a Grecian custom prohibited by the laws of the Romans. *Lucian in Abdicat.*

ABDITÆ causæ (*Med.*) hidden or remote causes. *Celsus.*

ABDITORIUM (*Archæol.*) a hiding place, as the chest in York Cathedral for preserving valuables. *Mon. Anglic.*

ABDOMEN (*Anat.*) so called, from *abdo*, to hide, because the viscera are hidden in it, is that cavity which was termed by the ancients, *κατακοιλίς*, *imus venter* or *abvus*, the lower belly, beginning immediately under the thorax, or middle belly, and ending at the pelvis of the ossa innominata. The abdomen is divided into four regions, three of which are anterior and one posterior. The anterior are the *epigastric*, or superior region; the *umbilical*, or middle region; and the *hypogastric*, or lower region. The posterior region is the *regio lumbaris*, or Loins. The *epigastric region* is situated at a small depression, called the Pit of the Stomach, and is divided into three parts; the one middle, named *epigastrium*; and two lateral, named *hypochondria*. The *umbilical region* is divided into one middle, called properly the *regio umbilicalis*, or the Navel; and two lateral, called the *ilia*, or Flanks. The *hypogastric region* is divided into one middle, named the *pubis*; and two lateral, called the *inguina*, or Groins. The cavity of the abdomen is separated from that of the thorax by the muscular diaphragm, or Midriff; and the bottom of the abdomen, which answers to the pelvis of the skeleton, is terminated anteriorly by the Pudenda, and posteriorly by the *clunes* or Buttocks. The space between the *anus* and *pudenda* is called the *perinæum*; and the membrane with which the abdomen is lined, is called the *peritonæum*. Its contents, or viscera, are anteriorly, the *epiphron*, the *ventriculus*, or Stomach; the Intestines, large and small; the Mesentery, the Pancreas, Spleen, Liver and Gall-bladder; posteriorly, the Kidneys, Ureters, and *receptaculum chyli*, Urinary Bladder, and in women the *uterus*, or Womb, &c. *Hippocrat. de Nat. Hom. et Struct. Hom. &c.*; *Aristot. Hist. Anim. l. 1, c. 13*; *Ruff. Ephes. de Appell. Part. Corp. Hum. l. 1, c. 3, &c.*; *Jul. Poll. Anom. l. 2, scgm. 168, &c.*; *Gal. de Meth. Med. l. 6*; *Oribas. Med. Coll.*

l. 24, c. 1, &c.; *Fallop. Anat.*; *Eustach*; *Tab. Anatom.*; *Gorr. Def. Med. in Voc. κολία*; *Foes. Oeconom. Hippocrat.* *Heister. Surg.* p. 141, &c.; *Winslow's Anatom.*; *Ckessel-*
den's Anat. &c.

ABDOMEN of *Fishes*, in comparative anatomy, is covered in its lower part with a black thin membrane answering to the human *peritonæum*, and consisting of annular segments. It lies behind the thorax, from which it is separated by a membranous partition, but no muscular diaphragm.

ABDOMINAL (*Anat.*) an epithet for what belongs to the abdomen, as the *Abdominal* arteries, muscles, nerves, &c.—*Abdominal Ring*, or the *Annulus Abdominis*, an oblong tendinous opening in the groin, through which the spermatic chord passes in men, and the round ligament of the uterus in women. It is through this aperture that the intestines fall in cases of rupture.

ABDOMINALES (*Ich.*) the fourth order of fishes having the ventral fins behind the pectoral. [Vide *Pisces*.] It includes the following genera—namely the *Cobitis*, Loche; of the same thickness nearly from head to tail.—*Amia*; head naked, bony, and rough.—*Silurus*; head naked, broad, compressed.—*Teuthis*; head truncate on the forehead.—*Loricaria*; head smooth, depressed.—*Salmo*, Salmon, head smooth, compressed.—*Fistularia*, Tobacco-Pipe-Fish; body round, gently tapering from the jaws to the tail.—*Esox*, Pike; head flattish above, dorsal and anal fins very short.—*Elops*; head smooth, edges of the jaws and palate rough, with teeth.—*Argentina*, Argentine; teeth in the jaws and tongue.—*Atherina*, Atherine; upper jaw a little flat, gill membrane brayed.—*Mugil*, Mullet; lips membranaceous, teeth.—*Exococtus*, Flying-Fish; head scaly.—*Polynemus*; head compressed and covered with scales.—*Clupea*, Herring; belly carinate and serrate, tail forked.—*Cyprinus*, Carp; mouth small, without teeth. *Linn. Syst. Nat.*

ABDUCENT (*Anat.*) an epithet for some muscles. vide *Abductor*.

ABDUCENTES Nervi, part of the sixth pair of nerves, so called because they are lost on the abductores oculi.

ABDUCTION (*Surg.*) ἀπάγωμα. 1. A fracture of the bones καυήδον, after the manner of a stalk, when the extremities of the fractured bone recede from each other. *Gal. Meth. Med.* l. 2, &c. 2. A strain, according to *Cælius Aurelianus de Morb. Chron.* l. 5, c. 1.

ABDUCTION (*Law*) the carrying away any person by force, as the "abduction of an heiress."

ABDUCTION (*Log.*) an argument that leads from the conclusion to the demonstration of a proposition.

ABDUCTOR (*Anat.*) from *ab* and *duco*, to draw away; an epithet for several muscles which serve the office of drawing away the parts to which they are annexed, as—*Abductor auris*, called by Winslow *Posterior Auris*, by others *Triceps*, pulls the ear backwards.—*Abductor minimi digiti manus vel pedis*, the former of which is called by Winslow *Hypothenar*, and the latter *Parathenar*; they draw the little finger or toe from the rest.—*Abductor pollicis manus vel pedis*, called by Winslow *Thenar*, draws the thumb or great toe from the rest.—*Abductor oculi*, or *indignatorius*, *abducens*, or *musculus exterior*, the scornful muscle is so called, because it expresses scorn, by moving the eye outwards from the great to the little angle.

ABELE Tree (*Bot.*) the great white Poplar, the *Populus alba* of Linnæus.

ABELIANS (*Ecc.*) heretics who rejected marriage. This sect arose in the reign of Arcadius, and terminated in that of Theodosius the younger. *August. ad quod vult Deum, et de Hæres.* c. 87.

ABELICEA (*Bot.*) a small tree in Crete, otherwise called *Pseudo Platanus*. *Raii Hist. Plant.*

ABELMO'LUCH (*Bot.*) a sort of *palma Christi*. *Raii Hist. Plant.*

ABELMO'SCHUS (*Bot.*) the seed of an Egyptian plant which resembles musk in its perfume, and is used by the Arabians, on account of its agreeable flavour, in their coffee. The plant is called musk mallow, and is the *Hibiscus Abelmoschus* of Linnæus. *Raii Hist. Plant.*

A'BELMUSK (*Bot.*) vide *Abelmoschus*.

A'BER (*Geog.*) 1. A Persian word for *on* or *upon*, is used in composition for some places situated on mountains, as Abercobad, &c. 2. *Äber*, a British word for the fall of one stream or rivulet into another: whence the name of several towns built upon such confluences, as Aberdeen, &c. *Sylv. Gyrald. Itin.* l. 2, c. 1.

ABERDAVINE (*Or.*) the *Spinus Fringilla* of Linnæus. *Willough. Ornith.*

A'BEREMURDER (*Law*) plain downright murder in distinction from manslaughter; it is compounded of the Saxon *abere*, notorious, and *moj*, murder. *Leg. Can.* c. 9; *apud Brompt. Chron.*; *Hen. I.* c. 13; *apud Lambert, seu Wylckens.*

ABERRATION (*Astron.*) from *ab* and *erro*, to wander, a term applied to the apparent motion of the celestial bodies occasioned by the progressive motion of light and the earth's annual motion in its orbit, which was first discovered by Dr. Bradley, Astronomer Royal, and an account of it was given by himself in the Philosophical Transactions of March, 1728, No. 406.

ABERRATION of a Star, an ellipse which appears to be described in the heavens in consequence of the earth's motion in its orbit and the progressive motion of light. The transverse axis of this ellipse is nearly equal, in quantity, for every star, that is, to 40°; the conjugate axis varies for every star, as the sine of the star's latitude, that is, radius is to the sine of the star's latitude, as the transverse axis to the conjugate axis, and consequently a star in the pole of the ecliptic, its latitude being there 90°, will appear to describe a small circle about that pole as a centre, whose radius is equal to 20°.

ABERRATION of the Planets is equal to their geocentric motion, or the space through which they appear to move, as seen from the earth during the time that the light is passing from the planet to the earth. *Clair. Acad. Franc.* 1746-7; *Maupert. de la Parall. de la Lune*, § 11; *Simpson's Essays*; *Mem. de Berlin.* tom. ii. p. 14, &c.

ABERRATION (*Opt.*) the deviation of the rays of light when inflected by a lens or speculum, whereby they are prevented from meeting in what is called the geometrical focus. There are two sorts of *aberration*, the one arising from the figure of the lens which produces a geometrical dispersion of the rays when these are perfectly equal in all respects; the second arising from the unequal refrangibility of the rays of light, called after the name of its discoverer, the "Newtonian Aberration."

ABE'SUM (*Chem.*) unslacked or quick lime.

to **ABE'T**. (*Law*) Sax. *a* for *ad* or *usque*, and *bedan* or *beteren*, to stir, to encourage, or set on.

ABE'TTOR (*Law*) vide *Accessory*.

ABEVACUATIO (*Med.*) a partial evacuation.

ABE'YANCE (*Law*) from the Fr. *beer*, or *bayer*, to gape after in expectance: lands are in *abe'gance* which are not actually in the possession, but only in the expectance of him who is next to inherit them. 1 *Inst.*

ABGATORIA (*Archæol.*) the alphabets. *Mat. West.*

A'BHAL (*Bot.*) an eastern fruit of a ruddy colour, held to be a powerful emmenagogue.

A'BIB (*Chron.*) אבב, אביב, a ripe ear of corn, according to St. Jerom, the name of the first month in the Jewish sacred year, answering to part of March and April, and so called because in Palestine barley was in ear at that time. *Boch. Hieroz. Pars Prior*, l. 2, c. 10.

A'BICUM (*Med.*) a covering.

A'BIES (*Bot.*) ἐλάτη, the fir-tree, which Homer calls ἐλάτη

ερανομήκη, i. e. the fir stretching itself towards heaven; it is the *Pinus picea*, the *Pinus balsamea*, and the *Pinus abies* of Linnæus. *Theophrast.* l. 1, c. 8, &c.; *Plin.* l. 16, c. 39; *J. Bauh. Hist. Plant.*; *C. Bauh. Enum. Plant.*; *Gerard. Herbal.*; *Park. Theat. Botan.*; *Raii Hist. Plant.* &c.

ABIGA (*Bot.*) from *abigendo partu*, the same as Chamapitys.

ABIGEVS (*Law*) or *Abigens.* vide *Abactor.*

ABISHERING (*Law*) abishering, or mishering, an exemption from amercements.

ABIT (*Min.*) or *Aboit.* Ceruss.

ABITELLO (*Ecc.*) a sort of ignominious garment, which penitents in the Romish church were obliged to wear by way of penance. *Eymeric. Director Inquisit. Pars.* 3. p. 332.

ABJURA'TIO (*Law*) an oath taken to leave the realm for ever. By the 21 *Jac.* c. 28, this privilege, which had been hitherto granted to some criminals on confession of their crime, was abolished. *Staundf. Offic. Cor.* l. 116, c. 49; 2 *Inst.* 628.

ABJURA'TION (*Ecc.*) or recantation of any doctrines, was enjoined by the Romish church upon all heretics, to be performed publicly before they were admitted to communion. *Eymeric. Direct. Inquisit. Pars.* 3, p. 323; *Simanc. de Cathol. Instit.* c. 1, &c.

ABL'LAB (*Bot.*) a shrub of the height of a vine which is said to grow in Egypt.

ABLACTA'TION (*Med.*) from *a*, priv. and *lacto*, to suckle, weaning a child.

ABLACTATION (*Hort.*) a species of ingrafting, by leaving the graft on its proper stock till it be fully incorporated with the new stock.

ABLA'NIA (*Bot.*) a genus of plants, the *Trichocarpus* of Linnæus. *Aublet. Hist. des Plant.*

ABLAQUE (*Com.*) a fine sort of Persian silk, otherwise called the Ardessine silk.

ABLAQUEA'TION (*Agric.*) the digging about and baring the roots of trees. *Plin.*

ABLA'TION (*Phy.*) *ablatio*, from *ab* and *fero*, to take off or away, a taking away, another name for Abstraction. *Scalig. De Caus. Ling. Lat.*

ABLA'TIO (*Gram.*) the same as Aphæresis. *Scalig. de Caus. Ling. Lat.*

ABLATIO (*Math.*) the same as subtraction.

ABLATIO (*Med.*) 1. An evacuation. 2. A subtraction from the usual diet. 3. An interval between two fevers.

ABLATIO (*Chem.*) the removal of any thing from a process.

ABLATIVE (*Gram.*) *ablativus*, i. e. taking away, the sixth case in Latin nouns which signifies taking from;—*Ablative absolute*, a noun, with a participle in the ablative case, is said to be absolute when it does not depend upon any other word. This sort of case is mostly used in the Latin language, and answers to the genitive absolute of the Greek. *Charis. Sos. Instit. Gram.* l. 1; *Diomed.* l. 1; *Isid. Orig.* l. 1.

ABLE'CTI (*Ant.*) ἀπολέκτοι, *Selecti*, a chosen band of foreign troops, selected, according to Polybius, from the 'Extraordinarii Sotorum.' *Polyb.* l. 6, c. 31.

ABLE'GMINA (*Ant.*) choice pieces of the sacrifices among the Romans, sprinkled with flour and offered to the gods. *Tertull. Apolog.* c. 13; *Fest. de Signif. Verb.*; *Buleng. de Sortib.* l. 1, c. 6; *Kipping. Ant. Roman.* l. 1, c. 2.

ABLE'PSIA (*Med.*) ablepsy, or blindness, from *α* priv. and βλέπω, *video*.

ABLUENTIA (*Med.*) from *abluo*, to wash away, *abluents*, or *abluent* medicines, which carry off impurities from any part of the body. *Gal. de Simplic. Med.* l. 1, c. 37.

ABLU'TION (*Ant.*) from *abluo*, to wash off; the purification of the human body, among the Jews and the Heathens, from some religious pollution.

ABLUTION (*Med.*) 1. Cleansing the body externally or in-

ternally. 2. The preparing of a medicine in any liquor, so as to cleanse it from its dregs or any ill quality.

ABNEGA'TION (*Theol.*) the renouncing of passions, pleasures, or lusts.

ABNODA'TION (*Hort.*) the cutting away, or pruning off the knots of trees.

ABO'ARD (*Mar.*) i. e. on board, or in the inside of a ship. Thus "to go aboard" is to enter a ship, and "to board a ship" is to enter it in a hostile manner.—"To fall aboard of," is to strike against it whilst in motion.—"Aboard main-tack," an order to draw one of the corners of the main-sail down to the chess tree.

ABO'I-VENTS (*Fort.*) small lodgements constructed in a covered way to protect soldiers from the weather.

ABOLA (*Ant.*) ἄβολα, a sort of dice reckoned among the unlucky by Pollux. *Poll. Onom.* l. 7, c. 33; *Hesychius.*

ABOLITA (*Numis.*) an epithet signifying cancelled in application to debts, as on a medal of Adrian which represents, as in the annexed figure, the emperor standing in his paludamentum, with a torch in his right hand, ready to set some papers on fire, whereby he would cancel the arrears due from the people to the treasury. The inscription RELIQUA VETERA H. S. NOVIES MILL. ABOLITA i. e. *reliqua vetera sestertium novies millies abolita.* *Gessn. Imp. Num. Tab.* 89, fig. 25; *Vaill. Num. Imp. Rom.* vol. i.; *Hard. Select. Oper.* p. 756; *Occon. Num. Imp.* p. 170; *Pemb. Num. Antiq.* part 3, tab. 63.

ABOLITIO Criminis (*Ant.*) the extinction of an action at law, by which the defendant gets his discharge. *Suet. in Aug.* c. 32.

ABOLITIO (*Law*) abolition, leave given by the king or the judges for an accuser to desist from farther prosecution. *Stat.* 25, *Hen.* 8.

ABOLITIO (*Met.*) the entire extinction of a thing.

ABOLLA (*Ant.*) a cloak used by the Greeks and Romans in following the camp. It was generally lined and doubled, and distinct from the toga. *Mart.* l. 8, *Epig.* 46, v. 1.

*Nescit cui dederit Turiam Crispinus abollam,
Dum mutat cultus, induiturque togam.*

The abolla was also worn by judges in the execution of their office, whence *facinora majoris abollæ*, in Juvenal, for crimes of great magnitude. *Varro apud Non.* l. 14, c. 9; *Turneb. Adv.* l. 27, c. 15; *Salmas de Mod. Usur.* c. 3; *Bulenger. de Imp. Rom.* l. 4, c. 39; *Ferrar. de Re Vest.* l. 1, c. 2, &c.

ABOMA'SUM (*Anat.*) from *ab*, dim. and *omasum*, ἠρσπῶν, the paunch, the fourth stomach of a ruminating beast. *Aristot. Hist. Animal.* l. 3, c. 14.

ABORIGINES (*Ant.*) Ἀναρχιδες, the ancient and original inhabitants of Italy supposed to have been conducted into Latium by Saturn, *vel quod ab origine*, according to Servius; *vel Aberrignes errantes aut vagantes*, according to Festus; *vel ἄρος, quod in montibus degerent*, according to Dionysius Halicarnassus. *Dion. Halicarn. Antiq. Rom.* l. 1; *Liv.* l. 1, c. 1; *Justin.* l. 41; *Sigon. de Nomin. Rom.* c. 4; *Cluv. Ital. Antiq.*; *Parvin. Descript. Urb. et Ferrar. de Orig. Rom. apud Græv. Thes. Antiq. Rom.* tom. 1 & 3.

ABORTIENS (*Bot.*) *palaceus* according to Ray, and *sterilis* according to *Tournefort*; an epithet for a flower which falls off without fruit. *Raii Hist. Plant.*; *Tournef. Instit.*; *Linn. Phil. Botann.* p. 219.

ABO'RTION (*Hort.*) a term applied to trees when the fruits fall off, or are blasted before they come to maturity.

ABORTIVA, *Medicamenta*, (*Med.*) ἀμβροτικά, medicines

calculated to produce abortion. *Hippoc. de Morb. Mul.* l. 5, 6, &c.; *Foes. Oeconom. &c.*

ABORTIVE (*Bot.*) *Abortiens*, an epithet for a flower which does not come to maturity. *Linn. Phil. Bot.*—*Abortive corn*, corn which shows itself by a deformity in the stalk, leaves, ear, and even grain.

ABORTUS (*Surg.*) or *Aborsus*, from *ab* and *orior*, to come before the time; miscarriage, the emission or ejection of an imperfect foetus, called by Hippocrates ἀποφθορία διαφθορία, ἐκτρασμός; Galen says that among the Attics it was called ἀβλωσις. *Hippoc. de Morb. Mul.* c. 5, 6; *Gal. comm.* 1, in lib. 6, *Hippoc.*; *Gorr. Defin. Med.*; *Foes. Oeconom. Hippocrat.*; *Castell. Lex. Medic.*

ABOUCOUCHOU (*Com.*) a sort of woollen cloth manufactured in Languedoc, Provence, and Dauphiné.

ABOUKELB (*Com.*) or *Abukelb*, a Dutch coin current in Egypt, something inferior in value to a Spanish piastre, 4s. 8d. It bears the impression of a lion which, however, the Arabians have changed to *kelb*, a dog; either to show their contempt for Christians, or on account of its base alloy.

ABO'UT (*Mar.*) the situation of a ship immediately after she has tacked.—*About ship*, an order to the crew to prepare for tacking.

ABOUT (*Mil.*) a term for the movement by which a body of troops changes its front.—*Right about*, when the soldier turns by a semicircular movement to the right.—*Left about*, when the soldier makes a semicircular movement to the left.

ABOUT (*Mech.*) Fr. that part of a piece of wood which is between one of the ends of the piece and a mortise.

ABO'UTED (*Hort.*) a term formerly used for budded, in application to trees. It properly signifies a swelling that comes to a head or abscess, and is figuratively applied to buds which rise up in the form of small heads.

ABP. An abbreviation for archbishop.

A'BRA (*Com.*) a Polish coin worth about three half-pence.

A'BRABAX (*Magic*) *Abraaxas*, or *Abrasax*, a magical word comprehending the days of the year in numeral letters. Vide *Abrasax*.

A'BRACADABRA (*Magic*) a cabalistical word used as a charm against fevers, and formed of dropping every time the last letter when written in a kind of cone, as

א ב ר א ר א כ א ר ב א
 ר ב ר א ר א כ א ר ב א
 ב א ר א כ א ר ב א
 א ר א כ א ר ב א
 ר א כ א ר ב א
 א כ א ר ב א
 כ א ר ב א
 א ר ב א
 ר ב א
 ב א
 א

ABRA'CALAM (*Magic*) a cabalistical word serving as a charm among the Jews. This, as well as the former *Abra-bax*, and the following *Abrasax* [Vide *Abrasax*.] express the name of a Syrian idol. *Selden de Diis Syriis*.

ABRA'HAMITES (*Ecc.*) 1. An order of monks exterminated for idolatry by Theophilus. 2. A sect of heretics called after their leader Abraham, who adopted the errors of Paulus.

ABRA'SA (*Med.*) ulcers attended with, or liable to, abrasion. *Castell. Lex. Med.*

ABRASAX (*My.*) the name given by the heretic Basilides

to God and Jesus Christ, whom they worshipped under the figure of Isis. Osiris, and other Ægyptian gods, as also under the figure of animals, with the head of a cock, a lion, a beetle, or a sphinx; the body of a man, as in the annexed cut; and the tail of a serpent, &c. They impiously conceived our Saviour to be the material sun, in imitation of the Ægyptians, who worshipped the sun under the name of Osiris, &c. The word *ABPACAΞ*, *Abrasax*, or *Abraaxas*, was chosen because the letters, of which it is composed, make up 365, the number of days, according to the Greek computation by letters, in which the sun performs his annual revolution, i. e. as follows :

A	B	P	A	C	A	Ξ.
1	2	100	1	200	1	60

This word was employed as a talisman, and the image was worshipped as a magical deity, who was to dispel evils. *S. Iren. adv. Hæres.* l. 1, c. 2; *Tertul. de Præc.* c. 46; *Euseb. Eccl. Hist.* l. 4, c. 7; *Hieron. adv. Lucif. in Amor.* l. 2; *S. Epiph. Hæres.* 24; *S. August. de Hæres. et ad quod vult Deum*; *Baron. Annal. Ann.* 120; *Montfaucon. Antiq. expliq.* vol. i. p. 369, et seq.

ABRA'SIO, from *ab* and *rado*, to pare; the paring off of superficial ulcerations. *Castell. Lex. Med.*

ABRA'XAS (*Magic*) vide *Abrasax*.

ABRE'AST (*Mar.*) side by side, or opposite to; the situation of two or more ships when standing together, particularly as regards the line of battle at sea.—*Abreast* line, the line abreast is formed by the ships being equally distant from and parallel to each other, so that the length of each ship forms a right angle with the extent of the squadron or line abreast.—*Abreast* of a place, directly opposite to it, as "a fleet abreast of Beechy-Head," i. e. off, or directly opposite to it.—*Abreast* within the ship, implies on a parallel line with the beam.

ABREAST (*Mil.*) a term formerly used for any number of men in front. They are, at present, determined by files.

ABRE'TTE (*Bot.*) vide *Abelmoschus*.

ABREUVOIR (*Mil.*) a French word for a watering place, or any place dug for retaining water, as in the case of encampment.

ABREUVOIRS (*Archit.*) 1. The interstices between two stones to be filled up with mortar or cement. 2. Small trenches which are made in stone quarries to carry off the water.

ABRI (*Mil.*) French for shelter, cover; as *être à l'abri*, to be under the cover of a wood, &c.

TO ABRIDGE (*Law*) *Abbreviare*, from the Fr. *abrégér*; to make a count or declaration shorter.

TO ABRIDGE (*Algeb.*) to reduce a compound equation or quantity to a more simple form of expression, as $x^2 + (a + b)x - \frac{ab}{c} = 0$, by putting $p = a + b$ and $g = \frac{ab}{c}$ becomes $x^2 + px - g = 0$.

ABROHANI (*Com.*) or malle-molle, a certain muslin, or clear white cotton cloth from the East Indies.

ABROMA (*Bot.*) from α priv. and βρωμα, food, i. e. not fit for food; a genus of plants; class 18 *Polyadelphia*, order 2 *Dodecandria*.

Generic Character. CAL. *perianth* nine-leaved. COR. *petals* five; *nectary* five-cleft. STAM. *filaments* five. PIST. *germ* subcylindrical. PER. *capsule* ovate five-winged, five-celled; *seeds* winged.

Species. The two species are the *Abroma Augusta*, *Theobroma Augusta* seu *Althæa Luzonis*, maple leaved abroma tree, a native of New South Wales and the Philippines.—*Abroma*, *Wheleri*, *Wheler's abroma*, a shrub, native of the East Indies. *Linn. Spec. Plant.*

- ABRO'MIOS (*Ant.*) Ἀβρώμιος, a sort of drinking cup mentioned by Pollux. *Pol. Onomast.* l. 6, c. 16.
- ABROTANO'IDES (*Nat.*) a kind of coral in the form of the abrotanum. *Raii Hist. Plant.*
- ABROTANOIDES (*Bot.*) the *Artemisia Æthiopica*, the *Protea serraria*, and the *Scirpium cinereum, plumosum*, and *fuscum* of Linnæus. *Bauh. Pin.; Raii Hist.*
- ABROTANUM (*Bot.*) ἀβρότιον, southernwood; a plant so called, διὰ το ἀβρόν φαίνεσθαι, on account of its delicate appearance. Nicander describes it as a wild plant of the woods. *Nicand. Theriac.*

Ναὶ μὴν ἀβρότιονο τοτ' ἄργιρον κρεσι βάλλαει
Αεινήν ὑπὸ βήσσων.

- Abrotanum is the *Artemisia abrotanum*; the *Santolina chamaecyparissus, villosa*, and *rosmarifolia*; and the *Tanacetum* of Linnæus. *Theophrast. Hist. Plant.* l. 6, c. 8; *Diosc.* l. 3, c. 29; *Plin.* l. 19, c. 6; *Gal. de Simpl.* l. 6; *J. Bauh. Hist. Plant.; Ger. Herb.; Park. Theat. Bot.; Raii Hist. Plant.; Boerhaav. Ind. &c.; Tournef. Instit.*
- ABROTO'NITES (*Med.*) ἀβροτονίτης, wine impregnated with abrotanum. *Diosc.* l. 5, c. 62.
- ABROTO'NUM (*Bot.*) vide *Abrotanum*.
- ABRUPTE *Pinnatum* (*Bot.*) abruptly pinnated, an epithet for a leaf which has neither leaflet (foliolum), tendril, nor clasper (cirrus) at the end. *Linn. Philosoph. Bot.*
- ABRUPTIO (*Med.*) vide *Abductio*.
- ABRUPTUS (*Ich.*) abrupt, an epithet for the lateral line in fishes, when divided into two or more parts not contiguous.
- A'BRUS (*Bot.*) ἀβρός, mollis, delicatus, from the softness of its leaves; a kind of kidney bean growing in Egypt, "Phaseolus ruber abrus vocatus." Now called Jamaica wild Liquorice, from its resembling the liquorice in taste. *Prosper. Alpin. Ægypt.*
- ABRUS in the *Linnæan System*, a genus of plants, Class 17 *Diadelphia*, Order 4 *Decandria*.
- The Generic Character. CAL. perianth one leafed. COR. papilionaceus: wings oblong; keel oblong. STAM. filaments 9; anthers oblong, erect. PIST. germ cylindrical; style subulate; stigma in form of a head. PER. legume like a rhomb; seeds solitary.
- Species. The only species is the *Abrus precatorius, glycine*; *Abrus konni, phaseolus seu orobus Americanus*, Jamaica wild Liquorice; a tree, native of the Indies. *Prosper. Alpin. Ægypt.; Raii Hist. Plant.; Breyn. Prodrom.; Parkins. Theat. Botanic.; Herman. Catalog.; Plucken. Phytograph. &c.*
- ABSCEDĒ'NTIA (*Med.*) from *ab* and *cedo*, to go; the diseased or decayed part which abscedes from the body. *Cels.* l. 5, c. 18.
- ABSCÉ'SSUS (*Med.*) ἀπόστημα, abscess, an inflammatory tumor. *Hippoc.* l. 4, *Aphor.* 31; *Ruff. Ephes. de Ves. Affect.* c. 9; *Cels. de Re Med.* l. 2, c. 9; *Paul. Ægin.* l. 4, c. 18; *Oribas. de Curat. Morb.* l. 3, c. 43, et 9 *Act. Terab.* 4, *Serm.* 2, c. 32, &c.; *Act. de Meth. Med.* l. 1, c. 17.
- A'BSCISS (*Math.*) *Abscissa*, or *Abscissæ*, from *ab* and *scindo*, to cut off, το ἀποκομμένον; the segment of any diameter or axis of a curve, as A C, or C B, cut off by another line

called the ordinate, as D C. The abscissæ are understood to commence at the vertex of the curve, as A or B, *fig. 1, 2*, unless expressed otherwise, as in *fig. 2*, where a C, A C, C b, and C B, are all abscissæ. Each ordinate,

- in a common parabola, has but one absciss, as A C, *fig. 1*; in the circle and ellipse, two lying on opposite sides, as A C, C B, *fig. 2*; and, in the hyperbola, also two lying on the same side, as C A, C B, *fig. 3*. When an absciss and its corresponding ordinate are considered together they are called *coordinates* of the curve, by means of which the equation of a curve is defined. [Vide *Curve*.] *Apollon. Conic.* l. 1, pr. 20, &c.; *Wallis. Mathemat.; Wolf. Mathematic. Curs.*
- ABSCI'SSIO (*Med.*) abscission, or cutting off, from *ab* and *scindo*, to cut; 1. cutting away an unsound or luxuriant part. 2. The sudden termination of a disease in death.
- ABSCI'SSIO (*Rhet.*) a figure of speech of cutting short in the discourse after we have begun to speak of any thing. *Cic. ad Heren.* l. 4, c. 54.
- ABSCI'SSION (*Astrol.*) the cutting off the light of the first of three planets when the third comes in conjunction with the middle one.
- ABSCO'NSIO (*Med.*) from *abscondo*, to hide; a sinus or cavity of a bone which receives and conceals the head of another bone.
- A'BSENT (*Mil.*) a term employed in regimental returns to account for the deficiency of any in a regiment or company.—*Absent with leave*, officers with permission, or non-commissioned officers on furlough excused parade or field duty.—*Absent without leave*, a milder term often used for desertion.
- ABSINTHII (*Bot.*) a species of *Chrysomela*.
- ABSINTHITES (*Med.*) ἀχύνθιτης, wine impregnated with absinthium or wormwood. *Dioscor.* l. 5, c. 49.
- ABSINTHIUM (*Bot.*) ἀψίνθειον, from *a* priv. and *ψνθος*, or *τίψη*, *delectatio*, i. e. unpleasant; a plant, so called on account of its bitterness. *Theophrast. Hist. Plant.* l. 9, c. 18; *Dioscor.* l. 3, c. 26; *Plin.* l. 27, c. 7; *Gal. de Simpl.* l. 6.—*Absinthium* is the *Artemisia*; the *Achillea Ægyptiaca*, et *Clavenæ*; the *Parthenium hysterophorus*; the *Senecio abrotanifoliis*; and the *Tanacetum incanum et annuum* of Linnæus. *J. Bauh. Hist. Plant.; C. Bauh. Pin.; Ger. Herb.; Parkins. Theat. Botan.; Raii Hist. Plant.; Boerh. Ind.; Tournef. Instit.; Dale Pharmacop.*
- A'BSIS (*Math.*) *Abses*, or *Absides*. vide *Apsis*.
- A'BSOLUTE, *absolutum*, i. e. *ab alio solutum*, dependant on no other thing, as
- ABSOLUTE (*Theol.*) free from conditions; so the decrees of God are said to be absolute in regard to man.—*Absolute*, without any cause; thus God is said to be absolute.
- ABSOLUTE (*Phy.*) without relation to, or dependance on what is external; as—*Absolute time*, which flows equally in itself without relation to any thing external, as duration.—*Absolute space*, which remains similar and immovable without relation to any thing exterior.—*Absolute motion*, which is the transfer of any body from one absolute place to another. *Newt. Princ. Math.* def. viii.—*Absolute gravity*, the whole force with which a body is impelled towards the centre, in distinction from specific gravity.
- ABSOLUTE (*Gram.*) without regimen or government, as an ablative or genitive *absolute* when the case depends on no other words, as in the Latin *Augusto imperatore*, Augustus being emperor; in the Greek the genitive is employed in place of the ablative.—*Absolute noun*, a noun that needs no other word to be joined to it, as God, reason, horse, &c. *Prisc.* l. 2.—*Absolute degree*, in the comparison of adjectives, the same as the positive.
- ABSOLUTE (*Law*) without condition or encumbrance, as an "absolute bond," *simplex obligatio*, in distinction from a conditional bond. An "absolute estate," one that is free from all manner of condition or encumbrance.
- ABSOLUTE number (*Algeb.*) the *Homogeneum Comparationis* of Vieta is the term in an equation which is com-

pletely known, as in $x^2 + ax = b$, b is the absolute or known quantity. *Viet. Art. Analyt.* c. 8.

ABSOLUTE equation (*Astron.*) the sum of the optic and eccentric equation. [vide *Equation*]

ABSOLUTE (*Ecc.*) among the Romanists, in opposition to declaratory. They hold that a priest can forgive sins absolutely; but the protestants say, that the forgiveness is only declaratory.

ABSOLUTELY (*Log.*) applied to the terms of a proposition, signifies without relation to any thing else.

ABSOLUTELY (*Geom.*) entirely or completely, as a circle is said to be *absolutely* round, in contradistinction to a figure that is partly so, as an oval, &c.

ABSOLUTIO (*Rhet.*) that perfect division of any cause which embraces all the parts. *Cic. Invent.* l. 1, c. 22.

ABSOLUTION (*Ecc.*) 1. A judicial act in the Romish church whereby a priest, as a judge, by virtue of a power supposed to be delegated to him from Christ, takes upon him to remit the sins of penitents. *Order. Vital.* l. 5. 2. An act, in the reformed as well as in the Romish church, by which a man who stands excommunicated is freed or released from the excommunication.—*Absolutio ad cautelam*, that which is given to an excommunicated person when he wishes to make his appeal against the sentence, and also that which the pope gives to those to whom he grants benefices.

ABSOLUTION (*Law*) a definitive sentence whereby a man accused of any crime is acquitted.

ABSOLUTORIUM (*Med.*) an absolute or perfect remedy; also a perfect cure.

ABSOLUTORIUS (*Ant.*) from *absolvo*, to acquit; absolatory, as *tabula absolutoria*, a bill of discharge.

ABSONIA'RE (*Archæol.*) to shun, detest; a term used in the oath of allegiance taken by the Anglo-Saxons.

to ABSORB (*Hort.*) a term applied to all greedy branches that, growing on fruit trees, drink up and rob the other branches of the nutritious juice which is requisite to promote their growth.

ABSORBENTIA *Medicamenta* (*Med.*) medicines which have the power of drying up redundant humours.

ABSORBENTS (*Chem.*) an epithet for alkaline, or such earthy bases as have the property of absorbing or neutralizing acids; a term used more by the ancients than the moderns.

ABSORBENT vessels (*Ana.*) *absorbentia vasa*, from *absorbeo*, to absorb or dry up; vessels which carry any fluid into the blood, as the *lacteals*, which absorb the chyle; the *lymphatics*, &c.

ABSQUE hoc (*Law*) i. e. without this; words of exception made use of in a traverse.

ABSTEMII (*Ecc.*) a name given to persons who could not partake of the sacrament from their natural aversion to wine.

ABSTEMSIO (*Law*) withholding the heir from taking possession.

ABSTEMTIO (*Med.*) the retention or suppression of the excrements.

ABSTERGENTS (*Med.*) *abstergentia medicamenta*, from *abstergo*, to rinse away; medicines capable of cleansing by the power of dissolving concretions.

ABSTERIVE *Medicines* (*Med.*) vide *Abstergents*.

ABSTINENCE (*Ecc.*) a ceremony in the Romish church of abstaining from food in a partial manner, by which it is distinguished from fasting, which is almost entire abstinence: hence the terms "Days of abstinence," and "Fast-days."

ABSTINENCE (*Hierog.*) the moral virtue of abstaining from indulgence is represented in painting, by a woman of a healthy constitution holding one hand to her mouth; and in the other a scroll, with the words *Utor, non abutor*; I use, but do not abuse.

ABSTINENCE from evil is represented by a woman crowned with laurels, leaning on a pedestal, and looking attentively on a decalogue which lies before her. Under her feet lie serpents, tortoises, and broken arrows; and by her side stands a camel.

ABSTINENCE (*Med.*) from *abstinco*, to abstain. 1. Abstinence from all food, or particular kinds of food. 2. Suppression or compression, as *abstinentia sudoris*, suppression of the sweat; *spiritus ob abstinentiam clausus*, wind shut up by compressure. *Cæl. Aur. de Acut. Morb.* l. 2, c. 32.

ABSTINENTS (*Ecc.*) heretics professing abstinence from marriage, and particular foods, &c. They appeared in France and Spain about the end of the third century. *Philastr. de Hæres.* c. 26; *Baron Annal. Ann.* 228; *Præteol. de Hæres.*

ABSTRACT (*Law*) an abridgement or epitome of any original writing.

ABSTRACT (*Log.*) *abstractus*, an epithet applied to whatever is separated from any other thing by an operation of the mind, termed *abstraction*; thus any thing may be said to be considered in the *abstract*.—An *abstract idea* is a simple idea detached and separated from any particular subject or complex idea, as the idea of rationality abstracted or separated from that of corporeal agency.—*Abstract quality*, that quality which is considered as abstracted from the subjects in which it inheres, as whiteness, which is a quality considered abstractedly from a wall, a flower, a man, &c.—*Abstract term*, a term which expresses qualities without regard to the subject, *vox abstracta*, as visibility, rationality, whiteness, &c. in distinction from the concrete.

ABSTRACT Noun (*Gram.*) or noun substantive, denotes that which is real, but which subsists only in the understanding; it is distinguished from the *noun adjective*, and answers to the abstract term in logic, as whiteness, coldness, valor, &c.

ABSTRACT (*Math.*) or *pure*, an epithet for that sort of mathematics which treats of the properties of magnitude, figure, and quantity, abstractedly and generally, without regard to any particular object, as arithmetic and geometry, in distinction from mixed mathematics, in which simple and abstract quantities are applied to particular sensible objects, as astronomy, mechanics, optics, &c.—*Abstract numbers* are such as are considered abstractedly, or without regard to any object which they may represent, as 5, 6, 7, &c. in distinction from *concrete numbers*, where the thing is specified with the number, as 5 feet, 6 inches, 7 yards, &c.

ABSTRACTIO (*Phy.*) from *abstraho*, to draw asunder; *ἀφαίρεσις, τὸ χωρίζειν*; a separation of one thing from another, to which it is usually joined. It is of different kinds; namely, *Abstractio realis, qui fit ὄντως, re ipsa*, the actual separation of one thing from another, as gold from the earth.—*Abstractio mentalis, νοητικῆ*, mental abstraction, or the separation of universals from particulars, as the consideration of whiteness in distinction from the wall, the milk, snow, &c. in which it exists; this is taking things in the abstract, and is either—*Abstractio logica*, the abstraction of accidents from their subject, as animal from man or brute.—*Abstractio mathematica*, the abstraction of the form of bodies from the matter *secundum rationem*; or,—*Abstractio metaphysica*, the abstraction of the form of bodies from the matter *secundum rem*, i. e. *Abstractio realis*, real abstraction. *Aristot. Physic.* l. 2, c. 2; *Alex. de Alex. in Met. Aristot.* l. 3; *Albertus Mag. Phy.* l. 1, tr. 1, c. 2; *Fonsec. in Met. Aristot.* l. 5, c. 28, quæst. 6; *Scal. Exercit.* 307, 342.

ABSTRACTION (*Chem.*) The process of drawing off by distillation any part of a compound, and returning it again to the residue to be redistilled any number of times; thus arsenic acid may be procured by abstracting arsenic with nitrous acid.

ABSTRACTITIUS (*Chem.*) *vel Abstractivus*, from *abstraho*, to draw away; abstractivus, an epithet for the native spirits of aromatic vegetables, in distinction from those produced by fermentation.

ABSURDUM (*Log.*) vide *Reductio ad Absurdum*.

AB'SUS (*Bot.*) a species of the *Cassia* of Linnæus. *Prosp. Alpin.*

ABSYNTHIUM (*Bot.*) the same as Absinthium.

ABUNDANCE (*Med.*) *abundantia*, a term employed for an excess of humours.

ABUNDANT (*Math.*) an epithet for a number, whose aliquot parts, when added together, make a sum greater than the number itself, as 12; the aliquot parts of which 1, 2, 3, 4, 6, are 16; it is opposed to a deficient number.

ABUNDANT Year (*Chron.*) a Jewish year when it has a day more than ordinary, in distinction from the defective year. *Scal. Emeudat. Temp.* l. 2.

ABUNDANTIA (*Numis.*) *Abundantia* was the name of the goddess of plenty on medals, who is called *Copia* by the poets. In the annexed cut, she is represented seated on a chair, like the Roman chairs in general, only that the two sides are wrought into the shape of two Cornucopias, to denote the character of this goddess. The figure of *Abundantia* is given on medals of *Trajan*, *Caracalla*, *Eliogabulus*, *Alexander Severus*, *Gordian*, *Pius*, *Trajan Decius*, *Gallienus*, *Tetricus*, *Probus*, *Numidianus*, *Carinus*, *Carus*, *Dioclesian*, and *Valerius Maximianus*; sometimes with the simple inscription **ABUNDANTIA**, but mostly with the addition of **AUGUSTI** **AUGG. NN.** *Augustorum Nostorum*; sometimes **ABUNDANTIA PERPETUA**.

ABUNDANTIA Temporum, an inscription on a medal of *Salonina*, the wife of *Gallienus* the emperor, which bears on the obverse, as on the subjoined cut, her head with a

stola or robe over the breast, and the inscription **CORNELIA SALONINA AUG.**; on the reverse, a figure of *Salonina*, sitting with three boys standing before her, while she pours out coins from the cornucopia which she had in her lap; near her is a female figure standing; and on the right hand, behind the chair, a military figure. *Vaillant. Numism. Imperator. Roman.*; *Patin. Numis. Imperat. Roman.*; *Morell. Thesaur. Imp. Roman.*; *Occo. Numis. Roman. Imperat.*; *Bandur. Num. Imper. Roman.*

ABUNDANTIA (*Med.*) abundance, or excess of humours.

ABU'SE (*Med.*) *abusus*, from *abutor*, to abuse, an ill use of a thing, applied to nonnaturals in medicines.

ABU'SIO (*Rhet.*) *κατάχρησις*, a figure of speech by which words are used with some deviation from their proper meaning; thus "worship," which is strictly applied to God only, may also, by *abusio* or misuse, be applied to magistrates, &c.; as in the Scripture, "They worshipped God and the king."

ABU'TILON (*Bot.*) a plant formerly called in English the Yellow Mallow, from its great resemblance to the mallow, both in leaf and flower. Its different species are now known by the names of the *Hibiscus ciliaceus*, the *Melochia pyramidata et tomentosa*, the *Malva caroliniana*, the *Napæ scabra*, and the *Sida spicata*, in the Linnæan system. *J. Bauh. Hist. Plant.*; *Casp. Bauhin. Pin.*; *Ger. Herb.*; *Parkin. Theat. Botan.*; *Raii Hist. Plant.*; *Pluk. Almag. Botan.*

ABU'TMENTS (*Arch.*) or *Bulments*, the extremities of a

bridge, by which it is made to rest upon the banks or sides of rivers, &c.

ABUTMENTS (*Carpent.*) the junctions or meetings of two pieces of timber.

ABU'TTALS (*Law*) from the Fr. *aboutter*, to but against, or terminate; the *buttings* or boundings of land. The sides of the lands are properly said to be adjoining, and the ends *abutting* to the thing that is contiguous.

ABY'SS (*Bibl.*) *abyssus*, from *a*, priv. and *βύσσις*, *Ionice*, *pro βυθος*, a depth, i. e. without a bottom; a depth, an epithet for, 1. Hell. *Luke* viii. 31, &c. 2. The common receptacle for the dead, the grave, or depth of the earth. *Rom.* x. 7. 3. The deepest parts of the sea. *Psalms* xxiv. 28.

ABY'SSUS (*Med.*) the deep, abyss, a proper receptacle for the seminal matter. *Castell. Lex. Med.*

ACA'CALIS (*Bot.*) *ἀκακάλις*, a shrub bearing a papilionaceous flower, and siliquous fruit like a tamerisk. *Diosc.* l. 1, c. 118.

ACA'CIA (*Bot.*) *ἀκακία*, from *ἀκάζω*, to sharpen; a thorny tree of Egypt, called, by Theophrastus, *Ἀκακία Αἰγυπτιακή*, by Pliny *acacia*, or the *spina Ægyptiaca*, was supposed by some to be the tree which yielded the *Gummi Arabicum*, or Gum Arabic. *Theophrasti. Hist. Plant.* l. 9, c. 1; *Dioscor.* l. 1, c. 130; *Plin.* l. 24, c. 12.

ACACIA, in the Linnæan system, is the *Mimosa nilotica*; but the Common *Acacia*, otherwise called *Pseudo-acacia*, or False *Acacia*, is the *Robinia pseudo-acacia*; and the Rose *Acacia*, a shrub so called from its rose-coloured flowers, is the *Robinia hispida* of Linnæus. *Prosper. Alpin. de Plant. Ægypt.*; *J. Bauh. Hist. Plant.*; *C. Bauh. Enumerat.*; *Ger. Herb.*; *Parkin. Theat. Botan.*; *Raii Hist. Plant.*; *Tournef. Instit.*; *Boerhaav. Ind. Plant.*

ACA'CIANS (*Ecc.*) heretics so called after one *Acacius*, bishop of *Cæsarea*, who denied the son to be of the same substance as the father. *Baron. Annal. Ann.* 359.

ACADEMIA (*Ant.*) *Ἀκαδημία*, a Gymnasium at Athens, in a grove of the suburbs, where Plato taught. It derived its name from *Academeus*. *Hor. Ep.* 22, v. 45.

Atque inter silvas Academici querere verum.

This school of Plato, in which it was forbidden to laugh, was called *Academia vetus*, in distinction from the *Academia nova*, or *secunda*, founded by *Arcesilaus*, who departed from the doctrines of Plato; and *Academia tertia*, which was founded by *Carnaedes*, or, according to *Diogenes Laertius*, by *Lacydes*. *Eusebius* also makes mention of a fourth *Academia* founded by *Antiochus*. *Cic. Quæst. Academ.* l. 1. c. 4—12; *Diog. Laert. Proæm. Segm.* 18, 19, &c.; *Æl. Var. Hist.* l. 3, c. 35; *Euseb. Evang. Præparat.* l. 14.

ACADEMICS (*Ant.*) *academici*, a name for the followers of Plato; a sect of philosophers, so called from the *Ἀκαδημία*, where he taught.

ACADEMY (*Lit.*) from *academia*, a society of learned men instituted and protected by public authority: the first of which, among the moderns, was that founded by *Charlemagne* at the instance of *Alcuin*, an English monk; this has been followed by several others, of which the principal are the—*Academia Secretorum Naturæ*, established at *Naples* in 1560, by *Baptista Porta*.—*Academia Lyncei*, founded at *Rome*, among whose early members was *Galileo*.—*Academia del Limento*, founded at *Florence* in 1657, by *Prince Leopold of Tuscany*.—*Academia Degli Inquieti*, founded at *Bologna* about the same time.—*Academia Royale*, founded at *Paris* in 1666.—*Academie Imperiale*, at *Petersburg*, founded by *Peter the Great* in 1725.—*Academie Royale des Sciences*, &c. founded, at *Berlin*, by *Frederic I.* in 1700, of which *Leibnitz* was the first president.—*Academie Royale*, at *Stockholm*, in 1739.

ACADEMY, a collegiate school for the training of youth in the sciences, of which there are three royal foundations in England, two for the military at Woolwich and Midhurst; and one at Portsmouth for the navy.

ACÆNA (Bot.) a genus of plants, Class 4 *Tetrandria*, Order 1 *Monogynia*.

Generic Characters. CAL. perianth four-leaved; leaflets ovate.—COR. none, unless the calyx be termed as such.

—STAM. filaments equal; anthers quadrangular.—PIST. germ inferior; style very small; stigma, a small membrane.—PER. one-celled berry; seeds single.

Species.—The *Acæna* is a Mexican plant, having only one species, namely, the *Acæna elongata*. Linn. Spec. Plant.

ACA'HI (Chem.) alum-water.

ACA'JA (Bot.) *Prunus Brasiliensis fructu racemosa*, a tree of Brazil, growing to the size of a tall lime, on the extreme branches of which certain birds build their nests pendulous, that they may be out of the way of serpents. Marcgrav. Hist. Brasil.; Raii Hist. Plant.

ACA'JA'IBA (Bot.) *Acajou*, or *Acajuba*; the *Anacardium occidentale* of Linnæus, and in English the Cashew-tree; the fruit of which is called the Cashew-nut, from which is extracted an oil used by painters to give a black colour, and also a spirit is distilled equal in strength to arrack or rum. Ger. Herb.; Pis. et Marcgrav. Hist. Bras.; Raii Hist. Plant.

ACA'JOUANUM lignum (Bot.) a sort of wood of a red colour, which is never touched by worms.

A'CALAI (Chem.) salt.

ACALEPHE (Bot.) or *Acalypha*, the *Ακαλύφη* of Theophrastus, and *Ἀκαλυφή* of Dioscorides; a herb so called, παρὰ το μὴ ἔχειν καλὴν ἄφην, i. e. from its not being pleasant to the touch. Theophrast. Hist. Plant. l. 7, c. 7; Aristoph. Equit. v. 420; Diosc. l. 4, c. 94; Athen. l. 3, c. 12.

ACA'LYPHA, in the Linnæan system, the *Rhinocarpus* of Boerhaave or Tickfruit; a genus of plants, Class 21 *Monocœcia*, Order 8 *Monodelphia*.

Generic Characters of the Male Flowers. CAL. perianth three or four-leaved; leaflets roundish.—COR. none.—STAM. filaments eight to sixteen; anthers roundish.

Generic Characters of the Female Flowers. CAL. perianth three-leaved; leaflets subovate.—COR. none.—PIST. germ roundish; styles three; stigmas simple.—PER. capsule roundish; seeds solitary.

Species.—Plants of this tribe are either annuals or shrubs, but mostly the latter; and natives of the Indies or America. The principal species are the—*Acalypha Virginiana*, or *Mercurialis tricoccus*.—*Acalypha Zeylanica*, or *Cupameni*; Indian *Acalypha*.—*Acalypha Australis*, or *Ricinoides*; South American *Acalypha*.—*Acalypha betulina*, or *Cauda*.—*Acalypha mappa*, *Ricinus mappa*, or *Folium mappæ*; a shrub, native of the Malaccas.—*Acalypha lanceolata*, or *Ricinocarpus Indica*, &c. Raii Hist. Plant.; Herm. Catal.; Sloan. Hist. Jamaic.; Linn. Spec. Plant.

ACA'MATOS (Med.) from *α*, priv. and *κάρμω*, to labour; a position of the limbs longest to be borne without weariness.

ACA'MPTE (Opt.) an epithet applied by Leibnitz to a figure which is opaque and polished, and consequently possesses properties necessary for reflecting light, yet does not reflect it. Leib. Epist. tom. iii. p. 263.

ACA'NGA (Bot.) a species of the *Bromelia* of Linnæus.

ACA'NOR (Chem.) a sort of chemical furnace.

ACA'NOS (Bot.) *Ἀκάνος*, a herb, the *Onopordium Acanthium* of Linnæus. Theoph. Hist. Plant. l. 1, c. 16; Diosc. l. 6, c. 3.

ACA'NTHA (Bot.) vide *Acanthus*.

ACANTHA (Anat.) the acute processes of the vertebræ, the spine of the tibia, or the *Spina Dorsi*. Gorr. Defin. Med.

ACANTHA (Ich.) the fins of fishes.

ACANTHABOLUS (Surg.) from *ἀκανθα*, a thorn, and *βάλλω*, to throw; a surgical instrument for extracting thorns, pieces of bone, &c. Paul. Æginet.

ACATHA'CEOUS (Bot.) *ακανθώδης*, from *ἀκανθα*, *aculeum*; prickly as plants of the thistle kind. Diosc. l. 3, c. 14.

ACA'NTHALEUCE (Bot.) *ἀκανθαλευκη*, *Alba spina*, white thorn.

ACANTHE (Bot.) another name for the *Cinara* of Linnæus.

ACA'NTHIA (Ent.) a division of the genus *Cimex*.

ACA'NTHICE (Bot.) *ἀκανθική μυσική*, the liquid which the head of the Helixines (*ξίπης*) contains, used by females for mastick. Theoph. l. 6, c. 4.

ACA'NTHINUM (Chem.) gum.

ACA'NTHIS (Or.) *ἀκανθίς*, *ἀκανθόφαιος*, an eater of thorns: a bird of mean colour, but agreeable voice, of which Virg. Georg. 3, v. 338, says

Litoraque halcyonem resonant, et Acanthida dum.

It is supposed to be what we call the linnet. Aristot. Hist. Anim. l. 8, c. 3; Aldrov. Arnithol. in voc. *Carduelis*.

ACA'NTHIUM (Bot.) the *Onopordium acanthium*, *Illyricum* et *Arabicum* of Linnæus. Raii Hist. Plant.

ACANTHE'IDES (Zo.) the same as echinos.

ACANTHEIDES (Bot.) prickliest Thistle, a species of the *Carduus* of Linnæus.

ACA'NTHUS (Arch.) an ornament in the capital of a Corinthian pillar, invented, according to Vitruvius, by Callimachus, who took the idea from observing an *Acanthus* grow over a tile that had been placed on a tomb. Vitruv. l. 4, c. 2; Bald. Lex. Vitruv.

ACANTHUS (Bot.) the *ἀκάνθος* of Theophrastus, and *Acanthus* of Virgil, called by Herodotus *ἀκανθα*, by Strabo *ἄκανθις*, by Dioscorides *ἀκάνθια*, and by Pliny *Spina Ægyptiaca*; is a shrub answering to the *Acacia* of Bauhine, and the *Mimosa nilotica* of Linnæus. Its fruit in the pod (*ξίλαθος*) is termed, by Virgil, a berry. Georg. 2, v. 119.

Et quid odorato referam sudantia ligno

Balsamaque et baccas semper frondentis Acanthi?

ACANTHUS, the herb, called by Dioscorides *ἀκανθα*, is distinguished by the epithet *mollis*, smooth, because it is provided with spines so soft that it might be used for garlands. Theoc. Idyl. l. 1, v. 55.

Παντὰ δ' ἄμφι δέπας περιπέπταται ὑγρὸς ἀκάνθος.

Virg. Eclog. 3, v. 45.

Et molli circum est ansas amplexus acantha.

This, as well as the former, is called *Acanthus*, because it is thorny, which was also a general name for many thorny plants. It is called *Branca ursina* by Bauhine, Brank ursine by Dale, and Bears-breech, vulgarly. Herod. l. 2, c. 96; Theophrast. Hist. Plant. l. 4; Steph. Byz. de Urb.; Dioscor. l. 3; Plin. l. 22; Ovid. Metam. l. 13; Vitruv. l. 4; Athen. Deipnos. l. 15; Gal. de Simpl. l. 6; Aet. l. 1; Marcell. Empiric. l. 6; Salmas. Exercitat. Plin.; &c.

ACANTHUS, in the Linnæan system, a genus of plants, Class 14 *Didynamia*, Order 2 *Angiosperma*.

Generic Characters. CAL. perianth unequal, permanent.—COR. one-petalled, unequal; tube very short; upper-lip none; under-lip very large.—STAM. filaments four; anthers oblong.—PIST. germ conical; style filiform; stigmas two.—PER. capsule subovate, with a point; claws alternate; seeds ovate.

Species. The species are mostly shrubs, as the *Acanthus mollis sativus*, seu *Mollis Virgilii Carduus*, seu *Branca Ursi vel Ursina*, Brank ursine, a native of Italy, where it is

- used medicinally.—*Acanthus carduiifolius*, Thistle-leaved Acanthus, native of the Cape of Good Hope.—*Acanthus spinosus aculeatus* seu *sylvestris*, Prickly Acanthus, a native of Italy.—*Acanthus Dioscoridis* vel *sativus*, native of Lebanon, and supposed by Linnæus to be the genuine species of Dioscorides.—*Acanthus ilicifolius*, the *Paina-Schulli* of Rheed, native of the Indies, &c. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin. Theat. Botan.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tourn. Inst. Herb.*; *Boerh. Ind. Plant.*; *Linn. Spec. Plant.*
- ACANTHYLLIS (*Or.*) another name for Acanthis.
- ACA'NTICONE (*Min.*) a species of the *Epidote* family.
- ACA'NUS (*Bot.*) vide *Acanos*.
- ACA'NZII (*Mil.*) Turkish light-horse, the Avant-guard of the Grand Seigneur's army.
- ACAPA'TLI (*Bot.*) another name for the *Piper Longum* of Linnæus. *Raii Hist. Plant.*
- ACA'PNON (*Bot.*) another name for the *Sampsuchum* of Linnæus.
- ACAPNON (*Nat.*) ἀκάπνισον, from α, priv. and καπνός, smoke; honey taken from the hive without smoking the bees. *Strabo*. l. 9; *Plin.* l. 11, c. 16.
- ACA'RNA (*Bot.*) Ἀκάρνα, Fish-Thistle, a species of the *Atractilis*, the *Carlina*, and the *Ericus* of Linnæus. *Theoph.* l. 6, c. 3.
- ACA'RNAN (*Ich.*) a sea-fish, mentioned by Athenæus and Aldrovandus. *Castel.*
- A'CARON (*Bot.*) the Wild Myrtle; the *Myrtus Brabantia* of Linnæus.
- ACAR'TUM (*Chem.*) red-lead.
- A'CARUS (*Ent.*) Ἀκάρη, Tick, a genus of animals of the Class *Insecta*, Order *Aptera*.
- Generic Characters.* Mouth without proboscis.—*Feelers* two as long as the sucker.—*Eyes* two placed on each side of the head.—*Legs* eight.
- Species.* The most remarkable species are the *Acarus sciro*, the Cheese Mite, found in cheese and meal.—*Acarus ricinus*, Dog-Tick, which infests dogs.—*Acarus exulcerans*, the Itch-Mite, found on the hands and joints of persons infected with the itch.—*Acarus autumnalis*, the Harvest Bug, which attaches itself to plants and animals in autumn.—*Acarus telarius*, spins its web on the bark of trees, which, being dispersed by the winds, covers the fields with innumerable threads.—*Acarus coleopterorum*, which is found on the bodies of several coleopterous insects.—*Acarus vegetans*, Vegetating Mite, an insect so called from the singular manner in which it is affixed to the limbs or wing-shells of the insect it infests.
- ACATALECTIC (*Gram.*) Ἀκατάληκτος, i. e. *acatalecticus versus cui in fine nihil deest*, from α, priv. and κατάληξις, to end; a perfect or acatalectic verse, not having a syllable too much or too little. *Diomed.* l. 3.
- ACATALE'PSIA (*Phy.*) Ἀκαταληψία, incomprehensibility, uncertainty in science.
- ACA'TALIS (*Bot.*) another name for the *Juniperus*.
- ACATASTA'TÆ (*Med.*) from α, priv. and καθίσταμαι, to determine; an epithet for fevers that are irregular and variable in their appearances; or urines that are turbid. *Hippocrat. de Rat. Vict. in Acut. Morb. & Gal. Com.*
- ACATE'RA (*Bot.*) *Juniperus niger*.
- ACA'TERY (*Hist.*) a sort of check between the clerks of the king's kitchen, and the purveyors.
- ACATHA'RSIA (*Med.*) Ἀκαθάρσια, from α, priv. and καθάρω, to purge; impurity of the humours.
- ACATHI'STUS (*Mus.*) Ἀκάθιστος, a solemn hymn, anciently sung in the Greek church, in the fourth week of Lent. *Curopolat. de Off. Constantin.* c. 12.
- ACA'TIUM (*Ant.*) ἀκάτιον, the largest sail placed in the middle of the ship. *Poll. Onon.* l. 2, c. 81; *Isidor. Orig.* l. 19, c. 3.
- ACA'TO (*Chem.*) or *Araxos*, soot.
- ACA'ULIS (*Bot.*) from α, priv. καυλός, a stem, i. e. *sine caule*, stemless; an epithet for a plant; *Planta acaulis*, a plant wanting a stem, as the *Viola odorata*; also for the cap of the fungi, as *Pileus acaulis*, or *sessilis*, when the cap is not supported by a stalk. *Linn. Phil. Botan.*
- ACA'ULOS (*Bot.*) the *Carlina Acaulis* of Linnæus. *Bauh. Hist. Plant.*
- ACCAPITA'RE (*Law*) to pay relief to lords of manors. *Flet.* l. 2, c. 50.
- ACCA'PITUM (*Law*) i. e. *Relevium*, a relief to lords of manors.
- ACCE'DAS ad Curiam (*Law*) a writ issuing from Chancery to a sheriff, where a man has received false judgment. *F.N.B.* 18; *Reg. Orig.* 9, 56.—*Accedas ad Vice-Comitem*, a writ to a coroner, commanding him to deliver a writ to a sheriff, who having a writ, called a *pone*, suppresses it. *Reg. Orig.* 83.
- ACCELERATED (*Phy.*) an epithet for motion when it increases by continual accessions of velocity, which may be either equably or unequably accelerated, as the *accelerated* motion of pendulums, projectiles, compressed bodies, &c. The term is opposed to *retarded*, which expresses a diminution of velocity.
- ACCELERATING, or *Accelerative* (*Mech.*) *acceleratrix*, an epithet for that force which causes an increased velocity of motion. *Newt. Princip.* def. 8.
- ACCELERATION (*Phy.*) *acceleratio*, from *ac*, or *ad*, and *celero*, to quicken; increased velocity of motion, which is principally applied to falling bodies tending towards the centre of the earth by the force of gravity. Acceleration is either equable or variable.—*Equable acceleration* is that in which the accessions of velocity are always equal in equal times.—*Variable acceleration* is when the accessions in equal times either increase or decrease. *Galil. Dial.* 2.
- ACCELERATION (*Astron.*) is applied to the fixed stars, the planets, and the moon.—*Acceleration of the fixed stars*, is the time which the stars, in one diurnal revolution, anticipate the mean diurnal revolution of the sun.—*Acceleration of a planet*, when its real diurnal motion exceeds its mean diurnal motion.—*Acceleration of the moon*, the increase of the moon's mean motion from the sun, compared with the diurnal motion of the earth.
- ACCELERATIVE (*Phy.*) vide *Accelerating*.
- ACCELERATO'RES urinæ (*Anat.*) muscles so called because they serve to expedite the passage of the urine.
- ACCEN'DONES (*Ant.*) a kind of gladiators or supernumeraries, whose office was to excite and animate the combatants. *Salmas. in Tertull. de Pall.* c. 6.
- ACCEN'SOR (*Ant.*) vide *Acolythus*.
- ACCEN'SUS (*Art.*) an officer who attended on the consuls and prætors acting as a clerk of the assizes, or crier of the court to summon the witnesses, &c.; so called *quod alios ad prætorem acciret*. Before the introduction of clocks he used also to cry the hour at the third hour at noon, and at the ninth hour. *Varr. de Ling. Lat.* l. 5, c. 9; *Cic. de Leg.* l. 2, c. 24; *Ad. Frat.* l. 1, ep. 1; *Plin.* l. 7, c. 60; *Var. de Vit. Pop. Rom. Apud. Non. Marcell.* l. 12, c. 8; *Suet. in Jul.* c. 20; *August. Ad. Leg.* xii. Tab. § 44; *Sigon. de Antiq. Jur. Civ. Roman.*; *Manut. de Civit. Rom. apud Thesaur. Græc.* tom. 1, p. 36; *Salmas. de Mil. Rom.* c. 14; *Buleng. de Imp. Rom.* l. 6, c. 16. This officer seems also to have acted as a scribe, according to Cicero, and some inscriptions T. TITIENUS FELIX, AUGUSTALIS SCRIBA LIBR. ÆDIL. CURUL. VIATOR ÆDILIS. PLEBIS. ACCENSUS. *Cic. in Verr.* l. 3, c. 66; *Buleng. de Imp. Rom.* l. 6; *Pollet. For. Rom.* l. 5, c. 13.

ACC

ACCENSUS, a kind of adjutant appointed by the tribunes to assist the centurion or decurion; or, according to Festus, a supernumerary soldier who was ready to supply the place of any one that died. *Varr. de Vit. Pop. Rom.* l. 3 *apud Non.* l. 12, c. 8; *Liv.* l. 1, c. 43; *Fest. de Verb. Signif.*; *Salmas. de Re Mil.* c. 14; *Rosin. Antiq. Rom.*

A'CCENT (*Gram.*) *Accentus*, from *ac*, or *ad*, and *cantus*, a song; an inflection of tone which is either *acute*, *grave*, or *circumflex*: the—*Acute accent* (´) sharpens or raises the syllable.—*Grave accent* (`) depresses the syllable.—*Circumflex accent* (˘) both elevates and depresses, i. e. *per arsin et thesis*; as in the word *natura*; when I say, *natu*, the voice is elevated, and it is called *arsis*; but when I say *ra*, the voice is depressed, and it is called *thesis*. *Varro. de Lat. Lin.*; *Quint. Inst.* l. 12, c. 10; *Diomed.* l. 2; *Prisc. de Accent. apud Vet. Grammat.*; *Isid. Orig.* l. 1, c. 17.

ACCENTS *Greek*, the Greek accents are now known but little, except by the marks over the vowels; they are three, namely, acute (´), grave (`), and circumflex (˘); words are denominated differently according to the position of the accent, as—*Proparoxytons*, with the acute on the antepenultimate, as *πάρδομος*.—*Paroxytons*, having the acute on the penultimate, as *λύχος*.—*Oxytons*, having the grave or acute accent on the last syllable, as *σθμός*, *διά*.—*Barytons*, with the grave accent, or no accent, on the last syllable, as *τιμή*, *σάμα*.—*Circumflex*, those with the circumflex on the last syllable, as *ποιῶ*.—*Ante-circumflex*, with the circumflex on the penultimate, as *βοῶτι*.—To these may be added the breathings, which are two; viz. the lenis or mild (´), as *ἄζω*, and the asper or aspirate (´), as *ἰκατον*, which is pronounced *Ηικατον*. Every word beginning with a vowel has either the *lenis* or the *asper*, and when two ρ's come together, the first has the *lenis*, and the second the *asper*, as *πῶρρα*.

ACCENTS *Hebrew*, the Hebrew accents consisted either of points which served as vowel points, which will be noticed under the head of points, or of accents, properly so called, which are either tonic, distinctive, or servile.—*Tonic accents* stand for notes to sing by.—*Distinctive accents* distinguish the sense.—*Servile accents*, *accentus ministri*, or *serviles*, serve to show the construction and connexion of words.

ACCENTS are moreover distinguished as they stand over or under the letters.

Hebrew Accents under the Letters.

Name,	Figure, Place, and Power.
Silluk	⋈ Punctum.
Atnack	⋈ Colon.
Tiphcha	⋈ Semicomma primum.
Tefir	⋈ Ditto.
Jethif	⋈ Semicolon.
Munach	⋈ Semicomma.
Merca simplex	⋈ Ditto.
Merca duplex	⋈ Ditto.
Mahpach	⋈ Ditto.
Darga	⋈ Ditto.
Jerach ben jomo	⋈ Ditto.

Hebrew Accents above the Letters.

Paser minor	⋈ Semicomma quartum.
Paser major	⋈ Ditto.
Karne para	⋈ Ditto.
Schalscheleth	⋈ Semicolon.
Pesik, or Legarme	⋈ Ditto.

ACC

Name,	Figure, Place, and Power.
Telischa ketanna	⋈ Semicomma.
Sarka	⋈ Semicomma primum.
Pasta	⋈ Ditto.
Geresch	⋈ Semicomma secundum.
Geraschajim	⋈ Ditto.
Telischa Gedola	⋈ Semicomma tertium.
Segol, or Segolta	⋈ Strong colon.
Sakeph katon	⋈ Comma.
Sakeph gadol	⋈ Ditto.
Refia, or Rebbia	⋈ Ditto.

The Greek and Roman accentual marks are placed over the vowels, as follow:

Greek Accents and Breathings.

´ Acute, as	á é í ó ú ó é
` Grave, as	à è ì ò ù ò è.
˘ Circumflex, as	ā ē ī ō ū ō ē.
˙ Lenis, as	á è ì í ò ù ò é.
˘ Asper, as	á é í ó ú ó é.
˘ Acute lenis, as	á é ì í ò ù ò é.
˘ Grave lenis, as	á è ì í ò ù ò é.
˘ Acute asper, as	á é ì í ò ù ò é.
˘ Grave asper, as	á è ì í ò ù ò é.
˘ Circumflex lenis, as	ā ē ī ō ū ō ē.
˘ Circumflex asper, as	ā ē ì í ò ù ò é.

Roman Accents.

´ Acute, as	á é í ó ú.
` Grave, as	à è ì ò ù.
˘ Circumflex, as	â ê î ô û.
˘ Cedilla used only under the French c, as ç.	
˘ over the Spanish n, thus ñ.	

ACCENT (*Mus.*) the modulation of the voice in singing.

ACCENTED (*Mus.*) an epithet for those notes or bars on which the emphasis naturally falls.

ACCENTS (*Mus.*) *accentus*; a verse or song.

ACCENTOR (*Mus.*) he that sings the highest part, or treble in a choir.

ACCEPTANCE (*Law*) *Acceptatio*, from *accipio*, to accept; an accepting of a thing, or a tacit agreement, as if *husband* and *wife*, seized of lands in right of the wife, join and make a lease reserving rent; and after the death of the husband the wife receives or accepts the rent, by this acceptance the lease is confirmed, and it shall bind her. 1 *Inst.* 273.

ACCEPTANCE of a bill (*Com.*) the signing, subscribing, and making a person debtor for the contents.

ACCEPTATIO (*Ant.*) a discharge from the creditor to the debtor, which is in civil law, what an acquittance is in common law. *Bud. in Pandect.* p. 178.

ACCEPTOR (*Ant.*) vide *Accipiter*.

ACCEPTOR (*Com.*) the person who accepts a bill of exchange by signing it, and obliging himself to pay the contents.

ACCEPTORIUS *modiolus* (*Ant.*) a vessel employed in the aqueducts for holding water, in distinction from the *erogatorius*, by which it was dealt out. *Keuchen. in Frontin. de Aqueduct.* l. 1 *apud Thes. Græv. Antiq. Rom.* vol. 4, p. 1638.

ACCERSITORES (*Ant.*) Runners who went before to announce the arrival of any one. *Pignor. de Serv.* p. 255.

ACCE/SSA (*Archæol.*) *Accessio, Accessus*; the access of the sea, i. e. the tide in distinction from the recessus or ebb.

A'CESSARY (*Law*) or *Accessory, accessorius*, from *ac cedo*, to come; one guilty of an offence not principally, but by a direct participation, as of command, &c.; if simply by advice or abetting he is an *abettor*; if by act and deed, as a principal, he is an *accomplice*. Accessories are either so before the fact or after.—*Accessories before the fact*, are those who being absent, yet procure or command another to commit a crime.—*Accessories after the fact*, those who receive and relieve the felon, knowing the felony to have been committed. 3 *Inst.* 138; 1 *Hale. Pleas of the Crown*, 613, &c.; *Hawk. P. C.* l. 2, c. 37, &c.

ACCE/SSIBLE (*Math.*) an epithet for any height or depth which can be approached so as to be measured by applying a proper instrument.

ACCE/SSIBLE (*Mil.*) an epithet for any place that may be approached by a hostile force. A fortress may be accessible both by sea or land.

ACCE/SSION (*Med.*) *accessio*, from *accedo*, to approach, *πρόσθεσις*, the beginning of a paroxysm, or a fit of an intermitting fever.

ACCESSION (*Pol.*) from *accedo*, to approach; an approach or coming to; as of a king who takes possession of his throne, or of any person who comes into possession of property.

ACCESSION (*Ecc.*) a term used in the election of a pope, when one or more cardinals accede or go over to a particular side so as to give it the majority, which is one mode of election in distinction from acclamation, or scrutiny. Vide *Accessus*.

ACCESSORIUS *Musculus* (*Anat.*) another name for the *flexor digitorum* and *sacro lumbaris*.—*Accessorius Nervus*, a name given, by Willis, to the eighth pair of nerves which arise by several filaments, from both sides of the *medulla spinalis*.

A'CESSORY (*Law*) vide *Accessory*.

ACCE/SSUS (*Ant.*) from *accedo*, to approach; a climbing machine for ascending the walls of besieged towns. *Vitruv.* l. 10, c. 19.

Accessus (*Ecc.*) *vel per accessum*, a mode of electing the pope, when all the cardinals, with one consent, approach him and salute him by the title of *Papa*. This is called, in English, "An election by acclamation." *Ceremonial Rom.* l. 1, § 1.

ACCIACATURA (*Mus.*) Italian, for a sweeping of the chords of the harpsichord, and dropping sprinkled notes usual in accompaniments.

A'CCIDENS (*Phy.*) or *per Accidens*, *κατὰ συμβεβηκός*; a term applied to the operations of natural bodies, in distinction from *per se*; thus fire is said to burn *per se*, but a hot iron *per accidens*. *Aristot. Analyt. Post.* l. 1, c. 3.

A'CCIDENT (*Log.*) *Accidens*, from *accido*, to befall or happen to a thing, *τὸ συμβεβηκός*; that which belongs incidentally to substances. Accidents are of different kinds, namely:—*Accidens particulare*, a particular accident, that which is in a subject, but attributed to no subject; as a garment that belongs to a man, but forms no part of a man.—*Accidens prædicabile*, a predicable accident, which is in a subject, and predicated of, or attributed to, a subject; but belongs incidentally to it, in distinction from the essence, as white, black. This is, as Porphyry defines it, what comes to, or goes from, a thing, *χωρὶς τῆς τῶ ὑποκειμένου φθορᾶς*, i. e. without destroying the subject. It is divided into common and proper.—*Accidens commune*, *κοινόν*, a common accident, belongs to several subjects; as animality, which is common to man and beast.—*Accidens proprium*, *ιδίον*, a proper accident, which is peculiar to one subject; as risibility to man.—*Accidens separabile*, *χωριστὸν*, a separable accident, which may be separated from a sub-

ject; as sleeping from a man.—*Accidens inseparabile*, *αχωριστὸν*, an inseparable accident, which cannot be separated from the subject; as blackness from the skin of an Ethiopian.—*Accidens prædicamentale*, a predicamental accident, which includes the last nine of the predicaments; as quantity, quality, action, passion, &c. in distinction from the *εἶδος*, or substance, which is the first predicament. *Porphyr. Isagog.*; *Aristot. Analyt.*

ACCIDENTAL Colours (*Opt.*) those which depend on the eye, in distinction from those which are produced by the light.

ACCIDENTAL Point (*Perspect.*) that point in which a right line drawn from the eye, parallel to another given right line, cuts the picture or plane. Thus, suppose A B to be

the line given in perspective, C F E the perspective plane, D the eye, C D the line parallel to A B; then is C the *accidental point*.

ACCIDENTS (*Logic*) vide *Accident*.

ACCIDENTS (*Metaph.*) are distinguished into primary and secondary.—*Primary accidents* are such as are absolute; as quantity and quality.—*Secondary accidents* are *quando*, when; *ubi*, where; *situs*, situation; *habitus*, habit, &c.

ACCIDENTS (*Gram.*) the inflexions of words, or the accents in letters and syllables.

ACCIDENTS (*Her.*) the tincture and differences in blazoning, or the points and abatements in an escutcheon.

ACCIPE/NSER (*Ich.*) vide *Acipenser*.

ACCIPITER (*Or.*) the hawk, a well-known bird of prey, so called on account of its rapacity, from *accipio*, to seize, i. e. to seize or take birds. The Hebrew name *חַי* is derived from *חַי*, to fly; because it is a bird of swift flight, as the Greek *ίεραξ*, from *τὸ ῥᾶον ἴσθαι*, to go freely. This bird was made emblematical of the winds, on account of the swiftness of its flight, which, together with its rapacity, has been celebrated by the poets. *Hom. Iliad.* l. 15, v. 237, speaking of Apollo,

Ἐὴ δὲ κατ' ἰδαίων ὄρεον Ἴρηνε εἰοικὸς
Ὠκεί Φασσοφῶναι ὅστ' ἀκίστος πετεηνῶν.

Odyss. l. 15, v. 525.

Κίρκος Απόλλωνος ταχὺς ἄγγελος.

Hom. Il. l. 16, v. 582.

Ἰθυσεν δὲ διὰ προμάχων Ἴρηνε εἰοικὸς
Ὠκεί, ὅστ' ἐπέβησε κολοίης τε ψήρας τε
Ὠς ἴθυσ Λυκίῳ πατρόκλειε ἱπποκίλευθε.

Hesiod. Oper. l. 1, v. 210.

Ὠς ἕφατ' ἀκυπετῆς ἱρήξ, τανυσίπτερος.

Ovid Metam. l. 11, v. 664.

—*Accipiter nulli satis æquus in omnes
Sævit aves, aliisque dolens fit causa dolendi.*

Ovid. de Arte Amand. l. 2, v. 147.

Odimus accipitrem quia vivit semper in armis.

Martial. l. 14, ep. 216.

*Prædo fuit volucrem, famulus nunc aucupis, idem
Decipit et captus non sibi mæret aves.*

Claud. Eidyll. 1, v. 81.

*Non ferus accipiter, non armiger ipse tonantis
Bella movent.*

For the sharpness of its sight, it was made emblematical of the sun, to which it was held sacred by the Egyptians;

and on this account is called by Aristophanes παντ' ὄφθαλμοῖς, and by Virgil *ales sacer*. Callimachus mentions six species of the hawk, and Pliny sixteen; but Aristotle gives the names of only ten, viz. Τρόρκης, αἰσάλαν, κίρκος, ἀστέριας, φασσοφόρος, πέρηνος, λείος, πέρηνος, σπιζίας, φρηνολόχος. *Buteo, asalo, circus, asterias, palumbarius, pernes, lævis, percus, spizia, rubetarius*. The two species principally known are the—*Accipiter palumbarius*, or Goss-hawk, so called because it takes doves. It is the ἰέραξ φασσοφόρος of Aristotle; the *Accipiter palumbarius* of Aldrovandus; and the *Falco palumbarius* of Linnæus.—*Accipiter fringillarius*, or the Sparrow-hawk, so called because it catches sparrows, is the ἰέραξ σπιζίας of Aristotle; the *Accipiter fringillarius vulgo Nisus sparrow* dictus of Aldrovandus; and the *Falco nisus* of Linnæus. *Herodot.* l. 2, c. 65, &c.; *Aristot. Hist. Animal.* l. 9; *Diodor.* l. 2; *Cic. de Nat. Deor.* l. 3, c. 14; *Virg. Æn.* l. 11, v. 721; *Apul. Apolog.* l. 1; *Plin.* l. 10, c. 8; *Plut. de Isid. et Osir.*; *Ælian. Hist. Anim.* l. 2, c. 42; *Horopol. de Hierogl.* l. 2, c. 14; *Oppian. Ixeut.* l. 1; *Eustath in Odys.* l. 15; *Gregor. Nazianz.* l. 10, c. 16; *August. contra Manat.*; *Jul. Firm. Mathes.* l. 5, c. 7; *Sidon. Apollinar. Paneg. ad Avit.*; *Oros. Hist.* l. 2, c. 14; *Demet. Pref. ad Hierocosoph*; *Isidor. Orig.* l. 12; *Gesner de Avib*; *Aldrov. Ornith.* l. 1; *Bellon. de Avibus*; *Alex. ab Alexand. Gen. D.* l. 5, c. 13; *Boch. Hieroz.* l. 1, &c.; *Thuan. de Re Accipiter*, l. 1; *Will. Ornith.*; *Raii Hist.*; *Linn. Syst. Nat.*

ACCIPITER (*Numis.*) this bird [vide *Accipiter* under *Ornithology*], was worshipped in Egypt for Osiris, on account of its fierceness and violence, which attributes it was supposed to possess in common with Osiris or the sun. The subjoined figure represents a medal of Adrian, bearing, on

the obverse, the head of the emperor, crowned with laurel. The inscription, ΑΥΤΟΚΡΑΤΩΡ ΚΑΙΣΑΡ ΤΙΒΕΡΙΟΣ ΑΙΛΙΟΣ ΑΔΡΙΑΝΟΣ; on the reverse, the accipiter with the flower of the lotus on its head, standing on a small staff: the inscription ΜΕΤΗΛΙΤΩΝ Λ. ΙΑ. i. e. *Metelitarum anno undecimo. Vaillant Numis. Ptolem.*

ACCIPITER (*Surg.*) the name of a bandage which was put over the nose; so called from its resemblance to the claw of a hawk.

ACCIPITRES (*Or.*) the first order in the Linnean system, in the class *Aves*, or Birds, having an angular tooth-like process on the upper mandible, including the following genera, namely,—*Vultur*, the Vulture, having the bill hooked, and the head naked.—*Falco*, the Eagle, Falcon, Kite, Hawk, &c. having the bill hooked, and covered at the base with a cere.—*Strix*, the Owl, having the bill hooked, with a frontlet of covered bristles.—*Lanius*, the Shrike, having the bill straightish and notched.

ACCIPITRINA (*Bot.*) another name for the hawk-weed.

ACCISE (*Com.*) a duty in Holland on different sorts of commodities, as wheat, coals, &c.

ACCLAMATIO (*Ant.*) acclamation, or shouting, which among the Romans was performed by a certain tune or modulation of the voices in accordancy, and was employed either for the purpose of praise or dispraise. *Acclamations* were adopted on most public occasions, as in the case of marriages, congratulations of emperors or generals, in the theatre, the senate, and other places. The form of the acclamation varied with the occasion; on saluting a newly elected general, they cried out *Dii te servent, Imperator*; on applauding the performances of any declaimer or orator,

they would cry out *Bene et præclare; Belle et festive, non potest melius*, &c. Sometimes, however, the acclamation was employed to express a contrary feeling, as on the death of Commodus. *Cic. de Orat.* l. 3, c. 26; *Hor. de Art. Poet.* v. 428; *Mart.* l. 2, epig. 27; *Pers. Sat.* l. v. 49; *Senec. Octav.* act 4, scen. 1, v. 704, and epist. 59; *Plin.* l. 2, epist. 14, &c.; *Quintil. Institut. Orat.* l. 8, c. 3; *Suet in Ner.* c. 20, and in *Domit.* c. 23; *Dio.* l. 43, &c.; *Arrian in Epict.* l. 2, c. 23; *Vopisc. in Prob.* c. 10; *Lamprid. in Commod.* c. 18, and in *Anton. Diadum.* c. 1; *Bud in Pandect.* p. 74; *Sigon de Ant. Jur. Provin.* l. 2, c. 7; *Ferrar. de Acclamat.* l. 1, c. 2, &c.; *Buleng. de Cir.* c. 49; *Laz. Comm. Reip. Rom.* l. 9, c. 2.

ACCLAMATION (*Ecc.*) a mode of electing the Pope, when the cardinals, with one consent, address him by the title of "Papa," as soon as he makes his appearance among them.

ACCLIVIS (*Anat.*) another name for the muscle called *obliquus ascendens abdominis*.

ACCLIVITY (*Math.*) the steepness, or slope, of any place inclined to the horizon reckoned upwards.

ACCOLA (*Ant.*) a husbandman who came from other parts to till the ground: *Eo quod perveniens terram colat*, In distinction from the *incola qui propriam terram colit*: i. e. who tills his native soil. *Isid. Orig.* l. 12, c. 1.

ACCOLADE (*Archæol.*) from *ac* or *ad* and *collum*, the neck; a ceremony used in knighting, when the king puts his hand round the neck of the knight, *Wilhelm Malmshur. de Gest. Reg. Angl.*

ACCOLADE (*Mus.*) the brace which includes all the parts of a score.

ACCOLER (*Com.*) the making of a bracket in the margin of an account book in France, so as to comprehend several sums in one.

ACCOLLÉ (*Her.*) collared or wearing a collar.

ACCOMMODATION bill (*Com.*) a bill given as an accommodation instead of a loan of money, which is commonly taken up by the drawer.

ACCOMPAGNE'E (*Her.*) between.

ACCOMPANIMENT (*Mus.*) An instrumental part added to a composition by way of embellishment.—*Accompaniment ad libitum*, when the piece may be performed with or without the accompaniment at pleasure.—*Accompaniment-obligato*, when the accompaniment is indispensable to the piece.

ACCOMPANIMENTS (*Mus.*) instrumental parts added incidentally to any piece.

ACCOMPANIMENTS (*Her.*) such things as are usually applied about the shield, as the belt, mantlings, &c.

ACCOMPANIST (*Mus.*) the performer of the accompaniment.

ACCOMPLICE (*Law*) vide *Accessory*.

ACCOMPT (*Com.*) vide *Account*.

ACCONTUM (*Ant.*) a Grecian dart or javelin, somewhat similar to the Roman *pilum*.

ACCORD (*Mus.*) an agreement in pitch and tone, as applied to the voice, or to instruments. Rousseau defines it a union of two or more sounds made at the same time, so as to form an harmonic whole. Accords are divided by Rousseau into—*Accords consonans*, or *consonances*, when the intervals formed by two sounds are agreeable to the ear.—*Accords dissonans*, or *dissonances*, those which contain some *dissonance*, or discordant sound, which is disagreeable to the ear.—*Accords parfaits*, which consist of three different sounds, having the grave sound as the fundamental.—*Accords imparfaits*, which have not the grave sound.

ACCORD (*Law.*) an agreement between two or more persons, when any one is injured by a trespass or offence, to satisfy him with some recompence.

ACCORDATURA (*Mus.*) an Italian word for the tuning of an instrument.

ACCOSTED (*Her.*) from the Latin *ac* and *costa*, a rib or side; side by side, as in the annexed figure. "Chevron between six rams accosted." The family of Harman bear this coat of arms on a field azure.

ACCO'TEMENT (*Mech.*) an upsetting among paviours; a space of ground which is between the border of the road and the ditch.

ACCO'UCHEMENT (*Med.*) Fr. delivery, or lying-in; hence the practitioners have been styled *accoucheurs*.

ACCO'UNT (*Com.*) or *accounts*, in general all computations.—*Books of accounts*, or *Merchants' Accounts*; the books in which all the transactions of a merchant are entered and digested in proper order. [Vide *Book-keeping*.] Whence the different phrases.—*To open an account*, or to enter it for the first time in a ledger.—*To keep open an account*; when merchants agree to honour each other's bills of exchange reciprocally.—*To affirm an account*; to declare and make oath that it is true.—*To dispute*, or *note an account*; to make remarks or objections on the several items of an account.—*To settle an account*; to cast it up and balance it.—*To post a sum to an account*; to enter into the ledger the articles for which any persons become either debtors or creditors.—*Account paper*; a fine large paper in France on which accounts were written.—*Account of sales*; an account given by one merchant to another of the disposal, charges, commission, and net produce from the sale of certain goods.

ACCOUNT *personal* (*Mil.*) or *pay-account*; an account which is kept by army agents of monies received and disbursed for subsistence and allowance.—*Clothing account*; an account kept by the army-agent of monies received and disbursed for the clothing of the regiment.

ACCOUNT (*Chron.*) the same as *style*, 'the old or new account,' i. e. the old or new style.

ACCOUNT (*Law*) *computus*; a writ or action against a bailiff or receiver, who refuses to render an account. *Stat. of Westm.* 2 c. 1; *F. N. B.* 13, 116.

ACCO'UNTANT (*Law*) one obliged to render an account to another.—*Accountant-general*; an officer in the court of chancery, to receive all money lodged in court.

ACCO'UTREMENTS (*Mil.*) the habits, equipage, and furniture of a soldier, such as belts, pouches, cartridge-boxes, &c.

ACCRES'SIMENTS (*Mus.*) or *Accress*, the same as augmentation.

ACC'RETIO (*Phy.*) from *ac* or *ad* and *cresco*, to grow; accretion, or the increase of a body by growth.

ACC'RETIO (*Med.*) a growing together, as the fingers or toes to one another.

ACCRO'CHE (*Law*) from the French *accrocher*, to hook to; to encroach. *Stat.* 25, *Ed.* 3. Among the French, to delay; as *accrocher un process*, to stay proceedings in a court.

ACC'RUE'D (*Her.*) an epithet for a tree full grown.

ACCUBA'TIO (*Hist.*) accubation, or a mode of reclining on couches side by side at meals, customary among the Romans. *Cic. in Ver.* 1. 5, c. 31; *Petron. Arb.* c. 36; *Isidor. Origin.* 1. 20, c. 2; *Lips. Ant. Lect.* vol. 2, p. 144; *Stuck. de Ant. Conv.* 1. 2, c. 34; *Philand. in Vitruv.* 1. 6, c. 2; *Buleng. de Conviv.* 1. 1, c. 32; *Ciaccon de Triclin.* p. 252.

ACCU'BITA (*Ant.*) the couches on which the ancients used to recline. *Spartian in Æl. Ver.* c. 5; *Lamprid. in Heliogab.* c. 19, &c.; *Buleng. de Conviv.* 1. 1, c. 30; *Salmas in Tertull. de Pall.* p. 174.

ACCUL'ER (*Mil.*) to come to close action, or to drive an army into such a situation as to compel it to action.

ACCUSA'TIO (*Med.*) Vide *Indicatio*.

ACCUSATIO (*Ant.*) accusation, among the Romans, consisted of three parts: namely,—*Postulatio*, or a petition to produce the charge.—*Delatio*, the bringing before the court; and *accusatio*, in the strict sense, or the substantiating the charge. *Ascon in Cic.* p. 65, &c.; *Senec. Controvers.* 1. 4; *Ulpian. de Accusat.*; *Sigon de Iudic.* 1. 2, c. 8, &c.; *Manut de Leg.* c. 828, &c.; *Rosin Ant. Rom.* 1. 9, c. 29.

ACCUSATIVE (*Gram.*) *Accusativus*, κατηγορικὸς, the fourth case of nouns, because we accuse *accusamus*, commend, or predicate something of some one. *Varr. de Ling. Lat.* 1. 7; *Sosip. Charis. Instit. Grammat.* 1. 5; *Diomed.* 1. 1; *Priscian. Gramm.* 1. 5; *Cledon. de Art. Gram. apud Putsch. Grammat. Lat. Auctor Ant.*; *Isidor. Orig.* 1. 1, c. 16.

ACE (*Games*) that side of a die on which the number one is expressed: also the card on which there is but one figure.

ACE'DIA (*Med.*) ἀκηδία, from *α* *pro* *αργων*, a particle of excess, and *κηδος*, care; a term used by Hippocrates for fatigue. *Hippoc. περι ἄδεν.*

ACE'PHALI (*Ecc.*) ἀκέφαλοι, from *α*, priv. and *κεφαλή*, a head; heretics, so called because they admitted no lawful superior, either layman or ecclesiastic. They were similar to the levellers in the time of Henry I. There were also priests of this name, who submitted to no bishop. *Leontius de Sectis*, act. 5; *Baron. Annual. Ann.* 433; *Prateol. de Hæret. Doct. Omn.*

ACEPHALI *versus* (*Rhet.*) *mutili in principio*; verses that begin with a short syllable instead of a long one. *Macrobi. Saturnal.* 1. 5, c. 15.

ACEPHALI (*Zool.*) ἀκεφάλιοι, from *α*, priv. and *κεφαλή*, a head; headless, an epithet for crabs, and other such animals as have their senses about the breasts or hearts. *Gal. de Usu. Part.* 1. 8, c. 4.

A'CKER (*Bot.*) or *Aceris*, according to Solinus; the Maple-tree, a tree so called from *acer* hard, as Vossius thinks, because of the great hardness of its wood, answering to the σφενδάμνος of the Greeks, from σφενδαῖος, *durus*, hard; or, as Perotius thinks, from *acer*, sharp, because it exercises the wit of man in the liberal arts, according to the words of Pliny, "*Acer operum elegantia et subtilitate cedro secundum.*" The root is used in physic, and a juice is extracted from it in the spring, which serves as a sweet drink. There are three species of it mentioned by the ancients, viz. *Acer album*, *acer venis distinctum*, et *acer zygia vel carpinum*; but, according to Pliny, there were ten species. *Columel.* 1. 5, c. 7; *Plin.* 1. 16, c. 26; *Hesychius.*; *Salmas Exercit. Plin.* p. 507.

ACER, in the Linnæan system, a genus of plants, Class 23 *Polygamia*, Order 1, *Monœcia*.

Generic Characters.—CAL. *perianth* one-leaved.—COR. *petals* five.—STAM. *filaments* eight; *anthers* simple; *pollen* cruciform.—PIST. *germ* compressed; *style* filiform; *stigmas* two (or three) pointed.—PER. *capsules*, the number of the stigmas coalescent at the base; *seeds* solitary.

Species. The principal species of the *Acer* are as follow: *Acer sempervirens*, Evergreen Maple, a shrub.—*Acer pseudo-platanus*, Great Maple; a British plant, but not indigenous.—*Acer saccharinum*, American Sugar Maple, from which the inhabitants make sugar.—*Acer palmatum*, or *Kevan Mokf*, Hand-leaved Maple, native of Japan.—*Acer campestre*, or *minus*, Common or Small Maple, a British plant, but not indigenous.—*Acer negundo*, or *maximum*, Virginian, Ash-leaved Maple.—*Acer dasycarpum*, *ericarpum*, or *rubrum*, a native of Pennsylvania. *Parkin. Theat. Botan.*; *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Raii Hist. Plant. et Synop.*; *Tournef. Inst.*; *Boerhaav. Ind.*; *Dillen. Catalog.*

ACER is also a name for the *Bannisteria laurifolia* and the *Triopteris critrifolia* of Linnæus. *Plum. Spec. Sloan. Jam.*

ACERATOS (*Med.*) ἀκράτες from α, priv. and κεράννυμι, to mix; unmingled, uncorrupted; an epithet for the humours. *Hippocrat. de Affect*; *Foes. Oeconom. Hippocrat.*

ACERBUS (*Med.*) sour, harsh, or astringent; as unripe fruit.

ACERIC (*Chem.*) an epithet for a vegetable acid from the *acer campestre*.

ACERIDES (*Med.*) ἀκρίδες, from α, priv. and κηρός, wax; plasters without wax. *Gal. de Med. Compos. per gen.* l. 4, c. 14.

ACERO'SÆ arbores (*Bot.*) the pine tribe, a sort of ligneous plants. *Linn. Phil. Bot.*

ACERO'SUS (*Med.*) ἀκρόδης, from ἀκρόν, chaff; an epithet employed by Hippocrates for the coarsest bread made of flour not separated from the chaff. *Hippoc. περί ύγιαν χρέσις. Foes. Oeconom. Hippocrat.*

ACEROSUS (*Bot.*) linear, persistent; an epithet for a leaf.—*Folium acerorum*, a leaf, needle-shaped, and inserted at the base into the branch by articulation, as in the pine, fir, and juniper. *Linn. Phil. Bot.*

ACERRA (*Ant.*) an altar erected near the bed of a deceased person on which incense was burnt; it was so called because perfumes were, *accensi*, burnt upon them to prevent unpleasant smell. The *Acerra* was also a little pot which contained the perfumes. *Horat.* l. 3, od. 8, v. 2.

*Quid velint flores et acerra thuris
Plena, miraris.*

Ovid de Pont. l. 4, epist. 8, v. 39.

*Nec que de parva pauper diis libat acerra,
Thura minus grandi quam data lance valent.*

The *Acerra* was very similar in form to what is now used in the church of Rome. *Cic. de Leg.* l. 2, c. 24; *Fest. de Sign. Verb*; *Ferret Mus. Lapid.* l. 4, *Memor.* 9; *August. in Leg.* xii. *Tab.* § 43; *Hotman. Antiq. Rom.* l. 3, c. 1; *Meurs. de Funer.* c. 6; *La Chaussé Insign. Pontif. Max.* tab. 8.

ACE/SCENT (*Chem.*) an epithet for substances which readily run into the acid fermentation.—*Acescent liquids*, those liquids in which the acid fermentation has commenced.

ACE/STIDES (*Chem.*) from ἀστής, *acies*, a point; chimneys of furnaces, narrow at the top, for melting brass.

ACE/STORIS (*Med.*) ἀκιστορίς, from ἄκτος, healing; a term used by Hippocrates for a female physician, or a midwife. *Hippoc. περί Φυσαν, &c.*; *Foes. Oeconom. Hippocrat.*

ACETABULUM (*Ant.*) ἀξυβαφον; a vessel for vinegar. 2. A measure equal to the one eighth of a modern pint. *Athen.* l. 2, c. 26. *Gal. de Mensur, &c.* c. 2.

ACETABULUM (*Med.*) κοτύλη, *cavitas*, or ἀξυβαφον, the cup, from its resemblance to that vessel: 1. A cavity, or socket in the *os coxendix*, or hip-bone, to receive the head of the *femur*, or thigh-bone. *Ruff. Ephes.* l. 1, c. 9; *Gal. Comm. in Hippoc. de Fract.* &c.; *Foes. Oeconom. Hippocrat.* 2. A glandular substance found in the *placenta* of some animals. *Gal. de Usu Part.* l. 15, c. 53.

ACETABULUM (*Bot.*) another name for the Cotyledon.

ACETARIA (*Med.*) from *acetum*, vinegar. *Acetars*, 1. Salads. *Plin.* l. 19, c. 4. 2. Pickles, as the *acetarium scorbuticum* of Bates.

ACETATE (*Chem.*) any salt formed by the union of acetic acid with a salifiable base, as the acetate of potash, of soda, of lead, &c. in distinction from the acetite. [vide *Acetite*]

AC *etiam billæ* (*Law*) i. e. and also to a bill to be exhibited for 20l. debt, &c. words in a writ where the action requires bail.

ACETIC acid (*Chem.*) radical vinegar, or vinegar in a particularly concentrated state. [vide *Acetum*]

ACETITE (*Chem.*) any salt formed by the union of acetous acid with an alkaline or earthy base. [vide *Acetate* and *Chemistry*]

ACETO'SA (*Bot.*) ὄξυλις, *herba acida*, so called from ὄξυς, acid; sorrel, from the Anglo-Saxon *sur*, sour, the *Rumex* of Linnæus. *Gal. de Alim. Fac.* l. 2; *J. Bauh. Hist. Plant.*;

C. Bauh. Pin.; *Raii Hist. Plant.*; *Tournef. Inst. Herb.*; *Dillen. Catalog. Plant.*; *Boérh. Ind.*

ACETOSE/LLA (*Bot.*) *herba acida*, from *ab* and *sapere acetosa*, an acid taste; Wood-sorrel, a species of the *oxalis*, and of the *Rumex* of Linnæus. *J. Bauhin. Hist. &c.* [vide *Acetosa*]

ACETOUS acid (*Chem.*) distilled vinegar. [vide *Acetum*]

ACETUM (*Nat.*) ἄκνητον, an epithet for honey that is liquid, which is reckoned the best sort. *Plin.* l. 11, c. 15; *Hesychius.*

ACETUM (*Chem.*) from *aceo*, to sharpen; Vinegar or any acid liquor made from potent juices, particularly wine and beer.—*Acetum distillatum*, distilled vinegar, or vinegar purified by distillation, is now called Acetous Acid, because it is a strong acid of an agreeable odour, somewhat differing from simple vinegar.—*Acetum radicum*, or radical vinegar, the strongest acid of vinegar, is still more concentrated than the former. Its phlegm being abstracted it is now termed Acetic Acid.—*Acetum philosophicum*, an acid distilled from honey.—*Acetum esurinum*, distilled vinegar, so called because it creates an appetite.

ACHÆMENIS (*Bot.*) a herb which, according to Pliny, when thrown into an army, was wont to cause a general panic. *Plin.* l. 26, c. 8.

ACHA'NIA (*Bot.*) Ἀχωνίς, *non hians*, because the corolla does not open; a genus of plants, Class 16 *Monodelphia*, Order 6 *Polyandria*.

Generic Characters. CAL. *perianth* double.—COR. subclavate; *petals* erect.—STAM. *filaments* numerous; *anthers* oblong.—PIST. *germ* subglobular; *style* filiform; *stigmas* capitate.—PER. *berry* subglobular; *seeds* solitary.

Species. The principal species are the—*Achania malvaviscus*, otherwise called *Malvaviscus arboreus*, *arborescens*; *Malva arborea*; *Hibiscus malvaviscus*, seu *frutescens*; or *Alcea indica*, *Bastard Achania*, or *Malvaviscus*; a shrub, native of Jamaica and Mexico.—*Achania mollis*, *Woolly Achania*, a shrub, native of America.—*Achania pilosa*, *Hairy Achania*, a shrub, native of Jamaica. *Pluken. Almag. Bot.*; *Dillen. Hort. Etlh.*; *Brown. Hist. Jamaic.*; *Linn. Spec. Plant.*

ACHA'OVA (*Med.*) an Egyptian herb, like chamomile. *Prosp. Alpin. de Med. Ægypti.*

ACHARISTON (*Med.*) ἀχαριστον, from α, priv. and χάρις, thanks; thankless, an epithet for an excellent medicine, so called because many who were cured by it never feed their physician. *Gal. de Comp. Med. sec. loc.* l. 4, c. 6; *Aet. Tetrab. 2.* serm. 4, c. 110.

A'CHAT (*Law.*) from *acheter*, to buy; a contract or bargain.

ACHA'TES (*Min.*) Ἀχάτης, *agate*; a precious stone representing different objects, from which it derives the different names of phassachates, cerachates, dendrachates, &c. according as it represents a dove, wax, a tree, &c. It was said to be generated in the river Achate. *Sil. Ital.* l. 14, v. 228.

Et pellucentem splendenti gurgite Achaten.

and had medicinal virtues ascribed to it. *Theophrast. de Lapid.*; *Plin.* l. 37, c. 10; *Solin.* c. 11; *Isid. Orig.* l. 16, c. 11; *Marbod. de Lapid.*

ACHA'TORS (*Law.*) *Purveyors*, so called from their frequent bargaining. 36 E. 3.

ACHE'IR (*Med.*) Ἀχίης, from α, priv. and χείρ, hand, handless.

ACHEIROPOE'TA (*Ecc.*) An image of the blessed virgin, to whom the popes used to pay particular reverence at Easter. It was so called to signify that it was made without hands.

ACHER'NER (*Ast.*) or *Acher-Nahr*, called, by Ptolemy, ἑσχατος τῶ πόταμος; the name of a star of the first magni-

- tude in the southern extremity of Eridanus, marked (a) by Bayer. Its longitude for 1761 was \times $11^{\circ} 55' 1''$, and latitude south $59^{\circ} 22' 4''$.
- ACHE'TA (*Ent.*) a division in the genus of insects called *Gryllus* in the Linnean system.
- A'CHIA (*Nat.*) a kind of cane in the East Indies which is pickled green.
- A'CHIAR (*Nat.*) a Malayan word for all sorts of pickled fruits and roots.
- ACHICOLUM (*Ant.*) a sweating bath. *Cæl. Aurel. de Acut.* l. 3, c. 17.
- ACHILLE'A (*Bot.*) ἀχιλλεία, or *Achilleon*, ἀχιλλείον; a plant so called because Achilles, who was the disciple of Chiron, is said to have used it in the healing of wounds. *Plin.* l. 25, c. 4; *Athen. Deipnos.* l. 3, c. 30.
- ACHILLEA, in the Linnean system, a genus of plants; Class 19 *Syngenesia*, Order 2 *Polygamia superflua*. It is classed, by Tournefort and others, under the genera *Millefolium* and *Parnica*, and is called in English Milfoil or Maudlin.
- Generic Character.* CAL. common, ovate; scales ovate.—COR. compound radiate; corollas tubular.—STAM. filaments five; anther cylindrical.—PIST. germ small; style filiform; stigma obtuse.—PER. none; receptacle filiform; seeds solitary.
- Species.* The species are mostly perennials and natives of Europe; the principal are the *Achillea ageratum*, Sweet Milfoil or Maudlin.—*Achillea falcata*, Sickle-leaved Milfoil.—*Achillea tomentosa*, Woolly Milfoil.—*Achillea pubescens*, Downy Milfoil.—*Achillea impatiens*, Impatient Milfoil.—*Achillea atrata*, or *Chamamælum alpinum*, Camomile-leaved Milfoil.—*Achillea mosehata*, Genipe *Iva moschata*, *Tanacetum alpinum*, or *Dracunculus alpinus*, Musk Milfoil, or Swiss Genipe.—*Achillea nana*, Dwarf Milfoil.—*Achillea magna*, or *Millefolium maximum*, Great Milfoil or Yarrow.—*Achillea millefolium*, Common Milfoil, a native of Britain, &c. *Dodon. Stirp. Hist. Pemptad.*; *Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Linn. Spec. Plant.*
- ACHILLEA is also the name of the *Athanasia annua*; the *Senecio abrotanifolius*; and the *Chrysanthemum millefolium* of Linnæus. *Lob. Adv. Stirp. et Plant. Icon.*
- ACHILLE'ION (*Med.*) ἀχιλλείον, from Achilles; a sort of sponge proper for making tents.
- ACHILLE'IOS (*Med.*) ἀχιλλείος, a sort of maze made of Achillean barley. *Foes. Oeconom. Hippocrat.*
- ACHILLE'IS (*Med.*) ἀχιλλεία, a sort of barley used medicinally for making barley-water, so called, according to Galen, from a certain husbandman named Achilles. *Gal. de Med. Simpl. Fac.* l. 8.
- ACHILLES (*Log.*) an epithet for an argument (λόγος) invented by Zeno against motion, founded on the assumption that the swifter animal can never overtake the slower. It takes its name from Achilles, either because it was supposed to be insuperable like him, or because he was compared in the argument with a tortoise. Can Achilles overtake a tortoise in running? Certainly; but if there were motion he could not overtake it, therefore, there is not motion. As the assumption or premise is here false, of course, the conclusion is false. *Aristot.* l. 6, c. 14; *Simplic. et Themist. in Aristot. ad locum.*
- ACHIL'LES Tendo (*Anat.*) vide *Tendo Achillis*.
- ACHIMBA'SSI (*Med.*) chief physician at Grand Cairo. *Prosp. Alp.*
- ACHIMENES (*Bot.*) the *Columnnea longifolia et hirsuta* of Linnæus. *Brown. Hist. Jam.*
- ACHIMENIS (*Bot.*) vide *Achamenis*.
- ACHIO'TE (*Med.*) lozenges made of achiote. *Raii Hist. Plant.*
- A'CHIO'TL (*Bot.*) the *Bixa Orleana* of Linnæus. *C. Bauh. Pin.*; *Hermand. Nov. Plant. Mex. Hist.*; *Raii Hist. Plant.*

- A'CHITH (*Bot.*) a sort of vine in Madagascar.
- A'CHLYS (*Med.*) ἀχλὺς, cloudiness; 1. dimness of sight. *Hippocrat. Prædict.* l. 1. 2. The pupil of the eye. *Prædict.* l. 2. 3. Condensed air in the uterus. *Hippocrat. de Morb. Mul.* l. 2; *Gorr. Defn. Med.*; *Foes. Oeconom. Hippocrat.*
- ACHMA'DIUM (*Chem.*) antimony.
- A'CHNE (*Med.*) ἀχνη, literally, chaff, or froth of the sea, signifies medicinally, 1. A whitish mucilage in the eyes of persons having fevers. *Hippocrat. Epidem. sect.* l. 2. Lint recommended by Hippocrates in a fracture of the nose. *Hippocrat. de Art.*; *Gorr. Def. Med.*; *Foes. Oeconom. Hippocrat.*
- ACHOA'VAN (*Bot.*) a sort of chamomile.
- A'CHOR (*Med.*) ἀχῶρ, probably from ἀχῶρ, a watery discharge, Scald-Head; an ulcer in the head which, swelling and breaking into holes, discharges an honey-like humour; when the perforations are large it is called *favus*, a Honeycomb, and *tinea*, from the similitude of the holes to those made in cloth by moths; when this disorder affects the face it is called *crusta lactea*, Milk-Scab. *Gal. de Tum. prat. Nat.* c. 5; *Heister. Chirurg.* l. 5, c. 10.
- ACHORYSTOS (*Med.*) ἀχώριστος, from ἀ, priv. and χωρίς, without, inseparable; an epithet for a symptom; thus a pungent pain in the side is an inseparable symptom of a pleurisy.
- A'CHRAS (*Bot.*) ἀχράς, a sort of wild pear-tree, ἀπίε ἀγρίος, according to Dioscorides, the *Pyrus sylvatica* of Varro, and *Pyrus sylvestris* of Pliny, on which, according to Aristotle, swine fattened: it was called by Brown the *Bully-tree*, or *Nisberry Bully-tree*, and now more generally the *Sapota-tree*. *Diosc.* l. 1, c. 148; *Brown. Hist. Jam.*
- ACHRAS, in the Linnean system, is a genus of plants; Class 6 *Hexandria*, Order 1 *Monogynia*.
- Generic Characters.* CAL. perianth six-leaved; leaflets ovate.—COR. one petalled; border cut into six subovate flat divisions; scales at the jaws of the corolla.—STAM. filaments short; anthers sharp.—PIST. Germ roundish; style awl-shaped; stigma obtuse.—PER. pome globose; seeds solitary.
- Species.* The species of this tribe are mostly natives of America; the principal of which are the *Achras mammosa*, *Sapota mammosa*, *Zapota major*, *Malus Persica maxima*, or *Arbor Americana pomifera*, Mammee Sapota; a tree.—*Achras sapota* or *zapota*, Common Sapota; a tree.—*Achras dissecta*, *Ballata*, or *Manil-kara*, Cloven-flowered Sapota; a native of the Philippine islands.—*Achras salicifolia*, or *Bumelia salicifolia*, Willow-leaved Sapota.—*Achras argentea*, a tree, &c. *Raii Hist. Plant.*; *Pluk. Almag. Botan.*; *Plum. Plant. Amer.*; *Sloan. Jamaicae.*; *Brown. Hist. Jamaicae.*; *Jacq. Amer. Hist.*; *Linn. Spec. Plant.*
- A'CHROI (*Med.*) ἀχροί, from ἀ, priv. and χροία, colour, colourless; from a deficiency of blood.
- ACHROMATIC (*Opt.*) an epithet for a sort of telescopes used first by Dr. Bevis to remedy aberrations and colours.
- ACHROMATIC Telescope, a species of refracting telescope, invented by Mr. Dolland to refract the light in contrary directions.
- ACHRONICAL (*Ast.*) vide *Acronical*.
- A'CHTELING (*Com.*) a liquid measure in Germany.
- ACHTENDE'ELEN (*Com.*) a corn measure used in some parts of Germany equal to 536 pounds avoirdupoise weight.
- A'CHY (*Bot.*) a species of *Cacia*, in Arabia.
- ACHYRACANTHA (*Bot.*) the *Achyranthes* of Linnæus. *Dillen. Hort.*
- ACHYRANTHES (*Bot.*) from Ἀχρῶν, chaff, and ἀνθος, a flower, formed after the manner of *Ananthes*, *Dianthes*, and similar words in Theophrastus; a genus of plants; Class 5 *Pentandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* outer three-leaved.—COR. none; *nectary* of five valves.—STAM. *filaments* filiform; *anthers* ovate.—PIST. *germ* superior; *style* filiform; *stigma* bifid.—PER. *capsule* roundish; *seed* single.
Species. The species of this genus are mostly shrubs or perennials; as the *Achyranthes aspera*, *Amaranthus zeylanicus*, *Auricula canis* or *cadeli*, Rough *Achyranthes*.—*Achyranthes muricata*, or *Blitum frutescens*, Prickly *Achyranthes*.—*Achyranthes prostrata*, *Auris canina*, or *Verbena indica*, Prostrate *Achyranthes*, &c. *Bont. Hist. Nat. Ind. Orient.*; *Pluk. Phytog.*; *Pluk. Almag. Sloan*, &c.

A'CHYRON (*Med.*) ἄχυρον, chaff, *Hipp.*; bran or straw.
A'CIA (*Med.*) a kind of thread for sowing wounds. *Gal. comm. in Hippoc.*; *Cels. de Re. Med.* l. 5, c. 26.

ACIA (*Bot.*) in Guiana *Aciona*, according to Jussieu, *Acioa*; a genus of plants; Class 16 *Monodelphia*, Order 6 *Dodecandria*.

Generic Characters. CAL. *perianth* one-leaved; *border* five-parted; *parts* roundish.—COR. *petals* five—STAM. *filaments* twelve; *anthers* roundish.—PIST. *germ* ovate; *style* filiform; *stigma* acute.—PER. *drupe* ovate; *seed* a nut ovate.

Species. The principal species are the *Acia dulcis amara*, &c.

ACICO'SA (*Bot.*) a herb similar to Paraguay.
ACICULA (*Ich.*) diminutive, from *acus*, a fish, called also *acus*, *αἰκὺλῆ*. *Prisc.*

ACICULA (*Bot.*) another name for *chervil*, or shepherd's needle.

ACICULARIS (*Bot.*) from *Acus*, a needle. 1. Acicular, or needle-shaped, an epithet for the *pili*, or hairs of plants. 2. A species of *Scirpus*. *Linn. Philos. Botan.*

A'CID (*Chem.*) vide *Acids*.

ACID Holder, a part of the chemical apparatus, consisting of a glass phial, so constructed that any acid or liquor may be dropped from it into a retort without admitting the external air.

ACIDIFIABLE base (*Chem.*) a base or substance which, without decomposition, can unite with oxygen in such quantities as to acquire the properties of an acid.

ACIDIFYING base (*Chem.*) that principle in any substance which generates acids: oxygen is the chief acidifying base.

ACIDOTON (*Bot.*) *Plin.*; a genus of plants: Class 21 *Monoccia*, Order 7 *Polyandria*.

Generic Characters. CAL. *perianth* five-leaved; *leaflets* ovate lanceolate.—COR. none.—STAM. *filaments* numerous; *anther* cordate-ovate.

Species. The only species is the *Acidoton urens*, seu *Urtica urens arborea*, a shrub, native of Jamaica. *Sloan. Hist. Jamaic.*

ACIDOTON is also the *Adelia Acidoton* of Linnæus. *Brown. Hist. Jamaic.*

A'CIDS (*Chem.*) substances which impress the taste with a sour sharp sensation, change vegetable blue colours to red, and combine with alkalines so as to form salts. They were divided by chemists originally into—*Natural Acids*, such as have a sharpness of taste of their own from their nature, as the juice of lemons, &c.—*Artificial Acids*, which are generated from substances, not properly acids, by means of fire, as from vegetables, minerals, &c.—*Dulcified Acids*, those which are now called *Æthers*.—*Vegetable Acids*, which are especially prepared from vegetable substances, as citric acid, acetic acid, &c.—*Animal Acids*, which are generated from animal substances, as lactic acid, saccolactic, phosphoric, &c. acids.—*Mineral Acids*, those generated from mineral substances.—*Manifest* or *Perfect Acids*, such as affect the tongue sensibly with the taste of sharpness, or, in the language of modern chemistry, those which have their base saturated with oxygen, and are distinguished by the termination *ic*, as Nitric

Acid.—*Dubious latent* or *imperfect Acids*, those which have not a sufficient degree of acidity to affect the taste, but have the other properties that distinguish the perfect acids, or those acids whose base predominates over the oxygen, which are distinguished by the termination *ous*, as Nitrous Acid.—*Acids* are now distinguished into incombustible and combustible.—*Incombustible Acids* are those which are formed by the combination of oxygen, the *acidifying principle* with one combustible, which is considered as the *acidifiable base* or *radical*.—*Combustible Acids* are those which contain two or more combustibles. The following table, taken from Thomson's Chemistry, exhibits a view of the modern distribution of acids.

CONSTITUENTS.

Acids.	Base.	Oxygen.
Nitric	Azote	100 285·8
Nitrous	—	100 228·57
Hyponitrous	—	100 171·43
Carbonic	Carbon	100 266·66
Boracic	Boron	100 228·57
Silica	Silicon	100 100·
Phosphoric	Phosphorus	100 200·
Phosphorous	—	100 133·3
Hypophosphorous	—	100 66·6
Sulphuric	Sulphur	100 150·
Sulphurous	—	100 100·
Hyposulphurous	—	100 50·
Arsenic	Arsenic	100 52·631
Arsenious	—	100 31·6
Antimonic	Antimony	100 35·556
Antimonious	—	100 23·7
Chromic	Chromium	100 87·72
Molybdic	Molybdenum	110 50·
Molybdous	—	— 33·3
Tungstic	Tungsten	100 25·
Columbic	Columbium	100 5·5

The termination *ic*, in the above acids, expresses the higher state of oxygenation, and that of *ous* the lower.

Combustible Acids containing two or more simple combustible Substances as a Base.

ATOMS OF

Acids.	Hydrogen.	Carbon.	Oxygen.
Acetic	3	4	3
Benzoic	6	15	3
Succinic	2	4	3
Moroxylic	—	—	—
Camphoric	—	—	—
Boletic	—	—	—
Suberic	—	—	—
Pyrotartaric	—	—	—
Oxalic	1½	2	3
Mellitic	1	4	3
Tartaric	3	4	5
Citric	3	4	4
Rheumatic	—	—	—
Kinic	—	—	—
Sacclactic	5	6	8
Uric	—	—	—
Lactic	—	—	—
Malic	—	—	—
Sorbic	—	—	—
Formic	—	—	—
Lactic	—	—	—
Zumic	—	—	—
Gallic	3	6	3
Tannin	9	18	12

To these may be added acids containing supporters as well as combustibles :

Acids	Compounded of	
Chloric	} Chlorine	Oxygen
Perchloric		
Muriatic	Chlorine	Hydrogen
Chlorocarbonic	Chlorine gas	Carbonic oxide gas
Iodic	Iodine	Oxygen
Chloriodic	Chlorine	Iodine
Hydriodic	Iodine	Hydrogen
Fluoric	Fluorine	Hydrogen
Fluoboric	Fluorine	Boron
Fluosilic	Fluorine	Silicon
Chlorocyanic	Chlorine	Cyanogen
Hydrocyanic	Hydrogen	Cyanogen
Sulphocyanic	Sulphur	Cyanogen
Ferrocyanic	Iron	Cyanogen

ACIDULÆ (Min.) from *acidus*, acid; mineral waters in general, but particularly those of the brisk cold kind. *Plin.* l. 31, c. 2.

ACIDULOUS (Chem.) an epithet expressing either in general a slight degree of acid, or in particular an excess of acid in a compound salt; thus acidulous sulphat of potash is the sulphat of potash with an excess of acid.

ACIDULUM (Chem.) a genus of native vegetable salts, consisting of potash saturated with an excess of acid, consisting of two species, tartareous acidulum, or the acidulous tartrate of potash, and the oxalic acidulum, or the acidulous oxalat of potash.

ACIES (Chem.) the same as Chalybs.

ACINACES (Ant.) *ἀκινάκης*, from *ἀκίη*, an edge; the name of a Persian scimitar.

ACINACIFORMIS (Bot.) from *ἀκινάκης*, a scimitar; scimitar-shaped, an epithet for a leaf: *Folium acinaciforme*, a leaf which has one edge convex and sharp, the other straight and thick, as in the *Mysembranthemum*. *Linn. Phil. Bot.*

ACINE'SIA (Med.) *ἀκινεσία*, from *α*, priv. and *κίνηω*, to move; a term employed by Galen to express the interval of rest which takes place between the contraction and dilatation of the pulse. *Gal. de Diff. Puls.* l. 1, c. 7.

ACINI (Bot.) granulations.

ACINIFORMIS (Anat.) or *Acina Tunica*, a coat of the eye. [vide *Uvea Tunica*]

ACINOS (Bot.) *ἀκινος*, a species of the *Thymus* of Linnæus. *Dioscor.* l. 3, c. 50; *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Raii Hist. Plant.*

ACKNOWLEDGEMENT money (Law.) Money paid by tenants on the death of their landlords.

ACMA'STICA febris (Med.) *ἀκμάστικος πυρετός*, from *ακμάζω*, to flourish; a fever which, during the whole course, maintains itself in the same vigour without either increasing or diminishing in its violence. *Gal. de Diff. Feb.* l. 2, c. 2; *Act. de Meth. Med.* l. 2, c. 1.

ACME (Med.) *ἀκμη* signifies literally a point, but is taken figuratively for the height of a disorder. Physicians commonly reckon three stages in disorders; namely, the *ἀρχή*, or commencement, i. e. the first attack; the *ἀναβάσις*, or growth; and the *ἀκμη* when it is at the highest pitch of violence. It also implies the highest pitch of exercise. *Hippocrat.* l. 1, *Aphor.* 1; *Gal. de Differ. Feb.* l. 2, c. 2.

ACMELLA (Chem.) a plant of Ceylon, which is well known as a lithontriptic and diuretic; it is the *Verbesina acmella* of Linnæus. *Herman. Catalog. Plant.*

ACMO (Bot.) red coral.

ACNE (Med.) from *ἄχνη*, chaff; a tubercle on the face which Actius calls *ἄχμη*. *Gorr. Def. Med.*

ACNESTES (Med.) from *α*, priv. and *κνίω*, to scratch; a part of the spine in quadrupeds, so called because it cannot be reached to be scratched.

ACNESTIS (Bot.) the same as *Urtica*.

ACNIDA (Bot.) from *α*, priv. and *κνίδη*, a nettle, to which it bears some resemblance without having its pruriency; a genus of plants; Class 22 *Dioecia*, Order 5 *Pentandria*. *Generic Characters.* CAL. perianth five-leaved; leaflets ovate; COR. none.—STAM. filaments five; anthers versatile.

Species. The principal species is the *Acnida cannabina*, otherwise called *Cannabis*, Virginian hemp, an annual. *C. Bauh. Pin.*; *Linn. Spec. Plant.*

ACO (Ich.) a sort of fish in the lake Como.

ACOELIOS (Med.) *ἀκοίλιος*, from *α*, priv. and *κοιλία*, venter, without a belly, or seeming to be so as one wasted away.

ACOEMETI (Ecc.) *ἀκόμητοι*, a set of monks, who kept up their devotions by turns incessantly day and night; and they were so called, on account of their continued watchfulness, from *α*, priv. and *κοιμάω*, to sleep. *Evagr. Eccles. Hist.* l. 3, c. 19; *Theodor. Lect.* l. 1; *Niceph. Calist.* l. 15, c. 23.

ACOETON (Nat.) vide *Acetum*.

ACOLUTHI (Ecc.) from *ἀκόλυθοι*, sequitor *pedissequis*; attendants or under deacons, who wait upon the priests, in their office, to carry the wax lights, &c. *S. Cyprian.* ep. 7; *Euseb.* l. 6, c. 43; *Augustin.* ep. 62. 100; *S. Gregor.* l. 7, indict. 1, ep. 1; *Hesychius.*; *Isidor. Orig.* l. 7, c. 12; *L'Ordre Roman.*; *Lcs Anciens Rituels.*

ACOMAS (Bot.) a tree in America used for ship-building.

ACON (Ant.) a sort of Discus.

ACONION (Med.) *ἀκόνιον*, a medicine prepared by levigation on a stone. *Dioscor.* l. 1, c. 129.

ACONITE (Bot.) Wolf's-bane, or Monk's-hood. [vide *Aconitum*]

ACONITIFOLIA (Bot.) the *Podophyllum peltatum* of Linnæus. *Boerhaav. Ind. Plant.*

ACONITON (Med.) *ἀκόνιτον*, from *α*, priv. and *κονία*, plaister; vessels not plaistered or lined within. *Dioscor.* l. 4, c. 65.

ACONITUM (Bot.) *ἀκόνιτον*, a poisonous plant, which the poets fable to have been produced from the foam of the dog Acheron, when he was dragged by Hercules from Hell. *Nicand. in Alexand.*

Ἄλλ' ἦτοι χυλόν μὲν ἰδὲ φομύισι δυσπαλῆς
Πυθείης ἀκόνιτον, ὃ δὲ ῥα' ἀχεραυίδες ὄχθαι
Φύσσω.

Dionys. Perieges. v. 789.

Ἵουδαίς κρονίδαιο μέγαν κύνια χαλκῆφόρον
Χερσὶν ἀνεγκόμενον μεγαλόφρονος Ἑρακλῆος
Δεινὸν ἀπὸ φομύισιν βαλεῖν σιαλῶδα χυλὸν
Τὸν μὲν ἰδέετο γαῖα καὶ ἀνδρῶσι πῆμ' ἐφύτευσεν.

Others ascribe its origin to the gall, from the liver of Prometheus, which was eaten by the vulture.

Auson. in Monosyllab.

Unde Prometheus de corpore sanguineus ros
Aspergit cautes et dura aconita creat eos.

The *aconitum* is so called from *aconæ*, i. e. the naked rocks on which it grows.

Nicand. in Alexipharm.

— ἐν δ' ἀκοναίσις
Τῆλε λίην ἀκόνιτον ἀνεβλάσῃσεν ὀρόγχοις.

Ovid. Met. l. 7, v. 416.

Quæ quia nascuntur dura vivacia caute
Agrestes aconita vocant.

Others derive it, and with equal reason, from *α*, priv. and *κονίς*, dust, because it grows without much earth; or from *ἀκίη*, a dart, because savages used to poison their darts with it. *Theoph.* l. 9, c. 16; *Dioscor.* l. 4, c. 77; *Plin.* l. 6, c. 1, l. 27, c. 3; *Gal. de Simplic. Med. Fac.* l. 6.

ACONITUM, in the Linnæan system, a genus of plants; Class 13 *Polyandria*, Order 3 *Trigynia*.

Generic Character. COL. none.—COR. petals five; nectaries two.—STAM. filaments subulate; anthers erect.—PIST.

Germ three; *stigmas* simple.—*PER.* *Capsules* ovate, subulate; *seeds* very many.

Species. The species of this genus are all perennials; the principal of which are the *Aconitum lycoctorum*, or the *Napellus magnus*, Great yellow Monk's-hood, or Wolf's-bane.—*Aconitum napellus*, or the *Napellus verus*, common Monk's-hood, or Wolf's-bane.—*Aconitum anthora*, *Aconitum salutariferum*, *Anthora vulgaris*, or *Antithora*, Salutory Monk's-hood.—*Aconitum variegatum*, *Napellus minor*, or *Lycotomum cæruleum*, Variegated or small blue Monk's-hood, &c. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Tournief. Inst.*; *Bochr. Ind.*

ACONITUM is also the name of the *Helleborus hyemalis* of Linnæus. *C. Bauh. Pin.*

ACON'TIAS (*Zo.*) a very poisonous serpent.

ACONTIAS (*Ast.*) a blazing star shooting like an arrow. *Plin.* l. 2, c. 24.

A'COPA (*Med.*) ἀκοπα, from α, priv. and κόπος, labour; medicines against weariness. *Hippocrat. Aphor.* l. 2; *Cels.* l. 5, c. 24; *Plin.* l. 37, c. 10; *Gal. de Comp. Med. per Gen.* l. 7, c. 11, &c.; *Oribas. Synops.* l. 3, c. 10; *Paul. Æginet.* l. 7, c. 19.

A'COPI'S (*Nat.*) ἀκοπία, from α, priv. and κόπος, labour; a precious stone, good against weariness. *Plin.* l. 37, c. 10.

A'COPOS (*Bot.*) Bean-trefoil.

A'COR (*Med.*) acrimony in the stomach.

ACORD'NA (*Chem.*) Indian Tutty.

A'CORI (*Min.*) Blue Coral on the coast of Africa.

ACOR'IA (*Med.*) ἀκορία, insatiability, or, according to Hippocrates, a sharp appetite. *Hippoc. Epid.* l. 6, c. 4, *Aphor.* 20.

ACORIT'ES Vinum (*Nat.*) Ἀκορίτες οἶνον, a wine made of the Acorus and liquorice roots. *Dios.* l. 5, c. 73.

A'CORN (*Ucd.*) the seed of the oak used as an astringent.

ACORN (*Mar.*) a little ornamental piece of wood fashioned like a cone, and fixed above the vane on the mast head.

ACORN shell (*Con.*) the name of a genus of shells classed in the Linnean system under the Lepas. [vide *Lepas*]

ACOR'NA (*Bot.*) ἀκορνα, from α, i. e. αγγων, very, and κόρνος, a spine, i. e. very thorny; a herb similar to the *Atractylis*.

A'COR'NED (*Her.*) a tree with acorns on it. "He beareth argent an oak acorn'd proper, over all on a fesse gules three royal crowns." This coat was given by Charles II. to Colonel Carloss, a Staffordshire gentleman, for the signal service he performed in preserving his Majesty in the oak after the battle of Worcester.

A'CORUS (*Bot.*) ἄκορος, Sweet Rush, a plant so called because it was useful for disorders in the κορου, or pupils of the eye. *Theoph.* l. 1, c. 22; *Diosc.* l. 1, c. 2; *Gal. de Simplic.* *Pliny*, l. 25, c. 13.

ACORUS, in the Linnean system, is a genus of plants; Class 6 *Hexandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *spadix* cylindrical; *spathe* none; *perianth* none.—COR. *petals* six.—STAM. *filaments* thickish; *anthers* thickish.—PIST. *Germ* gibbous; *style* none; *stigma* a prominent point.—PER. *capsule* short; *seeds* many.

Species. The principal species is the *Acorus calamus*, Common Sweet Rush; a perennial, native of Britain. *C. Bauh. Pin.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Merr. Pin. Britt.*; *Pluk. Almag. Botan.*; *Tourn. Inst. Herb.*; *Boerh. Ind. Plant.*

ACOSMIA (*Med.*) ἀκοσμία, irregularity in fevers. *Hippoc. Progn.* l. 3, c. 7; *Castel. Lex Med.*

ACOSMOI (*Ant.*) ἀκοσμοί, from α, priv. and κόσμος, an ornament; an epithet for bald people, because they have lost their greatest ornament. *Poll. Onomast.* l. 2, c. 26.

ACOTYLE'DONES (*Bot.*) from α, priv. and κοτύληδών, acotyledonous, or lobeless. 1. An epithet for a description of plants whose seeds have no lobes or cotyledons, and of course when they vegetate they produce no seminal leaves, as in the *Cryptogamia*. 2. One of Jussieu's natural order of plants. *Linn. Phil. Bot.*

ACO'USIA (*Med.*) ἀκοσσία, involuntary, an epithet applied by Hippocrates to tears.

ACO'USTIC (*Anat.*) the same as auditory, an epithet for the nerve of the ear, ἀκοστικὸν νεῦρον, which assists the sense of hearing. *Gorr. Def. Med.*

ACO'USTICA (*Med.*) from ἀκούω, audio; remedies against deafness.

ACOUSTICA (*Phy.*) from ἀκούω, audio; acoustics, or the doctrine of hearing and sound.

ACQU'ESCENCE (*Com.*) consent, in French commerce, to any judgment or sentence, judicial or by arbitration.

ACQUIETANDIS plegiis (*Law*) a writ of justices lying for surety against a creditor, who refuses to acquit him after the debt is satisfied. *Regis. of Writs.*

ACQUIETANTIA de Shiris et Hundredis (*Law*) freedom from suits and services in shires and hundreds.

ACQUIETARE (*Law*) to acquit, or pay. *Mon. Angl.*

ACQUIT (*Com.*) a discharge or receipt.—*Acquit, à caution*, a certificate to exempt goods that are exported or transported from a visitation on the road.—*Acquit, à caution de transit*, a certificate to exempt goods from the payment of duties in their passage through a particular place.—*Acquit de franchise*, a certificate exempting merchandize from paying duties on exportation.—*Acquit de payment*, a certificate, in which the quantity of goods, amount of duties paid, names of the persons sending, &c. are mentioned.

ACQUIT'TAL (*Law*) from the Latin *acquietare*. 1. A discharge from the claims of a superior lord. 2. A discharge from the suspicion of guilt: *acquietatus de feloniam*, acquitted of felony. Acquittal is of two kinds, namely—*Acquittal, in deed*, when a person is cleared by a verdict.—*Acquittal, in law*, when, if two persons be indicted for felony, the one as principal, and the other as accessory, and the jury acquits the principal, in this case, by law, the accessory is also acquitted. 2 *Inst.* 384.

ACQUIT'TANCE (*Law*) the same as receipt.

ACRAIPALA (*Med.*) ἀκραίπαλα, remedies for surfeits, &c. *Gorr. Def. Med.*

A'CRAS (*Bot.*) vide *Achras*.

ACRASIA (*Ant.*) ἀκρασία, from α, priv. and κεράννυμι, drinking unmixed wine, which was synonymous with intemperance among the Greeks.

ACRA'TIA (*Med.*) ἀκράτεια, from α, priv. and κράτος, strength; imbecility, or incapacity to move. *Hippocrat.* l. 7, *Aphor.* 40; *Gal. Comm.*; *Gorr. Def. Med.*; *Foes. Oeconom. Hippocrat.*

ACRATISMA (*Ant.*) ἀκράτισμα, from α, priv. and κεράννυμι, to mix, a breakfast consisting of bread steeped in wine not mixed with water. *Gal. de Loc. Affect.* c. 5, &c.; *Plut. Sympos.* l. 8, prob. 6; *Athen.* l. 1; *Schol. in Theocrit.*; *Gorr. Def. Med.*

ACRATOMELI (*Med.*) wine mixed with honey.

A'CRE (*Agr.*) from *ager*, a field. 1. A measure of land equal to forty perches in length, and four in breadth. 24 *Hen.* 8, c. 14; 33 *Ed.* 1, st. 6. 2. An open unmeasured field, as *Castle Acre*, *West Acre*, &c.

A'CREA (*Anat.*) ἀκρεα, from ἀκρη, *summa*; the extremities according to Hippocrates. *Foes. Oecon. Hippocrat.*

A'CRE-FIGHT (*Law*) a sort of duel fought by single combatants, English and Scotch, on the frontiers of their kingdoms.

ACRÉ'ME (*Archæol.*) ten acres of land.

ACRIBE'A (*Med.*) ἀκριβεία, from ἀκριβής, correct; an exact description of diseases.

ACRIMONY (*Med.*) from *acer*, sharp; sharpness or pungency in the humours of the body; also, in chemical substances, as alkalies, &c.

A'CRIS (*Med.*) ἀκρίς, the extremities of fractured bones. *Hippocrat. de Art.*

ACRIS (*Ent.*) the locust, which was so called because it fed on τὰς ἀκρας τῶν φυτῶν, i. e. the tops of plants.

ACRISIA (*Med.*) ἀκρίσια, from *α*, priv. and κρίνω, to judge, want of a crisis, or discriminating state in a disorder which is very fluctuating. *Gal. Comm. 2. in Hippocrat. Epid. l. 1.*

ACR'VIOLA (*Bot.*) the *Tropeolum majus* of Linnæus. *Boerharv. Ind. Herb.*

A'CROAMA (*Ant.*) ἀκρόαμα, *res aliqua audita*, from ἀκρόαομαι, to hear, i. e. any thing heard or listened to with attention. 1. A philosophical lecture of the higher sort. 2. A ludicrous recitation. 3. Symphony, or vocal concert. *Manut. in Cic. Sex. c. 54; Plin. Epist. l. 6, ep. 31; Suet. in August. c. 74; Plut. Sympos. l. 7, c. 8; Gell. l. 20, c. 5; Salmas. in Lamprid. Alex. Sever. c. 32.*

ACROAMA'TICA (*Ant.*) ἀκροαματικά, the subtle parts of Aristotle's philosophy, which he taught only to his constant followers, in distinction from the ἐξωτερικά, consisting of more familiar subjects. *Aul. Gell. l. 20, c. 5.*

ACROBA'TICHION (*Archit.*) from ἀκρός, and βαῖνω, going aloft; a climbing machine. *Vitruv. l. 10, c. 1; Gyrald. de Poet. Dial. 6; Bald. Lex Vitruv.*

ACROBOLISTÆ (*Ant.*) ἀκροβολισταί, soldiers of Tarentum, who were expert in the use of the javelin, which they threw to a great distance while on horseback; so called from ἀκρος and βάλλω. *Ælian. Tact. c. 45.*

ACROBYSTIA (*Anat.*) vide *Acroposthia*.

ACROCHEIRIA (*Ant.*) or *Acrocheirismos*, ἀκροχειρία, a species of wrestling in which only the hands are employed. *Poll. Onom. l. 2, § 153.*

ACROCOLIA (*Ant.*) ακροκόλια, from ἀκρος, extreme, and κόλον, a limb; the extremities of animals, and also the internal parts, the giblets. It was particularly applied to Pensile-Wait. *Poll. Onom. l. 4, § 195; Cels. l. 5, c. 28; Gal. Defn. Med. Sc. Actuar. in voc. μυρμηκία.*

ACRO'DRYA (*Bot.*) ακρόδρυα, from ἀκρος and δρυσ, an oak; all fruits having hard rinds or shells. *Theophrast. l. 2, c. 7.*

ACROLENIA (*Anat.*) ἀκροληνία, the great processes of the ulna. *Poll. Onomast. l. 2, § 140; Gorr. Def. Med.*

ACROMALLOS (*Ant.*) ἀκρομαλλός, short wool, of which the Belgæ made their garments, in distinction from the βῆδύμαλλος, or long wool. *Strab. l. 4; Ferrar. de Re Vest. l. 2, c. 2, &c.*

ACROMION (*Anat.*) ἀκρόμιον, or ἐπ'ομίς, from ἄμιος, the shoulder; *Scapula, Humeri summitas sive Humeri Mucro*; the superior process of the shoulder, the shoulder-blade. *Ruff. Ephes. de Appell. Part. Corp. Hum. l. 1, c. 9; Oribas. Med. Collect. l. 25, c. 3.*

ACROMPHALIUM (*Anat.*) ἀκρομφάλιον, from ἄκρος, the extreme, and σμφαλός, the navel; the tip of the navel. *Poll. Onom. l. 2, segm. 169.*

A'CRON (*Med.*) ἄκρον, from ἀκρος, the highest; an epithet, signifying the best of its kind, as ἄκρον ἴρινον, the best sort of the unguentum irinum. *Hippocrat. de Morb. Mul.*

A'CRON (*Bot.*) the top of the thistle.

ACRONYCHIA (*Bot.*) an epithet for a plant; the *Lawsonia Acronychia* of Linnæus.

ACRONYCHAL (*Astron.*) ἀπὸ τῆς ἀκρας, from the first point, νυκτός, of night; an epithet for the rising of a star when the sun sets, or the setting of a star when the sun rises. *Ptol. Almag. l. 8, c. 4. [vide Astronomy]*

ACRONYCTÆ (*Astron.*) ἀκρονύκται, stars rising in the twilight about sun-setting, for ἀκρόνυξ is the evening twilight.

ACROPATHOS (*Med.*) ἀκρόπαθος, from ἀκρος, extreme, and

πάθος, affection; an affection or disease on the surface of the body, such as the κερύντοι ἀκρόπαθοι, open cancers, in distinction from the κρυπτοί, occult or internal. *Hippocrat. Prorrheth. l. 2.*

A'CROPIS (*Med.*) ἀκροπίς, an epithet for the tongue, which, by reason of dryness or any muscular imperfection, is incapable of articulation. *Hippocrat. Epidem. l. 7; Gal. Exeges. Hippocrat. Vocab.*

ACRÓPO'STHIA (*Anat.*) ἀκροποσθέν, the extremity of the prepuce. *Hippocrat. l. 2, Aph. 48; Poll. Onomast. l. 2, segm. 171; Ruff. Ephes. de Appell. Part. Corp. Hum. l. 1, c. 12.*

A'CROS (*Med.*) ἀκρος, extreme; an epithet for a disease at its height.

Acros (*Anat.*) an epithet for the prominence of a bone.

Acros (*Bot.*) an epithet for the top of herbs.

A'CROSPIRE (*Bot.*) the sprout at the ends of barley when it is malted, whence the epithet acrospered for barley in that condition.

ACRÓSTICHUM (*Bot.*) a genus of plants, Class 24 *Cryptogamia*, Order 1 *Filices*.

Generic Character. *Fructifications* cover the whole under-surface of the frond.

Species. The species are mostly perennials, the principal of which are—*Acrostichum citrifolium*, *Hemionitis parasitica*, or *Lingua cervina*, native of America.—*Acrostichum crinitum*, *Lingua cervina*, or *Phyllitis crinita*, native of the East Indies.—*Acrostichum aureum*, *Phyllitis ramosa*, *Lonchitis palustris maxima*, *Lingua cervina aurea*, or *Filix palustris*, native of Jamaica.—*Acrostichum biforme*, or *Osmunda coronaria*, native of the East Indies.—*Acrostichum serrulatum*, or *Polypodium fuscum*, native of Spain, &c. &c. *Raii Hist. Plant.; Pluk. Almag. Botan.; Plum. Plant. Amer.; Linn. Spec. Plant.*

ACRÓSTICK (*Lit.*) ἀκροστιχίς, i. e. ἄκρον τῆς στιχῆς, the beginning; a set of verses, the first letters of which contain some name or sentence, such as the famous verses of the Sibyl of Erythraea, which contain the words ΙΗΣΟΥΣ ΧΡΙΣΤΟΣ ΘΕΟΥ ΥΙΟΣ ΣΩΤΗΡ ΣΤΑΥΡΟΣ, which are given at large by Lilius Giralduus. *Cic. de Divin. l. 2, c. 51; Euseb. de Vit. Constantin. l. 4; Ludovic. Vives ad August. de Civit. Dei, l. 18, c. 23; Lyl. Gyrald. de Poet. Histor. Dialog. 2.*

ACRÓSTOLIUM (*Ant.*) ἀκροστόλιον, the extreme part of the ornament on the prow of the ship. *Poll. Onom. l. 1, segm. 86.*

ACROT'ERIA (*Anat.*) ἀκροτέρια, from ἀκρος, extreme; the extremities of the human body, as the fingers' ends, &c. *Hippocrat. l. 7, Aphor. 1, et Gal. Comm.; Gorr. Def. Med.; Foes. Oeconom. Hippocrat.*

A'CROTERS (*Archit.*) ἀκροτέρια, from ἀκρος, extreme. 1. Small pedestals placed on the pediments which serve to support statues. 2. The sharp pinnacles, or spiry battlements, standing in ranges on flat buildings, with rails and balusters. 3. The figures made, either of stone or metal, which are placed as ornaments or crownings on the tops of temples. *Vitruv. l. 3, c. 2; Bald. Lex Vitruvian. Rhodig. Antiq. Lect. l. 21, c. 33; Salmas. ad Spartian. in Nig. c. 12.*

ACROT'ERIA'SMUS (*Med.*) ἀκρωτηριασμός, a term used by Hippocrates for an amputation of the ἀκρωτήρια, or extremities. *Hippocrat. l. 7, Aphor. 26.*

ACROT'HYMION (*Med.*) ἀκροθύμιον, a species of wart, which is hard, rough, broad at the base, and narrow at the top. *Cels. l. 5, c. 28.*

ACRY'DIUM (*Ent.*) a name given by Fabricius to a division of the genus of insects, called by Linnæus *Gryllus*.

ACT (*Phy.*) the effective application of some power or faculty.

ACT of Faith (Ecc.) in Spanish *Auto da Fe*; a solemn act of the inquisition, by which they bring to punishment those who are declared to be heretics.

ACT (Polit.) any public act, or proceeding of the government, as an—*Act of Parliament*, a deed or decree of the high court of Parliament.—*Act of grace*, an Act of Parliament, which grants a general and free pardon; it is sometimes passed at the commencement of a new reign.—*Act of curatory*, in the Scotch law, an act to be extracted by the clerk upon any one's acceptance of being curator.—*Act before answer*, when the lords ordain probation to be led before they determine the revelancy, and then take both at once under their consideration.

ACT (Lit.) the close of the session at Oxford, when degrees are regularly taken; whence the *Act Term*, or that term in which the act falls.

ACT is also an abbreviation for *Acta*, as—Act. S. R. for *Acta Societatis Regiæ*, or Philosophical Transactions of the Royal Society.—Act. Med. for *Acta Medica*, Medical Transactions, &c.

ACTA (Ant.) the acts or proceedings of the government, which were either public or private.—*Acta publica* were edicts, decrees of the senate, laws, &c.; hence the public measures of Gracchus and Cæsar are termed *Acta*. Cicero refers particularly to the *Acta Cæsaris* in his seventh Philippic.—*Acta privata* were whatever was transacted in private, or in respect to private individuals; whence Cicero says, *In publicis actis nihil est lege gravius, in privatis firmissimum est testamentum*.

ACTA, Tabulæ or Commentarii, were also the registers or books in which affairs of state, &c. were enrolled. These were *Acta publica* and *Acta diurna* or *urbana*.—*Acta publica* contained an account of the proceedings of the senate and the people.—*Acta diurna* were chronicles of the city, or whatever was of daily occurrence; whence Tacitus says, *Ex dignitate populi Romani repertum est illustres res annalibus, talia (nempe de ædificiis) diurnis urbis actis mandare*. These *acta* were similar to our gazettes. *Cic. ad Fam.* l. 12, ep. 8; *Tacit. Annal.* l. 5, c. 14, et l. 13, c. 31; *Plin. Epist.* l. 5, ep. 14.

ACTA (Lit.) transactions. [vide *Act*]

ACTÆA (Bot.) ἄκταια, a diminutive of ἄκτις, a plant, recommended by Pliny for its medicinal virtues. Ray supposes it to be the *Aconitum racemosum*, which is a very poisonous plant. *Plin.* l. 27, c. 7; *Paul. Æginet.* l. 3, c. 48.

ACTÆA, in the Linnæan system, a genus of plants, Class 13 Polyandria, Order 1 Monogynia. It is called by Tournefort *Christophoriana*; in English, Herb Christopher, or Bane-Berry.

Generic Character. CAL. perianth four-leaved; leaflets roundish.—COR. petals four.—STAM. filaments capillary; anthers roundish.—PIST. germ superior; style none.—PER. berry oval, globose; seeds numerous.

Species. The principal species are the—*Actæa spicata*, a perennial, native of Britain.—*Actæa racemosa*, seu *Christophoriana*, American black or wild Snakeroot, a perennial, native of Florida.—*Actæa Japonica*, Japanese Herb Christopher, a shrub, native of Japan, &c.

A'CTE (Bot.) ἄκτις, the elder, called in Latin *Sambucus*, and classed as a genus under that name by Linnæus.

A'CTIA (Ant.) ἄκτια, scilicet, ἄγωνα, *Ludi Actiaci*; Actian games, quinquennial games sacred to Apollo, instituted, or, as some will have it, revived, by Augustus, in commemoration of his victory over M. Anthony at Actium. *Virg. Æn.* l. 3, v. 280.

Actique Iliacis celebramus littora ludis.

Stephanus says, they were celebrated every third year, and consisted in gymnastic, equestrian, and naval contests.

Strab. l. 7; *Plut. in Anton.*; *Steph. Byz. de Urb.*; *Serv. in Virg.*; *Suid.*

ACTIA (Numis) the celebration of the Actian games is commemorated on several medals, as in the annexed figure, which represents a woman standing with a small temple in one hand, and a cornucopia with a small temple resting on it in the other; and at her feet two urns filled with the rewards for the games.

The inscription ΠΕΡΙΝΘΙΑΝ ΙΑΝΝΑ. ΝΒ. ΝΕΥΚΟΠΙΑΝ ΑΚΤΙΑ ΠΥΘΙΑ, i. e. *Perinthiorum Ionium, Iterum Cedituorum, Actia Pythia*. The Perinthians were descendants of the Ionians. *Froehl. Not. Elcment. Numis.*

A'CTIAN (Ant.) *actiacus*, an epithet for any thing appertaining to Actium, as the *Actian games*. [vide *Actia*] The *Actian Æra*, which was dated from the victory at Actium, U. C. 714, B. C. 37.

ACTIAN Æra (Num.) this æra is marked on coins with the inscription ΕΤΟΥΣ ΝΙΚΗ, i. e. the year of victory. *Vaillant. Numis. Græc.*

ACTILIA (Mil.) military utensils.

A'CTINE (Bot.) the *Brassica napus* of Linnæus.

A'CTING (Log.) τὸ ποιεῖν, the fifth predicament, or category: the subject of which is called the agent.

ACTINIA (Ent.) a genus of animals, Class *Vermes*, Order *Mollusca*.

Generic Character. Body oblong, contractile; mouth surrounded with numerous cirri.

Species. These marine animals are viviparous, and have no aperture, except the mouth. They assume various forms; and when the *tentacula* are all expanded, they have the appearance of full-blown flowers. The principal species are—*Actinia bellis*, the Sea-Daisy.—*Actinia dianthus*, the Sea-Carnation.—*Actinia calendula*, the Sea-Marigold, &c.

ACTINOBOLISMUS (Med.) ἀκτινοβολισμος, irradiation, or the instantaneous action of the animal spirits, by which they convey the inclinations of the mind to the organs of voluntary motion.

ACTINOBOLISMUS (Phy.) the diffusion or diradiation of light and sound.

ACTINOLITE glassy (Min.) from ακτις, radius, and λίθος, lapis; a species of minerals, the *Actinotus vitreus* of Linnæus.

ACTINOTUS (Min.) a genus of minerals, Class *Earths*, Order *Talcose*, consisting of carbonate of magnesia, oxide of iron, and silica: harsh to the touch, shining, breaking into indeterminate fragments, and melting in the fire with ebullition. The principal species are the—*Actinotus vulgaris asbestoid*.—*Actinotus vitreus*, Glassy Actinote, &c.

A'CTIO (Ant.) 1. The act of the magistrates and senates, the same as *acta*. 2. The management of a cause, consisting either of accusation or defence; where there were several pleadings in the same cause, they were divided into first, second, &c. thence the *actio prima, secunda, tertia*, &c. of Cicero in *Verrem*. 3. A suit at law, an action against any one, by which a person sought redress, either *accusando*, by accusing; or *petendo*, by suit. Of these actions there were several kinds, as—*Actio in rem*, real action, for obtaining that to which one had a real right, *jus in re*, but which was possessed by another. These actions were either—*Actio civilis*, according to the laws by which the citizens were governed one with another, which was called *Vindicatio*.—*Actio prætoria*, according to the decrees of the prætor who governed the city.—*Actio socialis*, according to the laws of their allies.—*Actio in personam*, personal action against a person for doing or omitting to do that which he was bound either to

do, or to abstain from. Of these actions there are several kinds, as—*Actio empti, venditi, locati, &c.* for contracts and obligations, in buying, selling, &c.—*Actio adjectitia qualitatis*, against a person on account of the contracts of others.—*Actio insitoria*, against him who carried on trade for the benefit of another.—*Actio exercitoria*, against him who sent a ship to sea on any trading concern.—*Actio de peculio*, against the master of a family, for contracts made either by his son or slave.—*Actio jussu*, if the contract was made by the master's order.—*Actio tributoria*, against a master for not distributing the goods of his slave among his creditors.—*Actio redhibitoria*, against the seller for selling a bad article, which he was compelled to take back, and to restore the money.—*Actio ex furto*, for theft, *ex rapina*, for robbery, *ex damno*, for loss or damage, *ex injuria*, for personal injury, comprehending the personal wrongs, and their several punishments.—*Actio noxalis*, against a person for injuries done by those under his power.—*Actio mixta*, which lies against any one, both for the recovery of the thing, and the punishment of the person. *Ulpian. Instit. 1; Justin. Pandect. et Instit; Sigon. de Judic. l. 1, &c.; Pollet. For. Rom. l. 5; Ursat. de Not. Rom.*

ACTIO (Law) vide *Action*.

ACTION (Ant.) vide *Actio*.

ACTION (Phy.) *actio, το ποιειν*, the application of the agent to the patient, by which some change is produced, as boiling, which is the action of fire on the water to which it is communicated; it is either physical or habitual.—*Physical action*, arising from the exercise of the physical power, as generally in generation, corruption, &c. or particularly in seeing, hearing, local motion, &c.—*Habitual or acquired action*, arising from habit or experience, which consists in speculation, θεωρια, as the contemplation of the heavens, of physical or mathematical objects; practice, πραξις, which is either moral, political, or ecclesiastical; doing or making, ποιησις, which includes the arts liberal and mechanical. *Arist. Physic.; Melancth. Metaph.*

ACTION (Log.) *το ποιειν*, the fifth predicament or category, into which all things have been divided. It is opposed to passion, and is divided into—*Action imminent*, that action which remains in the agent so as not to pass over to any other thing without itself, as going, walking, running, &c.—*Action transient*, that which passes from the agent to the patient, as burning, striking, breaking, &c. *Arist. Categ.; Boeth. de Categor.; Wall. Instit. Log.*

ACTION (Mech.) a force impressed upon a body so as to change its state of rest, or uniform motion. It arises from *percussion, pressure, or centripetal force*. *Newton Princ. def. 4.*—*Quantity of action*, the continual product of the mass of a body by the space which it runs through, and by its celerity. *Maupert. Acad. des Sciences, Paris, 1744, Berlin, 1746.*

ACTION (Med.) function of the body, which is divided into vital, natural, animal, or voluntary.—*Vital action*, which is immediately essential for the preservation of life, as the motion of the heart and lungs.—*Natural action*, which is remotely necessary for the continuance of the animal, as the digestion of the aliments, &c.—*Animal or voluntary actions*, which depend upon the will, as walking, running, &c.

ACTION (Eth.) or *moral action*, a voluntary action of any creature capable of distinguishing between good and evil, or whatever a rational agent thinks, does, or even omits to do, with respect to the end he ought to aim at, and the rule he is to be guided by. A *morally good action* is that which is agreeable to the law of God; in distinction from a *morally evil action*, which is disagreeable to the Divine law, as revealed in Scripture.

ACTION (Law) the process or form of a suit at law to re-

cover a right. Actions are generally divided into criminal or civil.—*Criminal actions* are to have judgment for damage to the party injured.—*Civil actions* for the recovery of a debt, &c.

Criminal actions consist of—*Actions, penal*, for some penalty or punishment.—*Actions upon statute*, for the breach of a statute, whereby the injured party has his action.—*Actions, popular*, for the breach of some penal statute where every one has his action: it is otherwise called a *qui tam action*, from the form of words used in this action; namely, *qui tam pro domino rege sequitur quam pro se ipso*, &c.

Civil actions consist of different kinds, as—*Actions, real*, whereby a man claims title to lands, &c. which are called *possessory*, if of his own possessions; *ancestral*, if of an ancestor.—*Actions, personal*, claiming a debt, goods, damages, &c.—*Actions, mixed*, which lie both for the thing demanded, and against the person having it.

Actions are also distinguished into

Actions, local, when confined to a particular county.—

Actions, transitory, which may be laid in any county.—

Actions, perpetual, which may not be determined by time.—

Actions, temporary, that are expressly limited.—

Actions, joint, where several persons conjointly sue or are sued.—

Actions, several, where persons are severally charged.—

Actions on assumpsit, or promises, for a breach of promise, &c.—

Actions on covenant, for a breach of covenant.—

Actions on debt, to compel the payment of a debt.—

Actions of detinue, to compel the redelivery of goods (or their value) which have been delivered in charge.—

Actions of trespass, for any injury denominated a trespass.—

Actions of trover, for goods which have come into the possession of another by finding, or otherwise, which he refuses to restore to the owner.—

Actions on the case, that is, an action on a man's own particular case, in distinction from those on any of the above-mentioned cases.—

Actions, prejudicial, otherwise called *preparatory or principal*, arising from some doubt in the principal, as in case a man sues his younger brother for lands descended from his father; and it is objected to him, that he is a bastard, which question must be tried before the cause can proceed further: it is, therefore, termed *prejudicialis quia prius judicanda*.

Bract. lib. 8, c. 4.—*Action of a writ*, when one pleads some matter by which he shows the plaintiff had no cause to have the writ.—

Action of abstracted multures, i. e. an action for multures, in the Scotch law, against those who are thirled to a mill, and come not, or an action to compel persons to grind at a mill according to their tenure.—

Action for poymding of the ground, i. e. an action, in the Scotch law, for poymding or distraining the land, founded on some infeoffment for an annuity. *Bract. de Leg. l. 3; Fleta. l. 1; Glanville. l. 1; Mirror. c. 21, &c.; F. N. B. 92; Co. in Lytt. 1 Instit. sect. 285, 2 Inst. sect. 40; Hawk. P. C. 244, &c.; Comyn. Digest.*

Comyn. Digest.

ACTION (Paint.) the posture of the figure, or that which is expressed by the disposition of its parts, or the passion that appears in the face of it.

ACTION (Poet.) an event or series of occurrences mutually connected with, or dependent upon, each other, either real or imaginary, that makes the subject of a dramatic or epic poem, &c.

ACTION (Rhet.) an accommodating the person to the subject, or the management of the voice and gesture suitably to the matter delivered.

ACTION of the mouth (Man.) the agitation of the tongue and mandible of a horse in champing the bit.

ACTION (Com.) moveable effects; a creditor seizes on a merchant's actions, that is, his actual debts.—*Action, re-*

hibitory, by which the buyer may oblige the seller to take back damaged goods.—*Action of a company*, 1. The equal portion of their joint stock. 2. The bonds, contracts, or stock in general, which the directors of trading companies deliver to those who have made themselves proprietors.

French actions, or stocks, are—*Actions simples*, which have a share in all the company's profits and losses, with no security but in their funds.—*Actions Rentieres*, which have a profit of two per cent. with the King's security.—*Actions Interessés*, or bearing interest, which have the above profit, and the King's security, besides a share in the overplus of the dividends; whence the phrase "To feed an *action*," i. e. to pay exactly when they become due the several sums subscribed to the stock of the company. *A fed action*, one on which all payments have been made, and is capable of sharing in the company's dividends.

ACTIONAIRE (*Law*) i. e. *in jus vocare*, to prosecute.

ACTIONARY (*Fr. Com.*) or *Actionist*, a proprietor of actions.

ACTIVE (*Phy.*) capable of communicating motion or action, as the cause of gravity or fermentation, which are active principles. *Newt. Princip.*

ACTIVE verb (*Gram.*) a sort of verb which denotes action, as I love, in distinction from the passive or neuter.

ACTIVITY (*Phy.*) faculty of acting, as the activity derived from attraction. *Newt. Princip.*—*Sphere of Activity*, the space within which the efficacy of a body extends, as the sphere of activity of a loadstone.

ACTON Búrnél (*Law*) the statute of 11 *Ed. I.* ordaining the *statute merchant*, amended by 13 *Ed. I.* It was so termed from a place named Acton Búrnél, where it was made.

ACTOR (*Ant.*) 1. in the forensic sense, Plaintiff, he who brings an action against any one, whether as *accusator vel petitor*; but, in a dramatic sense, an actor or player. *Oratores sunt veritatis ipsius actores; imitatores veritatis histriones. Cic. Orat. l. 3, c. 56.* 2. One who pleads or manages the cause of another; a Counsellor or Proctor. 3. A slave to whom the management of any concern is entrusted.

ACTOR ecclesiæ (*Archæol.*) he who administered the possessions, &c. of the church.—*Actor advocatus, vel defensor Ecclesiæ*, the pleading patron of the church.—*Actor dominicus, qui res domini agit*; a Lord's-bailiff or Attorney.—*Actor villarum, villicus qui prædiorum curam agit*; Head-bailiff of a village.

ACTS of the Apostles (*Bibl.*) a canonical book of the New Testament written by St. Luke, and containing a considerable part of the history of St. Peter and St. Paul. *Tertull. contra Marcion. l. 5, c. 1, &c.; Chrysos. in Acta. Homil. c. 3, &c.; Hieron. Epist. 103, de Script. Eccles.; Oecumen. in Act. Apost. p. 20; Grab. Spiceleg. &c.*

Spurious acts of the apostles were supposed to be written by Abdias the impostor.—*Acts of St. Peter*, otherwise called *Periodi Petri*, a book full of visions and fables. *Fab. Apocr. N. T. p. 759.*—*Acts of St. Paul*, a continuation of St. Paul's narrative to the end of his life, which Eusebius calls spurious. *Euseb. Hist. Eccles. l. 3, c. 3.*—*Acts of St. John the Evangelist*, mentioned by Epiphanius and St. Augustin, contain incredible stories of that apostle; and are supposed to be the acts of St. John published by Abdias the impostor. *Epiphan. Hæres. 42. 47; Aug. de Fide. cap. 4 and 405, contra Adversar. Leg. et Proph. l. 1, c. 20.*—*Acts of St. Andrew* were used by the Manichees, according to St. Augustin and Epiphanius. *Epiphan. Hæres. 61; St. August. contra Adversar. Leg. et Prophet. c. 20.*—*Acts of St. Thomas* were used by the Manichees, according to St. Augustin. *Aug. contra Adimant. c. 17; contra*

Faust. l. 29, c. 79; De Serm. Domini in Monte. c. 20.—*Acts of St. Philip* was a book used by the Gnostics. *Cotel. Monum. Eccles. t. 3. 428.*—*Acts of St. Matthias*; the work which bears this title is not admitted by the critics to contain the genuine acts of the apostle, whose name it bears. *Tillemont. Eccles. Hist. tom. 1.*

ACTS (*Ant.*) vide *Acta*.

ACTS, clerk of the (*Mar.*) an officer who receives and enters the Lord Admiral's commissions and warrants, and registers the acts and orders of the commissioners of the navy.

A'CTUAL (*Phy.*) in act or done, as distinguished from the Potential.

ACTUALIS (*Med.*) acting by an immediate inherent power, as fire, which is actual, in distinction from a cautery, which is virtual, and acts by an indirect or borrowed power.

ACTUA'RIA (*Ant.*) a sort of small swift sailing vessel plied with oars, so called because they are *cito agantur*. *Non.*

ACTUA'RII (*Ant.*) 1. Notaries or short-hand writers who took down the *acta* or public proceedings. *Suet. Jul. c. 55; Pollet. For. Rom. l. 5, c. 12.* 2. Those who took account of the military concerns. *Ammian. l. 20, c. 5; Aurel. Victor. de Cæsar.*

A'CTUARY (*Law*) a clerk that registers the acts of the convocation.

ACTUA'TION (*Med.*) the change wrought on any thing taken into the body by vital heat, which is necessary to make it act.

A'CTUS (*Ant.*) 1. The forms used in making bargains, &c. as *actus legitimi*, &c.—2. A certain portion of a play, an act. *Fest. de Verb. Signif.*—3. A measure of land either 4 feet wide and 120 long, as between neighbours' fields, or 120 feet square. *Varr. de Re Rust. l. 1, c. 10; Columel. l. 5, c. 1; Frontin. Expos. Form. p. 30; Alex. Gen. Dier. l. 2.*

ACTUS (*Phy.*) ἐνεργεια, energy, or the active principle, which is called *Actus purus*, having nothing in common with matter, as God, in distinction from the *Actus impurus*, which communicates with the power of matter, such as physical forms. *Aristot. Metaph. l. 9, c. 1, &c.*

A'CUANITES (*Ecc.*) another name for the Manichæans.

A'CUBENE (*Astron.*) a star of the third magnitude in the southern claw, *chela* or *brachium* of Cancer, marked (*a*) by Bayer. It is called by Ovid *Labia*, by others *Acetabulum*. Its longitude, for 1761, was Ω 10° 18' 9", South Latitude 5° 5' 56".

ACU'TION (*Med.*) from *acuo*, to sharpen: the sharpening of medicines to increase their effect, as vegetable acids may be sharpened by mineral acids.

ACU'TZCHUARIA (*Bot.*) a plant of Mechoachan, in South America, from which a water was distilled called *the enemy of poisons*.

ACULEATED (*Bot.*) *aculeatus*, prickly; an epithet applied to different parts of plants.—*Caudex aculeatus*, an aculeated stem, when the remains of the leaf are set with prickles, as in *Coccus aculeatus, Polypodeum asperum, &c.*—*Caulis aculeatus*, prickly stalk, when along the stem there are pointed protuberances.—*Folium aculeatum*, prickly leaf, when the surface of the leaf is covered with prickles.

ACULEO'SA (*Bot.*) the *Gortneria cibaris* of Linnæus.

A'CULER (*Man.*) the motion of a horse when in working upon volts he does not go far enough forward at every time, or movement.

ACULEUS (*Bot.*) a Prickle that is a persistent production issuing from the bark, as in *Rosa centifolia*, the Rose, or, in the words of Linnæus, *Mucro pungens corticis tantum affixus*. The *Aculeus* is distinguished into the—*Rectus*, straight, when the prickle is not bent.—*Incurvus*, incurved, when it is curved inwards.—*Recurvus*, recurved, when it is curved upwards.—*Cincinnatus*, rolled up, when rolled up with its apex inwards.

ACUPUNCTURE (*Surg.*) from *acus*, a needle, and *pungo*,

to prick; a method of bleeding by making many small punctures.

A'CURON (*Bot.*) ἄκυρον, the *Alisma* of Linnæus. *Diosc.* l. 3, c. 169.

A'CUS (*Surg.*) a Needle or instrument for confining the lips of wounds.

Acus *Pastoris* (*Bot.*) Shepherd's Needle, the *Scandix anthriscus*, the *Acus moschata*, and the *Geranium* of Linnæus.

ACU'STICUS (*Med.*) the same as acoustic.

ACU'TE (*Geom.*) from *acuō*, to sharpen, an epithet for several things.—*Acute angle* ὀξεία γωνία, that which is less than a right angle, or the measure of 90 degrees, the quadrant of a circle, as A B C, *fig. 1*, which is less than the

angle a B C.—*Acute-angled Triangle*, one whose angles are all three acute, as D E F, *fig. 2*.—*Acute-angled Cone*, one whose opposite sides make an acute angle at the vertex, as G H I, *fig. 3*.—*Acute-angled section of a cone*, an ellipsis made by a plane cutting both sides of an acute-angled cone. *Euclid. Elem. defin. 1. 1; Apollon. Conic. 1. 1, prob. 20, &c.; Papp. Math. Collect.*

ACUTE (*Bot.*) an epithet for different parts of a flower ending in a sharp point, as *Folium acutum*, an acute leaf; *Ligulum acutum*, an acute strap; *Stigma acutum*, a pointed stigma.

ACUTE (*Mus.*) an epithet for a sound which is sharp or elevated, in distinction from a grave sound. *Euclid. Introduct. Harmon.*

ACUTE *Accent* (*Gram.*) that elevation of the voice with which any syllable or word is pronounced, marked thus [']. *Priscian. de Accent.*

ACUTE (*Med.*) an epithet for a disease which is violent and comes quickly to a crisis. *Hippocrat. de Rat. Vict. in Acut. &c. and Gal. Comm.; Aret. de Caus. et Sign. Acut. Morb.; Cels. 1. 3, c. 1; Aet. Tetrab. 1. 2, serm. 1; Paul. Æginet. de Re Med. 1. 2.*

ACUTE (*Chem.*) an epithet for a liquor which is made more piercing by a stronger.

ACUTENA'FULUM (*Surg.*) a handle for a needle now called *Portaiguille*.

ACUTIA'TOR (*Archæol.*) one who whets or grinds cutting instruments.

A'CYLOS (*Bot.*) ἄκυλος, the fruit of the *Ilex*, distinguished by Homer from the βάλανος, or acorn, the fruit of the *Quercus*. *Odys. 1. 10, v. 242.*

Πέρρῳκυλον, βάλανον τ' ἔβαλον.

Theocrit. Idyl. 5, v. 94; Theophrast. Hist. Plant. 1. 3, c. 16; Plin. 1. 6, c. 6; Gal. de Alim.

ACYRO'LOGY (*Gram.*) ἀκυρολογία, from ἄκυρος, careless, and λόγος, speech; improper diction, as "one who fears may hope," for fear is the contrary of hope. *Isidor. 1. 1, c. 33.*

A. D. (*Chron.*) an abbreviation for *Anno Domini*. [vide *Abbreviations*]

AD (*Ant.*) this preposition forms a part of several peculiar phrases among the Latin writers, as—*Ad bestias*, a punishment among the Romans of exposing criminals to wild beasts. *Ulpian.; Tertull. Apol. c. 40; Bud. in Pandect. vol. i. p. 240; Holman. Antiq. Roman.—Ad ludos*, a similar punishment of being obliged to fight with either man or beast at the public games.—*Ad metalla*, another Roman punishment borrowed from the Egyptians of condemning criminals to work at the mines.

AD *scalum* (*Archæol.*) by the scale, that is, by weighing in the scale, a mode of counting money at the mint, when a certain portion having been told out the remainder is

weighed by it. This is distinguished from a mode of weighing called *ad Pensum*, which was employed for money that was diminished in quantity by clipping, wearing, &c.

AD *absurdum* (*Logic*) vide *Reductio*.

AD *valorem* (*Com.*) i. e. according to the value, a term applied to the duties or customs when rated according to the value of the commodities.

AD *libitum* (*Mus.*) or *Con ad lib.* at pleasure; a term signifying that the performer may introduce into the composition any thing extemporaneous according to his own fancy; hence an *ad libitum pause*, or an *ad libitum cadenza*.—*Ad longum*, old compositions so termed, consisting of notes of equal duration and generally the longest in use.—*Ad omnem tonum*, a term in such old compositions as preserved their harmony from whatever tone or note the *cantus* started.

AD *inquirendum* (*Law*) a judicial writ commanding inquiry to be made of any thing relating to a cause depending in the king's courts. *Reg. Judic.—Ad jura regis*, a writ brought by the King's clerk presented to a living against him who sought to eject him. *Reg. of Writs, 61.—Ad largum*, at large, as title at large, assize at large.—*Ad quod damnum*, a writ to inquire when a grant intended to be made by the King will be to the damage of him or others. *F. N. B. 221.—Ad terminum qui præterit*, a writ of entry, where a man having leased lands, &c. for a term of life or years, is kept from them by the tenant or possessor after the term is expired.—*Ad ventrem inspiciendum*, vide *Ventre inspiciendo*.—*Ad vitam aut culpam*, an office to be so held as to determine only by the death or delinquency of the possessor; in other words, it is held *quamdiu se bene gesserit*.

ADA'CTED (*Mil.*) driven into the earth with large mallets applied to stakes, or piles, used in securing ramparts or pontoons.

ADA'GIO (*Mus.*) a term in music books denoting the slowest time, except the grave, especially if repeated *adagio, adagio*.

ADAL (*Med.*) a term used by Paracelsus for that part of plants in which their virtue consists.

ADA'LIDES (*Polit.*) the name of certain military officers in Spain, who are spoken of in the laws of King Alphonsus.

ADAMANT (*Min.*) *Adamas*, so called from α, priv. and δαμῶ, to conquer, because of its hardness: it is a sort of diamond, and the hardest, most brilliant, and most valuable of the precious stones. *Adamas* is classed by Linnæus under the Silicious earths. [vide *Adamas*]

ADAMA'NTINE *Earth* (*Min.*) or *Adamantine Spar*, a sort of hard and ponderous earth which, under the name of *Adamantinus*, forms the sixth order of earths in the Linnean system.

ADAMA'NTIS (*Bot.*) a species of plant so called from its resemblance to Adamant. *Plin. 1. 24, c. 16.*

ADAMAS (*Min.*) Adamant, or Diamond, a genus of Silicious Earths, consisting of silica and carbon. It is slightly ponderous, extremely hard, shines in the dark after having been exposed to the rays of the sun, and consumes altogether like an inflammable substance. It is found, in Golconda and Brazil, enclosed generally in loose earth or sand. *Linn. System. Nat.*

ADAMI *pomum* (*Bot.*) the *Citrus aurantium* of Linnæus.

ADAMI *pomum* (*Anat.*) the convex part of the Thyrsia cartilage.

ADAM'IANI (*Ecc.*) vide *Adamites*.

ADA'MICA *terra* (*Geol.*) an oily slimy substance of the sea-waters.

ADA'MITA (*Med.*) the stone in the bladder, so called by Paracelsus. *De Tartar. 1. 1.*

ADAMI'TES (*Ecc.*) or, according to Epiphanius, *Adamiani*, ἀδαμῖται; heretics of the second century, who assumed that name from Adami, whose innocence they affected to imitate, and whose nudity they actually put in practice at their meetings. *Clemen. Alexand. 1. 3, &c.; S. Epiphan.*

Hæres. 52; *S. August. Hæres.* 31; *Theodoret. de Fab. Hæret.* l. 1.

ADAMITUM (*Med.*) the same as Athiasis.

ADAM'S Needle (*Bot.*) an Indian plant of which the inhabitants made coarse bread in times of scarcity. It is the *Yucca gloriosa* of Linnæus.

ADAMUS (*Alch.*) the Philosopher's Stone. *Theat. Chem.* vol. i.

ADANSONIA (*Bot.*) a genus of plants; Class 16 *Monadelphica*, Order 7 *Polyandria*, so named from M. Adanson, the French Naturalist.

Generic Character. CAL. *perianth* one-leaved.—COR. *petals* five.—STAM. *filaments* united at bottom into a tube; *anthers* kidney-shaped.—PIST. *Germ* ovate; *style* very long; *stigmas* many, prismatic.—PER. *capsule* ovate; *seeds* numerous.

Species. The only species is the *Adansonia digitata*, *Baobab*, *Abavi*, *Abavo Arbor*, or *Guanabanus*, Ethiopian Sour Gourd, or Monkeys' Bread. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Raii Hist. Plant.*; *Vesl. Plant. Ægypt.*; *Linn. Spec. Plant.*

ADARCES (*Nat.*) ἀδάρες, a kind of salt concretion adhering to herbs and canes in the fens and marshes of Galatia. It is said to clear the skin of freckles, &c.; and was so called from α, priv. and δέρω, to see, because it was not to be seen among the rushes. *Diosc.* l. 5, c. 137.

ADARCONIM (*Bibl.*) אדרכונים, a sort of money mentioned, 1 *Chron.* xxix. 7, and *Ezra* viii. 27, called, in the Septuagint, χρυσοί, and, in the Vulgate, *aurei*; they are the same as δαρικαί, the Daricks of the Greeks, a gold coin valued at twenty drachmas. *Gronov. de Pecun. Vet.* l. 3, c. 7.

ADARME (*Com.*) a small Spanish weight, the sixteenth of our ounce Troy weight.

ADARNECK (*Chem.*) Auripigmentum, or orpiment.

ADARTICULATION (*Anat.*) a species of articulation the same as Arthrodia.

ADATAIS (*Com.*) a clear fine Bengal muslin.

ADCENSI (*Ant.*) vide *Accensi*.

ADCHER (*Bot.*) the *Andropogon schoenanthus* of Linnæus.

ADCORDABILES *Denarii* (*Archæol.*) money paid by the vassal to his lord upon the selling or exchanging of a feud.

ADCORPORATION (*Med.*) vide *Incorporation*.

ADCREDULITARE (*Archæol.*) to purge oneself of an offence by oath.

ADCRESCENTES (*Ant.*) a sort of soldiers, the same as *Accensi*.

ADDAD (*Bot.*) a poisonous plant in Numidia.

ADDEPHA'GIA (*Med.*) ἀδδηφαγία, from ἄδδν, excessively, and φάγω, to eat; voracity.

ADDER (*Zo.*) the name of a small poisonous serpent, with plates on the belly, and scales upon the tail, greatly resembling the viper *Coluber verus* of Linnæus, which inhabits Europe, and is not rare in our own country. It is called in Saxon Ædder, Ætter, Ættor, Naddre; in low German and Dutch, adder and natter, from eitter, poison.

ADDER (*Her.*) the poisonous serpent has been made a charge in coats of arms, of which Guillim gives two examples, as follow:

ADDER, *nowed or knotted*, as in fig. 1. "The field is *gules*, an adder *nowed*, or, by the name of *Nathiley*."

Fig. 1.

Fig. 2.

ADDER, *curling erected*, as in fig. 2. "Or, an adder curling

erected upon its tail, in *pale sable*." This coat was allowed or assigned by patent, dated January 2, 1606, by William Camden, Clarendieux, to Sir Thomas Coach, of the city of London.

ADDER'S grass (*Bot.*) a herb so called, as Skinner supposes, because it serves as a lurking place for adders.—*Adder's tongue*, the *Ophioglossum* of Linnæus, a herb so called because it has a single leaf that puts forth a spike in the shape of an adder's tongue.—*Adder's wort*, a herb so called because it is imagined to cure the bite of a serpent.

ADDER stung (*Med.*) stung by adders and venomous creatures, as in the case of cattle.

ADDICTI (*Ant.*) those who, according to the laws of the twelve tables, were delivered over to their creditors to be made slaves until they discharged their debts. *Cic. Rosc. Com.* c. 14; *Flacc.* c. 20, &c.; *Liv.* l. 6, c. 14, &c.; *Alex. Gen. Dier.* l. 5, c. 4.

ADDITAMENT (*Med.*) any thing added to the ordinary ingredients.

ADDITAMENTS (*Her.*) what is added to coat armour to distinguish the bearer. *Guill.*

ADDITAMENTS (*Chem.*) things added to a menstruum, to render it more efficacious in dissolving any mixed body.

ADDITAMENTUM (*Anat.*) the same as *Epiphysis necatum*; the Epiphysis of the Ulna.—*Additamentum coli*, the *Appendicula cæci vermiformis*.

ADDITION (*Law*) whatever is added to a man's name by way of title, as additions of degree, estate, mystery, place.—*Additions of degree*, are Knight, Lord, Earl, Marquis, and Duke.—*Additions of an estate or quality*, are Yeoman, Esquire, Gentleman, and the like.—*Additions of mystery*, are such as Scrivener, Painter, Mason, and the like.—*Additions of place* are of London, York, &c.

ADDITION (*Nat.*) a name given by distillers to whatever is added to a liquor to improve its spirit, which includes ferments and every thing else which is not expressly of the same nature as the liquor.

ADDITION (*Arithm.*) the uniting or joining together several numbers into one sum.—*Addition of integers*, the first of the four fundamental rules of arithmetical operation, which is either performed by placing the figures under one another in columns, or by means of the sign plus [+], which is called the sign of addition, as 6 + 3 = 9, that 6 plus, or added to 3, is equal to 9. This operation is either simple or compound.—*Simple addition*, the method of collecting several numbers into one sum, as 4, 5, 9, which, added together, make 18.—*Compound Addition*, the method of collecting quantities of different denominations into one sum, as pounds, shillings, pence, yards, feet, and inches, &c.—*Addition of Vulgar Fractions* is the adding together the numerators into one sum, when the fractions have, by the rules of reduction, been brought to a common denomination, as in the adding of 1/2, 1/3, and 1/7 together, they are first reduced [vide *Reduction*], to 7/14, 4/14, and 2/14, then 7/14 + 4/14 + 2/14 = 13/14.—*Addition of decimals* is performed in the same manner as that of whole numbers, only having regard to the decimal points, that they should range under one another, as

$$\begin{array}{r} 34 \cdot 17 \\ 19 \cdot 143 \\ 167 \cdot 13 \\ \hline 220 \cdot 443 \end{array}$$

—*Addition of circulating decimals* is performed by changing each of them into its equivalent vulgar fraction, and finding the sum of such fractions.

ADDITION (*Algeb.*) the finding the sum of several algebraical

quantities, and connecting them together with their proper signs, as in the annexed example :

$$\begin{array}{r} 5x - 13y \\ 4x - 11y \\ 14x - 7y \\ \hline 23x - 31y \end{array}$$

ADDITION of *surds* is performed by reducing the surds to the same denomination or radical, as far as it can be done: then add the rational parts, and subjoin the common surd, as $\sqrt{8} + \sqrt{18} = \sqrt{4 \times 2} + \sqrt{9 \times 2} = 2\sqrt{2} + 3\sqrt{2} = 5\sqrt{2} = \sqrt{50}$.

ADDITION of *ratios*, vide *Composition*.

ADDITION (*Mus.*) a dot marked on the right side of a note.

ADDITIONALES (*Law*) additional terms, or propositions, to be added to a former agreement.

AD'DITIVE (*Math.*) a term employed to denote something to be added in distinction from something to be subtracted, as *additive equations*, *additive ratios*, &c.

ADDIXIT (*Ant.*) the word which the Augurs used to signify that the birds foretold a joyful event. "Fabio auspicianti priusquam egrederetur de Tarento aves semel et iterum addixerunt." *Liv.* l. 27, c. 16; *Fest. in Voc. Prætor.*

ADDO'RSED (*Her.*) Back to Back, as two Lions rampant, or, addorsed, which Guillim calls endorsed. Leigh says this coat was borne by Achilles at the siege of Troy, and he takes it to represent two champions who have met in the field of battle, but being prevented by the interposition of the prince from engaging in combat, turn back to back, and so go off the field.

ADDO'SSER (*Mil.*) Fr. to place one thing behind another, as a tent, &c. *Addosser une Compagnie*, to post one company in the rear of the other.

ADDRE'SS (*Com.*) whatever directs to the person or the place, as, 'My address is at Lyons, to the house of N. N.' i. e. where goods may be sent me. A bill of exchange payable to the address of N. N. that points out the place of payment. 'This bill is to the address of Mr. N.' signifying that it is drawn upon him.

ADDU'CENT (*Anat.*) an epithet for certain muscles. [vide *Adductor*.]

ADDUCTO'RES (*Anat.*) or *Adductentes*, from *ad* and *duco*, to draw to, or towards; an epithet for some muscles which draw those parts of the body to each other in which they are inserted, in distinction from the *Abductores*, as the—*Adductor minimi digiti et pedis*, which draws the third and fourth lesser toes to the others.—*Adductor oculi*, which draws the eye to the nose, also called *hibitorius*, because it directs the eye of the person drinking towards the cup.—*Adductor femoris primus, secundus, &c.* otherwise called *Triceps*, which serves to draw the thigh inwards.—*Adductor pollicis*, which brings the thumb nearer to the forefinger.—*Adductor pollicis pedis*, the Antithenar of Winslow, which brings the great toe nearer to the rest.

A'DEB (*Com.*) a large Egyptian weight, used principally for rice, somewhat less than an English pound. *Pocock. Trav. in Egypt.*

A'DEC (*Chem.*) sour Milk.

ADECAT'IST (*Ecc.*) one not decimated, or who is against paying tithes, from *a*, priv. and *decativai*, to decimate.

A'DECH (*Alch.*) the internal or invisible part of man, that impresses the forms or images of external material objects on the mind. *Paracel. Chirurg. Tract. 2.*

ADE'CTA (*Med.*) from *a*, priv. and *dektas*, to bite; an epithet for medicines which relieve pain, as *lenitives*, &c. *Cels. apud Gorr. Def. Med.*

ADELANTA'DO (*Polit.*) a governor of a Spanish province.

ADELIA (*Bot.*) from *ἀδελος*, obscure, or indistinct; a genus of plants, Class 22 *Dioccia*, Order 12 *Monadelphica*, the *Bernardia* of Brown.

Generic Character. CAL. *perianth* one-leaved; *leaflets* oblong.—COR. none.—STAM. *filaments*, many; *anthers* roundish.

Species. The species are the *Adelia Bernardia*, *ricinella*, and *acidotum*, which are shrubs, and natives of Jamaica. *Linn. Spec.*

ADELING (*Polit.*) in Saxon, *Æthling*; a title of honour among the Saxons.

ADELPHÆ (*Numis.*) Ἀδελφαι, sisters, an epithet on a medal of Caracalla for two cities, inscribed ΠΑΩΤΕΙΝΟΠΟΛΙΣ ΔΟΜΝΟΠΟΛΙΣ ΑΔΕΛΦΑΙ.

ADELPHI (*Numis.*) Ἀδελφοι, brothers, an epithet on a medal of the brothers, Drusus and Germanicus, represents them on the obverse, with the inscription ΔΡΟΥΣΟΣ ΚΑΙΣΑΡ

ΓΕΡΜΑΝΙΚΟΣ ΚΑΙΣΑΡ ΑΔΕΛΦΟΙ, i. e. *Drusus Cæsar Germanicus Cæsar, fratres*: on the reverse, a crown, with the words circumscribed ΕΠΙ ΑΛΕΞΑΝΔΡΟΥ ΚΛΕΩΝΟΣ ΣΑΡΔΙΑΝΩΝ. i. e. *sub Alexandro Cleone Sardinorum Prætor*, and inscribed within the crown ΚΟΙΝΟΥ ΑCΙΑC. by which latter words is to be understood, that this crown of laurel was decreed to them by the universal consent of all the cities of Asia. *Seguin. Numis. sel Antiq.*

ADELPHIA (*Med.*) or *Adelphizis*, a term used by Hippocrates for analogy, as applied to diseases.

ADELPHIA'NI (*Ecc.*) a sect of heretics who fasted always on Sundays. *Theodoret. Hist. Eccles.* l. 4, c. 10; *Cedren. Compend. Hist.* p. 242.

ADELPHIDES (*Bot.*) Ἀδελφίδης, a kind of palm-tree, whose fruit has the taste of figs.

ADELPHON (*Numis.*) Ἀδελφῶν, i. e. *fratris sororisque*, brother and sister, an inscription on a medal of Ptolemy Philadelphus and Arsinoe, both his sister and wife.

ADEMONIA (*Med.*) ἀδημονία, from *δαίμων*, *fortuna*, restlessness and anxiety in diseases. *Hippoc. de Epidem.* l. 1; *Gorr. Defin. Med.*; *Foes. Oeconom. Hippoc.*

ADEMP'TION (*Law*) taking away a legacy, or revoking a grant, &c.

A'DEN (*Med.*) *glandula*, a gland.

ADENANTHE'RA (*Bot.*) from *ἄδην*, a gland, and *ἀνθερα*, an anther; a genus of plants, Class 10 *Decandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth*, one-leaved.—COR. five-petaled; *petals* lanceolate.—STAM. *filaments* subulate; *anthers* roundish.—PRST. *germ* oblong; *style* subulate; *stigma* simple.—PER. a *legume* long; *sceds* very many.

Species. The principal species are the—*Adenantha pavonina*, a shrub, native of India.—*Adenantha scandens*, a shrub, native of Mallicollo, an island in the South Seas, &c. *Raii Hist. Plant.*; *Rheed. Hort. Ind. labar.*

ADENENTES (*Med.*) from *ἄδην*, and *edo*, to eat; ulcers which eat and destroy the glands.

ADE'NIA (*Bot.*) a genus of plants, Class *Hexandria*, Order *Monogynia*, given by Forskal in his *Flora Ægyptiaca Arabica*.

ADENO'IDES (*Anat.*) glandiform; an epithet for the *Glandula prostata*. *Ruff. Ephes. de Appell. Part. Corp. Human.* l. 1, c. 29; *Gal. de Usu Part.* l. 14, c. 11; *Gorr. Def. Med.*

ADENOS (*Com.*) marine Cotton from Aleppo.

ADENOSUS abscessus (*Med.*) a crude tubercle, resembling a gland, which proceeds from obstructed viscidities.

ADEPHA'GIA (*Ant.*) ἀδηφαγία, gluttony, which was worshipped as a goddess among the Greeks, and had a temple in Sicily, according to Athenæus. *Deipnosph.* l. 10, c. 4.

A'DEPS (*Anat.*) fat; an animal oil in the *membrana adiposa*, which differs from the *Pinguedo*, by being a thicker, harder, and more earthy substance. *Ruff. Ephes. de Appell. Part. Hum. Corp.* l. 1, c. 35; *Gal. de Usu Part.*

ADEPT philosophy (*Alch.*) the science which professes to teach the transmutation of metals, and finding the philosopher's stone. The *Adepti*, or *Adepts*, were such as were initiated into the adept philosophy.—*Adept medicine*, that which treats of diseases contracted by celestial operations. *Paracel. Peragran.*

ADER'AIMIN (*Astron.*) or *aldcraimin*, a star of the third magnitude in the left shoulder of Cephcus, marked α, by Bayer. Its longitude for 1761 was γ 9° 30' 8", latitude North 68° 56' 20". *Ulug. Beigh. apud Hyde; Bayer Uranomet.*

ADESSENA'RIANS (*Ecc.*) a branch of the sacramentarians who derived their name from the Latin *adesse*, to be present; because they believed the presence of Christ's body in the eucharist, though in a manner different from the Romish church. *Præcol. de Vit. Sect. et Dogm. Hæret. Omn.*

ADFE'CTED (*Algeb.*) vide *Affected*.

ADHA (*My.*) or *adcha*, i. e. sacrifices, a festival which the Mahometans celebrate on the 12th day of the month Dhoullegiat, which is the 12th and last month of their year. This month, being particularly destined for the ceremonies which the pilgrims observe at Mecca, takes its name from that circumstance: the word signifying the month of pilgrimage.

ADHATO'DA (*Bot.*) the Malabar Nut; a species of the *Justicia* of Linnæus.

ADHERENCE, *Action of* (*Law*) an action in the Scotch Law, competent to a husband or a wife, to compel either party to adhere in case of desertion.

ADHESION (*Phy.*) from *ad* and *hæreo*, the union of two substances, similar or dissimilar; as of mercury to gold, in distinction from cohesion, which retains together component particles of the same mass. *Adhesion* arises either from the compression of external bodies, or from a principle of attraction between particular bodies. James Bournelli considered the pressure of the external air as the proximate cause; but later experiments have led to the conclusion, that it arises from the natural tendency to adhesion in the bodies themselves.

ADHESION (*Med.*) the junction of parts that ought to be separated, as the adhesion of the lungs to the Pleura.

ADHESIVE inflammation (*Surg.*) a modern term in surgery for that species of inflammation which terminates by an adhesion of the inflamed parts.

ADHESIVE plaster, a plaster made of common litharge plaster and resin, which is so called for its adhesive properties.

A'DHIL (*Astron.*) a star of the sixth magnitude in the garment *σπειρα* of Andromeda, marked (δ) by Bayer. *Ptol. Almag.* l. 7, c. 5; *Bayer. Uranomet.*

A'DHO (*Chem.*) or *Ado*, Buttermilk.

ADJA'CENT (*Math.*) from *ad* and *jacio*, to lie, lying near; an epithet applied to angles when they lie so as to have but one common side, and the other two sides form one continued right line, as in the annexed diagram, where the adjacent angles C B A and C B D have the legs A B and D B in one straight line.

ADIA'CHYTOS (*Med.*) from α, priv. and διαχύω, to be pro-

fuse, or to scatter; an epithet used by Hippocrates to imply not foppish or extravagant. *Hippocrat. de Decent. Habit.*

ADIA'NTHUM (*Bot.*) vide *Adiantum*.

ADIA'NTUM (*Bot.*) ἀδιάντων, a plant; so called from α, priv. and διαίνω, to moisten or become wet, because its leaves throw off the wet. *Nicand. Theriac.*

Ἀρχαῖος τ' ἀδιάντων ὁ ἐκ ἔμβροιο ῥαγέντος
 Λεπταλέη πίπτεισιν νοτίσι πετάλοισιν ἐφίξει.

Hippocrates calls it καλλιφυλλον, beautiful-leaved; Theocritus χλοερόν ἀδιάντων, the green adiantum. *Hippocrat. de Nat. Mul.; Theophrast. Hist. Plant.* l. 7, c. 13; *Dioscor.* l. 4, c. 136; *Plin.* l. 22, c. 21; *Schol. in Theocrit. Idyl.* 13, v. 14; *Schol. in Nicand. Theriac.*

ADIAN'TUM, in the *Linnaean system*, a genus of plants, Class *Cryptogamia*, Order *Filices*, in English Maidenhair.

Generic Character. Fructifications assembled in oval spots, at the end of the fronds.

Species. The species of this tribe are perennials, and mostly natives of the East and West Indies. The principal are the—*Adiantum reniforme* or *monophyllum*, *Hemionitis* or *Felix Hemionitis*, Kidney-leaved Maidenhair.—*Adiantum radiatum*, *Lonchitis radiata*, or *Trichomanes Americanum radiatum*, rayed Maidenhair.—*Adiantum fragrans* or *Polypodium fragrans*, sweet-scented Maidenhair.—*Adiantum denticulatum* or *Lonchitis serrata*, tooth-leaved Maidenhair.—*Adiantum lunulatum* or *Pteris lunulata*.—*Adiantum varium*, or *Asplenium varium*, &c. *J. Bauh. Hist. Plant.; C. Bauh. Pin.; Ger. Herb.; Park. Theat. Botan.; Raii Hist. Plant.; Pluk. Phyto-graph.; Tournef. Instit.; Boerh. Ind. Plant.*

ADIAN'TUM is also the name for the *Asplenium obtusifolium* and *nigrum* of Linnæus. *Raii Hist. Plant.*

ADIA'PHORISTS (*Ecc.*) from ἀδιάφορος, indifferent; the name of those moderate reformers who, according to the sentiments of Melancthon, declared that in matters of an indifferent nature, compliance with the edicts of the Emperor was a duty, in consequence of which they adhered to the Interim of Charles V. *Spondan. Continuat. Baron. Annal. Ann.* 1525; *Præcol. de Vit. &c. Hæret. Omn.*

ADIA'PHOROUS (*Chem.*) from α, priv. and διαφέρω, differo, without difference; a spirit distilled from tartar, neither acid, vinous, nor urinous.

ADIA'PNEUSTIA (*Med.*) ἀδιαπνευσία, to breathe, from α, priv. and διαπνέω, difficult or impeded respiration. *Gal. Meth. Med.* l. 11, c. 4.

ADIAPTO'TOS (*Med.*) ἀδιαπτωτος, from α, priv. and διαπτω, to fall through; a remedy for the colic. *Gal. de Comp. Med. sec. Loc.; Gorr. Def. Med.*

ADIARRHO'EA (*Med.*) ἀδιάρρεια, from α, priv. and διαρρέω, to flow through; an entire suppression of all evacuations. *Erotian. Lex. Hippocrat.; Foes. Oeconom. Hippocrat.*

ADIATHOROSUS (*Chem.*) a spirit distilled from tartar.

A'DIBAT (*Alch.*) mercury.

A'DICE (*Bot.*) the same as *Urtica*.

ADJECTITIOUS (*Archit.*) an epithet for any thing added to a building.

A'DJECTIVE (*Gram.*) or *noun adjective*, from *adjicio*, to adjoin; a part of speech which is added to a noun in order to qualify its signification; as a *good* man, a *large* house.

ADJICIA'LIS cæna (*Ant.*) a particular festival among the Romans, so called because it seems that something *adjiciebatur* was added to the ordinary entertainment. *Senec. Epist.* 95; *Plin.* l. 10, c. 20; *Tacit. Annal.* l. 2, c. 65; *Scalig. Conject. in Varr.* p. 118; *Lips. de Mag. Rom.* l. 4, c. 9; *Ursin. Append. ad Ciaccon. de Triclin.* p. 175; *Ba-leng. de Imper. Roman.* l. 2, c. 32.

AD INQUIRENDUM (*Law*) a judicial writ commanding inquiry.

ADJOURNMENT (*Law*) *Adjournamentum*, a putting off until another time or place, as the Adjournment of Parliament, or a Writ of Adjournment for a court of justice to be held at some other time or place.

ADIPOCERE (*Chem.*) from *adeps*, fat, and *cera*, wax; fatty wax, a concretion or substance resembling ammoniac soap. It forms a class of biliary calculi, like spermaceti.

ADIPO'SUS (*Anat.*) adipous, or fat; an epithet for certain membranes, veins, &c.—*Adiposa membrana*, a membrane which encloses the *cellulæ adiposæ*, but more particularly that in which the kidneys are wrapped up.—*Adiposæ cellulæ*, a number of cells or holes full of fat.—*Adiposa vena*, a vein arising from the descending trunk of the cava, which spreads itself on the coat and fat of the kidneys.—*Adiposi ductus*, certain vessels of the animal body which convey the adeps or fat into the interstices of the muscles or parts that are between the flesh and skin.

ADIPSA (*Med.*) vide *Adipson*.

ADIPSA'THEON (*Bot.*) a thorny shrub in the island of Rhodes.

ADIP'SIA (*Med.*) from *α*, priv. and *διψα*, thirst; want of thirst, a genus of diseases, Class *Locales*, Order *Dysorexia*, in Cullen's Nosology.

ADIP'SON (*Med.*) from *α*, priv. and *διψα*, thirst; any drink that quenches or prevents the thirst. Hippocrates applies the term to the ptissana. *Hippocrat. de Rat. Vict. in Acut. Morb.*; *Gal. de Comp. Med. sec. Loc.*

ADIP'SOS (*Bot.*) *ἄδριψος*, from *α*, priv. and *διψα*, thirst; an epithet for the *Glycorrhiza*, or Liquorice-Tree, from its property of assuaging thirst. According to Solinus, the Egyptian palm was also so called. *Hippocrat. de Rat. Vict. in Acut. Morb.*; *Theophrast. Hist. Plant.* 1. 9, c. 13; *Dioscor.* 1. 3, c. 7; *Plin.* 1. 22, c. 9; *Gal. de Simpl.* 1. 6; *Foes. Oeconom. Hippocrat.*

ADIP'SOS (*Med.*) a catapotium or pill, made by Asclepiades. *Gal. de Comp. Med. sec. Loc.* c. 8; *Trallian.* 1. 7.

ADIRA'TUS (*Law*) strayed or lost.

A'DIT (*Min.*) the shaft or entrance into a mine.

ADIT (*Mil.*) a passage under ground, by which the miners approach the part they intend to sap.

A'DITUS (*Ant.*) a passage to the seats of a theatre. *Vitruv.* 1. 5, c. 3. The *Aditus* in a ship is that space where it is broadest. *Ovid. Metam.* 1. 3, v. 722; *Scheff. de Re Nav.* 1. 1, c. 6.

ADJUDICA'TION (*Law*) the adjudging or determining a cause in favour of some person.—*Adjudication*, in the Scotch Law, is an action by which a creditor attaches the heritable estate of his debtor's heir in payment of his debt; also that by which the holder of an heritable right, labouring under any defect in point of form, may supply that defect.

A'DJUNCTS (*Log.*) whatever is joined to a thing, as to its subject; as knowledge to the soul, or greenness to grass, &c. These are more commonly termed the accidents of the subject. [vide *Accident*]

ADJUNCTS (*Rhet.*) certain words or things added to others to amplify the discourse, or augment its force.

ADJUNCTS (*Med.*) qualities, dispositions, and symptoms.

ADJUNCTS (*Eth.*) vulgarly called circumstances, are comprehended in this verse.—

Quis, quid, ubi, quibus auxiliis, cur, quomodo, quando.

Quis, to denote the person; *quid*, the matter; *ubi*, the place; *quibus auxiliis*, the instruments; *cur*, the efficient cause and end; *quomodo*, the manner; and *quando*, the time.

ADJUNCTS (*Mus.*) the intervals which constitute the relation and connexion between the principal mode, and the modes of its two fifths.

ADJUNCTS (*Lit.*) a class of members in the Royal Academy at Paris, attached to the pursuit of particular sciences, who were twelve in number, namely, two for geometry, two for anatomy, two for mechanics, two for astronomy, two for chemistry, and two for botany. They were elected in 1716 in lieu of the *élevés*.

ADJUNCTS (*Polit.*) colleagues or fellow officers associated with any other to assist him in his office, or inspect his proceedings.

ADJU'RA *regis* (*Law*) vide *Ad.*

ADJUTANT (*Mil.*) from *adjuvo*, to help; one who assists a superior officer in a regiment, distributing the pay to the men, exercising them when they are assembled, and presiding over the punishments of delinquents. The *Adjutant-General* is an officer of distinction, who assists the general with his council and personal service.

ADJU'TOR (*Ant.*) an assistant or deputy, who was named after his office, as—*Adjutor actoris*, an assistant to the steward.—*Adjutor admissionum*, an assistant to the master of the ceremonies.—*Adjutor aruspicum*, an assistant to the aruspices or soothsayers on public occasions.—*Adjutor prætoris*, a deputy-prætor.—*Adjutor principis*, a king's commissioner, who acted in the name of the prince.—*Adjutor provinciæ*, a deputy-lieutenant, of whom frequent mention is made in inscriptions. *Cassiodor Var.*; *Panciro Notit. Dig. Imp. Orient.*; *Pignor. de Serv.*; *Buleng. de Imp. Rom.*; *Ursat. de Not. Roman.*; *Salmas. in Lamprid.*; *Græv. Thesaur. Antiq. Roman.* vol. ii. p. 533, &c.

ADJUTO'RIMUM (*Anat.*) a bone between the cubit and the scapula, so called because it is of use in raising the arm.

ADJUTORIUM (*Med.*) a topical or external application to assist an internal medicine.

ADJU'TRIX (*Numis.*) the good genius of the emperor Victorinus is so called, as in the annexed cut, which represents the head of a female figure half naked, with a bow; the inscription ADJUTRIX AUG. On the obverse of this medal is the head of the emperor himself. *Occo. Numis Imper. Roman.*; *Pembroch. Numis. Antiq.*

ADJUVA'NTIA (*Med.*) from *adjuvo*, to help, aiding; an epithet applied to medicines that help nature.

AD LA'RGUM (*Law*) at large, as "a title at large."

A'DLE (*Nat.*) the state of an egg which is putrid from long keeping.

ADLE'CTI (*Ant.*) 1. Inferior Deities enrolled from among men into the number of the gods. *Cæl. Rhodig. Antiq. Lect.* 1. 22, c. 2; *Bud. Pandect.* p. 53. 2. Soldiers who were enrolled into any particular class, or raised to a particular rank. *Ursat. de Not. Roman. apud Græv. Thes. Antiq. Roman.* tom. xi. p. 531. 3. Senators who, on account of their poverty, were enrolled from the equestrian into the senatorial order. *Suet. in Jul.* c. 80; *Fest. de Signif. Verb.*; *Alex. ab Alex. Gen. Dier.* 1. 4, c. 2; *Bud. in Pandect.* p. 53. 4. Adjuncts, or assistants to the actors on the stage, according to an inscription on a stone.

ADLEGA'TION (*Polit.*) a right claimed by the German States of adjoining plenipotentiaries to those of the emperor for the transaction of affairs relating to the empire in general. It is distinguished from legation, which is the sending ambassadors on one's own account.

ADLEGIARE (*Law*) in French *abier*, to purge oneself of a crime by oath. *LL. Aelfred apud Brompton.*

ADLOCU'TIO (*Ant.*) from *adloquor*, to speak to or address; an address or harangue of the emperor to his soldiers.

ADLOCUTIO (*Numis.*) many medals of the emperors represent them in the act of haranguing their soldiers, as those of Nero, Caligula, Galba, Vespasian, Adrian, Domitian, Nerva, M. Aurelius, L. Verus, Severus, Macrinus, Alex. Severus, Julia Mammæa, Gordian, Phillip Sen., Vale-

rian, Tacitus, Probus, and Numerian, with the following inscriptions.

ADLOCUTIO	ADLOCUTIO BRITANNICA
ADLOCUTIO S. C.	ADLOCUTIO COH.
ADLOCUTIO AUG.	ADLOCUTIO COHORT
ADLOCUTIO AUGG.	ADLOCUTIO COH. PRÆTOR
ADLOCUTIO AUGUSTOR.	ADLOCUTIO MILITUM.

The subjoined cut, *fig. 1*, represents Nero addressing the

soldiers from an elevation, while they stand, near the *prætorium*, with their military standards. He is robed in the *toga*, and another figure near him also robed. *Fig. 2*, represents the emperor Galba, in his military robe, haranguing the soldiers as they stand with their legionary ensigns. *Fig. 3*, represents Vespasian, crowned with laurel, in the same act. *Vaillant. Num. Imp. &c.; Patin. Num. Imp.*

AD LONGUM (*Mus.*) at full length. [vide *Ad*]

ADMANUE'NSIS (*Archæol.*) the same as *amanuensis*.

ADME'ASUREMENT (*Law*) *admensuratio*, a writ against those usurping more than their own share, as in the Admeasurement of Pasture, and the Admeasurement of Dower. The *Admeasurement of pasture* is a writ against those having common pasturage, who surcharge the pasture. *Admeasurement of dower* is a writ against a widow holding more from the heir, as dower, than she is entitled to. *Britt. c. 58, &c.; Flet. 1. 4, c. 23; Reg. Orig. 156.*

ADMEASUREMENT of a ship (*Mar.*) a measurement made to ascertain its tonnage.

ADM'NICLE (*Ant.*) a term applied to the attributes or ornaments wherewith Juno is represented on medals.

ADM'NICLE (*Law*) 1. A term, in the Scotch Law, for any writing or deed referred to by a party, in an action at law, for proving his allegations. 2. An ancient term for aid or support. 3. A term in Civil Law for imperfect proof.

ADM'NICULA'TOR (*Ecc.*) an ancient officer of the church, who defended the cause of widows and orphans.

ADM'NISTRATION (*Law*) the disposing, in Civil Law, of the estate or effects of a man who dies intestate.

ADM'NISTRATION (*Com.*) a staple magazine or warehouse established by the Spaniards in Callao, a port of Lima, where vessels must unload.

ADM'NISTRA'TOR (*Polit.*) he who administers or manages the public concerns in the place of a sovereign prince.

ADM'NISTRATOR (*Law*) he to whom the estate and effects of an intestate person are committed by the ordinary, for which he is accountable as an executor.

ADM'NISTRATO'RES (*Ant.*) *ipsius Patrisfamilias ministri in mensa. Alfen. de Verb. Signif.*

ADM'NISTRA'TRIX (*Law*) she that hath the goods and chattels of an intestate person committed to her charge as an administrator.

ADMIRA'BILIS *Sal* (*Chem.*) another name for Glauber's salt.

ADMIRAL (*Mar.*) *admiralius, admirallus, admirallis, Capitaneus custos maris*, from the Saxon, *aen-meNeal*, all over the sea, or, as some say, from the Arabic, *amer* or *emir*, a governor, and *dal*, the sea; an officer of the first rank and command in a fleet.—*Lord High Admiral*, an officer that used to have the government of the king's navy by the king's patent. The term seems to have been first used

in the time of Edward I.; and the first Admiral of England was Richard Fitz-Alan, Earl of Arundel. 10 *Ric. 2*. The office is now vested in the Lords commissioners of the Admiralty, who have the same power and authority.—*Admiral of the fleet*, the highest officer under the Admiralty of Great Britain, is distinguished when he embarks on any expedition by the union flag at the main-top-gallant-mast-head.—*Vice Admiral*, 1. The officer next in rank and command to the Admiral, has his flag displayed at the fore-top gallant-mast-head. 2. A civil officer appointed by the Lords commissioners of the Admiralty, of whom there are upwards of twenty in different parts of Great Britain, with judges and marshals under them for exercising jurisdiction in maritime affairs. Their decisions, however, are not final, an appeal lying to the court of Admiralty in London.—*Rear Admiral*, the officer next in rank and command to the Vice Admiral, carries his flag at the mizen-top gallant-mast-head.—*Admiral of the red, white, &c.* that is, of the red squadron, the white squadron, &c. so denominated from the colour of the flag. [vide *Flag*]—*Admiral of the Cinque Ports*, the warden of the Cinque Ports has the jurisdiction of Admiral within these ports, exempt from the jurisdiction of the Admiralty of England.

ADMIRAL, a name given also to the most considerable ship of a fleet of merchantmen, or of the vessels employed in the cod fishery of Newfoundland. This ship directs the movements of the rest.

ADMIRALTY (*Mar.*) in French, *amirauté*, the office of Lord High Admiral, whether discharged by one or many.—*Lords commissioners of Admiralty*, those who execute the office of Lord High Admiral by the *Stat. 2 W. & M.* They are seven in number.—*Admiralty court*, the supreme court held by the Lord High Admiral or Lords commissioners for the trial of maritime causes, established in the reign of Edward III. The jurisdiction of this court is confined to the main sea, or coasts of the sea not being in any county.—*Admiralty office*, an office near Whitehall, wherein are transacted all maritime affairs belonging to the jurisdiction of the Lord High Admiral, where the Lords commissioners at present meet on certain days for the management of the navy; and where formerly the Lord High Admiral determined all causes, civil and criminal, committed at sea, which are now decided at Doctors' Commons, or the Old Bailey. *Stowe's Survey.*

ADMIRA'TION (*Gram.*) the note or mark [!] expressing admiration.

ADM'SSIO (*Ant.*) an appellation for certain parts of the *atrium*, or audience-chamber, divided off by hangings, into which persons were admitted to the prince according to their different degrees of favour; thence termed *amici admissionis primæ, secundæ, vel tertiæ*. *Senec. de Benef. 1. 6, c. 33, 34; Lamprid. Alex. Sev. c. 20; Lips. in Tac. Annal. 1. 6, c. 29; Salmas. in Spartian Adrian. c. 18.*

ADM'SSION (*Law*) the ordinary's declaration, that he approves the parson who is presented to the cure of the church. When the patron has presented to a church, the bishop on examination admits the clerk by saying, *admitto te habilem. Co. Lit. 344. a.*

ADM'SSION'ALES (*Ant.*) gentlemen ushers, or those who admitted persons into the presence of the prince. *Lamprid. in Alex. Sev. c. 4; Ammian. 1. 15, c. 5; Lips. in Tacit. Annal. 1. 6, c. 29.*

ADM'SSION'NUM *Magister* (*Ant.*) another name for *Admissionalis*.

ADM'ITTANCE (*Law*) the admittance of a tenant to a copyhold estate, which may be either by voluntary grant when the lord is proprietor, by the surrender of the prior tenant, or by descent.

ADM'ITTENDO *clerico* (*Law*) a writ granted to one that has recovered the right of presentation against the bishop.

Reg. Orig. 31, 33; *New Nat. Brev.* 84.—*Admittendo in socium*, a writ for associating certain persons to justices of assize. *Reg. Orig.* 206.

ADMONTIO (*Ant.*) *edicto admonere, rescripto admonere*, &c. an injunction or proclamation.—*Admontio fustium*, a beating with sticks, which was a military punishment.

ADMONTIO (*Archæol.*) a summons, particularly of debtors.

ADMORTIGATION (*Archæol.*) the reduction of the property of lands or tenements to mortmain.

ADNATA (*Nat.*) or *Adnascentia*, *προσφύεις*, from *adnascor*, to grow to adnate, or adherent; an epithet for what grows upon animal or vegetable bodies inseparably, as hair, &c. or accidentally, as fungus, &c. *Plin.* l. 16, c. 93.

ADNATA (*Anat.*) or *adnascentia*; branches that sprout out of the main stock, as the veins and arteries.—*Adnata tunica*, the coat of the eye which makes what is called the White. *Winslow*.

ADNATUS (*Bot.*) adnate, growing or fixed to, as applied to off-sets, or small bulbs produced from the main bulb and closely adjoining to it, as in Narcissus, Lily, Hyacinth, &c.—*Adnatus* is also applied to different parts of plants, as the leaf, stipule, &c. as *Folium adnatum*, a leaf adhering to the stem.—*Stipula adnata*, a stipule adhering to the petiole.—*Anthera adnata*, an anther closely attached to both sides of the filaments.—*Stylus adnatus*, a style adhering to the corolla, as in the *Canna*. *Linn. Phil. Botan.*

ADNICHELLED (*Lav.*) the same as annulled.

ADNOMEN (*Ant.*) vide *Agnomen*.

ADNOUN (*Gram.*) the same as substantive.

ADOLESCENCE (*Ant.*) *Adolescentia*; the period of youth among the ancients from twelve to twenty-five.

AD OMNEM tonum (*Mus.*) vide *Ad*.

ADONIA (*Ant.*) Ἀδωνίαι; festivals in Sicily, in honor of Adonis, at which lamentations formed a part of the ceremony, whence ἀδωνίαι ἕρπον signified, according to Suidas, Ἀδωνν κλαίειν, to mourn over Adonis. *Plut. in Nic.*; *Ammian Marcell.* l. 22, c. 9; *Macrob. Saturnal.* l. 1, c. 21; *Natal Com.* l. 5, c. 16; *Meurs. Græc. Fest.*; *Selden de Diis Syr.*

ADONIC verse. (*Poet.*) *Metrum Adonicum*; a short kind of verse used first in bewailing the death of Adonis. It consists of a dactylic dimeter catalectic; or, more properly, of a dactyle and a spondee; as, ᾠ τὸν Ἀδωνιν, or “*Fünditē flētūs.*” *Serv. Centimet.*; *Plot. de Met.*

ADONIDIS horti (*Hort.*) or *Adonis Horti*, i. e. the gardens of Adonis; plants, flowers, &c. in pots or boxes set on the outside of windows, &c. *Plin.* l. 19, c. 19.

ADONIS (*Bot.*) Pheasant's-Eye, or Bird's-Eye; a genus of plants, Class 13 *Polyandria*, Order 7 *Polygynia*.

Generic Character. CAL. *perianth* five-leaved; *leaflets* obtuse.—COR. *petals* from five to fifteen.—STAM. *filaments* very short; *anthers* oblong.—PIST. *germs* numerous; *styles* none; *receptacle* oblong; *seeds* numerous.

Species. The principal species are the *Adonis aestivalis*, or *silvestris*, tall Adonis, an annual.—*Adonis autumnalis*, common Adonis, or Bird's-Eye, an annual.—*Adonis vernalis*, or *Flos Adonis*, perennial or spring Adonis, a perennial.—*Adonis appennina*, or *Helleborus niger*, apennine Adonis, a perennial.—*Adonis capensis*, *Actæa trifoliata*, *Christophoriana Africana*, *Ranunculus Æthiopicus*, cape Adonis, a perennial.—*Adonis vesicatoria* or *Imperatoria*. *Dod. Stirp. Hist. Pemptad.*; *Ger. Herb.*; *Raii Hist. Plant.*; *Pluk. Almag. Botan.*

ADONISTS (*Lit.*) those who contend against the Hebrew points; in distinction from the Ichorists, who maintain their use.

ADOPTER (*Chem.*) a chemical vessel, with two necks interposed between the retort and receiver.

ADOPTIANI (*Eccles.*) adoptianists; a sect of heretics in the

8th century, who denied that Christ was the proper or natural, but only the adopted, son of God. Their heresy was condemned in a synod at Frankfort, held by Charlemagne in 794. *Hor. Hist. Eccles.* per. 2, art. 2.

ADOPTIO (*Ant.*) Adoption; a solemn act among the Greeks and Romans, whereby a man made another his son, investing him with all the rights and privileges of that relationship. It was distinguished from *arrogatio*, in as much as the former was done by means of the Prætor, and the latter by means of the people. *Aul. Gell.* l. 5, c. 19.

ADOPTIO (*Numis.*) the form of adoption is painted on the medals of Adrian and Trajan, as in the subjoined cut,

which represents on the obverse, the head of Trajan crowned, and the inscription *NERVA TRAIAN CAESAR GERMANICI NERVÆ AVGVSTI FILIVS POTESTATE TRIBVNTIA*; on the reverse, Nerva, in a military habit, with a spear in his left hand, offering his right hand to Trajan, with the legend *ADOPTIO*. *Vaillant. Numis. Imp. Roman. Tristau. Commentaires Historiques*, vol. 1, p. 378.

ADOPTION (*Hier.*) is represented by the figure of an elderly woman embracing a youth with her right arm, and holding in her left the eagle called *ossifraga*, which is said to reject her young for a time, and afterwards to take them again.

ADOR (*Bot.*) ἄδορ, another name for *Spelta*.

ADORAT (*Chem.*) a chemical weight of four pounds.

ADORATIO purpura (*Ant.*) a mode of saluting the emperors among the Romans, by lifting up their purple with the right hand and applying it to the lips, in imitation of the worship or adoration which they offered to the gods. *Ammian Marcel.* l. 15, c. 5; *Cassiodor.* l. 11, ep. 20; *Panciroi Notit. Dig. Imper. Occid.* c. 30; *Buleng. de Imp. Roman.* l. 1, c. 11.

ADORATION (*Ant.*) *adoratio*, from *ad* and *os*, i. e. to apply the hand to the mouth; a mode of reverence anciently shown to the gods, by raising the right hand to the mouth and applying it gently to the lips. “*In adorando dextram ad osculum referimus.*” *Plin.* l. 28, c. 2. This kiss was called *osculum libatum*. The Romans performed the ceremony of *adoration* veiled, to all the gods except Saturn, whom they worshipped as the god of truth, from whom nothing should be concealed. *Apul. Apol.*; *Spartian in Adrian*, c. 26; *Turneb. Adversar.* l. 18, c. 6; *Stuck. de Sacrif.* p. 5; *Kipping. Antiq. Roman.* l. 1, c. 9, s. 5.

ADOS (*Chem.*) water wherein iron has been extinguished.

ADOS (*Mil.*) a French term for a bank of earth raised against a wall.

A double (*Mus.*) or, double A, i. e. A below G gamut.

ADOSCUATION (*Bot.*) joining or inserting one part of a plant into another. *Grew. Anat. of Plants.*

ADOXA (*Bot.*) Fumitory, or Hollow Root; a genus of plants, Class 8 *Octandria*, Order 4 *Pentagynia*.

Generic Characters. CAL. *perianth* inferior.—COR. *monopetalous*.—CLEFTS *ovate*.—STAM. *filaments* subulate; *anthers* roundish.—PIST. *germ* below the receptacle of the corolla; *styles* simple; *stigmas* simple.—PER. a globose berry; *seeds* solitary.

Species. The only species is the *Adoxa moschatellina*, *Moschatellina moschatella*, *Ranunculus*, *Fumaria bulbosa*, *Bulbous Fumitory*, *Hollow Root*, *Tuberous Moschatell*; a perennial, native of Britain. *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Mer. Hist. Plant.*

AD pondus omnium (*Med.*) signifying that the last pre-

scribed medicine ought to weigh as much as all the medicines mentioned before.

ADPRE'SSUS (*Bot.*) appressed, or squeezed close to; an epithet applied to different parts of a plant, as—*Folium adpressum*, a leaf that turns up and lays its upper surface to the stem, as if pressed to it by violence.—*Calyx adpressus*, a calyx that is close to the peduncle.—*Pedunculus adpressus*, one that is close to the branch or stem.

AD quod damnum (*Law*) a writ to inquire whether a grant to be made by the king, as a market, fair, &c. will be to his damage. *F. N. B.* 221, &c.

ADRA'CHNE (*Bot.*) ἀδράχνη; a tree which is found in great abundance in Crete, on the hills of Leuce, and in stony places; and is called by the modern Greeks, ἄδραχνα. *Theoph.* l. 1, c. 8; *Clus. Hist.* l. 1, c. 31. According to Pliny, it must be distinguished from Ἀνδράχνη, which is a herb. " *Adrachnen omnes fere Græci portulacæ nomine interpretantur, cum illa sit herba et andrachne vocetur.*" *Plin.* l. 13, c. 22.

A'DRAGANTH (*Bot.*) the name of a herb, which is the *Astragalus Tragacanthus* of Linnæus.

ADRECTARE (*Law*) to set right.

ADRIANISTS (*Ecc.*) two different sects of heretics of this name. 1. A sect mentioned by Theodoretus, which he says was a branch sprung from Simon Magus; but of this sect no mention is made by any other writer. *Theodoret. Hæret. Fab.* l. 1. 2. A sect of anabaptists, in the 16th century, who, after their leader, one Adrian, held many errors, particularly respecting our Saviour. *Prætol. Dogm. omn. Hæret.; Spondan continuat Baron. Annal.*

ADRIFT (*Mar.*) from *a* or *ab*, and *drift* driven; an epithet for a vessel broken loose from her moorings and driven about by the waves.

ADRO'BOLON (*Chem.*) Indian Bdellium. *Gorr. Def. Med.*

ADROGA'TION (*Ant.*) the adoption of persons grown to an age to dispose of themselves. [vide *Adoption*]

A'DROS (*Med.*) ἄδρος, plump and full; applied to the habit of the body, and also to the pulse; ἄδρος σφυγμός, a full pulse. *Hippocrat. de Genit. &c.; Gal. de Meth. Med.* l. 14; *Gorr. Def. Med.; Poes. Oeconom. Hippocrat.*

ADRO'TERON (*Bot.*) a plentiful grain.

ADSCENDENS (*Bot.*) vide *Ascendens*.

ADSCRIP'TI (*Math.*) an epithet for the tangents of arcs.

ADSCRIPTITII (*Ant.*) vide *Ascriptitii*.

ADSE'RTOR (*Ant.*) the asserter and supporter of another's liberty; from *adserere manu in libertatem*, to maintain the freedom of another; to bail him and advocate his cause. *Fest. de Signif. Verb.*

ADSESSO'RES (*Ant.*) vide *Assessores*.

ADSTRIC'TION (*Med.*) from *ad* and *stringo*, to bind. 1. The styptic quality of medicines. 2. The retention of the natural evacuations, particularly those of the bowels.

AD terminum qui preterit. (*Law*) a writ for the lessor, or his heirs, against a tenant who holds lands or tenements after the expiration of the lease. *F. N. B.* 201.

ADVA'NCE (*Com.*) anticipation of time; as when money is paid in advance before goods are delivered. "To be in advance with a merchant:" to lend him money. Advance for the drawer of a bill; when the person who negotiates it receives more than the contents. Advance for the payer and loss for the drawer; when he to whom the bill belongs does not receive the full value of it.

ADVANCE upon seamen's wages (*Mar.*) wages paid before they are due. Every volunteer is entitled to an advance of two months' wages before he proceeds to sea.

TO ADVANCE money (*Com.*) to be at the expense of an undertaking before the time of being reimbursed.

ADVANCE (*Mil.*) or *advanced*, an epithet for any part of an army which is in front of the rest; as, the advance guard, the first line or division of the army ranged or marching in

battle array; it is also said of a battalion, or of guns, when brought in front and before the first line. It is figuratively applied to the promotion of the officers and soldiers.

ADVANCE fosse (*Fort.*) a ditch thrown round the esplanade or glacis of a place.

ADVA'NCER (*Hunt.*) one of the starts or branches of a buck's attire, between the back antler and the palm.

ADVANCEMENTS of money in the bank (*Com.*) monies advanced by the Bank, on Government and other good securities.

ADVANTAGE ground (*Mil.*) the ground that gives superiority or an opportunity for annoyance and resistance.

A'DUAR (*Polit.*) a name for the moveable villages erected of tents, among the Arabians.

A Due or A 2 (*Mus.*) for two voices.

ADVENT (*Ecc.*) *adventus*. 1. The coming of our Saviour.

2. The feast commemorative of the Advent, which falls about a month before Christmas.—*Advent Sundays*, the four Sundays preceding Christmas Day, the first commencing either with that Sunday which falls on St. Andrew's day, namely, the 30th of November, or the nearest Sunday to it, before or after.

ADVENTITIOUS (*Law*) *Adventitius*, from *advenio*; what comes incidentally; as, *adventitia bona*, goods that fall to a man otherwise than by inheritance; or, *adventitia dos*, a dowry given by some other friend beside the parent.

ADVENTITIOUS glandules (*Anat.*) kernels which sometimes make their appearance in the neck, holes under the arms, &c.

ADVENTITIOUS matter (*Phy.*) matter which does not properly belong to any body or substance, either natural or mixed, but comes to it from some other place, as in the freezing of water, when some frigorific particles adventitious to the water are added, either from the air or the freezing mixture.

AD ventrem inspiciendum (*Law*) *Vide Ventre inspiciendo*.

ADVENTURE (*Com.*) i. e. *at a venture*; goods sent out at a venture.

ADVENTURE, bill of, a writing signed by a merchant, to testify that the goods shipped on board a certain vessel are at the venture of another person, he himself being answerable only for the produce.

ADVENTURER (*Com.*) 1. A person not known or established in public business; a trickster. 2. A merchant's ship that goes to traffic within the limits of a company's grant without licence.

ADVENTURERS (*Com.*) those who by the name of proprietors undertake the settlements of distant colonies.

ADVENTURERS, a name also applied to the enterprising pirates who joined together against the Spaniards in the West Indies, otherwise known by the name of *Buccaneers*.

ADVENTURERS (*Her.*) or *Merchant Adventurers*, the name of an ancient company of merchants or traders, erected for the discovery of lands, territories, trading places, &c. hitherto unknown. This society had its rise in Burgundy, under John, Duke of Brabant, in 1428; and, being translated into England, was successively confirmed by Edward III., and IV., Richard III., Henry IV., V., VI., and VII., who gave it its present name. They bear for arms, *Nebule* of six pieces, *argent* and *azure*, on a chief quarterly or and *gules*; in the first and fourth two red roses, and in the second and third a lion of England.

ADVENTURERS Merchant (*Com.*) those who adventure their goods to sea, in distinction from inland traders.

ADVENTURINE (*Com.*) a precious stone of a yellowish brown colour.

ADVENTUS (*Numis.*) the arrival of the emperors at Rome and other places was commemorated by medals struck in

commemoration of the event. The inscriptions employed on such occasions were as follow: ADVENTUS AUGUSTI, seu AUG. IMP. on the coming of Trajan to Rome after the death of Nerva, U.C. 852, A.D. 99. ADVENTUS AUG. S.C. on Adrian's first arrival at Rome as emperor, U.C. 871, A.D. 118. ADVENTUS AFRICÆ, on his arrival in Africa, U.C. 876, A.D. 123. ADVENTUS GALLIÆ, on his arrival in Gaul.—ADVENTUS ITALIÆ, on his arrival in Italy. ADVENTUS JUDEÆ, on his arrival in Judea. ADVENTUS MAURITANIÆ, on his arrival in Mauritania. ADVENTUS ASIÆ, on his arrival in Asia. ADVENTUS BITHYNIÆ, on his arrival in Bithynia. ADVENTUS CILICIÆ, on his arrival in Cilicia. ADVENTUS HISPANIÆ, on his arrival in Spain. ADVENTUS PHRYGIÆ, on his arrival in Phrygia. ADVENTUS SICILIÆ, on his arrival in Sicily. ADVENTUS AUG. COS. III. P.P. on Adrian's return to Rome, U.C. 887, A.D. 134. ADVENTUS AUG. S.C., on the arrival of M. Aurelius from Germany, U.C. 927, A.D. 174. ADVENTUS AUG., on the return of Commodus from the conquest of Germany, U.C. 933, A.D. 180. ADVENTUS AUG. IMP., on the return of Severus from Asia, U.C. 949, A.D. 196. ADVENTUS AUG. FELICISSIMO, S.C., on the triumphant return of Severus from Gaul, U.C. 954, A.D. 201. ADVENT. AUGG., on the triumphant return of Severus from Parthia, U.C. 955, A.D. 202. ADVENT. AUG., on the triumphant return of Antoninus Caracalla from the East with his father, U.C. 955, A.D. 202. ADVENTUS AUGG., on Caracalla's return with his brother, and with the ashes of his father, U.C. 964, A.D. 211. ADVENTUS AUGG., on the return of Philip with his son to Rome, U.C. 998, A.D. 245. ADVENTUS AUGG., on the arrival of Trajan Decius at Rome after having conquered Marinus, U.C. 1002, A.D. 249. ADVENTUS AUG., on the return of Q. Hostilianus to his father, with his brother Decius. This medal is supposed by Vaillant to belong properly to Decius, as history gives no account of the arrival of Hostilianus at Rome from any place. ADVENTUS AUG. S.C. on the return of Trebonianus Gallus to Rome after his victory, U.C. 1004, A.D. 251. ADVENTUS AUGG. S.C. on the triumphant arrival of Gallienus from Germany, U.C. 1007, A.D. 254. ADVENTUS AUG., on his return from his victory over Regillianus, U.C. 1012, A.D. 259. ADVENTUS AUG., on the triumphant return of Gallienus from Thrace and Macedonia, U.C. 1016, A.D. 263. ADVENTUS AUG., on the return of M. Aurelius Claudius from his victory over Aureolus, U.C. 1021, A.D. 268. ADVENTUS AUG. IMP., on the coming of Tacitus to the army, U.C. 1029, A.D. 276. ADVENTUS PROBI. AUG. XXI., on the arrival of Probus after his conquest of the Germans, U.C. 1029, A.D. 276. ADVENTUS AUG. H.S. on the return of Probus to Rome after his conquests in Gaul, U.C. 1024, A.D. 281. ADVENTUS AUG. R.X.Z., on the first arrival of Dioclesian at Rome, U.C. 1037, A.D. 284. FELIX ADVENTUS AUGG. N.N., on the triumphant return of Dioclesian and Maximianus, U.C. 1055, A.D. 302. ADVENTUS AUG. on the return of Carusius into Britain, U.C. 1044, A.D. 291. FELIX ADVENTUS AUG. N. CON. on the arrival of Constantine at Constantinople after the Gothic war, A.D. 334. ADVENTUS AUGUSTI ROM. IMP., on the arrival of Jovianus at Rome, after the conquest of the Persians, A.D. 364. The manner of representing the adventus was either in the form of a religious or military ceremony, as in fig. 1, where the emperor Adrian, on his arrival in Sicily, is represented standing near a tripod; opposite to him the goddess Ceres crowned with ears of corn, and offering other ears. In

fig. 2, Trabinianus Gallus and Volusianus are represented

Fig. 1.

Fig. 2.

- on horseback, preceded by a figure of victory, and emblematical of their successes over the Goths.
- ADVENTUS *jocundus* (*Archæol.*) a tribute paid to the lord on coming to any dignity.
- ADVERB (*Gram.*) *adverbium*, i. e. *verbo adjectum*, a part of speech added to a verb to complete its signification.
- ADVERSA'RIA (*Ant.*) *quia scriberentur in adversâ tantum et non in aversâ paginâ*. A memorandum book, to note down whatever occurs, particularly in courts of Law; or a day-book for pecuniary purposes. *Cic. Rosc. Com. c. 4; Salmas. de Usur. p. 147.*
- ADVERSATIVE *particle* (*Gram.*) that which denotes some contrariety; as but, however, &c.
- ADVERSITOR (*Ant.*) *qui in adversum it*; a servant among the Romans who went to meet his master on the road.
- ADVERSUS (*Bot.*) an epithet for a leaf, as *folium adversum*, a vertical leaf; so called when its margin is turned towards the stem. *Linn. Phil. Bot.*
- to ADVERTISE (*Com.*) from *adverto*, to warn or give notice, to send notice to all merchants or traders when a bill or any thing else is lost, giving an exact description of the same.
- ADVERTISEMENT (*Com.*) a name for any printed publication of circumstances, either of public or private interest.
- ADVICE (*Com.*) the communicating to another by letter what passes: as a letter of *advice*, informing a correspondent that one has drawn upon him, or concerning the sending of goods, with the invoice annexed.—*Advice to the Bank*, notice to the proper clerks of bills payable, with an exact description of the contents and parties.
- ADVICE *boat* (*Mar.*) a small boat employed for carrying despatches and orders.
- AD *vitam aut culpam* (*Law*) an office held for the term of a person's life, or during his good conduct.
- ADULA'RIA (*Min.*) a subspecies of the Feldspar family.
- ADULT (*Law*) a term applied by civilians between fourteen and twenty-five years of age.
- ADULTERA'TIS *judicii* (*Ant.*) bribing the judges.
- ADULTERA'TION (*Law*) a general term for rendering the coin of the realm of less value than it ought to be: which comprehends *debasing* the coin, by the admixture of impure metals, or the use of an undue alloy, &c.; and *counterfeiting* the coin, which is forging a stamp upon a baser metal. The former is sometimes from state-necessity an act of authority; but the latter is always the fraudulent act of individuals for purposes of private gain.
- ADULTERATION (*Med.*) the debasing and corrupting of medicines.
- ADULTERINE (*Law*) a term in the Civil Law for the issue of an adulterous intercourse.
- ADULTE'RIUM (*Ecc.*) the intruding into, or invading a bishopric during the lifetime of the bishop, who was supposed to be allied to his church by a spiritual marriage.
- ADULTERIUM (*Nat.*) a term for ingrafting of trees.
- ADULTERY (*Law*) from *ad* and *alter*, another person; a criminal conversation between two married persons, or a married and an unmarried person.

ADULTERY (*Med.*) an overloading of the body with aliment at the instigation of the appetite. *Paracel.*

ADUMBRATED (*Her.*) an epithet for any figure in coat armour which is borne so shadowed or obscured that nothing is visible but the bare purfile, or, as the painters call it, the outline.

ADUMBRA'TIO (*Bot.*) the whole history of a plant, comprehending the name, etymology, class, character, difference, variety, synonyms, description, figure, place, and time. *Liun. Phil. Bot.*

ADUMBRATION (*Her.*) the shadow or outlines only of the arms borne by a family in decay.

ADVOCATE (*Law*) 1. A pleader in the civil or ecclesiastical law, who maintains or defends the right of his client in the same manner as the counsellor does in the common law.—*Lord Advocate*, an officer of state in Scotland appointed by the king to advise about the making and executing law, to defend his right and interest in all public assemblies, to prosecute capital crimes, &c.—*College or faculty of advocates*, a college consisting of 180 appointed to plead in all actions before the lords of session.—*Church or ecclesiastical advocates*, pleaders appointed by the church to maintain its rights. 2. A patron who has the advowson or presentation to a church. *Glan.* l. 13, c. 19, l. 4, c. 7; *LL. Loubgard*, l. 2.

ADVOCATIO (*Aut.*) 1. A calling or assembling together a multitude of friends with cries and clamour to one's assistance: *Virginus filiam suam obsoleta veste, comitantibus aliquot matronis, cum ingente advocacione in forum deducit.* *Liv.* l. 3, c. 47; *Pollet. For. Rom.* l. 2, c. 1. 2. The office of an advocate or pleader, pleading either for or against a person: *In fine sententiæ adject, quod ego et Tacitus injunctâ advocacione diligenter, fortiter functi essemus.* *Plin.* l. 2, ep. 10; *Pollet. For. Rom.* l. 2, c. 1. 3. A delay of judgment granted at the request of either party wishing for further time to prepare an answer and to take advice. *Cic. in Verr.* l. 1, c. 49, et *ad Fam.* l. 7, ep. 2; *Senec. de Consol. ad Marc.* c. 10, et *de Ira.* l. 1, c. 16.

ADVOCATION (*Law*) a writing in the Scotch Law drawn up in the form of a petition, called a *bill of advocacy*, whereby a party in an action applies to the supreme court to advocate its cause, and to call the action out of an inferior court before itself.—*Letters of advocacy* are the decree or warrant of the Supreme Court, or court of Session, discharging the inferior tribunal from all farther proceedings in the matter, and advocating the action to itself.

ADVOCATIONE decimarum (*Law*) a writ that lies for tithes demanding the fourth part or upwards that belong to any church. *Reg. Orig.* 29.

ADVOCATUS (*Ant.*) *amicus quem litigator ad eum vocat*; advocate, or one who was called to assist another man in his cause by his presence, his counsel, his testimony or otherwise: *Armatos homines, quos in Senatum induxerat, Antonius consul advocatos vocat, vellem adesset sine advocatis.* When the advocate was employed to plead the cause of the defendant, in a court of law, he was styled *patronus*. *Cic. Philipp.* l. 1, c. 7, et *Ascon. in Cic.* p. 20.

ADVO'W (*Law*) or *Avow*, from *advocare*, to justify; an act formerly done, as, in the case of things stolen, he in whose possession they were found was obliged *advocare* i. e. to produce the seller in order to justify the sale. *Fleta.*

ADVO'WEE (*Ecc.*) an advocate of a church or religious house. [vide *Adascatus*]

ADVOW'SON (*Law*) from *advow* or *advocare*, a right of presentation to a church or benefice. He who possesses this right is called the patron; when there is no patron, or he neglects to exercise his right within six months, it is called a *Lapse*, i. e. a title given to the ordinary to collate to a church; when a presentation is made by one who has no right it is termed a *usurpation*.—*Advowsons* are of dif-

ferent kinds, as—*Advowson appendant*, when it depends upon a manor, &c.—*Advowson in gross*, when it belongs to a person and not to a manor.—*Advowson presentative*, when the patron presents to the Bishop.—*Advowson collative*, when it is lodged in the Bishop.—*Advowson donative*, when the king or patron puts the clerk into possession without presentation.—*Advowson of the moiety of the church*, where there are two several patrons, and two incumbents in the same church.—*A Moiety of Advowson*, where two must join in the presentation of one incumbent.—*Advowson of religious houses*, that which is vested in any persons who founded such a house.

ADUSTION (*Med.*) an inflammation of the parts about the brain and its members. *Oribas. Synopsis*, l. 5, c. 13.

ADU'STUS (*Med.*) from *aduro*, to burn; *adust*, or *adusted*, i. e. scorched, burnt, as applied to the fluids of the body when they are rendered acrid by the heat.

ADY (*Bot.*) a name for the Palm-tree, in the island of St. Thomas. *Raii Hist. Plant.*

ADYNA'MIA (*Med.*) ἀδυναμία, from α, priv. and δύναμις, *potentia*, impotence or weakness. *Hippoc. Coac. Prænot.* l. 1, &c.; *Gal. Comm. et Different. Morb.* c. 5, et *Defin. Med. &c.*; *Goor. Defiu. Med.*; *Foes. Oeconom. Hippocrat.* It is formed into an order of diseases under the class *Neuroses*. *Cullen's Nosology.*

ADYNAMON (*Mcd.*) ἀδυναμων, from ἀδυναμία, *impotentia*; a fictitious wine allayed with water, and boiled away so as to make it of a suitable strength for weak patients. *Dioscor.* l. 5, c. 13; *Plin.* l. 14, c. 16.

ADYTUM (*Aut.*) ἄδυτον, that part of the temple to which there is no *aditus* or admission, except for the priests, from α, priv. and δύω, to enter. *Cæs. de Bell. Civil.* l. 3, c. 105; *Paus.* l. 10.

ADZ (*Carp.*) or *addicc*, a tool similar to an axe, but having its blade athwart the handle.

ÆACEA (*Ant.*) games in honour of Æacus. *Isocrat. in Evagor.*; *Hesychius.*; *Meurs. Græc. Fer. apud Gronov. Antiq. Græc.* tom. vii. p. 710.

ÆA'CIDES (*Ant.*) Αἰακίδης, a patronymic for Achilles, Peleus, and other descendants of Æacus. *Hom. Il.* l. 9, v. 184, &c.; *Virg. Æn.* l. 1, v. 99, &c.; *Paus.* l. 1, c. 10.

ÆANTIA (*Ant.*) Αἰαντία, a festival in honour of Ajax at Salamis. *Isocrat. in Evagor.*; *Plut. in Demosth.*; *Pausan.* l. 2, c. 29; *Schol. in Pind. Olymp. od.* 7; *Meur. Græc. Fer. apud Gronov. Antiq. Græc.* tom. vii. 710.

ÆBUTIA *Lex* (*Ant.*) a law, so called from one of the Æbutian family in Rome, by whom it was made, prohibiting the proposer of a law from bestowing any office on himself or his colleagues. *Cic. Agrar. orat.* 2, c. 8.

ÆCHMOLOTARCH (*Ecc.*) a title given by the Jews to the principal leader or governor of the Jews during their captivity; a head of their religion like the *Episcopus Judæorum* now in England. [vide *Aichmolotarch*]

ÆDEPOL (*Ant.*) an oath by Pollux which, at first, could be taken by the women only, but in time became common among the men as well as the women. *Aul. Gell.* l. 11, c. 6.

ÆDES sacræ (*Ant.*) sacred edifices which were temples in every respect, except the want of consecration.

ÆDES (*Numis.*) a temple was dedicated to Faustina, the wife of Antoninus Pius, who died in the third year of his reign, and was deified by the senate. The annexed cut represents this temple as it is given on a medal of Faustina, with the inscription *ÆDES DIVÆ FAVSTINÆ. Vaillant. Numis. Imperat. Roman.*; *Mediob. Occo. Numis. Imperat. Roman.*

ÆDICULA (*Ant.*) a small *ædes* or temple, which was in every village or parish, answering to the parish church of the present day.

ÆDILES (*Ant.*) Roman magistrates so called, a *cura ædium*, i. e. from the care of the temples, which were particularly entrusted to their charge. They had moreover to see that all public buildings, streets, and highways were kept clean, and in good repair; to make provision for public games, funerals, and other spectacles; to take care of weights and measures; and to inspect the markets, &c. At first two ædiles were chosen from among the plebeians, to which others were afterwards added from the patricians. *Ascon. in Cic. Sigon.; de Jur. Civ. Roman.; Hotoman de Majis. Rom.; Manutius, Bulengerus, Pighius, Ursatus, &c. apud Græc. Thesaur. Antiq. Roman.*

The *Ædiles* were distinguished into the—*Ædiles plebei*, who were chosen from the plebeians in the *Comitia curiata* as assistants to the tribunes. *Dionys. Hal. l. 6; Liv. l. 2, c. 56.*—*Ædiles curules*, so called from the curule chair in which they sat, were created, U. C. 388, from the patricians, to provide for certain public games. *Liv. l. 6, c. 42.*—*Ædiles cereales* were created by Cæsar for keeping the records in the temple of Ceres. *Dio. l. 43.*—*Ædiles alimentarii*, known by that name from the abbreviation *ÆDIL. ALIM.*, were especially charged with the care of the public granaries. *Turneb. Adv. l. 11, c. 10.*

ÆDILITIUM *Edictum* (*Ant.*) the sentence of the *Ædile* allowing redress to the purchaser of a beast.

ÆDITUUS (*Ant.*) or *æditumnus*, according to Gellius, an officer who had the charge of the temples, so called from *Ædes tueri*, i. e. to protect the temples. *Varro de Lat. Lin. l. 6, c. 2; Festus de Verb. Sign.; Aul. Gell. l. 12, c. 10; Ursatus de Not. Roman.; Dempster. Paralip. ad Rosin. Antiq., et Guther. de Jur. Man. apud Græv. Thesaur. Antiq. Roman. vol. ii. p. 536, &c.*

ÆDOÏA (*Anat.*) vide *Pudenda*.

ÆDOR (*Or.*) a sort of bird of the genus *Muscicapa*, or Fly Catchers.

ÆDOSOPHIA (*Med.*) from *ἀιδοῖν*, *pudenda*, and *ψοφῆω*, to send forth; a flatus passing from the uterus, or urinary-bladder, through the vagina, or urethra.

ÆGAGROPHILA (*Med.*) from *ἀγῶργος*, the rock goat, and *πίλος*, the hair; little balls composed of hairs in the stomach of the goat, which have been employed medicinally.

ÆGIAS (*Med.*) vide *Ægis*.

ÆGICERAS (*Bot.*) from *αἴζ*, a goat, and *κέρα*, a horn; a genus of plants; Class 5 *Pentandria*, Order 1 *Monogynia*. *Generic Character.* CAL. perianth one-leaved.—COR. petals five.—STAM. filaments five.—PIST. germ oblong.—PER. capsule bowed; seed single.

Species. The principal species are the—*Ægiceras majus*, *Rhizofera corniculata*, or *Mammosa fruticosum*, &c.; a shrub, native of the Moluccas.—*Ægiceras minus*, *Umbra culum maris*, a shrub, &c. *Rumph. Herb. Amb.; Linn. Spec. Plant.*

ÆGIDIUM (*Med.*) *αἰγίδιον*, a collyrium for inflamed eyes.

ÆGILOPS (*Med.*) an abscess in the canthus, or corner of the eye near the nose; a disorder so called from *αἴζ*, a goat, and *ὤψ*, the eye, either because goats were peculiarly subject to it, or because those suffering from it had a cast in the eye like the goats, which Virgil describes to be *transversa tumentibus hircis*. Paulus *Ægineta* calls this abscess *Anchilops*, before it has broken, and *Ægilops* afterwards; Fallopius and others give it the name of *Fistula lachrymalis*. [vide *Anchilops*, &c.] *Gal. Def. Med.; Cels. l. 7, c. 7; Oribus de Loc. Affct. Curat. l. 4, c. 32; Act. Tetrab. 2, serm. 3, c. 85, &c.; Paul. Æginet. l. 3, c. 22; Act. de Meth. Med. l. 2, c. 7; Fallop. Obs. Anatom. c. 6; Wiseman. Chirurg. Essay; Heist. Chirurg. part 2, sect. 2, c. 54.*

ÆGILOPS (*Bot.*) *αἰγίλωψ*, from *αἴζ*, a goat, and *ὤψ*, a face;

received its name, according to Dioscorides, from its power to cure the disease in the eye, called the *Ægilops*. *Theoph. l. 8, c. 4; Diosc. l. 4, c. 12.*

ÆGILOPS, in the *Linnean system*, a genus of plants; Class 23 *Polygamia*, Order 1 *Monoecia*, in English, Great Wild-Oat-Grass or Drank.

Generic Characters. CAL. valves ovate.—COR. glume bivalvular; nectary two-leaved; leaflets ovate.—STAM. filaments three; anthers oblong.—PIST. Germ turbinate; styles two; stigmas hairy.—PER. none; seeds oblong.

Species. The principal species are the *Ægilops ovata*, *caudata*, *truncialis*, and *squarrosa*, which are mostly annuals, and of the Natural Order of Grasses.

ÆGILOPS is also the name of the *Andropogon contortium*, and the *Avena fatua* of Linnæus. *Raii Hist. Plant.*

ÆGINE'TIA (*Bot.*) a species of the *Orobanche* of Linnæus.

ÆGINE'TICUM *æ*s (*Ant.*) the money of *Ægina*, which was the first that was coined. *Æl. Var. Hist. l. 12, c. 20.*

ÆGINE'TON (*Ant.*) *Ἄγιωντων ἑορτή*, a festival, celebrated at *Ægina* by the free denizens only, in honour of Neptune, which lasted sixteen days. *Plut. Græc. Quæst.*

ÆGI'PHILA (*Bot.*) from *αἴζ*, a goat, and *φιλῶ*, to like, because goats are fond of it; a genus of plant, Class 4 *Tetandria*, Order 1 *Monogynia*.

Generic Characters. CAL. perianth one-leaved.—COR. petals one; tube cylindrical; clefts oblong.—STAM. filaments capillary; anthers roundish.—PIST. germ roundish; style capillary; stigmas simple.—PER. berry roundish; seed either in pairs or solitary.

Species. The species are mostly shrubs, the principal of which are the—*Ægiphila Martiniensis*, native of Martinique.—*Ægiphila elata*, or *Knoxia scandens*, native of the West Indies.—*Ægiphila villosa*, or *Manabea villosa*, a native of Cayenne. *Brown. Hist. Jamaic.; Linn. Spec. Plant.*

ÆGIRINON (*Med.*) *αἰγείρινον*, a medicine; so called because the *αἰγίριος*, i. e. the poplar, is the chief ingredient in it.

ÆGIROS (*Bot.*) *αἰγίριος κρητικὸν*, the black poplar, which is used medicinally. *Hippocrat. de Mul.; Foes. Oeconom. Hippocrat.*

ÆGIS (*My.*) *Αἰγίς*, a shield, particularly Jupiter's shield, so called because it was supposed to be covered with the skin of the goat *αἴζ*, named *Amalthea*. Jupiter afterwards gave it to Minerva, who placed upon it a Medusa's head, as represented on a medal of Syracuse, according to the annexed figure. *Goltz. Græc. mag. tab. 4, numm. 6.*

ÆGIS (*Med.*) an affection of the eye when it has small *αἰγίδες*, i. e. *cicatrices*, which cause a dimness of sight. *Hippocrat. Prædict. l. 2; Foes. Oeconom. Hippocrat.*

ÆGITHUS (*Or.*) *αἰγίθος*, a very little bird, said by Aristotle to be at variance with the ass. *Aristot. de Hist. Anim. l. 9, c. 6.*

ÆGLEFINUS (*Ich.*) a name for the Hadock, a species of the *Gasamundus* of Linnæus. *Will. Ichth.*

ÆGLEUS (*Bot.*) another name for the *Chamaeleon*.

ÆGOCEPHALA (*Or.*) a name for the common Godwit; a species of the *Scolopax* of Linnæus. *Will. Ornith.*

ÆGOCERAS (*Bot.*) *αἰγόκερας*, the Greek name for the herb called *Foenmgreek*. *Gorr. Def. Med.*

ÆGOCERATOS (*Bot.*) the *Hugonia mystax* of Linnæus. *Raii Hist. Plant.*

ÆGOCEROS (*Astron.*) the same as *Capricornus*.

ÆGOLE'THRON (*Bot.*) from *αἴζ*, and *ὄλεθρος*, pernicious; a plant answering to the *Azalea portica* of Linnæus, or the *Chamaerodendron* of Tournefort. *Plin. l. 21, c. 13; Tournef. Instit.*

ÆGONYCHON (*Bot.*) *αἰγώνυχον*, the Greek name for the *Lithospermum* of Linnæus. *Dioscor. l. 2, c. 158.*

ÆGOPHTHALMOS (*Min.*) from αἴξ, and ὀφθαλμός, an eye; a precious stone resembling a goat's eye. *Plin.* l. 37, c. 11; *Salmas. ad Solin.* p. 706.

ÆGOPODIUM (*Bot.*) from αἴξ, a goat, and πᾶς, foot, Goatweed: 1. a genus of plants, Class 5 *Pentandria*, Order 2 *Digynia*.

Generic Characters. CAL. umbel universal manifold, partial similar; involucre none; proper perianth scarcely observable.—COR. universal uniform; particular ovate.—STAM. filaments simple; anthers roundish.—PIST. germ inferior; styles simple; stigmas headed.—PER. none; fruit ovate-oblong; seeds two.

Species. The only species is the *Ægopodium podagraria*, *Ligusticum podagraria*, *Seseli ægopodium*, *Angelica sylvestris*, &c. a native of Britain, and a perennial. *Ger. Herb.*; *Park. Theat. Botan.*; *Rivin. Ord. Plant.*; *Mor. Hist. Plant.*; *Pet. Herb. Britan.*; *Linn. Spec. Plant.*

ÆGOPODIUM is also a name for the *Cicuta maculata* and the *Smyrniium aureum* of Linnæus. *Gron.*

ÆGOPRICON (*Bot.*) a genus of plants, Class 21 *Monocia*, Order 1 *Monandria*.

Generic characters. CAL. one-leaved.—COR. none.—STAM. filaments one; anther ovate.

Species. The only species is the *Agopricon betulinum* seu *Maprounea Guianensis*, a shrub, native of Guiana. *Linn. Spec. Plant.*

ÆGOPROSPHON (*Med.*) Ægidion.

ÆGYLOPS (*Bot.*) vide *Ægilops*.

ÆGYPTIA (*Med.*) αἰγυπτία, an epithet for several medicines mentioned by Galen, Paulus Ægineta, and Mirepsus. *Gal. de Med. Com. sec. Gen.* l. 6, c. 8, &c.; *Paul. Æginet.* l. 7, c. 24; *Mirep. de Antidot.* sect. 1, c. 228, &c.—*Ægyptia stypteria*, αἰγυπτία στυπτηρία, Egyptian alum, recommended by Hippocrates. *Epidem.* l. 1, &c.—*Ægyptia ulcera*, Syrian Ulcers in the fauces. *Aret. de Acut. Morb.* l. 1, c. 9.

ÆGYPTIA Moschata (*Bot.*) the same as *Abelmoschus*.

ÆGYPTIACUM Unguentum (*Med.*) a detersive ointment.

ÆGYPTIACUM Balsaman (*Bot.*) vide *Balsamum*.

ÆGYPTILLA (*Nat.*) a precious stone; said to have the remarkable quality of giving water the colour and taste of wine. *Plin.* l. 37, c. 10.

ÆGYPTIUM (*Med.*) Αἰγυπτίον, a topic in uterine disorders, of which there were four sorts, namely, αἰγυπτίον ἔλαιον, and αἰγυπταίον ἔλαιοῖδενον, Egyptian oil of two sorts; αἰγυπτίον μύρον λευκον, white Egyptian ointment; and the fourth, μύρον αἰγυπτίον, Egyptian ointment simply. *Hippocrat. περι γυναικ.* l. 2, &c.; *Dioscor.* l. 1, c. 62, &c.; *Gal. Comm. in Hippocrat.*; *Erotian Lex. Hippocrat.*; *Paul. Æginet.* l. 7, c. 20; *Gorr. Defn. Med.*; *Foes. Oeconom. Hippocrat.*—*Ægyptium pharmacum*, a detergent for the eyes.—*Ægyptium linum*, αἰγυπτίον λίνον, a kind of tow for the polypus in the nose, mentioned by Hippocrates. *Hippoc. de Morb.* l. 2; *Foes. Oeconom. Hippocrat.*

ÆICHRYSION (*Bot.*) the same as *Sedum*.

ÆIGLUCES (*Nat.*) αἰγιλυκίς, from αἰ, always, and γλυκύς, sweet; a name for a sweet wine.

ÆITHALES (*Bot.*) from αἰ, always, and ἔλω, to be green; another name for the *Sedum*.

ÆIZOON (*Bot.*) from αἰ, always, and ζῶω, to live; another name for the *Sedum*.

AEL (*Gram.*) *al* or *eal*, like πᾶς in Greek, a Saxon particle, signifying *all*; is used in compound names, as *Ælpin*, i. e. all conqueror; *Ælbend*, all industrious, &c. to which the Greek names, Pammachius, Pancratus, &c. in some measure answer.

AEL, or *Ælf*, a Saxon particle, signifying *help*, otherwise written *ulf*, *wulf*, *hulf*, *hilf*, or *helf*, and used in compound names; as *Alewin*, victorious help; *Aelwold*, an auxiliary governor; *Aelgiva*, a giver of aid, &c.; to which Boetius, Symmachus, and Epicurus, bear an evident analogy.

ÆLIA (*Ant.*) *Ælia lex*, a name given to certain laws; so called from the *Ælii*, by whom they were made. 1. A law made by Quintus Ælius Tubero, A. U. 55, for sending two colonies into the country of the Bruttii. *Liv.* l. 34, c. 53. 2. A law made by Q. Ælius Pætus, A. U. 586, ordaining, that, in public affairs, the Augurs, *de cælo servarent*, i. e. should observe the skies. *Cic. pro Sext.* c. 15, 53; *Post. Red. in Sen.* c. 5, &c. &c. 3. *Ælia Sexta lex*, a law made, A. U. 756, by Augustus, in the consulship of Ælius Sextus, respecting the manumission of slaves. *Suct. Aug.* c. 40; *Dio.* l. 65, in Aug.

AELUROPO (*Med.*) from αἴλουρος, a cat, and πᾶς, a foot, i. e. a cat's foot; a syrup from the plant cat's-foot, or the *Gnathalum* of Linnæus.

AEM (*Com.*) *Am*, or *Awme*, a liquid measure in Germany, differing in size in different parts.

ÆMPLIA Lex (*Ant.*) the name given to two laws enacted by the Æmilii, namely, one by Æmilius the dictator, U. C. 309, to limit the censorship to a year and a half, and a sumptuary law, in 675, by M. Æmilius Lepidus, or, according to Pliny, of M. Æmilius Scaurus, in 638. *Liv.* l. 4, c. 24, &c.; *Plin.* l. 8, c. 57; *Aurel. Vict. de Vir. illust.* c. 72; *Aul. Gel.* l. 2, c. 24; *Macrob. Saturn.* l. 2, c. 13; *August. de Leg. in Æmilia*; *Hotman. Antiq. Rom.*; *Pigh. Annal. Roman.*; *Panvin. Fastor. Rosin. Antiq. apud Roman. Græv. Thes. Antiq. Roman.* vol. viii, &c.

ÆNEATO'RES (*Ant.*) trumpeters; so called from Æneus.

ÆNITTOLO'GIUS versus (*Poet.*) a sort of verse having two dactyles and three trochees; as

Pratiū dirā plācēt trūci jūventæ.

Scal. Poet. p. 2, c. 24.

ÆOLIAN mode (*Mus.*) Ἄλιος ἄρμονια, one of the five principal modes of ancient music, the fundamental chord of which was immediately above that of the Phrygian. It derived its name from Æolia, not from the Æolian islands, and was of a grave character, according to Lasus, who is quoted by Athenæus. Pratinas, on the same authority, calls it the medium between the quick and the slow.

*Μὴ σύντονον διακερμῆ τ' ἀνεμῶν
Ἰασί' ἔσαν, ἀλλὰ τὰν μέσων νέων
Ἄρραν ἀόλιζε τῷ μέλει.*

Athen. Deipnos. l. 14, c. 5; *Apul. Platon. Florid.*; *Cal. Rhodig.* l. 9, c. 3.

ÆOLIC (*Gram.*) an epithet for what belongs to the Æolians, as—*Æolic dialect*, Ἄλιος διάλεκτος, that mode of writing the Greek which was adopted by the writers of the Æolian nation, which most resembled the Doric. *Joann. Char. Technicon. Eustath.* περι διαλέκ.—*Æolic digamma*, a name given to the letter F, which the Æolians used to prefix to words beginning with vowels, as *Φωνος*, for *ὄϊνος*, and also to insert in the middle of words, between vowels, as *Φις*, for *ὄϊς*.—*Æolic verse*, or *carmen æolicum*, a kind of measure, consisting, first, of an iambic or spondee, then of two anapests, divided by a syllable; and, lastly, a syllable common. It is otherwise called Archilochian and Pindaric, from the poets by whom it was used. *Prisc. de Met.* l. 1; *Terent. Maur. de Met.*; *Mar. Victor. Ars. Grammat.* l. 3; *Scalig. Poet.*

ÆOLO'PILE (*Ant.*) from αἰολε πύλαι, i. e. Gates of the Wind; a device for remedying smoky chimneys. *Vitruv.* l. 1, c. 6.

ÆOLOPILE (*Hydraul.*) a hollow ball of metal, with a very small hole or opening, used to show the convertibility of water into steam.

ÆOLOPILE (*Pneumat.*) the above-mentioned instrument also serves to show the cause and production of the wind. *Descart.*

ÆOLUS (*Mech.*) a machine invented by Mr. Tidd for ventilating rooms.

ÆOLUS *Harp.* (*Mus.*) or Æolian Harp; a musical instrument, producing melody by the wind.

Æ'ON (*Med.*) *αἰών*. 1. The natural age or life of man from his birth to his death. *Gal. Exeges. Hippocrat. Vocab.; Hesychius*. 2. The spinal marrow. *Erot. Lex Hippocrat.; Hesychius; Foes. Oeconom. Hippocrat.*

ÆONE/SIS (*Med.*) *αἰώνισσις*; the moistening external parts by perfusion or fomentation. *Grot. Lex Hippocrat.; Foes. Oeconom. Hippocrat.*

Æ'ONION (*Bot.*) *αἰώνιον*; a Greek name for a sort of sedum. *Gorr. Def. Med.*

Æ'ORA (*Ant.*) *αἰόρα*; a festival in honour of Erigone. *Hygin. Fab. 116; Hesych. in Voc. αἰόρα; Voss. de Orig. & Progress. Idol. 1. 1, c. 13; Meurs. Græc. Fer. 1. 1.*

ÆORA (*Med.*) a species of exercise by gestation, as swinging, riding, &c. adapted for weak persons; so called from *αἰωρῶ*, to lift up. *Cels. 1. 7, c. 26; Erotian Lex Hippocrat.; Aet. Tetrab. 1. serm. 3, c. 6; Gorr. Def. Med.; Foes. Oeconom. Hippocrat.*

ÆQUA'BILIS (*Phy.*) equable; an epithet applied to motion, celerity, &c. [vide *Equable*]

Ex **ÆQUA'LI**, sc. *distantia* (*Math.*) or *ex æquo*, at equal distance: a term applied to any number of magnitudes more than two, and as many others, so that they are proportionals when taken two and two of each rank, in such wise that the first is to the last of the first rank of magnitudes as the first is to the last of the second, &c.—*Ex* *Æquali*, *ex æqualitate*, or *ex æquo ratio*, *διῆσθαι λόγος*, is when the first magnitude is to the second of the first rank as the first of the second of the other rank; and as the second is to the third of the first rank, so is the second to the third of the other; and so on in order: whence this is called ordinate proportion: thus, suppose there be three magnitudes, *a, b, c*, and as many others, *d, e, f*, which taken two and two have the same ratio, that is, such that *a* is to *b* so is *d* to *e*; and as *b* is to *c* so is *e* to *f*; then *a* shall be to *c* as *d* is to *f*.—*Ex* *Æquali*, *in proportione perturbata, seu inordinata*, i. e. from equality in perturbate or disorderly proportion, is when the first magnitude is to the second of the first rank as the last but one is to the last of the second rank, and so on; as, suppose there be four magnitudes, *a, b, c, d*, and other four, *e, f, g, h*, which taken two and two, in cross order, have the same ratio, that is, *a* to *b* as *g* to *h*; *b* to *c* as *f* to *g*; and *c* to *d* as *e* to *f*; then *a* will be to *d* as *e* to *h*. *Euclid. Def. Elem. 1. 5.*

ÆQUA'LIS (*Bot.*) equal; an epithet applied to the gills, anthodium, and filaments.—*Lamellæ æquales*, when all the gills reach from the stalk to the margin.—*Anthodium æquale*, when the leaves of the anthodium are all of equal length.—*Filamenta æqualia*, when the filaments are of equal length.

ÆQUALIS *Polygamia*, the name of the first order in the Class *Syngenesia*, of Linnæus, containing those compound flowers which have all the florets hermaphrodite and alike. It includes the following genera.—

The Genera of Æqualis Polygamia.

<i>Scolymus</i> , Golden Thistle	<i>Scorzonera</i> , Viper's-grass
<i>Cichorium</i> , Succory	<i>Leontodon</i> , Dandelion
<i>Catananche</i>	<i>Crepis</i> , Hawk's-beard
<i>Seriola</i>	<i>Chondrilla</i> , Gum Succory
<i>Hypochaeris</i> , Cat's-ear	<i>Prenanthes</i>
<i>Geropogon</i> , Old Man's beard	<i>Lactuca</i> , Lettuce
<i>Rothia</i>	<i>Heracium</i> , Hawk's-weed
<i>Andryala</i>	<i>Sonchus</i> , Sow-thistle
<i>Triptilion</i>	<i>Lacintha</i>
<i>Tragopodon</i> , Goat's beard	<i>Lapsana</i> , Nipple-wort
<i>Helmintia</i>	<i>Rhagadiolus</i>
<i>Picris</i> , Ox-tongue	<i>Krigia</i>
<i>Apargia</i>	<i>Hyoseris</i> , Swine's Succory

<i>Hedypnois</i> , Hawkbit	<i>Calea</i> , Halbert-weed
<i>Thrineia</i>	<i>Bidens</i> , Bur Marygold
<i>Tolpis</i>	<i>Spilanthes</i>
<i>Atractylis</i>	<i>Athanasia</i>
<i>Acarna</i>	<i>Santolina</i> , Lavender-cotton
<i>Serratula</i> , Saw-wort	<i>Cæsulia</i>
<i>Carthamus</i> , Bastard Saffron	<i>Tarhonanthus</i> , African
<i>Carlina</i> , Carline Thistle	<i>Flea-bane</i>
<i>Aretium</i> , Burdock	<i>Kuhnia</i>
<i>Pteronia</i>	<i>Eupatorium</i> , Hemp
<i>Stobæa</i>	<i>Agrimony</i>
<i>Lachnospermum</i>	<i>Chrysocoma</i> , Goldilocks
<i>Barnadesia</i>	<i>Mikania</i>
<i>Cynara</i> , Artichoke	<i>Kleinia</i>
<i>Johannia</i>	<i>Cacalia</i>
<i>Cnicus</i>	<i>Lavenia</i>
<i>Carduus</i> , Thistle	<i>Ageratum</i>
<i>Onoseris</i>	<i>Stevia</i>
<i>Stokesia</i>	<i>Hymenopappus</i>
<i>Leatris</i>	<i>Cephalophora</i>
<i>Vernonia</i>	<i>Pentzia</i>
<i>Onopordon</i> , Cotton Thistle	<i>Ethulia</i>
<i>Stehelina</i>	<i>Piqueria</i>
<i>Haynea</i>	<i>Balsamita</i>

ÆQUALIS (*Math.*) vide *Equal*.

ÆQUALIS (*Med.*) consistent with itself, or always the same; as an *equal* pulse, that keeps the same tenor; an *equal* temperament, or constitution, that is, not subject to altercations or excesses.

ÆQUA'LITAS (*Math.*) vide *Equality*.

ÆQUANS (*Math.*) a particular circle. [vide *Equant*]

ÆQUA'TIO (*Alg.*) vide *Equation*.

ÆQUA'TOR (*Astron.*) vide *Equator*.

ÆQUA'TUS, (*Astron.*) vide *Equated*.

ÆQUIANGULA'TUS (*Math.*) vide *Equiangular*.

ÆQUIDICI *versus* (*Poet.*) *ισόδικτοι*; verses, different members of which have an opposite diction, as, *alba ligustra cadunt; vaccinia nigra leguntur*. *Virg. E. 2, 18.*

ÆQUILA'TERUS (*Math.*) vide *Equilateral*.

ÆQUILIBRIUM (*Math.*) vide *Equilibrium*.

ÆQUIMULTIPLEX (*Math.*) vide *Equimultiple*.

ÆQUINOCTIA'LES (*Bot.*) equinoctial solar flowers; i. e. flowers so called by Linnæus, which open and usually shut at certain determinate hours of the day, observing, therefore, equal or European hours, as some species of the *Alyssum*, *Anagallis*, *Convolvulus*, *Hieracium*, &c.

ÆQUINOCTIALIS (*Math.*) vide *Equinoctial*.

ÆQUINOCTIALIS (*Ent.*) an epithet for a species of *Scarabæus*.

ÆQUINOCTIUM (*Astron.*) vide *Equinox*.

ÆQUIPOLLENS (*Math.*) vide *Equipollent*.

ÆQUIPOLLENTIA *nominum* (*Log.*) the equivalence in the sense of two propositions differing in certain syncategoremata, as "Not every man is learned," or "Some man is not learned."

ÆQUITAS (*Numis.*) Equity, according to Cicero, is three-fold, as regards *superos*, the gods above, which is *piety*; the *manes*, or gods below, which is *sanctity*; and as regards men, which is *justice*. Equity is mostly represented on medals under the figure of a female, as in fig. 1, holding a pair of scales in her right hand, and a lance or cornucopia

Fig. 1.

Fig. 2.

in the left; sometimes as in fig. 2, under the triple figure of

goddess Moneta, holding the scales in the right and a cornucopia in the left, as on the medals of *Galba*, *Vitellius*, *Vespasianus*, *Titus*, *Domitianus*, *Nerva*, *Adrian*, *Antoninus*, *Pertinax*, *Severus*, *Julia Pia*, *Geta*, *Macrinus*, *Elagabalus*, *Julia Soemias*, *Alexander Severus*, *Julia Mamaea*, *Maximilian*, *Gordianus Pius*, *Philippus (Sen. and Jun.)*, *Decentius*, *Gallienus*, *Salonina*, *Lic Valerianus*, *Claudius Gothicus*, *Tacitus*, *Florianus*, *Probus Carinus*, and *Allectus*, bearing the inscriptions—ÆQUITAS and ÆQUITAS AUGUSTI.—ÆQUITAS AUGG. *Augustorum*.—ÆQUITAS AUGUSTI.—ÆQUITAS AUGUSTI.—ÆQUITAS AUGUSTI.—ÆQUITAS AUGUSTI COS. *Consulis*, &c.—ÆQUITAS AUGUSTI NOSTRI.—ÆQUITAS AUGUSTI TRIBUNITIÆ POTESTATE, &c.—ÆQUITAS PUBLICA.—ÆQUITATI AUGG. *Augustorum*.—ÆQUITATI PUBLICAE. *Vallant. Numis. Imp. Roman. ; Mediobarb. Oxon. Numis.*

ÆQUIVALENTIA *nominum (Log.)* the same as *Æquipolentia*.

ÆQUIVALENTIA (*Phy.*) equivalence is three-fold—*Æquivalentia moralis*, when one thing is of equal value with another in the estimation of men; as he by whose contrivance another is killed is equivalent to the murderer.—*Æquivalentia physica*, when a physical body contains within itself those perfections conjointly which are found separate in other bodies; as when a man contains the strength of two, he is equivalent to two men in matters of strength.—*Æquivalentia statica*, when a less weight is equal or equivalent to a greater, by reason of distance or some other circumstance.

ÆQUIVOCA *æquivocata (Log.)* equivocation, or things equivocal in their name, which may be so either *casu*, i. e. an accidental equivocation, as *taurus*, which signifies either an animal or a sign in the heavens; or *consilio*, an intentional equivocation, as *acute*, which is applicable either to instruments or pains; such terms are otherwise called analogous.

ÆQUIVOCA *æquivocantia (Log.)* the same as *vox æquivoca*; an equivocal term.

ÆQUIVOCUS (*Log.*) *quod una vox plurimis rebus ex æquo serviat*, ὁμώνυμος, equivocal; an epithet applied to the *vox*, or word, when it admits of a double signification, as *Gallus*, which is the name either for a cock or a Frenchman.

ÆQUIVOCUS (*Nat.*) equivocal; an epithet applied to a supposed mode of generation of plants and animals, from the combination of solids and fluids.

Ex ÆQUO (Math.) vide *Ex Æquali*.

ÆR (*Nat.*) vide *Air*.

ÆR (*Med.*) air is defined by Hippocrates to be the circumambient breath, which is the author of every thing that happens to the bodies of men, either good or evil. *Hippocrat. ἐπιφυσῶν. Erotian. Lex Hippocrat. ; Foes. Oeconom. Hippocrat.*

ÆRA (*Ant.*) the plural of *æs*, money; was used in accounts for our vulgar word *item*.—*Æra militaria*, or *æs militare*; military pay, or the money assigned to the *Tribuni Ærarii*, out of the treasury, for the pay of the army, according to the inscription AERA. STIPENDIAQUE; and another MILES ÆRUM XII. i. e. *stipendiorum duodenum. Varr. de Lat. Ling. l. 4 ; Liv. l. 5, c. 10 ; Gruter. Thes. Inscript. Vet. p. 508, &c.*—*Æra auxiliaria*, brazen vessels, by the use of which, as by a sort of charm, the ancients thought to prevent an eclipse of the moon.

Ovid. Met. l. 4, v. 333.

Cum frustra resonant æra auxiliaria luna.

Rhodig. Antiq. Lect. l. 19, c. 10 ; Turneb. Adv. l. 22, c. 24.

ÆRA (*Chron.*) the name of any date, period, or event, from which a calculation of years is made to commence. It is now substituted in chronology for the word *epocha*, which was in use among the Greeks. [vide *Epocha*] The term was first employed on the occasion of a tribute imposed by the emperor Augustus on the Spaniards, and is, on that

account, supposed to have been formed from the initials A. E. R. A. i. e. *annus erat regni Augusti*; others derive it from *æra*, the plural of *æs*, signifying coin stamped with particular dates; also the items in an account. Since its introduction it has been applied to any important period from which a reckoning has commenced, of which the following are the principal—*Æra of the creation*, computed by Usher to have happened 4004 B. C. and 710 of the Julian period; chronologers, however, differ in their accounts of this *æra*.—*Æra of the Olympiads* began from the new moon in the summer solstice Jul. Per. 3938, A. M. 3228, B. C. 776.—*Roman Æra* is dated from the foundation of the city, in the 7th Olympiad, xii. Kal. Mai, i. e. April 21. Jul. Per. 3966, A. M. 3256, B. C. 748.—*Æra of Nabonassar* is dated from Jul. Per. 3967, Feb. 26, A. M. 3257, B. C. 747.—*Æra Phillipic*, or the year of Alexander's death, commenced Jul. Per. 4390, A. M. 3680, B. C. 324.—*Æra of the Seleucidæ*, or *Æra of the Kingdom of the Greeks*, called by the Jews the *Æra of Contracts*, because they were obliged to use this *æra* in all their civil contracts, commenced Jul. Per. 4403, A. M. 3693, B. C. 311.—*Spanish Æra* was dated from the publication of the edicts at Rome, for imposing the tax before mentioned. Jul. Per. 4677, A. M. 3947, B. C. 39.—*Æra Actian* is dated from the conquest of Egypt by Augustus, i. e. in the 187th Olympiad, U. C. 724, Jul. Per. 4684, A. M. 3974, B. C. 30.—*Christian Æra* is dated from the birth of our Saviour, respecting the true time of which authors have differed variously: some place it two, some four, and some five, or more years before the vulgar *æra*, which is computed at the year of the world 4004 by Usher, and most modern chronologers after him, who suppose the birth of Christ to have happened in the year of the world 4000, and of the Julian period 4714.—*Æra of Diocletian* is dated from the first year of Diocletian. Jul. Per. 4997, A. M. 4267, A. D. 284.—*Æra of Martyrs*, the same as that of Diocletian, so called on account of the persecution of the Christians, which happened in his reign.—*Æra, Turkish or Arabian*, or the *æra of the Hegira*, is dated from the flight of Mahomed, which is said to have happened A. D. 610. *Ruf. Fest. Brev. ; Julian. Toletan. Episcop. contra Jul. l. 3 ; Papias. in Voc. Æra ; Luitprand. in Legat. ; Scalig. de Emendat. Tempor. l. 5 ; Vas. Chron. Hispan. c. 22 ; Baron. Not. in Martyrol. 22 Octob ; Petav. de Doctrin. Temp. l. 10, c. 68, &c. ; Ricciol. Chronol. &c.*

ÆRA (*Bot.*) *αἴρα*, the Greek name for cockle or darnel.

ÆRARIUS *præfectus (Ant.)* the officer who had charge of the exchequer, the treasurer of the exchequer. This charge was given first to the quæstors, afterwards to the prætors.—*Ærarii Quæstores*, the quæstors so called because they had charge of the treasury or exchequer.—*Ærarii Prætores*, the prætors so called because they were also treasurers of the exchequer.—*Ærarii Fusores*, coiners of the *æs*, or money, at the mint; likewise all workmen in brass or copper. *Tacit. Annal. l. 13, c. 28 ; Hist. l. 4, c. 9 ; Sueton. ; Aug. c. 36 ; Dio. l. 33 ; Alex. Gen. Dier. l. 2, c. 2 ; Laz. Comm. Reip. Rom. l. 2, c. 14 ; Pancirol. de Corp. Artific. § 17.*

ÆRARIUM (*Ant.*) the treasury, a public place so called because there the citizens deposited the *æra*, or copper money, before the gold and silver were coined.—*Ærarium Saturni*, at the bottom of the Capitoline hill, was so called because it was the temple of Saturn employed as the treasury; whence the ancient inscription given by Gruterus, VIII. VIR. III. AERARI SATURNI, i. e. "octumvir tertium, Ærarii Saturni." *Aurel. Vict. de Orig. Gen. Rom. c. 3 ; Fabric. Descript. Urb. Rom. ; Grut. Thes. Inscript. Vet.*—*Ærarium sanctius*, contained the tribute money, and other moneys destined for particular purposes.

as also the public accounts; it was so called because it was situated in the interior of the temple, where it was more retired and secure. *Cic. ad Attic.* l. 7, c. 21; *Cæs. de Bello, Civ.* l. 1, c. 14; *Plin.* l. 33, c. 3; *Appian. de Civ. Bell.* l. 2; *Flor. Epit.* l. 4, c. 2; *Oros.* l. 6, c. 15.—*Ærarium privatum* contained the emperor's privy purse.—*Ærarium Iithyæ*, or *Junonis Lucinæ*, so called because it received the moneys paid on the birth of a child. *Dionys.* l. 4; *P. C.*—*Ærarium militare*, a military chest, or a particular treasury in which the money was kept that was destined for the pay of the soldiers, according to an inscription, PRÆF. MILIT. AERARI. *Tacit. Annal.* l. 1, c. 78; *Suet. in Aug.* c. 49; *Dio.* l. 55; *Grut. Thes. Inscript. Vet.*—*Ærarium vicesimarum*, the treasury which contained the money raised by way of tribute from foreign countries, which was so called because they paid the twentieth of inheritances, &c.—*Ærarium imperatorum*, the same as the *fiscus imperatoris*; the exchequer. *Blond. Triumph. Rom.*; *Bud. in Pandect.*; *Calcagni de Verb. Signif.*; *Alex. ab Alex. Gen. Dier.*; *Gyrald. Synt. Deor.*; *Laz. Comm. Reip. Rom.*; *Marlian. Top. Urb. Rom.*; *Pavv. Descript. Urb. Rom.*; *Fabric. Descript. Urb. Rom.*; *Hotman. Ant. Rom.*; *Manut. in Cic. ad Attic.*; *Camerar. de Re Numm.*; *Panciro. Descript. Urb. Rom.*; *Demster. Paral. ad Rosin. Antiq.*; *Baleng. de Imp. Rom.*; *Donat. de Urb.*; *Sperling. de Numm. non cus.*; *Ursin. in Marlianus*; *Kipping. Antiq. Rom.*; *Ois. in Gell.*; *Franckens de Ærar.*; *Ursat. de Not. Rom.*; *Gothofr. Burman de Fechtg. Dissert. apud Græv. Thes. Antiq. Roman.* vol. i. ii. iii. &c.

ÆRARIUS (*Ant.*) 1. A citizen of the lowest class, who paid few or no taxes, and had no votes. He was so called because *Æra tributi loco pendebat*; wherefore in *Ærarios referre* signified to degrade a citizen, which the Censors used to do in cases of immorality. Thus senators were expelled from the senate, and knights deprived of their horses, by which they were reduced to the condition of *Ærarii*, or the meanest citizens. *Ascon. in Cic. Div.* l. 2, c. 66; *Liv.* l. 24, c. 18; *Sigon. de Antiq. Jur. Rom.* l. 1, c. 17; *Manut. in Cic. Or.*; *Gronov. de Pecunia.* 2. An officer appointed by the emperor Severus to distribute the bounty of the prince from the treasury or exchequer. *Lamprid. in Sever.*; *Panciro. Notit. Dignit. Imp. Orient.* c. 79. 3. The last on the list of candidates who offered to contend in the public games. *Panvin. de Lud. Circens.* l. 1, c. 14; *Laz. Comm. Reip. Rom.* l. 10, c. 5.

ÆRARIUS, an epithet for what belongs to, or is connected with, the treasury or exchequer.—*Ærarius Tribunus*, a paymaster to the army, so called a *tribuendo ære*. *Cic. Planc.* c. 8; *Varro de Lat. Ling.* l. 5; *Plin.* l. 34, c. 1; *Ascon. ad Cic. in Verr.* 3; *Fest. de Signif. Verb.*; *Grut. Thes. Inscript. Vet.*—*Ærarius miles*, a mercenary soldier, or one who received pay. *Varro de Lat. Ling.* l. 4; *Plin.* l. 34, c. 1; *Grut. Thes. Inscript. Vet.*

ÆRATED (*Chem.*) an epithet for water having brass in it. **ÆRDA'DI** (*Alchem.*) spirits supposed by Paracelsus to inhabit the air. *Parac. de Vit.*

ÆRE diruti milites (*Ant.*) soldiers whose pay, *æs*, was, *dirutus*, stopped or taken from them for some misdemeanor. *Varro. apud Non.* l. 12, c. 53; *Fest. de Verb. Signif.*

ÆREOLUM (*Ant.*) the thirty-sixth part of a dram.

ÆRIAL acid (*Chem.*) the same as *Carbonic acid*.

ÆRIAL perspective (*Per.*) that which represents bodies diminished and weakened in proportion to their distance from the eye.

ÆRIANS (*Ecc.*) *Æριανοί*, *acriani*, a sect of heretics in the fourth century, called after their leader Aerius, who maintained, among other things, that there was no difference between priests and bishops. *Epiphani. Hæres.* l. 3, c. 75; *August. Her.* 53; *Inuph-Chron. Ann.* 349.

ÆRIE (*Falc.*) or *Airy*, from the German *ey*, an egg; a receptacle for eggs, a hawk's nest. "*Unusquisque liber homo habeat in boscis aerias accipitrum.*" *Fleta.*

ÆRIFICA'TIO (*Chem.*) the producing air from other bodies, or rather converting them into air.

ÆRIS flos (*Med.*) *χαλκὸς ἀνθεα*, flowers of copper, or copper reduced to small grains, when in a state of fusion. *Dioscor.* l. 5, c. 88; *Oribas. Synop.* l. 2, c. 6; *Med. Collect.* l. 13; *Act. Tetrab.* l. serm. 2, c. 81; *Paul. Æginet. de Re Med.* l. 7, c. 3, *apud Med. Art. Princip.*—*Æris squamæ*, *χαλκὸς λεπτεῖς*, flakes of copper, which fly off by hammering the metal when heated. *Dioscor.* l. 5, c. 89; *Oribas. Med. Collect.* l. 13; *Act. Tetrab.* l. serm. 2, c. 59, *apud Med. Art. Princip.*

ÆRITIS (*Bot.*) another name for *Anagallis*.

ÆROGRAPHY (*Nat.*) from *ἀήρ*, air, and *γράφω*, to describe; a description of the air and its properties.

ÆROLITHS (*Nat.*) or *Ærolites*, from *ἀήρ*, air, and *λίθος*, a stone; air stones, or meteoric stones, falling from the atmosphere.

ÆROLOGY (*Med.*) from *ἀήρ*, air, and *λόγος*, doctrine; the study of the air, as connected with the animal economy.

ÆRÓMANCY (*Ant.*) *ἀερομαντεία*, aeromancy; a mode of divination from certain spectres and appearances in the air. They sometimes wrapped their head in a cloth, and having placed a bowl full of water in the open air, proposed their question in a whisper; at which time, if the water boiled or bubbled, they supposed what they said was approved. [*vide Hydromancy*]

ÆROMETRY (*Nat.*) *Aerometria*, the art of measuring the air, so as to ascertain its pressure or weight, its elasticity, rarefaction, &c. *Wolf. Math. cur.*

ÆRONAUT (*Nat.*) one who sails or floats in the air in a balloon.

ÆROPHOBIA (*Med.*) from *ἀήρ*, air, and *φοβέω*, to fear; a species of frenzy with which some that are affected are afraid of a lucid air, and others of that which is obscure. *Cæl. Aurelian. de Acut. Morb.* l. 3, c. 12.

ÆROPHYLA'CEA (*Nat.*) a name employed by Kircher for caverns or reservoirs of air supposed to exist in the bowels of the earth.

ÆROSCOPIA (*Pneu.*) *ἀεροσκοπία*, from *ἀήρ*, air, and *σκοπέω*, to observe; aeroscropy, or observations on the air.

ÆRO'SIS (*Med.*) an imaginary resolution of the blood into vapour, brought about by ventilation.

ÆROSTATICA (*Nat.*) from *ἀήρ*, air, and *στατική*, the doctrine of weights; the science of weights suspended in the air.

ÆROSTATION (*Nat.*) from *ἀήρ*, air, and *στατική*, the doctrine of weights: i. e. the modern art of navigating the air in air balloons or aerostatic machines.

ÆROSTATS (*Nat.*) or *Aerostatic machines*; another name for air balloons.

ÆROSUS lapis (*Min.*) *cadmia*.

ÆRUGINOSUS (*Med.*) *ἰώδης*, from *ærugo*, verdigrease; æruginous, or verdigrease colour, as the bile discharged from the stomach. *Ruff. Ephes.* l. 1, c. 36.

ÆRUGINOSUS (*Orn.*) an epithet for a species of *falco*.

ÆRUGO (*Mct.*) *ῥῶς*, from *ærus rubigo*, verdigrease, or the rust of any metal, particularly copper. *Oribas. Synop.* l. 2, c. 61; *Act. Tetrab.* l. serm. 2, c. 56.—*Ærugo rassa*, or *rasilis*, *ῥῶς ἕρσῶν*, rust scraped from a copper plate hung over the strongest vinegar. *Dioscor.* l. 5, c. 92; *Act. Tetrab.* serm. 2, c. 55.

ÆRUSCATORRES (*Ant.*) beggars, or vagabonds, who went about collecting *æs*, money, by various arts.

ÆS (*Ant.*) *χαλκός*, brass or copper, a durable and sonorous metal; so called from *æër*, the air, without which it will not emit sound, or more probably from *αἶθρα*, to shine. Its use was first discovered by the Telchines, who were expert

artists in Crete. *Cassiod.*; *Var.* l. 3, c. 31; *Gyrald. Synt. Deor.* i. p. 24; *Jun. Catal. Archit.* p. 101; *Rhodig. Ant. Lex.* l. 19, c. 10; *Turneb. Ant. Adv.* l. 6, c. 10; *Panciroi. Notit. Dignit. Imp. Orient.* c. 137.—*Æs alienum*, money that is borrowed, or that which is not our own, but is owing to others. *Senec. de Benef.* l. 5, c. 14; *Ulpian. de Verb. Signif.* i. 213.—*Æs caldarium*, copper, of which cauldrons were made; it is both malleable and fusible. *Plin.* l. 34, c. 8; *Salmas. Exerc. Plin.* p. 758.—*Æs candidum*, white brass, a vein of which is found under a vein of silver. *Savot. de Numm. Ant.* l. 12, c. 16.—*Æs circumforaneum*, money taken in the haymarket. *Cic. ad Attic.* l. 2, ep. 1.—*Æs confessum*, a debt that is owned. *Cic. de Orat.* l. 2, c. 63; *Aul. Gell.* l. 15, c. 13; l. 20, c. 1.—*Æs Corinthium* was made from three metals, gold, silver, and copper; and, according to Pliny, it received its name from the taking and burning of Corinth, U. C. 608, by Mummius, when the gold and silver and copper from the statues mixed together. *Cic. Tusc. Quæst.* l. 4, c. 32; *Plin.* l. 34, c. 2.—*Æs coronarium*, a ductile sort of brass, of which crowns were made for actors. *Plin.* l. 33, c. 9.—*Æs corybantium*, is so called because the priests of Cybele used it for the sacred timbrels.—*Æs curionum*, money so called because it was given to the Curio for the discharge of his office.—*Æs cyprium*, copper; a ductile kind of brass first found in Cyprus, from which it took its name. It was made from an ore, called Cadmia, and answers to what is now called Pinclibeck. *Isidor.* l. 16, c. 19.—*Æs dodonæum*, so called because the sacred cauldrons of Apollo were made of it. *Erasm. Adag.* p. 276.—*Æs factum*, factitious brass used in vases.—*Æs flavum*, so called from its colour. It is drawn from a mineral, which the Latins call *cadmia*, and the Gauls *calamin*.—*Æs grave*, so called from its weight which was fixed by law. *Liv.* l. 4, c. 60.—*Æs hæreditarium*, so called from the law of the twelve tables, which obliges heirs to divide a portion among the creditors. *August. in Leg.* xii.—*Æs hepaticum*, so called because it approaches to the colour of the liver, now called Bronze.—*Æs hordearium*, public money; so called because it was given in payment for the food of the horses.—*Æs Indicum*, a kind of brass, so bright, pure, and void of rust, that it was not distinguishable by the colour from gold.—*Æs infectum*, unwrought brass.—*Æs manuarium*, money collected from different quarters. *Aul. Gell.* l. 18, c. 13.—*Æs militare*, the money set apart for the pay of the soldiers. *Varro. de Lat. Ling.* l. 4; *Tacit. Annal.* l. 1, c. 78; *Dio.* l. 55, p. 565.—*Æs ollarium*, called *patin* by the Gauls, a kind of brass which could not be gilded, on account of the lead which was mixed with it. *Plin.* l. 34, c. 9.—*Æs Persicum*, vide *Æs Indicum*.—*Æs pyropum*, brass which, in its brightness, resembled fire. *Diodor.* l. 1; *Plin.* l. 34, c. 8.—*Æs regulare*, brass that is both fusible and malleable. *Plin.* l. 34, c. 8.—*Æs resignatum*, a soldier's pay, of which he was mulcted for any misdemeanour. *Fest. de Signif. Verb.*—*Æs rude*, unwrought brass, or bullion.—*Æs Saturnium*, coin kept in *æarium Saturni*, the treasury of Saturn.—*Æs signatum*, brass that is coined. *Plin.* l. 33, c. 3.—*Æs uzorium*, money paid as a tax by those who remained unmarried.—*Per Æs et libram*, a formula among the Romans of ratifying their purchases and sales. *Fest. de Signif. Verb.*; *Isidor. Orig.*; *Rhodig. Ant. Lect.*; *Aug. in Leg.* xii. tab.; *Stuch. de Sacrif.*; *Erasm. Adag.*; *Phil. Bochart. Hieroz.*; *Fabric. Descript. Urb. Rom.*; *Salmas. Exercit. Plin.*; *Gronov. de Pecun. Vet.*; *Savot. de Re Numm.*; *Græv. Thes. Antiq. Roman.* tom. 2, &c.

Æs ustum (*Met.*) χαλκός καυκόμενος, burnt brass, is made of red copper, cut into plates, and put into a crucible, with sulphur, and a little common salt, *stratum super stratum*, and set over a fierce charcoal fire. *Dioscor.* l. 5, c. 87; *Oribas.* l. 13; *Paul. Æginet de Re Med.* l. 7, c. 3.

ÆSCHYNES (*Ecc.*) the name of three sects of heretics that sprang from the Montanists, who, among other strange notions, affirmed Christ to be both father and son. *Epiph. Hæres.*

ÆSCHYNOMENE (*Bot.*) from *αἰσχύνωμαι*, to be ashamed; an epithet for a plant vulgarly called the "Sensitive Plant," on account of its property of retreating from the touch.

ÆSCHYNOMENE, in the *Linnean System*, a genus of plants, Class 17 *Diadelphia*, Order 4 *Decandria*.

Generic Characters. CAL. *perianth* one-leaved.—COR. *papilionaceous*; *banner* subcordate; *wings* subovate; *keel* lunate.—STAM. *filaments* ten; *anthers* small.—PIST. *germ* oblong; *style* subulate; *stigmas* simple. PER. *legume* long; *seeds* solitary.

Species. The species are shrubs and annuals, the principal of which are the—*Æschynomene grandiflora*, Great-flowered *Æschynomene*, a shrub, native of the East Indies.—*Æschynomene coccinea*, Scarlet-flowered *Æschynomene*, a shrub.—*Æschynomene aspera*, seu *Mimosa*, Rough-stalked *Æschynomene*, an annual, native of the East Indies.—*Æschynomene Americana*, seu *Hedysarum*, Hairy *Æschynomene*, an annual, native of Jamaica.—*Æschynomene pumila*, *Hedysarum*, seu *Malam-Toddavaddi*, &c. Dwarf *Æschynomene*, an annual, native of India.—*Æschynomene sensitiva*, seu *Hedysarum arborescens*, a shrub, native of Jamaica, &c. *Raii Hist. Plant.*; *Plum. Plant. Amer.*; *Linn. Spec. Plant.*

ÆSCHYNOMENOUS (*Bot.*) from *αἰσχύνωμαι*, to be bashful; sensitive, an epithet for such plants as move upon being touched.

ÆSCULUS (*Bot.*) from *esca*, food, because it was first used for food; a kind of glandiferous tree, which, according to Virgil, was sacred to Jupiter.

Georg. l. 2, v. 16.

— *memorunque Jovi quæ maxima frondet,*
Æsculus atque habite Grævis cracula quercus.

It is supposed to answer to the *ἀργιῶψ* of Theophrastus. *Hist. Plant.* l. 3, c. 9.

ÆSCULUS, in the *Linnean system*, a genus of plants, Class 7 *Heptandria*, Order 1 *Monogynia*. It is called by Tournefort *Hippocastanum*.

Generic Characters. CAL. *perianth* one-leaved.—COR. *petals* five.—STAM. *filaments* subulate; *anthers* ascending.—PIST. *germ* roundish; *style* subulate; *stigma* acuminate.—PER. *capsule* leathery; *seeds* two.

Species. The principal species are the—*Æsculus Hippocastanum*, Common Horse-chestnut, a tree, native of Asia.—*Æsculus flava*, Yellow-flowered Horse-chestnut, a tree, native of North Carolina.—*Æsculus pavia*, Scarlet Horse-chestnut, a tree, native of Carolina.—*Æsculus variegata*, a tree, native of South Carolina.—*Æsculus parviflora*, a tree. *Gcr. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Pluk. Almag. Botan.*

ÆSHNA (*Ent.*) a division of the genus *Libellula*, comprehending those insects which, according to Fabricius, have the portions of the lip equal.

ÆSTATES (*Med.*) from *æstas*, summer; freckles in the skin.

ÆSTIMATIO (*Ant.*) an estimate of damages.

ÆSTIMATIO Capitis (*Archæol.*) an estimate of the head, or a valuation of a person's estate and rank, according to which, on the commission of any crimes towards these persons, King Athelstane ordained certain fines to be paid. The fine for any offence towards the king was 30,000 thrymsas.

ÆSTIVA (*Ant.*) *æstiva loca vel castra æstiva*. 1. Summer encampments for the soldiers, in distinction from the hibernia or winter quarters. *Tac. Annal.* l. 1, c. 31. 2. Shady places for the cattle. *Serv. in Virg. Georg.* l. 2; *Lact. in Stat. Theb.* l. 1.

ÆSTIVALIA (*Archæol.*) a species of greaves or buskins worn in summer.

ÆSTIVALIS (*Astron.*) from *Æstas*, summer; *Æstival*, an epithet for the summer solstice.

ÆSTIVALIS (*Bot.*) or *æstivus*, an epithet for flowers that blossom in the summer, i. e. summer flowers.

ÆSTIVATIO (*Bot.*) estivation, the time when flowers arrive at their perfection, or, as Martin defines it, the disposition of the petals within the floral gem or bud, of which Linnæus speaks more at large under the head of the sleep of plants. [vide *Somnus*]

ÆSTPHARA (*Med.*) incineratio.

ÆSTUARIUM (*Med.*) estuary.

ÆSTUATIO (*Chem.*) the fermenting of liquor when mixed.

ÆSTUS marinus (*Phy.*) seu *reciprocatio maris*, the tide, or flux and reflux, which is triple according to the difference in the times.—*Æstus diurnus*, what happens within the space of twenty-four hours.—*Æstus mensurius*, what happens twice in the month at new and full moon.—*Æstus annuus*, what happens twice in the year at the equinoxes.

ÆSYMNETÆ (*Ant.*) αἰσυμητῆται, a name for rulers whose authority equalled that of kings, to which the dignity of dictator, among the Romans, is supposed to have owed its origin. *Aristot. Polit.* l. 3, c. 15; *Hesychius*; *Alexand. ab Alexand.* l. 4, c. 13.

ÆTAS Mundi (*My.*) the poets divide the age of the world into four periods according to the manners of the age.—*Ætas aurea*, the golden age in the reign of Saturn, when men lived in innocence and simplicity. *Ovid. Met.* l. 1, v. 89.

*Aurea prima sata est ætas qua, vindice nullo
Sponte sua, sine lege, fidem rectumque colebat.*

Ætas argentea, the silver age at the beginning of Jupiter's reign, when they showed propensities to evil. *Ovid. Met.* l. 1, v. 114.

*Sub Jove mundus erat: subit ærgentea proles
Auro deterior, fulvo pratiosior ære.*

Ætas ærea, the brazen age followed soon after, when they commenced war and rapine. *Ovid. Met.* l. 1, v. 126.

Sevior ingeniis, et ad horrida promptior arma.

Ætas ferrea, the iron age, when vice became prevalent. *Ovid. Met.* l. 1, v. 127.

*Nec scelerata tamen. De duro est ultima ferro
Protinus irrupit venæ peioris in ævum
Omne nefus.*

Ætas hominis (*Ant.*) *dimensio vitæ*, according to Scaliger, i. e. properly human life, or that space of life on which the frame of the body begins to undergo a notable change, as—*Ætas augmenti*, αὐξουσία, while it is increasing after the birth.—*Ætas consistentiæ*, ἀρμῆς, the middle state, while it is neither increasing nor decreasing.—*Ætas decrementi*, μείωσις, while it is on the decline.

Ætas, human life was likewise divided into the following stages; namely—*Ætas infans*, quod adhuc fari nescit, the time from the birth to the seventh year.—*Ætas pueritia*, a puritate, from the seventh to the fourteenth year.—*Ætas adolescentiæ*, quod sit ad gignendum adductus, from the age of puberty to the twenty-eighth year.—*Ætas Juventutis* quod juvare posse incipiat, from the prime of life to the age of fifty.—*Ætas Senectutis*, a sensus diminutione, old age to the end of life. *Aristot. de Vit. et Mort.*; *Isid. Orig.* l. 11, c. 2.

Ætas, the age, or period of life, was also distinguished among the Romans according to their offices, as—*Ætas Ædilitia*, the age to be elected to the ædileship is supposed to have been not before thirty-seven, although the time is not precisely fixed by any law.—*Ætas consularis*, the age for the consulship was forty-three.—

Ætas urbani magistratus, the age for a civic magistrate was twenty-seven. *Polyb.* l. 6, c. 17.—*Ætas judicum*, the age for being appointed judges was not to be under thirty nor above sixty by the law of Augustus. *Sueton. in August.* c. 32.—*Ætas Prætoria*, the age for the prætorship was forty, for it preceded the consulship by two years, and followed the ædileship after an interval of two years. *Cic. ad Fam.* l. 10, ep. 25.—*Ætas militaris*, the age to be enlisted was seventeen, to be discharged forty-five. *Polyb.* l. 4, c. 17; *Dionys.* l. 4, p. 221; *Aul. Gell.* l. 10, c. 28.—*Ætas Quæstoria*, &c. the age for serving the office of quæstor, tribune, &c. is supposed to have been twenty-seven, or at least not earlier. *Vel. Pater.* l. 2, c. 94; *Tac. Annual.* l. 3, c. 29; *Sueton. in Cal.* c. 1; *Dio.* l. 53; *Spartian. in Did. Julian.* c. 1.—*Ætas Senatoria*, the age for admission into the senate is not defined by ancient writers, but is supposed to have succeeded the quæstorship. *Gruch. de Comit.*; *Manut. de Leg. Roman.*; *Signon. de Antiq. Jur. Civ. Roman.*; *Alex. Gen. Dier.*; *August. de Leg. in Vill. Annual.*; *Hotman. de Rit. Nupt.*; *Lips. de Magistrat. Rom.*; *Deuster. Paralip. ad Ant. Ros.*; *Græc. Thes. Ant. Rom.* tom. 1, &c.

ÆTAS mundi (*Chron.*) vide *Age*.

ÆTATE probanda (*Law*) a writ of inquiry, whether the heir of a tenant that held of the king in chief by chivalry be of full age. *Reg. Orig.* 294.

ÆTERNA (*Num.*) vide *Æternitas*.

ÆTERNALES (*Ecc.*) a sect of heretics that maintained the eternity of the world *a parte post*, i. e. that after the resurrection it should continue the same as it now is.

ÆTERNITAS (*My.*) Eternity was worshipped as a god by the ancients, of which the Pythagoreans, Plato and Hermes Trismegistus made time to be the image. *Gyrald. Synt. Deor.* l. 1, p. 59.

ÆTERNITAS (*Numis.*) Eternity was represented in various forms on medals, sometimes under the figure of the sun and moon for their durability; sometimes by the elephant for its length of years, as on a medal of Faustina, *fig. 1*,

where a chariot is drawn by two elephants; sometimes by a phœnix and a globe, the one for its long life, and the other for its supposed eternity, as on a medal of Faustina, *fig. 2*. There were besides several other representations, as of a serpent winding itself round a globe, or with its tail brought down to its mouth, or of a figure veiled to imply that eternity is inscrutable, or of a head with two faces, implying that it can see backwards and forwards. On a medal of Faustina, *fig. 3*, eternity is represented as carrying this empress to heaven, and holding a lighted flambeau in her hand. The medals of the emperors representing eternity refer most commonly to the perpetuity of the government in their own family. The emperors, whose medals had the figure of eternity, were *Augustus*, *Vespasian*, *Titus*, *Domitian*, *Severus*, *Caracalla*, *Geta*, *Alexander Severus*, *Gordianus Philippus*, *Gallienus*, *Claudius Gothicus*, *Quintilian*, and *Maximian*. The inscriptions on the medals were as follow:

ÆTERNITAS.—**ÆTERNITAS. AUG. or AUGG.**—**ÆTERNITAS. FLAVIORUM.**—**ÆTERNITAS. IMP. or IMPERII.**—**ÆTERNITATI AUGUSTI**

AUGUS. or AUGG. — AETERNITATIBUS. — AETERNIT. AUG. and AUGG. &c.—AETERNIT. IMP. and IMPERIT. &c.—AFTER. AUG. P. M. &c. —AET. AUG. COS. &c.—AETERNA. FELICITAS. MEMORIA, &c.—AETERNI. IMPERII.

ÆTHER (*My.*) ἄηθρ, that subtle part of the air which was taken by the heathens for Jupiter, and which, being easily inflammable, is the fittest for producing the thunder and lightning ascribed to him; whence the word was supposed to come from αἰθερ, to burn.

ÆTHER (*Nat.*) Ether was supposed by Aristotle to come from ἀεὶ τὸ πρὸ αἰθῆ βῆν, i. e. always running, because of its constantly fluctuating nature. The word is taken to signify, 1. The firmament which is above the region of the air. 2. A subtle fluid supposed to be the cause of gravitation, and other phenomena otherwise inexplicable. *Aristot. de Mund. c. 2.*

ÆTHER (*Chem.*) a very light volatile inflammable liquor distilled from a mixture of Alcohol and acid in equal proportions.

ÆTHEREA (*Bot.*) a herb mentioned by Cælius Aurelianus; the *Eryngium* of Linnæus.

ÆTHEREAL matter (*Nat.*) the same as Æther.

ÆTHEREAL world (*Nat.*) all that space above the upper element; viz fire, which the ancients imagined to be perfectly homogeneous, incorruptible, and unchangeable.

ÆTHEREAL oil (*Chem.*) an animal or vegetable oil highly rectified.

ÆTHEREUS spiritus (*Chem.*) an epithet for Æther.

ÆTHIOPICÆ (*Med.*) an epithet applied to many medicines of a black colour.

ÆTHIOPICUS lapis (*Min.*) Ethiopian stone, a stone of great medicinal virtue, according to Oribasius. *Med. Collect. l. 15, c. 7.*

ÆTHIOPIS (*Bot.*) Ἰθιοπίς, the *Salvia Æthiopsis* of Linnæus; a herb which grows in Illyria and Greece, and much resembles the common clary, whereon it is called, by Dale, the *Ethiopian Clary*. It has the stinking smell of Archangel, and the root, which is fibrous, is made into a decoction. *Dioscor. l. 4, c. 105; Plin. l. 26, c. 4; Paul. Ægin. l. 7, c. 3; Myrep. sect. 8, c. 54; C. Bauh. Pin. Plant.; Raii Hist. Plant.*

ÆTHIOPS (*Med.*) a medicine so called from its black colour: there are different kinds, as *Æthiops' mineral*, an incorporation of sulphur and mercury—*Antimonial Æthiops*, an incorporation of antimony and mercury.—*Vegetable Æthiops*, reduced to powder in the open air.—*Æthiops Jovialis*, a mixture of tin, mercury, and sulphur.

ÆTHNA (*Nat.*) subterraneous fire.

ÆTHOLICES (*Med.*) ἁθολικός, from ἕθω, uro; pustules raised in the skin by heat. *Erotian Lex. Hippocrat.; Galen in Exiges. voc. Hippocrat.; Foes. Oeconom. Hippocrat.*

ÆTHUSA (*Bot.*) Fools' Parsley; a genus of plants, Class 5 Pentandria, Order 2 Digynia.

Generic Characters. CAL. umbel universal spreading, partial also spreading; involucre universal none; partial linear; proper perianth scarcely observable.—COR. universal nearly uniform, partial unequal.—STAM. filamentis simple; anthers roundish.—PIST. germ inferior; styles reflex; stigmas obtuse. PER. none; fruit roundish; seeds two.

Species.—The principal species are *Æthusa Cynapium*, *Coriandrum Cynapium*, *Cinapium seu Cicutaria*, &c. Common Fools' parsley; an annual, native of Britain.—*Æthusa Bunius*, *Carum Bunius*, *Daucus Pyrenaicus*, &c. *Bunius seu Saxifraga montana*, &c. Coriander-leaved Fools' Parsley; a biennial, native of the Pyrenees.—*Æthusa Meum*, *Athamanta Meum*, *Ligusticum Meum*, *Sesili Meum*, seu *Meum Spignel*, *Meu* or *Bawd-money*; a perennial, native of Europe.—*Æthusa Fatua*, Fine-

leaved Fools' Parsley; a perennial. *I. Bauhin. Hist. Plant.; C. Bauhin. Pin. Theat. Bot.; Ger. Herb.; Park. Theat. Botan.; Linn. Spec. Plant.*

ÆTHYA (*Orn.*) ἄθυα, a sea fowl, answering to the Fulica or Coot.

ÆTIANS (*Ecc.*) *Ætiani*; a sect of heretics, from one Ætius, of Antioch, who maintained doctrines respecting the Trinity, &c. differing somewhat from the Arians. *St Athanas. de Synod.; S. Gregor. Nyssen. contra Eunom.; Philostrat. l. 3, &c.; Epiphani. Hæres. 76; August. Hæres. 74; Socrat. Hist. Eccles. l. 1, c. 28; Sozomen. l. 3, &c.; Theodoret. l. 2, &c.; Baron Annal Ann. 356, &c. Tillemont Hist. Eccles. tom. 6; Du Pin, &c.*

ÆTIOLOGY (*Rhet.*) ἐτιλογία, from ἔτιω, cause or reason, and λόγος, an account; a showing the reasons for a thing, called by Quintilian "*Causarum relatio*;" by Cicero "*Ad propositum subjecto ratio*." *Cic. de Orat. l. 3, c. 52; Quintilian, l. 6, c. 3; Alex. περισχρημ; Ald. Rhet. vol. 1, p. 577; Rutil. Lup. l. 2, c. 19.*

ÆTIOLOGY (*Med.*) the theory of physic, and the causes of diseases.

ÆTITES (*Min.*) ἁίτιτης, eagle stone; a species of ore of a kidney form, imbedded in iron shot clay. Pliny says it was found in eagles' nests. *Dioscor. l. 5, c. 161; Plin. l. 36, c. 21; Act. Tetrab. l. serm. 2, c. 32.*

ÆTOMA (*Med.*) ἄτρομα, the roof of a house. *Gal. Exeges.*

ÆTONYCHON (*Bot.*) another name for the *Lithospermum*.

A'FFA (*Com.*) an ounce weight of gold on the coast of Guinea.

TO AFFE'AR (*Archæol.*) to confirm, ratify. *Shakspeare.*

TO AFFE'CT (*Law*) to make over, pawn, or mortgage any thing to assure the payment of a sum of money, or discharge any other duty.

AFFE'CTED (*Algeb.*) *affectus* or *adfectus*: an epithet, the first use of which is attributed to Vieta, by whom it was applied to a quantity having coefficients, as $4a$, in which a is affected by the coefficient 4; or having the sign + or -, as $-4a$. An equation is said to be affected when the unknown quantity rises to two or more powers, as $x^3 - x^2 + 9x = r$. *Vieta in Art. Analyt. et Isagog. c. 8.*

AFFE'CTION (*Phy.*) πάθος, *affectio ab afficiendo eò quod subjectum, dum de illo prædicatur, afficiat*; any thing peculiarly attributed to a body and resulting from its essence. As respects the subject, affections are divided into—*Affections of the mind*, which are any commotions of the mind.—*Affections of the body*, which are certain modifications of matter introduced by motion in this or that way: these are divided into—*Affections primary*, which either arise out of the idea of matter, as magnitude, quantity; or out of the form, as quality and power; or out of both, as motion, place, and time.—*Affections secondary* or *derivative* such as arise out of primary ones, as divisibility, continuity, contiguity; or out of quantity, as equality, inequality, &c.; or out of figure, as a circle, square, &c.; out of qualities, as strength, health, &c.

AFFE'CTION (*Met.*) is said of being, in its abstract form, and is divided into—*Affections united*, which are predicated of being singly and solely, and are convertible without a conjunction, as 'every being is good,' and 'all good is a being.'—*Affections disunited*, are predicated of being with a disjunctive term, and, by taking in both parts of the sentence, are convertible with it, as 'being is either necessary or contingent,' and 'whatever is necessary or contingent is being.'

AFFE'CTION (*Law*) the making over, pawning, or mortgaging a thing to assure the payment of a sum of money, or the discharge of some other duty or service.

AFFE'CTION (*Paint.*) a lively representation of any passion in a figure.

AFFECTION (*Med.*) a general term to denote any disorder with which the whole body or any part of it is affected, or under which it suffers. It is commonly defined by some epithet, as the—*Affectio colica*, the colic affection, or simply the colic.—*Affectio melancholica*, melancholy.—*Affectus implicatus*, a complicated affection or disorder, is one in which many parts are affected with different disorders. *Hippocrat. de Epidem.* l. 3. and *Gal. Comm.* 2.

AFFERERS (*Law*) *Afferatores*; those who in Courts-Lect, upon oath, settle and moderate the fines. *Hawkins P. C.* l. 2, c. 112.

TO **AFFERE** (*Law*) signifies either “to affere an amerement,” i. e. to mitigate the rigour of a fine; or “to affere an account,” i. e. to confirm it upon oath in the Exchequer.

AFFERI (*Archæol.*) cattle fit for husbandry, according to our old law writers. *Fleta.* l. 2, c. 73, § 6, &c.

AFFETTUOSO (*Mus.*) or *Affetto*, Italian, signifying, in an affecting style; a term employed in music-books at the beginning of a movement.

AFFIANCE (*Theol.*) that acquiescence of the mind, under all circumstances, grounded on a perfect confidence in the wisdom and goodness of the supreme disposer of all things.

AFFIANCE (*Law*) from *affidare*, or *dare fidem*, to give a pledge; a plighting of troth between a man and a woman. *Lit.* sect. 39.

AFFICHE (*Com.*) a posting-bill or any advertisement pasted up in public places to make things known.

AFFIDARE (*Law*) i. e. *dare fidem*; to plight one's faith or swear fealty.

AFFIDARI (*Law*) to be mustered or enrolled for a soldier. *MS. Dom. de Farendon*, 22. 25.

AFFIDATI (*Lit.*) the name which the academicians of Pavia assume.

AFFIDATIO Dominorum (*Law*) an oath taken by the Lords in parliament. *Hen. VI. Rot. Parl.*

AFFIDATUS (*Law*) a tenant by fealty.

AFFIDAVIT (*Law*) an oath in writing, sworn before some one duly authorized to administer it.

AFFIDRA (*Chem.*) Ceruss.

AFFILIATIO (*Archæol.*) or *adfilatio*, an adoption into a son's place.

AFFINAGE (*Com.*) an action by which any thing is refined, so as to make it purer and better; more particularly applied to the refining of metals.

AFFINIS (*Law*) from *affinis*, or *ad finis*, i. e. appertaining to the boundary; *προσηκουσ κατ' επισημιαν*, a cousin or kinsman by marriage; *uxoris cognati sunt, affines mariti*.

AFFINITY, *degrees of* (*Bible*) There are several degrees of affinity, or relationship by marriage, mentioned in *Leviticus xviii.*, which were regarded as impediments to marriage.

AFFINITY, *degrees of* (*Law*) The prohibited degrees of affinity specified in God's law, were particularized by two different statutes of Henry VIII. that is, 18 Hen. VIII. c. 7; 25 Hen. VIII. c. 22: at present the prohibited degrees are all those which are under the 4th degree; but between collaterals, those in the 4th degree and upwards, as first cousins, are permitted to marry. *Gibs. Cod.* 413.

AFFINITY (*Phy.*) the tendency which the particles of matter have to be attracted to each other at insensible distances, in distinction from *attraction*, properly so called. This *Affinity* is of different kinds, as—*Chemical affinity*, or *Elective attraction*, distinguished from all other kinds of attraction, as the affinity of sulphuric acid for potash and lime.—*Compound affinity*, the union of different bodies in one homogeneous mass.—*Compound elective affinity*, or *double elective attraction*, when there are more than four

substances; as, if nitric acid be added to the sulphat of ammonia, no decomposition takes place; but if nitrat of potash be added, then two new bodies are formed, that is, the potash attracts the sulphuric acid, and the nitric acid the ammonia.—*Intermediate affinity*, a union by the help of a medium; as azote with fixed alkalies, by the help of nitric acid.—*Quiescent and dwelent affinity*: the former of these terms, according to Mr. Kirwan, expresses the force exerted to preserve the old combination; and the latter, that which tends to destroy it.—*Reciprocal affinity*, when a separation is caused between two substances by a third, with which one of them is united, but afterwards separated again by the influence of the separated principle.

AFFI'ON (*Chem.*) an Arabic name for opium.

AFFI'OUME (*Com.*) or *Fiume*; a kind of flax which comes from Egypt, by way of Marseilles and Leghwan.

AFFIRMANCE (*Law*) from *affirmare*: the confirming a former law. 8 *Hen. VI.*

AFFIRMANT (*Law*) the same when applied to Quakers, as deponent when applied to others.

AFFIRMATION (*Law*) a simple asseveration, which, according to a set form of words, is allowed to the Quakers in the lieu of an oath. 7 *Will. III.*

AFFIRMATIVE (*Log.*) an epithet for a species of proposition wherein any predicate is affirmed of its subject, or it is predicated affirmatively of the subject; as, ‘a horse is an animal:’ here ‘*animal*’ is affirmed of a *horse*. This is opposed to the negative.

AFFIRMATIVE (*Algeb.*) an epithet either for a sign or a quantity. This term was first used by Vieta.—*Affirmative* or *positive quantity*, any quantity that is absolutely to be added, in distinction from the negative quantity to be subtracted.—*Affirmative* or *positive sign*, marked thus (+) signifies *plus*, and more, or added to, and is annexed to the affirmative quantity, as $a + b$, signifies that b must be added to a . *Viet. ad Logist. Spec. Not. prior.*

AFFIRMATIVE (*Ecc.*) an epithet for those who being charged with heresy before the Inquisition, do affirm the same when called upon to answer. *Emeric. Director. Inquisit.* pars 2, quæst. 34.

AFFIX (*Gram.*) any letter or syllable affixed or placed at the end of words, as *ment*, in the word *amendment*.

AFFLATUS Divinus (*Ant.*) an inspiration of some deity. *Cic. de Nat. Deor.* l. 2, c. 66.

AFFLATUS (*Med.*) from *af* or *ad* and *flo*, to blow; a blast or vapour that affects the body with some sudden distemper.

AFFLUX (*Med.*) a flowing of humours to any part.

AFFODIUS (*Zool.*) a sort of serpent, the same as the *Hæmorrhous*.

AFFORAGE (*Com.*) a duty paid in France to the lord of the district, for permission to sell wine or other liquors within his district.

AFFORA'RE (*Archæol.*) to set a price on any thing.

AFFORATUS (*Archæol.*) appraised or valued.

AFFORCIAMENTUM (*Law*) a strong hold.—*Afforciamentum curiæ*, the calling of a court on any extraordinary occasion.

AFFORCIARE (*Law*) to increase, as in the case of increasing a jury: *Cum in veritate dicenda sunt sibi contrarii*; i. e. when they are not agreed on their verdict. *Bract.* l. 4, c. 19.

AFFOREST (*Law*) to turn ground into a forest. *Chart. de Forest.*

TO **AFFRANCHISE** (*Law*) to set a person free from bondage.

AFFRAY (*Law*) from the Fr. *affrayer*, to frighten, signified, originally, the appearing in armour not usually worn, to the terror of others; but now implies a skirmishing or

fighting between two or more persons, to the terror of the king's subjects. *Stat. 2 Ed. III.*; *3 Inst.* 158, &c.

AFFREIGHTMENT (*Law*) *affretamentum*; the freight of a ship. *Stat. 11 Hen. IV.*

AFFRENGI (*Chem.*) red lead.

A'FFRI (*Archæol.*) 1. vide *Afferi*. 2. *Afri* or *Afri* bullocks, horses, or beasts of the plough. *Mon. Angl. par.* 2, f. 291.

AFFRODYNE, or *Affrodite* (*Chem.*) vide *Venus*.

AFFRONTE (*Her.*) an epithet for a savage's head that on a charge is fullfaced, as on the annexed cut.

AFFUSIO (*Med.*) affusion. 1. Pouring a liquor on something. 2. The same as *suffusio*.

AFFUT (*Mil.*) French for a gun-carriage.

A flat (*Mus.*) that which is the seventh of B flat.

AFLOAT (*Mar.*) floating; as a ship is *afloat* when the water is deep enough to buoy her up from the ground.

A'FORA (*Bot.*) without valves; an epithet for the pericarps of some plants, according to Camellus' system. [vide *Botany*]

AFORE (*Mar.*) that part of a ship which lies forward or near the stem; so likewise, adverbially, the manger stands *afore* the foremast; that is, further forward, or nearer the stem.

A fortiori (*Log.*) a term employed in a chain of reasoning, to imply that what follows is a more powerful argument than what has been already adduced.

A'FRAGAN (*Chem.*) verdigrease.

A'FRICAN company, (*Com.*) or the Royal African company, was incorporated in the 14th of Charles II. and was empowered to trade from Barbary to the Cape of Good Hope. The arms of this company are—"Or, an elephant with a castle on his back; *sable*, ensigned with a flag; *gules*, on a canton quarterly *azure* and *gules*; on the first and last a fleur de lis of France, and in the second and third a lion of England."

AFRICAN Bladder Nut (*Bot.*) the *Royena* of Linnæus, a shrub.—*African flea-bane*, the *Tarchoanthos* of Linnæus, a shrub.—*African Marigold*, the *Tagetes erecta* of Linnæus, an annual.—*African Ragwort*, the *Othonna* of Linnæus, a shrub.

A'FRICUS (*Ant.*) a south-west wind, so called because it blew from Africa. Horace calls it *protervus*. *Hor. Epod.* od. 16, v. 22.

A'FSLAGERS (*Com.*) those appointed by the Burgomasters of Amsterdam to preside over sales, after the manner of our auctioneers.

AFT (*Mar.*) *abaft* or *behind*, near the stern of the ship, as "To run out the guns *afore* and *aft*," i. e. from one end to the other.—"Right *aft*," i. e. in a direct line with the stern when applied to any distant object.—"To haul *aft* the fore sheet or main sheet," i. e. to pull the sails more towards the stern.

AFTER (*Mar.*) the hinder part of the ship, as the *after-hatchway*, the *after-capstan*, *after-sails*, &c.—*After-guard*, a name for the seamen who are stationed on the poop and quarter-deck of vessels, to attend and work the *aftersails*, &c.

AFTER-MATH (*Agric.*) or *after-grass*, the second grass which springs up after mowing.

AFTERBIRTH (*Med.*) the placenta. [vide *Placenta*]

A'GA (*Polit.*) an officer at the court or in the armies of the grand seignor, as *Buguk Inrakor Aga*, the grand equerry.—*Spahilar Agassi*, general of the cavalry.—*Capi Agassi*, governor of the pages.—*Janissar Agassi*, general of the janissaries, &c. The particle *si* is here added because the words *Spahilar*, *Capi*, &c. are in the genitive. *Ricaut. Ottom. Emp.*

AGALACTIA (*Med.*) *ἀγαλακτία*, from *α*, priv. and *γάλα*, milk, *Agalaxy*, or want of milk; whence the epithet, in Hippocrates, of *ἀγάλακτος*, applied to a woman wanting milk at the time of lying-in; and *ἀγάλακτος*, applied by Galen and others to the pastures which are unfavourable to the generation of milk in the animals who feed upon them. *Hippocrat. de Mul. & Gal. Com.*; *Gorr. Def. Med.*; *Foes. Oeconom. Hippocrat.*

AGALLIS (*Bot.*) vide *Anagallis*.

AGALLOCHA (*Bot.*) a species of the *excaccaria* of Linnæus.

AGALLOCHUM (*Bot.*) *Ἀγάλλοχον*, the *Indian Aloe*, or the *Excaccaria Agallocha* of Linnæus, is so called from *ἀγάλλομαι*, to exult, because it seems to exult in sending forth its odours. It is a sort of sweetscented wood, which is exported from India, and is used in suffumigations instead of frankincense. Dioscorides speaks of its medicinal virtues. *Dios. l. 1, c. 21*; *Oribas. Medec. Collect. l. 11*; *Paul. Æginet. de Re Med. l. 7, c. 3*; *C. Bauhin. Pin.*

AGALLUGI (*Bot.*) or *Agallugin*, vide *Agallochum*.

AGALMA (*Law*) the impression or image of any thing on a seal. *Chart. Edg. Reg. pro Westmonast. Eccles. anno 698.*

AGALMATOLITE (*Min.*) bildstein, or figure-stone; a species of the soapstone family.

AGAPANTHUS (*Bot.*) a genus of plants, Class 6 *Hexandria*, Order 1 *Monogynia*.

Generic Character. CAL. *spathe* common, gaping at the side.—COR. one-petalled; *tube* cornered; *border* six-parted.—STAM. *filaments* six; *anthers* kidney-shaped.—PIST. *germ* superior; *style* filiform; *stigma* simple.—PER. *capsule* oblong; *valves* navicular; *dissepiment* contrary; *seeds* numerous.

The Species are—*Agapanthus umbellatus*, African Blue Lily, a perennial, native of the Cape of Good Hope.—*Agapanthus ensifolius*, a perennial, native of the Cape of Good Hope. *Pluk. Phytogr.*; *Comm. Hort. Medi.*; *Breyh. Icon. Rar. et Exot. Plant.*; *Linn. Spec. Plant.*

AGAPETÆ (*Ecc.*) *ἀγάπηται*. 1. A society of unmarried women who professed to lead a holy and recluse life; but, on account of their immoralities, their house was broken up by order of a general council, under Pope Innocent II. 2. The priests who acted as father confessors to these women, and who were also called *Agapetæ*. *Epiphian. Hæres. c. 63*; *Hieron. ad Occan. de Vit. Cleric.*; *Pallad. in Vit. S. Chrysostom*; *Concil. Laodic. Ann. 364*; *Concil. Constantin. 5, 6*; *Gregor. ii. epist. 54*; *Baron. Annal. Ann. 57*; *Prætol. Elench. Hæret.*; *Sander. Hæres. c. 63* and *79*.

AGARIC (*Bot.*) *ἀγαρικόν*, another name for the Mushroom, the *Agaricus* of Linnæus, which grows on oaks, or the roots, and is either male or female. The former is used in dyeing, and the latter in medicine. [vide *Agaricum* and *Agaricus*]

AGARICOIDES (*Bot.*) a sort of Fungus like the Agaric.

AGARICUM (*Bot.*) *ἀγαρικόν*, Agaric; a plant, so called from the town of Agaria, in Sarmatia. It is reckoned of a warm and astringent quality, good for the gripes, crudities, fractures, and the like. *Dioscor. l. 3, c. 1*; *Plin. l. 25, c. 9*; *Gal. de Simpl. Med. Fac. l. 6, c. 5*; *Oribas. Med. Collect. l. 15, c. 1*; *Act. Tetrab. 4, serm. 1, c. 81*; *Paul. Æginet. l. 5, c. 64*; *Act. de Meth. Med. l. 5, c. 12*; *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Raii Hist. Plant. &c.*

AGARICUS (*Bot.*) a genus of plants, Class 24 *Cryptogamia*, Order *Fungi*. *Linn. Spec. Plant.*

Generic Character. PILEUS. *gills* underneath, composed of *lamina*, differing in substance from the rest of the plant; *seeds* numerous between the two lamina.

Species. The genus *Agaricus* may be divided into, 1. Those

whose stem is surrounded with a ring and curtain. [vide *Fungi*] 2. Those having a stem with a curtain, but no ring. 3. Those whose stem is annulate without a wrapper. 4. Those without stem or wrapper. 5. Those with a funnel form, or oblique cap. 6. Those with a cap halved, and stem lateral. 7. Those with a coriaceous cap and gills. 8. Those with a cap striate and plaited. 9. Those with the cap opaque and conic.

AGASYLLIS (*Bot.*) ἀγάσυλλις, a shrub, which, according to Dioscorides, produces the Gum Ammoniac. *Dioscor.* l. 3, c. 98.

AGATE (*Min.*) ἀγάτης, a precious stone, first found in Sicily, which is variegated with veins and clouds that form different figures, from which it derived different names. [vide *Achates*] It is composed of chrystal debased by earth, and formed, not by repeated incrustations round a nucleus, but by a simple concretion.

AGATE (*Mech.*) a stone of the agate kind engraven by art, which, among antiquarians, constitutes a species of antique gems.

AGATHOPHYLLUM (*Bot.*) a genus of plants, Class 11 *Dodecandria*, Order 1 *Monogynia*.

Generic Characters. CAL. perianth very small.—COR. petals six.—STAM. filaments twelve; anthers roundish.—PIST. germ superior; style very short; stigma pubescent.—PER. drup. somewhat globose; seed a nut, somewhat globose; the kernel convex.

Species. The only species is the *Agathophyllum aromaticum*. *Linn. Spec. Plant.*

AGAVE (*Bot.*) from ἀγαυός, admirable; a genus of plants, Class 6 *Hexandria*, Order 1 *Monogynia*.

Generic Character. CAL. none.—COR. one-petalled; border six-parted; parts lanceolate.—STAM. filaments filiform; anthers linear.—PIST. germ oblong; style filiform; stigma headed.—PER. capsule oblong; seeds numerous.

Species. Plants of this tribe are mostly shrubs, the principal of which are the—*Agave Americana*, *aloe*, &c. American Agave.—*Agave Virginica*, seu *subcaulescens*, Virginian Agave, native of Cuba, &c. *J. Bauh. Hist. Plant.*; *Ger. Herb.*; *Park. Theat. Bot.*; *Raii Hist. Plant.*; *Linn. Spec. Plant.*

AGE (*My.*) vide *Ætas*.

AGE (*Ant.*) vide *Ætas*.

AGE (*Chron.*) any period or limit of time which, for the convenience of chronology and history, is distinguished by events that have happened in the world. The generality of chronologers agree in making seven ages, or periods, that is, six ages before Christ, and one after; but they differ as to the division of these periods. The following is the division according to Usher.

Ages of the World.

1. From the creation of the world until the deluge, 1656, which contains 1656 years.—2. From the deluge till the time of the departure of Abraham to the land of Canaan, 2083, which contains 427 years. *Gen.* xi. 31, 32.—3. From the time of Abraham to the departure of the children of Israel from Egypt, 2153, which contains 430 years. *Exod.* xii. 29, 30, 31. 37. 41. 51.; *Num.* xxxiii. 3.—4. From the departure of the children of Israel from Egypt to the fourth year and second month of the reign of Solomon, 2992, containing 479 years. 1 *Kings* vi. 1. 37; 2 *Chron.* iii. 2.—5. From the reign of Solomon to the captivity, 3416, which contains 424 years.—6. From the captivity to the birth of Christ, 4000, which contains 584 years.—7. From the birth of Christ to the present period.

AGE (*Law*) that special time when men or women are enabled to do what, for want of years, they are prohibited doing: thus, twelve is the age for taking the oath of alle-

giance in a leet; fourteen, or for a woman twelve, the age of discretion, for consenting to a marriage, or choosing a guardian; twenty-one the full age. A person under the age of twenty-one may make a purchase; but, at his full age, he may agree or disagree to it. Fourteen is the age by law to be a witness, although a child of nine years of age has, in some cases, been admitted to give evidence. No one can be chosen member of parliament under the age of twenty-one; ordained as a priest before the age of twenty-four; nor be a bishop before thirty. 1 *Inst.* 78.—*Age prier*, in Latin *ætatis precatio*, when an action being brought against a person under age for lands which he hath by descent, he, by petition or motion, shows the matter to the court, and prays that the motion may be staid till he is of full age.

AGE of the Moon (*Astron.*) the number of days elapsed since the last new moon.

AGE of a Horse (*Vet.*) is known by his teeth, hoof, coat, tail, and ears.

AGE of a Hart (*Hunt.*) is judged by the furniture of his head.

AGE of Trees (*Bot.*) is commonly judged by the number of circles which appear on the trunk or stock of a tree cut perpendicularly.

AGELA (*Ant.*) assemblies of boys in Crete so called. *Cæl. Rhodig.* l. 18, c. 26.

AGE/LÆUS (*Med.*) ἀγελαῖος, an epithet for the coarsest sort of bread.

AGE/MA (*Ant.*) ἀγημα, a choice band of soldiers, mostly cavalry, among the Macedonians, answering to the Roman legion, of which Livy makes mention, in speaking of the army of Antiochus, "Addita his alia mille ferme equitum, agema eam vocabant," l. 37, c. 40; and in another place, "Delecta deinde et viribus, et robore ætatis ex omni cætratorum numero duo erant agemata; hanc ipsi legionem vocabant," l. 42, c. 51. It is also spoken of by other authors. *Diodor.* l. 19, c. 28; *Arrian. Alexand. Exped.* l. 3, &c.; *Quint. Curt.* l. 4, c. 13; *Suidas.*; *Cæl. Rhodig. Ant. Lect.* l. 21, c. 31, &c.

AGEMO/GLANS (*Pol.*) vide *Agiamoglaus*.

AGE/ND A (*Ecc.*) the office or service of the church.—*Agenda matutina et vespertina*, morning and evening prayers.—*Agenda Diei*, the office of the day.—*Agenda Mortuorum*, the service for the dead, i. e. offices or masses for the dead.

AGENDA is also the name of the book which contains the ritual or church service of the Romish church.

AGENDA (*Com.*) 1. A pocket or memorandum book, in which a merchant sets down what is to be done in the day.

2. A pocket almanack which a merchant carries with him for ascertaining dates.

AGENE/SIA (*Med.*) vide *Anaphrodisia*.

AGENFRIDA (*Law*) the true Lord or owner of any thing. *Leg. Inæ. apud Brompton.*

AGENHINE (*Archæol.*) *familiaris seu famulus domesticus*: he who lay a third night at an inn, and was called a third night awnhide, for whom his host was answerable if he committed any offence. "Item secundum antiquam consuetudinem dici poterit de familia cujus qui hospitatus fuerit cum alio per tres noctes: quia prima nocte dici poterit UNEATH, i. e. incognitus; secunda vero GUST, i. e. hospes; tertia nocte hogen hyne, i. e. familiaris." *Leg. Ed. Confess. apud Brompton.*

AGENO/RIDES (*Ant.*) a patronymic for the descendants of Agenor, particularly Cadmus. *Ovid. Met.* l. 3, v. 8.

AGENT (*Phy.*) *Agens*, τὸ ποιεῖν; any thing having the power to act on another object, as cold.—*Agent univocal* is that which produces an effect of the same kind and denomination as itself.—*Agent equivocal* is that which produces an effect of a different kind from itself.

AGE

AGENT, *natural* or *physical* (*Met.*) that which is determined by the author of nature to produce a univocal, or one sort of effect, with an incapacity to produce the contrary thereto, as the fire, which only heats, but does not cool.—*Agent, free or voluntary*, that which may equally do one thing, or the contrary to that, not acting from any predestination, but from choice, such as man, or the rational part of him, the soul.

AGENT (*Com.*) one who is commissioned to take care of the business of another, as *agent* to the several regiments of the army, *agents* for taxes, &c.—*Agents of the Bank and Exchange*, officers in France for transacting the business of Exchange between the Bankers and Merchants.

AGENT (*Pol.*) a person in the service of Government, who, in a foreign country, superintends the concerns of the nation that are entrusted to him.

AGENT, *army* (*Mil.*) a person in the civil department of the army between the paymaster general and the paymaster of the regiment, through whom every regimental concern of a pecuniary nature is transacted. He is obliged to give securities to government.—*Half-pay agent*, a person named or appointed by an officer on half-pay to receive his allowance.—*Agent*, among the French, is the person who is entrusted with the interior economy of a regiment, troop, or company.

AGENT, *Navy* (*Mor.*) a person on shore employed by officers and seamen to manage their concerns in regard to their pay, prize-money, &c.—*Agent victualler*, an officer stationed at a royal port to regulate the victualling of the king's ships.

AGENT and Patient (*Law*) when one person is both the doer of the thing, and the party to whom it is done, as when a woman endows herself with the best part of her husband's possessions.

AGENTES in rebus (*Polit.*) officers at the court of Constantinople, who had the direction of all the public carriages, of the couriers, of the journeys of the emperor and his household, &c. *Aurel. Vict. de Cæsar.* c. 39; *Hieron. in Abdiam.*; *Pancirolog. Notit. Dig. Imp. Orient.* c. 65.

A'GER (*Ant.*) a field, land, lands, or country, so called, according to Varro, from *ago*, to act, because work is done in fields. The Augurs distinguished the country round Rome into the—*Ager Romanus*, so called from the city of Rome.—*Ager Gabinus*, from the town Gabinium.—*Ager peregrinus*, from *pergo*, or *progredior*, because they went out of the *Ager Romanus* into it.—*Ager hosticus*, from *hostis*, an enemy.—*Ager incertus*, because it was doubtful to which of the four above-mentioned it belonged. To these may be added other distinctions, as the—*Ager arcifinus* or *arcifinalis*, from *arceo*, to keep off, because it was fitted to keep off an enemy.—*Ager occupatorius*, from *occupo*, to seize, because it was taken possession of by force of arms.—*Ager assignatus*, land portioned out.—*Ager compascuus*, common for the cattle, also called *ager scripturarius*, because it was entered in the books of the Roman publicans or tax-gatherers.—*Ager decumanus*, glebe or tithe land, so called because a tenth of the produce was paid to the Censors.—*Ager solutus*, fields not hedged or walled in.—*Ager vectignalis*, lands taken from an enemy that paid a certain annual tribute; they were also called *Ager publicus* when occupied by Roman colonists. *Cato de Re Rust.* c. 142; *Varro de Lingua Lat.* l. 4, c. 4; *Cic. Top.* c. 3; *de Offic.* l. 1, c. 7, &c.; *Hygin. de Limit. Constit.* p. 203, &c.; *Tacit. German.* c. 29; *Frontin. de Agror. Qualitat.*; *Fest. de Verb. Signif.*; *Isid. Orig.* l. 15, c. 13; *Turneb. Adver.* l. 1, c. 6; *Manut. Robertellus*, &c. *apud Græv. Thes. Antiq.* vol. iii. &c.

AGE'RASY (*Med.*) ἀγήρασις, from *a*, priv. and γήρας, old age; a vigorous old age.

AGG

AGERATO'IDES (*Bot.*) from *ageratum*, a species of the *Eupatorium* of Linnæus.

AGERATUM (*Bot.*) ἀγήρατον, i. e. μὴ γηρῶν, non senescens, not growing old, Sweet Maudlin; a plant so called, according to Pliny, because its flower does not decay soon. *Diosc.* l. 4, c. 59; *Plin.* l. 27, c. 4.

AGERATUM, in the *Linnean system*, a genus of plants; Class 19 *Syngenesia*, Order 1 *Polygamia Equalis*.

Generic Character. CAL. common oblong.—COR. compound uniform; corollæ hermaphrodite; proper monopetalous.—STAM. filaments capillary; anther cylindrical.—PIST. germ oblong; style filiform; stigmas two.—PER. none; calyx unchanged; seeds solitary; receptacle naked.

Species. The species are—*Ageratum conyzoides*, *Eupatorium humile Africanum*, seu *Americanum*, &c. seu *Conyza*, &c. Hairy *Ageratum*; an annual, native of America.—*Ageratum ciliare*, seu *Centaurium ciliare*, &c. native of the East Indies—*Ageratum latifolium*, an annual, native of Peru. *J. Bauhin. Hist. Plant.*; *C. Bauhin. Pin. Theat. Bot.*; *Ger. Herb.*; *Park. Theat.*; *Raii Hist. Plant.*; *Tourn. Inst. Herb.*; *Boerh. Ind. Plant.*

AGERATUM is also a name for the *Achillea ageratum*; the *Athanasia annua*; the *Conyza linifolia*; the *Eupatorium ageratoides*; and the *Senecio abrotanifolius* of Linnæus. *Ger. Herb.*; *Raii Hist. Plant.*; *Camer. de Plant. Epit.*; *Tournesf. Instit.*

AGE'RATUS lapis (*Min.*) Ἀγήρατος λίθος, a stone used by cobblers to polish women's shoes. It is esteemed discussive and astringent. *Gal. de Med. facil. Parab.* c. 18; *Oribas. Med. Collect.* l. 15, c. 1; *Paul. Æginet. de Re Med.* l. 7, c. 3.

AGETOR'ON (*Ant.*) ἀγήτοριον, a Grecian festival mentioned by Hesychius.

AGE' vitæ (*Med.*) an antidote used for procuring longevity. *Myrep. de Antidot.* c. 500.

AGE'USTIA (*Med.*) from *a*, priv. and γέομαι, to taste; a term used for fasting.

A'GGER (*Ant.*) 1. The middle and more elevated part of a military way, formed by the *coaggeratio*, or heaping of the stones and strata. 2. The mound of earth raised for a rampart to a town. *Varro de Ling. Lat.* l. 4, c. 32, et *Scal. in Varr.*

AGGESTUM Terræ (*Ant.*) χῶμα, a grave made of earth, which served formerly instead of a tomb. *Solin. apud Salmas.* p. 1219.

AGGISU'ED-BUND (*Com.*) vide *Aggouéd-bund*.

AGGLUTINANTIA (*Med.*) agglutinants or agglutinating, medicines that tend to the healing or reunion of parts that are separated. *Paul. Æginet. de Re Med.* l. 3, c. 22, &c.

AGGLUTINATIO Pilorum (*Med.*) reducing the hairs of the eyelids that grow inwards to their natural order. *Act. Tetrab.* 2, serm. 3, c. 681.

AGGLUTINATIO (*Med.*) from *ad* and *glutino*; the reunion of any separated parts of the body. [vide *Prosthesis*]

AGGLUTINATION (*Astron.*) the meeting of two or more stars in the same part of the zodiac, or, as it is more commonly understood, the seeming coalition of several stars so as to form a nebulous star.

AGGO'UED-BUND (*Com.*) the best of the six sorts of silks that are gathered in the great Mogul's dominions.

AGGREGATÆ (*Bot.*) from *aggrego*, aggregates or collectives; an epithet for the forty-eighth order in Linnæus' natural arrangement, including the aggregate flowers properly so called.

AGGREGATÆ glandulæ (*Med.*) small glands supposed to be lodged in the cellular coat of the intestines.

A'GGREGATE (*Phy.*) *aggregatum*, from *aggrego*, to assemble together; the whole sum or mass resulting from the collection of several small things into one body.

AGGREGATE (*Bot.*) *aggregatus*, from *aggrego*, to collect or assemble; an epithet applied to the flower which has some part of the fructification common to several florets: the

part which serves as a bond to the rest is either the receptacle or the calyx; and the partial or component flower is called the *floscule* or floret of Aggregate flowers. There are seven kinds; namely, 1. The Umbellate; 2. The Cymose; 3. The Compound; 4. The Aggregate, properly so called, having a dilated receptacle, and the florets on peduncles, as *Scabiosa*, *Knautia*, *Cephalanthus*, *Globularia*, &c.; 5. The Amentaceous; 6. The Glumose, as the grasses; 7. The Spadiceous, as the palms, also *Calla*, *Dracontium*, *Pothos*, *Arum*, *Zostera*, &c.

AGGREGATE is also an epithet for the bud, *gemma*; bristle, *seta*; root, *radix*: a bud is aggregate when many stand close together, as in *Zanthoxylum fraxineum*; a bristle is aggregate when many are joined together; a root is aggregate when several bulbs are connected together at the base.

AGGREGATION (*Phy.*) a species of union by which several things that have no natural dependance or connection one with another are collected together so as to form one mass.

AGGRE'SSES (*Her.*) vide *Pellet*.

AGGRE'STEIN (*Falcon.*) a disease in hawks proceeding from a sharp humour.

AGHE'USTIA (*Med.*) from *α*, priv. and *γεύομαι*, to taste; defect or loss of taste, a genus of diseases, Class *Locales*, Order *Dysæsthia*, in Cullen's Nosology.

AGIAMO'GLANS (*Polit.*) untaught Christian children, who, being taken while young, are instructed by the Turkish officers in the Mahometan religion, and made janizaries. *Ricaut. Turk. Emp.* l. 1, c. 10.

AGILD (*Law*) exempt from the customary fine or penalty.

A'GILER (*Archæol.*) an observer or informer.

AGILLA'RIOUS (*Archæol.*) an heyward, herdsward, or keeper of cattle in a common field, who is sworn at the Lords' court by solemn oath.

A'GIO (*Com.*) a Venetian word for assistance, signifies also, the Exchange or difference between the Bank-money and Current-money or Cash, as when a merchant stipulates to receive for his goods 100 livres bank-money, or 105 cash or current-money; the Agio is said to be 5 per cent. *Agios* vary in every place, and at different times in the same place: at Venice it is of two kinds; namely—*Agio constant*, or *Bank-Agio*, which is 20 per cent.—*Fluctuating Agio*, which is from 120 to 128, and is also called *sopragio*, because it is calculated on the Bank-money after the first *agio* is added.

AGIOSYMA'NDRUM (*Ecc.*) from *ἅγιος*, holy, and *συναγωγή*, to signify; a wooden instrument used by the Greek churches, and others, under the dominion of the Turks, for calling together assemblies of the people.

A'GIOTAGE (*Com.*) a French word for usury.

AGPST (*Law*) from the Saxon *gīpste*, a bed or biding place; taking in the cattle of strangers to feed in the King's forest. *Chart. de Foresta.* 9 Hen. III.; *Manw. For. Laws*, c. 11, &c.

AGISTER (*Law*) *Gist-Taker*, or *Agistator*, the officer appointed to take cattle into the King's forest. *Manw. For. Laws*, c. 11, &c.

AGISTAGE (*Law*) or *agistment*, *Agistamentum*, from the French *geyser*, *gister*, in Latin, *jacere*, to lie; because the cattle are *levant* and *couchant* while they are on the land. 1. The taking other men's cattle on one's own ground at a certain rate per week. 2 *Inst.* 643. 2. The profit from such feeding or pasturage. 3. The *agistment* of sea-banks is where lands are charged with a tribute to keep out the sea.

AGITA'TION (*Phy.*) a brisk intestine motion excited among the particles of a body; thus fire agitates the subtlest particles of bodies.

AGITATION (*Med.*) the exercise of the body, as from riding, which agitates the whole system in a salutary manner.

AGITATION (*Law*) *agitatio animalium in Foresta*; the drift of beasts in the Forest. *Leg. Forest.*

AGITA'TO (*Mus.*) Italian, signifying in a rapid manner, i. e. a rapid and broken style of performing.

AGITATO'RES (*Ant.*) *ἐλατῆρες*; charioteers, particularly those who drove the chariots at the games. *Cic. ad Attic.* l. 13, ep. 21; *Buleng. de Circ.*

AGITATO'RES (*Archæol.*) a name given to players in the middle ages, who were forbidden church communion: "De agitatoribus qui fideles sunt, placuit quamdiu agitant a communione separari." *Conc. Arel. Sub. Sylv.*

A'GITATORS (*Polit.*) 1. Persons chosen, in the time of the rebellion, out of every regiment, to sit in council, and manage the affairs of the parliament army. 2. Confidential persons employed to mix with their fellow subjects or comrades for the purpose of discovering their views and turning informers.

AGLA'SPIDES (*Ant.*) a regiment of soldiers among the Romans, so called from *ἀγλαός*, splendid, and *ἄσπις*, a shield; i. e. from the splendour of their shields. *Liv.* l. 44, c. 41.

A'GLETS (*Bot.*) or *Agleeds*, pendants which hang on the tip end of chives and threads, as tulips, roses, &c. *Græw. Anat. of Plants.*

A'GLITHES (*Bot.*) *ἀγλίθεις*; the divisions or segments of a head of garlic, which are usually called the cloves. *Hippocrat. de Morb. Mul.* l. 2.

AGLUTINATION (*Med.*) from *α*, priv. and *glutio*, to swallow; a difficulty or impediment in swallowing.

A'GME (*Surg.*) *ἄγμα*, from *ἄγω*, to break; the Greek name for a fracture.

A'GMEN (*Ant.*) a Roman army in march; so called from *ago*, to act, in distinction from the *acies*, or army drawn up in battle array. The Agmen was divided into the—*Agmen primum*, the troops in the front, answering to our van-guard, which were the *Hastati*, or spearmen.—*Agmen medium*, the troops in the centre, or the main-guard, which were the *Principes*.—*Agmen postremum*, the troops in the rear, or the rear-guard, which consisted of the *Triarii*, or veterans.—*Agmen longum*, an army marching in single files.—*Agmen pilatum*, an army in close ranks and files, having a narrow front; so called either from its form, or because the front ranks consisted of javelin men.

Virg. Æn. l. 12, v. 121.

———— *Pilataque plenis
Agmina se fundunt portis.* ———

—*Agmen quadratum*, a squadron or battalion; so called from its form approaching to the figure of a square. *Polyb.* l. 6, c. 38; *Frontin. Stratag.* l. 1, c. 6; *Isid. Orig.* l. 9, c. 3; *Veget. de Re Mil.* l. 3, c. 21; *Salmas de Re Mil.* c. 7; *Ramus. de Milit. Cæsar apud Græv. Thesaur. Antiq. Roman.* vol. 10, &c.

A'GNACAT (*Bot.*) a tree growing about the Isthmus of Darien, resembling a pear tree. *Ravi Hist. Plant.*

A'GNAIL (*Med.*) a sore slip of skin at the root of the nail.

AGNA'NTHUS (*Bot.*) the *Cornutia pyramidata* of Linnæus. *Plum. Nov. Gen. Plant.*

AGNA'TA (*Bot.*) vide *Adnata*.

AGNA'TI (*Ant.*) kindred; so called because, *agnoscuntur*, i. e. they are reckoned the first in the line of relationship, and stand in the son's stead in default of male issue. The *Agnati* are on the father's side, in distinction from the *Cognati* on the mother's side, the *Affines* who are allied by marriage, and the *Propinqui* or relations in general. *August. de Leg.*; *Sigon. de Nom. Roman. &c. apud Græv. Thes. Antiq. Roman.* vol 2, 8, &c.

AGNA'TION (*Law*) that relation by blood which is between such males as are descended from the same father; in distinction from cognation, or consanguinity, which includes the descendants from females.

AGNIL (*Bot.*) the *Indigofera tinctoria* of Linnæus.

AGNINA membrana (*Anat.*) or *Pellicula*; a membrane which involves the fœtus.

AGNITION (*Poet.*) ἐπίγνωσις, recognition; a part of the fable in an epic poem, as the agnition of Ulysses in the *Odyssey*. *Aristot. de Poet.* c. 16.

AGNOIA (*Med.*) ἀγνοία, from α, priv. and γινώσκω, to know; privation of knowledge, or losing the recollection of our friends, in consequence of a fever. *Hippocrat. Prædict.* l. 1, & *Gal. Comm.* 2.; *Foes. Oeconom. Hippocrat.* l. 1, & *Gal. Comm.* 2.; *Foes. Oeconom. Hippocrat.*

AGNOIETÆ (*Ecc.*) ἀγνοίηται, from ἀγνοίω, to be ignorant of; a name for two different sects of heretics. 1. A sect of the fourth century, who called in question the omniscience of God. *Socrat. Eccles. Hist.* l. 5, c. 24; *Sozom. Hist.* l. 6, c. 26; *Nicephor.* l. 12, c. 30; *Prateol. Elench. Hæret.* 2. A sect of the sixth century, who denied that Christ knew the day of judgment. They are probably but one and the same sect, avowing different doctrines at different times. *Johann. Damascen. de Hæres.; Nicephor. Eccles.* l. 18, c. 45.

AGNOMEN (*Ant.*) from *ad*, and *Nomen*, quasi accedens nomen; a name or title affixed to a name by way of distinction; as, Africanus, the agnomen of Scipio, who conquered Africa. It is the last of the three among the Roman names. [vide *Nomen*]

AGNUS castus (*Bot.*) a tree so called, from ἄγνος, chaste because the chaste matrons used to sleep upon it during the Thesmophoria, or feast of Ceres. It is more commonly called λόγος οἶσος, osier, from the toughness of its rods. *Hippocrat. de Morb. Mul.* l. 1; *Nicand. Theriac.* v. 71; *Dioscor.* l. 1, c. 135; *Plin.* l. 24, c. 19; *Gal. de Simpl. Med. Fac.* l. 16; *Eustath. ad Il.* l. 11; *Aet. Tetrab.* l. serm. 1.

AGNUS castus, in the Linnæan System, the *Vitex Agnus castus*, or the Chaste Tree. *Ger. Herb.; Park. Theat. Bot.—Agnus Scythicus*, the Scythian Lamb, described by Kircher and others as a plant betwixt the vegetable and the animal, has been discovered to be a fern cut into the shape of a lamb, for the purposes of deception. *Kirch. Ars Magna.; Kaempf. Amœnit. Exot.*

AGNUS Dei (*Ecc.*) the figure of the Holy Lamb holding the cross, stamped upon a piece of white wax of an oval form, and consecrated by the pope. *Alcuin. de Divin. Offic.; Cerem. Rom.* l. 1, sect. 7; *Baron. Annal. ann.* 58.

AGOGE (*Mus.*) ἀγογή, one of the subdivisions of the Melopœia. *Eucl. lib. de Mus. Art.*

AGOGE (*Med.*) 1. The order and tenor of a thing, as the procedure of a distemper, or the course of a man's life. *Hippocrat. Epidem.* l. 7; *Gal. ad Glauc.* l. 2. 2. The state and disposition of the surrounding atmosphere. *Hippocrat. Epidem.* l. 1, &c. and *Gal. Com.; Gorr. Def. Med.; Foes. Oeconom. Hippocrat.; Castell Lex Med.*

AGOGE (*Min.*) or *Agogæ*, little channels through which the water runs from gold ore that has been washed in it, and in which the gold is deposited. *Plin.* l. 33, c. 4.

AGOMPHIASIS (*Med.*) from α, priv. and γόμφος, a socket; a disorder in the teeth, by being loose in the sockets. *Gorr. Def. Med.*

AGON (*Ant.*) ἀγων, a Greek name for any contest, but particularly applied to the public games in which the principal contests took place.

AGONALES (*Ant.*) priests so called, which were added by Tullus Hostilius to the number of the Salii.

AGONALIA (*Ant.*) festivals in Rome, celebrated in honor of Janus, or Agonius, on the 11th of January, the 21st of May, and 13th of December, ἀπὸ τῶν ἀγώνων, i. e. from the games and contests usually celebrated at that time, wherefore called, likewise, *Agonia*, according to *Ovid. Fast.* l. v. 331.

Et prius antiquus dicebat Agonia sermo,

Varr. de L. L. l. 5; *Macrob. Saturn.* l. 1, c. 4.

AGONALIS dies (*Ant.*) the fourth day after the Nones and ninth day of the month, on which day, when the feast of Agonalia was celebrated, a ram was sacrificed to Janus according to *Ovid. Fast.* l. 1.

*Quatuor adde dies, ductus ex ordine Nonis
Janus Agonali luce piandus erit.*

AGONE (*Bot.*) another name for the *Hyosccmus niger* of Linnæus.

AGONES (*Ant.*) the priests who struck the victims so called from the ancient custom among the Romans for the priest to inquire *agone?* i. e. shall I strike? *Fest. de Signif. Verb.—Agones Capitolini*, games celebrated every fifth year on the Capitoline hill, where artists of every description used to contend. It was instituted by Domitian, who assigned a crown of oak to the victors. *Juven. sat.* 6, v. 386.

*An Capitolinum deberet Pollio quercum
Sperare.*

Mart. l. 4, epig. 44.

O cui Tarpeius licuit contingere quercus.

Sucton. in Domit. c. 4; *Schol. in Sueton. Scalig. de Emendat. Temp.* l. 5; *Panvin. Fast.* l. 2; *Rosin. Antiq. Roman.*

AGONIA (*Ant.*) the same as *Agonalia*.

AGONIA (*Med.*) ἀγωνία, from α, priv. and γένος, an offspring; a term used by Hippocrates for sterility. *Hippoc. Epidem.* l. 2.

AGONIA (*Med.*) ἀγωνία, *agony*; a struggle, as between life and death. *Gal. de Symptom. Caus.* l. 2, c. 5; *Gorr. Def. Med.*

AGONICLITÆ (*Ecc.*) vide *Agonyclitæ*.

AGONISTARCH (*Ant.*) he who took charge of the combatants, that they might be exercised previous to the contests. This office is mentioned in an ancient inscription quoted by Ligorius, APOLLINI INVICTO SACRUM Marcus AURELIUS. Marci AUGUSTI LIBERTUS APOLLONIUS. AGONISTARCHA. COMMODIANUS. *Mercur. de Arte Gymnast.* l. 1, c. 12.

AGONISTICI (*Ecc.*) a name given by the Donatists to those whom they sent about in the country to seize the Catholics.

AGONISTICUM (*Med.*) ἀγωνιστικόν, an application of excessively cold water in case of fever. *Gal. περί μαρμαριμῆς; Paul. Æginet. de Re Med.* l. 2, c. 30.

AGONIZANTS (*Ecc.*) certain friars in Italy who assisted those that were in their last agonies.

AGONOS (*Med.*) from α, priv. and γένος, an offspring; barren. 1. An epithet applied by Hippocrates to women who, though capable of breeding, had never had children. *Hippocrat. Epidem.* l. 2. 2. To signify equal, as applied to days, ἀγνοιοί ἡμέραι, equal days, as the fourth and sixth, on which a crisis is not to be expected, in distinction from the γονίμοι ἡμέραι, the unequal days, as the third or seventh, when the crisis commonly happens. *Hippocrat. Epidem.* l. 2. sect. 6; *Gorr. Defn. Med.; Foes. Oeconom. Hippocrat.*

AGONOTHETA (*Ant.*) ἀγωνοθετής, from ἀγων, and τίθημι, i. e. *Agonis dispositor*; the judge at the games, who distributed the prizes. *Poll. Onomast.* l. 3. c. 30; *Phavorinus; Hesychius; Suidas.*

AGONYCLITÆ (*Ecc.*) ἀγωνοκλιταί, from α, priv. γόνυ, the knee, and κλῖνω, to bend, Agonyclites, or not benders of the knee, a sect of the 7th century, who objected to kneeling at prayer. *Johann. Damasc. Hæres.* c. 91.

AGORÆUS (*Med.*) ἀγοραῖος, an epithet for bread that is very coarse.

AGORA'NOMI (*Ant.*) ἀγορανόμοι, Athenian magistrates who presided over the market, so called because they administered justice in the ἀγορά, or forum. They answered to the Ædiles or Æditui of the Romans, and were chosen

by lot. To these men a certain toll was paid by all the market folks, whence Decapolis is introduced by Aristophanes, demanding an eel of the Bœotian for the *τελος της ἀγορᾶς*, i. e. the toll of the market.

Acharn. act 1, sc. 4.

Ἀγορᾶς τέλος ταύτην γέπε δῶσις ἐμοί.

They were ten in number, five for the city and five for the Piræus, and had, according to Theophrastus, in his book *De Legibus*, to see that no one was wronged in the market. *Plat. de Leg.* l. 6; *Lysias. Orat. cont. Dardan*; *Artemidor. Oneirocrit.* l. 2, c. 31; *Harpocraton Lex*; *Meurs. de Pir.* c. 4.

A'GRA *Caramba* (*Bot.*) an odoriferous wood that comes from the isle of Hayman, in China.

AGRA'RIA *Lex* (*Ant.*) from *ager*, land; a law for distributing among the soldiers the land gotten by conquest. This law was proposed four several times, i. e. by Spurius Cassius, Licinius Stolo, Tiberius Gracchus, and lastly by Julius Cæsar, who prevailed, by his intrigues, in carrying a measure that proved fatal to the republic. U. C. 695. B. C. 59. *Dionys.* l. 8, c. 69; *Cic. de Leg. and Agrar. contra Rull.*; *Liv.* l. 2, c. 41, &c.; *Flor.* l. 3, c. 3, &c.

AGRA'RIÆ *Stationes* (*Ant.*) a kind of advance guard among the Romans, that was posted in the fields. *Veget. de Re Mil.* l. 3, c. 8; *Ammian Marcell.* l. 31, c. 8; *Turneb. Adver.* l. 4, c. 7.

AGREA'GE (*Com.*) a name among the merchants of Bourdeaux for courtage or brokerage.

AGREEMENT (*Law.*) a joining together two or more minds in any thing done or to be done.

AGRE'STA (*Med.*) the juice of unripe grapes.

AGRE'STEN (*Chem.*) Acid-stone Tartar.

A'GRI (*Law*) arable lands in the common fields.

A'GRIA (*Bot.*) Holly, the *Ilex aquifolium* of Linnæus.

AGRIA (*Med.*) a pustule on the skin; so called on account of its malignity, from the Greek *ἀγριοίς*, fierce. *Cels.* l. 5, c. 28.

AGRIA'MPELOS (*Bot.*) from *ἀγριος*, wild, and *ἄμπειλος*, a vine; the wild vine or Black Briony, the *Brionia alba* of Linnæus.

A'GRICULTURE, from *ager*, a field, and *colo*, to till, may be defined the cultivating of land, for the benefit of man and beast, in distinction from Horticulture, which is the cultivation of gardens, or particular portions of ground for the benefit of man only. Agriculture is divided into *Theoretical*, which is Agriculture properly so called; and *Practical*, which is called Husbandry. He who follows agriculture as a science is termed an *Agriculturist*; and he who practices husbandry is a *Husbandman*.

Agriculture, or the Theory of Agriculture.

The theory of agriculture comprehends the nature and properties of lands, the different sorts of plants fitted for it, and the rotation of crops.

Different kinds of Lands.

Land is distinguished by the name of *soil* when its qualities are considered as a light soil, heavy soil, stiff soil, rich soil, or poor soil.

As to its application. Land is denominated—*Meadow* or *grass lands*, where grass is allowed to grow.—*Pasture land*, that on which cattle is fed.—*Arable land*, land fit for ploughing.—*Fallow land*, which is left to lie fallow, or without a crop for a certain time.—*Wood-lands*, or lands covered with wood, which are either *woods* having trees and underwood; or *groves* having only timber.—*Pastures* are either *up-lands* which are never overflowed by rivers, *marsh lands* which lie near water, or *fenny lands* which receive and retain

the water from the up-land.—*Fore-land* is that piece of land which lies to seaward in marsh-land, a—*Garden* is cultivated for domestic use and pleasure.—*Orchard* is a species of garden destined for fruit-trees.—*Vineyard* is a place set apart for the growth of vines.—*Hop-grounds*, or *Hop-plantations*, for the growth of hops.—*Plantations* are small patches of trees to serve for ornament, and—*Nurseries* are the grounds where young trees are reared.—*Lay* is any piece of land laid down with grass: this grass is called the *sward*, and the land therefore is named also *sward-land*.—A *Field* is any portion of land parted off for the purposes of agriculture: when enclosed by a hedge or wall, it is a *close* or *enclosure*, otherwise it is an *open-field*. The *fences* of fields are either *ditches*, with or without an embankment; *ha-has*, or sunk fences; *palings*, or timber fences, in different forms; *hedges*, with or without a ditch, consisting of *dead-hedges* formed of stakes; *live-hedges*, or *quickset-hedges*, planted with the quick of Whitethorn, Blackthorn, Holly, &c.

Land is moreover differently denominated according to the tenure by which it is held; namely,—*Freehold*, if free of all legal incumbrances; and the person holding such land is a *Freeholder* or *Land-Proprietor*.—*Copyhold*, if held under a copy or contract with the Lord of the Manor; and the person so holding is a *Copy-holder*.—*Farm*, if it be held by a lease or contract with the proprietor: the person letting the farm is called the *Landlord*, and the person hiring is the *Farmer* or *Tenant*.

Plants of different Kinds.

Plants which are used in agriculture serve either for food or commerce, and are distinguished into *Culmiferous* and *Leguminous*. The fruit or seed of *Culmiferous* plants is *corn* or *grain*; the leaves and roots of *Leguminous* plants, which serve as food for man, are *vegetables*.

Culmiferous Plants are of different kinds, namely—*Wheat*, *triticum*, which grows best on a stiff or clay-soil, and is sown in October. [vide *Wheat*]—*Rye*, *secale*, which grows best in a chalky soil.—*Barley*, *hordeum*, which requires a mellow soil, rather light than stiff, and is sown in April. [vide *Barley*]—*Oats*, *avena*, which succeeds in most soils, even the poorest, and is sown in March.

Leguminous Plants are as follow:—*Potatoes*, *Solanum tuberosum*, which are planted in April.—*Turnips*, *Brassica rapa*, which are sown in June.—*Pease*, *pisum*, sown in February.—*Beans*, *Vicia faba*, sown in February.—*Carrots*, *daucus*, sown in March or April.—*Parsnips*, *pastinaca*, in Autumn.—*Cabbages*, *Brassica oleracea*, in March or April.—*Burnet*, *poterium*, recommended as food for cattle, on account of its being an evergreen, is adapted to a poor soil, and is sown in March.—*Beet*, *beta*, is sown in March.

Plants which are cultivated, particularly for commerce, serve various purposes besides that of food. They are either *herbaceous* or *woody*.

Herbaceous Plants of this sort, are—*Flax*, *linum*, used for the making of linen, and extracting an oil, grows on a deep sandy loam.—*Hemp*, *cannabis*, the same.—*Rape* or *Cole-seed*, *Brassica napus*, which is cultivated for its oil, grows any where.—*Woad*, *isatis*, which is used in dyeing, is cultivated in a blackish heavy mould.—*Hops*, *humulus*, used in malt liquor, grow in a black loose moor-soil.

The *woody kinds* of plants are either *Fruit-Trees*, or *Timber-Trees*. The two most important sorts of fruit-trees are the *Apple*, from which *Cyder* is made; and the *Pear*, which yields *Perry*. Among the timber-trees are the *Oak*, *Elm*, *Ash*, *Larch*, &c. which are each spoken of in their proper places.

Plants which grow spontaneously, and are therefore hurt-

AGRICULTURE.

ful, are called *weeds*, such as the—Thistle, *carduus*, which grows on strong land, and burns the corn.—Twitch-Grass, *ophyris*, which keeps the land loose and hollow.—May-Weed, *anthesis*, which infests barley.—Goose-Grass, or Wild-Tansy, *tanacetum*, which grows mostly on strong clays.—Cockle, *Agrostemma gūhago*, which infests barley.—Fern, *filix*, and Furze or Brake, *Pteris aquilina*, which grow mostly in a sandy brown soil.—Rushes or Flags, *juncus*, aquatic weeds, which grow in marsh-lands.

Plants in agriculture are exposed to particular diseases, as the—*Blight* in wheat, supposed to be caused by an insect.—*Mildew*, a more frequent disease, consists of a powder that attaches to the grain in the ear. It is either black or red, the former of which is called *smut*. Washing the grain, that is, to be sown in a lie, has been found to be an efficacious remedy.—*Grub* is a kind of worm which feeds upon the roots of the corn.—Turnips and Hops are both subject to a particular *fly*, called after the plants they infect.—Potatoes are exposed to the *curl*, which attacks the leaves of the plants.

Rotation of Crops.

A *crop* is that which is produced by a single act of cultivating a field, and supplying it with grain or seed. A field is said to be *cropped* when it is occupied with any vegetation. An *etch crop* is that which is second in rotation.—*Rotation of crops*, or the manner in which they succeed each other in the same field, varies with the circumstances of the soil; but, as a general rule, wheat may follow fallow on a clay soil, then peas, barley, hay, and oats; on a light soil barley may follow turnips, then hay, oats, fallow, and wheat.

Husbandry, or Practical Agriculture.

Under this part of Agriculture are comprehended the labours of Husbandry, with the implements and animals appertaining thereto.

Labours of Husbandry.

The labours of husbandry are those which belong to the field, and those of the farm-yard. The labours of the field consist of preparing the land for the reception of the grain, committing the grain to the earth, and gathering in the fruits.

Preparing the Land.

The preparation of the land requires both general and particular labours. The general labours are—*Breaking up* the ground, i. e. opening it for the first time.—*Hedging*, or the enclosing land with a hedge. The person who does this work is the *Hedger*, and the ways of doing it are various, as, *Plashing a hedge*, i. e. bending down the shoots of an old hedge.—*Riddering a hedge*, cutting away the superfluous shoots.—*Eddowing a hedge*, &c. [vide *Hedge*]—*Land-draining*, another important labour is the carrying off stagnant water from the surface of the soil, by means of *drains* or channels made in the earth. *Drains* are either open or hollow. *Open drains* are those which run along the surface of the earth. *Hollow drains* are placed under the earth. [vide *Drain*]

The particular preparatory labours are—*Ploughing*, or turning up the earth with a plough. Lands are ploughed so as to make furrows and ridges. *Furrows* are the tracks of the plough. *Ridges* are made up of a certain number of furrows between the *henting* or *water-furrows*. Lands ploughed with ridges of two bouts or rounds, are called *two bouted lands*; those which are ploughed with broad ridges are *broad-lands*; and those parts of ploughed fields that run along the hedges are *head-lands*, or *hedge-*

lands. When the furrow is turned towards the unploughed ground, this is termed *Rice-balking*.—*Fallowing land* is the ploughing up a fallow; *twifallowing* is ploughing it a second time; and *trifallowing* is the third ploughing.—*Rolling* is the operation by which the clods of earth are broken with a roller, and—*Harrowing* is the loosening the earth with the harrow after it has been ploughed.—*Burn-beating*, otherwise called *Denshiring*, i. e. *Devonshiring*, probably from the county where it commenced, is the burning of land, or rather the weeds, as heath, furze, &c. as it lies in heaps on the land.—Land is said to be *brought to a season* when it is made fine, by ploughing, &c.—*To Lay up land*, is to plough it the first time for any particular occasion.—*Manuring land* is the supplying it with any sort of manure; and *dressing land* is the mixing any other soil with the earth to alter its texture and properties.

Seed Time. When the land is prepared, the next step is the sowing the seeds or grain. Whatever is raised by seed is *sown*, *set*, or *drilled*.—*Sowing* is done with the hand, and when scattered over the ground, it is called *sowing broadcast*.—*Setting* is dropping the grain from the hand into holes made with the *dibble*, as in the case of wheat, peas, beans, &c.—*Drilling* is the sowing of seeds in *drills*, or rows, which is done by a machine, called the *drill-plough*. When the earth is supplied with grain, then it is necessary to *weed*, i. e. to clear it of the weeds which grow, and, in some cases, as that of turnips, it is necessary to *hoe*, i. e. to loosen the earth with the hoe, and remove some of the plants.—*Planting* is the raising of plants by means of others, or parts of others. Hops are planted by means of *sets*. Trees are raised by *layers* from the mother plant; or by *suckers* from the mother root, as the Elm, Elder, &c.; or by *slips*, *cuttings*, or *sets*, as Willows, Sallow, Ozier, and the like. Some are raised from seed, as the Oak, Chesnut, Ash, &c.; and the young plants, after they first come up, are termed *seedlings*.

Harvest. The seed time is succeeded by the *harvest*, or the gathering in of the fruits. The time for cutting grass and making hay is the *haysel*. That of cutting the corn is properly the harvest. Hay is mowed, i. e. cut with a scythe; and the grass so cut is called the *swath*.—*Strewing* the grass, is scattering it evenly over the ground, which is done either with a fork, or the hand.—*Winrowing* is the gathering into small rows the grass so strewed.—*Cocking* is the raising it into heaps.—Hay is carted on waggons by one who *itches* with a pitchfork; and afterwards *stacked*, i. e. put upon a stack, which, if the hay be not properly made will *heat*, and sometimes be set on fire.—If the same meadow be mowed a second time, this mowing is called the *Aftermath*.—When hay is to be sold it is taken to the market in certain quantities, called a *load* or *truss*.—*Wheat* is ripe when the ear is yellow and hangs down. It is *reaped*, i. e. cut with a sickle, and made up into *sheaves*, i. e. bundles tied up with a *wisp* or band of straw. When several sheaves are set up in a slanting direction against each other, it is termed a *shock*, which is afterwards *carted* and placed in a barn. The heap thus raised in the barn is termed the *goff*. When a field is cleared of the shocks, the gleaners are let in to gather the scattered ears of corn, which is called *leasing* or *gleaning*. The straw of wheat or rye which is left after cutting, is the *stubble*.—*Barley* is ripe when the red *roan* or reddish colour is gone off, when it is mowed, and left to lie on the *swath*. If it be *inned* or *housed* wet, it will *mowburn*, which renders it unfit for *malting*, or the making of malt. If the weather be wet after it is reaped, it is apt to *must*, i. e. to spire or sprout, unless it be turned and shaken.

Corn is *thrashed* by the help of a flail; and *winnowed*, or cleansed, of the *chaff* or husk by means of a fan. The *Offal* is the defective grain that remains after winnowing and cleansing. When grain is thrashed, it is laid up in *granaries* until it goes to market; and, for the better preservation of it, is turned and *screened*, i. e. run through a screen. Wheat is ground either in a wind or watermill, and yields *flour*, which is the finest part of the grain, and *meal* and *pollard*, which have different portions of the *bran* or husk mixed with it.—*Peas* are commonly reaped with a hook at the end of a long stick, and left to lie in small heaps till the *haum*, i. e. the stalks, and the *cods*, are dry.—*Hops* are ripe when they begin to colour; and are gathered by picking the hops from the *haum*, or *bind*, which is round the pole, after which they are dried to a certain *gage of draught*, in a *kiln* covered with hair, over a *staddle*, in which is a charcoal fire. *Hack dried hops* are those which are imperfectly dried. After drying, the hops are *bagged*, or put into bags called *pockets*, in which manner they are carried to market.—*Hemp* and *flax*, which are ripe when they begin to grow brown, are gathered by *pulling* and *tying* up in handfuls.—*Madder*, which is three years in coming to maturity, consists of three different sorts when it is gathered, namely, *mill-madder*, the first, is the outer rind or husk, which, when pared off, is the inferior; the second, or middle rind, is termed Number O: *crop-madder*, the third and best sort, is the heart and pith.—Trees are transplanted, which are removed from the spot where they were reared or have been growing. They are *pruned*, i. e. cleared of their dead woods or superfluous branches with a pruning knife: they are *lopped* when the larger branches that form the top are cut off. When trees have been often lopped, and are grown old, they are called *pollards*. Timber is *felled* when the trunk is cut down, so as to leave only a stump. It is *barked*, when it is stripped of its bark. To *stadle* a wood, is to leave young trees at certain distances.

Labours of the Yard House.

Under this head are to be reckoned the management of animals, malting, brewing, baking, management of the dairy, &c.

The animals on a farm are termed the *live stock*, and consist of either beasts called *cattle*, or birds called *poultry*. Beasts are either beasts of burden, as horses, &c.; or grazing beasts, as oxen, sheep, &c.—*Horses* are distinguished into *draught-horses*, *riding-horses*, &c. [vide *Horse*] A *team* of horses is any number that go together either in a waggon or plough. The young of a horse is termed a *foal* while it sucks, and a *colt* before it is broken in for use. The *stable* is the place set apart for the horses; the *stall* is a partition in the stable for a single horse; the *litter* is his bed of straw; the *rack* is the place railed off for his hay; the *manger* is a trough for his corn; and the *bin* is the chest to hold the chaff or the corn. Of grazing beasts there is the—*Ox*, of which the male is called the *bull*, and the female the *cow*. The young of a cow, while it sucks, is a *calf*, afterwards a *steer* if male, a *heifer* if female, and a *bud* as soon as it has budding horns. Oxen of the black kind are called *black cattle*, and cows which are kept for their milk are called *milk-cows*.—*Sheep* are bred for their flesh and their wool. The male of the sheep is the *ram*, which, when cut, is a *weather*; the female the *ewe*, which, when it is old, is a *erone*. *Polled sheep* are those without horns, which are reckoned the best breeders. The young of sheep are termed *lambs*, and the bringing forth is *yeaning* or *lambing*.

Shearing of sheep is taking off their wool with shears; whence, as shearing takes place annually, their age is reckoned thereby, as *one-shear sheep*, *two-shear sheep*, &c. Sheep are penned or folded, that is, they are fastened within a narrow space called a *pen*, by means of *hurdles* or moveable gates, which are fixed into the ground, and tied together with *ozier-twigs*.—*Swine* are kept for breeding and fattening, of which the male is the *boar*, and, after it is cut, is a *hog*; the female is the *sow*, and, after it is cut, the *spayed gelt*. The young of the sow is the *pig*, and the bringing forth is *farrowing*; while a pig sucks it is a *sucking pig*; when fit for roasting, it is a *roaster*; and, when it is three quarters of a year old, it is a *young shoot*. Swine *shackle* in corn fields or on mash, i. e. the acorns that are under the tree; their flesh is called *pork*, but that of the boar is *brawn*.—*Poultry* are the domestic *fowls* or birds kept for their flesh, and their eggs. The male bird is generally the *cock*, the female the *hen*; but of geese the male is the *gander*, the female the *goose*; and of ducks the male is the *drake*, and the female the *duck*. Poultry *hatch* their young by sitting upon their eggs a certain time; a hen brings forth *chickens* after twenty days' sitting; a duck brings forth *ducklings* after thirty days; a goose, *goslings*; a Turkey, *turkey-pouts*; and a swan, *cygnets*. *Green geese* are the young geese fatted in spring, *stubble geese*, those which are fatted in the stubble. *Barn door fowls* are full grown chickens which are fatted by the barn-door.—*Bees* are kept for their honey and wax. An *apiary* is a bee-garden, or the place where bees are kept; the *hives* or wicker baskets are their houses, which are placed on stools or benches in a sheltered spot. The *swarming* of bees is the collection of the young bees in the open air, which light on some place, and form themselves into a compact body. The honey and wax is collected into a solid substance called the *comb*. The *virgin honey* is that which flows of itself out of the comb when taken out of the hive, and also that which comes from the first year's swarm.

Malting is the making of malt out of barley, which is done by a particular process, and the person who causes it to be done is the *malster*. Barley is first steeped, that is, left in water for three nights till it be drenched; it is afterwards laid on the floor, and the quantity laid down, at a given time, is called a *couch*. In this state it sends forth a sprout, which is called the *spire* or *come*, and the second *spire*, which succeeds the first, and comes at the end of the barley, is called the *aerospire*. This determines the state of the grain, whether it be fit for the next process, which is *kiln-drying*, i. e. drying it by the fire of the kiln, after which it becomes *malt*. This is then *cleansed* in order to clear it of the sprout or come before it goes to the mill to be ground.—*Brewing* is the making of malt, with the assistance of hops, into beer; *wort* is the essence of the malt before the hop is put to it. *Strong-beer* is made of the first wort, which is drawn from the malt; *ale* is a middle sort of beer; *small-beer*, otherwise called *table-beer*, is the weakest kind of the three; *homebrewed beer* is that which is brewed in private families, in distinction from that which is made in the public breweries. *Mashing* is the putting of the malt to the hot water in the mash-tub; *grains* are the malt after it has been worked off the usual number of times; *yeast* is the frothy ferment which rises from the working of the beer in the cask.—*Baking* is the process of making bread out of flour with the assistance of yeast; *white-bread* is the finest sort made of the flour; *Brown-bread* is that which is made of meal; *Rye-bread* is that which is made of rye, which, on account of its colour, is called *black-bread*, and for its worthlessness

Pumpernickel, i. e. *bon pour Nickel*, or good for nothing; *slackbaked bread* is that which is not properly baked. The *dairy* comprehends all that is made from milk. The *cream* is the essence of the milk which settles on the top, and is *skimmed*, or taken off with a *skimmer*. *Flet-milk* is that from which the cream has been taken. *Butter* is made from the cream by the process of *churning*: the liquid which remains after it has been made is called *butter-milk*. *Cheese* is made by means of the *runnet*; which turns the milk to *curd*; this is hardened in a *vat*. The liquid which remains from the curd is *whey*.

To the above may be added the following catalogue of agricultural labours through the year, beginning with the first month in order.—*January*. Ploughing lands for beans and pease. Breaking up lays. Cattle tended with turnips, and well-fenced against the frost. Fences tended. Trees lopped of dead boughs. Cows calve, and sows farrow. Lands to be cleared of bushes.—*February*. Lands to be dunged. Grey Peas and Beans to be sown and harrowed. Fences repaired and planted. Vines planted. Meadows cleared of the moles. The pastures drained for the young lambs to be dry. Barley thrashed for malting.—*March*. Marsh-grounds to be ditched. Hop-grounds set. Land ploughed for barley. Barleys sown and harrowed. Wheats rolled.—*April*. Barley, seed-time. Summer-fallowing. Fodder to be provided for the cattle, particularly the cows. Hop-yards provided with poles. Timber felled and peeled. The dairy to be well tended.—*May*. Lambs and sheep to be washed. Thrashing of corn. Barley or wheat fed as occasion may serve. Corn-fields weeded. Buck-wheat, Flax, and Hemp sown. Hops tended on the poles, and weeded. Quicksets weeded. Bees tended. Land twifalowed.—*June*. Sheep shorne. Summer fallowing carried on. Bushes, thorns, &c. cleared away. Haysel begun.—*July*. Haysel finished. Try-fallowing. Hemp and flax plucked.—*August*. Reaping, mowing, and all sorts of harvest going on. Managing pastures, hop-picking and kiln-drying hops.—*September*. Farmers enter on fresh farms. Seeds thrashed. Fruits and honey gathered. Ditches, &c. made. Hemp plucked and dressed. Brakes gathered for firing.—*October*. Wheat and Rye-sowing. Laying up barley-land. Acorns, hawes, &c. sown. Quickset planted.—*November*. Swine fatted and killed. Rearing of poultry and ploughing finished.—*December*. Cattle provided with fodder and housing. Dung carted, &c.

Implements of Husbandry.

The most important of all agricultural implements is the *plough*; the parts of which are the *head*, which is designed to go into the ground; the *heel*, which is the hinder end; the *base* or bottom, otherwise called the *sole*; the *sock*, a hollow shoeing of iron fixed to the end of the head; the *stilt*, or handle for the driver; the *beam*, or long piece of wood, in which is fixed the *coulter*, or sharp iron that cuts the ground; the *bridle* or *muzzle* at the end of the beam, by which the horses are put to; the *cross-tree*, to which the traces are fixed. The back of a plough is usually called the *land-side*, and that board which receives the turf or sod is the *mould-board*, *earth-board*, or *broad-board*. A plough is said to be *in trim*, or to *swim fair* when it goes on steadily in the ground. Ploughs are named differently according to their make or use, as the *chain plough*, the *wheeled-plough*, the *sward-cutter*, the *drill-plough*, the *paring-plough*, &c.—The implements for fencing and ditching are the *bill*, or curved hatchet; *skavel*, a sort of ditching spade; *skuppat*, a scooper or hollow shovel used in marsh-lands; *didall*, a short spade for ditching.—Those

used in draining are the *waterlevel*, for measuring the level of the land at a distance; *forks* and *crooks* for clearing away sedges; *wheel* and *hand-barrows*; *short scythes* for mowing down grass; and *strong water-boats* fitted to resist the water.—Those used in other labours of the field are the *waggon*, which is the largest kind of carriage; the *cart*, which is the smallest; and the *tunbril*, which is the heaviest and stoutest made. The parts of a carriage are the *axle-tree*, which supports the *body*, or the whole machine; the *wheel*, which consists of the *nave*, into which the *spokes* are fixed; the *felloes*, which form the *orb* of the wheel, and the *tire*, or *iron-band*, which goes round the orb. *Clombing* a wheel is arming the axle-tree with iron plates. *Shoeing* a wheel is arming the felloes with iron stakes. To these may be added *cromes*, or dung-forks, scythes, sickles, &c.

AGRIELÆ/A (Bot.) *ἀγριελαια*, from *ἀγριος*, wild, and *ελαια*, an olive, in Latin *oleaster*; the tree called the Wild Olive, or the *Olea sylvestris* of Linnæus. *Dioscor.* l. 1, c. 122; *Gorr. Def. Med.*

AGRIFOLIUM (Bot.) the *Ilex aquifolium* of Linnæus.

AGRIMONIA (Bot.) Agrimony, a plant of the spriggy kind, *ἀγριμόνις*, answers to the *Eupatorium* of Dioscorides, which is a cleanser of the blood, and a strengthener of the liver. *Diosc.* l. 4, c. 4.

AGRIMONIA, in the *Linnean system*, is a genus of plants; Class 11 *Dodecandria*, Order 2 *Digynia*.

Generic Character. CAL. *perianth* one-leaved.—COR. *petals* five; *claws* narrow.—STAM. *filaments* capillary; *anthers* small.—PIST. *germ* inferior; *styles* simple; *stigmas* obtuse.—PER. none; *calyx* contracted at the neck; *seeds* two.

Species. The principal species are the—*Agrimonia eupatoria*, seu *Eupatorium*, Common Agrimony; a perennial, native of Britain.—*Agrimonia repens*, Creeping Agrimony; a perennial, native of America.—*Agrimonia*, *Agrimonoides*, seu *Agrimonia similis*, &c. Three-leaved Agrimony; a perennial, native of Italy. *J. Bauhin. Hist. Plant.*; *C. Bauhin. Pin. Theat. Botan.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tourn. Inst. Herb.*; *Boerh. Ind. Plant.*; *Linn. Spec. Plant.*

AGRIMONIA is also the name for several species of the *Bidens* and the *Triumphetta* of Linnæus. *Raii Hist. Plant.*

A'GRIMONY (Bot.) the name of four different sorts of plants in the *Linnean system*, i. e. the *Agrimonia*; the *Ageratum*, or Bastard Hemp; the *Eupatorium*, or Hemp; and the *Bidens*, or Water-Hemp.

AGRIOCARDAMUM (Bot.) *ἄγριοκάρδαμον*, from *ἀγριος*, wild, and *κάρδαμον*, Nasturtium; the *Iberis* of Linnæus. *Paul. Aeginet. de Re Med.* l. 3, c. 77.

AGRIOCASTANUM (Bot.) Earth-nut, or Pig-nut, the *Bunium bulbocastanum* of Linnæus.

AGRIOCINARIA (Bot.) Wild Artichoke, the *Cynara scolymus* of Linnæus.

AGRIOCOCCIMELA (Bot.) the *Prunus spinosa* of Linnæus.

AGRIOME'LA (Bot.) the *Pyrus malus* of Linnæus. *J. Bauh. Hist. Plant.*; *Raii Hist. Plant.*

A'GRION (Ent.) a division of the genus *Libellula*, according to Fabricius, consisting of those insects, of this tribe, which have their wings erect when at rest.

AGRIONIA (Ant.) *ἄγριωνία*, or, according to Hesychius, *ἄγριώνιον*; an annual festival in honour of Bacchus, which was celebrated generally in the night. It is so called, according to Plutarch, from *ἀγριος*, rustic and rude, because of the rudeness and intemperance with which the celebration of this festival was attended, or from *ἀγριόσιος*, the surname of Bacchus for his cruelty. *Plut. Sympos.* l. 8, quest. 1; & in *Anton.*; *Meurs. de Græc. Fer.*

AGRIOPALMA (Bot.) Archangel, or dead nettle.

AGRIOPASTINA'CA (*Bot.*) the wild parsnip or carrot.

AGRIOPHYLLON (*Bot.*) the *Peucedanum officinale* of Linnæus.

AGRIORIGANUM (*Bot.*) the *Heracleoticum* of Linnæus.

AGRIOSELINUM (*Bot.*) the *Smyrniolum olusatrum* of Linnæus.

AGRIOT (*Bot.*) a sour or tart cherry.

AGRIPALMA (*Bot.*) the *Leonirus cardiaca* of Linnæus.

AGRIPPÆ (*Surg.*) a name for children born with their feet foremost. The name is supposed by some to be derived from *ægro partu*; by others, from Agrippa, the Roman, who came into the world in this manner. *Plin.* l. 7, c. 8; *Gell.* l. 16, c. 16; *Non. Marcell.* c. 19; *Salmas. Exercit. Plinian.* p. 31.

AGRIUM (*Chem.*) an impure fossile alkali.

AGGROM (*Med.*) a disease of the tongue frequent in India.

AGROSTEMMA (*Bot.*) from ἀγρὸς στέμμα, *Agri corona*, *Campion*; a genus of plants, Class 10 *Decandria*, Order 4 *Pentagynia*.
Generic Characters. CAL. *perianth* one-leaved.—COR. *petals* five; *claws* length of the tube of the calyx; *border* spreading.—STAM. *filaments* awlshaped; *anthers* simple.—PIST. *germ* ovate; *styles* filiform; *stigmas* simple.—PER. *capsule* oblong ovate; *seeds* very many; *receptacles* free.
Species. The species are—*Agrostemma githago*, *Lolium lychnis* seu *githago*, an annual, native of Britain.—*Agrostemma coronaria*, *Rose Campion*, a biennial, native of Italy.—*Agrostemma flos Jovis*, *Umbellate Rose Campion*, a perennial, native of Switzerland. *Ger. Herb.*; *Park. Theat. Botan.*; *Raii. Hist. Plant.*; *Mor. Hist. Plant.*; *Herm. Cat. Lugd. Batav.*; *Mild. Linn. Spec. Plant.*

AGROSTIS (*Bot.*) ἀγροστis, *Bent Grass*, a herb, so called because it grows in the fields, is a tall grass, the leaves of which, according to Dioscorides, are pointed, hard, and broad, like those of a reed. The root bruised and applied agglutinates wounds. It is called by Theocritus the εἰλιτῆνις ἀγροστis. *Theoc. Idyl.* 13, v. 43; *Theoph. Hist. Plant.* l. 1, c. 10; *Diosc.* l. 4, c. 30; *Oribas. Med. Coll.* l. 15, c. 1; *Aet. Tetrab.* 1. serm. 1.

AGROSTIS, in the *Linnean system*, a genus of plants, Class 3 *Triandria*, Order 2 *Digynia*.
Generic Characters. CAL. *glume* one-flowered.—COR. *bivalve*.—STAM. *filaments* longer than the corolla; *anthers* forked.—PIST. *germ* roundish; *styles* reflex; *stigmas* longitudinally hispid.—PER. *corolla* growing to the seed, not gaping; *seed* roundish, pointed at both ends.
Species.—The principal species are the—*Agrostis monantha*, seu *Gramen segetum*, *silky Bent Grass*, an annual, native of Britain.—*Agrostis arundinacea*, *Arundo agrostis*, *Catanagrostis arundinacea* seu *Gramen miliaceum*, *reedy Bent Grass*, a perennial, native of Britain.—*Agrostis sylvatica* seu *panicula*, &c. *wood Bent Grass*, a perennial, native of Britain.—*Agrostis pungens* seu *Phalaris disticha*, &c. *prickly Bent Grass*, a perennial, native of Spain.—*Agrostis rupestris*, *Avena monantha* seu *Gramen paniculatum*, &c. an annual, native of Switzerland, &c. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tournef. Inst.*; *Boerhaav. Ind. Plant.*; *Linn. Spec. Plant.*

AGROSTIS is also a name for the *Cenchræ racemosus* and the *Milium lendigerum* and *paradoxum* of Linnæus. *Bauh. Hist. Plant.*; *Ger. Herb.*; *Raii Hist. Plant.* &c.

AGROTERA (*Ant.*) an annual sacrifice at Athens, in honour of Diana ἀγροτέρα, i. e. the huntress; also a temple dedicated to Diana. *Xenoph. Exped. Cyr.*

AGROUND (*Mar.*) i. e. on the ground; a term applied to a ship when any part of it rests on the ground so as to render it immoveable.

AGRYPNIA (*Med.*) ἀγρυπνία, from α, priv. and ὑπνός, sleep; sleeplessness, called by Celsus, on the authority of Hippocrates, *nocturnæ vigiliæ*, or wakefulness in the night season, which he reckons among the bad symptoms. *Hippocrat.* l. 3, aphor. 24, and *Gal. Comm.* 1, in *Hippocrat. Prædict.* l. 6; *Cels.* l. 2, c. 1; *Gorr. Def. Med.*; *Foes. Oeconom. Hippocrat.*

AGRYPNIS (*Med.*) ἀγρυπνίς; a festival in honour of Bacchus, at Arbela, in Sicily. *Hesychius.*

AGUE (*Med.*) from the French *ague*, sharp or acute; an intermitting fever, with hot and cold fits alternately. In the vulgar sense, the ague is a fever attended with cold shiverings.—*Ague Cake*, a tumor in the spleen which often follows agues.—*Ague Drops*, a medicine consisting of the solution of arsenic in water, for the cure of the ague.

AGUE Tree (*Bot.*) the *Sassafras*, or *Laurus sassafras* of Linnæus; a tree so called from the medicinal virtue in its wood for curing agues.

A GUI-Pan-neuf (*Archæol.*) i. e. new year to the misletoe; a name for a ceremony among the Gauls, who, on the first day of the new year, went about gathering misletoe, and repeating *a-gui-l'au-neuf*, in which they were joined by the multitude. A similar practice prevailed in some parts of France, under the shape of begging for tapers to light the churches, until the 17th century, when it was abolished by the interference of the church.

AGUL (*Bot.*) a little prickly shrub growing in Persia and Arabia, the *Hedysarum alhagi* of Linnæus.

AGURAH (*Ant.*) אגורא, a Hebrew coin, which Buxtorf explains by *Nummulus*, a small coin.

AGUSADURA (*Archæol.*) a fee paid by vassals to their lords, for the sharpening their ploughshares, &c.

AGUSTINE (*Chem.*) a name given to a supposed new earth, so called from its forming insipid salts with acids.

AGUTI (*Zool.*) or *Long-eared Cavy*, the name of an American animal resembling a guinea-pig, the *Cavia aguti* of Linnæus, which lives in hollow trees or burrows, is very voracious, and uses its fore paws like hands.

AGUITEPA (*Bot.*) a Brazilian plant, the root of which is medicinal. It is the *Thalia geniculata* of Linnæus. *Marcgrav. Hist. Bras.*

AGYNEIA (*Bot.*) from α, priv. and γυνή, wife; a genus of plants, Class 21 *Monœcia*, Order 11 *Monadelpchia*.
Generic Characters.—CAL. *six-leaved*, *leaflets* oblong.—COR. *none*.—STAM. *filaments* none; *anthers* three or four in the male.—PIST. *germ* of the size of the calyx; *neither style* nor *stigma*.—PER. *supposed* to be a *trilocular capsule*.
Species. The species are mostly shrubs, and natives of the East Indies and China.

AGYNEI (*Ecc.*) a set of heretics who sprung up in 694, and said that God forbid marriage and eating of flesh. *Prætel. Dogmat. Hæret.*

AHALOTH (*Bot.*) the Hebrew name for the *Lignum Aloes*.

AHAMELLA (*Bot.*) the *Verbesina acmella* of Linnæus.

AHEAD (*Mar.*) further on than the ship, in opposition to *astern*, or behind the ship. "To run ahead of one's reckoning;" i. e. to sail beyond the place erroneously estimated in the dead reckoning as the ship's station.—*Line ahead*. [vide *Line*]

AHAMELLA (*Bot.*) the *verbesina acmella* of Linnæus. [vide *Acmella*]

AHOVAI (*Bot.*) or *ahovai*, a tree of Brazil, growing to the size of a pear-tree, and bearing fruit the size of a chesnut. *C. Bauh. Pin.*; *Raii Hist. Plant.*

AHULL (*Mar.*) a term for a ship when all her sails are furled and her helm lashed on the lee-side.

AHUSAL (*Chem.*) the sulphur of arsenic.

AICHMALOTARCH (*Theol.*) or *Echmalotarch*, Αχμαλο-

אֵלֶּיךָ, which signifies, literally, prince or chief of the captives, was the title which the Jews pretend to have belonged to him who governed that people during their captivity at Babylon. They believe him to have been constantly of the tribe of Judah, although there is no proof of the existence of such a character before the end of the second century, when Huna was invested with it, after which the office continued till the eleventh century. *Prid. Connect.* part 2, book 4.

AID (*Hist.*) an Arabic term for a festival, so named because it returns every year.

AID (*Law*) in French *aide*; a subsidy granted to the crown, or to any lord, as in the case of knighting a son or marrying a daughter.—*Aids customary* or *common*, are those which were given by the right of custom, such as those above-mentioned.—*Aids reasonable*, are those which were given in an emergency.—*Aids gracious* or *noble*, are those which were given voluntarily.—*Aid prier*, a petition in court, to call in the help of another person who has an interest in the thing contested, as a servant having done any thing lawfully in right of his master shall have aid of him. *F. N. B.* 50.—*Aid of the king*, where the king's tenant prays aid of the king on account of rent demanded of him by others. *Stat.* 4 *Ed. I.* c. 1, &c. 14 *Ed. III.* st. 1. c. 14, &c. and 1 *H. IV.* c. 8.

AID de camp (*Mil.*) an officer that always attends on each of the generals in his camp, to receive and carry orders.—*Aid de camp major*, an officer who assists the major-general, and supplies his place in his absence.

AID (*Man.*) the assistance given to the movements of a horse by the rider, with his bridle and accoutrements; thus, a horse is said to know his aids, or take his aids with vigour. The aids are of two sorts—*Aid inner*, as the inner heel, inner leg or inner rein, &c.—*Aid outer*, as the outer heel, leg, rein, &c.

AIDE du Parc des Vivres (*Mil.*) an officer in France acting immediately under the commissary of stores and provisions.

AIGHENDALE (*Com.*) a liquid measure in Lancashire, containing seven quarts.

AIGLETT (*Her.*) an eaglet or young eagle.

A'GREMORE (*Mech.*) a term used by the artificers in a laboratory to signify the charcoal in a state fitted for the making of powder.

A'GRIS (*Com.*) a stone which serves as current coin among the Issinois, a tribe of Africans, where it is looked upon as a precious stone, although it possesses no real value. It is of a greenish blue colour, without any lustre. It is hard in its texture, but does not admit of any great polish.

AIGUEMARINE (*Min.*) or *Aquamarine*, another name for the emerald.

AIGUILLE (*Mil.*) an instrument used by engineers to pierce a rock for the lodgement of powder, as in a mine: or to mine a rock so as to excavate it and make roads.—*Aiguille de Chariot*, French for the draught-tree of a chariot.

AIGUILLES (*Mech.*) French for the short upright pieces of wood used in the roofs of houses.

AIGUILLES (*Hyd.*) round or square pieces of wood which serve to go up and down by way of a flood-gate.

AIGUILLETES (*Mil.*) French for the tagged points which hang from the soldiers' uniforms, particularly among the Russians and Prussians.

AIGUISCE (*Her.*) or *Eguisce*, an epithet for a cross: a cross *aiguisee* is that which has the two angles at the ends cut off so as to terminate in two points, in distinction from the cross *fitchee*, which goes tapering to a sharp point.

AIGULET (*Mech.*) a point of gold placed at the end of fringes.

AIL (*Law*) or *Aiel*, from the French *aieul*, an ancestor, or a grandfather; a writ which lies where a man's grandfather being seized of lands and tenements in fee simple the day that he died, and a stranger abateth or entereth the same day and dispossesses the heir of his inheritance. *F. N. B.* 222.

AIL'ANTHUS (*Bot.*) from the Amboyna word *Aylanto*, i. e. the tree of heaven; a genus of plants, Class 23 *Polygamia*, Order 1 *Monoecia*.

Generic Characters. CAL. *perianth* one-leaved.—COR. *petals* five.—STAM. *filaments* ten; *anthers* oblong.—PST. *germs* from three to five; *styles* lateral; *stigmas* capitate.—PER. *capsules* compressed; *seeds* solitary.

Species.—The species are—*Ailanthus glandulosa*, Tall *Ailanthus*, a tree, native of China.—*Ailanthus excelsa*, a tree, native of the East Indies. *Linn. Spec. Plant.*

AILERONS (*Mech.*) 1. The short boards which are set into the outside of the wheel of a watermill, which are called, in English, *ladles* or *aveboards*. 2. The buttresses or tarlings laid along the sides of rivers or water-coarces, in order to prevent them from undermining any building.

AIM of a bow or gun (*Sport.*) the button or mark to take aim by.

AIM frontlet (*Mil.*) a piece of wood hollowed out to fit the muzzle of a gun, so as to make it level with the breech, formerly in use among gunners.

A in alt. (*Mus.*) the second note in *Alt*, the ninth above *G* or treble cliff-note.—*A in Altissimo*, the second note in *altissimo*, or the octave above *A* in *Alt*.

AJOURE' (*Her.*) from the French *jour*, a day, or light; an epithet for that part of the field which, by the removal of an ordinary or part of it, is exposed to the view.

AIR (*Nat.*) *aer*, ἀήρ, one of the four elements, so called because, ἀέρος, it lifts things up from the earth, or because ἀἰεὶ ῥεῖ, it is always flowing; a rare invisible and extremely elastic fluid, not condensable by cold, or any other means, into a solid state. *Plat. in Cratin.*; *Arist. de Anim.* l. 1, c. 2; and *Met.* l. 1, c. 3.

AIR (*Chem.*) was expressed in ancient chemistry by the character of a triangle, thus [Δ].

AIR, in modern Chemistry, is distinguished into atmospheric, factitious, fixed, vital, &c.—*Air*, atmospheric or common, an invisible, insipid, inodorous, ponderous, and elastic fluid, consisting of two parts, vital air or oxygen gas, and mephitic air or azotic gas.—*Air factitious*, that particular sort of air which has been discovered and distinguished by means of chemical experiments. Such sorts of air are commonly known by the name of *gases*, of which the following are the principal.—*Air, fixed* or *fixable*, called by Van Helmont, *Gas sylvestre*, an inodorous and elastic fluid like the former, but of superior gravity. It is called *fixed air*, because it is found in a fixed state in *lime*, *alkalies*, &c. It is also called *carbonic acid gas*, from its acid properties.—*Air, vital* or *oxygen gas*, is the union of oxygen with caloric, and forms a constituent part of the common air. It is absolutely essential for the respiration of every animal, and on that account termed *vital*.—*Air inflammable*, or *Hydrogen gas*, an extremely inflammable substance, which is ten or even twelve times lighter than common air, and, by its mixture with oxygen gas, will produce the most intense heat that is known. It is fatal to animals that are obliged to breathe it; but for its lightness is generally used in the construction of air balloons.—*Air mephitic*, so called from its impurity, has also the name of *Azotic gas*, because it is destructive to life; and of *nitrogen gas*, because it is a union of nitrogen with caloric. It is the second principal ingredient in atmospheric air, being, in fact, atmospheric air deprived of its oxygen. Its principal properties are that of extinguishing flame and life, as in mines, where it is called *fire damp*, that is, *fire quencher*.—

Airs acid, those acids which assume the form of airs or gases, and in consequence receive the name of air, as—*Air phlogisticated*, the same as *mephitic air* or *vital gas*. [vide *Air mephitic*].—*Air Empyrcal*, or *dephlogisticated*, the same as *vital air*. [vide *Air vital*].—*Air alkaline*, another name for *Ammonia*.—*Air dephlogisticated nitrous*, another name for the acid called *nitrous oxyd*.—*Air dephlogisticated marine*, another name for *oxymuriatic acid*. In this manner other acids are denominated.

AIR (*Anat.*) the fine aerial substance supposed to be enclosed in the labyrinth of the inward ear, and to minister to the due conveyance of the sounds in the sensory.

AIR Bladder (*Ich.*) the vesicles in fishes, by the contraction or dilation of which they raise or sink themselves in the water.

AIR-vessel (*Bot.*) or *Air-bag*, the name given by Withering to the *Folliculus* of Linnæus. [vide *Folliculus*].

AIR-threads (*Nat.*) a name given to the long filaments so frequently observed in the autumn season, floating in the air. These are formed by the long legged field spider, which supports itself upon them to a considerable height when it is in quest of prey.

AIR Balloon (*Pneum.*) a machine so constructed as to be able to float in the air and carry weight. It is filled with a species of air called hydrogen gas, or air inflammable.—*Air cane*, an air gun converted into a walking stick.—*Air gun*, an instrument for propelling bullets solely by means of condensed air.—*Air holder*, a part of the chemical apparatus, otherwise called a gazometer.—*Air hole*, a hole in a furnace just under the hearth to admit air, for increasing the force of the fire.—*Air-jacket*, a leathern jacket made with bags or bladders, communicating with each other, by the help of which when filled with air, and placed under the breast, a person may be supported in the water.—*Air lamp*, a pneumatic machine, formed by the combination of inflammable air and electricity to produce a flame, which, by means of a stop-cock, may be repressed or continued at pleasure.—*Air pipes*, pipes which are adapted to the holds of vessels, or other close places, for the purpose of clearing them of the foul air.—*Air pump*, a machine for exhausting the air out of vessels, so as to obtain a vacuum as far as possible. [vide *Pneumatics*].—*Air shaft*, a passage for the conveyance of air into mines, or other subterraneous places.—*Air trunk*, a contrivance for the clearing of rooms of the foul air, in which a number of persons are assembled.

AIR vessel (*Hyd.*) 1. A vessel of air, contained in water engines, which force the water out in a stream as fast as it is admitted. 2. A metallic cylinder in the improved fire engines, which is constructed so as to retain the air which is requisite for forcing out the water in an equable stream.

AIR (*Mus.*) or *Airia*, an air: 1. Any melody that comes within the reach of vocal expression. 2. In a stricter sense, any composition for a single voice.—*Air*, with variations, a melody varied, *ad libitum*, by the compiler.—*Air tendre*, an air, so denominated for the tenderness of its style.

AIR (*Man.*) a cadence and liberty of motion accommodated to the natural disposition of a horse, which makes him rise with obedience, measure, and time. [vide *Airs*].

AIRA (*Bot.*) *αἶρα*, the Greek name for *Lolium* or *Darnel*, has been given by Linnæus to a genus of plants, Class 3 *Triandria*, Order 2 *Digynia*, called in English *Aira Grass*.

Generic Characters. CAL. *glume* two flowered; *valves* ovate-lanceolate.—COR. *bivalve*; *Nectary* two-leaved; *leaflets* acute.—STAM. *filaments* capillary; *anthers* oblong.—PIST. *germ* ovate; *styles* cetaceous; *stigmas* pubescent.—PER. none; *seeds* subovate.

Species. The species mostly consist of different species of the *Avena* or *Gramina* of other writers. *J. Bauh in Hist. Plant.*; *C. Bauh Pin.*; *Ger. Herb.*; *Park. Theat.*

Botan.; *Raii Hist. Plant.*; *Tournef. Inst. Herb.*; *Boerh. Ind. Plant.*; *Linn. Spec. Plant.*

AIRA, as a species, answers to the *Cynosurus cæruleus* and the *Melica cærulea* and *lanatus* of Linnæus. *Jacqu. Stirp. in Vindel.*

AIR-BAG (*Bot.*) *folliculus*. [vide *Folliculus*].

A'IRE (*Falc.*) or *Airy*, a nest of hawks, or other birds of prey, especially the nest used by falcons for hatching their young in.

AIRE (*Math.*) French for, 1. The area, or inside of any geometrical figure. 2. The space between the walls of a building. 3. A smooth and even spot of ground on which one treads.

AIR-GUN (*Pneum.*) vide *Air*.

AIR-HOLE (*Pneum.*) vide *Air*.

AIRING (*Vet.*) the exercise given to horses in the open air.

AIR-PIPES, *Air-pump* (*Pneum.*) vide *Air*.

AIR-SHAFT (*Pneum.*) vide *Air*.

AIRS, *high* or *low* (*Man.*) the motions of a horse that rise higher than *terra a terra*, and works at curvets, &c.

AIRY (*Falc.*) vide *Aerie* and *Aire*.

AIRY Meteors (*Astron.*) such as are bred from flatulous and spirituous exhalations.

AIRY Triplicity (*Astrol.*) the signs *Gemini*, *Libra*, and *Aquarius*.

AIS d'entrevoix (*Mech.*) French for boards or planks which cover the space between the rafters or beams in a building.

AISCE/AU (*Mech.*) French for a chipaxe, or one-handed plane axe, used for hewing timber smooth.

AISCE/TTE (*Mech.*) French for a small plane axe.

AISIMENTA (*Law*) easements or conveniences, including any liberty of passage, open way, water-course, &c. for the ease and convenience of any tenant of either house or land.

AISLE (*Her.*) winged; an epithet for a bird in a charge having wings.

AISLES (*Archæol.*) the wings or side passages belonging to a church; so called from the French *les aisles*.

AISSE (*Mech.*) French for a linch pin.

AISSIEU (*Mech.*) French for the axle-tree or axis, otherwise called a tympan or tambour, round which a rope may be wound for the purpose of drawing it up, after the manner of a crane.

AISTHETERIUM (*Med.*) *sensorium commune*, the Common Sensory.

AITONIA (*Bot.*) a genus of plants, Class 16 *Monadelphia*, Order 4 *Octandria*.

Generic Character. CAL. *perianth* one-leaved; *segments* sharp.—COR. *petals* four.—STAM. *filaments* awlshaped; *anthers* ovate.—PIST. *germ* superior; *style* one; *stigma* obtuse.—PER. *berry* ovate; *seeds* many.

Species. The only species is *Aitonia Capensis*, seu *Cotyledon*, a shrub, native of the Cape of Good Hope. *Linn. Spec. Plant.*

AJUBATIPITA Brasiliensium (*Bot.*) a Brazilian shrub, five or six palms high, from the almond-like fruit of which is extracted an oil that is used by the savages in anointing themselves. *Raii Hist. Plant.*

AJU'GA (*Bot.*) another name for the *Abiga*, is, in the *Linnean system*, a genus of plants, Class 14 *Didynamia*, Order 1 *Gymnospermia*, called by Tournefort *Bugula*, in English *Bugle*.

Generic Characters. CAL. *perianth* one-leaved; *segments* nearly equal.—COR. *monopetalous*; *tube* cylindric; *upper lip* very small; *lower* large; *middle division* very large; *side ones* small.—STAM. *filaments* subulate; *anthers* twin.—PIST. *germ* four parted; *style* filiform; *stigmas* two.—PER. none; *seeds* somewhat oblong.

Species. The species are either perennials, as—*Ajuga alpina*, Alpine Bugle.—*Ajuga reptans*, common Bugle,

&c.; or else annuals, as the—*Ajuga chamæpitys*, *chia*, *salicifolia*, &c. They are taken mostly from the genus *Chamæpitys* of other authors. *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant*; *Tournef. Institut.*; *Boerhaav. Ind.*

AJUTAGE (*Hyd.*) a kind of tube or spout filled to the cistern or pipe of the *jet d' eau*.

AIZOON (*Bot.*) ἀϊζών, i. e. always living, a genus of plants, Class 12 *Icosandria*, Order 4 *Pentagymia*.

Generic Characters. CAL. *perianth* one-leaved.—COR. none.—STAM. *filaments* very many, capillary; *anthers* simple.—PIST. *germ* five-cornered; *styles* five; *stigmas* simple.—PER. *capsule* five-celled; *seeds* kidney-shaped. *Species.* The species are either annuals, as the—*Aizoon canariense*, *hispanicum*, &c.; or biennials, as the—*Aizoon lanceolatum*, *sarmentosum*, &c.; or shrubs, as the—*Aizoon fruticosum*, *rigidum*, &c. all which are natives of the Cape of Good Hope.

AIZOON is also the name of several species of the *Sedum* of Linnæus. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Boerhaav. Ind.*, &c.

AKER-STAFF (*Agric.*) an instrument for clearing the coulter of the plough.

A'KETON (*Mil.*) vide *Aqueton*.

A'KOND (*Polit.*) the third pontifex in Persia, who is also an officer of justice.

AL (*Gram.*) 1. An Arabian particle, answering to the English *the*, and employed in the same manner to mark any thing distinctly, as Alcoran, from *coran*, to read; the Reading, or Book, in distinction from all others. 2. *Al*, or *ald*, from the Saxon *Ælþ*, old, is affixed to old towns, as Aldborough, &c.

A-LA (*Gram.*) French for *in the*, used adverbially, as *à la François*, in the French fashion: *à la mode*, in the fashion.

A-LA Grec (*Mus.*) in the Greek style, as applied to chorusses.—*A la Polacca*, in the Polish style.

ALA (*Ant.*) or *Alæ*, the wings of an army, or the horse on each side flanking the foot. They were so called because they stood on the right and left, as the wings on the body of a bird. According to Vegetius, they were also called *veillationes*. *Aul. Gell.* l. 16, c. 4; *Veget. de Re Mil.* l. 2, c. 1; *Serv. in Æn.* l. 9, v. 604; *Laz. Comm. Reip. Roman.* l. 6, c. 2; *Panvin. Imper. Roman.* c. 16; *Pancirof. Notit. Dignit. Imp. Orient.* c. 33, *apud Grecv. Thes. Antiq. Roman.* vol. 10, &c.; *Salmas. de Re Milit. Roman.* c. 8.

ALA, or *Alæ* (*Bot.*) 1. The same as *Axilla*. 2. A wing or membrane on the sides of a petiole or footstalk, or attached to a seed or seed-vessel; which last is distinguished by the names of *Monopterygia* or *alata*, *Dipterygia* or *bialata*, *Triptyrygia* or *trialata*, &c. according as there is one, two, three, or more wings. 3. The two side petals of a papilionaceous flower. *Linn. Phil. Botan.*

ALA, or *Alæ* (*Anat.*) μασχάλη, the arm-pit. *Hippocrat. de Art.*; *Gorr. Defn. Med.*—*Alæ aurium*, περιγώματα τῶν ὠτῶν, the superior parts of the external ear. *Gal. Introd.* c. 10, &c.—*Alæ*, or *Alæ Nasi*, περιγῶμα ῥινός, the cartilages which are joined to the extremities of the bones of the nose, and form the moveable part. *Gal. de Usu. Part.* l. 11.—*Alæ ossis Sphenoides*, the two apophyses of the os sphenoides.—*Ala*, or *Alæ Pudendi*, the same as *Nymphæ*.

ALA (*Ecc.*) vide *Alæ*.

ALABANDICA Rosa (*Bot.*) so called from Alabanda in Asia; a sort of damask rose with whitish leaves.

ALABANDICUM Opus (*Ant.*) a proverb for any bad workmanship, for which the Alabandenses were famous.

ALABANDICUS Lapis (*Min.*) a blackish sort of stone, the powder of which makes grey hairs black. *Æt. Tetrab.* l. serm. 2, c. 33.

ALABA'RCHEs (*Ant.*) a tribute paid for the feeding of

cattle; also, the gatherer of the tribute, and a nickname of Pompey, on account of his having raised taxes in Syria. *Cic. ad Attic.* l. 2, ep. 17; *Joseph. Antiq. Ind.* l. 20, c. 5; *Enseb. Hist. Eccles.* l. 2, c. 5.

ALABA'RI (*Min.*) lead.

ALABA'STER (*Ant.*) an alabaster box, or a box made of the alabaster stone.

ALABASTER (*Min.*) *Alabastrites* so called from Alabastrum, a town of Egypt; a soft kind of marble. Being easily cut, it was converted by the ancients into boxes for perfumes. It was of various colours, and streaked with veins. The burnt stone, with rosin or pitch, is a discutient. *Dioscr.* l. 5, c. 153; *Plin.* l. 37, c. 10; *P. Æginet.* l. 7, c. 3.

ALABASTRITES (*Min.*) 1. The Alabaster-stone, [vide *Alabaster*]. 2. A species of the *Inolithus* of Linnæus.

ALABA'STRON (*Med.*) ἀλάβαστρον, an ointment mentioned by Myrepsus. *Sect.* 3, c. 61.

ALABA'STRUM (*Ant.*) the box made of the alabaster-stone. *Plin.* l. 9, c. 35.

ALABASTRUM (*Min.*) or *Alabastrites*, the name among the ancients for the Alabaster-stone, which is classed by Linnæus under the species of *Gypsum*, or Plaster of Paris. *Aldrov. Mus. Metall.*; *Linn. System. Nat.*

ALABA'STRUS (*Bot.*) the herbaceous leaves of a plant which encompass the flower, particularly the rose. *Plin.* l. 21, c. 4.

ALACAB (*Chem.*) Sal Ammoniac.

ALA'DINISTS (*Theol.*) a sect of Mahometans answering to free-thinkers among the Christians.

A'LÆ (*Anat.*) [vide *Ala*]

ALÆ (*Ant.*) the prominent parts of the prow of a vessel. *Poll. Onomast.* l. 1, c. 9.

ALÆ the corners of a garment, the lappets.

ALÆ Ecclesiæ (*Ecc.*) *les aisles de l'église*, the wings or aisles of a church.

ALÆ'A (*Ant.*) ἀλαΐα, a festival in Peloponnesus called after Alæa, the surname of Minerva. *Paus.* l. 8, c. 47.

ALAFI (*Chem.*) Alkali.

ALATA phthisis (*Med.*) ἀλαΐα φθίσις, from ἀλαΐα, blind; a consumption caused by a fluxion of humours in the head. *Gal. Exceges Vocab. Hippoc.*

ALALITE (*Min.*) a stone of the Chrysolite family.

ALAMACH (*Astron.*) Almak called Cothurnus, by Hyde; a star of the third magnitude in the southern foot of Andromeda, marked (γ) by Bayer.

A-LA-MI'RE (*Mus.*) the lowest note but one in the three septenaries of the gamut or scale of music.

ALAMO'DE (*Com.*) a thin light glossy black silk, not quilted or crossed, chiefly for women's hoods.

ALANA terra (*Min.*) English Oker, now called Red Ochre, the *Ochra ferri* of Linnæus, supposed to be what the ancients called *Samius lapis*, the Samian stone; a light white stone, inclining to red, which was procured principally in France. It is detersive and desiccative.

ALANALA'BOLUS (*Min.*) a sort of earth mentioned by Paulus Æginetes, which is supposed to be the same as the *Alana terra*.

ALAN'DAHAL (*Bot.*) the *Colocynthis* of Linnæus.

ALANEARIUS (*Falcon.*) a falconer, or a keeper of dogs for hawking.

ALANFU'TA (*Anat.*) a vein between the chin and under lip.

ALANT (*Her.*) a mastiff dog with short ears; one of the supporters to the arms of Lord Dacres.

A'LA pouli (*Bot.*) another name for the *Bilimbi* or *Averrhoë bilimbi* of Linnæus.

ALAUQUE'CA (*Med.*) a stone found in little polished fragments in the East Indies, and much used to stop bleeding.

AL A'RAF (*Theol.*) the party-wall that separates heaven from hell, according to the creed of the Mahometans.

ALARES (*Ant.*) *Alarii milites*, the soldiers in the Roman army who formed the *alæ* or flanks, which were mostly cavalry. *Cæs. de Bell. Gall.* l. 1, c. 51; *Liv.* l. 35, c. 5.

ALARIS (*Med.*) alar or wing-shaped; an epithet for a vein in the bend of the arm.

ALARIS (*Bot.*) alar or wing-shaped; an epithet for the peduncle and the head.—*Pedunculus alaris*, an alar peduncle, or one that stands in the axillæ of the branches, as *Linum radiola*.—*Capitulum alare*, an alar head, or one that sits in the axillæ of the branches.

ALARM (*Mil.*) any notice given either by the beat of the drum or the firing of cannon, &c. which shall cause the men to run to their arms.—*Alarm post*, in the field, is the spot fixed upon by the quarter-master-general for each regiment to march to in case of an alarm: in the garrison, a similar place is marked out by the governor.—*Alarm-bell*, a bell which is made for the purpose of ringing an alarm.—*False alarms*, stratagems of war, which are employed either by an enemy for the purpose of harrassing, or by commanders for the purpose of trying the vigilance of the men.

ALARM (*Fenc.*) another name for an appeal or challenge.

ALAT'AN (*Chem.*) Lithargyrum.

A'LATUR (*Chem.*) *Æs ustum*.

ALATERNOIDES (*Bot.*) another name for the *Phylica cricoides*; the *Clutea alaternoides*; the *Creanthus Africanus*; the *Ilex cassine* and the *Mirica cordifolia* of Linnæus. *Raii Hist. Plant.*

ALATERNUS (*Bot.*) a name formerly for a genus of plants, the species of which are now the *Rhamnus alaternus* and *phylica*; the *Celastrus*; and the *Ilex cassine*, *Paragua* and *vomitaria* of Linnæus. *Clus. Rar. Plant. Hist.*; *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Parkins. Theat. Botan.*; *Raii Hist. Plant.*; *Boerhaav. Ind. Botan.*

ALATI (*Anat.*) an epithet for such as have their scapule or shoulder-blade very prominent, who are supposed to be subject to consumptions.

ALATI *processus*, the process of the Os sphenoides.

ALAT'US (*Bot.*) winged, or provided with a membrane like a wing.

ALAU'DA (*Or.*) Lark, a genus of animals, Class *Aves*, Order *Passeres*.

Generic Characters. Bill cylindrical.—*Mandibles* equal.—*Tongue* bifid.—*Hind claw* straight.

Species. The principal species are the—*Alda arvensis*, in French *l'Alouette*, the Sky Lark.—*Alda cristatella*, in French *le Lulu*, Lesser crested Lark.—*Alda arborea*, in French *l'Alouette de bois* ou *le Cujulier*, Wood-Lark.—*Alda Italica*, in French *Giarola*, Italian Lark.—*Alda capensis*, in French *Cravate jaune*, Cape Lark.—*Alda mosellana*, in French *le Rousseline*, Marsh Lark.—*Alda Senegalensis*, in French *Grisette*, Senegal Lark.—*Alda minor* seu *Agræstis*, Field Lark.—*Alda Ludoviciana*, in French *la Farlouzanne*, Louisiana Lark.—*Alda alpestris*, in French *le Haupecol*, Shore Lark.—*Alda Africana*, in French *le Sioli*, African Lark.—*Alda undata*, in French *la Coquillade*, Undated Lark.—*Alda pratensis*, in French *l'Alouette de près*, Tit-Lark.—*Alda sepiaria*, in French *Alouette pipi*, Pipit-Lark, &c.

ALAU'DÆ (*Mil.*) a legion of Transalpine Gauls who were in Cæsar's army. Suetonius says they were so called in the Gallic tongue. *Sueton. in Jul. Cæs.* c. 24.

ALA'USA (*Ich.*) vide *Alosa*.

ALAY (*Polit.*) a Turkish word signifying triumph, is taken for a ceremony of proclaiming war in Turkey, which is a sort of masquerade.

ALAY (*Sport.*) a term used for fresh dogs when they are sent into the cry.

A'LBA (*Ant.*) a sort of tunic, so called from its whiteness,

of which mention is made in the letter of the emperor Valerian. *Trebell. Poll. in Claud.*

ALBA (*Archæol.*) the Alb. 1. A surplice anciently used by officiating priests, so called because it was made of white linen. *Con. Carthag.* iv. can. 4; *Alcuin de Offic. Divin.*; *Amalar. Eccles. Offic.* l. 2. 2. A vestment worn by persons newly baptized, as an emblem of purity; whence they were called *Albati*. *St. Ambrosius de his qui Myster. in.*; *Dionys. Areop. de Hier. Eccl.* c. 1, 2, &c.; *St. August. epist.* 168, &c.; *Alcuin. de Divin. Offic.* &c.

ALBA *firma* (*Law*) or *Album*, a yearly rent payable to the chief lord of a hundred, paid in white money or silver, in distinction from that paid in grain, &c. which was called *reditus nigri*. 2 *Inst.* 19, &c.

ALBA (*Min.*) a sort of pearl of peculiar excellence. *Lamprid. in Heliogab.*; *Suidas.*

ALBA *terra* (*Alch.*) a name for the philosopher's stone, which was a composition of quicksilver and sulphur.

ALBA *spina* (*Bot.*) vide *Acacia*.

ALBA *vitiligo* (*Med.*) vide *Vitiligo*.

ALBA *pituuta* (*Med.*) vide *Leucoplegmatia*.

ALBADA'RA (*Anat.*) an Arabic term for the sesamoid bone of the first joint of the great toe.

ALBAGIA'ZI (*Anat.*) Arabic for the *os sacrum*.

ALBAHU'RIM (*Astrol.*) a figure consisting of sixteen sides, on which astrological physicians built their prognostics.

ALBAMENTUM (*Nat.*) vide *Album ovi*.

ALBA'RA (*Med.*) the same as *Alphus*.

ALBARA (*Bot.*) the *Canna angustifolia* of Linnæus. *Pis. Braz. Plant.*

ALBA'RII (*Ant.*) those who whitened earthen vessels, in distinction from the *Dealbatores* who whitened walls.

ALBARUS (*Chem.*) arsenic.

ALBARUS *alba* (*Med.*) the same as *Leuce*.—*Albarus nigra*, the same as *Lepra Græcorum*.

ALBA'TI (*Ant.*) clothed with the Alba [vide *Alba*]; an epithet for soldiers who were employed for parade on public occasions: "Jamprimum inter Togatos Patres et Equestrum ordinem, albatos milites et omni populo præunte." *Trebell. Poll. in Gall.*

ALBATI (*Ecc.*) an epithet, 1. For ecclesiastics in their clerical robes, who *Albas gerunt seu in Albis sunt*. 2. For those who, on receiving baptism, were clothed in the Alba. [vide *Alba*]

ALBA'TIO (*Chem.*) *Albificatio*, from *albeo*, to whiten; blanching metals.

A'LBATROSS (*Or.*) or Man of War Bird, the *Diomedea* of Linnæus; a water bird which inhabits most seas, particularly within the Tropics, between three and four feet long, and lays eggs as large as a goose, the white of which cannot be hardened by boiling.

A'LBE (*Com.*) a small coin in Germany equal to a penny.

ALBE'DO (*Med.*) whiteness, particularly as applied to urines, which are of four kinds, chrySTALLINE, SNOWY, LIMY, and LIMPID. *Theophil. de Urin.* c. 5; *Actuar. de Urin.* c. 8.

AL'BERAS (*Bot.*) the *Stophisagria* of Linnæus.

A'LBERGE (*Bot.*) a small forward pear of a yellow colour.

ALBERGE'LIIUM (*Mil.*) an habergeon, a defence for the neck. *Hovedon.*

ALBE'RNUS (*Com.*) a stuff resembling camblet, which is manufactured in the Levant.

ALBERTUS (*Numis.*) a gold coin worth about fourteen livres, which was coined during the administration of Albertus, Archduke of Austria.

ALBE'STON (*Chem.*) Quick-Lime.

A'LBETAD (*Chem.*) Galbanum.

A'LBI (*Chem.*) Sublimate.

ALBICA'NTIA *Corpora* (*Anat.*) glands behind the infundibulum of the pelvis of the cerebrum.

ALBIGENSES (*Ecc.*) a sect of heretics in the twelfth century, who opposed the doctrine and discipline of the Romish church. They derive their name from the city of Albi where they established themselves, but they were also known by the different names of Henricians, Petrosians, Publicans or Poplicians, Bon-hommes or Puritans, &c. according to their different tenets, which were mostly after the Manichean scheme. *Prætol. Vit. et Dogm. Hæret. omn.; Sander. Hæres.; Baron. Annal. and Bzov. Hist. Eccles.*

ALBIGO (*Bot.*) mildew, a whitish mucilaginous coating of the leaves of plants, produced either by small plants or insects.

ALBIMEC (*Chem.*) Orpiment. [vide *Auripigmentum*]

ALBINOS (*Nat.*) the name given by the Portuguese to the white Moors, who are looked upon as monsters by the negroes.

ALBINUM (*Bot.*) the *Gnaphalium Diorcum* of Linnæus; a species of plant, so called from the whiteness of its blossoms.

ALBIS (*Nat.*) pitch from the bark of the yew-tree.

ALBITROSSE (*Or.*) vide *Albatross*.

ALBO marginatum (*Bot.*) having white on the margin; an epithet for a leaf.—*Albo variegatum*, having white in the centre; an epithet for a leaf.

ALBOR Ovi (*Nat.*) Albumen Ovi.

ALBORA (*Med.*) a species of itch consisting of the Morpew, Serpigo and Leprosy. *Paracel. de Apostem. c. 42.*

ALBO'REA (*Chem.*) Mercury.

ALBORO (*Ich.*) a common name, in the markets of Rome and Venice, for the small red fish called the *Erethymus*.

ALBOT (*Chem.*) a crucible.

ALBOTAT (*Chem.*) Ceruss.

ALBOTIM (*Chem.*) Turpentine.

ALBOTIS (*Med.*) Terminusus.

ALBU'CA (*Bot.*) a genus of plants; Class 6 *Hexandria*, Order 1 *Monogynia*.

Generic Characters. CAL. none.—COR. petals six.—STAM. filaments shorter than the corolla.—PIST. germ oblong; style three-sided; stigma a triangular pyramid.—PER. capsule oblong; seeds numerous.

Species. The species are mostly perennials, and natives of the Cape of Good Hope. *Raii Hist. Plant.; Mor. Hist. Plant.; Linn. Spec. Plant.*

ALBUGINEA (*Anat.*) from *albus*; an epithet for the *tunica adnata oculorum*, as also for the coat of the testicles, so called from its colour which is white.

ALBUGINEUS *humour* (*Anat.*) the aqueous humour of the eye. [vide *Aqueous Humour*]

ALBU'GO oculorum (*Anat.*) a disease in the eye, which consists of a pearl or white speck. *Plin. l. 20, c. 5, &c.; Oribas. de Loc. Affect. l. 4, c. 24; Aet. Tetrab. 2, serm. 3, c. 37, &c.; Paul. Æginet. de Re Med. l. 3, c. 22; Actuar. de Meth. Med. l. 6, c. 5.*

ALBUGO Coralli (*Nat.*) the magistry of Coral.—*Albugo Ovi*, the white of an egg. [vide *Albumen*]

ALBULÆ Aquæ (*Med.*) "Αλβουλαί, the mineral waters of Albula, in Italy, by which wounds were healed, according to Pliny. *Hist. Nat. l. 31, c. 2; Gal. de Meth. Med. l. 8, c. 2; Aet. Tetrab. 3, serm. 3, c. 30.*

ALBUM (*Ant.*) a white table wherein the prætors had their decrees written, also a muster-roll, or list of names, as the *Album Judicium*, *Album senatorium*, &c. *Cic. Orat. l. 2, c. 12; Senec. de Benef. l. 3, c. 7; Plin. Præfat.; Tacit. Annal. l. 4, c. 118; Sucton. in Claud. c. 16; Dio. in August.; Bud. in Pandect.; Salmas de Med. Usur. p. 678.*

ALBUM balsamum (*Med.*) Capivi Balsamum.—*Album Hispanicum*, Spanish White; a cosmetic.—*Album Græcum* or *Canis*, Dog's-dung applied to Ulcers, &c. *Dale. Phar-*

macop.—*Album Jus*, a broth made from fish for sick people. *Oribas.*

ALBUM Oculi (*Anat.*) the White of the eye.—*Album Ovi*, the white of an egg. [vide *Albumen*]

ALBUM Olus (*Bot.*) Corn Salad.

ALBUM Nigrum (*Nat.*) Mouse-dung.

ALBUM (*Law*) vide *Alba Firma*.

ALBUMEN (*Nat.*) the White of an egg, called by Aristotle λευκον, by Celsus *Ovi candidum*, by Pliny *Ovi Albus liquor*, by Palladius *Ovi Albor*, *Ovi Album*, or *Albumentum*. *Aristot. de Gen. Animal. l. 3, c. 2; Dioscor. l. 2, c. 155; Plin. l. 10, c. 53; Gal. de Simplic. l. 11; Harv. de Gen. Animal. Exercit. 60.*

ALBUMEN (*Bot.*) the substance of the lobes of seeds corresponding to the white of an egg. *Grew. Anat. of Plants.*

ALBUMOR (*Nat.*) vide *Albumen*.

ALBURNUM (*Bot.*) the soft white substance in trees next to the *liber*, or inner bark, which gradually acquires solidity, until it becomes wood. It is, according to Linnæus, *Intermedia substantia libri et ligni*, and is vulgarly called Sap, to distinguish it from the heart, which is harder, and of a deeper colour. It derives its name *albo colore* from its white colour. *Plin. l. 16, c. 38; Linn. Phil. Botan.*

ALBURNUS (*Ich.*) the Bleak, the *Cyprinus alburnus* of Linnæus; a little fish mentioned by Ausonius, the catching of which was an amusement for children.

Auson. Mosel. v. 126.

Alburnos prædam puerilibus hamis.

ALBUS Liquor (*Nat.*) vide *Albumen*.

ALBUS Spinus (*Bot.*) White Thorn.

ALBUS Romanus Pulvis (*Med.*) magnesia.—*Albus fluor*, vide *Fluor Albus*.

ALBUS (*Com.*) a small coin current in Cologne, a half-penny in value.

ALCA (*Or.*) the Auk, a genus of birds of the Order *anseris*. *Generic Character.* Bill strong, thick, compressed.—*Nostrils* linear.—*Tongue* almost as long as the bill.—*Toes* no back toe.

Species. The principal species are as follow; namely—*Alca impennis*, in French *le grand Pingoin*, Penguin, or Great Auk. From the smallness of its wings it is unable to fly, and is observed by mariners never to go beyond soundings.—*Alca torda*, in French *le Pingoin*, the Razor-bill Auk or Murre, so called from the sharp edges of the bill.—*Alca arctica*, in French *le Macareux*; the *Pica marina* of Aldrovandus, and the Puffin or Coulterneb of Willoughby.—*Alca alle*, in French *la petit Guillemot*; the Little Black and White Diver of Willoughby; the *Mergulus melanoleucos* of Ray, is now more commonly known by the name of the Little Auk.—*Alca pygmaea*, an American and Asiatic bird, is still smaller than the preceding, being not more than seven inches long.

ALCADE (*Polit.*) an inferior minister of justice in Spain.

ALCAHEST (*Chem.*) vide *Alkahest*.

ALCAHOL (*Chem*) Alcohol.

ALCAIC Dactylic (*Poet.*) an alcaic verse, in which the dactyl is the principal foot.—*Alcaic Strophe*, a strophe in which the Alcaic verse prevails.—*Alcaic Verse*. [vide *Alcaics*]

ALCAICS (*Poet*) *Carmen Alcaicum*, i. e. Alcaic Verse; a sort of verse so called from the poet Alcæus, by whom it was first used. *Alcaics* are of three sorts; namely—The *lesser Alcaic*, which consists of two dactyles and two trochees, as

Hor. Carm. l. 2, od. 3, v. 28.

Ἐξίλι | um ἰμῖσι | τῆρά | εἴμβε.

The *greater Alcaic*, which consists of five feet; the first a

spondee, or iambic; the second an iambic; the third a cæsuræ, or long syllable; the fourth and fifth dactyles, as *Hor. Carm. l. 1, od. 3, v. 25.*

Ōmnēs | cō | dēm | cōgimūr | ōnniūm
Vērā | tīr ar | nā, &c.

These two are called Alcaic Dactylics.—The third and last sort consists of four feet, the first an epitrite, the second and third choriambuses, and the fourth a bacchius, as

Hor. l. 1, od. 8.

Tē Dēs ō | rō Sjbōrin | cūr pōpōrēs | ūmāndo.

ALCALI (*Chem.*) vide *Alkali*.

ALCALESCENT, &c. (*Chem.*) vide *Alkalescent*, &c.

ALCA'NCALI (*Med.*) an antidote used in burning fevers.

Myrep. sect. 1, c. 24.

ALCA'NNA (*Bot.*) the *Anchusa* of Linnæus, more commonly called Alkanet.

ALCAVA'LA (*Com.*) a custom-house duty paid in Spain, on imported goods, at the rate of five per cent. on the price of the commodity.

AL'CEA (*Bot.*) ἀλκία, a sort of wild mallows which was employed in medicine as an emollient. *Dioscor. l. 3, c. 164; Plin. l. 27, c. 4; Paul. Æginet. de Re Med. l. 7, c. 3.*

ALCEA, in the *Linnean system*, a genus of plants; Class 16 *Monodelphia*, Order 7 *Polyandria*, in English the Vervain Mallow.

Generic Characters. CAL. double.—COR. petals five.—STAM. filaments uniting into a sort of five-angled cylinder at bottom; anthers almost kidney-shaped.—PIST. germ orbiculate; style cylindrical; stigmas setaceous.—PER. arils many-jointed; seed one.

Species. The Species are the—*Alcea rosea*, Common Holly-hock, a native of China.—*Alcea ficifolia*, Fig-leaved Holly-hock.—*Alcea Africana*, African Holly-hock, native of Africa. *J. Bauh. Hist. Plant.; C. Bauh. Pin.; Ger. Herb.; Park. Theat. Botan.; Raii Hist. Plant.; Tournef. Inst.; Boerhaav. Ind. Plant.; Linn. Spec. Plant.*

ALCEA is also the name for different species of the *Hibiscus* and *Malva* of Linnæus. *Bauh. Raii, &c.*

ALCEBRIS vivum (*Chem.*) the same as *Sulphur vivum*.

ALCEDO (*Or.*) a genus of animals; Class *Aves*, Order *Picæ*.

Generic Characters. Bill triangular.—Tongue fleshy.—Feet (in most) gressorial.

Species. The principal species are—*Alcedo gigantea*, in French *le plus grand Martin Pecheur*, Giant King-fisher, inhabits New Holland.—*Alcedo torquata*, in French *l'Alatli*, Cinereous King-fisher, inhabits Martinique.—*Alcedo atracapilla*, in French *le Martin-pêcheur à coiffe noir*, Blackcapped King-fisher.—*Alcedo cancrphaga*, in French *le Crabièr*, Crab-eating King-fisher.—*Alcedo flavescens*, in French *Tenrou-joulon*, Flavescent King-fisher.—*Alcedo Brasiliensis*, in French *le Gip-Gip*.—*Alcedo cristata*, in French *le Vintsi*, Crested King-fisher, inhabits Amboyne and the Philippine islands.

ALCHAHIL (*Chem.*) Rosemary.

ALCHA'MIA (*Chem.*) vide *Alchemy*.

ALCHEMILLA (*Bot.*) or *Alchimella*, from having been celebrated by the Alchemists, Ladies Mantle; a genus of plants, Class 4 *Tetandria*, Order 1 *Monogynia*.

Generic Characters. CAL. perianth one-leaved; edge flat.—COR. none.—STAM. filaments erect; anthers roundish. PIST. germ ovate; style filiform; stigma globular.—PER. none; seed solitary.

Species. The species are—*Alchemilla vulgaris*, seu *Pes*

Leonis, Common Ladies Mantle, or Bearsfoot. A perennial, native of Britain.—*Alchemilla Alpina*, *Stellarea argentia*, seu *Heptaphyllon Cinquefoit*, or Alpine Ladies Mantle; a perennial, native of Britain.—*Alchemilla pentaphyllea*, seu *alpina*, &c. Five-leaved Ladies Mantle; a perennial, native of the Alps.—*Alchemilla Capensis*, native of the Cape of Good Hope.—*Alchemilla Aphanes*, *hirsuta*, *monandra*, *annuus*, seu *minima montana*, *Aphanes*, or *Scandix minor*, an annual.—*Alchemilla Arvenis*, an annual, native of Britain *J. Bauh. Hist. Plant.; C. Bauh. Pin. That. Botan.; Ger. Herb.; Park. Theat. Botan.; Raii Hist. Plant.; Tourn. Inst. Herb.; Boerh. Ind. Plant.; Willd. Linn. Spec. Plant.*

ALCHEMISTOR (*Alch.*) Alchymist, a studier of Alchymy.

AL'CHEMY (*Chem.*) vide *Alchymy*.

ALCHIME'LLA (*Bot.*) vide *Alchemilla*.

ALCHI'TRAN (*Chem.*) the oil of Juniper.

ALCHOCO'RDEN (*Astrol.*) a planet that bears rule in the principal places of astrological figures at a person's nativity.

ALCHO'LLA (*Mech.*) a sort of meat pickled, dried, and potted.

ALCHOR'NEA (*Bot.*) from Mr. Alchorne, of London; a genus of plants, Class 22 *Dioecia*, Order 13 *Monadelphæa*.

Generic Characters. CAL. perianth three or five leaved; leaflets ovate.—COR. none.—STAM. filaments eight; anthers ovate.—PIST. a rudiment.

Species. The only species is the *Alchornea latifolia*, a shrub, native of Jamaica. *Linn. Spec. Plant.*

AL'CHYMY (*Chem.*) that branch of chemistry which more particularly treats of the transmutation of metals. It is compounded of the Arabic particle *al*, the, and the Greek χημεία, preparing of metals, i. e. 'The chemistry,' by distinction from every other branch of the art.

ALCHYMY is also the name of a composition of copper and arsenic, which is used for Kitchen utensils.

ALCIB'ION (*Bot.*) from ἀλκι, strength, and βίος, life; a herb that is good against the stinging of serpents.

ALCMA'NIC verse (*Poet.*) so called from the lyric poet, Alcman, its inventor, consists of three dactyls and a long syllable.

ALCOB (*Chem.*) Sal Ammoniac.

ALCOCHO'RDON (*Astrol.*) vide *Alchocorden*.

ALCODE'TA (*Chem.*) the tartareous sediment of urine.

ALCOHOL (*Chem.*) *Alcohol* or *Alkohol*. 1. The powder of lead ore, a fine unpalpable powder with which the Eastern ladies tinged their hair. 2. Any powder reduced to the highest state of purity. 3. Spirits of wine, or any other fermented liquor, rectified to the highest state of perfection. *Paracel. de Tartar.*

ALCOHOLIZATION (*Chem.*) the reducing of bodies to a fine and unpalpable powder; or in liquids, the depriving liquid spirits of their phlegm or watery quality, so as to rectify them highly.

AL'COL (*Chem.*) vinegar.

AL'COLA (*Med.*) the same as *aphthia*.

ALCOLA (*Alch.*) the tartar or excrement of wine. *Paracel. de Urin. c. 2.*

ALCOLISMUS (*Chem.*) Alcolizing or reducing any substance to fine particles.

ALCOLITA *Urina* (*Med.*) a urine so called from the Alcola which it contains. *Paracel. de Urin. c. 2.*

ALCORAD (*Astrol.*) a contrariety of light in the planets.

ALCORAN (*My.*) i. e. the Koran or reading, from the Arabic *al*, the, and *Koran*, to read; a collection of fables and impostures, invented by Mahomet, which is held sacred by the Musselmén, as their Bible, or rule of faith.

ALCORAN (*Lit.*) a name given to some extravagant productions of the monks in former times, as the "Alcoran of the

- Cordeliers," in which St. Francis is preposterously extolled, and put on a level with our Saviour.
- ALCORANISTS (*Theol.*) strict adherents to the letter or text of the Koran.
- ALCORANES (*Archæol.*) high slender towers, generally built by the Mahometans near their mosques.
- ALCYON (*Or.*) vide *Halcyon*.
- ALCYONIUM (*Con.*) a genus of animals, Class *Vermes*, Order *Zoophyta*.
Generic Characters. Animal in the form of a plant.—*Stem* fixed, fleshy, gelatinous, spongy, or coriaceous.
Species. The principal species are the—*Alcyonium digitatum*, Dead-man's hand.—*Alcyonium bursa*, Sea-purse.—*Alcyonium ficus*, Sea-fig, &c.
- ALDABARAN (*Astron.*) or the Bull's Eye, a star of the first magnitude in the southern eye of the constellation Taurus, which Ptolemy calls *ὁ λαμπρὸς τῶν αὐδῶν*, i. e. the bright star of the Hyades. The Right Ascension for 1812 was 66° 17' 4": Declination, 16° 7' 31" N.: Annual Variation in Right Ascension 51" 31.; in Declination 8" 16. *Ptolem. Almagest.* l. 7, c. 5, &c.; *Ulug. Beigh. apud Hyde Relig. Vet. Persar.; Bayer. Uranomet.*
- ALDER (*Bot.*) the *Betula Alnus* of Linnæus, a well-known tree which thrives particularly in moist places. It is called in Greek *κλήβρα*, in Latin *Alnus*, in German *Eller*, in Danish *Ell*, in Swedish *All*, *Ahl*, &c. The principal sorts of alder are three, namely, the round-leaved, or common alder, the long-leaved, and the dwarf alder. It is propagated by layers or truncheons, which are planted in February or March, and is of great use for making fences. The wood is valuable for piles and pumps, and all other works which remain under water, and is also much used by turners. The bark is employed in tanning.—*Black alder*, the *Rhamnus frangula* of Linnæus.
- ALDERAIMEN (*Astron.*) vide *Aderaimin*.
- ALDERMAN (*Polit.*) *Æalderman*, formerly one of the three degrees of Nobility among the Saxons. Atheling was the first, Thane the lowest, and Alderman the same as Earl among the Danes. Now Aldermen are associates to the chief civil magistrates of a city or town corporate.
- ALDERMANNUS *totius Angliæ* (*Law*) an officer answering to the Lord Chief Justice.—*Aldermannus Hundredi*, an office first appointed in the reign of Henry I.
- ALDROVANDA (*Bot.*) a genus of plants, so called after Aldrovandrus, the naturalist, Class 5 *Pentandria*, Order 5 *Pentagynia*.
Generic Characters. CAL. perianth five-parted.—COR. petals five.—STAM. filaments length of the flowers; anthers simple.—PIST. germ. globose; styles very short; stigmas obtuse.—PER. capsule globose; seeds ten.
Species. The only species is the *Aldrovanda vesiculosa*, seu *Lenticula palustris*, &c. native of Italy. *Pluk. Almag. Botan.; Linn. Spec. Plant.*
- ALE (*Husband.*) a species of beer, which is distinguished by having less of the hop.—*Pale Ale* is brewed from malt slightly dried.—*Brown Ale* is brewed from malt high dried.—*Ale-House*, a house that is licensed to sell ale. *Stat. 5 & 6 Ed. VI.*—*Ale Shot*, a reckoning to be paid at an Ale-house.
- ALE-silver (*Law*) a rent or tribute annually paid to the Lord of the Manor by those that sell ale within the liberties of the city.—*Ale-taster*, an officer for inspecting the quality of the beer sold in Ale-houses in the city. *Kitch. 46.*—*Ale-Conner*, an officer in the city of London to inspect the measures of Ale-house Keepers.
- ALE cost (*Bot.*) or *ale-coast*, from its being put into Ale; an old name for the *Tanacetum Balsamita* of Linnæus.—*Ale-Hoaf*, Ground Ivy, so called because it serves to clear ale or beer.
- ALE Gill (*Med.*) or *Gill-ale*; a kind of medicated liquor

- from the infusion of ground-ivy in malt liquor. *Quinc. Med. Dispens.*
- ALECENARIUM (*Falcon.*) a sort of hawk called the Lan-ner-Hawk.
- ALE-CONNER (*Archæol.*) vide *Ale*.
- ALECTORIA (*Min.*) or *Lapis Alectorius*, from *ἀλέκτωρ*, a cock; a gem so called because it is found in the stomach of cocks.
- ALECTOROLOPHUS (*Bot.*) a plant so called from *ἀλέκτωρ*, a cock, and *λόφος*, a crest, because its leaves resemble the crest of a cock. By the earlier botanists, it is called either by this name, or by that of *Gallæ Crista* and *Pedicularis*. In the Linnæan system it is classed under the *Bartsia*, *Pedicularis*, and *Rhinanthus*. *Plin.* l. 21, c. 5; *Dodon. Stirp. Hist.; Clus. Rar. Plant. Hist.; J. Bauh. Hist. Plant.; C. Bauh. Pin.; Raii Hist. Plant.; Linn. Spec. Plant.*
- ALE/CTRA (*Bot.*) a genus of plants, Class 14 *Didynamia*, Order 2 *Angiospermia*.
Generic Characters. CAL. perianth one-leaved; clefts ovate. COR. one-petalled; tube by degrees widened a little; border expanding.—STAM. filaments four; anthers twin.—PIST. germ. ovate; style filiform; stigma incurved.—PER. capsule ovate; seeds solitary.
Species. The only species is the *Alectra Capensis*, an annual, native of the Cape of Good Hope. *Linn. Spec. Plant.*
- ALECTRYOMANCY (*Ant.*) *Alectryomanteia*, from *ἀλέκτωρ*, and *μαντεία*, a prophecy or divination by means of cocks. It was performed by writing the twenty-four letters of the alphabet in the dust, on each of which a grain of corn was laid: then a cock magically prepared was let loose among them, and those letters, out of which he picked the corn, being joined together into words, were supposed to declare what they purposed to know. In this manner Jamblicus, the master of Proclus, is said to have divined that a person, named Theodosius, Theodotus, Theodorus, or Theodectes, was to succeed the emperor Valens, which coming to the emperor's ears, he put to death several persons whose names began with those letters, and obliged Jamblicus to poison himself, in order to escape his fury. *Zonar. Annal.*
- ALECTRYONON Agon (*Ant.*) *ἀλεκτρίωνον ἀγών*, i. e. the contest of cocks, an annual festival, which was celebrated by cock-fighting. It was instituted by Themistocles, in commemoration of his victory over the Persians, which had been presaged by the crowing of cocks. *Plutarch. in Themistoc.*
- ALE-DRAPER (*Archæol.*) a humorous name for an Ale-house keeper.
- A-LEE (*Mar.*) i. e. *A lee*, the situation of the helm when pushed close down to the lee side of the ship, in order to put the ship about.
- ALEFANTÉS (*Chem.*) flower of salts.
- ALEGAR (*Chem.*) sour ale used by the Dyers.
- ALE-HOOF (*Bot.*) a plant, the *Glycome hederacea* of Linnæus, so called from its use to clear ale or beer.
- ALEIPHA (*Med.*) *ἄλειφα*, the oil of vegetables. *Gal. Exeg. apud Hippocrat.*
- ALEIPTERIUM (*Ant.*) *ἀλειπτήριον*, the place in the Gymnasium at Athens where the combatants used to anoint themselves, so called from *ἄλειφα*, to anoint.
- ALELAIION (*Med.*) *ἄλλελαίον*, oil beat up with salt to apply to tumours. *Galen. de Remed. Parab.; Foes. Oeconom. Hippocrat.*
- ALE'MA (*Chem.*) *ἄλημα*, boiled meal.
- ALEMBIC (*Chem.*) *Alembicus*, compounded of the Arabic particle *al*, and the Greek *ἄμβιξ*, a cup; is the cap or head to a distilling vessel, which was called the body. The whole apparatus is now called by the name of Alem-

- bic, and is of two sorts, beaked and blind.—*Alembicus rostratus*, a beaked Alembic, has a canal or pipe from the head into the receiver.—*Alembicus cæcus*, a blind Alembic, is one without a pipe. *Paracel. Archidox.* l. 3.
- ALEMBOR (*Chem.*) vide *Alembroth*.
- ALEMBROTH (*Chem.*) the philosopher's salt, in the language of Paracelsus; a fixed alkaline salt. *Paracel. Diction.*
- ALEOPH'ANGINÆ *pilulæ* (*Med.*) aromatic pills.
- ALEO'RE (*Med.*) ἄλεωρον, ease from the abatement of a distemper. *Hippocrat. Prognost.* sect. 1; *Foes. Oeconom. Hippocrat.*
- A'LEOS (*Med.*) ἄλεος, as an epithet, signifies heaped, condensed; as a substantive, heat or warmth. *Hippocrat. de Morb. Mul.* l. 1; *Hesychius.*
- A'LER *sans jour* (*Law*) to be finally dismissed the court, because there is no further day assigned for appearance. *Kitch.* 146.
- A'LES (*Med.*) ἄλεος, condensed; an epithet applied by Hippocrates to the excrements. *Hippocrat. de Morb. Mul.* l. 1.
- ALES (*Chem.*) a compound salt.—*Ales crudum*, crude ales drops which often fall in the night time in June.
- A'LESCH (*Chem.*) alumen.
- A'LE-SHOT (*Archæol.*) a reckoning to be paid at an ale-house.
- A'LE-SILVER (*Archæol.*) a rent annually paid to the lord mayor by those who sell ale within the city.
- A'LE-STAKE (*Archæol.*) a maypole; so called because ale was sold there.
- A'LET (*Falcon.*) the true falcon of Peru, that never lets her prey escape.
- A'LE-TASTER (*Archæol.*) the same as Ale-Conner.
- ALE'TIDES (*Ant.*) festivals at Athens, in commemoration of Erigone, who wandered with a dog in search of her father Icarus, so called from ἀλάομαι, to wander. *Athen.* l. 14, c. 3.
- ALE'TON (*Med.*) ἄλετον, from ἀλέω, to grind; the meal of any sort of corn ground, as it is explained by Erotian and Hesychius *Erot. Lex*; *Hesych. Lex*; *Foes. Oeconom. Hippocrat.*
- A'LETRIS (*Bot.*) a genus of plants, Class 6 *Hexandria*, Order 1 *Monogynia*.
Generic Characters. CAL. none.—COR. one-petalled.—STAM. filaments subshaped; anthers oblong.—PIST. germ ovate; style subulate; stigma trifid.—PER. capsule ovate; seeds very many.
Species. The principal are the—*Aletris farinosa*, seu *acaulis*, seu *Hyacinthus floritanus*, &c. American Aletris, a perennial, native of America.—*Aletris Capensis*, seu *veltheimia*, Waved-leaved Aletris, native of the Cape of Good Hope.—*Aletris uvaria*, seu *Aloe uvaria*, Great Orange-flowered Aletris, native of the Cape of Good Hope.—*Aletris fragrans*, Sweetscented Aletris, a shrub, native of Africa. *Pluk. Almag. Botan.*; *Jacqu. Hort. Botan.*; *Linn. Spec. Plant.*
- ALEURITES (*Bot.*) ἀλευρίτης, from ἄλευρον, meal which is scattered over different parts of the tree; a genus of plants, Class 21 *Monoecia*, Order 8 *Monadelphia*.
Generic Characters. CAL. perianth three-cleft; clefts ovate.—COR. petals five; nectary five scales.—STAM. filaments numerous; anthers roundish.—PIST. germ conic superior; style none; stigmas two.—PER. berry large; seeds two.
Species. The principal are the—*Aleurites triloba*, a shrub, native of the Society Islands.—*Aleurites Moluccana*, *Jatropha Moluccana*, seu *Nux Moluccana*, a shrub, native of the Moluccas.—*Aleurites laccifera*, *Croton lacciferum*, *Ricinoides aromatica arbor*, *Ricinus aromati-*
- cus spicatus*, seu *Halicus terrestris*, a shrub, native of the East Indies, &c. *Linn. Spec. Plant.*
- ALEURON (*Med.*) ἄλευρον, from ἀλέω, to grind, properly signifies the meal of corn; but is used by Hippocrates for the meal of lentils. *Hippocrat. de Morb. Mul.* l. 2; *Erotian. Lex Hippocrat.*; *Foes. Oeconom. Hippocrat.*
- ALEXANDRI *antidotus aurea* (*Med.*) an antidote for defluxions from the head. *Myrep. de Antidot.* sect. 1, c. 1.—*Alexandri collyrium*, an ointment for the eyes. *Aet. Tetrab.* 2. serm. 3, c. 39.
- ALEXANDRIAN *library* (*Lit.*) an immense collection of books, formed at a vast expense by the Ptolemies, and afterwards burnt by order of the caliph Omar, A.D. 624. It is said that the volumes of this library supplied fuel for the 4000 baths in the city during the space of six months.
- ALEXANDRINA *aqua* (*Ant.*) baths in Rome built by the emperor Severus.
- ALEXANDRINA *laurus* (*Bot.*) the *Ruscus epiglossum* of Linnæus.
- ALEXANDRINE (*Poet.*) or Alexandrian, the name of a particular verse in modern poetry, consisting of ten, twelve, or even thirteen syllables, and so called from a certain French poem on the life of Alexander the Great.
- ALEXANDRINUM *emplastrum* (*Med.*) a plaster of wax, alum, &c. *Cels. de Re Med.* l. 5, c. 19.
- ALEXANTHUS (*Chem.*) or *Altingas*, flowers of copper.
- ALEXETERIA (*Med.*) vide *Alexipharmica*.
- ALEXIPHARMICA (*Med.*) ἀλεξιφάρμακα, from ἀλέξω, to drive away, and φάρμακον, a poison; alexipharmics, or remedies against poisons; otherwise called *Alexiteria*. *Gal. de Simplic. Med. fac.* l. 5, c. 18; *Gorr. Defin. Med.*
- ALEXIPYRÉ'TICUM (*Med.*) from ἀλέξω, arceo, and πυρετός, a fever; a remedy for a fever.
- ALEXITERIA (*Med.*) vide *Alexipharmica*.
- ALFA'CTA (*Chem.*) distillation.
- ALFA'DIDAM (*Chem.*) the scoria of gold, iron, &c.
- ALFA'NDIGA (*Com.*) the custom-house at Lisbon.
- ALFA'TIDA (*Chem.*) burnt copper.
- ALFA'TIDE (*Chem.*) sal ammoniac.
- A'LFDOUGH (*Cook.*) a name given by the Moors to a sort of vermicelli, which they make of flour and water, and use much at their entertainments.
- ALFE'CCA (*Astron.*) or Alphecca, an Arabic name for the star which Ptolemy calls ὁ λαμπρὸς ἀστὴρ ἐν τῷ σιφώνῳ, i. e. the bright star in the crown; called by Manilius *Lucida corona*. *Ptol. Almagest.* l. 7, c. 5; *Manil. Astronom.* l. 1; *Ul. Beigh. apud Hyde. Relig. vet. Persar.*; *Bayer. Uranomet.*
- ALFE'SERA (*Med.*) a confect, good for spasmodic affections. *Mesue.*
- ALFE'TUM (*Archæol.*) of ælan, *accendere*, to make to burn, and fæt, *vas*, a vessel; a cauldron in which boiling water being put the accused person was to hold his hand and arm up to the elbow, and if it came out unhurt he was judged innocent. *Leg. Adelst. Reg. apud Brompton.*
- A'LFIDAS (*Chem.*) Plumbum.
- A'LGÆ (*Bot.*) a sea weed; so called from the *algor* or coldness of water in which it grows.
- ALGÆ (*Bot.*) the second of the seven families, and the eighth of the nine tribes or nations, into which Linnæus divides all vegetables, comprehending such as have the root, leaves, and stem, all in one; as *Lichens* or *Liverworts*, *Fuci*, *Sea-weeds*, &c.
- ALGÆ, in the artificial system of Linnæus, is the third order of the Class *Cryptogamia*, and comprehends the following genera—*Lichen*, *Liverwort*, having its fructifications on a smooth shining receptacle.—*Tremella*, fructification in a gelatinous substance.—*Ulva*, fructification in a membrana-

ALGEBRA.

ceous substance.—*Fucus*, Sea-weed, substance coriaceous, seeds in a gelatinous bladder.—*Conferva*, substance capillary, or fibres continuous.—*Byssus*, substance lanuginous nor nearly fibrous.

ALGALI (Chem.) Nitre.

ALGALY (Med.) an hollow leaden probe invented by Dr. Hale for extracting the stone.

ALGAMET (Chem.) Coals.

ALGARAB (Med.) the Arabic name for the disease called the Anchylops.

ALGAREŚ (Med.) a strong emetic and cathartic powder prepared from butter of antimony.

ALGAROTH (Med.) *Algeroth*, a preparation of antimony and sublimate, so called from its inventor Algerothos, a physician at Verona. *Castell. Lex. Med.*

ALGATIA (Chem.) Civet.

ALGATRANE (Chem.) a sort of pitch or bituminous matter found in the isle of Plata.

ALGEBRA, the science of computing abstract quantities by means of symbols or signs. It is so called from the Arabic word *Algebra*, according to Lucas de Burgo, who makes *Algebra e Almucabala*, to signify the art of restitution and comparison, opposition and restoration, or resolution and equation, which all denote different parts in the operation of equations. Others derive it from the particle *al*, the, and *Geber*, the inventor of the science; or from *geber*, to reduce fractions to integers. By Lucas de Burgo himself, the first writer on Algebra in Europe, it was called, in Italian, *L'Arte Maggiore*, to distinguish it from Arithmetic, or *L'Arte Minore*, although it had been long known in Italy by the name of *Regola de la Cosa*, or Rule of the Thing. It was called *Specious Arithmetic* by Vieta, and *Universal Arithmetic* by Newton.

Algebraic Quantities.

Quantities are of different kinds; namely—*Known quantities*, the values of which are known; these are commonly represented by the first letters of the alphabet, as *a, b, c, d, &c.*—*Unknown quantities*, the values of which are unknown, which are represented by the letters *x, y, z.*—*Simple quantities* are those which consist of one term, as *a, 2b, &c.*—*Compound quantities* consist of several terms; if the quantity consist of two terms only it is called a *binomial*, as *a + b*; when of three terms a *trinomial*, as *a + b + c*; and if of four terms a *quadrinomial*, &c.—*Similar quantities* are those which are expressed by the same letter, as *a + 3a.*—*Dissimilar or unlike quantities* are expressed by different letters, as *a + b.*—*Positive quantities* are those which are to be added, having the sign + prefixed to them, as *+ b* or *+ c.*—*Negative quantities* are those which are to be subtracted, having the sign — prefixed to them, as *- a* or *- b, &c.* When no sign is prefixed to a quantity it is understood to be positive, as *a - b*, where *a* is a positive.—*Co-efficient of a quantity* is any number prefixed to a letter, as in *5a, 4b*, the 5 and 4 are co-efficients. When no number is prefixed it is understood to be unity, as *a* for *1a.*—*Residual quantities* are binomials, having one negative quantity, as *c - d.*—*Affected quantities* are those which have some number or sign joined to them, as *5b* or *- a.*—*Multiple of a quantity* is that which contains it a certain number of times; thus *16a* is the multiple of *4a.*—*Measure of a quantity* is that which is contained in another a certain number of times, as *4a*, the measure of *16a.*—*Common measure* is that quantity which measures or divides two quantities without leaving a remainder, as *2a*, which is the common measure of *6a* and *10a.*—*Rational quantities* are those which have some common

measure, as *6a* and *10a*, both of which may be measured or divided by *2a*, so as to make *3a* and *5a* without any remainder.—*Irrational quantities*, otherwise called *surds* or *incommensurable quantities*, are those which cannot be measured by any other quantity without a remainder, and have the radical sign $\sqrt{\quad}$ prefixed to them, as \sqrt{a} or $\sqrt{b^3}$, i. e. the square root of *a*, or of *b* cube.—*Quantities* that have no common measure but unity are said to be *prime* to one another.—*Reciprocal of a quantity* is that quantity inverted, or unity divided by it; thus $\frac{b}{a}$ is the reciprocal of $\frac{a}{b}$, and $\frac{1}{b}$ is the

reciprocal of *b.*—*Power of a quantity* is its square, cube, &c. as *a*², the square of *a*; *a*³, the cube; *a*⁴, the biquadrate, or fourth power of *a*, &c.: these different degrees are also called *dimensions.*—*Indices*, or exponents, are the figures which are placed above the letters to denote the powers, as the 2 in *a*², the 3 in *a*³, &c.

Algebraic Signs.

Signs express the relations of quantities; they are of different kinds, as follow:—+, the *sign of addition*, which is called *plus*, signifies that the quantity, to which it is prefixed, is to be added, as *a + b*, i. e. *a* plus, *b* or *a* added to *b.*—-, the *sign of subtraction*, which is called *minus*, signifies that the quantity must be subtracted, as *a - b*, i. e. *a* minus *b*, or *a* subtracted from *b.* The first of these is called the *positive* or *affirmative* sign, the second the *negative* sign. When several of these signs are prefixed to different quantities they are called *like signs*, when they are all affirmative, or all negative; and *unlike signs* when they are some affirmative, and some negative; thus in *a + 2b + 3c*, or *a - 2c - 4d*, the signs are like, but in *a + 3c - 4d* they are unlike.—×, the *sign of multiplication*, as *a × b* signifies that *a* is to be multiplied by *b.* Multiplication may be expressed also by a note, or full-point (.), and by the word *into*, as $\overline{a + b} \cdot \overline{c + d}$, or *a + b* into *c + d.*—÷, the *sign of division*, as *a ÷ b* signifies that *a* is to be divided by *b*; this may be expressed also in the form of a fraction, as $\frac{a}{b}$.—::: the *sign of proportion*, as

a : b :: c : d, signifies that *a* bears the same proportion to *b* that *c* bears to *d.*— $\sqrt{\quad}$, the *radical sign*, denotes the square root of the quantity before which it is placed, as $\sqrt{a^2}$, the square root of *a*², i. e. *a*; the same sign may be used with figures to express the root of the cube, biquadrate, &c. as $\sqrt[3]{a^3}$, $\sqrt[4]{a^4}$, &c.: these roots may likewise be expressed by fractions, $\frac{1}{2}, \frac{1}{3}, \frac{1}{4}$, &c. as $a^{\frac{1}{2}}, a^{\frac{1}{3}}, a^{\frac{1}{4}}, a^{\frac{1}{n}}$, which represents the square, cube, biquadrate, and *n*th root of *a* respectively.—*a*⁻¹, *a*⁻², *a*⁻³, &c. denote the negative powers of *a*, and

are equivalent to $\frac{1}{a^1}, \frac{1}{a^2}, \frac{1}{a^3}$, &c.—=, the *sign of equality*, as *a + b = x*, which signifies that *a* added to *b* is equal to *x.*—∞, the *sign of difference*, when it is not known, which is the greater, as *a ∞ x*, which signifies either *a - x* or *x - a.*—> or < is put between two quantities to express that the former is greater than the latter, as *a > b* or *a < b*, i. e. *a* greater than *b.*—⊃ or < signifies the reverse of the preceding, as *a ⊃ b* or *a < b*, i. e. *a* less than *b.*—*Vinculum*, a line drawn over several quantities signifies that they are taken collectively, as $\overline{a - b + c} \times \overline{d - e}$ signifies that the quantity represented by *a - b + c* is to be multiplied by *d - e*; thus suppose *a* to stand for 6,

ALGEBRA.

b for 5, c for 4, d for 3, and e for 1; then $a - b + c$ is $6 - 5 + 4 = 5$, and $d - e$ is $3 - 1 = 2$, therefore $a - b + c \times d - e$ is $5 \times 2 = 10$. In like manner are expressed the powers and the roots of quantities; thus $a + b$ denotes the square, or second power of $a + b$ considered as one quantity, and $a + b$ the third power; so that, suppose $a = 4$, $b = 2$, then $a + b = 4 + 2 = 6$, and $a + b$ = $4 + 2$ = $6^2 = 36$, the square of 6, or of $a + b$, also $a + b$ = $4 + 2$ = $6^3 = 216$, the cube of 6, or $a + b$; and so in regard to the roots of quantities, $\sqrt{a + b}$ denotes the square root of $a + b$; suppose $a = 100$, $b = 44$, then $\sqrt{a + b} = \sqrt{100 + 44} = \sqrt{144} = 12$. — \therefore or $\cdot\cdot$ is used in operations to signify *ergo*, therefore.

Operations in Algebra.

The operations in Algebra are Addition, Subtraction, Multiplication, Division, Fractions, Involution, Evulsion, Irrational Quantities, Infinite Series, Proportion, and Equations.

Addition.

Addition consists of three cases; namely, 1. To add quantities that are like, and have like signs, which is done by adding the co-efficients and prefixing the sign, as

To $+5a$	To $-6b$	To $3a - 4x$
Add $+4a$	Add $-2b$	Add $5a - 8x$
Sum $+9a$	$-8b$	$8a - 12x$

2. To add quantities that are alike, but have unlike signs, which is done by subtracting the lesser co-efficient from the greater, and prefixing the sign of the greater to the remainder, as

To $-4a$	To $5b - 6c$	To $a + 6x - 5y + 8$
Add $+7a$	Add $-3b + 8c$	Add $-5a - 4x + 4y - 3$
Sum $+3a$	$2b + 2c$	$-4a + 2x - y + 5$

3. To add quantities that are unlike, which is done by setting the quantities down one after another, with their proper signs, as

To $+2a$	To $3a$	To $4a - 4b + 3c$
Add $+3b$	Add $-4x$	Add $-4x - 4y + 3z$
Sum $+2a + 3b$	$3a - 4x$	$4a - 4b + 3c - 4x - 4y + 3z$

Subtraction.

Subtraction is performed by simply changing the signs of the quantity to be subtracted, and then proceeding as in the last case of addition, as

From $+5a$	From $8a - 7b$	From $2a - 3x + 5y - 6$
Sub. $+3a$	Sub. $3a + 4b$	Sub. $6a + 4x + 5y + 4$
Rem. $5a - 3a$ or $2a$	$5a - 11b$	$-4a - 7x \quad 0 - 10$

Multiplication.

Multiplication is performed by multiplying the co-efficients together, and affixing the letters after one another to the product, in which case like signs produce $+$, and unlike signs $-$, as

Mult. $+a$	Mult. $-12a$	Mult. $-2a$	Mult. $-6x$
By $+b$	By $-4b$	By $+4b$	By $-5a$
Product $+ab$	$+48ab$	$-8ab$	$+30ax$

When the quantities are compound, multiply every part of the multiplicand by all the parts of the multiplier, and add the product as in common multiplication, as

Mult. $a + b$	Mult. $2a - 3b$
By $a + b$	By $4a + 5b$
$aa + ab$	$8aa - 12ab$
$+ab + bb$	$+10ab - 15bb$
Prod. $aa + 2ab + bb$	$8aa - 2ab - 15bb$

Mult. $2a - 4b$	Mult. $xx - ax$
By $2a - 4b$	By $x + a$
$4aa - 8ab$	$xxx - axx$
$+8ab - 16bb$	$+axx - aax$
$4aa \dots 0 - 16bb$	$xxx \dots 0 - aax$

Powers of the same root are multiplied by adding their indices or exponents; thus if you multiply a^3 by a^2 the product is $a^{3+2} = a^5$; b^4 multiplied by b makes $b^{4+1} = b^5$; and x^n into x is x^{n+1} , x^n into x^2 is x^{n+2} , &c.

Division.

Division is performed by expunging the letters that are common to the dividend and divisor when placed in the form of a fraction, and dividing the coefficient by any term that will divide them without any remainder. Like signs produce $+$, and unlike signs $-$; thus

$$8bc \div 2b = \frac{8bc}{2b} = 4c; \quad -12ab \div +3a = \frac{-12ab}{+3a} = -4b;$$

$$-6bc \div -2c = \frac{-6bc}{-2c} = +3b; \quad 10ab \div +15ac = \frac{10ab + 15ac}{+20ad} \div 5a = \frac{2b + 3c}{4d}.$$

When the quantities are compound the letters must be arranged according to the dimensions of some one letter, both in the dividend and divisor, and then proceed to work each term as in long division of numbers; thus

$$\begin{array}{r} (a+b)aa + 2ab + bb \quad (a+b) \\ \underline{aa + ab} \\ + ab + bb \\ \underline{ab + bb} \end{array}$$

Here the quantities are arranged according to the dimensions of the letter a , then aa divided by a gives a the quotient, which, multiplied into the divisor, gives $aa + ab$, and this subtracted gives $+ab + bb$; ab divided by a gives $+b$, and makes, by multiplication, $ab + bb$.

The powers of the same root are divided by subtracting their indices; thus $a^5 \div a^2 = a^{5-2} = a^3$; $b^7 \div b^2 = b^{7-2} = b^5$; $a^7 b^2 \div a^2 b = a^{7-2} b^{2-1} = a^5 b$.

Fractions.

Fractions consist, as in whole numbers, of a *numerator*, which is placed above the line, and a *denominator* below

it, as $\frac{a}{b}$. If the numerator a be greater than the denominator b , then it is an *improper fraction*; if the quantity consist of an integer and a fraction it is a *mixed fraction*, as $a + \frac{a^2}{b}$. A mixed fraction is reduced to an improper one by multiplying the integral part into

the denominator, adding the numerator to the product, and placing the denominator under the sum, as

$$2\frac{3}{5} = 2 \times 5 + 3 = \frac{13}{5}; \quad a + \frac{a^2}{b} = \frac{a \times b + a^2}{b} =$$

$$\frac{a b + a^2}{b}; \quad a - x + \frac{a^2 - a x}{x}; \quad \text{first } a - x \times x = a x - x^2,$$

$$\text{then } a x - x^2 \text{ added to } a^2 - a x = a^2 - x^2 = \frac{a^2 - x^2}{x}.$$

An improper fraction is reduced to a mixed one by dividing the numerator of the fraction by the denominator; the quotient is then the integral part, and the remainder set over the denominator gives the fraction, as

$$\frac{a b + a^2}{b} = a + \frac{a^2}{b}; \quad \frac{a x + 2 x x}{a + x} = x + \frac{x x}{a + x}; \quad \frac{a a + x x}{a - x}$$

$$= a + x + \frac{2 x x}{a - x}.$$

To reduce fractions to a common denominator, multiply each numerator into all the denominators but its own for new numerators; and all the denominators together for

a new denominator; thus $\frac{a}{b}$, $\frac{b}{c}$, and $\frac{c}{d}$, are reduced to

the fractions $\frac{a c d}{b c d}$, $\frac{b b d}{b c d}$, $\frac{c c b}{b c d}$, having the common denominator $b c d$.

To reduce fractions to their lowest terms, divide the numerator and denominator by their common measure, i. e. some number which divides them both without a

$$\text{remainder; thus } \frac{2 a b}{4 b c} \div 2 b = \frac{a}{2 c}; \quad \frac{a^2 b^2 c}{a^3 b} \div a^2 b = \frac{b c}{a};$$

$$\text{and } \frac{6 a^2 b - 12 a x}{b a^2 x} \div 6 a = \frac{a b - 2 x}{6 a^2 x}.$$

When the common measure is not found by inspection, then divide the greater number by the less, and, if there be a remainder, divide the last divisor by it, and so on until no remainder is left; then the last divisor is the common measure, thus, to find the common measure of $a^2 - b^2$, and $a^2 - 2 a b + b^2$,

$$a^2 - b^2 \quad a^2 - 2 a b + b^2 \quad (1)$$

$$\underline{a^2 - b^2}$$

$$- 2 a b + 2 b^2 \text{ remainder.}$$

This divided by $- 2 b$ is reduced to $a - b$; then

$$a - b \quad a^2 - b^2 \quad (a)$$

$$\underline{a^2 - b^2}$$

.....

therefore $a - b$ is the greatest common measure to the fraction $\frac{a^2 - 2 a b + b^2}{a^2 - b^2}$, then $\frac{a^2 - 2 a b + b^2}{a^2 - b^2} \div$

$$a - b = \frac{a + b}{a - b}.$$

Fractions are added, subtracted, and multiplied, after preparing the quantities by reduction, as in whole numbers; thus add $\frac{a}{c}$ to $\frac{b}{x}$, then $\frac{a x}{c x} + \frac{b c}{c x} =$

$$\frac{a x + b c}{c x} \text{ the sum; from } \frac{a}{c} \text{ take } \frac{b}{x}, \text{ then } \frac{a x}{c x} - \frac{b c}{c x} =$$

$$\frac{a x - b c}{c x}; \quad \frac{a}{c} \times \frac{b}{x} = \frac{a b}{c x}; \quad \text{but, in dividing fractions,}$$

invert the divisor, and then proceed as in multiplication; thus

$$\frac{2 a}{b} \div \frac{4 c}{d} = \frac{2 a}{b} \times \frac{d}{4 c} = \frac{2 a d}{4 b c} = \frac{a d}{2 b c}, \text{ the quo-}$$

tient required.

Involution.

Involution is the continual multiplication of a quantity into itself; the products arising thence are called the *powers* of the quantity, and the quantity itself is called the *root*, as $a \times a = a a$ or a^2 ; $a \times a \times a = a a a$ or a^3 . When the sign of the root is +, all the powers of it will be +; but, if it be -, then the even powers will be +, and the odd powers -; thus, the second power of $- a$ is $- a \times - a = + a^2$, but the third power of a is $+ a^2 \times - a = - a^3$. The powers of quantities are multiplied by adding, and divided by subtracting, their exponents. When a lesser power is divided by a

greater, the exponent must be negative; thus $\frac{a^4}{a^6} = a^4$

$$\div a^6 = a^{4-6} = a^{-2}, \text{ or, as it is otherwise expressed,}$$

$$\frac{1}{a^2}.$$

These negative powers are also multiplied by adding, and divided by subtracting, their exponents; thus $a^{-2} \times a^{-3} = a^{-2-3} = a^{-5}$.

Binomial Theorem.

To remove the trouble and entanglement of raising compound quantities, Sir Isaac Newton formed a general theorem, the principles of which, as illustrated by Maclaurin, are as follow:

1st, That, in the first term of any power of $a \mp b$, the quantity a has the exponent of the power required, which decreases gradually in the following terms, and is never found in the last. The powers of b are in the contrary order; for it is never found in the first term; and its exponent in the second term is unit, in the third 2, and so on till the last, which becomes equal to the exponent required. As the exponents of a thus decrease, and, at the same time, those of b increase, the sum of their exponents is always the same, and is equal to the exponent of the power required; thus in the sixth power of $a + b$, viz. $a^6 + 6 a^5 b + 15 a^4 b^2 + 20 a^3 b^3 + 15 a^2 b^4 + 6 a b^5 + b^6$, the exponents of a decrease in this order; namely, 6, 5, 4, 3, 2, 1, 0, and those of b increase in the contrary order, 0, 1, 2, 3, 4, 5, 6, &c.; the sum of their exponents is always the same, and equal to the exponent of the power required.

2dly, To find the co-efficient of any term, the co-efficient of the preceding term being known, "divide the co-efficient of the preceding term by the exponent of b in the given term, and multiply the quotient by the exponent of a , in the same term, increased by unit." Thus to find the co-efficients of the terms of the sixth power of $a + b$ you find the terms are

$$a^6, a^5 b, a^4 b^2, a^3 b^3, a^2 b^4, a b^5, b^6;$$

and you know the co-efficient of the first term is unity; therefore, by the rule, the co-efficient of the second term will be $\frac{1}{1} \times 6 + 1 = 6$; that of the third term will be $\frac{6}{2} \times 4 + 1 = 3 \times 5 = 15$; that of the fourth term will be $\frac{15}{3} \times 3 + 1 = 5 \times 4 = 20$; those of the following terms will be 15, 6, 1.

According to these rules, if, in general, $a + b$ be raised to any power m , the terms without their co-efficients will be $a^m, a^{m-1} b, a^{m-2} b^2, a^{m-3} b^3, a^{m-4} b^4, a^{m-5} b^5, \&c.$ continued till the exponent of b becomes equal to m ; the co-efficients of the respective terms will be, 1 m ,

$$m \times \frac{m-1}{2}, \quad m \times \frac{m-1}{2} \times \frac{m-2}{3}, \quad m \times \frac{m-1}{2} \times$$

$$\frac{m-2}{3} \times \frac{m-3}{4}, \quad m \times \frac{m-1}{2} \times \frac{m-2}{3} \times \frac{m-3}{4} \times$$

$$\frac{m-4}{5}, \quad \&c. \text{ continued until you have one co-efficient}$$

quantities are said to be in arithmetical proportion when the difference between the first and second is equal to the difference betwixt the third and fourth, as 3, 7, 12, 16, and the quantities $a, a + b, e, e + b$. But quantities form a series in arithmetical proportion when they increase or decrease by the same constant difference; as $a, a + b, a + 2b, a + 3b, a + 4b, \&c.$; $x, x - b, x - 2b, \&c.$ This is called *Arithmetical Progression*. In arithmetical proportion the sum of the extremes is equal to the sum of the means, thus $3 + 16 = 7 + 12 = 19$; and $a + e + b = a + b + e$.—*Geometrical Proportion* denotes that relation between two quantities, which consists in one being contained in the other a certain number of times. If of four quantities the quotient of the first and second be equal to the quotient of the third and fourth, then those quantities are said to be in Geometrical Proportion, as 2, 6, 4, 12, or the quantities a, ar, b, br , which are expressed in this manner :

$$2 : 6 :: 4 : 12 \qquad a : ar :: b : br$$

i. e. as 2 is to 6 so is 4 to 12, or as a is to ar so is b to br . In these quantities the first and third terms are called the *antecedents*, the second and fourth the *consequents*. A series is said to be in Geometrical Proportion when it increases by one common multiplier, or decreases by one common divisor, as

$$a, ar, ar^2, ar^3, ar^4, \&c. \text{ or } a, \frac{a}{r}, \frac{a}{r^2}, \frac{a}{r^3}, \&c.$$

This is called *Geometrical Progression*, and the common multiplier or divisor is called their *Common Ratio*. In Geometrical Proportion the product of the extremes is equal to the product of the means, as $2 \times 12 = 6 \times 4 = 24$; and $a \times br = ar \times b$. This sort of Proportion is moreover distinguished into the *direct*; thus, $a : b :: c : d$; *inverse*, $b : a :: d : c$; *alternate*, $a : c :: b : d$; *compound*, $a : a + b :: c : c + d$; *divided*, $a : a - b :: c : c - d$; *mixed*, $b + a : b - a :: d + c : d - c$; by multiplication, $ra : rb :: c : d$; by division, $a \div r : a \div r :: c : d$; *harmonic*, $a : d :: a \mathcal{S} b : c \mathcal{S} d$.

Equations.

An *Equation* is the ratio of Equality between two quantities differently denominated, expressed by the sign of equality (=) as $2 + 3 = 7 - 5$, or $a + b = c$. The quantities are called the *terms* of the Equation, as $a, b, c, \&c.$; their places before or after the sign, the *sides* of the Equation; thus, $a + b$ is one side and c the other. The *root* of an Equation is the value of the unknown quantity contained in it, as in $3x + 18 = 24$, 2 is the root; for if you substitute 2 in the place of x you have $3 \times 2 + 18 = 6 + 18 = 24$.

Roots are either positive or negative, real or imaginary.—*Positive roots* are those that have a positive sign expressed or understood, as $x = 3$ or $x = +a$.—*Negative roots* have a negative sign prefixed to them, as $x = -5$. *Real roots* are those which contain some real or possible quantity, as those before mentioned.—*Imaginary roots* are those to which no absolute value can be attached, which, nevertheless, may be substituted for the unknown quantity so as to answer the condition of the equation. The square root of a negative quantity is always imaginary, as $\sqrt{-1}$. Every equation has as many roots, real or imaginary, as there are units in the highest power of the unknown quantity; thus, an equation of the second degree has two roots, one of the third degree three, of the fourth four, &c. as $x^3 - 8 = 0$, which has three roots, namely, one real, as $x = 2$, and two imaginary, as $x = -1 + \sqrt{-3}$, and $x = 1 - \sqrt{-3}$.

Different kinds of Equations.

Equations are of different kinds according to their powers. —*Simple Equations*, called by Vieta *pure Equations*, are those which have the unknown quantity of the first dimension only, as $7x = 35$.—*Affected*, called by Vieta *adfected*, and by Harriot *compound Equations*, are those which have the unknown quantity rising to two or more powers, as $x^2 + ax = b$, or $3x - 4x^2 + x^3 = 25$. Affected Equations are denominated after the highest power contained in them, as—*Quadratic Equations*, which rise to two powers, as $a^2 = b$; this is called a *simple quadratic*, in distinction from the *affected quadratic*, into which the unknown quantity enters in the first as well as the second degree, as $ax^2 + bx = c$, or $x^2 + a = bx$.—*Cubic Equations* are those in which the unknown quantity is of three dimensions, as $x^3 = 25$, or $y^3 = a^3 - b^3$.—*Biquadratic Equations*, in which the unknown quantity rises to the fourth degree, as $x^4 = 25$, or $y^4 + ab^2y^2 + a^2cy = a^3d$. Equations are moreover distinguished, according to their form, into—*Literal Equations*, in which all the quantities, both known and unknown, are expressed by letters, as $ax^2 + bx = c$.—*Numeral Equations*, those in which the co-efficients of the quantities are given in numbers, as $5x^2 + 7x = 16$.—*Binomial Equations*, such as have only two terms, as $x^5 = a, x^6 = b, \&c.$ —*Fluxional Equations*, equations of fluxions.—*Fluential Equations*, equations of fluents.—*Exponential Equations*, those in which the exponent is a variable or unknown quantity, as $a^x = b, x^a = a, \&c.$ —*Eminential Equations*, a sort of assumed equation that contains another equation eminently.—*Differential Equations*, such as involve or contain differential quantities, as the equation of $3x^2 dx - 2, ax dx + ay dx + ax dy = 0$.—*Reciprocal Equations* are those in which the co-efficients of each pair of terms equally distant from the extremes are equal to each other, as $ax^7 + bx^6 + cx^5 = 0$; and $cx^2 + bx + a = 0$; $x^3 + 3x^2 + 3x + 1 = 0$; and $x^4 + ax^3 + bx^2 + ax + 1 = 0$.—*Determinate Equations*, those equations in which only one unknown quantity enters, in distinction from—*Indeterminate Equations*, in which there are more unknown quantities than there are independent equations, as $16p - 419 = 1$.—*Transcendental Equations* are either such as contain transcendental quantities, or such fluxional equations as do not admit of finite algebraical fluents,

$$\text{thus, } y = \frac{\ddot{x}}{\sqrt{(a^2 - x^2)}} \text{ and } y = \text{fluent of } \frac{\dot{x}}{\sqrt{(ax - x^2)}} \text{ are}$$

transcendent equations.—*Equation of a Curve*, an equation showing the nature of a curve by expressing the relation between the absciss and its corresponding ordinate, or else the relation of their fluxions; thus the equation of the circle is $ax - x^2 = y^2$, where a is its diameter, x any absciss or part of that diameter, and y the ordinate at that point of the diameter; so that whatever absciss is denoted by x , the square of the corresponding ordinate will be $ax - x^2$; in like manner the

$$\text{equation of the ellipse is } \frac{p}{a} (ax - x^2) = y^2; \text{ of the}$$

$$\text{hyperbola } \frac{p}{a} (ax + x^2) = y^2; \text{ of the parabola, } px = y^2;$$

where a is an axis, and p the parameter.

Operations with Equations.

Equations undergo various operations, as Generation, Reduction, Solution or Resolution, Depression, Extermination, Elimination, Transformation, Construction. *Generation of Equations* is the multiplying of certain as-

sumed simple equations together to produce compound ones; thus, suppose $x = a$, $x = b$, $x = c$, &c. or $x - a = 0$, $x - b = 0$, $x - c = 0$, then these last multiplied together become

$$\begin{aligned} x - a &= 0 \\ x - b &= 0 \end{aligned}$$

$$\begin{array}{r} x^2 - \frac{a}{b} \} x + ab = 0 \\ x - c \qquad \qquad = 0 \end{array}$$

$$\begin{array}{r} x^3 - \frac{a}{c} \} x^2 + \frac{ab}{bc} = 0 \\ x - d \qquad \qquad = 0 \end{array}$$

$$\begin{array}{r} x^4 - \frac{a}{d} \} x^3 - \frac{ad}{bc} \} x^2 \left. \begin{array}{l} \frac{abc}{abd} \\ \frac{acd}{dbc} \end{array} \right\} x + abcd = 0 \end{array}$$

This method was invented by Harriot, in order to show the nature of compound equations.

Reduction of Equations.

Reduction of Equations is the reducing them to the simplest form that is most commodious for their resolution: this consists of certain general rules, namely—1. Any quantity may be transposed from one side of the equation to the other by changing its sign; thus if $5x + 50 = 4x + 56$, then by transposition $5x - 4x = 56 - 50$ and $x = 6$; so likewise if $2x + a = x + b$, then $2x - x = b - a$, or $x = b - a$; for to take a quantity from one side and to place it with a contrary sign on the other, is to subtract it from both sides, and consequently if from equals you take equals the remainders will be equal. 2. If each side of an equation be divided by the same quantity, the results will be equal; for if equals be divided by equals the quotients will be equal; thus, if

$$ax = b, \text{ then } x = \frac{b}{a}; \text{ and if } 3x + 12 = 27, \text{ then, by}$$

Rule the first, $3x = 27 - 12 = 15$; and by this rule $x = \frac{15}{3} = 5$; also if $ax + 2ba = 3cc$, then, by Rule 1,

$$ax = 3cc - 2ba; \text{ and, by this rule, } x = \frac{3cc}{a} - 2b.$$

3. If every term on each side be multiplied by the same quantity the results will be equal, for if equals be multiplied by equals the products will be equal. In this manner an equation may be cleared of fractions, as if $\frac{x}{b} = b + 5$, then multiplying both sides by b you have

$$x = bb + 5b; \text{ if } \frac{x}{5} + 4 = 10, \text{ then multiplied by } 5 \text{ it}$$

$$\text{becomes } x + 20 = 50, \text{ and, by Rule the first, } x = 50 - 20 = 30; \text{ if } \frac{4x}{3} + 72 = 2x + 6, \text{ then } 4x + 72 =$$

$$6x + 18; \text{ by Rule the first, } 72 - 18 = 6x - 4x, \text{ or } 54 = 2x; \text{ and, by Rule the second, } x = \frac{54}{2} = 27. \text{ If}$$

there are more fractions than one in the given equation, you may, by reducing them to a common denominator, and then multiplying all the other terms by that denominator, abridge the operation thus; if $\frac{x}{5} + \frac{x}{3} = x - 7$,

$$\text{then } \frac{3x + 5x}{15} = x - 7; \text{ and, by this rule, } 3x + 5x = 15x - 105; \text{ and, by Rules 1 and 2, } x = \frac{105}{7} = 15.$$

4. If the unknown quantity involve a surd root, let all the other terms be transposed to the contrary side, and involve both sides to the power denominated by the surd, of which the equation will thus become free: if there are more surds than one the operation must be repeated; thus, if $\sqrt{4x + 16} = 12$, then $4x + 16 = 144$, and $4x = 144 - 16 = 128$, and $x = \frac{128}{4} = 32$; if

$$\sqrt{ax + b^2} = 3b, \text{ then } ax + b^2 = 9b^2; \text{ by transposition, } ax = 9b^2 - b^2 = 8b^2; \text{ and by division, } x = \frac{8b^2}{a};$$

if $\sqrt{x + a} = c - \sqrt{x + b}$, then $x + a = c^2 - 2c\sqrt{x + b} + x + b$; and by transposition, $x - x + 2c\sqrt{x + b} = c^2 + b - a$, or $2c\sqrt{x + b} = c^2 + b - a$, and dividing by $2c$ we get $\sqrt{x + b} = \frac{c}{2} + \frac{b - a}{2c}$;

then squaring again we have $x + b = \frac{c^2}{2} + \frac{b - a}{2c}$; there-

fore $x = \frac{c^2}{2} + \frac{b - a}{2c} - b$. 5. If the roots be extracted

from each side of an equation the results will be equal; if $x^2 = 25$, then $x = \sqrt{25} = 5$; if $x^2 + 6x + 9 = 20$, then $x + 3 = \pm \sqrt{20}$ and $x = \pm \sqrt{20} - 3$. 6. A proportion may be converted into an equation by multiplying extremes and means together; if $x : 16 - x :: 3 : 5$; then $5x(x \times 5) = 48 - 3x(16 - x \times 3)$, and by

$$\text{transposition } 5x + 3 = 48, \text{ or } 8x = 48; \text{ hence } x = \frac{48}{8}$$

$= 6$. 7. If any quantities be found with the same sign, and multiplied or divided by the same quantity on both sides of the equation, they may be struck out thus: if

$$3x + b = a + b, \text{ then } 3x = a, \text{ and } x = \frac{a}{3}; \text{ if } 3ax +$$

$$5ab = 8ac, \text{ then } 3x + 5b = 8c, \text{ and } x = \frac{8c - 5b}{3};$$

$$\text{if } \frac{2x}{3} + \frac{8}{3} = \frac{16}{3}, \text{ then } 2x + 8 = 16, \text{ and } x = 4. \text{ 8. Any}$$

quantity may be substituted for another which is its equal; thus, if $3x + y = 24$, and $y = 9$, then $3x + 9 = 24$, $x = \frac{24 - 9}{3} = 5$; if $3y + 5x = 120$, and $y = 5x$,

$$\text{then } 15x + 5x (= 20x) = 120, \text{ and } x = \frac{120}{20} = 6.$$

9. In quadratic equations extract the square root on both sides, and proceed according to the preceding rules: thus, let $5x^2 - 45 = 0$, then by transposition $5x^2 = 45$, $x^2 = 9$; therefore $x = \sqrt{9} = \pm 3$. But if both the first and second powers of the unknown quantity be found in an equation, arrange the terms according to the dimensions of the unknown quantity, beginning with the highest, and transpose the known quantities to the other side; then if the square of the unknown quantity be affected with a co-efficient, divide all the terms by this co-efficient; add to both sides the square of half the co-efficients, and extract the square root on both sides; thus, suppose $y^2 + ay = b$, by adding the square

of $\frac{a}{2}$ to both sides, $y^2 + ay + \frac{a^2}{4} = b + \frac{a^2}{4}$; by extracting the root $y + \frac{a}{2} = \pm \sqrt{b + \frac{a^2}{4}}$; by transposition, $y = \pm \sqrt{b + \frac{a^2}{4}} - \frac{a}{2}$. The signs + and - are prefixed to both the preceding roots, because the square root of any quantity may be either positive or negative; consequently quadratic equations admit of two solutions.

Resolution or Solution of Equations.

Resolution of Equations is the determination of the values of the unknown letters or quantities of which the equation is composed. 1st, If the equation consist of only one unknown quantity, bring it by the rules of reduction to stand alone on one side, and its value will then stand on the other, thus :

Example I.

A person being asked what was his age, answered that $\frac{3}{4}$ of his age, multiplied by $\frac{1}{12}$ of his age, gives a product equal to his age; quere, what was his age?

Let his age be x ; then $\frac{3x}{4} \times \frac{x}{12} = x$, that is, $\frac{3x^2}{48} = x$; by Rule 3, $3x^2 = 48x$; by Rule 7, $3x = 48$; whence, by Rule 2, $x = 16$.

Example II.

If A can perform a piece of work in 8 days, and B in 10 days, in what time will they finish it together.

Let x be the time required; then since A in one day performs $\frac{1}{8}$ part of the work, in x days he performs $\frac{x}{8}$ parts of it; and in the same time B performs $\frac{x}{10}$ parts of it; and calling the work 1, $\frac{x}{8} + \frac{x}{10} = 1$, $10x + 8x = 80$, $18x = 80$, $x = \frac{80}{18} = 4\frac{4}{9}$ days.

Example III.

What quantity is that which, being divided by 4, and having 9 subtracted from the quotient, the remainder shall be 20.

Put x for the number required, then dividing x by 4, and subtracting 9 from the quotient $\frac{x}{4}$, the remainder is $\frac{x}{4} - 9$, equal by the question to 20; whence $\frac{x}{4} - 9 = 20$, $\frac{x}{4} = 29$, and $x = 116$.

2dly. If there are two unknown quantities, then there must be two equations arising from the conditions of the question; and if the values of these two quantities in each equation be found, then, by putting these values equal to each other, there will arise a new equation involving one unknown quantity, thus :

Example I.

Let $x + y = 9$, and $3x + 5y = 37$, be given to find x and y ; then $y = 9 - x$, and $5y = 37 - 3x$, $y = \frac{37 - 3x}{5}$; now these two quantities, $9 - x$, and $\frac{37 - 3x}{5}$, are both

equal to y , and things that are equal to one and the same thing are equal to each other; therefore $\frac{37 - 3x}{5} = 9 - x$, $37 - 3x = 45 - 5x$, $2x = 8$, $x = 4$, and $y = 9 - x = 5$.

Example II.

Let the sum of two quantities s , and their difference d , be given to find the quantities themselves.

Let x and y be the quantities; then by the question, $x + y = s$, and $x - y = d$; whence $x = s - y$, and $x = d + y$, and $d + y = s - y$; $2y = s - d$, $y = \frac{s - d}{2}$, and $x = \frac{s + d}{2}$.

Example III.

A privateer running at the rate of 10 miles an hour, discovers a ship 18 miles off, making way at the rate of 8 miles an hour, how many miles can she run before she be overtaken.

Let x be the number of miles she can run, and y the number that the privateer must run to overtake her: then, by the question, $y = x + 18$, and $x : y :: 8 : 10$; whence $10x = 8y$, $x = \frac{4y}{5}$, and $x = y - 18$; therefore $y - 18 = \frac{4y}{5}$, $5y - 90 = 4y$, and $y = 90$, $x = y - 18 = 72$.

Sometimes the value of one quantity being found is substituted for that quantity in the equation, as, let $x + 3y = 9$, and $2x + 7y = 20$, be given to find x and y ; then $x = 9 - 3y$, and by substituting this expression of x , $2 \times 9 - 3y + 7y = 20$, or $18 - 6y + 7y = 20$, and $y = 20 - 18 = 2$; therefore $x = 9 - 3y = 9 - 6 = 3$.

Sometimes the co-efficients, if they are the same in both equations, may be added or subtracted, as occasion requires. Thus let $x + y = 15$, and $x - y = 7$, be given to find x and y ; then, by subtraction, $2y = 8$, and $y = 4$; by addition, $2x = 22$, and $x = 11$. If the co-efficients are different, the terms of the first equation may be multiplied by the coefficient of the unknown quantity in the second, and those of the second equation by the co-efficient of the same unknown in the first, and then add or subtract as before: thus,

Example I.

Let $x + 3y = 35$, $5x - y = 105$, be given to find x and y ; from five times the first equation take the second, and you will have $14y = 70$; hence $y = \frac{70}{14} = 5$; and from three times the second equation take the first, and there will remain $14x = 280$; whence $x = \frac{280}{14} = 20$.

Example II.

Given $ax + by = c$, and $dx + ey = f$, to find x and y . From e times the first equation take b times the second, and there will remain $aex - bdx = ce - bf$; hence $x = \frac{ce - bf}{ae - bd}$. Again, from a times the second equation take d times the first, and you will have $ae y - db y = af - dc$; whence $y = \frac{af - dc}{ae - db}$.

Example III.

Suppose $x + y = s$, and $x : y :: a : b$; hence $bx = ay$;

then the second equation being taken from b times the first leaves $b y = b s - a y$; hence $a y + b y = b s$; therefore $y = \frac{b s}{a + b}$. Now write $\frac{b s}{a + b}$ instead of y in the second equation, namely, in $b x = a y$, and you will have $b x = \frac{a b s}{a + b}$, or $x = \frac{a s}{a + b}$.

When you have two equations of different dimensions, if you cannot reduce the higher to the same dimension with the lower, raise the lower to the same dimension with the higher. Thus let the sum of two quantities, s , and the difference of their squares, d , be given, to find the quantities. Put x and y for the two quantities; then by the question, $x + y = s$, and $x^2 - y^2 = d$; $x = s - y$, $x^2 = s^2 - 2 s y + y^2$, and $x^2 = d + y^2$; $d + y^2 = s^2 - 2 s y + y^2$, $d = s^2 - 2 s y$; whence $2 s y = s^2 - d$, $y = \frac{s^2 - d}{2 s}$, and $x = \frac{s^2 + d}{2 s}$.

3dly. If there are three unknown quantities, and consequently three equations, find two equations involving two unknown quantities, and then proceed as before: thus,

Example I.

Suppose $x + y + z = 12$, $x + 2 y + 3 z = 20$, and $\frac{x}{3} +$

$\frac{y}{2} + z = 6$; then $x = 12 - y - z$, $x = 20 - 2 y - 3 z$,

and $x = 18 - \frac{3 y}{2} - 3 z$; and $12 - y - z = 20 - 2 y$

$- 3 z$, $12 - y - z = 18 - \frac{3 y}{2} - 3 z$. As these two

last equations involve only y and z , they are to be resolved by the preceding rules, as follows; $2 y - y + 3 z - z = 20 - 12 = 8$, $y + 2 z = 8$, and $36 - 3 y - 6 z = 24 - 2 y - 2 z$, $12 = y + 4 z$; whence $y = 8 - 2 z$, and $y = 12 - 4 z$; consequently $8 - 2 z = 12 - 4 z$, $2 z = 12 - 8 = 4$, and $z = 2$; $y = 8 - 2 z = 4$; $x = 12 - y - z = 6$.

Questions of this kind may also be resolved by multiplication, addition, and subtraction, as the case requires; thus,

Example II.

Suppose $2 x + y + 2 z = 40$, $3 x + 3 y - z = 48$, $x + z = 2 y$. Take twice the third equation from the first,

and there will remain $y = 40 - 4 y$, or $5 y = 40$;

therefore $y = \frac{40}{5} = 8$, by substituting 8 for y in the

sum of the second and third equations, there will arise

$4 x + 3 \times 8 = 48 + 2 \times 8$, or $4 x = 40$, and $x = \frac{40}{4}$

$= 10$; and by writing 10 for x , and 8 for y , in the third given equation, you will have $10 + z = 2 \times 8$; hence $z = 16 - 10 = 6$.

Example III.

Suppose $x + y = a$, $x + z = b$, $y + z = c$; from the sum of the first and second equations take the third, and there will remain $2 x = a + b - c$; therefore $x = \frac{a + b - c}{2}$. Again, from the sum of the first and third

equations take the second, and you will have $2 y = a + c - b$, and $y = \frac{a + c - b}{2}$. Lastly, from the sum

of the second and third equations subtract the first, and

there will remain $2 z = b + c - a$; hence $z = \frac{b + c - a}{2}$.

Depression of Equations is the reducing them to lower degrees; as, from biquadratics to cubics, or from cubics to quadratics. Thus, if the equation be $x^3 - 6 x^2 + 11 x - 6 = 0$, and it be discovered that x is equal to 2, then $x - 2$ will be a divisor, by which, if the given equation be divided, it will be depressed to the quadratic $x^2 - 4 x + 3 = 0$.

Transformation of Equations is the changing their form, in order to prepare them for a more ready solution. This is effected by changing the signs of the terms alternately, beginning with the second. Thus, the roots of the equation $x^4 - x^3 - 19 x^2 + 49 x - 30 = 0$, are $+ 1 + 2 + 3 - 5$; these, by changing the signs of the second and fourth terms in the same equation, namely, $x^4 + x^3 - 19 x^2 - 49 x - 30 = 0$, become $- 1 - 2 - 3 + 5$. Equations may also be transformed into others that shall have roots greater or less than the roots of the proposed equation by some given difference. Thus, suppose the equation to be the cubic $x^3 - p x^2 + q x - r = 0$; then let it be transformed into another whose roots shall be less than the roots of this equation by some given difference, e ; that is, suppose $y = x - e$, and consequently $x = y + e$; then, instead of x and its powers, substitute $y + e$ and its powers, and there will arise this new equation.

$$\left. \begin{array}{r} x^3 = y^3 + 3 e y^2 + 3 e^2 y + e^3 \\ - p x^2 = - p y^2 - 2 p e y - p e^2 \\ + q x = \quad \quad \quad + q y + q e \\ - r = \quad \quad \quad \quad \quad - r \end{array} \right\} = 0$$

Whose roots are less than the roots of the preceding equation by the difference (e).

Extermination, or Elimination, is the taking away any unknown quantities in a given equation, so as to facilitate the solution of the question, of which many examples may be found under the head of the Resolution of Equations.

Extermination is one mode of transforming equations by taking away the second, or any other intermediate term out of an equation; or, in other words, to put the equation into such a form that the new equation may want the second, third, or fourth, &c. term. This is only to divide the co-efficient of the second term of the proposed equation by the number of dimensions of the equation; and, assuming a new unknown quantity, y , add to it the quotient having its sign changed, and then substitute this aggregate for the unknown quantity: thus, suppose it be required to exterminate the second term out of this equation, $x^3 - 9 x^2 + 26 x - 34 = 0$, then let $x - 3 = y$, or $y + 3 = x$, which, being substituted, will make the new equations.

$$\left. \begin{array}{r} x^3 = y^3 + 9 y^2 + 27 y + 27 \\ - 9 x^2 = - 9 y^2 - 54 y - 81 \\ + 26 x = \quad \quad \quad + 26 y + 78 \\ - 34 \end{array} \right\} = 0$$

$$y^3 * \quad - y - 10 = 0$$

In this example the (*) denotes that the second dimension of y is wanting. If the proposed equation is a biquadratic, as $x^4 - p x^3 + q x^2 - r x + s = 0$, then, by supposing $x - \frac{1}{4} p = y$, or $x = y + \frac{1}{4} p$, an equation will arise having no second term, and so on, with higher dimensions, of which more may be seen in Maclaurin's Algebra, as also on the extermination of the third and other terms.

Finding the Limits of Equations, is that process by means of which the solution of equations is sometimes much facilitated, particularly in those cases where it is necessary to proceed by approximation; for since it is evident that a root must lie between certain limits, that is, that it must be greater than one known quantity, and less than another; we are led to a near proximate value by an easy process. Thus, suppose it were required to find a number greater than the greatest root of the equation $x^3 - 5x^2 + 7x - 1 = 0$; then, assuming $x = y + e$, we have this new equation.

$$\left. \begin{aligned} x^3 &= y^3 + 3ey^2 + 3e^2y + e^3 \\ -5x^2 &= -5y^2 - 10ey - 5e^2 \\ +7x &= +7y + 7e \\ -1 &= -1 \end{aligned} \right\} = 0$$

Then, if 3 be substituted for e , each of the quantities $e^3 - 5e^2 + 7e - 1$, $3e^2 - 10e + 7$, $3e - 5$, is positive, or all the values of 7 are negative; therefore 3 is greater than the greatest value of x . In the same manner you may find a limit less than the least root of an equation, as $x^3 - 3x + 72 = 0$, assuming $x = y + e$; then

$$\left. \begin{aligned} x^3 &= y^3 + 3ey^2 + 3e^2y + e^3 \\ -3x &= -3y - 3e \\ 72 &= -72 \end{aligned} \right\} = 0$$

and here, if 5 be substituted for e , every term becomes positive; consequently, 5 is greater than the greatest root of the equation $x^3 - 3x + 72 = 0$, and 5 less than the least root of the equation $x^3 - 3x + 72 = 0$; of which more may be seen in Maclaurin's and Wood's Algebra.

Approximations of Equations is a method of coming nearer and nearer to the roots of equation, which is very similar to the method in arithmetic called Double Position, or Trial and Error. Various modes of Approximation have been devised by different authors; but that proposed by Newton, and somewhat varied by Raphson, is considered to be the most simple and practical. Of these varieties a farther account may be found in the writings of Newton, Wallis, Raphson, &c.

Construction of Equations is the finding the roots of equations by means of geometrical figures, which is effected by the intersection of lines or curves with each other, according to the rank of the equation; for the roots of equations are the ordinates of the curves at the points of intersection, with a right line. A simple equation is constructed by the intersection of one right line with another; a quadratic, by the intersection of a right line with a circle or any conic section; a cubic and biquadratic equation, by the intersection of one conic section with another. Thus, suppose the simple equation $ax = b^2 + c^2$, and the right-angled triangle, ABC, to be constructed having its base b and its perpendicular c , then the square of the hypotenuse $= b^2 + c^2$, which call h^2 ; then the equation is

$ax = h^2$, and $x = \frac{h^2}{a}$ a third proportional to a and h^2 .

If it be a simple quadratic, as $x^2 = ab$, then $a : x :: x : b$, or $x = \sqrt{ab}$, a mean proportional between a and b ; thus, upon a straight line take AB = a , and BC = b , describe the semi-circle ADC, and raise the perpendicular to meet in D; so shall BD be = x , the mean proportional between AB and BC, or a and b .

If the quadratic be affected as $x^2 + 2ax = b^2$, then

draw the right-angled triangle ABC, having the base AB = a , perpendicular, BC = b ; from the point A at the distance of AC describe the semicircle DCE; so shall DB and BE be the two roots of the given equation $x^2 + 2ax = b^2$. [vide Construction]

Principal writers on Algebra in chronological succession.

ALGEBRAIC (*Algeb.*) or *Algebraical*, any epithet for what belongs to Algebra; thus, an *Algebraic Curve* is one in which the relation between the absciss and ordinates can be expressed by an algebraic equation, as $d x - x^2 = y^2$ for the circle, supposing d to express the diameter, x the absciss, and y the ordinate.

ALGEBRAIST (*Math.*) one skilled in the science of Algebra.

ALGEDO (*Med.*) suppressed Gonorrhœa, or the suppression of the discharge from the gonorrhœa. *Cockb. on Gonorrh.*

ALGEMA (*Med.*) ἄλγημα, the disease whence the pain proceeds, in which sense the term is frequently used by Hippocrates. *Gorr. Def. Med.*

ALGENEB (*Astron.*) an Arabic name for a star of the second magnitude in Pegasus. Its longitude is $27^\circ 46' 12''$ of Taurus, its latitude $30^\circ 50' 28''$ North, according to Flamstead. *Bayer. Uranomet.*

ALGIRA (*Zo.*) a Moorish Lizard, and a species of the *Lacerta* of Linnæus.

ALGOIDES (*Bot.*) an aquatic plant, so called from its resemblance to the Alga, having imperfect hermaphrodite flowers. *C. Bauh. Pin.; Raii Hist. Plant.; Pluken. Phytograph.*

ALGOL (*Astron.*) an Arabic name for a star, called by Ulug Beigh, *Ras Algali*, i. e. the Head of a demon; by Ptolemy ὁ λαμπρὸς ἐν τῷ Γοργόνειο, i. e. the bright star in the Gorgon's Head. It is now known by the name of Algol, or Medusa's Head, and is a star of the second magnitude, according to Ptolemy; marked (β) by Bayer; but by

others it is reckoned to be of the third magnitude. Its longitude was $21^{\circ} 50' 42''$ of Taurus, and its latitude $23^{\circ} 23' 47''$ North, according to Flamstead. *Ptol. Almagest.* l. 7, c. 5; *Ul. Beigh. apud Hyde. Relig. Vet. Per.*; *Bayer. Uranomet.*; *Ricciol. Almagest. nov.* l. 6, c. 4, &c.; *Flamstead. Catal.*

ALGORAB (*Ast.*) an Arabic name for a fixed star of the third magnitude, ἐν δεξιᾷ πτέρυγι, i. e. in the right wing of the constellation Corvus, marked (δ) by Bayer. *Ptol. Almag.* l. 7, c. 5; *Bayer. Uranomet.*; *Ricciol. Almag. nov.* l. 6, c. 5.

ALGORITHM (*Math.*) from the Arabic *al*, the, and the Greek ἀριθμός, *Algorism* or *Algorithm*; the art of computation by numeral figures, as in Arithmetic.

ALGOSAREL (*Bot.*) the *Daucus carota* of Linnæus.

ALGUAZIL (*Polit.*) an officer of justice in Spain.

ALHA'BAR (*Astron.*) a star in the Great Dog.

ALHA'GI (*Bot.*) a species of the *Hedysarum* of Linnæus. *Raii Hist. Plant.*

ALHANDEL (*Bot.*) the *Cucumis colocynthis* of Linnæus.

ALHANDEL (*Med.*) a species of troche as old as Mesue, but not now used. *Quin. Dispen.*

ALHANNA (*Min.*) vide *Alana Terra*.

ALHA'SEF (*Med.*) a kind of pustule, otherwise called *Hydroa*.

ALHENNA (*Bot.*) another name for the *Lausonia inermis* of Linnæus.

ALHIDA'DE (*Mech.*) Alidade, the label index or ruler, moveable about the centre of an Astrolabe.

ALHOLLAND tide (*Ecc.*) another name for *All-Saints' Day*.

ALIAS (*Law*) a second or further writ after a *capias*, &c. which has been issued without effect—*Alias Dicitus*, a description of the defendant by an addition to his real name of that whereby he is bound in the writing.

ALIBANIES (*Com.*) cotton cloth imported into Holland from the East Indies.

ALIBANTES (*Ant.*) ἀλιβάντες, a term among the Greeks for those who, on account of their poverty, were deprived of sepulture.

ALICA (*Nat.*) from *alo*, to nourish; a nourishing kind of farinaceous food, a sort of Frumenty; also a kind of wheat, χλόηρος, which was used medicinally. *Hippocrat. Aphor.*; *Aret. de Caus. et Sig. Morb. Acut.* l. 1, c. 10; *Dioscor.* l. 2, c. 18; *Plin.* l. 18, c. 7; *Cels. de Re Med.* l. 3, c. 6; *Oribas. Med. Collect.* l. 4, c. 1; *Raii Hist. Plant.*; *Gorr. Med. Def. in Voc. χλόηρος.*

ALICANDE (*Bot.*) vide *Aliconde*.

ALICES (*Med.*) the little red spots in the skin, which precede the eruption of pustules in the small-pox.

ALICONDE (*Bot.*) an Ethiopian tree, from the bark of which flax is spun.

ALICORNU (*Zol.*) vide *Unicornu*.

ALIDADE (*Mech.*) vide *Alhidade*.

ALIEN (*Law*) one born in a foreign country out of the allegiance of the King. 1 *Inst.*—*Alien priories*, those cells of monks formerly established in England, which belonged to foreign ministers.—*Alien office*, the office at Gravesend, where all aliens are examined before they are permitted to proceed further into the country.

ALIEN duty (*Com.*) an impost laid on all goods imported by aliens over and above the customs paid on goods imported by British subjects.—*Alien's duty*, otherwise called *petty customs*, or *navigation duties*, a custom paid on fish not caught in British vessels.

ALIENATIO Mentis (*Med.*) a wandering or derangement.

ALIENATION (*Law.*) vide *Aliene*.—*Alienation office*, an office to which all writs of covenants and entries are carried for the recovery of fines levied thereon.

TO ALIENE (*Law*) from *aliēno*; to convey the property

of a thing to another.—*To aliene in fee*, to sell the fee simple thereof.—*To aliene in mortmain*, to make over lands or tenements to a religious house, or body politic.

ALIFORMES Processus (*Anat.*) the prominences of the Os cuneiforme, which are otherwise called Pteregoides.—*Aliformes musculi*, muscles in the form of a wing which rise from the Ossa Pteregoidæa.

ALIGNMENT (*Mar.*) a supposed line drawn to preserve a fleet, or part thereof, in its just direction.

ALIMENT (*Med.*) *alimentum*, from *alo*, to nourish; the food which serves to nourish the body, or that which, by the heat and ferment of the stomach, may be dissolved and converted into the juice called Chyle.

ALIMENTARIES (*Ant.*) *alimentarii pueri*, or *alimentariæ puellæ*, children who were educated at the public expense, who were sometimes called after the name of the founder, as the *Faustinæ*, a community of females instituted by Antoninus Pius, and called after the name of his wife *Faustina*. *Jul. Capitolin. in Anton. et Sever.*

ALIMENTARY canal (*Anat.*) the whole tract of intestines, including the stomach.—*Alimentary duct*, the same as the *Thoracic duct*.

ALIMONY (*Law*) from *alo*, to feed; the allowance made to a married woman upon a separation from her husband.

ALIMOS (*Bot.*) ἀλίμοι, from *α*, priv. and *λιμός*, hunger; a plant so called because it is said to drive away hunger and thirst. *Theophrast. Hist. Plant.* l. 4, c. 20; *Dioscor.* l. 1, c. 120; *Plin.* l. 17, c. 24; *Salmas. in Solin.* c. 16.

ALINDE'SIS (*Med.*) ἀλιόδοσις, a species of exercise mentioned by Hippocrates, which consisted of rolling in the dust after being anointed with oil. *Hippocrat. de Vict. Rat.* l. 2; *Foes. Oeconom. Hippocrat.*

ALINTHISAR (*Anat.*) the same as *Hypostaphyle*.

ALIOCAB (*Chem.*) the same as *Sal Ammoniac*.

ALIO Die (*Ant.*) the words used by the Augur in dissolving the *Comitia*, on religious grounds: "Quid gravius quam rem susceptam dirimi si Augur alio die dixerit." *Cic. de Leg.* c. 50.

ALIPÆNA (*Med.*) vide *Alipe*.

ALIPA'SMA (*Med.*) from ἀλείφω, to anoint; an ointment rubbed over the body to prevent sweat. *Gorr. Def. Med.*

ALIFE (*Med.*) ἀλίπη, applications to wounds in the cheek to prevent inflammation; they were so called from *α*, priv. and *λιπαίω*, to anoint, because they had no fat in them. They were otherwise called by the Greeks ἄναιμμα. *Gal. de Compos. Med.* l. 1, c. 15; *Cels. de Re Med.* l. 5, c. 19; *Gorr. Def. Med.*

ALIPILUS (*Ant.*) the name of the slave who plucked the hairs from the armpits of those who bathed. *Senec. Epist.* 56; *Cæc. Rhodig. Ant. Lect.* l. 30, c. 19; *Turneb. Adv.* l. 27, c. 10; *Mercur. de Art. Gymnast.* l. 1, c. 12; *Salmas. in Tertull. de Pall.*; *Stuck. Ant. Conviv.* l. 2, c. 25.

ALIP'TA (*Ant.*) *Aliptes*, ἀλειπτης, ἀπό τῆς αλείφειν, i. e. from anointing; slaves who anointed those who went to the bath. *Cic. Famil.* l. 1, ep. 9; *Cels. de Re Med.* l. 1, c. 1; *Juven. Sat.* 3, v. 76; *Rhodig. Ant. Lect.* l. 3, c. 19; *Turneb. Adv.* l. 16, c. 15; *Mercur. de Arte Gymnast.* l. 1, c. 12, &c.

ALIQUNT Part (*Arith.*) *aliquanta pars*; an indeterminate part of a number which will not measure it without a remainder, as the aliquant part of 10.

ALIQOT Part (*Ant.*) *aliquota pars*; a determinate part of a greater number which will measure or divide it without a remainder, as 3, the aliquot part of 12.

ALISANUS (*Bot.*) the *Rhezia virginica* of Linnæus. *Pluken. Phytog.*

ALISMA (*Bot.*) ἄλισμα, a plant so called from its supposed virtue in curing the bite of a sea-hare. It was also supposed to have the power of breaking the stone in the

kidneys, &c. *Dioscor.* l. 3, c. 169; *Plin.* l. 25, c. 10; *Orilas. Med. Coll.* l. 11.

ALISMA, in the *Linnean system*, is a genus of plants; Class 6 *Hexandria*, Order 5 *Polygynia*.

Generic Characters. CAL. *perianth* three-leaved.—COR. three-petalled; *petals* roundish.—STAM. *filaments* awl-shaped; *anthers* roundish.—PIST. *germs* more than five; *styles* simple; *stigmas* obtuse.—PER. *capsules* compressed; *seeds* solitary.

Species. Plants of this kind are perennials, as—*Alisma Plantago*, *Damasonium*, seu *Plantago aquatica*, Great Water-Plantain, a native of Great Britain.—*Alisma damasonium*, seu *Damasonium stellatum*, Star-headed Water-Plantain, a native of England.—*Alisma natans*, *Damasonium repens*, seu *Ranunculus palustris*, native of France, &c. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Ravi Hist. Plant.*; *Tournef. Inst.*; *Boerhaav. Ind.*; *Linn. Spec. Plant.*

ALISMA is also the name of different species of the *Primula* and *Senecio* of Linnæus.

ALISTELES (*Chem.*) Sal Ammoniac.

ALKADA'RII (*Theol.*) a sect of Mahometans, who assert the doctrine of free-will, and deny the absolute decrees of the Almighty.

A'LKAHEST (*Chem.*) or *alcahest*, a name first used by Paracelsus, by whom it was probably coined to signify a universal menstruum. It is explained by Van Helmont to signify a salt of the highest sort, that had attained to the highest state of purity and subtlety. It was supposed to possess the virtue of pervading every substance; and while it acted on every thing else, it remained itself immutable. *Paracel. de Vir. Memb.* l. 2, c. 6; *Van Helmon. Arcan. Paracel.*

A'LKALE (*Chem.*) the fat of a hen.

A'LKALI (*Chem.*) or *alkali*, a perfectly pure salt, altogether without any acidity, caustic in taste, and volatilized by heat. It combines with acids, so as to produce an ebullition and effervescence. Alkalies are distinguished according to the substances from which they are extracted, namely, the—*Animal alkalies*, procured from Hartshorn, and other animal substances.—*Vegetable alkalies*, procured from the ashes of Wormwood, and other plants.—*Fossile and mineral alkali*, procured from different parts of the earth, especially in Egypt, from sea-salt, &c.

Alkalies are moreover distinguished, according to their volatility, into—*Volatile alkalies*, which are gaseous, as Ammonia; and—*Fixed alkalies*, which remain fixed even in the fire, as Potash and Soda. The word *alkali* is derived from *kali*, an Arabic name for a certain herb on the coast of Egypt, the ashes of which yield a remarkably salt and acrid taste. This salt, which now goes by the name of Alkali, or Alkaline salt, was originally called *Lixivius Cinis*, *Lixivium Cineris*, *lixivious salts*, *Rochetta*, or Soda. *Plin.* l. 14, c. 2; *Paracel. Archædox.* l. 4; *Var. Helm. Comp. et Mist. Elam.* sect. 12; *Theat. Chem.* vol. 2, p. 470.

A'LKANET, *Dyer's (Bot.)* or *alcanna*, a plant, the *Anchusa tinctoria* of Linnæus, the root of which yields a fine deep red, that is used much by the dyers. It is cultivated in the South of France, and much resembles Bugloss.

ALKEKE'NGI (*Bot.*) a plant called Winter Cherry by Dale. It is the *Atropa physaloides*, and different species of the *Physalis* of Linnæus. Its medicinal virtues are that of an aperient and diuretic. *C. Bauh. Pin.*; *Parkins. Theat. Botan.*; *Boerhaav. Ind. Botan.*

ALKE'RMES (*Med.*) a confect mentioned in Quincy's Dispensatory, of which Kermes is the principal ingredient.

A'LKIAN (*Chem.*) that spirit which nourishes a man. *Theat. Chem.* vol. 5, p. 155.

ALKI'BRIC (*Chem.*) Sulphur vivum.

AL'KIN (*Chem.*) pot-ash.

A'LKIR (*Chem.*) smoke of coal.

ALL-GOOD (*Bot.*) the *Chenopodium*, or *Bonus Heuricus*, of Linnæus; a plant so called because it is applied by the common people to the healing of slight wounds.—*All-Heal*, or *Clown's All-Heal*, the *Stachys* of Linnæus, otherwise called Wound-Wort.—*All-Seed* [vide *All-Seed*].—*All-Spice* [vide *All-Spice*]

ALL-H'ALLOWTIDE (*Ecc.*) the name for All-Saints' day.—*All-Saints*, a festival observed in the Christian church on the first day of November, in commemoration of all the saints.—*All-Souls*, a festival observed in the Romish on the second of November, when prayers are offered up for all departed souls.

A'LKOHOL (*Chem.*) vide *Alcohol*.

A'LLA (*Mus.*) Italian, for in the, is used adverbially as follows:—*Alla*, or *All antica*, in the old style applied to compositions after the manner of the last age.—*Alla breve*, quick; that is, a species of quick time.—*Alla caccia*, in the hunting style, applied to music imitative of the chace.—*Alla capella*, in the church style, or after the manner of sacred music.—*Alla Zoppa*, or *alzop*, in an affected style, or *all improvista*, extemporaneous.—*Alla*, or *al loco*, in its place, denoting, in violin music, that the hand, having been shifted, must return to its place.—*Alla moderna*, in the modern style, applied to compositions since the time of Handel.—*Alla*, or *All ottavo*, in the octave, applied to voices or instruments when the parts lie note for note, an octave above or below.—*Alla*, or *All reverso*, the reverse, applied to parts in a contrary direction.—*Alla segno*, or *Al Seg*, marked thus, :S: i. e. to the mark, denoting that the performer must return to the mark.—*Alla Russe*, *Scorzese*, *Siciliana*, *Italianne*, &c., in the Russian, Scotch, &c. style.

ALLAGO'STEMON (*Bot.*) a class of plants, according to Monk's system.

ALLAMA'NDA (*Bot.*) from Mr. Allamand, a Dutch surgeon, a genus of plants, Class 5 *Pentandria*. Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* one-leaved.—COR. one-petalled; *tube* cylindric; *border* semiquinquefid; *divisions* spreading.—STAM. *filaments* scarcely any; *anthers* five.—PIST. *germ* oval; *style* filiform; *stigma* headed.—PER. *capsule* orbicular; *seeds* very many.

Species. The only species is the *Allamanda Cathartica*, *Orelia grandiflora* *Galarips*, *Echinus scandens*, &c. seu *Apocynum scandens*, a shrub, native of Guiana. *Barrel. Plant. Gall. Hispan. et Ital.*; *Aubl. Hist. Plant. Guian.*; *Linn. Spec. Plant.*

A'LLANITE (*Min.*) a species of the ores of Uranium, being a silicate of cerium and iron.

ALL antica (*Mus.*) Italian, for in the old style, applied to compositions of the old school.

ALLANTOIDES (*Anat.*) ἄλλαντοειδής, *Allantois* ἄλλαντοεις, from *ἀλλᾶς*, a sausage, or hog's-pudding: the urinary membrane, so called from its resemblance to a pudding. This membrane reaches from one corner of the uterus to the other. *Galen. de Sem.* l. 1, c. 7. In brutes it is called the *Sarcimimalis Punica*, or Gut Pudding.

A'LLERGER (*Chem.*) or *alegar*, *ale aigue*, vinegar made of ale, now in common use.

ALLE'GIANCE (*Law*) from *ab* or *ad*, and *ligo*, i. e. *ligamen fidei*, a bond of fidelity; the natural, lawful, and faithful obedience which every subject owes to his prince. 1 *Inst.* 129, &c.—*Oath of Allegiance*, the oath which all persons are required to take before they enter upon any office, and on other occasions, specified in different statutes. *Eliz.* c. 1, 5; 3 *Jac.* 1.

ALLEGIA'RE (*Law*) to justify or defend in due course of law. *Leg. Alured. apud Brompton.*

ALLEGORICUS *methodus* (*Rhet.*) ἀλληγορικὸς μέθοδος, an allegorical mode of speech when the authority of others *allegatur*, that is, is quoted in confirmation of what is adduced. *Hermog. περι. δ.*

ALLEGORY (*Rhet.*) ἀλληγορία, a figurative sort of discourse, by which something else is meant than what is expressed by the literal words, so called from ἄλλο, another thing, and ἀγορεύω, to speak, *i. e.* to speak differently from what one means. According to Cicero, it answers to the Latin *Immutatio*; but Quintillian renders it by *Inversio*. The allegory is a continued metaphor, of which Horace's Ode to the *Navis*, or ship, is a happy illustration; where by the ship is meant the republic; by the waves, the civil wars; by the port, peace and concord; by the oars, the soldiers; by the mariners, the magistrates, &c. *Heraclid. Pont. in Alleg. Hom. e. 5; Demet. Elocut.; Cicer. Orat. e. 27; Quintil. l. 9, c. 6; Sosepat. Charis. Inst. Gramm. l. 4.*

ALLEGRA'MENTE (*Mus.*) Italian, for rather quick.

ALLEGRE'SSIMO (*Mus.*) Italian, for very quick [vide *Allegro*]

ALLEGRE'TTO (*Mus.*) Italian, for a time not so quick as *Allegro* of which it is a diminutive.

ALLEGRO *allo* (*Mus.*) Italian, for the third degree of quickness.—*Allegro agitata*, quick and agitated.—*Allegro furioso*, vehemently quick.—*Allegro assai*, more quick.—*Allegro di molto*, very quick.—*Allegro non molto*, not very quick.—*Allegro ma non preste*, quick, but not in the extreme.

ALLELE'NGYON (*Pol.*) ἀλληλέγγυον, a sort of tribute or rate paid by the rich for the support of the poor when they entered the army. *Zonar. vol. 3; Constit. Niceph. Jur. Orient. Roman. l. 1; Buleng. de Vectig. c. 79.*

ALLELUJA (*Ecc.*) ἠλληλη, from ἠλλῆ, praise ye, and η, the Lord; that part of sacred music which was formerly employed by religious assemblies as a call on each other to praise the Lord.

ALLELUJA (*Bot.*) the *Acetosa* of Linnæus.

ALLEMA'NDE (*Mus.*) a French word, signifying German, because it is supposed to be of German origin; an epithet for a slow air, or melody in common.

ALLENCE (*Min.*) another name for *Stannum*.

ALLER (*Ant.*) vide *Alder*.

ALLER *sans jour* (*Law*) see *Aler*.

ALLERION (*Her.*) a small bird painted without beak or feet, like the martlet, or martinet; or, according to some, like an eagle without beak or feet, so called because they have nothing perfect but the wings. They differ from martlets therein, that their wings are expanded, whilst those of the martlet are close.

ALLEVE'URE (*Com.*) a brass coin struck in Sweden, worth about 2½d. English money.

ALLEVIA'RE (*Law*) to levy or pay an accustomed fine.

ALLEY (*Horticol.*) a walk in a garden-bed which separates the squares of a parterre. This is of different sorts, as a—*Counter alley*, an alley by the side of another that is greater—*Diagonal alley*, that cuts a parterre from angle to angle—*Front alley*, that runs straight from the front of a building—*Transverse alley*, which cuts a front alley at right angles.

ALLEY (*Perspect.*) that which is larger at the entrance than at the issue, in order to make the length appear greater.

ALL-FO'URS (*Sport*) a game of cards played by two, which is so called from the four sorts of cards, called High and Low, Jack of Trumps, and the Game, which, when joined in the hand of either party, constitutes him the winner.

ALL-GOOD (*Bot.*) vide *All*.

ALL-HA'LOW-TIDE (*Ecc.*) vide *All*.

ALL-HEAL (*Bot.*) vide *All*.

ALLIAR *æris* (*Alch.*) philosophical copper for preparing the philosopher's stone.

ALLIARIA (*Bot.*) a plant which was formerly reckoned an excellent anti-scorbutic. It is the *Erisynum alliaria* of Linnæus. *Bauh. Hist. Plant.; Raii. Hist. Plant. &c.*

ALLIB'ALLIES (*Com.*) a fine clear muslin, of which the piece contains twenty-one yards, and is one yard wide.

ALLICA (*Ent.*) a species of Papilio.

ALLICAR (*Chem.*) the same as Acetum.

ALLIE'NSIS *dies* (*Ant.*) an ominous day among the Romans, which was the anniversary of their defeat by the Gauls near the Allia. *Cic. ad Attic. l. 9, ep. 5; Liv. l. 6, e. 1; Siccum in Fast. Kalend. Roman. c. 5.*

ALLIGA'TI (*Ant.*) those slaves among the Romans who were obliged to work in chains. *Columel. l. 1, e. 9.*

ALLIGATION (*Arit.*) a rule in Arithmetic by which questions relating to the compounding of different simples are resolved; so called from *allegiare*, to bind or connect. Alligation is of two kinds, medial and alternate.—*Alligation medial*, a rule for finding the mean rate of a mixture compounded out of certain quantities.—*Alligation alternate*, a rule to find out such quantities as are necessary to make a mixture to bear a rate proposed, the rates of the simples being given. *Luc. de Burg. Sum. Arith.*

ALLIGATOR (*Zool.*) an amphibious animal in the West Indies, the *La carta alligator*, so nearly resembling the crocodile of the Nile, both in form and habits, as to be considered merely a variety which difference of climate produces. It is but little inferior to the crocodile in size, and will sometimes grow to the length of eighteen or twenty feet. The opinion of Aristotle, and other ancient naturalists, that animals of this description move their upper jaw only, appears, upon closer inspection, to be incorrect.

ALLIGATOR *pear* (*Bot.*) the *Laurus persea* of Linnæus.

ALLIGAT'URA (*Sur.*) the same as ligature.

ALL' *improvista* (*Mus.*) Italian for extemporaneous, applied to the performance.

ALLIO'NIA (*Bot.*) a genus of plants so called from Professor Allioni, Class 4 *Tetrandria*, Order 1 *Monogynia*.

Generic Characters. CAL. perianth common; *proper* obsolete.—COR. *proper* one-petalled.—STAM. filaments setaceous; anthers roundish.—PIST. germ inferior; style setaceous; stigma multifid.—PER. none; seeds solitary; receptacle naked.

Species. There are two species, namely, the *Allionia violacea*, a native of South America; and *Allionia incarnata seu Wedelia*, an annual native of Peru.

ALLIOTH (*Astron.*) an Arabic name for a star in the tail of the great bear, which signifies, literally, a horse. It is marked ε by Bayer. *Ulug. Beigh apud Hyd. de Relig. Vet. Persar.; Bay. Uranomet.*

ALLIO'TICUM (*Med.*) from ἄλλοίω, to change; an alterative medicine, composed of antiscorbutics.

ALLITERA'TION (*Gram.*) a repeating and playing upon the same letter.

ALLIUM (*Bot.*) in Greek σκάρωδον, the herb Garlic, which was held in reverence by the Egyptians, and in abhorrence by the Greeks, so that no one dare approach the temple of Ceres, the mother of the Gods, after having eaten of it. It was, however, esteemed good food for soldiers, to animate them before they went to battle, to which Aristophanes alludes, *Aristoph. Equit.*

ἢ ἀμεινον ὄταν ἐσκοροδισμένος μάχη.

It was reckoned of no less efficacy for the rowers on board a ship, according to *Plautus*. *Plaut. Poen. act. 5, scen. 5, v. 34.*

—Tum autem plenior
Allii utpicique quam Romani remiges.

Hence the vulgar proverbs of *allium ne comedas*, for lead a quiet life, and *allium in retibus*, in reference to the quantity of garlic which the Athenian mariners took with them. Horace makes frequent allusions to its offensive smell and coarseness for food, particularly in his ode to Mæcenas.

Horat. Epod. 3, v. 1.

*Parentis olim si quis impiâ manu
Senile guttur fregerit
Edat cicutis allium nocentius, &c.*

Its medicinal virtues are much commended by the ancient physicians, particularly for its efficacy against the bite of the viper. *Hippocrat. de Rat. Vict. in Acut. Morb. 1. 2; Theophrast. 1. 7, c. 4; Dioscor. 1. 2, c. 182; Plin. 1. 19, c. 6; Columel. 1. 2, c. 3; Gal. de Simpl. Med. Fac. 1. 8; Orobas. Med. Collect. 1. 11; Aet. Tetrab. 1. serm. 1; Paul Æginet. 1. 7, c. 3.*

ALLIUM, in the *Linæan system*, is a genus of plants, Class 6 *Hexandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *spathe* common.—COR. *petals* six.—STAM. *filaments* six; *anthers* oblong.—PIST. *germ* superior; *style* simple; *stigma* sharp.—PER. *capsule* very short; *seeds* few.

Species. The species are mostly perennials, as—*Allium ampeloprasum*, seu *Porrum ampeloprasum*, seu *Scorodoprasum latifolium*, &c. Great Round-headed Garlic, a native of Britain.—*Allium sub-hirsutum*, *Moly angustifolium* seu *Dioscoridis*, Hairy Garlic, native of Africa.—*Allium roseum* seu *Moly minus*, Rose Garlic, native of Montpellier.—*Allium sativum*, Common Garlic.—*Allium scorodoprasum*, *sativum alterum*, *Allioprassum* seu *Porrum*, Rocamboles, native of Sweden.—*Allium moschatum* seu *Moly moschatum*, Musk-smelling Garlic.—*Allium ascalonicum* seu *Cepa ascalonica*, Shallot, or Eschallote, a native of Palestine.—*Allium odorum*, sweet-smelling Garlic, native of Europe.—*Allium fistulosum*, seu *Cepa oblonga*, Welsh onion, or Ciboule, native of Siberia.—*Allium Schænoprasum*, seu *Cepa palustris*, Chives, native of Siberia; but—*Allium porrum*, seu *Porrum*, &c. the Common Leek, is a biennial. *J. Bauh. Hist. Plant.; C. Bauh. Pin.; Ger. Herb.; Park. Theatr. Botanicum; Raii Hist. Plant.; Journal Instit.; Boerhaav. Ind.*

ALLIUM is also the name of some species, as the *Hypoxis fascicularis*, and the *Tradescantia Virginica* of Linnæus. *C. Bauh. Pin.*

ALLOBROGICUM vinum (*Med.*) a sort of harsh wine of Savoy and Dauphiny. *Cels. de Re Med. 1. 4, c. 6.*

ALLOCATION (*Law*) an allowance made on account in the Exchequer.—*Allocatione facienda*, a writ for an accountant to receive such sums from the treasurer as he has expended. *Reg. Orig. 206.*

ALLOCA'TO comitatu (*Law*) a new writ of exigent allowed before any county court holden, on the former not being fully served or complied with. *Fitzh. Exig. 14.*

ALLOCA'TUR (*Law*) i. e. it is allowed; a term applied to the certificate of allowance by the master on taxation of costs.

ALLO'CHOI (*Med.*) ἀλλοχοί, those talking deliriously, as it is commonly read in Hippocrates; but Galen reads it σπασσοχοί, those who spit much, which reading is approved by Erotian. *Hippocrat. de Epidem. 1. 2; Gal. Exeges.; Hippocrat. Vocab.; Erotian. Lex. Hippocrat.; Foes. Æconom. Hippocrat.*

ALLO'CHROITE (*Min.*) a sort of stone of the garnet kind. **ALLOCO** (*Mus.*) vide *Alla*.

ALLOCO'TON (*Med.*) ἀλλοκότον, absurd or unnatural, as applied by Hippocrates. *Hippocrat. de Morb. Med.; Gal. Exeges. Vocab. Hippocrat.; Erot. Lex. Med. Hippocrat.; Gorr. Def. Med.; Foes. Æconom. Hippocrat.*

ALLOEO'THETA (*Gram.*) ἀλλοίβητα, from ἀλλοίος, various, and βητός, disposed; a figure of grammar varying from the

ordinary rules of Syntax, as a noun in the singular with a verb plural, *Pars abiere*. Friscian calls this *varietas*.

ALLODE'MIA (*Med.*) ἀλλοδημία, a term used by Hippocrates for travelling into a foreign country. *Hippocrat. de Intern. Affect.; Foes. Æconom. Hippocrat.*

ALLO'DIAL (*Law*) *Allodialis*, exempt from rent or services, as allodial lands, which pay not fine, rent, or services. *Domesday Book.*

ALLO'GNOON (*Med.*) ἀλλογνοών, delirious, i. e. ἀλλογνώσκων παρά τὰ ὄντα, i. e. one knowing things different from what they really are. *Gal. Exeges. Vocab. Hippocrat.; Erotian. Lex. Med. Hippocrat.; Foes. Æconom. Hippocrat.*

ALLO'NGE (*Fenc.*) a thrust or pass at the adversary.

ALLO'PHASIS (*Med.*) ἀλλόφασσις, i. e. speaking things different from what they really are; delirium, as it is applied by Hippocrates. *Gal. Comm. in Prognost.; Erot. Lcx. Med. Hippocrat.; Hesych. Lex.; Gorr. Def. Med.; Foes. Æconom. Hippocrat.*

ALLO'PHYLI (*Bibl.*) ἀλλόφυλοι, signifies literally strangers; but is commonly employed in Scripture for the Philistines.

ALLO'PHYLUS (*Bot.*) ἀλλόφυλος, literally a stranger, i. e. an exotic, a genus of plants, Class 8 *Octandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *Perianth* four-leaved; *leaflets* orbiculate.—COR. *petals* four; *claws* broad.—STAM. *filaments* filiform; *anthers* roundish.—PIST. *germ* superior; *style* filiform; *stigma* bifid.

Species. The Species are *Allophylus Zeylanicus*, a shrub, native of Ceylon.—*Allophylus rigidus*, native of Hispaniola.—*Allophylus racemosus*, native of Hispaniola.—*Allophylus cominia*, *Rhus cominia*, *Cominia*, seu *Toxicodendron arboreum*, native of Jamaica.—*Allophylus ternatus*, a shrub, native of Cochin China. *Raii Hist. Plant.; Sloan. Hist. Jamaic.; Brown. Hist. Jamaic.; Wild. Linn. Spec. Plant.*

ALLO'TMENT (*Mar.*) allowing half the pay of the private and non-commissioned officers of the royal navy to be paid monthly to the wife, children, or mother of the parties.

ALLO'TMENT of goods (*Com.*) when any cargo is divided into several parcels, to be bought by different persons, whose names being written upon as many pieces of paper, are indifferently applied to the respective parcels.

ALL ottave (*Mus.*) Italian, for in the octave; an expression applied to the instruments or voices, when their parts lie an octave above or below some other part.

ALLO'WANCE (*Mar.*) the ratio or quantum of provisions served out to the seamen on board.—*Short allowance*, when necessity obliges a curtailment of the usual quantity.—*Two thirds allowance*, when two thirds only of the usual quantity is allowed.—*To stop the allowance*, a last resource when the provisions are nearly exhausted.

ALLO'Y (*Com.*) a mixture of other metals with silver or gold. *Stat. 9, Hen. V.* A pound weight of standard gold in the mint is 22 carats fine, and 2 carats alloy or alloy. Of standard silver 11 ozs. 2 dwts. of fine, and 18 dwts. of alloy.

ALL-SAINTS (*Ecc.*) a festival. [vide *All*]

ALL-SEED (*Bot.*) the *Chemopodium polyspermum* and *Linum radiola* of Linnæus.

ALL segno (*Mus.*) *Al Seg*, or the character : S : Italian for the words, to the sign. [vide *Alla*]

ALL-SOULS (*Ecc.*) a festival. [vide *All*]

ALL-SPICE (*Bot.*) the *Myrtus Pimento* of Linnæus.

ALLUM (*Min.*) vide *Alum*.

ALLUMINOR (*Archæol.*) one whose business it is to alluminate or paint upon paper, parchment, &c. *Stat. 1, R. 3, c. 9.*

ALLUVIAL (*Law*) belonging to a deluge or alluvion; as *alluvial soil*, i. e. soil that has been brought to other lands by means of floods.

ALLUVION (*Law*) from *alluo*, to wash to; an accession of land washed to the shore by inundations.

ALMA (*Med.*) or *Halma*, ἄλμα, the first motion made by the fœtus in the womb to free itself from confinement. *Hippocrat. apud Hesychium.*

ALMA-MATER (*Lit.*) a title given to Oxford or Cambridge by such as have received their education in either university.

ALMACA'NTAR (*Astron.*) *Almincatarath*, from the Arabic *Almocantharat*; a name for the Parallels of altitude on the celestial globe whose zenith is the pole or vertical point.

ALMACA'NTER'S staff (*Mech.*) an instrument for observing at sea the sun's amplitude rising and setting.

ALMADY (*Com.*) 1. A vessel in the East Indies, made in the form of a weaver's shuttle. 2. An African canoe made of the bark of trees.

ALMAGESTUM (*Lit.*) the title of Ptolemy's celebrated work on Astronomy, so called by the Arabians, who adding the particle *al* to the μέγιστα of the Greek title συντάξις μέγιστα, thus formed the word *Almagist*. Riccioli has given a similar title, *Almagistum Novum*, the New Almagest, to his work on astronomy.

ALMAGRA (*Min.*) a kind of ochre.

ALMAIN rivets (*Mil.*) a certain light kind of armour worn by the Germans.

ALMAKA'NDA (*Chem.*) litharge.

ALMAN (*Metal.*) a furnace used by refiners for separating metals.

ALMANAC (*Chron.*) a calendar or table, containing an account of the months, weeks, and days of the year, with the festivals, changes of weather, &c. It is in French *Almanac*, in Italian *Almanacco*, in Spanish *Almanaque*, in German *Almanach*; and is derived by Golius from the Arabic particle *al*, and *Mana*, a measure or reckoning; by Scaliger, from the same particle, *al*, and the Greek μῶν, a month; by Verstigan, from the compound Saxon word *Al-mon-aht*, i. e. All-Moon-Heed, or an account of every moon, which the Saxons are said to have kept very carefully. The latter seems to be the immediate derivation, and the former that which is more remote.

ALMANAC Nautical (*Astron.*) or *Astronomical Ephemeris*, is published under the direction of the διοδ' κοί Longitude, for the use of mariners, containing an account of the longitude, latitude, ascension, declination, &c. of the heavenly bodies.

ALMAND cathartica (*Bot.*) a plant of Surinam, supposed by the inhabitants to be good for the colic.

ALMANDINE (*Min.*) a coarse sort of ruby, approaching in colour nearer to the granate than the ruby.

ALMA'RCAB (*Chem.*) litharge of silver.

ALMA'RGAN (*Min.*) coral.

ALMELILE'TU (*Med.*) a preternatural heat, less than a fever.

ALMENE (*Chem.*) Sal Gemma.

ALMENE (*Com.*) an Indian weight of about two pounds.

ALMISA (*Chem.*) Musk.

ALMISA'DAR (*Chem.*) Sal Ammoniac.

ALMOIN (*Law*) vide *Frank Almoin*.

ALMONA'RIMUM (*Archæol.*) a safe or cupboard in which broken victuals were kept that were to be given to the poor.

ALMOND (*Metal.*) vide *Alman*.

ALMOND (*Bot.*) the nut or fruit of the almond tree, whether sweet or bitter, called in French *Amande*, in German *Mandel*, in Latin *Amygdala*, and in Greek ἄμυγδαλή.

ALMOND-tree the *Amygdalus communis* of Linnæus; a pretty tall tree, resembling a peach tree, which is one of the first trees that blossoms. It is a native of the Holy Land. There are different sorts of trees so called, as the—Common Dwarf Almond, or *Amygdalis nana* of Linnæus.—

African Almond, the *Brabeium stellafolium*.—Hoary Dwarf Almond, the *Amygdalis incana*.—Silvery-leaved Almond, the *Amygdalis orientalis* of Linnæus.

ALMOND (*Com.*) a Portuguese measure of oil, equal to four gallons two quarts.

ALMOND (*Anat.*) a name for the glandular substances on each side the uvula at the root of the tongue, otherwise called *tonsillæ*.

ALMOND-stone (*Min.*) the *amygdalites* of Linnæus, a sort of stones consisting of glandules that resemble the almond in shape.

ALMONER (*Archæol.*) or *almner eleemosynarius*; an officer in the king's house who distributed the king's alms every day. *Fleta*, l. 2, c. 22.

ALMONRY (*Archæol.*) *Eleemosyna*; the office or dwelling of the almoner.

ALMOXARIFARGO (*Com.*) a duty of two and a half per cent. on bulls' hides in Spain.

ALMS feoh (*Archæol.*) Saxon for alms-money, given first by Ina, king of the West Saxons.—*Alms-basket*, the basket in which the provisions are put that are to be given away.—*Alms-house*, a house endowed with a revenue for the maintenance of a certain number of poor aged persons.—*Alms-man*, a man who is supported by alms or charity.

ALMU'CIUM (*Archæol.*) vide *Almutium*.

ALMUGAVA'RI (*Archæol.*) a name for the Spanish soldiers who distinguished themselves against the Saracens. *Roder. Tolit. de Reb. Hispan.* l. 9, c. 16; *Pachymer.* l. 2, c. 13.

ALMU'GIA (*Astrol.*) the planets facing one another in the zodiac.

ALMUGIM (*Bibl.*) a sort of wood mentioned 1 Kings x. 2. It is called by the Septuagint ξύλα πύωνα, by the Vulgate *ligna pinea*.

ALMU'NIA (*Archæol.*) a sort of tenure among the Spaniards.

ALMUTEN (*Astrol.*) the lord of a figure, or strongest planet in a nativity.

ALMU'TRIUM (*Archæol.*) a cap made with lambs or goats' skins. *Dugd. Mon. Angl.*

ALNABA'TI (*Med.*) a gentle laxative.

ALNAGE (*Com.*) the measure of an ell. 17 *stat Ed.* 4.

ALNAGE (*Law*) 1. A measure by the ell. 2. An officer to inspect the alnage or measuring. 25 *Ed.* 3.

ALNEC (*Min.*) Tin.

ALNE'RIC (*Chem.*) Sulphur vivum.

ALNETUM (*Archæol.*) a grove of alder trees. *Domesday-book.*

ALNI effigie (*Bot.*) the *Cratægus aria* of Linnæus. *Bauh. Hist. Plant.*

ALNIFOLIA (*Bot.*) the *Clethra alnifolia* of Linnæus. *Pluken. Phytograph.*

ALNUS (*Bot.*) alder; a tree so called, either because, *alatur anne*, it thrives by the river side, or from the Hebrew אלון, *alon*, an oak. It is called in the Greek κλήρα, and its bark was reckoned drying and astringent. The wood is celebrated by the poets on account of its fitness for the building of ships. *Virg. Georg.* l. 2, v. 451.

Nec non et torrentem undam levis innatat alnus.

Lucan. l. 3, v. 441.

Et fluctibus aptior alnus.

Claudian.

Qui dubiis ausus committere fluctibus alnum.

Theophrast. Hist. Plant. l. 3, c. 14; *De Caus Plant.* l. 3, c. 17; *Dioscor.* l. 3, c. 25; *Plin.* l. 16, c. 26; *Vitruv. de Architect.* l. 2, c. 9; *Ovid. Met.* l. 13.

ALNUS, in the Linnæan system, is the *Betula alnus*, the

Conocarpus erecta, and the *Rhamnus frangula* of Linnæus. *Lob. Plant. seu Stirp. Hist.*; *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Raii Hist. Plant.*; *Tournef. Instit.*; *Boerhaav. Ind.*

A'LOA (*Ant.*) Ἀλώα, festivals at Athens in honour of Bacchus and Ceres, celebrated by an offering from the fruits of the earth in the time of harvest, from ἄλωα, a barn, whence Ceres is called Ἀλωας, aloas, that is, a filler of barns. *Demosthen. in Neær.*; *Harpocrat. Lex.*; *Hesychius.*; *Eustath. in Il.* 9, v. 588; *Meurs. Eleus. apud Gronov.* vol. 7.

A'LOE (*Bot.*) ἄλoη, the name of a plant, comes in all probability from the Hebrew פלפס, which signifies the same thing. The aloe, which comes from India, resembles the squill, only that it is bigger and provided with fatter leaves. The juice, which is found sticking to the plant like a tear, is exceedingly bitter, but of great use in medicine, particularly as a purgative. *Dioscor. l.* 3, c. 25; *Plin. l.* 27, c. 4; *Ruff. Ephes. Fragment. de Med. Purg.*; *Gal. Comm. 2 in Hippocrat. de Art.* c. 49; *Cels. de Re Med.* l. 2, c. 12; *Oribas. Med. Coll.* l. 7, c. 27; *Aet. Tetrab.* l. serm. 3, c. 24; *Actuar. de Meth. Med.* l. 5, c. 8; *Salmas. Exercitat. Plin.* 1053.

A'LOE, in the Linnæan system, a genus of plants, Class 6 Hexandria, Order 1 Monogynia.

Generic Character. CAL. none.—COR. one-petalled; tube gibbous; border spreading.—STAM. filaments awlshaped, anthers oblong.—PIST. germ ovate, style simple, stigma obtuse.—PER. capsule oblong, seeds several.

Species. The species are mostly shrubs, and natives of the Cape of Good Hope. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*

A'LOE is also the name of some species, as the—*Crapula perfoliata*; the *Agave Americana*; the *Dacæna marginata*; the *Aletris uvaria*; and the *Yucca aloifolia* of Linnæus. *J. Bauh. Hist. Plant.*; *Raii Hist. Plant.*; *Pluk. Phytograph.*

A'LOEDARIA (*Med.*) aloetics, medicines consisting chiefly of aloes. *Aet. Tetrab.* l. serm. 3, c. 105.

A'LOES (*Med.*) the inspissated juice of the aloe, which is of different sorts, namely, the—*Common Aloes*, or the juice of the officinal aloe.—*Hepatic Aloes*, the juice of the Guinea aloe, so called from its liver-like colour.—*Caballine* or *Horse Aloes*, from the same plant, but of a coarser sort, which is commonly given to horses.—*Saccotrine Aloes*, from the juice of the aloe of Sacotra.

A'LOE'TICS (*Med.*) vide *Aloedaria*.

A'LOE'XYLUM (*Bot.*) the *agularia* of Linnæus.

A'LO'FT (*Mar.*) at the mast-head, or in the top of the rigging.

A'LOGIA (*Ecc.*) ἄλογια; silent feasts, or where there was no discourse held; from α, priv. and λογῆς, a discourse. *August. epist.* 86.

A'LOGIA'NI (*Ecc.*) or Alogi, ἄλογοι, a sect of heretics so called, from α, priv. and λογῆς the word, because they rejected the λόγος, or Word of St. John. *Epiphan. Hæres.* c. 51; *August. ad quod vult Deum.* c. 30.

A'LOGOS (*Rhet.*) ἄλογος, disproportionate; an epithet for the first long syllable, because it does not bear a due λογος or proportion to the rest of the foot. *Dionys. Hal. de Comp.* c. 16.

A'LOGOS (*Med.*) ἄλογως, without due cause; a term employed by Hippocrates in speaking of disorders, as when a fever disappears without any critical evacuation, he says it is resolved ἄλογως, i. e. without an adequate cause, and is consequently subject to a relapse. *Gal. Comm. 2 in Hippocrat.*

A'LOGOTROPHY (*Med.*) αλογοτροφία, from τρέφω, to nourish, and ἄλογως, without proportion; disproportionate nutrition in different parts of the body.

A'LO'NG-side (*Mar.*) parallel to a ship, a wharf; "To lay along-side," to place a ship by the side of another.—*Along-shore*, along the coast, applied to coasting navigation.—*Along-shore-owner*, one who sends his ship to sea in want of stores and provisions.—*Along-lying*, the state of being pressed down sideways by a weight of sail in a fresh wind.

A'LOOF (*Mar.*) at a distance; a term employed in sea phrases, as "To keep aloof," commonly called "To keep the luff," a command given by the pilot or the officer to the helmsman, to direct the ship's course nearer the wind.

A'LOPECES (*Anat.*) ἀλόπειες, from ἀλόπηξ, a fox; psoa muscles; so called because they are very strong in foxes. *Ruff. Ephes. Appell.* l. 1, c. 30.

A'LOPE'CIA (*Med.*) ἀλωπεκία, a falling off of the hair; a distemper so called from ἀλόπηξ, a fox, and πίπτω, to fall; because foxes are very liable to such a defluxion of the hair. Celsus calls it a kind of area. *Cels. l.* 6, c. 4; *Plin. l.* 20, c. 5; *Gal. de Comp. Med. secund. Loc.* l. 1, c. 2; *Oribas. de Loc. Affec.* l. 4, c. 5; *Aet. Tetrab.* 2, serm. 3, c. 55; *Alex. Trallian. l.* 1, c. 1; *Paul. Æginet. l.* 3, c. 1; *Actuar. de Meth. Med.* l. 2, c. 5.

A'LOPECURO *veronica* (*Bot.*) the *Mentha auricularia* of Linnæus.

A'LOPECU'ROS (*Bot.*) the *Betonica alopecuros* of Linnæus. *J. Bauh. Hist. Plant.*; *Ger. Herb.*; *Raii Hist. Plant.*

A'LOPECU'RUS (*Bot.*) from ἀλόπειος οὔρα, i. e. a fox's tail; the Fox-tail or Fox-tailed Grass; a genus of plants, Class 3 Triandria, Order 2 Digynia.

Generic Characters. CAL. glume one-flowered; valves ovate.—COR. one-valved; valve ovate; awn twice as long.—STAM. filaments three: anthers forked at each end.—PIST. germ roundish; styles two; stigmas villous. PER. none, the corolla investing the seed; seed ovate.

Species. The species are mostly perennials, as the—*Alopecurus bulbosus*, seu *Gramen typhoides*, &c. Bulbous Fox-tail Grass.—*Alopecurus pratensis* seu *Gramen phaleroides*, &c. Meadow Fox-tail Grass, &c.; but some are said to be annuals, as the *Alopecurus monspeliensis*, Bearded Fox-tail Grass, and *Alopecurus paniceus*, Hairy Fox-tail Grass. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Linn. Spec. Plant.*

A'LOPEX (*Zool.*) Brant Fox, a species of the *Canis* of Linnæus.

A'LOSA (*Ich.*) the shad, a species of the *Clupea* of Linnæus.

A'LOSAT (*Chem.*) argentum vivum.

A'LO'TIA (*Ant.*) festivals in Arcadia in commemoration of a victory obtained over the Lacedæmonians, many of whom were taken prisoners that were called in Greek ἄλωται.

A'LOVERIUM (*Archæol.*) a purse.

A'LP (*Or.*) a Bullfinch.

A'LPHA (*Gram.*) ἄλφα, from the Hebrew פֶּלֶא; the first letter in the Greek alphabet, so called by the ancient Syrians because this word signified an ox in the Phœnician tongue, which was reckoned by Cadmus the first of the three necessities of life. *Plut. Synops.* l. 2, quæst. c. 3; *Hesychius.*; *Scal. Animadvers. in Euseb. Chrou.*

A'LPHABET (*Gram.*) alphabetum, the whole order of letters which are used in any language, so called from *alpha* and *beta*, the first and second letters of the Greek alphabet. The following are the principal alphabets which have been or are in use among different nations.

The Alphabets of different nations, in alphabetical order.

Alphabet of Abraham, a Chaldean alphabet, ascribed by the Rabbis to Abraham, but without any authority.

Abyssinian the same as the *Æthiopian*.

Alphabet of Adam, a Chaldean alphabet ascribed to Adam.

Æolian, a variation of the ancient Greek, attributed to the Æolians by Theseus Ambrosius.

African, a sort of Arabic alphabet.

Anglo-Norman, a sort of Gothic character. [vide *Gothic*]

Arabic consists of different characters. The most ancient

Arabic is called the Kufic, so named from the city of Kufa, on the Euphrates, which does not appear to be now in use. The specimen given in Tab. IV, No. 18, [Pl. 4] was communicated to Dr. Morton of the British Museum, by Dr. Hunt, Arabic professor at Oxford, from MSS. in the Bodleian Library. It consists of *initials* or letters used at the beginning, *medials* or letters in the middle, and *finals* or letters used at the end. The modern Arabic is supposed by some to have been invented by the vizier Molach, A.D. 933, with which he wrote the Koran three times, and in a manner so fair and correct as to make it a perfect model of writing. This alphabet consists also of four sorts of characters, namely, single, initial, medial, and final, which is the common character of the Arabians, Turks, and Persians; but the two latter nations have added four more letters, namely, پ *p*, چ *ch*, ز *zh*, گ *g*, and given a different power to others.

There are two other variations of the Arabic, namely, the African and Mauritanian, which are said to be used in different parts of Africa.

Arcadian, a variation of the Latin, taken from the Eugubian tables, and so called because it is supposed to have been brought by Evander from Arcadia into Latium. [vide *Latin*]

Armenian is used not only in Armenia but in Asia Minor, Syria, Tartary, &c. It differs in its character according to the use which is made of it, but approaches, in some respects, very near to the Chaldee or Syriac, and to the Greek in others. The characters given in Tab. V, No. 31, [Pl. 5] are the common printing character of the Armenian, capitals and small letter. There is also an ornamental kind of character, which is termed blooming or flowery, because it is used for the titles of books; and Duret likewise mentions an ancient Armenian character, which he says was taken from an inscription over an entrance into the castle of Curcho. *Choron. Hist. Armen.* l. 2, c. 2, &c.; *Schroeder. Thesaur. Ling. Armen.*; *Duret. Tresor. des Lang.* p. 725.

Attic, a variation of the ancient Greek. [vide *Greek*]

Bali, an alphabet of a dialect in Bali, an island north of Java.

Barman, an alphabet used in the kingdom of Ava, which, in the order, power, and general form of its letters, resembles the Sanscrit.

Bastard or *Mongrel*, first made by a German named Heilman in 1490, was in common use, in France, in the fifteenth century; so called because it was derived from the *Lettres de Forme*, or Gothic character, but it has most of its angles cut off or diminished. Fournier gives four varieties of this bastard character. The specimens given in Tab. VI, No. 45, [Pl. 6] are of the ancient and the round Bastard.

Batta, an alphabet of one of the principal languages in Sumatra.

Bengallee, an alphabet now used in the extensive country of Bengal, which is under the dominion of the East, very similar to the Sanscrit.

Black Letter, a sort of English alphabet, as in Tab. VI, No. 48. [Pl. 6.]

Bulgarian, a character similar to that of the Illyrian.

Bullantic or *Imperial*, an alphabet of ornamented capitals, which was so called because it was employed in writing the papal bulls.

Cadeaux, flourishing capitals that were used in French writing of the fifth century.

Cadmean, the original Greek alphabet, which is supposed

to have been first introduced into Greece by Cadmus. [vide *Greek*]

Chaldee, many alphabets have been given under this name which more properly belong to the Phœnician or Syriac, and several have been ascribed by the Rabbis to Adam, Enoch, Noah, Abraham, and Moses, but without any authority that entitles them to credit. The character of the Chaldee is the same at present as that of the Hebrew.

Chancery, a sort of English law alphabet, as in Tab. VI, No. 49, [Pl. 6.]

Of Charlemagne, the name of three alphabets which are attributed to the emperor Charlemagne, by whom they are said to have been introduced, at the commencement of the ninth century, for the purpose of improving the letters used in his dominions, of which a specimen is given in Tab. VI, No. 47, [Pl. 6.]

Chinese, this language has no proper alphabet, but consists of 214 Key-words, or radical characters, that serve to form 80,000 characters of which it is composed, of which a specimen is given in Tab. I, No 6, [Pl. 1.]

Church Text, a sort of English, as in Tab. VI, No. 51, [Pl. 6.]

Coptic, an alphabet so called from Coptos, a city of Egypt, where it was used, is a mixture of Greek and Egyptian. There are two characters under this name, one of which is the ancient, and the other the modern Coptic, as given in Tab. V, No. 30, [Pl. 5.] The latter, which consists of thirty-two letters, is only to be met with in the books of the Christians of Egypt, by whom it was used in the translation of the Sacred Writings. *Kircher. Oedip. Ægypt. et Copt.*; *Pocock. in Not. ad Spec. Hist. Arab.*; *Montfauc. Palæograp.* l. 4, c. 7; *Univ. Anc. Hist.* vol. i, p. 512; *Wilkins. Dissert. de Ling. Copt.*

Court Text, a sort of handwriting among the English lawyers. [vide *English*]

Croatian has the same characters as the Illyrian.

Dalmatian, Tab. V, No. 33, [Pl. 5] is said to have been invented by St. Jerom. It has been used for the translation of the Sacred Writings, besides missals and breviaries. *Duret. Tresor. des Lang.* &c. p. 738.

Doric, a variety of the ancient Greek. [vide *Greek*]

Egyptian, the characters of the ancient Egyptians were of three kinds; namely *ἱερολογραφικὸς*, or vulgar; *ἱερατικὸς*, or sacred; and *ἱερογλυφικὸς*, hieroglyphick. Many vestiges remain of their hieroglyphic writing, of which only conjectural explanations can be offered; of this sort is the one given in Tab. I, No. 5, [Pl. 1]. Their letters are in all probability lost, notwithstanding many characters have been given under this name, particularly one by Theseus Ambrosius, which is, however, unsupported by any authority. The Coptic is the only Egyptian character that remains. *Herod.* l. 2, c. 36; *Diodor. Sic.* l. 3; *Heliodor. Æthiop.* l. 4; *Clem. Alexandrin. Strom.* l. 5; *Eustath. on Hom. Il.* l. 6, v. 168; *Athanas. Kirch. Oedip. Theat. Hieroglyphic.* p. 12, &c.; *Marsham. Canon. Chronol.*

English, the characters bearing this name are the Old English, or Black Letter, Tab. VI, No. 48, [Pl. 6] called by the French *Lettres de Forme*. It was first used by Guttemberg and Faust at Mentz, and was by them denominated *Lettres Burgeoises*; Round Chancery and Running Chancery, as in No. 49, used in the enrollments of letters patent; Court or Exchequer Text, as No. 50, which were invented by the English lawyers about 1550; Church Text, as in No. 51, which was invented about the same time for the use of the church; Secretary, which is the modern style of writing among the lawyers, in engrossing their conveyances and legal instruments.

Ethiopic, otherwise called *Amharic* or *Abyssinian*, is evi-

dently derived from the Samaritan or Phenician, as will appear from the specimen given in Tab. IV, No. 21 [Pl. 4]; but, contrary to the custom of the Orientals, it is written from the right to the left. According to Diodorus and Heliodorus the Ethiopians as well as the Egyptians used the hieroglyphical mode of writing. *Diodor. Sic.* l. 3; *Heliodor. Æthiop.* l. 4: *Eustath. in Il.* l. 6, v. 168; *Marian. Victor. Instit. Ling. Æthiop.*; *Walton. in Introd. ad Lect. Ling. Oriental.*; *Ludolf. Hist. Æthiop.* l. 1, c. 15; and *Gram. Æthiop.*; *Loescher. de Caus. Ling. Herb.* p. 201.

Etruscan, Tab. III, No. 15, [Pl. 3] the first alphabet used in Italy, so called from the Etrusci, the most ancient inhabitants of that country; is a sort of Pelasgian or Arcadian characters, which were disposed after the Greek fashion, *βαστοφρον*, i. e. alternately from left to right, and from right to left. There are two other alphabets attributed to the Etruscans, which Theseus Ambrosius says were used as secret characters by their priests, but without stating any authority. The Etruscan characters are to be found on many coins, as in No. 16, which represents, on the obverse, the head of Janus covered with a helmet, and, on the reverse, a club of Hercules, with the inscription FELAΘΠΙ, i. e. Felathri, a town of Latium, now called Velletri. *Tab. Eugub. apud Dempster. de Etrusc. Regal.* tom. i. p. 91; *Marian de Etrusc. Metrop.*; *Gori. Mus. Etrusc.* p. 401; *Swinton. de Primev. Etrusc. Dissert.*

Flemish is the proper character of the Austrian and French Netherlands, used in their common printing, which much resembles the old English, as Tab. VI, No. 41, [Pl. 6.]

Franco Gallic, so called from its being a mixture of French and Gaulish characters, was used under the first race of the kings of France in their public acts.

Franks, an alphabet which was used by the earliest inhabitants of the Low Countries, and afterwards transferred to Gaul. It was a variety of the Latin alphabets used at that time. There is also another alphabet under this name belonging to the *Lingua Franca*, a kind of jargon spoken on the Mediterranean; the characters of which are like the language composed of French, vulgar Greek, Spanish, and Italian, Tab. VI, No. 42, [Pl. 6.]

French, or *ancient French*, an alphabet distinguished by this name, and of which a specimen, also of the current hand, is given in Tab. VI, No. 43, [Pl. 6] was used in the fifth century under the first race of the French kings.

Georgian, an alphabet which consists of four different characters; namely, the ancient Georgian, immediately derived from, and nearly allied to, the Greek; two consisting of capitals and small letters, called *sacred*, because they are used in transcribing their Holy Books; the fourth is the running-hand of the Georgians. The specimen given in Tab. V, No. 32, [Pl. 5] is of the ordinary printing character.

German consists of two characters, capitals and small letter, which are used for general printing, and two also for writing, or the current-hand, as in Tab. VI, No. 40.

Gothic, the most ancient characters under this name are attributed to Ulphilas, bishop of the Goths in 388, although, according to others, the Goths had the use of letters from the earliest period. The first specimen of this alphabet, in Tab. VI, No. 35, bears a strong affinity to the Runic; the second is formed from the Greek and Latin; a third alphabet, which is attributed to Albert Durer in the sixteenth century, is very similar to the German. To the above may be added the Mæso-Gothic, as given in No. 35, which is also attributed to Ulphilas, and was used in the translation of the Holy Scriptures; and an old English or Norman character,

which is called in French *les Lettres Tourneures*, and by Astle modern Gothic. It was formerly much used in adorning Roman missals.

Greek. Under this name is comprehended a greater variety of Alphabets than that of any other language, for the Greek characters were employed by very many countries that did not speak the Greek; and, in Greece itself, it underwent many changes, according to the diversity of dialects, or the different periods in which it was used. It is generally admitted, on the authority of Herodotus, Pliny, Plutarch, and others, that Cadmus, the Phenician, introduced the first Greek alphabet into Bœotia, where he settled, B. C. 1500, although Diodorus is of opinion that the Pelasgian letters were prior to the Cadmean. It is evident, however, from comparing the specimens of the Cadmean and Pelasgic alphabets given in Tab. II, No. 7; [Pl. 2] with the Phenician, Tab. I, No. 3, [Pl. 1] that they sprung from one and the same origin; but the former appears, from many of its letters, to be made by the inversion of the Phenician character. The Cadmean, or, as it is otherwise called, the Attic or Ionic alphabet, is drawn from coins and medals, the Pelasgian from the Eugubian tables; the former consisted originally, as is supposed, of only sixteen letters, to which eight others were afterwards added; the number of the latter varies according to the account of different writers, Dr. Swinton making it to consist of thirteen, Father Gori of twelve, and others of twenty. The next in succession is the Sigeian alphabet, so called because the letters of which it is composed are taken from the Sigeian inscription engraven on a marble pillar near the promontory and town of Sigeum, near Troy; the reading of which, in the common Greek characters, is as follows:

Φανόδικο εἰμι τῷ ἐμμοκράτος τὸ πρὸ
κονεσίῳ κατὰ κράτηρα κατιστάτων καὶ
ἡμίον ἐς πρυτανεῖον ἰδοῦκα μνημεῖα
Σίγηνευσί ἐς καὶ μὲ' ἐποίησεν ἑ αἰσῶπος καὶ ἑ ἀδελφοί.
Ἐὰν δετὶ πασῶχο μωλε δαινεν εὐ στήγει.

A specimen of the letters with the deficiencies, as supplied by Chishull, are given in No. 8, and a *fac-simile* of the inscription itself in Tab. III, Plate 3, No. 11. The antiquity of this alphabet is evinced by its being read alternately from left to right, and from right to left, which manner of writing was called *βαστοφρον*, because it resembled the turning of oxen at both ends of a furrow. It is besides observable that the H for the long E, and the Ω for the long O were not then in use, which were afterwards introduced by Simonides. Other Greek characters are also drawn from medals and inscriptions; namely, the Nemean, B. C. 430, engraven on marbles, as is supposed, before the Peloponnesian war; the Delian from inscriptions on the remains of a stately building on Mount Cynthus, in the island of Delos; the Athenian; and the Teian. About 500 years before the Christian Æra Simonides completed the Greek alphabet called the Ionic, which is given in No. 9, to which is annexed other Greek alphabets of different ages; namely, one used in the time of Alexander the Great, B. C. 330, No. 10; the alphabet drawn from the coins of the Antiochi, Kings of Syria, &c. B. C. 240 to 187; that of Constantine the Great, A. D. 306; of Justinian the Great, A. D. 527; of Heraclius, A. D. 610; of Leo Jaurus, A. D. 716; a specimen of small Greek letters, and another of capitals, in the eighth century: it is observable, in the first, that the *sigma* obtains the sixth place, according to the ancient alphabets, that *iota* has the form of *eta* inverted, and that *upsilon* follows the *omicron* as well as the *tau*; an alphabet used in the time of Charlemagne in the ninth century; the Greek of

Fac Similes, Tab. III, No. 12, 13, [Plate 3]; namely, of Basil and Constantine, A. D. 900. To these may be added a MS. of the New Testament in the British Museum, presented to King Charles I, in 1628, by Cyrillus Lucario, patriarch of Alexandria, and supposed to have been written upwards of 1400 years; and a specimen of small Greek writing, as practised in the ninth century. This specimen is taken from a copy of Chrysostom's Homilies on the Psalms, in the French King's library, which Montfaucon has inserted in his *Palæographia*; also two Greek coins, No. 14; the first of which contains, on the reverse, the Θ for ΘΕΒΑΙΩΝ, as is supposed; the head, on the obverse, being ascribed to Cadmus: the second contains, on the obverse, the head of a lion, with the inscription REGION, i. e. Regiorum, a town in Italy, on the reverse, the head of an ox. *Herodot.* l. 1, c. 49; *Diodor.* l. 1; *Dionys.* l. 1; *Plin.* l. 7, c. 56; *Plut. Sympos.* l. 9, probl. 3; *Pausan.* l. 5, c. 17; *Euseb. in Chron.*; *Victorin. de Gramm.* l. 1; *Isidor. Orig.* l. c. 3; *Harpocration*; *Suidas. in Κλέμης*; *Eustath. in Il.* l. 18; *Tzetz. Chil. sect.* 398; *Scal. Animadvers. in Euseb.*; *Bochart. de Col. Phœnic.* l. 1, c. 21; *Voss. de Art. Grammat.* l. 1; *Spanheim. Dissert. 1. de Usu et Præstant. Num.*; *Salmas. ad Inscript. Herod.* p. 31; *Dr. Barnard's Tables*; *Montfaucon. Palæograph. Græc.*; *Chishul. Antiquit. Asiat.*; *Dr. Morton's Tables.*

Hebrew, under this name two fanciful alphabets are given by Theseus Ambrosius and Duret, which are attributed, on the authority of the Rabbis, to Solomon. Those most worthy of note are the ancient and modern Hebrew, Tab. I, No. 1, [Pl. 1]; the former of which is supposed to have been invented by Esdras after the Captivity, and to have given rise to the latter. A question has, however, here arisen respecting the original Hebrew character, which has undergone much discussion among the learned, both Jews and Christians. The more prevailing opinion is, that the character known by the name of Samaritan, or Phœnician, was the original Hebrew character; and that the present alphabet was invented after the captivity, although the two Buxtorfs and others contend that the Hebrew letters, now in use, are the same as those in which the Law and Prophets were written by Moses: the former of these two opinions principally rests on the authority of Samaritan inscriptions on coins, which are admitted to have been struck before the Captivity. Of these, three specimens are given at the bottom of Tab. I, [Pl. 1] which represent the censor on the obverse, and, on the reverse, Aaron's rod budding; the inscriptions, the "Shekel of Israel" and "Jerusalem the Holy." These three coins are all of less value than the full shekel, the first of which has \aleph over the censor, being called *a half shekel*; the second having γ , *the third of a shekel*; and the third also having γ *the fourth of a shekel*. To the above alphabets may be added the Rabbinical Hebrew, which is the current-hand in use among the Jews at present. *Euseb. in Chron. et Scalig. in Euseb.*; *Hieron. de Esd. et in Ezech.* c. 9; *Waser. de Antiq. Ebræor. Numm.*; *Villalpand. de Appar. Urb. et Templ. part 2, l. 2, disp. 4, c. 21*; *Walton. Prolegom. II, &c. de Ling. Heb.*; *Schickard. de Num.*; *Baron. Annal. ann. 180*; *Reland de Num. Ebræor.*; *Morin. Exercit. de Ling. part 2, c. 6, &c.*

Huns, an alphabet so called because it was used by the Huns, who settled in Pannonia, or Hungary, in 370.

Jacobite, an alphabet formed from the Greek, and used by the Jacobites, an heretical sect, in their religious service.

Japanese consists of three characters; namely, two that are in common use, and one that is used only at court. The specimen given in Tab. IV, No. 26, [Pl. 4] is of the

common character, which, like the Chinese, is written from top to bottom.

Icelandic is the same as the Runic.

Illyrian. There were two alphabets of this name, according to John Baptist Palatin; one said to have been invented by St. Cyril, and the other by St. Jerom, or, according to Aventinus, in his Annals, by one Methodius, a bishop of Illyrium, who used it in the translation of the Scriptures; the former bears a great affinity to the Russian; the latter is most like the Dalmatian. *Duret. Tres. des Lang.* p. 741.

Indian, the same as the Ethiopian. Duret also mentions another Indian alphabet, which is generally used among the Easterns. *Duret. Tres. des Lang.* p. 383.

Irish. This alphabet, Tab. V, No. 29, [Pl. 5.] bears, in the opinion of Vallancy, the greatest affinity to the Phœnician, from which he supposes it to be derived. But the Irish used other mysterious alphabets in their incantations, after the manner of those given under the name of Ogums, from *Oga*, and *Ogma*, an augury. The three principal Ogums used by the Irish were the *Ogum Beath*, when *bt* or *beath* was placed always for the letter *a*; *Ogum Coll*, when, for vowels, diphthongs, and triphthongs in the *Ogum*, the letter *c* was variously repeated; *Ogum Croabh*, or the *virgular Ogum*, having a line or stem called the *Croabh*, through which, and on each side, are drawn perpendicular strokes. *Wurm. de Lit. Run.*; *O'Mulloy. Irish. Gramm.*; *Raban. Maur. de Usu Lit.*; *O'Flahrt. Ogyg.*; *O'conner's Dissert. seu Hibern. Rer. Chronolog.*; *Ware. Antiq. of Ireland.*; *Ledwig. Antiq.*

Italic, a well known alphabet formed from the Roman, which was called likewise Venetian, because it was first cut at Venice, and afterwards *Lettres Aldines*, from Aldus Minutius, by whom it was invented about 1512.

Kufic, the ancient Arabic. [vide *Arabic*]

Latin, the most ancient alphabet of the inhabitants of Italy, was the Etruscan, [vide *Etruscan*] which underwent successive changes, as are noted in Tab. III, No. 15, [Pl. 3] until it arrived at its present state, in which it is more generally known by the name of Roman. *Dionys. Halic.* l. 1; *Hygin. Fab.* 277; *Plin.* l. 7, c. 63; *Tacit. Annal.* l. 11; *Quintil. Institut.* l. 1, c. 4; *Diomed. Gramm. Institut.* l. 1; *Marius Victorinus, Priscian. &c. apud Gramm. Vet. Putsche's Edit.*; *Cyprian. de Varietat. Idol.*; *Auson. Idyll.* 12; *Isidor. Orig.* l. 1, c. 4; *Voss. de Art Grammat.*; *Lips. de Pronunt. Ling. Lat.* c. 8; *Spanheim. de Usu et Præstant. Numis. Antiq. Dissert.* 1, p. 114; *Montfaucon. Palæograph. Græc.*; *Dr. Morton's Tables*; *Massey. Orig. et Prog. of Letters.*

Lombard, a variety of the Latin character, as Tab. VI, No. 46, [Pl. 6.]

Malabaric, an alphabet consisting of sixteen vowels, and thirty-five simple consonants or radicals, as in Tab. IV. No. 23, [Pl. 4.] *Alphabet. Var. Congregat. de Propagand. Fide.* vol. ii.

Malayan, the character of this alphabet is the same as the Arabic.

Mantchon, a sort of Tartaric. [vide *Tartaric*]

Mendeian, an alphabet used by the Mendes, a people of Egypt, A. D. 277, which was formed from the Syriac.

Monk's, a mode of writing among the ancient Britons by cutting letters upon sticks, either in a square or triangular form, very similar to that which is given as a specimen of the Welch or Bardic alphabet.

Norman, there are two alphabets given under this name on the authority of the venerable Bede, one of which was a variety of the Greek, and the other, as in Tab. VI, No. 44, [Pl. 6.]

ALPHABET.

Palmyrian, which was first decyphered by the Abbe Barthelemé, is read from right to left. It bears a strong affinity to the Hebrew.

Pelasgian, a name given to the alphabet which the Greeks derived from the Phenicians, whom they called Πελασγοί, *Pelasgii quasi Pelagi*, from πελάγος, the sea, because they traversed the ocean, and carried on commerce with other nations. A specimen of the Pelasgian is to be found in Tab. II, No. 8, [Pl. 2.]

Persian, the modern alphabet of the Persian is nearly the same as the Arabic, except the addition of four letters, and a few slight differences in the powers given to the letters. An ancient character is given by Hyde, that is, called *Zend* or *Pazend*, and is supposed to have been used by Zoroastre. *Hyde de Relig. Vet. Persar.*

Phœnician. Under this name is comprehended a great variety of characters, which are drawn from coins and inscriptions, and are generally supposed to have been in use among the Phenicians, who had alphabetical characters as early as any people in the world. The specimen in Tab. I, No. 3, [Pl. 1] is given on the authority of Scaliger, who supposes this to have been the original Hebrew character, otherwise called the Samaritan.

Roman, the modern name for the Latin.

Runic, a character derived from the Mæso-Gothic, was used by several nations of the North, as in Tab. VI, No. 36, [Pl. 6.]

Russian is evidently derived from the Greek, as may be seen in Tab. V, No. 34, [Pl. 5.]

Samaritan is the name given to the Phenician character, which is most generally supposed to be that which was used by the Jews from the time of Moses to the Captivity, although this has been a subject of dispute among the learned. [vide *Hebrew*] The name was given to this character because the Samaritans continued to use it, after the captivity, in writing the Pentateuch. The ancient Samaritan has been collected, by Walton, from coins and inscriptions, of which specimens are given at the bottom of Tab. I, [Pl. 1]: the modern Samaritan differs somewhat from the ancient, as may be seen by comparing them in Tab. I, No. 2. Duret has given two other alphabets under this name, the characters of which are said to be formed according to the course and movements of nature.

Sanscrit. The alphabet of the Sanskrita, i. e. the perfect or polished language of the Hindu class, is called the Devanagari, which is given in Tab. IV, No. 25, [Pl. 4] according to the form and order in which it is drawn out in Wilkins' Grammar.

Saracen. Theseus Ambrosius gives one Saracen alphabet, which he says was used at the time of their conquests. It bears some affinity to the Phenician, as in Tab. IV, No. 20, [Pl. 4.] Another alphabet under this name is quoted by Dr. Morton on the authority of Kircher, which is very similar to the Arabic. *Duret. Tres. des Lang. p. 475; Dr. Morton's Tables.*

Saxon consists of two characters, the ancient and modern, Tab. VI, No. 38, [Pl. 6.]

Sclavonian, the alphabet used by the ancient inhabitants of Sclavonia, bore some resemblance to the Illyrian.

Secretary, a sort of writing among English lawyers, which is used in engrossing.

Servian, an alphabet bearing some affinity to the Greek, is attributed to St. Cyril, A. D. 700. There are other characters under this name, which are ascribed to St. Jerom.

Siamic, an alphabet much resembling the Chinese.

Stranghelo, a name for the ancient Syriac, from the Greek στρωγγυλλος, round, or rather rude and rough. [vide *Syriac*]

Syriac consists of two characters; the ancient, called the

Stranghelo, which is said to have been in use, B. C. 300; and the modern Syriac, which consists of Initials, Medials, and Finals, like the Arabic, as in Tab. I, No. 4, [Pl. 1.] From this character two others were formed, called Nestorian, because they were used by the Nestorians of Syria, but differing only in some few particulars. A fifth and sixth sort of Syriac have been given under the names of Syro-Galilean and Syro-Hebraic, but without sufficient authority.

Sumatran. The dialects of Sumatra have each its peculiar alphabet, of which Marsden, in his Comparative Vocabulary, has taken notice, as the Batta, Lampoor, Rejang, &c. A specimen of the latter is given in Tab. IV, No. 28, [Pl. 4.]

Talenga, an alphabet, used in the kingdom of Decan, very similar to the Malabaric.

Tamoulic, an alphabet much used in India in letter-press printing.

Tartaric is the same as the Arabic, but the Mantchou Tartar is a different character, as in Tab. IV, No. 24, [Pl. 4.]

Teutonic. Under this name is given the specimen, as in Tab. VI, No. 39, [Pl. 6] which is said to have been taken from an ancient MS. in the cathedral of Wurzburg.

Thibetan, the alphabet used by the Lamas; the specimen of which, in Tab. IV, No. 27, [Pl. 4] has been copied from the second volume of the "Alphabeta Varia Typis sacræ Congregationis de Propaganda Fide."

Turkish is the same as the Arabic, except the addition of five letters.

Welsh, or, as it is called in Wales, *Coelbren y Beirz*, i. e. the Bardic alphabet; consisted of sixteen primitive or radical characters, and twenty-four secondary ones. It was formed by cutting the letters on a stick in a triangular or square form, as in Tab. VI, No. 37.

Tables of Alphabets according to their Derivation and Affinity.

These Tables are given in six plates in the following order; namely,

Table I, Plate 1.—Oriental Alphabets.

1. Hebrew, ancient, modern, and rabbinical. 2. Samaritan, ancient and modern. 3. Phenician. 4. Syriac, ancient and modern. 5. Egyptian Hieroglyphic. 6. Chinese Characters. At the bottom, Samaritan Coins.

Table II, Plate 2 and 3.—Greek Alphabets.

7. Cadmean. 8. Pelasgian, Sigean, Nemean, Delian, Athenian, and Teian. 9. Ionic, or alphabet of Simonides. 10. Greek alphabets of different ages, from 330 B. C. to 900 A. D.

Table III, Plate 3.—Latin Alphabets.

11. Sigean Inscription. 12, 13. Fac Similes of Greek MSS. in the second and ninth centuries. 14. Greek coins. 15. Latin characters of different ages. 16. An Etruscan coin.

Table IV, Plate 4.—Alphabets derived from, or allied to, the Oriental Alphabets.

17. Cufic. 18. Arabic. 19. Persian. 20. Saracen. 21. Ethiopic. 22. Mendeian. 23. Malabaric. 24. Mantchou Tartar. 25. Sanscrit. 26. Japanese. 27. Thibetan. 28. Rejang.

Table V, Plate 5.—Alphabets derived from the Oriental or Greek Alphabets.

29. Ancient Irish, Bobeloth and Bethluisnon; Ogums, namely, Croabh and O'Sullivan's. 30. Coptic. 31. Armenian. 32. Georgian. 33. Dalmatian. 34. Russian.

Table VI, Plate 6.—Alphabets derived from the Greek or Latin.

Northern Alphabets. 35. Gothic, ancient, modern, and Mæso-Gothic. 36. Runic. 37. Welsh. 38. Saxon, ancient and modern. 39. Teutonic. 40. German, printing and current. 41. Flemish.—*French Alphabets.* 42. Franks. 43. French, ancient and eurrent. 44. Norman and Anglo-Norman. 45. Bastard, ancient and round. 46. Lombard. 47. Charlemagne.—*English Alphabets.* 48. Black Letter. 49. Chancery, Round and Running. 50. Court Text. 51. Church Text.

ALPHE'TI (*Astron.*) another name for the star *Lucida Corona*.
ALPHITE'DON (*Med.*) ἀλφιδων, from ἀλφιτον, bran; a fracture of a bone into small fragments like bran.

ALPHITON (*Med.*) ἄλφιτον, or in the plural ἄλφιτα, a term used by Hippocrates for a sort of hasty pudding. *Hippocrat. de Mul.* l. 2, &c.; *Gal. de Alim.* l. 1; *Gorr. Def. Med.*; *Foes. Econom. Hippocrat.*

ALPHONSINE tables (*Astron.*) astronomical tables made by Alphonsus, king of Arragon.

ALPHUS (*Med.*) ἄλφος, from ἀλφαινω, to whiten; because it turns the skin white; the white leprosy, a species of vitiligo, i. e. the *Vitiligo alba*, in which, according to Celsus, the skin is of a white colour, with a kind of roughness. The *Alphus* is less virulent than another species called the *Leuce*. *Cels.* l. 5, c. 18; *Gal. Introd.* c. 17; *Oribas. de Morb. Curat.* l. 3, c. 58; *Aet. Tetrab.* 4, serm. 1. c. 132; *Actuar. de Meth. Med.* l. 2, c. 11.

ALPINIA (*Bot.*) a genus of plants called after Prosper Alpinus, Class 1 *Mouandria*, Order 1 *Monogynia*.

Generic Character. CAL. perianth one-leaved; leaflets equal.—COR. monopetalous; tube cylindrical; border three-parted; nectary two-parted.—STAM. filament proper none; anther large.—PIST. germ inferior; style filiform; stigma obtuse.—PER. capsule ovate.

Species. The species are perennials, as—*Alpinia racemosa*, *Anomum pyramidale* seu *Zingiber sylvestre*.—*Alpinia galanga*, *Marautia galanga* seu *Anomum galanga*, &c.

ALQUIFOU (*Com.*) or *Arquifou*, a sort of mineral lead ore used by potters.

ALRA'MECA (*Astron.*) *Ahrumech*, an Arabic name for the star *Arcturus*.

ALRA'TICA (*Anat.*) an imperforation of the vagina.

ALSADAF (*Conchol.*) the *unguis odoratus* and the *murex*, of the shell of which it was supposed to be a part.

ALSAMECH (*Anat.*) the great foramen in the *Os petrosum*.

ALSAMBEL (*Bot.*) or *Simbala*, the Spikenard of India.

ALSINA (*Bot.*) the *Thelygonum* of Linnæus.

ALSINA'STRUM (*Bot.*) the *Elatine* of Linnæus.

ALSINE (*Bot.*) ἄλσιν, a plant so called, from ἄλσος, a grove, because it delights in the shade, *in lucis nascitur*. It is sometimes called, in English, Mouse-ear, from the resemblance which its leaves bear to the ears of a mouse; but its general name is Chickweed. This plant is of an astringent and refrigerating quality. *Dioscor.* l. 4, c. 87; *Plin.* l. 27, c. 4; *Oribas. Med. Coll.* l. 11; *Aet. Tetrab.* 1, serm. 1; *Paul. Ægmet.* l. 7, c. 3; *Lem. des Drog. Dale Pharmacop.*

ALSINE, in the *Linnean system*, a genus of plants, Class 5 *Pentandria*, Order 3 *Trigynia*.

Generic Characters. CAL. perianth five-leaved.—COR. petals five.—STAM. filaments capillary; anthers roundish.—PIST. germ subovate; styles filiform; stigmas obtuse. PER. capsule none; seeds very many.

Species. The species are annuals, as the—*Alsine media* seu *Holostium alsine*, Common Chickweed, native of Britain.—*Alsine segetalis* seu *Spergala*.—*Alsine mucronata* seu *Arenaria*, &c.

ALSINE is also the name of different species of the *Arenaria*,

Callitricha, *Draba*, *Glinus*, *Holostium*, *Campanula*, *Cerastium*, &c. *Bauh. Hist. Plant.*; *Raii Hist. Plant.*; &c.

ALSINEFORMIS (*Bot.*) the *Montia fontana* of Linnæus.

ALSINE'LLA (*Bot.*) the *Sagina procumbens* of Linnæus.

ALSINES facie (*Bot.*) the *Thelygonum cynocrambe* of Linnæus.

ALSTONIA (*Bot.*) a genus of plants called after Mr. Alston, professor at Edinburgh, Class 13 *Polyandria*, Order 1 *Monogynia*.

Generic Characters. CAL. perianth inferior; scales ovate.

COR. one-petalled.—STAM. filaments very many; anthers orbiculate.—PIST. germ superior; style simple; stigma capitate-obovate.

Species. The only species is the *Alstonia theciformis* seu *Symplocos Alstonia*, a shrub, native of South America.

ALSTROMERIA (*Bot.*) a genus of plants called after Mr. Alstromer, a Swedish naturalist, Class 6 *Hexandria*, Order 1 *Monogynia*.

Generic Characters. CAL. none.—COR. six.—STAM. filaments awlshaped; anthers oblong.—PIST. germ inferior; style filiform; stigmas three.—PER. capsule roundish; seeds very many.

Species. The species are mostly perennials, as the *Alstroemeria pelegrina*, *ligtu*, *salsilla*, &c.

ALT (*Mus.*) Italian for that portion of the great scale between F above the treble cliff and G in *altissimo*.

ALTA (*Mus.*) or *Alt*, Italian for high or higher; as *Svo. alta*, an octave higher.

ALTA tenura (*Law*) the high tenure, or tenure in chief by military service.

ALTA'IR (*Astron.*) a star of the first magnitude in the constellation *Aquila*.

ALTAR (*Bibl.*) in Latin *altare*, from *altus*, high, because altars were set up by the heathens in high places; or, in all probability, because it was raised above the ground; a table or raised place on which any offering was made to the Almighty. The first altar mentioned is that built by Noah after the flood, on which he offered burnt-offerings. *Genes.* viii. 20. The altars which Moses raised by the command of God were made of earth or rough stones. *Exod.* xx. 24; but that built by Solomon was of brass. *2 Chron.* iv. 1, 2, 3. The two principal altars of the Jews were, the Altar of Burnt-Offerings, the Altar of Incense; there was also the Altar, or rather Table, of Shew Bread.

The *Altar of Burnt-Offerings* was a kind of coffer of shittim wood, covered with brass, which in the time of Moses, was five cubits, or two yards and a half square, and three cubits, or a yard and a half high; but that made by Solomon was much larger. *2 Chron.* iv. 1, &c. To this altar, as in fig. 1, belonged—1. The *Horns*, or four spires, one at each corner. 2. The *Grate* of brass, on which the fire was made. 3. The *Pan* which received the ashes. 4. The *Rings* and *Chains* by which it was fixed to the four horns of the altar. 5. The *Kibbish*, or ascent to the altar. *Exod.* x. 26, &c.; *2 Chron.* iv. 1, &c.

The *Altar of Incense*, a small table of shittim-wood covered with gold, one cubit in length, one in width, and two in height. To this, as in fig. 2, belongs—1. The *Horns*, as

Fig. 1.

Fig. 2.

in the first. 2. The *Crown*, which was made of pure gold. 3. The *Rings* under the crown. 4. The *Censor*, which was placed upon it. *Exod.* xxx. 1, &c. This was the altar hidden by Jeremiah before the captivity. 2 *Maccab.* ii. 5, &c.

The *Altar*, or *Table of Shew Bread*. vide *Table*.

An altar at Athens is spoken of by St. Paul as bearing the inscription $\epsilon\rho\theta\omega\varsigma$ $\Theta\epsilon\omega$, i. e. to the unknown God, to which a something similar is mentioned by Pausanias and Lucian. Hereupon St. Jerom, and some other of the Fathers, raised a question as to what this altar was; but St. Chrysostom naturally solves the difficulty by supposing that the Athenians, a superstitious people, being fearful lest they should have forgotten any divinity in their religious worship, set up an altar "To the unknown God," whoever that might be; whence St. Paul takes occasion to preach the true God, who was to them an unknown God, whom they ignorantly worshipped. *Luc. in Philostrap. ad Fin.*

ALTAR *Ant.* in Greek $\beta\alpha\iota\omicron\varsigma$, was called in Latin either *altare* or *ara*: the *altare*, according to Servius, was dedicated *Diiis superis*, i. e. to the Gods above; and the *Ara Diiis inferis*, or gods below: this distinction, however, is not made by either of the Plinys or by Tacitus. The altars of the Greeks were called $\beta\alpha\iota\omicron\iota$ $\epsilon\mu\pi\upsilon\rho\iota$, when designed for sacrifices by fire; $\xi\pi\upsilon\rho\iota$, if without fire; and $\alpha\nu\alpha\iota\mu\alpha\kappa\tau\alpha\iota$, if without blood; on which two latter sort of altars only cakes, fruits, and inanimate things could be offered, according to the doctrine of Pythagoras. *Orph. de Achat.*

$\text{Πρ\omicron}\tau\alpha \mu\acute{\epsilon}\nu \epsilon\tilde{\nu} \sigma\pi\acute{\upsilon}\delta\omicron\nu\tau\alpha\varsigma \alpha\nu\alpha\iota\mu\alpha\kappa\tau\acute{\omega}\nu \epsilon\pi\grave{\iota} \beta\alpha\iota\omicron\tilde{\omega}\nu.$

The form of the altars was generally similar to the altar of incense among the Jews. [vide *Consecratio* and *Pietas*] *Plin.* l. 15, c. 30; *Tacit. Annal.* l. 16, c. 30; *Plin. Panag.* c. 1, § 5; *Diog. Laert. in Pythag.*; *Serv. in Eccl.* l. 5, v. 65; *Prudent. περὶ σεφ.* l. 10, v. 49; *Berthold. de Ara*, c. 2.

ALTAR (*Ecc.*) the table in churches where the communion is administered.—*Altar of Prothesis*, a kind of small preparatory altar, in which the priests of the Greek church bless the bread before they carry it to the Altar or Communion Table.

ALTERATA (*Mus.*) Italian, things altered, or innovations; a term applied by old musicians to the deviations from the diatonic scale.

ALTERATIVES (*Med.*) *Alterantia medicameuta*, such medicines as induce a change in the blood and juices for the better, without any manifest operation or evacuation, as sea-water in the case of scrophula. *Gal. de Nat. Facultat.* l. 3.

ALTERATRIX (*Med.*) alterative, an epithet for such things as have the power of inducing a desirable change in the system.

ALTERCUM (*Bot.*) or *Altercangenon*, a herb among the Arabians, which is called by the Greeks $\iota\omicron\sigma\kappa\upsilon\alpha\mu\omicron\varsigma$. [vide *Hyoscyomus*]

ALTERN *Base* (*Trig.*) in oblique triangles, is that which is distinguished from the true base: supposing this to be the sum of the two sides, then the difference of the sides is the altern base; or if the difference of the sides be the true base, then their sum is the altern base.

ALTERNATE *angles* (*Geom.*) angles formed by a line cutting two parallel lines which are on opposite sides of the cutting line; thus, the internal angles A and B, or a and b, formed by the line C D cutting the parallel lines E F and G H are alternate.—*Alternate ratio*, is the comparing of

the antecedent with the antecedent, and the consequent with the consequent: supposing there be four quantities proportional, namely A B C D, whereof A is to B as C is to D, then the ratio is alternate, if it be said that A is to C as B to D.

ALTERNATE (*Her.*) the position of quarterings, partitions, and other figures that succeed one another by turns.

ALTERNATE (*Bot.*) *alteruus*, an epithet for the leaf, (*folium*); the flower, (*flos*); and the peduncle, (*pedunculus*); when they come out one after or above another in succession or gradation.

ALTERNATE (*Med.*) different medicines employed by turns.

ALTERNATELY *pinnate* (*Bot.*) *alternatim pinnatum*, an epithet applied to a leaf (*folium*) when the leaflets (*foliola*), or a pinnated leaf, stand alternately.

ALTERNATION (*Math.*) *alternatio*, changing the order or position of any proposed number of things, as a and b, which admit of two changes, a b and b a; or a, b and c, which admit of six changes, &c.

ALTERNATION (*Mus.*) changes rung on bells.

ALTHÆA (*Bot.*) $\alpha\lambda\theta\alpha\iota\alpha$; a plant so called, from $\alpha\lambda\theta\epsilon\iota$, a remedy, on account of its great efficacy in medicine. It was much used as an emollient, particularly in application to wounds. *Theoph. Hist. Plant.* l. 9, c. 19; *Dioscor.* l. 3, c. 163; *Plin.* l. 20, c. 21; *Gal. de Meth. Med.* l. 14, c. 5; *Suidas*.

ALTHÆA, in the *Linnean system*, a genus of plants, Class 16 *Monadelphica*, Order 5 *Polyandria*, in English, Marsh-mallow.

Generic Character. CAL. *perianth* double.—COR. five-petalled.—STAM. *filaments* many; *anthers* subreniform.—PIST. *germ* orbiculate; *style* cylindrical; *stigmas* many.—PER. *arils* not jointed; *seed* one.

Species. The species are some annuals, as *Althæa acaulis* seu *Malva rosea*, &c.; some perennials, as *Althæa officinalis*, Common Marsh-mallow; *Althæa cannabina* seu *Alcea cannabina*, Hemp-leaved Marsh-mallow, &c.; some biennials, as *Althæa rosea, pallida, sicifolia*, &c. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tournef. Inst.*; *Boerhaav. Ind. Plant.*; *Linn. Spec. Plant.*

ALTHÆANACA (*Chem.*) orpiment.

ALTHEBEGIUM (*Med.*) a swelling as in a cachexy.

ALTICA (*Ent.*) a division of the genus *Cantharis*, according to Fabricius, consisting of the insects of this tribe, which are of an oblong shape, and have the lip bifid.

ALTIMAR (*Min.*) burnt copper.

ALTIMETRY (*Math.*) the art of taking and measuring heights.

AL TIN (*Com.*) a small coin in Muscovy.

ALTINEAR (*Min.*) a factitious kind of salt used in separating metals.

ALTINGAT (*Min.*) rust of copper.

ALTINURAUUM (*Chem.*) vitriol.

ALTISSIMO (*Mus.*) or, abbreviated, *altiss.* an Italian epithet for notes above F in alt.

ALTISTA (*Mus.*) an Italian name for the vocal performer who takes the *alto primo* part.

ALTITONANS (*Mus.*) highscunding; an epithet applied to the counter-tenor of anthems, &c. signifying the highest of the parts intended for the adult male voice.

ALTITUDE (*Geom.*) the height of an object, or its elevation above that plane to which the base is referred.—

Altitude of a figure, the perpendicular or nearest distance of its vertex from the base, as the right line B D drawn from the vertex B of the triangle ABC perpendicular to the line A C which is the altitude of the

triangle.—*Altitude of an object*, is an elevation of an object above the plane of the horizon, or a perpendicular let fall to that plane; as A B, the perpendicular, let fall from a tower, as in the annexed diagram. Altitudes are either accessible or inaccessible. *Accessible altitudes*

are those whose base may be approached so as to measure the distance between it and the station from which the measure is to be taken.—*Inaccessible altitudes* are when no access is to be had to the base of the object. The altitudes of the pyramids, according to Plutarch, were measured by means of their shadows and that of a pole set up beside them, making the altitude of the pole and the pyramid proportional to their shadows. *Euclid. Elem. Def. 1. 6; Wolf. Elem. Math. tom. 1, § 115, &c.*

ALTITUDE of the Eye (Perspect.) a right line let fall from the eye perpendicular to the geometrical plane, being the point from which the principal ray proceeds.

ALTITUDE (Astron.) the arc of a vertical circle measuring the height of the sun, moon, or any other celestial object above the horizon. Altitudes are distinguished into—*Apparent altitude*, that which appears by sensible observation made at any place on the surface of the earth.—*True altitude*, that which results from the correction

of the apparent altitude on account of refraction and altitude. Let C D be the true horizon, H O the sensible horizon, D Q a vertical circle whose centre C is the centre of the earth, L any point in the heavens, H the place of observation, and L M an arc of a circle drawn through L about the centre H, then is L M the *apparent altitude* of the point L, which is always less than the *true altitude* which is D Q. The true altitudes of the sun, fixed stars, and planets, differ but very little from their apparent altitudes: the difference of the moon, however, is about 52 minutes.—*Meridian altitude*, an arc of the meridian intercepted between the horizon and the centre of the object on the meridian, as in the annexed diagram, where H Z R N represents the meridian, H R the horizon, S the star; then is R S the meridian altitude.—*Altitude or Elevation of the Pole*, an arc of the meridian P O intercepted between the horizon H O and P the pole of the world; this is equal to the latitude of the place.—*Altitude of the Equator*, an arc of the meridian H Æ, intercepted between the horizon H O and the equator, Æ Q being always equal to the complement of the latitude of the place.—*Altitude of the Tropics*, otherwise called the *Solstitial altitude of the Sun*, is his meridian altitude when in the solstitial points.—*Altitude of the Horizon*, or of the stars, &c. seen in it, is the quantity by which it is raised by refraction.—*Altitude of the Nonagesimal*, is the altitude of the 90th degree of the Ecliptic, counted upon it from the point where it cuts the horizon. It is equal to the angle made by the ecliptic and horizon where they intersect at that time.—*Altitude of the Cone of the Earth's or Moon's Shadow*, the height of the shadow of the body made by the sun, and measured from the centre of the body. This is found when the sun is at a mean distance, by saying, as the apparent semidiameter of the sun, i. e. about 16, is to Radius, so is the same diameter of the earth to a fourth proportional 214.8 semidiameters of the earth, which is the altitude. The greatest altitude of the earth's shadow is 217 semidiameters of the earth; and the altitudes of the earth's and moon's shadows are nearly as 11 to 3, the pro-

portion of their diameters.—*Circles of Altitude* [vide *Circle*].—*Parallax of Altitude* [vide *Parallax*].—*Parallels of Altitude* [vide *Parallel*].—*Quadrant of Altitude* [vide *Quadrant*].—*Refraction of Altitude* [vide *Refraction*]. *Ricciol. Almag. 1. 1, c. 12, 1. 3, c. 10, &c.; Keil. Lect. ad ver. Astronom. 1. 19, &c.; Wolf. Elem. Math. tom. 3, § 73, &c.*

ALTITUDE of Motion (Mech.) a term employed by Dr. Wallis, to signify the measure of any motion estimated in the line of direction of the moving force. *Wall. de Mechan.—Equal altitude Instrument*, an instrument used to observe a celestial object when it has the same or an equal altitude on both sides of the meridian. It is very useful in adjusting clocks, &c.

ALTO tenore (Mus.) Italian for the upper or counter-tenor part in music of several parts. *Alto cliff*, the Cliff when placed on the third line of the staff.—*Alto concertante*, the tenor of the little chorus which sings throughout.—*Alto primo*, the first or upper alto, in distinction from the —*Alto secondo*, or lower alto.—*Alto ripieno*, the tenor of the great chorus which performs in the full parts.—*Alto viola*, the small tenor of the violin.

ALTO et Basso (Law) *ponere se in arbitrio in alto et basso*, the absolute submission of all differences, high and low, to an arbiter.

AL TOM (Com.) the Turkish name for a sequin.

ALVARISTS. (Ecc.) a branch of the Thomists, so called from their leader Alvarez, who maintained the efficacy of divine grace, in distinction from the former, who maintained its sufficiency.

ALUCUTA (Ent.) a division of the genus *Phalæna*, according to Gmelin.

ALUD (Bot.) the same as *Agallochum*.

ALUDEL (Chem.) an earthen tube or vessel without a bottom, used in sublimations. Such vessels are without a bottom, and are fitted into one another as occasion may require. At the bottom of the furnace there is a pot, holding the matter that is to be sublimed, and at the top there is a head, to receive the flowers that sublime up thither.

ALVEARE (Nat.) Alveary, a bee-hive.

ALVEARIUM (Anat.) the bottom of the concha, or the external ear.

ALVEOLARIS processus (Anat.) the same as *Maxillaria superiora ossa*.

ALVEOLATE (Bot.) *alveolatus*, Honey-combed, an epithet applied to the receptacle when it is divided into open cells, like a honey-comb, with a seed lodged in each, as in *Onopordum*. *Linn. Philos. Botan.*

ALVEOLI (Anat.) from *Alveus*, the sockets in the jaws for the teeth.

ALVEOLUS (Nat.) a name for the waxen cells of which the comb in a bee-hive consists.

ALVEOLUS (Min.) a marine body so called, which is frequently found in a fossil state. It is of a conic shape, and composed of several hemispheric cells, like those which form the comb of a bee-hive, having a pipe of communication similar to that in the thick nautilus.

ALVEUS (Ant.) 1. a boat formed from the trunk of a tree hollowed out, which was in use among the ancients. According to Ovid, Romulus and Remus were exposed in a bark of this kind.

Ovid. Fast. 1. 2, v. 407.

*Sustinet impositos summâ cavus alveus undâ,
Heu quantum fati parva tabella tulit,
Alveus in limo sylvis appulsus opacis,
Paullatim fluvio deficiente sedet.*

Liv. 1. 1, c. 4; Patercul. 1. 2, c. 107; Gyrald. de Navig. c. 8; Schæf. de Milit. Nav. 1. 1, c. 3. 2. A chess-board, or any table for gaming, the furrows of which resembled the beds, alvei, of a river. Plin. 1. 37, c. 2; Dolet. de Re Nav. apud Gronov. Thes. Antiq. Græc. vol. 11, p. 657.

ALVEUS (*Anat.*) a canal or duct through which some fluid passes.—*Alveus communis*, the common duct or communication of the ampullæ of the membranaceous semicircular canals in the internal ear.—*Alveus ampullescens*, part of the duct conveying the chyle to the subclavian vein.

ALVIDUCA (*Med.*) Purgatives.

ALVIFLUXUS (*Med.*) a diarrhœa, or purging.

ALUM (*Min.*) vide *Alumen*.

ALUM (*Chem.*) Alumen, so called from ἄλς, the sea; a saline humour of the earth, *Salsugo terræ*, of an astringent, hardening, and corroding quality; whence called in Greek εὐπτηρία, from εὐπτεω, to bind. Alum is either natural or factitious.—*Natural Alum*, which was well known to the ancients, is a kind of whitish friable stone, formerly found in the island of Melos, Macedonia, Egypt, &c. of which there were different kinds, namely, the *scissile*, σχιστή, sometimes called τριχίτις, because when pulled asunder it runs into hairs; and also *plumose*, because it was composed of featherlike fibres; the round, στρογγυλή; and the liquid, which, to be good, must have a milky property. When alum is melted, so as to become a white porous substance, it is called *burnt Alum*.—*Factitious alum*, which is the modern alum, is composed of other ingredients besides the concentered juice. It is commonly made of a stone, of seaweed, and of urine, and known by the names of *rock*, or *English Alum*, which is colourless, and *Roch*, or *Roman Alum*, which is of a reddish colour.—*Saccharine Alum* is a composition of common alum with rose-water and the white of eggs, which serves as a cosmetic. *Hippocrat. Dioscor.* l. 5, c. 123; *Plin.* l. 25, c. 15; *Gal. de Simplic.* l. 9, &c.; *Oribas Med. Coll.* l. 15, c. 1; *Aet. Tetrab.* 4, serm. 2, c. 25.

ALUM-WATER (*Paint.*) a preparation used by painters in water-colours, prepared by dissolving common alum in water.

ALUM Stone (*Surg.*) a stone or calx used in surgery, which is probably alum calcined so as to become corrosive.

ALUM Earth (*Min.*) the earth from which alum is extracted, that is, pure clay.—*Alum Ores*, the ores or stone from which alum is prepared.—*Alum-Works*, where alum is manufactured, in distinction from alum mines, where the natural alum is found. In these mines are found the stones or ores of which the alum is made, called *doggers*, i. e. a sort of coal snake-stones, and also a brown alum-slate, a sort of clay-slate, so called from its aluminous taste. Besides these stones is found likewise the water, or liquid, which, when it first appears, is called the *virgin water*. To these ingredients are added urine and the sea-weed called *kelp*. When the alum is made, the *mothers*, or liquor, that remains is put into a boiler, where, by the help of kelp-lees, it ferments, and is then put into a *settler* of lead, where the nitre and *slam* sink to the bottom; after which it is scooped out into a *cooler*, made of deal boards, when, by the addition of fresh urine, the alum is made to *strike*, or *shoot*, that is, to harden about the sides and at the bottom of the cooler.

ALUMEN (*Min.*) Alum, a genus of Salts in the *Linnean system*, formed by the combination of the earth called *Alumine*, or pure clay, with sulphuric acid, potash, and ammonia. The principal species of alumen are, the—*Alumen nativum*, seu *nudum*, natural Alum.—*Alumen commune*, seu *factitium*, the rock Alum.—*Alumen butyraceum*, *Stone-Butter*, or *Mountain-Butter*.—*Alumen romanum*, *Roche Alum*.—*Alumen Schisti Alumina*, or *Aluminous Earth*.

ALUMINA (*Min.*) *Alumine*, or the *Earth of Alum*, an argillaceous, soft, and insipid sort of earth, which is the base of alum, being the principal part of clay. When obtained in a small quantity of water, it is very light, friable, and spongy, and on that account is called the *spongy Alumina*,

in distinction from the gelatinous *Alumina*, which is obtained in a large quantity of water. *Alumina* is the base of several salts when combined with acids, as the *Nitrate of Alumina*, the *Sulphate of Alumina*, &c. formed by the combination of *Alumina* with nitric, sulphuric, &c. acids.

ALUMINA'RIS (*Min.*) another name for the *Alumina*.

ALUMINITE (*Min.*) a species of alum, which is a subsulphate of *Alumina*.

ALUMINOUS Earth (*Min.*) *Alumina*, or *Alum Earth*; the earth from which alum is procured. [vide *Alum*, *Alumina*]—*Aluminous Waters*, waters impregnated with particles of alum.

ALURNUS (*Ent.*) a genus of animals, Class *Insecta*, Order *Coleoptera*.

Generic Character. Antennæ filiform, short.—*Feelers* from 4 to 6, very short.—*Jaw horny*, arched.

Species. The species are—*Alurnus grossus*, having a scarlet thorax.—*Alurnus femoratus*, having the thighs and hind shanks toothed.—*Alurnus dentipes*, of a black colour, &c.

ALUSAR (*Chem.*) *Manna*.

ALUTA (*Med.*) soft thin leather used to spread plasters on.

ALVUS (*Anat.*) the *Belly*, comprehending the stomach and entrails. *Ruf. Ephes. de Appel. Part. Corp. human.* l. 1, c. 11.

ALVUS (*Med.*) the belly, in relation to stools or the condition of the bowels, as it is used by Celsus, answering to the κοιλία of Hippocrates, and other Greek writers. *Hippocrat.* l. 2, aphor. 20, &c.; *Cels. de Re Med.* l. 2, c. 12, &c.; *Gal. Comm. in Hippocrat.*; *Aet. Tetrab.* l. 1, serm. 2, c. 184; *Trallian.* l. 1, c. 11; *Actuar. de Melh. Med.* l. 4, c. 6.

ALYCE (*Med.*) ἄλυκῆ, the same as *Alysmos*.

ALYPUM (*Bot.*) ἄλυπον, a herb so called from α, privative, and λύπη, pain, because it relieves pain. It is called, in English, *Herb Terrible*, from its violently purging quality, and in the *Linnean system* is the *Globularia alypum*, a spriggy plant, of an acrid viscous taste, and a very strong cathartic, which purges phlegm, bile, &c. It has been doubted by some whether the *Alypum* of Dioscorides is the same as that of more modern Botanists; but their descriptions correspond so considerably as to leave little room for doubt. *Dioscor.* l. 4, c. 180; *Plin.* l. 27, c. 4; *P. Æginet. de Re Med.* l. 7, c. 3; *Actuar. de Meth. Med.* l. 5, c. 8; *Clus. Rar. Plant. Hist.*; *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Raii Hist. Plant.*; *Parkins. Theat. Botan.*; *Tournef. Inst.* &c.

ALYSMOS (*Med.*) ἀλυσμός, anxiety, or the restless uneasiness attendant on sickness; a term used frequently in this sense by Hippocrates. *Gal. Exeg. Vocab. Hippocrat.*; *Erotian Lex. Hippocrat.*; *Gorr. Defin. Med.*; *Foes. Æconom. Hippocrat.*

ALYSSOÏDES (*Bot.*) different species of the *Alyssum* of Linnæus, Bauhin, Tournefort, &c.

ALYSSON (*Bot.*) different species of the *Alyssum*, the *Clypeola*, the *Draba*, and the *Marrubium* of Linnæus, Bauhin, Raii, &c.

ALYSSUM (*Bot.*) ἄλυσσον, Madwort, from α, privative, and λύσσα, madness; a plant so called because it was supposed to cure the bite of a mad dog. *Dioscor.* l. 3, c. 105; *Plin.* l. 24, c. 12; *Gal. de Simplic.* l. 2, c. 11, &c.; *Oribas Med. Coll.* l. 15, c. 1; *Paul. Æginet. de Re Med.* l. 7, c. 3.

ALYSSUM, in the *Linnean system*, a genus of plants, Class 15 *Tetradynamia*, Order 1 *Siliculosa*.

Generic Character. CAL. perianth four-leaved; leaflets ovate, oblong.—COR. four-petalled; petals flat.—STAM. filaments six; anthers spreading.—PIST. germ subovate; style simple; stigma obtuse.—PER. silicle subglobose; seeds few.

Species. The species are some shrubs, as the—*Alyssum halimifolium*, *Thlaspi fruticosum*, seu *Leucorium spinosum*, sweet Madwort.—*Alyssum saxatile Lunaria*, seu *Thlaspi*,

&c. Yellow Madwort, &c. Some species are perennials, as—*Alyssum incanum*, *Maenchia incana*, &c. Hoary Madwort.—*Alyssum montanum*, *Clypeola montana*, *Adyseton montanum*, &c. Mountain Madwort, &c. Some are annuals, as—*Alyssum minimum*, *lunaria annua*, &c. Least Madwort.—*Alyssum clypeatum*, *Leucorum alyssoides*, *Alysson Dioscoridis*, &c. Bucklerpodded Madwort, &c. *J. Bauhin. Hist. Plant.*; *C. Bauh. Pin. Boerhaav. Ind.*; *Linn. Spec. Plant.*

ALYSSUM is also the name of different species of the *Clypeola*, the *Draba*, the *Myagrum*, and the *Veronica* of Linnæus. *C. Bauh. Pin.*; *Ger. Herb.*; *Tournef. Inst.*

ALYTARCHUS (*Ant.*) ἀλυστάρχης, the name of the chief officer among the Eleans, who was appointed to keep good order at the games. He was called by the rest of the Greeks βιβλοφόρος, or μυσετοφόρος, answering to the Lictor of the Romans. Those who were under the Alytarches were called Alytæ.

ALZEGI (*Chem.*) Ink.

ALZEMA'FOR (*Chem.*) Cinnabar.

ALZILAT (*Med.*) a weight of three grains.

ALZOFAR (*Chem.*) Burnt Copper.

ALZUM (*Bot.*) the tree that produces the gum Bdellium.

A. M. (*Gram.*) an abbreviation for Anno Mundi, &c. [*vide Abbreviations*]

A'MA (*Ant.*) or *Ames*, ἄμα, a sort of cake made with milk. *Aret. de Curat. Morb. Acut. l. 1, c. 3*; *Suidas*.

AMA'BYR (*Archæol.*) a custom in the honour of Clun, belonging to the Earls of Arundel. "Pretium virginitatis domino solvendum."

AMA'ENDAVA (*Or.*) a species of finch, the *Fringilla Amaduvada* of Linnæus.

AMA'IN (*Mar.*) from *a*, or *ab*, and *main*, the hand, i. e. off-hand, at once, applied to any movement of the tackle, as "To lower *amain*," to lower at once, or let go the fall of the tackle: "To strike *amain*," to lower the topsail: "To wave *amain*," to make a sign to another vessel, by waving a bright sword, that it should strike its topsails.

AMA'LGAMA (*Chem.*) from ἄμα, together, and γαμῖα, to marry; a soft paste produced by the incorporation of mercury with a metal, as the amalgama of mercury with lead, &c. *Shaw's Boerhaav. Pract. Operat. Chem. Proc. 203*.

AMALGAMA is expressed by chemical writers by the character A or $\text{A}|||$

AMALGAMA'TION (*Chem.*) the process of mixing mercury with gold, silver, and other metals, so as to reduce them to an impalpable powder. This operation is marked by the three letters A A A. All metals may be amalgamated with mercury except iron, but gold amalgamates more readily than silver, and this than lead, copper, or tin, which is the least fitted for amalgamation.

AMANDINUS lapis (*Min.*) a gem of various colours, which is said to resist poisons. *Albert. Mag. De Lapid. Pret.*

AMANI'TE (*Bot.*) ἀμανίται, Truffles, a sort of fungi or mushrooms, which, according to Oribasius, were the least hurtful of all the sorts. They are so called, from *a*, priv. and *μανία*, madness, i. e. not poisonous. *Oribas. Med. Coll. l. 2, c. 25*; *Aet. Tetrab. l. 1, serm. 1*; *Paul. Æginet. l. 1, c. 77*; *Myrep. sect. 38, c. 371*; *Actuar. de Spir. Anim. c. 6*; *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Tournef. Instit.*

AMA'NNIA (*Bot.*) *vide Ammania*.

AMANUE'NSIS (*Ant.*) from *a manu*, i. e. by the hand, or one serving by the hand; a slave who used to be employed in writing; a transcriber.

AMARA (*Ant.*) ἄμαρα, a furrow or channel through which water flows.

AMARA (*Med.*) bitters, the essence of any bitter substance; or the whole substance itself, of which great use is made in medicine, particularly for bracing the relaxed fibres of the organs of digestion. *Ruf. Ephes. de Appel. Part. hum. Corp. l. 1, c. 23*; *Oribas. l. 13, c. 5*; *Aet. Tetrab. l. 1, serm. 1*; *Paul. Æginet. de Re Med. l. 7, c. 3*.

AMARA dulcis (*Bot.*) *vide Dulcamara*.—*Amara Indica*, the *Momordica charantia* of Linnæus.

AMARACUS (*Bot.*) ἀμάρακος, a plant spoken much of by the ancients, particularly for its medicinal virtues, being a principal ingredient in *Acopas* and *Malagmas*, on account of its warming quality. Nicander celebrates the Amaracus as a garden flower.

Nicand. Ther.

——— μάλα δ' ἂν ἀμάρακος εἴη
Χρυσιμήεις πρασιῆς τε καὶ ἀνδρῖοσι κλαύζων.

According to Catullus it was used as a nuptial garland. *Catull. Carm. 60, v. 7*.

*Cinge tempora floribus
Suavolentis amaraci.*

Virgil speaks of its fragrance.

Virg. Æn. l. 1, v. 693.

——— ubi mollis amaracus illum
Floribus et dulci adspirans complectitur umbra.

Theophrast. Hist. Plant. l. 6, c. 7; *Ruf. Ephes. Fragm. apud Med. Princip. p. 127*; *Dioscor. l. 1, c. 58*; *Plin. l. 21, c. 2*; *Gal. de Antidot. l. 1, c. 9*; *Athen. l. 15, c. 5*; *Myrep. de Antidot. sect. 1, c. 21*.

AMARACUS, in the Linnæan system, is the *Origanum marjorana*, or Sweet Marjoram. *C. Bauh. Pin.*; *Salmas. de Homonym. Hyl. Iatr. c. 13*; *Raii Hist. Plant.*; *Tournef. Instit.*; *Boerhaav. Ind. Botan.*

AMARA dulcis (*Bot.*) *vide Dulcamara*.

A'MARANTH (*Bot.*) the *Amaranthus* of Linnæus, an annual, which produces a beautiful flower.—*Globe Amaranth*, an annual, the *Gomphrena globosa* of Linnæus.

AMARA'NTHI Spica (*Bot.*) a species of the *Phryma* of Linnæus.

AMARA'NTHO affinis (*Bot.*) the *Gomphrena globosa* and *Illecebrum sessile* of Linnæus.

AMARANTHO'DES (*Bot.*) the *Celosia mensionia*, the *Gomphrena perennis*, and *Illecebrum sessile* of Linnæus. *Pluken. Almag., &c.*

AMARA'NTHUS (*Bot.*) or *Amarantus*, ἀμάραντος, a plant, so called from *a*, priv. and *μαραινουμαι*, to fade, i. e. never fading, because it retains its freshness a long time. According to Dioscorides, it was a remedy against the bites of serpents. *Dioscor. l. 4, c. 57*; *Plin. l. 21, c. 8*; *Oribas. Med. Coll. l. 11*; *Paul. Æginet. de Re Med. l. 7, c. 3*.

AMARANTHUS *Amaranth*, in the Linnæan system, a genus of plants, Class 21 *Monocœcia*, Order 5 *Pentandria*.

Generic Character. CAL. *perianth*, five or three-leaved; leaflets lanceolate.—COR. none.—STAM. *filaments* five, or three capillary; *anthers* oblong.—PIST. *germ* ovate; *styles* three; *stigmas* simple permanent.—PER. *capsule* ovate; *seed* single.

Species. Plants of this tribe are annuals, of which the principal are the—*Amaranthus albus*, White Amaranth.—*Amaranthus polygonoides*, *Blitum polygonoides*, *Chenopodium humile*, &c. Spotted-leaved Amaranth.—*Amaranthus polygamus*, Hermaphrodite Amaranth.—*Amaranthus oleraceus*, Eatable Amaranth.—*Amaranthus tricolor*, Three-coloured Amaranth.—*Amaranthus blitum*, Least Amaranth.—*Amaranthus hypochondriacus*, Prince's-feather Amaranth, &c. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin. Theat. Botan.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Pluk. Almag. Botan.*; *Tournef. Inst.*; *Boerhaav. Ind.*; *Linn. Spec. Plant.*

AMARANTHUS is also the name of the *Achyranthes corymbosa*, different species of the *Celosia*, the *Illecebrum sessile*, the *Iresine celsoides*, and the *Rivina humilis* of Linnæus. *Bauh. Hist.*; *Pluk. Almag.*—*Amaranthus luteus*, the *Guaphalium arena* of Linnæus.—*Amaranthus capensis*, the *Hypoxis stellata* of Linnæus, &c.

AMARILLA (*Bot.*) a species of the *Gentiana* and the *Polygala amara* of Linnæus.

AMARUM (*Min.*) Sulphate of Magnesia, or Epsom Salt; a genus of mineral substances, Class *Salts*, a bitter taste, easily soluble in water, and melting in heat.

AMARUS dulcis Orientalis (*Bot.*) the same as *Costus*.

AMARUS (*Min.*) a genus of earths, of the Class *Silices*, consisting of silica, with a small quantity of magnesia, alumina, and carbonate of lime.

AMARYLLIS (*Bot.*) or Lily, a genus of plants, Class 6 *Hexandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *spathe* oblong.—COR. *petals* six; *nectary* six.—STAM. *filaments* six; *anthers* rising.—PIST. *germ* roundish; *style* filiform; *stigma* trifid.—PER. *capsule* subovate; *seeds* several.

Species. The species are perennials, and mostly inhabit the East and West Indies. The principal are the—*Amaryllis atamasco*, the Atamasco Lily.—*Amaryllis pumilis*, the Dwarf Amaryllis.—*Amaryllis formosissima*, *Lilio-Narcissus*, &c. the *Jacoea Lily*.—*Amaryllis lutea*, *Narcissus autumnalis*, *Yellow Amaryllis* or *Autumnal Lily*.—*Amaryllis sarniensis*, *Narcissus japonicus*, the *Guernsey Lily*, &c. *J. Bauh. Hist. Plant.*; *Linn. Spcc. Plant.*

AMARYNTHIA (*Ant.*) ἀμαρυνθία, festivals celebrated in honour of Diana at Amarynthusa, a village of Eubœa. *Paus.* l. 1, c. 31.

AMASONIA (*Bot.*) a genus of plants, called after Mr. Amason, a traveller, Class 14 *Didynamia*, Order 2 *Angiospermia*.

Generic Character. CAL. *perianth* one-leaved.—COR. one-petalled; *border* quinquefid.—STAM. *filaments* four; *anthers* oval.—PIST. *germ* ovate; *style* in the situation and form of the stamens; *stigmas* two.—PER. none; *seeds* a nut ovate.

Species. The species are the *Amasonia erecta* and *pumicea*. *Linn. Spec. Plant.*

AMATORIA Febris (*Med.*) the same as *Chlorosis*.—*Amatoria Veneficia*, the same as *Philtrea*. *Castell. Lex. Med.*

AMATORIUS (*Anat.*) another name for the muscles called *obliquus superior* and *inferior Oculi*, because they are used in ogling.

AMATYQUIL (*Bot.*) the *Arbutus unedo* of Linnæus.

AMAURO'SIS (*Med.*) ἀμαυρωσις, the *Gutta serena*. [*vide Gutta serena*]

AMAZONUM Pistillum (*Med.*) Ἀμαζόνων τροχίσκος, the Amazonian trochee; a medicine given to chlorotic maids. *Galen. de Comp. Med. sec. Loc.* l. 8.

AMBA (*Bot.*) the same as the *Manga* or *Mango tree*.

AMBAIBA (*Bot.*) a beautiful tree of Brazil, the *Cecropia peltata* of Linnæus, the outer bark of which resembles that of the fig-tree. *Marcgrav. Pison. Med. Bras.*; *Raii Hist. Plant.*

AMBAITINGA (*Bot.*) an Indian tree, the oily juice of which, like that of the *Ambaiba*, is of a cooling and astringent nature. *Marcgrav. Pison. Med. Brasil.*; *Raii Hist. Plant.*

AMBALAM (*Bot.*) an Indian tree, the fruit of which is a kind of kernel that is good to assuage pains in the ears; of the root is made a pessary that promotes the menstrual discharge. The bark converted into a powder is beneficial in dysenteries, and a decoction of its wood is given with success in gonorrhœas. *Raii Hist. Plant.*

AMBAPATA (*Bot.*) an Indian tree; the *Carica Papaya* of Linnæus. *C. Bauh. Pin.*; *Raii Hist. Plant.*

A'MBAR (*Chem.*) vide *Ambra*.

AMBA'RE (*Bot.*) an Indian tree, the leaves of which are as large as those of the walnut. The pulp of the ripe fruit when seasoned with vinegar and salt creates an appetite. *C. Bauh. Pin.*; *Leu. de Drog.*

AMBARVALES fratres (*Ant.*) the priests who offered the sacrifices at the ambarvalia. *Vet. Grammat.*

AMBARVALIA (*Ant.*) feasts among the Romans in honour of Ceres, *ut arva fruges ferrent*. They are so named from going round the fields, *Ambiendis arvis*, which was a part of their ceremony. Servius says that the victim was taken round the fields, according to Virgil.

Georg. l. 1, v. 345.

Terque novas circum felix eat hostia fruges.

The festival was celebrated twice a year, in April and July. *Cato de Re Rust.* c. 142; *Fest. de Signif. Verb.*; *Macrob.* l. 3, c. 5; *Gyrald. Syntag. Dior.* l. 17, p. 488; *Turneb. Adv.* l. 18, c. 17; *Alex. Gen. Dier.* l. 3, c. 12; *Rosin. Kipping, &c. apud Græv. Antiq. Roman.*

AMBARVALIÆ Hostiæ (*Ant.*) the victims sacrificed at the Ambarvalia, which were a sow, a sheep, and a bull. [*vide Ambarvalia*]

AMBARVALIS Flos (*Bot.*) the *Polygala vulgaris* of Linnæus. *Dodon. Stirp. Hist.*

A'MBE (*Surg.*) ἄμβη, a lip or edge, because its extremity runs out like the edge or brim of a pot; a surgical instrument used in restoring a luxation of the shoulder. *Hippocrat. de Artic.* l. 6; *Gal. Exceges. Vocab. Hippocrat.*; *Heist. Chirurg.* p. 1, l. 3, c. 7.

AMBE'GNIS (*Ant.*) an epithet for the weather sheep which was led to be sacrificed between two lambs; so called from *ambo*, both, i. e. both sides, and *agnus*, a lamb. *Fest. de Verb. Signif.*

A'MBELA (*Bot.*) the *Nymphæa lotus* of Linnæus.

AMBELANIA acida (*Bot.*) the *Willoughbeia acida* of Linnæus.

A'MBER (*Min.*) the *Succinum* of Linnæus, a brittle hard resinous substance, which in Greek is called ἄμπερξ, i. e. the Snatcher, because, according to Pliny, it snatches straws, leaves, &c. to itself. The Arabic name, *Kerabe*, signifies the same thing, namely, an "Attractor of Straw." By the Greeks of later ages, as Nicetas Chroniates relates, amber is called ἄμπερξ: but what may be the origin of this word, which is neither Greek nor Arabic, it is difficult to conjecture, unless we are to suppose that it comes from *Hambara*, which, according to Leo Africanus, signifies a whale. Amber is usually transparent, of a yellow and a deep colour, but sometimes it is colourless. It is highly electric; and if a piece be kindled it burns to the end with pungent white vapours, without melting. It takes a good polish, and is made into beads, necklaces, and other ornaments; specific gravity from 1.078 to 1.085. Many virtues are ascribed to amber, particularly when taken inwardly, in a cold state of the brain, in catarrhs, &c. Ancient authors affirm that amber works out of springs like bitumen, which is warranted by the discoveries of modern writers, who assure us that it is got out of the German sea, where it rises in a bituminous form. *Plin.* l. 37, c. 2; *Salmas. de Homonym.* c. 101; *Boerhaav. Chem.*—*Liquid Amber*, or *Liquid Ambar*, a fat resinous substance, of the consistence of Venice Turpentine, of an acrimonious taste, but an aromatic and fragrant smell. It distils from a tree in New Spain, and is used in medicine as an emollient.

AMBER, Oil of (*Chem.*) an acid liquor drawn from amber, which is supposed to be the liquid storax, sold by druggists.

AMBE'RBOI (*Bot.*) different species of the *Centaurea* of Linnæus.

AMBERGRIS (*Min.*) the *Ambra grisea* of Aldrovandus, and the *Ambra* of Linnæus, a solid sebaceous or fat substance, not ponderous, of an ash colour, variegated like marble, and often marked with white specks. It is supposed to be the excrement of the spermatic whale, having frequently been met with in the intestines of that fish. It is found floating on the waters, or on the shores of the Moluccas, and other islands in the Indian Ocean. It breaks easily, but cannot be reduced to powder; melts like wax, and is somewhat soluble in spirits of wine, with the assistance of heat. Specific gravity 0.926.

AMBER Tree (*Bot.*) the *Anthospermum* of Linnæus, a shrub, the beauty of which lies in its small evergreen leaves, which grow as close as heath, and which being bruised between the fingers, emits a very fragrant odour. — *Amber-seed*, a seed brought from Martinico and Egypt, of a bitterish taste, and resembling millet-seed.

AMBIDEXTER (*Med.*) ἀμδιδέξιος, a man who can play equally with both hands. *Hippocrat.* l. 7, aphor. 43; *Gal. Exeges. Vocab. Hippocrat.*; *Foes. Econom. Hippocrat.*

AMBIDEXTER (*Law*) one who plays on both sides, as a juror who takes money for giving his verdict.

AMBIEGNA (*Ant.*) an ox; so named by the augurs, because it had the other victims around it. *Varro de Ling. Lat.* l. 6, c. 3; *Buleng. de Sort.* c. 6.

AMBIENT (*Phy.*) or *circumambient*, an epithet for whatever encompasses other things; thus, bodies are called ambient or circumambient which surround other bodies, and the air which immediately encompasses or surrounds all bodies on the earth is called the *ambient air*.

AMBIGENAL (*Math.*) an epithet given by Sir Isaac Newton, in his *Enumeratio Linearum tertii Ordinis*, to one of the triple hyperbolas of the second order, EGF having one of its infinite legs, GE, falling within the angle ACD, formed by the asymptotes ACCD, and the other leg, GF, falling without the angle.

AMBIT of a Figure (*Math.*) the same as the *Perimeter*, i. e. the line, or the sum of the lines by which the figure is bounded.

AMBITION (*Hierog.*) was represented as a young man clad in green, and crowned with ivy, and going to climb up a steep ascent, at the top of which appeared crowns and sceptres. He had a lion by his side to denote fortitude, which is the companion of ambition.

AMBITUS (*Ant.*) from *ambire*, to go about; a going round, or canvassing for a place: whence comes the word *ambition*, to signify an immoderate thirst for honours, because the *ambitus* was commonly attended with bribery and corruption, notwithstanding the severity with which it was punished. *Cic. in Sallust.*; *Fest. de Verb. Signif.*; *Bud. in Pandect.* p. 195.—*Ambitus Urbis*, the circuit of the city, which, in the time of Vespasian, A.U.C. 828, was estimated at 13 miles. *Plin.* l. 3, c. 5; *Panciroll. Descript. Urb.*; *Panvin. Descript. Urb. et Nardin. Rom. Vet.*; *apud Græv. Thes. Antiq. Roman.* tom. iii. p. 377.—*Ambitus Ædium*, a vacant space which was left between houses for going round. *Fest. de Verb. Signif.*

AMBLE (*Man.*) the peculiar pace of a horse, when two legs of the same side move at the same time.

AMBLIGONAL (*Geom.*) ἀμβλυγωνίος, an epithet for a figure that contains an obtuse angle.

AMBLO'SIS (*Med.*) the same as *Abortus*.

AMBLO'TICA *Medicamenta* (*Med.*) Medicines which produce abortion.

AMBLYO'GMOS (*Med.*) ἀμβλυωγμός, a word frequently used by Hippocrates for dimness of sight. *Hippocrat. Predict.* l. 1, c. 18, &c.; *Gal. Exeges. Vocab. Hippocrat.*; *Foes. Econom. Hippocrat.*

AMBLYO'PIA (*Med.*) ἀμβλυωπία, a word used by Hippocrates for debility of sight; but by Paulus Ægineta and Actuarius, for the *gutta serena*. *Hippocrat. sect.* 3, aphor. 31; *Act. de Meth. Med.* l. 2, c. 7; *Gorr. Def. Med.*; *Foes. Econom. Hippocrat.*

AMBON (*Anat.*) ἄμβων, the edge of the sockets in which bones are inserted, as the *femur* in the *acetabulum*. *Cas-tell. Lex. Med.*

AMBORA (*Bot.*) the *Mithradatea* of Linnæus.

AMBRA (*Min.*) the *Ambra grisea* of Aldrovandus, the *Ambra maritima* of Linnæus, and the *Ambergrise* of Dale; a fragrant fat resinous substance, the excrement of the Spermacetti Whale, Class *Inflammabilia*. [vide *Amber*]

AMBRA (*Mid.*) a vessel among the Saxons, containing a measure of salt, &c. *Brompt.*

AMBRAM (*Min.*) the same as *Succinum*.

AMBRA'RIA (*Bot.*) the *Anthospermum Æthiopicum* of Linnæus.

AMBROMA (*Bot.*) the same as *Abroma*.

AMBROSIA (*My.*) ἀμβροσία, a name given to the food of the gods, from α, priv. and βροτός, mortal, i. e. food which makes immortal, or the food of immortals. Homer uses this word very frequently. *Il. passim*.

AMBROSIA (*Ant.*) 1. A libation which consisted of water, honey, and all sorts of fruits, which was used according to Athenæus in the consecration of Jupiter Ctesias' statue. 2. A festival celebrated in honour of Bacchus. *Scholias-t. in Hes. Oper. et Dies.* l. 2.

AMBROSIA (*Bot.*) a small shrub, called by some *Botrys*, which has a grateful smell, and a very astringent taste. Dioscorides ranks it among the coronary plants, ερεθισματικὰ; but, according to Nicander, the appellation of *Coronary Ambrosia* was bestowed by some on the lily.

Nicand. in Ther.

Ἄ κρῖνα λείρια δ' ἄλλοι ἐπιφθέρηγονται ἀοιδῶν
Οἱ δ' ἔ ἀμβροσίην.

Dioscor. l. 3, c. 129; *Plin.* l. 17, c. 4, &c.; *Athen.* l. 15; *Oribas. Med. Collect.* l. 11; *Act. Tetrab.* 1, serm. 1; *Paul. Ægin. de Re Med.* l. 7, c. 3; *Salmas. de Homonym.* c. 62.

AMBROSIA, in the *Linnean system*, a genus of plants, Class 21 *Monoecia*, Order 5 *Pentandria*, in English, Oak of Jerusalem.

Generic Characters. CAL. *perianth* common.—COR. *compound* uniform; *proper* one-petalled.—STAM. *filaments* very small; *anthers* erect.—PIST. *style* filiform; *stigma* orbiculate.—REC. *common*.—PER. *nut* subovate; *seed* single.

Species. The species are mostly annuals, as the—*Ambrosia elatior*, Tall Ambrosia.—*Ambrosia artemisifolia*, Mugwort-leaved Ambrosia, &c. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tournef. Inst.*

AMBROSIAN Office (*Ecc.*) a formula of worship used in the church of Milan; so called from St. Ambrose, bishop of Milan.

AMBROSI'NIA (*Bot.*) a genus of plants, so called from the Ambrosini, brothers and professors of botany at Bologna fifty-two years, Class 21 *Monoecia*, Order 1 *Monandria*.

Generic Character. CAL. *spathe* one-leaved; *partition* membranaceous.—COR. *none*.—STAM. *filaments* none; *anthers* very many; *nectaries* two.—PIST. *germ* solitary; *style* cylindrical; *stigma* obtuse.—PER. *capsule* roundish; *seeds* many.

Species. The species are the *Ambrosinia Bassii*, seu *Arisarum*, and the *Ambrosinia maculata*, both perennials. *Raii Hist. Plant.*

AMBRY (*Med.*) or *Aumery*, from *Eleemosynaria*; a place where vessels and domestic utensils were kept.

AMBUBA'LE (*Ant.*) loose women, who went about as min-

strels, probably so called from *ambu*, i. e. *circum*, around, and *Baiæ*, a place of pleasure in Italy which they much frequented.

Horat. l. 1, sat. 2, v. 1.

Ambubiarum Collegia Pharmacopole.

Sueton. in Neron. c. 27; *Scalig. Conject. in Varr.* p. 54; *Turneb. Adv.* 11, c. 27.

AMBUBIA (*Bot.*) the common Cichory.

AMBULANTS (*Com.*) Brokers or Exchange Agents in Amsterdam who are not sworn before the magistrates.

AMBULATIVA (*Med.*) the same as *Herpes*.

AMBULATOR (*Archæol.*) Ambler, a sort of horse which went an ambling pace.

AMBULATORIA turris (*Ant.*) an engine or battery on wheels for taking towns. *Vitruv. de Architect.* l. 10, c. 19.

AMBULATORIA voluntas (*Law*) a man's will or testament as long as he lives and has the power of changing it.

AMBULO (*Med.*) a disease arising from inflation.

AMBULON (*Bot.*) a tree, the fruit of which resembles sugar in its taste, and in bulk a coriander seed. *Raii Hist. Plant.*

AMBURBIA (*Ant.*) a festival, which consisted in going round the walls of the city in solemn procession, from *ambiendo urbe*, i. e. going round the city.

Lucan. l. 1, v. 592.

*Mox jubet et totam pavidis a civibus urbem
Ambiri, et festo purgantes mania lustrò
Longa per extremos pomaria cingere fines.*

Fest. de Verb. Signif.; *Vopisc. in Aurel.* c. 20; *Serv. in Virg.* l. 3; *Ecc.* 3, v. 77; *Gyrald. Syntag. Deor.* l. 17; *Jos. Scalig. Castig. in Fest.;* *Turneb. Adver.* l. 18, c. 17.

AMBURBIALES hostiæ (*Ant.*) victims which were carried round the city in celebrating the Amburbia. *Fest. de Verb. Signif.*

AMBUSTA (*Med.*) burns or scalds, for the cure of which the ancient physicians gave many prescriptions. *Aet. Tetrab.* 4, serm. 2, c. 64; *Paul. Ægin. de Re Med.* l. 4, c. 2.

AMBUSTION (*Med.*) burning, or any solution of continuity produced by fire, or bodies heated by fire. *Heist. Chirurg.* l. 4, c. 15.

AMBU'TUA (*Bot.*) the *Cisampelos Pareira* of Linnæus.

AMEA (*Bot.*) a plant used in Africa against bleeding at the nose.

AMEDIANS (*Ecc.*) a congregation of religious in Italy; so called from their professing themselves to be *amantes Deum*, lovers of God, or *amati Dei*, beloved of God. They wore a grey habit and wooden shoes, but no breeches.

AMEDANA (*Bot.*) the *Alnus vulgaris* of Linnæus.

AMELANCHIER (*Bot.*) the *Chionanthus Virginica* and *Mespilus Amelanchia* of Linnæus. *Raii Hist. Plant.*

AMEL corn (*Com.*) French rice, by which starch is made.

AMELI (*Bot.*) a Malabar plant, from the leaves of which a decoction is made that is good for colics.

AMELLOIDES (*Bot.*) a species of the *Cineraria* of Linnæus.

AMELLUS (*Bot.*) one of those herbs which Virgil reckons to be agreeable to bees.

Virg. Georg. l. 4, v. 271.

*Est etiam flos in pratis, cui nomen amello,
Fecere agricolæ, facilis quærentibus herba.*

AMELLUS, in the Linnæan system, a genus of plants, Class 19 *Syngenesia*, Order 2 *Polygamia superflua*.

Generic Characters. CAL. common imbricate.—COR. compound radiate; corollæ hermaphrodite, very many in the disc; females very many in the ray; proper of the hermaphrodite tubulous; female ligulate.—STAM. filaments five; anther cylindrical.—PIST. germ obovate; style filiform; stigmas two.—PER. none; calyx unchanged; seeds solitary; down capillary; receptacle chaffy.

Species. Plants of this tribe are shrubs, as the—*Amellus*,

lychnitis, bupthalmum, verbesina, seu chrysanthemum, trailing Amellus, &c.

AMELLUS is also the name of the *Calca Amellus*, the *Eriogeron acre*, and the *Aster Amellus* of Linnæus. *Raii Hist. Plant.*

AMELPODI (*Bot.*) an Indian tree, used as an antidote against the bites of serpents. *Raii Hist. Plant.*

AMEN (*Bibl.*) from אמן, true, certain; a term employed either in affirmation, as by our Saviour, Amen, amen, verily, verily, or in confirmation, as Numb. v. 22. Deut. xxvii. 15.

AMENABLE (*Law*) tractable, or governable, as applied to a woman who submits to her husband; also to be responsible in a court of justice.

AMENDE (*Archæol.*) a mulct or pecuniary punishment formerly imposed in France by the sentence of the judge for any crime, as false prosecution, a groundless appeal, and the like.

AMENDE Honourable (*Law*) that which was imposed upon a person by way of disgrace or infamy, as a punishment for any offence, or for the purpose of making reparation for any injury done to another, as the walking into church in a white sheet, with a rope about the neck, and a torch in the hand, and begging pardon either of God or the King, or any private individual, for some delinquency.

AMENDMENT (*Law*) *emendatio*, the correction of an error in any process, which may be amended either before or after judgment. Errors are now effectually obviated by the statutes of amendment and jeofails. 14 *Ed.* 3, c. 6; 8 *Hen.* 6, c. 15.

AME'NE (*Chem.*) Common Salt.

AMENE'NOS (*Med.*) from α, priv. and μένος, strength, a term used by Hippocrates for weak.

AMENT (*Bot.*) *Amentum*, otherwise called *Julus*, *Nucamentum*, and *Catulus*, in English, Catkin, from the French *châton*, a cat's-tail, to which it bears a resemblance; a long and simple stem, which is thickly covered with scales, under which are the flowers, or their essential parts, as in the annexed figure, which represents the catkin of a hazel. It is either Cylindrical, *Cylindricum*, i. e. equally thick above and below—Attenuated, *Attenuatum*, growing thinner and thinner, to a point—Slender, *Gracile*, i. e. in proportion to its length—Ovate, *Ovatum*, i. e. thick below, and round above. Examples of the Catkin, are found in the Willows, *Salices*, Hazel, *Corylus Avellana*, Hornbeam, *Carpinus*, &c. The Ament of the Willow, in vulgar language, is called the Palm.

AMENTA'CEÆ (*Bot.*) one of Linnæus' Natural Orders of plants, comprehending those plants whose fruit is a catkin. *Linn. Philos. Botan.* &c. This is also the name of a class in the system of Tournefort and others.

AMENTA'CEOUS *Flowers* (*Bot.*) one species of the *Aggregate Flowers*, borne or growing in an ament or catkin.

AMEN'TIA (*Med.*) Madness, a genus of diseases, Class *Neuroses*, Order *Vesaniæ*.

AMENTUM (*Ant.*) from ἀμμου, a chain; the thong with which the spear was drawn back after it had been darted. *Virg. Æn.* l. 9, v. 665.

Intendunt acres arcus, amentaque torquent.

Fest. de Verb. Signif.; *Turneb. Adver.* l. 28, c. 5, &c.; *Lips. Poliorc.* l. 4, dial. 5.

AMENTUM *Sessile* (*Chem.*) Alum.

AMERCIAMENT (*Law*) or *Amercement*, a pecuniary punishment arbitrarily imposed by some lord or count, in distinction from a fine, which is expressed according to statute. *Kitch.* 78.—*Amerciament royal*, when the Amerciament is made by the sheriff, or any other officer of the King.

AMERI (*Bot.*) the *Indigofera tinctoria* of Linnæus. *Rheed.*
AMERICAN Earthnut (*Bot.*) a plant, so called from its nut-like fruit, which is used for chocolate in South Carolina. From this nut is extracted an oil, which is used for lamps in the Eastern countries. The Earth or Ground Nut is the *Arachis hypogea* of Linnæus.
AMERIMNUM (*Bot.*) a genus of plants, Class 17 *Diadelphina*, Order 4 *Decandria*.
Generic Characters. CAL. *Perianth* one-leaved; *teeth* sharp. COR. papilionaceous; *standard* expanding; *wings* lanceolate; *keel* short.—STAM. *filaments* ten; *anthers* roundish.—PIST. *germ* pedicelled—PER. *cells* disposed longitudinally within; *seeds* solitary.
Species. The species are shrubs, as the—*Amerimnum Brownii*, a shrub, native of Jamaica.—*Amerimnum ebenus*, *Pterocarpus*, *Aspalathus*, *Pseudo-Ebenus*, scu *Brya*, &c. Prickly Amerimnum, &c. *Sloan. Hist. Jam.*; *Linn. Spec. Plant.*
AMETHYST (*Bibl.*) in the Hebrew אַחַלְמָה, achalma, which signifies sleep; the precious stone [vide *Amethyst*] which is the ninth in order in the high priest's breast-plate, on which was engraven the name of Issachar. *Exod.* xxviii. 19, &c.
AMETHYST (*Min.*) ἀμύθυστος, a sort of precious stone, so called from α, privative, and μύθος, to inebriate, because it resists or drives away inebriation. It is a hard, beautiful, shining, transparent stone, of different colours, but mostly purple or violet. It comes from the Indies, and is used in medicine as an astringent. The amethyst is now reckoned among the Quartz Family of stones, and is the *Quartzum Amethystus* in the Linnæan system. *Plin.* l. 37, c. 9; *Epiphan. de 12 Gem.* p. 229; *Isid. Orig.* l. 16, c. 9; *Albert Mag. de Min.* l. 2; *Aldrov. Mus. Metall.*; *Geoff. Prælect.*
AMETHYST (*Her.*) the colour of the precious stone called the amethyst was formerly used in blazoning instead of purple.
AMETHYSTA (*Med.*) ἀμύθυστα, medicines which remove the inebriating effects of wine. *Gal. de Comp. Med. sec. Loc.* l. 2.
AMETHYSTEA (*Bot.*) a genus of plants, so called from its resemblance in colour to the Amethyst, Class 2 *Dianthia*, Order 1 *Monogynia*.
Generic Character. CAL. *perianth* one-leaved tube; *tube* bell-shaped.—COR. one-petalled; *border* five-parted; *upper lip* erect; *lower* three-parted.—STAM. *filaments* filiform; *anthers* simple.—PIST. *germ* quadrifid; *style* size of the stamina; *stigmas* two.—PER. none; *seeds* four.
Species. The only species is the *Amethystea cœrulea*, an annual, native of Siberia.
AMETHYSTINA (*Ant.*) Purple garments, which were of the colour of the Amethyst. *Salmas in Vopisc. Aurcl.* c. 46.
AMETHYSTINA (*Bot.*) another name for the *Amethystea*.
AMETHYSTIZONTES (*Min.*) the best sort of Carbuncle. *Plin.* l. 37, c. 9.
AMETHYSTUS (*Min.*) Amethyst; the *Quartzum amethystus* of Linnæus
AME'TRIA (*Med.*) ἀμετρία, receding from a due temperament.
to AME'UBLE (*Hort.*) a French term for turning up or loosening the earth which is grown hard, or incrusted over by means of rains, heat, &c.
A ME'ZZA aria (*Mus.*) Italian for the notes which keep the middle compass of the voice, for which they are composed—*A mezza di voce*, a soft tone, or gradual diminution of the voice.
AMIA (*Ich.*) ἄμια, from α, priv. and μια, alone, or from its going in company, ἄμια, with other of its kind. A fish, the growth of which, according to Pliny, is so rapid that it

might be perceived every day. Aetius says that its flesh is very hard. *Aristot. Nat. Hist.* l. 1, c. 1; *Plin.* l. 9, c. 13; *Act. Tetrab.* 1, serm. 2.

AMIA, in the Linnæan system, a genus of fishes, having its head flattened and naked, numerous sharp teeth, two cirri, and a gill membrane, 12 rays. The single species is called *Amia calva*, which inhabits the waters of Carolina.

AMIANTH (*Min.*) *Amiantus lapis*, or *Amiant*, Earth-Flax, λίθος ἀμιάντος, a sort of stone-like scissile alum, generated in Cyprus. It was said to be efficacious against sorceries, to resist poisons, and to cure the itch. As it may be drawn into threads fit for work, it was wrought, according to Dioscorides, into a cloth, which, if thrown into the fire, did not consume, but came out the brighter and purer. *Dioscor.* l. 5, c. 156; *Plin.* l. 36, c. 18; *Paul. Æginet. de Re Med.* l. 7, c. 3.

AMIAN'TUS, in the Linnæan system, is classed under *Asbestos*, but by former mineralogists it constituted a genus of stones. *Gessn. de Lapid.*; *Aldrov. Mus. Metall.*

AMICABLE Numbers (*Arith.*) such as are mutually equal to the sum of one another's aliquot parts, as 284 and 220 for all the aliquot parts of 220, namely, 1, 2, 4, 5, 10, 11, 20, 22, 44, 55, 110, added together, are equal to 284; and all the aliquot parts of 284, namely, 1, 2, 4, 71, 142, added together, are equal to 220. The only pairs of amicable numbers besides this, which have been hitherto discovered, are, 6232 and 6368; 17296 and 18416; 9363584 and 9437056. The name of *amicable* was first given to these numbers by Van Schooten, but their property had been already treated of by Rudolphus, Descartes, and others. *V. Schoot. Exercitat. Geometr. Miscellan. sect.* 11.

AMICE (*Ecc.*) an ecclesiastical vestment, [vide *Amictus*] common to bishops and presbyters, which was tied round the neck, and covered the breast and heart.

AMICTUS (*Ecc.*) Amice, the undermost of the six garments worn by priests. These were the *Amictus*, *Alba*, *Cingulum*, *Stola*, *Munipulus*. *Innocent. III. de Myst.* l. 1, c. 10; *Antalar. de Eccles. Offic.* l. 2, c. 17.

AMICTUS (*Ant.*) a name for every sort of external garment. *Ferrar. de Re Vest.* l. 2, c. 1.

AMICULUM (*Ant.*) from *amicio*, to wrap; an upper garment worn by females; a sort of cloak. *Plaut. Cist. act* 1, scen. 1, v. 117.

Amiculum hoc sustolle saltem Sil. Sine trahi dum egomet trahor.

It seems also to have been used by men occasionally, according to Quintus Curtius. *Liv.* l. 27, c. 4; *Val. Max.* l. 5, c. 2; *Q. Curt.* l. 5, c. 1; *Ferrar. de Re Vest.* l. 1, c. 3.

AMICULUM (*Anat.*) the same as *Annios*.

AMICUS *Curia* (*Lav*) a friend of the court, who, as a stander by, when a judge is doubtful, or mistaken in a matter of law, may inform the court. *2 Inst.* 178.

AMID-SHIPS (*Mar.*) i. e. in the middle of the ship; a term applied either to her length or her breadth, as "The enemy boarded us *amid-ships*," i. e. between the stem and stern. "Put the helm *amid-ships*," i. e. between the two sides.

AMIENS (*Com.*) a gold coin, value 17s. 1 $\frac{3}{4}$ d.

AMINEUM vinum (*Ant.*) or *Ammineum vinum*, Ἀμιναιῶς οἶνος, Aminean wine, a particular sort of wine, which was highly esteemed for imbecilities in the stomach. Macrobius makes the Falernian and Aminean wines to be the same; but Virgil distinguishes them from each other.

Virg. Georg. l. 2, v. 96.

—*Nec cellis ideo contende Falernis.*

Sunt etiam Amineæ vites, firmissima vina.

It is supposed to have derived its name from the vines of the Aminei, a people of Thessaly, which were planted in different parts of Italy. *Plin.* l. 14, c. 2; *Gal. de Antidot.* l. 1; *Macrob. Saturn.* l. 2, c. 16; *Act. Tetrab.* 1, serm. 1.

AMINEUM *Acetum* (Chem.) Vinegar made of the Aminean wine.

AMINIA (Bot.) a sort of Cotton-tree in Brazil. *Maregrav. Pis.*

AMITTERE *legem terræ* (Law) or *liberam legem* to lose the liberty of swearing in any court. *Glanvil. l. 2.*

AMMANTÆ (Bot.) vide *Amanitæ*.

AMMAN'NIA (Bot.) a genus of plants, called after Professor Ammann, of Petersburg, Class 4 *Tetrandria*, Order 1 *Monogynia*.

Generic Character. CAL. *perianth* bell-shaped.—COR. none.—STAM. *filaments* bristly; *anthers* twin.—PIST. *germ* subovate; *style* simple; *stigma* headed.—PER. *capsule* roundish; *seeds* numerous.

Species. The species of this genus are annuals, as the—*Ammannia latifolia* *Isnardia*, seu *Aparines*, &c. Broad-leaved *Ammannia*.—*Ammannia ramosior*, seu *Ludwegia aquatica*, Branching *Ammannia*.—*Ammannia baccifera*, seu *Cornelia verticillata*, Berrybearing *Ammannia*, &c.

AMMI (Bot.) *ἄμμι*, or *Amium*, a plant, the seed of which was reckoned strongly diuretic. *Dioscor. l. 3, c. 70; Plin. l. 20, c. 15.*

AMMI, in the *Linnean system*, a genus of plants, Class 5 *Pentandria*, Order 2 *Digynia*, in English Bishop's-weed.

Generic Characters. CAL. *universal umbel* manifold; *partial* short; *universal involucre* of many acute leaflets; *partial* many-leaved; *leaflets* linear; *proper perianth* scarcely apparent.—COR. *universal* uniform; *proper* of five petals.—STAM. *filaments* capillary; *anthers* roundish.—PIST. *germ* inferior; *styles* reflex; *stigmas* obtuse.—PER. none; *seeds* two.

Species. The species are, the—*Ammi majus*, seu *Vulgare*, seu *Ammioselinon*, Common Bishop's-weed, an annual, native of the South of Europe.—*Ammi Copticum*, an annual, native of Egypt.—*Ammi glaucifolium*, seu *petræum*, seu *Daucus petræus*, &c. a perennial, native of France.—*Ammi daucifolium*, seu *majus*, &c. *Criethmun pyrenaicum*, seu *Apium Pyrenaicum*, a perennial, native of the Pyrenees. *J. Bauhin Hist. Plant.; C. Bauhin Pin. Theat.; Ger. Herb.; Park Theat. Botan.; Raii Hist. Plant.; Tourn. Inst. Herb.; Rivin. Ord. Plant.; Boerh. Ind. Plant.; Linn. Spec. Plant.*

AMMI is also the name of the *Sison Ammi*, the *Cicuta bulbifera*, the *Seseli ammoides*, and the *Sum falcaria* of Linnæus. *Bauh. Tournef. &c.*

AMMION (Chem.) the same as *Cinnabaris*.

AMMIOSELINON (Bot.) the *Ammi majus* of Linnæus. *Dodon. Stirp. Histor.*

AMMOBRAGIUM (Archæol.) a service, the same as *Che-vage*, according to Spelman.

AMMOCHOZIAL (Med.) a remedy for drying the body, by covering it with hot sand. *Cels. de Re Med. l. 3, c. 1; Dioscor. l. 5, c. 167; Gal. de Præcog.; Oribas. Med. Coll. l. 10, c. 8.*

AMMOCHRY'SUS (Min.) 1. A sort of stone found in Bohemia, which is sometimes yellow, and sometimes of a gold colour. It will crumble into sand, and is used for strewing on paper. *Lem. des Drogues.* 2. A sort of mud, of a gold colour, which is found in mineral waters in Friseland. *Castell. Lex. Med.*

AMMODYTES (Zool.) a venomous serpent, of a sandy colour, and a cubit in length; the bite of which, according to Aetius, is generally followed by speedy death. *Aet. Tetrab. 4, serm. 1, c. 25.*

AMMODYTES is also the name of a species of the *Coluber* of Linnæus.

AMMODYTES (Ich.) the *Launce*; a genus of fishes of the *Apodal* Order, having the *head* compressed, and narrower than the *body*, the *teeth* very sharp, the *lower jaw* narrow and pointed, the *body* long and square, and the *caudal fin*

distinct. The only species is the *Ammodytes gobianus*, or *Sand Launce*, which inhabits the sandy shores of the Northern Seas, buries itself, on the recess of the tides, a foot deep in the sand, with its nose out, and is a prey to other rapacious fish.

AMMO'NIA (Chem.) a gaseous substance in modern chemistry, formed from the combination of hydrogen with azote. It is commonly prepared by the mixture of Sal Ammoniac with twice its weight of quick lime. It is transparent and colourless, like air, acrid and caustic to the taste, like fixed alkalis, is used as a stimulant in fainting, but is fatal to animals when they breathe it. Its specific gravity is 0.590 that of common air being 1. Ammonia was not known to the ancients, but the alchemists were acquainted with it in an impure state, by whom it was called Volatile Alkali, or Hartshorn, because it was often distilled from the hart of the horn, Spirit of Urine, and Spirit of Sal Ammoniac; from both of which substances it may be obtained by a similar process. It is one of the salifiable bases by the help of which the salts are produced, as the acetate of Ammonia, &c.

AMMONIAC (Chem.) or Gum Ammoniac, *ἄμμωνιακόν*, *Ammoniacum*; a fat resinous substance brought from the East Indies, which is agglutinated together in small pieces of a yellowish white colour, a smell more pleasant than that of Galbanum, and of a nauseous sweet taste, mixed with bitter. The tree which yields it is called in the Greek *Agasyllis*, and in the Arabic *Altarthub*; but nothing certain is known respecting it at present. Nicander, in his *Alexipharmics*, puts Ammonion for Ammoniacum:

—ἢ δὲ ἑπαρῆς
Θάλασσε βαλὼν χύτρα Ἀμμωνίων.

It is supposed to derive its name from Ammonia, in Lybia, where it was found.

Ammoniac, according to modern chemists, is composed of the following ingredients, in nearly the following proportions:—

Resin	70.0
Gum	18.4
Glutinous matter	4.4
Water	6.0
Loss	1.2

100.0

AMMONIAC (Min.) or Sal Ammoniac, *ἄλας Ἀμμωνιακόν*, *Sal Ammoniacus*; a fossile salt which was said to be dug out of the sands of Ammonia, from which it took its name. [vide *Gum Ammoniac*] *Sal Ammoniac*, as a native salt, is not known to the moderns; but a factitious kind, of the same name, is a neutral salt, composed of a volatile alkaline and the acid of sea-salt, and is therefore called *Muriate of Ammonia*.

AMMO'NIS *Cornu* (Min.) a fossile, of an ash-colour, found in the shape of a ram's horn.

AMMONITÆ (Min.) Snake-Stones; a sort of fossils which abound in the alum works in Yorkshire, and other parts of England. They are made up of circles, like the rings of a snake rolled up.

AMMONITRUM (Chem.) the lixivious salt of a burnt vegetable, now called Frit. *Plin. l. 36, c. 26.*

AMMO'NIUM (Chem.) vide *Ammoniac*.

AMMOPHILA (Ent.) Sand Wasp; a genus of animals, Class *Insectæ*, Order *Hymenoptera*.

Generic Character. *Snout* inflected; *jaws* forcipated; *antennæ* filiform; *eyes* oval; *wings* planed; *sting* concealed in the abdomen.

Species. The species of this genus resemble the sphex in economy as well as in form.

AMMUNITION (Mil.) Military stores, including not only

cannon, powder, balls, &c. but all sorts of weapons, offensive and defensive.—*Ammunition bread*, that which is served to the soldiers of a garrison or army.

AMNA *alcalizata* (Chem.) water run through limestone, and impregnated with its particles. *Paracel. Lexic.*

AMNESTIA (Ant.) ἀμνηστία, from α, priv. and μνάσθαι, to remember; amnesty, or oblivion of the past, an act of princes to their subjects, or states one to another, which had its origin in a law enacted by Thrasybulus after the expulsion of the thirty tyrants, by which it was decreed to bury all past injuries in oblivion, for the speedier conciliation of all parties. *Val. Max.* l. 4, c. 1.

AMNION (Ana.) ἄμνιον, the internal membrane which surrounds the fetus. It is very thin and pellucid in the early stage of pregnancy, but increases in thickness and strength in the latter months. *Ruf. Ephes. Appell. Part. human. Corp.* l. 1, c. 37; *Gal. de Dissect. Vulvæ*, c. 10; *Gorr. Def. Med.*; *Foes. Econom. Hippocrat.*

AMNION (Bot.) the liquor in the *Succulus colliquamenti*, or vesicle of the seed, from which the cotyledons are formed.

AMNIOTIC Acid (Chem.) an acid found in the amnion of a cow.

AMOEBÆUM *Carmen* (Ant.) verse, in which one answereth another by course, as in some of Virgil's eclogues. *Fest. de Signif. Verb.*

AMOLYNTON (Med.) ἀμόλυντος, from α, priv. and μόλιον, to make dirty; a topical application, which, if handled, will not soil the fingers. *Cæc. Aurelian. de Acut. Morb.* l. 2, c. 27.

AMO'MI (Bot.) Jamaica pepper, so called by the Dutch.

AMO'MIS (Bot.) Pseudo Amomum.

AMO'MUM (Bot.) ἄμωμον, a plant, so called from its fragrant odour, the Greek word signifying what is pure and blameless. It was one of the aromatic herbs which was used for the preservation of dead bodies, whence is derived the word *mummy*. The poets take it for any ointment or perfume.

Juv. sat. 4, v. 108.

*Et matutino sudans Crispinus amomo,
Quantum vix redolent duo funera —.*

Ovid. Trist. l. 3, eleg. 3, v. 69.

*Atque ea cum foliis et amomi pulvere misce:
Inque suburbano condita pone solo.*

According to Dioscorides it is of a healing, drying, astringent, hyptic, and anodyne quality. *Dioscor.* l. 1, c. 14; *Plin.* l. 13, c. 1, &c.; *Oribas. Med. Coll.* l. 11; *Aet. Tetrab.* l. 1, serm. 1; *Paul. Aeginet. de Re Med.* l. 7, c. 3; *Salmas. de Homonym.*

AMOMUM, in the Linnean system, a genus of plants, Class 1 Monandria, Order 1 Monogynia.

Generic Characters. CAL. perianth one-leaved.—COR. monopetalous; tube cylindrical; border three-parted; nectary two-leaved.—STAM. filaments none; anther oblong.—PIST. germ inferior; style filiform; stigma turbinate.—PER. capsule fleshy; seeds several.

Species. The species are mostly perennials, as the—*Amomum zinziber*, seu *Ilschi*, Narrow-leaved Ginger.—*Amomum cardamomum*, seu *Cardamomum minus*, Cardamom.—*Amomum granum paradisi*, Grains of Paradise.—*Amomum galanga*, seu *Maranta galanga*, Galangale, &c. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin. Theat.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Ruif. Hist. Plant.*; *Tournef. Inst. Herb.*

AMOMUM is also a name for the *Solanum pseudo-capsicum*, the *Cureuma longa*, and a species of the *Sison* of Linnæus. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Park. Theat. Botan.*; *Ruif. Hist. Plant.*

AMONGEA'BA (Bot.) a kind of grass good for a fomentation in a tencinus.

AMORGE (Nat.) ἀμόργα. 1. The fæces of the expressed oil. [vide *Amurea*] 2. The purple dye made in the island of Amorgos. *Poll. Onom.* l. 7, c. 16; *Suidas.*; *Harporation*, &c.

AMORGINON (Ant.) ἄμώργινον, or, in the feminine, ἄμώργινα; a vestment, made of the Amorgis or flax in the island of Amorgus.

AMORGIS (Nat.) ἄμωργίς, the flax, not unlike byssus, from which the ἀμώργινα are made in the island of Amorgus.

AMORIS Pomum (Bot.) the *Solanum lycopersicum* of Linnæus.

AMORISCO (Mus.) in a Moorish style; an expression applied to old English ballads, signifying that the air is to resemble a Moorish dance.

AMORPHA (Bot.) from α, priv. and μορφή, the form; a genus of plants, Class 17 Diadelphia, Order 3 Decandria.

Generic Characters. CAL. perianth one-leaved.—COR. petal one.—STAM. filaments erect; anthers simple.—PIST. germ roundish; style subulate; stigma simple.—PER. legume lunulate; seeds two.

Species. The species are shrubs, as the *Amorpha fruticosa*, seu *Barba Jovis*, &c. Bastard Indigo, &c. *Linn. Spec. Plant.*

AMORPHOUS (Nat.) from α, priv. and μορφή, the form; shapeless, of no determinate shape when broken.

AMORTIZATION (Law) an alienation of lands or tenements in mortmain. 2 *Stat. Ed.* 1.

AMORTISE (Law) from the French *Amortir*, to alien lands in mortmain.

AMPA'NA (Bot.) the *Borassus flabelliformis* of Linnæus.

AMPELION (Med.) vine leaves, which are good for making pessaries. *Hippocrat. de Nat. Mulieb.*; *Foes. Econom. Hippocrat.*

AMPELIS (Or.) Chatterer; a genus of birds, of the Order *Passeres*.

Generic Character. Bill straight and convex.—Nostrils covered with bristles.—Tongue sharp and bifid.—Feet simple, with three toes before, and one behind.

Species. All the species but one are natives of America, as—*Ampelis Cristata*, Crested Chatterer.—*Ampelis Ceryle*, seu *Cotinga rubra*, Red bird from Surinam, or Red Chatterer.—*Ampelis Cuprea*, seu *Coccyzina*, Cupreous Chatterer.—*Ampelis cinerea*, seu *Lanius Neugeta*, in French, *Cotinga gris de Cayenne*, Grey Shrike.—*Ampelis luteus*, Yellow Chatterer.—*Ampelis Cotinga Cayanensis*, seu *Cayana*, in French *Cotinga de Cayenne*, le *Quereira*, Purple-throated Chatterer.—*Ampelis Cotinga*, in French le *Cordon bleu*, Purple-breasted Manakin, or Purple-breasted Chatterer.—*Ampelis Pompadour*, seu *Cotinga purpurea*, le *Pacapacon Pompadour*, Grey Chatterer, or *Pompadour Chatterer*.—*Ampelis Phœnicia*, Red-winged Chatterer.—*Ampelis tersa*, la *Tersine*, Blue-breasted Chatterer.—*Ampelis Maynana*, seu *Cotinga Maynanaensis*, in French le *Cotinga à plumes soyenses*, Silky Chatterer.—*Ampelis variegata*, seu *Cotinga nævia*, in French *Paverano*, Variegated Chatterer.—*Ampelis carunculata*, seu *Cotinga alba*, in French le *Cotinga blanc*, Carunculated Chatterer.—*Ampelis superba*, Superb Chatterer.—*Ampelis umbellata*, seu *cephalopterus ornatus*, Umbrellad Chatterer.—*Ampelis garrulea*, Waxen Chatterer.

AMPELITES terra (Min.) ἀμπελίτης, from ἄμπελος, a vine, because it kills the worms at the roots of the vines; Canal Coal, a species of black earth, which is more medicinal than other earths. It has a discussive and refrigerating virtue, and is used as an ingredient in cosmetics for the eyelids, καλλιβλέφαρα, and for dyeing the hair. *Dioscor.* l. 5, c. 181; *Oribas. Med. Coll.* l. 13; *Aet. Tetrab.* l.

serm. 2, c. 9; *Marcel. Empir.* c. 7; *Lemer. des Drogues.*; *Dale Pharmacop.*

AMPELODESMOS (*Bot.*) from ἄμπελος, a vine, and δεσμός, a band; a kind of herb with which the vines in Sicily used to be tied.

AMPELOLEUCE (*Bot.*) the name of a white sort of vine mentioned by Pliny. *Nat. Hist.* l. 23, c. 1.

AMPELOPRA'SUM (*Bot.*) from ἄμπελος, a vine, and πρᾶσον, a leek; a herb growing among vines, called leek-vine, a species of the *Allium* of Linnæus.

AMPELOS *Agria* (*Bot.*) Briony, or Wild-Vine.

AMPEMERINOS (*Med.*) an epithet for a quotidian fever, or a fever which brings on a paroxysm or fit every day, from ἀμφί, signifying a revolution, and ἡμέρα, a day.

AMPHIARTHROSIS (*Anat.*) from ἀμφί, *circum*, on both sides, and ἀρθρῶσι, articulation; a mixed sort of articulation, between the diarthrosis and the synarthrosis. [*vide Articulation*]

AMPHIBIA (*Zo.*) from ἀμφί, *utrinque*, and βία, *vita*, that is, both ways of life, because the animals live as well on land, or in the air, as in the water. The third class into which the animal world is divided, consisting of two orders, *Reptilia*, Reptiles, with feet, and *Serpentes*, Serpents, without feet, having plates, scales, or rings on the belly.

Reptilia comprehend *Testudo*, the Tortoise, covered with a shell—*Draco*, the Dragon, having wings and a tail—*Rana*, the Frog or Toad—*Lacerta*, the Crocodile, Alligator, Lizard, Newt, Salamander, Chameleon, Eft, Siren, which is two-footed, tailed, and naked.

Serpentes comprehend *Crotalus*, the Rattle Snake.—*Boa*, without a rattle.—*Coluber*, the Viper, having plates on the belly, and scales on the tail.—*Anguis*, the Snake, having scales under the tail.—*Amphisbæna*, having rings on the body.—*Cacilia*, having wrinkles on the body and tail.—*Acrochordus*, having tubercles. A more particular account of this class will be found under each genus.

AMPHIBIALITHUS (*Foss.*) so called from being the part of an amphibious animal; a genus of petrefactions in the Linnæan system.

AMPHIBLÉSTROIDES (*Med.*) from ἀμφίβλεστρον, a net, and εἶδος, the form, i. e. Net-formed; the Retina, or Net-like coat of the eye. *Ruf. Ephes. Appell. Part. Corp. human.* l. 1, c. 23.

AMPHIBOLE (*Min.*) a species of Hornblende.

AMPHIBOLIA (*Rhet.*) ἀμφιβολία, from ἀμφί, on both sides, and βάλλω, to throw; Amphibology, or Ambiguity of expression when a sentence carries a double sense, as "Aio te, Æacide, Romanos vincere posse." It is distinguished from an equivocation, which lies in a single word, as Captare "leporēs," where *leporēs* signifies either hares or jests. *Aristot. Rhet.* l. 3, c. 5; *Cic. de Invent.* l. 2, c. 40; *Quint. Instit.* l. 7, c. 9; *Hermog. περί διανοτ*; *Voss. Instit. Rhet.* p. 167.

AMPHIBRA'CHYS (*Gram.*) ἀμφίβραχυς, from ἀμφί, *utrinque*, and βραχύς, *brevis*, i. e. short on both sides; a foot, having a long syllable between two short ones, as ὀμῆρος. *Hæphest. εγκυκλιδ.*

AMPHIBRANCHIA (*Nat.*) from ἀμφί and βράγχια, *branchiæ*; the parts about the tonsils.

AMPHICAUSTIS (*Bot.*) a sort of wild barley.

AMPHICTYONES (*Ant.*) Ἀμφικτυόνες, the judges who constituted the Amphictyonic council. [*vide Amphictyonium*]

AMPHICTYONIA (*Ant.*) Ἀμφικτυονία, a general name for any assembly of the Grecian cities, who met to consult about the common good. [*vide Amphictyonium*]

AMPHICTYONIUM *concilium* (*Ant.*) the Council of the Amphictyones, founded, as is generally supposed, by a king of Athens of the same name. It consisted at first of deputies from only seven cities, which were afterwards in-

creased to twelve, namely, from the Ionians, Dorians, Bœotians, Magnesians, Phthians, Locrians, Malians, Phocians, Thessalians, Dolopians, Perhebian, and Ætians. *Diodor.* l. 16, c. 16; *Plin.* l. 36, c. 19.

AMPHIDEON (*Med.*) the orifice of the uterus.

AMPHIDIARTHROSIS (*Anat.*) an articulation of the lower jaw, partly by a ginglymus, and partly by an arthrodia.

AMPHIDROMIA (*Ant.*) Ἀμφιδρομία, from ἀμφί, around, and δρόμος, a course; a festival at Athens celebrated on the fifth day after the birth of a child, when it was carried round the fire and presented to the Lares, or household gods, on which occasion an entertainment was given, and presents made to the attendants. A description of the whole ceremony is to be found in the verses of Ehippus, as quoted by Athenæus. *Plat. in Thætet.*; *Lysias in Orat. apud Harpocrat.*; *Schol. in Aristoph. Lysistrat.*; *Poll. Onom.* l. 2, segm. 8; *Athen.* l. 2, c. 24, and l. 9, c. 2; *Harpocratio*; *Hesychius*; *Suidas.*; *Cæl. Rhodig.* l. 22, c. 12; *Meurs. Hist. Miscel.*; *Turneb. Adv.* l. 3, c. 6.

AMPHIJENE (*Min.*) a species of garnet.

AMPHIMACER (*Gram.*) Ἀμφιμακρος, from ἀμφί, on both sides, and μακρός, long, i. e. a foot, having a short syllable

in the middle, and a long one on each side, as ἡγῆμῶν *Hæphest. εγκυκλιδ.*

AMPHIMASCHALI (*Ant.*) ἀμφιμασχαλοι, an epithet for coats with two sleeves, which were worn by freemen only, in distinction from the ἑτερομασχαλοι, or coats with one sleeve, which was the peculiar dress of slaves. To this Aristophanes alludes.

Equit. act 2, scen. 4, v. 47.

Οὐ πάπορ' ἀμφιμασχαλε τὸν δῆμον ἡξίωσας.

Alexand. Gen. Dier. l. 5, c. 18; *Cæl. Rhodig. Antiq. Lect.* l. 16, c. 10.

AMPHIMERINA Febris (*Med.*) a tertian remittent fever.

AMPHIPLEX (*Anat.*) the part betwixt the scrotum and anus. *Ruf. Ephes. de Appell. Part. Corp. human.* l. 1, c. 12.

AMPHIPNEUMA (*Med.*) the same as *Dyspncea*.

AMPHIPOLI (*Ant.*) Ἀμφίπολοι, magistrates appointed by Timoleon at Syracuse, after the expulsion of Dionysius the Tyrant, who derive their name from their being supposed to be ministers to Jupiter. *Diod.* l. 16.

AMPHIPPI (*Ant.*) ἀμφίπποι, *desultores*; horse soldiers who used to charge with two horses, so that they might leap from one to the other; to which Homer alludes.

Hom. Il. l. 15, v. 684.

Ὀρώσκων ἄλλο τ' ἐπ' ἄλλῃ ἀμειβεταί.

Suidas in Verb. ἱππικῆ. *Cæl. Rhodig. Antiq. Lect.* l. 21, c. 30.

AMPHIPROSTYLOS (*Ant.*) ἀμφίπροστυλος, from ἀμφί, on both sides, and πρόστυλος, a prostyle or column; a house with pillars, or piazzas, on both sides. *Vitruv.* l. 3, c. 1; *Salmas. in Solin.* p. 1217.

AMPHISBÆNA (*Zool.*) ἀμφισβæνα, from ἀμφί, both ways, and βαινῶ, to go; a venomous serpent in Lybia with two heads, and moving forward with either end. *Lucan.* l. 9, v. 719.

Et gravis in geminum surgens caput Amphisbæna.

Nicander, in his Theriacæ, calls it ἀμφίκεαρνοι, i. e. having a head at both ends. This notion of the ancients arose from the shape of the animal; the body of which is of equal thickness throughout its whole length, so that it is not easy to distinguish the head from the tail. The bites of these serpents resemble the stings of wasps. *Plin.* l. 8, c. 23; *Solin. Polyhist.* c. 27; *Act. Tetrab.* l. 1, serm. 1; *Paul. Æginet. de Re Med.* l. 5, c. 13; *Actuar. de Meth. Med.* l. 6, c. 11.

AMPHISBÆNA, in the Linnean system, a genus of animals; Class Amphibia, Order Serpentes.

Generic Character. Rings on the body and the tail.—Scales none.—Tail hardly to be distinguished from the body.

Species. The species are the *Amphisbæna fuliginosa*, *flava*, *varia*, *alba*, *magnifica*, &c.

AMPHISCI (Astron.) from ἀμφι, on both sides, and σκία, a shadow; the inhabitants of the Torrid Zone, who have their shadow turned to the north one part of the year, and to the south the other. When the sun is in the zenith they have no shadow, wherefore Pliny calls them *Ascii*; and to this Lucan alludes, when speaking of Syene, that was placed under the tropic of Cancer; he says, "Umbras nusquam flectente Syene." *Luc.* l. 2, v. 587; *Cleomed. de Mund.* l. 1; *Plin.* l. 2, c. 74.

AMPHISMI (Anat.) ἀμφισμίλη, from ἀμφι, on both sides, and σμίλη, a knife; a dissecting knife with an edge on both sides. *Galen apud Castell.*

AMPHISCIEN cockatrice (Her.) vide Basilisk.

AMPHITANE (Chem.) Tineal.

AMPHITAPÆ (Ant.) garments having hair on both sides, on which persons slept. *Lucill.* l. 1.

Psila, atque amphitapæ, villis ingentibus molles.

Ulpian. de Aur. et Argent. Leg.; *Hesychius*; *Non.* l. 14, c. 24; *Cælar. Rhodig. Antiq. Lect.* l. 16, c. 2; *Ferrar. de Re Vest.* l. 2, c. 1, &c.

AMPHITHALAMUS (Ant.) from ἀμφι, on both sides, and θάλαμος, the marriage bed; the maid's room on both sides that of her mistress's. *Vitruv.* l. 6, c. 10.

AMPHITHEATRE (Ant.) *Amphitheatrum*, ἀμφιθέατρον, from ἀμφι, on both sides, and θέατρον, i. e. a theatre on both sides; a circular building so constructed as to appear to be composed of two theatres, or one entire theatre all round;

Ovid. Met. l. 11, v. 25.

— structo utrinque theatro
Ceu matutini cervus periturus arenâ.

The form of which was either round or oval, as in the annexed figure, which represents an amphitheatre adorned with columns, and, in the interior, the emperor sitting in the midst of the spectators; in the area a bull, and a man seated on an elephant engaged in battle; on the left an obelisk; and on the right a colossal statue; the inscription MUNIFICENTIA GORDIANI AUGUSTI. The principal parts of the amphitheatre were the—*Arena*, or place where the gladiators fought.—*Cavea*, or hollow part where the beasts were kept—*Podium*, or projection at the top of the wall, which surrounded the arena, and was assigned to the senators, &c. for their use—*Gradus*, or benches rising all round above the podium—*Aditus*, or entrances; and the—*Vomitoria*, or gates which terminated the Aditus. *Vitruv.* l. 5, c. 7; *Liv.* l. 41, c. 31; *Senec. de Ira*, l. 2, c. 12; *Plin.* l. 36, c. 15; *Sueton. in Cal.* c. 30; *Dio.* l. 61; *Tertull. de Spectac.* c. 12; *Vopisc. in Prob.* c. 19; *Treb. Poll. in Gallien.* c. 12; *Cassidor. Var.* l. 5, c. 4; *Isidor. Orig.* l. 18, c. 52; *Lips. de Amphitheat.* c. 8; *Panciroll. Descript. Urb. apud Græv. Thes. Rom. Antiq.* tom. iii. p. 322.

AMPHITRITE (Con.) a genus of animals of the Class Vermes, Order Mollusca.

Generic Character. Body annulac.—Peduncles small.—Feelers two.—Eyes none.

Species. The principal species are the—*Amphitrite infundibulum*, found near King's-bridge, in Devonshire.—*Amphitrite convolutus*, found on the southern coast of Devonshire.—*Amphitrite ventilabrum*, found on different

parts of the English coast.—*Amphitrite rosea*, having the feelers beautifully spotted with crimson.—*Amphitrite campanulata*, &c.

AMPHODONTA (Zo.) ἀμφόδοντα, from ἀμφι, on both sides, and ὀδὸν, a tooth; animals having teeth in both jaws. *Erot. Lex. Hippocrat.*; *Foes. Econom. Hippocrat.*

AMPHORA (Ant.) ἀμφορεύς, per *Synec. pro ἀμφορέυς*, from ἀμφι, on both sides, and φέρον, to bear, because it has two handles for holding by; a vessel and liquid measure, among the ancients, containing above seven gallons. The Amphora is represented on the coins of Athens, and is supposed to be symbolical of this city, where earthen-ware was first made, as in the annexed figure, which represents *Jupiter Fulgurator*, i. e. the darter of lightning; the inscription ΑΘΕ, i. e. Ἀθηναίων, *Atheniensium. Cato de Re Rust.* c. 114; *Cic. in Verr.* 2, c. 74; *Colum.* l. 12, c. 28; *Pæt. de Rom. Pond. &c. apud Græv. Thes. Antiq. Rom.* vol. ii. p. 1627; *Beger. Thes. Brandenburgh.*

AMPHORA (Com.) the largest measure used at Venice, equal to four English gallons.

AMPHORAICUM (Ant.) the name for the wine which was kept in the amphora.

AMPHORARIUS (Ant.) from ἀμφορα, a tankard bearer.

AMPHORITES (Ant.) a sort of literary contest in the island of Ægina, where an ox was the reward bestowed upon the poet, who made the best dithyrambic verses in honour of Bacchus.

AMPLEXATIO (Alchem.) a term among the alchemists for a matrimonial union between their mercury called the white female, and gold, called the red husband.

AMPLEXICAULE (Bot.) stem-clasping; an epithet for a leaf.

AMPLIATION (Law) *ampliatio*, a deferring of judgment till the cause is further examined. In this case the judges pronounced the word *amplius*, or by writing the letters N. L. for *non liquet*, signifying that the cause was not clear. *Manut. ad Cic. in Verr.* 1, c. 29; *Sigon. de Jud.* l. 2, c. 22; *Turneb. Adv.* l. 1, c. 3; *Pollet. For. Rom.* l. 4, c. 15.

AMPLIATIO (Com.) the duplicate of a receipt account, and the like. "To sign a copy by ampliation" is to sign a duplicate of it.

AMPLIFICATION (Rhet.) *amplificatio*, a figure of speech which consists of enlarging on an argument so as to make it appear either better or worse in the minds of the audience, and thus excite their approbation, or the contrary emotion towards the subject of discourse; it is called by the Greeks ἀξίωμα. *Aristot. Rhet.* l. 2, c. 26; *Cic. Orat.* l. 3, c. 27; *Quintil. Institut.* l. 3, c. 7; *Sulpic. Vict. Institut. Rhet.* p. 249.

AMPLITUDE (Ast.) *amplitudo*, an arc of the horizon intercepted between its east and west points, and the centre of the sun or stars at their rising and setting. *Amplitude* is called *ortive*, or *Eastern*, when the star is rising, and *occiduus*, or *Western*, when it is setting.

Each of these amplitudes is likewise termed *Northern* or *Southern*, as the point of rising or setting is in the northern or southern hemisphere; thus let H R be the horizon, A G the Equinoctial, O the true East or West point of the horizon, S the centre of the sun or star at its rising or setting, then the arc O S is the amplitude.—*Complements of the Amplitude*, vide *Azimuth*.

AMPLITUDE, *Magnetical (Mar.)* an arc of the horizon between the sun or star at its rising, and the magnetic East or West point indicated by the compass.

AMPLITUDE, complement of the (Gun.) the range of shot, or the horizontal right line drawn from the mouth of the cannon to the spot where the shot finally rests.

AMPLUSTRIA (Ant.) ornaments for ships. [vide *Aplustria*]

AMPO'TIS (Med.) ἀμπωτις, from ἀναπίνω, to regurgitate; the recess of the humours from the circumference of the body to the internal parts.

AMPULLA (Ant.) a flagon for oil, or a jug for beer, which was set on the table. It was sometimes made of glass, as *Mart.* l. 6, epig. 28, v. 3.

*At tu multa diu dicis, vitreisque tepentem
Ampullis potus semisipivus aquam.*

Sometimes of skins, as
Plaut. Rud. act 3, scen. 4, v. 51.

*Nisi erit tam sincerum, ut quivis dicit ampullarius
Optimum esse opere faciundo corium, et sincerissimum.*

The form of the ampulla is as in the annexed figure. *Cic. de Fin.* l. 14, c. 12; *Apul. Flor.* l. 2; *Plin. Epist.* l. 4, ep. 30; *Suet. in Domit.* c. 21; *Stuck. Antiq. Conviv.* l. 2, c. 25; *Fabric. Descript. Urb. Rom.* c. 18.

AMPULLA (Chem.) any vessel having a belly, as cucurbits, bolt-heads, receivers, &c.

AMPULLA (Anat.) the first appearance of the heart, liver, &c. in a foetus after conception. *Hildanus.*

AMPULLA (Bot.) the bladder; a round, hollow, closed body that is found at the roots of some plants, as in the sub-

joined figure, which represents the root of the *Utricularia Aldrovanda*.

AMPULLA'SCENS *abvus* (Anat.) the most tumid part of Pecquet's duct.

AMPUTA'TION (Surg.) from *am* and *puto*, i. e. *scindo*, to cut; the cutting off a limb, which operation is described by Celsus, l. 7, c. 23, &c.

AMPUTATION is also used, by Cælius Aurelianus, to signify deprivation of speech, and, in regard to the nerves, to take away the strength. *Cæl. Aurel. de Acut. Morb.* l. 2, c. 6; *Chronic.* l. 4, c. 7.

AMPUTATURA (Med.) a wound from amputation.

AMSE'GETES (Ant.) those whose lands lay against the high road. *Fest. de Verb. Signif.*

AMU'CTICA (Med.) ἀμυκτική, from ἀμύσσω, to vellicate; medicines serving to vellicate the bronchia, and produce coughing. *Cæl. Aurel. Chron.* l. 2, c. 6.

AMVE'TTI (Bot.) an Indian tree.

AMULE'TUM (Ant.) *Amuletum*, from ἀμύνω, to keep off; Amulet, the name of a particular form of words or of medicines, which, tied about the neck, were supposed to expel disease. *Le Clerc Hist. de la Medic.*

AMU'RCA (Nat.) the Mother of the lees of the pressed olive, which is of use for hydropical persons. It is called by Dioscorides ἀμύρκη. *Cat. de Re Rust.* c. 100; *Dioscor.* l. 1, c. 138; *Plin.* l. 15, c. 11; *Columel.* l. 2, c. 20; *Oribas. Med. Coll.* l. 14, c. 1; *Act Tetrab.* l. 1, serm. 1; *Paul. Æginet. de Re Med.* l. 7, c. 9.

AMU'SSIS (Ant.) or *Amussium*, a Carpenter's Rule.

AMY (Law) from the French *ami*; the friend or guardian to whom an infant is entrusted: *prochain amy*, the next friend; *alien amy*, a foreigner subject to some prince who is on friendly terms.

A'MYCHE (Med.) ἀμυχή, from ἀμύσσω, to scratch; a superficial exulceration or scarification, according to Hippocrates.

AMYE'TICA (Med.) stimulating and vellicating medicines. *Cæl. Aurel. de Acut. Morb.* l. 2, c. 6.

AMYGDALA (Bot.) ἀμυγδαλή, so called because it has many furrows; the almond or fruit of the almond tree. The sweet and esculent almond is much inferior in virtue to the bitter, which, among other medicinal qualities, attenuates and provokes urine. *Theophrast. Hist. Plant.* l. 2, c. 1; *Dioscor.* l. 1, c. 176; *Plin.* l. 15; *Paul. Æginet.* l. 7, c. 12.

AMYGDALÆ faucium (Anat.) the almonds or kernels of the throat, otherwise called *Tonsillæ*.

AMYGDALA'TUM (Med.) an amygdalate or emulsion of almonds.

AMYGDALÆA (Ant.) the same as *Amygdale*.

AMYGDALI'NUM oleum (Phar.) oil of almonds.

AMYGDALIS similis (Bot.) the *Theobroma* of Linnæus.

AMYGDALITES (Bot.) a herb of the spurge kind, having the leaf of the almond. *Plin.* l. 26, c. 8.

AMYGDALA'D (Min.) the *Amygdalites vulgaris* of Linnæus.

AMYGDALO'IDES (Bot.) the *Euphorbia palustris* of Linnæus.

AMYGDALOPERZICUM (Bot.) the Almond Peach.

AMYGDA'LUM (Bot.) ἀμυγδαλον, the fruit of the *Amygdalus*.

AMYGDALUS (Bot.) *Amygdala*, ἀμυγδαλή, Almond-tree; a tree so called, from ἀμύσσω, to tear with the nails; because the stone of the fruit is furrowed as if torn with the nails. [vide *Amygdala*]

AMYGDALUS, in the Linnæan system, a genus of plants, Class 12 *Icosandria*, Order 1 *Monogynia*.

Generic Characters. CAL. perianth one-leaved, tubulous; divisions spreading.—COR. of five petals, oblong-ovate.—STAM. filaments shorter by half than the corolla; anthers simple.—PIST. germ roundish; style simple; stigma headed.—PER. a drupe roundish, villose; seed a nut ovate compressed.

Species. The principal species are the—*Amygdalus Persica*, the Peach or Nectarine Tree.—*Amygdalus communis*, the common Almond Tree.—*Amygdalus nana*, Common Dwarf Almond.—*Amygdalus pumila*, Double-flowered Dwarf Almond.

AMYGDALUS is also the name of the *Brabeium stelluli-folium*, and the *Catappa terminalis* of Linnæus. *Raii Hist. Plant.*

AMYGDALY'TES (Min.) almond-stone, a genus of earths of the aggregate order.

Generic Character. The amygdalytes consists of various elliptical stones imbedded together, so as form an irregular mass.

Species. The species of this genus may be divided into those which have a talcose base, those with a calcareous base, those with an argillaceous base, and those with a siliceous base.

A'MYLA (Chem.) any sort of chemical fæcula. *Castell. Lex Med.*

A'MYLON (Nat.) or *Amylum*, ἀμυλον, from α, priv. and μύλος, a mill; because it is made without a mill; starch, or the fæcula of wheat, which is good for rheum in the eyes. *Dioscor.* l. 2, c. 123; *Plin.* l. 18, c. 7; *Oribas. Med. Coll.* l. 1, c. 17; *Act. Tetrab.* l. 1, serm. 1; *P. Ægin. de Re Med.* l. 1, c. 78; *Myrep. de Antid.* l. 1, c. 425.

A'MYON (Anat.) an epithet for a limb so emaciated as for the muscles to disappear.

A'MYRIS (Bot.) ἄμυρις, a genus of plants, Class 8 *Octandria*, Order 1 *Monogynia*.

Generic Character. CAL. perianth one-leaved.—COR. petals spreading.—STAM. filaments awlshaped; anthers

oblong.—PIST. germ superior; style thickish; stigma four-cornered.—PER. berry roundish; seed nut round.

Species. The species are mostly shrubs, as the—*Amyris Gileadensis*, the Balsam of Gilead-tree.—*Amyris elemifera*, Gum Elemi-tree.—*Amyris opobalsamum*, *Opobalsamum*, &c. Balsam of Mecca tree.—*Amyris balsamifera*, Sweet Amyris, White Candle-wood or Rose-wood.—*Amyris toxicifera*, *Toxicodendron*, &c. Poison-ash, &c. *Raii Hist. Plant.*; *Pluk. Almag.*

ANA (*Med.*) *ἀνα*, a term in prescriptions for each, which is commonly written A or A A.

ANA (*Com.*) an Indian coin equal to a shilling and $\frac{1}{4}$ of a penny.

ANABA'PTISTS (*Ecc.*) an heretical sect who admit none to the ordinance of baptism but such as can give an account of their faith. They are called Anabaptists, that is "Rebaptizers," from *ἀναβαπτίζω*, to baptize again, because they rebaptize all before they join their community, that have already received baptism. *Geneb. in Clemens. VIII.*; *Prateol. Doctrin. Hæret. Omn.*; *Sander. de Origin et Progress. Schismat. Anglican.*; *Spondan. Contin. Baron. Annal. Ann. 1522.*

ANABA'SII (*Ant.*) expeditious couriers or messengers mentioned by St. Jerom. *Adver. Rufin.*

ANA'BASIS (*Ant.*) *ἀνάβασις*, from *ἀναβαίνω*, to ascend; the title of Xenophon's description of the younger Cyrus' expedition against his brother.

ANABASIS (*Med.*) an increase of fever in general. *Gal. de Morb. Temp. c. 2.*; *Gorr. Defin. Med.*

ANABASIS (*Bot.*) a plant mentioned by Pliny, which was otherwise called *equisetum*, or Horse-hair. *Plin. l. 26, c. 7.*

ANABASIS, in the Linnean system, a genus of plants, Class 5 Pentandria, Order 2 Digynia.

Generic Character. CAL. perianth three-leaved leaflets, roundish.—COR. five-petalled.—STAM. filaments filiform; anthers roundish.—PIST. germ roundish; styles acuminate; stigmas obtuse.—PER. berry roundish; seed single.

Species. The species are—*Anabasis aphylla*, *Salsola baccifera* seu *Kali bacciferum*, Leafless Anabasis, a shrub, native of the South-east of Europe—*Anabasis foliosa*, *Salsola clavifolia*, Leafy Anabasis, an annual, native of the South-east of Europe—*Anabasis tamariscifolia* seu *Kali fruticosum*, Tamarisk-leaved Anabasis, a shrub, native of Spain—*Anabasis spinosissima*, seu *Salsola echinus*, Thorny Anabasis, a shrub, native of Alexandria—*Anabasis Cretacea*, a perennial, native of Siberia. *Linn. Spec. Plant.*

ANABA'TICA (*Med.*) *ἀναβατικὰ*, a continued fever increasing in malignity. *Gal. de Differ. Puls. l. 2, c. 1.*; *Gorr. Defin. Med.*

ANABA'THRA (*Ant.*) from *ἀναβαίνω*, *ascendo*; 1. Stepping stones or blocks placed by the way side for mounting or dismounting. 2. Ranges of seats in the theatres. 3. A throne in the palace at Constantinople where the emperor used to sit.

Juven. sat. 7, v. 46.

Et que conducto pendent anabathra tigillo.

Bergier. de Viis. Milit. l. 4, sect. 39.; *Lips. ad Belg. l. 2, ep. 48.*

ANABIBA'ZON (*Astron.*) the dragon's head or Northern node of the moon.

ANA'BOLE (*Med.*) from *ἀναβάλλω*, to cast up; throwing any thing off the stomach.

ANA'BOLEUS (*Ant.*) *Ἀναβολεὺς*, in the Latin *strator*; an equerry or groom of the stables; so called from his assisting his master to mount his horse. *Plutarch in Crass.*; *Suidas*; *Enstath. in Odyss. l. 1, v. 155.*

ANABROCHISMOS (*Med.*) *ἀναβροχισμός*, from *ἀνα*, upwards, and *βρόχος*, a cord; an operation for fastening the

hairs of the eyelids when offensive to the eyes. *Cels. de Re Med. l. 7, c. 7.*; *Gall. Comm. 4, in Hippocrat. de Rat. Vict.*; *Paul. Æginet. de Re Med. l. 6, c. 13.*; *Gorr. Defin. Med.*; *Foes. Econom. Hippocrat.*

ANABRO'SIS (*Med.*) *ἀναβρωσις*, from *αναβρίσκω*, to consume; a corrosion of the solid parts by acrid humours.

ANA'BULA (*Zool.*) a kind of beast in Ethiopia, having a head like a camel, a neck like a horse, legs like an ox, and reddish all over, with white spots.

ANACALYPTE'RIA (*Ant.*) *Ἀνακαλύπτριον*, from *ἀνακαλύπτω*, to unveil; festivals among the Greeks on the third day after marriage, when the bride was allowed to take off her veil which she had hitherto always worn. The presents made at that time to the bride had also that name, and, according to Hesychius, the day was called *ἀνακαλύπτριον*. *Jul. Pollux. l. 3, segm. 36.*; *Harpocration*; *Hesychius*; *Suidas*; *Cæl. Rhodig. Antig. Lcct. l. 1, c. 26.*

ANACA'MPSE'ROS (*Bot.*) Orpine, or Live Long; a plant that grows to the height of a foot and more. It is of a detersive and vulnerary quality, fit for ruptures. The leaves of the anacampseros have a glutinous acidity, and give a strong red tincture to blue paper. *Plin. l. 24, c. 17.*; *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *J. Tournef. Instit.*; *Len. des Drogues.*

ANACA'MPTICS (*Opt.*) a species of optics, otherwise called catoptrics.

ANACA'RDIOS *antidotus Theodotus* (*Med.*) a confect of warm ingredients, good for epilepsies and apoplexies. *Myrep. de Antidot. sect. 1, c. 219.*; *Trallian, l. 7, c. 10.*; *Gorr. Def. Med.*

ANACA'RDINA *confectio* (*Med.*) a confect of anacardiums. *Mes.*

ANACA'RDIIUM (*Bot.*) Cassa, Cajou, or Cashew tree, from *ἀνά*, upward, and *καρδία*, the heart; because the pulp of the fruit has a nut growing out at the end of it instead of its enclosing the seed. This is said to be hot, dry, and comforting to the vitals. *Paul. Æginet. de Re Med. l. 7, c. 11.*; *Gorr. Defin. Med.*

ANACARDIUM, in the Linnean system, a genus of plants, Class 9 Enneandria, Order 1 Monogynia.

Generic Characters. CAL. perianth five-leaved; leaflets ovate.—COR. petals five.—STAM. filaments ten; anthers roundish.—PIST. germ kidney-shaped; style subulate; stigma small.—PER. none; receptacle fleshy; seed a nut kidney-shaped.

Species. The only species are the *Anacardium occidentale*, *Pomifera* seu *potius Prumifera Indica*, *Acajou*, *Cassuvium*, *Caschou* seu *Kapa-mava*, Cashew Nut, Cassu or Acajou, a shrub, native of the Indies. *Brown. Hist. Jamaic.*; *Jacqu. Hist. Americ.*; *Linn. Spec. Plant.*

ANACARDIUM, a name, a species of the *Semecarpus* and the *Avicenna tomentosa* of Linnæus. *J. Bauhin. Hist. Plant. C. Bauhin. Pin.*; *Ger. Herbal*; *Raii Hist. Plant.*; *Pluk. Almag. Botan.*

ANACARDIUM *orientale* (*Bot.*) Malacca Bean Tree; a plant from which an oil like that of almonds is extracted, which is of medicinal virtue. *Len. des Drog.*

ANACATHA'RSIS (*Med.*) *ἀνακάθαρσις*, from *ἀνακαθαίρωμαι*, to purge upwards; a purgation of the lungs by expectoration. *Gal. Com. in Hippocrat. l. 5, aphor. 8.*

ANACATHA'RTICA (*Med.*) from *ἀνακαθαίρωμαι*, to purge upwards; a species of purgatives that promote expectoration.

ANACE'IA (*Ant.*) *Ἀνακειαι*, a festival in honour of Castor and Pollux, who were called *Anaces*, *ἄνακες ἢ ἀνακτες*, and their temple *Anaceum*, *ἀνακειον*. *Jul. Poll. l. 1, c. 1.*; *Paus. l. 10, c. ult.*

ANACEPHALÆO'SIS (*Rhet.*) *ἀνακεφαλαίωσις*, from *ἀνά*, again, and *κεφαλαία*, to rehearse; recapitulation, or summing up of the heads of a discourse. This is called, in

Latin, *collectio*; and Cicero also speaks of a species of recapitulation which he calls *enumeratio*. *Cic. Brut.* c. 88, *et de Inven.* l. 1, c. 52; *Quintil. Instit.* l. 6, c. 1; *Hermog. περί διωότ.* p. 26; *Apsin. Art Rhet. Ald. Edit.* p. 706.

ANACHITES (*Min.*) the name of the gem *adamas*, or Adamant, which is so called because it serves as an antidote, and expels all vain fears from the mind. *Plin.* l. 37, c. 4.

ANACHORETA (*Ecc.*) ἀναχωρητής, from ἀναχωρέω, *recedo*, an anchorite; a hermit, or one who secludes himself altogether from the society of man. The first monks were of this description, as St. Paul, the hermit, who, to avoid the persecution, fled into the desert, and passed his days in religious contemplation. This mode of life was frequently followed until the foundation of the monastery of the Cenobites. *Hier. Vit. St. Paul. Eremit. &c.*; *Allatius de Consensu Eccl. Orient. et Occident.*; *Du Pin. Bibl. des Aut. Eccles.*

ANACHREMPISIS (*Med.*) ἀναχρέμψις, from ἀνά, up, and χρέμπτωμαι, to hawk; a purgation of the lungs by means of hawking. It is otherwise called *apochrenpsis*. *Gal. in Hippocrat.* l. 4, aphor. 47; *Foes. Econom. Hippocrat.*

ANACHRONISM (*Chron.*) *anachronismus*, ἀναχρονισμός, from χρόνος, time; an error in time by placing an event earlier or later than it really happened.

ANACINEMATA (*Ant.*) ἀνακινήματα, gesticulations and motions used by the combatants before they entered the lists. *Foes. Econom. Hippocrat.*

ANACLASIS (*Anat.*) the elevation of the arm so that the humerus with the arm should appear to be one bone. *Hippocrat. de Fract.* sect. 3; *Foes. Econom. Hippocrat.*; *Gorr. Defin. Med.*

ANACLASIS (*Rhet.*) Ἀνάκλασις, reflection; a figure of speech which is understood by the auditor in a contrary sense to what was intended to be conveyed. Quintilian calls this "antanaclasis." *Quint.* l. 9, c. 3; *Rutil. Lup.* l. 1, c. 5.

ANACLASTICS (*Phy.*) from ἀνακλάω, to refract; a species of optics which treats of the refraction of light.

ANACLETERIA (*Ant.*) Ἀνακλητήρια, from ἀνακαλέω, to proclaim; festivals observed in all the regal states of Greece when their princes came of age to take the government upon themselves. *Polyb. Hist.* l. 18, c. 38.

ANACLINOPALE (*Ant.*) Ἀνακλινοπάλη, wrestling and struggling while the combatants are on the ground; a sort of combat to which Martial alludes.

Mart. l. 14, ep. 201.

*Non amo qui vincit, sed qui succumbere novit
Et dicit melius τὴν ἀνακλινοπάλην.*

ANACLINTEA (*Ant.*) ἀνακλινητήρια, pillows among the Greeks, on which they rested their heads. This sort of pillow is called by Aristophanes ἐπικλινητήρια.

ANACLISIS (*Med.*) ἀνάκλισις, the reclining of a sick person. *Gal. Com. 1, in Hippocrat. de Art.*; *Foes. Econom. Hippocrat.*; *Gorr. Defin. Med.*

ANACLISMOS (*Med.*) ἀνακλισμός, that part of a chair on which the back of a sick person leans. *Hippocrat. περί ἄβρων.*

ANACOLLEMA (*Med.*) ἀνακόλλημα, from ἀνακόλλω, to agglutinate; topics to prevent defluxions of humours upon the eyes. *Gal. de Comp. Med. Gen.* l. 6, c. 8; *Paul. Aeginet.* l. 7, c. 16; *Myreps.* sect. 10, c. 3.

ANACOLUPPA (*Bot.*) an Indian plant, the juice of which is a preservative against the effects of the bite of the Cobra Capella. *Raii Hist. Plant.*

ANACOLUTHON (*Rhet.*) ἀνακόλυθον, *inconsequentia*, inconsequence; in speech, when that which answers to the preceding is not expressed.

ANACOMIDE (*Med.*) ἀνακομιδή, a word frequently used by Hippocrates, to denote restoration of strength to a patient after an illness. *Hippocrat. de Morb.* l. 2, &c.; *Gorr. Def. Med.*; *Foes. Econom. Hippocrat.*

ANACONDO (*Zool.*) the name of a large and terrible snake in the island of Ceylon, supposed to be the same as the *Boa constrictor* of Linnæus.

ANACOUPISMATA (*Ant.*) a sort of exercise or gestation among the ancients, mentioned by Hippocrates, which consisted, according to Madame Dacier, in leaping. *Hippocrat. περί δίαιτης*, l. 2.

ANACOSTE (*Com.*) a sort of woollen diaper made in Flanders and Holland, after the manner of the serges of Caen.

ANACREONTIC *verse* (*Gram.*) a sort of verse so called after Anacreon, by whom it was first used. It consisted of three feet; generally spondees and iambics, sometimes anapaests.

ANACRISIS (*Ant.*) ἀνάκρισις, examination of witnesses.

ANACROSIS (*Poet.*) the name of a Parthian song, in which the combat of Apollo and the Pythian serpent is described.

ANACTES (*Hist.*) the title assumed by the sons and brothers of the kings of Cyprus, who administered the government while the latter took their pleasure. *Aristot. apud Harpocrat.*

ANACTORION (*Bot.*) the same as *Gladiolus*.

ANACYCLUS (*Bot.*) from ἀνακύκλω, to encircle; a genus of plants, Class 19 *Syngenesia*, Order 2 *Polygamia superflua*. *Generic Characters.* CAL. common, scales sharp.—COR. compound.—STAM. filaments five; anther cylindric.—PIST. germ flatted; style filiform; stigmas in the floscules.—PER. none; seed solitary; receptacle chaffy; chaff's obtuse.

Species. The species are—*Anacyclus Creticus*, *Cotula Cretica* &c. seu *Santolinoides annua*, &c. Trailing Anacyclus, an annual, native of Crete.—*Anacyclus Orientalis* seu *Chamæmelum Orientale*, Eastern Anacyclus, native of the East.—*Anacyclus aureus*, *Chamæmelum luteum* seu *aureum*, &c. seu *Anthemis chrysanthemum*, Golden-flowered Anacyclus, an annual or perennial, native of the South or East of Europe.—*Anacyclus valentinus*, *Chrysanthemum valentinum*, *Buphthalmum lanuginosum*, &c. seu *Chamæmelum tenuifolium*, Fine-leaved Anacyclus, an annual, native of Valentine.—*Anacyclus Alexandrinus*, an annual, native of Egypt. *J. Bauhin. Hist. Plant.*; *C. Bauhin. Pin. Theat.*; *Linn. Spec. Plant.*

ANADEMA (*Ant.*) ἀνάδημα, a kind of ornament worn by Grecian women about their heads. *Jul. Poll. Onomast.* l. 5, c. 16, segm. 96.

ANADENDROMALACHE (*Bot.*) the same as *Althæa*.

ANADENDRON (*Bot.*) the same as *Althæa*.

ANADESMA (*Med.*) a bandage for wounds.

ANADIPLOISIS (*Med.*) ἀναδίπλωσις, a reduplication of the paroxysm of a semitertian fever. *Gal. de Typis*, c. 4; *Trallian.* l. 12, c. 2; *Gorr. Defin. Med.*

ANADIPLOISIS (*Rhet.*) a repetition at the commencement of a verse of the last word in the preceding; as, *Virg. ecl.* 8, v. 55.

——— *Sit Tityrus Orpheus,*

Orpheus in Sylvis ——

or of any word by way of emphasis, as in Cicero's orations, "Dic, dic planius." This is called ἐπανάλυψις by Alexander, in his book, *περί σχήματων*. *Demet. de Elocut.*; *Cic. in Verr.* 3; *Quintil. Instit.* l. 9, c. 3; *Alexand. περί σχήμ. apud. Ald.* 582.

ANADOSIS (*Med.*) ἀνάδοσις, a distribution of aliment over the whole body. *Gal. in Tim. Plat.* c. 16.

ANADROME (*Med.*) ἀναδρομή, a recess of pains from the inferior to the superior part of the body. *Hippocrat. de Prædict.* &c.; *Foes. Econom. Hippocrat.*

ANADROMOS (*Nat.*) an epithet for fish which at certain seasons ascend from the sea into the rivers. *Trallian.* l. 1, c. 15.

ANADYO'MENE (*Ant.*) a painting, by Apelles, of Venus coming out of the sea, and wringing her wet hair, which Augustus bought of the Coans, and placed in the temple of Julius Cæsar. It was a little defaced in one place, but no painter could be found at Rome to repair the damage.

ANÆSTHESIA (*Med.*) ἀνασθησία, from *α*, priv. and *αἰσθησις*, sensation; an insensibility to the touch, the consequence of disease, particularly the palsy. *Arct. de Sign. et Caus. Chron.* l. 1, c. 7.

ANAGALLIDA'STRUM (*Bot.*) the *Centunculus minimus* of Linnæus.

ANAGA'LLIS (*Bot.*) ἀναγάλλις, a plant so called, ἀπὸ τῆ ἀναγωγῆς, i. e. from its reviving the spirits. It was reckoned a lenitive that was very efficacious in curing inflammations. *Dioscor.* l. 2, c. 209; *Plin.* l. 25, c. 13; *Gal. de Simpl.* l. 6; *Oribas. Med. Coll.* l. 11; *Act. Tetrab.* l. 1, serm. 1; *Paul. Æginet. de Re Med.* l. 7, c. 3; *Marcellin. de Med.* c. 1.

ANAGALLIS, in the Linnæan system, a genus of plants, Class 5 Pentandria, Order 1 Monogynia.

Generic Characters. CAL. perianth five-parted; divisions keeled.—COR. wheel-shaped; border five-parted; divisions ovate.—STAM. filaments erect; anthers simple.—PIST. germ globose; style filiform; stigma capitate.—PER. capsule globose; seeds very many; receptacle globose.

Species. The species are either annuals, as the *Anagallis arvensis*, Common Pimpernel.—*Anagallis latifolia*, Broad-leaved Pimpernel; or perennials, as—*Anagallis monelli*, Upright Pimpernel.—*Anagallis tenella*, Bog-Pimpernel, Loose-Strife, or Money-Wort, &c. *J. Bauhin. Hist. Plant.; C. Bauhin. Pin. Theat.; Ger. Herb.; Park. Theat. Botan.; Raii Hist. Plant.; Tourn. Inst. Herb.; Dill. Plant. Cat. Giss.; Boerh. Ind. Plant.; Linn. Spec. Plant.*

ANAGALLIS is also a name for the *Centunculus minimus evolvulus et absinoides*; the *Lysimachia nemorum* and *nummularia*, and the *Veronica Anagallis* of Linnæus. *Raii, Tourn. &c.*—*Anagallis aquatica*, the *Veronica Betabunga* and *Veronica Anagallis*, the *Montia fontana*, *Pepis portula*, and *Samolus erandi* of Linnæus. *Bauh. Ger. Raii, &c.*—*Anagallis cærulea*, the *Gratiola monnicra* of Linnæus. *Sloane.*

ANAGARGALICTA (*Med.*) Ἀναγαργάλικτα, Gargarisms, with which the fauces are washed. *Hippocrat. de Affect.; Gorr. Defin. Med.; Foes. Econom. Hippocrat.*

ANAGLY'PHA (*Ant.*) ἀνάγλυφα, from ἀνά and γλύφω, to carve out; vessels or plate, in *asperitatem excisa*, chased, embossed, or wrought with the hammer, not engraved. *Plin.* l. 33, c. 11; or *opera signi*, as Virgil calls them. *Æn.* l. 5, v. 267.

ANAGLYPHA is also the art of embossing.

ANAGLYPHA (*Anat.*) the same as *Calamus scriptorius*.

ANAGNO'STES (*Ant.*) ἀναγνώστης, a reader, or a person in families of distinction, whose office it was to read at their meals. *Cic. ad Attic.* l. 1, ep. 12, &c.; *Fam.* l. 5, ep. 9.

ANAGO'GE (*Bibl.*) ἀναγωγή, the mystical interpretation of Scripture; one of the four ordinary modes of interpretation, in distinction from the *literal*, *allegorical*, and *tropological*.

ANAGOGE (*Anat.*) an efflux of the blood from the inferior parts of the body, as from the breast, &c. according to Aretaus; but, as Gorræus thinks, Hippocrates takes it, in his aphorisms, for an expulsion of the blood from the lungs. *Arct. de Caus. et Sign. Acut. Morb.* l. 2, c. 2; *Gorr. Defin. Med.*

ANAGO'GIA (*Ant.*) Ἀναγωγία, an annual festival in Sicily, celebrated by the Inhabitants of Mount Eryx in honour of Venus, who was said to retire with all the doves from her usual abode. Her return nine days after with the doves was celebrated by another festival, entitled *καταγωγή*

Catagogia. Æl. Var. Hist. l. 1, c. 15; *Hist. An.* l. 4, c. 2.

ANAGO'GICAL (*Bibl.*) or *mystical*, an epithet applied to a mode of interpreting Scripture. [vide *Anagoge*]

ANAGRAM (*Ant.*) ἀναγράμμα, *anagramma*; the change of one word into another by the transposition of its letters, as Amor into Roma. As also of several words, as from the question of Pilate to our Saviour, *Quid est veritas* is made the appropriate answer *Est vir qui adest*.

ANAGRA'PHE (*Ant.*) ἀναγράφη, from ἀναγράφω, *describo*; an inventory or commentary.

A'NAGROS (*Com.*) a measure for grain at Seville, equal to about 10¾ quarters English measure.

ANAGY'RIS (*Bot.*) ἀνάγυρις, or ἀνάγυρος, a plant, resembling the vine in leaf and branch, which has a very fetid odour, whence the proverb κινεῖ τὸν ἀνάγυρον, *Anagyrum moves*, for one who brings himself into trouble. The juice of the root is diaphoretic and digestive: the seed is taken as an emetic. *Diosc.* l. 5, c. 147; *Plin.* l. 27, c. 4; *Suidas.; Oribas. Med. Coll.* l. 11; *Paul. Æginet.* l. 7, c. 3.

ANAGYRIS, in the Linnæan system, a genus of plants, Class 10 Decandria, Order 1 Monogynia.

Generic Characters. CAL. perianth bell-shaped; mouth five-toothed.—COR. papilionaceous; standard obcordate; wings ovate oblong; keel straight.—STAM. filaments parallel; anthers simple.—PIST. germ oblong; style simple; stigma villose.—PER. legume oblong; seeds six or more.

Species. The species are the—*Anagyris foetida*, Stinking Bean-Trefoil, a shrub, native of Italy.—*Anagyris cretica*, a shrub, native of Candia.—*Anagyris inodora*, a shrub, native of Cochin China. *J. Bauhin. Hist. Plant.; C. Bauhin. Pin. Theat.; Ger. Herb.; Park. Theat. Botan.; Raii Hist. Plant.; Tourn. Inst. Herb.; Boerh. Ind. Plant.; Linn. Spec. Plant.*

ANAGYRIS non foetida (*Bot.*) the *Cytisus laburnum* of Linnæus. *Bauh. Hist. Plant.*

A'NAL fin (*Ich.*) the fin placed between the vent and tail, which expands perpendicularly.

ANAL'CIME (*Min.*) a species of Zeolite.

ANALE'CTA (*Ant.*) ἀνάλεκτα, *collectanea*, from ἀναλέγωμαι, to gather, or collect; fragments or crumbs falling from the table, which were picked up, and not swept away, as the pavements of the Roman floors were too finely inlaid to admit of sweeping. *Mart.* l. 7, ep. 20, v. 16.

*Colligere longa turpe nec putat dextrâ
Analecta, quicquid et canes reliquerunt.*

Rhodig. Antiq. Lect. l. 13, c. 31; *Turneb. Adver.* l. 24, c. 33; *Ursin. Append. ad Ciacon. Triclin.; Alex. Gen. Dier.* l. 4, c. 21.

ANALECTA (*Lit.*) a name of modern invention for collections out of authors.

ANALECTÆ (*Ant.*) ἀπὸ τῆ ἀναλέγεσθαι, à *colligendo*, i. e. from collecting; slaves among the Romans, who picked up the crumbs that fell after meals. [vide *Analecta*]

ANALECTY'DES (*Ant.*) ἀπὸ τῆ ἀναλέγεσθαι, à *colligendo*, i. e. from collecting; stuffed cushions to lay on the shoulders, in order to make a crooked body straight.

ANALE'MMA (*Ant.*) ἀνάλημμα, from ἀναλαμβάνω, to resume; a planisphere, or projection of the sphere, on the plane of the meridian.

ANALENTIA (*Med.*) a species of Epilepsy, proceeding from affections of the stomach. *Paracel. Generat. Caduc.* tab. 5; *Johann. Anglic. Ros. Anglic. de Epilep.*

ANALE'PSIA (*Med.*) vide *Analenia*.

ANALE'PSIS (*Med.*) ἀνάληψις, from ἀναλαμβάνω, to recover. 1. The regaining of strength. 2. The suspension of any member, as of the arm when hung in a sling. *Gal. Comm.*

2, in *Hippocrat. de Med. Offic.*; *Gorr. Def. Med.*; *Foes. Econom. Hippocrat.*

ANALEPTICS (*Med.*) ἀνάληπτικά, from ἀναλαμβάνω, to restore; a species of restoratives which serve to repair the strength, and to raise the depressed spirits. *Gal. de Sanitat. tuend.* l. 1, &c.

ANALOGY (*Log.*) ἀναλογία, from ἀνά, equally, and λόγος, called by Quintilian *ratio*, seu *proportio*, by Aulus Gellius *Convenientia*, seu *Ratio proportionis*, the relation which things bear, or are supposed to bear, to one another, from their resemblance or proportion to one another, as in regard to words that bear an analogy to each other in declension, conjugation, &c.; as if the nominative be *malus dolus*, the oblique cases be *mali* and *doli*, *malo* and *dolo*; but, if in the nominative, they are alike, and in the oblique cases different, then it is not *Analogy*, but *Anomaly*, as *lupus* and *lepus*, which, in the oblique cases make *lupi* and *leporis*. *Cic. ad Attic.* l. 6, ep. 2; *Varr. de Lat. Lin.* l. 9; *Quint. Instit.* l. 1, c. 4.

ANALOGY (*Math.*) the comparison or proportion of numbers or magnitudes one to another, thus, as 4 is to 2, so is 8 to 4.

ANALOGISM (*Log.*) ἀναλογισμός, from ἀναλογία, Ratiocination, or investigation of things by the analogy they bear to one another, as the judging of diseases, by the likeness of their appearance, or of their causes.

ANALOGOUS Term (*Log.*) *Vox analoga*, seu *Analogicum*; a term applied to two different objects, from some certain analogy or resemblance which they bear to one another, as, in speaking of pictures, they may be called the King, Queen, &c. meaning the picture of the King. Such words are in Rhetoric said to be metaphorical.

ANALYSIS (*Log.*) ἀνάλυσις, *resolutio*, from ἀναλύω, to resolve; the unfolding any matter, so as to discover its composition, as when one proceeds from universals to particulars, by the help of certain media or premises, in distinction from the Synthesis or composition adopted in Grammar, which proceeds from particulars, as letters, syllables, &c. up to generals, which are sentences: whence the logical treatise of Aristotle is termed *Analytica*.

ANALYSIS (*Math.*) the resolution of problems, which is of two kinds, Ancient and Modern.—*Ancient Analysis* is the proceeding from the thing sought, as taken for granted, through all its consequences, to something really known, which is opposed to the *Synthesis*, or composition, which takes for granted that which is found in the last step of the analysis; and, proceeding by a backward course of deduction, arrives at what was taken for granted, or the first step of the Analysis. Euclid's Data afford the best examples of the Ancient Analysis.—*Modern Analysis* is the resolution of problems by reducing them to equations by the help of symbolical characters. This is divided, with respect to its object, into—*Analysis of Finites*, which is otherwise called Algebra.—*Analysis of Infinites*, of which fluxions and the differential calculus form the principal parts.—*Analysis of Powers*, which is the same as Evolution.—*Analysis of Curve lines*, which shows their constitution, properties, &c.

ANALYSIS (*Chem.*) the decomposition of bodies, as vegetables, minerals, &c. so as to discover their component parts, which is effected either by fire, as in general cases, or by menstrua, as in the case of bodies compounded of several substances, which may be soluble in spirits of wine, water, and the like.

ANALYSIS (*Anat.*) the dissection of the human body, which is so called in lieu of the more familiar term *anatomy*.

ANALYST (*Math.*) one who adopts the Analytical method; also the title of a treatise, by Bishop Berkeley, on the doctrine of Fluxions.

ANALYTICS (*Log.*) ἀναλυτικά, the books of Aristotle for the resolving of arguments. [vide *Analysis*]

ANA-MALLA (*Bot.*) a species of Brazilian-tree, from the leaves of which a decoction may be made.

ANAMNESIS (*Rhet.*) ἀνάμνησις, an enumeration of the things treated of, before which is a sort of recapitulation. *Aristot.* l. 3, c. 19.

ANAMNESTICA (*Med.*) from ἀναμνάσθαι, to remind; medicines to improve the memory.—*Anamnesticæ Signa*, commemorative signs which discover the preceding state of the body.

ANAMORPHOSIS (*Per.*) the representation of some image, either on a plane or a curve surface, deformed or distorted; but which, in another point of view, shall appear regular, and drawn in just proportion. Thus, suppose the square A B C D to be drawn, divided into a number of small squares or areolas, as in the annexed diagram, fig. 1, within which may be drawn the image to be

distorted. This is called the *craticular prototype*. Then to produce an anamorphosis let *a b*, as in fig. 2, be drawn equal to A B, and divided into the same number of equal parts as the prototype A B, and erect at the middle point E, the perpendicular E V, as also V S, perpendicular to E V making E b, so much longer and V S so much shorter, as it is intended that the image shall be so much the more distorted. From each of the points of division draw right lines to the point V, also the right line a S, and, lastly, through the points c, e, f, g, &c. parallel lines to a b, then will a b c d be the space called the *craticular ectype*, in which the monstrous projection is to be drawn.

ANA'NAS (*Bot.*) a plant called the Brazil Yayanna or Pine apple; the fruit of which is reckoned astringent. This plant is classed by Linnæus under the *Bromelia*.

ANANCÆON (*Rhet.*) ἀναγκάων, *necessarium*; a figure in rhetoric by which only necessary things are expressed to the rejection of all ornaments; it is properly the dry style as opposed to the τὸ περὶ τὸν, the 'Flowery style.' *Aristot. Rhet.* l. 3, c. 13; *Dionys. Jud. Thucyd.* c. 22; *Cic. de Orat.* c. 21; *Plut. in Cat.*; *Quintil. Instit.* l. 9, c. 3; *Rutil. Lup.* l. 1, c. 20; *Ulp. Prologem. ad Demosth. Aristid. πολ. λογ. Ald.* p. 658.

ANANCHITIS (*Min.*) a sort of gem by which the images or visions of the gods are said to be worked in hydromancy. *Plin.* l. 37, c. 11.

ANA'NES (*Mus.*) a term for the modes and tones in the Greek church.

ANA'NDRIA (*Bot.*) a species of the *Tussilago* of Linnæus.

ANANTAPODOTON (*Rhet.*) ἀνανταπόδοτον, a figure of speech in which some part, as the apodosis, for example, is understood, ἢ μὴ συμβῆ ἢ πέριρα, 'Sin conatus ille recte successerit,' *sicilicet*, 'bene est, which is the apodosis here understood. *Schol. in Thucid.* l. 3.

ANA'PALIN (*Med.*) ἀνάπαλι, on the contrary side, opposed to Cataxin, καταξιν, on the same side; applied frequently, by Hippocrates, to the transmutation and fluxes of the humours. *Gorr. Def. Med.*; *Foes. Econom. Hippocrat.*

ANAPÆSTUS (*Gram.*) ἀναπαίσιτος, Anapæst; a metrical foot, having the two first short and last long (—), the contrary of a Dactyle, as πολέμων. It is derived from ἀνάπαλι, to reverberate, because it reverberates the dactyle with

its own sound. *Quintil. Instit.* l. 9, c. 4; *Hæphest. Enchyrid.*; *Isid.* l. 1, c. 16.

ANAPÆSTIC *verse* (*Gram.*) what consists mostly of Anapæsts.

ANAPHONE/SIS (*Med.*) ἀναφώνησις, a species of exercise strongly recommended by the ancient physicians.

ANAPHORA (*Gram.*) ἀναφορά, a figure in rhetoric when the same word is repeated at the beginning of every verse, or member of a sentence, as
Virg. Eclog. l. 4, v. 58.

*Pan etiam Arcadiū necum si iudice certet
Pan etiam Arcadiū dicat se iudice victum.*

According to Demetrius it comprehends the Epanaphoran, the Asyndeton, and the Homœostuleuton. *Demet. de Elocut.* § 141; *Hermogeu. περι δεινот*; *Long. de Sub.* l. 20, c. 1.

ANAPHORA (*Astron.*) an ascension or rising of the twelve signs of the zodiac from the East to the West by the daily course of the heavens. *Firmic.*

ANAPHRODISIA (*Med.*) ἀναφροδισία, from *a*, priv. and ἀφροδισίαι, *venereus*; *impotentia venerea.*

ANAPHRO'MELI (*Med.*) from ἀνά, ἀφρός, froth, and μέλι, honey; despumated honey, which will no longer froth when boiled.

ANAPLASIS (*Surg.*) ἀναπλασις, reformation; the replacing a fractured bone as it was before it was broken.

ANAPLERO/SIS (*Surg.*) ἀναπλήρωσις, the restoring of deficiencies. *Gal. de Dynam. lib. ascript.*

ANAPLERO'TICS (*Surg.*) from ἀναπλήρω, to fill up; a species of medicines which tend to encourage the growth of flesh in wounds. *Gal. de Dynam. lib. ascript.*

ANAPLEU/SIS (*Med.*) ἀνάπλευσις, the exfoliation or rotting away of the bones from a redundancy of humours. *Hippocrat. de Fract. &c.*; *Erot. Lex. Hippocrat.*; *Paul. Æginet. de Re Med.* l. 6, c. 107; *Gorr. Def. Med.*; *Foes. Econom. Hippocrat.*

ANAPNEU/SIS (*Med.*) ἀνάπνευσις, from ἀναπνέω, to respire; a respite from pain. *Aret. de Cur. Acut. Morb.* l. 2, c. 1; *Foes. Econom. Hippocrat.*

ANAPODOPHYLLUM (*Bot.*) the *Podophyllum peltatum* of Linnæus.

ANA'RAPHE (*Surg.*) ἀναράφω, retraction of the upper eyelid when relaxed. *Aet. Tetrab.* 2, serm. 3, c. 69.

ANA'RCHI (*Ant.*) ἀναρχοί; an epithet applied by the Athenians to the four supernumerary days in their year, in which they had no magistrates.

A'NARCHY (*Polit.*) Ἀναρχία, ubi nullus imperat, i. e. the condition of a city, commonwealth, or state without a head or sovereign, as "In those days there was no king in Israel, but every man did that which was right in his own eyes."

ANA'RHICAS (*Ich.*) Wolf-fish; a genus of animals; Class *Pisces*, Order *Apodal.*

Generic Characters. Head blunt.—*Gill-membrane* seven-rayed.—*Body* roundish.—*Caudal fin* distinct.

Species. The species are—*Anarhicas lupus*, Ravenous Wolf-fish.—*Anarhicas minor*, Lesser Wolf-fish.—*Anarhicas pantherinus*, Panther Wolf-fish.

ANARRHEGNIMIA (*Med.*) or *Anarrhexis*, from ἀνά, again, and ῥήγνυμι, to break; a fresh fracture or opening of a wound.

ANARRHINON (*Bot.*) vide *Antirrhinum.*

ANARRHICE'A (*Med.*) ἀναρροία, a flux of humours from the inferior parts upwards. *Castell. Lex. Med.*

ANARRHOPIA (*Med.*) ἀναρροπία, from ἀνά, and ῥέπω, to move or creep; a tendency of the humours to verge upwards. *Hippocrat. de Humor.*; *Gorr. Defin. Med.*; *Foes. Econom. Hippocrat.*

ANA'RTHROI (*Med.*) an epithet used by Hippocrates for a people of Scythia, so fat and bloated that they were

ἀναρροί, i. e. their joints were not discernible. *Hippocrat. de Aer.*

ANAS (*Or.*) a genus of animals; Class *Aves*, Order *Anseres*. *Generic Characters.* Bill convex, obtuse.—*Tongue* fringed. *Three fore-toes* connected.

Species. This genus consists of three divisions, which are distinguished, in English, by the names of the Swan, the Goose, and the Duck. The most remarkable species under each of these divisions are the following; namely—*Anas cygnus*, the Wild Swan.—*Anas olor*, in French *le Cygne*, the Tame Swan.—*Anas anser*, in French *l'Oye privée*, the Grey Lag Goose, or Common Wild Goose.—*Anas segetum*, the Bean Goose.—*Anas erythropus*, the Bernacle Goose.—*Anas bernicla*, in French *le Cravant* or *les Canes de Mer*, Brent Goose.—*Anas mollissima*, the Eider Duck.—*Anas spectabilis*, in French *le Canard à tête grise*, the King Duck.—*Anas nigra*, in French *la Macreuse*, the Black Diver or Scoter.—*Anas marila*, in French *le petit Morillon rayé*, the Scaup.—*Anas tadoma*, in French *la tadome*, the Shield-drake, or Borough Duck.—*Anas boschas*, in French *le Canard domestique*, the Mallard or Common Wild Duck.—*Anas clypeata*, in French *le Souchet*, the Shoveler.—*Anas acuta*, in French *le Canard à longue queue*, the Sea-Pheasant, Cracker, or Pintail.—*Anas penelope*, the Wigeon.—*Anas strepera*, in French *le Chipeau*, the Gadwall or Gray.—*Anas querquedula*, in French *la Sarcelle*, the Garganey.—*Anas crecea*, in French *la petite Sarcelle*, the Teal. *Belon. Hist. des. Ors.*; *Gessn. de Av. Nat.*; *Willough. Ornith.*; *Raii Synop.*; *Brisson. Ornith.*; *Linn. System. Nat.*

ANASARCA (*Med.*) ἀνασάρκα, from ἀνά, and σάρξ, flesh; a species of dropsy, in which the flesh is puffed up. This is called ὑπὸσάρκα by Hippocrates, and κατασάρκα by Heracles Tarentinus, according to Cælius Aurelianus. *Gal. Comm.* 3, in *Hippocrat. de Acut. Morb.*; *Aret. de Sig. et Caus. Acut. Morb.* l. 2, c. 1; *Cal. Aurelian. de Acut. Morb.* l. 3, c. 8; *Trallian.* l. 9, c. 2; *Act. de Meth. Med.* l. 5, c. 6. This disease is placed as a genus by Cullen, under the Class *Cachecicæ*, Order *Intumescenticæ*.

ANASARCA (*Bot.*) the dropsy in plants, from an excess of water or rain.

ANASCHONADI (*Bot.*) the *Elaphantopus scaber* of Linnæus.

ANA'SPISIS (*Med.*) ἀνάσπισις; a contraction of the stomach. *Hippocrat. de Prisc. Medicin.*

ANA'SSA (*Bot.*) the *Bromelia ananas* of Linnæus.

ANASTALTICS (*Med.*) from ἀνατέλλω, to contract; restringent or styptic medicines.

ANA'STASIS (*Med.*) ἀνάστασις, from ἀνίστημι, to rise up; is used by Hippocrates to signify a migration of humours, when expelled from one part they are obliged to go to another. *Hippocr. de Epidem.* sect 7; *Gorr. Defin. Med.*; *Foes. Econom. Hippocrat.*

ANASTATICA (*Bot.*) ἀνάστατικα, from ἀνίστημι, to rise up, or revive; a plant so called from its quality of reviving in water.

ANASTATICA, in the Linnæan system, is a genus of plants, Class 15 *Tetradynamia*, Order 1 *Siliculosa*, in English, the Rose of Jericho.

Generic Characters. CAL. perianth four-leaved; leaflets ovate, oblong.—COR. tetrapetalous; petals roundish.—STAM. filaments six; anthers roundish.—PIST. germ bifid; style subulate; stigma capitate.—PER. silicle very short; seeds solitary.

Species. The species are, *Anastatica hierochuntica*, *Thlaspi Rosa de Hiericho dictum*, seu *Rosa Hierochuntea*, Common *Anastatica*, or Rose of Jericho, an annual, native of the coast of the Red Sea.—*Anastatica syriaca*, *Buuias syriaca*, *Myagrum rostratum*, *Thlaspi*, &c. seu *Rosa*

ANATOMY.

hierococtea, &c. Syrian Anastatica, native of Syria. *C. Bauhin Pin. Theat.; Raii Hist. Plant.; Mor. Hist. Plant.; Linn. Spec. Plant.*

ANASTOICHEIOSIS (*Chem.*) ἀναστοιχείωσις, from ἀνα and στοιχείον, an element; re-ementation, or the resolution of the solids and fluids into their first elements. *Gal. de Sympt. Caus. l. 3, c. 2; Gorr. Def. Med.; Castell. Lex. Med.*

ANASTOMO'SIS (*Med.*) ἀναστόμωσις, from ἀνα and στόμα, to close the mouth; 1. An opening of the mouths of the vessels for the discharge of any fluid, as the menses, which are discharged by *Anastomosis* into the uterus. 2. The inosculation of the arteries and veins, i. e. their running into one another. *Hippocrat. de Mul. l. 1; Cels. de Re Med. l. 4, c. 4; Gal. de Meth. Med. l. 5; Cæl. Aurel. de Pard. Passion. l. 3, c. 10; Gorr. Defn. Med.; Foes. Econom. Hippocrat.*

ANASTOMOSIS (*Bot.*) a similar process of the juices in vegetable as of the fluids in animal bodies. [vide *Anastomosis*]

ANASTOMO'TICA (*Med.*) ἀναστομοτικά; a species of aperitive medicines. [vide *Anastomosis*]

ANA'STROPHE (*Rhet.*) ἀναστροφή, from ἀνα and στρέφω, to turn a figure of speech by the inversion of words, as *Italiana contra*, which, according to Quintilian, is reckoned a species of solecism. *Quintil. G. Instit. Orator. l. 1, c. 5; Aristid. πολλὰ λόγ. Ald. p. 658.*

ANA'STROUS signs (*Astron.*) a name given to the *duodecatornia*, or the twelve portions of the ecliptic, which the signs anciently possessed, but which they have since deserted by the precession of the equinoxes.

ANATA (*Com.*) or *Anatto*, a sort of red dye brought from the West Indies, which is used in England for colouring cheese.

ANATA'SE (*Min.*) the *Titanium ruthila* of Linnæus.

ANATA'SIS (*Med.*) ἀνάτασις, from ἀνατίνω, an extension of the body upwards. *Galen. Quid fit Med.*

ANATĒS (*Med.*) a disease of the anus.

ANATHEMA (*Ant.*) ἀνάθημα, from ἀναθεῖναι, to set apart, dedicate, or devote to a sacred purpose; an offering made to any God, and laid up in the temple. *Poll. Onomast. l. 1, c. 1, segm. 27.*

ANATHĒMA (*Ecc.*) ἀναθήμα, from ἀναθεῖναι, to remove from others, as something set apart and devoted; a sentence of excommunication, by which a person was either cut off from all communion with the faithful, as was the practice among the Hebrews, and after them of the Christians; or else of being devoted to death and utter destruction, as was frequently practised among the Hebrews, in the case of the Canaanitish cities, of Achan and others; and in some instances, as of Codrus and Curtius, among the heathens, who made a voluntary devotion of themselves, which was the same as anathematizing themselves, that is, setting themselves apart for some exclusive object.

ANATHRON (*Min.*) a fossil which vegetates on rocks, in the form of a white stony moss.

ANATHYMIA'SIS (*Med.*) from ἀνάθυμιαι, to fumigate, signifies evaporation.

ANATOCISM (*Com.*) ἀνατοκισμός, usurious interest, or compound interest for monies lent.

ANATOMY.

ANATOMY, ἀνατομία, from ἀνατέμνω, to dissect, or cut asunder; is the separation of the parts of an animal body, so as to come at the knowledge of the component parts. The word anatomy is commonly applied to the dissection of a human subject in a healthy state, in distinction from *morbid anatomy*, or the anatomy of diseased subjects, and *comparative anatomy*, or the dissection of animals. The body is composed of solids and fluids, and is generally divided into the Head, Trunk, and Extremities.

The Solids.

The solids consist of fibres, or small filaments, which differ in their degree of hardness or elasticity. They are divided into *integumenta*, the Integuments; *ossa*, the Bones; *cartilaginee*, Cartilages; *ligamenta*, Ligaments; *membranæ*, the Membranes; *vasa*, the Vessels; *musculi*, the Muscles; *nervi*, the Nerves; and *glandulæ*, the Glands.

Integuments are the coverings of the whole body, comprehending the—*Epidermis*, Cuticle or Skarfskin, which is the outermost.—*Rete mucosum*, a net-work immediately under the epidermis.—*Cutis vera*, the real Skin, which retains and carries off all the humours of the body.—*Corpus adiposum*, seu *Membrana adiposa*, the Fat, a cellular substance, containing an unctuous juice. To the above may be added—*Capillus*, the Hair, which consists of cellular filaments, and is denominated the Beard, Eyelashes, &c. according to the place in which it grows. [vide *Hair*]—*Unguis*, the Nails, which are horny substances.

Bones are hard and brittle substances, composed of *lamellæ*, or plates, lying upon one another, and joined together by transverse fibres. They are covered with an exquisitely sensible vascular membrane, called the *periosteum*, which on the cranium, or skull, is called the *pericranium*. On the surface of the bones are both eminences and cavities. The eminences are called *Processes*, which are of two sorts, namely, the *epiphysis* and the *apophysis*. The *epiphyses*, or *appendices*, are, as it were, parts added to the bone; the *apophyses* are set upon or growing to a large bone, so as to make one, as the nasal apophysis.

Processes have different names, according to their figure. A process like a ball is called *caput*, the Head; when flattened, *condyle*; the narrow part of the process *cervix*, the Neck. A rough process is a *Tuberosity*; and one terminating with a sharp point *corona* which, from its resemblance to other substances, is termed *mastoid*, *styloid*, *anchoroid*, *spinal*, &c. Long ridges are called *spinæ*, the sides of which are *labia*, Lips. Processes which form the brims are *supercilia*.

The cavities and depressions of bones are of two sorts, namely—*Glenæ*, which are narrow and shallow, and—*Cotylæ*, which are deep and wide. These are subdivided into—*Pits*, or small roundish holes—*Furrows*, or long narrow channels—*Nitches*, or *Notches*, small branches in the bones—*Sinuosities*, broad but superficial depressions—*Fossæ*, large deep cavities—*Sinuses*, still larger cavities, within the substance of the bone itself—*Foramina*, Holes through the body of the bone. The internal structure of the bones consists of cells, filled with a fluid fat, called *Marrow*, that is contained in *Follicles*. The junction of the bones with each other is called *Articulation*, from the *articulus*, or Joint, at the ends of the bones. This is of two kinds, namely—*Articulation*, properly so called, and *symphysis*, Connection. *Articulation* is either *diarthrosis*, or Separated *Articulation*, and *synarthrosis*, or Conjoined *Articulation*. *Diarthrosis* is subdivided into *enarthrosis*, or the Ball and Socket, when a large head is received into a deep cavity; *arthrodia*, when a round head is received into a small cavity; *gyn-glinus*, when a bone receives, and is received into another bone.—*Synarthrosis* is the fixing of two bones together without motion, which is of two kinds, namely—by *ingrailing*, or, as the joiners call it, *dovetailing*, which is termed *sutura*, a Suture, and by a junction on a more extended surface, which was termed *harmonia*.—*Symphysis*, or Connection, is that species of articulation which takes place through the medium of another body;

ANATOMY.

this is either *synchronodrosis*, a Cartilaginous Connection; *synneurosis*, a Ligamentary Connection; or *syssarcosis*, a fleshy Muscular Connection. [vide Pl. 7, fig. 1, 2, and the article *Bone*]

Cartilages are smooth white substances, which are harder than all the other solid parts of the body, except the bones. They are covered with a membrane called the *perichondrium*.

Ligaments are close compacted fibrous substances. The ligaments at the joint are called Capsular, because they retain in *capsulae*, or bags, the mucilaginous liquor called *synovia*, with which the joints are kept moist.

The *Muscle* is a bundle of fleshy or tendinous fibres, consisting of the Belly or Body, which is the fleshy part; the Head and the Tail, which are the tendinous parts; these are otherwise called *aponeuroses* or tendons. The head is fixed on the immoveable joint called the Origin, and the tail on the part to be moved, called the Insertion. The membranes, in which the muscles are enclosed, are called *vaginae* or sheaths. As the motions of the human body are performed by means of the muscles, they derive their names mostly from their office; as the *abductor*, *elevator*, *flexor*, *extensor*, &c. [vide *Muscle*] When muscles act in opposite directions they are called Antagonists; but when several concur in the same motion they are termed *congeneres*. [vide Pl. 7, fig. 4, 5, 6]

Membranes are expanded substances of a pliable texture, and fitted to serve as coverings for other parts of the body, as the *skin*, *peritoneum*, *pleura*, *dura mater*, &c.

The *vessels* are ducts or canals, composed of membranes, the strata of which are called *tunicae* or Coats. They may be divided generally into Blood Vessels and Absorbents. Blood-Vessels, so called because they serve to circulate the blood through the body, are either *arteriae*, Arteries, or *venae*, Veins; the former of which convey the blood from the heart, and the latter return it to the heart. [vide *Artery* and *Vein*] The arteries have a beating motion, called the Pulse, which the veins have not. This pulsation arises from what is termed the *systole* and *diastole*, i. e. the dilatation and contraction of the heart. [vide Pl. 7, fig. 3]

Absorbents, so called from their absorbing any fluid and carrying it to the blood, are the *vasa lactea*, the Lacteals; *vasa lymphatica*, the Lymphatics; together with their common trunk, the Lacteal Sac and Duct. The Lacteals absorb the chyle and the Lymphatics the lymph. The Lacteal Sac, or *receptaculum chyli*, serves, as its name denotes, to retain the chyle, and sends it by the Thoracic Duct through the whole body. The lymphatics, with the lacteals of the intestines, form what is called the Absorbent System. Most vessels are parted off into branches, which are again split into smaller branches or ramifications, the last or smallest extremities of which are termed *capillary*.

Nerves are long white medullary cords, springing from the *crebrum* or Brain and Spinal Marrow, whence they are generally distinguished into the *cerebral* and *spinal nerves*. The cerebral are subdivided into the *olfactory*, *optic*, *auditory*, &c. nerves, according to their use. [vide *Nerve*] They go out in *bundles* or *pairs*, and are afterwards distributed by *branches*, *ramifications*, and *filaments*, over every part that is endowed with sensibility. In several places the nerves communicate with each other, which communication is called a *plexus*; in other places they unite into Knots, called *ganglions*. [vide Pl. 8, fig. 2]

Glands are secretory vessels, composed of all the different sorts of vessels, enclosed in a membrane, and serving to secrete some fluid. As to their fabric, they are *conglomerate* or *simple*, *conglomerate* or *compound*. As to their contents, *mucous*, *sebaceous*, *lymphatic*, *salival*, *lachrymal*, &c.

Fluids.

Fluids.

The fluids of the body are those humours or juices which serve either to sustain life or preserve the frame in a healthy state. The principal of these are *sanguis*, the Blood; *chylus*, the Chyle; *lymphæ*, the lymph; and *bilis*, the Bile.

Blood is a red homogeneous fluid, of a saltish taste, a somewhat urinous smell and glutinous consistence, which circulates in the heart, arteries, and veins.

Chyle, a milk-like liquor, secreted in the lacteal vessels, by digestion, from the chyme or indigested mass of food that passes from the stomach into the duodenum. The chyle is that fluid substance from which the blood is formed.

Lymph, a liquid contained in the lymphatic vessels, has a fatuous smell, no taste, and a crystalline colour: its use is to return the superfluous nutritious jelly from every part, and to mix it with the chyle in the thoracic duct, for the purpose of furnishing nutriment to the animal.

Bile, a bitter fluid, secreted in the glandular substance of the liver. In a healthy state it is a yellow-green colour, and of the consistency of thin oil. Its principal use is to separate the chyle from the chyme, with which it mixes in the duodenum.

To the above might be added *pituita*, Phlegm; *saliva*, Spittle; *mucus*; *lachrymæ*, Tears; *sudor*, Perspiration; *urina*, Urine; *menses*; *lac*, Milk; and *semen*; which are all excretions from the blood, and, in a healthy state, pass off from the body at particular periods, of which more may be found under their respective heads.

Of these component parts, in different proportions, are formed the three principal divisions of the body before mentioned, namely, the Head, the Trunk, and the Extremities.

THE HEAD.

The *head* consists of *caput*, the Head, properly so called, and *cervix*, the Neck. The parts of the head are external or internal.

External Parts of the Head.

The external parts of the head are, the Hairy Scalp and the Face. The Hairy Scalp is composed of the common integuments; its uppermost part is called the *vertex* seu *fontenella*, the Crown; the forepart, the *sinciput*; the hind part, *occiput*, or Back of the Head; and the lateral parts, *tempora*, the Temples. The Face comprehends *frons*, the Forehead; *oculus*, the Eye; *auris*, the Ear; *nasus*, the Nose; and *os*, the mouth.

The *eye* is composed, externally, of *supercilia*, the Eyebrows; *cilia*, the Eyelashes; *palpebrae*, the Eyelids, the angles of which are called *canthi*, the margin *tarsus*; *glandulae lachrymalis*, the Lachrymal Glands; *puncta lachrymalia*; *canales lachrymales*, Lachrymal Ducts; *saccus lachrymalis*, the Lachrymal Sac; *ductus nasalis*, the Nasal Duct; *membrana conjunctiva seu albuginea*, the White.

The *internal* parts of the eye compose what is called the Ball or Globe. These are *tunicae*, the Coats; *camerae*, the Chambers; and *humores*, the Humours; besides the Muscles, Fat, Nerves, and Glands. The principal coats of the eye are *tunica sclerotica*, or the Cornea, which is the external and thickest coat; *tunica choroidca*, or the Choroides, which is the middle. The perforated septum of the choroides has the name of *uvea*; the anterior lamina of the septum is termed the *iris*; the radiated plicæ of

ANATOMY.

the posterior lamina *processus ciliares*; and the hole near the centre of the *septum pupilla*, the Pupil, which is capable of contraction or dilatation. The third and innermost of the coats is the *retina*.—*Cameræ*, the Chambers of the eye, are the *camera anterior* and *posterior*, situated between the *cornea lucida*, or the anterior portion of the sclerotica and the uvea.—

Humores, the humours of the eye, are three, namely, the *Aqueous Humour*, which is contained in the two chambers; *Crystalline Lens* or Humour; and the *Vitreous Humour*: these two last are enclosed in capsular tunica, called *crystallina* and *vitrea*. All these soft parts are enclosed in a funnel-shaped cavity, called an Orbit, which is formed by seven bones, namely, the *os frontis*, *os sphenoidale*, *os ethmoidale*, *os maxillare*, *os mala*, *os unguis*, and *os palati*. [vide *Eye*]

The *Ear* is divided into the external and internal.

Auricula, the *External Ear*, consists of a large cartilage that is divided into two portions, namely, the *pinna*, which is large and solid, and the *lobus*, or Lobe, which is soft and small, and forms the lower part. The external ear contains besides several eminences, namely, the *helix*, *anthelix*, *tragus*, and *antitragus*; and, also, some depressions, as the *fossa navicularis* or *scapha*, the *concha*, and the *meatus*.

The *Internal Ear* consists of, *meatus auditorius internus*, the Internal Auditory Passage; *membrana tympani*, the membrane which separates the external from the internal parts of the ear; and *tympanum*, the Drum or Barrel of the ear; and the Labyrinth, which consists of three portions, namely, *cochlea*, the anterior; *vestibulum*, the middle; and the semicircular canals. [vide *Ear*]

The *nose* consists, *externally*, of the Root; the Arch; Back or Spine, called the *spina nasi*; the Sides of the arch; the Tip of the nose; the *ala* or *pinna*, which are the Sides of the nostrils; the *nares*, or External Nostrils.

The *internal parts of the nose* are, the Internal Nares, which consist of the *septum narium*; the *subseptum*, or pillar of fat under the *septum narium*; the Convolutions; the *conchæ superiores* and *inferiores*; the *sinus maxillares*, and *sinus sphenoidales*; the *ductus lachrymalis*; the *ductus palatini*, and the *membrana pituitaria*, which lines the whole cavity of the nostrils. [vide *Nose*]

The *mouth* consists, *externally*, of *labia*, the Lips, which are upper and lower, and composed of a border or edge, and of commissures or angles; *fossula*, the depression which runs from the *septum narium* to the edge of the upper lip; *Cheeks*, the upper prominent part of which is called the *mala*; *Chin*, the anterior protuberance by which the lower part of the face is terminated.

The *internal parts of the mouth* are *palatum*, the Palate, or roof of the mouth; *septum palati*, or *velum palati*, the soft part of the palate, which forms two arches; *uvula*, the conical fleshy substance at the root of the tongue; *amygdalæ* or *tonsillæ*, the Tonsils, two glandular substances, one on each side the basis of the tongue; *gingivæ*, the Gums, which contain the teeth; *maxillæ*, the Jaws, which are composed of bones, and are either upper or lower; the *fræna*, of the lips; *lingua*, the Tongue, which consists of an Apex, a Root or Basis, and a Frænum. [vide *Mouth*]

Internal Parts of the Head.

The internal parts of the head are contained within an oval cavity, called the *cranium* or Skull, which is formed of eight bones. [vide *Bones*, and Pl. 8, fig. 1] The contents of the Skull are comprehended under the general name of *cerebrum*, the Brain, which is immediately surrounded by two membranes, called by the Greeks *μηνιγγες*, or, by others, *matres*, i. e. the *pia mater* and the

dura mater, between which lies a third membrane, called the *tunica arachnoidea*. The duplicatures or circumvolutions of these membranes are called *septa*, the upper of which has the name of the *falx*. The cerebrum consists of three portions, namely, the *cerebrum*, or Brain, properly so called; the *cerebellum*, or Little Brain; and the *medulla oblongata*; to which is added sometimes a fourth, namely, the *medulla spinalis*, which fills the great canal of the *spina dors*.

The *cerebrum* is divided into two lateral portions, called *hemispheres*, the extremities of which are termed *lobes*. Its substance is of two kinds, namely, the outer, that is cortical, and is called the *cortex*; and the inner, which is called the *substantia medullaris* or *substantia alba*.

The cavities of the brain, called *ventricles*, are four in number, and separated by a membrane called the *septum lucidum*. In each of these is the *choroid plexus*, formed of blood-vessels. There is also another small cavity or *fossula*, called the *infundibulum*, the superior opening of which is called the *foramen commune arterius*. The principal prominences are the *corpus callosum*, the lower side of which forms a sort of vault called the *fornix*; the *corpora striata*, two striated prominences; *thalami nervorum opticorum*; *corpora quadragemina*, four medullary projections, originally called *nates* and *testes*; the *pineal gland*, a cerebrine tubercle on the nates, and the *crura cerebri*, two medullary columns proceeding from the basis of the brain to the medulla oblongata. To these may be added the *glandula pituitaria*, a small spongy body in the sella sphenoidalis.

On the *cerebellum* are observed four eminences, called *appendices vermiformes*; a fourth ventricle; a valve, called the *valvula magna cerebri*; lamina or ramifications, called *arbor vitæ*, the trunks of which are termed *pedunculi cerebelli*.

The *medulla oblongata* is a medullary continuation of the cerebrum and cerebellum, having anterior branches, called *brachia*, and posterior, called *crura medullæ*. Its transverse process is called *processus annularis*. The extremity of the medulla is called the *cauda*; its tubercles, *corpora olivaria et pyramidalia*; to which may be added the *medullary papillæ* that are productions of the *infundibulum*.

The lower part of the *medulla spinalis* is called *caudina equina*; but, in other particulars, it resembles the parts before described. From the cerebrum, and the other parts of the brain, arise the nerves which are dispersed through the body. [vide *Nerves*, and Pl. 8, fig. 2]

THE NECK.

The neck may be added either to the head, to the thorax, or to both. The fore part is called the Throat, and the hind part the Nape. The parts of the throat are the *fauces*, a cavity behind the tongue; *larynx*, which consists of five cartilages, a part of the *trachea*; *pharynx*, a muscular bag, which receives the masticated food; *œsophagus*, or *gula*, the Throat, a membranous and muscular tube.

The salival glands, which are three pair, namely, the *glandulæ parotides*, *maxillares*, and *sublinguales*, so called from their situation. [vide *Neck*]

THE TRUNK.

The Trunk consists of *spina*, the Spine; *thorax*, the Chest; and *abdomen*, the Belly.

The Spine.

The spine is a bony column, consisting of a chain of *bones*, called *vertebræ*, which are divided into true or false. [vide *Vertibræ*, *Bones*, and Pl. 7, fig. 1 and 2]

The Thorax.

The fore part of the thorax is the Breast, the hind part the Back; the lateral part the Sides. These are severally formed by *sternum*, the Breast-Bone; *vertebræ dorsi*, the Dorsal Vertebrae; and *costæ*, the Ribs. [vide *Bones*, &c.] The thorax has externally the *mamma*, or Breasts, in the middle of which is the *papilla*, or Nipple, surrounded by a disc, called the *areola*; within are the *tubuli lactiferi*, or Lactiferous Ducts. The cavity of the thorax contains the *pleura*, a membrane with which it is lined; *mediastinum*, a membranous septum; *pulmones* the lungs; *cor*, the Heart, and *pericardium*, the Heartpurse, a membranous bag, within which it is enclosed. The largest part of the heart is called the Base, the narrower extremity the Apex. It is divided by a membrane called the *septum medium* or *septum cordis*, into two cavities, called *ventriculi*, ventricles, having several eminences or inequalities, called *fossulae*, *thymus gland*, *ductus thoracicus*, and the *ductus lacteus*. [vide *Thorax*]

The Abdomen.

The abdomen is divided into four regions, three of which are anterior, and one posterior.—The *anterior regions*, are the *epigastric*, or upper region, which is divided into the *epigastrium*, or middle, and the *hypochondria*, or lateral parts; the *umbilical*, or middle region, consisting of the *regio umbilicalis*, or Navel, in the middle, and the *ilia*, or Flanks, on the sides; the *hypogastric*, or lower region, which is divided into the *pubis*, or middle part, and the *inguina*, or Groins, on each side.—The posterior region is the *regio lumbaris*, or Lains.

The cavity of the abdomen is separated from that of the thorax by the muscular diaphragm, called the Midriff. Its *viscera*, or contents, are enclosed in a membrane, called the *peritonæum*, and are as follow: namely, the —*Ventriculus*, the Stomach which has two orifices, namely, the *cardia*, which is the upper; and the *pylorus*, which is the lower. It is composed of three coats, namely, the outermost, which is *membranous*; the middle, which is *muscular*; and the inner, which is *nervous*, and covered with vessels. To these has been added a fourth, called *villous*. The stomach performs the office of *digestion*, which is now generally supposed to be effected by the *saccus gastricus*, or Gastric Juice, which flows from the *tunica nervosa*, aided by the continual contraction and relaxation of the muscular tunic, which is called the *peristaltic motion*.—The *intestines* are a long pipe or canal, which, by its convolutions, forms six portions, three small and three large, namely, the *duodenum*, *jejunum*, *ileum*, *cæcum*, *colon*, and *rectum*. The small intestines have valves, or folds, called *valvulae conniventes*; the large intestines have fatty appendages, called *appendiculæ epiploicæ*. The membranes belonging to the intestines are the Mesentery, Mesocolon, and the *omentum*, or *epiploon*, by which they are kept in their places and preserved from injuries, whilst by their peristaltic motion they expel the *faeces* collected in them.—*Hepar*, the liver, is divided into two lobes, and is suspended in the body by means of ligaments, which connect it with the diaphragm, &c. It is composed of small vessels, or the ramifications of vessels, called *folliculi*, or *pori bilarii*, because in them is secreted the humour called the Bile. The ducts of the liver are the *ductus hepaticus*; the *ductus cysticus*; and the *ductus chelodochus*, which is composed of the two former. On the hollow side of the liver lies the *vesicula fellis*, or the Gall-Bladder.—*Pancreas*, a glandular viscus, consists of innumerable small glands that form one duct, called *ductus pancreaticus*, the Pancreatic Duct; its office is to

secrete a juice distinguished by the name of the *succus pancreaticus*, the Pancreatic Juice.—*Lien*, the Spleen, is connected with the stomach by its blood vessels, called *vasa brevia*.—*Renes*, the Kidneys, are composed of three substances, namely, the external, which is cortical; the middle, which is tubular; and an inner substance, which is medullary. They have also a peculiar membrane, called the *membrana propria*, and an excretory duct, called the *ureter*, the origin of which, expanded into the form of a funnel, is called the *pelvis*.—*Urinaria vesica*, the Urinary Bladder, a fleshy membranous pouch, is divided into the Body, the Fundus, or upper part, and the Neck, which is the lower part, that is, contracted by the *sphincter* muscle.

The lower part of the Abdomen is, in the skeleton, called the *pelvis*, which is formed by the *ossa ilia* and *ischia*, the *os sacrum*, the *os coccygis*, and the *ossa pubis*, and is terminated anteriorly by the *pubenda*, and posteriorly by the *clunes*, or Buttocks. [vide *Bones* and Pl. 8, fig. 3] The space between the *anus* and *pubenda* is called the *perinæum*.

The *pubenda*, or organs of generation, are distinguished into the male and female. The male organs are the *testes*, *vesiculæ seminales*, *prostatæ*, and *penis*.—The *testes* are composed of many minute vessels, convoluted into different heaps, by means of which is formed a body called the *epididymis*. They are enclosed in three integuments, or coats, namely, the *scrotum*, common to both, the *tunica vaginalis*, and the *tunica albuginea*; besides a muscular lining of the *scrotum*, called the *dartos*, by which it is corrugated. The principal vessels are the *vasa præparantia*, commonly called the spermatic Chord, and the *vasa deferentia*. The most important muscle is the *cremaster*.—*Vesiculæ seminales* are two in number, on each side the bladder, which serve as receptacles for the seed.—*Prostatæ*, or *corpus glandulosum*, a conglomerate gland, situated at the neck of the bladder.—The *penis* is composed of two spongy substances, called *corpora cavernosa*, and covered with a particular integument, called the *præputium*. The extremity of the penis is the *glans*, or *balanus*, and the ligament by which it is tied to the glans is the *frænum*. The canal or urinary passage of the penis is the *urethra*, in which is a longitudinal orifice, called the *meatus urinarius*.

The female organs of generation are external or internal. The external are the *vulva*, *mons veneris*, *labia*, *nymphae*, and *clitoris*, the branches of which are called the *crura*.—The internal parts are the *vagina*, or neck of the womb, the *hymen*, and the *carunculae myrtiformes*, formed from the hymen and the *uterus* or Womb.

The *uterus* is divided into three parts, namely, the *fundus*, or upper part; the Body, and the *cervix*, or lower part, the entrance into which is called the *os uteri*. It is tied by two sorts of ligaments, called *ligamenta lata* and *ligamenta rotunda*, i. e. two broad and two round. To one end of the *ligamenta lata* are tied the *ovaria* or *testes* in females: along the other end run the *tubæ Fallopiæ*. The vessels of the uterus are subject to a periodical discharge, which is called *menstruation*, and that which is discharged the *menses*. The formation of the parts of an animal in the womb constitutes a *gravid uterus*. The commencement of this process is called *conception* or *impregnation*; and that which follows is *gestation* till the time of delivery, when the young is brought forth. The first rudiments of the animal are called the *embryo*, which, with the *umbilical chord* and *membranes*, constitute the *ovum*. When the parts of the embryo are to be distinguished from one another, it is termed the *fœtus*. The membranes of the ovum and fœtus are the *amnios*, which is true or false, and the *chorion*. These mem-

ANATOMY.

branes contain a fluid, called the *liquor amnii*, in which the embryo floats; and from the flocculent vessels of the amnion is formed the vascular substance called the *placenta*. The placenta and membranes which come away after the birth of the child are known by the name of *secundines*, or *after-birth*.

The Extremities.

The extremities are superior and inferior. The superior extremities consist of *summitas humeri*, the Shoulder; *brachium*, the Arm; and *manus*, the Hand.—The shoulder is composed of *clavicula*, the Collar Bone; *scapula*, the Shoulder Blade; and *axilla*, the Armpit.—The arm is composed of the *os humeri*, *ulna*, and *radius*, the two last of which make what is called the Fore-arm, in which anteriorly is the bend of the arm; and posteriorly, *angulus cubiti*, the elbow.—The hand consists of the *carpus*, or the Wrist; *metacarpus* and *digiti manus*, or Fingers; *dorsum manus*, the Back of the hand; and *vola*, the Palm.

The inferior extremities consist of *coxa* or *regio ischiadica*, the Hip; *femur*, the Thigh; *tibia*, the Leg; and *pes*, the Foot.—The thigh is composed of the *os femoris*, the Thigh Bone.—The leg is composed of the *genu*, the knee; *tibia*, *fibula*, *patella*, or Knee-Pan; *poples*, the Ham; *cavum poplitis*, the Hollow of the Thigh; *sura*, the Calf; and *malleolus*, the Ankle.—The foot consists of *tarsus*, the Instep; *metatarsus*, or *dorsum*, the Back; *digiti pedis*, the Toes; and *planta*, the Sole. [vide *Bones* and Plate I.]

Explanation of the Plates.

Plate No. I. (9)

Fig. 1.—1. Os Frontis. 2. Sutura coronalis. 3. Os Verticis. 4. Sutura squamosa. 5. Os Temporis. 6. Processus mammillaris. 7. Os Mala. 8. Ossa Nasi. 9. Ossa Maxillaris superiora. 10. Os Maxillae inferioris. 11. Vertebrae Colli. 12. Vertebrae Lumborum. 13. Os Sacrum. 14. Sternum. 15. Scapula. 16. Costae verae. 17. Costae nothae. 18. Claviculae. 19. Processus coracoideus. 20. Os Humeri. 21. Ulna. 22. Radius. 23. Os Ilium. 24. Crista Ossis Ilii. 25. Ischium. 26. Os Pubis. 27. Foramen magnum. 28. Os Femoris. 29. Trochanter major. 30. Trochanter minor. 31. Patella. 32. Tibia. 33. Fibula. 34. Talus. 35. Os Calcaneum. 36. Ossa Tarsi.

Fig. 2.—1. Cerebrum. 2. Cerebellum. 3. Corpus pyramidale. 4. Annular Protuberance. 5. Processus mammillaris. 6. Optic Nerves. 7. Motores Oculorum. 8. The fourth pair of Nerves. 9. The fifth pair spreading into three branches. 10. The sixth pair. 11. The seventh pair. 12. The eighth pair. 13. The recurrent nerves joined with the eighth pair. 14. The recurrent nerves after leaving the eighth pair. 15. The trunks of the eighth pair. 16. Intercostal nerves. 17. Phrenic nerves. 18. Branches of nerves going to the spermatic vessels, &c. 19. Branches of the ninth pair. 20. The sciatic and crural nerves. 21. The brachial nerves; a communication between the dorsal and intercostal nerves.

Fig. 3.—1. The Larynx. 2. The internal jugular vein. 3. The subclavian vein. 4. The vena cava descendens. 5. The right auricle of the heart. 6. The right ventricle. 7. Part of the left ventricle. 8. The Aorta descendens. 9. The Arteria pulmonalis. 10. The right lobe of the Lungs, part of which is cut off to show the Gall-bladder and vessels. 11. The left lobe of the lungs. 12. The Diaphragm. 13. The Liver. 14. The ligamentum rotundum. 15. The Gall-bladder. 16. The Stomach pressed by the liver towards the left side. 17. The small intestines. 18. The Spleen.

Fig. 4.—1. The right ventricle of the Fœtus distended by wax. 2. The right auricle. 3. The left ventricle. 4. Branches of the pulmonary veins of the right lobe of the lungs. 5. Arteries of the left lobe of the lungs. 6. The vena cava descendens. 7. The Aorta ascendens. 8. The Arteria pulmonalis. 9. The Ductus arteriosus.

Fig. 5.—1. The parenchymous substance of the Pancreas laid open. 2. The Pancreatic Duct. 3. Branches of the Pancreatic Duct. 4. The Bile Duct joining the Pancreatic Duct. 5. The Duodenum opened. 6. The orifices of the Bile and Pancreatic Ducts.

Fig. 6.—1. The Kidney divested of its external coat. 2. A kidney in its natural state. 3. The Vena Cava. 4. The Aorta. 5. The Renal Glands with their vessels. 6. The Emulgent vessels. 7. The Ureters. 8. The Urinary Bladder. 9. The neck of the Bladder. 10. The Testes. 11. The process of the Peritonæum. 12. The Cremaster muscle cut off. 13. The Spermatic vessels. 14. The Epididymis. 15. The Vasa Deferentia. 16. The corpus glandosum. 17. The two bodies which compose the Penis. 18. The Prepuce. 19. The Glans Penis. 20. The insertion of the spermatic veins into the emulgent. 21. Vesiculæ seminales. 22. The insertion of the ureters. 23. Veins which run into the back of the Penis. 24. Arteries which arise on each side.

Fig. 7.—The Pulmonary Artery.

Fig. 8.—1. The upper orifice of the Stomach. 2. The Stomach. 3. The Pylorus. 4. Arteries. 5. Veins which accompany the arteries. 6. The Duodenum. 7. The Small Intestines. 8. The valve in the Colon. 9. The Appendiculum of the Cæcum. 10. The Colon. 11. The Rectum. 12. The Constrictor of the Anus. 13. The Elevatores Ani. 14. The Anus.

The principal Writers on Anatomy in chronological Succession.

Hippocratis "Opera;" Aristoteles "De Partibus Animalium," &c.; Arctæus "De Causis et Signis Morborum acutorum," &c.; Rufus Ephesus "De Appellationibus Partium humani Corporis;" Galen "De Administratione Anatomia;" "De Usu Partium," &c.;

Oribasii "Medicæ Collectiones;" Berengarii Carpensis "Isagoge," &c.; Vassæi Catalaunensis "In Anatomem Corporis humani Tabulæ quatuor;" Vesalius "De Re Anatomica," &c.; Fallopii "Observationes Anatomicæ," &c.; Eustachii "Opuscula Anatomica," "Tabulæ Anatomicæ," &c.; Caspari Bauhini "Institutiones Anatomicæ," &c.; Fabricii "De Aqua pendente," "Opera Anatomica," &c.; Riolani "Schola Anatomica," &c.; Harvey "Exercitatio Anatomica de Motu Cordis et Sanguinis in Animalibus," &c.; Albini "Tabulæ Anatomicæ," &c.; Cheselden's "Anatomy of the Human Body;" Heister's "Compendium Anatomicum," &c.; Highmore's "Corporis humani Disquisitio Anatomica," &c.; Hoffmanni "Dissertationes Anatomico-physiologicæ," &c.; Keil's "Anatomy of the human Body abridged;" Malpighii "Observationes Anatomicæ," &c.; Munro's "Osteology;" Piquet's "Experimenta nova Anatomica," &c.; Swammerdam's "Miraculum Naturæ," &c.; Winslow's "Anatomique de la Structure du Corps humain," &c.

ANATON (*Min.*) the same as Anatron.

ANATRE/SIS (*Anat.*) ἀνατρεσις, from ἀνα, and τρεω, *perforo*; trepanning.

ANATRIS (*Chem.*) mercury.

ANATRON (*Min.*) 1. The same as Natron. 2. The spume or gall of glass, which bubbles on the surface while in the furnace. 3. The same as *Terra Saracenica*. 4. The same as Anathron.

ANATROPE (*Med.*) ἀνατροπή, from ἀνατρέπω, to subvert; a relaxation of the stomach.

ANATTO (*Chem.*) vide *Anata*.

ANATUM (*Nat.*) *ovorum testa*.

ANA'UDIA (*Med.*) the same as *Catalepsis*.

ANA'UDOS (*Med.*) ἀναυδός, from α, priv. and αὐδός, voice, speechless; an epithet for one who has lost his speech, in distinction from ἄφωνος, who has lost his voice. *Gal. Exeg. Vocab. Hippocrat.*; *Cels. de Re Med.* 1. 5; *Cæl. Aurelian de Morb. Chron.* 1. 2, c. 1; *Alex. Trall.* 1. 1, c. 2; *Gorr. Defn. Med.*

ANAVINGA (*Bot.*) An evergreen that grows in Malabar, and in Cochin China.

ANAXAGORIA (*Ant.*) Ἀναξαγόριον, a festival observed at Lampsacus in honour of Anaxagoras. *Diogen. Laert. in Anax.*

ANAXYRIDES (*Ant.*) ἀναξυρίδες, a sort of breeches or drawers worn by the Scythians, according to Hippocrates, from ἀναστροφή, to draw up. *Hippocrat. de Aer.*; *Poll. Onomast.* 1. 7, c. 13, segm. 59, &c.

A'NBAR (*Min.*) vide *Ambra*.

ANBLATUM (*Bot.*) the name for a species of plant; the *Lathrea anblatum* of Linnæus.

A'NCEPS (*Med.*) doubtful as to the nature of the disease or effects of the medicine.

ANCEPS (*Bot.*) an epithet for a stem and a leaf which has both its edges sharp.

A'NCESTOR (*Law*) *antecessor*, a natural person, who has gone before in a family, in distinction from a predecessor, who belongs to a body politic. *Co. Lit.* 78, b.

ANCESTREL (*Law.*) relating or belonging to one's ancestors, as ancestral homage.

A'NCHOR (*Ant.*) vide *Anchora*.

ANCHOR (*Mar.*) the instrument which holds a ship in its place, consists of four principal parts; namely, the Ring, the Stock, the Shank, and the Arms.—The ring (a) is the upper part, to which the cable is attached; and the square part (b), through which a hole is punched to receive the ring, is called the square.—The stock (c) is the large beam, which is fixed to the square.—The shank or beam (d) is the longest part of the anchor.—The two arms (ff) branch from the shank, and run into the ground;

they consist of *palms* or *flooks* (*g g*), which are broad plates of a triangular form at nearly the extremity of the arm; and the broad part is called the *blade*, and the extreme sharp point the *bill*.—The *throat* of the arm (*h h*) is the angular point near the shank.—The *trend* (*e*) is a distance marked on the shank, which is equal to that between the throat of one arm and its bill.—The *crown* is that part where the arms are joined to the shank. The flattened surface at the lower extremity of the shank is called the *Scarf*, which is formed with a *shoulder* on each side for the purpose of *shutting on*, i. e. joining the arms to the shanks. The *small round* is the diameter of the shank where it is the smallest, which is near the stock.

The different sorts of anchors are the—*Sheet anchor*, in French *maîtrese ancre*, the largest and strongest sort, which is never used but in the last extremity.—*Best bower anchor*, in French *la seconde ancre*, and *small bower*, in French *ancre d'affurche*. These two last are smaller than the rest, and carried on the bows, whence they take their name.—*Stream anchor*, less than the preceding, and the *kedg anchor*, the smallest of all.—*Pilot's anchor*, betwixt the two last in size, and used by the pilots for dropping a vessel in a stream.—*Flood anchor*, for a ship riding during flood tide.—*Ebb anchor*, for a ship riding during the ebb tide.—*Sea anchor*, in French *ancre du large*, which lies towards the offing.—*Shore anchor*, in French *ancre de terre*, which is between the ship and the shore.—*Floating anchor*, in French *ancre flottante*, which is sunk below the swell of the sea where there is no other anchorage.

The movements and situations of the anchor are as follow:
 “Anchor comes home,” when it is dislodged from its bed.
 —“Anchor drags,” when it makes an effort to come home.—“Anchor is foul,” when it gets entangled with another anchor, and the like.—“Anchor is a cock-bill,” when suspended from the cat-head ready to let go.—“Anchor is a-peek,” when drawn so tight as to bring the ship over it.—“Anchor is a-trip, or a-weight,” when just drawn out of the ground.—“To lie at anchor,” the situation of a ship which rides by her anchor.—“To back the anchor,” in French *empenneller l'ancre*, to lay down a small anchor a-head of the large one, by which the ship rides.—“To cat the anchor,” in French *caponer l'ancre*, to draw the anchor perpendicularly up to the cat-head by a tackle called a cat.—“To fish the anchor,” in French *traverser l'ancre*, to draw up the flooks of a ship's anchor towards the top of the bow by a machine called a fish.—“To steer the ship to her anchor, in French *gouverner l'ancre*, to steer the ship's-head to the place where the anchor lies when they are heaving the cable into the ship.—“To sweep the anchor,” in French *draguer l'ancre*, to drag for an anchor that has been lost.—“To shoe the anchor,” in French *couvrir les pattes de l'ancre*, to cover the flooks with a broad triangular piece of plank.—“To weigh the anchor,” in French *lever l'ancre*, to heave the anchor out of the ground by its cable; sometimes it is performed by mechanical powers fixed in the long boat.

ANCHOR (*Her.*) an emblem of hope, was borne in coat armour, most commonly in pale, as in the annexed figure. He beareth “gules, an anchor in pale argent, the timber or cross piece thereof or; name Goodrood.”

ANCHOR (*Com.*) a measure of brandy containing ten gallons; the same as *anker*.

ANCHOR (*Archit.*) a carving somewhat resembling an anchor.

ANCHORA (*Ant.*) ἄγκυρα, from ἀγκυρῶς, crooked anchor; a naval instrument, so called from its curved form. Its invention is of such antiquity as to be attributed to Midas, and, according to some, to Anacharsis. At first they were made of stone or wood, with lead affixed to them, but afterwards of iron, and in shape very similar to what is now in use, except that it wanted the stock, as may be seen from the annexed figure, taken from a marble. The anchor is most frequently to be found on the coins of the Seleucidæ, by whom it was used, in consequence of a prediction, to Seleucus, that he should reign in that place where he dug up an anchor, which happened in Babylon. The arms of the anchors were called ἰδόντες, *dentis*, teeth, whence the name of ἰδῆς, *dens*, was substituted for an anchor among the Greek and Latin poets. Some anchors which had but one arm were called ἐπιπέσομοι, and those with two ἀμφιπέσομοι. The anchor which was the biggest, and used only on particular occasions, was called ἄγκυρα ἱερὰ, *anchora sacra*, whence the proverb *sacram anchoram solvere*, i. e. to be driven to one's last shifts. *Diodor.* l. 5; *Strab.* l. 10; *Plin.* l. 8, c. 56; *Poll. Onom.* l. 1, c. 9; *Polyæn.* l. 3, c. 9; *Athen.* l. 5; *Arrian. in Perip.*; *Suidas. in Voc. ζῆγμα.*; *Leo. Tact.* c. 20, § 140; *Gyrald. de Navigat.* c. 12; *Sheff. de Re Naval.* &c.

ANCHORAGE (*Mar.*) 1. The ground fit to hold the Anchor. 2. A duty taken of ships for the use of the haven, where they cast anchor. 3. The ground in port and haven belonging to the king; no person can let an anchor fall thereon without paying therefor to the king's officers. 4. The set of anchors belonging to a ship.

ANCHORALIS *processus* (*Anat.*) the same as the *Processus coracoides*.

ANCHORED (*Her.*) or *Ancreed*, a cross, the four extremities of which resemble the flooks of an anchor.

ANCHORET (*Ecc.*) a hermit. [vide *Anachoreta.*]

ANCHOR-GROUND (*Mar.*) ground fit for holding the anchor.

ANCHORING (*Mar.*) the process of fixing a ship by her anchor.

ANCHOR-STOCK (*Mar.*) a method of working planks so that they should appear in the shape of an anchor stock.

ANCHOVY (*Ich.*) the ἰγκρασιχάλος of Aristotle, *Clupea encrasicolus* of Linnæus; a small fish, caught in great quantities in the Mediterranean, having a slender body, but thicker in proportion than the herring. It is brought over pickled, and used in sauces. *Aristot. Hist. Anim.* l. 6, c. 15; *Athen.* l. 7, c. 8; *Rondelet. & Gessn. de Piscib.*; *Will. Ichthiol.*

ANCHOVY pear (*Bot.*) the fruit of a tree in the West Indies, called by Linnæus the *Grias cauliflora*. It is about the size of an alligator's egg, and very similar in shape, of a brown colour, and commonly used as a pickle.

ANCHUSA (*Bot.*) Alkanet, in Greek ἄγκυσα; a plant so called from its power of producing suffocation, according to Nicander, Dioscorides, Pliny, and Galen. The root was reckoned astringent, and good for ambustions and the bites of venomous serpents. According to Galen, it was used as a cosmetic, and is at present employed in dyeing, being covered with a red bark, which gives a red dye or tincture to any infusion. *Theophrast. Hist. Plant.* l. 7, c. 9; *Dioscor.* l. 4, c. 23; *Plin.* l. 22, c. 21, &c.; *Gal. de Simpl.* l. 6; *Orib. Med. Coll.* l. 15; *Aet. Tetrab.* 1, serm. 1; *Paul Æginet.* l. 7, c. 3; *Act. de Meth. Med.* l. 6, c. 8.

ANCHUSA, in the Linnæan system, a genus of plants, Class

5 *Pentandria*, Order 1 *Monogynia*, in English Alkanet, or Bugloss.

Generic Characters. CAL. *perianth* five-parted.—COR. monopetalous; *tube* cylindrical; *limb* semiquinquefid.—STAM. *filaments* very short; *anthers* oblong.—PIST. *germs* four; *style* filiform; *stigma* obtuse.—PER. none; *seeds* four.

Species. The species are perennials, as the—*Anchusa officinalis*, seu *Buglossum sylvestris*, officinal or garden Alkanet, or Bugloss, a native of Britain.—*Anchusa tinctoria*, *Buglossum tinctorium*, seu *Lithospermum villosum*, dyer's Alkanet, native of Montpellier.—*Anchusa sempervivens*, evergreen Alkanet, native of Britain, &c. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin. Theat.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tourn. Inst. Herb.*; *Boerh. Ind. Plant.*; *Linn. Spec. Plant.*

ANCHUSA, a name for several species, as the—*Barleria longifolia*; the *Borago Indica* and *Zeylanica*; the *Lithospermum Orientale*, *purpureum et cæruleum*; the *Myosotis lappilla* and *spinocarpus*; the *Onosma cinioides*, and the *Pulmonaria Sibirica* of Linnæus. *Bauhin*, *Gerard*, *Rai*, &c.

A'NCHYLE (*Med.*) the same as *Anchylosis*.

A'NCHYLOMERIS (*Med.*) a concretion of the soft parts.

A'NCHYLOPS (*Med.*) the same as *Ægilops*.

A'NCHYLOSIS (*Med.*) from ἀγκύλωσις, crooked; a stiff joint, a species of contraction.

A'NCHYNOPE (*Bot.*) the same as *Phœnix*.

A'NCHYROIDES (*Anat.*) the same as *Caracoides*.

A'NCI (*Med.*) vide *Galiancon*.

A'NCIENT (*Mil.*) a term used formerly to express the grand ensign or standard of an army; also the standard bearer.

A'NCIENT demesne (*Law*) a tenure by which all the manors belonging to the crown in the days of St. Edward and William the Conqueror were held. The latter caused the number and names of all manors, after a survey of them, to be enrolled in the book called the *Doomsday-Book*; and all lands found therein belonging to the crown, under the title of *Terra Regis*, are called *Ancient Demesne*. 9 *H. 4*, c. 5; 8 *H. 6*, c. 26; *F. N. B.* 14, 228, &c.; *Kitch*, 98, &c.; 4 *Inst.* 269; *New Nat. Brev.* 32, 35.

A'NCIENTS (*Law*) a term for gentlemen in the Inns of Court who are of a certain standing. In the Middle Temple all who have passed their readings are termed *ancients*: in Gray's Inn the ancients are the oldest barristers; besides which the society consists of *benchers*, barristers, and students. In the inns of Chancery it consists of ancients and students, or clerks.

A'NCIENTY (*Law*) a term for eldership or seniority used in the stat. of Ireland. 14 *Hen. 8*.

A'NCILE (*Ant.*) *Ancyle*, a sacred shield among the Romans, which was said to have fallen from heaven in the reign of Numa, who ordered eleven others to be made in imitation of it, and appointed an order of priests, called the *Salii*, to watch over their safety in the temple. It was so called, according to Ovid, because it was rounded, or had all its angles cut off.

Ovid. Fast. 1. 3, v. 377.

*Idque ancile vocat; quod ab omni parte recisum est,
Quaque notes oculis, angulus omnis abest.*

The ancile was generally supposed to have fallen on the calends, or first of March, on which day the feast of Mars and Juno was celebrated, which were called, on that account, the *Ancilia*, or feast of the *Ancilia*, when the priests carried the *Ancilia* in solemn procession round the city, dancing, and singing praises in honour of the god Mars. *Virg. Æn.* 1. 8, v. 664.

*Hic exultantes Salios, nudosque Lupercos,
Lanigerosque apices, et lapsa ancilia celo
Extuderat.*

Juven. sat. 2, v. 125.

*Arcano qui sacra ferens nutantia loro
Sudavit clypeis ancilibus.*

Ovid. Fast. 1. 3, v. 259.

*Quis mihi nunc dicet, quare caelestia Martio
Arma ferant Salii.*

During the celebration of this festival all public or important business was suspended; and it was deemed unfortunate to undertake an expedition or to be married on those days. *Dionys. Hal.* 1. 2; *Val. Max.* 1. 1, c. 1; *Liv.* 1. 1, c. 20; *Tacit. Hist.* 1. 1, c. 89; *Suct. in Otho.* c. 8; *Plut. in Num.*; *Obseq. de Prod.* c. 104; *Schol. in Horat. Carm.* 1. 3, od. 5, v. 10; *Serv. in Æn.* 1. 7, v. 188; *Fest. de Signif. Verb.*

A'NCILE (*Numis.*) the form of the ancile, or sacred shield [vide *Ancile*] is mostly compared to the Thracian *petta*, which it resembled in its circular or crescent-like form, as may be observed in the annexed figure, the reverse of a monetal coin of the Licinian family, representing the ancilia on each side the apex, or priest's cap. This is supposed by Vaillant to have been struck by Publius Licinius Stolo, in honour of Augustus, on his triumphant return from Syria; the inscription *Publius STOLO III. VIR.* *Vaill. Numis. Imper. Rom.*; *Patin. Num. Imp. Rom.*; *Beg. Brand. Thes. tom. 2*; *Morell. Thesaur. Numis.*

A'NCISTRUM (*Bot.*) a genus of plants, Class 2 *Diandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* one-leaved.—COR. superior.—STAM. *filaments* capillary; *anthers* roundish.—PIST. *germ* oblong; *style* filiform; *stigma* pencil-shaped.—PER. none; *seed* single.

Species. The species are perennials, as—*Ancistrum decumbens*, *latebrosum*, &c. *Linn. Spec. Plant.*

A'NCLABRA (*Ant.*) brazen vessels which the priests used in their sacrifices. *Fest. de Signif. Verb.*

A'NCLE (*Anat.*) the malleolus, which is either outer, *externus*, or inner, *internus*. [vide *Malleolus*]

A'NCON (*Anat.*) ἄγκων, the elbow; the gibbous eminence, or flexure of the cubit, on which we lean, being the greatest of the two apophyses of the Ulna, and the same as the *olecranon*. *Ruf. Ephes. de Appel. Part. Corp. human.* 1. 1, c. 10; *Orib.* 1. 25, c. 1; *Castell. Lex. Med.*

A'NCONÆTUS (*Anat.*) the same as *Cubitalis musculus*.

A'NCONES (*Archit.*) from ἄγκων, the elbow; the consoles or ornaments cut on the corners of arches. *Vitruv. de Archit.* 1. 4, c. 6.

A'NCONY (*Mech.*) a bloom or mass of iron wrought into the figure of a flat bar.

A'NCORA (*Ant.*) vide *Anchora*.

A'NCORA (*Min.*) *Calx*.

A'NCORALIA (*Ant.*) or *ancorarii funes*; the ropes to which the anchors were fixed. The Venetians, according to Cæsar, used chains instead of ropes. *Cæs. de Bell. Gall.* 1. 3, c. 15; *Liv.* 1. 22, c. 19.

A'NCORALIS (*Anat.*) the same as *Coracoides Processus*.

A'NCRED (*Her.*) vide *Anchored*.

A'NCTER (*Surg.*) ἀγκυτερ, from ἄγκω, to constrict. 1. The fibula or button by which the lips of wounds are held together. 2. That part of the neck which is subject to choking. *Cels.* 1. 5, c. 26; *Gal. de Meth. Med.* 1. 1; *Gorr. Def. Med.*

A'NCUBITUS (*Med.*) that affection of the eyes in which they seem to contain sand.

A'NCUMULENTÆ (*Ant.*) women in the time of their menstruation who are supposed to have contracted an inquinamentum. *Fest. de Verb. Signif.*

A'NCYLE (*Ant.*) vide *Ancile*.

ANCYLE (*Med.*) a fixation of the joints from a settlement of the humours. *Hippocrat. de Art.*; *Cels.* 1. 5, c. 18, &c.; *Gal. Defn. Med.*; *Aet. Tetrab.* 2, serm. 4, c. 36; *Paul. Æginet. de Re Med.* 1. 4, c. 55; *Scribon. Larg. de Compos. Med.* c. 104; *Gorr. Defn. Med.*; *Foes. Econom. Hippocrat.*

ANCY'LIA (*Ant.*) vide *Ancile*.

ANCYLOBLE/PHARON (*Med.*) ἀγκυλοβλέφαρον, from ἀγκύλος, curved or closed, and βλέφαρον, the eyelid; a disease of the eye which closes the eyelids. *Cels. de Rc Med.* 1. 7, c. 7; *Paul. Æginet. de Re Med.* 1. 6, c. 15; *Gorr. Def. Med.*

ANCYLOGLOSSUM (*Med.*) ἀγκυλόγλωσσον, from ἀγκύλος, crooked, and γλῶσσα, the tongue, tongue-tied; a contraction of the ligaments of the tongue so as to hinder the speech. *Aet. Tetrab.* 2, serm. 4, c. 36; *Paul. Æginet. de Rc Med.* 1. 6, c. 39; *Gorr. Defn. Med.*

ANCYLOME'LE (*Surg.*) ἀγκύλος, crooked, and μάχνη, a knife; a surgeon's probe. *Gorr. Defn. Med.*

ANCYLO'SIS (*Med.*) the same as *Ancyle*.

ANCYLO'TOMOS (*Surg.*) ἀγκυλοτόμος, from ἀγκύλος, crooked, and τέμνω, to cut; any crooked surgical knife. *Paul. Æginet. apud Gorr. Def. Med.*

A'NCYRA (*Surg.*) from ἀγκυρα, an anchor; a surgical hook. Epicharmus gives the same name to the *membrum virile*. *Gorr. Def. Med.*

ANCYRO'IDES (*Anat.*) or *coracoides*; the name of a process from the upper part of the neck of the Scapula, or shoulder-blade, resembling an anchor, from which it takes its name. *Ruf. Ephes. de Appell. Part. Human. Corp.* 1. 2, c. 2; *Oribas. Med. Coll.* 1. 25, c. 1.

A'NDA (*Bot.*) a tree; the wood of which is spongy and light. The fruit is said to be purgative.

ANDA'BATÆ (*Ant.*) gladiators who fought blindfolded; whence the proverb *Andabatarum more*, denoting rash and inconsiderate measures. *Cic. ad. Fam.* 1. 7; *Hieron. contra Jovian.*; *Rhodig. Antiq. Lect.* 1. 11, c. 11; *Turneb. Adv.* 1. 19, c. 8; *Alex. Gen. Dier.* 1. 6, c. 22.

ANDA'NTE (*Mus.*) Italian for exact and just time in playing, so as to keep the notes distinct from each other, chiefly in respect to the thorough bass.—*Andante largo* signifies that the music must be slow, the time exactly observed, and each note distinct.

ANDANTI'NO (*Mus.*) an Italian word for gentle, tender; somewhat slower than *Andante*.

A'NDARAC (*Chem.*) red orpiment.

ANDAS (*Chem.*) a solution of salt.

A'NDERA (*Archæol.*) 1. A swath in mowing. 2. As much ground as a man can stride over at once.

AND'IRA (*Bot.*) a tree of Brazil, the bark, wood, and fruit of which are as bitter as aloes. *G. Pison. Med. Bras.*

ANDIRA guacu (*Zool.*) a kind of bat, in Brazil, the tongue and heart of which are reckoned poisons.

A'NDIRONS (*Mech.*) or Hand-irons, according to Skinner; irons placed before the grate of a kitchen chimney for the spits to turn in, or for the chimney of a chamber where wood may be laid. They are so called because they may be taken up by the hand.

ANDRA'CHNE (*Bot.*) ἀνδράχνη, or *atticè*, ἀνδράχνη; the name of a tree like a strawberry-tree, which, according to Pliny, answered most to the Portulaca or Purslain of the Latins. This name has, however, been given to many other plants. *Theophrast. Hist. Plant.* 1. 7, c. 4; *Dioscor.* 1. 2, c. 15; *Plin.* 1. 13, c. 22; *Gal. de Simpl.* 1. 6; *Oribas. Med. Coll.* 1. 15; *Hellad. apud Phot. Bibliothek*; *Phavorin. Lex.*; *Aet. Tetrab.* 1, serm. 1; *Gorr. Defn. Med.*

ANDRACHNE, in the *Linnean system*, a genus of plants, Class 21 *Monoecia*, Order 11 *Gynandria*.

Generic Characters. CAL. perianth five-leaved.—COR. petals five; nectary leaflets five.—STAM. filaments five; anthers simple.—PIST. germ superior; styles three; stig-

mas globose.—PER. capsule globose-trilobate; seeds in pairs.

Species. There are but few species of this genus, which are shrubs. *Linn. Spec. Plant.*

ANDRACHNE Theophrasti (*Bot.*) the *Arbutus andrachne* of Linnæus.

ANDRANOTOMIA (*Anat.*) from ἀνήρ, vir, and ἀνατομή; the dissection of a male subject. *Castell. Lex. Med.*

A'NDRAPHAX (*Bot.*) ἀνδραφάξ, stinking orache; the *Che-nopodium vulgare* of Linnæus. *Hippocrat. de Mul.*

ANDRAPODÓCAPE'LOI (*Ant.*) ἀνδραποδοκάπηλοι, from ἀδράποδον, a slave, and κάπηλος, a seller; a slave merchant or dealer, who attended the slave market at Athens to dispose of their slaves. *Galen.*

ANDRAPODI'STES (*Ant.*) ἀνδραποδιστής, slave-mongers who were mostly kidnappers that stole children to sell them, for which the Thessalians were noted, according to Aristophanes.

Aristoph. Plut. act 2, scen. 5.

κερδαίνειν βελομένους τις

*Εμπροσθ' ἦσαν ἐκ Θεσσαλίας παρὰ πλείων ἀνδραποδιστῶν.

ANDRE'NA (*Ent.*) a division of the genus *apis*, according to Fabricius, consisting of those insects of this tribe having the tongue three-cleft.

ANDRE'OLITE (*Min.*) cross-stone; a species of stone of the zeolite family.

A'NDREW, Sr. *Knights of* (*Her.*) an order instituted by Peter the Great, in 1698. The badge of this order is a gold medal, on one side whereof is represented St. Andrew's Cross, with these words: "Cazar Pierre Monarque de toute la Russie."—St. Andrew's Cross was in the form of the letter X.

ANDREW'S day, *St. (Ecc.)* a festival celebrated in the Christian church on the 30th of November, in honour of the apostle St. Andrew.

A'NDRIA (*Ant.*) Ἄνδρια, a name given to the public entertainments in Crete, which were called by the Spartans φιδτια. *Plut. in Lycurg.*

ANDRIA (*Lit.*) the title of one of Terence's plays.

ANDRIA (*Med.*) an hermaphrodite.

ANDRO'CHIA (*Archæol.*) a name given, by Fleta, to a milk-maid. *Flet.* 1. 2, c. 87.

ANDROGEN'IA (*Med.*) ἀνδρογένεια, from ἀνήρ, homo, and γενναω, gigno; a propagation of the male sex.

ANDROGEO'NIA (*Ant.*) ἀνδρογεώνια, annual games celebrated in the Ceramicus at Athens, by the command of Minos, in memory of his son Androgeos, who was murdered by the Athenians. *Plut. in Thes.*; *Hesych. Lex.*

ANDRO'GYNA dichogamia (*Bot.*) the same as *Dichogamia*.

ANDRO'GYNE (*Med.*) ἀνδρογένη, from ἀνήρ, a man, and γυνή, a woman; hermaphrodites, or effeminate men. *Hippocrat. de Vict. in Acut. Morb.*

ANDRO'GYNOUS (*Bot.*) androgynus, from ἀνήρ, a man, and γυνή, a woman; an epithet for plants bearing male and female flowers on the same root, without any mixture of hermaphrodites: androgynous plants are found mostly in the Class *Monoecia*.

ANDROGYNOUS is also an epithet for flowers having stamens or pistils only.

ANDROGYNOUS (*Astrol.*) an epithet for a planet that is sometimes hot and sometimes cold.

ANDRO'IDES (*Mech.*) the name given to an automaton in the form of a man, who, by means of springs, walks, talks, handles, &c. like a man.

A'NDROLEPSY (*Ant.*) ἀνδροληψία, from ἀνήρ, a man, and λαμβάνω, to seize; an action, according to the laws of Athens, against such as protected murderers, by which the relations of the deceased were empowered to seize three

men in the city or house where the malefactor had fled, till he either surrendered or satisfaction was made in some other way for the murder. *Demosthen. contra Aristocrat.*; *Poll. Onomast.* l. 8, c. 6.

ANDROMACHI *theriaca* (*Med.*) the treacle of Andromachus, the physician; or Venice treacle, consisting of more than sixty ingredients. *Gal. de Antidot.* l. 2; *Act. Tetrab.* 13, serm. 3, c. 13; *Act. de Meth. Med.* l. 5, c. 6; *Myrep. de Pil.* sec. 32.

ANDROMEDA (*Astron.*) ἀνδρομίδα, a constellation of the Northern hemisphere, containing 23 stars according to Ptolemy, and 27 stars according to Kepler and Bayer, of which the three principal are of the second magnitude, although Ptolemy reckons them to be of the third; namely, the first, in the head, which is called ὀμφαλὸς ἵππου; the second, in the girdle, called by the Arabians *mirach*; and the third, in the Southern foot, called *alamak*. This constellation is called by the Arabians *marah musalseleth*, or the woman chained; because Andromeda is represented as a female bound to a rock, according to the fable of the Greeks, who say that Andromeda, the daughter of Cassiopeia, was bound to a rock by the Nereids, and afterwards released by Perseus.

Manil. Astronom. l. 1, v. 355.

*Andromedam vastos metuentem piscis hiatus
Expositam ponto desilet, scopulis que revinctam
Ne veterem Perseus caelo quoque servet amorem
Auxilioque juvet.*

Arat. de Apparent. v. 197; *Hipparch. in Arat.*; *Hygin. Astronom. Poet.*; *Eratosthen. Asterism*; *Ptol. Almagest.* l. 7, c. 5.

ANDROMEDA (*Bot.*) a genus of plants, Class 10 *Decandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* five-parted.—COR. *monopetalous*.—STAM. *filaments* subulate; *anthers* two-horned.—PIST. *germ* roundish; *style* cylindrical; *stigma* obtuse.—PER. *capsule* roundish; *partitions* contrary; *seeds* very many.

Species. The species are mostly shrubs, and natives of Lapland, North America, and Russia, as the *Andromeda tetragona*, *paniculata*, *calyculata*, &c.; but the *Andromeda palifolia*, *Erica humilis* seu *Rhododendron*, Marsh *Andromeda*, is a native of Britain. *Raii Hist. Plant.*; *Pluk. Almagest. Botan.*; *Linn. Spec. Plant.*

ANDRONION, i. e. *Andronis pistelli* (*Med.*) trochees of Andron.

ANDROPOGON (*Bot.*) from ἀνὴρ, a man, and πόγων, a beard; a genus of grasses, Class 23 *Polygamia*, Order 1 *Monoecia*.

eric Characters. CAL. a glume.—COR. a glume; *nectary* two-leaved.—STAM. *filaments* three; *anthers* oblong.—PIST. *germ* oblong; *styles* two; *stigmas* obtuse.—PER. none; *seed* solitary.

Species. The species are very numerous in the Linnean system, and are some of them called, by other writers, *Lagurns*, as the *Andropogon divaricatum*, *nardus*, &c. some *Festuca*, as *Andropogon distachium*, *hartum*, &c. some *Chloris*, as the *Andropogon pubescens*, *fasciculatum*, *polydactylon*, &c. *J. Bauh. Hist. Plant.*; *Raii Hist. Plant.*; *Pluk. Almag. Botan.*; *Linn. Spec. Plant.*

ANDROSACE (*Bot.*) a genus of plants, Class 5 *Pentandria*, Order 1 *Monogynia*.

Generic Character. CAL. *involucre* many-leaved; *perianth* one-leaved.—COR. *monopetalous*; *tube* ovate; *border* flat; *divisions* ovate-oblong; *throat* beset with glands.—STAM. *filaments* very short; *anthers* oblong.—PIST. *germ* globose; *style* filiform; *stigma* globose.—PER. *capsule* globose; *seeds* very many; *receptacle* erect.

Species. Some of the species are annuals, as—*Androsace maxima* seu *Alsini affinis*, Oval-leaved *Androsace*.—*An-*

drosace septentrionalis, *Aretia* seu *Alsine verna*, Tooth-leaved *Androsace*, &c.; but some are perennials, as the—*Androsace lactea*, *Aretia* seu *Sedum Alpinum*, Grass-leaved *Androsace*.—*Androsace odoratissima* seu *orientalis*.—*Androsace chamæjasme* seu *Sedum minus*, &c. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tournef. Inst.*; *Boerharv. Index Plant.*; *Linn. Spec. Plant.*

ANDROSA'CHE (*Nat.*) Sea Navel-wort; a submarine production found on the rocks and shells of fishes. Its powder is diuretic

ANDROSACHE *diapuesia* (*Bot.*) the *Aretia Helvetica* of Linnaeus.—*Androsache caulescens*, the *Aretia Alpina* of Linnaeus.

ANDROSÆMUM (*Bot.*) ἀνδροσαίμων, Tutsan or Park-leaves; a sort of hypericum, the flower of which yields juice like man's blood, whence it is called ἀνδροσαίμων, *androsæmon*, ἀνδρὸς αἷμα, i. e. man's blood. The leaves, when bruised, yield a resinous smell: the seed pounded and drunk in a decoction, was reckoned good for the bile. *Dioscor.* l. 2, c. 172; *Plin.* l. 27, c. 4; *Gal. de Simpl.* l. 4; *Oribas. Med. Coll.* l. 15; *Act. Tetrab.* 1, serm. 1; *Paul. Æginet. de Re Med.* l. 7, c. 3; *Lem. des Drog.*

ANDROSÆMON, in the Linnean system, the name of several species of the *Hypericum*.

ANDRUM (*Med.*) an epidemic disease on the coast of Malabar, the same as the *Hydrocele*.

ANDRYALE (*Bot.*) from ἀνδρὸς ἄλη, i. e. the wandering of a man; a genus of plants, Class 19 *Syngenesia*, Order 1 *Polygamia Æqualis*.

Generic Characters. CAL. common.—COR. *compound umbellate*; *corrullules* hermaphrodite.—STAM. *filaments* five; *anthers* cylindrical.—PIST. *germ* ovate; *style* filiform; *stigmas* two.—PER. none; *seeds* solitary; *down* capillary; *receptacle* villose.

Species. The species are mostly perennials, as the *Andryale cheiranthifolia*, *pinnatifida* seu *Hieracium incanum*, &c.; but the *Andryale integrifolia* seu *Sonchus villosus*, Hairy *Androsace*, is an annual. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Linn. Spec. Plant.*

TO AN'EAL (*Mech.*) to bake or harden glass, tiles, &c. in the fire.

A'NEE (*Com.*) a corn measure in France, containing six gallons.

ANEE (*Com.*) a French measure for grain, equal to as much as an ass can carry.

A'NEGRAS (*Com.*) a measure of corn used in Seville, above half a peck English.

ANEILE'MA (*Med.*) ἄνειλημα, an involution of the parts occasioned by the gripes. *Hippocrat. de Vet. Med.*

ANEMIUS *furnus* (*Alch.*) a wind furnace, used for making strong fires.

ANEMOMETER (*Aer.*) from ἀνεμος, the wind, and μέτρον, a measure; an instrument for measuring the force of the wind, which was invented by Wolfius.

ANEMONE (*Bot.*) ἀνεμώνη, a plant so called, ἀπὸ τῆ ἀνέμου, from the wind, because it is easily destroyed by the wind, to which Ovid refers.

Ovid. Met. l. 10, v. 737.

—————brevis est tamen usus in illo.
Namque malè hærentem, et nimid levitate caducum
Excutiunt idem, qui præstant nomina, venti.

It is fabled to have sprung from the tears of Venus, on the death of Adonis, according to *Bion. Idyl.* 1.

Αἰ αἰ τῶν κυθέρων, ἀπάλετο καλὸς Ἄδωνις
Δάκρυον ἂ Παιφίη τὸσον ἐκχείει, ὅσσον Ἄδωνις
Αἷμα χέει, τὰ δὲ πάντα ποτὶ χθονὶ γίνονται ἄνεθ
Αἷμα ῥόδου τίκτει, τὰ δὲ δάκρυα τῶν ἀνεμώνων.

others, according to the Scholiast on Theocrites, make it to have sprung from the blood of Adonis. It is reckoned to be detersive and aperient. *Theophrast.* l. 6, c. 7; *Dioscor.* l. 2, c. 207; *Plin.* l. 21, c. 23; *Oribas. Med. Coll.* l. 15; *Aet. Tetrab.* 4, serm. 3, c. 12; *Paul. Æginet. de Re Med.* l. 7, c. 3.

ANEMONE, in the Linnean system, a genus of plants, Class 13 Polyandria, Order 7 Polygynia.

Generic Characters. CAL. none.—COR. petals in two or three rows.—STAM. filaments numerous; anthers twin.—PIST. germs numerous; styles acuminate; stigmas obtuse.—PER. none; receptacle globular or oblong; seeds very many.

Species. The species are perennials, as—*Anemone Hepatica*, *Hepatica* seu *Trifolium hepaticum*, *Hepatica*.—*Anemone patens* seu *Pulsatilla patens*, Woolly-leaved Anemone.—*Anemone Alpina* seu *Burseriana*, Alpine Anemone, &c. &c. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tournef. Inst.*; *Boerharv. Ind. Plant.*; *Linn. Spec. Plant.*

ANEMONOSPERMOS (*Bot.*) the *Arctotis aspera* and *Gorteria rigens* of Linnæus.

ANEMOSCOPE (*Mech.*) from ἀνεμος, the wind, and σκοπέω, to behold; an instrument for foretelling the changes of the wind and weather. Such an instrument was invented by Otto Guerick, consisting of a little man in a glass tube, which rose and fell according to the changes of the weather. *Acta Erud.* 1664.

AN END (*Mar.*) perpendicular, as applied to any mast or boom. The top mast is an end when hoisted up to its usual station at the head of the lower masts.

A'NEOS (*Med.*) ἄνεως, deprived of voice and reason.

ANETHINUM vinum aut oleum (*Med.*) ἀνήθινος οἶνος, a preparation of wine or oil with Anethum. *Dioscor.* l. 5, c. 75.

ANETHOXULA (*Bot.*) the woody root of Dill. *Myrep.* sect. 8, c. 52.

ANETHUM (*Bot.*) ἀνήθον, probably changed from ἀνίεθον, or ἀνίεστον, unconquered, to denote its power; Dill, a plant so called because it sharpens the appetite. It was used for garlands by the ancients. *Theocrit.* idyl. 7.

Κήρυ τῆνο καθ' ἄμαρ, ἀνήθινον, ἢ ρόδονεττα
 Ἡ' καὶ λευκοῖων σέφανον περὶ κρατὶ Φυλάσσων
 τὸν πετελατικὸν οἶνον ἀπὸ κρητῆρος ἀφύεῳ
 Πᾶρ περὶ κεκλιμένους.

Virg. Eclog. 2, v. 48.

Narcissum et florem jungit bene olentis anethi.

and formed, according to Plinius Valerius, a principal ingredient in the food given to the athleteæ, on account of its nutritious quality. *Dioscor.* l. 3, c. 67; *Plin.* l. 20, c. 18; *Oribas. Synop.* l. 1, c. 22; *Plin. Valer.* l. 4, c. 27.

ANETHUM, in the Linnean system, a genus of plants, Class 5 Pentandria, Order 2 Digynia.

Generic Characters. CAL. umbel, universal and partial, manifold; involucre neither universal nor partial; perianth proper, obsolete.—COR. universal uniform; floscules all fertile; proper petals five.—STAM. filaments capillary; anthers roundish.—PIST. germ inferior; styles approximating; stigmas obtuse.—PER. none; fruit subovate; seeds two.

Species. The species are—*Anethum graveolens* seu *hortense*, Common Dill, an annual, native of Portugal.—*Anethum segetum* seu *sylvestre*, &c. seu *Feniculum Lusitanicum*, &c. an annual, native of Portugal.—*Anethum feniculum*, *Feniculum dulce* seu *Ligusticum feniculum*, Fennel or Finckle, a perennial, native of Britain. *J. Bauhin. Hist. Plant.*; *C. Bauhin. Pin. Theat.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*;

Tourn. Inst. Herb.; *Boerh. Ind. Plant.*; *Linn. Spec. Plant.*

ANETICUS (*Med.*) ἀνετικός, from ἀνίμι, to remit; assuaging pain, an epithet applied to remedies. *Castell. Lex. Medic.*

A'NEURISM (*Med.*) ἀνευρισμῆς, from ἀνευρίνω, to dilate; a tumour in the arteries from excessive dilatation. *Gal. De finit. Med.*; *Aet. Tetrab.* 7, serm. 3, c. 10; *Paul. Æginet. de Re Med.* l. 6, c. 37.

ANFE/LTYHDE (*Archæol.*) Anfealtihle, a simple accusation from which, according to the Saxon law, a man might be discharged upon his own oath and that of two men, in distinction from the *Accusatio triplex*, which required the oaths of five more. *Leges Adelstani apud Brompton.*

ANGARI (*Ant.*) a Persian word for post-boys or couriers, who were employed to carry letters, and go on different errands. *Joseph. Antiq.* l. 11, c. 6; *Hesychius et Suidas*; *Rhodig. Antiq. Lect.* l. 18.

ANGARIA (*Ant.*) the post-office or post-houses where the angari or post-boys stopped. [vide *Angari*]

ANGEIO/TOMY (*Anat.*) ἀγγειοτομία, from ἀγγεῖον, a vessel, and τέμνω, to cut; a dissection of the blood vessels, consisting of arteriotomy, and phlebotomy.

ANGEL (*Numis.*) an English gold coin, equal to 6s. 8d.; so called from its having the impression of an angel on it, as in the subjoined figure of a coin of Edward the Fourth, which represents the archangel Michael standing with one

foot on the dragon, which he is piercing with his spear, the upper end of which terminates in a cross, the inscription EDWARD DEI GRA. REX ANGL. Z. FRANÇ.; on the reverse, a ship, with a large cross for the mast, the letter E on the right side, and a rose on the left; on the side of the ship the arms of England quartered with those of France, the inscription PER CRUCEM TUA SALUA NOS XPE REDEMPT.

ANGEL shot (*Gun.*) a cannon bullet cut in two, and the halves linked together with a chain.

ANGEL bed (*Mech.*) an open bed without bed posts.

ANGEL fish (*Ich.*) the πύρ of Aristotle, the *Squatina* of Pliny, the *Ange* or *Angelot* of Belonius, the *Monk* or *Angel-fish* of Ray, the *Squalus squatina* of Linnæus, a fish, which connects the genus of Rays and Sharks. It differs from both in the situation of its mouth, which is placed at the extremity of the head. It is extremely voracious and fierce, and, like the Rays, feeds on flounders and flat-fish. The aspect of this fish is extremely malignant, and its skin very rough. *Aristot. Hist. Anim.* l. 5, c. 5; *Plin.* l. 9, c. 12; *Athen.* l. 7, c. 19; *Oppian. Halicut.* l. 1; *Rondel. Gessn. de Pis. Will. Ichth.*; *Raii Synop. Pisc.*

ANGELET (*Numis.*) a gold coin equal to half an angel. [vide *Angel*]

ANGELIC Habit (*Ecc.*) angelica vestis, ἀγγελικὸν σῆμα; a monkish garment which laymen put on a little before their death, that they might have the benefit of the prayers of the monks. *Allat. de Cons. Eccl. Occid. et Orient.* l. 3, c. 8; *Eucholog. Græcor.* p. 499.

ANGELICA (*Bot.*) from the angelic virtue ascribed to it, a genus of plants, Class 5 Pentandria, Order 2 Digynia.

Generic Characters. CAL. universal umbel manifold.—COR. universal uniform; partial petals five.—STAM. filaments simple; anthers simple.—PIST. germ inferior; styles reflex; stigmas obtuse.—PER. none; fruit roundish; seeds two.

Species. The species are biennials, as the *Angelica arcangelica* and *lucida*; or perennials, as the *Angelica sylvestris*, *verticillaris*, &c. *J. Bauhin. Hist. Plant.*; *C. Bauhin. Pin. Theat.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tourn. Inst. Herb.*; *Boerh. Ind. Plant.*; *Linn. Spec. Plant.*

ANGELICA is also the name of several species, as the *Chærophyllum aromaticum*, the *Cicuta maculata*, the *Laserpitium latifolium Smyrniun*, and *Aman* of Linnæus. *C. Bauhin. Pin.*, &c.—*Angelica-tree*, the *Arabia spinosa* of Linnæus.

ANGELICÆ (*Ecc.*) an order of nuns who had two houses in Italy, at Milan, and Cremona. It was founded by Louisa Torelli, countess of Guastalli, by permission of Pope Paul III. in 1534. *Hellot. Hist. des Ord. Mon. tom. iv. c. 16.*

ANGELICI (*Ecc.*) ἄγγελικοι, heretics of the third century, so called, as Epiphanius thinks, because they believed that the world was made by angels; and Augustin adds that they also worshipped angels. *Epiphani. Hæres. 6*; *Augustin. Hæres. 39*; *Baron. Annual. Ann. 360.*

ANGELICI (*Her.*) an order of knighthood, instituted in 1191, by Angelus Flavius Comnenus, emperor of Constantinople.

ANGELICUS pulvis (*Chem.*) mercury.

ANGERONA'LIA (*Ant.*) a festival celebrated at Rome on the 12th Kal. Jan. i. e. the 21st of December, in honour of the goddess Angerona, to whom sacrifices were offered in the curia or senate-house. *Varro de Lat. Ling. l. 5*; *Gyrald. Syntag. Deor. l. p. 57*; *Vaill. Numism. Imperat. vol. 2*; *Ursat. de Not. Roman. apud Græv. Thes. Antig. Roman. tom. ii. p. 675.*

ANGI (*Med.*) buboes or tumours in the groin.

ANGIGLO'SSI (*Med.*) Stammerers.

ANGILD (*Law*) a single fine for an offence, in distinction from the *two-gild* and *tri-gild*, the double and treble fine. *Laws of Ina.*

ANGINA (*Med.*) ζωνάγχη, from ἄγχω, to strangle, or suffocate; the Quinsey [vide *Cyananche*], a disease in the throat, of which three species are mentioned by the ancients, namely, *Angina aquosa*, *Angina gangrænosâ*, and *Angina stridula*, the Croup. *Hippocrat. de Prognost.*; *Aret. de Curat. Morb. Acut. l. 1, c. 7*; *Cels. de Re Med. l. 4, c. 4*; *Gal. de Loc. Affect. l. 4*; *Aet. Tetrab. 2, serm. 4, c. 47*; *Alex. Trallian. l. 4, c. 1*; *Act. de Meth. Med. l. 2, c. 10*; *Gorr. Defin. Med.*; *Foes. Econom. Hippocrat.*—*Angina pectoris*, a disease described by Dr. Heberdeen, consisting of an acute constrictory pain at the lower end of the sternum.

ANGIOLOGIA (*Med.*) from ἀγγεῖον, a vessel, and λόγος, a speech; Angiology, the doctrine of the arteries, nerves, and other vessels. *Gal. Introduc.*

ANGIOP'TERIS (*Bot.*) the *Onoclea* of Linnæus.

ANGIOSPERMIA (*Bot.*) from ἀγγεῖον, a vessel, and σπέρμα, seed, i. e. Seed included in a vessel or capsule; an epithet for the second Order of the 14th Class *Didynamia*, including the genera, having the Calyces undivided: as—*Aeginetia*, *Tanaecium*. Those having the Calyces bifid, as—*Orobanche*, *Broomrape*; *Crescentia*, *Calabash-tree*; *Obolaria*; *Hebenstreitia*; *Torenia*; *Castilleia*; *Acanthus*; *Premna*. Those having the Calyces trifid, as—*Halleria*. Those having the Calyces quadrifid, as—*Lathræa*; *Euphrasia*, *Eye-bright*; *Rhinanthus*, *Yellow Rattle*; *Melampyrum*, *Cow Wheat*; *Lippia*; *Bartsia*; *Schwalbea*; *Barleria*; *Laeselia*; *Gmelina*; *Lantana*. Those having the Calyces five cleft, as—*Limosella*; *Avicennia*; *Tozzia*; *Phyllopsis*; *Browallia*; *Brunsfelsia*; *Holmskioldia*; *Lindernia*; *Conobea*; *Columnnea*; *Vandellia*; *Russelia*; *Scrophularia*; *Digitalis*, *Fox Glove*; *Antirrhinum*, *Snap Dragon*; *Fluellin*, *Toad Flax*; *Pedicularis*, *Louse Wort*; *Mimulus*, *Monkey Flower*; *Sesamum*, *Oily Grain*; *Alectra*; *Ges-*

neria; *Cyrilla*; *Stemodia*; *Achimenes*; *Celsia*; *Hemimeris*; *Sibthorpia*; *Capraria*; *Bignonia*; *Incarvillea*; *Ruelia*; *Buchnera*; *Erinus*; *Petrea*; *Mamilea*; *Anarrhinum*; *Gerardia*; *Dodartia*; *Chelone*; *Pentstemon*; *Gloxinia*; *Tourretia*; *Martynia*; *Maurandia*; *Millingtonia*; *Tartula*; *Pedalium*; *Linnea*; *Cornutia*; *Ovieda*; *Amasonia*; *Besleria*; *Bantia*; *Spielmannia*; *Vitex*, *Chaste-Tree*; *Myoporum*; *Citharexylon*; *Volkameria*; *Clerodendron*; *Duranta*. Calyces many cleft, as—*Hyobanche*; *Lepidagathis*; *Cymbaria*; *Thunbergia*; *Melianthus*, *Honey-Flower*.

ANGIOSPERMOS (*Bot.*) an epithet for any flower having its seed included in a capsule, in distinction from those that are Gymnospermos, or naked seeded; hence also plants are likewise denominated *Angiospermia*, of which description is the second order in the Class *Didynamia*. [vide *Angiospermia*]

AN'GLE (*Math.*) from the Greek ἄγκυλος, bent, denotes the inclination of two lines, or planes, to each other, which meet together in a point called the *vertex* or angular point. The lines are called the legs or sides of the angle, which is named either by one letter, as A, or by three letters, as B A C, the middle of which always stands for the angle to be described. Angles are measured by an arc of a circle, drawn from the vertex with any radius at pleasure, as the arc D E, drawn from A, which is a measure of the angle B A C, i. e. the angle B A C is said to be as many degrees as the arc D E, a circle being always supposed to be divided into 360 degrees.

Angles in Geometry.

Angles, as to their magnitude, are right, oblique, or equal.

A *right angle* is formed by one perpendicular right line falling upon another, as B A C, which is subtended by the quadrant of a circle, is consequently equal to 90 degrees.—*Oblique angle* is formed by lines not perpendicular, which are either acute or obtuse.—An *Acute angle* is less than a right angle, and consequently less than 90 degrees, as D A B.—*Obtuse angle* is greater than a right angle, and consequently more than 90 degrees, as E A B.—*Equal angles* are those whose arcs or measures *km* and *mo* are proportionate to the radii.

Fig. 3.

As to their construction; angles are rectilinear, curvilinear, mixed, plane, spherical, solid, &c.—*Rectilinear angle* is formed by two legs, which are right lines, as in the preceding figures—*Curvilinear angle* has two curved lines for its legs, as A C B, in fig. 4, formed by the arcs B C and A C.—*Mixed angle* has one of its legs a right line, and the other as the angles B C D, in fig. 4, and B C E formed by arc B C, and the right lines D C or C E, so also A C D or A C E curved.—*Plane angle* is the inclination of two lines in the same plane, and meeting in a point. The above-mentioned angles are all of this description.—*Spherical angle* is an angle formed on the surface of the sphere by the intersection of two great circles, or the inclination of the planes of those circles, as

ANGLE.

A D C, in *fig. 5*, or B D E.—

Solid angle is the inclination of more than two right lines that touch one another, and are not in the same superficies, as where two walls and the ceiling meet, in which case a solid angle is formed by three lines. To these may be added others less usual, as a—*Horned angle*, made by a right line, whether secant or tangent, with the circumference of a circle.—*Lunular angle*, formed by the intersection of two circular lines, one convex, and the other concave.—*Cissoïd angle*, an inner angle made by two spherical convex lines intersecting each other.—*Sistroïd angle*, in the form of a sistrum.—*Pelecoïd angle*, in the form of a hatchet.

As to their situation; *angles* are contiguous, adjacent, vertical, alternate, external, internal, &c.—*Contiguous angles* have the same vertex, and one leg common to both, as A B C E B A.—*Adjacent angles* are those of which the leg of the one produced forms the leg of the other, as E B C, *fig. 6*, and E B D.—

Vertical, or opposite angles, are those which are made by lines cutting or intersecting each other, which are consequently opposite to each other, as the angles C E A, *fig. 7*, D E B. An angle in a triangle is also said to be opposed to the side that subtends it, as the angle B, *fig. 8*, to the line A C.—

Internal angles are those which are made within any right lined figure, in distinction from the *external angles*, which are placed without the figure.—*Internal and opposite angles* are formed by a line cutting two parallel lines, as B G H, *fig. 9*, and G H D, in distinction from the *external angles*, E G B, and D H F.—

Alternate angles are those which lie in the opposite sides of two parallel lines, as A G H, and G H D.—*Homologous, or like angles*, are those which in two separate figures preserve the same order in both.—

Angles at the centre are those whose vertex is in the centre of a circle, as H, *fig. 10*, in distinction from the *angle at the circumference*, whose vertex is in the circumference, as D.—The *angle in a segment* is that

which two chords of a circle make with each other at the periphery; thus the two chords A B, *fig. 11*, and C B make the angle B, which is an angle in the segment. This angle is said to *insist* or *stand* on the circumference, which is included by the base of the segment, as A D C.—If the angle at the circum-

ference stand on a semicircle, or has the diameter for its base, it is a right angle, and is called an *angle in a semicircle*, as A B C, *fig. 12*; if it stand on a segment greater than a semicircle it is acute, and is called an *angle in the greater segment*, as A D C, *fig. 13*; if on a less it is obtuse, and called an *angle in the less segment*, as A G C, *fig. 14*. Moreover all angles, as A B C,

A G C, and A D C in a segment, or which stand on the same arc, are equal to one another.—An *angle of a segment* is, according to Euclid, that which is contained by a chord, and the circumference of a circle, or otherwise that which is made by a chord with a tangent at the point of contact, as A C D, *fig. 15*,

which is formed by the line A B touching the circle, and the chord D C. This is also called the *angle of the less segment*, in distinction from D C B, which is the *angle of the greater segment*.—An *angle of contact* is that which is formed by a tangent to a curve, as A C D.

ANGLE (*Astron.*) is made either by the circles of the sphere, which are spherical angles, or of right lines supposed to be drawn from the celestial bodies in given positions, which are right-lined angles.

Angles in Astronomy.

Spherical angles in astronomy are as follow; namely, the—*Angle of the ecliptic and meridian*, made by an arch of the ecliptic and meridian, which is a right angle at the solstitial points, and otherwise oblique.—*Angle of the ecliptic and the horizon*, otherwise called the *angle of the ascendant*, or the *angle of the East*, the angle which the portion of the ecliptic above the horizon makes with the horizon.—*Angle of the ecliptic and equator* is the inclination of the axis of the earth to the axis of the ecliptic, which is 23° 28'.—*Angle of the equator and the meridian*, which is always a right angle.—*Angle of the equator and the horizon*, which, in a right sphere, is a right angle, in an oblique sphere, oblique.—*Angle of the ecliptic and a verticle circle*, which is always a right angle.—*Angle of longitude* is the angle which the circle of a star's longitude makes with the meridian at the pole of the ecliptic.—*Angle of right ascension* is the angle which the circle of the star's right ascension makes with the meridian at the pole of the equator.—*Angle of the same position* is an angle made by the meeting an arc of the meridian with an arc of the azimuth, or any other great circle passing through the body of the sun. [*vide Astronomy*]

The right-lined angles are as follow; namely, the—*Angle of commutation*, or the *angle at the sun*, which is the difference between the true place of the sun when seen from the earth, and the place of a planet reduced to the ecliptic, as T S B, in the annexed figure, supposing T B to be the orbit of the earth,

ANGLE.

A P G the orbit of the planet, S the sun, and P the planet.—*Angle of elongation*, or *angle at the earth*, is the distance of any planet from the sun with respect to the earth; the greatest elongation is the greatest distance which the planet recedes from the sun, as the angle S T D, which supposes A B C to represent the orbit of the earth, F D V that of Venus, T the earth, V Venus, and S the sun. This angle is $47\frac{1}{2}$, but the greatest elongation made by Mercury is not more than $27\frac{1}{2}$.—*Paralactic angle*, or *angle at the planet*, is the difference between the two angles, under which the true and apparent distances of a planet from the zenith are seen. [vide *Parallax*] Kepler. *Epit.* l. 6; Ricciol. *Almag.* l. 1, c. 22; Keil. *Introd. ad Ver. Astron.*

ANGLE of the *rhumb* (Mar.) the angle which the rhumb line makes with the meridian.

ANGLE (Fort.) the inclination of two lines, which are used in fortifying, or the erection of a fortification. These are divided into two general sorts, real and imaginary, or occult. The *real angles* appear actually in the work itself, as the *flanked angle*, the *angle of the epaule*, &c. The *occult*, or *imaginary angles*, are those which only serve the purpose of the construction, and no longer exist after the work is completed, as the *angle at the centre*, the *angle of the polygon*, &c.

Angles in Fortification.

The angles in fortification are as follow; namely, the—*Angle of the exterior figure*, or *angle of the polygon*, is the angle intercepted between the two outermost sides, or bases of the polygon, as *a b d*, in the subjoined figure,

formed by the sides *a b* and *b d*.—*Angle of*, or *at the centre*, is the angle formed at the centre of the polygon, as *a l d*.—*Angle of the bastion*, or the *flanked angle*, is the angle formed by the two faces of the bastion, as *f b c*, formed by *f b* and *b c*. It is the outermost part of the bastion most exposed to the fire of the enemy.—*Angle of the interior figure*, the angle formed in the centre of the bastion by the meeting of the innermost sides of the figure *k n* and *n m*.—*Angle of the triangle*, half the angle of the polygon, as *l b a* or *l b d*.—*Angle of the flank* or *curtin*, the angle contained between the curtain and the flank, as *f h i*.—*Angle of the epaule*, the angle formed by the flank and face of the bastion, *b f h*.—*Diminished angle*, the angle *b a e* formed by the meeting of the exterior sides of the polygon, *b a*, *a e*.—*Angle of the tenaille*, or *exterior flanking angle*, the angle formed by the two rasant lines of defence, *i e*. the two faces of the bastion prolonged, as *a g b*.—*Angle flanking inwards* or *upwards*, an angle formed by the flanking line with the curtain, as *k n b*.—*Re-entering angle*, *angle re-entrant*, an angle whose vertex turns inwards towards the place, as *h* or *i*.—*Sabanti*, or *sortant angle*, the angle advancing its point towards the field or country, as *e* or *f*.—*Angle of the circumference*, the angle made by the arch, which is drawn from one gorge to another.—*Angle of the counterscarp*, the angle formed by the two sides of the counterscarp meeting before the middle of the curtain.—

Angle forming the flank, the angle consisting of one flank and one demigorge.—*Angle forming the face*, the angle made by one flank and one face.—*Angle of the gorge*, the angle formed by the prolongation of the curtains intersecting each other.—*Angle of the complement of the line of defence*, the angle formed by the intersection of the two complements with each other.—*Angle of the line of defence*, the angle made by the flank and the line of defence.—*Angle of the moat*, the angle made before the curtain where it is intersected.—*Dead angle*, a re-entering angle not flanked or defended.

ANGLE (Opt.) the inclination of any two lines formed by the rays of light.

Angles in Optics.

The angles in optics, and its branches, catoptrics, and dioptrics are as follow; namely, the—*Optic angle*, the angle included or contained between the two rays of light drawn from the extreme points of an object, as A B C, which is comprehended between the rays A B and B C.—*Angle of the interval* is the angle subtended by two lines drawn from the eye to those objects.—*Angle of incidence* is the angle which a ray of light forms with a perpendicular at the point where it falls or first touches, as A B F, supposing A B to be the

line representing the incident ray of light, B the point at which it falls, and F B the perpendicular. According to Dr. Barrow and some others, the angle of incidence is the angle formed by the incident line A B and the plane D B E, which is acted upon.—*Angle of reflection* is the angle formed by a reflected ray of light with a perpendicular at the point of contact, from which it rebounds, as F B C. Upon the equality of these two angles is founded the whole science of catoptrics.—*Angle of refraction* is the angle which a ray of light refracted makes with the ray of incidence, as F N H, supposing D N E to be the plane, M N the ray of incidence, N H the ray continued, and N F the refracted ray.—*Refracted angle* is the angle which a refracted ray makes with a perpendicular to the refracting surface; thus let G N be perpendicular to the refracting surface D E, then is G N F the refracted angle.—*Angle of inclination* is the angle made by a ray of incidence and an axis of incidence. Alhazen. *de Opt.*; Vitell. *de Optic.*; Kepler. *Paralop. Prop.* 5, &c.; Cartes. *Dioptric.* c. 2, § 2; Huygen. *Dioptric*; Kircher. *Ars. Mag. Luc. et Umb.* l. 8, c. 2; Newt. *Opt.* c. 8, § 10, &c.; Voss. *de Nat. et Prop. Luc.* p. 36.

ANGLE of Emergence (Nat.) the angle which any body, projected from one fluid or medium into another, makes at its going out, or emerging from, the latter, with a perpendicular to those planes, as the angle K G H; thus, suppose A B and C D to be parallel planes bounding water or glass, and a body as a ray of light, for example, to be projected into them at E in the direction of F E, and going out at G in the direction of G H; then G K being made perpendicular to A B and C D, the angle G H K is the angle of emergence.

ANGLE (*Mech.*) the inclination of any two lines supposed to be formed by the bodies impelled towards each other.

Angles in Mechanics.

The angles in mechanics are—the angle of incidence, the angle of reflection, the angle of elevation, and the angle of direction.—*Angle of incidence*, an angle which a line of direction of an impinging body makes at the point of contact.—*Angle of reflection*, the angle which a line of direction of a body rebounding after it has struck another body makes at the point of impact. The equality of these two lines is a fundamental principle in mechanics as in optics.—*Angle of elevation*, the angle comprehended between a line of direction of a projectile and an horizontal line.—*Angle of direction*, an angle comprehended between the lines of direction of two conspiring forces.

ANGLE of a battalion (*Mil.*) the angle made by the last men at the extremity of the ranks and files.—*Front angles*, the two last men of the front rank.—*Rear angles*, the two last men of the rear rank.

ANGLE of a wall (*Archit.*) the angle formed by the meeting of the two sides or faces of a wall.

ANGLE (*Diall.*) the angle that is made by a right line proceeding from the sun to the dial plate.

ANGLE-bar (*Carpent.*) the upright bar at the meeting of any of the two sides of the window.—*Angle-braces*, timbers opposite to each angle in a quadrangular frame, which serve as a brace or tie, the two sides forming the angle opposite to which they are fixed.—*Angle-rafter* [vide *Hipped roof*].—*Angle-rib*, a curved piece of timber in a ceiling or vault, fixed between two parts which form the angle.—*Angle-staff*, or *staff-beads*, beads fixed to the exterior angles of any wall, as a protection against accidents.

ANGLE (*Astrol.*) vide *Angles*.

ANGLER (*Ich.*) the βάρραχος ἀλίς of Aristotle, the *Rana piscatrix* of Pliny, *la Grenouille de mer*, *le Diable de mer*, of Belonius, the Toad-Fish, Frog-fish, or Sea Devil, of Willoughby, the *Lophius piscatorius* of Linnæus, a singular fish, which is also known at present by the name of the Fishing Frog, from the resemblance which it bears to that animal in the state of a tadpole. Pliny tells us that "It puts forth the slender horns which it has beneath its eyes, enticing by that means the little fish to play round till they come within reach, when it springs on them;" from which characteristic it has acquired its modern name. Its head is much bigger than its whole body, and the mouth of a prodigious width. The fishermen on the coast of Scarborough have a great regard for it, and always set it at liberty when it is caught, from a supposition that it is a great enemy to the dog-fish, the bodies of which have been found in its stomach. *Aristot.* l. 9, c. 37; *Plin.* l. 9, c. 24; *Gessn. de Pis.*; *Rondelet de Pisc. Marin.*; *Will. Ichth.*

ANGLES (*Astrol.*) certain houses in the scheme of the heavens: the first house is called the *angle* of the East, the seventh the *angle* of the West, the fourth house is the *angle* of the North, the tenth the *angle* of the South.

ANGLICISM (*Gram.*) an idiom or manner of speech peculiar to the English.

ANGLICUS Sudor (*Med.*) vide *Sudor Anglicus*.

ANGOLAM (*Bot.*) a very tall and beautiful tree of Malabar; the expressed juice from whose root kills worms. *Raii Hist. Plant.*

ANGO'NES (*Ant.*) ἄγγωνες, a kind of spear used by the Franks. *Suidas*.

ANGOR (*Med.*) ἄγωνια, a concentration of the natural heat of the body, causing a palpitation of the heart. *Hippocrat. Epid.* l. 1.

ANGRACUM (*Bot.*) the *Epidendrum ovatum et scriptum* of Linnæus.

ANGSA'NA (*Bot.*) or *Angsava*, an Indian tree, from which, when wounded, issues a liquor of a gummy consistence, sold for the *sanguis draconis*. It is astringent, and good for the aphthæ. *Raii Hist. Plant.*; *Commel. Hort.*; *Med. Anstel.*

ANGUELLES (*Falcon.*) small worms cast up by sick hawks.

ANGUIFER (*Astron.*) vide *Serpentarius*.

ANGUILLA (*Numis.*) the eel, was a symbol in the coins of Agrigentum, Adranum, and other cities of Sicily, as in the subjoined cut, which represents on the obverse the

Cancer marinus, with a shell above and an eel below; and on the reverse an eagle tearing a hare; the inscription, ΑΔΡΑΝΙΩΝ. *Goltz. Sicil.*; *Haverkamp. Parut. Sicil. Descript.*

ANGUILLA (*Ich.*) the eel, a fish named by Aristotle εγγίλιος, and classed by Linnæus under the *Muraena*. *Aristot. Hist. An.* l. 2, c. 13, &c.

ANGUILLA'RIA (*Bot.*) the *Ardicia excelsa* and *Zeylanica* of Linnæus.

ANGUILLA'RIS (*Ich.*) a species of the *Silurus* of Linnæus.

ANGUINA (*Bot.*) the *Calla* and the *Tricosanthes Anguina* of Linnæus.

ANGUINEAL (*Geom.*) a sort of hyperbola of a serpentine figure; a species of the second order of curves, according to Newton.

ANGUINUM (*Zool.*) a bed or knot of snakes. *Plin.* l. 29, c. 3.

ANGUIS (*Numis.*) the snake, an emblem of Æsculapius, is mostly represented on coins twining round a staff, which is in the hands of an old man; but in the annexed figure it represents Æsculapius himself, who is said to have appeared under this form when the vessel which was sent to fetch his image from Epidaurus arrived in the Tiber. The old man rising out of the water is supposed to be the river-god Tiber, before whom he is rearing himself. *Valer. Maxim.* l. 1, c. 8; *Aur. Victor. de Illust.* c. 22.

ANGUIS (*Zool.*) ἄνγυς, Snake, a genus of animals, Class *Amphibia*, Order *Serpentes*.

Generic Characters. Scales on the belly, and under the tail.

Species. Animals of this genus mostly inhabit the Indies. The species which are natives of Europe are—*Anguis fragilis*, the Blind-Worm, and *Anguis Eryx*, Aberdeen Snake.

ANGUIS vulgaris (*Zool.*) the *Coluber natrix* of Linnæus.—*Anguis Æsculapii*, a perfectly harmless species of serpent, which is good against the plague, and resists poison. *Lem. des Droq.*

ANGUIUM senectæ (*Nat.*) the *Exuvia* Slough, or cast-off skins of serpents or snakes, a decoction of which is good for pains in the ear, &c. *Dioscor.* l. 2, c. 19; *Aet. Tetrab.* 2, serm. 4, c. 33.

ANGULAR motion (*Mech.*) the motion of any body which moves circularly about a point, as the angular motion of a pendulum, which moves about its centre of motion.

ANGULAR motion (*Astron.*) the motion of the planets round the sun as their centre, or the increasing angle made by two lines drawn from a central body, as the sun or earth, to the apparent places of two planets in motion.

ANGULAR (*Bot.*) *angulatus*, an epithet for a stem; *angulatus caulis*, an angular stem, i. e. a stem grooved longitudinally, with more than two hollow angles. It may be triangular,

triangularis, quadrangular, *quadrangularis*, &c. or obtuse-angled, *obtuse-angulatus*, acute-angled, *acute-angularis*, &c. according to the number and measure of the angles. Others are also angular, *angulatae*, when they have several deep furrows that form four or more angles. The Stigma is angular, *angulosum*, when its close deep furrows occasion projecting angles and leaves; and pericarps are likewise so named, according to the number of their angles.

ANGULAR capital (Archit.) any capital which has two or more fronts alike, so as to return at the angles of the building.—*Angular modillions*, those which are placed at the return, i. e. at the turning of a cornice.

ANGULARIS Arteria (Anat.) the same as *Maxillaria*.—*Angularis Musculus*, the same as the *Levator Scapulae*.

ANGULATED (Bot.) vide *Angular*.

ANGULATUS (Bot.) angular, or angled. [vide *Angular*]

ANGULI oculi (Anat.) vide *Canthi*.

ANGULO'SUS (Bot.) vide *Angular*.

ANGULUS oculi (Anat.) vide *Canthus*.

ANGURIA (Bot.) Water Melon, a genus of plants, Class 21 *Monoecia*, Order 2 *Diandria*.

Generic Characters. CAL. monophyllous; divisions lanceolate.—COR. pentapetalous.—STAM. filaments two; anther creeping up and down.—PIST. germ inferior, oblong; style semibifid; stigmas bifid.—PER. pome oblong; seeds very many.

Species. The species are, the—*Anguria trilobata*, a perennial, native of Carthage.—*Anguria pedata*, seu *polyphyllus*, a perennial, native of St. Domingo.—*Anguria trifoliata*, seu *Cucumis triphyllus*, native of St. Domingo. *Plum. Plant. Americ.; Linn. Spec. Plant.*

ANGURIA *Citrullus*, the *Cucurbita Citrullus* of Linnæus.

ANGUSTIA (Anat.) narrowness of the vessels.

ANGUSTIFOLIA (Bot.) narrow-leaved; an epithet for many plants.

ANGUSTURA cortex (Bot.) a bark which comes from the Spanish main, and is a powerful bitter.

ANHALDINUM (Med.) a corrosive described by Hartman.

ANHALTINA (Med.) medicines promoting perspiration.—*Anhaltina aqua*, a cordial distilled from aromatic ingredients.

ANHELATIO (Med.) *Anhelitus*; panting or shortness of breath. *Plin. l. 22, c. 23; Act. Tetrab. 2, serm. 4, c. 7; Paul. Aeginet. de Re Med. l. 3, c. 29.*

ANHELITUS (Chem.) smoke; also horse-dung.

ANHIMA (Orn.) an aquatic bird of prey of Brasil, bigger than a swan: on its head is a horn, the powder of which is an antidote against poison. *Lem. des Drog.*

ANHLOTE (Law) a term used to signify that every one should pay his respective share, as *Scot and Lot*, according to the custom of the country.

ANHUBA (Bot.) an Indian plant; the same as *Sassafras*.

ANHYDRITE (Min.) a species of Sulphate.

ANI (Orn.) a species of the *Crotophagos* of Linnæus.

ANI *procidencia* (Med.) vide *Procidencia Ani*.

ANIA'DA (Alch.) the Astral and Celestial powers.

ANIA'DON (Alch.) the celestial body implanted in Christians by the Holy Spirit, by means of the sacraments.

ANIBA (Bot.) the *Cedrota* of Linnæus.

ANICETON (Med.) ἀνικητόν; 1. An epithet for a plaster described by Galen and Aetius. *Gal. de Comp. Pharm. Sec. Loc. l. 1, c. 8; Act. Tetrab. 4, serm. 3, c. 16.*—2. The same as *Anisum*.—3. An epithet for the *Anethum*.

ANIL (Bot.) the *Indigofera tinctoria* of Linnæus.

ANIMA (Phys.) from ἀνεμοί, the wind, and ψν, πνεύ, to breathe; the principle of life which the Author of our being breathes into us.—*Anima mundi*, or the ψύχη τῆς κόσμου, the soul of the world; a certain pure ethereal substance or spirit which is diffused through the mass of the world, or-

ganizing and actuating the whole and the different parts. *Plat. Tim.*

ANIMA (Chem.) a concentration of the virtues of bodies by means of solution, distillation, or any other processes which can develop their powers. Of this description is—*Anima Jaspidis*, *Anima Aloes*, &c.—*Anima Hepatis*, the same as *Sal Martis*.—*Anima pulmonum*, a name for Saffron, from its supposed use in Asthmas.—*Anima Saturni*, a white powder, obtained by pouring distilled vinegar on litharge, and much used in enamelling.

ANIMA *orticulorum* (Bot.) the name for *Hermodactylus*.

ANIMÆ (Nat.) the vesicles of herrings, because they are light, and full of wind. They are supposed to be diuretic.

ANIMAL (Phy.) a living body, endued with sensation and spontaneous motion.—*Animal faculty* is that faculty by which man exercises his senses, and all the other animal functions.—*Animal functions*, those functions or offices which are performed by the different members of the body, as seeing, hearing, voluntary motion, and the like.—*Animal frame*, or animal part of man; the bodily part, in distinction from the rational part.

ANIMAL secretion (Anat.) the process whereby the divers juices of the body are secreted or separated from the common mass of the blood by means of the glands.—*Animal motion*; the same as muscular motion.—*Animal spirits*, a fine subtle juice or humour in animal bodies, supposed to be the great instrument of muscular motion, sensation, &c. as distinguished from natural and vital. *Gal. de Caus. Puls.*

ANIMAL kingdom (Zool.) *Animale Regnum*; one of the three principal divisions into which Linnæus divided all organized bodies, consisting of classes, orders, genera, and species.

Animals were by him divided into six classes, namely, the—*Mammalia*, or such as suckle their young, mostly quadrupeds.—*Aves*, Birds, which are oviparous.—*Amphibia*, Amphibious Creatures, living either on land or in the water.—*Pisces*, Fishes, which live only in the water, and are covered with scales.—*Insecta*, Insects, which have few or no organs of sense, and a bony coat of mail.—*Vermes*, Worms, which have mostly no feet.

First Class.

The *Mammalia* consist of seven orders, namely, the—*Primates*, *Bruta*, *Feræ*, *Glires*, *Pecora*, *Belluinae*, and *Cete*.

First order.

The *Primates* are divided into 4 genera, namely—*Homo*, Man.—*Simia*, the Ape, the Baboon, and the Monkey.—*Lemur*, the Lemur.—*Vespertilio*, the Bat.

Second order.

Bruta, the second order, comprehends the following genera, namely—*Bradypus*, the Sloth.—*Myrmecophaga*, the Ant-Eater.—*Dasybus*, the Armadillo.—*Rhinoceros*, the Rhinoceros.—*Sokotyro*.—*Elephas*, the Elephant.—*Trichechus*, the Morse, Walrus.—*Manis*.

Third order.

Feræ, the third order, comprehends ten genera, namely—*Phoca*, the Seal.—*Canis*, the Dog, the Wolf, the Fox, and the Hyæna.—*Felis*, the Lion, the Tyger, the Leopard, the Tyger-Cat, the Lynx, and the Cat.—*Viverra*, the Weasel, the Shunk, the Civet, the Genet, and the Fitchet.—*Mustela*, the Otter, the Martin, the Ferret, the Polecat, the Ermine, and the Stoat.—*Ursus*, the Bear, the Badger, the Raccoon, and the Glutton.—*Didalphis*, the Opossum, Marmose, Phalanger, and the Kangaroo.—*Talpa*, the Mole.—*Sorex*, the Shrew.—*Erinaceus*, the Hedge-Hog.

Fourth order.

Glires, the fourth order, comprehends the following genera,

ANIMAL.

namely—*Histrix*, the Porcupine.—*Cavia*, the Cavy.—*Castor*, the Beaver.—*Mus*, the Rat, the Musk-Rat, and the Mouse.—*Arctomys*, the Marmot.—*Sciurus*, the Squirrel.—*Myoxus*, the Dormouse.—*Dipus*, the Jerboa.—*Lepus*, the Hare, and the Rabbit.—*Hyrax*.

Fifth order.

Pecora, the fifth order, comprehends the following genera, namely—*Camelus*, the Camel, the Lama.—*Moschus*, the Musk.—*Cervus*, the Stag, the Deer, the Moose, or Elk.—*Camelopardalis*, the Camelopard, or Giraffe.—*Antilopus*, the Antelope.—*Capra*, the Goat.—*Ovis*, the Sheep.—*Bos*, the Ox.

Sixth order.

Belluinae, the sixth order, comprehends the following genera, namely—*Equus*, the Horse, the Ass, and the Mule.—*Hippopotamus*, the River-Horse.—*Tapir*, the Tapir.—*Sus*, the Hog.

Seventh order.

Cete, the seventh order, comprehends the following genera, namely—*Monodon*, the Monodon.—*Balena*, the Whale.—*Physeter*, the Cachelot.—*Delphinus*, the Porpoise, the Dolphin, and the Grampus.

Second Class.

Aves, Birds, the second class, is divided into six orders, namely—*Accipitres*, *Picæ*, *Anseres*, *Grallæ*, *Gallinæ*, *Passeres*.

First order.

Accipitres, the first order, comprehends four genera, namely—*Vultur*, the Vulture and the Condur.—*Falco*, the Eagle, the Kite, the Buzzard, the Falcon, and the Hawk.—*Strix*, the Owl.—*Lanius*, the Shrike, the Butcher Bird, and the Woodchat.

Second order.

Picæ, the second order, comprehends the following genera, namely—*Ramphastos*, the Toucan.—*Momotus*, the Motmot.—*Psittacus*, the Parrot, the Maccaw, the Parroquet, the Cockatoo, and the Lory.—*Scythrops*.—*Buceros*, the Horn-Bill.—*Crotophaga*, the Ani.—*Glaucoptis*, the Wattle Bird.—*Corvus*, the Crow, the Rook, the Raven, the Jack-Daw, and the Jay.—*Coracias*, the Roller.—*Oriolus*, the Oriole.—*Gracula*, the Grackle.—*Paradisea*, the Bird of Paradise.—*Bucco*, the Barbet.—*Trogon*, the Curucui.—*Cuculus*, the Cuckoo.—*Yunx*, the Wryneck.—*Picus*, the Woodpecker.—*Sitta*, the Nuthatch.—*Todus*, the Toddy.—*Alcedo*, the Kingfisher.—*Galbula*, the Jacama.—*Merops*, the Bee-Eater.—*Upupa*, the Hoop or Hoopo.—*Certhia*, the Creeper.—*Trochilus*, the Humming-Bird.—*Buphuga*.

Third order.

Anseres, the third order, comprehends the following genera, namely—*Anas*, the Swan, the Goose, the Duck, the Shoveler, and the Teal.—*Mergus*, the Merganser, the Goosander, the Dunn-Diver, and the Smew.—*Alca*, the Auk or Razorbill.—*Aptenodytes*, the Penguin.—*Procellaria*, the Petrel.—*Diomedea*, the Albatross or Man-of-War Bird.—*Pelicanus*, the Pelican, the Corvorant, the Shag, the Crane, the Gannet, and the Booby.—*Ploctus*, the Darter.—*Phaeton*, the Tropic Bird.—*Colymbus*, the Guillemot, the Diver, and the Grebe.—*Larus*, the Gull, and the Tarrock or Kittiwake.—*Sterna*, the Tern.—*Rynchops*, the Skimmer.

Fourth order.

Grallæ, the fourth order, comprehends the following genera, namely—*Phœnicopteros*, the Flamingo.—*Platalea*,

the Spoonbill.—*Palamedea*, the Screamer.—*Mycteria*, the Jabiru.—*Cancroma*, the Boatbill.—*Scopus*, the Umbre.—*Ardea*, the Heron, the Crane, the Stork, and the Bittern.—*Tantalus*, the Ibis.—*Corrira*, the Courier.—*Scolopax*, the Curlew, the Whintrel, the Snipe, the Woodcock, the Godwit, and the Red Shank.—*Tringa*, the Sandpiper, the Phalarope, and the Purre.—*Charadrius*, the Plover and the Dotterel.—*Recurvirostra*, the Avocet.—*Hæmatopus*, the Sea-Pie or Pied Oyster, and the Catcher.—*Glareola*, the Pratincole.—*Fulica*, the Gallinule, the Moor-Hen, and the Coot.—*Vaginalis*, the Sheathbill.—*Parra*, the Jacana.—*Rallus*, the Rail, the Crake or Sand-Rail, the Brook-Ouzel or Water-Rail, and the Soree.—*Psophia*, the Trumpeter.

Fifth order.

Gallinæ, the fifth order, includes the following genera, namely—*Otis*, the Bustard.—*Struthio*, the Ostrich, and the Cassowary or Emu.—*Didus*, the Dodo.—*Pavo*, the Peacock.—*Meleagris*, the Turkey.—*Penelope*, the Guam and the Yacou.—*Craç*, the Curassow.—*Phasianus*, the Pheasant.—*Numidia*, the Pintado or Guinea Hen.—*Tetrao*, the Grouse, the Moorcock, the Partridge, the Quail, and the Tinamou.

Sixth order.

Passeres, the sixth order, includes the following genera, namely—*Columba*, the Pigeon, the Ring-Dove, the Turtle-Dove, &c.—*Alauda*, the Lark.—*Sturnus*, the Stare or Starling, and the Crake or Water-Ouzel.—*Turdus*, the Thrush, the Field-Fare, the Blackbird, and the Ring-Ouzel.—*Ampelis*, the Chatterer.—*Colius*, the Coly.—*Loxia*, the Grossbeak, the Crossbill, and the Haw-Finch.—*Emberiza*, the Bunting.—*Tanagra*, the Tanager.—*Fringilla*, the Finch, the Chaffinch, the Siskin, the Redpole, the Linnet, the Twite, and the Sparrow.—*Phytotoma*, the Phytotoma.—*Muscicapa*, the Fly-Catcher.—*Motacilla*, the Wagtail or Warbler, the Nightingale, the Hedge Sparrow, the Wren, the White-Throat, the Wheat-Ear, and the Red-Start.—*Pipra*, the Minnakin.—*Parus*, the Titmouse.—*Hirundo*, the Swallow and the Swift.—*Caprimulgus*, the Goatsucker.

Third Class.

Amphibia, Amphibious animals, the third class, is divided into two orders, namely—*Reptilia*, Reptiles, and *Serpentes*, Serpents.

First order.

Reptilia, Reptiles, the first order, comprehends the following genera, namely—*Testudo*, the Tortoise and the Turtle.—*Rana*, the Toad, the Frog, and the Natter-Jack.—*Draco*, the Flying Dragon.—*Lacerta*, the Crocodile, the Alligator, the Lizard, the Guana, the Newt, the Salamander, the Chameleon, the Eft.—*Siren*.

Second order.

Serpentes, Serpents, the second order, includes the following genera, namely—*Crotalus*, the Rattle-Snake.—*Boa*.—*Coluber*, the Viper and the Asp.—*Anguis*, the Snake and the Blind-Worm.—*Amphisbæna*.—*Cæcilia*.—*Achrocordus*, the Warted Snake.

Fourth Class.

Pisces, Fishes, the fourth class, is divided into six orders, namely—*Apodal*, *Jugular*, *Thoracic*, *Abdominal*, *Branchiostegous*, *Chondroptergious*.

First order.

Apodal, the first order, contains the following genera, namely—*Muræna*, the Eel.—*Gymnotus*.—*Trichiurus*.—

ANIMAL.

Anarhicas, the Wolf Fish.—*Ammodytes*, the Launce.—*Stromateus*.—*Xiphias*, the Sword-Fish.—*Sternopyx*.—*Leptocephalus*, the Morris.—*Stylephorus*.—*Ophidium*.—*Gymnothorax*.

Second order.

Jugular, the second order, contains the following genera, namely—*Callionymus*, the Dragonet.—*Uranoscopus*.—*Trachinus*, the Sting-Bull or Weaver.—*Gadus*, the Cod-Fish, the Bib, the Whiting, the Coal-Fish, the Hake, the Barbot, and the Rockling.—*Blennius*, the Blenny.—*Kurtus*.

Third order.

Thoracic, the third Order, contains the following genera, namely—*Cepola*.—*Echineis*, the Sucking-Fish.—*Coryphæna*.—*Gobius*, the Goby.—*Cottus*, the Bull-Head.—the Father Lasher, and the Miller's Thumb.—*Scorpena*.—*Zeus*, the John Doree.—*Pleuronectes*, the Hollibut, the Flounder, the Plaise, the Dab, the Sole, the Smear-dab, the Pearl, and the Turbot.—*Chætodon*.—*Sparus*, the Gilthead, the Pudding-Fish.—*Scarus*.—*Labrus*, the Wrasse, the Goldfinny, the Camber, and the Cook.—*Sciaena*.—*Perca*, the Perch, the Basse, the Luffe, the Black Fish, and the Squirrel-Fish.—*Trachyichthys*.—*Gasterosteus*, the Stickleback.—*Scomber*, the Mackerel, the Thunny, the Scad, and the Yellow-Tail.—*Centrogaster*.—*Mullus*, the Surmullet.—*Trigla*, the Gurnard, the Piper, and the Tub-Fish.—*Lonchiurus*.

Fourth order.

Abdominal, the fourth order, comprehends the following genera, namely—*Cobitis*, the Loche and the Mud-Fish.—*Amia*.—*Silurus*.—*Teuthis*.—*Salmo*, the Salmon, the Trout, the Salmon-Trout or Bull-Trout, the Charr, the Smelt, the Gurniad, and the Lavaret.—*Fistularia*, the Tobacco-Pipe-Fish.—*Esox*, the Pike and the Garfish.—*Elops*.—*Argentina*, the Argentine.—*Atherina*, the Atherine or Silver-Fish.—*Mugil*, the Mullet.—*Excocoetus*, the Flying Fish.—*Polynemus*.—*Clupea*, the Herring, the Pilchard, the Sprat, the Shad, and the Anchovy.—*Cyprinus*, the Carp, the Barbel, the Gudgeon, the Tench, the Crucian, the Gold-Fish, the Dace, the Roach, the Finscale or Rud, the Red Eye, the Bleak, the Bream, the Minnow, and the Graining.—*Loncarina*.

Fifth order.

Branchiostegous, the fifth order, comprehends the following genera, namely—*Mormyrus*.—*Ostracion*.—*Tetrodon*, the Sun-Fish.—*Diodon*.—*Singnathus*, the Pipe-Fish and the Needle-Fish.—*Pegasus*.—*Centriscus*.—*Balistes*.—*Cyclopterus*, the Sucker.—*Lophius*, the Fishing-Frog, and the Angler or Frog-Fish.

Sixth order.

Chondropterigious, the sixth order, contains the following genera, namely—*Acipenser*, the Sturgeon.—*Chimæra*, the Sea-Monster.—*Squalus*, the Shark, the Dog-Fish, the Tope, the Sea-Fox, and the Angel-Fish.—*Pristis*, the Saw-Fish.—*Raia*, the Ray, the Skate, the Thornback.—*Petromyzon*, the Lamprey, and the Pride.—*Gastrobranchus*, the Hag or Hag-Fish.

Fifth Class.

Insecta, Insects, the fifth class, is divided into seven orders, namely—*Coleoptera*, *Hemiptera*, *Lepidoptera*, *Neuroptera*, *Hymenoptera*, *Diptera*, and *Aptera*.

First order.

Coleoptera, the first order, contains the following genera, namely—*Scarabæus*, the Beetle.—*Lucanus*.—*Dermestes*, the Leather-Eater.—*Synodendron*.—*Bostrichus*.—*Mely-*

ris.—*Ptinus*, the Death-Watch.—*Hister*.—*Gyrinus*, the Water-Flea.—*Byrrhus*.—*Anthrenus*.—*Silpha*, the Carrion Beetle.—*Nitidula*.—*Opatrum*.—*Titroma*.—*Tetratoma*.—*Cassida*.—*Coccinella*.—*Chrysomela*.—*Cryptocephalus*.—*Hispa*.—*Bruchus*.—*Pausus*.—*Zygia*.—*Zonitis*.—*Apalus*.—*Brentus*.—*Curculio*.—*Rhinomacer*.—*Attelabus*.—*Notoxus*.—*Cerambyx*.—*Calopus*.—*Leptura*.—*Necydalis*.—*Lampyris*, the Fire-Fly.—*Horia*.—*Cucujus*.—*Cantharis*.—*Serropalpus*.—*Elater*.—*Cucindela*.—*Bupestris*.—*Hydrophilus*, the Water-Clock.—*Dytiscus*.—*Carabus*.—*Tenebrio*.—*Pimelia*.—*Lytta*.—*Meloe*.—*Mordella*.—*Staphylinus*.—*Forficula*, the Earwig.—*Erodius*.—*Manticora*.—*Alurnus*.

Second order.

Hemiptera, the second order, contains the following genera, namely—*Blatta*, the Cockroach.—*Pneumora*.—*Mantis*.—*Gryllus*, the Locust, the Grasshopper, and the Cricket.—*Fulgora*, the Lanthorn Fly.—*Cicada*.—*Notonecta*, the Boat Fly.—*Nepa*, the Water Scorpion.—*Cimex*, the Bug.—*Macrocephalus*.—*Aphis*, the Plant-Louse.—*Chermes*.—*Coccus*, the Cochineal.—*Thrips*.

Third order.

Lepidoptera, the third order, contains the following genera, namely—*Papilio*, the Butterfly.—*Sphinx*, the Hawk-moth.—*Phalæna*, the Moth.

Fourth order.

Neuroptera, the fourth order, contains the following genera, namely—*Libellula*, the Dragon-Fly.—*Ephemera*, the Day-Fly.—*Phryganea*.—*Hemerobius*.—*Myrmeleon*, the Lion-Ant.—*Panorpa*.—*Raphidia*.

Fifth order.

Hymenoptera, the fifth order, contains the following genera, namely—*Cynips*, the Gall-Fly.—*Tenthredo*, the Saw-Fly.—*Sirex*, the Tailed Wasp.—*Ichneumon*, the Ichneumon.—*Sphex*.—*Ammophila*.—*Scolia*.—*Thynnus*.—*Lucopsis*.—*Tiphia*.—*Chalcis*.—*Chrysis*, the Golden Fly.—*Vespa*, the Wasp.—*Apis*, the Bee.—*Formica*, the Ant or Emmet.—*Mutilla*.

Sixth order.

Diptera, the sixth order, contains the following genera, namely—*Oestrus*, the Gad-Fly and the Breeze.—*Tipula*, the Crane-Fly.—*Diopsis*.—*Musca*, the Fly.—*Tabanus*.—*Culex*, the Gnat.—*Empis*.—*Stomoxys*.—*Conops*.—*Asilus*.—*Bombylus*, the Humble-Bee.—*Hippobosca*.

Seventh order.

Aptera, the seventh order, contains the following genera, namely—*Lepisma*.—*Podura*, the Spring-Tail.—*Termes*, the White Ant.—*Pediculus*, the Louse and Crab-Louse.—*Acarus*, the Tick, the Harvest-Bug, and the Itch-Mite.—*Phalangium*.—*Aranea*, the Spider.—*Scorpio*, the Scorpion.—*Cancer*, the Crab, the Lobster, the Prawn, the Shrimp, and the Squill.—*Monoculus*.—*Oniscus*.—*Scolopendra*.—*Julus*.—*Pulex*, the Flea.—*Hydrachna*.

Sixth Class.—Vermes.

The sixth class is divided into five orders, namely—*Intestina*, *Mollusca*, *Testacea*, *Zoophyta*, and *Infusoria*.

First order.

Intestina, the first order, contains the following genera, namely—*Ascaris*.—*Trichocephalus*.—*Filaria*.—*Scolex*.—*Ligula*.—*Strongylus*.—*Echinorynchus*.—*Cucullanus*.—*Caryophyllæus*.—*Linguatula*.—*Fasciola*, the Gourd-Worm or Fluke.—*Tænia*, the Tape-Worm.—*Furia*.—*Godius*, the Hair-Worm.—*Lumbricus*, the Earth-Worm,

the Dew-Worm, and the Lug.—*Planaria*.—*Sipunculus*, the Tube-Worm.—*Hirudo*, the Leech.—*Uncinaria*.—*Hænica*.

Second order.

Mollusca, the second order, contains the following genera, namely—*Limax*, the Slug or Snail.—*Onchidium*.—*Laplisia*, the Sea Hare.—*Doris*, the Sea Lemon.—*Aphrodita*.—*Spio*.—*Amphitrite*.—*Terebella*.—*Nereis*.—*Nais*.—*Ascidia*.—*Salpa*.—*Dagysa*.—*Clava*.—*Actinia*, the Sea Daisy, the Sea Marigold, and the Sea Carnation.—*Mammaria*.—*Pedicellaria*.—*Tethys*.—*Plerotrachea*.—*Derris*.—*Holothuria*.—*Lobaria*.—*Triton*.—*Lernæa*.—*Scyllæa*.—*Clio*.—*Sepia*, the Cuttle-Fish.—*Lucernaria*.—*Medusa*, the Sea-Nettle.—*Physophora*.—*Asterias*, the Star-Fish and the Sea-Star.—*Echinus*, the Sea Urchin.

Third order.

Testacea, Shells, the third order, comprehends the following genera, namely—*Chiton*.—*Lepas*, the Acorn Shell.—*Phloas*.—*Mya*.—*Solen*, the Razor-Sheath.—*Tellina*.—*Cardium*, the Cockle.—*Maetra*.—*Donax*.—*Venus*.—*Spondylus*.—*Chama*.—*Arca*, the Ark.—*Ostrea*, the Oyster.—*Anomia*.—*Mytilus*, the Mussel.—*Pinna*.—*Argonauta*.—*Nautilus*.—*Conus*, the Cone.—*Cypræa*, the Cowrie or Gourie.—*Bulla*.—*Voluta*, the Mitre or Volute.—*Buccinum*, the Whelk.—*Strombus*.—*Murex*.—*Trochus*.—*Turbo*, the Wreath.—*Helix*, the Snail.—*Nerita*, the Nerite.—*Haliotis*, the Sea-Ear.—*Patella*, the Limpet.—*Dentalium*, the Tooth-Shell.—*Serpula*.—*Teredo*.—*Sabella*.

Fourth order.

Zoophyta, the fourth order, contains the following genera, namely—*Tubipora*, the Tubipore.—*Madrepora*, the Madripore.—*Millepora*, the Millepore.—*Cellepora*, the Cellepore.—*Isis*, the Coral.—*Antipathes*.—*Gorgonia*, the Red Coral.—*Alcyonium*.—*Spongia*, the Sponge.—*Flystra*, the Hornwrack.—*Tubularia*.—*Corallina*, the Coral-line.—*Sertularia*.—*Pennatula*, the Sea-Pen.—*Hydra*, the Polype.

Fifth order.

Infusoria, the fifth order, contains the following genera, namely—*Branchionus*.—*Vorticella*.—*Trichoda*.—*Cercaria*.—*Bursaria*.—*Gonism*.—*Colpoda*.—*Paramecium*.—*Cyclidium*.—*Vibrio*.—*Bacillaria*.—*Enchelis*.—*Volvox*.—*Monas*.—*Leucopera*.

ANIMALCULÆ (Zool.) very small animals, scarcely discoverable by the naked eye, which, by the help of microscopes, are found in fluids, and also in solids.

ANIMATE power (Mech.) a power in animal beings, in distinction from that which exists in inanimate bodies, as springs, &c.

ANIMATE mercury (Chem.) quicksilver impregnated with some subtle and spirituous particles, so as to render it capable of growing hot when mixed with gold. *Libav. Apoc. Hermet. part 1, c. 10.*—*Animated needle*, a needle touched with a stone.

ANIMATION (Alch.) the fermentation produced by the conjunction of mercury with any metal. *Libav. Apoc. Hermet. part 1, c. 10; Castell. Lex Med.*

ANIME gummi (Chem.) a gum or white resin, brought from America, which flows, by an incision, from a tree, the *Hymenea courbaril* of Linnæus. Dioscorides and Serapio call it *Aninea*, which has been corrupted into *Animé*. The former says that it is an inferior kind of myrrh. The best Gum Animé is white, dry, friable, clean, of a good smell, that soon consumes when thrown into the fire, and contains a great deal of oil and essential salt. It is discussive, good for the head-ache, and a strengthener of the brain.

There are two sorts principally spoken of, namely, the Oriental and the Western; but Bauhine reckons five sorts. *Dioscor. l. 1, c. 77; Clus. Rar. Plant. Hist.; J. Bauh. Hist. Plant.; Raii Hist. Lem. des Drog.*

ANIME (Her.) an epithet implying that the eyes of any rapacious creature are borne of a different tincture from that of the creature itself.

ANIMELLÆ (Anat.) the Glandules under the ears and the lower jaws.

ANIMUS (Met.) the mind, or reasoning faculty, in distinction from *anima*, the being or substance in which the faculty exists.

ANINGA *ibis* (Bot.) an Indian aquatic plant that grows five or six feet high, with leaves similar to the water-lily. From the bulbous root of the aningas is expressed an oil of great medicinal use for fomentation. *Pis. Marc. Hist. Braz.; Raii Hist. Plant.*

AN *jour et wast*. (Law) a forfeiture when a man has committed petty treason and felony, and has lands held of some common person, which shall be seized for the king, and remain in his hands a year and a day next after the attainder, and then the trees shall be pulled up; except he to whom the lands should come by escheat or forfeiture, redeem it of the king.

ANISATUM (Med.) from *ἀνισον*, Anise-seed; a wine in which Anise seeds are infused.

ANISATUM (Bot.) a species of the *Illicium* of Linnæus.

ANISCALPTOR (Anat.) the same as *Latissimus Dorsi*.

ANISE (Bot.) a small oblong seed, produced from the *Anisum*, or the *Pimpinella anisum* of Linnæus. [vide *Anisum*]

ANISE (Com.) a sort of greyish wood that is brought from the Indies in logs, and has a scent similar to that of the plant.

ANISEED-TREE (Bot.) the *Illicium* of Linnæus.

ANISIFOLIUM (Bot.) the *Limonia acidissima* of Linnæus.

ANISOCYCLA (Archæol.) a machine constructed of many unequal circles, by the help of which the ancients discharged arrows or stones from their scorpions or crossbows. *Vitruv. de Architect. l. 10, c. 1; Turneb. Adver. l. 9, c. 20; Bald. Lec. Vitruvian.*

ANISOMARATHRUM (Bot.) the *Scandix australis* of Linnæus.

ANISUM (Bot.) *ἀνισον*, Anise, probably from *ἀνίκητον*, *invictum*, invincible, to denote its superior power above other medicines; a plant, the seed of which is an anodyne, diaphoretic, diuretic, and discutient. It is the *Pimpinella anisum* of Linnæus. *Theoph. Hist. Plant. l. 7, c. 3; Dioscor. l. 3, c. 65; Plin. l. 20, c. 17; Gal. de Simplic. l. 6; Oribas Med. Coll. l. 11; Aet. Tetrab. 1, serm. 1; Paul. Æginet. de Re Med. l. 7, c. 3; Myrep. de Antidot. sect. 1, c. 23; J. Bauh. Hist. Plant.; Parkin. Theat. Botan.; Raii Hist. Plant.*—*Anisum Africanum*, the *Bubon galbinatum* of Linnæus.

ANKER (Com.) a liquid measure at Amsterdam, containing thirty-two gallons wine measure in England.

ANLÆ (Archæol.) a falchion or sword shaped like a scythe.

ANN (Com.) abbreviated for *annum*, as *per annum*, yearly.

ANN (Law) or *Annat*, half a year's stipend, in the Scotch Law, over and above what is owing for the incumbency, due to the minister's relict, children, or near akin.

ANNABA'SSES (Com.) a coarse blanketing made in France for the Guinea trade.

ANNALES (Ant.) Annals, from *annus*, a year, signifying an account of what was done within the year; small books in which were registered the names of the magistrates, together with the names of the persons, places, and things connected with their magistracy. Whence Cicero makes

the distinction between Annals and History. "Historia nihil aliud nisi Annalium confectio." *De Orat.* l. 2, c. 12; *Aul. Gell.* l. 1, c. 1; *Ferrar. de Origin. Roman. apud Græv. Thesaur. Antiq. Rom.* tom. 1, &c.—*Annales maximi* was also the name given to the annals of the state, because they were consecrated and confirmed by the *Pontifex maximus*, or High-Priest; they were also called *Commentarii*. *Cic. de Orat.* l. 2, c. 12; *Liv.* l. 4, c. 3; *Fest. de Verb. Signif.*; *Turneb. in Cic. de Leg.*; *Alex. Gen. Dier.* l. 2, c. 8, &c.

ANNALES (*Archæol.*) 1. Public acts registered every year. *Leg. Cod. Theod.* 2. a sort of annual census.

ANNALES (*Law*) yearlings, or cattle a year old.

ANNA'LIS *lex* (*Ant.*) a law for regulating the age at which offices might be enjoyed. It was proposed U. C. 573, by L. Vilius or Julius, who, on that account, was surnamed *Annalis*. What the precise age fixed for each magistracy was is not ascertained. [vide *Ætas*] *Cic. de Or.* l. 2, c. 65; *Liv.* l. 4, c. 44; *Manut. de Leg.* c. 6.—*Annalis clavus*, the nail was so called which was driven into the wall of the temple every year, to mark the succession and number of years. [vide *Clavus*]

ANNA'TES (*Law*) Annats, or first fruits paid out of spiritual benefices to the Pope, being the value of one year's profit. *Stat. 25, Hen.* 8.

ANNE'S Day, *St. (Ecc.)* a festival kept in the Romish church on the 26th of June, and in the Greek church on the 9th of December, in honour of Anna, the mother of the Virgin Mary.

ANNE'AL (*Bot.*) the same as *Anil*.

ANNEA'LING of tile (*Mech.*) from the Saxon *ælan*, to set on fire; the burning of tiles, so as to harden them.

ANNEXA'TION (*Law*) uniting lands or rents to the crown.

ANNI'ENTED (*Law*) in French *aneantie*; abrogated or made null.

A'NNI *Tempora constantia* (*Med.*) *καθεστῶτες καιροί*, Consistent seasons, which keep their usual and expected temperature, in distinction from the inconsistent seasons, *καιροί ἀκατέστατοι*, which are unstable, and not to be relied upon. *Hippoc. Aph.*; *Foes Econom. Hip.*

ANNI *nubiles* (*Law*) the age at which a girl becomes by law fit for marriage, which is twelve.

ANNIVE'RSARY (*Ecc.*) the yearly obit or service performed in the Romish church once every year for a person deceased, i. e. properly on the anniversary of his or her decease.

ANNIVERSARY *days* (*Law*) Days so called because they returned at the revolution of every year, *quovis anno vertente*. These days were kept solemn every year, in commemoration of the death or martyrdom of any saint. *Alcuin. de Divin. Offic.*; 1 Ed. 6.

A'NNO *Domini* (*Chron.*) abbreviated A. D. the computation of time from the incarnation of our Saviour, which is used as the date for all public deeds and writings in England, on which account it is called the 'Vulgar Æra.' This computation is supposed to be three years later than the real time of our Saviour's Incarnation. [vide *Æra*]

ANNO'SANCE (*Law*) the same as *Nuisance*.

ANNO'MEANS (*Ecc.*) vide *Anomceans*.

ANNO'NA (*Ant.*) from *annus*, a year, signified properly a year's produce from one's land; but it is also taken for the provision of corn, and whatever else was necessary for the sustenance of man, whence *annonæ caritas* signifies dearth of provisions, or a dear market. *Cic. in Verr.* l. 3, c. 92.—*Annona militaris*, the public allowance of bread, fodder, &c.—*Annonæ*, in the plural, the loaves themselves. *Lamprid. in Sever.* c. 41; *Cod. Theodos. de Erag. Mil. Annon.*

ANNO'NA (*Numis.*) is commonly represented on coins by ears

of corn, and a cornucopia, as in the annexed figure, on a coin of the emperor Claudius, bearing the inscription ANNONA. AUG. The female, which is the figure of the goddess Ceres, is sometimes represented holding a spear, a lance, and sometimes a measure, with ears of corn, &c. To the inscription is frequently added the words PROVIDENTIA, FELICITAS, FELICISSIMI SAECULI. AETERNÆ CERES, &c.

ANNONA (*Bot.*) a genus of plants in the hot climates; so called because its fruit is grateful to the natives, Class 13 *Polyandria*, Order 7 *Polygynia*.

Generic Characters. CAL. *perianth* three-leaved; *leaflets* cordate.—COR. *petals* six.—STAM. *filaments* scarcely any; *anthers* very numerous.—PIS. *germ* roundish; *styles* none; *stigmas* obtuse.—PER. *berry* very large; *seeds* very many.

Species. The plants of this tribe are all shrubs, and mostly natives of America or India, as—*Annona tripetala*, *Cherimolia*, seu *Guanabanus*, Broad-leaved Custard-Apple.—*Annona squamosa*, seu *Atamaran*, Undulated Custard-Apple.—*Annona reticulata*, Nettle Custard-Apple.—*Annona Asiatica*, seu *Keschta*, Asiatic Custard-Apple, &c.

ANNONA'RII (*Ant.*) forestallers of the market, who bought up all the provisions before hand in order to raise the market.

A'NNORA (*Chem.*) calcined egg-shells, or quick-lime.

ANNOTA'TIO (*Med.*) the beginning of a febrile paroxysm.

A'NNUA *pensione* (*Law*) a writ from the king to an abbot, or a prior, demanding of him an annual pension due to him for one of his chaplains, &c. *Reg. Orig.* 165, 307.

A'NNUAL (*Bot.*) an epithet for any plant or root which perishes within the compass of a year, in distinction from *Biennials* or *Perennials*. The stem of herbaceous plants is annual, but the root is perennial, which distinguishes them from trees and shrubs.

ANNUAL (*Astron.*) an epithet employed frequently to denote what is done in the space of a year, or returns every year.—*Annual motion of the earth.* [vide *Earth*]—*Annual argument of longitude.* [vide *Argument*]—*Annual epacts.* [vide *Epact*]—*Annual equation*, the equation of the mean motion of the sun and moon, and of the moon's apogee and nodes.

ANNUAL *Pension* (*Law*) vide *Annua pensione*.—*Annual rent*, in the Scotch Law, a yearly profit due to a creditor by way of interest for a given sum of money.—*Right of annual rent*, the original right of burdening land with a yearly payment for the loan of money.

ANNUA'LIA (*Law*) a yearly stipend assigned to a priest for celebrating an anniversary for the soul of a deceased person, &c.

ANNUALIA (*Archæol.*) oblations made by the relations of deceased persons on the anniversary of their death, which was called the Year's Day or the year's Mind.

ANNUE'NTES *musculi* (*Anat.*) muscles of the back or head; so called because they perform the office of nodding or bending the head downward.

ANNU'ITY (*Law*) a yearly rent to be paid for term of life or years, or in fee. *Reg. Orig.* 158.—*Writ of Annuity*, the writ that lies against a man for the recovery of such a rent, if not satisfied every year according to the grant. *Co. Lit.* 144.—*Annuity of teinds or tithes*, in the Scotch law, what is allowed yearly to the king out of the teinds not paid to the bishop.

ANNUITY (*Com.*) what is payable at any stated period within a year. Annuities are yearly, half-yearly, or quarterly, that is, payable by the year, half-year, or quarter.—*Certain annuity*, one that is in perpetuity.—*Contingent Annuity*, one depending on some contingency, as a life

annuity.—*Annuity in possession*, when it has already commenced.—*Annuity in reversion*, when it will commence at some given future period.—*Annuity in arrears*, what is forborne for any number of years.

ANNULAR bone (*Anat.*) *Circulus osseus*, a ring-like bone placed before the cavity of the tympanum in the fœtus.—*Annular cartilage*, the second cartilage at the head of the *larynx* or Windpipe.—*Annular ligament*, a strong ligament encompassing the carpus or wrist after the manner of a bracelet.

ANNULARIS digitus, the ring-finger next to the little one.—*Annularis vena*, the vein next to the ring-finger. *Act. Tetrab.* 1, serm. 3, c. 12.—*Annularis musculus*, the *Sphincter Ani*.—*Annularis processus*, a protuberance of the medulla. *Ruf. Ephes. de Appell. Part. hum. Corp.* l. 1, c. 10.

ANNULATE (*Bot.*) *annulatus*, an epithet for a capsule, stem, and root.—*Capsula annulata*, an annulate capsule, is encircled by an articulated ring.—*Radix annulata*, an annulate root, is furnished on its upper surface with alternately raised and depressed bands.—*Caudex annulatus*, an annulate stem, is that which has the remains of the leaves at regular distances resembling annular elevations, as in the *Corypha rotundifolia*.

ANNULËT (*Archæol.*) a little square moulding to accompany a larger, or to separate the flutings of a column; also, a narrow flat moulding that encompasses other parts of a column, which is called by the different names of *Fillet*, *Listel Cincture*, *List Tænia*, *Square*, *Rabit*, and *Supercilium*.

ANNULET (*Her.*) a little ring [O] borne in the coats of arms, supposed to be taken for rings of mail, which was an armour of defence. The annulet is the charge which distinguishes the fifth son of any family. It is supposed to remind him that he should achieve great actions, according to the old motto, *Jus aureorum Annulorum*.

ANNULUS (*Geol.*) a ring; a species of *Volutæ*.

ANNULUS (*Bot.*) a membranaceous part of the fungi, of which there are different kinds, namely—*Annulus erectus*, fixed below and free above.—*Annulus invertus*, fixed above and free below.—*Annulus sessilis*, attached by one side.—*Annulus mobilis*, to be moved up and down.—*Annulus persistens*, lasting as long as the fungus.—*Annulus fugax*, disappearing when the fungus develops itself.—*Annulus arachnoides*, composed of a white web.

ANNUNCIÆDE (*Her.*) the name of several orders; so called in honour of the Annunciation to the Blessed Virgin. The most distinguished order of this name was that instituted by Amadeo, the sixth Earl of Savoy, in commemoration of the victory obtained by the first Earl over the Turks, whom he drove from the Isle of Rhodes. The collar belonging to this order is of gold, on which these letters are engraven, F.E.R.T. *Fortitudo ejus Rhodum tenuit*. To this collar is appended a tablet, wherein is the figure of the Annunciation.

ANNUNCIATION (*Ecc.*) *annunciatio*, from *ad* and *nuncio*, to tell; the delivery of a message, particularly the Angel's message to the Virgin Mary, concerning the birth of our Saviour.—*Annunciation of our Lady*, a festival in the Christian Church commemorative of the Annunciation to the Blessed Virgin, which is celebrated on the 25th of March.

ANNUNCIATION (*Theol.*) a name given by the Jews to a part of their ceremonial of the Passover.

ANNUNCIATOR (*Ecc.*) an officer in the church of Constantinople, whose office it was to announce to the people the festivals that were to be celebrated.

ANO (*Med.*) *ἀνω*, upwards, opposed to *κάτω*, downwards, in respect to purgatives, which operate upwards or downwards.

ANOBIUM (*Ent.*) a division of the genus *Ptinus*, accord-

ing to Fabricius, comprehending the insects of this tribe, which have the feelers clavate.

ANOCATHARTICA (*Med.*) Emetics.

ANOCHEILON (*Anat.*) *ἀνωχειλον*, from *ἀνω*, upper, and *χειλος*, the lip; the upper lip. *Castell. Lex. Med.*

ANOCHUS (*Med.*) from *ἀνεχθαι*, to retain; a stoppage of the intestinal discharge.

ANODA (*Bot.*) the *Sida* of Linnæus.

ANODINA (*Med.*) vide *Anodynes*.

ANODMON (*Med.*) without smell, as applied to pus. *Hippoc. in Coac.*; *Foes. Hippocrat. Econom.*

ANODUS (*Chem.*) what is separated from the nourishment by the kidneys.

ANODYNES (*Med.*) *ἀνόδυνα*, *anodyna*, from *α*, priv. and *ὀδον*, pain; medicines so called because they ease pain and procure sleep, such as the medicinal preparations of the poppy. *Cels. de Re Med.* l. 5, c. 25, &c.; *Gal. de Simpl. Med.* l. 5, c. 11; *Cels. Aurel. de Tard. Pass.* l. 3, c. 4; *Trallian.* l. 10; *Myreps. de Antidot.* sect. 1, c. 178; *Marcell. de Med.* c. 25; *Gorr. Def. Med.*; *Foes. Econom. Hippocrat.*

ANODYNUM (*Med.*) *Anodyne Balsam.*—*Anodynum minerale*, the same as *Nitrum*.

ANODYNUS fofus (*Med.*) *Anodyne fomentation.*

ANOËA (*Med.*) *ἀνοία*, from *α*, priv. and *νοία*, to think; privation of understanding, madness.

ANOINTERS (*Ecc.*) a name given to a particular sect, who were so called because they anointed all whom they admitted into their society.

ANOMÆANS (*Ecc.*) *ἀνόμοιοι*, an heretical sect, which held most of the doctrines of the Arians, particularly that the essence of the Son was unlike that of the Father. *Socrat. Hist. Eccles.* l. 2, c. 45, l. 3, c. 25, &c.; *Sozom. Hist.* l. 4, c. 14; *Theodoret.* l. 4; *S. Hilar. in Constant.*

ANOMÆOS (*Med.*) *ἀνόμοιος*, dissimilar, as applied to vicious humours.

ANO'MALÆ plantæ (*Bot.*) from *anomalus*, irregular; the twenty-sixth class of plants in the system of Ray.

ANOMALIA (*Med.*) *ἀνωμαλία*, from *α*, priv. and *ὀμαλος*, equal, inequality, or irregularity, as applied to the pulse. *Galen. Defin. Med.*; *Actuar. περι διαγνώως παθῶν*, l. 1, c. 1; *Gorr. Defin. Med.*

ANOMALIA (*Astron.*) vide *Anomaly*.

ANOMALISTIC Year (*Astron.*) or periodical year; that space of time in which the earth, or a planet, passes through its orbit, which is 365 d. 6 h. 15 m. 10 sec.

ANO'MALOUS (*Gram.*) *ἀνόματος*, from *α*, priv. and *ὀματος*, equal, i. e. without rule; an epithet applied to verbs that are irregularly formed, of which the Greek affords many examples.

ANO'MALY (*Astron.*) *ἀνωμαλία*, irregularity; the irregularity in the motion of a planet, whereby it deviates from the aphelion or apogee, or it is the distance from the aphelion or apogee. It is sometimes taken for the argument of anomaly, which is the arc between the line of the apsides and the line of mean motion. Kepler distinguished anomaly into mean or simple, eccentric, and true, or equated.—*Mean or simple anomaly*, the distance of the mean place of

a planet from the apogee; thus, suppose E S D to be the sun's orbit, A M N B the ecliptic, the earth at T, the sun at S, and A B the line of the apsides, then is the angle A T M, or the arc A M, the sun's mean anomaly; in the modern astronomy the mean anomaly is the time in which a planet moves from its aphelion to the mean place or point in its orbit; thus, suppose a planet P to describe an ellipse, A P B, about the sun, S, in one focus, let A B be the line of the apsides, A

the aphelion, and B the perihelion, then the mean anomaly is the time in which the planet moves from the aphelion to its mean place, P; and since the elliptic area A S P is proportional to the time in which the planet describes the arc A P, that area may represent the mean anomaly.—*Eccentric anomaly*, or the angle at the centre, is the arc A D of the eccentric circle A D B, intercepted between the aphelion and the point D, determined by the perpendicular D P E to the line of the apses A B; or it is the angle A E D at the centre of the circle.—*True or equated anomaly*, otherwise called *the angle at the sun*, is the angle A S P at the sun, which the planet's distance, A P, from the aphelion appears under.

ANO'MIA (Con.) Bowl-shell, a genus of animals, Class Vermes, Order Testacea.

Generic Characters. Shell inequivalve.—*Valve* one, perforated near the hinge; affixed by that perforation to some other body.

Species. The principal species of this genus, which mostly inhabit the Mediterranean, and adhere to oyster-shells, are, the—*Anomia ephippium*, the Wrinkled Bowl-Shell.—*Anomia electa*, the Amber Bowl-Shell.—*Anomia squamula*, the Scaly Bowl-Shell, &c.

ANOMŌ'EOS (Med.) ἀνόμοιος, heterogeneous; applied to the humours which are preternatural and vicious. *Foes. Æconom. Hippocrat.*

ANOMORHOMBOÏDEA (Min.) a sort of crystals; so called because their plates are composed of irregular arrangements of short and thick rhomboidal concretions.

ANO'MPHALOS (Anat.) ἀνόμφαλος, without a navel, as our first parents were supposed to be.

ANO'NA (Bot.) the genus *Annona*, as also the *Achras mammosa et sapota*, the *Chrysophyllum cainito*, and the *Crateva gymandra et tapia* of Linnæus. *Raii Hist. Plant.*

ANO'NIS (Bot.) or *Ononis*, ἀωνίς, ὄωνίς, or ὀνίς, from α, priv. and ὄνισμι, to be of use; a plant so called, because it seems to be worthless. In English it is called Restharrow; and in the Linnean system is the *Glycine-tomentosa*, the *Hedysarum hamatum*, and several species of the *Ononis*. The root is heating and attenuating; the bark, drank in wine, provokes urine; the root, boiled in oxycras, eases the toothache. *Theoph. Hist. Plant.* l. 6, c. 5; *Dioscor.* l. 3, c. 21; *Plin.* l. 21, c. 16; *Gal. de Simplic.* l. 6; *Oribas. Med. Coll.* l. 15; *Paul. Æginet. de Re Med.* l. 7, c. 3.

ANO'NYMOUS (Com.) ἀνόνομος, *anonymus*; from α, priv. and ὄνομα, a name, nameless; an epithet applied to partnerships in France, which are not acknowledged openly as partnerships, but are known only to the parties themselves.

ANONYMOUS spirit (Chem.) a sort of spirit that may be separated from tartar, and several sorts of wood.

ANONYMOUS (Lit.) an epithet applied to books or writings the author of which is not named.

ANO'NYMUS (Bot.) ἀνόνομος, from α, priv. and ὄνομα, a name; anonymous; an epithet for many exotics.

ANO'NYMUS (Anat.) the second cartilage of the throat. [vide *Cricoides*]

A'NORA (Chem.) Ovorum Testæ.

ANORCHIDES (Anat.) such as are born without testicles.

ANOREXIA (Med.) ἀνορέξια, from α, priv. and ὄρεξις, *appetitus*; loathing of food. *Gorr. Def. Med.*; *Foes. Æconom. Hippocrat.*

ANOREXIA, in *Cullen's Nosology*, is a genus of diseases.

ANO'SIA (Med.) ἀνοσία; from α, priv. and νόσος, disease; absence of disease.

ANO'SMIA (Med.) from α, priv. and ὄσμη, smell, i. e. without smell; a disease attended with a diminution or loss of smell.

ANO'TTA (Bot.) the *Bixa orellana* of Linnæus.

A'NSÆ (Ast.) the various positions of the rings of Saturn, which appear like *Ansæ*, or handles.

A'NSEL (Com.) a weight. [vide *Aunsel*]

A'NSER (Astron.) a small star, of the 5th or 6th magnitude, in the Milky Way. *Hevel. Prodrum. Astron.*

A'NSERES (Or.) the third order of birds, *Aves*, having the bill somewhat obtuse, and covered with a skin, gibbous at the base; the mouth toothed; the tongue fleshy; feet palmate, formed for swimming. It includes the following genera, namely: 1. Those having a bill with teeth, as—*Anas*, Goose, Swan, Duck, &c.; *bill* convex, obtuse.—Three fore toes connected.—*Mergus*, Merganser; *bill* hooked at the point; *feet* four-toed; the outer toe longest.—*Phaeton*, Tropic-Bird; *bill* sharp edged; *hind toe* turned forwards.—*Plotus*, Darter; *bill* pointed; *feet*, all the toes connected. 2. Those having a bill without teeth, as—*Rynchops*; *bill*, the upper mandible much shorter, lower truncate.—*Diomedea*, Albatross; *bill*, upper mandible hooked, lower truncate; *feet* four-toed, all placed forward.—*Ap-tenodyta*, Penguin; *bill* sharp edged; *feet* fettered, four-toed.—*Alca*, Auk; *bill* short, compressed; *feet* mostly three-toed.—*Procellaria*, Petrel; *bill* hooked at the point, mandibles equal; *feet*, the back toe pointing downwards.—*Pelicanus*, Pelican; *bill* furnished with a nail; *feet*, all the fore toes palmate.—*Larus*, Gull; *bill* sharp edged; *feet*, back toe small.—*Sterna*, Tern; *bill* pointed; *feet*, back toe small.—*Colymbus*; *bill* subulate; *feet* fettered.

ANSERINA (Bot.) the *Potentilla Anserina* of Linnæus.

ANSPEADE (Mil.) a subaltern in the French army, below a corporal, but above a sentinel.

A'NSWER (Law) a form of defence.

ANT (Ent.) a gregarious and proverbially industrious tribe of insects, which on that account is made the emblem of industry. They are divided, like the Bees and Wasps, into males, females, and neutrals, which last constitute the great mass of this tribe, and appear to conduct the business of the nest. Ants feed both on animal and vegetable substances, and if left at liberty will pick the bones of any dead animal until they have rendered it a naked skeleton. By this means good skeletons of frogs, snakes, &c. have been obtained.

ANT (Chem.) This insect yields a very grateful acid by distillation, which resembles vinegar, except that it forms crystals with magnesia, iron, and zinc.

ANTBEAR (Zool.) a name which Ray gives to two species of the bear that devour Ants.

ANT Eater (Zool.) the English name for an American quadruped, classed by Linnæus as a genus of Mammalia, under the name of *Myrmecophaga*.

ANTACHATES (Min.) a precious stone of the agate kind, which on being burnt yields a perfume of myrrh. *Plin.* l. 37, c. 19.

ANT-A'CIDA (Med.) acids that correct or destroy the acidity of the humours.

A'NTÆ (Archit.) Jaumbs or square pillars on each side the doors of the temples. The capitals of the Antæ seldom corresponded with those of the column; but in the temples of Minerva Polias, and Apollo Didymæus, in Ionia, they bear a strong resemblance, having also volutes, though not in the same proportion, nor hanging in the same manner. *Vitruv.* l. 3, c. 1; *Fest. de Verb. Signif.*; *Serv. in Virg. Eclog.* l. 2; *Salmas. in Solin.* p. 1216.

ANTAGONISTA (Anat.) ἀνταγωνιστής, from ἀντι and ἄγωμι, to contend; i. c. one thing acting against another; an epithet applied to muscles acting contrary ways, as the

Abductor of the cubitus, which serves to stretch the arm out, and the *Adductor*, which pulls it back.

ANTA'LGICS (*Med.*) medicines which assuage pain.

ANTA'LIUM (*Con.*) *Antale*, or *tubulus marinus*, a little shell, the size of a pipe, which contains small sea-worms.

ANTA'LKALINA (*Med.*) Medicines which possess the power of neutralizing alcalies, such as the antacids, &c.

ANTANACLA'SIS (*Rhet.*) ἀντανάκλασις, from ἀντανάκλω, to refract; a figure in rhetoric, when that which is spoken in one sense is turned to another or contrary sense.

Quint. Instit. l. 9, c. 3; *Rutil. Lup.* l. 1, c. 5.

ANTANAGO'GE (*Rhet.*) ἀντανάγωγη, from ἀντάγω, to set forth in opposition; recrimination; a figure of speech when one answers a charge by a counter charge of the same kind.

ANTANISOPHY'LLUM *scandens* (*Bot.*) the *Boerhavia scandens* of Linnæus.

ANTAPHRODISI'ACOS (*Med.*) ἀνταφροδισιακός, from ἀντι, and ἄφροδισις, Venus; anti-venereals, or medicines tending to extinguish venereal appetite.

ANTAPHRODI'TICA (*Med.*) the same as *Antiphrodisiacos*.

ANTAPODO'SIS (*Med.*) ἀνταποδόσις, from ἀνταποδοῖν, to reciprocate; periodical returns of the paroxysms of fevers. *Hippocrat. Aphor.* sect. 12; *Gorr. Def. Med.*; *Foes. Oeconom. Hippocrat.*

ANTAPODOSIS (*Rhet.*) ἀνταποδόσις, the counter part or latter clause of a similitude, answering to the former called by Quintilian "Redditio." *Quint. Instit.* l. 8, c. 3.

ANTARCTIC (*Astron.*) ἀνταρκτικός, from ἀντι, opposite, and ἄρκτος, the Northern Bear; an epithet for one of the Poles and one of the Circles.—*Antarctic Pole*, the South Pole, or the pole opposite to the Northern.—*Antarctic Circle*, one of the lesser circles, drawn on the globe at the distance of 23 degrees and a half from the Antarctic, or South Pole. *Gem. Elem. Astron.* c. 2; *Cleom. de Mund.* l. 1; *Procl. de Sphaer.*

ANTARTHRI'TICS (*Med.*) ἀνταρθρίτικα, from ἀντι, and ἄρθρις, the gout; medicines against the gout.

ANTA'RES (*Ast.*) the Scorpion's heart; a star of the first magnitude in the Scorpion. Its longitude for 1700, according to Hevelius, was in ♄ 5° 32' 43", and S. Lat. 4° 27' 19".

ANTASTHMA'TICS (*Med.*) ἀντασθματικά, from ἀντι and ἄσθμα, asthma; medicines against the Asthma.

ANTEAMBULO'NES (*Ant.*) from *ante*, and *ambulo*, to walk; clients who walked before their patrons.

Mart. l. 2, epig. 18, v. 5.

Sum comes ipse tuus, tumidique antambulō regis.

Sueton. in Vesp. c. 2; *Bud. in Pandect.* p. 137; *Salmas. ad Trebell. in Claud.* c. 14.

ANTECA'NIS (*Astron.*) the same as *Canis major*.

ANTECE'DENCE (*Astron.*) vide *Antecedentia*.

ANTECE'DENT (*Log.*) *Antecedens*, from *ante*, and *cedo*, to go; the premises of a syllogism, in distinction from the consequent conclusion. 2. *Locus proprius dialecticorum*, a conclusion.

ANTECEDENT of a ratio (*Geom.*) ἡγεμῖνος τε λόγος; the first of the two terms of a ratio, in distinction from the consequent or last term; as, if *a* be to *b* as *c* to *d*, then *a* and *c* are the antecedents, *b* and *d* consequents. *Def. Euc. Elem.* l. 5.

ANTECEDENT (*Gram.*) that word to which the relative refers.

ANTECEDENT (*Phy.*) the cause that is first observed.

ANTECEDENT Decree (*Theol.*) a decree preceding some other decree, or some action of the creature, or the provision of the action.

ANTECEDE'NTAL method (*Geom.*) a mode of Geometrical proportion, derived from the examination of the antecedents and consequents of ratios, invented by Mr. James

Glennic, and illustrated in 1789, in a treatise on "General Proportion."

ANTECEDE'NTIA (*Astron.*) an epithet applied to the motion of the planets when they appear to move εἰς τὰ προηγμένα westward, or contrary to the usual order of the sigus, in distinction from the eastward motion, when they are said to move εἰς τὰ ἐπόμενα i. e. "in consequentia." *Ptol. Almag.* l. 3, &c.

ANTECEDENTIA Signa (*Med.*) signs of diseases; such as the bad disposition of the blood, which are first observed.

ANTECESSO'RES (*Ant.*) men who for their skill were held in high esteem, and took the lead on all occasions. Justinian gave this name to professors of the law. *Turneb. Adv.* l. 8, c. 19.—*Antecessores equites*, parties of dragoons sent out on the scout; called by Cæsar "ante cursores." *Cæs. de Bell. Gall. Cic.* l. 5, c. 45; *Hist. de Bell. Afric.* c. 12; *Turneb. Adver.* l. 24, c. 16.

ANTECIANS (*Astron.*) vide *Antoeci*.

ANTECE'NIUM (*Ant.*) from *ante*, and *cænum*, supper; περίδειπνον, a collation before supper, or the first course at supper, consisting of eggs, herbs, &c. customary among the Greeks and Romans. *Macrob. Saturn.* l. 3, c. 12; *Turneb. Adv.* l. 17, c. 10; *Lips. Antiq. Lect.* vol. 3, p. 147.

ANTECURSO'RES (*Ant.*) vide *Antecessores*.

ANTEDATE (*Com.*) a date that precedes the real one, as the antedate of a bill, that which is earlier than the time when it is drawn.

ANTEDILUVIANS (*Ant.*) from *ante* and *diluvium*, the deluge; persons living before the deluge.

ANTEJURAMENTUM (*Law*) an oath taken both by the accuser and accused, before any trial or purgation.

ANTELA'BIA (*Anat.*) πρόχειλα, from *ante*, before, and *labia*, the lips; the extremities of the lips. *Ruf. Ephes. Appell. Part. Human. Corp.* l. 1, c. 6.

ANTELIX (*Ant.*) or *Antihelix*, from *anti*, opposite to, and *helix*; in the Greek ἀντιελίξ; that part of the ear which is opposite to the helix. *Ruf. Ephes. de Appell. Part. human. Corp.* l. 1, c. 6.

ANTELOPE (*Zool.*) the *Antilopus* of Linnæus; an African beast, like a deer, which is remarkable for its swiftness. The hoofs and horns are used in medicine, and are esteemed good against the epilepsy and hysterics. *Gessn. de Quad.*; *Aldrov. de Quad.*

ANTELUCA'NÆ cæna (*Ant.*) suppers early in the morning.

ANTEBALLO'MENOS (*Med.*) ἀντεβαλλόμενος, from ἀντι, for, and ἐμβάλλω, to throw or put in, substituted; an epithet applied to any medicine substituted for another.

ANTEMBASIS (*Anat.*) ἀντεμβάσις, from ἀντι, and ἐμβάσις, to enter; a mutual insertion of the bones.

ANTEMERIDIAN (*Astron.*) abbreviated A. M. from *ante*, and *meridies*, the noon; the time before noon.

ANTEME'TICS (*Med.*) ἀντεμετικά, from ἀντι, against, and ἔμετικος, vomiting; remedies against præternatural vomiting.

ANTEMURA'LE (*Ant.*) the name among the ancients for what is now called the counterscarp, or outwork in fortification.

ANTEMUR'LE (*Rhet.*) ἀντέμυρλημα, a figure of speech, in which the accused draws his defence out of the accusation itself, as when Orestes says, "It is true I killed my mother, and I did rightly, for she killed my father." *Cic. de Invent.* l. 2, c. 26; *Hermogenes in Partit.*; *Quintil.* l. 7, c. 4; *Sopat. διαμ. Ald. Ed.* p. 289.

ANTEDEI'XIS (*Med.*) ἀντεδείξις, a contra indication; when any thing happens contrary to the primary indication, as an inflammatory pleurisy indicates phlebotomy, but the weakness of the patient is a contrary indication. *Gal. de Meth. Med.* l. 9, c. 7; *Gorr. Def. Med.*

ANTE'NNA (*Ant.*) the sail-yard, or the beam which crosses the mast for the purpose of extending the sails. It is called in the Greek κίμας, a horn; in which sense Virgil, and after

him Silius Italicus, uses the Latin *cornu*. The parts of the Antennæ are: *ἀμβολα* and *σύμβολα*, junctures in the middle, by which it could be bent; *ἀγκύλαι*, the arms, inclining to an orbicular figure; and *ἀκροίερα*, the extremities. *Cæs. de Bell. Gall.* l. 3, c. 14; *Poll. Onomast.* l. 1, c. 9; *Tertull. cont. Marcion.* l. 3; *Artemidor. de Interpret. Sonn.* l. 1; *Schol. in Hom. Il.* l. 18; *Macrob. Saturn.* l. 5, c. 21; *Jun. Catal.*; *Gyrald. de Nav.* c. 12; *Scheff. de Re Nav.* l. 2, c. 5.

ANTE *Nicene* (*Ecc.*) an epithet for what preceded the council of Nice.

ANTE'NNÆ (*Ent.*) the Horns, or hornlike processes, projecting from the head of insects.

ANTEPENU'LTIMATE (*Gram.*) from *ante*, before, *pene*, almost, and *ultimus*, the last; the syllable before the two last.

ANTEPA'GMENTA (*Archit.*) ornaments to the doors, so called because *ante pangantur* they are fixed before the porches or doors wrought in timber or stone, according to an ancient inscription—TACITO ANTEPAGMENTA ABIEGNA LATA S=—. *Vitruv. de Architect.* l. 4, c. 6; *Bald. Lex. Vitruv.*

ANTEPHIA'LTICS (*Med.*) from *ἀντι*, and *ἰφιάλις*; remedies against the night-mare.

ANTEPA'NNI (*Ant.*) or *antipana*, from the modern Greek *ἀντιπανα*; the band with which the anterior part of the garment was fastened. *Salmas. de Re Mil. Roman.*

ANTEPILEPTICS (*Med.*) *ἀντεπιληπτικά*, from *ἀντι*, and *ἐπιληψία*, *epilepsis*; remedies against the epilepsy.

AN'TERA (*Bot.*) the same as *Anthera*.

AN'TERIDES (*Arch.*) in the Greek *ἀντηρίδες*, or *ἑρέσματα*; props or buttresses which served to support a wall. *Vitruv.* l. 6, c. 2; l. 10, c. 1, & *Philand. in Vitruv.*; *Hesychius*; *Bald. Lex. Vitruv.*; *Salmas. Plin. Exercitat.* p. 856.

AN'TERIOR (*Anat.*) before in position; an epithet applied to the muscles and other parts of the body.

AN'TES (*Arch.*) vide *Antæ*.

AN'TES (*Agr.*) the outermost rows of vines in the vineyards, so called because they stand *ante* foremost. *Fest. de Verb. Signif.*

AN'TESIGNA'NI (*Ant.*) soldiers, so called because they marched *ante signa* immediately before the standards, so as to form the van or front of the army. The *hastati* and *principes* used to occupy this post. *Cæs. de Bell. Civ.* l. 1, c. 57; *Liv.* l. 2, c. 20, &c.; *Leps de Mil. Roman.* l. 4, dial. 3; *Salmas. de Re Mil.* c. 1, &c. *Schel. in Hygin. apud Græv. Thes. Antiq. Roman.* tom 10, p. 1055, &c.

AN'TESTA'RI (*Ant.*) from *ante*, before, and *testari*, to call to witness; to call any one as a witness, or to subpoena a person, which was done among the Romans by touching the right ear, to which custom Plautus and Horace alludes. *Plaut. Pers.* act 4, scen. 9, v. 10.

Tuane ego causa carnifex
Cuiquam mortali libero aures atteram.

Horat. l. 1, sat. 9, v. 75.

Casu venit obivus illi?
Adversarius; et, Quò tu, turpissime? magna
Exclamat voce; et, licet antestari? Ego vero
Oppono auriculam; rapit in jus; clamor utrimque
Undique concursus. Sic me servavit Apollo.

Plin. l. 11, c. 45; *Ursat. de Not. Roman. apud Græv. Thes. Antiq. Roman.* tom. 11, p. 549, &c. &c.

AN'TESTATURE (*Fort.*) a traverse or small entrenchment made of palisadoes, or of sacks filled with earth.

AN'TEUPHORB'BIUM (*Bot.*) the *Cacalia Antephorbium* of Linnæus.

AN'THALIUM (*Bot.*) the *μαλθαλάρα* of Theophrastus, a plant which is said to grow freely on the banks of rivers. *Theophrast. Hist. Plant.* l. 4, c. 10; *Plin.* l. 21, c. 15.

AN'THEA (*Med.*) from *ἄνθος*, redness, like the top of a carbuncle.

AN'THELIX (*Anat.*) vide *Antelix*.

AN'THELMIA (*Bot.*) a species of the *Spigelia* of Linnæus.

AN'THELMINTICA (*Med.*) from *ἀντι*, and *ἔλμινς*, *vermes*; vermifuges, or remedies against worms.

AN'THEMIS (*Bot.*) *ἀνθεμίς*, a plant called by some *λευκανθεμος*, *ἡρώθεμος*, and *χαμαιμήλος*, which was reckoned efficacious against the stone. *Dioscor.* l. 3, c. 153; *Plin.* l. 21, c. 16, &c.; *Oribas. Med. Coll.* l. 11, 15, &c.; *Aet. Tetrab.* l. 1, serm. 1; *Paul. Æginet. de Re Med.* l. 1, c. 3.

AN'THEMIS, in the Linnæan system, a genus of plants, Class 19 Syngenesia, Order 2 Polygamia Superflua.

Generic Characters. CAL. common hemispherical; scales linear—COR. compound radiate—STAM. filaments five; anther cylindrical.—PIST. germ oblong; style filiform; stigmas two—PER. none; calyx unchanged; seeds solitary; down margined or none; receptacle chaffy.

Species. The species are either annuals or perennials, Among the annuals are the—*Anthemis cotula*, *Chamæmelum annuum* seu *Bellis montana*, native of Italy.—*Anthemis cotula* seu *Chamæmelum fœtidum*, Stinking Chamomile.—*Anthemis Chia* seu *Chamæmelum Chium*, Cut-leaved Chamomile, native of Chios, &c. Among the perennials are the—*Anthemis nobilis*, *Chamæmelum nobile* seu *odoratum*, *Leucanthemum* seu *Matricaria*, Common or Sweet Chamomile, a native of Britain.—*Anthemis pyrethrum*, *Chamæmelum* seu *Pyrethrum*, Spanish Chamomile or Pellitory, &c. *J. Bauhin. Hist. Plant.*; *C. Bauhin. Pin. Theat.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Pluk. Almag. Botan.*; *Mor. Hist. Plant.*; *Linn. Spec. Plant.*

AN'THER (*Bot.*) from the Greek *ἀνθηρς*, florid, and *ἄνθος*, a flower; a part of the stamen of the flower which is placed on the filament. It is called, by Ray, the *apex*, or Chive; by Malpigi, *capsula staminis*; by Grew, the Summit, Pendent, or Tip. It is defined by Linnæus *Pars floris gravida polline, quod natura dimittit*; i. e. a part of the flower big with pollen or farina, which it emits or explodes when ripe; or it may be defined to be a vessel destined to retain and emit, in its proper season, a dust, which serves to impregnate the germ.

Anthers differ as to their figure, number, situation, manner of bursting, and number of their cells.

As to its figure, the anther is—Oblong, as in *Lilium*, and Grasses.—Arrow-shaped *sagittata*, as in the *Crocus*, fig. 1; so also in *Linum*, *Bromelia*, &c.—Angular, *angulata*, i. e. having deep furrows that form angles, as in the Tulip.—Horned, *cornuta*, as in *Asarum*, fig. 2.; so in *Hamamelis*, *Vaccinium*, *Pyrola*.—Forked, *bifurcata*, i. e. bifid, or cleft above and below, as in *Festuca*, fig. 3, and in most Grasses.—Two-horned, *bicornis*, having two subulate prolongations at the apex, as in *Vaccinium*.—Subulate or awlshaped, as in *Corus*, *Roella*, fig. 2.—Awned, *aristata*, having two bristle-shaped appendages at the base, as in *Erica*, *Arborea*, fig. 4.—Heartshaped *Cordata*, as in *Turnera frutescens*, fig. 5; so in *Thea*, *Capraria*, *Bucida*, *Malpigia*, &c.—Crested, *cristata*, having two cartilaginous points at the sides or the base, as in *Erica*, fig. 6.—Dentated, having indentations on the margin, as in the Yew.—Hastate, or shaped like the head of a halbert, as in *Jacquinea*.—Spiral, or turned like a screw, as in *Chironia*.

As to its situation, the anther is mostly—Erect, *erecta*, i. e. standing with its base straight on the point of the fila-

ment.—Incumbent, *incumbens*, i. e. obliquely or horizontally attached to the filaments, as in fig. 7.—Lateral, *lateralis*, i. e. attached by its side to the point of the filament, as in fig. 8.—Adnate, *adnata*, when it is closely attached to both sides of the filament, as in fig. 6 and 9. Connate, *connata*, when several grow together, forming a tube.—Sitting, *sessilis*, that has no filament.

As to their number, there is generally one anther to each filament, but in *Cucurbita* there is one to three filaments; in the Class *Syngenesia*, one to five. On the other hand there are in *Mercurialis* two, and in *Tumaria* three anthers to a filament: in *Bryonia* five to three filaments; in *Theobroma* five to each. In some flowers anthers are regularly wanting on one or more of the filaments, as in *Chelone*, *Curcuma*, &c. which are called Barren filaments.

As to their manner of bursting: anthers burst at the side in most plants; at the point, as in *Galanthus*; from the base, upwards, as in *Epimedium* and *Leontice*.

As to their number of cells, anthers are unilocular, having but one cell or cavity, as in *Mercurialis*; bilocular, as in *Epimedium*, *Asclepias*, *Daphne*, and *Helleborus*; multilocular, as in *Fritillaria*, *Tropæolum*.

ANTHERA (*Med.*) medicines so called from their florid red colour. *Cel. de Re Med.* l. 6, c. 2; *Gal. de Meth. Med.* l. 5; *Paul. Æginet. de Re Med.* l. 3, c. 66.

ANTHEREON (*Anat.*) ἀνθηρέων, the chin, or that part of the face where the beard grows, according to Hippocrates and most writers; but Suidas and Cælius Aurelianus explain it by the beginning of the neck and throat. *Hippocrat. Epid.* l. 5; *Suidas*; *Cal. Aurel. de Tard.* l. 1, c. 3.

ANTHERICUM (*Bot.*) ἀνθηρίκος, is called, by Theophrastus, the stem, and by Dioscorides, the flower of the Asphodel. *Theophrast.* l. 1, c. 7; l. 7, c. 12; *Dioscor.* l. 1, c. 199; *Plin.* l. 21, c. 17; *Schol. in Theocrit.* idyl. 1; *Suidas*; *Hesychius*.

ANTHERICUM, a genus of plants, Class 6 *Hexandria*, Order 1 *Monogynia*.

Generic Character. CAL. none.—COR. petals six—STAM. filaments subulate; anthers small—PIST. germ obscurely three-cornered; style simple; stigma obtuse.—capsule ovate; seeds numerous.

Species. The species of this genus are mostly perennials, and natives of the Cape of Good Hope, India, &c. as—*Anthericum ramosum*, Branching Anthericum.—*Anthericum liliago*, seu *Phalangium liliago*, Grass-leaved Anthericum, &c. But the *Anthericum liliastrum*, Savoy Anthericum or Spider-Wort, is a native of the Alps; and the *Anthericum ossifragum*, Lancashire Anthericum or Asphodel, a native of Europe, &c.

ANTHESIS (*Bot.*) ἀνθησις, *efflorescentia*, efflorescence; that state of vegetation in which the flower is completely developed.

ANTHESPHORIA (*Ant.*) Ἀνθησφορία, from ἄνθος, a flower, and φέρω, to carry; a festival celebrated in Sicily, in which flowers were strewed in the temple, in honour of Proserpine, who was carried away by Pluto while gathering flowers. It is called by Plutarch *Φερεφάρτια*, and in the Latin *Florilegium*. It was observed, according to Pausanias, in honour of Juno, to whom a temple was dedicated under the name of ἀνθεία. *Poll. Onomast.* l. 1, c. 1, segm. 37; *Pausan.* l. 2.

ANTHESTERIA (*Ant.*) Ἀνθησθηρία, festivals in honour of Bacchus, among the Greeks, celebrated on the 11th, 12th, and 13th days of the month Anthesterion. These days were distinguished by the names of the πθονία, χοά, and χότρα, during which the slaves were allowed to make themselves merry, and at the end of the festivals were dispersed with the command θύραζε κῆρες, ἐκ τῆς ἀνθησθηρίας, i. e. "Be gone, o Carian slaves, the Anthesteria are over." *Ælian. Var. Hist.* l. 2, c. 41; *Schol. in Aristoph.*; *Harpocration*;

Suidas. cent. vii. prov. 90; *Etymolog. Magnum*; *Zenob.* cent. iv. prov. 32; *Meurs. Græc. Fer.* l. 1.

ANTHESTERION (*Chron.*) ἀνθησθηρίων the sixth month of the Athenian year, consisting of twenty-nine days, and answering to the latter part of our November and the beginning of December. This month was so called from the feast Anthesteria, which was celebrated at that time. *Macrob. Saturnal.* l. 1, c. 14; *Gaza de Mens. Attic.*; *Scalig. de Emendet. Tempor.*

A'NTHIA (*Ich.*) ἄνθια, a kind of fish, the fat of which is good against humours. *Aristot. Hist. Animal.* l. 9, c. 37.

A'NTHINES (*Med.*) ἀνθίνης, from ἄνθος, a flower; medicated wines and oils infused in flowers. *Gal. Exeg. in Vocab. Hippocrat.*; *Foes. Econom. Hippocrat.*; *Gorr. Defn. Med.*

ANTHISTIRIA (*Bot.*) from Ἀνθησθηρία [vide *Anthesteria*] a genus of plants, Class 23 *Polygamia*, Order 1 *Monoecia*.

Generic Characters. CAL. glume four-valved; valves equal.—COR. glume two-valved; valves lanceolate.—STAM. filaments three; anther oblong.—PIST. germ oblong; styles two; stigmas hairy.—PER. none, except the closed calyx; seed oblong.

Species. The species of this genus are perennials, and mostly natives of India, as—*Anthesteria imberbis* seu *Stipa paleacea*—*Anthistiria glauca* seu *Stipa arguens*, &c.—*Anthistiria Japonica* seu *Andropogon Ciliatum*, &c.—but the *Anthistiria ciliata* is an annual. *Linn. Spec. Plant.*

ANTHOCEROS (*Bot.*) a genus of Algæ, Class *Cryptogamia*.

Generic Characters. Male flowers within the substance the leaf. CAL. leaf one; blossom none.—STAM. filaments hardly any; anthers from three to eight. Female flowers on the same plant. CAL. leaf one; blossom veil fibrous.—PIST. germ. short, conical; style very short; summit simple.—PER. capsule very long, awlshaped; seeds many.

ANTHODIUM (*Bot.*) the *Calyx communis* of Linnæus, and the Common Perianth or Calyx which contains a great number of flowers that appear but as one, as in *Leontodon taraxacum*, Blue-bottle; *Centaurea cyanus*, Sunflower, &c.

ANTHOLOGION (*Ecc.*) a church book, mass book, or missal in the Greek church, which contained a collection of devotional pieces.

ANTHOLY'ZA (*Bot.*) from ἄνθος, a flower, and λίσσα, madness; a genus of plants; Class 3 *Triandria*, Order 1 *Monogynia*.

Generic Characters. CAL. spathes two valved.—COR. petal one.—STAM. filaments long; anthers acute.—PIST. germ inferior; style filiform; stigma trifid.—PER. capsule roundish; seeds many.

Species. The species are mostly perennials, and natives of the Cape of Good Hope. *Linn. Spec. Plant.*

ANTHONY, *Knights of St.* (*Her.*) a military order instituted by Albert, Duke of Bavaria, when he designed to make war against the Turks in 1382. The knights wore a collar of gold made in the form of a hermit's girdle, from which hung a stick cut like a crutch, with a little bell, as they are represented in the pictures of St. Anthony. There was another order of this name instituted as early as 370 by John, emperor of Ethiopia.

ANTHONY'S fire, *St.* (*Med.*) a name given to the disorder called the Erysipelas, which is said to have been cured by St. Anthony.

ANTHOPHYLLUS (*Bot.*) vide *Carophylli*.

ANTHROPOLOGY (*Theol.*) an ascription of human passions to the divine being.

ANTHROPOMANCY (*Ant.*) from ἄνθρωπος and μαντεία, a species of divination by inspecting human entrails.

ANTHROPOSCOPIA (*Eth.*) from ἄνθρωπος, a man, and σκοπέωμαι, to behold; a judging of human characters.

ANTHORA (*Bot.*) seu *Antithora*, Salutory Monk's Hood; the *Aconitum Anthora* of Linnæus. *J. Bauh. Hist. Plant.*; *Ger. Herb.*; *Park. Parad.*; *Raii Hist. Plant.*

ANTHOS (*Bot.*) ἄθος, 1. Flowers in general; 2. Rosemary in particular.

ANTHOSPERMUM (*Bot.*) from ἄθος and σπέρμα, flower-seed; a genus of plants; Class 23 *Diocia*, Order 4 *Tetrandria*.

Generic Characters. CAL. *perianth* one-leaved.—COR. none.—STAM. *filaments* four; *anthers* twin.—PIST. *germ* inferior; *styles* two; *stigmas* simple.

Species. The species are mostly shrubs, and natives of the Cape of Good Hope, as *Anthospermum cancellatum*, *Aethiopicum*, &c. *Pluk. Phytog.*; *Linn. Spec. Plant.*

ANTHOXANTHON (*Bot.*) the *Rumex maritimus* of Linnæus.

ANTHOXANTHUM (*Bot.*) from ἄθος and ζαῖθος, Yellow-flower; a genus of plants; Class 2 *Diandria*, Order 2 *Digynia*.

Generic Characters. CAL. *glume* one-flowered; *valves* ovate.—COR. *glume* one-flowered; *nectary* two-leaved.—STAM. *filaments* two; *anthers* oblong.—PIST. *germ* oblong; *styles* two; *stigmas* simple.—PER. *glume* of the corolla grows to the seed; *seed* one.

Species. The plants of this tribe are grasses and perennials, as the *Anthoxanthum odoratum*, Sweet Vernal-Grass, &c. *J. Bauhin. Hist. Plant.*; *C. Bauhin. Pin. Theat.*; *Raii Hist. Plant.*; *Pluk. Almag. Botan.*; *Linn. Spec. Plant.*

ANTHOXANTHUM is also the name of the *Rumex maritimus*; the *Crispis aculeata*; the *Festuca spadicæ* of Linnæus. *Bauh. Hist. Plant.* &c.

ANTHRA'CIA (*Med.*) a burning swelling. [vide *Carbuncle*]

ANTHRACITES (*Min.*) vide *Schistos*.

ANTHRACO'SIS oculi (*Med.*) a scaly corrosive ulcer in the eye.

ANTHRAX (*Ent.*) a division of the genus *Bombylius*, according to Fabricius, comprehending the insects of this tribe, which have the antennæ distant, and the last joint setaceous.

ANTHRE'NUS (*Ent.*) a genus of animals; Class *Insecta*, Order *Coleoptera*.

Generic Character. *Antennæ* clavate.—*Fcelers* unequal.—*Jaws* membranaceous.—*Lip* entire.—*Head* hid under the thorax.

Species. The principal species are the—*Anthrenus denticornis*, which inhabits Santa Cruz.—*Anthrenus histrio*, which inhabits Germany, &c.

ANTHRI'BOS (*Ent.*) a division of the genus *Curculio*, comprehending those species of insects which have the lip bifid, jaw bifid, and snout short.

ANTHRI'SCUS (*Bot.*) the *Chærophyllum tumulum* and *Scandix anthriscus* of Linnæus.

ANTHROPO'GRAPHUS (*Ant.*) from ἀνθρώπος, a man, and γράφω, to paint, i. e. a painter of man; a surname of Dionysius, the painter who painted men only. *Plin.* l. 35, c. 10.

ANTHROPOLI'THUS (*Foss.*) from ἀνθρώπος, a man, and λίθος, a stone; a genus of petrefactions of the human body and its parts.

ANTHROPO'LOGY (*Anat.*) from ἀνθρώπος, a man, and λέγω, to discourse upon the study of man anatomically.

ANTHROPOMORPHITES (*Ecc.*) from ἀνθρώπος, man, and μορφή, the form; heretics in the fourth century, who maintained that God had bodily shape. *S. Epiphani. Hæres.* 70; *S. August. Hæres.* 50.

ANTHROPOMO'RPHOS (*Nat.*) another name for the mandrake.

ANTHROPOPHAGI (*Ant.*) another name for cannibals, or men eaters.

ANTHROPO'SOPHIA (*Anat.*) the knowledge of the nature of man.

ANTHUMON (*Bot.*) the Epithymon, or dodder growing on thyme.

ANTHYLLIS (*Bot.*) ἄνθυλλις, Kidney-Vetch; a plant which was reckoned very good for diseases in the kidneys. *Diosc.* l. 3, c. 153; *Gal. de Simpl. Med.* l. 6; *Oribas. Med. Coll.* l. 11; *Act. Tetrab.* l. 1, serm. 1; *Paul. Æginet.* l. 7, c. 3.

ANTHYLLIS, in the Linnæan system, a genus of plants; Class 17 *Diadelphia*, Order 4 *Dicandria*.

Generic Characters. CAL. *perianth* one-leaved.—COR. *papilionaceous*.—STAM. *filaments* connate; *anthers* simple.—PIST. *germ* oblong; *style* simple; *stigma* obtuse.—PER. *Legume* roundish; *seeds* one or two.

Species. The species are either perennials or shrubs. Among the perennials are the—*Anthyllis vulneraria*, Common Ladies' Fingers or Kidney-Vetch, native of Britain.—*Anthyllis montana* seu *Astragalus purpurea*, Mountain Ladies' Fingers or Kidney-Vetch.—*Anthyllis polycephala*, &c. Among the shrubs are the—*Anthyllis barba Jovis*, Silvery Anthyllis or Jupiter's Beard.—*Anthyllis cytasoides* seu *Cytisus incanus*, Downey-leaved Anthyllis, &c. There are also a few annuals and biennials among the species. *J. Bauhin. Hist. Plant.*; *C. Bauhin. Pin. Theat.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tourn. Inst. Herb.*; *Boerh. Ind. Plant.*; *Linn. Spec. Plant.*

ANTHYLLIS is also the name for several species, as the *Arenaria peploides*; the *Aspalathus anthylloides*; the *Camphorosma acuta*; the *Cressa polycarpon et tetraphyllum*; the *Salsola fruticosa*; the *Teucrium iva*; and the *Frankenia pulverulenta* of Linnæus. *Clus.*; *Bauh.*; *Ger.*; *Raii*; *Park.* &c.

ANTHYLLOIDES (*Bot.*) the *Salsola polyclonos* of Linnæus; also an epithet for the *Aspalathus* of Linnæus.

ANTHYPNO'TICA (*Med.*) from ἀντι and ὕπνος, sleep; remedies against excessive sleep.

ANTHYPA'LLAGE (*Rhet.*) ἀνθυπαλλαγῆ, a commutation in cases, as when Homer says, Οἱ δὲ δῶα σκόπελοι, ὁμῆν ουρανὸν εὐρὸν ἰκάνει; instead of the more common form, τῶν δὲ δῶα σκοπελων, &c. *Hom. Odys.* l. 13, v. 75; *Demet. de Eloc.* § 60.

ANTHYPO'PHORA (*Rhet.*) ἀνθυποφορᾶ, from ἀντι, contra, ὑπό, under, and φέρω, to carry, a figure of speech, wherein the objections of an adversary are brought forward in order to be answered. *Ulpin. ad Demost. Orat. Olynth.* l. 1, p. 5; *Hermog. de Invent.* l. 3.

ANTHYPOCHO'NDRIACUM sal (*Chem.*) the residuum remaining after the distillation of the water and sublimation of the Sal Ammoniac.

ANTHY'STERICA (*Med.*) from ἀντι, and ὕστερα, the womb; medicines against hysterical affections.

ANTIA *Lex* (*Ant.*) a law made by Antius Restro against luxury. Seeing the inefficacy of his measure, he never after supped abroad, that he might not be a witness to the extravagance which he could not suppress. *Aul. Gel.* l. 2, c. 24; *Macrob.* l. 2, c. 13.

ANTI'ADES (*Anat.*) ἀντιάδες. 1. *Tonsillæ*, the tonsils. 2. The tonsils in an inflamed state. *Hippocrat. de Morb.* l. 2; *Ruff. Ephes. de Appel. Part. Corp. human.* l. 1, c. 6, l. 2, c. 4; *Cel. de Re Med.* l. 7, c. 12; *Gal. de Symp. Caus.* c. 4, &c.; *Oribas. de Loc. Affect. Curat.* l. 3, c. 68; *Act. Tetrab.* 2, serm. 4, c. 51; *Paul. Æginet. de Re Med.* l. 3, c. 26; *Gorr. Def. Med.*; *Foes. Æconom. Hippocrat.*

ANTI'AGRI (*Med.*) from ἀντιάδες, and ἄγρῃ, a prey; tumours of the tonsils.

ANTIARTHRITICA *Antiasthmatica* (*Med.*) vide *Antarthritis*, &c.

ANTIBAC'CHIUS (*Gram.*) παλιμβάκχιος, a foot; in verse having the two first long, and the last short, as *nūiūrā*;

pes bacchio contrarius. Terentian. Maur. de Met.; Hæphest. Enchyrid. Mar. Vict. Centimet.

ANTICACHE/TICS (*Med.*) from ἀντί and καχεξία, *cachexia*; remedies against the cachexy.

ANTICA'DMIA (*Min.*) a substitute for the real cadmia.

ANTICAR (*Chem.*) Borax.

ANTICARDIUM (*Anat.*) from ἀντί, opposite to, and καρδιά, *os ventriculi*, the pit of the stomach.

ANTICATARRHALIS (*Med.*) from ἀντί, against, and κατάρρως *catarrh*; a remedy against the *catarrh*.

ANTICAUSTIC (*Med.*) from ἀντί and καυσός, a burning fever; a remedy against a burning fever.

ANTICHAMBER (*Archæol.*) any outer chamber next to the principal chambers or room, where persons wait who are in attendance on the great.

ANTICHEIR (*Anat.*) ἀντιχειρ, the Greek name for the *pollex*, or thumb. *Gal. de Mus. Dissert. c. 22; Gorr. Def. Med.*

ANTICHOLE'RICA (*Bot.*) the *Sophora heptaphylla* of Linnæus.

ANTICHORUS (*Bot.*) if from χορός, and *Antichórus*, if from χορός, a genus of plants, Class 8, *Octandria*, Order 1 *Monogymia*.

Generic Characters. CAL. *perianth* four-leaved; leaflets lanceolate.—COR. *petals* four.—STAM. *filaments* setaceous; *anthers* roundish.—PIST. *germ* superior; *style* cylindrical; *stigma* obtuse.—PER. *capsule* subulate: seeds very many.

Species. The only species is the *Antichorus depressus*, seu *Justicia edulis*, an annual, native of Arabia. *Linn. Spec. Plant.*

ANTICHRE'SIS (*Ant.*) a mortgage, or pawn, left for the creditor to use till the debt be paid. *Hotoman.*

ANTICHRIST (*Ecc.*) the great adversary of Christ who is described in the Bible.

ANTICHTHONES (*Geog.*) another name for the Antipodes.

ANTICIPANS (*Med.*) from *ante* and *capio*, to take before the time, anticipating; an epithet for a fever, the paroxysms of which anticipate the time of the preceding paroxysm.

ANTICIPATIO (*Rhet.*) vide *Prolepsis*.

ANTICNEMION (*Med.*) ἀντικνήμιον, from ἀντί, opposite to, and κνήμη, the leg; the fore part of the tibia which is bare of flesh. *Poll. Onom. l. 2, segm. 190.*

ANTICOLICA (*Med.*) from ἀντί and κολικῶς, the colic; remedies against the colic.

ANTICONTO'SIS (*Med.*) ἀντικόντωσις, from ἀντί and κόντος, a staff; supporting with a staff or crutch.

ANTICOR (*Vet.*) from *ante*, before, and *cor*, the heart; a dangerous disease near the heart of horses.

ANTICUM (*Ant.*) scilicet *ostium*, from *ante*, before, that is, a porch before a door or a fore-door. *Fest. de Signif. Verb.*

ANTIDACTYLUS (*Gram.*) a foot, opposite to a *dactyle*; the same as the *Anapest*.

ANTIDESMA (*Bot.*) from ἀντί, instead of, and δεσμός, a chain; so called because it is good for making ropes, a genus of plants, Class 22 *Dioccia*, Order 5 *Pentandria*.

Generic Characters. CAL. *perianth* five-leaved; leaflets oblongish.—COR. none.—STAM. *filaments* five; *anthers* roundish.—PIST. *germ* superior; *style* none; *stigmas* five.—PER. *drupe* roundish; *seed* none.

Species. The species are mostly shrubs and natives of the East Indies. *Linn. Spec. Plant.*

ANTIDIAPHORISTS (*Ecc.*) those who opposed the *adiaphorists*.

ANTIDIASTOLE (*Med.*) ἀντιδιαστολή, from ἀντί, in distinction from, and διαστέλλω, to discriminate; a discrimination of one disease or symptom from another.

ANTIDICOMARIANITES (*Ecc.*) the followers of Hel-

vidius, who denied the perpetual virginity of the Virgin Mary, A. D. 373. *Epiphani. Hæres. 78; St. August. Hæres. 84; St. Hieron. cont. Helvid.; Baron. Annal. Ann. 373.*

ANTIDY'NICA (*Med.*) from ἀντί, and δύν, *vortex*; remedies against a vertigo.

ANTIDOTA'RIUM (*Med.*) a book in which *Antidotes* are described.

ANTIDOTE (*Med.*) ἀντίδοτος, *Antidotus*, from ἀντί, against, and δοτός, given; a counter poison, or counteracting medicine in general. *Cel. de Re Med. l. 5, c. 22; Gal. de Antidot.; Oribas. Synop. l. 3; Act. Tetrab. 4, serm. 1; Tral-lian. l. 4, &c.; Paul. Æginet. de Re Med. l. 7, c. 3; My-reps. de Antidot.; Gorr. Defin. Med.*

ANTIDOTUS (*Chem.*) the philosopher's stone.

ANTI'DYSENTERICA (*Med.*) from ἀντί, against, and δυσεντερία, *dysenteria*; remedies against the dysentery.

ANTIELMINTHICKS, *Antiemelica*, &c. (*Med.*) vide *Anthelminthicks*, &c.

ANTI'ENT (*Law*) vide *Ancient*.

ANTI'EPILEPTIC *elixir* (*Chem.*) the spirit of a human head, mixed with an equal quantity of spirit of wine, in which opium has been dissolved.

ANTIFEBRILE (*Med.*) a remedy against a fever.

ANTIGONIA (*Ant.*) Ἀντιγονεῖα, sacrifices in honour of Antigonus. *Plut. in Ag.*

ANTIGRAPHE (*Ant.*) ἀντιγραφή, a name for the oath which the defendant was obliged to take before a lawsuit was commenced in Greece.

ANTIGRAPHE is also an action against any one laying claim to a vacant inheritance, i. e. the inheritance of a person who dies childless. *Jul. Poll. l. 8, c. 6; Harpocraton.*

ANTIGRAPHEUS (*Ant.*) ἀντιγραφεύς, a Receiver-general among the Greeks.

ANTIHECTICA (*Med.*) from ἀντί, against, and ἑκτικός, the hectic; remedies against a hectic fever.

ANTIHELIX (*Anat.*) the same as *Antelix*.

ANTILENA (*Ant.*) a poitrel, or breast-leather for horses.

ANTILEPSIS (*Surg.*) ἀντιληψίς, the hold for a bandage to keep it from slipping. *Hippoc. de Med.; Gorr. Defin. Med.; Foes. Econom.*

ANTILOB'IUM (*Med.*) ἀντιλόβιον, from ἀντί, contra, and λοβός, *lobus*; that part of the ear opposite to the lobe. *Ruf. Ephes. Appellat. Part. human. Corp. l. 1, c. 6; Poll. Onom. l. 2, segm. 86.*

ANTILOGARITHM (*Math.*) the complement of the logarithm of any sine, tangent, or secant to 90 degrees.

ANTILOMICA (*Med.*) from ἀντί, against, and λοιμός, the plague; remedies against the plague.

ANTILOPUS (*Zool.*) *Antelope*, a genus of animals, Class *Mammalia*, Order *Pecora*.

Generic Characters. Horns hollow, persistent, annulate.—Foreteeth lower, eight.—Canine teeth or tusks none.

Species. The species are distinguished into the Antelopes, with straight or nearly straight horns, those with curved horns, and those with hooked horns.

Of the first kind are the—*Antilopus oryx*, or *Capra gazella*, in French, *le Pasan*, Egyptian Antelope.—*Antilopus gazella*, *Hircus bezoardicus*, *Capra bezoartica*, *Algazel* Antelope, a species in India and Persia, which affords the Bezoar.—*Antilopus oreotragus*, in French, *Sauteur des Rochers*, *Klipspringer*.—*Antilopus grinnia*, the Guinea Antelope, &c. &c.

Those of the second kind are the—*Antilopus Nyl-gchau*, the Nilgau, or White-footed Antelope.—*Antilopus strip-ciseros*; *Bos strepticerus*, in French, *le Condoma*, Striped Antelope, native of the Cape of Good Hope.—*Antilopus cervicapra*, Common Antelope.—*Antilopus euchore*, *Spring-Bock*, the Springer Antelope, a native of the Cape of Good Hope, so called from the prodigious

leaps it takes on the sight of any body.—*Antilopus arundinacea*, Retbock, a species so called from its frequent reedy places.—*Antilopus Dorcas*, Barbary Antelope, &c. &c. supposed to be the Dorcas of Ælian.

Those of the third kind are the—*Antilopus Gnu*, the Gnow or Ox-headed Antelope.—*Antilopus Rupicapra*, in French, *le Chamois*, the Chamois Antelope, a native of Switzerland.

ANTILYSSUS (*Med.*) from ἀντι, and λύσσα, madness; a remedy against madness.

ANTIMERIA (*Rhet.*) a figure in which one part of speech is put for another.

ANTIMETABOLE (*Rhet.*) ἀντιμεταβολή, from ἀντι, and μεταβάλλω; a figure, wherein words are repeated in the same sentence in a different case or person, as “Non ut edam vive sed ut vivam edo,” or “Qui stultis videri cruditi volunt, stulti eruditus videntur.” *Quintil. Instit.* l. 9, c. 3, l. 10, c. 7; *Longin.* l. 23, c. 1; *Voss. Instit. Rhet.* l. 5, p. 404.

ANTIMETATHESIS (*Rhet.*) ἀντιμετάθεσις, a figure of speech, by which the hearer is, as it were, transported to the scene of action, τὴν ψυχὴν διὰ τῶν τόπων ἕξει, τὴν ἀκοῆν ὁψὺ ποιῶν. *Longin. de Sublimit.* sect. 26; *Alexand. περὶ σχημ.* Ald. p. 586.

ANTIMONIAL silver ore (*Min.*) an alloy of silver.—*Antimonial red ore*, the *Stibium rubrum* of Linnæus.—*Antimonial sulphuret*, or *brittle silver ore*; an ore and a sulphuret of silver.—*Antimonial ochre*, the *Stibium stibigo* of Linnæus.

ANTIMONIATE (*Chem.*) a salt, formed by the combination of antimonie acid with a salifiable base, as the *antimoniate* of Ammonia, of Potash, &c.

ANTIMONIC acid (*Chem.*) a particular kind of acid prepared from antimony, in the form of a white powder, insoluble in water, but capable of reddening vegetable blues.

ANTIMONIOUS acid (*Chem.*) Antimonie acid deprived of some of its oxygen. It is otherwise called the *oxide of antimony*.

ANTIMONITE (*Chem.*) a salt, formed by the combination of antimonious acid, with a salifiable base.

ANTIMONY (*Min.*) the σίμμι of Dioscorides, probably the τετραγωνον of Hippocrates, the *lapis spumæ candidæ nitentisque, non tamen translucentis* of Pliny, and the *Antimonium* of Basil Valentine; a metallic, solid, heavy brittle substance, probably so called from ἀντι, against, and μόνον, alone, i. e. an enemy to solitude, because it is very seldom found pure, but mostly mixed with some other metals. It is sometimes found in the state of an oxyde, called *antimonial ochre*; but the most abundant ore of antimony is that in which it is combined with sulphur, called the *sulphuret of antimony*.—*Oxides of antimony* are formed by the combination of antimony with oxygen. The three oxides of antimony which are best known are distinguished by the names of the protoxide, the deutoxide, and the peroxide. The *protoxide* is grey; the *deutoxide*, formerly called *Argentive flowers of antimony*, or *calx of antimony*, now called *antimonious acid*, is white; and the *peroxide*, or *antimonie acid*, is straw yellow.—*Salts of antimony* are formed by the combination of antimonial acids, with a salifiable base. Those which are formed by antimonie acid are called *antimoniates*; those formed by antimonious acid are *antimonites*, as the *antimoniate* of copper, or the *antimonite* of copper, &c. To these may be added a third sort of salts, which contain the protoxide of antimony, as the *tartrate of potash and antimony*, otherwise called *tartar emetic*, so the *acetate, succinate, benzoate*, &c. of antimony.—*Alloys of Antimony* are formed by combining antimony with arsenic, potassium, &c. The alloy of antimony with iron was formerly called the *marial regulus*; that of antimony with copper the *regulus of Venus*.—*Chloride of Antimony* is

formed by the combination of antimony with chlorine: this, as a medicinal preparation, was formerly called *butter of antimony*.—*Ores of Antimony* are mostly found in veins, either as an alloy, a sulphuret, or an oxide.—*Native Antimony* is an ore, and an alloy of antimony, silver, and iron; but it is seldom found pure.—*Crude antimony* is the native mineral antimony melted down and cast into stones, otherwise called *antimony in substance*.—*Prepared antimony* is that which has passed through some process, by which its powers are altered, as the sulphur of antimony, formerly called *golden sulphur*, *mineral kermes*, or *Carthusian powder*, which was reckoned a grand panacea; *glass of antimony*; *liver of antimony*; *magistery of antimony*, and the like.

ANTINEPHRITICA (*Med.*) ἀντινεφριτικά, from ἀντι, against, and νεφρίτις, a pain in the kidneys; remedies against the disorders in the kidneys.

ANTINOIA (*Ant.*) ἀντινοία, annual sacrifices and quinquennial games instituted by Adrian in honour of Antinous, at Mantinea in Arcadia, where he was worshipped as a god. *Paus.* l. 8, c. 9.

ANTINO'MIA (*Rhet.*) ἄντινομία, i. e. a state of contrary laws; a double statement composed of a double description, and a double judgment, since laws are explained both ways according to contrary opinions. *Cic. de Invent.* l. 2, c. 49; *Hermog. de Partit.*

ANTINO'MIANS (*Ecc.*) a sect of heretics, who, according to Pontanus, sprung up in the sixteenth century, having John Agricola as their leader. They maintained that faith alone without good works was sufficient for salvation.

ANTINOUS (*Ast.*) a part of the constellation Aquila.

ANTIO'CHIAN sect (*Ant.*) *Antiochianæ Partes*, a name given to the fifth academy, or branch of Academics, so called from one Antioch, a cotemporary with Cicero. *Cic. Academ.* l. 1, e. 3.

ANTIOCHIAN Epocha (*Numis.*) was the same as the Augustan and Julian Epocha.

ANTIPÆDOBAPTISTS (*Ecc.*) those who are against infant baptism.

ANTIPAGMENTA (*Ant.*) vide *Antepagmenta*.

ANTIPARALLELS (*Geom.*) lines which make equal angles with two other lines, but in a contrary order; thus, suppose A B and A C be any two lines, and F C, F E two

others cutting them so as to make the angle B equal to the angle E, and the angle C equal to the angle D, then B C and D E are antiparallels, with respect to A B and A C.

ANTIPARALYTICA (*Med.*) from ἀντι and παράλυσις, paralysis; remedies against the palsy.

ANTIPARA'STASIS (*Rhet.*) ἀντιπαράστασις, from ἀντι, against, and παριστήμι, to compare, i. e. to set up one thing against another; a figure of speech by which one grants what the adversary says, but denies his inference. *Hermog. περὶ εὐρ.*; *Apsin. Rhet.*

ANTIPATHES (*Min.*) ἀντιπάθεις, a mineral which answers to what is now called Black Coral. *Dioscor.* l. 5, c. 140.

ANTIPATHES (*Ent.*) a genus of animals; Class *Vermes*, Order *Zoophyta*.

Generic Characters. Animal growing in the form of a plant.—*Stem* expanded at the base.

Species. The principal species which inhabit the Indian seas are the *Antipathes spiralis*, with a spiral rough stem.—*Antipathes apex*, &c.

ANTIPATHY (*Med.*) *Antipathia*, ἀντιπάθεια, from ἀντι and

πῶτος; an occult quality of repulsion in certain things to one another, as in the case of burnt leather, which Galen says was supposed to cure galls by a sort of antipathy. *Gal. de Simpl.* l. 11; *Castel. Lex.*

ANTIPELARGIA (*Ant.*) a law among the ancients whereby children were obliged to furnish necessaries to their parents in imitation of the stork, whence it is sometimes called *Lex ciconaria*, or the Stork's Law.

ANTIPERISTASIS (*Med.*) ἀντιπερίσταςσις, from ἀντί, against, and περίσταναι, to stand around; a cohibition or straightening all around, as by the circumambient air or water; thus, on account of the antiperistasis, or being beset with the opposite quality, springs are hottest in the winter, or in cold weather. *Theophrast. de Ign.*

ANTIPHARMACUM (*Med.*) the same as Antidote, a remedy against poison.

ANTIPIHERNA (*Ant.*) ἀντιφερινα, from ἀντί and φερῖν, dower; presents made by the bridegroom to the bride in lieu of her portion.

ANTIPLLOGISTICA (*Med.*) from ἀντί, and φλέγω, to burn; remedies for inflammation.

ANTIPOONA (*Mus.*) ἀντιφωνοια, from ἀντί, against, and φωνή, a voice; when each side of a quire alternately sings a verse.

ANTIPIHRA/SIS (*Gram.*) ἀντιφρασις, from ἀντί, opposite to, and φράζω, to speak, i. e. to speak what is contrary to the meaning; a figure in grammar when a word has a meaning contrary to the original sense, as 'Parcæ,' the fates, "quia minime parcant." *Rutil. Lup.*

ANTIPIHTHISICA (*Med.*) from ἀντί, against, and φθίσις, consumption; remedies against a consumption.

ANTIPIHTHORA (*Bot.*) ἀντιφθορία, from ἀντί, against, and φθορά, corruption; a species of Wolf's-bane, which resists corruption.

ANTIPIHYSICA (*Med.*) ἀντιφυσικά, from ἀντί, against, and φυσάω, to inflate; remedies against flatulence.

ANTIPIHYSON (*Nat.*) from ἀντί, against, and φύσις, nature; an epithet for the loadstone, because it seemed to act against nature.

ANTIPIEURITICUM (*Med.*) from ἀντί, against, and πleurίτις; a remedy against the pleurisy.

ANTIPODAGRICA (*Med.*) the same as Antarthritica.

ANTIPODES (*Ast.*) ἀντιπόδες, from ἀντί, opposite to, and πῶς; the foot; people dwelling on the opposite side of the earth with their feet to our feet. The Antipodes are 180 degrees distant from each other every way, having equal latitudes, the one North and the other South, but opposite longitudes. [vide *Astronomy*] Consequently, when it is day to the one, it is night to the other, and when summer to the one, winter to the other, &c. Plato first conceived the idea, and gave the name of Antipodes to inhabitants of the world thus relatively situated; the existence of which was disputed by the ancient fathers. Manilius has given a description of them in verse. *Astron.* l. 1, v. 236.

Pars ejus ad Arcos

*Eminet, Austrinis pars est habitabilis oris
Sub pedibusque jacet nostris, supraque videtur
Ipso sibi; fallente solo declivia longa
Et pariter surgente viâ, pariterque cadente.*

Cicero and Pliny call them Ἀντιχθόνες, *Antichthones*; Albertus Magnus *Antigenæ*. *Cic. Tuscul.* l. 1, c. 28; *Cleom. de Mund.* l. 1; *Strab.* l. 1; *Pompon. Mel.* l. 1; *Plin.* l. 2, c. 66; *Solin.* c. 66; *Lactant. Instit. Divin.* l. 3, c. 24; *August. de Civ. Dei.* l. 6, c. 9; *Macrob. de Somm. Scip;* *Mart. Capell.* l. 6; *Stæflin. Procl. de Sphær.*

ANTIPODIA (*Gram.*) a figure by which one foot is changed for another, if both be of equal measure.

A'NTIPOPE (*Ecc.*) a false pope set up by a faction.

ANTIPIRAXIA (*Med.*) from ἀντί, against, and πῶσσω, to

do; a contrariety of functions and temperaments in different parts of the body, as a cold stomach joined with a hot liver. *Castel. Lex. Med.*

ANTIPTO/SIS (*Gram.*) from ἀντί, instead of, and πῶσις, case; a figure by which one case is put for another.

ANTIPIRE/TICÓN (*Med.*) from ἀντί, against, and πυρετός, a fever; a febrifuge.

ANTIQUARIII (*Lit.*) 1. The monks who were employed in making new copies of old books. 2. The copies themselves of the old books.

ANTIQUARTANARIUM (*Med.*) or *antiquartium*, a remedy for a quartan fever.

ANTIQUI morbi (*Med.*) old and inveterate diseases lengthened out to many years.

ANTIRRHINUM (*Bot.*) or *Anarrhinum*, ἀντιρρῖνον, ἀνάρρῖνον, Snap Dragon or Calves-Snout; a plant, so called because the figure of its flower resembles the snout of a calf, from ἀντί, instead of, and ρῖν, a snout. It is seldom used in medicines, but has been employed as a charm against spectres and the like. *Theophrast. Hist. Plant.* l. 9, c. 21; *Dioscor.* l. 4, c. 133; *Plin.* l. 25, c. 10; *Apul.* c. 86; *Gal. de Simpl.* l. 6; *Paul. Æginet. de Re Med.* l. 7, c. 3.

ANTIRRHINUM, in the Linnean system, a genus of plants; Class 14 *Didynamia*, Order 2 *Angiospermia*.

Generic Characters. CAL. perianth five parted; divisions oblong.—COR. monopetalous; tube oblong; nectary prominent.—STAM. filaments four; anthers converging.—PIST. germ roundish; style simple; stigma obtuse.—PER. capsule roundish; seeds very many; receptacles reniform.

Species. The species are mostly annuals or perennials. Among the former are the—*Antirrhinum versicolor*, Spike-flowered Toad-flax.—*Antirrhinum procumbens*, seu *Linaria pumila*, Procumbent Toad-flax.—*Antirrhinum arvense* seu *Linaria arvensis*, Yellow Corn Toad-flax, &c.—*Antirrhinum elatine*, Sharp-pointed Toad-flax or Fluellin. Among the perennials are the—*Antirrhinum cymbalaria* seu *Linaria cymbalaria*, Ivy-leaved Toad-flax.—*Antirrhinum repens*, Creeping Toad-flax.—*Antirrhinum sparteum*, Branching Toad-flax.—*Antirrhinum saxatile*, Rock Toad-flax, &c. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin. Theat.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Rail Hist. Plant.*; *Tourn. Inst. Herb.*; *Boerh. Ind. Plant.*; *Linn. Spec. Plant.*

ANTI/SCIANS (*Ast.*) from ἀντί, opposite to, and σκία, a shadow; the people who, dwelling in the opposite hemispheres of North and South, have their shadows at noon fall directly opposite to each other; consequently, those living in the Southern Frigid and Temperate Zones are Antiscians to those living in the North Frigid and Temperate Zones. Lucan alludes to the surprize which the Arabians, going into Italy, expressed on seeing the shadows turning to the right, which they had always seen turn to the left.

Lucan. l. 3, v. 247.

*Ignotum vobis, Arabes, venistis in orbem,
Umbrus mirati nemorum non ire sinistras.*

Amm. Marcell. l. 22, c. 15; *Schol. in Luc.* 4, c. 16; *Ricciol. Almag.* l. 1, c. 20.

ANTI/SCION signs (*Astrol.*) certain signs in the Zodiac, which, with reference to each other, are equally distant from the tropical signs, Cancer and Capricorn; so that, when a planet is in such a station, it is said to cast its *antiscion*, i. e. to give a virtue or influence to another star or planet that is in the opposite sign.

ANTI/SCOLICA (*Med.*) vide *Anthelmintica*.

ANTI/SCORBUTIC (*Med.*) remedies against the scurvy.

ANTI/SEPTICS (*Med.*) from ἀντί, against, and σήπτικός, putrefying; resisters of putrefaction.

ANTISIGMA (*Gram.*) a mark γ in ancient writings where the order of the verses is to be changed. *Isid. Orig.* l. 1, c. 20.

ANTISPASIS (*Med.*) ἀντίσπασις, from ἀντί, against, and σπᾶσις, to draw back; a revulsion or drawing away of humours while in actual motion. *Gal. de Meth. Med.* l. 5, c. 9; *Gorr. Defin. Med.*; *Foes. Econom. Hippocrat.*

ANTISPASMODICS (*Med.*) from ἀντί, against, and σπασμῶδες, convulsions; remedies against spasms.

ANTISPA'STIC (*Poet.*) ἀντισπαστικὸν μέτρον; verse consisting principally of antispasts, or antispastic feet.

ANTISPA'STICON (*Med.*) ἀντισπαστικόν; a medicine acting by Antispasis. [vide *Antispasis*]

ANTISPA'STUS (*Gram.*) Ἀντισπαστος, from ἀντισπᾶσις, to draw contrary ways; a foot of four syllables in verse, having the first syllable short, then two long, and the last short, as *Alēxandēr. Diomed.* l. 3; *Hephest. Enchyr. id.*; *Victorin. de Carm.*

ANTISPODA (*Nat.*) or *antispodia*, ἀντίσποδα, from ἀντί, instead of, and σποδῶς, spodium; a kind of medicinal ashes made of herbs, which may be used as a substitute for spodium. *Dioscor.* l. 5, c. 186; *Plin.* l. 34, c. 13; *Gal. de Simpl.* l. 9; *Oribas Med. Coll.* l. 13; *Gorr. Defin. Med.*

ANTISTASIS (*Rhet.*) ἀντίστασις, a sort of anticlerma, or figure of speech, in which a person justifies himself for having done what is laid to his charge, by showing its expediency. *Hermog. διακρίσεως et Sopatr. Schol. in Hermog. Ald. Ed.* p. 256; *Syrian. Ald.* p. 95; *Mar. Victorin. in Cic. Rhet.*

ANTISTERIGMA (*Med.*) ἀντιστήριγμα, a word used by Hippocrates for a crutch or support. *Hippocrat. de Artic.*; *Gorr. Defin. Med.*; *Foes. Econom. Hippocrat.*

ANTISTERNON (*Anat.*) ἀντίστερνον, from ἀντί, and στήρνον, pectus; the back, which is opposite to the breast. *Ruf. Ephes. Appell. Part. Human. Corp.* l. 2, c. 4.

ANTISTES *sacrorum* (*Ant.*) the High-Priest among the Romans. *Plin.* l. 7, c. 3; *Bud. in Pandect.* p. 6; *Pollet. For. Rom.* l. 2, c. 1.

ANTISTI'TIUM (*Archæol.*) a Monastery.

ANTISTOICHON (*Gram.*) ἀντίστοικον, from ἀντί, instead of, and στοιχείον, an element; a figure in which one letter is put for another, as *promuscus* for *proboscis*.

ANTISTROPHĀ (*Rhet.*) ἀντίστροφᾶ; arguments so called from ἀντί, against, and τρέπω, to turn, because they may be turned against him by whom they are advanced. *Dionys. Hal. Art. Rhet.* c. 9; *Aul. Gell.* l. 5, c. 10; *Sopat. ad Hermog. Ald.* tom. 2, p. 54.

ANTISTROPHE (*Rhet.*) ἀντιστροφή, from ἀντί, against, and στροφή, *verto*. 1. An alternate conversion of the same words in different sentences, as "Servus domine," and "Domine servus." *Eustat. ad Hom. Il.* l. 13; *Hermog. id. Ald. Edit.* tom. 1, p. 176; *Alexand. περί σχημ.* *Ald. Edit.* p. 583. 2. A sort of dancing performed by the chorus, who by the strophe turned to the one hand, and by the antistrophe to the other; whence the ancient poetry was divided into the στροφή, strophe, when the chorus turned from the right to the left; the ἀντίστροφή, antistrophe, when they turned from the left to the right; and ἑπωδός, when they rehearsed their part standing still.

ANTITASIS (*Surg.*) from ἀντί, and τείνω, to extend; the contra extension of dislocated bones.

ANTIFACTES (*Ecc.*) a sect of heretics, who taught that sin deserved rather reward than punishment. *Clem. Alexand. Strom.* 3; *Baron. Annal. Ann.* 120; *Du Pin. Bibl. Eccles. prem. sicc.*

ANTITHENAR (*Anat.*) from ἀντί, and θέναρ, the hollow of the hand or foot; the *Abductor pollicis*.

ANTITHESIS (*Rhet.*) ἀντίθεσις, from ἀντί, in opposition, and τίθεμαι, to place; a figure in which contraries are opposed to contraries. *Hermog. περί ιδ.* *Ald. Ed.* tom. 1, p. 48;

Alexand. περί σχημ.; *Apsius Art. Rhet.* p. 695; *Schol. ad Hermog.* tom. 2; *Rhet. Ald.* p. 271; *Suidas in voc. ἀντίθεσις.*

ANTITHETARIUS (*Law*) the name given to a man who endeavours to discharge himself of the crime of which he is accused by retorting the charge on the accuser. *Leg. Canuti apud Brompton.*

ANTITHETON (*Gram.*) ἀντίθετον, contraries opposed to each other; as "Vicit pudorem libido, timorem audacia, rationem amentia." *Cic. pro Cluent. et de Orat.* c. 50.

ANTITRAGUS (*Anat.*) the part of the ear opposite to the Tragus, according to Rufus Ephesius, on the authority of Oribasius. *Ruf. Ephes. apud Oribas. Med. Coll.* l. 25, c. 1.

ANTITRAGUS (*Bot.*) the *Crypsis aculeata* of Linnæus.

ANTITRINITARIANS (*Ecc.*) such as deny the holy Trinity.

ANTITYPE (*Theol.*) from ἀντί, instead of, and τύπος, a type; what answers to or is prefigured by a type; as the Paschal lamb was a type to which our Saviour, the Lamb of God, was the Antitype.

ANTIVENEREA (*Med.*) Medicines against the *Lues venerea*.

ANTLER (*Sport.*) the starts or branches of a deer's attire, properly the first branches. There is the *Bes-Antler*, the *Sur-Antler*, and the *Brow-Antler*.—The *Bes-Antler* is the start or branch next above the *Brow-Antler*.—The *Sur-Antler* is the topmost start or branch; and—the *Brow-Antler* is that next the head.

ANTOCOW (*Vet.*) vide *Anticor*.

ANTOE'CI (*Astron.*) ἀντοίκοι, from ἀντί, against, and οἶκος, a house; inhabitants of the earth who live under the same meridian East or West, but under opposite parallels of latitude North and South. They have their noon or midnight at the same hour, but their seasons are contrary, i. e. when it is spring with the one, it is autumn with the other, and when winter with the one, it is summer with the other. The length of the night and day is equal in both. *Cleom. de Mund.* l. 1; *Ricciol. Almag.* l. 1. c. 20.

ANTONIA *Lex* (*Ant.*) a law so called from Mark Anthony, the proposer, by which it was prohibited to make a dictator; and no one, under pain of death, dare accept the office when offered. *Appian. de Bell. Civil.* l. 3, p. 542; *Hotmann. Roman. Antiq.* l. 1, p. 196.

ANTONIAN (*Min.*) a mineral water of Germany, containing carbonated soda, common salt, and calcareous earth.

ANTONII Sancti ignis (*Med.*) St. Anthony's Fire, because it was supposed to be miraculously cured by that Saint.

ANTONOMA'SIA (*Rhet.*) ἀντονομασίαι, from ἀντι, instead of, and ὄνομα, a name, i. e. one name instead of another; a figure by which one name is put for another, as an appellation for a proper name, as the Poet for Homer or Virgil, the Apostle for St. Paul. *Dionys. Hal. de Hom. Poes.*; *Quint. Instit.* l. 6, c. 29; *Tryph. de Trop.*; *Voss. Instit. Rhet.* l. 4, p. 165.

ANTONOMA'STICA (*Con.*) the same as *Cochlea cæolata*.

ANTOPHYLLON (*Bot.*) *Antophyllus*, ἀντοφυλλον, from ἀντί, against, and φύλλον, a leaf; because its leaves stand opposite to one another; the Male Caryophyllus, or, according to Ray, a name given by the chemists to the full grown Caryophyllus. *Myrep. de Antid.*; *Raii Hist. Plant.*

ANTRISCUS (*Bot.*) a plant, the leaves of which resemble Hemlock. *Bauh.*

ANTRUM *buccinosum* (*Anat.*) the same as *Cochlea*.—*Antrum genæ*, maxillary sinus.—*Antrum Pylori*, the great concavity of the stomach near the Pylorus.

ANTYLLION (*Med.*) a very astringent malagma.

ANVIL (*Mech.*) the tool on which smiths hammer their work.

ANVIL (*Her.*) a charge, as party per chevron, *argent and sable*, three anvils, counter charge, name *Smith*, of Abingdon, Berks.

A'NUS (*Anat.*) the orifice of the *intestinum rectum*, through which the *feces* are discharged. *Gal. de Usu. Part.* 1. 5, c. 18.—*Anus Cerebri*, that cavity in the brain which arises from the contract of the four trunks of the *Medulla spinalis*.

ANUS (*Bot.*) the posterior opening of a monopetalous flower.

ANYPEUTHYNA (*Med.*) ἀνυπεύθυνα, from α, priv. ὑπεύθυνος, obnoxious; things for which one is not accountable; in which sense Hippocrates uses it for those circumstances which are above the ordinary controul of a physician, and for which he is not accountable. *Hippocrat. παραγωγ. γλ.*

A'ORIST (*Gram.*) ἄοριστος, from α, priv. and ὀρίζω, to define, i. e. indefinite; the name of a Greek tense, denoting great uncertainty of time.

A'ORTA (*Anat.*) ἄορτή, from ἀείρω, to lift up, is the name of a little chest, and was applied to the great artery of the heart in the days of Aristotle; it was called by Aretæus ἀρτηρία παρχεινή, the great artery proceeding from the left ventricle of the heart, from which all the other arteries mediately or immediately proceed. It is distinguished into the ascending and descending, from the manner in which it runs; the *Aorta ascendens* distributing its branches to the upper part of the Thorax, the head, and upper extremities; the *Aorta descendens* supplying the rest of the Thorax, the Diaphragm, &c. *Aristot. Hist. Anim.* 1. 3, c. 3, &c.; *Gal. de Dissect. Ven.* The annexed cut represents a part of the trunk of the Aorta turned inside out; *a a* the glandulous membrane; *b b* the vascular membrane; *c* the internal tunic.

AOVO'RA (*Bot.*) an Indian plant, the fruit of which is as large as a hen's egg, and is astringent. *Lem. des Drog.*

APACTUS (*Bot.*) a genus of plants; Class 11 *Dodecandria*, Order 1 *Monogynia*.
Generic Characters. CAL. none.—COR. four-petalled; petals roundish.—STAM. filaments from sixteen to twenty.—PIST. germ superior; style none.

Species. The only species is—*Apactis Japonica*, a shrub, native of Japan. *Linn. Spec. Plant.*

APÆDEU'SIA (*Lit.*) ἀπειθευσία, ignorance, or a want of information in general; whence those who were so deficient were termed *Apædeutæ*.

APÆDEU'TÆ (*Lit.*) vide *Apædeusia*.

APA'GMA (*Surg.*) the same as *Abductio*.

APAGO'GE (*Ant.*) ἀπαγωγή; the carrying a criminal taken in the fact before a magistrate. *Poll. Onom.* 1. 6, segm. 154.

APAGOGE (*Log.*) the same as *Reductio*.

APAGO'GICAL demonstration (*Log.*) the same as *Reductio ad Absurdum*.

APALLAGE (*Med.*) ἀπαλλαγή, from ἀπαλλάσσω, to change; any alteration in general, but in particular by a deliverance from a disease. *Hippocrat.* 1. 2, Aph. 45; *Foes. Æconom. Hippocrat.*

A'PALUS (*Ent.*) a genus of animals, Class *Insecta*, Order *Coleoptera*.

Generic Character. Antennæ filiform.—Feelers equal, filiform.—Jaw horny.—Lip membranaceous, truncate.

Species. There are only two species, the *Apalus bimaculatus* and *Amaculatus*.

A'PANAGE (*Law*) or *Appannage*, among the French, was the assignment of lands by the king to the younger sons, which revert to the crown upon the failure of male issue.

APANTHISMUS (*Anat.*) ἀπανθισμός, signifies literally a very fine and almost imperceptible line in painting, but is applied, by a figure, to the small capillary veins, from their resemblance to those lines. *Gal. de Ven. et Art.* c. 8.

APANTHRO'PIA (*Med.*) ἀπανθροπία, from α, priv. and ἄν-

θρωπος, a man; a term used by Hippocrates for an aversion to company, or a love of solitude. *Hippocrat. Coac. Præd.*

APARACHY'TUM vinum (*Med.*) ἀπαράχυτος οἶνος, wine un-mixed with sea water. *Gal. de Comp. Med. Sec. Gen. et Meth. Med.*

APARA'GUA (*Bot.*) a species of Briony growing in Brasil.

APA'RGIA (*Bot.*) ἀπαργία; the name of an herbaceous plant mentioned by Theophrastus, who only distinguishes it by the epithet of ἐπιγυγιόφυλλον, i. e. having the leaf issue from the root instead of from the stem, after the manner of the Dandelion. *Theophrast.* 1. 7, c. 9.

APARGIA, in the *Linnæan system*, a genus of plants, Class 19, Order 1 *Polygamia Æqualis*.

Generic Characters. CAL. common imbricate; scales several.—COR. compound imbricate; corollets hermaphrodite; proper monopetalous.—STAM. filaments five; anthers cylindric.—PIST. germ subovate; styles filiform; stigmas two.—PER. none; calyx oblong; seeds solitary; down sessile; receptacle naked.

Species. The plants of this tribe are mostly perennials, and are called *Leontodon*, or *Hieracium*, by the ancient botanists. *Dodon. Hist. Stirp.*; *Lobel. Plant. seu Stirp. Plant.*; *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Linn. Spec. Plant.*

APARINE (*Bot.*) ἀπαρνή, a plant, the expressed juice of which was said to cure the bites of serpents. *Theophrast. Hist. Plant.* 1. 7, c. 14; *Dioscor.* 1. 3, c. 14; *Plin.* 1. 27, c. 5.

APARINE, in the *Linnæan system*, is a species of the *Galium*.

A'PARINES (*Bot.*) the *Ammankia latifolia* of Linnæus.

APARITHME'SIS (*Rhet.*) ἀπαριθμήσις, a figure of speech, which consists in enumerating or distinguishing several particulars by means of the particles firstly, then, or moreover, finally, &c. *Hermog. id. Ald. Ed. tom. i, p. 48*; *Aristid. περι λογισπολ.* p. 650.

APATE (*Ent.*) a division of the genus *Dermestes*, according to Fabricius, comprehending those insects of this tribe which have the jaw one-toothed.

APATHES (*Ant.*) ἀπαθείς, from α, priv. and πάθος, affection; a sort of philosophers who pretended to have no affections. *Plin.* 1. 7, c. 19.

APATISA'TIO (*Law*) an agreement or compact made with another. *Upton.* 1. 2, c. 12.

APATITES (*Min.*) a genus of calcareous and brittle earths, consisting of carbonate of lime and phosphoric acid.

APATU'RIA (*Ant.*) Ἀπατεύρις, a festival at Athens, from ἀπάτης, deceit, because it was instituted in commemoration of a stratagem by which Xanthus, king of Bœotia, was killed by Melanthus, king of Athens. It was celebrated for three days, the first of which was called Δόρπεια or Δορπέϊς; the second, Ἀναθήσις; and the third, κερεῶτις. *Herod.* 1. 1, c. 147; *Plat. in Tim. & Procl. in Plat.*; *Xenoph. Hellen.* 1. 1, c. 7; *Aristoph. in Nub. & Schol. in Aristoph.*; *Poll. Onom.* 1. 6, segm. 102; *Harpocration*; *Etymol. Magn.*; *Suidas*; *Simplic. ad Aristot. Phys.* 1. 4.

APAULETERIA (*Ant.*) ἀπαυλητερία, the garment presented by the bridegroom on the day called the *Apaula*. [vide *Apaulia*]

APA'ULIA (*Ant.*) ἀπαύλια, the second day of the marriage festival, when the bride's departure from her father's house was celebrated. *Poll. Onomast.* 1. 3, c. 3; *Hesychius*; *Suidas*; *Etymologic. Magn. Phavorinus*.

APA'UME (*Her.*) a hand opened, with the full palm appearing, and the thumb and fingers extended, as may be seen in the arms of a baronet. [vide *Canton*]

A'PE (*Zool.*) a name for different species of the *Simia* which are without tails. They are imitative, full of gesticulations, chatter with their teeth, and macerate their food in their cheeks before they swallow it. This tribe of animals is

also remarkable for being lascivious, thievish, and gregarious.—*Sea Ape*, a marine animal on the coast of America.
APECHE'MA (*Med.*) ἀπήχημα, from ἀπὸ, and χῆμος, sound; i. e. repercussion of sound; but in a medical sense, a contra fissure.
APEAK (*Mar.*) when the cable is drawn so tight as to bring the vessel directly over the anchor, the ship is said to be *apeak*.
APEIBA (*Bot.*) the *Aubletia* of Linnæus. *Marc. Hist. Bras.*
APELLITÆ (*Ecc.*) hereticks in the second century, so called from their leader Apelles, who, among other heresies, denied the spirituality of Christ and the resurrection of the dead. *Tertul. de Præsc.* c. 30, &c.; *Euscb. Hist.* l. 3, c. 13; *S. Epiph. Hæres.* 44; *S. August. Hæres.* 23; *Baron. Annal. Ann.* 146.
APEPSIA (*Med.*) the same as *Dyspepsia*.
APER (*Nat.*) the boar, which is a symbol of several cities, is supposed to refer to the Erymanthian boar which was killed by Hercules; it is represented, as in the annexed figure, on a coin of Abacænum, in Sicily, with an acorn

lying before it.—The legend **ABAKAINI**. *Parut. Sicil. Descriit.*; *D'Orville Sicul.*; *Pemb. Numismat. Antiq.*
APERIENS palpebram rectus (*Anat.*) the same as *Élevator palpebræ superioris*.
APERIENTS (*Med.*) *aperientia*, from *aperio*, to open; opening medicines. *Cels. de Re Med.* l. 5, c. 18; *Gal. de Simpl.* l. 5.
APERITIOS (*Med.*) ἀπίριτος, from α, priv. and περιτός, redundant; an epithet for aliment not generating much excrement. *Gorr. Defin. Med.*
APERITIS portarum (*Astrol.*) some great and manifest change of the air upon certain configurations.
APERTURA tabularum (*Law*) the breaking open a last will and testament.—*Apertura feudi*, the loss of a feudal tenure by default of issue to him, to whom the feud or fee was granted.
APERTURE (*Opt.*) a hole next to the object-glass of a telescope, through which the light and image of the object is conveyed from the tube into the eye. *Huygen. Diopt.* prop. 53, 56.
APERTURE (*Archit.*) an opening in any building, as doors, windows, &c.
APERTURE (*Geom.*) the opening or angle formed by the meeting of two right lines.
APERTUS (*Med.*) an epithet in Scribonius Largus, answering to the *ulceratus* of Pliny; as, *Strumæ aperta*, ulcerated humours. *Plin.* l. 30, c. 5; *Reod. in Scribon. Larg.*
APES (*Zool.*) vide *Apis*.
APE'TALÆ (*Bot.*) the fourth class of plants, according to Haller's system.
APE'TALOUS (*Bot.*) from α, priv. and πέταλος, a petal, a flower-leaf; an epithet for plants that have no petals.
A'PEX (*Ant.*) from *apiendo*, i. e. ligando, binding. 1. A little woollen tuft on the flamens or high priest's cap. 2. The cap itself, of which a representation is given under *Ancilia*. 3. A hat, or any thing capped. 4. The crest of a helmet.
Virg. Æn. l. 12, v. 492.

Apicem tamen incita summum

Hasta tulit.

Plin. l. 22, c. 23; *Val. Max.* l. 1, c. 1; *Lucan.* l. 1, v. 604; *Serv. in Virg. Æn.* l. 10, v. 270; *Scalig. Conj. ad Varr.* p. 37; *Turneb. Adv.* l. 29, c. 31.
APEX (*Zool.*) the crest or crown of birds. *Plin.* l. 11, c. 37.

APEX (*Geom.*) the angular point of a cone or conic section.
APEX (*Con.*) the beak, tip, or extremity of a shell. The *apices* are *Auriformes*, auriform or earshaped, having an incurved arch between the beaks.—*Corniformes*, horn-shaped, i. e. long and mucronated or pointed.—*Inflexi*, inflex, or bending towards each other.—*Reflexi*, reflex, turned towards the *areola*.—*Spirales*, spiral, i. e. twisted spirally.
APEX (*Bot.*) the upper extremity of a leaf, farthest from the base or insertion.
APEX literarum (*Gram.*) the mark which serves as an accent.
APEX legis (*Law*) a quirk.
A'PHACA (*Bot.*) ἄφακα, the Wild Vetch, a small shrub that grows in ploughed lands, the seeds of which are of an astringent quality; it is the *Lathyrus aphaca* of Linnæus. *Theophrast. Hist. Plant.*; *Dioscor.* l. 2, c. 78; *Plin.* l. 21, c. 17; *Oribas. Med. Coll.* l. 11; *Paul. Æginet.* l. 7, c. 3; *Geopon. Auct.* l. 12, c. 1; *Ger. Herb.*; *Park. Theat. Bot.*; *C. Bauh. Pin.*; *Raii Hist. Plant.*
APHÆRESIS (*Gram.*) ἀφαίρεσις, from ἀφαίρω, to take away; a figure which takes away a letter or syllable from the beginning of a word, as *ruit* for *iruit*.
APHÆRESIS (*Med.*) a taking away of any superfluous part medicinally or chirurgically. *Hipp. Coac. Prænot.* &c.; *Foes. Econom. Hippocrat.*
A'PHANES (*Bot.*) ἀφανής, obscure; a genus of plants so called from its diminutive size, Class 4 *Tetandria*, Order 2 *Digynia*.
Generic Characters. CAL. perianth one-leaved.—COR. none—STAM. filaments four; anthers roundish—PIST. germ ovate; style filiform; stigma headed.—PER. none; Calyx containing the seeds in the bottom; seeds ovate.
Species. The only species is the *Aphanes arvensis*, *Alchemilla aphanes*, *Percepier Anglorum*, seu *Polygonum selinoides*, an annual, native of Europe. *Ger. Herb.*; *J. Bauhin. Hist. Plant.*; *C. Bauhin. Pin. Theat.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Mor. Hist. Plant.*; *Linn. Spec. Plant.*
APHASSOMENOS (*Med.*) ἀφασσόμενος, from ἀφάσσω, to stroke; rubbed with the fingers, or gently felt, to discover any disorder in the part. *Gal. Exeges. in Vocab. Hippocrat.*; *Foes. Econom. Hippocrat.*
APHEBRIOC (*Chem.*) Sulphur.
APHELICE/STEROS (*Med.*) ἀφελικέστρος, from ἀπὸ, away from, and ἡλικία, youth; past the flower of youth. *Hippocrat. Epid.* l. 7.
APHELION (*Ast.*) or *Aphelium*, from ἀπὸ, from, and ἥλιος, the sun; that point at which the earth or any planet is most distant from the sun. In the Copernican system it is that end of the greater axis of an elliptical orbit of the planet most remote from the focus wherein the sun is, as A in the figure under the head *Anomaly*. In the Ptolemaic system, the Apogee supplies the place of the Aphelion: [vide *Astronomy* and *Anomaly*]
APHELLAN (*Ast.*) the name of a bright star in the constellation Gemini.
APHESIS (*Med.*) ἀφῆσις, from ἀφίημι, to remit; the remission of a disorder. *Gal. Exeges. Vocab. Hippoc.*; *Gorr. Defin. Med.*; *Foes. Econom. Hippocrat.*
APHETA (*Astrol.*) a planet, taken to be the giver of life in a nativity.
APHILANTHROPIA (*Med.*) ἀφιλανθρωπία, from α, priv. and φίλανθρωπία; the first degree of melancholy which produces an aversion to society. *Castell. Lex. Med.*
A'PHIS (*Ent.*) Plant-Louse, a genus of animals, Class *Insecta*, Order *Hemiptera*.
Generic Characters. Snout inflected; antennæ longer than thorax; wings either four upright or none; feet formed for walking; abdomen generally furnished with two horns or processes.

The numerous species of this tribe of insects are remarkable for infesting plants, the leaves of which they cause to crumple up, and consume their juices. They are sometimes winged and sometimes apterous, and are supposed to possess the extraordinary faculty of continued impregnation, one single act of which in a female is sufficient for many successive generations. The species are principally distinguished by the names of the plants which they infest, as the—*Aphis salicis*, one of the largest kind of Aphides that infest the willows.—*Aphis rosæ*, of a bright colour, which is found in great numbers on the leaves, stalks, and buds of roses.—*Aphis tiliæ*, the Lime-tree Aphis, one of the most beautiful of the genus.—*Aphis millefolii*, the Yarrow Aphis.—The Common Green Aphis is called the Fly, when it infests hop-yards.

APHLEGMA'NTON (*Med.*) ἀφλέγματον, from α, priv. and φλέγμα, *phlegma*, void of phlegm; an epithet for pus which marks it to be laudable. *Hippocrat. Prædict.* l. 2; *Gorr. Defin. Med.*; *Foes. Econom. Hippocrat.*

APHODOS (*Med.*) ἀφοδος, the recrements of the aliment which pass off by stool. *Gal. com.* 5, in *Epid.* l. 6; *Foes. Econom. Hippocrat.*

APHONI (*Med.*) ἀφωνοι, from α, priv. and φωνή, voice; those who labour under a deprivation of voice from an apoplectic affection, or any other cause. *Gorr. Def. Med.*; *Foes. Econom. Hippocrat.*

APHONIA (*Med.*) ἀφονια, from α, priv. and φωνή, the voice; a deprivation of voice, or palsy of the tongue. *Gal. in Hippocrat.* l. 6, aphor. 51; *Gorr. Defin. Med.*; *Foes. Econom. Hippocrat.*

APHONIA now constitutes a genus of diseases, Class *Locales*, Order *Dysnesiæ*, in Cullen's Nosology.

APHORISM (*Phi.*) ἀφορισμός, from ἀφορίζω, to define, or separate; a sentence comprehending, within a few words, all the properties of a thing, as the Aphorisms of Hippocrates, Boerhaave, &c.

APHORME (*Med.*) ἀφορμή, from ἀπο, and ὄρμη, impetus; the exciting cause of a disease. *Gal. comm.* 3, in *Hippocrat. Epidem.* l. 6; *Gorr. Defin. Med.*; *Foes. Econom. Hippocrat.*

APHORME (*Ant.*) ἀφορμή, money placed as a deposit in the banker's hands, otherwise called Εὐθήκη; Αφορμῆς δίκη is a suit about a deposit. *Poll.* l. 3, c. 9; *Harpocraton*; *Hesychius*; *Suidas*.

APHRA'CTA (*Ant.*) open vessels which were used in naval engagements. *Cic. ad Attic.* l. 6, ep. 8; *Scheff. de Mil. Nav.* l. 2, c. 2.

APHRITE (*Min.*) from ἀφρός, spume, or froth; Silvery Chalk, a species of stone of the carbonate family, so called from its frothy appearance.

APHRODES (*Med.*) ἀφρώδης, from ἀφρός, spume; frothy in application to the blood and excrements.

APHRODISIA (*Ant.*) Ἀφροδίσια, festivals in honour of Αφροδίτη, Venus, in different parts of Greece, as at Cyprus, Paphos, Corinth. At the latter place it was celebrated by harlots, according to Athenæus. *Strab.* l. 14; *Athen.* l. 13, c. 4; *Clemen. Protreptric.*; *Firm. de Error. Profess. Relig.*

APHRODISIA (*Med.*) ἀφροδίσια, from ἀφροδίτη; venereal commerce. *Gal. de Top.* l. 7; *Gorr. Defin. Med.*

APHRODISICIA'STICON (*Med.*) ἀφροδισιαστικόν, a troche so called, by Galen, because the stools which it produced were frothy. He recommends it in dysenteries.

APHRODISIUS morbus (*Med.*) the *Lues venerea*.

APHRODISIUS (*Chron.*) the eleventh month of the Bithynian year, commencing on the 25th of July.

APHRODITA (*Ent.*) a genus of animals, Class *Vermes*, Order *Molusca*.

Generic Characters. Body creeping, oblong, with fasci-

culate feet, each side; mouth cylindrical, retractile; feelers two, setaceous; eyes four.

Species. The principal species are the—*Aphrodita aculeata*, the Sea-Mouse, four or five inches long, often found in the belly of the cod-fish.—*Aphrodita squamosa*, covered with two rows of large scales, about an inch long.—*Aphrodita minuta*, not an inch long, &c.

APHRODITA'RIMUM (*Med.*) ἀφροδίταριον. 1. A sort of collyrium. 2. A sort of powder. *Paul. Ægin. de Re Med.* l. 4, c. 40; l. 7, c. 13.

APHROGA'LA (*Med.*) ἀφρογάλα, from ἀφρός, spume, or froth, and γάλα, *lac*; the froth of milk, good for an habitual heat in the stomach. *Gal. de Meth. Med.* l. 7, c. 4.

APHROLITRUM (*Min.*) or Aphronitrum, ἀφρόλιτρον, ἀφρόνιτρον, the spume of nitre. *Plin.* l. 31, c. 10; *Gorr. Defin. Med.*

APHRON (*Bot.*) from α, priv. and φρήν, the mind, from its inebriating quality; a wild kind of poppy. *Plin.* l. 20, c. 19.

APHRON (*Med.*) a cephalic plaster. *Aet. Tetrab.* 4, serm. 3, c. 13.

APHRONITRUM (*Min.*) ἀφρόνιτρον, the spume or flower of nitre; natron. *Plin.* l. 31, c. 10.

APHROSELE'NOS (*Min.*) ἀφροσελένος, a stone; so called from its representing the moon as it were in a glass. *Paul. Æginet. de Re Med.* l. 7, c. 3; *Gorr. Defin. Med.*

APHROS'YNE (*Med.*) from ἀφρον, simple; dotage.

APHTHÆ (*Med.*) ἀφθαί, the thrush; a disease consisting of ulcers in the mouth, to which children are very subject.

Hippocrat. l. 3, aphor. 24; *Aret. de Caus. et Sign. Acut. Morb.* l. 1, c. 9; *Cels. de Re Med.* l. 2, c. 1, &c.; *Gal. de Comp. Med. Sec. Loc. &c.*; *Oribas. de Loc. Affect.* l. 4, c. 68; *Aet. Tetrab.* 2, serm. 4; *Paul. Æginet.* l. 1, c. 10; *Actuar. de Meth. Med.* l. 6; *Gorr. Defin. Med.*; *Foes. Econom. Hippocrat.*

APHTHÆ constitutes now a genus of diseases in Cullen's Nosology, Class *Pyrexia*, Order *Exanthemata*.—*Aphthæ Serpentes*, vide *Cancrum Oris*.

APHTHÆ'RDICITES (*Ecc.*) a sect of heretics which branched off from the Eutichians in the sixth century. They denied the passion of our Saviour, maintaining that his body was immortal from the moment of his conception. They are so called from ἀφθαγτός, incorruptible, and δοξια, to think. *Sander. Hæres. Ann.* 535.

APHYA (*Ich.*) ἀφύα, from α, priv. and φύω, to beget; a small fish of a pale white colour; so called because it is supposed not to be generated in the ordinary way; but, according to Aristotle, from the froth of the sea. It is a species of the *Cyprinus* of Linnæus. *Aristot. Hist. Anim.* l. 6, c. 15; *Athen.* l. 8, c. 14; *Gal. Exeges. Vocab. Hippocrat.*

APHYLLA'NTES *Anguillaræ* (*Bot.*) the *Globularia vulgaris* of Linnæus.

APHYLLA'NTHES (*Bot.*) from α priv. φύλλον, leaf, and άνθος, a flower, i. e. an apetalous flower; a genus of plants, Class 6 *Hexandria*, Order 1 *Monogynia*.

Generic Characters. CAL. glumes univalve—COR. petals six; claws slender.—STAM. filaments setaceous; anthers oblong—PIST. germ superior; style filiform; stigmas three.—PER. capsule turbinate; seeds ovate.

Species. The only species is the *Aphyllanthes monspeliensis*, seu *Monspeliensum*, seu *Caryophyllus cæruleus*, &c. a perennial, native of the South of France. *Lob. Adv. Stirp.*; *J. Bauhin. Hist. Plant.*; *C. Bauhin. Pin. Theat.*; *Mor. Hist. Plant.*; *Wild. Linn. Spec. Plant.*

APHYLLA'NTI affinis (*Bot.*) the *Globularia cordifolia* of Linnæus.

APHYLLON (*Bot.*) the *Oribanche* of Linnæus.

APHY'LLOUS (*Bot.*) from α, priv. and φύλλον, a leaf; leafless; an epithet applied to the stem, leaf, or whirl; as *aphyllus caulis*, a leafless stem; *aphyllus flos*, a flower-

having no calyx; *aphyllus verticellus*, a whirl having no leaves about it.

APHYTAGORAS (*Bot.*) an Indian tree, which is said by Clusius to bear amber.

APHYTEIA (*Bot.*) from α , priv. and $\varphi\upsilon\tau\acute{o}\nu$, a plant, plantless; a genus of plants, Class 16 *Monadelphia*, Order 1 *Triandria*, having neither root, stem, nor leaves, parasitical-terrestrial, and consisting of a fructification only.

Generic Characters. CAL. *perianth* monophyllous.—COR. rudiments of three petals.—STAM. *filaments* short; *anther* convex.—PIST. *germ* inferior; *style* thickish; *stigma* three-cornered.—PER. *berry* one-celled; *seeds* numerous.

Species. The only species is the *Aphytcia hydнора*, seu *Hydnora africana*, native of the Cape of Good Hope. *Linn. Spec. Plant.*

APIARY (*Zool.*) a place in which bees are kept.

APIARIUS (*Zool.*) a bee-merchant.

APIASTRA (*Or.*) *Bee-Eater*, a sort of bird mentioned by Servius.

APIASTRUM (*Bot.*) from *apes*, the bees; the herb which bees delight in, Balm-gentle or Mint. *Plin.* l. 20, c. 11.

APICA OVIS (*Zool.*) a small-bodied sheep, bearing little wool, a pilled ewe. *Fest. de Verb. Signif.*

APINEL (*Bot.*) a root met with in the American islands, remarkable for its destructive quality to serpents, who shun it, and every thing rubbed with it. The plant is the *Aristolochia anguicida* of Linnæus.

APIOS (*Bot.*) $\alpha\pi\iota\omicron\varsigma$, round knob-rooted spurge, the root of which is like an onion, and the juice purgative. It is a species of the *Glycine*, and of the *Euphorbia* of Linnæus. *Dioscor.* l. 4, c. 177; *Plin.* l. 26, c. 8; *Oribas. Med. Coll.* l. 11; *Aet. Tetrab.* 1, serm. 1.

APIOSCORODON (*Bot.*) the *Cratæva gynandra* of Linnæus. *Pluk. Almag.*

APIS (*Ent.*) the bee, a well known insect; so called because, according to Virgil—

Virg. Georg. l. 4, v. 257,

— *pedibus connexæ ad limina pendent;*

or from $\alpha\pi\tau\epsilon\varsigma$, i. e. without feet, because they are born without feet; a genus of animals, Class *Insecta*, Order *Himenoptera*.

Generic Character. Mouth horny.—*Feclers* four, unequal.—*Antennæ* short.—*Wings* flat.—*Sting* of the females and neutrals concealed in the abdomen.

Species. The species of this genus are divided by Linnæus into two assortments, namely, those whose body is slightly covered with a fine hair or down, and those whose body is very villose or hairy. The principal species in the first division is the—*Apis mellificus*, the Honey-Bee.—*Apis centuncularis*, the Carpenter-Bee. Those in the second division, which are commonly known by the name of Humble-Bee, are the—*Apis lapidarius*, so called because its nest is situated in gravelly places. It is one of the largest insects of the tribe.—*Apis terrestris*, of the same size as the former, of a black colour, with the thorax marked by a yellow bar.—*Apis Hortorum*, with the thorax and abdomen yellow.

APIS (*Astron.*) or *Musca*, the Bee or Fly, a southern constellation, consisting of four stars.

APIS (*Numis.*) the Bee was represented on the coins of many cities, because it was chosen as the symbol of new colonies. It is most frequently to be met with on the coins of Athens and Ephesus, as in the annexed figure of a coin

belonging to the latter city, where the stag and the palm on the obverse are emblematical of Diana, the tutelary goddess of the place; and, on the reverse, the inscription ΕΦ, with the figure of a bee, denotes the city. *Beg. Brand. Thes.* vol. i. 503.

A'PIUM (*Bot.*) $\sigma\epsilon\lambda\acute{\iota}\nu\omicron\upsilon$, smallage or parsley, a garden herb, which, according to Homer, was the food of the war horses.

Homi. Il. l. 2, v. 775.

— *ἴπποι δὲ παρ' ἀρμασιν ἄσιν ἕκαστος,*
λατὸν ἐρεπτόμενοι ἐλεεῶν ἄρεπτον σέλινον
** ἔφασαν.*

It is likewise celebrated by the poets as a coronary plant. *Pind. Olymp.* od. 13.

Δίο δ' αὐτὸν ἔρεψαν πλόκοι σελί
Ἄων ἐν ἰσθμιάδεσσιν.

Anacreon. Fragm. 17.

Ἐπὶ δ' ἴφρυσσι σελίνων σεφάνισκας
Θέμενοι θαλίαν ἔορτην ἀγέρομεν Διονύσα.

Hor. l. 2, od. 7, v. 24.

— *Quis udo*
Deproperare apio coronas
Curative myrto?

Diodor. l. 16; *Callimach. apud Plut. Sympos.* l. 5; *Plin.* l. 19, c. 8, &c.; *Polyæn. Stratag.* l. 5, c. 12; *Arnob.* l. 5; *Alex. Gen. Dier.* l. 5, c. 26; *Suidas.*; *Stuck. Ant. Conviv.* l. 1, c. 26.

A'PIUM, in the *Linnean system*, a genus of plants, Class 5 *Pentandria*, Order 2 *Digynia*.

Generic Characters. CAL. *umbel* universal of fewer rays; *partial* of more; *involucre* universal small; *partial* similar; *proper perianth* obsolete.—COR. *universal* uniform; *proper petals* roundish.—STAM. *filaments* simple; *anthers* roundish.—PIST. *germ* inferior; *styles* reflex; *stigmas* obtuse.—PER. none; *fruit* ovate; *seeds* two.

Species. The two species are the *Apium petroselinum*, Parsley, a biennial, native of Sardinia; and *Apium graveolens*, Smallage, a biennial, native of Britain. *J. Bauhin. Hist. Plant.*; *C. Bauhin. Pin. Theat.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tourn. Inst. Herb.*; *Boerh. Ind. Plant.*; *Wild. Linn. Spec. Plant.*

A'PLOME (*Min.*) a species of garnet.

APLUDA (*Bot.*) the chaff or bran of any corn; so called, according to Festus, because, *applodatur*, it is flapped off from the grain. *Plin.* l. 18, c. 10; *Aul. Gell.* l. 11, c. 7; *Fest. de Verb. Signif.*

APLUDA, in the *Linnean system*, a genus of plants, Class 23 *Polygamia*, Order 1 *Monoecia*.

Generic Characters. CAL. *involucre* common unvalve; *valve* ovate.—COR. *glume* bivalve; *valve* exterior navel, interior lanceolate; *nectary* very small.—STAM. *filaments* three; *anthers* linear.—PIST. *germ* oblong; *styles* two; *stigmas* oblong.—PER. none; *corolla* cherishes the seed; *seed* ovate-oblong.

Species. The species are perennials, as the—*Apluda mutica*, *zeujites*, and *aristata*. *Linn. Spec. Plant.*; *Brown. Hist. Jamaica.*; *Wild. Linn. Spec. Plant.*

APLUSTRIA (*Ant.*) ἀφλαστρα, ornaments at the stern, answering to the acrostolia at the prow, to which the poets frequently refer.

Homi. Il. l. 15, v. 717.

Ἐκτωρ δὲ πρύμνηθεν ἐπεὶ λάβεν ἔρχι μεθέηι
** Ἀφλαστον μετὰ χερσὶν ἔχων —.*

Luc. l. 3, v. 671.

Invenit arma furor: remum contorsit in hostem
Alter; at hi totum validis aplustre lacertis,
Avulsasque rotant excusso remige sedes.

Juv. sat. 10, v. 135.

*Et curtum temone jugum, victæque trivemis
Aplustre, et summo tristis captivus in arcu,
Humanis majora bonis creduntur.*

Poll. Onom. l. 1, c. 9; *Fest. de Verb. Signif.*; *Eustath. in Hom.*; *Hesychius*.

APLYSIA (*Con.*) a genus of animals, Class *Vermes*, Order *Mollusca*.

Generic Character. Body covered with reflexible membranes.—Shield horny on the back, guarding the lungs.—Aperture on the right side.—Vent on the extremity of the back.—Feelers four, resembling ears.

Species. The two species are the—*Aplysia depilans*, depilatory Sea-Harc.—*Aplysia mustelina*, the tawny Sea-Hare.

APLYTOS (*Med.*) from α , priv. and $\pi\lambda\upsilon\omega$, to wash; an epithet for wool, as $\epsilon\iota\mu\iota\sigma\iota$ $\acute{\alpha}\pi\lambda\upsilon\tau\omicron\upsilon\sigma\iota$, unwashed wool, called in Latin *Lana succida*.

APNO'EA (*Med.*) $\acute{\alpha}\pi\nu\omicron\iota\alpha$, from α , priv. and $\pi\nu\acute{\epsilon}\alpha$, *spiro*; a difficulty of respiration, or suppression of breathing. *Gal. de Diffic. Spir.* l. 1.

APOBA'MMA (*Nat.*) $\acute{\alpha}\pi\acute{\omicron}\beta\alpha\mu\mu\alpha$, from $\acute{\alpha}\pi\acute{\omicron}\beta\acute{\alpha}\pi\tau\omega$, to tinge; a slight tincture applied to liquors in which gold coins or red hot irons have been quenched. *Castell. Lex. Med.*

APOBATE'RIA (*Ant.*) a valedictory poem or speech made by a person on his leaving his country.

APOBRA'SMA (*Nat.*) $\acute{\alpha}\pi\acute{\omicron}\beta\rho\alpha\sigma\mu\alpha$, the bran of wheat, or the froth of the sea. *Hippocrat. de Nat. Puer.*; *Foes. Econom. Hippocrat.*; *Castell. Lex. Med.*

APO'CALYPSE (*Bibl.*) $\acute{\alpha}\pi\omicron\kappa\acute{\alpha}\lambda\upsilon\psi\iota\varsigma$, from $\acute{\alpha}\pi\omicron\kappa\acute{\alpha}\lambda\upsilon\pi\tau\omega$, to reveal; the Greek name for the book of Revelations.

APOCAPNIS'MUS (*Nat.*) from $\kappa\alpha\pi\nu\acute{\omicron}\varsigma$, smoke; suffumigation.

APOCA'RSAMUM (*Med.*) a poisonous drug growing in Abyssinia.

APOCA'RTEREON (*Med.*) $\acute{\alpha}\pi\omicron\kappa\alpha\rho\tau\epsilon\rho\acute{\epsilon}\alpha\upsilon\sigma$, starving oneself to death. *Hippocrat. de Rat. Vict. in Morb. Acut.*

APOCATA'STASIS (*Med.*) $\acute{\alpha}\pi\omicron\kappa\alpha\tau\acute{\alpha}\sigma\tau\alpha\sigma\iota\varsigma$, from $\acute{\alpha}\pi\omicron\kappa\alpha\theta\acute{\iota}\sigma\tau\eta\mu\iota$, to restore; an amendment, recovery, or cessation of a disorder, in which sense Hippocrates uses the verb in many places, and Aretæus the noun. *Aret. l. 1, c. 10*; *Foes. Econom. Hippocrat.*

APOCATHA'RSIS (*Med.*) $\acute{\alpha}\pi\omicron\kappa\acute{\alpha}\theta\alpha\rho\sigma\iota\varsigma$, an expurgation or evacuation of any kind, as of pus from the breast by spitting, according to Hippocrates, and the vomitings mentioned by Thucydides, which affected the patients during the memorable plague at Athens. *Thucyd. l. 2*; *Foes. Econom. Hippocrat.*

APO'CECAULISMENON (*Surg.*) a fracture after the manner of a stalk.

APO'CENOS (*Med.*) the same as *Abevacuatio*.

APOCERU'GMA (*Med.*) $\acute{\alpha}\pi\omicron\kappa\acute{\epsilon}\rho\upsilon\gamma\mu\alpha$, a declaration made to a patient respecting his case. *Foes. Econom. Hippocrat.*

APO'CHA (*Law*) a discharge for money that has been paid. *Ulp.*

APOCHRE'MMA (*Med.*) $\acute{\alpha}\pi\acute{\omicron}\chi\rho\epsilon\rho\mu\mu\alpha$, sputum discharged by apochrempsis, or hawking. *Hippoc. Coac. et de Loc. in Homine*; *Gorr. Def. Med.*; *Foes. Econom. Hippocrat.*

APOCHYLISMA (*Med.*) the same as *Sapa*.

APO'CHYMA (*Med.*) a kind of Zopissa, made of the resin and wax scraped from ships, or from the pitch-tree. *Aet. Tetrab. 4, serm. 3, c. 20*; *Paul. Æginet. de Re Med. l. 7, c. 3*; *Gorr. Defin. Med.*

APOCLA'SMA (*Surg.*) the same as *Abductio*.

APOCLE'TI (*Ant.*) a select council of the Etolians mentioned by Livy. *Hist. l. 35, c. 34, &c.*

APO'COPE (*Gram.*) $\acute{\alpha}\pi\omicron\kappa\omicron\psi\eta$, from $\acute{\alpha}\pi\acute{\omicron}$ and $\kappa\acute{\omicron}\psi\tau\omega$, *scindo*; a figure by which the last letter or syllable of a word is cut off, as *viden'* for *videsne*.

APOCORE (*Med.*) the same as *Abscisio*.

APOCRISIA'RIOUS (*Ecc.*) $\acute{\alpha}\pi\omicron\kappa\rho\iota\sigma\iota\alpha\rho\iota\omicron\varsigma$, from $\acute{\alpha}\pi\omicron\kappa\rho\iota\sigma\iota\mu\alpha\iota$, to answer; the surrogate, commissary, or chancellor to a bishop.

APO'CRISIS (*Med.*) the same as *Eccrisis*.

APOCRO'USTION (*Med.*) from $\acute{\alpha}\pi\omicron\kappa\rho\upsilon\sigma\acute{\alpha}$, to repel; a repellent, or a remedy of a repelling or astringent nature. *Gorr. Def. Med.*

APO'CRYPHA (*Theol.*) from $\acute{\alpha}\pi\omicron\kappa\rho\upsilon\pi\tau\omega$, to hide; *occultu scripta*, certain books of doubtful authority which are not received into the canon of holy writ. Of this description is the book of the Maccabees, although it is admitted to contain a true history.

APOCYE'SIS (*Med.*) $\acute{\alpha}\pi\omicron\kappa\acute{\omicron}\upsilon\sigma\iota\varsigma$, bringing forth young; a birth.

APO'CYNON (*Ant.*) $\acute{\alpha}\pi\acute{\omicron}\kappa\upsilon\sigma\omicron\upsilon\sigma$, from $\acute{\alpha}\pi\acute{\omicron}$ and $\kappa\acute{\upsilon}\omega\upsilon\sigma$, a dog; because it was supposed to restrain the fury of dogs; a bone in the left side of a frog which served to keep dogs off from a person; and also a shrub, Dog's Bane, that kills dogs which eat of it. *Diosc. l. 4, c. 81*; *Pliny l. 24, c. 11, l. 32, c. 5*.

APO'CYNUM (*Bot.*) $\acute{\alpha}\pi\acute{\omicron}\kappa\upsilon\sigma\omicron\upsilon\sigma$, the name of a plant [vide *Apocynon*], and in the *Linnean system*, a genus of plants, Class 5 *Pentandria*, Order 2 *Digynia*.

Generic Characters. CAL. perianth one-leaved.—COR. monopetalous; nectary of five glandular corpuscles surrounding the germ.—STAM. filaments very short; anthers oblong.—PIST. germs two; styles short; stigma roundish.—PER. follicles two; seeds numerous; receptacle subulate.

Species. The species are mostly perennials. *J. Bauhin. Hist. Plant.*; *C. Bauh. Pin. Theat.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Pluk. Almag. Botan.*; *Tourn. Hist. Herb.*; *Wild. Linn. Spec. Plant.*

APOCYNUM is also the name of several species, as the—*Asclepias amœna purpurascens*, &c. the *Ceropegia tenuifolia*, the *Cyanochnum virginale et acutum*, the *Echites biflora, suberecta*, &c. of *Linnaeus*. *Bauh.*, *Ray*, *Pluk.*, &c.

APOCYRTE'MENA (*Med.*) $\acute{\alpha}\pi\omicron\kappa\rho\upsilon\tau\epsilon\rho\mu\epsilon\upsilon\alpha$, gathering to a sharp head, as applied to suppurations.

APODACRY'TICA (*Med.*) $\acute{\alpha}\pi\omicron\delta\alpha\kappa\rho\upsilon\tau\iota\kappa\acute{\alpha}$, from $\acute{\alpha}\pi\acute{\omicron}$ and $\delta\acute{\alpha}\kappa\rho\upsilon$, a tear, Apodacrytics; medicincs provoking tears, and carrying off superfluous humours at the eyes.

A'PODAL (*Ich.*) the first order of fishes having no ventral fins. It includes the following genera:—*Muraena*, Eel, caudal, dorsal, and anal fins united.—*Gymnotus*, Gymnote, dorsal fins none.—*Gymnothorax*, pectoral fin none.—*Trichiurus*, body ensiform, tail subulate, without fin.—*Anarhichas*, Wolf-fish, body roundish, caudal fin distinct.—*Ammodytes*, Launce; body long, square.—*Ophidium*, teeth both in the jaws and palate, body ensiform.—*Stomateus*, body oval, broad.—*Xyphias*, Sword-fish, head furnished with a sword-shaped upper jaw.—*Sternoptyx*, gill membrane none.—*Leptocephalus*, head small, narrow, pectoral fins none.—*Stylephorus*, pectoral fins small, dorsal as long as the back, caudal short.

APODECTÆ (*Ant.*) $\acute{\alpha}\pi\omicron\delta\epsilon\kappa\tau\alpha\iota$, receivers general among the Athenians, to whom all the revenues of the state were paid. They were ten in number, and had to decide all controversies, except those which were of the greatest importance. *Aristot. Polit. l. 6, c. 8*; *Poll. Onom. l. 3, segm. 97*; *Sigon. de Rep. Athen. l. 4, c. 3*.

APODECTÆI (*Ant.*) $\acute{\alpha}\pi\omicron\delta\epsilon\kappa\tau\alpha\iota\omicron\iota\varsigma$, Athenian officers who measured the corn, whence they were also called $\sigma\iota\tau\omicron\mu\acute{\epsilon}\tau\rho\iota$. [vide *Sitometa*]

A'PODES (*Or.*) *Plin.* $\acute{\alpha}\pi\omicron\delta\epsilon\iota\varsigma$, from α , priv. and $\pi\acute{\epsilon}\varsigma$, *pes*; a species of bird, having very short feet, or, according to Pliny, wanting the use of their feet. *Aristot. Hist. Anim. l. 9, c. 30*; *Plin. l. 10, c. 39*.

APODICTICA (*Rhet.*) $\acute{\alpha}\pi\omicron\delta\iota\kappa\tau\iota\kappa\acute{\alpha}$, from $\acute{\alpha}\pi\omicron\delta\iota\kappa\acute{\omicron}\mu\iota$, to demonstrate; an epithet for arguments which are fitted for

proving the truth of any point, in distinction from *τὰ πανηγυρικά*. *Hermog. de Invent.* l. 3, Ald. edit. p. 140.

APODIDRASCINDA (*Ant.*) ἀποδιδρασκινδᾶ, from ἀποδιδράσκω, to run away; a game now known by the name of Hide and Seek.

APODIOXIS (*Rhet.*) ἀποδιόξις, a figure of speech by which one rejects certain particulars as unworthy of notice. This is also called ἀποπλάνησις, or, as it is interpreted by Cicero, *erroris inductio*, because it is much used by orators to mislead or carry away from the subject. *Cic. de Orat.* l. 3, c. 52; *Jul. Rufin. Fig.* 12.

APODIXIS (*Rhet.*) ἀποδείξις, from ἀποδεικνυμι, to demonstrate; an evident demonstration, called by Cicero *Argumenti conclusio*. *Cic. Acad.* l. 2, c. 8.

APODOSIS (*Rhet.*) ἀπόδοσις, *reditio*, from ἀποδοῦμαι, to restore; a figure consisting of the latter part, or application of a similitude. *Hermog. περι εὐρέε;* *Ald. Ed.* vol. 1, p. 6.

APODYTERIUM (*Ant.*) ἀποδυτήριον, from ἀποδύω, to strip; the place where those undressed who frequented the bath; it was also used as the dressing-room. *Varr. de Vit. Rom.* l. 2, c. 1; *Cic. ad Q. Fra.* l. 3, ep. 1; *Poll. Onom.* l. 3, c. 30; *Plin.* l. 5, ep. 6.

APCEUM (*Med.*) ἄπτοιον, from α, priv. and ποῖον, *quale*; insipid, or having no quality of astringency, acrimony, &c.

APOGÆI (*Nat.*) ἀπόγμοι, from ἀπὸ and γῆ, *terra*; winds blowing from land.

APOGÆE (*Ast.*) ἀπόγειον, from ἀπὸ, *ab*, and γαῖα, *terra*; or that point of the orbit at which the sun, moon, or any planet is, ἀπογειότατος, most distant from the earth. The ancients, considering the earth as the centre of the universe, had most regard to the apogee and perigee, which the moderns, who make the sun to be the centre, have exchanged for the aphelion and perihelion. This point is called by the Arabians the *Aux*, and by the Greeks the ἄψις, the apsis. — *Line of the apogee*, which is also called the line of the Apsides, a right line drawn from the highest to the lowest apsis through the centre of the world. [vide *Anomaly*]

APOGÆUSIA (*Med.*) vide *Agheustia*.

APOGRAPHE (*Ant.*) ἀπογραφή, a rendering up of one's accounts in order to clear oneself from the charge of owing money to the state. *Suidas*.

APOLÉCTI (*Ant.*) ἀπόληκτοι, chosen senators in the council of the Ætoliens. *Liv.* l. 25, c. 4.

APOLEPSIS (*Med.*) ἀπόληψις, *suppressio arteriarum*, &c.; tying a vein or artery to stop an hæmorrhage. *Hippocrat. Epid.* l. 6; *Gal. Comm.* 2 in *Hippocrat.*; *Erot. Lex. Hippocrat.*

APOLEXIS (*Med.*) ἀπόληξις, the decay of life.

APOLIDES (*Ant.*) those who were banished to some remote part, and condemned to hard labour, with the loss of the Roman citizenship. *Marcian. de Pæn.* l. 17; *Spanheim de Constitut.*; *Antonin. Imperat. Exercitat.* l. 1; *apud Græv. Thesaur. Antiq. Rom.* tom. 11, p. 14.

APOLINOSIS (*Med.*) vide *Amolinon*.

APOLLINARES ludi (*Ant.*) games celebrated in honour of Apollo, which were appointed by a decree of the senate, U. C. 542, in consequence of the prediction of the prophet Marcius relative to the battle of Cannæ. *Liv.* l. 25; *Macrobi.* l. 1, c. 17; *Laz. Comm. Reip. Rom.* l. 10, c. 8; *Ursat. de Not.* &c.; *apud Græv. Thesaur. Ant. Roman.* tom. 11, &c.

APOLLINARIANS (*Ecc.*) Ἀπολλινάριοι, the followers of one Apollinarius, a bishop of Laodicea, who held heretical notions respecting the Holy Trinity. *S. Athanas. Epist. ad Antioch.*; *S. Basil. Epist.*; *S. Hieronom. in Chron. ad Ann.* 366, &c.; *S. Epiphani. in Panar.*; *Socrat. Hist. Eccles.* l. 2, c. 46; *Sosom. Hist. Eccles.* l. 6, c. 27.

APOLLONIA (*Ant.*) ἀπολλωνία, a festival celebrated at Ægialea to commemorate the return of Apollo and Diana,

who had fled from that place into Crete. *Pausan.* l. 2, c. 8.

APO'LLYON (*Bibl.*) ἀπολλύων, from ἀπὸ and ολλύμι, to destroy; the destroyer, a name in Scripture given to the Devil.

APOLYSIS (*Med.*) ἀπόλυσις, 1. Exclusion, as of the fœtus, or the secundines. 2. The solution of a disease, or the untying a bandage. *Hippocrat. Epid.* l. 5, *de Coac. Prænot.* &c.; *Gal. περί της μητ. ωνάτ.*; *Foes. Econom. Hippocrat.*

APOMA'GMA (*Med.*) ἀπομαγμα, from ἀπομάττω, to wipe away; any thing that serves for abstersion or cleansing, as a linen handkerchief, or a sponge. *Foes. Econom. Hippocrat.*

APOMATHEMA (*Med.*) Απομάθημα, from απο, priv. and μαθῆναι, to learn; unlearning, or forgetting what has been learned.

APOMEOMETRY (*Mech.*) from ἀπὸ μῆκος, at a distance, μετρέω, to measure; the art of measuring things afar off, in order to ascertain their distance.

APOMELI (*Med.*) ἀπόμελι, from ἀπο and μέλι, honey; a sweet drink made of honey-combs diluted. *Gal. Comm.* 3, in *Hippocrat.* περί ἀγμῶν; *Act. Tetrab.* 2, serm. 1, c. 137; *Paul. Æginet.* l. 7, c. 15; *Myreps. sect.* 5; *Foes. Econom. Hippocrat.*

APOMPÆA (*Ant.*) ἀπομπαῖα, certain days on which sacrifices were offered up to the gods, called *πομπαῖοι*. *Hesychius*.

APOMYLLENE (*Med.*) ἀπομυλλήνη, a distortion and convulsion, particularly of the cheek, occasioned by a blow. *Erot. Lex. Hippocrat.*

APONENSEMENOS (*Med.*) ἀπονενσημέναις, from ἀπέναι, to be averse; disgusted with, or loathing. *Gal.* l. in *Hippocrat. Epid.* l. 5.

APONEURO'SIS (*Med.*) ἀπονεύρωσις, from ἀπὸ and νεῦρον, a nerve; the extension of a nerve, a tendon, or chord. *Gorr. Defin. Med.*; *Foes. Econom. Hippocrat.*

APONOGETON (*Bot.*) a genus of plants; Class 11 *Dodecandria*, Order 4 *Tetragynia*.
Generic Characters. CAL. none.—COR. none.—STAM. filaments eleven to nineteen.—PIST. germs usually four; styles none; stigmas subulate.—PER. capsules four; seeds in each capsule three.
Species. The species are perennials, as *Aponogeton monastachyon*, *distachyon*, &c. *Linn. Spec. Plant.*

APOPHASIS (*Ant.*) ἀπόφασις, a disclosure, from ἀπεφάνω, to unfold; the disclosure or discovery which the Liturgi used to make on oath of their estates. *Suidas*.

APOPHASIS (*Rhet.*) ἀπόφασις, a figure of speech in which the orator seems to decline stating that which he wishes to insinuate, as if he should say, "I will not attempt to show you in how many particulars he has failed to prove his point." *Poll. Onom.* l. 2, segm. 129; *Hermog. περί δεινότητ.*; *Gregor. in Hermog.* c. 37; *Ruf. in Fig.* 7; *Ulpian. ad Demosth. Olynth.* l.

APOPHASIS bonorum (*Ant.*) an inventory, or properly an account taken of estates when they were exchanged, in order to avoid public employments; for it was a custom among the Greeks, when any man would excuse himself from a troublesome office by casting it upon another richer than himself, that the person selected should have the power of challenging him to make an exchange of estates; and thereby compel him to fill the office he wished to get rid of.

APOPHLEGMATISM (*Med.*) ἀποφλεγματισμός, from ἀπὸ and φλέγμα, phlegm; a medicine to promote the carrying off phlegmatic humours. *Gal. de Simplic.* l. 5; *Oribas. de Loc. Affect.* l. 4, c. 40; *Act. Tetrab.* 1, serm. 4, c. 96; *Trallian.* l. 3, c. 6; *Actuar. de Meth. Med.* l. 5, c. 11; *Gorr. Defin. Med.*; *Foes. Econom. Hippocrat.*

APOPHORETA (*Ant.*) from ἀποφορέω, to take away; a

Greek name in use among the Romans for presents made in the Saturnalia to the guests, which they were to take with them, of which Martial gives a copious account in his fourteenth book of Epigrams, bearing this title. *Mart. in Apoph. in Cal. c. 55; Ambros. Exhort. ad Virgin. ; Symmach. l. 2, ep. 80; Turneb. Adv. l. 9, c. 23; Stuck. Antig. Conviv. l. 4, c. 5.*

APO'PHRADES (*Med.*) from ἀποφράς, inauspicious; an epithet for the day in which a disorder comes to a crisis or no crisis at all. *Castell. Lex. Med.*

APO'PHROGISM (*Ant.*) the impression of any images on a seal, such as that of the gods or heroes, which the ancients used to put upon their seals.

APO'PHTHEGM (*Rhet.*) ἀπόφθεγμα, from ἀποφθέγγομαι, to speak; a brief and pithy saying, especially of some worthy person.

APO'PHTHA'RMA (*Med.*) the same as Apophthora.

APO'PHTHORA (*Med.*) ἀποφθορά, from φθείρω, to destroy; the term mostly employed by Hippocrates for Abortion.

APO'PHYAS (*Med.*) ἀποφύας, from ἀπὸ and φύω, to grow, i. e. excrescence; the ramification of the veins.

A'POPHYGE (*Arch.*) ἀποφυγή, a concave part, or ring of a column lying above or below a flat member. *Vitruv. l. 4, c. 7.*

APO'PHYLITE (*Min.*) a species of Zeolite.

APO'PHYSIS (*Anat.*) ἀπόφυσις, from ἀπὸ and φύω, to grow, i. e. an excrescence; that kind of eminence of a bone which is contiguous, and makes it one piece with itself. *Ruf. Ephes. Appell. Part. hum. Corp. l. 1, c. 10; Gal. de Ossib.; Oribas. Med. Coll. l. 25; Gorr. Defin. Med.; Foes. Econom. Hippocrat.*

APO'PHYSIS (*Bot.*) an excrescence from the theca of the musci.

APOPLE'CTA (*Anat.*) the internal jugular vein. *Castell. Lex. Med.*

APOPLE'CTICA (*Med.*) 1. Medicines against the apoplexy. 2. A fever succeeding an apoplexy.

APO'PLECTICA vena (*Anat.*) the jugular vein.

A'POPLEXY (*Med.*) ἀποπληξία, from ἀπὸ and πλίσσω, to strike; that disorder which suddenly surprises the brain, and takes away all sense and motion. *Hippocrat. l. 7, Aphor. 4; Aret. l. 1, c. 7; Cels. de Re Med. l. 3, c. 1; Gal. in Hippocrat. Aphor.; Cæl. Aurelian. de Acut. Morb. l. 3, c. 5; Oribas. Med. Coll. l. 8, c. 6; Aet. Tetrab. 2, serm. 2, c. 27; P. Æginet. de Re Med. l. 3, c. 18.*

APOPLEXY now constitutes a genus of diseases in Cullen's Nosology; Class *Neuroses*, Order *comata*.

APOPO'MPÆ (*Anat.*) ἀποπομπῆαι, an epithet for certain days, on which sacrifices were offered to the gods, called πομπῆαι. *Hesychius, Phavorinus.*

APO'RIA (*Rhet.*) ἀπορία, *addubitatio*; a figure, when one is in doubt or perplexity what to do. *Rutil. Lup. l. 2, c. 10.*

APO'RIA (*Med.*) from α, priv. and πόρος, a duct; 1. A doubtful disease. 2. The same as Alysms.

APO'RIA'RE (*Law.*) to bring to poverty.

APORRHAI'DES (*Con.*) a sort of shell-fish.

APORRHIPSIS (*Med.*) ἀπορρηψις, abjection; a precipitate throwing off the clothes, as in a state of delirium. *Hippocrat. de Rat. Vict. in Morb. acut.*

APORRHŒ'A (*Med.*) ἀπορροια, a defluxion of humours, vapours, and sulphurous effluvia passing off from the body.

APORRHŒA (*Astrol.*) when the moon separates from one planet and applies to another.

A'POS (*Or.*) the same as Apus.

APOSCEPARNISMUS (*Sur.*) from σκίπετρον, an axe; a fracture of a bone like a chip cut by an axe.

APOSCHA'SIS (*Med.*) ἀπόσχησις, scarification.

APOSIOPE'SIS (*Rhet.*) ἀποσιωπήσις, called by Cicero *reticentia*; *taciturnitas*, by Celsus; *obticentia*, by Macrobius; from ἀποσιωπάω, *taceo*: a figure of speech by which one,

through anger or earnestness, leaves out some word, or part of a sentence, to be understood, as *Virg. Æn. l. 1, v. 135.*

Quos ego — Sed motos præstat componere fluctus.

Where may be understood the word *puniam*. *Demet. de Elocut. § 264; Cic. Orat. l. 3, c. 25; Quintil. l. 9, c. 22; Tiber. Rhet. c. 10; Alex. περί σχημ. Ald. Edit. p. 579; Gregor. ad Hermog. c. 7; Macrob. sat. 4, c. 6.*

APO'SITIA (*Med.*) ἀποσιτία, the same as Anorexia.

APOSTICA (*Med.*) ἀποσινικά, what causes Apositia. *Gal. Exeg. Vocab. Hippocrat.*

APO'SPA'SMA (*Surg.*) ἀποσπάσμα, from ἀπὸ and σπάω, to pluck; the rending asunder a ligament, &c. *Gal. Comm. 3, in Hippocrat. κατ' ἰατρ.*

APO'SPHACE/LISIS (*Surg.*) ἀποσφακέλισις, from σφάλαιος, a mortification; a mortification caused by too tight a bandage.

APO'SPHA'GMA (*Ant.*) ἀποσφάγμα, from ἀποσφαιττω, to slay; the blood flowing from the slaughtered beast into the vessel which was variously prepared for food.

APO'SPHAGMA (*Med.*) fæculent strainings. *Gal. Exeges. Vocab. Hippocrat.*

APO'SPHINXIS (*Surg.*) ἀποσφινγίσις, from ἀπὸ, priv. and σφίγγω, to bind; easing a bandage.

APO'SPONGISMUS (*Med.*) ἀποσπογγισμός, wiping off with a sponge.

APOSTALA'GMA (*Med.*) or *Apostagma*, ἀποσάλαγμα, from ἀποσάλαζω, to distil; the sweet juice which distils from the grapes before they are trodden. *Castell. Lex. Med.*

APOSTA'RE (*Law*) wilfully to violate the laws. *Leg. Edw. Conf. apud Brompton.*

APO'STASIS (*Med.*) ἀπόστασις, from ἀφισήμι, to separate from; 1. The same as Abscessus. 2. When the fragment of a bone comes away by a fracture it is called an apostasis. 3. The passing off of a distemper by excretion, or by a settlement in one particular part. 4. The transition from one distemper into another. *Gal. Comm. in Hippocrat. Epidem.*

APO'STA'TA capiendo (*Law*) a writ for the apprehension of one who, having entered into some orders of religion, departs from them, and wanders about the country. *Reg. Orig. 71. 267.*

APO'STA'XIS (*Med.*) ἀπόσταξις, from ἀποσάζω, to distil; any defluxion, but particularly of blood from the nose, as it is generally used by Hippocrates.

APOSTE'MA (*Med.*) ἀποστημα, from ἀφισήμι, to depart from, *suppuratio*; an imposthume, or unnatural swelling of any corrupt matter.

APOSTEMA'TIÆ (*Med.*) ἀποσηματίαι, those who void pus downwards.

APOSTERIGMATA (*Med.*) ἀποσερίγματα, from ἀποσηρίζω; 1. Supports for a weak part, as pillows, bolsters, &c. *Gal. Comm. 3, in Hippocrat. κατ' ἰατρ.* 2. Deeprooted disorders in the intestines. *Hippocrat. de Flat.*

A POSTERIO'RI (*Log.*) a term employed in demonstrating a truth, whether mathematical or philosophical, as when a cause is proved from an effect.

APO'STLE (*Bibl.*) ἀπόστολος, from ἀποστέλλω, to send; signifies literally a messenger or ambassador, but is now particularly applied to those disciples of our Saviour, who were commissioned to preach the gospel.

APO'STOLATE (*Ecc.*) the office and dignity of an apostle. It was also employed formerly as a title for a bishop.

APO'STOLE (*Ant.*) a tribute which was sent to the emperor by the Jews. *Jul. Epist. ad Jud.; Buleng. de Vectigal.*

APOSTOLI (*Ant.*) a name for letters demissory, which were sent from one court of justice to another to certify an appeal.—*Apostoli*, magistrates at Athens who had the charge of equipping the fleet.

APOSTO'LIC (*Ecc.*) or *Apostolical*, an epithet for what belonged to the Apostles, as the Apostolical age, doctrine, &c.—*Apostolical churches*, those churches which were founded immediately by the Apostles, particularly the churches of Rome, of Alexandria, of Antioch, and of Jerusalem. It is now applied by the catholics to the Romish church only, as when they speak of the *apostolic see*, an *apostolic nuncio*, an *apostolic brief*, and the like.—*Apostolic Fathers*, the Christian converts of the first century. *Sozom. Hist. Eccles.* l. 1, c. 16.

APOSTO'LICI (*Ecc.*) Apostolians, heretics of the third century, who affected to despise marriage, and to abstain from wine, and every indulgence. Baronius speaks also of another sect of the same name, who sprung up, in Perigord, in the twelfth century, who held similar principles. *S. Epiph. Hæres.* c. 61; *Augustin. Hæres.* c. 40; *Baron. Annal. Ann.* 260 & 1147; *Sander. Hæres.* c. 144.

APOSTOLICUM (*Ecc.*) a particular song or hymn anciently used in the churches.

APOSTOLORUM unguentum (*Med.*) an ointment composed of twelve ingredients.

APOSTRACOS (*Anat.*) ἀποστράκωσ, an epithet for a bone which is dried so as to become a mere skeleton. *Gorr. Def. Med.*

APOSTROPHE (*Med.*) ἀποστροφή, from ἀποστέφω, *verto*, to turn from; a turning away from or loathing to food. *Paul. Ægin. l. 3, c. 7.*

APOSTROPHE (*Rhet.*) ἀποστροφή, *aversio*; a figure when we turn our speech from the judge or auditor to one that is absent. *Hernog. περὶ ἰδ.*; *Quintil. l. 9, c. 2*; *Long. l. 16, c. 2*; *Sopat. ζωγ.*; *Jul. Rufin. de Figur.*

APOSTROPHE (*Gram.*) a mark (') showing that a vowel is cut off, as *Ain'* for *Aisne*.

APOSYRMA (*Med.*) the same as *Abrasum*.

APOTEICHISMOS (*Ant.*) the work of circumvallation, or the act of surrounding a town that was to be besieged with a line of circumvallation. *Poll. Onom.* l. 7, segm. 120.

APOTELESMATA (*Med.*) the event of a disease. *Cæl. Aur.*

APOTELESMATICI (*Ant.*) those who tell fortunes and calculate nativities, holding all things subject to the power of the planets.

APOTHECA (*Ant.*) ἀποθήκη, *repositorium*; signifies properly a cellar or warehouse, but particularly a medicine shop, or a gally-pot.

APOTHECARY (*Med.*) from ἀποθήκη, a medicine-shop; signifies properly the keeper of a medicine-shop, but more generally any compounder of medicines, who also, in some countries, practises the art of medicine.

APOTHECARY'S Company (*Her.*) obtained a charter of incorporation in the fifteenth year of King James I. Their arms are *argent*, Apollo, armed with a bow and arrow, bestriding a Python; their supporters two unicorns, and the crest a rhinoceros surmounting a torse and helmet. The motto "Opifer per Orbem dicor."

APOTHEOSIS (*Ant.*) deification, or placing among the number; an honour conferred on several of the Roman emperors at their decease. The ceremony of the apotheosis is described at length by Herodian.

APOTHEPCEIA (*Med.*) ἀποθερπεία; 1. The completion of a cure. 2. The exercise of friction and bathing, employed for the final removal of lassitude. *Gal. de San. tuend.* l. 2, c. 4; *Gorr. Def. Med.*; *Foes. Econom. Hippocrat.*

APOTHERNUM (*Med.*) ἀπόθερον, a pickle made of mustard, oil, and vinegar. *Gal. de Atten. Diæt.* c. 11.

APOTHESIS (*Surg.*) ἀπόθεσις, from ἀποτίθημι, to place; the placing of a fractured limb in the position in which it ought to remain.

APOTHRASIS (*Surg.*) the removal of a fragment of fractured bone. *Gorr. Defin. Med.*

APO'TOCOS (*Med.*) Abortive.

APO'TOME (*Math.*) ἀποτομή, from ἀποτέμνω, to cut off; the rational remainder or residual between two lines or quantities which are commensurable only in power, as in

$A \frac{B}{C}$, AB is the difference, or Apotome, between AC and CB .

Euclid distinguishes Apotomes into six sorts.—The *first Apotome* is, when the greater is rational, and the difference between their squares is a square number, as in the numbers $6 + \sqrt{20}$, $6 - \sqrt{20}$ is the Apotome.—The *second Apotome* is when the less number is irrational, as $\sqrt{18} - 4$, the difference between the squares

18 and 16, is 2 and the $\sqrt{2}$ is as 1 to 3.—The *third Apotome* is when both the numbers are irrational, as $\sqrt{24} - \sqrt{18}$, for the difference of their squares 24 and 18 is 6, and $\sqrt{6}$ is to $\sqrt{24}$ as 1 to 2.—The *fourth Apotome* is when the greatest number is rational, and the square root of the difference of the squares has no ratio to it, such is $4 - \sqrt{3}$, where the difference of the squares 16 and 3 is 13, and $\sqrt{13}$ has no ratio in numbers to 4.—The *fifth Apotome* is when the least number is rational, and the square root of the difference of the squares of the two numbers has not a ratio in numbers to the greatest, as $\sqrt{6} - 2$, where the difference of the squares 6 and 4 is 2, and $\sqrt{2}$ to $\sqrt{6}$ has not a ratio in numbers.—The *sixth Apotome* is when both the numbers are irrationals, and the square root of the difference of their squares has not a ratio in numbers to the greatest, as $\sqrt{6} - \sqrt{2}$, where the difference of the squares 6 and 2 is 4, and $\sqrt{4}$ to $\sqrt{6}$ is not a rational ratio. *Euclid. Elem.* b. 10, prop. 80, et seq.; *Papp. Math. Coll.* Introd. l. 7; *Luc. de Burg.*; *Stifel. Arith. Integ.* l. 2, c. 13, &c.; *Oughtred. Clav. Mathemat.*

APOTOME (*Mus.*) the difference between the greater and less semitone, being expressed by the ratio of 123 to 125.

APOTROPÆA (*Ant.*) ἀποτρόπαια, from ἀποτρέπω, to avert; sacrifices offered to the Apotropæi Dii, ἀλεξίμαχοι, *Averruncatores vel malorum depulsores*, i. e. the gods who delivered them from all hurtful things.

APOTROPÆA (*Med.*) the same as *Amulets*.

APOZEMA (*Med.*) a decoction.

APPARATOR (*Ant.*) the same as *Apparitor*.

APPARATUS (*Surg.*) the collection and right disposition of the instruments of surgery, &c.

APPARATUS is also a term among Lithotomists for the particular operation with its apparatus, which is employed in the extraction of the stone. There are two sorts, the *Apparatus major*, or High Operation, and the *Apparatus minor*, or Low Operation.—*Apparatus major* is that which is performed immediately above the Pubes, in that part of the bladder which is not covered with the Peritonæum.—*Apparatus minor* is performed in the perinæum, by laying open the neck and lateral part of the bladder, so as to allow the extraction of the stone.

APPARATUS (*Chem.*) the machinery for performing experiments, as the vessels, and other utensils belonging to a laboratory.

APPARATUS (*Pneum.*) comprehends those peculiar instruments by which the aeriform fluids may in distillations, solutions, &c. be caught and collected. The principal of these machines is the pneumumatic trough.

APPARENT (*Astron.*) an epithet applied to things as they appear to the eye, in distinction from what they really are, as in regard to conjunction, diameter, distance, &c. of the heavenly bodies.—*Apparent conjunction of the planets* is when they appear to be placed in the same right line with the eye of the spectator.—*Apparent diameter* is the angle

under which we see the sun, moon, and stars, as when we see the sun, S, under the angle D O E. This angle is the sun's apparent diameter, which is the least when he is in ☌, and the greatest when in ☿. *Ptol. Almag.* l. 5, c. 14; *Kepl. Tab. Rudolph.* p. 92, &c. and *Astron. Optic.* c. 10; *Cassin. apud Ricciol. Almag. Nov.* l. 3, c. 10, &c.; *Tych. Brah. Progymnas.* l. 1, c. 1; *De la Hire Tab. Astron.*; *Hevel. in Tractat. de Mer.* p. 101; *Huygen. System. Saturn.* p. 77.—*Apparent horizon.* [vide *Horizon*]—*Apparent place of a planet*, that point in the sphere of the world at which you see the centre of the sun, moon, or stars, from the surface of the earth.—*Apparent station*, the position or appearance of a planet or comet in the same point of the zodiac for several days successively.—*Apparent time.* [vide *Equation and Time*]

APPARENT distance (*Opt.*) that distance which we judge an object to be from us when seen from a far off, which may be very different from the real distance; for the heavenly bodies appear to be at the same distance, although there is the difference of many thousand miles between their distances.—*Apparent motion*, that motion which we perceive in a distant body that is moving whilst the eye is either at rest or in motion; or that motion which an object at rest seems to have whilst the eye itself only is in motion; thus very swift motions, as those of the luminaries, may not appear to be any motions; and on the other hand, supposing the eye to move forwards in one direction, any remote object at rest will appear to move in a parallel line the contrary way. The more oblique the eye is to the line or plane which a distant body moves in, the more will the apparent motion differ from the true one. Suppose a body to revolve equably in the circumference of a circle, A B F C E D, describing equal arcs in equal times, and the eye be at O in the plane of that circle, when at the point A it seems for some time to stand still, and constantly afterwards to move faster till it gets to the point F, where the motion appears to become the greatest; after which it appears to decrease till the body comes to C, when it will again seem to stand still; and then its apparent motion will increase backwards till the body arrives at E, where it will seem again to move fastest.—*Apparent magnitude of an object*, the magnitude as it appears to the eye, the measure of which is the quantity of the optic angle; as suppose D to be an

object viewed by the eye at A B, then C A D is the apparent magnitude of the object when viewed at A, and C B D the apparent magnitude of that object viewed at B.—*Apparent figure*, the figure or shape under which an object appears when seen at a distance.—*Apparent place of an object*, that in which it appears when seen through or in glass, water, or other refracting substances. When an object is seen in a convex glass, its apparent place will be more remote than the true place, and the reverse when it is seen through a plane or concave glass.—*Apparent place of the*

image of an object, that in which the image of an object appears to be which is made by the reflection of a speculum. This, according to Euclid and others, is when the reflected rays meet the perpendicular drawn from the object to the speculum. *Eucl. Catop.* prop. 16, &c.; *Kepl. in Vitell.* prop. 18.

- APPARENT** (*Law*) an epithet for an heir, as the heir *apparent*, or immediate heir to the crown, in distinction from the *presumptive heir*.
- APPARITION** (*Astron.*) the becoming visible, as applied to the heavenly bodies which appear above the horizon.—*Circle of apparition*, that circle or imaginary line within which the stars are always visible in any given latitude, in distinction from the *circle of occultation*.
- APPARITORES** (*Ant.*) from *appareo*, to appear, or be at hand; public officers so called because they were always at hand to wait upon the magistrates. Under this general name were included the Scribes, Accensi, Præcones, &c. They also acted as lictors to the priests, according to an inscription in the Appian way, APPARITORI PONTIFICUM PARMULARIO. *Cic. in Verr.* act. 3, c. 78; *Serv. in Virg. Æn.* l. 12, v. 850; *Bud. in Pandect.* p. 244; *Sigon. de Ant. Jur. Civ. Rom.* l. 2, c. 15; *Guther. de Vet. Jur. Pontif.* l. 2, c. 13.
- APPARITORS** (*Law*) or messengers who serve the process of the spiritual court. *Stat.* 21, *Hen.* 8.—*Apparitors comitatus*, Sheriffs' officers. *Halé's Sheriff's Acco.* 104.
- APPARLEMENT** (*Law*) a French term corrupted from *pareillement*, signifying in like manner, as *apparlement* of wars, i. e. after the manner of wars. *Stat.* 2, *R.* 2.
- APPARURA** (*Archæol.*) furniture implements, as *Carrucarum apparura*, plough tackle.
- APPEAL** (*Law*) from *appello*, to appeal. 1. The removal of a cause from an inferior to a superior judge. [vide *Audita Querela*, &c.] 2. An accusation by a private subject for any heinous offence, as appeals of *Mayhem*, *de pace*, *de plagio*, *de imprisimento*, which are not capital; or appeals of Murder, Larceny, or Robbery, Rape, and Arson, which are capital. *Glanv. de Leg. &c.* l. 2, c. 1; *Bract.* l. 3, tract 2, c. 19; *Britt.* c. 22, &c.; *Horn. Mir. of Just.* c. 2, sect. 11; *Staundf. Plac. Coron.* l. 2, c. 5, &c.; 1 *Inst.* 288, &c.
- APPEARANCE** (*Per.*) the representation or projection of a figure, &c. on the perspective plane.
- APPEARANCE direct** (*Opt.*) the view or sight of any object by direct rays, without refraction or reflection.
- APPEARANCE** (*Law*) the defendant's engaging to answer an action entered against him.
- APPEARANCE** (*Astron.*) the same as *Phænomenon* or *Phasis*.
- APPEARAND** (*Law*) vide *Heir-apparent*.
- APPEL** (*Mil.*) French for a roll-call.
- APPEL** (*Fenc.*) a smart blow with the sword-blade on that of the antagonist on the contrary side to that which has been engaged. It is generally accompanied with a stamp of the foot, and serves the purpose of procuring an opening.
- APPELLANT** (*Law*) he who makes the appeal.
- APPELLATIO** (*Law*) vide *Appeal*.
- APPELLATIVE** (*Gram.*) the common name, as opposed to the proper. *Prisc. Inst. Gramm.* l. 1.
- APPELLEE** (*Law*) he of whom the appeal or accusation is made.
- APPELLOR** (*Law*) the same as *Appellant*.
- APPENDENS** (*Law*) *appendant*, or belonging to something else; as an advowson *appendant* to a manor, &c. *Co. Lit.* 121, &c.
- APPENDICULA vermiformis** (*Anat.*) a worm-formed appendage to the *intestinum cæcum*.
- APPENDICULATE** (*Bot.*) *appendiculatus*; appendicled, or appended, at the extremity; an epithet applied to the petiole; *Petiolus appendiculatus*, a petiole that has a small leaf or leaves at the base.

APPENDICULATE (*Med.*) connected in any way.

APPENDICULATE (*Ich.*) an epithet for the Botany Bay *Squalus* of Linnæus.

APPENDITIA (*Law*) from *appendo*, to hang at or on; the appurtenances to a dwelling, &c. thus pent-houses are the *appenditia domus*, &c.

APPENDIX (*Lit.*) from *appendo*, to hang at or on; a supplement to any work by way of addition or illustration.

APPENDIX (*Med.*) the same as *Apophysis*; parts connected with the whole: the Fallopian tubes are appended to the *uterus*.

APPENDIX (*Bot.*) a thorn having red berries; also the berries themselves hanging on are appendices.

APPENNAGE (*Law*) *apanage*, from *appendage*; a child's portion; properly the portion of the king's younger children in France.

APPENSA (*Med.*) a species of amulet.

APPENSIO (*Med.*) from *appendo*, to hang up; the suspension of a broken limb, principally the arm in a scarf. *Castell.*

APPENSURA (*Law*) the payment of money at the scale, or by weight.

APPETENTIA *cibi*, an appetite.—*Appetentia gloria*, ambition.

APPETITUS *caninus* (*Med.*) the same as *Bulima*.

APPLE (*Bot.*) the well-known fruit of a tree of the same name, the *Pyrus malus* of Linnæus, which, in its cultivated state, is called the *Malus sativa*, or Common Apple-Tree; and in its wild state, *Malus sylvestris*, the Wilding or Crab. The most esteemed sorts of apples, in England, are, according to the order of their ripening, the—Codlin, which comes first to the market; the Margaret Apple, not so long as the Codlin; the Pearmain; the Quince; the Golden Renette, which ripens in October; the Hertfordshire Pearmain, fit for use in November; the Russet, a good kitchen apple from October to April; Nonpareil, one of the most esteemed fruits, which is not ripe before Christmas; and Golden Pippin, an apple almost peculiar to England. The sorts best fitted for cyder are the Red-Streak, the Devonshire Royal Wilding, the Whitsour, the Herefordshire Under Leaf, John-Apple or Deux-anues, Everlasting Hanger, and Gennet Moyle.

There are other plants which have also the name of Apple, as follows—Custard apple, the *Annona*; Love apple, the *Solanum*; Mad apple, the *Solanum*; Pine apple, the *Bromelia*; Purple apple, the *Annona*; Sour apple, the *Annona*; Thorn apple, the *Datura*; Water apple, the *Annona* of Linnæus.

APPLICATE (*Geom.*) another name for the ordinate or right line that is drawn to a curve and bisected by its diameter. [vide *Ordinate*].—*Applicate number*. [vide *Concrete*]

APPLICATIO (*Med.*) *applicatio*, any communication to the body, externally or internally, by way of a remedy.

APPLICATION (*Math.*) the bringing one thing near to another for the purpose of measuring it. Thus a longer space is measured by the continual application of a less, as a yard by a foot or inch. The number 24 is measured or divided by the application of 6; or the rectangle *ab* applied to the line *c* gives $\frac{ab}{c}$.—*Application*, *παραβολή*, a term to express the fitting of two quantities whose areas are equal but figures different, as when Euclid shows how on a given line *παραβαλλεῖν*, to apply a parallelogram, equal to a right-lined figure given. *Euclid Elem.* l. 6, prop. 28, &c.

—*Application of one science to another*, is the employing the rules and principles of the one for perfecting the other; as of Algebra to Geometry, when geometrical theorems are solved by algebraical investigations.—*Application of Mechanics to Geometry*, consists chiefly in employing the

centre of gravity of figures for determining the contents of solids described by those figures.—*Application of Geometry and Astronomy to Geography*, consists in determining the longitudes and latitudes of places, the figure of the globe, &c. by geometrical and astronomical operations and principles.—*Application of Geometry and Algebra to Physics and Natural Philosophy*, the reduction of any physical principles or operations to a comparison of angles and lines, &c. as in the science of Catoptrics for example, which rests on the datum, "That the angle of incidence is equal to the angle of reflection." This species of application was first introduced by Newton.

APPLICATION (*Astrol.*) the approaching of any two planets to each other.

APPODIA'RE (*Archæol.*) to lean upon.

APPOGIATURA (*Mus.*) an Italian word for a note of embellishment.

APPOINTEE' (*Mil.*) a foot soldier in France, who, for long service and great bravery, received pay above a private sentinel.

APPOINTMENT of a ship (*Mar.*) its equipment, furniture, &c.

APPO'LLON (*Astron.*) a name given to the star Castor.

APPO'NERE (*Law*) to pledge or pawn. *Neubrigensis.*

APPO'RTIONMENT (*Law*) a dividing of rents.

APPO'RTUM (*Ant.*) the revenue or profit which a thing brings in to its owner. *Stat.* 1, 35 *Ed.* 1, *De Apportis Rel.*

APPO'SAL of Sheriffs (*Law*) the charging them with money received upon the account in the Exchequer. *Stat* 22 *Car.* 2.

APPO'SER (*Law*) an examiner; an officer in the court of Exchequer, called the foreign apposer.

APPOSITIO (*Med.*) the same as *Additio*.

APPOSITION (*Gram.*) the situation of two nouns standing in the same case, as Cicero, the orator.

APPRaiser (*Com.*) one sworn to value goods, &c.

APPREHENSION (*Log.*) *apprehensio*, the first power of the mind, by which it simply contemplates things without pronouncing any thing about them.

APPREHENSION (*Law*) the capture of the person.

APPRE'NDRE (*Law*) a fee or profit to be taken or received. *Stat.* 2 *Ed.* 6.

APPRE'NTICE (*Law*) a young person bound by indentures or articles of agreement, to a tradesman or artificer, to learn his trade or mystery.

APPRE'SSED (*Bot.*) *appressus*, pressed or squeezed close; an epithet for a leaf, calyx, and peduncle. *Folium appressum*, a leaf, the disk of which approaches so near to the stem as to seem as if it had been pressed to it by violence. *Calyx appressus*, a calyx that presses close on the peduncle. *Pedunculus appressus*, a peduncle that is close to the branch or stem.

APPRIZING (*Law*) a name for an action in the Scotch law, by which a creditor formerly carried off the estates of the debtor in payment of the debts due to him, in lieu of which adjudications are now resorted to.

APPRO'ACH (*Math.*) or the *Curve of equable Approach*, a problem, first proposed by Leibnitz, to find a curve down which a body descending by the force of gravity shall make equal approaches in equal times. This curve has been found, by Bernoulli and others, to be the second cubical parabola, placed with its vertex uppermost.—*Method of Approaches*, a method of resolving certain problems in Algebra, by assigning certain limits to the quantity, and then approaching nearer and nearer until the point is reached. *Wall. Oper. Math.*

APPRO'ACHES (*Fort.*) the works whereby the besiegers approach the besieged place, such as the first, second, and third Parallels, Trenches, &c.—*Counter Approaches*, are

those which are carried on by the besieged against those of the besiegers.

APPROACHING (*Hort.*) the inoculating or grafting the sprig of one tree into another without cutting it off from the parent stock. It is also called *Inarching*.

APPROACHING (*Sport.*) a term for the devices employed by the sportsman to get near shy birds.

APPROPIA'RE (*Med.*) to appropriate or adapt medicines to a particular part of the body.—*Appropriare communiam*, to discommon or inclose any piece of land which was before common.—*Appropriare ad honorem*, to bring a manour within the extent and liberty of such an honour.

APPROPRIATION (*Law*) the annexation of an ecclesiastical benefice to the proper and perpetual use of some religious body. If to the use of lay persons it is termed *Impropriation*. 27 Hen. 8, c. 13; *Co. Lit.* 46.

APPROPRIATION (*Med.*) that action of the natural heat by which the humours and animal spirits are so united with the body as to enable them to perform their proper function.

to **APPROVE** (*Law*) *approbare*, to increase the profit upon a thing; as to approve land by increasing the rent. 2 *Inst.* 784.

APPROVEMENT (*Law*) *approbatio*. 1. The inclosing the common land within the lord's waste, so as to leave egress and regress to the tenant who is a commoner. *Reg. Jud.* 8, 9. 2. The augmentation of the profits of lands. *Stat. of Mert.* 20 Hen. 8; *F. N. B.* 71; *Crompt. Just.* 250.

APPROVER (*Law*) *approbator*, one confessing himself guilty of felony, and appealing others of the same crime to save himself. (*Bract.*) l. 3, tract. 2, c. 33; *Standf. Plac. Coron.* 52; *Crompt. Just.* 250.

APPROVERS (*Law*) *approbatores*. 1. Bailiffs or lords in their franchises; such persons in the marshes of Wales as had licence *de vendre et acheter* beasts. 2. Those who were sent to increase the farms of hundreds, &c. *Stat.* 2, *Edw.* 3.—*Approvers of the King*. 1. Such as have the letting of the king's demesne. *Stat.* 51 Hen. 3. 2. Sheriffs. *Edw.* 3, stat. 1.

APPROXIMATE (*Bot.*) *approximatus*; an epithet for a leaf; *approximatum folium*, a leaf that stands close to the stem.

APPROXIMATION (*Math.*) a continual approach to a root or quantity sought, but not expected to be found.

APPROXIMATION (*Med.*) a method of cure by transplanting a disease into an animal or vegetable subject by way of immediate contact. *Castell. Lex. Med.*

APPRUA'RE (*Law*) to take to one's own use or profit. *Stat. Will.* 2.

APPRYSING (*Law*) vide *Apprising*.

APPUI (*Men.*) a stay upon the hand; that is, the reciprocal sense between the horse's mouth and the bridle hand.—*True or right appui* is the nice bearing or stay of the bridle.—*Dull or deaf appui* is when the tongue is so thick, that the bit cannot work or bear upon the bars.—*Too much appui*, when the horse throws himself too much upon the bit.—*Full appui*, a firm stay without resting heavy.

APPUI (*Mil.*) a French term for any particular given point or body upon which troops are formed, or by which they are marched in line or column.—*Aller à l'appui* is to go to the assistance of any body of men.

APPULSE (*Astron.*) the approach of two luminaries to one another, so as to be seen as it were together in the same telescope.

APPULSUS (*Law*) from *appello*, to drive; the driving or coming of cattle to the water.

APPURTENANCE (*Law*) in Latin *pertinentia*, in French *appartinir*; whatever thing corporal or incorporeal appertains to another thing as the principal, as hamlets to a chief manor, &c.; or right of common, &c. *Co. Lit.* 121.

A'PRE (*Her.*) a figure like a bull, except that the tail is short, and without the testes; the sinister supporter of the Russia merchants' company.

A'PRICOT (*Bot.*) or *apricock*, a sort of wall-fruit, which requires much sun to ripen it. It was reckoned by the ancients to be allied both to the Apple, *malum*, and to the Plum, *prunus*; and is called by Dioscorides *μῆλα Ἀρμενιακά, περικοκκία, or βερεκοκκία*; by Pliny, *Præcocia*; and is now, in the Linnean system, the *Prunus Armeniaca*. The principal sorts of this fruit are the Masculine; the Orange, the Alger, the Roman, the Turkey, the Breda, and the Brussels, which last is ripe the latest of all the Apricots. *Dioscor.* l. 1, c. 163; *Plin.* l. 15, c. 12; *Columel. in Hort.*; *Paul. Æginet.* l. 1, c. 81.

A'PRIL (*Chron.*) *Aprilis*, i. e. *Aperilis*, because the spring, *aperit*, opens or commences with this month. *Virg. Georg.* l. 1, v. 217.

Candidus auratis aperit cum cornubus annum Taurus.

The second month of Romulus' year and the fourth of Numa's year, which began in January. Romulus consecrated this month to Venus, the mother of Æneas. *Ovid. Fast.* l. 1, v. 39.

Martis erat primus mensis, Venerisque secundus: Hac generis princeps, ipsius ille pater.

Hor. l. 4, od. 11, v. 14.

Idus tibi sunt agenda;

Qui dies mensem Veneris marine Findit Aprilem.

A'PRON (*Gunn.*) a piece of thin or sheet lead, used to cover the vent or touch-hole of a cannon.—*Apron of a dock*, a flooring raised at the entrance of the dock, a little higher than the bottom.—*Apron of a ship*, a piece of curved timber fixed behind the stern.

APRON (*Carpent.*) a platform, or flooring of plank, raised at the entrance of a dock, against which the gates are shut.—*Apron piece*, or pitching piece, in double-flighted stairs, for supporting the carriage piece or rough strings.

APRONIA (*Bot.*) a name for the *Nigra vitis*, or Black Briony.

APRO'XIS (*Bot.*) the name given by Pythagoras to a herb, whose root takes fire at a distance like Naphtha. *Plin.* l. 24, c. 17.

APSIDES (*Astron.*) or *Apses*, from *apsis, ἀψίς, comaxio*; two points in the orbits of the planets at the greatest and least distance from the sun or the earth, as A and B in the article *Anomaly*. [vide *Anomaly*]

APSINTHATUM (*Med.*) from *ἀψίνθηον, apsinthium*; a sort of drink accommodated to the stomach made of worm-wood. *Act. Tetrab.* 1, serm. 3, c. 69.

APSINTHIUM (*Bot.*) the same as *Absinthium*.

APISIS (*Ecc.*) a place in ancient churches where the clergy used to sit; so called from *ἀψίς*, an arch, because it was arched. *August. ep.* 23; *Greg. Turon.* l. 10, c. 31, &c.; *Cæl. Rhodig. Antiq. Lect.* l. 28, c. 10.

APISIS (*Math.*) vide *Apsides*.

APSY'CHIA (*Med.*) the same as *Lipochthymia*.

APSYRTOS (*Bot.*) a name for common horehound.

to **A'PTATE** a planet (*Astrol.*) to strengthen it in the position of a house and dignities, to its greatest advantage.

A'PTENADYTES (*Or.*) Penguin, a genus of animals, of the Class *Aves*, Order *Anseres*.

Generic Characters. Bill straight.—Tongue with reflected prickles.—Wings fin-shaped, without quill-feathers, covered with a strong, broad membrane.—Tail, short, wedged.

A'PTERA (*Ent.*) *ἄπτερος*, i. e. without wings, from *α*, priv. and *πτερον*, a wing; the seventh order of insects, having no wings. It includes the following genera:—*Lepisma*;

Podura, Spring-Tail; *Termes*; *Pediculus*, Louse; *Pulex*, Flea; *Acarus*, Tick; *Hydrachna*, Head; *Phalangium*; *Aranca*, Spider; *Scorpio*, Scorpion; *Cancer*, Crab, Lobster; *Monoculus*; *Oniscus*; *Scolopendra*; *Julus*, Lip.

AP'TOTE (*Gram.*) ἄπτωτον, from *α*, priv. and πᾶσι, case; a noun without cases, as Nequam. *Sosiyat. Char. Inst. Gram.* l. 1; *Priscian. de Art. Gram.* l. 5.

AP'PUA (*Ich.*) ἀψύχον, a worthless little fish; called by some the Loach. The same name is given to the *Clupea Encrasicolus* of Linnæus, now called the Anchovy. *Arist. Hist. Animal.* l. 6, c. 15; *Plin.* l. 31; *Gesn. de Aquat. Rai. Ichth.*; *Aldrov. de Pisc.*, &c.

AP'PUS (*Or.*) ἄπτωτος, without feet, the Martinet; so called because it does not use its feet; a kind of Swallow; the *hirundo apus* of Linnæus. *Plin.* l. 11, c. 47.

APUS (*Astron.*) or *Apous*, a constellation near the south pole, having eleven stars, according to Bayer. *Uranomet.*

APUTASY (*Bot.*) a tree found on the coast of Guinea, used by the natives as an antiscorbutic.

APY'CNĪ (*Mus.*) ἀπυκνοί, a name given by the Greeks to the three notes *proslambanomenos*, *nete symmenenon*, and *nete hyperbolæon*, which are so called because they contain a perfect sound, and do not press on either side upon the compact intervals.

APY'RA (*Min.*) a species of the *Argilla* of Linnæus.

APYREXIA (*Med.*) ἀπυρεξία, from *α*, priv. and πυρετός, fever; the abatement of a fever.

APYRINA (*Med.*) Current-wine.

APYROMELE (*Surg.*) ἀπυρομήλη, from *α*, priv. πύρην, nucleus, and μέλη a probe; a probe without a button. *Gal. Exceges Vocab. Hippoc.*

APYRON (*Min.*) from *α*, priv. and πῦρ, fire: 1. Sulphur vivum. *Diosc.* l. 5, c. 124. 2. A chemical preparation, otherwise called Æthiops.

APYROTĪUM (*Min.*) Sulphur vivum.

A'QUA (*Chem.*) i. e. a quæ vivimus, by which we live; as unda comes from unde sunt omnia, i. e. whence all things are; Water, an insipid, ponderous, transparent, colourless, unflammable, and fluid body, formed by the union of oxygen and hydrogen. The substances contained in water are held either in suspension or solution; by the first are meant clay, silice, calcareous earth, and magnesia; by the latter, air of different kinds, carbonic acid, simple or compound alkalies, lime, the sulphates, muriates, hepatic gas, &c.—*Aqua pura*, Pure or common water is distinguished into—*Aqua pluvialis*, called by Ovid *aqua pluvialis*, by Pliny *aqua imbrium*, by Horace *aqua caelestis*; Rain Water, which is the purest or freest from the impregnation of foreign bodies.—*Aqua fontana*, Spring Water; the next in purity, often contains common salt and carbonate of lime. It is unfit for the dressing of food, or the dissolving of soap, owing to the quantity of earthy salts which it holds in solution.—*Aqua puteana*, called by Columella *putealis*, Well-Water, known by the name of hard-water, which is the most liable to be impregnated with the soil.—*Aqua fluvialis*, River-Water, is generally as pure if not purer than spring water, if the motion be rapid and the bed silicious sand.—*Aqua nivalis*, Snow-Water, which, when melted, is destitute of all gaseous bodies.—*Aqua palustris*, Marsh-Water, which is stagnant and impregnated with many animal and vegetable substances.—*Aqua marina*, Sea-Water, which, in addition to common salt, contains sulphate of magnesia, of soda, and of lime, muriate of magnesia, and of lime, in different proportions.—*Aqua mineralis*, Mineral-Water, whatever is impregnated in a sensible manner with any mineral. The substances which these waters are found to contain are thirty-eight in number, consisting of air, and gases, acids, alkalies, earth, and salts, according to the predominance of which they are distinguished into the classes. 1. The Acidulous, in

which carbonic acid prevails. 2. The Chalybeate, in which iron is discovered. 3. The hepatic, or sulphurous, which contain sulphurated hydrogen gas. 4. The saline, which contains only salts in solution without iron, or carbonic acid in excess.—*Aqua distillata*, Distilled-Water, which is drawn from vegetables or any other substance, and is either simple when drawn by simple water; but compound, spirituous, or medicated, as lavender water, peppermint water, &c. when drawn by means of any other liquid substance.—*Aqua fortis*, made of a mixture of saltpetre, vitriol, and potter's-earth, in equal parts.—*Aqua extincta*, aquafortis, on which river water has been poured to qualify its corrosive quality.—*Aqua omnium florum*, made of cow-dung when the cows go to grass.—*Aqua regulus* or *regia*, made by the dissolution of sal ammoniac in the spirit of nitre.—*Aqua secunda*, made of water and the precipitate of silver.—*Aqua caelestis*, rectified spirits of wine.—*Aqua vitæ*, a cordial water made of beer, strongly hopped, and well fermented.—*Aqua tophania*, a noted Italian poison, called after the name of the woman who employed it.—*Aqua epidemica*, Plague Water, made of rosemary, angelica, French brandy, &c.—*Aqua odorifera*, Honey-Water, made of honey, coriander seeds, spirits of wine, &c.—*Aqua vulnerata*, Arquebusade-Water, made of various aromatics.

AQUA INTERCUS (*Med.*) the same as *Anasarca*.—*Aqua pericardii*, that humour which is collected in the bag of the heart.

AQUA MARINA (*Min.*) seu *Beryllus*, a species of *Gemma* of Linnæus.

AQUA BENEDICTA (*Ecc.*) Holy Water, otherwise called *Aqua aspersionis*, because both persons and things are sprinkled with it among the Roman Catholics.

AQUÆDUCTA Fallopiæ (*Anat.*) a bony canal in the *os petrosum*.

AQUÆDUCTUS (*Ant.*) from *aqua* *ducenda*, Aqueduct, a Conduit for water by pipes, of which, in the time of the Emperor Nerva, there were nine that emptied themselves through 13,594 pipes of an inch diameter. *Plin.* l. 31, c. 6; *Frontin. de Aquæduct. apud Græc. Thesaur. Antiq. Roman.* tom. 4, &c.

AQUA'GIUM (*Law*) i. e. *aquæ agium*: 1. A watercourse. 2. A toll for water.

AQUAL'FCULUS (*Anat.*) ἵπτερον, properly signifies that part of the belly which reaches from the navel to the pubes; but it is sometimes used to express the stomach or intestinal tube. *Ruf. Ephes. Appellat. Part. human. Corp.* l. 1, c. 11; *Oribas. Med. Coll.* l. 25, c. 1.

AQUA'RIA libra (*Mech.*) an instrument for measuring the height of water. *Vitruv. de Architect.* l. 8, c. 5.

AQUA'RIANS (*Ecc.*) Heretics; so called because they used only water at the Lord's Supper; a practice which was condemned by S. Cyprian in 252. *S. Cyp. epist.* 63.

AQUARIUS (*Ant.*) ὑδροουλάξ, *Aqueductum Curator*, the name of the person who had charge of the conduits or aqueducts, of whom mention is made in an ancient inscription. NYPHSANC. SAC. EPICETUS AQUARIUS. AUGUSTI. *N. Nic. ad Fam.* l. 8, ep. 6; *Manut. in Cic. ad loc. Turneb. Adver.* l. 14, c. 13.

AQUARIUS (*Ast.*) ὑδροχόος, the water bearer, a constellation in the heavens; so called, as is supposed, because at its rising there is much rain. It is the eleventh sign in the zodiac, reckoned from Aries, and is commonly marked [♒]. It rises in January, and sets in February, and is supposed by the Poets to be Ganymede or Deucalion. *Virg. Georg.* l. 3, v. 303.

— cum frigidus olim
Jam cadit, extremoque irrorat Aquarius anno.

This constellation contains 45 stars according to Ptolemy, 45 according to Kepler, 41 Tycho, 47 Hevelius, 108

Flamstead; among which is one of the first magnitude, called *Fomahaut* or *Fomelhaut*, and one of the third, called *Scheat*. *Arat. in Apparent. et Hipparch. in Arat. Manil. Astronom.* l. 4; *Hygin. Poet. Astronom.*; *Vitruv.* l. 9, c. 6.

AQUARTIA (*Bot.*) a plant; so named by Jacquin in honour of his friend and assistant Benoit Acquat.

AQUARTIA, in the *Linnæan system*, is a genus of plants, Class 4 *Tetrandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* monophyllous; tube bell-shaped.—COR. *monopetalous*; tube very short.—STAM. *filaments* short; *anthers* erect.—PIST. *germ* ovate; *style* filiform; *stigma* simple.—PER. *berry* globular; *seeds* very many.

Species. The two species are *Aquartia aculeata*, a shrub, native of South America.—*Aquartia microphylla*, a shrub. *Linn. Spec. Plant.*

AQUATIC (*Nat.*) ἑνδρος, Aquatic; belonging to, or living in, the water; an epithet applied to different sorts of birds, plants, or flowers. Also, an epithet in natural history for different species of animals and plants.

AQUATICS (*Bot.*) trees that grow on the banks of rivers, in marshes, and watery places.

AQUA-TINTE (*Paint.*) a method lately invented of etching on copper, by which a soft colour is produced resembling a fine drawing in water colours. It is effected by means of a powder.

AQUATUM *aquæum* (*Nat.*) the chalaza of an egg.

AQUEDUCT (*Anat.*) vide *Aquæductus*.

A'QUEOUS (*Anat.*) vide *Aqueus*.

AQUE'TTA (*Chem.*) the same as *Aqua Tophania*.

A'QUEUS *humor oculi* (*Anat.*) the aqueous or watery humour of the eye; the first, or outermost, and thinnest of the three.

AQUIFO'LIUM (*Bot.*) the *Ilex cassine* of Linnæus.

AQUILA (*Ant.*) the Eagle was reckoned by the ancients, not only the king of the birds, but the minister of Jupiter, who is said to have carried Ganymede up into heaven in the form of an eagle; whence he is styled by the poets *ales Jovis*, *armiger*, and the like.

Pind. Olymp. od. 2.

λάβουσι
παγγλωσσία κοράκες ὡς
ἀκραντα γαρύετον
διὸς πρὸς ὄρνιθας βῆτον.

Theocrit. idyl. 17, v. 72.

Διὸς, ἄσιος ὄρνις Ζηνὸς περὶ τόδε σῆμα.

Virg. Æn. l. 5, v. 254.

quem præpes ab Ida
Sublimem pedibus rapuit Jovis armiger uncis.

Hor. Carm. l. 4, od. 4, v. 1.

Qualem ministrum fulminis alitem.

Stat. Theb. l. 7, v. 674.

nec segnus ardens
Accurrit, niveo quam flammiger ales olori
Imminet.

This bird is particularly distinguished for his fierceness, loftiness of flight, rapidity, and quickness of sight; whence Homer designates him commonly by the epithets ὀψιπέτης, or simply πετεινός, i. e. by distinction; thus, when describing the combat between Achilles and Hector, he says,

Il. l. 22, v. 303.

ὡς τ' αἰετὸς ὀψιπέτης
Ὅς τ' εἴσιν πεδὸν δὲ διὰ νεφέων εφεβενῶν
Ἀρτάξων ἢ ἄρ' ἀμαλίν, ἢ πτώκα λαγῶν.

Virg. Æn. l. 11, v. 753.

Utque volans alte, raptum cum fulva draconem
Fert aquila,

Hor. l. 1, sat. 3, v. 26.

Cur in amicorum vitis tam cernis acutum,
Quam aut aquila, aut serpens Epidaurius?

As a bird of omen it was reckoned lucky when it appeared on the right hand, as we learn from Homer.—

Hom. Odys. l. 15, v. 115.

Ὄς ἄρα οἱ εἰπόντι ἐπέτατο δεξιὸς ὄρνις
Διαιτὸς ἀργὴν χθῆνα φέρον ὄνυχουσι πέλαρον.

Aquila legionaria, the figure of the eagle, with expanded wings, made either of gold or silver, was chosen by the Romans as their ensign, one of which belonged to each legion, wherefore the term *aquila* is sometimes used for a legion.

Lucan. l. 1, v. 244.

Ut nota fulsere aquile, Romanaque signa.

[vide *Aquila*, under *Numismatics*]

AQUILA (*Num.*) the eagle was chosen, as the symbol of empire, first by the Persians, and afterwards by the Romans, in consequence of which he is represented on coins in a variety of forms, sometimes standing on thunder, as *fig. 1*, or on a crown, as in *fig. 2*; the first of which is the reverse of a coin of Ptolemy Soter, the inscription ΠΤΟΛΕΜΑΙΟΥ ΣΟΤΗΡΟΣ, in the area AB, i. e. Ἀβυδνῶν, *Abydnorum*; the second a coin of Achæus, the son of Seleucus, the inscription ΑΧΑΙΟΥ ΒΑΣΙΛΕΩΣ. On the coins of Sicily

the eagle was a frequent symbol, as in *fig. 3*, the reverse of a coin of Agrigentum, where two eagles are standing over a hare, which is supposed to be emblematical of the victory obtained by Gelo, King of Syracuse, and his father-in-law, Theron, King of Agrigentum, over the Carthaginians, the inscription ΑΚΡΑΓΑΝΤΙῶν, i. e. *Agrigentorum*. On another coin of the same city one eagle is tearing another, as in *fig. 4*, which was emblematical of the civil wars between Cæsar and Pompey. The consecration of the emperors was some times depicted by an eagle with a man on its back, supposed to be the soul of the deceased emperor which it was bearing to heaven. [vide *Consecratio*] But the most frequent representation of the eagle was that of the *Aquila legionaria*, as in the subjoined figure of the coin of Augustus, struck by the town of

Acci, in Spain. On the obverse, is the head of Augustus, with the inscription AUGUSTUS CAESAR; on the reverse two legionary eagles between two military standards, the common symbol of this town, the inscription *Colonia Julia Gemella Acci*. *Xenophon. Cyrop.* l. 7, c. 1, and *Anab.* l. 1, c. 10; *Sallust. de Bell. Cat.*; *Hist. de Bell. Civ.* l. 3, c. 99; *Diodor.* l. 1; *Joseph. de Bell. Jud.* l. 3, c. 5; *Plin.* l. 10, c. 4; *Tacit. Annal.* l. 15, c. 29; *Flor.* l. 11, c. 12; *Quint. Curt.* l. 3, c. 3; *Sucton. in Aug.*; *Dio.* l. 40; *Lactant.* l. 1, c. 2; *Herod.* l. 4, c. 3; *Veget.* l. 2, c. 8; *Serv. in Æn.* l. 9, c. 161; *Fulgent. Mythol.* l. 2, c. 25; *Vaillant. Numis. Præst. Imperat.*; *Haverkamp. Parut. Sicil. Discrit.*; *Florez. Med. de Espan.*; *Spanh. Dissert. de Præst. et Usu Num.*; *Harduin.*; *Num. Ant. Illust.*; *Beg. Thes. Brand.*; *Froeh. Not. Elem.*

AQUILA (*Astron.*) the Eagle, in the Arabic *Altaïr*, but, in

the Persian tables, the Flying Vulture, one of the forty-eight old constellations, which, according to the fables of the Greeks, represented Ganymede, who was transported to heaven, and made cup-bearer to Jupiter. Ptolemy reckons nine stars in this constellation, Kepler twelve, Bayer thirty-two, Tycho and Flamstead seventy-one, among which was one in the shoulder of the first magnitude called *Altair*. *Arat. Apparent., et Hipparch. in Arat.; Eratosth. Characterism.; Ptol. Almag. l. 7, c. 5; Hygin. Astron. Poet.; Man. Astron. l. 1.*

AQUILA (Zool.) the Eagle is classed, in the Linnæan system, under the genus *Falco*. [vide *Falco*]

AQUILA alba (Chem.) the same as *Mercurius dulcis*.—*Aquila philosophorum* is the name given by the alchemists to the process of reducing metals to their first matter.

A'QUILÆ (Anat.) ἀἰροί, the veins which pass through the temples into the head. *Ruf. Ephes. Appell. Part. Corp. hum.*

AQUILÆ lignum (Bot.) Eagle wood, generally sold for Agallochum, is that part which is nearest the bark.

AQUILARIA (Bot.) from *aquila*, an eagle, eagle wood; a genus of plants, Class 10 *Decandria*, Order 1 *Monogynia*. *Generic Characters.* CAL. perianth one-leaved; tube bell-shaped; border five-cleft; clefts ovate.—COR. none; nectary one-leaved; clefts bifid.—STAM. filaments ten; anthers oblong.—PIST. germ ovate; style none; stigma simple.—PER. capsule obovate; seeds solitary.

Species. The only species is the *Aquilaria ovata*, a shrub, native of Malacca. *Linn. Spec. Plant.*

AQUILEGIA (Bot.) *Columbina*, a plant so called, from *aquila*, an eagle, because of the resemblance its nectaries are supposed to bear to the eagle's claws; a genus of plants, Class 13 *Polyandria*, Order 5 *Pentagynia*.

Generic Characters. CAL. none.—COR. petals five; nectaries five.—STAM. filaments thirty to forty; anthers oblong.—PIST. germs five; styles longer than the stamens; stigmas erect; chaffs ten.—PER. capsules five; seeds very many.

Species. The species are perennials, as the *Aquilegia vulgaris*, *viscosa*, &c. *J. Bauhin. Hist. Plant.; C. Bauhin. Pin. Theat.; Ger. Herb.; Park. Theat. Botan.; Raii Hist. Plant.; Tourn. Inst. Herb.; Linn. Spec. Plant.*

AQUILICEA sambucina (Bot.) the *Leea sambucina* of Linnæus.

AQUILICIUM (Ant.) particular sacrifices performed among the Romans during a period of great drought. *Fest. de Verb. Signif.*

AQUILIFER (Ant.) from *aquila* and *fero*, to bear; the standard bearer among the Romans, who had in his ensign the picture of an eagle. *Suet. in Jul. c. 62; Sigon. de antiq. Jur. Provinc. l. 2, c. 2; Ursat. de Nat. Rom. apud Græc. Thes. Antiq. Rom. tom. 11, p. 960.*

A'QUILINE (Nat.) an epithet for any thing connected with or belonging to an eagle, as an *aquiline nose*, i. e. a nose crooked like an eagle's beak.

A'QUILO (Nat.) the North-West wind; so called from its rapidity and vehemence resembling the flight of the eagle. Horace gives it the epithet of *impotens*, i. e. *valde potens*, very powerful.

Hor. l. 3, od. 30, v. 3.

Quod non imber edax, non Aquilo impotens Possit diruere.

It is named by the Greeks *Boreas*. *Plin. l. 2, c. 47; Fest. de Verb. Sig.*

ARA (Ant.) from *ardore*, heat or burning; because the victims ardent, burn upon it: a place reared for offering sacrifices *diis inferis et superis*, i. e. to the gods above and below; in distinction from the *altare*. [vide *Altare*] In the phrase, *Certare pro aris et focis*, *ara* is put for the altar in the impluvium or middle of the house, in which the Pe-

nates were worshipped. The *ara* was a place of refuge or asylum for slaves who fled from their masters, and criminals who wanted to escape justice, as we learn from the poets. *Plaut. Rud. act 3.*

LA. *Mihi non liceat meus ancillas Veneris de arâ abducere?*
DAE. *Non licet; ita est lex apud nos.*

Terent. Heaut. act. 5, scen. 2, v. 22.

— *nemo accusat, Syre, te; nec tu aram tibi Nec precatorem pararis.*

Ovid. Trist. l. 5, eleg. 2, v. 43.

— *Sacram, quamvis invisus, ad aram Confugiam: nullas summoet ara manus.*

Tibull. l. 4, carm. 13, v. 23.

Sed Veneris sanctæ considam vincetus ad aras Hac notât injustos, supplicibusque favet.

Altars were erected not only in honour of particular deities, but also on particular occasions; as votive altars, altars of apotheosis, or consecration of the emperors; altars of peace; altars of adoption, and the like. [vide *Consecratio, Pietas, &c.*] Herodotus makes the Egyptians to have been the first who erected altars to the gods, in which they probably imitated the example of the patriarchs, who set up altars to the true God. *Herodot. l. 2, c. 4; Cic. pro Dom. c. 40, et de Nat. Deor. l. 3, c. 10; Varro. de Ling. Lat. l. 4, c. 4; Tacit. Ann. l. 1, c. 14; Dio. 55; Isid. Orig. l. 15, c. 4; Berthold. de Ara.*

ARA (Astron.) one of the old constellations in the southern hemisphere, which was fabled to have been that at which the giants entered into their conspiracy against the gods; wherefore Jupiter, in commemoration of the event, transplanted the altar into the heavens.

Manil. Astron. l. 1, v. 421.

— *Tunc Jupiter aræ Sidera constituit, quæ nunc quoque maxima fulgent.*

It contains seven stars according to Ptolemy, and nine according to Flamstead. *Hygin. Astron. Poet.; Ptol. Almag. l. 7, c. 5; Flamstead. Cælest. Machin.*

ARA parva (Surg.) βαρὸς μικρὸς, a neat kind of bandage or filling; so called because, when fixed, its four corners represented an altar. *Gal. de Fascic.*

ARABESQUE (Paint.) or *Moresque*; a style of ornament in painting and sculpture, so called from the Arabians and Moors, who rejected the representation of animals.

ARABIC Figures (Math.) or Arabic characters, the numeral characters 0, 1, 2, 3, 4, 5, 6, &c. now in common use, which are so called because they were borrowed from the Arabs on the revival of learning in the eleventh century.

ARABIC (Nat.) an epithet for a transparent sort of gum, called "Gum Arabic," which exudes from the Egyptian *Acacia*. It is brought from Turkey in small irregular masses, of a pale yellow colour. Being glutinous and demulcent, it is good for coughs, diarrhæas, &c.

ARA'BICI (Ecc.) heretics of the third century, who had their rise in Arabia, and who maintained the belief that the soul died or slept till the day of judgment, and then had its resurrection without the body. *August. de Hær. 83; Niceph. l. 5, c. 23.*

ARA'BICA antidotus (Med.) a preparation of myrrh and Indian spices for the liver. *Myrep.*

ARA'BICUM Gummi (Chem.) Gum Arabic. [vide *Gummi*]

ARA'BICUS lapis (Min.) a stone like ivory blemished with spots.

A'RABIS (Bot.) ἀραβίς, Wall-Cress, a genus of plants, Class 15 *Tetradynamia*, Order 2 *Siliquosa*.

Generic Characters. CAL. perianth four-leaved; leaflets ovate.—COR. four-petalled; petals spreading.—STAM. filaments subulate; anthers cordate.—PIST. germ columnar; style none; stigma obtuse.—PER. silique compressed; seeds very many.

Species. Some of the species are annuals, as—*Arabis thaliana*, Common Wall-Cress.—*Arabis hispida*, seu *Cardamine pumila*, Rough Wall-Cress, &c. Some are perennials, as—*Arabis grandiflora*, Great-flowered Wall-Cress.—*Arabis bellidifolia*, seu *Sinapi*, Daisy-leaved Wall-Cress, &c. *J. Baulin Hist. Plant.; Ger. Herb.; Park. Theat. Botan.; Raii Synop. Meth. Stirp.; Pluk. Almag. Botan.; Mor. Hist. Plant.; Wild. Linn. Spec. Plant.*

ARABIS is also the name of the *Cardamine bellidifolia* of Linnæus.

ARABIS Malagma (Med.) the Arabians malagma for strumous swellings. *Cel.* l. 5, c. 18.

ARABLE land (Agric.) land fit to be ploughed.

ARABO-TEDE'SCO (Archit.) a style of architecture, in which the Moorish and the modern Gothic are combined.

ARAC (Cook.) an Indian spirituous liquor, prepared from rice, or sugar fermented with the juice of Cocoa.

ARACA-PUDA (Bot.) a species of the *Drosera* of Linnæus.—*Araca guam*, a species of the Goava tree.—*Araca miro*, a shrub growing in Brasil, the fruit of which has a sweetish musky taste, and somewhat the savour of mulberries. *Pis. Marcgr. Med. Braz.*

ARACE (Law) in French *arracher*; to rase or pluck up.

ARACH (Bot.) vide *Orache*.

ARACHIDNA (Bot.) or *Arachidnoides*. 1. Another name for the *Arachis*. 2. The *Glycine subterranea*, and the *Lathyrus amphicarpos* of Linnæus. *Bauh. Hist. Plant.; Plum. Descript. des Plant. de l'Amer.*

ARACHIS (Bot.) ἀρακος, ἀρακίς, ἀρακιδνα, and ἀραχιδνα, a plant called by Dale Wild Vetch, or Strangle Tare, the medicinal virtues of which are the same as those of the vetch tribe. *Theophrast. Hist. Plant.* l. 1, c. 1.

ARACHIS, in the Linnean system, a genus of plants, Class 17 *Diadelphia*, Order 4 *Decandria*.

Generic Characters. CAL. perianth two-parted; upper lip ovate; under lip lanceolate.—COR. papilionaceous.—STAM. filaments ten; anthers alternately roundish and oblong.—PIST. germ oblong; style subulate; stigma simple.—PER. Legume ovate-oblong; seeds two.

Species. The species are—*Arachis hypogæa*, Common Earth or Ground Nut, a perennial, native of Peru.—*Arachis fruticosa*, Shrubby Earth or Ground Nut, native of the East Indies. *Raii Hist. Plant.; Pluk. Almag. Botan.; Plum. Nov. Plant. Amer.; Brown. Hist. Jamaic.; Linn. Spec. Plant.*

ARACHIS, the *Glycine Africana* of Linnæus. *Burm. Prodr.*

ARACHNOIDES (Anat.) ἀραχνοειδης, from ἀράχνη, a spider, i. e. spider-formed. 1. The name of the coat between the *Pia* and the *Dura Mater*. 2. The crystalline humour of the eye, which, according to Celsus and others, immediately invests the vitreous humour. *Ruf. Ephes.* l. 1, c. 2, 3; *Cels.* l. 7, c. 7; *Gal. de Meth. Med.* l. 1, c. 3. 3. An epithet for a pulse that was small, and moved like a spider's web by every breeze. Also for urine resembling a spider's web. *Gal. Def. Med; Gorr. Def. Med.*

ARACHNOIDEUS (Bot.) Cobwebbed; an epithet for the ring of the fungi, which is composed of a very white web, also of a leaf, a peduncle, and a calyx, when they are covered with a thick interwoven pubescence, resembling a cobweb.

ARACHUS (Bot.) vide *Aracus*.

ARACON (Min.) Brass.

ARACUS (Bot.) Strangle Tare, or Wild Vetch; the *Orabus canescens* of Linnæus.

ARADOS (Med.) ἀραδος, perturbation in the stomach from the concoction of discordant food. *Hip. de Rat. Vict. in Acut. Morb.*

ARÆOMETER (Mech.) or Water-Poise, from ἀραιός, thin,

and μέτρον, a measure, an instrument for measuring the density and gravity of fluids.

ARÆO'STYLOS (Archit.) from ἀραιός, thin, and στυλός, a pillar; a sort of intercolumniation, in which the columns are at a distance from each other. *Vitruv.* l. 3, c. 2.

ARÆO'TICS (Med.) ἀραιωτικά, from ἀραιώω, to rarify; medicines which rarify the humours, so that they may pass off more freely.

ARAHO (Law) i. e. in *araho conjurare*; to make oath in the church, or some holy place.

ARAINS (Com.) striped or checked armorines, or taffeties, which come from the Indies.

ARALIA (Bot.) a genus of plants, Class 5 *Pentandria*, Order 5 *Pentagynia*.

Generic Characters. CAL. involucre very small; perianth five-toothed.—COR. petals five.—STAM. filaments five; anthers roundish.—PIST. germ roundish; styles very short; stigmas simple.—PER. berry roundish; seeds solitary.

Species. The species are mostly shrubs, as the—*Aralia spinosa*, the Thorny Aralia, or Angelica-Tree, &c. *Park. Theat. Botan.; Raii Hist. Plant.; Pluk. Almag. Botan. et Phytogr.; Mor. Hist. Plant.; Linn. Spec. Plant.*

ARALIA capitata, the *Hedera capitata* of Linnæus. *Jacyn. Hist. Americ.*

ARALIA'STRUM (Bot.) another name for the *Panax* of Linnæus.

ARANEA (Ent.) Spider; a well-known genus of animals, Class *Insecta*, Order *Aptera*.

Generic Characters. Mouth with short horny jaws.—Feelers two, jointed.—Eyes eight, sometimes six.—Legs eight.—Abdomen terminated by papillæ, or teats, through which the insect draws its thread.

Species. The principal species are—*Aranea diadema*, one of the largest of the common spiders, of a deep chesnut brown, which is seen during the autumnal season in gardens, &c.—*Aranea Tarantula*, the Tarantula spider, the bite of which it was formerly supposed could be cured only by music.—*Aranea nobilis*, a very beautiful species, with an orange-coloured thorax.—*Aranea scenica*, a small species, seen on the walls of gardens: this is one of those species which darts suddenly on its prey.—*Aranea extensa*, a smallish species, of a fine green colour.—*Aranea lævipes*, of a grey colour, with legs beautifully crossed by numerous alternate black and white bars.—*Aranea palustris*, of a lengthened form, and brown colour, found in damp places.—*Aranea aquatica*, a middle-sized species, of a deep chesnut colour, residing entirely under water.—*Aranea avicularia*, or Bird-catching Spider, a gigantic species, not uncommon in the East Indies, where it is of sufficient size to seize on small birds, which it destroys by wounding with its fangs.

ARANEA (Anat.) vide *Tunica Arachnoides*.

ARANEA (Com.) a silver ore, found only in the mines of Potosi, so called from its resemblance to a cobweb.

ARANEO'SA urina (Med.) ἀραχνοειδης ὕρον, Urine containing something like spiders' webs, with a fatness at the top, indicating something like a colliquation. *Hippocrat. in Coac. Prænotat. Cels.* l. 8, c. 2; *Foes. Econom. Hippocrat.*

ARANEO'SUS pulsus (Med.) A small pulse that moves as if it were shaken by short puffs of air. *Gal. de Differ. Puls.*

ARANEUS niger (Ent.) the Black Spider; from which a water is distilled that is an excellent cure for wounds. *Dale.*

ARAPABA'CA (Bot.) the *Spigelia anthelmia* of Linnæus.

ARA'RA (Bot.) a tree of the Juniper kind.

ARATE (Com.) vide *Arobe*.

ARATIA (Law) Arable grounds.

ARATICU (Bot.) the *Annona muricata* of Linnæus.

ARAT'TRUM (Ant.) the Plough; the invention of which is

ascribed by some to Ceres, by others to Bacchus, or to Triptolemus. *Orph. Hymn. ad Cer.*; *Diodor.* l. 3; *Virg. Georg.* l. 1, v. 147; *Ovid. Met.* l. 5, v. 341.

ARATRUM *terræ* (*Law*) as much land as could be ploughed with one plough.

ARATURA *terræ* (*Law*) the service which the tenant is to do for his lord by ploughing his land.

ARBALET (*Mil.*) a kind of weapon, vulgarly called a cross-bow.

ARBALIST (*Mil.*) a cross-bow.

ARBITER (*Ant.*) a sort of judge appointed by the Prætor to decide by equity rather than by the strict letter of the law, who is called *Judex honorarius* by Cicero. *Tusc.* l. 5, c. 41; *Offic.* l. 3, c. 16, &c.; *Senec. de Benef.* l. 3, c. 7; *Fest. de Verb. Signif.*—*Arbiter bibendi* was the master of the feast, or the toast-master, who was chosen by the *Tali*, or *Tesseræ*, and prescribed rules for the company. *Hor.* l. 2, od. 7, v. 25.

*Quem Venus arbitrum
Dicit bibendi?*

He was called by the Greeks *συμποσιαρχός, βασιλεύς, στρατηγός.* *Rhodig. Ant. Lect.* 7, c. 26; *Putean. Reliq. Cons. Prisc. apud Græv. Thes. Antiq. Rom.* tom. 12, p. 248, &c.

ARBITER (*Law*) any one to whom a reference is made for the decision of any disputes in law.

ARBITRARY *punishments* (*Law*) those which are left to the decision of the judge, in distinction from those which are defined by a statute.

ARBITRATION of *Exchange* (*Com.*) is the method of remitting to and drawing upon foreign places in such a manner as shall turn out the most profitable. *Arbitration* is either simple or compound.—*Simple arbitration* respects three places only, where, by comparing the par of arbitration between a first and second place, and that between a first and third, the rate between the second and third is discovered.—The *compound Arbitration* comprehends cases of exchange between three, four, or more places.

ARBITRII (*Mus.*) certain extemporaneous preludes.

ARBOR *Americana fraxinifolia* (*Bot.*) the *Swietenia Mahagoni* of Linnæus.

ARBOR *Aquatica Brasiliensis.* [vide *Aninga*]—*Arbor Aromatica Magellanica*, Winter's Bark, or Wild Cinnamon-tree; the *Wintera Aromatica* of Linnæus.—*Arbor Camphorifica Japonica*, the *Laurus Camphora* of Linnæus.—*Arbor crepitans*, the *Hura crepitans* of Linnæus.—*Arbor in aqua nascens*, the *Nyssa denticulata* of Linnæus.—*Arbor Judæ*, the *Cercis* of Linnæus.—*Arbor laurifolia venenata*, the Poison Tree.—*Arbor Saponaria*, the *Sapindus saponaria* of Linnæus.—*Arbor Virginiana Benzoinum fundens*, the *Laurus Benzoin* of Linnæus.—*Arbor Vitæ*, the *Thuja* of Linnæus.—*Arbor Zeylonica*, the *Chionanthus Zeylonica* of Linnæus.

ARBOR *Dianæ* (*Chem.*) a particular crystallization, from the solution of Mercury in salts.—*Arbor Hermetis*, a process of the revivification of Mercury.

ARBOR *Martis*, Coral, it being supposed to grow like a tree or plant, under the water of the sea.

ARBOR *Porphyriana* (*Log.*) otherwise called *scala prædicatorialis*; a scale of beings, or a figure formed by three rows or columns of words, the middle of which contained the genus or species, bearing some analogy to the trunk and branches of a tree, as

Thinking	SUBSTANCE.	Extended
Inanimate	BODY.	Animate
Irrational	ANIMAL.	Rational
This	MAN.	That
	PLATO.	

ARBOR (*Mech.*) 1. The principal part of a machine, which serves to support the rest. 2. The spindle or axis on which the instrument or machine turns.

ARBOR *vitæ* (*Med.*) a medicine drawn from the *Arbor vitæ*.

ARBO'REOUS (*Bot.*) an epithet for mosses, &c. growing on trees, in distinction from such as grow on the ground.

ARBORES (*Bot.*) Trees; the name of one of the Natural Families of plants, consisting of a durable stem and branches.—*Arbores caduæ*, Trees that have been cut and sprout up again.

ARBORESCENT (*Bot.*) *Arborescens*, an epithet for a stem which becomes woody.

ARBUSCULA (*Bot.*) a little tree or shrub.—*Arbuscula Africana repens*, an African trailing shrub, with leaves something like the *Orache*.

ARBUSTIVA (*Bot.*) the 39th order in Linnæus' fragments of a natural arrangement. *Phil. Bot.*

ARBUSTUM (*Bot.*) an orchard, hopyard, or vineyard.

ARBUTUS (*Bot.*) *κομάρτος*, Strawberry tree; a tree, the leaves of which resemble those of the laurel, and its fruit is that of the strawberry plant. It is very sharp and austere, and when eaten, according to Dioscorides, it occasions head-aches, and pains in the stomach. Virgil speaks of it as grateful food for kids. *Virg. Ecl.* 3, v. 82.

Dulce satis humor, depulsis arbutus hædis.

Horace commends it for the shade which it affords. *Hor.* l. 1, od. 1, v. 21.

— nunc viridi membra sub arbuto
Stratus.

Dioscor. l. 1, c. 175; *Plin.* l. 15, c. 24; *Oribas. Med. Coll.* l. 11; *Aet. Tetrab.* 1, serm. 1; *Paul. Æginet. de Re Med.* l. 7, c. 3.

ARBUTUS, in the *Linnean system*, a genus of plants, Class 10 *Decandria*, Order 1 *Monogynia*.

Generic Characters. CAL. perianth five-parted.—COR. monopetalous.—STAM. filaments ten.—PIST. germ subglobose; style cylindrical; stigma obtuse.—PER. berry roundish; seeds small.

Species. The species are mostly shrubs, as—*Arbutus unedo*, the Common Strawberry-Tree.—*Arbutus pumila*, the Dwarf Strawberry-Tree.—*Arbutus laurifolia*, the Laurel-leaved Strawberry-Tree, &c.

ARC (*Math.*) or arch, any part of a curve line, as a circle, ellipse, &c. as A F, F B, or B G, of the circle A B G D. The right line joining the extremes of any arc is the chord, as A G is the chord of the arc A B G, and K M the chord of the arc K D M.—*Circular Arcs* are the measures of angles; thus suppose the arc F B to contain 29° 25', then the angle F C B contains also 29° 25'; and as the arc B G is the quadrant of the circle A B G D, then the angle B C G is 90°, i. e. the fourth part of 360°, into which the whole circumference of every circle is supposed to be divided. Arcs are equal, similar, and concentric.—*Equal arcs* are the arcs of the same or equal circles, which contain the same number of degrees.—*Similar arcs* are the arcs of unequal circles that have the same number of degrees, or that are the like parts of their respective circles, as the arcs A B and M N. Similar arcs are proportionate to their radii, i. e. A B is to M N as C A is to C M.—*Concentric arcs* are those that have the same centre drawn from different radii, as the arcs A B and M N having the same centre, C.

ARC (*Astron.*) is differently named, according to the circle

to which it is applied, as an arc of the meridian, by which the latitude, &c. is measured, an arc of a parallel, circle, &c.—*Diurnal arc*, that part of a circle parallel to the equator, described by the sun in his course from his rising to his setting, in distinction from his *nocturnal arc*, which is described from his setting to his rising.—*Arc of progression or direction*, an arc of the ecliptic, which a planet seems to describe when its motion is direct, or according to the order of the signs.—*Arc of retrogradation*, an arc of the ecliptic, described by a planet while it is retrograde, or moving contrary to the order of the signs.—*Arc between the centres*, in eclipses, is an arc passing from the centre of the earth's shadow perpendicular to the moon's orbit, meeting her centre at the middle of an eclipse.—*Arc of vision*, that which measures the sun's depth below the horizon, when a star, before hid by his rays, begins to appear again. This arc varies for different planets, as, for Mercury 10°, for Venus 5, Mars 11½, Jupiter 10, Saturn 11; for a star of the first magnitude 12°, for one of the second, 13, &c. It will sometimes also vary for the same planet. *Ptol. Almag.* l. 13, c. 7; *Magin. Theor. Planet.* l. 2, c. 15; *Kepler. Epit.* p 369; *Ricciol.* l. 1, c. 32.

A'RCA (*Con.*) Ark-Shell; a genus of animals, Class *Vermes*, Order *Testacea*.

Generic Character. Animal a tethys; shell bivalve equivalent; hinge with numerous sharp teeth, alternately inserted between each other.

Species. The species are divided into—Those which have their margin entire, beaks recurved, as *Arca tortuosa*, &c.—Those which have their beaks inflected, as *Arca Noë*, Noah's Ark, &c.—Those which have their margin crenate, beaks recurved, as *Arca lactea*, &c.—Those which have their margin crenate and beaks inflected, as *Arca undata*.

ARCA arcanorum (*Alch.*) *Mercurius philosophorum*.

ARCA cyrographica (*Archæol.*) a common chest, with three locks and keys, kept by certain Christians and Jews, wherein all mortgages, &c. belonging to the latter were kept to prevent fraud, by order of Richard I. *Hoved. Annal.*

ARCA'DE (*Archit.*) an opening in the wall of a building, formed by an arch.

ARCA'NNE (*Min.*) Ochre.

ARCA'NUM (*Alch.*) from *arca* in *qua, quæ clausa sunt, tuta manent*; a name for chemical preparations kept secret by the authors. Paracelsus describes it as a principal medium which ought to be investigated by experience.—*Arcanum materiale*, a specific extract more nearly allied to the matter of the body.—*Arcanum specificum*, an extract of the interior nature.—*Arcanum coralinum*, the red precipitate of mercury.—*Arcanum duplex*, or *duplicatum*, a sort of salt from the distillation of double Aqua fortis, the Sulphate of Pot-ash in modern chemistry.—*Arcanum Jovis*, an amalgama of tin and quicksilver digested in nitre.—*Arcanum tartari*, Acetate of Pot-ash.

ARCA'TA (*Mus.*) or *Arcote*, when placed at a particular part, signifies it must be played with the *arco*.

ARC-BOUTANT (*Archit.*) an arched buttress.

ARCEUTHOS (*Bot.*) the same as *Juniperus*.

A'RCH (*Geom.*) vide *Arc*.

ARCH (*Archit.*) that part of a building which derives its name from its curved figure. The parts of an arch are the *reins* or *springing walls* by which it is supported.—The *drift* or *push* of an arch is that force which the arch exerts in the whole length of the building.—*Keystone* is the middle of the *vousoir* immediately over the centre of the arch.—*Vousoirs*, the archstones, or stones which immediately form the arch.—*Pitch*, the perpendicular height from the spring or impost to the keystone.—*Intrados*, the under sides of the *vousoir*, in distinction from the—*Extrados*, or upper surface.—*Springing lines*, the bounding

lines of the intrados.—*Chord* or *Span*, that line which extends from the springing line on one side of the arch to that on the opposite side.—*Vertex* or *Crown*, that part of the intrados most remote from the span.—*Section*, that vertical plane figure contained by the span and the intrados.—*Haunches* or *Flanks*, the curved parts on the top of the section, between the crown and each extremity of the spanning line. [vide *Bridge*]

Arches are variously named, according to the figure of the section, as *circular*, *elliptical*, *cycloidal*, &c.—*Circular arches* are distinguished into perfect and imperfect.—*Perfect arches* form an exact semicircle: they are called by the French *arcs en plein centre*.—*Imperfect* or diminished arches do not form an exact semicircle. They are, moreover, distinguished into—*Scheme* or *Skene arches*, which are flat arches.—*Pointed arches*, otherwise called *Gothic*, or by the Italians *arches di terzo et di quarto acuto*, i. e. of the third and fourth point; because they consist of two arcs of a circle meeting in an angle at the top, and drawn from the division of a chord into three or more points at pleasure.—*Strait arches*, those which have their upper and under edges parallel strait lines instead of a curve.—*Arch of Equilibrium*, is that which is in equilibrium in all its parts, having no tendency to break in one part more than another. [vide *Bridge*]

ARCH (*Gram.*) in composition, signifies *chief*, from ἀρχός, princeps, as Archbishop, Archduke, &c.

ARCH (*Mus.*) a curve formerly placed over a bass note, to signify that it was accompanied with the imperfect fifth.

ARCH (*Bot.*) *formix*, a small elongation of the corolla, which commonly covers the stamina, or is situated at the aperture of the corolla, as in *Symphytum officinale*, or *Gomfrey*.

ARCH (*Her.*) arches are borne in coat armour, as in the annexed figure. "He beareth *gules* three single arches, their capitals and pedestals or, by the name of *Arches*." These are supposed to be arches of a bridge.

ARCHÆO'LOGY, from ἀρχαίος, ancient, and λόγος, doctrine; the science which treats of antiquities in general. The term is now particularly applied to the antiquities of the Middle Ages.

ARCHÆRE'SII (*Chron.*) the same as *Anarchi*.

ARCHA'LTES (*Alch.*) the pillars of the earth, supported by the power of God only.

ARCHA'NGEL (*Bibl.*) *Archangelus*, ἀρχάγγελος, princeps angelorum, the prince of angels, as Michael is called.

ARCHANGEL (*Bot.*) the *Archangelica* and *Lamium* of Linnæus.—Baum-leaved Archangel, the *Melittis melissophyllum*, of Linnæus.—Yellow-leaved Archangel, the *Galeopsis galeobdolon*.

ARCHBI'SHOP (*Ecc.*) *archiepiscopus*, ἀρχιεπίσκοπος, princeps episcoporum; the chief prelate, having an authority over other bishops.

ARCHBU'TLER (*Polit.*) one of the great officers at the court of the German emperor, who presents the cup to him on solemn occasions.

ARCHDA'PIFER (*Ant.*) the chief sewer; one of the principal officers of the Germanic empire belonging to the Count Palatine.

ARCHDEA'CON (*Ecc.*) *archdeaconus*, ἀρχιδιάκονος, a substitute for the bishop, who has a superintendant power over the clergy within his district.—*Archdeacon's Court*, an inferior court within the jurisdiction of the archdeacon.

ARCHDU'KE (*Polit.*) one having a pre-eminence over other dukes.

ARCHDUKE'S crown (*Her.*) closed at the top by a scarlet cap, and encompassed with a circle of gold.

A'RCHÉ (*Med.*) ἀρχή, *initium*, the first attack of a disorder.

ARCHED *buttresses* (*Archit.*) or Arch-butments, otherwise called *flying buttresses*; props, in the form of an arch, which are employed in sacred edifices, of the pointed style, for sustaining the vaults of the nave.

ARCHED *legs* (*Vet.*) the defect of a horse who has his knees bent archwise. This relates to the fore quarters, and happens to such horses as are spoiled by travelling.

ARCHED (*Bot.*) the same as *Vaulted*.

ARCHEGONOS *morbus* (*Med.*) the same as *Acutus morbus*.

ARCHEION (*Ant.*) ἀρχεῖον, which is rendered in the Latin *summum templum*, a particular part of the temple, which served as a repository or treasury for any thing that was valuable, whether of public or private property; whence also the epithets given to it by Pollux, *μεγαλόπλετόν πολιχρῶσον ἀρχεῖον*. This place, according to Suidas, was likewise employed as a judgment hall. *Poll. Onom.* l. 1, c. 23; *Suidas*; *Bud. in Pandect.* p. 245.

ARCHE'NDA (*Med.*) a powder prepared from the *Alcanna*.

ARCHER (*Ast.*) the constellation named Sagittarius.

ARCHERY (*Law*) an ancient service of keeping a bow for the use of the lord to defend his castle. *Co. Lit.* sect. 157.

ARCHERY, the art of shooting with the bow. This art was learnt by means of *pricking*, i. e. shooting at a mark or butt, called a popinmoye or popinjay, because it was made in the shape of a parrot.

Bows were called, as to their shape, *long-bows* or *cross-bows*; as to their quality and materials, *steel-bows*, *yew-bows*, and *livery-bows*, a coarse sort of bow.—Cross-bows were of two kinds, called *latches* and *prodcs*.—Those who used the long-bow were called *archers*, in distinction from the *cross-bowmen*, who were so denominated from their use of the cross-bow; both of whom were employed in the English army long after the introduction of fire arms.

The bow consisted of the *stave*, or straight wooden part; the *arch* which was to be bent; the *string* by which it was bent; and the *nook*, or *nut*, in which the string was fixed. Bow-staves were made either of steel or wood; the latter either of yew, ash, or elm, of which the first was reckoned the best. The smaller bows were bent by means of an instrument called a *goat's foot*, and the long bows either by the help of a *stirrup*, or a machine called a *moulinet*. Cross-bows discharged not only arrows but also darts, called *quarreaux* or *quarrels*, stones, leaden-balls, &c.

Arrows were reckoned in *garbs*, *sheaves*, or *bundles*, each sheaf consisting of twenty-four arrows. Their heads were made of the best iron pointed with steel, which were mostly *barbed* and *feathered*; some were likewise *acerata*, that is, sharpened, or *non acerata*, that is, blunt. The arrows were carried in a *quiver* or case, and those who used them were obliged to have a *bracer* or piece of leather, on which the bow-string rested; *shooting gloves*, to protect the fingers; and *sharp-pointed stakes* which served as a defence against the cavalry in the day of battle. Those who manufactured the bows were called *bowyers*; those who made the arrows and quarrels were *fletchers*; and those who made the arrow-heads were termed *arrow-head-makers*.

ARCHES (*Archit.*) vide *Arch*.

ARCHES (*Her.*) a sort of canting or allusive arms; as *three arches* for a person named Arches. [vide *Arch*]

ARCHES, *Court of* (*Law*) the most ancient consistory belonging to the Archbishop of Canterbury, for the determination of ecclesiastical matters. It was so called from the church of St. Mary-le-Bow, i. e. *de Arcubus*.—Dean of *Arches*, the chief judge of this court, who has also a peculiar jurisdiction over thirteen parishes in London. 4 *Inst.* 337. &c.

ARCHIET (*Mus.*) the same as *Arco*.

ARCHETYPE (*Paint.*) *Archetypum*, ἀρχέτυπον, from ἀρχή, *principium*, and τύπος, *figura*, a figure; the original of a picture or drawing.

ARCHETYPE (*Com.*) the original standard for the weights kept at the mint.

ARCHE'US (*Alch.*) the power or principle in nature, which, according to Paracelsus, disposes and orders all matter according to its form. This Archæus, or *primum mobile*, in animal bodies is in the stomach.

ARCHEZO'STIS (*Bot.*) the same as *Bryonia alba*.

ARCHIACO'LUTHUS (*Ecc.*) the chief of the acolythi or ministers in cathedral churches.

ARCHIA'TER (*Med.*) ἀρχιατρός, from ἀρχός, chief, and ἰατρός, physician; a physician to the prince, according to Mercurialis, Casaubon, and Vossius; or the prince of physicians; or, which is more probable, it signifies both.

ARCHIEPI'SCOPAL (*Ecc.*) belonging to an archbishop.

ARCHIGERO'NTES (*Ant.*) ἀρχιγέροντες, *principes seniorum*, the overseers of the king's household. *Hottom*.

ARCHIGRA'MMATEUS (*Ant.*) ἀρχιγραμματῆς, *scribarum præfectus*, the principal secretary.

ARCHIGUBE'RNUS (*Ant.*) or *Archigubernator*, i. e. *gubernatorum princeps*, sive *classis præfectus*, the admiral of a squadron. *Diodor.* l. 20.

ARCHIL (*Com.*) a dye made of the *Lichen roccella*.

ARCHILO'CHIAN *verse* (*Poet.*) *Archilochium Carmen*, a verse so called from the poet Archilochus, of which there were different kinds, as the *Iambic trimeter catalectic*, which consists of five feet; the *Iambic dimeter hypermeter*, i. e. Iambic dimeter, with an additional syllable at the end, &c.

ARCHIMAGIA (*Alch.*) Chemistry; or the art of making gold and silver.

ARCHIMAGIRUS (*Ant.*) head cook.

ARCHI'MANDRITE (*Ecc.*) another name for *Abbot*.

ARCHIMIA (*Alch.*) the art of changing imperfect metals into those that are perfect.

ARCHISTRATE'GUS (*Ant.*) from ἀρχός, chief, and στρατηγός, a leader; the chief leader or generalissimo of an army.

ARCHITECT (*Ant.*) ἀρχιτεκτων, from ἀρχός, the chief, and τέκτων, a workman, Architect; a master builder, or a person skilled in architecture.

ARCHITECTO'NICE, vide *Architecture*.

ARCHITECTO'NIC *nature* (*Nat.*) the same as *Palastic Nature*.

ARCHITECTURE, *Architectura*, ἀρχιτεκτονική, from ἀρχός, the chief, and τεκτονία, building; the art of building any edifice. It is divided into civil, military, and naval architecture. *Civil architecture* is applied to the erection of buildings for the purposes of civil life. *Military architecture* is the art of erecting places for the purposes of security against the attacks of an enemy. *Naval architecture* is the art of constructing ships. The two last branches of architecture are treated of under the heads of *Fortification* and *Ship-building*. Civil Architecture is again divided into theoretical and practical architecture. *Theoretical architecture* comprehends those rules of science, the application of which gives stability and beauty to every edifice. It is therefore mostly employed about the exterior and decorative parts of buildings. *Practical architecture* is mostly concerned with the operative part of erecting an edifice; and is consequently more employed about the interior economy. The theory of architecture is properly *architecture* so called: the practical part is mostly called *Building*, and may be found treated of under that head.

Architecture, according to Vitruvius, comprehends, *ordinatio*, in Greek, τάξις, Order; *dispositio*, διάθεσις; *eurythymia*, Proportion; *symmetria*, Symmetry; *decor*, Propriety; *distributio*, Distribution; which four are comprehended under the Greek name *δικαιοσύνη*.—*Ordination* is the modification of all the members, or parts, to the

ARCHITECTURE.

whole work.—*Disposition* is the adaptation, or apt collocation, of things for producing a suitable composition or combination. The different kinds of disposition are *ichnography*, or the drawing of geometrical plans; *orthography*, or the taking of elevations; and *scenography*, or the drawing of those plans in perspective.—*Eurithmy* is the harmonious correspondence of the parts with one another, in length, breadth, and thickness.—*Symmetry* is the proportion of one member to another, or to the whole.—*Propriety* is the suitability of the building to the purpose for which it is intended, and all other relative circumstances.—*Distribution* is the arrangement of the work according to the nature of the situation, the materials, and the like.

The principal parts of a building on which the skill of an architect is displayed, are beginning from the foundation upwards, as follows: namely, the pedestal, column, architrave, arches, pediments, mouldings, and ornaments.

Pedestal.

The pedestal, called by Vitruvius, *stylobates*, serves as a foot to the column which rests upon it. The principal parts of the pedestal are three, namely—*Basis*, the Base, which is the foot of the pedestal.—*Die*, a square trunk, which forms the body.—*Corona*, the cornice, which serves for the head. The different sorts of pedestals are as follow: namely, the—*Tuscan*, *Doric*, *Ionic*, *Corinthian*, and *Composite pedestals*, which belong to the five orders. [vide Plate 9 and 10.]—*Square pedestal*, one whose height and width are equal.—*Double pedestal*, that which supports two columns.—*Continued pedestal*, that which supports a row of columns.

Columns.

The *Column*, *columna*, in Greek, *συλῆς*, the cylindrical body, which serves as the chief support and ornament of a building. The column consists of three principal parts, namely, the—*Basis*, which is the lowest part.—*Frustum*, the Fust or Shaft, which is the body; and—*Capitula*, the Capital.

Columns are of different kinds, according to their proportions, as the *Doric*, *Ionic*, *Corinthian*, *Tuscan*, and *Composite columns*, of which more may be seen under the head of *Orders*.—According to their materials, as *moulded*, *fusible*, *transparent*, *scagliola*, and *masonic columns*.—According to their construction or formation, as *columns in bands*, or *tambours*; *columns in trencheons*, or *banded columns*; *attic*, *conical*, *conoidal*, *cylindrical*, *cylindroidal*, *polygonal columns*.—According to the decoration of their shafts, as *bark-formed*, *cabled*, *carolytic*, *fluted*, *twisted columns*.—According to their disposition, as *angular*, *canted*, *coupled*, *doubled*, &c. [vide *Column*]

A *pillar* is an irregular kind of column, which deviates from the just proportions of the latter.—A *pilaster* is a small kind of column which is square instead of being round: otherwise it consists of the same parts and proportions. Pilasters are mostly employed in interior decorations, because they occupy less space.—*Attics* are a sort of pilasters with their cornices, which are employed at the upper extremity of a building. They derive their name from the Athenians, by whom they were first used for the purpose of concealing the roofs of their houses.

Columns are either *insulated*, i. e. stand singly, at a distance from any wall; or else they are *engaged* and stand near a wall. When several columns stand together in one building, their distance from each other is called the *intercolumniation*, which is of different kinds, as it

was distinguished among the ancients into *pycnostyle*, when the columns stood thickly together; *areostyle*, when they were at a considerable distance; *diastyle*, when three diameters distant; *custyle*, when two diameters and a quarter, which was reckoned a happy medium between the pycnostyle and the areostyle; *systyle*, when the columns stood thick, but not so thick as the pycnostyle. When a range of columns support an entablature, this is termed a *colonnade*; which is distinguished according to the number of its columns, into *tetrastyle*, *hexastyle*, *octostyle*, &c.

Entablature.

The entablature, otherwise called *trabeation*, is comprehended by Vitruvius under the general name of ornament. The word is immediately derived from the French, which is formed from the Latin, *tabulatum*, a stage or story. The entablature is supported by the column, and consists of three principal divisions, namely—the *Architrave*, in Greek, *ἐπιστυλιόν*, in Latin, *epistylium*, the epistyle or beam, which rests upon the capitals of the columns.—*Frize*, in Greek, *ζωφόρος*, in Latin, *zoophyrus*, which is formed by the cross beams that support the roof.—*Cornice*, in Latin, *corona*, which is formed by the ends of the timbers of the roof.

Arches.

An arch is a concave structure, raised on a mould, called the *centering*, and in a curved form, serving as the inward prop of some superstructure. The supports of an arch are the *springing walls* or *reins*; the under surface is the *intrados*; the upper surface the *extrados*; the line extending from one rein to the other is the *chord* or *span*; the most remote part from the span is the *vertex* or *crown*; the curved parts on each side the vertex are *haunches*, or flanks. To these parts may be added the—*Archivault*, or contour of the arch, an assemblage of mouldings on the face of the arch.—*Imjost*, a capital or plinth which sustains the arch.—*Piers*, the walls which support the arches of a bridge, and from which they spring, as bases to stand upon.—*Voussoirs*, or *arch-stones*, the stones which immediately form the arch of a bridge, &c. That which is in the middle is called the *Key-stone*.

Arches are employed in different parts of large buildings, and are of various kinds, according to the figure of the section; as *semicircular*, *elliptical*, *scheme*, *pointed*, *rampant*, *extradosed*, *perfect*, *imperfect*, *surbassed*, *diminished*, *horse shoe*, *surmounted*, &c. When employed as props to buildings, they are called *arc-boutants*, or *flying buttresses*; when in the interior of buildings to form the ceiling, they are termed *vaults*. When several arches stand together, they form a range which is called an *arcade*. [vide *Arch* and *Building*]

Pediments.

A *Pediment* is a kind of low pinnacle, called, in French, *fronton*, and, in Latin, *fastigium*, which serves as a crowning to porticoes, or to finish a frontispiece. Its area is called the *tympan*; and its figure is commonly triangular, but sometimes circular; in the former case it is termed a *pointed pediment*.

Mouldings.

A *moulding* is any projection from the naked part of a wall, column, &c. which serves as a decoration, either singly, or when brought together into an assemblage. Mouldings are of different kinds, as follows: namely,—*Fillet*, a small square moulding that separates the larger mouldings. The fillets in a Doric architrave are each called a

regula.—*Annulet*, a narrow flat moulding in different parts of a column.—*Plinth*, a flat square member, resembling a brick or tile, which serves as a support to the base of the column or pedestal.—*Cavetto*, a concave moulding in the pedestal and entablature, which is *recta*, when in its natural position, and *reversa* when turned upside down.—*Ovolo*, or *quarter round*, a convex moulding, the reverse of the cavetto.—*Cyma*, or *ogee*, a wave-like moulding, which is either *recta* or *reversa*.—*Torus*, a large round moulding in the bases of the columns.—*Astragal*, a small round moulding, like the *torus*, encompassing the shaft of a column.—*Bead*, a small round moulding, like a bead in different parts of the column.—*Scotia*, a hollow obscure moulding of the base.—*Apo-phyge*, or *scape*, a moulding, partly concave and partly straight, which joins the bottom of the shaft to the base; also the top of the shaft to the fillet under the astragal.—*Frize*, or *hypotrachelion*, a flat member on the capital of a column.—*Volute*, a spiral or scroll of the capital.—*Bell of a capital*, that part under the abacus which contains the caulicles, leaves, scrolls, &c.—*Abacus*, a square table on the upper part of the capital of a column.—*Facia*, or *fascia*, Face or Platband, a flat member of the architrave.—*Gutta*, an ornament in the shape of drops under the triglyphs of the frize.—*Tenia*, a small square fillet above the guttæ.—*Triglyphs*, ornamental tablets in the frize of the entablature.—*Metops*, the square interval between the triglyphs.—*Consoles*, or brackets, with scrolled ends for the support of the cornice.—*Soffit*, or *larmier*, the eaves or drip of the cornice.—*Modillions*, or *mutules*, projecting bodies under the soffits, resembling inverted consoles.—*Dentils*, ornaments in the cornice shaped like teeth, and placed in a square moulding, called *denticle*. [vide Plate 9 and 11]

The proportions of these several parts to each other are regulated by a given rule or measure, called a *module*, for which the diameter or semidiameter of the bottom of the column is commonly taken, which is subdivided into sixty parts, called *minutes*.

Ornaments.

Ornaments comprehend all the sculpture, or carved work, with which any piece of architecture is decorated, and derive their names from the figure which they are intended to represent, as *foliage*, *roses*, *egg*, *egg and anchor*, *festoons*, *fretwork*, and the like. [vide Plate 11] The disposition of the several members in a column constitutes what is termed an *order*, which, as far as respects the use of the arch in modern times, has been termed a *style of Architecture*.

Orders and Styles.

There are five principal orders among the ancients, three of which are Grecian, and two Roman; namely, the Doric, Ionic, Corinthian, Tuscan, and Composite.

The *Doric Order*, the most ancient of all, is said to have been invented by Dorus after the proportions of a man's body, making the thickness of the shaft, at the base of the column, equal to the sixth part of the height, including the capital. This order is now distinguished by the name of *Grecian* and *Roman Doric*; the former of which is the original model of that style of architecture drawn from specimens which are extant in different parts of Greece; the latter, which is but an imperfect imitation of the Doric, taken principally from the theatre of Marcellinus, at Rome, is the style which is now most commonly known by that name. [vide Plate 10]

The *Ionic Order*, so called from Ionia, where it had its origin, copied the gracefulness of women, making the

thickness of the column, and the volutes to represent the tresses of hair falling to the right and left. [vide Plate 9 and 10]

The *Corinthian Order*, called, by Scamozzi, the *Virginal Order*, derived its name from a Corinthian maid, whose tomb gave rise to the ornament in the capital of this column, which represents the flower *Acanthus*. The height of the Corinthian capital is also much greater than that in the Ionic Order, so as to give the whole the appearance of slender delicacy. [vide Plate 10]

The *Tuscan Order* derives its origin and name from Tuscany, in Italy. The shaft of this column is six times the diameter, the base and capital each half a diameter, and, consequently, the whole height seven times the diameter. [vide Plate 9 and 10]

The *Composite Order*, so called because it is composed of the Ionic and Corinthian Orders, is of Roman extraction, and, on that account, called likewise the *Roman*, or *Italian Order*. It is more slender than the Corinthian, the column, including its base and capital, being ten diameters in height. [vide Plate 9 and 10]

There were other styles among the ancients which have also been distinguished by the name of *Orders*; namely, the—*Attic Order*, a name sometimes given to the Attic pilasters which are frequently placed at the top of edifices over the other orders.—*Persian*, or *Persic Order*, is applied to the statues of men, which serve to support the entablature in the place of columns. It is so called because the figures of the Persian captives, taken by the Lacedemonians in their war with the Persians, were employed in this manner. The figures themselves were called *Persians*, or *Atlantides*, and by the Romans *Telamonians*.—The *Cariatid Order* differs from the preceding only in as much as the statues represented women instead of men, being the figures of the Caryatides, or Carian women, who were taken captives by the Athenians when they destroyed the city of the Carians after the Persian war. Besides the Caryatides and the Persians, figures were sometimes used by the Romans for the support of entablatures, the upper part of which represented the head and breast of a human body, and the lower the inverted frustum of a square pyramid. They were called *Termini*, because they were used by the ancients as boundaries, and were made to represent the god *Terminus*. Persian figures are generally charged with a Doric entablature; the Caryatides with an Ionic, or Corinthian architrave cornice; and the Termini with an entablature of any of the three Grecian orders.

Styles of architecture are distinguished by the different forms of the arch, as orders are by that of the column. The two principal styles which are now in use are the Saxon and the Gothic.—The *Saxon Style* is characterized by its semicircular arches, and massive columns.—The *Gothic Style* is otherwise called the *Pointed Arch*, in Italian *di terzo* and *quarto acuto*, because the arch which is used in this style meets in a sharp point. The Gothic has been, moreover, divided into the *simple* and the *florid*, according as the workmanship was more or less decorated. The florid Gothic, which surpasses the Grecian architecture in grandeur and elegance, is particularly chosen for sacred edifices.

Principal Authors on Architecture.

Vitruvius "De Architectura;" *Philandri*, *Barbari*, and *Salmasii* "Commentarii in Vitruvium;" *Sir Henry Wotton's* "Elements of Architecture;" *Leo Baptista de Albertis* "De Re ædificatoriâ libri decem;" *Palladio* "De Architectura libri quatuor," and "De Templis Romanis;" *Philibertis de Lorme* "De Architectura libri novem;" *Vignola* "Cour d'Architecture," &c.; *Scamozzi*

ARCHITECTURE.

“Œuvres d'Architecture;” *Blondel* “Cursus Architecturæ;” *Perrault* “Architecture generale de Vitruve reduite en Abregé;” and “Ordonnance de cinq espèces de Colomnes,” &c.; *Goldmanni* “Tractatus de Stylo-metris,” &c.

Explanation of the Plates.

Plate No. I. (9)—Members of the Pedestal, Column, and Entablature, in the five Orders.

Tuscan Order.

Pedestal.—*Base*. *a*, Plinth. *b*, List, or Fillet. *c*, Cavetto reversa.—*Die*, or *Body*.—*Cornice*. *d*, Cavetto, i. e. Cavetto recta; Fillet. *e*, Band.

Column.—*Base*. *f*, Plinth. *g*, Torus; Fillet.—*Shaft*. *h*, Apophyge, or Cincture, and Body, or Diameter below the break; Apophyge and Body above; Fillet. *i*, Astragal.—*Capital*. *k*, Gorge, Freeze, or Neck of the Capital; Fillet. *l*, Ovolo, or Echinus. *m*, Abacus. Entablature.—*Architrave*. *n*, First, or small Fascia. *o*, Second, or large Fascia; List, or Band.—*Frize*, or *Zophyrus*.—*Cornice*. Cavetto; Fillet; Ovolo, *p*, Corona; Fillet. *q*, Cima recta, Cymatium, or ogee; Fillet.

Doric Order.

Pedestal.—*Base*; Plinth. *A*, Cima reversa; Cavetto reversa.—*Die*, or *Body*.—*Cornice*; Cavetto; Ovolo; Corona.

Column.—*Base*; lower Torus. *B*, Scotia; upper Torus.—*Shaft*, Apophyge and Body below the break; Apophyge and Body above; Astragal.—*Capital*; Frize, or Neck. *C*, Anulets; Ovolo; Abacus; Cyma recta.

Entablature.—*Architrave*; first Fascia; second Fascia. *D*, Guttæ. *E*, Tænia.—*Frize*. *F*, Metops. *G*, Triglyphs. *H*, Cap of Triglyphs; Cavetto; Ovolo. *I*, Mutule. *K*, Cap of Mutule; Corona; Cima reversa; Cima recta.

Ionic Order.

Pedestal.—*Base*; Plinth; Cima reversa. *L*, Bead; Cavetto.—*Die*.—*Cornice*; Cavetto; Ovolo and Bead; Corona.

Column.—*Base*; Plinth; lower Torus; Scotia; upper Torus.—*Shaft*; Body below; Body above, with Fluting.—*Capital*; Astragal; Ovolo. *M*, Volute; Abacus.

Entablature.—*Architrave*; first, second, and third Fascia; Cima reversa.—*Frize*.—*Cornice*; Cavetto; Ovolo. *N*, Modillions; Caps; Corona; Cima reversa.

Corinthian Order.

Pedestal.—*Base*; Plinth; Torus; Cima reversa; Cima recta.—*Die*.—*Cornice*; Cima recta; Ovolo; Corona; Cima reversa.

Column.—*Base*; Plinth; lower Torus; Scotia; upper Torus; Bead.—*Shaft*; Body below, above with Apophyges; Astragal.—*Capital*. *O*, Bell adorned with the leaves of the Acanthus; Abacus.

Entablature.—*Architrave*; first, second, and third Fascia; Cima reversa.—*Frize*.—*Cornice*; Cima reversa. *P*, Dentils; Ovolo; Modillions in the form of Consoles; Corona; Cima reversa; Cima recta.

Composite Order.

Pedestal.—*Base*; Plinth; Torus; Cima reversa; Bead.—*Die*.—*Cornice*; Bead; Cima recta; Corona; Cima reversa.

Column.—*Base*; Plinth; lower Torus; Scotia; double Astragal; Scotia; upper Torus; Bead.—*Shaft*; Body below and above, with Apophyges.—*Capital*; Bell adorned with the leaves of the Acanthus; Astragal; Ovolo; Volute; Abacus.

Entablature.—*Architrave*; first and second Fascia; Cima

reversa; Cavetto.—*Frize*.—*Cornice*; Cima reversa; Modillions; Corona; Cima reversa; Cima recta.

Plate No. II. (10.)—The five Orders in General.

These five orders are collected from the foregoing proportions, allowing their several heights to be as follow: namely, *Tuscan*, 10 modules, 45 minutes.—*Roman Doric*, 12 modules, 20 minutes, the proportions of which may be compared with the *Grecian Doric*, both being of the same altitude.—*Ionic*, 13 modules, 31 minutes.—*Corinthian*, 14 modules, 12 minutes.—*Composite*, 14 modules. The module in this plate is marked by the figures 15, 14, 13, &c. which may be easily reduced to minutes by the scale laid down.

Plate No. III. (11.)

Ornaments. *A*, Eggs. *B*, Channels. *C*, Foliage. *D*, Rose. *E*, Festoon. *F*, Fretwork.—*Mouldings*. *G*, Torus. *H*, Astragal. *I*, Cavetto. *K*, Ovolo. *L*, Scotia. *M*, Cima Recta. *N*, Cima reversa. *O*, Apophyge.—*P*, Doric Intercolumniation.—*Q*, Corinthian Capital. *R*, Composite Capital.

ARCHITECTURE (*Perspect.*) a sort of building, the members of which are of different measures and modules, and diminish in proportion to their distance so as to make the building appear longer and larger to the view than it really is.

ARCHITRAVE (*Archit.*) a French term, from ἀρχός, chief, and trabes, a beam; signifying that division of the entablature, which rests upon the column, and is supposed to represent the principal beam in the building; whence it has the name, in English, of the Reason-Piece, or Master-Piece in porticoes, &c.; the Mantle-Piece in chimneys; and the Hyperthyron over doors, &c. It is called in Greek ἐπιστύλιον, by Vitruvius *epistylum*, the Epistyle, i. e. ἐπὶ τῶν στύλων, upon the column, because it rests upon the column. *Vitruv.* l. 3, c. 3; *Plut. in Peric.*; *Bald. Lex. Vitruv.*—*Architrave Cornice*, an architrave crowned with a cornice.—*Architrave doors*, those which have an architrave on the jaunbs, or over the door windows; on the cap-piece if straight; and on the arch if the top be curved.—*Architrave windows* are usually an ogee raised out of the solid timber with a list over it; but sometimes the mouldings are struck and laid on; sometimes cut in brick.

ARCHITRICLINUS (*Ant.*) *qui præest triclinio*, the major domo, or steward of the household. *Stuck. de Ant. Conviv.* l. 2, c. 7.

ARCHIVAVULT (*Archit.*) or *Archivolt*, the contour of an arch or a frame set off with mouldings running upon the faces of the arch-stones, and bearing upon the impost.

ARCHIVES (*Archæol.*) from *arca*, a chest, or more probably from ἀρχεῖον, the treasury in the Greek temples [vide *Archeion*]; a place where the records, &c. belonging to the crown and kingdom are kept; the office of the rolls, &c.; also the rolls themselves.

ARCH-LUTE (*Mus.*) a theorbe, or large lute. [vide *Arceleuto*]

ARCHON (*Hist.*) the chief magistrate of Athens; the office was at first perpetual, and afterwards annual. *Vel. Pat.* l. 1, c. 2. 8; *August. de Civ. Dei.* l. 18, c. 20.

ARCHON'TICKS (*Ecc.*) heretics who held that Archangels created the world, &c. They were a branch of the Valentinians. *Epiphani. Hæres.* 40; *August. Hæres.* 20; *Baron. Annal. Ann.* 195.

ARCHOPTOMA (*Med.*) a bearing down of the rectum.

ARCHILEUTO (*Mus.*) Italian for an archlute, or very long lute used by the Italians for playing a thorough base.

ARCIUM (*Bot.*) or *Arcium*. [vide *Arctium*]

ARCITENENS (*Ast.*) another name for Sagittarius. *Prisc.*

ARCO (*Mus.*) an Italian word signifying the Arc or Bow, with

which the violin and other string instruments are played. In violin music it denotes that the bow must be used instead of the fingers.

ARCOS (Chem.) Burnt Copper.

ARCTATA pars (Med.) the part compressed or closed by a fibula.

ARCTATIO (Med.) a constipation of the intestines from inflammation, or a præternatural streightness of the *pudendum muliebre*.

ARCTIC (Astron.) ἀρκτικός, from ἄρκτος, the bear; an epithet for what lies towards the North, as the Arctic circle, and the Arctic Pole.—Arctic circle, one of the lesser circles of the sphere, which is twenty-three degrees and a half distant from the North Pole.—Arctic Pole, the same as the North Pole. *Procl. de Sphær. Cleom. l. 1.*

ARCTIZITE (Min.) a sort of stone of the *Feldspar* family.

ARCTOMYS (Zool.) Marmot, a genus of animals; Class *Mammalia*, Order *Glires*.

Generic Characters. Fore-teeth wedged, two in each jaw. Grinders upper five each jaw; lower four; *clavicles* perfect.

Species. The *Arctomys* is so similar to the mouse that it scarcely deserves to be reckoned a distinct genus. The principal species are—*Arctomys Marmota*, the Marmot.—*Arctomys Bobac*, *le Boback*, the Bobac.—*Arctomys citellus*, *le Zizel*, the Varigated Marmot, &c.

ARCTOPHYLAX (Astron.) the Bear-Ward, a name for *Bootes*. *Arat. de Phæn. Cic. in Arat.*

ARCTOPUS (Bot.) ἀρctopus, Bear's-Foot; a genus of plants; Class 23 *Polygamia*. Order 3 *Dioecia*.

Generic Characters. CAL. *unbel* universal long, partial shorter; *perianth* five parted.—COR. *universal* uniform; proper petals five.—STAM. *filaments* five; *anthers* simple.—PIST. *germ* none; *styles* two; *stigmas* simple.—PER. abortive; *seeds* solitary.

Species. The only species is the *Arctopus echinatus*, Prickly leaved *Arctopus*, a perennial, native of the Cape of Good Hope. *Linn. Spec. Plant.*

ARCTOS (Astron.) ἄρκτος *ursa*, a name for the two Northern constellations, namely, the *Ursa major* and *minor*, which were also known by the names of *Helice* and *Cynosura*, which were carefully observed by the sailors. *Arat. de Apparent.*

Οἱ τὴν μὲν, κινῶσθραν ἐπίκλησιν καλέσωσι
Τὴν δ' ἑτέραν Ἐλίκαν.

These stars never set to us, to which Virgil and others allude.

Virg. Geor. l. 1, v. 246.

Arctos, Oceani metuentes aquare tingi.

Ovid. Fast. l. 4.

*Esse duas Arctos, quarum Cynosura petatur
Sidonius, Helicen Graia carina nutet.*

Homer speaks of *Arctos* in the singular. *Odyss. l. 5, v. 273.*

Ἄρκτουθ' ἢ καὶ Ἀμαζάν, ἐπίκλησιν καλέσω
Ἦτ' αὐτῆ εἰρέφεται καίτ' Ὠρίανα δοκίει
Ὅτ' ἢ ἄμμορος ἐστὶ λῆτρων Ὠκεανοῖο.

ARCTOSC'ORDON (Bot.) Bear's Garlic.

ARCTOSTA'PHYLOS (Bot.) from ἄρκτος, and σταφυλή, *uva*; because it is eaten by bears; a species of the *vaccinium* of *Linnaeus*.

ARCTOTHE'CA (Bot.) the *Gorteria rigens* and the *Arctotis* of *Linnaeus*. *Raii Hist. Plant.*

ARCTO'TIS (Bot.) from ἄρκτος, *ursa*, the bear; because of its shagginess. 1. A genus of plants, Class 19 *Syngenesia*, Order 4 *Polygamia Necessaria*.

Generic Characters. CAL. *common* roundish.—COR. *compound* radiate.—STAM. *filaments* five; *anthers* cylindrical.

—PIST. *germ* scarcely visible; *style* cylindrical; *stigma* simple.—PER. none; *calyx* unchanged; *seeds*, in the hermaphrodites, none—in the females, solitary; *receptacle* villose or chaffy.

Species. The species are annuals, as the *Arctotis calendulacea serrata*, &c.; biennials, as the *Arctotis grandifolia*, &c.; perennials, as *Arctotis tenuifolia*, *argentea*, &c.; shrubs, as *Arctotis angustifolia aspera*, &c. *Linn. Spec. Plant.*

ARCTOTIS is also the *Gorteria rigens* of *Linnaeus*.

ARCTU'RA (Med.) inflammation of the finger or the toe, from the curvature of the nail. *Linn.*

ARCTU'RUS (Astron.) ἀρκτῦρος, a star of the first magnitude in the tail of the bear, which *Erotian* makes to signify the same as *Arctophylax*, i. e. the keeper of the bear, because keepers were called ἄρκοι; but others derive it from ἄρκτος, the bear, and ἔρα, a tail. This star is called by *Homer* ὀψεδύων; by *Pliny* *gladius aut pugio Bootis*; by *Isidore* *arctuzona*; in the Arabic *alkameluz*. *Aratus* distinguishes it for its brightness.

Phæn. v. 93.

Καὶ μάλιστα πᾶς ἀριθῆλος ὑπὸ ζῆνῃ δ' εἰ, αὐτὸς
Ἐξ ἄλλων Ἄρκτῦρος ἐλίσσεται ἀμφραδὸν αἰσῆς;

which is rendered by *Cicero*,

*Illic autem subter precordia fixa videtur
Stella micans radiis arcturus nomine clara.*

So *Manilius Astron. l. 5, v. 351.*

*Nunc subit Arcitenens, cujus pars quinta nitentem
Arcturum ostendit ponto.*

It was the portender of storms, according to *Plautus* and others.

Plaut. in Rudent.

*Arcturus signum sum omnium quam acerrimum
Vehemens sum cum exorior, cum occido vehementior.*

Virg. Æn. l. 1, v. 743.

— Unde imber et ignes,
Arcturum pluviasque Hyades, geminosque Triones.

Hor. Carm. l. 3, od. 1, v. 27.

*Nec savius Arcturi calentis
Impetus.*

Virgil recommends ploughing barren lands at the rising of *Arcturus*.

Virg. Geor. l. 1, v. 67.

*At si non fuerit tellus fecunda sub ipsum
Arcturum tenui sat erit suspendere sulco.*

According to *Pliny* it rose on the 12th, and according to *Columella* on the 5th of September; but now it rises as late as October. *Hippocrat. Epidem. l. 1; Hipparch. in Arat.; Plin. l. 6, c. 23; Ptolem. de Apparent; Erotian. Lex Hippocrat.; Hesychius; Suidas.*

ARCTURUS *verbascum* (Bot.) a species of the *Celsia* of *Linnaeus*.

ARCUALIA ossa (Anat.) the bones of the *Sinciput*, or the temple bones.

ARCUALIS sutura (Anat.) another name for the *Sutura coronalis*, from its bow-like shape.

ARCUALTIO (Med.) Arcuation; a gibbosity of the fore parts, with a curvature of the bone of the sternum of the tibia, or dorsal vertebræ.

ARCUALTION (Hort.) the raising of plants by layers.

ARCUALTUS morbus (Med.) the same as *Icterus*.

ARCUALTUS (Bot.) bent like a bow.

ARCUBALISTA (Ant.) from *arcus*, a bow, and βάλλω, to cast; a cross bow, which has been contracted into *arbalist*.

ARCULÆ (Anat.) ποιλίδες, the caverns or orbits of the eyes. *Ruf. Ephes. Appell. Part. human. Corp. l. 3, c. 1.*

ARD

ARCUS (*Numis.*) the Bow; was the symbol of many cities, in honour of Diana, as on the annexed figure, which represents the reverse of a medal of Agrippina, struck by the Acmonians; the inscription ΕΠΙ ΣΕΠΟΤΙΝΙΟΥ ΚΑΠΙΤΩΝΟΣ ΚΑΙ ΙΟΥΛΙΑΣ ΣΕΟΥΡΑΣ ΑΚΜΟΝΕΩΝ, i. e. *sub Serotinio Capitone et Juliâ Severâ Acmoniensiūm*. Sometimes Apollo is also represented with his bow bent ready to shoot the serpent, Python, as in the annexed figure, which represents a coin of Ægina, bearing the inscription ΑΙΓΙΝΗ, Ægina. *Vaillant. Numis. Græc. Peller. Rec. de Med.—Arcus triumphalis*, the Triumphal Arch, is represented on the coins of several emperors, commemorative of their victories, as in the annexed figure, representing a coin of Augustus Cæsar, on which an equestrian statue, by the side of the triumphal arch, the inscription S. P. Q. R. IMP. CAES. Triumphal arches are represented on the coins of Drusus, Claudius, Nero, Galba, Titus, Domitian, Trajan, Antoninus, M. Aurelius, L. Verus, Gallienus, and Postumus, *sen. Goltz. Num. Aug. Cæs.; Vaillant. Num. Imp. Rom.; Tristan. Comment. Histor. vol. i.; Morell. Famil. Pompeian.; Beg. Thes. Brand. tom. ii.*

ARDABAR (*Chem.*) a sort of arum.

ARDAS (*Chem.*) sordes or filth.

ARDA'SSINE (*Com.*) a sort of Persian silk of the finer kind.

ARDEA (*Or.*) a sort of water-fowl of the heron tribe; so called from the loftiness of its flight, to which Virgil alludes. *Virg. Georg. l. 1, v. 363.*

*In sicco ludunt fulicæ; notasque paludes
Deserit, atque altam supra volat Ardea nubem.*

ARDEA, in the Linnean system, a genus of birds, in the Order *Grallæ*.

Generic Characters. Bill straight, long, pointed.—*Nostri* linear.—*Tongue* sharp.—*Feet* four-toed cleft.

Species. The species are distinguished by the English names of the Crane, the Stork, the Heron, and the Bittern, as—*Ardea grus*, in French, *le Grue*, the *Gru* or *Grua* of Aldrovandus, the Common Crane, having its head bald.—*Ardea ciconia*, in French, *le Cicogne*, the Stork, having its orbits naked.—*Ardea major*, or *cinerea*, the *Heron cendre* of Belon, and *Heron hupé* of Brisson, the Heronshaw or Common Heron.—*Ardea alba*, in French, *le Heron blanc*, the White Heron.—*Ardea Garzetta*, in French, *l'Aigrette*, the Egret, or Dwarf Heron.—*Ardea nycticorax*, or *grisea*, in French, *le Heron gris*, or *Bithreau*, the Night Heron.—*Ardea comata*, the *Cancroflagus luteus* of Brisson, in French, *Crabier de Mahon*, the Squacco of Ray, the Squacco Heron.—*Ardea stellaris*, or *Botaurus*, in French, *le Butor*, the Trombone, or *Terrabuso* of Aldrovandus, the Bittour, Miredrum, or Bittern.—*Ardea minuta*, or *Ardeola*, in French, *le Blongios*, the Little Bittern Heron.

ARDENS febris (*Med.*) *καῶσις*, an ardent or burning fever; a species of tertian remittent.

ARDENT spirits (*Chem.*) distilled spirits, which will take fire, and burn as spirits of wine, &c.

ARDENTES papule (*Med.*) the same as *Echrasmata*.

ARDENTIA (*Med.*) things unfit to be eaten and drank, being subject to combustion, as amber, turpentine, and the like.

ARDEOLA (*Or.*) *dim.* of *ardea*, a little heron; the *Ardea minuta* of Linnæus.

ARDERS (*Agric.*) the fallowings or ploughings of grounds, &c.

ARE

ARDESIA (*Min.*) a genus of *Argillaceous* earths, consisting of alumina and silica, with some oxyde of iron and carbonate of lime, magnesia, and petroleum.

Species. The principal species are—*Ardesia novacula*, or *Schistus scriptura alba*, Novaculite, Turkey Hone, or Whetstone.—*Ardesia tabularis*, *Schistus tabularis*, or *Schistus subtilior niger*.—*Ardesia tegularis*, *Schistus Ardesia*, or *Schistus durus*, Argillite, Argillaceous Schistus, Slate, &c.

ARDISIA (*Bot.*) a genus of plants, Class 5 *Pentandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* one-leaved.—COR. one-petalled.—STAM. *filaments* five; *anthers* acute.—PIST. *germ* superior; *style* subulate; *stigma* simple.—PER. *berry* roundish; *seed* single.

Species. The species are mostly shrubs, and natives of the Indies, as *Ardisia excelsa*, *zeylanica*, &c.

ARDOR (*Med.*) an intense heat in the body.—*Ardor urinæ*, vide *Dysuria*.—*Ardor ventriculi*, vide *Cardialgia*.

ARDUINA (*Bot.*) from *Pietro Ardiūm* of Padua; a genus of plants, Class 5 *Pentandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* five-parted.—COR. one-petalled.—STAM. *filaments* five; *anthers* oblong.—PIST. *germ* superior; *style* filiform; *stigma* bifid.—PER. *berry* globular oval; *seeds* solitary.

Species. The only species is *Arduina hispinosa*, Two-spined Arduina, a shrub, native of the Cape of Good Hope. *Linn. Spec. Plant.*

ARE (*Mus.*) *ala mire*, one of the eight notes in the scale.

AREA (*Ant.*) from *areo*, to grow dry, because there the fruits, *arescunt*, grow dry; a threshing floor, which, among the Romans, was placed near the house, on high ground, open on all sides, and elevated in the middle. *Varr. de Lat. Ling. l. 4, c. 4; Aul. Gell. l. 11, c. 10, &c.*

AREA (*Archit.*) the site or space of ground on which any building is erected.

AREA (*Geom.*) the superficial content of any figure, as a triangle, quadrangle, &c. which is estimated by small squares or parts of squares. Suppose A B C D to be a rectangle, consisting of twelve inches, twelve feet, or twelve yards; then each of the little squares, as *a* or *b*, will be one inch, one foot, or one yard square.

AREA (*Opt.*) vide *Field*.

AREA (*Min.*) the mass dug from the mines, or the place where it is dug.

AREA (*Med.*) the same as *Alopecia*.

AREALU (*Bot.*) the *Ficus religiosa* of Linnæus.

AREB (*Com.*) a nominal money used in accounts in the dominions of the Great Mogul.

ARECA (*Bot.*) the Indian nut, the fruit of a kind of palm-tree which the Indians chew, and roll up in a betel leaf to help digestion. *Kæmpf. Amœnitat.*

ARECA, in the Linnean system, a genus of plants, Class 21 *Monocœcia*, Order 8 *Monadelpia*.

Generic Characters. CAL. *spathe* bivalve.—COR. *petals* three.—STAM. *filaments* nine.—PER. *berry* subovate; *seed* ovate.

Species. The species are mostly shrubs, and natives of the Indies, as the—*Areca oleracea*, the Cabbage-Tree.—*Areca catechu*, &c. *Linn. Spec. Plant.*

AREFACTIO (*Med.*) Arefaction, or the drying of medicines, so as to reduce them to a powder.

AREIRA (*Bot.*) a species of *Selinus* of Linnæus.

ARELI (*Bot.*) the *Nerium oleander* of Linnæus.

AREMARIOS (*Bot.*) vide *Cinnabaris*.

ARENA (*Ant.*) the amphitheatre, and that part of it in particular where the gladiators contended; so called from the sand with which it was strewed. *Plin. l. 8, c. 7.*

ARE

- ARENA** (*Min.*) a genus of earths of the *Siliceous* order.
Generic Characters. The *Arena* consists of comminuted Siliceous stones, not fusible, *per se*, but melting with soda into glass.
Species. The principal species are—*Arena silicea*, Flint Stones.—*Arena saxosa*, Gravel.—*Arena quartzosa*, Common Sand.—*Arena farinacea*, Dust or Grit.—*Arena mobilis*, Quick Sand.
- ARENA'MEN** (*Chem.*) Bole Armoniac.
- ARENA'RIA** (*Bot.*) from *Arena*, sand, its native soil Sandwort; a genus of plants, Class 10 *Decandria*, Order 3 *Trigynia*.
Generic Characters. CAL. *perianth* five-leaved; *leaflets* oblong.—COR. *petals* five.—STAM. *filaments* ten; *anthers* roundish.—PIST. *germ* ovate; *styles* from erect reflex; *stigmas* thickish.—PER. *capsule* ovate; *seeds* very many.
Species. The species are mostly perennials, as—*Arenaria peploides*, Sea Sandwort or Chickweed.—*Arenaria multicaulis*, many stalked Sandwort.—*Arenaria montana*, Mountain Sandwort, &c. Some few are annuals, as—*Arenaria trinerva*, Plantain-leaved Chickweed.—*Arenaria serpyllifolia*, Least Chickweed, or Thyme-leaved Sandwort.—*Arenaria media*, Middle or Downy Sandwort, &c. These annuals are all natives of Britain.
- ARENA'RII** (*Ant.*) those who fought with beasts in the amphitheatre. *Symmach. Epist.* l. 5, ep. 57; *Lips. de Amphith.* c. 3.
- ARENA'TIO** (*Med.*) Besprinkling or bathing patients with hot sand. *Castell. Lex. Med.*
- ARE'NDATE** (*Min.*) another name for *Epidote*.
- AREN'TES** (*Med.*) a sort of cupping glasses.
- A'REOLA** (*Anat.*) a diminutive of *area*; a circle which surrounds the nipple of the breast.
- AREOMETER** (*Mech.*) from *ἀρος*, the air, and *μετρίω*, to measure; an instrument for measuring the weight of liquors.
- AREOPAGITÆ** (*Ant.*) Ἀρειοπαγίται, a sort of judges at Athens; so called from the court of the Areopagus where they presided. *Cic. de Offic.* l. 1, *ad Attic.* l. 1, ep. 14.
- AREOPAGUS** (*Ant.*) from ἀρείος πάγος, i. e. Mars-hill; so called, as some say, because Mars was first tried there for the murder of Haerrihotius. A village or hill in the neighbourhood of Athens, where the first capital sentence is said to have passed; whence it became a court or judgment-hall for life and death. *Isocrat. Areopagitic.* *Licurg. in Leocrat.*; *Demosth. in Aristocrat.*; *Dimarch. in risticit.*; *Poll. Onomast.* l. 8, c. 9; *Harpocraton, Suidas, Etymologicon*, &c.
- AREOSTYLE** (*Archit.*) a species of intercolumniation mentioned by Vitruvius, in which the columns are placed at considerable intervals between each other, from ἀραιός, a few, and εὔλος, a column. *Vitruv. de Architect.* l. 3, c. 2.
- A'RES** (*Alch.*) the last of the three disposers of nature, which distributes the species into individuals. *Paracel. de Vit. Long.* l. 3, c. 12, &c.
- ARE'STA Bovis** (*Bot.*) vide *Annonis*.
- ARETÆNO'IDES** (*Anat.*) vide *Arytænoïdes*.
- ARETHU'SA** (*Bot.*) a genus of plants, Class 20 *Gynandria*, Order 1 *Dianthia*.
Generic Characters. CAL. *spathe* leafy; *perianth* none.—COR. ringent; *petals* five; *nectary* one-leaved.—STAM. *filaments* two; *anthers* ovate.—PIST. *germ* oblong; *style* oblong; *stigma* funnel shaped.—PER. *capsule* oblong ovate; *seeds* numerous.
Species. The species are mostly perennials and natives of America, the Cape of Good Hope, &c. as *Arethusa bulbosa*, *ophioglossoides*, *divaricata*, &c. *Linn. Spec. Plant.*
- ARE'TIA** (*Bot.*) from *Arctius*, a Botanist at Berne; a genus of plants, Class *Pentandria*, Order 1 *Monogynia*.

ARG

- Generic Characters.* CAL. *perianth* one-leaved.—COR. monopetalous.—STAM. *filaments* five; *anthers* erect.—PIST. *germ* roundish; *style* filiform; *stigma* flat-headed
 PER. *capsule* one-celled; *seeds* five.
Species. The species are perennials, as—*Aretia helvetica*, *Alpina*, &c. *Linn. Spec. Plant.*
- A'REUS** (*Med.*) a pessary, mentioned by Paulus Ægineta. *De Re Med.* l. 7, c. 3.
- A'RFAR** (*Chem.*) Arsenic.
- ARGA'GANON** (*Med.*) Medicines against the leprosy.
- A'RGAL** (*Nat.*) Hard lees sticking to the sides of wine glasses; another name for *Tartar*.
- A'RGAN** (*Bot.*) A species of *Elæodendrum*.
- A'RGEMA** (*Med.*) ἀργέμα, *Albugo*; an ulceration of the Cornea. [vide *Albugo*]
- ARGEMONE** (*Bot.*) ἀργεμόνη, or *Argemone*; a plant like wild poppy, so called because it cures the disease in the eyes called the ἀργεμόνα, or *Albugo oculi*. *Dioscor.* l. 2, c. 208; *Plin.* l. 25, c. 9.
- ARGEMONE**, in the *Linnean system*, a genus of plants; Class 13 *Polyandria*, Order 1 *Monogynia*.
Generic Characters. CAL. *perianth* three-leaved; *leaflets* roundish, with a point.—COR. *petals* six.—STAM. *filaments* numerous; *anthers* oblong.—PIST. *germ* ovate; *style* none; *stigma* thickish.—PER. *capsule* ovate; *seeds* numerous; *receptacles* linear.
Species. The Species are annuals, as *Argemone Mexicana*, *Armeniaca*, *Pyrenaica*, &c. *Linn. Spec. Plant.*
- ARGEMONE** is also the *Papaver argemone*, *hybridum*, *Alpinum*, et *dubium* of Linnæus. *Bauh.*; *Park. &c.*
- A'RGENT** (*Her.*) a French word for silver, is used to denote the white colour marked in the coats of arms of baronets, knights, and gentlemen; the white colour in the coat of a sovereign prince is called *Luna*, that in the arms of the nobility *Pearl*. It is marked in painting by leaving the field blank, or without any dot and line, as in the annexed figure.
- 
- ARGENTANG'INA** (*Law*) from *argentum*, silver, and *angina*, the quincy, in Greek ἀργυρογχινα, silver quincy; when a pleader being bribed feigns himself sick, and not able to speak.
- ARGEN'TEA** (*Bot.*) the *Protea potentilla* of Linnæus.
- ARGENTEO-MARGINATUM** (*Bot.*) Silver-bordered, an epithet for leaves, &c.
- ARGENTEUM** (*Bot.*) the *Potentilla anserina* of Linnæus. *Bauh.*
- ARGENT'INA** (*Ich.*) *Argentine*, a genus of animals; Class *Pisces*, Order *Abdominales*.
Generic Characters. *Teeth* in the jaws and tongue.—*Rays* branchiostegous eight.—*Vent* near the tail.—*Fins* ventral composed of many rays.
Species. The species are *Argentina sphyraena*, European *Argentine*.—*Argentina glossodonta*, &c.
- ARGENTINA** (*Bot.*) the *Potentilla anserina* of Linnæus.
- ARGENTINE** (*Ich.*) vide *Argentina*.
- ARGENTINE** (*Min.*) Slate-spar, a calcareous salt of the Carbonate family.
- ARGENTINE** (*Chem.*) flowers of Antimony, a preparation of Antimony with acid.
- ARGENTUM factum** (*Anat.*) called by Valerius Maximus *argentea vasa*, i. e. Plate or silver wrought into vessels of different kinds. *Val. Max.* l. 2, c. 9; *Aul. Gell.* l. 4, c. 8.—*Argentum infectum*, unwrought silver, or silver in the lump. *Liv.* l. 34, c. 52; *Isidor. Orig.* l. 16, c. 17.—*Argentum escurium*, the plate or silver vessels at table. *Ulp.* l. 19, § 12; *ff. de Aur. Donat. in Virg. Æn.* l. 1, v. 644.—*Argentum signatum*, silver coin, or silver stamped.—*Argentum pustulatum* or *granulatum*, silver chased or embossed, which was of the purest kind. *Mart.* l. 7,

epig. 69; *Sueton. in Ner. c. 44.*—*Argentum viatorium*, money for travelling. *Scavol. Leg. 40; ff. de Aur. &c.*—*Argentum purum*, plain silver, in distinction from the *calatum* that was carved.
Juv. sat. 9, v. 141.

— *argenti vascula puri.*

Plin. l. 3, ep. 1; Paull. Leg. 6, ff. de Aur. et Arg. Legat.

ARGENTUM album (*Archæol.*) silver coin. *Domesday Book.*
ARGENTUM Dei (*Law*) money given as earnest at the making of a bargain.

ARGENTUM (*Min.*) ἀργυρος, from ἀργεος, white, silver; a genus of metals.

Generic Characters. Of a white colour, hard, tenacious, sonorous, exceedingly malleable, and ductile; specific gravity before hammering 10,478, melting in a perfect red heat, and soluble in nitric acid.

Species. The species are *Argentum nativum*, seu *Argentum nudum*, Native Silver. [vide *Silver*]—*Argentum nigrum*, *Argentum fuliginosum*, seu *Argentum mineralisatum*, Black-silver, Black-silver-ore.—*Argentum corneum*, *Argentum diaphanum*, seu *Argentum acidum sale mineralisatum*, Corneous Silver Ore or Muriate of silver.—*Argentum electrum*, Auriferous Native Silver.—*Argentum stibiatum*, Antimoniated Native Silver, Antimoniated Silver Ore.—*Argentum arseniacum*, Arsenicated Silver, Arsenicated Native Silver, or Arsenical Silver.—*Argentum molybdænatum*, Molybdenic Silver Ore.—*Argentum vitreum*, *Argentum mineralisatum*, seu *Argentum sulphuratum mineralisatum*, Sulphurated Silver Ore, Vitreous Silver, or Sulphuret of Silver.—*Argentum fragile*, Antimoniated Silver Ore, Brittle Silver Ore, or Antimoniated Sulphuret.—*Argentum nitens*, Cupriferous sulphurated Silver or Cupriferous Sulphure.—*Argentum rubrum*, *Argentum rubescens*, *Argentum sulphure*, &c. seu *Argentum arsenico-minerale*, Light red Silver Ore.—*Argentum album*, Plumbiferous Silver Ore or Grey Silver Ore.

ARGENTUM vivum, Quick Silver, the *Hydrargyrum* of Linnaeus.

ARGETE'NAR (*Astron.*) a star of the fourth magnitude in Eridanus.

ARGIL (*Min.*) *Argilla*, White Clay; a fat soft kind of earth, of which potters' vessels are made. [vide *Argilla*]

ARGILLA (*Min.*) from ἀργιλλος or ἀργη, white, i. e. White-earth; a genus of argillaceous earths.

Generic Character. Alumina and Silica, with some oxyde of iron and inflammable matter; opaque, soft to the touch, earthy, contracting, and becoming harder in the fire.

Species. The species are *Argilla porcella*, *Terra porcellana*, seu *Argilla apyra*, Porcelain Clay.—*Argilla leucargilla*, Potters' Clay, Pipe Clay, or Common Clay.—*Argilla lithomarga*, *Talcum subfriabile*, seu *Lithomarga*, Lithomarge or Potters' Clay.—*Argilla fullonica*, seu *Argilla vitrescens*, Fuller's Earth.—*Argilla crustacea*, *Argilla fullonica*, seu *Argilla vitrescens*.—*Argilla Lemnia*, *Argilla incarnata*, *Terra Lemnia*, seu *Argilla crustacea*, Lemnian earth.—*Argilla communis*, Common Clay.—*Argilla bolus*, *Argilla ore liquescens*, seu *Argilla vitrescens*, Bole.—*Argilla cimolia*, Cimolite.—*Argilla sinensis*, seu *Argilla flavescens*, Polierschiefer.—*Argilla rubrica*, seu *Talcum*.—*Argilla subfissile*, Reddle.—*Argilla lutea*, Yellow Ochre.—*Argilla viridis*, *Bolus viridis*, Terra verde.—*Argilla Tripolitana*, seu *Argilla scabra*, Tripolis.

ARGILLA'CEUS (*Min.*) Argillaceous, the fourth order of earths, according to Gmelin, which are mostly soft and plastic. They are as follow:—*Aluminaris*, consisting almost entirely of alumina; meagre to the touch.—*Argilla*, consisting of alumina and silica.—*Puteolana*, of alumina, silica, and iron.—*Cæmentum*, as the former, but hardish, lightish, porous, of an earthy texture.—*Cariosus*, Rotten-

stone, consisting of alumina, &c. but light, soft, porous, falling to powder in water.—*Ardesia*, of alumina and silica, with some oxide of iron and carbonate of lime, magnesia, and petroleum.—*Basaltes*, Basalt, consisting of more silica, and less of alumina and oxyde of iron.—*Lava*, consisting of alumina, &c. but generally of a dull colour.—*Mica*, of alumina, &c. but lightish and parasitical.—*Opalus*, of alumina, &c. but melting with the greatest difficulty.—*Zeo-lithus*, of a little alumina, and a large proportion of silica, &c.—*Schorlus*, of alumina, &c. but easily melting into a glass.

ARGILLITE (*Min.*) a species of clay-slate.

ARGO Navis (*Astron.*) Ἀργώ ναῦς, the ship; a constellation called after the ship of Jason and his companions, which was said to be translated into the heavens, which is situated near to the *Canis Major*.

Arat. Phænom. v. 342.

— Ἀργώ
Ἡδὲ κινὸς μεγάλῳ κατ' οὐρὴν ἔλκεται
Πρυμνόθεν.

Manill. Astronom. l. 1, v. 401.

*Tum Procyon, veloque Iepus. Tum nobilis Argo
In cælum subducta, mari quod prima cucurrit.*

It contained, according to Ptolemy, forty-five stars, according to Kepler fifty-three, to Bayer sixty-three, and to Hevelius sixty-four; of these, one in the rudder, called by Proclus κίναβος, i. e. *Canopus*, and in the Arabic *Suhel*, is of the first magnitude. This constellation is called by Catullus *currus volans*. *Ptol. Almag. l. 7, c. 5; Hygin. Astron. Poet.; Hipparch. in Arat.; Eratosth. Characteris.*

ARGONA'UTA (*Con.*) a genus of animals; Class *Vermes*, Order *Testacea*.

Generic Characters. *Animal* a Sepia or Clio.—*Shell* univalve, one-celled.

Species. The most remarkable of the species is the *Argonauta Argo*, or the famous Nautilus, which was supposed by the ancients to have first taught men the use of sails. When it means to sail it discharges a quantity of water, by which it was made heavier than the seawater, and, rising to the surface, erects its arms and throws out a membrane between them, by which means it is driven forwards like a vessel under sail; two of the arms it hangs over the shell to serve as oars or as a rudder. The keel or ridge of the shell is slightly toothed on each side.

ARGONAU'TICA (*Lit.*) the account of the expedition of the Argonauts, as that of Valerius Flaccus, Orpheus, &c.

ARGOPHY'LLUM (*Bot.*) from ἀργεος, white, and φύλλον, a leaf, Whiteleaf; a genus of plants, Class 5 *Pentandria*, Order 1 *Monogynia*.

Generic Characters. CAL. perianth short.—COR. petals five; nectary five-angled.—STAM. filaments five; anthers ovate.—PIST. germ. turbinate; style filiform; stigma globular.—PER. capsule hemispherical; seeds very many.

Species. The only species is *Argophyllum nitidum*, a shrub, a native of New Caledonia.

ARGUMENT (*Astron.*) any quantity or equation on which depends another quantity relating to the motion of the planets; or, in other words, it is an arc whereby another arc is to be sought, bearing a certain proportion to the first arc. The argument is of different kinds, namely—*Argument of inclination*, or *Argument of latitude*, the arc of a planet's orbit intercepted between the ascending node and the place of the planet from the sun, numbered according to the succession of the signs.—*Menstrual argument of latitude* is the distance of the moon's true place from the sun's true place, by which is found the quantity of the real obscuration in eclipses.—*Annual argument of the moon's apogee*, the distance of the sun's place from the

- moon's apogee, i. e. an arc of the ecliptic comprised between these two places.—*Argument of the parallax*, denotes the effect it produces on the observation, which serves for determining the true quantity of the horizontal parallax.—*Argument of the equation of the centre*, is the same as the anomaly.
- ARGUMENT (*Log.*) whatever is added or offers itself to the mind, so as to create belief in regard to any subject or matter laid down.
- ARGUMENT (*Lit.*) the summary of the contents of any book or chapter in a work.
- ARGUMENT (*Paint.*) the persons represented in a landscape, in contradistinction to the country or prospect.
- ARGUMENTA'TION (*Log.*) an operation of the intellect, by which any proposition is proved by the help of other propositions. The proposition to be proved is called the *assumption*, and when it is proved, or drawn to a conclusion, it is termed the *conclusion*.
- ARGYRA'SPIDES (*Ant.*) from ἀργυρος, and ἄσπις, a shield; a company in Alexander's army, who were so called because they wore silver shields.
- ARGYRI'TÆ (*Ant.*) ἀργυρίται, from ἀργυρος, money; games upon wagers for money, &c. as horse-races for plates, &c.
- ARGYRI'TIS terra (*Min.*) ἀργυρίτις γῆ. 1. The sort of earth taken from silver mines. 2. *Spuma argenti*, the scum or froth arising from the silver, or the lead that is mixed with the silver on trial. *Dioscor.* l. 5, c. 102; *Plin.* l. 33, c. 6; *Oribas.* l. 13.
- ARGYRO'COME (*Bot.*) ἀργυροκόμη, from ἀργυρος, silver, and κόμη, hair; the *Baccharis halimifolia*, the *Gnaphaleum margaritaceum*, the *Peranthenum vestilum* and *speciocissimum* of Linnæus. *Park. Theat. Bot.*
- ARGYRO'DAMAS (*Min.*) 1. ἀργυροδάμας, from ἀργυρος, silver, and ἄδαμας, Adamant, a silver diamond; a sort of precious stone. *Plin.* l. 37, c. 10. 2. A kind of talc of a silver colour that will not yield to fire. *Castell. Lex. Med.*
- ARGYRODE'NDROS (*Bot.*) the *Portea argentea* of Linnæus. *Raii Hist. Plant.*
- ARGYROGO'NIA (*Chem.*) ἀργυρογονία, from ἀργυρος, silver, and γόνιμαι, to produce; an argentific seed, perfectly digested from the solution of silver. *Castell. Lex. Med.*
- ARGYROLIBANUM (*Bot.*) the White Olibanum.
- ARGYROPHORA (*Med.*) a costly antidote. *Myrep. Antidot.* c. 320.
- ARGYROPOEIA (*Alch.*) ἀργυροποιία, from ἀργυρος, silver, and ποιία, to make; the art of making silver out of more imperfect metals, by means of the philosopher's stone.
- ARGYROTHROPHEMA (*Med.*) from ἀργυροτροφή, nourishment; a cooling food made with milk. *Gal. de Suc.*
- ARGYTHA'MNIA (*Bot.*) from ἀργός, albus, and θαμνίον, shrub; White-Shrub, a genus of plants, Class 21 *Monoecia*, Order 4 *Tetrandria*.
- Generic Characters.* CAL. perianth four-leaved; leaflets lanceolate.—COR. petals four; nectary roundish.—STAM. filaments four; anthers simple.—PIST. rudiment of a style.—PER. capsule tricoccous; seed solitary.
- Species.* The only species is the *Argythamnia caudicans*, a shrub, native of Jamaica. *Linn. Spec. Plant.*
- ARHEUMATISTOS (*Med.*) ἀρρευματίστος, from α, priv, and ρεύμα, rheum; without rheumatism: applied to the joints in particular. *Castell. Lex. Med.*
- ARIA (*Mus.*) Italian for an air.—*Aria Buffo*, a comic air.
- ARIA (*Bot.*) ἄρια, a plant, the fruit of which mitigates coughs. It is a species of the *Cratægus* of Linnæus.—*Aria Bepou*, the *Melia azederachta* of Linnæus.—*Aria vecla*, the *Cleome viscosa* of Linnæus.
- AR'IANISM (*Ecc.*) the heresy of Arius, who, in the fourth century, denied that the Son was of the same substance with the Father. *Athanas. orat. 1, ad Serap; Epiphani. Hæres.*
- 68; *Socrat. Hist. Eccles.* l. 1, c. 6; *Sozom.* l. 2, c. 32, &c.
- AR'IDA medicamenta (*Med.*) dry medicines, such as powders.
- ARIDITAS (*Med.*) dryness, from disease, as in a fever.
- ARIDURA (*Med.*) a total consumption or withering away of the body or its members.
- ARIE aggiunte (*Mus.*) Italian for supplementary airs to an oratorio, &c.
- ARIE'RBAN (*Law*) vide *Arrierban*.
- ARIES (*Ant.*) κριός, a battering ram; a formidable warlike machine, invented, as is mostly supposed, by the Carthaginians. It was constructed with a head of iron, called in Greek κεφαλή, or ἐμβολή, resembling a ram's head, which was sometimes enclosed or covered with a shroud to protect the soldiers, which was called χελάνη, *arctaria testudo*. The use of this machine in levelling the walls of towns is spoken of by the poets.
- Luc.* l. 1. v. 383.
- Tu quoscunque voles in plonum ducere muros
His Aries actus disperget saxa lacertis.*
- Claud.*
- Tum, tua murali libretur machina fulsu
Saxa rotet præceps Aries, protectaque portus
Testudo feriat, ruat emersura iuventus.*
- Cic. de Offic.* l. 1, c. 11; *Cæs. de Bell. Gall.* l. 2; *Liv.* l. 38, c. 5; *Plin.* l. 7, c. 56; *Athen. apud Turneb. Adv.* l. 23, c. 31; *Vitruv.* l. 10, c. 19; *Appian. in Bell. Mithridat.*; *Joseph. de Bell. Jud.* l. 3, c. 9; *Aul. Gel.* l. 1, c. 13; *Tertull. de Pall.* c. 1; *Veget. de Re Mil.* l. 4, c. 14.
- ARIES (*Astron.*) the first sign marked (♈) in the Zodiac, into which when the sun enters, the days and nights are equal. Ptolemy reckoned 18 stars in this constellation, Tycho Brahe 21, Bayer 18, Hevelius 27, and Flamsteed 66; of which one only is of the second magnitude, two of the third, and the rest smaller. *Ptol. Almag.* l. 7, c. 5; *Tych. Brah. Mech. Astron.*; *Bayer Uranomet.*; *Hevel. Machin. cælest.*; *Flamst. Hist. cælest. Britan.*
- ARIES (*Zool.*) the ram; the male of the first and common species of the *Ovis* of Linnæus.
- ARIES (*Ich.*) a great sea fish with horns like a ram, much of the nature of the Shark. *Plin.*
- ARIE'TTA (*Mus.*) an Italian diminutive of *Aria*, signifying a short air.—*Arietta alla Veneziana*, little airs in the Venetian style.
- ARIETTINA (*Mus.*) Italian for the same as *Arietta*.
- ARIE'TUM levatio (*Archæol.*) a sort of tournament or tilting.
- ARILLA (*Bot.*) a grape stone.
- ARILLA'TUS (*Bot.*) provided with an aril.
- ARILLUS (*Bot.*) aril, the outer coat of a seed falling off spontaneously, or inclosing the seed partially. It is called succulentus, succulent, when it is thick and fleshy, as in *Euonymus Europæus*; cartilagineus, cartilaginous, when the membrane is thick; membranaceus, membranaceous, when consisting of a thin tunicle; dimidiatus, halved, when covering half the seed; lacerus, torn, i. e. irregularly lacinated; calyptratus, capped, when covering the top of the seed, as the calyptra encircles the top of the theca of mosses; reticulatus, netlike, when it embraces the seed like a fine web, as in some species of the *Orchis*.
- ARIO'SE cantate (*Mus.*) Italian for a kind of speaking airs.
- ARIO'SO (*Mus.*) Italian for the movement or time of a common air in musical composition.
- ARIS (*Surg.*) the name of an instrument, according to Galen. *Exiges. Vocab. Hippocrat.*
- ARIS (*Bot.*) the same as the *Arisarum*.
- ARISARUM (*Bot.*) ἀρίσαρον, Friar's Cowl; a small plant with a root like that of the olive, but more acrimonious than the Arum. *Dioscor.* l. 2, c. 198; *Plin.* l. 24, c. 16.

ARISARUM, in the Linnean system, is classed under the *Ambrosinia* and the *Arum*. *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Bot.*; *Raii Hist. Plant.*; *Tournef. Instit.*

ARISH (*Com.*) a Persian measure of length equal to 3197 feet.

ARISTA (*Bot.*) the beard of corn, or the ear of corn; so called from *areo*, to grow dry, because it dries.

Virg. Æn. l. 7, v. 720.

Vel quam sole novo dense torrentur arista.

Arista, in modern Botany, the *Awñ* is the pointed beard that sits on the flower of grasses, which is called—*Nuda*, naked, when not hairy.—*Plumosa*, feathered, when beset with fine hairs, as in the *Stipa pennata*.—*Recta*, when it is straight.—*Geniculata*, geniculated, when it has a joint in the middle by which it is bent, as in the common oat *Avena sativa*.—*Recurvata*, bent, when bent in the form of a bow.—*Tortilis*, twisted, when it is bent in a serpentine form.—*Terminalis*, when situated on the point of the glume.—*Dorsalis*, when situated behind the apex, or on the back of the glume.

ARISTA (*Num.*) is an emblem of plenty on medals, as in the annexed figure, which represents the head of Agrippina, the mother of Nero; the inscription ΑΓΡΡΙΠΙΝΑΝ ΣΕΒΑΣΤΗΝ, i. e. *Agrippinam Augustam. Vaillant. Num. Græc.*

ARISTA'TUS (*Bot.*) awned.

ARISTEA (*Bot.*) a genus of plants; Class 3 *Triandria*, Order 1 *Monogynia*.

Generic Characters. *GAL.* spathes bivalve.—*COR.* petals six.—*STAM.* filaments three; anthers oblong.—*PIST.* germ inferior; style filiform; stigma funnel-form.—*PER.* capsule oblong; seeds very many.

Species. The species are all perennials. *Linn. Spec. Plant.*

ARISTELLA (*Bot.*) a species of the *Stipa* of Linnæus.

ARISTIO'NIS machinamentum (*Surg.*) a machine for restoring luxations. *Oribas. de Machin.*

ARISTO'CRACY (*Polit.*) ἀριστοκρατία, that form of government where the supreme power is lodged in the hands of the chiefs or nobles, from ἀριστός, the chief or best, and κράτος, power. *Aristot. de Politic.* l. 4, c. 7.

ARISTOLO'CHIA (*Bot.*) Birthwort, a plant so called from its efficacy in promoting the *Lochia*, or evacuations of child-bed-women, after the *fœtus* and *secundines* are expelled. *Hippocrat. de Mul.*; *Theophrast. Hist. Plant.* l. 9, c. 13; *Nicand. in Theriac.*; *Cic. de Div.* l. 1, c. 10; *Dioscor.* l. 3, c. 4, &c.; *Gal. de Simplic.* l. 6; *Oribas. Med. Coll.* l. 1; *Aet. Tetrab.* l. 1, serm. 1; *Paul. Æginet.* l. 7, c. 3; *Salmas. ad Solin.* p. 504.

ARISTOLOCHIA, in the Linnean system, a genus of plants; Class 19 *Gynandria*, Order 4 *Hexandria*.

Generic Characters. *CAL.* none.—*COR.* monopetalous.—*STAM.* filaments none; anthers six.—*PIST.* germ oblong; style scarcely any; stigma subglobular.—*PER.* capsule large; seeds several.

Species. The species are either shrubs or perennials; among the former are—*Aristolochia bilobata*, Two lobed Birthwort, native of Dominica.—*Aristolochia peltata*, Peltated Birthwort, native of St. Domingo.—*Aristolochia erecta*, Upright Birthwort, native of New Spain.—*Aristolochia odoratissima*, Sweet scented Birthwort, native of Jamaica.—*Aristolochia anguicida*, Snake-killing Birthwort, native of Carthage.—*Aristolochia sempervirens*, Evergreen Birthwort, &c. Among the perennials are—*Aristolochia serpentaria*, Virginia Birthwort or Snake-root.—*Aristolochia clematitis*, Common Birthwort, a native of Britain, &c. *Linn. Spec. Plant.*

ARISTOTE'LIA (*Bot.*) a genus of plants, so called from the philosopher Aristotle, Class 11 *Dodecandria*, Order 1 *Monogynia*.

Generic Characters. *CAL.* perianth one-leaved.—*COR.* petals five.—*STAM.* filaments fifteen; anthers linear.—*PIST.* germ superior; style filiform; stigmas three.—*PER.* berry subglobular; seeds two.

Species. The only species is the *Aristotelia Macqui*, Shingle leaved *Aristotelia*, a shrub, native of Chili. *Linn. Spec. Plant.*

ARITHMETIC is the science of computation, or estimating quantities, from the Greek ἀριθμός, to number, or calculate. It is of different kinds, namely—*Theoretical Arithmetic*, which considers the abstract properties and relations of numbers.—*Practical Arithmetic*, the art or practice of computing numbers, or finding from them certain other numbers whose relation to the former is known.—*Instrumental Arithmetic* is a mode of computing numbers by means of some instrument, as the ten fingers, the abacus, Napier's Bones, &c.—*Logarithmical Arithmetic* is performed by tables of Logarithms.—*Political Arithmetic* is the application of arithmetic to political subjects.—*Numeral Arithmetic* teaches the calculus of determinate quantities by the numeral characters, 1, 2, 3, &c.—*Specious, literal, or universal Arithmetic*, is the computation of abstract quantities by means of letters, which is otherwise called Algebra.—*Binary Arithmetic* is performed by means of two figures, as 1 and 0.—*Tetractical Arithmetic* by means of four figures, as 1, 2, 3, 0.—*Decadal Arithmetic* by a series of ten characters, as 1, 2, 3, 4, 5, 6, 7, 8, 9, 10, such as are now in common use.—*Duodenary Arithmetic* by a series of twelve figures instead of ten.—*Integral Arithmetic* treats of whole numbers.—*Fractional Arithmetic* of fractional numbers.—*Decimal Arithmetic* is the working with decimal fractions.—*Sexagesimal Arithmetic* treats of the doctrine of sexagesimal fractions.—*Arithmetic of Infinites* is the summing up a series of numbers, of which the number of terms is infinite.—*Harmonical Arithmetic* is the doctrine of numbers, as it relates to the comparison and reduction of numbers.—*Vulgar Arithmetic* is the computation of numbers in the ordinary concerns of life according to certain rules, called *Operations*; these are, Numeration, Addition, Subtraction, Multiplication, Division, Reduction, Rule of Three, Practice, Tare and Tret, Interest, Exchange, Barter, Profit and Loss, Position, Progression, Permutation, Fractions, Decimals, Square and Cube Root, &c.; all which will be considered in their respective places.

Numbers, which are the foundation of Arithmetic, are of different kinds.—*Whole numbers*, either a unit or units, as a pound, a yard, &c. or 1, 2, 3, &c.—*Fractions*, or *broken numbers*, which are less than unity, as $\frac{1}{2}$, that is, one third of a unit.—*Mixed numbers* consist of a whole number and a fraction, as $1\frac{1}{2}$.—*Even numbers* may be divided into two equal whole numbers, as 4, which may be divided into 2 and 2.—*Odd numbers* cannot be equally divided.—*Prime numbers* can only be divided by themselves or by unity, as 5, which may be divided by 5 or 1.—*Compound numbers* are produced by multiplying two or more numbers together.—*Square number*, or *square*, the product of any number multiplied by itself, as 4 the product of 2 multiplied by 2.—*Cube number*, or *cube*, the product of any number multiplied by its square, as 8 the product of 2 multiplied by 4.—*Aliquot part* is that which is contained a precise number of times in an integer, as 2 the aliquot part of 10, because it is contained in it five times.—*Aliquant part* is that which is not contained in an integer a certain number of times without a remainder, as 5, which is the aliquant part of 7, 11, &c.—*Rational number* is that which is commensurable to unity.—*Irrational number*, or *surd*, is that which is incommensurable to unity.—*Abstract number* is any number considered independently of or abstracted from all things.—*Concrete number* is any number connected with

ARM

some thing or things; thus, 5, 7, 8, &c. are abstract numbers, but 5 pounds, 7 ounces, &c. are concrete.

The characters employed in Arithmetic are either numeral letters, such as were used by the Phœnicians, Greeks, &c. [vide Plate 13 and Notation] figures called *digits*, [vide Plate 13 and Notation] letters, used as symbols, and signs, or arbitrary characters, which serve to shorten the different operations. [vide Algebra] Those used in Vulgar Arithmetic are the sign of addition, marked thus, +; the sign of subtraction, thus, -; the sign of multiplication, thus, x; and the sign of division, ÷. the remaining signs will be found under the head of Algebra.

Writers on Arithmetic.

Nicomachi, "Arithmetica;" Boetii "Arithmetica;" Pselli, "Compendium Arithmeticae veterum;" Lucas de Burgo "De Arithmetica," &c.; Stifelii, "Arithmetica integra;" Tartagliæ, "Arithmetica practica;" Henischii, "Arithmetica perfecta;" Rccorde, Clavius, Leotaude, Wallis, &c. &c. &c. [vide Algebra]

Explanation of the Plate.

Plate 12.

This plate contains the numerical characters in the order of derivation, or chronological succession, beginning with A. Phœnician, drawn from the coins of Sidon, by Dr. Swinton. B. Greek, derived from the Phœnician. C. Irish, also derived from the Phœnician, and taken from MS.; and another Irish, derived from the Arabian. D. Palmyrene. E. Ægyptian. F. Indian, ancient and modern. G. Arabian. H. Figures of Plannudes. I. Figures of Boetius. K. Arabian and Persian figures in 800, from Moreton's Tables. L. Spanish numerals in 1000, from Moreton's Tables. M. Figures of John Sacro de Bosco, from Dr. Wallis. N. Coins of Sidon, having on the obverse a turreted head with a branch of palm, emblematical of the country, and on the reverse three Phœnician letters, that form the word Sidon, over the prow of a ship, the usual symbol of the city where it was struck. The characters in the exergue form, according to Dr. Swinton, the inscription "In the year of Sidon 120. 127. 130;" i. e. the proper æra of Sidon.

ARITHMETICAL (*Math.*) an epithet for any thing relating to arithmetic, as—*Arithmetical complement of a logarithm*. [vide *Complement*]—*Arithmetical instruments*, contrivances by which calculations are made, as the Abacus, Napier's Bones, &c.—*Arithmetical mean*, the middle term of three quantities in arithmetical progression, or half the sum of two proposed quantities, as in 2, 4, 6, 4 is the arithmetical mean.—*Arithmetical progression or proportion*. [vide *Progression and Proportion*]—*Arithmetical ratio*, the difference between any two adjacent terms in arithmetical progression.—*Arithmetical scale*, the scale of rotation by which arithmetical operations are performed, as the binary, denary, &c. [vide *Notation*]—*Arithmetical triangle*, a table of numbers in the form of a triangle.

ARITHMOS (*Med.*) ἀριθμός, numerus; the numeral differences of diseases, by which they were distinguished.

ARK (*Geom.*) vide *Arc*.

ARK (*Astron.*) vide *Arc*.

ARLESPE'NNY (*Cus.*) Earnest given to servants when they were hired.

ARLES crudum (*Alch.*) Drops falling in June, especially by night. *Paracel. de Grad. et Comp.*

ARM (*Anat.*) vide *Brachium*.

ARM, fore, that part lying between the elbow and the wrist.

ARM

ARM presentation (*Mid.*) when the arm of the child comes foremost.

ARM of a horse (*Men.*) the fore thigh.

ARM (*Mar.*) each extremity of a bibb or bracket.—*Arm of an anchor*, that part of an anchor on which the palm is shut. [vide *Anchor*]

ARM of the sea (*Geog.*) when the sea runs any way into the land.

ARM (*Her.*) the human arm is borne in coat armour, either erect or cubit, i. e. couped at the elbow, or embowed in armour, that is, couped at the shoulder, bent, grasping a military standard, and the like, as in the annexed figure. "Field argent, a fess embattled; base a chevron indented; gules between three boars' heads, erased azure; out of the embattlements in chief issuant a dexter arm embowed in armour, encircled by a wreath of laurel, and the hand grasping a stand of military colours, representing the invincible standard of the French taken in Egypt." These are the arms of the distinguished general Sir Ralph Abercrombie.

TO ARM (*Men.*) the action of a horse when he endeavours to defend himself against the bit, to prevent being checked thereby.

TO ARM a shot (*Gun.*) to roll rope, yarn, &c. about the end of the iron bar which passes through the shot.

A'RMMA (*Ant.*) vide *Militia*.

ARMA (*Archæol.*) vide *Arms and Armour*.

ARMA dare (*Law*) to dub a knight.—*Arma capere vel suscipere*, to be made a knight.—*Arma deponere*, a punishment enjoined when a man had committed an offence against the king. *Walsing.* p. 507; *Orderic. Vit.* l. 8, *de Hen.* &c.—*Arma libera*, a sword and a lance usually given to a servant when he was made free. *Leg. Wil. apud Brompt.*—*Arma moluta*, sharp weapons, that cut instead of bruising, called by Fleta *arma emolita*. *Brac.* l. 3; *Flet.* l. 1, c. 38, &c.—*Arma reversata*, a punishment inflicted on one convicted of treason or felony, as in the case of Hugh Spenser, mentioned by our historian Knighton. "Primo vestierunt eum uno vestimento cum armis suis reversatis." *Knight*, l. 3, p. 2546.

ARMA (*Bot.*) arms, weapons of defence, as thorns, stings, &c.

ARMA'DA (*Mar.*) a Spanish name for a fleet of men of war, and applied in particular to that of the Spaniards destined for the invasion of England in the reign of Elizabeth.

ARMADILLA (*Mar.*) a small squadron in Spanish America.

ARMADILLO (*Zool.*) a creature of the amphibious kind in the West Indies, whose body is covered with a bony shell-like armour; the *Dasyppus* of Linnæus.

A'RMALA (*Bot.*) Wild Rue.

ARMA'LGOL (*Chem.*) the same as *Corallium*.

ARMAMENTA (*Ant.*) all kinds of tools for husbandry.—*Armenta navium*, the tackling of the ship. *Tac. Hist.* l. 5, c. 23.

ARMAMENTA'RIVM (*Ant.*) an armoury, or a storehouse for ordnance and shipping; "Aperire armamentarium jussit, rapta statim arma, &c." *Tac. Hist.* l. 1, c. 38.

ARMAND (*Vet.*) a confection to prevent or cure the loss of appetite in horses.

ARMA'RIVM (*Ant.*) from *arma*; a storehouse for all sorts of arms or utensils.

ARMATU'RA (*Ant.*) from *armo*, to arm; the military exercise in use among the Romans which consisted either in throwing the spear or javelin, shooting with the bow, &c.

ARMATURA, also a denomination given to the soldiers in the emperor's retinue.

ARMATURE (*Archit.*) a French word comprehending the bars, iron pins, stirrups, and all the iron holdfasts used in carpentry.

A'RME (*Mil.*) a French term for any distinct body of armed men.—*Arme blanche* signifies a sword or bayonet; *arme à feu*, fire-arms, *arme de trait*, a bow or cross-bow.

ARME (*Anat.*) ἄρμη, from ἄρω, to fit, *apto*; a joining of the parts of the body; a coalition of wounds in general; the joining of the sutures of the head. *Gal. in Exeg.; Erot. Lex. Hippocrat.; Hesychius.*

A'RMED (*Mil.*) an epithet signifying generally provided with or carrying arms, as an armed body of men, *i. e.* a military detachment provided with arms and ammunition for an engagement.

ARMED (*Mar.*) an epithet for a bar-shot, &c. when rope-yarn is rolled about the end of the iron-bar which runs through the shot.—*Armed ship*, that which is fitted out and provided in all respects for a man of war.

ARMED (*Her.*) an epithet in blazoning for lions, eagles, cocks, &c. painted with their respective arms, as claws, talons, spurs, &c. of different tincture from that of their bodies.

ARMED loadstone (*Nat.*) when it is capped, cased, or set in iron to make it take up a greater weight.

A'RMENA (*Surg.*) τὰ ἄρμυνα, a whole surgical apparatus, or the whole apparatus for bathing, &c. *Hippocrat. de Rat. Vict. in Morb. acut.; Hesychius.*

ARMENIACA malus (*Bot.*) the Apricot-tree, the *Prunus Armeniaca* of Linnæus. *Ger. Herb.; J. Bauh. Hist. Plant.; Raii Hist. Plant. &c.*

ARMENIACUM (*Bot.*) ἄρμενιακόν, *Armeniaca malus*, the *Prunus Armeniaca* of Linnæus. *Dioscor. l. 1. c. 165; Plin. l. 15, c. 12; Oribas Med. Collect. l. 2, c. 48; Paul. Æginet. de Re Med. l. 1, c. 82; Act. de Spir. Anim. Nat. c. 6.*

ARMENIAN stone (*Min.*) ἄρμενιον, *Armenus lapis*, an opaque sort of stone of a greenish blue colour like the *lapis lazuli*. It is used as a purgative. *Dioscor. l. 5, c. 105; Act. Tetrab. serm. 2, c. 12; Act. de Urin. Differ. c. 9.—Armenian Bole*, a native bole or earth brought from Armenia commonly called *Bole Armoniac*. It is a fat kind of earth of considerable use as an absorbent, astringent, and vulnerary.

ARMENIANS (*Ecc.*) a denomination of professing Christians in Armenia who formed two sects; one which adhered to the catholic church, and another which rejected the episcopacy.

ARME'RIA (*Bot.*) Meadow pink; a plant, the flowers of which are good as an alexipharmic. *In the Linnæan system* it is the *Dianthus barbatus*.

ARME'RIOUS flos (*Bot.*) The *Silene armeria* of Linnæus. *Dodon. Stirp. Hist.*

A'RMEs à l'épreuve (*Mil.*) a French phrase for armour of polished steel.—*Armes à la légère*, light-armed troops.—*Armes au pied!* ground arms!

ARMIGER (*Ant.*) ὀπλοφορος, ὀπλίτης, an Armour-bearer.

ARMIGER (*Law*) Knight or Esquire; a title of dignity to such gentlemen as bear arms; they are of two kinds.—*Armiger by courtesy*, as sons of noblemen, eldest sons of knights, &c.—*Armiger by creation*, such as the king's servants, &c.

ARMIGER (*Cus.*) the higher servants in convents.

ARMILLA (*Ant.*) a bracelet or ornament for the wrist presented as a badge of distinction to soldiers. *Liv. l. 1, c. 2; l. 10, c. 44; Plin. l. 10, c. 15; Fest. de Verb. Signif.; Isidor. Orig. l. 19, c. 31.*

ARMILLA (*Polit.*) one of the coronation garments.

ARMILLA (*Mech.*) an iron ring, hoop, or bracc, wherein the gudgeons of a wheel move. *Vitruv. l. 10, c. 6.*

ARMILLA (*Anat.*) a circular ligament comprehending the manifold tendons of the whole hand as it were in a circle. *Castell Lex Med.*

ARMILLARY sphere (*Astron.*) an artificial sphere so called from *armilla*, a bracelet, or ring, because it is composed of a number of circles of metal, wood, or paper, representing the several circles of the sphere of the world put together

in their natural order. [vide *Astronomy*] *Armillary trigonometeter*, an instrument invented by Mr. Munro Murray, and improved by Mr. Ferguson, consisting of five semicircles divided and graduated so as to serve for the expeditious resolution of many problems in astronomy.

ARMILLA'TI cursores (*Ant.*) runners, or posts, wearing bracelets by way of a badge.

ARMILLUM (*Ant.*) *vas quod armo*, *i. e.* *humero deportetur*, a wine vessel, carried in sacrifices on the shoulders.

ARMILU'STRUM (*Ant.*) *ab armis lustrandis*, a solemn feast at Rome, in which all the people being armed went to the sacrifices at the sound of the trumpet. *Varr. de Lat. Ling. l. 4, c. 32; Fest. de Verb. Signif.*

A'RMING-Buckle (*Her.*) a buckle in the shape of a lozenge.

ARMUNIANISM (*Ecc.*) the doctrines of one Arminius, a professor of Leyden, who maintained certain tenets respecting free-will, the atonement, &c. in 1603, which were condemned by the synod of Dort.

ARMISCARA (*Law*) a sort of punishment imposed upon an offender by the judge. *Malmsb. l. 3; Walsingh. p. 430.*

ARMISTICE (*Mil.*) *armistitium*, *i. e.* *sistere ab armis*, a temporary cessation of arms.

A'RMELET (*Geog.*) a small arm or branch of a sea, river, &c.

ARMELET (*Mil.*) a piece of armour for the arm.

ARMO'NIAC (*Chem.*) the same as *Ammoniac*.

A'RMOR (*Law*) or *arms*; any thing that a man either wears for his defence, or takes into his hand in his anger, to strike or throw at another. *Comp. Inst. 65.*

A'RMORER (*Mar.*) an officer who takes charge of the arms in a vessel.

A'RMORINGS (*Mar.*) the same as waste clothes.

ARMO'RIAL (*Her.*) an epithet for what belongs to coat armour, as armorial bearings, armorial ensigns, &c.

ARMO'RUM pugna (*Ant.*) a sort of gymnastics used formerly by the Romans as a military exercise. *Orib. Med. Coll. l. 6, c. 36.*

A'RMORY (*Her.*) the art of blazoning and marking all coats of arms.

ARMORY (*Mil.*) the place where armour and arms are kept.

A'RMOUR (*Mil.*) a name for all such habiliments as serve to defend the body from wounds, as helmets, cuirasses. A suit of armour formerly consisted of a helmet, a shield, a cuirasse, a coat of mail, a gantlet, &c.—*Armour-bearer*, the person who was formerly employed to carry the armour of another.

A'RMOURER (*Mil.*) the person who makes and deals in arms.

A'RMOURERS' Company (*Her.*) a company in the city of London which was incorporated in the beginning of the reign of Henry VI; the king himself being pleased to be free of their company. Their arms are *argent* on a chevron *gules*, a gauntlet between four swords in saltire on a chief *sable*, a buckler *argent*, charged with a cross *gules* betwixt two helmets of the first. Their crest is a man demi-armed at all points surmounting a torse and helmet. Their motto "Make all sure."

A'RMOURY (*Mil.*) a storehouse for arms.

A'RMS (*Mil.*) any kind of weapon that is used either for offence or defence.—*Arms of offence* include *fire-arms*, or those which are discharged by fire, *swords*, *bayonets*, &c.—*Arms of defence* consist of shields, helmets, coats of mail, and every species of repulsive or impenetrable covering.—*Bells of arms*, or *Bell-tents*, a kind of tents in the shape of a cone where the company's arms are lodged in the field.—*Arms of parade* or *courtesy*, those used in ancient jousts and tournaments, as unshod lances, swords without edge, wooden swords, &c.—*Pass of arms*, a kind of combat in which ancient cavaliers undertook to defend a pass against all attacks.—*Stand of arms*, a complete set of

arms for one soldier.—*Place of arms*, a part of the covert way opposite to the re-entering angle of the counterscarp projecting outward in an angle.

ARMS (*Mech.*) the two ends of an axle-tree in a carriage.

ARMS (*Her.*) or coats of arms; any signs of arms, or armour, painted on shields, targets, banners, &c. and denoting some act or quality of the bearer.

Arms are of various kinds, as—*Arms of dominion*, borne by kings and emperors.—*Arms of pretension*, borne by sovereigns who are not in possession of the dominions they represent, as the arms of France formerly quartered in those of England.—*Arms assumptive*, such as a man may of right assume with the approbation of his sovereign, as in the annexed figure. “The field is *argent*, on a bend *gules* between three pellets, as many swans proper, rewarded with a canton sinister *azure*, thereupon a demi-ram mounting *argent* armed, or between two fleurs de lis of the last, over all a baton dexterwise, as the second in the canton.” This is the arms of Sir John Clarke; the canton was the arms of the Duke of Longueville, which being granted to Sir John Clarke as a reward for taking prisoner Lewis de Orleans, Duke of Longueville, are what is called *Arms assumptive*.—*Arms of patronage*, such as governors of provinces, &c. add to their arms.—*Arms of alliance*, such as are taken by the issues of heiresses to show their descent, paternal and maternal.—*Arms of succession*, taken by those who inherit certain fiefs or manors.—*Arms of adoption*, those taken from another family to be quartered with the paternal one.—*Arms paternal and hereditary*, such as are transmitted from the first obtainer to his son, grandson, great grandson, &c.—*Arms of concession*, augmentations granted by sovereigns.—*Arms canting or allusive*, whose figures allude to the names, professions, &c. as a *trevet* for a person named Trevet, three covered cups for one named Butler, &c.

Arms vary also according to the mode of marshalling, as the arms of a husband and wife, &c. of which farther account may be seen under the head of *Heraldry* or *Marshalling*.

ARMS (*Falcon.*) the legs of a bird of prey from the thighs to the feet.

ARMY (*Ant.*) vide *Militia*.

ARMY (*Mil.*) is a term used either in a general or a particular sense. *Army*, in a general sense, is taken for the whole armed force raised for the defence of the country by land. The English army consists of the—*Militia*, which is raised for home service and by ballot.—*Volunteers*, those who volunteer their services to government on particular occasions.—*Fencibles*, raised by enlisting for a limited time and a particular service.—*Regulars*, enlisted without any limitation of time or place. They are so called because they are better disciplined, and consequently rank higher than any other force. They are also termed the *line*, because they act in a more compact body. Formerly there were foreign troops called *mercenaries*, because they served for hire; otherwise named *routers* or *ryters*, i.e. horsemen, Brabançons, Provençals, Colerelli, and Flemings.

Army, in a limited sense, signifies a body of troops completely equipped and disciplined for service, whence it is mostly confined in its application to the Regulars. An army is generally divided into three corps, each consisting of *Brigades*, *Regiments*, *Battalions*, and *Squadrons*. The first corps is called the *front line*, a part of which forms the *vanguard*, the second the *main body*, and the third the *rear-guard*, or corps of reserve. The whole is under the command of one general, who is styled, by distinction, the *Commander in Chief*. The officers under him

are *general-officers*, *field-officers*, *staff-officers*, and *subalterns*. The soldiers are called *privates*, common men, or *rank and file*, in distinction from the officers. They are moreover distinguished, according to the nature of their service or their equipment, into *horse* or *foot*, otherwise called *infantry* or *cavalry*. The cavalry consists of *hussars*, or *light horse*, and *heavy horse*.—*Dragoons* are soldiers serving either on foot or on horseback.—*Marines* are soldiers trained up to serve at sea.—*Artillerymen* serve the artillery.—*Guards* are those who protect the king's person, and consist of the *life-guards*, the *horse-guards*, and the *foot-guards*, which are collectively called *household troops*.—*Grenadiers*, so called because they were formerly trained in the art of throwing hand grenades, are a picked body of men, distinguished by their size and dress.—*Riflemen*, or *sharpshooters*, those who are exercised particularly in the use of the rifle, and in sharp-shooting.—*Fusileers*, are so called from the fusil which they carry, and *musqueteers* from the *musket*: the latter term is no longer in use.—*Men at arms* were those formerly who were equipped in a complete suit of armour.—*Pioneers*, those who are employed during the march in mending the roads, cutting down hedges, &c.

The exercising of soldiers in military movements and discipline is called *drilling*; those who are so trained are called *recruits*; the person training is the *drill serjeant*; the exercise in which they are trained is either manual or platoon. The *manual exercise* teaches the use of the firelock, and the movements of the body; the *platoon exercise* is that which is performed in companies. When soldiers are brought to act together in large bodies, they go through a variety of manœuvres. The duties of a soldier are various, according as he is in camp, in garrison, or in quarters, in the field of battle, or at a siege. In all cases they move by certain signals, either from the beat of the drum, or the sound of the trumpet, the former of which is called the *beat*, and the latter the *sounding*. The beats of the drum are differently named, according to the purpose for which it is beaten; as, the *general*, for a general march; the *revellé*, at break of day for the soldiers to rise; the *assembly*, or *troop*, for the troops to assemble, &c. [vide *Beat*] The soundings are also differently named: as *butte sella*, put on your saddles; *monte caballo*, mount on horseback, &c.

The *matériel* of an army, as the French term it, consists of the horses, cannon, stores, provisions, and every thing necessary for service.

Armies are moreover distinguished, according to their service, into the—*Covering army*, which is used to cover and protect every place.—*Blockading army*, which is employed to invest a town, so as to reduce it by assault or famine.—*Army of observation*, an army employed in watching the movements of an enemy.—*Army of reserve*, an army which is reserved, or kept apart, for any particular exigency, as to renew an engagement in case of defeat, to secure a victory, and the like.—*Flying army*, a strong body of horse and foot, always in motion to protect its own army.

ARNALDIA (*Med.*) from *ἀρς*, a lamb, because lambs were subject to it, a malignant disease, attended with an Alopecia; a kind of Lues venerea.

ARNALIA (*Archæol.*) Arable lands. *Dooms-day book*.

ARNAUTS (*Mil.*) Turkish light cavalry, whose only weapon was a sabre.

ARNICA (*Bot.*) a genus of plants, Class 19 *Syngenesia*, Order 2 *Polygamia*, *Supcrflua*, called *Doronicum* by Bauhin.

Generic Characters. CAL. common imbricate; leaflets lanceolate.—COR. compound radiate.—STAM. filaments very

short; *anthers* cylindric.—*Pist.* germ oblong; *style* simple; *stigma* bifid.—*PER.* none; *calyx* unchanged; *seeds* solitary; *dawn* simple; *receptacle* naked.

Species. The species are mostly perennials or shrubs, as—*Arnica montana* *Doronicum*, or *Caltha alpina*, the Mountain Arnica.—*Arnica scorpioides*, or *Aster scorpioides*, Alternate-leaved Arnica.—*Arnica maritima*, *Aster* or *Helenium maritimum*, Sea Arnica. &c. *Clus. Pann.*; *Dod. Pempt.*; *C. Bauh. Pin.*; *Raii Hist. Plant.*

ARNOGLOSSUM (*Bot.*) ἀρνόγλωσσον, from ἄρνος, a lamb, and γλῶσσα, a tongue; a species of the *Plantago* of Linnæus. *Theophrast.* l. 7, c. 10.

ARNOLDISTS (*Ecc.*) the followers of one Arnold of Brescia, who set themselves up against the Roman pontiff.

ARNO'TTO (*Bot.*) or *Anata*, the *Bixa oriblana* of Linnæus. [vide *Anata*]

ARNOTTS (*Bot.*) the roots of a plant frequently turned up in ploughing, resembling a chesnut when roasted. They seem to be the roots of a species of *Bunium*.

A'ROBE (*Com.*) a Portuguese measure for sugar, equal to twenty-five bushels.

AROMA (*Bot.*) ἄρωμα, from ἀρώ, aro; all sweet spices, but particularly myrrh.

AROMA (*Alch.*) another name for *Aroph.*

AROMATA'RIOUS (*Archæol.*) a Grocer.

AROMATICA (*Bot.*) from ἄρωμα, all fragrant things, as spices, herbs, seeds, &c.; also confects or pills, made of aromatic herbs.

AROMATITES (*Nat.*) ἀρωματίτης: 1. *vinum aromiate consitum*, Hippocras, or wine brewed with spices. *Dioscor.* l. 5, c. 64—5; *Plin.* l. 14, c. 16. 2. A precious stone, in colour and smell resembling myrrh. *Plin.* l. 37, c. 10.

A'RON (*Bot.*) vide *Arum*.

ARONIA (*Bot.*) a species of the *Mespilus* of Linnæus.

A'ROPH (*Alch.*) 1. A Lithontriptic medicine prepared by distillation. *Parac. de Vir. Memb.* l. 2, c. 10. 2. The flowers raised by sublimation of equal portions of Lapis Hæmatitis and Sal Ammoniac. *Parac.* 3. A distillation of saffron and bread. *Van. Helm. de Lithias.* c. 7.

A'ROTUS (*Theol.*) and *Marotus*, two Angels; so called by the Mahometans, whom they believe to have been sent from heaven to teach men their duty.

A'ROUGHCAIN (*Zool.*) an animal in Virginia resembling the beaver.

A'RPA (*Mus.*) Italian for a harp.—*Arpa doppa*, a double harp.

ARPA'GIUS (*Med.*) a name for one who died in his cradle.

ARPEGGIO (*Mus.*) or *Argo*, Italian for a mark in Music, signifying that the movement of the several notes must be heard not together, but one after another in the style of harp music.—*Arpeggio accompaniment* consists chiefly of the notes of the several chords taken in returning successions.

A'RPEX (*Law*) or *Arpente*, an acre or furlong of ground equal to 100 perches. *Doomsday Book.*

ARPENTA'TOR (*Law*) a measurer or surveyor of land.

ARQUA'TUS morbus (*Med.*) the jaundice; so named from its resembling the colour of the rainbow.

ARQUEBUSA'DE (*Med.*) Aqua Sclopetaria.

A'RQUEBUSE (*Mil.*) in French *Arquebuse*, a large hand gun, somewhat bigger than our musket.

ARQUEBU'SIER (*Mil.*) a soldier that bears an arquebuse.

A'RRAC (*Com.*) a spirituous liquor distilled in India from the Cocoa-tree, rice, or sugar Mort; also, in Tartary, from Mares' milk; this liquor is very strong, and intoxicates more than rum or brandy.

ARRAC (*Bot.*) another name for the *Oryza* and *Palma* of Linnæus.

A'RRACH (*Bot.*) vide *Arach.*

ARRA'CHE (*Her.*) erased or torn up by the roots.

A'RRAGONITE (*Min.*) a species of calcareous salt.

ARRAIA'TIO peditum (*Law*) arraying the foot soldiers.

ARRA'TERS (*Law*) *arratores*, officers who had the charge of the soldiers' armour.

to **ARRA'IGN** a writ of *assize* (*Law*) to cause the demandant to be called to make the plaint, and to set the cause in such order as the tenant may be forced to answer thereunto.—To *arraign a prisoner*, to bring him forth to trial, read the indictment to him, and put the question of guilty or not guilty. *Co. Lit.* 262, &c.

A'RRAPHON (*Anat.*) ἄρραφον, from α, priv. and ῥάπτω, to knit together; an epithet signifying without a suture, applied to the cranium when it is so disposed, whether naturally or apparently.

A'RRAS Hangings (*Com.*) Tapestry made at Arras, in the county of Artois, in Flanders.

ARRA'Y (*Mil.*) the drawing up, or ranging of soldiers in order of battle.

ARRAY (*Law*) the setting forth a jury impanelled upon a cause F. N. B. 157.—To *challenge an array*, to except at once against all the persons arrayed or impanelled. If the sheriff be of affinity to either of the parties, or for any other partiality, the *array* shall be *quashed*. *Co. Lit.* 156, &c.

ARRA'YERS (*Mil.*) vide *Arraiers*.

ARREA'RAGE (*Law*) *arrears*; money unpaid at the due time: as rent, moneys in hand, or arrears of an account, pensions, and the like.

ARRECTA'TUS (*Law*) suspected of any crime. *Offic. Coronat.*

ARRECTED (*Law*) reckoned, considered. *Inst.* 173.

ARRENA'TUS (*Law*) *Arraigned*. *Rot. Parl.* 21. *Ed.* 1.

ARRENTA'TION (*Law*) *ad certum reditum dimittere*; licensing the owner of lands in the forest to enclose them with a hedge and a little ditch, under a yearly rent.—*Saving the arrentation*, saving the power to give such licences. *Ord. Forest.* 34 *Ed.* 1. st. 5.

ARREPHO'RIA (*Ant.*) ἀρρηφῶρια, a festival in honour of Minerva, celebrated at Athens in the month Scirophorion. It is so called ἀπὸ τῆς ἄρρηφτα φέρειν, i. e. because certain mysterious things were carried about by four noble virgins. *Harprocraton.*; *Suidas.*; *Etymologicon. Magnun.*

ARREST (*Law*) *arrestum*, in French *arrêter*. 1. The restraint of a man's person by the lawful warrant of some court of record, or officer of justice. 2. The decree of a court, by which a man is arrested. An arrest in a civil case must be by virtue of a precept; but, in a criminal case, it may be done without a warrant. *Wood's Inst.* 575.—*Arrest of judgment*, a staying of judgment. To move an *arrest of judgment*, is to show cause why judgment should be stayed, notwithstanding verdict given. 2 *Inst.* 210.—*Arrest of inquest*, is to plead in arrest of taking the inquest upon a former issue, and to show cause why an inquest should not be taken.

ARRESTA'NDIS bonis ne dissipentur (*Law*) a writ for him whose cattle or goods, being taken during a controversy, are likely to be wasted and consumed. *Reg. Orig.* 126.

ARRESTA'NDO ipsum qui pecuniam recipit, &c. (*Law*) a writ for the apprehension of him who hath taken the king's prest money to serve in the wars, and hides himself uoq̄a he should go. *Reg. Orig.* 24.

ARRESTMENT (*Law*) the command of a judge in the Scotch law, discharging any person in whose hands the debtor's moveables are, to pay or deliver up the same, till the creditor who hath procured the arrestment to be laid on be satisfied.—*Arrestment jurisdictionis fundandæ causâ*, an arrestment which is used to bring a foreigner under the jurisdiction of the courts of Scotland.

ARRESTO (*Law*) *facto super bonis mercatorum alienigenorum*, a writ which lies for a denizen against the goods of aliens found in this kingdom, in recompence for goods

taken from him in a foreign country, after denial of restitution. This was formerly called *clarigatio* by the civilians, but now *reprisatia*. *Reg. Orig.* 129.

ARRE/STS (*Vet.*) mangy humours upon a horse's hinder legs, between the ham and the pastern.

ARRE/TTED (*Law*) *arrectatus*, i. e. *ad rectum vocatus*; convened before a judge, and charged with a crime.—*Ad rectum habere malefactorem*, is, according to Bracton, to have a malefactor forthcoming to be put to his trial. Sometimes it is used for imputed or laid to his charge; as no folly may be *arretted* to any one under age. *Bract.* 1. 3, tract 2, c. 10; *Staudf. Plac.* cor. 45; *Lyt. Cap. Rom. rcmmitter.*

ARRHÆ (*Law*) earnest-money given in evidence of a bargain.

ARRHÆA (*Med.*) ἀρρηα, from α, priv. and ῥέω, to flow; a retention or obstruction of the menstrual discharge. *Gal. in Exeges. Vocab. Hippocrat.*

ARRHOBONA'RII (*Ecc.*) heretics of the 16th century, who denied that the eucharist was the sign of the real flesh and blood, but only a pledge of them. *Præteol. Doct. Omn. Hæret.*

ARRHOSTIA (*Med.*) ἀρρῳστια, infirmity or debility. *Hipp.*

ARRIÈRE-BAN (*Archæol.*) the edict of the old French and German kings, commanding all their tenants to come into the army, and in case of their refusal to be deprived of their estates.

ARRIÈRE-GUARD (*Mil.*) that part of an army which marches in the rear.

ARRIS (*Archit.*) the intersection or line formed by the meeting of the exterior surfaces of two bodies, as the *arris of a stone*: it answers to what is vulgarly called the *edge*, which latter term in building is confined to the two surfaces of rectangular bodies, as boards, planks, &c.—*Arris fillet*, a small piece of timber, of a triangular section, used in raising the slates against chimney-shafts, or against a wall that cuts obliquely across the roof.

ARRO'NDIE (*Her.*) rounded or circular; an epithet for a tierce, as a tierce in *gyrons arrondie*.

ARROW (*Arch.*) the well-known missile which is discharged from a bow, the pointed part of which is called the Arrow-Head. Bundles of arrows are called sheaves. [vide *Archery*]

ARROW (*Her.*) this weapon, when borne in coats of arms, is commonly said to be *barbed and feathered*, as in the subjoined *fig. 1*. The field is *azure*, three broad arrows; *or*, barbed and feathered *argent*; name, Hales. The *arrow-head* is also borne as a charge, as in *fig. 2*. The field is

Fig. 1.

Fig. 2.

vert on a chevron, *argent*; three barbed arrow-heads, *sable*, by the name of Keymis, of Gloucestershire.

ARROW-GRASS (*Bot.*) the *Triglochin* of Linnæus.—*Arrow-head*, the *Sagittaria* of Linnæus, a plant so called because its leaves resemble the head of an arrow.—*Arrow-root*, an Indian root of which starch was made. It is also employed medicinally, and is esteemed a warm alexipharmic. It is the root of the plant which by Linnæus is classed under the genus *Maranta*.—*Arrow-headed*, or *Arrow-shaped*, [vide *Sagittate*]

ARRURA (*Law*) one day's work at the plough, which the tenant was obliged to give his lord.

ARS *notoria* (*Alch.*) a pretended way of acquiring sciences by means of infusion.—*Ars transcendens*, the transcendent

art, called also *Raimond Lully's art*, by which a man can dispute upon subjects in a style altogether unintelligible.

ARSENAL (*Mil.*) a public storehouse for arms and all sorts of ammunition.

ARSENIATE (*Chem.*) the name of a sort of salts formed by the combination of arsenic acid with different bases, as the *arsenate* of ammonia, of potash, &c.

ARSENIC (*Min.*) a ponderous mineral body. [vide *Arsenicum*]

ARSENIC (*Chem.*) was distinguished formerly by the cha-

Arsenic is now distinguished into yellow, white, and red.—

Yellow arsenic is the native arsenic dug out of the mines, which is otherwise called *Arsenic ore*, or the *Arsenicum nativum* of Linnæus.—*White arsenic*, or the oxyde of arsenic, is arsenic reduced to powder by the mixture of oxygen, or by exposure to the air; of this there are two sorts, namely, the *protozide* of arsenic, or *arsenious acid*, which, when exposed to a moderate heat in contact with air, sublimes in a white powder; and the *peroxide*, or *arsenic acid*, which is formed by an additional dose of oxygen.—*Red arsenic*, otherwise called *sulphuret of arsenic*, or *realgar*, is formed by heating arsenious acid, or arsenic acid with sulphur.—*Butter of arsenic*, a composition formed of arsenic and corrosive sublimate; it is otherwise called *chloride of arsenic*, because it may be prepared of arsenic and chlorine gas.—*Arsenic bloom*, another name for an arseniate, or arsenic salt, which is a sort of stone dug out of the mines in Germany.

ARSENIC acid (*Chem.*) an acid formed by the combination of arsenic with a dose of oxygen, in distinction from *arsenious acid*, which contains a less dose.

ARSENICAL (*Min.*) an epithet for what contains or belongs to arsenic, as *arsenical pyrites*, &c.—*Arsenical magnet*, a preparation of antimony with sulphur and white arsenic.—*Arsenical caustic*, a preparation of antimony with white arsenic.—*Arsenical solution*, a solution of arsenic with sub-carbonate of potash in distilled water.

ARSENICUM (*Min.*) ἀρσενικόν, arsenic; a well-known mineral, called by Aristotle *σανθραχυ*, by Theophrastus ἀρσενικόν, by the Romans *orpimentum* and *arsenicum*; it is a reddish-coloured ponderous, caustic, corrosive, and highly poisonous substance; which was used by the ancients in medicine and painting. *Aristot. de Hist. Anim.* 1. 8, c. 24; *Theophrast.*; *Dioscor.* 1. 5, c. 121; *Plin.* 1. 34, c. 18; *Ccls. de Re Med.* 1. 5, c. 5; *Gal. de Comp. Med. sec. Loc.* 1. 4; *Oribas. Med. Collect.* 1. 2; *Gorr. Def. Med.*

ARSENICUM, in the Linnean system, a genus of metals.

Generic Characters. Blueish white, soon becoming black, and falling to powder in the air; soft and extremely brittle; specific gravity 8.310.

Species. The principal species are—*Arsenicum nativum*, Native Arsenic.—*Arsenicum californica*, White Arsenic.—*Arsenicum auripigmentum*, *Arsenicum flavum*, seu *Pyrites nudus*, Orpiment, or Yellow Sulphurized Arsenic.—*Arsenicum sandaraca*, *Arsenicum rubrum*, Red Arsenic, or Realgar.—*Arsenicum sulphuratum*, White Muncie, or Arsenical Pyrites.—*Arsenicum albicans*, Misspickel.

ARSENITE (*Chem.*) the name for a sort of salts formed by the combination of arsenious acid with different bases.

ARISIS (*Gram*) ἄρσις, from ἀίρω, to elevate, signifies the elevation of the voice, in distinction from the thesis or depression of the voice, corresponding to the motion of lifting up and setting down again of the foot, which the Greeks call ἄρσις and θέσις.

ARSIS (*Mus.*) and *Thesis*, the raising and falling of the hand as applied to the beating of time. *Schol. Anon. in*

Hermog. πῆξ, δ. l. 1; *Meibom. in Quintil.* l. 9, c. 4; *Prisc. de Accent.*; *Eustath. in Hom.* ll. v. 566.

ARSMART (*Bot.*) the *Polygonum* of Linnæus.

ARSON (*Law*) from *ardeo*, to burn; setting houses, &c. on fire, which is felony by common law. 3 *Inst.* 66.

ARSURA (*Law*) 1. Trial of money by fire after it has been coined. 2. The diminution and loss of metal occasioned by this trial. 3. The dust and sweepings of metals that are melted down by silversmiths.

ART, the contrivance and disposal of things by the help of thought and experience, and according to prescribed rules, so as to make them serve the purposes for which they were designed.—*Liberal arts*, those which are noble and worthy to be cultivated, without regard to the lucre which they may bring; such as architecture, grammar, the military art, music, navigation, painting, poetry, &c. These are commonly distinguished by the name of the seven liberal arts.—*Mechanic arts*, those wherein the hand and body are more concerned than the mind; which are followed for the sake of the gain that accrues from them; as weaving, turnery, &c.—*A term of art*, a word used in the sense of any particular art or profession.—*Transcendent art*, otherwise called *Raymond Lilly's art*, a method of descanting upon subjects in a manner so mysterious and abstruse as to be totally unintelligible.—*St. Anselm's art*, a superstitious or pretended method of curing wounds by touching the linen with which the wounds have been covered.—*The black art*, the same as magic.—*Angelic art*, a pretended method of coming at the knowledge of any thing that is desired by means of spirits or dæmons.

ART [vide *Arts*]

ART, *Terms of* (*Gram.*) any term used in the particular sense of an art or profession.

ART and Part (*Scotch Law*) when, in the commission of a crime, the same person was both a contriver and actor.

ARTE/DIA (*Bot.*) from Mr. Artedi, a Swedish botanist, a genus of plants, Class 5 *Pentandria*, Order 2 *Digynia*.
Generic Characters. CAL. *umbel* universal, spreading.—COR. *universal* difform.—STAM. *filaments* five; *anthers* simple.—PIST. *germ* small; *styles* reflex; *stigmas* simple.—PER. none; *fruit* roundish; *seeds* two.
Species. The only species is the—*Artedia squamata*, an annual, native of Mount Lebanon.

ARTEMISIA (*Ant.*) Ἄρτεμισία, a festival celebrated in different parts of Greece, particularly at Delphi, where they offered a mullet to the goddess Diana, for its supposed chastity. *Liv.* l. 25, c. 23; *Athen.* l. 7, c. 21; *Hexychius*.

ARTEMISIA (*Bot.*) Ἄρτεμισία. Mother-Herb, a plant, which was reckoned of great efficacy in promoting the uterine evacuations. It is called by Apuleius *Parthenium*, and is supposed to derive its name from Ἄρτεμις, Diana, who presided over women in child-bed. *Dioscor.* l. 3, c. 127; *Plin.* l. 26, c. 5, &c.; *Apul. de Herb.* l. 10; *Oribas. Med. Coll.* l. 11; *Paul. Æginet.* l. 7, c. 3; *Kirch. Ædip. Ægyptiac.* vol. 3, p. 72.

ARTEMISIA, in the *Linnean system*, a genus of plants, Class 19 *Syngenesia*, Order 1 *Polygamia Æqualis*, answering to the *Abrotanum* and *Absinthium* of Tournefort.
Generic Characters. CAL. *common* roundish.—COR. *compound*.—STAM. *filaments* capillary; *anthers* cylindric.—PIST. *germ* small; *style* filiform; *stigma* bifid.—PER. none; *calyx* scarcely changed; *seeds* solitary; *receptacle* flat.
Species. The plants of this genus are either undershrubs or herbs, as—*Artemisia abrotanum*, *Abrotanum vulgare*, Common Southernwood.—*Artemisia campestris*, seu *Abrotanum campestre*, Field Southernwood.—*Artemisia absinthium*, *Absinthium vulgare*, Common Wormwood.—*Artemisia pontica*, *Absinthium ponticum*, Roman Wormwood.—*Artemisia rupestris*, Creeping Wormwood.—*Ar-*

temisia vulgaris, Mugwort.—*Artemisia dracunculus*, seu *Draco herba*, Tarragon, &c. *Dodon. Pempt.*; *J. Bauh. Hist. Plant.*; *Ger. Herb.*; *Park. Parad.*; *Raii Hist. Plant.*; *Tournef. Inst.*; *Boerh. Lugdb.*

ARTEMISION (*Chron.*) Ἄρτεμισιον; a month among the Macedonians when the vernal equinox commenced. *Gal. Com.* 1, in *Hippocrat. Epid.* l. 1.

ARTEMONIUM (*Med.*) *Abollyrium.* *Gal.*

ARTE'NNA (*Or.*) an aquatic web-footed bird, called also *Diomedea Castell.* *Lex. Med.*

ARTERIA (*Anat.*) ἀρτηρία, the Greek for Artery, was used by Hippocrates to signify what is now called the *Arteria aspera*, or Windpipe, and is derived from *τερέω*, to keep, and *αἴρ*, the air, because it serves as a channel for the air. The term is now applied to the conical tubes which convey the blood from the heart to all parts of the body. The arteries consist of three coats, the *external* containing blood-vessels; the *middle* consisting of elastic fibres, that contract and dilate; and the *internal*, which is a fine dense membrane that supports the fibres. By the circulation of the blood through the arteries is produced the particular motion called the pulse, which arises from the alternate dilatation of the arteries, called the *diastole*, and their contraction, called the *systole*. The time which the fibres of the arteries take in performing their systole, i. e. returning to their natural state, is the distance between two pulses. The heart discharges the blood into two great blood-vessels, called the *Arteria pulmonalis* and the *Aorta*.
The *arteria pulmonalis*, or Pulmonary Artery, rises from the right ventricle of the heart, and dividing itself to the right and left, carries the blood by innumerable ramifications through the lungs. [vide *Pulmonary Artery*]

The *Aorta* goes from the left ventricle of the heart, and is divided into the *Aorta ascendens* and the *Aorta descendens*. The *Aorta* is called *ascendens* from the point where it leaves the heart to its great curvature or arch, from which it is principally distributed to the thorax, the head, and the upper extremities. The *Aorta descendens* is the remaining part of this trunk from the arch to the *Os Sacrum*, or the Bifurcation. It is distributed to the diaphragm, abdomen, and lower extremities. From each of these divisions arise what are called original or capital branches, from which smaller branches and ramifications proceed.

Branches of the Aorta ascendens.

The capital branches from the *Aorta ascendens* are—*Arteria subclavia*, the Subclavian Arteries, which run under the clavicle, or collar-bone.—*Carotides*, the Carotids, which go from the arch of the aorta directly to the head.—*Arteria coronaria*, Coronary Arteries of the heart, so called because they form a sort of crown on the basis of the heart.

The principal subordinate branches from these are from the Subclavian Arteries, the—*Mammaria interna*, the *Mediastana*, the *Pericardia*, the *Diaphragmatica minor sive superior*, *Thymica*, *Trachealis*, *Vertebrales*, *Cervicales*, and *Intercostales*. The *Azillary Artillery*, which is only a continuance of the Subclavian from where it goes out of the thorax to the axilla, detaches chiefly the *Mammaria externa*, *Thoracica superior et inferior*, *Scapularis externa*, *Scapularis interna*, *Humeralis*, *Muscularis*, &c.—The *Carotids* are divided into external and internal; the external sends out the *Maxillaris interna*, *Occipitalis*, *Temporalis*, *Lingualis*, &c. The internal sends out the *Ophthalmic* and middle *Cerebral Arteries*.

Branches of the Aorta descendens.

The capital branches from the *Aorta descendens* are—

In the breast, the *Bronchial*, *Œsophageal*, *Intercostal*, and *Inferior Diaphragmatic*.—Within the abdomen, the *Cæliac*, which divides into the *Hepatic*, the *Coronaria ventriculi*, and the *Splenic*; the *Mesenteric Superior* and *Inferior*, the *Emulgents*, the *Spermaties*, the *Lumbar arteries*, &c.—At the bifurcation the *Aorta* divides into the *Iliacs*, which are divided into internal and external. The internal gives off the *Sacral*, *Gluteal*, *Ischiatic*, &c.; the external sends forth the *Epigastric*, *Femoral*, *Tibial*, &c. [vide *Anatomy*] *Hippocrat. de Cord.* &c.; *Ruf. Ephes. Appell. Part. Corp. Hum.* 1. 2, c. 17; *Gal. de Anat. Administ.* 1. 7, &c.; *Aul. Gell.* 1. 18, c. 10; *Philaret. de Puls.* 1. 1, c. 3, 4; *Oribas. Med. Coll.* 1. 23, c. 11, &c.

ARTER'ACA (*Med.*) ἀρτηριακά, medicines against disorders in the *Arteria aspera*.

ARTERIO'TOMY (*Surg.*) ἀρτηριοτομία, the opening of an artery with a view of taking away blood. *Gal. apud Oribas. Med. Coll.* 1. 7, c. 13; *Paul. Æginet.* 1. 6, c. 4.

ARTETI'SCIUS (*Surg.*) one who suffers the loss of any member.

ARTHAN'ITA (*Bot.*) from ἀρτος, bread; Sow Bread, a plant so called because it is the food of swine. It is of a very forcing nature, and is the *Cyclamen Europæum* of Linnæus.

A'RTHÉL (*Law*) or *Ardhel*, a Welsh word for a vouchee allowed to one who was taken with stolen goods in his hand, by whom he was allowed to clear himself of the charge. This privilege occasioning a delay in the administration of justice, provision was made against it by stat. 28 Hen. 8.

ARTHÉ'TICA (*Med.*) or *Arthretica*, from ἄρθρον, a joint; Ground-Pine, a plant so called because it is good for the gout, and disorders in the joints.

ARTHRO'CUM (*Med.*) an oil extracted from roots and bread digested in dung.

ARTHRE'MBOLUS (*Surg.*) ἀρθρέμβολος, from ἄρθρον, a joint, and ἐμβάλλω, to impel; an instrument for reducing luxated bones. *Castell. Lex. Med.*

ARTHRI'TIC (*Med.*) an epithet for what belongs to the gout.

ARTHRI'TIS (*Med.*) ἀρθρίτις, *morbus articularis*, i. e. joint evil; the gout, a disorder in the joints, which, if it lie in the feet, is called *podagra*; if in the hips, *sciatica*; if in the hands, *chiragra*. *Hippocrat.* 1. 3, aph. 6; *Aret. de Caus. et Sympt. Acut. Morb.* 1. 2, c. 12; *Cæll. Aurelian. Chron.* 1. 5, c. 3; *Gal. de Fin. Med.*

ARTHROCA'CE (*Med.*) from ἄρθρον, a joint, and κακόν, an evil; a disease in the cavity of the bone.

ARTHRO'DIA (*Anat.*) from ἄρθρον, a joint, and δέχομαι, to receive; a species of articulation, when the flat head of one bone is received into the shallow socket of another. *Winslow. Anat.*

ARTHRODY'NIA (*Med.*) vide *Rheumatism*.

A'RTHRON (*Anat.*) ἄρθρον, *articulus*, a joint.

ARTHROPY'O'SIS (*Med.*) from ἄρθρον, a joint, and πύον, pus; an abscess or inflammation in a joint.

ARTHROPYOSIS is a genus of diseases, Class *Pyrexice*, Order *Phlegmasice*, in Cullen's Nosology.

ARTHRO'SIS (*Med.*) vide *Articulation*.

A'R'TICHOKE (*Bot.*) a plant very like a thistle, with scaly heads, like the cone of a pine tree. It is the *Cynara* of Linnæus.—*Jerusalem artichoke*, a plant, the root of which resembles a potatoe, and has the taste of the artichoke. It is the *Helianthus tuberosus* of Linnæus.

A'R'TICLE (*Law*) the clause or condition in a covenant.—*Lords of articles*, a committee of the Scotch Parliament, which was abolished in 1689, because it was supposed to increase too much the power of the crown.—*Articles of Roup*, the conditions under which property is exposed to sale in Scotland.

ARTICLE (*Gram.*) a part of speech which commonly serves to distinguish the gender of nouns. In modern languages it also serves to distinguish things, and is divided into the

Definite and Indefinite.—*Definite article*, which in English is "The," defines and specifies some particular thing pointed out.—*Indefinite article*, which is "A," is applied in the indefinite sense to any thing.

ARTICLES (*Ecc.*) or the *thirty-nine Articles*, a name for thirty-nine points of faith which have been adopted by the "Church of England," and to which all persons must subscribe before they are admitted into Holy Orders.—*Articles of the Clergy*, statutes containing certain articles relating to the church, the clergy, and other ecclesiastical matters.

ARTICO'CCA (*Bot.*) Artichoke.

ARTICULA'RIS morbus (*Med.*) the swelling, &c. from the gout, or the gout itself.

ARTICULATE adjudication (*Law*) a term used in the Scotch law in cases where there is more than the debt due to the adjudging creditor, when it is usual to accumulate each debt by itself, so that any error which may arise in ascertaining one of the debts need not reach to all the rest.

ARTICULATED (*Bot.*) *articulatus*, jointed; an epithet for different parts of a plant, as—*Radix articulata*, a root which has one knob growing out of another, so that the whole seems to consist of connected members.—*Folium articulatum*, a cylindrical hollow leaf, having its cavities divided by horizontal partitions, as the *Juncus articulatus*.—*Filamentum articulatum*, a filament having a moveable joint, as in *Salvia officinalis*, the Sage.—*Lomentum articulatum*, a loment, having its transverse partitions visible on the outside, so that they may be easily divided into joints, as in *Hedysarum*.—*Pili articulati*, hairs divided into distinct members or joints, like the antennæ of some insects.

ARTICULATION (*Anat.*) ἄρθρωσις; the fit adjustment of the bones together, which is articulation, properly so called, in distinction from *symphysis*, the connection or keeping them together, which is another sort of articulation. Articulation is of three kinds, namely—*Diarthrosis*, when the bones are allowed a certain degree of motion—*Synarthrosis*, when the bones remain fixed in their situation; and—*Amphiarthrosis*, which is a species composed of the two preceding.

ARTICULATION (*Bot.*) 1. The springing or shooting of plants from joint to joint. 2. *Articulatio arborum*, the hurting or bruising of young vine shoots, &c. *Plin.* 1. 17, c. 21.

ARTICULATION (*Gram.*) the articulate or distinct utterance of each syllable or sound, so as to render oneself intelligible.

ARTICULATION (*Mus.*) that distinctness and accuracy of expression which gives every sound with truth and perspicuity.

ARTICULAT'US (*Bot.*) vide *Articulated*.

ARTICULI Clerici (*Ecc.*) vide *Articles*.

ARTICULUS (*Ecc.*) an article or complaint exhibited by way of libel in a court Christian. Sometimes the religious bound themselves to obey the ordinary without this formal process.

ARTICULUS (*Anat.*) ἄρθρον, dim. of *artus*, a limb; a joint or connexion of bones adapted for motion.

ARTICULUS mortis (*Med.*) the instant of death or expiration.

ARTICULUS (*Bot.*) joint; that part of a culm between two knots. *Linn. Phil. Bot.*

ARTICULUS (*Gram.*) vide *Article*.

ARTICULUS (*Law*) vide *Article*.

A'R'TIFÉX (*Med.*) the Physician who practises the art of medicine from rational principles, confirmed by experience. *Castell.*

ARTIFICIAL Argument (*Rhet.*) a name for those proofs or considerations that proceed from the genius, industry, or invention of the orator; such are definitions, causes, effects, &c.

ARTIFICIAL Lines (*Geom.*) lines so contrived on a sector as to represent the logarithmal lines and tangents.—*Artificial*

numbers, logarithmical numbers relating to sines, tangents, and secants.

ARTIFICIAL Day (*Astron.*) that space of time which intervenes between the rising and setting of the sun, in distinction from the night, when he is under the horizon.

ARTIFICIAL (*Chem.*) a name for whatever is prepared from cinnabar, &c.

ARTILLERY (*Mil.*) in a general sense, implies all sorts of great guns, mortars, howitzers, petards, &c., together with all the apparatus and stores which are requisite for service in the field, at sieges, &c.; but in a particular sense it implies the science of artillery and gunnery.—*Train of artillery*, a train formed of the attendants and carriages which follow the artillery into the field.—*Park of artillery*, the place set apart by the general for the depot of guns, ammunition, and stores, to be in readiness, as occasion may require.—*Honourable Artillery Company*, a band of infantry, consisting of 600 men, of which the Prince of Wales for the time being is always colonel. This corps forms part of the militia, or city guard, of London.

ARTISCOCCUS laevis (*Bot.*) the same as the *Cinara* of Linnæus.

ARTISCUS (*Med.*) ἄρτισκος, from ἄρτος, bread; a troche made in the form of a loaf; but particularly that which is made of viper's flesh. *Castell. Lex. Med.*

ARTIST, a proficient in the liberal arts, in distinction from *artisan*, or one who follows one of the mechanic arts.

ARTIST (*Chem.*) a term used by Paracelsus and others for a chemist and an alchemist.

ARTOCA'RPUS (*Bot.*) from ἄρτος, bread, and καρπός, fruit, Bread-fruit Tree; a genus of plants; Class 21 *Monoecia*, Order 1 *Monandria*.

Generic Characters. CAL. none.—COR. to each two petals.—STAM. filament filiform; anther oblong.—PIST. germs very many; style to each filiform; stigma single.—PER. fruit ovate-globular; seeds oblong.

Species. The species are—*Artocarpus incisa*, *Sitodium incisum*, *Radermachia incisa*, *Soccus lanosus*, seu *granosus*, in French *Le Rima ou Fruit à Pain*, Bread-fruit Tree, Native of the Molucca Islands.—*Artocarpus integrifolia*, *Sitodium macrocarpon*, seu *cauliflorum*, *Radermachia integra*, *Soccus arboreus*, seu *Tojacca-maram Indica*, Indian Jaca Tree, a shrub, native of the East Indies.—*Artocarpus Philippensis*, a shrub, native of the Philippine Islands.—*Artocarpus pubescens*, *Anseli*, seu *Castanea Malabarica*, a shrub, native of Malabar. *Linn. Spec. Plant.*

ARTOCREAS (*Med.*) from ἄρτος, bread, and κρέας, flesh; a paste.

ARTOMELI (*Med.*) a Cataplasm, from ἄρτος, bread, and μέλι, honey.

ARTOPTA (*Med.*) from ἄρτος, bread, and ὀπτάνω, to bake; a vessel for baking a pye or pudding; applied metaphorically to women who have easy labours. *Castell.*

ARTOS (*Med.*) ἄρτος, bread; the different sorts of which, mentioned by Hippocrates and Galen, are as follow:—ἄρτος ἄζυμος, unleavened bread, most nourishing.—ἄρτος δίπυρος, bread twice baked, prescribed in the dropsy.—ἄρτος ἕξοπτος, toasted bread prescribed in a dysentery.—ἄρτος ἑσχαρίτης, bread baked on a hearth, a very bad sort.—ἄρτος ζυμίτης, leavened bread, light but not nutritive.—ἄρτος καθαρός, bread made of fine flour.—ἄρτος κλιβανίτης, testaceous bread, so called from κλίβανος, a moveable oven, the vessel in which it was baked; it was very dry but not nourishing.—ἄρτος ἐγκρυφίης, subcineritious bread baked under the embers, which was the worst sort.—ἄρτος ὀβελιαῖος, bread spitted and roasted, which was rather nutritious.—ἄρτος σεμαδαλίτης, bread made of fine flour, mentioned by Hippocrates, Galen, and Athenæus, as very nutritious.—ἄρτος ἐκ χυθόρα, bread made of alica, which was extremely nourishing.—ἄρτος σελιγιτίης, bread made of

siligo, the purest and finest flour; this was a Roman bread, and the most nutritive of all.—ἄρτος ἀντυπίης, bread of the wheat itself, or unsifted meal, which was reckoned the least nutritive of all. *Hippocrat. de Vict. in acut. Morb.* l. 2, &c.; *Gal. Exeges. et de Alim. Fac.* l. 1; *Athen. Deipnos.* l. 3; *Gorr. Def. Med.*; *Foes. Econom. Hippocrat.*

ARTOTYR'TÆ (*Ecc.*) panem et caseum offerentes, heretics in the second century offering bread and cheese at the communion. *Epiphan. Hæres.* 49; *S. Augustin. Hæres.* 27; *Baron. Annal. Ann.* 173; *Du Pin. Bibl. des Aut. des premières Siècles.*

ARTUS (*Anat.*) quod membra membris artentur, 1. A limb. τὰ κἄλα, the extreme and most compacted parts of the body. *Fest. de Verb. Signific.*; *Castell. Lex. Med.* 2. A joint, the members of which extend themselves from the trunk, and are divided into joints. *Castell.*

ARVA'LES (*Ant.*) the twelve priests appointed by Romulus to celebrate the festival of the Ambarvalia. *Plin.* l. 18, c. 2; *Aul. Gell.* l. 6, c. 7; *Fulgent. de Prisc. Sermon.*

ARVIL (*Archæol.*) Arval, or Arful, funeral rites.—*Arvil supper*, a funeral entertainment formerly made in the northern parts of England.—*Arvil bread*, bread given to the poor at a funeral.

ARUM (*Bot.*) ἄρον, Cuckow-Pint; a plant probably so called from ἴερον, sacred. It has leaves like the *Dracunculus*, which it resembles also in its medicinal virtues. *Diosc.* l. 2, c. 197; *Plin.* l. 24, c. 16.

ARUM, in the *Linnean system*, a genus of plants, Class 21 *Monoecia*, Order 9 *Polyandria*.

Generic Characters. CAL. spathe one-leaved.—COR. none.—STAM. filaments none; anthers sessile.—PIST. germ each obvate; style none; stigma bearded with villose hairs.—PER. berry globular; seeds several.

Species. The species are mostly perennials, as—*Arum crenatum*, seu *muscivorum*, seu *dracunculus*, Hairy-sheathed Arum.—*Arum dracunculus*, *Dracontium*, seu *Dracunculus polyphyllus*, Long-sheathed Arum, or Common Dragon.—*Arum Dracontium*, Short-sheathed Arum or Green Dragon.—*Arum esculentum*, seu *Caladium aquatile*, Esculent Arum, or Indian Kale.—*Arum maculatum*, Common Arum.—*Arum arisarum*, seu *Arisarum latifolium*, Broad-leaved hooded Arum, or Friar's Cowl, &c. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Bot.*; *Raii Hist. Plant.*; *Tournef. Inst.*; *Boerhaav. Ind. &c.*

ARUM is also the *Calla Æthiopica et orientalis* of Linnæus.

ARUNCO (*Zool.*) the Chili toad.

ARUNCUS (*Bot.*) from ἄρυγος, hair hanging from the chin of goats, Goat's-beard; a species of *Spiræa* of Linnæus. *Aristot. Hist. Anim.* l. 9, c. 4; *Plin.* l. 8, c. 50.

ARUNDELIAN marbles (*Ant.*) ancient marbles illustrative of the history and mythology of the ancients, so called from the Earl of Arundel, by whom they were transported from the island of Paros into England. They contain the principal epochas in the Athenian history, from the first year of Cecrops, 1582 years B. C. to 354 years B. C. *Selden. Marmor. Arundel.*; *Prid. Marmor. Oxoniens.*

ARUNDINA'CEA (*Bot.*) reedy, an epithet for some plants.

ARUNDINE'TUM (*Bot.*) a place where reeds grow.

ARUNDINEUS (*Bot.*) Arundineous, abounding in reeds.

ARUNDINO'SUS (*Bot.*) Arundinose, or full of reeds.

ARUNDO (*Bot.*) from *areo*, to dry; a plant so called because, *arescit*, it dries quickly. It has some medicinal virtues, particularly if applied as a powder to wounds; it contracts any matter that is lodged in them. *Plin.* l. 16, c. 35; *Oribas. de Morb. Curat.* l. 3, c. 32; *Aet. Tetrab.* l. 1.

ARUNDO, in the *Linnean system*, a genus of plants, Class 3 *Triandria*, Order 2 *Dizygia*.

Generic Characters. CAL. two-valved; valves oblong.—

COR. two-valved; *valves* oblong; *nectary* two-leaved.—
STAM. *filaments* three; *anthers* forked at both ends.—
PIST. *germ* oblong; *styles* two; *stigmas* simple.—PER.
none; *seed* single.

Species. The species are perennials, as the—*Arundo bambu*, *Bambu*, *Mambu*, *Bambos arundinacea*, *Tabacir*, seu *Mambu arbor*, seu *Canna*, &c. *Bamboo Cane*.—*Arundo donax*, seu *sativa*, Cultivated Reed.—*Arundo phragmites*, Common Reed.—*Arundo epizegos*, seu *Calamagrostis minor*, Small Reed-Grass.—*Arundo calamagrostis*, *Calamagrostis*, seu *Gramen arundinaceum*, Wood Reed-grass.—*Arundo arenaria*, seu *Spartum spicatum*, Sea Reed-grass. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tournef. Instit.*; *Boerhaav. Ind.*

ARUNDO is also the *Canna Indica*, the *Saccharum officinarum*, and the *Calamus rotany* of Linnæus.

ARUNDO (*Mech.*) the reed or instrument which separated the threads of the warp.

ARURA (*Law*) vide *Arrura*.

ARUSPEX (*Ant.*) i. e. *Avispex*, because *inspexit*, he inspected the entrails of birds; a soothsayer or diviner who examined the birds, in distinction from the *augurs*, who examined the entrails, &c. of victims at the sacrifices for the purpose of divination; but the aruspex used also to examine the entrails. The college of the Aruspices grew into an order, as we learn from an inscription dug up, at Rome, in 1605; L. FONTEIUS. FLAVIANUS HARUSPEX. AUGG. CC. PONTIFEX. DICTATOR. ALBANUS. MAG. PUBLICUS HARUSPICUM ORDINI HARUSPICUM. LX. D. D. *Cic. de Div.* l. 1, c. 41; *Dionys. Hal.* l. 2; *Plin.* l. 7, c. 3; *Val. Max.* l. 1, c. 1; *Q. Curt.* l. 7, c. 7; *Herodian.* l. 4, c. 12; *Jul. Obseq. de Prodig.*; *Firmic. Astron.* l. 2; *Isid. Orig.* l. 8, c. 9; *Buleng. de Sort.*; *Ursat. de Not. Roman. apud Græv. Thes. Antiq.* vol. xi.

ARYTÆNO-EPIGLOTTI (*Anat.*) fleshy *fasciculæ* fixed to the Arytænoides and the Epiglottis.

ARYTÆNOIDES (*Anat.*) ἀρυταννοειδής, from ἀρύττω, a cup, and ἴδος, a figure funnel shaped; Arytenoides two cartilages constituting the head of the Larynx. *Oribas. Med. Coll.* l. 24, c. 9.

ARYTÆNOIDÆI (*Anat.*) a name for some muscles of the Larynx.

ARYTHMUS (*Med.*) ἀρυθμος, from α, priv. and ρυθμός, rhythm, signifies, properly, a modulation of time in music, but is taken also for order and harmony in other things. The word is used by Galen for the pulse not modulated according to nature, in opposition to the ἑρυθμος, or just modulation. *Gal. de Diff. Puls.* l. 1, c. 9.

A'S (*Ant.*) from æs, brass, because money was first coined from brass; 1. a Roman pound weight containing 12 ounces. 2. Any thing divided into equal parts, as an inheritance, land, &c. whence *ex asse hæredem facere*, to make one heir to the whole fortune. *Mart.* l. vii. epig. 65.

Hæredem Fabius Labienum ex asse reliquit.

3. The smallest brass coin, as a farthing, 12 of which made a denier, equal to $\frac{2}{3}$ English money. *Var. de Lat. Ling.* l. 5; *De Vit. Pop. Roman.* l. 1, *apud Non.* l. 12, c. 50; *Plin.* l. 33, c. 3; *Columel.* l. 5, c. 3; *Vitruv. de Architect.* l. 3, c. 1; *Suet. in August.* c. 91; *Gal. de Pond.*; *Macrob. Saturn.* l. 2, c. 4; *Gronov. de Pec. Vet.*; *Salmas. in Vopisc.*; *Patus de Vet. Ponder. &c. &c. apud Græv. Thes. Antiq.* vol. v. xi.

A'SA dulcis seu odorata (*Chem.*) vide *Benzoicum*.—*Asa fœtida*, a gum resin of a very fetid smell; which is an excellent remedy in hysterical disorders, a good sudorific and strengthener of the stomach. It is extracted from a plant

of the same name, a native of Persia. *Kempf. Amœnitat.*

ASA fœtida (*Bot.*) a plant from which *asa fœtida* is extracted. It is the *Ferula assa fœtida* of Linnæus.

ASAPHA'TUM (*Med.*) a sort of serpigo, or intercutaneous itch, generated in the pores like worms.

A'SAPHEIS (*Med.*) ἀσαφήεις, obscure; applied to patients who do not utter their words distinctly. *Hipp. Prorrhēt.* l. 1.

A'SAPPI (*Mil.*) vide *Azapes*.

A'SAR (*Com.*) a gold coin at Ormuz, in the Persian Gulf, worth 6s. 8d. sterling.

ASARABA'CCA (*Bot.*) the *Asarum* of Linnæus.

ASAR'CON (*Nat.*) ἄσαρκον, fleshless; applied by Aristotle to the head, in distinction from the fleshy parts.

A'SARI pulvis compositus (*Med.*) a powder made of the leaves of Asarum, Marjoram, Marum, and Lavender.

ASARINA (*Bot.*) the *Antirrhinum* of Linnæus.—*Asarina erecta*, the *Chelone penstemon* of Linnæus.

ASARITES (*Med.*) ἀσαρίτης, from ἄσαρον, a diuretic wine made of Asarum. *Diosc.* l. 5, c. 68.

ASAROTA (*Ant.*) ἀσαρότα, from α, priv. and σάρω, to sweep; a fine pavement laid in dining-rooms of such small tiles that it appears never to be swept. They were artificially inlaid in different colours. *Stat. Sylv.* l. 3, v. 35.

— *varias ubi picta per artes*

Gaudet humus, suberantque novis assarota figuris.

Plin. l. 36, c. 25; *Vitruv. de Architect.* l. 6, c. 5, et *Philand. ad Loc.*; *Salmas. in Solin.* p. 1214; *Gyrard. Oper.* tom. 2, p. 643; *Rhodig. Antiq. Lect.* l. 21, c. 32.

A'SARUM (*Bot.*) ἄσαρον, from α, priv. and σάρω, to adorn, Asarabacca, or Wild Spikenard; a plant so called, according to Pliny, because it was not inserted in garlands. It has leaves like ivy, and its roots are heating and diuretic. *Dioscor.* l. 1, c. 9; *Plin.* l. 12, c. 13; *Oribas. Med. Coll.* l. 11; *Aet. Tetrab.*, serm. 1; *Paul. Æginet. de Re Med.* l. 7, c. 3; *Myrep. de Antidot.*

ASARUM, in the Linnean system, a genus of plants, Class 11 Dodecandria, Order 1 Monogynia.

Generic Characters. CAL. perianth one-leaved.—COR. none.—STAM. *filaments* twelve; *anthers* oblong.—PIST. *germ* inferior; *style* cylindric; *stigma* stellate.—PER. *capsule* coriaceous; *seeds* several.

Species. The species are perennials, as the—*Asarum Europæum*, *Canadense*, and *Virginicum*. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb. &c.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tournef. Instit.*; *Boerhaav. Ind.*

ASARUM is also a species of the *Cytisus* of Linnæus. *Bauh. &c.*

ASA'SI (*Bot.*) a tree growing on the coast of Guinea, the infusion of whose leaves cures the tooth-ache.

ASBESTINUM (*Nat.*) or *Asbestos*, ἄσβεστον, inextinguishable, from α, priv. and σβέννυμι, to extinguish; a kind of flax of which cloth was made that was cleansed by fire, as tobacco pipes are, but was not consumed. *Plin.* l. 19, c. 1; *Ferrar. de Vet. Lucern. &c. apud Græv. Thes. Antiq. Roman.* tom. 12, &c.

ASBESTINUM (*Mech.*) the cloth or paper which was made of the Abestinum.

ASBESTUS (*Min.*) ἀσβεστος, inextinguishable; a kind of stone which being set on fire cannot be quenched. *Plin.* l. 37, c. 10; *Solin.* p. 7; *Isid. Orig.* l. 16, c. 4.

ASBESTUS, in the Linnean system, a genus of minerals, Class *Talcose Earths*, consisting of carbonate of magnesia, silicea, and generally alumina.

Species. The species consist of such as have all their fibres parallel, as—*Asbestus amiantus*, seu *Amiantus fibrus*, *Amiant*, or *Flexible Asbestos*.—*Asbestus vulgaris*, or *Amiantus immaturus*, Common *Asbestos*, or *Asbcst*; and

of such as have the fibres interwoven and breaking into obtuse-angled fragments, as—*Asbestus suber*, *Amiantus corticosus*, *Asbestus fibrus flexibilibus*, seu *Suber montanum*, Elastic Asbestos, or Mountain Cork.—*Asbestus lignum*, Ligniform Asbestos.—*Asbestus caro*, seu *Amiantus corticosus flexilis*, Mountain Leather.

ASCALABOTES (Zool.) ἀσκαλαβάτης, a kind of lizard. *Gal. de Simpl.* l. 2.

ASCALAPHUS (Ent.) a division of the genus Myrmeleon, according to Fabricius, comprehending those insects of this tribe having the feelers nearly equal, jaw ciliate, lip horny, rounded.

ASCALIA (Bot.) ἀσκαλία, an artichoke bottom. *Theophrast. Hist. Plant.* l. 6, c. 4; *Plin.* l. 21, c. 16.

ASCALONIA (Bot.) a kind of onion, so called from the town of Ascalon.

ASCALONITIDES (Bot.) Eschalots, or barren onions.

ASCARDAMYCTES (Med.) ἀσκαρδαμύκτης, one who keeps his eyes fixed without twinkling. *Hippocrat. de Epidem.* l. 2.

ASCARIDES (Ent.) ασκάριδες, from ἀσκήω, to move; small worms bred in the *intestinum rectum*, which cause by their motion a continual irritation and titillation. *Gal. Exeges. Vocab. Hippocrat.*; *Aet. Tetrab.* 1, serm. 2, c. 41; *Paul. Æginet. de Re Med.* l. 4, c. 58; *Actuar. de Meth. Med.* l. 1, c. 21.

ASCARIDES, in the *Linnean system*, a genus of insects, Class *Vermes*, Order *Intestina*.

Generic Characters. Body round, elastic; head with three vesicles; tail obtuse; intestines spiral and milk-white.

Species. The species are distinguished according to the animal which they infest, namely—Those infesting the Mammalia, *Ascaris vermicularis*, in the intestines of children; *Ascaris canis*, in the intestines of the dog, &c.; those found in birds, as *Ascaris aquilæ*, *cornicis*, &c. in the intestines of an eagle, crow, &c.—Those infesting reptiles, as *Ascaris testudinis lacertæ*, &c. in the intestines of the tortoise, lizard, &c.—Those infesting fishes and those infesting worms.

ASCARINA (Bot.) from *ascaris*, to which the shape of the anther is like; a genus of plants, Class 22 *Dioecia*, Order 1 *Monandria*.

Generic Character. CAL. Ament filiform.—COR. none.—STAM. filaments single.—PIST. germ globose; style none; stigma flat.—PER. drupe; seed globose.

The only species is *Ascarina polystachia*, a shrub, native of the Society Isles. *Linn. Spec. Plant.*

ASCARIS (Ent.) vide *Ascarides*.

ASCAULES (Ant.) ἀσκαύλης, a bagpipe.

ASCENDANT (Law) such relations as have gone before in families reckoned upwards.

ASCENDANT (Archit.) an ornament in masonry and joiner's work which borders the three sides of doors, windows, and chimneys; it is otherwise called *chambranle*.

ASCENDANT (Astrol.) that degree of the ecliptic which rises at a person's nativity, and is supposed to have an influence on his future life. This is otherwise called the *First House*, the *Angle of the East*, the *Oriental Angle*, or the Significator of life. Hence the expression, "This or that planet ruled in his Ascendant."

ASCENDING (Astron.) an epithet applied to any star, degree, or point in the heavens, which is rising above the horizon.—*Ascending Latitude*, the latitude of a planet when going towards the North.—*Ascending Node*, that point of a planet's orbit where it crosses the ecliptic whilst proceeding northward. It is otherwise called the *Northern Node*, and is marked by the character ☊ representing a node or knot, in distinction from the descending node.—*Ascending signs*, those which are upon the ascent, or rising, from the nadir to the zenith.

ASCENDING stem (Bot.) *caulis ascendens*, that part of a plant

which rises above the ground in the form of wood and leaf, in distinction from the *caulis descendens*, the descending stem or root.

ASCENDING (Anat.) an epithet for that part of the aorta from where it leaves the heart to its great curvature or arch.

ASCENSION Day (Ecc.) a festival observed in the Christian church ten days before Whitsuntide, in commemoration of our Saviour's ascension into Heaven. It is otherwise called *Holy Thursday*.

ASCENSION (Astron.) that degree of the equator reckoned from the first of Aries eastward, which rises with a star, or any point in the Ecliptic.—*Ascension* is right or oblique.—*Right ascension*, that degree of the equinoctial reckoned from Aries which rises with the sun, or a star, in a right sphere.—*Right ascension of the mid-heaven* is the right ascension of that point of the equator which is in the meridian.—*Oblique ascension*, that degree of the equinoctial reckoned from Aries which rises with the sun or a star in an oblique sphere.—*Arc of oblique ascension*, an arc of the horizon intercepted between the beginning of Aries and the point of the Equator, which rises with a star or planet in an oblique sphere. This varies with the latitude of the place.—*Refraction of ascension* [vide *Refraction* and *Astronomy*]

ASCENSIONAL Difference (Astron.) is the difference between the right and oblique ascension of the same point in the sphere; or it is the space of time the sun rises or sets before or after six o'clock.

ASCENSUS morbi (Med.) the ascent or increase of a disease.

ASCENT (Nat.) *Ascensus*, from *ad* and *scando*, to climb; the motion of a body tending upward.—*Ascent of fluids*, the ascent or rising of fluids in a glass tube, or any vessel, above the surface of their own level.

ASCENT (Log.) a sort of reasoning by which one ascends from particulars to universals.

ASCENT (Chem.) a sort of sublimation and distillation.

ASCESTERICUM (Ecc.) a Monastery.

ASCETÆ (Ant.) the same as *Athletæ*.

ASCETERIA (Ecc.) ἀσκητήρια, from ἀσκήω, to exercise; cloisters or places where people gave themselves up to meditation and prayers. *Theodoret.* l. 6, &c.

ASCHIA *Thymallus* (Ich.) the Grayling or Umber; a sort of fish, the fat of which is used in medicine to take away specks from the eyes.

ASCIA (Med.) from ἀξίον, an axe or hatchet; a bandage in the form of the axe. *Gal. Com. 2 in Hippocrat. de Art.*

ASCIDIA (Ent.) a genus of animals, Class *Vermes*, Order *Mollusca*, found in the sea, and adhering by their base to the rocks.

Generic Characters. Body fixed roundish.—*Apertures* two, one on the summit, the other lower.

Species. The species of this genus are principally found in the sea, and adhere by their base to rocks, shells, and other submarine substances. They are more or less gelatinous, and have the power of squirting out the water they take in, and alternately contracting and dilating themselves; some of them are esculent, most of them sessile, though a few are furnished with a long stalk or tubular stem.

ASCIDIFORMIS (Bot.) bottle-shaped; an epithet for the *bractæ* in the *Ascium* and *Ruyschia*.

ASCIDIUM (Bot.) the Bottle, a species of *fulcrum*, which is a foliaceous body, cylindrical, and hollow, having its mouth furnished with a complete cover that opens occasionally. It is either *sessile*, sitting, i. e. supported on a foot stalk, or *petiolatum* pedicelled, i. e. situated at the extremity of a leaf, as in the *Nepenthes distillatoria*. This body generally contains pure water.

ASCIA (Astron.) ἀσκήω, from α, priv. and σκία, shade; in-

habitants of the globe having no shadow, such as those in the torrid zone, who twice a year have their sun at noon in the zenith. *Plin.* l. 2, c. 73.

ASCITES (*Med.*) ἀσκίτης, from ἀσκος, a bottle; a species of dropsy, distending the belly in the shape of a bottle. *Aret. de Sign. et Caus. Morb. Acut.* l. 2, e. 1; *Cels. de Re Med.* l. 3, e. 21; *Oribas. Synops.* l. 9, e. 23; *Aet. Tetrab.* 3, serm. 2, c. 21; *Paul. Æginet.* l. 3, c. 48.

ASCITES has been classed by Cullen as a genus of diseases, Class *Cachexia*, Order *Intumescencia*.

ASCITICUS (*Med.*) aseitick; an epithet which signifies labouring under an ascites.

ASCIMUM (*Bot.*) a genus of plants, Class 13 *Polyandria*, Order 1 *Monogynia*.

Generic Characters. CAL. perianth five-leaved; leaflets roundish.—COR. petals five.—STAM. filaments very many; anthers oblong.—PIST. germ ovate; style very short; stigma headed.—PER. berry one-celled; seeds very many.

Species. The species are *Ascium morantea*, a shrub, native of Guiana.—*Ascium violaceum*, a shrub, native of Guiana. *Linn. Spec. Plant.*

ASCLEPIA (*Ant.*) Ἀσκληπεία, a festival in honour of Æseulapius, celebrated all over Greece, but with the greatest solemnity, by the Epidaurians. It was also called ἱερὸς ἀγών, the sacred eontest, because poets and musicians contended for victory at this festival. *Plat. in Ion.*

ASCLEPIADÆ (*Biog.*) the descendants of Æseulapius, of whom Hippocrates was one in the eighteenth degree.

ASCLEPIADÆAN *verse* (*Poet.*) a sort of verse; so called from Aselepias, the inventor, consisting of four feet, a spondee, ehoriambus, and two daetyls; or a spondee, two ehoriambus, and a pyrrhieius.

Hor. l. 1, od. 1, v. 1.

Macē | nās ātāvīs | tēitē | rēgībūs.

Or, according to the second form,

Mæē | nās ātāvīs | edītē re | gībūs.

Plotin. & Mar. Vict. de Met.; Serv. de Cent.

ASCLEPIAS (*Bot.*) a genus of plants, Class 5 *Pentandria*, Order 2 *Digynia*.

Generic Characters. CAL. perianth five-cleft.—COR. monopetalous; divisions ovate-aeuminate; nectaries five, fleshy or eowled.—STAM. filaments five; anthers oblong; pollen collected into ten corpuscles.—PIST. germs two oblong; styles two subulate; stigma common to both.—PER. follicles, two large oblong; seeds numerous; receptacle membranaceous.

Species. The species are mostly perennials and shrubs. Of the former kinds are the—*Asclepias Syriaca*, *Apocynum Syriacum*, seu *Beidessar*, Syriou Swallow-Wort.—*Asclepias incarnata*, seu *Apocynum Canadense*, Flesh-coloured Swallow-Wort, &c. Of the latter kind are the—*Asclepias undulata*, seu *Apocynum Africanum*, Wave-leaved Swallow-Wort.—*Asclepias gigantea*, seu *Ericu*, Curl-flowered gigantic Swallow-Wort.—*Asclepias curassauica*, seu *Curassoa*, Swallow-Wort or Bastard Ipecaeu-anha, &c. *J. Bauhin. Hist. Plant.; C. Bauh. Pin.; Ger. Herb.; Park. Theat. Botan.; Raii Hist. Plant.; Tourn. Inst.; Boerh. Ind.; Linn. Spec. Plant.*

ASCLEPIOS (*Med.*) 1. A dry Smeigma. *Paul. Ægin.* l. 7, c. 13. 2. A troche. *Aet. Tetrab.* 4, serm. 2, e. 50. 3. A Collyrium. *Gal. Ex. Scribon.*

ASCODROGITES (*Ecc.*) Heretics in the second century, who, under the pretence of inspiration, introduced bacchanals into their worship. *August. Her.* 62; *Philast. de Har. Baron. Annal. Ann.* 173.

ASCOLIA (*Ant.*) Ἀσκολία, from ἀσκος, a bottle; a festival among the rustic Athenians in honour of Bacchus, at

which they leaped upon a bladder filled with oil and wine. *Virg. Georg.* l. 2, v. 384.

— atque inter pocula lati
Mollibus in pratis unctos saliere per utres.

Schol. in Aristoph. Plut. act 5, seen. 1; *Phurnut. de Bacch.*

ASCOLIA'SMUS (*Ant.*) ἀσκολισμός, from ἀσκος, a leathern bottle; a game among boys of beating one another with thongs.

ASCO'MA (*Med.*) ἄσκαμα, the eminence in the pubes at years of maturity, particularly in the female. *Ruf. Ephes. Appell. Part. Corp. human.* l. 1, c. 11.

ASCRIP'TITI (*Ant.*) *Ascriptivi*, or *Adscriptivi*, supernumerary soldiers, who served to supply the losses in the legions. *Varr. de Lat. Ling.* l. 6, ct de *Vit. Pop. Rom.* l. 3; *Lamprid. in Alex. Sever.; Trebell. Poll. de Balist. Tyrann.*

ASCRIP'TITI (*Archæol.*) 1. A kind of villeins who attach themselves to some new lord, and become his vassals. 2. Foreigners, or aliens, who are newly admitted to the freedom of a city.

ASCYROIDES (*Bot.*) the same as *Ascyrum*.

ASCYRUM (*Bot.*) ἀσκυρον, from α, priv. and σκύρος, rough, St. John's Wort; a plant very similar to the *Hypericum*, but the leaves larger and thicker; the seeds in hydromel are good for the sciatica and the bile. *Diosc.* l. 3, c. 172; *Plin.* l. 27, c. 5; *Oribas. Med. Coll.* l. 11.

ASCYRUM, a genus of plants, Class 18 *Polyadelphia*, Order 4 *Polyandria*.

Generic Characters. CAL. perianth four-leaved.—COR. petals four-ovate.—STAM. filaments numerous; anthers roundish.—PIST. germ oblong; style scarcely any; stigma simple.—PER. capsule oblong; seeds numerous.

Species. The species are—*Ascyrum*, *Crux Andrea*, seu *Hypericoïdes*, Common Ascyrum, or St. Andrew's Cross, native of Virginia.—*Ascyrum*, *Hypericoïdes*, seu *Hypericum pumilum*, seu *sempervirens*, a shrub, native of Virginia.—*Ascyrum villosum*, *Hypericum pilosum*, seu *Virginianum*, a shrub, native of Virginia.—*Ascyrum stans*, seu *Hypericum tetrapetalum*, a shrub, native of North America. *Ger. Herb.; J. Bauh. Hist. Plant.; C. Bauh. Pin.; Park. Theat. Botan.; Raii Hist. Plant.; Tourn. Inst.; Boerhaav. Ind.*

ASDENIGI (*Min.*) Blood-stone.

A'SE (*Med.*) ἄσ, loathing of food from a conflux of humours to the stomach. *Hipp.* l. 5, aphor. 61, &c.

A'SEB (*Min.*) the same as *Alumen*.

A'SEB (*Med.*) the same as *Hydroa*.

A'SEGEN (*Bot.*) vide *Sarguis Draconis*.

A'SEKI (*Polit.*) or *Asekai*, a Turkish name for the favourite sultanas who have brought forth sons.

A'SELLI (*Astron.*) two stars of the fourth magnitude, which, according to Pliny, portend storms. *Plin.* l. 18, c. 35.

A'SELLUS (*Ich.*) Cod-fish, or Keeling, was formerly reckoned a genus of fishes by Willoughby, but is classed in the Linnean system under the *Gadus*. *Plin.* l. 9, c. 16; *Wil. Ichth.; Raii Synop.*

A'SEMOS (*Med.*) ἄσημος, from α, priv. and σημα, a sign; an epithet, signifying without the ordinary signs or reasons, applied to diseases and their changes. *Hipp. Epid.* l. 2.

A'SGANDES (*Ant.*) ἀσκανδης, a Persian messenger or courier. *Plut. in Alex.*

ASH (*Bot.*) a well known tree, the timber of which is next to the oak in value, being of service in every sort of handicraft. The tree is raised best by the keys gathered, when they are about to fall, in October; they are sown in January, and best transplanted in October or November; they are felled when the sap is at rest, from October to November, but the lopping of pollards is better done in the spring. When the young plants are cut down they throw up straight shoots called *ground-ash*. The principal sorts

- of ash are the Common, Flowering, and Manna Ash, the *Fraxina*; Mountain Ash, the *Sorbus*; Poison Ash, the *Rhus* in the Linnean system.—*Ash-weed*, the *Egopodium* of Linnæus.
- ASHA'RIANS (*Theol.*) a sect of Mahometans opposed to the Motazales, or orthodox sect.
- ASHES (*Ant.*) a mode of punishment, in use among the Persians, of throwing criminals from a great height into ashes, with which they were suffocated to death.
- ASHES (*Chem.*) the residue of combustion, in general containing earth and fixed salts.—*Vegetable ashes* are produced from the burning of vegetable substances, as fuel.—*Animal ashes*, produced from animal substances, as the *cornu cervi calcinatum*.—*Mineral ashes*, the calces of minerals.
- ASHES (*Mech.*) the skimmings of metal among the letter-founders, and the sweepings of their house, from which refiners afterwards draw the remainder of the metal by the fierceness of their fires.—*Fat ashes*, those which are heavy and contain much metal.—*Lean ashes* are light, containing little metal.
- A'SH-FIRE (*Chem.*) when the vessel, containing the substance to be heated, is covered with ashes.
- A'SH-HOLE (*Mech.*) the hole in the earth of a furnace, which receives the ashes to be taken away.
- A'SHLAR (*Mason.*) free stone as it comes from the quarry.
- A'SHLERING (*Carpent.*) quartering to tuck to in garrets perpendicular to the floor.
- ASHORE (*Mar.*) on the shore or land, as opposed to aboard; but a ship is said to be *ashore* when she has run aground, or on the sea coast.
- ASH-WEDNESDAY (*Ecc.*) the first day in Lent, so called from the ancient custom of fasting in sack-cloth and ashes.
- ASIA'RCHE'S (*Ant.*) ἀσιάρχης, a governor of the provinces, who used to preside over the public games.
- ASTIDE (*Lit.*) a term in plays for what is to be said on the stage without being heard by the other performers.
- A'SILUS (*Ent.*) an insect so called, either from its infesting *asellos*, young asses, or from ἄσις and ἰδύς, both which signify mud. It was used, according to Pliny, as an amulet, and was called *oestron* by the Greeks. *Plin.* l. 11, c. 28; *Aldrov. Ichth.*—*Asilus marinus*, οἰστρος θαλάσσιος, the sea breeze, which gets under the fins of the Thunny, and stings them so that they leap out of the water. *Plin.* l. 11, c. 29.
- ASILUS, in the Linnean system, a genus of insects, of the order *Diptera*.
- Generic Characters.* Mouth with a horny sucker.—*Antennæ* filiform.—*Body* conic.
- Species.* The principal species of this genus are the—*Asilus crabroniformis*, nearly equalling a hornet in length.—*Asilus gibbosus*, larger than the former, a native of Lapland.—*Asilus flavus*, the size of a wasp, and of a black colour, with a yellow abdomen.—*Asilus forcipatus*, of a blackish brown colour, and considerably smaller than the former.—*Asilus tipuloides*, one of the smallest species.
- ASINA'RIA (*Ent.*) Ἀσινάρια, a festival, in Sicily, in commemoration of the victory obtained over the Athenians, when Demosthenes and Nicias were taken prisoners; it was so called from the river Asinarius, near which the battle was fought. *Demosthen. in Nic.*
- A'SINUS (*Zool.*) the Ass is classed, in the Linnean system, as a species of the *Equus*, or Horse.
- A'SIO (*Or.*) horned owl, a species of the *Strix* of Linnæus; a bird, so called because it has ears like an ass.
- ASIRACUS (*Ent.*) ἀσιράκος, a species of locusts.
- A'SITI (*Med.*) ἄσιτοι, from α, priv. and σιτίον, food; an epithet for those abstaining from food.
- A'SJOGAM (*Bot.*) an Indian tree, the juice of whose leaves is good for the colic. *Raii Hist. Plant.*

- A'SIUS (*Min.*) vel *Assius Lapis*, ἄσιος ἢ ἄσσιος λίθος; a stone, so called from Ἄσσιος, a city of Troas. It is a soft, friable, and topous substance, having a fine powder growing upon it called the *Flower of the Asian Rock*, which is colligative, digestive, and preservative like salt. *Ccl.* l. 4, c. 24; *Dioscor.* l. 5, c. 142; *Gal. de Simpl.* l. 9; *Oribas. Synop.* l. 2, c. 12; *Aet. Tetrabib.* 2, serm. 3, c. 38; *Paul. Æginet. de Re Med.* l. 7, c. 3; *Actuar. de Meth. Med.* l. 6, c. 5.
- ASLA'NI (*Com.*) the Turkish name for a Dutch dollar.
- A'SMAGA (*Chem.*) mixing certain metals together.
- ASP (*Zool.*) a very small kind of serpent, the *Coleber aspis* of Linnæus, peculiar to Lybia and Egypt, the bite of which is deadly: its poison is so quick in the operation that it kills without the possibility of applying a remedy. Those who are bitten by it die within three hours, and their death, which comes on by sleep, is attended with no pain; circumstances which induced Cleopatra to adopt this mode of dispatching herself.
- ASP (*Bot.*) or *Aspen-tree*, a kind of poplar, the *Populus tremula* of Linnæus, the leaves of which are remarkable for their perpetually tremulous motion.
- ASPADIA'LIS *Ischuria* (*Med.*) suppression of the urine from the Urethra being imperforated.
- ASPA'LATHUS (*Bot.*) ἀσπάλθος, a plant which, according to Theocritus, grows on the mountains. *Theocrit. Idyl.*

Ἐν γὰρ ὄρει ῥάμνοι τε καὶ ἀσπάλθοι κομῶνται.

- The scholiast, on this verse, makes the *Aspalathus* to be a sort of *Acanthus*, so called because its thorns cannot be easily, ἀσπασθαι, plucked out of the bodies of those who are beaten with it; wherefore, according to Plato, tyrants were scourged with it, in Tartarus. It is of a heating, astringent, and abstersive quality, good as a decoction for aphthæ and removing impurities. *Plat. de Repub.* l. 10; *Dioscor.* l. 1, c. 19; *Plin.* l. 24, c. 13; *Oribas. Med. Coll.* l. 11; *Aet. Tetrab.* 1, serm. 2, c. 196; *Paul. Æginet. de Re Med.* l. 7, c. 3.
- ASPALATHUS, in the Linnean system, a genus of plants; Class 17 *Diadelphia*, Order 4 *Decandria*, in English *Rhodium* or *Rose-Wood*.
- Generic Characters.* CAL. perianth one-leaved.—COR. papilionaceous.—STAM. filaments ten; anthers oblong.—PIST. germ ovate; style simple; stigma sharp.—PER. legume ovate; seeds generally two.
- Species.* The species are mostly shrubs and natives of the Cape of Good Hope, as—*Aspalathus spinosa*, seu *Genistella spinosa Africana*, Thorny *Aspalathus*, or *Rose-wood*.—*Aspalathus chenopoda*, *Genista Africana*, *Chenopodaria*, seu *Chenopoda monomatopensis*, &c.
- ASPALATHUS is also the *Robinia spinosa* and *pygmea*, the *Spartium spinosum*, and the *Amerimum ebcnus* of Linnæus. *Bauh. Hist. Plant.* &c.
- A'SPALAX (*Bot.*) ἀσπάλαξ, a plant which, according to the description of Theophrastus, resembles the crocus in having more root than leaf. *Theophrast. Hist. Plant.* l. 1, c. 11; *Plin.* l. 19, c. 6.
- ASPA'RAGIN (*Chem.*) the juice extracted from *Asparagus*.
- ASPA'RAGUS (*Bot.*) ἀσπαραγός, a well known plant, so called, according to Varro, because it springs up from rough twigs. The root of this plant is one of the five opening roots, and it is also of singular efficacy in disorders of the eye. *Theophrast.* l. 6, c. 3; *Cato de Re Rust.* c. 6; *Varr. de Lat. Ling.* l. 4; *Colum. de Re Rust.* l. 2, c. 3; *Dioscor.* l. 2, c. 152; *Plin.* l. 19, c. 8, &c.; *Athen.* l. 2, c. 22; *Gal. de Simp.* l. 6; *Oribas. Synop.* l. 2, c. 1; *Aet. Tetrab.* 1, serm. 1; *Paul. Æginet.* l. 7, c. 3.
- ASPARAGUS, a genus of plants; Class 6 *Hexandria*, Order 1 *Monogynia*.
- Generic Characters.* CAL. none.—COR. petals six.—STAM.

filaments six filiform; *anthers* roundish.—*Pist. germ* turbinate; *style* very short; *stigma* a prominent point.—*PER. berry* globular; *seeds* two.

Species. The species are either perennial or shrubs, but mostly the latter, as—*Asparagus officinalis*, Common Asparagus.—*Asparagus frutescens*, *Africanus*, seu *tenuifolius*, Larch-leaved Asparagus.—*Asparagus horridus*, seu *Hispanicus*, Thorny Asparagus.—*Asparagus aphyllus*, seu *Corruda altera*, Prickly Asparagus.—*Asparagus Capensis*, seu *Corruda Africana*, Cape Asparagus, &c. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tournef. Instit.*; *Boerhaav. Ind.*

ASPASIA (*Med.*) a constrictive medicine for the Pudenda Muliebria. *Castell. Lex. Med.*

A'SPECT (*Astron.*) the situation of the stars and planets in respect to each other. These configurations of the planets were regarded by astrologers as having an influence over sublunary affairs, wherefore they were much noticed in the study of astrology. *Aspect* is an angle formed with the earth by the luminous rays of two planets so situated as to be capable of acting upon sublunary natures, according to Kephher, or perhaps more correctly, according to Wolfius, the meeting of luminous rays emitted from two planets to the earth according to their situation with respect to each other. The ancient astronomers reckoned five different aspects; namely, *Conjunction*, *Sextile*, *Quartile*, *Trine*, *Opposition*; the signs and distances of which are as follows:

Name.	Character.	Distance.
Conjunction	♄	0° = 0' sign
Sextile	*	60 = 2 signs
Quartile.....	Π	90 = 3 signs
Trine.....	Δ	120 = 4 signs
Opposition.....	♁	180 = 6 signs

To these Kepler added eight new aspects, as the Demisextile of 30°, Decile of 36°, Octile of 45°, Quintile of 72°, &c. [vide *Astronomy*] *Vitruv. de Architect.* l. 9, c. 4; *Jovian. Pontan. de Cel. Reb.* l. 1; *Kepler. Epitom. Sc.*

ASPECT double (*Paint.*) when a single figure represents two or more different objects.

A'SPEN-TREE (*Bot.*) the *Populus tremula* of Linnæus, or Trembling Poplar, a sort of poplar which is much more tender of its branches than the common kind. [vide *Asp*]

A'SPÉR (*Com.*) a Turkish coin equal to ¾d, also a money of account at Constantinople.

A'SPERA *Arteria* (*Anat.*) the windpipe, so called from the inequality of its cartilages. [vide *Trachea*] *Aret. de Sign. et Caus. acut. Morb.* l. 1, c. 7; *Act. Tetrab.* 2, serm. 3, c. 5.

ASPERGINES (*Med.*) from *aspergo*, to sprinkle; medicines administered by way of sprinkling.

ASPERIFOLLÆ (*Bot.*) Rough leaved, the name of a class in Ray's and Herman's systems, and of the forty-third order in Linnæus' Fragments of a natural Method.

ASPERSED (*Her.*) strewed or powdered.

ASPERUGO (*Bot.*) from *asperitia*, or roughness, which this plant has in common with several genera of the natural order of *Asperifoliæ*. *Plin.* l. 24, c. 17.

ASPERUGO, in the *Linnean system*, a genus of plants, Class 5 *Pentandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* one leaved.—COR. one-petalled.—STAM. *filaments* five; *anthers* oblongish.—*Pist. germ* four; *style* filiform; *stigma* obtuse.—*PER.* none; *calyx* very large; *seeds* four.

Species. The two species are the *Asperugo procumbens*, *Buglossum sylvestre*, seu *Aparine major Plinii*, Pro-cumbent Asperugo, an annual, native of Britain; *Asperugo Egyptica*, *Lycopsis Egyptiaca*, *Anchusa verrucosa*, seu *flava*, Egyptian Asperugo, an Annual, native of Egypt.

ASPERULA (*Bot.*) a diminutive of *asper*, rough because the seeds are roughish; a genus of plants, Class 4 *Tetrandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* small.—COR. one-petalled.—STAM. *filaments* four at the top of the tube; *anthers* simple.—*Pist. germ* twin; *style* filiform; *stigmas* headed.—*PER.* two dry united berries; *seed* solitary.

Species. The species are mostly perennials, as—*Asperula odorata*, *Galum odorata*, *Rubeola montana odorata*, seu *Hepatica stellaria*, Sweet-scented Woodroof.—*Asperula cynanchica*, *Galum cynanchicum*, seu *Rubia cynanchica*, Squinancy-Wort, &c.; but the—*Asperula arvensis*, *Rubia asperula*, seu *Rubeola cærulea*, Blue or Field Woodroof, a native of Britain, is an annual; and the—*Asperula Calabrica*, *Oleander Creticus*, *Thymelæ*, *Sherardia*, *Pavetta fetidissima*, *Rubeola valeriana*, seu *Nerum*, Calabrian Woodroof, a native of Calabria, is a shrub. *Ger. Herb.*; *J. Bauh. Hist. Plant.*; *Park. Theat. Bot.*; *Raii Hist. Plant.*; *Tournef. Inst. Rei Herb.*; *Boerhaav. Ind.*

ASPHALATHUS (*Bot.*) the same as *Aspalathus*.

ASPHALTYTIS (*Bot.*) ἄσφαλτιτις, a kind of trefoil, which Dioscorides calls ἄσφάλτιον. *Dioscor.* l. 3, c. 123.

ASPHALTYTIS (*Anat.*) the last vertebræ of the loins. *Gorr. Defn. Med.*

ASPHALTOS (*Min.*) or Asphaltum, ἄσφαλτος, asphaltos; Jews' Pitch: a solid, brittle, ponderous substance; of a discutient, emollient, and agglutinant quality. It is the *Bitumen Asphaltum* of Linnæus.

ASPHENDAMNOS (*Bot.*) Mountain Maple.

A'SPHODEL (*Bot.*) a plant. [vide *Asphodelus*]

ASPHODELUS (*Bot.*) ἄσφodelος, Asphodel, or King's Spear; a well-known plant, so called from the ashes, σποήον, of the dead bodies that were burnt; because the ancients used to put the asphodel into the tombs, that there might be food in the regions below for the departed spirits. This plant bears on the top of its smooth stalk a small flower, called Anthericus.

Nicand. Theriac.

Ἄσφριδ' ἄσφodelοιο διανθῆος ἄλλοτε ρίζον

Ἄλλοτε καυλεῖον ὑπέρτερον ἀνθήρικον

Πολλὰκι δ' αὖ καὶ σπέρμα ὅτε λαβὸς ἀμφὶς ἀΐξει.

Hippocrat. de Intern. Affect.; *Theophrast. Hist. Plant.* l. 1, c. 16; l. 7, c. 12; *Dioscor.* l. 2, c. 199; *Plin.* l. 22, c. 22; *Schol. in Nicand. Gal. de Simplic.* l. 4; *Oribas. Med. Coll.* l. 11; *Act. Tetrab.* 1, serm. 1; *Paul. Æginet. de Re Med.* l. 7, c. 3.

ASPHODELUS, a genus of plants, Class 6 *Hexandria*, Order 1 *Monogynia*.

Generic Characters. CAL. none.—COR. one-petalled.—STAM. *filaments* six; *anthers* oblong.—*Pist. germ* roundish; *style* subulate; *stigma* truncate.—*PER.* capsule globular; *seeds* several.

Species. The species are mostly perennials; but the *Asphodelus luteus*, Yellow Asphodel, or King's-spear, is a biennial. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tournef. Instit. Rei Herb.*; *Boerhaav. Ind.*

ASPHURELA'TÆ (*Min.*) semi-metallic fossils, fusible by fire, and not malleable when in their purest state. They are intimately connected with sulphur and metallic ores.

ASPHYXIA (*Med.*) ἀσφύξια, from α priv. and σφύξω, to beat like the pulse; an apparent privation of pulse; or according to Cælius Aurelianus, a smallness and amputation of the pulse. *Cæl. Aurel. de Tard. Pass.* l. 4, c. 3; *Gal. de Diff. Puls.* l. 4, c. 3.

A'SPIC (*Bot.*) another name for the *Lavandula Stoechas* of Linnæus.—*Oil of aspic*, an extraction from the root of a plant called Aspic. *Geoff. Mem. de l'Academ.* 1715.

ASPIDION (*Bot.*) a name for the *Alysson* of Dioscorides.

ASPIDISCI (*Ant.*) ἀσπίδοι, dim. of ἄσπις; short shields or ornaments in the fashion of shields.

ASPIDISCOS (*Anat.*) ἀσπίδοσκος, a buckler, is metaphorically applied to the *Sphincter ani*. *Cæl. Aurelian. Tard. Pass.* l. 3, c. 3.

ASPILATES (*Min.*) ἀσπιλατής, from *a*, priv. and σπῖλος, a spot. 1. A precious stone, of a silver colour, good against lunacy. 2. A sparkling gem in Arabia. *Plin.* l. 37, c. 10.

ASPIRATE (*Gram.*) the character in the Greek (marked thus, ᾿) to denote that the vowel must be sounded with a breathing, as ἦ, which is sounded with an *h* instead of *e*. The letter *h*, in modern languages, is called aspirate when it is sounded, in distinction from *h* mute, which is not sounded.

ASPIS (*Ant.*) ἄσπις, in Latin *clipeus*, and in English *shield*, was a defence for the whole body, according to the manner in which it was anciently made. It was composed either of wickers, or light wood, or hides doubled into several folds, and fortified with several plates of metals, to which Homer frequently alludes. They were mostly made of ox-hides, and therefore commonly called ἀσπίδες βοείων. The principal parts of the shield were the ἀντιζῆτρος, περιφέρειαι, or κυκλος, the outermost round, circle, or circumference; ὀμφαλός, in Latin *umbo*, the Boss, jutting out in the middle of the buckler; τελαμών, a thong of leather, whereby they hung over the shoulder. The shields were of different kinds, varying both in size and form. The general form was round, whence ἀσπίδες εὐκυκλοι; but the γέρον was squared, the θυρεός was oblong, the λαοπήιον was composed of hides with the hair, and the πελτροί was a small light buckler. [vide *Militia*] *Poll. Onom.* l. 1, c. 10; *Eustath. in Hom.*

ASPIS (*Zool.*) ἄσπις, Asp, the most venomous of all serpents; is classed by Linnæus under the *Coluber*. Galen makes three species of the Aspis, namely, χερσαία, χελιδονία, and πτυαίς, which is the most pernicious of all. [vide *Asp*] *Gal. de Theriac. ad Pison.* l. 1, c. 8; *Aet. Tetrab.* 4, serm. 3, c. 15; *Paul. Æginet.* l. 5, c. 18.

ASPLENIUM (*Bot.*) ἄσπλιον, or Spleenwort; a plant so called from its efficacy in curing disorders of the spleen. It is a small plant, consisting of leaves only, and is one of the five capillary plants. *Theophrast. Hist. Plant.* l. 9, c. 19; *Dioscor.* l. 3, c. 151; *Plin.* l. 27, c. 5; *Oribas. Med. Coll.* l. 11; *Paul. Æginet. de Re Med.* l. 7, c. 3.

ASPLENIUM, in the *Linnean system*, a genus of plants, Class 24 *Cryptogamia*, Order 1 *Filices*, the *Trichomanes* and *Lingua cervina* of Tournefort.

Generic Character. FRUCTIFICATIONS disposed in right lines under the disk of the frond.

Species. The species are mostly perennials, as—*Asplenium rhizophyllum*, seu *Phyllitis*, Rootleaved Spleenwort.—*Asplenium hemionitis*, seu *Hemionitis*, Mule's-tongue Spleenwort.—*Asplenium nidus*, seu *Scolopendria*, Bird's-nest Spleenwort.—*Asplenium ceterach*, Common Spleenwort, or Miltwaste.—*Asplenium trichomanes*, *Polytrichum* seu *Adiantum*, Common Maidenhair.—*Asplenium septentrionale*, *Acrostichum*, *Holosteum*, *Filicula*, seu *Filix*, Forked Fern, &c. &c. *Dodon. Stirp. Hist.*; *Clus. rar. Plant. Hist.*; *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tournef. Inst.*; *Boerhaav. Ind.*

ASPLENIUM is also the *Acrostichum rufum* and the *Meniscum* of Linnæus.

ASPORTATION (*Law*) a felonious carrying away.

ASPREDO *cernua* (*Ichth.*) the name of a fish answering to the *Perca cernua* of Linnæus. In the head of this fish is a bone good for the stone, &c. *Gesn. de Aquat.*; *Raii Ichth. Aldrov. de Pis.*

ASPRELLA (*Bot.*) the *Equisetum majus* of Linnæus.

A'SPRIS (*Bot.*) the same as *Ægilops*.

ASS (*Zool.*) the well-known animal which is nearly allied to the horse, and is the *Equus asinus* of Linnæus.

Ass (*Her.*) a charge in coats of arms, where it was the emblem of patience, as “*Argent, a fess between three asses passant; in the arms of the Ascough family.*”

A'SSABA (*Bot.*) an Indian plant used medicinally.

A'SSAC (*Chem.*) the same as *Gummi ammoniacum*.

A'SSACH (*Law*) a mode of purgation used in Wales, of clearing oneself from a criminal charge by the oath of 300 men. It was abolished in the reign of Henry the Fifth. 1 Hen. 5.

ASSA-FE'TIDA (*Chem.*) vide *Asa*.

ASSAI (*Mus.*) Italian for an augmentative expression which in any composition indicates that the time must be accelerated or retarded, as *allegro*, quick; *allegro assai*, still quicker; *adagio*, slow; *adagio assai*, still slower.

A'SSALA (*Bot.*) Nutmeg.

ASSA'LLÆ (*Ent.*) worms that breed among planks.

ASSANE'GI (*Min.*) the powder that falls off from the walls of salt in the salt mines.

A'SSANUS (*Com.*) a weight among the ancients, consisting of two drams. *Gal. de Ponder. et Mensur.*

ASSARABA'CCA (*Bot.*) vide *Asarum*.

ASSARON (*Ant.*) another name for the measure called in the Scriptures *omer*.

ASSARTUM (*Law*) or *assertum*, from *exertum*, pulled up by the roots; *assart*, an offence of plucking up trees by the roots in the forests. *Charta Forest. Anno 9 H. 3, c. 4; Flet. l. 4, c. 22; Crompt. Jur. 177; Manw. For. Laws, part 1, p. 171.*

ASSA'SSIN (*Law*) one who kills another unlawfully and by surprise. The word is supposed to be derived from a certain prince of the family of the Arsacidæ, called the “*Old Man of the Mountain,*” who was wont to fall on defenceless persons that came in his way.

ASSA'TIO (*Med.*) ἄστικα and τήγνισα, roasting and frying. *Gal. Alim. Fac.* l. 3, c. 2.

ASSAT'URA (*Med.*) the piece of meat just removed from the fire after roasting, which, when wrapped up in a cloth, was reckoned among poisons.

ASSA'ULT (*Law*) an attempt or offer, with violence, to do bodily hurt to another. *Lil. Assis.* pl. 60; *Lamb. Errenarch.* l. 1, c. 3.—*Assault and battery*, an assault with actual blows.

ASSA'Y (*Law*) from *essayer*, to try; a mode of trying metals, or separating them from all foreign bodies inherent in them; thus gold and silver are assayed by the refiner, to obtain them in their finest or purest state. It was formerly called the *touch*, and those who had the care of it were called the *officers of the touch*.—*Assay Master*, the master of the mint, who weighs the bullion, and takes care that it be according to the standard.—*Assay of weights and measures*, an examination of them by the questmen in the city, &c. *Reg. Orig.* 279.

ASSAY-BALANCE (*Mech.*) a particular kind of balance or scales employed by Assayers.

ASSA'YER of the king (*Law*) an officer of the king's mint for the trial of silver: he is indifferently appointed between the master of the mint and the merchants that carry silver thither for exchange.

ASSA'YING (*Mus.*) a flourishing previous to the performance.

ASSAYS'ARE (*Law*) to associate or take as fellow judges. *Cart. Abbat. Glasc. M. S.*

ASSECU'RE (*Archæol.*) to make secure by pledges, or any solemn interposition of faith. *Hovedon, Anno 1174.*

ASSEDATION (*Law*) possession, in the Scotch law, by a tack or lease, &c.

ASSEMBLY (*Ecc.*) or General Assembly of the Church of Scotland, the highest ecclesiastical court in Scotland, composed of a representation of the ministers and elders of the Kirk.

ASSEMBLY *unlawful* (*Law*) the meeting of three or more persons to do an unlawful act, although they may not carry their purpose into effect.

ASSEMBLY (*Mil.*) the second beat of the drum before the march.

ASSENT *royal* (*Law*) the assent of the king to the bills that have passed the two Houses of Parliament, the form of which, when given to a public bill, is "Le Roy le veut;" but to a private bill, "Soit fait comme il est désiré." The royal assent may be given either in person, through the medium of the clerk, by commission to certain lords, or by writing.

ASSERS (*Archit.*) *asserres*, laths which support the tiles of the roof, in imitation of which the dentils were made. *Vitruv.* l. 4, c. 2; *Fest. de Verb. Signif.*; *Bald. Lex. Vitruv.*

ASSERVATIO (*Med.*) the same as *Conservatio*.

ASSESS (*Law*) to rate, or to fix the proportion which every person has to pay of any particular taxes.

ASSESSOR (*Ant.*) *Cujus officium est assidere præsidi*; an assistant in council.

ASSESSOR (*Anat.*) *vide Prostatæ*.

ASSESSOR (*Law*) those that assess the public taxes, of which there were two in every parish, to rate every person according to the value of his estate. *Stat.* 16 and 17 *Car. II.*

ASSETS (*Law*) from *assez*, enough; goods and chattels sufficient for an heir or executor to discharge the debts and legacies of the testator or ancestor. *Assets* are either real or personal, assets per descent, or assets entre maines. — *Real assets* are lands in fee simple whereof a man dies seized. — *Personal assets*, any personal estate. — *Assets per descent*, where a person is bound in an obligation, and dies seized of lands, that land shall be *assets*, and the heir shall be charged as far as the land descended to him shall extend. — *Assets entre maines*, when sufficient is left to discharge all debts and legacies; or where some commodity or profit ariseth to them in right of the testator: these are *assets entre maines*, or in hand.

ASSERVIA'RE (*Law*) to draw or drain water from marsh-grounds. *Mon. Anglican.*

ASSIDE'ANS (*Theol.*) *ἀσίδαναι*, a sect of the Jews who are mentioned in the Maccabees, 1 Macc. ii. 42, as a people who were devoted to the law. They are supposed to derive their name from *חסידים*, merciful, holy, because they professed particular holiness of life. From them sprung the Pharisees. *Reland. Antiq. Sac. Pars.* 2, c. 11; *Prid. Connect.* part 2, book 3, &c.

ASSIDENS *signum* (*Med.*) *συνεπιθεῖν*, a sign or symptom usually attendant on a disorder, but not inseparable from it, in distinction from the *pathognomonic*, which is inseparable. *Gal. Com.* 3, in *Hippocrat. Epid.* l. 3.

ASSIDERE (*Law*) to assess or tax equally. *Math. Par.*

ASSIDUUS (*Med.*) the same as *Continuus*.

ASSIENTO (*Com.*) a contract between the king of Spain and the South-Sea company for furnishing the Spanish settlements with slaves.

TO ASSIGN (*Law*) 1. To make a right over to another; as to assign an estate, an annuity, bond, &c. over to another. 2. To appoint, as to appoint a deputy, &c. Justices are also said to be assigned to take assizes. *Stat.* 11 *H.* 6, c. 2, 3. 3. To set forth or point out, as "to assign errors," to show where the error is committed, or to assign false judgment; to show wherein it was unjust. *F. N. B.* 19, &c.; *Reg. Orig.* 72.

ASSIGN. *vide Assignee.*

ASSIGNABLE *magnitude* (*Math.*) any finite magnitude that can be expressed or specified.

ASSIGNATIO *agrorum* (*Ant.*) the assignment of land to soldiers, either as debentures or for reward of services. *Cic. ad Fam.* l. 8, ep. 13, &c.

ASSIGNATION (*Law*) the ceding or yielding a thing to another in the Scotch law, of which intimation must be made.

ASSIGNE'E (*Law*) or *assign*, he to whom any thing is assigned, as an assignee to a Bankrupt's estate. — *Assignee*, or *assign by deed*, is one appointed, as when a lessee of a term assigns the same to another, in distinction from an *Assignee*, or *assign in law*, whom the law makes so without any appointment, as an executor, who is *assignee* in law to a testator.

ASSIGNMENT (*Law*) 1. The making over the interest a man hath in a concern to another, as the assignment of an estate freehold, or for term of years, by a deed in writing. *Co. Lit.* 2. The deed itself; thus in assignments the words *grant*, *assign*, and *set over*, are required. *Inst.* 30. — *Assignment of a dower*, the setting out a woman's marriage portion by the heir.

ASSIMILATION (*Phy.*) a sort of motion, by which some bodies are changed into other bodies, aptly disposed into a nature homogeneous to their own; as the assimilation of the food with the body.

ASSIMILATION (*Med.*) *ἰσομοίωσις*, an action by which the nourishment assimilates with the thing nourished, which requires *πρόσθεσις*, apposition, and *πρόσφυσις*, agglutination, or adherence. It differs only in name from nutrition. *Gal. de Fac. Nat.* l. 3, c. 1, *et de Caus. Sympt.* l. 3, c. 2.

ASSIMULARE (*Law*) to put highways together. *Leg. Hen.* 1, c. 8, *apud Brompton.*

ASSIMULATIO (*Archæol.*) counterfeiting.

ASSIS (*Med.*) an Egyptian bolus, consisting of a powder prepared from hemp leaves. *Prosp. Alp.*

ASSIS (*Her.*) *sejant*, or sitting, as a lion *assis affronté*, or *sejant gardant affronté*. [*vide Sejant*]

ASSISTENTES (*Anat.*) or *astites glandulosi*, the prostate glands; so called because they lie near the bladder. [*vide Parastatæ*]

ASSISA (*Law*) from *assideo*. [*vide Assize*] — *Assisa cadere*, to be nonsuited when the complainant, from defect of legal evidence, can proceed no farther. *Bract.* l. 2, c. 7; *Flet.* l. 4, c. 15. — *Assisa cadit in juratum*, is where a thing in controversy is so doubtful that it must necessarily be tried by a jury. *Flet.* l. 4, c. 15. — *Assisa continuanda vel proroganda*. [*vide Assize*] — *Assisa panis et cerevisæ*. [*vide Assize*] — *Assisa de utrum*, a writ. [*vide Juris utrum*] — *Assisa Nocumenti*. [*vide Nuisance*] — *Assisa capi in modum assisæ* — *Assisa judicium*, a judgment of the court given either against the plaintiff or the defendant.

ASSISE (*Law*) *vide Assize*.

ASSISUS (*Law*) rented or farmed out for such an assize or assessment. *Terra assisa* was opposed to *Terra dominica*, the latter being held in domain, and the former let out to smaller tenants.

ASSITHMENT (*Law*) a weregeld or compensation by a pecuniary mulct for any offence, from *ad* and the Saxon *riþe*, in lieu of, because it was paid in lieu of any other punishment.

ASSIUS *lapis* (*Min.*) *vide Asius*.

ASSIZE (*Law*) *assisa*, from *assidere*, to sit together; signifies, in its proper sense, an assembly of knights, and other substantial men, with the justice, at a certain time, and in a certain place, for the due administration of justice. In this sense assizes are general when the justices go their circuits with commission to take all assizes; or they are special when special commissions are granted to try particular causes. The commissions for general assizes are five in number; namely, — Commission of *oyer* and *terminer*

for the trial of felonies, treasons, &c.—Of *gaol delivery*, for the trial of all persons committed to gaol for any offence.—Of *assize*, for trials upon writs of assize.—Of *nisi prius*, for the trial of civil causes, in the vacation, that have been brought to issue in the courts above by a jury of twelve men of the county where the cause of action arises, with this proviso, *nisi prius*, i. e. unless, before the day prefixed, the judges of assize come into the county in question, which they are sure to do in the preceding vacation.—A *commission of the peace* in every county of the circuits where all justices of the peace are bound to attend. *Bract*. l. 2, &c.; *Flet*. l. 4; 4 *Inst*. 265.—*Clerk of assize*, an officer of the court who sets down all things judicially done by the justices of assize in court. *Assize* signifies also, 1. A writ of assize for the recovery of things immoveable, of which one has been disseized. This was of different kinds; namely,—*Assize of novel disseisin*, a remedy, *maxime festinum*, for the recovery of lands or tenements.—*Assize of mort d'ancestor*, when a man's ancestors died seized of lands, and, after their death, a stranger abated.—*Assize of darrein presentment*, where a man's ancestors have presented a clerk to a church, and, afterwards the church being void, a stranger presents his clerk to the church, whereby the right of the proprietor is disturbed. *Stat*. 20, *H*. 3, c. 3; *Westm*. 2, c. 13, &c.; *Bract*. l. 4; *F. N. B*. 105. 190, &c.; *Co. Lit*. 154, &c.; *Reg. Orig*. 208, &c.; *New. Nat. Brev*. 417, &c.—*Assize at large*, a writ brought by an infant to inquire whether his ancestors were of full good memory when he made the deed whereby he claims his right.—*Assize in point of assize*, when the defendant pleads directly to the writ, no wrong.—*Assize out of the point of assize*, when the defendant pleads something by way of exception.—*Assize of right of damages*, when the tenant confesseth an ouster.—*Assisa continuanda*, a writ directed to justices of assize for the continuation of a cause when certain records alleged cannot be produced in time by the party that has occasion to use them.—*Assisa proroganda*, a writ for the stay of proceedings by reason of the parties being employed in the King's business. 2. *Assize* is sometimes taken for a statute, as—*Assiza panis et cerevisæ*, assize of Bread and Beer, a statute for regulating their weight and quantity.—*Assize of the forest*, touching orders to be observed in the King's forest.—*Assize of the King*, the same as the statute of view of Frankpledge. 51 *H*. 3; *Manw. For. Laws*, 35. 3. *Assize* is likewise sometimes taken for a jury where *assizes of novel disseisin* are tried. 6 *Hen*. 6, c. 2.

ASSIZER of weights and measures (*Law*) an officer who has the care and oversight of those matters.

ASSIZORS (*Law*) in the Scotch Law answer to the jurors in the English Law.

ASSOCIATION (*Law*) a writ directed to justices of assize to have others associated unto them as colleagues in assize. *F. N. B*. 185; *Reg. Orig*. 201, &c.; *New. Nat. Brev*. 416, &c.—*Association of Parliament*, the solemn association which Parliament entered into, in the reign of William III, to defend his Majesty's person and government. 7 & 8 *Will. III*, cap 2, made void by 1 *Ann. Stat*. 1, cap. 22, § 2.

ASSOCIATION of Ideas (*Phil.*) that connexion between certain ideas which causes them to succeed each other involuntarily in the mind.

ASSODES (*Med.*) from *assâre*, to burn; a continual fever with excessive heat inwardly, though not so great externally. It is arranged by Cullen under the Tertian Remittents.

ASSOLE (*Law*) to deliver from excommunication. *Staundf. Plac. Cor*. 72.

ASSONANCE (*Gram.*) a jingling of words which have the same sound, but are not intended to rhyme.

ASSONANT rhymes (*Poet.*) a sort of verses common among the Spaniards which rhyme but imperfectly.

ASSONIA (*Bot.*) from *asso*, a Spanish botanist; a genus of plants, Class 16 *Monadelphia*, Order 5 *Dodecandria*.

Generic Characters. CAL. *perianth* double.—COR. *petals* five.—STAM. *filaments* fifteen; *anthers* oblong.—PIST. *germ* roundish; *style* simple; *stigmas* five.—PER. *capsule* subglobose; *seeds* solitary.

Species. The species are perennials, as *Assonia palmata*, *angulata*, &c.

ASSUMINA (*Bot.*) a shrub on the coast of Guinea, which destroys the *vena medinensis*.

ASSUMPSIT (*Law.*) from *assumo*, a voluntary promise, by which a man takes upon himself to perform or pay any thing to another.—*Action of assumpsit*. [vide *Action*]

ASSUMPTION (*Log.*) the postulate or thing supposed, which is the minor or second proposition in a syllogism. [vide *Syllogism*]

ASSUMPTION (*Med.*) the receiving of any thing into the body through the mouth, as an aliment, &c. *Castell. Lex. Med.*

ASSUMPTION (*Ecc.*) 1. A feast, celebrated on the 15th of August, in the Romish church, in commemoration of the miraculous ascent of the Holy Virgin. 2. The day of the death of a Saint.

ASSUMPTIVE Arms (*Her.*) such arms as a man hath a right to assume to himself by virtue of some action; as if a man, being no gentleman by blood, shall take prisoner any nobleman and gentleman, he may bear the shield of that prisoner, and enjoy it to him and his heirs for ever, as in the case of Sir John Clark, who, in the reign of Henry VIII, took the arms of his prisoner the Duke de Longueville. [vide *Arms*]

ASSURANCE (*Com.*) vide *Insurance*.

ASSURANCE of lands (*Law*) where lands are conveyed by a deed.

ASSURGENS (*Bot.*) rising in a curve to an erect position, an epithet for a *petiole* and for leaves.—*Petiolus assurgens*, a rising *petiole*.—*Folia assurgentia*, rising leaves.

ASSYZERS (*Law*) jurors, or those who serve on an inquest in the Scotch Law.

ASSYTHMENT (*Law*) Reparation for mutilation and slaughter in the Scotch Law.

ASTACUS (*Ichth.*) the lobster, which, in the Linnean system, forms a division of the Cancer or Crab. *Plin*. l. 9, c. 31; *Gesn. de Aquat.*; *Rondelet. de Aquat.*; *Aldrov. Ichth.*

ASTANDÆ (*Ant.*) vide *Asgandæ*.

ASTATHIANS (*Ecc.*) heretics and followers of one Sergius in the ninth century, who renewed the Manichean impostures. *Baron. Annal. Ann*. 810.

A'STAZOF (*Med.*) 1. An ointment of litharge, spernisla, and houseleek. 2. A mixture of rosewater and camphor. *Paracel. de Apostem*. c. 38.

ASTCHA'CHILLOS (*Med.*) a gangrenous ulcer at the juncture of the feet. *Paracel. de Apostem*. c. 18.

A'STEISM (*Rhet.*) ἀπειρομύδης, from ἀπειρος, *urbanus*; a pleasant trope, or kind of irony, as *Virg. Eclog*. 3, v. 90.

Qui Bavium non odit, amet tua carmina, Mævi.

Demet. Eloc. 128; *Longin. de Sublin*. l. 34, c. 2; *Philostrat. Vit. Sophist.* tom. i. p. 540.

A'STER *Samius* (*Min.*) from ἀστὴρ, a star; a kind of bright earth dug in the island of Samos, so called from its resembling a star. It is efficacious against spitting of blood. *Diosc.* l. 15, c. 172; *Plin.* l. 35, c. 16; *Gal. de Camp. Med. sec. gen.* l. 4; *Oribas. Med. Collec.* l. 13;

- Aet. Tetrab.* 1, serm. 1; *Paul. Æginet. de Re Med.* 1. 7, c. 3.
- ASTER Atticus (Bot.)** ἀστὴρ ἀστεικός, a plant, so called from the figure of its flower, which resembles that of a star. It was also called *Bubonium* from its efficacy in curing a bubo. *Dioscor.* 1. 4, c. 120; *Plin.* 1. 27, c. 5; *Gal. de Simpl.* 1. 6; *Oribas. Med. Coll.* 1. 11; *Aet. Tetrab.* 1, serm. 1; *Paul. Æginet. de Re Med.* 1. 7, c. 3.
- ASTER, in the Linnean system,** a genus of plants, Class 19 *Syngenesia*, Order 2 *Polygamia Superflua*, in English Starwort.
- Generic Characters.** CAL. common imbricate.—COR. compound radiate.—STAM. filaments five; anthers cylindrical.—PIST. germ oblong; style filiform; stigma bifid.—PER. none; calyx scarcely changed; seeds solitary; receptacle naked.
- Species.** The species are perennials, as—*Aster tripolium*, seu *Tripolium*, the Sea-Starwort.—*Aster Amellus*, seu *Amellus*, Italian Starwort, &c. *Ger. Herb.*; *C. Bauh. Pin.*; *Raii Hist. Plant.*; *Tournef. Inst. Rei Herb.*; *Boerhaav. Ind.*
- ASTER (Law)** or *homo aster*, a man that is resident. *Britt.* 151.
- ASTERA'NTIUM (Bot.)** the herb called *imperatoria*, masterwort, or pellitory of Spain. *Dodon. Stirp. Hist.*
- ASTERIA (Min.)** the Bastard Opal, a sort of gem.
- ASTERIAS (Or.)** ἀστερίας, a kind of heron or egret, the *Accipiter palumbarius* of Pliny, the *Falco palumbarius* of Linnæus, and the Gosshawk of Willoughby *Aristot. Hist. Anim.* 1. 9, c. 36; *Plin.* 1. 10, c. 60.
- ASTERIAS (Bot.)** the *Gentiana lutea* of Linnæus.
- ASTERIAS (Con.)** Star-fish or Sea-star, a genus of animals, Class *Vermes*, Order *Mollusca*.
- Generic Characters.** Body depressed, covered with a coriaceous coat, furnished with five or more rays, and numerous retractile tentacula.—Mouth in the centre.
- Species.** These animals are all inhabitants of the sea, and feed on oysters, to whose beds they are very destructive. They easily renew any parts which are lost by violence, and fix themselves to the bottom by swimming on the back, and bending the rays. The species are distinguished into the *lunate*, *stellate*, &c.
- ASTERICUM (Bot.)** ἀστερικόν, *muralis herba*; pellitory of the wall. *Plin.* 1. 22, c. 17.
- ASTERISCOIDES (Bot.)** a species of the *Osmites* of Linnæus.
- ASTERISCUS (Bot.)** the *Bupthalmium* and the *Silphium asteriscus* of Linnæus. *Tournef.*; *Dillen.* &c.
- A'STERISK (Gram.)** ἀστερίσκος, a diminutive of ἀστὴρ, a star; a little mark in the form of a star (*) shewing something to be noted. *Isid. Orig.* 1. 1, c. 20.
- A'STERI Similis (Bot.)** the *Erigeron alpinum* of Linnæus.
- ASTERISMUS (Ast.)** ἀστερισμός, an asterism or constellation of fixed stars.
- A'STERN (Mar.)** behind a ship, as opposed to *ahead*, which is before.
- ASTEROCEPHALUS (Bot.)** the *Scabiosa* of Linnæus.
- ASTEROIDES (Bot.)** Bastard Star-wort. 1. The *Bupthalmium* of Linnæus. *Tournef.* 2. A species of the *Conyza* of Linnæus.
- ASTEROPLATYCARPOS (Bot.)** the *Orthonna pectinata* of Linnæus.
- ASTEROPTEROS (Bot.)** the *Leysera* of Linnæus.
- ASTEROPODIUM (Min.)** a gem, very similar to the *Asteria*.
- A'STHMA (Med.)** ἄσθμα, from ἀσθ, to breathe; signifies, according to Hippocrates, a quick and difficult respiration, such as people experience after running, and is the highest degree of dyspnea. *Hippocrat. aph.* 46; *Arct. de Sign. de Caus. Morb. Acut.* 1. 1, c. 11; *Gal. Comm. in Hip-*
- pocrat. ad loc. Oribas. de Loc. Affec.* 1. 3, c. 79; *Paul. Æginet. de Re Med.* 1. 3, c. 29.
- ASTHMA** is a disorder which consists in a chronic and sometimes periodical difficulty of breathing, with a sense of stricture across the breast, and is classed by Cullen as a genus of diseases in the Class *Neurosis*, Order *Spasmi*. The species are—*Asthma spontaneum*, when without any manifest cause.—*Asthma plethoricum*, when arising from plethora.—*Asthma exanthematicum*, originating in the repulsion of some acid humour.
- A'STOMOS (Anat.)** ἄστομος, from α, priv. and στόμος, without mouth. Pliny speaks of a people in India without mouths, who live *anelatu et odore*.
- ASTRA'BA (Lit.)** 1. The Pack-saddle or Sumpter-mule; a title of one of Plautus' plays. 2. A stepping-stone on which to mount horses. *Suidas*; *Hesychius*, &c.
- A'STRAGAL (Archit.)** ἀστράγαλος, the ankle-bone; a small round moulding, encompassing the fut or shaft of a column, which was made to imitate the form of those bones which are placed at the juncture of the neck of the foot, as in the annexed figure  *Vitruv. de Archit.* 1. 3, c. 3; *Philand. Bald. Lex Vitruv.*
- ASTRAGAL (Gun.)** the corner ring of a piece of ordnance.
- ASTRAGALOIDES (Bot.)** the *Phaca* of Tournefort.
- ASTRAGALOMANCY (Ant.)** ἀστράγαλομαντεία, a species of divination, by throwing small pieces marked with the letters of the alphabet, from the accidental disposition of which the answer was sought.
- ASTRA'GALUS (Anat.)** the ankle-bone, or sling-bone, the superior and first bone of the foot, so called from ἀστράγαλος, a die, because it resembled a die in shape. It is divided into two portions; one posterior, which is large, and as it were the body; and one anterior, which is an apophysis. *Ruf. Ephes. Appell. Part Corp. Human.* 1. 3, c. 5; *Oribas.* 1. 25, c. 3.
- ASTRAGALUS (Bot.)** Liquorice-Vetch, a plant so called from the ankle-bone, which its seed resembles in shape. Its root is sweetish, astringent, and gives a tincture of red to blue paper. *Dioscor.* 1. 4, c. 62; *Plin.* 1. 26, c. 8; *Cal. de Simpl.* 1. 6.
- ASTRAGALUS (Bot.)** a genus of plants, Class 17 *Diadelphia*, Order 4 *Decandria*.
- Generic Characters.** CAL. perianth one-leaved.—COR. papilionaceous.—STAM. filaments diadelphous; anthers roundish.—PIST. germ nearly columnar; style subulate; stigma obtuse.—PER. legume two-celled; seeds kidney-shaped.
- Species.** The species are perennials, as—*Astragalus onobrychis*, Purple-spiked Milk-Vetch.—*Astragalus cicer* *Cicer silvestre*, seu *Glauz*, Blad Milk-Vetch, &c.—*Astragalus hypoglottis*, seu *Glauz montana purpurea*, Purple Mountain Milk-Vetch, &c. *Clus. Hist. rar. Plant.*; *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*
- ASTRAGALUS** is also the *Anthyllis montana*; the *Bisurrula*; the *Hedysarum argentatum*; the *Indigofera hirsuta*; the *Orobus vernus* and *tuberosus*; and the *Phaca* of Linnæus. *Bauh.*; *Park.*; &c.
- A'STRAL (Astron.)** belonging to the stars.
- ASTRA'LISH (Min.)** that ore of gold which lies as yet in its first state.
- ASTRA'NTIA (Bot.)** Master Wort, a genus of plants, Class 5 *Pentandria*, Order 2 *Digymia*.
- Generic Characters.** CAL. umbel universal rays very few; partial very numerous.—COR. universal uniform.—STAM. filaments five; anthers simple.—PIST. germ oblong; styles two; stigmas simple.—PER. fruit ovate; seeds two.
- Species.** The species are perennials, as—*Astrantia major*,

Helleborus, seu *Veratrum*, Great Master-Wort.—*Astrantia minor*, seu *Helleborus*, Little or Alpine Master-Wort.—*Astrantia ciliaris*, seu *jassione*, &c. *Dodon. Stirp. Hist.*; *Ger. Herb.*; *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tournef. Instit. Rei Herb.*; *Boerhaav. Ind.*

ASTRA'RIOUS *hæres* (*Law*) from *astre*, the hearth of a chimney, where the ancestor, by conveyance, hath set his heir apparent and his family in a house in his lifetime. *Co. Lit.*

ASTRICTA (*Med.*) an epithet applied to the belly, in opposition to the *soluta*, or relaxed.

ASTRICTORIA (*Med.*) the same as *Astringentia*.

ASTRINGENS (*Med.*) *astringentia*, those things which have a binding quality, as Peruvian Bark, &c.

ASTRIOS (*Min.*) from *ἄστρον*, a kind of gem found in India, resembling chrystal. *Plin. l. 37, c. 9*; *Isid. Orig. l. 16, c. 13*.

ASTRO'BOLOS (*Min.*) from *ἄστρον* and *βάλλω*, to dart; a gem like a fish's eye. *Plin. l. 37, c. 9*.

ASTROBOLISMÓS (*Med.*) *ἄστροβολισμός*, from *ἄστρον*, a star, and *βάλλω*, to strike; with regard to plants, denotes planet stricken; with regard to man, it signifies apoplexy. *Theoph. de Caus. Plant. l. 5, c. 2*; *Gorr. Defin. Med.*

ASTRODICTICUM (*Astron.*) an instrument for several persons to view the stars at the same time, invented by Mr. Weighel.

ASTROGNOSIA (*Astron.*) a knowledge of the fixed stars, from *γινώσκω*, to know, and *ἄστρον*.

ASTROIDES (*Her.*) a star consisting of six points or more, in distinction from a mullet, consisting only of five. [vide *Mullet and Star*]

ASTROITES (*Min.*) a stone having the figure of a star upon it. It is a species of the *Helmintholithus* of Linnæus. *Plin. l. 37, c. 9*.

ASTROLABIUM (*Astron.*) *ἄστρολάβιον*, from *ἄστρον*, a star, and *λαμβάνω*, to take; Astrolabe, an instrument described by Ptolemy, which was chiefly used by navigators to take the height of the pole, &c. at sea. It is now superseded by Hadley's quadrant. *Ptol. Almag. l. 5, c. 1*.

ASTROLABE, *Sea*, an instrument for taking altitudes by sea.

ASTROLOGY, an art of judging or predicting human events by the influence of the stars, which is now generally exploded.

ASTRONIUM (*Bot.*) a genus of plants, Class 22 *Pentandria*, Order 5 *Diocia*.

Generic Characters. For the male. *CAL.* perianth five-leaved; leaflets ovate.—*COR.* petals five ovate; nectary five.—*STAM.* filaments five; anthers oblong. For the female. *CAL.* perianth five-leaved; leaflets oblong.—*COR.* petals five.—*PIST.* germ ovate; styles three; stigmas sub-capitate.—*PER.* none; calyx coloured; seed one oval.

Species. The only species is, *Astronium graveolens*, a shrub, native of Carthage. *Linn. Spec. Plant.*

ASTRONOMICAL (*Astron.*) an epithet for any thing relating to astronomy, as *astronomical Day, Hour, Year*, in distinction from the *civil Day, Hour, Year*. [vide *Day, &c.*]—*Astronomical Characters*, those used in astronomy. [vide *Characters*]—*Astronomical Horizon*, in distinction from the *Sensible Horizon*. [vide *Horizon*]—*Astronomical Place of a Star or Planet*, the longitude of a star or place in the ecliptic, reckoned from the beginning of Aries.—*Astronomical Hours*, such as are reckoned from the noon or mid-day of one day to the noon or midnight of another.—*Astronomical observations*, such observations as are made with suitable instruments by astronomers on the heavenly bodies to ascertain their forms, appearances, motions, &c. The observations of Hipparchus, which are

the earliest handed down to us from the Greeks, are given in Ptolemy's *Almagest*.—*Astronomical Tables*, are computations of the motions, places, and other phenomena of the planets, both primary and secondary. Tables of this description are to be found in Ptolemy's *Almagest*, which have, however, been superseded by more modern and correct calculations.

ASTRONOMICAL Calendar, an instrument consisting of a board on which is pasted an engraven and printed paper, with a brass slider, which carries a hair, and shows upon sight the meridian altitude and declination of the sun.—*Astronomical Quadrant*, a mathematical instrument for taking observations of the sun. [vide *Astronomy*]—*Astronomical Telescope*, so called because it is only used in astronomical observation, consists of an object-glass, and an eye-glass, both convex.—*Astronomical Sector*, an instrument for finding the difference in right ascension and declination between two objects whose distance is too great to be seen through a fixed telescope.

ASTRONOMICALS (*Math.*) i.e. *Astronomical Numbers*, a name for sexagesimal fractions, because they were formerly used in astronomical calculations.

ASTRONOMY, so called from *ἄστρον*, a star, and *νόμος*, a law, is a science which teaches the measures and motions of the heavenly bodies, or, in other words, it comprehends the whole doctrine of the sphere. It consists of two parts, theoretical and practical.

Theoretical Astronomy.

The theory of astronomy comprehends a knowledge of the circles of the sphere, and of the affections of the sphere.

The Circles of the Sphere.

The *sphere* is the concave orb, or expanse, which invests the celestial bodies.—The *circles of the sphere* are those which cut the sphere, or have their circumference either in the immoveable or moveable superficies of the sphere.—To every circle of the sphere belongs a centre, an axis, and two poles.—The *centre* is the middle point round which the sphere revolves.—The *axis* is a right line drawn through the centre, on which the body revolves.—The *poles* are the extreme points of the axis.

Every circle is divided into 360 parts called *degrees*, each degree into 60 *minutes*, and each minute into 60 *seconds*. Circles are divided into great and small.—*Great circles* are such as cut the sphere into two equal parts, the centres of which are the centres of the sphere.—The *small circles of the sphere* are those which divide it unequally, and consequently do not pass through its centre.

Great Circles of the Sphere.

The great circles of the sphere are—the *Horizon*, *Meridian*, *Equator*, *Ecliptic* with the *Zodiac*, the *Colures*, the *Vertical Circles*, *Circles of Declination*, *Circles of Latitude*, *Horary Circles*, and *Circles of Position*.

Horizon. The *Horizon* is a great circle which divides the sphere into two hemispheres, upper and lower.—The *upper hemisphere* is that above the head of the spectator, and the *lower hemisphere* that under his feet. The horizon is divided into the rational and sensible. The *rational*, which is the *Horizon* properly so called, belongs to all the spheres; but the *sensible Horizon* has respect to different parts of the same sphere. The poles of the *Horizon* are the two vertical points called the *Zenith* and the *Nadir*, as in fig. 1, plate 13, where C represents the centre of the mundane sphere, B A E N the globe of the earth, H V R K the heavens, or celestial meridian, H C R the *Horizon*, H V R the upper hemisphere of the universe, B A E of the earth; H R K and B N E the lower hemispheres, V K the axis, V and K the poles,

ASTRONOMY.

or the Zenith and Nadir. The sensible horizon is $h r$, which is a small circle of the sphere.

Meridian. The Meridian is a vertical circle drawn through the poles of the world $P Q$, as $A Z B N$ in fig. 2.

Equator. The Equator, so called in the terrestrial sphere; but, in the celestial sphere, the *Equinoctial*, is a circle drawn from the East to the West, by which it divides the sphere into the Northern and Southern hemisphere, as $A H Q G$, fig. 3.

Ecliptic. The Ecliptic is that circle in the heavens which the sun seems to describe in its course. It cuts the Equator at two points, called the Equinoctial points, where the Ecliptic is at the greatest distance from the Equator, and makes with it an angle of inclination of nearly $23\frac{1}{2}$ degrees, called the *obliquity of the Ecliptic*, as in fig. 3, where $E G L H$ represents the Ecliptic, $A H Q G$ the Equator; the arc $A E$, or the angle $A G E$, formed by the intersection of $A Q$, and $E L$ the obliquity of the Ecliptic. E and L the *Equinoctial Points*, the former of which is called the *vernal equinox*, and the latter the *autumnal equinox*. The *Zodiac* is a girdle, or belt, in the celestial sphere, which extends about eight degrees on each side the Ecliptic, as $C P$, fig. 7. It is divided into the *Dodecamatoria*, or twelve portions, called the *signs of the Zodiac*.

Colures. The Colures are circles which circumscribe the globe from North to South, and pass through the poles of the world; the first, called the *Equinoctial colure*, passes through the beginning of Aries and Libra; the second, called the *Solstitial Colure*, passes through the beginning of Cancer and Capricorn.

Vertical or Azimuth circles. A Vertical or Azimuth circle is a great circle passing through the Zenith and Nadir, cutting the horizon at right angles; it is also called a circle of altitude, because the altitudes of the heavenly bodies are measured upon it, as $A Z B N$, fig. 2, passing through the points $Z N$. The *prime* or *primary vertical circle*, is that which passes through the East and West points, and is always at right angles to the meridian, which is also a vertical circle passing through the North and South points. The points in which this prime circle $Z D N E$ cuts the Horizon $A D B E$ are called *Cardinal Points*, which are A North, B South, E East, and D West.

Circles of Declination. A circle of declination is a circle passing through the poles of the world, and having its poles in the Equator, as in fig. 4, where $H O R$ represents the horizon, $A Q$ the Equator, $Z N$ the vertical circle, and $P G D K$ the circle of declination passing through the poles of the Equator and the poles of the world $P K$. These circles are so called because the declination of the heavenly bodies is marked upon them.

Circles of Latitude. A Circle of Latitude is drawn through the poles of the Ecliptic, as in fig. 6, where $H Z R Q$ represents the Meridian, $Z C$ the Ecliptic, $E Q$ the Equator, $G P$ the poles of the Ecliptic, then the circle $G I P L G$ will be the Circle of Latitude, so called because the latitude of the stars is reckoned upon it.

Horary Circles. Horary Circles are those circles whose poles are in the Equator, through whose poles they are drawn at the distance of fifteen degrees from one another, which is equal to an hour in time, as in fig. 5, where $H Q B R A$ represents the Meridian, $H R$ the horizon, $E Q$ the Equator, $A B$ the poles of the Equator, and the figures the twelve hours of the day and of the night.

Circles of Position. A circle of position is a circle drawn through the intersections of the Horizon and the Meridian, and through a star, or any point in the sphere, as in fig. 10, where $H V R$ represents the Meridian, $H A R$ the horizon, then $H P R$ the Circle of Position passing

through H and R , where the meridian and horizon mutually intersect each other; and, supposing the arc of a vertical circle to be drawn as $V P A$, then $H P V$ or $R P V$ is the angle of position.

Circles of Longitude and Right Ascension. The Circle of Longitude, which is the same as the Ecliptic, and the Circle of Right Ascension, which is the same as the Equator, are both so called from their use.

Small Circles of the Sphere.

The small circles of the sphere are the Tropics, Polar Circles, Almacantar Circles, Parallels of Latitude, and Circles of Apparition and Occultation.

Tropics. The Tropics are drawn parallel to the equator at the distance of twenty-three degrees and a half from it on each side; that on the North side is the Tropic of Cancer, as $C R$, fig. 7; that on the South side is the Tropic of Capricorn, as $K P$.

Polar Circles. The Polar Circles are drawn parallel to the Equator at the distance of twenty-three degrees and a half from the Poles; that at the North Pole is called the Arctic Circle, as $T M$, fig. 7; and that at the South Pole the Antarctic Circle.

Almacantar Circles. Almacantars, or Circles of Altitude, are parallel to the Horizon, and drawn from its Poles, as in fig. 8, where $H V R$ represents the Meridian, $H O R$ the Horizon, $A S L$ an Almacantar circle drawn parallel to the Horizon; they are so called because the altitude of celestial objects is marked by them.

Parallels of Latitude. Parallels of Latitude are circles drawn parallel to the Equator on the terrestrial sphere, as in fig. 9, where $E N Q S$ represents the terrestrial sphere, $E Q$ the Equator, $L M$ and $O P$ parallels, $N E S$ and $N G S$ Meridians.

Circles of Apparition and Occultation are drawn parallel to the Equator, and are so called because within these circles the stars are perpetually visible or otherwise to the inhabitants of any sphere, as in any given latitude in the terrestrial sphere. By means of these circles other divisions are formed, both of the earth itself and its inhabitants, as zones, climates, antipodes, antoeci, perioeci, &c. of which more may be seen under the practical part.

The most important of the above-mentioned circles are to be seen in fig. 7, where G represents the centre of the mundane sphere, $A E B Q$ the Meridian, and, at the same time, the Solstitial Colure, $A G B$ its diameter, which also represents the horizon and the axis of the Equator, $E G$ the Equator or Equinoctial, of which $A B$ are the Poles, which are also the poles of the world, A the South Pole, and B the North, $C P$ the Zodiac with the Ecliptic, $C R$ the Tropic of Cancer, and $K P$ the Tropic of Capricorn, $T M$ and $N O$ the Polar Circles, i. e. $T M$ the Arctic, and $N O$ the Antarctic.

Affections of the Sphere.

The affections of the sphere are either general or particular, i. e. such as belong equally to the sphere in general, or are applied in different ways to particular celestial bodies.

General Affections of the Sphere.

The general affections are as follow; namely, the Order or System of the Sphere, Positions of the Sphere, Longitude, Latitude, Altitude, Declination, Ascension, Descension, Azimuth, Amplitude, Zenith Distance, and Polar Distance.

System of the Sphere. The order or system of the sphere is the order in which the different celestial bodies are

supposed to be placed in regard to each other, on which a variety of hypotheses have been formed that have been denominated systems; the principal of these are the Ptolemaic, Copernican, Tychoic, &c.

Ptolemaic System. The Ptolemaic System, so called from Ptolemy, a distinguished astronomer, whose system was that of the ancients in general. According to this system, which is represented in fig. 11, the Earth is supposed to be the immovable centre of the universe, round which all the heavenly bodies revolved as crystalline spheres, one included in the other; thus the Moon (ζ) occupies the place nearest to the earth, and the six other planets in their order; namely, Mercury (ξ), Venus (ϕ), the Sun (\odot), Mars (δ), Jupiter (χ), Saturn (ν): these are succeeded by the sphere of the fixed stars, otherwise called the *firmament*, or the *eighth sphere*, and two other spheres called crystalline, all which were put in motion by the outermost sphere, called the *Primum Mobile*, or prime mover.

Copernican System. The Copernican system, as represented in plate 14, fig. 13, places the Sun in the centre of the world, round which the Earth and all the planets move in their orbits; each of which is singly treated of under the Solar System. This system, though called Copernican, because Copernicus was the reviver of it, is as old as Pythagoras, from whom it was called the Pythagorean System.

Tychoic System. The Tychoic System, or the system of Tycho Brahe, a Danish astronomer, supposes the Earth to be fixed in the centre of the world, as in plate 13, fig. 12, round which the sun, stars, and planets revolved in twenty-four hours; but it differs from the Ptolemaic System by allowing the Sun to be the centre of the planetary motions, which the planets performed in their respective years, as the sun revolves round the earth in a solar year. This system was afterwards altered by Longimontanus, who allowed the motion of the earth on its own axis, but denied its annual motion round the sun.

To the above systems might be added the Egyptian, and others, which, as they have not obtained any considerable number of followers, are not entitled to any particular consideration in this place.

Positions of the Sphere. The Positions of the Sphere respect the relative situation of the Equator and the Horizon, and are three-fold; namely, right, oblique, and parallel.—A *right sphere* is that in which the Equator cuts the horizon at right angles, as in plate 15, fig. 14, where the Equator E Q cuts the Horizon H O. In this case the poles of the world are in the Horizon; namely, at H and O.—An *oblique sphere* is that in which the Equator cuts the Horizon obliquely, as in fig. 15; the poles of the world P and S are then obliquely situated above and below the horizon.—A *parallel sphere* is that in which the Equator is parallel with the horizon H O, as in fig. 16, and the poles of the world are the poles of the Horizon.

Longitude. Longitude, in the celestial sphere, is the distance of a star, or any other heavenly body from the first point of Aries, or from East to West, measured on the Equinoctial, as in plate 13, fig. 6. Suppose the star to be in K, the beginning of Aries to be Z, and through K a circle of latitude P K I G L be drawn, cutting the ecliptic in I, the longitude of the star K will be Z I. The longitude of the Sun is what is called the *Sun's place* in the ecliptic.—Longitude, in the terrestrial sphere, is the distance of the meridian of any place from the first meridian, which is either eastward or westward, and reckoned on the Equator.

Latitude. Latitude, in the celestial sphere, is the distance of a star or any celestial object from the ecliptic, north-

ward or southward, measured on a circle of latitude; or it is an arc of that circle intercepted between the Ecliptic and the centre of the star, as in fig. 6, where A Z H Q represents the Meridian and Solstitial Colure; Z C the Ecliptic, E Q the Equinoctial; G the South Pole, and N the North Pole of the Ecliptic; P K I G L a circle of latitude; then if a star be in I it will have no latitude; if in K its North latitude will be the arc I K; if in F its Southern latitude F I. The greatest latitude a star can have is 90 degrees, and the greatest latitude of a planet nearly 8 degrees. The Sun being always in the ecliptic has no latitude.—Latitude, in the terrestrial sphere, is the distance of any place from the equator, reckoned in degrees, minutes, or geographical miles, &c. Latitude is either North or South.

Altitude. Altitude of a star, or any point in the heavens, is its height above the Horizon, as in plate 13, fig. 8, where V R N represents the Meridian, V the Zenith, N the Nadir, H O R the Horizon, S the Star, and Z S the altitude or arc of the vertical circle V Z N M. Altitudes may be either true or apparent.—*Apparent Altitude* is that which appears by sensible observation.—*True Altitude* is that which results from correcting the apparent, on account of refraction and parallax.—*Meridian Altitude* is the greatest altitude when the object is upon the Meridian.—*Altitude or Elevation of the Pole*, the arc R P (in fig. 4) of the Meridian, intercepted between the Horizon R and the Pole P; this is always equal to the latitude of the place.—*Altitude or Elevation of the Equator*, the arc H A of the Meridian, intercepted between the Horizon H R and the Equator A Q. The elevation of the Equator is equal to Z P, the co-latitude of the place; therefore the elevation of the Pole and the Equator make up the quadrant of a circle.—*Altitude of the Nonagesimal* is the altitude of the 90th degree of the Ecliptic, counted from the point where it cuts the Horizon, i. e. from its rising point; this is equal to the angle K M I, in plate 15, fig. 18, which is formed by the intersection of E L the Ecliptic and H R the Horizon, and is called the *angle* of the East, or of the *Ascendant*.

Declination. Declination of a star, or any celestial object, is its distance from the Equator, measured on an arc of a great circle, as in plate 15, fig. 19, where H E R Q represents the Meridian, E O Q the Equator, A the South Pole, B the North Pole, A O B I A the circle of Declination; then, if a star be in O or I it has no declination; if in S, or the parallel C N, its Northern Declination will be the arc O S; but if the star be in M, or on the parallel K P, the Southern Declination will be M O; so, in like manner, if the star be in the Horizon, as G or F, the Northern Declination will be F I, and the Southern, G O.

Ascension. Ascension of any star or point in the heavens, is an arc of the Equinoctial, intercepted between the beginning of Aries eastward, and that point of the Equinoctial which rises with the star. This is either right or oblique.—*Right ascension* is an arc of the equinoctial which rises with a star in a right sphere.—*Oblique ascension* is that which arises with a star in an oblique sphere.—*Ascension of the mid-heaven* is the right ascension of that point of the Equinoctial which is in the meridian.

Descension. Descension of any star or point in the heavens, is an arc of the Equinoctial, intercepted between the beginning of Aries and that point which sets with any celestial object. This is either right or oblique, as it sets in a right or oblique sphere. Ascension and Descension, with respect to the stars, are otherwise called their astronomical rising and setting, in distinction from their poetical rising and setting.

Ascensional Difference. Ascensional Difference is the difference between the right and oblique ascensions; thus,

suppose, as in plate 15, fig. 19, a star to be in F, the rising point of the horizon, and a circle of declination be drawn through it, B F I A, the arc of the Equinoctial D I will be the ascensional difference of the star F; but the point rising with it will be the point of the Equinoctial D.

Azimuth. Azimuth is the distance of a star or any celestial object from the North or South points, reckoned upon an arc of the horizon towards the East or West points, when the object is above the horizon; thus, suppose a star to be in Z or S, the point of a vertical circle passing through Z, as in plate 13, fig. 8, the azimuth of that star will be the arc H Z, and the complement of the azimuth is Z O.

Amplitude. Amplitude is the distance of a star or any heavenly body from due East or West at the time of its rising or setting.

Zenith Distance. Zenith Distance is the number of degrees that any star or heavenly body wants of 90 degrees when it is upon the meridian or at its greatest height.

Polar Distance. Polar Distance of a star or any celestial object, is an arc of the meridian contained between the centre of that object and the Pole of the Equinoctial.

Rising and Setting. Rising of any celestial object is the becoming visible, or ascending above the horizon, in distinction from *setting*, or the becoming invisible by descending below the horizon. The faint light which we perceive before the sun rises, and after he is set, is called the *Crepusculum*, or Twilight. The arc described by the heavenly bodies from their rising to their setting, is called the *diurnal arc*, in distinction from that which they describe from their setting to their rising, which is the *nocturnal arc*. The rising and setting of the stars is either astronomical or poetical.—The *astronomical rising or setting* are the same as Ascension or Descension.—The *poetical rising and setting*, so called because they are spoken of by the poets, are of three kinds, namely, cosmical, achronical, and heliacal.—The *cosmical rising or setting* of a star is when it rises with the sun, or sets when the sun rises, as in plate 15, fig. 20, where the sun is rising in E and the stars I, L are rising with it, or the stars F, R, G are setting with it.—*Achronical rising or setting* is when a star rises at sun-set, or sets with the sun, as in fig. 21, where E, the sun, is setting; F G, the stars, are setting, and I K L rising.—*Heliacal rising* is when a star first becomes visible in the morning, after having been so near the sun as to be hidden by the splendour of his rays; and the *heliacal setting* is when a star first becomes invisible in the evening, by reason of its nearness to the sun; thus, for the heliacal rising, suppose, as in fig. 22, the rising sun to be in E and the star to be in F, which has just emerged from his rays and is become visible; on the following days he will appear more distant, as at G: for the setting, suppose a star L, which one day is seen in the Horizon A I C after the setting of the sun, and the next day becomes invisible when it reaches to the point of setting, on account of its near approach to the sun.

Culminating. Culminating, or Southing, is when a star or any other heavenly body comes to the Meridian of any place; for then its altitude at that place is the greatest.

Occlusion. Occlusion is the obscuration or hiding from our sight any star or planet by the interposition of any celestial body.

Place. The Place of a star, or any other celestial object, simply denotes the sign and degree of the Zodiac which the luminary is in; but, in respect to the eye of the observer, it is distinguished into physical or optical.—The *physical place* of a star is that point in which the centre of the body lies, as S in plate 15, fig. 23.—The *optical*

place is that point on the surface of the mundane sphere where the spectator sees the centre of the star, &c. The optical place is either true or apparent.—The *true*, or *real optic place*, is that point where a spectator, at the centre of the earth, would see the object, as B in fig. 23.—The *apparent or visible place* is that point where a spectator, situated on the surface of the earth, at E, would see the object as the point C.

Parallax. Parallax, or Parallax of Altitude, is the difference between the true and apparent optical place of a star or any other celestial object, as in plate 15, fig. 24. Suppose C to be the centre, A the place of the spectator on the surface, S any object, Z H the sphere of the fixed stars to which the places of all the bodies in our system are referred, Z the Zenith, H the Horizon; then, if C S m, A S n, be drawn, m is the place seen from the centre, and n from the surface; m n is the arc of parallax, and the angle made by lines drawn through the centre of the object from these several points is called the *parallactic angle*, as m S n, or its equal A S C. Parallax from the zenith to the horizon affects the altitude of an object, which, when it is in the zenith, has no parallax; and when in the horizon has the greatest, as at s; wherefore the *horizontal parallax* is distinguished from the rest. The Moon's greatest horizontal parallax is $1^{\circ} 1' 25''$, and the least $54' 5''$. The fixed stars, owing to their immense distance, have no parallax. There are other sorts of parallax, as the—*Parallax of right ascension and descension*, which is an arc of the Equinoctial, D d, as in plate 15, fig. 17, by which the parallax of altitude increases the ascension and diminishes the descension.—*Parallax of declination* is an arc of a circle of declination, s I, by which the parallax of altitude increases or diminishes the declination of a star.—*Parallax of latitude* is an arc of a circle of latitude, S I, by which the parallax of altitude increases or diminishes the latitude.—*Menstrual parallax of the Sun*, an angle formed by two right lines, one drawn from the earth to the sun, and another from the sun to the moon, at either of their quadratures.—*Parallax of the annual orbit of a planet* is the difference between the heliocentric and geocentric place of a planet, or the angle at any planet subtended by the distance between the earth and sun, as the S R T in plate 18, fig. 29, which is explained under the *eccentric place of planets*.

Refraction. Refraction is an inflection of the rays of the stars, &c. in passing through our atmosphere, the effects of which are directly the opposite to those of parallax, for the parallax diminishes the altitude of objects, and the refraction increases it. There are as many kinds of refraction as of parallax, namely—*Refraction of altitude*, which is the principal sort, as in plate 15, fig. 25, where C O G represents the quadrant of a vertical circle, A the centre of the earth, T B the quadrant of a great circle described from A as the centre, D R E a quadrant of the spherical superficies described by the vapours round the earth, A B G the rational horizon, T R O the sensible horizon, S the true place of the star, of which S R is the radius, which by refraction is inflected from the straight line S R L towards the perpendicular R A, and from that line to T; wherefore the star will appear in the line T R O, and at the point O in the horizon, though it be really below the horizon.—*Refraction of declination* is an arc of a circle of declination, by which the declination is decreased or diminished.—*Refraction of ascension and descension* is an arc of the Equinoctial, by which ascension or descension is increased or diminished. [vide *Refraction*]

Aberration. Aberration, an apparent motion of the heavenly bodies, occasioned by the earth's annual motion in its orbit combined with the progressive motion of light,

ASTRONOMY.

as in plate 15, fig. 26. Suppose S to represent a fixed star, V F the direction of the earth's motion, S F the direction of a particle of light entering the axis *ac* of a telescope at *a*, and moving through *a F* while the earth moves from *c* to F; then, if the telescope keep parallel to itself, the light will descend in the axis, and as the place measured at F by the telescope is *s*, the angle S F *s* is the aberration, or the difference between the true place of the star and the place measured by the instrument.

Particular affections of the sphere.

The particular affections of the sphere are such as belong to some particular spheres, or which belong to all the spheres in different measures. The spheres, or celestial bodies, are divided in respect to motion and rest, into *fixed stars* and *planets*.

Fixed Stars.

The fixed stars are so called because they preserve nearly the same relative distance with respect to each other; but they are subject to an increase of longitude of about $50\frac{1}{4}$ seconds in a year, as also to a small variation in their latitudes, declinations, and right ascensions, which was ascribed by the ancients to a motion called the *trepidation*, or *libration*, of the eighth sphere; but by the moderns this motion is supposed to be apparent, and occasioned by the retrograde motion of the Equinoxes, called the *precession of the Equinoxes*.

The fixed stars are distinguished, as to their magnitudes and distribution.

Magnitudes of the stars. The magnitudes of the stars are commonly estimated as at the bottom of the planisphere [plate 16], from those of the first to those of the seventh magnitude, according to the magnitude and splendour of their light: besides which, they are, moreover, distinguished, according to the arrangement of Bayer, in his *Uranometria*, by the letters of the Greek alphabet, α being affixed to those of the first magnitude, β to those of the second, and γ to those of the third, and so on.

Distribution. The distribution of the stars is generally into formed, unformed, and nebulous.—*Formed stars* are those which are arranged under certain figures called *Constellations*.—*Unformed stars* are such as are brought under no positive form, but are scattered about.—*Nebulous stars*, or *Nebulae*, are such as are smaller than the seventh magnitude, and present only a dim hazy light, like little specks or clouds. Of these nebulae is formed a whitish luminous tract, which seems to encompass the heavens like a girdle of a considerable though unequal breadth, varying from about 4 to 20 degrees, as may be seen in the planisphere, beginning at Cygnus; this is well known by the name of the *galaxy*, *via lactea*, or *Milky Way*.

Constellations. The constellations are divided into Northern, Southern, and Zodiacal; and in the following Catalogue they are arranged according to their proximity to the Poles within the parallels of latitude, by which they may be more easily traced by the reader.

The Northern Constellations are those which are north of the Equinoctial; the Southern, those which are south; the Zodiacal, those which are contained within the zodiac: the latter are, moreover, distinguished into *ascending*, through which the planets ascend northerly, as Capricorn, Aquarius, Pisces, &c.; the *descending* through which the planets descend towards the South, as Cancer, Leo, Virgo, &c. These are called Signs of the Zodiac, because they are marked with particular characters, as may be seen in the planisphere.

Since the construction of this planisphere, other constellations have been formed, which are of minor importance, as *Taurus Poniatowski*, *Pyxis nautica*, *Fornax chemica*, &c. &c.

Planets.

A planet is a heavenly body which either moves, or appears to move, perpetually within a certain limit, called his *orbit* or *path*; or supposing the sun, according to the Copernican System, to be immoveable in the centre of the sphere, then the planets are defined to be celestial bodies moving round the sun, or some other body, in elliptical orbs, having a focus for a centre. In this sense they are distinguished into primary or secondary. — *Primary planets* are those which move about the sun. — *Secondary planets*, otherwise called *satellites*, move about some other planet, as the moon about the earth. The primary planets hitherto discovered are 11 in number, which are distinguished by the following names and characters, as Mercury ♀, Venus ♀, the Earth ⊕, Mars ♂, Vesta ♁, Juno ♃, Ceres ♄, Pallas ♁, Jupiter ♃, Saturn ♄, and the Georgium Sidus ♁. The satellites hitherto discovered are 18 in number, the Earth having the Moon for one satellite, Jupiter four, Saturn seven, and the Georgium Sidus six.

The sun and planets, together with the comets, comprehend what is now commonly called the *Solar System*, in which the sun is supposed to be the centre of motion round which the other celestial bodies revolve at different distances, and in different periods of time. The affections of the solar system are either general or particular.

General Affections of the Solar System.

The general affections of the Solar System are mostly the affections of motion.

Motion. The motion of the planets is of different kinds, as mean, true, direct, retrograde, &c.—*Mean motion* is that by which a planet is supposed to move equably in its own orbit.—*True motion* is that which the planet actually performs in the heavens, as seen from the earth. — *Direct motion* is when a planet appears to a spectator on earth to move in *signa consequentia*, i. e. according to the order of the signs, as *aries*, *taurus*, *gemini*, &c. from east to west.—*Retrograde motion* is when the planet appears to move in *signa antecedentia*, i. e. in a contrary order of the signs, as *gemini*, *taurus*, *aries*, &c. Planets are said to be stationary when they seem to remain fixed in one point of the heavens for some time.—*Diurnal motion* is the number of degrees and minutes which the planet passes over within twenty-four hours.

Aphelion. Aphelion is a point in the orbit of a planet which is at the greatest distance from the sun, as in plate 18, fig. 27, where S represents the sun in the focus, round which, as its centre, the planet P describes the ellipse A P B, then A is the point of the orbit, which is the aphelion, or at the greatest distance from the sun. In the motion of the sun about the earth, this point is called the *apogee*, or the greatest distance from the earth.

Perihelion. Perihelion is the point of the planet's orbit, which is at the least distance from the sun, as the point B. This, according to the Ptolemaic system, is the *perigee*, or the point nearest the earth.

Apsis. Apsis of an orbit is its aphelion or perihelion, its apogee or perigee.—*Line of the Apsides*, or *Apses*, is a right line, as A B, drawn from the aphelion to the perihelion.

Eccentricity. Eccentricity is the distance of the centre of the orbit C from the sun S. In the ancient astronomy this was called the distance of the centre of the orbit from the earth.—*Eccentric circle* is the circle B D A E, described from the centre of the orbit C, with half the axis C A for a radius. In the old astronomy this eccentric circle was the orbit of the planet itself.

Anomaly. Anomaly is the distance of the planet from its aphelion or apogee.—*Mean or simple Anomaly* is, in modern astronomy, the time in which a planet moves from the aphelion A, to its mean place or point in the orbit P, and, as the area A S P, is proportional to the time in which the planet describes the arch A P; that area may be the measure of mean anomaly. In ancient astronomy the mean anomaly was the distance of the mean place of a planet from the apogee.—*Eccentric anomaly*, or anomaly of the centre, is the arc A K of the eccentric circle, intercepted between the aphelion A and the perpendicular K L, drawn through the centre of the planet P.—*True or equated anomaly*, otherwise called *the angle at the sun*, is the angle A S P, under which the planet's distance from the aphelion A P, appears. In the motion of the sun this will be the distance of the true place of the sun from the apogee, as seen by a spectator on the earth, or, which is the same thing, the distance of the true place of the earth from the apogee, as seen from the sun.

Equation. Equation is an arc of the Ecliptic to be added to, or subtracted from, the mean motion or place, that it may be reduced to the true, or from the true, that it may be reduced to the mean.—*Equation of the centre*, or *prosthaphæresis*, the difference between the true and mean motion, or between true and mean place of a planet; or, which is the same thing, the difference between the true and equated anomaly.

Thus, suppose $\Upsilon \ominus \oplus \Psi$, plate 18, fig. 28, to be the Ecliptic, S the sun, M P N A the orbit of the Earth, its centre C, A P the line of the apsides, A the aphelion, then if the Earth be in L, the arc A L, or the angle A C L is the mean anomaly, and the arc of the ecliptic $\Psi \ominus$, or the angle A S L is the true anomaly; which, if taken from the true anomaly, leaves the angle C L S, which is the equation or prosthaphæresis. It is so called because it is sometimes to be added to, and sometimes subtracted from, the mean anomaly, to give the true one. Thus, suppose the earth to be in R, the mean anomaly to be P C R, and then, if C R S be added to it, the true anomaly will be P S R and the place of the Earth in the Ecliptic will be found, consequently C R S is the Equation.—*Annual equation*, an equation either of the mean motion of the sun and moon, or of the moon's apogee and nodes, &c. [vide Equation]

Eccentric place of a planet. Eccentric place of a planet,

in its orbit, is the place in which it appears when seen from the sun, as represented by the line SP, *plac* 18, *fig.* 29, where N E O R is put for the *Ecliptic*, N P O Q for the orbit of the planet, S for the Sun, T for the Earth, and P for the planet.—*Eccentric place in the Ecliptic*, or the *place of the planet reduced to the Ecliptic*, is a point of the *Ecliptic* to which the planet, as seen from the sun is referred, as R S. This coincides with the *heliocentric longitude*, or the longitude of the planet viewed from the sun, and is therefore called the *heliocentric place*.—*Geocentric place of a planet*, as T R, is the point of the *Ecliptic* to which the planet viewed from the earth is referred.—*Angle of Commutation*, E S R, is the difference between the true place of the sun, E, when seen from the earth, and the place of the planet reduced to the *Ecliptic*.

Nodes. Nodes are the two points of N and O in *fig.* 29, where the planet intersects the *Ecliptic*. They are ascending and descending.—*Ascending node*, otherwise called the *Dragon's head* in the Moon, and marked (♁), is that point N, where the planet ascends from the South to the North side of the *Ecliptic*.—*Descending node*, or *Dragon's tail*, marked (♂), is that point O, where the planet descends from the North to the South side of the *Ecliptic*.

Inclination. Inclination is the angle at the sun R S P, in *fig.* 29, under which the distance of the planet P from the *Ecliptic*, P R, appears when viewed from the sun. The greatest inclination or declination is called the inclination of the orbit of a planet, which varies for different planets, as may be seen hereafter.

Argument. Argument, an arc given, by which another arc is found, as—*Argument of inclination*, or *argument of latitude*, an arc of a planet's orbit, as N P, in *fig.* 29, intercepted between the *Ascending Node* and the planet's place, numbered according to the succession of signs.—*Menstrual argument of latitude*, the distance of the moon's true place from the sun's true place.—*Annual argument of the moon's apogee*, or simply *annual argument*, the distance of the sun's place from the place of the moon's apogee, or an arc of the *Ecliptic*, comprised between these two places.

Reduction to the Ecliptic. Reduction to the *Ecliptic* is the difference between the argument of latitude N P, *fig.* 29, and the arc of the *Ecliptic* N R, intercepted between the place of the planet R, brought back to the *Ecliptic*, and the *ascending node* N.

Curtate Distance. Curtate distance, the distance from the sun of the place of a planet reduced to the *Ecliptic*.

Curtation, the difference between the distance of a planet from the sun, as P S, and the curtate distance S R.

Aspect. Aspect is the situation of the planets, (and also of the stars), with respect to each other. The aspects are five in number, namely, *Conjunction*, *Sextile*, *Quartile*, *Trine*, and *Opposition*.—*Conjunction*, marked (♌), when they are in the same sign and degree.—*Sextile* (*), when they are two signs distant, as *Cancer* (♋), and *Virgo* (♍), *Scorpio* (♏), and *Capricornus* (♐), *Pisces* (♓), and *Taurus* (♉), are each in sextile aspect, i. e. at the distance of 60 degrees, or the sixth part of a circle from each other.—*Quartile* (♈), when they are three signs, 90 degrees, or the fourth part of a circle distant from each other, as *Cancer* (♋), and *Libra* (♎), *Capricornus* (♐), and *Aries* (♈).—*Trine* (♊), when they are four signs, 120 degrees, or the third part of a circle from each other, as *Cancer* (♋), *Scorpio* (♏), and *Pisces* (♓).—*Opposition*, when they are six signs, 180 degrees, or half a circle from each other. The *Conjunction* and *Opposition* are called *Syzygies*; the *quartile aspect*, the *quadrature*; and the *trine*, *triplicity*.

—Other aspects have since been added to these, as *decile*, *tridecile*, &c. [*vide Aspect*]

Transit. Transit is the apparent passage of any planet over the *disc* or face of the sun, or any planet. Mercury and Venus, in their transits over the sun's disc, appear like specks.

Eclipses. An Eclipse is a species of occultation, particularly applied to the sun and the planets.—*Duration of an eclipse* is the time of its continuance, or the time of the immersion and emersion.—*Immersion*, or *Incidence* of an Eclipse, is the moment when the eclipse begins, or when part of the planet is obscure.—*Emersion* or *expurgation* of an Eclipse, is the time when the eclipsed body begins to re-appear, or emerge out of the shadow. Quantity of an eclipse, is the portion of the luminary that is eclipsed. This is usually measured by dividing the diameter of the luminary into twelve equal parts, called *digits*.—*Annular eclipse*, is when the whole body is eclipsed, except a ring or annulus, which appears round its limb or edge. Eclipses are also distinguished into *partial*, when only a part of the luminary is eclipsed; *total*, when the whole is eclipsed; and *central*, when the centre of the three bodies is in the same right line. [*vide Eclipse*]—*Penumbra* is a faint or partial shadow in an eclipse, observed between the perfect shadow and the full light. The penumbra arises principally from the magnitude of the sun's body: thus, suppose S to be the sun, as in *plate* 18, *fig.* 31, T the moon, the shadow of the moon to be G H, then the penumbra, or imperfect shadow, will be H L and G E.—*Scruples of incidence*, an arc of the moon's orbit, described by her from the beginning of the eclipse, to the time when her centre falls into the shadow. [*vide Eclipse* and *Scruple*]—*Eclipse of the Moon*, the privation of the light of the Moon, occasioned by the interposition of the earth, as in *fig.* 32, where A B represents the Sun, F C D the conical shadow of the Earth, H, G the Moon partially eclipsed, I the same totally eclipsed, and K its situation when not at all eclipsed. Lunar eclipses happen only at the time of the full moon, because it is only at that time that the earth is between the sun and the moon. They do not, however, happen every full moon, only when the moon's latitude, or distance between the centres of the earth and moon is less than the sum of the apparent semidiameters of the moon and the earth's shadow. This happens mostly at the moon's nodes.—*Eclipse of the sun*, is an occultation of the sun's body, occasioned by the interposition of the moon between the sun and the earth. This is represented in *fig.* 33, where S is the sun, m the moon, c d the earth, m n o p the moon's conical shadow extended over that track of the earth, C O D to which only the eclipse is complete, then D e n p is the faint shadow, called the *penumbra*.

Phases. Phases are the forms under which the illuminated parts of a planet are seen, and are particularly applied to the Moon, Mercury, or Venus; thus, suppose S to represent the sun in *plate* 18, *fig.* 34, T the earth, and A B C D, &c. the moon's orbit. When the moon is at A, in conjunction with the sun, S, her dark side, being turned towards the earth, she will be invisible as at a, and is then called the *new moon*: when she comes to her first octant, as at B, and a quarter of her enlightened side is turned towards the earth, she will then appear to be *cusped* or *horned*, as at b. When she has run through her first quarter, as at C, she is said to be a *half moon*, as at c. At D she is in her second octant, and shows more than half her enlightened side, wherefore she is said to be *gibbous*, as at d. Her whole enlightened side being turned to the earth, in her opposition at E, she is called a *full moon*, as at e. In the same manner she decreases

from E to A, being gibbous at *f*, a half moon at *g*, and horned at *h*, until the change at A.

Revolution. Revolution is the course of a celestial body from any point of its orbit to the same point again. This is twofold, namely, diurnal and sidereal.—*Diurnal revolution* is the revolution which any celestial body performs on its own axis, which is called diurnal, because the space of time in which this is performed is called a *day*.—*Sidereal revolution* is the revolution which the body performs round another body: the space of time in which this is performed is called a *year*. Sometimes this is called a tropical revolution, if the body be supposed to move from either of the tropics, and to return to the same point again: wherefore the year, in that case, is called a *tropical year*.

Time. Time is that portion of duration which is measured by the motion of the heavenly bodies.—Time is true or apparent, and mean.—*True* or *apparent time* is the unequal time which is measured by the motion of the sun in the ecliptic.—*Mean time* is the equal time which is measured by the mean motion of the sun.—The *equation* of time is the difference between the mean and true time.

Particular affections of the Solar System.

The particular affections of the Solar System are magnitudes, relative distances, peculiar motions, &c. which belong in various proportions and measures to the bodies that compose this system.

The Sun ☉.

The Sun, plate 14, is an immense body of fire, situated near the centre of the orbits of the planets. He is discovered by the *maculae*, or spots, on his disc to have a motion on his own axis, which he performs in $25\frac{1}{2}$ days, or in 25 days 10 hours; besides which, he is supposed to be agitated by a small motion caused by the attractions of the various surrounding planets. But the apparent annual motion of the sun is explained, according to the Copernican System, on the supposition of the earth's real motion round the sun. The figure of the sun is spheroidal, like that of the planets; his diameter is equal to a hundred diameters of the earth, and therefore the body of the sun must be one million times greater than that of the earth. His mean apparent diameter, according to Newton, is $32' 12''$, and his horizontal parallax is now fixed at $8''\frac{1}{10}$. The proportional magnitudes of the sun as seen from the different planets are given in plate 19, fig. 38.

Mercury ☿.

Mercury is the least of all planets, as in plate 14 and 19, and performs his periodical revolution round the sun in 87 days, 23 ho. 15 min. 43 sec.; his greatest elongation is $28^\circ 20'$ distance from the sun, nearly 37 millions of miles, and eccentricity of his orbit is estimated at one-fifth of his mean distance from the sun; his apparent diameter is $11''$; hence his real diameter is 3108 miles, and his magnitude $\frac{1}{10}$ the magnitude of the earth.

To illustrate the apparent paths of the planets in general, that of Mercury and Venus is given in plate 19, fig. 36, where the dotted line represents the sun's path in the ecliptic, the looped circles the motion of Mercury for seven years, and that of Venus for eight years, in which time Mercury makes 23 loops, crossing itself so many times, but Venus makes only five. The dotted lines from the earth to the ecliptic shows Mercury's apparent or geocentric motion therein for one year; in which time his path makes three loops; he has three inferior and as many superior conjunctions with the sun; is six

times stationary, and three times retrograde. For the better understanding of this plate, let us suppose Mercury to set out from A towards B with a direct motion; when he comes to B he appears to stand still in the 24° of \uparrow at F, as shown by the line BF; whilst going from B to C the line BF is supposed to move with him, and goes backward from F to E, or contrary to the order of the signs; when he is at C he appears stationary at E, having gone back $11\frac{1}{2}$. Now supposing him to be stationary at C on the 1st of January, on the 10th he will appear in the heavens, as at 20 near F; on the 20th he will be seen at G; on the 31st at H; on the 10th of February at I; on the 20th at K, and on the 28th at L; on the 10th of March he appears at M; on the 20th at N; on the 31st at O; on the 10th of April stationary at P; on the 20th he seems to have gone back to O, and on the 30th to be stationary at Q; from the 30th of April to the 10th of May he seems to move from Q to R, and on the 20th he is seen at S, thus going forward or backward according to the order of the letters by which his path may be easily traced.

Venus ♀.

Venus, the brightest of all the planets, is also to appear-ance the largest; but her real magnitude, as may be seen in plate 19, fig. 37, is somewhat less than the earth. Her apparent diameter is stated to be $58'' 79''$, consequently her real diameter is 7498 miles. The eccentricity of her orbit is nearly 500,000 miles, her greatest elongation $47^\circ 48'$; her revolution round the sun is performed in 224 d. 16 h. 49 m. 10 sec. and her distance from the sun is nearly 69 millions of miles. When Venus appears west of the sun she is a morning star, and when eastward of the sun she is an evening star.

The Earth ⊕.

The earth is a globe 95 millions of miles distant from the sun, 7964 miles in diameter, of a spherical figure, but generally supposed to be somewhat flatter at the poles than at the equator. According to the Copernican System the earth revolves on its own axis every 24 hours from West to East, which causes an apparent diurnal motion of all the heavenly bodies from East to West, and performs her annual revolution round the sun in 365 d. 5 h. 49 m. from either of the equinoxes or solstices to the same again; but from any fixed star to the same again, as seen from the sun in 365 d. 6 h. and 9 m. the former being the length of the tropical year, and the latter the length of the sidereal.

The earth's axis makes an angle of $23\frac{1}{2}$ with the axis of its orbit, which keeps always the same oblique direction towards the same fixed stars throughout its annual course, which causes the vicissitudes of the seasons, and the difference in the length of the days and nights, as may be seen in plate 20, fig. 46, where *a, b, c, d, e, f, g, h*, represents the earth in eight different parts of its orbit equi-distant from one another. *Ns* its axis, *N* its North Pole, *s* its South Pole, and *S* the sun, nearly in the centre of the earth's orbit. As the earth goes round the sun according to the order of the letters *a, b, c, d, &c.* its axis *Ns* keeps the same obliquity, and is still parallel to *MNs*. When the earth is at *a*, its North Pole inclines towards the sun *S*, and brings all the northern places more into the light than at any other time of the year; but when the earth is at *e*, the North Pole declines from the sun, which occasions the northern places to be more in the dark than in the light, and the reverse at the southern places. When the earth is at *c* or *g*, its axis inclines neither to nor from the sun, wherefore the poles are in the boundary of light and darkness,

ASTRONOMY.

and the sun being directly over the equator makes equal day and night at all places. When the earth is at *b* it is halfway between the summer solstice and harvest equinox; at *d* it is between the harvest equinox and the winter solstice; at *f* halfway between the winter solstice and the spring equinox; and *h* halfway between the spring equinox and the summer solstice. The axis of the earth is subject to a libratory motion, called the *nutiation of the earth's axis*, which is about 19" in 9 years, and in returning to the same spot the same period of time, making about eighteen years and seven months, the period in which the moon performs the motion of her nodes.

The Moon ☾.

The Moon, though considered as a primary planet, is only a satellite to the earth, which she attends in its revolution round the sun every year. The moon's orbit is inclined to the ecliptic in an angle which is at medium $5^{\circ} 9'$, her mean horizontal parallax is $57' 48''$, her mean distance from the earth is upwards of two hundred thousand miles; her mean apparent diameter is stated to be $31' 7''$, consequently her real diameter is 2144 miles, and her magnitude $\frac{1}{30}$ of that of the earth. The principal motions peculiar to the moon are as follow, namely, — *Periodical or sidereal motion* of the moon on her own axis, when she returns to the point of the zodiac from which she set out; which revolution she performs in 27 d. 7 h. 43 m. 11 sec. called the *periodical month*. — *Synodical motion*, or her motion in her orbit round the earth, which she performs in 29 d. 12 h. 44 m. 12 sec. called the *synodical month*. — *Motion of libration*, a wavering motion of the moon about her own axis, by which she seems to turn one time towards the East, and the other towards the West. — *The motion of the moon's anomaly*, or *apogee*, which she has in common with the other planets, is performed at the rate of $6^{\circ} 41'$ for the diurnal motion, in the period of 8 y. 311 d. 8 h. 34 m. 57 sec. called the *anomalistic month*; her motion of the nodes, or her revolution from the ascending node to the same point again, she performs at the rate of $3^{\circ} 10'$ for the diurnal motion, in the period of 18 y. 223 d. 7 h. 13 m. 17 sec. which is called the *draconic month*.

The disc or face of the moon is greatly diversified with inequalities, which, through a telescope, have the appearance of hills and vallies. These spots have been delineated on a map, as in plate 18, fig. 35, to each of which different names of astronomers and philosophers have been given by different writers.

Mars ♂.

Mars is a planet well known by his dusky red colour. He revolves on his axis in 24 h. 39 m. 22 s. and performs his revolution round the sun in 1 y. 321 d. 23 h. 15 m. 44 s. His apparent semidiameter at his nearest distance is $25''$, consequently his mean distance from the sun is 144907630 miles, his diameter 4218 miles, and his magnitude rather more than $\frac{1}{2}$ of that of the earth. (Plate 19, fig. 37.) The apparent motion of Mars, like that of Venus, is sometimes direct, sometimes retrograde, and sometimes stationary; sometimes he rises before the sun, and at other times he sets after the sun. The inclination of his orbit to the plane of the ecliptic is $1^{\circ} 51'$, the place of his ascending node about 18° in Taurus, and his horizontal parallax is said to be $23'' 6$.

Vesta ♃.

This planet was discovered by Dr. Olbers, of Bremen, on the 29th of March, 1807. It has the appearance of a star of the fifth magnitude, (as in plate 14, fig. 13) and

performs its revolution in about 3 y. 66 d. 4 h.; its mean distance is 2,163, the inclination of its orbit $7^{\circ} 8' 20''$, and the place of its perihelion in 13° of the eighth sign, the place of its ascending node in $14^{\circ} 38'$ of the third sign. The orbits of this planet, as also of Ceres, Pallas, and Juno, are given in fig. 13, together with their eccentricities and the intersections of their orbits one with another, which latter affection is peculiar to them in distinction from the other planets. The points of intersection however necessarily vary with the changes which the planets experience in their aphelia.

Juno ♃.

Juno was discovered by Mr. Harding, of Libienthal, near Bremen, on the 1st of September, 1804, having the appearance of a star of the eighth magnitude, as in plate 14, fig. 13. It is distinguished from the rest of the planets by the eccentricity of its orbit, as may be seen in fig. 13. It performs its revolution in 4 y. 128 d.; its apparent mean diameter, as seen from the earth, is $3'' .057$; its diameter is 1425 miles; mean distance from the sun 280 millions of miles; inclination of its orbit $13^{\circ} 3' 37'' .29$.

Ceres ♄.

Ceres was discovered by M. Piazzi, astronomer royal at Palermo, in Sicily, on the 1st of January, 1801. She is of a ruddy colour, appears like a star of the eighth magnitude, as in plate 14, fig. 13, and performs her revolution round the sun in 4 y. 7 m. 10 d. Her mean distance from the sun is 260 millions of miles; her apparent mean diameter, as seen from the earth, $2'' 5$; and the eccentricity of her orbit is little less than that of Mercury.

Pallas ♃.

Pallas was discovered by Dr. Olbers, in March, 1802. It is nearly of the same magnitude with Ceres, but of a less ruddy colour. It performs its revolution round the sun in 4 y. 7 m. 11 d., its annual motion being $2^{\circ} 18' 11''$, and its mean distance from the sun 266 millions of miles.

Jupiter ♃ and his satellites.

Jupiter, the biggest of all the planets, as may be seen in plate 19, fig. 37, is above 1000 times as big as our earth, his diameter being 81,000 miles. He is upwards of 400 millions of miles distant from the sun, round which he performs his annual revolution in 11 y. 315 d. 14 h. 27 m. 11 s., while he revolves on his own axis in 9 h. 56 m. Jupiter is surrounded with faint substances, called *belts*, which, owing to their variable appearance, are supposed to be clouds, and he is attended with four satellites, as in plate 14, fig. 13, which revolve round him as the moon does round the earth, and supply him with light, wherefore they are called *moons*. Their periodical revolutions are, for the first, 1 d. 18 h. 27 m. 33 s.; for the second, 3 d. 13 h. 13 m. 42 s.; for the third, 7 d. 3 h. 42 m. 33 s.; for the fourth, 16 d. 16 h. 32 m. 8 s. Jupiter's orbit is $1^{\circ} 20'$ inclined to the ecliptic; his North node is in about the 7th degree of Cancer, and his South node in nearly the same degree of Capricorn. As his axis is so nearly perpendicular to his orbit, he has no sensible change of seasons. The eccentricity of his orbit is $\frac{1}{2}$ his mean distance from the sun.

Saturn ♄, his satellites, and his ring.

Saturn shines with a pale feeble light, being the farthest of any of the planets that can be seen without a telescope. It is upwards of 700 millions of miles distant from the sun, round which it performs its annual revolution in 29 y. 167 d. 5 h., travelling at the rate of 18,000 miles

every hour. His diameter is above 67,000 miles, and consequently he is more than 600 times as big as our earth. The inclination of his orbit is said to be $2^{\circ} 29' 50''$, and he revolves, according to Herschel, on his axis from West to East in 10 h. 16 m. 2 s. The most remarkable features in the appearance of Saturn, when seen through a telescope, are his satellites and his ring, both of which are to be seen in plate 14, and the latter also in plate 20, fig. 40. The disc of Saturn is likewise crossed by obscure zones, or belts, like those of Jupiter. The satellites, which are five in number, as marked by the round points in their orbits, revolve round the planet in different periods, namely, for the first, or nearest, 0 d. 22 h. 37 m. 23 s.; the second in 1 d. 8 h. 53 m. 9 s.; the third, 1 d. 21 h. 18 m. 27 s.; the fourth, 2 d. 17 h. 44 m. 51 s.; the fifth in 4 d. 12 h. 25 m. 11 s.; the sixth, 15 d. 22 h. 41 m. 16 s.; the seventh in 79 d. 7 h. 53 m. 43 s. The ring of Saturn encircles him much in the same manner as the horizon encircles the artificial globe; and when seen through the telescope it appears to be double, being divided into an interior and exterior, as he is represented in fig. 40.

The Georgium Sidus H and his satellites.

The Georgium Sidus (Plate 14) was discovered by Dr. Herschel in 1781, by whom it obtained its name, although on the continent it is better known by the name of Uranus, or Herschel. It is the most distant of all the planets hitherto discovered, its revolution round the sun completing, as is supposed, a period of not less than 83 of our years. The revolutions of its six satellites, according to Herschel, are as follow—for the first, or nearest, 5 d. 21 h. 25 m.; for the second, 8 d. 17 h. 1 m. 19 s.; for the third, 10 d. 23 h. 4 m.; for the fourth, 13 d. 11 h. 5 m. $1\frac{1}{2}$ s.; for the fifth, 38 d. 1 h. 49 m.; for the sixth, 107 d. 16 h. 40 m.

The Comets.

The Comets are solid opaque bodies, which, according to Newton, are a kind of planets moving in exceedingly oblique and eccentric orbits, similar to what is represented in plate 14. The train of light which is frequently observable in them is called its *tail*; which light is emitted by its *nucleus*, or Head, that is ignited by the sun. Comets have the appearance of being *tailed* when they are westward of the sun, and set after him. Others are called *bearded*, because they emit a light resembling a beard in appearance when they are eastward of the sun; and others are termed *hairy*, when their light resembles hair, as when the sun and comet are diametrically opposite.

Practical Astronomy.

Practical astronomy comprehends that part of the science which may be learned by the means of machines or instruments, of which the principal are the Globes, the Orrery, and the Astronomical Quadrant.

The Use of the Globes.

A Globe is an artificial representation of any sphere, and is of two kinds, namely, *terrestrial*, which gives a representation of the earth, and *celestial*, that which represents the heavens, as may be seen in plate 20, fig. 43. The parts of the globes, and their several uses, are as follow:—

Axis. The axis is a brass wire, as A, on which the body of the globe is made to turn, so as to represent the motion of the earth or the heavens on their own axis, the two extremities of which, N and S, are the North and South poles.

The *brazen Meridian*, M, is a strong brass ring which encompasses the globe from North to South. The use of the Meridian is as follows:—1. It divides the globe into two hemispheres, East and West, in the former of which all bodies rise, and in the latter they set; by which both the diurnal and nocturnal arcs are divided into two equal portions, making forenoon, noon, afternoon, and midnight. Each of these four quadrants of the circle consists of 90 degrees, namely, two numbered from the equator to the poles, and the other two from the poles to the equator, as in plate 20, fig. 42. 2. It measures the greatest altitude of the heavenly bodies; on that account called their Meridian altitude. 3. It measures the elevation of the pole in an oblique and parallel sphere. 4. In a right sphere, being in the place of the horizon, it determines the right ascension of the celestial bodies. 5. It measures the declination of the heavenly bodies when they are brought to its graduated edge. The declination of the sun is thus measured by means of his place in the ecliptic, i. e. the sign and degree he is in on any given day, as marked on the horizon. 6. It measures the latitude of all places on the terrestrial globe by means of the degrees and minutes thereon marked, and also the longitude of places as marked on the equator, by showing the point where the latter is intersected by it. 7. It serves for the solution of all problems where the globe requires to be *rectified* for the latitude of the place, or for the sun's place. When the pole, North or South, is elevated above the horizon any number of degrees, equal to the latitude of the place, or the declination of the sun, the globe is said to be *rectified* for the latitude and sun's place; but in the latter case the index, or hour circle, must be turned to twelve, or noon. 8. It answers as a general meridian for all the meridian circles which are drawn on the globe at the distance of fifteen degrees from each other; and by it also parallels of latitude may be drawn on the globe at the smallest possible distance from each other.

Horizon. The Horizon, or rational Horizon, H, is the frame which supports the globe, and is divided into several concentric spaces, containing a calendar of the months and days, corresponding to the 12 zodiacal constellations, each divided into 30 parts. In most globes the circle of bearings follows, marked with the cardinal and collateral points of the compass, also the circle of azimuths and amplitudes. The use of the Horizon is as follows:—1. It divides the globe into two hemispheres, upper and lower, i. e. northern and southern, and cuts the meridian at right angles. 2. It is the circle from which the altitudes of the poles and of the heavenly bodies are reckoned. 3. It determines the true rising and setting of the celestial bodies, as also their course above and below itself, which is called the *artificial day* and *night*. 4. Not only the four cardinal points, North, South, East, and West, but also four other points are marked upon it namely, the rising and setting points in the two solstices. 5. It measures the amplitude of the heavenly bodies, which is an arc of the horizon intercepted between the true East or West points and the centre of the sun or stars at their rising or setting, according to their different declinations and latitudes. 6. It is the circle in which are marked the regions or points in the sphere, from which the winds derive their names; whence these points are called the points of the compass. 7. It measures the ascensions and descensions of the heavenly bodies, &c.

Horary Circle. The Horary, or Hour Circle, is a small circle of brass, as in fig. 43, which is usually divided into twice 12 hours, the upper of which represents noon, and the lower midnight. This circle is divided so that

ASTRONOMY.

the hours should correspond to the *meridian circles*, otherwise called *horary circles*, drawn on the globe, as M m m, &c., plate 20, fig. 41, reckoning an hour of time equal to fifteen degrees of longitude.

Quadrant of Altitude. The Quadrant of Altitude is a thin flexible piece of brass, so formed at one end, with the assistance of a screw, as to fix on any part of the horizon: it is so called because it measures the altitudes of celestial bodies, and serves the purpose of the vertical circles which are not drawn on the globe. It is divided upwards from 0 to 90 degrees, and downwards from 0 to 18 degrees. The upper divisions are used to determine the distances of places on the terrestrial globe, or the distances, altitudes, &c. of the celestial bodies on the celestial globe: for this purpose the quadrant must be screwed upon the brass meridian over the latitude of any given place, which is called *rectifying for the zenith*; for supposing the pole to be elevated so many degrees above the horizon as are equal to the latitude of the place, then the same degree on the meridian, reckoned from the equator, is the zenith point. The lower division serves to measure the beginning, end, and duration of twilight.

Equator. The Equator on the terrestrial globe, or Equinoctial on the celestial, has the degrees and minutes marked upon it (as E in fig. 42), 180 degrees each way, i. e. Eastward and Westward, or 360 degrees quite round, numbered from a given point, called the *first meridian*, for which that which passes through the capital of the country is generally chosen. The use of the Equator is as follows:—1. It divides the globe into two equal parts, called the Northern and Southern hemispheres, every part of which is 90 degrees distant from the poles. 2. It intersects the ecliptic at two points, called the *equinoctial points*, namely, Aries and Libra. Whenever the sun comes to these points, the days and nights are equal all over the world; wherefore these periods are called the Equinoxes. 3. From this circle the declination of the sun or stars on the celestial globe, or the latitude of places on the terrestrial, are reckoned on the meridian. 4. On this circle are reckoned the right and oblique ascensions on the celestial globe, and the longitude of places on the terrestrial.

Ecliptic. The Ecliptic, *e* in fig. 41, and CP in plate 13, fig. 7, is the circle so called because eclipses of the sun and moon happen only within that circle. The use of the ecliptic is as follows:—1. It cuts the equator at two opposite points, making an angle of $23\frac{1}{2}$, called the obliquity of the ecliptic. 2. By this obliquity of the ecliptic is determined the greatest declination of the sun, as well as the distance of the tropics from the equator, and the poles of the ecliptic from the poles of the equator. 3. It is divided into the twelve portions of thirty degrees, corresponding to the days of the month, which are distinguished by the signs of the zodiac. 4. In this circle the sun advances one degree every 24 hours, and thirty degrees every month, passing through the whole 360 degrees in a year; whence it is called the *sun's path*. 5. From this circle is measured the latitude of the stars.

Zodiac. The Zodiac is the broad belt or circle drawn on the celestial globe at the distance of about eight degrees on each side the ecliptic, E, which marks the boundary within which the planets perform their revolutions.

Colures. The Colures divide the ecliptic into four equal parts, and mark the four seasons of the year. The meridian, A E B Q, in pl. 13, fig. 7, represents the solstitial colure.

By the help of the lesser circles the terrestrial globe is divided into different portions called *Zones*, which are

large, and *Climates*, which are small portions. The zones are five in number; namely, two frigid, two temperate, and one torrid. The *North frigid zone* lies within the arctic circle, T M, in fig. 7; and *South frigid zone* within the antarctic circle. The *North temperate zone* extends from the arctic circle to the tropic of Cancer, C R; the *South temperate zone* from the antarctic circle to the tropic of Capricorn, K P. The *torrid zone* lies between the tropics. *Climates* are portions of the earth, contained between two small circles parallel to the equator, of such a breadth that the longest day in the parallel nearest the pole exceeds the longest day in the parallel of latitude nearest the equator, by half an hour, in the torrid and temperate zones, and by a month in the frigid zones; so that there are twenty-four climates between the equator and each polar circle, and six climates between each polar circle and its poles.

The inhabitants of the earth are likewise distinguished, by their relative situations with regard to each other, into Antoeci, Perioeci, and Antipodes. The *Antoeci* are those who live in the same degree of longitude, and in equal degrees of latitude, but the one North and the other South: they have noon at the same time, but contrary seasons of the year; consequently, the length of the days to the one is equal to the length of the nights to the other. *Perioeci* are those who live in the same latitude, but in opposite longitudes; consequently, when it is noon with the one it is midnight with the other: they have the same seasons of the year, and the same lengths of days. *Antipodes* are those who live diametrically opposite to each other; their latitudes, longitudes, seasons of the year, days, nights, being all contrary. There are other distinctions of the inhabitants into Amphiscii, Heteroscii, and Periscii, according to the manner in which their shadows fall. [vide *Amphiscii*, &c.]

The Orrery.

The Orrery is a machine which has been contrived to display the solar system with the order, motions, eccentricities, and other affections of the sun and the planets. It has been constructed in a variety of forms more or less complete, but the one which is given in plate 20, fig. 45, affords the best representation of the planets that can be given on paper.

Astronomical Quadrant.

This instrument is so called because it is constructed for the purpose of taking observations of the heavenly bodies. It is usually made of brass or iron bars, having its limb A B, pl. 19, fig. 39, divided into degrees and minutes, and furnished either with two pair of plain sights, or two telescopes, one on each side of the quadrant, as C D and E F, moveable about the centre by means of the screw G; the dented wheels H and I serve to direct the instrument to any object of which the observer wishes to take the altitude, &c. This quadrant is sometimes provided with only one telescope, and a plummet to direct its movements.

ASTROSCOPE (*Astron.*) a kind of astronomical instrument composed of telescopes for the observation of the stars, invented and described by William Shukhard, of Tubingen, in 1698.

ASTROSCOPIA (*Astron.*) from *ἄστρον* and *σκέπτομαι*, *specular*; observation and contemplation of the stars.

ASTROTHERSIA (*Astron.*) the same as Astrum.

ASTRUM (*Astron.*) or *Astron*, a constellation or assemblage of stars, in distinction from *aster*, a single star.

ASTRUM (*Chem.*) the virtue and power which accrues to things from their preparation, as the *astrum* of salt, its resolution with water or oil. *Dict. Paracelsic.*

ASTRUM (*Med.*) troches in the form of an asterisk. *Gal. de Comp. Med. sec loc. l. 8, c. 3.*

ASTRUM (*Law*) a house or place of habitation. *Placit. Hilar. 18 Ed. 1.*

A'SYLA (*Bot.*) a herb with which cattle cure themselves when they have eaten pimpernel. *Plin. l. 27, c. 13.*

ASYLUM (*Ant.*) *ἀσύλον*, from *α*, priv. and *συλάω*, to violate, i. e. an inviolable place, or a place of refuge for offenders, where they were screened from the hands of justice. The *asyla*, among the Jews, were the temple, the altar of burnt offering, and the cities of refuge mentioned in Exodus xxi. 33, and Numbers xxxi. 11. A similar custom prevailed both among the Greeks and the Romans, where temples, altars, and statues, were places of refuge for criminals of every description, as Tacitus informs us, to the violation of public justice. It is said that the first asylum was erected, at Athens, by the Heraclidæ, for the protection of those who dreaded the resentment of such as had suffered from the oppression and tyranny of their grandfather Hercules. The tomb of Theseus was an asylum for slaves; the temple of Diana, at Ephesus, an asylum for debtors. At the building of Rome, Romulus left a space as a place of refuge for all sorts of persons, slaves or free-born, who wished to settle under his government: to which Virgil and Juvenal allude.

Virg. Æn. l. 8, v. 342.

Hinc lucum ingentem, quem Romulus acer asyllum Rettulit.

Juven. sat. 8, v. 272.

*Et tamen, ut longe repetas, longæque revolvas
Nomen, ab infami gentem deducis asylo.*

According to Suetonius this custom was abolished by Tiberius, at Rome; but it continued in the Græcian provinces, as we learn from the coins of Claudius, Vespasian, Domitian, Trajan, M. Aurelius, Macrinus, Elegabalus, and Decius, which were struck by the cities of Seleucia,

Damascus, Heraclea, Laodicea, Antioch, Samosata, &c. bearing the inscription *ΙΕΡΑ ΚΑΙ ΑCΥΤΑΟC*, i. e. sacred and inviolable. *Dionys. Hal. l. 2; Liv. l. 35, c. 51; Tacit. Annal. l. 3, c. 60; Plut. de Superstit. et de Vitand. Usur.; Sueton. in Tib. c. 37; Non. Marcell. l. 1, c. 209; Serv. in Æn.; Vaillant. Numis. Græc.; Spanheim. de Præst. et Us. Numm. Dissert. 9, p. 778, &c.*

ASYMMETRY (*Math.*) *ἀσυμμετρία*, a relation between two quantities, having no common measure, as between 1 and the $\sqrt{2}$.

ASYMPTOTE (*Meth.*) *ἀσύμπτωσις*, a name for lines continually approaching each other, but which, if infinitely produced, can never meet, so called from *α*, priv. and *συμπίπτω*, to meet; or, in other words, a tangent to the curve when conceived to be at an infinite distance, which is best illustrated by the asymptote of the conchoid, as in the subjoined figure: suppose A B C to be part of a

conchoid, and the line MN be so drawn that the parts FB, GC, HD, IE, &c. of right lines drawn from the pole P to the curve B C D, be equal to each other, then will the line MN be the asymptote of the curve, because the perpendicular C c is shorter than FB, and D d than C c, &c. so that two lines continually approach, yet the points E, e, &c. can never coincide.—Of curves of the first kind, that is, the Conic Sections, only the hyperbola has more than one asymptote; all curves of the second kind have one at least, and may have three; and all curves of the fourth kind may have four. The conchoid, cissoid, and logarithmic curve have each one.—Asymptotes of the hyperbola are thus described; suppose, as in the annexed figure, C P to be a diameter of an hyperbola, R A S and C D the semiconjugate to it; then, if F E be a tangent at the point A, A E = FA = C D, and the lines C G, C G, be drawn from the centre C through the points E and F, these lines C G, C G, will be the asymptotes of the hyperbola R A S.

Apollon. Perg. Con. Sect. l. 2, prop. 1, &c.

ASYMPTOTON (*Med.*) *ἀσύμπτωσις*, i. e. not meeting, not compressed or brought into contact. *Hippocrat. πρὶ χυμῶν; Gal. ad Glauc. l. 1.*

ASYNDETON (*Rhet.*) *ἀσύνδετον*, from *α*, priv. and *συνδέω*, to bind; a figure in which many words are joined without a conjunction, as *veni, vidi, vici*. *Dionys. Hal. in Jud. Lys. c. 9; Sophron. apud Phot. Cod. 5; Philostrat. in Vit. Antiph.; Schol. in Aphthon. Progymn. de Ethopoeia.*

A'TABAL (*Mus.*) a kind of tabor used among the Moors, which is probably a word of Moorish extraction.

ATAMA'RAM (*Bot.*) the *Annona squamosa* of Linnæus.

ATAMA'SCO (*Bot.*) a species of the *Amaryllis* of Linnæus.

ATARA'XIA (*Ant.*) another name for stoical apathy, from *α*, priv. *ταράσσω*, to disturb.

ATA'XIA (*Med.*) *ἀταξία*, from *α*, priv. and *τάσσω*, to dispose, irregularity; a term applied to the pulse or to fevers. *Hipp. Epidem. l. 1 & 3.*

A'TC'HE (*Com.*) the smallest coin in the Grand Seignor's dominions equal to $\frac{2}{3}$ of a farthing.

ATCHIE'VEMENT (*Her.*) vulgarly called hatchment, the arms of any family, with all the ornaments belonging to their several degrees, as crest, helmet, mantle, &c. or of

any person deceased, painted on canvass, and fixed against the wall of his late dwelling-house to denote his death. The atchievement marks not only the degree of the person, but also, whether a bachelor, married man, or widower, a maid, married woman, or widow. [vide *Heraldry*]

ATE'BRAS (*Chem.*) a subliming vessel.

ATE'CHNIA (*Med.*) ἀτεχνία, from α, priv. and τεχνία, art; a want of art.

A'TEGAR (*Cus.*) a weapon among the Saxons, which from æton, to throw, and ζαπα, weapon, seems to have been a hand weapon.

A'TELLA'NÆ (*Ant.*) comic and satirical pieces among the Romans, so called from Atella, a town of the Oscii or Tuscany, where they were first represented; they were something similar to our farces. *Cic. ad Fam.* l. 9, ep. 16; *Val. Maxim.* l. 3, c. 4; *Diomed. de Elocut.* l. 3; *Macrob. Saturn.* l. 3, c. 7; *Gyrald. de Sat. Roman.*; *Salmas. Exercitat.* *Plin.* p. 77.

A-TEMPO (*Mus.*) Italian for *in time*, an expression employed only when the regular measure has been interrupted.

ATHAMA'NTA (*Bot.*) a genus of plants, Class 5 *Pentandria*, Order 2 *Digynia*, the *Oreoselinum* of Tournefort.

Generic Characters. CAL. umbel universal manifold; involucre universal, many leaved.—COR. universal uniform.—STAM. filaments five; anthers roundish.—PIST. germ inferior; styles two, distant; stigmas obtuse.—PER. none; fruit ovate oblong; seeds two.

Species. The species are perennials, as—*Athamanta libanotis*, *Lygusticum*, *Apium libanotis*, seu *Daucus*, Mountain Spignel, or Stone Parsley.—*Athamanta cervaria*, *Selinum libanotis*, *Daucus*, seu *Cervaria*, Broad-leaved Spignel, or Black-Heart Root.—*Athamanta oreoselinum*, seu *Oreoselinum*, Divaricated Spignel, or Mountain Parsley.—*Athamanta Cretensis*, *Libanotis*, seu *Daucus*, Cretan Spignel, or Candy Carrot. *Clus. Hist. var. Plant.*; *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tournef. Inst.*

ATHANA'SIA (*Med.*) from α, priv. and θάνατος, mors; a medicine for infirmities of the liver, &c.

ATHANASIA (*Bot.*) a genus of plants, Class 19 *Syngenesia*, Order 1 *Polygamia Equalis*, the *Baccharis* of Vaillant.

Generic Characters. CAL. common umbriate.—COR. compound uniform.—STAM. filaments five; anther cylindrical.—PIST. germ oblongish; style filiform; stigma bifid.

Species. The species are either shrubs or perennials, as—*Athanasia capitata*, *Chrysanthemum*, seu *Tanacetum*, Hairy Athanasia.—*Athanasia maritima*, *Filago maritima*, *Santolina maritima*, *Gnaphalium maritimum*, seu *Chrysanthemum*, Sea Athanasia Cudweed, or Cottonweed.—*Athanasia erithmifolia* *Santolina*, *Jacobæa*, seu *Coma aurea*, Sampire-leaved Athanasia.—*Athanasia parviflora*, *Tanacetum erithmifolium*, *Santolina*, *Coma aurea*, *Elichrysum*, seu *Ageratum*, Small-flowered Athanasia, &c. There are a few annuals, namely,—*Athanasia annua*, *Elichrysum inodorum*, *Chrysanthemum erymbiferum*, *Bellis polyclonos*.—*Achillea inodora*, seu *Ageratum*, the Annual Athanasia. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*, &c.

ATHANA'SIAN creed (*Ecc.*) a formula of faith which has been adopted into the Liturgy of the Church of England; so called because it is said to have been drawn up by St. Athanasius: a point upon which ecclesiastical writers are not agreed. *Du Pin. Bib. des Aut. de iv. Sic.*; *Waterland. Hist. Athanas. Creed.*

ATHA'NATI (*Ant.*) ἀθάνατοι, immortal; the name of a squadron of ten thousand horse among the Macedonians,

which was always kept complete, by filling up the vacancies of every one when he died.

ATHA'NOR (*Chem.*) from the Arabic *Athan*; a digesting furnace which retained the heat for so long a time as a month; and was so contrived that it might be increased or diminished at pleasure.

ATHA'REN (*Astrol.*) a term applied to the moon when she is in the same day and minute as the sun.

A'THE (*Law*) a privilege of administering an oath; such as was granted to the monks of Glastonbury by Hen. II.

A'THELING (*Polit.*) atheling, athel, or adel, Saxon for noble; was the title given to the king's eldest son, as the Prince of Wales is in our time.

ATHENA (*Med.*) ἀθήνα, a plaister, recommended by Asclepiades, and mentioned by Orobasius, Actius, and Paulus. *Eginet.*

ATHENÆ (*Lit.*) the title of Anthony Wood's History of Oxford.

ATHENÆ'A (*Bot.*) a genus of plants, Class 8 *Octandria*, Order 1 *Monogynia*.

Generic Characters. CAL. perianth one-leaved.—COR. none.—STAM. filaments eight; anthers sagittate.—PIST. germ superior; style setaceous; stigma depressed.—PER capsule globose; seeds three to five.

Species. The only species is the—*Athenæa Guianensis*, seu *Iroucana*, a shrub, native of Guiana.

ATHENÆ'UM (*Ant.*) ἀθηναίον, a public school erected at Athens, which was frequented by philosophers, poets, and rhetoricians, for the purpose of arguing, reciting, declaiming, and other exercises of a scholastic or philosophic kind. There were several buildings of this name at Athens, and one at Rome, erected by the emperor Adrian. *Dio.* l. 73; *Aurel. Vict. de Caesar.*; *Lamprid. in Alex.* c. 35; *Cupitolin. in Pertinax.* c. 11.

ATHENATO'RIMUM (*Chem.*) a thick glass cover, to be luted to a cucurbit when the alumbic is taken off. *Theat. Chem.* vol. iii. p. 33.

ATHENIO'NIS catapotium (*Med.*) a cough pill mentioned by Celsus, consisting of myrrh, pepper, castor, and apium.

ATHENI'PPON (*Med.*) a collyrium for the eyes, mentioned by Galen, and another by Scribonius Largus.

A'THER (*Nat.*) ἄθηρ, the prickly part, or beard of barley. *Hipp. de Epidem.* l. 5.

ATHERÅ (*Med.*) ἄθηρα, a kind of pap for children; also a kind of liniment. *Dioscor.* l. 2, c. 114; *Plin.* l. 22, c. 25.

ATHERINA (*Ich.*) Atherine; a fish very full of bones, but good food and easy of digestion. *Gesn. de Aquat.*; *Aldrov. Ichth.*

ATHERINA, in the *Linnean system*, a genus of fishes of the *Abdominal Order*.

Generic Characters. Upper Jaw a little flat; Gill-membrane brayed; Sides with a silvery stripe.

Species. The species are the *Atherina hispetus*, *menidia*, *schama*, and *Japonica*.

ATHERO'MA (*Med.*) ἀθήρωμα, a kind of tumor in the neck or arm-holes, containing a matter like ἄθηρα, a pap. *Cels. de Re Med.* l. 7, c. 6; *Act. Tetrab.* 2, serm. 3, c. 83; *Paul. Eginet.* l. 4, c. 33; *Act. Meth. Med.* l. 2, c. 12; *Gorr. Def. Med.*

ATHLE'TÆ (*Ant.*) ἀθληταί, from ἀθλίο, to contend; a combatant, champion, or any one who is engaged in the contests usually exhibited at the games, as wrestlers, runners, pugilists, &c. *Vitruv. Praef. in lib. 9, Architect.*

ATHLE'TICUS (*Med.*) ἀθλητικός, athletic; an epithet, signifying full, or robust, when applied by Hippocrates to the ἔξῃς, or habit of the body; full and strong when applied to the victus, or food. *Foes. Econom. Hippocrat.*

ATHLOTHE'TÆ (*Ant.*) ἀθλοθέται, the judges who presided at the Athletic games, in distinction, according to Phavo-

- rinus; sometimes from the ἀγανόβηται, who presided at musical contests.
- ATHWA'RT** (*Mar.*) an epithet, used in several phrases to signify a cross, the line of the ship's course, as 'We discovered a fleet standing *athwart* us.' "*Athwart* the fore-foot" is applied to the flight of a cannon ball, fired from one ship across the line of another's course, but a-head of her to bring her to. "*Athwart* hawse" expresses the situation of a ship when she is driven by wind or tide across the stern of another vessel, whether in contact, or at a small distance from each other. "*Athwart* ships," reaching across the ship from one side to the other.
- ATHY'MIA** (*Med.*) from α, priv. and θυμός, the mind; dejection of spirits attendant upon some diseases.
- A'TIA** (*Law*) a writ of inquiry, whether a person be committed to prison on just cause of suspicion. [vide *Odio et Atia*]
- ATIBAR** (*Com.*) Gold dust on the coast of Africa.
- ATILIA** *Lex* (*Ant.*) the name of several laws enacted by members of the Atilian family, as 1, by Atilius, a tribune, concerning the towns which surrendered themselves, U. C. 543. *Liv.* l. 26, c. 33. 2. Concerning the guardians, U. C. 567. *Ulp. in Fragm.* 3. Concerning the military tribunes, passed by L. Atilius and C. Marcius, tribunes of the people. *Liv.* l. 9, c. 30.
- ATILIA** (*Archæol.*) Utensils or country implements.
- ATY'NIA** (*Bot.*) a sort of Elm. *Plin.* l. 16, c. 17.
- ATINIA** *lex* (*Ant.*) a law which gave the tribunes the privilege of a senator. *Aul. Gell.* l. 45, c. 8.
- ATIZOES** (*Min.*) a precious stone, shining like silver, three fingers in size. *Plin.* l. 37, c. 10.
- ATLA'NTES** (*Archæol.*) ἀτλαντες, from ατλάνω, to bear; images of men bearing up pillars, or supporting the building; as Atlas bore the heavens on his shoulders. *Vitruv.* l. 6, c. 10.
- ATLA'NTIDES** (*Astron.*) another name for the *Pleiades*.
- ATLA'NTIUS nodus** (*Bot.*) the first or bottom joint of the thorn which bears up the rest. *Plin.* l. 28, c. 8.
- A'TLAS** (*Geog.*) the name of a book, containing maps of the whole world; so called from Atlas, who was fabled to have borne the world on his shoulders.
- A'TLAS** (*Anat.*) the first vertebra of the neck which supports the head.
- ATLAS** (*Com.*) a satin manufactured in the Indies. *Mort.*
- ATMOSPHERE** (*Nat.*) from ἀτμός, vapour, and σφαῖρα, a sphere or region; signifies properly that region of the air next to the earth, which receives the vapours and exhalations, and is terminated by the refraction of the sun's light. In this sense, it is most commonly understood by natural philosophers; although sometimes it is made to signify the whole mass of ambient air.—*Atmosphere of consistent bodies*, according to Mr. Boyle, is a kind of sphere, formed by the effluvia emitted from them.
- ATMOSPHERE** (*Elect.*) that sphere which surrounds the surface of electrified bodies, and is formed by the effluvia issuing from them.—*Magnetic atmosphere*, that sphere within which the virtue of the magnet acts.
- ATMOSPHERIC Stones** (*Nat.*) vide *Aeroliths*. — *Atmospheric Tides*, certain periodical changes in the atmosphere, similar to those of the ocean, and produced from nearly the same causes; of this description are the Equinoctial winds.
- ATMOSPHERICAL clock** (*Mech.*) a machine for measuring the mean temperature of the air, which was proposed by Dr. Brewster.
- ATA'CIUM** (*Bot.*) a name for *Antirrhinum*.
- ATOC'CIUM** (*Med.*) ἀτόκιον, a medicine which prevents conception.
- ATO'LLI** (*Med.*) a sort of Indian pap, made of maize.
- A'TOM** (*Nat.*) άτομος, sc., ἕσια, *individua substantia que*

- secari non potest*; a thing so small that it cannot be divided.
- A'TONY** (*Med.*) ἀτονία, from α, priv. and τείνω, to extend; a want of due tension, or a relaxation of the system.
- A'TRA bilis** (*Med.*) Black-Bile, or Melancholy, properly signifies that humour of the body which is rendered, by adustion, preternaturally mordacious, harsh, and malignant. *Aret. de Sign. et Caus. Acut. Morb.* l. 1, c. 5; *Ruf. Ephes.* l. 1, c. 3; *Gal. Comm. in Hippoc. Epidem.* l. 1, &c.
- ATRA'CTYLIS** (*Bot.*) ἀτρακτυλις, distaff-thistle, a plant; so called from ἀτράκτος, a spindle, because the spindle was formerly made of it. Its leaves, when taken by decoction, are aperitive, sudorific, and an antidote against poisons. *Theoph. Hist. Plant.* l. 6, c. 4; *Dioscor.* l. 3, c. 107; *Plin.* l. 21, c. 15, &c.; *Gal. de Simpl.* l. 6; *Oribas. Med. Collect.* l. 15; *Aet. Tetrab.* l. 1, serm. 1; *Paul. Æginet.* l. 7, c. 3.
- ATRAC'TYLIS**, in the *Linnean system*, a genus of plants, Class 19 *Syngenesia*, Order 1 *Polygamia Æqualis*.
Generic Characters. CAL. outer many-leaved.—COR. compound radiate.—STAM. filaments five; anther cylindrical.—PIST. germ very short; style filiform; stigma bifid.—PER. none; seeds turbinate; receptacle villose.
Species. The species are some annuals, as—*Atractylis cancellata*, *Acarna*, *Eryngium*, seu *Carduus*, *Netted Atractylis*. Some biennials, as—*Atractylis humilis*, *Centaurea*, *Cnicus*, seu *crocodeloïdes*, *Dwarf Atractylis*. Some perennials, as—*Atractylis gummifera*, *Cnicus*, *Carlina*, *Carduus*, seu *Chameleon*, *Gummy-rooted Atractylis*, &c. *Dodon. Stirp. Hist.*; *Clus. Hist. rar. Plant.*; *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tournef. Inst.*
- ATRAG'ENE** (*Bot.*) Traveller's joy, a plant, the flowers, bark, seeds, and root of which are of a caustic quality.
- ATRAGENE**, in the *Linnean system*, a genus of plants, Class 13 *Polyandria*, Order 7 *Polygynia*.
Generic Characters. CAL. perianth four-leaved.—COR. petals twelve.—STAM. filaments very many; anthers oblong.—PIST. germs very many; styles villose; stigma simple.—PER. none; seeds very many.
Species. The species are shrubs, as—*Atragene Japonica*, *Atragene Alpina*, *Clematis*, *Capensis*, seu *Pulsatilla*, *Zeylanica*. *Clus. Hist. rar. Plant.*; *J. Bauh. Hist.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Bot.*; *Raii Hist. Plant.*
- ATRAMENTUM** (*Nat.*) the blood of the Cuttle-fish.
- ATRAMENTUM sutorium** (*Chem.*) χαλκάνθεος, Copperas or Vitriol. *Cic. de Nat. Deor.* l. 2, c. 50; *Plin.* l. 34, c. 12; *Oribas. Med. Collect.* l. 13.
- ATRAPHA'XIS** (*Bot.*) the Greek name for the *Atriplex*.
- ATRAPHAXIS**, in the *Linnean system*, a genus of plants, Class 6 *Hexandria*, Order 2 *Digynia*.
Generic Characters. CAL. perianth two-leaved.—COR. petals two.—STAM. filaments six; anthers roundish.—PIST. germ compressed; style none; stigmas two capitate.—PER. none; seed one.
Species. The two species are—*Atraphaxis spinosa*, seu *Atriplex*, Prickly branched *Atraphaxis*, a shrub, native of Siberia.—*Atraphaxis undulata*, *Polygonum*, seu *Arbuscula*, *Waved-leaved Atraphaxis*, a shrub, native of the Cape of Good Hope. *Tournef. Inst. Re. Herb.*; *Boerhaav. Ind.*
- ATREBA'TICÆ Vestes** (*Ant.*) χιτῶνις ἀτρεβατικῶν, a sort of cloths made at Arras, in Flanders. *Suidas.*; *Cal. Rhodig. Ant. Lect.* l. 16, c. 10.
- ATRICES** (*Med.*) Small tubercles about the anus.
- A'TRICI** (*Med.*) small sinuses in the intestinum rectum.
- ATRIE'NSIS** (*Ant.*) *custodes Atrii*; servants of special trust, who had the charge of the images, plate, and pedigree of the family which were kept in the porch, or hall. *Plant. Asin. act.* 2, scen. 2, v. 84.

*Ex templo facio factum me, atque magnificentum virum
Dico me esse atriensem.*

Cic. Parad. 1. 5; *Columel.* 1. 12, c. 3; *Ursin. Append. ad Craccon. in Triclin.*; *Nardin. Rom. Vet.* 1. 6, c. 13.

A-TRIP (Mar.) an epithet applied to the anchor and sails: "The anchor is *a-trip*" when it is just drawn out of the ground in a perpendicular direction. "The top-sails are *a-trip*" when they are just started from the cap.

ATRIPLEX (Bot.) ORACHE, a plant called in the Greek *ατρίπλαξ*, or *ατρίφραξις*, because, *ἀτρίφραξις*, it grows immediately to its full height. The seeds of this plant are purgative, and often act as an emetic. *Theophrast. Hist. Plant.* 1. 7, c. 2; *Dioscor.* 1. 2, c. 145; *Plin.* 1. 20, c. 20; *Cæd. Aurelian. Chron.* 1. 5, c. 11; *Oribas. Med. Coll.* 1. 15; *Aet. Tetrab.* 1, serm. 1; *Paul. Æginet de Re Med.* 1. 7, c. 3.

ATRIPLEX, in the *Linnean system*, a genus of plants, Class 23 *Polygamia*, Order 1 *Monoecia*.

Generic Characters. CAL. *perianth* five-leaved.—COR. none. STAM. *filaments* five; *anthers* twin.—PIST. *germ* orbiculate; *style* short; *stigmas* reflex.—PER. none; *seed* one.

Species. The species are partly annuals, as—*Atriplex marina*, Serrated Sea-Orache.—*Atriplex hastata*, Broad-leaved Wild Orache, vulgarly called Fat-Hen, &c.; and partly shrubs, as—*Atriplex portulacoides*, *Halimus*, seu *Portulaca marina*, Dwarf Shrubby Orache, or Common Sea Purslane. *Matthiol. Kraut*; *Lobel Observat. Sylvest.*; *J. Bauh. Hist.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*

ATRIPLICIS (Ent.) a species of Scarabæus.

ATRIUM (Ant.) a court before the house, and sometimes a churchyard.

ATROPA (Bot.) from Atropos, one of the Fates, who was supposed to cut the thread of life; a genus of plants, Class 5 *Pentandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* one-leaved.—COR. *petals* one.—STAM. *filaments* five.—PIST. *germ* semi-ovate; *style* filiform; *stigma* headed.—PER. *berry* globular; *seeds* very many.

Species. The species are mostly perennials, as *Atropa Belladonna*, seu *Solanum*, Deadly Nightshade, or Dwale.—*Atropa mandragora*, Mandrake; but the—*Atropa physaloides*, seu *Alkengi*, Peruvian Deadly Nightshade, is an annual, and some others are shrubs, as *Atropa frutescens*, *Physalis*, seu *Belladonna*, Shrubby Atropa, &c. *Fuchs. Hist. Stirp. &c. Lobel. Plant. Hist. et Adver.*; *Clus. Hist. Plant. Rar.*; *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*

ATROPHUS (Med.) one labouring under the disease of atrophy.

ATROPHY (Med.) *ἀτροφία*, from *α*, priv. and *τρέφω*, to nourish, atrophy; a sort of consumption by means of a defective nourishment. *Cels.* 1. 3, c. 22.

ATROPHY, in Cullen's Nosology, is a genus of diseases, Class *Cachexia*, Order *Marcoses*.

ATTA (Ant.) *ἄττα*, or *πάττα*, a Thessalian; a term of respect given by young people to their elders. *Fest.*

ATTA (Med.) a limper, or one who from some defect in his feet walks on the fore part instead of the tread. *Fest. de Verb. Signif.*

ATTACHIA'RE (Law) from *attacher*, to attach, or apprehend by force of a writ, or precept. *Lamb. Eiren.* 1. 2, c. 26.

ATTACHIAMENTA bonorum (Law) a distress taken upon goods or chattels.—*Attachiamenta de spinis et bosco*, a privilege granted to the officers of a forest, to take to their own use thorns, bushes, &c. of the forest.

ATTACHMENT (Law) a laying on of hands, or apprehending by virtue of a precept; it differs from an arrest,

inasmuch as it lays hold of the goods, as well as the person. It differs from a *capias*, inasmuch as the latter belongs to real and the former to personal actions. *Bract.* 1. 4; *Britt.* c. 26; *Flet.* 1. 2, c. 1, &c.; *Horn. Mir. of Just.* c. 2, sect. 6; *F. N. B.* 40, &c.; *Kitch.* 79, &c.; *Lamb Eiren.* 1. 2, c. 26; *New Nat. Brev.* 6, &c.—*Attachment of privilege*, a power to apprehend a man in a privileged state. *Küch.* 79.—*Foreign Attachment*, an attachment of the goods of a *foreigner*, to satisfy his creditors.—*Attachment of the forest*, the lower of the three courts held there, of which the Sweynmote is the middle, and the Justice in Eyre's seat the highest. It is so called because attachments against offenders are there received and enrolled. *F. N. B.* 105; *Crompt. Court.* 164; *Manw. For. Laws*, c. 3, &c.

ATTACK (Mil.) a general assault, or onset, made to gain a post, or any particular point.—*Attack of a siege*, are the works which the besiegers carry on, as trenches, galleries, mines, &c. in order to take the place by storm.—*Regular attack*, an attack made in due form, according to the rules of art, called also *right*, or *droit*; so also, "To gain a place by right attack," is to gain the place by formal attack and regular works without a general storm.—*False attack*, is an effort of the besiegers to make themselves masters of the place, but made with less vigour than a real attack, in order to divert the attention of the besieged from the point really aimed at.—*Attack in front or flank* i. e. an attack of the salient angle, or both sides of the bastion, which the French call *en Front et sur les Flancs*.—*Attack and Defence*, a part of the drill exercise for recruits learning the sword exercise.

ATTAGEN (Orn.) *ατταγῆς*, called by the Greeks, *λαγώππε*, "Harefoot," on account of its downy feet; an Asiatic partridge, native of Ionia in Asia Minor, the flesh of which Aristophanes, in Athenæus, calls "The sweetest that is dressed at public feasts;" also *Hor. Epod.* od. 2, v. 53.

*Non Afra avis descendat in ventrem meum,
Non attagen Ionicus.*

Mart. 1. 13, ep. 61.

*Inter sapos fertur alitum primum
Ionicarum gustus attagenarum.*

This bird, or one supposed to be like it, is called by the same name by Gessner, Aldrovandus, and Ray, and by Willoughby the GOR-COCK, MOOR-COCK, or RED-GAME. *Plin.* 1. 10, c. 48. *Athen.* 1. 9, c. 9. *Oribas. Med. Coll.* 1. 2, c. 42.

ATTAINER (Law) *attinctura*; the stain or corruption of blood which arises from being condemned for any crime.—*Attainder on appearance*, is by battle, confession, or verdict.—*Attainder by battle*, is when the party appealed by another chooses to try the truth by battle rather than by jury.—*Attainder by confession*, is either by pleading guilty at the bar before the judges, and not putting oneself on one's trial by a jury; or before the coroner in sanctuary, when, in ancient times, the offender was obliged to abjure the realm.—*Attainder by verdict*, is when the prisoner at the bar pleads not guilty to the indictment, and is pronounced guilty by the verdict of the jury.—*Attainder by process*, or *outlawry*, is when the party fleeth. *Staudf. Plac. Cor.* 44, &c.; *Co. Lit.* 391, &c.—*Bill of attainder*, a bill brought into parliament for attainting persons condemned of high treason, which have been passed into acts occasionally from the reign of Charles II. to the present time.

ATTAPNT (Law) 1. *attinctus*, attainted, stained, or blackened. 2. A writ that lieth to inquiry, whether a jury of twelve men gave a false verdict. A verdict cannot be attained by less than twelve men. *Bract.* 1. 4, tr. 1, c. 34; *Flet.* 1. 5, c. 22, § 2, &c.; *Co. Ent.* 61.

ATTAINT (Vel.) a knock, or hurt, in a horse's leg.

ATTAL-SARASIN (*Archæol.*) a name among the ancient miners of Cornwall for an old deserted mine.

ATTELABUS (*Ent.*) ἀττέλαβος, ἀττέλιβος, or according to Theophrastus ἀττέλιβος; the smallest kind of locust without wings. *Theophrast. Hist. Plant.* 1. 2, c. 4; *Plin.* 1. 29, c. 4.

ATTELABUS, in the *Linnean system*, a genus of animals, Class *Insecta*, Order *Coleoptera*.

Generic Characters. Antennæ moniliform; head pointed behind.

Species. The species are distinguished into those which have their jaws bifid, those which have the jaw one-toothed, hind-feelers hatchet-shaped, and those which have the feelers clavate. Of the first kind are the—*Attelabus coryli*, a small insect found chiefly on hazel-trees, &c.—*Attelabus Betule*, which is found on the birch.—Of the second sort is the *Attelabus apiarius*, a species so called from the mischief which it commits among bee-hives.

ATTELANÆ (*Ant.*) vide *Attellancæ*.

to ATTEMPT (*Mar.*) in French *tenter un passage*, to attempt a passage with a vessel.

to ATTE'ND (*Mar.*) in French *veiller aux signaux*, to attend the signals.

ATTE'NDANT (*Law*) one that owes duty or service to another, or is otherwise dependant upon him, as a wife when endowed of lands by a guardian, &c. is attendant on that guardian.

ATTENTION! (*Mil.*) the word of command which is given in the British army preparatory to any particular exercise or direction.

ATTENUANTIA (*Med.*) attenuants; attenuating medicines, which tend to promote excretion and secretion.

ATTENUATED (*Bot.*) tapered, or tapering; an epithet for a leaf, peduncle, scape, &c. as *attenuatum folium*, a leaf tapering towards one or both extremities.

ATTE'RMING (*Law*) from *Atterminer*, the granting a time or term for the payment.

ATTESTATION (*Law*) the act of bearing witness in a court of law; also the evidence given.

ATTIC (*Ant.*) an epithet denoting purity, as an *Attic* witness.

ATTIC (*Lit.*) an epithet signifying delicate or fine, as the *Attic* muse, and *Attic* salt, i. e. wit which was peculiar to the Athenians.

ATTIC Order (*Archit.*) a little order which is usually placed upon a greater. Instead of pillars, this order has only pilasters, with a cornice and architrave for an entablature, as that, for instance, in the castle of Versailles above the Ionic, on the side of the garden.—*Attic*, or *Athenian base*, a particular kind of base, attached by modern architects to the Doric pillar.—*Attic* signifies also a kind of building in which there is no roof or covering to be seen, as was usual in the houses of the Athenians.—*Attic of a roof*, a sort of platform or parapet, which is of two kinds, namely, the—*Attic continued*, which encompasses the whole pourtour of a building without any interruption.—*Attic interposed*, that which is situated between two tall stories, and sometimes adorned with columns and pilasters.—*Attic story*, the upper story of a house.

ATTIC dialect (*Gram.*) a dialect of the Greek; so called because it was used by the Athenians.

ATTICISM (*Ant.*) ἀττικισμός, an elegance of speech, after the manner of the Attic dialect.

ATTICKI (*Vet.*) a breed of Arabian horses.

ATTICUM (*Med.*) a plaister described by Hippocrates. *Epidem.* 1. 4.

ATTICURGES (*Ant.*) ἀττικουργός, *attico opere factus*; made after the Athenian fashion.

ATTILATUS equus (*Ant.*) a horse dressed in his geers or harness. *Flet.* 1. 1, c. 23.

ATTILTUM (*Ant.*) *attilamentum*; the rigging of a ship. *Flet.* 1. 1, c. 25.

ATTIRE (*Sport.*) the branching horns of a stag.

ATTIRE (*Her.*) the term which designates the horns of stags and similar animals in blazoning coats of arms. The attires of a stag are both the horns affixed to the scalp.

ATTIRE (*Bot.*) a term formerly used to denote one of the three parts belonging to the flower, of which the former are the Empalement and the Foliation. It was either *Florid Attire*, otherwise called *Thrums*, as in the flowers of the Marigold, Tansey, &c.; or it was *Semiform Attire*, consisting of two parts, i. e. the *Chives*, otherwise called *Stamina*; and the *Semets*, or *Apices* in each attire. *Grew. Anat. Plant.*

ATTIRED (*Her.*) an epithet used in blazoning, in application to such animals as stags, harts, &c. which are provided with horns.

ATTITUDE (*Paint.*) the posture of a figure or statue, or the disposition of its parts, by which we discover the action it is supposed to be engaged in, and the very sentiment of mind which the artist wishes to delineate.

ATTOLLENS (*Anat.*) lifting up; an epithet applied to some muscles, as—*Attollens aurem*, a muscle of the ear, whose office it is to draw the ear upwards.—*Attollens oculum*, the same as the Elevator oculi.—*Attollentes*, a pair of muscles which together draw the upper lip upward and outward.

ATTONITUS morbus (*Med.*) or *attonitus stupor*, Epilepsy; so called because the person affected falls down as it were in a perfect stupor.

ATTORNA'RE rem (*Law*) to attorn or turn over money and goods, i. e. to assign them to some particular use and service.

ATTORNA'TO *faciendo vel recipiendo* (*Law*) a writ to command a sheriff, &c. to admit an attorney to appear for the person that owes suit of that court. *F. N. B.* 156.

ATTORNEY (*Law*) *attornatus*, from *ad* and *tour*; one that is appointed by another man to do a thing in his absence. *Reg. Orig.* 20, &c.—*Public attorney*, is in the courts of record, king's bench, &c.—*Private attorney* acts upon particular occasions, who is made by letter of attorney.—*Letter of attorney*, an instrument which gives full power to act for another.—*Attorney at law*, any one taking upon him the business of other men by whom he is retained.—*Attorney of the Duchy court of Lancaster*, the second officer in that court, and assessor to the court.—*Attorney General*, a great law-officer under the king, made by letters patent.

ATTOR'NMENT (*Law*) the consent of the tenant to the grant of the seignory, whereby he agreed to become the tenant to the new lord. *Bract.* 1. 11, c. 99; *Old Nat. Brev.* 170, &c.; *F. N. B.* 147; *Kitch.* 70; *Reg. Orig.* 170, &c.

ATTRACTION (*Nat.*) that universal tendency that all bodies have towards one another, by which the whole system of the universe is supposed to preserve its coherence, and all the several bodies be made to move within their several spheres of activity by mutual attraction to their proper centre. This principle is termed by Copernicus, "An appetence, *appetentia*, which the Creator has impressed upon all the parts of matter, in order to their uniting and coalescing into a globular form, &c." Kepler also speaks of gravity, as "A corporeal and mutual affection between similar bodies in order to their union." This principle has since been applied to the motion of the heavenly bodies by Sir Isaac Newton, in his *Principia*, for the illustration of the Copernican system. Attraction is of different kinds, as applied to particular bodies, as Magnetism and Electricity.—*Centre of Attraction* [vide *Centre*] *Copernic. de Rev. Orb. Cælest.* 1. 1, c. 9; *Kepler. Introduc. Ast. Nov.*; *Gilbert. de Mag.* 1. 2, aphor. 86, &c.; *et de Motiv. &c.*; *Newt. Principia Defn.* 8, &c.

ATTRACTION *chemical* (*Chem.*) another name for Affinity. [*vide Affinity*]

ATTRACTIVE force, any force by which bodies, and the particles of all bodies, are made to tend towards each other without any sensible impulse. Sir Isaac Newton calls this force centripetal; and on it he builds the whole theory of his Principia; but he does not profess to define by what cause or particular mode it acts in and upon all bodies.

ATTRACTIVUM (*Med.*) a specific which draws out every thing from the body that is hurtful to it. *Parac. de Archidox.* l. 7.

ATTRAHENTIA (*Med.*) drawing medicines, such as by their minute particles open the pores of the body, so as to disperse the humours, cause the parts to swell, and draw blisters in the skin.

ATTRIBUTE (*Theol.*) those properties or excellencies which are attributed to the Divine Being only, as his Self-existence, Immutability, Eternity, Infinite Wisdom, and the like. These attributes have been divided into communicable and incommunicable: the—*Communicable Attributes* of God are power, justice, knowledge; the—*Incommunicable Attributes* of God, which are properly his attributes, are his Self-existence, &c.

ATTRIBUTE (*Log.*) the predicate of any subject, or whatever is affirmed or denied of any thing. Attributes are *positive*, *negative*, *common*, and *proper*.—*Positive attribute*, what is affirmed of any thing, as, "That it is animate."—*Negative attribute*, that which is denied of a thing, as, "That it is inanimate."—*Common attribute*, that which is common to several different things, as "Animality."—*Proper attribute*, what is peculiar to one kind only, as "Rationality" to man.

ATTRIBUTES (*Paint.*) symbols added to figures, to intimate their quality and character; as an eagle to Jupiter, to denote his power; a club to Hercules, to denote his prowess, &c.

ATTRIBUTUM (*Ant.*) ἀποτεταγμένα χρήματα; money assigned for the payment of the soldiers. *Varr. de Lat. Ling.* l. 4, c. 36.

ATTRIBUTIVES (*Gram.*) words denoting attributes; the same as adjectives.

ATTRITION (*Med.*) a superficial galling or fretting from friction.

ATTRITION (*Nat.*) the striking or rubbing of bodies against each other, so as to throw off some of their superficial particles, as amber and other electric bodies are rubbed.

ATTRITION (*Theol.*) the lowest or faintest degree of repentance for sin, as it may affect ourselves; in distinction from contrition, which is the highest degree of repentance.

ATYPUS (*Med.*) ἄτυπος, from α, priv. and τυπος, a type or form. 1. An epithet for one that is tongue-tied, or that does not speak articulately. 2. An epithet for a disease which has no regularity in its periods.

ATZOZATL (*Bot.*) an Indian name for the *Mirabilis Mexicana* of Ray, or the *Mirabilis longiflora* of Linnæus. *Raii Hist. Plant.*

AVA A'VA (*Bot.*) the name of a plant in the Otaheitan language, which is of an intoxicating quality.

AVA'CCARI (*Bot.*) a little Indian tree very similar to the myrtle, but a great deal more astringent.

AVADRA'TES (*Theol.*) a sect of Bramins in India, who exceeded all the rest in austerity.

AVAGE (*Law*) or *Avisage*, a rent or payment by tenants of the manor of Writtle, in Essex, for the privilege of pannage in the Lord's woods.

AVAIL of marriage (*Law*) that casualty in wardholding by which the superior was entitled to a certain sum from his vassal on his attaining the age of puberty.

AVALANCHE (*Nat.*) a French term for the masses of

snow which break off from the mountains and rocks of Switzerland, and fall down into the vallies below.

AUA'NSIS (*Bot.*) ἄνωσις, from ἀνω, to dry; an epithet denoting exsiccation in general, but particularly that of plants, which is caused by age.

AVANT (*Mil.*) a French word for foremost, or advanced towards the enemy, as *Avant-Garde*, the van of the army, the next to which is the *Battail*, and the last the *Arriere-garde*, or the rear.—*Avant-train*, the limbers of a field piece, on which are placed two boxes containing ammunition enough for immediate service.

AVANT-bec (*Archit.*) the starting of a stone bridge.—*Avant-bec d'amont*, the name of those starlings which are always pointed towards the current of the water, in distinction from the others which are called the *Avant-bec-d'aval*.

AVANT-chemin-couvert (*Fort.*) the advanced covered-way which is made at the foot of the glacis to oppose the approaches of an enemy.—*Avant-duc*, the pilework which is formed by a number of trees on the edge or entrance of a river.—*Avant-fosse*, the ditch of the counterscarp next to the country. It is dug at the foot of the glacis.

AVANT main (*Man.*) French for the fore-hand of a horse.

AUA'NTE (*Med.*) ἄνωτη, from ἀνω, to dry; the dry disease in which the patient can neither bear eating or fasting. *Hippocrat. de Morb.* l. 2; *Foes. Econom. Hippocrat.*

AVANTURINE (*Min.*) a reddish-yellow stone covered all over with sparkles which resemble gold; it is used by enamellers.

AVARA'MO-TEMO (*Bot.*) a siliquose tree growing in the Brazils of a very astringent quality. *Raii Hist.*

AVA'ST (*Mar.*) a term of command given at sea signifying hold, stop, stay.

AVA'UNCERS (*Sport.*) the second branch of a hart's-horn.

AU'BIER (*Bot.*) the same as *Albernum*.

AU'BIN (*Man.*) the awkward or imperfect gait of a horse between a trot and an amble.

AUBLE'TIA (*Bot.*) a genus of plants, so called after M. Aublet, a botanist; Class 713 *Polyandria*, Order 1 *Monogynia*.

Generic Characters. CAL. perianth five-leaved.—COR. petals five.—STAM. filaments very many; anthers ovate oblong.—PIST. germ roundish; style long; stigma spreading.—PER. capsule large; seeds very many.

Species. The species are shrubs and natives of Guiana.

AUCTA'RIMUM (*Ant.*) from the supine *auctum*, augmented; surplusage, or what is more than just weight or measure. *Fest. de Verb. Signif.*

AUCTIO (*Ant.*) publica venditio cum res traditur plus offerenti, auction, or setting things to a public or open sale.—*Auctio hastæ*, setting to sale under a spear as the custom was by the proclamation of the cryer.—*Auctio regia*, sale of the King's goods.

AUCTION (*Com.*) a public sale conducted by persons called *auctioneers*, who are licensed to dispose of goods to the highest bidder, according to certain conditions called the *conditions of sale*.—*Mock Auction*, a similar public sale conducted by unlicensed persons for fraudulent purposes.

AUCTION legis (*Ant.*) suasor, laudator, the proposer of a law, or speaker in its favour; but, in regard to senators, it always implies proposer or mover. *Cic. in Dom.* c. 30; *Agr. orat.* 2, c. 5.—*Auctor sententiæ*, the maker of a motion, or the principal defender of it. *Cic. Academ.* l. 4, c. 2, &c.—*Auctor comitiorum*, he who assembled the comitia and presided at the meeting.

AUCTORAMENTUM (*Ant.*) an indenture or obligation whereby one is bound to serve out a hire.

AUCTORES in senatu (*Ant.*) the principal senators, or those who, like the consuls, had the power of decreeing or determining. *Cic. Brut.* c. 34, &c.

AVE

AUCTUS (*Bot.*) increased, doubled, or calyculated; an epithet for the *Anthodium*. [vide *Calyculate*]

AUCUBA (*Bot.*) a genus of plants; Class 21 *Monoecia*, Order 4 *Tetrandria*.
Generic Characters. CAL. *perianth* one-leaved.—COR. four-petalled.—STAM. *filaments* four; *anthers* ovate.
Species. The only species is the *Aucuba Japonica*, a shrub, native of Japan. *Linn. Spec. Plant.*

AUCUPATION (*Sport.*) fowling, or the art of bird-eating.

AUDFARAND (*Cus.*) a term in the North country for children grave and witty above their years.

AUDIENCE (*Polit.*) 1. A ceremony by which ambassadors or ministers at any court are admitted to a hearing from the sovereign. 2. A Spanish Court of Justice in the West Indies which had several provinces within its jurisdiction. 3. A commission to quell any insurrection which had commenced at any given place.

AUDIENCY *court* (*Law*) a court belonging to the Archbishop of Canterbury, having the same authority with the court of arches. 4 *Inst.* 337.

AUDIENDO (*Law*) *et terminando*, a writ, or rather a commission, directed to certain persons for the trying and punishing such persons as have been concerned in a riotous assembly, insurrection, or other heinous misdemeanour.

AUDIENTES (*Ecc.*) vide *Auditores*.

AUDIT (*Com.*) a regular examination of accounts by a proper officer.—*Audit Office*, an office at Somerset House where accounts are audited.

AUDI'IA *querela* (*Law*) a writ whereby a defendant against whom judgment is recovered, is therefore in danger of execution, and may be relieved upon some good matter of discharge. *F. N. B.* 102; *Reg. Orig.* 114.

AUDITOR (*Law*) an officer of the king, or of any corporate body, appointed annually to examine accounts.—*Auditor of the receipts*, an officer of the exchequer that files the teller's bills, and gives in a weekly account of the receipts, &c. 4 *Inst.* 106.—*Auditors of the mint*, those who make up the accounts of the imprest. These officers formerly had the charge of auditing the king's accounts, &c. 4 *Inst.* 107.

AUDITORES (*Ecc.*) or *Audientes*, Catachumens instructed in the mysteries of the christian religion previous to their admission to baptism.

AUDITORIUM (*Ecc.*) the auditory, or place in the church for the auditors, now called the *nave*.

AUDITORY (*Archæol.*) the bench on which magistrates used to sit and hear causes.

AUDITORY *passage* (*Anat.*) *Auditorius meatus*, the passage or entrance into the ear. *Ruf. Ephes. Appel. Part. Corp. Human.* 1. 1.—*Auditory nerves*, a pair of nerves arising from the medulla oblongata, and distributed, the one to the ear, the other to the nose, lips, &c. *Gal. Introd.*

AVELLA'NA (*Bot.*) *aux Pontica*, Filbert, a sort of nut so called from Avellanum, a town of Campania, where they abounded. It is the *Corylus avellana* of Linnæus. *Plin.* 1. 25, c. 23.; *Ger. Herb.* &c. [vide *Corylus*]

AVELLA'NE (*Her.*) a cross so called because the quarters of it resemble a filbert-nut, as in the annexed figure. According to Morgan, it is the cross which ensigns the mound of authority on the sovereign's globe.

AVÉ-MARIA (*Ecc.*) a prayer so called because it consists of the first words used in the salutation of the Virgin Mary.

AVENA (*Bot.*) Oats, in the Greek *βρώμος*, a plant, the grain of which is astringent and drying. *Dioscor.* 1. 2, c. 116; *Plin.* 1. 18, c. 17; *Gal. de Aliment.* 1. 1, c. 14; *Oribas. Synop.* 1. 3, c. 35; *Paul. Aeginet.* 1. 7, c. 3.

AVENA, Oats, in the Linnæan system, a genus of plants, Class 3 *Triandria*, Order 2 *Digynia*.
Generic Characters. CAL. *glume* generally many flowered.—COR. *valves* two.—STAM. *filaments* three; *anthers* ob-

AVE

long.—PRST. *germ* obtuse; *styles* two; *stigmas* simple.—PER. none; *seed* one.

Species. The species are mostly annuals, as—*Avena fatua*, *Festuca*, *Gramen avenaceum*, seu *Ægilops*, Bearded Wild Oat, or Haver.—*Avena sativa*, cultivated Oats.—*Avena nuda*, Pillis, or Pillcorn, &c. except—*Avena clatior*, *Holcus avenaceus*, seu *Gramen nodosum*, Tall Oat Grass, Quick or Couch Grass, which is a perennial. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tournef. Instit.*

AVENAGE (*Law*) from *avena*, Oats, i. e. oats paid to a landlord instead of rent or other dues.

AVENARIA *cicada* (*Zool.*) a kind of grasshopper that does not appear till the corn is ripe. *Plin.* 11, c. 27.

AVENARIUS (*Archæol.*) an officer belonging to the king's stables that provided oats for his horses. *Stat.* 13, *cap.* 8.

AVENIUS (*Bot.*) Veinless; an epithet for a leaf.—*Folium avenium*, a leaf without any perceptible veins.

AVENQUA (*Bot.*) a Brazilian name for Maiden-hair.

AVENTURÆ (*Archæol.*) adventures or trials of skill, military exercises on horseback.

AVENTURE (*Law*) for adventure; a mischance, causing the death of a man, as when a person is drowned, or otherwise killed, without any felonious intent. *Co. Lit.* 391.

AVENUE (*Hort.*) *quo licet venire ad*; i. e. a passage open to a place; a walk or row of trees leading to a house, garden, or some distant object.

AVENUE (*Mil.*) a space left for a passage into a camp, garrison, &c.; an opening or inlet into any fortress.

AVER (*Archæol.*) vide *Aver-Corn*, *Aver-Penny*, &c.

AVERA (*Archæol.*) i. e. *overa*, from *ouvrer*, to work, and in Latin *opera*, a day's work at ploughing, valued at 8d. *Doomsday Bk.*; 4 *Inst.* 269.

AVERAGE (*Law*) *averagium*, the service which a tenant owes to his lord.

AVERAGE of *corn fields* (*Agr.*) the stubble or remainder of straw-grass left in corn fields after the harvest is carried away. In Kent it is called the *Gratten*, in other parts the *roughings*, &c.

AVERAGE (*Com.*) 1. The damage which the vessel, the goods, or the loading sustains from the time of its departure to its return. 2. The charges or contribution towards defraying such damages or the losses of such as have their goods cast overboard for the safety of the ship and the crew. 3. The quota or proportion which each merchant or proprietor in the ship or lading is adjudged, upon a reasonable estimate, to contribute to a common average. This contribution seems to be so called because it is proportioned after the rate of every man's average or goods carried. 4. A small duty joined to primage, which is the master's perquisite. This is called *petty average*.

AVER-CORN (*Law*) a reserved rent in corn paid to religious houses.

AVERIA (*Archæol.*) from *ouvrage*, work; cattle, principally working cattle.

AVERIIS *captis in Withernam* (*Law*) a writ for the taking of cattle to his use, who hath cattle unlawfully distrained by another, and driven out of the county where they were taken, so that they cannot be replevied by the sheriff. *Reg. Orig.* 82.

AVER-LAND (*Law*) Lands ploughed by the tenant, *cum averiis suis*, for the use of the lord. *Mon. Angl.*

AVERMENT (*Law*) an offer of the defendant to make good or justify an exception pleaded in abatement, or bar of a plaintiff's action. Averments are either general or particular. *Co. Lit.* 362.

AVER-PENNY (*Law*) Money paid towards the king's averages or carriages.

AVERRA'RE (*Archæol.*) to carry goods in a waggon, &c. a duty required of some tenants.

AVERRHO'A (*Bot.*) a genus of plants, called after *Averrhoes* of Corduba, Class 10 *Decandria*, Order 4 *Pentagynia*.

Generic Characters. CAL. perianth five-leaved.—COR. petals five.—STAM. filaments ten; anthers roundish.—PIST. germ oblong; styles five; stigmas simple.—PER. pome turbinate; seeds angular.

Species. The species are—*Averrhoa Bilimbi*, *Bilimbing teres*, seu *Bilimbi*, a shrub, native of India.—*Averrhoa carambola*, *foliolis*, &c. *Mala goensia*, &c. *Prunum stellatum*, *Tamara Conga*, seu *carambolas*, native of India. *C. Bauh. Pin.*; *Raii Hist. Plant.*; *Linn. Spec. Plant.*

AVERRUNCA'TIO (*Ant.*) from *averrunco*, to avert; a pruning of vines, and cutting away any thing hurtful; also the averting of evils, hence *Dii averruncant*, God forbid, or forefend; and *averruncus deus* the god whom they supplicated to avert evils.

A'VER-SILVER (*Archæol.*) A custom of rent.

AVERSIO (*Med.*) the diverting a flux of humours from one part to another.

AVERT (*Man.*) Regular, or enjoined; an epithet in lessons of horsemanship applied to the step or motions of the horse; as *pas averti*, or *pas ecouté*, i. e. a step regulated or enjoined.

A'VERY (*Archæol.*) a place where the oats are kept for the king's horses.

A'VES (*Or.*) Birds, the second Class of animals in the Linnæan system, comprehending those which are oviparous. [vide *Animal kingdom*]

A'UGE (*Astron.*) vide *Aux*.

AUGE'A (*Archæol.*) a cistern for water.

A'UGER (*Mech.*) a wimble or tool for boring.

AUGELOT (*Hort.*) or *à Paugelot*, French, for a mode of planting vines, i. e. to dig small trenches in the form of a little trough, for laying in the slips or shoots, which are afterwards covered with earth.

AUGITES (*Min.*) from *ἀογή*, splendour; Augite, a precious stone; a stone of the Chrysolite family.

AUGMENT (*Gram.*) vide *Augmentum*.

AUGMENTA'TION (*Law*) a court erected by Henry VIII. for augmenting the revenues, by suppressing religious houses. 27 Hen. 8.

AUGMENTATION (*Her.*) a particular mark of honour, borne either on an escutcheon, or a canton, as *argent*, a hand, *gules*, borne by every baronet not being of higher dignity, as in the annexed example. "Or, a cross flory sable, with a mullet for difference." These are the arms of the Ainslie family.

AUGMENTATION (*Mus.*) doubling the length of the notes in a fuge or canon.

AUGMENTUM (*Gram.*) augment, a letter or syllable added or changed in the tenses of Greek verbs. The augment is either syllabic or temporal.—*Augmentum Syllabicum*, the syllabic augment, is the addition of a letter or syllable, as from *εὔρω*, comes, *εὔρωτον εὔρωλα*, &c.—*Augmentum Temporale*, the temporal augment, is the change of a short vowel into a long one, or a diphthong into one still longer, as *ἀνίω*, *ἤνωον*.

AUGMENTUM (*Med.*) the increase of a disease from its attack to its utmost violence.

A'UGRE (*Mech.*) vide *Auger*.

A'UGURES (*Ant.*) from *garritus*, the noise of birds; certain officers appointed by Romulus to draw omens from the flight and singing of birds. *Cic. de Divin.* l. 1, c. 17; *Plin.* l. 7, c. 56; *Liv.* l. 1, c. 18; *Sueton. in Aug.* c. 95; *Fest. de Verb. Signif.*

AUGUST (*Chron.*) the eighth month of the year, called after the emperor Augustus, who entered his second con-

sulship in that month, after the Actian victory. It was before called *Sextilis*. *Dio.* l. 55; *Macrob. Saturn.* l. 1, c. 12; *C. Gassend. Calend. Roman.* c. 3; *Viol. de Vet. et Nov. Roman.*; *Temp. Rat. apud Græv. Thes. Antiq. Roman.* tom. viii. p. 194.

AUGUSTA (*Mcd.*) an epithet for several compound medicines.

AUGUSTALES (*Ant.*) priests appointed by Tiberius to perform the sacred rites, instituted in honour of Augustus and the Augustan family. They were twenty-five in number, and chosen by lot from the principal people of the city. Ancient inscriptions make frequent mention of the Augustalis Flamen, and also the Augustalis Sodalis, as *NERONI. CAESARI GERMANICI. F. TI. AUGUSTI. N. DIVI AUG. PRON. FLAMINI. AUGUSTALI SODALI AUGUSTALI*.—*Augustales*, soldiers whom Augustus had added to the *Ordinarii*, and who commonly formed the van-guard. *V eget. de Re Mil.* l. 2.—*Augustales ludi*, games instituted in honour of Augustus, U. C. 735, and celebrated on the 4. Id. October, i. e. the twelfth of October.

AUGUSTALIA (*Ant.*) plays instituted in honour of Augustus. *Tac. Annal.* l. 1, c. 100; *Dio.* l. 54.

AUGUSTALIS (*Num.*) a gold coin of the emperors of the East, first struck by Frederic II. in 1231. *Chron. Richard.*

AUGUSTAN confession (*Ecc.*) a confession of Christian faith made by the Protestants of Augusta, or Augsburg, in Germany, A. D. 1550.

AUGUSTINS (*Ecc.*) or *Augustin Friars*, black friars, who were of the order of St. Augustin.—*Barefooted Augustins*, a distinct branch of the Augustins, who were founded in Portugal.

AUGUSTINIANS (*Ecc.*) heretics of the sixteenth century, who maintained that the gates of heaven were not opened till the general resurrection.

AVICEN'NIA (*Bot.*) a genus of plants, called after Avicenna, the physician, Class 14 *Didynamia*, Order 2 *Angiospermia*.

Generic Characters. CAL. perianth five-parted.—COR. monopetalous.—STAM. filaments four; anthers roundish.—PIST. germ ovate; style subulate; stigma bifid.—PER. capsule coriaceous; seed one.

Species. The species are shrubs, as the—*Avicennia tomentosa*, *Bontia germinans*, *Donatia*, *Mangel laurocerasi*, &c. *Anacardium*, seu *Cepata*, &c. a native of the Indies. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Raii Hist. Plant.*; *Pluk. Almagest. Botan.*; *Linn. Spec. Plant.*

AVICULARIA *Sylvii* (*Bot.*) Venus Looking glass.

AVILA (*Bot.*) a species of apple in the Indies larger than an orange, including nuts, that are an excellent medicine against poisons, &c. *Lemer. des Drog.*

AVISAMEN'TUM (*Law*) advice or counsel; *de avisamento et consensu consilii nostri concessimus*, &c. was the common form of our ancient kings' grants.

AUK (*Orn.*) a bird, otherwise called Penguin, or Razor-bill, and by Linnæus *Alca*: is an inhabitant of the Arctic seas. This bird is observed by seamen never to wander beyond soundings, and accordingly they conclude, on its appearance, that land is not very remote. The species best known are the Great Auk, *Alca impennis*; the Little Auk, *Alca alle*; and the Puffin Auk, *Alca arctica*.

AULA (*Law*) a Court baron.—*Aula regia*, the King's Bench.—*Aula ecclesie*, the same as *Navis ecclesie*.

AULAX (*Bot.*) the *Protea* of Linnæus.

AULNAGE (*Com.*) vide *Alnage*.

AULOS (*Med.*) the foramen of the exterior vagina. *Hipp. de Mul.* l. 2.

AULULARIA (*Ant.*) the name of one of Plautus' comedies.

AUME (*Com.*) vide *Awm*.

AUMONE (*Cus.*) Alms.—*Tenure in Aumone*, where lands

are given in alms to a religious house, on condition of prayers being offered up at certain times. *Brit.* 164.

AUNCEL (*Com.*) or *Auncel weight*, i. e. hand sale weight, from *ansa*, a handle; an ancient kind of hand-weighing, by the hanging of the scales at each end of a beam, and lifting it up with the finger to find the weight of the thing weighed. *Stat.* 5, 25 *Ed.* 2.

AUNCESTRAL (*Law*) vide *Action*.

AUNCIA'TUS (*Archæol.*) Antiquated.

AVOCADO (*Bot.*) a tree that grows in the Spanish West Indies, and in Jamaica, the fruit of which, though very insipid, is much eaten by the natives.

AVOCATORIA (*Polit.*) a mandate of the emperor of Germany to a prince of the empire, to stop his unlawful proceedings.

AVOIDANCE (*Law*) when a benefice is void of an incumbent, which is either in fact or by law.—*Avoidance in fact*, by the death of an incumbent.—*Avoidance in law*, by cession, deprivation, resignation, &c.

AVOIR-DU-POISE (*Com.*) i. e. *habere pondus aut justis esse ponderis*; a weight having sixteen ounces to the pound, in distinction from Troy weight, which has only twelve.

AVOLATION (*Chem.*) a flying off of the particles, as by evaporation.

AVOSET (*Orn.*) a bird otherwise called the Scooper or Crooked Bill, is distinguished by its bill, which is three and a half inches long, slender, thin, and turned up nearly half its length. It is the *Recurvirostra* of Gesner; the *Avosetta*, seu *Spinzago d'Acqua* of Aldrovandus; and the *Recurvirostra Avosetta* of Linnæus. *Gesn. Av.*; *Will. Orn.*; *Raii Syn.*; *Aldrov. Ornith.*

AVOW (*Law*) vide *Advow*.

AVOWANT (*Law*) one making an avowry.

AVOWEE' (*Law*) an advocate of a church benefice. [vide *Advocate*]

AVOWRY (*Law*) the plea which the maker of a distress for rent, &c. must put in when the party distrained sues for a replevin.

AVOWTERER (*Ant.*) an adulterer.

AURA (*Orn.*) or *Gallinassa*, a species of Indian raven, approaching the eagle in size, the flesh of which is good for the small pox. *Lemery*.

AURA (*Med.*) a vapour, as if from mephitic caves.—*Aura epileptica*, a gradual sensation like air ascending from some determined part of the extremities upwards occasioning an epileptic attack.—*Aura vitalis*, vital heat.

AURÆ (*Mech.*) clouts or plates of iron set upon the axle-tree to save it from fretting.

AURAMENTUM (*Ant.*) an instrument for taking gold out of the mine; also leaf gold.

AURANTIA (*Bot.*) the *Citrus* of Linnæus.

AURANTIACUS (*Bot.*) orange, the colour of some flowers.

AURANTIUM (*Bot.*) orange, the *Citrus aurantium* of Linnæus.

AURATUS (*Archæol.*) a knight with gilt spurs.

AURELIA (*Nat.*) the first apparent change of the eruca or maggot of any insect.

AURELIANA (*Bot.*) the *Pinax quinquefolia* of Linnæus.

AUREOLA (*Paint.*) a crown of glory with which saints, martyrs, and confessors, are adorned, as a mark of their having obtained the victory.

AURES (*Archæol.*) an ancient punishment among the Saxons, of cutting off the ears of church robbers and other offenders.

AUREUS (*Num.*) the name of a gold coin current among the Romans, which was equivalent to 25 denarii, or 100 sesterces, and a crown sterling. It was customary to give this piece to the charioteers.

Juven. sat. 7, v. 243.

Accipe, victori populus quod postulat, aurum.

Sueton. in Claud. c. 21; *Dio.* l. 55; *Turneb. Adv.* l. 5, c. 1; *Gron. de Vet. Pecun.* l. 3, c. 15.

AURICHALCUM (*Met.*) *quasi orichalchum*, ὀρείχαλκον, mountain brass, from ὄρος, a mountain, and χαλκός, brass; the metal now called brass, being a mixture of copper and lapis calaminaris. It is called Aurichalcum by Plautus, and Orichalcum by Virgil and Horace.

Plaut. Mil. act. 3, scen. 1, v. 64.

Cedo mihi tres homines aurichalco contra cum istis moribus.

Virg. Æn. l. 12, v. 87.

— *auro squallentem, alboque orichalco*
Circumdat lorica humeris.

Horat. Ars Poet. v. 202.

Tibia non ut nunc orichalco vincta, tubaque
Æmula.

Plat. in Crit.; *Senec. ep.* 90; *Suet. in Vet.* c. 5; *Fest. de Signif. Verb.*

AURICLE (*Anat.*) *auricula*. 1. The external ear, or that part of it which is prominent from the head. 2. *Auricula cordis*, two appendages of the heart, being muscular caps or bags covering the two ventricles, and seated at its basis. They move regularly like the heart, only in an inverted order, their systole corresponding to the diastole of the heart.

AURICLE (*Bot.*) vide *Auricula*.

AURICOLLA (*Met.*) the glue or cement of gold. *Oribas. Med. Coll.* l. 13; *Act. Tetrab.* 1, serm. 1; *Paul. Æginet.* l. 7, c. 3.

AURICULA (*Anat.*) vide *Auricle*.

AURICULA Leporis (*Bot.*) Hare's Ear, the *Bupleurum falcatum*, *odonitis*, *ranunculoides*, et *tenuissimum*, of Linnæus. *Bauh. Hist.*—*Auricula muris*, Mouse Ear, the *Hieracium auricula et aurantiacum*, &c.—*Auricula Ursi*, the *Primula*, &c. of Linnæus. *Bauh., Tournef., &c.*

AURICULARIA (*Bot.*) Ear-wort, the *Hedyotis auricularia* of Linnæus.

AURICULARIUS (*Med.*) an epithet for what belongs to the ears, as *auricularius medicus*, an aurist.

AURICULATUS (*Bot.*) Earshaped, an epithet for a leaf; *folium auriculatum*, a leaf having two small lobes bent outwards.

AURICULAR confession, a mode of confessing sins practised by the Roman Catholics; so called because the penitents whisper their sins into the ears of their confessors.

AURICULARIS *Digitus* (*Anat.*) the little finger with which one is most apt to pick the ear.

AURIFEROUS *silver* (*Min.*) an alloy of silver, of a yellowish colour.

AURIFLAMMA (*Mil.*) a flag or standard belonging to the abbey of St. Dennis, which the monks used in honour of that saint whenever they were compelled to defend themselves.

AURIGA (*Ant.*) *quasi curriga*, because, *currum agat*, he drives the chariot; a charioteer at the races, of whom there were different *greges*, or factions, as the *alba vel albata*, *russata*, *varcata*, *prasina*, *aurata*, et *purpurea*, so called from their dress. *Sueton. in Calig.* c. 19, &c.; *Tertull. de Spect.* c. 9; *Rosin. Antiq. Rom.* l. 5, c. 5, &c.

AURIGA (*Astron.*) ἠριόχος, the Waggoner, called by Manilius and others *Hentochus*, which Ptolemy makes to consist of 14 stars; Kepler and Tycho, of 27; Bayer, of 33; Hevelius, of 40; the British Catalogue, of 66, among which is *Capella*, a star of the first magnitude, which was otherwise call *Olenia*, or *Capra Jovis*, i. e. Amalthea, the nurse of Jupiter.

Atrat. v. 16.

Ἀἴξ ἱερῆ, τῆν μὲν τε λόγος Διὶ μαζῶν ἐπισχέειν
Ὠληνὴν δὲ μὴν αἴγῳ Διὸς καλέουσ' ὑποφῆται.

Capella was called *pluvialis*, because it brought rain with it when it rose.

Ovid. Fast. l. 5, v. 111.

*Ab Jove surgat opus; prima mihi nocte videnda
Stella est in cunis officiosa Jovis,
Nascitur Olenia sidus pluviale Capelle
Illa dati calum premia lactis habet.*

This constellation is represented by the figure of an old man, with a goat and her kids in his left hand, who is said to have been transported to heaven by Jupiter, on the invention of carriages. *Hipparch. in Arat.; Eratosth. Characterism.; Plin.* l. 18, c. 26, &c.; *Manil. Astron.* l. 1, v. 361; *Hygin. Astron. Poet.*

AURIGA (*Med.*) a sort of bandage for the side, made like the traces of a waggon-horse.

AURIGA (*Anat.*) the fourth lobe of the liver. *Castell. Lex. Med.*

AURIGA'RIOUS (*Ant.*) a person who kept chariots for use.

AURIGO (*Med.*) the jaundice.

AURIPIGMENTUM (*Min.*) Orpiment, the arsenic ore [vide *Arsenic*] which was formerly much used by painters, and is of two kinds, namely, the yellow and red, which is otherwise called Realgar. *Plin.* l. 33, c. 4.

AURIPLICES (*Ant.*) leaves of gold wrapped together in the shape of a man or woman.

AURIS (*Anat.*) vide *Ear*.

AURISCALPRUM (*Mech.*) an ear-picker.

AURIST (*Med.*) an ear-doctor.

AURO'RA (*Astron.*) the morning twilight.—*Aurora borealis*, Northern light, or Streamers, a meteor appearing in the northern part of the heavens, mostly in the winter season and in frosty weather. It appears often in the form of an arch, which is partly bright and partly dark, of a reddish colour inclining to yellow. The matter of which it is composed is not found to have any effect on the rays of light which pass freely through it. In the Shetland Isles these phenomena are the constant attendants on bright evenings, and have obtained the name of the *merry dancers* among the inhabitants, to whom they afford relief amidst the gloom of long winter nights.

AURUM factum (*Ant.*) Wrought Gold.—*Aurum signatum*, coined gold. [vide *Argentum*]

AURUM (*Min.*) Gold, the heaviest of all metals, the specific gravity being 19'300. It is of a reddish-yellow colour, soft texture, not sonorous, but exceedingly ductile and malleable.

AURUM potabile (*Med.*) Tincture of Gold, a rich cordial liquor, with leaf gold in it.—*Aurum fulminans*, Thundering Gold, a powder of gold and aqua regia, so called because of the explosion which it makes by a gentle attrition.—*Aurum horizontale*, a mercurial medicine of a red colour.

AURUM mosaicum (*Paint.*) or *musivum*, a composition to lay on a colour like brass or copper. It is known to be a persulphuret of tin.

AURUM Reginæ (*Law*) the queen's gold; a royal revenue belonging to every queen-consort during her marriage, drawn from fines to the king upon grants.

AUSPEX (*Ant.*) a diviner by birds, who, when he wished to perform any divination, mounted a tower, his head being covered with a gown peculiar to his office; he then turned his face to the east, marked out the heavens with his *lituus* (a rod which he held in his hand), and afterwards waited for the omen from the quarter to which the bird should fly.

AUSPICIUM (*Ant.*) *quasi avispicium*, a divination from the inspection of birds, which, by Pliny, is distinguished from *augurium*, the former being confined to observations on birds, and the latter extending itself to divination from objects in general. The auspice was, however, more

minute and particular in its observations on birds than the *augury*. The *Auspicia* were taken either from the noise or the flight of birds, or from the movements of chickens in a coop, &c. *Cic. de Divin.* l. 2, c. 36; *Liv.* l. 6, c. 41; *Plin.* l. 7, c. 56.

AUSTER (*Ant.*) the South wind.

Virg. eclog. 2, v. 58.

————— *Floribus Austrum
Perditus, et liquidis immisi fontibus aprum.*

AUSCULTARE (*Archæol.*) a custom of hearing the monks read the service, by persons appointed to correct them, so that they may officiate in a graceful and impressive manner.

A'USTRAL signs (*Astron.*) the six last signs in the zodiac, so called because they are on the south side of the Equinoctial.

AUSTRALIS corona (*Astron.*) vide *Corona*.—*Australis Piscis*. [vide *Piscis*]

AUSTRIACA sidera (*Astron.*) spots in the sun, resembling small stars.

AUSTURCUS (*Fal.*) a Goshawk.

AUTER-DROIT (*Law*) an expression used when persons sue or are sued in another's right.—*Auterfoits acquit*, a plea by a criminal that he was heretofore acquitted of the same felony or treason; so, in like manner, *Auterfoits convict* or *attaint*, viz. convicted or attainted before of the same crime, &c.

AUTHEMERON (*Med.*) *αὐτήμερον*, from *αὐτός*, the same, and *ἡμέρα*, day; a medicine, so called because it gives relief the same day as it is taken. *Gal. de Comp. Med. sec. Loc.* l. 9, c. 2.

AUTHE'NTICS (*Law*) the title of the third volume of the Roman law; so called because it has its authority from itself; proceeding immediately from the mouth of the emperor. This was a volume of new constitutions, appointed by the emperor Justinian, and introduced into the body of the law under one book, called the *Novellæ* of Justinian.

AUTHEPSA (*Ant.*) from *αὐτός*, of itself, and *έψω*, to boil; a kind of brass pot that boils any thing with little or no fire under it. *Cic. pro Rosc.; Lamprid. in Heliogab.* c. 19.

AUTOCHTHONES (*Ant.*) *αὐτόχθωνες*, in Latin *indigenæ*, the original inhabitants of a country. The Athenians gave themselves this epithet because they boasted to be as old as *χθών*, the earth, *αὐτη*, itself. *Cic. de Orat.* l. 3, c. 83; *Paus.* l. 1, c. 14.

AUTO'CRASY (*Polit.*) *αὐτοκρατία*, from *αὐτός*, oneself, and *κρατός*, power; government by oneself, or self-supremacy.

AUTO'GENES (*Bot.*) *αὐτογενής*, from *αὐτός*, oneself, and *γένεσθαι*, to be made; self-begotten, applied to the *Narcissus*, the bulb of which seems to produce its leaves of itself before it is put into the earth.

AUTOGRAPH (*Ant.*) *αὐτόγραφος*, from *αὐτός*, itself, and *γραφα*, to write; one's own hand-writing, as *autographa epistola*, a letter of one's own writing, or writing with one's own hand.

AUTOMARIA (*Mech.*) the art of making clocks, &c.

AUTO'MATON (*Mech.*) any machine moving by itself, as a spring.

AUTO'MATOS (*Med.*) *αὐτοματος*, from *αὐτός*, itself, and *ματῶν*, easy; whatever is done more by an effort of nature than by any external action or application. *Hippocrat.* l. 1, aph 2.

AUTO'MELITE (*Min.*) a mineral of the ruby family.

AUTONO'MIA (*Polit.*) *αὐτονομία*, independent government, or a government according to one's own laws and customs,

in distinction from those towns or countries that were subject to foreign laws. Many cities and places are distinguished by the title of *αὐτόνομος*, as in the annexed figure of the town of Ægea, representing the head of a goat, with the inscription Αἴγαιον τῆς Ἰεράς καὶ ἄττονομου. *Hard. Numm. Urb.*

AUTOPH'ORAS (*Ant.*) *αὐτόφορος* from *αὐτός*, *ipse*, oneself, and *φάσ*, a thief, i. e. the very thief; a thief taken in the very fact.

AUTO'PSIA (*Med.*) *αὐτοψία*, from *αὐτός*, oneself, and *ᾄττομαι*, to see; ocular evidence, or the memory of what one sees with one's own eyes; a point strongly insisted upon by the empiric sect.

AUTOPYROS (*Med.*) vide *Artos*.

AUTOU'R (*Med.*) a bark much resembling cinnamon.

A'UTUMN (*Astron.*) the third season of the year, which begins at the descending equinox, i. e. in the Northern Hemisphere, when the sun enters *Libra*, on the 22d day of September; it terminates about the same day of December, when winter commences.

AUTUMNAL Equinox (*Astron.*) the time when the sun enters *Libra*. [vide *Autumn*].—*Autumnal point*, that point at which the autumnal equinox commences.—*Autumnal signs*, the three signs, *Libra*, *Scorpio*, and *Sagittarius*, through which the sun passes during the autumn season.

AUXE'SIS (*Rhet.*) *ἀξέσις*, a figure of rhetorick when, by hyperbole, a thing is too much magnified. *Longin. sect. 12; Schol. in Hermog. Ald. Edit. p. 353.*

AUXILIARIES (*Mil.*) or *auxiliary forces*, that are employed only on particular occasions, or that come to assist.

AUXILIARY verbs (*Gram.*) verbs that are principally used in forming the tenses of other verbs, as "To Have" and "To Be."

AUXILIUM *ad filium militem faciendum et filiam maritandam* (*Law*) a writ for levying an aid towards the knight-riding the king's son, or marrying a daughter. *F. N. B. 82.*—*Auxilium curie*, a precept or order for the citing one party at the suit of another.—*Auxilium facere alieni in curia regis*, to be another's friend or solicitor in the king's courts.—*Auxilium regis*, the king's aid, or money levied for the king's use or the public service.—*Auxilium vicecomiti*, a customary aid, or duty payable to sheriffs out of certain manors.

to AWA'IT (*Law*) to lay in wait, or way-lay.

AWA'ME (*Com.*) the same as *Awm*.

AWARD (*Law*) from the French *agard*, because it is a dictum imposed upon the parties to be observed by them; a judgment given by an arbitrator between two parties on a matter of dispute.

A-WE'ATHER (*Mar.*) the situation of the helm when pushed to the weather side of the ship.

A-WE'IGH (*Mar.*) the state of the anchor when it is drawn out of the ground in a perpendicular direction.

AWL (*Mech.*) a sharp pointed tool.

AWL-WORT (*Bot.*) the *Subularia* of Linnæus; an annual, so called from the shape of its leaves.—*Awl-shaped*, or *subulate*, *subulatus*. [vide *Subulate*]

AWM (*Com.*) a measure of Rhenish wine containing forty gallons, mentioned in *Stat. 1, Jac. 1*, now equivalent to a ton.

AWN (*Bot.*) *arista*, the Beard; a slender sharp process issuing from the glume, or chaff in corn and grasses. [vide *Arista*]

A'WNED (*Bot.*) *aristatus*, having an awn; an epithet for the glume and anther.

AWNLESS (*Bot.*) *muticus*, having no awn, opposed to the awncd; an epithet for the glume, as in *Agrostis* and *Aira*, for the calyx of *Serratula*; for the seeds, as in *Adonis*, &c.

AWNING (*Mar.*) a canopy extending over the deck.

AX (*Mech.*) or *Axe*, a carpenter's tool.

AXAYACA'TL (*Ent.*) a species of fly in Mexico, the eggs of which are gathered from the rushes where they are deposited, and are called *caveare*.

AXE'A *commissura* (*Anat.*) a sort of articulation.

AXE'DO (*Alch.*) a spell to render a person impotent. *Marc. Emp.*

AXE'-FORMED (*Bot.*) vide *Dolabriformed*.

AXE-STONE (*Min.*) a subspecies of the Nephrite.

AXI'CVLUS (*Mech.*) a roller or cylinder.

AXILLA (*Anat.*) diminutive of *axis*, the arm-pit, or cavity of the arm.

AXILLA (*Bot.*) the *Axil*, the angle formed by a branch with a stem, or by a leaf with a branch, resembling the arm-pit in form.

AXILLA'RIS (*Anat.*) belonging to the *axilla*, axillary, or subclavian; an epithet for the vein that passes under the arm-pit, or the arteries which are the continuations of the subclavian, or of the nerve which is a branch of the brachial plexus.

AXILLARY (*Bot.*) *axillaris*, an epithet for leaves, the peduncle, and the scape and cirrus: axillary leaves are those growing at the angles formed by the branches with the stem.

AXINITE (*Min.*) a species of stone of the Epidote family.

AXINOMANCY (*Ant.*) *ἀξινομαντεία*, from *ἀξίον*, a hatchet; a sort of divination by means of a hatchet or ax which was fixed on a stake so as to be poised; when the names of the suspected persons being repeated, he, at whose name the hatchet moved, was pronounced guilty.

AXIOM (*Phi.*) *ἀξίωμα*, from *ἄξιος*, worthy, i. e. *ἀξιώσιμος*, worthy of credit; a self evident proposition, or one requiring no proof, as 'the whole is greater than the part.'

AXI'RNACH (*Med.*) superfluous fat sometimes growing on the tunics of the eyelids, particularly of children.

A'XIS (*Ant.*) *ἄξων*, from *ἄγω*, the axle-tree of a wheel; so called because the wheel is driven about it. It is also the name of the board, or tablet, on which the laws of Solon and others were engraven. *Vitruv. l. 4, c. 2; Aul. Gell. l. 2, c. 12; Fest. de Verb. Signif.*

AXIS (*Geom.*) a right line conceived to be drawn from the vertex of a figure to the middle of the base; it is so called because the figure, by revolving round this line, is conceived to generate a solid.—*Axis of a circle*, the same as the diameter. [vide *Circle*].—*Axis of a cone*, the line drawn from the vertex to the centre of the base.—*Axis of a cylinder*, the line drawn from the centre of the one end to that of the other. [vide *Cylinder*].—*Axis of a conic section*, a line going through the middle of the figure, and cutting all the ordinates at right angles. Upon this the figure is supposed to be turned, so as to form the section. The axes are of different kinds, namely, transverse, conjugate, determinate, and indeterminate.—*Transverse axis* of an ellipse hyperbole, or parabola, otherwise called the principal axis, is that diameter which passes through the two foci, and the two vertices, as A P, which cuts the ordi-

nate MN at right angles.—*Conjugate axis of an ellipse hyperbola, &c.* is the diameter FE passing through the centre and perpendicular to the transverse axis; it is the

shortest of the diameters, as the transverse is the longest.—*Determinate axis of an hyperbola*, is a right line drawn between the vertices, or tops of the opposite sections.—*Indeterminate axis of an hyperbola*, the axis which cuts an infinite number of lines at right angles; in this manner A P is determinate if it lies only between the vertices of the opposite sections; but it is indeterminate if it cut the lines M N, C E, M N, &c. at right angles.

AXIS (*Astron.*) or *axis of the sphere*, an imaginary right line conceived to pass through the centre of the earth, and terminating in each end at the surface of the mundane sphere. In the Ptolemaic system the sphere was supposed to revolve about this line as an axis in performing its diurnal motion.—*Axis of the earth*, the line connecting its two poles, and about which the earth performs its diurnal rotation from west to east. This is represented in the terrestrial globe by the piece of wood, or iron, on which the globe turns.—*Axis of a planet*, the line passing through its centre, and about which the planet revolves, as the axis of the Sun, Earth, Moon, Jupiter, Mars, and Venus, round which they are known, by observation, to perform their several motions.—*Axis of the Horizon, Equator, Ecliptic, &c.* the right lines passing through the centres of those circles perpendicular to their planes. (vide *Astronomy*)

AXIS (*Mech.*) a certain line about which a body may revolve, as the axis of a balance, &c.; so also—*Axis of rotation*, the line about which a body revolves when it is put in motion.—*Axis of oscillation*, a line parallel to the horizon passing through the centre, about which a pendulum vibrates, and perpendicular to the plane in which it oscillates.—*Axis in Peritrochio*, or Wheel and Axle, one of the five mechanical powers, or simple machines, which is principally used in the raising of water, as in the annexed figure,

where the circle A B represents that part of the machine which is called the *peritrochium*, and the cylinder C A the *axis*. In the peritrochium are the radii, or spokes, called the *scytalæ*, by which it is turned round, and in the cylinder is the rope to which the weight E is fixed that is to be raised. Of this description are capstans, cranes, and the like.—*Axis of a vessel*, the quiescent right line through the middle of it perpendicular to its base, and equally distant from its sides.

AXIS of a magnet (*Nat.*) a line supposed to pass through the middle of a magnet in such a manner, that, however the magnet is divided, if the division be made according to a plane in which such line is found, the magnet will be cut or separated into two loadstones. The extremes of such lines are called the *poles* of the magnet.

AXIS (*Archit.*) is otherwise called *catetus*. The axis of an Ionic capital is a line passing perpendicularly through the eye of the volute.—*Spiral axis*, is the axis of a twisted column drawn spirally, in order to trace the circumvolutions without.

AXIS of any glass (*Opt.*) a right line drawn perpendicularly through the centre of a glass, and if it be a convex glass through the thickest part; if it be a concave glass through

the thinnest part; which in each of them is termed the *pole* of the glass.—*Axis of a lens*, a right line passing along the axis of that whereof the lens is a segment.—*Optic, or visual axis*, a ray passing through the centre of the eye, or falling perpendicularly on the eye.—*Axis of incidence*, in dioptrics, is the line passing through the point of incidence, particularly to the refracting surface.—*Axis of refraction*, is the line continued from the point of incidence, or refraction, perpendicularly to the refracting surface along the further medium.

AXIS (*Bot.*) The smooth part in the centre of some fruits about which the other parts are disposed.

AXIS (*Anat.*) a name for the second vertebra of the neck, which has a toothlike fixture into the first vertebra. This tooth is sometimes called the *axis*.

AXLE-TREE (*Mech.*) a piece of wood under a cart, &c. on which the wheel turns.—*Axle-tree pins*, the irons holding the axle-tree to the cart.

AXUNGIA (*Nat.*) ἄζυργια, hog's lard. *Paul. Aeginet.* l. 7, c. 3.—*Axungia de mumia*, Marrow.—*Axungia vitri*, Sandiv'er, or Salt of glass.

AXYRIS (*Bot.*) a genus of plants, Class 21 *Monoccia*, Order 3 *Triandria*.

Generic Characters. CAL. *perianth* three-parted.—COR. none.—STAM. *filaments* three; *anthers* roundish.—PIST. *germ* roundish; *styles* two; *stigmas* acuminatc.—PER. none; *seed* one.

Species. The species are annuals, as—*Axyris amaranthoides*, seu *Atriplex montana*, &c. Simple spiked *Axyris*, &c.—*Axyris hybrida*, native of Siberia.—*Axyris prostrata foliis*, &c. seu *herbacea*, &c. an annual, native of Siberia. *Linn. Spect. Plant.*

AYENIA (*Bot.*) from the Duc d'Ayen, a genus of plants, Class 5 *Pentandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* one-leaved.—COR. pentapetalous.—STAM. *filaments* five; *anthers* roundish.—PIST. *germ* roundish; *style* cylindric; *stigma* obtuse.—PER. *capsule* five-grained; *seeds* solitary.

Species. The species are—*Ayenia pusilla foliis*, &c. Smooth *Ayenia*, an annual, native of Jamaica.—*Ayenia tomentosa*, native of South America.—*Ayenia magna*, a perennial, native of South America.—*Ayenia laevigata*, a shrub, native of Jamaica. *Linn. Spect. Plant.*

A'YLETS (*Her.*) or *sea-swallows*, a charge in coats of arms represented sable, beaked and legged gules. They are otherwise called Cornish choughs.

A'ZAC (*Chem.*) *Sal ammoniacum*.

AZADARICHTA (*Bot.*) The *Melia azadirichta* of Linnaeus.

A'ZAGOR (*Chem.*) veridigrease.

AZA'LEA (*Bot.*) from ἄζαλας, dry, because it grows in dry places; a genus of plants, Class 5 *Pentandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* five-parted.—COR. monopetalous.—STAM. *filaments* five; *anthers* simple.—PIST. *germ* roundish; *style* filiform; *stigma* obtuse.—PER. *capsule* roundish; *seeds* many.

Species. The species are mostly shrubs, as—*Azalea pontica*, or *Chamaerhodendron ponticum*, Pontic azalea.—*Azalea Indica*, *Chamaerhodendron exoticum*, *Cistus Indicus*, seu *Tsuhusi*, &c. *Linn. Spect. Plant.*

AZALDUS (*Archæol.*) a jade or poor horse.

AZAMO'GLANS (*Theol.*) vide *Agamoglans*.

AZANITÆ *Acopon* (*Med.*) an ointment. *Paul. Aeginet.* l. 7, c. 19.—*Azanitæ ceratum*, a cerate. *Oribas. Med. Coll.* l. 13.

AZAT'PES (*Mil.*) The name by which the Turks distinguish their newly-raised soldiers.

A'ZEG (*Chem.*) vitriol.

AZEMA'SOR (*Chem.*) native cinnabar.

- AZENSALI (*Bot.*) a sort of moss that grows on rocks; also a sort of black stone found among gold.
- A'ZEC (*Chem.*) ink.
- A'ZED (*Med.*) an inferior kind of camphor used by the Arabians.
- AZE'DARACH (*Bot.*) a species of the *Melia* of Linnæus.
- AZE'DEGRIN (*Min.*) the *Lapis hæmatites*.
- A'ZEFF (*Chem.*) scissile alum.
- A'ZEM (*Polit.*) the name which the Turks give to their grand vizier.
- A'ZEROLE (*Bot.*) a kind of medlar-trees, the leaves of which are like parsley.
- A'ZIMAR (*Chem.*) Burnt Copper.
- A'ZIMEN *degrees* (*Astrol.*) Degrees of the Zodiac, so called because persons born when any of them are ascending are commonly afflicted with lameness, or some other natural imperfection.
- A'ZIMUTH *of the sun, stars, &c.* (*Astron.*) an arc of the horizon, comprehended between the meridian of the place and the azimuth circle, passing through the sun, &c.—*Azimuth circles, or vertical circles.* i. e. great circles of the spheres, intersecting each other in the zenith and nadir.—*Magnetical Azimuth*, an arc of the horizon contained between the magnetical meridian and the azimuth or vertical circle of the object.—*Azimuth compass*, an instrument for finding either the magnetical azimuth or amplitude of a

- circle at sea.—*Azimuth dial*, a dial whose stile or gnomon is perpendicular to the plane of the horizon.
- A'ZIMUTHS (*Astron.*) vide *Azimuth Circles*.
- AZOGA *ships* (*Com.*) Spanish ships commonly carrying quicksilver for the use of the miners in extracting the silver.
- AZO'T (*Chem.*) another name for *nitrogen*. [vide *Nitrogen*]
- AZO'TH (*Alch.*) the Mercurius Philosophorum, or universal remedy. *Paracel. de Philos. Occult.*
- A'ZOTITE (*Chem.*) a kind of salt formed from the combination of the protoxide of azote with alcalies.
- A'ZUR (*Min.*) Red Coral.
- A'ZURE (*Min.*) vide *Copper*.
- AZURE (*Her.*) the blue colour in the coats of arms of all persons under the degree of Barons. In engraving, the azure is represented by horizontal lines across the shield from side to side. Azure is the emblem of justice, humility, and loyalty.
- A'ZURITE (*Min.*) a species of azure stone.
- AZURIUM (*Chem.*) a preparation of mercury, sulphur, and sal ammoniac, recommended by Albertus Magnus.
- AZYGES (*Anat.*) ἀζυγές, a name for the *Os Sphenoides*.
- A'ZYGUS (*Anat.*) ἀζυγος, from α, priv. and ζυγος, a pair, i. e. unpaired, the name of a vein situated within the thorax, on the right side, having no fellow on the left.
- A'ZYMA (*Theol.*) ἀζυμα, the feast of unleavened bread among the Jews; from ἀζυμος, unleavened, or unfermented.

B.

- B. (*Ant.*) stands as an abbreviation for Balbus, Brutus, &c.; as a numeral for 300, and with a dash over it, as B̄, for 3,000. [vide *Abbreviations*]
- B. (*Lit.*) stands for *Bachelor*. [vide *Abbreviations*]
- B. (*Chron.*) stands for one of the Dominical letters. [vide *Dominical Letter* and *Chronology*]
- B (*Mus.*) the name of the seventh note in the gamut, to which De Nevers, a French physician, is said to have applied the syllable *si*, Guido having attached syllables only to the other six. [vide *Gamut* and *Music*]
- B. (*Her.*) stands for the middle chief in the Escutcheon. [vide *Escutcheon* and *Heraldry*]
- BA'ANITES (*Ecc.*) Heretics so called from their leader, one Baancs, who taught the errors of the Manachites in the 9th century.
- BA'ARD (*Mar.*) a sort of sea vessel or transport ship.
- BA'AS (*Zool.*) the *Bos barbatus* of Linnæus.
- BA'AT (*Com.*) a weight in Siam and China equal to half an ounce, also current as a small coin of different values.
- BABOON (*Zo.*) a sort of monkey with a short tail, which forms one division of the genus *Simia* in the Linnæan system.
- BABUZICARIUS (*Med.*) vide *Incubus*.
- BAC (*Mar.*) a kind of praam or ferry-boat.
- BAC (*Mech.*) another name for a tub or cooler.
- BAC (*Chem.*) the vessel into which the liquors are poured.
- BA'CANON (*Nat.*) βάρκανον, the seeds of cabbages.
- BACANON (*Med.*) a sort of antidote, which, according to Myrepsus, is a good hepatic medicine.
- BAC'ANTIBI (*Ecc.*) strolling clerks, who wandered from church to church.
- BA'CAR (*Ant.*) *Vas vinarium*, a beaker, or drinking vessel.
- BACAR (*Com.*) a weight.
- BA'CCA (*Bot.*) from בכח, he wept, on account of the juice

- or fluid which it contains; a berry, or round soft succulent fruit, containing seeds in a pulpy substance. It is a species of pericarp. Its different kinds are, the—*Bacca succosa*, very succulent, as the Gooseberry, Currant, &c.—*Bacca corticosa*, corticated, or covered with a hard rind, as the *Garcinia Mangostana*, &c.—*Bacca exsucca*, dry, when the skin is coriaceous or coloured, as in the *hedera*.—*Bacca Mono-bi-tri-poly-sperma*, one-two-three, many seeded, according to the number of seeds.—*Bacca Uni-bi-tri-multilocularis*, one-two-three, many celled, according to the number of cells into which the berry is divided.—*Bacca di-tri-pyrena*, one-two, or three, many pyrenous, when the seeds have a hard shell attached to their skin.—*Bacca Bermudensis*, the fruit of *Arbor Saponaria*, the kernel of which, steeped in water, raises a froth, like soap.
- BACCALAU'REUS (*Lit.*) Batchelor. [vide *Batchelor*]
- BACCA'LIA (*Bot.*) the Bay-tree.
- BACCA'TUS (*Bot.*) berried, or soft, like a berry; an epithet for a capsule, a drupe, a silique, and an aril.—*Baccata capsula*, a capsule with a fleshy coat.—*Baccata drupa*, a drupe with a succulent coat, &c.
- BACCHANALIA (*Ant.*) *Bacchi festa*, Διονυσία. [vide *Dionysia*] Bacchanals, festivals at Rome, in honour of Bacchus, which for their licentiousness were suppressed by a solemn decree of the senate. *Liv.* l. 29, c. 14; *Fest. de Verb. Signif.*; *Laz. Comment. Reip. Roman.* l. 10, c. 9; *Stuck. Antiq. Conviv.* l. 1, c. 33; *Castellan de Fest. Græc. apud Gronov. Thes. Antiq.* tom. 8, p. 637.
- BACCHANALIANS (*Ant.*) those who performed rites in honour of Bacchus.
- BA'CCHANALS (*Ant.*) vide *Bacchanalia*.
- BACCHARIODES (*Bot.*) the *Conyza Anthelmintica* of Linnæus.
- BA'CCHARIS (*Bot.*) βακκίρις, a sweet-scented shrubby

plant, which was formerly esteemed a vulnerary. and of which an ointment is supposed to have been made that bore the same name. *Hippocrat. de Mul.*; *Dioscor. l. 3, c. 51*; *Plin. l. 21, c. 6*; *Athen. l. 15*.

BACCHARIS, in the *Linnean system*, a genus of plants, Class 19 *Syngenesia*, Order 2 *Polygamia superflua*.

Generic Characters. CAL. common cylindric; scales linear.—COR. compound equal; proper funnel-formed.—STAM. filaments five; anthers tubular.—PIST. germ ovate; style filiform; stigma bifid.—PER. none; calyx unchanged; seeds solitary; receptacle naked.

Species. The species are shrubs.—*Baccharis ivæfolia*, *Conyza frutescens*, *Eupatorium Africanum*, Peruvian Ploughman's Spikenard, native of America.—*Baccharis nervifolia*, Oleander Ploughman's Spikenard.—*Baccharis halimifolia*, *Senecio Virginica*, pseudo *Helichrysum*, Sea Purslane-leaved Ploughman's Spikenard.—*Baccharis Dioscoridis*, seu *Conyza Major altera indica*, native of Ceylon.—*Baccharis Brasiliana*, native of Brasil.—*Baccharis fetida*, seu *Conyza Americana*, native of Carolina.—*Baccharis Chinensis*, an undershrub, native of Canton, in China. *Ger. Herb.*; *J. Bauh. Hist.*; *C. Bauh. Pin.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tournef. Inst. de Re Herb.*

BACCHARIS, the species is the *Conyza squarrosa* of Linnæus.

BACCHAROIDES, the *Conyza athelmintica* of Linnæus.

BACCHIA (*Ant.*) βακχία, a festival. [vide *Dionysia*]

BACCHIA (*Med.*) the same as *Gutta rosacea*.

BA'CCHICA (*Bot.*) the same as *Hedera*.

BA'CCHIIUS (*Gram.*) βακχίσιος, a sort of foot so called because it was frequently used in hymns to Bacchus; it consists of three syllables, the first short and two last long, as λέγῆbant.

BACCIFERÆ (*Bot.*) Berry-bearing plants; one of the eighteen classes in Morrison's system.

BACHELARIA (*Polit.*) the Yeomanry, as distinguished from the Baronage.

BA'CHELOR (*Lit.*) the first degree in the arts and sciences, as Bachelor of arts, B. A.; Bachelor of Divinity, B. D.; Bachelor of Medicine, B. M., &c. It is called in Latin *Baccalaureus*, from *baculus*, a staff, because it was supposed that a staff was given, by way of distinction, into the hands of those who had completed their studies. Some have, however, derived the word from *bas chevaliers*, i. e. knights of a lower order.

BACHELOR, arms of (*Her.*) a bachelor, while he remains such, may quarter his paternal coat with other coats, but he may not impale it till he is married. [vide *Heraldry*]

BACHELOR, a title formerly given to knights who had made their first campaign; also to young military men, because they exercised themselves with staves and bucklers.

BACHELOR of Arms, a title given to those who for the first time came off victorious in the combat.

BA'CHELORS (*Polit.*) those members belonging to the companies of London who are not yet admitted to the livery.

BACILLA'RIA (*Ent.*) a genus of animals, Class *Vermes*, Order *Infusiora*.

Generic Character. Body consisting of cylindrical straw-like filaments.

Species. The only species is the—*Bacillaria Paradoxa*, seu *Vibrio pavilifer*.

BACILLUM (*Med.*) dim. of *baculum*, a troche in the form of a stick.

BACILLUM (*Chem.*) iron instruments in the shape of a *baculum*, or staff.

BACINIUM (*Cus.*) a Wash-hand bason; the holding of which at the king's coronation is one kind of service. *Lib. Rub. Seacar. Mon. Angl.*

BACK (*Carp.*) the upper side of a piece of timber when it

is fixed in a level or inclined position, in distinction from the lower side, which is called the *Breast*. The same is to be understood with regard to the curved ribs of ceilings, and the rafters of a roof; their upper edges are always called the backs.—*Back of a Window*, in joinery, is the board or wainscoting between the sash frame and the floor, forming a part of the finish of the room in which it is placed.—*Back or hip-moulding*, the backward hips or valley-rafter in the way of an angle for the back part of a building.—*Back-stairs*, stairs leading to an apartment backwards.—*Back-house*, the buildings behind the house, the office houses.

BACK of the stern-post (*Mar.*) an additional piece behind the stern-post.—*Back-board*, a board placed in the after part of the ship to lean against, as the back of a chair.—*Back-frame-wheel*, a wheel for laying cordage.—*Back-staff*, an instrument for taking the sun's altitude; so called because the back of the observer is towards the sun. It consists of two concentric arcs and three vanes: the arc of the longer radius, as G F, is 30 degrees, that of the shorter 60 degrees, as D E, making altogether 90 degrees, or a quadrant. The vane A, at the centre, is called the *horizon vane*, because through it the observer must see the horizon; that at B the *shade vane*, because it produces a shadow that directs his eye; that at C the *sight vane*, because through it he looks to make his observation.—*Back-stays*, ropes that stay back or keep up the masts from pitching forward.—*Back-stay-stool*, a piece of plank fitted for the dead eyes and chains for the *back-stays*.

BACK-BERINDE (*Law*) or *back bear*, bearing upon the back a sign or circumstance of what the civilians call *furtum manifestum*, theft apparent, which was one of the four cases or circumstances wherein, according to Manwood, a forester may arrest the body of an offender against vert or venison; the three other cases being *stable-stand*, i. e. with the bow bent; *dog-draw*, i. e. drawing a dog or hound after him, to recover the deer that is shot; and *bloody-hand*, i. e. having the hands suspiciously besmeared with blood. *Bract. l. 3, tract 2, c. 32*; *Manw. For. Laws*, pt. 2, c. 18.—*Back-tack*, in the Scotch law, when a wadsetter, instead of occupying the wadset lands, grants a tack thereof to the reverser for payment of a certain sum, under the name of the *tacking duty*, that tack is called a *back-tack*.

BACK-GAMMON (*Sport.*) a particular game played by two persons, with the help of dice, on a board or table divided into two parts, whereon are 24 black and white spaces, called *points*.

BA'CK-PAINTING (*Paint.*) the method of painting mezzotinto prints pasted on glass, with oil colours.

to BACK (*Mar.*) is used in several nautical phrases, as—“To *back an anchor*,” to carry out a small anchor to support the larger one.—“To *back a-stern*,” to manage the oars in rowing in a direction contrary to the usual method.—“To *back and fill*,” an operation generally performed in a river when a ship has the tide in her favour and the wind against her.—“To *back the sails*,” to arrange them for the ship to retreat or move astern, in consequence of the tide favouring her.—“*Back the starboard oars!*” the command to confine the management to the oars on the right hand side of the boat or ship.—“*Back the main top-sail!*” the command to brace that sail, so that the wind may act on the forepart, and thus retard the ship's course.

BA'CKING of a wall (*Carpent.*) the building which forms the inner face of a wall, or the act of building the inner face.

- BACKS (*Com.*) the thickest and best tanned hides, used chiefly for soles of shoes.
- BA'COPA (*Bot.*) a genus of plants, Class 5 *Pentandria*, Order 1 *Monogynia*.
Generic Characters. CAL. *perianth* one-leaved.—COR. one-petalled.—STAM. *filaments* five; *anthers* sagittate.—PIST. *germ* ovate; *style* short; *stigma* headed.—PER. *capsule* one-celled; *seeds* very many.
Species. The only species is the—*Bacopa aquatica*, native of Cayenne. *Linn. Spec. Plant.*
- BA'CTILE (*Archæol.*) a candlestick, properly so called when made *e baculo*, of a stick.
- BA'CTRIS (*Bot.*) a genus of plants, Class 21 *Monoecia*, Order 6 *Hexandria*.
Generic Characters. CAL. *spathe universal* one-leaved.—COR. one-petalled.—STAM. *filaments* six; *anthers* oblong.—PIST. *germ* ovate; *style* very short; *stigma* headed.—PER. *drupe* coriaceous; *seed* nut roundish.
Species. The species are—*Bactris minor fructibus*, &c. seu *Cocos quincensis aculeata*, &c. a shrub, native of S. America.—*Bactris major fructu*, &c. seu *Fructus exoticus*, a shrub, native of S. America. *Linn. Spec. Plant.*
- BA'CuLE (*Fort.*) a kind of portcullis, or gate, made like a pitfall, with a counterpoise, and supported by two great stakes.
- BACULOME'TRIA (*Math.*) a measuring of lines by means of baculi, or staves.
- BADGE (*Her.*) an exterior ornament of a coat of arms, originally worn by the servants, &c. of the nobility. They were much used from the reign of king Edward the First until that of queen Elizabeth, when they grew into disuse.
- BADGE (*Mar.*) an ornament placed on the outside of small ships, and commonly decorated with marine figures.
- BA'DGER (*Law*) from *baggage*, and *bagagier*, a carrier of bundles; one that buys corn or victuals in one place and sells them in another. *Stat. 5 and 6 Ed. 6; 3 Eliz. c. 12.*
- BADGER (*Nat.*) the *Ursus meles* of Linnæus, an animal which lives in woods and clefts of rocks. It feeds on insects, &c. burrows during winter, hunts by night, and lies concealed by day. It is easily tamed; gravid 7 weeks, and brings 3 to 5 young.
- BADGER (*Her.*) has been occasionally used as a charge in coats of arms.
- BADIA'GA (*Med.*) a kind of sponge in Russia, the powder of which, according to Bauxbaum, takes away the livid marks from bruises.
- BA'DIAN (*Semen* (*Bot.*)) the same as *Anisum Indicum*.
- BADIGEON (*Mech.*) a mixture of plaster and free-stone ground and sifted together, which is used by statuaries to fill up the little holes and repair the defects in stones. The same name is given by joiners to a composition of sawdust and glue, with which any cavities in their work are filled up.
- BADITES (*Bot.*) the name for the *Nyμφæa*, or *Clava Herculis*; the root of which, according to Marcellus Empiricus, bruised and eaten with vinegar for ten days by a boy, makes him a eunuch without excision.
- BA'DIUS (*Bot.*) chesnut or liver brown, an epithet for plants.
- BA'ECKIA (*Bot.*) from Abraham Baeccka, a friend of Linnæus', a genus of plants, Class 8 *Octandria*, Order 1 *Monogynia*.
Generic Characters. CAL. *perianth* one-leaved.—COR. *petals* five.—STAM. *filaments* eight; *anthers* subovate.—PIST. *germ* roundish; *style* filiform; *stigma* capitate.—PER. *capsule* globular; *seeds* a few.
Species. The species are mostly shrubs, as the—*Baekia frutescens foliis*, &c. seu *Chinensis*, native of China.—*Baekia densifolia*, seu *foliis*, &c. native of New Holland.

- Baekia virgata*, native of New Holland. *Linn. Spec. Plant.*
- BÆOBO'TRYS (*Bot.*) from *βαίος*, *parvus*, and *βίτρυς*, *racemus*, the fructifications being in their racemes; a genus of plants, Class 5 *Pentandria*, Order 1 *Monogynia*.
Generic Characters. CAL. *perianth* double.—COR. one-petalled.—STAM. *filaments* five; *anthers* heart-shaped.—PIST. *germ* globose; *style* cylindric; *stigma* obtuse.—PER. *berry* globose; *seeds* several.
Species. The species are the—*Bæobotrys nemoralis*, seu *foliis*, &c. a shrub, native of the Isle of Janna, in the South Seas.—*Bæobotrys lanceolata foliis*, &c. seu *Maesa*, a shrub, native of Arabia Felix. *Linn. Spec. Plant.*
- BÆ'OS (*Med.*) a malagma. *Paul. Ægin.*
- BA'ETAS (*Com.*) a sort of woollen stuff in Spain and Portugal which is not crossed.
- BAFFE'TAS (*Com.*) a kind of calico manufactured in India.
- BA'FFLING-WINDS (*Mar.*) those winds which wave and shift continually.
- BAG (*Com.*) a determinate quantity of goods contained in a bag, varying according to the article, or the place, in size, from three to four hundred weight.
- BAG of madder (*Her.*) a charge in the Dyer's arms. [vide *Dyer's Company*]
- BAGA'VEL (*Archæol.*) a tribute upon all goods brought to the city of Exeter, the collection of which was granted to the citizens by charter, from King Edward I. for repairing the walls, &c.
- BAGA'UZ (*Com.*) the sugar canes in the Antilles, after they have passed through the mills.
- BAGÉ'DIA (*Com.*) a pound of twelve ounces.
- BAGNIGGE-WELLS (*Med.*) Wells, near Islington, containing water slightly brackish, three half-pints of which are purgative.
- BA'GNIO (*Med.*) from *bagno*, Italian for a bathing-house, with conveniences for bathing, sweating, and otherwise cleansing the body. It is now most commonly understood to be a brothel.
- BAGNOLE'NSES (*Ecc.*) Heretics in the eighth century, who rejected the Old Testament and part of the New. They were a branch of the Manichæans. *Antonin. Sum. Hist. part iv, sect. 11, c. 7; Prætol. Doct. Om. Hæret.*
- BA'GPIPE (*Mus.*) a favourite wind instrument among the Highlanders.
- TO BAGPIPE the mizen (*Mar.*) to lay it back, by bringing the sheet to the mizen shrouds.
- BA'G-REEF (*Mar.*) a fourth or lower reef, sometimes used in the royal navy.
- BAGUETTE (*Archit.*) a small round moulding, less than an astragal, sometimes carved and enriched with foliages, ribbands, laurels, &c.
- BAGEL-COYOLLI (*Bot.*) the same as *Areca*.—*Bagel-Schulli*, an Indian tree, from the roots of which a decoction is made that is diuretic. *Raii Hist. Plant.*
- BA'HIR (*Theol.*) a term signifying literally excellent, but applied particularly to the cabbala of the Rabbis, or their book of mysteries.
- BAIL (*Law*) from the French *bailler*, Latin *ballium*, and Greek *βαλλειν*, to deliver. 1. The freeing one arrested, or imprisoned upon any action, on surety taken for his appearance on a certain day, and at a certain place. This is what Bracton and the statute of Westminster (made the 3 Ed. I.) calls *replegiari*, and letting out by a sufficient *replegium*; what Britton and the Register express by finding of *Mainprize*; the statute 5 Ed. III. c. 8, by letting to Baile; that of Marlbridge, c. 27 (made 52 Hen. III.), by *tradere in ballium vel replegium*; the statute 2 Ed. III. c. 9, *de homine replegiando*, declareth the effect thereof to be, that he should replevy the prisoner by good *Mainprize*;

the statute 23 Hen. VIII. calls it *letting to bail*, or *mainprize*; and the statute of 2 P. & M. seems to make all the words synonymous: but according to the modern distinction, to *replevie*, is to redeem a thing by giving pledges, particularly applied to cattle or goods that are distrained; *bailment* signifies delivering a person, who is a prisoner, into the hands of his friends, who are sureties for his appearance; *mainprize* signifies also literally taking a prisoner in hand from *manu captio*, but with this difference, that he who is bailed is always a prisoner to his friends; but he who is mainprized, is said always to be at large.—Bail is either common or special.—*Common bail* is in common concernment, where any sureties may be taken; but—*Special bail* is in matters of greater weight, where special surety of two or more persons must be taken, according to the value of the cause. *Horne's Mir. of Just.* c. 2; *Britt.* c. 2, &c.; *Bract.* l. 3, tract 2, c. 8; *Old. Nat. Brev.* 42; *F. N. B.* 249; *Reg. Orig.* 123; *Lamb. Eiren.* l. 3, c. 2; 4 *Inst.* 179.

BAIL signifies also a limit or bound within a forest.

TO BAIL (*Law*) to be bail or surety for one arrested, &c.; also to hold to bail.

BAILE'E (*Law*) the person to whom the goods of the one that is bailed are delivered.

BA'ILIFF (*Law*) *Balivus*, from βαλλειν, to commit or entrust; Magistrates in France who administered justice in the parliaments or courts, answering to sheriffs or to the bailiffs of hundreds, mentioned by Bracton. There are still *bailiffs* of particular towns in England, as the *bailiff* of Dover Castle, &c.; otherwise *bailiffs* are now only officers or stewards, &c.; as—*Bailiffs of liberties*, appointed by every lord within his liberty, to serve writs, &c.—*Bailiff, errant or itinerant*, appointed to go about the county for the same purpose.—*Sheriff's bailiffs*, sheriff's officers to execute writs. These are also called *bound bailiffs*, because they are usually bound in bond to the sheriff for the due execution of their office.—*Bailiff of courts baron*, to summon the court, &c.—*Bailiffs of husbandry*, appointed by private persons to collect their rents, and manage their estates.—*Water-Bailiffs*, officers in all port towns, for searching ships, gathering toll, &c.

BAILIWICK (*Law*) from *balliva*, either the county itself, or any liberty over which the lord appointeth a bailiff, as the bailiff of Westminster. *Wood's Instit.* 206.

BAILO'NE (*Her.*) a charge in coats of arms, representing a lion rampant, holding a staff in his mouth.

BAILLOR (*Law*) the party who delivers the goods of a person that is bailed.

BAILMENT (*Law*) from the French *bailler*, to deliver; a delivery of goods in trust upon a contract expressed or implied. Of these there are six sorts, as—1. *Depositum*, a bare and naked bailment, to keep for the use of the bailor. 2. *Accommodatum*, a lending gratis, or delivery of goods, to be returned again in specie. 3. *Locatio*, or *conductio*, a delivery of goods for hire. 4. *Vadium*, a delivery by way of pledge. 5. A delivery of goods to be carried for a reward. 6. *Mandatum*, as it is called by Bracton, a commission or delivery of goods to do something about them, as to carry them, &c. without a reward. 1 *Inst.* 89.

BAILO (*Polit.*) the title given at Constantinople to the ambassador of the Republic of Venice, who acts also as consul.

BAILO'QUE (*Com.*) or *Ballogue*, a French name for the ostrich feathers that are used as ornaments without dying.

BAIO'CO (*Com.*) a small coin in the Roman state, a hundred of which make a Roman crown.

BAYRAM (*Theol.*) a festival among the Turks, celebrated after the fast of Ramazan for three days together, in which

no work is done; but presents are sent from one to another with manifestations of joy.

BAI'R-MAN (*Law*) a poor insolvent debtor left bare and naked. *Stat. Will. Reg. Scot.*

BAIRN'S part (*Law*) Children's part; a third part of the defunct's free moveables, debts deducted, if the wife survive; and a half if there be no relict.

TO BAIT (*Falc.*) the action of a hawk when she claps her wings, or stoops to catch her prey.

BA'JULUS (*Archæol.*) a Bailiff.

BAIZE (*Com.*) or *bays*, in the singular, Bay; a coarse woollen stuff, having a long nap. The name and the thing was introduced into England by the Flemish refugees.

TO BAKE (*Print.*) the letters are said by compositors to *bake* which stick together, in a composed state, from the drying of the ink.

BA'KERS' Company (*Her.*) there are two companies of this name, the White and the Brown Bakers.

The *White Bakers* are of great antiquity, having been a company as early as Edward II. Their arms are, as in fig. 1, "gules, three garbs, or, on a chief; an arm issuing out of a cloud, proper, holding a pair of scales, or, between three garbs of the first."

Fig. 1.

Fig. 2.

The *Brown Bakers* were incorporated the 19th of James I.

Their arms, as in fig. 2, are "gules, a hand issuing out of the clouds, proper, holding a pair of scales; an anchor in a chief, barry wavy, or and azure, on a chevron, gules between three garbes."

BALÆNA (*Zool.*) Whale, the *μυσίκετος* of Aristotle, the *Musculus* of Pliny; is, in the *Linnean system*, a genus of animals, Class *Mammalia*, Order *Cete*.

Generic Characters. Horny *laminae* in the upper jaw in place of teeth.—*Spiracle* with a double external orifice on the top of the head.

Species. The principal species are the—*Balæna Mysticetus*, seu *Groenlands Wallfisch*, the Common Whale.—*Balæna physalus, tripinnis*, &c. *Physalus bellua, Physeter*, seu *Finnfisch*, Fin-Fish, or Finn-backed Mysticete. *Balæna boops, tripinnis, musculus*, &c. seu *Jupiterfisch*, Pike-headed Whale, or Mysticete.—*Balæna gibbosa*, seu *Knotenfisch, Knobbelfisch*, Bunched Mysticete Whale.

BALANCE (*Mech.*) an instrument formed by the application of the lever, in order to determine the weight of bodies; of which there are different kinds, named according to their construction, as the *common balance*, the *Roman balance*, or *steelyard*, the *compound balance*, *Danish balance*, *deceitful or false balance*, &c.; and also according to their use, as *assay balance*, *hydrostatical balance*, and the like. The Common Balance consists of a lever, called the *beam*, the two halves of which, on each side the axis, are called the *arms*; the line which divides the beam in two is called the *axis*, which, if considered as a point, is called the *centre of motion*; and the extremities, where the weights are applied, are called the *points of suspension*.—*Balance of a clock or watch*, that part which by its motion regulates and determines the beat. The circular part of it is called the *rim*, and its spindle the *verge*; besides which it has two *pallets*, or nuts, that play in the fangs of the crown wheel; and in pocket watches the strong stud in which the lower part of the crown wheel lies, is called the *potans*

- or *potance*. The wrought piece which covers the balance and by which the upper pivot plays, is the *lock*, and the small spring in watches is the *regulator*. [vide *Mechanics*]
- BALANCE (*Astron.*) a constellation. [vide *Libra*]
- BALANCE (*Com.*) is so called in Merchants' Accounts when the debtor and creditor sides are even. The act of so doing is termed "Drawing a *balance*."—*Balance* also signifies the difference between two accounts, which, when added to the one that is deficient, makes them even.—*Balance in trade*, the difference between the value of commodities bought of foreigners, and that of our own products exported.
- BALANCE (*Ent.*) a style or oblong body under each wing of the two-winged flies, which is supposed to serve as a balance or poise for them in their flight.
- BALANUM (*Bot.*) the oil of the *Balanus Myrep-sica*. *Plin.* l. 13, c. 1.
- BALANOCA'STANUM (*Bot.*) the same as *Balbocastanum*.
- BALANOPHORA (*Bot.*) the *Lyuomorium* of Linnæus.
- BALANOS (*Bot.*) βάλανος, an acorn; an oak, or any glandiferous tree. *Hippocrat. de Affect.*; *Theoph. Hist. Plant.* l. 1, c. 8.
- BALANOS (*Med.*) a suppository or pessary made in form like an acorn.
- BALANOS (*Anat.*) the Glans Penis.
- BALANUS (*Myrep-sica*) (*Bot.*) the Oily Acorn, the fruit of the *Lignum Nephriticum*.
- BALARUC, *Waters of* (*Med.*) saline and purgative waters in France.
- BALASIUS (*Min.*) a sort of Carbuncle.
- BALASS-RUBY (*Min.*) a species of stone, of the ruby kind, with crystals of a regular octahedron form.
- BALASTRI (*Com.*) the finest gold cloth of Venice.
- BALATRONES (*Archæol.*) a profligate set of men; so called from one Servilius Balatro, a noted libertine. *Hor.* l. 1, sat. 2, v. 2, &c.
- BALAUSTIUM (*Bot.*) βαλαύστιον, Balaustines; the flowers of the wild Pomegranate; the *Punica granatum* of Linnæus. These flowers were reckoned of an astringent quality. *Diosc.* l. 1, c. 154; *Plin.* l. 13, c. 19.
- BALAZOES (*Com.*) or white cotton cloths of Mogul.
- BALBIS (*Med.*) βάλβις, an oblong cavity. *Gal. Exeges. Vocab. Hippocrat.*
- BALBITO'DES (*Anat.*) βάλβιτοδής, the cavity at the extremity of the humerus to which the *ulna* is articulated. *Hip. de Artic.*
- BALBUTIES (*Med.*) from βάλβυζος, a stammering and precipitate speech.
- BALCANIFER (*Archæol.*) a standard-bearer.
- BALCONY (*Arch.*) a projection in the front of a building surrounded with balustrades, and serving the purpose of a small gallery.
- BALDACHIN (*Archit.*) from the Italian *baldachino*, signifying a sort of canopy erected over an altar as a covering.
- BALE (*Com.*) a pack, or certain quantity of goods.—*Bale-goods*, such goods as are exported or imported in bales.
- TO BALE (*Mar.*) to lade water out of a ship's hold with buckets.
- BALENGER (*Archæol.*) a kind of barge or water-vessel, *Stat.* 28 H. 6; also a man of war. *Walsing. in R.* 2.
- BALRUGA (*Archæol.*) a territory, or precinct. *Chart. Hen.* 2.
- BALISTA (*Ant.*) vide *Ballista*.
- BALISTA (*Her.*) vide *Sweep*.
- BALISTRA'RIOUS (*Archæol.*) a cross-bowman. 28, 29 *Hen.* 2.
- BALISTES (*Ich.*) a genus of animals, Class *Pisces*, Order *Branchiostegous*.
- Generic Character.* Head compressed; Mouth narrow; Teeth in each jaw 8; Gills narrow in the aperture; Body rough, with very minute prickles, the scales joined together by the skin.
- Species.* None of these fishes inhabit the seas of Europe; they feed on other fish, grow to a vast size, and are most of them suspected to be poisonous, particularly the *Balistes monocerus*, *Sinensis*, &c.
- BALISTIQUE (*Mil.*) a French word signifying the art of projecting heavy substances, as cannon-balls, &c.
- BALIVA (*Law*) a bailiwick or jurisdiction.
- BALIVO AMOVENDO (*Law*) a writ to remove a bailiff out of his office. *Reg. Orig.*
- BALK (*Arch.*) a large piece of timber used as a main beam for a house, a scaffolding, or any other building.
- BALK (*Agr.*) a ridge, or bank, between two furrows.
- BALK staff (*Mar.*) a quarter-staff.
- BALKERS (*Archæol.*) from the word *Balk*, because they stand higher than others. Persons who from a high place on the coast show the passage of the shoals of herrings to fishermen, or give notice of any thing to others.
- BALL (*Ent.*) the little case, or cone, of silk in which silkworms and spiders deposit their eggs.
- BALL (*Nat.*) a mass of hair covered with a smooth shining coat, or shell, found in the stomach of goats, &c. and otherwise called *Bezoar*.
- BALL (*Min.*) a term among the Cornish miners for a tinmine.—*Ball-vein* a sort of iron ore common in the mines of Switzerland.
- BALL of fire (*Meteor.*) vide *Fire-ball*.
- BALL (*Mil.*) any round substance of lead, iron, &c. which is discharged from fire-arms, as musket-balls, cannon-balls, &c.—*Fire-balls*, or *light-balls*, are such as are composed of meal, powder, saltpetre, sulphur, &c. and put into shells which are discharged from mortars for the purpose of setting fire to particular places.—*Smoke-balls*, those which have a larger proportion of pitch, rosin, and sawdust.—*Sink-balls*, those in which horses' hoofs, asa-fœtida, &c. form the principal ingredients.—*Red-hot balls*, such as are sent out in a perfect state of ignition.—*Chain-balls*, two balls linked together by a chain, that do much damage to the rigging of vessels.—*Stang-balls*, commonly called *bar-shot*, are balls of two heads, or two half-balls joined together by a bar of iron.—*Anchor-balls* are composed of the same materials as *fire-balls*, but are made with an iron-bar, one-half of which is fixed within the ball.—*Message-balls*, [vide *Shells*]—*Sky-balls*, those which burst from rockets.—*Water-balls*, those which burn while swimming on the water.—*Sand-balls*, those which burst on the ground.
- BALL martial (*Med.*) a mixture of iron filings and cream of tartar formed into the consistence of a ball for impregnating water and other liquids.—*Mercurial ball*, an amalgam of mercury and tin moulded into the shape of a ball.
- BALL (*Vet.*) the medicines given to a horse in the shape of a ball, and distinguished by the name of a *horse-ball*.
- BALL of a pendulum (*Mech.*) The weight at the bottom, which, in short pendulums, is called the *bob*.—*Ball and socket*, an instrument made of brass, with a perpetual screw, so as to move in different directions, for the purpose of managing astronomical and surveying instruments.
- BALL (*Elect.*) a name for two pieces of cork, or pith of elder-tree, nicely turned in a lathe to the size of a small pea, and suspended by very delicate threads, which serve to discover small degrees of electricity.
- BALLAST (*Mar.*) from the Teutonic, *Ballast*; gravel, sand, or any weighty matter, put into a ship's hold to poise her, and bring her sufficiently low in the water. Ships are said to be in *ballast* when they have no other lading.—"To *trench ballast*," is to divide or dispose it.—*Shot-ballast*, when the ballast runs from one side to the other.—*Pea-ballast*, a peculiar kind of fresh-water sand dried by the sun, and used for stowing teas with.—*Shingle-ballast*, coarse gravel used for ballast.—*Stiff ballast*, when the ballast is so heavy as to retard the ship's motion.—*Crank bal-*

last, when the ballast is so light as to endanger the ship upsetting.

BALLATA (*Mus.*) Italian for any song, the melody of which is calculated to regulate the measure of a dance.

BALLATOONS (*Mar.*) large, heavy barks, or baggage-boats, for carrying wood from Astracan to Moscow.

BALLEL (*Bot.*) the *Convolvulus repens* of Linnæus.

BALLET (*Mus.*) French for a theatrical representation composed of music and dancing.—*Ballet-master*, the artist who regulates the performance and representation of the ballet.

BALLETYTS (*Ant.*) βαλλητυς, a festival at Eleusis, in Attica, in honour of Demophoon, the son of Celeus. *Athen.* l. 9; *Hesychius*.

BALLI (*Mus.*) Italian for dances between the acts of the operas.

BALLIAGE (*Com.*) a duty payable to the City of London, for all the goods and merchandises of aliens, according to the charter of the 16th *Car.* 2.

BALLIN (*Com.*) the name for Emballage, or packing, in the South of France and Bayonne.

BALLISTA (*Ant.*) a machine for war, by which stones and other missile weapons were projected to a distance. *Sil. Ital.* l. 1, v. 334.

————— *Adductis stridula nervis*
Phucis effundit vastos ballista molares.

Lucan. l. 3, v. 464.

————— *Neque enim solis excussa lacertis*
Lancea, sed tenso ballistæ turbine raptâ
Haud unum contenta latus transire, quiescit :
Sed pandens perque arma viam, perque ossa, relicta
Morte fugit ; superest telo post vulnera cursus ;
At saxum quoties ingenti ponderis ictu
Excutitur, qualis rupes, quam vertice montis
Abscidit impulsu ventorum adjuta vetustas,
Frangit cuncta ruens :

It is so called from the Greek βάλλω, to cast, but the Greeks distinguish this machine by the names πετροβόλος and λιθοβόλος, [vide *Militia*] *Cic. Tuscul.* l. 2, c. 24; *Vitruv.* l. 10, c. 16; *Joseph. de Bell. Jud.* l. 6; *Plin.* l. 7, c. 56; *Appian. in Mithrid. Hegesip.* l. 3, c. 12; *Ammian.* l. 3, c. 24; *Isidor.* l. 18, c. 10; *Lips. Poliorc.* l. 3; dial. 3.

BALLISTA'RII (*Ant.*) a sort of light-armed soldiers. *Veget.* l. 2, c. 2.

BALLISTER (*Arch.*) vide *Baluster*.

BALLISTEUM (*Ant.*) βαλλίστειον, a sort of song and dance combined, which was in use among the Romans, so called from βαλλίζειν, to dance, or throw about the hands. The French word *ballet*, which is taken in a similar sense, is derived, in all probability, from this word. *Vopisc. in Aurel.*; *Suidas*.

BALLISTIC pendulum (*Mech.*) a machine for ascertaining the velocity of military projectiles, invented by Mr. Benjamin Robins.

BALLISTICS (*Mil.*) the art of using projectiles.

BALLIUM (*Archæol.*) a fortress, or bulwark. *Matth. West. An.* 1265.

BALLON (*Ant.*) from the French *ballon* and *balle*, a large ball which princes used in the sports.

BALON (*Chem.*) or *balloon*; a round, short-necked vessel, used as a receiver in distillation.

BALON (*Archit.*) a ball, or globe, on the top of a pillar.

BALON (*Mech.*) a kind of bomb made of pasteboard, and played off in fireworks.

BALON (*Mar.*) a sort of brigantine in Siam made out of a single trunk not less than a hundred, or a hundred and twenty feet long.

BALON (*Com.*) or *ballot*, a name in Lorraine for a certain

quantity of glass-plates, smaller or larger, according to the quality.

BALLON, a determinate quantity of particular commodities; as a *ballon* of glass, consisting of twelve bundles and a half; a *ballon* of paper, containing fourteen reams.

BALLON (*Pneum.*) *balloon*, or *air-balloon*, the machine invented by Mr. Montgolfier, for navigating the air. [vide *Pneumatics*]

BALLOON (*Chem.*) a large glass receiver in the form of a hollow globe, which forms a part of the chemical apparatus.

BALLOT (*Polit.*) a diminutive of ball, *i. e.* a little ball used in giving votes: or the act itself of giving votes.

BALLOTA (*Bot.*) βαλλωτη, Stinking or Black Horehound; a plant so called, from βάλλω, to dart, because it was supposed to open obstructions in the ears, in the same manner that a dart penetrates the body. A cataplasm made of its leaves are, according to Dioscorides, efficacious against the bite of a mad dog. *Dioscorides*, l. 3, c. 117; *Plin.* l. 27, c. 8.

BALLOTA, in the *Linnean system*, a genus of plants, Class 14 *Didynamia*, Order 1 *Gymnospermia*. This plant is, by the earlier botanists, mostly called *Marrubium*, of which it was reckoned to be a species; Tournefort, however, calls it *Ballote*.

Generic Characters. CAL. *perianth* one-leaved.—COR. monopetalous.—STAM. *filaments* four; *anthers* oblong.—PIST. *germ* quadrifid; *style* filiform; *stigma* slender.—PER. none; *seeds* four.

Species. The species are mostly perennials, as—*Ballota nigra*, *Marrubium nigrum*, seu *Marrubiastrum*, Stinking or Black Horehound, a native of Britain.—*Ballota alba*, White Horehound.—But the *Ballota suaveolens*, *Bystropogon*, *Mesosphærum*, *Mentastrum*, seu *Melissa*, Sweet-smelling Horehound, is an annual.

BALLOTA'DE (*Man.*) the leap of a horse between two pillars made with justness of time.

BALLUSTER (*Arch.*) a small kind of column or pillar.

BALLUSTRA'DE (*Arch.*) a series of ballusters serving as a guard or fence to balconies, staircases, &c. It is so called from *Balustrum*, a space in the ancient baths that was railed in.

BALM (*Bot.*) a contraction of balsam, as the Balm of Gilead, a liquid resin of a whitish or yellow colour, of a fragrant smell, and of a penetrating aromatic taste. The balm flows from the Balsam-Tree. [vide *Balsam*]

BALM of Gilead is also a perennial, so called from the fine perfume which it emits when rubbed. It is the *Dracocephalum canariense* of Linnæus.—*Balm of fir-tree*, the *Pinus balsamea* of Linnæus.—*Balm*, or *Balm mint*, the *Melissa* of Linnæus; a perennial, so called from the fragrance of its smell which resembles that of the balsam: the sort of balm most known is the garden balm, which is of medicinal and culinary use.

BALNEÆ (*Ant.*) public baths or bains for bathing two together, one for the men, and the other for the women. *Vitruv.* l. 5, c. 10.

BALNEA'RIOUS (*Ant.*) a name of the thief who stole the clothes of those that were bathing. *Tertull. de Persecut.* c. 13.

BALNEA'TOR (*Ant.*) *qui balneis preest*; the bath keeper, or he who had the charge of the bath.

BALNEUM (*Ant.*) βαλνειον, a private bath or bathing place, in distinction from the *Balneæ* or *Balineæ*, which were public baths. *Varr. de Ling. Lat.* l. 8, c. 41.—*Balneum Frigidarium*, the cold-bath.—*Balneum Caldarium*, the hot-bath.—*Balneum Tepidarium*, the warm or tepid-bath.

BALNEUM arenæ, vel siccum (*Chem.*) a sand heat for the purification of mercury.—*Balneum mariæ*, seu *maris*, boiling water, into which the vessel that contains the ingredients to be digested or acted upon is placed.—*Balneum vaporis*,

Vapour-bath, when the vessel is exposed only to the steam of boiling water.

BALOTIDES (*Man.*) vide *Ballotide*.

BALSAM (*Bot.*) the resinous juice which proceeds from the bark of the Balsam-tree. The first sort of Balsam that was known bore the name of Opobalsam, Balm of Gilead, or the Balsam of Mecca, and was produced from a tree, growing in Arabia and Egypt, called, in the Linnean system, the *Amyris Gileadensis*, et *Opobalsamum*. [vide *Balsamum*] This balsam is much in use, among the females of Turkey, as a cosmetic.

BALSAM (*Med.*) a name also given to several medicinal preparations, as the—*Balsam of Sulphur*, or the oily parts of common brimstone dissolved in oil of turpentine.—*Balsam of Saturn*, a solution of the *Saccharum Saturni*, or sugar of lead, made with spirit or oil of turpentine, and digested, &c.

BALSAM Tree (*Bot.*) the tree from which the Balm or Balsam of Gilead flows; it is the *Amyris Gileadensis* of Linnæus.

BALSAMEA (*Bot.*) from *balsamum*, a species of *Pinus*, which see.

BALSAMELÆON (*Bot.*) the same as *Balsamum*.

BALSAMELLA (*Bot.*) the same as *Balsamina*.

BALSAMICS (*Med.*) from *balsamum*; balsamic medicines, which Hoffman describes as hot and acrid. Under this description are comprehended Aloe's-wood, Yellow Sanders, Ambergrise, which are very efficacious in all diseases of the head, nerves, spinal marrow, &c.

BALSAMINA (*Bot.*) a species of *Momordica* of Linnæus.—*Balsamina lutea*, seu *noli me tangere*, a species of *Impatiens* of Linnæus.

BALSAMINUS (*Bot.*) βαλσαμίνος, *oleum balsaminum*, Oil of Balm. *Plin.* l. 23, c. 4.

BALSAMITA major (*Bot.*) a species of the *Tanacetum* of Linnæus.—*Balsamita minor*, the *Achillea ageratum* of Linnæus.—*Balsamita agerati*, the *Chrysanthemum flosculosum* of Linnæus.

BALSAMUM (*Bot.*) βάλσαμον, a tree growing in the valleys of Syria which yields the most precious aromatic, known by the name of Balsam; it is so called from *belsamin*, which, among the Easterns, signifies the chief of aromatics. In the Linnean system it is the *Amyris Gileadensis*. *Theophrast. Hist. Plant.* l. 9, c. 6; *Dioscor.* l. 1, c. 18; *Plin.* l. 12, c. 25; *Oribas. Med. Coll.* l. 11; *Aet. Tetrab.* l. 1, serm. 1; *Paul. Æginet.* l. 7, c. 3.

BALTHEI (*Archit.*) bands or girdles belonging to the Ionic volute, according to Vitruvius. They are supposed to be the bolsters of the volute, and are so called from their resembling the girdles of the soldiers. *Vitruv.* l. 3, c. 3; *Tertull. de Spectac.* 3; *Salmas. in Solin.* p. 919.

BALTIMORA (*Bot.*) from Lord Baltimore, a genus of plants, Class 19 *Syngenesia*, Order 4 *Polygamia Necessaria*.

Generic Characters. CAL. common cylindric.—COR. compound radiate.—STAM. filaments five; anthers cylindric.—PIST. germ obscure; style short; stigma none.—PER. none; seeds none; receptacle chaffy.

Species. The only species is *Baltimora recta*, seu *Chrysanthemum Americanum*, &c. an annual, native of North America.

BALUSTER (*Archit.*) corruptly written Bannister, a small column or pilaster of different dimensions, from an inch and three quarters to four inches square.

BALUSTRADE (*Archit.*) vide *Ballustrade*.—*Feinte balustrade*, French for small pillars or balusters which are fixed half their usual height upon any ground.

BAMBOO (*Bot.*) or *bambu*, an Indian reed with larger knots than the common reed; the *Arundo bambos* of Linnæus, a plant of which the poorer inhabitants in the East Indies build their houses; paper is also made of the same

material, by bruising it, and steeping it in water till it be reduced to a paste. The Turks make their pens of a variety of this cane.—*Bamboo habit*, a Chinese contrivance for one to keep himself above water who does not know how to swim.

BAMBU'SA (*Bot.*) a genus of plants, Class 6 *Hexandria*, Order 1 *Monogynia*.

Generic Characters. CAL. none, except glume like bractes scattered.—COR. glume two-valved; nectary two-leaved.—STAM. filaments six; anthers parellalopiped.—PIST. germ oblong; style capillary; stigmas feathery.—PER. none; seed single.

Species. The species are—*Bambusa arundinacea*, *panicula*, &c. *Bambos arundinacea*, *Nastus*, *Arundo Bambos*, &c. *Arundo arbor*, *Arundarbor vasaria*, *Tabaxir*, seu *Mombu arbor* seu *Illy*, a shrub, native of the Indies.—*Bambusa verticillata*, *spica*, &c. *Arundo multiplex*, &c. *Arundo arbor*, &c. a shrub, native of India.

BA'MIER (*Bot.*) an Egyptian plant, the husk of which is dressed with their meat to give it an agreeable flavour.

BA'MMA (*Med.*) the same as *Emamma*.

BAN (*Law*) in the Latin of the Middle age, *bannum*, *Teutonic bann*, from *binden*, to bind; 1. An outlawry, or banishment by edict or proclamation at the sound of the trumpet. 2. An arrier ban, or reer ban, an edict by which all vassals were summoned to attend their lord on the field with horses and arms, in pain of being outlawed. *Hotton.* 3. An edict interdicting all intercourse with an enemy. 4. *Banna matrimonialia*, bans which are published in the church previous to the marriage of any couple, who have not obtained a licence.

BAN (*Com.*) a sort of fine India cotton.

BAN (*Bot.*) an Egyptian plant called *calaf*.

BANA'NA (*Bot.*) Banana or Plantain-tree, the *Musa sapientum* of Linnæus; an American plant, diuretic, heating and nutritious. *Raii Hist. Plant.*

BANANI'ERA (*Bot.*) the *Ficus Indica* of Linnæus.

BANA'RA (*Bot.*) a genus of plants, Class 12 *Icosandria*, Order 1 *Monogynia*.

Generic Characters. CAL. perianth one-leaved.—COR. petals six.—STAM. filaments fifteen and more; anthers roundish.—PIST. germ somewhat globose.—PER. berry globose; seeds very many.

Species. The species are the *Banara quianensis*, et *Banara fagifolia*, shrubs of Cayenne.

BANC de ciel (*Archit.*) a bed or layer of the upper stones, which is supported by pillars at intermediate distances.

BA'NCAL (*Com.*) an Indian weight of 16 oz. and above.

BANCALE (*Archæol.*) a covering for ease or ornament belonging to the seats or benches formerly used.

BA'NCI jus (*Law*) vide *Jus*.

BA'NCO (*Com.*) Italian for bank, a term particularly applied to that of Venice.

BA'NCUS (*Archæol.*) bench, a term particularly used in Law, as—*Bancus Regius*, the King's Bench.—*Bancus Communis*, the Common Pleas.

BAND of Pensioners (*Polit.*) a particular company of gentlemen bearing halberds, and attending the person of the King upon solemn occasions.

BAND (*Her.*) a military order instituted by Alphonso XI, king of Castile, for the younger sons of the nobility, who are obliged to serve ten years, either by land or sea, before their admission, and are bound to take up arms in defence of the Catholic faith against the infidels.

BAND (*Archit.*) any flat low member or moulding that is broad, but not very deep. It is otherwise called "Face," and by Vitruvius *fascia*. *Vitruv.* l. 3, c. 3.

BAND (*Com.*) a weight of two ounces on the Gold coast.

BAND (*Mil.*) vide *Bands*.

BAND (*Mus.*) a fixed and select body of musicians, particu-

- larly such as are attached to every regiment in the English army.
- BA'ND *Fish (Ich.)* the *Cepola rubescens* of Linnæus, a fish remarkable for the shortness of its head.
- BA'NDAGE (*Surg.*) *deligatio*, seu *fascia*, an apparatus consisting of one or more pieces of linen or flannel, and fitted for the binding up of wounds, &c. Bandages are either simple or compound.—*Simple Bandages*, made of one entire piece of linen, are, as to their form, *circular*, or *annular*, *spiral*, or *obtuse*, &c.; as to their use, *uniting*, *retaining*, *expellent*, &c.—*Compound bandages*, made of several pieces, or of one piece cut into several heads, are the *T. bandages*, the *suspensory*, the *capistrum*, the *eighteen-tail bandage*, or *ascialis*, &c.
- BANDA'NNOIS (*Com.*) a species of Indian calicoe.
- BANDÉ (*Her.*) vide *Bend*.
- BA'NDED (*Her.*) any thing as a garb or wheatsheaf, &c. tied with a band of a different tincture, as "A garb, or, banded, *gules*, by the name of *Grosvenor*." [vide *Garb*]
- BANDED Column (*Archit.*) any column encircled with bands or annular rustics.
- BANDELET (*Archit.*) an ornament encompassing a pillar quite round about like a ring.
- BANDELIE'RS (*Mil.*) vide *Bandoleer*.
- BANDERE'T (*Mil.*) a name in history for the commander in chief of the Swiss troops in the Canton of Berne.
- BA'NDES (*Mil.*) a French name anciently for the infantry of France. It is now used in application to the *Prévôt des Bandes*, i. e. the judge, or Provost Marshal, who tried the men belonging to the *Gardes*.—*Bandes* is also a name for the troops or bands to a mortar carriage.
- BANDIE'RE (*Mil.*) an epithet for a particular disposition of the army, as *une armée rangée en front de bandière*, i. e. an army in battle array; *une armée campée en front de bandière*, an army encamped with the regular stand of colours; hence also *la ligne bandière*, the camp colour line.
- BANDITTI (*Polit.*) *baniti qui carebant jure togæ; quibus aqua et igne interdictum erat*. Outlaws originally in Italy; robbers in particular.
- BA'NDLE (*Com.*) an Irish measure of two feet.
- BANDOLEER (*Mil.*) or *bandolier*, a large leathern belt, formerly worn over the right shoulder and hanging under the left arm, to carry some kind of warlike weapon.—*Bandoliers* were also wooden cases to hold the charges of powder, of which each musketeer used to carry twelve hanging on his belt.
- BANDORE (*Mus.*) *bandusa*, an ancient stringed instrument resembling a lute.
- BA'NDROL (*Mil.*) a little flag or streamer, particularly that at the end of a flag.
- BA'NDROLLS (*Mil.*) vide *Camp-Colours*.
- BANDS (*Mil.*) *train-bands*, or *trained-bands*, i. e. particular regiments composed of the citizens of London, who used to be trained and exercised after the manner of the militia.
- BANDS *nave* (*Gun.*) the bands or iron hoops that bind the nave of a gun-carriage at both ends.
- BANDS (*Mar.*) slips of canvass strongly sewed across a canvass to strengthen it, as the *reef bands*, &c.
- BANDS of a saddle (*Mech.*) two flat pieces of iron nailed on each side the bows of the saddle, to keep its form.
- BA'NDSUM (*Ant.*) *signum militare*, a banner or standard of the general.
- BANDURA (*Bot.*) a plant of Columbo, the root of which is astringent. Its seeds and seed-vessels resemble those of gentian. It is the *Nepenthes distillatoria* of Linnæus. *Raii Hist. Plant.*
- BA'NDY (*Mech.*) a crooked club or stick to play with.
- BANE (*Law*) from the Saxon *bana*, a murderer; the author of mischief to another. *Bract.* l. 2, tract 8, c. 1.
- BA'NE-BERRY (*Bot.*) the *Actæa spicata* of Linnæus.
- BA'NERET (*Her.*) *banerettus*, a knight made in the field, whose standard was converted into a banner, which he could display in the king's army as barons do. They are next to the baron in dignity; but those banerets who have been created *sub vexillis regis*, in *aperto bello*, &c. take place of all baronets. *Smith de Repub. Anglican.* c. 18.
- BA'NGLE-EARED (*Man.*) flap-eared, an imperfection in the sit of a horse's ears.
- BANGUE (*Bot.*) an Indian plant, with leaves like hemp, of a heating and intoxicating nature. It is the *Acosta* of Ray, and the *Cannabis Indica* of Linnæus.
- BA'NIAN (*Archæol.*) vide *Bannians*.
- BANIAN days (*Mar.*) a cant term among the seamen for days on which no meat is served out to them.
- BA'NICA (*Bot.*) the *Pastinica sylvestris* of Linnæus.
- BANI'LIA (*Bot.*) the same as *Vanilla*.
- BANISHMENT (*Law*) from *ban* [vide *Ban*] signifies quitting the realm in consequence of some offence. It is of two kinds, namely, voluntary, i. e. upon oath, or by abjuration; and compulsory, i. e. by transportation. *Staudf. Plac. Coron.* 117.
- BANISTE'RIA (*Bot.*) a genus of plants, called after the Rev. John Banister, of Virginia, who lost his life in the search after plants. Class 10 *Decandria*, Order 3 *Trigynia*. *Generic Characters.* CAL. *perianth* five-parted.—COR. *petals* five.—STAM. *filaments* ten; *anthers* simple.—PIST. *germs* three; *styles* three; *stigmas* obtuse.—PER. *capsules* three; *seeds* solitary.
- Species.* The species are all shrubs, and natives of hot climates, particularly of America and Brazil.
- BANK (*Law*) was formerly taken for a bench or seat of judgment, as *Bank le Roy*, the King's Bench; *Bank le Common Pleas*, the Common Pleas: so also in Latin *Bancus Regis*, &c. *Crompt. Just.* 67, 91.—*Days in bank*, stated days of appearance in the Court of Common Pleas in each of the terms, called, in Latin, *dies in banco*. They are generally at the distance of about a week from each other.
- BANK (*Com.*) a public office for keeping and circulating money, to be employed in exchanges, discounts, government-loans, &c. of which description is the Bank of England, which was established by charter in the reign of William and Mary, into a corporate body, by the title of The Governor and Company of the Bank of England.—The word *bank* in this sense owes its origin to the Italian *banco*, because the money-changers of this nation, who were the first bankers, used to sit on benches in their courses or exchanges.—*Bank-note*, or *bank-post-bill*, names for the paper currency issued by the Bank of England: the former payable to *bearer on demand*; the latter to *order* seven days after sight.
- BA'NKER (*Com.*) one who carries on the trade of private banking.
- BANKER (*Mar.*) a vessel employed in the cod fishery on the banks of Newfoundland.
- BA'NKING (*Com.*) that particular kind of trade carried on in England, which consists in exchanging and receiving the current cash of individuals, free of interest, and negotiating with it, either in the discount of bills or the advance of money on sufficient securities. This is one of the principal branches of business carried on by the Bank of England, and the peculiar trade of private bankers.—*Banking-House*, any mercantile house which carries on the banking-business, in distinction from the Bank, by which is understood the Bank of England.
- BANKING (*Agric.*) the making of banks to oppose the force of the sea.
- BA'NKRUPT (*Com.*) a trader who fails, or breaks, so as to be unable to pay his debts. It is compounded of *bancum*,

the bench, and *rumpere*, to break, i. e. to break the bench, because the bench of the Italian banker or money-changer is said to have been broken, by way of infamy, when he failed.

BA'NKRUPTCY (*Com.*) from *bankrupt*, the condition of a bankrupt, or becoming a bankrupt.—*Act of bankruptcy*, any act such as that of secreting oneself, &c. which makes a man legally a bankrupt.—*Commission of bankruptcy*, a warrant granted by the Lord Chancellor, on the petition of one or more creditors, against any trader who is charged with an act of bankruptcy.

BA'NKSEA (*Bot.*) a genus of plants, so called from Sir Joseph Banks, the discoverer, Class 4 *Tetrandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* one-leaved.—COR. one-petalled.—STAM. *filaments* none; *anthers* four.—PIS. *germ* superior; *style* filiform; *stigma* acute.—PER. *capsule* ovate or globose; *seeds* two.

Species. The species are shrubs, and natives of New Holland, as *Banksea serrata*, *integrifolia*, *ericæfolia*, &c.

BANN (*Law*) vide *Ban*.

BANNALIS mola (*Archæol.*) the lord of the manor's mill, where his tenants were obliged to grind their corn.—*Bannalia flumina*, rivers whose royalties belong to particular lords of manors.

BA'NNER (*Mil.*) a flag or standard at the end of a lance. The ordnance flag is affixed to the carriage of the right-hand gun of the park. The banner for the kettle-drums and trumpets in the horse equipage must be of the colour and facing of the regiment, that of the kettle-drums bearing in the centre the badge of the regiment, or its rank; and that of the trumpets, the king's cypher and crown. &c.

BANNER (*Her.*) such a flag is borne as a charge in coats of arms, and when open and flying is called "The Banner disveloped," as "The field is *Jupiter*, three banners disveloped, in bend *Sol*," which are said to have been the arms of the kingdom of Baldachia.

BANNERE'T (*Ant.*) vide *Baneret*.

BA'NNIANS (*Theol.*) a religious sect among the Indians, who believe in the transmigration of souls, and therefore abstain from the flesh of all animals, whom they carefully preserve.

BANNIMUS (*Archæol.*) the first word in the sentence of expulsion of any member from the University of Oxford, which was formerly posted up in some public place.

BA'NNISTER (*Archit.*) vide *Ballister*.

BANNITUS (*Law*) an outlaw.

BA'NNOCK (*Cook.*) a sort of oaten cake, in the North of England, baked in the embers or on a hot stone.

BA'NNUM (*Archæol.*) the utmost bounds of a manor or town.

BAPTISTERY (*Ecc.*) either the place or the vessel in which persons are baptized.

BA'NQUET (*Man.*) a part of the branch of a bridle under the eye, which is rounded like a small rod, and joins the extremities of a bit to the branch.—*Banquet-line*, an imaginary line drawn along the banquet, to adjust the designed force or weakness of the branch.

BANQUETTE (*Fort.*) a small foot-place, in form of a step, at the bottom of a parapet.

BA'NTAM-COCK (*Orn.*) a species of the *Gallus*, having the shanks feathered and long feathers behind.

BA'OBAL (*Bot.*) an African fruit, as large as a lemon, resembling a gourd, grateful to the taste, a cooler and quencher of thirst. Prosper Alp Baobal is the *Adansonia digitata* of Linnæus.

BAOBAL lapidium (*Min.*) a particular stone resembling the fruit in form.

BAPHIA (*Ant.*) βαφεια, dye-houses.

BA'PTÆ (*Ant.*) 1. The priests of Cotytto, the goddess of

lasciviousness, so called, ἀπὸ τῆς βαπτειν, i. e. from washing, because bathing was a particular rite among them. *Juv. sat.* 2, v. 91.

*Talia secretâ coluerunt Orgia tædâ
Cecropiam soliti Baptæ lassare Cotytto.*

2. The title of a play of Eupolis, who ridiculed their effeminacy and licentiousness.

BA'PTES (*Min.*) βάπτεις, a soft precious stone, of a fragrant smell. *Plin.* l. 37, c. 10.

BA'PTISM (*Theol.*) βάπτισμα, from βάπτειν, to wash; a sacrament of the Christian church, administered, by means of water, to all persons previous to their admission into the number of the faithful. It is performed either by immersion, i. e. dipping, or by sprinkling.

BA'PTIST (*Bibl.*) βαπτιστής, one who performs the office of baptizing, an epithet applied, by way of distinction, to John the Baptist.

BAPTISTE'RIUM (*Ant.*) a tub of wood or stone, used in the bath, by those who went to bathe. *Plin.* l. 2, ep. 16.

BAPTISTERIUM (*Ecc.*) the baptistery or fount used in baptizing. *Sidon. Apoll.* l. 2, ep. 1.

BAPTISTUM (*Bot.*) a species of wild mustard, so called from its reddish colour.

BAR (*Mech.*) a long piece of iron or wood, which serves as a fastening to doors and windows, and also as an inclosure. In carriages bars are of different denominations, as cross-bars, shaft-bars, &c.

BAR (*Com.*) a solid mass of metal, as gold, silver, or iron, wrought into a shape somewhat resembling a bar.

BAR (*Mar.*) a rock lying before the harbour in such a manner that ships cannot sail over it but upon the flood.

BAR (*Law*) is taken in different senses. 1. The place parted off by a bar or railing, where serjeants and counsellors at law stand to plead, on one side of which stand also prisoners to plead to the indictment. 2. The profession of a barrister: "To be called to the bar," is to be admitted a member of the profession of barristers. 3. A sort of plea, or such a peremptory exception of a defendant as destroys the plaintiff's action. Bars are of different kinds, namely—*Perpetual bar*, which for ever overthrows the action of the plaintiff. *Temporary bar*, which is good for the present.

Ordinary or general bar, or *bar to a common intendment*, usually a bar to the declaration of the plaintiff.—*Special bar*, one which falls out on some special circumstance of the fact.—*Bar at large*, is when the defendant does not traverse the plaintiff's title by pleading, nor confess nor avoid it, but only makes to himself a title in his bar.—*Bar material*, a sort of special bar, which is a plea in stay of the plaintiff's action on some particular matter, as a descent from him that was owner of the land. *Kitch.* 68, &c. &c.—*Bar fee*, a fee of twenty-pence which prisoners acquitted of felony paid to the gaoler.

BAR (*Her.*) one of the honourable ordinaries, consisting of two horizontal lines drawn across the escutcheon, as in fig. 1. The bar differs from the *fesse* in three particulars, namely, that it occupies a fifth part of the field instead of a third; it is not limited to any part of the escutcheon, and is never borne single. It has two diminutives, namely, the *closet* (fig. 2), which is half the bar, and the *barrule* (fig. 3),

which is half the closet. Of the closet there may be five

in one field; but the barrulet can be borne only in couples.
—*Bars gemelles* are so called when they stand in couples, as in fig. 4. “The field is *argent*, a fesse between two bars, *gemelles gules*, by the name of *Badlemere*.”

BAR (*Mus.*) is employed to divide the notes into equal portions in respect to their duration, (as fig. 1.)—*Double bar*, (fig. 2) is introduced at the end of a strain, or a change in the measure or time.—*Dotted bar*, (fig. 3) signifies that the preceding and following strains are to be repeated.—*Half-dotted bar*, (fig. 4) shows that the strain is on the same side of the bar with the dots.

BAR (*Man.*) a horse is said “To fall foul of the bar” who gets himself entangled in the partition bar that separates two horses in the stable.

TO BAR a vein (*Vet.*) to tie it above and below, after the skin has been opened, and then strike it between the ligatures.

BAR-SHOT (*Mil.*) the same as Stang-balls. [vide *Ball*]

BARALIPTON (*Log.*) an indirect mode of syllogisms, or an imperfect syllogism, consisting of two universals and one particular affirmative proposition, as,

- b A Every animal is endued with sense;
- 2 A Every man is an animal; therefore
- l l pton Something endued with sense is man.

BARALLOTS (*Ecc.*) heretics of Bologna, in Italy, who had their base spirit they were called Obedientes. *Feruin. Cordubens. de 8 exig. ammon.*

BARA-MAREKA (*Bot.*) a species of the *Dolichos* of Linnæus.

BARANGI (*Polit.*) βαρᾶργοι, officers in the Greek empire, who had the keys of the city in charge where the emperor resided. This word is of English extraction, according to Curupulates, from *bar*, to fasten, or shut close, because their office was to keep the gates locked; and they were of the English nation to whom this office was entrusted.

BARAS (*Med.*) vide *Alphus*.

BARATHRUM (*Ant.*) βαράθρον, a deep pit into which condemned persons were cast headlong, at Athens. It was a dark and noisome hole, having sharp spikes at the top and others at the bottom, to pierce such as were cast in. *Aristoph. in Plut. act 2, scen.; Plut in Mar.; Diomed. de Art. Gram.*

BARATOR (*Law*) vide *Barrator*.

BARATRON (*Ant.*) βεράτρον, games in Threspotia, at which the strongest obtained the victory. *Hesychius*.

BARATRY (*Com.*) when the master or mariners cheat the owners by embezzling their goods or running away with the vessel.

BARATTA (*Nat.*) a sort of balsam brought from the West Indies.

BARATZ (*Polit.*) a Turkish name for the letters patent granted by the sultan to the grand patriarch, the bishops, &c. for the exercise of their clerical functions.

BARB (*Arch.*) the reflected points of the head of an arrow.

BARB (*Bot.*) γλαχίς, glochis, a straight process armed with several teeth pointing backwards like the sting of a bee. It is one sort of pubescence in plants, in distinction from the Hook, *hamus*, which is not bent.

BARB (*Zool.*) a horse of the Barbary breed, much esteemed for its swiftness. Barbs are so much valued by the owners in Barbary, that they preserve their genealogies with as much care as the nobility do of their families in Europe. They are said to be able to outstrip an ostrich in the race, and some will fetch as high a price as 200 or 300 pounds sterling.

TO BARB a lobster (*Cook.*) to cut it up.

BARBA (*Bot.*) the beard. [vide *Beard*]—*Barba-capra*, the *Spiræa Aruncus* and *Ulmaria* of Linnæus.—*Barba Hirci*, the *Tragopogon* of Linnæus.—*Barba Jovis*, the *Anthyllis barba Jovis*, the *Ebenus Cretica*, and the *Psorella*, of Linnæus.

BARBACAN (*Archæol.*) vide *Barbican*.

BARBA'DOES (*Bot.*) or Bastard Cedar, the *Cedrela* of Linnæus.—Barbadoes Cherry, the *Malpighia* of Linnæus.—Barbadoes Gooseberry, the *Cactus Pereskia* of Linnæus.—Barbadoes Wild Olive, the *Bontia* of Linnæus.

BARBARA (*Log.*) an arbitrary name for the first mode of the first figures of syllogisms, consisting of three universal propositions, as—

- b A r All animals are endued with sense.
- b A All men are animals; ergo,
- r A All men are endued with sense.

BARBA'REA (*Bot.*) a species of the *Erysimum* and *Sisymbrium* of Linnæus.

BARBARISM (*Gram.*) βαρβαρισμός from βαρβαρίζω, to speak a strange tongue; a barbarous kind of speech, used only by the rude and unlettered.

BARBAROSSA (*Med.*) mercurial medicine.

BARBARUM (*Med.*) a plaster for green wounds. *Scrib. Larg.*

BARBARY *Falcons* (*Falc.*) a kind of hawks commonly taken in Barbary, which are less than the *tiercel*; they are gentle, but very bold; are plumed with red under the wings, and armed with long talons and stretchers.

BARBE (*Mil.*) the armour of the horses of the ancient knights and soldiers, which covered the neck, breast, and crupper.

BARBE (*Fort.*) or, *to fire en barbe*; to discharge a cannon over the breast-work instead of putting it through the loop-holes.

BARBE *Robert* (*Cook.*) a particular way of dressing hogs' ears.

BARBED (*Mech.*) bearded like a fish-hook, set with barbs.

BARBED (*Her.*) 1. An epithet for the full-blown rose, provided with its barbs, or green leaves, which appear on the outside. 2. For the arrow, whose head is pointed and jagged. 3. *Barbed and Crested*, an epithet for the cock, wattled and crested, particularly if of a different tincture.

BARBED (*Bot.*) furnished with a barb, or glochis.

BARBEE (*Her.*) or *barbed*, as *croix barbee*, a cross, the extremities of which are like a barbed fish-hook.

BARBEL (*Ich.*) the *Cyprinus Barbus*, a fish of the carp kind, which lies in holes near the banks, and feeds on testaceous animals, worms, lesser fish, and carcasses. It is so very tame as to be often taken by the hand, grows fast, and is long lived. It has the name of *Barbel* from the beards, or wattles under its nose.

BARBELICOTÆ (*Ecc.*) an abominable sect of heretics mentioned by Theodoret.

BARBER *Chirurges* (*Her.*) were incorporated by king Edward IV., but the barbers were separated from the surgeons by 18 Geo. 2, c. 15. Their arms are, “A St. George's cross; *gules* thereon a lion passant; gardant or quarterly; the first and fourth a chevron between three fleams; the second and third per *pale argent* and *vert*, a rose, *gules* crowned, and seeded or.”

BARBERRY (*Bot.*) a tart berry, the fruit of the barberry-tree.—*Barberry-tree*, the *Barberis* of Linnæus, a prickly shrub, bearing a tart fruit.

BARBES (*Vet.*) or *barbles*, a disease in horses and black cattle, when they have two small excrescences under the tongue.

- BARBET (*Zool.*) a species of *Canis familiaris*, with a tail truncate, the hair long and coarse.
- BARBET (*Orn.*) the *Bucco* of Linnæus, a bird, living chiefly in warm countries, which is almost covered with bristles, and is very stupid.
- BARBICAN (*Archæol.*) *Barbicanum*, a watch-tower of a fortress, or any outwork to a great building.
- BARBICANAGE (*Archæol.*) money given for the maintenance of a fortress or watch-tower.
- BARBITON (*Ant.*) βαρβίτον, a musical instrument of three or more strings, of which Horace makes Anacreon to be the inventor. *Poll. Onom.* l. 4, c. 9.
- BARBOTA (*Ich.*) the barbut, a small river fish, the liver of which is remarkable for its size and delicacy.
- BARBOTINE (*Bot.*) a grain, otherwise called wormseed.
- BARCALAO (*Com.*) a kind of cod on the coast of Chili.
- BARCALO'NGA (*Mar.*) a large Spanish coasting vessel.
- BARCARIA (*Archæol.*) a sheepcote, or sheepwalk. *M. S. Placit.* Ed. 3.
- BARCAROLLES (*Mus.*) Italian for songs composed by the Venetian Gondoliers.
- BARD (*Archæol.*) *Bardus*, a sort of poets among the Gauls, whose business it was to set forth the deeds of their heroes and great men. *Ammian. Marcell.* l. 15, c. 9; *Buling. de Theat.* l. 2, c. 39.
- BARDA'NA (*Bot.*) the *Arctium Lappa* of Linnæus.
- BARDE (*Man.*) French for a long saddle for an ass or mule, made only of coarse canvass stuffed with flocks.—*Javelin de Barde*, a barbed javelin for a horseman.
- BARDEE'S d'eau (*Com.*) French for a measure used in the making of saltpetre, containing three half-hogsheads of water, which are poured into tubs for the purpose of refining it.
- BARDELLE (*Man.*) *bardello*, the quilted or canvass saddle with which colts are backed.
- BARDE'SENISTS (*Ecc.*) the heretical followers of one Bardesenes, who maintained the Valentinian heresy. *Euseb. Hist. Eccles.* l. 4, c. ult.; *S. Epiph. de Hær.* c. 56; *St. August. de Hær.* c. 35; *Hieron. in Cat.* c. 33; *Baron. Annal.* Ann. 175; *Tillem. Biblioth. des Aut. Eccl. des 3 prem. siec.*
- BARDS (*Cook.*) thin broad slices of bacon, with which capons, pullets, &c. are covered, in order to be roasted, baked, &c.
- BAR'D-WOOL (*Com.*) when the head and neck is cut off from the fleece. [vide *To Clack*]
- BA'RE-PUMP (*Mar.*) a pump for drawing liquor out of a cask.—*Bare-poles*, an epithet for any ship lying to without any sails set. A ship is said to be under *bare-poles*, when having no sails set out at sea.
- BAR'GAIN (*Com.*) a contract in buying and selling.
- BARGAIN and sale (*Law*) a real contract upon a valuable consideration for passing lands, tenements, &c. 2 *Inst.* 672.
- BARGE (*Mar.*) from *barca*; a very large boat used on rivers, either for pleasure and state, as the royal barge, &c. or for trade, as the coal barge, &c.
- BARGE couples (*Arch.*) a beam or piece of wood mortised into another to strengthen the building.—*Barge-course*, part of the tiling of a house that projects over the principal rafter when there is a gable or a gerkin head.
- BAR-GEMEL (*Her.*) from the Latin *Gemelli*, twins; a double bar, or two bars placed near each other. [vide *Bar*]
- BAR'GH-MASTER (*Min.*) from the Teutonic *berge*, a mine; a master of the mines.—*Bargh-mote*, a court held concerning the mines.
- BAR'ILLAR (*Polit.*) French for an officer who was formerly employed among the gallies, to superintend the distribution of bread and water.

- BARILLET (*Mech.*) French for the barrel of a watch; also for the funnel of a sucking-pump.
- BA'RING of trees (*Husband.*) laying the roots bare in the winter season, that they may receive the snow water.
- BARIPICNI (*Mus.*) a name among the Greeks for low sounds in general.
- BARITO'NO (*Mus.*) from βαρῖτονος, *gravitonus*, a low pitch of the voice, between bass and tenor.—*Baritono cliff*, the F cliff, so called because it was suited to the baritono voice.
- BA'R'IUM (*Min.*) a metal of barytes, produced by its chemical decomposition.
- BARK (*Bot.*) the skin or covering of a ligneous plant, consisting of three parts, namely—1. The cuticle, or *Epidermis*. 2. The outer bark, *Cortex*. 3. The inner bark, *Liber*.
- BARK (*Med.*) *Cortex*, a name given by way of eminence to the Peruvian or Jesuit's bark, which is of such well-known efficacy.
- BARK binding (*Hort.*) a distemper in trees cured by slitting the bark.—*Bark galling*, when trees are galled by being bound to stakes.
- BARK (*Com.*) a stuff manufactured in the East Indies with bark, which is spun like hemp.
- BARK (*Mar.*) in French *barque*, from the Latin *barca*; any small ship, but particularly one carrying three masts.—*Armed bark*, a fireship filled with soldiers for attacking batteries, &c.—*Long bark*, one that has no deck, and is built like a sloop.—*Water bark*, a small kind of vessel for carrying fresh water in Holland.
- BA'RKARY (*Archæol.*) a tan-house, or place to keep bark in.
- BA'R'KING of trees (*Husband.*) peeling the bark off the trees, which must be done in the month of May, because at that time the sap parts the bark from the wood.
- BARLE'RIA (*Bot.*) a genus of plants so called by Plumier, after the Rev. J. Barrelier, a Dominican botanist, and M. D. of Paris, Class 14 *Didynamia*, Order 2 *Angiospermia*. *Generic Characters.* CAL. perianth four-parted.—COR. monopetalous.—STAM. filaments four; anthers, the upper oblong, the lower withered.—PIST. germ ovate; style filiform; stigma bifid.—PER. capsule acute; seeds two. *Species.* The species are mostly shrubs, and natives of America or India.
- BARLEY (*Agric.*) a sort of corn or grain botanically named *Hordeum*, which is sown in March, April, and May, succeeds best in light dry soils, and is ripe when the *red roan*, as it is called, is off. The sorts of barley most used in agriculture are, the Common Spring Barley, the Sprat, or Battle-dore Barley, Common, or Long-eared Barley, &c.—*Barley-mow*, the place where reaped barley is laid up.—*Pearl-barley*, barley stripped of its first coat, and sold at Paris by the druggists, to be used as a diet drink.
- BARLEY-CORN (*Arith.*) the smallest measure in England, equal to one-third of an inch.
- BA'RLEY-BIRD (*Orn.*) the siskin; so called in Essex because it goes there in barley seed time.
- BA'RLEY-WATER (*Med.*) a decoction of pearl-barley, which, for its lubricity and cooling quality, is much used in slow fevers.
- BARM (*Nat.*) Yeast; the head or working out of beer, which is used as a ferment to lighten bread.
- BA'RNABITES (*Ecc.*) an order of regular priests, of the congregation of St. Paul.
- BARNACLE (*Con.*) the *Lepas balanus* of Linnæus, a species of shell-fish which sticks to the bottom of ships, rocks, &c. The *tentacula* from this animal are feathered, for which reason the origin of the Barnacle-geese is ascribed, as we learn from Gerard, in his *Herbal*, p. 1587, &c.
- BARNACLE Goose (*Or.*) or *Barnacle*, a large water-fowl, called by the Scotch a *cleg goose*, has a flat broad bill, with

a hooked point, the forepart of its head white, and the rest of its body mostly black. It is the *Anus erythropus* of Linnæus. **BAR'NACLES' (Vet.)** from the Saxon *bearan*, to carry, or hold up, and *necca*, the neck; irons put on the noses of horses, to make them stand still.

BARNADE'SIA (Bot.) a genus of plants named after Barnades, a Spanish botanist, Class 19 *Syngenesia*, Order 1 *Polygamia Æqualis*.

Generic Characters. CAL. common somewhat ventricose. —COR. compound rayed. —STAM. filaments five; anther cylindrical. —PIST. germ ovate; style filiform; stigma bifid. —PER. none; seeds very many; receptacle flat.

Species. The only species is, the—*Barnadesia spinosa*, a shrub, native of America. Linn. *Spec. Plant.*

BARO'CO (Log.) a technical term for the fourth mode of the second figure of syllogisms, containing an universal affirmative and two particular negative propositions, as—

b A All believers will be saved.

r O c Some men will not be saved; ergo,

c O Some men are not believers.

BAR'OLITE (Min.) the *Barytes Witheringii* of Linnæus, a stone of the *Ponderous Order*, called also the Carbonite of Barytes.

BARO'METER (Pneum.) from βαρῦς, heavy, and μέτρον, to measure; an instrument for weighing the gravity of the air, invented by Torricelli. Barometers are variously named, according to their construction, as *horizontal*, *portable*, *wheel*, and *reduced barometer*. [vide *Pneumatics*]

BAR'ON (Law) in Latin *baro*, from βαρῦς, i. e. having weight or influence; a degree of nobility next to a viscount. Barons are of different kinds, as—*Barons major*, or *by writ*, those who were summoned by writ in the reign of King John to attend Parliament, now termed *Barons by prescription*, for that he and his ancestors have continued barons beyond the memory of man.—*Barons by letters patent*, or *by creation*, those who were made barons by the king's letters patent, whose posterity are now called *Lords of Parliament*.—*Barons by tenure*, those who are barons by virtue of the barony annexed to their lands or office, as in the case of some ancient barons and bishops.—*Barons by office*, as the barons of Exchequer, of the Cinque Ports, &c.—*Bract.* l. 1; *Glanvil.* c. 8, &c.; *Cambd. Brit.* p. 109; *2 Inst.* 48, &c.; *Selden's Titles of Honour*, l. 4, c. 13.—*Court Baron*. [vide *Court*].—*Baron and femme*, husband and wife, because *baro* in law, signified a husband.

BARON and femme (Her.) in blazoning, when the arms of a man and his wife are marshalled together side by side.

BAR'ONS' coronet (Her.) on a gold circle, six pearls, which were assigned to barons by King Charles the Second after the restoration. Previously to this time, the barons wore scarlet caps, turned up with ermine, and on the top a tassel of gold. The pearls on the coronet, though called pearls, are always made of silver.

BAR'ONAGE (Law) a tax to be raised for the king's use out of the precincts of baronies.

BAR'ONES (Ent.) small worms.

BAR'ONET (Her.) the lowest degree of honour, hereditary, created by letters patent, and founded by James I. in 1604.

A baronet takes precedence of all knights except Bannerets.—*Baronets' mark*, the arms of the Province of Ulster, viz. *argent*, a hand *gules*, in a canton, or in escutcheon, are borne by every baronet, as in the annexed example. "He beareth, or, between two chevrons, three trefoils, slipped, sable." These are the arms of the Abdy family.

BAR'ONY (Law) *baronia*, from *baro*; the honour and territory which gives titles to a Baron, including the fees and lands of Lords, both temporal and spiritual.

BARONY'CHIA (Bot.) the *Asplenium* and *Ruta muraria* of Linnæus.

BARO'QUE (Mus.) an epithet applied to a composition where the harmony is false and overcharged.

BAR'OS (Med.) from βαρῦς, heavy; an epithet expressing an uneasy weight in any part.

BAR'ROSCOPE (Nat.) from βαρῦς, heavy, and σκοπία, to view; a sort of barometer.

BAROSSE'LENITE (Min.) the *Barytes vulgaris* of Linnæus; a stone, otherwise called the Sulphate of Barytes. —*Compact Barosselenite*, the *Barytes compacta* of Linnæus.

BARO'TE (Min.) a name for the *Barytes*.

BARR (Her.) vide *Bar*.

BARRA (Com.) a Portuguese measure, equal to the English ell.

BAR'RRACAN (Com.) a French woollen stuff resembling the English *barrage*.

BAR'RRACKS (Mil.) from the Spanish *baracca*, a small cabin; the places erected for the accommodation of both men and horses in the English army. Formerly those used by the cavalry were so called, in distinction from the *huts* built for the use of the infantry.—*Barrack allowance*, a specific allowance of bread, beer, and coals, &c. to the regiments stationed in barracks.—*Barrack-guard*, the name given to the principal guard of a regiment that is in barracks.—*Barrack-Master-General*, a staff officer that is at the head of the barrack department.

BAR'RRAGE (Com.) a linen, interwoven with worsted flowers in Normandy.

BAR'RRAS (Chem.) a substance, consisting of rosin and oil, which exudes from the wounds of fir-trees in winter.

BAR'RRASTER (Law) Barrister.

BAR'RRATOR (Law) from the French *Barrateur*, a deceiver; a common mover of suits and quarrels, either in courts or elsewhere.

BAR'RRATRY (Com.) vide *Baratry*.

BAR'REL (Com.) 1. A cask or vessel for holding liquor, viz. 31½ gallons of wine, &c.; 32 gallons of ale, and 36 gallons of beer. 2. A cask for other commodities of different measures.

BARREL of the ear (Anat.) *tympanum*, otherwise called the Drum, is the cavity in which are lodged the bones of the ear.

BARREL of a watch (Mech.) the cylinder about which the spring is wrapped.

BARRELS (Mil.) are of different kinds, as—*Fire-barrels*, that are filled with combustibles, grenades, handspikes, &c. —*Budge-barrels*, that are made in the form of half powder barrels, having at one end a leathern bag with brass nails. —*Water-tight barrels*, such as have six copper hoops, without any hazle hoops.—*Barrels of earth*, a sort of half hogsheads filled with earth, which are used as breastworks for covering the soldiery.

BARREN Signs (Astrol.) the signs, Gemini, Leo, and Virgo; so called because when the question is asked, whether any particular person shall have children or not; if one of those signs be on the cusp, or first point of the first house, it is taken for granted that the person inquiring shall have none.

BARRE'RIA (Bot.) a genus of plants, named after Barrere, a Professor of Perpignan, Class 19 *Syngenesia*, Order 1 *Monogynia*.

Generic Characters. CAL. perianth one-leaved.—COR. one-petalled.—STAM. filaments five; anthers erect.—PIST. germ roundish; style short; stigma trifid.

Species. The species are shrubs and natives of Guiana.

BAR'RETOR (Law) vide *Barrator*.

BAR'RETRY (Com.) vide *Baratry*.

BARRICA'DE (Mil.) or *barricado*, in French *barricade*, in

- Spanish *barricada*, from *barre*, a spar; is a fence hastily raised with stakes, earth, &c. to protect an army from a sudden assault.
- BARRICADE** (*Mar.*) a strong wooden rail, supported by staunchcons, extending across the foremost part of the quarter-deck, employed with a netting as a defence against the grape-shot.
- BARRIERS** (*Fort.*) in French *barrières*, a kind of fence, composed of great stakes, planted ten feet from one another, and erected to defend the entrance of a passage, &c.—*Barrier towns*, fortified places on the frontiers of any country, as were formerly Ypres, Tournay, Mons, Namur, &c. in Flanders.
- BARRIERS** (*Mil.*) *barrières*, or *jeu de barres*, a martial exercise of men fighting with swords within bars or rails, separating them from the spectators.
- BARRINGTONIA** (*Bot.*) a genus of plants; named by Forster after the Hon. Daines Barrington, Class 16 *Monadelphina*, Order 7 *Polyandria*.
Generic Characters. CAL. *perianth* two-leaved.—COR. *petals* four; *nectary* conic.—STAM. *filaments* very many; *anthers* small.—PIST. *germ* inferior; *style* filiform; *stigma* simple.—PER. *drupe* large; *seed* nut long.
Species. The only species is the *Barringtonia speciosa*, *Butonica speciosa*, *Commersonia*, seu *Mammea Asiatica*, &c. Laurel-leaved Barringtonia, a tree, native of the East Indies.
- BARRISTER** (*Law*) a counsellor admitted to plead at the bar.—*Outer barrister* is one who pleads ouster, or without the bar.—*Inner barrister*, a serjeant or king's counsel who pleads within the bar.—*Vacation barrister*, a counsellor newly called to the bar, who is obliged to attend for the six or four next long vacations the exercise of the house.
- BARROW** (*Archæol.*) a large hillock or mount raised in many parts of England, supposed to be the tumuli of the Romans for their dead.
- BARROW hog** (*Husband.*) a boar-hog that has been cut.
- BARRULET** (*Her.*) a diminutive of bar; the fourth part of a bar and twentieth of the field. [vide *Bar*]
- BARRRULY** (*Her.*) vide *Barry*.
- BARRY** (*Her.*) or *barways*, from *bar*, a field, divided by horizontal lines into four or more parts. The number of divisions, which must always be specified, as in fig. 1.

- “Barry of eight, or and azure, name Constable.”—*Barry*, *Bendy*, is when the lines run from dexter chief to sinister base, &c. interchangeably varying their tinctures, as in fig. 2; likewise—*Barry pily*, is another particular manner of dividing the field into six or more pieces, as in fig. 3.
- BARS** (*Mus.*) vide *Bar*.
- BARS** (*Archæol.*) slender pieces of wood or iron, affixed at certain distances, to make fast and secure.
- BARS hatch** (*Mar.*) bars which lock over the hatches—*Capstan bars*, those which are fitted to the drum head of the capstan.
- BARS** (*Man.*) or *binders*. 1. Those portions of the hoof of a horse that form the arches, situated between the heels and the frog. 2. The fleshy row that runs across the upper part of the mouth, and reaches almost to the palate.
- BARTER** (*Arith.*) from the Italian *barratare*. 1. Exchanging one commodity for another. 2. The rule by

- which the proportionate value of the commodities is found. *Luc. de Borg.*
- BAR'TON** (*Law*) or *Berton*, the demesne lands of a manor; a farm distinct from the mansion.
- BARTONA'RII** (*Law*) husbandmen who held bartons at the will of the lord.
- BARTRA'MIA** (*Bot.*) a species of the *Triumfetta* of Linnæus.
- BAR'TSIA** (*Bot.*) a genus of plants, named after Linnæus' unfortunate friend, John Bartsch, MD. Class 14 *Didynamia*, Order 2 *Angiospermia*.
Generic Characters. CAL. *perianth* one-leaved.—COR. *monopetalous*.—STAM. *filaments* four; *anthers* oblong.—PIST. *germ* ovate; *style* filiform; *stigma* obtuse.—PER. *capsule* ovate; *seeds* numerous.
Species. The species are mostly perennials, as—*Bartsia coccinea*, *Pedicularis*, seu *Crista galli*, &c. seu *Horminum*, &c. Red Bartsia, native of Virginia.—*Bartsia pallida foliis alternis*, &c. seu *foliis lanceolatis*, &c. Pale-flowered Bartsia, native of Siberia.—*Bartsia alpina foliis oppositis*, &c. *Stachelinia foliis*, &c. *Stachelinia alpina*, *Euphrasia caule*, &c. *Euphrasia rubra*, &c. *Chamaedry vulgare*, &c. *Clinopodium alpinum*, &c. *Teucrium alpinum*, *Cratæogonon*, seu *Pedicularis*, Alpine Bartsia, native of Britain; but the—*Bartsia viscosa*, *Euphrasia latifolia*, seu *Alectorophos*, &c. Viscid Bartsia, or Yellow Marsh Eyebright, native of Britain, is an annual. *Raii Hist. Plant.*
- BAR'ULES** (*Ecc.*) a sect of heretics, who held that our Saviour had only a phantom of a body. *Sander. Hæc.* 149.
- BAR'UTH** (*Com.*) an Indian measure, equal to 5½ or 58 pounds, of pepper.
- BAR'UTINE silks** (*Com.*) silks manufactured in Persia.
- BARYO'CCATON** (*Bot.*) the *Stramonium* of Linnæus.
- BARYPHONIA** (*Med.*) from βαρυς, difficult, and φωνη, voice; a difficulty of speech.
- BARYPI'CRON** (*Bot.*) vide *Absinthium*.
- BARYPY'JNI** (*Mus.*) βαρυπύωννοι, a name among the Greeks for five of their eight sounds, or principal chords, namely, the *hypate-hypaton*, the *hypate-meson*, the *mese*, the *paramese*, and the *nete diazeugmenon*. *Euclid. Introd. Harmon.*
- BARYTES** (*Min.*) a genus of the *Terræ ponderosæ*.
Generic Characters. Ponderous, parasitic, very brittle, entirely soluble in boiling sulphuric acid.
Species. The species are—*Barytes Witheringii*, Barolite, or Carbonate of Barytes.—*Barytes lamellosa*, Carbonate of Barytes.—*Barytes terrestris Baroselenite*, Ponderous Earth-cawk, Earthy sulphate of Barytes.—*Barytes compacta*, Compact Baroselenite, Heavy Spar, or Sulphate of Barytes.—*Barytes bononiensis*, *Muriaphosphorea*, seu *Gypsum spathosum*, Bononien, or Bologna-stone.—*Barytes lamellata*, Lamellated heavy Spar.—*Barytes vulgaris*, Chrystallized Sulphate of Barytes, Baroselenite, Sulphate of Barytes, Common ponderous Spar, or Cawk.
- BAS-CHEVALIERS** (*Her.*) inferior knights by a bare tenure of military fee, in distinction from bannerets.
- BASA'AL** (*Bot.*) an Indian tree: a decoction from the leaves of which is used as a gargle. *Raii Hist. Plant.*
- BASA'LTES** (*Min.*) Basalt, a genus of earths of the Argillaceous order.
Generic Characters. Consisting of more silica and less alumina and oxyde of iron, lime, magnesia, oxyde of manganese and soda; opaque, and breaking into indeterminate fragments.
Species. The principal species are—*Basaltis columnaris*, Figurate trap, Basalt.—*Basaltis Trapezium*, seu *saxum impalpabile*, Trap, consisting of the three varieties—1. Toadstone; 2. Rowley ragg; 3. Whin-stone.
- BASA'RACO** (*Com.*) a small Indian coin.

BASCA'NIA (*Ant.*) βασκάνια, little trifles that smiths were wont to hang at their shop-windows as amulets and charms.

BA'SE, or *basis*, in Greek βασις, from βαίω, to go; signifies that on which one treads, that is, the lowermost part or foundation of any body.

BASE (*Archit.*) the foot of a pillar, by which it is sustained, or that part that is under the body, or lies upon the pedestal, or zocle, when there is any. [vide *Architecture*]—*Base of a room*, the lower projecting part, which consists of a plinth, and one or more mouldings, called *base-mouldings*.

BASE of a solid figure (*Math.*) is its lowermost plain side, or that on which it stands; and if the solid has two opposite parallel plain sides, and one of them is the base, then the other is also called the base.—*Base of a triangle*, or any other plain figure, is usually that which lies the lowest; but any side may be the base, according to the position in which it may be conceived to be lying, or standing.

BASE (*Fort.*) the external side of the polygon in the imaginary line which is drawn from the flanked angle of a bastion to the angle opposite to it.—*Base* also signifies the level line on which any work stands that is even with the ground; thus the base of a parapet is the rampart.

BASE (*Gun.*) is the least sort of ordnance, the diameter of whose base is $1\frac{1}{4}$, weighing 200 pounds, and carrying a ball $1\frac{1}{8}$ inch in diameter.—*Base ring of a cannon*, the great ring next behind the touch-hole.

BASE line (*Mil.*) the line on which troops in column move; the first division that marches into the alignment forms the base line which each successive division prolongs.—*Base line* signifies also the line on which all the magazines and means of supply of an army are established.

BASE line (*Perspect.*) the common section of a picture, and the geometrical plane.

BASE distinct (*Opt.*) that precise distance from the pole of a convex-glass, in which the objects seen through it appear distinct: it is the same as focus.

BASE (*Bot.*) that part on which the whole flower stands, and the fruit too when the flower has faded. There are two kinds of bases, namely, the receptacle and the fruit-bed. [vide *Botany*, &c.]

BASE (*Con.*) the broad extremity of a shell, in distinction from the apex.

BASE tenure (*Law*) holding by villeinage, or other customary service, in distinction from the higher tenure *in capite*, or by military service.

BASE (*Chem.*) a term employed by chemists formerly to designate substances of a fixed and inert nature, which combined with and were acted on by more volatile and active menstrea. Of this description were reckoned the alkalies, earths, and metallic oxydes, which form compound salts. The modern chemists apply this term, *base*, to the same substances, because, although they do not admit their character, yet they reckon them principal ingredients in the formation of salts, which serve as a convenient mark of distinction between the several sorts of salts that differ in regard to their acid; as salts with an alkaline base, in distinction from salts with a metallic or earthy base. [vide *Chemistry*, or *Salts*]

BA'SELARD (*Ant.*) or Basillard; a weapon mentioned in *Stat. 12, Rich. 2*, which signifies, according to Mr. Speight, on Chaucer, *pugio vel sicca*, a poignard.

BASELLA (*Bot.*) Climbing Nightshade; a genus of plants, Class 5 *Pentandria*, Order 3, *Trigynia*.

Generic Characters. CAL. none. — COR. seven-cleft. — STAM. filaments five; anthers roundish. — PIST. germ superior; styles three; stigmas oblong. — PER. corolla permanent; seed single.

Species. The species are annuals, or biennials, and natives of India, &c. as the—*Basella rubra*, *Cuscutata*, seu *Gan-*

dola rubra, Red Malabar Nightshade.—*Basella alba*, *Gandola Mirab.* seu *Matasackki*, White Malabar Nightshade, &c.

BASELS (*Archæol.*) Baselli; a coin abolished by Henry II.

BASEMENT (*Archit.*) a continued base extended along any building, as the basement, or lower story of a house, &c.

BASHA'NAN (*Theol.*) a sect of Mahometans who carried the notion of man's free agency to its utmost length.

BASHA'W (*Polit.*) or Pasha, a title given to the grand officers of the Porte, as the Capudan-Bashaw, the commander at sea, or admiral; Bostangi-Bashaw, the chief officer of the gardens, &c.

BA'SIL (*Bot.*) a perennial, the *Clinopodium* of Linnæus. The principal sorts are the Common Basil and the Bush-Basil, which has an aromatic smell.

BASIL (*Carpent.*) the sloping edge of a chisel, or of the iron of a plane, the angle of which is ground away.

BASIL (*Mech.*) the skin of a sheep tanned.

BASILA'RIS (*Anat.*) from βασιλεύς, a king; royal, an epithet applied by way of distinction to some bones, as the sphenoid and occipital bones.—*Basilaris arteria*, basiliary artery, an artery of the brain so called, because it lies upon the basiliary process of the occipital bone.

BA'SILEION (*Med*) a collyrium.

BA'SILEUS (*Ant.*) βασιλεύς, the second in rank among the Athenian archons, who presided over their religious ceremonies, &c. *Lys. Or.* ἀσπβ; *Demosth. in Near; Poll. Onomast.* l. 8, c. 9; *Harpocration; Suidas; Sigon de Rep. Athen.* l. 4.

BASILEUS (*Polit.*) βασιλεύς, rex, from βασις λεω, i. e. λαός, *fundamentum populi*; a title anciently adopted by our English kings, as *Ego Edgar totius Angliæ basileus confirmavi*.

BASILIA (*Ant.*) βασιλία, a festival at Lebadæa in Bœotia. *Schol. in Pind. Olymp.* 9.

BASILIA'RIS apophysis (*Anat.*) the great apophysis of the occiput.

BA'SILIC Constitutions (*Law*) an abridgement and reform of the emperor Justinian's laws made under Basilius and Leo, whence they were named.

BASI'LICA (*Anat.*) the middle vein of the arm, so named by way of pre-eminence.

BASI'LICÆ (*Ant.*) halls, or spacious buildings, adorned with stately columns, which were employed as courts of justice, and, on the establishment of Christianity, were many of them converted into churches. Suetonius calls the basilicæ a palace, and Zosimus βασιλική σόα. *Cic. ad Att.* l. 4, ep. 16; et *Verr.* 4, c. 3; *Vitruv.* l. 5, c. 1; *Senec. de Ira*, l. 3, c. 33; *Joseph. Antiq.* l. 15, c. 11; *Plin.* l. 6, ep. 33; *Zosim.* l. 5, c. 2; *Isidor. Orig.* l. 5; *Marlian Topogr. Urb. Rom.* l. 3, c. 6; *Panciroll Descr. Urb. Rom. apud Græv. Thes. Antiq. Rom.* vol. 3, p. 360.

BASI'LICON (*Med.*) βασιλικόν, royal, from βασιλεύς, a king; an ointment consisting of rosin, pitch, oil, wax, &c.; also a sovereign kind of plaster, and an epithet for many compositions. *Cels. de Re Med.* l. 5, c. 19; *Oribas. Synop.* l. 3; *Act. Tetrab.* 4, serm. 3, c. 21.

BASI'LICUM (*Bot.*) the *Ocimum basilicum* and *tenuifolium*, and the *Basilicum agreste* of Linnæus.

BASI'LICUS (*Astron.*) or *basilica*, the same as *Regulus*.

BASILICUS pulvis (*Med.*) Royal powder; an epithet for several purging powders containing cream of tartar.

BASILID'IANs (*Ecc.*) a sect of heretics in the second century, who held the errors of Simon Magus. They maintained, among other things, that angels created the world. *Justin. Mart. Dial. cum Tryphon;* *S. Iren.* l. 22, c. 2; *Tertull. de Præsent. Clem. Aleria, et Strom.* 3; *Epiphani. Hæres.* 23; *St. Augustin. Hæres.*

BASI'LIDION (*Med.*) a particular cerate for the itch, described by Galen.

BASI'LINDA (*Ant.*) βασιλίνδα, a sort of game similar to

the choosing of king and queen on Twelfth-night. *Poll. Onomast.* l. 9, c. 7.
BA'SILISK (*Zool.*) βασιλίσκος, *basiliscus*, a poisonous serpent, so called from βασιλεύς, a king, because, according to Nicander, he was ἐπιτυῶν βασιλεύς, the king of the reptiles. *Luc.* l. 9, v. 725.

— Late sibi submovet omne
 Vulgus, ac in vacua regnat basiliscus arenâ.

It is also called in English a cockatrice, because it was fabled to be produced from the egg of a cock. This serpent, which is the *Lacerta basiliscus* of Linnæus, is not above three palms long, and distinguished from others of its tribe, by having a white spot on its head resembling a diamond. *Plin.* l. 8, c. 21; *Solin.* c. 27; *Ælian.* de *Hist. Anim.* l. 3, c. 21; *Gal. ad Pison.* c. 8; *Hor. Hierog.* l. 1, c. 1, &c.; *Boch. Hieroz. Part. Post.* l. 3, c. 9; *Salmas Plin. Exercitat.* p. 372.

BASILISK (*Mil.*) the name of a large piece of ordnance.
BA'SIN of a dock (*Mar.*) a place for water confined by double floodgates, to prevent it running out at ebb tide. It contains vessels before they enter or after they come out of dock.—*Basin of a haven*, that part which opens from a narrow channel into a spacious receptacle.

BASIN (*Anat.*) a round cavity in the form of a tunnel, situate betwixt the anterior ventricles of the brain, and ending at the *glandula pituitaria*.

BASINS of a balance, (*Mech.*) the two concave pieces of brass, or other metal, hanging by strings at the extremity of the beam; the one to hold the weights, and the other the things to be weighed.—*Basins, among glass-grinders*, the dishes in which are formed or ground the convex glasses, which are different as the focusses of the glass are at a greater or less distance.—*Basins, with hatters*, the iron moulds in which they form their wool or fur into hats.

BA'SIO-CERA'TO-CHONDRO-GLOSSUS (*Anat.*) vide *Hyoglossus*.

BASIO-GLOSSUM, vide *Hyoglossus*.

BASIO-PHARYNGÆUS, vide *Constrictor pharyngis medius*.

BA'SIS (*Anat.*) βᾶσις, the sole of the foot, according to Hippocrates. *De Artic.*—*Basis cordis*, the superior part of the heart, to distinguish it from its apex, or small point.—*Basis Cerebri*, the lower and posterior part of the brain. *Ruf. Ephes.* l. 1, c. 22.

BASIS (*Med.*) the principal ingredient in a composition.

BA'SKET (*Her.*) vide *Winnowing Basket*.

BASKET *Tenure of Lands* (*Law*) vide *Canes-Tellus*.

BA'SKING SHARK (*Ich.*) a species of the shark, the *Squalus maximus* of Linnæus, so called from its lying much in the sun on the surface of the water. This fish inhabits the Arctic and European seas, feeds on the smaller cetaceous animals, and grows to a prodigious size, but is not very fierce. The liver is very large, and produces much oil.

BASNETUM (*Archæol.*) a basnet.

BA'SON (*Anat.*) vide *Basin*.

BA'SS (*Mech.*) a sort of cushion made of straw or rushes; also a collar for horses.

BASS (*Mus.*) in Italian *basso*, the lowest or deepest part of any composition, which is regarded as the foundation of harmony. Bass is of different kinds, as—*Thorough bass*, which includes the fundamental rules of composition.—*Fundamental bass*, which forms the tone, or natural foundation of harmony.—*Ground bass*, is that which commences with some subject of its own, that is continually repeated throughout the movement, whilst the *upper parts* pursue a separate air.—*Figured bass* is that which, while a certain chord or harmony is continued by the parts above, moves in notes of the same harmony.—*Bass cliff*, or *F cliff*, the

character marked thus $\underline{\underline{B}}$, and placed at the beginning

of a stave, in which the base, or lower notes of a composition, are placed.—*Bass cliff note*, that note in the bass stave which is placed on the same line with the bass cliff. [vide *Music*]—*Bass voice*, the gravest and deepest of the male voices.—*Bass viol*, a well-known stringed instrument of the same form but larger than a violin.

BASS RELIEF (*Archit.*) vide *Basso Relievo*.

BASSE (*Ich.*) a species of perch, the λάβραξ of Aristotle, the *Perca Labrax* of Linnæus; a strong, active, voracious fish, which Ovid calls *rapidi lupi*, wherefore they are called *lupus* by Rondeletius. The flesh is esteemed as very delicate.

BASSE COURT (*Archit.*) a court separated from the principal one, and destined for the stables, &c.

BA'SSET (*Sport.*) a game of chance, which was invented by a Venetian nobleman.

BASSE'TTO (*Mus.*) or *basso*, a small bass viol.

BASSIA (*Bot.*) a genus of plants named after Ferdinand Bassi, curator of the Botanic-garden at Bologna, Class 11 *Dodecandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* four-leaved.—COR. monopetalous.—STAM. *filaments* sixteen; *anthers* linear. PIST. *germ.* superior; *style* subulate; *stigma* acute.—PER. *drupe* fleshy; *seeds* nuts five.

Species. The species are shrubs, and natives of India.

BA'SSO-RELIEVO (*Archit.*) in French *bas relief*, in English Bass Relief, a sort of sculpture in which the figures are represented as projecting from the back ground, as a kind of relief in distinction from the *alto relievo* and *mezzo relievo*.

BASSO (*Mus.*) Italian for bass, which in choral scores is generally placed against the stave of the instrumental bass.—*Basso* is of different kinds, as *Basso concertante*, the bass of the little chorus.—*Basso repieno*, the bass of the grand chorus.—*Basso continuo*, that part of a composition which is figured for the organ, &c. &c.

BA'SSOCK (*Mech.*) the same as Bass or Hassock.

BASSOON (*Mus.*) a wind instrument, consisting of a very long tube, and a reed for the admission of the wind; it comprehends three octaves.

BASSO'VIA (*Bot.*) a genus of plants, Class 5 *Pentandria*, Order 1, *Monogynia*.

Generic Characters. CAL. *perianth* one-leaved.—COR. one petalled.—STAM. *filaments* five; *anthers* ovate.—PIST. *germ* ovate; *style* short; *stigma* thickish.—PER. *berry* ovate; *seeds* very many.

Species. The only species is the—*Bassovia sylvatica*, a perennial, native of Guiana.

BASS-VIOL (*Mus.*) vide *Bass*.—*Bass voice*. [vide *Bass*]

BA'STA (*Mus.*) Italian for *enough, stop!* an expression used by the leader of a band.

BA'STARD (*Gumm.*) a name for those pieces of ordnance which are of an unusual size and make.

BASTARD-SCARLET (*Mech.*) a name given to red dyed with bale-madder, which comes the nearest to new scarlet.

BASTARD (*Law*) one born out of lawful wedlock, according to the civil and canon law; but one begotten as well as born out of wedlock, according to the common. *2 Inst.* 96.—*Bastard-eigné*, a son born out of wedlock, in distinction from another son born of the same man and woman after their marriage. *Lit. sect.* 399, &c.

BASTARD Alkanet (*Bot.*) an annual, the *Lithospermum arvense* of Linnæus.—*Bastard balm*, a perennial, the *Melittis Melissophyllum*.—*Bastard Cabbage-trec*, the *Geoffroya*.—*Bastard Cedar*, the *Bubroma Gauzuma*.—*Bastard Cress*, a biennial, the *Thlaspi*.—*Bastard Feverfew*, an annual, the *Parthenium Hysterophorus*.—*Bastard Gentian*, an annual, the *Sarothra*.—*Bastard Gromwell*, an annual, the *Lithospermum arvense*.—*Bastard Hares' Ear*, a shrub, the *Phyllis*.—*Bastard Hatchet Vetch*, an annual, the *Bisserrula*.—*Bastard Hemp*, a perennial, the *Datisca*.—*Bastard Hibiscus*, the

Achania.—Bastard Jesuit's Bark-tree, the *Iva frutescens*.—Bastard Indigo, a shrub, the *Amorpha*.—Bastard Knot-grass, the *Corrigiola*.—Bastard Lupine, a perennial, the *Trifolium Lupinaster*.—Bastard Orpine, the *Andrachne*.—Bastard Pellitory, the *Achillea*.—Bastard Pimpernel, an annual, the *Centunculus*.—Bastard Plantain, a large herbaceous plant, the *Heliconia Bihai* and *Centunculus*.—Bastard Quince, a shrub, the *Mespilus Chamætraepilus*.—Bastard Saffron, an annual, the *Carthamus tinctorius*.—Bastard Toadflax, a perennial, the *Thesium linophyllum*.—Bastard Vetch, a perennial, the *Phaca*.

BASTARD strangles (*Vet.*) the strangles in its most violent state.

BA'STARDY (*Law*) *bastardia*, the defect of birth objected to one born out of wedlock.—*Rights of bastardy*, a right in the French Law, by virtue of which the effects of bastards dying intestate devolved to the king, or the lord of the manor.

BASTERIA (*Bot.*) the *Calycanthus florida* of Linnæus.

BATA (*Bot.*) the *Musa paradisiaca* of Linnæus.

BATA'TA (*Bot.*) an Indian name for the potatoe, or the *Solanum tuberosum* of Linnæus.—*Batata* is also a name for a species of the *Dioscorea* of Linnæus.

BATA'TUS (*Bot.*) a species of the *Convolvulus* of Linnæus.

BASTILE (*Polit.*) the name of a noted French prison destroyed during the French Revolution.

BA'STION (*Fort.*) a large mass of earth forming part of the inner inclosure of a fortification, anciently called the bulwark. The bastion consists of two *faces*, and an opening towards the centre called the *gorge*. It is of different kinds; namely—*Full*, or *solid bastion*, that in which the level ground within is even with the rampart.—*Empty*, or *hollow bastion*, where the level ground is much lower than the bastion.—*Composed bastion*, when two sides of the interior polygon are very unequal.—*Deformed bastion*, when the irregularity of the lines and angles causes the bastion to appear deformed.—*Cut bastion*, that which makes a re-entering angle at the point, sometimes called *bastion with a tenaille*—*Demi-bastion*, one raised on the plane of another bastion, but much higher.—*Regular bastion*, that which has its due proportion of faces, &c.—*Flat bastion*, one constructed on a right line so that its demigorges do not form an angle. [vide *Fortification*]

BA'STON (*Her.*) vide *Batton*.

BASTON (*Law*) a servant or officer belonging to the warden of the Fleet, who attends the king's courts to take such into custody as are committed by the court.

BASTONA'DO (*Polit.*) a mode of punishment, usual among the Turks, of beating the offender on the soles of the feet.

BA'SUS (*Archæol.*) strike, as "Per basum tolnetum capere;" to take toll by strike, in distinction from *in cumulo vel cantello*.

BAT (*Zool.*) the *Vespertilio* of Linnæus, an animal that resembles both a bird and a mouse. It has wings, not of feathers, but of a skin distended; lays no eggs, but brings forth its young alive, and suckles them. It is never to be tamed, feeds on insects, and flies about in the dusk of a summer's evening.

BAT (*Her.*) vide *Rere Mouse*.

BAT-Fowling (*Sport.*) a way of catching birds in the night while they are roosting.

BAT-Horses (*Mil.*) or *Baw-Horses*, baggage horses belonging to the officer when on actual duty.—*Bat-Men*, or *Baw-Men*, originally servants hired in war time to take care of the horses belonging to the artillery, &c. The same name is given now to those who are excused regimental duty for the express purpose of attending to the horses belonging to the officers.

BA'TA (*Bot.*) the *Musa Paradisiaca* of Linnæus.

BA'TABLE ground (*Law*) land lying between England and Scotland heretofore in debate, or debatable to whom it belonged.

BA'TAGE (*Mil.*) or *Battage*, French, for the time employed in reducing gunpowder to its proper consistency.

BATA'ILLE Cheval de (*Mil.*) a war horse, or charger.

BATAILLO'N quarré (*Mil.*) French for a battalion formed into a perfect square, which is equally strong on all sides.

BATA'RDE (*Mil.*) an eight pounder among the French.

BATARDEAU (*Fort.*) a massive perpendicular pile of masonry, whose length is equal to the breadth of the ditch inundation, or any part of a fortification where the water cannot be kept in by any other means.

BA'TCHELOR (*Her.*) vide *Bachelor*.

to BATE (*Falc.*) the act of a hawk fluttering her wings, either from fist or perch, as it were striving to get away.

BATEMENT (*Carp.*) the wasting of stuff in cutting it for a designed purpose; a board is said "to have so much *batement*" from which any quantity is cut off.

BATH (*Bibl.*) בַּת , a liquid measure of the largest capacity next to the homer, of which it was the tenth part, *Ezek.* xlv. 11. 14. It was equal to the *Epha*, i. e. seven gallons and a half English.

BATH, Knights of the (*Her.*) a military order of Knighthood of uncertain original, but so called from a part of the ceremony. It was restored, if not instituted, by Henry IV, and revived again in the reign of George I. The Knights wear a red ribbon, and their motto is "*Tria juncta in uno*," alluding to the three cardinal virtues which every knight ought to possess. [vide *Heraldry*]

BATH (*Med.*) any receptacle for water which is convenient for bathing. This is distinguished into the *hot*, *tepid*, or *cold Bath*, according to the temperature of the water.—*Bath* is also any artificial contrivance which is to supply the place of a bath, which is of different kinds, as—*Shower Bath*, an apparatus for applying water to the body through numerous apertures after the manner of a shower.—*Vapour Bath* conveys moisture or heat to the body through the medium of steam, which may be done to any degree of temperature.—*Medicated Bath*, such as is saturated with various mineral, vegetable, and animal substances.—*Dry Bath*, made of ashes, salt, sand, &c. through which heat is conveyed to the body.

BATH (*Chem.*) a contrivance by which heat is conveyed to any substance, as when a body is heated by the steam or vapour of boiling water, it is said to be done by means of a *vapour Bath*.

BATH (*Metal.*) the fusion of metallic matter for any particular purpose: metals are said to be *in bath* when they are melted for refining; and the purifying of gold by antimony is called the bath of gold.

BA'THYS (*Med.*) the best sort of cheese for food used by the great at Rome. *Gal. de Alim. fac.* l. 3, c. 17.

BA'THMIS (*Anat.*) $\beta\alpha\theta\mu\iota\varsigma$, a *sinus*, or cavity of a bone, which receives the protuberance of another at the joints. *Gorr. Def. Med.*; *Foes. Econom. Hippocrat.*

BA'THRON (*Sur.*) $\beta\alpha\theta\rho\nu$, or $\beta\alpha\theta\rho\nu$, as it is written in Hippocrates's Treatise, *de flatibus*, the *scannum*, *Hippocratis*; an instrument invented for the extension of fractured limbs. *Oribas. de Machin.* c. 29.

BATILLUS (*Mus.*) an instrument, used in the service of the Armenian churches, formed like a staff, and furnished with rings which yield an harmonious sound.

BA'TIS (*Ich.*) $\beta\alpha\tau\iota\varsigma$, or $\beta\alpha\tau\iota\varsigma$; a sort of fish, the *Raia batis* of Linnæus.

BATIS (*Bot.*) a genus of plants, Class 22 *Dioecia*, Order 4 *Tetrandria*.

Generic Characters. CAL. ament pyramidal.—COR. none.—STAM. filaments four; *anthers* oblong.—PIST. germ.

BAT

quadrangular; *style* none; *stigma* obtuse.—*Pen. berry* one-celled; *seeds* four.

Species. The only species is the *Batis maritima*, *maritima erecta*, &c. seu *Kali fruticosum*, &c.; a shrub, native of Jamaica.

BATISTE (*Com.*) a fine white linen manufactured in Picardy.

BATMAN (*Com.*) a Persian weight of four hundred drams.

BATON *de Commandement* (*Mil.*) literally "A staff of command," which was a symbol of authority given to generals in the French army. Henry III, before his accession, received the *bâton* on being made *generalissimo* of the forces of his brother Charles IX.

BATOON (*Archit.*) a moulding in the base of a column.

BATOON (*Mil.*) a truncheon, or marshal's staff.

BATRACHITES (*Min.*) a stone, in colour and shape much resembling a green frog. *Plin.* l. 37, c. 10.

BATRACHIUM (*Bot.*) Crow's-foot, a sort of herb. *Plin.* l. 25.

BATRACHOIDES (*Bot.*) the *Geranium*, et *Phacum pratense*, et *syboticum* of Linnæus. *Bauh. Hist. Plant.*

BATRACHOMYOMACHIA (*Lit.*) the title of one of Homer's smaller poems signifying the battle between the frogs and mice, from *βάτραχος*, a frog, *μῦς*, mouse, *μάχη*, a battle.

BATRACHUS (*Ich.*) *βάτραχος*, a sea fish like the frog, called a sca-devil. *Plin.* l. 32, c. 11.

BATRACHUS (*Med.*) an inflammatory tumor which rises under the tongue, particularly of children. *Paul. Æginet. de Re Med.* l. 3, c. 26.

BATTA (*Mil.*) allowances made to troops in India.—*Dry batta*, money which is given in India to the troops in lieu of rations.—*Full batta*, an additional allowance which is given by the East India Company to their troops.—*Half batta*, half of the above allowance drawn by the troops in garrison.—*Wet batta*, batta given in kind.

BATTALIA (*Mil.*) from the Italian *Battaglia*, order of battle.

BATTALION (*Mill.*) in French *bataillon*, a body of foot soldiers of from 600 to 800 men.—"To draw up *battalion*," is to range the men in order of battle.—*Triangular battalion*, a body of troops ranged in the form of a triangle, as was formerly the practice.

BATTARDEA (*Archit.*) coffer-dam, a case of piling fixed in the bed of a river for drawing off the water where the pier of a bridge is to be built.

BATTATA (*Bot.*) vide *Batata*.

BATTEL (*Law*) in French *bataille*, an ancient mode of trial by single combat called *wager of battel*, where, in appeals of felony, the appellee might fight with the appellant to prove his innocence. It was also used in affairs of chivalry or honour, and in civil cases upon issue joined in a writ of right. *Glanv.* l. 2, c. 7; *Brit. issue* 22; *Co. Lit.* 294.

BATTEL (*Mil.*) vide *Battle*.

BATTELED (*Her.*) or *embatteled*, vide *Crenelle*.

BATTELER (*Cus.*) a student in the University that battles.

BATTEN (*Carp.*) a scantling or piece of wooden stuff from two to four inches broad and one inch thick.—*Batten-door*, a door, on the surface of which are fixed stiles, rails, and munnions, made of battens, so as to give it the appearance of a framed door.—*Batten-floor*, the same as a *Boarded-floor*.

BATTEN (*Mech.*) the moveable lath or bar of a loom, which serves to strike in, or close, more or less, the threads of a woof.

BATTENING (*Carpent.*) the act of fixing battens to walls for nailing of the lath over which the plaster is laid; or it is the battens that are prepared for this purpose.

BATTENS (*Mar.*) thin pieces of oak or fir, nailed to the

BAT

mast-head.—*Battens of the hatches*, narrow laths which serve to keep the tarpaulin close to the hatchways—*Tracing-battens*, pieces of wood to which the seamen's hammocks are slung.

TO BATTEN (*Archit.*) a term used to signify that a wall, piece of timber, and the like, does not stand upright, but leans from a person; in distinction from *overhanging*, when it leans towards the person.

BATTERIE *de tambour* (*Mil.*) French for a beat of the drum, called in English, the General.

BATTERIE is also the name for a Battery, as—*Batterie en rouage*, a battery used to dismount the enemy's canon.—*Batterie par camarade*, the discharge of several pieces of ordnance planted above a parapet that is not sufficiently high to admit of embrasures.—*Batterie de canon*, signifies not only a park of artillery, or the place where the ordnance are planted, but also the pieces themselves, as *batterie directe*, cannon planted right in front of a work, &c. [vide *Battery*]

BATTERING (*Mil.*) a cannonade of heavy ordnance from the first and second parallel of entrenchment against any fortress or works.—*To batter in breach*, in French *battre en brèche*, is a heavy cannonade of many pieces directed to one part of the revetement from the third parallel.—*Battering-pieces*, the heavy pieces of ordnance used in battering.—*Battering-train*, a train of artillery used solely for besieging a strong place.

BATTERING ram (*Mil.*) vide *Aries*.

BATTERING ram (*Her.*) the ancient military machine of this name has been used as a charge in some coats of arms, as *argent* three battering rams, barwise proper, headed *azure*, armed and garnished *or*, name *Bertie*.

BATTERY (*Law*) French *batterie*, an act that tends to a breach of the peace, by violently striking or beating a man, who may therefore indict the person, or have his action of trespass, or of assault and battery; there may be an assault without battery, but there can be no battery without an assault.

BATTERY (*Mil.*) any raised place on which cannon are planted. It consists of a—*Breastwork*, *parapet*, or *epaulement*.—*Embrasures*, or open spaces left to put the muzzles of the guns.—*Merlons*, the solid earth between the embrasures.—*Genouillères*, or parts of the parapet which cover the carriages.—*Platform*, or wooden floor to prevent the carriages from sinking.

Batteries are of different kinds, as—*Gun-batteries*, which are the common sort.—*Open batteries*, in French *batteries en plein champ*, different sorts of batteries, when they are exposed to view.—*Covered* or *masked batteries*, *batteries enterrées*, when hidden by a breastwork.—*Sunk* or *buried batteries*, when the platform is sunk on which the cannon are planted, so that trenches are cut into the earth for firing through.—*Ricochet batteries*, when the elevation is but small, and the balls are made to roll along the opposite parapet to dismount the enemy's cannon.—*Cross batteries*, two batteries firing athwart each other on the same object. They are otherwise called *murdering batteries*.—*Sweeping* or *enflading batteries*, in French *batteries d'Enflade*, when they scour or sweep the whole length of a straight line.—*Direct batteries*, in French *batteries directes*, those situated directly opposite to the place intended to be battered.—*Oblique batteries*, in French *batteries en echarde*, when they play obliquely upon any work.—*Reverse* or *murdering batteries*, in French *batteries de reverse*, which play on the enemy's back.—*Redan batteries*, in French *Batteries en redans*, such as flank each other at the salient or re-entering angles of a fortification.—*Joint batteries*, or in French *Batteries par camarade*, when several guns play upon the

same place at the same time.—*Mortar batteries*, in French *Batteries de mortier*, have the parapet inwards, and no embrasures.—*Glancing batteries*, those whose shot strikes the object at an angle of 20°, after which the ball glances from the object and recoils to some adjacent object.—*Fascine* or *Gabion batteries*, in French *Batteries à fascines*, batteries made of fascines instead of rods, when they cannot be procured.—*Battery planks*, the planks used in making platforms.—*Battery boxes*, square chests or boxes filled with earth or dung, and used instead of sods for the erection of batteries.—*Battery nails*, wooden pins made of the toughest wood, with which the platforms are nailed.—*Battery master*, an officer whose business it was to see to the raising of batteries, which office is now suppressed in England.

BATTERY, *floating* (*Mar.*) a battery erected either on simple rafts, or, according to the latest invention of Sir William Congreve, on the hulls of ships.

BATTERY (*Elect.*) a combination of coated surfaces of glass jars, so connected that they may be charged at once and discharged by a common conductor.—*Battery*, or *Pile*, an apparatus employed for accumulating the electricity of galvanism, consisting of plates of copper and zinc, or of silver and zinc, soldered together, and cemented in such manner as to leave a number of water-tight cells. [vide *Chemistry*]

BATTEURS d'Estrade (*Mil.*) scouts of horsemen sent to collect intelligence.

BAT'TING-STAFF (*Mech.*) a tool used by laundresses to beat washed linen.

BATTIURA (*Met.*) the squama or scales which fly off from the metals while under the hammer.

BATTLE (*Law*) vide *Battel*.

TO BATTLE, to take up provision in the college-book at Oxford.

BATTLE axe (*Mil.*) an ancient sort of weapon, having an axe and a point at the end, for cutting or thrusting.

BATTLE axe (*Her.*) the weapon of this name was frequently used as a charge in coats of arms, as he beareth "gules three battle axes, or, name *Hackluit*, of Yetton, in Hertfordshire." From this family was descended Richard Hackluit, prebend of Westminster, and author of a collection of sea voyages.

BATTLED (*Archit.*) or *embattled*, an epithet for a wall which has a double row of embattlements.

BATTLED (*Her.*) or *embattled*, an epithet for a line of partition having one battlement upon another.

BATTLEDORE (*Sport.*) an instrument used either with a shuttlecock or tennis ball.

BATTLEDORE-SHAPED (*Bot.*) *Spatulatus*; an epithet for a leaf, when its fore part is circular and it grows smaller towards the base, as in the *Cucubalus oites*.

BATTLEMENTS (*Arch.*) from battle; notches or indentures in the top of a wall or building, like embrasures, to look through.

BATTOLOGY (*Gram.*) *βαττολογία*, from *βάττος*, a foolish poet of that name, and *λογία*, speech; vain babbling; tautology. *Hesychius*; *Suidas*.

BATTON (*Her.*) *battune*, or *baston*, in French *baton*, a staff truncheon, used as an abatement in coats of arms to denote illegitimacy. It is the fourth part of the bend-sinister, as in the annexed figure.

BATTOON, vide *Batton*.

BATTRE (*Mil.*) a French word, signifying literally to beat; is also employed in many military phrases in a particular sense, as—*Battre la campagne*, to scour the country.—*Battre de front*, to throw cannon shot in almost a perpendicular direction against any object.—*Battre en*

brèche, to batter in breach.—*Battre en flanc*, to direct shot along the front of an object.—*Battre à dos*, to direct the shot along the back part of an object.—*Battre en sape*, to batter a work at the foot of its revetement.—*Battre en salve*, to make a general discharge of heavy ordnance.—*Battre la caisse*, to beat a drum.—*Battre un ban*, to give notice by sound of drum when an officer is to be received, a punishment inflicted, &c.—*Battre la chamade*, to beat a parley.—*Battre aux champs*, to give notice by beat of drum that a regiment is approaching or marching off, &c.—*Battre la charge*, to beat the charge, or to give notice that a general discharge of musketry is about to take place.—*Battre la Diane*, to beat the reveillé.—*Battre les drapeaux*, to announce, by beat of drum, that the colours are to be lodged.—*Battre la generale*, to beat the General.—*Battre la marche*, to give the signal for advancing or retreating.—*Battre la masse*, to give notice by beat of drum, for the soldiers to go to church.—*Battre la priere*, to give notice, by beat of drum, for prayers.—*Battre la retraite*, to beat the retreat, &c. [vide *To Beat*].—*Se Battre en retraite*, to keep up a running fight.

BATZ (*Com.*) a coin of less value than a farthing, current in different parts of Germany.

BAUDRIER (*Mil.*) French for a cross-belt, and also a sword-belt.

BAVEUTE (*Mil.*) French for a piece or apron of lead, which is placed in front of a water-pipe, or upon a roof that is slated.

BAUGE (*Mil.*) French for a coarse sort of mortar.

BAUGE (*Com.*) a druggot manufactured in Burgundy, with thread spun thick and coarse wool.

BAUHINIA (*Bot.*) a genus of plants, called by Plumier after John and Caspar Bauhin, two famous botanists, Class 10 *Decandria*, Order 1 *Monogynia*.

Generic Characters. CAL. perianth oblong.—COR. petals five, oblong.—STAM. filaments ten; anthers ovate.—PIST. germ oblong; style filiform; stigma obtuse.—PER. legume oblong; seeds many.

Species. The species are shrubs and natives of India.

BAVINS (*Mil.*) small faggots of brushwood having no part of the brush taken off, which serve as fascines.

BAULK (*Archit.*) vide *Balk*.

BA'WLING (*Sport.*) a name given to the noise of dogs who are too busy before they find the scent.

BA'WREL (*Falcon.*) a kind of hawk resembling the linnet in size and shape, but having a longer body and tail.

BAY (*Geog.*) in Saxon *býge*, German *Bucht*, from *biegen*, to bend or curve; an arm of the sea stretching inland.

BAY (*Mar.*) any inlet of the sea between two capes or promontories, where shipping may ride. Smaller bays are denominated gulfs or havens, and creeks, which are the smallest of the kind.—*Bay of a ship*, that part on each side, between the decks of large ships of war, which lies before the bits.

BAY (*Mech.*) or *pen*, a pond head, made very high to keep in water for the supply of a mill. *Stat. 27, Eliz.*

BAY (*Bot.*) or *Bay-tree*, the female laurel-tree, a well known shrub, which Linnæus has therefore entitled the *Laurus nobilis*. It is an evergreen which grows wild in Italy and France. The leaves and berries of this shrub have an aromatic and astringent taste, and a fragrant smell, whence it is called the Sweet Bay, of which there are several sorts cultivated in gardens, namely, the Broad-leaved Bay, the Common Bay, and the Narrow-leaved Bay; it is generally supposed to be the *Laurus* of the ancients.

BAY (*Sport.*) when a dog detains a partridge till she be shot, he is said to keep her at *bay*; also when the dogs have earthed any vermin, or brought a deer or boar, or the like, to turn against them; then not only the deer but the dogs are said to *bay*.

BAY (*Vet.*) a colour in horses; so called from its resembling the colour of a dried bay leaf. There are various shades of this colour, from the bright bay, which is a very beautiful colour, to the dark bay, which approaches very near to the brown, but is more gay and shining. Bay horses have black manes, which distinguish them from the sorrel which have reddish manes.—*Bay* is also the same as a Bay-Horse.

BAY (*Archit.*) 1. A space left in a wall for a door, &c. 2. That part of a barn where the corn is laid.—*Bay of Joists*, the joisting between two binding joists, or between two girders when there are no binding joists.—*Bay of Roofing*, the small rafters, and their supporting purlins between principal rafters.—*Bay-Window*, another name for a *Bow-window*.

BAY (*Fort.*) a hole in a parapet to receive the mouth of a cannon.

BAY-SALT (*Chem.*) a salt, so called from its brown colour, which is made of sea-water in France, particularly on the coast of Bretagne, from the middle of May to the end of August, by letting the sea-water into square pits or basons, where, by the rays of the sun, the water is evaporated, and the residue is converted into crystals of salt.

BAYONET (*Mil.*) in French *Bayonette*, Italian *Bagonetta*, Spanish *Bayoneta*, a kind of triangular dagger, made to fix on the muzzle of a firelock or musket, so as not to interfere with either charging or firing. It is of great use against a charge of the cavalry.

BAYS (*Com.*) vide *Baize*.

BAZA'R (*Com.*) a place designed for trade among the Eastern nations, particularly the Persians. It is sometimes uncovered like our market places, but mostly covered and fitted up with shops for the sale of every article.

BAZOT (*Com.*) or *Baza*, cotton, from Saïd or Zeyde.

BDELLA (*Med.*) a horse-leach.

BDELLIUM (*Nat.*) βδέλλιον, from the Hebrew בדרלה, the gum of an Arabian tree about the size of the olive-tree. It resembles wax, is somewhat pellucid, moderately heavy, considerably hard, of a bitterish taste, and a sweet smell. Its medicinal virtues consist in mollifying hard swellings and stiff sinews, and in acting as an antidote against the bites of venomous beasts. *Dioscor.* l. 1, c. 80; *Plin.* l. 12, c. 9; *Cel. de Re Med.* l. 7, c. 4; *Gal. de Simplic.* l. 6; *Oribas. de Virt. Simplic.* l. 2; *Aet. Tetrab.* 1, serm. 1; *Paul. Eginet. de Re Med.* l. 7, c. 3.

BDELLIUM (*Chem.*) the constituent parts of this gum have been found to be resin, gum, cerasin, and volatile oil.

BEACH (*Mar.*) the sea shore, or margin of the sea, particularly that part washed by the waves.

BEACON (*Archit.*) from the Saxon beacone, to discover or descry; a signal by fire, placed on some eminence to prevent shipwrecks; or to give an alarm on the appearance of an enemy.

BEACON (*Her.*) this signal has been used as a charge in coats of arms, representing high standards, bearing the iron pots, with pitch, hemp, and other combustibles set on fire, as "He beareth sable three beacons, fired, or, the flames, proper, by the name of *Dauntre*."

BEACONAGE (*Cus.*) a duty paid towards the maintenance of beacons. *Stat.* 5, *Hen.* 4.

BEAD (*Ecc.*) in Saxon *Bede*, a prayer; hence, "To say over beads," or "To tell one's beads," is to say one's prayers; and "Bidding of beads," was a charge from the priest to say so many *Pater Nosters* over their beads for a soul that was deceased.—*Bead-roll*, a list of such as used to be prayed for in the church.

BEAD (*Archit.*) a round moulding, carved in short em-

bossments, like the bead of a necklace. [vide *Architecture*.]

BEAD (*Carpent.*) a circular moulding stuck on the edge of a piece of stuff by a plane of the same. When the bead is flush, i. e. even with the surface, it is called the *quirk-bead*; but when raised, the *cock-bead*. When the bead is stuck on with one quirk only, it is called *Bead* and *Quirk*; but when it is returned on the other surface, it is then a *Bead* and *Double Quirk*, or a *Return Bead*.—*Bead* and *Butt-Work*, a piece of framing, having the pannels flush with the framing; it is called *Bead-Butt* and *Square*, or *Bead-Butt* and *Flush*, when it is bead and butt; or *Bead* and *Flush* on one side, and square only on the other.

BEAD (*Metal*) the small ball or mass of pure metal separated from the scoria, and seen distinct while in the fire.

BEAD-proof (*Chem.*) a term among distillers for that proof of the standard strength of spirituous liquors, which consists in the bubbles called *beads*, that will rise and stand on the surface of the liquid for some time after it has been shaken.

BEAD Tree (*Bot.*) the *Melia* of Linnæus, a shrub, so called because the nut which it bears is bored through, and strung as beads by the Roman Catholics in Spain and Portugal, where it commonly grows.

BEADLE (*Law*) vide *Bedel*.

BEADMAKERS (*Com.*) the manufacturers and makers of beads for the use of the Roman Catholics.

BEADSMAN (*Ecc.*) one who says over beads or prayers for his patron, &c.

BEAGLE (*Sport.*) a sort of hunting dog, of which there are three sorts, the southern, the northern, or cut beagle, and a cross breed of the two, which is reckoned the best of the three.

BEAK (*Or.*) the upper part of the bill of a bird.

BEAK (*Falcon.*) the upper and crooked part of the bill of a hawk.

BEAK (*Vet.*) a little shoe at the toe of a horse's foot, about an inch long, turned up and fastened in upon the fore part of the hoof.

BEAK of a ship (*Ant.*) vide *Rostrum*.

BEAK-HEAD (*Mar.*) a small platform at the forepart of the upper deck, either for the planting of a gun, or the convenience of the men.

BEAK (*Archit.*) a little fillet left on the edge of a larmier, which forms a channel behind, for preventing the water from running down the lower bed of the cornice.—*Chin-Beak*, a moulding, the same as the quarter round, except that it is inverted. It is more commonly called a *cavetto*. [vide *Moulding*.]

BEAK (*Carp.*) the crooked end of the hold-fast in a carpenter's bench.

BEAKED (*Her.*) an epithet in blazoning for birds whose beaks are of a different tincture from the bodies.

BEAKED (*Bot.*) *rostratus*; an epithet for the fruit when it is terminated by a process in the shape of a bird's beak.

BEAKER (*Mech.*) in the Teutonic, *becker*, a drinking cup; so called from its having a spout like a bird's beak.

BEAKING (*Sport.*) the fighting of cocks with their bills.

BEAKING Joint (*Carpent.*) a name for the heading joints of the boards of a floor when they fall in the same straight line.

BEAM (*Carpent.*) from the Saxon beam, a tree; the largest piece of wood in a building, which is its main support: the dimensions of beams are regulated by statute, so that a beam 15 feet long must be at least 7 inches on one side its square, or end, and 5 the other.

BEAM-filling (*Mason.*) the filling up the space between the rason and the roof with bricks or stones; laid betwixt the rafters or the rason, and plastered on with loom.

BEAM of a plough (*Mech.*) the stout wooden part into which

the iron-work of the plough-tail is fixed.—*Beam of a loom*, a long thick cylinder running along the back of the loom.

BEAM (*Mar.*) the large main timbers that stretch across a ship to support the decks, &c.—*Beak-head beam*, the broadest beam in the ship.—*Midship beam*, the longest beam lodged in the midship frame.—*Orlop beams*, those which support the orlop deck. This word is also used in many phrases, as “On the *beam*,” any distance from the ship, or a line with the beams: thus, when a ship steers northward, any object lying east or west is on her star-board or larboard beam. “On the weather-*beam*,” *i. e.* on the weather-side of the ship. “Before the *beam*,” an arc of the horizon between the line of the beam and that point of the compass which she steers. “Aft the *beam*,” an arc of the horizon between the line drawn at right angles to the keel, and the point to which the ship’s stern is directed. A ship is said “To be on her *beam ends*,” when she inclines very much to one side for her beams to be almost in a vertical position.—*Beam of an anchor*, the main piece. *vide Anchor.*

BEAM (*Nat.*) a sort of fiery meteor in the shape of a pillar.

BEAM of a stag (*Sport.*) that part of the head where the antlers, &c. grow, which are so called because they grow out of the head as branches out of a tree.—*Beam antler*, the second start in a stag’s head.

BEAM (*Falc.*) the long feathers of a hawk’s wing.

BEAM (*Her.*) a term used in blazoning coats of arms, for the main horn of a stag, or buck.

BEAM of a balance (*Mech.*) the horizontal piece of wood, or iron, on the extremities of which the scales are suspended.—*Beam compass*, an instrument consisting of a wooden or brass square beam having sliding sockets carrying steel or pencil points.

BEAM-TREE (*Bot.*) the *Crategus aria* of Linnæus, a tree which grows to the height of thirty or forty feet; it is so called, because it is particularly fitted for making axletrees, and the like.

BEAN (*Bot.*) the *Vicia Faba* of Linnæus; an edible pulse, of which there are several sorts, as the Common Garden Bean, the Windsor-Bean, the Horse-Bean, &c.—Kidney or French-Bean, the *Phaseolus*, cultivated in gardens, of which the principal sorts are the small White Dwarf, the Scarlet, and the Black Dwarf, or Negro.—Bean Caper, the *Zygophyllum*, a fleshy succulent shrub.—Bean Trefoil, the *Anagyris*, a hardy, deciduous shrub.—Bean Trefoil-tree, the *Cytisus Laburnum* of St. Ignatius, the fruit of a tree growing in the Philippine Islands, which is the *Ignatii amara*. This fruit was so named by the Jesuits, on account of its medicinal virtues being a specific remedy against poisons, diseases of the nerves, cramps, &c.

BEAN-COD (*Mar.*) a small fishing-boat, or pilot-boat, on the coasts of Portugal.

BEAN-FLY (*Ent.*) a beautiful fly of a pale purple colour, frequently found on bean-flowers.

BEAR (*Zool.*) a wild beast covered with shaggy hair of a dark brown colour, and having hooked claws for climbing trees. It feeds on honey, insects, and carcases, lies torpid during the winter season, and is gravid six or seven months. It is also related of the she-bear, that she brings forth her young imperfect and deformed, and licks them into shape and perfection. The Black Bear, *Ursus arctos* of Linnæus, is a native of the North of Europe and Asia; but the Polar Bear, *Ursus maritimus*, lives within the Arctic Pole, and is frequently found on the ice-islands.

BEAR, to sell a, (*Com.*) to sell stock on the Stock Exchange which one has not.

BEAR (*Mar.*) a square piece of wood with pigs of iron ballast fastened to it for cleaning a ship’s deck.

BEAR-berry (*Bot.*) the *Arbutus uva ursi* of Linnæus.

BEAR (*Astron.*) the name of two northern constellations, the one called the Great Bear, *Ursa major*, and the other the Little Bear, *Ursa minor*. [*vide Ursa*]

BEAR (*Her.*) this animal occurs frequently as a charge in coats of arms when it is borne *passant*, as in *fig. 1*. “He beareth, *or*, a bear *passant, sable*; by the name of *Fitzcourse*: and *rampant*, as in *fig. 2*. “He beareth, *or*,

Fig. 1.

Fig. 2.

Fig. 3.

a bear *rampant, sable, muzzled, or*; by the name of *Bar-nard*. Also, bears’ heads are borne in coat armour mostly erased, as in *fig. 3*. “*Argent*, a chevron between three bears’ heads erased, *sable, muzzled, or*; by the name of *Pennarth*.”—*Order of the Bear*, a military order instituted by Frederic II. in 1213. To the collar was attached a medal, on which was represented a bear raised on an eminence of earth.

BEAR-GARDEN (*Archæol.*) a place formerly set apart for the baiting of bears.

BEAR’S breech (*Bot.*) or Brank Ursine, the *Acanthus spinosus* of Linnæus; a herb, supposed to be the *Mollis acanthus* of Virgil. From this herb is extracted a mucilage which is highly esteemed.—*Bear’s ear*, the *Primula auricula*.—*Bear’s foot*, the *Helleborus fetidus*.

BEAR’S HEAD (*Her.*) *vide Bear*.

TO BEAR (*Mar.*) a term used to denote the situation or movements of a ship, or the persons in a ship. A place is said “*To bear*,” *i. e.* To be, or be seen from a ship in a certain direction, as “The land’s end bore E. N. E.” A ship is said “*To bear down upon the enemy*,” being to windward so as to approach the enemy by sailing large, or from the wind. “*To bear in with the land*,” to steer towards it. “*To bear in with the harbour*,” to sail into the harbour before the wind, or with the wind large. “*To bear off*,” either to steer from the land, or to keep off from any weight, as a cask, boat, &c. when it is hoisting up from rubbing against the sides of the ship, &c. “*To bear under another ship’s lee*,” to come under the stern of another ship which was to the windward, and so give her the wind. “*To bear up or away*,” to change the course of a ship, in order to make her sail before the wind; so called from the motion of the helm, which is borne up, or to windward. “*To bear up round*,” to let the ship go between her two sheets directly before the wind. “The ship bears,” which sinks too deep on the descent of her heavy burden. “The ship bears a good sail,” when she sails upright in the water. “*To bear ordnance*,” *i. e.* to carry great guns. “*Bear a hand!*” a command given to make haste, or be quick. “*Bear up the helm*,” a command to the steersman to let the ship go more at large before the wind.

TO BEAR (*Her.*) to have in one’s coat of arms, that is, the respective charges, &c.

TO BEAR (*Gunn.*) a piece of ordnance is said to bear when it lies right with the mark.

TO BEAR (*Mech.*) timber is said to bear at its whole length when neither a wall nor post stands between its extremities; otherwise, it is said to bear according to the distance between the bearer and either end.

BEARD (*Bot.*) *barba*, a name for the parallel hairs in the pubescence: also for a tuft of stiff hairs terminating the leaves, as in the *Mesembryanthemum barbatum*; and with some botanists the lower lip of a ringent corolla is so called. Beard is, in common language, the name of the awn.

BEARD of a horse (*Vet.*) that part beneath the longer man-

dible on the outside and above the chin, which bears the curb of the bridle.

BEARD of a letter (*Print.*) the outer angle of the square shoulder of the shank, which reaches almost up to the face of the letter, and is commonly scraped off by the founder. —*Beard-gage*, an instrument for measuring this angle.

BEARD of a comet (*Astron.*) the rays which it emits in the direction in which it moves, in distinction from the tail, or the rays emitted from behind.

BEARDED (*Bot.*) *barbatus*, having parallel hairs, or tufts; an epithet for the leaves: also for the corolla, as in *Dianthus barbatus*; and for the nectary in the Iris, &c.

BEARDING (*Carp.*) chipping, planing, or otherwise diminishing any piece of timber from a given line, or curve, as the bearding of clamps, planksheers, &c.

BEARDLESS (*Bot.*) *imberbis*, without parallel hairs, or tufts; an epithet applied to the corollas, as in some species of the Iris, Gentiana, &c.

BEARER (*Com.*) the person carrying any thing.

BEARER (*Carp.*) the post, or wall, trimmed to a beam, to lessen its bearing.

BEARER (*Law*) a person bearing others down with litigation, &c. *Stat. 4, Edw. 3.*

BEARER (*Her.*) a person bearing a coat of arms in distinction from others by some colour or difference.

BEARER of a bill (*Com.*) the person in whose hands the bill is, and in favour of whom the last indorsement is made.

BEARING (*Mar.*) 1. The point of the compass that one place bears, or stands off, from another. 2. The situation of any distant object estimated with regard to the ship's position, that is, whether a-head, a-stern, or a-breast, &c.

BEARING (*Her.*) what fills an escutcheon, vide *Charge*.

BEARING (*Archit.*) the distance between the bearer and each end of the timber, as 12, 15, &c. feet bearing.

BEARING-CLAWS (*Sport.*) the foremost toes of a cock.

BEASTS of Chase (*Law*) *Feræ campestris*, are five in number, namely, the buck, doe, fox, marten, and roe. *Manw. For. Laws*, pt. 1, &c.—*Beasts of the Forest*, otherwise called *Beasts of venery*, are the hart, hind, boar, and wolf. *Manw. For. Laws*, pt. 2, c. 4.—*Beasts and fowls of the warren*, are the hare, coney, pheasant, and partridge. *Reg. Orig.* 95, &c. *Co. Lit.* 233.

BEAT (*Mil.*) from Lat. *batuo*, and Gr. *πατίω*, to tread; beating the drum as a signal. [vide *To beat*]

BEAT (*Mus.*) a grace-note marked thus "u", or thus χ .

BEAT (*Cus.*) the walk, or round, which the watchman has to take at stated intervals.

To **BEAT** (*Mil.*) to give a signal by beat of drum, of which there are different kinds, namely, "To beat an alarm," to give notice of danger by beat of drum. "To beat a charge," to give notice to charge the enemy. "To beat the general," to give notice to the troops to march. "To beat the reveille," to give notice for leaving quarters. "To beat the tat-too," to give notice for retiring to quarters. "To beat the troop," to give notice for repairing to their colours. "To beat to arms," to give notice for the soldiers to repair to their arms. "To beat a parley," to give a signal for a conference with the enemy.

To **BEAT** (*Sport.*) or tap, is said of coneyes or hares when they make a noise at rutting time.

To **BEAT** upon the hand (*Man.*) is said of a horse when it tosses up its nose, and shakes it all of a sudden, to avoid the subjection of the bridle.—To beat the dust, is when a horse, at each time or motion, does not take in way or ground enough with his fore-legs.

BEATASSI (*Theol.*) an order or sect of religions among the Turks, to which all the Janizaries belonged.

BEATERS (*Print.*) the ink-balls with which the pressmen beat the letters in the chase, or form.

BEATERS (*Mech.*) is the name of those who beat gold.

BEATING Time (*Mus.*) that motion of the hand or foot by which the performers themselves, or some person presiding, mark and regulate the measure of the movements. If the time be common or equal, the *beating* is also equal, two down and two up; but when the time is triple, the beating is two down and one up.

BEATING in of the flanks (*Vet.*) a disease which consists of an abscess in the loins, with a little pulsation.

BEATING (*Mech.*) among *Bookbinders*, is the process of beating the quires with a hammer; among the *Paperworks*, it is beating the paper.

BEATING (*Mar.*) the act of making a progress against the wind.

BEATING the wind (*Archæol.*) a practice, in former times, at a trial by battle, when one of the parties failed to appear, for the other to flourish his sword in the air, which was called *beating the wind*.

BEATINGS (*Mus.*) the regular pulsative heavings or swellings of sound produced in an organ by pipes of the same key, when they are not exactly in unison.

BEATS in a clock or watch (*Mech.*) the strokes made by the pallets or fangs of the spindle, or of the pads in a royal pendulum.

BEAVER (*Zool.*) the *Castor* of Linnæus; an amphibious fourfooted animal, that lives on the banks of rivers and unfrequented lakes, and is remarkable, like the otter, for its skill in building its house. It walks slow, swims dexterously, is very cleanly, eats sitting on its haunches, and conveys its food to its mouth with the fore-paws. The female has four teats, is gravid four months, and seldom brings forth more than two young. This animal is valued both for the fur on its skin, and for the oil which it yields, called *Castor-oil*.—Beaver Rat, the *Mus Coypus* of Linnæus, which inhabits Chili.

BEAVER (*Her.*) this animal is painted as a charge in a coat of arms in a window of New Inn Hall, London, as "*Argent, a beaver erected sable devouring a fish proper, armed gules.*"

BEAVER (*Mil.*) that part of the helmet which defends the sight, and opens in the front.

BEAVER (*Mech.*) the best sort of hat, which is made of the beaver.

BEAVER, or *Beaver-skin* (*Com.*) the fur and skin of the Beaver, or Castor: they are of two sorts, the *coat beaver*, worn by savages as a garment; and the *parchment beaver*, which is as it is taken from the animal.

BEA'U PLEADER (*Law*) *pulchre placitando*, in French *beau-plaidier*, to plead fairly; a writ upon the statute of Marlbridge, whereby it is enacted, that neither in the circuit of justices, nor in counties, hundreds, or courts baron, any fines shall be taken for "*Fair-pleading,*" *i. e.* not pleading fairly.

BECABUNGA (*Bot.*) the *Veronica becabunga* of Linnæus.

BECA'LMED (*Mar.*) an epithet expressing the state of a ship which lies still for want of wind.

BECARRE (*Mus.*) French for a Natural. [vide *Natural*]

BE'CKETS (*Mar.*) large hooks, or such things as are used to confine loose ropes, tackles, oars, or spars.

BED (*Mech.*) in Saxon *bedde*, the place for lying in, which is of various kinds, according to the materials of which it is made; as a feather bed, down bed, flock bed, and straw bed; or according to the make of the bedstead, a pallet bed, canopy bed, truckle bed, couch bed, &c.

BED mouldings (*Archit.*) the members of a cornice that is placed below the corona.

BED of snakes (*Zool.*) a knot of young snakes.

BED (*Gunn.*) a thick plank which lies under a piece of ordnance on the carriage.—*Bed* or *stool* for a mortar, a thick

BEE

and strong planking hollowed out to receive a mortar.—*Royal beds*, or *coehorn beds*, carriages for a royal mortar, the diameter of which is from 4·6 to 5·6 inches.

BED *for the cask* (*Mar.*) a flat thick piece of timber lodged under the quarters of casks which are stowed in a ship's hold.—*Bed of a barrel screw*, the main piece, through which the puppets work.—*Bed of a bowsprit*, the place of greatest diameter in the bowsprits.—*Bed of a river*, the bottom of a channel in which the stream or current usually flows.

BED (*Hort.*) the place parted off and disposed for flowers.

BED (*Mason.*) a range or course of stones or bricks. The point of the bed is the mortar between two stones placed over each other.—*Bed of a mill*, the nether stone.

BED (*Min.*) a stratum or layer of any earth or stone. The different strata or layers are disposed one above another.

to **BED** (*Hunt.*) to hedge in a particular place, which is said of a roe.

to **BED** (*Print.*) to lay or fix the stone of the press either on paper, bran, or plaster of Paris.

BED-CHAMBER, *Lords of the* (*Polit.*) twelve noblemen at the British Court, who attend each a month in rotation, and lie in the bed-chamber of the King.

BEDE/GUA (*Bot.*) a species of thistle.

BEDEG'UAR (*Bot.*) the spongy excrescences of the *Rosa Sylvestris*; also a disease in plants, arising from insects, which deposit their eggs in a heap in the apex of a bud.

BE'DE-HOUSE (*Ecc.*) an hospital or alms-house for bede's people, or poor people, who were to pray for their benefactors.

BE'DEL (*Law*) or Beadle, an officer or cryer of a court, an officer to attend at church, an officer of the university, and an officer of the forest; also an officer belonging to any company or corporate body.

BE'DELARY (*Law*) the jurisdiction of a bedel.

BEDENGIAR (*Bot.*) Love apples.

BE'DEREPE (*Archæol.*) a service of certain tenants to reap their landlord's corn.

BE'DMAKER (*Cus.*) a servant in the University, whose office it is to wait upon the students.

BE'DMOULDING (*Archit.*) vide *Bed*.

BE'DRIDDEN (*Med.*) confined to one's bed from age or sickness, so as never to be able to leave it.

BEE (*Ent.*) a well-known insect, the *Apis* of Linnæus [vide *Apis*] which carries on the operations of making wax and honey in baskets made for them, called *hives*, or *beehives*, which, when situated in a particular spot, are called an apiary. Bees begin to swarm, i. e. to form new colonies, in May or June, according to the state of the weather. In a mild season they swarm much earlier than usual. The swarm commonly consists of a female, called the *queen*, as in *fig. 1*, who is distinguished by her size; the *drones*, as in *fig. 2*, who are supposed to be males that eat, but do

Fig. 1.

Fig. 2.

Fig. 3.

not work or contribute to the common stock; and the *mules*, or *common bees*, as in *fig. 3*, who are of neither sex, and do the whole work of the hive. The queen bee lives in a larger cell than the rest, called the *royal cell*, where she deposits her eggs, which, in the process of hatching, change to the state of a maggot, a chrysalis, and a bee, after the manner of other insects. The food of

BEH

the maggot is supposed to be the pastelike substance found in the hives, which is called *bee-bread*.

BEE (*Her.*) this insect is made the emblem of industry and good government in heraldry, and is represented in coat armour, as in *fig. 1*. "He beareth azure three bees volant

Fig. 1.

Fig. 2.

en arriere, by the name of Bye." The *beehive* is also represented, as in *fig. 2*. "He beareth argent a beehive, with bees diversely volant, sable, by the name of Rooe of Macclesfield."

BEE-FLOWER (*Bot.*) the *Orchis* of Linnæus.

BEECH (*Bot.*) or beech-tree, in Saxon *bece*, or *boe*, the *fagus* of Linnæus, a glandiferous tree, raised from seeds, and mostly managed like the oak. The two principal sorts are the Mountain-Beech and the Campestoul, or Wild Beech, which grow to a considerable stature, though the soil be barren. The fruit of this tree is good for fattening swine.

BEEF à-la-mode (*Cook.*) beef well beaten, larded, and stewed with lemon, pepper, &c.

BEEHIVE (*Mech.*) vide *Bee*.

BEELE (*Mech.*) a pick-axe.

BEE'NEL (*Bot.*) an evergreen tree of Malabar, from the leaves of which a liniment is made for the head-ache. *Raii Hist. Plant.*

BEER (*Cook.*) a drink made of malt and hops, by the process of brewing. It is of three kinds, strong beer, ale, and table beer, or small beer.

BEER (*Mech.*) a name given by weavers to 19 ends of yarn running all together out of the trough its whole length.

BEEES (*Archit.*) pieces of elm plank bolted to the end of the bowsprit.

BEE'SHA (*Bot.*) a species of Cambu, a decoction of which is good for obstructions.

BEE'STINGS (*Husband.*) the first milk of a cow after calving.

BEE'T (*Bot.*) a garden herb which is thick and fleshy, the *Beta* of Linnæus.—*Betrave*, a *beet raddish*, a sort of red beet.

BEE'TLE (*Ent.*) the *Scarabæus* of Linnæus, a well-known insect, produced from the larvæ or grubs that live under ground; it has six feet, and is annular, and hairy at one end.

The beetle lives on dry decayed wood, roots of plants, &c.

BEE'TLE (*Mech.*) a large wooden hammer for driving palisades.

BEGGAR (*Com.*) one who follows the trade of a beggar.

BEG'GLERBEG (*Polit.*) the chief governor of a Turkish province, who has all the inferior officers under his command. The sultan gives each beglerbeg three ensigns, as a mark of royalty.

BEG'MA (*Med.*) βήμμα, from βήξ, a cough; a cough, with what is brought up by expectoration. *Foes. Econom. Hippocrat.*

BEG'ONIA (*Bot.*) a genus of plants, named by Plumier after Mons. Begon, Class 21 *Monoecia*, Order 7 *Polyandria*.

Generic Characters. CAL. none.—COR. petals four.—

STAM. filaments numerous; anthers oblong.—PIST. germ inferior; styles bifid; stigmas six.—PER. capsule in most three-cornered.

Species. The species are mostly shrubs or perennials.

BEGUE (*Vet.*) an old term for the natural mark in a horse's mouth, by which his age may be known.

BEHAV'ING as heir (*Law*) the same as *gestio pro herede*.

BEHAV'IOUR (*Law*) vide *Good Behaviour*.

- BETHEMOTH** (*Bibl.*) בֵּהֶמֶת, an animal described in Job xl. 15. which Bochart supposes to be the same as the river-horse.
- BETHEN** (*Bot.*) or *been*, from the Arabic *behen*, or *albehen*, a plant, the root of which is medicinal. There are three sorts of Behen, namely *Behen album*, the White Behen of the ancients, and the *Centaurea bchen* of Linnæus.—*Behen rubrum*, Sea Lavender, the *Statice Lemonium*.—*Behen officinarum*, the *Cucubalus behen*. The roots of these plants are cordial and cephalic. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Park. Theat.*; *Raii Hist. Plant.*; *Tournef. Instit.*; *Boerhaav. Ind.*
- BEJA'RIA** (*Bot.*) a genus of plants, named by Mutis after Bejar, a Spanish botanist, Class 11 *Dodecandria*, Order 1 *Monogynia*.
Generic Characters. CAL. *perianth* one-leaved.—COR. *petals* seven.—STAM. *filaments* fourteen; *anthers* oblong.—PIST. *germ* superior; *style* columnar; *stigma* thickish.—PER. *berry* juiceless; *seeds* numerous.
Species. The species are shrubs, and natives of Grenada, Florida, &c.
- BEID-EL-O'SSAR**, an Egyptian plant described by Prosper Alpinus, abounding with a milky juice, in which when leather is macerated the hair falls off.
- BEIGE-SERGE** (*Com.*) a serge of Poitou, which is black, grey, or tawny.
- BEIT-OLLAH** (*Theol.*) literally signifies in the Arabic the house of God, and is applied by the Mahometans to the temple at Mecca, whither the pilgrims resort.
- BEJU'CO** (*Bot.*) the *Hippocratea comosa* of Linnæus.
- BEJU'IO** (*Bot.*) a kind of bean in Carthage.
- BEKAH** (*Ant.*) a Jewish coin, worth about $1\frac{1}{6}$ d. of our money.
- BELAC** (*Med.*) a particular kind of bark of Madagascar, slightly bitter and astringent.
- BELANDRE** (*Mar.*) French for a flat-bottomed vessel with masts, sails, &c. which is used in Flanders for the conveyance of goods.
- TO BELAY** (*Mar.*) to fasten a rope, particularly the running rigging, by winding it several times round the cleats, &c.
- BELAYING-PINS** (*Mar.*) wooden-pins on which the ropes are belayed or wound.
- TO BELAGUER** (*Mil.*) to besiege.
- BELECTION** *mouldings* (*Carpent.*) those which surround the pannels, and project without the surface of the framing in doors.
- BELELAIS** (*Com.*) a species of Bengal silk resembling taffety.
- BELEMNITES** (*Min.*) from βέλος, a dart; a kind of stone resembling an arrow in shape; it is sometimes whitish, and sometimes of a gold colour. *Gess. de Lapid.*; *Aldrov. Mus. Metall.*
- BELEMNOIDES** (*Anat.*) from βέλος, a dart, and εἶδος, the form; a name for the styloid process of the temporal bone.
- BELFRY** (*Ant.*) *belfredum*, *berpedum*, *belfragum*, *braxfreit*, in French *béffroy*, a warlike machine, in form of a tower, formerly used in sieges, under the shelter of which they could fire upon the enemy. It was also employed as a tower.
- BELFRY** (*Archit.*) that part of a steeple in which the bells are hung, but more particularly that part of the timber work from which the bells are suspended.
- BELFRY** (*Mar.*) the shelter under which the ship's bell is suspended.
- BELLI** (*Bot.*) a tall fruit-tree, not unlike the quince, the *Crateva marmelos* of Linnæus. *J. Bauh. Hist. Plant.*
- BELIC** (*Her.*) vide *Gules*.
- BELILIA** (*Bot.*) an Indian berry-bearing shrub; the *Musenda frondosa* of Linnæus, a decoction of which is cooling. *Raii Hist. Plant.*
- BELL** (*Mus.*) the well-known metallic machine which is ranked among musical instruments; it consists of three parts, the *body*, or *barrel*, the *clapper*, and the *ear*, or *cannon*.—*Bell metal*, the metal employed in the manufacture of bells, which usually consists of three parts of copper and one of tin.—*Bell of a horn*, the wide open part, from which the sound issues.
- BELL** (*Her.*) vide *Bells*.
- BELL** (*Mar.*) vide *Bells*.
- BELL of a capital** (*Archit.*) a circular moulding, otherwise called the *cobel*.
- BELL, book, and candle-light** (*Ecc.*) the name of an imprecation practised formerly in the Christian church in the 10th and 11th centuries upon the excommunication of a person. It was so called because the people were summoned by the sound of the bell to attend the ceremony of hearing the curse read out of the book by the minister, standing in a balcony, when he extinguished the candle or lamp that he held by throwing it on the ground, thereby denoting that in this manner the excommunicated person would be extinguished if he did not repent.
- BELL** (*Man.*) a name for the horse in a team who bears the bell.
- BELL-FLOWER** (*Bot.*) the common name for the *Campanula*.—Bell-shaped, *campanulatus*, an epithet for the corolla when it swells or bellies, but without any tube, as in the *Campanulas*, Canterbury bells, &c. also applied to the calyxes and nectaries.—*Bell Pear*, a pear in the shape of a gourd.
- BELLADONNA** (*Bot.*) Deadly Nightshade; the *Atropa belladonna* of Linnæus.
- BELLA'TRIX** (*Ant.*) a galley for war.
- BELLATRIX** (*Astron.*) a glittering star, of the 2d magnitude, in the left shoulder of Orion; so called from bellum war, over which it was supposed to preside.
- BELLED** (*Her.*) an epithet in blazoning for a hawk, to whose feet bells are affixed.
- BELLES LETTRES** (*Lit.*) a French term, now generally used to imply polite literature.
- BELL-FOUNDER** (*Mech.*) one who casts bells for churches, &c.
- BELLIDIA'STRUM** (*Bot.*) a species of the *Dronicum* of Linnæus.
- BELLIDIOIDES** (*Bot.*) the *Chrysanthemum balsamita* of Linnæus.
- BELLIGERENT** (*Mil.*) an epithet for any country which is in a state of warfare; in which case it is called a *belligerent* power.
- BELLIS** (*Bot.*) from Lat. *Bellus*, pretty; in Fr. *Marguerite*, Daisy, a genus of plants, Class 19 *Syngenesia*, Order 2 *Polygamia Superflua*.
Generic Characters. CAL. *common* hemispheric.—COR. *compound* radiate.—STAM. *filaments* five; *anther* cylindrical.—PIST. *germ* ovate; *style* filiform; *stigmas* two.—PER. none; *seeds* solitary; *receptacle* naked.
Species. The species are—*Bellis perennis scapo nudo*, &c. seu *syvestris minor*, Perennial, or Common Daisy, a perennial, native of Britain.—*Bellis annua*, seu *Leucanthemum annuum*, &c. Annual Daisy, an annual, native of Sicily, &c.—*Bellis sylvestris*, seu *scapo nudo*, &c. a perennial, native of Italy.
- BELLIS**, the species is the—*Anthemis cola*, the *Athanasia annua*, the *Calendula nudiculis*, the *Crysanthemum frutescens*, *serotinum*, *abratum*, *leucanthemum*, &c.; the *Cotula coronifolia*, the *Dronicum Bellidiastrum*, and the *Saponaria Bellidifolia* of Linnæus. *Clus. Hist. Plant. Rar.*; *J. Bauh. Hist. Plant.*; *Raii Hist. Plant.*; *Commel. Hort. Med.*; *Pluken. Almagest. Botan.*

BELLIUM (*Bot.*) a genus of plants, Class 19 *Syngenesia*, Order 2 *Polygamia superflua*.

Generic Characters. CAL. common simple.—COR. compound radiated.—STAM. filaments four; anther cylindric.—PIST. germ turbinate; style filiform; stigma bifid.—PER. none; seeds turbinate; receptacle naked.

Species. The species are the—*Bellium bellidioides*, &c. *droseræfolia stolonibus*, &c. *annua minima*, *maritima minima*, &c. *seu foliis parvis*, &c. an annual, native of Italy.—*Bellium minutum*, *Pectis minuta*, &c. *seu Bellis cretica*, &c. an annual, native of the East.

BELLO'CVLUS (*Min.*) from *bellus*, fair, and *oculus*, the eye; a precious stone resembling the eye, and formerly supposed to be useful in its disorders.

BELLON (*Med.*) the Devonshire colic, or *colica Pictonum*.

BELLONA'RIA (*Bot.*) from *Bellona*, the goddess; a herb which, if eaten, makes people mad, and act outrageously.

BELLONA'RII (*My.*) priests of *Bellona*, who cut and maimed themselves in their mad fits. *Tertull. Apolog.* c. 9; *Lact. ant.* l. 1, c. 21.

BELLONIA (*Bot.*) a genus of plants, named by Plumier after Pierre Belon, a naturalist; Class 5 *Pentandria*, Order 1 *Monogynia*.

Generic Characters. CAL. perianth one-leaved.—COR. monopetalous.—STAM. filaments five; anthers erect.—PIST. germ inferior; style subulate; stigma acute.—PER. capsule turbinate-ovate; seeds numerous.

Species. The two species are—*Bellonia aspera*, *foliis ovalis*, &c. *frutescens*, &c. a shrub, native of America.—*Bellonia spinosa*, &c. a shrub, native of Hispaniola. *Linn. Spec. Plant.*

BELLOWS of an organ (*Mus.*) the pneumatic part of the machine, by which it is supplied with wind.

BELLOWS (*Her.*) a machine for blowing, the invention of which is ascribed by Strabo to Anacharsis. It occurs sometimes as a charge in coats of arms, as he beareth, "Argent, three pair of bellows, sable, by the name of Scipton."

BELLS, *Baptism of* (*Ecc.*) a ceremony, in the Romish church, of consecrating bells by sprinkling them with holy water and blessing them, after which they were supposed capable of dispelling evil spirits by their sound.

BELLS (*Her.*) are denominated church bells in coats of arms where they are used as a charge, as he beareth, "Sable, a fesse, ermine, between three church bells, argent, by the name of Bell of Norfolk." *Crest*, "A falcon rising, argent, jessed and belled, or, on his breast an ermine."

BELLS (*Mar.*) half hours of the watch, which are marked by striking the bell at the end of each.

BELLUÆ (*Zool.*) the sixth order of animals, Class *Mammalia*, having their fore-feet obtuse, truncate, and feet hoofed. It contains the following genera:—*Equus*, fore-teeth, upper six, lower six; tusks solitary; teats two, inguinal.—*Hippopotamus*, fore-teeth, each jaw; tusks solitary; feet hoofed.—*Tapir*, fore-teeth, each jaw ten; tusks none; hoofs on the fore-feet four, hind-feet three.—*Sus*, fore-teeth, upper four, lower six; tusks, upper two, lower two; snout prominent; feet mostly cloven.

BELLUTA (*Bot.*) the *Crinum Asiaticum* of Linnæus.

BELLY (*Anat.*) vide *Alvus* and *Venter*.—*Belly of a muscle*, the large fleshy part, in contradistinction to the smaller tendinous extremities.

BELLY (*Archit.*) the hollow part of compass timber, the round part of which is called the *back*.

BELLY-band (*Man.*) the girt that goes under the belly of the shaft horse, in a carriage, &c.

BELLY of an instrument (*Mus.*) the smooth thin board over which the strings are distended, as the belly of a harpsichord, violin, &c.

BELLYING (*Bot.*) or bellied, *ventricosus*, swelling out in the middle; an epithet for the perianth, as in *Æsculus*; for the corolla, as in *Digitalis*; so also for the spike, the stipe, &c.

BEL-META'LO *di voce* (*Mus.*) an Italian expression for a clear and brilliant toned *soprano* voice.

BELOMA'NCY (*Ant.*) βελομαντεία, from βέλος, a dart, and μαντεία, divination; a sort of divination, by means of arrows, which was in practice among the Scythians.

BELONE (*Ich.*) from βελόνη, a needle; a kind of fish, with a long slender body like a needle, a species of the *Esox* of Linnæus. *Aristot. Hist. Anim.* l. 6, c. 8; *Plin.* l. 9, c. 51.

BELT (*Mil.*) a girdle to hang a sword, or other weapon in, belb, belt, belte, Sax.; *belte*, Du.; *belte*, Sw.; all of which come immediately from the Lat. *balteus*. They are of different sorts, as—*Sword-belt*, a leathern strap in which a sword hangs.—*Shoulder-belt*, a broad leathern belt which goes over the shoulder, and to which the pouch is fixed; it is also called *cross-belt*, and should be made of stout smooth buff.—*Waist-belt*, a leathern strap fixed round the waist, by which a sword or bayonet is suspended.—*Belts* were called, by the ancient writers, by different names, as *Zona cingulum*, *reniniculum*, *ringa*, and *balldrellus*.

BELT (*Her.*) a badge, or mark of the knightly order given to a person when he was raised to knighthood.

BELT (*Vet.*) a distemper in sheep.

BELT (*Med.*) a bandage applied round the body; in this manner mercury is sometimes employed.

BELT (*Astron.*) vide *Belts*.

BELT (*Mason.*) a range or course of stones or bricks projecting from the rest, which may be either plain or fluted, &c.

BELTEIN (*Cus.*) or *Beltane*, from the Gaelic and Irish *beal-tine*, or *Bel's fire*, that is, the sun, *Bel* being a name of the sun among the Gauls; a festival celebrated, in Ireland, on the 21st of June, the summer solstice, when fires were made on the tops of the hills, and every member of the family was made to pass through the fire to ensure good luck.

BELTS (*Astron.*) *fasciæ*, two zones or girdles round the planet Jupiter, which are observed to be sometimes broader, and sometimes narrower, and not always to occupy the same part of the planet's disc.

BELTS (*Geog.*) straits near the Sound which lead from the Baltic into the German ocean.

BELU'CDERE (*Archit.*) a turret, or some part of an edifice raised above the rest for the purpose of extending the prospect of the country around.

BELU'LCUM (*Surg.*) from βέλος, a dart; an instrument for extracting darts.

BELUTTA (*Bot.*) vide *Bellutta*.

BELZO'INUM (*Chem.*) vide *Benzoinum*.

BEMA (*Ecc.*) a sort of festival, observed by the Manichees, in honour of Manes, who was slain. *August. Cont. Faust.* l. 18, c. 4.

BEM'BEX (*Ent.*) a division of the genus *Vespa*, according to Fabricius, comprehending the insects of this tribe, which have the tongue inflected, five-cleft.

BEM-CURINI (*Bot.*) the *Justicia adhotoda* of Linnæus.

BEMOL (*Mus.*) another name for B flat. [vide *B*]

BEN Tamdra (*Bot.*) the Egyptian bean.

BENAR (*Mil.*) French for a four-wheeled carriage, which is used to carry stones in the construction of fortified places.

BENATH (*Med.*) Arabic for small pustules produced by sweating in the night.

BENCH (*Law*) a seat of justice, as the King's Bench at

Westminster.—*Bench, King's*, a prison belonging to the court of King's Bench.

BENCH (*Mech.*) a particular tool fitted up with a hook, a screw, &c. for laying and fastening boards to it so that they may be steeled, &c.—*Bench of a spinning wheel, or the reel*, the stool to which the supporters of the wheel, or reel, are fixed.

BENCHER (*Law*) a lawyer of the first rank in the inns of court.

BEND (*Her.*) an honourable ordinary formed by diagonal lines drawn from the dexter, or right corner at top, to the sinister base, or left corner at bottom, which is supposed to represent a shoulder belt or scarf, and to show the wearer to be valiant in war. The content of the bend when charged is the third part of the field, but uncharged it contains only the fifth. The bend taken absolutely signifies the dexter-bend, as in *fig. 1*. "He beareth, *argent*, a bend, *sable*; name Erderswick, of Staffordshire." Otherwise it is called a *bend sinister*, as in *fig. 2*. "He beareth, *gules*, a bend sinister, by the name of Wildestein." Bends are composed of either plain or crooked lines; those composed of crooked lines are engrailed, wavy, crenelle, flory, &c. [*vide Engrailed, &c.*]

The *bend* has four different diminutives; namely, the *bendlet*, the *garter*, the *cost*, or *cottise*, and the *ribbon*. [*vide Bendlet, &c.*] It is also borne in three different forms; namely, *in-bend*, *per-bend*, and *bendy*.—*In-bend* is when a charge is borne sloping from the dexter chief to the sinister base, after the manner of a bend, as in *fig. 3*. "He beareth, *argent*, a wyvern volant *in-bend*, *sable*; name Raynon."—*Per-bend* is when the charge or field is divided by a line drawn after the manner of a bend, as in *fig. 4*. "He beareth, parted by bend crenelle, *pearl* and *ruby*, i. e. *argent* and *gules*." These were the arms of the Right Honourable Robert Boyle, the philosopher.—*Bendy*, or *Bendwise*, *vide Bendy*.

BEND (*Mar.*) 1. The knot by which one rope is fastened to another, or to an anchor, varying in name according to the bend by which the knot is formed, as the *fisherman's bend*, the *carrick-bend*, the *sheet-bend*, &c. To make a *carrick-bend*, lay the ends of a rope bend, as *a* and *b* in the annexed figure, then pass it through the bight in *d*, and up through the bight *c*. 2. The small rope used to confine the clench of a cable. 3. The thickest and strongest planks in the ship's side, on which men set their feet in climbing up.

TO BEND (*Mech.*) from the Saxon *bindan*, to be; the reducing a body to a curved or crooked form. The bending of boards, planks, &c. is effected by means of heat, whether by boiling or otherwise.

TO BEND (*Mar.*) to fasten one rope to another.—"To bend the cable," to clinch, or tie it to the ring of an anchor. "To bend two cables," to tie them together so as to make their own ends fast on themselves. "To bend a sail," to fasten it to a yard or stay.

BENDIDIA (*Ant.*) *βενδιδια*, a Thracian festival in honour of Diana, who was called *Βένδις*, by the Thracians. *Strab.* 1. 9: *Procl. in Tim.*; *Hesychius*.

BENDING (*Mech.*) *vide To Bend*.

BENDLET (*Her.*) one of the diminutives of the bend,

which is in size half the breadth of the bend. Bendlets are sometimes borne in an unusual manner, called *enhanced*, i. e. lifted up to a place in which they are not usually borne, as "He beareth, *argent*, three bendlets, *gules*; name Byron, of Nottinghamshire.

BE'NDY (*Her.*) *bendwise*, or *bendways*; an epithet for a thing that is divided four, six, or more parts drawn sloping like a bend, as in the annexed figure. "He beareth bendy wavy of six, *argent* and *azure*; name Playters, of Suffolk." A border is also borne bendy.

BE'NE (*Mus.*) *vide Bene placito*.

BENE'APED (*Mar.*) an epithet expressing the state of a ship when the water does not flow high enough to bring her off the ground, out of a dock, or over a bar.

BENEDICTINES (*Ecc.*) an order of monks founded by St. Benedict, whose habit was black. They were divided into several congregations.

BENEDICTION *generale* (*Mil.*) an invocation made to God by the chaplain of the French army on the eve of an engagement.—*Benediction de Drapeaux*, a consecration of colours.

BENEDICTUS (*Med.*) Blessed; an epithet for several compositions on account of their supposed excellence, as *Benedicta aqua*, for lime-water; and also an infusion of *Crocus metallorum*, &c. *Benedictum laxativum*, for Rhubarb. *Benedictum vinum* for antimonial wine.

BENEDICTUS lapis (*Alch.*) the philosopher's stone.

BE'NEFICE (*Law*) *beneficium*; a grant of land from a lord to his followers, held at first *ex mero beneficio*, of the donor, but afterwards converted into a perpetual hereditary tenure. 2. Any ecclesiastical living or promotion, but particularly rectories and vicarages. They are either elective or donative. 13 R. 2, st. 2, c. 2; 3 *Instit.* 155; *Spelm. de Feud.* c. 21; *Blount. Anc. Ten.*

BENEFICIARII (*Ant.*) 1. Soldiers who were promoted to a higher rank, at first *beneficio*, i. e. by the favour of the tribunes, afterwards by that of other magistrates; wherefore we read in inscriptions of the *Beneficiarius Consulis*, *Proconsulis*, &c. *Liv.* 1. 9, c. 30; *Veget.* 1. 2, c. 7; *Buleng. de Imp. Roman.* 1. 6, c. 80; *Ursat. de Not. Roman. apud Græv. Thes. Antiq.* tom. 11, p. 570, &c. 2. Soldiers who were discharged from military duty with a pension allowed to them. *Cæs. de Bell. Civ.* 1. 3, c. 88; *Fest. de Verb. Signif.*

BENEFICIO primo ecclesiastico habendo, a writ from the king to the chancellor to bestow the benefice that shall fall in the king's gift upon this or that man. *Reg. Orig.* 307.

BE'NEFIT of Clergy (*Law*) a privilege formerly peculiar to clerks, but in after times made common to laymen, who were convicted of certain crimes, as manslaughter and the like. The mode of obtaining this privilege was thus: the ordinary, his commissioner, or deputy, gives the prisoner at the bar a Latin book, in a black Gothic character, and puts him to read a verse or two; then, if he say *legit ut clericus*, "he reads like a clergyman or scholar," he is only burnt in the hand and set free, for the first time; otherwise he must suffer death.

BENEFIT societies, *vide Friendly Societies*.

BENEFIT (*Com.*) a term used at the theatre for the profit of one or more nights, which is given to an actor or a poet.

BENEOLENTIA (*Med.*) sweet-smelling medicines.

BENE PLACITO (*Mus.*) Italian for *at pleasure*; a term denoting that the performer is at liberty to exercise his taste.

BE'NERTH (*Law*) an ancient service rendered by the tenant to his lord, with his plough and cart. *Lamb. Itin. Co. Lit.* 86.

BENEVOLENCE (*Law*) a voluntary contribution from the

- subject to the king, which grew from the time of Henry the Fourth's days.
- BENEVOLENTIA** *regis habenda* (*Law*) the form of purchasing the king's favour, in ancient fines and submissions, to be restored to estate, title, or place.
- BENG** (*Med.*) a name among the Mahometans for the leaves of hemp made into pills or a conserve, which possess an exhilarating power.
- BENGAL QUPNCE** (*Bot.*) the fruit of the *Crateva marmelos* of Linnæus.
- BENGI-E'RI** (*Bot.*) the name of an Indian evergreen.
- BENJAMIN** (*Bot.*) vide *Benzoin*.—Benjamin tree, the *Styrax benzoin* of Linnæus.
- BENINGA'NIO** (*Bot.*) a fruit growing in the bay of St. Augustine, of the size of a lemon, and grateful to the taste.
- BENIGN** *disease* (*Med.*) a favourable disease, unattended with dreadful symptoms.
- BENMARCI'TO** (*Mus.*) Italian for well-marked; an epithet applied to the performance when it must be clear and pointed.
- BENNET** (*Bot.*) or Herb Bennet, *Benedicta herba*, the *Geum urbanum* of Linnæus, a perennial, so called because of its supposed medicinal virtues.
- BENT-GRASS** (*Bot.*) the *Agrostis* of Linnæus, a perennial.
- BENVENU'E** (*Print.*) i. e. welcome, from the French *bien* and *venir*, to come; a custom among printers for every new workman to pay a certain sum upon first going to the chapel, i. e. the printing-office.
- BENZOATE** (*Chem.*) a salt formed by the combination of Benzoic acid with alkalies, earths, or metallic oxides.
- BENZOE** (*Chem.*) the same as *Benzoin*.
- BENZOIC A'CID** (*Chem.*) the acid produced by subliming Benzoin.
- BENZOIN** (*Bot.*) a species of the *Laurus* and the *Styrax* of Linnæus.
- BENZOIN** (*Chem.*) *Benzoinum*, *Benzoe*, *Belzoe*, *Asa dulcis*, a gum of an agreeable and fragrant smell, produced by incision, from an Indian tree, the *Styrax Benzoin* of Linnæus. The best is hard, solid, shining, and transparent; being of a warming, drying, discussing, and dissolving nature. The two principal sorts are the true Benzoin, and Benzoin in tears.—True Benzoin is of a yellowish gold colour, a highly aromatic smell, but without any taste.—Benzoin in tears, or *Benzoinum amygdaloides*, is a clear transparent mass, of a reddish colour, mixed with whitish tears, resembling almonds. The tincture of Magistery and flowers of Benzoin are particularly good for the lungs, and also for obstructions.
- BENZOINI tinctura** (*Med.*) Tincture of Benzoin, made by digesting Benzoin in spirits of wine, a cosmetic. [vide *Lac virginis*].—*Benzoini flores*, Flowers of Benzoin, or the gum sublimed and purified, which is a fine pectoral, now called Benzoic Acid.—*Benzoini oleum*, Essential oil of Benzoin, the oil which rises after the flowers are mixed with a little acid.—*Benzoini magisterium*, Magistery of Benzoin, the gum deposited on mixing the tincture with water, that is, the resinous without the saline part of the gum.
- BER** (*Bot.*) an Indian tree, the fruit of which is like jujel.
- BERAMS** (*Com.*) a coarse calico made at Surat.
- BERBERIS** (*Bot.*) Barberry, or Pipperidge bush, a genus of plants, Class 6 *Hexandria*, Order 1 *Monogynia*, the fruit of which is very cooling and restringent.
- Generic Characters.* CAL. *perianth* six-leaved.—COR. *petals* six; *nectary* two, small.—STAM. *filaments* six; *anthers* two.—PIST. *germ* cylindrical; *style* none; *stigma* orbiculate.—PER. *berry* cylindrical; *seeds* two.
- Species.* The species are shrubs—*Berberis vulgaris-racemis*, &c. *pedunculis*, &c. *floribus*, &c. *spinis*, &c. *dumetorum*, *Crespinus*, seu *Oxyacantha Galeni*, Common Berberry.—*Berberis Cretica*, seu *Lycium Creticum*, seu *Cretan*, or Box-leaved Berberry.
- BER'BIAGE** (*Archæol.*) a sort of tenure mentioned by Blount.
- BERBICA'RIA** (*Ant.*) a sheep-down, or ground to feed sheep. *Leg. Alfredi. Mon. Angl.*
- BERCARY** (*Archæol.*) *Berquarium*, in French *Berquere*; a fold or inclosure for sheep, probably contracted from *berbicaria*: hence *berbicus*, a ram; *berbica*, a ewe; *caro berbicina*, mutton.
- BERCE'AU** (*Archit.*) French for a full-arched vault.
- BERE'ANS** (*Ecc.*) a sect of seceders from the Scotch kirk.
- BERE'DRIAS** (*Med.*) an ointment described by Aetius. *Tetrab. 4, serm. 4, c. 113.*
- BEREFELLA'RII** (*Archæol.*) seven churchmen so called, anciently belonging to the church of St. John Beverley.
- BEREFRE'IT** (*Archæol.*) a large wooden tower.
- BEREN'CE** (*Chem.*) a name for Amber.
- BERENICE'S Hair** (*Astron.*) vide *Coma Berenicæ*.
- BERENGE'RIANS** (*Ecc.*) a sect of heretics in the eleventh century, the followers of one Berenger, who denied the real presence.
- BEREN'CIUM** (*Chem.*) a sort of nitre mentioned by Galen and others.
- BERETINUS fructus** (*Bot.*) a fruit found by Francis Drake's sailors in the Malaccas.
- BERGAMO** (*Com.*) a coarse tapestry, manufactured from several sorts of spun thread, supposed to derive its name from the town Bergamo, where it was said to be invented.
- BERGAMO'T** (*Bot.*) in French *Bergamotte*, Italian *Bergamote*; a species of *Pyrus sativa*, of which there are two kinds, namely, the Summer Bergamot and the Autumn Bergamot.
- BERGAMOT** (*Chem.*) a certain fragrant and cordial essence, extracted from a kind of lemon in Italy; the fruit of a lemon tree ingrafted on a Bergamot pear tree. The liquor is an æthereal oil, very subtile, and of a charming smell. Medicinally it is a cardiac, stomachic, and cephalic.
- BERGE'RA** (*Bot.*) a genus of plants, named after Professor Berger, of Kiel, Class 10 *Decandria*, Order 1 *Monogynia*.
- Generic Characters.* CAL. *perianth* five-parted.—COR. *petals* five.—STAM. *filaments* ten; *anthers* round.—PIST. *germ* roundish; *style* filiform; *stigma* turbinate.—PER. *berry* subglobular; *seeds* two.
- Species.* The only species is the *Bergera Koenigii*, seu *Papaja sylvestris*, a shrub, native of the East Indies.
- BERGH-MASTER** (*Min.*) from the Saxon berg, mountain or mine; a bailiff or chief officer among the Derbyshire miners. *Esc. de Ann. 16 Ed. 1.*
- BERGHMOTE** (*Min.*) Bergmot, from the Saxon berg, mountain or mine, and *gemotæ*, an assembly; an assembly or court for deciding all controversies among the Derbyshire miners.
- BERGIA** (*Bot.*) a genus of plants, named after Professor Bergius, of Stockholm, Class 10 *Decandria*, Order 5 *Pentagynia*.
- Generic Characters.* CAL. *perianth* five-parted.—COR. *petals* five.—STAM. *filaments* ten; *anthers* roundish.—PIST. *germ* roundish; *styles* five; *stigmas* simple.—PER. *capsule* simple; *seeds* numerous.
- Species.* The species are natives of India.
- BERIA** (*Archæol.*) or *berie*, an open place, which Cowel says is not, according to Spelman, to be confounded with bury and borough in the names of towns that end with this word. *Beria Sancti Edmundi* [St. Edmond's Bury] mentioned by Matthew Paris, sub. ann. 1174, is not to be taken for the town, but the plain, according to Du Fresne.
- BERIBERI** (*Med.*) a kind of pulsary frequent in the East Indies.
- BERILLI'STICA** (*Alch.*) a kind of magic art in observing

pretended præternatural visions in *ballisti*, or mirror glasses.

BERLIN (*Mech.*) a sort of carriages made at Berlin.

BERME (*Fort.*) a small space of ground, 4 or 5 feet wide, left without the rampart, between it and the side of the moat.

BERMUDAS *Juniper* (*Bot.*) the *Juniperus Bermudiana* of Linnæus.

BERMUDI'ANA (*Bot.*) 1. A species of the *Juniperus* of Linnæus. 2. The *Juniperus barbadensis*. 3. A species of the *Sisyrinchium*, and of the *Iris*.

BERNACLE (*Orn.*) a bird of the goose kind, the *Anas erythropus* of Linnæus, formerly called the *tree goose*, because it was supposed to be generated out of wood, or rather to be a species of shell adhering to the bottoms of ships. These birds appear in vast flocks during winter on the north-west coast of this kingdom. They are very shy and wild; but upon being taken grow as tame as the domestic goose. In February they retire as far as Lapland, to breed.

BERNARDINES (*Ecc.*) monks of the order of St. Bernard.

BERNA'VI (*Med.*) an electuary mentioned by Prosper Alpinus.

BERNET (*Law*) *incendium*, from the Saxon bynan, to burn; the crime of arson, or wilfully setting on fire, which, according to the laws of Henry I. was one of those crimes which *non emendari possunt*. It is, however, sometimes taken for any capital crime. *Leg. Canut. et H.* 1, *apud Brompt.*

BERQUARIUM (*Archæol.*) vide *Bercaria*.

BERRA (*Archæol.*) vide *Beria*.

BERRIED (*Bot.*) *baccatus*; an epithet for the capsule, and also for the drupe, which is surrounded by a very succulent coat, as the cherry, that seeds, but never bursts.

BERRY (*Bot.*) [vide *Bacca*]—Berry-bearing Alder, the *Rhamnus frangula* of Linnæus.

BERS (*Med.*) an exhilarating sort of electuary made by the Egyptians.

BERSA (*Archæol.*) a limit within a park.

BERSA'RE (*Archæol.*) to hunt or shoot: the *bursarii* were properly those who hunted the wolf.

BERSELET (*Archæol.*) a hound.

BERTHINSECK (*Law*) or *berdinseck*, a law in Scotland, by which a man is not hanged, but only whipped, for taking a sheep or calf that he can carry away on his back.

BERTIERA (*Bot.*) a genus of plants named by Aublet after Mons. Bertier, Class 5 *Pentandria*, Order 1 *Monogynia*.
Generic Characters. CAL. *perianth* turbinate.—COR. one-petalled.—STAM. *filaments* five; *anthers* linear.—PIST. *germ* roundish; *style* filiform; *stigmas* two-plated.—PER. *berry* globose; *seeds* very many.
Species. The only species is—*Bertiera quianensis*, a shrub, native of Guinca.

BERTON (*Archæol.*) vide *Barton*.

BERTYING a ship (*Mar.*) raising up a ship's sides.

BERULA (*Bot.*) Upright water parsnep, which was esteemed an antiscorbutic. *Gal. de Comp. Med.* l. 7, c. 26.

BERULIANS (*Ecc.*) a sect of heretics in the 12th century, who affirmed that all human souls were created in the beginning of the world.

BERRY (*Archæol.*) or *Bury*, the vill or country seat of a nobleman, from βουρη, a hill, because the castles of the nobility were erected on hills.

BERYL (*Min.*) *beryllus*, βήρυλλος, a precious stone, which, in its purity, is of a perfectly sea-green colour, and on that account has been called *aqua marina*. Pliny mentions several species of the beryl, as the *chrysoberyllus*, *chrysoprasus*, *hyacinthozontes*, and *eroides*. *Plin.* l. 37, c. 5; *Solin.* c. 52; *Dionys. Perieg.* v. 1012; *Epiphan. de 12 Gem.*; *Isid. de Origin.* l. 16, c. 17; *Marbod. de Lapid. pret. eq.* Beryl.

among the modern lapidaries, is only a fine sort of cornelian, of a more deep bright red.

BERYL (*Paint.*) the sea-green colour prepared in imitation of the beryl.

BERYTION (*Med.*) βερύτιον, a collyrium for the eyes described by Galen.

BES (*Ant.*) 1. A weight of eight ounces, i. e. two-thirds of the *as*, or pound. *Gal. de Comp.* l. 6; *Fest. de Verb. Signific.* 2. A measure of land making two-thirds of an acre.

BESA'CHER (*Bot.*) a fungus, or sponge.

BESAILLE (*Law*) or *besayle*, in Latin *proavus*, in French *besayeul*; a writ that lies where the great grandfather was seized the day that he died of any lands or tenements in fee simple, and after his death a stranger entereth the same day upon them, and keepeth out the heir. *F. N. B.* 222.

BESANT (*Com.*) or *Bezant*, a very ancient gold coin stamped at Byzantium.

BESANT (*Her.*) vide *Bezant*.

BESCA (*Archæol.*) a spade or shovel, whence *una bescata terra inclusa*; a piece of land turned up with a spade in a day. *Mon. Angl.*

BESIEGED (*Astrol.*) an epithet for a planet which is placed between others of a malignant cast, as Saturn and Mars.

BESISTAN (*Com.*) or *Berstan*, large galleries vaulted over in Turkey, where the merchants have shops, and expose their goods to sale.

BESLE'RIA (*Bot.*) a genus of plants named by Plumier after Basil Besler, a botanist of Nuremberg, Class 14 *Didynamia*, Order 2 *Angiospermia*.
Generic Characters. CAL. *perianth* one-leaved.—COR. monopetalous.—STAM. *filaments* four; *anthers* oblong.—PIST. *germ* globular; *style* subulate; *stigma* bifid.—PER. *berry* subglobular; *seeds* numerous.
Species. The species are shrubs or perennials.

BESORCH (*Com.*) a tin coin at Ormus, in value much less than a farthing.

BESTIA'LES (*Ant.*) in French *bestayles*, Bestials, all kinds of cattle, but particularly those which were anciently purveyed for the king's provision. *Stat.* 4 *Ed.* 3.

BESTIA'RII (*Ant.*) those among the Romans who fought with beasts at their public games, whether by compulsion, as condemned persons, or voluntarily, as gladiators, who made a trade of it. *Cic. in Vatican.* c. 17; *Suet. Claud.* c. 34; *Tertull. Apol.* c. 35.

BESTIAS (*Ant.*) or *ad Bestias*. [vide *Ad*]

BETA (*Gram.*) the second letter in the Greek Alphabet. [vide *Alphabet*]

BETA (*Bot.*) a plant so called from the Greek letter β, which it resembles in shape whilst the seed is swelling.
Column. l. 10.
Nomine tum Graio, ceu littera proxima prime
Pingitur in cera docti mucrone magistri,
Sic et humo pingui ferratæ cuspidis ictu
Deprimitur folio viridis, pede caudila, beta.
Mart. l. 13, *epig.* 13.
Ut sopiant fatuæ fabrorum prandia betæ,
O quam sæpe petet vina, piperque coquus.

It is one of the five emollient herbs; and on account of its insipidity, those who languished were said *belizare*, to flag like the beet-root.
Catull. *Carm.* 66, v. 21.
Languidior tenera cui pendens sicula betæ
Numquam se mediam sustulit ad tunicam.
Theoph. Hist. Plant. l. 1, c. 5, &c.; *Dioscor.* l. 2, c. 149; *Plin.* l. 19, c. 8.

BETA, Beet, in the Linnæan system, a genus of plants, Class 5 *Pentandria*, Order 2 *Digynia*.
Generic Characters. CAL. *perianth* five-leaved.—COR. none.—STAM. *filaments* five; *anthers* roundish.—PIST.

germ in a manner below the receptacle; styles two; stigmas acute.—PER. capsule one-celled; seed single.

Species. The species are biennials, as—*Beta vulgaris*, Red Garden Beet.—*Beta cicla*, White Garden Beet.—*Beta maritima*, Sea-Beet.—*Beta patula*, Spreading Beet, &c.

BETA'CHES (Archæol.) Laymen using glebe lands.

BE'TEL (Bot.) or *Betle*, a species of pepper plant, the leaf of which is universally chewed by the southern Asiatics, to sweeten the breath and strengthen the stomach. This is the *Piper Betle* of Linnæus.—*Betel-nut*, a name given to the *Areca* when slices of it are enclosed in the leaf of the Betel.

BETELGEUSE (Ast.) a star of the first magnitude in the right shoulder of Orion. Its right ascension in 1812 was $86^{\circ} 14' 52''$, declination North $7^{\circ} 21' 34''$, annual variation in right ascension $48'' 6$, in declination $+ 1'' 5$.

BE'THLEMITES (Ecc.) certain friars who wore the figure of a star on their breasts, in memory of the star that appeared to the wise men, and conducted them to Bethlehem.

BETYLLES (Com.) a thick sort of muslin; the finer sort resembling cambric, and the coarser calico.

BE'TTLE (Bot.) in German *betel*, a plant of the scandent kind, the leaves of which are chewed by the Indians, for the purpose of sweetening their breath.

BETO'NICA (Bot.) a plant so called, according to Pliny, because it was found among the Bettones. This plant was reckoned vulnerary, aperient, and diuretic. *Plin.* l. 25, c. 8; *Gal. de Simpl.* l. 7; *Oribas. Med. Coll.* l. 11; *Aet. Tetrab.* l. 1, serm. 1; *Paul. Ægin.* l. 7, c. 3.

BETONICA, in the Linnean system, a genus of plants, Class 14 *Didymia*, Order 1 *Gymnospermia*.

Generic Characters. CAL. perianth one-leaved.—COR. monopetalous.—STAM. filaments four; anthers roundish.—PIST. germ four-parted; style filiform; stigma bifid.—PER. none; seeds four.

Species. The species are perennials. *Dodon. Stirp. Hist.*; *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat.*; *Raii Hist. Plant.*; *Linn. Spec. Plant.*

BE'TULA (Bot.) a tree so called, according to some, from the bitumen which is extracted from it. *Plin.* l. 16, c. 8.

BETULA, the Birch in the Linnean system, a genus of plants, Class 21 *Monoecia*, Order 4 *Tetrandria*.

Generic Characters. CAL. ament imbricate on every side.—COR. none.—STAM. filaments to each four; anthers twin.—PIST. germ proper, ovate, compressed; styles two; stigmas simple.—PER. none; seeds solitary.

Species. The species are either trees or shrubs, as—*Betula alba*, Common Birch-tree.—*Betula nana*, the Dwarf Birch-tree.—*Betula nigra*, Virginian Black Birch-tree.—*Betula incana*, seu *Alnus folio incano*, Hoary Alder-tree.—*Betula oblongata*, seu *Alnus folio oblongo*, Turkey Alder.—*Betula serrulata*, Notch-leaved Alder.—*Betula crispa*, Curled-leaved Alder. &c. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Park. Theat.*; *Raii Hist. Plant.*; *Tournf. Instit.*; *Boerhaav. Ind.*

BETULA (Ent.) an insect that feeds on the *Betula alba*, a species of the *Chrysomela*.

BE'TULUS (Min.) a precious stone, of the white jasper kind. *Plin.* 37, c. 9.

BETULUS (Bot.) a species of the *Carpinus*.

BETWE'EN-DECKS (Mar.) the space contained between two whole decks of a ship.

BE'VEAU (Mech.) French for an instrument that is used to carry a mixlined angle from one angle to another.

BE'VEL (Carp.) an instrument with a moveable tongue to strike angles of a greater or less number of degrees. This instrument differs from the square and mitre by being moveable, whilst they are fixed, the first at an angle of 90° ,

and the second at that of 45° , or a right angle, whether it be obtuse or acute; but if it be exactly half a right angle, i. e. if the angle measure 45° , then it is called a mitre; if the quarter of a right angle, i. e. $27\frac{1}{2}^{\circ}$, it is a half mitre.—*Bevel-angle*, any angle that is not a square.

BEVEL (Her.) an epithet for a chief in coats of arms which is broken, or opening like a carpenter's rule, as, he beareth "Argent a chief bevilé, vert, by the name of *Beverlis*."

BE'VELLING (Carp.) hewing timber with a proper or regular curve, according to a mould, so that each side should be a plane. If timber be not hewn square, and a square be applied, there will be wood wanting either on the upper or the lower side. This is called being *within* or *without* square. When the wood is deficient on the under side it is called *Under-bevelling*; when it is on the upper side it is called *Standing-bevelling*.

BE'VER (Archæol.) from the Ital. *bevere*, to drink. 1. A small collation between dinner and supper. 2. The visor or sight of a head-piece.

BEVERAGE to pay (Cus.) to give a treat on the first wearing a new suit of clothes.

BEVERCHES (Archæol.) customary services done by the tenants at the will of the lord.

BEVILE (Her.) vide *Bevel*.

BEURE'RIA (Bot.) the *Chalcanthus floridus*, and the *Ehretia beureria*, and *excussa*, of Linnæus.

BEURT-SCHE'EPEN (Com.) or *Beurt Schuyten*, Turnships, or Turn-boats; vessels or boats at Amsterdam which have the exclusive privilege of taking in goods in the seven provinces; so called because they must sail in their turn, according to specific regulations.

BEVY (Sport.) a certain number of animals of the chase when together, as "A bevy of roe-bucks," i. e. a herd; "A bevy of partridges," i. e. three in number; "A bevy of quails," i. e. a flock, or brood.

BEWA'RED (Ant.) i. e. expended, or laid out in wares; a term among the Saxons and Britons, who traded only by an exchange of wares.

BE'WITS (Falcon.) pieces of leather with which the bells of hawks are fastened and buttoned to their legs.

BEX (Med.) βήξ, tussis, a cough.

BEXU'GO (Bot.) the root of the *Clematis Peruviana*, which is a purgative. *Bauh. Hist. Plant.*

BEY (Polit.) an officer of high rank among the Turks, inferior to none but the Pacha.

BEZA'NT (Num.) round flat pieces of bullion without any impression, which are supposed to have been the current coin of Byzantium.

BEZANT (Her.) this coin was probably introduced into coat armour by those who went to the Holy Wars, as in the annexed figure. "He beareth ermine on a fess, gules three bezants, by the name of *Milward*." They were always of metal, and when blazoned, according to the custom of foreign heralds, should be expressly said to be *or* or *argent*.

BEZA'NTLER (Sport.) or *bisantler*, the second branch of a stag's horn.

BEZA'NTY (Her.) an epithet for a cross composed of bezants.

BE'ZEL (Archit.) or *Bezil*, the upper part of the collet of a ring, which encompasses and fastens the stone in it.

BEZO'AR (Chem.) from the Persian *bedzher*, an antidote; a medicinal stone brought from the East and West Indies, which was formerly reckoned a sovereign antidote against poisons. It is found to be a morbid concretion in the stomachs of some animals, which consists partly of bile and partly of resin. The bezoars are distinguished into—*Oriental bezoar*, found in the stomach of an animal of the

- goat kind in Persia, called *pazan*.—*Occidental bezoar*, found in quadrupeds of the deer kind.—*Bezoar hystricus*, found in the gall bladder of the Indian porcupine.—*Monkey bezoar*, found in certain monkeys of Brazil.—*German bezoar*, found in the stomach of the chamois.
- BEZOAR *fossile* (*Min.*) a substance so called because it is formed by strata or beds that resemble bezoar, as the Bezoar minerale, or *Terra Sicula*, found in the clay-pits of Italy.
- BEZOAR (*Med.*) is also the name of some medicinal preparations, as the—*Bezoar animale*, made of calcined hartshorn and vitriol.—*Bezoar minerale*, a preparation of antimony, made by adding nitrous acid to antimony.
- BEZOARDIC acid (*Chem.*) a name given to the acid extracted from the urinary calculi formed in the kidneys or gall-bladder.
- BEZOARDICA *radix* (*Bot.*) a herb so called for its efficacy as a counterpoison; the *Drosera contrajerva* of Linnaeus.
- BEZOARTIC (*Med.*) an epithet for several compositions, as the—*Bezoarticum Joviale*, bezoar mixed with tin.—*Bezoarticum Lunale*, a preparation of antimony and silver, &c.—*Bezoarticum Martiale*, a composition of nitrous acid and butter of antimony.—*Bezoarticus pulvis*, the powder of the oriental bezoar.
- BIA (*Com.*) a Siamese name for the white shells called *cowries* throughout the East Indies.
- BIALATUS (*Bot.*) two-winged; an epithet applied to the wings or membranes of a seed.
- BIARCHUS (*Polit.*) a caterer, or one who took charge of the public provisions; an officer in the Greek empire. *Leon. Imp. Constit.* l. 3. *de Agent. in Reb.*; *Hieron. Epist.* 61. *ad Pammach.*
- BIAS (*Mech.*) from the Fr. *biais*, a weight fixed on one side of a bowl, turning the course of the bowl that way to which the bias looks.
- BIB (*Ich.*) a species of Cod fish, the *Gadus luscus* of Linnaeus, which inhabits European seas. It grows to a foot in length, has a back of a pale olive colour, sides finely tinged with gold, and a belly white. The flesh of this fish is excellent.
- BIBBS (*Mar.*) brackets made of elm plank, and bolted to the hounds of the masts, for the purpose of supporting the tresle-trees.
- BIBEROT (*Cook.*) minced meats made of the breasts of partridges and fat pullets.
- BIBINELLA (*Bot.*) the same as *Pimpernella*.
- BIBIO (*Ent.*) a division of the genus *Musca*, according to Fabricius, comprehending the insects of this tribe which have a sucker with three bristles, and a single-valved sheath.
- BIBITORIUS *musculus* (*Anat.*) another name for the *Adductor oculi*. [vide *Adductor*]
- BIBLIOGRAPHER (*Lit.*) from βιβλος, a book, and γράφω, to write; a describer of books, or one conversant in books.
- BIBLIOGRAPHY (*Lit.*) from βιβλος, a book, and γράφω, to write; a description of books as respects their general contents, different editions, type, and the like.
- BIBLIOMANCY (*My.*) a kind of divination performed by means of the bible, otherwise called *Sortes Biblica*, or *Sortes Sanctorum*, which consists in taking passages of scripture at hazard, and drawing conclusions from them concerning futurity.
- BIBLIOMANIA (*Lit.*) from βιβλος, a book, and μανία, a mania; a rage for books on account of their scarcity, dearth, print, or some other childish reason.
- BIBLIOPOLIST (*Lit.*) βιβλιοπωλης, *venditor librorum*; a bookseller.
- BIBLIOTAPHIST (*Lit.*) βιβλιόταφος, from βιβλος, a book, and τάφω, to bury; a hider or burier of books.
- BIBLIOTHECA (*Lit.*) βιβλιοθήκη, from βιβλος, a book, and

- theca*, a chest; a library or repository of books, also the books themselves.
- BICA'PSULAR (*Bot.*) *bicapsularis*; having two capsules containing seeds to each flower, an epithet for the pericarp, as in *Pæonia*.
- BICA'UDALIS (*Anat.*) the same as *Abductor Auris*.
- BICE (*Paint.*) a blue colour prepared from the *Lapis Armenus*; it bears the best body of all bright blues used in common work, as House-painting, &c., but it is the palest in colour.
- BICEPS (*Anat.*) *bicapital*, or double-headed; an epithet for several muscles having two heads, as—*Biceps Cubiti*, a muscle of the elbow, the outermost head of which rises from the *Acetabulum scapulae*.—*Biceps Femoris*, which rises from the protuberance of the *Ischium*, on the back part. Its office is to bend the *Tibia*.—*Biceps Humeri*, or *Biceps flexor*, rising, by one head from the glenoid cavity, by the other from the coracoid process. It acts both as a flexor and a rotator.
- BICHE'T (*Com.*) a measure in France equal to from thirteen to nineteen bushels.
- BICHICHA (*Med.*) troches made of liquorice, almonds, &c. *Castel. Lex. Med.*
- BICHOS (*Ent.*) a Portuguese name for the worms found under the toes in the Indies, which are destroyed by the Cashew-nut.
- BICKERN (*Mech.*) or *beak-iron*, the pointed part of an anvil, with which its face is usually made to end.
- BICO'RNES (*Bot.*) two-horned; the eighteenth of Linnaeus' natural orders of plants, having the anthers furnished with two long straight points or horns, as in *Vaccinium*, *Erica*, *Pyrola*, &c.
- BICO'RNIS (*Bot.*) two-horned; an epithet for the *anthera bicornis*, an anther having two subulate prolongations, as in *Arbutus*, *Pyrolus*, &c.
- BICUCULLATA (*Bot.*) the *Fumaria cucullaria* of Linnaeus.
- BICU'SPIDES (*Anat.*) two-pointed; an epithet for the teeth which have double fangs.
- BIDA'LE (*Ant.*) or *biddal*, an invitation to friends to drink ale at the house of a poor man, who thereby hopes for a charitable contribution for his relief. *Stat.* 26. *Hen.* 8.
- BIDDING of Beads (*Archæol.*) a charge or warning anciently given by the parish priest to his parishioners, that they should pray for the soul of some deceased friend.
- BIDENS (*Ant.*) a two-yearling sheep, which was reckoned fit to be a victim for sacrifice.
- BIDENS (*Bot.*) Water Hemp, a genus of plants so called because the seeds are terminated by two teeth or awns, Class 19 *Syngenesia*, Order 1 *Polygamia Æqualis*.
- Generic Characters.* CAL. common imbricate.—COR. compound uniform.—STAM. filaments five; anther cylindric.—PIST. germ oblong; style simple; stigmas two.—PER. none; seeds solitary; receptacle flat.
- Species.* The species are mostly annuals, as—*Bidens tripartita*, seu *Cannabina aquatica*, Trifid Water-Hemp, Agrimony, or Bur-Marygold.—*Bidens cernua*, *Cannabina*, seu *Eupatorium*, &c. Drooping Water-Hemp, Agrimony, or Bur-Marygold.—*Bidens Chinensis*, seu *Agrimonia Molluca*, &c.; but some are perennials, as the—*Bidens heterophylla*, *Sambucefolia*, &c.; and the—*Bidens frutescens* is a shrub.
- BIDENTA'LES (*Ant.*) priests; so named among the Romans, whose office it was to consecrate any place that had been struck by a thunderbolt, or by lightning: this ceremony was performed by the sacrifice of a sheep *bidens*, i. e. two years old, or having two teeth longer than the rest.
- BIDON (*Com.*) a liquid measure containing about five pints

of Paris, i. e. about five quarts English wine measure. It is seldom used but among ships' crews.

- BIDUANA** (*Archæol.*) a fasting for the space of two days.
- BIENNIALS** (*Bot.*) or Biennial Plants; those plants which endure for two years, and then perish. The roots and leaves of biennials are produced in the first year, and in the second year they flower.
- BIESTINGS** (*Nat.*) the first milk taken from a cow after calving, which is thick, and of a yellow colour.
- BIFA'RIOUS** (*Bot.*) pointing two ways; an epithet for the leaves; *folia bifaria*, leaves coming out only on opposite sides of a branch.—*Bifariously hairy* is also applied to the stem or branch when the hairs between any two joints come out on the front and back.
- BIFEROUS plants** (*Bot.*) those which bear twice a year, as is common in hot climates.
- BIFID** (*Bot.*) *bifidus*, cleft, or cloven into two, an epithet for the leaf; the perianth, as in *Utricularia*; the anther, as in the Grasses; the stigma; the strap; the filament; the tendril; and the teeth; and the style.
- BIFLO'ROUS** (*Bot.*) *biflorus*, two-flowered; an epithet for the ear, the peduncle, and the spathe.
- BIFORA** (*Bot.*) the name for a class of plants, according to Camellus, having a pericarp with two valves.
- BIFRONS** (*Ant.*) double-headed, or double-faced, an epithet for Janus.
- to **BIFURCATE** (*Anat.*) to divide into branches, as nerves and vessels are said to do; thus the bifurcation of the aorta, &c.
- BIGA** (*Ant.*) a cart or chariot drawn with two horses, but properly a cart with two wheels, and in our ancient records any waggon or wain. *Plin.* l. 7, c. 56; *Mon. Angl.*
- BIGAMY** (*Law*) or a double marriage; marrying two females one after another, both of which were virgins, or the one a virgin and the other a widow, which incapacitated a man for holy orders, according to a canon at Lyons, A. D. 1247. *Stat.* 4. *Ed.* 1.—*Bigamy*, in the civil law, is the having a plurality of wives or husbands, which is felony. 3 *Inst.* *Stat.* 1. *Jac.* 1.
- BIGARELLA** (*Bot.*) a species of the *Prunus* of Linnæus.
- BIGARIUS** (*Ant.*) the charioteer of a biga, or two-wheeled chariot, as we learn from an inscription at Rome. **FLORUS. EGO. HICJACEO. BIGARIUS. INFANS. QUI. CITO. DUM. CUIPO. CURRUS. CITO. DECIDI. AD. UMBRAS. JANUARIUS. ALUMNO. DULCIS. S.** *Ferret. Mus. Lapid.* l. 4.
- BIGA'STER** (*Anat.*) from *bis* and *ἄστρον*, *venter*, double-bellied; an epithet for muscles.
- BIGA'TI** (*Ant.*) money or coin stamped with the figure of a biga, or two-wheeled chariot. *Liv.* l. 23, c. 15, &c.; *Plin.* l. 33, c. 3; *Tacit. de Germ.* c. 5.
- BIGEMINATE** (*Bot.*) *bigeminatus*, or *bigeminus*, twin-forked; according to Withering, an epithet for a leaf; *folium bigeminum*, a decompound leaf, having a dichotomous or forked petiole, with several folioles or leaflets at the end of each division.
- BIGHT** (*Mar.*) from the Sax. *bygan*, to bend; the double part of a rope when it is folded, in contradistinction from the end, as "Her anchor hooked the bight of our cable," i. e. caught any part of it between the ends. "The bight of his cable has swept our anchor;" the double part of another ship's cable, as she ranged about, has entangled itself with our cable.
- BIGHT** (*Geog.*) a small bay between two points of land.
- BIGHT** (*Man.*) the inward bent of the chambrel; also the bent of the fore knees.
- BIGNONIA** (*Bot.*) a genus of plants, named by Tournefort after the Abbé Bignon, librarian to Lewis XIV., Class 14 *Didyhamia*, Order 2 *Angiosperma*.
Generic Characters. CAL. perianth one-leaved.—COR. mo-

nopetalous.—STAM. filaments four; anthers reflex.—PIST. germ oblong; style filiform; stigma capitate.—PER. silique two-celled; seeds very many.

- Species.* The species are shrubs, as—*Bignonia tomentosa*, seu *Too*, seu *Kiri*, &c.—*Bignonia sempervirens*, *Gelseminum*, *Lasminum*, seu *Syringo*, &c. Carolina Yellow Jasmine.—*Bignonia clematis*, Four-leaved Trumpet-Flower.—*Bignonia pentaphylla*, seu *Guari-paraba*, Hairy five-leaved Trumpet-flower.—*Bignonia Leucoxydon*, *Leucoxydon*, seu *Nerio*, &c. Smooth five-leaved Trumpet-flower, White Wood, or Tulip-Flower, &c. &c. *Tournef. Instit.*
- BIHAI** (*Bot.*) the *Strelitzia regina* of Linnæus.
- BIHYDRO'GURET** of carbon (*Chem.*) a gaseous substance, compounded of hydrogen and carbon.
- BIJORKNA** (*Ich.*) a species of the *Cyprinus* of Linnæus.
- BIS** (*Com.*) a weight and measure in the East Indies.
- BIJUGOUS** (*Bot.*) *bijugus*, from *bis* and *jugum*, yoked or coupled side by side: an epithet for a leaf; *folium bijugum*, a pinnate leaf, having two pairs of leaflets. *Linn. Philos. Botan.*
- BILA'BIATE** (*Bot.*) *bilabiatus*, two lipped; an epithet for the corolla and perianth; *corolla bilabiata*, a corolla, having two segments or lips.
- BILAD'EN** (*Med.*) steel, or rather iron.
- BILAGINES** (*Law*) bye-laws of corporations, &c.
- BILAMMELLATE** (*Bot.*) *bilammellatus*; an epithet for the stigma; as *stigma bilamellatum*, a stigma in the form of a flattened sphere longitudinally bifid. *Linn. Philos. Botan.*
- BILA'N** (*Com.*) French for a book, in which bankers and merchants in France write their active and passive debts.
- BILA'NCIIS deferendis** (*Law*) a writ directed to a corporation for the carrying of weights to a particular haven, there to weigh the wool that was licensed to be exported. *Reg. Orig.* 270.
- BILANDER** (*Mar.*) a small merchant vessel with two masts.
- BILA'NUS** (*Bot.*) the *Crateva Marmelos* of Linnæus.
- BILAW** (*Law*) vide *Biscot*.
- BILBO** (*Mil.*) the former name of a rapier or small sword.
- BILBOES** (*Mar.*) long bars or bolts of iron with which the feet of offenders at sea are confined: the irons are more or less ponderous, according to the magnitude of the offence.
- BILBOQUETS** (*Mil.*) a French term for small pieces of stone which have been sawed from the block, and laid up in store.
- BILE** (*Med.*) *Bilis*, *χολη*, is supposed to be derived from *bis* and *lis*, double strife, because it is supposed to be the principal cause of disputes; a bitter fluid, secreted in the glandular substance of the liver. There are different sorts, according to the colour and state of the fluid, as Pale or Yellow Bile, which Hippocrates calls simply *χολη*; Black Bile, *χολη μέλαινα*, a thick black humour, or bile torrefied beyond measure. *Arct. de Caus. et Sign. Morb. acut.* l. 1, c. 15; *Ruf. Ephes. de Appell. Corp. hum.* l. 1, c. 36; *Gal. Comm.* 3 in *Hippocrat. de Rat. vict. in acut. Morb.*; *Act. Tetrab.* 3, serm. 4, c. 28; *Gorr. Defn. Med.*; *Foes. Econom. Hippocrat.*
- Bile is now distinguished by the names of *hepatic* and *cystic Bile*.—*Hepatic bile* is that which flows from the liver into the duodenum. This is thin and of a pale yellow colour.—*Cystic bile*, that which regurgitates from the hepatic duct into the gall-bladder, where it becomes thicker and more acid.
- BILE** (*Chem.*) the constituent parts of bile are water, a resinous and albuminous principle, soda in its caustic state, and phosphate of lime.
- BILGE** (*Mar.*) from the Saxon *bilg*, the belly. 1. That

part of the floor of a ship on which it would rest if laid on the ground. 2. The largest circumference of a cask, or that which extends round by the bung hole.—*Bilge water*, that water which, by reason of a ship's flat bottom, remains in the bilge, instead of going into the well.

BILGED (*Mar.*) the state of a vessel which, by reason of its striking on a rock, or otherwise, has its bilge fractured or staved in.

BILIARY ducts (*Anat.*) *Ductus biliosi*, small canals which convey the bile out of the liver into the hepatic duct, which is formed of these canals, into one trunk.

BILIARIS calculus (*Med.*) Gall-stone. [vide *Calculus*]

BILIMBI (*Bot.*) a tree of Malabar; the *Averrhoa biligubri* of Linnæus.

BILIOUS (*Med.*) *biliosus*; an epithet for any disorders arising from too copious a secretion of the bile, a bilious fever, a bilious colic, a bilious habit, &c.

BILIS (*Med.*) vide *Bile*.—*Bilis atra*, black bile, which was supposed to be the cause of melancholy.

BILL (*Mar.*) the point or extremity of the flook of an anchor; also, the ends of a compass or knee timber.

BILL (*Law*) a declaration in writing, expressing the grievance or wrong the plaintiff has suffered from the defendant. 3 *Inst.* 30.—*Bill in Chancery* is a bill filed in Chancery.—*Bill of review*, a bill for the rehearsal of any cause, an error of judgment appearing on the face of the decree.—*True bill*, or *billa vera*, is a presentment or indictment, which, in a criminal cause, a grand jury finds to be true, and endorses accordingly.—*Bill of debt*, a common engagement for money given by one man to another, which is either a *penal bill* having a penalty attached to it, or it is a *single bill*, without any penalty, which is equivalent to a bond. *West Symbol*, l. 2, sect 1 & 6.—*Bill of exceptions* to evidence, is a sort of appeal put in writing, *sedente curia*, in the presence of the judge who tried the cause, and signed by the counsel on each side. It is then signed by the judge, when there goes out a *scire facias* to the same judge, *ad cognoscendum scriptum*.—*Bill in Parliament*, an instrument drawn up by any member, and presented to Parliament for its approbation or rejection. After it has gone through the two houses, and passed the Royal assent, it has the force of a law.—*Bill of Middlesex*, vide *Process*.—*Bill of rights*, a statute passed in the reign of William and Mary; so called because it declared the true rights of British subjects. *W. & M. stat.* 2, c. 2.

BILL of exchange (*Com.*) a note ordering the payment of a sum of money to a person in a given place, in consideration of value received. This bill, when signed by responsible persons, is negotiable. The person who draws up the bill is called the *drawer*, he to whom it is addressed the *drawee*; and when he undertakes to pay the amount, which he does by writing the word *accepted*, signed with his name, he is then called the *acceptor*. The person to whom it is ordered to be paid is called the *payee*, and when he indorses his name he is the *indorser*; if he appoint another to receive the money, that person is, in respect to himself, the *indorsee*. He who is in possession of the bill is called the *holder*. A bill that is to be paid whenever it is presented is called *payable at sight*; sometimes it is payable at so many days after sight, and sometimes after a certain interval from the given date. *Usance* is the time of one, two, or three months after the day of the date of the bill, according to the custom of the place between which the exchanges run. *Usance* may be either double, treble, or half. When the time is limited, three days are added to the term specified in the bill, which are called *days of Grace*.

Bills are moreover distinguished into *foreign* and *inland*, the first of which pass from one country to another, and the latter between persons residing in the same country.

A bill when presented for payment, and not *taken up*, i. e. payment refused, is said to be *dishonoured*. This refusal is noted on the back of the bill by the notary, which is called simply *noting*, and afterwards it is *protested*, i. e. a declaration is signed by the notary, signifying the acceptance of the bills and refusal of payment.—*Bill of credit*. [vide *Letter*]

Bill is also the name of several other documents employed in trade, as—*Bill of lading*, or *invoice*, a deed signed by the master of a ship, by which he acknowledges the receipt of the merchant's goods, and obliges himself to deliver the same at the place to which they are consigned.—*Bill of parcels*, a particular account given by the seller to the buyer of the sorts and prices of goods bought.—*Bill of sale*, a deed given by a person borrowing a sum of money, and delivering goods as a security to the lender.—*Bill of stores*, a licence granted at the Custom-House to merchants to carry stores and provisions necessary for their voyage custom free.—*Bill of sufferance*, a licence granted to trade from one English port to another without paying custom.—*Bill of the play*, an account of the performance that is to be exhibited at the theatre at any time; and also of the performers who are to take part in it.—*Bill of fare*, an account of the provisions that are in season, and of the dishes that are prepared for an entertainment.

BILLA vera (*Law*) i. e. true bill; the words of endorsement used by the Grand Jury who find any bill to be true.

BILLAGE (*Mar.*) the breadth of a floor of a ship when she lies aground.

BILLARD (*Cook.*) an imperfect or bastard capon.

BILLET (*Com.*) a diminutive of *bill*; a log of wood for fuel.—*Billet-wood*, small wood, sold in billets, which, according to *statute 43 Eliz.* must be three feet four inches long.—*Billet of gold* is the same as *wedge* or *ingot*. *Stat.* 27, *Eliz.*

BILLET (*Mil.*) a ticket for quartering soldiers.

BILLET (*Her.*) a bearing in form of an oblong square, supposed to represent cloth of gold, as in the annexed figure. "*Argent*, a chevron, between three billets, *gules*, by the name of *Kelly*, of *Devonshire*." Guillim thinks that billets represent *billet-doux*, but, according to Smithurst, they signify one employed in embassies.

TO BILLET (*Mil.*) to quarter soldiers in houses by means of billets.

BILLET-DOUX (*Lit.*) a short love letter sent to a sweetheart or mistress.

BILLETY (*Her.*) or *billette*, an epithet used in blazoning, when the billets exceed the number of ten.

BILLIARDS (*Sport.*) a game; so called, from *balyard*, the stick with which the ivory balls are struck. It is played upon a table, covered with baize, and furnished with holes, called *hazards* or *pockets*, into which, according to the rules of the game, each party seeks to drive his antagonist.

BILLINGBING (*Bot.*) the same as *Bilimbi*.

BILLION (*Arith.*) i. e. bimillion; a million millions.

BILLON (*Com.*) a sort of base metal, either gold or silver, in the mixture of which copper predominates.

BILLOT (*Coin.*) or bills, bullion of gold or silver in the mass before it is coined.

BILLS of mortality (*Law*) annual registers of the deaths and burials which take place in the different parishes in and near London. These bills were first commenced in 1592, during the period of a great pestilence, when they included 109 parishes. The number has since been increased to 146.

BILLUS (*Ant.*) a bill stock or staff, which was the only weapon in use for servants and watchmen.

BILOBATE (*Bot.*) *bilobus*, two-lobed; an epithet for a leaf; *folium bilobum*, a leaf divided into two lobes.

BILOCULAR (*Bot.*) *bilocularis*, or two-celled; an epithet applied to the anther, the berry, the capsule, the leaf, the nut, the pumpkin, and the seed.

BIMEDIAL (*Geom.*) *δύο μέσαι*, the sum of two medials, as when two medials, commensurable only in power, and containing a rational rectangle, be compounded, the whole shall be irrational with respect to either of the two parts. This Euclid calls the *first medial*, in distinction from the second, when that rectangle is a medial. *Eucl.* 1. 10, prop. 38, 39.

BINARY (*Arith.*) an epithet for what appertains to the number of two.—*Binary arithmetic*, or *binary scale*, is that arithmetic in which two figures only are used; namely, 0 and 1; the cypher multiplying by 2 instead of 10; thus, in the number 1111, the first figure on the right hand, according to the denary scale, means simple unity; the second 10; the third 100, or 10^2 ; the fourth 1000, or 10^3 ; but, according to the binary scale, the second figure is 2, or 2^1 ; the third 2^2 , or 4; the fourth 2^3 , or 8; consequently,

1111, in the first case, = $10^3 + 10^2 + 10^1 + 1 = 2345$

1111, in the second case, = $2^3 + 2^2 + 2^1 + 1 = 15$

BINARY measure (*Mus.*) a measure in which you beat equally, i. e. the time of rising is equal to the time of falling.

BINATE (*Bot.*) an epithet either for a leaf, or a peduncle; *folium binatum*, a leaf having a simple petiole connecting two leaflets at the top of it, which is a sort of digitate leaf; *binati pedunculi*, peduncles in pairs, as in *Capraria*.

BINDING (*Archit.*) an epithet for the joists in a floor, into which the trimmers of staircases and chimney walls are framed.

BINDING (*Mar.*) the iron wrought round the dead eyes.—*Binding strakes*, two strakes of oak in the deck to bind it well together.

BINDING notes (*Mus.*) notes held together by ties or curves.

BINDING (*Falc.*) a tiring, or when a hawk seizes.

BINDING of books (*Mech.*) the art of doing up books in leather.

BIND-WEED (*Bot.*) a flower better known by its botanical name of *Convolvulus*.—Rough Bind-Weed, the *Smilax aspera* of Linnæus.

BIND-WITH (*Bot.*) a plant better known by its botanical name of *Clematis*.

BINN (*Husband.*) a large chest to put corn in.

BINNACLE (*Mar.*) a wooden case containing the compasses, log-glasses, watch-glasses, and lights to show the compass at night. The binacle consists of three apartments with sliding shutters; the two side ones, *a*, *b*, have always a compass in each, *d*, to direct the way, while the middle division, *c*, has a lamp, or candle, with a pane of glass on either side to throw a light upon the compass in the night.

BINNARIUM (*Archæol.*) a pond, or stew for keeping fish in.

BINO'CLE telescope (*Per.*) from *bini* and *oculi*, or binocular telescope; a double perspective glass to see a distant object with both eyes at once.

BINO'CLUS (*Surg.*) a bandage for retaining the dressings upon both eyes.

BINO'MIAL (*Algeb.*) from *bis*, twice, and *nomen*, a name; a term introduced by Recorde to denote any quantity consisting of two names, or terms connected together by the signs +; or —, as $a + b$, or $a - c$. This epithet has since been applied to different things, as—*Binomial curve*,

a curve whose ordinate is expressed by a binomial quantity, as $y = x^m \sqrt{b + d x^n}$.—*Binominal equation*, an equation consisting of two terms, $x^n - 1 = 0$.—*Imaginary*, or *impossible binomial*, a binomial expression of which one of the branches is imaginary, as $a \pm \sqrt{-b}$, or $-a \pm \sqrt{-b}$.—*Binomial surd*, is the same as *Apotome*. [vide *Apotome*]—*Binomial theorem*, a general algebraic expression or formula, by which any power, or root of a quantity, is expanded into a series; this is called the Newtonian Theorem, from Sir Isaac Newton, its discoverer. By the help of this theorem a binomial quantity is readily raised to any given power without the trouble of continued

involution, as, for example, $(a + b)^3 = a^3 + \frac{3}{1} a^2 b +$

$\frac{3.2}{1.2} a b^2 + \frac{3.2.1}{1.2.3} b^3$, or $(a + b)^3 = a^3 + 3 a^2 b + 3 a b^2 + b^3$;

and, in its most general form, $(a + b)^n = a^n + \frac{n}{1} a^{n-1} b +$

$\frac{a(n-2)}{1.2} a^{n-2} b^2 + n \frac{(n-1)(n-2)}{1.2.3} a^{n-3} b^3$, &c. [vide

Algebra] *Record. Whet. of Wit.; Newt. Commerc. Epist.*

BINSECA (*Med.*) mental sickness, or a disordered imagination.

BINTA'MBARA (*Bot.*) the *Convolvulus pes capræ* of Linnæus.

BIO'GRAPHY (*Lit.*) from *βίος*, life, and *γράφω*, to write; the writing the lives of eminent persons.

BIOLY'CHNIUM (*Med.*) *βιολύχγιον*, from *βίος* and *λυχγιόν*, a lamp; 1. The vital flame, the lamp of life. 2. A secret preparation of human blood.

BIOS (*Med.*) a Greek term signifying literally life, is taken sometimes in the sense of *victus*, food. *Castel. Lex. Med.*

BIO'TE (*Med.*) *βιοτή*, the time of continuance of aliment in the body. *Gal. apud Castel. Lex. Med.*

BIO'TH'NATOS (*Ant.*) *βιοθάνατος*, mors, from *βία*, force, and *θάνατος*, death; persons dying a violent death, particularly by suicide; hence Ordericus Vitalis, speaking of William Rufus, tells us that the bishops, considering his wicked life and bad exit, adjudged him "ecclesiastica veluti biothanetum absolutione indignum." *Lib.* 10, p. 782.

BIO'TICUM metrum (*Ant.*) *μέτρον βιωτικόν*, a measure where-by we buy and sell whatever is necessary for our use.

BI'OVAC (*Mil.*) *bivouac*, from *bis*, double, and the German *Wache*, a guard; an extraordinary guard kept by the whole army which remain under arms all the night to prevent a surprize; whence "To bivouac" is to remain all night under arms; and "To raise the bivouac," to order the men to return to their tents some time after break of day.

BIPARTIENT (*Mat.*) *bipartiens*, from *bis* and *partior*, to divide, dividing into two; an epithet for a number that divides another into two equal parts without a remainder.

BIPARTITE (*Bot.*) *bipartitus*, divided into two; an epithet for the corolla, the leaf, and the perianth, when they are divided into two parts at the base.

BIPÈS (*Ant.*) a biped, or two footed animal.

BIPINNATE (*Bot.*) doubly pinnate, or winged, an epithet for a leaf; *folium bipinnatum*, a common petiole, having pinnate leaves on each side of it, as in *Anemone pulsatilla*.

BIPINNATIFID (*Bot.*) doubly pinnatifid, an epithet for the leaf and the frons; *folium bipinnatifidum*, a petiole having pinnatifid leaves on each side of it; *frons bipinnatifida*, a bipinnated frond, having the foliola cleft half-way down.

BIPINNE'LLA (*Bot.*) the same as *Pimpinella*.

BIQUADRATE (*Algeb.*) or *biquadratic*, i. e. the square-squared, or the fourth power of any quantity, as 16, which

is the biquadrate of 2, thus $2 \times 2 \times 2 \times 2 = 16$.—*Biquadrate root*, the root of a biquadratic power, as 2, the biquadrate root of 16.—*Biquadratic equation*, an equation of the fourth degree in which the unknown quantity rises to the fourth power, as $x^4 + a x^3 + b x^2 + c x + d = 0$, which is a biquadratic equation having the unknown quantity, x , raised to the fourth degree or power. [vide *Algebra*]

BIQUADRATICS (*Algeb.*) that part of an equation in which there are biquadratic powers. [vide *Biquadrate*]

BIQUIENTILE (*Astron.*) an aspect, formed by Kepler, consisting of two-fifths of a whole circle, or 140 degrees distance.

BIRCH-TREE (*Bot.*) a well-known tree, the *Betula* of Linnæus, which is commonly raised from roots and suckers. The timber, which is of an inferior quality, is used for hoops, and the like.

BIRD (*Orn.*) vide *Aves*, and *Ornithology*.—Bird of Paradise, the *Paradisea* of Linnæus, a bird of New Guinea, the bill of which is covered with a belt of downy feathers.

BIRD-BOLT (*Ich.*) a delicate kind of codfish, otherwise called Burbot.

BIRD-BOLT (*Her.*) a small arrow with three heads, which was discharged at birds from a cross. This arrow is borne in coat armour as in the annexed figure. "He beareth argent three bird-bolts sable, by the name of Ridsen. These were the arms of Tristram Ridsen, esq. the celebrated antiquary. As bird-bolts are borne with two or more heads, the number of heads must always be specified.

BIRD-CALL (*Sport.*) a whistle or pipe to decoy birds.—*Bird-lime*, a glutinous matter made of the bark of holly, which being spread upon twigs entangles the feet of birds that light upon it.

BIRD-CHERRY (*Bot.*) a shrub, the *Prunus padus* of Linnæus.—Bird Pepper, a shrub, the *Capsicum baccatum*.

BIRDING-PIECE (*Sport.*) a fowling-piece or gun for shooting birds.

BIRD'S-EYE (*Bot.*) an annual, the *Adonis autumnalis* of Linnæus.—Bird's-Foot, an annual, the *Ornithopus*.—Bird's-foot Trefoil, an herbaceous root, more perennial than otherwise, the *Lotus*.—Bird's-Tongue, a perennial, the *Senecio paludosus*.

BIREMIS (*Ant.*) a galley with two benches of oars. *Cic. ad Attic.* l. 16, ep. 4; *Hirt. de Bell. Alex.* c. 47; *Plin.* l. 7, c. 56.

BIRG'NDER (*Orn.*) a sort of wild goose.

BIRE'THRUS (*Ant.*) the same as *Cucupha*.

BIRLAW (*Law*) or Bye-law, a law in Scotland, established between neighbours by common consent.—*Birlaw-court*, a court in which cognizance is taken of complaints betwixt neighbours.—*Birlaw-men*, men who are chosen to be judges in the Birlaw court, or arbitrators betwixt neighbours.

BIRLET (*Archæol.*) a coif or hood.

BIRSEN (*Med.*) an inflammation in the breast.

BIRT (*Ich.*) a fish of the turbot kind.

BIRTH (*Mar.*) 1. The station in which a ship rides at anchor: "She is in a good birth," that is, in a good anchoring-ground. 2. The room where any number of the ship's company mess or reside.

BIRTH-DAY (*Chron.*) the day on which a person is born, or the anniversary of that day.

BIRTH-RIGHT (*Law*) honour or estate belonging to a person by right of his birth.

BIRTH-WORT (*Bot.*) a perennial, the *Aristolochia* of Linnæus.

TO BIRTH a ship's company (*Mar.*) to allot to each man the space in which his hammock is to be slung.

BIRTHING (*Mar.*) the raising the sides of the ship.

BIS (*Com.*) twice; used in accounts to denote duplicates of folios or accounts.

BIS (*Mus.*) in a composition, signifies that the bars included within the same curve is to be sung or played twice successively.

BISA (*Com.*) *biza*, or *bize*, a coin of Pegu, equal to half a ducat, or one shilling and eightpence.

BISACUTUS (*Mil.*) two-edged; an epithet for an iron weapon.

BISANTIUM (*Num.*) besant, or besantine, a gold coin of Byzantium current in England, equal to half a ducain silver, or two shillings sterling.

BISCOCTUS (*Ant.*) an epithet for *panis*, bread, that is, twice baked, whence comes the word biscuit.

BIS-SCOT (*Ant.*) i. e. a double scot, or fine, for every perch of land, in default of not repairing banks, causeways, &c. on a day assigned, the first fine being called bilaw.

BISCUIT (*Cook.*) *biscocutus*; twice or much baked bread.—*Sea Biscuit*, a sort of unfermented bread, more baked than any other, and fitted to last good for a year at sea.

BISCUTELLA (*Bot.*) from *bis* and *scutella*, diminutive of *scutum*, a shield, the fruit resembling a double shield; Buckler Mustard, a genus of plants, Class 15 *Titradynamia*, Order 1 *Siliquosa*.

Generic Characters. CAL. *perianth* four-leaved.—COR. four-petalled.—STAM. *filaments* six; *anthers* simple.—PIST. *germ* compressed; *style* simple; *stigma* obtuse.—PER. *silicle* erect; *seeds* solitary.

Species. The species are either annuals, perennials, or shrubs. Among the annuals are the—*Biscutella auriculata*, *Thlaspidium*, &c. *Leuconium*, &c. seu *Jondrabas*, &c. Earpoddled Buckler Mustard.—*Biscutella Apula* *Thlaspidium*, &c.; *Thlaspi biscutatatum*, &c. *Thlaspi clypeatum*, seu *Jondraba*, &c. Spear-leaved Buckler Mustard, &c. Among the shrubs or perennials are the—*Biscutella sempervirens*, *Biscutella lævigata*, &c. &c.

BISDIPASON (*Mus.*) a name among the ancients for a double octave.

BISECTION (*Math.*) from *bis* and *seco*, to cut; the cutting any quantity, as a line or an angle, into two equal parts.

BISEMATUM (*Min.*) Plumbum.

BISERIALIS (*Bot.*) two-rowed; an epithet for the *Lamelle* and *Sorus*.—*Lamelle biserialis*, gills, which consist of a long and a short gill alternate.—*Sorus biserialis*, the moss which has its seed capsules run in two close lines, as in *Danæa* and *Angiopteris*.

BISERULA (*Bot.*) Hatchet Vetch, a genus of plants, Class 17 *Diadelphia*, Order 4 *Decandria*.

Generic Characters. CAL. *perianth* one-leaved.—COR. *papilionaceous*.—STAM. *filaments* diadelphous; *anthers* small.—PIST. *germ* oblong; *style* subulate; *stigma* simple.—PER. *legume* large; *seeds* very many.

Species. The only species is the *Bisserula pelecinus astragalus*, seu *Lunaria*, &c. Bastard Hatchet Vetch, an annual, native of the South of Europe.

BISHOP (*Ant.*) vide *Episcopus*.

BISHOP (*Ecc.*) a dignitary in the Christian Church who presides over the clergy within a certain district, called his *diocese*. The word is derived from the Greek *ἐπίσκοπος*, signifying literally an overseer, and was at first indiscriminately applied to those who presided over a single church, and to those who had many churches: but bishops were from the beginning a superior order of clergy, who became the successors of the apostles both in their office and authority. The bishop is called by Justin Martyr *πρεσβυτης*, by St. Cyprian the *summus sacerdos*, in distinction from *presbyteri et diaconi*, priests and deacons, who might baptize, but not without permission from the bishop, *ob ecclesiæ honorem*. *Clem. Constit. Apostol.* l. 2, c. 1, &c.; *Ignat. in Epist. ad Philadelph.*; *Tertull. de Baptism.* c. 17; *S. Cyprian. Epist.* 66; *S. Chrysostom. Hom.* 10, &c.; *S. Au-*

gust. de Civ. Dei, l. 19, c. 19; *S. Hieron. Epist. ad Evangelium*; *Socrat. Hist. Eccles.*; *D. Gregor. Hom.* 26, in *Evang.* &c.

Bishops are *suffragans* or *assistants* to the archbishop, who is the chief of the clergy in his *Province*. The archbishop is said to be *enthroned*, the bishop to be *installed*; the titles of the archbishop are, *Your Grace* and *Most Reverend Father in God by Divine Providence*; those of a bishop, *My Lord*, or *Right Reverend Father in God by Divine Permission*. An archbishop is *created*, and consecrated by another archbishop, and two bishops: according to a statute in the reign of Henry VIII. a bishop is *elected* by the King's *congé d'élire*, or licence to elect the person named by the King, directed to the Dean and Chapter.—*Suffragan* or *titular bishop*, one who is subordinate or assistant to the bishop or archbishop by whom he is consecrated, to execute such power, jurisdiction, and authority, and to receive such profits, as are specified in his commission.

BISHOPPING (*Man.*) a trick among horsedealers of attempting to pass off an old horse for a young one, by operating on his mouth.

BISHOPRIC (*Ecc.*) the diocese, or district, over which a bishop presides.

BISHOPS-WEED (*Bot.*) an annual, the *Ammi* of Linnæus.

BISLIQUOUS (*Bot.*) an epithet for plants contained in two distinct pods.

BISK (*Sport.*) in French *bisque*; odds at the play of Tennis, a stroke allowed to the weakest player.

BISK (*Cook.*) a pottage made of quails, capons, &c.

BISLINGUA (*Bot.*) the *Hypoglossum* of Linnæus.

BISMA'LVIA (*Bot.*) another name for the *Althæa*.

BISMIA (*Mus.*) an epithet for piano forte pieces, in which both hands are alternately employed upon the same melody.

BISMI'LLAH (*Theol.*) the term with which the Mahometans begin their Koran, compounded of *bi*, in, *ism*, the name, and *Allah*, God.

BISMUTH, *salts of* (*Chem.*) salts formed by the mixture of bismuth, the base, with some acid, as the nitrate of bismuth, the sulphate of bismuth, &c.

BISMUTUM (*Min.*) *Bismuth*, a genus of metals.
Generic Characters. Reddish-white, soft, brittle, specific gravity 9.822, easily melting, and soluble in acids.

Species. The species are—*Bismutum nativum*, seu *Wismutum nativum*.—*Bismutum ochraceum*, seu *Wismutum pulverulentum*, Flowers of Bismuth, or Bismuth ochre.—*Bismutum sulphuratum*, seu *Wismutum sulphure*, Sulphurated Bismuth, or Sulphuret of Bismuth.—*Bismutum martiale*, seu *Wismutum lamellis cuneatis*, Martial sulphurized Bismuth.

BISON (*Zool.*) a variety of the ox, or *Bos taurus* of Linnæus, which has its horns bent forwards, back gibbous, and mane long. *Plin.* l. 8, c. 15; *Gess. de Animal.*; *Aldrov. de Quad.*

BISSAC (*Mil.*) French for a wallet, or sack, which opens down the middle.

BISSEXTILE (*Chron.*) *bissextilis*, or *bisextus*, Leap-Year; a name given by the ancient Romans to that year in which the intercalation of a day took place, by reckoning the sixth of the Calends of March, *i. e.* the 24th of February, twice. This intercalation, which happens every fourth year, was made by Julius Cæsar to compensate for the hours which the sun takes up in his course above 365 days. It is called *intercalaris* by Pliny. *Plin. Nat. Hist.* l. 2, c. 24; *Columel.* l. 3, c. 6; *Ammian.* l. 26, c. 1; *Macrob. Saturnal.* l. 1, c. 14; *Censor de Die Nat.*

BISTA'CIUM (*Bot.*) the same as *Pistacia*.

BISTER (*Paint.*) a colour made of chimney soot boiled and diluted.

BISTORTA (*Bot.*) from *bis* and *torta*, twice twisted, or wreathed; so called from the contortion of its roots, which, medicinally applied, are powerfully astringent, and antiseptic. It is a species of the *Polygonum* of Linnæus.

BISTOURY (*Surg.*) a small knife of various forms, according to the purpose for which it is to be used.

BISUS (*Archæol.*) or *panis basius*, brown bread.

BIT (*Mar.*) vide *Bitt*.

BIT (*Carpent.*) a boring instrument, so constructed as to be taken out of the handle, which is called the stock, by means of a spring. Bits are of different kinds, as—*Shell-bits*, for boring wood.—*Centre-bits*, which form a cylindrical excavation, by turning on an axis or centre.—*Countersink bits*, for widening the upper part of a hole, &c.

BIT (*Com.*) vide *Bitt*.

TO BIT *the cable*, to put it round the bitts so as to fasten it.

BITCHEMARE (*Com.*) a kind of fish on the coast of China, which is salted and dried like cod.

TO BITE (*Mar.*) is said of the anchor when it lays hold of the ground.

TO BITE (*Print.*) is said of the frisket of a printing press when it falls upon any of the sides of the pages.

BITERNATE (*Bot.*) *i. e.* doubly ternate, an epithet for a leaf; *folium biternatum*, a petiole having three ternate leaflets, as in *Epimedium*.

BITHNIMA'LEA (*Med.*) a word coined by Dôlæus, to express the active principle presiding over the several functions of the stomach.

BITHY'NICI *tonsoris emplastrum* (*Med.*) a plaster for splenic people.

BITHYNUS (*Med.*) the name of a plaster, and a trochee.

BITT (*Mech.*) from the verb to bite; any thing that lays hold, or is laid hold of, as—*Bitt of a bridle*, the iron attached to the bridle, which is put into the horse's mouth, called otherwise the *bitt-mouth*.—*Bitt of a poker*, the part which stirs up the fire.—*Bitt of a water-mill on boats*, the piece which fastens the mills to the boats.—*Bitt of a key*, that part in which the wards are cut out.

BITT (*Mar.*) the name for two pieces of timber, in the fore part of the ship, to which the anchor cables are fastened.

BITT (*Com.*) a piece of money value $7\frac{1}{2}d.$ current at Barbadoes.

BITTACLE (*Mar.*) a frame of timber in the steerage of a ship in which the compass stands. [vide *Binnacle*]

BITTEN (*Bot.*) *Præmorsus*, an epithet for a root, a leaf, and a corolla. [vide *Præmorsus*]

BITTER (*Mar.*) the turn of the cable round the bitts; thus, a ship stopped by her cable is said to be brought up to a bitter.—*Bitter-end*, that part of the cable which is abaft the bitts, and therefore within boards when the ship rides at anchor.

BITTER almond (*Bot.*) a tree, and the fruit of the tree, the *Amygdalus communis* and *Amygdala* of Linnæus.—Bitter Cucumber, Gourd, or Apple, an annual, the *Cucumis Colocynthis*, otherwise called *Coloquintida*.—Bitter-Sweet, a perennial, the *Solanum dulcamara*.—Bitter-Vetch, a perennial, the *Orobus*.—Bitter-Wort, another name for Gentian.

BITTER-SALT (*Min.*) the *Amerum geminum* of Linnæus.—*Bitter-spar*, a species of saline stone, or calcareous salt.

BITTER principle (*Chem.*) the bitter parts of vegetable substances, which may be extracted by a chemical principle.—*Artificial bitter*, any bitter formed by the action of nitric acid on vegetable and other substances.

BITTERN (*Orn.*) or Bittour, the *Ardea* of Linnæus; a bird of the Heron kind, which is of retired habits, concealing itself in the midst of reeds and rushes in marshes. It has two kinds of notes, the one croaking, when it is disturbed; and the other bellowing, which it commences in the spring,

and ends in the autumn. There is a small sort of this bird which is distinguished by the name of the Little Bittern Heron.

BITTERN (*Med.*) a certain very bitter liquor, which drains off in the making of common salt, and is used in the preparation of Epsom salt.

BITUMEN (*Min.*) a genus of mineral substances of the class *Inflammabilia*.

Generic Characters. Easily combustible with flame; and emitting, when ignited, a strong odour; greasy to the touch.

Species. The species are the—*Bitumen Naphtha*, seu *Bitumen fluidum*, Naphtha, found principally in Persia.—*Bitumen petroleum*, Petrol, or Rock oil, liquid, but of thicker consistence than the former.—*Bitumen Maltha*, Barbadoes Tar, found floating on lakes.—*Bitumen Mumia*, Mineral Mummy, found in the clefts of rocks.—*Bitumen asphaltum*, Asphalt, or Bitumen, which was used by the ancient Egyptians for making mummies.—*Bitumen serum*, Mineral Tallow, found in Finland.—*Bitumen elasticum*, Mineral Cahoutchou, or Elastic Bitumen.—*Bitumen gagas*, jet-black, compact, and glassy.—*Bitumen Ampelites*, Bovey, or Cannel Coal, bituminous wood.—*Bitumen lithanthrax*, common coal.—*Bitumen oxygenatum*, Culm, or Stone Coal, oxygenated carbon.

BIVALVE (*Bot.*) double-valved; an epithet for the capsule, glume, indusium, and spathe, which is split into two portions, as all the siliques and the glumes in Grasses, &c.

BIVASCULA'RES (*Bot.*) from *bis et vasculum*, a little vessel; bivascular plants, a class in Hermann's system.

BIVENTER (*Anat.*) from *bis* and *venter*, the belly biventral; an epithet for a muscle with two bellies, as the *Biventer cervicis*, a muscle of the lower jaw, &c.

BIXA (*Bot.*) a genus of plants, Class 13 *Polyandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* five-toothed.—COR. double.—STAM. *filaments* numerous; *anthers* erect.—PIST. *germ* ovate; *style* filiform; *stigma* parallelly bifid.—PER. *capsule* ovate-cordate; *seeds* numerous; *receptacle* near.

Species. The only species is the—*Bixa Orellana*, *Orellana*, seu *Orellana*, *Arbor Mexicana*, *Urucu*, *Rocu Pigmentaria*, *Bixa Oviedi*, seu *Achiott*, *Arnotto*, *Arnotta*, or *Anata*, a shrub, native of America.

From the red pulp which covers the seeds of this plant is made the drug *Yerra Orellana*, *Rouco*, or *Arnotto*. [vide *Anata*]

BIZARRÒ (*Mus.*) Italian for strange or fantastical, and applied to the style of movement.

BLACCIE (*Med.*) the measles.

BLACK (*Phy.*) a colour which is supposed to be produced by the peculiar texture of bodies, which deaden, as it were, the light falling upon them, and reflect none, or very little of it, outwards towards the eye. Sir Isaac Newton considers that, for the production of black colours, the corpuscles must be less than any of those that exhibit other colours.

BLACK (*Paint.*) as a colour or dye, is of different kinds, as follow:—*Lamp black*, *smoke black*, the smoke of rosin, prepared by melting and purifying the rosin in iron vessels.—*Ivory black*, made of burnt ivory, is used in miniatures.—*Spanish black*, so called because it was first used by the Spaniards, is made of burnt cork.—*Indian ink*, made of burnt horse beans, very commonly used by painters instead of water-colours.—*Earth black*, a kind of coal which is pounded and used in fresco.—*Printer's black*, the same as printer's ink, which is frequently used by painters in washing.—*Bistre*, a colour made of chimney soot, boiled and diluted with water, with which painters wash their designs.—*Dyer's black*, one of the five simple and mother colours used in

dying, which is differently made according to the quality of the stuff to be dyed.

BLACK BOOK (*Archæol.*) vide *Liber Niger*.

BLACK BOOK (*Law*) a book kept in the Exchequer, which contains the orders of that court.—*Black maile*, a rent in the Northern counties, either of money, corn, or cattle, and paid to some person in power living on the borders, and allied to the Moss Troopers, to protect them from their robberies.

BLACK-ROD, *Usher of the* (*Her.*) the Usher of the Order of the Garter, so called because he carries a black rod with a golden lion on the top.

BLACK-HOLE (*Mil.*) a place of confinement to which soldiers are committed at the discretion of the commanding officer.

BLACK-LETTER (*Gram.*) a sort of old English alphabet. [vide *Alphabet*]

BLACK-CATTLE (*Husband.*) a name given to oxen and cows.

BLACK-BERRY (*Bot.*) the fruit of the common Bramble, or the *Rubus fruticosus* of Linnæus.

BLACKBIRD (*Orn.*) a bird, well known for its fine black colour and beautiful voice. It is the *Turdus merula* of Linnæus, which frequents ledges, sings during spring and summer, and makes its nest of moss, grass, &c.—*Black Cap*, the *Motacilla atracapilla*, a little bird about five and a half inches in length, which frequents orchards, singing very finely: it is distinguished by the black crown of its head.—*Black Cock*, or *Black Game*, a name given to the black sort of grouse.

BLACK-FISH (*Ich.*) a fish of the perch kind found in Cornwall; the *Perca nigra* in the Linnæan system.

BLACK-LEAD (*Min.*) *Plumbago*, or the *Graphites* of Linnæus; a mineral found in lead mines, which is used in making pencils. It is not fusible but by a very violent heat.

BLACKBURNIA (*Bot.*) a genus of plants, Class 4 *Tetandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* very short, four-toothed; *teeth* short, acute.—COR. *petals* four, elliptic.—STAM. *filaments* four, rather shorter than the petals.—PIST. *germ* conic; *style* filiform; *stigma* simple.

Species. The only species is the *Blackburnia pinnata*.

BLACKSTONIA (*Bot.*) the *Chlora perfoliata* of Linnæus.

BLADARIUS (*Archæol.*) a corn chandler or mealman, according to old records.

BLADDER, *urinary* (*Anat.*) vide *Urinary Bladder*.—*Bladder-Gall*, vide *Gall-Bladder*.

BLADDER, *Inflammation of* (*Med.*) vide *Cystitis*.

BLADDER (*Bot.*) *utriculus*, a distended membranaceous pericarp, as in the *Bladder Senna*.—*Bladder-Nut*, so called from its fruit being contained in a membrane inflated like a bladder. The plant which produces this fruit is a tree, the *Staphylea pinnata* of Linnæus. *Raii Hist. Plant.*—*Bladder Senna*, a shrub, the *Colutea*. It yields a papilionaceous flower, which is succeeded by pods that resemble the inflated bladder of fishes, in which are contained several kidney-shaped seeds.

BLADDERS (*Bot.*) *Vesiculæ*, or *Utriculi*, bags at the root of the *Utricularia*.

BLADE (*Bot.*) the leaf, or first sprout of a plant.

BLADE (*Mech.*) the flat part of a sword or knife, which resembles the blade of grass in shape.

BLADE-BONE (*Anat.*) the *Shoulder-Bone*, called by anatomists the *Scapula*.

BLADED (*Her.*) bearing a blade of corn, &c.; an expression in blazonry when the blade is of a different colour from the ear or fruit.

BLADHIA (*Bot.*) a genus of plants, named by Thunberg after P. J. Bladh, a Swede, Class 5 *Pentandria*, Order 1 *Monogynia*.

BLA

Generic Characters. CAL. *perianth* one-leaved.—COR. one-petalled.—STAM. *filaments* five; *anthers* heart-shaped.—PIST. *germ* superior; *style* filiform; *stigma* simple.—PER. *berry* globose; *seed* single.

Species. The species are shrubs, and natives of Japan, as *Bladhia japonica*, *foliis*, &c. seu *Sankits*, &c.—*Bladhia crispa*, *foliis*, &c. seu *Kvakits*, &c.

BLÆ'RIA (Bot.) a genus of plants, named after P. Blair, M.D. and a botanist, Class 4 *Tetrandria*, Order 1 *Monogymia*.

Generic Characters. CAL. *perianth* four-parted.—COR. monopetalous.—STAM. *filaments* four; *anthers* oblong.—PIST. *germ* four-cornered; *style* setaceous; *stigma* obtuse.—PER. *capsule* obtuse; *seeds* some roundish.

Species. The principal species are—*Blæria bricoides*, seu *Erica blæria*, &c. Heath-leaved Blæria.—*Blæria ciliaris*, *articulata*, &c.

BLÆ'SUS (Med.) a stammerer.

BLAIR (Vet.) a distemper in cattle, being a bladder full of wind and water, rising from the root of the tongue, which grows so large as to stop the breath of the animal.

BLAKE'A (Bot.) a genus of plants, named by Brown after Mr. Blake, of Antigua, Class 11 *Dodecandria*, Order 1 *Monogymia*.

Generic Characters. CAL. *perianth* of the fruit, inferior; of the flower, superior.—COR. *petals* six.—STAM. *filaments* twelve; *anthers* triangular.—PIST. *germ* inferior; *style* subulate; *stigma* acute.—PER. *capsule* obovate; *seeds* very many.

Species. The species are shrubs, and natives of South America and the West Indies.

BLA'NEA (Med.) a purging mixture; so called because it was supposed to evacuate the white phlegmatic humours.

BLANCH farm (Law) a farm where the rent is paid in silver, not in black cattle.

BLA'NCHING (Mech.) the art of making any thing white.

BLANCHING almonds (Cook.) skinning them by means of hot water.

BLANCHING (Min.) annealing, boiling, and cleansing the money that is coined, to give it the necessary lustre and brilliancy.—*Blanching* denotes also the operation of covering iron plates with a thin coat or crust of tin.

BLANCHING (Hort.) the method of whitening salads.

BLANK (Num.) from blanc, white, i. e. empty, or unfilled up; a kind of white money, value 8d. coined by Hen. V. in France; but forbidden to be current in England. 2 *Stat. Hen. 6.*

BLANK bar (Law) the same as common bar, plea in bar. [vide *Bar*]—*Blank bar*, in judicial proceedings, void spaces left by mistake, which may cause an abatement, or demurrer. *Stat. 4, Ed. 4; 20 H. 6.*—*Blank letter of Attorney*, one in which is a void space left to be filled up by the name of the person who is to act. A *blank* is also a piece of paper at the bottom of which a person has signed his name, the rest being void, commonly entrusted to arbiters or friends for the settlement of a dispute.

BLANK (Com.) a void space in a merchant's books, which in a court of law is suspicious.—*Blank endorsement*, when one person writes his name on a bill, leaving an empty space sufficient for writing either an order or a receipt.

BLANK verse (Poet.) that which has no rhymes.

BLANK (Archit.) an epithet for a window or door which is made to appear like a real window or door.

BLA'NKETS (Mil.) combustibles made of coarse brown paper, steeped in nitre, dried, and then dipped again in tallow, resin, and sulphur. These blankets are used in freships.

BLANKETS (Print.) woollen cloths to lay between the tympan of a printing press, in order to produce a fair impression of the letter.

BLANKET (Bot.) in French *Blanquet*, a large pear, approach-

BLE

ing to a round form. *Pyrus sativa fructu æstivo albido majori. Tournef. Instit.*

BLANQUILLE (Num.) a small coin current in Morocco on the coast of Barbary, equal in value to about three halfpence English.

BLAPS (Ent.) a division of the genus *Pimelia*, according to Fabricius, comprehending the insects of this tribe which have the feelers clavate.

BLAPSIGONIA (Nat.) a disease in bees that do not breed.

BLAPTISE'CU'LA (Bot.) a name for the Cornbottle, because it turns the edge of the mowers.

BLARE (Com.) a coin in Berne, a canton of Switzerland, equal to a penny.

BLAS (Alch.) the force of motion according to Van Helmont.

BLA'SA (Bot.) an Indian tree, the fruit of which is powdered and used to destroy worms.

BLA'SIA (Bot.) a genus of plants, Class *Cryptogamia*, Order *Algæ*.

BLAST (Nat.) the stroke of a malignant planet, the infection of any thing pestilential, or the blight of corn from a pestilential wind.

to BLAST (Min.) is to blow up mines by the force of gunpowder.

BLASTE'MA (Med.) βλάστημα, a bud; is used by Hippocrates for a cutaneous pimple, resembling a bud. *Foes. Econom. Hippocrat.*

BLA'STINGS (Nat.) winds and frosts immediately succeeding rain, which are destructive to the fruits.

BLA'TTA (Ant.) a sort of worm which consumes books and garments.

Martial l. 6, epig. 60.

Quam multi lineas pascent blattasque deserti.

Horat. l. 2, sat. 3, v. 119.

cui stragula vestis,

Blattarum ac tinearum epule, putrescat in arcâ?

Plin. l. 11, c. 8.

BLATTA Byzantina (Nat.) or *blattca*, θρόμβος αίματος, con- creted blood, particularly that of the purple-fish. *Paul. ex Fest.; Serv. in Aeneid., &c.*

BLATTA (Ent.) Cock-Roach; a genus of animals, Class *Insecta*, Order *Hemiptera*.

Generic Characters. Head inflected.—*Antennæ* setaceous; feelers unequal.—*Wing-cases* and *wings* smooth.—*Thorax* rather flat.—*Legs* formed for running.—*Abdomen* terminating in four spines or bristles.

Species. The principal species which are most known are the—*Blatta gigantea*, the largest of the genus, nearly equal to the egg of an hen in size, native of the warmer parts of Asia, Africa, and South America.—*Blatta orientalis*, the Black Beetle, an insect naturalized in Europe.—*Blatta Americana*, American Cockroach, of a light chesnut colour, common in the warmer parts of America and the West Indies.—*Blatta heteroclitia*, shorter and rounder than the rest, and further distinguished by having three spots on one wing-sheath, and four on the other.

BLATTA'RIA (Bot.) the *Lysimachia vulgaris* of Linnæus.

BLA'ZON (Her.) comes from the German *blasen*, to blow; because a trumpet used to be blown at justs, &c. previous to the herald's recording the achievements of the knights, and signifies the explication of coats of arms in apt and significant terms.

BLA'ZONRY (Her.) or blazoning, from *blazon*; that branch of the art of heraldry which consists in expressing in proper terms all that belongs to coats of arms. [vide *Heraldry*]

BLEAK (Ich.) a little fish, the *Alburnus* of Ausonius, [vide *Alburnus*] and the *Cyprinus alburnus* of Linnæus, which is very abundant in our rivers. The *bleaks* keep together in great shoals, and at certain seasons are infested with a species of Gordius or hair-worm, which causes them to tumble

about on the surface of the waters, apparently in great agonies, and unable to swim any distance. They are then denominated by the sailors *mad bleaks*. The flesh of this fish is very white and good.

BLE'CHNON (*Bot.*) βλήζνον, a plant of the fern kind, mentioned by Dioscorides and Pliny. *Dioscor.* l. 4, c. 186; *Plin.* l. 27, c. 9.

BLE'CHNUM, in the *Linnean system*, a genus of plants, Class *Cryptogamia*, Order *Filices*.

BLE'CHON (*Bot.*) Penny-royal.

BLEE'DING (*Med.*) is either an operation of letting blood, which is called *blood-letting*, or it is an involuntary discharge of blood, called an *hæmorrhage*.—*Bleeding* at the nose [vide *Epitaxis*]

BLEIME (*Vet.*) an inflammation arising from bruised blood between the horse's sole and the bone of the foot towards the heels: this may be either accidental or owing to bad shoeing.

BLE'MISH (*Vet.*) any imperfection in a horse which impedes a sound warrant, as broken knees, cracked heels, false quarters, &c.

BLEMISH (*Hunt.*) when the hounds finding where the chace has been, only make a proffer, and return.

BLE'NCH (*Law*) the same as *Blanche*.

BLE'NDE (*Min.*) different species of *Zincum*.

BLE'ND-WATER (*Vet.*) a distemper incident to black cattle, in which their livers are affected.

BLE'NNA (*Med.*) βλεννα, mucus flowing from the brain, through the nostrils. Galen explains it by the word *μύξα*. *Hippocrat. de Epidem.* l. 2; *Gal. Exeges*; *Gorr. Def. Med.*; *Foes. Econom. Hippocrat.*

BLE'NNIUS (*Ich.*) Blenny, the name of a fish, derived from βλενω, mucus, because of its slimy nature.

BLENNIUS, in the *Linnean system*, a genus of fishes, Order *Jugulares*.

Generic Characters. Head sloping from the eyes.—*Gill-membrane* with six rays.—*Body* lanceolate.—*Ventral-fins* of two united rays.—*Anal-fin* distinct.

Species. The species consist of such as have a crested head and such as have not.

BLENNY (*Ich.*) vide *Blennius*.

BLE'NORRHÆ'A (*Med.*) or *Blenorrhagia*, from βλένω, mucus, and ρεω, to flow; a gleet, or a discharge of mucus from the urethra.

BLE'PHARA (*Anat.*) βλέφαρα, from βλέπω and φάρος, a defence for the sight; the eyelids. *Ruf. Ephes. de Appellat. Part Human. Corp.* l. 1, c. 4.

BLE'PHARIDES (*Anat.*) βλεφαρίδες, the hair growing on the eyelids. *Hesychius*.

BLE'PHAROPHTHA'LMIA (*Med.*) from βλέφαρα, the eyelids, and ὀφθαλμία, a disease in the eyes; signifies, literally, a disease in the eyelids.

BLE'PHAROPTO'SIS (*Med.*) from βλέφαρα, the eyelids, and πτωσις, a falling; a prolapse or falling of the upper eyelid, so as to cover the cornea.

BLE'PHARO'TIS (*Med.*) from βλέφαρα, the eyelids; an inflammation in the eyelids.

BLE'PHAROXY'STUM (*Sur.*) βλεφαρόξυστον, from βλέφαρα, the eyelids, and ξίω, to scrape; an instrument, so called by Paulus Ægineta, for scarifying the eyelids. Others give this instrument the name of *asperatum specillum*. *Paul. Æginet. de Re Med.* l. 3, c. 22.

BLE'STRISMUS (*Med.*) βληστρισμός, from βάλλω, to lie; a restless tossing of the body from one posture to another, as in a phrensy, &c. *Gorr. Def. Med.*; *Foes. Econom. Hippocrat.*

BLE'TA (*Archæol.*) peat, or combustible earth, dug up for burning. *Rot. Parl.* 35 Ed. I.

BLETA white (*Med.*) milky urine, from diseased kidneys. *Parac. de Tartar. tract* 3, c. 3; *Castell. Lex Med.*

BLE'TE (*Med.*) βλετοι, from βαλλω, *jacio*; struck or seized with a difficulty of breathing, from an inflammation of the pleura. *Hipp. de Rat. Vict. in Morb. Acut.* &c.; *Foes. Econom. Hippocrat.*

BLIGHT (*Bot.*) *ustilago*; a disease incident to plants, particularly the grasses, which affects them seriously, sometimes the whole plants and sometimes only the leaves or blossoms. It consists in a sort of fungus that converts the affected part into a sooty mass, and is commonly produced by dry cold winds which impede the circulation of the vegetable juices.

BLIND (*Surg.*) is an epithet for a blow which is attended with no apparent wound or bruise.

BLIND (*Mech.*) a false light used in shops and warehouses.—*Blinds for windows*, a contrivance to prevent persons from seeing through a window. Blinds are either made of cloth, and are called *Canvas Blinds*, or of laths, which are *Venetian Blinds*.

BLINDS (*Mil.*) or, in French, *blindes*, bundles of ozers used at the heads of trenches to protect the men.

BLIND-WORM (*Zool.*) or *Slow-worm*, so called from the smallness of its eyes and the slowness of its motion; a harmless torpid species of serpent, the *Anguis fragilis* of Linnæus.

BLINK of the ice (*Mar.*) the dazzling whiteness about the horizon, which is occasioned by the reflection of light from fields of ice.

BLINK-BEER (*Husb.*) beer kept unbroached till it is sharp.

BLINKS (*Sport.*) boughs put in the way where deer are likely to pass.

BLIS'TER (*Med.*) *vesicatorium emplastrum*, a topical application, which raises small vesicles on the skin filled with a serous fluid.

BLIS'TERED (*Bot.*) an epithet for a leaf. [vide *Bullate*.]

BLITUM (*Bot.*) βλίτον, or βλητον, a plant, so called from βλητός, struck with a stupor, because of its insipidity; for which reason it was esteemed of no value by the ancients. Nevertheless, the seeds were reckoned good in dysenteries. *Catull. Carm.*

Non assis facis O blitum lacunar.

Hippocrat. de Morb. Mul. l. 2; *Theophrast. Hist. Plant.* l. 7, c. 2; *Dioscor.* l. 2, c. 143; *Plin.* l. 20, c. 22; *Gal. de Alim. Fac.* l. 2, c. 45.

BLITUM, in the *Linnean system*, a genus of plants, Class 1 *Monandria*, Order 2 *Digynia*.

Generic Characters. CAL. perianth three-parted; divisions ovate.—COR. none.—STAM. filaments longer than the calyx; anthers twin.—PIST. germ ovate; styles two erect; stigmas simple.—PER. capsule ovate; seed single.

Species. Plants of this genus are annuals.

BLO'ATED fish (*Com.*) a name for herrings half dried.

BLOCK land (*Archæol.*) another name for what is now called *freehold-land*.

BLOCK (*Falcon.*) the perch whereon the hawk is kept.

BLOCK (*Mar.*) a pulley, or system of pulleys, mounted in a frame or shell, which consists of the *shell*, (fig. 1); the *sheave* or *wheel*, (fig. 2) on which the rope runs; the *pin* or *axle*, (fig. 3) on which the sheave turns. To this may be

added the *strap*, or part by which the block is made fast to

any particular station, and is generally made either of rope or iron. The strap terminates with an eye of rope or a hook of iron, by means of which one of the blocks, called the *running block*, is attached to the object on which it acts as a mechanical power, while the other, called the *standing block*, is suspended from some fixed support. In the best blocks those sheaves are called *coaked sheaves*, which have a brass *bush* fitted in the centre, with a round hole through it, to receive the pin. Blocks are of different kinds, as follow:—*Single blocks* are those which have a single sheave, as fig. 4; so, also, *double, treble blocks, &c.* according to the number of blocks.—*Bee-blocks*, those bolted to the bowsprit under the bees.—*Cheek-blocks*, half shells bolted against the mast-head.—*Clew-garnet-blocks*, which are suspended from the yards by a strap with two eyes.—*Clew-line-blocks*, the same as the former, but applied to the topsails.—*Fish-blocks*, which serve to haul up the flocks of the anchor in the ship's bow.—*Bull's-eye*, a kind of wooden thimble, with a hole in the centre and a groove in the circumference.—*Dead-eye*, a large circular piece of wood, having a groove in its circumference.—*Euphroe*, a long piece of wood with a number of holes, through which the crowfoot for the awning is reeved.—*Heart*, a block of wood with a large hole in the centre, and a groove to admit of a rope called a *stay*, &c.

BLOCK (Sport.) the small bowl which is used by bowlers to bowl at.

BLOCK-TIN (Min.) the purest kind of tin, which is unmixed, and, as yet, unwrought.

BLOCKADE (Mil.) the blocking-up the avenues and roads to a place by soldiers, so as to prevent all ingress and egress.

BLOCKADE of a port or harbour (Mar.) surrounding it with ships so as to prevent ingress and egress.—“To raise a *blockade*,” to force the ships, or troops (if by land), from their stations.

BLODEUR (Archæol.) deep red, whence *blouse*, a red-faced wench.

BLOMARY (Mech.) the first forge in an iron mill.

BLOOD (Anat.) in Latin *sanguis*, a red homogeneous fluid, of a saltish taste, a rather urinous smell, and glutinous consistence, which circulates by means of the heart, the arteries, and the veins, through the whole body [vide *Anatomy, Arteries, &c.*]; while it is in motion it is perfectly fluid and red; but, when it is at rest, and grows cool, it separates into two parts; namely, a concrete floating substance of a dark red colour called *cruur crassamentum*, or *Cake*; and a fluid of a yellow-greenish colour, which is undermost, called the *serum*. By a chemical analysis the blood is found to contain an insipid water which soon becomes putrid, an empyreumatic oil, an ammoniacal spirit, and the remainder carbon, a spongy substance which is with difficulty incinerated.—*Blood vessels*, the vessels by which the blood is distributed to all parts of the body, consisting of arteries and veins. [vide *Anatomy, Artery, Vein*]

BLOOD (Law) is regarded in descent of lands; for a person is to be next and most worthy of blood to inherit his ancestor's estate. *Co. Lit.* 13.—*Princes of the blood*, a name for all princes who are of the blood royal.—*Blood-wit*, or *bloudveit skene*, an amercement, or fine for bloodshed.

BLOOD Running-itch (Vet.) a disease in horses similar to the mange.—*Blood-stick*, a stick used in bleeding horses.—*Blood Spavin*, a distemper in horses, which consists in a soft swelling that grows through the hoof, and is usually full of blood.—*Blood-horse*, a particular breed of horses cultivated originally from the Arabian horses; the excellence of which consists in the compactness of his fibre, which increases his strength without adding to his bulk.—*Blood-hounds*, a fierce kind of hunting dogs that are of such quick scent that they can follow the track of the person.

BLOOD, spitting of (Med.) vide *Hæmoptysis*.—*Vomiting of*

blood, vide *Hæmatemesis*.—*Blood-shot*, a disorder of the eyes, when the blood vessels are distended so as to make the eyes appear red.

BLOOD-FLOWER (Bot.) a bulbous root, the *Hæmanthus* of Linnæus.—*Blood-wort*, or *Blood-dock*, a herb, the *Rumex sanguineus*.—*Dragon's Blood*, vide *Dragon's Blood*.

BLOOD-LETTING (Surg.) an artificial discharge of blood, which is either general, as venesection and arteriotomy, or topical, as by the application of leeches, &c.

BLOOD-RED hot (Mech.) the last degree of heat given by smiths to their iron in the forge.

BLOOD-STONE (Min.) a stone, so called because it is effectual in stopping a bleeding. [vide *Hæmatites*]

BLOOD-SUCKER (Nat.) the name of a leach, so called from its sucking the blood of any animal to whom it is applied.

BLOODY hand (Law) one circumstance by which an offender in killing deer is discovered if he be found with his hands or other parts bloody. [vide *Backberind*]

BLOODY flux (Med.) vide *Dysentery*.

BLOOM of iron (Com.) a square piece of two foot long.

BLOQUER (Mil.) a term in French for erecting thick rough walls along the trenches without following the line and the measure, as is usual in other walls; also for filling up the chasms in walls with rubbish and coarse mortar, as is usually done in works constructed under water.

BLOSSOM (Bot.) in common language, answers to the *Corolla* in the botanical language.

BLOSSOM (Man.) an epithet for a horse, whose general colour is white interspersed with sorrel and bay hairs.

BLOT in Backgammon (Sport.) when a single man is open to be taken up.

BLOW (Ent.) or *Fly-Blow*, the ova of flies collected on meat.

Blow (Surg.) vide *Blind*.

BLOWER (Zool.) a kind of whale, so called because it spouts fourth an immense quantity of water.

BLOWING of fire-arms (Gunn.) is when the vent or touch-hole is run or gullied, and becomes wide so that the powder will flame out.

BLOWING glass (Mech.) the process of forming glass into various shapes by means of blowing through a blow-pipe dipped into the melted glass.—*Blowing of tin*, melting the ore of tin after it has been burnt to destroy the mundic.—*Blowing-house*, furnaces where tin ore is melted and cast.

BLOWING-SNAKE (Zool.) a kind of snake which swells itself up before it begins to bite.

BLOWN (Mech.) a term used in the boiling of sugar when the sides of the copper pan, in which the sugar has been boiled for a considerable time, is beaten with the skimmer, and, a person blowing through the holes of it from one side to the other, certain sparks or small bubbles fly out, which is an indication that the sugar is come to the proper degree of boiling.

BLOW-PIPE (Chem.) an apparatus in chemistry and mineralogy, which consists of a tube ending in a cavity as fine as a wire, through which air may be directed with considerable force against a flame; and, by that means, minute substances may be heated with great rapidity according to the convenience of the operator. In this manner experiments may be made on minerals, and all substances which are exposed to the action of heat.

BLUBBER (Nat.) the fat of a whale before it is boiled.

BLUBBER, sea (Con.) a vulgar name for the *Medusa* of Linnæus.

BLUE (Phy.) one of the seven primitive colours, into which they are divided when refracted through a glass prism.

BLUE (Paint.) as a colour, is distinguished according to the manner of its preparation, its use, shade, &c. as follows:—*Ultra-marine*, a rich and beautiful blue from an azure stone called the *Lapis lazuli*.—*Blue ashes* are used in limning, fresco, and miniature.—*Turnsole blue*, made of the seed

of the turnsole, used in painting on wood.—*Prussian blue*, a colour next to ultra-marine for beauty, if it be used in oil.—*Bice*, or *blue-bice*, is the palest of all the bright blues.—*Smalt* is a sort of blue frequently used instead of bice on common occasions.—*Indigo* is a dark blue extracted from indigo, principally used to shadow upon other blues.—*Blue verditer* is a bright pleasant blue somewhat inclining to a green, which is the easiest to work with in water.

BLUE (*Her.*) is the common name for azure as a tincture in coats of arms. [vide *Azure*]

BLUE-BOTTLE (*Bot.*) the *Cyanus* of Linnæus, an annual having a bell-shaped flower.

BLUE-BOTTLE (*Ent.*) a large kind of fly with a bluish body.

BLUE-BOTTLE (*Her.*) the flower is borne sometimes in coats of arms, as in the annexed figure. "He beareth a chevron, *gules*, between three blue bottles slipped, *proper*; by the name of *Chorley*, of *Chorley*," an ancient family in the County Palatine, of Lancaster.

BLUE'ING of metals (*Mech.*) the process of heating metals in the fire till they assume a blue colour, which is the practice of gilders before they apply the gold and silver leaf to them.

BLUENESS (*Phy.*) the property of a body which, from the size and texture of the parts that compose its surface, is disposed to reflect the blue or azure rays of light to the eye.

BLUFF (*Mar.*) a high land projecting almost perpendicularly into the sea.—*Bluff bowed*, an epithet for a vessel that has broad and flat bows.—*Bluff-headed*, an epithet for a vessel that has a small rake forward, and her stern too straight up.

BLUNDERBUS (*Mil.*) a short brass gun with a large bore.

BLUNT (*Bot.*) vide *Obtuse*.

B MOLLARE (*Mus.*) or *B melle*, one of the notes of music, otherwise called soft or flat, in opposition to the sharp.

BO'A (*Med.*) a pustulous eruption similar to the small pox, which was so called, as is supposed, because oxen were subject to it. *Vet. Gloss.*

BOA (*Zool.*) a huge kind of serpent mentioned by Pliny, in the belly of which was found a young child whole, in the time of the emperor Claudius. It was so called because it used to suck the cows. *Plin.* l. 8, c. 14; *Solin.* c. 2.

BOA, in the *Linnean system*, a genus of animals, Class *Amphibia*, Order *Serpentes*.

Generic Characters. Plates on the belly; plates under the tail; without a rattle.

Species. The principal species are the—*Boa Constrictor*, *griseo-flavescens*, &c. *Serpens Ceilonica*, &c. *excellens*, &c. *blanda*, &c. *Americana arborea*, seu *Le Devin*, *Boa Constrictor*, or *Great Boa*, native of Africa, India, &c. This is a serpent of immense size and strength, measuring sometimes twelve yards in length, which, by twisting itself round the bodies of oxen and other animals, breaks their bones and swallows them whole.—*Boa scytale*, seu *cinerea maculis*, &c. *Cinereous* or *Spotted Boa*, native of S. America, which is eaten by the natives.—*Boa Cenchris*, seu *Tamacuilla Huilia*, &c. seu *Serpens Oculea*, &c. *Ringed* or *Rufescent Boa*, native of South America.—*Boa Euydris*, *Water Boa*.—*Boa Ophryas*, seu *corpore fusco*, *Brown Boa*, or *Boa with brown body*.—*Boa canina*, *viridis*, *fasciis*, &c. seu *Serpens Bojobi*, &c. *Canine* or *Green Boa*.—*Boa regia*, *alba*, *collo*, &c. *Serpens phyticus*, &c. seu *Arabica*, &c. *Royal* or *White Boa*.—*Boa phrygia*, *alba*, *dorso*, &c. seu *Serpens Phyticus*, &c. *Embroidered* or *White Boa*, native of the East Indies.—*Boa Hortulana*, seu *Griseo*, &c. *Garden* or *Yellowish-Grey Boa*, native of South America.—*Boa marina*, *grisea maculis*, &c. seu *Serpens testudinea*, &c. *Rat* or

Grey Boa, native of South America.—*Boa maculis*, &c. seu *Crotalus mutus*, *Crotaline Boa*, native of Surinam.—*Boa fasciata*, *flava*, *corpore*, &c. seu *Bungarum Parnah*, *Fasciated* or *Yellow Boa*.

BOA-A'TI (*Bot.*) a dry fruit from a tree in the Molucca islands, which is much esteemed as a medicine in the East Indies, and is an article of trade with the Dutch.

BOAR (*Zool.*) the same as swine.

BOAR (*Her.*) a charge in a coat of arms, which betokeneth a man of a bold spirit, and skilful in warlike feats, who will rather die valourously in the field than save himself by ignominious flight; whence no doubt the boar's head is found so frequent in coats of arms. [vide *Boar's Head*]

BOAR (*Man.*) the action of a horse when he shoots out his nose as high as his ears, or tosses his nose in the wind.

BOARD (*Polit.*) an office under the control of the executive government, where the business of particular departments is conducted, as the *India Board*, the *Board of Ordnance*, the *Board of Admiralty*, the *Board of Works*, &c.

BOARD (*Carp.*) all timber sawed to a less thickness than nine inches. All above this thickness are called *planks*; boards that are thinner at one edge than another are called *Feather-edged*. *Fir boards* are *Deals*, which, if they are one inch and a quarter thick, are called *Whole Deals*; and those half an inch thick, *Split Deals*. [vide *Boards*]

BOARD (*Mech.*) or *pasteboard*, layers of paper so pasted together as to make a substance as hard as a board, of which the coverings of books are made; hence a book is said to be *in boards*, or, abbreviated, *in bds.*, when the boards are only covered with paper, in distinction from a book, *bd.* or *bound*, i. e. when it is put into leather.

BOARD (*Cus.*) the food received at the board or table of another for a certain remuneration.

BOARD (*Mar.*) the space comprehended between any line a ship runs over, between tack and tack, when turning to windward, or against the wind; hence "To make a board," "To board it up to a place," i. e. to turn to windward. "To make a good board," or "To stretch," to sail in a straight line. "To make short boards," to tack frequently. "To make a stern board," to fall back from the point she has gained on the last tack. "Weather board," that side of a ship which is to windward. "A long board," to stand a good way off before you tack. "To leave the land on back board," to leave it a-stern or behind.

Board is also taken for the ship itself, as "*a-board*," i. e. within a ship. "To go *a-board*," to go into the ship.

"To throw *over-board*," to throw out of a ship. "To slip by the board," i. e. by the ship's side. "*Board and board*," when two ships come so near each other as to touch by the board over the ship's side.

TO BOARD (*Mar.*) to enter a ship in battle, or in a forcible manner.

BOA'RDED floor (*Carpent.*) a floor formed of boards, in distinction from a *stone floor*, or a *brick floor*.

BOA'RDERS (*Mar.*) sailors appointed to make the attack by boarding.

BOARDING (*Carpent.*) the fixing of boards for any purpose, as a floor: also the boards themselves, which are used for the purpose.

BOARDING-HOUSE (*Cus.*) any house in which persons are provided with board and lodging.

BOARDING-PIKE (*Mar.*) a defensive weapon used by sailors in boarding.

BOARDS, *listed* (*Carpent.*) are those reduced in their breadth by taking away the sap wood.—*Lever-boards*, those which are fixed in such a manner as to admit or exclude the air at pleasure.

BOARD-WAGES (*Cus.*) money given to servants in lieu of their diet, which they provide for themselves.

BOARS' HEADS (*Her.*) a charge in coats of arms, as "He beareth azure three boars' heads coupéd within a double tressure, by the name of Gordon, of the illustrious house of Gordon."

BOASTING (*Mech.*) the paring of stones by stone-cutters, with the broad chisel and mallet.—*Boasting*, among carvers, is the rough cutting round the ornaments, so as to reduce them to their contour or outlines.

BOAT (*Mar.*) a small open vessel worked on rivers or small waters, by rowing or sailing. Of the different kinds are—the *long-boat*, which is the largest that accompanies a ship; the *skiff-boat*, or *skiff*; the *ferry-boat*, *passage-boat*, &c.—*Life-boat*, [vide *Life*]

Boat is a term used in many sea-phrases, as "To trim the boat," to sit in the boat in such a manner as that she shall float upright in the water.—"To moor the boat," to fasten the boat with two ropes so as to keep her in a steady position.—"To bale the boat," to bale the water out of the boat.—*Boat-rope*, the rope which fastens the boat to the ship.—*Boat-hook*, a long pole with a hook at the end, which is used in boats.—*Train of boats*, small vessels fastened to each other, ascending the Loire in France.—*Boat-skids*, long square pieces of fir extending across the ship, on which the boats, &c. are stowed.—*Boat-swain*, the officer who has the boats, anchors, &c. in his charge.—*Boat-swain's-mate*, an assistant to the boat-swain.

BOAT-BILL (*Orn.*) a bird of South America, the *Cancroma* of Linnæus, which lives upon fish, and darts down upon them as they are swimming. It is so called because its bill resembles a boat in shape.

BOAT-FLY (*Ent.*) an insect with an inflected snout, the *Notonecta* of Linnæus. It lives in stagnant waters, and preys on aquatic animalculæ.

BOAT-SHAPED (*Bot.*) *navicularis*, seu *cymbiformis*, an epithet for a petal, a pericarp valve, &c. hollowed out in the shape of a boat.

BOATING (*Ant.*) a punishment in ancient Persia, of fixing a person between two boats, and leaving him to perish in that condition.

BOAT'S CREW (*Mar.*) the men appointed to man a boat.

BOAT-SHAPED (*Bot.*) vide *Boat*.

BOATSWAIN (*Mar.*) vide *Boat*.

BOB of a *pendulum* (*Hor.*) or *Ball of a pendulum*, the metallic weight attached to the lower extremity of a pendulum-rod, by means of an adjusting nut, at such a distance from the point of suspension as the time of a given vibration requires.

BOB of the *Shears* (*Mech.*) that which serves to bring the edges of the shears together.

BOBARTIA (*Bot.*) the *Morea spathacea* of Linnæus.

BOBBINS (*Mech.*) little pins of wood, with a notch, on which thread, &c. is wound.—*Bobbin* is also a sort of tape used in female dress.

BOB STAY (*Mar.*) a rope used to confine the bowsprit to the stem or cut-water.—*Bobstay-holes*, those in the fore-part of the knee.—*Bob of the head*, a rope used for the security of the bob-stay.

BOB-TAIL (*Archer.*) the steel of a shaft or arrow that is small breasted and big towards the head.

BOCARDO (*Log.*) an arbitrary term for a species of syllogism of the fifth mode and third figure, in which the middle proposition is (A) a universal affirmative proposition, the first and last (O) particular negatives, as

b O Some animals are not men.

c A r Every animal is endued with sense.

d O Therefore something endued with sense is not man.

BOCCA (*Mech.*) the large mouth or opening of a glass-house.

BOCCALE (*Com.*) a liquid measure at Rome, equal to half a gallon.

BOCCARELLA (*Mech.*) a small mouth or opening on each side the *bocca*.

BOCCONIA (*Bot.*) a genus of plants, (named after Paolo Boccone, a physician, Sicilian monk, and botanical writer) Class 11 *Dodecandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* two-leaved.—COR. none.—STAM. *filaments* twelve; *anthers* linear.—PIST. *germ* roundish; *style* one; *stigmas* simple.—PER. *subovate*; *seed* one.

Species. The species are—*Bocconia frutescens foliis*, &c. *ramosa*, &c. *Chelidonium*, &c. seu *Cocoxihuitl*, Shrubby *Bocconia*, Tree *Celandine*, or *Parrot-weed*, a shrub, native of Mexico.—*Bocconia cordata*, seu *foliis*, &c. a shrub, native of China.

BOCHETUM (*Med.*) a second decoction of *Lignum Vitæ*, &c.

BOCHIA (*Chem.*) a chemical vessel similar to a cucurbit.

BOCIUM (*Med.*) vide *Bronchocele*.

BOCKELET (*Falcon.*) a sort of long-winged hawk.

BOCK-HORD (*Archæol.*) a place where books are kept.

BOCKING (*Com.*) a Dutch word for red-herring.

BOCK-LAND (*Law*) i. e. bookland, deed or charterland; land held by some deed or charter, and not to be made over to another by sale or gift, but left entire to the heir.

BODIANUS (*Ich.*) a genus of fishes of the *Thoracic* Order. *Generic Character.* *Gill-cover* scaly, serrated, and aculeated.—*Scales* mostly smooth.

Species. The species are mostly distinguished by their colour, as the — *Bodianus rhodianus*, Rose-coloured *Bodian*.—*Bodianus maculatus*, &c.

BODICE (*Mech.*) from body; a kind of waistcoat stiffened with whalebone, but not so much as women's stays.

BODKIN (*Mech.*) 1. A long sort of pin, on which women used to roll their hair. 2. A long pointed instrument with a handle to it. 3. An instrument with an eye to it, through which thread or ribbon may be drawn.—*Bodkin-work*, a sort of trimming.

BODLEIAN library (*Lit.*) a library in Oxford, called after its founder Sir Thomas Bodley, which is noted throughout Europe for its immense collection of valuable books, and manuscripts.

BODY (*Geom.*) or *solid*, that which has three dimensions, length, breadth, and thickness.—*Bodies* are either regular or irregular.—A *regular body* is that which has all its angles, sides, and planes, similar and equal.—An *irregular body* is a solid not bounded with equal and similar surfaces.—*Regular bodies* are also called *Platonic*, because Plato compared the five elements to them: they are as follow—*Tetraedron*, a body contained under four equilateral triangles, as fig. 1.—*Hexaedron*, containing six squares, as fig. 2.—*Octaedron*, having eight triangles, as fig. 3.—

Fig. 1.

Fig. 2.

Fig. 3.

Fig. 4.

Dodecaedron, containing twelve pentagons, as fig. 4.—
Icosaedron, containing twenty triangles, as fig. 5.

Fig. 5.

BODY (*Phys.*) a solid, extended, palpable substance, which, according to the Newtonian philosophy, consists of massy, hard, impenetrable, moveable particles. Bodies are of different kinds, namely—A *hard body*, whose parts do not yield to any stroke or percussion, but remains unaltered.—A *soft body*, which yields to any stroke, and thereby undergoes a change.—An *elastic body*, that changes its form with every stroke, but recovers it again when the impelling force is removed.

BODY (*Hydros.*) is distinguished into solid, fluid, dense, rare, specifically heavy and light.—A *solid body* is that whose particles are kept by a certain continuity which preserves them in the same form.—A *fluid body* is that the particles of which are not so bound together as to preserve a constant cohesion.—A *dense body* is that which within the same space contains a greater mass than another.—A *rare body* is that which contains a less mass within the same space than others.—A *body specifically heavier* is that which with the same volume of matter contains a greater weight.—A *body specifically lighter* is that which with the same volume of matter contains a less weight.

BODY (*Opt.*) that which, as the object of sight, is distinguished into luminous or lucid, illuminated, diaphonous or pellucid, and opaque.—A *luminous body* is that which diffuses its own light.—An *illuminated body* is that which diffuses a borrowed light.—A *pellucid* or *diaphonous body* is that through which the rays of light easily pass.—An *opaque body* intercepts the passage of the rays.

BODY (*Anat.*) the animal body is distinguished into Head, Trunk, and Extremities. [vide *Anatomy*]

BODY (*Chem.*) is distinguished into imponderable, combustible, or incombustible, inflammable, gaseous, &c. [vide *Chemistry*]

BODY (*Mech.*) the solid and more spacious part of many vessels, machines, and the like, as—The *body of a chemical vessel*, that which holds the matter in distillation.—The *body of a pump*, the thickest part of the barrel or pipe.—The *body of a piece of ordnance*, the part contained between the centre of the trunnions and the cascabel.

BODY (*Paint.*) or *to bear a body*, a term applied to any colour which is of a nature to be ground so finely, and to mix with the oil so entirely, as to seem only a very thick oil of the same colour; of this nature are white-lead and ceruss, lamp-black, ivory-black, &c.

BODY of a letter (*Print.*) the space contained between the top and bottom line of a long letter. [vide *Printing*]

BODY of the Place (*Fort.*) that part inclosed by the bastions, curtains and other works, or the buildings within the inclosure.

BODY of a room (*Archit.*) the middle open part, in distinction from the recesses or sides.

BODY (*Mil.*) any number of forces united under one commander.—The *main body* is that part of an army which occupies the centre between the two wings.—The *body of reserve*, or, simply, the *reserve*, is a select body of troops posted by a general out of the first line of action, to answer some specific or critical purpose.

BOEDROMIA (*Ant.*) *βοηδρομία*, an Athenian festival so called, ἀπὸ τῆς βοηδρομείης, i. e. from coming to help, because it

was instituted in honour of Ion, the son of Ruthus, who went to the assistance of the Atherians, in the reign of king Erichtheus; or, according to Plutarch, to commemorate the victory obtained by Theseus over the Amazons in the month Boedromion. *Plut. in Thes.; Harpocratio; Suidas, &c.*

BOEDROMION (*Chron.*) *βοηδρομίον*, a month so called by the Greeks, after the festival Boedromia, answering to our March.

BOEHMERIA (*Bot.*) a genus of plants, named by Jacquin after Professor Boehmer, of Wittenberg, Class 21 *Monococia*, Order 4 *Tetrandria*.

Generic Characters. CAL. *perianth* one-leaved.—COR. none; *nectary* none.—STAM. *filaments* four; *anthers* roundish.—PIST. a rudiment, or none.—PER. none; *seed* roundish.

Species. The species are mostly shrubs and natives of America or the West Indies; but the *Boehmeria littoralis* is an annual.

BOERHAVIA (*Bot.*) Hogweed, a genus of plants, named by Vaillant, after the distinguished physician and botanist, Boerhaave, Class 1 *Monandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* oblong.—COR. one-petalled; *nectary* fleshy.—STAM. *filaments* one; *anthers* twin.—PIST. *germ* roundish; *style* filiform; *stigma* capitate.—PER. none; *seed* one.

Species. The species are perennials, as—*Boerhavia erecta*, &c. seu *Solanum bacciferum*, &c. Upright Hogweed.—*Boerhavia diffusa*, *Talu-dama*, seu *Valerianella*, &c. Spreading Hogweed, &c.

BOETE (*Gunn.*) an instrument made of brass, to which a steel-tempered blade is attached for diminishing the metal in a cannon and widening the bore.

BOETHEMATICA signa (*Med.*) *βοηθηματικά σημεῖα*, auxiliary signs for observing a cure in diseases. *Gal. Def. Med.*

BOETHI (*Ant.*) *βοηθοί*, assistants in any office.

BOG-RUSH (*Bot.*) a perennial, the *Schoenus* of Linnæus.—Bog-Bean, the *Memanthes trifoliata*.

BOG-IRON-ORE (*Min.*) a simple mineral, and a kind of sulphuret.

BOGIA (*Min.*) a sort of gum. [vide *Gamboge*]

BOGOMILES (*Ecc.*) or *Bongomiles*, heretics of the twelfth century, who, among others, rejected the five books of Moses. *Baron. Annal. Ann. 1118; Prateol. Doct. omn. Heret.; Sander. Hæres. 138.*

BOHAD'UCHIA (*Bot.*) the *Peltaria alliacea* of Linnæus.

BOHE'A (*Com.*) one of the superior kinds of tea that comes from China.

BOYAR (*Polit.*) a great officer of state in Persia.

BOICININGA (*Zool.*) a name in India for the Rattle Snake.

BOIL (*Med.*) *furunculus*, a phlegmonous tumour, which commonly terminates in some sort of pustule.

BOILARY (*Mech.*) a salt-house, or place where salt is boiled.

BOILED silk (*Com.*) that which has been boiled in water to facilitate the winding.

BOILING (*Phy.*) ebullition, or the bubbling up of any fluid by the application of heat. This consists, in general, in the discharge of some vapour, whether of common air, fixed air, or steam, &c.—*Boiling point*, that point or degree of heat, as marked on the barometer, which is requisite to produce ebullition or boiling in any fluid. This varies in different liquids, and in the same liquid under different pressures of the atmosphere; water begins to boil at 212 degrees of Fahrenheit's scale.

BOJO'BI (*Zool.*) a venomous serpent.

BOIS (*Mil.*) French for wood, is used in some phrases, as *aller au bois*, to go foraging for wood; *bois de remontage*, timber for new mounting cannon, &c.; *bois de chauffage*,

fuel distributed among French troops; *faire haut le bois* is said of pikemen who make a stand advancing their pikes.

BOITIA'PO (*Zool.*) a serpent of Brazil.
BOLBIDION (*Med.*) βολβιδιον, a small polypus, recommended as a food. *Hipp. de Mul.*; *Foes. Econom. Hippocrat.*

BOLBION (*Med.*) βολβιον, *bulbulus*, diminutive of βολβος, *bulbos*, recommended in a pessary. *Hipp. de Mul.*; *Foes. Econom. Hippocrat.*

BOLBITION (*Med.*) vide *Bolbidion*.
BOLBITON (*Med.*) βολβιτον, attic, βολιτος, from βολη, ejection; cow-dung, recommended as a fomentation. *Hipp. de Mul.*; *Foes. Econom. Hippocrat.*

BOLCHON (*Min.*) the same as *Bdellium*.
BOLD-SHORE (*Mar.*) a sea coast, so abrupt and steep, that vessels may approach it without danger.

BOLE (*Min.*) a friable earth of the argillaceous kind, which unites with water so as to form a paste. There are many kinds of boles distinguished either by the name of the place from which they come, as *Armenian*, *Lemnian*, *Tuscan bole*, &c.; or from their colour, as *red*, *white*, *brown bole*, &c. The principal earth of this kind used in medicine is the *Armenian bole*, or *Bole Armenic*, a bright red coloured earth, which is often mixed with honey, and applied to the mouth of children having the aphthæ.

BOLE (*Med.*) vide *Bolus*.
BOLE/SIS (*Min.*) Coral.
BOLE/SON (*Chem.*) Balsam.
BOLE/TIC acid (*Chem.*) an acid drawn from the juice of the *Boletus pseudo igniarius*.
BOLE/TUS (*Bot.*) a sort of fungus highly esteemed by the ancients, and purchased as a great delicacy for the table. *Mart. l. 13, epig. 47.*

Argentum atque aurum facile est, lænamque togamque Mittere; boletos mittere difficile est.

It was by means of the *boletus* that Claudius was poisoned; to which Juvenal alludes,

Juv. sat. 5, v. 147.

*Vitibus ancipites fungi ponentur amicis
 Boletus domino; sed qualem Claudius edit.*

Suet. in Claud. c. 44; Plin. l. 22, c. 22.

BOLETUS, in the *Linnean system*, a genus of plants, Class *Cryptogamia*, Order *Fungi*.—*Boletus cervi*, the Mushroom.—*Boletus igniarius*, the same as *Agaric*.

BOLIS (*Ant.*) 1. The plummet line for sounding. 2. A fiery meteor that darts down. *Plin. l. 2, c. 26.*

BOLISMUS (*Med.*) the same as *Bulimus*.

BOLL (*Bot.*) from ball and bowl. 1. The naked trunk of a tree. 2. A poppy head with the seeds.

BOLL of salt (*Com.*) a measure of two bushels.

BOLLARD-TIMBERS (*Mar.*) or Knight-heads, two timbers on each side the bowsprits to secure its inner end.—*Bollards*, large posts set in the ground on each side a dock.

BOLLERO (*Sport.*) a Spanish dance noted for its voluptuousness.

BOLLIMONY (*Husband.*) a medley of several sorts of grain.

BOLLITO (*Paint.*) an Italian name for a sort of sea-green colour in artificial crystal.

BOLLOCK-BLOCKS (*Mar.*) blocks secured to the topsail yards.

BOLOGNA Stone (*Min.*) a phosphoric stone; the *Barytes bononienses* of Linnæus, which shines in the dark after having been calcined in the fire.

BOLSTER (*Surg.*) a soft pillow for a broken limb.

BOLSTER (*Man.*) those parts of a saddle which are raised upon the bows to receive the rider's thighs.—*To fit the Bolster*, i. e. to put the cork of the saddle into the bolster to keep it tight.

BOLSTER (*Mar.*) 1. A piece of timber cut and placed for the casement of the cable. 2. The piece bolted to the ship's side on which the stanchions for the linings of the anchors are placed. 3. A small bag of tarred canvass laid between the collars of the stays. 4. A cylindrical piece of iron with a hole through the middle, used when holes are to be punched.

BOLT (*Carpent.*) an iron pin used for strengthening timber. Bolts are distinguished into plate, spring, and round bolts. *Plate and spring bolts* are used for doors and windows. *Round bolts* are long iron pins, with a head at one end and a key at the other.—*Bolt-lock* or *nab*, that part of the lock which receives the bolt in shooting it backward and forward.

BOLT (*Mar.*) an iron pin used to fasten parts of a ship; which is distinguished into—*Fend bolts*, bolts with long and thick heads, struck into the uttermost walls or bends of the ship to save the sides from galling.—*Set bolts*, used for forcing the planks together.—*Ring bolts*, which serve to bring the planks together, to which the breeches are fastened.—*Rag-bolts*, which have jags or barbs.—*Clench-bolts*, which are clenched with a rivetting hammer.—*Drive-bolts*, which are used for driving out other bolts.—*Forelock bolts*, which have a forelock of iron at the end driven in, to keep it from starting back.—*Bolt rope*, that to which the edges of the sails are sewed to prevent their rending.—*Bolt-boat*, a strong boat fitted for a rough sea.—*Bolt-sprit*. [vide *Bow-sprit*]—*Bolt-augeur*, a large borer or piercer, used by ships' carpenters for boring the holes for bolts.

BOLT (*Gunn.*) the iron pin of a gun carriage, which is of different kinds, namely—*Prize bolts*, large knobs of iron on the check of a carriage to prevent the handspike from sliding.—*Traverse bolts*, two short bolts put into each end of an English mortar carriage.—*Transum bolts*, which go between the cheeks of a gun carriage to strengthen the transums.—*Bracket bolts*, which go through the cheeks of a mortar, and by the help of the coins, keep it at any given elevation.

BOLT-HEAD (*Chem.*) a long straight-necked glass vessel for distillations, which being fitted to the alembic or still, is called a *receiver*; when the neck is well joined to the neck of another, it is called a double-vessel.

BOLT of silk (*Com.*) a long narrow piece.—*Bolt of canvass*, a certain quantity, containing twenty-eight ells.

BOLT and tun (*Her.*) a charge in coats of arms, consisting of a bird bolt in pale piercing through a tun.

TO BOLT (*Sport.*) a coney is said to be *bolted* when she is first started.

TO BOLT (*Husband.*) to sift flour.

BOLTER (*Mech.*) the machine for sifting meal.

BOLTING (*Law*) a legal exercise of arguing cases formerly used in our inns of court.

BOLTING-CLOTH (*Mech.*) the cloth through which the sifted meal runs, which is of different degrees of fineness.

BOLTONIA (*Bot.*) a genus of plants, named after Mr. Bolton, a botanist of Halifax, Class 19 *Syngenesia*, Order 2 *Polygamia Superflua*.

Generic Characters. CAL. common flattish.—COR. compound radiate.—STAM. filaments five; anthers cylindrical.—PIST. germ oblong; style filiform; stigmas two.—PER. none; seeds solitary; receptacle naked.

Species. The species are the—*Boltonia asteroides, foliis*, &c. *Matricaria asteroides, &c. foliis*, &c. seu *Aster americanus*, &c. Star-wort flowered Boltonia.—*Boltonia glastifolia*, seu *foliis*, &c. Glaucous-leaved Boltonia, a perennial, native of Pennsylvania.

BOLUS (*Med.*) from βῶλος, a clod of earth; a Bolus or Bole, an internal medicine, of a consistency much thicker than honey. [vide *Bole*]

BOMB (*Gunn.*) from βομβος, a hollow noise; a shell or hol-

low ball of cast iron, which is thrown into towns, when, by bursting, it causes much mischief. They have large vents to receive the fuses or tubes, and are filled with combustible materials of all kinds, nails, old iron, &c. After the bomb has been filled, the fusee is driven into the vent within an inch of the head, and pitched over to preserve it: then they uncase another fusee, put the bomb into the mortar, and cover it with gunpowder dust, which, having taken fire by the flash of the powder in the chamber of the mortar, burns all the time the bomb is in the air, and the composition in the fusee being spent, it fires the powder in the bomb, which, in consequence, bursts, blowing into pieces whatever comes in its way. [vide *Fortification*].—*Bomb-chest*, a wooden chest, filled with bombs, which was formerly buried under ground, in order to blow up those that happened to be on the spot at the time of its bursting.—*Bomb-ketch*, or *bomb-vessel*, a small vessel particularly constructed for carrying and using mortars at sea.—*Bomb-tender*, a small vessel laden with bombs for the use of the bomb-ketch.

BOMBAR'D (*Mil.*) in Latin *bombarda*, in French *bombarde*, a great gun, formerly in use, which carried balls 300 pounds weight, and for the loading of which they employed cranes.

to **BOMBARD** (*Mil.*) to shoot bombs into a besieged place.

BOMBARDIERS (*Mil.*) non-commissioned officers; so called because they were chiefly employed in mortar and howitzer duty.

BOMBA'RD (*Mus.*) a wind instrument, resembling a bassoon.

BOMBASINE (*Com.*) a sort of slight silken stuff.

BOMBAST (*Com.*) a kind of stuff made of cotton.

BOMBAX (*Bot.*) Cotton-bush, or Silk-cotton, a genus of plants, Class 16 *Monadelphia*, Order 5 *Polyandria*.

Generic Characters. CAL. *perianth* one-leaved.—COR. five-parted.—STAM. *filaments* five, or many.—PIST. *germ* roundish; *style* filiform; *stigma* capitate.—PER. *capsule* large; *seeds* very many; *receptacle* columnar.

Species. The species are shrubs, as the—*Bombax pentandrum*, *Xylon caule*, &c. *Gossypium*, &c. *Eriophoros javana*, seu *Pania Paualala*.—*Bombax Cuba*, *Xylou*, *Gossypium arboreum*, &c. seu *Cuba viticis*, &c.—*Bombax heptaphyllum floribus*, &c. *Septenatum, foliis septenatis*, &c. *Gossypium*, seu *Xylou arbor*, &c. seu *Moul-clauou*.—*Bombax gossypium foliis*, &c. *Ketmia foliis*, &c.—*Bombax Conga*, seu *Gossypium*, &c.—*Bombax Erianthos, floribus*, &c. *caule*, &c.—*Bombax globosum, floribus*, &c. seu *foliis*, &c. *Ger. Herb.*; *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Raii Hist. Plant.*; *Park. Theat. Botan.*; *Boerhaav. Ind.*; *Tournef. Instit.*

BOMBELLES (*Mil.*) French for small bombs.

BOMBATE (*Chem.*) a salt formed by the combination of bomic acid with different bases, as the bombate of alumine, &c.

BOMBIC acid (*Chem.*) an acid liquor of the silk-worm, contained in a reservoir near the anus. This acid is of a very penetrating nature, and of a yellow amber colour.

BOMBUS (*Med.*) βόμβος, a reverberating noise, which if in the ears in an acute disorder is a mortal symptom.

BOMBYCILLA (*Orn.*) Wax-wing, a genus of birds detached from the Chatterers, of the Order *Passercs*.

Generic Character. *Beak* short, and slightly depressed.—*Nostrils* oval, covered with small feathers.—*Feet* four-toed.

Species. There are two species, namely—*Bombycilla bohemica*, *Garrulus Bohemicus*, le *Jaseur de Boheme*, Bohemian Wax-wing, or Chatterer.—*Bombycilla Carolina*, *Ampelis garrulus*, Carolina Wax-wing.

BOMBYLIUS (*Ant.*) βομβυλιός, a drinking-cup with a long narrow neck, which is so called from the bubbling noise

which it makes in drinking. *Poll. Onomast.* l. 6, c. 16; *Athen.* l. 6, c. 18.

BOMBYLIUS (*Ent.*) the Humble Bee, a sort of bee so called από τῆ βομβυλλίαν, that is, from the lummung noise which this bee makes; or from βομβυλιός, a drinking-cup with a long neck, which its larva resembles in shape, a genus of animals, Class *Insecta*, Order *Diptera*.

Generic Characters. *Mouth* furnished with a long setaceous sucker, formed of two unequal horizontal valves, and containing setaceous stings.

Species. The species are: 1. Those having two hairy feelers, and antennæ united at the base, as—*Bombylius major*, Humble-bee.—*Bombylius medius*.—*Bombylius minor*.—*Bombylius ater*. 2. Those having two suckers, with three incumbent bristles or feelers, and antennæ approximate, as—*Bombylius albifrons*, &c.

BOMBYX (*Ant.*) βόμβυξ, a sort of pipe made of the reed called βομβυξίαι, which was used in the Bacchanalian festival. *Aristot. de Auscult.*; *Poll.* l. 4, c. 9.

BOMBYX (*Ent.*) the worm mentioned by Aristotle and Pliny, which was supposed to be generated from the flowers of trees in the island of Cos, and spun its threads after the manner of the spider, of which the inhabitants made their garments. The bombyx was so called because it resembled in shape the vessel called the bombylius [vide *Bombylius*] but it is supposed to differ from what is now called the Silk-Worm. *Aristot. Hist. Anim.* l. 5; c. 19; *Plin.* l. 11, c. 22; *Poll.* l. 7, c. 17; *Salmas. in Tertull. de Pall.* c. 3.

BOMO'LOCHUS (*Ant.*) from βωμός, an altar, and λοχάω, to lie wait; one who lies wait at the altar to get any thing of the provisions.

BOMPERNICHEL (*Med.*) or *Boupournickel*, good for nothing, i. e. *bon pour* and *nickel*, nothing, corrupted from the Low German *nic*, and the French *nil*, nothing; an epithet applied by a French traveller to the Westphalian black bread, which being made of the unsifted meal, as it comes from the mill, has been reckoned by some of a highly glutinous and nutritious quality.

BON (*Polit.*) French for a written document, by the signature of which a sovereign or a minister confirms some appointment to the person or persons specified.

BON (*Bot.*) the Coffee-tree; the *Coffea Arabica* of Linnæus.

BONA-FIDE (*Law*) with good faith, i. e. without fraud or subterfuge.—*Bona gestura*, Good Abearing, Good-Behaviour.—*Bona patria*, an assize of twelve men, or good neighbours, otherwise called *juratores*.—*Bona peritura*, perishable commodities, such as, in a wreck, will not last a year and a day, and must therefore be sold by the Sheriff. *Stat. West.* 1, 3 Ed. 1.

BONACE (*Mar.*) French for calm weather and a smooth sea.

BONAROTA (*Bot.*) the *Pæderota bonerota* and *ageria* of Linnæus.

BONA'SIANS (*Ecc.*) or Bonosians, Heretics of the fourth century maintaining that Jesus Christ was the Son of God by adoption only. *Baron. Annal.* 376.

BONA'SUS (*Zool.*) βωνάσος, an animal of the ox kind in Pæonia having the mane of a horse. It is said that when pursued by hunters he emits a noisome odour, for the purpose of deterring them from the pursuit.

BONAVE'NTURE mizen (*Mar.*) a second mizen mast added in some large foreign ships, which stands next the poop.

BON chrétien (*Bot.*) a sort of summer pear.

BOND (*Carpent.*) from to bind; the binding any two pieces together by tenancing, morticing, &c.; whence the expression "To make good bond," i. e. to fasten them in such manner securely.

BOND (*Mason.*) the disposition of stones or bricks in a building. Stones which have their length placed in the thickness of the wall are called *headers*, and those whose length extends along the face, or exterior of the wall, are

BON

called *stretchers*: where this sort of disposition is blended it is called *header* and *stretcher bond*. The stones that are inserted the whole thickness of the wall are called *heading jambs*; and the intermediate stones, having their length placed horizontally in the face, are the *stretching jambs*.—*Heart bond* is when two stones which appear in the front and rear of a wall meet in the centre of it, and when a third stone is placed over the joint, in order to bind the facing and backing together.—*Bond stones* are stretchers used in uncoursed rubble work, which, if they are inserted the whole thickness of the masonry, are called *perpends*, or *perpend stones*.—*English bond* is when to every two courses of headers there is one course of stretchers, the former of which are called *heading-courses*, the latter *stretching-courses*.—*Flemish bond* has one header between every two stretchers.—*Bond-timbers* are the horizontal timbers built in stone or brick walls for strengthening the masonry, &c. *Bond-timbers* disposed in tires are called *common bond*; those placed in or near the middle of the story are called *chain-timbers*, or *chain-bond*.

BO'NDMAN (*Ant.*) a man who was a slave, in distinction from the bond-maid. They are otherwise called bond-servants.

BOND-SO'COME (*Law*) a custom by which tenants were bound to grind corn at their lord's mill.—*Bond-tenants*, another name for copyholders, or customary tenants.

BO'NDAGE (*Law*) another name for slavery.

BONDS (*Carpent.*) all the timbers disposed in the walls of a house, as bond-timbers, lintels, and wall-plates.

BO'NDSMAN (*Law*) one bound or giving security for another.

BO'NDUC (*Bot.*) the *Guilandina* of Linnæus.

BONDUCELLA (*Bot.*) a species of the *Guilandina* of Linnæus.

BONE (*Anat.*) a hard, dry, insensible part of the body, of a whitish colour, composed of a spongy, compact, reticular substance, containing an oily substance, called *marrow*. Bones are covered with an exceedingly sensible membrane, which is generally called *periosteum*, and on the skull the *pericranium*. The processes of bones are distinguished by their figure and situations, into the *head*, the *neck*, the *condyle*, the *tuberosity*, *crista*, &c. &c. The cavities of bones, which serve for the reception of other bones, &c. are distinguished, according to their magnitude, into *foveæ*, or pits, *foramina*, notches, furrows, &c. &c. The human body is divided, as respects the bones, into the Head, Trunk, and Extremities, which are composed altogether of 238 bones, as in the following table:—

BONES OF THE HEAD.		<i>The Tongue.</i>	
<i>The Cranium, or Skull.</i>		No.	
	No.	Hyoides Os	1
Frontal	1	<i>The Ear.</i>	
Parietal	2	Malleus	2
Occipital	1	Incus	2
Temporal	2	Stapes	2
Ethmoid	1	Os Orbitale	2
Sphenoid	1	BONES OF THE TRUNK.	
<i>The Face.</i>		<i>The Spine.</i>	
Superior maxillary	2	Vertebræ cervical	7
Jugal	2	—— dorsal	12
Nasal	2	—— lumbar	5
Lachrymal	2	Os Sacrum	1
Palatine	2	Os Coccygis	1
Inferior and spongy	2	<i>The Thorax.</i>	
Vomer	1	Sternum, or Breast-bone	1
Inferior maxillary	1	Costæ, or Ribs	24
<i>The Teeth.</i>		BONES OF THE UPPER	
Incisores	8	EXTREMITIES.	
Cuspidati	4	<i>The Shoulder.</i>	
Molares	20	Clavicle, or Collar-bone	2

BON

		No.	BONES OF THE LOWER
		EXTREMITIES.	
Scapula, or Shoulder-blade		2	
<i>The Arm.</i>		<i>The Thigh.</i>	
Os Humeri	2	Femur	2
<i>The Fore arm.</i>		<i>The Leg.</i>	
Ulna	2	Patella, or Knee-pan	2
Radius	2	Tibia	2
<i>The Hand.</i>		Fibula	2
Os Naviculare	2	<i>The Foot.</i>	
Os Lunare	2	Calcaneus	2
<i>Carpus, or Wrist.</i>		Astragalus	2
Os Cuneiforme	2	Os Cuboides	2
Os Orbiculare	2	<i>Tarsus, or Instep.</i>	
Os Trapezium	2	Os Naviculare	2
Os Trapezoides	2	Ossa Cuneiformia	6
Os Magnum	2	Metatarsus	10
Os Unciforme	2	Phalanges	28
Metacarpus	10		
Phalanges	28		

BONE (*Mar.*) is used in the sea phrase of a ship, "To carry a bone in her mouth," when she makes the water foam before her in sailing.

BO'NE-LACE (*Com.*) lace made of bobbins that are formed from bones.

BONES (*Com.*) a sort of bobbins, made of trotter-bones, for weaving bone-lace.

BONES *foul* (*Vet.*) the same as Caries.—*Bone-spavin*, a hard crust in the inside of a horse's heel.

BONES (*Math.*) a name given to Lord Napier's rods for facilitating arithmetical calculations. [vide *Napier's Bones*]

BO'NGOMILES (*Ecc.*) vide *Bogomiles*.

BONGRA'CE (*Archæol.*) a shelter worn on the head to keep the face from tanning.

BONGRACE (*Mar.*) a frame of old ropes, &c. laid in different parts of a ship, to preserve it from the snow.

BO'NIFACE (*Bot.*) the same as the *Laurus Alexandrina*.

BONING (*Mensur.*) a term among surveyors, which signifies laying poles upon the ground in such a manner that all may lie in a straight line, so that the eye can pass them all to the end.

BONIS *non amovendis* (*Law*) a writ to the sheriff of London not to permit one condemned, who brings a writ of error, to remove his goods till the error be tried, *Reg. Orig.* 131.

BO'NNET (*Her.*) a cap of velvet worn without a coronet.

BONNET (*Fort.*) a work of two faces raised before the salient angle of the counterscarp, having a parapet with two rows of palisadoes.—*Bonnet a prêtre*, Priest's-cap; an outwork having three salient angles at the head, and two inward.

BONNET (*Mar.*) an additional part, or a small sail made to fasten with lutchings to the foot of the other sails; whence the phrase, "The ship has her course and bonnet abroad," when she has the bonnet added to her course.

BONNETIA (*Bot.*) a genus of plants named after Mons. Bonnet, of Geneva, Class 13 *Polyandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* one-leaved.—COR. *petals* five.—STAM. *filaments* very many; *anthers* oblong.—PIST. *germ* oblong; *style* length of the germ; *stigma* three-lobed.—PER. *capsule* oblong; *seeds* very many.

Species. The two species are shrubs, and natives of Cayenne.

BO'NNY (*Min.*) a distinct bed of ore that has no communication with any vein. It is distinguished from a *squat* in shape: the bonny being round, and the *squat* flat.

BONPOURNICKEL (*Med.*) vide *Bonpournickel*.

BONTA'NS (*Com.*) a kind of stuff of cotton interwoven with worsted at Canton, on the river Gambia.

BO'NTIA (*Bot.*) a genus of plants named after Bontius, a physician of Batavia, Class 14 *Didynamia*, Order 2 *Angiospermia*.

Generic Characters. CAL. *perianth* one-leaved.—COR. one-petalled.—STAM. *filaments* four; *anthers* simple.—PIST. *germ* ovate; *style* simple; *stigma* bifid.—PER. *drupe* ovate; *seed-nut* oval.

Species. The only species is—*Bontia daphnoides, foliis alternis, &c. arborescens, &c. lauricolæ facie, seu Olea sylvestris, &c.* Barbadoes Wild Olive, a shrub, native of the West Indies.

BONUS Henricus (*Bot.*) a species of the *Chenopodium* of Linnæus.

BO'NZES (*Theol.*) Indian priests, who wear a charlet of 100 beads round their neck, and carry a staff, at the end of which is a wooden bird.

BOO'BY (*Orn.*) a South American bird of the Pelican tribe.

BOOK (*Lit.*) from the *Ger. buch*, a beech-tree, because the bark of trees was originally used instead of paper: any folded leaves which are or may be written upon.

Book of rates (*Law*) a book showing the value of goods that pay poundage at the custom house.—*Book of responses*, that which the director of the chancery keeps particularly to note a seizure.

BOOK (*Mil.*) the different books used in the British service are distinguished according to their use, as the—*General order Book*, from which the parole and countersign are taken.—*Regimental order Book*, containing instructions to particular regiments.—*Regimental book*, containing the records of the regiment.—*Black book*, containing the offences, &c. of the non-commissioned officers and soldiers.—*Time book*, a book kept in the war-office, and other offices, to note down the time when the clerks attend.—*Quarter book*, in the ordnance office, containing the names of the officers, their appointments, salaries, &c.—*Practice book*, containing the weight, range, &c. of cannon.

BOOK-KEEPING (*Com.*) the art of keeping a merchant's books or accounts in due order, according to certain rules. To this end merchants always employ two, and sometimes three books, namely, the Waste Book, the Ledger, the Journal, to which may be added the Cash Book and the Bill Book.—*Waste Book* is the book which contains a registry of the common and daily transactions that occur in business, when against every person's name, at the right hand extremity of the same line, *D^r*. i. e. debtor, or *C^r*. i. e. creditor, must be written. The act of placing any transaction under a given account is called the entry: if any transaction be entered with the mark *D^r*. it is called *debiting* the account; if with the mark *C^r*. it is *crediting*. The accounts of persons are debited under their respective names when they become indebted to the merchant: they are credited when the merchant becomes indebted to them. Accounts of property are debited when they come into the merchant's possession, and credited when they go out of his possession. The goods are either specified particularly, or given under the general name of *sundries*. In the same manner the accounts of profit and loss are kept, which are debited on account of a loss, or credited on account of a gain. Those marked *D^r*. in the Waste Book are placed on the left hand page, marked *D^r*. and those marked *C^r*. on the opposite page, marked *Contra C^r*.—*Ledger* is a book in which the various accounts relating to any individual are arranged in a methodical manner, the act of doing which is called *posting*. The different ledgers which a merchant may want in the course of his transactions are numbered by the letters of the alphabet, A, B, C, &c.; and when a new ledger becomes necessary each account must be balanced by carrying the difference between the two sides to

the lighter, and entering it against the words "To *balance*," or "By *balance*," as the entry is to be made on the *D^r*. or *C^r*. side: when the difference is carried to the former, it shows the same to be in favour of the person to whose debit it is carried, and when on the *C^r*. side it is against him.—*Journal* is an intermediate book between the Waste Book and the Ledger, wherein the transactions of the Waste Book are entered in a brief manner, so as to facilitate the posting them into the latter.—*Cash Book* is the book in which the cash-account is kept, by entering moneys due to the merchant on the *D^r*. side of the person's against whose name it is entered, and those received on the *C^r*. side. In this book cash is *D^r*. on the left hand page, and *Contra C^r*. on the right hand.—*Bill Book*, or the book in which all bills payable or receivable are entered, commonly consists of two distinct books, called the *bills receivable book*, and the *bills payable book*. In the former the bills receivable is the only *D^r*. and accounts credited are entered in the column which shows from whom or on whose account they are received: in the latter the bills payable is the only *C^r*. and accounts debited are entered in the column which shows by whom or on whose account they are drawn.

Book-keeping is conducted either by double or single entry, which are two different methods of posting the entries of the transactions into the ledger.—*Double Entry* is so called because the same transaction is entered as it were twice, or in two different forms, as in the entry of N. N. *D^r*. to Cottons, the account of N. N. was debited to Cottons, and the account of Cottons was credited by N. N. each for the same amount. This is called forming the ledger by Double Entry.—*Single Entry*, on the other hand, is that in which the entry is made but once, as in the preceding case, wherein the entry of N. N. *D^r*. to Cottons, the account of N. N. only is debited to account, with the omission of the Credit Account by N. N.

to **Book a debt** (*Com.*) is to enter a debt against a person's name in account books.

BOOM (*Mar.*) from beam, a long pole to extend the bottoms of particular sails, as the jib-boom, studding sail boom, &c.—*Boom iron*, the iron composed of two rings in which the boom rests.—*Boom of a harbour*, a strong iron chain thrown across a harbour to prevent the entrance of an enemy.—*Fire-boom*, a strong pole thrown out from a ship to prevent the approach of fire-ships, &c.

BOOMING (*Mar.*) the application of a boom to the sails: also a ship is said to *come booming* when she makes all the sail she can.

BOOPS (*Ich.*) a fish which is the *Sparus* of Linnæus.

BOOT (*Archæol.*) a species of torture formerly practised in Scotland towards criminals to extort confession. It consisted in fixing a boot of wetted parchment on the leg, which being afterwards dried by the fire, caused exquisite pain by the shrinking.

BOOT was also the name of another punishment, by means of irons so fixed on the legs that when squeezed together they could be broken.—*Boot-haler*, a freebooter or robber.

Boot of a coach (*Mech.*) the space underneath between the coachman and the body of the coach, in which parcels are stowed.—*Boot-tree*, two pieces of wood, the shape of a leg, driven into a boot to stretch it.

BOOT-TOPPING (*Mar.*) the operation of scraping off the grass, shells, &c. from the ship's bottom.

BOO'TES (*Astron.*) βούτης, a northern constellation so called from βῆς, an ox, and αἴετα, to drive, i. e. the ox-driver, because it seems to follow the great bear as the driver follows his oxen. It was also called by the Greeks *Arctophylax*, ἀρμάξω and *Arctos*, and by the Arabians *Aramach*, and in English Charles' Wain.

Hom. *Odyss.* l. 5, v. 272.

Πηλιάδας τ' ἔσρωσαντι, καὶ ὄψε δόντα Βωῶτην
Ἀρκτον θ' ἦν καὶ Ἀμαζέων ἐπικλήσιν καλέεσιν.

Arat. *Apparent.* v. 91.

Ἐξόπισθενδ' Ἐλίας φερίται ἐλάοντι ἰοίκας
Ἀρκτοφύλαξ τὸν β' ἀνδρες ἐπικλήσιν Βωῶτην,
Ὅυνεξ' ἀμαζώνης ἐπαφάμενος εἰδέται Ἄρκτε.

Ovid.

Arctophylax formam terga sequentis habet.

Juv. *sat.* 5, v. 23.

Frigida circumagunt pigri sarraca Boöta.

Manill. *Astron. Poet.* l. 1, v. 315.

A tergo nitet Arctophylax, idemque Boötes.

Bootes had, according to Ptolemy, 23 stars, according to Tycho 28, to Bayer 34, to Hevelius 52, to Flamstead 54, one of which, in the skirt of his coat, is *Arcturus*, a star of the first magnitude. Bootes is represented as a man walking, and grasping a club in his right hand, and is fabled to have been Icarus, who was transported to heaven because he was a great cultivator of the vine; for when Bootes rises the works of ploughing and carting go forward. *Cic. de Nat. Deor.*; *Hugin. Astron. Poet.*; *Plin.* l. 2, c. 41; *Aul. Gell.* l. 2, c. 21; *Gem. Elem. Astron.*; *Hipparch. in Arat.*; *Eratosth. Characteris.*; *Ptol. Almag.* l. 7, c. 5; *Bay. Uranomet. Hevel. Machin. caelest.*

BO'OTING (*Law*) the punishment formerly used in Scotland of putting irons on the legs of offenders.—*Booting corn*, a rent of corn paid by the tenant to his lord by way of compensation for giving him a lease.

BOOTS (*Mil.*) a familiar term in the British army for the youngest officer at a regimental mess.

BOOZE (*Archæol.*) an ox or cow-stall.

BORACE (*Min.*) vide *Borax*.

BORACHIO (*Archæol.*) a leathern bottle made of swine skin to carry wine in.

BORACIC acid (*Chem.*) an acid drawn from *borax* by combustion.

BORACITES (*Min.*) Boracite, a genus of argillaceous earths found at Kahlberg, near Luneberg, situated on a bed of *Gypsum*.

Generic Characters. Consisting of carbonate of lime, of carbonate of magnesia, and boracic acid, with a little alumina, silica, and oxyde of iron.

Species. The only species is *Boracites cubicus*, Boracites, Boracite, or Borat of Magnesia.

BO'RAGE (*Bot.*) vide *Borago*.

BORAGINOIDES (*Bot.*) another name for the *Borago*.

BORAGO (*Bot.*) Borage, a plant, the leaves of which are esteemed of a cordial, exhilarating, and refrigerating nature. It answers nearest to the *Buglossum* of the ancients.

BORAGO, in the *Linnean system*, a genus of plants, Class 5 *Pentandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* five-parted.—COR. monopetalous.—STAM. *filaments* five; *anthers* oblong.—PIST. *germs* four; *style* filiform; *stigma* simple.—PER. none; *seeds* four roundish.

Species. The species are mostly annuals, as *Borago officinalis*, seu *Buglossum*, Common Borage.—*Borago Indica*, *Cynoglossoides*, seu *Anchusa*, &c. Indian Borage.—*Borago Africana*, *Cynoglossoides*, seu *Cynoglossum*, African Borage. But the *Borago orientalis* is a perennial; and the *Borago laxiflora* is a biennial. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Raii Hist. Plant.*; *Park. Theat. Botan.*; *Tournef. Inst. Re Herb.*; *Boerhaav. Ind.*

BORAGO, the species is the *Cynoglossum Ompholades* of Linnæus. *Park.*

BORAMETZ (*Bot.*) vide *Agnus Scythicus*.

BORASSUS (*Bot.*) a genus of plants consisting of the

Palmae of the largest size, Class 22 *Dioecia*, Order 6 *Hexandria*.

Generic Characters. CAL. *spathe* universal.—COR. *perianth* proper three-leaved.—STAM. *filaments* six; *anthers* thicker.—PIST. *germ* roundish; *styles* three; *stigmas* simple.—PER. *berry* (drupe) roundish; *seeds* three.

Species. The only species is *Borassus flabelliformis*, *frondibus*, &c. *Palma coccifera*, *Ampana Carimpara*, seu *Lontarus domestica*, a shrub, native of the East Indies.

BO'RATE (*Chem.*) a salt formed of horacic acid with an earthy, alkaline, or metallic base, as borate of soda, &c.—*Borate of magnesia* is another name for the Boracites.

BORAX (*Min.*) the name of a salt which, by the ancients, was called *chrysocolta*, and is supposed to be derived from the Arabic *Baurac*, which properly signifies nitre. The use of Borax in medicine is to cleanse wounds. *Aristot. de Mirab.*; *Dioscor.* l. 5, c. 104; *Plin.* l. 33, c. 5; *Aet. Tetrab.* l. 1, serm. 2, c. 81; *Paul. Aeginet.* l. 7, c. 3; *Salmas. Homonym. Hyl. Iatr.* c. 121.

BORAX, in the *Linnean system*, a genus of salts, found in Japan, Chili, and Peru, sometimes in the form of solid grains, sometimes in large crystals enclosed in a fatty matter.

Generic Characters. The generic characters are slightly caustic, rather ponderous, semitransparent, and melting into a transparent glass.

Species. The species are *Borax scdativa*, seu *Sal naturale*.—*Borax tincal*, *Borax nudus*, seu *Borax crudus*, *Borax*, *Tincal*, or *Sub-bort* of Soda.

BORAX (*Chem.*) was formerly distinguished by this character .

BORBONIA (*Bot.*) a genus of plants named after Gaston Bourbon, Duke of Orleans, Class 17 *Diadelphia*, Order 4 *Decandria*.

Generic Characters. CAL. *perianth* one-leaved.—COR. pentapetalous.—STAM. *filaments* nine; *anthers* small.—PIST. *germ* subulate; *style* very short; *stigma* obtuse.—PER. *legume* roundish; *seed* kidney-form.

Species. The species are shrubs, and natives of the Cape of Good Hope, as the—*Borbonia ericifolia*, seu *Genista Africana*, &c. a shrub.—*Borbonia trinervia*, seu *Frutex Æthiopicus*, &c.—*Borbonia lanceolata*, *Genista Africana*, &c. *Spartium Africanum*, &c. seu *Frutex Æthiopicus*, &c. Spear leaved *Borbonia*, &c.

BORBORODES (*Med.*) βορβορώδης, earthy, feculent, as βορβορώδες πυσ, feculent pus. *Hipp.* l. 7, aphor. 44.

BORBORYGMUS (*Med.*) βορβορυγγμύς, from βορβορυγίζω, to send forth a noise, or murmur. *Gal. Com. in Hippoc.* l. 4, aphor. 73.

BO'RDAGE (*Mar.*) French for the planks of a ship's side.

BORDA'GIUM (*Archæol.*) the same as *Bordlode*.

BORDARIA (*Archæol.*) a cottage, from the Saxon bord, a house.

BORDA'RII (*Archæol.*) or *Bordmen*, a term frequently used in *Domesday book* for a sort of boors, who were distinct from the *villani*. They are supposed to have been peasants in a less servile condition, who had a bord or cottage.

BORDA'T (*Com.*) or *bordctti*, a very narrow stuff manufactured in India.

BO'RD-BRIGGH (*Archæol.*) from the Saxon bord-brynce, or burz-brych; a pledge, breach, or breach of mutual fidelity.

BO'RDER (*Mil.*) a French term, signifying to line with soldiers, as *border la côte*, to line the coast.

BORDER (*Mech.*) from the Teut. *Bort*, a limit, or a board; the edge of any thing, particularly of a garment, a garden-bed, &c.

BORDER (*Bot.*) the upper or spreading part of a one-petalled corolla. [vide *Limbus*]

BORDER (*Her.*) or *bordure*, in French *bordeure*; is an ordinary, so called because it borders round, and, as it were, hems in the field. They are either plain, as in *fig. 1*, or in-

dented, as in *fig. 2*. "He beareth, *gules*, a bordure indented, *argent*." Borders are charged with things natural and artificial in the same manner as the field; thus, a border

enluron consists of birds, as in *fig. 3*. He beareth, *argent*, a bordure, *gules*, *enluron* of martlets, *or*;" so borders *enurey* composed of beasts; *verdoy*, of vegetables; *entoyer*, of inanimate things. Borders always give place to the chief, quarter, and canton, so that in coats charged with a chief, quarter, or canton, the border goes round the field until it reaches them, as in *fig. 4*. "He beareth, *argent*, a border, *gules*, a chief, *azure*." Borders were anciently used to distinguish one house from another that was descended of one family and the same parents.

BORDEREA'U (*Mil.*) French for a sort of diary, which is kept, for a troop or company, for the purpose of ascertaining what articles have been distributed, and what money paid to the soldiers.

BORDERER (*Geog.*) a name for an inhabitant on the extreme borders of a country, and particularly applied, in former times, to those who lived on the borders of England and Scotland.

BORDERERS (*Mil.*) or *King's own borderers*, a name given to the twenty-fifth regiment, because it was originally stationed on the borders of Scotland.

BORDER-WARRANT (*Law*) a warrant given by a judge, on either side the borders of England or Scotland, for arresting a person on the opposite side.

BORD-HALFPENNY (*Law*) from the Saxon *bord*, a board; a duty paid at fairs and markets for setting up boards, stalls, &c. for vending.—*Bord-lands*, the demesnes, or estate, which lords kept in their hands for the maintenance of their board or table. *Bract.* l. 4, trat. 3, c. 9.—*Bord-lode*, a service required of tenants to carry timber out of the woods of the lord.—*Bord service*, a tenure of *bord-lands*, by which some lands in the manor of Fulham were held of the bishop of London.

BORDURE (*Her.*) vide *Border*.

BORDURE (*Archit.*) French for a profile in relievo, which is either oval or round. When it is square it is called a *cadre*, and serves as a frame for a pannel or a picture.

BORE (*Gun.*) the hollow of a piece of ordnance.

BO'RE COLE (*Bot.*) or Curled Colewort, a hardy species of Kale, which is improved by cold. It is a variety of the *Brassica Oleracea* of Linnæus.

BO'REAL (*Astron.*) an epithet the same as northern, as the boreal signs, Aurora Borealis. [vide *Aurora Borealis*]

BO'REAS (*Ant.*) the North wind, otherwise called *Aquilo*; it derives its name from the Hyperborean mountains, from which it blows, or ἀπὸ τῆς βοῶν, from the blustering noise which it makes in blowing. It lies, according to Pliny, between Cæcias and Aparctias, answering nearly to that part of the compass which sailors call N.N.E.

Virg. Geog. l. 1, v. 93.

— *Borea penetrabile frigus adurat.*

Ovid makes Boreas say of himself, *Met.* l. 6, v. 691.

*Apta mihi vis est, quâ tristia nubila pello:
Et freta concutio, nosaque robora verto,
Induroque nives, et terras grandine pulso.*

Vitruv. l. 1, c. 6; *Plin.* l. 2, c. 47; *Agathem.* l. 1, c. 2.

BOREA'SMI (*Ant.*) βορειασμι, an Athenian festival in honour of Boreas, who had an altar at Athens.

BOREL-FOLK (*Archæol.*) country people, from the French *boire*, Flock, because they covered their heads with such stuff.

BO'RER (*Mech.*) an instrument for boring holes.

BOR'DIA (*Med.*) a kind of salt fish eaten raw, which is hard of digestion.

BO'RING (*Vet.*) an operation formerly practised upon horses with wrenched shoulders, by cutting a hole in the part affected, and thrusting in a cold flat iron.

BORNE (*Mason.*) French for a stone stud placed before a wall to secure it against waggons, &c.

BORNOYER (*Hort.*) a French term signifying to look with one eye through three or more stakes or poles in order to erect a wall, or plant a row of trees.

BOROUGH (*Archæol.*) from the Teut. *Burg*, formerly signified a fenced town, but is now taken for any corporate town which is not a city, and sends burgesses to Parliament. Boroughs in Scotland are divided into *Royal boroughs*, that are held of the King; and *boroughs of barony*, that are held of a subject. The magistrates of royal boroughs have the same jurisdiction within the borough that sheriffs have in the county.—*Borough English*, a custom whereby lands or estates descended to the youngest son.—*Borough-holders*, or *borsholder*, vide *Headborough*.—*Borough master*, a mayor of a town. *Glanv.* l. 7, c. 3; *Bract.* l. 3, tract. 2, c. 10; *F. N. B.* 150; *Co. Lit.* 33, &c.; *Kitch.* 102; *Lamb. Dut. of Const.*

BO'ROZAIL (*Med.*) a disease in Æthiopia similar to the *lues venerea*.

BORRA'GO (*Bot.*) vide *Borago*.

BORSE'LLA (*Mech.*) an instrument with which glass makers contract or extend their glasses at pleasure.

BORSYCITES (*Min.*) a black gem mixed with red and white spots. *Plin.* l. 37, c. 10.

BO'RTMAGAD (*Archæol.*) a housemaid.

BOS (*Zool.*) a genus of animals, Class *Mammalia*, Order *Pecora*.

Generic Characters. Horns hollow.—*Foreteeth* lower eight; *tusks* none.

Species. The species are *Bos Taurus*, the Ox, including the varieties of the Wild Bull, the Bison, the Bonassus, &c.—*Bos Arnee*, Arnee.—*Bos Bubalus*, *Bubalus*, *Buffelus*, *Le Buffle*, Buffalo.—*Bos Moschatus*, Musk Ox.—*Bos Grunniens*, *Bubalus cauda*, et *equina*, *Le yak*, ou *Buffle à queue de Cheval*, Grunting Ox, or Yak of Tartary.—*Bos Caffer*, Cape Ox.—*Bos Americanus*, American Ox.—*Bos barbatus*, Baas.—*Bos pumilus*, Dwarf Ox.

BO'SA (*Med.*) an inebriating preparation of meal, darnel, &c. *Prosp. Alp.*

BO'SCAGE (*Paint.*) a picture representing much wood, &c.

Boscage (*Archit.*) vide *Bossage*.

BOSCA'GIUM (*Archæol.*) *Boscage*, the food which woods yield to cattle, as mast, &c. from the Italian *Bosco*, a wood: to be *quit de Boscagio* is to be free of paying a duty for windfalls in the wood. *Manw.*

BOSCA'RIA (*Archæol.*) wood-houses.

BOSCAS (*Or.*) a pigeon, βοσκας from βοσκα.

BOSCAS (*Chem.*) a kind of dry pitch. *Gorr. Med. Def.*

BO'SCUS (*Ant.*) from the Italian *bosco*, wood; all manner of wood. *Stat.* 10, *Hen.* 6.

BO'SEA (*Bot.*) a genus of plants, (named after Bose, a German senator,) Class 5 *Pentandria*, Order 2 *Digynia*.

Generic Characters. CAL. *perianth* five-leaved.—COR. none.—STAM. *filaments* five; *anthers* simple.—PIST. *germ* ovate-oblong; *style* none; *stigmas* two.—PER. *berry* globular; *seed* one.

Species. The only species is the *Bosea Yervamora*, Golden-Rod tree, a shrub, native of the Canary Isles.

BOSS (*Mason.*) a vessel in which bricklayers put the mortar used for tiling. It is hung by an iron hook on the laths or the ladder.

Boss of a bit (*Her.*) a charge borne in the arms of the loriners or bitmakers' company.

BOSSAGE (*Archit.*) or *Boscage*, a term for any stone having a projecture which is laid rough in a building, in order to be afterwards carved into mouldings, capitals, coats of arms, &c.—*Bossage* is also the name for what is otherwise called *Rustic work*, consisting of stones that seem to project beyond the naked of the building.—*Bossage en liaison*, that which represents squares and stones laid crossways.

BOSSE (*Mil.*) a French term for a glass bottle filled with gunpowder and provided with matches, which, when thrown with force, breaks and explodes to the annoyance of the enemy.

BOSSE (*Mason.*) French for a knob or embossment which is left on the dressing of a stone, to show that the dimensions have not been toised. It is afterwards pared off when the work is finished.

BO'STRYCHUS (*Ent.*) a genus of animals, Class *Insecta*, Order *Coleoptera*.

Generic Characters. *Antennæ* clavate.—*Thorax* convex.—*Head* inflected.

Species. Insects of this tribe are very voracious, and make deep irregular channels in the bark of trees.

BOTA (*Archæol.*) a boot, such as the monks used to wear.

BOTANOMANCY (*Ant.*) *Βοτανομαντία*, divination by means of herbs, especially by those of sage or the fig-tree. The persons who consulted them wrote their own names or their questions on leaves, which they exposed to the wind, and from the scattered letters they collected what they took to be the answer.

BOTANY.

BOTANY is the science which teaches the knowledge of plants. Plants are to be considered as to their Parts, Classification, and Physiology.

Parts of Plants.

The principal Parts of Plants are three; namely, the Stem, *caudex*; the Herb, *herba*; and the Fructification, *fructificatio*.

The Stem.

The Stem is either descending or ascending.—The Descending Stem is the same as the Root, *radix*; the Ascending Stem is the Stem, *caudex*, properly so called.

Root. The root is divided into the *Rhizoma*, the thick fleshy part belonging to biennials and perennials.—*Fibrille*, the fibrous prolongations or thread-like parts of the root, which in some plants constitute the only parts of the root.—*Radicalæ*, the fine hair-like prolongations of the roots, which serve as absorbent vessels to nourish the plants.—*Tuber*, the thick fleshy part from which the shoots proceed, as in the *Solanum tuberosum*, the Potatoe.—*Bulbus*, the Bulb, a fleshy body provided with several coats.—*Soboles*, an horizontal prolongation of the root, which produces new plants of its kind, as in the *Triticum repens*, Couch, or Dog's Grass. According to these parts, roots are divided into the *Rhizomatoideæ*, *Fibrillatæ*, *Tuberosæ*, *Bulbosæ*, and *Nothæ*, or spurious roots. The *rhizomatoideæ* are moreover distinguished into the woody, as in trees and shrubs; fleshy, as in *Daucus carota*, the Carrot; hollow, as in *Fumaria bulbosa*; *præmorse*, or bitten-off, as in *Scabiosa succisa*, Devil's-Bit Scabious; *geniculate*, or jointed, as in *Cyclamen*.—The *fibrillatæ* are distinguished into the fibrous, as in *Poa annua*; capillary, or hair-like, as in *Scirpus avicularis*, the Least Club-Rush, &c.—The *tuberosæ* are distinguished into the granulate, or knobbed, as in the *Saxifraga granulata*; testiculated, as in the *Orchis*; digitate or fingered, as in the *Dioscorea*

alternifolia, &c.—The *bulbosæ* are distinguished into the imbricated, as in the *Lilium bulbiferum*, or Bulb-bearing Lily; coated, as in the *Allium Cepa*, the Common Onion, &c.—The *nothæ* are distinguished into *divisæ*, the divided; *bissaracæ*, byssus-like, as in many species of *Agaricus*, &c. [pl. 21]

Stem. The Ascending Stem, *Caudex ascendens*, is the prolongation of the plant above the soil, which is divided into *truncus*, the Trunk; *caulis*, the Stalk; *culmus*, the Straw, or Culm; *scapus*, the Scape; *stipes*, the Stipe; *surculus*, the Shoot; *sarmentum*, the Sarmment; *stolo*, the Sucker; *caudex*, the Stem; *petiolus*, the Petiole, or Leaf-Stalk; *pedunculus*, the Peduncle, or Flower-Stalk; and *seta*, the Bristle.—*Truncus*, the Trunk, peculiar to trees and shrubs, the divisions of which are called *Rami*, Branches, and *Ramuli*, Twigs.—*Caulis*, the Stalk, is herbaceous, and belongs only to herbaceous plants. The stalk, in respect to division, is simple, branched, dichotomous, &c.; in respect to the branches, alternate, opposite, distochous, &c.; in respect to position, erect, creeping; or parasitical, as in the *Viscum sarmentosum*, Mistletoe; twining from the left to the right, as in *Humulus lupulinus*, the Hop; twining from the right to the left, as in *Convolvulus*, the Bindweed; in respect to clothing, as naked, leafless, scaly, prickly, bulb-bearing, &c.; in respect to figure, round, compressed, angled, articulated, &c.; in respect to substance, woody, herbaceous, fleshy, &c.—*Culmus*, the Straw or Culm, proper to Grasses only. The straw is knotted, branched, sheathed, &c.—*Scapus*, the Scape, an herbaceous stem, bearing flowers but not leaves, like the Lilies.—*Caudex*, the Stem, a simple perennial rod, belonging to the Palms and the arboreous Ferns. The Stem is ringed, scaly, tessellated, aculeated, &c.—*Stipes*, the Stipe, is applied only to the Filices, Fungi, &c. The Stipe in the Filices is chaffy, scaly, naked, &c.; in the Fungi, fleshy, leathery, squarrose, &c.—*Surculus*, the Shoot, is a stem of the Mosses; but that sort of stalk which bears the fructification of the *Musci frondosi et Jungermannicæ*, is called *seta*, the Bristle. The Shoot is simple, branched, pinnated, creeping, &c. The Bristle, single, aggregate, axillary, &c.—*Sarmentum*, a filiform stem, that sends forth shoots and produces new plants of the same kind, as *Saxifraga sarmentosa*, the Saxifrage.—*Stolo*, the Sucker, a foliaceous creeping stem, producing leaves, from which comes a new plant, as *Azuga reptans*, Common Bugle, and *Hieracium pilosella*, Mouse-Ear Hawkweed.—*Petiolus*, the Petiole, or Leafstalk, is a stem situated at the base of the leaf. The Petiole is winged, as in the *Citrus aurantium*, the Orange; compressed, as in the *Populus tremula*, the Asp; ehannelled, as in the *Tussilago petasites*, Common Butter-Burr; inflated, as in the *Trapa natans*, four-awned Caltrops, &c.—*Pedunculus*, the Peduncle, or Flower-Stalk, which is found close under the flower, and may be either a principal stem or a partial stalk, called *Pedicellus*, or Foot-stalk. The Flower-Stalk is one, two, three, flowered, &c., common, partial, axillary, lateral, alar, &c. To the Flower-Stalk belongs *inflorescentia*, the Inflorescence, or the manner in which the flower grows on the stalk. [pl. 21]

Inflorescence. The Inflorescence is of different kinds, namely, *verticillus*, the Whorl; *capitulum*, the Head; *spicula*, the Ear; *spica*, the Spike; *racemus*, the Raceme; *fasciculus*, the Fascicle; *cyma*, the Cyme; *corymbus*, the Corymb; *panicula*, the Panicle; *thyrsus*, the Thyrsus; *spadix*, the Spadix; *amentum*, the Catkin; *sorus*, the Moss.—*Verticellus*, the Whorl, or Whirl, which consists of several flowers standing at intervals. It is sessile, as in the *Mentha arvensis*, the Field Mint;

pedicelled, headed, as in *Phlomis tuberosa*; naked, bracteate, &c.—*Capitulum*, the Head, has many flowers, standing thick, so as to form a head. It is spherical, as in the *Gomphrena globosa*; conical, as in the *Trifolium montanum*; leafy, tufted, &c.—*Spicula*, or *Locusta*, the Ear, the flowers of gramineous plants. It is one, two, many flowered, &c.; ovate, oblong, &c.—*Spica*, the Spike, has many flowers without a foot-stalk. It is glomerate, interrupted, verticillated, imbricated, ovate, or ventricose, &c.—*Racemus*, the Raceme, is a peduncle with short lateral branches, as in *Vitis*, the Vine; *Ribes*, the Currant, &c.: this is one-sided, one-rowed, limber, stiff, compound, conjugate, &c.—*Corymbus*, the Corymb, is an erect raceme, the lower peduncles of which are so lengthened as to be of equal height with the upper. These footstalks take their rise from different heights, which distinguish the Corymb from—*Cyma*, the Cyme, where the peduncles take their rise from the same centre; but the subdivisions are irregular, as in *Sambucus nigra*, and from—*Umbella*, the Umbel, where the peduncles take their rise from the same centre, and the whole is disposed in regular order. In an Umbel the flower-stalks are called *Radii*, Rays; and the Umbel is either simple, compound, sitting, peduncled, close, distant, poor, convex, or flat, &c.—*Fasciculus*, the Fascicle, or Bundle, a number of simple peduncles rising at the foot of the stem from several points, as in *Dianthus barbatus*, the Sweet-William.—*Panicula*, the Panicle, is that in which the flowers or fruits are scattered on branches unequally divided, as in *Avena*, Oats, or Oat-Grass, it is either simple, branched, or crowded, &c.—*Thyrus*, the Thyrsus, is a panicle in an ovate form, as in the *Syringa*, *Ligustrum vulgare*, Common Privet, &c.—*Spadix*, an inflorescence, so called from the *vagina*, called *Spadix*, which contains the flower-stalks, as in the Palms and some plants of the *Arum* genus.—*Amentum*, or *Julus*, the Catkin, is a long stem thickly covered with scales, under which are the flowers, or their essential parts, as in the *Salices*, the Willows; *Corylus avellana*, the Hazel, &c. It is either cylindrical, or attenuated, &c.—*Sorus*, the Mass, the inflorescence peculiar to the Filices, so called from the masses of seed-capsules found on the fronds of these plants. It is either round, lunated, linear, two-rowed, continued, or interrupted, &c. [pl. 21. 22]

Of the Herb.

The Herb consists of *folium*, the Leaf; *frons*, the Frond; and *fulcrum*, the Prop or Fulcrum.

Leaf. The Leaf is the production and prolongation of the ascending stem. Leaves are generally divided into simple and compound. The simple Leaf is distinguished, as to its Apex, into acute, or ending in a point; obtuse, or having the point blunt or round; mucronate, præmorse, truncated, &c. As to its Base, into heartshaped, kindey-shaped, ear-shaped, lunate, arrow-shaped, &c. As to its Circumference, spatulate, or in the form of a spatula, rhombic, ovate, lanceolate, lobed, palmated, lacinate, or torn, &c. As respects the Surface, into veined, when the vessels rise from the middle rib; nerved, when the vessels rise from the base to the apex; three-nerved, quintuple-nerved, &c.; channelled, wrinkled, pitted, curled, &c. As to the Margin, toothed, undulated, or bent in and out; crenated, serrated, gnawed, spiny, fringed, &c. As to its Situation, into radical when the leaf springs from the root, as in the *viola odorata*; seminal, when the leaf grows out of the seed, as in Hemp, &c.

Compound Leaves, are those which have several leaves supported by one footstalk. They are of different kinds,

as bigeminate, when the divided leafstalk bears two leaves; pinnate, when an undivided leafstalk has leaflets on each side; alternately pinnate, when the leaflets stand alternately on a pinnated leaf, &c.

Fronde. The Frond, a kind of leaf proper to the *Palmæ hepaticæ* and *Algæ*, which have the stalk and leaf so intimately connected that they cannot be distinguished. The Frond of the Palms is either fanshaped, as in *Chamærops borassus*; petalled, as in *Corypha*; pinnated, as in *Phoenix*; bipinnated, as in *Caryota*; unfertile, as in *Blechnum*; whirled, as in *Equisetrum*. The Frond of the *Algæ* is in *Lichen saxatilis fraxineus*, &c. gelatinous, as in *Lichen crispus, fascicularis*; leathery, as in *Peltidea canina*; imbricated, as in *Lichen saxicola, parietinus*, &c.; crustaceous, as in *Lichen saxicola, subfuscus, Opegrapha pulverulenta*; powdery, as in *Lepra*; threadlike, as in *Lichen jubatum, Conferva, Geranium, Byssus*, &c.; cupbearing, as in *Lichen pyridatus, gracilis*, &c. [pl. 23]

Props. The Prop is a sort of leaf which serves to keep the plant erect, and answers several other purposes. It is of different kinds, as—*Stipula*, the stipule, a small leaf that appears on the stem in the place of a footstalk, which are double, solitary, lateral, caducous, deciduous, &c. The stipules also vary in form like the leaves.—*Ramentum*, the Rament, a bristle-shaped leaflet placed in the angle of the petiole, as on the oak.—*Bractea*, the Floral Leaves that stand near or between the flowers, which sometimes form *Coma*, a Tuft, as *Fritillaria imperialis*, the Pine Apple,—*Vagina*, the Sheath, the prolongation of a leaf, which rolls itself round the stem, as in the grasses.—*Spatha*, the Spathe, an oblong leaf which surrounds the stem, and serves as a covering for the flower. The spathe is univalve, as in *Arum maculatum*; bivalve, as in *Stratiotes aloides*, the Fresh-water Soldier; one flowered, two-flowered, &c. withering, permanent, &c.—*Ochrea*, the Roll, a leaf-like body, encircling the branches of the Flower-Stalk in some grasses, after the manner of the sheath. The Roll is truncated, oblique, and foliaceous.—*Ascidium*, the Bottle, a foliaceous cylindrical hollow body, which is generally furnished with a cover, and contains water.—*Ampulla*, the Bladder, a round hollow body at the roots of water plants, as in *Utricularia*.—*Ligula*, the Strap, a leaflet at the base of the leaf in grasses only. The strap is entire, bifid, torn, fringed, truncated, &c.—*Involucrum*, the Involucre, consisting of several leaves which surround the flower, particularly of umbelliferous plants before they unfold. The Involucre is common, partial, or halved; one-leaved, as in *Buplerum*; two-leaved, as in *Euphorbia*; three-leaved, as in *Butomus*; tetraphyllous, or four-leaved, as in *Cornus*; pentaphyllous, as in *Daucus*, hexaphyllous, as in *Halmanthus*. Linnaeus reckons the involucre as a sort of calyx. [vide *Calyx* and *Involucre*]—*Cirrhus*, the Tendril, a filiform body, which serves for attaching plants to some support, as in the vine, &c. The tendril is either axillary, foliar, petiolar, peduncular, simple, three-branched, &c. [vide *Tendril*]—*Gemma*, the Bud which contains the embryo of leaves. The opening of the bud is called *foliatio*, Foliatio; an opening bud cut horizontally presents different appearances, which are distinguished by the names of involute, as in *Humulus lupulus*, the Hop; revolute, as in *Salices*, the Willows; obvolvute, as in *Salvia officinalis*, Sage; convolute, as in *Prianus Armeniaca*, the Apricot; riding, as in *Syringa vulgaris*, the Lilac; conuplicate, as in *Fagus sylvatica*, the Beech; plaited, as in *Betula alba*. [vide *Bud*]—*Propago*, the Moss-Bud, is a roundish longish body proceeding from the mother plant, and becoming itself a new one, as in the mosses.

—*Gongylus*, the knot belonging to the Fuci, which falls off upon the death of the mother plant, and becomes a new one.—*Glandula*, the gland, a round body, situated on the leaves, that serves as an organ of transpiration and secretion.—*Spina*, the Thorn, rises in the interior of the plant, as in *Prunus spinosa*, the Sloe.—*Aculeus*, the Prickle, a persistent production, that issues from the bark, as in the *Rosa centifolia*.—*Arista*, the Awn, a pointed beard on grasses. The Awn is either naked, feathered, straight, geniculated, bent, twisted, terminal, or dorsal. [vide *Arista*]—*Pili*, the Hairs, fine slender bodies, which serve as organs of perspiration. The Hairs are either awl-shaped, as in *Borago officinalis*; bulbous, as in *Centaurea jacea*; hook-shaped, as in *Scabiosa succisa*; articulated, as in *Veronica aphylla*; forked, as in *Apargia hispida*; branched, as in *Ribes grossularia*; the Gooseberry. [vide *Pili*]

Parts of the Fungi, &c. To the above may be added the parts of the Fungi, Filices, and Algæ, which differ so materially, as to admit of little or no comparison with those of other plants, particularly the first, the parts of which are *volva*, the Wrapper; *annulus*, the Ring; *pileus*, the Cap; *peridium*, the Envelope.—*Volva*, the wrapper, is a thick fleshy membrane, as in *Lycoperdon stellata*.—*Annulus*, the Ring, is a thin membrane attached to the stalk, as in *Agaricus conspurcatus*. The Ring is either upright, inverted, sitting, moveable, permanent, fugacious, cobweb-like.—*Pileus*, the Cap, or the top of the Fungus, is distinguished into the flat, round, hollow, bossed, bell-shaped, viscid, scaly, squarrose, halved, stipitate, sitting, &c. The Pileus has also parts peculiar to itself, as *Umbo*, the Boss, which is the centre; *Lamelles*, the Gills, the thin foliaceous membrane on the underside of the Pileus, which are peculiar to the genus *Agaricus*; *Pori*, the Pores, small holes on the under side of the Pileus, which are peculiar to the *Boleti*; *Aculei*, or *Echini*, the Prickles or projecting points peculiar to the genus *Hydnum*; *Papillæ*, the Warts, small round protuberances on the under surface. [vide *Cap*]—*Peridium*, the Envelope, is a thin membrane, belonging to some Fungi, which cover the seeds, as in *Lycoperdon*, &c. The Envelope is either simple, as in *Phy-sarium*, *Nidularia*, &c.; double, as in *Diderma*; circularly-torn, as in *Arcyria*; dentated, as in *Æcidium*; reticulate, as in *Dictydium*.

The Filices have a tender membrane, called *Indusium*, the Cover which surrounds the *Sorus*. The Cover is either flat, as in *Polypodium*; bottle-shaped, as in *Trichomanes*; bivalve, as in *Hymenophyllum*; continuous, as in *Pteris*; superficial, as in *Scolopendrum*; simple, as in *Pteris*; double, as in *Scolopendrum*, &c.

Some of the Algæ have a peltated concavity, with a raised rim, called *Cyphella*, the Little Cup.

Fructification.

The Fructification consists of the Flower, *Flos*; and the Fruit, *Fructus*.

Flower. The Flower is to be considered as to the parts of which it is composed, and the kinds into which it is divided. The principal parts of the Flower are, *calyx*, the Calyx or Empalement; *corolla*, the Blossom; *stamen*, the Stamen or Chives; *pistillum*, the Pistil or Pointal; and *nectarium*, the Nectary.

Calyx. The Calyx comprehends all the green leaves which serve as an envelope for the flower, of which there are different kinds, as—*Perianthium*, the Perianth, which immediately incloses the flower; and is either abiding, as in *Hyoscyamus niger*, the Henbane; deciduous, as in *Tilia Europæa*, the Lime Tree; withering, *marescens*, as in *Prunus Armeniaca*, the Apricot;

caducous, as in *Papaver somniferum*; double, as in *Fragaria vesca*, the Strawberry; labiated, as in *Salvia officinalis*, the Sage; one, two, three-leaved, &c. cleft, bifid, trifid, &c. &c. [vide *Calyx* or *perianth*]—*Anthodium*, the common Perianth, which contains a great number of flowers in one, as in *Leontodon Taraxacum*, the Dandelion; *Centaurea cyanus*, the Blue Bottle; *Helianthus annuus*, the Sunflower, &c. The common Perianth is either one-leaved, many-leaved, simple, equal, sealy, squarrose, fringed, muricated, thorny, turbinated, spherical, cylindrical, flat, doubled, or calyculated. This perianth is called by Linnæus the Common Calyx, and its *foliola* are called *squamæ*. The same name is also given to the *foliola* which cover the Catkin, and serve in place of the Calyx.—*Gluma*, the Glume, or perianth of Grasses.—*Pappus*, a calyx, consisting of hair, which remains till the ripening of the seed.—*Perichætium* is the calyx of the mosses. [vide *Calyx*]

Corolla. The Corolla is the envelope of small leaves, inclosed by the Calyx, and surrounding the interior parts of the flower. The divisions or small leaves of the Corolla are called *Petala*, petals, according to which it is distinguished into *Corolla monopetala*, monopetalous Corolla, when it consists of one piece, or petal; and *Corolla polypetala*, polypetalous Corolla, when it consists of several petals. The monopetalous Corolla is divided into segments, and, as to its form, is either club-shaped, spherical, bell-shaped, cup-shaped, urceolated, funnel-shaped, salver-shaped, wheel-shaped, tongue-shaped, ringent, or bilabiate, &c. The Polypetalous Corolla is either rose-like, mallow-like, cross-like, pink-like, lily-like, papilionaceous, one, two, three, or many-petalled, &c. The other parts of the Corolla are *Tubus*, the hollow underpart of the monopetalous Corolla; *limbus*, the Border or opening of the Corolla; *lacinie*, the segments or lobes; *galea*, the Helmet, or upper arched *lacinia*; *labia*, the Lips upper and under; *barba*, the Beard, a species of a lip; *rictus*, the Gape between the extremities of the lip; *faux*, the Throat, or opening of the tube; *palatum*, the Palate, or arch of the under lip. The parts of a papilionaceous Corolla are *vezillum*, the Standard; *alæ*, the Wings; *carina*, the Keel. [vide *Corolla*] The Corolla of the Mosses, which differs from that of all other plants, is a pretty hard membrane that closely embraces the pistil, the under part of which perfectly resembles the vagina on the straw of the Grasses, and is called *vaginula*, the little Sheath; the upper part remains attached to the fruit, and is called *calyptra*, the Calyptra, the varieties of which do not appear until the fruit is ripe.

Stamen. The Stamen is one of the essential parts of a flower consisting of—*Filamenta*, Filaments, which support the Anther.—*Anthera*, the Anther, a hollow cellular body.—*Pollen*, a powder, or very fine dust contained in the anther. The Filaments are, as to their figure, capillary, filiform, awl-shaped, dilated, heart-shaped, wedge-shaped, loose, connate, bifid, multifid-jointed, connivant, incurved, declined, hairy, unequal, &c. [vide *Stamen* and *filament*] The Anther is either kidney-shaped, as in *Digitalis purpurea*, the Fox-glove; bifid, as in most Grasses; peltated, as in *Taxus baccata*, the Yew; hairy, as in *Lamium Album*, the Dead-Nettle; crested, as in *Ericæ*, the Heaths; bilocular, unilocular, angulated, &c. [vide *Stamen* and *Anther*]

Pistil. The Pistil, the second essential part of a flower, stands always in the middle, and consists of—*Germen*, the Seed-bud, the undermost part containing the embryo of the fruit.—*Stylus*, the Style or Shaft, a small stalk seated on the Germen.—*Stigma*, the top of the style. The Germen is either sitting, pedicelled, superior, or

inferior. The Style is hair-like, bristle-like, thread-like, awl-shaped, club-shaped, dichotomous, bifid, trifid, multifid, &c. terminal, lateral, erect, declined, deciduous, &c. The Stigma is pointed, blunt, oblong, club-shaped, spherical, capitate, emarginated, peltated, angular, three-lobed, cruciform, petal-like, bifid, trifid, multifid, &c.

Nectary. The Nectary is that part of the flower which commonly serves to secrete a sweet juice, called Nectar. Nectaries are of different kinds, as *Glandulæ*, glands which really secrete and exude the sweet juice, and are either sessile, petiolated, spherical, compressed, or flat, &c.—*Squamæ nectariferæ* are small scales that exude honey.—*Pori nectariferi* are small pores that exude honey.—*Cucullus*, the Hood, a hollow body like a hood or bag, as in *Aconitum*, Monkshood.—*Fornix*, the Arch, a small elongation of the Corolla.—*Barba*, the Beard, consisting of soft hairs or bristles.—*Tubus*, the Tube, of the shape of a cylinder, as in *Pelargonium*, Crane's-bill.—*Fovea*, the Pit, a cavity for the reception of honey.—*Plica*, an oblong groove.—*Calcar*, the Spur, a horn-shaped production of the Corolla, in which honey is found, as in *Viola odorata*, March Violet.—*Filum*, the Thread, a long body at the bottom of the flower, as in *Passiflora*, the Passion-Flower.—*Cylindrus*, the Cylinder, a thin cylindrical body surrounding the pistil, as in *Svetenia*.—*Corona*, the Crown, a body much resembling the Corolla.

Fruit. The Fruit proceeds from the Germen, and consists of *pericarpium*, the Pericarp; *semen*, the Seed; and *basis*, the Base.

Pericarp. The Pericarp is the hard hollow body which contains the seed, and is of different kinds; namely, *utriculus*, the Bladder; *samara*, the Winged Fruit; *folliculus*, the Follicle; *capsula*, the Capsule; *nux*, the Nut; *drupa*, the Drupe; *bacca*, the Berry, *pomum*, the Pome; *pepo*, the Pumpkin; *siliqua*, the Silique; *legumen*, the Legume; *lomentum*, the Loment; and *theca*, the Case.—*Utriculus*, the Bladder, a thin skin inclosing a single seed. The Bladder is loose, as in *Adonis*; straight, as in *Galium*; and cut round, as in *Amaranthus*.—*Samara*, the Winged-Fruit, a pericarp containing two seeds at most, as in the fruit of the Eln.—*Folliculus*, the Follicle, an oblong pericarp, filled with seeds.—*Capsula*, the Capsule, is a pericarp, or thin coat divided into cells.

The parts of the capsule are, *dissepimentum*, the partition; *loculamenta*, the cells; *columella*, the Column; *valvula*, the Valves; *sutura*, the Suture. The different sorts of capsules are distinguished, as to their figure, into round, long, &c.; as to the number of their cells, into unilocular, or one-celled, bilocular, &c.; as to the number of valves, into one-valved, two, three-valved, &c. as to the number of seeds, into one-seeded, two-seeded, &c.; as to their composition, into berried, corticated, woody, &c.; as to their mode of opening, whether they burst at the top, in the middle, or at the base.—*Nux*, the Nut, a pericarp covered with a hard shell, called the Putamen, the seed of which is called *Nucleus*, the Kernel.—*Drupa*, the Drupe, a nut covered with a fleshy coat, as in the *Prunus cerasus*, the Cherry. The Drupe is berried, as in *Prunus cerasus*, the cherry, *Prunus domestica*, the Plum, *Amygdalus Persica*, the Peach; dry, as in *Amygdalus communis*, the Almond; winged, as in *Halesia*; bursting, as in *Juglans regia*, the Walnut, *Myristica moschata*, the Nutmeg, &c. It is also distinguished as to the number of nuts and cells.—*Bacca*, the Berry, a succulent fruit containing many seeds. The Berry is distinguished, according to the number of the seeds, into one, two, three, or many-seeded, &c.; according to the number of cells, into one, two, three, or many-celled, &c.; and as to its

make, succulent, as in *Ribes grossularia*, the Gooseberry; dry, as in *Hedera helix*, the Ivy; corticated, as in *Garcinia mangostana*.—*Pomum*, the Pome, a fleshy fruit, having internally a capsule for the seed.—*Pepo*, Pumpkin, a succulent fruit, having its seeds attached to the inner surface of the rind, as in the *Cucurbita pepo*, the Gourd, &c. The Pumpkin is unilocular, bilocular, multilocular, &c.; halflocular, fleshy, juicy, dry, cortical, &c.—*Siliqua*, the Silique, a dry elongated pericarp, consisting of halves, or valves, as in the *Sinapis alba*, the Mustard: when the Silique is as broad as it is long it is called *silicula*, a Silicle, both of which are distinguished according to the situation of the partition, i. e. whether the valves run parallel with the partition, or whether contrary to the partition.—The *Legume*, a dry elongated pericarp, differing somewhat from the silique. The Legume is membranaceous, coriaceous, fleshy, woody, mealy, ventricose, compressed, channelled, one-seeded, two-seeded, &c.—*Lomentum*, the Loment, an elongated pericarp that bursts differently from the legume. The Loment is cortical, as in *Cassia fistula*; articulated, as in *Hedysarum*; intercepted, as in *Hippocrepis*.—*Theca*, the Case, the fruit of the *frondosi Musci*, which consists of *calyptra*, a calyptræ, or tender skin, like a cup; *operculum*, a lid; *fimbria*, the Fringe, a narrow sinuated membrane; *peristoma*, or *peristomium*, the Mouth; *epiphragma*, the Epiphragm, a thin membrane which stretches over the mouth of the Theca; *columella*, or *sporangidium*, the Column, a slender thread-like body passing through the middle of the Theca, and to which the seed is attached; *apophysis*, a fleshy round or oblong body that appears at the base of the Theca. The calyptræ is either entire, as in *Grimmia extinctoria*; half, as in most *Musci*; hairy, as in *Polytrichum*; den- tated, as in *Grimmia dentata*. The Lid is distinguished as to its figure into acute, mucronate, convex, &c. The Mouth is either naked or set with membranaceous teeth in different rows and positions.—*Strobile*, a pericarp made of a catkin.—*Apothecium*, a pericarp peculiar to the Lichens.

Seed. The Seed is that part of the plant destined for propagation. It consists of different parts, namely, *cotyledones*, Cotyledons, or Seed-Leaves; *corculum*, the Corcle; *hylum* the Eye; *funiculus umbilicalis*, the Umbilical Chord; *plumula*, the Plumule; and *rostellum*, the Rostel.—*Cotyledons*, are the two lobes, or Seed-Leaves.—*Corculum*, the Corcle, or germ of the new plant.—*Hylum*, the Eye, a deep scar in that part of the seed which has been occupied by the corcle.—*Funiculus umbilicalis*, the Umbilical chord, or the thread by which the seed is attached.—*Plumula*, the Plumule, or that part of the corcle which ascends to form the leaves.—*Rostellum*, the Rostel, the other part of the corcle which descends into the earth, and becomes the root. The seed is, besides, covered with two coats, the one external, called the *tunica externa*, and the other internal, *Membrana interna*. Other parts belonging to the Seed or Pericarp are *arillus*, the Aril; *pappus*, the Down; *desma*, the Tuft; *cauda*, the Tail; *rostrum*, the Beak; *ala*, the Wing; *crista*, the Crest; *costæ*, the Ribs; *verruca*, the Wart; *pruina*, the Hoar; *elater*, the Springer; *capillitium*, the Hair-Net, and the *trichidium*.—*Arillus*, the Aril, is a soft membrane extended over the seed, which is succulent, as in *Enonymus Europæus*, the Spindle-Tree; the Aril, cartilagineous, membranaceous, halved, torn, caped; or netlike, as in the *Orchis*. Sometimes the Aril encloses the pericarp as well as the seed, as in *Myristica moschata*, the Nutmeg.—*Pappus*, or Down, the calyx of each particular floret enclosed in a common perianth. The Down is either sitting, stipitate, abiding, caducous, calyced; or chaffy, as in *Helianthus annuus*,

the Sunflower; awned as in *Bidens tripartita*; stellate, hair-like, fringed, setaceous, &c.—*Desma*, or *Coma*, the Tuft, a sort of *pilose pappus*.—*Cauda*, the Tail, a threadlike body that appears on the top of the seed.—*Rostrum*, a persistent style on the seed or pericarp.—*Ala*, the Wing, a cartilaginous membrane on the seed and the pericarp.—*Crista*, the Crest, a cork-like wing on the top of some pericarps.—*Costæ*, the Ribs, prominent ridges on some pericarps.—*Verruca*, the Wart, a protuberance on many seeds.—*Pruina*, the Hoar, a fine white powder that often covers the seeds and the pericarp.—*Elatér*, the Springer, a filiform elastic body found on the seeds of the *Musci hepatici*.—*Capillitium*, a Hair-Net that serves to fasten the seeds of some *Fungi*.—*Trichidium*, or *Pecten*, a very tender simple hair which supports the seed in some *Fungi*.

Base. The Base connects all the parts of fructification, and consists of—*Receptaculum*, the Receptacle, or body on which the flower stands. The Receptacle is distinguished as to its form into flat, convex, conical; clubbed as in *Arum*, closed as in *Ficus*; quadrifid as in *Mithridatea quadrifida*; flat as in *Dorstenia*, &c.—*Thalamus*, the Fruit-bed, which encloses the fruit within its substance. This is of different kinds, as *pella*, the Target, a thin round or oblong fruit-bed, which is chiefly found in the genus *Peltidea*; *scutella*, the Shield, a plate-shaped fruit-bed, proper only to the *Algæ*; *tuberculum*, a convex fruit-bed which has no raised margin; *gyroma*, or *trica*, which has the appearance of a saucer, and is peculiar to the genus *Umbilicaria*; *cistella*, which is in shape like a ball; *orbiculus*, a round fruit-bed flat on both sides, in the substance of some fungi, as *Nidularia*; *linella*, a linear-shaped fruit-bed.

Flowers. Flowers are either simple or compound—The Simple Flower is distinguished into *flos nudus*, the Naked Flower, which has neither calyx nor corolla; *flos apetalus*, the Apetalous Flower, which has no corolla; *flos aphyllus*, or *corallaceus*, the Aphyllous Flower, which has no calyx; *flos hermaphroditus*, the Hermaphrodite Flower, which has no stamina and pistillum; *flos fœmineus*, the Female Flower, having no stamina; *flos masculus*, the Male Flower, having no pistil.—The Compound Flower is that which has several flowers seated close together, so as to have the appearance of but one. It is distinguished according to the form into semifloscular, discoid, radiate, &c. [vide *Flower*]

Classification of Plants.

Plants are classed either according to a natural or an artificial order.

Natural Orders. Plants in their natural order are divided into seven families, namely—*Fungi*, which are fleshy, coriaceous, or woody—*Algæ*, which have neither stem nor leaves.—*Musci*, Mosses, which resemble other plants in nothing, except in their leaves and fruit.—*Filices*, Ferns, that never send forth more than one leaf on a footstalk. Their fructification is either in a spike, whence they are called spiciferæ; or on the back of the leaf *Epiphyllousperma*; or on the root in the form of a knob, *Rhizosperma*.—*Gramina*, Grasses, which are distinguished by their stem, which is a culm, or straw.—*Lilia*, Lilies, having a tuberosous or bulbous root.—*Palmae*, Palms, which have an arborcous stem, called *Stipes*, from which rise the leaves, but not the branches.—*Plantæ*, Plants, all those which do not come under the above divisions. These are divided into *Herbæ*, Herbs, which bear flowers and seeds once, and then die. If they die at the end of one year they are called *Annuals*; if they last two years they are called *Biennials*.—*Suffrutices*, Undershrubs, the stem of which perishes annually, but the

root remains. These are better known by the name of *perennials*.—*Frutices*, Shrubs, the stem of which continues many years, and sends forth branches from the bottom.—*Arbores*, Trees, the stem of which sends forth branches from the middle or top.

Artificial System. The artificial system is composed of Classes, Orders, Genera, Species, and Varieties. The Class is the most general division of all, including the greatest number of particular plants that have some common characteristic; the Order is a subdivision of the Class; the Genera are contained in the Order, and the Species in the Genera; when the species differ from each other in any minute particular, it is denominated a Variety. The name of a Genus is called the generic Name: that of a Species or Variety the specific or trivial Name. In this manner different systems have been formed according to the different characters which have been selected as the ground of distinction.

Cæsalpinus, who first systematized Botany, formed fifteen classes from the fruit and the situation of the Corculum. Morison constructed his system according to the flower and the general appearance of the plant, out of which he made eighteen classes, and divided the plants generally into *Lignosæ* and *Herbaceæ*. Hermann made use of the flower, fruit, &c. dividing his plants into *Herbæ gymnospermae*, *Herbæ angiospermae*, *Herbæ apetalæ*, and *arbores*. Ray also chose the flower, fruit, and external appearance of the plant, dividing them into, 1. *Herbæ submarinæ*. 2. *Fungi*. 3. *Musci*. 4. *Capillares*. 5. *Apetalæ*. 6. *Planipetalæ*. 7. *Discoideæ*. 8. *Corymbiferae*. 9. *Capitatae*. 10. *Solitario Semine*. 11. *Umbelliferae*. 12. *Stellatae*. 13. *Asperifoliae*. 14. *Verticellatae*. 15. *Polyespermae*. 16. *Pomiferae*. 17. *Bacciferae*. 18. *Multisiliquæ*. 19. *Monopetalæ*. 20. *Di-tripetalæ*. 21. *Siliquosæ*. 22. *Leguminosæ*. 23. *Pentapetalæ*. 24. *Floriferae*. 25. *Stamineæ*. 26. *Anomalæ*. 27. *Arundinaceæ*. 28. *Arbores apetalæ*. 29. *Fructu umbilicato*. 30. *Fructu non umbilicato*. 31. *Fructu sicco*. 32. *Fructu siliquoso*. 33. *Anomalæ*.

Camellus framed a system from the valves of the capsule, calling his classes *Pericarpia afora*, *unifora*, *bifora*, &c. Rivinus selected the Corolla, dividing the plants into *Flores regulares*, *compositæ*, and *irregulares*, and these again into *Monopetali*, *dipetali*, &c.

Tournefort also made the Corolla the foundation of his system, which was generally adopted until the time of Linnæus. He divided plants into *Herbæ et Suffrutices*, *Arbores et Frutices*, and these again into *Herbæ Floribus monopetalis campaniformibus*, *infundibuliformibus*, &c.

Gleditsch formed his system on the stamina, making the following classes: *Thalastemonis*, *Petalastemonis*, *Calycostemonis*, *Stylostemonis*, and *Cryptostemonis*.

Haller framed a natural system on the Cotyledons, the Calyx, the Corolla, the Stamina, and the sexes of the plants, distinguishing them into—1. *Fungi*. 2. *Musci*. 3. *Epiphyllousperma*. 4. *Apetalæ*. 5. *Gramina*, &c. to the number of fifteen classes.

The system of Linnæus, otherwise called the *sexual system*, because it embraces the sexes of plants in the scheme, consists of classes which are distinguished according to the stamina, and of orders which are mostly taken from the style. From the first to the tenth they are named after the number of the stamina, as—1. *Monandria*, for those having one stamen; 2. *Diandria*, those with two stamina; 3. *Triandria*, those with three stamina; 4. *Tetrandria*, those with four stamina; 5. *Pentandria*, those with five stamina; 6. *Hexandria*, those with six stamina; 7. *Heptandria*, those with seven stamina; 8. *Octandria*, those with eight stamina; 9. *Enneandria*, those with nine stamina; 10. *Decandria*, those

BOTANY.

with ten stamina; 11. *Dodecandria*, including those plants which have from eleven to seventeen stamina; 12. *Icosandria*, those having many stamina inserted in the calyx; 13. *Polyandria*, those having twenty stamina and upwards; 14. *Didynamia*, those having four stamina in one flower, two of which are longer than the rest; 15. *Tetradynamia*, those having six stamina in one flower, two shorter than the rest; 16. *Monodelphia*, those whose filaments are connected in the form of a cylinder or tube; 17. *Diadelphia*, when the filaments form two parcels; 18. *Polyadelphia*, when the filaments form several parcels; 19. *Syngenesia*, when the antheræ are united into one cylinder or tube; this class contains mostly compound flowers; 20. *Gynandria*, when the stamina stand on the style; 21. *Monoecia*, those having flowers male and female in one plant; 22. *Dioecia*, having male and female flowers so divided, that one plant bears only male flowers, and the other only female flowers; 23. *Polygamia*, containing hermaphrodite flowers; 24. *Cryptogamia*, those plants whose flowers are not visible to the naked eye, as the *Filices*, *Musci*, and *Algae*.

The Orders are distinguished, 1. According to the number of styles, as *Monogynia*, when there is only one style; so *di—tri—tetra*, &c. *gynia*, two, three, four, &c. styled from the first to the 13th class. 2. According to the manner of producing the seed, as *Gymnospermia*, when the seeds are naked; *Angiospermia*, those which have the seed contained in a pericarp; *Siliculosa* and *Siliquosa*, those which have the seed contained in a silique of different sizes. 3. According to the number of stamina, and connexion of the filament and anthers, from class the 16th to the 23d, with the exception of the 19th. 4. According to the connexion of the flower, which is distinguished in four different forms, namely, 1. *Polygamia æqualis*, when all the florets are hermaphrodites. 2. *Polygamia superflua*, when the disk of the compound flower bears hermaphrodite florets, and the ray fertile florets. 3. *Polygamia frustranea*, when the disk consists of fertile hermaphrodite florets, and the ray of barren female florets. 4. *Polygamia necessaria*, when the disk consists of barren hermaphrodite florets, and the ray of fertile female florets. 5. *Polygamia segregata*, when, besides the common perianth, each floret is provided with its own particular calyx.

The Linnean Orders under each Class.

 2. Hexandria.
 3. Octandria.
 4. Decandria.

- CLASS XVIII.
Polyadelphia.
3 Orders.
1. Dodecandria.
 2. Icosandria.
 3. Polyandria.

- CLASS XIX.
Syngenesia.
5 Orders.
1. Polygamia æqualis.
 2. Polygamia superflua.
 3. Polygamia frustranea.
 4. Polygamia necessaria.
 5. Polygamia segregata.

- CLASS XX.
Gynandria.
7 Orders.
1. Monandria.
 2. Diandria.
 3. Triandria.
 4. Tetrandria.
 5. Pentandria.
 6. Hexandria.
 7. Octandria.

- CLASS XXI.
Monoecia.
8 Orders.
1. Monandria.
 2. Diandria.
 3. Triandria.
 4. Tetrandria.
 5. Pentandria.
 6. Hexandria.
 7. Polyandria.
 8. Monodelphia.

- CLASS XXII.
Dioecia.
8 Orders.
1. Monandria.
 2. Diandria.

- 3. Triandria.
- 4. Tetrandria.
- 5. Pentandria.
- 6. Hexandria.
- 7. Polyandria.
- 8. Monodelphia.

CLASS XXIII.

Polygamia.

3 Orders.

- 1. Monoccia.

- 2. Dioecia.
- 3. Trioecia.

CLASS XXIV.

Cryptogamia.

4 Orders.

- 1. Filices.
- 2. Musci.
- 3. Algæ.
- 4. Fungi.

To the above may be added the characters which Linnæus introduced into his system.

- 1. To mark the duration of plants.

h a tree or shrub.

u a perennial.

⊙ a biennial.

♂ an annual.

- 2. To mark the sex.

♂ an hermaphrodite flower.

♂ a male flower.

♀ a female flower.

♂ — ♀ male and female flowers upon one stem.

♂ : ♀ male and female flowers on different stems.

h neuter flowers.

♂ | ♀ hermaphrodite and female flowers in one compound flower, as in the class syngenesia.

♂ | h hermaphrodite and neuter flowers in one compound flower in the same class.

♂ — ♂ hermaphrodite and male flowers on one stem.

♂ — ♀ hermaphrodite and female flowers.

Physiology of Plants.

The Physiology of Plants comprehends their vegetation, anatomical structure, chemical composition, and diseases.

Vegetation.—The vegetation of Plants is distinguished according to its different stages or states into—*Germinatio*, Germination, when the seed begins to unfold its tender leaves.—*Vernatio*, or *frondescentia*, Vernation, when the swollen buds of trees, &c. unfold their leaves.—*Somnus*, Sleep, when in the evening, or at night, the leaves of plants hang down.—*Defoliatio*, Defoliation, when in autumn the leaves fall off.—*Virginitas*, Virginity, when the flowers or buds are not yet unfolded.—*Anthesis*, Expansion, when the flowers are perfectly developed.—*Estivatio*, Estivation, the month or season of the year when the flower is in perfection.—*Fructificatio*, Fructification, when the antheræ communicate the fructifying dust to the neighbouring parts.

Anatomy of Plants.—Plants, as to their Anatomical structure, consist of an—*Epidermis*, or *cutis*, the Cuticle.—*Cortex*, the Outer Bark.—*Liber*, Inner Bark.—*Alburnum*, the Soft Wood.—*Lignum*, Wood.—*Medulla*, the Pith.—*Parenchyma*, a fleshy substance which incloses the pith.—*Vasa pneumatophora*, Air-Vessels, which are the conductors of air.—*Vasa adducentia*, Aducent Vessels, otherwise called spiral Vessels, from their twisted appearance, which proceed either in a straight line with the air-vessels or twine round them.—*Vasa reducentia*, Reducent Vessels, which are supposed to serve the purpose of transpiration. They are more delicate than the preceding.—*Vasa lymphatica*, Lymphatic Vessels, which are very delicate, and reticularly united.—*Tela cellulosa*, Cellular Texture, a delicate membrane which surrounds all the vessels. The juices contained in the cellular texture are lymphatic in all plants, resinous in those of the fir tribe, and gummy in fruit trees.—*Glandule*, Glands, round elevated bodies which serve as secretory vessels, and are scattered over different parts of plants.

Chemical Composition of Plants.—Plants are found, on a chemical analysis, to be principally composed of three simple substances, namely, Carbon, Hydrogen, and Oxygen, of which Carbon forms the chief ingredient. There are other simple substances which enter partially into their composition, as Azote, Sulphur, Phosphorus, Muriatic Acid, Silica, Iron, Manganese, Potash, Soda, Lime, Magnesia, and Alumina. The principal compound substances which form the more immediate and sensible ingredients are, the Acids, Mucilage, Sugar, Starch, Albumen, Gluten, Fixed Oil, Wax, Resin, Caoutchouc, Gum Resins, Volatile Oil, Camphor, &c.

Diseases of Plants.—The principal diseases or accidents to which plants are exposed are—*Fissura*, Fissure, the separation of the solid parts into a long cleft, proceeding either from fulness of juice, *Polysarca*, or from frost. In this latter case it degenerates into a chilblain, *pernis*, from which a blackish sharp liquor exudes.—*Defoliatio notha*, Premature Defoliation, when the leaves fall off before the usual period.—*Hæmorrhagia*, Hæmorrhage, which is either spontaneous or occasioned by wounds.—*Albigo*, Mildew, a whitish mucilaginous coating of the leaves of plants, which often causes their decay.—*Meligo*, Honey-Dew, a sweet clear juice found upon the leaves in hot weather.—*Rubigo*, Rust, appears on the leaves and stems of many plants.—*Lepra*, Leprosy, which affects the trunk, especially of young trees.—*Gallæ*, Galls, produced by small flying insects, the *Cynips* of Linnæus. One sort of Gall is called *folliculus carnosus*, found on the leaves of Black Poplar.—*Contorsiones*, Contorsions, produced also by insects on the leaves.—*Verruca*, Wart, a small protuberance found on fruit-trees, particularly the apple.—*Nævi*, or *maculæ*, Moles, which arise from wounds of the cutis.—*Tuber lynosum* is met with on trunks of trees.—*Squamationes*, Spongy Swellings, produced by insects which lay their eggs in the apex of the bud.—*Bedeguar*, a sort of swelling, which occurs in roses only.—*Chlorosis*, an affection of plants which causes the loss of their green colour.—*Icterus* differs from *chlorosis* only in its colour and its cause, which latter is early cold in autumn.—*Anasarca*, Dropsy, which arises from long continued rain.—*Phthiriasis*, a disease in which the whole plant is covered with insects.—*Verminatio*, Worms, a disease in which the larva of insects infest the stem, leaves, and fruit.—*Tabes*, Consumption, which arises from the influence of the above-mentioned diseases.—*Debilitas*, Debility, when all the parts of the plant hang down in a relaxed state.—*Suffocatio incrementi*, Stoppage of growth.—*Exulceratio*, Exulceration, the corroded part of a plant, from which proceeds an ichorous water.—*Caranoma*, Cancer, which occurs principally in fruit-trees when they lose much gum.—*Mutilatio*, Mutilation, happens in flowers when single parts do not come to perfection.—*Monstrositas*, Monstrosity, the preternatural form of single parts or a whole plant. One of the most remarkable monstrosities is that called the *Clavus*, in grain, when the seed is swelled three times its usual size and thickness, but has no corcle.—*Sterilitas*, Sterility, is that disease in plants which causes them to yield neither flower nor seed.—*Abortus*, Abortion, when flowering plants provided with perfect female organs of generation do not bear fruit.

Explanation of the Plates.

Plate No. I. (21)

Roots. *Fig. 1.* A creeping scaly root of the *Oxalis laciniata*. 2. A dentated root of the *Ophrys corallorhiza*. 3. A tuberous, pendulous root of the *Spiræa filipendula*. 4. A granulated root of the *Saxifraga granulata*. 5. A palmated root of the *Orchis latifolia*. 6. A root of the *Succisa fuchsii*, which is præmorse, or bitten off. 7. The tunicated bulb of the *Allium cepa*. 8. The scaly bulb of the *Lilium bulbifera*. 9. The horizontal root of the *Gratiola officinalis*, which is jointed and fibrous at the joints. 10. The testiculated or scrotiform root of the *Orchis militaris*: *a*, the old tuber that sent up and nourished the stem of the preceding year; *b*, the new tuber that sent up and nourished the present year's stem. Stems. *Fig. 11.* A stem bending upwards, *adscendens*. 12. A stem bent downwards, *declinatus*. 13. A sarmentose stem. 14. A flexuose stem of the *Celastrus buxifolius*, which has obovate leaves standing in bundles. 15. A quadrangular stem with stellate leaves, which stand close together. 16. A twining stem which twists itself round its prop from left to right. 17. An articulated stem. 18. A culm, or straw. 19. A naked stipe of the *Boletus bovinus*, a fungus. 20. A surculus, or shoot, of the *Polytrichum commune*, the theca of which is covered with a hairy calyptra. 21. The scape, *a*, of the *Pinguicula vulgaris*, bearing a flower with a horned nectary. 22. A winged petiole or leafstalk, *a*, of the *Citrus aurantium*. 23. The bristle of the *Polytrichum commune* with the *Perichætium*, and the capsule without an operculum.

Inflorescence. *Fig. 24.* A leafy capitulum of the *Gomphrena globosa*. 25. The circinate spike of the *Heliotropium Indicum*. 26. The raceme of the vetch, which has its leaves alternately pinnate and the corolla papilionaceous. 27. A fascicle of the *Rhexia hypericoides*.

Plate No. II. (22)

Inflorescence. *Fig. 1.*—A compound umbel of the *Amni-majus*. 2. The cyme of the *Viburnum opulus*, having large neuter flowers at the extremities. 3. The corymb

of the *Achillea crithmifolia*. 4. The panicle of the *Poa trivialis*. 5. A catkin of the *Populus tremula*, bearing female flowers. 6. The univalve spathe of the *Arum maculatum*, in the centre of which stands the spadix. 7. The spadix of the foregoing flower, with female flowers below and male flowers above.

Simple Leaves. *Fig. 8.* A venoso-nerved leaf. 9. A rhombic leaf of *Hibiscus rhombifolius*. 10. An ovate leaf of the *Citrus aurantium*, the Orange. 11. The leaf of the *Lacis fluviatilis*, which is laciniate and curled. 12. The lanceolate leaf of the *Nepenthes distillatoria*, which bears a pedicelled ascidium, *a*. 13. A quintuple-nerved leaf. 14. An oval pointed perfoliate leaf of the *Bupleurum rotundifolium*. 15. The leaf of the *Epidendrum præmorsum*, which is, as it were, bitten off at the end. 16. A lyrate leaf. 17. A spatulate leaf. 18. A squarrose lacinate leaf, which is also decurrent, and has a winged footstalk. 19. The imbricated leaves of the *Berkheya ciliaris*, which are ciliated. 20. The singular leaf of the *Sarracenia purpurea*, or Purple Side-saddle Flower. 21. The anomalous leaf of the *Dionæa muscipula*, or Venus's Flytrap.

Plate No. III. (23)

Compound Leaves, Fulcra, &c. *Fig. 1.* A jointedly pinnate leaf of the *Fagara pterota*. 2. A digitato-pinnate leaf of the *Mimosa pudica*. 3. A tripinnate leaf. 4. The alternately pinnate leaf of the *Vicia sativa*, or Common Vetch. 5. The interruptedly pinnate leaf of the *Spiræa filipendula*, the pinnula of which is lanceolate and unequally dentated. 6. A trigeminate leaf of the *Mimosa trigemina*. 7. A triternate leaf. 8. The sinuated leaves of the Common Oak, having the rameta between them. 9. The frond of the *Polypodium oites* diminished, having a frond with confluent pinnæ, on the back of which are the subrotund sori. 10. The fertile frond of *Osmunda cinnamomea* diminished, which is pinnated; and the infertile, which is bipinnatifid. 11. The pinnated frond of the *Pteris longifolia*, having linear masses which are marginal and continued. 12. The twining stem of the *Banisteria purpurea*, twining from the right to the left, the leaves of which are opposite and elliptic, and bear a corymbus. 13. Part of a straw with a leaf, and at the base a strap. 14. The *Passiflora tiliæflora*, having, *a*, a round stem; *b*, a heartshaped leaf; *c*, double stipulæ; *d*, an axillary tendril; *e*, a one-flowered peduncle; *ff*, a polypetalous corolla; *g g*, nectaria, which consist of straight threads; and *h*, a pedicelled germen. 15. The *Bupleurum rotundifolium*, with *a*, a perfoliate stem and leaf; *b*, a depauperate umbel; and *a* pentaphyllous involucre. 16. The *Sagittaria sagittifolia*, having, *a*, an arrowshaped leaf; *b*, a channelled petiole; *c*, a three-sided scape. The flowers stand in whirls, as at *d d*, and are tripetalous. 17. The *Erythrophyllon coca* has a veined leaf and lateral peduncles, *a a a*. 18. The two-rowed sori which stand transversely on the frond of the *Danæa nodosa*. 19. The *Agaricus conspurcatus*, a fungus having *a*, an annulated stipe; *b*, the annulus sessile; and *c*, the pileus umbonated and squarrose. 20. The *Gastrum pedicellatum*, a fungus with, *a*, a stellated volva of a spherical figure and *b*, a ciliated orifice. 21. The scape of the *Equisetum arvense*, which is one of the *Filices spiciferæ*. 22. The *Lichen stellaris*, an alga with a stellated frond and scutellæ, or plateshaped fruit-beds in the middle. 23. The *Lichen gracilis*, having a cup-bearing frond.

Plate No. IV. (24)

Fructification. *Fig. 1.* A back view of the Rose, to display the calyx, or cup. *a a a a a*, the segments of the

cup. 2. *a*. The flower, in bud, of the *Lilium candidum*, or Common White Lily. *b*. The bellshaped corolla, or blossom, expanding. *cccccc*. The six petals of the corolla quite open. *d*. The pistil, or pointal. *e*. The germ. *f*. The style. *g*. The stigma. *h*. The six stamens. *i*. The filaments. *k*. The anthers. *l*. The germ, advanced into a pericarp, which is here a capsule. *m*. A transverse section of the pericarp, to show the three cells and seeds. 3. A flower of the *Cheiranthus incanus*, or Stock-Gilliflower, showing—*a*. The four petals and the cruciform shape of the corolla. *b*. The calyx of the same, seen from a back view, consisting of four leaflets, and bulging out at the bottom. *c*. A single petal separated, the lower narrow part of which is called the *unguis*, or tail; the upper spreading part, the *lamina*, or border. *d*. A section of the calyx, with the single pistil and six stamens in their proper situation. *e*. The six stamens, two of which are sensibly shorter than the other four. *f*. The pistil separated from the other parts. *g*. A single stamen. *h*. The fruit seed-vessel, or pericarp, called the silique, open from the bottom upwards, and showing the two valves with the seeds ranged along the dissepiment, or partition of the two cells, and the permanent stigma at the top. 4. *a*. The glume, which is the calyx of Grasses. *b*. The anthers on the filaments. *c*. The downy summits of the styles. 5. A flower with the calyx, stamen, and pistils, but the petals taken away. *a*. The calyx or cup. *bbbbbbb*. The anthers of the stamens. *c*. The germen. *d*. The style. *e*. The summit. *f*. One of the anthers discharging its pollen. 6. A funnelshaped corolla, or blossom. *a*. The tube. *b*. The border. *c*. The calyx, or cup. 7. A cruciform corolla, with the calyx taken away to show, *aa*, the claws, *ungues*, of the petals. *bbbb*. The limbs, *lamina*, of the petals. *c*. The receptacle. 8. The flower of the *Dimorpha grandiflora*, with its singular corolla. 9. The flower of the *Rupala montana*, the stamina of which stand on the tips of the petals. 10. The flower of the *Sterculia crinita*, which has a pedicelled germen. 11. The flower of the *Fuchsia excorticata*, with a funnelshaped corolla, showing, *a*, its tetraphyllous crown, and, *b*, the three-lobed stigma. 12. The *Aconitum napellus*, or Blue Monk's Hood, showing, *aa*, the two recurved pedunculated nectaries. *b*. A single nectary taken out of the flower. 13. *a*. The nectary of the *Delphinium Ajacis*, or Garden Larkspur, continued backward in the form of a spur. 14. The flower of the *Parnassia palustris*, showing, *a*, the nectareous scales at the base of the stamens. *b*. The five heartshaped nectaries, terminating in hairs, with a little ball on the top of each hair, and placed between the stamens. 15. A petal of the *Ranunculus*, showing, *aa*, the honied gland just above the base on the inside. 16. The nectary of the *Iris*, or Flag, in form of a villous line along the middle of one of the reflex petals. 17. The *Fritellaria Imperialis*, or Crown Imperial, showing an excavation, *a*, at the base of the petal. 18. *a*. The tubular nectaries placed in a ring at the base of the stamens in the *Helleborus foetidus*, or Stinking Black Hellebore. *b*. A single nectary. 19. *a*. The closed ringent, or personate corolla, of the *Antirrhinum majus*, or Snap-Dragon. *b*. The corolla opened, to show the situation of the stamens. *c*. The capsule, with the permanent style and calyx. 20. *a*. A single flower of the *Digitalis purpurea*, or Purple Fox-glove, showing its open bellshaped corolla. *b*. The inside, exhibiting the situation and structure of the stamens. *c*. The germ, with the style. *d*. The capsule, with the style permanent. 21. *a*. The pericarp of the *Pisum sativum*, or Garden Pea, which is a legume silique, or pod, open, to show, *ab*, the two valves,

dddd, *ccc*. The seeds, fastened alternately to the sutures of the valves at the back of the legume. *e*. The permanent calyx. 22. Figures of silicles, or small short pods or pouches. *a*. The flat triangular or heartshaped silicle of the Shepherd's Purse. *b*. The oblong silicle of Scurvy-Grass, both shut and open. *c*. The almost spherical silicle of Candy Tuft. 23. A capsule cut open horizontally, to show, *aaaa*, the receptacles and seeds. *bbbb*. The partitions. *ccc*. The valves to which the partitions are connected. 24. A seed, with its *pappus*, or down. *a*. The hairlike down. *b*. The feathered down. *d*. The pillar, or pedicle, supporting the down. *c*. The seed.

Plate No. V. (25)

Linnean Classes. *Fig. 1—10* represent the classes *Monandria*, *Diandria*, &c. which are distinguished by the number of the stamens, from one to ten. 11. The class *Dodecandria*, which comprehends plants that have from eleven to nineteen stamens inclusive. 12. *Icosandria*, having about twenty stamens on the Calyx or Corolla. 13. *Polyandria*, having above twenty stamens on the Receptacle, or Base of the Flower. 14. *Didynamia*, having four Stamens, two longer than the other two; one Pistil; and ringent Flowers. 15. *Tetradynamia*, having six Stamens, four longer than the rest; one Pistil; Flowers cruciform. 16. *Monodelphia*, having the filaments united into one body. 17. *Diadelphia*, having the filaments united into two bodies; Corolla papillionaceous. 18. *Polyadelphia*, having the filaments in three or more parcels; Stamens coherent at the top only, or by the Anthers. 19. *Syngenesia*, having the Anthers united, five filaments distinct; one pistil, with Stamens growing out of the Pistil itself. The Flowers are compound. 20. *Gynandria*, having Stamens on the Pistil instead of the Receptacle. All the flowers imperfect, having stamens only, or pistils only. 21. *Monoeceia*, having *a*, a male flower, and *b*, a female flower, separate on the same plant. 22. *Dioecia*, having *a*, a plant, with a male flower; *b*, another plant with a female flower. 23. *Polygamia*, having *a*, a plant with a male and hermaphrodite flower; *b*, another plant with a female and hermaphrodite flower. 24. *Cryptogamia*, a felix or Fern, having the fructification upon the back of the leaf.

Plate No. VI. (26)

Linnean Orders. *Fig. 1—10* represent the Orders according to the number of pistils; namely, 1. *Monogynia*, one Pistil; 2. *Digynia*, two Pistils; 3. *Trigynia*, three Pistils; 4. *Tetragynia*, four Pistils; 5. *Pentagynia*, five Pistils; 6. *Hexagynia*, six Pistils; 7. *Heptagynia*, seven Pistils; 8. *Decagynia*, ten Pistils; 9. *Dodecagynia*, twelve Pistils; 10. *Polygynia*, many Pistils.—*Fig. 11*. *Didynamia Gymnosperma*, having four naked seeds at the bottom of the Perianth; *a*, the four seeds in their natural order; *b*, the Calyx laid open to show them more plainly. 12. *Didynamia Angiosperma*, the Seeds in a Seed vessel which is two-celled, and the seeds, which are many, are fastened to a receptacle in the middle of it. 13. *Tetradynamia siliculosa*, having a Silicle, or short, two-valved Pericarp for the fruit. 14. *Tetradynamia Siliquosa*, having a Silique, or oblong narrow, two-valved Pericarp. 15. *Polygamia Æqualis*, the first of the six Orders belonging to the Class *Syngenesia*, having the whole flower regular, all the Florets alike hermaphrodite, and, consequently, fertile; *a*, a Compound ligulate Flower; *b*, a single Floret; *c*, the germ crowned by its pappus; *d*, the cylinder of anthers with the bifid curled stigma above it. The other Orders are as follow:—16. *Polygamia superflua*, *a*, a radiate

Flower; *b*, a single tubulous and ligulate Floret; *c*, the cylinder of anthers. 17. *Polygamia Frustanea*, *a*, an entire Flower; *b*, a single fertile Floret; *c*, a Floret that is neuter. 18. *Polygamia Necessaria*, *a*, an entire Flower; *b*, a fertile Floret; *c*, a neuter Floret; *d*, a fertile seed; *e*, an abortive Seed. 19. *Polygamia segregata*, *a*, an entire flower; *b*, a single tubulous floret surrounded with its calyx; *c*, one stripped of the calyx. 20. *Monogamia*, *a*, a simple Flower; *b*, the Anthers united. 21. *Trioccia*, the third Order of the Class *Polygamia*, representing *a*, a plant that has male flowers only; *b*, one that has female flowers only; *c*, one that has hermaphrodite flowers only. 22. *Cryptogamia Filices*, a Fern having the fructification on the back of the Leaf. 23. A specimen of the Order *Musci*. 24. A specimen of the Order *Algæ*. 25. A specimen of the Order *Fungi*.

Plates No. VII, VIII. (27, 28)

Linnean Classes and Orders exemplified. *Fig. 1. Monandria Monogynia*. *a*. The flower of *Canna Indica*, or Indian Shot, with its monopetalous six-parted Corolla. *b*. The scabrous Germ. *c*. The triphyllous perianth, or calyx on the top of the germ. *d*. The anther growing to one of the Petals, which serves it for a filament. *e*. The Style growing to the petaliform filament. *f*. The scabrous capsule cut open to show the three cells.

Fig. 2. Diandria Monogynia. *a*. A Flower of the *Salvia officinalis*, or Garden Sage. *b*. The two Stamens showing the singularity of their structure. *c*. The Pistil separate.

Fig. 3. Triandria Digynia, a Branch of the *Dactylis glomerata*, or Hard Grass. *a*. The Glume, or Chaff. *bbb*. The three Stamens. *c*. The two reflected Styles with the feathered Stigma.

Fig. 4. Tetrandria Monogynia. *a*. An aggregate Flower of the *Scabiosa columbaria*, or Small Scabious consisting of many Floscules. *b*. A single Floscule with its five-parted Corolla, and the Germ crowned with hairs. *c*. The Calyx with the four stamens, and the Pistil.

Fig. 5. Pentandria Tetragynia. *a a a a a*. The veined petals of *Parnassia palustris*. *b b b b b*. The five heart-shaped nectaries. *c c c c c*. The five stamens. *d*. A single anther. *e*. A single nectary. *f*. The germen with the four pistils.

Fig. 6. Hexandria. *a*. The flower of the *Trillium crectum*. *b*. The stamens and pistils apart. *c*. A single pistil.

Fig. 7. Heptandria Heptagynia, the *Septas Capensis*. *a*. One of the seven Stamens. *b*. One of the seven Pistils.

Fig. 8. Octandria Tetragynia, the *Paris quadrifolia*, or Herb Paris. *a*. The four green Petals, 1, 2, 3, 4. *b b b b b b b b*. The eight stamens. *c c c c*. The four Pistils.

Fig. 9. Enneandria Hexagynia, the *Butonus umbellatus*, or Flowering Rush. *a*. The Flower of six Petals. *b*. The nine Stamens surrounding. *c*. The six Pistils.

Fig. 10. Decandria Monogynia, the *Rhododendron chamcisticus*. *a*. One of the ten Stamens. *b*. The Pistil.

Fig. 11. Dodecandria Dodecagynia, the *Sempervivum tectorum*, Common Houseleek. *a*. The Peduncle, or Flower-stem, with a reflexed range of flowers. *b*. A flower in front showing the Corolla of twelve Petals. *c*. The Calyx with the Capsules after the flower is past. *d*. A single Capsule. *e*. The twelve Stamens and twelve Styles separated from the flower. *f*. A single Pistil exhibiting the Germ, Style, and Stigma. *g*. Two Stamens.

Fig. 12. Icosandria Pentagynia. *a*. A flower of the *Pyrus malus*, or Apple-Tree. *b*. The stamens apart. *c*. The pistils apart.

Fig. 13. Polyandria Polyginia, a flower of the *Caltha*

palustris, Marsh Marigold, showing *a*, the Corolla with *b*, five Petals.

Fig. 14. Didynamia Gynospemia, the *Glechoma hederacea*, or Ground Ivy. *a*. The kidney-shaped leaves. *b*. The ringent flowers. *c*. A flower opened to show the situation of the Stamens. *d*. A flower exhibiting the cruciform appearance of the anthers. *e*. The Calyxes. *f*. A single Filament. *g*. The Pistil.

Fig. 15. Tetradynamia Siliquosa, the *Sisymbrium nasturtium*, or Water Cress. *a a*. The pinnated leaves. *b*. The Corymb of flowers. *d*. A single four-petalled cruciform Flower. *e*. A single Petal. *f*. The Calyx. *g*. The Calyx with the Stamens. *h*. A single Stamen. *i*. The Silique.

Fig. 16. Monodelphia Polyandria, the *Althæa officinalis*, or Marsh Mallow. *a*. The Flower showing the five Petals united at bottom; in the centre the column of Stamens with the Pistils in the middle of them. *b*. The column of Stamens and Pistils removed from the Corolla, and showing the rudiment of the fruit underneath. *c*. The Pistil separate. *d*. The Calyx exhibiting the nine divisions of the outer calyx.

Fig. 17. Diadelphina Decandria, the *Lathyrus latifolius*, or Everlasting Pea, consisting of a bunch of flowers in their natural size and situation. *a*. The Banner. *b*. One of the Wings. *c*. The keel. *d*. The Stamens and Pistil in their natural situation. *e*. The Stamens showing the simple Filament separate from the compound one.

Fig. 18. Polyadelphia Polyandria, the *Hypericum ascyron*, or Garden Tutsan. *a*. The Flower with a Corolla of five petals, and the numerous stamens in the middle. *b*. A single pencil, or parcel of Stamens. *c*. The permanent five-parted Calyx, including the germ terminated by five pistils.

Fig. 19. Syngenesia—1. *Polygamia Æqualis*. *a*. The *Eupatorium cannabinum*, Common Hemp Agrimony. *b*. The bunch of Flowers. *c*. A single Flower. *d*. A single bunch.—2. *Polygamia frustanea*. *a*. The compound flower of the *Centaurea montana*, Mountain Blue Bottle, showing the neutral or barren florets on the outside, longer than the fertile ones in the middle, and the ciliated scales of the calyx. *b*. A barren floret. *c*. A fertile floret, with some of the bristles at the base. *d*. The same divested of the Corolla. *e*. The Pistil.

Fig. 20. Gynandria Monandria, the *Ophrys muscifera*, or Fly Orchis, showing, *a*, the five Petals, 1, 2, 3, 4, 5. *b*. The lip of the nectary. *c*. The bracte, or floral leaf. *d*. The germen. *e*. The germen and anthers apart. *f*. The germen. *g*. A single anther.

Fig. 21. Monoecia Syngenesia. *a*. The male or stamiferous flower of the *Momordica Elaterium*, or Spirting Cucumber. *b*. The female, or pistilliferous flower, with the large germ below the receptacle. *c*. The male flower apart, showing the three filaments with double anthers on two of them, and a simple anther on the third. *d*. The germ, surmounted with the style, divided into three parts, each part sustaining an oblong gibbous stigma. *e*. The divided part of the style, with the stigmas. *f*. Two different views of a single stigma.

Fig. 22. Dioecia Pentandria, the *Cannabis sativa*, or Hemp. *a*. The female hemp. *b*. The seed included within the calyx. *c*. The male hemp. *d*. Male flowers, separate.

Fig. 23. Polygamia Monoecia. *a a*. The lobed leaves of the *Acer campestre*. *b*. A bunch of flowers. *c*. A perfect flower. *d*. A male flower, with stamens only. *e*. A single perfect flower. *f*. a petal. *g*. A perfect flower, divested of corolla and calyx. *h*. A single stamen. *i*. The pistil, with the two revolute stigmas, and the rudiment of the two capsules, terminating in a

wing. *k.* A male or stamiferous flower, and a single petal.

Fig. 24. Cryptogamia.—1. *Musci*, the male flower of one of the *Musci frondosi*, with succulent filaments and stamina, some of which are shedding their pollen; others are not so far advanced; and others have already shed their pollen.—2. *Algæ. a a a.* The small or barren flowers of the *Lichen ciliaris*, Ciliated Liverwort. *b b.* The females in a state of ripeness. *c c.* The rooting hairs.—3. *Fungi. a.* The Fungus in its natural state. *b.* The same in its middle state. *c.* Small plants just rising. *d.* A parcel of knotted threads from the fungus, marked *b*, supposed to be the stamens. *e.* The ripe seeds of this fungus much magnified.

BOTA'RG0 (*Cook.*) a kind of sausage made of the roes and blood of the sea mullet.

BOTCHING *matrices* (*Print.*) vide *Matrices*.

BOTE (*Law*) in Saxon *boce*, a recompense or amends.—*Bote-house*, an allowance of wood for its repairs.—*Bote-plough*, or *cart*, an allowance of wood for their repairs.—*Bote-hay*, or *hedge*, wood for the repairs of hedges.—*Bote man*, compensation for a man slain.

BOTELLA'RIA (*Archæol.*) a cellar for the butts and bottles.

BOT'EROLL (*Her.*) the tag of a broad sword scabbard, which by the French heraldic writers, is esteemed an honourable bearing. The crampet, which is the badge of the Right Honourable Earl de la War, was meant for the same ornament of the scabbard.

BOTH *sheets aft* (*Mar.*) the situation of a ship that sails right before the wind.

BO'THA (*Law*) a booth or standing in a fair, &c.

BOTHAG'GIUM (*Law*) a duty paid to the lord for erecting booths. *Kenn. Par. Ant.*

BOTHE'NA (*Law*) a barony or lordship.

BO'THOR (*Med.*) Arabic for pustules in general, and for particular pustules.

BO'THRION (*Med.*) *βόθριον*, a tumour in the back of the eye. *Gal. Def. Med.*

BO'TILER of the king (*Ant.*) an officer that provides the king's wines, who may choose out of every ship laden with sale wines, one cask before the mast, and one cask behind. *25 Ed. 3, st. 5, c. 21; Flet. l. 2, c. 21.*

BOTIN (*Chem.*) *butino*, turpentine; also the balsam of turpentine.

BO'TONNY (*Her.*) or *botone*, a cross; so called because its extremities resemble trefoil. The French call it *Croix trefflee*, as in the annexed figure.

BO'TOTHINUM (*Med.*) a word which Paracelsus explains to be the *Flower of the Disease*. *Parac. de Podag. Necromant, l. 2.*

BOTRYITIS (*Min.*) *βοτρυιτις*, or *Botritis*, a sort of burnt Cadmia; so called because it resembled a *βότρυς*, a cluster of grapes. It is collected from the upper part of the furnace, where it is burnt, and is distinguished from the *placitis*, which is collected in the lower part. *Plin. l. 37, c. 10; Gorr. Def. Med.*

BOTRYOIDAL (*Nat.*) clustered like a bunch of grapes; hence *Botria*, a plant, found in Africa.

BOTRYOIDES (*Min.*) a species of Suillus.

BO'TRYS (*Bot.*) *βότρυς*, Oak of Jerusalem; the *Chenopodium ambrosioides* et *botrys* of Linnæus, a herb; so called because its seeds hang down like a *βότρυς*, a bunch of grapes. It is of a bitter taste, a heating, drying, dissolving, and purgative nature. *Dioscor. l. 3, c. 130; Plin. l. 27, c. 8; Dodon. Stirp. Hist.; Lobel. Plant. et Stirp. Hist. et Advers.; C. Bauh. Pin.*

BO'TTINE (*Mil.*) French for the half-boots worn by the dragoons and hussars in foreign armies.

BOTTLE HEAD (*Ich.*) the name of a sort of whale, called

Flounder's Head or Beaked Whale, because its nose resembles the beak of a bird.

BO'TTOM (*Mar.*) the ground or lowest part of any thing; as the bottom of a vessel, or the bottom of the sea: hence a clean or a foul *bottom*; or to go in foreign *bottoms*, when speaking of ships; or a rocky muddy *bottom*, &c. in regard to the water.

BO'TTOM plate (*Mech.*) a plate of iron belonging to the mould of a printing-press, on which the carriage is fixed.—*Bottom line*, one of the four imaginary lines belonging to the body of a letter in printing.

BO'TTOMRY (*Law*) 1. A contract for borrowing money on the bottom of a ship, which is to be forfeited if the terms of the contract be not fulfilled. 2. Lending money to a merchant on any adventure, the interest to be paid on the return of the ship, but to be lost if she is lost.

BOTTS (*Vet.*) worms that are very troublesome, and even dangerous to horses, breeding in their intestines.

BO'TUS (*Chem.*) a sort of cucurbit.

BOVAR (*Bot.*) Little Lard Pear; a juicy kind of pear.

BOVA'TA terræ (*Law*) as much as an ox can till, i. e. twenty-eight acres, otherwise called an oxgate.

BOUBA'LIOS (*Bot.*) *βουβάλιος*, the *Cucurnis agrestis* of Linnæus.

BOUBALIOS (*Anat.*) the female pupendum.

BOUBO'N (*Med.*) *βουβων*, *bubo*, a tumour in the groin; a term frequently recurring in this sense in Hippocrates, Galen, and Aretæus. *Gorr. Def. Med.; Foes. Econom. Hippocrat.*

BO'UCERAS (*Bot.*) Fenugreek.

BOUCHE of court (*Law*) a certain allowance of provisions to knights and others attending the king upon military expeditions.

BOUCHERS *d'une armée* (*Mil.*) a French name for those persons who contract to supply the French army with provisions.

BOUCHES à feu (*Mil.*) a French name for pieces of ordnance, as cannon and mortars.

BOUCHE'TT (*Bot.*) a sort of pear like the besidery.

BOUCHO'N (*Mil.*) French for the wadding of a cannon.

BOVE'RIMUM (*Archæol.*) an ox-stall.

BOVE'TTUS (*Archæol.*) a young steer or bullock that is cut.

BOVE'Y COAL (*Min.*) the *Bitumen amphiliites* of Linnæus.

BOUGE' (*Mech.*) the middle or belly of a cask.

BOUGH of a tree (*Law*) seisin of land given by it, to be held of the donor *in capite*.

BOUGIE (*Surg.*) from the French *bougie*, a wax candle; another name for the catheter, which is sometimes made of wax.

BOVILLÆ (*Med.*) the measles.

BOVILLANS (*Cook.*) little pies made of the breasts of roasted capons, &c.

BOVILLON (*Vet.*) a disease in horses when a lump, or excrescence of flesh, grows by or upon the frush.

BOVINA affectio (*Vet.*) a distemper in black cattle, caused by a worm between the flesh and the skin.—*Bovina fames*, the same as *Bulimus*.

BOUJO'NS (*Cook.*) steaks of veal, with thin slices of bacon rolled up together.

BOVISTA (*Bot.*) the *Lycoperdon* of Linnæus.

BO'ULDER WALLS (*Archit.*) certain walls built of round flints or pebbles, laid on a strong mortar, particularly near the sea coast.

BOULE'TE (*Man.*) a term used of a horse when the fetlock or pastern-joint bends forward, and out of its natural situation.

BOU'LINS (*Carpent.*) pieces of timber, which are fastened into walls, in order to erect a scaffold.

BOULINIS (*Com.*) or *boulymis*, a copper coin, struck at Boulogna, in Italy, which answers to a penny English money.

BOULTINE (*Archit.*) a convex moulding, whose convexity is but one fourth of the circle, and is placed next below the plinth in the Tuscan and Doric capital.

BOUND (*Vet.*) from to bind; an epithet applied to any part of an animal that is embraced with an unnatural force, as of a horse *hoof-bound*, *hide-bound*, &c.

BOUND (*Mar.*) confined to a particular spot or direction, applied to a ship; as *wind-bound*, *ice-bound*, &c. confined by the wind or ice to a place from which you were sailing homebound, or going homeward, &c.

BOUNIAS (*Bot.*) vide *Bumias*.

BOUNTY (*Law*) or *Queen Anne's Bounty*, a term applied to the provision made by Queen Anne for the augmentation of poor livings out of the first fruits.

BOUNTY (*Com.*) a premium given by government on the exportation of British manufactures or commodities.

BOUNTY (*Mil.*) a sum of money given by government to men who enlist.—*Fresh bounty*, money given to a soldier when he continues in the service after the expiration of the term for which he enlisted.

BOURGEOIS (*Polit.*) a French name for the middle order of inhabitants in towns, in distinction from the nobility and gentry.

BOURGEOISE (*Cook.*) veal dressed à la *bourgeoise*, after the city fashion, *i. e.* larded, spiced, and stewed with pieces of bacon, &c.

BOURNIGNOMISTS (*Ecc.*) an enthusiastic sect in the Low Countries, resembling the quakers in England.

BOURRA'DE (*Mil.*) French for a thrust which is made with the barrel end of the musket, instead of the butt.

BOURRELA'T (*Gunn.*) the French for the extremity of a piece of ordnance towards its mouth.

BOURRERIA (*Bot.*) the *Ehretia bourreria* of Linnæus.

BOURRIQUET (*Mil.*) French for a basket made use of in mining, to draw up the earth, and to let down whatever may be necessary for the miner.

BOURSEAU (*Archit.*) French for a round moulding formed by the ridge of lead on the top of a house that is slated.

BOUSSOLE (*Mar.*) French for the mariner's compass.

BOUSTROPHE'DON (*Gram.*) vide *Bustrophedon*.

BOUTA'DE (*Mus.*) a small kind of ballet.

BOUT (*Man.*) a term used for a horse when he is overdone, and quite spent with fatigue.

BOUTE (*Man.*) an epithet for a horse whose legs are in a straight line from the knee to the coronet.

BOUTE-FE'U (*Archæol.*) an incendiary or wilful firer of houses.

BOUTE-SELLE (*Mil.*) French for the signal or word given to the cavalry to saddle their horses.

BOUTON (*Gunn.*) French for the sight of a musket.

BOUTON (*Cook.*) a dish of bards of bacon, covered with a farce and ragout, and baked between two fires.

BOUTS-RIMÉ'AUX (*Poet.*) a French term, signifying certain rhymes disposed in order, and given to a poet, together with a subject to be filled up with verses in the same rhymes and the same order.

BOW (*Mil.*) from the Teut. *bogen*, and *biegen*, to bend; an instrument for the discharge of arrows, bullets, &c. The two principal sorts of bows are the Long Bow and the Cross Bow.—*Long Bow*, the favourite of the English army in former times, is simply a bow with a string fixed at each end, to which the arrow is applied.—*Cross Bow* is a bow strung and set in a shaft of wood, with a trigger, &c.

Bow (*Her.*) a charge in coats of arms, as in the annexed figure, "He beareth three long bows *ermine* bent, in pale *gules*, by the name of Bowes."

Bow (*Math.*) an instrument consisting of an arch of 90 deg. fixed on a staff with vanes,

&c. for taking the sun's altitude at sea.—*Bow compasses*, an instrument for drawing arches.

Bow (*Mar.*) the rounding parts of the ship's side on each side its head, distinguished by the starboard and leeboard, or weather and lee bow.—*Lean Bow*, a narrow bow fitted for swift sailing.—*Bluff bow*, a broad bow fitted for a high sea.—*Doubling of the bow*, the thick stuff placed there to prevent the anchor from tearing it.—*On the bow*, an arch of the horizon (not exceeding 45 deg.) between some object and the point of the compass right a head, as a fleet bearing three points on the starboard bow, viz. three points from that point of the horizon right a head, or towards the right hand.—*Bow grace*, a frame of old rope, or junk, laid against the bows to defend them from the ice.—*Bow line*, or *Bow ling*, a rope fastened to the bolt rope of a sail by two or three small ropes, called *bridles*, used when the sails must be braced sideways. 'To check the *bow line*,' is to slacken it when the wind becomes more favourable. 'To sharp the main *bowling*, or hale the *bowling*,' to pull it harder.—*Bow-man of the boat*, the man who rows the foremost oar in a boat.—*Bow-piece*, a piece of ordnance lying at the bow.—*Bow-sprit*, a mast projecting over the stem to carry the sail forward.

Bow (*Mech.*) the name of several things so called from their having a curved figure, as the—*Turner's bow*, the pole fixed to the ceiling to which the cord is fastened that wheels round the piece to be turned.—*Shipwright's bow*, the beam of wood, or brass, with three long screws that direct a lath of wood, or steel, to any part, particularly used in making the draughts of ships.—*Bow of a key*, the arched part to receive the fingers.—*Bow saw*, a hand saw, having an arched handle.—*Bow of a mold* to a printing-press; a spring wire that is arched conveniently for the purpose.—*Bow of a saddle*, the piece of wood on each side laid archwise to receive the upper part of a horse's back.

Bow of a violin (*Mus.*) the round stick furnished with hair with which the performer plays.

BOW-BEARER (*Law*) an officer in the forest who had charge of the vert, or venison; as also to oversee and make true inquisition of every person, sworn or unsworn, in every bailiwick of the forest. *Crompt. Jur.* 201.

BOWED (*Bot.*) *arcuatus*, bent like a bow; an epithet for a frond, filament, anther, and legume.

BOWEL GALLED (*Vet.*) an epithet for a horse when the girth frets his skin between the elbow of his fore-legs and his ribs.

BOWELS (*Anat.*) the same as *Intestines*.

BOWEN'S KNOT (*Her.*) a particular sort of knot, so called from the name of the bearer.

BOWER-ANCHOR (*Mar.*) a name for two anchors which are situated at the bow of a ship.

BOWET (*Falcon.*) a young hawk, so called when it draws any thing out of the nest and covets to clamber on the boughs.

BOWGE (*Law, Mar.*) vide *Bouche* and *Bow-grace*.

BOW-HAND (*Archer.*) the right-hand, with which the bow is held: hence 'a fine or good *bow-hand*.'

BOWING (*Mus.*) managing the bow, which constitutes the main art of the performer on the violin.

BOWL (*Mar.*) a round space at the head of the mast for the men to stand in.

BOWL (*Gunn.*) a box to fill with small shot and fire out of a cannon at the enemy when near at sea.

BOWLDER-STONES (*Min.*) lumps or fragments of stones or marble, broken from the adjacent cliffs, which are so called because they are tumbled backward and forward by the action of the water.

BOW-LEGGED (*Man.*) a defective conformation of a horse's leg, when the knees come further out than the feet.

BO'WLIN (*Mar.*) vide *Bow*.—*Bowline-knot*, a knot so constructed that it should never slip. It is made by laying the end of a rope, *a*, over the standing part, *b*, and turning a bight over the standing part; then leading the end round the standing part through the bight again.—*Bowling-bridle*. [vide *Bow*]

to **BOWLT** a *coney* (*Sport.*) to start it.

to **BOWSE** (*Mar.*) to pull upon a body with tackle, or a complication of pulleys, in order to remove any object; hence 'bowse away' i. e. pull all away; 'bowse, ho!' pull more upon the tackle.

BO'WSING (*Falc.*) the excessive drinking of a hawk who is always thirsty.

BO'WSPRIT (*Mar.*) vide *Bow*.

BO'WYER (*Mech.*) a bowmaker; one of the City companies, which was incorporated in 1622, but had been a fraternity long before. The arms of this company are "argent, on a chevron between three floats, *sable*, as many mullets, *gules*."

BOX (*Bot.*) or Box Tree, the *Buxus* of Linnæus, the wood of which is used by engravers and mathematical instrument-makers. There are two kinds of box, namely, the Dwarf Box, which is used for borders in gardens; and the Tall Box, a shrub or tree, which grows to a considerable height. The box wood is yellow and hard, and bears a good polish.—*Box-thorn*, the *Lycium*, a shrub.

Box (*Mech.*) any case of wood, iron, or leather, which is named according to the use to which it is applied, as—*Cutting-boxes*, chests for keeping cut hay and straw for the use of the cavalry.—*Battery-boxes*. [vide *Battery*].—*Cartridge-boxes*. [vide *Cartridge*].—*Box-and-needle*, a compass applied to the theodolite, and used for surveying.—*Box of a rib-saw*, two thin iron plates for receiving the saw.—*Box of the pump*, the machine requisite for repairing a pump.—*Nave-boxes*, iron boxes fastened one at each end of the nave, to prevent the arms of the axletree, about which the boxes turn, from causing too much friction.—*Box-dust*, dust for strewing over fresh writing.—*Box-maker*, a maker of boxes, packing-cases, &c.

BO'XHAULING (*Mar.*) a particular method of veering a ship, by keeping the helm hard *a-lee*. It is used when tacking is impracticable.

BOX'ING *off* (*Mar.*) an operation similar to box-hauling.—*Boxing the compass*, rehearsing the several points of the compass in their proper order.—*Boxing of the stem*, or simply *boxing*, the projection left in the hawse-pieces, in the wake of the hawse-holes.

BO'XUS (*Bot.*) Mistletoe.

BO'YAR (*Polit.*) a lord or grandee among the Muscovites.

BOYA'U (*Fort.*) French for a ditch separated from the main trench, covered with a parapet, and serving as a communication from one trench to another.

BRA'BE (*Bot.*) an herb a cubit high, with leaves like dittander, and an umbella like that of elder. *Oribas*.

BRABE'IUM (*Bot.*) a genus of plants, Class 23 *Polygamia*, Order 1 *Monoecia*.

Generic Characters. CAL. ament with ovate scales.—COR. one-petalled.—STAM. filaments four; anthers small.—PIST. germ very small; style filiform; stigma simple.—PER. drupe very dry; seed nut globular.

Species. The only species is the *Brabeum stellulifolium*, *Amygdalus Ethiopica*, &c. seu *Brabyla Capensis*, African Almond, a shrub, native of the Cape of Good Hope.

BRA'BYLA (*Bot.*) *Damascenes*.

BRA'CCA (*Archæol.*) 1. A Gaulish name for breeches. 2. A large fleet hound, or hunting dog.

BRACE (*Mech.*) from *brachium*, an arm; any thing which is extended so as to include, lock, or fix other things, as *Braces of a coach*, the thick leather thongs on which it rests; hence also a brace in the sense of a couple, as "a brace of partridges," &c.—*Braces of a drum*, the leathers with which the drum head is tightened or relaxed.

BRACE (*Archit.*) the cross beams framed in with bevel joints, which serve to keep the building from swinging either way.

BRACE (*Mar.*) 1. The ropes that are fastened to the yard arms to brace the yard, or bring it to any position. 2. Pieces of iron that serve as supports to different machines in a ship, as the poop lantern, &c. 3. A security for the rudder, which is fixed to the stern post, and to the bottom of the ship.

BRACE (*Print.*) 1. The stays of the press, which serve to keep it steady in its position. 2. A character (}) designed to hook in, or brace any number of lines.

BRACE (*Com.*) an Italian measure equal to two or three ells, English.

BRACE (*Mus.*) a character similar to that used in printing, which is placed at the beginning of every stave to bind and harmonize the parts.

to **BRACE** (*Mar.*) to move the yard by means of braces, as "To brace about," to turn the yards round for tacking. "To brace the yards sharp up," so that they should make the sharpest angle possible with the keel. "To brace to," to ease off the lee braces, and round in the weather braces.

BRACED (*Her.*) the same as *fretted* or *interlaced*. [vide *Interlaced*]

BRA'CELET (*Mil.*) from brace or *brachium*, the arm; a piece of defensive armour for the arm.

BRACELET (*Sport.*) a hound, or rather beagle of the smaller kind. *Rot. Pat.* 1 *Rich.* 2.

BRACENA'RIOUS (*Sport.*) a huntsman or master of the hounds. *Ann.* 26 *Ed.* 1. *Rot.*

BRA'CKER (*Archer.*) a smooth piece of leather fastened on the outside of the archer's left arm, which serveth to defend his arm from the stripe of the string. *Rog. Asch.*

BRACHE'RIOUS (*Med.*) the same as *Amma*.

BRACHE'TUS (*Archæol.*) vide *Braco*.

BRACHIA'US (*Anat.*) vide *Brachial*.

BRA'CHIAL (*Anat.*) an epithet for what belongs to the arm, as the brachial artery, &c.

BRACHIA'LIS (*Anat.*) or *brachiceus*, an epithet for two muscles of the arm; namely, the *Brachialis externus*, which is the same as the *Triceps extensor cubiti*; and *Brachialis internus*, a muscle in the forearm.

BRA'CHIATE (*Bot.*) from *brachium*, an arm; an epithet for a stem: *caulis brachiatus*, a stem having branches stretched out like arms in pairs.

BRACHIO-CUBITAL (*Anat.*) an epithet for an expansion of the lateral ligament fixed in the inner condyle of the *Os Humeri*.—*Brachio-radial*, an expansion of the lateral ligament, on which runs the external condyle.

BRACHIO'LUM (*Math.*) the member of an instrument used upon astrolabes, &c. usually made of brass, with several joints.

BRA'CHIUM (*Anat.*) *βραχίον*, the arm; that part lying between the cubit and the joint of the shoulder, according to Hippocrates; or the whole arm, from the shoulder to the fingers' ends. *Hippocrat. de Art.*; *Ruf. Ephes. de Appellat. Part. Corp. hum.* 1. 1; *Gal. de Admin. Anat.* 1. 8; *Gorr. Def. Med.*; *Foes. Econom. Hippocrat.*

BRACINUM (*Archæol.*) the whole quantity of ale brewed at one time.

BRACIUM (*Min.*) copper.

BRA'CKET (*Carpent.*) from brace, a kind of stay in the

- form of a knee or shoulder for the support of shelves, or a cramp-iron as a stay in timber work.
- BRACKET** (*Mar.*) 1. A short crooked timber resembling a knee for the support of the gratings, as also of the gallery. 2. Ornaments, as the hair bracket, which is the boundary of the aft-part of the head; and the console-bracket, at the fore-part of the quarter-gallery.
- BRACKETETS** (*Gun.*) the cheeks of the travelling carriage of guns or howitzers, which are made of strong wooden planks. This name is also given to that part of a large mortar-bed where the trunnions are placed for the elevation of the mortar.
- BRACKETTING** (*Archit.*) ornamental projections placed in the corners of rooms, called according to the figure of the ceiling which they support, *groin-bracketting*, *cove-bracketting*, *dome-bracketting*, &c.
- BRA'CHMANS** (*Theol.*) or *Brachmins*, a sect of gymnosophists, or philosophers in India, who live only on fruits and herbs, and derive their mission from Confucius.
- BRACHYCATALECTON** (*Poet.*) βραχυκατάληκτον, scil. μέτρον, from βραχὺς, short, and κατάληγμα, to end; a verse wanting a syllable at the end.
- BRACHYCEPHALI** (*Ich.*) a fish of bad juice and rank smell. *Orib. Med. Coll.* 1. 2, c. 58.
- BRACHYCERUS** (*Ent.*) a division of the genus *Curculio*, consisting of such insects of this tribe as have a horny lip, and feelers very short.
- BRACHYCHRONIUS** (*Med.*) βραχυχροῖνος, from βραχὺς, short, and χρόνος, time; an epithet for a disease of short duration. *Gal. Def. Med.*
- BRACHYGRAPHY** (*Lit.*) from βραχὺς, short, and γράφω, to write; short-hand writing.
- BRACHYGLOTTIS** (*Bot.*) the *Cineraria rotundifolia* of Linnæus.
- BRACHYLOGY** (*Rhet.*) βραχυλογία, from βραχὺς, short, and λόγος, speech; a laconic or concise form of speech similar to the aphorisms of Hippocrates. Tacitus calls it *Imperatoriam brevitatem*, and Plutarch refers to it when speaking of Lycurgus. *Demet. de Elocut.* c. 7; *Quint. Instit.* 1. 8, c. 3; *Tacit. Hist.* 1. 1, c. 18.
- BRACHYPNÆA** (*Med.*) βραχυπνῆαια, from βραχὺς, short, and πνῆαια, to breathe; short and small respiration, or a short respiration at small intervals. *Hippoc. de Epid.* 1. 1, &c.; *Gal. de Diffic. Resp.* 1. 3, c. 8.
- BRACHYPOTÆ** (*Med.*) βραχυπόταια, from βραχὺς, little, and πῶτος, drinking; little drinkers, like those sometimes who are in a phrensy. *Gal. Comm. 3 in Hippocrat. Epid.* 1. 3.
- BRA'CO** (*Archæol.*) a large fleet hound, in distinction from the *brachetus*, the smaller; and *brachete*, the bitch of that breed. *Mon. Angl.*
- BRA'CONS** (*Carpent.*) French for small stakes of wood which are placed with the cross-beams in the floodgates of large sluices.
- BRA'CTEA** (*Ant.*) πέταλον ἑλασμού, a thin leaf of gold, or any metal.
- BRACTEA** (*Bot.*) Bracte, or Floral leaf, one of the seven fulcres or props of plants, as in the Lime, *Tilia Europæa*. It is different from the other leaves in shape and colour, and generally situated on the peduncle. When there are several bractes on one flower they are called a tuft. The bracte is caduceous, *caducca*, when it falls off soon after its evolution; deciduous, *decidua*, when it falls before the leaves; persistent, *persistens*, when it falls with the leaves; coloured, *colorata*, when of any other colour than green.
- BRAC'TED** (*Bot.*) *bracteatus*, furnished with a bracte; an epithet for the peduncle, the whorl, and the raceme.
- BRAD** (*Carpent.*) vide *Brads*.
- BRADLE'YA** (*Bot.*) a genus of plants, named after Professor Bradley, of Cambridge, Class 21 *Monoccia*, Order 1 *Monodclphia*.
- Generic Characters.** CAL. none.—COR. petals six.—STAM. filaments three; anther cylindrical.—PIST. germ globose; style none; stigmas six to eight.—PER. capsule depressed; seed solitary.
- Species.** The species are shrubs, and natives of the Indies, &c.
- BRADS** (*Carpent.*) a kind of nails without heads, which are particularly used in flooring of rooms.
- BRADYPEPSY** (*Med.*) βραδυπέψυσις, from βραδύς, slow, and πέψω, to boil; weakness of digestion. *Gal. de Diff. Symph.* c. 4.
- BRA'DYPUS** (*Zool.*) Sloth, a genus of animals, Class *Mammalia*, Order *Bruta*.
- Generic Characters.** Fore-teeth none; grinders six in each jaw.—Body covered with hair.
- Species.** The species are *Bradypus Tridactylus*, *Ignavus*, seu *Ai*, Three-toed Sloth, native of South America.—*Bradypus Didactylus*, seu *Unau*, Two-toed Sloth, native of South America.—*Bradypus Ursinus*, Ursine *Bradypus* or Ursiform Sloth, or *Betre Bear*, native of India.—*Bradypus Pentadactylus*, Five-toed Sloth.
- BRAG** (*Sport.*) a game at cards, in which the knaves and nines are principals.
- BR'AGGAT** (*Med.*) a name formerly applied to a ptisan of honey and water.
- BRAGUE** (*Carpent.*) French for a kind of mortise, or joining together.
- BRAILS** (*Mar.*) ropes for hauling up, or collecting to their yards, the lower extremities of the sails that they may be furled the more conveniently; hence the expression "Brail up," for haul up a sail by the brails.
- BRAIN** (*Anat.*) the soft contents of the *cranium*, or skull, consisting of the *Cerebrum*, *Cerebellum*, &c. [vide *Anatomy*, &c.]
- BRA'IN-STONE** (*Ent.*) the *Madrepora cerebrum* of Linnæus, an insect of the Zoophytes Order.
- BRAISES** (*Cook.*) meat dressed à la *braise*, i. e. broiled upon the coals, or else baked in a campaign oven, &c.
- BRAIT** (*Min.*) a rough diamond.
- BRAKE** (*Bot.*) a sort of furze.
- BRAKE** (*Mech.*)¹ 1. An instrument with teeth for dressing flax. 2. A baker's kneading trough. 3. The sharp bit or snaffle of a bridle.
- BRAKE** (*Mar.*) the handle or lever by which a common ship's pump is worked.
- BRA'MA** (*Ich.*) vide *Bream*.
- BRA'MANS** (*Theol.*) vide *Brachmans*.
- BRA'MBLE** (*Bot.*) a shrub which has been classed by Linnæus under the *Rubus*.
- BRAMBLE** (*Or.*) or *Brambling*, the Mountain Finch, *Fringilla montefringilla*.
- BRAMBLE-NET** (*Mech.*) a sort of net for catching birds.
- BRAN** (*Bot.*) the husk of ground corn, which contains a considerable portion of the glutinous and nutritious quality of the wheat.
- BRA'NCA ursina** (*Bot.*) Bear's Foot. [vide *Acanthus*]
- BRA'NCARD** (*Mil.*) a sort of hand-barrow.
- BRANCH** (*Bot.*) *ramus*, a division of the main stem supporting the leaves and fructification.—Branch Leaves, *ramæa folia*, leaves growing on the branches.—Branch Peduncle, *rameus pedunculus*, a peduncle springing from a branch.—Fruit branch, that which shoots out of the cut of a preceding year, and is naturally of a considerable thickness.—Half-wood branch, one that is too gross for a fruit branch, and too slender for a wood branch.
- BRANCH** (*Mech.*) a name for several things, so called from their resemblance in figure, as—Branch of a candlestick, or chandelier, that which runs off from the main stem.—Branches of the bit of a bridle, the two pieces of bended iron that bear the bit mouth, the chains, and the curb.

BRANCH of a stag (*Sport.*) the horns of the head, or the antlers.
 BRANCH (*Or.*) a canary bird of the first year brought up by the old one.
 TO BRANCH *stand* (*Falc.*) to make a hawk take the branch, or leap from tree to tree, till the dog spring the partridge.
 BRANCHE (*Fort.*) a French word applied to the extended sides of the different works which surround a fortified town, as the covert-way, ditch, &c.
 BRANCHED (*Her.*) a term in blazouing for spread into branches like the horns of a deer.
 BRANCHED (*Bot.*) or Branching, *ramosus*; an epithet for a stem, leaf, spine, &c. which, when loaded with many branches, are called *ramosissimus*, very branching.
 BRANCHER (*Falcon.*) a young hawk, or other bird, that begins to go from branch to branch.
 BRANCHES (*Carpent.*) the ribs or arches of a Gothic vault, which traverse from one angle to another.
 BRANCHI (*Med.*) or *Brancheæ*, the glandulous tumours of the fauces. *Castell. Lex. Med.*
 BRANCHIÆ (*Ich.*) the gills of a fish.
 BRANCHIOPUS (*Ent.*) a genus of animals, Class *Vermes*, Order *Infusoria*.
Generic Character. Body contractile, and covered with a shell.
Species. These animals inhabit the stagnant water, where, from their minuteness, they appear to the naked eye like white specks.
 BRANCHIOSTEGOUS (*Ich.*) an Order of fishes, in the Linnean system, comprehending those which have gills without bony rays, and including the following genera: *Mormyrus*; *Ostracion*, *Tetrodon*; *Syngnathus*, Pipe Fish; *Pegasus*; *Centriscus*; *Balistes*; *Cyclopterus*, Sucker; *Lophius*, Frog-fish.
 BRANCHLET (*Bot.*) *ramulus*, a small branch.
 BRANCHUS (*Med.*) *βράγχος*, a hoarseness, or defluxion of humours upon the fauces. *Hippocrat. de Epid.* l. 1; *Cæli. Aurel. Tard. Pass.* l. 2, c. 7; *Foes. Econom. Hippocrat.*
 BRAND (*Archæol.*) a sword.
 BRAND (*Or.*) vide *Brant*.
 BRANDEUM (*Ecc.*) the cloth wherewith the bodies of saints and martyrs had been wrapped, cut into small pieces, and distributed as a relic. *Bed. Hist. Angl.* l. 1, c. 3; *Gregor. Turon. de Glor. Confess.* c. 37.
 BRANDLING (*Sport.*) a worm used in fishing.
 BRANDRITH (*Mec.*) a fence or rail about a well.
 BRANDY (*Chem.*) a spirituous and inflammable liquor made from the lees of wine by distillation. Its constituent parts are water, alcohol, and a little oil or resin. It was formerly distinguished by the annexed character, **V** and called *Aqua vitæ*.
 BRANK (*Bot.*) another name for Buck-Wheat.—*Brank Ursine, Branca ursina.* [vide *Acanthus*]
 BRANT-FOX (*Zool.*) a sort of black and red fox, the *Canis alopec* of Linnaeus.
 BRAZIL-WOOD (*Bot.*) an American wood, so called because it was first brought from Brazil.
 BRA'SIUM (*Archæol.*) Malt.
 BRA'SMA (*Nat.*) *βράσμα*, a sort of black pepper that is good for nothing; the same as is now observed to corrupt on the plant.
 BRASMA'TIAS (*Nat.*) a kind of earthquake, when the earth moves directly upwards.
 BRA'SMOS (*Nat.*) *βράσμος*, fermentation.
 BRASS (*Met.*) a factitious metal made of zinc and copper, or copper ore.—*Brass colour*, a colour prepared by braziers to imitate brass, which is red brass or bronze, and yellow or gilt brass.
 BRA'SSART (*Her.*) armour for the elbow.
 BRASSATELLA (*Bot.*) the same as *Ophioglossum*.
 BRASSES (*Her.*) sepulchral engravings on brass-plates, let

into slabs in the pavements of the ancient churches, portraying the effigies, &c. of illustrious persons.
 BRASSES (*Mech.*) plates let into the heads of spinning wheels, with holes for the spindles to work in.
 BRA'SSETS (*Her.*) pieces of armour for the arms.
 BRA'SSICA (*Bot.*) in the Greek *βράσσις*, and in English Cabbage, a well-known vegetable, much used by the ancients and the moderns. In the Linnean system it is a genus of plants, Class 15 *Tetradynamia*, Order 2 *Siliquosa*.
Generic Characters. CAL. perianth four-leaved; leaflets lanceolate.—COR. tetrapetalous; petals subovate; nectareous glands four ovate.—STAM. filaments six, subulate; anthers erect.—PIST. germ columnar; style short; stigma capitate.—PER. silique long; partition with a prominent columnar top; valves shorter than the partition.
Species. The principal species are the—*Brassica oleracea*, Common Cabbage.—*Brassica napus*, *Napus sylvestris*, seu *Bunias*, Wild Cabbage, Rape, or Naveu.—*Brassica napus sativa*, Coleseed.—*Brassica rapa*, *Rapa rotunda*, *Rapum majus*, seu *Rapa napus*, Turnep, &c. &c.
 BRA'SSICOURT (*Man.*) or *brachicourt*, an epithet for a horse whose legs are naturally bent archwise, in distinction from the bow-legged horse, who is made so by labour.
 BRASSIDE/LICA *ars* (*Med.*) a mode of cure by applying the herb brassadella.
 BRA'THYS (*Bot.*) *βράθυσ*, or *βράθυ*, a shrub of a habit between the heath and the juniper: it is so called from *βραδύς*, slow, because it is of slow growth. According to Pliny it was the name for the herb Savine. *Dioscor.* l. 1, c. 104; *Plin.* l. 24, c. 11.
 BRATHYS, in the Linnean system, a genus of plants, Class 13 *Polyandria*, Order 5 *Pentagynia*.
Generic Characters. CAL. perianth five-leaved.—COR. petals five.—STAM. filaments many; anthers twin.—PIST. germ superior; styles five; stigmas capitate.—PER. capsule ovate; seeds very many.
Species. The species are all shrubs.
 BRA'ULE (*Mus.*) an old French dance performed in a circle.
 BRAURO'NIA (*Ant.*) *βραυρονία*, an Athenian festival celebrated every five years in honour of Diana, who was surnamed Brauronia. *Aristoph. Iren.*; *Poll. Onom.* l. 8, c. 9; *Hesychius*.
 BRAV'URA (*Mus.*) Italian for a song of spirit, as also for the execution of the performer.
 BRAWN (*Anat.*) the muscular or fleshy part of the body, particularly that of the boar.
 BRAY (*Falcon.*) a pannel or piece of leather slit to bind up the legs of a hawk.
 BRAY false (*Fort.*) a false trench to hide a real one.
 BRA'YER (*Print.*) a round wooden rubber used in the ink-block to bray or rub ink.
 BRA'ZIER (*Com.*) a maker or seller of brass ware.
 BRA'ZING (*Mech.*) the soldering or joining two pieces of iron by means of thin plates of brass melted between the two pieces to be joined.
 BREACH (*Fort.*) a gap made in the works of a town by the besiegers. A practicable breach is an opening made in a wall by which soldiers may enter. "To repair a Breach;" to stop or fill up the gap with gabions, fascines, &c. so as to prevent the assault. "To fortify a Breach," to render it inaccessible by chevaux de frizes, crowsfeet, &c. "To make a lodgment in the Breach" is said of the besiegers who secure themselves in the breach after the besieged have been driven out. "To clear the Breach," to remove the rubbish, &c. from the Breach.
 BREACH of close (*Law*) is a sort of trespass by entering on another man's ground without lawful authority.—*Breach of covenant*, the not performing any covenant, &c.—*Breach of duty*, the not executing any office, &c.—*Breach of peace*,

offences against the public peace.—*Breach of pound*, breaking any place where cattle are distrained.—*Breach of prison*, an escape by breaking out of prison.

BREAD (*Med.*) vide *Artos*.

BREAD-FRUIT-TREE (*Bot.*) the *Artocarpus* of Linnæus, a tree growing in Otaheite, so called because the fruit, which is milky and juicy, supplies the place of bread to the inhabitants. This tree grows to the height of forty feet.—*Bread-nut-tree*, the *Brosimum* of Linnæus.

BREAD (*Law*) or *assize of bread, beer, and ale*. [vide *Assize*]—*Bread of treat*, a name in the statute 51 Hen. 3. of assize of bread and ale for the household bread, as it is now called in distinction from the *wastel*, or *white bread*, and the *cocket*, or *wheaten bread*.

BREA'D ROOM (*Mar.*) that part of the hold in a ship destined to receive the bread and biscuit.

BREAD TURNIP (*Med.*) the expressed juice of turnips mixed with meal.—*Bread-jelly*, bread boiled to a jelly.

BREAK (*Archit.*) the projection in the front of a building carried up more than one story.

BREAK (*Agric.*) a land ploughed the first year after it had lain fallow in sheep-walks.

BREAK of a deck (*Mar.*) that part where the descent to the next deck below it commences.—*Break-water*, 1. The hull of a vessel sunk at the entrance of a harbour to break the force of the water. 2. A small buoy fastened to a large one, to show where the latter always is.

BREAK (*Print.*) the short line which ends a paragraph. 2. The piece of metal contiguous to the shank of the letter, so called because it is always broken off.

TO BREAK in (*Carpent.*) to cut or break a hole in brickwork with a ripping chissel for the purpose of inserting timber.

BRE'AK-JOINT (*Mason.*) a term for that part of brickwork which consists in laying a third stone over two others that are contiguous, for the purpose of binding them the closer together.

TO BREAK (*Com.*) to become bankrupt.

TO BREAK off (*Mil.*) a term in the military movements of the cavalry for diminishing the front, and also for wheeling from the line, as "*Break off to the left*," i. e. wheel to the left.

TO BREAK ground (*Fort.*) to open the trenches, or begin the works for a siege.

TO BREAK (*Mar.*) is used in several sea phrases, as "*To break ground*," i. e. to weigh an anchor, and quit a place. "*To break bulk*," to commence unloading a ship. "*To break up*," to rip off the planks of a ship, and take her to pieces, when old and unserviceable. "*To break sheer*," is said of a ship which is driven by the force of the winds out of the position in which she might keep clear of her anchors.

TO BREAK a horse (*Man.*) in trotting, is to make him light upon the hand by trotting; to *break* him for hunting, is to supple him, and make him take the habit of running.

TO BREAK a deer (*Cook.*) to cut up venison.

BRE'AKERS (*Mar.*) billows breaking over rocks that lie under water.

BREAKING in (*Man.*) the discipline of first training a colt to be useful.

BREAKING of arrestment (*Law*) an action in the Scotch court, wherein it is narrated, that though arrestment was laid on, payment nevertheless was not made; the pursuer therefore concludes that the breaker should refund him, and besides should be punished according to law.

BREAKING off (*Mech.*) breaking the break from the shank of a printing-type.

BREAM (*Ich.*) the *Cyprinus brama* of Linnæus, a fish of the carp kind that grows fast, and has a broad body.—*Sea bream*, otherwise called Red Gilt Head, the *Sparus pagrus* of Linnæus, a fish of a red colour, with the iris silvery.

BREA'MING (*Mar.*) burning off the filth of grass, sea-weed, &c. from a ship's bottom.

BREAST (*Anat.*) the anterior part of the Thorax, the Sternum.—*Breast-bone*, the Sternum. [vide *Anatomy*]—*Breast*, or *Breasts*. vide *Mammæ*.

BREASTFAST (*Mar.*) the large rope employed to confine a ship sideways to a wharf or quay.—*Breast hooks*, thick pieces of incurvated timber, serving to strengthen the forepart of the ship.—*Breast caskets*, the longest and biggest caskets.—*Breast-rail*, the upper rail of the breast-work.—*Breast-work*, the balustrade of the quarter-deck, &c.

BREAST-PAIN (*Vet.*) a disease incident to horses.

BREAST-PLATE (*Man.*) a leathern strap running from one side of the saddle, across the horse's breast, to the other, to keep it in its place.—*Breast of a saddle*, that part where the arch or upper part of the bow ends.

BREAST-PLATE (*Mil.*) a piece of defensive armour worn on the breast.

BREAST-PLOUGH (*Agric.*) a sort of plough which is driven by the breast, and is used in parting turf for denshering the land. [vide *Agriculture*]

BREAST-WORK (*Fort.*) works thrown up as high as the breast of the besieged, or those who are defending themselves.

BRE'CCA (*Archæol.*) a breach from the want of repair.

BRE'CCIA (*Min.*) Pudding-stone, a sort of aggregate earths, consisting of fragments of stones conglutinated.

BRE'DWITE (*Archæol.*) a fine, or penalty, imposed for defaults in the assize of bread.

BREE'CH (*Mar.*) the angle of knee-timber in a ship, the inside of which is called the throat.

BREECH of a gun (*Gunn.*) the hinder part from the cascade to the bore.

BREECHING (*Agric.*) the hard and clotted wool cut from the sheep; also long white hairs in wool as stiff as badger's hairs.

BRE'EDING (*Agric.*) a method of improving the race of different animals by crossing or mingling one species or variety with another.

BRE'EZE (*Mar.*) a shifting wind that blows from sea and land alternately.

BREEZE (*Ent.*) or sea-breeze, the *Oestrus* of Linnæus, another name for the Gadfly.

BRE'GMA (*Anat.*) *βρεγματις, βρεγματις*, the middle and forepart of the head. *Hippoc. de Vul. Cap.*; *Cæsar. Aurelian. de tard Pass.* l. 1, c. 4; *Eustath. in Hom. Il.* l. 3; *Hesychius*.

BRE'HON (*Law*) an Irish judge.

BRE'ISMA (*Archæol.*) a weather sheep.

BRE'LSIS (*Nat.*) the caranna, a sort of gum.

BRENA'GRIMUM (*Archæol.*) a payment in bran by tenants to their lords.

BRE'NT-GOOSE (*Orn.*) the *Anas Bernicla* of Linnæus. [vide *Bernicle*]

BRENTUS (*Ent.*) a genus of insects, Order *Coleoptera*. *Generic Character.* *Antennæ* moniliform; head projecting into a very long cylindrical snout.

Species. The species are distinguished into those which have the thighs simple, and those that have the thighs toothed.

BRE'SSUMMER (*Carpent.*) a binding inter-tie, or girder, to different parts of a house.

BRE'ST (*Archit.*) another name for the torus.

BRETE'SSE (*Her.*) a charge which is embattled on both sides equal to each other.

BRETO'ISE (*Law*) or *bretoyse*, the law of the Marches of Wales in use among the ancient Britons.

BREVE' (*Law*) a writ so called for its brevity, directed to the Chancellor and Judges, by which a man is summoned or attached to answer an action, &c. *Bract.* l. 51; *Tract.* 5, c. 17.—*Breve perquirere*, to purchase a writ or licence of

trial in the king's court by the plaintiff.—*Breve de recto*, a writ of right or licence for a person ejected out of an estate to sue for the possession of it.

BREVE (*Mus.*) a note of the third degree of length, marked thus |C|; it was formerly marked as a square figure.—*Imperfect breve*, is one that has no dot after it, which is equal to one quarter of a large breve, or to two semibreves.—*Perfect breve* is dotted, and is equal to three semibreves.

BREVET (*Mil.*) a term expressive of promotion in the army, from the captain upwards, without additional pay, until it reaches to the rank of Major-General, who is now entitled to a quarterly allowance.—*Brevet-rank*, a rank in the army higher than that for which pay is received.

BREVIA TESTATA (*Law*) an ancient term for a deed.

BREVIA vasa (*Anat.*) small venous vessels passing from the stomach to the splenic veins.

BREVIARY (*Ecc.*) a book containing the daily service of the Romish Church.

BREVIBUS et rotulis liberandis (*Law*) a writ to a sheriff to deliver to his successor the county with the rolls, &c. *Reg. Orig.* 295.

BREVIER (*Print.*) a small printing letter, so called, probably, from its having been first used in printing breviaries, or, still more probably, from *brevis*, short, because it is comparatively small. [vide *Printing*]

BREVIS musculus (*Anat.*) a muscle of the *scapula*.—*Brevis cubiti*, a muscle of the fore-arm.—*Brevis extensor digiti pedis*. [vide *Extensor*].—*Brevis Flexor Pollicis*. [vide *Flexor*].—*Brevis Peroneus*. [vide *Peroneus*]. *Brevis Pronator radii*. [vide *Pronator*]

BREWERS' Company (*Her.*) the brewers were incorporated in 1424, in the 6th year of the reign of Henry VI. Their arms are "Gules on a chevron *argent* between three saltines of garbs *or*, as many tuns *sable*."

BREWING (*Mar.*) or a squall brewing; black tempestuous clouds collecting so as to portend a storm.

BREXANTES (*Med.*) a small kind of frog, to the blood of which was falsely ascribed, according to Galen, the virtue of restoring the lost hair. *Gal. de San. tuend.* l. 10.

BREYNIA (*Bot.*) a genus of plants named after Breynius, father and son. Class 23, *Polygamia*, Order 2, *Diocia*. *Generic Characters*.—*CAL.* *perianth* one-leaved.—*COR.* none.—*STAM.* *filaments* none; *anthers* five.—*PIST.* *germ* very small; *style* cylindrical; *stigma* blunt.—*PER.* *berry* dry; *seeds* two.

Species. The only species is *Breynia disticha*, native of New Caledonia and the Isle of Tamia.

BRIAR (*Bot.*) Wild or Common Briar, the *Rosa canina* of Linnæus.

BRIBBERY (*Law*) when any person in a judicial place takes any fee, gift, reward, or brokerage, for doing his office, or by colour of his office, except of the king only. 3 *Inst.* 145.

BRIBO'UR (*Archæol.*) a pilferer.

BRICK (*Mech.*) an artificial kind of stone composed of clay, coal-ashes, or sand, &c. dried by the sun, and hardened by fire. Bricks are made in a mould, are dried in a framework called *Hacks*, and burnt in heaps, called *Clamps*, whence the burning itself is also called a *Clamp*. Bricks differ according to their quality.—*Marls* are prepared and tempered with the greatest care; the finest of which are called *firsts*, which are chosen for archways, &c. The next best are called *seconds*.—*Stocks* are a sort of brick next in quality to the seconds of marls. The *grey Stocks* are made of the purest earth: the *red Stocks* are so called from the colour of the earth of which they are made. The finest sort of *Stocks* are called *red Rubbers*.

Bricks are likewise distinguished according to their figure, as—*Compass Bricks*, which are of a circular form. *Concave* or *hollow Bricks*, which are flat on one side and

hollowed on the other.—*Feather-edged Bricks*, that are thinner on one edge than the other; also according to their use, as *Caping Bricks*, used for the caping of walls.—*Cogging Bricks*, for the indented work under the caping of walls.—*Dutch* or *Flemish Bricks* used in paving yards, &c.

BRICK (*Chem.*) was formerly distinguished by this character, 

BRICK-KILN (*Mech.*) a place in which bricks are burnt.

BRICKLAYERS' Company (*Her.*) was not incorporated before 1586. The Bricklayers' arms are as in the annexed figure. "*Azure* a chevron, or between a fleur de Lys, *argent* enters two brick-axes in chief, and a bundle of lathes in base, or."

BRICOLLE (*Archæol.*) an engine for beating down walls.

BRICOLLE (*Sport.*) or bricoil, the rebound of a tennis-ball after a side stroke.

BRICUMUM (*Bot.*) a name for Artemisia.

BRIDEMEN (*Cus.*) and *bridemaids*, young men and maidens attending the bride on their wedding-day.

BRIDE-STAKE (*Archæol.*) probably a post set up to dance round like a may-pole.

BRIDGE (*Archit.*) a structure raised over rivers, &c. commonly formed of some durable materials, as wood, stone, or iron. The principal parts belonging to a bridge are as follow, namely, the *cafferdam*, or *batterdean*, a case of piling without a bottom fixed in the river water-tight, or nearly so, for the purpose of laying the bottom dry.—*caisson*, a flat-bottomed boat, in which a pier is built; the bottom of which afterwards serves as a foundation for the pier.—*Abutments*, the extremities of the bridge which join to or abut upon the land.—*Piers*, the walls built for the support of the arches.—*Arches*, the circular openings which have different names for their different parts and figure. [vide *Arch*].—*Impost*, that part of the pier on which the feet of the arches stand.—*Piles*, stakes or posts shod with iron, and driven into the bed of the river to serve as a foundation, or to protect the piers.—*Stilts*, a set of piles driven into the space intended for the pier, whose tops being sawed off level above low-water mark, the pier is then raised upon them.—*Jettée*, the border made round the stilts under the pier.—*Starlings*, a kind of case made about a pier of stilts and jettées, &c.—*Pile-driver*, an engine for driving down the piles. [vide *Pl.* 29, fig. 5].—*Parapet*, the breast-wall made on the top of the bridge to prevent the passengers from falling over.—*Banquet*, the raised footpath at the sides of the bridge next the parapet.

Bridges are of different kinds, according to their materials, construction, or use, namely—*Wooden bridges*, *stone*, or *iron bridges*, according as they are made of wood, stone, or iron.—*Rush bridges*, those which are made of rushes bound fast together, over which planks are laid for passing over marshy places. They are used by soldiers on their march.—*Pendant* or *hanging bridges*, those which are not supported by posts, pillars, or butments, but hang in the air sustained only at the two ends.—*Draw-bridge*, that which is fastened with hinges at one end, so that the other may be drawn up, or to one side, so as to admit the passage of a vessel, or in fortifications to prevent the crossing of a ditch.—*Flying bridge*, one composed of two smaller bridges, so constructed one over the other, that by means of ropes and pulleys the upper one may be pushed forward till it reaches the point where it is to be fixed. It is commonly used to surprise works or outposts.—*Bridge of boats*, a number of common boats joined parallel to each other at the distance of six feet, till they reach across a river. They are then covered with planks, so as to serve as a passage for men and horses. This is mostly used in military marches.—

Bridge of communication, a bridge constructed for the purpose of affording a communication between two armies or forts.—*Floating bridge*, a sort of redoubt, consisting of two boats covered with planks, and solidly framed so as to bear either man or horse.—*Ponton bridges*, those which are made of pontoons.—*Cask or barrel bridges* are a number of casks or barrels, which are made to answer the purpose of pontoons.

BRIDGE (*Mus.*) the perpendicular arch in a violin, bass-viol, &c. which stands upon the belly, and serves to support the strings; also the flat ruler laid over the jacks of a harpsichord, or spinnet, to prevent them leaping out of their sockets.

BRIDGE (*Gunn.*) a name for the two pieces of timber which go between the two transoms of a gun-carriage, on which the coins are placed for elevating the piece.

BRIDGE (*Her.*) a charge in coat armour, as in the annexed figurc. "He beareth or on a bridge of three arches, *gules masoned sable*, the streamers transfuent proper, a fane argent, name *Trowbridge*."

BRIDLE (*Man.*) a contrivance made of leather straps and pieces of iron, the parts of which are as follow, namely, the—*Bitt*, or *snaffle*, which goes into the horse's mouth.—*Curb*, a chain of iron made fast to the upper part of the branches of the bridle in a hole called the *eye*, and running over the beard of the horse.—*Head-stall*, the leather going from the top of the head to the rings of the bitt.—*Fillet*, which lies over the forehead, and is usually adorned with a rose.—*Throat-band*, a leather under the throat.—*Reins*, the thongs for the use of the rider.—*Button and loop*, at the end of the reins.—*Nose-band*, a leather going over the middle of the nose.—*Cavesson*, a false rein.—*Martingale*, a thong of leather, one end of which is fastened under the horse's head, and the other between his legs, to make him hold his head well.

The principal parts of bridles now in use are the *snaffle*, the *curb*, and the *chaff-halter*, which is a lady's bridle with double reins.—*Bridle-hand*, the horseman's left hand; the right hand being the spear, or whip hand.

BRIDLE-ARM *protect* (*Mil.*) a guard used by the cavalry, which consists in having the sword-hilt above the helmet, and the point downwards in advance of the bridle-hand.

BRIDON (*Man.*) or *bridoon*, the snaffle and rein of a military bridle, which acts independently of the bit and curb at the pleasure of the rider.

BRIEF (*Law*) an abridgement of the client's case made out for the instruction of counsel on a trial at law.—*Brief al' Evesque*, a writ to the bishop, which, in *Quare impedit*, shall go to remove an incumbent.—*Brief out of the chancery*, a writ to a judge to examine by an inquest whether a man be nearest heir.—*Brief of distress*, a writ out of chancery against a landlord to distress his goods, now obsolete.—*Brief of mort-ancestry*, for entering the heirs of all defuncts.—*Brief*, or *licence*, to make collections for repairing churches, losses by fire, &c.

BRIEF, *Apostolical* (*Ecc.*) a letter which the pope sends to princes and magistrates relative to public affairs. It is so called on account of its brevity, in distinction from the *Bull*, which is drawn up at large, and with all possible form.

BRIEF (*Mus.*) a measure of quantity, which contains two strokes down in beating time, and as many up. It is not now often used.

BRIG (*Mar.*) a small merchantman with two masts.

BRIGA (*Archæol.*) contention.

BRIGADE (*Mil.*) a party of either horse or foot, consisting, in the first case, of eight or ten squadrons; and, in the second, of from four to six battalions.—*Irish Brigade*,

were Irish regiments serving in France, Spain, and Naples.—*Brigade Major* is an officer appointed by the brigadier to assist him in the management of his brigade.—*Brigade of a troop of horse*, the third part of it.

TO BRIGADE (*Mil.*) to make any given number of regiments or battalions act together for the purpose of service.

BRIGADIER (*Mil.*) the officer who commands a brigade.

BRIGANDINE (*Mil.*) a coat of mail, consisting of many jointed and scale-like plates, very pliant and easy for the body. *Stat.* 45, P. & M.

BRIGANDINE (*Her.*) or *Brigantine*. [vide *Habergeon*]

BRIGANTINE (*Mar.*) a small swift sailing vessel.

BRIGBOTE (*Archæol.*) or *brug bote*, the contribution to the repair of bridges. *Fleta*.

BRIGHT-BAY (*Man.*) the common colour of a horse.

BRIGIDIANS (*Ecc.*) an order of Swedish nuns, whose founder was named Bridget.

BRILLA'NTE (*Man.*) an epithet for a brisk high mettled stately horse.

BRILLANTE (*Mus.*) Italian for a brisk lively manner.

BRILLS (*Man.*) hairs on a horse's eyelids.

BRIMSEY (*Her.*) vide *Gad-fly*.

BRIMSTONE (*Chem.*) the vulgar name for sulphur.

BRINDLED (*Zool.*) spotted; an epithet for cows, &c.

TO BRING (*Mar.*) a term used in several sea phrases, as 'To bring by the lee, to incline rapidly to leeward.—'To bring to, to check the ship's course, to make her lie to, or stationary; also in applying a rope to the capstan, it is said 'Bring to the messenger.'—'To bring up,' a term among the colliers for casting anchor.

TO BRING up (*Mason.*) a chimney foundation, &c. to raise it to any height.

BRINGER (*Mil.*) a term employed in the recruiting service, to signify the person who produces a man or a boy within the regulated age that is willing to enlist, for which he is allowed a guinea.—*Bringers up*, a name formerly used in the English army for the whole rear rank of a battalion drawn up.

BRINGING to (*Mar.*) checking the course of a ship to wait the approach of another.

BRINGING in (*Man.*) keeping in a horse's nose when he boars.

BRINGING up the rear (*Mil.*) bringing all stragglers to the main body.

BRINS d'est (*Mil.*) French for large stakes or poles, resembling pickets, with iron at each end, which are used to cross ditches.

BRONY (*Bot.*) vide *Bryony*.

BRISE (*Carpent.*) French for a beam in sluices, that is placed swipe fashion, on the top of a large pile.

BRISE (*Agric.*) vide *Brize*.

BRISE (*Her.*) vide *rompu*.

BRISKET (*Vet.*) that part of the breast of an animal that lies nearest the ribs.—*Brisket of a horse*, the forepart of the neck at the shoulder down to the forelegs.

BRISTLE (*Bot.*) *seta*, that sort of stalk which bears only the fructification of the *Musci*. It differs from the flower-stalk, in being always simple, and standing between the fruit and calyx.—Bristle-shaped, *setaceous*, an epithet for a leaf; *folium setaceum*, a leaf in the shape of a bristle, that is, shorter than a capillary leaf.

BRISTLED (*Her.*) an epithet in blazoning for a boar, having hair on his back and head.

BRISTLY (*Bot.*) *setosus*, i. e. set with bristles; an epithet for some receptacles that have bristles between the florets.

BRISTOL hot waters (*Chem.*) mineral waters of the lowest temperature of any in England, the constituent parts of which are carbonic acid gas, lime, magnesia, together with muriatic and vitriolic acids. They are used efficaciously in pulmonary disorders.

BRITANNICA (*Bot.*) *βρετανικα*, the *Rumex Britannica* of

Linnæus, a plant; so called, according to Pliny, because it was discovered by the Friezlanders near the British Channel. It is very astringent and efficacious for ulcers in the mouth, &c. *Dioscor.* l. 4, c. 2; *Plin.* l. 25, c. 3.

BRIZA (*Bot.*) St. Peter's corn, Spelt Wheat, or Quaking Grass, a genus of plants, Class 3 *Triandria*, Order 2 *Digynia*.

Generic Characters. CAL. *glume* many-flowered.—COR. *bivalve*; *nectary* two-leaved.—STAM. *filaments* three; *anthers* oblong.—PIST. *germ* roundish; *styles* two; *stigmas* plumose.—PER. none; *seed* one.

Species. The species are mostly annuals, as—*Briza minor*, *Poa petiolis*, &c. seu *Gramen tremulum*, &c. small Quaking Grass, an annual, native of Britain.—*Briza virens*, seu *Gramen paniculatum*, Green Quaking-Grass.—*Briza maxima*, &c. Greatest Quaking Grass, &c. But—*Briza medea*, *Poa petiolis*, &c. *Gramen tremulum*, &c. seu *Phalaris pratensis*, Middle or Common Quaking Grass, Shakers, Ladies' Hair, or Bird's Eyes, is a perennial.

BRIZE (*Agric.*) a sort of ground that has lain long un-tilled.

BRIZEVENT (*Hort.*) shelters on the north side of melon-beds where walls are wanting.

BROACH (*Mech.*) a spit for roasting meat upon.

BROACH (*Mus.*) a wind instrument, the sounds of which are produced by turning round a handle.

BROACH (*Sport.*) the start of the head of a young stag, growing sharp like the end of a spit.

TO **BROACH** (*Husband.*) to pierce a cask or vessel in order to draw the liquor.

TO **BROACH** (*Mar.*) to incline very rapidly to windward, an action differing but in degree from that of *bringing to*.

BROAD-ARROW (*Her.*) a charge which differs from the pheen only, by having the inside of its barbs plain. [vide *Pheon*]

BROAD-AXE (*Her.*) a charge occasionally in coats of arms.

BROAD-SIDE (*Mar.*) 1. A discharge of all the guns on one side of a ship at a time. 2. All that side of the ship above water between the bow and quarter.

BROAD-SIDE (*Print.*) a form of one full page, printed on one side of a whole sheet of paper.

BROAD-SIDE-PIECE (*Com.*) a gold coin, worth 23s. or 25s. 6d. G. II.

BROADSWORD (*Mil.*) a sword with a broad blade, chiefly designed for cutting. The principal guards in the broadsword exercise are the—*Inside guard*, which is formed by directing your point in a line about six inches higher than your antagonist's left eye.—*Outside guard* consists in directing your point above your antagonist's right eye.—*Medium guard* is a position between the inside and outside guard.—*Hanging guard* is that in which the hilt of your sword is raised high enough to view your opponent under the shell.—*St. George's guard* protects the head.

BROCADE (*Com.*) a kind of stuff, or cloth of gold, silver, or silk, raised and enriched with flowers, &c.

BROCA'GIUM (*Archæol.*) brokery.

BROCCOLI (*Bot.*) a variety of the Cauliflower.

BROCH (*Mech.*) vide *Brooch*.

BROCHA (*Ant.*) in French *broche*, an awl or large packing needle.

BROCHA (*Archæol.*) *broche*, a spit.

BROCHA (*Her.*) an instrument used by embroiderers, and borne in the arms of the embroiderers' company.

BROCHETTE (*Cook.*) a particular way of frying chickens.

BRO'CHIA (*Archæol.*) a great can or pitcher.

BRO'CHITAS (*Vet.*) bending of the teeth, which is a mark of old age in horses, according to Pliny. *Varr. de Re Rust.* l. 2, c. 7; *Plin.* l. 11, c. 36.

BROCHOIR (*Mech.*) French for a smith's shoeing-hammer.

BRO'CHUS (*Anat.*) one having a prominent upper lip. *Castell. Lex. Med.*

BROCK (*Sport.*) a buck or hart two years old.

BRODERIE'S (*Mus.*) flourishes thrown by performers, *en passant*, into any composition.

BRO'D-HALFPENNY (*Archæol.*) vide *Bord-halfpenny*.

BRO'DIUM (*Med.*) the liquor in which some solid medicine is preserved.

BRO'GGER (*Archæol.*) the same as *Broker*.—*Brogger of corn*, the same as *Badger*.

BROKEN-BA'CKED (*Mar.*) an epithet for a vessel so loosened in her frame as to droop at both ends.

BROKEN-LE'TTER (*Print.*) the breaking the orderly succession in which the letter stood in a line or page, and mingling them together.

BROKEN-NUMBER (*Arith.*) the same as *Fraction*.

BROKEN-RADIA'TION (*Catop.*) the broken beams of light, as seen through a glass that is cut into several panes or pieces.

BROKEN-RA'Y (*Diop.*) or ray of refraction, a right line, whereby the ray of incident changes its direction, or is broken in traversing the second medium.

BROKEN-WI'ND (*Vet.*) a diseased respiration in horses.—*Broken-knees*, an injury done to the knees of horses.

BROKER (*Com.*) *broccator*, from *broca*, a breaking; that is, a broken trader, such being originally the only persons employed in that way. A broker is one who concludes bargains or contracts for merchants, &c. of whom there are several kinds, as—*Exchange Brokers*, such as negotiate in all matters of exchange with foreign countries.—*Ship Brokers*, those who transact business between the owners of vessels, and the merchants who send cargoes.—*Insurance Brokers*, those who manage the concerns, both of the insurers and the insured.—*Stock Brokers*, those who buy and sell stock for other persons.—*Army Brokers*, those who formerly acted between army agents, and individuals wishing to purchase, sell, or exchange commissions.—*Pawn Brokers*, those who lend money upon goods to necessitous people at a certain rate per month.

BROME-GRASS (*Bot.*) the *Bromus* of Linnæus, a sort of grass much resembling the Oat, whence it has also been called *Oat-Grass*. The species are mostly annuals.

BROMELIA (*Bot.*) a genus of plants named after Olaus Bromel, a Swede, Class 6 *Hexandria*, Order 1 *Monogynia*. *Generic Characters.* CAL. *perianth* three-cornered.—COR. *petals* three.—STAM. *filaments* six; *anthers* erect.—PIST. *germ* inferior; *style* simple; *stigma* obtuse.—PER. *berry* roundish.

Species. The species are shrubs, and natives of South America, Jamaica, &c. as—*Bromelia ananas*, *Carduus Brasilianus*, &c. *Ananas acostæ ovata*, seu *aculcatus*, &c. *Anassa*, seu *Capa-Isiakka*, *Ananas*, or *Pine-Apple*.—*Bromelia pinguin*, *Ananas Americana*, &c. seu *Pinguin*, *Pinguin*, or *Broad-leaved Wild Ananas*.—*Bromelia Karatas*, seu *Karatas*, &c. *Karatas*, or *Upright-leaved Wild Ananas*.—*Bromelia acanga*, *Caraguata Mexocoll*, seu *Manguel*, &c. *Park. Theat. Bot.*; *Raii Hist. Plant.*; *Linn. Spec. Plant.*

BRO'MION (*Med.*) a plaster. *Paul Æginet.* l. 7, c. 9.

BRO'MUS (*Bot.*) *ἔβρωμος*, a herb described by Dioscorides as very much like the *Ægilops* in its drying quality. A decoction of this plant is recommended for worms in children. *Dioscor.* l. 4, c. 140; *Plin.* l. 18, c. 10; *Gal. de Simpl.* l. 6; *Oribas Med. Coll.* l. 11; *Act. Tetrab.* 1, serm. 1.

BROMUS, *Brome Grass*, in the *Linnæan system*, a genus of plants, Class 3 *Triandria*, Order 1 *Digynia*.

Generic Characters. CAL. *glume* many-flowered, bivalve; *valve* ovate.—COR. bivalve; *lower valve* obtuse; *upper valve* lanceolate; *awn* straight; *nectary* two-leaved; *leaflets* ovate.—STAM. *filaments* three, capillary; *anthers*

oblong.—PIST. germ turbinate; styles two; stigma simple.—PER. corolla adhering; seed one, oblong.

Species. The species of this genus of Grasses are annuals, and classed by the older botanists under the *festuca*. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Raii Hist. Plant.*; *Linn. Spec. Plant.*

BRONCHANT (*Her.*) a French term in blazonry to signify surmounting, as when an escutcheon is strewn with fleurs de lis, and then *brunchant sur le tout*, i. e. over them all, stands a beast, or any thing else, which seems to cover them almost entirely.

BRONCHIA (*Anat.*) βρογχία was taken by Hippocrates for the Aorta; but the bronchia, or bronchi, are now the ramifications of the *Arteria aspera*, or Larynx. *Hippocrat. de Anatom.*; *Gal. Exeg. Voc. Hippocrat.*; *Gorr. Def. Med.*; *Foes. Econom. Hippocrat.*

BRONCHIAL arteries (*Anat.*) branches of the Aorta given off from the chest.—*Bronchial Glands*, glands situated about the *Bronchia* and *Trachea*.

BRONCHOCELE (*Med.*) βρογχόκελη, from βρόγχος, the wind-pipe, and κέλη, a tumour; a tumour in the neck, principally of women, called a Derby Neck, because the people in Derbyshire are mostly subject to it. It is also frequent in the vallies of the Alps, to which Juvenal alludes. *Juv. sat.* 13, v. 162.

Quis tumidum guttur miratur in Alpibus?

Cels. 1. 7, c. 13; *Paul. Æginet.* 1. 6, c. 38; *Gorr. Def. Med.*
BRONCHOS (*Med.*) the suppression of the voice from a catarrh.

BRONCHOTOMY (*Surg.*) βρογχοτομία, from βρόγχος, and τέμνω, to cut; an operation of cutting open the windpipe in a membranaceous part, between two rings, for the purpose of preventing suffocation.

BRONCHUS (*Anat.*) βρόγχος, the whole *Arteria aspera*, or only the fauces.

BRONTEUM (*Ant.*) βροντήιον, from βροντή, thunder; a machine or engine used on the stage to represent thunder. *Fest. de Verb. Signif.*

BRONTIAS (*Min.*) a sort of precious stones supposed to fall with thunder. *Plin.* 1. 37, c. 10.

BRONZE (*Met.*) a compound metal, two-thirds of which consists of copper, and one-third of brass.

BRONZITE (*Min.*) a species of stones of the Hornblende family.

BROOCH (*Mech.*) a collar of gold formerly worn about the necks of ladies; also an ornamental pin used in the same manner.

BRUOCH (*Paint.*) a painting all in one colour.

BROOK-LIME (*Bot.*) a sort of Water Speedwell.

BROOM (*Bot.*) a shrub; the *Genista* and *Spartum* of Linnæus.—African Broom, the *Aspalathus genistoides*.—Butcher's broom. [vide *Butcher*]

BROOM-LANDS (*Agric.*) lands that bear broom.

BROOMING (*Mar.*) vide *Breaming*.

BROSIMUM (*Bot.*) from βροσίμος, esculentus, a genus of plants, Class 22 *Dioecia*, Order 1 *Monandria*.

Generic Characters. CAL. *ament* common, globular.—COR. none.—STAM. *filaments* solitary; *anthers* bilamellate.—PIST. germ ovate; *style* single; *stigmas* reflex.—PER. berry pedicelled; *seeds* solitary.

Species. The species are trees, as the—*Brosimum alicastrum* et *spurium*.

BROSSÆA (*Bot.*) a genus of plants named after Guy de la Brosse, intendant of the royal garden at Paris, Class 5 *Pentandria*, Order 1 *Monogynia*.

Generic Characters. CAL. *perianth* one-leaved.—COR. monopetalous.—STAM. *Filaments* five.—PIST. germ pentacoccus; *style* subulate; *stigma* simple.—PER. capsule roundish; *seeds* very many.

Species. The only species is—*Brossæa coccinea*, a shrub native of South America.

BROSSUS (*Archæol.*) bruised, or injured with wounds.

BROTHEL (*Archæol.*) or *bordel*, from the Italian *bordello*, a little house, was at length applied to a house of ill-fame, a stewhouse, of which there were some licensed in the reign of Henry VI, but they were put down in that of Henry VII.

BROUILLER (*Man.*) a French term for a horse that plunges, and is in disorder.

BROW (*Anat.*) the *Os Frontis*, or Forehead.

BROW-ANTLER (*Sport.*) the first start that grows on a stag's head.

BROW-POST (*Carpent.*) an athwart or cross-beam.

BROWALLIA (*Bot.*) a genus of plants named after Browallius, Bishop of Aboa, the defender of Linnæus, Class 14 *Didynamia*, Order 2 *Angiospermia*.

Generic Characters. CAL. *perianth* one-leaved.—COR. monopetalous.—STAM. *filaments* four; *anthers* simple.—PIST. germ ovate; *style* filiform; *stigma* thick.—PER. capsule ovate; *seeds* numerous; *receptacle* compressed.

Species. The species are annuals, and natives of South America.

BROWN-BILL (*Mil.*) the ancient weapon of the English foot, resembling a battle-axe.

BROWNEA (*Bot.*) a genus of plants named after Patrick Browne, M. D. and Historian of Jamaica, Class 16 *Monodelphia*, Order 4 *Decandria*.

Generic Characters. CAL. *perianth* one-leaved.—COR. outer monopetalous; inner five-petalled.—STAM. *filaments* ten; *anthers* oblong.—PIST. germ oblong; *style* subulate; *stigma* obtuse.—PER. legume oblong; *seed* solitary.

Species. The species are shrubs.

BROWNISTS (*Ecc.*) a sect of independents who rejected both episcopacy and presbyterianism.

BROWZE (*Hort.*) or *browze-wood*, sprouts of trees that shoot forth early in the spring.

BRUCEA (*Bot.*) a genus of plants named by Sir Jos. Banks after Bruce, the Abyssinian traveller, Class 22 *Dioecia*, Order 4 *Tetrandria*.

Generic Characters. CAL. *perianth* four-parted.—COR. petals four.—STAM. *filaments* four; *anthers* roundish.—PIST. germ four; *styles* subulate; *stigmas* acute.—PER. four; *seeds* solitary.

Species. Plants of this genus are shrubs, and natives of the East Indies.

BRUCENA (*Archæol.*) briars, or bush-heath.

BRUCHUS (*Ent.*) βρῦχος, from βρῦχω, to devour. A kind of locust or caterpillar, a genus of animals, Class *Insecta*, Order *Coleoptera*.

Generic Characters. *Antenna* filiform.—*Feelers* equal.—*Lip* pointed.

Species. The species of this genus are mostly small insects inhabiting the Indies and America. The *Bruchus granarius* is found among beans, vetches, &c.—*Bruchus seminarius* is smaller than the preceding, having the hinder thighs plain.—*Bruchus Bactris*, of a grey colour, is found in the nuts of the Palm of that name.

BRUGBOTE (*Archæol.*) or *Bruch-bote*. [vide *Brigbote*]

BRULLTUS (*Archæol.*) or *bruillus*, a copse or thicket.

BRUISE-WORT (*Bot.*) or *Soap-Wort*, a perennial, the *Saponaria* of Linnæus.

BRUMALIA (*Ant.*) a festival celebrated by the Romans in honour of Bacchus twice a year, i. e. on the twelfth of the calends of March, and the eighth of the calends of December. Suidas ascribes the institution of this festival to Romulus. *Tertull. de Idol.* c. 14; *Auctor. Geopon.* 1. 1, c. 1; *Gyrald. Syntag. Deor.* 1. 8.

BRUNELLA (*Bot.*) vide *Prunella*.
BRUNFELSIA (*Bot.*) a genus of plants named by Plumier after Brunfelsius, a monk, physician, and botanist of Mentz, Class 14 *Didymania*, Order 2 *Angiospermia*.
Generic Characters. CAL. *perianth* one-leaved.—COR. one-petalled.—STAM. *filaments* four; very short; *anthers* oblong.—PIST. *germ* roundish; *style* filiform; *stigma* thickish.—PER. *capsule* one-celled; *seeds* very many.
Species. Plants of this tribe are shrubs, and natives of the East Indies.
BRUNIA (*Bot.*) a genus of plants named after Cornelius Brun, a traveller, Class 5 *Pentandria*, Order 1 *Monogynia*.
Generic Characters. CAL. *perianth* common roundish; *proper* five-leaved.—COR. *petals* five.—STAM. *filaments* five; *anthers* ovate oblong.—PIST. *germ* very small; *style* simple; *stigma* obtuse.—PER.; *receptacle* common, hairy.
Species. Plants of this genus are shrubs, and natives of Æthiopia, as—*Brunia lanuginosus*, seu *Tamariscus*, &c.—*Brunia abrotanoides*, *Levisanus Africanus*, seu *Erica capitata*, &c. &c.
BRUNNERS GLANDS (*Anat.*) glands situated between the villous and cellular coat of the intestinal canal.
BRUNSFELSIA (*Bot.*) vide *Brunfelsia*.
BRUNSVY'GIA (*Bot.*) the *Amaryllis orientalis*.
BRUNUS (*Med.*) a sort of *Erysypelas*.
BRUSCUM (*Bot.*) a bunch or knob in a maple tree.
BRUXUS (*Bot.*) the *Ruscus aculeatus* of Linnæus.
BRUSH (*Sport.*) the tail of a fox.
BRUSH-WOOD (*Bot.*) rough, low, and shrubby thickets; also the wood cut from such places for fuel.
BRUSOLES (*Cook.*) veal and other meats well seasoned and stewed between thin slices of bacon.
BRUSULA (*Archæol.*) Brushwood.
BRUT (*Mech.*) French for any thing in the rough state, as stones from the quarry.
BRUTA (*Zool.*) the second order of animals of the Class *Mammalia*, comprehending those animals which have no fore teeth in either jaw; *feet* with strong hoof-like nails, and a slow motion. The genera included in this order are as follow; namely, the—*Rhinoceros*, Brady, having a horn in the middle of its forehead.—*Bradypus*, Sloth—*Myrmecophaga*, Ant-eater.—*Platypus*, having a duck-shaped mouth.—*Maus*—*Sypus*, Armadillo.—*Sukotyro*, having a horn on each side near the nose.—*Elephas*, Elephant.—*Trichechus*, Morse.
BRUTE-WEIGHT (*Com.*) is when merchandizes are weighed with the cases, &c. in distinction from the *net weight*, when an allowance is made for the packages. This distinction is preserved in the laying on of duties.
BRUTIA (*Chem.*) the most resinous kind of pitch.
BRUTINO (*Chem.*) Turpentine.
BRUTOBON (*Med.*) a barbarous name for some Greek ointment. *Castell. Lex. Med.*
BRUTUA (*Bot.*) the *Cissampelos pareira* of Linnæus.
BRUXANE'LLI (*Bot.*) a Malabar tree, the bark of which is diuretic.
BRYA (*Bot.*) the *Amerymnum ebenus* of Linnæus.
BRYANTHA (*Bot.*) or *Bryanthus*, the *Andromeda bryantha* of Linnæus.
BRYGMUS (*Med.*) βρυγμός, a grating noise made by the gnashing of the teeth.
BRYON (*Bot.*) βρύον, a moss growing on the bark of trees, which was used by Hippocrates as a cataplasm, and was reckoned very astringent. *Hippocrat. de Mul. Nat. &c.; Theophrast. Hist. Plant. l. 1, c. 1; Dioscor. l. 1, c. 20; Plin. l. 12, c. 23; Gal. de Meth. Med. l. 3.—Bryon thalassium*, Sea Moss. [vide *Alga*]
BRYONIA (*Bot.*) βρυονία, a plant, so called because it bears a flower resembling βρύον, Moss. It is otherwise called *vitis albus*, because its leaves resemble the vine. This

plant is of an exulcerating quality, and its root is purgative. *Dioscor. l. 4, c. 185; Plin. l. 23, c. 1; Gal de fac. Simpl. Med. l. 6, c. 34.*
BRYONIA, Bryony, in the *Linnean system*, a genus of plants, Class 21 *Monocœcia*, Order 10 *Syngenesia*.
Generic Characters. For the male flower—CAL. *perianth* one-leaved.—COR. five-parted; *divisions* ovate.—STAM. *filaments* three, very short; *anthers* five. For the female flower—CAL. *perianth* as in the males.—COR. the same.—PIST. *germ* inferior; *style* trifid; *stigmas* emarginate.—PER. *berry* subglobular; *seeds* few.
Species. The species of this genus are shrubs, as the—*Bryonia alba*, Black-berried White Bryony.—*Bryonia dioica*, Red-berried White Bryony.
BRYOPTERIS (*Bot.*) White Fern of the Oak.
BRYTHION (*Med.*) a malagma. *Paul. Æginet. l. 7, c. 18.*
BRYTON (*Med.*) a kind of drink made of barley.
BUBALUS (*Zool.*) βυβαλος, a wild ox or buffalo, native of Africa, the *Bos bubalus* of Linnæus. *Arist. Hist. Anim. l. 3, c. 6; Plin. l. 11, c. 38.*
BUBASTECORDIUM (*Bot.*) the *Artemisia angustifolia* of Linnæus.
BUBBLES (*Phy.*) little round drops or vesicles filled with air, which rise on the surface of any fluid when it is agitated.
BUBBLES (*Com.*) any cheating projects by which the public are defrauded, as the South-Sea speculation, or the Stock-bubbles.
BUBO (*Med.*) from βυβών, the groin; is the name of any tumor in the lymphatic glands, particularly in the groin or axilla. *Aret. de Caus. et Sign. l. 2, c. 3; Hippocrat. de Natur. Puer.; Gal. de Art. Cur. l. 2, c. 1; Oribas. l. 7, c. 31; Act. Tetrab. l. 1, serm. 2, c. 103; Act. l. 2, c. 12; Actuar. de Meth. Med. l. 2, c. 12; Gorr. Def. Med.; Foes. Æconom. Hippocrat.* Buboes are now distinguished into mild, malignant, and venereal. *Heist. Chirur. l. 4, c. 7, 8, 9.*
BUBON (*Bot.*) contracted from *bubonium*, a genus of plants, Class 5 *Pentandria*, Order 2 *Digynia*.
Generic Characters. CAL. *umbel* universal of ten rays; *partial* of fifteen; *perianth* five-toothed.—COR. *universal* uniform; *proper* of five petals.—STAM. *filaments* five; *anthers* simple.—PIST. *germ* ovate; *styles* two, setaceous.—PER. none; *fruit* ovate; *seeds* two, ovate.
Species. The species are mostly annuals or perennials, as—*Bubon Macedonicum*, *Apium Macedonicum*, *Daucus Macedonicus*, seu *Petroselinum Macedonicum*, &c. Macedonian Parsley.—*Bubon galbanum*, seu *Anisum Africanum*, &c. Lovage-leaved Bubon, from which the gum called Galbanum is procured. These are annuals; but the *Bubon rigidum* is a low perennial. *J. Bauh. Hist. Plant.; Park. Theat. Botan.; Raii Hist. Plaut.*
BUBONIUM (*Bot.*) βυβώνιον, a plant, so called from its supposed efficacy in curing buboes. It is the same as *Aster Atticus*. *Dioscor. l. 4, c. 120; Plin. l. 27, c. 5.*
BUBONOCELE (*Med.*) βυβονοχήλη, from βυβών, the groin, and χήλη, a tumor; the Inguinal Hernia, or rupture of the groin, caused by the descent of the *epiploon*, or intestines; i. e. when the bowels protrude at the abdominal ring. While the intestine continues above the groin it is called *Bubonocèle*, but when it descends into the *scrotum* it is called *Enterocèle*. *Cels. l. 7, c. 19; Gal. de Tum. præc. Nat. c. 19; Paul. Æginet. l. 3, c. 53; Gorr. Def. Med.*
BUBULCA (*Ich.*) a small river fish, of a silver colour, the *Sarracenia flava*, of Linnæus.
BUCANEPHYLLUM (*Bot.*) the *Sarracenia purpurea et flava* of Linnæus.
BUCARDIA (*Min.*) a stone shaped like the heart of an ox, from βύς, an ox, and καρδιά, the heart.
BUCCA (*Anat.*) γνάθος, that part which lies under the ball of the cheek. *Gal. Comm. 2 in Hippocrat. de Art.; Gorr. Def. Med.; Foes. Æconom. Hippocrat.*

BUCACRATON (*Ant.*) βουκκράτων, a morsel of bread sopped in wine, which served in former times for a breakfast.

BUCCANAL-GLANDS (*Anat.*) the small glands of the mouth under the cheek, which assist in secreting the saliva.

BUCCANEE'RS (*Mar.*) a name for the pirates of all nations who used to make war on the Spaniards in their West-India possessions.

BUCCEA (*Med.*) or *buccella*, a Græco-Latin word for a mouthful; it is used by Paracelsus for a polypus of the nose. *Par. de Apostem.* c. 20.

BUCCELATION (*Med.*) from *buccella*, a method of stopping an hæmorrhage by applying pieces of lint to the vein or artery.

BUCCELATON (*Med.*) βουκέλατον, a purging medicine. *Act. Tetrab.* 1, serm. 3, c. 100; *Paul. Æginet.* 1. 7, c. 5.

BUCCELLARII (*Archæol.*) the emperor's guards at the court of Byzantium, so called, as is supposed, because they acted as sutlers, and distributed the Buccellatum, or camp-bread, to the soldiers. *Vopisc. in Aurel.; Ammian. Marcell.* 1. 17, c. 8; *Idac. Chron. Famil.; Constantin. Porphyrog. ἐπι Θεω.*

BUCCELLATUM (*Archæol.*) Biscuit-bread eaten by soldiers and sailors. [vide *Buccellarii*]

BUCCINA (*Ant.*) a military instrument, called by Festus a crooked horn.

BUCGINATOR (*Ant.*) a trumpeter. *Cæs. de Bell. Civ.* 1. 2, c. 35.

BUCGINATOR (*Anat.*) a muscle of the cheek, so called from its office of forcing out the breath.

BUCCINUM (*Con.*) the Whelk, a genus of animals, Class *Vermes*, Order *Testacea*.
Generic Character. Animal a limax or slug.—*Shell* univalve, spiral.—*Aperture* ovate, ending in a short canal.
Species. The principal species are the—*Buccinum lapillus*, the Massy Whelk, which yields a fine purple dye.—*Buccinum perdirix*, the shell inflated.—*Buccinum bilineatum*, &c.

BUCCO (*Orn.*) Barbet, a genus of birds, of the Order *Picæ*.
Generic Character. Beak strong, pointed.—*Nostrils* covered with strong bristles.—*Feet* formed for swimming.
Species. The principal species are the—*Bucco elegans*, in French *le beau Tamatia*, Beautiful Barbet.—*Bucco Philippensis*, in French *le Barbu à gorge jaune*, Yellow-throated Barbet.—*Bucco Africanus*, in French *le bourrou-driou*, African Cuckoo, or Barbet.—*Bucco Cayanensis*, in French *le Tamatia à tête et gorge rouges*, Cayenne or Black Barbet, &c.

BUCCULA (*Ant.*) that part of the helmet which covered the cheeks on each side. *Liv.* 1. 44, c. 34; *Turneb. Adv.* 1. 9, c. 16.

BUCENTAUR (*Mar.*) the name of the large vessel which the Venetians formerly used in the ceremony of espousing the sea.

BUCEPHALON (*Bot.*) the *Trophis Americana* of Linnæus.

BUCEPHALOPHORUS (*Bot.*) a species of the *Rumex* of Linnæus.

BUCERAS (*Bot.*) the same as the *Bucida*.

BUCEROS (*Orn.*) Horn-bill, a genus of birds of the Order *Picæ*.
Generic Character. Bill very large and furnished with a large appendix on the upper mandible.—*Eyelids* strongly ciliated.—*Tongue* very short.—*Legs* short and strong.
Species. The principal species are the—*Buceros rhinoceros*, in French *le Calao rhinoceros*, Rhinoceros Bird, or Rhinoceros Hornbill.—*Buceros monoceros*, in French *le Calao unicomne*, Pied Hornbill.—*Buceros bicornis*, Bifid Casked Hornbill.—*Buceros Abyssinicus*, seu *Abba Gumba*, Abyssinian Hornbill.—*Buceros plicatus*, Indian Raven, or Wreathed Hornbill, &c.

BUCHNERA (*Bot.*) a genus of plants, (called after Buch-

ner, a German botanist), Class 14 *Didynamia*, Order 2 *Angiospermiâ*.
Generic Character. CAL. *perianth* one-leaved.—COR. monopetalous.—STAM. *filaments* four; *anthers* oblong.—PIST. *germ* ovate; *style* filiform; *stigma* obtuse.—PER. *capsule* acuminate; *seeds* numerous; *receptacle* fastened to the middle of the partition.
Species. The species are shrubs, and natives of America and the Cape of Good Hope, &c.

BUCIDA (*Bot.*) a genus of plants, Class 10 *Decandria*, Order 1 *Monogynia*.
Generic Characters. CAL. *perianth* one-leaved.—COR. none.—STAM. *filaments* ten; *anthers* cordate.—PIST. *germ* inferior; *style* filiform; *stigma* obtuse.—PER. *berry* dry ovate; *seed* one.
Species. The single species is the *Bucida buceras*.

BUCK (*Zool.*) signifies either, generally, the same as the Fallow Deer, the *Cervus dama* of Linnæus; or it is the male of this tribe, in distinction from the Doe, or female.

Buck of the first head (*Sport.*) a buck in the fifth year, in distinction from a Great Buck, i. e. one in the sixth year.

Buck (*Her.*) This animal is represented in coat armour mostly tripping; as, "He beareth *gules* three bucks tripping, *argent*, attired or; by the name of *Row*." The buck's head is also a bearing in coats of arms.

Buck (*Chem.*) a lye made made of ashes and the lather of soap.

to Buck (*Min.*) to pound the ore on iron plates to the consistency of gravel.

BUCK-BASKET (*Mech.*) a basket in which foul clothes used to be carried.

BUCK-BEAN (*Bot.*) a perennial, the *Menyanthes* of Linnæus.—*Buck-thorn*, a shrub, the *Rhamnus* of Linnæus. The principal species is the Purging Buckthorn, *Rhamnus catharticus*, which grows to the height of fourteen feet.—*Buck-Wheat*, otherwise called Brank, or Crap, an annual, the *Polygonum fagopyrum*, which is cultivated as excellent food for swine and poultry.—*Buckmast*, the mast of the beech-tree.

BUCK-STALL (*Sport.*) a toil for taking deer, which, by the statute 19 H. 7, c. 11, is not to be kept by any person that hath not a park of his own.

BUCKET (*Mech.*) a kind of pail made of leather, and commonly used for carrying water in quenching fire. Other sorts are made of wood, for drawing water out of a well.

BUCKET (*Her.*) the well-bucket is occasionally used as a bearing in coats of arms.

BUCKET-ROPE (*Mar.*) a rope fastened to the bucket for drawing water up the sides of a ship.

BUCKLE (*Her.*) the buckle was anciently worn by persons of repute and honour, on their military belts and girdles; wherefore it is an ancient and honourable bearing. It is necessary, however, to describe the shape of the buckle, whether it be round, oval, square, &c. as, "He beareth *sable* a chevron between three oval buckles *argent*, by the name of *Mallet*."

BUCKLE of beef (*Cook.*) a piece cut off from the sirloin.

BUCKLER (*Ant.*) vide *Militia*.

BUCKLER (*Mil.*) an ancient piece of defensive armour made of wicker-work, and worn on the arm. It varied in shape, being round, oval, or square.

BUCKLER-MUSTARD (*Bot.*) an annual, the *Biscutella* of Linnæus.

BUCKLERS (*Mar.*) two pieces of wood fitted together to stop the hawser-holes, leaving only sufficient space between them for the cable to pass. They serve to prevent the ship taking in much water in a heavy sea.

BUCKRAM (*Con.*) a sort of cloth stiffened.

BUCK'S HEAD (*Her.*) a bearing occasionally in coats of arms

BUF

BUCK'S-HORN PLANTAIN (*Bot.*) an annual, the *Plantago coronopus* of Linnæus.
BUCK-THORN (*Bot.*) vide *Buck*.
BUCOLICS (*Poet.*) a name for pastoral poems, particularly applied to the pastorals of Virgil.
BUCRANION (*Bot.*) Snap Dragon. [vide *Antirrhinum*.]
BUD (*Bot.*) *gemma*, that part of a plant which contains the embryo of the leaves, flowers, &c. for which it is an *hybernaculum*, or Winter Receptacle in cold climates. Buds vary as to their being Leafbearing, *foliaris*, as in Alder; Leaf and Flower bearing, *foliaris et florifera*, as in Poplar, Willow, Ash, &c.: Leaf and Flower bearing together, *communis*, as in most flowers; Leaf, and Male Flower bearing, &c.
 Buds, as to their foliage or opening, are—*Involute*, *involutæ*, when the edges of the leaves are turned in, as in *Humulus lupulus*, the Hop. (fig. 1).—*Revolute*, *revolutæ*, when the edges of the leaves are rolled outwards, as in the Willows, (fig. 2).—*Obvolute*, when two simply closed leaves embrace each other, as in *Salvia officinalis*, Sage, (fig. 3)—*Convolute*, *convolutæ*, when the leaves are rolled up spirally, as in fig. 4.—*Riding*, *equitantes*, when

several leaves lie parallel and embrace one another, as in *Syringa vulgaris*, the Lilac, (fig. 5).—*Conduplicate*, *conduplicatæ*, when the sides of the leaves lie parallel to one another, as in *Fagus sylvatica*, the Beech, (fig. 6).—*Plaited*, *plicatæ*, when the leaves are regularly folded, as in *Betula alba*, the Birch, (fig. 7).—*Bent down*, *reclinatæ*, when the points of the young leaves hang down.—*Circinal*, *circinatæ*, when the whole leaf is rolled up, as in the *Filices*.

As to their position they are simple, aggregate, sessile, &c.
BUDDLE (*Min.*) a frame to receive the ore after it is separated from its coarsest parts.

TO BUDDLE (*Min.*) to wash and cleanse the *Lapis calaminaris*, or stones in general.

BUDDLE'A (*Bot.*) a genus of plants, (called after Adam Buddle, a botanist,) Class 4 *Tetandria*, Order 1 *Monogynia*.

Generic Character. CAL. *perianth* very small.—COR. *monopetalous*, bell-form, four-cleft.—STAM. *filaments* four; *anthers* very short.—PIST. *germ* ovate; *style* simple; *stigma* obtuse.—PER. *capsule* ovate; *seeds* numerous.

Species. The species are shrubs, and natives of Jamaica.

BU'DGE-BARREL (*Mar.*) a small tin barrel to hold gunpowder, having a case or purse made of leather covering the head, to hinder the powder from taking fire.

BUDGE BA'CHELORS (*Polit.*) a company of poor old men clothed in long gowns lined with lamb's fur, who attend on the Lord Mayor at the solemnity of the public show on the first day that he enters upon his office.

BU'DGET (*Polit.*) the statement made by the minister in the House of Commons respecting the finances.

BUFF (*Mech.*) or buffskin: 1. A sort of thick tanned leather, prepared from the skin of the Buffalo. 2. The skin of elks and oxen dressed in oil, and prepared in the same manner as that of the Buffalo.

BU'FFALO (*Zool.*) a wild ox, the *Bos bubalus* of Linnæus, which is a native of Africa, but very abundant in America. It has horns resupinated and flat on the foreshide, a tough skin, black hair, a small head, and no dewlap.

BUFFET (*Mech.*) a repository, or sort of cupboard for plate, glasses, china-ware, &c.

BU'FFLE (*Zool.*) the same as *Buffalo*.

BUI

BUFFO (*Mus.*) Italian for a singer, or actor, when he takes the humorous part in comic operas, &c.

BUFFONIA (*Bot.*) a genus of plants called after the naturalist Buffon, Class 4 *Tetandria*, Order 2 *Digynia*.

Generic Character. CAL. *perianth* four-leaved.—COR. *petals* four.—STAM. *filaments* four; *anthers* twin.—PIST. *germ* ovate; *styles* two; *stigmas* simple.—PER. *capsule*; *seeds* two.

Species. The single species, *Buffonia tenuifolia Polygonum*, seu *Alsina polygonoides*, is an annual. *Raii Hist. Plant.*; *Lin. Spec. Plant.*

BUFO (*Zool.*) the Toad, or *Rana bufo* of Linnæus.

BUFONITES (*Min.*) or *Bufonius Lapis*, Toadstone, the *Ichthyolithus bufonites* of Linnæus, is a sort of stone said to have been found in the head of a toad, which is, however, generally supposed to be the grinders of the sea-wolf.

BUG (*Ent.*) a disgusting insect that infests beds, the *Cimex lectularius* of Linnæus.

BUGA'NTIA (*Med.*) Chilblains.

BUGGERY (*Law*) an unnatural offence, which was formerly punished with burning alive, but is now felony without benefit of clergy. *Rot. Parl.* 50 Ed. 1, 3. No. 58; 25 H. 8, c. 6; 3 Inst. 58.

BU'GLE (*Zool.*) from *bucula*, a young heifer; was formerly the name of a wild ox.

BUGLE (*Mech.*) a sort of glass bead of a shining black colour.

BUGLE (*Bot.*) a vulnerary plant and a biennial, the *Ajuga* of Linnæus.

BUGLE (*Her.*) a frequent bearing in coats of arms, which, when it is provided with a mouth and strings, &c. of a different tincture, is said to be garnished and furnished, as "He beareth sable a bugle-horn garnished and furnished argent." These were the arms of Bishop Burnet.

BUGLE (*Mil.*) the person who blows the bugle-horn in the British army.

BU'GLE-HORN (*Mus.*) a sort of horn so called, because it was made of the horn of the bugle; it was also called the Hunter's Horn, because it was also used in hunting. The bugle is now used in the British service.

BU'GLES (*Mil.*) *beugles* or *bibles*, engines used formerly for throwing large stones.

BU'GLOSS (*Bot.*) vide *Buglossum* — Viper's Bugloss, a shrub, the *Echium* of Linnæus.

BUGLO'SSUM (*Bot.*) Bugloss, a plant so called from βῆς, an ox, and γλῶσσα, a tongue, on account of the shape and roughness of its leaf. It resembles the Borage in its qualities, being accounted a cordial, and good for hysterical disorders. The roots are very glutinous, and give a strong tincture of red to blue paper. *Dioscor.* l. 4, c. 128; *Plin.* l. 25, c. 8; *Gal. de Simpl.* l. 6.

Buglossum was reckoned a genus of plants by the earlier botanists, but in the Linnean System is classed under the *Anchusa*, *Asperugo*, *Borago*, *Lithospermum*, and *Lycopsis*. *Lobel Plant.* seu *Stryp. Hist.*; *J. Bauh. Hist. Plant.*; *C. Bauh. Pin. Ger. Herb.*; *Park. Theat. Bot.*; *Raii Hist. Plant.*; *Tournef. Inst.*; *Boerhaav. Ind.*

BUGO'NES (*Zool.*) from βῆς, an ox, and γίνωμαι, to be generated; a name given by the ancients to bees, which were supposed to be bred from the putrefaction of an ox.

BU'GULA (*Bot.*) the same as the *Ajuga*.

BU'ILDING is the art of raising buildings according to given designs, which may be called Practical Architecture. [vide *Architecture*] Buildings are distinguished according to their general structure as follow, namely—*Regular building*, one whose plan is square, its opposite sides equal, and disposed with symmetry.—*Irregular building*, that which is not contained within equal and parallel lines, or one whose parts have not a just relation the one to the other

BUILDING.

in the elevation.—*Insulated building*, one which is not attached to any other, as the Monument.—*Engaged building*, one encompassed having no front towards any street, or public place, nor communication but by a narrow passage.—*Interred or sunk building*, the area of which is below the level or surface of the place on which it stands, and of which the lowest courses of stones are hidden.

Buildings as to their particular structure and use are distinguished into Houses, Churches, Theatres, Bridges, Monuments, and the like.

Houses. Houses are places of residence which are distinguished, according to the condition of the inhabitant, into—*Palaces*, which are royal residences.—*Castles*, which are fortified residences, formerly occupied by the nobility.—*Country seats*, or family mansions, the residences of the higher classes.—*Dwelling-houses*, which are occupied by the middle or inferior classes. Houses are divided by walls into distinct rooms, called, according to their use, *parlour*, *dining-room*, *chamber*, or *bed-chamber*, &c. The ceiling, or floor, forms other divisions, called *floors*, or *stories*. That which lies the lowest is called the *ground-floor*, or *basement-story*; those which rise above it are called first, second, third floor, or story. All the rooms taken collectively which serve for a residence are called an *apartment*, and when they are on the same floor without a passage between them, they are called a *suite of apartments*.

Churches. A church is an edifice erected for the purpose of public worship, consisting of a *nave* or body, two *aisles* or wings, a *choir*, *organ-loft*, &c. Churches are distinguished ecclesiastically into *cathedral*, *metropolitan*, *parochial*, *patriarchal*, &c.; and as to their plan, into churches built in a *Greek cross*, in a *Latin cross*, in a *Rotunda*, &c.

Theatres. A theatre is an edifice erected for public exhibitions, consisting of a *stage*, *scenes*, *orchestra*, *pit*, *boxes*, *galleries*, &c.

Bridges. A bridge is a particular structure raised over a river, canal, or other piece of water, which consists of *piers*, *arches*, *imposts*, *abutments*, &c. [vide *Bridge*, and plate 29, fig. 5]

Monuments. A monument is any structure raised by way of a memorial; this is commonly in the form of a *pillar*, or a *pilaster*, and denominated an *obelisk*. [vide *Architecture* and *Column*]

The two principal arts employed in erecting any building are carpentry and masonry.

Carpentry, and the tools belonging thereto.

Carpentry comprehends all works done in wood, and is either *house-carpentry*, that is, the large rough work, or *joinery*, which is light, ornamental, and more artful. *Timber*, i. e. the wood employed in building, is cut out of the tree into *deals*, which are afterwards broken or cut down into *boards*, or *leaves*, of different thicknesses, so that deals will always have one cut less than there are leaves. When the leaves are thinner than half an inch, the deal will divide into five or more parts, called *five-cut stuff*; and in this manner deals are distinguished according to the number of cuts, and the boards are denominated one inch, one inch and a half, &c. Boards, as to their dimensions in breadth and thickness, are termed *scantlings*. The workman fits the wood for his use by *planing*, *grooving*, *rabbetting*, *mortising*, and *tennating*. [vide *Planing*, &c.] The making a piece of wood with a straight edge is called *shooting*, and the edge so made is called the *shot*. Boards are joined together by nails and pins, or by the mortise and tennon, or by indenting them together, which is called *dovetailing*. When they are glued together, and a piece of wood called a *clamp* is nailed across, they are said to

be *clamped*. The cutting a piece of wood with a bevel, or sloping edge, is called *bevelling*.

When the spot of ground is marked out on which a house is to be built, which is called the *ground-plot*, the carpenters make a frame of the timber-work, which is called a *carcase*. The *carcase*, or *naked flooring*, consists of three tiers of beams. Those of the upper tier are called *bridges*, or bridging-joists, those of the lower the ceiling-joists, and those of the middle, which support the other two, the *binding-joists*. Another set of large beams, which shorten the bearings of the others, are called *girders*. [pl. 29, fig. 1, 2] The *carcase roofing* consists also of three tiers of timbers; the first tier, which is inclined to the *pitch* of the roof, is supported by other timbers, which together make vertical frames called *trusses*; the inclined timbers of which, in the upper part of the truss, are called *principal rafters*; these support what are called *purlins*, and by the latter are supported the timbers of the last tier, which are called *bridgings*. The principal rafters rest upon an horizontal piece of timber on the wall-head, called the *raising* or *wall-plate*. *Roofs* are of different forms, the simplest of which is the *shed-roof*, or *lean-to*, otherwise called a *pent-roof*. When the four sides of the roof are formed by inclined planes it is said to be *hipped*, and the inclined ridges springing from the angles of the walls are called the *hips*. There are also curvilinear roofs of different descriptions. [vide *Roof*, and Plate 29, fig. 3] After the chimneys are completed by the bricklayer, then the carpenter proceeds to bring up the stairs and staircases, to hang the doors, &c. *Stairs* are either straight, which ascend in a straight line, or they are *winding*, when they turn round an upright post, called a *newel*, or a circular well-hole. The steps next to the well-hole are narrower than the rest, and are termed *winders*, in distinction from the *flyers*, which continue of the same breadth. A series, or number of flyers connected together, is termed a *flight of steps*. [vide *Stairs*] The joiner's works in the interior are very various, as in the *casements*, *sashes*, and *sash-frames* to windows, *pannels* to doors, *boxing of windows*, *nosings* to stairs, *brackets*, *wainscotting*, *mouldings* of different kinds, *rails*, *balusters*, *centerings* to the arches, &c. of which more may be found in their respective places. The tools used by carpenters and joiners are *planes* of different kinds for smoothing wood. [vide *Plane*] Those used for boring holes are, the *stock*, with *bits* of different sizes, *gimblets*, and *brad-awls*, [vide *Stock*, &c.] Those for parting the wood are *chisels* and *saws* of different kinds. [vide *Chisel* and *Saw*] Those for regulating the form are, the *square* for trying right angles, the *bevel* for oblique angles, which, when it is stationary, is called a *joint-hook*; the *gauge* for reducing a piece of stuff to a parallel breadth; the *straight edge*, a slip of wood straightened at one edge for making straight edges.

Masonry, and the tools belonging thereto.

Masonry comprehends all works done with stones, bricks, and mortar; but, in a particular sense, masonry is confined to the preparing of stones so as to tooth or indent them into each other, in distinction from the bricklayer, who builds with bricks. The walls of a building are raised by either of these artificers, but the chimneys are the particular work of the latter. [vide *Wall* and *Chimney*] The materials of the mason are *stone*, *marble*, and *cement*; those of the bricklayer are *bricks*, *tiles*, *mortar*, *laths*, *nails*, and *tile-pins*; to which may be added, *plaster* and *slatcs*. [vide *Stone*, *Marble*, &c.] The tools belonging to this art are, the *trowel*, the *hammer*, the *plumb-rule*, the *level*, the *raker*, *hod*, *rammer*, *crow*, *pick-axe*, *banker*, *camber-slip*, *rubbing-stone*, *scribe*, *templet*,

float-stone, lathing-hammer, boss, pantile-strike, scurbage; besides which the plasterers have *stopping and picking out tools, straight-edges, moulds*, and the like.

Explanation of the Plate (29.)

Fig. 1. *A Floor, with the names of each member.*—1. The Bressummer. 2. The Summer. 3. Girders framed into the summer. 4. Spaces between the joists. 5. Joists. 6. Trimmers for the chimney way. 7. Trimmers for the staircase, or well-hole.

Fig. 2. *Carcase of a House.*—A A. The breadth of the house, cantilevers, cornices, and eaves. A B. The length of the raftings and furrings, which ought to be three-fourths the breadth of the house. 1. Ground-plate. 2. Girder, or binding interduce. 3. Beam to the roof, or girder to the garret floor. 4. Principal post, and upright brick wall. 5. Braces. 6. Quarters. 7. Interduces. 8. Prick-post, or window-post. 9. Jaumes, or door-posts. 10. King-piece, or joggle-piece. 11. Struts. 12. Collar-beam, strut-beam, wind-beam, or top-beam. 13. Door-head. 14. Principal rafters. 15. Furrings and shreadings. 16. Ends of the lintels and pieces. 17. Bedding, moulding of the cornice over the windows, and space between. 18. Knees of the principal rafters, which are to be of one piece. 19. Purline mortices.

Fig. 3. *A Hip Roof.*—1. The wall. 2. Lintels. 3. Dragon-beam for the hip to stand on. 4. Beam on summer, wherein the dragon-beams are framed. 5. King-piece, or crown-post. 6. Struts, or braces from the crown-post to the hip-rafter. 7. Hips which make the angle equal to the breadth of the house. 8. Hips which make the angle in the diagonal lines from corner to corner.

Fig. 4. *Centering for an arch of a bridge, with the names of the timbers, &c.*—1. Timbers which support the centering. 2, 3. Upper and lower striking plates, cased with copper. 4. Wedge between striking-plates for lowering the centre. 5. Double trussing pieces, to confine braces. 6. Apron-pieces, to strengthen the rib of centre. 7. Bridgings, to keep them at equal distances. 8. Small braces, to confine the ribs tight. 9. Iron straps bolted to trussing pieces and apron pieces. 10. Ends of beams at the feet of truss-pieces. 11. Principal braces.

Fig. 5. *A Bridge, and its several parts.*—C. the Crown. B K. Part of the Extradors. B L. Part of the Intradors. B. The Keystone, or Middle Voussoir. A M. the Span. A. M. The Imposts. E D F G. the Pier. O B. The Pitch, or perpendicular height. H I. The Spandrels.

BUENDE'S (*Mil.*) French for the shield which the Turks and Tartars use when they fight with sabres.

BULAFO (*Mus.*) a musical instrument among the Negroes of Guinea, consisting of pipes of wood tied with thongs of leather.

BULAPATHON (*Bot.*) the herb Patience, or Great Dock.

BULB (*Bot.*) βολβός, so called, according to Eustathius, because γῆθεν βάλλεται βία, i. e. is sent out of the ground with force, as it were; an hybernacle or winter receptacle of a plant, composed of the bases of past leaves, and placed immediately upon the root. Bulbs are distinguished into—Scaly, *squamatus*, as in the Lily.—Solid, *solidus*, as in the Tulip.—Coated, *tunicatus*, as in the Onion.—Jointed, as in *Lathræa*, *Mastynia*, *Adoxa*. [vide *Botany*]

BULB (*Mech.*) the globular part in the tube of a thermometer.

BULBIFEROUS (*Bot.*) an epithet for plants which are succeeded by bulbs instead of seeds, as the *Allium*, &c.

BULBINA (*Bot.*) or *bulbine*, βολβίνη, a bulbous plant having leek blades and a red bulb. Pliny reckons it good for fresh wounds. *Theophrast. Hist. Plant.* l. 7, c. 13; *Plin.* l. 20, c. 9; *Athen.* l. 2.

BULBINE (*Bot.*) the same as *Anthericum*.

BULBOCOSTANUM (*Bot.*) the same as *Bunium*.

BULBOCODIUM (*Bot.*) a genus of plants, Class 6 *Hexandria*, Order 1 *Monogynia*.

Generic Character. CAL. none.—COR. hexapetalous; *claws* long; *border* erect.—STAM. *filaments* six, subulate; *anthers* incumbent.—PIST. *germ* ovate, subulate; *style* filiform; *stigmas* three.—PER. *capsule* triangular; *seeds* numerous.

Species. The single species is the *Bulbocodium*, seu *Colchicum vernalis*, Spring-flowering *Bulbocodium*.

BULBOCODIUM is also the *Anthericum verotinum*, et *Græcum*.

BULBONACH (*Bot.*) the *Lunaria rediviva* of Linnæus.

BULBOUS PLANTS (*Bot.*) *bulbosæ*, plants growing from bulbs; the name of a Class of plants in the systems of Cæsalpinus and Ray.—*Bulbous* is also an epithet for roots that are solid and round, like bulbs, as that of the Turnip, *Ranunculus bulbosus*, &c.

BULBS (*Bot.*) a name formerly given to the round spired beard of flowers.

BULBUS *esculentus* (*Bot.*) βολβός ἐσθλῆμος, the Esculent Bulb, a particular sort so denominated by the ancients, of which nothing certain is known at present, but it is supposed to be the *Cepa ascalonica*. *Diosc.* l. 2, c. 200; *Cels. de Re Med.* l. 2, c. 18; *Plin.* l. 19, c. 5; *Athen.* l. 2, c. 22; *Gal. de Simplic.* l. 6; *Paul Aeginet.* l. 1, c. 76; *Salmas. de Homonym.* *Hyl. Jatr.* c. 114.—*Bulbus vomitorius*, βολβός ἐμετικὸς, a plant mentioned by Dioscorides to be emetic and diuretic. *Dioscor.* l. 2, c. 201. *Bulbus vomitorius* is called by Ray Musk-Grape-Flower, and in the Linnean system *Hyacinthus Moscaris*. *Raii Hist. Plant.*; *Linn. Spec. Plant.*

BULGA (*Archæol.*) a budget, or coat of mail.

BULGE (*Mar.*) originally written *bilge*, from the Teutonic *Balg*, a bellow; a name for that part of a ship which bulges out at the floor-heads.—*Bulge-way*, a large piece, or large pieces of timber bolted together into one solid piece, which is placed under the bulge of a ship to support her when launching. The support for the bulge-ways to lie on is called the *ways*.

BULGE-WATER-TREE (*Bot.*) the *Geoffroya Jamaicensis* of Linnæus.

BULGED (*Mar.*) an epithet for a ship when she has struck off some of her timbers upon a rock or anchor, and when she springs a leak.

BULIMIA (*Med.*) from βῆ, a particle denoting excess, and λιμός, hunger; voracity of appetite from the diseased state of the stomach. *Gal. Exegis. Vocal. Hip.*; *Gorr. Def. Med.*; *Foes. Econom. Hippocrat.*

BULIMIA is ranked by Cullen as a genus of diseases, under the Class *Locales*, Order *Dysorexiæ*.

BULIMIA/SIS (*Med.*) vide *Bulimia*.

BULISMOS (*Med.*) vide *Bulimia*.

BULITHOS (*Med.*) from βῆ, an ox, and λίθος, a stone; a concretion found in the kidneys and bladder of an ox.

BULK of a ship (*Mar.*) the whole cargo stowed in the hold; whence "To break *bulk*," is to take part of the cargo out of the ship's hold.—*Bulk Heads*, partitions built up in several parts of a ship, between two decks, either lengthways or across, to form and separate the other apartments.—*Bulk-head fore*, is the partition between the fore-castle and gratings in the head.

BULL (*Zool.*) the male of Black Cattle, the female of which is called the cow: when the male is cut he is called an ox, which is the first species of this *Bos*, namely, the *Bos taurus* of Linnæus.

BULL (*Astron.*) a constellation. vide *Taurus*.

BULL (*Her.*) as a charge in coats of arms, denotes, according to Guillim, valour and magnanimity. It is mostly borne passant, as "He beareth on a fess *vert* a bull passant, *argent* armed *or*, by the name of Aldrich," father to Dr. Henry Aldrich, canon of Christ Church, Oxford.

BULL (*Ecc.*) *bullæ*, a brief or mandate issued by the pope or bishop of Rome, which was so called from the *bullæ* or seal.

of lead or gold which was affixed to it. These bulls are frequently mentioned in our statutes; by one of which, in the reign of Henry 8, they were made void. *Math. Par. Ann.* 1237, 25 Ed. 3; 28 Hen. 8, c. 16; 2 P. & M. c. 8; 18 Eliz. c. 2.

BULL and boar (Law) by the law of some places a parson may be obliged to keep a bull and a boar for the use of the parishioners, in consideration.

BULL golden (Polit.) a statute or ordinance made by the emperor Charles IV, in 1356, by which he regulated the manner of electing emperors of Germany.

BULLA (Med.) *πυροφούλις*, a bubble, or any vesicle which arises from combustion, or other causes.

BULLA (Ant.) an ornament of gold or silver in the shape of a bulla, or bubble of water, which was worn about the neck or breast of the children of the nobility till the age of fourteen.

Propert. l. 4, eleg. 1, v. 132.

Mox ubi bulla rudi demissa est aurea collo.

Pers. sat. 5, v. 31.

*Cum primum pavido custos mihi purpura cessit
Bullaque succinctus Laribus donata pependit.*

They were sometimes presented on the birth day, according to Plautus.

Plaut. Rud. act 4, scen. 4, v. 127.

Et bulla aurea est, pater quam dedit mihi natali die.

In shape they were either round, as in the annexed figure; heart shaped, or elliptical. *Ascon. in Cic. Verr.* act 1, c. 58; *Plin.* l. 23, c. 1; *Æl. Var. Hist.* l. 14, c. 34; *Fcst. de Verb. Signif.*; *Macrob. Saturn.* l. 1, c. 6; *Schol. in Juven. Sat.*; *Isidor. Orig.* l. 19, c. 31; *Pigh. Annal.* l. 1, p. 44; *Augustin. apud Græv. Thes. Antiq. Roman.* tom. xi.; *Spon. Miscell. Erudit.* Act. sect. 9, p. 299.

BULLA (Con.) Dipper, a genus of testaceous animals, Class *Vermes*, Order *Testacea*.

Generic Character. *Animal* a Liman; *shell* univalve, convolute; *aperture* oblong; *pillar* oblique.

Species. Many of the species are found on the coast of Devonshire, Dorsetshire, &c. as the *Bulla plumula*, *hydatis*, *emarginata*, &c.

BULLACE (Bot.) a wild sort of plum, the *Prunus insitia* of Linnæus.

BULLARY (Mech.) a salt-house, salt-pit, or place where salt is made.

BULLATE (Bot.) *bullatus*, an epithet for a leaf; *folium bullatum*, a leaf having protuberances on its surface resembling blisters.

BULL-BEEF (Cook.) the flesh of a bull, which is the coarsest kind of beef.

BULL-COMBER (Ent.) a sort of beetle, the *Scarabæus tryphæus* of Linnæus.

BULL-DOG (Sport.) a sort of dog, of English breed, with pendulous lips, of a robust body, and the size of a wolf, so called from its property of attacking the bull; on which account it was formerly used in bull-baiting.—*Bull-feast*, or *Bull-fight*, an entertainment formerly frequent in Spain and Portugal, at which wild bulls are encountered by men on horseback, armed with lances.

BULLEN (Agric.) the stalks of hemp pitted.

BULLEN-NAILS (Carpent.) a sort of nails with round heads and short shanks, tinned and lacquered, which are used in the hangings of rooms.

BULLET (Mil.) a name for the leaden balls wherewith all kinds of small fire-arms are loaded. [vide *Ball*]

BULLETTIN (Polit.) any official account of public transactions, and the state of health of any members of the royal family, &c.

BULL-FINCH (Orn.) a small bird, the *Loxia pyrrhula* of Linnæus, of a cinereous colour, having its head and wings

black, and coverts of the tail white. It frequents gardens in the spring, when it is very destructive to the fruit-trees; is easily tamed when young, and may be taught to whistle any tune.

BULL-FROG (Zool.) the *Rana catesbeiana*, a remarkable species of the frog in North America; so called because its voice resembles the distant lowing of an ox.

BULL-HEAD (Ich.) a sort of fish, the *Cottus* of Linnæus, having its head much broader than its body. It is without teeth, but the edges of its mouth are rough like a file.—*Bull Trout*, the *Salmo trutta* of Linnæus, a sort of salmon which seldom exceeds two feet in length. This fish inhabits Europe; and, like the rest of its tribe, ascends rivers periodically.

BULLIMENTA (Chem.) chemical vessels such as they appear after scouring, that is, with glittering brightness.

BULLIMONY (Husband.) a mixture of several sorts of grain together, as peas, oats, vetches, &c.

BULLIO salis (Archæol.) a measure of salt as much as is made at one wealing or boiling, supposed to be twelve gallons. *Mon. Angl.* tom. ii.

BULLION (Min.) in French *billon*, unwrought gold or silver, i. e. gold or silver in the mass or billet before it is wrought into coin. 9 Ed. 3, st. 2, c. 2.

BULLION of copper (Mil.) was set as an ornament on the breast plates and bridles of horses.

BULLOCK-SERGEANT (Mil.) a non-commissioned officer in India, who has the care and superintendance of the bullocks on the service.

BULLOSA febris (Med.) an epithet applied to the vesicular fever, because the skin is covered with little vesicles or blisters.

BULL-RUSH (Bot.) the *Scirpus lacustris* of Linnæus.

BULLS-EYE (Archer.) a mark in the shape of a bull's eye, at which archers used to shoot by way of exercise; the centre of a target.

BULLS-EYE (Mar.) a sort of small pulley in the form of a ring, having a hole in the middle to admit a rope.—*Bull's eye* is also the name given to the patent reflectors set in to the posts or decks.

BULLS-HEAD (Her.) the bull's head is commonly represented in coats of arms as couped or erased.

BULLS-WORT (Bot.) or Bishop's Weed, an umbelliferous plant.

BULTED (Husband.) vide *Bolted*.

BULTER (Husband.) the bran or refuse of meal after it is dressed.

BULTER (Husband.) vide *Bolter*.

BULWARK (Archæol.) the ancient name for a bastion or rampart.

BUMALDA (Bot.) a genus of plants, Class 5 *Pentandria*, Order 2 *Digynia*.

Generic Character. CAL. *perianth* one-leaved.—COR. five-petalled.—STAM. *filaments* five; *anthers* twin.—PIST. *germ* superior; *styles* two; *stigmas* simple.—PER. a two-celled capsule.

Species. The only species is the *Bumalda trifolia*, a shrub, native of Japan.

BUMBOAT (Mar.) a sort of wherry used in, and about harbours, to carry provisions, &c. for sale to ships lying at a distance from the shore.

BUMELIA (Bot.) *βεμελία*, the Great Ash, so called from the particle *βε*, signifying excess, and *μελία*, an ash. *Theoph.* l. 3, c. 11; *Plin.* l. 6, c. 13; *Plut. sympos.* 8, quest. 6.

BUMELIA, in the Linnæan system, a genus of plants, Class 5 *Pentandria*, Order 1 *Monogynia*.

Generic Character. CAL. *perianth* five-leaved.—COR. one-petalled.—STAM. *filaments* five; *anthers* ovate.—PIST. *germ* superior; *style* thick; *stigma* obtuse.—PER. *drupe* oval; *seed* a single kernel.

Species. The plants of this tribe are all trees or shrubs.

BUMICELLI (*Theol.*) a sect of Mahometans, who deal much in sorcery.

BUMKIN (*Mar.*) or *boomkin*, a short bow, or beam of timber, projecting from each bow of a ship to extend the helm, or lower edge of the foresail.—*Bumkin of a boat*, a small outrigger over the stern usually serving to extend the mizen.

BUNCH (*Bot.*) vide *Racemus*.

BUNCHE (*Bot.*) an epithet for seedpods or roots which stand out in knobs.

BUNDLE (*Com.*) a certain quantity of particular commodities.

BUNDLE (*Bot.*) vide *Fasciculum*.

BUNDLE pillar (*Archit.*) a sort of Gothic pillar consisting of several smaller pillars in a cluster.

BUNDLES (*Archæol.*) a sort of records of Chancery lying in the office of the Rolls.

BUNGALOW (*Mech.*) an Indian name for a house with a thatched roof such as is peculiar to the country.

BUNIAS (*Bot.*) βυνιάς, a plant, the seed of which, according to Dioscorides, is an antidote against poisons. *Dioscor.* l. 2, c. 136.

BUNIAS, in the *Linnean system*, a genus of plants, Class 15 *Tetradynamia*, Order 2 *Siliquosa*, the *Erucago* of Tournefort.

Generic Characters. CAL. perianth four-leaved.—COR. tetrapetalous.—STAM. filaments six; anthers erect bifid.—PIST. germ oblong; style none; stigma obtuse.—PER. silicle irregular; seeds few.

Species. The species are mostly annuals, as the *Bunias cornuta*, seu *Bursa Pastoris*, Horned Bunias.—*Bunias spinosa*, *Brassica spinosa* seu *crambe*, Thorny Bunias.—*Bunias Erucago*, *Myagrum*, *Sinapi*, seu *Eruca*, Prickly-podded Bunias.—*Bunias cakile*, *Cakile*, seu *Raphanus*, Sea Rocket. *J. Bauh. Hist. Plant.*; *Ger. Herb.*; *Park. Theat.*; *Raii Hist. Plant.*; *Linn. Spec. Plant.*

BUNITES Vinum (*Med.*) βυνιτης οίνος, a wine made of Bunium, which was reckoned good for disorders in the stomach. *Dioscor.* l. 2, c. 146; *Plin.* l. 20.

BUNIUM (*Bot.*) βυνίον, a plant which, according to the description of Dioscorides, resembled *Anethum*; but Pliny speaks of it as a sort of *Napus*. *Dioscorides*, l. 4, c. 124; *Plin.* l. 20, c. 4.

BUNIUM, in the *Linnean system*, a genus of plants, Class 5 *Pentandria*, Order 2 *Digynia*.

Generic Character. CAL. umbel both universal and partial; involucre both universal and partial.—COR. universal and proper.—STAM. filaments five; anthers simple.—PIST. germ oblong; stigmas obtuse.—PER. none; fruit ovate; seeds two, ovate.

Species. The only species is the *Bunium bulbocastanum*, seu *Nucula terrestris*.

BUNT (*Mar.*) in French *fonds des voiles*, the middle part, or cavity of the square sails, as the main-sail, fore-sail, &c.—*Bunt-line-cloth*, the linen that is sewed up the sail in the direction of the bunt-lines to prevent the sail from being chafed.—*Bunt-lines*, in French *cargues fonds*, ropes fastened to cringles on the bottoms of the square sails to draw them up to their yards.

BUN'TINE (*Mar.*) or *Bunting*, the thin woollen stuff of which the colours, flags, and signals of a ship are usually made.

BUNTING (*Orn.*) a bird, the *Emberiza* of Linnæus, remarkable for the shape of its bill, the sides of the upper mandible forming a sharp angle bending inwards towards the lower.

BUONO-CARDO (*Mus.*) Italian for an instrument resembling a spinnet.—*Buono-mano*, Italian for a good hand, implying a free power of exertion.

BUOY (*Mar.*) a sort of close cask, or block of wood, fastened by a rope to the anchor to point out its situation, that the ship may not come too near it so as to entangle her cables about the stock or flook. The *slings* of the

buoy are the ropes fastened about it. "To stream the buoy," to let it fall from the ships into the water preparatory to letting go the anchor.—*Buoy-rope*, the rope which fastens the buoy to the anchor. Buoys are of different kinds, as—*Cable-buoys*, common casks employed to buoy up the cables in rocky anchorage.—*Can-buoys*, in the form of a cone, used to point out sand-banks, &c.—*Nun-buoys*, shaped like the middle *frustum* of two cones.—*Wooden-buoy*, a solid piece of light timber with a hole pierced through the end for the reception of a rope.

BUPEINA (*Med.*) vide *Bulimia*.

BUPHAGA (*Or.*) Beef-Eater, a genus of birds, Order *Pica*, having the bill straight, and legs fitted for walking. They are a solitary sort of bird, living mostly on the larvæ of the gad-fly, which they peck out of the skins of oxen and other animals. The only species is the *Buphaga Africanus*.

BUPHAGOS (*Med.*) an antidote mentioned by Marcellinus.

BUPHONIA (*Ant.*) vide *Diopolea*.

BUPHTHALMUM (*Bot.*) βεφθαλμος, Ox-Eye, a plant; so called because its flowers resemble the eye of an ox. It is said to be aperitive and vulnerary. *Dioscor.* l. 3, c. 156; *Oribas. Med. Collect.* l. 15; *Act. Tetrab.* l. 1, serm. 1; *Paul. Aeginet.* l. 7, c. 3.

BUPHTHALMUM, in the *Linnean system*, a genus of plants, Class 19 *Syngenesia*, Order 2 *Polygamia superflua*.

Generic Character. CAL. common imbricate.—COR. both compound and proper.—STAM. Of the hermaphrodite.—Filaments five; anther tubular.—PIST. Of the hermaphrodite.—Germ ovate; style filiform; stigmas thickish. Of the female.—Germ ancipital; style filiform, &c.

Species. These plants are either annuals or shrubs. Of the first kind are the—*Buphtalmum spinosum*, *Aster luteus*, seu *Aster Alticus*, Prickly Ox-Eye.—*Buphtalmum aquaticum*, Sweet-scented Ox-Eye, &c. Of the latter kind are the—*Buphtalmum frutescens*, *Astericus*, *Corona Solis*, seu *Chrysanthemum*, Shrubby Ox-Eye.—*Buphtalmum salicifolium*, *Asteroides*, seu *Conyza*, Willow-leaved Ox-Eye.—*Buphtalmum grandiflorum*, seu *Chrysanthemum*, Great-flowered Ox-Eye.—*Buphtalmum helianthoides*, *Helianthus*, *Silphium*, &c. Sunflower-leaved Ox-Eye. *Clus. Hist.*; *Prosp. Alpin. de Plant. Exot.*; *J. Bauh. Hist.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat.*; *Raii Hist. Plant.*; *Tournef. Inst.*; *Boerhaav. Ind.*; *Linn. Spec. Plant.*

BUPHTHALMUS (*Med.*) a diseased enlargement of the eye.

BUPHTHALMUS (*Bot.*) Houseleek.

BUPLEUROIDES (*Bot.*) an evergreen, in the shape of the *Bupleurum*.

BUPLEURUM (*Bot.*) βεπλευρον, from βεϋ, an ox, and πλευρον, a side, a plant; so called because it has large rib-like filaments on its leaves. It is reckoned aperitive and discutient. *Nicand. in Ther.*; *Plin.* l. 22, c. 22.

BUPLEURUM, in the *Linnean system*, a genus of plants, Class 5 *Pentandria*, Order 2 *Digynia*.

Generic Characters. CAL. umbel, both universal and partial.—COR. both universal and proper.—STAM. filaments five; anthers roundish.—PIST. germ inferior; styles two reflected; stigmas very small.—PER. none; fruit roundish; seeds two.

Species. The species are annuals or perennials. Of the first kind are the—*Bupleurum rotundifolium*, Common Thorough-wax.—*Bupleurum odontites*, Narrow-leaved Hare's Ear, &c. Of the latter kind is the—*Bupleurum stellatum*, Starry Hare's Ear.—*Bupleurum petraeum*, seu *Sedum petraeum*, Rock Hare's Ear.—*Bupleurum rigidum*, seu *Auricula leporis*, Stiff-leaved Hare's Ear. *Clus. Rar. Plant. Hist.*; *Dodon. Stirp. Pemptad.*; *J. Bauh.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat.*; *Raii Hist. Plant.*; *Tournef. Inst.*; *Boerhaav. Ind.*

BUPRESTIS (*Ent.*) βεπρεστις, the Burn-Cow, an insect; so

called from βῆ, a particle, signifying excess, and πῖσσω, to burn; because of its very inflammatory quality, which it has in common with the Cantharides. *Dioscor.* l. 2, c. 66; *Plin.* l. 30, c. 4; *Gal. Exeg. Vocab. Hippocrat.*; *Oribas. Med. Coll.* l. 15; *Aet. Tetrab.* l. 1, serm. 1.

BUPRESTIS, in the *Linnean system*, a genus of insects, Order *Coleoptera*.

Generic Character. *Antennæ* filiform.—*Feelers* four.—*Head* partly retracted within the thorax.

Species. The species of this genus are remarkable for their rich metallic colour, having frequently the appearance of the most highly polished gold or copper. The larvæ are usually found in decayed trees and among timber.

BUPRESTIS (*Bot.*) a large sort of herb mentioned by *Hesychius*.

BUR (*Min.*) a sort of mineral juice, mentioned by *Van Helmont*.

BUR (*Mil.*) a broad ring of iron behind the hand, or the place made for the hand on the spears that were used by knights formerly in tilting, which bur was brought to rest when the tilter charged his spear.

BURAC (*Chem.*) a general name for all kinds of salts.

BURBOT (*Ich.*) a kind of cod, the *Gadus lota* of *Linnæus*.

BURCARDIA (*Bot.*) a genus of plants, called after *Henry Burkhard*, a botanist and physician, Class 5 *Pentandria*, Order 5 *Pentagynia*.

Generic Characters. *CAL. perianth* five-leaved.—*COR. petals* five.—*STAM. filaments* five; *anthers* ovate.—*PIST. germ* three-cornered; *styles* five; *stigmas* flat.—*PER. capsule* one-celled; *seeds* seven or eight.

Species. The only species is the—*Burcardia villosa*, seu *Piriqueta villosa*, an annual.

BURCHÉTA (*Archæol.*) in French *berchi*, a kind of gun used in forests.

BURCIFER *regis* (*Law*) or *Pursebearer*, the keeper of the King's privy purse. *Pat.* 17, *Hen.* 8.

BURDA'RE (*Archæol.*) to jest or trifle. *Matth. Par.*

BURDELAY (*Bot.*) a sort of grape.

BURDEN (*Com.*) signifies generally any weight which a man or horse can carry; but when applied to a ship it signifies as much as can be stowed into the hold.—*Beasts of burden*, those beasts which are particularly fitted for carrying burdens, or drawing heavy bodies, as the horse, ox, &c.

BURDEN of a song (*Mus.*) that part of a song which is repeated at the end of every stanza; so called from the French *bourdon*, a drone bass, an instrument remarkable for its monotony.

BURDO (*Zool.*) a young mule.

BURDOCK (*Bot.*) a perennial, the *Aretium* of *Linnæus*.

BURDUNCULUS (*Bot.*) a herb mentioned by *Marcellus Empiricus*.

BURÉAU (*Polit.*) French for an office, or the place where any office is performed.

BURG (*Archæol.*) a walled town or privileged place.—*Burgbote*, from *burg*, a borough, and *bote*, a compensation; a tribute or contribution towards the building, or repairing the walls of a town. *Flet.* l. 1, c. 47.

BURGAGE (*Law*) a tenure by which the inhabitants of cities or boroughs held their lands or tenements of the king, or any other lord for an annual rent. *Glanv.* l. 7, c. 3; *Litt.* § 162.

BURGEAIS (*Print.*) a kind of type larger than *Brevier*.

BURGESS (*Law*) *burgarius*. 1. The inhabitant of a walled town. 2. The magistrate of a corporate town, who is also a representative in Parliament.

BURGH-BRECHE (*Law*) *fidejussionis violatio*, i. e. a breach of pledge; is used for a fine imposed on the community of a town for a breach of the peace. *Leg. Canut. apud Brompt.*—*Burgh Engloyes*, or *Francoyes*, two particular tenures in the county of Nottingham, the usages of which are that all the tenements, whereof the ancestor

dies seized, in *Burgh Engloyes*, descend to the youngest son, and of those in *Burgh Francoyes* to the eldest, as in common law. 1 Ed. III. c. 12.—*Burgh-vote*, vide *Burgbote*.—*Burghmaster*, vide *Burgomaster*.—*Burghmote*, a court of a borough, which is distinct from a *Berghmote*. [vide *Berg.*]—*Burgh-ware*, vide *Burgess*.

BURGLAR (*Law*) from *burg*, a castle, and *latro*, a thief; a breaker into houses by night.

BURGLARY (*Law*) *burgi latrocinium*, anciently called *hameseken*, as it still is in Scotland; a breaking in and entering the mansion-house of another in the night to the intent to commit some felony, whether the felonious intent be executed or not. There must be both a breaking and an entering to complete the offence. 3 *Inst.* 64.

BURGOMASTER (*Polit.*) the chief magistrate in the towns of Germany and Switzerland answering to our mayor.

BURGUNDY (*Husband.*) a French wine which comes from Burgundy.

BURIN (*Mech.*) an engraver's tool.

BURIS (*Med.*) a scirrhus hernia.

to **BURL** (*Mech.*) To dress cloth as fullers do; also to pick out the straws or threads of cloth which have not taken the dye.

BURLETTA (*Mus.*) a comic species of musical dance.

BURLING-IRONS (*Mech.*) a sort of pincers or nippers.

BURMA'NNIA (*Bot.*) a genus of plants, called after *John Burmann*, professor of botany, at Amsterdam, Class 6 *Hexandria*, Order 1 *Monogynia*.

Generic Characters. *CAL. perianth* one-leaved.—*COR. petals* three.—*STAM. filaments* five; *anthers* two, always together.—*PIST. germ* cylindric; *style* filiform; *stigmas* three.—*PER. capsule* cylindric; *seeds* numerous.

Species. These plants, which are perennials, grow in open watery places in Ceylon.

BURN (*Surg.*) vide *Ambustum*.

BURN-BEATING (*Agric.*) a method of manuring lands by cutting off the peat, and burning it in heaps.

BURNEC (*Chem.*) pitch.

BURNET (*Bot.*) a perennial, the *Poterium* of *Linnæus*.—*Burnet saxifrage*, a perennial, the *Pimpernella*.

BURNETA (*Archæol.*) cloth made of dyed wood. The burnet colour, which must be dyed, is distinct from the *brunus*, or *brunet*, which may be made with wool without dyeing. These are called medleys or russets.

BURNING (*Phy.*) the solution of continuity, produced by the action of heat on bodies.

BURNING (*Med.*) or *brenning*, an infectious disease, got by impure commerce.

BURNING in the hand (*Law*) a mode of punishment, otherwise called branding.—*Burning of houses*, &c. vide *Arson*.

BURNING-GLASS (*Mech.*) a convex lens which transmits the rays of light by refraction towards a common centre called the *focus*.—*Burning mirrors*, or *specula*, concave reflecting surfaces, which carry the rays of light by reflection to the common centre.

BURNING MOUNTAIN (*Nat.*) the same as *volcano*.

BURNING ZONE (*Geog.*) vide *Torrid Zone*.

BURNT offering (*Bibl.*) an offering in which the whole victim was consumed by fire.

BURNT Brass (*Chem.*) *Æs ustum*, was formerly distinguished by the annexed character. [vide *Æs ustum*]

BURNT hartshorn (*Chem.*) vide *Cornu Ustum*.—*Burnt sponge*. [vide *Spongia usta*]

BURR (*Gunn.*) a round iron ring which serves to rivet the end of the bolt so as to form a round head; also a broad iron ring for a lance.

BURR (*Mil.*) a triangular chisel used to clear the corner of mortices.

BURR (*Sport.*) a round knob of horn next a deer's head; also the lobe or tip of the ear.

BURRAS pipe (*Mech.*) a utensil for keeping corroding powders, such as vitriol, precipitate, &c.

BURREL (*Bot.*) a pear, otherwise called the *red-butter pear*, from its smooth, delicious, and soft pulp.

BURREL SHOT (*Mil.*) small bullets, nails, &c. put into cases to be discharged out of ordnance.

BURROCK (*Mech.*) a small wear or dam where wheels are laid in a river to catch fish.

BURROW (*Lâw*) vide *Borough*.—*Burrows*, or *burgh*, a caution, security.

BURSA pastoris (*Bot.*) the *Bunias cornuta* of Linnæus.

BURSA (*Theol.*) a rich covering of the door of the house at Mecca, which is carried about at the solemn processions of the Mahometans, when those who carry it are made to stop, that the people may touch it.

BURSÆ mucosæ (*Anat.*) mucous bags which secrete a mucous fat that serves to lubricate tendons, muscles, and bones, in order to render their motion easy.

BURSA' LIS musculus (*Anat.*) the *Obturator externus et internus*.

BURSAR (*Archæol.*) the treasurer of a monastery or college.

BURSARIÏ (*Archæol.*) stipendiary scholars who lived upon the burse, or joint stock of the college.

BURSA'RIA (*Ent.*) a genus of animals, Class *Vermes*, Order *Infusoria*, consisting of a very simple worm.

BURSE (*Com.*) *bursa*, or *basilica*, an exchange, or place of meeting for merchants.

BURSERIA (*Bot.*) a genus of plants, so called after Joachim Burser, the disciple of Casper Bauhin, Class 23 *Polygamia*, Order 2 *Dioecia*.

Generic Character. CAL. *perianth* one-leaved.—COR. *petals* three.—STAM. *filaments* six; *anthers* ovate.—PIST. *germ* ovate; *style* short, thick.—PER. *capsule* fleshy; *seeds* berried, solitary.

Species. The only species is the *Bursera gummifera* seu *Terebinthus*, the Jamaica Birch-Tree.

BURSERIA (*Bot.*) the *Verbena lappulacea* of Linnæus.

BURSHOLDERS (*Law*) vide *Head-borough*.

BUR-SEL'NUM (*Bot.*) a large sort of parsley.

BURTON (*Mar.*) a small tackle formed by two blocks.

BUSH (*Mar.*) a circular piece of metal let into the sheaves of such blocks as have iron pins.

BUSHEL (*Com.*) an English dry measure containing four pecks, or eight gallons.

BUSHELS of a *cart wheel* (*Mech.*) certain irons within the nave to preserve it from wearing.

BUSO'NES comitatus (*Law*) a term used by Bracton, which is supposed to signify barons.

BUSS (*Mar.*) *bursa*, a ship of two masts used by the English and Dutch in their herring fisheries.

BUST (*Sculpt.*) the figure or portrait of a person in relievo, showing only the upper parts of the body.

BUSTROPHE'DON (*Gram.*) from βῆς, an ox, and σπείρω, to turn; a term used by the Greeks to express a manner of writing, which began at the left-hand in one line, and at the right-hand in another, in imitation of the manner in which oxen turn themselves at the end of the furrows.

BUSTUAR'II (*Ant.*) gladiators who fought about the *bustum*, or funeral pile, of any person in the celebration of his obsequies.

BUSTUM (*Ant.*) a funeral pile, on which the dead bodies of the Romans used to be, *combustum*, burnt, from which it derives its name. It was raised of stones.

Propert. l. 4, el. 5, v. 75.

Scabrîs hoc bustum cadite saxis.

Cic. de Leg. l. 2, c. 26; *Fest. de Verb. Signif.*; *Serv. in Æn.* l. 12, v. 201.

BUSTARD (*Or.*) a large bird resembling a turkey, the *Otis* of Linnæus, which runs with great speed, but flies with difficulty. The breed of this bird is almost extirpated in England.

BUTCHER-BIRD (*Or.*) a species of the Shrike, the *Lanus excubitus* of Linnæus. It is remarkable for its ferocity towards the little birds which it kills, tearing them to pieces, and sticking them on thorns.

BUTCHERS, *Company of* (*Her.*) this fraternity, although very ancient, was not incorporated before the reign of James I. Their arms are, "Azure, two axes saltirewise, argent, between three bulls' heads couped, attired, or; a boar's head, gules, betwixt two garbs, vert."

BUTCHERS'-BROOM (*Bot.*) the *Ruscus* of Linnæus, a shrub, so called because its twigs are used in making besoms for the use of butchers.

BUT-HINGES (*Carpent.*) those which are employed in hanging doors, &c.

BUTHSCARLE (*Archæol.*) a mariner.

BUTLER (*Law*) vide *Botiler*.

BUTLERAGE (*Law*) vide *Prisage*.

BUTMENT (*Archit.*) vide *Abutment*.

BUTNERIA (*Bot.*) the same as the *Calycanthus*.

BUTOMON (*Bot.*) the *Iris pseudacorus* of Linnæus.

BUTOMUS (*Bot.*) a genus of plants, Class 9 *Enneandria*, Order 3 *Trigynia*.

Generic Character. CAL. *involucre* simple.—COR. *petals* six.—STAM. *filaments* nine; *anthers* bilamellate.—PIST. *germs* six; *stigmas* simple.—PER. *capsules* six; *seeds* very many.

Species. The only species is the *Butomus umbellatus*, *Juncus floridus*, seu *Gladrohis aquatilis*, Flowering Rush, or Water Gladiole, a perennial.

BUTO'NICA (*Bot.*) the Barrington.

BUTT (*Gun.*) a solid earthen parapet to fire against in the proving of guns.—*Butt of firelocks*, the thick end which rests against the shoulder when it is fired off.

BUTT (*Mar.*) the end of a plank, in a ship's side or bottom, uniting with the end of another plank. "To start, or spring a butt," to loosen the end of a plank. "But and butt," the butt ends of two planks that come together. Butt signifies also the lower end of a mast, &c.

BUTT (*Agric.*) the end, or short piece of land, in arable ridges or furrows.

BUTT (*Com.*) a measure of wine containing 126 gallons.

BUTT-END (*Carpent.*) the largest end of a piece of timber nearest to the root.—*Butt-joint*, a joint in hand railing at right angles to the curve of the rail.

BUTTER-BUR (*Bot.*) a perennial, the *Tussilago alba*, &c. of Linnæus.—*Butter-Wort*, a perennial, the *Pinguicula* of Linnæus.—*Butterflower*, the *Ranunculus*.

BUTTERFLY (*Ent.*) the well-known insect, a species of the *Papilio*, so called because it first appears in the butter season.

BUTTER of *Antimony* (*Chem.*) another name for the *muriate of Antimony*.—*Butter of bismuth*, a chloride of bismuth obtained by heating bismuth with corrosive sublimate.—*Butter of tin*, a compound of one part tin, and three parts corrosive sublimate.—*Butter of wax*, wax when it is of the consistency of butter.

BUTTERIS (*Vet.*) or *buttrice*, an instrument of steel used in paring the hoof of a horse.

BUTTERMILK (*Husband.*) the whey separated from the cream after it has been converted into butter.

BUTTERY (*Archit.*) the store-room for provisions.

BUTTNERIA (*Bot.*) a genus of plants, called after August. Buttner, Class 5 *Pentandria*, Order 1 *Monogynia*.

Generic Character. CAL. *perianth* one-leaved.—COR. *petals* five.—STAM. *filaments* five; *anthers* twin.—PIST. *germ* roundish; *style* subulate; *stigma* obtuse.—PER. *capsule* roundish; *seeds* solitary.

Species. The species are shrubby perennials.

BUTTOCK (*Mar.*) that part of a ship which forms its convex breadth a-baft, under the stern.

BUTTON (*Mech.*) any thing in a round form which serves to fasten.

BUTTON and loop (*Mar.*) a short piece of rope having, at one end, a walnut knob, and, at the other end, an eye.

BUTTON (*Gunn.*) a part of the cascabel in a gun, or a howitzer, made in the form of a ball.

BUTTON-TREE (*Bot.*) the *Conscarpus erecta* of Linnæus.—Button-Weed, the *Spermacoe*, an annual.—Button-Wood, the *Cephalanthus occidentalis*, a shrub.

BUTTRESS (*Archit.*) a mass of stone-brick work serving to support the sides of walls, which are of two sorts, pillared and arched.—*Pillared buttresses* rise in a perpendicular direction.—*Arched buttresses*, in an arched form.

BUTTRICE (*Vet.*) vide *Butteris*.

BUTTS (*Archer.*) the place where archers meet with their bows and arrows to shoot at a mark, which is called shooting at butts.

BUXBAUMIA (*Bot.*) a kind of moss.

BUXUS (*Bot.*) a genus of plants, Class 21 *Monocœcia*, Order 4 *Tetrandria*.
Generic Character. Male flowers prominent from the buds of the plant.—*Pist.* rudiment of a germ without style or stigma. Female flowers in the same bud with the males.
Pist. germ superior; *styles* permanent; *stigmas* obtuse.

BUZONIS (*Archer.*) the shaft of an arrow before it is fletched. *Strab. Ed.* 1.

BUZZARD (*Or.*) a very sluggish bird of the hawk kind, the *Falco buteo* of Linnæus.—*Bald buzzard*, a name given, by Willoughby and Ray, to a bird of the falcon or eagle tribe. Willoughby also gave the name of Honey Buzzard to the *Falco æruginosus* of Linnæus.

BUZZARDE'T (*Or.*) the *Falco albidus* of Linnæus.

BUZE (*Mech.*) a wooden or leaden pipe to convey the air into mines.

BYA'RES (*Anat.*) a plexus of blood vessels.

BY'E-LAWS (*Law*) from the Saxon bye, a town; the laws of towns, or particular places, or more probably laws made *obiter*, i. e. by the bye; for bye-laws, called in Scotland *birlaws*, are certain orders and constitutions made by corporate bodies, with the consent of those who made them in particular cases, to which the general laws do not extend.

BYRE'THRUM (*Med.*) an odoriferous cap filled with cephalic drugs, from the Italian *biretta*, a cap.

BY'RSA (*Med.*) *βύρσα*, a leather skin to spread plasters upon.

BYSAU'CHON (*Med.*) from *βύσα*, to stuff up, and *αυχον*, the neck; a morbid stiffness of the neck.

BYSSMA (*Ant.*) garments made of the *byssus*.

BYSSUS (*Ant.*) *βύσσος*, a fine linen among the ancients, which was obtained from India. *Poll. Onom.* l. 7, segm. 75; *Plin.* l. 19, c. 1; *Tertull. de Cult. Fœmin.* c. 13; *Isid. Orig.* l. 19, c. 27.

BYSSUS (*Bot.*) a genus of plants, Class *Cryptogamia*, Order *Algae*.

BYSTROPO'GON (*Bot.*) a genus of plants, Class 14 *Didynamia*, Order 1 *Gymnospermia*.
Generic Character. CAL. *perianth* one-leaved.—COR. *monopetalous*.—STAM. *filaments* four; *anthers* incumbent.—*Pist. germ* superior; *style* subulate; *stigma* bifid.—*PER.* none; *seeds* four.
Species. Plants of this tribe are shrubby perennials.

BY'THOS (*Anat.*) *βύθος*, depth; is used by Hippocrates to signify the bottom of the stomach. *Hippocrat. de Nat. Hom.*

BYTTNERIA (*Bot.*) vide *Buttneria*.

C.

C. (*Ant.*) as an abbreviation, stands for *Caius*, *Cæsar*, &c. As a Numeral, for *Centum*, 100, as CCCC, four hundred. [vide *Abbreviations*]

c. (*Chron.*) stands for *Christi*, as A. C. *Anno Christi*, in the year of Christ. [vide *Abbreviations*]

c. (*Gram.*) stands for *Caius*, *Corpus Christi*, &c. [vide *Abbreviations*]

c. (*Mus.*) the name of that note in the natural major mode, to which Guido applied the monosyllable, for which the Italians now substitute *D*.—*C* above *G* Gamut, that note which is a fourth higher than *G* Gamut.—*C* above the *bass Cliff*, that note which is a fifth higher than the *bass cliff*.—*C* above the *treble cliff*, a note which is a fourth higher than the *treble cliff*.

CAA-A'PIA (*Bot.*) an Indian name for the Brazilian plant, the *Dorstenia Brasiliensis* of Linnæus, with which the inhabitants cure those wounds which are caused by poisoned darts.—*Caa-atega*, a plant of Brazil, the root of which is perfectly cathartic. *Raii Hist. Plant.*

CAA'BA (*Theol.*) Arabic for the *Beit-Allah*, or the House of God, in Mecca, so called from its cubic form; *caaba* signifying cubic.

CAACI'CA (*Bot.*) a Brazilian herb, the *Colubrina Lusitana*, which was applied in cataplasms against venomous bites. *Raii Hist. Plant.*

CAACO (*Bot.*) an Indian name for the sensitive plant, the root of which is used by the natives as an antidote.

CAAETIMA'Y (*Bot.*) the *Senecio Brasiliensis*, a decoction of which is used in the cure of the itch.

CAAGHRYU'YS (*Bot.*) *Frutex baccifer Brasiliensis*, a shrub of Brazil, the leaves of which are applied to ulcers.

CAA-O'PIA (*Bot.*) the *Hypericum bacciferum*, a tree of Brazil, the bark of which emits a juice which when dried resembles gamboge.

CAAPE'BA (*Bot.*) the *Cessampelos Pareira* of Linnæus.

CAAPO'NGA (*Bot.*) an Indian name for the *Inula arithmoides* of Linnæus, the leaves of which are gently diuretic.

CAARO'BA (*Bot.*) an Indian name for a plant, the leaves of which are employed in a decoction for the venereal disease.

CAB (*Ant.*) קב, a Hebrew measure, the sixth part of a Seah, containing three English pints.

CABALA (*Theol.*) קבלה, from קבל, to receive; a traditional or mysterious doctrine, which the ancient Jews say was delivered by word of mouth to Moses.

CABALA (*My.*) an abuse of certain passages of Scripture for magical purposes, as the making of magical words, numbers, &c.

CABALI'STIC Art (*My.*) the magic art, which teaches the Cabala that was formerly employed in medicine.

CABA'LLINE (*Vet.*) a coarser sort of aloes used for horses, so called from *caballus*, a horse.

CABA'LLUS (*Archæol.*) a Keffel or Rosinante, but sometimes taken for a war-horse.

- CABANE** (*Mar.*) French for a flat-bottomed boat with a deck, which is used for the accommodation of passengers.
- CABA'S** (*Mil.*) a basket made of rushes, which is used in Languedoc for the purpose of conveying stores and ammunition.
- CABBAGE** (*Bot.*) an edible plant for the pot, the *Brassica* of Linnæus. There are several sorts of cabbage cultivated in gardens, which are varieties of the common Cabbage, or the *Brassica oleracea* of Linnæus: the principal of these are the Kale, or Colwort, the Broccoli, the Cauliflower, and the Broccole, or Fringed Cabbage, the Turnip Cabbage, &c.—Sea Cabbage, or Wild Colewort, the *Brassica oleracea sylvestris*.—Cabbage-Tree, the *Cacalia Kleinia* of Linnæus, so called from the resemblance its leaves bear to those of the Cabbage.—Cabbage-Bark-Tree, the *Geoffroya Jamaicensis*.
- CABBAGE of a Deer's Head** (*Sport.*) the burr which parts where the horns take their rise.
- CABBAGE-WORM** (*Ent.*) a name for the Caterpillar which particularly infests the Cabbage.
- CABBALISTICAL** (*Mag.*) vide *Cabalistic*.
- CABE'CA** (*Com.*) or *cabesse*, the finest kind of India silks, in distinction from the *bariga*, which is the inferior sort.
- CAB'E'ER** (*Com.*) a coin current at Mocha, equal to two shillings and sixpence sterling.
- CABELIA'U** (*Ich.*) Cod-fish.
- CABIDOS** (*Com.*) a Portuguese long-measure, equal to three-fourths of an English yard.
- CABIN** (*Mar.*) the apartment in a vessel for the officers and superior passengers.—*Cabin boy*, the lad who attends on the officers and passengers in the cabin.—*Cabin passengers*, those who pay for accommodations in the cabin, in distinction from the deck passengers, or those who mess with the sailors.
- CABINET** (*Pol.*) *Gabinetto*, It.; *Gavinéte*, Sp.; *Gabinete*, Port. 1. A closet, or private room, in which consultations, particularly on state affairs, are commonly held. 2. The collective body of ministers of state, each of whom may be called a cabinet minister.—*Cabinet council*, a council of cabinet ministers held with particular privacy.
- CABINET** (*Mech.*) a small or close chest for valuables.—*Cabinet-maker*, a workman who does the finest work.
- CABLE** (*Mar.*) or *Kabel*, a thick rope made of three strands or smaller ropes, and fixed to the anchor to hold a ship fast.—*Cable-tier*, the place on the orlop-deck where the cables are stowed.—*Chief cable*, or *sheet-anchor-cable*, the largest cable in the ship.—*Bower-cable*, a name for either of the two bowers.—*Stream-cable*, a hawser or small rope, smaller than the bower-cable.—*Cable-tire*, the several rolls of cable as they lie one upon another.
- In the use of the *cable* there are very many sea phrases, as —“To bend the *cable*,” to make it fast to the ring of the anchor. “To unbend the *cable*,” to take it away. “To bit the *cable*,” to put it round the bits, to fasten or slacken it gradually. “To serve, keckle, or plait the *cable*,” to bind it round with ropes, &c. to prevent it from being galled. “To heave in the slack of the *cable*,” to draw it into the ship by the capstan or windlass. “To pay out the *cable*, or veer away the *cable*,” to slacken it, that it may run out. “To pay the *cable* cheap,” is to hand it out apace. “To coil the *cable*,” to roll it round in a ring. “To shoot or splice the *cable*,” to splice two parts of a cable together by working the several threads of the rope the one into the other. “To slip the *cable*,” to let it run quite out when there is no time to weigh anchor.
- CABLE** is also the name of any large rope which is used for raising weights, as in pullies, cranes, &c.
- CABLE** (*Archit.*) a moulding of a convex form at the back of the flute, representing a rope or staff laid in a flute.

CABLE (*Mil.*) French for the large rope which is used for dragging the artillery.

CABLE'E (*Her.*) or *cabled*, an epithet for a cross; a cross cablee is made of two ends of a ship's cable.

CABLED flutes (*Arch.*) flutes filled up with pieces in form of cables.

CABLE'S length (*Mar.*) the measure of 120 fathoms.

CABLET (*Mar.*) a small cable.

CABLING (*Archit.*) the filling of flutes with cables, or the cables themselves so disposed, whether in flutes or without them.

CAB'LISH (*Archæol.*) *cadibulum*, Brushwood, or windfall wood, from *cadere*, to fall.

CABO'CHE (*Carpent.*) French for a long-headed nail.

CABOSSE (*Her.*) or *cabossed*, from the French *caboché*, Latin *caput*, the head; a term in blazoning when the head of a beast is cut off just under the ears, leaving no neck, as he beareth “*Argent three Bulls Heads, cabossed sable, armed or, by the name of Baynham, in Gloucestershire.*”

CABOTAGE (*Mar.*) the art of navigating so as to avoid all sand-banks, &c.; also the practice of sailing from port to port without stretching out to sea.

CABRER (*Man.*) French for to rear as a horse does when improperly checked.

CABRIOLÉ'T (*Mech.*) a light low chaise.

CABULAT'OR (*Chem.*) Nitre.

CABURE'RBA (*Bot.*) an Indian tree, which, according to Ray, yields the balsam of Peru.

CABUR'NES (*Mar.*) small lines for binding the cable.

CA'CABUS (*Ant.*) a cauldron or kettle so called from the noise which it makes in boiling.

CACA'DE (*Mil.*) a French term for an unlucky enterprize in war, which has been ill-concerted and ill-conducted.

CACAGO'GA (*Med.*) from *κακα*, ordure, and *αγο*, to draw, medicines which, when applied to the fundament, procure stools. *Paul. Æginet.* l. 7, c. 9.

CACA'LIA (*Bot.*) *κακαλία*, Strange Colts-foot, a plant which, according to Dioscorides, cures coughs when macerated in wine. *Dioscor.* l. 4, c. 123; *Plin.* l. 25, c. 11.

CACALIA, in the Linnean system, a genus of plants, Class 19 *Syngenesia*, Order 1 *Polygamia æqualis*.

Generic Characters. CAL. common simple.—COR. compound tubular.—STAM. filaments five; anther cylindric.—PIST. germ oblong; style filiform; stigmas two.—PER. none; seeds solitary; receptacle naked.

Species. The species are mostly shrubs, and natives of the Cape of Good Hope, as the—*Cacalia papillaris*, *Kleinia*, seu *Cacalianthemum*, Rough-stalked *Cacalia*, a shrub, native of the Cape of Good Hope.—*Cacalia Anteu-phorbium*, *Kleinia*, seu *Ante-Euphorbium*, Oval-leaved *Cacalia*.—*Cacalia cuneifolia*, Wedge-leaved *Cacalia*.—*Cacalia Kleinia*, *Kleinia*, *Cacalianthemum Frutex Indiæ*, &c. seu *Nec Cacalia*, &c. Oleander-leaved *Cacalia*, or Cabbage-tree.—*Cacalia repens*, Glaucous-leaved *Cacalia*.—*Cacalia Ficoïdes*, *Kleinia*, seu *Senecio africanus*, &c. Flat-leaved *Cacalia*.—*Cacalia carnosa*, Narrow-leaved *Cacalia*.—*Cacalia articulata*, laciniata, seu *runcinata*, Jointed-stalked *Cacalia*.—*Cacalia arbuscula*, native of the Cape of Good Hope.—*Cacalia tomentosa*, woolly-leaved *Cacalia*, &c. But the following are perennials, as the—*Cacalia sempervirens*, *carnosa*, seu *semperviva*.—*Cacalia saracenicæ*, *Solidago*, &c. *Senecio perennis*, *Virga aurea*, seu *Conyza montana*, &c. Creeping-rooted *Cacalia*, native of the South of France.—*Cacalia hastata*, seu *Senecio*, &c. Spear-leaved *Cacalia*, native of Siberia.—*Cacalia suaveolens*, sweet-scented *Cacalia*, native of Virginia.—*Cacalia atriplicifolia*, seu *virginiana glabra*, *Porophyllum*, seu *Nardus americana*, &c.

Orach-leaved *Cacalia*, a native of Virginia.—*Cacalia alpina*, *glabra pyrenaica*, *Alliaria*, seu *Tussilago Cacalia*, Alpine *Cacalia*, native of Switzerland.—*Cacalia albifrons*, herbacea, *hirsuta tomentosa*, seu *Alliaria*, White-leaved *Cacalia*, a native of Austria, &c.; and the following are annuals, as the—*Cacalia porophyllum*, *Porophyllum Senecio indicus*, seu *Chrysanthemum americanum*, &c. Perforated *Cacalia*, native of America.—*Cacalia rudcralis*, seu *Kleinia rudcralis*, an annual, native of St. Domingo.—*Cacalia procumbens*, seu *Sonchus volubilis*, native of China.—*Cacalia Coccinea*, an annual, native of South America, &c.—*Cacalia sonchifolia*, *Kleinia*, *Muel Schair*, *Senecio maderaspatanus*, *Chondrilla Zeylanica*, *Sonchus amboinensis*, seu *Tagolina lugonum*, Sowthistle-leaved *Cacalia*, native of China. *Clus. Hist. Plant. Rav. Ger. Herb.*; *J. Bauh. Hist. Plant.*; *C. Bauh. Pin.*; *Park. Theat. Botan.*; *Raii Hist. Plant.*; *Tournef. Inst.*; *Boerhaav. Ind.*

CACALIA'NTHIUM (Bot.) the *Cacalia papillaris* et *Kleinia* of Linnæus.

CACAMO'TIC *Hanoquiloni* (Bot.) the Cathartic potatoe. *Hern. Nov. Plant. Amer. Hist.*

CACANGE'LIA (Lit.) *κακουργεῖα*, evil-speaking. *Gal. Exegcs.*

CACANUM (Bot.) a plant mentioned by Paulus Ægineta, and supposed to be the same as the *Cacalia* of Dioscorides.

CA'CAO-TREE (Bot.) the *Theobroma* of Linnæus.

CA'CAO-NUT, the fruit of the Cacao-tree, from which chocolate is made, as also an oil, or butter, which has an anodyne virtue. This oil can be kept a long time without becoming rancid. *J. Bauh. Hist. Plant.*; *C. Bauh. Pin. Hernand. Plant. Amer. Hist. &c.*

CACA'OTETE (Min.) an Indian stone, otherwise called *Lapis corvinus*, which, when heated, cracks like thunder.

CACA'PHONIA (Med.) Defective articulation.

CACA'RA (Bot.) the *Dolichos bulbosus* of Linnæus.

CACATORIA *febris* (Med.) An intermittent fever. *Castell. Lex. Med.*

CACA'VA (Bot.) *Cacavate*, or *Quahool*, the same as Cacao. *Hernand. Hist. Amer.*

CACA'VI (Nat.) The same as Cassavi.

CA'CCIA (Mus.) an Italian epithet for a sort of composition written in the hunting style.

CACEDO'NIUM *tartarum* (Med.) peccant matter in the human body.

CACE'MPHATON (Gram.) or *cacephaton*, *κακίφατον*, from *κακός* and *φῆμι*, to say; bad diction.

CA'CHALOT (Ich.) the *Physeter* of Linnæus, one of the largest of the whale tribe, from the head of which spermaceti is extracted.

CACHE'CTUS (Med.) or *cachecticus*, one labouring under a cachexy.

CACHE'POLUS (Law) a catchpole, an inferior officer of justice.

CACHE'XIA (Med.) *κακίξια*, from *κακός*, *malus*, and *ἕξις*, *habitus*; an ill habit of body. *Arct. de Acut. Morb.* l. 1, c. 16; *Cels.* l. 3, c. 22; *Gal. de Meth. Med.* l. 4; *Act. Tetrab.* 3, serm. 2, c. 19; *Actuar. de Meth. Med.* l. 1, c. 11.

CACHEXIA, in Cullen's system the third class of diseases, comprehending the three orders, *marcores*, *intumescencia*, and *impetigines*.

CA'CHLEX (Med.) *κάχληξ*, a pebble to which Galen ascribes an astringent virtue when heated. *Gal. de Simpl.* l. 10.

CACHOL'ONY (Min.) the *Chalcedonius Cacholonius* of Linnæus.

CA'CHOS (Bot.) the *Solanum pomiferum*, &c. of Linnæus. *Bauh. Pin.*

CA'CHOW (Bot.) an aromatic drug. vide *Terra Japonica*.

CA'CHRY (Bot.) *καρχυρ*, the seed of the *Libanotis*, which, according to Dioscorides, is of a heating and drying quality. *Dioscor.* l. 3, c. 88.

CACHRYS (Bot.) a genus of plants, Class 5 *Pentandria*, Order 2 *Digynia*.

Generic Character. CAL. umbel universal manifold; partial similar; involucre universal many-leaved; partial similar; perianth proper, scarcely observable.—COR. universal uniform; floscules all uniform; proper of five lanceolate petals.—STAM. filaments five; anthers simple.—PIST. germ. turbinate, inferior; styles two simple; stigmas headed.—PER. fruit subovate, angular; seeds two, very large.

Species. The species are perennials, as the—*Cachrys libanotis*, seu *Libanotis*, Smooth-seeded *Cachrys*.—*Cachrys sicula*, seu *Hippomarathrum*, Hairy-seeded *Cachrys*.—*Cachrys panicifolia*, seu *Panax*, &c. *Bauh. Hist.*; *C. Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Tournef. Inst.*

CA'CHRYES (Bot.) *κάχρυς*, Maple Chat, or Ash Keys.

CACHUNDE (Med.) a cordial medicine in China and India, composed of amber, cinnamon, juice of roses, &c.

CACHY'MIA (Met.) an imperfect metallic body, according to Paracelsus.

CA'CIA *ferrea* (Archæol.) an iron spoon.

CACO'A (Bot.) the same as Cacao.

CACO-LEXITERIUM (Med.) the same as *Alexiterium*.

CACOCO'LIA (Med.) from *κακός* and *χολή*, an indisposition of the bile.

CACOC'HROI (Med.) from *κακός* and *χρῶμα*, ill-coloured in the face. *Gal. Com. 4 in Hippoc. de Rat. Vict. in Acut. Morb.*

CACOC'HYLIA (Med.) from *κακός* and *χυλός*, a bad chylification; when the humour called chyle is not duly made. *Cels.* l. 2, c. 19.

CACOC'HYMIA (Med.) *κακοχυμία*, from *κακός* and *χυμός*, *cachochymy*, abundance of bad humours in the body, caused by bad nourishment and ill digestion. *Gal. de Sanit. tuend.* l. 5; *Act. de Meth. M.* l. 3, c. 9.

CACOC'HYMICAL (Med.) or *Cachochymic*, having the humours corrupted, as *cachochymical* blood.

CACODÆMON (Astrol.) so called from its dreadful significations, as great losses, &c. The twelfth house scheme, or figure of the heavens.

CACODÆMONUM *magia* (Mag.) from *κακός* and *δαίμων*, diabolical magic. *Castell. Lex. Med.*

CACOD'ES (Med.) from *κακός* and *ἔζω*, ill-scented, fetid.

CACOE'THES (Med.) *κακοίθης*, from *κακός* and *ἦθος*, a habit; an epithet applied by Hippocrates to diseases, to denote their malignancy; and by Galen, to symptoms which are dangerous and threatening, or ulcers and tumors which are virulent and malignant. *Gal. Com. 1, in Hippocrat. Prædict.* l. 1; *Cels.* l. 5, c. 21; *Act. Tetrab.* 3, serm. 1, c. 45; *Foes. Econom. Hippocrat.*; *Gorr. Med. Def.*

CACOE'THES (Eth.) an ill habit or propensity, as the *cacoe'thes scribendi*, the itch for writing mentioned by Juvenal. *Juv. sat.* 7, v. 52.

———— Tenet insanabile multos
Scribendi cacoe'thes.

CACOPA'THIA (Med.) *κακοπαθία*, from *κακός* and *παθος*, ill-affection; suffering.

CACOP'HONY (Med.) *κακοφωνία*, from *κακός*, *malus*, and *φωνή*, *vox*; a deprivation of the voice, of which there are two kinds; aphony, or dumbness; and dysphony, difficulty of speech. *Gal. de diff. Sympt.* c. 3.

CACOP'HONY (Gram.) a bad tone of the voice, proceeding from the ill disposition of the organs; or, a certain harshness of sound, arising from an improper mixture of the vowels and consonants among themselves. Strabo says, "Theophrastus was first called Tertamus; but Aristotle changed it into Theophrastus, to avoid the cacophony of the former name."

CACOPHONY (*Mus.*) a combination of discordant sounds.

CACOPHRASTUS (*Med.*) a name given by some to Theophrastus. *Paracelsus*; *Castell. Lex Med.*

CACOPRAGIA (*Med.*) *κακοπραγία*, from *κακός*, ill, and *πρασσι*, to act; a depraved action of the viscera.

CACORRHEMO'SYNE (*Med.*) the same as *Cacangelia*.

CACORRYTHMUS (*Med.*) the same as *Arythmus*.

CACOSIS (*Med.*) *κάκωσις*, from *κακός*, *malus*; indisposition. *Hippocrat. de Intern. Affect.*

CACOSYSTATA (*Log.*) arguments that will serve as well for one side as the other; as, "You ought to forgive him because he is a child.—No, for that reason I will correct him, that he may be better hereafter."

CACOSYFIA (*Med.*) the same as *Nausea*.

CACOSPHYXIA (*Med.*) from *κακός* and *σφίξις*, a disorderly beating of the pulse in general. *Gal. de Diff. Sympt. c. 4.*

CACOSTOMACHUS (*Med.*) *κακοσμομαχός*, from *κακός* and *σώμαχος*, unwholesome; a medicinal epithet for food.

CACOSYNTHETON (*Gram.*) *κακοςυνθεσία*, from *κακός*, *malus*, and *συνθεσις*, an ill composition of words in a sentence.

CACOTECHNY (*Rhet.*) *κακοτεχνία*, from *κακός*, *malus*, and *τεχνη*, *ars*; a corruption of art. *Quintill.*

CACOTHY'MIA (*Med.*) from *κακός* and *θυμός*; an ill disposition of mind.

CACOTROPHY (*Med.*) *κακοτροφία*, from *κακός*, *malus*, and *τροφία*, nutriment; any sort of vicious nutrition in general. *Gal. de Diff. Symp. c. 4.*

CACOTY'CHE (*Astrol.*) i. e. *Bad Fortune*; the sixth house of an astrological figure.

CACOZELIA (*Rhet.*) from *κακός*, *malus*, and *ζήλω*, *æmulo*; a vicious mode of speech, consisting of an affected or imperfect attempt at the sublime; the bombastic style. *Demet. de Elocut. § 286*; *Quintil. Instit. l. 8, c. 3*; *Suet. Aug. c. 86*; *Lougin. de Sublim. c. 3*; *Hermog. περι δεικω. Ald. Edit.*

CACTUS (*Bot.*) *κάκτος*, a prickly plant of Sicily, mentioned by Theophrastus, and also the poet Theocritus, the description of which is copied from the former by Pliny and Athenæus, according to whom it is the same plant which the Romans called *carduus*, and the Greeks *κνώρα*, the Artichoke. *Theophrast. Hist. Plant. l. 6, c. 4*; *Theocrit. Idyl. 10*; *Plin. l. 21, c. 16*; *Athen. l. 2.*

CACTUS, in the *Linnean system*, a genus of plants, Class 12 *Icosandria*, Order 1 *Monogynia*.

Generic Character. CAL. *perianth* one-leaved.—COR. *petals* numerous, rather obtuse.—STAM. *filaments* numerous, subulate; *anthers* oblong, erect.—PIST. *germ* inferior; *style* the length of the stamens, cylindrical; *stigma* headed.—PER. *berry* rather oblong; *seeds* numerous, roundish.

Species. This genus consists of succulent plants permanent in duration and singular in structure, which are all natives of the continent of South America. The principal species are as follow: the—*Cactus manmillaris*, *Echinon melocactus*, *Ficoides*, seu *Melocactus*, Smaller Melon Thistle.—*Cactus melocactus*, seu *Melocarduus*, Great Melon Thistle, or Turk's Cap.—*Cactus hexagonus*, seu *Cereus hexagonus*, Six-angled Torch Thistle.—*Cactus grandiflorus*, seu *Cereus grandiflorus*, Great-flowering Creeping Cereus.—*Cactus pendulus*, *Cassyta baccifera*, *Rhipsalia cassutha*, seu *Ibiscum*, Slender Cereus, —*Cactus triangularis*, Triangular Cactus, or Strawberry Pear.—*Cactus opuntia*, *Opuntia vulgaris*, seu *Ficus Indica*, Common Indian Fig, or Prickly Pear.—*Cactus tuna*, seu *Tuna major*, *Opuntia tuna*, Great Indian Fig, or Upright Prickly Pear.—*Cactus cochenillifer*, Cochineal Indian Fig, so called because the insect called the Cochineal feeds upon this plant.—*Cactus phyllanthus*, seu *Phyllanthus Americana*, Spleenwort-leaved Indian Fig.—*Cactus pereskia*, *Malus Americana*, seu *Portulaca*

Americana, Barbadoes Gooseberry. *Bauh. Hist. Plant*; *Bauh. Pin.*; *Ger. Herb.*; *Park. Theat. Botan.*; *Raii Hist. Plant*; *Tournef. Inst.*; *Boerh. Ind.*

CACU'BALUM (*Bot.*) a herb which cures tumors, the *Alsine baccifera* of Bauhin, and the Berry-bearing Chickweed of Ray.

CADA'RIANS (*Theol.*) a sect of Mahometans so called, according to Abulpharajius, from the Arabic *cadr*, a decree; not because they maintain, but because they deny, the absolute decrees of the Almighty, in opposition to the generality of Mahometans. *Albufarag. Hist. Dynast. Poc. Edit.*

CADA'VER (*Anat.*) a carcase, corpse, or dead body; so called from *cado*, to fall, because the body falls when stripped of the soul.

CADA'VEROUS (*Nat.*) an epithet signifying like, or appertaining to, a corpse.

CADBOTÉ-FLY (*Ent.*) or Cadworms, the maggot of the insect *Phryganea*, which is a good bait for fish.

CADDIS (*Mech.*) a kind of tape or ribbon.

CA'DE (*Com.*) a vessel containing 100 herrings, or 1000 sprats.

CA'DE-LAMB (*Husband.*) a lamb weaned and brought up in the house.

CA'DE-WORM (*Ent.*) vide *Cadbote-fly*.

CADEL-AVA'NACU (*Bot.*) a tree growing in Brazil, the leaves of which are purgative. *Raii Hist. Plant.*

CADELSHEER (*Polit.*) a Turkish chief magistrate or governor of a province. There were three who held this rank; namely, one who was set over Natolia; a second over Romania; and a third over Egypt. They had all the cadies under them. *Theven. Voy. de Lev.*

CADENCE (*Gram.*) both in verse and prose, is formed by the difference of time in pronouncing.—*Cadence of the voice*, that sound of the voice which falls on the ear at the end, which may be agreeable or otherwise, but is mostly taken for what ends pleasantly to the ear.—*Cadence of a period*, an harmonious fall or termination of a period, or part of a period.

CADENCE (*Mus.*) or *reprize*, in Italian *cadenza*, a pause or suspension at the end of an air, resembling points or virgules in prose. Cadences afford the performer an opportunity of introducing a graceful extempore close. *Cadence* is also taken for the close or embellishment itself, whence the expression "To close the song with a fine cadence."—*Cadence* is likewise used in dancing, when the steps follow the notes and measures of the music.

CADENCE (*Mil.*) a regular and uniform method of marching, in which the length of the step, the time, and the distance, are made to accord to a rule.

CADENCE (*Man.*) an equal measure or proportion observed by a horse in all his motions when he is thoroughly managed, and works justly at a gallop, *terrâ à terrâ*, so that his motions or times have an equal regard to each other.

CA'DENCY (*Her.*) a distinction of houses.

CADE'NE (*Com.*) the smallest Turkey carpets.

CA'DENT (*Astrol.*) an epithet for a planet when it is in a sign opposite to its exaltation.

CADE'NZÁ (*Mus.*) Italian for the close of an air or song. [vide *Cadence*]

CADE'T (*Her.*) the younger son of a family.

CADET (*Mil.*) a young gentleman who follows a course of instruction and discipline preparatory to his entering the army; of this description are the cadets, or *gentlemen cadets*, at the military college of Woolwich, &c.—*Cadet* is also a junior officer.—*Cadet* in the French army, is a volunteer serving without pay, for the express purpose of becoming acquainted with military tactics.

CADGE (*Mech.*) a round frame of wood, on which hawks are carried by the cadgers to be sold.

- CADGER** (*Com.*) a huckster; one who brings butter, eggs, and poultry, from the country to market.
- CAD'I** (*Polit.*) an officer of justice in Turkey, who acts as a judge.
- CADIA** (*Bot.*) from the Arab. *forsk*, a genus of plants, Class 10 *Decandria*, Order 1 *Monogynia*.
Generic Characters. CAL. *perianth* one-leaved.—COR. *petals* five.—STAM. *filaments* ten; *anthers* oblong.—PIST. *germ* linear; *style* bowed; *stigma* acute.—PER. *legume* linear; *seeds* oblong.
Species. The only species is *Cadia purpurea* *Panciatia purpurea*, seu *Spandoncea*, *tamarindifolia*, Purple flowered *Cadia*, a shrub, native of Arabia Felix.
- CADILE'SHER** (*Polit.*) vide *Cadelsheer*.
- CADIS** (*Com.*) woollen stuffs of different kinds in France.
- CADME'AN** *letters* (*Gram.*) the letters composing the Greek alphabet, which are supposed to have been brought out of Phœnicia, by Cadmus, 1,500 years before Christ. [vide *Alphabets*, Tab. II, Plate 2.]
- CAD'MIA** (*Min.*) a mineral; so called from Cadmus, by whom the use of metals is supposed to have been introduced. *Cadmia* is either natural or artificial.—*Natural cadmia* is of two kinds, namely, *metallic cadmia*, which is otherwise called *cobalt*, and the *fossil cadmia*, otherwise called *Lapis calaminaris*, or the *Calamine* of the shops, now more commonly known by the name of *zinc*, from which brass is made.—*Artificial cadmia*, called by *Agricola Cadmia fornacum*, is also of two kinds, namely, that of the ancients, which was only the recement blown off by the bellows in melting copper; and the *Cadmia officinarum*, the *Cadmia* of the shops, otherwise called *Tutty*. The *cadmia* of the ancients was distinguished by its form into the *bostryitis*, i. e. clustered like a bunch of grapes; *onychitis*, like an onyx stone; *placitis*, crusty; *zonitis*, surrounded with veins like girdles; *ostratitis*, testaceous, &c. This *cadmia* was much esteemed by physicians for its obstruent and drying virtues. *Dioscor.* l. 5, c. 84; *Plin.* l. 34, c. 10; *Gal. de Simp.* l. 9; *Oribus Med. Coll.* l. 11; *Act. Tetrab.* 1, serm. 1; *Paul. Æginet.* l. 7, c. 3; *Isidor. Orig.* l. 16, c. 19; *Agricol. de Re Metal.* l. 8.
- CADMITES** (*Min.*) a precious stone having blue specks in it.
- CADRE** (*Mil.*) signifies in French literally a frame; but is used to denote the proposed establishment of a regiment.
- CADRYTES** (*Theol.*) a sect among the Mahometans who lead a monastic life.
- CADUCARIUS** (*Ant.*) one made heir to the goods of another who has left no heir, an escheator; whence *caduca bona*, escheats. *Isid. Orig.* l. 5, c. 25.
- CADUCEA'TOR** (*Ant.*) a herald among the Romans who went to sue for peace, in distinction from the *feciales*, by whom war was declared. He was so called from the *caduceus* which he carried. [vide *Caduceus*]
- CADUCEUS** (*Ant.*) a name for Mercury's rod or sceptre, supposed to be derived from the Greek *καρπίσιον*. It was furnished with a pair of wings, and two serpents entwine themselves about the top, as in the annexed figure. When found upon medals it is an emblem of peace, and was carried by the Roman heralds who went to proclaim peace, when they were called *caduceatores*. It is said to have been presented by Apollo to Mercury. *Liv.* l. 8, c. 20; *Poll.* l. 8, c. 2; *Hygin. Astron. Poct.*; *Plin.* l. 29, c. 3.
- CADUCOUS** (*Bot.*) *caducus*, i. e. falling off before the time; an epithet for different parts of plants, as the stipule bracte, petiole, pappus, &c.—*Bractæ caducæ*, are those which fall off before the end of the summer, as in the *Conglus*, or *vellana*, or *Hazel*.—*Pappus caducus* is that which falls off upon the ripening of the seed.
- CADUCUS morbus** (*Med.*) the falling sickness or epilepsy.

- CADUS** (*Ant.*) *κάδος*, or *κάδος*, a Grecian and Roman measure, equal to about ten gallons English. *Poll. Onom.* l. 9; *Plin.* l. 14, c. 16.
- CÆCALISVENA** (*Anat.*) the same as *Cæcum intestinum*.
- CÆCIAS** (*Nat.*) *κακίαι*, a northerly wind, which, according to Aristotle, is distinguished from the other winds by its drawing the clouds to itself. *Aristot. Prob. sect.* 26; *Vitruv.* l. 1, c. 6; *Plin.* l. 2, c. 47; *Aul. Gell.* l. 2, c. 22; *Salmas in Solin.* p. 1227.
- CÆCILIA** (*Zool.*) a genus of animals, Class *Amphibia*, Order *Serpentes*.
Generic Character. *Body* and *Tail* wrinkled.—*Upper lip* with two tentacula.
Species. The species are—*Cæcilia tentaculata*, seu *L'Ibiare*, Eel-shaped *Cæcilia*, a native of South America.—*Cæcilia Glutinosa*, seu *Serpens cæcilia*, *ceilonica*, White sided *Cæcilia*, native of South America.—*Cæcilia Gracilis*, seu *tentaculata*, Slender *Cæcilia*.
- CÆCILIANA** (*Bot.*) a species of lettuce mentioned by Pliny. *Hist. Nat.* l. 15, c. 25.
- CÆCUM** *intestinum* (*Anat.*) τὸ τυφλόν, also called by Ruffus Ephesius, the *Appendicula cæci*, comprehends the first of the three portions into which the large intestines are divided; it is called the *cæcum*, or *Blind Gut*, because it is perforated at one end only, being a round bag, with the mouth upwards. It has also been called *monomachon*, and by *Paracelsus monocolon*. *Ruf. Ephes.* l. 1, c. 27; *Gal. de Usu. Part.* l. 4; *Gorr. Def. Med.*
- CÆLUM** (*Anat.*) *εὐράτος*, the roof of the mouth. *Ruf. Ephes. de Appell. Part. Corp. hum.* l. 1, c. 8.
- CÆMENTUM** (*Min.*) *cement*. 1. A preparation of brick-dust, crocus of Mars, crocus of Venus, alum, vitriol, &c. for the corroding, exalting, and depurating metals; that which is used for the depurating of gold is called *cæmentum regale*. 2. The same thing as lute. [vide *Lute*].—*Cæmentum cupreum*, *Cement Copper*, or *Ziment Copper*; copper precipitated from vitriolic waters, by means of iron.
- CÆMENTUM**, in the *Linnean system*, a genus of earths, Order *Argillaceous*.
Generic Character. It consists of iron, alumina, silica, and carbonate of lime.
Species. The species are—*Cæmentum Tufa*, *Tufas* or *Tuffwacke*.—*Cæmentum tarras*, seu *induracum*, *Terass*, *Terras*, or *Parras*.—*Cæmentum columnare*, &c.
- CÆNOPTERIS** (*Bot.*) a genus of plants, Class 24 *Cryptogamia*, Order 1 *Filices*.
Generic Character. *Fructifications* in submarginal lateral lines, covered with a membrane, gaping on the outside.
Species. The only species is *Cænopteris rhizophylla*, native of the island of Dominica.
- CÆPA** (*Bot.*) vide *Cepa*.
- CÆRITES** *tabula* (*Ant.*) tables or registers in which the Censors entered the names of those citizens, who for any misdemeanor were deprived of their suffrage or voice at an election; whence the expression *In cæritum tabulas referre*, signifying to lose the right of voting at elections, because the people of Cære, though made denizens of Rome, had, notwithstanding, no voice at elections, wherefore Horace says, *Cærite cerâ digni*, i. e. persons fit to be amerced or degraded. *Hor.* l. 1, epist. 6, v. 63; *Aul. Gell.* l. 16, c. 13; *Ascon. in Cic.*
- CÆSALPINIA** (*Bot.*) a genus of plants, named by Plumier after Cæsalpinus, physician to Clement VIII, of the Class 10 *Decandria*, Order 1 *Monogynia*.
Generic Characters. CAL. *perianth* one-leaved.—COR. *petals* five.—STAM. *filaments* ten; *anthers* oblong.—PIST. *germ* superior; *style* filiform; *stigma* blunt.—PER. *legume* oblong; *seeds* few.
Species. The species are shrubs, as—*Cæsalpinia bijuga*, *aculeata*, *vesicaria*, &c. seu *spinosa*, *Senna spuria*, &c.

Acacia gloriosa, &c. seu *Poinciana bijuga*, native of Jamaica.—*Cæsalpinia pulcherrima*, seu *aculeata*, *Poinciana pulcherrima*, seu *aculeata*, *Senna spuria*, &c. *bristapavonis*, *Frutex pavonius*, *Acacia orientalis*, &c. *Flos pavonis*, seu *Spetti mandaru*, native of the Indies.—*Cæsalpinia elata*, seu *inermis*, seu *Poinciana elata*, &c. native of India.—*Cæsalpinia boviaria*, seu *inermis Poinciana coriaria*, *Siliqua*, seu *Libididi*, native of the island of Caraccas.—*Cæsalpinia brasiliensis*, *inermis*, seu *arboorea inermis*, &c. seu *Pseudo Santalum*, &c. Smooth Brassiletto, native of Carolina.—*Cæsalpinia eclimata*, seu *aculeata*, *Pseudo-Santalum*, *Arbor Brasilia*, *Acacia gloriosa*, seu *Iberapitanga*, native of Brasil.—*Cæsalpinia Sappan*, seu *aculeata*, *Lignum Sappan*, seu *Tsiani pangam*, Narrow-leaved Prickly Brasiletto, native of the Indies.—*Cæsalpinia crista*, *aculeata*, seu *polyphylla*, &c. Broad-leaved Prickly Brasiletto, native of Jamaica.—*Cæsalpinia mimosoides*, seu *aculeata*, *Mimosa malabarica*, seu *Kali-lodda-vaddi*, native of the East Indies.—*Cæsalpinia pyramidata*, seu *Robinia pyramidata*, native of the West Indies. *Bauh. Pin.*; *Rau Hist. Plant.*

CÆSALPINIA, as a species, is the *Guilandina Bondu* of Linnæus.

CÆSAREA sectio (*Mid.*) *hysterotomia*, the Cæsarean Section; so called because Cæsar is said to have been born in this manner; the operation of extracting the fœtus from the uterus, by dividing the ligaments of the abdomen. *Plin.* l. 7, c. 9; *Roset. de Hysterot. apud C. Bauh.*; *Heist. Chirurg. pars.* 2, sect. 5, c. 113.

CÆSARIENSES (*Ant.*) officers of the treasury at the court of the Greek emperors.

CÆSIAS (*Ant.*) vide *Cæcias*.

CÆSIUS (*Med.*) grey, like the eyes of a cat; an epithet for urine; as also for the eyes.

CÆSO (*Mid.*) one born by means of the Cæsarian operation. *Plin.* l. 7, c. 9.

CÆSTUS (*Ant.*) *κόμμηξ*, a kind of club, or rather thong of leather, having plummets of lead fastened to it, which was used by pugilists at the games. *Propert.* l. 3, el. 12.

Nunc ligat ad cæstum gaudentia brachia loris.

Cic. Tusc. Quæst. l. 2, c. 17; *Poll.* l. 3, segm. 150; *Plin.* l. 11, c. 37; *Eustath. in. Hom. Il.*; *Serv. in Virg. Æn.* l. 5, v. 457; *Merc. de Arte Gymn.* l. 2, c. 9; *Turneb. Adv.* l. 14, c. 4.

CÆSU'RA (*Poet.*) from *cædo*, to cut; a figure in prosody, by which a division or separation takes place in a foot that is composed of syllables belonging to separate words. It is called in the Greek *τομή*, or *κόμμηξ*, by Cicero and Victorinus *incisio* or *insiscum*. It is divided into four kinds, which take their name from the place where they are found in a verse, as the *Trihemimeris*, when the cæsura is made after the third half foot, as *Virg. Æn.* l. 4, v. 64.

Pectori | bus inhians spirantia, consulit exta.

Penthemimeris, when it falls after the fifth half foot, as *Virg. Æn.* l. 5, v. 337.

Emicat | Eurya | lus, et munere victor amici.

Hepthemimeris, when it falls after the seventh half foot, as *Virg. Æn.* l. 1, v. 482.

Per ter | ram et ver | sâ pul | vis inscribitur hastâ.

Ennehemimeris, when it falls after the ninth half foot, as *Virg. Æn.* l. 10, v. 720.

Græius ho | mo, infec | tos lin | quens profu | gus hymenæos.

In all which examples it is observable that the cæsura has the force of converting the short syllables *bus*, *lus*, *vis*, and *gus* into long ones.

CÆTERIS *paribus* (*Phil.*) a term frequently used by writers in drawing comparisons between objects, which signifies the rest, or other things, being alike or equal: thus, of a bullet it may be said, *cæteris paribus*, the heavier it is the greater the range, supposing the strength of the powder, the length, and the diameter of the two pieces, &c. to be the same. So in Etlics, *cæteris paribus*, a wealthy man is fitter to be entrusted with power than a poor man, i. e. supposing both to be alike known or esteemed for their moral character.

CAFFA (*Com.*) painted cloths, manufactured in the East Indies, and sold at Bengal.

CAFFEIN (*Chem.*) the bitter principle of coffee.

CAFFILA (*Com.*) a company of travellers, or merchants, who form themselves into a band, for the purpose of passing with greater security through the dominions of the Great Mogul to the East Indies. 2. A fleet of merchant ships, kept by the King of Portugal, which navigate the coast of Guzarat.

CAFFTAN (*Cus.*) a Persian vest or garment which is now worn by the Turks.

CAG (*Mech.*) a vessel of wood in the form of a barrel, holding about four or five gallons, and sometimes less.

CAGA'STRUM (*Med.*) morbid seed, not innate or hereditary, but adventitious, producing pleurisies, fevers, &c. in distinction from the *Iliastrum*. *Parac. Lex.*

CAGE (*Mech.*) from the Latin *cavea* and *cavus*, hollow; any inclosure for birds or beasts.

CAGE (*Carpent.*) an outer work of timber for the inclosure of other works, as the cage of stairs, which is the same as the wooden case.

CAGE (*Law*) a machine built with lattice-work, which was used as a place of confinement for prisoners. The same name is now given to a temporary place of confinement in each parish for occasional offenders.

CAGE *de la bascule* (*Mil.*) a space into which one part of the drawbridge falls whilst the other part rises and conceals the gate.

CA'GMAG (*Com.*) old geese are so called which are sent up to the London market for sale, when they are become useless in the country. Tough dry meat of any kind is also so called.

CA'HUTE (*Mil.*) French for a small hut, which soldiers make to defend themselves against the inclemencies of the weather.

CA'HYS (*Com.*) a corn measure of Seville, equal to one fourth of a bushel.

CAJA'CIA (*Bot.*) the same as *Cacica*.

CAJAH'A'BA (*Bot.*) an Indian plant that entwines itself round trees like ivy.

CA'JAN (*Bot.*) a species of the *Cytisus*.

CAJA'TUS (*Bot.*) a species of the *Æschynomene*.

CAIC (*Mar.*) a galley-boat.

CAIDBE'IA (*Med.*) the *Forskohlea tenacissima* of Linnæus.

CAJEPUT oil (*Med.*) an aromatic oil extracted from an Indian tree; the *Maleleuca leucodendron* of Linnæus.

CAIMA'CAN (*Polit.*) an officer of great dignity in Turkey, of which there are three; one who attends on the Grand Seigneur, one attached to the Grand Vizier, and a third, who is governor of Constantinople.

CAINITES (*Ecc.*) or *Cainæans*, a sect of heretics, branching off from the Gnostics in the second century. They were so called from Cain, whom they professed to honour. They also held Dathan, Abiram, and the other wicked Scripture characters, in veneration.

CAINITO (*Bot.*) a species of the *Chrysophyllum*.

CAJOU' (*Bot.*) the same as *Acajarba*.

CAIRNS (*Archæol.*) or *carnes*, a vulgar name for the heaps to be seen in many parts of Britain, which consist of stones.

CAISSO'N (*Mil.*) a chest filled with bombs and gunpowder,

- to be buried under ground till the time for explosion, when it blows up all that is near it.—*Caisson* is also a covered waggon or carriage for the provisions and ammunition belonging to an army.
- CAISSON** (*Mar.*) a chest in the form of a boat, used in the dock-yards instead of flood-gates, for getting ships in and out.
- CAISSON** (*Archit.*) the wooden chest, or flat-bottomed boat, sunk in the beds of rivers, &c. to keep off the water while laying the foundation of bridges, &c. It is so contrived that the bottom is made to serve in part for the foundation.
- CA'KILE** (*Bot.*) a species of *Bunias*.
- CAL** (*Chem.*) Yellow Arsenic.
- CAL'LA** (*Ant.*) the club or staff carried by slaves who attended their masters to the field of battle.
- CAL'LABA** (*Bot.*) the *Calophyllum* of Linnæus, an Indian tree, from the trunk and branches of which issues a gum like mastich.
- CAL'LABASH** (*Bot.*) a sort of Gourd.—*Calabash Tree*, the *Crescentia* of Linnæus, the fruit of which is enclosed in a shell that serves the natives of the Caribbee islands for a drinking cup, a pot for boiling, a musical instrument, and various other domestic purposes.
- CALA'BRA** (*Ant.*) a place of meeting for religious matters, as the appointment of festivals, games, sacrifices, &c. *Fest. de Verb. Signif.*
- CALABUR'A** (*Bot.*) a species of the *Muntingia* of Linnæus.
- CALADARIS** (*Com.*) a coarse calico of Bengal.
- CALA'DE** (*Man.*) or *casse*, the slope of a manège-ground, down which a horse is ridden several times in a gallop, to make him learn to ply his haunches.
- CALAD'IDIUM** (*Bot.*) the *Arum esculentum* of Linnæus.
- CALA'C** (*Min.*) a kind of Indian tin, from which ceruss is made.
- CALAF** (*Bot.*) the *Salix Ægyptiaca* of Linnæus.
- CALAGUA'BA** (*Bot.*) a root brought from America, and used with success in medicine. It is probably a species of the *Polypodium*.
- CALAMACORUS** (*Bot.*) the Indian Reed.
- CALAMAGROSTIS** (*Bot.*) Sheer Grass, or Reed Grass, a sort of grass which, according to Dioscorides, is larger than the common sort. *Dioscor.* l. 4, c. 3.
- CALAMAGROSTIS** is the *Arundo epigejos* et *calamagrostis* of Linnæus. *Park. Theat. Botan.*; *Raii Hist. Plant.*
- CALAMA'NCO** (*Com.*) a woollen stuff of Flanders, Brabant, &c. which has a fine gloss upon it, and is chequered in the warp.
- CALAMA'RIA** (*Bot.*) the *Isoetes lacustris* of Linnæus.
- CALAMA'RIÆ** (*Bot.*) from *calamus*, the third Order in Linnæus' "Fragments of a Natural Arrangement," comprehending the sedges and other plants nearly allied to the Grasses.
- CALAME'DON** (*Surg.*) from *καλάμιος*, a reed; a species of fracture which runs along the bone in a right line, but is bent at the extremity.
- CALAME'TA** (*Ant.*) from *calamus*, a reed; broken pieces of reeds with which the ancients propped their vines in vineyards.
- CALAMINARIS lapis** (*Min.*) the Calamine Stone, the *Zincum calaminaris* of Linnæus, and the Oxyde of zinc of the chymists; a kind of bituminous fossile earth, which when mixed with copper produces brass. [vide *Cadmia*] It is used as an absorbent and drier in outward medicinal applications, but seldom given inwardly. *Gal. de Sanit. tuend.* l. 4; *Oribas Med. Coll.* l. 11; *Aet. Tetrab.* l. serm. 1; *Paul. Æginet.* l. 7, c. 3.
- CALAMINE** (*Min.*) the *Zincum calaminaris* of Linnæus.
- CALAMINT** (*Bot.*) in Latin *Calamintha*, in Greek *καλαμίνθη*, a herb; the Mountain Mint.
- CALAMINTHA** (*Bot.*) Calamint, from the two Greek words

- καλά μίνθη*, i. e. good mint, is an aromatic herb much used in physic as a cordial, alexipharmic, stomachic, carminative, uterine, and emmenagogue medicine. *Gal. de San. tuend.* l. 4; *Oribas Med. Coll.* l. 11; *Aet. Tetrab.* l. serm. 1.
- CALAMINTHA** is the *Melissa Calamintha, grandiflora*, &c. of Linnæus.
- CALAMISTRUM** (*Ant.*) a crisping or frizzling iron with which the hair is curled.
- CALAMITA** (*Ant.*) the name for little green frogs living among reeds and shrubs. *Plin.* l. 32, c. 10.
- CALAMITA** (*Min.*) a dry sort of *Styrax*.
- CALAMITES** (*Min.*) a precious stone which is formed with many joints, after the manner of *calamus*, a reed. *Plin.* l. 37, c. 10.
- CALAMITIS** (*Min.*) 1. A factitious cadmia, which by adhering to iron acquires the form of a reed. 2. A marine stone in the form of a reed.
